FEDERAL REGISTER

Vol. 84 Friday,

No. 221 November 15, 2019

Book 1 of 2 Books

Pages 62431–62996

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097–6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see *www.federalregister.gov.*

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at *www.govinfo.gov*, a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 1, 1 (March 14, 1936) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, *gpocusthelp.com.*

The annual subscription price for the **Federal Register** paper edition is $860 plus postage, or $929, for a combined **Federal Register, Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is $330, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register,** including postage, is based on the number of pages: $11 for an issue containing less than 200 pages; $22 for an issue containing 200 to 400 pages; and $33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for $3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see *bookstore.gpo.gov.*

There are no restrictions on the republication of material appearing in the **Federal Register.**

How To Cite This Publication: Use the volume number and the page number. Example: 84 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

[DOL Docket No. ETA–2018–0003]

RIN 1205–AB91

Modernizing Recruitment Requirements for the Temporary Employment of H–2B Foreign Workers in the United States

AGENCY: U.S. Citizenship and Immigration Services, Department of Homeland Security and Employment and Training Administration and Wage and Hour Division, Department of Labor.

ACTION: Final rule.

SUMMARY: The Department of Homeland Security (DHS) and the Department of Labor (DOL) (collectively, the Departments), are jointly issuing this final rule to amend the regulations governing DOL's certification of nonagricultural labor or services to be performed by temporary foreign workers in H–2B nonimmigrant status (H–2B workers). Pursuant to Section 214(c)(1) of the Immigration and Nationality Act (INA), this certification serves as DHS's consultation with DOL regarding whether a qualified United States (U.S.) worker is available to fill the petitioning H–2B employer's job opportunity, and whether a foreign worker's employment in the job opportunity will adversely affect the wages or working conditions of similarly employed U.S. workers. This final rule modernizes and improves the labor market test that DOL uses to assess whether qualified U.S. workers are available by: Rescinding the requirement that an employer advertise its job opportunity in a print newspaper of general circulation in the area of intended employment, and expanding and enhancing DOL's electronic job registry to disseminate available job opportunities to the widest audience possible.

DATES: This final rule is effective December 16, 2019.

FOR FURTHER INFORMATION CONTACT: Regarding the Department of Homeland Security: Charles L. Nimick, Chief, Business and Foreign Workers Division, Office of Policy and Strategy, U.S. Citizenship and Immigration Services, Department of Homeland Security, 20 Massachusetts Ave NW, Suite 1100, Washington, DC 20529–2120, telephone (202) 272–8377 (not a toll-free call). Regarding the Department of Labor: Thomas M. Dowd, Deputy Assistant Secretary, Employment and Training Administration, Department of Labor, Box #12–200, 200 Constitution Ave NW, Washington, DC 20210, telephone (202) 513–7350 (this is not a toll-free number). Regarding 29 CFR part 503: Mary Ziegler, Director, Division of Regulations, Legislation, and Interpretation, Wage and Hour Division, Department of Labor, 200 Constitution Avenue NW, Room S–3510, Washington, DC 20210; telephone (202) 693–0071 (this is not a toll-free number).

Individuals with hearing or speech impairments may access the telephone numbers above via TTY by calling the toll-free Federal Information Relay Service at 1–877–889–5627 (TTY/TDD).

SUPPLEMENTARY INFORMATION:

I. Executive Summary

A. Statutory and Regulatory Background

The Immigration and Nationality Act (INA), as amended by the Immigration Reform and Control Act of 1986 (IRCA), establishes the H–2B nonimmigrant visa classification for a nonagricultural temporary worker ''having a residence in a foreign country which he has no intention of abandoning who is coming temporarily to the United States to perform . . . temporary [nonagricultural] service or labor if unemployed persons capable of performing such service or labor cannot be found in this country.'' INA section 101(a)(15)(H)(ii)(b), 8 U.S.C. 1101(a)(15)(H)(ii)(b). Employers must petition DHS for classification of prospective temporary workers as H–2B nonimmigrants. INA section 214(c)(1), 8 U.S.C. 1184(c)(1). DHS must approve this petition before a beneficiary may be considered eligible for an H–2B visa. Finally, the INA requires that ''[t]he question of importing any alien as [an H–2B] nonimmigrant . . . in any specific case or specific cases shall be determined by [DHS],[1] after consultation with appropriate agencies of the Government.'' *Id.*

DHS regulations provide that an H–2B petition for temporary employment in the United States must be accompanied by an approved temporary labor certification (TLC) from DOL issued pursuant to regulations established at 20 CFR part 655. *See* 8 CFR 214.2(h)(6)(iii)(A), (C)–(E), (h)(6)(iv)(A); *see also* INA section 103(a)(6), 8 U.S.C. 1103(a)(6), INA section 214(c)(1), 8 U.S.C. 1184(c)(1). The TLC serves as DHS's consultation with DOL regarding whether: (i) A qualified U.S. worker is available to fill the petitioning H–2B employer's job opportunity, and (ii) whether a foreign worker's employment in the job opportunity will adversely affect the wages or working conditions of similarly employed U.S. workers. *See* INA section 214(c)(1), 8 U.S.C. 1184(c)(1); 8 CFR 214.2(h)(6)(iii)(A) and (D).

Through the application process set forth in these regulations, DOL acquires the information necessary to make these factual determinations, including whether there are sufficient qualified U.S. workers available to perform the nonagricultural labor or services for which an employer seeks H–2B certification. 20 CFR 655.1. To that end, the regulations require an employer seeking H–2B temporary labor certification to test the labor market by recruiting U.S. workers for the position(s) in which it intends to employ H–2B workers. *See, e.g.,* 20 CFR 655.16, 655.40 through 655.46. The

[1] As of March 1, 2003, in accordance with section 1517 of Title XV of the Homeland Security Act of 2002 (HSA), Public Law 107–296, 116 Stat. 2135, any reference to the Attorney General in a provision of the Immigration and Nationality Act describing functions which were transferred from the Attorney General or other Department of Justice official to the DHS by the HSA ''shall be deemed to refer to the Secretary'' of Homeland Security. *See* 6 U.S.C. 557 (2003) (codifying HSA, Title XV, sec. 1517); 6 U.S.C. 542 note; 8 U.S.C. 1551 note.

outcome of this labor market test forms the basis of DOL's determination, through consultation with DHS before DHS makes the final determination on an H–2B petition, as to whether there are sufficient qualified U.S. workers available to fill the employer's job opportunity.

The INA also authorizes DHS to impose appropriate remedies against an employer for a substantial failure to meet the terms and conditions of employing an H–2B nonimmigrant worker, or for a willful misrepresentation of a material fact in a petition for an H–2B nonimmigrant worker. INA section 214(c)(14)(A), 8 U.S.C. 1184(c)(14)(A). The INA expressly authorizes DHS to delegate certain enforcement authority to DOL. INA section 214(c)(14)(B), 8 U.S.C. 1184(c)(14)(B); *see also* INA section 103(a)(6), 8 U.S.C. 1103(a)(6). DHS has delegated its authority pursuant to INA section 214(c)(14)(B), 8 U.S.C. 1184(c)(14)(B) and INA section 103(a)(6), 1103(a)(6), to DOL. *See* DHS, Delegation of Authority to DOL under Section 214(c)(14)(A) of the Immigration and Nationality Act (Jan. 16, 2009); INA section 103(a)(6), 8 U.S.C. 1103(a)(6); 8 CFR 214.2(h)(6)(ix) (stating that DOL may investigate employers to enforce compliance with the conditions of, among other things, an H–2B petition and a DOL-approved TLC). Within DOL, this enforcement authority has been delegated to the Wage and Hour Division (WHD), and is governed by regulations at 29 CFR part 503.

B. Current Recruitment Requirements

Under the regulations currently in effect, an employer seeking H–2B workers generally initiates the temporary labor certification process by filing the following with DOL: (1) An *Application for Temporary Employment Certification,* Form ETA–9142B (H–2B application) and (2) a copy of the job order submitted concurrently to the State Workforce Agency (SWA) serving the area of intended employment; and other documentation supporting the H–2B application. 20 CFR 655.15(a). Absent limited exceptions, an employer must file a completed H–2B application no more than 90 days, but no fewer than 75 days, before it seeks to employ H–2B workers. 20 CFR 655.15(b).

An Office of Foreign Labor Certification (OFLC) Certifying Officer (CO) will review the H–2B application and job order for compliance with program requirements. 20 CFR 655.30. The SWA concurrently reviews the job order to confirm that the employer's job opportunity complies with applicable requirements and notifies the CO of any deficiencies within 6 business days of receipt of the job order. 20 CFR 655.16(b). If the H–2B application and job order meet all applicable requirements, the CO will issue a Notice of Acceptance (NOA) within 7 business days from the date the H–2B application was received. 20 CFR 655.33. The NOA authorizes the next step in the temporary labor certification process—the recruitment of U.S. workers—and specifies a date on which the employer must provide an initial written report of its recruitment efforts. *See* 20 CFR 655.33(b).

The NOA directs the SWA to place the job order into intrastate clearance and circulate a copy of the job order to other states listed as anticipated worksites and designated by the CO for interstate clearance, where the job orders must remain active until 21 days before the date of need as set forth in 20 CFR 655.40(c). *Id.* Where the occupation or industry is traditionally or customarily unionized, the NOA instructs the SWA to circulate a copy of the job order to the central office of the State Federation of Labor and the office(s) of local union(s) representing employees in the same or a substantially equivalent job classification in the geographic area(s) where work will be performed. *Id.* Additionally, the NOA specifies the recruitment steps that the employer must conduct, within 14 calendar days from the date the NOA is issued, to complete the labor market test, unless the CO instructs otherwise. *Id.* Upon receipt of the employer's initial recruitment report, the CO will make a final determination whether to grant, partially grant, or deny the employer's H–2B application, based on the criteria for certification set forth in 20 CFR 655.50–655.51.

Sections 655.40 through 655.48 outline the recruitment standards and procedures that the CO may order an employer to conduct. Under these regulations, an employer is generally required to: (1) Place two print advertisements in a newspaper of general circulation serving the area of intended employment, *see* 20 CFR 655.42; (2) contact U.S. workers the employer employed in the previous year to solicit their return, *see* 20 CFR 655.43; and (3) contact the bargaining unit, if one exists, to seek referrals of U.S. workers, or if a bargaining unit does not exist, post notice of the job opportunity at the place(s) of employment for at least 15 consecutive business days, *see* 20 CFR 655.45. If relevant to the occupation and area of intended employment, the CO may also direct the employer to provide written notice of the job opportunity to a community-based organization, as provided in 20 CFR 655.45(c). Both print newspaper advertisements and the notice of posting at the place(s) of employment must meet the minimum content requirements set forth in 20 CFR 655.41, and an employer must maintain documentation of all advertising and recruitment efforts in the event of an audit or other review, as required by 20 CFR 655.56.

Finally, the CO may direct an employer to conduct additional recruitment where the CO determines there is a likelihood that qualified U.S. workers will be available to fill the employer's job opportunity. 20 CFR 655.46(a). The regulation provides the CO with flexibility to select the appropriate methods of recruitment on a case-by-case basis to ensure an adequate test of the labor market and that U.S. workers are apprised of available job opportunities. 20 CFR 655.46(b) leaves to the CO's discretion the precise nature of the additional recruitment an employer may need to conduct, and provides a non-exclusive list of advertising options. The flexibilities contained in this regulatory provision permit the CO to keep pace with labor market trends and changes in technology that may affect how information about job opportunities is disseminated and how many U.S. workers search for and find jobs. Equally important, when assessing the appropriateness of a particular recruitment method, the CO considers all options at his or her disposal, including relying on the SWA's experience and expertise with local labor markets, and where appropriate, selects the appropriate methods of recruitment on a case-by-case basis.

C. Summary of Proposed Changes to the Recruitment Requirements and the Changes Adopted in This Final Rule

On November 9, 2018, the Departments issued a notice of proposed rulemaking (NPRM) announcing their intent to modernize the recruitment that an employer must conduct in conjunction with an H–2B application. *See* 83 FR 55977, 55979 (Nov. 9, 2018). Specifically, the Departments proposed to eliminate the general requirement that an employer advertise its job opportunity in a print newspaper and replace it with a requirement to post an electronic advertisement on a qualifying website. The Departments invited interested parties to submit written comments on all aspects of this proposal, including a variety of issues related to the electronic advertising requirement. The Departments specifically solicited comments as to

whether there were alternative methods of recruitment that would more broadly and effectively disseminate information about temporary nonagricultural job opportunities to U.S. workers. The Departments originally stated that they would accept comments through December 10, 2018, but in response to a request for an extension, they subsequently extended this period through December 28, 2018. The public may review all comments that the Departments received in response to the NPRM in the Federal Docket Management System (FDMS) at *http://www.regulations.gov,* docket number ETA–2018–0003.

Upon careful consideration of the comments received, the Departments have decided to adopt their proposal to transition to electronic advertising with several changes. Specifically, this final rule adopts the NPRM's proposal to eliminate the existing requirement for most employers seeking H–2B labor certification to advertise their job opportunities in print newspapers of general circulation in the area of intended employment. The Departments' transition to electronic advertising will not require an employer to place an electronic advertisement on the internet in the manner proposed in the NPRM. As explained in detail below, DOL will instead advertise all H–2B job opportunities by posting them on *SeasonalJobs.dol.gov*, the expanded and improved version of DOL's existing electronic job registry.

D. Joint Issuance of This Final Rule

In order to effectuate DHS's requirement for DOL consultation pursuant to 8 U.S.C. 1184(c)(1), which is provided in the form of temporary labor certifications, DOL must issue regulations to structure procedures and standards for its issuance of labor certifications, as DOL has done for almost 50 years. On April 29, 2015, following a court's vacatur of nearly all of DOL's H–2B regulations, the Departments jointly promulgated an interim final rule (IFR) governing DOL's role in issuing temporary labor certifications and in enforcing the statutory and regulatory rights and obligations applicable to employment under the H–2B program. *See* Temporary Non-Agricultural Employment of H–2B Aliens in the United States, 80 FR 24042 (Apr. 29, 2015) (''2015 H–2B IFR'').

As explained in the 2015 H–2B IFR, following conflicting legal decisions about DOL's authority to independently issue legislative rules to carry out its duties for the H–2B program under the INA, the Departments jointly issued the 2015 H–2B IFR to ensure that there can be no question about the authority for and validity of the regulations in this area. 80 FR at 24045; *see also* 80 FR at 24044–47.[2]

Specifically, DHS's participation in the rulemaking is pursuant to its broad authority to issue rules in the H–2B program under 8 U.S.C. 1103(a)(3) and 1184(a), and, as referenced above, DOL—which has the institutional expertise on all matters relating to the domestic labor market and has for decades issued temporary labor certifications and legislative rules governing them in the nonagricultural foreign worker program—is necessarily authorized to promulgate rules governing its issuance of temporary labor certifications pursuant to 8 U.S.C. 1184(c). *See also* 8 U.S.C. 1103(a). The Departments further explained in the 2015 H–2B IFR that by jointly issuing that rule, ''the Departments affirm that [it] is fully consistent with the INA and implementing DHS regulations and is vital to DHS's ability to faithfully implement the statutory labor protections attendant to the program.'' 80 FR at 24045–46. Litigation on these and related matters is ongoing. Accordingly, notwithstanding that DOL has the authority to independently issue this Final Rule, DHS is joining DOL in this rulemaking to ensure that there can be no question about the authority underlying this action.

E. Severability

To the extent that any portion of this final rule is declared invalid by a court, the Departments intend for all other parts of the final rule that are capable of operating in the absence of the specific portion that has been invalidated to remain in effect. Thus, even if a court decision invalidating a portion of this final rule results in a partial reversion to the current regulations or to the statutory language itself, the Departments intend that the rest of the final rule continues to operate, if at all possible, in tandem with the reverted provisions.

[2] The Departments' authority to jointly regulate has not been found invalid, and nothing otherwise precludes joint action in the H–2B program. While the same district court twice issued an injunction against DOL's unilaterally-issued H–2B rules, *see Bayou Lawn & Landscape Servs.* v. *Solis,* 2012 WL 12887385 (N.D. Fla. Apr. 26, 2012) and *Bayou Lawn* v. *Perez,* 81 F. Supp. 3d 1291, 1300 (N.D. Fla. 2014) (*Bayou II*), the court has since upheld the joint rules, *Bayou Lawn* v. *Johnson,* 173 F. Supp. 3d 1271, 1277, 1289–91 (N.D. Fla. 2016) (*Bayou III*), noting that the primary difference between the enjoined 2012 rules and the 2015 rules was their joint promulgation. *Id.* at 1277 n.2.

II. Revisions to 20 CFR Part 655, Subpart A

A. The Departments are Rescinding the Regulation Generally Requiring Employers to Place Print Newspaper Advertisements in the Area of Intended Employment

1. Background

In the NPRM, the Departments proposed to revise 20 CFR 655.42 to replace the requirement for an employer to place print newspaper advertisements with a requirement to post an electronic advertisement on a website that is widely viewed and appropriate for use by workers who are likely to apply for the job opportunity in the area of intended employment. The Departments based this proposal on data indicating that print newspaper circulation continues to decline and that U.S. workers are increasingly turning to the internet in their job searches. The Departments also relied on DOL's experience in administering temporary and permanent labor certification programs, as well as anecdotal evidence received from stakeholders, who reported that advertisements in print newspapers were not an effective means of recruiting prospective U.S. workers for temporary nonagricultural job opportunities. In light of this data, experience, and stakeholder feedback, the Departments asserted that classified advertisements in print editions were becoming a less effective means of recruiting U.S. workers, and proposed to replace 20 CFR 655.42's current requirement to place a print newspaper advertisement with a requirement to post an electronic advertisement on the internet.

Many of the H–2B employers and employer associations that submitted comments in response to the NPRM applauded the Departments' efforts to modernize the recruitment process and confirmed, based on their experience, print newspaper advertising is expensive and ineffective in attracting U.S. workers who are likely to apply for temporary nonagricultural job opportunities in most cases. For example, one commenter stated that most of the H–2B petitioner employers it represents ''almost never . . . receive U.S. applicants as a result of the print advertisements,'' and asserted, based on its experience, that print newspaper advertisements are not a meaningful source for recruiting workers for temporary nonagricultural job opportunities. Similarly, a commenter representing an employer stated it prefers to advertise electronically, on social media and online job boards,

because it never receives applications in response to print newspaper advertisements. Another commenter agreed that print advertising is ineffective and asserted that advertising costs are rising due to decreasing competition in the newspaper industry.

Nevertheless, a number of these commenters disagreed with the Departments' proposal to completely eliminate print newspaper advertisements. Some expressed concern that the proposed rule would have a significant adverse impact on the newspaper industry. One of these commenters acknowledged online advertising would be more effective but expressed concern only with the financial impact of the proposed rule.

One commenter associated with the newspaper industry asserted that the Departments' proposal to eliminate the print newspaper advertising requirement overlooked certain factors. This commenter stated that newspapers are more effective than the internet in disseminating information to relevant viewers. The same commenter also opined that many local newspapers reach a larger audience than their subscribership indicates because a single newspaper is read by multiple people, and the content in these newspapers is often available online. According to this commenter, the distribution and readership of a local newspaper, in all of its formats (print and electronic), can easily exceed the number of visits to a third-party job search website. Finally, this commenter maintained that newspapers play an essential role in placing electronic advertisements and noted that some newspapers use services that will not only post an employer's advertisement to large internet job boards, but also distribute the advertisements to other job search websites.

A number of commenters urged that the Departments provide an individual employer with the option to choose whether to post two print newspaper advertisements in accordance with the requirement in the existing rule or to post an electronic advertisement in accordance with the requirement in the proposed rule. These commenters provided varied reasons to justify their request. For instance, some were concerned about internet accessibility issues for employers. Others were concerned that mandating electronic advertisements would unfairly exclude U.S. workers who are uncomfortable with certain technology or live in areas without ready access to the internet. Some pointed to the studies cited in the NPRM as evidence that the Departments did not adequately consider whether online advertisements would be effective in reaching the types of U.S. workers who typically work in jobs filled by H–2B workers. One commenter asserted that the Departments' proposal would violate the Equal Protection Clause of the Fourteenth Amendment of the United States Constitution because the Government would ''restrict access to potential jobs'' to people who have internet access.

Other commenters suggested that the Departments require employers to post advertisements both in print and electronic formats. Most of these commenters expressed general support for electronic advertising, but also noted that the Departments provided insufficient or incomplete evidence to demonstrate that electronic advertising would be any more effective in recruiting U.S. workers most likely to apply for temporary nonagricultural job opportunities. Some of these commenters expressed concerns that the Departments relied on information and data trends focusing on U.S. job seekers generally, and failed to consider more specific information regarding how job seekers located in rural communities and, more specifically, temporary nonagricultural workers obtain employment, as well as how employers recruit for temporary nonagricultural workers. These commenters cited data suggesting that many U.S. workers who might be interested in filling temporary nonagricultural job opportunities may not have reliable high speed internet access, which would impede U.S. workers from viewing and responding to advertisements for H–2B job opportunities.

Some commenters cited Pew Research Center data suggesting that the internet was used in job searches much less frequently by job seekers possessing less than a high school education, earning less than $30,000 per year, and residing in rural community areas, characteristics they asserted are often shared by workers in temporary nonagricultural employment.[3] A commenter representing a newspaper industry association cited a recent study conducted by the Federal Communications Commission (FCC) indicating that nearly 40 percent of Americans, or approximately 24 million people, living in rural areas lack access to fixed broadband internet service, 30 percent of rural Americans lack access to mobile LTE broadband, and cellular reception is generally poorer in these areas. Some of these commenters urged the Departments to engage in additional consultation with the stakeholder community and State Workforce Agencies, and conduct a more formal assessment of internet access and usage by U.S. workers most likely to apply for temporary nonagricultural jobs.

At times citing reasons similar to those who advocated for giving employers the option to use either method (for example, pointing to data suggesting that some workers still use print sources to search for jobs and may have limited access to the internet), some commenters generally questioned whether electronic advertisements alone would be effective in reaching U.S. workers interested in temporary nonagricultural employment. They suggested the dual requirement would ensure the broadest possible exposure to U.S. applicants. One commenter recommended leaving the print requirement in place until the new DOL platform discussed in the NPRM was fully operational, opining that the online advertising the NRPM described was unlikely to have sufficient oversight or consistency.

Finally, a commenter representing a newspaper industry association stated that electronic advertising would be less effective in recruiting temporary nonagricultural workers than the currently required newspaper advertisements. Citing the FCC report and the Pew Research Center report noted above, this commenter asserted that the proposed rule would make it more difficult for U.S. workers to apply for H–2B job opportunities because such jobs attract job seekers less likely to search for employment online, including those with a low income, low level of educational attainment, minorities, and job seekers residing in rural areas. The commenter stated that the Pew Research Center data showed rural Americans are less likely to use the internet to search for work than suburban or urban Americans. Despite these concerns, this commenter supported placement of advertisements on online job boards operated by newspapers or websites that partner with newspapers, such as *Careerbuilder.com* and *Monster.com,* but urged the Department to require both print and online advertising.

2. Discussion

After carefully considering the comments received, the Departments have decided to rescind 20 CFR 655.42. The regulations will no longer generally require a prospective H–2B employer to advertise its job opportunity in a newspaper serving the area of intended

[3] Aaron Smith, *Searching for Work in the Digital Era,* Pew Research Center, Nov. 19, 2015, *http://www.pewinternet.org/2015/11/19/searching-for-work-in-the-digital-era.*

employment. This decision is grounded in the Departments' determination that the newspaper advertisements required under this section do not generally contribute in a significant way to the labor market test that DOL administers to assess the availability of qualified U.S. workers, as compared to the electronic advertising as described in this rule.

This determination is supported by the lack of data indicating newspaper advertisements are an effective means of recruiting U.S. workers for temporary nonagricultural positions. Specifically, as noted in the NPRM, available data indicates that U.S. workers are now much more likely to turn to the internet to search for work, and classified advertisements in print newspaper editions are becoming a less effective means of notifying potential applicants about available job opportunities. *See* 83 FR 55877, 55979. The data available to the Departments and the supportive comments reviewed in preparation of this final rule lead DOL to conclude that electronic advertising is a more effective means of reaching U.S. workers seeking temporary nonagricultural job opportunities, and of achieving the goals of the H–2B labor certification program.[4] In addition, the Departments considered anecdotal accounts in comments from employers and employer associations, who reported that the newspaper advertisements they have placed in connection with this requirement have yielded very few, if any, applications from qualified U.S. workers.

In arriving at this determination, the Departments carefully considered the arguments that some commenters raised in support of retaining the requirement to place print newspaper advertisements. As explained below, however, none of these arguments contradict the findings discussed above that newspaper advertisements as a general requirement of prospective H–2B employers are a less effective means of recruiting U.S. workers for temporary nonagricultural positions. Accordingly, these arguments have not persuaded the Departments that the regulations must require every employer seeking H–2B workers to place print advertisements in order to effectively test the labor market for able, willing, qualified, and available U.S. workers. As is currently the case, to the extent DOL determines that an advertisement in a particular print publication is likely to reach qualified and available U.S. workers in specific areas or across certain populations, the CO retains the discretion to direct an employer to place such an advertisement on a case-by-case basis, under his or her authority to order additional positive recruitment. *See* 20 CFR 655.46.

Significantly, the commenters who urged the Departments to retain a general print newspaper-advertising requirement did not point to data that showed such advertisements are effective in recruiting U.S. workers for temporary nonagricultural positions. Rather, these commenters asserted advantages of newspaper advertisements in general terms or pointed to their importance in certain communities, compared to the advantage of electronic advertisements proposed in the NPRM, without specifically addressing the efficacy of requiring all prospective H–2B employers to post newspaper advertisements when recruiting U.S. workers for temporary or seasonal nonagricultural job opportunities. For instance, some commenters cited data indicating certain populations and demographics are less likely to use the internet when searching for jobs and one commenter asserted that Americans in some communities are more likely to turn to community newspapers than the internet to obtain local news and information. However, the referenced non-public data only purports to show newspaper readership; it does not address individual job search habits, so the conclusion drawn is not supported by the data on which it is based and the Departments are unable to determine whether it offers any useful information with respect to this rulemaking. The arguments that commenters raised regarding the circulation and distribution of newspapers similarly do not refute the Departments' observation in the NPRM that job seekers rarely learn about job opportunities using print newspaper advertisements, nor do the assertions and anecdotes received in response to the NPRM. Similarly, the fact that DOL can easily verify whether an employer has placed a newspaper advertisement is irrelevant to whether the placement of such advertisements is an effective means of testing the labor market.

The Departments acknowledge that the rates of internet access and use of the internet to search for job opportunities vary among cross-sections of the population based on factors like age, location of residence, income, education level, and ethnicity. However, as noted in the NPRM, data indicates that the internet is an increasingly popular method that job seekers among all demographics use most often and find most reliable. For example, the Pew Research Center report cited in the NPRM and by the newspaper industry commenter concluded that the internet ''is a near-universal resource among those who have looked for work recently.'' [5] The report noted that the data was ''based on the entire public—many of whom are retired, not in the job market, or have simply not had a reason to look for a job recently'' and while it is not possible to parse the data to determine precise rates of online job searching among all populations, it is clear that the internet is, by an increasing margin, the most widely used job search tool among job seekers across demographics. The Pew Research Center report ultimately found that when ''[n]arrowing the focus to the 34% of Americans who have actually looked for a new job in the last two years, fully 90% of these recent job seekers have ever used the internet to research jobs, and 84% have applied to a job online.'' [6] Importantly, while the Pew Research Center data indicates rural Americans are less likely to use the internet to search for job opportunities than urban or suburban Americans, the data does not support the conclusion that rural Americans are more likely to use print newspapers than the internet when searching for job opportunities.

Similarly, while the Departments also acknowledge that some job seekers may lack reliable access to advertisements on the internet, such access limitations are true of advertisements in any form, and the Departments believe the data supports the conclusion that electronic advertisements are currently, and will be increasingly, accessible to an overwhelming majority of job seekers across a much broader geographic area than print advertisements. The Departments understand the concerns of some commenters that job seekers,

[4] *See* Aaron Smith, *Searching for Work in the Digital Era,* Pew Research Center, Nov. 19, 2015, *http://www.pewinternet.org/2015/11/19/searching-forwork-in-the-digital-era* (only 32 percent of Americans use ''ads in print publications'' when searching for employment and only four percent found ads in print publications to be the most useful tool in obtaining their recent employment); Elaine C. Kamarck and Ashley Gabriele, *The News Today: Trends in Old and New Media,* The Brookings Institution (Nov. 10, 2015)(Stating there are now only 400 newspapers for every 100 million Americans, and that only 15 percent of Americans receive a daily newspaper). *https://www.brookings.edu/research/the-news-today-7-trends-in-old-and-new-media.*

[5] Aaron Smith, *Searching for Work in the Digital Era,* Pew Research Center, Nov. 19, 2015, *https://www.pewinternet.org/2015/11/19/1-the-internet-and-job-seeking/.*

[6] Aaron Smith, *Searching for Work in the Digital Era,* Pew Research Center, Nov. 19, 2015, *http://www.pewinternet.org/2015/11/19/searching-for-work-in-the-digital-era/.*

particularly in rural areas, are less likely to have access to reliable internet service. However, as noted in the FCC report cited by the newspaper industry association commenter, the number of Americans that lack access is declining, including Americans living in rural areas.[7] Importantly, while the FCC report indicated a number of rural areas still lag behind the rest of the country in access to fixed-site, terrestrial broadband internet, the report also noted that the number of Americans with access to broadband internet is much higher when additionally considering sources like satellite internet service providers and mobile LTE.[8] In contrast to increasing access to internet, the data cited in the NPRM shows that access to print newspapers continues to decline, there are now only 400 newspapers for every 100 million Americans, and only 15 percent of Americans receive a daily newspaper.[9] In addition, print newspaper advertisements are often accessible only to persons in the areas where that newspaper is circulated, while electronic advertisements can reach job seekers in a much larger geographic area.

The Departments agree that no single recruitment method will reach all job seekers and do not disagree with comments asserting that other forms of advertising, such as print newspaper advertisements, may be effective in some limited circumstances. The move to electronic advertisements—and to *SeasonalJobs.dol.gov* in particular—is simply one important step in the Departments' broader effort to modernize the H–2B program, which has for many years been hampered by the tools of another era. As explained further below, COs will retain their discretion under 20 CFR 655.46(a) to evaluate, on a case-by-case basis, whether additional recruitment is necessary to ensure an adequate test of the labor market for the employer's job opportunity. And, in some limited circumstances where newspaper print advertisements would be effective, the CO has the authority to direct such advertising.

Moreover, as discussed in detail below, the Departments have decided not to adopt the proposal to replace the requirement to place newspaper advertisements with a requirement for *an employer* to post an electronic advertisement on the internet. Instead, DOL will post an electronic advertisement on an employer's behalf on *SeasonalJobs.dol.gov,* an improved and expanded version of the electronic job registry that DOL is required to maintain under its existing regulations. *See* 20 CFR 655.34. This addresses concerns that some commenters expressed regarding the effect of the proposed rule on those employers who have limited or no access to the internet, because such employers will not need to access the internet in order to participate in the H–2B program. Accordingly, employers who lack access to the internet will not need to acquire access to the internet in order for *SeasonalJobs.dol.gov* to advertise their job opportunities or for them to respond to any applications received from U.S. workers in response to these advertisements. Likewise, employers will not need to determine whether a particular website meets applicable regulatory criteria or retain evidence of this posting. Rather, DOL will use information that an employer provides on its job order and H–2B application to generate the advertisement that DOL posts on the employer's behalf on *SeasonalJobs.dol.gov,* and U.S. workers interested in a particular job opportunity can apply to the employer directly using the contact information that the employer provided to DOL.

While the Departments are aware that the final rule may have an impact on members of the newspaper industry, the Departments are also obligated to carry out the statutory mandate in a manner that ensures the methods and locations in which employers conduct positive recruitment are effective. As a general requirement for all employers, the Departments have determined that newspaper advertisements do not generally contribute in a significant way to the labor market test, which must be carried out by prospective employers to determine the availability of able, willing, and qualified U.S. workers. Therefore, the impact the newspaper industry experiences as a result of this final rule, to the extent that it is relevant at all, is outweighed by the Departments' needs to more effectively carry out the statutory mandate to ensure an adequate test of the U.S. labor market.

The relevant question is whether this requirement is an effective component of the labor market test that DOL conducts in connection with an H–2B application. Given the absence of evidence suggesting print newspaper advertisements are comparably effective in recruiting U.S. workers for temporary or seasonal nonagricultural job opportunities, the Departments have decided not to continue requiring most employers seeking an H–2B labor certification to place print newspaper advertisements. Accordingly, DOL is rescinding 20 CFR 655.42, the regulation that generally requires employers to place such advertisements.

B. Instead of Requiring a Prospective H–2B Employer To Post Its Own Electronic Advertisement, as Originally Proposed, DOL Will Advertise the Employer's Job Opportunity on SeasonalJobs.dol.gov, an Improved and Expanded Version of the DOL's Electronic Job Registry

1. Background

In the NPRM, the Departments proposed to amend 20 CFR 655.42 to require that an employer post an advertisement on a website meeting certain criteria, namely a website that is widely viewed and appropriate for use by workers who are likely to apply for the job opportunity in the area of intended employment. The Departments suggested that such job search websites might include those that specialize in advertising job opportunities for the specific industry or occupation, and other classified advertisement websites with sections focused on local jobs. The Departments requested comments on whether they should establish additional qualifying criteria (*e.g.,* minimum number of unique visitors per month) or more specifically define the types of websites that an employer may use.

Under the Departments' proposed revision to 20 CFR 655.42, an employer's advertisement would need to be clearly visible on the website's homepage or easily retrievable using the search tools on the website, posted for a period of no less than 14 consecutive calendar days, and publicly accessible to U.S. workers at no cost using the latest browser technologies and mobile devices. The proposed rule also required employers to use commonly-

[7] Inquiry Concerning Deployment of Advanced Telecommunications Capability to All Americans in a Reasonable and Timely Fashion, GN Docket No. 17–199, FCC 18–10 (Feb. 2, 2018), *https://docs.fcc.gov/public/attachments/FCC-18-10A1.pdf* (''2018 Broadband Deployment Report'') (noting that between 2012 and 2016, mobile and fixed terrestrial broadband access was deployed to 43.4 million Americans and the number of Americans without mobile or fixed terrestrial broadband access fell from 72.1 million to 20.6 million. When taking into account fixed terrestrial, satellite, and mobile internet access, the report also notes that ''approximately 99.9 percent of Americans have access to one of these services, including 99.3 percent in rural areas and nearly all Americans in urban areas.'')

[8] 2018 Broadband Deployment Report at 26, 87 (stating 99.9 percent of all Americans and 99.3 percent of those in rural areas have access to either fixed broadband or mobile LTE, indicating 99 percent have access to mobile LTE and 95.6 percent have access to broadband at speeds of 25/3 Mbps).

[9] *See* Elaine C. Kamarck and Ashley Gabriele, *The News Today: 7 Trends in Old and New Media,* The Brookings Institution, Nov. 10, 2015, *https://www.brookings.edu/research/the-news-today-7-trends-in-old-and-new-media.*

understood terms and keywords to describe their job opportunities, so that U.S. workers likely to apply could easily retrieve advertisements using the website's search function. Moreover, in an attempt to ensure the advertisement would be readily available to U.S. workers at no cost, the proposed rule prohibited employers from placing it on a website that required U.S. workers to establish personal accounts or make payments of any kind to view the advertisement. For the same reason, the proposed rule also required the website to be functionally compatible with the latest commercial web browser platforms and easily viewable on mobile smartphones and similar portable devices. To ensure employers retained the documentation necessary to demonstrate their compliance with these requirements, the proposed rule required employers to print and retain screen shots of the web pages on which their advertisements appeared, as well as screen shots of the web pages establishing the path used to access their advertisements.

Separately, in the NPRM, the Departments provided notice that DOL was evaluating the development of a centralized online platform to automate the advertising of H–2B job opportunities in order to assist employers in complying with the proposed electronic advertising requirement. Specifically, DOL envisioned that this electronic advertising platform would maintain a standard set of data on each job opportunity for integration with a wide array of job search website technologies. As envisioned in the NPRM, employers who elected to use this electronic advertising platform would consent to have DOL transmit information about their H–2B job opportunities to companies offering to provide advertising services. These companies would, in turn, advertise the employers' job opportunities on their respective job search websites.

2. Discussion

The Departments received comments both in support and in opposition to the proposal to replace the print newspaper-advertising requirement in 20 CFR 655.42 with a requirement to post an electronic advertisement on the internet. Some commenters fully supported the Departments' proposed transition to electronic advertising, agreed it was a necessary modernization of the H–2B program, and expressed a belief that online advertisements would permit employers to recruit labor more quickly and reliably than print newspaper advertisements.

However, the Departments also received a number of comments that raised significant concerns with various aspects of the proposal. For instance, some commenters cited data indicating people in rural communities are less likely to have reliable high-speed internet access than those in urban areas, which could impede employers' ability to post—and U.S. workers' ability to view—electronic advertisements. These commenters raised concerns that workers in particular demographic groups, such as lower income workers or workers with low levels of education, are less likely to use the internet to search for job opportunities. Other commenters raised significant issues with the proposed criteria for websites, the minimum required duration of the posting, and the documentation that employers would be required to retain to establish compliance.

After considering these comments, the Departments continue to believe that electronic advertising is an effective medium through which to reach U.S. workers. However, upon further consideration of how an electronic posting requirement can be effective in testing the U.S. labor market, how it can be effectively administered and enforced, and by whom, the Departments have decided to rescind, rather than revise, the advertising requirement in 20 CFR 655.42. Instead, the Departments have decided that DOL will carry out the electronic advertising itself by posting H–2B job opportunities on *SeasonalJobs.dol.gov,* an improved and expanded version of the electronic job registry that DOL is required to maintain under its existing regulations. *See* 20 CFR 655.34. To accomplish this, in addition to placing copies of all approved H–2B job orders on its publicly accessible electronic job registry, 20 CFR 655.34, DOL will continue to enhance the functional capabilities of the registry so that it also serves as a job search website that broadly advertises and disseminates H–2B job opportunities to U.S. workers. As discussed in detail below, the Departments believe this approach strikes an appropriate balance between addressing the concerns that stakeholders have raised with the proposed electronic advertising requirement and realizing the Departments' goal of modernizing and improving the labor market test conducted in connection with an H–2B application.

Having DOL facilitate the electronic advertising of H–2B job opportunities will have several salutary effects. First, it addresses concerns raised in public comments regarding the effect that this rule will have on employers who lack internet access and/or who have religious objections to using the internet. The employer will not need internet access to advertise job opportunities because DOL will be placing advertisements on *SeasonalJobs.dol.gov* on behalf of all employers using the information that employers provide to DOL in their H–2B applications. U.S. workers interested in a particular job opportunity can apply by directly contacting the employer, using the contact information—regardless of whether that is an email or physical address—that the employer provided to DOL. Second, it eliminates the need to establish regulatory criteria for the websites on which employers may place advertisements or the documentation employers must retain to establish compliance with those criteria. It also reduces burden on prospective H–2B employers—who historically have been the parties tasked with placing advertisements—by effectively transferring the responsibility (and cost) for this activity from prospective H–2B employers to DOL. Finally, and most importantly, it strengthens the integrity and efficiency of the labor market test that is conducted in connection with an H–2B application by leveraging the latest job search technologies to more broadly disseminate information about H–2B job opportunities through a centralized website. The enhancements that DOL is making to its electronic H–2B job registry, as well as each of these salutary effects, are discussed in further detail below.

(a) DOL Will Improve and Expand Its Electronic H–2B Job Registry Instead of Creating a Separate DOL-Assisted Advertising Platform

As previously mentioned, after considering the comments received in response to the NPRM, the Departments have decided that the best approach is for DOL to assume the responsibility for posting an electronic advertisement through its own website. Accordingly, this final rule provides notice that DOL intends to continue to improve and enhance the electronic job registry that it maintains under its existing regulations. *See* 20 CFR 655.34 (generally requiring the CO to place a copy of an employer's job order on an electronic job registry once the employer's H–2B application has been accepted for processing, and generally requiring that this job order remain posted on the electronic job registry until 21 calendar days before the certified start date of work).

DOL initially implemented the job registry to accommodate the posting of H–2A job orders for two reasons. *See* 75 FR 6884, 6927 (Feb. 12, 2010) (2010 H–2A Final Rule). One was to promote public disclosure and transparency and the other was to have an additional tool through which U.S. workers and other intermediaries providing services to agricultural employers could more easily identify available job opportunities. DOL later expanded use of the job registry to include H–2B job orders to disseminate temporary nonagricultural job opportunities to the widest audience possible. *See* 80 FR at 24074. DOL has used the same technology platform to host its electronic job registry—the iCERT Visa Portal System (iCERT System)—since July 2010, shortly after § 655.144 as promulgated in its 2010 H–2A Final Rule went into effect.

Under the current H–2B program, once an employer's application has been accepted for processing, the CO will redact any confidential information on the employer's job order and upload a redacted image of the job order onto the iCERT System, where it will generally remain posted until 21 calendar days before the certified start date of work. *See* 20 CFR 655.40(c). At the conclusion of this period, the CO will change the job order to inactive status, so that the information on the job order will still be available for public research and access. The iCERT System currently allows the public to search and retrieve H–2B job orders using several common data points—including the H–2B application number, employer name, area of intended employment, work contract period, and job title. Stakeholder feedback suggests that many stakeholders value the transparency of a publicly available job registry and consistently use the current job registry to locate H–2B job orders.

Currently, however, the technology supporting the job registry is more than 10 years old, lacks compatibility with the latest mobile devices, and provides limited search options for the public to retrieve H–2B job orders. It also serves as a static repository of H–2B job orders and lacks functionality that can facilitate the dissemination of these job opportunities to the widest audience. Finally, the manual process of scanning, redacting, and uploading scanned images of job orders increases the risk of error, incomplete information, and delays in posting, especially during the winter months when employers are filing large numbers of applications for the upcoming spring and summer seasons.

To address these limitations and expand U.S. worker awareness and access to temporary and seasonal job opportunities, DOL is in the process of transitioning its electronic job registry to a new platform, *SeasonalJobs.dol.gov,* and it plans to decommission the public job registry on the iCERT System in the fall of 2019.[10] *SeasonalJobs.dol.gov* is a mobile-friendly website that leverages the latest technologies to automate the electronic advertising of H–2B job opportunities *and* ensures copies of H–2B job orders are promptly available for public examination.

SeasonalJobs.dol.gov is currently operational. Once a CO has accepted an employer's H–2B application for further processing, DOL posts a brief description of the employer's job opportunity on *SeasonalJobs.dol.gov* that includes a link to a full copy of the employer's job order. The employer's job opportunity appears on the website in a concise and easy-to-read format, using information that the employer reports to DOL on its H–2B application and job order. While currently functional, DOL continues to enhance the functionality of *SeasonalJobs.dol.gov* to make information about H–2B job opportunities more accessible to U.S. workers. For instance, the search options available in the iCERT System are limited to job title, employer name, job order posting date, and the state where work will be performed. Users will be able to create and save customizable job search profiles and request email notifications informing them when DOL posts positions that match their search criteria. In addition, a geolocation Application Programming Interface will connect a user's current geographic location (when available) to the website's automated search tool, so that search results favor job opportunities near the user's current location. Location history will also help DOL identify how many users are searching for work in certain areas of the country and more effectively steer H–2B job opportunities to groups of job seekers located in certain regional areas and/or seeking different types of temporary nonagricultural work.

In addition, *SeasonalJobs.dol.gov* will make information about H–2B job opportunities more accessible to U.S. workers with limited English proficiency by posting the jobs in a format that allows language translation services to access and translate both the general web content on *SeasonalJobs.dol.gov* and specific terms and conditions of the job opportunities presented on job orders through the site. It will also facilitate broader dissemination of available job opportunities by making a standard set of job data available to third-party job search websites, which will allow job search websites to execute web-scraping protocols that extract new H–2B job opportunities from *SeasonalJobs.dol.gov* and index them for advertising to U.S. workers. In fact, Jobs on Google and LinkedIn job search features index the H–2B job opportunities currently advertised on *SeasonalJobs.dol.gov,* and DOL is evaluating additional integrations with other commonly used job search and social media websites to cast as wide a net as possible to help Americans find jobs. Finally, DOL will be further enhancing the RSS feed capability to allow interested U.S. workers and stakeholders to tailor notifications of relevant job opportunities.

The Departments believe that the enhancements DOL has and will continue to make to the electronic job registry will improve the existing labor market test and resolve many of the concerns that commenters raised in response to the NPRM.

This approach is also consistent with suggestions that the Departments received from commenters who urged DOL to either allow postings on its electronic job registry to fulfill the proposed electronic advertisement requirement or to implement a DOL-assisted electronic advertising platform. In fact, most of these comments expressed support for a DOL-administered-advertising platform, noting it would reduce regulatory burdens on employers, assist employers in complying with advertising requirements, and enhance U.S. worker access to employers' job opportunities in a centralized location and standardized format. A labor union commenting on the proposal urged DOL to ensure that the platform would be compatible with smart phone technology, and that the platform provide notice of job opportunities to unions and worker advocacy organizations. It also urged the Departments to permit those organizations time to review the advertisements and provide input to DOL regarding the appropriateness of the occupational classification and designated prevailing wage. In contrast, one commenter believed it would be unnecessary for DOL to create a new or updated platform because it could use commercial applicant tracking systems

[10] DOL first announced that it would be launching *SeasonalJobs.dol.gov* on December 21, 2018. *See https://www.dol.gov/newsroom/releases/eta/eta20181221.*

that post advertisements to all of the major online job boards and permit applicants to complete applications at any time from any device.

The Departments have considered these comments, and while the Departments have decided not to go forward with the DOL-assisted advertising platform that was proposed in the NPRM, they anticipate that stakeholders will be pleased with the improvements DOL has—and continues—to make to the electronic job registry. DOL has administered this electronic job registry in some form for nearly a decade. Accordingly, employers have been and continue to be on notice that, as a condition of participating in the H–2B program, the CO will place a copy of their approved H–2B job order on an electronic job registry. As explained above, DOL created this job registry to promote greater public awareness of and access to H–2A and H–2B job opportunities. The enhancements DOL has made and continues to make to *SeasonalJobs.dol.gov*, including the capability for third-party websites to extract H–2B job opportunities for broader advertising, are designed to further this goal and increase the likelihood that U.S. workers interested in temporary nonagricultural opportunities, as well as intermediaries providing services to those workers, receive timely notice of H–2B job opportunities.

Because the Departments are not implementing a separate DOL-assisted advertising platform, but rather enhancing the electronic job registry that DOL is currently required to maintain, the Departments have decided that U.S. workers will be best served if DOL implements these enhancements as soon as practicable. Nevertheless, the Departments value all suggestions and ideas to improve the functionality of *SeasonalJobs.dol.gov* and invites public input on changes that DOL can make to attract U.S. workers who are likely to apply for seasonal or temporary nonagricultural jobs. To facilitate public input, DOL has made the site easily accessible and included a specific function to collect stakeholder feedback and questions. DOL will also continue—as is its practice—to solicit and incorporate informal feedback from program users and other stakeholders in the course of outreach and technical assistance activities (including DOL-hosted stakeholder meetings and webinars) and at conferences, forums, and events hosted by interested stakeholders.

The Departments have also considered issues that several commenters raised regarding technical difficulties with DOL's existing job registry and the iCERT System, and agree that it is critical for *SeasonalJobs.dol.gov* to function effectively and reliably. Although this is a goal of the Departments independent of public comments in response to the NPRM, the above-referenced steps that DOL is taking to meet this goal should address and allay the concerns of the stakeholder community.

(b) Posting H–2B Job Opportunities on *SeasonalJobs.dol.gov* Will Reduce Regulatory Burden and Address Concerns About the Proposed Criteria for Employer-Posted Electronic Advertisements

The Departments received numerous comments addressing electronic advertisements, the criteria that would apply to these advertisements, and the documentation that an employer would be required to maintain. Many commenters generally agreed with the Departments' proposal to transition to electronic advertising, but a number of commenters urged the Departments to modify the proposal in various ways. For example, several commenters expressed concern that the proposed rule did not accommodate employers who had limited or no access to the internet, and they urged the Departments to provide employers the option of posting an electronic advertisement *or* print newspaper advertisements.

The Departments also received many comments suggesting that the standard they proposed to define the websites on which an employer could place an electronic advertisement required clarification. A number of commenters felt the proposed standard was ambiguous and did not sufficiently identify the websites—or types of websites—that would be permissible under the proposed rule. One commenter explained that the approach announced in the NPRM was ''unworkable and unpredictable,'' given the sheer number of websites that would qualify under the proposed standard. These commenters expressed varying opinions about the types of websites they believed should qualify and, for differing reasons, urged the Departments to further clarify, define, or list the websites where it would be appropriate for an employer to advertise an H–2B job opportunity. For example, several commenters suggested the Departments should require advertising on specific websites, including social media websites, state and county employment websites, and the National Labor Exchange, an online advertising platform operated by SWAs in partnership with operators of private online job boards.

Other commenters, by contrast, opposed the adoption of more specific qualifying criteria, which they argued would be cumbersome and make the regulation difficult to adapt to future changes in practices and technologies. Indeed, at least one commenter expressed concern that the proposed standard would require employers to monitor website platforms and technologies to ensure that they remain compliant with regulatory criteria.

The Departments also received comments from stakeholders on whether the final rule should exclude advertisements placed on websites operated by employers or the employer-client of a job contractor. An association of attorneys and legal professionals, as well as several labor unions, asserted that placement of advertisements on websites operated by employers is insufficient to satisfy an employer's recruitment obligations. One commenter expressed concern that such advertising would require potential applicants to know that a specific employer is seeking to hire H–2B workers and permit unscrupulous employers to ''hide'' advertisements. A few of these commenters believed that employers should be required to post job advertisements on their websites as a supplement to advertisements on other websites, but did not believe advertising on these websites alone would be effective. In contrast, a commenter representing an employer association believed advertising on employer websites would be effective because these websites would be appropriate to both the industry and location of the job opportunity.

In addition, some commenters sought clarification on the documentation that an employer would be required to retain under the proposed recordkeeping requirements. For example, one commenter expressed concern that the proposed rule did not clearly articulate what documentation an employer must retain. Another commenter suggested it would be overly burdensome to print and retain screen shots documenting compliance with this rule and suggested an employer's attestation should be sufficient to verify compliance. A labor union urged the Departments to require employers to include in their recruitment reports both the advertisements and the documentation of advertising. Another commenter believed the proposed screenshot documentation method was outdated, but did not suggest an alternative. Finally, commenters associated with the

newspaper industry additionally alleged that newspapers are a more reliable means of documenting compliance, because they are archived and available if an employer loses its copy of the tear sheet, whereas screen shots of websites can be easily lost, altered, or fabricated.

The issues that these commenters raised have persuaded the Departments that it would be unduly difficult at this time to develop, interpret, and implement qualifying criteria to govern the types of websites on which employers should place an electronic advertisement, as well as the documentation that an employer should retain to demonstrate compliance with this requirement. In addition, it is unnecessary to impose such requirements upon employers, when DOL has the capacity to produce similar benefits through its own website. Accordingly, as explained above, the Departments have decided not to adopt their proposal to require that an employer post an electronic advertisement. Instead, DOL will advertise on an employer's behalf by posting its job opportunity on *SeasonalJobs.dol.gov.*

Assuming control over the posting of the electronic advertisement and placing it on a centralized, DOL-administered platform addresses many, if not all, of the above-referenced concerns. As a preliminary matter, the Departments will no longer need to establish—and employers will no longer need to comply with—regulatory criteria limiting the types of websites on which employers must place an electronic advertisement or the documentation necessary to demonstrate compliance with this requirement. Moreover, the advertisement that DOL posts on *SeasonalJobs.dol.gov* will not create any additional regulatory burden for an employer because the employer will have already provided DOL with information about its job opportunity on its job order and H–2B application, which DOL will use to generate the advertisement it posts on *SeasonalJobs.dol.gov.* U.S. workers interested in a particular job opportunity can apply by directly contacting the employer, using the contact information that the employer provided on its job order and H–2B application. As noted above, employers who lack access to the internet will not need to acquire access to the internet to post advertisements on *SeasonalJobs.dol.gov* or respond to any applications that they receive from U.S. workers in response to these advertisements, and employers will not need to determine whether a particular website meets applicable regulatory criteria or retain evidence of this posting.

Finally, the Departments believe this approach leaves unscrupulous employers no leeway to ''hide'' their job opportunities on websites that they suspect are unlikely to attract qualified and available U.S. workers. *SeasonalJobs.dol.gov* will offer U.S. workers a free, publicly accessible, and easy-to-use job search platform that identifies all job opportunities for which employers are seeking to hire H–2B workers.

Thus, the Departments' revisions to the labor market test in this final rule seeks to reduce the burden of applying for an H–2B labor certification, while simultaneously broadening the dissemination of all H–2B job opportunities in a more uniform format through a modernized technology platform.

(c) The Advertisements That DOL Places on *SeasonalJobs.dol.gov* Will Improve the Information That U.S. workers Receive About H–2B Job Opportunities

The Departments also received several comments questioning whether U.S. workers would be able—or likely—to access the electronic advertisements required under the proposed rule. In addition to concerns over issues of internet accessibility, explained elsewhere, commenters expressed concerns that U.S. workers would encounter difficulty determining where to look for information about potential job opportunities. A labor union, for example, stated that it would be difficult for job seekers to know where to look for advertisements because a vast number of websites might be appropriate under the criteria proposed in the NPRM. As explained below, the Departments' decision for DOL to assume control over the posting of the electronic advertisement not only reduces the burden of applying for an H–2B labor certification, but also improves worker access to information about H–2B job opportunities.

First, it ensures that all H–2B job opportunities are advertised in a centralized location and in a uniform manner. This eliminates the concern raised by some commenters that U.S. workers would not know where to go to look for information about available H–2B job opportunities if employers were not posting advertisements in consistent locations or that unscrupulous employers could intentionally post advertisements on websites that are unlikely to yield applications from able, willing, and qualified U.S. workers.

Second, DOL can assure broader dissemination of H–2B job opportunities without requiring an employer to ensure that the website on which it places its advertisement is functionally compatible with the latest commercial web browser platforms and easily viewable on mobile smartphones and similar portable devices. Under the Departments' approach, it is DOL (and not the employer) who will ensure compliance with these requirements. DOL will stay abreast of broader changes in technologies and implement appropriate upgrades to the usability and security of the *SeasonalJobs.dol.gov.* For example, unlike the iCERT System, *SeasonalJobs.dol.gov* uses Responsive Web Design (RWD), which allows DOL to optimize the design and content structure of the website to fit on the screen of the user's computer, smartphone, or other similar portable device, regardless of size. The RWD approach allows DOL to create a single website design that can reach users across a wide array of computing devices. DOL continuously tests the site's mobile device compatibility using a series of emulation tools and a wide array of actual mobile devices.

Third, DOL will be able to improve the presentation of H–2B job opportunities to U.S. workers. While the Departments continue to believe that U.S. workers should have access to all of the information that is currently required by 20 CFR 655.41, they also understand that, in some situations, a concise summary of the job opportunity may be more attractive to U.S. workers, at least as a starting point. Accordingly, the advertisements that DOL places on *SeasonalJobs.dol.gov* provide a concise summary of the job opportunity, highlighting select information about an employer's job opportunity and including a link to the job order, so that U.S. workers can quickly review listings to assess whether they are interested in a particular job and, if interested, review the job order to access all of the terms and conditions of employment. Additionally, DOL intends to upgrade *SeasonalJobs.dol.gov* to allow users to create and manage customizable notifications for the H–2B job opportunities. Specifically, as noted above, DOL plans to enhance the site's current RSS feed capability, which includes a basic function that alerts users when DOL updates web-based content, with more sophisticated options that will allow users to personalize these alerts so that they only receive notifications of new postings for specific types of temporary or seasonal

work and/or in predetermined frequencies (*e.g.,* immediately, daily, weekly, monthly) tailored to their individual preferences. Users will be able to manage these notifications and turn them off when they are no longer needed or relevant.

Fourth, DOL will be able to improve the accessibility of electronic advertisements to U.S. workers, especially those workers with limited English proficiency. The internet offers an abundance of content presented in languages other than English, and the Departments recognize there are already a number of free browser applications and extension technologies (*e.g.,* Google Translate, Chrome Duolingo, Firefox's Flagfox) that provide users with translations, definitions, and other language assistance. To assist U.S. workers who search for jobs online but who have limited proficiency in English, jobs available on *SeasonalJobs.dol.gov* will be posted in a format that allows language translation services to access and translate both the general web content and specific terms and conditions of the job opportunities presented on job orders. DOL is further evaluating whether existing technologies and services can provide effective language translation services, and can be implemented through the site, to both general web content on *SeasonalJobs.dol.gov* and specific information about H–2B job opportunities presented on the site. The Departments understand the challenges (*e.g.,* numerous language dialects, accurately applying grammatical rules) associated with language translation tools and services, but believe that it is important for the information on *SeasonalJobs.dol.gov* to be accessible and understandable to the widest possible audience of U.S. workers who are looking for employment. DOL will therefore work as expeditiously as possible within existing budgetary constraints to implement additional built-in language translation services for all job opportunities advertised on *SeasonalJobs.dol.gov.*

Finally, the Departments acknowledge that some U.S. workers may lack reliable access to the internet and agree that no single recruitment method will reach all job seekers. The Departments likewise do not dispute that other methods of recruitment may be effective in limited circumstances. Nevertheless, the Departments' move to electronic advertising—and to *SeasonalJobs.dol.gov* in particular—is only one aspect of the labor market test conducted in connection with an H–2B application. The existing labor market test additionally includes the intrastate and interstate clearance process administered by the SWA, *see* 20 CFR 655.16(c), the requirement for an employer to contact former U.S. employees, *see* 20 CFR 655.43, the requirement to post notice of the job opportunity at the worksite, and, in certain circumstances, provide written notice of the job opportunity to a community-based organization, *see* 20 CFR 655.45.

The Departments believe that the enhancements DOL has and continues to make to the electronic job registry will improve the existing labor market test by increasing awareness of H–2B job opportunities, which interested parties may then share with U.S. workers who do not have access to the internet or who may not use the internet to search for job opportunities. Moreover, as discussed in detail below, this final rule retains the option for DOL to require additional recruitment where the CO has determined that there is a likelihood there are qualified U.S. workers who will be available for the work, including where the job opportunity is located in an Area of Substantial Unemployment. *See* 20 CFR 655.46. Accordingly, even if certain U.S. workers interested in temporary nonagricultural jobs are unlikely to view an advertisement on *SeasonalJobs.dol.gov* (*e.g.,* workers who do not have internet access or who are otherwise unlikely to turn to the internet to search for available job opportunities), they may be identified through other steps in this labor market test.

C. The Departments Are Retaining the Options To Require Additional Employer-Conducted Recruitment Under § 655.46.

In developing this final rule, the Departments have given careful consideration to the responses they received in response to their request for comments regarding whether there are alternative methods of recruitment that would more broadly and effectively disseminate information about available job opportunities to U.S. workers. A number of commenters suggested other methods of recruitment, such as placing advertisements on radio stations, making use of 24/7 job hotlines, and placing advertisements in community-based or other publications that target populations who may be interested in temporary or seasonal work.

Two commenters representing worker advocacy organizations also urged the Departments to require more dissemination of H–2B job opportunities to unemployed U.S. workers through DOL-funded grantees under the Workforce Innovation and Opportunity Act and expand union notification requirements to those unions representing workers in the job opportunity on a nationwide scale. These commenters also recommended that the Departments expand the recruitment activities of the SWAs to ensure job seekers, particularly those who lack adequate access to the internet, are made aware of H–2B job opportunities. Specifically, one of these commenters suggested the Departments require the SWAs to consult with worker advocacy organizations to develop annual plans for recruiting U.S. workers on a nationwide scale targeting specific groups of unemployed U.S. workers using a variety of advertising methods.

Some commenters were not opposed to the idea of internet advertising, but suggested strengthening the requirements in the rule, maintaining that a single advertisement would not account for the broad range of positions and geographic areas where H–2B workers are employed. They urged the Departments to require employers to further tailor their recruitment. One commenter asserted that modern-day recruitment of hourly workers demanded a targeted marketing strategy such as a 24/7 job hotline and applicant tracking system. Another argued for leaving the specific methods of recruitment to the SWAs, who could develop recruitment plans suited to the needs of each locality. Another thought it ''critically important'' that the CO maintain flexibility to require additional advertising in certain circumstances. This commenter also recommended that, in addition to any electronic means for applying to jobs, there should also be a variety of non-electronic means, to account for the possibility that a U.S. worker will have limited or only short-term access to the internet.

The Departments appreciate the ideas and suggestions that they received on alternative forms of recruitment. DOL has considered each of these suggestions but notes that many of these proposals—including advertising on local radio stations or in community-based and ethnic publications or using commercial recruitment services—are challenging to regulate and monitor. Because the Departments do not currently have sufficient information regarding the efficacy of these proposals in recruiting U.S. workers for temporary nonagricultural employment, the Departments have decided that a generally applicable requirement for every employer to use these methods is unwarranted at this time. However, to the extent that DOL receives information indicating that one or more

of these methods are effective in a particular area or among specific groups of U.S. workers, the CO retains the authority under 20 CFR 655.46 to order an employer to use that method to recruit U.S. workers.

The Departments continue to believe that this provision provides sufficient flexibility to design recruitment procedures—and the appropriate means of recruitment in those areas—on a case-by-case basis taking into account the occupation and current labor market conditions. This provision provides the CO with flexibility to keep pace with the ever-changing labor market trends and technologies and select the most appropriate method(s) of recruitment for a particular job opportunity. The Departments' intention in requiring additional recruitment under this provision, including in areas of substantial unemployment (ASU), is predicated on the belief that more recruitment will result in more opportunities for U.S. workers. ASUs by their nature have a higher likelihood of worker availability; DOL's recognition of worker availability in these areas is a strong indicator that these open job opportunities may have more receptive potential populations.

Under 20 CFR 655.46 the CO has discretion to evaluate, on a case-by-case basis, the appropriate locations and methods of recruiting where there may be qualified U.S. workers available for job opportunities. The types of additional recruitment the CO may require the employer to conduct include print advertising, advertising on the employer's or another website, and contacting community and faith-based organizations. Title 20 CFR 655.46 does not afford the CO unlimited discretion; rather, it authorizes the CO to order only the recruitment necessary to ensure an adequate test of the labor market for the employer's job opportunity.

In determining whether and what additional recruitment is required for a position, the CO will continue to consider, among other information, information that DOL obtains from SWAs who are familiar with current labor market conditions and positioned to provide advice about the effective methods of recruiting U.S. workers for the job opportunity. The Departments acknowledge the comments they received suggested a wide array of alternative methods of advertising that, depending on the information provided to the CO, may effectively disseminate information about available job opportunities to U.S. workers. For example, based on the information DOL receives from SWAs, the CO may determine that a particular method of advertising (*e.g.,* a community-based newspaper) covering a regional area may be effective in recruiting U.S. workers for a particular position, in a specific location, during certain periods of the year, or in response to local or regional events like natural disasters, layoffs, and plant closures. In requiring the use of a particular method of advertising, the CO will take into consideration all available information about whether that method has been, or is likely to be, effective in generating referrals of qualified U.S. workers.

D. Other Technical Amendments Related to the Final Rule

This final rule also makes technical amendments to several regulatory provisions to ensure they conform with the substantive changes to the recruitment process discussed above. First, the rule amends 20 CFR 655.19(e)(1), 655.40(b), and 655.41(a) by replacing references to 20 CFR 655.42 with references to 20 CFR 655.43 to reflect the Departments' decision to eliminate the requirement for all employers to place print newspaper advertisements. For the same purpose, the final rule amends 20 CFR 655.56 by eliminating paragraph (c)(2)(ii), which references 20 CFR 655.42, and redesignating paragraphs (c)(2)(iii), (iv), and (v) as paragraphs (c)(2)(ii), (iii), and (iv), respectively. The final rule also amends 20 CFR 655.71 by removing the reference to ''newspapers and other publications'' to clarify that the CO has the discretion to order advertising in sources like newspapers and other publications, but 20 CFR 655.71(c) does not require the CO to order advertising in these sources.

Finally, the final rule also makes a minor technical revision to WHD regulations at 29 CFR part 503 to ensure they conform with the substantive changes to the recruitment process discussed above. Specifically, the final rule eliminates 29 CFR 503.17(c)(2)(ii), which includes reference to 20 CFR 655.41 and 655.42, and redesignates paragraphs (c)(2)(iii), (iv), and (v) as (c)(2)(ii), (iii), and (iv), respectively.

E. Out of Scope Comments on the Proposed Rule

The Departments received comments on several issues that were unrelated to their proposal to modernize the recruitment that an employer must conduct under the regulations by replacing print newspaper advertisements with electronic advertisements posted on the internet. The Departments recognize and appreciate the value of these comments and suggestions. However, they are outside the scope of this rulemaking and the Departments cannot adopt them without additional regulatory—and in some cases Congressional—action.

II. Administrative Information

A. Executive Orders 12866 (Regulatory Planning and Review), 13563 (Improving Regulation and Regulatory Review), and 13771 (Reducing Regulation and Controlling Regulatory Costs)

Under Executive Order (E.O.) 12866, the Office of Management and Budget (OMB)'s Office of Information and Regulatory Affairs determines whether a regulatory action is significant and, therefore, subject to the requirements of the E.O. and review by OMB. *See* 58 FR 51735 (Oct. 4, 1993). Section 3(f) of E.O. 12866 defines a ''significant regulatory action'' as an action that is likely to result in a rule that: (1) Has an annual effect on the economy of $100 million or more, or adversely affects in a material way a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or state, local or tribal governments or communities (also referred to as economically significant); (2) creates serious inconsistency or otherwise interferes with an action taken or planned by another agency; (3) materially alters the budgetary impacts of entitlement grants, user fees, or loan programs, or the rights and obligations of recipients thereof; or (4) raises novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in the E.O. *Id.* OMB has determined that this final rule is a significant, but not economically significant, regulatory action under Sec. 3(f) of E.O. 12866. Consequently, OMB has reviewed this rule.

E.O. 13563 directs agencies to propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs; the regulation is tailored to impose the least burden on society, consistent with achieving the regulatory objectives; and in choosing among alternative regulatory approaches, the agency has selected those approaches that maximize net benefits. E.O. 13563 recognizes that some benefits are difficult to quantify and provides that, where appropriate and permitted by law, agencies may consider and discuss qualitatively values that are difficult or impossible to quantify, including equity, human dignity, fairness, and distributive impacts.

This final rule is an E.O. 13771 deregulatory action because the cost savings to H–2B employers associated with the rule are larger than the costs.

The estimated cost savings associated with this regulatory action are derived from the rescission of § 655.42 to remove the newspaper advertising requirement, and the revision of § 655.56 to eliminate document retention requirements associated with print newspaper advertisements.

1. Discussion of Comments

In response to the NPRM, which instituted an online advertising requirement in place of the current print advertising requirement, some commenters took issue with the Departments' assumption that the cost savings of the proposed rule outweighed its costs. One commenter stated that the analysis did not attempt to estimate what burdens the proposed rule or any alternative rules considered would impose on U.S. workers, relative to the current rule, in terms of their ability to search for and locate available jobs. Another commenter suggested that the Departments' estimates for the costs of online advertisements underestimated actual fees, stating that prices for advertising online are in some instances the same as, if not greater than, the cost of a single newspaper advertisement. The same commenter believed the proposed rule's use of advertising rates for the largest newspapers in the five states with the most H–2B temporary labor certifications inflated the NPRM's estimated costs. The commenter stated that the proposed rule's analysis did not specify the criteria used for developing the cost estimates and was not representative of the smaller newspapers employers may use to meet print advertising requirements, noting that print advertising costs vary based on a number of factors (*e.g.,* advertisement size, number of lines, and geographic location). Additionally, the commenter asserted that the analysis inflated cost estimates because it failed to account for the fact that the advertising fee charged by many newspapers includes both digital and print advertising. Finally, the commenter asserted the analysis failed to account for the costs of compliance with the proposed rule for employers and the costs associated with DOL enforcement of the rule.

The proposed rule based the cost estimates for two newspaper advertisements on advertising costs from newspapers with the widest circulation in the five states where H–2B certifications are most prevalent, as well as the advertising costs from the most widely circulating newspapers in the top feeder states that are adjacent to the primary H–2B prevalent states. The estimate of $1,606.16 represents, on average, a reasonable estimate of cost savings of removing print newspaper requirements. As for the costs associated with online job posting, the Departments agree with the commenter's concern that DOL may have underestimated the cost of online advertising. As explained elsewhere in this preamble, the Departments have concluded that, to reduce this cost and burden, expand the reach of each ad, and leverage DOL's existing technology and infrastructure, it is appropriate for DOL rather than employers to place H–2B electronic advertisements. The final rule replaces the print newspaper-advertising requirement with employers' job opportunities posted on a DOL-maintained website, *SeasonalJobs.dol.gov,* thus eliminating the cost to employers. Additionally, the enhancements DOL has and continues to make to *SeasonalJobs.dol.gov* are designed to further the Departments' goal to promote greater public awareness of and access to H–2B job opportunities in order to increase the likelihood that U.S. workers interested in nonagricultural opportunities, as well as intermediaries providing services to those workers, receive timely notice of H–2B job opportunities. Any costs or burden that an employer incurs reviewing increased applications from U.S. workers is a fundamental obligation for choosing to participate in the H–2B program and outweighed by the Departments' statutory obligation to ensure that able, willing, and qualified U.S. workers are not available. As explained above, DOL has also estimated the cost savings from eliminating the document retention requirement. In terms of cost impacts on job seekers, the costs of searching and applying for a job electronically are less than the cost associated with searching and applying for a job through a newspaper recruitment advertisement.[11]

Four commenters asserted that the analysis did not consider the effect the rule would have on the newspaper industry, though three of these commenters acknowledged that the proposed rule estimated that lost revenue would equal $9.45 million. While this rule may have an effect on the newspaper industry, the advertising revenue lost from employers who are no longer required to post job openings in print is expected to represent an insignificant portion of the industry's overall advertisement revenue.[12]

2. Subject-by-Subject Analysis

The Departments' analysis below considers the expected impacts of the following aspects of the final rule against the baseline (*i.e.,* the 2015 Interim Final Rule (80 FR 24042 (Apr. 29, 2015)): (a) Rescission of the requirement that an employer advertise its job opportunity in a print newspaper of general circulation in the area of intended employment; (b) elimination of the document retention requirement associated with print newspaper advertisements; and (c) the time it takes the regulated community to read and review the rule.

(a) Eliminating the Use of Print Newspaper Advertisements

This final rule modernizes H–2B recruitment by rescinding the regulation at 20 CFR 655.42 imposing the requirement for print newspaper advertisements, and amending the regulation at 20 CFR 655.41(a) to delete reference to the content of print advertisements. In conjunction with this rule, DOL will assume responsibility for these recruitment activities by advertising each employer's job opportunity on a DOL website designed to make the job opportunity more broadly available to U.S. workers.

To estimate the cost savings to employers that would result from this final rule, the Departments multiplied the average number of H–2B labor certifications issued each fiscal year by the average cost to an employer of placing a print advertisement. First, the Departments used program data for FYs 2015–2017 to estimate that DOL approves, on average, 5,879 H–2B labor certifications each fiscal year.[13] To estimate the average cost of a print ad, the Departments identified the top five states where prospective H–2B employers received temporary labor certifications,[14] and researched the cost of placing a newspaper advertisement in the most populous city in each of these states (for several newspapers, including large and local papers), for advertisements satisfying the content requirements set forth in § 655.41. Based

[11] The Departments acknowledge that some job seekers may not have access to the internet. For this group of job seekers, it may not necessarily be less costly to search and apply for a job online. However, the Departments believe that the number of job seekers without internet access is a small portion of the population.

[12] The total estimated advertising revenue for the newspaper industry in 2018 was $14.3 billion (*https://www.journalism.org/fact-sheet/newspapers/*).

[13] The average is based on 5,106 H–2B certifications in FY 2015; 5,933 certifications in FY 2016; and 6,599 certifications in FY 2017. *See https://www.foreignlaborcert.doleta.gov/performancedata.cfm.*

[14] The top five states where employers seek to place H–2B workers are Colorado, Florida, Louisiana, Texas, and Virginia.

on this data, the Departments estimated that, on average, it costs an employer $803.08 to place a single advertisement (one day) complying with § 655.41's content requirements.

Thus, placing the advertisement on two separate days, as required by § 655.42, costs an employer, on average, twice as much, or $1,606 ($803 for each advertisement).

As mentioned above, employers can advertise using the DOL-maintained website free of charge, so removing the requirement to advertise in a print newspaper would result in a cost savings equal to the cost of complying with the current regulation. Although § 655.42 currently requires that one of the advertising days be a Sunday, the Departments did not identify a significant difference in cost between advertisements placed on Sundays and weekdays. Therefore, the Departments did not distinguish between these two costs when calculating total advertising cost savings.

To estimate the annual newspaper advertising costs that employers will avoid under the final rule, the Departments multiplied the estimated annual number of H–2B temporary labor certifications (5,879) by the average newspaper advertising cost of $1,606. This yielded annual cost savings of $9.44 million. The annualized cost savings over the 10-year period is $9.44 at both discount rates of 3 and 7 percent. The Departments believe that the cost to DOL of upgrading its database and posting an employer's job opportunity on its website would be *de minimis* on an annual basis.

(b) Eliminating Document Retention Requirements

The final rule amends § 655.56 to eliminate the document retention requirement at § 655.56(c)(2)(ii) associated with print newspaper advertisements. To estimate the cost savings from this revision, the Departments calculated the average cost for each employer to retain print advertisements records for each H–2B certification. To do so, the Departments multiplied each employer's per-certification staff time by its per-certification staff cost. The Departments estimate that it takes a human resources (HR) specialist, on average, two minutes to store (print and file) proof of print advertisement. The Departments used the median hourly wage rate of an HR specialist at a nonagricultural business ($31.84) [15] then adjusted the base wage rate using a loaded wage factor (1.63) [16] to account for fringe benefits and overhead. The Departments then multiplied the resulting wage rate by the staff time (two minutes), which yielded a cost of $1.73 per certification. As explained above, the Departments estimate that DOL issues, on average, 5,879 H–2B labor certifications each fiscal year. By multiplying the estimated annual number of certifications by the cost per certification ($1.73), the Departments estimated an annual cost savings of $10,171. The annualized cost savings over the 10-year period is $10,171 at both discounts rates of 3 percent and 7 percent.

(c) Time To Review and Understand the Rule

During the first year after this rule takes effect, employers seeking H–2B workers will need time to learn about the new requirements. The Departments assume that many employers participating in the H–2B program will learn about the requirements of the new rule from an industry newsletter or bulletin. The Departments estimate that an employer will require approximately 10 minutes to understand the rule change, as this final rule addresses only the job-advertising and document retention requirements for employers seeking H–2B workers, and eliminates those requirements without replacing them with new ones.

The requirement to review and understand the rule represents a cost to employers participating in the H–2B program only in the first year of the rule. The Departments estimate this cost for each employer by multiplying the staff time required to read and review the new rule by the estimated staff cost. As above, the Departments estimated a wage rate by multiplying the median hourly wage of an HR specialist at a nonagricultural business ($31.84) by the loaded wage rate (1.63) to account for fringe benefits and overhead. The Departments then multiplied the resulting wage rate by the required staff time (10 minutes), which yielded a cost of $8.65 per employer. The Departments estimated the total cost of reading and reviewing the rule by multiplying $8.64 by the average annual number of employers participating in the H–2B program over FY 2015–2017 (5,326).[17] This calculation results in a cost of $46,069 in the first year the rule is in effect. The annualized cost over the 10-year period is $5,243 and $6,130 at the discount rates of 3 percent and 7 percent, respectively.

3. Summary of Impacts

The Departments estimate the total first-year cost of the final rule to be $46,069. This cost results from the time required to read and review the final rule for the average annual number of unique H–2B employer applicants (based on FY 2015–2017 data). The Departments estimate total first-year cost savings of $9.45 million. This cost savings results from eliminating the requirement that employers place print newspaper advertisements and retain ad-related documents. Net first-year cost savings, therefore, amount to $9.41 million.

Generally, annual cost savings are expected to be $9.45 million in every year following the first. The 10-year discounted net cost savings of the rule range from $80.59 million to $66.35 million (with 3 percent and 7 percent discount rates, respectively). The annualized net cost savings of the final rule is $9.45 at both the 3 percent and 7 percent discount rates. When the Departments use a perpetual time horizon to allow for cost comparisons under E.O. 13771, the annualized cost savings of this final rule are $7.57 million at a discount rate of 7 percent.

B. Regulatory Flexibility Act

The Regulatory Flexibility Act of 1980 (RFA), 5 U.S.C. 601 *et seq.,* as amended by the Small Business Regulatory Enforcement Fairness Act of 1996, Public Law 104–121 (March 29, 1996), requires federal agencies engaged in rulemaking to consider the impact of their proposals on small entities, consider alternatives to minimize that impact, and solicit public comment on their analyses. The RFA requires the assessment of the direct effects [18] of a regulation on a wide range of small entities, including small businesses, not-for-profit organizations, and small governmental jurisdictions. Agencies must perform a review to determine whether a proposed or final rule would have a significant economic impact on a substantial number of small entities. 5 U.S.C. 603 and 604.

This final rule may impact small businesses that request H–2B temporary labor certification. The Departments

[15] Wage derived from Bureau of Labor Statistics median hourly wage for HR Specialists (occupational code 13–1071), May 2017.

[16] The loaded wage factor is calculated using a fringe benefit rate of 46 percent, which is based on the Bureau of Labor Statistics Employer Cost for Employee Compensation data. This fringe benefit rate was added to an overhead rate of 17 percent, which is based on DOL practices.

[17] The average is based on 4,764 unique H–2B employer applicants in FY 2015; 5,296 employers in FY 2016; and 5,917 employers in FY 2017.

[18] Because this rule does not directly regulate newspapers, the rule's potential effects on newspaper revenue are outside the scope of this specific analysis. The Departments note, however, that these effects are discussed above.

assume that the average number of H–2B certifications requested by any small business per year would be one. The Departments estimate that small businesses would incur a one-time cost of $8.65 to familiarize themselves with the rule and would incur annual cost savings of $1,606 associated with advertising online rather than in print newspapers. In addition, the Departments estimate that a small business would incur annual cost savings of $1.63 related to the elimination of the document retention requirement. Over a 10-year analysis period, the net annualized cost savings for a small business would be $1,719 at a 7-percent discount rate.

The Departments reviewed the impacts of the proposed rule for two North American Industry Classification System (NAICS) Codes that frequently request H–2B certification: NAICS 561730: Landscaping Services, and NAICS 721110: Hotels (except Casino Hotels) and Motels. The Small Business Administration estimates that revenue for a small business with NAICS Code 561730 is $7.5 million and for NAICS Code 721110 is $32.5 million.[19] The impact of the final rule would be less than 1 percent of annual revenue for the smallest businesses in these industries with an employment size fewer than five ($197,491 for NAICS 561730 and $321,239 for NAICS 721110).[20] Based on this determination, the Departments certify that this final rule will not have a significant economic impact on a substantial number of small entities.

C. Paperwork Reduction Act

The Paperwork Reduction Act (PRA), 44 U.S.C. 3501 *et seq.,* provides that a Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless it is approved by OMB under the PRA and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information that does not display a valid Control Number. *See* 5 CFR 1320.5(a) and 1320.6. DOL has submitted the Information Collection Request (ICR) contained in this final rule to OMB and obtained approval using emergency clearance procedures outlined at 5 CFR 1320.13.

This final rule modernizes and improves the labor market test that DOL uses to assess whether qualified U.S. workers are available by: (1) Rescinding the requirement that an employer advertise its job opportunity in a print newspaper of general circulation in the area of intended employment; and (2) expanding and enhancing the Department's electronic job registry. More specifically, this final rule eliminates the general requirement for a prospective H–2B employer to advertise its job opportunity in a print newspaper of general circulation in the area of intended employment. However, in contrast to the NPRM, this final rule does not require the employer to place an electronic advertisement on a website that is widely viewed and appropriate for use by workers who are likely to apply for the job opportunity in the area of intended employment. Rather, as explained in detail in this final rule, DOL will advertise the employer's job opportunity on the employer's behalf on *SeasonalJobs.dol.gov,* an expanded and improved version of DOL's existing H–2B job registry website.

During the NPRM stage of this rule, DOL requested the creation of a new OMB Control Number 1205–0534 to account for the time burden and cost associated with the online recruitment process. However, upon further consideration and in light of the revised requirements in the final rule, it is appropriate, instead, to revise the existing OMB Control Number 1205–0509 to account for the burden and costs associated with requiring online ads only, and for the transfer of this burden from employers to DOL. DOL is seeking OMB's approval under PRA emergency procedures to revise 1205–0509 to accommodate this change.

The information collection requirements associated with OMB Control Number 1205–0509, are revised under this final rule as follows. This burden breakdown only reflects the updated burden with regard to the advertisement requirement:

Agency: DOL–ETA.

Type of Information Collection: Currently approved.

Title of the Collection: Advertising Requirements for Employers Seeking to Employ H–2B Nonimmigrant Workers.

Agency Form Number: ETA 9142B, instructions and accompanying appendixes.

Affected Public: Private Sector—businesses or other for-profits.

Total Estimated Number of Respondents: 5,879.

Average Responses per Year per Respondent: 2.

Total Estimated Number of Responses: 11,758.

Average Time per Response: 7 minutes per application.

Total Estimated Annual Time Burden: 0 hours. (Employers will not be burdened with the advertisement requirements.)

Total Estimated Other Costs Burden: $0

D. Unfunded Mandates Reform Act of 1995

The Unfunded Mandates Reform Act of 1995 (UMRA) is intended, among other things, to curb the practice of imposing unfunded Federal mandates on State, local, and tribal governments. Title II of the Act requires each Federal agency to prepare a written statement assessing the effects of any Federal mandate in a proposed or final agency rule that may result in $100 million or more expenditure (adjusted annually for inflation) in any one year by State, local, and tribal governments, in the aggregate, or by the private sector.

This final rule does not exceed the $100 million expenditure in any 1 year when adjusted for inflation, and this rulemaking does not contain such a mandate. The requirements of Title II of the Act, therefore, do not apply, and the Departments have not prepared a statement under the Act.

E. Small Business Regulatory Enforcement Fairness Act of 1996

This final rule would not be a major rule as defined by section 804 of the Small Business Regulatory Enforcement Act of 1996, Public Law 104–121, 804, 110 Stat. 847, 872 (1996), 5 U.S.C. 804(2). The Office of Information and Regulatory Affairs has found that this final rule is not likely to result in an annual effect on the economy of $100 million or more; a major increase in costs or prices; or significant adverse effects on competition, employment, investment, productivity, innovation, or on the ability of United States-based companies to compete with foreign-based companies in domestic or export markets.

F. Executive Order 13132: Federalism

This final rule does not have federalism implications because it would not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

[19] U.S. Small Business Administration (2017), *Table of Small Business Size Standards Matched to North American Industry Classification System Codes,* retried from: *https://www.naics.com/wp-content/uploads/2017/10/SBA_Size_Standards_Table.pdf.*

[20] U.S. Census, *2012 SUSB Annual Data Tables by Establishment Industry, https://www.census.gov/data/tables/2012/econ/susb/2012-susb-annual.html.*

Accordingly, Executive Order 13132, Federalism, requires no further agency action or analysis.

G. Executive Order 13175, Indian Tribal Governments

This final rule does not have ''tribal implications'' because it would not have substantial direct effects on one or more Indian tribes, on the relationship between the Federal government and Indian tribes, or on the distribution of power and responsibilities between the Federal government and Indian tribes. Accordingly, Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, requires no further agency action or analysis.

H. The Treasury and General Government Appropriations Act of 1999: Assessment of Federal Regulations and Policies on Families

This final rule would have no effect on family well-being or stability, marital commitment, parental rights or authority, or income or poverty of families and children. Accordingly, section 654 of the Treasury and General Government Appropriations Act of 1999 (5 U.S.C. 601 note) requires no further agency action, analysis, or assessment.

I. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

This final rule would have no adverse impact on children. Accordingly, Executive Order 13045, Protection of Children from Environmental Health Risks and Safety Risks, as amended by Executive Orders 13229 and 13296, requires no further agency action or analysis.

J. Environmental Impact Assessment

This final rule is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This final rule is therefore categorically excluded from further review under the National Environmental Policy Act of 1969 (NEPA), 42 U.S.C. 4321–4375.

K. Executive Order 13211, Energy Supply

This final rule has not been identified to have impacts on energy supply. Accordingly, Executive Order 13211 requires no further agency action or analysis.

L. Executive Order 12630, Constitutionally Protected Property Rights

This final rule will not implement a policy with takings implications. Accordingly, Executive Order 12630, Governmental Actions and Interference with Constitutionally Protected Property Rights, requires no further agency action or analysis.

M. Executive Order 12988, Civil Justice Reform Analysis

This final rule was drafted and reviewed in accordance with Executive Order 12988, Civil Justice Reform. It was written to provide a clear legal standard for affected conduct and was carefully reviewed to eliminate drafting errors and ambiguities, so as to minimize litigation and undue burden on the Federal court system. It meets the applicable standards provided in section 3 of Executive Order 12988.

List of Subjects

20 CFR Part 655

Administrative practice and procedure, Employment, Employment and training, Enforcement, Foreign workers, Forest and forest products, Fraud, Health professions, Immigration, Labor, Longshore and harbor work, Migrant workers, Nonimmigrant workers, Passports and visas, Penalties, Reporting and recordkeeping requirements, Unemployment, Wages, Working conditions.

Accordingly, part 655 of title 20 and part 503 of title 29 of the Code of Federal Regulations are amended as follows:

Title 20—Employees' Benefits

PART 655—TEMPORARY EMPLOYMENT OF FOREIGN WORKERS IN THE UNITED STATES

■ 1. The authority citation for part 655 continues to read as follows:

Authority: Section 655.0 issued under 8 U.S.C. 1101(a)(15)(E)(iii), 1101(a)(15)(H)(i) and (ii), 8 U.S.C. 1103(a)(6), 1182(m), (n), and (t), 1184(c), (g), and (j), 1188, and 1288(c) and (d); sec. 3(c)(1), Pub. L. 101–238, 103 Stat. 2099, 2102 (8 U.S.C. 1182 note); sec. 221(a), Pub. L. 101–649, 104 Stat. 4978, 5027 (8 U.S.C. 1184 note); sec. 303(a)(8), Pub. L. 102–232, 105 Stat. 1733, 1748 (8 U.S.C. 1101 note); sec. 323(c), Pub. L. 103–206, 107 Stat. 2428; sec. 412(e), Pub. L. 105–277, 112 Stat. 2681 (8 U.S.C. 1182 note); sec. 2(d), Pub. L. 106–95, 113 Stat. 1312, 1316 (8 U.S.C. 1182 note); 29 U.S.C. 49k; Pub. L. 107–296, 116 Stat. 2135, as amended; Pub. L. 109–423, 120 Stat. 2900; 8 CFR 214.2(h)(4)(i); 8 CFR 214.2(h)(6)(iii); and sec. 6, Pub. L. 115–218, 132 Stat. 1547 (48 U.S.C. 1806).

Subpart A issued under 8 CFR 214.2(h).

Subpart B issued under 8 U.S.C. 1101(a)(15)(H)(ii)(a), 1184(c), and 1188; and 8 CFR 214.2(h).

Subpart E issued under 48 U.S.C. 1806.

Subparts F and G issued under 8 U.S.C. 1288(c) and (d); sec. 323(c), Pub. L. 103–206, 107 Stat. 2428; and 28 U.S.C. 2461 note, Pub. L. 114–74 at section 701.

Subparts H and I issued under 8 U.S.C. 1101(a)(15)(H)(i)(b) and (b)(1), 1182(n) and (t), and 1184(g) and (j); sec. 303(a)(8), Pub. L. 102–232, 105 Stat. 1733, 1748 (8 U.S.C. 1101 note); sec. 412(e), Pub. L. 105–277, 112 Stat. 2681; 8 CFR 214.2(h); and 28 U.S.C. 2461 note, Pub. L. 114–74 at section 701.

Subparts L and M issued under 8 U.S.C. 1101(a)(15)(H)(i)(c) and 1182(m); sec. 2(d), Pub. L. 106–95, 113 Stat. 1312, 1316 (8 U.S.C. 1182 note); Pub. L. 109–423, 120 Stat. 2900; and 8 CFR 214.2(h).

■ 2. Amend § 655.19 by revising paragraph (e)(1) to read as follows:

§ 655.19 Job contractor filing requirements.

* * * * *

(e)(1) Either the job contractor or its employer-client may place the required job order and conduct recruitment as described in §§ 655.16 and 655.43 through 655.46. Also, either one of the joint employers may assume responsibility for interviewing applicants. However, both of the joint employers must sign the recruitment report that is submitted to the NPC with the *Application for Temporary Employment Certification,* ETA Form 9142B.

* * * * *

■ 3. Amend § 655.40 by revising paragraph (b) to read as follows:

§ 655.40 Employer-conducted recruitment.

* * * * *

(b) *Employer-conducted recruitment period.* Unless otherwise instructed by the CO, the employer must conduct the recruitment described in §§ 655.43 through 655.46 within 14 calendar days from the date the Notice of Acceptance is issued. All employer-conducted recruitment must be completed before the employer submits the recruitment report as required in § 655.48.

* * * * *

■ 4. Amend § 655.41 by revising paragraph (a) to read as follows:

§ 655.41 Advertising requirements.

(a) All recruitment conducted under §§ 655.43 through 655.46 must contain terms and conditions of employment that are not less favorable than those offered to the H–2B workers and, at a minimum, must comply with the assurances applicable to job orders as set forth in § 655.18(a).

* * * * *

§ 655.42 [Removed and Reserved]

■ 5. Remove and reserve § 655.42.

§ 655.56 [Amended]

■ 6. Amend § 655.56 by removing paragraph (c)(2)(ii) and redesignating paragraphs (c)(2)(iii), (iv), and (v) as paragraphs (c)(2)(ii), (iii), and (iv), respectively.

■ 7. Amend § 655.71 by revising paragraph (c)(2) to read as follows:

§ 655.71 CO-ordered assisted recruitment.

* * * * *

(c) * * *

(2) Designating the sources where the employer must recruit for U.S. workers and directing the employer to place the advertisement(s) in such sources;

* * * * *

Title 29—Labor

PART 503—ENFORCEMENT OF OBLIGATIONS FOR TEMPORARY NONIMMIGRANT NON–AGRICULTURAL WORKERS DESCRIBED IN THE IMMIGRATION AND NATIONALITY ACT

■ 8. The authority citation for part 503 continues to read as follows:

Authority: 8 U.S.C. 1101(a)(15)(H)(ii)(b); 8 U.S.C. 1184; 8 CFR 214.2(h); 28 U.S.C. 2461 note (Federal Civil Penalties Inflation Adjustment Act of 1990); Pub. L. 114–74 at § 701.2.

§ 503.17 [Amended]

■ 9. Amend § 503.17 by removing paragraph (c)(2)(ii) and redesignating paragraphs (c)(2)(iii), (iv), and (v) as paragraphs (c)(2)(ii), (iii), and (iv), respectively.

Kevin K. McAleenan,

Acting Secretary of Homeland Security.

Eugene Scalia,

Secretary of Labor.

RIN 3245–AH06

HUBZone Program Provisions for Governor-Designated Covered Areas

AGENCY: U.S. Small Business Administration.

ACTION: Direct final rule; request for comments.

SUMMARY: This direct final rule contains amendments to the regulations governing the HUBZone Program. The U.S. Small Business Administration (SBA) is making changes to its regulations to implement provisions of the National Defense Authorization Act for Fiscal Year 2018 which authorized the inclusion of ''Governor-designated covered areas'' under the HUBZone program. This direct final rule would merely replicate these statutory changes into SBA's regulations.

DATES: This rule is effective on January 1, 2020, without further action, unless significant adverse comment is received by December 16, 2019. If significant adverse comment is received, SBA will publish a timely withdrawal of the rule in the **Federal Register**.

ADDRESSES: You may submit comments, identified by RIN 3245–AH06, by any of the following methods:

- *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the instructions for submitting comments.
- *For Mail, Paper, Disk, or CD–ROM Submissions:* Bruce Purdy, U.S. Small Business Administration, Office of the HUBZone Program, 409 Third Street SW, 8th Floor, Washington, DC 20416.
- *Hand Delivery/Courier:* Bruce Purdy, U.S. Small Business Administration, Office of the HUBZone Program, 409 Third Street SW, 8th Floor, Washington, DC 20416.

SBA will post all comments on *www.regulations.gov.* If you wish to submit confidential business information (CBI) as defined in the User Notice at *www.regulations.gov,* please submit the information to Bruce Purdy, U.S. Small Business Administration, Office of the HUBZone Program, 409 Third Street SW, 8th Floor, Washington, DC 20416, or send an email to *hubzone@sba.gov.* Highlight the information that you consider to be CBI and explain why you believe SBA should hold this information as confidential. SBA will review the information and make the final determination on whether it will publish the information.

FOR FURTHER INFORMATION CONTACT: Bruce Purdy, Deputy Director, Office of the HUBZone Program, 409 Third Street SW, Washington, DC 20416, 202–205–7554, *hubzone@sba.gov.*

SUPPLEMENTARY INFORMATION: This direct final rule implements a conforming amendment to SBA's regulations from the National Defense Authorization Act for Fiscal Year 2018, Public Law 115–91 (2018 NDAA). The 2018 NDAA became effective on December 12, 2017. Section 1701(e) of the 2018 NDAA authorized the inclusion of ''Governor-designated covered areas'' under the HUBZone program. Section 1701(j) of the 2018 NDAA provides that section 1701(e) shall be effective January 1, 2020.

SBA seeks to amend its HUBZone rules to mirror the changes made to the Small Business Act, to avoid public confusion and possible misinterpretations of SBA's HUBZone program. Since these are conforming amendments, with no extraneous interpretation or other expanded materials, SBA expects no significant adverse comments. Therefore, SBA has decided to proceed with a direct final rule. If SBA receives a significant adverse comment during the comment period, SBA will withdraw the rule, and proceed with a new proposed rule.

In order to implement the changes made by section 1701(e) of the 2018 NDAA, SBA is amending § 126.103 of its regulations by adding a new definition for the term ''Governor-designated covered area'', revising the definition of the term ''HUBZone'' to include Governor-designated covered areas, and adding a new § 126.104 to implement the statutory process by which a Governor can petition and the SBA Administrator may designate a specific covered area to be a qualified HUBZone area. The statute provides the guidelines under which a petition will be considered. Specifically, the Administrator will consider the following: The potential for job creation and investment in the covered area; the demonstrated interest of small business concerns in the covered area to be designated as a Governor-designated covered area; how State and local government officials have incorporated the covered area into an economic development strategy; and if the covered area was a HUBZone before becoming the subject of the petition, the impact on the covered area if the Administrator did not approve the petition. SBA anticipates that included within the covered areas that a Governor may seek to be designated as a qualified HUBZone area are Opportunity Zones, authorized by Section 13823 of the Tax Cuts and Jobs Act of 2017, Public Law 115–97, that do not otherwise qualify as HUBZones.

Compliance With Executive Orders 12866, 13771, 13563, 12988, 13132, 13175, the Paperwork Reduction Act (44 U.S.C. Ch. 35), the Regulatory Flexibility Act (5 U.S.C. 601–612), and the Administrative Procedure Act

Executive Order 12866

The Office of Management and Budget (OMB) has determined that this direct final rule does not constitute a significant regulatory action under Executive Order 12866. This rule is also

not a major rule under Congressional Review Act.

Executive Order 13771

This rule is not an Executive Order 13771 regulatory action because this rule is not significant under Executive Order 12866.

Executive Order 13563

Executive Order 13563 reaffirms the principles of Executive Order 12866 while calling for improvements in the nation's regulatory system to promote predictability, to reduce uncertainty, and to use the best, most innovative, and least burdensome tools for achieving regulatory ends. The executive order directs agencies to consider regulatory approaches that reduce burdens and maintain flexibility and freedom of choice for the public where these approaches are relevant, feasible, and consistent with regulatory objectives. Executive Order 13563 also requires that regulations be based on the open exchange of information and perspectives among state and local officials, affected stakeholders in the private sector, and the public as a whole. SBA has developed this rule in a manner consistent with these requirements. While developing this rule, SBA responded to specific inquiries from government officials and the public regarding the implementation of the statutory authority for Governor-designated covered areas and discussed the implementation of the authority at nationwide conferences, including the HUBZone Council Conference. SBA continues to communicate with the public by responding to inquiries regarding this new authority.

Executive Order 12988

This action meets applicable standards set forth in Sections 3(a) and 3(b)(2) of Executive Order 12988, Civil Justice Reform, to minimize litigation, eliminate ambiguity, and reduce burden. The action does not have retroactive or preemptive effect.

Executive Order 13132

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. This direct final rule would allow State Governors to petition SBA to designate as HUBZones certain areas that would otherwise not qualify as HUBZones. A Governor's petition must delineate the areas to be included and show: (1) The potential for job creation and investment in the covered area; (2) the demonstrated interest of small business concerns in the covered area to be designated as a Governor-designated covered area; (3) how State and local government officials have incorporated the covered area into an economic development strategy; and (4) if the covered area was a HUBZone before becoming the subject of the petition, the impact on the covered area if the Administrator did not approve the petition. Governors may only submit one petition for their State every year and must annually provide data on Governor-designated covered areas previously approved by the SBA Administrator.

We have analyzed this direct final rule and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Executive Order 13175

This rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it would not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

Paperwork Reduction Act, 44 U.S.C. Ch. 35

SBA has determined that this direct final rule imposes reporting requirements under the Paperwork Reduction Act (PRA). Specifically, the rule would require State Governors to submit petitions to SBA in order for SBA to determine whether to designate certain areas as Governor-designated covered areas. At a minimum, such petitions would provide a list of covered areas for which the Governor requests designation and information on the potential for job creation and investment in the covered area, the demonstrated interest of small business concerns in the covered area to be designated as a Governor-designated covered area, how State and local government officials have incorporated the covered area into an economic development strategy, and if the covered area was a HUBZone before becoming the subject of the petition, the impact on the covered area if the Administrator did-not approve the petition. As permitted by 13 CFR 1320.13, SBA sought emergency PRA review and approval of this information collection, including waiver of the required 60-day public comment notice, from the Office of Management and Budget (OMB). OMB approved SBA's request and assigned OMB Control Number 3245–0403. Before this approval expires on April 30, 2020, SBA will publish the 60-day notice in the **Federal Register** and resubmit this information collection to OMB for standard review. The disposition of any comments received will be addressed with that resubmission.

Regulatory Flexibility Act, 5 U.S.C. 601–612

The Regulatory Flexibility Act (RFA), 5 U.S.C. 601, requires administrative agencies to consider the effect of their actions on small entities, small non-profit enterprises, and small local governments. Pursuant to the RFA, when an agency issues a rulemaking, the agency must prepare a regulatory flexibility analysis which describes the impact of the rule on small entities. However, section 605 of the RFA allows an agency to certify a rule, in lieu of preparing an analysis, if the rulemaking is not expected to have a significant economic impact on a substantial number of small entities. Within the meaning of the RFA, SBA certifies that this direct rule will not have a significant economic impact on a substantial number of small entities.

Administrative Procedure Act—Justification for Direct Final Rule

In general, SBA publishes a rule for public comment before issuing a final rule, in accordance with the Administrative Procedure Act, 5 U.S.C. 553. The Administrative Procedure Act provides an exception to this standard rulemaking process, however, where an agency finds good cause to adopt a rule without prior public participation. 5 U.S.C. 553(b)(3)(B). The good cause requirement is satisfied when prior public participation is impracticable, unnecessary, or contrary to the public interest.

SBA is publishing this rule as a direct final rule because public participation is unnecessary. SBA views this as a non-controversial administrative action because it merely implements a change required by the Small Business Act, as amended by section 1701(e) of the National Defense Authorization Act for Fiscal Year 2018, Public Law 115–91 (2018 NDAA). This rule will be effective on the date shown in the **DATES** section unless SBA receives any significant adverse comments on or before the deadline for comments set forth in the **DATES** section. Significant adverse comments are comments that provide

strong justifications why the rule should not be adopted or for changing the rule. SBA does not expect to receive any significant adverse comments because the rule simply mirrors the statutory language contained in section 1701(e) of the 2018 NDAA, with no extraneous interpretation or other expanded text. Implementation of this change will benefit the public by expanding the HUBZone program and will allow SBA to meet the statutory deadline mandated by section 1701(j) of the 2018 NDAA, which provides that this change is effective January 1, 2020. If SBA receives any significant adverse comments, SBA will publish a notice in the **Federal Register** withdrawing this rule before the effective date. If SBA receives no significant adverse comments, SBA will publish a document in the **Federal Register** confirming the effective date.

List of Subjects in 13 CFR Part 126

Administrative practice and procedure, Government procurement, Small businesses.

Accordingly, for the reasons stated in the preamble, SBA amends 13 CFR part 126 as follows:

PART 126—HUBZONE PROGRAM

■ 1. The authority for 13 CFR part 126 continues to read as follows:

Authority: 15 U.S.C. 632(a), 632(j), 632(p), 644 and 657a.

■ 2. Amend § 126.103 by adding a definition alphabetically for the term ''Governor-designated covered area'' and revising the definition of the term ''HUBZone'' to read as follows:

§ 126.103 What definitions are important in the HUBZone program?

* * * * *

Governor-designated covered area means an area that the Administrator has designated as a HUBZone by approving a Governor-generated petition as described in § 126.104.

HUBZone means a historically underutilized business zone, which is an area located within one or more:

(1) Qualified census tracts;

(2) Qualified non-metropolitan counties;

(3) Lands within the external boundaries of an Indian reservation;

(4) Redesignated areas;

(5) Qualified base closure areas;

(6) Qualified disaster areas; or

(7) Governor-designated covered areas.

* * * * *

■ 3. Add § 126.104 to read as follows:

§ 126.104 How can a Governor petition for the designation of a Governor-designated covered area?

(a) For a specific covered area to receive a designation as a Governor-designated covered area, the Governor of the State in which the identified covered area is wholly contained shall include such area in a petition to the Administrator requesting such a designation. In reviewing a request for designation included in such a petition, the Administrator may consider—

(1) The potential for job creation and investment in the covered area;

(2) The demonstrated interest of small business concerns in the covered area to be designated as a Governor-designated covered area;

(3) How State and local government officials have incorporated the covered area into an economic development strategy; and

(4) If the covered area was a HUBZone before becoming the subject of the petition, the impact on the covered area if the Administrator did not approve the petition.

(b) Each calendar year, a Governor may submit not more than 1 petition described in this section. Such petition shall include all covered areas in a State for which the Governor seeks designation as a Governor-designated covered area, except that the total number of covered areas included in such petition may not exceed 10 percent of the total number of covered areas in the State.

(c) If the Administrator grants a petition described in this section, the Governor of the Governor-designated covered area shall, not less frequently than annually, submit data to the Administrator certifying that each Governor-designated covered area continues to meet the requirements of paragraph (d)(1) of this section.

(d) In this section:

(1) The term ''covered area'' means an area in a State—

(i) That is located outside of an urbanized area, as determined by the Bureau of the Census;

(ii) With a population of not more than 50,000; and

(iii) For which the average unemployment rate is not less than 120 percent of the average unemployment rate of the United States or of the State in which the covered area is located, whichever is less, based on the most recent data available from the American Community Survey conducted by the Bureau of the Census.

(2) The term ''Governor'' means the chief executive of a State.

(3) The term ''State'' means each of the States of the United States, the District of Columbia, the Commonwealth of Puerto Rico, the United States Virgin Islands, Guam, the Commonwealth of the Northern Mariana Islands, or American Samoa.

Christopher Pilkerton,

Acting Administrator.

BILLING CODE P

PENSION BENEFIT GUARANTY CORPORATION

29 CFR Part 4022

Benefits Payable in Terminated Single-Employer Plans; Interest Assumptions for Paying Benefits

AGENCY: Pension Benefit Guaranty Corporation.

ACTION: Final rule.

SUMMARY: This final rule amends the Pension Benefit Guaranty Corporation's regulation on Benefits Payable in Terminated Single-Employer Plans to prescribe certain interest assumptions under the regulation for plans with valuation dates in December 2019. These interest assumptions are used for paying certain benefits under terminating single-employer plans covered by the pension insurance system administered by PBGC.

DATES: Effective December 1, 2019.

FOR FURTHER INFORMATION CONTACT: Gregory Katz (*katz.gregory@pbgc.gov*), Attorney, Regulatory Affairs Division, Pension Benefit Guaranty Corporation, 1200 K Street NW, Washington, DC 20005, 202–326–4400 ext. 3829. (TTY users may call the Federal relay service toll-free at 1–800–877–8339 and ask to be connected to 202–326–4400, ext. 3829.)

SUPPLEMENTARY INFORMATION: PBGC's regulation on Benefits Payable in Terminated Single-Employer Plans (29 CFR part 4022) prescribes actuarial assumptions—including interest assumptions—for paying plan benefits under terminated single-employer plans covered by title IV of the Employee Retirement Income Security Act of 1974 (ERISA). The interest assumptions in the regulation are also published on PBGC's website (*https://www.pbgc.gov*).

PBGC uses the interest assumptions in appendix B to part 4022 (''Lump Sum Interest Rates for PBGC Payments'') to determine whether a benefit is payable as a lump sum and to determine the amount to pay. Because some private-sector pension plans use these interest rates to determine lump sum amounts payable to plan participants (if the

resulting lump sum is larger than the amount required under section 417(e)(3) of the Internal Revenue Code and section 205(g)(3) of ERISA), these rates are also provided in appendix C to part 4022 (''Lump Sum Interest Rates for Private-Sector Payments'').

This final rule updates appendices B and C of the benefit payments regulation to provide the rates for December 2019 measurement dates.

The December 2019 lump sum interest assumptions will be 0.25 percent for the period during which a benefit is (or is assumed to be) in pay status and 4.00 percent during any years preceding the benefit's placement in pay status. In comparison with the interest assumptions in effect for November 2019, these assumptions represent no change in the immediate rate and are otherwise unchanged.

PBGC updates appendices B and C each month. PBGC has determined that notice and public comment on this amendment are impracticable and contrary to the public interest. This finding is based on the need to issue new interest assumptions promptly so that they are available for plans that rely on our publication of them each month to calculate lump sum benefit amounts.

Because of the need to provide immediate guidance for the payment of benefits under plans with valuation dates during December 2019, PBGC finds that good cause exists for making the assumptions set forth in this amendment effective less than 30 days after publication.

PBGC has determined that this action is not a ''significant regulatory action'' under the criteria set forth in Executive Order 12866.

Because no general notice of proposed rulemaking is required for this amendment, the Regulatory Flexibility Act of 1980 does not apply. See 5 U.S.C. 601(2).

List of Subjects in 29 CFR Part 4022

Employee benefit plans, Pension insurance, Pensions, Reporting and recordkeeping requirements.

In consideration of the foregoing, 29 CFR part 4022 is amended as follows:

PART 4022—BENEFITS PAYABLE IN TERMINATED SINGLE-EMPLOYER PLANS

■ 1. The authority citation for part 4022 continues to read as follows:

Authority: 29 U.S.C. 1302, 1322, 1322b, 1341(c)(3)(D), and 1344.

■ 2. In appendix B to part 4022, rate set 314 is added at the end of the table to read as follows:

Appendix B to Part 4022—Lump Sum Interest Rates for PBGC Payments

* * * * *

Rate set	For plans with a valuation date		Immediate annuity rate (percent)	Deferred annuities (percent)				
	On or after	Before		i_1	i_2	i_3	n_1	n_2
*	*		*	*	*	*	*	
314	12–1–19	1–1–20	0.25	4.00	4.00	4.00	7	8

■ 3. In appendix C to part 4022, rate set 314 is added at the end of the table to read as follows:

Appendix C to Part 4022—Lump Sum Interest Rates for Private-Sector Payments

* * * * *

Rate set	For plans with a valuation date		Immediate annuity rate (percent)	Deferred annuities (percent)				
	On or after	Before		i_1	i_2	i_3	n_1	n_2

BILLING CODE 7709–02–P

DEPARTMENT OF THE TREASURY

31 CFR Part 50

RIN 1505–AC62

IMARA Calculation Under the Terrorism Risk Insurance Program

AGENCY: Departmental Offices, Department of the Treasury.

ACTION: Final rule.

SUMMARY: The Department of the Treasury (Treasury) is issuing this final rule to implement technical changes to program regulations that address the calculation and notification to the public of the Terrorism Risk Insurance Program's (Program) insurance marketplace aggregate retention amount (IMARA) under the Terrorism Risk Insurance Act (Act), as amended. The changes were published in proposed form for public comment on September 6, 2019.

DATES: This rule is effective December 16, 2019.

FOR FURTHER INFORMATION CONTACT: Richard Ifft, Senior Insurance Regulatory Policy Analyst, Federal Insurance Office, 202–622–2922 or Lindsey Baldwin, Senior Policy Analyst, Federal Insurance Office, 202–622–3220.

SUPPLEMENTARY INFORMATION:

I. Background

The Terrorism Risk Insurance Act of 2002 (as amended, the Act or TRIA) [1] was enacted on November 26, 2002, following the attacks of September 11, 2001, to address disruptions in the

[1] Public Law 107–297, 116 Stat. 2322, codified at 15 U.S.C. 6701 note. Because the provisions of TRIA (as amended) appear in a note instead of particular sections of the U.S. Code, the provisions of TRIA are identified by the sections of the law.

market for terrorism risk insurance, to help ensure the continued availability and affordability of commercial property and casualty insurance for terrorism risk, and to allow for the private markets to stabilize and build insurance capacity to absorb any future losses for terrorism events.[2] TRIA requires insurers to ''make available'' terrorism risk insurance for commercial property and casualty losses resulting from certified acts of terrorism (insured losses), and provides for shared public and private compensation for such insured losses. The Program has been reauthorized three times, most recently by the Terrorism Risk Insurance Program Reauthorization Act of 2015 (2015 Reauthorization Act).[3]

The Secretary of the Treasury (Secretary) administers the Program. The Federal Insurance Office (FIO) assists the Secretary in administering the Program.[4] To assist insurers, policyholders, and other interested parties in complying with the applicable requirements of the Act, Treasury has issued regulations implementing the Program. In some instances, Treasury has also issued interim guidance to be relied upon by insurers until superseded by any regulations.[5] Most recently, Treasury issued regulations implementing the changes to the Program required under the 2015 Reauthorization Act.[6]

The Act established an industry marketplace aggregate retention amount (IMARA) as a threshold figure to determine whether any Treasury payments under the Program are subject to mandatory recoupment. Under the Act, if total annual payments by participating insurers are below the IMARA, Treasury must recoup all amounts expended by it up to the IMARA threshold (mandatory recoupment). If total annual payments by participating insurers are above the IMARA, Treasury has the discretion to recoup all expended amounts above the IMARA threshold (discretionary recoupment).[7]

The 2015 Reauthorization Act provided for a schedule of defined IMARA values from calendar year 2015 through calendar year 2019. The 2015 Reauthorization Act also provided that for calendar year 2020 and future years the IMARA ''shall be revised to be the amount equal to the annual average of the sum of insurer deductibles for all insurers participating in the Program for the prior 3 calendar years,'' as such sum is determined pursuant to a rule issued by the Secretary.[8] The rule change adopted in this notice solely addresses the manner in which Treasury calculates the IMARA and the timing of public notification of the IMARA calculation.

II. The Proposed Rule

The proposed rule on which this final rule is based was published in the **Federal Register** at 84 FR 46907 on September 6, 2019. The proposed rule would make a technical correction to 31 CFR 50.4(m)(2)(i), originally implemented in 2016, to clarify that the IMARA calculation is based upon direct earned premium reported to Treasury by insurers in Treasury's annual data call ''*in*'' the three calendar years prior to the calendar year in question, instead of ''*for*'' the three calendar years prior to the calendar year in question. For example, this would result in a proper calculation of the 2020 IMARA by referring to the insurer deductibles for the previous three years (2019, 2018, and 2017), which are based on reported data for calendar years 2018, 2017, and 2016.[9] In addition, the proposed rule accelerates the notification date of the IMARA calculation by Treasury, from no later than April 30 of the year in question to no later than December 31 of the prior calendar year. That acceleration will improve administrative efficiency and provide greater certainty to insurers and policyholders.

III. Summary of Comments and Final Rule

Treasury received one comment regarding the proposed changes concerning the IMARA calculation and the date of notification of the IMARA calculation to the public. This comment was in favor of both of the proposed changes.[10] Accordingly, Treasury is issuing this final rule based upon the proposed rule without change.

IV. Procedural Requirements

Executive Order 12866, ''*Regulatory Planning and Review.*'' This rule is not a significant regulatory action for purposes of Executive Order 12866, ''Regulatory Planning and Review,'' and thus has not been reviewed by the Office of Management and Budget (OMB).

Regulatory Flexibility Act. Under the Regulatory Flexibility Act, 5 U.S.C. 601 *et seq.,* Treasury must consider whether this rule will have a ''significant economic impact on a substantial number of small entities.'' 5 U.S.C. 605(b). In this case, Treasury certifies that this rule will not have a significant economic impact on a substantial number of small entities. The rule provides for a technical change in the manner in which Treasury will calculate a figure relevant to operation of the Program and to better conform it to Congressional requirements. The only other rule change is to provide for earlier notice to insurers of the IMARA calculation than the existing rule. It has no effect on the collection of the data (including data collected from small entities) under the Program rules.

Paperwork Reduction Act. The rule does not involve the collection of information and thus has not been submitted to OMB for review under the requirements of the Paperwork Reduction Act, 44 U.S.C. 3507(d). The

[2] TRIA, sec. 101(b).

[3] See Terrorism Risk Insurance Extension Act of 2005, Public Law 109–144, 119 Stat. 2660; Terrorism Risk Insurance Program Reauthorization Act of 2007, Public Law 110–160, 121 Stat. 1839; Terrorism Risk Insurance Program Reauthorization Act of 2015, Public Law 114–1, 129 Stat. 3.

[4] 31 U.S.C. 313(c)(1)(D).

[5] Treasury summarized the history of prior rulemakings in connection with the Program in a 2016 proposed rulemaking proposing rule changes to implement the 2015 Reauthorization Act. See 81 FR 18950 (April 1, 2016) (2016 NPRM).

[6] See 81 FR 88592 (December 7, 2016) (Certification Interim Final Rule); 81 FR 93756 (December 21, 2016) (Program Final Rules Except Certification).

[7] See TRIA, sec. 103(e)(7); see also 31 CFR part 50 subpart J (Recoupment and Surcharge Procedures).

[8] TRIA, sec. 103(e)(6)(B)(ii) and (e)(6)(C). An insurer's deductible under the Program for any particular year is 20 percent of its direct earned premium subject to the Program during the preceding year. TRIA, sec. 102(7). For example, an insurer's calendar year 2019 Program deductible is 20 percent of its calendar year 2018 direct earned premium.

[9] The Program rule amended by this final rule was originally proposed in the 2016 NPRM and finalized in the Program Final Rules Except Certification. As explained in the September 2019 notice of proposed rulemaking, although the preamble to the 2016 NPRM correctly explained the methodology for calculating the IMARA in 2020 and beyond, as required by the 2015 Reauthorization Act, the language in the Program rule implemented by the Program Final Rules Except Certification is ambiguous as to how the IMARA should be calculated. Under § 50.4(m)(2)(i) of the Program rules as implemented in 2016, the IMARA calculation is to be based on the ''direct earned premium reported by insurers to Treasury . . . *for* the three calendar years prior to the calendar year in question'' (emphasis added.) This language could be interpreted to mean, for example, that the 2020 IMARA would be calculated using direct earned premiums in 2019, 2018, and 2017, rather than using the data reported in 2019, 2018, and 2017 for calendar years 2018, 2017, and 2016, as intended. This unintended interpretation would be inconsistent with the methodology specified in the 2015 Reauthorization Act and would result in an incorrect IMARA. See generally 84 FR 46907, 46907–08 (Sept. 6, 2019).

[10] See Comment from Underwriters at Lloyd's, London (Oct. 2, 2019), *available at https://www.regulations.gov/docket?D=TREAS-TRIP-2019-0014.*

rule only involves the calculation and public notification of the IMARA in connection with the Program based on data collected by Treasury under rules which have already been subject to OMB review and approval under Control No. 1505–0257.

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket Number USCG–2019–0852]

RIN 1625–AA00

Safety Zone; Green River, Rumsey, KY

AGENCY: Coast Guard, DHS.

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is establishing a safety zone for all navigable waters of the Green River from mile marker (MM) 64.0 to MM 65.0. This action is necessary to provide for the safety of life on these navigable waters near Rumsey, KY, during the wire-crossing event. Entry into, transiting through, or anchoring within this zone is prohibited unless authorized by the Captain of the Port Sector Ohio Valley (COTP) or a designated representative.

DATES: This rule is effective from 8 a.m. on November 18, 2019, through 4 p.m. November 22, 2019.

ADDRESSES: To view documents mentioned in this preamble as being available in the docket, go to *https://www.regulations.gov,* type USCG–2019–0852 in the ''SEARCH'' box and click ''SEARCH.'' Click on Open Docket Folder on the line associated with this rule.

FOR FURTHER INFORMATION CONTACT: If you have questions on this rule, call or email MST3 Riley Jackson, Waterways Department Sector Ohio Valley, U.S. Coast Guard; telephone 502–779–5347, email *SECOHV-WWM@uscg.mil.*

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
COTP Captain of the Port Sector Ohio Valley
DHS Department of Homeland Security
FR Federal Register
MM Mile Marker
NPRM Notice of proposed rulemaking
§ Section
U.S.C. United States Code

II. Background Information and Regulatory History

The Coast Guard is issuing this temporary final rule without prior notice and opportunity to comment pursuant to authority under section 4(a) of the Administrative Procedure Act (APA) (5 U.S.C. 553(b)). This provision authorizes an agency to issue a rule without prior notice and opportunity to comment when the agency for good cause finds that those procedures are ''impracticable, unnecessary, or contrary to the public interest.'' Under 5 U.S.C. 553(b)(B), the Coast Guard finds that good cause exists for not publishing a notice of proposed rulemaking (NPRM) with respect to this rule because it is impracticable. We must establish this safety zone by November 18, 2019 and lack sufficient time to provide a reasonable comment period and then consider those comments before issuing the rule.

Under 5 U.S.C. 553(d)(3), the Coast Guard finds that good cause exists for making this rule effective less than 30 days after publication in the **Federal Register**. Delaying the effective date of this rule would be contrary to the public interest because immediate action is necessary to prevent possible loss of life and property.

III. Legal Authority and Need for Rule

The Coast Guard is issuing this rule under authority in 46 U.S.C. 70034. The Captain of the Port Sector Ohio Valley (COTP) has determined that potential hazards associated with wire-crossing event will present a safety concern on all navigable waters of the Green River extending from mile marker (MM) 64.0 to MM 65.0. The purpose of this rule is to ensure the safety of life and vessels on these navigable waters before, during, and after the scheduled event.

IV. Discussion of the Rule

This rule establishes a temporary safety zone that will be enforced from 8 a.m. through 4 p.m. each day, from November 18 through November 22, 2019. The temporary safety zone will cover all navigable waters of the Green River from MM 64.0 to MM 65.0. The duration of the safety zone is intended to ensure the safety of waterway users on these navigable waters before, during, and after the scheduled event. No vessel or person is permitted to enter the safety zone without obtaining permission from the COTP or a designated representative. All persons or vessels desiring entry into or passage through the area must request permission from the COTP or a designated representative. U. S. Coast Guard Sector Ohio Valley may be contacted on VHF Channel 13 or 16, or at 1–800–253–7465.

V. Regulatory Analyses

We developed this rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive orders, and we discuss First Amendment rights of protestors.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. Executive Order 13771 directs agencies to control regulatory costs through a budgeting process. This rule has not been designated a ''significant regulatory action,'' under Executive Order 12866. Accordingly, this rule has not been reviewed by the Office of Management and Budget (OMB), and pursuant to OMB guidance it is exempt from the requirements of Executive Order 13771.

This regulatory action determination is based on the size, location, duration, and time-of-day of the safety zone. This rule impacts one mile of the Green River over five days. Entry into the regulated area will be prohibited from 8 a.m. through 4 p.m. each day, November 18 through November 22, 2019, from Green River MM 64.0 to MM 65.0, unless authorized by the COTP or a designated representative. Moreover, the Coast Guard will issue written Local Notice to Mariners and Broadcast Notice to Mariners via VHF–FM marine channel 16 about the temporary safety zone that is in place.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities. While some owners or operators of vessels intending to transit this temporary safety zone, may be small entities, for the reasons stated in section V.A. above, this rule will not have a significant economic impact on any vessel owner or operator.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

C. Collection of Information

This rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes. If you believe this rule has implications for federalism or Indian tribes, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section above.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

F. Environment

We have analyzed this rule under Department of Homeland Security Management Directive 023–01 and Environmental Planning COMDTINST 5090.1 (series), which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have determined that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule involves a safety zone lasting 8 hours per day for five days, on all navigable waters extending one mile on part of the Green River. It is categorically excluded from further review under paragraph L60(a) in Table 3–1 of U.S. Coast Guard Environmental Planning Implementing Procedures 5090.1. A Record of Environmental Consideration supporting this determination is available in the docket where indicated under **ADDRESSES**.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places or vessels.

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 46 U.S.C. 70034, 70051; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Department of Homeland Security Delegation No. 0170.1.

■ 2. Add § 165.T08–0852 to read as follows:

§ 165.T08–0852 Safety Zone; Green River, Rumsey KY.

(a) *Location.* The following area is a safety zone: All navigable waters of the Green River from Mile Marker (MM)

64.0 to MM 65.0, extending the entire width of the river.

(b) *Effective period.* This section is in effect from 8 a.m. on November 18, 2019, through 4 p.m. on November 22, 2019.

(c) *Enforcement period.* This section will be enforced from 8 a.m. through 4 p.m. each day from November 18, 2019 through November 22, 2019.

(d) *Regulations.* (1) In accordance with the general regulations in § 165.23 of this part, entry of vessels or persons into this zone is prohibited unless specifically authorized by the COTP or designated representative. A designated representative is a commissioned, warrant, or petty officer of the U.S. Coast Guard assigned to units under the operational control of USCG Sector Ohio Valley.

(2) All persons or vessels desiring entry into or passage through the safety zone must request permission from the COTP or a designated representative. U.S. Coast Guard Sector Ohio Valley may be contacted on VHF Channel 13 or 16, or at 1–800–253–7465.

(3) Persons and vessels permitted to enter this safety zone must transit at their slowest safe speed and comply with all lawful directions issued by the COTP or the designated representative.

(e) *Information broadcasts.* The COTP or a designated representative will inform the public through Broadcast Notices to Mariners of any changes in the planned schedule.

Dated: November 12, 2019.

A.M. Beach,

Captain, U.S. Coast Guard, Captain of the Port Sector Ohio Valley.

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket No. USCG–2019–0868]

Safety Zone, Brandon Road Lock and Dam to Lake Michigan Including Des Plaines River, Chicago Sanitary and Ship Canal, Chicago River, and Calumet-Saganashkee Channel, Chicago, IL

AGENCY: Coast Guard, DHS.

ACTION: Notice of enforcement of regulation.

SUMMARY: The Coast Guard will enforce a segment of the Safety Zone; Brandon Road Lock and Dam to Lake Michigan including Des Plaines River, Chicago Sanitary and Ship Canal, Chicago River, Calumet-Saganashkee Channel on all waters of the Chicago Sanitary and Ship Canal and South Branch of the Chicago River between mile marker 296 and mile marker 296.7 during specified times from November 18, 2019 through November 22, 2019. This action is necessary and intended to protect the safety of life and property on navigable waters prior to, during, and immediately after planned US Army Corps of Engineers work at the Electric Barrier. During the enforcement period listed below, entry into, transiting, or anchoring within the safety zone is prohibited unless authorized by the Captain of the Port Lake Michigan or a designated representative.

DATES: The regulations in 33 CFR 165.930 will be enforced from 7 a.m. through 1 p.m. and 3 p.m. through 5 p.m. from November 18, 2019, to November 22, 2019.

FOR FURTHER INFORMATION CONTACT: If you have questions about this notice of enforcement, call or email LT Tiziana Garner, Waterways Management Division, Marine Safety Unit Chicago, at 630–986–2155, email address *D09-DG-MSUChicago-Waterways@uscg.mil.*

SUPPLEMENTARY INFORMATION: The Coast Guard will enforce a segment of the Safety Zone; Brandon Road Lock and Dam to Lake Michigan including Des Plaines River, Chicago Sanitary and Ship Canal, Chicago River, Calumet-Saganashkee Channel, Chicago, IL, listed in 33 CFR 165.930. Specifically, the Coast Guard will enforce this safety zone on all waters of the Chicago Sanitary and Ship Canal between mile marker 296 and mile marker 296.7. Enforcement will occur from 7 a.m. through 1 p.m. and 3 p.m. to 5 p.m. from November 18, 2019 to November 22, 2019. During the enforcement period, no vessel may transit this regulated area without approval from the Captain of the Port Lake Michigan or a designated representative. Vessels and persons granted permission to enter the safety zone shall obey all lawful orders or directions of the Captain of the Port Lake Michigan, or an on-scene representative.

This notice of enforcement is issued under the authority of 33 CFR 165.930 and 5 U.S.C. 552(a). In addition to this publication in the **Federal Register**, the Captain of the Port Lake Michigan will also provide notice through other means, which will include Broadcast Notice to Mariners, Local Notice to Mariners, distribution in leaflet form, and on-scene oral notice. Additionally, the Captain of the Port Lake Michigan may notify representatives from the maritime industry through telephonic and email notifications. If the Captain of the Port or a designated representative determines that the regulated area need not be enforced for the full duration stated in this notice, he or she may use a Broadcast Notice to Mariners to grant general permission to enter the regulated area. The Captain of the Port Lake Michigan or a designated on-scene representative may be contacted via Channel 16 or at (414) 747–7182.

Dated: November 1, 2019.

Thomas J. Stuhlreyer,

Captain, U.S. Coast Guard, Captain of the Port, Lake Michigan.

Federal Emergency Management Agency

44 CFR Part 206

[Docket ID FEMA–2008–0005]

RIN 1660–AA18

Disaster Assistance-Federal Assistance to Individuals and Households

AGENCY: Federal Emergency Management Agency, DHS.

ACTION: Final rule.

SUMMARY: Under the authority of section 408 of the Robert T. Stafford Disaster Relief and Emergency Assistance Act, the Federal Emergency Management Agency provides financial assistance to individuals and households after a Presidentially-declared major disaster or emergency. This rule finalizes, without change, current interim regulations which establish the requirements and procedures for the Individuals and Households Program.

DATES: This rule is effective December 16, 2019.

FOR FURTHER INFORMATION CONTACT: Mark Millican, FEMA, Individual Assistance Division, 500 C Street SW, Washington, DC 20472–3100, (phone) 202–212–3221 or (email) *FEMA-IA-Regulations@fema.dhs.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

Section 408 of the Robert T. Stafford Disaster Relief and Emergency Assistance Act (Stafford Act) provides the Federal Emergency Management Agency (FEMA) the authority to administer the Individuals and

Households Program (IHP). *See* 42 U.S.C. 5174. Through the IHP, FEMA provides financial and/or direct assistance to help survivors recover from Presidentially-declared emergencies and major disasters. This help may be in the form of Housing Assistance and/or Other Needs Assistance, which includes personal property losses, medical, dental, funeral, child care, transportation, and other miscellaneous expenses.

Specifically, FEMA provides the following types of Housing Assistance:

Temporary Housing: Financial assistance is available to rent a different place to live for a limited period of time. If housing resources are not available and the applicant is unable to make use of FEMA-provided financial assistance, FEMA may provide direct assistance in the form of a manufactured housing unit.

Housing Repair: Financial assistance is available to homeowners to repair disaster damage to their primary residence. Assistance is only available to repair damage that is not covered by insurance. The goal is to make the damaged home safe, sanitary, and functional.

Housing Replacement: Financial assistance is available to homeowners to replace their primary residence if it was destroyed in the disaster. Assistance is only available for damage that is not covered by insurance.

Permanent and Semi-Permanent Housing Construction: In exceptional circumstances, FEMA is authorized to provide permanent and semi-permanent housing construction. If FEMA exercises its discretion to offer this form of disaster assistance, FEMA may provide financial assistance for the construction of a home or may construct the new permanent or semi-permanent housing unit for an individual or household. FEMA may provide this type of assistance only in insular areas outside the continental United States and in other locations when alternative housing resources are not available and no other types of temporary housing assistance are available, feasible, or cost-effective. Assistance is provided only for damage that is not covered by insurance.

44 CFR part 206, subparts D and F regulate the types of IHP assistance, the eligibility requirements for assistance, and the procedures for obtaining assistance.

On September 30, 2002, FEMA published an interim final rule in the **Federal Register**. *See* 67 FR 61446.[1] The interim final rule implemented new statutory authority provided from section 206 of the Disaster Mitigation Act of 2000, Public Law 106–390 (DMA 2000). Section 206 of the DMA 2000 consolidated and streamlined the provision of assistance to individuals, which FEMA previously administered under two separate assistance programs: (1) The Temporary Housing Assistance Program and (2) the Individual and Family Grant Program. Specifically, the interim final rule provided a framework for the new consolidated IHP in 44 CFR 206.110–206.120, as follows:

- Section 206.110 provided a broad overview of the new consolidated program.
- Section 206.111 provided the definitions for terms used throughout sections 206.110–120.
- Section 206.112 provided information on the registration period for the IHP.
- Section 206.113 provided the eligibility factors that individuals must meet in order to qualify for the IHP.
- Section 206.114 provided criteria for continued assistance in the IHP.
- Section 206.115 provided the appeals process and protocols for the IHP.
- Section 206.116 provided information on when and how FEMA would seek recovery of funds from IHP recipients.
- Section 206.117 provided information on the types of housing assistance as well as the eligible costs that are covered under the IHP.
- Section 206.118 provided the procedures that FEMA would follow if FEMA decides to sell temporary housing units that were purchased under 206.117(b)(1)(ii), temporary housing, or direct housing.
- Section 206.119 provided the process for individuals to be eligible to receive financial assistance to address other disaster-related needs.
- Finally, Section 206.120 provided the process and options for States when delivering financial assistance to address other disaster-related needs.

On April 3, 2009, FEMA published a final rule that provided technical, organizational, and conforming amendments to Title 44 of the CFR to reflect the current organization and procedures of FEMA. *See* 74 FR 15328. The final rule had no substantive effect on the regulated public and corrected organization names and addresses, updated Information Collection Approval Numbers issued by the Office of Management and Budget (OMB), removed the text of an Executive Order that was repealed, and made other technical and editorial corrections throughout Title 44. Specifically, in 44 CFR 206.110, 206.111, 206.112, 206.115, 206.117, and 206.120, FEMA updated the titles of various FEMA leadership positions as well as updated the term ''FEMA Office of Inspector General'' to ''DHS Office of Inspector General'' to reflect that FEMA became a component of the Department of Homeland Security in 2003.

On July 30, 2012, FEMA published a notice of proposed rulemaking (NPRM), which addressed the public comments received on the 2002 interim final rule related to housing repair and replacement, the provisions for which are found at 44 CFR 206.117. *See* 77 FR 44562. In addition, FEMA proposed four separate sets of changes in the NPRM. First, FEMA proposed revisions to the interim rule to respond to public comments received on the 2002 interim rule. Second, FEMA proposed changes that were intended to restate the existing requirements more clearly and in greater detail without substantively changing the underlying requirements. Third, consistent with statutory amendments in the Post-Katrina Emergency Management Reform Act of 2006 (PKEMRA), FEMA proposed removing the housing repair and replacement subcaps which previously limited housing repair assistance to $5,000 and housing replacement assistance to $10,000. Finally, also consistent with statutory amendments in PKEMRA, FEMA proposed adding the term ''semi-permanent'' and removing the term ''remote'' with respect to the eligibility requirements for housing construction pursuant to PKEMRA.

On November 7, 2013, FEMA published a final rule that finalized the NPRM without change. *See* 78 FR 66852.

II. FEMA's Response to 2003 IHP Implementation Review Report

In February 2003, during the comment period for the Interim Final Rule, FEMA held a meeting with representatives from the five States who first implemented the IHP to identify the best practices and problems or issues that needed corrective actions. An IHP Implementation Review Report was prepared, which outlined the issues discussed and recommendations. None of the issues discussed were specifically pertinent to this rulemaking.

The general topics discussed and the recommendations were related to:

1. The business rules and functionality for the National Emergency Management Information System (NEMIS), which FEMA uses to

[1] FEMA published a correction to the interim final rule on October 9, 2002. *See* 67 FR 62896.

process applications for disaster assistance;

2. Internal and external communications, to include FEMA Helpline numbers and printed Applicant Guides;

3. Addressing unmet needs of disaster survivors through referrals to voluntary agencies;

4. Financial and grants management regarding internal billing processes and procedures;

5. Training needs for field staff administering the program; and

6. Policy development.

All of these topics focused primary on procedural and other aspects of IHP that were beyond the scope of the interim final rule and were addressed in separate actions, such as developing policies, training courses, fact sheets and handouts, or standard operating procedures. Therefore, FEMA is not addressing these issues and recommendations in this final rule.

III. Discussion of Comments Received on 2002 Interim Final Rule

In response to the 2002 interim final rule, FEMA received written comments from five States: Texas, Maine, Washington, New York, and Virginia. This section describes the comments received, as well as FEMA's responses to the public's input.

Comments Regarding Duplication of Benefits (44 CFR 206.110(h))

Section 206.110(h) in the interim final rule addresses duplication of benefits. Under this section, FEMA will not provide assistance under IHP when any other source has already provided such assistance or when such assistance is available from any other source. The section also states that in the instance of insured applicants, FEMA will provide assistance only when:

1. Payment of the applicable benefits are significantly delayed;

2. applicable benefits are exhausted;

3. applicable benefits are insufficient to cover the housing or other needs; or

4. housing is not available on the private market.

Three State agencies (from Washington, Virginia, and Maine) commented on this section. All three State agencies commented that the term ''significantly delayed'' should be defined in the regulation so that it is applied consistently and equitably and to avoid confusion and undue hardship while the term is being debated at the time of a disaster. The commenters stressed that the definition should be in the regulation as opposed to a policy.

Two State agencies (Washington and Maine) commented that if the estimated damage is below the deductible of the insurance policy, the applicant should not have to wait for a formal denial from the insurance company in order for FEMA to process the application, especially since insurance companies are slow to provide damage reports and produce decisions on eligibility. Rather, the regulation should allow an applicant to certify to FEMA that the estimated damage is below the maximum allowable repair assistance award and to provide a copy of the hazard insurance declaration page that clearly shows the damage is below the insurance deductible. The commenters proposed that if at the time of disaster the applicant estimates the damage to be below the insurance deductible, the applicant should be allowed to produce a copy of the declaration page or policy at the time of inspection in order to receive immediate assistance. In addition, two State agencies (Washington and Virginia) recommended modifying the regulation text to provide assistance to applicants immediately if they produced an insurance declaration page as proof of the limits of the policy.

In support of its comment, a Washington State agency described how, following an earthquake affecting 22 counties in that State, most of the homes had less than $10,000 damage, and since the homes were valued in excess of $100,000, the damage was below the earthquake insurance deductible of 10 percent. The commenter described how the applicant had to send in an insurance denial before FEMA would process the application and that later, FEMA changed its policy and asked the applicant to send in the declaration page of the earthquake policy, if damage was below $10,000. The commenter stated that this further confused the affected public. The commenter concluded that when applicants have to wait for an insurance denial before FEMA will consider their application, the applicants assume falsely that they would have been better off if they had not had the insurance, which has the unintended consequence of applicants dropping their insurance coverage.

Finally, the commenters on the insurance coverage provision also suggested that if FEMA makes the requested changes, FEMA should also make conforming changes to 44 CFR 206.113(a).

FEMA's Response

The three State agencies that commented that the term ''significantly delayed'' should be defined in the regulation were in error. The term ''significantly delayed'' was defined in the interim final rule at 44 CFR 206.111 and used at 44 CFR 206.110(h) and 44 CFR 206.113(a)(3). The term ''significantly delayed'' is defined in the interim final rule as more than 30 days.

With respect to the request that FEMA amend the regulation to allow for an applicant to certify to FEMA that the estimated damages are below the maximum allowable repair assistance award and to provide a copy of the hazard insurance declaration page that clearly shows the damage is below the insurance deductible, FEMA has concluded that applicants are not qualified to objectively estimate the total cost of damages, and therefore are not qualified to certify that the estimated cost is below their deductible. Therefore, FEMA did not make any changes based on this comment.

In addition, prior to DMA 2000, FEMA accepted declaration pages from applicants to support their claims for assistance. However, an unintended consequence of this was that applicants were asking their insurance companies for a copy of their declaration page. In turn, the insurance companies classified the applicants' inquiries as claims against their policies, so in some cases, the applicants' insurance premiums were increased. After DMA 2000, FEMA made a policy determination to stop accepting declaration pages from applicants to support their claims for assistance. For this reason as well, FEMA did not make any changes based on this comment.

With respect to the comment from the Washington State agency, FEMA notes that if the applicant has filed a claim with their insurance provider and, through no fault of their own, the coverage has been delayed for 30 days or more and the person has agreed to pay FEMA back when their insurance proceeds arrive, FEMA can provide assistance up to the maximum IHP award. For fiscal year 2020, the IHP maximum award is $35,500 for housing assistance and $35,500 for other needs assistance. 84 FR 55323, Oct. 16, 2019; *see* 44 CFR 206.113(a)(3). In addition, if the applicant's insurance proceeds are less than what FEMA can authorize and the proceeds are insufficient to cover the necessary expenses or serious needs, FEMA can provide the difference up to the maximum award. *See* 44 CFR 206.113(a)(4). Otherwise, FEMA would be competing with the applicant's insurance company to see which entity could issue assistance the fastest. FEMA has to allow the insurance company time to process the applicant's claim.

FEMA does not agree that applicants would have been better off if they had

not had insurance. The Stafford Act only allows FEMA to issue a maximum amount of assistance, which is usually much less than the amount of insurance coverage for which an applicant could insure their dwelling. IHP provides financial assistance and, if necessary, direct assistance to eligible individuals and households who, as a direct result of an emergency or major disaster, have uninsured or under-insured necessary expenses and serious needs, and are unable to meet such expenses or needs through other means. IHP's purpose is not to make an applicant ''whole again.'' FEMA's assistance is intended to help applicants on the road to self-sufficiency. Therefore, FEMA did not propose any changes to the regulations based upon this comment.

Comments Regarding Conditions of Ineligibility (44 CFR 206.113(b))

The interim final rule at 44 CFR 206.113(b)(9) indicates business losses are ineligible for IHP grant assistance. One State (Texas) commented that there should be an exception to the rule forbidding IHP grant assistance for business losses. The State proposed that the exception should allow IHP to provide grants for the loss of uninsured work tools for self-employed individuals who are denied loan assistance from the U.S. Small Business Administration (SBA) for financial reasons. The commenter noted that under current regulations, self-employed individuals who suffer work tool loss, and are ineligible for SBA loans, receive no assistance from IHP for this significant loss, and therefore, they fall through the cracks of the recovery program.

FEMA's Response

Section 408(e) of the Stafford Act limits financial assistance to medical, dental, child care, funeral expenses, personal property, transportation, and other necessary expenses or serious needs resulting from the major disaster. Financial assistance for ''personal property'' losses provides assistance to repair or replace personal property damaged or destroyed due to a disaster.[2] Financial assistance for ''other necessary expenses'' provides assistance to households with certain disaster-caused miscellaneous expenses; eligible items must be purchased or rented after the incident to assist with the applicant's disaster recovery.[3] FEMA does allow for assistance to replace essential tools, supplies, and equipment owned pre-disaster that are required by an employer as a condition for employment.[4] If a self-employed individual's tools are destroyed due to a disaster, FEMA considers the tools as property of the business and not the individual and thus a business loss. The Small Business Administration Office of Disaster Assistance's provides low interest disaster loans to businesses of all sizes, private non-profit organizations, homeowners, and renters to repair or replace real estate, personal property, machinery and equipment, inventory and business assets that have been damaged or destroyed in a declared disaster.[5] Section 312 of the Stafford Act prohibits duplication of benefits for losses incurred as a result of a major disaster. Since the SBA provides assistance for business related losses, FEMA structured the IHP to provide assistance to individuals and households and not businesses, and thus FEMA chose to not make any changes to the regulations based on this comment.

Conditions Regarding Appeals (44 CFR 206.115(b))

Section 206.115 allows for applicants to appeal any determination of eligibility under 44 CFR part 206, subpart D. Section 206.115(b) provides that ''appeals must be in writing and explain the reason(s) for the appeal.'' One State (Washington) recommended that FEMA publish an email address for use in filing appeals, as this would expedite the appeals process, would reduce the possibility of lost regular mail, and would speed up the process of passing misdirected appeals to the right agency.

FEMA's Response

FEMA does not provide the address in 44 CFR 206.115(b) since the address to submit appeals may change and FEMA would not want applicants to have to wait for the publication of a document in the **Federal Register** before they would have the updated address to submit their appeal. Instead, FEMA provides applicants with the address that they may submit an appeal to in FEMA's denial letter. FEMA does not provide an email address in the denial letter, as FEMA does not have a secure system in place that would allow appeals to be emailed to FEMA. The only secure server FEMA has in place that can accommodate applicant appeals is the system handling applications for FEMA disaster assistance. If an applicant creates an online disaster assistance account, they can submit an appeal ''electronically'' by uploading appeal documentation into their file.

Comments Regarding Moving and Storage (44 CFR 206.119(c)(5))

The proposed rule, in 44 CFR 206.110(c)(5), provided for financial assistance for necessary expenses and serious needs related to moving and storing personal property ''away from the threat of damage including the evacuation'' of such property. In contrast, the interim final rule, in 44 CFR 206.119(c)(5), provided for financial assistance for necessary expenses and serious needs related to moving and storing personal property ''to avoid additional disaster damage.'' Four State agencies (Virginia, New York, Texas, and Washington) commented on this provision, stating that financial assistance should be provided for pre-disaster preventative moving and storage and not only for moving and storage of property after a disaster has occurred. Several commenters noted that the restriction on paying for pre-disaster moving and storage was inconsistent with the Federal and State philosophy of promoting and supporting hazard mitigation measures and that the people should be encouraged to move personal property out of flood zones, if they have time to do so. One commented that it was most desirable that proactive actions be taken to avoid serious harm or injury to person or property.

The commenters stated that the cost of moving and storage was much less than the cost of replacing personal property. One commented that the concept of not paying for taking preventive measures to reduce the potential loss is in direct contrast to the ''insurance model,'' where individuals who sustain losses or may incur additional losses are required to take necessary and effective action to prevent or mitigate further losses and that the reimbursement of expenses incurred to minimize prospective losses prior to or during a disaster would seem to be prudent and should be encouraged and rewarded. The commenter stated that it was inconsistent to not reimburse an applicant for moving items out of harm's way prior to a disaster and then make them purchase mandatory flood insurance coverage for items that could have been safeguarded.

FEMA's Response

Section 408(e)(2) of the Stafford Act provides that financial assistance may be provided to address personal property, transportation, and other necessary expenses or serious needs resulting from the major disaster. FEMA interpreted Section 408(e)(2) in 44 CFR 206.119(c)(5) to provide financial assistance under ONA to pay for the cost of storage of personal property while repairs are being made to the primary residence and the cost of returning the property to the applicant's primary residence. FEMA has provided further guidance that eligible expenses for moving and storage assistance include the following expenses: Costs for commercial moving labor, moving truck rental fee, fuel for the rental vehicle, costs for tape and boxes, storage unit fees, and associated sales taxes.[6]

With respect to comments stating that the restriction on paying for pre-disaster moving and storage is inconsistent with the Federal and State philosophy of promoting and supporting hazard mitigation measures, FEMA believes that even if it were to remove the restriction and begin paying for pre-disaster moving and storage expenses it would have limited affect, as it would only apply sporadically and affect a small population of disaster survivors. This is because pre-disaster moving and storage expenses would only apply to specific types of disasters that have advance warning such as hurricanes and lava flows. Unexpected disasters such as earthquakes and tornados would not be eligible for pre-disaster moving and storage expenses because those events occur without sufficient warning to permit sufficient time to move and store. In addition, FEMA's system for processing applications for IHP accepts expenses that occurred post major disaster declaration date. Allowing moving and storage expenses pre-disaster declaration date is an administrative challenge and would require system changes. For these reasons, FEMA has chosen, at this time, to continue to limit moving and storage assistance to assistance provided after the disaster has occurred while repairs are being made to the primary residence. However, FEMA is taking the commenter's suggestion under advisement and it will conduct a policy review to evaluate a possible future change to allow moving and storage expenses pre-disaster declaration date.

With respect to comments stating that the cost of moving and storage was much less than the cost of replacing personal property, FEMA also notes that the insurance industry generally does not reimburse for pre-disaster, preventative moving and storage. In addition, the insurance industry requires individuals who sustain losses or may incur additional losses to take necessary and effective action to prevent or mitigate further losses. The insurance industry generally does not require prevention or mitigation before the loss occurs.

Comments Regarding Ineligible Costs (44 CFR 206.120(f)(3))

As discussed in the NPRM and changed by the interim final rule, the Other Needs Assistance (ONA) provision of the IHP may be administered one of three ways: (1) Exclusively by FEMA, (2) administered by the State with substantial FEMA assistance, or (3) by the State with minimal FEMA participation. If the State administers ONA, it may request a grant from FEMA that it uses to administer assistance to individuals and households in the State. In accordance with section 408(f)(1)(B) of the Stafford Act, a State that receives an ONA grant may expend not more than 5 percent of the amount of the grant for administrative costs. These administrative costs typically include conducting grants management oversight; generating financial status reports, weekly program status reports, and other accounting documents; maintaining records; and conducting audits.

Under the terms of 44 CFR 206.120(f)(3), funds provided to the State for administrative costs cannot be used to pay regular time for State employees but may be used to pay overtime for those employees. Three of the State agencies that commented on the rule (Texas, Washington, and New York) disagreed with this provision. One commenter stated that FEMA had arbitrarily implemented a rule that runs contrary to the definition of eligible costs in OMB Circular A–87, Attachment A, General Principles for Determining Allowable Costs. The commenter stated that staff costs, whether they are incurred by an incumbent State employee or newly hired person, should be an eligible expense against grant management if the employee spends most of his/her available hours managing the grant.

Another commenter stated that because overtime is an allowed expense by 206.120(f)(3),[7] and thus recognized as an identifiable and specific function which fully benefits IHP/ONA, regular time should be allowed since it is also an identifiable and specific function which fully benefits IHP/ONA. The commenter also stated that funding the regular time of State employees with another funding source would contradict OMB Circular No. A–87, Attachment A, C.3.c., which addresses overcoming funding deficiencies for Federal grant awards.

Commenters stated that some employees involved in IHP/ONA administration devote 100 percent of their time to the management of the disaster processing operation, and for those that perform other tasks in addition to grant management, any sizeable disaster will require hiring additional staff to backfill the other duties that the grant manager no longer has time to do.

A commenter stated that the current rule, as written, runs contrary to a State's effort to remain involved in ONA and that considerable time and effort has been expended in order to train State staff to be ready and able to respond effectively to disaster declarations. According to the commenter, the current rule encourages States to hire a temporary person to manage the grant, thus allowing their salary to be a legitimate cost against the 5 percent administrative fee; however, hiring someone who knows nothing about the IHP, which needs to be up and running within hours of a declaration, is not justifiable.

FEMA's Response

The 2002 interim final rule was not contrary to the definition of eligible costs in OMB Circular A–87. On September 30, 2002, the date that FEMA promulgated the interim final rule (*see* 67 FR 61446), the applicable version of OMB Circular A–87 was the version published in the **Federal Register** on May 17, 1995. *See* 60 FR 26484. The 1995 OMB Circular A–87, Attachment A, E.2.a., states that typical direct costs that are chargeable to Federal awards include compensation for employees for the time devoted and identified specifically to the performance of those awards. However, OMB Circular A–87 does not prohibit FEMA from making

[6] FEMA, Individuals and Households Program Unified Guidance, FP 104–009–3, September 30, 2016, at 111, available at *https://www.fema.gov/media-library/assets/documents/124228.*

[7] The commenter referenced 44 CFR 206.120(e)(3). FEMA construes the citation as a reference to 44 CFR 206.120(f)(3), because section 206.120(e)(3) does not exist and 44 CFR 206.120(f)(3) states that ''Funds provided to the State for the administrative costs of administering Other Needs assistance shall not be used to pay regular time for State employees, but may be used to pay overtime for those employees.''

these types of direct costs ineligible through the regulatory process. *See* 1995 OMB Circular No. A–87, Attachment A, C.1d.

With respect to the commenter's statement that funding the regular time of State employees with another funding source would contradict the 1995 OMB Circular No. A–87 C.3.c., FEMA construes the citation as a reference to the 1995 OMB Circular No. A–87, Attachment A, C.3.c., as the referenced cite, C.3.c., does not exist in the main portion of the 1995 OMB Circular No. A–87. The interim final rule at 44 CFR 206.120(f)(3) does not contradict the 1995 OMB Circular No. A–87, Attachment A, C.3.c., as the regular time of State employees would be funded by the State and would not be charged to other Federal awards to overcome funding deficiencies. FEMA made a program determination to reimburse States that hire additional personnel for the grant because in such cases the costs for the additional personnel hired are directly linked to the management of the IHP/ONA grant award. FEMA determined that it would reimburse the State for the costs for these additional State employees because their salaries are not covered under previously appropriated funds in a State's budget and they were hired simply to work on the management of the IHP/ONA grant award. For the same reasons, 44 CFR 206.120(f)(3) does not contradict the 1995 OMB Circular No. A–87, Attachment A, C.3.c.

Since the interim final rule was promulgated, OMB has issued two additional versions of OMB Circular A–87, which have superseded the previous versions. *See* 69 FR 25970 and 78 FR 78590. The 2004 OMB Circular A–87 version was merely a revision, and while the citations were updated, the language was not changed. In 2013, OMB issued final guidance that superseded and streamlined requirements from OMB Circulars A–21, A–87, A–110, and A–122 (which have been placed in OMB guidance); Circulars A–89, A–102, and A–133; and the guidance in Circular A–50 on Single Audit Act follow up. *See* 78 FR 78590. The purpose of this consolidation was to provide the aforementioned circular in a streamlined format that aims to improve both clarity and accessibility.

Comments Regarding Ineligible Costs (44 CFR 206.120(f)(3)) and Federalism

One commenter also added that the interim final rule appears to be a subtle attempt to encourage the States to let FEMA administer the grants. The commenter stated that the rule may, therefore, have federalism implications.

FEMA's Response

As discussed under the Federalism heading of the preamble, a rule has federalism implications if it has a substantial direct effect on the States, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government. This regulation clearly leaves the decision whether to administer (or apply for) ONA to the States. ''Subtle encouragement'' to participate voluntarily in a Federal program, whether intended or not, does not rise to the level of a rule with federalism implications. The regulatory text in question does not require States to participate in the program, mandate that FEMA administer the program, prohibit States from administering the program, or limit the policymaking discretion of the States with respect to whether they may or may not administer the program. States are free to administer the grants; however, FEMA will not fund the regular salaries of State employees, for the reasons stated above.

Comments Regarding Recovery of Other Needs Assistance Funds (44 CFR 206.120(f)(5))

Section 206.120(f)(5) requires the States to recover ONA funds from applicants who obtained the funds through fraud, who expended the funds for unauthorized items or services, who expended the funds for items for which assistance is received from other means, and from applicants to whom the award was made in error. Four State agencies (Texas, Washington, Maine, and New York) commented that the States should not be responsible for recovering ONA funds when the recovery is necessary due to FEMA error, for example when a grant is issued erroneously by FEMA's automated determination process. One State agency proposed that, since many States use the ''AUTO–D'' option, which is based on the FEMA inspection reports and business rules set up in NEMIS, the following language should be added to 44 CFR 206.120(f)(5): ''FEMA will be responsible for recovering assistance awards from applicants when an award has been mistakenly made as a result of a FEMA processing error.'' The commenter added that the State administrative ''cost to recover funds runs two to three times more than the cost of issuing an award. Under the current FEMA policy, the administrative costs are deducted from the total Federal outlay, which means the States are not compensated (five percent administrative costs) for moneys recovered.'' The commenter noted that requiring the States to recover award moneys for Federal mistakes results in use of State funds to correct Federal errors, which is punitive to the States.

FEMA's Response

FEMA inserted 44 CFR 206.120 into the interim final rule to address the financial management principles that FEMA would use to implement the ONA portion of the IHP. Even before FEMA published the proposed IHP rule, a number of States had expressed a desire to actively participate in the administration of IHP. The comments that FEMA received on both the proposed and interim final rule indicated that the States wanted opportunities to be active partners in the administration of the new program. One component in the administration of the IHP is the recovery of funds that were issued in error. Federal agencies are required to take action to identify and recover improper payments, regardless of whether the payments were made in error or obtained by fraud.[8] In addition, by statute, applicants must return funds to FEMA when the assistance provided by FEMA duplicates assistance from another source.[9] And the generally applicable IHP regulations, which apply regardless of which entity administers IHP, require applicants to return funds when such funds were provided in error, were spent inappropriately, or were obtained through fraudulent means.[10] When a State is administrating the ONA portion of the IHP, FEMA provides a grant to the State, territorial, or Tribal government and they are responsible for all tasks associated with the administration of ONA. The State, territorial, or Tribal government provides assistance to applicants, and FEMA is responsible for reimbursing the State, territorial, or Tribal government for its portion of the cost share. The State, territorial, or Tribal government may utilize 5 percent of the grant toward administrative costs, including the costs of reimbursement. Because the State, territorial, or Tribal government are the entities who made the decisions regarding whether an applicant was eligible for ONA funds and have the records regarding who was awarded ONA funds, the State, territorial, or Tribal government are ultimately the party that must be responsible for recovering funds that were issued in error.

[8] The Debt Collection Act of 1996, Public Law 104–34; 31 U.S.C. 3711(a).

[9] Section 312(c) of the Stafford Act, 42 U.S.C. 5155(c); 44 CFR 206.191.

[10] 44 CFR 206.116(b).

Additionally, as a result of cost-share requirements, 25 percent of the funds that were issued in error are actually State funds that need to be returned to the State. Thus, the State can recover the funds, subtract their portion of funds, and return the remaining 75 percent to the Federal Government.

Comments Regarding Flood Insurance Purchase Requirement (44 CFR 206.110(k)) and Group Flood Insurance Policy (44 CFR 206.119(d))

The Flood Disaster Protection Act of 1973, as amended, requires that individuals or households that are located in a Special Flood Hazard Area (SFHA) may not receive Federal assistance for National Flood Insurance Program (NFIP) insurable real and/or personal property damaged by a flood unless the community in which the property is located is participating in the NFIP. *See* 42 U.S.C. 4001–4129. In addition, the National Flood Insurance Reform Act of 1994 and the Riegle Community Development and Regulatory Improvement Act of 1994 state that no Federal disaster assistance may be provided to a person for damage to any personal or residential property who has received flood disaster assistance that was conditioned on the person first having obtained flood insurance and subsequently failed to obtain and maintain flood insurance as required. See 42 U.S.C. 5154a. Pursuant to the flood insurance purchase requirement, individuals and households must buy and maintain flood insurance as a condition of receiving Federal assistance. For purposes of IA, FEMA interprets financial assistance to mean assistance to an individual or household to buy, receive, build, repair, or improve insurable portions of a home and/or to purchase or repair insurable contents. *See* 44 CFR 206.110(k).

Individuals identified by FEMA as eligible for ONA under section 408 of the Stafford Act as a result of flood damage caused by a Presidentially-declared major disaster and who reside in a special flood hazard area may be included in a Group Flood Insurance Policy (GFIP) established under the NFIP. *See* 44 CFR 206.119(d). The GFIP is a policy that is established for each disaster declaration that results from flooding and authorizes the provision of Individual Assistance. FEMA or the State will withhold a portion of ONA funds for such individuals and provide it to the NFIP on behalf of individuals and households who are eligible for coverage. Payments to cover the premium amount for each applicant are paid for a 3-year policy term. The master GFIP policy term is for 36 months and begins 60 days from the date of the disaster declaration. However, individual coverage becomes effective 30 days following the NFIP's receipt of the applicant's name and premium payment from the State, Territory, Tribal government, or FEMA.

Three State agencies (Washington, Virginia, and Texas) commented on the requirement that individuals and households must purchase flood insurance when their GFIP grant ends. Washington and Virginia stated that the requirement to maintain the policy places a disproportionate burden on the poor, as the poor were more likely to buy property in SFHAs because it is the least expensive property in a community, and that the cost of GFIP renewal for such individuals was cost-prohibitive, given their limited resources. Texas stated that, since the penalty for failure to purchase and maintain flood insurance, which is a condition of IHP, is a denial of future disaster assistance, it would be imprudent not to continue to provide GFIP coverage for low income disaster victims.

Three State agencies (Maine, Washington, and Virginia) commented that FEMA should consider changing the GFIP requirement for people who cannot pass an SBA income test. Maine expressed concern that the individuals would become disenfranchised from assistance following the expiration of their GFIP grant and that, unless the financial situations of such individuals improved dramatically, it was unlikely that such individuals would either qualify for SBA programs or be able to pay an NFIP premium following the expiration of the GFIP grant. Virginia also commented that if an individual fails the SBA income test they should be subsidized by a formula based system.

FEMA's Response

In the proposed rule, FEMA proposed the elimination of the GFIP. *See* 67 FR 3415. As discussed in the interim final rule, FEMA received comments from States which supported the continuation of the GFIP. *See* 67 FR 61449. The States stated that the basis for their support of the program related to the fact that disaster survivors who qualified for Individual and Family Grant assistance (the precursor program to the IHP) generally had low incomes and were not as able to afford to pay flood insurance premiums as other disaster survivors. *See* 67 FR 61449. Because the penalty for failing to purchase and maintain flood insurance as a condition of receiving disaster assistance under the old Individual and Family Grant Program and under the new IHP is a denial of future disaster assistance, most of the States that commented on FEMA's proposal believed that it would be imprudent not to continue providing GFIP coverage for low income disaster survivors.

FEMA retained the GFIP in the interim final rule based upon the comments FEMA received on the proposed rule as well as the requirement from the National Flood Insurance Reform Act of 1994 and the Riegle Community Development and Regulatory Improvement Act of 1994 (*See* 42 U.S.C. 5154a). But some States questioned the requirement to maintain flood insurance, arguing that it places a disproportionate burden on the poor, since the poor are more likely to buy property in special flood areas because they are the least expensive properties in a community, and that the cost for such individuals is too high. Also, the Stafford Act requires the purchase and maintenance of flood insurance as a condition of receiving future disaster assistance in certain circumstances. *See* 42 U.S.C. 5154a. Therefore, FEMA does not have the discretion to waive the flood insurance requirement. To assist applicants with maintaining flood insurance, as mentioned above, FEMA provides all eligible applicants with GFIP for 3 years. *See* 44 CFR 206.119(d).

Comments Regarding Executive Order 12898, Environmental Justice

Two State agencies (Washington and Virginia) commented generally that the interim final rule would ''discriminate covertly'' against the poor. Specifically, these two commenters stated that the housing repair cap of $5,000 and the housing replacement cap of $10,000 have a negative impact on low-income disaster survivors.

FEMA's Response

FEMA does not believe that the interim final rule discriminates covertly against the poor. For instance, the interim final rule assisted the poor by retaining the GFIP.

The two comments that FEMA received regarding the housing repair and replacement caps were addressed in the final rule published on November 7, 2013, that removed the caps.

IV. Final Rule

FEMA is finalizing the interim final rule implementing 44 CFR 206.110–120 published on September 30, 2002, (67 FR 61446), with the corrections published on October 9, 2002, (67 FR 62896), the technical amendments to 206.110, 206.111, 206.112, 206.115, 206.117, and 206.120 published on

April 3, 2009, (74 FR 15328), and the amendments to 206.117 published on November 7, 2013, (78 FR 66852), without change.

V. Regulatory Analysis

A. Executive Order 12866, Regulatory Planning and Review, Executive Order 13563, Improving Regulation and Regulatory Review and Executive Order 13771, Reducing Regulation and Controlling Regulatory Costs

Executive Orders 12866 (''Regulatory Planning and Review'') and 13563 (''Improving Regulation and Regulatory Review'') direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. Executive Order 13771 (''Reducing Regulation and Controlling Regulatory Costs'') directs agencies to reduce regulation and control regulatory costs and provides that ''for every one new regulation issued, at least two prior regulations be identified for elimination, and that the cost of planned regulations be prudently managed and controlled through a budgeting process.''

The Office of Management and Budget (OMB) has not designated this rule a ''significant regulatory action,'' under section 3(f) of Executive Order 12866. Accordingly, OMB has not reviewed it. As this rule is not a significant regulatory action, this rule is exempt from the requirements of Executive Order 13771. *See* OMB's Memorandum ''Guidance Implementing Executive Order 13771, Titled 'Reducing Regulation and Controlling Regulatory Costs''' (April 5, 2017).

This final rule will result in no changes to the IHP and FEMA does not anticipate any additional costs. FEMA is not requiring applicants to perform any additional tasks, fill out any new forms, or provide any additional information. It is anticipated that the cost to applicants will not change as a result of this rule. FEMA is not changing the parameters of the program in any way so there is no expectation that the number of applications processed by FEMA would be altered. As such, FEMA's workload will not be impacted.

The IHP provides financial and direct assistance to those who, as the result of a Presidentially-declared emergency or major disaster, have necessary expenses and serious needs they are unable to meet through other means. This aid may include temporary housing, aid to repair or replace housing, permanent or semi-permanent housing construction, and ONA, which provides financial assistance for personal property losses, medical, dental, funeral, child care, transportation, and other miscellaneous expenses. These services and the benefits derived from them are not being altered by this final rule and will continue to exist at their current levels. Since there are no changes to the amount or type of assistance available, there will correspondingly be no change in the benefits currently derived from the IHP.

Similarly, this final rule will not change the number of eligible applicants or the amount of funds expended per applicant. This rule also has no anticipated impact on transfers.

This rule finalizes an interim final rule and addresses outstanding comments received on the September 30, 2002 interim final rule. This final rule makes no changes to the IHP either in response to or independent of those comments. FEMA does not anticipate any changes to the associated costs, benefits, or transfers from this final rule.

B. Regulatory Flexibility Act

Under the Regulatory Flexibility Act (RFA), 5 U.S.C. 601 *et seq.,* as amended by the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121, 110 Stat. 857), FEMA must consider the impact of this proposed regulation on small entities. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. When the Administrative Procedure Act requires an agency to publish a notice of proposed rulemaking under 5 U.S.C. 553, the RFA requires a regulatory flexibility analysis for both the proposed rule and the final rule if the rulemaking could ''have a significant economic impact on a substantial number of small entities.''

This final rule concerns the provision of Federal assistance to individuals and households after a Presidentially-declared emergency or major disaster. Individuals and households are not classified as small entities. A household is defined at 44 CFR 206.111 as ''all persons (adults and children) who lived in the pre-disaster residence who request assistance under this subpart, as well as any persons such as infants, spouse or part-time residents who were not present at the time of the disaster, but who are expected to return during the assistance period.'' This rule does not directly regulate any small entities.

Additionally, while this rule is addressing comments from the September 30, 2002 interim final rule, it is making no changes and imposes no direct costs.

During the public comment period on the January 23, 2002, NPRM, FEMA did not receive any comments contrary to the Regulatory Flexibility Analysis certification provided at that time.

Accordingly, pursuant to section 605(b) of the RFA, 5 U.S.C. 605(b), the head of FEMA certifies this rule will not have a significant economic impact on a substantial number of small entities.

C. Unfunded Mandates Reform Act of 1995

The Unfunded Mandates Reform Act of 1995, 2 U.S.C. 658, 1501–1504, 1531–1536, 1571, pertains to any notice of proposed rulemaking which implements any rule that includes a Federal mandate that may result in the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector, of $100 million (adjusted annually for inflation) or more in any one year. If the rulemaking includes a Federal mandate, the Act requires an agency to prepare an assessment of the anticipated costs and benefits of the Federal mandate. The Act also pertains to any regulatory requirements that might significantly or uniquely affect small governments. Before establishing any such requirements, an agency must develop a plan allowing for input from the affected governments regarding the requirements. The Act exempts any regulation or proposed regulation that ''requires compliance with accounting and auditing procedures with respect to grants or other money or property provided by the Federal Government'' or ''provides for emergency assistance or relief at the request of any State, local, or tribal government or any official of a State, local, or tribal government.'' 2 U.S.C. 1503(4). FEMA finds this rule to be exempt from the Act under those provisions.

As reported in the 12866 section, FEMA has determined that this rule will not result in the expenditure by State, local, and Tribal governments, in the aggregate, nor by the private sector, of $100 million or more in any one year as a result of a Federal mandate, and it will not significantly or uniquely affect small governments. Therefore, no actions are deemed necessary under the provisions of the Unfunded Mandates Reform Act of 1995.

D. National Environmental Policy Act

Under the National Environmental Policy Act of 1969 (NEPA), as amended, 42 U.S.C. 42 U.S.C. 4321 *et seq.,* an agency must prepare an environmental assessment or environmental impact statement for any rulemaking that significantly affects the quality of the human environment. FEMA has determined that this rulemaking does not significantly affect the quality of the human environment and consequently has not prepared an environmental assessment or environmental impact statement.

Rulemaking is a major Federal action subject to NEPA. Categorical exclusion A3 included in the list of exclusion categories at Department of Homeland Security Instruction Manual 023–01–001–01, Revision 01, Implementation of the National Environmental Policy Act, Appendix A, issued November 6, 2014, covers the promulgation of rules, issuance of rulings or interpretations, and the development and publication of policies, orders, directives, notices, procedures, manuals, and advisory circulars if they meet certain criteria provided in A3(a–f). This final rule finalizes an existing regulation without changing its environmental effect, which meets Categorical Exclusion A3(d).

E. Paperwork Reduction Act of 1995

FEMA has determined that this rule will not create a new collection of information or create a revision to an existing collection of information under the Paperwork Reduction Act of 1995 (PRA), 44 U.S.C. 3501–3520. All information submitted by applicants seeking IHP housing assistance, including information submitted on appeal, is included in OMB-approved collections.

The following collections related to IHP have been approved by OMB under the following titles and control numbers: ''Disaster Assistance Registration,'' OMB control number 1660–0002, expiration date August 31, 2022, and ''Federal Assistance to Individuals and Households Program (IHP),'' OMB control number 1660–0061, expiration date May 31, 2020. There is no additional paperwork burden as a result of this final rule.

F. Privacy Act

Under the Privacy Act of 1974, 5 U.S.C. 552a, an agency must determine whether implementation of a proposed regulation will result in a system of records. A ''record'' is any item, collection, or grouping of information about an individual that is maintained by an agency, including, but not limited to, his/her education, financial transactions, medical history, and criminal or employment history and that contains his/her name, or the identifying number, symbol, or other identifying particular assigned to the individual, such as a finger or voice print or a photograph. See 5 U.S.C. 552a(a)(4). A ''system of records'' is a group of records under the control of an agency from which information is retrieved by the name of the individual or by some identifying number, symbol, or other identifying particular assigned to the individual. An agency cannot disclose any record which is contained in a system of records except by following specific procedures.

FEMA, in partnership with other Federal agencies, hosts a single application and resource center at *http://www.disasterassistance.gov* that allows the public to apply for disaster assistance, benefits, and other services within FEMA and other Federal agencies. This application and resource center accepts personally identifiable information about IHP applicants seeking disaster related housing and other needs assistance. The application resource center is included in a Privacy Act System of Records entitled ''Disaster Recovery Assistance Files'' number ''DHS/FEMA–008'' which was published on April 30, 2013, in the **Federal Register** at 78 FR 25282. This final rule would not change the application materials received or result in a new collection of personally identifiable information about individuals.

G. Executive Order 13175, Consultation and Coordination With Indian Tribal Governments

Executive Order 13175, ''Consultation and Coordination with Indian Tribal Governments,'' 65 FR 67249, November 9, 2000, applies to agency regulations that have Tribal implications, that is, regulations that have substantial direct effects on one or more Indian Tribes, on the relationship between the Federal Government and Indian Tribes, or on the distribution of power and responsibilities between the Federal Government and Indian Tribes. Under this Executive Order, to the extent practicable and permitted by law, no agency shall promulgate any regulation that has Tribal implications, that imposes substantial direct compliance costs on Indian Tribal governments, and that is not required by statute, unless funds necessary to pay the direct costs incurred by the Indian Tribal government or the Tribe in complying with the regulation are provided by the Federal Government, or the agency consults with Tribal officials. This final rule would not significantly or uniquely affect the communities of Indian Tribal governments, nor would this rulemaking impose substantial direct compliance costs on those communities.

H. Executive Order 13132, Federalism

Executive Order 13132, ''Federalism,'' 64 FR 43255, August 10, 1999, sets forth principles and criteria that agencies must adhere to in formulating and implementing policies that have federalism implications, that is, regulations that have ''substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.'' Federal agencies must closely examine the statutory authority supporting any action that would limit the policymaking discretion of the States, and to the extent practicable, must consult with State and local officials before implementing any such action. The disaster assistance addressed by this final rule is provided to individuals and households, and would not have federalism implications.

I. Executive Orders 11988 and 11990, Floodplain Management and Protection of Wetlands

Executive Order 11988, ''Floodplain Management,'' 42 FR 26951, May 24, 1977, sets forth that each agency is required to provide leadership and take action to reduce the risk of flood loss, to minimize the impact of floods on human safety, health and welfare, and to restore and preserve the natural and beneficial values served by floodplains in carrying out its responsibilities for (1) acquiring, managing, and disposing of Federal lands and facilities; (2) providing Federally undertaken, financed, or assisted construction and improvements; and (3) conducting Federal activities and programs affecting land use, including but not limited to water and related land resources planning, regulating, and licensing activities. In carrying out these responsibilities, each agency must evaluate the potential effects of any actions it may take in a floodplain; ensure that its planning programs and budget requests reflect consideration of flood hazards and floodplain management; and prescribe procedures to implement the policies and requirements of the Executive Order.

Before promulgating any regulation, an agency must determine whether the proposed regulations will affect a floodplain(s), and if so, the agency must

consider alternatives to avoid adverse effects and incompatible development in the floodplain(s). If the head of the agency finds that the only practicable alternative consistent with the law and with the policy set forth in Executive Order 11988 is to promulgate a regulation that affects a floodplain(s), the agency must, prior to promulgating the regulation, design or modify the regulation in order to minimize potential harm to or within the floodplain, consistent with the agency's floodplain management regulations and prepare and circulate a notice containing an explanation of why the action is proposed to be located in the floodplain.

The requirements of these Executive Orders apply in the context of the provision of Federal financial assistance relating to, among other things, construction and property improvement activities, as well as conducting Federal programs affecting land use. This final rule would not have an effect on land use, floodplain management, or wetlands. When FEMA undertakes specific actions in administering IHP that may have effects on floodplain management (*e.g.,* placement of manufactured housing units on FEMA-constructed group sites; permanent or semi-permanent housing construction; Multi-Family Lease and Repair; financial assistance for privately owned roads and bridges), FEMA follows the procedures set forth in 44 CFR part 9 to assure compliance with this Executive Order. The notice that is required by the Executive Order is provided separately at the time FEMA undertakes the specific action.

J. Executive Order 12898, Environmental Justice

Under Executive Order 12898, ''Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations,'' 59 FR 7629, February 16, 1994, as amended by Executive Order 12948, 60 FR 6381, February 1, 1995, FEMA incorporates environmental justice into its policies and programs. The Executive Order requires each Federal agency to conduct its programs, policies, and activities that substantially affect human health or the environment in a manner that ensures that those programs, policies, and activities do not have the effect of excluding persons from participation in programs, denying persons the benefits of programs, or subjecting persons to discrimination because of race, color, or national origin. FEMA has incorporated environmental justice into its policies, programs, and activities.

The IHP regulations intentionally contain provisions that ensure they would not have a disproportionately high and adverse human health effect on any segment of the population. FEMA received a comment on the interim final rule that stated the interim final rule did not overtly discriminate against disaster survivors based on race, color, or national origin, but that it did discriminate covertly against those who are ''financially challenged,'' and, to the extent that the ''financially challenged'' consist disproportionately of minority groups, one might conclude that an element of the IHP program lacks environmental justice. The commenter stated that the housing repair cap of $5,000 has a gross negative impact on low-income disaster survivors, and results in more low-income disaster survivors returning to unsafe, unsanitary, and/or non-functional homes. The commenter recommended the liberal use of housing replacement assistance to provide additional help for the financially challenged.

FEMA addressed this comment in a NPRM that published in the **Federal Register** on July 30, 2012 (*see* 77 FR 44562), and a final rule that published in the **Federal Register** on November 7, 2013 (*see* 78 FR 66852). The $5,000 subcap is no longer in place and individuals and households may receive up to the full amount of IHP funds ($33,000 for fiscal year 2016) for eligible housing repair and replacement assistance. See 80 FR 62086 (Oct. 15, 2015). This figure is adjusted annually to reflect changes in the Consumer Price Index.

No action that FEMA can anticipate under this final rule would have a disproportionately high and adverse human health effect on any segment of the population. In addition, the rulemaking would not impose substantial direct compliance costs on those communities.

K. Executive Order 13045, Protection of Children From Environmental Health Risks and Safety Risks

FEMA has analyzed this final rule under Executive Order 13045, Protection of Children From Environmental Health Risks and Safety Risks, 62 FR 19883, Apr. 23, 1997. This rule is not an economically significant rule and would not create an environmental risk to health or safety that might disproportionately affect children.

L. Executive Order 12988, Civil Justice Reform

This rule meets applicable standards in sections 3(a) and 3(b)(2) of Executive Order 12988, Civil Justice Reform, to minimize litigation, eliminate ambiguity, and reduce burden. *See* Executive Order 12988, 61 FR 4729, Feb. 7, 1996.

M. Executive Order 12630, Governmental Actions and Interference With Constitutionally Protected Property Rights

FEMA has reviewed this rule under Executive Order 12630, Governmental Actions and Interference with Constitutionally Protected Property Rights, as supplemented by Executive Order 13406, Protecting the Property Rights of the American People. *See* Executive Order 12630, 53 FR 8859, Mar. 18, 1988, and Executive Order 13406, 71 FR 36973, June 28, 2006. This rule will not effect a taking of private property or otherwise have taking implications under Executive Order 12630.

N. Congressional Review of Agency Rulemaking

Under the Congressional Review of Agency Rulemaking Act (CRA), 5 U.S.C. 801–808, before a rule can take effect, the Federal agency promulgating the rule must submit to Congress and to the Government Accountability Office (GAO) a copy of the rule, a concise general statement relating to the rule, including whether it is a major rule, the proposed effective date of the rule, a copy of any cost-benefit analysis, descriptions of the agency's actions under the Regulatory Flexibility Act and the Unfunded Mandates Reform Act, and any other information or statements required by relevant executive orders.

FEMA has sent this rule to Congress and to GAO pursuant to the CRA. The rule is not a major rule within the meaning of the CRA. It will not have an annual effect on the economy of $100 million or more, it will not result in a major increase in costs or prices for consumers, individual industries, Federal, State, or local government agencies, or geographic regions, and it will not have significant adverse effects on competition, employment, investment, productivity, innovation, or on the ability of United States-based enterprises to compete with foreign-based enterprises in domestic and export markets.

List of Subjects in 44 CFR Part 206

Administrative practice and procedure, Coastal zone, Community facilities, Disaster assistance, Fire prevention, Grant programs—housing and community development, Housing, Insurance, Intergovernmental relations, Loan programs—housing and

community development, Natural resources, Penalties, and Reporting and recordkeeping requirements.

PART 206—FEDERAL DISASTER ASSISTANCE

■ Accordingly, the amendments to 44 CFR 206.110–120 of the interim final rule published on September 30, 2002 (67 FR 61446), with the corrections published on October 9, 2002 (67 FR 62896), the technical amendments to 206.110, 206.111, 206.112, 206.115, 206.117, and 206.120 published on April 3, 2009 (74 FR 15328), and the amendments to 206.117 published on November 7, 2013 (78 FR 66852), are adopted as a final rule without change.

Pete Gaynor,

Acting Administrator, Federal Emergency Management Agency.

[FR Doc. 2019–24762 Filed 11–14–19; 8:45 am]

BILLING CODE 9111–23–P

FEDERAL MARITIME COMMISSION

46 CFR Part 515

[Docket No. 18–11]

RIN 3072–AC73

Licensing, Registration, Financial Responsibility Requirements, and General Duties for Ocean Transportation Intermediaries

AGENCY: Federal Maritime Commission.

ACTION: Final rule.

SUMMARY: The Federal Maritime Commission (Commission) amends its rules governing licensing, registration, financial responsibility requirements, and general duties for ocean transportation intermediaries (OTIs). The changes are mainly administrative and procedural.

DATES: The rule is effective December 16, 2019.

FOR FURTHER INFORMATION CONTACT: Sandra L. Kusumoto, Director, Bureau of Certification and Licensing. *Address:* 800 North Capitol Street, NW, Washington, DC 20573–0001. *Phone:* (202) 523–5787. *Email: bcl@fmc.gov.*

SUPPLEMENTARY INFORMATION:

I. Introduction

By Notice of Proposed Rulemaking (NPRM) published in the **Federal Register** on December 17, 2018, 83 FR 64502, the Commission proposed changes to 46 CFR part 515, which governs licensing, registration, financial responsibility requirements, and general duties for OTIs. The changes are necessary because while implementing the extensive revisions to part 515 made in a November 5, 2015 final rule (80 FR 68722), the Commission has identified a number of regulatory provisions where clarification is warranted.

The Commission invited comments on the NPRM, and later extended the comment period from January 12, 2019 to February 22, 2019, 84 FR 2125 (February 6, 2019). The Commission received three comments. After consideration of the comments and for the reasons stated below, the Commission is adopting all but one of the proposed amendments to part 515 without change. The exception is the proposed change to § 515.3, which the Commission is deferring while it considers whether this section of its rules will require further revision in light of the recent statutory changes made by the Frank LoBiondo Coast Guard Authorization Act of 2018, Public Law 115–282 (LoBiondo Act).

II. Summary of NPRM

The Commission's proposed changes to its current rules were administrative or procedural in nature or would further reduce the regulatory burden on regulated entities. These proposed changes included: (1) Updating the title and scope of part 515 to include foreign-based non-vessel-operating common carrier (NVOCC) registrations; (2) clarifying the requirements for U.S. agents of foreign-based registered NVOCCs; (3) removing the optional paper application process and related reference to fee amounts; (4) adding language to clarify who can be the Qualifying Individual (QI) in partnerships between entities other than individuals; (5) updating and improving processes (renewal, bond, and termination); (6) adding clarifying language regarding the Commission's direct review of applications in certain cases; (7) clarifying the information that sureties are to provide regarding claims against OTIs; (8) adding a requirement that NVOCCs submit their Form FMC–1 prior to being issued a license; and (9) deleting the reference to the availability of the Regulated Person's Index. None of the proposed changes would increase the burden to applicants, licensees, or foreign-based registered NVOCCs.

III. Summary of Comments

Roanoke Insurance Group Inc. (Roanoke), a provider of surety bonds to OTIs, stated that it endorses and supports the minor administrative modifications the Commission is proposing to part 515. Specifically, Roanoke stated that it believes ''the closer integration between the Tariff and Licensing units during the licensing process, specifically adopting a rule that the [Commission] will not issue the license until the financial responsibility and tariff are in place, is beneficial to the industry.'' Roanoke also had no objection to the proposed clarifications relating to information provided by financial responsibility providers on claims against OTIs.

Distribution-Publications, Inc. (DPI), a tariff publisher, stated in its comments that it agrees ''none of the proposed changes will increase the burden on applicants, licensees or registered foreign-based NVOCCs.'' DPI supports the requirement for NVOCCs to submit the tariff registration form (Form FMC–1) prior to being issued a license and agrees with the Commission that the rule will not add any additional burden to NVOCCs because ''this will merely be a change to the timing of the [tariff publication] requirement.''

The National Customs Brokers and Forwarders Association of America, Inc. (NCBFAA) is a national trade association representing the interests of freight forwarders, NVOCCs, and customs brokers in the ocean shipping industry. The NCBFAA stated that ''the majority of the proposed changes are mainly administrative or procedural and do not raise substantive issues or impose new regulatory obligations on licensees.'' The NCBFAA, however, raised a concern with the proposed changes to § 515.14, namely ''that the duration of an OTI license would be for a period of one to four years, as contrasted with the current three-year initial license period.'' The NCBFAA asserted that ''[a] change of that nature would be both administratively burdensome to the Commission and unnecessarily burdensome to licensees.'' We address this concern below.

IV. Changes to Part 515

Accordingly, the Commission adopts the changes in the proposed rule as follows:

A. Part 515 Title and Scope

The final rule adds ''Registration'' to the part heading to reflect that foreign-based NVOCCs have the option of registering or becoming licensed. The rule also includes registration in the description of the scope of part 515 in § 515.1.

B. U.S. Agents for Registered NVOCCs

The NPRM proposed amending § 515.3 to clarify that licensed OTI agents for foreign-based NVOCCs can be either ocean freight forwarders (OFFs) or NVOCCs. In light of the changes

made by the LoBiondo Act to the licensing requirements in 46 U.S.C. 40901, the Commission is deferring making any changes to § 515.3 while it determines whether the LoBiondo Act requires more substantive revisions to the section. *See* NPRM: Regulatory Amendments Implementing the Frank LoBiondo Coast Guard Authorization Act of 2018, 84 FR 54087 (Oct. 9, 2019).

C. Forms and Application Fees

The final rule removes references in §§ 515.5 and 515.14 to renewal forms for licensed OTIs. These references are not needed because the data collection during the renewal process is the same as the data collection in the initial Form FMC–18.

The final rule also amends §§ 515.5(b) and 515.12(a) to eliminate the paper application option for OTI licenses, based on the Commission's experience since introducing the electronic filing option. The Commission has not received any requests for a waiver to file a paper application since the waiver requirement was implemented in November 2015.

Finally, the final rule replaces an outdated reference to ''Form FMC–18 Rev.'' in §§ 515.5; 515.12 with ''Form FMC–18.''

D. Qualifying Individuals in Partnerships Between Entities

The current qualifying individual (QI) requirements in § 515.11(b) regarding partnerships assume that the managing partners are individuals and thus eligible to be the QI for the partnership. In order to address the situation in which the managing partners are entities rather than individuals, clarifying language has been added indicating that an officer of a general partner entity may be the QI.

E. Submission of Form FMC–1 as Prerequisite for License

The final rule amends § 515.14(a) to require NVOCCs applying for a license to provide the Commission with a Form FMC–1 prior to the Commission issuing a license, which conforms to the current procedures for foreign-based NVOCCs that register with the Commission.[1] Currently, a license is issued after approval by the Commission and receipt of proof of financial responsibility. Although NVOCCs are required under § 520.3 to submit a Form FMC–1 prior to the commencement of common carrier service pursuant to a published tariff, submission of the form is not currently a prerequisite for receiving a license. Like the current requirement for submitting proof of financial responsibility, the final rule requires NVOCCs to submit a Form FMC–1 within 120 days of the conditional approval of their license application. Failure to submit the form within that time period will result in the NVOCC having to submit a new application to restart the license process. This change will ensure that NVOCCs comply with all requirements for commencing service in the U.S. trades in a timely manner. This change will add no additional burden to NVOCCs seeking licenses as they are already required to provide the Commission with a Form FMC–1; the final rule merely affects the timing of the submission of the form.

Because the Form FMC–1 requirements mirror the existing requirements for submitting proof of financial responsibility, the final rule combines the latter requirement from § 515.25 with the Form FMC–1 requirements being added to § 515.14(a).

F. License Renewal Process

The final rule makes a number of changes to § 515.14 to improve and clarify the license renewal process. In addition to some minor clarifying language changes, the final rule changes the initial license period before renewal from three years to a period of not less than one year and not greater than four years. Allowing for a range in the initial period would provide flexibility and account for the varying time periods between submission of an application and issuance of a license due to issues that may arise during the review process or delayed submission of necessary documentation (*e.g.,* proof of financial responsibility).

As noted above, the NCBFAA has concerns about this change, stating that the group assumes that the Commission did not intend for the proposed rule to mean that some licenses would be issued for a period of less than three years, and, instead, that the Commission was trying to ''rationalize the process by which renewal obligations were set.'' The NCBFAA argues that issuing licenses for periods of less than three years would be burdensome for the Commission and licensees and requests that the Commission clarify the proposal.

The NCBFAA is correct that the change to § 515.14(c) is intended to govern how renewal obligations are set. Specifically, the purpose is to enable the Bureau of Certification and Licensing to determine license renewal dates by the license number rather than the initial issuance date of the license in order to evenly distribute license renewals over a 36-month period. An even distribution of license renewals will ensure an effective and efficient renewal process for the increasing OTI licensee population by preventing the potential bunching of license renewals in particular months or years. Such bunching could occur if the initial issuance date of a license was the basis for the renewal, potentially delaying the review and processing of renewals during more populous months or years.

Spreading out the renewal dates, however, necessitates establishing a range of initial license periods for OTIs; otherwise, the initial license period could conflict with the renewal date (*e.g.,* if an OTI had a three-year initial license period but the renewal date was in four years).

Although we understand NCBFAA's concern, the Commission respectfully disagrees with the assertion that this change will be burdensome for the Commission or licensees. As explained above, the purpose of the change is to reduce the burden on the Commission and to provide the industry with efficient and timely renewal processing. Moreover, the change only affects the *initial license period,* which will be one to four years; all subsequent renewal periods will continue to be three years. And although some OTIs will have initial license periods of one to two years, others will have an initial period of three to four years, *i.e.,* longer than the current three-year period. For those OTIs with a shorter initial license period, the Commission expects the renewal burden to be lower than for OTIs with longer initial license periods, given that the shorter duration will decrease the likelihood of any changes needing to be made during the renewal. Overall, the Commission believes that the change will be beneficial to both OTI licensees and the Commission in that it will ensure the timely processing of renewals.

The final rule would also change the deadline for completing the renewal process. Currently, § 515.14 requires licensed OTIs to complete the renewal process no later than 60 days prior to the renewal date. The final rule would change the deadline to the renewal date itself. This change would reduce the burden on licensed OTIs by allowing them additional time to complete the renewal process.

G. Application After Revocation or Denial

The final rule expands the types of applications subject to direct Commission review to include applicants employing the same officers,

[1] The final rule also makes minor clarifying changes to the corresponding requirement in § 515.19 for foreign-based NVOCCs registering with the Commission.

managers, or members of an OTI whose license was revoked or denied within the previous three years and where the Commission determined that the OTI was not qualified to provide OTI services. The applications currently subject to direct Commission review are limited to those submitted by an OTI whose license was previously denied or revoked, or those from another OTI that employs the same QI or is controlled by persons whose conduct formed the basis for the previous revocation or denial. The Commission believes that an OTI employing an officer, manager, or member of another OTI that previously had its license denied or revoked raises the same concerns as an OTI employing the same QI and has concluded that direct review of applications by such OTIs is warranted.

The final rule also adds clarifying language to more clearly reflect that denial of an application under § 515.18 is final and not subject to the hearing procedures in § 515.17.

H. Reporting Changes in Trade Names

The final rule clarifies in § 515.20 that a change in a licensee's name includes adding or deleting a trade name relating to its OTI services. OTIs must seek prior approval from the Commission before making such changes.

I. Proof of Financial Responsibility

The final rule clarifies in § 515.22 that OTIs may submit proof of financial responsibility via email, and, in § 515.26 that the Commission may transmit notices of termination of financial instruments via email. Allowing transmission of this information by email reduces delays and the burdens on both OTIs and the Commission.

The final rule also clarifies that in addition to the principal's name, trade name, and address, the financial responsibility instrument must clearly identify the state of incorporation or formation, and the printed name and title of the signatory.

J. Claims Against an OTI

The final rule clarifies that financial responsibility providers must include a registered foreign-based NVOCC's organization number when notifying the Commission of claims against that NVOCC under § 515.23(c). The current rule requires that financial responsibility providers include an OTI's license number, but registered foreign-based NVOCCs do not have license numbers. This change will ensure that the organization number for registered NVOCCs will be included in claim notifications to the Commission. Notwithstanding the ambiguity in the rule, financial responsibility providers currently provide this information with OTI claim information; thus, this change will not result in any additional burdens for financial responsibility providers.

K. Regulated Persons Index

The final rule deletes § 515.34, which references the availability of the Regulated Persons Index (RPI) on the Commission website. The Commission has determined that because the RPI is available on the website, and the Commission advertises that fact, this section is no longer helpful or necessary.

V. Rulemaking Analyses and Notices

Congressional Review Act

The rule is not a ''major rule'' as defined by the Congressional Review Act, codified at 5 U.S.C. 801 *et seq.* The rule will not result in: (1) An annual effect on the economy of $100,000,000 or more; (2) a major increase in costs or prices; or (3) significant adverse effects on competition, employment, investment, productivity, innovation, or the ability of United States-based companies to compete with foreign-based companies. 5 U.S.C. 804(2).

Regulatory Flexibility Act

The Regulatory Flexibility Act (codified as amended at 5 U.S.C. 601–612) provides that whenever an agency promulgates a final rule after being required to publish a proposed rulemaking under the Administrative Procedure Act (APA) (5 U.S.C. 553), the agency must prepare and make available a final regulatory flexibility analysis (FRFA) describing the impact of the rule on small entities, unless the head of the agency certifies that the rulemaking will not have a significant economic impact on a substantial number of small entities. 5 U.S.C. 604–605. Based on the analysis below, the Chairman of the Federal Maritime Commission certifies that this final rule will not have a significant economic impact on a substantial number of small entities.

The Commission recognizes that the majority of businesses affected by these rules (OTIs) qualify as small entities under the guidelines of the Small Business Administration. The final rule will not, however, result in a significant economic impact on these businesses. No material changes are being proposed; the proposed rule would make minor changes to the licensing, registration, and financial responsibility processes. Most of the changes will have little to no economic impact on OTIs, while some of the changes, *e.g.,* changes to the deadline for renewing licenses, expressly allowing email transmission of documents between OTIs and the Commission, are expected to reduce burdens on OTIs. Notwithstanding the concerns of the NCBFAA regarding the changes to the initial license period, we conclude that, as discussed above, the change will not meaningfully increase the burden on licensees.

Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3521) requires an agency to seek and receive approval from the Office of Management and Budget (OMB) before collecting information from the public. 44 U.S.C. 3507.

The information collection requirements for part 515 are currently authorized under OMB Control Number 3072–0018: *46 CFR 515- Licensing, Financial Responsibility Requirements, and General Duties for Ocean Transportation Intermediaries and Related Forms.* The final rule will result in very minor changes to information collected by the Commission. Specifically, the final rule makes minor adjustments to information provided to the Commission and the timing of such submissions, as well as expressly allowing the submission of certain information by email. No changes are being made, however, to any of the forms in part 515, and none of the changes are expected to affect the burden hours associated with the information collection.

Although the Commission initially concluded in the NPRM that these changes did not warrant revisions to the information collection associated with part 515, the Commission subsequently determined to submit the changes to OMB for approval. Notice of the revised information collection was published in the **Federal Register**; no comments were received. *See* 84 FR 25274 (May 31, 2019) (60-day notice); 84 FR 50036 (Sep. 24, 2019) (30-day notice).

National Environmental Policy Act

The Commission's regulations categorically exclude certain rulemakings from any requirement to prepare an environmental assessment or an environmental impact statement because they do not increase or decrease air, water or noise pollution or the use of fossil fuels, recyclables, or energy. 46 CFR 504.4. This final rule relates to OTI licensing and financial responsibility requirements and therefore falls within the categorical exclusions for matters related to the issuance, modification, denial and revocation of ocean transportation intermediary licenses, and matters related to the receipt of

surety bonds from OTIs. § 504.4(a)(1), (3). Therefore, no environmental assessment or environmental impact statement is required.

Executive Order 12988 (Civil Justice Reform)

This proposed rule meets applicable standards in E.O. 12988 titled, ''Civil Justice Reform,'' to minimize litigation, eliminate ambiguity, and reduce burden.

Regulation Identifier Number

The Commission assigns a regulation identifier number (RIN) to each regulatory action listed in the Unified Agenda of Federal Regulatory and Deregulatory Actions (Unified Agenda). The Regulatory Information Service Center publishes the Unified Agenda in April and October of each year. You may use the RIN contained in the heading at the beginning of this document to find this action in the Unified Agenda, available at *http://www.reginfo.gov/public/do/eAgendaMain*.

List of Subjects in 46 CFR Part 515

Freight, Freight forwarders, Maritime carriers, Reporting and recordkeeping. requirements.

For the reasons stated in the supplementary information, 46 CFR part 515 is amended as follows:

PART 515—LICENSING, REGISTRATION, FINANCIAL RESPONSIBILITY REQUIREMENTS, AND GENERAL DUTIES FOR OCEAN TRANSPORTATION INTERMEDIARIES

■ 1. The authority citation for part 515 continues to read as follows:

Authority: 5 U.S.C. 553; 31 U.S.C. 9701; 46 U.S.C. 305, 40102, 40104, 40501–40503, 40901–40904, 41101–41109, 41301–41302, 41305–41307; Pub. L. 105–383, 112 Stat. 3411; 21 U.S.C. 862.

■ 2. Revise the part heading to read as set forth above.

■ 3. Amend § 515.1 by revising the first sentence of paragraph (a) to read as follows:

§ 515.1 Scope.

(a) This part sets forth regulations providing for the licensing and registration as ocean transportation intermediaries of persons who wish to carry on the business of providing intermediary services, including the grounds and procedures for revocation and suspension of licenses and registrations. * * *

* * * * *

■ 4. Amend § 515.5 by revising paragraphs (a), (b), and (c)(2) to read as follows:

§ 515.5 Forms and fees.

(a) *Forms.* License Application Form FMC–18 is found at the Commission's website *www.fmc.gov* for completion on-line by applicants and licensees. Foreign-based Unlicensed NVOCC Registration/Renewal Form FMC–65 and financial responsibility Forms FMC–48, FMC–67, FMC–68, FMC–69 may be obtained from the Commission's website at *www.fmc.gov,* from the Director, Bureau of Certification and Licensing, Federal Maritime Commission, Washington, DC 20573, or from any of the Commission's Area Representatives.

(b) *Filing of license application forms.* All application forms are to be filed electronically.

(c) * * *

(2) Fees under this part shall be as follows:

(i) Application for new OTI license as required by § 515.12(a): Filing $250.

(ii) Application for change to OTI license or license transfer as required by § 515.20(a) and (b): Filing $125.

■ 5. Amend § 515.11 by revising paragraph (b)(2) to read as follows:

§ 515.11 Basic requirements for licensing; eligibility.

* * * * *

(b) * * *

(2) *Partnership.* At least one of the active managing partners, unless the partners are entities, such as corporations, in which case an officer, member, or manager of one of the entities as long as the entity is a general partner.

* * * * *

■ 6. Amend § 515.12 by revising the first sentence of paragraph (a)(1) to read as follows:

§ 515.12 Application for license.

(a) * * *

(1) Any person who wishes to obtain a license to operate as an ocean transportation intermediary shall submit electronically a completed application Form FMC–18 (Application for a License as an Ocean Transportation Intermediary) in accordance with the automated FMC–18 filing system and corresponding instructions. * * *

* * * * *

■ 7. Amend § 515.14 by revising paragraphs (a), (c), (d)(1), and the first sentence of paragraph (d)(2) to read as follows:

§ 515.14 Issuance, renewal, and use of license.

(a) *Qualification necessary for issuance.* (1) The Commission will issue a license if it determines, as a result of its investigation, that the applicant possesses the necessary experience and character to render ocean transportation intermediary services; has filed the required bond, insurance or other surety; and has electronically submitted Form FMC–1 pursuant to § 520.3 if approved to offer NVOCC service.

(2) If, within 120 days of notification of conditional approval for licensing by the Commission, proof of financial responsibility and, in the case of an NVOCC, the Form FMC–1 is not received, the conditional approval of the application will be invalid. Applicants whose applications/approvals have become invalid may submit a new Form FMC–18, together with the required filing fee, at any time.

* * * * *

(c) *Duration of license.* Licenses shall be issued for an initial period of not less than one year and not greater than four years as determined by the license number and published on the Commission website. Thereafter, licenses will be renewed for sequential three-year periods upon successful completion of the renewal process in paragraph (d) of this section.

(d) * * *

(1) The licensee shall submit the renewal electronically to the Director of the Bureau of Certification and Licensing (BCL) no later than the renewal date as published on the Commission website. The renewal date (month/day) will remain the same for subsequent renewals irrespective of the date on which the license renewal is submitted or when the renewal is accepted by the Commission, unless another renewal date is assigned by the Commission.

(2) Where information identified in an OTI's license renewal process is changed from that set out in its current Form FMC–18 and requires Commission approval pursuant to § 515.20, the licensee must promptly submit a request for such approval on Form FMC–18 together with the required filing fee.

* * *

* * * * *

■ 8. Revise § 515.18 to read as follows:

§ 515.18 Application after revocation or denial.

Whenever a license has been revoked or an application has been denied because the Commission has found the licensee or applicant to be not qualified to render ocean transportation

intermediary services, any further application within 3 years of the Commission's notice of revocation or denial, made by such former licensee or applicant or by another applicant employing the same qualifying individual, officer(s), member(s), manager(s) or controlled by persons on whose conduct the Commission based its determination for revocation or denial, shall be reviewed directly by the Commission. If the Commission denies the application, such denial is final and not subject to the hearing procedures described in §§ 515.15 and 515.17.

■ 9. Amend § 515.19 by revising paragraphs (c), (e), and (g)(1)(viii) to read as follows:

§ 515.19 Registration of foreign-based unlicensed NVOCC.

* * * * *

(c) Registrations are complete upon receipt of a registration form which meets the requirements of this section, evidence of financial responsibility pursuant to § 515.21, and Form FMC–1 pursuant to § 520.3.

* * * * *

(e) A tariff shall not be published and NVOCC service shall not commence until the Commission receives valid proof of financial responsibility from the registrant and a Form FMC–1 has been submitted.

* * * * *

(g) * * *

(1) * * *

(viii) Failure to designate and maintain a person in the United States as legal agent for the receipt of judicial and administrative process, including subpoenas, as required by § 515.24.

* * * * *

■ 10. Amend § 515.20 by revising paragraph (a)(4) to read as follows:

§ 515.20 Changes in organization.

(a) * * *

(4) Any change in a licensee's name, including adding or deleting a trade name relating to its OTI services; or

* * * * *

■ 11. Amend § 515.22 by revising paragraph (e) to read as follows:

§ 515.22 Proof of financial responsibility.

* * * * *

(e) All forms and documents for establishing financial responsibility of ocean transportation intermediaries prescribed in this section shall be submitted to the Director, Bureau of Certification and Licensing, via email to *bcl@fmc.gov*. Such forms and documents must clearly identify the principal's name; trade name, if any; address; the state of incorporation/formation; and the printed name and title of the signatory.

■ 12. Amend § 515.23 by revising paragraph (c)(3) to read as follows:

§ 515.23 Claims against an ocean transportation intermediary.

* * * * *

(c) * * *

(3) Notices required by this section shall include the name of the claimant, name of the court and case number assigned, and the name and license or organization number of the OTI involved. Such notices may include or attach other information relevant to the claim.

* * * * *

■ 13. Amend § 515.25 by revising paragraph (a)(1) to read as follows:

§ 515.25 Filing of proof of financial responsibility.

(a) * * *

(1) *Licenses.* Upon notification by the Commission that an applicant has been conditionally approved for licensing, the applicant shall file with the Director of the Commission's Bureau of Certification and Licensing, proof of financial responsibility in the form and amount prescribed in § 515.21. No license will be issued until the Commission is in receipt of valid proof of financial responsibility.

* * * * *

■ 14. Revise § 515.26 to read as follows:

§ 515.26 Termination of financial responsibility.

No license or registration shall remain in effect unless valid proof of a financial responsibility instrument is maintained on file with the Commission. Upon receipt of notice of termination of such financial responsibility, the Commission shall notify the concerned licensee, registrant, or registrant's legal agent in the United States, by email, mail, courier, or other method reasonably calculated to provide actual notice, at its last known email address or address, that the Commission shall, without hearing or other proceeding, revoke the license or terminate the registration as of the termination date of the financial responsibility instrument, unless the licensee or registrant shall have submitted valid replacement proof of financial responsibility before such termination date. Replacement financial responsibility must bear an effective date no later than the termination date of the expiring financial responsibility instrument.

§ 515.34 [Removed]

■ 15. Remove § 515.34.

By the Commission.

Rachel Dickon,

Secretary.

BILLING CODE 6731–AA–P

DEPARTMENT OF LABOR

48 CFR Part 2902

[DOL Docket No. DOL–2019–0002]

RIN 1291–AA42

Department of Labor Acquisition Regulations: Definitions for Head of Agency, Head of Contracting Activity, and Senior Procurement Executive

AGENCY: Office of the Assistant Secretary for Administration and Management, Department of Labor.

ACTION: Final rule; confirmation of effective date.

SUMMARY: The Department of Labor (Department) is confirming the effective date of its direct final rule (DFR) amending three definitions in the Department of Labor Acquisition Regulation (DOLAR). These changes provide the Secretary of Labor with greater flexibility and a streamlined procedure to delegate procurement authority and appoint procurement officials. In the Department's August 29, 2019 DFR, the Department stated that the DFR would become effective on October 28, 2019, if the Department received no significant adverse comments in response to the DFR. The Department did not receive any comments in response.

DATES: This document confirms that the effective date of the DFR published on August 29, 2019 (84 FR 45434) is October 28, 2019. For purposes of judicial review, the Department considers the date of publication of this document as the date of promulgation of the DFR.

FOR FURTHER INFORMATION CONTACT: *Press inquiries:* Ms. Megan P. Sweeney, Office of Public Affairs, Room No. S–2514, U.S. Department of Labor, 200 Constitution Ave, NW, Washington, DC 20210; telephone: (202) 693–4676; email: *sweeney.megan.p@dol.gov.*

General information: Herman J. Narcho, U.S. Department of Labor, Office of the Assistant Secretary for Administration and Management, Office of the Chief Procurement Officer, 200 Constitution Avenue NW, Room N–5305, Washington, DC 20210; telephone (202) 693–7171 (this is not a toll-free number).

SUPPLEMENTARY INFORMATION:

I. Confirmation of Effective Date

On August 29, 2019, the Department published a DFR amending three DOLAR definitions found at 48 CFR 2902.101(b): Head of Agency, Head of Contracting Activity, and Senior Procurement Executive. The Department stated that it would publish another document confirming the effective date of the DFR if it received no significant adverse comments. The Department received no significant adverse comments. Accordingly, the Department is hereby confirming that the effective date of the DFR published on August 29, 2019, is October 28, 2019.

II. OMB Review Under the Paperwork Reduction Act of 1995

This action does not add or change any information collection requirements subject to OMB approval under the Paperwork Reduction Act of 1995 (PRA), 44 U.S.C. 3501 *et seq.,* and its implementing regulations at 5 CFR part 1320. The PRA defines a collection of information as the obtaining, causing to be obtained, soliciting, or requiring the disclosure to third parties or the public of facts or opinions by or for an agency regardless of form or format. See 44 U.S.C. 3502(3)(A).

In the DFR published on August 29, 2019, the Department provided 30 days for the public to comment on whether approved information collections would be affected by this rulemaking. The agency did not receive any comments on paperwork in response to that notice.

List of Subjects in 48 CFR Part 2902

Government procurement.

Bryan Slater,

Assistant Secretary for Administration and Management, Labor.

[FR Doc. 2019–24682 Filed 11–14–19; 8:45 am]

BILLING CODE 4510–04–P

Proposed Rules

Federal Register
Vol. 84, No. 221
Friday, November 15, 2019

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF ENERGY

10 CFR Part 430

[EERE–2017–BT–STD–0003]

Energy Conservation Program: Energy Conservation Standards for Consumer Refrigerators, Refrigerator-Freezers, and Freezers

AGENCY: Office of Energy Efficiency and Renewable Energy, Department of Energy.

ACTION: Request for information.

SUMMARY: The U.S. Department of Energy (''DOE'') is initiating an effort to determine whether to amend the current energy conservation standards for consumer refrigerators, refrigerator-freezers, and freezers. Under the Energy Policy and Conservation Act of 1975, as amended, DOE must review these standards at least once every six years and publish either a notice of proposed rulemaking (''NOPR'') to propose new standards for consumer refrigerators, refrigerator-freezers, and freezers or a notice of determination that the existing standards do not need to be amended. This request for information (''RFI'') solicits information from the public to help DOE determine whether amended standards for consumer refrigerators, refrigerator-freezers, and freezers would result in a significant amount of additional energy savings and whether those standards would be technologically feasible and economically justified. DOE welcomes written comments from the public on any subject within the scope of this document (including topics not raised in this RFI).

DATES: Written comments and information are requested and will be accepted on or before December 30, 2019.

ADDRESSES: Interested persons are encouraged to submit comments using the Federal eRulemaking Portal at *http://www.regulations.gov.* Follow the instructions for submitting comments. Alternatively, interested persons may submit comments, identified by docket number EERE–2017–BT–STD–0003, by any of the following methods:

1. *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the instructions for submitting comments.

2. *Email: ConsumerRefrigFreezer2017STD0003@ee.doe.gov.* Include the docket number EERE–2017–BT–STD–0003 in the subject line of the message.

3. *Postal Mail:* Appliance and Equipment Standards Program, U.S. Department of Energy, Building Technologies Office, Mailstop EE–5B, 1000 Independence Avenue SW, Washington, DC 20585–0121. Telephone: (202) 287–1445. If possible, please submit all items on a compact disc (''CD''), in which case it is not necessary to include printed copies.

4. *Hand Delivery/Courier:* Appliance and Equipment Standards Program, U.S. Department of Energy, Building Technologies Office, 950 L'Enfant Plaza SW, 6th Floor, Washington, DC 20024. Telephone: (202) 287–1445. If possible, please submit all items on a CD, in which case it is not necessary to include printed copies.

No telefacsimilies (faxes) will be accepted. For detailed instructions on submitting comments and additional information on this process, see section III of this document.

Docket: The docket for this activity, which includes **Federal Register** notices, comments, and other supporting documents/materials, is available for review at *http://www.regulations.gov.* All documents in the docket are listed in the *http://www.regulations.gov* index. However, some documents listed in the index, such as those containing information that is exempt from public disclosure, may not be publicly available.

The docket web page can be found at *http://www.regulations.gov/#!docketDetail;D=EERE-2017-BT-TP-0003.* The docket web page contains instructions on how to access all documents, including public comments in the docket. See section III for information on how to submit comments through *http://www.regulations.gov.*

FOR FURTHER INFORMATION CONTACT:

Dr. Stephanie Johnson, U.S. Department of Energy, Office of Energy Efficiency and Renewable Energy, Building Technologies Office, EE–5B, 1000 Independence Avenue SW, Washington, DC 20585–0121. Telephone: (202) 287–1943. Email: *ApplianceStandardsQuestions@ee.doe.gov.*

Mr. Pete Cochran, U.S. Department of Energy, Office of the General Counsel, GC–33, 1000 Independence Avenue SW, Washington, DC 20585–0121. Telephone: (202) 586–9496. Email: *Peter.Cochran@hq.doe.gov.*

For further information on how to submit a comment, review other public comments and the docket, contact the Appliance and Equipment Standards Program staff at (202) 287–1445 or by email: *ApplianceStandardsQuestions@ee.doe.gov.*

I. Introduction

A. Authority and Background

The Energy Policy and Conservation Act of 1975, as amended (''EPCA''),[1] among other things, authorizes DOE to regulate the energy efficiency of a number of consumer products and certain industrial equipment. (42 U.S.C. 6291–6317) Title III, Part B [2] of EPCA established the Energy Conservation

[1] All references to EPCA in this document refer to the statute as amended through America's Water Infrastructure Act of 2018, Public Law 115–270 (Oct. 23, 2018).

[2] For editorial reasons, upon codification in the U.S. Code, Part B was redesignated Part A.

Program for Consumer Products Other Than Automobiles. These products include consumer refrigerators, refrigerator-freezers, and freezers, the subject of this document. (42 U.S.C. 6292(a)(1)) EPCA prescribed energy conservation standards for these products (42 U.S.C. 6295(b)(1)–(2)), and directed DOE to conduct three cycles of rulemakings to determine whether to amend these standards. (42 U.S.C. 6295(b)(3)(A)(i), (b)(3)(B)–(C), and (b)(4))

Under EPCA, DOE's energy conservation program consists essentially of four parts: (1) Testing, (2) labeling, (3) Federal energy conservation standards, and (4) certification and enforcement procedures. Relevant provisions of EPCA specifically include definitions (42 U.S.C. 6291), test procedures (42 U.S.C. 6293), labeling provisions (42 U.S.C. 6294), energy conservation standards (42 U.S.C. 6295), and the authority to require information and reports from manufacturers (42 U.S.C. 6296).

Federal energy efficiency requirements for covered products established under EPCA generally supersede State laws and regulations concerning energy conservation testing, labeling, and standards. (42 U.S.C. 6297(a)–(c)) DOE may, however, grant waivers of Federal preemption in limited instances for particular State laws or regulations, in accordance with the procedures and other provisions set forth under 42 U.S.C. 6297(d).

DOE completed the first of these rulemaking cycles in 1989 and 1990 by adopting amended performance standards for consumer refrigerators, refrigerator-freezers, and freezers manufactured on or after January 1, 1993. 54 FR 47916 (Nov. 17, 1989) (setting amended standards to apply starting on January 1, 1993); 55 FR 42845 (Oct. 24, 1990) (making certain corrections to the 1993 standards). DOE completed a second rulemaking cycle to amend the standards for consumer refrigerators, refrigerator-freezers, and freezers by issuing a final rule in 1997. 62 FR 23102 (Apr. 28, 1997). Most recently, DOE completed a third rulemaking cycle to amend the standards for consumer refrigerators, refrigerator-freezers, and freezers by publishing a final rule in 2011 (''September 2011 Final Rule''). 76 FR 57516 (Sep. 15, 2011). The current energy conservation standards are located in title 10 of the Code of Federal Regulations (''CFR'') part 430, section 32(a). The currently applicable DOE test procedures for consumer refrigerators, refrigerator-freezers, and freezers appear at 10 CFR part 430, subpart B, appendices A and B (''Appendix A'' and ''Appendix B'').

EPCA also requires that, not later than 6 years after the issuance of any final rule establishing or amending a standard, DOE evaluate the energy conservation standards for each type of covered product, including those at issue here, and publish either a notice of determination that the standards do not need to be amended, or a NOPR including new proposed energy conservation standards (proceeding to a final rule, as appropriate). (42 U.S.C. 6295(m)(1)) EPCA further provides that, not later than 3 years after the issuance of a final determination not to amend standards, DOE must publish either a notice of determination that standards for the product do not need to be amended, or a NOPR including new proposed energy conservation standards (proceeding to a final rule, as appropriate). (42 U.S.C. 6295(m)(3)(B)) DOE must make the analysis on which the determination is based publicly available and provide an opportunity for written comment. (42 U.S.C. 6295(m)(2)) In making a determination, DOE must evaluate whether more stringent standards would: (1) Yield a significant savings in energy use and (2) be both technologically feasible and economically justified. (42 U.S.C. 6295(m)(1)(A))

DOE is publishing this RFI to collect data and information to inform its decision consistent with its obligations under EPCA.

B. Rulemaking Process

DOE must follow specific statutory criteria for prescribing new or amended standards for covered products. EPCA requires that any new or amended energy conservation standard be designed to achieve the maximum improvement in energy or water efficiency that is technologically feasible and economically justified. (42 U.S.C. 6295(o)(2)(A)) EPCA also precludes DOE from adopting any standard that would not result in the significant conservation of energy. (42 U.S.C. 6295(o)(3)(B)) To determine whether a standard is economically justified, EPCA requires that DOE determine whether the benefits of the standard exceed its burdens by considering, to the greatest extent practicable, the following seven factors:

(1) The economic impact of the standard on the manufacturers and consumers of the affected products;

(2) The savings in operating costs throughout the estimated average life of the product compared to any increases in the initial cost, or maintenance expenses;

(3) The total projected amount of energy and water (if applicable) savings likely to result directly from the standard;

(4) Any lessening of the utility or the performance of the products likely to result from the standard;

(5) The impact of any lessening of competition, as determined in writing by the Attorney General, that is likely to result from the standard;

(6) The need for national energy and water conservation; and

(7) Other factors the Secretary of Energy (Secretary) considers relevant. (42 U.S.C. 6295(o)(2)(B)(i)(I)–(VII))

DOE fulfills these and other applicable requirements by conducting a series of analyses throughout the rulemaking process. Table I.1 shows the individual analyses that are performed to satisfy each of the requirements within EPCA.

TABLE I.1—EPCA REQUIREMENTS AND CORRESPONDING DOE ANALYSIS

EPCA requirement	Corresponding DOE analysis
Significant Energy Savings	• Shipments Analysis. • National Impact Analysis. • Energy and Water Use Determination.
Technological Feasibility	• Market and Technology Assessment. • Screening Analysis. • Engineering Analysis.
Economic Justification:	
1. Economic impact on manufacturers and consumers	• Manufacturer Impact Analysis. • Life-Cycle Cost and Payback Period Analysis. • Life-Cycle Cost Subgroup Analysis. • Shipments Analysis.

TABLE I.1—EPCA REQUIREMENTS AND CORRESPONDING DOE ANALYSIS—Continued

EPCA requirement	Corresponding DOE analysis
2. Lifetime operating cost savings compared to increased cost for the product.	• Markups for Product Price Determination. • Energy and Water Use Determination. • Life-Cycle Cost and Payback Period Analysis.
3. Total projected energy savings	• Shipments Analysis. • National Impact Analysis.
4. Impact on utility or performance	• Screening Analysis. • Engineering Analysis.
5. Impact of any lessening of competition	• Manufacturer Impact Analysis.
6. Need for national energy and water conservation	• Shipments Analysis. • National Impact Analysis.
7. Other factors the Secretary considers relevant	• Emissions Analysis. • Utility Impact Analysis. • Employment Impact Analysis. • Monetization of Emission Reductions Benefits. • Regulatory Impact Analysis.

As detailed throughout this RFI, DOE is publishing this document seeking input and data from interested parties to aid in the development of the technical analyses on which DOE will ultimately rely to determine whether (and if so, how) to amend the standards for consumer refrigerators, refrigerator-freezers, and freezers.

II. Request for Information and Comments

The following sections identify a variety of issues on which DOE seeks input to aid its development of the technical and economic analyses regarding whether amended energy conservation standards for consumer refrigerators, refrigerator-freezers, and freezers may be warranted. DOE also welcomes comments on other issues relevant to this data-gathering process that may not specifically be identified in this document.

A. Products Covered by This Rulemaking

This RFI covers those products that meet the definitions for refrigerator, refrigerator-freezer, or freezer, as codified in 10 CFR 430.2. The definitions for refrigerators, refrigerator-freezers, and freezers were most recently amended in a test procedure final rule in a separate rulemaking addressing ''miscellaneous refrigeration products'' [3] (MREFs), in which DOE removed reference to food storage, clarified under what conditions the products must be able to maintain compartment temperatures, and excluded products designed to be used without doors, that do not include a compressor and condenser integral to the cabinet assembly, or that would be classified as an MREF. 81 FR 46768 (July 18, 2016).

Specifically, as codified, ''refrigerator'' means a cabinet, used with one or more doors, that has a source of refrigeration that requires single-phase, alternating current electric energy input only and is capable of maintaining compartment temperatures above 32 degrees Fahrenheit (°F) (0 degrees Celsius (°C)) and below 39 °F (3.9 °C). A refrigerator may include a compartment capable of maintaining compartment temperatures below 32 °F (0 °C), but does not provide a separate low temperature compartment capable of maintaining compartment temperatures below 8 °F (− 13.3 °C). A refrigerator does not include: any product that does not include a compressor and condenser unit as an integral part of the cabinet assembly, coolers, or any product that must comply with an applicable miscellaneous refrigeration product energy conservation standard. 10 CFR 430.2.

''Refrigerator-freezer'' means a cabinet, used with one or more doors, that has a source of refrigeration that requires single-phase, alternating current electric energy input only and consists of two or more compartments where at least one of the compartments is capable of maintaining compartment temperatures above 32 °F (0 °C) and below 39 °F (3.9 °C), and at least one other compartment is capable of maintaining compartment temperatures of 8 °F (− 13.3 °C) and may be adjusted by the user to a temperature of 0 °F (− 17.8 °C) or below. A refrigerator-freezer does not include: any product that does not include a compressor and condenser unit as an integral part of the cabinet assembly, or any product that must comply with an applicable miscellaneous refrigeration product energy conservation standard. *Id.*

''Freezer'' means a cabinet, used with one or more doors, that has a source of refrigeration that requires single-phase, alternating current electric energy input only and is capable of maintaining compartment temperatures of 0 °F (− 17.8 °C) or below. A freezer does not include: Any refrigerated cabinet that consists solely of an automatic ice maker and an ice storage bin arranged so that operation of the automatic icemaker fills the bin to its capacity, any product that does not include a compressor and condenser unit as an integral part of the cabinet assembly, or any product that must comply with an applicable miscellaneous refrigeration product energy conservation standard. *Id.*

DOE's regulations at 10 CFR 430.2 also define sub-categories of refrigerators, refrigerator-freezers, and freezers, including compact [4] and built-in [5] product configurations.

[3] ''Miscellaneous refrigeration product'' means a consumer refrigeration product other than a refrigerator, refrigerator-freezer, or freezer, which includes coolers and combination cooler refrigeration products. 10 CFR 430.2. ''Cooler'' means a cabinet, used with one or more doors, that has a source of refrigeration capable of operating on single-phase, alternating current and is capable of maintaining compartment temperatures either no lower than 39 °F (3.9 °C) or in a range that extends no lower than 37 °F (2.8 °C) but at least as high as 60 °F (15.6 °C). *Id.* ''Combination cooler refrigeration product'' means any cooler-refrigerator, cooler-refrigerator-freezer, or cooler-freezer. *Id.*

[4] *Compact refrigerator/refrigerator-freezer/freezer* means any refrigerator, refrigerator-freezer or freezer with a total refrigerated volume of less than 7.75 cubic feet (220 liters). (Total refrigerated volume shall be determined using the applicable test procedure appendix prescribed in 10 CFR part 430 subpart B.) *Id.*

[5] *Built-in refrigerator/refrigerator-freezer/freezer* means any refrigerator, refrigerator-freezer or freezer with 7.75 cubic feet or greater total volume and 24 inches or less depth not including doors, handles, and custom front panels; with sides which are not finished and not designed to be visible after installation; and that is designed, intended, and marketed exclusively (1) To be installed totally encased by cabinetry or panels that are attached during installation, (2) to be securely fastened to adjacent cabinetry, walls or floor, and (3) to either be equipped with an integral factory-finished face or accept a custom front panel. *Id.*

Issue A.1 DOE requests comment on whether the definitions for refrigerator, refrigerator-freezer, and freezer require any revisions—and if so, how those definitions should be revised. DOE also requests feedback on whether the subcategory definitions currently in place are appropriate or whether further modifications are needed. If these subcategory definitions need modifying, DOE seeks specific input on how to define these terms.

Issue A.2 DOE requests comment on whether additional product definitions are necessary to close any potential gaps in coverage between product types. For example, should the definitions be modified to better account for products that maintain compartment temperatures above 0 °F or 8 °F but less than 32 °F (*i.e.,* between the freezer and refrigerator temperature ranges). DOE also seeks input on whether such products currently exist in the market or whether they are being planned for introduction. DOE also requests comment on opportunities to combine product classes that could reduce regulatory burden.

B. Market and Technology Assessment

The market and technology assessment that DOE routinely conducts when analyzing the impacts of a potential new or amended energy conservation standard provides information about the consumer refrigerator, refrigerator-freezer, and freezer industries that will be used in DOE's analysis throughout the rulemaking process. DOE uses qualitative and quantitative information to characterize the structure of the industry and market. DOE identifies manufacturers, estimates market shares and trends, addresses regulatory and non-regulatory initiatives intended to improve energy efficiency or reduce energy consumption, and explores the potential for efficiency improvements in the design and manufacturing of consumer refrigerators, refrigerator-freezers, and freezers. DOE also reviews product literature, industry publications, and company websites. Additionally, DOE considers conducting interviews with manufacturers to improve its assessment of the market and available technologies for consumer refrigerators, refrigerator-freezers, and freezers.

1. Product/Equipment Classes

When evaluating and establishing energy conservation standards, DOE may divide covered products into product classes by the type of energy used, or by capacity or other performance-related features that justify a different standard. (42 U.S.C. 6295(q)) In making a determination whether capacity or another performance-related feature justifies a different standard, DOE must consider such factors as the utility of the feature to the consumer and other factors DOE deems appropriate. *Id.*

For consumer refrigerators, refrigerator-freezers, and freezers, the current energy conservation standards specified in 10 CFR 430.32(a) are based on 42 product classes determined according to the following performance-related features that provide utility to the consumer, in terms of the type and quantity of items that may be stored, method of access to these items, availability of automatically made ice, defrost requirements, and locations where the product may be installed: Type of unit (refrigerator, refrigerator-freezer, or freezer), total refrigerated volume (standard or compact), defrost system (manual, partial automatic, or automatic), presence of through-the-door (''TTD'') ice service, presence of an automatic icemaker, intended installation (*i.e.,* built-in or freestanding), and configuration of compartments and doors. Table II.1 lists the current 42 product classes for consumer refrigerators, refrigerator-freezers, and freezers.

TABLE II.1—CURRENT CONSUMER REFRIGERATOR, REFRIGERATOR-FREEZER, AND FREEZER PRODUCT CLASSES

	Product class
1	Refrigerator-freezers and refrigerators other than all-refrigerators with manual defrost.
1A	All-refrigerators—manual defrost.
2	Refrigerator-freezers—partial automatic defrost.
3	Refrigerator-freezers—automatic defrost with top-mounted freezer without an automatic icemaker.
3–BI	Built-in refrigerator-freezer—automatic defrost with top-mounted freezer without an automatic icemaker.
3I	Refrigerator-freezers—automatic defrost with top-mounted freezer with an automatic icemaker without through-the-door ice service.
3I–BI	Built-in refrigerator-freezers—automatic defrost with top-mounted freezer with an automatic icemaker without through-the-door ice service.
3A	All-refrigerators—automatic defrost.
3A–BI	Built-in all-refrigerators—automatic defrost.
4	Refrigerator-freezers—automatic defrost with side-mounted freezer without an automatic icemaker.
4–BI	Built-in refrigerator-freezers—automatic defrost with side-mounted freezer without an automatic icemaker.
4I	Refrigerator-freezers—automatic defrost with side-mounted freezer with an automatic icemaker without through-the-door ice service.
4I–BI	Built-in refrigerator-freezers—automatic defrost with side-mounted freezer with an automatic icemaker without through-the-door ice service.
5	Refrigerator-freezers—automatic defrost with bottom-mounted freezer without an automatic icemaker.
5–BI	Built-in refrigerator-freezers—automatic defrost with bottom-mounted freezer without an automatic icemaker.
5I	Refrigerator-freezers—automatic defrost with bottom-mounted freezer with an automatic icemaker without through-the-door ice service.
5I–BI	Built-in refrigerator-freezers—automatic defrost with bottom-mounted freezer with an automatic icemaker without through-the-door ice service.
5A	Refrigerator-freezer—automatic defrost with bottom-mounted freezer with through-the-door ice service.
5A–BI	Built-in refrigerator-freezer—automatic defrost with bottom-mounted freezer with through-the-door ice service.
6	Refrigerator-freezers—automatic defrost with top-mounted freezer with through-the-door ice service.
7	Refrigerator-freezers—automatic defrost with side-mounted freezer with through-the-door ice service.
7–BI	Built-in refrigerator-freezers—automatic defrost with side-mounted freezer with through-the-door ice service.
8	Upright freezers with manual defrost.
9	Upright freezers with automatic defrost without an automatic icemaker.
9I	Upright freezers with automatic defrost with an automatic icemaker.
9–BI	Built-in upright freezers with automatic defrost without an automatic icemaker.
9I–BI	Built-in upright freezers with automatic defrost with an automatic icemaker.

TABLE II.1—CURRENT CONSUMER REFRIGERATOR, REFRIGERATOR-FREEZER, AND FREEZER PRODUCT CLASSES—Continued

	Product class
10	Chest freezers and all other freezers except compact freezers.
10A	Chest freezers with automatic defrost.
11	Compact refrigerator-freezers and refrigerators other than all-refrigerators with manual defrost.
11A	Compact all-refrigerators—manual defrost.
12	Compact refrigerator-freezers—partial automatic defrost.
13	Compact refrigerator-freezers—automatic defrost with top-mounted freezer.
13I	Compact refrigerator-freezers—automatic defrost with top-mounted freezer with an automatic icemaker.
13A	Compact all-refrigerators—automatic defrost.
14	Compact refrigerator-freezers—automatic defrost with side-mounted freezer.
14I	Compact refrigerator-freezers—automatic defrost with side-mounted freezer with an automatic icemaker.
15	Compact refrigerator-freezers—automatic defrost with bottom-mounted freezer.
15I	Compact refrigerator-freezers—automatic defrost with bottom-mounted freezer with an automatic icemaker.
16	Compact upright freezers with manual defrost.
17	Compact upright freezers with automatic defrost.
18	Compact chest freezers.

For products with an automatic icemaker, DOE's test procedures specify a constant energy-use adder of 84 kilowatt-hours per year (''kWh/year''), which represents the annual energy consumed by automatic icemakers in consumer refrigerators, refrigerator-freezers, and freezers. With this constant adder, the standard levels for product classes with an automatic icemaker are equal to the standards of their counterparts without an icemaker plus the 84 kWh/year. Because the standards for the product classes with and without automatic icemakers are effectively the same, except for the constant adder, there may be an opportunity to merge product classes to limit the total number of overall product classes for consumer refrigerators, refrigerator-freezers, and freezers. The energy consumption associated with automatic icemaking could then be incorporated into product labeling rather than the energy conservation standard.

In the most recent energy conservation standards rulemaking for consumer refrigerators, refrigerator-freezers, and freezers, DOE considered combining certain product classes that include products with similar features and operation. Specifically, DOE sought feedback on combining product classes 1 and 2, and product classes 11 and 12. 75 FR 59470, 59493–59494 (Sep. 27, 2010). DOE received mixed feedback on this issue, with comments responding to the NOPR for that rulemaking generally favoring the continued separation of these product classes. As a result, DOE did not merge these product classes in the 2011 Final Rule. 76 FR 57516, 57536 (Sept. 15, 2011).

Issue B.1 DOE requests feedback on the current consumer refrigerator, refrigerator-freezer, and freezer product classes and whether changes to these individual product classes and their descriptions should be made or whether certain classes should be merged or separated (*e.g.,* combining separate product classes equipped with and without automatic icemakers or combining certain classes, such as product classes 1 and 2, or product classes 11 and 12). DOE further requests feedback on whether combining certain classes could impact product utility by eliminating any performance-related features or impact the stringency of the current energy conservation standard for these products. DOE also requests comment on separating any of the existing product classes and whether it would impact product utility by eliminating any performance-related features or reduce any compliance burdens.

DOE is also aware that new configurations and features are available for consumer refrigerators, refrigerator-freezers, and freezers that may not have been available at the time of the last energy conservation standards analysis. Products with multiple compartments, some of which may be intended for storing certain types of food or beverages rather than general fresh food and freezer compartments, may have different energy performance compared to typical product setups. Additionally, product features such as accessible door storage and connected functions may affect product performance compared to those without such features.

Issue B.2 DOE seeks information regarding any other new product classes it should consider for inclusion in its analysis. Specifically, DOE requests information on the performance-related features (*e.g.,* connected functionality, door-in-door designs, display screens, *etc.*) that provide unique consumer utility and data detailing the corresponding impacts on energy use that would justify separate product classes (*i.e.,* explanation for why the presence of these performance-related features would increase energy consumption).

2. Technology Assessment

In analyzing the feasibility of potential new or amended energy conservation standards, DOE uses information about existing and past technology options and prototype designs to help identify technologies that manufacturers could use to meet and/or exceed a given set of energy conservation standards under consideration. In consultation with interested parties, DOE intends to develop a list of technologies to consider in its analysis. That analysis will likely include a number of the technology options DOE previously considered during its most recent rulemaking for consumer refrigerators, refrigerator-freezers, and freezers. A complete list of those prior options appears in Table II.2. As certain technologies have progressed since the 2011 Final Rule, Table II.3 lists newer technology options that DOE may also consider in a future consumer refrigerator, refrigerator-freezer, and freezer rulemaking.

TABLE II.2—PREVIOUSLY CONSIDERED TECHNOLOGY OPTIONS FOR CONSUMER REFRIGERATORS, REFRIGERATOR-FREEZERS, AND FREEZERS FROM THE 2011 FINAL RULE

Insulation:	Fans and Fan Motor:
Improved resistivity of insulation	Evaporator fan and fan motor improvements
Increased insulation thickness	Condenser fan and fan motor improvements
Vacuum-insulated panels (VIPs)	Expansion Valve:
Gas-filled panels	Improved expansion valves
Gasket and Door Design:	Cycling Losses:
Improved gaskets	Fluid control or solenoid valve
Double door gaskets	Defrost System:
Improved door face frame	Reduced energy for automatic defrost
Reduced heat load for TTD feature	Adaptive defrost
Anti-Sweat Heater:	Condenser hot gas
Condenser hot gas	Control System:
Electric heater sizing	Temperature control
Electric heater controls	Air-distribution control
Compressor:	Other Technologies:
Improved compressor efficiency	Alternative refrigerants
Variable-speed compressors	Component location
Linear compressors	Alternative Refrigeration Cycles/Systems:
Evaporator:	Lorenz-Meutzner cycle
Increased surface area	Dual-loop system
Improved heat exchange	Two-stage system
Condenser:	Control valve system
Increased surface area	Ejector refrigerator
Improved heat exchange	Tandem system
Forced-convection condenser	Stirling cycle *
	Thermoelectric *
	Thermoacoustic *

* DOE's definitions for refrigerators, refrigerator-freezers, and freezers exclude products that do not include compressor and condenser units as an integral part of the cabinet assembly. 10 CFR 430.2. Therefore, because these options do not meet this requirement, DOE is not seeking information on these refrigeration technologies as part of this RFI.

TABLE II.3—NEW TECHNOLOGY OPTIONS FOR CONSUMER REFRIGERATORS, REFRIGERATOR-FREEZERS, AND FREEZERS

Insulation:	Evaporator:
Improved VIPs	Sequential dual evaporator
Improved blowing agents	Condenser:
Compressor:	Heat-storage condenser with phase change materials
Large compressors with phase change material	Condensers with microchannel heat exchangers
Solid state thermal cooling technology	Other Technologies:.
Inert blowing fluid CO_2	Alternative refrigerants—*e.g.,* propane, isobutane
	Door-in-door design

Issue B.3 DOE seeks information on the technologies listed in Table II.2 regarding their applicability to the current market and how these technologies may impact the efficiency of consumer refrigerators, refrigerator-freezers, and freezers as measured according to the DOE test procedure. DOE also seeks information on how these technologies may have changed since they were considered in the 2011 Final Rule analysis. Specifically, DOE seeks information on the range of efficiencies or performance characteristics that are currently available for each technology option.

Issue B.4 DOE seeks information on the technologies listed in Table II.3 regarding their market adoption, costs, and any concerns with incorporating them into products (*e.g.,* impacts on consumer utility, potential safety concerns, manufacturing/production/implementation issues, *etc.*).

Issue B.5 DOE seeks information on the availability of improved insulation for consumer refrigerators, refrigerator-freezers, and freezers, specifically on the use of polyurethane (''PU'') foam and VIPs. At the time of the 2011 Final Rule, vendors indicated that there was ongoing work with PU foam insulation that may lead to improvements in insulation performance. DOE seeks any information on the current and projected future status of improved PU foam insulation as a viable design option for the products at issue, and whether improved PU foam insulation has entered the market. During the 2011 Final Rule analysis, DOE noted that manufacturers had varying levels of success implementing VIPs into their products. DOE also seeks information on what advances, if any, the insulation and consumer refrigerator, refrigerator-freezer, and freezer industries have made with respect to the incorporation of VIP technologies.

Issue B.6 DOE seeks comment on other technology options that it should consider for inclusion in its analysis and if these technologies may impact product features or consumer utility.

In October 2016, the 28th Meeting of the Parties to the Montreal Protocol adopted the Kigali Amendment to reduce consumption and production of hydrofluorocarbons (''HFCs''). The Kigali Amendment entered into force on January 1, 2019, for those parties who have ratified the Amendment by that time.[6] On December 1, 2016, the Environmental Protection Agency (''EPA'') published a final rule in the **Federal Register** under its Significant New Alternatives Policy (''SNAP'') program that, amongst other things, changed the status from acceptable to unacceptable of certain HFC-based refrigerants (*e.g.,* R–134a) commonly

[6] *https://ozone.unep.org/sites/default/files/2019-07/MP_Handbook_2019.pdf.*

used in consumer refrigerators, refrigerator-freezers, and freezers as of January 1, 2021. 81 FR 86778. The validity of that approach, however, has been the subject of a legal challenge regarding EPA's use of its SNAP authority to require manufacturers to replace HFCs with a substitute substance and the December 2016 SNAP rule was partially vacated by the court.[7] On August 8, 2018, the EPA published a separate final rule under its SNAP program that modified the use conditions for three flammable refrigerants used in household refrigerators, freezers, and combination refrigerators and freezers. 83 FR 38969. This rule, among other modifications, increased the allowable charge limits for propane and isobutane when used in consumer refrigeration products.

DOE understands that, while the United States has not yet ratified the Kigali Amendment, a significant portion of refrigerators, refrigerator-freezers, and freezers currently use HFC-based refrigerants and may become affected by this Amendment to the Montreal Protocol. DOE plans to account for the impacts, if any, from this Amendment and the SNAP regulations on the consumer refrigerator, refrigerator-freezer, and freezer markets addressed by this RFI in each of the analytical cases that DOE routinely examines, including the no-new-standards analytical case (*i.e.,* without an amended energy conservation standard).

Issue B.7 DOE seeks information related to alternative HFC-free refrigerants, including propane and isobutane. Specifically, DOE seeks information on the availability of such refrigerants and their applicability and/or penetration in the current market (including whether charge limits or safety standards (for example, Underwriter's Laboratory's (''UL'') Standard 60335–2–24, ''Safety Requirements for Household and Similar Electrical Appliances, Part 2: Particular Requirements for Refrigerating Appliances, Ice-Cream Appliances and Ice-Makers'' (2nd Edition, April 28, 2017)) would restrict their use). DOE also requests information on which alternative refrigerant is the most appropriate substitute for R–134a and why.

Issue B.8 DOE requests information and data on the fractional change in efficiency and cost associated with converting an HFC-based refrigerator, refrigerator-freezer, or freezer to an HFC-free refrigerator, refrigerator-freezer, or freezer (both per-unit costs and conversion costs). DOE also seeks feedback on whether the conversion to HFC-free refrigeration systems would affect the availability of any product features (*e.g.,* volumes, configurations, *etc.*) Additionally, if the use of HFC refrigerants were to remain an available option to manufacturers, would this factor impact the efficiency and related costs of these products relative to products that rely on HFC-free refrigerants? If so, how? What would the extent of these efficiency and cost impacts be?

Issue B.9 DOE also requests data on the current and historical (past five years) fraction of HFC-free sales by product type (*e.g.,* top-mount, side-mount, and bottom-mount refrigerator-freezers, or upright and chest freezers).

C. Screening Analysis

The purpose of the screening analysis is to evaluate the technologies that improve equipment efficiency to determine which technologies will be eliminated from further consideration and which will be passed to the engineering analysis for further consideration.

DOE determines whether to eliminate certain technology options from further consideration based on the following criteria:

(1) *Technological feasibility.* Technologies that are not incorporated in commercial products or in working prototypes will not be considered further.

(2) *Practicability to manufacture, install, and service.* If it is determined that mass production of a technology in commercial products and reliable installation and servicing of the technology could not be achieved on the scale necessary to serve the relevant market at the time of the effective date of the standard, then that technology will not be considered further.

(3) *Impacts on equipment utility or equipment availability.* If a technology is determined to have significant adverse impact on the utility of the equipment to significant subgroups of consumers, or result in the unavailability of any covered equipment type with performance characteristics (including reliability), features, sizes, capacities, and volumes that are substantially the same as equipment generally available in the United States at the time, it will not be considered further.[8]

(4) *Adverse impacts on health or safety.* If it is determined that a technology will have significant adverse impacts on health or safety, it will not be considered further.

10 CFR part 430, subpart C, appendix A, 4(a)(4) and 5(b).

Technology options identified in the technology assessment are evaluated against these criteria using DOE analyses and inputs from interested parties (*e.g.,* manufacturers, trade organizations, and energy efficiency advocates). Technologies that pass through the screening analysis are referred to as ''design options'' in the engineering analysis. Technology options that fail to meet one or more of the four criteria are eliminated from consideration.

Table II.4 summarizes the screened out technology options, and the applicable screening criteria, from the 2011 Final Rule.

[6] *https://ozone.unep.org/sites/default/files/2019-07/MP_Handbook_2019.pdf.*

[7] In August 2017, the U.S. Court of Appeals for the District of Columbia Circuit vacated and remanded a July 2015 EPA final rule (80 FR 42870 (July 20, 2015)) to the extent that it required manufacturers to replace HFCs with a substitute substance. *See Mexichem Fluor, Inc.* v. *EPA,* 866 F.3d 451 (D.C. Cir. 2017); *cert. denied* 139 S.Ct. 322 (Oct. 9, 2018). Subsequent to the decision in the *Mexichem* case, the court vacated the December 2016 EPA final rule to the extent it requires manufacturers to replace HFCs that were previously and lawfully installed as substitutes for ozone-depleting substances. Case No. 17–1024 (D.C. Cir. April 5, 2019). DOE will consider the potential impact, if any, of the court's decisions and remand on the products addressed by this RFI.

TABLE II.4—PREVIOUSLY SCREENED OUT TECHNOLOGY OPTIONS FROM THE 2011 FINAL RULE

Screened technology option	EPCA Criteria (X = basis for screening out)			
	Technological feasibility	Practicability to manufacture, install, and service	Adverse impact on product utility	Adverse impacts on health and safety
Improved PU Insulation Resistivity	X			
Gas-Filled Panels	X	X		
Improved Gaskets, Double Gaskets, Improved Door Frame		X	X	
Linear Compressors	X			
Improved Heat Exchange	X		X	
Component Location		X	X	X
Lorenz-Meutzner Cycle	X	X		
Two-Stage System	X	X		
Control Valve System and Tandem System	X	X		
Ejector Refrigerator	X	X		
Stirling Cycle *	X	X		
Thermoelectric*	X	X		
Thermoacoustic *	X	X		

* As stated in the note to Table II.2, DOE's definitions for refrigerator, refrigerator-freezer, and freezer exclude products without compressor and condenser units as an integral part of the cabinet assembly, so DOE would not consider these technology options in a future energy conservation standards rulemaking.

Issue C.1 DOE requests feedback on what impact, if any, the four screening criteria described in this section would have on each of the technology options listed in Table II.2 and Table II.3 with respect to consumer refrigerators, refrigerator-freezers, and freezers. Similarly, DOE seeks information regarding how these same criteria would affect any other technology options not already identified in this document with respect to their potential use in refrigerators, refrigerator-freezers, and freezers.

Issue C.2 With respect to the screened out technology options listed in Table II.4, DOE seeks information on whether these options would, based on current and projected assessments regarding each of them, remain screened out under the four screening criteria described in this section. With respect to each of these technology options, what steps, if any, could be (or have already been) taken to facilitate the introduction of each option as a means to improve the energy performance of consumer refrigerators, refrigerator-freezers, and freezers and the potential to impact consumer utility of the refrigerators, refrigerator-freezers, and freezers.

D. Engineering Analysis

The engineering analysis estimates the cost-efficiency relationship of products at different levels of increased energy efficiency (''efficiency levels''). This relationship serves as the basis for the cost-benefit calculations for consumers, manufacturers, and the Nation. In determining the cost-efficiency relationship, DOE estimates the increase in manufacturer production cost (''MPC'') associated with increasing the efficiency of products above the baseline, up to the maximum technologically feasible (''max-tech'') efficiency level for each product class.

DOE historically has used the following three methodologies to generate incremental manufacturing costs and establish efficiency levels (''ELs'') for analysis: (1) The design-option approach, which provides the incremental costs of adding to a baseline model design options that will improve its efficiency; (2) the efficiency-level approach, which provides the relative costs of achieving increases in energy efficiency levels, without regard to the particular design options used to achieve such increases; and (3) the cost-assessment (or reverse engineering) approach, which provides ''bottom-up'' manufacturing cost assessments for achieving various levels of increased efficiency, based on detailed data as to costs for parts and material, labor, shipping/packaging, and investment for models that operate at particular efficiency levels.

1. Baseline Efficiency Levels

For each established product class, DOE selects a baseline model as a reference point against which any changes resulting from energy conservation standards can be measured. The baseline model in each product class represents the characteristics of common or typical products in that class. Typically, a baseline model is one that meets the current minimum energy conservation standards and provides basic consumer utility.

If it determines that a rulemaking is necessary, consistent with this analytical approach, DOE tentatively plans to consider the current minimum energy conservations standards (which went into effect September 15, 2014) to establish the baseline efficiency levels for each product class. The current standards for each product class are based on the maximum allowable annual energy use in kWh/year and determined according to an equation using the product's calculated adjusted volume (''AV'') in cubic feet (''ft^3''). The current standards for consumer refrigerators, refrigerator-freezers, and freezers are found in 10 CFR 430.32(a).

Issue D.1 DOE requests feedback on whether using the current established energy conservation standards for consumer refrigerators, refrigerator-freezers, and freezers are appropriate baseline efficiency levels for DOE to apply to each product class in evaluating whether to amend the current energy conservation standards for these products. DOE requests data and suggestions to evaluate the baseline efficiency levels in order to better evaluate amending energy conservation standards for these products.

Issue D.2 DOE requests feedback on the appropriate baseline efficiency levels for any newly analyzed product classes that are not currently in place or for the contemplated combined product classes, as discussed in section II.B.1 of this document. For newly analyzed product classes, DOE requests energy use data to develop a baseline

relationship between energy use and adjusted volume.

2. Maximum Available and Maximum Technology Levels

As part of DOE's analysis, the maximum available efficiency level is the highest efficiency unit currently available on the market. For the 2011 Final Rule, DOE did not analyze all 42 consumer refrigerator, refrigerator-freezer, and freezer product classes. Rather, DOE focused on 11 product classes. Seven of the 11 analyzed product classes represented over 90 percent of product shipments in the market at the time of the analysis. *See* 76 FR 57516, 57530 and chapter 2 of the preliminary analysis technical support document (''TSD'') for that rulemaking. The current maximum available efficiencies for these 11 analyzed product classes are included in Table II.5.

TABLE II.5—MAXIMUM EFFICIENCY LEVELS CURRENTLY AVAILABLE

Product class	Rated energy use percentage below maximum allowable limit	Adjusted volume (ft^3)
3	14	17
5	32	13
7	28	32
9	25	24
10	17	18
11	22	3
18	26	12
3A–BI	37	12
5–BI	17	11
7–BI	9	32, 33, 37
9I–BI	25	28

Source: DOE Compliance Certification Database (as of April 9, 2019).

DOE defines a max-tech efficiency level to represent the theoretical maximum possible efficiency if all available design options are incorporated in a product. In many cases, the max-tech efficiency level is not commercially available because it is not economically feasible. In the 2011 Final Rule, DOE determined max-tech efficiency levels using energy modeling. These energy models were based on use of all design options applicable to the specific product classes. While these product configurations had not likely been tested as prototypes, all of the individual design options had been incorporated in available products.

Issue D.3 DOE seeks input and data that would allow it to evaluate the appropriateness and technological feasibility of the maximum available efficiency levels for potential consideration as possible energy conservation standards for the products at issue. DOE also requests feedback on whether the maximum available efficiencies presented in Table II.5 are representative of those for the other consumer refrigerator, refrigerator-freezer, and freezer product classes not directly analyzed in the 2011 Final Rule. If the range of possible efficiencies is different for the other product classes not directly analyzed, DOE requests alternative approaches that should be considered for those product classes and data and information to support use of the alternative.

Issue D.4 DOE seeks feedback on what design options would be incorporated at a max-tech efficiency level, and the efficiencies associated with those levels. As part of this request, DOE also seeks information as to whether there are limitations on the use of certain combinations of design options.

3. Manufacturer Production Costs and Manufacturing Selling Price

As described at the beginning of this section, the main outputs of the engineering analysis are cost-efficiency relationships that describe the estimated increases in manufacturer production cost associated with higher-efficiency products for the analyzed product classes. For the 2011 Final Rule, DOE developed the cost-efficiency relationships by estimating the efficiency improvements and costs associated with incorporating specific design options into the assumed baseline model for each analyzed product class.

Issue D.5 DOE requests feedback on how manufacturers would incorporate the technology options listed in Table II.2 and Table II.3 to increase energy efficiency in consumer refrigerators, refrigerator-freezers, and freezers beyond the baseline. This includes information on the order in which manufacturers would incorporate the different technologies to incrementally improve the efficiencies of products. DOE also requests feedback on whether the increased energy efficiency would lead to other design changes that would not occur otherwise. DOE is also interested in information regarding any potential impact of design options on a manufacturer's ability to incorporate additional functions or attributes in response to consumer demand.

Issue D.6 DOE also seeks input on the increase in MPC associated with incorporating each particular design option. Specifically, DOE is interested in whether and how the costs estimated for design options in the 2011 Final Rule have changed since the time of that analysis. DOE also requests information on the investments necessary to incorporate specific design options, including, but not limited to, costs related to new or modified tooling (if any), materials, engineering and development efforts to implement each design option, and manufacturing/production impacts.

Issue D.7 DOE requests comment on whether certain design options may not be applicable to (or are incompatible with) specific product classes.

As described in section II.D.2 of this document, DOE analyzed 11 product classes in the 2011 Final Rule. DOE developed cost-efficiency curves for each of these product classes that were used as the input for the downstream analyses conducted in support of that rulemaking. See chapter 5 of the 2011 Final Rule TSD for the cost-efficiency curves developed in that rulemaking.

Issue D.8 DOE seeks feedback on whether the approach of analyzing a sub-set of product classes is appropriate for a future consumer refrigerator, refrigerator-freezer, and freezer energy conservation standards rulemaking. DOE requests comment on whether it is necessary to individually analyze all 11 product classes used in the 2011 Final Rule. For example, analysis on the built-in product classes may not be necessary if the analysis on the corresponding freestanding product classes is applicable to both product classes. Additionally, DOE requests data and suggestions to evaluate the approach used to apply the analyzed product class results to other product classes. For example, if it is necessary to individually analyze more than 11 product classes used in the 2011 Final Rule, DOE requests information on why aggregating certain products is not appropriate. If this approach is not appropriate, DOE requests alternative approaches and data and information that would support the use of the alternative.[9]

To account for manufacturers' non-production costs and profit margin, DOE applies a non-production cost multiplier (the manufacturer markup) to the MPC. The resulting manufacturer selling price (''MSP'') is the price at which the manufacturer distributes a unit into commerce. For the 2011 Final Rule, DOE used a manufacturer markup of 1.26 for all non-built-in products and a manufacturer markup of 1.40 for built-in products. See chapter 6 of the 2011 Final Rule TSD.

Issue D.9 DOE requests feedback on whether manufacturer markups of 1.26 and 1.40 are appropriate for non-built-in and built-in products, respectively.

E. Distribution Channels

In generating end-user price inputs for the life-cycle cost (''LCC'') analysis and national impact analysis (''NIA''), DOE must identify distribution channels (*i.e.,* how the products are distributed from the manufacturer to the consumer), and estimate relative sales volumes through each channel. In the 2011 Final Rule, DOE only accounted for the retail outlets distribution channel because data from the Association of Home Appliance Manufacturers (''AHAM'') 2005 *Fact Book* indicates that the overwhelming majority of residential appliances were sold through retail outlets. In that rulemaking, DOE did not include a separate distribution channel for refrigeration products included as part of a new home because DOE did not have enough information to characterize which of these products were ''pre-installed'' by builders in these new homes. Should sufficient information become available, DOE may consider including a separate distribution channel that includes a contractor in addition to the existing retail outlets distribution channel.

Issue E.1 DOE requests information on the existence of any distribution channels other than the retail outlet distribution channel that are used to distribute the products at issue into the market. DOE also requests data on the fraction of full-size consumer refrigerator and refrigerator-freezer sales in the residential sector that go through both a wholesaler/retailer and a contractor as well as the fraction of sales that go through any other identified channels.

F. Energy Use Analysis

As part of the rulemaking process, DOE conducts an energy use analysis to identify how products are used by consumers, and thereby determine the energy savings potential of energy efficiency improvements. DOE bases the energy consumption of consumer refrigerators, refrigerator-freezers, and freezers on the rated annual energy consumption as determined by the DOE test procedure. Along similar lines, the energy use analysis is meant to represent typical energy consumption in the field.

1. Usage Adjustment Factor

In the 2011 Final Rule, DOE incorporated a usage adjustment factor (''UAF''), which served to correct for differences in a product's actual energy use in the field and the product's energy use as determined by the DOE test procedure. Average UAFs were calculated for each product class, and most product classes incorporated an age-dependent UAF, and a distribution of UAFs dependent on the average outdoor temperature, as well as the number of occupants across the household sample in the LCC; additionally, separate UAFs were calculated for primary and secondary refrigerators. Since the publication of the 2011 Final Rule, DOE amended its test procedure for these products. 79 FR 22320 (April 21, 2014).

Issue F.1 DOE requests feedback and data on whether a product's energy use results from the current test procedure accurately reflect the product's average energy use in the field, thereby rendering an average UAF unnecessary for this rulemaking. If the UAF is still necessary, DOE requests data and information to allow it to better evaluate the representativeness of the current UAF. DOE also requests suggestions and data that would allow DOE to evaluate steps that could be taken to bring these two values into closer harmony.

Issue F.2 DOE also requests feedback and data on how a product's energy use changes with age, how the number of occupants in the household affects the product's energy use, and whether separate UAFs for primary and secondary refrigerator-freezers are necessary.

2. Connected Refrigerators, Refrigerator-Freezers, and Freezers

DOE is aware of the introduction of internet-connected refrigerators and refrigerator-freezers on the market. DOE recently published an RFI on the emerging smart technology appliance and equipment market. 83 FR 46886 (Sept. 17, 2018). In that RFI, DOE sought information to better understand market trends and issues in the emerging market for appliances and commercial equipment that incorporate smart technology. DOE's intent in issuing the RFI was to ensure that DOE did not inadvertently impede such innovation in fulfilling its statutory obligations in setting efficiency standards for covered products and equipment. Additionally, as discussed in the RFI, DOE lacks data regarding consumer use of connected features.

Issue F.3 DOE requests information and data specific to consumer use and the associated power consumption of connected features on internet-connected refrigerators, refrigerator-freezers, and freezers.

G. Repair and Maintenance Costs

In the 2011 Final Rule, DOE estimated the increase in repair costs from using specific technology found in some higher efficiency design options; however, DOE excluded maintenance costs from its analysis because there was no evidence that maintenance costs change by efficiency level. In the 2011 Final Rule analysis, DOE used relative component repair rates from a prior rulemaking for commercial refrigeration equipment combined with aggregate survey data from Consumers Union collected in 2009 to estimate the repair rate by product class and efficiency level. To estimate the repair costs, DOE used incremental cost models developed in the engineering analysis in addition to baseline repair cost data from Best Buy Co., Inc.

Issue G.1 DOE requests feedback and data on whether maintenance costs differ in comparison to the baseline

[9] See chapter 2, section 2.15 in the preliminary analysis TSD published during the rulemaking process leading to the 2011 Final Rule, document #22 on *regulations.gov* in docket ID EERE–2008–BT–STD–0012.

maintenance costs for any of the specific technology options listed in Table II.2 and Table II.3. To the extent that these costs differ, DOE seeks supporting data and the reasons for those differences.

Issue G.2 DOE requests information and data on the frequency of repair and repair costs by product class for the technology options listed in Table II.2 and Table II.3. While DOE is interested in information regarding each of the listed technology options, DOE is particularly interested in the impacts on repair frequencies and costs with respect to those products that use VIPs and variable-speed compressors. DOE is also interested in whether consumers simply replace the products when they fail as opposed to repairing them.

H. Shipments

DOE develops shipments forecasts of consumer refrigerators, refrigerator-freezers, and freezers to calculate the national impacts of potential amended energy conservation standards on energy consumption, net present value (''NPV''), and future manufacturer cash flows. DOE shipments projections are based on available historical data broken out by product class, capacity, and efficiency. Current sales estimates allow for a more accurate model that captures recent trends in the market.

Issue H.1 DOE requests 2018 annual sales data (*i.e.,* number of shipments) for refrigerators with a top-mounted freezer, TTD refrigerators with a bottom-mounted freezer, non-TTD refrigerators with a bottom-mounted freezer, refrigerators with a side-mounted freezer, compact refrigerators, chest freezers, and upright freezers. For each category, DOE also requests the fraction of sales that are ENERGY STAR-qualified.

Issue H.2 DOE requests 2018 data on the fraction of sales in the residential and commercial sector for full-size refrigerators, compact refrigerators, and freezers.

Issue H.3 DOE requests 2018 data on the fraction of sales of full-size refrigerators, compact refrigerators, and upright freezers that are built-in models.

If disaggregated fractions of annual sales are not available at the product type level, DOE requests more aggregated fractions of annual sales at the category level.

Issue H.4 If available, DOE requests the same information for the previous five years (2013–2017).

Issue H.5 DOE requests available 2018 sales data on the fraction of full-size refrigerator sales by technology for the technology options listed in Table II.2 and Table II.3, and in particular, for VIPs and variable-speed compressors. DOE also requests information on any expected market trends in the popularity of those technology options.

Issue H.6 DOE requests data and information on any trends in the refrigeration market that could be used to forecast expected trends in product class market share, as well as market share of efficiency levels within each product class. DOE also requests data and information on the existence of price learning for refrigeration products, which could impact market shares over the analysis period.

Issue H.7 DOE has identified several new features, such as door-in-door configuration and ''smart'' internet-connected refrigerators, which may impact total energy consumption. DOE requests input on any expected market trends for such features.

Issue H.8 An initial analysis of data from the Residential Energy Consumption Surveys (''RECSs'') from 1993–2015 indicates that consumers are purchasing higher-capacity refrigerators over time. For example, estimates show that purchases of refrigerators greater than or equal to 22.6 cubic feet rose from 10 percent to 50 percent of the market from 2000 to 2015. In the same time period, sales of refrigerators less than 17.6 cubic feet decreased from 43 percent to 6 percent of the market. DOE seeks data and information on whether the trend towards increased sales of higher-capacity units has continued through 2018 or has leveled off. If the trend has continued, DOE requests data on which capacities have seen significant changes from 2009 to 2018 and by how much. DOE requests input on expected capacity market trends over the next 5 years. Additionally, DOE requests feedback on the drivers of this market shift towards larger-capacity refrigerators.

Issue H.9 In the 2011 Final Rule, DOE developed a lifetime model for standard-size refrigerator-freezers, standard-size freezers, and compact refrigeration products. In addition, DOE derived a conversion function to model the conversion from primary to secondary refrigerator-freezers. The mean lifetimes were 17.4 years, 22.3 years, 5.6 years, and 7.5 years for standard-size refrigerator-freezers, standard-size freezers, compact refrigerators, and compact freezers, respectively. The primary-to-secondary conversion model indicated that 5.6 percent of standard-size refrigerator-freezer shipments are sold as new secondary units and that roughly 1.5 percent of surviving refrigerator-freezers are converted from primary to secondary each year. Because the conversion and lifetime models affect the shipments analysis (as well as the LCC and payback period (''PBP'') analyses), DOE requests data and information to inform the average lifetime of refrigeration products and the conversion of primary to secondary refrigerator-freezers.

I. Manufacturer Impact Analysis

The purpose of the manufacturer impact analysis (''MIA'') is to estimate the financial impact of amended energy conservation standards on manufacturers of consumer refrigerators, refrigerator-freezers, and freezers, and to evaluate the potential impact of such standards on direct employment and manufacturing capacity. The MIA includes both quantitative and qualitative aspects. The quantitative part of the MIA primarily relies on the Government Regulatory Impact Model (''GRIM''), an industry cash-flow model adapted for each product in this rulemaking, with the key output of industry net present value (''INPV''). The qualitative part of the MIA addresses the potential impacts of energy conservation standards on manufacturing capacity and industry competition, as well as factors such as product characteristics, impacts on particular subgroups of firms, and important market and product trends.

As part of the MIA, DOE intends to analyze impacts of amended energy conservation standards on subgroups of manufacturers of covered products, such as small business manufacturers. DOE intends to use the Small Business Administration's (''SBA'') small business size standards to determine whether manufacturers qualify as small businesses, which are listed by the applicable North American Industry Classification System (''NAICS'') code.[10] Manufacturing of consumer refrigerators, refrigerator-freezers, and freezers is classified under NAICS 335220, ''Major Household Appliance Manufacturing,'' and the SBA sets a threshold of 1,500 employees or less for a domestic entity to be considered as a small business. This employee threshold includes all employees in a business' parent company and any other subsidiaries.

One aspect of assessing manufacturer burden involves looking at the cumulative impact of multiple DOE standards and the product-specific regulatory actions of other Federal agencies that affect the manufacturers of a covered product or equipment. While any one regulation may not impose a significant burden on manufacturers,

[10] Available online at: *https://www.sba.gov/document/support—table-size-standards.*

the combined effects of several existing or impending regulations may have serious consequences for some manufacturers, groups of manufacturers, or an entire industry. Assessing the impact of a single regulation may overlook this cumulative regulatory burden. In addition to energy conservation standards, other regulations can significantly affect manufacturers' financial operations. Multiple regulations affecting the same manufacturer can strain profits and lead companies to abandon product lines or markets with lower expected future returns than competing products. For these reasons, DOE conducts an analysis of cumulative regulatory burden as part of its rulemakings pertaining to appliance efficiency.

Issue I.1 To the extent feasible, DOE seeks the names and contact information of any domestic or foreign-based manufacturers that distribute consumer refrigerators, refrigerator-freezers, and freezers in the United States.

Issue I.2 DOE identified small businesses as a subgroup of manufacturers that could be disproportionally impacted by amended energy conservation standards. DOE requests the names and contact information of small business manufacturers, as defined by the SBA's size threshold, of consumer refrigerators, refrigerator-freezers, and freezers that distribute products in the United States. In addition, DOE requests comment on any other manufacturer subgroups that could be disproportionally impacted by amended energy conservation standards. DOE requests feedback on any potential approaches that could be considered to address impacts on manufacturers, including small businesses.

Issue I.3 DOE requests information regarding the cumulative regulatory burden impacts on manufacturers of consumer refrigerators, refrigerator-freezers, and freezers associated with (1) other DOE standards applying to different products that these manufacturers may also make and (2) product-specific regulatory actions of other Federal agencies. DOE also requests comment on its methodology for computing cumulative regulatory burden and whether there are any flexibilities it can consider that would reduce this burden while remaining consistent with the requirements of EPCA.

J. Other Energy Conservation Standards Topics

1. Market Failures

In the field of economics, a market failure is a situation in which the market outcome does not maximize societal welfare. DOE welcomes comment on any aspect of market failures, especially those in the context of amended energy conservation standards for consumer refrigerators, refrigerator-freezers, and freezers.

2. Other

DOE welcomes comments on other issues relevant to the conduct of this rulemaking that may not specifically be identified in this document. In particular, DOE seeks comment on whether there have been sufficient technological or market changes since the most recent standards update that may justify a new rulemaking to consider more stringent standards. Specifically, DOE seeks data and information that could enable the agency to determine whether a more-stringent standard: (1) Would not result in significant additional savings of energy; (2) is not technologically feasible; (3) is not economically justified; or (4) any combination of the foregoing.

DOE also notes that under Executive Order 13771, ''Reducing Regulation and Controlling Regulatory Costs,'' Executive Branch agencies such as DOE are directed to manage the costs associated with the imposition of expenditures required to comply with Federal regulations. See 82 FR 9339 (February 3, 2017). Consistent with that Executive Order, DOE encourages the public to provide input on measures DOE could take to lower the cost of its energy conservation standards rulemakings, recordkeeping and reporting requirements, and compliance and certification requirements applicable to consumer refrigerators, refrigerator-freezers, and freezers while remaining consistent with the requirements of EPCA.

III. Submission of Comments

DOE invites all interested parties to submit in writing by December 30, 2019, comments and information on matters addressed in this RFI and on other matters relevant to DOE's consideration of amended energy conservations standards for consumer refrigerators, refrigerator-freezers, and freezers. After the close of the comment period, DOE will review the public comments received any may begin collecting data and conducting the analyses discussed in this RFI.

Submitting comments via *http://www.regulations.gov.* The *http://www.regulations.gov* web page requires you to provide your name and contact information. Your contact information will be viewable to DOE Building Technologies Office staff only. Your contact information will not be publicly viewable except for your first and last names, organization name (if any), and submitter representative name (if any). If your comment is not processed properly because of technical difficulties, DOE will use this information to contact you. If DOE cannot read your comment due to technical difficulties and cannot contact you for clarification, DOE may not be able to consider your comment.

However, your contact information will be publicly viewable if you include it in the comment or in any documents attached to your comment. Any information that you do not want to be publicly viewable should not be included in your comment, nor in any document attached to your comment. Persons viewing comments will see only first and last names, organization names, correspondence containing comments, and any documents submitted with the comments.

Do not submit to *http://www.regulations.gov* information for which disclosure is restricted by statute, such as trade secrets and commercial or financial information (hereinafter referred to as Confidential Business Information (''CBI'')). Comments submitted through *http://www.regulations.gov* cannot be claimed as CBI. Comments received through the website will waive any CBI claims for the information submitted. For information on submitting CBI, see the Confidential Business Information section.

DOE processes submissions made through *http://www.regulations.gov* before posting. Normally, comments will be posted within a few days of being submitted. However, if large volumes of comments are being processed simultaneously, your comment may not be viewable for up to several weeks. Please keep the comment tracking number that *www.regulations.gov* provides after you have successfully uploaded your comment.

Submitting comments via email, hand delivery/courier, or postal mail. Comments and documents submitted via email, hand delivery/courier, or postal mail also will be posted to *http://www.regulations.gov.* If you do not want your personal contact information to be publicly viewable, do not include it in your comment or any accompanying

documents. Instead, provide your contact information on a cover letter. Include your first and last names, email address, telephone number, and optional mailing address. The cover letter will not be publicly viewable as long as it does not include any comments.

Include contact information each time you submit comments, data, documents, and other information to DOE. If you submit via postal mail or hand delivery/courier, please provide all items on a CD, if feasible. It is not necessary to submit printed copies. No telefacsimiles (faxes) will be accepted.

Comments, data, and other information submitted to DOE electronically should be provided in PDF (preferred), Microsoft Word or Excel, WordPerfect, or text (ASCII) file format. Provide documents that are not secured, written in English and free of any defects or viruses. Documents should not contain special characters or any form of encryption and, if possible, they should carry the electronic signature of the author.

Campaign form letters. Please submit campaign form letters by the originating organization in batches of between 50 to 500 form letters per PDF or as one form letter with a list of supporters' names compiled into one or more PDFs. This reduces comment processing and posting time.

Confidential Business Information. According to 10 CFR 1004.11, any person submitting information that he or she believes to be confidential and exempt by law from public disclosure should submit via email, postal mail, or hand delivery/courier two well-marked copies: One copy of the document marked confidential including all the information believed to be confidential, and one copy of the document marked ''non-confidential'' with the information believed to be confidential deleted. Submit these documents via email or on a CD, if feasible. DOE will make its own determination about the confidential status of the information and treat it according to its determination.

It is DOE's policy that all comments may be included in the public docket, without change and as received, including any personal information provided in the comments (except information deemed to be exempt from public disclosure).

DOE considers public participation to be a very important part of the process for developing energy conservation standards. DOE actively encourages the participation and interaction of the public during the comment period in each stage of the rulemaking process. Interactions with and between members of the public provide a balanced discussion of the issues and assist DOE in the rulemaking process. Anyone who wishes to be added to the DOE mailing list to receive future notices and information about this process or would like to request a public meeting should contact Appliance and Equipment Standards Program staff at (202) 287–1445 or via email at *ApplianceStandardsQuestions@ee.doe.gov.*

Signed in Washington, DC, on October 31, 2019.

Alexander N. Fitzsimmons,

Acting Deputy Assistant Secretary for Energy Efficiency, Energy Efficiency and Renewable Energy.

[FR Doc. 2019–24820 Filed 11–14–19; 8:45 am]

BILLING CODE 6450–01–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2018–0538; Product Identifier 2012–NE–47–AD]

RIN 2120–AA64

Airworthiness Directives; Rolls-Royce plc Turbofan Engines

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Supplemental notice of proposed rulemaking (SNPRM); reopening of comment period.

SUMMARY: The FAA is revising an earlier proposal for certain Rolls-Royce plc (RR) RB211 Trent 768–60, 772–60, and 772B–60 model turbofan engines. This action revises the notice of proposed rulemaking (NPRM) by modifying the inspection threshold for ultrasonic inspections (UIs) of the affected low-pressure (LP) compressor blades for both standard operations and non-standard operations (NSO). This action also revises the service information references. The FAA is proposing this airworthiness directive (AD) to address the unsafe condition on these products. Since these actions would impose an additional burden over those in the NPRM, the FAA is reopening the comment period to allow the public the chance to comment on these changes.

DATES: The comment period for the NPRM published in the **Federal Register** on August 14, 2018 (83 FR 40161), is reopened.

The FAA must receive comments on this SNPRM by December 30, 2019.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to *https://www.regulations.gov.* Follow the instructions for submitting comments.
- *Fax:* 202 493 2251.
- *Mail:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12 140, 1200 New Jersey Avenue SE, Washington, DC 20590.
- *Hand Delivery:* Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

For service information identified in this SNPRM, contact Rolls-Royce plc, P.O. Box 31, Derby, DE24 8BJ, United Kingdom; phone: 44 (0)1332 242424; fax: 44 (0)1332 249936; email: *https://www.rolls-royce.com/contact/civil_team.jsp.* You may view this service information at the FAA, Engine and Propeller Standards Branch, 1200 District Avenue, Burlington, MA 01803. For information on the availability of this material at the FAA, call 781–238–7759.

Examining the AD Docket

You may examine the AD docket on the internet at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2018–0538; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this SNPRM, the mandatory continuing airworthiness information (MCAI), the regulatory evaluation, any comments received, and other information. The street address for Docket Operations is listed above. Comments will be available in the AD docket shortly after receipt.

FOR FURTHER INFORMATION CONTACT: Stephen Elwin, Aerospace Engineer, ECO Branch, FAA, 1200 District Avenue, Burlington, MA 01803; phone: 781–238–7236; fax: 781–238–7199; email: *stephen.l.elwin@faa.gov.*

SUPPLEMENTARY INFORMATION:

Comments Invited

The FAA invites you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under the **ADDRESSES** section. Include ''Docket No. FAA–2018–0538; Product Identifier 2012–NE–47–AD'' at the beginning of your comments. The FAA specifically invites comments on the overall regulatory, economic, environmental, and energy aspects of this SNPRM. The FAA will consider all comments received by the closing date and may amend this SNPRM because of those comments.

The FAA will post all comments received, without change, to *https://www.regulations.gov,* including any personal information you provide. The FAA will also post a report summarizing each substantive verbal contact received about this SNPRM.

Discussion

The FAA issued an NPRM to amend 14 CFR part 39 by superseding AD 2017–03–02, Amendment 39–18793 (82 FR 10701, February 15, 2017), (''AD 2017–03–02'') that would apply to certain RR RB211 Trent 768–60, 772–60, and 772B–60 model turbofan engines. AD 2017–03–02 resulted from revised service information to reduce the inspection threshold of the UI for the LP compressor blades. The NPRM published in the **Federal Register** on August 14, 2018 (83 FR 40161). The NPRM was prompted by LP compressor blade partial airfoil release events. The NPRM proposed to require initial and repetitive UIs of the affected LP compressor blade and replacement of the LP compressor blade with a part eligible for installation if the LP compressor blade fails an inspection.

The European Union Aviation Safety Agency (EASA), which is the Technical Agent for the Member States of the European Community, has issued EASA AD 2018–0188R1, dated September 5, 2018 (referred to after this as ''the MCAI''), to address the unsafe condition on these products. The MCAI states:

> Occurrences have been reported of LP compressor partial aerofoil blade release events on RR Trent 700 engines. While primary containment of the released sections was achieved in each case, some of the releases did exhibit secondary effects that are considered to present a potential hazard.
>
> This condition, if not detected and corrected, could lead to LP compressor blade release with possible consequent loss of the engine nose cowl, under cowl fires and forward projection of secondary debris, possibly resulting in damage to the aeroplane and/or injury to persons on the ground.
>
> To address this potential unsafe condition, RR published NMSB RB.211–72–G872, providing inspection instructions and, consequently, EASA issued AD 2012–0247 to require a one-time inspection of the higher life LP compressor blades. After identification of a population of these LP compressor blades that were incorrectly inspected, RR issued NMSB RB.211–72–H311 and, consequently, EASA issued AD 2013–0060, retaining the requirements of EASA AD 2012–0247, which was superseded, to require a one-time re-inspection of the affected blades.
>
> After that AD was issued, to mitigate the risk of further partial LP compressor blade release events, RR issued NMSB RB.211–72–AH465, providing instructions for ultrasonic inspection of the affected parts to detect sub-surface anomalies in the aerofoil. Consequently, EASA issued AD 2014–0031, superseding [EASA] AD 2013–0060, to require repetitive inspections of all affected LP compressor blades and, depending on findings, replacement. Thereafter, EASA issued AD 2016–0141, retaining the requirements of [EASA] AD 2014–0031, which was superseded, to reduce inspection threshold (RR Alert NMSB RB.211–72–AH465 Revision 2). Prompted by further analysis, EASA issued AD 2017–0241, retaining the requirements of EASA AD 2016–0141, which was superseded, further reducing the inspection threshold and interval (RR Alert NMSB RB.211–72–AH465 Revision 4).
>
> Since EASA AD 2017–0241 was issued, RR issued the NMSB to distinguish between standard operations and NSO and to determine the applicable inspection threshold and interval. The flight cycles (FC) accumulated by operators conducting NSO have to be calculated using the beta factor shown in Table of the NMSB. The NMSB also introduces, for engines that have accumulated more than 600 FC or standard duty cycles (SDC, for engines used in NSO), a closing date by which these have to be inspected at least once.
>
> For the reason described above, this [EASA] AD retains the requirements of EASA AD 2017–0241, which is superseded, and requires implementation of the changes introduced.

You may obtain further information by examining the MCAI in the AD docket on the internet at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2018–0538.

Actions Since the NPRM Was Issued

Since the FAA issued the NPRM, the manufacturer determined the need to modify the inspection threshold for UIs and to distinguish between operators conducting standard operations and NSO. The manufacturer also determined the need to require inspection of engines that have accumulated greater than 600 flight cycles (FCs) or standard duty cycles (SDCs) for engines used in NSO.

Also, since the FAA issued the NPRM, EASA issued EASA AD 2018–0188R1, dated September 5, 2018, which requires UIs of each affected LP compressor blade within the compliance time specified in the Accomplishment Instructions, paragraph 3, of RR Alert Non-Modification Service Bulletin (NMSB) RB.211–72–AH465, Revision 5, dated July 26, 2018 (''the NMSB''). The FAA also determined the need to revise the references to the service information in this AD because, since the publication of the NPRM, RR published the NMSB.

Comments

The FAA gave the public the opportunity to comment on the NPRM. The following presents the comments received on the NPRM and the FAA's response to each comment.

Request To Update Service Information

A commenter requested that the FAA update all service information references from RR Alert NMSB RB.211–72–AH465, Revision 4, to Revision 5. The commenter indicated that updated service information contains all the inspection compliance time and requirements as Revision 4, but Revision 5 also addresses NSO.

The FAA agrees to reference the latest revision of the service information in this proposed AD.

Support for the AD

The Air Line Pilots Association International supported the NPRM as written.

Related Service Information Under 1 CFR Part 51

The FAA reviewed RR Alert NMSB RB.211–72–AH465, Revision 5, dated July 26, 2018. The NMSB describes procedures for performing a UI of the LP compressor blades. This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

FAA's Determination

This product has been approved by EASA, and is approved for operation in the United States. Pursuant to our bilateral agreement with the European Community, EASA has notified us of the unsafe condition described in the MCAI and service information referenced above. The FAA is proposing this AD because it evaluated all the relevant information provided by EASA and determined the unsafe condition described previously is likely to exist or develop in other products of the same type design. Certain changes described above expand the scope of the NPRM. As a result, the FAA has determined that it is necessary to reopen the comment period to provide additional opportunity for the public to comment on this SNPRM.

Proposed Requirements of This SNPRM

This SNPRM would require initial and repetitive UIs of the affected LP compressor blades and, depending on the results, their replacement with a part eligible for installation.

Costs of Compliance

The FAA estimates that this proposed AD affects 56 engines installed on airplanes of U.S. registry.

The FAA estimates the following costs to comply with this proposed AD:

ESTIMATED COSTS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Inspect LP compressor blade	44 work-hours × $85 per hour = $3,740	$0	$3,740	$209,440

The FAA estimates the following costs to do any necessary replacements that would be required based on the results of the proposed inspection. The FAA has no way of determining the number of engines that might need this replacement.

ON-CONDITION COSTS

Action	Labor cost	Parts cost	Cost per product
Replace LP compressor blade (one blade per 77 engine sets).	6 work-hours × $85 per hour = $510	$103,000	$103,510

According to the manufacturer, some of the costs of this proposed AD may be covered under warranty, thereby reducing the cost impact on affected individuals. The FAA does not control warranty coverage for affected individuals. As a result, the FAA has included all costs in our cost estimate.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: ''General requirements.'' Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

This AD is issued in accordance with authority delegated by the Executive Director, Aircraft Certification Service, as authorized by FAA Order 8000.51C. In accordance with that order, issuance of ADs is normally a function of the Compliance and Airworthiness Division, but during this transition period, the Executive Director has delegated the authority to issue ADs applicable to engines, propellers, and associated appliances to the Manager, Engine and Propeller Standards Branch, Policy and Innovation Division.

Regulatory Findings

The FAA determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Will not affect intrastate aviation in Alaska, and

(3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

Rolls-Royce plc: Docket No. FAA–2018–0538; Product Identifier 2012–NE–47–AD.

(a) Comments Due Date

The FAA must receive comments by December 30, 2019.

(b) Affected ADs

This AD replaces AD 2017–03–02, Amendment 39–18793 (82 FR 10701, February 15, 2017).

(c) Applicability

This AD applies to Rolls-Royce plc (RR) RB211 Trent 768–60, 772–60, and 772B–60 turbofan engines, with low-pressure (LP) compressor blade, part number (P/N) FK23411, FK25441, FK25968, FW11901, FW15393, FW23643, FW23741, FW23744, KH23403, or KH23404, installed.

(d) Subject

Joint Aircraft System Component (JASC) Code 7230, Turbine Engine Compressor Section.

(e) Unsafe Condition

This AD was prompted by LP compressor blade partial airfoil release events. While released sections were contained in each case, projection of secondary debris and effects could present a potential hazard. The FAA is issuing this AD to prevent LP compressor blade airfoil separation. The unsafe condition, if not addressed, could result in damage to the engine and damage to the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Required Actions

(1) Within the compliance time specified in Figure 1 to paragraph (g)(1) of this AD and

thereafter, at intervals not to exceed 1,200 flight cycles (FCs) or Standard Duty Cycle (SDCs) for Non-Standard Operations (NSO), as applicable, since the last ultrasonic inspection (UI), perform a UI of each affected LP compressor blade in accordance with the Accomplishment Instructions, paragraph 3, of RR Alert Non-Modification Service Bulletin (NMSB) RB.211–72–AH465, Revision 5, dated July 26, 2018.

Note 1 to paragraph (g): Paragraph 1.D of Rolls-Royce Alert NMSB RB.211–72–AH465, Revision 5, dated July 26, 2018, describes how to determine the applicable SDCs. The Time Limits Manual (TLM), 05–00–01, defines NSO.

Figure 1 to paragraph (g)(1) – Inspection Threshold

FCs/SDC Accumulated Since New or Since Last Inspection Required by paragraph (g)(1)	Compliance Times
Less than 1,100 FCs/SDCs	Before exceeding 1,200 FCs/SDCs since new.
1,100 FCs/SDCs or greater	Within 100 FCs/SDCs after the effective date of this AD, or before exceeding 2,400 FCs/SDCs since new, whichever occurs first.

(2) If, during any inspection required by paragraph (g)(1) of this AD, a LP compressor blade is rejected by the UI, as defined in Accomplishment Instructions, paragraph 3, of RR Alert NMSB RB.211–72–AH465, Revision 5, dated July 26, 2018, before further flight, or before returning the LP compressor blade to service, whichever occurs first, remove the affected LP compressor blade from service and replace with a part eligible for installation.

(h) Installation Prohibition

After the effective date of this AD, do not install an affected LP compressor blade on an engine unless the LP compressor blade meets the conditions specified in paragraphs (h)(1) or (2) of this AD, as applicable.

(1) The affected part has not exceeded 1,200 FC or SDCs (for NSO) since new, or since inspection in accordance with RR Alert NMSB RB.211–72–AH465, Revision 5, dated July 26, 2018, or since an inspection as specified in paragraph (k) of this AD, whichever occurs later.

(2) Prior to installation, the affected part has passed an ultrasonic inspection in accordance with paragraph (g)(1) of this AD.

(i) No Reporting Requirement

The reporting requirements in the Accomplishment Instructions, paragraph 3 of RR Alert NMSB RB.211–72–AH465, Revision 5, dated July 26, 2018, are not required by this AD.

(j) Credit for Previous Actions

You may take credit for LP compressor blade UIs required by paragraph (g)(1) of this AD, if you performed the UI before the effective date of this AD using:

(1) The instructions referenced in the mandatory inspection paragraph of the applicable engine TLM, provided the compliance times of this AD are not exceeded; or

(2) RR NMSB RB.211–72–G702, dated May 23, 2011; RR NMSB RB.211–72–G872, Revision 2, dated March 8, 2013, or earlier versions; RR NMSB RB.211–72–H311, dated March 8, 2013; RR NMSB RB.211–72–AH465, Revision 4, dated October 3, 2017, or earlier versions; Engine Manual E–Trent–1RR, Task 72–31–11–200–806; or Airbus A330 Aircraft Maintenance Manual (AMM) Task 72–31–41–270–801, or AMM Task 72–31–41–270–802.

(k) Alternative Methods of Compliance (AMOCs)

(1) The Manager, ECO Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the ECO Branch, send it to the attention of the person identified in paragraph (l)(1) of this AD. You may email your request to: *ANE–AD–AMOC@faa.gov.*

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(l) Related Information

(1) For more information about this AD, contact Stephen Elwin, Aerospace Engineer, ECO Branch, FAA, 1200 District Avenue, Burlington, MA 01803; phone: 781–238–7236; fax: 781–238–7199; email: *stephen.l.elwin@faa.gov.*

(2) Refer to European Union Aviation Safety Agency (EASA) AD 2018–0188R1, dated September 5, 2018, for more information. You may examine the EASA AD in the AD docket on the internet at *https://www.regulations.gov* by searching for and locating it in Docket No. FAA–2018–0538.

(3) For service information identified in this AD, contact Rolls-Royce plc, P.O. Box 31, Derby, DE24 8BJ, United Kingdom; phone: 44 (0)1332 242424; fax: 44 (0)1332 249936; email: *https://www.rolls-royce.com/contact/civil_team.jsp.* You may view this referenced service information at the FAA, Engine and Propeller Standards Branch, 1200 District Avenue, Burlington, MA 01803. For information on the availability of this material at the FAA, call 781–238–7759.

Issued in Burlington, Massachusetts, on November 6, 2019.

Robert J. Ganley,

Manager, Engine and Propeller Standards Branch, Aircraft Certification Service.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2019–0865; Product Identifier 2019–NM–158–AD]

RIN 2120–AA64

Airworthiness Directives; Airbus SAS Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: The FAA proposes to adopt a new airworthiness directive (AD) for all Airbus SAS Model A350–941 and –1041 airplanes. This proposed AD was prompted by reports of passenger door girt bar fitting assembly safety hooks being stuck in the upward position. This proposed AD would require repetitive detailed inspections of girt bar fitting assemblies, repetitive greasing of girt bar fitting assembly bushes, and, depending

on findings, accomplishment of applicable corrective actions, as specified in a European Union Aviation Safety Agency (EASA) AD, which will be incorporated by reference. The FAA is proposing this AD to address the unsafe condition on these products.

DATES: The FAA must receive comments on this proposed AD by December 30, 2019.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to *https://www.regulations.gov.* Follow the instructions for submitting comments.
- *Fax:* 202–493–2251.
- *Mail:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.
- *Hand Delivery:* Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

For the material identified in this proposed AD that will be incorporated by reference (IBR), contact the EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 89990 1000; email *ADs@easa.europa.eu;* internet *www.easa.europa.eu.* You may find this IBR material on the EASA website at *https://ad.easa.europa.eu.* You may view this IBR material at the FAA, Transport Standards Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195. It is also available in the AD docket on the internet at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2019–0865.

Examining the AD Docket

You may examine the AD docket on the internet at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2019–0865; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this NPRM, the regulatory evaluation, any comments received, and other information. The street address for Docket Operations is listed above. Comments will be available in the AD docket shortly after receipt.

FOR FURTHER INFORMATION CONTACT: Kathleen Arrigotti, Aerospace Engineer, International Section, Transport Standards Branch, FAA, 2200 South 216th St., Des Moines, WA 98198; telephone and fax 206–231–3218.

SUPPLEMENTARY INFORMATION:

Comments Invited

The FAA invites you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under the **ADDRESSES** section. Include ''Docket No. FAA–2019–0865; Product Identifier 2019–NM–158–AD'' at the beginning of your comments. The FAA specifically invites comments on the overall regulatory, economic, environmental, and energy aspects of this NPRM. The FAA will consider all comments received by the closing date and may amend this NPRM based on those comments.

The FAA will post all comments received, without change, to *https://www.regulations.gov,* including any personal information you provide. The FAA will also post a report summarizing each substantive verbal contact received about this NPRM.

Discussion

The EASA, which is the Technical Agent for the Member States of the European Union, has issued EASA AD 2019–0207, dated August 22, 2019 (''EASA AD 2019–0207'') (also referred to as the Mandatory Continuing Airworthiness Information, or ''the MCAI''), to correct an unsafe condition for all Airbus SAS Model A350–941 and –1041 airplanes.

This proposed AD was prompted by reports of passenger door girt bar fitting assembly safety hooks being stuck in the upward position. The FAA is proposing this AD to address this condition, which could lead to girt bar disengagement from the girt bar fitting assembly and consequent failure of the passenger door slide deployment during an emergency, possibly preventing safe evacuation of the airplane. See the MCAI for additional background information.

Related IBR Material Under 1 CFR Part 51

EASA AD 2019–0207 describes procedures for repetitive detailed inspections of girt bar fitting assemblies, repetitive greasing of girt bar fitting assembly bushes, and, depending on findings, accomplishment of applicable corrective actions. Corrective actions include rework and replacement. EASA AD 2019–0207 also describes procedures for sending inspection results to Airbus. This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

FAA's Determination and Requirements of This Proposed AD

This product has been approved by the aviation authority of another country, and is approved for operation in the United States. Pursuant to a bilateral agreement with the State of Design Authority, the FAA has been notified of the unsafe condition described in the MCAI referenced above. The FAA is proposing this AD because the agency evaluated all the relevant information and determined the unsafe condition described previously is likely to exist or develop in other products of the same type design.

Proposed AD Requirements

This proposed AD would require accomplishing the actions specified in EASA AD 2019–0207 described previously, as incorporated by reference, except for any differences identified as exceptions in the regulatory text of this AD.

Explanation of Required Compliance Information

In the FAA's ongoing efforts to improve the efficiency of the AD process, the FAA initially worked with Airbus and EASA to develop a process to use certain EASA ADs as the primary source of information for compliance with requirements for corresponding FAA ADs. The FAA has since coordinated with other manufacturers and civil aviation authorities (CAAs) to use this process. As a result, EASA AD 2019–0207 will be incorporated by reference in the FAA final rule. This proposed AD would, therefore, require compliance with EASA AD 2019–0207 in its entirety, through that incorporation, except for any differences identified as exceptions in the regulatory text of this proposed AD. Using common terms that are the same as the heading of a particular section in the EASA AD does not mean that operators need comply only with that section. For example, where the AD requirement refers to ''all required actions and compliance times,'' compliance with this AD requirement is not limited to the section titled ''Required Action(s) and Compliance Time(s)'' in the EASA AD. Service information specified in EASA AD 2019–0207 that is required for compliance with EASA AD 2019–0207 will be available on the internet at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2019–0865 after the FAA final rule is published.

Interim Action

The FAA considers this proposed AD interim action. If final action is later identified, the FAA might consider further rulemaking then.

Costs of Compliance

The FAA estimates that this proposed AD affects 13 airplanes of U.S. registry. The FAA estimates the following costs to comply with this proposed AD:

ESTIMATED COSTS FOR REQUIRED ACTIONS *

Labor cost	Parts cost	Cost per product	Cost on U.S. operators
1 work-hour × $85 per hour = $85	$0	$85	$1,105

*Table does not include estimated costs for reporting.

The FAA estimates that it would take about 1 work-hour per product to comply with the proposed reporting requirement in this proposed AD. The average labor rate is $85 per hour. Based on these figures, the FAA estimates the cost of reporting the inspection results on U.S. operators to be $1,105, or $85 per product.

The FAA estimates the following costs to do any necessary on-condition actions that would be required based on the results of any required actions. The FAA has no way of determining the number of aircraft that might need these on-condition actions:

ESTIMATED COSTS OF ON-CONDITION ACTIONS

Labor cost	Parts cost	Cost per product
Up to 3 work-hours × $85 per hour = $255	*	*$255

*The FAA has received no definitive data that would enable the agency to provide parts cost estimates for the on-condition actions specified in this proposed AD.

Paperwork Reduction Act

A federal agency may not conduct or sponsor, and a person is not required to respond to, nor shall a person be subject to penalty for failure to comply with a collection of information subject to the requirements of the Paperwork Reduction Act unless that collection of information displays a current valid OMB control number. The control number for the collection of information required by this NPRM is 2120–0056. The paperwork cost associated with this NPRM has been detailed in the Costs of Compliance section of this document and includes time for reviewing instructions, as well as completing and reviewing the collection of information. Therefore, all reporting associated with this NPRM is mandatory. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden to: Information Collection Clearance Officer, Federal Aviation Administration, 10101 Hillwood Parkway, Fort Worth, TX 76177–1524.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: ''General requirements.'' Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

This proposed AD is issued in accordance with authority delegated by the Executive Director, Aircraft Certification Service, as authorized by FAA Order 8000.51C. In accordance with that order, issuance of ADs is normally a function of the Compliance and Airworthiness Division, but during this transition period, the Executive Director has delegated the authority to issue ADs applicable to transport category airplanes and associated appliances to the Director of the System Oversight Division.

Regulatory Findings

The FAA determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Will not affect intrastate aviation in Alaska, and

(3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

Airbus SAS: Docket No. FAA–2019–0865; Product Identifier 2019–NM–158–AD.

(a) Comments Due Date

The FAA must receive comments by December 30, 2019.

(b) Affected ADs

None.

(c) Applicability

This AD applies to all Airbus SAS Model A350–941 and –1041 airplanes, certificated in any category.

(d) Subject

Air Transport Association (ATA) of America Code 52, Doors.

(e) Reason

This AD was prompted by reports of passenger door girt bar fitting assembly safety hooks being stuck in the upward position. We are issuing this AD to address this condition, which could lead to girt bar disengagement from the girt bar fitting assembly and consequent failure of the passenger door slide deployment during an emergency, possibly preventing safe evacuation of the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Requirements

Except as specified in paragraph (h) of this AD: Comply with all required actions and compliance times specified in, and in accordance with, European Union Aviation Safety Agency (EASA) AD 2019–0207, dated August 22, 2019 (''EASA AD 2019–0207'').

(h) Exceptions to EASA AD 2019–0207

(1) Where EASA AD 2019–0207 refers to its effective date, this AD requires using the effective date of this AD.

(2) The ''Remarks'' section of EASA AD 2019–0207 does not apply to this AD.

(3) Paragraph (4) of EASA AD 2019–0207 specifies to report inspection results to Airbus within a certain compliance time. For this AD, report inspection results at the applicable time specified in paragraph (h)(3)(i) or (ii) of this AD.

(i) If the inspection was done on or after the effective date of this AD: Submit the report within 90 days after the inspection.

(ii) If the inspection was done before the effective date of this AD: Submit the report within 90 days after the effective date of this AD.

(i) Other FAA AD Provisions

The following provisions also apply to this AD:

(1) *Alternative Methods of Compliance (AMOCs):* The Manager, International Section, Transport Standards Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the International Section, send it to the attention of the person identified in paragraph (j)(2) of this AD. Information may be emailed to: *9-ANM-116-AMOC-REQUESTS@faa.gov.* Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(2) *Contacting the Manufacturer:* For any requirement in this AD to obtain instructions from a manufacturer, the instructions must be accomplished using a method approved by the Manager, International Section, Transport Standards Branch, FAA; or EASA; or Airbus SAS's EASA Design Organization Approval (DOA). If approved by the DOA, the approval must include the DOA-authorized signature.

(3) *Required for Compliance (RC)*: For any service information referenced in EASA AD 2019–0207 that contains RC procedures and tests: Except as required by paragraph (i)(2) of this AD, RC procedures and tests must be done to comply with this AD; any procedures or tests that are not identified as RC are recommended. Those procedures and tests that are not identified as RC may be deviated from using accepted methods in accordance with the operator's maintenance or inspection program without obtaining approval of an AMOC, provided the procedures and tests identified as RC can be done and the airplane can be put back in an airworthy condition. Any substitutions or changes to procedures or tests identified as RC require approval of an AMOC.

(4) *Paperwork Reduction Act Burden Statement:* A federal agency may not conduct or sponsor, and a person is not required to respond to, nor shall a person be subject to a penalty for failure to comply with a collection of information subject to the requirements of the Paperwork Reduction Act unless that collection of information displays a current valid OMB Control Number. The OMB Control Number for this information collection is 2120–0056. Public reporting for this collection of information is estimated to be approximately 1 hour per response, including the time for reviewing instructions, completing and reviewing the collection of information. All responses to this collection of information are mandatory. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden to: Information Collection Clearance Officer, Federal Aviation Administration, 10101 Hillwood Parkway, Fort Worth, TX 76177–1524.

(j) Related Information

(1) For information about EASA AD 2019–0207, contact the EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 89990 6017; email *ADs@easa.europa.eu;* Internet *www.easa.europa.eu.* You may find this EASA AD on the EASA website at *https://ad.easa.europa.eu.* You may view this material at the FAA, Transport Standards Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195. This material may be found in the AD docket on the internet at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2019–0865.

(2) For more information about this AD, contact Kathleen Arrigotti, Aerospace Engineer, International Section, Transport Standards Branch, FAA, 2200 South 216th St., Des Moines, WA 98198; telephone and fax 206–231–3218.

Issued in Des Moines, Washington, on November 1, 2019.

Dionne Palermo,

Acting Director, System Oversight Division, Aircraft Certification Service.

RIN 2120–AA64

Airworthiness Directives; Airbus SAS Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: The FAA proposes to adopt a new airworthiness directive (AD) for all Airbus SAS Model A300 B4–600, B4–600R, and F4–600R series airplanes, and Model A300 C4–605R Variant F airplanes (collectively called Model A300–600 series airplanes); and Model A310 series airplanes. This proposed AD was prompted by a determination that new tests are necessary to address potential air leaks in the reservoir air pressurization lines. This proposed AD would require repetitive pressurization tests of the reservoir air pressurization lines for pipe rupture and leaks, and repair or replacement if necessary, as specified in a European Union Aviation Safety Agency (EASA) AD, which will be incorporated by reference. The FAA is proposing this AD to address the unsafe condition on these products.

DATES: The FAA must receive comments on this proposed AD by December 30, 2019.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to *https://www.regulations.gov.* Follow the instructions for submitting comments.
- *Fax:* 202–493–2251.
- *Mail:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

• *Hand Delivery:* Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

For the material identified in this proposed AD that will be incorporated by reference (IBR), contact the EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 89990 1000; email *ADs@easa.europa.eu;* internet *www.easa.europa.eu.* You may find this IBR material on the EASA website at *https://ad.easa.europa.eu.* You may view this IBR material at the FAA, Transport Standards Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195. It is also available in the AD docket on the internet at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2019–0864.

Examining the AD Docket

You may examine the AD docket on the internet at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2019–0864; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this NPRM, the regulatory evaluation, any comments received, and other information. The street address for Docket Operations is listed above. Comments will be available in the AD docket shortly after receipt.

FOR FURTHER INFORMATION CONTACT: Dan Rodina, Aerospace Engineer, International Section, Transport Standards Branch, FAA, 2200 South 216th St., Des Moines, WA 98198; telephone and fax 206–231–3225.

SUPPLEMENTARY INFORMATION:

Comments Invited

The FAA invites you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under the **ADDRESSES** section. Include ''Docket No. FAA–2019–0864; Product Identifier 2019–NM–140–AD'' at the beginning of your comments. The FAA specifically invites comments on the overall regulatory, economic, environmental, and energy aspects of this NPRM. The FAA will consider all comments received by the closing date and may amend this NPRM based on those comments.

The FAA will post all comments, without change, to *https://www.regulations.gov,* including any personal information you provide. The FAA will also post a report summarizing each substantive verbal contact the agency receives about this NPRM.

Discussion

The EASA, which is the Technical Agent for the Member States of the European Union, has issued EASA AD 2019–0188, dated July 31, 2019 (''EASA AD 2019–0188'') (also referred to as the Mandatory Continuing Airworthiness Information, or ''the MCAI''), to correct an unsafe condition for all Airbus SAS Model A300 B4–600, B4–600R, and F4–600R series airplanes, and Model A300 C4–605R Variant F airplanes (collectively called Model A300–600 series airplanes); Model A310 series airplanes; and Model A300F4–608ST airplanes. (Model A300F4–608ST airplanes are not on the U.S. Register; this proposed AD therefore does not include those airplanes in the applicability.)

This proposed AD was prompted by a determination that new tests are necessary to address potential air leaks in the reservoir air pressurization lines. The FAA is proposing this AD to address air leaks that could result in the loss of a hydraulic system and consequent reduced controllability of the airplane. See the MCAI for additional background information.

Related IBR Material Under 1 CFR Part 51

EASA AD 2019–0188 describes airworthiness limitations involving repetitive pressurization tests of the reservoir air pressurization lines for pipe rupture and leaks, and repair and replacement of affected hydraulic pipes, ducts, and pressurization lines. This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

FAA's Determination and Requirements of This Proposed AD

This product has been approved by the aviation authority of another country, and is approved for operation in the United States. Pursuant to the FAA's bilateral agreement with the State of Design Authority, the FAA has been notified of the unsafe condition described in the MCAI referenced above. The FAA is proposing this AD because the FAA evaluated all the relevant information and determined the unsafe condition described previously is likely to exist or develop in other products of the same type design.

Proposed AD Requirements

This proposed AD would require accomplishing the actions specified in EASA AD 2019–0188 described previously, as incorporated by reference, except for any differences identified as exceptions in the regulatory text of this AD.

Explanation of Required Compliance Information

In the FAA's ongoing efforts to improve the efficiency of the AD process, the FAA initially worked with Airbus and EASA to develop a process to use certain EASA ADs as the primary source of information for compliance with requirements for corresponding FAA ADs. The FAA has since coordinated with other manufacturers and civil aviation authorities (CAAs) to use this process. As a result, EASA AD 2019–0188 will be incorporated by reference in the FAA final rule. This proposed AD would, therefore, require compliance with EASA AD 2019–0188 in its entirety, through that incorporation, except for any differences identified as exceptions in the regulatory text of this proposed AD. Using common terms that are the same as the heading of a particular section in the EASA AD does not mean that operators need comply only with that section. For example, where the AD requirement refers to ''all required actions and compliance times,'' compliance with this AD requirement is not limited to the section titled ''Required Action(s) and Compliance Time(s)'' in the EASA AD. Service information specified in EASA AD 2019–0188 that is required for compliance with EASA AD 2019–0188 will be available on the internet at *http://www.regulations.gov* by searching for and locating Docket No. FAA–2019–0864 after the FAA final rule is published.

Interim Action

The FAA considers this proposed AD interim action. If final action is later identified, the FAA might consider further rulemaking then.

Costs of Compliance

The FAA estimates that this proposed AD affects 123 airplanes of U.S. registry. The FAA estimates the following costs to comply with this proposed AD:

ESTIMATED COSTS FOR REQUIRED ACTIONS

Labor cost	Parts cost	Cost per product	Cost on U.S. operators
2 work-hours × $85 per hour = 170 per inspection cycle	$0	$170 per inspection cycle	$20,910 per inspection cycle.

The FAA estimates the following costs to do any necessary on-condition action that would be required based on the results of any required actions. The FAA has no way of determining the number of aircraft that might need this on-condition action:

ESTIMATED COSTS OF ON-CONDITION ACTIONS

Labor cost	Parts cost	Cost per product
3 work-hours × $85 per hour = $255	$0	$255

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: ''General requirements.'' Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

This proposed AD is issued in accordance with authority delegated by the Executive Director, Aircraft Certification Service, as authorized by FAA Order 8000.51C. In accordance with that order, issuance of ADs is normally a function of the Compliance and Airworthiness Division, but during this transition period, the Executive Director has delegated the authority to issue ADs applicable to transport category airplanes and associated appliances to the Director of the System Oversight Division.

Regulatory Findings

The FAA determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Will not affect intrastate aviation in Alaska, and

(3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

Airbus SAS: Docket No. FAA–2019–0864; Product Identifier 2019–NM–140–AD.

(a) Comments Due Date

The FAA must receive comments by December 30, 2019.

(b) Affected ADs

None.

(c) Applicability

This AD applies to all Airbus SAS Model airplanes specified in paragraphs (c)(1) through (5) of this AD, certificated in any category.

(1) Model A300 B4–601, B4–603, B4–620, and B4–622 airplanes.

(2) Model A300 B4–605R and B4–622R airplanes.

(3) Model A300 F4–605R and F4–622R airplanes.

(4) Model A300 C4–605R Variant F airplanes.

(5) Model A310–203, –204, –221, –222, –304, –322, –324, and –325 airplanes.

(d) Subject

Air Transport Association (ATA) of America Code 29, Hydraulic power.

(e) Reason

This AD was prompted by a determination that new tests are necessary to address potential air leaks in the reservoir air pressurization lines. The FAA is issuing this AD to address air leaks that could result in the loss of a hydraulic system and consequent reduced controllability of the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Requirements

Except as specified in paragraph (h) of this AD: Comply with all required actions and compliance times specified in, and in accordance with, European Union Aviation Safety Agency (EASA) AD 2019–0188, dated July 31, 2019 (''EASA AD 2019–0188'').

(h) Exceptions to EASA AD 2019–0188

(1) Where EASA AD 2019–0188 refers to its effective date, this AD requires using the effective date of this AD.

(2) The ''Remarks'' section of EASA AD 2019–0188 does not apply to this AD.

(i) Other FAA AD Provisions

The following provisions also apply to this AD:

(1) *Alternative Methods of Compliance (AMOCs):* The Manager, International Section, Transport Standards Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the International Section, send it to the attention of the person identified in paragraph (j)(2) of this AD. Information may

be emailed to: *9-ANM-116-AMOC-REQUESTS@faa.gov.* Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(2) *Contacting the Manufacturer:* For any requirement in this AD to obtain instructions from a manufacturer, the instructions must be accomplished using a method approved by the Manager, International Section, Transport Standards Branch, FAA; or EASA; or Airbus SAS's EASA Design Organization Approval (DOA). If approved by the DOA, the approval must include the DOA-authorized signature.

(3) *Required for Compliance (RC):* For any service information referenced in EASA AD 2019–0188 that contains RC procedures and tests: Except as required by paragraph (i)(2) of this AD, RC procedures and tests must be done to comply with this AD; any procedures or tests that are not identified as RC are recommended. Those procedures and tests that are not identified as RC may be deviated from using accepted methods in accordance with the operator's maintenance or inspection program without obtaining approval of an AMOC, provided the procedures and tests identified as RC can be done and the airplane can be put back in an airworthy condition. Any substitutions or changes to procedures or tests identified as RC require approval of an AMOC.

(j) Related Information

(1) For information about EASA AD 2019–0188, contact the EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 89990 6017; email *ADs@easa.europa.eu;* internet *www.easa.europa.eu.* You may find this EASA AD on the EASA website at *https://ad.easa.europa.eu.* You may view this material at the FAA, Transport Standards Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195. This material may be found in the AD docket on the internet at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2019–0864.

(2) For more information about this AD, contact Dan Rodina, Aerospace Engineer, International Section, Transport Standards Branch, FAA, 2200 South 216th St., Des Moines, WA 98198; telephone and fax 206–231–3225.

Issued in Des Moines, Washington, on November 1, 2019.

Dionne Palermo,

Acting Director, System Oversight Division, Aircraft Certification Service.

BILLING CODE 4910–13–P

DEPARTMENT OF LABOR

48 CFR Part 2902

[DOL Docket No. DOL–2019–0002]

RIN 1291–AA42

Department of Labor Acquisition Regulations: Definitions for Head of Agency, Head of Contracting Activity, and Senior Procurement Executive

AGENCY: Office of the Assistant Secretary for Administration and Management, Department of Labor.

ACTION: Proposed rule; withdrawal.

SUMMARY: With this notice, the Department of Labor (Department) is withdrawing the proposed rule that accompanied its direct final rule (DFR) amending three definitions in the Department of Labor Acquisition Regulation (DOLAR) in order to provide the Secretary of Labor greater flexibility and a streamlined procedure to delegate procurement authority and appoint procurement officials.

DATES: The proposed rule published August 29, 2019 (84 FR 45456) is withdrawn as of November 15, 2019.

FOR FURTHER INFORMATION CONTACT:

Press inquiries: Ms. Megan P. Sweeney, Office of Public Affairs, Room No. S–2514, U.S. Department of Labor, 200 Constitution Ave. NW, Washington, DC 20210; telephone: (202) 693–4676; email: *sweeney.megan.p@dol.gov.*

General information: Herman J. Narcho, U.S. Department of Labor, Office of the Assistant Secretary for Administration and Management, Office of the Chief Procurement Officer, 200 Constitution Avenue NW, Room N–5305, Washington, DC 20210; telephone (202) 693–7171 (this is not a toll-free number).

SUPPLEMENTARY INFORMATION: On August 29, 2019, the Department published a proposed rule amending three DOLAR definitions found at 48 CFR 2902.101(b): Head of Agency, Head of Contracting Activity, and Senior Procurement Executive. The Department published a companion DFR rule proposing the same changes to the DOLAR definitions. In the DFR, the Department stated that it would withdraw the companion proposed rule and confirm the effective date of the DFR if no significant adverse comments were submitted on the DFR by September 30, 2019. The Department received no comments on the proposed rule. Accordingly, the Department is not proceeding with the proposed rule and is withdrawing it from the rulemaking process.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Parts 622 and 635

[Docket No. 191101–0072]

RIN 0648–BI61

Fisheries of the Caribbean, Gulf of Mexico, and South Atlantic; Atlantic Highly Migratory Species; Coral and Coral Reefs of the Gulf of Mexico; Amendment 9

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Proposed rule; request for comments.

SUMMARY: NMFS proposes to implement management measures described in Amendment 9 to the Fishery Management Plan (FMP) for the Coral and Coral Reefs of the Gulf of Mexico (Amendment 9) and an associated framework action to the FMP, as prepared by the Gulf of Mexico Fishery Management Council (Council). This proposed rule would establish new habitat areas of particular concern (HAPCs), some of which include a prohibition of the deployment of bottom-tending gear, and modify current fishing regulations for the other existing HAPCs in the Gulf of Mexico (Gulf). Additionally, this proposed rule would implement complementary management measures for Atlantic highly migratory species (HMS) in the Gulf. The purpose of this proposed rule is to protect coral essential fish habitat in the Gulf.

DATES: Written comments must be received by December 16, 2019.

ADDRESSES: You may submit comments on this proposed rule identified by ''NOAA–NMFS–2017–0146'' by either of the following methods:

- *Electronic Submission:* Submit all electronic public comments via the Federal e-Rulemaking Portal. Go to *www.regulations.gov/#!docketDetail;D=NOAA-NMFS-2017-0146,* click the ''Comment Now!'' icon, complete the required fields, and enter or attach your comments.

• *Mail:* Submit written comments to Lauren Waters, NMFS Southeast Regional Office, 263 13th Avenue South, St. Petersburg, FL 33701.

Instructions: Comments sent by any other method, to any other address or individual, or received after the end of the comment period may not be considered by NMFS. All comments received are a part of the public record and will generally be posted for public viewing on *www.regulations.gov* without change. All personal identifying information (*e.g.,* name, address, etc.), confidential business information, or otherwise sensitive information submitted voluntarily by the sender will be publicly accessible. NMFS will accept anonymous comments (enter ''N/A'' in the required fields if you wish to remain anonymous).

Electronic copies of Amendment 9 and the framework action may be obtained from *www.regulations.gov* or the Southeast Regional Office website at *https://www.fisheries.noaa.gov/action/amendment-9-coral-habitat-areas-considered-management-gulf-mexico.* Amendment 9 includes a final environmental impact statement (EIS), fishery impact statement, regulatory impact review, and a Regulatory Flexibility Act (RFA) analysis.

FOR FURTHER INFORMATION CONTACT: Lauren Waters, NMFS Southeast Regional Office, telephone: 727–824–5305; email: *lauren.waters@noaa.gov.* Karyl Brewster-Geisz, NMFS Highly Migratory Species Division, telephone: 301–427–8503; email: *karyl.brewster-geisz@noaa.gov.*

SUPPLEMENTARY INFORMATION: NMFS and the Council manage coral and coral reef resources in the Gulf under the FMP. The FMP was prepared by the Council and is implemented by NMFS through regulations at 50 CFR part 622 under the authority of the Magnuson Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act). NMFS manages Atlantic HMS under the 2006 Consolidated Atlantic HMS FMP and its amendments, under the authority of the Magnuson-Stevens Act and the Atlantic Tunas Convention Act. The 2006 Consolidated Atlantic HMS FMP is implemented by regulations at 50 CFR part 635.

Background

The Magnuson-Stevens Act requires that each fishery management plan identify and describe essential fish habitat (EFH) and minimize, to the extent practicable, adverse effects on these habitats caused by fishing. The FMP describes coral EFH as those areas where managed corals exist. HAPCs are a subset of EFH that meet specified criteria identified at 50 CFR 600.815(a)(8). An area in which corals exist in sufficient numbers or diversity could be designated as an HAPC if it is significantly ecologically important, habitat that is sensitive to human-induced degradation, located in an environmentally stressed area, or considered rare in abundance. Corals and coral habitat are especially sensitive to human-induced degradation by fishing and non-fishing activities because of their unique life history. An HAPC designation by NMFS does not confer any additional specific protections to such designated areas, but can be used to focus management attention on those areas when considering measures to minimize adverse impacts from fishing.

In December 2014, the Council convened a Coral Working Group to discuss which areas in the Gulf may warrant additional specific protection for corals. The group identified numerous new areas and existing HAPCs that may be in need of new or revised protection. In May 2015, the Council's Special Coral Scientific and Statistical Committee (SSC) and Coral Advisory Panel (AP) reviewed these areas along with members of the shrimp fishing community and recommended that the boundaries of some of the areas be refined based on available fishing information. In August 2016, the Council's Coral SSC, Coral AP, Shrimp AP, as well as Council invitees, which included royal red shrimp fishermen and bottom longline fishermen, provided input to the Council. These groups recommended that 15 new areas be designated as HAPCs in which fishing with bottom-tending gear be prohibited and 8 areas be designated as HAPCs without any prohibitions on fishing. Based on this input, the Council began developing Amendment 9. On December 18, 2017, NMFS published a notice of intent to prepare a draft EIS for Amendment 9 in the **Federal Register** and solicited public comment (82 FR 60003).

In April 2018, based on a recommendation by the Council's SSC, the Council modified the alternatives in Amendment 9 to combine three previously proposed HAPCs in the southeastern Gulf that were separate but geographically close to one another into a single slightly smaller proposed HAPC. As a result, Amendment 9 recommends 13 new HAPCs in which fishing with bottom-tending gear would be prohibited.

During subsequent discussions associated with Amendment 9, the Council decided to refine the fishing prohibition in the proposed and existing HAPCs. The Council determined that the broad definition of ''fishing'' in the Magnuson-Stevens Act might unnecessarily restrict activities that would have no impact on these HAPCs. Therefore, in August 2018, the Council approved a framework action that would modify the specific prohibitions on ''fishing with bottom-tending gear'' to ''deployment of bottom-tending gear'' for existing HAPCs listed in 50 CFR 622.74, except the Tortugas marine reserves HAPC, and those recommended in Amendment 9. Further, the Council recommended that ''deploy'' in this context be defined to mean that fishing gear is in contact with the water. In November 2018, the Council also requested that NMFS develop complimentary gear deployment prohibitions for Atlantic HMS fisheries in the Gulf (see 50 CFR part 635).

The management actions selected by the Council in Amendment 9 and as subsequently modified in the framework action are described in this proposed rule.

Management Measure Contained in This Proposed Rule

This proposed rule would establish 13 new HAPCs in the Gulf in which the deployment of certain bottom-tending gears would be prohibited. The proposed rule would also prohibit the deployment of dredge fishing gear in existing Gulf HAPCs that are managed with fishing regulations. Further, this proposed rule would modify the restrictions in the existing HAPCs that prohibit fishing with specific gears to prohibit the deployment of those gears. NMFS and the Council are proposing these areas and fishing regulations to protect coral EFH in the Gulf.

HAPCs With Fishing Regulations

This proposed rule would establish 13 HAPCs in which the deployment of specified bottom-tending gear would be prohibited. For purpose of the prohibition, fishing gear is ''deployed'' if any part of the gear is in contact with the water. The 13 proposed HAPCs are called West Florida Wall, Alabama Alps Reef, L & W Pinnacles and Scamp Reef (combined), Mississippi Canyon 118, Roughtongue Reef, Viosca Knoll 826, Viosca Knoll 862/906, AT 047, AT 357, Green Canyon 852, Southern Bank, Harte Bank, and Pulley Ridge South Portion A. Pulley Ridge South Portion A is adjacent to the current Pulley Ridge South HAPC.

For these areas, excluding Pulley Ridge South Portion A, prohibitions on the following activities would apply year-round: Deployment of bottom

longline, bottom trawl, buoy gear as defined in 50 CFR 622.2, dredge, pot, or trap, and bottom anchoring by fishing vessels. The buoy gear defined in 50 CFR 622.2 is not the same as HMS buoy gear defined in 50 CFR 635.2. HMS buoy gear is not a bottom-tending gear.

Within the proposed Viosca Knoll 862/906 area, the proposed gear deployment prohibitions would not apply to a fishing vessel issued a Gulf royal red shrimp endorsement, as specified in 50 CFR 622.50(c) while fishing for royal red shrimp. The areas around this proposed HAPC are used to fish for royal red shrimp. Fishing for royal red shrimp occurs in deep waters and requires a few miles of continuous forward movement to lift the nets up in the water column to the vessel. Therefore, requiring that these nets be out of the water would effectively prevent the use of an area much larger than the proposed HAPC. The exemption would allow royal red shrimp fishermen to continue the historic practice of lifting the nets off the bottom but keeping them in the water as they travel through this area.

Within the proposed Pulley Ridge South Portion A area, the following prohibitions would apply year-round: Deployment of a bottom trawl, buoy gear as defined in 50 CFR 622.2, dredge, pot, or trap, and bottom anchoring by fishing vessels. Pulley Ridge South Portion A would not include a restriction on the deployment of bottom longline gear to allow fishing that has historically occurred in this area to continue. This proposed rule would not change any other boundaries or regulations within the existing Pulley Ridge HAPC.

The Council concluded that the exception for royal red shrimp fishing in the proposed Viosca Knoll 862/906 area and for bottom longline fishing in the proposed Pulley Ridge South Portion A area was unlikely to adversely affect the habitat. Both types of fishing have occurred in the respective areas for over a decade without causing significant harm.

Dredge Fishing Prohibition

Currently, only some existing HAPCs in the Gulf have fishing regulations that prohibit dredge fishing within the designated areas. This proposed rule would prohibit the deployment of dredge fishing gear in all existing HAPCs in the Gulf in which other bottom-tending gear are already prohibited. Dredge fishing is most commonly used to harvest shellfish and is not known to occur in the Gulf. Therefore, this proposed management measure would not restrict any known fishing activity in the Gulf, but increase consistency of management measures across HAPCs with fishing regulations.

Fishing Restrictions in Existing HAPCs

This proposed rule would modify restrictions associated with bottom-tending fishing gear in the existing HAPCs. Currently, the regulations at 50 CFR 622.74 prohibit ''fishing'' in the existing HAPCs with bottom-tending gear with specific types of gear prohibitions varying by HAPC. As explained above, the Council determined that it was more appropriate to prohibit the ''deployment'' of bottom-tending gear. Therefore, this proposed rule would change the prohibition for existing HAPCs listed in 50 CFR 622.74, other than the Tortugas marine reserves HAPC, to prevent the deployment of the bottom-tending gear to be consistent with the prohibition in the proposed HAPCs. The Tortugas marine reserves HAPC already has a broader prohibition on all fishing and anchoring by fishing vessels.

HMS Fisheries in the Gulf

This proposed rule would modify regulations at 50 CFR 635.21 for Atlantic HMS fisheries that operate in the Gulf to complement the proposed fishing vessel anchoring and gear deployment prohibitions in 50 CFR 622.74.

Management Measure Contained in Amendment 9 But Not Codified Through This Proposed Rule

Amendment 9 would also establish eight HAPCs with no associated fishing regulations. The Council determined that fishing regulations in these eight proposed HAPCs are unnecessary because there is no known fishing activity that occurs within them, partly because the areas are located in very deep water (greater than 984 ft or 300 m). The proposed HAPCs without fishing regulations in Amendment 9 are South John Reed, Garden Banks 299, Garden Banks 535, Green Canyon 140 and 272 (combined), Green Canyon 234, Green Canyon 354, Mississippi Canyon 751, and Mississippi Canyon 885. Although fishing impacts were not identified as a concern in these eight areas, establishing these HAPCs would inform the public that the Council considers these areas to be of particular importance and could help guide NMFS' review of non-fishing impacts during EFH consultations.

Classification

Pursuant to section 304(b)(1)(A) of the Magnuson-Stevens Act, the NMFS Assistant Administrator has determined that this proposed rule is consistent with Amendment 9, the FMP for the Coral and Coral Reefs of the Gulf of Mexico, the 2006 Consolidated FMP for Atlantic Highly Migratory Species, the Magnuson-Stevens Act, and other applicable laws, subject to further consideration after public comment.

This proposed rule has been determined to be not significant for purposes of Executive Order 12866. This proposed rule is not an Executive Order 13771 regulatory action because this proposed rule is not significant under Executive Order 12866.

The Chief Counsel for Regulation of the Department of Commerce certified to the Chief Counsel for Advocacy of the Small Business Administration (SBA) that this proposed rule, if adopted, would not have a significant economic impact on a substantial number of small entities. The factual basis for this determination follows.

A description of the proposed rule, why it is being considered, and the objectives of, and legal basis for this proposed rule are contained in the preamble of this proposed rule at the beginning of the **SUPPLEMENTARY INFORMATION** section and in the **SUMMARY** section. The Magnuson-Stevens Act provides the statutory basis for this proposed rule. No duplicative, overlapping, or conflicting Federal rules have been identified. In addition, no new reporting, record-keeping, or other compliance requirements are introduced by this proposed rule. Accordingly, the requirements of the Paperwork Reduction Act do not apply to this proposed rule.

The proposed action would designate several areas in the Gulf as HAPCs and establish or modify fishing regulations in new and existing HAPCs. In some of the proposed HAPCs the deployment of specific bottom-tending gear would be prohibited. The proposed action would also change the prohibition in the existing HAPCs with fishing regulations to a prohibition on the deployment of the gear as opposed to fishing with the gear. As a result, this proposed action would directly affect federally permitted commercial fishermen fishing for reef fish, shrimp, or sharks. Recreational anglers fishing in the designated HAPCs would also be directly affected by this proposed action, but anglers are not considered business entities under the RFA. Recreational charter vessels and headboats would also be affected by this action but only in an indirect way. Thus, only the effects on federally permitted commercial fishing vessels harvesting reef fish, shrimp, and shark will be discussed. For RFA purposes only, NMFS has established a small

business size standard for businesses, including their affiliates, whose primary industry is commercial fishing (see 50 CFR 200.2). A business primarily engaged in commercial fishing (NAICS code 11411) is classified as a small business if it is independently owned and operated, is not dominant in its field of operation (including affiliates), and has combined annual receipts not in excess of $11 million for all its affiliated operations worldwide.

To determine whether a substantial number of small entities would be affected by the proposed rule, NMFS first describes the characteristics of the Federal commercial reef fish, shrimp, and shark fisheries that operate in the Gulf. NMFS then describes the data available to determine the number of small entities that operate in the proposed HAPCs and applies these data to each proposed HAPC or groups of HAPCs.

With respect to the Gulf reef fish fishery, as of July 14, 2018, there were 841 vessels with valid or renewable Federal Gulf reef fish commercial vessel permits. From 2010 through 2016, an average of 554 federally permitted commercial reef fish vessels per year landed any reef fish species in the Gulf. These vessels, combined, averaged 6,608 trips per year in the Gulf on which reef fish were landed and 810 other trips. The average annual total dockside revenue (2016 dollars) for these vessels combined was approximately $52.13 million from reef fish, approximately $1.32 million from other species co-harvested with reef fish (on the same trips), and approximately $1.54 million from other trips by these vessels in the Gulf on which no reef fish were harvested or where fishing occurred in other areas. Total average annual revenue from all species harvested by these vessels in the Gulf or other areas was approximately $54.95 million, or approximately $99,000 per vessel. These vessels generated approximately 95 percent of their total revenues from reef fish. Commercial reef fish vessels used a variety of gears in harvesting reef fish. For the period 2010–2016, an average of 68 vessels used longlines and generated revenues of approximately $250,000 per vessel; 267 vessels used bandit gear generating approximately $109,000 revenue per vessel; 273 vessels used hook-and-line generating approximately $27,000 revenue per vessel; 47 vessels used diving gear generating approximately $13,000 revenue per vessel; and, 6 vessels used other gears generating approximately $40,000 revenue per vessel. Therefore, all federally permitted commercial vessels fishing for reef fish are assumed to be small entities.

In the Gulf shrimp fishery, brown and white shrimp are the dominant shrimp species in terms of landings, ex-vessel revenues, and number of participating vessels. For the period 2010–2016, an annual average of 3,552 vessels landed approximately 61 million lb (27,669,134 kg) of brown shrimp with an ex-vessel value of about $206 million; an annual average of 3,914 vessels landed approximately 61 million lb (27,669,134 kg) of white shrimp valued at about $210 million; an annual average of 175 vessels landed pink shrimp valued at about $18 million; and, an annual average of 8 vessels landed approximately 154,000 lb (69,853 kg) of royal red shrimp valued at about $964,000. Not all vessels that landed Gulf shrimp are federally permitted, and not all federally permitted vessels landed shrimp. In 2014, for example, only 74 percent of federally permitted vessels landed shrimp. As of July 14, 2018, there were 1,422 valid or renewable Gulf shrimp commercial permits and 305 valid Gulf royal red shrimp endorsements. The latest data on the economics and financial conditions of the Gulf shrimp fishery are for 2014. Data for later years are still being processed and compiled by NMFS. Between 2011 and 2014, the average gross revenue from fishing operations of federally permitted shrimp vessels was approximately $343,000, but net revenue from operations was only about $8,300. These estimates best approximate expected financial and economic conditions for these vessels in the foreseeable future. Therefore, all federally permitted commercial vessels fishing for shrimp are assumed to be small entities.

The HMS shark fishery is the fishery that most likely would be affected by the proposed action. To commercially fish for sharks, fishermen need to possess a Federal shark directed or incidental permit, or smoothhound shark permit. Shark directed and incidental permits are currently limited access permits, while the smoothhound shark permit is an open access permit. As of September 12, 2018, there were 220 and 267 valid or renewable shark directed and incidental permits, respectively, and 164 valid or renewable smoothhound shark permits. Vessels can possess shark permits in addition to commercial reef fish or shrimp permits. In 2017, there were 18 vessels with limited access permits that were actively fishing for sharks in the Gulf. Of the 18 vessels, 11 possessed both a shark limited access permit and a commercial reef or shrimp permit, while 7 possessed only a shark limited access permit. These vessels, combined, generated $4.7 million of revenue from HMS. When tracked back to 2013, these vessels generated an average revenue of $4.8 million per year, indicating a close match between their 2017 revenue and 2013–2017 average revenue. The 2013–2017 average revenue per vessel was approximately $267,000. Therefore, all federally permitted commercial vessels fishing for sharks are assumed to be small entities.

As stated earlier in the preamble, the proposed rule would establish 13 HAPCs in which the deployment of specific bottom-tending gear would be prohibited. Unless otherwise noted, the following prohibitions would apply to each of the 13 HAPCs: Deployment of bottom longline, bottom trawl, buoy gear as defined in 50 CFR 622.2, dredge, pot, or trap, and bottom anchoring by fishing vessels.

The available data allows NMFS to estimate the number of federally permitted reef fish, shrimp, and shark vessels potentially affected by the proposed rule. Information on fishing activities in the proposed HAPCs is based on the electronic logbook (ELB) program for commercial shrimp vessels, the vessel monitoring system (VMS) for commercial reef fish vessels, and shark bottom longline observer program (SBLOP) for shark vessels. Available ELB data are for the years 2004–2013, VMS data are for the years 2007–2015, and SBLOP data are for the years 2008–2016.

ELB data are collected from approximately one-third of the federally permitted shrimp vessels, while VMS data collection is required of all federally permitted reef fish vessels. Vessels that were included in the SBLOP are also in the VMS data set because these vessels have both shark and commercial reef fish permits. The VMS and ELB data sets provide data points and number of fishing vessels by area, while the SBLOP data provides some information on the number of fishing sets by shark vessels. Although VMS data are collected from all reef fish vessels, the points refer to the number of times the electronic system detects the vessel in a specific area, but it does not distinguish between fishing and non-fishing activity. In contrast, ELB data points are collected from approximately one-third of permitted shrimp vessels but this occurs every 10 minutes, which allows NMFS to determine likely fishing activity from non-fishing activity based on vessel speed. Therefore, the ELB data points in this analysis are those that NMFS has

determined to represent active shrimp fishing.

Because the VMS, ELB, and SBLOP data sources do not provide information on the number of trips or fishing intensity per vessel, it is not possible to estimate the revenue and profit effects of the proposed rule. Therefore, the extent of economic impacts is based on the number of vessels potentially affected by the proposed rule. In the following discussion, data points and vessels are expressed as annual averages for each of the 13 proposed HAPCs. In addition, only information on bottom longline vessels from VMS data is reported as only these vessels would likely be affected by the proposed rule.

In the Pulley Ridge South Portion A HAPC, ELB data indicate one data point corresponding to one shrimp vessel. VMS data indicate 638 data points corresponding to 11 bottom longline vessels. However, to allow fishing that has historically occurred to continue, the proposed regulations would not prohibit the deployment of bottom longlines. Therefore, longline vessels would not be affected by the gear prohibitions in this area. SBLOP recorded only two fishing sets by shark longline vessels, which are included in the VMS data set. Based on the above information, the gear prohibitions in this area would not affect a substantial number of small entities.

For the West Florida Wall HAPC, which is located in the southeastern Gulf, ELB did not record any data point or shrimp vessel fishing in the proposed area. VMS recorded 4 data points corresponding to two bottom longline vessels. SBLOP data indicate very low shark fishing effort in the area. Therefore, the proposed gear prohibitions in this area would not affect a substantial number of small entities.

Six new HAPCs would be established in the northeastern Gulf: Alabama Alps Reef, L & W Pinnacles and Scamp Reef, Mississippi Canyon 118, Roughtongue Reef, Viosca Knoll 826, and Viosca Knoll 862/906. For Alabama Alps Reef, ELB recorded one data point corresponding to one vessel and VMS recorded seven data points and one bottom longline vessel. For L & W Pinnacles and Scamp Reef, ELB recorded 2 data points and 1 vessel while VMS recorded 42 data points 3 bottom longline vessels. For Mississippi Canyon 118, ELB recorded four data points and one vessel while VMS recorded four data points and one bottom longline vessel. For Roughtongue Reef, ELB recorded 1 data point and 1 vessel while VMS recorded 40 data points and 3 bottom longline vessels. For Viosca Knoll 826, ELB recorded one data point and one vessel while VMS recorded one data point and one bottom longline vessel. For Viosca Knoll 862/906, ELB recorded 168 data points and 2 vessels while VMS recorded 8 data points and 2 bottom longline vessels. NMFS notes that shrimp vessels fishing in Viosca Knoll 862/906 are mainly those fishing for royal red shrimp. Vessels with a royal red shrimp endorsement fishing for this species in this area are exempt from the prohibition on bottom-tending gear and would not be affected by this proposed rule. SBLOP reported only two sets by two shark fishing vessels for L & W Pinnacles and Scamp Reef, and none for the other areas. Because of the general location of this group of HAPCs, it is likely that certain vessels could be fishing in multiple HAPCs within this group in any given year. It is also possible that a vessel would fish in different HAPCs from year to year. Thus, the total number of vessels affected by the proposed prohibitions applicable in this group of HAPCs would be less than the sum of vessels fishing in each HAPC as noted above. Therefore, the gear prohibitions in these six areas would not affect a substantial number of small entities.

The proposed rule would establish three new HAPCs in the northwestern Gulf: AT 047, AT 357, and Green Canyon 852. Both ELB and VMS recorded very few data points and vessels fishing in each of these three areas. ELB recorded at most one data point and one vessel for each of these three areas while VMS recorded at most one data point and one bottom longline vessel in each of the AT 047 and AT 357 HAPCs and none for Green Canyon 852. In addition, no shark fishing sets were observed in these areas. Therefore, the gear prohibitions in these three areas would not affect a substantial number of small entities.

The proposed rule would establish two new HAPCs in the southwestern Gulf: Harte Bank and Southern Bank. ELB recorded at most one data point and one vessel while VMS recorded at most one data point and one bottom longline vessel for Harte Bank HAPC. ELB recorded one data point and one vessel, while VMS recorded no data points or bottom longline vessels for the Southern Bank HAPC. In addition, no bottom longlining for sharks was observed in these two areas. Therefore, the gear prohibitions in these two areas would not affect a substantial number of small entities.

The proposed action to change the prohibition in the existing HAPCs with fishing regulations to a prohibition on the ''deployment'' of bottom-tending gear, as opposed to a prohibition on ''fishing'' with the bottom-tending gear, would have no effects on the revenues of fishing vessels. These vessels do not currently derive any revenues from fishing with bottom-tending gear in any existing HAPCs with fishing regulations. This proposed action would make fishing regulations in existing HAPCs consistent with the regulations in the proposed new HAPCs, and therefore would lessen confusion on the part of fishermen as well as simplify enforcement.

Amendment 9 would also establish eight new deep-water HAPCs without fishing regulations, which would have no accompanying economic effects on small entities. The effects of prohibiting the deployment of dredge fishing gear in all HAPCs that have fishing regulations are included in the discussion of effects for each HAPC. This prohibition would not impact any small entities as there is no known dredge fishing in any existing or proposed HAPCs.

In summary, there are three Federal fisheries that operate in the proposed HAPCs, and although all of the commercially permitted reef fish, shrimp, and shark vessels are small entities, based on available data only a small number of vessels are estimated to have fished with bottom-tending gear in each of the proposed HAPCs, and all HAPCs combined. Therefore, this proposed rule would not affect a substantial number of small entities.

The information provided above supports a determination that this proposed rule would not have a significant economic impact on a substantial number of small entities. Because this proposed rule, if implemented, is not expected to have a significant economic impact on a substantial number of small entities, an initial regulatory flexibility analysis is not required and none has been prepared.

List of Subjects

50 CFR Part 622

Coral, Fisheries, Fishing, Gulf of Mexico.

50 CFR Part 635

Fisheries, Fishing, Fishing vessels, Foreign relations, Imports, Penalties, Reporting and recordkeeping requirements, Treaties.

Dated: November 4, 2019.

Samuel D. Rauch III,

Deputy Assistant Administrator, National Marine Fisheries Service.

For the reasons set out in the preamble, 50 CFR parts 622 and 635 are proposed to be amended as follows:

PART 622—FISHERIES OF THE CARIBBEAN, GULF OF MEXICO, AND SOUTH ATLANTIC

■ 1. The authority citation for part 622 continues to read as follows:

Authority: 16 U.S.C. 1801 *et seq.*

■ 2. Section 622.74 is revised to read as follows:

§ 622.74 Area closures to protect Gulf corals.

For the purposes of this section, fishing gear is deployed if any part of the gear is in contact with the water.

(a) *Florida Middle Grounds HAPC.* Deployment of a bottom longline, bottom trawl, dredge, pot, or trap is prohibited year-round in the area bounded by rhumb lines connecting the following points in order:

TABLE 1 TO PARAGRAPH (a)

Point	North lat.	West long.
A	28°42.500′	84°24.800′
B	28°42.500′	84°16.300′
C	28°11.000′	84°00.000′
D	28°11.000′	84°07.000′
E	28°26.600′	84°24.800′
A	28°42.500′	84°24.800′

(b) *Tortugas marine reserves HAPC.* Fishing for any species and bottom anchoring by fishing vessels are prohibited year-round in the areas of the HAPC.

(1) *EEZ portion of Tortugas North HAPC.* The area is bounded by rhumb lines connecting the following points in order: From point A at 24°40.000′ N lat., 83°06.000′ W long. to point B at 24°46.000′ N lat., 83°06.000′ W long. to point C at 24°46.000′ N lat., 83°00.000′ W long.; then along the line denoting the seaward limit of Florida's waters, as shown on the current edition of NOAA chart 11434, to point A at 24°40.000′ N lat., 83°06.000′ W long.

(2) *Tortugas South HAPC.* The area is bounded by rhumb lines connecting the following points in order:

TABLE 1 TO PARAGRAPH (b)(2)

Point	North lat.	West long.
A	24°33.000′	83°09.000′
B	24°33.000′	83°05.000′
C	24°18.000′	83°05.000′
D	24°18.000′	83°09.000′
A	24°33.000′	83°09.000′

(c) *Pulley Ridge South HAPC.* Deployment of a bottom longline, bottom trawl, buoy gear, dredge, pot, or trap, and bottom anchoring by fishing vessels are prohibited year-round in the area of the HAPC bounded by rhumb lines connecting the following points in order:

TABLE 1 TO PARAGRAPH (c)

Point	North lat.	West long.
A	24°58.300′	83°38.550′
B	24°58.300′	83°37.000′

K	29°19.269′	87°45.525′
A	29°18.595′	87°48.757′

(h) *Mississippi Canyon 118 HAPC.* Deployment of a bottom longline, bottom trawl, buoy gear, dredge, pot, or trap, and bottom anchoring by fishing vessels are prohibited year-round in the area of the HAPC bounded by rhumb lines connecting the following points in order:

TABLE 1 TO PARAGRAPH (h)

Point	North lat.	West long.
A	28°53.183′	88°30.789′
B	28°53.216′	88°27.819′
C	28°50.602′	88°27.782′
D	28°48.944′	88°27.759′
E	28°48.962′	88°30.727′
A	28°53.183′	88°30.789′

(i) *Roughtongue Reef HAPC.* Deployment of a bottom longline, bottom trawl, buoy gear, dredge, pot, or trap, and bottom anchoring by fishing vessels are prohibited year-round in the area of the HAPC bounded by rhumb lines connecting the following points in order:

TABLE 1 TO PARAGRAPH (i)

Point	North lat.	West long.
A	29°27.596′	87°37.527′
B	29°27.621′	87°31.552′
C	29°25.007′	87°31.539′
D	29°24.981′	87°37.510′
A	29°27.596′	87°37.527′

(j) *Viosca Knoll 826 HAPC.* Deployment of a bottom longline, bottom trawl, buoy gear, dredge, pot, or trap, and bottom anchoring by fishing vessels are prohibited year-round in the area of the HAPC bounded by rhumb lines connecting the following points in order:

TABLE 1 TO PARAGRAPH (j)

Point	North lat.	West long.
A	29°10.920′	88°03.509′
B	29°10.877′	87°59.460′
C	29°07.974′	87°59.448′
D	29°08.017′	88°03.532′
A	29°10.920′	88°03.509′

(k) *Viosca Knoll 862/906 HAPC.* Deployment of a bottom longline, bottom trawl, buoy gear, dredge, pot, or trap, and bottom anchoring by fishing vessels are prohibited year-round in the area of the HAPC. This prohibition does not apply to a fishing vessel issued a Gulf royal red shrimp endorsement, as specified in § 622.50(c), while the vessel is fishing for royal red shrimp. The HAPC is bounded by rhumb lines connecting the following points in order:

TABLE 1 TO PARAGRAPH (k)

Point	North lat.	West long.
A	29°07.640′	88°23.608′
B	29°07.603′	88°20.590′

PART 635—ATLANTIC HIGHLY MIGRATORY FISHERIES

■ 3. The authority citation for part 635 continues to read as follows:

Authority: 16 U.S.C. 971 *et seq.;* 16 U.S.C. 1801 *et seq.*

■ 4. In § 635.21, revise paragraph (a)(3)(i) and add paragraph (a)(3)(v) to read as follows:

§ 635.21 Gear operation and deployment restrictions.

* * * * *

(a) * * *

(3) * * * (i) No person may fish for, catch, possess, or retain any Atlantic HMS or anchor a fishing vessel that has been issued a permit or is required to be permitted under this part, in the areas and seasons designated at § 622.34(a)(3) of this chapter.

* * * * *

(v) Within the areas of the Gulf coral HAPCs designated at § 622.74 of this chapter, no person may bottom anchor a fishing vessel or deploy fishing gear that may not be deployed pursuant to § 622.74 of this chapter. For purposes of this provision, fishing gear is deployed if any part of the gear is in contact with the water.

Federal Register
Vol. 84, No. 221
Friday, November 15, 2019

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

DEPARTMENT OF AGRICULTURE

Submission for OMB Review; Comment Request

November 12, 2019.

The Department of Agriculture will submit the following information collection requirement(s) to OMB for review and clearance under the Paperwork Reduction Act of 1995, Public Law 104–13 on or after the date of publication of this notice. Comments are requested regarding: (1) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (2) the accuracy of the agency's estimate of burden including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology should be addressed to: Desk Officer for Agriculture, Office of Information and Regulatory Affairs, Office of Management and Budget (OMB), New Executive Office Building, Washington, DC; New Executive Office Building, 725 17th Street NW, Washington, DC 20503. Commenters are encouraged to submit their comments to OMB via email to: *OIRA_Submission@omb.eop.gov* or fax (202) 395–5806 and to Departmental Clearance Office, USDA, OCIO, Mail Stop 7602, Washington, DC 20250–7602.

Dates: Comments regarding these information collections are best assured of having their full effect if received by December 16, 2019. Copies of the submission(s) may be obtained by calling (202) 720–8681. An agency may not conduct or sponsor a collection of information unless the collection of information displays a currently valid OMB control number and the agency informs potential persons who are to respond to the collection of information that such persons are not required to respond to the collection of information unless it displays a currently valid OMB control number.

National Agricultural Statistics Service (NASS)

Title: Field Crops Production—County Estimates Survey—Row Crops—Substantive Change.

OMB Control Number: 0535–0002.

Summary of Collection: General authority for these data collection activities is granted under U.S. Code Title 7, Section 2204 which specifies that ''The Secretary of Agriculture shall procure and preserve all information concerning agriculture which he can obtain . . . by the collection of statistics . . .''. The primary objective of the National Agricultural Statistics Service (NASS) is to provide data users with timely and reliable agricultural production and economic statistics, as well as environmental and specialty agricultural related statistics. To accomplish this objective, NASS relies on the use of diverse surveys that show changes within the farming industry over time.

Numerous surveys included in the Agricultural Surveys Program (0535–0213) and the Field Crops Production docket (0535–0002) are used to set State and National estimates for numerous commodities. In order to publish data on a county level, much larger samples are needed. Within the Field Crops docket, are two surveys that collect supplemental data for the purpose of publishing county level data. Historically, the data collection costs for these two surveys has been partially funded through a cooperative agreement between NASS and the USDA Risk Management Agency (RMA). Due to program changes, RMA withdrew from this cooperative agreement this year. As a result, NASS is forced to reduce the County Estimates program. In the first step, NASS will reduce the number of commodities for which county level data will be made available. The commodities for which county level data will be discontinued are: Dry edible beans, flaxseed, hay (alfalfa and other), potatoes, sugarbeets, sugarcane, sunflower (non-oil and oil varieties) and tobacco. In addition, NASS will discontinue county estimates based on irrigated/non-irrigated practices. In the second step, in early 2020 NASS will evaluate the need for potentially more cost savings to the county estimate programs. If additional savings are needed, changes to small grain county estimates will be published in the **Federal Register**.

This substantive change resulted in an overall decrease in response burden of approximately 13,940 hours. The target sample size for enumerated questionnaires will be reduced by approximately 51,000.

Need and Use of the Information: County estimates for field crops are used by the Farm Service Agency (FSA) to carry out their legislative mandates. The primary use of the data is to determine average yields by county, used in determining participating farmers' compensation payments. The information is useful to the Natural Resources Conservation Service (NRCS) for administering programs. The information will also benefit the agricultural sector more generally by enabling the rental market for cropland to operate more competitively.

Description of Respondents: Farms sampled for the County Estimates—Row Crops.

Number of Respondents: 124,000.

Frequency of Responses: Reporting: Once.

Total Burden Hours: 33,894.

Ruth Brown,

Departmental Information Collection Clearance Officer.

BILLING CODE 3410–20–P

DEPARTMENT OF COMMERCE

Bureau of Industry and Security

[Case No. 18–BIS–0002]

Order Relating to AW-Tronics LLC

In the Matter of:

AW-Tronics LLC, 7405 SW 79CT, Miami, FL 33143, et al.,

Respondents

The Bureau of Industry and Security, U.S. Department of Commerce (''BIS''), has notified AW-Tronics LLC, of Miami, Florida, (''AW-Tronics'') that it has initiated an administrative proceeding

against it pursuant to Section 766.3 of the Export Administration Regulations (the ''Regulations''),[1] through the issuance of a Charging Letter alleging that AW-Tronics, Ali Caby, Arash Caby, Marjan Caby, and Arrowtronic, LLC (''Arrowtronic'') (collectively, ''Respondents'') violated the Regulations as follows:

Charge 1 15 CFR 764.2(d)—Conspiracy

Beginning as early as in or about September 2013, and continuing through in or about March 2014, Respondents conspired and acted in concert with others, known and unknown, to bring about one or more acts that constitute a violation of the Regulations. The purpose and object of the conspiracy was to unlawfully export goods from the United States through transshipment points to Syria, including to Syrian Arab Airlines (''Syrian Air''), the flag carrier airline of Syria and a Specially Designated Global Terrorist (''SDGT''), and in doing so evade the prohibitions and licensing requirements of the Regulations and avoid detection by U.S. law enforcement.

Pursuant to Section 746.9 of the Regulations, a license is required for the export or reexport to Syria of all items subject to the Regulations, except food and medicine classified as EAR99. Furthermore, pursuant to Section 744.12 of the Regulations, a license is required to export or reexport items subject to the Regulations to SDGTs. Syrian Air was designated as an SDGT on May 16, 2013 (see 78 FR 32304, May 29, 2013), under authority granted to the Department of the Treasury by Executive Order 13,224, and was at all times pertinent hereto (and remains) listed as an SDGT.

At all pertinent times, AW-Tronics and Arrowtronic were active limited liability companies incorporated in the State of Florida. Documentary evidence and email correspondence shows that AW-Tronics personnel represented to various transaction parties that AW-Tronics and Arrowtronic (collectively, ''AW-Tronics/Arrowtronic'') were the same company. Arash Caby was listed on Florida corporate records as a Managing Member of AW-Tronics at the time of the violations. From January 2014 until its most recent annual report in January 2017, Ali Caby was listed on Florida corporate records as the registered agent of AW-Tronics. AW-Tronics/Arrowtronic has maintained offices in Miami, Florida and Sofia, Bulgaria, as well as other locations.

As part of the conspiracy, the co-conspirators used electronic mail (email) and other forms of communication to communicate with each other between the United States, Bulgaria, United Arab Emirates (UAE), and Syria. Under their scheme, co-conspirators would purchase from U.S. suppliers or vendors items subject to the Regulations for export to Syrian Air in Syria, including aircraft parts and equipment, and would provide materially false or misleading documents and information to conceal the illegal exports. In furtherance of the conspiracy, they also would arrange for payment for the illegal exports to be made using third-party companies to transfer payments between the co-conspirators. Overall, between in or about September 2013 and in or about March 2014, Respondents engaged in multiple transactions with Syrian Air involving the export of aircraft parts and equipment subject to the Regulations from the Miami office of AW-Tronics/Arrowtronic to Syrian Air's transshipment point in Dubai, United Arab Emirates. These items were actually intended for, and some or all were ultimately delivered to, Syrian Air in Syria.

During the conspiracy, Ali Caby managed the Bulgaria office of AW-Tronics/Arrowtronic, while Arash Caby managed its Miami office, and Marjan Caby was its internal auditor. In furtherance of the conspiracy, each of these respondents exchanged numerous emails with other AW-Tronics/Arrowtronic employees authorizing or otherwise discussing the above-described exports to Syrian Air. These email communications included, for example, instructions that were designed to prevent U.S. law enforcement from detecting the unlawful exports to Syria and to allow them to continue by changing the routing of exports from AW-Tronics/Arrowtronic's Miami, Florida office. In March 2014, United States Customs and Border Protection seized a shipment of micro switches that, according to Electronic Export Information (EEI) filed in the Automated Export System, was destined for Syrian Air in the UAE, when, in fact, the ultimate destination was Syria. On March 5, 2014, Marjan Caby sent an email to AW-Tronics/Arrowtronic logistics employees, copying Alex Caby, that explained, ''We will . . . have packages stopped by the US Customs and Border Control [and] have a case file like this for the same client[,]'' and provided instructions stating, ''NOTHING WILL BE SHIPPED TO CLIENTS IN THE MIDDLE EAST FROM THE USA OFFICE. WE HAVE TO SEND TO BG [Bulgaria] THEN TO CLIENT.'' (Emphasis in original). ''SYRIA'' was specifically listed as one country for which Respondents would use Bulgaria as a transshipment point. (Same).

In so doing, Ali Caby, a/k/a Alex Caby, Arash Caby, a/k/a ''Axel'' Caby, Marjan Caby, AW-Tronics, LLC, and Arrowtronic, LLC violated Section 764.2(d) of the Regulations, for which they are jointly and severally liable.

Whereas, BIS and AW-Tronics have entered into a Settlement Agreement pursuant to Section 766.18(b) of the Regulations, whereby they agreed to settle this matter in accordance with the terms and conditions set forth therein; and

Whereas, I have approved of the terms of the Settlement Agreement;

It is therefore ordered:

First, for the period of six (6) years from the date of this Order AW-Tronics LLC, with a last known address of 7405 SW 79CT, Miami, FL 33143, and when acting for or on its behalf, its successors, assigns, director, officers, representatives, agents, or employees (hereinafter collectively referred to as the ''Denied Person''), may not, directly or indirectly, participate in any way in any transaction involving any commodity, software or technology (hereinafter collectively referred to as ''item'') exported to or to be exported from the United States that is subject to the Regulations, or in any other activity subject to the Regulations, including, but not limited to:

A. Applying for, obtaining, or using any license, license exception, or export control document;

B. Carrying on negotiations concerning, or ordering, buying, receiving, using, selling, delivering, storing, disposing of, forwarding, transporting, financing, or otherwise servicing in any way, any transaction involving any item exported or to be exported from the United States that is subject to the Regulations, or engaging in any other activity subject to the Regulations; or

C. Benefitting in any way from any transaction involving any item exported or to be exported from the United States that is subject to the Regulations, or from any other activity subject to the Regulations.

Second, no person may, directly or indirectly, do any of the following:

A. Export or reexport to or on behalf of the Denied Person any item subject to the Regulations;

B. Take any action that facilitates the acquisition or attempted acquisition by the Denied Person of the ownership, possession, or control of any item subject to the Regulations that has been or will be exported from the United States, including financing or other

[1] The Regulations originally issued under the Export Administration Act of 1979, as amended, 50 U.S.C. 4601–4623 (Supp. III 2015) (''the EAA''), which lapsed on August 21, 2001. The President, through Executive Order 13,222 of August 17, 2001 (3 CFR, 2001 Comp. 783 (2002)), which was extended by successive Presidential Notices, continued the Regulations in full force and effect under the International Emergency Economic Powers Act, 50 U.S.C. 1701, *et seq.* (2012) (''IEEPA''). On August 13, 2018, the President signed into law the John S. McCain National Defense Authorization Act for Fiscal Year 2019, which includes the Export Control Reform Act of 2018, 50 U.S.C. 4801–4852 (''ECRA''). While Section 1766 of ECRA repeals the provisions of the EAA (except for three sections which are inapplicable here), Section 1768 of ECRA provides, in pertinent part, that all rules and regulations that were made or issued under the EAA, including as continued in effect pursuant to IEEPA, and were in effect as of ECRA's date of enactment (August 13, 2018), shall continue in effect according to their terms until modified, superseded, set aside, or revoked through action undertaken pursuant to the authority provided under ECRA. The Regulations are currently codified in the Code of Federal Regulations at 15 CFR parts 730–774 (2018). The charged violation occurred in 2013–2014. The Regulations governing the violation at issue are found in the 2013–2014 versions of the Code of Federal Regulations (15 CFR parts 730–774 (2013–2014)). The 2019 Regulations set forth the procedures that apply to this matter.

support activities related to a transaction whereby the Denied Person acquires or attempts to acquire such ownership, possession or control;

C. Take any action to acquire from or to facilitate the acquisition or attempted acquisition from the Denied Person of any item subject to the Regulations that has been exported from the United States;

D. Obtain from the Denied Person in the United States any item subject to the Regulations with knowledge or reason to know that the item will be, or is intended to be, exported from the United States, or

E. Engage in any transaction to service any item subject to the Regulations that has been or will be exported from the United States and which is owned, possessed or controlled by the Denied Person, or service any item, of whatever origin, that is owned, possessed or controlled by the Denied Person if such service involves the use of any item subject to the Regulations that has been or will be exported from the United States. For purposes of this paragraph, servicing means installation, maintenance, repair, modification or testing.

Third, any licenses issued under the Regulations in which AW-Tronics has an interest as of the date of this Order shall be revoked by BIS.

Fourth, after notice and opportunity for comment as provided in Section 766.23 of the Regulations, any person, firm, corporation, or business organization related to the Denied Person by affiliation, ownership, control, or position of responsibility in the conduct of trade or related services may also be made subject to the provisions of this Order.

Fifth, AW-Tronics shall not take any action or make or permit to be made any public statement, directly or indirectly, denying the allegations in the Charging Letter or this Order.

Sixth, the Charging Letter, the Settlement Agreement, and this Order shall be made available to the public.

Seventh, this Order shall be served on AW-Tronics and shall be published in the **Federal Register**.

This Order, which constitutes the final agency action in this matter related to AW-Tronics, is effective immediately.

Dated: October 30, 2019.

Douglas R. Hassebrock,

Director, Office of Export Enforcement, performing the non-exclusive functions and duties of the Assistant Secretary of Commerce for Export Enforcement.

[FR Doc. 2019–24824 Filed 11–14–19; 8:45 am]

BILLING CODE 3510–33–P

DEPARTMENT OF COMMERCE

International Trade Administration

[A–552–817]

Certain Oil Country Tubular Goods From the Socialist Republic of Vietnam: Preliminary Results of Antidumping Duty Administrative Review

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (Commerce) preliminarily determines that certain oil country tubular goods (OCTG) from the Socialist Republic of Vietnam (Vietnam) are being sold in the United States at less than normal value (NV) during the period of review (POR) September 1, 2017 through October 31, 2018. Interested parties are invited to comment on these preliminary results.

DATES: Applicable November 15, 2019.

FOR FURTHER INFORMATION CONTACT: Fred Baker, AD/CVD Operations, Office VI, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–2924.

SUPPLEMENTARY INFORMATION:

Background

On November 15, 2018, Commerce initiated an administrative review of the antidumping order on OCTG from Vietnam.[1] The review covers SeAH Steel VINA Corporation (SSV) and its U.S. affiliate Pusan Pipe America, Inc. (PPA).[2] Commerce exercised its discretion to toll all deadlines affected by the partial federal government closure from December 22, 2018 through the resumption of operations on January 29, 2019.[3] Commerce extended the deadline for the preliminary results until November 8, 2019.[4]

For a full description of events that have occurred since the *Initiation Notice, see* the Preliminary Decision Memorandum.[5] A list of topics included in the Preliminary Decision Memorandum is included as an appendix to this notice. The Preliminary Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at *http://access.trade.gov,* and is available to all parties in the Central Records Unit, Room B8024 of the main Commerce building. In addition, a complete version of the Preliminary Decision Memorandum can be accessed directly at *http://enforcement.trade.gov/frn/.* The signed and electronic versions of the Preliminary Decision Memorandum are identical in content.

Scope of the Order

The merchandise covered by the order is certain OCTG. The merchandise subject to the order is currently classified in the Harmonized Tariff Schedule of the United States (HTSUS) under item numbers: 7304.29.10.10, 7304.29.10.20, 7304.29.10.30, 7304.29.10.40, 7304.29.10.50, 7304.29.10.60, 7304.29.10.80, 7304.29.20.10, 7304.29.20.20, 7304.29.20.30, 7304.29.20.40, 7304.29.20.50, 7304.29.20.60, 7304.29.20.80, 7304.29.31.10, 7304.29.31.20, 7304.29.31.30, 7304.29.31.40, 7304.29.31.50, 7304.29.31.60, 7304.29.31.80, 7304.29.41.10, 7304.29.41.20, 7304.29.41.30, 7304.29.41.40, 7304.29.41.50, 7304.29.41.60, 7304.29.41.80, 7304.29.50.15, 7304.29.50.30, 7304.29.50.45, 7304.29.50.60, 7304.29.50.75, 7304.29.61.15, 7304.29.61.30, 7304.29.61.45, 7304.29.61.60, 7304.29.61.75, 7305.20.20.00, 7305.20.40.00, 7305.20.60.00, 7305.20.80.00, 7306.29.10.30, 7306.29.10.90, 7306.29.20.00, 7306.29.31.00, 7306.29.41.00, 7306.29.60.10, 7306.29.60.50, 7306.29.81.10, and 7306.29.81.50.

The merchandise subject to the order may also enter under the following HTSUS item numbers: 7304.39.00.24, 7304.39.00.28, 7304.39.00.32, 7304.39.00.36, 7304.39.00.40,

While the HTSUS subheadings above are provided for convenience and customs purposes, the written description is dispositive. A full description of the scope of the order is contained in the Preliminary Decision Memorandum.

Methodology

Commerce conducted this review in accordance with sections 751(a)(1)(B) and 751(a)(2)(A) of the Tariff Act of 1930, as amended (the Act). Constructed export prices have been calculated in accordance with section 772(b) of the Act. Because Vietnam is a non-market economy (NME) within the meaning of section 771(18) of the Act, NV has been calculated in accordance with section 773(c) of the Act. For a full description of the methodology underlying our conclusions, *see* the Preliminary Decision Memorandum.

Application of Separate Rates in NME Proceedings

In the *Initiation Notice,* Commerce notified parties of the application process by which exporters may obtain separate rate status in an NME proceeding.[6] It is Commerce's policy to assign all exporters of the merchandise subject to review in NME countries a single rate unless an exporter can affirmatively demonstrate an absence of government control, both in law (*de jure*) and in fact (*de facto*), with respect to exports. To establish whether a company is sufficiently independent to be entitled to a separate, company-specific rate, Commerce analyzes each exporting entity in an NME country under the test established in *Sparklers,*[7] as further developed by *Silicon Carbide.*[8] However, if Commerce determines that a company is wholly foreign-owned, then an analysis of the *de jure* and *de facto* criteria is not necessary to determine whether it is independent from government control.[9]

Vietnam-Wide Entity

Commerce's policy regarding conditional review of the Vietnam-wide entity applies to this administrative review.[10] Under this policy, the Vietnam-wide entity will not be under review unless a party specifically requests, or Commerce self-initiates, a review of the entity. Because no party requested a review of the Vietnam-wide entity in this review, the entity is not under review and the entity's rate (*i.e.,* 111.47 percent) [11] is not subject to change.

Preliminary Results of Review

Commerce preliminarily determines that the following weighted-average dumping margin exists for the period September 1, 2017 through August 31, 2018:

Exporter	Weighted-average margin (percent)
SeAH Steel VINA Corporation/Pusan Pipe America, Inc	1.78

Disclosure, Public Comment and Opportunity To Request a Hearing

Commerce will disclose the calculations used in our analysis to parties in this review within five days of the date of publication of this notice in accordance with 19 CFR 351.224(b). Interested parties may submit case briefs within 30 days after the date of publication of these preliminary results of review in the **Federal Register**.[12] Rebuttals to case briefs, which must be limited to issues raised in the case briefs, may be filed within five days after the time limit for filing case briefs.[13] Parties who submit arguments are requested to submit with the argument: (a) A statement of the issue, (b) a brief summary of the argument, and (c) a table of authorities.[14] Parties submitting briefs should do so pursuant to Commerce's electronic filing system, ACCESS.[15]

Pursuant to 19 CFR 351.310(c), interested parties who wish to request a hearing must submit a written request to the Assistant Secretary for Enforcement and Compliance within 30 days of the date of publication of this notice. Requests should contain the party's name, address and telephone number, the number of participants, whether any participant is a foreign national and a list of the issues to be discussed. Issues raised in the hearing will be limited to those raised in the respective case and rebuttal briefs. If a request for a hearing is made, Commerce intends to hold the hearing at the U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230, at a date and time to be determined.[16] Parties should confirm by telephone the date, time, and location of the hearing two days before the scheduled date.

Commerce intends to issue the final results of this administrative review, which will include the results of our analysis of all issues raised in the case briefs, within 120 days of publication of these preliminary results in the **Federal Register**, pursuant to section 751(a)(3)(A) of the Act, unless extended.

Assessment Rates

Upon issuance of the final results, Commerce will determine, and U.S. Customs and Border Protection (CBP) shall assess, antidumping duties on all appropriate entries covered by this review.[17] Commerce intends to issue assessment instructions to CBP 15 days after the publication date of the final results of this review.

For assessment purposes, Commerce applied the assessment rate calculation method adopted in the *Antidumping Final Modification.*[18] For any individually examined respondent whose weighted average dumping margin is above *de minimis* (*i.e.,* 0.50 percent) in the final results of this review, Commerce will calculate importer-specific assessment rates on the basis of the ratio of the total amount of dumping calculated for the importer's

[15] *See* 19 CFR 351.303 (for general filing requirements).

[16] *See* 19 CFR 351.310(d).

[17] *See* 19 CFR 351.212(b).

[18] *See Antidumping Proceedings: Calculation of the Weighted-Average Dumping Margin and Assessment Rate in Certain Antidumping Proceedings: Final Modification,* 77 FR 8101 (February 14, 2012) (*Antidumping Final Modification*), in the manner described in more detail in the Preliminary Decision Memorandum.

examined sales to the total entered value of sales, in accordance with 19 CFR 351.212(b)(1). Where an importer- (or customer-) specific *ad valorem* rate is greater than *de minimis,* Commerce will instruct CBP to collect the appropriate duties at the time of liquidation.[19] Where either a respondent's weighted average dumping margin is zero or *de minimis,* or an importer- (or customer-) specific *ad valorem* is zero or *de minimis,* Commerce will instruct CBP to liquidate appropriate entries without regard to antidumping duties.[20]

Cash Deposit Requirements

The following cash deposit requirements will be effective upon publication of the final results of this review for shipments of the subject merchandise from Vietnam entered, or withdrawn from warehouse, for consumption on or after the publication date, as provided by sections 751(a)(2)(C) of the Act: (1) For the companies listed above that have a separate rate, the cash deposit rate will be that established in the final results of this review (except, if the rate is zero or *de minimis,* then zero cash deposit will be required); (2) for previously examined Vietnamese and non-Vietnamese exporters not listed above that at the time of entry are eligible for a separate rate based on a prior completed segment of this proceeding, the cash deposit rate will continue to be the existing exporter-specific cash deposit rate; (3) for all Vietnamese exporters of subject merchandise that have not been found to be entitled to a separate rate at the time of entry, the cash deposit rate will be that for the Vietnamese-wide entity; and (4) for all non-Vietnamese exporters of subject merchandise that at the time of entry are not eligible for a separate rate, the cash deposit rate will be the rate applicable to the Vietnamese exporter that supplied that non-Vietnamese exporter. These deposit requirements, when imposed, shall remain in effect until further notice.

Notification to Importers

This notice also serves as a preliminary reminder to importers of their responsibility under 19 CFR 351.402(f)(2) to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during the POR. Failure to comply with this requirement could result in Commerce's presumption that reimbursement of antidumping duties occurred and the subsequent assessment of double antidumping duties.

Notification to Interested Parties

These preliminary results are issued and published in accordance with sections 751(a)(1) and 777(i)(1) of the Act and 19 CFR 351.221(b)(4).

Dated: November 7, 2019.

Jeffrey I. Kessler,

Assistant Secretary for Enforcement and Compliance.

Certain Frozen Warmwater Shrimp From India: Rescission of Antidumping Duty Administrative Review; 2018–2019, in Part

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: On May 2, 2019, the Department of Commerce (Commerce) initiated an administrative review on frozen warmwater shrimp from India for the period February 1, 2018, through January 31, 2019, for 254 companies. Because all interested parties timely withdrew their requests for administrative review for certain companies, we are rescinding this administrative review with respect to those companies. For a list of the companies for which we are rescinding this review, *see* Appendix I to this notice. For a list of the companies for which the review is continuing, *see* Appendix II to this notice.

DATES: Applicable November 15, 2019.

FOR FURTHER INFORMATION CONTACT: Manuel Rey or Brittany Bauer, AD/CVD Operations, Office II, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–5518 or (202) 482–3860.

SUPPLEMENTARY INFORMATION:

Background

On February 8, 2019, Commerce published in the **Federal Register** a notice of opportunity to request an administrative review of the antidumping duty order on frozen warmwater shrimp from India for the period February 1, 2018, through January 31, 2019.[1] In February 2019, Commerce received timely requests, in accordance with section 751(a) of the Tariff Act of 1930, as amended (the Act), to conduct an administrative review of this antidumping duty order from the Ad Hoc Shrimp Trade Action Committee (the petitioner), the American Shrimp Processors Association (ASPA), and certain individual companies. Based upon these requests, on May 2, 2019, in accordance with section 751(a) of the Act, Commerce published in the **Federal Register** a notice of initiation listing 253 companies for which Commerce received timely requests for review.[2]

In July 2019, all interested parties timely withdrew their requests for an administrative review of certain companies.[3] These companies are listed in Appendix I.

[1] *See Antidumping or Countervailing Duty Order, Finding, or Suspended Investigation; Opportunity to Request Administrative Review,* 84 FR 2816 (February 8, 2019).

[2] *See Initiation of Antidumping and Countervailing Duty Administrative Reviews,* 84 FR 18777 (May 2, 2019) (*Initiation Notice*).

[3] *See* Magnum Sea Foods Limited (MSL) and Magnum Estates Limited (MEL) (collectively, Magnum) Letter, ''*Magnum Withdrawal of Review Request for Administrative Review* of the Antidumping Duty Order on Certain Frozen Warmwater Shrimp from India,'' dated July 26, 2019; West Coast Frozen Foods Private Limited (West Coast) Letter, ''*Frozen Warmwater Shrimp from India—Withdrawal of Request for Antidumping Duty Admin Review of West Coast Frozen Foods Private Limited,*'' dated July 30, 2019; Jafadeesh Marine Exports' Letter, ''Certain Frozen Warmwater Shrimp from India: Withdrawal of Request for 14th Administrative Review covering the Period from 01st February 2018 to 31st January 2019,'' dated July 30, 2019; Mangala Marine Exim India Private Limited Letter, ''Certain Frozen Warmwater Shrimp from India: Withdrawal of Request for 14th Administrative Review covering the Period from 01st February 2018 to 31st January 2019,'' dated July 29, 2019; Liberty Group comprised of Devi Marine Food Exports (P) Ltd., Universal Cold Storage (P) Ltd., Kader Exports (P) Ltd., Liberty Frozen Foods (P) Ltd., Premier Marine Products (P) Ltd., Kader Investment & Trading Company (P) Ltd., and Liberty Oil Mills Limited) (collectively Liberty Group), Devi Fisheries Group (comprised of Devi Fisheries Limited, Satya Seafoods Private Limited, Usha Seafoods, and Devi Aquatech Private Limited), and Falcon Marine Exports Limited (Falcon) Letter, ''*Certain Frozen Warmwater Shrimp from India:* Withdrawal of Requests for Administrative Review for Liberty Group, Falcon and Devi Fisheries Group (2/01/18–1/31/19),'' dated July 30, 2019; twenty-five (25) Indian producers and/or exporters Letter, ''*Certain Frozen Warmwater Shrimp from India:* Withdrawal of Requests for Administrative Review for 25 Indian Producers/Exporters (02/01/18–01/31/19),'' dated

Partial Rescission

Pursuant to 19 CFR 351.213(d)(1), the Secretary will rescind an administrative review, in whole or in part, if a party who requested the review withdraws the request within 90 days of the date of publication of notice of initiation of the requested review. As noted above, certain parties withdrew their requests for review by the 90-day deadline. Accordingly, we are rescinding this administrative review with respect to the companies listed in Appendix I.

Assessment

Commerce will instruct U.S. Customs and Border Protection (CBP) to assess antidumping duties on all appropriate entries. Antidumping duties shall be assessed at rates equal to the cash deposit of estimated antidumping duties required at the time of entry, or withdrawal from warehouse, for consumption, in accordance with 19 CFR 351.212(c)(1)(i). Commerce intends to issue appropriate assessment instructions to CBP 15 days after publication of this notice in the **Federal Register**.

Notification to Importers

This notice serves as a reminder to importers of their responsibility under 19 CFR 351.402(f)(2) to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during this review period. Failure to comply with this requirement could result in Commerce's presumption that reimbursement of antidumping duties occurred and the subsequent assessment of doubled antidumping duties.

Notification Regarding Administrative Protective Orders

This notice also serves as a reminder to parties subject to administrative protective order (APO) of their responsibility concerning the return or destruction of proprietary information disclosed under APO in accordance with 19 CFR 351.305. Timely written notification of the return/destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and terms of an APO is a violation which is subject to sanction.

July 30, 2019; Ad Hoc Shrimp Trade Action Committee (AHSTAC) Letter, ''Certain Frozen Warmwater Shrimp from India: Domestic Producers' Partial Withdrawal of Review Requests,'' dated July 30 2019; and American Shrimp Processors Association (ASPA) Letter, ''Certain Frozen Warmwater Shrimp from India: American Shrimp Processors Association's Partial Withdrawal of Review Requests,'' dated July 30, 2019.

Notification to Interested Parties

This notice is issued and published in accordance with section 751(a)(1) of the Act and 19 CFR 351.213(d)(4).

Dated: November 8, 2019.

James Maeder,

Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations.

[4] In past reviews, Commerce has treated these companies as a single entity. *See, e.g., Certain Frozen Warmwater Shrimp from India: Final Results of Antidumping Duty Administrative Review; 2016–2017,* 83 FR 32835 (July 16, 2018) (*2016–2017 AR Final*). Absent information to the contrary, we continue to treat these companies as a single entity for purposes of this administrative review.

[5] On December 11, 2012, Apex Frozen Foods Private Limited was found to be the successor-in-interest to Apex Exports. *See Final Results of Antidumping Duty Changed Circumstances Review: Certain Frozen Warmwater Shrimp from India,* 77 FR 73619 (December 11, 2012). Therefore, we did not initiate a separate administrative review with respect to Apex Exports.

[6] In past reviews, Commerce has treated these companies as a single entity. *See, e.g., 2016–2017 AR Final.* Absent information to the contrary, we continue to treat these companies as a single entity for purposes of this administrative review.

[7] On December 15, 2016, Avanti Frozen Foods Private Limited was found to be the successor-in-interest to Avanti Feeds Limited. *See Certain Frozen Warmwater Shrimp from India: Notice of Final Results of Antidumping Duty Changed Circumstances Review,* 81 FR 90774 (December 15, 2016). Therefore, we did not initiate a separate administrative review with respect to Avanti Feeds Limited.

[8] In the 2017–2018 administrative review of this order, Commerce preliminarily determined it was appropriate to treat the following companies as a single entity: Calcutta Seafoods Pvt. Ltd., Bay Seafood Pvt. Ltd., and Elque & Co (Elque). *See Certain Frozen Warmwater Shrimp from India: Preliminary Results of Antidumping Duty Administrative Review; 2017–2018,* 84 FR 16843 (April 23, 2019) (*2017–2018 AR Prelim*) and accompanying Issues and Decision Memorandum at 3.

[9] On October 3, 2018, Coastal Aqua Private Limited was found to be the successor-in-interest to Coastal Aqua. *See Certain Frozen Warmwater Shrimp from India: Notice of Final Results of Antidumping Duty Changed Circumstances Review,* 83 FR 49909 (October 3, 2018). Because the effective date of this determination is during the current POR, we included both exports from Coastal Aqua and Coastal Aqua Private Limited in this review.

[10] In past reviews, Commerce has treated these companies as a single entity. *See, e.g., 2016–2017 AR Final.* Absent information to the contrary, we continue to treat these companies as a single entity for purposes of this administrative review.

[11] In past reviews, Commerce has treated these companies as a single entity. *Id.* Absent information to the contrary, we continue to treat these companies as a single entity for purposes of this administrative review. Additionally, on December 2, 2014, Premier Marine Products Private Limited was found to be the successor-in-interest to Premier Marine Products. *See Notice of Final Results of Antidumping Duty Changed Circumstances Review: Certain Frozen Warmwater Shrimp from India,* 79 FR 71384 (December 2, 2014).

[12] In past reviews, Commerce has treated these companies as a single entity. *See, e.g., 2016–2017 AR Final.* Absent information to the contrary, we continue to treat these companies as a single entity for purposes of this administrative review.

[13] In past reviews, Commerce has treated these companies as a single entity. *Id.* Absent information to the contrary, we continue to treat these companies as a single entity for purposes of this administrative review.

[14] In the 2017–2018 administrative review of this order, Commerce preliminarily determined it was appropriate to treat Magnum Sea Foods Limited and Magnum Estates Limited as a single entity. *See 2017–2018 AR Prelim,* 84 FR at 16845 and accompanying Issues and Decision Memorandum at 3.

Certain Hardwood Plywood Products From the People's Republic of China: Partial Rescission of Antidumping Duty Administrative Review; 2017–2018

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (Commerce) is partially rescinding its administrative review of the antidumping duty order on certain hardwood plywood products (hardwood plywood) from the People's Republic of China (China) for the period June 23, 2017 through December 31, 2018.

DATES: Applicable November 15, 2019.

FOR FURTHER INFORMATION CONTACT: Nicolas Mayora or Kabir Archuletta, AD/CVD Operations, Office V, Enforcement and Compliance, International Trade Administration, Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–3053 or (202) 482–2593, respectively.

SUPPLEMENTARY INFORMATION:

Background

On February 8, 2019, Commerce published in the **Federal Register** a notice of opportunity to request an administrative review of the antidumping duty (AD) order on hardwood plywood from China for the period of review (POR) June 23, 2017, through December 31, 2018.[1] Pursuant to requests from interested parties, Commerce initiated an administrative review with respect to 58 companies in accordance with section 751(a) of the Tariff Act of 1930, as amended (the Act).[2] Subsequent to the initiation of the administrative review, several interested parties timely withdrew their request for 29 of these companies, as discussed below. No other party requested an administrative review of these companies.

Partial Rescission of Administrative Review

Pursuant to 19 CFR 351.213(d)(1), Commerce will rescind an administrative review, in whole or in part, if the party that requested the review withdraws its request within 90 days of the publication of the notice of initiation. The request for an administrative review of the following companies was withdrawn within 90 days of the date of publication of the *Initiation Notice:* Celtic Co., Ltd.;[3] Feixian Longteng Wood Co., Ltd.;[4] Golder International Trade Co., Ltd.;[5] Highland Industries–Hanlin.;[6] Huainan Mengping Import and Export Co., Ltd.;[7] Jiangsu Top Point International Co., Ltd.;[8] Jiaxing Gsun Imp. & Exp. Co., Ltd.;[9] Lianyungang Yuantai International Trade Co., Ltd. (Yuantai);[10] Linyi City Dongfang Jinxin Economic and Trade Co., Ltd. Yishui Zelin Wood Made Co., Ltd.[31] All review requests were withdrawn for these 29 companies, as detailed above. As a result, pursuant to 19 CFR 351.213(d)(1), Commerce is rescinding the administrative review of the AD order on certain hardwood plywood products with respect to these 29 companies. The instant review will continue with respect to the remaining companies for which a review was initiated on.

Assessment

Commerce will instruct U.S. Customs and Border Protection (CBP) to assess antidumping duties on all appropriate entries. For the companies for which this review is rescinded, antidumping duties shall be assessed at rates equal to the cash deposit of estimated antidumping duties required at the time of entry, or withdrawal from warehouse for consumption, in accordance with 19 CFR 351.212(c)(l)(i). Commerce intends to issue appropriate assessment instruction to CBP 15 days after publication of this notice in the **Federal Register**, if appropriate.

Notification to Importers

This notice serves as a final reminder to importers of their responsibility under 19 CFR 351.402(f)(2) to file a certificate regarding the reimbursement of any antidumping or countervailing duties prior to liquidation of the relevant entries during this review period. Failure to comply with this requirement could result in the presumption that reimbursement of any antidumping or countervailing duties occurred and the subsequent assessment of doubled antidumping duties.

Notification Regarding Administrative Protective Orders

This notice also serves as a final reminder to parties subject to administrative protective order (APO) of their responsibility concerning the disposition of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3), which continues to govern business proprietary information in this segment of the proceeding. Timely written notification of the return or destruction of APO materials, or conversion to judicial protective order, is hereby requested. Failure to comply with the regulations and terms of an APO is a violation which is subject to sanction. This notice is issued and published in accordance with sections 751(a)(1) and 777(i)(1) of the Tariff Act of 1930, as amended, and 19 CFR 351.213(d)(4).

BILLING CODE 3510–DS–P

DEPARTMENT OF COMMERCE

International Trade Administration

[A–570–979]

Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled Into Modules, From the People's Republic of China: Notice of Correction to the Final Results of the 2016–2017 Antidumping Duty Administrative Review

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (Commerce) is correcting its notice of the final results of the fifth administrative review of the antidumping duty (AD) order on crystalline silicon photovoltaic cells, whether or not assembled into modules (solar cells), from the People's Republic of China (China). The period of review (POR) is December 1, 2016 through November 30, 2017.

DATES: Applicable November 15, 2019.

FOR FURTHER INFORMATION CONTACT: Jeff Pedersen, AD/CVD Operations, Office IV, Enforcement & Compliance, International Trade Administration, Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–2769.

SUPPLEMENTARY INFORMATION: On July 30, 2019, Commerce published the final results of the 2016–2017 administrative review of the AD order on solar cells from China in the **Federal Register**.[1] In the *Final Results,* we incorrectly included Zhejiang ERA Solar Technology Co., Ltd. (Zhejiang ERA) in the list of companies we were continuing to find had made no shipments of subject merchandise to the United States during the POR. However, in the *Preliminary Results* we stated the following:

> We found that . . . Zhejiang ERA Solar Technology Co., Ltd., which claimed no exports, sales or entries of subject merchandise during the POR did, in fact, sell subject merchandise to the United States during the POR. {This company did not file} a separate rate application or certification and thus {it has} not established {its} entitlement to a separate rate in this review.[2]

We based this preliminary finding on record evidence that Zhejiang ERA sold subject merchandise to the United States during the POR.[3] We provided Zhejiang ERA an opportunity to discuss the evidence at the time that we placed it on the record.[4] While Zhejiang ERA Solar Technology Co., Ltd. commented on the information, it provided no evidence contradicting the information that it had a shipment.[5] We also provided Zhejiang ERA with an opportunity to submit a case brief concerning our *Preliminary Results,* but Zhejiang ERA did not submit a case brief. Commerce did not intend to change our preliminary decision with respect to Zhejiang ERA's no shipment claim or our preliminary finding that this company was not eligible for a separate rate. We inadvertently erred when we included Zhejiang ERA in the list of companies that we found did not ship subject merchandise to the United States during the POR. Therefore, we are correcting the *Final Results* by clarifying that we have adopted our *Preliminary Results* with respect to Zhejiang ERA in the *Final Results.* Specifically, we are continuing to find that Zhejiang ERA did in fact have shipments of subject merchandise to the United States during the POR and that Zhejiang ERA is not eligible for separate rate status, and thus is part of the China-wide entity. As we noted in the *Final Results,* the China-wide entity rate is 238.95 percent.[6]

This correction to the final results and notice are issued and published in accordance with sections 751(a) and 777(i) of the Tariff Act of 1930, as amended.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

[RTID 0648–XV130]

North Pacific Fishery Management Council; Public Meeting

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of public meetings of the North Pacific Fishery Management Council and its advisory committees.

SUMMARY: The North Pacific Fishery Management Council (Council) and its advisory committees will meet in December.

DATES: The meetings will be held Monday, December 2, 2019 through Tuesday, December 10, 2019. See **SUPPLEMENTARY INFORMATION** for specific dates and times.

ADDRESSES:

Meeting Address: The meeting will be held at the Anchorage Hilton Hotel, 500 W 3rd Ave., Anchorage, AK 99501.

Council Address: North Pacific Fishery Management Council, 605 W 4th Ave., Suite 306, Anchorage, AK 99501–2252; telephone (907) 271–2809.

FOR FURTHER INFORMATION CONTACT: Diana Evans, Council staff; telephone: (907) 271–2809.

SUPPLEMENTARY INFORMATION: The Council will begin its plenary session at 8 a.m. in the Aleutian Room on Wednesday, December 4, 2019 continuing through Tuesday, December 10, 2019. The Council's Scientific and Statistical Committee (SSC) will begin at 8 a.m. in the King Salmon/Iliamna Room on Monday, December 2, 2019 and continue through Wednesday, December 4, 2019. The Council's Advisory Panel (AP) will begin at 8 a.m. in the Dillingham/Katmai Room on Tuesday, December 3, 2019 and continue through Saturday, December 7, 2019. The Community Engagement Committee will meet on Monday, December 2, 2019 in the Fireweed Room from 1 p.m. to 5 p.m. The Charter Halibut Management Committee will meet on Tuesday, December 3, 2019 in the Birch/Willow Room from 8 a.m. to 3 p.m. The Enforcement Committee will meet on Tuesday, December 3, 2019 in the Fireweed Room from 10:30 a.m. to 1 p.m.

Agenda

Monday, December 2, 2019 Through Tuesday, December 10, 2019

Council Plenary Session: The agenda for the Council's plenary session will include the following issues. The Council may take appropriate action on any of the issues identified.

1. Executive Director's Report
2. NMFS Management Report
3. NOAA General Counsel Report
4. NOAA Enforcement Report
5. ADF&G Report (including Biennial Halibut Subsistence report)
6. USCG Report
7. USFWS Report
8. IPHC Report
9. BSAI Groundfish Specifications
10. GOA Groundfish Specifications
11. 2020 Charter Halibut Management Measures for Areas 2C and 3A
12. BSAI Parallel Waters—Final Action
13. Crab Partial Deliveries—Final Action
14. St Matthew Blue King Crab Rebuilding Plan
15. Central Gulf of Alaska Rockfish Reauthorization
16. Non-Guided Halibut Rental Boat Registration
17. Halibut abundance-based management workplan
18. Sablefish Discards
19. Aleutian Islands Community Follow Up
20. Staff Tasking

The Advisory Panel will address Council agenda items 9 through 20, with the exception of item 17, which is Council only.

The SSC agenda will include the following issues:

1. BSAI Groundfish Specifications
2. GOA Groundfish Specifications
3. St. Matthew Blue King Crab Rebuilding Plan
4. Central GOA Rockfish Reauthorization
5. Comments on National Standard 1 Technical Guidance on ABC control rule provisions

In addition to providing ongoing scientific advice for fishery management decisions, the SSC functions as the Council's primary peer review panel for scientific information, as described by the Magnuson-Stevens Act section 302(g)(1)(e), and the National Standard 2 guidelines (78 FR 43066). The peer review process is also deemed to satisfy the requirements of the Information Quality Act, including the OMB Peer Review Bulletin guidelines.

The Community Engagement Committee will review existing Council engagement strategies and practices to develop recommendations to improve Council engagement with rural and Alaska Native communities. The Charter Halibut Management Committee will discuss 2020 Charter Halibut Measures for Areas 2C and 3A and the non-guided halibut rental boat registration analysis. The Enforcement Committee will discuss the non-guided halibut rental boat registration analysis, and other business.

The Agendas are subject to change, and the latest versions will be posted at *http://www.npfmc.org/*.

Public Comment

Public comment letters will be accepted and should be submitted either electronically at*: meetings.npfmc.org*or through the mail: North Pacific Fishery Management Council, 605 W 4th Ave., Suite 306, Anchorage, AK 99501–2252. Deadline for comments is November 29, 2019, at 12 p.m.

Special Accommodations

These meetings are physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to Maria Davis at (907) 271–2809 at least 7 working days prior to the meeting date.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: November 12, 2019.

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Sunsetting of Raster Nautical Charts

AGENCY: Office of Coast Survey, National Ocean Service, National Oceanic and Atmospheric Administration (NOAA), Department of Commerce.

ACTION: Notice; request for comments.

SUMMARY: NOAA is undertaking a five-year program to end all raster and paper nautical chart production. Ultimately, production of all NOAA paper nautical charts, raster navigational charts (NOAA RNC®), and related products, such as BookletCharts™ will cease. NOAA is seeking feedback from chart users and companies that provide products and services based on NOAA raster and electronic navigational chart (NOAA ENC®) products. This information will shape the manner and timing in which

the product sunsetting process will proceed. More detailed information regarding this transition is available from *https://nauticalcharts.noaa.gov/publications/docs/raster-sunset.pdf.*

DATES: Comments are due by midnight, February 1, 2020.

ADDRESSES: Submit comments on the Sunsetting of Raster Nautical Charts through NOAA's ASSIST feedback tool at *https://nauticalcharts.noaa.gov/customer-service/assist,* or via mail to National Ocean Service, NOAA (NCS2), ATTN Sunset of Raster Charts, 1315 East-West Highway, Silver Spring, MD 20910–3282.

SUPPLEMENTARY INFORMATION: The Coast and Geodetic Survey Act of 1947 and the Hydrographic Services Improvement Act requires that NOAA compile and distribute nautical charts and other nautical publications. These statutes do not specify a particular format for chart products. NOAA and its predecessor agencies have produced paper nautical charts of the U.S. Coasts, its territorial waters, and the Great Lakes since the mid-1800s. NOAA has produced electronic navigational charts (ENCs) since 1993.

The International Maritime Organization now mandates that all large commercial vessels on international voyages use ENCs. In 2016, the USCG started allowing regulated commercial vessels on domestic voyages to use ENCs in lieu of paper charts. Recreational boaters are also increasingly using electronic chart displays.

Use of NOAA ENCs surpassed paper nautical charts in 2011. ENC sales increased 425% since 2008, while sales of paper charts are now half of 2008 levels. The current NOAA nautical chart product suites comprise 1,258 electronic navigational charts (NOAA ENC®) and 1,007 NOAA raster/paper nautical charts. NOAA has started a multi-year program to create a standard gridded layout and increase the scale of ENCs. This will increase the number of detailed NOAA ENCs to about 9,000.

NOAA is undertaking a five-year program to end all raster and paper nautical chart production. Ultimately, production of all NOAA paper nautical charts, raster navigational charts (NOAA RNC®), and related products, such as BookletCharts™ will cease.

NOAA is taking steps to provide a NOAA Custom Chart web-based application that will enable users to download and print raster chart backup files created from the most up-to-date ENC data. The NOAA Custom Chart prototype is available from *https://devgis.charttools.noaa.gov/pod.* These chart backup files will look somewhat different than traditional paper nautical charts, but will provide a similar functionality.

NOAA seeks comments from the public regarding the raster and paper chart product sunset transition and is particularly interested in:

- suggestions for improving the NOAA Custom Chart web application, and
- understanding other non-navigational uses for paper or raster nautical charts.

Richard Brennan,

Acting Director, Office of Coast Survey, National Ocean Service, National Oceanic and Atmospheric Administration.

New England Fishery Management Council; Public Meeting

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of a public meeting.

SUMMARY: The New England Fishery Management Council (Council, NEFMC) will hold a three-day meeting to consider actions affecting New England fisheries in the exclusive economic zone (EEZ).

DATES: The meeting will be held on Tuesday, Wednesday, and Thursday, December 3, 4, and 5, 2019, beginning at 9 a.m. on December 3 and 8:30 a.m. on December 4 and 5.

ADDRESSES: The meeting will be held at the Hotel Viking, 1 Bellevue Avenue, Newport, RI 02840; telephone (401) 847–3300; online at *www.hotelviking.com.*

Council address: New England Fishery Management Council, 50 Water Street, Mill 2, Newburyport, MA 01950; telephone (978) 465–0492; *www.nefmc.org.*

FOR FURTHER INFORMATION CONTACT: Thomas A. Nies, Executive Director, New England Fishery Management Council; telephone: (978) 465–0492, ext. 113.

SUPPLEMENTARY INFORMATION:

Agenda

Tuesday, December 3, 2019

After introductions and brief announcements, the meeting will begin with reports from the Council Chairman and Executive Director, NMFS's Regional Administrator for the Greater Atlantic Regional Fisheries Office (GARFO), liaisons from the Northeast Fisheries Science Center (NEFSC) and Mid-Atlantic Fishery Management Council, staff from the Atlantic States Marine Fisheries Commission (ASMFC), and representatives from NOAA General Counsel, NOAA's Office of Law Enforcement, and the U.S. Coast Guard. The Council then will receive a report on the 2019 annual meeting of the Northwest Atlantic Fisheries Organization (NAFO), followed by a report on the Northeast Trawl Advisory Panel's most recent meeting. Next, the Council will receive a NOAA Enforcement overview of the Carlos Rafael case, followed by a Coast Guard presentation on misreporting issues and their implications. Then, members of the public will have the opportunity to speak during an open comment period on issues that relate to Council business but are not included on the published agenda for this meeting. The Council asks the public to limit remarks to 3–5 minutes.

Following the lunch break, the Council will review Draft National Standard 1 Technical Guidance for Carry-over and Phase-in Provisions within Acceptable Biological Catch (ABC) control rules and approve Council comments on the draft. The Skate Committee Report will be up next. The Council will receive a progress report on Amendment 5 to the Northeast Skate Complex Fishery Management Plan (FMP), which proposes to establish a limited access program for the skate wing and/or skate bait fisheries. Then, the Council will receive an overview of the Spiny Dogfish 2019 Fishery Performance Report and the Spiny Dogfish Monitoring Committee's recommendations for the 2020 fishing year. Next, the Atlantic herring report will cover two issues. First, the Council will receive a presentation on the final discussion document pertaining to Atlantic herring spawning on Georges Bank. Second, the Council will receive the final debrief report on the Management Strategy Evaluation (MSE) process that was used to develop ABC control rule alternatives for Amendment 8 to the Atlantic Herring FMP. The Council then will hear from its Ecosystem-Based Fishery Management (EBFM) MSE Steering Committee, which will provide recommendations

on developing a non-technical document and structure for public information workshops, focusing on the approach used for the Council's example Fishery Ecosystem Plan for Georges Bank. Finally, the Council will receive an overview of NMFS's Modernizing Recreational Fisheries Management Act of 2018 Report to Congress and approve Council comment. Following these actions, the Council will adjourn for the day.

Wednesday, December 4, 2019

The Council will begin the day with a NEFSC presentation on the peer-reviewed results of the 2019 operational assessments for 14 Northeast multispecies (groundfish) stocks. Next, the Scientific and Statistical Committee (SSC) will provide the Council with overfishing limit (OFL) and ABC recommendations for those 14 groundfish stocks for fishing years 2020–22, as well as OFL and ABC recommendations for Atlantic sea scallops for fishing year 2020 with default specifications for 2021. The Groundfish Committee report will be next with three items. First, the Council will take final action on Framework Adjustment 59 to the Northeast Multispecies FMP. The framework includes: (1) 2020 total allowable catches for U.S./Canada stocks of Eastern Georges Bank (GB) cod, Eastern GB haddock, and GB yellowtail flounder; (2) 2020–22 specifications for 15 stocks, addressing commercial/recreational allocation if raised by data from the Marine Recreational Information Program (MRIP); and (3) removal of the allocation to the Closed Area I Haddock Special Access Program. This discussion will be followed by a progress report on Groundfish Monitoring Amendment 23, and then the Council will receive a summary of the input gathered during a series of public listening sessions that were conducted to gauge whether the Council should pursue developing a limited access program for the groundfish party/charter fishery.

Following the lunch break, the Council will continue its groundfish deliberations until all business is concluded. Then, the Council will receive a report on GARFO's October 2019 New England Recreational Fishing Workshops. After that, the Council will adjourn for the day.

Thursday, December 5, 2019

The third day of the meeting will begin with a discussion of Council priorities. The Council will take final action on 2020 priorities covering tasks and actions for all committees and Council responsibilities. Next, the Council will take up the Scallop Committee Report, which will cover two items. First, the Council will take final action on Framework Adjustment 32 to the Atlantic Sea Scallop FMP. This framework includes fishing year 2020 specifications, 2021 default specifications, and measures to mitigate impacts on Georges Bank yellowtail flounder. The Council also is working on Amendment 21 to the FMP, which is being developed to address: (1) Northern Gulf of Maine (NGOM) Management Area issues, (2) the Limited Access General Category (LAGC) possession limit, and (3) the one-way transfer of individual fishing quota (IFQ) from Limited Access vessels with LAGC IFQ to vessels that only hold LAGC IFQ permits. As part of this action, the Council will discuss whether or not to ask NMFS to publish a control date to restrict movement between LAGC permit categories. The Council may take action on this item.

Following the lunch break, the Council will receive a habitat report with updates on: (1) Ongoing offshore energy activities in the Northeast Region; and (2) habitat-related work. Next, the Council will receive a presentation from Cornell Cooperative Extension on its technology transfer program for small-mesh fishermen to utilize large-mesh belly panels to reduce bycatch of Georges Bank yellowtail flounder. This will be followed by the Council's small-mesh multispecies (whiting) report, which will focus on action being taken to rebuild southern red hake. Finally, the Council will close out the meeting with ''other business.''

Although non-emergency issues not contained on this agenda may come before the Council for discussion, those issues may not be the subject of formal action during this meeting. Council action will be restricted to those issues specifically listed in this notice and any issues arising after publication of this notice that require emergency action under section 305(c) of the Magnuson-Stevens Fishery Conservation and Management Act, provided the public has been notified of the Council's intent to take final action to address the emergency. The public also should be aware that the meeting will be recorded. Consistent with 16 U.S.C. 1852, a copy of the recording is available upon request.

Special Accommodations

This meeting is physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to Thomas A. Nies (see **ADDRESSES**) at least 5 days prior to the meeting date.

Authority: 16 U.S.C. 1801 *et seq.*

[Docket No. CFPB–2019–0056]

Agency Information Collection Activities: Comment Request

AGENCY: Bureau of Consumer Financial Protection.

ACTION: Notice and request for comment.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995 (PRA), the Bureau of Consumer Financial Protection (Bureau) is requesting to renew the Office of Management and Budget (OMB) approval for an existing information collection titled, ''Application Forms for Financial Empowerment Training Programs.''

DATES: Written comments are encouraged and must be received on or before January 14, 2020 to be assured of consideration.

ADDRESSES: You may submit comments, identified by the title of the information collection, OMB Control Number (see below), and docket number (see above), by any of the following methods:

- *Electronic:* Go to *http://www.regulations.gov.* Follow the instructions for submitting comments.
- *Email: PRA_Comments@cfpb.gov.* Include Docket No. CFPB–2019–0056 in the subject line of the message.
- *Mail:* Comment Intake, Bureau of Consumer Financial Protection (Attention: PRA Office), 1700 G Street NW, Washington, DC 20552.
- *Hand Delivery/Courier:* Comment Intake, Bureau of Consumer Financial Protection (Attention: PRA Office), 1700 G Street NW, Washington, DC 20552.

Please note that comments submitted after the comment period will not be accepted. In general, all comments received will become public records, including any personal information provided. Sensitive personal information, such as account numbers or Social Security numbers, should not be included.

FOR FURTHER INFORMATION CONTACT: Documentation prepared in support of this information collection request is

available at *www.regulations.gov.* Requests for additional information should be directed to Darrin King, PRA Officer, at (202) 435–9575, or email: *CFPB_PRA@cfpb.gov.* If you require this document in an alternative electronic format, please contact *CFPB_Accessibility@cfpb.gov.* Please do not submit comments to these email boxes.

SUPPLEMENTARY INFORMATION:

Title of Collection: Application Forms for Financial Empowerment Training Programs.

OMB Control Number: 3170–0068.

Type of Review: Revision of a currently approved collection.

Affected Public: Government social service entities, and not-for-profit institutions.

Estimated Number of Annual Respondents: 275.

Estimated Total Annual Burden Hours: 825.

Abstract: The Bureau's Office of Community Affairs (OCA) is responsible for developing strategies to improve the financial capability of low-income and economically vulnerable consumers, such as consumers who are unbanked or underbanked, those with thin or no credit file, and households with limited savings. To address the needs of these consumers, OCA has developed two initiatives that target intermediary organizations and provide tools, training, technical assistance, and other services to help them reach low-income and economically vulnerable consumers to provide them the financial empowerment tools and information that they need, when they need it, where they are. These initiatives: (1) Your Money, Your Goals, and (2) Tax Time Savings both require the Bureau to engage organizations to participate in our financial empowerment initiatives. The proposed information collection request consists of application forms that will be used by community-based organizations, local, State, or Federal government entities, and national non-profit organizations to indicate their desire and ability to participate in OCA's various initiatives. Empowerment will use the information provided in these applications to select the best qualified organizations for participation.

Request for Comments: Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the Bureau, including whether the information will have practical utility; (b) The accuracy of the Bureau's estimate of the burden of the collection of information, including the validity of the methods and the assumptions used; (c) Ways to enhance the quality, utility, and clarity of the information to be collected; and (d) Ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record.

Dated: November 12, 2019.

Darrin A. King,

Paperwork Reduction Act Officer, Bureau of Consumer Financial Protection.

CONSUMER PRODUCT SAFETY COMMISSION

[Docket No. CPSC–2009–0088]

Agency Information Collection Activities; Submission for OMB Review; Comment Request; Third Party Conformity Assessment Body Registration Form

AGENCY: Consumer Product Safety Commission.

ACTION: Notice.

SUMMARY: As required by the Paperwork Reduction Act of 1995, the Consumer Product Safety Commission (CPSC) announces that the CPSC has submitted to the Office of Management and Budget (OMB) a request for extension of approval of a collection of information under the requirements pertaining to the third party conformity assessment bodies registration form, approved previously under (OMB No. 3041–0143). In the **Federal Register** of September 6, 2019, the CPSC published a notice announcing the agency's intent to seek extension of approval of the collection of information. The Commission received no comments. Therefore, by publication of this notice, the CPSC announces that the agency has submitted to the OMB a request for extension of approval of that collection of information, without change.

DATES: Submit written comments on this request for extension of approval of information collection by December 16, 2019.

ADDRESSES: Submit comments about this request by email: *OIRA_submission@omb.eop.gov* or fax: 202–395–6881. Comments by mail should be sent to the Office of Information and Regulatory Affairs, Attn: OMB Desk Officer for the CPSC, Office of Management and Budget, Room 10235, 725 17th Street NW, Washington, DC 20503. In addition, written comments that are sent to OMB also should be submitted electronically at *http://www.regulations.gov,* under Docket No. CPSC–2009–0088.

FOR FURTHER INFORMATION CONTACT: Bretford J. Griffin, Consumer Product Safety Commission, 4330 East West Highway, Bethesda, MD 20814; (301) 504–7037, or by email to: *bfriffin@cpsc.gov*.

SUPPLEMENTARY INFORMATION: CPSC has submitted the following currently approved collection of information to OMB for extension:

Title: Requirements Pertaining to Third Party Conformity Assessment Bodies.

OMB Number: 3041–0143.

Type of Review: Renewal of collection.

Frequency of Response: On occasion.

Affected Public: Third party conformity assessment bodies seeking acceptance of accreditation or continuing accreditation.

General Description of Collection: The Consumer Product Safety Improvement Act of 2008 (CPSIA) requires certificates of conformity to be based in some cases on testing conducted by third party conformity assessment bodies. The CPSIA allows third party conformity assessment bodies to be accredited either by the Commission or by an independent accreditation organization designated by the Commission, and

requires that the Commission maintain on its website an up-to-date list of entities that have been accredited to assess conformity with specific children's product safety rules. Except for firewalled third party conformity assessment bodies, the Commission has chosen to accept the accreditation of third party conformity assessment bodies that meet accreditation requirements of an independent accreditation organization.

To evaluate a third party conformity assessment body's qualifications for acceptance by CPSC, information related to location, accreditation, and ownership must be collected from third party conformity assessment bodies. The CPSC uses an online collection form, CPSC Form 223, to gather information from third party conformity assessment bodies who are voluntarily seeking acceptance by CPSC. The information collected relates to location, accreditation, and ownership. CPSC staff uses this information to assess:

- A third party conformity assessment body's status as an independent third party conformity assessment body, a government-owned or government-controlled conformity assessment body, or a firewalled conformity assessment body;
- Qualifications for acceptance by CPSC to test for compliance to specified children's product safety rules; and
- Eligibility for acceptance on the CPSC website.

Part 1112 requires the collection of information in CPSC Form 223:

- Upon initial application by a third party conformity assessment body for acceptance by CPSC;
- Whenever there is a change in accreditation or ownership information; and
- At least every 2 years, as part of a regular audit process.

Estimated Burden:

The CPSC estimates the burden of the collection of information in CPSC Form 223 is as follows:

ESTIMATED ANNUAL REPORTING BURDEN

Activity	Number of respondents	Frequency of responses	Total annual responses	Hours per response	Total hours
Initial Registration	40	1	40	1	40
Re-Registration	291	1	291	1	291
Changes in Information	6	1	6	0.25	1.5
Total	.....	.....	.....	.....	332.5

These estimates are based on the following information:

- Based on applications received from FY 2013, to date, we estimate the number of third party conformity assessment bodies that would register initially each year for the next 3 years to be 40.
- Under 16 CFR part 1112, third party conformity assessment bodies are required to resubmit CPSC Form 223 every 2 years. Because all third party conformity assessment bodies have not submitted their first CPSC Form 223s at the same time, only about half would be expected to resubmit a CPSC Form 223 in any 1 year.
- As of August 2019, 581 third party conformity assessment bodies have registered with CPSC. Approximately half (291) of these firms would be required to re-register with CPSC each year.
- Under 16 CFR part 1112, third party conformity assessment bodies are required to ensure that the information submitted on CPSC Form 223 is current and must submit a new CPSC Form 223 whenever the information changes. Based on current experience with third party conformity assessment bodies, we estimate that two third party conformity assessment bodies will make revisions per year to update their information. A change in information is a change that does not require review of laboratory accreditation documents, such as scope or test methods. Examples of revised information include changes in the website URL, name of the laboratory, and name of point of contact.
- Therefore, the total burden is 332.5 hours, which we will round up to 333 hours. We estimate that hourly compensation for the time required for recordkeeping is $34.61 per hour (U.S. Bureau of Labor Statistics, ''Employer Costs for Employee Compensation,'' Table 9, total compensation for sales, office, and related workers in goods-producing industries, March 2019: *https://www.bls.gov/ect/data.htm*). The total cost burden to the respondents is approximately $11,525 ($34.61 × 333 hours = $11,525).

Alberta E. Mills,

Secretary, Consumer Product Safety Commission.

BILLING CODE 6355–01–P

DEPARTMENT OF DEFENSE

Office of Department of the Air Force

Notice of Intent To Grant an Exclusive Patent License

AGENCY: Department of the Air Force, DoD.

ACTION: Notice of intent.

SUMMARY: Pursuant to the Bayh-Dole Act and implementing regulations, the Department of the Air Force hereby gives notice of its intent to grant an exclusive patent license agreement to The Board of Regents of the University of Texas System, an agency of the State of Texas, having a place of business at 210 West 7th Street, Austin, TX 78701.

DATES: Written objections must be filed no later than fifteen (15) calendar days after the date of publication of this Notice.

ADDRESSES: Submit written objections to the Air Force Materiel Command Law Office, AFMCLO/JAZ, 2240 B Street, Room 260, Wright-Patterson AFB, OH 45433–7109; Facsimile: (937) 255–3733; or Email: *afmclo.jaz.tech@us.af.mil.* Include Docket No. AFD 1870 in the subject line of the message.

FOR FURTHER INFORMATION CONTACT: Air Force Materiel Command Law Office, AFMCLO/JAZ, 2240 B Street, Rm 260, Wright-Patterson AFB, OH 45433–7109; Facsimile: (937) 255–3733; Email: *afmclo.jaz.tech@us.af.mil.*

SUPPLEMENTARY INFORMATION: The Department of the Air Force intends to grant the exclusive patent license agreement to consolidate rights with co-owner The Board of Regents of the University of Texas System for the invention described in: U.S. Patent Application Serial No. 62/748,888, filed October 22, 2018, and entitled ''Multilayered Sheet-Polarizers with Enhanced Polarization Ratio and High Power Tolerance.''

The consolidation of rights is in the best interest of both owners in order to promote commercialization of the technology. The Department of the Air

Force may grant the prospective license unless a timely objection is received that sufficiently shows the grant of the license would be inconsistent with the Bayh-Dole Act or implementing regulations. A competing application for a patent license agreement, completed in compliance with 37 CFR 404.8 and received by the Air Force within the period for timely objections, will be treated as an objection and may be considered as an alternative to the proposed license.

Adriane Paris,

Acting Air Force Federal Register Liaison Officer.

BILLING CODE 5001–10–P

DEPARTMENT OF DEFENSE

Department of the Navy

[Docket ID: USN–2019–HQ–0014]

Submission for OMB Review; Comment Request

AGENCY: Navy Personnel Command (PERS–13) Navy Casualty, Navy, DoD.

ACTION: 30-Day information collection notice.

SUMMARY: The Department of Defense has submitted to OMB for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act.

DATES: Consideration will be given to all comments received by December 16, 2019.

ADDRESSES: Comments and recommendations on the proposed information collection should be emailed to Ms. Jasmeet Seehra, DoD Desk Officer, at *oira_submission@omb.eop.gov.* Please identify the proposed information collection by DoD Desk Officer, Docket ID number, and title of the information collection.

FOR FURTHER INFORMATION CONTACT: Angela James, 571–372–7574, or *whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil.*

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: Collection of Personal Information for Casualty Benefits; OPNAV Form 1770/1,''Consent to Release Personal Information''; OPNAV Form 1770/2, ''Next of Kin Travel Request''; OPNAV Form 1770/3, ''Next of Kin Identification''; OMB Control Number 0703–XXXX.

OPNAV 1770/1

Annual Burden Hours: 300.
Number of Respondents: 600.
Responses per Respondent: 1.
Annual Responses: 600.
Average Burden per Response: 30 minutes.
Frequency: As required.

OPNAV 1770/2

Annual Burden Hours: 400.
Number of Respondents: 800.
Responses per Respondent: 1.
Annual Responses: 800.
Average Burden per Response: 30 minutes.
Frequency: As required.

OPNAV 1770/3

Annual Burden Hours: 600.
Number of Respondents: 600.
Responses per Respondent: 1.
Annual Responses: 600.
Average Burden per Response: 1 hour.
Frequency: As required.
Total Number of Respondents: 800 (600 will complete all three forms, 200 more will complete form 1770/2).
Total Number of Annual Responses: 800.
Total Respondent Burden Hours: 1,300.

Needs and Uses: The information is collected from the next of kin (NOK) and other beneficiaries following the death of a Navy Sailor. Basic contact information is passed to members of Congress and the White House (when consent is granted) for use in condolence activity. This and additional information collected is necessary to review, certify, and process payment of benefits awarded to designated NOK and other beneficiaries following the death. The form gathers data necessary to facilitate direct payment of benefits through the Defense Finance and Accounting Agency (DFAS), arrange travel to memorial and funeral services through the Defense Travel System (DTS), and to process travel claims submitted post-travel through DTS to DFAS. Data on the form is used solely for these functions.

Affected Public: Individuals or households.

Respondent's Obligation: Voluntary.

OMB Desk Officer: Ms. Jasmeet Seehra.

You may also submit comments and recommendations, identified by Docket ID number and title, by the following method:

• *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the instructions for submitting comments.

Instructions: All submissions received must include the agency name, Docket ID number, and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at *http://www.regulations.gov* as they are received without change, including any personal identifiers or contact information.

DOD Clearance Officer: Ms. Angela James.

Requests for copies of the information collection proposal should be sent to Ms. James at *whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil.*

Dated: November 8, 2019.

Aaron T. Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

BILLING CODE 5001–06–P

DEPARTMENT OF EDUCATION

[Docket No. ED–2019–ICCD–0102]

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Comment Request; State and Local Educational Agency Record and Reporting Requirements Under Part B of the Individuals With Disabilities Education Act

AGENCY: Office of Special Education and Rehabilitative Services (OSERS), Department of Education (ED).

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, ED is proposing a revision of an existing information collection.

DATES: Interested persons are invited to submit comments on or before December 16, 2019.

ADDRESSES: To access and review all the documents related to the information collection listed in this notice, please use *http://www.regulations.gov* by searching the Docket ID number ED–2019–ICCD–0102. Comments submitted in response to this notice should be submitted electronically through the Federal eRulemaking Portal at *http://www.regulations.gov* by selecting the Docket ID number or via postal mail, commercial delivery, or hand delivery. If the *regulations.gov* site is not available to the public for any reason, ED will temporarily accept comments at *ICDocketMgr@ed.gov.* Please include the docket ID number and the title of the information collection request when requesting documents or submitting comments. *Please note that comments submitted by fax or email and those submitted after the comment period will not be accepted.* Written requests for information or comments submitted by

postal mail or delivery should be addressed to the Director of the Strategic Collections and Clearance Governance and Strategy Division, U.S. Department of Education, 400 Maryland Ave. SW, LBJ, Room 6W–208D, Washington, DC 20202–4537.

FOR FURTHER INFORMATION CONTACT: For specific questions related to collection activities, please contact Rebecca Walawender, 202–245–7399.

SUPPLEMENTARY INFORMATION: The Department of Education (ED), in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)), provides the general public and Federal agencies with an opportunity to comment on proposed, revised, and continuing collections of information. This helps the Department assess the impact of its information collection requirements and minimize the public's reporting burden. It also helps the public understand the Department's information collection requirements and provide the requested data in the desired format. ED is soliciting comments on the proposed information collection request (ICR) that is described below. The Department of Education is especially interested in public comment addressing the following issues: (1) Is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology. Please note that written comments received in response to this notice will be considered public records.

Title of Collection: State and Local Educational Agency Record and Reporting Requirements under Part B of the Individuals with Disabilities Education Act.

OMB Control Number: 1820–0600.

Type of Review: A revision of an existing information collection.

Respondents/Affected Public: State, Local, and Tribal Governments.

Total Estimated Number of Annual Responses: 73,623.

Total Estimated Number of Annual Burden Hours: 362,649.

Abstract: OMB Information Collection 1820–0600 reflects the provisions in the Act and the Part B regulations requiring States and/or local educational agencies (LEAs) to collect and maintain information or data and, in some cases, report information or data to other public agencies or to the public. However, some of the information or data are not reported to the Secretary. Data are collected in the areas of private schools, parentally placed private school students, State high cost fund, notification of free and low cost legal services, early intervening services, notification of hearing offices and mediators, State complaint procedures, significant disproportionality, and the LEA application under Part B.

Dated: November 12, 2019.

Kate Mullan,

PRA Coordinator, Strategic Collections and Clearance, Governance and Strategy Division, Office of Chief Data Officer.

FOR FURTHER INFORMATION CONTACT: For specific questions related to collection activities, please contact Rebecca Walawender, 202–245–7399.

SUPPLEMENTARY INFORMATION: The Department of Education (ED), in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)), provides the general public and Federal agencies with an opportunity to comment on proposed, revised, and continuing collections of information. This helps the Department assess the impact of its information collection requirements and minimize the public's reporting burden. It also helps the public understand the Department's information collection requirements and provide the requested data in the desired format. ED is soliciting comments on the proposed information collection request (ICR) that is described below. The Department of Education is especially interested in public comment addressing the following issues: (1) Is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology. Please note that written comments received in response to this notice will be considered public records.

Title of Collection: Annual State Application Under Part B of the Individuals with Disabilities Education Act as Amended in 2004.

OMB Control Number: 1820–0030.

Type of Review: A revision of an existing information collection.

Respondents/Affected Public: State, Local, and Tribal Governments.

Total Estimated Number of Annual Responses: 60.

Total Estimated Number of Annual Burden Hours: 2,340.

Abstract: The Individuals with Disabilities Education Act, signed on December 3, 2004, became Public Law 108–446. In accordance with 20 U.S.C. 1412(a) a State is eligible for assistance under Part B for a fiscal year if the State submits a plan that provides assurances to the Secretary that the State has in

effect policies and procedures to ensure that the State meets each of the conditions found in 20 U.S.C. 1412. Information collection 1820–0030 allows States to proved assurances that it either has or does not have in effect policies and procedures to meet the eligibility requirements of Part B of th Act as found in Public Law 108–446.

Information Collection 1820–0030 is being revised to include the reporting requirement in 34 CFR 300.647(b)(7). This requirement is pursuant to the significant disproportionality rules promulgated on December 19, 2016.

Dated: November 12, 2019.

Kate Mullan,

PRA Coordinator, Strategic Collections and Clearance, Governance and Strategy Division, Office of Chief Data Officer.

BILLING CODE 4000–01–P

DEPARTMENT OF ENERGY

Intent to Revise Power Marketing Policy Kerr-Philpott System of Projects

AGENCY: Southeastern Power Administration (Southeastern), DOE.

ACTION: Notice of Intention to begin a public process.

SUMMARY: Pursuant to its Procedure for Public Participation in the Formulation of Marketing Policy, published in the **Federal Register** of July 6, 1978, Southeastern Power Administration (Southeastern) intends to revise its marketing policy by including provisions regarding renewable energy certificates from its Kerr-Philpott System of Projects. The current power marketing policy was published on July 29, 1985, for the Southeastern Kerr-Philpott System and is reflected in contracts for the sale of system power, which are maintained in Southeastern's headquarters office. Southeastern solicits written comments and proposals in formulating the proposed marketing policy revision.

DATES: Comments and proposals must be submitted on or before January 14, 2020.

ADDRESSES: Written comments or proposals should be submitted to Kenneth E. Legg, Administrator, Southeastern Power Administration, 1166 Athens Tech Road, Elberton, GA 30635–6711, (706) 213–3800, *Comments@sepa.doe.gov.*

FOR FURTHER INFORMATION CONTACT: Leon Jourolmon IV, General Counsel, (706) 213–3800, *Comments@sepa.doe.gov.*

SUPPLEMENTARY INFORMATION: A ''Final Power Marketing Policy Kerr-Philpott System of Projects'' was developed and published in the **Federal Register** on July 29, 1985, 50 FR 30752, by Southeastern. The policy establishes the marketing area for system power and addresses the utilization of area utility systems for essential purposes. The policy also addresses wholesale rates, resale rates, and conservation measures, but does not address renewable energy certificates.

Under Section 5 of the Flood Control Act of 1944 (16 U.S.C. 825s), Southeastern is responsible for the transmission and disposition of electric power and energy from reservoir projects operated by the Department of the Army. Furthermore, Southeastern must transmit and dispose of such power and energy in such manner as to encourage the most widespread use at the lowest possible rates to consumers consistent with sound business principles. Rate schedules are drawn having regard to the recovery of the cost of producing and transmitting such electric energy.

The Kerr-Philpott System consists of two projects, the John H. Kerr Project and the Philpott Project. The power from the projects is currently marketed to Preference Customers located in the service areas of Dominion Energy, Duke Energy Progress, American Municipal Power, and American Electric Power.

Both the John H. Kerr Project and the Philpott Project are located within the regional footprint served by the regional transmission organization PJM Interconnection, L.L.C. (PJM) footprint, as are the Virginia-based Preference Customers with power allocations. Southeastern owns no transmission assets in the area of the Kerr-Philpott System and relies on PJM transmission resources to dispose of power and energy from the projects. As such, Southeastern joined PJM in 2005.

As the projects are located within the PJM region and potentially satisfy Renewable Portfolio Standards in a number of states, Southeastern has subscribed to the PJM Generation Attribute Tracking System (GATS). The GATS provides an unbundled, certificates-based tracking system that reports certain operating attributes of electricity generators selling energy through the PJM Market Settlement System. The attributes are unbundled from the megawatt-hour of energy produced and recorded onto a certificate. These certificates may be used by electricity suppliers and other energy market participants to comply with relevant state policies and regulatory programs and to support voluntary ''green'' electricity markets. Southeastern is considering distributing the GATS-created certificates to current Preference Customers with allocations of power from the Kerr-Philpott System.

Upon formulating a proposed revision to the Kerr-Philpott System marketing policy to address renewable energy certificates, Southeastern will publish the proposal in the **Federal Register** and begin a sixty-day comment period pursuant to its Procedures for Public Participation in the Formulation of Marketing Policy.

Dated: November 7, 2019.

Kenneth E. Legg,

Administrator.

[FR Doc. 2019–24819 Filed 11–14–19; 8:45 am]

BILLING CODE 6450–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP19–512–000]

Texas Eastern Transmission, L.P.; Notice of Intent To Prepare an Environmental Assessment for the Proposed Cameron Extension Project and Request for Comments on Environmental Issues

The staff of the Federal Energy Regulatory Commission (FERC or Commission) will prepare an environmental assessment (EA) that will discuss the environmental impacts of the Cameron Extension Project involving construction of a new 30,000 horsepower compressor station by Texas Eastern Transmission, L.P. (Texas Eastern), in Calcasieu Parish, Louisiana. The Commission will use this EA in its decision-making process to determine whether the project is in the public convenience and necessity.

This notice announces the opening of the scoping process the Commission will use to gather input from the public and interested agencies about issues regarding the project. The National Environmental Policy Act (NEPA) requires the Commission to take into account the environmental impacts that could result from its action whenever it considers the issuance of a Certificate of Public Convenience and Necessity. NEPA also requires the Commission to discover concerns the public may have about proposals. This process is referred to as ''scoping.'' The main goal of the scoping process is to focus the analysis in the EA on the important environmental issues. By this notice, the Commission requests public comments on the scope of the issues to address in

the EA. To ensure that your comments are timely and properly recorded, please submit your comments so that the Commission receives them in Washington, DC on or before 5:00 p.m. Eastern Time on December 9, 2019.

You can make a difference by submitting your specific comments or concerns about the project. Your comments should focus on the potential environmental effects, reasonable alternatives, and measures to avoid or lessen environmental impacts. Your input will help the Commission staff determine what issues they need to evaluate in the EA. Commission staff will consider all filed comments during the preparation of the EA.

If you sent comments on this project to the Commission before the opening of this docket on September 26, 2019, you will need to file those comments in Docket No. CP19–512–000 to ensure they are considered as part of this proceeding.

This notice is being sent to the Commission's current environmental mailing list for this project. State and local government representatives should notify their constituents of this proposed project and encourage them to comment on their areas of concern.

If you are a landowner receiving this notice, a pipeline company representative may contact you about the acquisition of an easement to construct, operate, and maintain the proposed facilities. The company would seek to negotiate a mutually acceptable easement agreement. You are not required to enter into an agreement. However, if the Commission approves the project, that approval conveys with it the right of eminent domain. Therefore, if you and the company do not reach an easement agreement, the pipeline company could initiate condemnation proceedings in court. In such instances, compensation would be determined by a judge in accordance with state law.

Texas Eastern provided landowners with a fact sheet prepared by the FERC entitled ''An Interstate Natural Gas Facility On My Land? What Do I Need To Know?'' This fact sheet addresses a number of typically asked questions, including the use of eminent domain and how to participate in the Commission's proceedings. It is also available for viewing on the FERC website (*www.ferc.gov*) at *https://www.ferc.gov/resources/guides/gas/gas.pdf.*

Public Participation

The Commission offers a free service called eSubscription which makes it easy to stay informed of all issuances and submittals regarding the dockets/projects to which you subscribe. These instant email notifications are the fastest way to receive notification and provide a link to the document files which can reduce the amount of time you spend researching proceedings. To sign up go to *www.ferc.gov/docs-filing/esubscription.asp.*

For your convenience, there are three methods you can use to submit your comments to the Commission. The Commission encourages electronic filing of comments and has staff available to assist you at (866) 208–3676 or *FercOnlineSupport@ferc.gov.* Please carefully follow these instructions so that your comments are properly recorded.

(1) You can file your comments electronically using the *eComment* feature, which is located on the Commission's website (*www.ferc.gov*) under the link to *Documents and Filings.* Using eComment is an easy method for submitting brief, text-only comments on a project;

(2) You can file your comments electronically by using the *eFiling* feature, which is also on the Commission's website (*www.ferc.gov*) under the link to *Documents and Filings.* With eFiling, you can provide comments in a variety of formats by attaching them as a file with your submission. New eFiling users must first create an account by clicking on ''*eRegister.*'' You will be asked to select the type of filing you are making; a comment on a particular project is considered a ''Comment on a Filing''; or

(3) You can file a paper copy of your comments by mailing them to the following address. Be sure to reference the project docket number (CP19–512–000) with your submission: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Room 1A, Washington, DC 20426.

Summary of the Proposed Project

Texas Eastern proposes to construct and operate a new compressor station (East Calcasieu Compressor Station) in Calcasieu Parish, Louisiana. The new compressor station is comprised of one 30,000 ISO-rated horsepower, natural gas-driven turbine compressor unit and related appurtenances. The project would consist of the following new facilities:

- Installation of a new delivery meter and regulatory (M&R) station and related facilities, including 0.2 mile of 30-inch-diameter piping to interconnect with TransCameron, LLC's pipeline system in Cameron Parish, Louisiana;
- installation of a receipt M&R station and related facilities at a new interconnect with Momentum Midstream, LLC in Beareugard Parish, Louisiana;
- installation of a new bi-directional M&R station and related facilities at a new interconnect with Trunkline Gas Company, LLC in Jefferson Davis Parish, Louisiana;
- installation of equipment, including a filter separator and regulator at the Gillis Compressor Station in Beauregard Parish, Louisiana;
- modifications to existing internal pipeline inspection launcher and receiver facilities, as well as two new bypass facilities at existing sites along Texas Eastern's Line 41 in Cameron (Grand Chenier Compressor Station), Beuregard (Gillis Compressor Station), and Jefferson Davis (Iowa Plant) Parishes, Louisiana; and
- other related auxiliary facilities and appurtenances.

The project would reverse natural gas flow on a portion of Texas Eastern's Line 41 mainline to provide natural gas from various sources to serve the Venture Global Calcasieu Pass Terminal, a liquefied natural gas export terminal project currently under development in Cameron Parish, Louisiana. Texas Eastern proposes to provide 750 million cubic feet per day of firm transportation service. Texas Eastern proposes to complete and place this project into service by November 1, 2021.

The general location of the project facilities is shown in appendix 1.[1]

Land Requirements for Construction

Construction of the project would disturb about 156.8 acres (of which 81.7 acres would be within the existing fence line of the Gillis Compressor Station, Iowa Plant, and Grand Chenier Compressor Station facility). Texas Eastern would maintain 10.2 acres for permanent operation of the project's facilities following construction. The remaining acreage would be restored and revert to former uses.

The EA Process

The EA will discuss impacts that could occur as a result of the construction and operation of the proposed project under these general headings:

- Geology and soils;
- water resources and wetlands;
- vegetation and wildlife;

[1] The appendices referenced in this notice will not appear in the **Federal Register**. Copies of appendices were sent to all those receiving this notice in the mail and are available at *www.ferc.gov* using the link called ''eLibrary'' or from the Commission's Public Reference Room, 888 First Street NE, Washington, DC 20426, or call (202) 502–8371. For instructions on connecting to eLibrary, refer to the last page of this notice.

- threatened and endangered species;
- cultural resources;
- land use;
- air quality and noise;
- public safety; and
- cumulative impacts.

Commission staff will also evaluate reasonable alternatives to the proposed project or portions of the project, and make recommendations on how to lessen or avoid impacts on the various resource areas.

The EA will present Commission staffs' independent analysis of the issues. The EA will be available in electronic format in the public record through eLibrary [2] and the Commission's website (*https://www.ferc.gov/industries/gas/enviro/eis.asp*). If eSubscribed, you will receive instant email notification when the EA is issued. The EA may be issued for an allotted public comment period. Commission staff will consider all comments on the EA before making recommendations to the Commission. To ensure Commission staff have the opportunity to address your comments, please carefully follow the instructions in the Public Participation section, beginning on page 2.

With this notice, the Commission is asking agencies with jurisdiction by law and/or special expertise with respect to the environmental issues of this project to formally cooperate in the preparation of the EA.[3] Agencies that would like to request cooperating agency status should follow the instructions for filing comments provided under the Public Participation section of this notice.

Consultation Under Section 106 of the National Historic Preservation Act

In accordance with the Advisory Council on Historic Preservation's implementing regulations for section 106 of the National Historic Preservation Act, the Commission is using this notice to initiate consultation with the applicable State Historic Preservation Office, and to solicit their views and those of other government agencies, interested Indian tribes, and the public on the project's potential effects on historic properties.[4] The EA for this project will document findings on the impacts on historic properties and summarize the status of consultations under section 106.

Environmental Mailing List

The environmental mailing list includes: Federal, state, and local government representatives and agencies; elected officials; Native American Tribes; libraries; newspapers; and other interested parties. This list also includes all affected landowners (as defined in the Commission's regulations) who are potential right-of-way grantors, whose property may be used temporarily for project purposes, or who own homes within certain distances of aboveground facilities, and anyone who submits comments on the project. Commission staff will update the environmental mailing list as the analysis proceeds to ensure that Commission notices related to this environmental review are sent to all individuals, organizations, and government entities interested in and/or potentially affected by the proposed project.

If the Commission issues the EA for an allotted public comment period, a *Notice of Availability* of the EA will be sent to the environmental mailing list and will provide instructions to access the electronic document on the FERC's website (*www.ferc.gov*). If you need to make changes to your name/address, or if you would like to remove your name from the mailing list, please return the attached ''Mailing List Update Form'' (appendix 2).

Additional Information

Additional information about the project is available from the Commission's Office of External Affairs, at (866) 208–FERC, or on the FERC website at *www.ferc.gov* using the eLibrary link. Click on the eLibrary link, click on ''General Search'' and enter the docket number in the ''Docket Number'' field, excluding the last three digits (*i.e.,* CP19–512). Be sure you have selected an appropriate date range. For assistance, please contact FERC Online Support at *FercOnlineSupport@ferc.gov* or (866) 208–3676, or for TTY, contact (202) 502–8659. The eLibrary link also provides access to the texts of all formal documents issued by the Commission, such as orders, notices, and rulemakings.

Public sessions or site visits will be posted on the Commission's calendar located at *www.ferc.gov/EventCalendar/EventsList.aspx* along with other related information.

Dated: November 8, 2019.

Kimberly D. Bose,

Secretary.

[2] For instructions on connecting to eLibrary, refer to the last page of this notice.

[3] The Council on Environmental Quality regulations addressing cooperating agency responsibilities are at Title 40, Code of Federal Regulations, Part 1501.6.

[4] The Advisory Council on Historic Preservation's regulations are at Title 36, Code of Federal Regulations, Part 800. Those regulations define historic properties as any prehistoric or historic district, site, building, structure, or object included in or eligible for inclusion in the National Register of Historic Places.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP19–479–000]

Northern Natural Gas Company; Notice of Revised Schedule for Environmental Review of the Bushton to Clifton A-Line Abandonment Project

This notice identifies the Federal Energy Regulatory Commission (FERC) staff's revised schedule for the completion of the environmental assessment (EA) for Northern Natural Gas Company's Bushton to Clifton A-Line Abandonment Project. The first notice of schedule, issued on July 30, 2019, identified November 8, 2019 as the EA issuance date.

Because affected landowners were inadvertently excluded from the environmental mailing list for the *Notice of Intent to Prepare an Environmental Assessment for the Proposed Bushton to Clifton A-line Abandonment Project* issued by the Commission on July 15, 2019, we have issued a supplemental notice on November 6, 2019 to provide all affected landowners an opportunity to comment in this proceeding. As a result, staff has revised the schedule for issuance of the EA to extend the comment period and give the public an expanded opportunity to participate in the project's design and implementation.

Schedule for Environmental Review

Issuance of Notice of Availability of the EA—December 17, 2019

90-day Federal Authorization Decision Deadline—March 16, 2019

If a schedule change becomes necessary, an additional notice will be provided so that the relevant agencies are kept informed of the project's progress.

Additional Information

In order to receive notification of the issuance of the EA and to keep track of all formal issuances and submittals in specific dockets, the Commission offers a free service called eSubscription. This can reduce the amount of time you spend researching proceedings by automatically providing you with notification of these filings, document summaries, and direct links to the

documents. Go to *www.ferc.gov/docs-filing/esubscription.asp.*

Additional information about the project is available from the Commission's Office of External Affairs at (866) 208–FERC or on the FERC website (*www.ferc.gov*). Using the eLibrary link, select ''General Search'' from the eLibrary menu, enter the selected date range and Docket Number excluding the last three digits (*i.e.,* CP19–479), and follow the instructions. For assistance with access to eLibrary, the helpline can be reached at (866) 208–3676, TTY (202) 502–8659, or at *FERCOnlineSupport@ferc.gov.* The eLibrary link on the FERC website also provides access to the texts of formal documents issued by the Commission, such as orders, notices, and rule makings.

[Docket No. CP19–474–000]

Notice of Revised Schedule for Environmental Review of the Florida Gas Transmission Company, LLC Putnam Expansion Project

This notice identifies the Federal Energy Regulatory Commission staff's revised schedule for the completion of the environmental assessment (EA) for Florida Gas Transmission Company, LLC's Putnam Expansion Project. The first notice of schedule, issued on August 14, 2019, identified November 8, 2019 as the EA issuance date. However, Florida Gas Transmission Company filed additional information on November 5, 2019 in response to Commission staff's October 30, 2019 data request regarding an affected landowner comment that was filed in this proceeding. Because the requested information was necessary to complete the environmental review, staff has revised the schedule for issuance of the EA.

Schedule for Environmental Review

Issuance of Notice of Availability of the EA—December 6, 2019

90-day Federal Authorization Decision Deadline—March 5, 2020

If a schedule change becomes necessary, an additional notice will be provided so that the relevant agencies are kept informed of the project's progress.

Additional Information

In order to receive notification of the issuance of the EA and to keep track of all formal issuances and submittals in specific dockets, the Commission offers a free service called eSubscription. h. Potential *Applicant Contact:* Mr. Bobby Armstrong, Nushagak Electric & Telephone Cooperative, Inc., P.O. Box 350, Dillingham, Alaska 99576; phone: (907) 842–5251 or email at *barmstrong@nushagak.coop.*

i. *FERC Contact:* Julia Kolberg at (202) 502–8261 or email at *julia.kolberg@ferc.gov.*

j. *Cooperating agencies:* Federal, state, local, and tribal agencies with jurisdiction and/or special expertise with respect to environmental issues that wish to cooperate in the preparation of the environmental document should follow the instructions for filing such requests described in item o below. Cooperating agencies should note the Commission's policy that agencies that cooperate in the preparation of the environmental document cannot also intervene. *See* 94 FERC ¶ 61,076 (2001).

k. With this notice, we are initiating informal consultation with: (a) The U.S. Fish and Wildlife Service and/or NOAA Fisheries under section 7 of the Endangered Species Act and the joint agency regulations thereunder at 50 CFR, Part 402 and (b) the State Historic Preservation Officer, as required by section 106, National Historic Preservation Act, and the implementing regulations of the Advisory Council on Historic Preservation at 36 CFR 800.2.

l. Nushagak Cooperative, Inc. filed a Pre-Application Document (PAD; including a proposed process plan and schedule) with the Commission, pursuant to 18 CFR 5.6 of the Commission's regulations.

m. A copy of the PAD is available for review at the Commission in the Public Reference Room or may be viewed on the Commission's website (*http://www.ferc.gov*), using the ''eLibrary'' link. Enter the docket number, excluding the last three digits in the docket number field to access the document. For assistance, contact FERC Online Support at *FERCONlineSupport@ferc.gov,* (866) 208–3676 (toll free), or (202) 502–8659 (TTY). A copy is also available for inspection and reproduction at the address in paragraph h.

Register online at *http://www.ferc.gov/docs-filing/esubscription.asp* to be notified via email of new filing and issuances related to this or other pending projects. For assistance, contact FERC Online Support.

n. With this notice, we are soliciting comments on the PAD and Commission's staff Scoping Document 1 (SD1), as well as study requests. All comments on the PAD and SD1, and study requests should be sent to the address above in paragraph h. In addition, all comments on the PAD and SD1, study requests, requests for cooperating agency status, and all communications to and from Commission staff related to the merits of the potential application must be filed with the Commission.

The Commission strongly encourages electronic filing. Please file all documents using the Commission's eFiling system at *http://www.ferc.gov/docs-filing/efiling.asp.* Commenters can submit brief comments up to 6,000 characters, without prior registration, using the eComment system at *http://www.ferc.gov/docs-filing/ecomment.asp.* You must include your name and contact information at the end of your comments. For assistance, please contact FERC Online Support at *FERCOnlineSupport@ferc.gov.* In lieu of electronic filing, please send a paper copy to: Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426. The first page of any filing should include docket number P–14873–001.

All filings with the Commission must bear the appropriate heading: ''Comments on Pre-Application Document,'' ''Study Requests,'' ''Comments on Scoping Document 1,'' ''Request for Cooperating Agency Status,'' or ''Communications to and from Commission Staff.'' Any individual or entity interested in submitting study requests, commenting on the PAD or SD1, and any agency requesting cooperating status must do so by February 4, 2020.

p. Although our current intent is to prepare an environmental assessment (EA), there is the possibility that an Environmental Impact Statement (EIS) will be required. Nevertheless, this meeting will satisfy the NEPA scoping requirements, irrespective of whether an EA or EIS is issued by the Commission.

Scoping Meetings

Commission staff will hold two scoping meetings in the vicinity of the

project at the times and places noted below. The daytime meeting will focus on resource agency, Indian tribes, and non-governmental organization concerns, while the evening meeting is primarily for receiving input from the public. We invite all interested individuals, organizations, and agencies to attend one or both of the meetings, and to assist staff in identifying particular study needs, as well as the scope of environmental issues to be addressed in the environmental document. Teleconferencing capability will be provided for those who cannot attend the meeting in person. The times and locations of these meetings are as follows:

Daytime Scoping Meeting

Date: Wednesday, December 11, 2019.
Time: 10:00 a.m.
Location: Homewood Suites, 101 W. 48th Ave., Anchorage, AK 99503.
Phone: (907) 762–7000.

Evening Scoping Meeting

Date: Wednesday, December 11, 2019.
Time: 7:00 p.m.
Location: Homewood Suites, 101 W. 48th Ave., Anchorage, AK 99503.
Phone: (907) 762–7000.

Please notify Julia Kolberg at (202) 502–8261 or *Julia.kolberg@ferc.gov* on or before December 4, 2019, if you plan to attend scoping meetings via teleconference.

Scoping Document 1 (SD1), which outlines the subject areas to be addressed in the environmental document, was mailed to the individuals and entities on the Commission's mailing list. Copies of SD1 will be available at the scoping meetings, or may be viewed on the web at *http://www.ferc.gov,* using the ''eLibrary'' link. Follow the directions for accessing information in paragraph n. Based on all oral and written comments, a Scoping Document 2 (SD2) may be issued. SD2 may include a revised process plan and schedule, as well as a list of issues, identified through the scoping process.

Meeting Objectives

At the scoping meetings, staff will: (1) Initiate scoping of the issues; (2) review and discuss existing conditions and resource management objectives; (3) review and discuss existing information and identify preliminary information and study needs; (4) review and discuss the process plan and schedule for pre-filing activity that incorporates the time frames provided for in Part 5 of the Commission's regulations and, to the extent possible, maximizes coordination of federal, state, and tribal permitting and certification processes; and (5) discuss the appropriateness of any federal or state agency or Indian tribe acting as a cooperating agency for development of an environmental document.

Meeting participants should come prepared to discuss their issues and/or concerns. Please review the PAD in preparation for the scoping meetings. Directions on how to obtain a copy of the PAD and SD1 are included in item n. of this document.

Meeting Procedures

The meetings will be recorded by a stenographer and will be placed in the public records of the project.

Under the Commission's Integrated Licensing Process, the Commission conducts scoping within 90 days of the filing of the licensee's NOI. An environmental site review is typically held in conjunction with that scoping meeting. However, in this case, access to project facilities is likely to be limited by winter weather conditions when scoping for this project will occur. For this reason, the license applicant will play a video filmed during a flyover of the proposed project site. An environmental site review may be conducted at a later date. Therefore, we are waiving § 5.8(b)(viii) of the Commission's regulations requiring an environmental site review within 30 days of issuance of a notice of commencement of proceeding to facilitate the early environmental site review.

Dated: November 8, 2019.

Kimberly D. Bose,

Secretary.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. IC19–39–000]

Commission Information Collection Activities (FERC–511); Comment Request; Extension

AGENCY: Federal Energy Regulatory Commission, Department of Energy.

ACTION: Notice of information collection and request for comments.

SUMMARY: In compliance with the requirements of the Paperwork Reduction Act of 1995, the Federal Energy Regulatory Commission (Commission or FERC) is soliciting public comment on the currently approved information collection FERC–511 (Transfer of Hydropower License) and submitting the information collection to the Office of Management and Budget (OMB) for review. Any interested person may file comments directly with OMB and should address a copy of those comments to the Commission as explained below. On August 29, 2019, the Commission published a Notice in the **Federal Register** (84 FR 45489) in Docket No. IC19–39–000 requesting public comments. The Commission received no public comments.

DATES: Comments on the collection of information are due December 16, 2019.

ADDRESSES: Comments filed with OMB, identified by OMB Control No. 1902–0069, should be sent via email to the Office of Information and Regulatory Affairs: *oira_submission@omb.gov.* Attention: Federal Energy Regulatory Commission Desk Officer.

A copy of the comments should also be sent to the Commission, in Docket No. IC19–39–000, by either of the following methods:

- *eFiling at Commission's Website: http://www.ferc.gov/docs-filing/efiling.asp.*
- *Mail:* Federal Energy Regulatory Commission, Secretary of the Commission, 888 First Street NE, Washington, DC 20426.

Instructions: All submissions must be formatted and filed in accordance with submission guidelines at: *http://www.ferc.gov/help/submission-guide.asp.* For user assistance, contact FERC Online Support by email at *ferconlinesupport@ferc.gov,* or by phone at: (866) 208–3676 (toll-free), or (202) 502–8659 for TTY.

Docket: Users interested in receiving automatic notification of activity in this docket or in viewing/downloading comments and issuances in this docket may do so at *http://www.ferc.gov/docs-filing/docs-filing.asp.*

FOR FURTHER INFORMATION CONTACT: Ellen Brown may be reached by email at *DataClearance@FERC.gov,* telephone at (202) 502–8663, and fax at (202) 273–0873.

SUPPLEMENTARY INFORMATION:

Title: FERC–511, Transfer of Hydropower License.[1]

OMB Control No.: 1902–0069.

Type of Request: Three-year extension of the FERC–511 information collection requirements with no changes to the current reporting and recordkeeping requirements.

Abstract: The Commission uses the information collected under the

[1] The title is being updated to Transfer of Hydropower License (rather than Transfer of Electric License).

requirements of FERC–511 to implement the statutory provisions of Sections 4(e) and 8 of the Federal Power Act (FPA).[2] Section 4(e) authorizes the Commission to issue licenses for the construction, operation and maintenance of reservoirs, powerhouses, and transmission lines or other facilities necessary for the development and improvement of navigation and for the development, transmission, and utilization of power.[3] Section 8 of the FPA provides that the voluntary transfer of any license is made only with the written approval of the Commission. Any successor to the licensee may assign the rights of the original licensee but is subject to all of the conditions of the license. The information filed with the Commission is a mandatory requirement contained in the format of a written application for transfer of license, executed jointly by the parties of the proposed transfer. The sale or merger of a licensed hydroelectric project may occasion the transfer of a license. The Commission's staff uses the information collection to determine the qualifications of the proposed transferee to hold the license and to prepare the transfer of the license order. Approval by the Commission of transfer of a license is contingent upon the transfer of title to the properties under license, delivery of all license instruments, and evidence that such transfer is in the public interest. The Commission implements these filing requirements in the Code of Federal Regulations (CFR) under 18 CFR part 9.

Type of Respondent: Hydropower Project Licensees.

Estimate of Annual Burden:[4] The Commission estimates the annual burden and cost[5] for the information collection as follows.

FERC–511: TRANSFER OF HYDROPOWER LICENSE

	Number of respondents	Annual number of responses per respondent	Total number of responses	Average burden hrs. & cost per response	Total annual burden hours & total annual cost	Cost per respondent ($)
	(1)	(2)	(1) * (2) = (3)	(4)	(3) * (4) = (5)	(5) ÷ (1)
Hydropower Project Licensees	46	1	46	40 hrs.; $3,200	1,840 hrs.; $147,000	$3,200

Comments: Comments are invited on: (1) Whether the collection of information is necessary for the proper performance of the functions of the Commission, including whether the information will have practical utility; (2) the accuracy of the agency's estimate of the burden and cost of the collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility and clarity of the information collection; and (4) ways to minimize the burden of the collection of information on those who are to respond, including the use of automated collection techniques or other forms of information technology.

Dated: November 7, 2019.

Kimberly D. Bose,

Secretary.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Project No. 10684–095]

City of Lansing, MI; Notice of Application for Surrender of License, Soliciting Comments, Motions To Intervene, and Protests

Take notice that the following hydroelectric application has been filed with the Commission and is available for public inspection:

a. *Application Type:* Application for surrender of minor license.

b. *Project No:* 10684–095.

c. *Date Filed:* September 30, 2019.

d. *Applicant:* City of Lansing, Michigan.

e. *Name of Project:* Moores Park Hydroelectric Project.

f. *Location:* The 600-kilowatt project is located on the Grand River, in the City of Lansing, Ingham County, Michigan. The project does not occupy any federal lands.

g. *Filed Pursuant to:* Federal Power Act, 16 U.S.C. 791a–825r.

h. *Applicant Contact:* Lori Myott, Manager, Environmental Services Department, Lansing Board of Water and Light, 1201 South Washington Avenue, Lansing, MI 48910–1650, 517–702–6639, or *Lori.Myott@lbwl.com.*

i. *FERC Contact:* Diana Shannon, (202) 502–6136, *diana.shannon@ferc.gov.*

j. *Deadline for filing comments, motions to intervene, and protests:* December 9, 2019.

The Commission strongly encourages electronic filing. Please file comments, motions to intervene, and protests using the Commission's eFiling system at *http://www.ferc.gov/docs-filing/efiling.asp.* Commenters can submit brief comments up to 6,000 characters, without prior registration, using the eComment system at *http://www.ferc.gov/docs-filing/ecomment.asp.* You must include your name and contact information at the end of your comments. For assistance, please contact FERC Online Support at *FERCOnlineSupport@ferc.gov,* (866) 208–3676 (toll free), or (202) 502–8659 (TTY). In lieu of electronic filing, please send a paper copy to: Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426. The first page of any filing should include docket number P–10684–095. Comments emailed to Commission staff are not considered part of the Commission record.

The Commission's Rules of Practice and Procedure require all intervenors filing documents with the Commission to serve a copy of that document on each person whose name appears on the official service list for the project. Further, if an intervenor files comments or documents with the Commission relating to the merits of an issue that may affect the responsibilities of a particular resource agency, they must also serve a copy of the document on that resource agency.

k. *Description of Request:* The applicant proposes to surrender its license for the project. The project has not operated since 2013 due to mechanical equipment problems. No ground disturbance is proposed and

project features will remain in place. The applicant would retain ownership of the dam and maintain the current reservoir elevation of 833.4 ± 0.2 NGVD29. In order to decommission the project facilities, the applicant proposes to close the intake for the units with steel bulkheads and to disconnect the project generators from the grid. The applicant proposes to keep the generating equipment in place. The powerhouse would remain secured with the existing fencing and security system. The current license expires on December 31, 2023.

l. *Locations of the Application:* A copy of the application is available for inspection and reproduction at the Commission's Public Reference Room, located at 888 First Street NE, Room 2A, Washington, DC 20426, or by calling (202) 502–8371. This filing may also be viewed on the Commission's website at *http://www.ferc.gov* using the ''eLibrary'' link. Enter the docket number excluding the last three digits in the docket number field to access the document. You may also register online at *http://www.ferc.gov/docs-filing/esubscription.asp* to be notified via email of new filings and issuances related to this or other pending projects. For assistance, call 1–866–208–3676 or email *FERCOnlineSupport@ferc.gov,* for TTY, call (202) 502–8659. A copy is also available for inspection and reproduction at the address in item (h) above. Agencies may obtain copies of the application directly from the applicant.

m. Individuals desiring to be included on the Commission's mailing list should so indicate by writing to the Secretary of the Commission.

n. *Comments, Protests, or Motions to Intervene:* Anyone may submit comments, a protest, or a motion to intervene in accordance with the requirements of Rules of Practice and Procedure, 18 CFR 385.210, .211, .214, respectively. In determining the appropriate action to take, the Commission will consider all protests or other comments filed, but only those who file a motion to intervene in accordance with the Commission's Rules may become a party to the proceeding. Any comments, protests, or motions to intervene must be received on or before the specified comment date for the particular application.

o. *Filing and Service of Documents:* Any filing must (1) bear in all capital letters the title COMMENTS, PROTEST, or MOTION TO INTERVENE as applicable; (2) set forth in the heading the name of the applicant and the project number of the application to which the filing responds; (3) furnish the name, address, and telephone number of the person commenting, protesting or intervening; and (4) otherwise comply with the requirements of 18 CFR 385.2001 through 385.2005. All comments, motions to intervene, or protests must set forth their evidentiary basis. Any filing made by an intervenor must be accompanied by proof of service on all persons listed in the service list prepared by the Commission in this proceeding, in accordance with 18 CFR 385.2010.

Dated: November 7, 2019.

Kimberly D. Bose,

Secretary.

[FR Doc. 2019–24769 Filed 11–14–19; 8:45 am]

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket Nos. CP19–491–000; CP19–494–000]

National Fuel Gas Supply Corporation and Transcontinental Gas Pipe Line Company, LLC; Notice of Schedule For Environmental Review of The FM100 Project and Leidy South Project

On July 18, 2019 and July 31, 2019, National Fuel Gas Supply Corporation (National Fuel) and Transcontinental Gas Pipe Line Company, LLC (Transco) filed their respective applications in Docket Nos. CP19–491–000 and CP19–494–000 each requesting a Certificate of Public Convenience and Necessity pursuant to Sections 7(b) and 7(c) of the Natural Gas Act to construct, operate, and abandon certain natural gas pipeline facilities. The proposed projects are the FM100 Project, proposed by National Fuel, and the Leidy South Project, proposed by Transco (Projects). The FM100 Project would allow National Fuel to modernize a portion of its existing system and provide an additional 330,000 dekatherms per day (Dth/d) of incremental natural gas transportation capacity, all of which is fully subscribed to Transco. The Leidy South Project would provide 582,400 Dth/d of firm natural gas transportation service from shale producing areas in northern and western Pennsylvania to Transco's customers in the eastern United States. The Federal Energy Regulatory Commission (Commission or FERC) staff's environmental review of the Projects will be presented in a single environmental assessment (EA) because of the interrelatedness of the Projects.

On July 31, 2019 and August 14, 2019, the Commission issued Notices of Application for the FM100 Project and the Leidy South Project, respectively. Among other things, those notices alerted agencies issuing federal authorizations of the requirement to complete all necessary reviews and to reach a final decision on a request for a federal authorization within 90 days of the date of issuance of the Commission staff's EA for the Projects. This instant notice identifies the FERC staff's planned schedule for the completion of the EA for the Projects.

Schedule for Environmental Review

Issuance of EA—February 7, 2020
90-day Federal Authorization Decision Deadline—May 7, 2020

If a schedule change becomes necessary, additional notice will be provided so that the relevant agencies are kept informed of the Projects' progress.

Project Description

National Fuel and Transco are proposing to construct and operate interdependent natural gas infrastructure projects, which are both located entirely within Pennsylvania. The FM100 Project consists of 29.5 miles of new 20-inch-diameter pipeline in McKean and Potter Counties (Line YM58); 1.4 miles of 24-inch-diameter pipeline loop [1] in Potter County (YM224 Loop); 0.4 mile of 12-inch-diameter pipeline in McKean County (Line KL Extension); construction of new Marvindale Compressor Station in McKean County; construction of new Tamarack Compressor Station in Clinton County; construction of the Marvindale Interconnect in McKean County; construction of the Carpenter Hollow over-pressurization protection station in Potter County; abandonment in place of a 44.9-mile-long portion of the existing 12-inch-diameter FM100 Pipeline in Clearfield, Elk, and Potter Counties; abandonment by removal of the existing Costello Compressor Station in Potter County; abandonment by removal of an existing meter station WHP–MS–4317X in Potter County; and installation and abandonment of appurtenances, such as mainline valves and anode beds, associated with the above facilities.

The Leidy South Project consists of 3.5 miles of 42-inch-diameter pipeline loop in Lycoming County (Benton Loop); 2.5 miles of 36-inch-diameter pipeline loop in Clinton County (Hilltop Loop); 6.3 miles of 36-inch-diameter

[1] A pipeline loop is a segment of pipe constructed parallel to an existing pipeline to increase capacity.

pipeline loop and related abandonment of a 5.8-mile-long portion of the 23.4-inch-diameter Leidy Line A Pipeline (Hensel Replacement) in Clinton County; modification of existing Compressor Station 605 in Wyoming County; modification of existing Compressor Station 610 in Columbia County; construction of new Compressor Station 607 in Luzerne County; construction of new Compressor Station 620 in Schuylkill County; installation of associated facilities such as mainline valves, communication facilities, and pig [2] launchers and receivers, and other appurtenances.

Background

On March 5, 2019, the Commission issued a *Notice of Intent to Prepare an Environmental Assessment for the Proposed FM100 Project and the Leidy South Project and Request for Comments on Environmental Issues and Notice of Public Scoping Sessions* (NOI). The NOI was issued during the pre-filing review of the Projects in Docket Nos. PF17–10–000 and PF19–1–000 and was sent to affected landowners; federal, state, and local government agencies; elected officials; environmental and public interest groups; Native American tribes; other interested parties; and local libraries and newspapers. In response to the NOI, the Commission received comments from the U.S. Environmental Protection Agency, U.S. Fish and Wildlife Service, Pennsylvania Department of Agriculture, Pennsylvania Department of Conservation and Natural Resources, Pennsylvania Department of Transportation; 1 state senator; 1 state representative; 3 local agencies; 3 special interest groups; 35 landowners; and 130 individuals.

The majority of issues raised by the commentors are related to the Leidy South Project's proposed Compressor Station 620 in Hegins, Pennsylvania, including impacts on air quality, noise, nearby residences, wildlife, prime farmland and organic farming, visual resources, waterbodies, zoning, future expansion of the facility, emergency response, and safety. Additional issues raised on the Projects include impacts on threatened and endangered species; the Hensel Replacement impact on the Tamarack Swamp Natural Area; landowner requests for removal of the to-be-abandoned Line FM100 from their property; and segmentation of projects under FERC review. All substantive comments will be addressed in the EA.

The U.S. Environmental Protection Agency and the U.S. Army Corps of Engineers are cooperating agencies in the preparation of the EA.

Additional Information

In order to receive notification of the issuance of the EA and to keep track of all formal issuances and submittals in specific dockets, the Commission offers a free service called eSubscription. This can reduce the amount of time you spend researching proceedings by automatically providing you with notification of these filings, document summaries, and direct links to the documents. Go to *www.ferc.gov/docs-filing/esubscription.asp.*

Additional information about the Projects is available from the Commission's Office of External Affairs at (866) 208–FERC or on the FERC website (*www.ferc.gov*). Using the ''eLibrary'' link, select ''General Search'' from the eLibrary menu, enter the selected date range and ''Docket Number'' excluding the last three digits (*i.e.,* CP19–491 or CP19–494), and follow the instructions. For assistance with access to eLibrary, the helpline can be reached at (866) 208–3676, TTY (202) 502–8659, or at *FERCOnlineSupport@ferc.gov.* The eLibrary link on the FERC website also provides access to the texts of formal documents issued by the Commission, such as orders, notices, and rule makings.

Dated: November 8, 2019.

Kimberly D. Bose,

Secretary.

[2] A ''pig'' is a tool that the pipeline company inserts into and pushes through the pipeline for cleaning the pipeline, conducting internal inspections, or other purposes.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. IC19–33–000]

Commission Information Collection Activities (FERC–539); Comment Request; Extension

AGENCY: Federal Energy Regulatory Commission.

ACTION: Notice of information collection and request for comments.

SUMMARY: In compliance with the requirements of the Paperwork Reduction Act of 1995 (PRA), the Federal Energy Regulatory Commission (Commission or FERC) is soliciting public comment on the currently approved information collection, FERC–539 (Gas Pipeline Certificates: Import and Export Related Applications) and submitting the information collection to the Office of Management and Budget (OMB) for review. Any interested person may file comments directly with OMB and should address a copy of those comments to the Commission as explained below.

DATES: Comments on the collection of information are due December 16, 2019.

ADDRESSES: Comments filed with OMB, identified by the OMB Control No. 1902–0062, should be sent via email to the Office of Information and Regulatory Affairs: *oira_submission@omb.gov.* Attention: Federal Energy Regulatory Commission Desk Office.

A copy of the comments should also be sent to the Commission, in Docket No. IC19–33–000, by either of the following methods:

- *eFiling at Commission's Website: http://www.ferc.gov/docs-filing/efiling.asp.*
- *Mail:* Federal Energy Regulatory Commission, Secretary of the Commission, 888 First Street NE, Washington, DC 20426.

Instructions: All submissions must be formatted and filed in accordance with submission guidelines at: *http://www.ferc.gov/help/submission-guide.asp.* For user assistance, contact FERC Online Support by email at *ferconlinesupport@ferc.gov,* or by phone at: (866) 208–3676 (toll-free), or (202) 502–8659 for TTY.

Docket: Users interested in receiving automatic notification of activity in this docket or in viewing/downloading comments and issuances in this docket may do so at *http://www.ferc.gov/docs-filing/docs-filing.asp.*

FOR FURTHER INFORMATION CONTACT: Ellen Brown may be reached by email at *DataClearance@FERC.gov,* telephone at (202) 502–8663, and fax at (202) 273–0873.

SUPPLEMENTARY INFORMATION: On September 3, 2019 (84 FR 46005), the Commission published a Notice in the **Federal Register** in Docket No. IC19–33–000 requesting public comments. The Commission received no comments and is noting that in the related submittal to OMB.

Title: FERC–539 (Gas Pipeline Certificates: Import and Export Related Applications).

OMB Control No.: 1902–0062.

Type of Request: Three-year extension of the FERC–539 with no changes to the reporting and recordkeeping requirements.[1]

[1] On 10/29/2019, FERC submitted a request to OMB for an emergency extension. On 10/31/2019, OMB granted a 2-month extension for FERC–539.

Abstract: Section 3 of the Natural Gas Act (NGA) (Pub. L. 75–688) (15 U.S.C. 717–717w) provides, in part, that . . . no person shall export any natural gas from the United States to a foreign country or import any natural gas from a foreign country without first having secured and order from the Commission authorizing it to do so. The 1992 amendments to Section 3 of the NGA concern importation or exportation from/to a nation which has a free trade agreement with the United States, and requires that such importation or exportation: (1) Shall be deemed to be a first sale, *i.e.,* not a sale for a resale, and (2) Shall be deemed to be consistent with the public interest, and applications for such importation or exportation shall be granted without modification or delay.

With the ratification of the North American Free Trade Agreement and the Canadian Free Trade Agreement, the Federal regulatory focus on construction, operation, and siting of import and export facilities increased significantly.

Estimate of Annual Burden.[2] The Commission estimates the annual public reporting burden and cost [3] for the information collection as:

FERC–539, GAS PIPELINE CERTIFICATES: IMPORT & EXPORT RELATED APPLICATIONS

Number of respondents	Number of responses per respondent	Total number of responses	Average burden hours & average cost per response ($)	Total annual burden hours & total annual cost ($)	Cost per respondent ($)
(1)	(2)	(1) × (2) = (3)	(4)	(3) × (4) = (5)	(5) ÷ (1) = (6)
6	2	12	15 hours; $1,200	180 hours; $14,400	$2,400

Comments: Comments are invited on: (1) Whether the collection of information is necessary for the proper performance of the functions of the Commission, including whether the information will have practical utility; (2) the accuracy of the agency's estimates of the burden and cost of the collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility and clarity of the information collection; and (4) ways to minimize the burden of the collection of information on those who are to respond, including the use of automated collection techniques or other forms of information technology.

Dated: November 5, 2019.

Kimberly D. Bose,

Secretary.

BILLING CODE 6560–50–P

FEDERAL RESERVE SYSTEM

Formations of, Acquisitions by, and Mergers of Bank Holding Companies

The companies listed in this notice have applied to the Board for approval, pursuant to the Bank Holding Company Act of 1956 (12 U.S.C. 1841 *et seq.*) (BHC Act), Regulation Y (12 CFR part 225), and all other applicable statutes and regulations to become a bank holding company and/or to acquire the assets or the ownership of, control of, or the power to vote shares of a bank or bank holding company and all of the banks and nonbanking companies owned by the bank holding company, including the companies listed below.

The applications listed below, as well as other related filings required by the Board, if any, are available for immediate inspection at the Federal Reserve Bank indicated. The applications will also be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing on the standards enumerated in the BHC Act (12 U.S.C. 1842(c)). If the proposal also involves the acquisition of a nonbanking company, the review also includes whether the acquisition of the nonbanking company complies with the standards in section 4 of the BHC Act (12 U.S.C. 1843), and interested persons may express their views in writing on the standards enumerated in section 4. Unless otherwise noted, nonbanking activities will be conducted throughout the United States.

[2] Burden is defined as the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a federal agency. See 5 CFR 1320 for additional information on the definition of information collection burden.

[3] The Commission staff estimates that industry is similarly situated in terms of hourly cost (for wages plus benefits). Based on the Commission's FY (Fiscal Year) 2019 average cost (for wages plus benefits), $80.00/hour is used.

Comments regarding each of these applications must be received at the Reserve Bank indicated or the offices of the Board of Governors, Ann E. Misback, Secretary of the Board, 20th Street and Constitution Avenue NW, Washington, DC 20551–0001, not later than November 22, 2019.

A. Federal Reserve Bank of Boston (Prabal Chakrabarti, Senior Vice President) 600 Atlantic Avenue, Boston, Massachusetts 02210–2204. Comments can also be sent electronically to *BOS.SRC.Applications.Comments@bos.frb.org:*

1. *Eastern Bank Corporation, Boston, Massachusetts;* through its subsidiary, Eastern Bank, to retain voting shares of Numerated Growth Technologies, Inc., both of Boston, Massachusetts, and thereby continue to engage in software development and data processing pursuant to section 4(c)(8) of the BHC Act.

B. Federal Reserve Bank of Cleveland (Nadine Wallman, Vice President) 1455 East Sixth Street, Cleveland, Ohio 44101–2566. Comments can also be sent electronically to *Comments.applications@clev.frb.org:*

1. *Farmers National Banc Corp, Canfield, Ohio;* to acquire Maple Leaf Financial, Inc., and thereby indirectly acquire Geauga Savings Bank, both of Newbury, Ohio, and thereby operate a savings association pursuant to section 4(c)(8) of the BHC Act.

Board of Governors of the Federal Reserve System, November 8, 2019.

Michele Taylor Fennell,

Assistant Secretary of the Board.

BILLING CODE P

GENERAL SERVICES ADMINISTRATION

[Notice–PBS–2019–10; Docket No. 2019–0002; Sequence No. 24]

Notice of Intent To Prepare an Environmental Impact Statement (EIS) for the Chet Holifield Federal Building in Laguna Niguel, California

AGENCY: Public Buildings Service (PBS), General Services Administration (GSA).

ACTION: Scoping announcement.

SUMMARY: GSA intends to prepare an EIS to analyze the potential impacts from the proposed alternatives to address the long-term housing of all the tenants of the Chet Holifield Federal Building. The building is owned and managed by GSA and is occupied by various federal agency tenants, with the United States Citizenship and Immigration Services (USCIS) serving as the largest tenant.

DATES: The Public Scoping Period will begin on Friday, November 8, 2019. Interested parties are encouraged to provide written comments regarding the scope of the EIS on or before Tuesday, December 10, 2019.

ADDRESSES: Written comments can be submitted by either of the following methods:

- *Email: osmahn.kadri@gsa.gov.*
- *Postal Mail/Commercial Delivery:* ATT: Osmahn Kadri, 50 United Nations Plaza, Room 3345, Mailbox 9, San Francisco, CA 94102.

The views and comments of the public are necessary in helping to determine the scope and content of the environmental analysis.

FOR FURTHER INFORMATION CONTACT: Osmahn A. Kadri, Regional Environmental Quality Advisor/NEPA Project Manager, GSA, at 415–522–3617.

SUPPLEMENTARY INFORMATION:

Background

The Chet Holifield Federal Building was originally built in 1970 by the Aerospace and Systems Group of North American Rockwell Corporation, although it was never occupied by them. The building and site was transferred to the Federal Government for use by federal agencies in March of 1974. As a result of the age and current condition of the Chet Holifield Federal Building, there are a number of issues with the building to be addressed, including abatement of asbestos containing materials and enhancement of the building's structural system.

The development of this project necessitates an Environmental Impact Statement (EIS) under the National Environmental Policy Act (NEPA) and the GSA Public Buildings Service NEPA Desk Guide as well as Council on Environmental Quality Laws, Regulations, and Executive Orders.

Alternatives

The EIS will consider two ''action'' alternatives and one ''no action'' alternative. One action alternative consists of relocation of current tenants into lease space primarily throughout the Orange County, California market. Some tenants may be relocated outside of Orange County. The existing Chet Holifield Federal Building and surrounding government property would be turned over to the GSA Real Property Utilization Disposal Division.

The other action alternative consists of construction of a new federal office building south of the existing Chet Holifield Federal Building for the USCIS and relocating all other tenants into lease space primarily within the Orange County market. The existing building and the remainder of the property not retained for construction of the new Federal Office Building would be turned over to the GSA Real Property Utilization Disposal Division.

The ''no action'' alternative assumes that the current issues with the Chet Holifield Federal Building would not be addressed and that operations would continue under current conditions.

Dated: November 7, 2019.

Jared Bradley,

Director, Portfolio Management Division, Pacific Rim Region, Public Buildings Service.

GENERAL SERVICES ADMINISTRATION

[OMB Control No. 3090–0310; Docket No. 2019–0001; Sequence No. 8]

Submission for OMB Review; Nondiscrimination in Federal Financial Assistance Programs, GSA Form 3702

AGENCY: Office of Civil Rights, General Services Administration (GSA).

ACTION: Notice of request for comments regarding an existing OMB clearance.

SUMMARY: Under the provisions of the Paperwork Reduction Act, the Regulatory Secretariat Division will be submitting to the Office of Management and Budget (OMB) a request to review and approve an existing information collection requirement regarding OMB Control No: 3090–0310; Nondiscrimination in Federal Financial Assistance Programs, GSA 3702. This information is needed to facilitate nondiscrimination in GSA's Federal Financial Assistance Programs, consistent with Federal civil rights laws and regulations that apply to recipients of Federal financial assistance.

DATES: *Submit comments on or before:* December 16, 2019.

FOR FURTHER INFORMATION CONTACT: Evelyn Britton, Branch Manager, External Programs Branch, Office of Civil Rights, at telephone 202–501–0767 or via email to *evelyn.britton@gsa.gov.*

ADDRESSES: Submit comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, by any of the following methods:

- *Regulations.gov: http://www.regulations.gov.*

Submit comments via the Federal eRulemaking portal by searching the

OMB control number. Select the link ''Submit a Comment'' that corresponds with ''Information Collection 3090–0310, Nondiscrimination in Federal Financial Assistance Programs, GSA 3702''. Follow the instructions provided at the ''Submit a Comment'' screen. Please include your name, company name (if any), and ''Information Collection 3090–0310, Nondiscrimination in Federal Financial Assistance Programs, GSA 3702'' on your attached document.

- *Mail:* General Services Administration, Regulatory Secretariat Division (MVCB), 1800 F Street NW, Washington, DC 20405. ATTN: Ms. Mandell/IC 3090–0228, Nondiscrimination in Federal Financial Assistance Programs, GSA 3702.

Instructions: Please submit comments only and cite Information Collection 3090–0310, Nondiscrimination in Federal Financial Assistance Programs, GSA 3702, in all correspondence related to this collection. Comments received generally will be posted without change to *http://www.regulations.gov,* including any personal and/or business confidential information provided. To confirm receipt of your comment(s), please check *www.regulations.gov,* approximately two to three days after submission to verify posting (except allow 30 days for posting of comments submitted by mail).

SUPPLEMENTARY INFORMATION:

A. Purpose

GSA has mission responsibilities related to monitoring and enforcing compliance with Federal civil rights laws and regulations that apply to Federal financial assistance programs administered by GSA. Specifically, those laws provide that no person on the ground of race, color, national origin, disability, sex or age shall be excluded from participation in, be denied the benefits of, or be otherwise subjected to discrimination under any program in connection with which Federal financial assistance is extended under laws administered in whole, or in part, by GSA.

These mission responsibilities generate the requirement to request and obtain certain data from recipients of Federal surplus property for the purpose of determining compliance, such as the number of individuals, based on race and ethnic origin, of the recipient's eligible and actual serviced population; race and national origin of those denied participation in the recipient's program(s); non-English languages encountered by the recipient's program(s) and how the recipient is addressing meaningful access for individuals that are Limited English Proficient; whether there has been complaints or lawsuits filed against the recipient based on prohibited discrimination and whether there has been any findings; and whether the recipient's facilities are accessible to qualified individuals with disabilities.

B. Annual Reporting Burden

Respondents: *1,200.*
Responses Per Respondent: *1.*
Total Responses: *1,200.*
Hours Per Response: *2.*
Total Burden Hours: *2400.*

C. Public Comments

A notice published in the **Federal Register** at 84 FR 44620 on August 26, 2019. No comments were received.

Public comments are particularly invited on: Whether this collection of information will have practical utility; whether our estimate of the public burden of this collection of information is accurate, and based on valid assumptions and methodology; ways to enhance the quality, utility, and clarity of the information to be collected; and ways in which we can minimize the burden of the collection of information on those who are to respond, through the use of appropriate technological collection techniques or other forms of information technology.

Obtaining Copies of Proposals: Requesters may obtain a copy of the information collection documents from the General Services Administration, Regulatory Secretariat Division (MVCB), 1800 F Street NW, Washington, DC 20405, telephone 202–501–4755. Please cite OMB Control No. 3090–0310, Nondiscrimination in Federal Financial Assistance Programs, GSA 3702, in all correspondence.

Dated: November 7, 2019.

David A. Shive,

Chief Information Officer.

BILLING CODE 6820–34–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

[30Day–20–19BIW]

Agency Forms Undergoing Paperwork Reduction Act Review

In accordance with the Paperwork Reduction Act of 1995, the Centers for Disease Control and Prevention (CDC) has submitted the information collection request titled Evaluation of the DP18–1801 Healthy Schools Program to the Office of Management and Budget (OMB) for review and approval. CDC previously published a ''Proposed Data Collection Submitted for Public Comment and Recommendations'' notice on July 25, 2019 to obtain comments from the public and affected agencies. CDC received one comment related to the previous notice. This notice serves to allow an additional 30 days for public and affected agency comments.

CDC will accept all comments for this proposed information collection project. The Office of Management and Budget is particularly interested in comments that:

(a) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(b) Evaluate the accuracy of the agencies estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

(c) Enhance the quality, utility, and clarity of the information to be collected;

(d) Minimize the burden of the collection of information on those who are to respond, including, through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses; and

(e) Assess information collection costs.

To request additional information on the proposed project or to obtain a copy of the information collection plan and instruments, call (404) 639–7570 or send an email to *omb@cdc.gov.* Direct written comments and/or suggestions regarding the items contained in this notice to the Attention: CDC Desk Officer, Office of Management and Budget, 725 17th Street NW, Washington, DC 20503 or by fax to (202) 395–5806. Provide written comments within 30 days of notice publication.

Proposed Project

Evaluation of the DP18–1801 Healthy Schools Program—New—National Center for Chronic Disease Prevention and Health Promotion (NCCDPHP), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

The Centers for Disease Control and Prevention's (CDC) School Health Branch (SHB) requests a three-year OMB

approval to conduct a new information collection entitled Evaluation of the DP18–1801 Healthy Schools Program. The DP18–1801 Healthy Schools Program builds upon previous CDC efforts designed to enhance the capacity of state education agencies (SEAs) to adopt and implement evidence-based policies, practices, and programs that support health among the nation's youth. The purpose of the DP18–1801 Healthy Schools Program is to: (1) Increase the number of students who consume nutritious food and beverages (*i.e.,* those aligned with the *Dietary Guidelines for Americans*); (2) increase the number of students who participate in daily physical education and physical activity; and (3) increase the number of students who can effectively manage their chronic health conditions. The evaluation approach is a multisite, embedded case study design, consisting of both process and outcome components, focusing on three 1801 state grantees and a subset of their targeted LEAs and schools. The process component will assess implementation of strategies and activities at the state, local, and school levels and their integration across levels; fidelity of implementation; implementation facilitators and barriers; and contributions of national and state level TA towards program achievements. Three primary data collection methods will be used: (1) Key informant interviews (KII) conducted during in-person site visits or by phone, (2) Web-based surveys, and (3) review of secondary data sources. CDC is requesting approval for an estimated 265 annual burden hours.

ESTIMATED ANNUALIZED BURDEN HOURS

Type of respondents	Form name	Number of respondents	Number of responses per respondent	Average burden per response (in hours)
SEA staff	Web-Survey	3	1	75/60
	Key-Informant Interview	9	1	75/60
LEA staff	Web-Survey	30	1	75/60
	Key-Informant Interview	12	1	75/60
School staff	Web-Survey	210	1	75/60
	Key-Informant Interview	54	1	75/60

Jeffrey M. Zirger,

Lead, Information Collection Review Office, Office of Scientific Integrity, Office of Science, Centers for Disease Control and Prevention.

BILLING CODE 4163–18–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration for Children and Families

Proposed Information Collection Activity; Tribal Maternal, Infant, and Early Childhood Home Visiting Program Form 2: Grantee Performance Measures (OMB #0970–0500)

AGENCY: Office of Child Care; Administration for Children and Families; HHS.

ACTION: Request for public comment.

SUMMARY: The Administration for Children and Families (ACF) is requesting a 3-year extension of the ACF-Tribal Maternal, Infant, and Early Childhood Home Visiting (Tribal MIECHV) Program Form 2: Grantee Performance Measures (OMB #0970–0500; Expiration date 8/31/2020). There are no changes requested to the form.

DATES: *Comments due within 60 days of publication.* In compliance with the requirements of Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, the Administration for Children and Families is soliciting public comment on the specific aspects of the information collection described above.

ADDRESSES: Copies of the proposed collection of information can be obtained and comments may be forwarded by emailing *infocollection@acf.hhs.gov.* Alternatively, copies can also be obtained by writing to the Administration for Children and Families, Office of Planning, Research, and Evaluation (OPRE), 330 C Street SW, Washington, DC 20201, Attn: ACF Reports Clearance Officer. All requests, emailed or written, should be identified by the title of the information collection.

SUPPLEMENTARY INFORMATION:

Description: The Maternal, Infant, and Early Childhood Home Visiting Program (MIECHV) authorizes the Secretary of HHS (in Section 511(h)(2)(A)) to award grants to Indian tribes (or a consortium of Indian tribes), tribal organizations, or urban Indian organizations to conduct an early childhood home visiting program. The legislation set aside 3 percent of the total MIECHV program appropriation for grants to tribal entities. Tribal MIECHV grants, to the greatest extent practicable, are to be consistent with the requirements of the MIECHV grants to states and jurisdictions and include conducting a needs assessment and establishing quantifiable, measurable benchmarks.

The ACF, Office of Child Care, in collaboration with the Health Resources and Services Administration, Maternal and Child Health Bureau, awards grants for the Tribal MIECHV Program. The Tribal MIECHV grant awards support 5-year cooperative agreements to conduct community needs assessments; plan for and implement high-quality, culturally relevant, evidence-based home visiting programs in at-risk tribal communities; collect and report on performance measures; and participate in research and evaluation activities to build the knowledge base on home visiting among Native populations.

Specifically, the MIECHV legislation requires that State and Tribal MIECHV grantees collect performance data to measure improvements for eligible families in six specified areas (referred to as ''benchmark areas'') that encompass the major goals for the program. These include:

1. Improved maternal and newborn health;
2. Prevention of child injuries, child abuse, neglect, or maltreatment, and reduction in emergency department visits;
3. Improvement in school readiness and achievement;
4. Reduction in crime or domestic violence;
5. Improvement in family economic self-sufficiency; and
6. Improvement in the coordination and referrals for other community resources and supports.

Tribal MIECHV grantees are required to propose a plan for meeting the benchmark requirements specified in the legislation and must report on

improvement on constructs under each benchmark area. The Tribal Home Visiting (HV) Form 2 provides a template for Tribal MIECHV grantees to report data on their progress in improving performance under the six benchmark areas, as stipulated in the legislation.

ACF will continue to use Tribal HV Form 2 to:

- Track and improve the quality of benchmark measures data submitted by the Tribal grantees;
- Improve program monitoring and oversight;
- Improve rigorous data analyses that help to assess the effectiveness of the programs and enable ACF to better monitor projects; and
- Ensure adequate and timely reporting of program data to relevant federal agencies and stakeholders including Congress and members of the public.

Respondents: Tribal MIECHV Program Grantees.

ANNUAL BURDEN ESTIMATES

Instrument	Total number of respondents	Annual number of responses per respondent	Average burden hours per response	Annual burden hours
Tribal MIECHV Form 2	25	1	500	12,500

Estimated Total Annual Burden Hours: 12,500.

Comments: The Department specifically requests comments on (a) whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Consideration will be given to comments and suggestions submitted within 60 days of this publication.

Authority: Public Law 115–123, Section 511(h)(2)(A) of Title V of the Social Security Act.

Mary B. Jones,

ACF/OPRE Certifying Officer.

[FR Doc. 2019–24797 Filed 11–14–19; 8:45 am]

BILLING CODE 4184–77–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2016–N–2544]

Agency Information Collection Activities; Submission for Office of Management and Budget Review; Comment Request; Medical Devices; Current Good Manufacturing Practice Quality System Regulation

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing that a proposed collection of information has been submitted to the Office of Management and Budget (OMB) for review and clearance under the Paperwork Reduction Act of 1995 (PRA).

DATES: Fax written comments on the collection of information by December 16, 2019.

ADDRESSES: To ensure that comments on the information collection are received, OMB recommends that written comments be faxed to the Office of Information and Regulatory Affairs, OMB, Attn: FDA Desk Officer, Fax: 202–395–7285, or emailed to *oira_submission@omb.eop.gov.* All comments should be identified with the OMB control number 0910–0073. Also include the FDA docket number found in brackets in the heading of this document.

FOR FURTHER INFORMATION CONTACT: Amber Sanford, Office of Operations, Food and Drug Administration, Three White Flint North, 10A–12M, 11601 Landsdown St., North Bethesda, MD 20852, 301–796–8867, *PRAStaff@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION: In compliance with 44 U.S.C. 3507, FDA has submitted the following proposed collection of information to OMB for review and clearance.

Medical Devices: Current Good Manufacturing Practice Quality System Regulation—21 CFR Part 820

OMB Control Number 0910–0073—Extension

Under section 520(f) of the Federal Food, Drug, and Cosmetic Act (FD&C Act) (21 U.S.C. 360j(f)), the Secretary of the Department of Health and Human Services has the authority to prescribe regulations requiring that the methods used in, and the facilities and controls used for, the manufacture, preproduction design validation (including a process to assess the performance of a device, but not including an evaluation of the safety and effectiveness of a device), packing, storage, and installation of a device conform to current good manufacturing practice (CGMP), as described in such regulations, to assure that the device will be safe and effective and otherwise in compliance with the FD&C Act.

The CGMP quality system (QS) regulation implementing authority provided by this statutory provision is found under part 820 (21 CFR part 820) and sets forth basic CGMP requirements governing the design, manufacture, packing, labeling, storage, installation, and servicing of all finished medical devices intended for human use. The authority for this regulation is covered under sections 501, 502, 510, 513, 514, 515, 518, 519, 520, 522, 701, 704, 801, and 803 of the FD&C Act (21 U.S.C. 351, 352, 360, 360c, 360d, 360e, 360h, 360i, 360j, 360l, 371, 374, 381, and 383). The CGMP/QS regulation includes requirements for purchasing and service controls, clarifies recordkeeping requirements for device failure and complaint investigations, clarifies requirements for verifying/validating production processes and process or product changes, and clarifies requirements for product acceptance activities, quality data evaluations, and corrections of nonconforming product/quality problems.

Requirements are compatible with specifications in the international standards ''ISO 9001: Quality Systems Model for Quality Assurance in Design/Development, Production, Installation, and Servicing.'' The CGMP/QS information collections will assist FDA inspections of manufacturers for compliance with QS requirements encompassing design, production, installation, and servicing processes.

Section 820.20(a) through (e) requires management with executive responsibility to establish, maintain, and/or review the following topics: (1) The quality policy, (2) the organizational structure, (3) the quality plan, and (4) the quality system procedures of the organization. Section 820.22 requires the conduct and documentation of QS audits and reaudits. Section 820.25(b) requires the establishment of procedures to identify training needs and documentation of such training.

Section 820.30(a)(1) and (b) through (j) requires, in respective order, the establishment, maintenance, and/or documentation of the following topics: (1) Procedures to control design of class III and class II devices and certain class I devices as listed therein; (2) plans for design and development activities and updates; (3) procedures identifying, documenting, and approving design input requirements; (4) procedures defining design output, including acceptance criteria, and documentation of approved records; (5) procedures for formal review of design results and documentation of results in the design history file (DHF); (6) procedures for verifying device design and documentation of results and approvals in the DHF; (7) procedures for validating device design, including documentation of results in the DHF; (8) procedures for translating device design into production specifications; (9) procedures for documenting, verifying, and validating approved design changes before implementation of changes; and (10) the records and references constituting the DHF for each type of device.

Section 820.40 requires manufacturers to establish and maintain procedures controlling approval and distribution of required documents and document changes. Section 820.40(a) and (b) requires the establishment and maintenance of procedures for the review, approval, issuance, and documentation of required records (documents) and changes to those records.

Section 820.50(a) and (b) requires the establishment and maintenance of procedures and requirements to ensure service and product quality, records of acceptable suppliers, and purchasing data describing specified requirements for products and services.

Sections 820.60 and 820.65 require, respectively, the establishment and maintenance of procedures for identifying all products from receipt to distribution and for using control numbers to track surgical implants and life-sustaining or supporting devices and their components.

Section 820.70(a) through (e), (g)(1) through (3), (h), and (i) requires the establishment, maintenance, and/or documentation of the following topics: (1) Process control procedures; (2) procedures for verifying or validating changes to specification, method, process, or procedure; (3) procedures to control environmental conditions and inspection result records; (4) requirements for personnel hygiene; (5) procedures for preventing contamination of equipment and products; (6) equipment adjustment, cleaning, and maintenance schedules; (7) equipment inspection records; (8) equipment tolerance postings, procedures for utilizing manufacturing materials expected to have an adverse effect on product quality; and (9) validation protocols and validation records for computer software and software changes.

Sections 820.72(a), (b)(1) and (2), and 820.75(a) through (c) require, respectively, the establishment, maintenance, and/or documentation of the following topics: (1) Equipment calibration and inspection procedures; (2) national, international, or in-house calibration standards; (3) records that identify calibrated equipment and next calibration dates; (4) validation procedures and validation results for processes not verifiable by inspections and tests; (5) procedures for keeping validated processes within specified limits; (6) records for monitoring and controlling validated processes; and (7) records of the results of revalidation where necessitated by process changes or deviations.

Sections 820.80(a) through (e) and 820.86, respectively, require the establishment, maintenance, and/or documentation of the following topics: (1) Procedures for incoming acceptance by inspection, test, or other verification; (2) procedures for ensuring that in-process products meet specified requirements and the control of product until inspection and tests are completed; (3) procedures for, and records that show, incoming acceptance or rejection is conducted by inspections, tests, or other verifications; (4) procedures for, and records that show, finished devices meet acceptance criteria and are not distributed until device master record (DMR) activities are completed; (5) records in the device history record (DHR) showing acceptance dates, results, and equipment used; and (6) the acceptance/rejection identification of products from receipt to installation and servicing.

Sections 820.90(a), (b)(1) and (2), and 820.100 require, respectively, the establishment, maintenance and/or documentation of the following topics: (1) Procedures for identifying, recording, evaluating, and disposing of nonconforming product; (2) procedures for reviewing and recording concessions made for, and disposition of, nonconforming product; (3) procedures for reworking products, evaluating possible adverse rework effect and recording results in the DHR; (4) procedures and requirements for corrective and preventive actions, including analysis, investigation, identification and review of data, records, causes, and results; and (5) records for all corrective and preventive action activities.

Section 820.100(a)(1) through (7) states that procedures and requirements shall be established and maintained for corrective/preventive actions, including the following: (1) Analysis of data from process, work, quality, servicing records, investigation of nonconformance causes; (2) identification of corrections and their effectiveness; (3) recording of changes made; and (4) appropriate distribution and managerial review of corrective and preventive action information. Section 820.120 states that manufacturers shall establish/maintain procedures to control labeling storage/application, examination/release for storage and use, and to document those procedures.

Sections 820.120(b) and (d), 820.130, 820.140, 820.150(a) and (b), 820.160(a) and (b), and 820.170(a) and (b), respectively, require the establishment, maintenance, and/or documentation of the following topics: (1) Procedures for controlling and recording the storage, examination, release, and use of labeling; (2) the filing of labels/labeling used in the DHR; (3) procedures for controlling product storage areas and receipt/dispatch authorizations; (4) procedures controlling the release of products for distribution; (5) distribution records that identify consignee, product, date, and control numbers; and (6) instructions, inspection and test procedures that are made available, and the recording of results for devices requiring installation.

Sections 820.180(b) and (c), 820.181(a) through (e), 820.184(a) through (f), and 820.186 require, respectively, the maintenance of records that are: (1) Retained at prescribed site(s), made readily available and accessible to FDA, and retained for the device's life expectancy or for 2 years; (2) contained or referenced in a DMR consisting of device, process, quality assurance, packaging and labeling, and

installation, maintenance, and servicing specifications and procedures; (3) contained in a DHR and demonstrate the manufacture of each unit, lot, or batch of product in conformance with DMR and regulatory requirements include manufacturing and distribution dates, quantities, acceptance documents, labels and labeling, and control numbers; and (4) contained in a quality system record, consisting of references, documents, procedures, and activities not specific to particular devices.

Sections 820.198(a) through (g) and 820.200(a) through (d), respectively, require the establishment, maintenance, and/or documentation of the following topics: (1) Complaint files and procedures for receiving, reviewing, and evaluating complaints; (2) complaint investigation records identifying the device, complainant, and relationship of the device to the incident; (3) complaint records that are reasonably accessible to the manufacturing site or at prescribed sites; (4) procedures for performing and verifying that device servicing requirements are met and that service reports involving complaints are processed as complaints; and (5) service reports that record the device, service activity, and test and inspection data.

Section 820.250 requires the establishment and maintenance of procedures to identify valid statistical techniques necessary to verify process and product acceptability; and sampling plans, when used, which are written and based on valid statistical rationale; and procedures for ensuring adequate sampling methods.

The CGMP/QS regulation added design and purchasing controls, modified previous critical device requirements, revised previous validation and other requirements, and harmonized device CGMP requirements with QS specifications in the international standard ''ISO 9001: Quality Systems Model for Quality Assurance in Design/Development, Production, Installation, and Servicing.'' The rule does not apply to manufacturers of components or parts of finished devices, or to manufacturers of human blood and blood components subject to 21 CFR part 606. With respect to devices classified in class I, design control requirements apply only to class I devices listed in § 820.30(a)(2) of the regulation. The rule imposes burden upon: (1) Finished device manufacturer firms, which are subject to all recordkeeping requirements; (2) finished device contract manufacturers, specification developers; and (3) re-packer, re-labelers, and contract sterilizer firms, which are subject only to requirements applicable to their activities. In addition, remanufacturers of hospital single-use devices are now considered to have the same requirements as manufacturers in regard to the regulation.

The establishment, maintenance, and/or documentation of procedures, records, and data required by the regulation assists FDA in determining whether firms are in compliance with CGMP requirements, which are intended to ensure that devices meet their design, production, labeling, installation, and servicing specifications and, thus are safe, effective, and suitable for their intended purpose. In particular, compliance with CGMP design control requirements should decrease the number of design-related device failures that have resulted in deaths and serious injuries.

The CGMP/QS regulation applies to approximately 27,074 respondents. This estimate is based on a query of the Agency's registration and listing database. Respondents to this information collection have no reporting activities, but must make required records available for review or copying during FDA inspection. Except for manufacturers, not every type of firm is subject to every CGMP/QS requirement. For example, all are subject to Quality Policy (§ 820.20(a)), Document Control (§ 820.40), and other requirements, whereas only manufacturers and specification developers are subject to subpart C, Design Controls. The PRA burden placed on the 27,074 establishments is an average burden.

In the **Federal Register** of July 31, 2019 (84 FR 37317), FDA published a 60-day notice requesting public comment on the proposed collection of information. No comments were received.

FDA estimates the burden of this collection of information as follows:

TABLE 1—ESTIMATED ANNUAL RECORDKEEPING BURDEN [1]

Activity/21 CFR section	Number of recordkeepers	Number of records per recordkeeper	Total annual records	Average burden per recordkeeping	Total hours
Quality policy–820.20(a)	27,074	1	27,074	7	189,518
Organization–820.20(b)	27,074	1	27,074	4	108,296
Management review–820.20(c)	27,074	1	27,074	6	162,444
Quality planning–820.20(d)	27,074	1	27,074	10	270,740
Quality system procedures–820.20(e)	27,074	1	27,074	10	270,740
Quality audit–820.22	27,074	1	27,074	33	893,442
Training–820.25(b)	27,074	1	27,074	13	351,962
Design procedures–820.30(a)(1)	27,074	1	27,074	2	54,148
Design and development planning–820.30(b)	27,074	1	27,074	6	162,444
Design input–820.30(c)	27,074	1	27,074	2	54,148
Design output–820.30(d)	27,074	1	27,074	2	54,148
Design review–820.30(e)	27,074	1	27,074	23	622,702
Design verification–820.30(f)	27,074	1	27,074	37	1,001,738
Design validation–820.30(g)	27,074	1	27,074	37	1,001,738
Design transfer–820.30(h)	27,074	1	27,074	3	81,222
Design changes–820.30(i)	27,074	1	27,074	17	460,258
Design history file–820.30(j)	27,074	1	27,074	3	81,222
Document controls–820.40	27,074	1	27,074	9	243,666
Documentation approval and distribution and document changes–820.40(a) and (b)	27,074	1	27,074	2	54,148
Purchasing controls–820.50(a)	27,074	1	27,074	22	595,628
Purchasing data–820.50(b)	27,074	1	27,074	6	162,444
Identification–820.60	27,074	1	27,074	1	27,074
Traceability–820.65	27,074	1	27,074	1	27,074
Production and process controls–820.70(a)	27,074	1	27,074	2	54,148

TABLE 1—ESTIMATED ANNUAL RECORDKEEPING BURDEN [1]—Continued

Activity/21 CFR section	Number of recordkeepers	Number of records per recordkeeper	Total annual records	Average burden per recordkeeping	Total hours
Production and process changes and environmental control–820.70(b) and (c)	27,074	1	27,074	2	54,148
Personnel–820.70(d)	27,074	1	27,074	3	81,222
Contamination control–820.70(e)	27,074	1	27,074	2	54,148
Equipment maintenance schedule, inspection, and adjustment–820.70(g)(1)–(3)	27,074	1	27,074	1	27,074
Manufacturing material–820.70(h)	27,074	1	27,074	2	54,148
Automated processes–820.70(i)	27,074	1	27,074	8	216,592
Control of inspection, measuring, and test equipment–820.72(a)	27,074	1	27,074	5	135,370
Calibration procedures, standards, and records–820.72(b)(1)–(2)	27,074	1	27,074	1	27,074
Process validation–820.75(a)	27,074	1	27,074	3	81,222
Validated process parameters, monitoring, control methods, and data–820.75(b)	27,074	1	27,074	1	27,074
Revalidation–820.75(c)	27,074	1	27,074	1	27,074
Acceptance activities–820.80(a)–(e)	27,074	1	27,074	5	135,370
Acceptance status–820.86	27,074	1	27,074	1	27,074
Control of nonconforming product–820.90(a)	27,074	1	27,074	5	135,370
Nonconforming product review/disposition procedures and rework procedures–820.90(b)(1)–(2)	27,074	1	27,074	5	135,370
Procedures for corrective/preventive actions–820.100(a)(1)–(7)	27,074	1	27,074	12	324,888
Corrective/preventive activities–820.100(b)	27,074	1	27,074	1	27,074
Labeling procedures–820.120(b)	27,074	1	27,074	1	27,074
Labeling documentation–820.120(d)	27,074	1	27,074	1	27,074
Device packaging–820.130	27,074	1	27,074	1	27,074
Handling–820.140	27,074	1	27,074	6	162,444
Storage–820.150(a) and (b)	27,074	1	27,074	6	162,444
Distribution procedures and records–820.160(a) and (b)	27,074	1	27,074	1	27,074
Installation–820.170	27,074	1	27,074	2	54,148
Record retention period–820.180(b) and (c)	27,074	1	27,074	2	54,148
Device master record–820.181	27,074	1	27,074	1	27,074
Device history record–820.184	27,074	1	27,074	1	27,074
Quality system record–820.186	27,074	1	27,074	1	27,074
Complaint files–820.198(a)–(g)	27,074	1	27,074	5	135,370
Servicing procedures and reports–820.200(a) and (d)	27,074	1	27,074	3	81,222
Statistical techniques procedures and sampling plans–820.250	27,074	1	27,074	1	27,074
Total					9,421,752

[1] There are no capital costs or operating and maintenance costs associated with this collection of information.

Our estimated burden for the information collection reflects an overall increase of 812,928 hours. We attribute this adjustment to an increase in the number of respondents.

Dated: November 6, 2019.

Lowell J. Schiller,

Principal Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2010–N–0117]

Agency Information Collection Activities; Submission for Office of Management and Budget Review; Comment Request; Hypertension Indication: Drug Labeling for Cardiovascular Outcome Claims

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing that a proposed collection of information has been submitted to the Office of Management and Budget (OMB) for review and clearance under the Paperwork Reduction Act of 1995.

DATES: Fax written comments on the collection of information by December 16, 2019.

ADDRESSES: To ensure that comments on the information collection are received, OMB recommends that written comments be faxed to the Office of Information and Regulatory Affairs, OMB, Attn: FDA Desk Officer, Fax: 202–395–7285, or emailed to *oira_submission@omb.eop.gov.* All comments should be identified with the OMB control number 0910–0670. Also include the FDA docket number found in brackets in the heading of this document.

FOR FURTHER INFORMATION CONTACT: Domini Bean, Office of Operations, Food and Drug Administration, Three White Flint North, 10A–12M, 11601

Landsdown St., North Bethesda, MD 20852, 301–796–5733, *PRAStaff@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION: In compliance with 44 U.S.C. 3507, FDA has submitted the following proposed collection of information to OMB for review and clearance.

Hypertension Indication: Drug Labeling for Cardiovascular Outcome Claims OMB Control Number 0910–0670—Extension

This information collection request supports recommendations found in Agency guidance. The document entitled, ''Guidance for Industry; Hypertension Indication: Drug Labeling for Cardiovascular Outcome Claims,'' available from our website at *https://www.fda.gov/regulatory-information/search-fda-guidance-documents/hypertension-indication-drug-labeling-cardiovascular-outcome-claims,* encourages the submission of supplemental labeling and is intended to assist applicants in developing labeling for outcome claims for drugs that are indicated to treat hypertension, and to provide common labeling for antihypertensive drugs except where differences are clearly supported by clinical data.

With few exceptions, current labeling for antihypertensive drugs includes only the information that these drugs are indicated to reduce blood pressure; the labeling does not include information on the clinical benefits related to cardiovascular outcomes expected from such blood pressure reduction. However, blood pressure control is well established as beneficial in preventing serious cardiovascular events, and inadequate treatment of hypertension is acknowledged as a significant public health problem. We believe that the appropriate use of these drugs can be encouraged by making the connection between lower blood pressure and improved cardiovascular outcomes more explicit in labeling.

As discussed in the guidance, we therefore recommend the following information collection:

1. Section IV.C of the guidance requests that the CLINICAL STUDIES section of the Full Prescribing Information of the labeling should include a summary of placebo or active-controlled trials showing evidence of the specific drug's effectiveness in lowering blood pressure. If trials demonstrating cardiovascular outcome benefits exist, those trials also should be summarized in this section. Table 1 in section V of the guidance contains the specific drugs for which FDA has concluded that such trials exist. If there are no cardiovascular outcome data to cite, one of the following two paragraphs should appear:

- ''There are no trials of [DRUGNAME] or members of the [name of pharmacologic class] pharmacologic class demonstrating reductions in cardiovascular risk in patients with hypertension,'' or
- ''There are no trials of [DRUGNAME] demonstrating reductions in cardiovascular risk in patients with hypertension, but at least one pharmacologically similar drug has demonstrated such benefits.''

In the latter case, the applicant's submission generally should refer to table 1 in section V of the guidance. If the applicant believes that table 1 is incomplete, it should submit the clinical evidence for the additional information to Docket No. FDA–2008–D–0150. The labeling submission should reference the submission to the docket. We estimate that no more than one submission to the docket will be made annually from one company, and that each submission will take approximately 10 hours to prepare and submit. Recommendations for the CLINICAL STUDIES section of the Full Prescribing Information of the labeling are covered by FDA regulations at §§ 201.56 and 201.57 (21 CFR 201.56 and 201.57) and require such labeling. The information collection associated with these regulations is approved under OMB control number 0910–0572.

2. Section VI.B of the guidance requests that the format of the cardiovascular outcome claim submitted to FDA in a prior approval supplement include the following information:

- A statement that the submission is a cardiovascular outcome claim supplement, with reference to the guidance and related Docket No. FDA–2008–D–0150.
- Applicable FDA forms (*e.g.,* 356h, 3397).
- Detailed table of contents.
- Revised labeling to include:
  - Draft revised labeling conforming to the requirements in §§ 201.56 and 201.57, and
  - Marked-up copy of the latest approved labeling, showing all additions and deletions, with annotations of where supporting data (if applicable) are located in the submission.

We estimate that on average, 4 cardiovascular outcome claim supplements will be submitted annually from 4 different companies, and that each supplement will take approximately 20 hours to prepare and submit. The guidance also recommends that other labeling changes (*e.g.,* the addition of adverse event data) should be minimized and provided in separate supplements, and that the revision of labeling to conform to §§ 201.56 and 201.57 may require substantial revision to the ADVERSE REACTIONS or other labeling sections.

3. Section VI.C of the guidance states that applicants are encouraged to include the following statement in the drug's promotional materials:

- ''[DRUGNAME] reduces blood pressure, which reduces the risk of fatal and nonfatal cardiovascular events, primarily strokes and myocardial infarctions. Controlling high blood pressure should be part of comprehensive cardiovascular risk management, including, as appropriate, lipid control, diabetes management, antithrombotic therapy, smoking cessation, exercise, and limited sodium intake. Many patients will require more than one drug to achieve blood pressure goals.''

The inclusion of this statement in the promotional materials for the drug is exempt from OMB review under 5 CFR 1320.3(c)(2).

In the **Federal Register** of July 16, 2019 (84 FR 33952), we published a 60-day notice requesting public comment on the proposed collection of information. No comments were received.

We therefore estimate the burden of the information collection as follows:

TABLE 1—ESTIMATED ANNUAL REPORTING BURDEN [1]

Activity	Number of respondents	Number of responses per respondent	Total annual responses	Hours per response	Total hours
Submission to Docket No. FDA–2008–D–0150	1	1	1	10	10
Cardiovascular Outcome Claim Supplement Submission	4	1	4	20	80

TABLE 1—ESTIMATED ANNUAL REPORTING BURDEN [1]—Continued

Activity	Number of respondents	Number of responses per respondent	Total annual responses	Hours per response	Total hours
Total					90

[1] There are no capital costs or operating and maintenance costs associated with this collection of information.

Our estimate for the information collection reflects an overall increase of burden. This increase corresponds to an increase in submissions we have received over the last few years.

Dated: November 6, 2019.

Lowell J. Schiller,

Principal Associate Commissioner for Policy.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2010–D–0350]

Agency Information Collection Activities; Submission for Office of Management and Budget Review; Comment Request; Guidance for Tobacco Retailers on Tobacco Retailer Training Programs

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing that a proposed collection of information has been submitted to the Office of Management and Budget (OMB) for review and clearance under the Paperwork Reduction Act of 1995.

DATES: Fax written comments on the collection of information by December 16, 2019.

ADDRESSES: To ensure that comments on the information collection are received, OMB recommends that written comments be faxed to the Office of Information and Regulatory Affairs, OMB, Attn: FDA Desk Officer, Fax: 202–395–7285, or emailed to *oira_submission@omb.eop.gov*. All comments should be identified with the OMB control number 0910–0745. Also include the FDA docket number found in brackets in the heading of this document.

FOR FURTHER INFORMATION CONTACT: Amber Sanford, Office of Operations, Food and Drug Administration, Three White Flint North, 10A–12M, 11601 Landsdown St., North Bethesda, MD 20852, 301–796–8867, *PRAStaff@fda.hhs.gov*.

SUPPLEMENTARY INFORMATION: In compliance with 44 U.S.C. 3507, FDA has submitted the following proposed collection of information to OMB for review and clearance.

Guidance for Tobacco Retailers on Tobacco Retailer Training Programs

OMB Control Number 0910–0745—Extension

I. Background

The Family Smoking Prevention and Tobacco Control Act (Tobacco Control Act) (Pub. L. 111–31) does not require retailers to implement retailer training programs. However, the statute does provide for lesser civil money penalties for violations of access, advertising, and promotion restrictions of regulations issued under section 906(d) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 387f(d)), as amended by the Tobacco Control Act, for retailers who have implemented a training program that complies with standards developed by FDA for such programs. FDA intends to issue regulations establishing standards for approved retailer training programs. In the interim, the guidance is intended to assist tobacco retailers in implementing effective training programs for employees.

The guidance discusses recommended elements that should be covered in a training program, such as: (1) Federal laws restricting the access to, and the advertising and promotion of, cigarettes, smokeless, and covered tobacco products; (2) the health and economic effects of tobacco use, especially when the tobacco use begins at a young age; (3) written company policies against sales to minors and other restrictions on the access to, and the advertising and promotion of, tobacco products; (4) identification of the tobacco products sold in the retail establishment that are subject to the Federal laws prohibiting their sale to persons under the age of 18; (5) age verification methods; (6) practical guidelines for refusing sales; and (7) testing to ensure that employees have the required knowledge. The guidance recommends that retailers require current and new employees to take a written test prior to selling tobacco products and that refresher training be provided at least annually and more frequently as needed. The guidance recommends that retailers maintain certain written records documenting that all individual employees have been trained and that retailers retain these records for 4 years in order to be able to provide evidence of a training program during the 48-month time period covered by the civil money penalty schedules in section 103(q)(2)(A) of the Tobacco Control Act.

The guidance also recommends that retailers implement certain hiring and management practices as part of an effective retailer training program. The guidance suggests that applicants and current employees be notified both verbally and in writing of the importance of complying with laws prohibiting the sales of tobacco products to persons under the age of 18. In addition, FDA recommends that retailers implement an internal compliance check program and document the procedures and corrective actions for the program.

In the **Federal Register** of June 17, 2019 (84 FR 28059), FDA published a 60-day notice requesting public comment on the proposed collection of information. One comment was received that was PRA related.

The comment suggested that FDA should adjust the burden calculation for two areas, develop training programs and review and updating training programs. The comment suggested that it would reasonably take 1000 hours to develop a training program. FDA disagrees with this comment and does not intend to adjust the burden calculations for these areas. FDA has not made significant changes to this guidance and expects that many retailer training programs already meet the elements in the guidance, some retailers would update their training program to meet the elements in the guidance, and a smaller number of other retailers would develop a training program for the first time. FDA has not received any comments from affected retailers regarding the time needed to develop retailer training programs, or that the burden calculation was insufficient. Additionally, FDA has provided several resources, such as webinars and

downloadable materials through FDA's ''This is Our Watch'' Program, to assist retailers in complying with the requirements under the law. FDA estimates the burden of this collection of information as follows:

TABLE 1—ESTIMATED ANNUAL REPORTING BURDEN [1]

Activity	Number of respondents	Number of responses per respondent	Total annual responses	Average burden per response	Total hours
Develop training program	273,900	1	273,900	16	4,382,400
Develop written policy against sales to minors and employee acknowledgement	273,900	1	273,900	1	273,900
Develop internal compliance check program	273,900	1	273,900	8	2,191,200
Total					6,847,500

[1] There are no capital costs or operating and maintenance costs associated with this collection of information.

TABLE 2—ESTIMATED ANNUAL RECORDKEEPING BURDEN [1]

Activity	Number of recordkeepers	Number of records per recordkeeper	Total annual records	Average burden per recordkeeper	Total hours
Training program	273,900	4	1,095,600	0.25 (15 minutes)	273,900
Written policy against sales to minors and employee acknowledgement.	273,900	4	1,095,600	0.10 (6 minutes) ..	109,560
Internal compliance check program	273,900	2	547,800	0.5 (30 minutes) ..	273,900
Total					657,360

[1] There are no capital costs or operating and maintenance costs associated with this collection of information.

FDA's estimate of the number of respondents in tables 1 and 2 is based on data reported to the U.S. Department of Health and Human Services Substance Abuse and Mental Health Services Administration. According to the fiscal year 2009 Annual Synar Report, there are 372,677 total retail tobacco outlets in the 50 States, District of Columbia, and 8 U.S. territories that are accessible to youth (meaning that there is no State law restricting access to these outlets to individuals older than age 18). Inflating this number by about 10 percent to account for outlets in States that sell tobacco but are, by law, inaccessible to minors, results in an estimated total number of tobacco outlets of 410,000. We assume that 75 percent of tobacco retailers already have some sort of training program for age and identification verification. We expect that some of those retailer training programs already meet the elements in the guidance, some retailers would update their training program to meet the elements in the guidance, and other retailers would develop a training program for the first time. Thus, we estimate that two-thirds of tobacco retailers would develop a training program that meets the elements in the guidance (66% of 410,000 = 270,600).

FDA estimates that the total burden for this collection will be 7,504,860 hours (6,847,500 reporting + 657,360 recordkeeping).

We also estimate that there are approximately 5,000 to 10,000 vape shops; we assume that 66 percent of them, or 3,300 (66% × 5,000) of the low estimate, currently engage in retailing activities (Ref. 1).

Based on a review of the information collection since our last request for OMB approval, we have made no adjustments to our burden estimate.

II. Reference

The following reference is on display with the Dockets Management Staff (see **ADDRESSES**) and is available for viewing by interested persons between 9 a.m. and 4 p.m., Monday through Friday; it is not available electronically at *https://www.regulations.gov* as this reference is copyright protected. It may be available at the website address, if listed. FDA has verified the website addresses, as of the date this document publishes in the **Federal Register**, but websites are subject to change over time.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2012–D–0530]

Agency Information Collection Activities; Submission for Office of Management and Budget Review; Comment Request; Q-Submission Program for Medical Devices

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing that a proposed collection of information has been submitted to the Office of Management and Budget (OMB) for review and clearance under the Paperwork Reduction Act of 1995.

DATES: Fax written comments on the collection of information by December 16, 2019.

ADDRESSES: To ensure that comments on the information collection are received, OMB recommends that written comments be faxed to the Office of Information and Regulatory Affairs, OMB, Attn: FDA Desk Officer, Fax: 202–395–7285, or emailed to *oira_submission@omb.eop.gov.* All comments should be identified with the OMB control number 0910–0756. Also include the FDA docket number found

in brackets in the heading of this document.

FOR FURTHER INFORMATION CONTACT: Amber Sanford, Office of Operations, Food and Drug Administration, Three White Flint North, 10A–12M, 11601 Landsdown St., North Bethesda, MD 20852, 301–796–8867, *PRAStaff@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION: In compliance with 44 U.S.C. 3507, FDA has submitted the following proposed collection of information to OMB for review and clearance.

Q-Submission Program for Medical Devices

OMB Control Number 0910–0756—Extension

The guidance entitled ''Requests for Feedback and Meetings for Medical Device Submissions: The Q-Submission Program'' (*https://www.fda.gov/media/114034/download*) provides an overview of the mechanisms available to submitters through which they can request feedback from or a meeting with FDA regarding certain potential or planned medical device submissions reviewed by the Center for Devices and Radiological Health (CDRH) and the Center for Biologics Evaluation and Research (CBER). The guidance provides recommendations regarding certain types of Q-Submissions, such as Pre-Submissions, Submission Issue Requests, Study Risk Determinations, Informational Meetings, and other Q-Submissions Types and other uses of the Q-Submission Program.

For clarity and consistency with the guidance that describes the program, we are requesting that the title of the information collection request, OMB control number 0910–0756, be changed to ''Q-Submission Program for Medical Devices.''

In the **Federal Register** of August 13, 2019 (84 FR 40069), FDA published a 60-day notice requesting public comment on the proposed collection of information. No comments were received.

FDA estimates the burden of this collection of information as follows:

TABLE 1—ESTIMATED ANNUAL REPORTING BURDEN [1]

FDA Center	Number of respondents	Annual frequency per response	Total annual responses	Hours per response	Total hours
CDRH	3,502	1	3,502	137	479,774
CBER	91	1	91	137	12,467
Total					492,241

[1] There are no capital costs or operating and maintenance cost associated with this of information.

Respondents are medical device manufacturers subject to FDA's laws and regulations. FDA's annual estimate of 3,593 submissions is based on experienced recent trends. FDA's administrative and technical staffs, who are familiar with Q-Submissions, estimate that an average of 137 hours is required to prepare a Q-Submission.

Our estimated burden for the information collection reflects an overall increase of 143,713 hours. We attribute this adjustment to an increase in the number of submissions we received based on FY18 data.

Dated: November 6, 2019.

Lowell J. Schiller,

Principal Associate Commissioner for Policy.

Food and Drug Administration

[Docket No. FDA–2013–N–0796]

Agency Information Collection Activities; Proposed Collection; Comment Request; Testing Communications on Medical Devices and Radiation-Emitting Products

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA or Agency) is announcing an opportunity for public comment on the proposed collection of certain information by the Agency. Under the Paperwork Reduction Act of 1995 (PRA), Federal Agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information including each proposed extension of an existing collection of information, and to allow 60 days for public comment in response to the notice. This notice solicits comments on communication studies involving medical devices and radiation-emitting products regulated by FDA. This information will be used to explore concepts of interest and assist in the development and modification of communication messages and campaigns to fulfill the Agency's mission to protect the public health.

DATES: Submit either electronic or written comments on the collection of information by January 14, 2020.

ADDRESSES: You may submit comments as follows. Please note that late, untimely filed comments will not be considered. Electronic comments must be submitted on or before January 14, 2020. The *https://www.regulations.gov* electronic filing system will accept comments until 11:59 p.m. Eastern Time at the end of January 14, 2020. Comments received by mail/hand delivery/courier (for written/paper submissions) will be considered timely if they are postmarked or the delivery service acceptance receipt is on or before that date.

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are

solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov.*

• If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

• *Mail/Hand Delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

• For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2013–N–0796 for ''Agency Information Collection Activities; Proposed Collection; Comment Request; Testing Communications on Medical Devices and Radiation-Emitting Products.'' Received comments, those filed in a timely manner (see **ADDRESSES**), will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday.

• Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.gpo.gov/fdsys/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

FOR FURTHER INFORMATION CONTACT: Ila S. Mizrachi, Office of Operations, Food and Drug Administration, Three White Flint North, 10A–12M, 11601 Landsdown St., North Bethesda, MD 20852, 301–796–7726, *PRAStaff@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION: Under the PRA (44 U.S.C. 3501–3521), Federal Agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. ''Collection of information'' is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes Agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA (44 U.S.C. 3506(c)(2)(A)) requires Federal Agencies to provide a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, FDA is publishing notice of the proposed collection of information set forth in this document.

With respect to the following collection of information, FDA invites comments on these topics: (1) Whether the proposed collection of information is necessary for the proper performance of FDA's functions, including whether the information will have practical utility; (2) the accuracy of FDA's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques, when appropriate, and other forms of information technology.

Testing Communications on Medical Devices and Radiation-Emitting Products

OMB Control Number 0910–0678—Extension

FDA is authorized by section 1003(d)(2)(D) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 393(d)(2)(D)) to conduct educational and public information programs relating to the safety of regulated medical devices and radiation-emitting products. FDA must conduct needed research to ensure that such programs have the highest likelihood of being effective. Improving communications about medical devices and radiation emitting products will involve many research methods, including individual in-depth interviews, mall-intercept interviews, focus groups, self-administered surveys, gatekeeper reviews, and omnibus telephone surveys.

The information collected will serve three major purposes. First, as formative research it will provide critical knowledge needed about target audiences to develop messages and campaigns about medical device and radiation-emitting product use. Knowledge of consumer and health care professional decision-making processes will provide the better understanding of target audiences that FDA needs to design effective communication strategies, messages, and labels. These communications will aim to improve public understanding of the risks and benefits of using medical devices and radiation-emitting products by providing users with a better context in which to place risk information more completely.

Second, as initial testing, it will allow FDA to assess the potential effectiveness of messages and materials in reaching and successfully communicating with their intended audiences. Testing messages with a sample of the target audience will allow FDA to refine messages while still in the developmental stage. Respondents will be asked to give their reaction to the

messages in either individual or group settings.

Third, as evaluative research, it will allow FDA to ascertain the effectiveness of the messages and the distribution method of these messages in achieving the objectives of the message campaign. Evaluation of campaigns is a vital link in continuous improvement of communications at FDA.

Annually, FDA projects conducting about 30 studies using a variety of research methods and lasting an average of 0.17 hours each (varying from 0.08 to 1.5 hours). FDA estimates the burden of this collection of information based on prior experience with the various types of data collection methods described earlier. FDA is requesting this burden so as not to restrict the Agency's ability to gather information on public sentiment for its proposals in its regulatory and communications programs.

FDA estimates the burden of this collection of information as follows:

TABLE 1—ESTIMATED ANNUAL REPORTING BURDEN [1]

Activity	Number of respondents	Number of responses per respondent	Total annual responses	Average burden per response	Total hours
Individual In-Depth Interviews	360	1	360	0.75 (45 minutes)	270
General Public Focus Group Interviews	144	1	144	1.5	216
Intercept Interviews: Central Location	200	1	200	0.25 (15 minutes)	50
Intercept Interviews: Telephone	4,000	1	4,000	0.08 (5 minutes)	320
Self-Administered Surveys	2,400	1	2,400	0.25 (15 minutes)	600
Gatekeeper Reviews	400	1	400	0.5 (30 minutes)	200
Omnibus Surveys	1,200	1	1,200	0.17 (10 minutes)	204
Total (General Public)	8,704		8,702		1,860
Physician Focus Group Interviews	144	1	144	1.5	216
Total (Physician)	144				216
Total (Overall)	8,848				2,076

[1] There are no capital costs or operating and maintenance costs associated with this collection of information.

Based on a review of the information collection since our last request for OMB approval, we have made no adjustments to our burden estimate.

Dated: November 7, 2019.

Lowell J. Schiller,

Principal Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

National Institute of Neurological Disorders and Stroke; Notice of Closed Meetings

Pursuant to section 10(d) of the Federal Advisory Committee Act, as amended, notice is hereby given of meetings of the Board of Scientific Counselors, National Institute of Neurological Disorders and Stroke.

The meetings will be closed to the public as indicated below in accordance with the provisions set forth in section 552b(c)(6), Title 5 U.S.C., as amended for the review, discussion, and evaluation of individual intramural programs and projects conducted by the NATIONAL INSTITUTE OF NEUROLOGICAL DISORDERS AND STROKE, including consideration of personnel qualifications and performance, and the competence of individual investigators, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: Board of Scientific Counselors, National Institute of Neurological Disorders and Stroke.

Date: January 12–14, 2020.

Time: 6:00 p.m. to 12:00 p.m.

Agenda: To review and evaluate personnel qualifications and performance, and competence of individual investigators.

Place: Residence Inn Bethesda, 7335 Wisconsin Avenue, Bethesda, MD 20814.

Contact Person: Lorna W. Role, Ph.D., Scientific Director, Division of Intramural Research, National Institute of Neurological Disorders and Stroke, 35A Convent Drive, MSC 3716, Bethesda, MD 20892, *lorna.role@nih.gov.*

Name of Committee: Board of Scientific Counselors, National Institute of Neurological Disorders and Stroke.

Date: March 22–24, 2020.

Time: 6:00 p.m. to 12:00 p.m.

Agenda: To review and evaluate personnel qualifications and performance, and competence of individual investigators.

Place: Residence Inn Bethesda, 7335 Wisconsin Avenue, Bethesda, MD 20814.

Contact Person: Lorna W. Role, Ph.D., Scientific Director, Division of Intramural Research, National Institute of Neurological Disorders and Stroke, 35A Convent Drive, MSC 3716, Bethesda, MD 20892, *lorna.role@nih.gov.*

Name of Committee: Board of Scientific Counselors, National Institute of Neurological Disorders and Stroke.

Date: June 21–23, 2020.

Time: 6:00 p.m. to 12:00 p.m.

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

[Docket No. USCG–2018–0565]

Lifejacket Approval Harmonization

AGENCY: Coast Guard, DHS.

ACTION: Notice of availability.

SUMMARY: The Coast Guard is finalizing the policy harmonizing personal flotation device (PFD) standards between the United States and Canada by accepting a new standard for approval of PFDs. As a result, PFD manufacturers can meet a single North American standard instead of separate standards for the United States and Canada. The standard is outlined in a policy letter with a supporting deregulatory savings analysis. This policy letter is intended to promote the Coast Guard's maritime safety and stewardship missions. This policy does not affect existing PFD approvals and does not require any action on the part of boaters or mariners who have approved PFDs on board.

ADDRESSES: Documents mentioned in this notice, and all public comments, are available in our online docket at *http://www.regulations.gov,* and can be viewed by following that website's instructions.

FOR FURTHER INFORMATION CONTACT: For information about this document call or email Jacqueline Yurkovich, Coast Guard; telephone 202–372–1389, email *Jacqueline.M.Yurkovich@uscg.mil.*

SUPPLEMENTARY INFORMATION:

Background

On August 17, 2018, the United States Coast Guard (USCG) published a Notice of Availability and Request for Comments (83 FR 41095) announcing that it was harmonizing PFD standards between the United States and Canada by accepting a new standard for approval of PFDs. The Coast Guard outlined the new standard in a draft policy letter with a supporting deregulatory savings analysis and made those documents available for public comment. The Coast Guard received input from six commenters.

Discussion of Policy and Comments

The Notice of Availability (83 FR 41095) summarizes the background of the policy letter.

During the notice of availability comment period, the Coast Guard received input from six commenters, including mariners, the Life Jacket Association, the National Marine Manufacturers Association, and the Boat Owners Association of the United States. Below are summaries of, and our responses to, those comments.

Four commenters supported the efforts to harmonize the PFD standards with ISO 12402. One commenter also stated that they supported and appreciated the policy language stating that lifejackets already approved would remain in compliance with the new policy. Some commenters also suggested that the Coast Guard should broaden the categories of buoyancy to specifically allow Level 50 and youth inflatable PFDs in appropriate conditions. While the Coast Guard will not include additional categories in this policy letter, we will take the suggestions of the commenters under consideration in a future rulemaking.

One commenter stated that the Coast Guard should address potential confusion in the recreational boating community with regard to the new [policy] that ''Adult devices that cannot meet the requirements of Level 70 with inherent buoyancy alone must be marked 'Approval conditions state that this device must be worn to be counted as equipment required by vessels meeting Transport Canada or USCG regulations.' '' [1] As the Coast Guard accepts alternatives to the markings of inflatable PFDs, the commenter urged that consideration should also be given to adding markings that users need to test or inflate the devices regularly in order to be approved for use. The commenter stated that adding markings requiring inflatable PFD testing would be in keeping with current Coast Guard practices, such as those for PFD lights where alkaline batteries must be changed annually for devices to maintain their approval. The commenter concluded that, to this end, the USCG and Transport Canada should consider requiring inflatable PFD manufacturers to add inspection tags, similar to fire extinguisher inspection tags, to their PFDs where owners can record and be reminded of their periodic inspections and tests. Additionally, the commenter stated that the inflatable PFD age requirement of 16 should be lowered to age 13 to close the gap between the age requirement for wearing a PFD, located in 33 CFR 175.15 and the age range for an inflatable PFD because PFD options are more limited in the 13–16 age range. The Coast Guard acknowledges these concerns and suggestions and aims to address any potential confusion about the subject policy in this notice. With regard to adding new requirements that are not discussed in the new standard being accepted, such as for additional marking, testing, and inspection tags, these measures are outside of the scope of the policy letter that is the subject of this notice. These other measures may, however, be considered in future rulemaking. Similarly, the Coast Guard may consider the appropriateness of inflatable PFDs for wearers under 16 years of age in a future rulemaking.

The Coast Guard also received comments about the deregulatory savings analysis. Specifically, one commenter said that the cost savings analysis projects various hypothetical savings for the manufacturing sector and the U.S. Government without regard for the end users of the equipment (*e.g.,* boaters, their families, insurance companies, and community). The commenter also stated that deregulation proposed to benefit the manufacturers may overlook the intended purpose of life saving equipment and result in more costs to the boating public, the U.S. taxpayers, and the U.S. government. The commenter also suggested other modifications to law and policy that might increase benefits in terms of lives saved—such as improving the rate of wear, improving visibility of PFDs at nighttime, and considering user size and weight.

The Coast Guard acknowledges that this policy letter pertains to producers of lifejackets primarily. Some portion of the cost savings may be passed onto consumers by lowering the final purchase price of lifejackets for consumers; however, the Coast Guard has no data to indicate what share of the cost savings would be passed onto consumers. Additionally, the Coast Guard has no evidence that this policy would harm the boating public. The Coast Guard determined that the PFDs permitted by this policy letter provide equivalent performance to a PFD that meets the requirements of 46 CFR 160.064, 160.076, or 160.077–15. Further, were any share of the cost savings estimated here to be passed onto consumers, the safety of the boating public would be increased as lifejackets would be cheaper. However, the stated goal of the policy letter is harmonization via a single standard for manufacturers to meet. The Coast Guard will consider this commenter's other suggestions for possible future action.

The commenter also said that the international agreement should factor in tariffs, exchange rates, trade agreements, and currency valuations. It is not clear how such secondary impacts would affect harmonizing PFD standards between the United States and Canada and the commenter did not describe how such secondary impacts were relevant to this particular harmonization. Consequently, the Coast Guard does not believe these secondary impacts are relevant to this issue.

The same commenter said that the lifejackets used in the United States and Canada are used in various water conditions and weather conditions impacting their effectiveness, and that the length of time that a boater has been in the water and the body of water the boater is rescued from all have different characteristics impacting the effectiveness of lifejackets.

The commenter argued the maximum cost savings could be realized by ensuring that each and every boater who is on the water is properly equipped with the correct lifejackets because historically most drownings involve boaters without lifejackets. The Coast Guard considers such additional requirements to be outside the scope of this policy letter.

Cost Savings Analysis

Since the affected population and projected cost-savings estimates have

[1] Document number USCG–2018–0565–0008 at *http://www.Regulations.gov* under docket number USCG–2018–0565.

remained the same from when we published the deregulatory savings analysis in August 2018, we have retained the projected cost-saving estimates for this notice, which we present below. As stated in the aforementioned economic analysis, which is available in the public docket, we estimate the annual net cost savings to the U.S. industry to be $660,965 in 2016 dollars using a 7-percent discount rate over a 10-year period of analysis. We estimate the total discounted net cost savings to U.S. industry over a 10-year period of analysis to be between $4.6 million and $5.7 million at 7- and 3-percent discount rates, respectively.

We estimate the annual net cost savings to the U.S. government to be $8,571 per year over a 10-year period of analysis at a 7-percent discount rate. We estimate the total discounted net cost savings to the U.S. government to be between $60,000 and $73,000 at 7- and 3-percent discount rates, respectively.

We also estimate an annual net cost savings to foreign manufacturers of $406,758 in 2016 dollars using a 7-percent discount rate over a 10-year period of analysis. We estimate the total discounted net cost savings to foreign industry over a 10-year period of analysis to be between $2.9 million and $3.5 million at 7- and 3-percent discount rates, respectively.

We estimate the costs to industry from this policy letter as a one-time switching cost between $40,000 and $41,000 at 7- and 3-percent discount rates, respectively.

Under a perpetual period of analysis, we estimate the total annualized cost savings of our policy letter to the U.S. economy to be $546,065 in 2016 dollars, using a 7-percent discount rate, and discounted back to 2016.

This notice is issued under authority of 5 U.S.C. 552(a).

Dated: November 7, 2019.

J.G. Lantz,

Director of Commercial Regulations and Standards, U.S. Coast Guard.

BILLING CODE 9110–04–P

DEPARTMENT OF HOMELAND SECURITY

U.S. Customs and Border Protection

[1651–NEW]

Agency Information Collection Activities: 321 E-Commerce Data Pilot

AGENCY: U.S. Customs and Border Protection (CBP), Department of Homeland Security.

ACTION: 30-Day notice and request for comments; New collection of information.

SUMMARY: The Department of Homeland Security, U.S. Customs and Border Protection will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995 (PRA). The information collection is published in the **Federal Register** to obtain comments from the public and affected agencies.

DATES: Comments are encouraged and must be submitted no later than December 16, 2019 to be assured of consideration.

ADDRESSES: Interested persons are invited to submit written comments on this proposed information collection to the Office of Information and Regulatory Affairs, Office of Management and Budget. Comments should be addressed to the OMB Desk Officer for Customs and Border Protection, Department of Homeland Security, and sent via electronic mail to *dhsdeskofficer@omb.eop.gov.*

FOR FURTHER INFORMATION CONTACT: Requests for additional PRA information should be directed to Seth Renkema, Chief, Economic Impact Analysis Branch, U.S. Customs and Border Protection, Office of Trade, Regulations and Rulings, 90 K Street NE, 10th Floor, Washington, DC 20229–1177, Telephone number 202–325–0056 or via email *CBP_PRA@cbp.dhs.gov.* Please note that the contact information provided here is solely for questions regarding this notice. Individuals seeking information about other CBP programs should contact the CBP National Customer Service Center at 877–227–5511, (TTY) 1–800–877–8339, or CBP website at *https://www.cbp.gov/.*

SUPPLEMENTARY INFORMATION: CBP invites the general public and other Federal agencies to comment on the proposed and/or continuing information collections pursuant to the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*). This proposed information collection was previously published in the **Federal Register** (84 FR 48363) on September 13, 2019, allowing for a 60-day comment period. This notice allows for an additional 30 days for public comments. This process is conducted in accordance with 5 CFR 1320.8. Written comments and suggestions from the public and affected agencies should address one or more of the following four points: (1) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (2) the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) suggestions to enhance the quality, utility, and clarity of the information to be collected; and (4) suggestions to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses. The comments that are submitted will be summarized and included in the request for approval. All comments will become a matter of public record.

Overview of This Information Collection

Title: 321 E-Commerce Data Pilot.
OMB Number: 1651–NEW.
Form number: N/A.
Current Actions: This submission is being made to obtain an OMB control number for this Information Collection Request and to expand the respondent group of the recent 321 Data Pilot test notice on July 23, 2019 (84 FR 35405) which was limited to nine respondents.
Type of Review: New.
Affected Public: Businesses.
Abstract: CBP faces significant challenges in targeting Section 321 shipments, while still maintaining the clearance speeds the private sector has come to expect. This is because CBP does not receive adequate advance information in order to effectively and efficiently assess the security risk of the approximately 1.8 million Section 321 shipments that arrive each day. This pilot is conducted pursuant to 19 CFR 101.9(a), which authorizes the Commissioner to impose requirements different from those specified in the CBP regulations for the purposes of conducting a test program or procedure designed to evaluate the effectiveness of new technology or operational procedures regarding the processing of passengers, vessels, or merchandise.

In the e-commerce environment, traditionally regulated parties, such as carriers, are unlikely to possess all of the information relating to a shipment's supply chain. While CBP receives some advance electronic data for Section 321 shipments from air, rail, and truck carriers (and certain other parties in limited circumstances) as mandated by current regulations, the transmitted data often does not adequately identify the

entity causing the shipment to cross the border, the final recipient, or the contents of the package. Consequently, CBP may not receive any advance information on the entity actually causing the shipment to travel to the United States, such as the seller or manufacturer. Some carriers may not have this information because sellers on e-commerce platforms often contract with other entities to act as the seller. Similarly, for the consignee's name and address, a carrier might transmit information for the domestic deconsolidator, which will not allow CBP to identify in advance of arrival, the final recipient of the merchandise in the United States. With the growth of e-commerce, shipments are increasingly subject to these complex transactions, where information about the shipment is limited. As a result, CBP is less able to effectively target or identify high-risk shipments in the e-commerce environment and CBP Officers must use additional time and resources to inspect Section 321 shipments upon arrival.

CBP anticipates that Section 321 shipments will continue to grow quickly. Accordingly, CBP is initiating this voluntary Section 321 Data Pilot to test the feasibility of obtaining advance information from regulated and non-regulated entities, such as online marketplaces, as well as requiring additional advance data elements. This test will enable CBP to assess the ability of online marketplaces to transmit information to CBP that enables CBP to better use resources used in inspecting and processing these shipments and better understand the operation of online marketplaces. Additionally, CBP is testing whether the transmission of additional advance data, beyond the data elements currently required for shipments arriving by air, truck, or rail, will enable CBP to more accurately and efficiently target Section 321 shipments. Pursuant to this test, participants will provide information that identifies the entity causing the shipment to cross the border, the ultimate recipient, and the product in the shipment with greater specificity, in advance. CBP will test the feasibility of using the additional data elements, transmitted by multiple entities for a single shipment, to segment risk. In sum, the pilot will enable CBP to determine if requiring additional data and involving non-regulated entities will enable CBP to address the threats and complexities resulting from the vast increase in Section 321 shipments, while facilitating cross-border e-commerce.

Participants in the Section 321 Data Pilot must transmit certain information for any Section 321 shipments destined for the United States for which the participant has information. The required data elements differ slightly depending on what entity is transmitting the data. In general, the required data relates to the entity initiating the shipment (*e.g.,* the entity causing the shipment to cross the border, such as the seller, manufacturer, or shipper), the product in the package, the listed marketplace price, and the final recipient (*e.g.,* the final entity to possess the shipment in the United States). The data elements are as follow.

1. All participants. All participants, regardless of filer type, must electronically transmit the following elements:

- Originator Code of the Participant (assigned by CBP)
- Participant Filer Type (*e.g.,* carrier or online marketplace)
- One or more of the following:
  - Shipment Tracking Number
  - House Bill Number
  - Master Bill Number
- Mode of Transportation (*e.g.,* air, truck, rail, or ocean)

2. Participating carriers. In addition to the data elements listed above in paragraph 1, participating carriers must also electronically transmit the following data elements:

- Shipment Initiator Name and Address (*e.g.,* the entity that causes the movement of a shipment, which may be a seller, shipper, or manufacturer, but not a foreign consolidator)
- Final Deliver to Party Name and Address (*e.g.,* the final entity to receive the shipment once it arrives in the United States, which may be a final purchaser or a warehouse, but not a domestic deconsolidator)
- Enhanced Product Description (*e.g.,* a description of a product shipped to the United States more detailed than the description on the manifest, which should, if applicable, reflect the advertised retail description of the product as listed on an online marketplace)
- Shipment Security Scan (air carriers only) (*e.g.,* verification that a foreign security scan for the shipment has been completed such as an x-ray image or other security screening report)
- Known Carrier Customer Flag (*e.g.,* an indicator that identifies a shipper as a repeat customer that has consistently paid all required fees and does not have any known trade violations)

3. Participating online marketplaces. In addition to the data elements listed above in paragraph 1, participating online marketplaces must electronically submit the following data elements:

- Seller Name and Address (*e.g.,* an international or domestic company that sells products on marketplaces and other websites), and, if applicable, Shipment Initiator Name and Address (as defined in Section II.A.2)
- Final Deliver to Party Name and Address (as defined in Section II.A.2)
- Known Marketplace Seller Flag (*e.g.,* an indicator provided by a marketplace that identifies a seller as an entity vetted by the marketplace and has no known trade violations)
- Marketplace Seller Account Number/Seller ID (*e.g.,* the unique identifier a marketplace assigns to sellers)
- Buyer Name and Address, if applicable (*e.g.,* the purchaser of a good from an online marketplace. This entity is not always the same as the final deliver to party.)
- Product Picture (*e.g.,* picture of the product presented on an online marketplace), Link to Product Listing (*e.g.,* an active and direct link to the listing of a specific product on an online marketplace), or Enhanced Product Description (as defined in Section II.A.2)
- Listed Price on Marketplace (*e.g.,* the retail price of a product that a seller lists while advertising on an online marketplace. For auction marketplaces, this price is the price of final sale.)

Different entities may transmit different data elements for the same shipment. In addition to the above required data elements, participants may voluntarily provide the following optional data elements:

- HTS Number;
- Retail Price in Export Country;
- Shipper Name;
- Shipper Address;
- Shipper Phone Number;
- Shipper Email Address;
- Shipment Initiator Phone Number;
- Consignee Name;
- Consignee Address;
- Consignee Phone Number;
- Consignee Email Address;
- Marketplace Name;
- Buyer Account Number;
- Buyer Address;
- Seller Phone Number;
- Buyer Phone Number;
- Marketplace website;
- Buyer Name;
- Buyer Confirmation Number;
- Buyer Email Address;
- Carrier Name;
- Known Carrier Customer;
- Merchandise/Product Weight; and,
- Merchandise/Product Quantity.

• Listed Price on Marketplace.

Estimated Number of Respondents: 20.

Estimated Number of Annual Responses per Respondent: 70,000.

Estimated Number of Total Annual Responses: 1,400,000.

Estimated Time per Response: 5 seconds.

DEPARTMENT OF HOMELAND SECURITY

Federal Emergency Management Agency

[Internal Agency Docket No. FEMA–4467–DR; Docket ID FEMA–2019–0001]

South Dakota; Major Disaster and Related Determinations

AGENCY: Federal Emergency Management Agency, DHS.

ACTION: Notice.

SUMMARY: This is a notice of the Presidential declaration of a major disaster for the State of South Dakota (FEMA–4467–DR), dated October 7, 2019, and related determinations.

DATES: The declaration was issued October 7, 2019.

FOR FURTHER INFORMATION CONTACT: Dean Webster, Office of Response and Recovery, Federal Emergency Management Agency, 500 C Street SW, Washington, DC 20472, (202) 646–2833.

SUPPLEMENTARY INFORMATION: Notice is hereby given that, in a letter dated October 7, 2019, the President issued a major disaster declaration under the authority of the Robert T. Stafford Disaster Relief and Emergency Assistance Act, 42 U.S.C. 5121 *et seq.* (the ''Stafford Act''), as follows:

I have determined that the damage in certain areas of the State of South Dakota resulting from severe storms, tornadoes, and flooding during the period of June 30 to July 21, 2019, is of sufficient severity and magnitude to warrant a major disaster declaration under the Robert T. Stafford Disaster Relief and Emergency Assistance Act, 42 U.S.C. 5121 *et seq.* (the ''Stafford Act''). Therefore, I declare that such a major disaster exists in the State of South Dakota.

In order to provide Federal assistance, you are hereby authorized to allocate from funds available for these purposes such amounts as you find necessary for Federal disaster assistance and administrative expenses.

You are authorized to provide Public Assistance in the designated areas and Hazard Mitigation throughout the State. Consistent with the requirement that Federal assistance be supplemental, any Federal funds provided under the Stafford Act for Public Assistance and Hazard Mitigation will be limited to 75 percent of the total eligible costs.

Further, you are authorized to make changes to this declaration for the approved assistance to the extent allowable under the Stafford Act.

The Federal Emergency Management Agency (FEMA) hereby gives notice that pursuant to the authority vested in the Administrator, under Executive Order 12148, as amended, James R. Stephenson, of FEMA is appointed to act as the Federal Coordinating Officer for this major disaster.

The following areas of the State of South Dakota have been designated as adversely affected by this major disaster:

Butte, Gregory, Kingsbury, Lawrence, Meade, and Tripp Counties and the Cheyenne River Tribe of the Cheyenne River Sioux Reservation and the Lower Brule Tribe of the Lower Brule Reservation for Public Assistance.

All areas within the State of South Dakota are eligible for assistance under the Hazard Mitigation Grant Program.

The following Catalog of Federal Domestic Assistance Numbers (CFDA) are to be used for reporting and drawing funds: 97.030, Community Disaster Loans; 97.031, Cora Brown Fund; 97.032, Crisis Counseling; 97.033, Disaster Legal Services; 97.034, Disaster Unemployment Assistance (DUA); 97.046, Fire Management Assistance Grant; 97.048, Disaster Housing Assistance to Individuals and Households In Presidentially Declared Disaster Areas; 97.049, Presidentially Declared Disaster Assistance—Disaster Housing Operations for Individuals and Households; 97.050, Presidentially Declared Disaster Assistance to Individuals and Households—Other Needs; 97.036, Disaster Grants—Public Assistance (Presidentially Declared Disasters); 97.039, Hazard Mitigation Grant.

Pete Gaynor,

Acting Administrator, Federal Emergency Management Agency.

[Internal Agency Docket No. FEMA–3425–EM; Docket ID FEMA–2019–0001]

Commonwealth of the Northern Mariana Islands; Emergency and Related Determinations

AGENCY: Federal Emergency Management Agency, DHS.

ACTION: Notice.

SUMMARY: This is a notice of the Presidential declaration of an emergency for the Commonwealth of the Northern Mariana Islands (FEMA–3425–EM), dated October 20, 2019, and related determinations.

DATES: The declaration was issued October 20, 2019.

FOR FURTHER INFORMATION CONTACT: Dean Webster, Office of Response and Recovery, Federal Emergency Management Agency, 500 C Street SW, Washington, DC 20472, (202) 646–2833.

SUPPLEMENTARY INFORMATION: Notice is hereby given that, in a letter dated October 20, 2019, the President issued an emergency declaration under the authority of the Robert T. Stafford Disaster Relief and Emergency Assistance Act, 42 U.S.C. 5121–5207 (the Stafford Act), as follows:

I have determined that the emergency conditions in certain areas of the Commonwealth of the Northern Mariana Islands resulting from Typhoon Bualoi beginning on October 20, 2019, and continuing, are of sufficient severity and magnitude to warrant an emergency declaration under the Robert T. Stafford Disaster Relief and Emergency Assistance Act, 42 U.S.C. 5121 *et seq.* (''the Stafford Act''). Therefore, I declare that such an emergency exists in the Commonwealth of the Northern Mariana Islands.

You are authorized to provide appropriate assistance for required emergency measures, authorized under title V of the Stafford Act, to save lives and to protect property and public health and safety, and to lessen or avert the threat of a catastrophe in the designated areas. Specifically, you are authorized to provide assistance for emergency protective measures (Category B), limited to direct Federal assistance, under the Public Assistance program.

Consistent with the requirement that Federal assistance be supplemental, any Federal funds provided under the Stafford Act for Public Assistance will be limited to 75 percent of the total eligible costs. In order to provide Federal assistance, you are hereby authorized to allocate from funds available for these purposes such amounts as you find necessary for Federal emergency assistance and administrative expenses.

Further, you are authorized to make changes to this declaration for the approved assistance to the extent allowable under the Stafford Act.

The Federal Emergency Management Agency (FEMA) hereby gives notice that pursuant to the authority vested in the Administrator, Department of Homeland Security, under Executive Order 12148, as amended, Teresa Serata, of FEMA is appointed to act as the Federal Coordinating Officer for this declared emergency.

The following areas of the Commonwealth of the Northern Mariana Islands have been designated as adversely affected by this declared emergency:

The municipalities of Rota, Saipan, Tinian, and the Northern Islands for emergency protective measures (Category B), limited to direct Federal assistance.

The following Catalog of Federal Domestic Assistance Numbers (CFDA) are to be used for reporting and drawing funds: 97.030, Community Disaster Loans; 97.031, Cora Brown Fund; 97.032, Crisis Counseling; 97.033, Disaster Legal Services; 97.034, Disaster Unemployment Assistance (DUA); 97.046, Fire Management Assistance Grant; 97.048, Disaster Housing Assistance to Individuals and Households In Presidentially Declared Disaster Areas; 97.049, Presidentially Declared Disaster Assistance—Disaster Housing Operations for Individuals and Households; 97.050, Presidentially Declared Disaster Assistance to Individuals and Households—Other Needs; 97.036, Disaster Grants—Public Assistance (Presidentially Declared Disasters); 97.039, Hazard Mitigation Grant.

Florida; Major Disaster and Related Determinations

AGENCY: Federal Emergency Management Agency, DHS.

ACTION: Notice.

SUMMARY: This is a notice of the Presidential declaration of a major disaster for the State of Florida (FEMA–4468–DR), dated October 21, 2019, and related determinations.

DATES: The declaration was issued October 21, 2019.

FOR FURTHER INFORMATION CONTACT: Dean Webster, Office of Response and Recovery, Federal Emergency Management Agency, 500 C Street SW, Washington, DC 20472, (202) 646–2833.

SUPPLEMENTARY INFORMATION: Notice is hereby given that, in a letter dated October 21, 2019, the President issued a major disaster declaration under the authority of the Robert T. Stafford Disaster Relief and Emergency Assistance Act, 42 U.S.C. 5121 *et seq.* (the ''Stafford Act''), as follows:

I have determined that the damage in certain areas of the State of Florida resulting from Hurricane Dorian during the period of August 28 to September 9, 2019, is of sufficient severity and magnitude to warrant a major disaster declaration under the Robert T. Stafford Disaster Relief and Emergency Assistance Act, 42 U.S.C. 5121 *et seq.* (the ''Stafford Act''). Therefore, I declare that such a major disaster exists in the State of Florida.

In order to provide Federal assistance, you are hereby authorized to allocate from funds available for these purposes such amounts as you find necessary for Federal disaster assistance and administrative expenses.

You are authorized to provide Public Assistance in the designated areas and Hazard Mitigation throughout the State. Consistent with the requirement that Federal assistance be supplemental, any Federal funds provided under the Stafford Act for Public Assistance and Hazard Mitigation will be limited to 75 percent of the total eligible costs.

Further, you are authorized to make changes to this declaration for the approved assistance to the extent allowable under the Stafford Act.

The Federal Emergency Management Agency (FEMA) hereby gives notice that pursuant to the authority vested in the Administrator, under Executive Order 12148, as amended, Thomas J. McCool, of FEMA is appointed to act as the Federal Coordinating Officer for this major disaster.

The following areas of the State of Florida have been designated as adversely affected by this major disaster:

Brevard, Duval, Flagler, Indian River, Martin, Nassau, Osceola, Palm Beach, Putnam, Seminole, St. Johns, and St. Lucie Counties for Public Assistance.

All areas within the State of Florida are eligible for assistance under the Hazard Mitigation Grant Program.

The following Catalog of Federal Domestic Assistance Numbers (CFDA) are to be used for reporting and drawing funds: 97.030, Community Disaster Loans; 97.031, Cora Brown Fund; 97.032, Crisis Counseling; 97.033, Disaster Legal Services; 97.034, Disaster Unemployment Assistance (DUA); 97.046, Fire Management Assistance Grant; 97.048, Disaster Housing Assistance to Individuals and Households In Presidentially Declared Disaster Areas; 97.049, Presidentially Declared Disaster Assistance—Disaster Housing Operations for Individuals and Households; 97.050, Presidentially Declared Disaster Assistance to Individuals and Households—Other Needs; 97.036, Disaster Grants—Public Assistance (Presidentially Declared Disasters); 97.039, Hazard Mitigation Grant.

[Docket No. CISA–2019–0015]

Notice of the President's National Infrastructure Advisory Council Meeting

AGENCY: Cybersecurity and Infrastructure Security Agency, DHS.

ACTION: Announcement of meeting; request for comments.

SUMMARY: The Cybersecurity and Infrastructure Security Agency (CISA) announces a public meeting of the President's National Infrastructure Advisory Council (NIAC). To facilitate public participation, CISA invites public comments on the agenda items and any associated briefing materials to be considered by the council at the meeting.

DATES:

Meeting Registration: Individual registration to attend the meeting in person is required and must be received no later than 5:00 p.m. EST on December 12, 2019.

Speaker Registration: Individuals may register to speak during the meeting's public comment period must be received no later than 5:00 p.m. EST on December 4, 2019.

Written Comments: Written comments must be received no later than 12:00 p.m. EST on December 11, 2019.

NIAC Meeting: The meeting will be held on Thursday, December 12, 2019 from 9:00 a.m.–1:00 p.m. EST.

ADDRESSES: The NIAC meeting will be held at the Eisenhower Executive Office Building, 1650 Pennsylvania Ave. NW, Washington, DC 20502.

Comments: Written comments may be submitted on the issues to be considered by the NIAC as described in the **SUPPLEMENTARY INFORMATION** section below and any briefing materials for the meeting. Any briefing materials that will be presented at the meeting will be made publicly available on Friday, December 6, 2019 at the following website: *https://www.dhs.gov/national-infrastructure-advisory-council.*

Comments identified by docket number ''*CISA–2019–0015*'' may be submitted by any of the following methods:

- *Federal eRulemaking Portal: www.regulations.gov.* Follow the instructions for submitting written comments.
- *Email: NIAC@hq.dhs.gov.* Include docket number *CISA–2019–0015* in the subject line of the message.
- *Fax:* 703–235–9707, ATTN: Ginger K. Norris.
- *Mail:* Ginger K. Norris, Designated Federal Officer, National Infrastructure Advisory Council, Cybersecurity and Infrastructure Security Agency, Department of Homeland Security, 245 Murray Lane, Mail Stop 0612, Arlington, VA 20598–0612.

Instructions: All submissions received must include the agency name and docket number for this notice. All written comments received will be posted without alteration at *www.regulations.gov,* including any personal information provided. For detailed instructions on sending comments and additional information on participating in the upcoming NIAC meeting, see the ''PUBLIC PARTICIPATION'' heading of the **SUPPLEMENTARY INFORMATION** section of this document.

Docket: For access to the docket and comments received by the NIAC, go to *www.regulations.gov.*

FOR FURTHER INFORMATION CONTACT: Ginger K. Norris, 202–441–5885, *ginger.norris@cisa.dhs.gov.*

SUPPLEMENTARY INFORMATION: The NIAC is established under Section 10 of E.O. 13231 issued on October 16, 2001. Notice of this meeting is given under the Federal Advisory Committee Act (FACA), 5 U.S.C. Appendix (Pub. L. 92–463). The NIAC shall provide the President, through the Secretary of Homeland Security, with advice on the security and resilience of the Nation's critical infrastructure sectors.

The NIAC will meet in an open meeting on December 12, 2019, to discuss the following agenda items with DHS leadership.

Agenda

I. Call to Order
II. Opening Remarks
III. Insurance Panel Discussion
IV. Discuss and Deliberate Current Task
V. Public Comment
VI. Closing Remarks
VII. Adjournment

Public Participation

Meeting Registration Information

Due to additional access requirements and limited seating, requests to attend in person will be accepted and processed in the order in which they are received. Individuals may register to attend the NIAC meeting by sending an email to *NIAC@hq.dhs.gov.*

Public Comment

While this meeting is open to the public, participation in FACA deliberations are limited to council members. A public comment period will be held during the meeting from approximately 12:45 p.m.–1:00 p.m. EST. Speakers who wish to comment must register in advance and can do so by emailing *NIAC@hq.dhs.gov* no later than Wednesday, December 4, 2019, at 5:00 p.m. EST. Speakers are requested to limit their comments to three minutes. Please note that the public comment period may end before the time indicated, following the last call for comments.

Information on Services for Individuals With Disabilities

For information on facilities or services for individuals with disabilities or to request special assistance at the meeting, contact *NIAC@hq.dhs.gov* as soon as possible.

Dated: November 6, 2019.

Ginger K. Norris,

Designated Federal Official, National Infrastructure Advisory Council, Cybersecurity and Infrastructure Security Agency, Department of Homeland Security.

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[LLWY925000.L13400000.PQ0000 20X]

Notice of Intent To Prepare Resource Management Plan Amendments for 9 BLM-Wyoming Resource Management Plans and an Associated Environmental Impact Statement

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of intent.

SUMMARY: In compliance with the National Environmental Policy Act (NEPA) of 1969, as amended, and the Federal Land Policy and Management Act (FLPMA) of 1976, as amended, the Bureau of Land Management (BLM) intends to prepare an Environmental Impact Statement (EIS) to analyze potential Resource Management Plan (RMP) amendments for BLM Wyoming's Cody, Worland, Buffalo, Casper, Lander, Pinedale, Kemmerer, Rawlins and Rock Springs field offices. The proposed amendments would designate pipeline corridors as part of the Wyoming Pipeline Corridor Initiative (WPCI) proposed by the State of Wyoming. By this notice, the BLM is announcing the beginning of the scoping process to solicit public comments and identify issues.

DATES: Comments on the RMP amendments and associated EIS may be submitted in writing until December 16, 2019. The date(s) and location(s) of any

scoping meetings will be announced at least 15 days in advance through local media, newspapers and the BLM website at *https://go.usa.gov/xpCMr.* To ensure the BLM can adequately consider and incorporate all comments, please submit written comments prior to the close of the 30-day scoping period or 15 days after the last public meeting, whichever is later. The BLM will provide additional opportunities for public participation upon publication of the Draft EIS.

ADDRESSES: You may submit comments on issues and planning criteria related to the EIS during public scoping meetings or on the WPCI ePlanning website at *https://go.usa.gov/xpCMr.*

Documents pertinent to this proposal may be examined in person at the BLM Wyoming State Office, 5353 Yellowstone Road, Cheyenne, WY 82009.

FOR FURTHER INFORMATION CONTACT: Heather Schultz, Project Manager, telephone: 307–775–6084; address: 5353 Yellowstone Road, Cheyenne, Wyoming; email: *hschultz@blm.gov.* Contact Ms. Schultz to be added to the WPCI mailing list. Persons who use a telecommunications device for the deaf (TDD) may call the Federal Relay Service (FRS) at 1–800–877–8339 to contact the above individual during normal business hours. The FRS is available 24 hours a day, 7 days a week, to leave a message or question with the above individual. You will receive a reply during normal business hours.

SUPPLEMENTARY INFORMATION: The State of Wyoming is proposing a pipeline corridor network for carbon capture, utilization, and storage (CCUS) and enhanced oil recovery (EOR) to be designated on BLM-managed lands in Wyoming through the land use planning process. The State of Wyoming proposes that 2,000 miles and 25 segments of pipeline corridors be designated on BLM-managed lands and in those lands' associated RMPs. The proposed WPCI corridors are divided into segments based on proposed width and the regions they will service.

The BLM plans to analyze the State's proposal by preparing an EIS. Based on the findings of the EIS process, the BLM may amend the nine RMPs containing lands proposed for pipeline corridors to designate those corridors. If the BLM were to receive a right-of-way application for CCUS and EOR pipelines or related facilities in the future, project-specific NEPA would be completed separately at that time. The purpose of this public scoping process is to determine relevant issues that will influence the scope of the environmental analysis, including alternatives, and guide the planning process. BLM and State of Wyoming personnel have identified preliminary issues to address within the planning area, including Greater Sage-Grouse; big game habitat (including migration corridors); potential conflicts with coal mining and other resource uses; air quality; transportation; vegetation and reclamation success; anticipated oil and gas development in the planning area; and opportunities to apply best management practices and design features.

The BLM also seeks input on planning criteria, which include compliance with laws and regulations and integration into affected plans. The BLM has identified the following preliminary planning criteria:

- The planning and environmental review processes will comply with FLPMA, the Endangered Species Act, the Clean Water Act, and all other applicable laws, regulations, and policies.
- Valid existing rights will continue to be recognized.
- The BLM will continue to manage other resources in the planning areas under pre-existing terms, conditions, and decisions in the applicable RMPs.
- The BLM will coordinate with Federal, State, and local agencies and tribal governments in the development of the EIS.
- Any amendments to BLM RMPs will be consistent with the existing plans and policies of state and local governments, to the extent practicable.

Please follow the procedures identified above to submit comments on issues and planning criteria. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so. The BLM will evaluate identified issues to be addressed in the plan, and will place them into one of three categories:

1. Issues to be resolved in the plan;
2. Issues to be resolved through policy or administrative action; or
3. Issues beyond the scope of this plan.

The BLM will provide an explanation in the Draft RMP/Draft EIS as to why an issue was placed in category 2 or 3. The public is also encouraged to help identify any management questions and concerns that should be addressed in the plan. The BLM will work collaboratively with interested parties to identify the management decisions that are best suited to local, regional, and national needs and concerns.

The BLM will utilize and coordinate the NEPA scoping process to help fulfill the public involvement process under the National Historic Preservation Act (54 U.S.C. 306108) as provided in 36 CFR 800.2(d)(3). The information about historic and cultural resources within the area potentially affected by the proposed action will assist the BLM in identifying and evaluating impacts to such resources.

The BLM will use an interdisciplinary approach to develop the plan in order to consider the variety of resource issues and concerns identified. Specialists with expertise in the following disciplines will be involved in the planning process: Rangeland management, minerals and geology, forestry, outdoor recreation, archaeology, paleontology, wildlife and fisheries, lands and realty, hydrology, soils, sociology, and economics.

Authority: 40 CFR 1501.7, 43 CFR 1610.2.

Duane Spencer,

Acting State Director.

BILLING CODE 4310–22–P

DEPARTMENT OF JUSTICE

Agency Information Collection Activities; Proposed Collection; Comments Requested; Immigration Practitioner Complaint Form

AGENCY: Executive Office for Immigration Review, Department of Justice.

ACTION: 30-Day notice.

The Department of Justice (DOJ), Executive Office for Immigration Review, will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995.

DATES: Comments are encouraged and will be accepted for an additional days until December 16, 2019.

FOR FURTHER INFORMATION CONTACT: If you have additional comments especially on the estimated public burden or associated response time, suggestions, or need a copy of the proposed information collection instrument with instructions or additional information, please contact Lauren Alder Reid, Assistant Director,

Office of Policy, Executive Office for Immigration Review, 5107 Leesburg Pike, Suite 2500, Falls Church, VA 22041, telephone: (703) 305–0289. Written comments and/or suggestions can also be directed to the Office of Management and Budget, Office of Information and Regulatory Affairs, Attention Department of Justice Desk Officer, Washington, DC 20530 or sent to *OIRA_submissions@omb.eop.gov.*

SUPPLEMENTARY INFORMATION: Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:

—Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the Executive Office for Immigration Review, including whether the information will have practical utility;
—Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
—Evaluate whether and if so how the quality, utility, and clarity of the information to be collected can be enhanced; and
—Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

Overview of This Information Collection

1. *Type of information collection:* Extension without change of a currently approved collection.

2. *The title of the form/collection:* Immigration Practitioner Complaint Form.

3. *The agency form number, if any, and the applicable component of the department sponsoring the collection:* Form EOIR–44. The applicable component within the Department of Justice is the Office of General Counsel, Executive Office for Immigration Review.

4. *Affected public who will be asked or required to respond, as well as a brief abstract:* Primary: Individuals who wish to file a complaint against an immigration practitioner authorized to appear before the Board of Immigration Appeals and the immigration courts. Abstract: The information on this form will be used to determine whether the Office of the General Counsel of the Executive Office for Immigration Review should conduct a preliminary disciplinary inquiry, request additional information from the complainant, refer the matter to a state bar disciplinary authority or other law enforcement agency, or take no further action.

5. *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* It is estimated that 200 respondents will complete the form annually, with an average of 2 hours per response.

6. *An estimate of the total public burden (in hours) associated with the collection:* The estimated public burden associated with this collection is 400 hours. It is estimated that respondents will take 2 hours to complete the form. The burden hours for collecting respondent data sum to 400 hours (200 respondents × 2 hours = 400 hours).

If additional information is required contact: Melody Braswell, Department Clearance Officer, United States Department of Justice, Justice Management Division, Policy and Planning Staff, Two Constitution Square, 145 N Street NE, 3E.405B, Washington, DC 20530.

Dated: November 12, 2019.

Melody D. Braswell,

Department Clearance Officer for PRA, U.S. Department of Justice.

BILLING CODE 4410–30–P

DEPARTMENT OF JUSTICE

[OMB Number 1125–0012]

Agency Information Collection Activities; Proposed Collection; Comments Requested; Request for New Recognition, Renewal of Recognition, Extension of Recognition of a Non-Profit Religious, Charitable, Social Service, or Similar Organization (Form EOIR–31)

AGENCY: Executive Office for Immigration Review, Department of Justice.

ACTION: 30-Day notice.

SUMMARY: The Department of Justice (DOJ), Executive Office for Immigration Review (EOIR), will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995. This proposed information collection was previously published in the **Federal Register** on September 5, 2019, allowing for a 60-day comment period.

DATES: Comments are encouraged and will be accepted for an additional 30 days until December 16, 2019.

FOR FURTHER INFORMATION CONTACT: If you have additional comments especially on the estimated public burden or associated response time, suggestions, or need a copy of the proposed information collection instrument with instructions or additional information, please contact Lauren Alder Reid, Assistant Director, Office of Policy, Executive Office for Immigration Review, 5107 Leesburg Pike, Suite 2500, Falls Church, VA 22041, telephone: (703) 305–0289. Written comments and/or suggestions can also be sent to the Office of Management and Budget, Office of Information and Regulatory Affairs, Attention Department of Justice Desk Officer, Washington, DC 20503 or sent to *OIRA_submissions@omb.eop.gov.*

SUPPLEMENTARY INFORMATION: Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:

—Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
—Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
—Enhance the quality, utility, and clarity of the information to be collected; and/or
—Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

Overview of This Information Collection

1. *Type of information collection:* Extension with changes of a currently approved collection.

2. *The title of the form/collection:* Request for New Recognition, Renewal of Recognition, Extension of Recognition of a Non-profit Religious, Charitable, Social Service, or Similar Organization.

3. *The agency form number:* Form EOIR–31 (OMB 1125–0012).

4. *Affected public who will be asked or required to respond, as well as a brief abstract:* Non-profit organizations seeking new recognition, renewal of recognition, or extension of recognition to be recognized as legal service providers by the Office of Legal Access Programs of the Executive Office for Immigration Review (EOIR). Abstract: This information collection will allow an organization for new recognition, renewal of recognition, or extension of recognition to appear before EOIR and/or the Department of Homeland Security. This information collection is necessary to determine whether an organization meets the eligibility requirements for recognition.

5. *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* It is estimated that 129 respondents will complete the form for new recognition annually with an average of 2 hours per response. It is estimated that 131 respondents will complete the form for renewal of recognition annually with an average of 7 hours per response.

6. *An estimate of the total public burden (in hours) associated with the collection:* There are an estimated 1175 (258 for new + 917 for renewals) total annual burden hours associated with this collection.

If additional information is required contact: Melody Braswell, Department Clearance Officer, United States Department of Justice, Justice Management Division, Policy and Planning Staff, Two Constitution Square, 145 N Street NE, 3E.405B, Washington, DC 20530.

Dated: November 12, 2019.

Melody D. Braswell,

Department Clearance Officer for PRA, U.S. Department of Justice.

BILLING CODE 4410–30–P

DEPARTMENT OF LABOR

Employment and Training Administration

Agency Information Collection Activities; Comment Request; Program Reporting and Performance Standards System for Indian and Native American Programs Under Title I, Section 166 of the Workforce Innovation and Opportunity Act (WIOA)

ACTION: Notice.

SUMMARY: The Department of Labor's (DOL's) Employment and Training Administration (ETA) is soliciting comments concerning a proposed extension for the authority to conduct the information collection request (ICR) titled, ''Program Reporting and Performance Standards System for Indian and Native American Programs Under Title I, Section 166 of the Workforce Innovation and Opportunity Act (WIOA).'' This comment request is part of continuing Departmental efforts to reduce paperwork and respondent burden in accordance with the Paperwork Reduction Act of 1995 (PRA).

DATES: Consideration will be given to all written comments received by January 14, 2020.

ADDRESSES: A copy of this ICR with applicable supporting documentation, including a description of the likely respondents, proposed frequency of response, and estimated total burden, may be obtained free by contacting Athena R. Brown by telephone at (214) 906–3902 (this is not a toll-free number), TTY 1–877–889–5627 (this is not a toll-free number), or by email at *brown.athena@dol.gov.*

Submit written comments about, or requests for a copy of, this ICR by mail or courier to the U.S. Department of Labor, Employment and Training Administration, Division of Indian and Native American Programs, 200 Constitution Ave. NW, Rm. # S–4206, Washington, DC 20210; by email: *DINAP@dol.gov;* or by Fax (202) 693–3817.

FOR FURTHER INFORMATION CONTACT: Duane Hall by telephone at (972) 850–4637 (this is not a toll-free number) or by email at *hall.duane@dol.gov.*

Authority: 44 U.S.C. 3506(c)(2)(A).

SUPPLEMENTARY INFORMATION: DOL, as part of continuing efforts to reduce paperwork and respondent burden, conducts a pre-clearance consultation program to provide the general public and Federal agencies an opportunity to comment on proposed and/or continuing collections of information before submitting them to the Office of Management and Budget (OMB) for final approval. This program helps to ensure requested data can be provided in the desired format, reporting burden (time and financial resources) is minimized, collection instruments are clearly understood, and the impact of collection requirements can be properly assessed.

ETA requires the collection and reporting of data on eligible persons served under the WIOA, Section 166, Comprehensive Services Program (CSP) and Supplemental Youth Services (SYS) Program to assess the performance and delivery of services. Each Indian and Native American (INA) grantee receiving WIOA, Section 166 funds (non-Pub. L. 102–477 grantees) shall submit a CSP report (ETA Form 9084) on a quarterly basis. Grantees receiving WIOA Section 166 (SYS) funds (non-Pub. L. 102–477 grantees) shall submit a SYS program report (ETA Form 9085) semi-annually. This request is to extend the existing ETA form 9084 and 9085 report submitted each quarter/semi-annually, by INA grantees. The current ETA forms 9084 and 9085 expire on January 31, 2020. 29 U.S.C. Chapter 30, Subchapter V, § 2935(2), authorizes this information collection.

This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless it is approved by OMB under the PRA and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information that does not display a valid Control Number. See 5 CFR 1320.5(a) and 1320.6.

Interested parties are encouraged to provide comments to the contact shown in the **ADDRESSES** section. Comments must be written to receive consideration, and they will be summarized and included in the request for OMB approval of the final ICR. In order to help ensure appropriate consideration, comments should mention OMB control number 1205–0422.

Submitted comments will also be a matter of public record for this ICR and posted on the internet, without redaction. DOL encourages commenters not to include personally identifiable information, confidential business data, or other sensitive statements/information in any comments.

DOL is particularly interested in comments that:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, (*e.g.,* permitting electronic submission of responses).

Agency: DOL–ETA.

Type of Review: Extension without changes.

Title of Collection: Program Reporting and Performance Standards System for Indian and Native American Programs Under Title I, Section 166 of the Workforce Innovation and Opportunity Act (WIOA).

Form: ETA–9084 and ETA–9085.

OMB Control Number: 1205–0422.

Affected Public: State, local and Tribal Governments.

Estimated Number of Respondents: 111 respondents to the CSP and 73 respondents to the SYS.

Frequency: Quarterly for the CSP (Form ETA–9084) and semi-annually for the SYS (Form ETA–9085).

Total Estimated Annual Responses: 440 respondents to the CSP and 146 respondents to the SYS.

Estimated Average Time per Response: 2 hours for the CSP and 2 hours for the SYS.

Estimated Total Annual Burden Hours: 1,180 hours.

Total Estimated Annual Other Cost Burden: $0.

John Pallasch,

Assistant Secretary for Employment and Training.

[FR Doc. 2019–24831 Filed 11–14–19; 8:45 am]

BILLING CODE 4510–FR–P

NATIONAL CREDIT UNION ADMINISTRATION

Sunshine Act: Notice of Agency Meeting

TIME AND DATE: 10:00 a.m., Wednesday, November 20, 2019.

PLACE: Board Room, 7th Floor, Room 7047, 1775 Duke Street (All visitors

must use Diagonal Road Entrance), Alexandria, VA 22314–3428.

STATUS: Open.

MATTERS TO BE CONSIDERED: 1. Board Briefing, NCUA's 2020–2021 Budget.

FOR FURTHER INFORMATION CONTACT: Gerard Poliquin, Secretary of the Board, Telephone: 703–518–6304.

Gerard Poliquin,

Secretary of the Board.

[FR Doc. 2019–24928 Filed 11–13–19; 4:15 pm]

BILLING CODE 7535–01–P

NATIONAL CREDIT UNION ADMINISTRATION

Agency Information Collection Activities: Proposed Collection; Comment Request; NCUA Profile

AGENCY: National Credit Union Administration (NCUA).

ACTION: Notice and request for comment.

SUMMARY: The National Credit Union Administration (NCUA), as part of a continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to comment on the following revision, as required by the Paperwork Reduction Act of 1995.

DATES: Written comments should be received on or before January 14, 2020 to be assured consideration.

ADDRESSES: Interested persons are invited to submit written comments on the information collection to Dawn Wolfgang, National Credit Union Administration, 1775 Duke Street, Suite 6032, Alexandria, Virginia 22314; Fax No. 703–519–8579; or Email at *PRAComments@NCUA.gov.*

FOR FURTHER INFORMATION CONTACT: Address requests for additional information to Dawn Wolfgang at the address above or telephone 703–548–2279.

SUPPLEMENTARY INFORMATION:

OMB Number: 3133–0004. At the time of this notice, NCUA is requesting a separate OMB control number for the Profile. The Call Report will retain OMB control number 3133–0004.

Title: NCUA Profile.

Form: NCUA Form 4501A.

Type of Review: Revision.

Abstract: Sections 106 and 202 of the Federal Credit Union Act require federally insured credit unions (FICU) to make financial reports to the NCUA. Section 741.6 prescribes the method in which federally insured credit unions must submit this information to NCUA. NCUA Form 4501A, Credit Union Profile, is used to obtain non-financial data relevant to regulation and supervision such as the names of senior management and volunteer officials, and are reported through NCUA's online portal, CUOnline.

The financial and statistical information is essential to NCUA in carrying out its responsibility for supervising federal credit unions. The information also enables NCUA to monitor all federally insured credit unions with National Credit Union Share Insurance Fund (NCUSIF) insured share accounts.

Affected Public: Private Sector: Not-for-profit institutions.

Estimated No. of Respondents: 5,308.

Estimated No. of Responses per Respondent: 4.

Estimated Total Annual Responses: 21,232.

Estimated Burden Hours per Response: 2.

Estimated Total Annual Burden Hours: 42,464.

Reason for Change: Revisions include the addition of two questions addressing London Interbank Offered Rate (LIBOR) exposure. These questions are needed to identify FICU that have LIBOR instruments or use LIBOR as a reference rate. Examiners will use this information to assess credit unions' exposure, governance, risk management and readiness related to the discontinuation of the LIBOR index after 2021.

This revision will not alter the estimated burden hours necessary to complete the profile. The information needed to provide a ''yes'' or ''no'' response is readily available and NCUA feels that the two hours currently allotted to complete the Form 4501A is sufficient.

Request for Comments: Comments submitted in response to this notice will be summarized and included in the request for Office of Management and Budget approval. All comments will become a matter of public record. The public is invited to submit comments concerning: (a) Whether the collection of information is necessary for the proper execution of the function of the agency, including whether the information will have practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information, including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of the information on the respondents, including the use of automated collection techniques or other forms of information technology.

By Gerard Poliquin, Secretary of the Board, the National Credit Union Administration, on November 8, 2019.

Dated: November 8, 2019.

Dawn D. Wolfgang,

NCUA PRA Clearance Officer.

10:00 a.m. Briefing on Equal Employment Opportunity, Affirmative Employment, and Small Business (Public Meeting); (Contact: Larniece McKoy Moore: 301–415–1942).

This meeting will be webcast live at the Web address—*https://www.nrc.gov/.*

Week of December 23, 2019—Tentative

There are no meetings scheduled for the week of December 23, 2019.

CONTACT PERSON FOR MORE INFORMATION: For more information or to verify the status of meetings, contact Denise McGovern at 301–415–0681 or via email at *Denise.McGovern@nrc.gov.* The schedule for Commission meetings is subject to change on short notice.

The NRC Commission Meeting Schedule can be found on the internet at: *https://www.nrc.gov/public-involve/public-meetings/schedule.html.*

The NRC provides reasonable accommodation to individuals with disabilities where appropriate. If you need a reasonable accommodation to participate in these public meetings or need this meeting notice or the transcript or other information from the public meetings in another format (*e.g.,* braille, large print), please notify Anne Silk, NRC Disability Program Specialist, at 301–287–0745, by videophone at 240–428–3217, or by email at *Anne.Silk@nrc.gov.* Determinations on requests for reasonable accommodation will be made on a case-by-case basis.

Members of the public may request to receive this information electronically. If you would like to be added to the distribution, please contact the Nuclear Regulatory Commission, Office of the Secretary, Washington, DC 20555 (301–415–1969), or by email at *Tyesha.Bush@nrc.gov.*

The NRC is holding the meetings under the authority of the Government in the Sunshine Act, 5 U.S.C. 552b.

Dated at Rockville, Maryland, this 13th day of November 2019.

For the Nuclear Regulatory Commission.

Denise L. McGovern,

Policy Coordinator, Office of the Secretary.

[FR Doc. 2019–24949 Filed 11–13–19; 4:15 pm]

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

[NRC–2019–0226]

Agency Action Regarding the Exploratory Process for the Development of an Advanced Nuclear Reactor Generic Environmental Impact Statement

AGENCY: Nuclear Regulatory Commission.

ACTION: Gather information that would be used to determine whether to prepare a Generic Environmental impact statement for the construction and operation of advanced nuclear reactors.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is conducting an exploratory process to gather information on potential environmental impacts resulting from the construction and operation of advanced nuclear reactors. The NRC is planning to conduct two public meetings and a workshop to explore the interaction of various advanced nuclear reactor designs with the environment. NRC intends to gather information that will inform its decision on whether to proceed with the development of a generic environmental impact statement for the construction and operation of advanced nuclear reactors (ANR GEIS). The intent of an ANR GEIS is to improve the efficiency of the environmental review process.

DATES: The NRC intends to hold two public meeting in November of 2019 to solicitate public input regarding the development of an ANR GEIS. The NRC anticipates that the public workshop would occur during the month of December 2019.

ADDRESSES: You may submit comments by any of the following methods:

- *Federal Rulemaking Website:* Go to *https://www.regulations.gov* and search for Docket ID NRC–2019–0226. Address questions about NRC dockets IDs in *Regulations.gov* to Jennifer Borges; telephone: 301–287–9127; email: *Jennifer.Borges@nrc.gov.* For technical questions, contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.
- *Email comments to: AdvancedReactors-GEIS.resource@nrc.gov.*
- *Mail comments to:* Office of Administration, Mail Stop: TWFN–7–A60M, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001, ATTN: Program Management, Announcements and Editing Staff.

For additional direction on obtaining information and submitting comments, see ''Obtaining Information and Submitting Comments'' in the **SUPPLEMENTARY INFORMATION** section of this document.

FOR FURTHER INFORMATION CONTACT: Jack Cushing, Office of Nuclear Material Safety and Safeguards, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001; telephone: 301–415–1424, and email: *Jack.Cushing@nrc.gov.* Mallecia Sutton, Nuclear Reactor Regulation, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001; telephone: 301–415–0673, and email: *Mallecia.Sutton@nrc.gov.*

SUPPLEMENTARY INFORMATION:

I. Obtaining Information and Submitting Comments

A. Obtaining Information

Please refer to Docket ID NRC–2019–0226 when contacting the NRC about the availability of information for this action. You may obtain publicly-available information related to this action by any of the following methods:

- *Federal Rulemaking Website:* Go to *https://www.regulations.gov* and search for Docket ID NRC–2019–0226.
- *NRC's Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly-available documents online in the ADAMS Public Documents collection at *https://www.nrc.gov/reading-rm/adams.html.* To begin the search, select ''Begin Web-based ADAMS Search.'' For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1–800–397–4209, 301–415–4737, or by email to *pdr.resource@nrc.gov.*
- *NRC's PDR:* You may examine and purchase copies of public documents at the NRC's PDR, Room O1–F21, One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852.

B. Submitting Comments

Please include Docket ID NRC–2019–0226 in your comment submission.

The NRC cautions you not to include identifying or contact information that you do not want to be publicly disclosed in your comment submission. The NRC will post all comment submissions at *https://www.regulations.gov* as well as enter the comment submissions into ADAMS. The NRC does not routinely edit comment submissions to remove identifying or contact information.

If you are requesting or aggregating comments from other persons for submission to the NRC, then you should inform those persons not to include identifying or contact information that they do not want to be publicly disclosed in their comment submission. Your request should state that the NRC does not routinely edit comment submissions to remove such information before making the comment submissions available to the public or entering the comment into ADAMS.

II. Discussion

The NRC is soliciting input from stakeholders regarding the development of an ANR GEIS for the construction and operation of advanced nuclear reactors. The NRC will hold two public meetings during the month of November 2019 and a workshop in December 2019 to discuss stakeholder input. The NRC expects to gather input from stakeholders until December 31, 2019.

If developed, an ANR GEIS would streamline the environmental review process for advanced nuclear reactor environmental reviews. The ANR GEIS

would also determine which environmental impacts would result in essentially the same (generic) impact for various types of advanced nuclear power plants and which ones could result in different levels of environmental impacts requiring a plant-specific analysis. Environmental reviews for advanced nuclear reactor licenses would incorporate the ANR GEIS by reference and provide site-specific information in a supplemental Environmental Impact Statement, thereby streamlining the environmental review process.

The input received in the public meetings will inform the NRC on whether to prepare an ANR GEIS. If, after gathering stakeholder input, the NRC has sufficient information to begin development of a GEIS, the staff will begin the scoping process and develop a schedule for completion of an ANR GEIS at that time.

III. Request for Information

This notice informs the public of the NRC's intention to gather input from stakeholders to assess whether to proceed with the development of an ANR GEIS.

The NRC will need to:

a. Seek and obtain input from stakeholders on whether an ANR GEIS would improve the efficiency of the environmental review process, where the advanced nuclear reactors would be located, the types of technologies that would be involved, and which environmental impacts should be addressed in the ANR GEIS;

b. Assess whether an ANR GEIS could avoid duplication of effort and focus the review on important environmental issues; and

c. Investigate how an ANR GEIS can align with the goals and best practices of Federal government efforts to streamline the National Environmental Policy Act processes.

Below are specific questions that the NRC is seeking stakeholder feedback on:

a. Should the scope of the ANR GEIS include reactors regardless of technology or be limited to specific reactor technologies?

b. What reactor sizes (footprint) and power levels should the NRC include in the scope the ANR GEIS?

c. One possible option NRC is considering is limiting the ANR GEIS to certain regions with common environmental conditions. Should the NRC consider the geographical site of a reactor when developing the scope of the ANR GEIS? Should the NRC consider a set of bounding plant parameters when developing the scope of the ANR GEIS? If so, what parameters should be considered?

IV. Public Meetings and Workshop

The NRC will hold two Category 2 public meetings to solicitate information regarding development of an ANR GEIS. The two meetings will be held in November 2019 and the workshop will be held in December 2019. The meeting dates and locations will be posted on the NRC's public website at *https://www.nrc.gov/pmns/mtg.* The public is invited to discuss regulatory issues with the agency at designated points that will be identified on the agenda. The NRC's Policy Statement, ''Enhancing Public Participation on NRC Meetings,'' effective May 28, 2002 (67 FR 36920), applies to this meeting. The policy statement may be found electronically under the NRC's public website (*https://www.nrc.gov/reading-rm/doc-collections/commission/policy/67fr36920.html*), and contains information regarding visitors and security.

The NRC provides reasonable accommodation to individuals with disabilities where appropriate. If you need a reasonable accommodation to participate in this meeting or need the meeting notice or the transcript or other information from the meeting in another format (*e.g.,* Braille, large print), please notify the NRC's meeting contact. Determinations on requests for reasonable accommodation will be made on a case-by-case basis.

V. Procedural Requirements

Paperwork Reduction Act Statement

This **Federal Register** Notice does not contain new or amended information collection requirements that are subject to the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*). Existing information collection requirements were approved by the Office of Management and Budget (OMB), approval number 3150–0021.

Public Protection Notification

The NRC may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the document requesting or requiring the collection displays a currently valid OMB control number.

Dated at Rockville, Maryland, this 12th day of November 2019.

For the Nuclear Regulatory Commission.

John R. Tappert,

Director, Division of Rulemaking, Environmental, and Financial Support, Office of Nuclear Material Safety and Safeguards.

[FR Doc. 2019–24792 Filed 11–14–19; 8:45 am]

BILLING CODE 7590–01–P

SECURITIES AND EXCHANGE COMMISSION

Sunshine Act Meetings

TIME AND DATE: 2:00 p.m. on Wednesday, November 20, 2019.

PLACE: The meeting will be held at the Commission's headquarters, 100 F Street NE, Washington, DC 20549.

STATUS: This meeting will be closed to the public.

MATTERS TO BE CONSIDERED: Commissioners, Counsel to the Commissioners, the Secretary to the Commission, and recording secretaries will attend the closed meeting. Certain staff members who have an interest in the matters also may be present.

In the event that the time, date, or location of this meeting changes, an announcement of the change, along with the new time, date, and/or place of the meeting will be posted on the Commission's website at *https://www.sec.gov.*

The General Counsel of the Commission, or his designee, has certified that, in his opinion, one or more of the exemptions set forth in 5 U.S.C. 552b(c)(3), (5), (6), (7), (8), 9(B) and (10) and 17 CFR 200.402(a)(3), (a)(5), (a)(6), (a)(7), (a)(8), (a)(9)(ii) and (a)(10), permit consideration of the scheduled matters at the closed meeting.

The subject matters of the closed meeting will consist of the following topics:

Institution and settlement of injunctive actions;

Institution and settlement of administrative proceedings;

Resolution of litigation claims; and

Other matters relating to enforcement proceedings.

At times, changes in Commission priorities require alterations in the scheduling of meeting agenda items that may consist of adjudicatory, examination, litigation, or regulatory matters.

CONTACT PERSON FOR MORE INFORMATION: For further information; please contact Vanessa A. Countryman from the Office of the Secretary at (202) 551–5400.

Dated: November 13, 2019.

Vanessa A. Countryman,

Secretary.

[FR Doc. 2019–24955 Filed 11–13–19; 4:15 pm]

BILLING CODE 8011–01–P

SOCIAL SECURITY ADMINISTRATION

[Docket No. SSA 2019–0048]

National Disability Forum

AGENCY: Social Security Administration (SSA).

ACTION: Announcement of a National Disability Forum.

SUMMARY: We are announcing the fourteenth National Disability Forum. The purpose of this public forum is to obtain feedback from experts in their field on what impairments have a likelihood to improve. This forum will be moderated, and include up to five panelists presenting information on the topic. Additionally, there will be a combined question and answer session during which the panelists will address questions from those on site and received by email during the forum.

DATES: Tuesday December 3, 2019 from 1:00 p.m. to 3:00 p.m.

ADDRESSES: *Meeting Location:* Partnership for Public Service, 1100 New York Ave NW, Suite 200 East, Washington, DC 20005.

Accommodations: Sign language interpreters, microphones, and materials in Braille, large print, and electronic formats will be available. The facility is wheelchair accessible. Anyone needing other accommodations should include a specific request when registering in advance.at: *https://www.ssa.gov/ndf/*.

FOR FURTHER INFORMATION CONTACT: James Edrington, NDF Team Lead, Office of Medical Assistance, Social Security Administration, 4539 Annex, 6401 Security Boulevard, Baltimore, MD 21235–6401, Telephone: (410) 966–2153, or send

SUPPLEMENTARY INFORMATION: The National Disability Forum is an open forum hosted by Social Security that gives all interested stakeholders an opportunity to share their unique insights on topics of particular interest to SSA early in the rulemaking process. The activities under the National Disability Forum supplement, but do not replace, the rule-making process followed by SSA under the Administrative Procedure Act.

These Forums serve as listening sessions, and bring public awareness to disability and retirement policy among stakeholders. Through these forums, we gain insight into how our policy affects the disability and retirement communities we serve, and the potential impact our policies may have in the future.

For more information, please visit our website at: *https://www.ssa.gov/ndf/.*

Mark Warshawsky,

Deputy Commissioner, Office of Retirement and Disability Policy.

BILLING CODE P

DEPARTMENT OF STATE

[Public Notice:10942]

Notice of Determinations; Culturally Significant Objects Imported for Exhibition—Determinations: ''Malangatana: Mozambique Modern'' Exhibition

SUMMARY: Notice is hereby given of the following determinations: I hereby determine that certain objects to be exhibited in the exhibition ''Malangatana: Mozambique Modern,'' imported from abroad for temporary exhibition within the United States, are of cultural significance. The objects are imported pursuant to loan agreements with the foreign owners or custodians. I also determine that the exhibition or display of the exhibit objects at The Art Institute of Chicago, in Chicago, Illinois, from on or about March 22, 2020, until on or about July 5, 2020, and at possible additional exhibitions or venues yet to be determined, is in the national interest. I have ordered that Public Notice of these determinations be published in the **Federal Register**.

FOR FURTHER INFORMATION CONTACT: Chi D. Tran, Paralegal Specialist, Office of the Legal Adviser, U.S. Department of State (telephone: 202–632–6471; email: *section2459@state.gov*). The mailing address is U.S. Department of State, L/PD, SA–5, Suite 5H03, Washington, DC 20522–0505.

SUPPLEMENTARY INFORMATION: The foregoing determinations were made pursuant to the authority vested in me by the Act of October 19, 1965 (79 Stat. 985; 22 U.S.C. 2459), Executive Order 12047 of March 27, 1978, the Foreign Affairs Reform and Restructuring Act of 1998 (112 Stat. 2681, *et seq.;* 22 U.S.C. 6501 note, *et seq.*), Delegation of Authority No. 234 of October 1, 1999, and Delegation of Authority No. 236–3 of August 28, 2000.

Marie Therese Porter Royce,

Assistant Secretary, Educational and Cultural Affairs, Department of State.

[FR Doc. 2019–24761 Filed 11–14–19; 8:45 am]

BILLING CODE 4710–05–P

SURFACE TRANSPORTATION BOARD

[Docket No. AB 1108 (Sub-No. 1X)]

The Blacklands Railroad—Discontinuance of Service Exemption—in Hunt, Delta, Hopkins, Franklin and Titus Counties, Tex.

On October 28, 2019, The Blacklands Railroad (BLR) filed a petition under 49 U.S.C. 10502 for exemption from the prior approval requirements of 49 U.S.C. 10903 to discontinue its operations over approximately 76 miles of rail line (the Line) in Hunt, Delta, Hopkins, Franklin, and Titus Counties, Tex.[1] In particular, BLR seeks authority to discontinue its operating rights over: (1) Approximately 31 miles of a line of railroad owned by the Northeast Texas Rural Rail Transportation District (NETEX) from milepost 524.0, located 6.2 miles west of Sulphur Springs, to milepost 555.0, near Greenville (also known as Simtrott); (2) an additional 34.59 miles of NETEX's line, from milepost 524.0 to milepost 489.41, at the eastern county line of Franklin County; and (3) trackage rights acquired by NETEX over a Union Pacific Railroad Company (UP) line, from milepost 489.41 to milepost 479.0 at Mt. Pleasant where BLR interchanges traffic with UP.[2] The Line traverses U.S. Postal Service Zip Codes 75455, 75493, 75457, 75478, 75482, 75401, 75433, 75428, and 75402.

According to BLR, its operations over the Line have resulted in significant financial losses over the last four years and there is no reasonable basis to believe profitability will improve in the near future. In addition, BLR states that, upon discontinuance, no customer on the Line will be left without common carrier service because NETEX is itself a Class III rail carrier on the Line.[3]

BLR states that it believes the Line does not contain any federally granted rights-of-way. BLR states that any documentation in its possession will be made available to those requesting it.

[1] BLR initially submitted its petition on October 25, 2019. In light of a supplement filed on October 28, 2019, that date is deemed the filing date of the petition for exemption.

[2] BLR states that it also leases directly from UP the segment between milepost 489.40 and milepost 481.5, and that these leased operations from UP are not the subject of the discontinuance authority sought in this proceeding. *See Blacklands R.R.—Lease & Operation Exemption—Union Pac. R.R.,* FD 34723 (STB served July 26, 2005).

[3] BLR states that NETEX sought and received authority to acquire and operate the Line as a common carrier in *Northeast Texas Rural Rail Transportation District—Purchase (Portion) Exemption—St. Louis Southwestern Railway Company,* FD 32841 (STB served Jan. 26, 1996) and *Northeast Texas Rural Rail Transportation District—Acquisition Exemption—Lines of Union Pacific Railroad Company,* FD 33892 (STB served Jul. 26, 2000).

As a condition to this exemption, any employee adversely affected by the discontinuance of service shall be protected under *Oregon Short Line Railroad—Abandonment Portion Goshen Branch Between Firth & Ammon, in Bingham & Bonneville Counties, Idaho,* 360 I.C.C. 91 (1979).

By issuance of this notice, the Board is instituting an exemption proceeding pursuant to 49 U.S.C. 10502(b). A final decision will be issued by February 14, 2020.

Because this is a discontinuance proceeding and not an abandonment proceeding, trail use/rail banking and public use conditions are not appropriate. Because there will be environmental review during any subsequent abandonment, this discontinuance does not require an environmental review. *See* 49 CFR 1105.6(c)(5), 1105.8(b).

Any offer of financial assistance (OFA) for subsidy under 49 CFR 1152.27(b)(2) will be due no later than 120 days after the filing of the petition for exemption, or 10 days after service of a decision granting the petition for exemption, whichever occurs sooner.[4] Persons interested in submitting an OFA must first file a formal expression of intent to file an offer by November 25, 2019, indicating the intent to file an OFA for subsidy and demonstrating that they are preliminarily financially responsible. *See* 49 CFR 1152.27(c)(1)(i).

All filings in response to this notice must refer to Docket No. AB 1108 (Sub-No. 1X) and must be filed with the Surface Transportation Board either via e-filing or in writing addressed to 395 E Street SW, Washington, DC 20423–0001. In addition, a copy of each pleading must be served on BLR's representative, Thomas J. Litwiler, Fletcher & Sippel LLC, 29 N. Wacker Drive, Suite 800, Chicago, IL 60606. Replies to this petition are due on or before December 5, 2019.

Persons seeking further information concerning discontinuance procedures may contact the Board's Office of Public Assistance, Governmental Affairs, and Compliance at (202) 245–0238 or refer to the full abandonment and discontinuance regulations at 49 CFR part 1152. Questions concerning environmental issues may be directed to the Board's Office of Environmental Analysis at (202) 245–0305. Assistance for the hearing impaired is available through the Federal Relay Service at (800) 877–8339.

Board decisions and notices are available at *www.stb.gov.*

[4] The filing fee for OFAs can be found at 49 CFR 1002.2(f)(25).

Decided: November 12, 2019.

By the Board, Allison C. Davis, Director, Office of Proceedings.

Brendetta Jones,

Clearance Clerk.

[FR Doc. 2019–24828 Filed 11–14–19; 8:45 am]

BILLING CODE 4915–01–P

TENNESSEE VALLEY AUTHORITY

Environmental Impact Statement for Johnsonville Fossil Plant Ash Impoundment Closure

AGENCY: Tennessee Valley Authority.

ACTION: Notice of intent.

SUMMARY: The Tennessee Valley Authority (TVA) intends to prepare an Environmental Impact Statement (EIS) to address the potential environmental effects associated with the future management of coal combustion residuals (CCR) material at the Johnsonville Fossil Plant (JOF) located in Humphreys County, Tennessee. The purpose of this EIS is to address the disposition of Ash Pond 2 at JOF, to support the implementation of TVA's goal to eliminate all wet CCR storage at its coal plants by closing CCR surface impoundments across the TVA system, and to assist TVA in complying with the United States Environmental Protection Agency (EPA) CCR Rule and other applicable federal and state statutes and regulations. TVA will evaluate the closure of JOF Ash Pond 2 and will develop and evaluate various alternatives for closure including the No Action Alternative. One alternative identified by TVA is Closure-in-Place of Ash Pond 2. Another alternative is Closure-by-Removal of Ash Pond 2. TVA is considering four options for disposal of the CCR removed from Ash Pond 2, including transport and disposal of CCR in an existing offsite permitted landfill, transport and disposal of CCR to a new onsite landfill, transport and disposal of CCR to both an existing offsite permitted landfill and a new onsite landfill, and transport of CCR to a beneficial re-use processing facility to be processed for use in concrete and other building materials with any unusable CCR and excavated soil material going to an existing offsite or new onsite permitted landfill.

TVA has identified a potential location for a new onsite landfill. TVA has not selected a potential offsite landfill for disposal of CCR from JOF, and no specific provider of the beneficiation services or specific site at which a beneficial re-use processing facility would be constructed has been developed at this time. Therefore, impacts of these options for CCR disposal would be based on the most impactful or ''bounding'' characteristics of CCR transport to suitable existing landfills or to a beneficial re-use processing facility. Similarly, the potential effects of construction and operation of the beneficial re-use processing facility will be evaluated using 'bounding'' attributes obtained from candidate beneficiation vendors. Public comments are invited concerning both the scope of the review and environmental issues that should be addressed. No decisions have been made about the final disposition of CCR storage at COF Ash Pond 2.

DATES: Comments on the scope of the EIS must be received on or before December 20, 2019.

ADDRESSES: Written comments should be sent to W. Douglas White, NEPA Compliance Specialist, 400 W. Summit Hill Drive, WT 11B–K, Knoxville, TN 37902. Comments also may be submitted online at: *https://www.tva.gov/nepa* or by email to *wdwhite0@tva.gov.*

FOR FURTHER INFORMATION CONTACT: Other related questions should be sent to W. Douglas White, NEPA Compliance Specialist, Tennessee Valley Authority, at 865–632–2252 or *wdwhite0@tva.gov.*

SUPPLEMENTARY INFORMATION: This notice is provided in accordance with the Council on Environmental Quality's regulations (40 CFR parts 1500 to 1508) and TVA's procedures for implementing the National Environmental Policy Act (NEPA) and Section 106 of the National Historic Preservation Act (NHPA) and its implementing regulations (36 CFR part 800).

TVA Power System and CCR Management

TVA is a corporate agency and instrumentality of the United States created by and existing pursuant to the TVA Act of 1933 that provides electricity for business customers and local power distributors. TVA serves more than 9 million people in parts of seven southeastern states. TVA receives no taxpayer funding, deriving virtually all of its revenues from sales of electricity. In addition to operating and investing its revenues in its electric system, TVA provides flood control, navigation and land management for the Tennessee River system and assists local power companies and state and local governments with economic development and job creation.

JOF had ten coal-fired generating units that had a combined capacity of 1,254 megawatts. Units 5 through 10 ceased power generation in 2012 and

were retired on December 31, 2015. Units 1 through 4 ceased operation and were retired on December 31, 2017. While in operation, JOF consumed approximately 3.5 million tons of coal per year and produced approximately 7,195 million kilowatt-hours of electricity a year. CCR produced as a by-product to burning coal by the collective units was wet-sluiced to Ash Pond 2. It is estimated that approximately 4.6 million cubic yards (yd^3) of CCR material remains in JOF Ash Pond 2.

Historically, TVA has managed its CCR in wet impoundments or dry landfills. In July 2009, the TVA Board of Directors passed a resolution for staff to review TVA practices for storing CCRs at its generating facilities, including JOF, which resulted in a recommendation to convert the wet ash management system at JOF to a dry storage system. On April 17, 2015, the EPA published the final Disposal of CCR from Electric Utilities rule, also known as the CCR Rule.

In June 2016, TVA issued a Final Programmatic Environmental Impact Statement (PEIS) that analyzed methods for closing CCR impoundments at TVA fossil plants and identified specific screening and evaluation factors to help frame its evaluation of closures at its other facilities. A Record of Decision was released in July 2016 that would allow future environmental reviews of qualifying CCR impoundment closures to tier from the PEIS. The PEIS can be found at *www.tva.com/nepa.* This EIS is intended to tier from the 2016 PEIS to evaluate the closure alternatives for the JOF Ash Pond 2.

Alternatives

In addition to a No Action Alternative, this EIS will address alternatives that meet the purpose and need for the project. TVA plans to consider the following: (1) Closure-in-Place of Ash Pond 2, (2) Closure-by-Removal of Ash Pond 2 to an Existing Offsite Landfill, (3) Closure-by-Removal of Ash Pond 2 to a New Onsite Landfill, (4) Closure-by-Removal of Ash Pond 2 to an Existing Offsite and New Onsite Landfill, and (5) Closure-by-Removal of Ash Pond 2 to an Offsite Beneficial Re-use Processing Facility with unusable CCR and excavated soil material going to an existing offsite or new onsite permitted landfill.

No decision has been made about the final disposition of CCR storage at JOF. TVA is preparing this EIS to inform decision makers, other agencies, and the public about the potential for environmental impacts associated with the final disposition of CCR at JOF Ash Pond 2.

Proposed Resources and Issues to be Considered

This EIS will identify the purpose and need of the project and will contain descriptions of the existing environmental and socioeconomic resources within the area that could be affected by the management and final disposition of CCR at JOF. Evaluation of potential environmental impacts to these resources will include, but not be limited to, air quality, climate change, water quality, groundwater, geology and soils, aquatic and terrestrial ecology, threatened and endangered species, wetlands, floodplains, land use, noise, transportation, visual resources, historic and archaeological resources, solid and hazardous waste, safety, socioeconomic and environmental justice issues, and natural areas, parks, and recreation. The final range of issues to be addressed in the environmental review will be determined, in part, from scoping comments received. The preliminary identification of reasonable alternatives and environmental issues in this notice is not meant to be exhaustive or final.

Public Participation

TVA is committed to an open process and wants input from the community. The public is invited to submit comments on the scope of this EIS no later than the date identified in the **DATES** section of this notice. Federal, state and local agencies and Native American Tribes are also invited to provide comments.

After consideration of comments received during the scoping period, TVA will develop and distribute a scoping document that will summarize public and agency comments that were received and provide a schedule for completing the EIS process. Following analysis of the affected resources, TVA will prepare a draft EIS for public review and comment. A final decision on proceeding with the management and final disposal of CCR and closure of the Ash Pond 2 surface impoundment will be based on a number of factors including public comments, the conclusions of the EIS, the requirements of the CCR Rule, relevant state law requirements, engineering and risk evaluations, and financial considerations.

TVA expects to release the Draft EIS in late 2020. TVA anticipates holding a community meeting near JOF after releasing the Draft EIS. Meeting details will be posted on TVA's website and advertised in local media.

Authority: 40 CFR 1501.7.

M. Susan Smelley,

Director, Environmental Compliance and Operations.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

[Docket No. 2019–0914]

Agency Information Collection Activities: Requests for Comments; Clearance of a Renewed Approval of Information Collection: Certification of Aircraft and Airmen for the Operation of Light-Sport Aircraft

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice and request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, FAA invites public comments about our intention to request the Office of Management and Budget (OMB) approval to renew an information collection. The collection involves the recordkeeping requirement for owners/operators of aircraft issued a special airworthiness certificate in the light-sport aircraft category (SLSA) to keep the current status of applicable safety directives, and transfer these records with the aircraft at the time the aircraft is sold. The information to be collected is necessary to determine and ensure the SLSA aircraft is in a condition for safe flight prior to aircraft operation.

DATES: Written comments should be submitted by January 14, 2020.

ADDRESSES: Please send written comments:

FOR FURTHER INFORMATION CONTACT: Tanya Glines by email at: *Tanya.glines@faa.gov;* phone: 801–257–5085.

SUPPLEMENTARY INFORMATION:

Public Comments Invited: You are asked to comment on any aspect of this information collection, including (a) whether the proposed collection of information is necessary for FAA's performance; (b) the accuracy of the estimated burden; (c) ways for FAA to enhance the quality, utility and clarity of the information collection; and (d) ways that the burden could be minimized without reducing the quality

of the collected information. The agency will summarize and/or include your comments in the request for OMB's clearance of this information collection.

OMB Control Number: 2120–0730.

Title: Certification of Aircraft and Airmen for the Operation of Light-Sport Aircraft.

Form Numbers: Aircraft maintenance records/logs.

Type of Review: Renewal of an information collection.

Background: Title 14 CFR, § 91.417(a)(2)(v) requires each registered owner or operator to retain records containing the current status of applicable safety directives including, for each, the method of compliance, the safety directive number and revision date. Additionally, if the safety directive involves recurring action, the time and date when the next action is required.

Recording this information and retaining these records is necessary to determine if unsafe conditions have been corrected on aircraft issued a special airworthiness certificate in the light-sport category (SLSA), which assists in ensuring that the SLSA aircraft is in a condition safe for flight prior to its operation within the national airspace.

Respondents include owners/operators of SLSA, aircraft mechanics, and LSA repairmen with a Maintenance rating. The records of SLSA safety directive compliance are retained by the aircraft owner/operator, who must keep the records for the life of the SLSA aircraft and transfer them to the new owner at the time the aircraft is sold. The burden estimates are based on the current number of registered SLA and a projected future growth rate.

Respondents: 2935 owners/operators of SLSA aircraft.

Frequency: On occasion.

Estimated Average Burden per Response: 2 Hours.

Estimated Total Annual Burden: 5870 hours annual industry burden.

Issued in Washington, DC, on November 12, 2019.

Tanya A. Glines,

Aviation Safety Inspector, Safety Standards, General Aviation Maintenance Branch (AFS–350).

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Motor Carrier Safety Administration

[Docket No. FMCSA–2019–0152]

Agency Information Collection Activities; Renewal of an Approved Information Collection Request: Designation of Agents, Motor Carriers, Brokers and Freight Forwarders

AGENCY: Federal Motor Carrier Safety Administration (FMCSA), DOT.

ACTION: Notice and request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, FMCSA announces its plan to submit the Information Collection Request (ICR) described below to the Office of Management and Budget (OMB) for its review and approval and invites public comment. FMCSA requests approval to renew an ICR titled ''Designation of Agents, Motor Carriers, Brokers and Freight Forwarders,'' which is used to provide registered motor carriers, property brokers, and freight forwarders a means of meeting process agent requirements.

DATES: We must receive your comments on or before December 16, 2019.

ADDRESSES: You may submit comments identified by Federal Docket Management System (FDMS) Docket Number FMCSA–2019–0152 using any of the following methods:

- *Federal eRulemaking Portal: http://www.regulations.gov*. Follow the online instructions for submitting comments.
- *Fax:* 1–202–493–2251.
- *Mail:* Docket Operations; U.S. Department of Transportation, 1200 New Jersey Avenue SE, West Building, Ground Floor, Room W12–140, Washington, DC 20590–0001.
- *Hand Delivery or Courier:* U.S. Department of Transportation, 1200 New Jersey Avenue SE, West Building, Ground Floor, Room W12–140, Washington, DC 20590–0001 between 9 a.m. and 5 p.m. e.t., Monday through Friday, except Federal holidays.

Instructions: All submissions must include the Agency name and docket number. For detailed instructions on submitting comments, see the Public Participation heading below. Note that all comments received will be posted without change to *http://www.regulations.gov,* including any personal information provided. Please see the Privacy Act heading below.

Docket: For access to the docket to read background documents or comments received, go to *http://www.regulations.gov,* and follow the online instructions for accessing the dockets, or go to the street address listed above.

Privacy Act: In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to better inform its rulemaking process. DOT posts these comments, without edit, including any personal information the commenter provides, to *www.regulations.gov,* as described in the system of records notice (DOT/ALL–14 FDMS), which can be reviewed at *www.dot.gov/privacy.*

Public Participation: The Federal eRulemaking Portal is available 24 hours each day, 365 days each year. You can obtain electronic submission and retrieval help and guidelines under the ''help'' section of the Federal eRulemaking Portal website. If you want us to notify you that we received your comments, please include a self-addressed, stamped envelope or postcard, or print the acknowledgement page that appears after submitting comments online. Comments received after the comment closing date will be included in the docket and will be considered to the extent practicable.

FOR FURTHER INFORMATION CONTACT: Lorenzo Allen, Office of Registration and Safety Information, Department of Transportation, Federal Motor Carrier Safety Administration, West Building 6th Floor, 1200 New Jersey Avenue SE, Washington, DC 20590. Telephone: 202–385–2465; email: *Lorenzo.allen@dot.gov.* Office hours are from 9 a.m. to 5 p.m., Monday through Friday, except Federal Holidays.

SUPPLEMENTARY INFORMATION:

Title: Designation of Agents, Motor Carriers, Brokers and Freight Forwarders.

OMB Control Number: 2126–0015.

Type of Request: Renewal of a currently-approved information collection.

Respondents: Motor carriers, freight forwarders and brokers.

Estimated Number of Respondents: 39,047.

Estimated Time per Response: 10 minutes.

Expiration Date: January 31, 2020.

Frequency of Response: On occasion. Form BOC–3 must be filed by all motor carriers, freight forwarders and brokers when the transportation entity first registers with the FMCSA. All brokers must make a designation for each State in which it has an office or in which contracts are written. Subsequent filings are made only if the motor carrier, broker or freight forwarder changes process agents.

Estimated Total Annual Burden: 6,508 hours [39,047 respondents × 10 minutes per response].

Background

The Secretary of Transportation (Secretary) is authorized to register motor carriers under the provisions of 49 U.S.C. 13902; freight forwarders under the provisions of 49 U.S.C. 13903; and property brokers under provisions of 49 U.S.C. 13904. These persons may conduct transportation services only if they are registered pursuant to 49 U.S.C. 13901. The Secretary delegated authority pertaining to these registration requirements to FMCSA in 49 CFR 1.73(a)(5).

Registered motor carriers, brokers and freight forwarders must designate an agent on whom service of notices in proceedings before the Secretary may be made (49 U.S.C. 13303). Registered motor carriers must also designate an agent for every State in which they operate and traverse in the United States during such operations, agents on whom process issued by a court may be served in actions brought against the registered motor carrier (49 U.S.C. 13304, 49 CFR 366.4T). Every broker shall make a designation for each State in which its offices are located or in which contracts are written (49 U.S.C. 13304, 49 CFR 366.4T). Regulations governing the designation of process agents are found at 49 CFR part 366. This designation is filed with FMCSA on Form BOC–3, ''Designation of Agents for Service of Process.'' The program decrease in annual burden hours from 18,395 to 6,508 is due to revised estimates of the number of respondents and responses. Previous estimates were based on 2014 data. Current estimates are based on May 2019 Motor Carrier Management Information System (MCMIS) and Safety Measurement System (SMS) data snapshots.

Public Comments Invited:

You are asked to comment on any aspect of this information collection, including: (1) Whether the proposed collection is necessary for the FMCSA to perform it's functions; (2) the accuracy of the estimated burden; (3) ways for the FMCSA to enhance the quality, usefulness, and clarity of the collected information; and (4) ways that the burden could be minimized without reducing the quality of the collected information.

Issued under the authority delegated in 49 CFR 1.87 on: November 7, 2019.

Kelly Regal,

Associate Administrator for Office of Research and Information Technology.

BILLING CODE 4910–EX–P

DEPARTMENT OF THE TREASURY

Bureau of Engraving and Printing

Environmental Impact Statement (EIS) for Construction and Operation of a Replacement Currency Production Facility at the Beltsville Agricultural Research Center, Prince George's County, MD

AGENCY: Bureau of Engraving and Printing, Department of the Treasury.

ACTION: Notice of Intent (NOI).

SUMMARY: The Department of the Treasury, Bureau of Engraving and Printing (BEP) announces its intent to prepare an Environmental Impact Statement (EIS) under the National Environmental Policy Act (NEPA) for the construction and operation of a replacement currency production facility.

DATES: Comments must be received by December 16, 2019.

ADDRESSES: Written comments may be mailed to: US Army Corps of Engineers, ATTN. Harvey Johnson, Programs and Project Management Division, 2 Hopkins Plaza, 10th Floor, Baltimore, MD 21201, or emailed to: *BEP-EIS@usace.army.mil.*

FOR FURTHER INFORMATION CONTACT: Harvey Johnson by email at *BEP-EIS@usace.army.mil.*

SUPPLEMENTARY INFORMATION: BEP is the federal agency tasked with developing and producing United States currency notes and other security documents. BEP currently operates production facilities in Washington, DC and in Fort Worth, Texas for this purpose. The Washington DC facility (DCF) is more than 100 years old and subject to sub-standard conditions that limit BEP's ability to modernize its production operations. These limitations include space, functional, and security deficiencies, in particular, segmented production processes and antiquated systems and equipment. From 2010 through 2017, BEP conducted various studies to evaluate alternative courses of action based on factors such as cost, location, and operational requirements. These investigations concluded that construction of a replacement production facility (vice renovation of the existing DCF) was the most appropriate and cost-effective course of action for BEP to modernize its currency production operations. A 2018 Government Accountability Office (GAO) review concurred with BEP's determination. Once operational, the new facility would phase out BEP's manufacturing operations at its existing Washington, DC facility (DCF); the main building in DC would be renovated for administrative purposes, and the Annex building would be returned to the General Services Administration (GSA). BEP is currently evaluating a potential site at the US Department of Agriculture (USDA) Beltsville Agricultural Research Center (BARC) for development of the new facility. The site's location would meet BEP's siting requirements for being accessible to commercial airports and interstate roadways, and for maintaining a reasonable commuting distance for its existing workforce in Washington, DC. A formal land transfer between BEP and USDA is pending further study of the site.

The EIS will analyze the potential impacts of siting a new BEP currency production facility at the BARC site. At a minimum, the EIS will analyze a No Action Alternative, the impacts of not constructing a replacement production facility at the BARC, and a Proposed Action Alternative. Other reasonable alternatives identified during conceptual design and the NEPA process for this proposed action will also be considered for evaluation in the EIS. Resource areas that will be analyzed in the EIS include: Land use, aesthetics, air quality, noise, geology and soils, water resources, biological resources, cultural resources, socioeconomics and environmental justice, traffic and transportation, utilities, and hazardous and toxic materials/waste. Mitigation measures will be presented in the EIS to reduce potential adverse effects.

The 2018 Farm Bill (Public Law 115–334) provided Congressional authorization for a land transfer between BEP and USDA. BEP is currently evaluating a potential site at the USDA's BARC on which to construct and operate the new facility. The BARC site is located in Beltsville, Prince George's County, Maryland on approximately 105 acres near the intersection of Poultry Road and Powder Mill Road. The site's location meets BEP's siting requirements for being accessible to commercial airports and interstate roadways, and for maintaining a reasonable commuting distance for its current workforce in Washington, DC. A formal land transfer between BEP and

USDA is pending further study of the site.

A replacement currency production facility would range in size from approximately 750,000 to 1 million square feet. Such a facility is needed to address the space and functional deficiencies of BEP's existing DCF located at 300 14th Street SW in Washington, DC. The proposed action would allow BEP to modernize and streamline its operational footprint within the National Capital Region (NCR). The proposed action would include siting and orientating the facility to meet specific operational, security, and safety standards, clearing and grading the site, placement of and connection to required utilities and infrastructure, and the phased construction and operation of the new facility. The phased operation of the proposed action would also include the transition or relocation of administrative and manufacturing personnel from BEP's existing DCF. However, the proposed action would not include structural changes to or disposition of any existing BEP facility assets within the NCR, including its current DCF. NEPA compliance for changes to or disposition of these assets will occur at a later date.

The EIS will analyze the potential impacts of siting this facility at the BARC site. At a minimum, the EIS will analyze a No Action Alternative, the impacts of not constructing a replacement production facility at the BARC, and a Proposed Action Alternative. Other reasonable alternatives identified during conceptual design and the NEPA process for BEP's proposed action will also be considered for evaluation in the EIS. Resource areas that will be analyzed in the EIS include: Land use, aesthetics, air quality, noise, geology and soils, water resources, biological resources, cultural resources, socioeconomics and environmental justice, traffic and transportation, utilities, and hazardous and toxic materials/waste. Mitigation measures will be presented in the EIS to reduce potential adverse effects.

The public is invited to participate in the scoping process. The scoping process begins with the publication of this Notice of Intent in the **Federal Register**and will last for 30 days. The scoping process will include a public scoping meeting, which is an opportunity for the public to receive information about the proposed action and assist BEP in identifying issues related to the proposed action. This meeting will take place near the BARC in Beltsville, Maryland; the specific details of the meeting will be announced in local media at least 2 weeks in advance. The public will also be invited to review and comment on the Draft EIS when it is available for review. Comments from the public will be considered before any decision is made regarding implementation of the proposed action.

David F. Eisner,

Assistant Secretary for Management.

BILLING CODE 4840–01–P

FEDERAL REGISTER

Vol. 84 Friday,
No. 221 November 15, 2019

Part II

Department of Health and Human Services

Centers for Medicare & Medicaid Services

42 CFR Parts 403, 409, 410, et al.
Medicare Program; CY 2020 Revisions to Payment Policies Under the Physician Fee Schedule and Other Changes to Part B Payment Policies; Medicare Shared Savings Program Requirements; Medicaid Promoting Interoperability Program Requirements for Eligible Professionals; Establishment of an Ambulance Data Collection System; Updates to the Quality Payment Program; Medicare Enrollment of Opioid Treatment Programs and Enhancements to Provider Enrollment Regulations Concerning Improper Prescribing and Patient Harm; and Amendments to Physician Self-Referral Law Advisory Opinion Regulations Final Rule; and Coding and Payment for Evaluation and Management, Observation and Provision of Self-Administered Esketamine; Final and Interim Final Rules

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare & Medicaid Services

42 CFR Parts 403, 409, 410, 411, 414, 415, 416, 418, 424, 425, 489, and 498

[CMS–1715–F and IFC]

RIN 0938–AT72

Medicare Program; CY 2020 Revisions to Payment Policies Under the Physician Fee Schedule and Other Changes to Part B Payment Policies; Medicare Shared Savings Program Requirements; Medicaid Promoting Interoperability Program Requirements for Eligible Professionals; Establishment of an Ambulance Data Collection System; Updates to the Quality Payment Program; Medicare Enrollment of Opioid Treatment Programs and Enhancements to Provider Enrollment Regulations Concerning Improper Prescribing and Patient Harm; and Amendments to Physician Self-Referral Law Advisory Opinion Regulations Final Rule; and Coding and Payment for Evaluation and Management, Observation and Provision of Self-Administered Esketamine Interim Final Rule

AGENCY: Centers for Medicare & Medicaid Services (CMS), HHS.

ACTION: Final rule and interim final rule.

SUMMARY: This major final rule addresses: Changes to the physician fee schedule (PFS); other changes to Medicare Part B payment policies to ensure that payment systems are updated to reflect changes in medical practice, relative value of services, and changes in the statute; Medicare Shared Savings Program quality reporting requirements; Medicaid Promoting Interoperability Program requirements for eligible professionals; the establishment of an ambulance data collection system; updates to the Quality Payment Program; Medicare enrollment of Opioid Treatment Programs and enhancements to provider enrollment regulations concerning improper prescribing and patient harm; and amendments to Physician Self-Referral Law advisory opinion regulations. In addition, we are issuing an interim final rule with comment period (IFC) to establish coding and payment for evaluation and management, observation and the provision of self-administered Esketamine to facilitate beneficiary access to care for treatment-resistant depression as efficiently as possible.

DATES:

Effective date: These regulations are effective on January 1, 2020.

Comment date: Comments will be accepted/considered ONLY on the Interim Rule ''Coding and Payment for Evaluation and Management, Observation and Provision of Self-Administered Esketamine'' contained in section V. of the preamble of this document. To be assured consideration, comments must be received at one of the addresses provided below, no later than 5 p.m. on December 31, 2019.

ADDRESSES: In commenting, please refer to file code CMS–1715–IFC. Because of staff and resource limitations, we cannot accept comments by facsimile (FAX) transmission.

Comments, including mass comment submissions, must be submitted in one of the following three ways (please choose only one of the ways listed):

1. *Electronically.* You may submit electronic comments on this regulation to *http://www.regulations.gov.* Follow the ''Submit a comment'' instructions.

2. *By regular mail.* You may mail written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–1715–IFC, P.O. Box 8016, Baltimore, MD 21244–8016.

Please allow sufficient time for mailed comments to be received before the close of the comment period.

3. *By express or overnight mail.* You may send written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–1715–IFC, Mail Stop C4–26–05, 7500 Security Boulevard, Baltimore, MD 21244–1850.

For information on viewing public comments, see the beginning of the **SUPPLEMENTARY INFORMATION** section.

FOR FURTHER INFORMATION CONTACT:

Jamie Hermansen, (410) 786–2064, for any issues not identified below.

Michael Soracoe, (410) 786–6312, for issues related to practice expense, work RVUs, conversion factor, and impacts.

Geri Mondowney, (410) 786–1172, or Tourette Jackson, (410) 786–4735, for issues related to malpractice RVUs and geographic practice cost indices (GPCIs).

Larry Chan, (410) 786–6864, or Geri Mondowney, (410) 786–1172, for issues related to potentially misvalued services under the PFS.

Lindsey Baldwin, (410) 786–1694, Emily Yoder, (410) 786–1804, or Patrick Sartini, (410) 786–9252, for issues related to telehealth services.

Pierre Yong, (410) 786–8896, or Lindsey Baldwin, (410) 786–1694, for issues related to Medicare coverage of opioid use disorder treatment services furnished by opioid treatment programs (OTPs).

Lindsey Baldwin, (410) 786–1694, for issues related to bundled payments under the PFS for substance use disorders.

Emily Yoder, (410) 786–1804, or Christiane LaBonte, (410) 786–7237, for issues related to the comment solicitation on opportunities for bundled payments under the PFS.

Regina Walker-Wren, (410) 786–9160, for issues related to physician supervision for physician assistant (PA) services and review and verification of medical record documentation.

Ann Marshall, (410) 786–3059, Emily Yoder, (410) 786–1804, Liane Grayson, (410) 786–6583, or Christiane LaBonte (410) 786–7237, for issues related to care management services.

Terry Simananda, (410) 786–8144, for issues related to interim final rule with comment period (payment for self-administered esketamine).

Kathy Bryant, (410) 786–3448, for issues related to coinsurance for colorectal cancer screening tests and global surgery data collection.

Pamela West, (410) 786–2302, for issues related to therapy services.

Ann Marshall, (410) 786–3059, Emily Yoder, (410) 786–1804, or Christiane LaBonte, (410) 786–7237, for issues related to payment for evaluation and management services.

Thomas Kessler, (410) 786–1991, for issues related to ambulance physician certification statement.

Felicia Eggleston, (410) 786–9287, or Amy Gruber, (410) 786–1542, for issues related to the ambulance fee schedule and the requirements related to the Medicare ground ambulance data collection system.

Linda Gousis, (410) 786–8616, for issues related to intensive cardiac rehabilitation.

David Koppel, (303) 844–2883, or Elizabeth LeBreton, (202) 615–3816, for issues related to the Medicaid Promoting Interoperability Program.

Fiona Larbi, (410) 786–7224, for issues related to the Medicare Shared Savings Program (Shared Savings Program) Quality Measures.

Katie Mucklow, (410) 786–0537, or Diana Behrendt (410) 786–6192, for issues related to open payments.

Cheryl Gilbreath, (410) 786–5919, for issues related to home infusion therapy benefit.

Joseph Schultz, (410) 786–2656, for issues related to Medicare enrollment of opioid treatment programs, and enhancements to provider enrollment regulations concerning improper prescribing and patient harm.

Jacqueline Leach, (410) 786–4282, for issues related to Deferring to State Scope of Practice Requirements: Ambulatory Surgical Centers (ASC).

Mary Rossi-Coajou, (410) 786–6051, for issues related to Deferring to State Scope of Practice Requirements: Hospice.

1877AdvisoryOpinion@cms.hhs.gov, for issues related to Advisory Opinions on Application of the Physician Self-referral law.

Molly MacHarris, (410) 786–4461, for inquiries related to Merit-based Incentive Payment System (MIPS).

Brittany LaCouture, (410) 786–0481, for inquiries related to Alternative Payment Models (APMs).

Patricia Taft, (410) 786–4561, for issues related to Physician Self-Referral Law: Annual Update to the List of CPT/HCPCS Codes Annual Update.

SUPPLEMENTARY INFORMATION:

Inspection of Public Comments: All comments received before the close of the comment period are available for viewing by the public, including any personally identifiable or confidential business information that is included in a comment. We post all comments received before the close of the comment period on the following website as soon as possible after they have been received: *http://regulations.gov.* Follow the search instructions on that website to view public comments.

Addenda Available Only Through the Internet on the CMS Website: The PFS Addenda along with other supporting documents and tables referenced in this final rule are available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/index.html.* Click on the link on the left side of the screen titled, ''PFS Federal Regulations Notices'' for a chronological list of PFS **Federal Register** and other related documents. For the CY 2020 PFS final rule, refer to item CMS–1715–F. Readers with questions related to accessing any of the Addenda or other supporting documents referenced in this final rule and posted on the CMS website identified above should contact Jamie Hermansen at (410) 786–2064.

CPT (Current Procedural Terminology) Copyright Notice: Throughout this final rule, we use CPT codes and descriptions to refer to a variety of services. Applicable Federal Acquisition Regulations (FAR) and Defense Federal Acquisition Regulations (DFAR) apply.

I. Executive Summary

A. Purpose

This major final rule revises payment polices under the Medicare PFS and makes other policy changes, including provisions to implement certain provisions of the Bipartisan Budget Act of 2018 (BBA of 2018) (Pub. L. 115–123, February 9, 2018) and the Substance Use-Disorder Prevention that Promotes Opioid Recovery and Treatment (SUPPORT) for Patients and Communities Act (the SUPPORT Act) (Pub. L. 115–271, October 24, 2018), related to Medicare Part B payment, applicable to services furnished in CY 2020 and thereafter. In addition, this final rule includes provisions related to other payment policy changes that are addressed in section III. of this final rule.

To facilitate beneficiary access to treatment for treatment-resistant depression (TRD) as using esketamine, we are creating two new HCPCS G codes, G2082 and G2083, effective January 1, 2020 on an interim final basis. For 2020, we are establishing RVUs for these services that reflect the relative resource costs associated with the evaluation and management (E/M), observation and provision of the self-administered esketamine product.

1. Summary of the Major Provisions

The statute requires us to establish payments under the PFS based on national uniform relative value units (RVUs) that account for the relative resources used in furnishing a service. The statute requires that RVUs be established for three categories of resources: Work; practice expense (PE); and malpractice (MP) expense. In addition, the statute requires that we establish by regulation each year's payment amounts for all physicians' services paid under the PFS, incorporating geographic adjustments to reflect the variations in the costs of furnishing services in different geographic areas.

In this final rule, we are establishing RVUs for CY 2020 for the PFS to ensure that our payment systems are updated to reflect changes in medical practice and the relative value of services, as well as changes in the statute. This final rule also includes discussions and provisions regarding several other Medicare Part B payment policies, Medicare Shared Savings Program quality reporting requirements, Medicaid Promoting Interoperability Program requirements for eligible professionals, the establishment of a ground ambulance data collection system, updates to the Quality Payment Program, Medicare enrollment of Opioid Treatment Programs and enhancements to provider enrollment regulations concerning improper prescribing and patient harm; and amendments to Physician Self-Referral Law advisory opinion regulations. Specifically, this final rule addresses:

- Practice Expense RVUs (section II.B.)
- Malpractice RVUs (section II.C.)
- Geographic Practice Cost Indices (GPCIs) (section II.D.)
- Potentially Misvalued Services under the PFS (section II.E.)
- Telehealth Services (section II.F.)
- Medicare Coverage for Opioid Use Disorder Treatment Services Furnished by Opioid Treatment Programs (section II.G.)
- Bundled Payments Under the PFS for Substance Use Disorders (section II.H.)
- Physician Supervision for Physician Assistant (PA) Services (section II.I.)
- Review and Verification of Medical Record Documentation (section II.J.)
- Care Management Services (section II.K.)
- Coinsurance for Colorectal Cancer Screening Tests (section II.L.)
- Therapy Services (section II.M.)
- Valuation of Specific Codes (section II.N.)
- Comment Solicitation on Opportunities for Bundled Payments under the PFS (section II.O.)
- Payment for Evaluation and Management (E/M) Services (section II.P.)
- Ambulance Coverage Services—Physician Certification Statement (section III.A.)
- Ambulance Fee Schedule—Medicare Ground Ambulance Data Collection System (section III.B.)
- Intensive Cardiac Rehabilitation (section III.C.)
- Medicaid Promoting Interoperability Program Requirements for Eligible Professionals (EPs) (section III.D.)
- Medicare Shared Savings Program Quality Measures (section III.E.)
- Open Payments (section III.F.)
- Home Infusion Therapy Benefit (section III.G.)
- Medicare Enrollment of Opioid Treatment Programs and Enhancements to Existing General Enrollment Policies Related to Improper Prescribing and Patient Harm (section III.H.)
- Deferring to State Scope of Practice Requirements (section III.I.)
- Advisory Opinions on the Application of the Physician Self-Referral Law (section III.J.)

- Updates to the Quality Payment Program (section III.K.)
- Physician Self-Referral Law: Annual Update to the List of CPT/HCPCS Codes (section IV.)
- Interim Final Rule with Comment Period: Coding and Payment for Evaluation and Management, Observation and Provision of Self-Administered Esketamine (HCPCS codes G2082 and G2083) (section V.)
- Collection of Information Requirements (section VI.)
- Regulatory Impact Analysis (section VII.)

2. Summary of Costs and Benefits

We have determined that this final rule is economically significant. For a detailed discussion of the economic impacts, *see* section VII. of this final rule.

II. Provisions of the Final Rule for the PFS

A. Background

Since January 1, 1992, Medicare has paid for physicians' services under section 1848 of the Act, ''Payment for Physicians' Services.'' The PFS relies on national relative values that are established for work, practice expense (PE), and malpractice (MP), which are adjusted for geographic cost variations. These values are multiplied by a conversion factor (CF) to convert the relative value units (RVUs) into payment rates. The concepts and methodology underlying the PFS were enacted as part of the Omnibus Budget Reconciliation Act of 1989 (Pub. L. 101–239, enacted on December 19, 1989) (OBRA '89), and the Omnibus Budget Reconciliation Act of 1990 (Pub. L. 101–508, enacted on November 5, 1990) (OBRA '90). The final rule published in the November 25, 1991 **Federal Register** (56 FR 59502) set forth the first fee schedule used for payment for physicians' services.

We note that throughout this major final rule, unless otherwise noted, the term ''practitioner'' is used to describe both physicians and nonphysician practitioners (NPPs) who are permitted to bill Medicare under the PFS for the services they furnish to Medicare beneficiaries.

1. Development of the RVUs

a. Work RVUs

The work RVUs established for the initial fee schedule, which was implemented on January 1, 1992, were developed with extensive input from the physician community. A research team at the Harvard School of Public Health developed the original work RVUs for most codes under a cooperative agreement with the Department of Health and Human Services (HHS). In constructing the code-specific vignettes used in determining the original physician work RVUs, Harvard worked with panels of experts, both inside and outside the federal government, and obtained input from numerous physician specialty groups.

As specified in section 1848(c)(1)(A) of the Act, the work component of physicians' services means the portion of the resources used in furnishing the service that reflects physician time and intensity. We establish work RVUs for new, revised and potentially misvalued codes based on our review of information that generally includes, but is not limited to, recommendations received from the American Medical Association/Specialty Society Relative Value Scale Update Committee (RUC), the Health Care Professionals Advisory Committee (HCPAC), the Medicare Payment Advisory Commission (MedPAC), and other public commenters; medical literature and comparative databases; as well as a comparison of the work for other codes within the Medicare PFS, and consultation with other physicians and health care professionals within CMS and the federal government. We also assess the methodology and data used to develop the recommendations submitted to us by the RUC and other public commenters, and the rationale for their recommendations. In the CY 2011 PFS final rule with comment period (75 FR 73328 through 73329), we discussed a variety of methodologies and approaches used to develop work RVUs, including survey data, building blocks, crosswalk to key reference or similar codes, and magnitude estimation. More information on these issues is available in that rule.

b. Practice Expense RVUs

Initially, only the work RVUs were resource-based, and the PE and MP RVUs were based on average allowable charges. Section 121 of the Social Security Act Amendments of 1994 (Pub. L. 103–432, enacted on October 31, 1994), amended section 1848(c)(2)(C)(ii) of the Act and required us to develop resource-based PE RVUs for each physicians' service beginning in 1998. We were required to consider general categories of expenses (such as office rent and wages of personnel, but excluding MP expenses) comprising PEs. The PE RVUs continue to represent the portion of these resources involved in furnishing PFS services.

Originally, the resource-based method was to be used beginning in 1998, but section 4505(a) of the Balanced Budget Act of 1997 (Pub. L. 105–33, enacted on August 5, 1997) (BBA of 1997) delayed implementation of the resource-based PE RVU system until January 1, 1999. In addition, section 4505(b) of the BBA of 1997 provided for a 4-year transition period from the charge-based PE RVUs to the resource-based PE RVUs.

We established the resource-based PE RVUs for each physicians' service in the November 2, 1998 final rule (63 FR 58814), effective for services furnished in CY 1999. Based on the requirement to transition to a resource-based system for PE over a 4-year period, payment rates were not fully based upon resource-based PE RVUs until CY 2002. This resource-based system was based on two significant sources of actual PE data: the Clinical Practice Expert Panel (CPEP) data; and the AMA's Socioeconomic Monitoring System (SMS) data. These data sources are described in greater detail in the CY 2012 PFS final rule with comment period (76 FR 73033).

Separate PE RVUs are established for services furnished in facility settings, such as a hospital outpatient department (HOPD) or an ambulatory surgical center (ASC), and in nonfacility settings, such as a physician's office. The nonfacility RVUs reflect all of the direct and indirect PEs involved in furnishing a service described by a particular HCPCS code. The difference, if any, in these PE RVUs generally results in a higher payment in the nonfacility setting because in the facility settings some resource costs are borne by the facility. Medicare's payment to the facility (such as the outpatient prospective payment system (OPPS) payment to the HOPD) would reflect costs typically incurred by the facility. Thus, payment associated with those specific facility resource costs is not made under the PFS.

Section 212 of the Balanced Budget Refinement Act of 1999 (Pub. L. 106–113, enacted on November 29, 1999) (BBRA) directed the Secretary of Health and Human Services (the Secretary) to establish a process under which we accept and use, to the maximum extent practicable and consistent with sound data practices, data collected or developed by entities and organizations to supplement the data we normally collect in determining the PE component. On May 3, 2000, we published the interim final rule (65 FR 25664) that set forth the criteria for the submission of these supplemental PE survey data. The criteria were modified in response to comments received, and

published in the **Federal Register** (65 FR 65376) as part of a November 1, 2000 final rule. The PFS final rules published in 2001 and 2003, respectively, (66 FR 55246 and 68 FR 63196) extended the period during which we would accept these supplemental data through March 1, 2005.

In the CY 2007 PFS final rule with comment period (71 FR 69624), we revised the methodology for calculating direct PE RVUs from the top-down to the bottom-up methodology beginning in CY 2007. We adopted a 4-year transition to the new PE RVUs. This transition was completed for CY 2010. In the CY 2010 PFS final rule with comment period, we updated the practice expense per hour (PE/HR) data that are used in the calculation of PE RVUs for most specialties (74 FR 61749). In CY 2010, we began a 4-year transition to the new PE RVUs using the updated PE/HR data, which was completed for CY 2013.

c. Malpractice RVUs

Section 4505(f) of the BBA of 1997 amended section 1848(c) of the Act to require that we implement resource-based MP RVUs for services furnished on or after CY 2000. The resource-based MP RVUs were implemented in the PFS final rule with comment period published November 2, 1999 (64 FR 59380). The MP RVUs are based on commercial and physician-owned insurers' MP insurance premium data from all the states, the District of Columbia, and Puerto Rico. For more information on MP RVUs, *see* section II.C. of this final rule, Determination of Malpractice Relative Value Units.

d. Refinements to the RVUs

Section 1848(c)(2)(B)(i) of the Act requires that we review RVUs no less often than every 5 years. Prior to CY 2013, we conducted periodic reviews of work RVUs and PE RVUs independently. We completed 5-year reviews of work RVUs that were effective for calendar years 1997, 2002, 2007, and 2012.

Although refinements to the direct PE inputs initially relied heavily on input from the RUC Practice Expense Advisory Committee (PEAC), the shifts to the bottom-up PE methodology in CY 2007 and to the use of the updated PE/HR data in CY 2010 have resulted in significant refinements to the PE RVUs in recent years.

In the CY 2012 PFS final rule with comment period (76 FR 73057), we finalized a proposal to consolidate reviews of work and PE RVUs under section 1848(c)(2)(B) of the Act and reviews of potentially misvalued codes under section 1848(c)(2)(K) of the Act into one annual process.

In addition to the 5-year reviews, beginning for CY 2009, CMS and the RUC identified and reviewed a number of potentially misvalued codes on an annual basis based on various identification screens. This annual review of work and PE RVUs for potentially misvalued codes was supplemented by the amendments to section 1848 of the Act, as enacted by section 3134 of the Affordable Care Act, that require the agency to periodically identify, review and adjust values for potentially misvalued codes.

e. Application of Budget Neutrality to Adjustments of RVUs

As described in section VII. of this final rule, the Regulatory Impact Analysis, in accordance with section 1848(c)(2)(B)(ii)(II) of the Act, if revisions to the RVUs cause expenditures for the year to change by more than $20 million, we make adjustments to ensure that expenditures do not increase or decrease by more than $20 million.

2. Calculation of Payments Based on RVUs

To calculate the payment for each service, the components of the fee schedule (work, PE, and MP RVUs) are adjusted by geographic practice cost indices (GPCIs) to reflect the variations in the costs of furnishing the services. The GPCIs reflect the relative costs of work, PE, and MP in an area compared to the national average costs for each component. Please refer to the CY 2017 PFS final rule with comment period for a discussion of the last GPCI update (81 FR 80261 through 80270), and to the GPCI section of this current rule for the CY 2020 update.

RVUs are converted to dollar amounts through the application of a CF, which is calculated based on a statutory formula by CMS' Office of the Actuary (OACT). The formula for calculating the Medicare PFS payment amount for a given service and fee schedule area can be expressed as:

$$\text{Payment} = [(\text{RVU work} \times \text{GPCI work}) + (\text{RVU PE} \times \text{GPCI PE}) + (\text{RVU MP} \times \text{GPCI MP})] \times \text{CF}$$

3. Separate Fee Schedule Methodology for Anesthesia Services

Section 1848(b)(2)(B) of the Act specifies that the fee schedule amounts for anesthesia services are to be based on a uniform relative value guide, with appropriate adjustment of an anesthesia CF, in a manner to ensure that fee schedule amounts for anesthesia services are consistent with those for other services of comparable value. Therefore, there is a separate fee schedule methodology for anesthesia services. Specifically, we establish a separate CF for anesthesia services and we utilize the uniform relative value guide, or base units, as well as time units, to calculate the fee schedule amounts for anesthesia services. Since anesthesia services are not valued using RVUs, a separate methodology for locality adjustments is also necessary. This involves an adjustment to the national anesthesia CF for each payment locality.

B. Determination of PE RVUs

1. Overview

Practice expense (PE) is the portion of the resources used in furnishing a service that reflects the general categories of physician and practitioner expenses, such as office rent and personnel wages, but excluding MP expenses, as specified in section 1848(c)(1)(B) of the Act. As required by section 1848(c)(2)(C)(ii) of the Act, we use a resource-based system for determining PE RVUs for each physicians' service. We develop PE RVUs by considering the direct and indirect practice resources involved in furnishing each service. Direct expense categories include clinical labor, medical supplies, and medical equipment. Indirect expenses include administrative labor, office expense, and all other expenses. The sections that follow provide more detailed information about the methodology for translating the resources involved in furnishing each service into service-specific PE RVUs. We refer readers to the CY 2010 PFS final rule with comment period (74 FR 61743 through 61748) for a more detailed explanation of the PE methodology.

2. Practice Expense Methodology

a. Direct Practice Expense

We determine the direct PE for a specific service by adding the costs of the direct resources (that is, the clinical staff, medical supplies, and medical equipment) typically involved with furnishing that service. The costs of the resources are calculated using the refined direct PE inputs assigned to each CPT code in our PE database, which are generally based on our review of recommendations received from the RUC and those provided in response to public comment periods. For a detailed explanation of the direct PE methodology, including examples, we refer readers to the 5-year review of work relative value units under the PFS and proposed changes to the PE

methodology CY 2007 PFS proposed notice (71 FR 37242) and the CY 2007 PFS final rule with comment period (71 FR 69629).

b. Indirect Practice Expense per Hour Data

We use survey data on indirect PEs incurred per hour worked, in developing the indirect portion of the PE RVUs. Prior to CY 2010, we primarily used the PE/HR by specialty that was obtained from the AMA's SMS. The AMA administered a new survey in CY 2007 and CY 2008, the Physician Practice Expense Information Survey (PPIS). The PPIS is a multispecialty, nationally representative, PE survey of both physicians and NPPs paid under the PFS using a survey instrument and methods highly consistent with those used for the SMS and the supplemental surveys. The PPIS gathered information from 3,656 respondents across 51 physician specialty and health care professional groups. We believe the PPIS is the most comprehensive source of PE survey information available. We used the PPIS data to update the PE/HR data for the CY 2010 PFS for almost all of the Medicare-recognized specialties that participated in the survey.

When we began using the PPIS data in CY 2010, we did not change the PE RVU methodology itself or the manner in which the PE/HR data are used in that methodology. We only updated the PE/HR data based on the new survey. Furthermore, as we explained in the CY 2010 PFS final rule with comment period (74 FR 61751), because of the magnitude of payment reductions for some specialties resulting from the use of the PPIS data, we transitioned its use over a 4-year period from the previous PE RVUs to the PE RVUs developed using the new PPIS data. As provided in the CY 2010 PFS final rule with comment period (74 FR 61751), the transition to the PPIS data was complete for CY 2013. Therefore, PE RVUs from CY 2013 forward are developed based entirely on the PPIS data, except as noted in this section.

Section 1848(c)(2)(H)(i) of the Act requires us to use the medical oncology supplemental survey data submitted in 2003 for oncology drug administration services. Therefore, the PE/HR for medical oncology, hematology, and hematology/oncology reflects the continued use of these supplemental survey data.

Supplemental survey data on independent labs from the College of American Pathologists were implemented for payments beginning in CY 2005. Supplemental survey data from the National Coalition of Quality Diagnostic Imaging Services (NCQDIS), representing independent diagnostic testing facilities (IDTFs), were blended with supplementary survey data from the American College of Radiology (ACR) and implemented for payments beginning in CY 2007. Neither IDTFs, nor independent labs, participated in the PPIS. Therefore, we continue to use the PE/HR that was developed from their supplemental survey data.

Consistent with our past practice, the previous indirect PE/HR values from the supplemental surveys for these specialties were updated to CY 2006 using the Medicare Economic Index (MEI) to put them on a comparable basis with the PPIS data.

We also do not use the PPIS data for reproductive endocrinology and spine surgery since these specialties currently are not separately recognized by Medicare, nor do we have a method to blend the PPIS data with Medicare-recognized specialty data.

Previously, we established PE/HR values for various specialties without SMS or supplemental survey data by crosswalking them to other similar specialties to estimate a proxy PE/HR. For specialties that were part of the PPIS for which we previously used a crosswalked PE/HR, we instead used the PPIS-based PE/HR. We use crosswalks for specialties that did not participate in the PPIS. These crosswalks have been generally established through notice and comment rulemaking and are available in the file called ''CY 2020 PFS Proposed Rule PE/HR'' on the CMS website under downloads for the CY 2020 PFS proposed rule at *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html.*

For CY 2020, we have incorporated the available utilization data for two new specialties, each of which became a recognized Medicare specialty during 2018. These specialties are Medical Toxicology and Hematopoietic Cell Transplantation and Cellular Therapy. We proposed to use proxy PE/HR values for these new specialties, as there are no PPIS data for these specialties, by crosswalking the PE/HR as follows from specialties that furnish similar services in the Medicare claims data:

- Medical Toxicology from Emergency Medicine; and
- Hematopoietic Cell Transplantation and Cellular Therapy from Hematology/Oncology.

These updates are reflected in the ''CY 2020 PFS Final Rule PE/HR'' file available on the CMS website under the supporting data files for the CY 2020 PFS final rule at *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html.*

We did not receive any public comments on the use of the proposed PE/HR proxy values for Medical Toxicology and Hematopoietic Cell Transplantation and Cellular Therapy. Therefore, we are finalizing our PE/HR crosswalks as proposed.

c. Allocation of PE to Services

To establish PE RVUs for specific services, it is necessary to establish the direct and indirect PE associated with each service.

(1) Direct Costs

The relative relationship between the direct cost portions of the PE RVUs for any two services is determined by the relative relationship between the sum of the direct cost resources (that is, the clinical staff, medical supplies, and medical equipment) typically involved with furnishing each of the services. The costs of these resources are calculated from the refined direct PE inputs in our PE database. For example, if one service has a direct cost sum of $400 from our PE database and another service has a direct cost sum of $200, the direct portion of the PE RVUs of the first service would be twice as much as the direct portion of the PE RVUs for the second service.

(2) Indirect Costs

We allocate the indirect costs at the code level on the basis of the direct costs specifically associated with a code and the greater of either the clinical labor costs or the work RVUs. We also incorporate the survey data described earlier in the PE/HR discussion. The general approach to developing the indirect portion of the PE RVUs is as follows:

- For a given service, we use the direct portion of the PE RVUs calculated as previously described and the average percentage that direct costs represent of total costs (based on survey data) across the specialties that furnish the service to determine an initial indirect allocator. That is, the initial indirect allocator is calculated so that the direct costs equal the average percentage of direct costs of those specialties furnishing the service. For example, if the direct portion of the PE RVUs for a given service is 2.00 and direct costs, on average, represent 25 percent of total costs for the specialties that furnish the service, the initial indirect allocator would be calculated so that it equals 75 percent of the total PE RVUs. Thus, in this example, the initial indirect allocator would equal 6.00, resulting in a total PE RVU of 8.00

(2.00 is 25 percent of 8.00 and 6.00 is 75 percent of 8.00).

• Next, we add the greater of the work RVUs or clinical labor portion of the direct portion of the PE RVUs to this initial indirect allocator. In our example, if this service had a work RVU of 4.00 and the clinical labor portion of the direct PE RVU was 1.50, we would add 4.00 (since the 4.00 work RVUs are greater than the 1.50 clinical labor portion) to the initial indirect allocator of 6.00 to get an indirect allocator of 10.00. In the absence of any further use of the survey data, the relative relationship between the indirect cost portions of the PE RVUs for any two services would be determined by the relative relationship between these indirect cost allocators. For example, if one service had an indirect cost allocator of 10.00 and another service had an indirect cost allocator of 5.00, the indirect portion of the PE RVUs of the first service would be twice as great as the indirect portion of the PE RVUs for the second service.

• Then, we incorporate the specialty-specific indirect PE/HR data into the calculation. In our example, if, based on the survey data, the average indirect cost of the specialties furnishing the first service with an allocator of 10.00 was half of the average indirect cost of the specialties furnishing the second service with an indirect allocator of 5.00, the indirect portion of the PE RVUs of the first service would be equal to that of the second service.

(3) Facility and Nonfacility Costs

For procedures that can be furnished in a physician's office, as well as in a facility setting, where Medicare makes a separate payment to the facility for its costs in furnishing a service, we establish two PE RVUs: Facility and nonfacility. The methodology for calculating PE RVUs is the same for both the facility and nonfacility RVUs, but is applied independently to yield two separate PE RVUs. In calculating the PE RVUs for services furnished in a facility, we do not include resources that would generally not be provided by physicians when furnishing the service. For this reason, the facility PE RVUs are generally lower than the nonfacility PE RVUs.

(4) Services With Technical Components and Professional Components

Diagnostic services are generally comprised of two components: A professional component (PC); and a technical component (TC). The PC and TC may be furnished independently or by different providers, or they may be furnished together as a global service. When services have separately billable PC and TC components, the payment for the global service equals the sum of the payment for the TC and PC. To achieve this, we use a weighted average of the ratio of indirect to direct costs across all the specialties that furnish the global service, TCs, and PCs; that is, we apply the same weighted average indirect percentage factor to allocate indirect expenses to the global service, PCs, and TCs for a service. (The direct PE RVUs for the TC and PC sum to the global.)

(5) PE RVU Methodology

For a more detailed description of the PE RVU methodology, we refer readers to the CY 2010 PFS final rule with comment period (74 FR 61745 through 61746). We also direct readers to the file called ''Calculation of PE RVUs under Methodology for Selected Codes'' which is available on our website under downloads for the CY 2020 PFS proposed rule at *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html.* This file contains a table that illustrates the calculation of PE RVUs as described in this proposed rule for individual codes.

(a) Setup File

First, we create a setup file for the PE methodology. The setup file contains the direct cost inputs, the utilization for each procedure code at the specialty and facility/nonfacility place of service level, and the specialty-specific PE/HR data calculated from the surveys.

(b) Calculate the Direct Cost PE RVUs

Sum the costs of each direct input.

Step 1: Sum the direct costs of the inputs for each service.

Step 2: Calculate the aggregate pool of direct PE costs for the current year. We set the aggregate pool of PE costs equal to the product of the ratio of the current aggregate PE RVUs to current aggregate work RVUs and the projected aggregate work RVUs.

Step 3: Calculate the aggregate pool of direct PE costs for use in ratesetting. This is the product of the aggregate direct costs for all services from Step 1 and the utilization data for that service.

Step 4: Using the results of Step 2 and Step 3, use the CF to calculate a direct PE scaling adjustment to ensure that the aggregate pool of direct PE costs calculated in Step 3 does not vary from the aggregate pool of direct PE costs for the current year. Apply the scaling adjustment to the direct costs for each service (as calculated in Step 1).

Step 5: Convert the results of Step 4 to a RVU scale for each service. To do this, divide the results of Step 4 by the CF. Note that the actual value of the CF used in this calculation does not influence the final direct cost PE RVUs as long as the same CF is used in Step 4 and Step 5. Different CFs would result in different direct PE scaling adjustments, but this has no effect on the final direct cost PE RVUs since changes in the CFs and changes in the associated direct scaling adjustments offset one another.

(c) Create the Indirect Cost PE RVUs

Create indirect allocators.

Step 6: Based on the survey data, calculate direct and indirect PE percentages for each physician specialty.

Step 7: Calculate direct and indirect PE percentages at the service level by taking a weighted average of the results of Step 6 for the specialties that furnish the service. Note that for services with TCs and PCs, the direct and indirect percentages for a given service do not vary by the PC, TC, and global service.

We generally use an average of the 3 most recent years of available Medicare claims data to determine the specialty mix assigned to each code. Codes with low Medicare service volume require special attention since billing or enrollment irregularities for a given year can result in significant changes in specialty mix assignment. We finalized a policy in the CY 2018 PFS final rule (82 FR 52982 through 59283) to use the most recent year of claims data to determine which codes are low volume for the coming year (those that have fewer than 100 allowed services in the Medicare claims data). For codes that fall into this category, instead of assigning specialty mix based on the specialties of the practitioners reporting the services in the claims data, we instead use the expected specialty that we identify on a list developed based on medical review and input from expert stakeholders. We display this list of expected specialty assignments as part of the annual set of data files we make available as part of notice and comment rulemaking and consider recommendations from the RUC and other stakeholders on changes to this list on an annual basis. Services for which the specialty is automatically assigned based on previously finalized policies under our established methodology (for example, ''always therapy'' services) are unaffected by the list of expected specialty assignments. We also finalized in the CY 2018 PFS final rule (82 FR 52982 through 59283) a policy to apply these service-level overrides for both PE and MP, rather than one or the other category.

For CY 2020, we proposed to clarify the expected specialty assignment for a series of cardiothoracic services. Prior to the creation of the expected specialty list for low volume services in CY 2018, we previously finalized through rulemaking a crosswalk to the thoracic surgery specialty for a series of cardiothoracic services that typically had fewer than 100 services reported each year (*see,* for example, the CY 2012 PFS final rule (76 FR 73188–73189)). However, we noted that for many of the affected codes, the expected specialty list for low volume services incorrectly listed a crosswalk to the cardiac surgery specialty instead of the thoracic surgery specialty. We proposed to update the expected specialty list to accurately reflect the previously finalized crosswalk to thoracic surgery for these services. The affected codes are shown in Table 1.

BILLING CODE 4120–01–P

TABLE 1: Updates to Expected Specialty

CPT Code	CY 2019 Expected Specialty	Updated CY 2020 Expected Specialty

BILLING CODE 4120–01–C

We note that the cardiac surgery and thoracic surgery specialties are similar to one another, sharing the same PE/HR data for PE valuation and nearly

identical MP risk factors for MP valuation. As a result, we noted that we did not anticipate the proposal having a discernible effect on the valuation of the codes listed above. The complete list of expected specialty assignments for individual low volume services, including the assignments for the codes identified in Table 1, is available on our website under downloads for the CY 2020 PFS final rule at *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html.*

We received public comments on the proposed updates to the expected specialty list. The following is a summary of the comments we received and our responses.

Comment: Several commenters stated that CMS had indicated that the expected specialty would be updated to include a column specifying if a service was identified as a low volume service for CY 2020, indicating if the service-level override was being applied for CY 2020. However, commenters noted that this additional column did not appear in the download version and asked for additional information.

Response: We thank the commenters for identifying this missing information and we apologize for the technical oversight that caused this information not to be displayed for the proposed rule. We will include this additional column in the public use files released with the final rule.

Comment: Several commenters disagreed with the CMS proposal to update the expected specialty list to accurately reflect the previously finalized crosswalk to thoracic surgery for these services. Commenters stated that when the expected specialty list was developed, the affected specialties specifically selected the cardiac surgery specialty for these codes. Commenters also stated that, for nearly all of the applicable codes, cardiac surgery was the dominant provider in the 2018 Medicare claims data. Commenters acknowledged that the MP risk factor for both cardiac surgery and thoracic surgery is naturally very similar, but still asked that CMS assign the codes listed in Table 1 to the cardiac surgery specialty.

Response: As we stated in the proposed rule, we did not propose to assign the codes listed in Table 1 to the cardiac surgery specialty. Instead, we proposed to update the incorrect documentation in our expected specialty list to accurately reflect the previously finalized crosswalk to thoracic surgery for these services. The previously finalized assignment of the cardiac specialty to these services has been in place since the CY 2012 rule cycle, and we believe that the expected specialty list should be updated to reflect the correct specialty assignment.

Comment: Several commenters disagreed with the CMS methodology used to determine low volume service status; that is, codes that have fewer than 100 allowed services in the non-modified 3-year average of Medicare claims data. Commenters stated that utilization frequencies are adjusted in the RUC database for certain codes based on the CPT modifiers that were appended to the code to ensure that certain services are not over- or underweighted, such as changes made for bilateral modifier 50, post-op only modifier 55 and anesthesia modifiers QK, QX and QY. Commenters stated that CMS does not discount the utilization when determining what constitutes a low volume service and instead uses the non-modified 3-year service count for this criterion. Commenters stated that this could lead to double-counting and overestimating utilization for the purposes of determining low volume status, and requested that CMS use discounted utilization for this purpose.

Response: We disagree that it would be more accurate to use a discounted form of utilization to determine low volume status. We finalized a policy in the CY 2018 PFS final rule (82 FR 52982 through 59283) to use claims data to determine which codes are low volume for the coming year, defining ''low volume'' as those that had fewer than 100 allowed services in the Medicare claims data. We did not finalize a policy to discount this utilization and we do not believe that it would be more accurate to do so, as a service is still performed even if a payment discount is applied to its billing. More importantly, we did not make any proposals concerning the methodology to determine what constitute a low volume service in the proposed rule, and therefore, we are not finalizing any changes to this methodology.

Comment: One commenter provided a list of 112 additional codes that the commenter stated were low volume procedures, with an expected specialty for each code. The commenter recommended that CMS append this list to the anticipated specialty assignment for low volume services. Another commenter stated that gastroenterologists do not perform CPT code 96571 on a current basis, and recommended that CMS remove gastroenterology as the expected specialty for this code.

Response: We appreciate the list of additional services identified by the commenter. As we have stated in previous rulemaking (82 FR 52982), we consider recommendations from the RUC and other stakeholders on changes to this list on an annual basis. In reviewing the submitted list of 112 additional codes, we noted that they generally fell into two categories—codes with a restricted coverage status code (''R'') or codes that exceed 100 services in the claims data, and therefore, did not meet our criteria for low volume status. We are finalizing the addition of these 112 codes to the low volume services list with the recommended expected specialty; however, we caution that many of these codes will continue to have utilization too high to meet the criteria for expected specialty assignment. We are adding these codes to the list in the interest of maintaining payment stability, such that, if they were to fall below 100 annual services at a future date, then an expected specialty would be assigned. We do not have indirect PE data for two of the specialties on the recommended list, and as a result we are substituting the established PE/HR crosswalk for these specialties. (The full list of all established PE/HR crosswalks is available on our website under downloads for the CY 2020 PFS final rule at *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html.*) The two affected specialties are Interventional Cardiology (crosswalked to Cardiology) and Surgical Oncology (crosswalked to General Surgery). We are also finalizing a change to the expected specialty for CPT code 96571 in response to the information supplied by the commenter, which we are changing to Pulmonary Disease to match the dominant specialty in the claims data. The complete list of additional updates to the low volume services list is detailed in Table 2.

BILLING CODE 4120–01–C

Comment: Several commenters stated that the non-facility PE RVUs for CPT code 55874 (*Transperineal placement of biodegradable material, peri-prostatic, single or multiple injection(s), including image guidance, when performed*) are projected to decrease 13 percent for CY 2020, which the commenter believed to be attributed to the current specialty mix utilizing the code. The commenters stated that the projected decrease for CY 2020 was due to CMS using the first year of actual claims data, which had a different ratio of the urology and radiation oncology specialties than in the previously projected utilization crosswalk. The commenters requested that CMS address the proposed decreases for CPT code 55874 in the final rule.

Response: We agree with the commenters that the proposed decreases for CPT code 55874 were due to changes in the specialty mix, as the code shifted from projected utilization to reported claims data. However, we do not agree with the commenters that there is a need to address the valuation of this code, as we believe that it is important to use actual claims data as opposed to utilization projections once the data for new codes has become available. The specialty mix on reported claims will necessarily be more accurate than the utilization projections created in advance before claims data exists. We also note that the specialty mix associated with CPT code 55874 in the claims data is unrelated to the low volume list or the assignment of an expected specialty.

Comment: A commenter stated that CPT codes 33271 (*Insertion of subcutaneous implantable defibrillator electrode*) and 33273 (*Repositioning of previously implanted subcutaneous implantable defibrillator electrode*) are low volume service codes that are proposed to have a service-level override to the anticipated specialty of cardiology. The commenter supported this expected specialty assignment.

Response: We appreciate the support for our proposals from the commenter.

After consideration of the public comments, we are finalizing our proposal to update the expected specialty list to accurately reflect the previously finalized crosswalk to thoracic surgery for these services. We are also finalizing the updates to the expected specialty list detailed above in Table 2; we reiterate again that we do not anticipate this finalized proposal having a discernible effect on the valuation of the codes in the table due to the similarity between the cardiac surgery and thoracic surgery specialties.

Step 8: Calculate the service level allocators for the indirect PEs based on the percentages calculated in Step 7. The indirect PEs are allocated based on the three components: The direct PE RVUs; the clinical labor PE RVUs; and the work RVUs.

For most services the indirect allocator is: Indirect PE percentage * (direct PE RVUs/direct percentage) + work RVUs.

There are two situations where this formula is modified:

- If the service is a global service (that is, a service with global, professional, and technical components), then the indirect PE allocator is: Indirect percentage (direct PE RVUs/direct percentage) + clinical labor PE RVUs + work RVUs.
- If the clinical labor PE RVUs exceed the work RVUs (and the service is not a global service), then the indirect allocator is: Indirect PE percentage (direct PE RVUs/direct percentage) + clinical labor PE RVUs.

(*Note:* For global services, the indirect PE allocator is based on both the work RVUs and the clinical labor PE RVUs. We do this to recognize that, for the PC service, indirect PEs would be allocated using the work RVUs, and for the TC service, indirect PEs would be allocated using the direct PE RVUs and the clinical labor PE RVUs. This also allows the global component RVUs to equal the sum of the PC and TC RVUs.)

For presentation purposes, in the examples in the download file called ''Calculation of PE RVUs under Methodology for Selected Codes'', the formulas were divided into two parts for each service.

- The first part does not vary by service and is the indirect percentage (direct PE RVUs/direct percentage).
- The second part is either the work RVU, clinical labor PE RVU, or both depending on whether the service is a global service and whether the clinical PE RVUs exceed the work RVUs (as described earlier in this step).

Apply a scaling adjustment to the indirect allocators.

Step 9: Calculate the current aggregate pool of indirect PE RVUs by multiplying the result of step 8 by the average indirect PE percentage from the survey data.

Step 10: Calculate an aggregate pool of indirect PE RVUs for all PFS services by adding the product of the indirect PE allocators for a service from Step 8 and the utilization data for that service.

Step 11: Using the results of Step 9 and Step 10, calculate an indirect PE adjustment so that the aggregate indirect allocation does not exceed the available aggregate indirect PE RVUs and apply it to indirect allocators calculated in Step 8.

Calculate the indirect practice cost index.

Step 12: Using the results of Step 11, calculate aggregate pools of specialty-specific adjusted indirect PE allocators

for all PFS services for a specialty by adding the product of the adjusted indirect PE allocator for each service and the utilization data for that service.

Step 13: Using the specialty-specific indirect PE/HR data, calculate specialty-specific aggregate pools of indirect PE for all PFS services for that specialty by adding the product of the indirect PE/HR for the specialty, the work time for the service, and the specialty's utilization for the service across all services furnished by the specialty.

Step 14: Using the results of Step 12 and Step 13, calculate the specialty-specific indirect PE scaling factors.

Step 15: Using the results of Step 14, calculate an indirect practice cost index at the specialty level by dividing each specialty-specific indirect scaling factor by the average indirect scaling factor for the entire PFS.

Step 16: Calculate the indirect practice cost index at the service level to ensure the capture of all indirect costs. Calculate a weighted average of the practice cost index values for the specialties that furnish the service. (*Note:* For services with TCs and PCs, we calculate the indirect practice cost index across the global service, PCs, and TCs. Under this method, the indirect practice cost index for a given service (for example, echocardiogram) does not vary by the PC, TC, and global service.)

Step 17: Apply the service level indirect practice cost index calculated in Step 16 to the service level adjusted indirect allocators calculated in Step 11 to get the indirect PE RVUs.

(d) Calculate the Final PE RVUs

Step 18: Add the direct PE RVUs from Step 5 to the indirect PE RVUs from Step 17 and apply the final PE budget neutrality (BN) adjustment. The final PE BN adjustment is calculated by comparing the sum of steps 5 and 17 to the proposed aggregate work RVUs scaled by the ratio of current aggregate PE and work RVUs. This adjustment ensures that all PE RVUs in the PFS account for the fact that certain specialties are excluded from the calculation of PE RVUs but included in maintaining overall PFS budget neutrality. (See ''Specialties excluded from ratesetting calculation'' later in this final rule.)

Step 19: Apply the phase-in of significant RVU reductions and its associated adjustment. Section 1848(c)(7) of the Act specifies that for services that are not new or revised codes, if the total RVUs for a service for a year would otherwise be decreased by an estimated 20 percent or more as compared to the total RVUs for the previous year, the applicable adjustments in work, PE, and MP RVUs shall be phased in over a 2-year period. In implementing the phase-in, we consider a 19 percent reduction as the maximum 1-year reduction for any service not described by a new or revised code. This approach limits the year one reduction for the service to the maximum allowed amount (that is, 19 percent), and then phases in the remainder of the reduction. To comply with section 1848(c)(7) of the Act, we adjust the PE RVUs to ensure that the total RVUs for all services that are not new or revised codes decrease by no more than 19 percent, and then apply a relativity adjustment to ensure that the total pool of aggregate PE RVUs remains relative to the pool of work and MP RVUs. For a more detailed description of the methodology for the phase-in of significant RVU changes, we refer readers to the CY 2016 PFS final rule with comment period (80 FR 70927 through 70931).

(e) Setup File Information

- *Specialties excluded from ratesetting calculation:* For the purposes of calculating the PE and MP RVUs, we exclude certain specialties, such as certain NPPs paid at a percentage of the PFS and low-volume specialties, from the calculation. These specialties are included for the purposes of calculating the BN adjustment. They are displayed in Table 2.

TABLE 3: Specialties Excluded from Ratesetting Calculation

Specialty Code	Specialty Description
49	Ambulatory surgical center
50	Nurse practitioner
51	Medical supply company with certified orthotist
52	Medical supply company with certified prosthetist
53	Medical supply company with certified prosthetist-orthotist
54	Medical supply company not included in 51, 52, or 53.
55	Individual certified orthotist
56	Individual certified prosthetist
57	Individual certified prosthetist-orthotist
58	Medical supply company with registered pharmacist
59	Ambulance service supplier, e.g., private ambulance companies, funeral homes, etc.
60	Public health or welfare agencies
61	Voluntary health or charitable agencies
73	Mass immunization roster biller
74	Radiation therapy centers
87	All other suppliers (e.g., drug and department stores)
88	Unknown supplier/provider specialty
89	Certified clinical nurse specialist
96	Optician
97	Physician assistant
A0	Hospital
A1	SNF
A2	Intermediate care nursing facility
A3	Nursing facility, other
A4	HHA
A5	Pharmacy
A6	Medical supply company with respiratory therapist
A7	Department store
A8	Grocery store
B1	Supplier of oxygen and/or oxygen related equipment (eff. 10/2/2007)
B2	Pedorthic personnel
B3	Medical supply company with pedorthic personnel
B4	Rehabilitation Agency
B5	Ocularist
C1	Centralized Flu
C2	Indirect Payment Procedure
C5	Dentistry

- Crosswalk *certain low volume physician specialties:* Crosswalk the utilization of certain specialties with relatively low PFS utilization to the associated specialties.
- Physical *therapy utilization:* Crosswalk the utilization associated with all physical therapy services to the specialty of physical therapy.
- *Identify professional and technical services not identified under the usual TC and 26 modifiers:* Flag the services that are PC and TC services but do not use TC and 26 modifiers (for example, electrocardiograms). This flag associates the PC and TC with the associated global code for use in creating the indirect PE RVUs. For example, the professional service, CPT code 93010 (*Electrocardiogram, routine ECG with at least 12 leads; interpretation and report only), is associated with the global service, CPT code 93000 (Electrocardiogram, routine ECG with at least 12 leads; with interpretation and report*).
- *Payment modifiers:* Payment modifiers are accounted for in the creation of the file consistent with current payment policy as implemented in claims processing. For example, services billed with the assistant at surgery modifier are paid 16 percent of the PFS amount for that service; therefore, the utilization file is modified to only account for 16 percent of any service that contains the assistant at surgery modifier. Similarly, for those services to which volume adjustments are made to account for the payment modifiers, time adjustments are applied as well. For time adjustments to surgical services, the intraoperative portion in the work time file is used; where it is not present, the intraoperative percentage from the payment files used by contractors to process Medicare claims is used instead. Where neither is available, we use the payment adjustment ratio to adjust the time

accordingly. Table 4 details the manner in which the modifiers are applied.

TABLE 4: Application of Payment Modifiers to Utilization Files

Modifier	Description	Volume Adjustment	Time Adjustment
80,81,82	Assistant at Surgery	16%	Intraoperative portion
AS	Assistant at Surgery – Physician Assistant	14% (85% * 16%)	Intraoperative portion
50 or LT and RT	Bilateral Surgery	150%	150% of work time
51	Multiple Procedure	50%	Intraoperative portion
52	Reduced Services	50%	50%
53	Discontinued Procedure	50%	50%
54	Intraoperative Care only	Preoperative + Intraoperative Percentages on the payment files used by Medicare contractors to process Medicare claims	Preoperative + Intraoperative portion
55	Postoperative Care only	Postoperative Percentage on the payment files used by Medicare contractors to process Medicare claims	Postoperative portion
62	Co-surgeons	62.5%	50%
66	Team Surgeons	33%	33%

We also make adjustments to volume and time that correspond to other payment rules, including special multiple procedure endoscopy rules and multiple procedure payment reductions (MPPRs). We note that section 1848(c)(2)(B)(v) of the Act exempts certain reduced payments for multiple imaging procedures and multiple therapy services from the BN calculation under section 1848(c)(2)(B)(ii)(II) of the Act. These MPPRs are not included in the development of the RVUs.

For anesthesia services, we do not apply adjustments to volume since we use the average allowed charge when simulating RVUs; therefore, the RVUs as calculated already reflect the payments as adjusted by modifiers, and no volume adjustments are necessary. However, a time adjustment of 33 percent is made only for medical direction of two to four cases since that is the only situation where a single practitioner is involved with multiple beneficiaries concurrently, so that counting each service without regard to the overlap with other services would overstate the amount of time spent by the practitioner furnishing these services.

- Work *RVUs:* The setup file contains the work RVUs from this final rule.

(6) Equipment Cost per Minute

The equipment cost per minute is calculated as:

(1/(minutes per year * usage)) * price * ((interest rate/(1 − (1/((1 + interest rate) ∧ life of equipment)))) + maintenance)

Where:

minutes per year = maximum minutes per year if usage were continuous (that is, usage = 1); generally 150,000 minutes.
usage = variable, *see* discussion below in this final rule.
price = price of the particular piece of equipment.
life of equipment = useful life of the particular piece of equipment.
maintenance = factor for maintenance; 0.05.
interest rate = variable, *see* discussion below in this final rule.

Usage: We currently use an equipment utilization rate assumption of 50 percent for most equipment, with the exception of expensive diagnostic imaging equipment, for which we use a 90 percent assumption as required by section 1848(b)(4)(C) of the Act.

Stakeholders have often suggested that particular equipment items are used less frequently than 50 percent of the time in the typical setting and that CMS should reduce the equipment utilization rate based on these recommendations. We appreciate and share stakeholders' interest in using the most accurate assumption regarding the equipment utilization rate for particular equipment items. However, we believe that absent robust, objective, auditable data regarding the use of particular items, the 50 percent assumption is the most appropriate within the relative value system.

Comment: A commenter stated that they disagreed with the 90 percent utilization metric for CT and MRI equipment, as the commenter did not believe it to be realistic in a typical outpatient imaging setting, but the commenter recognized that the percentage is dictated by statute. The commenter stated that the 90 percent equipment usage assumption for CT and MRI is inconsistent with actual imaging center practice and ignores scheduling in the ''real world,'' such as lunch and other mandated breaks, complicated patients, and downtime for maintenance and quality control. The commenter stated that to achieve a 90 percent utilization rate under ideal conditions would require two employees per unit; one doing pre-service tasks while the other is setting up the machine as opposed to assumptions of one CT or MRI technologist per scanner.

Response: We disagree with the commenters regarding the equipment time assigned to highly technical equipment such as CT or MRI machines. We continue to believe that certain highly technical pieces of equipment

and equipment rooms are less likely to be used during all of the preservice or postservice tasks performed by clinical labor staff on the day of the procedure and are typically available for other patients even when one member of clinical staff may be occupied with a preservice or postservice task related to the procedure. For a more detailed description of this topic, we refer readers to the CY 2015 PFS final rule with comment period (79 FR 67639 through 67640).

Comment: One commenter stated that most ophthalmology diagnostic equipment is in use far less than 50 percent of the time. The commenter indicated that they had developed a survey instrument that asked ophthalmic technicians to provide time usage estimates for the 16 most-utilized pieces of diagnostic testing equipment. The commenter stated that their preliminary survey results produced a utilization rate of 22 percent, much lower than the 50 percent assumption currently used by CMS. The commenter suggested that CMS should work with the RUC to do a robust survey to help determine a more valid utilization rate, including the possibility of specialty-specific equipment utilization rates. The commenter also requested a meeting to discuss what options CMS would find acceptable in undertaking their own survey for ophthalmology services.

Response: We are always looking for more accurate information to improve our PE methodology. We appreciate and share stakeholders' interest in using the most accurate assumption regarding the equipment utilization rate for particular equipment items, and we will review any information that the RUC's PE subcommittee or other stakeholders are willing to submit through the public comment process. We concur with the commenter that a wide-ranging survey or similar study designed to address the subject of equipment utilization rates would be an appropriate tool to investigate this subject in further detail. At the moment, we believe that absent robust, objective, auditable data regarding the use of particular items, the 50 percent assumption is the most appropriate within the relative value system. We welcome further submission of data that illustrates an alternative rate.

Maintenance: This factor for maintenance was finalized in the CY 1998 PFS final rule with comment period (62 FR 33164). As we previously stated in the CY 2016 PFS final rule with comment period (80 FR 70897), we do not believe the annual maintenance factor for all equipment is precisely 5 percent, and we concur that the current rate likely understates the true cost of maintaining some equipment. We also believe it likely overstates the maintenance costs for other equipment. When we solicited comments regarding sources of data containing equipment maintenance rates, commenters were unable to identify an auditable, robust data source that could be used by CMS on a wide scale. We do not believe that voluntary submissions regarding the maintenance costs of individual equipment items would be an appropriate methodology for determining costs. As a result, in the absence of publicly available datasets regarding equipment maintenance costs or another systematic data collection methodology for determining a different maintenance factor, we did not propose a variable maintenance factor for equipment cost per minute pricing as we noted that we did not believe that we have sufficient information at present to do so. We continue to investigate potential avenues for determining equipment maintenance costs across a broad range of equipment items.

Comment: A commenter stated that they continue to believe that maintenance costs for imaging equipment are much higher than the current 5 percent assumption. The commenter stated that the maintenance costs for an MRI unit include servicing the scanner itself plus replacing cryogens for a cost well in excess of 5 percent even using CMS' low assumptions of MRI and CT room cost.

Response: As detailed above, we continue to believe that the current 5 percent maintenance factor likely understates the true cost of maintaining some equipment and overstates the maintenance costs for other equipment. We continue at this time to lack publicly available datasets regarding equipment maintenance costs or another systematic data collection methodology for determining maintenance factor. We remind readers that when we solicited comments regarding sources of data containing equipment maintenance rates, commenters were unable to identify an auditable, robust data source that could be used by CMS on a wide scale.

Interest Rate: In the CY 2013 PFS final rule with comment period (77 FR 68902), we updated the interest rates used in developing an equipment cost per minute calculation (*see* 77 FR 68902 for a thorough discussion of this issue). The interest rate was based on the Small Business Administration (SBA) maximum interest rates for different categories of loan size (equipment cost) and maturity (useful life). We did not propose any changes to these interest rates for CY 2020. The Interest rates are listed in Table 5.

TABLE 5: SBA Maximum Interest Rates

Price	Useful Life	Interest Rate
<$25K	<7 Years	7.50%
$25K to $50K	<7 Years	6.50%
>$50K	<7 Years	5.50%
<$25K	7+ Years	8.00%
$25K to $50K	7+ Years	7.00%
>$50K	7+ Years	6.00%

Comment: A commenter stated that they did not support the continued use of the 2012 SBA maximum interest rates, which the commenter stated are significantly lower than the 2019 rates. The commenter stated that CMS should also update the interest rates used to calculate PE RVUs for such items based on current SBA data.

Response: We appreciate the additional information regarding SBA

maximum interest rates from the commenter. However, we did not propose any changes to these interest rates for CY 2020; we will consider potential changes to the interest rates used in the equipment cost per minute calculation for possible future rulemaking.

3. Changes to Direct PE Inputs for Specific Services

This section focuses on specific PE inputs. The direct PE inputs are included in the CY 2020 direct PE input public use files, which are available on the CMS website under downloads for the CY 2020 PFS final rule at *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html.*

a. Standardization of Clinical Labor Tasks

As we noted in the CY 2015 PFS final rule with comment period (79 FR 67640–67641), we continue to make improvements to the direct PE input database to provide the number of clinical labor minutes assigned for each task for every code in the database instead of only including the number of clinical labor minutes for the preservice, service, and postservice periods for each code. In addition to increasing the transparency of the information used to set PE RVUs, this level of detail would allow us to compare clinical labor times for activities associated with services across the PFS, which we believe is important to maintaining the relativity of the direct PE inputs. This information would facilitate the identification of the usual numbers of minutes for clinical labor tasks and the identification of exceptions to the usual values. It would also allow for greater transparency and consistency in the assignment of equipment minutes based on clinical labor times. Finally, we believe that the detailed information can be useful in maintaining standard times for particular clinical labor tasks that can be applied consistently to many codes as they are valued over several years, similar in principle to the use of physician preservice time packages. We believe that setting and maintaining such standards would provide greater consistency among codes that share the same clinical labor tasks and could improve relativity of values among codes. For example, as medical practice and technologies change over time, changes in the standards could be updated simultaneously for all codes with the applicable clinical labor tasks, instead of waiting for individual codes to be reviewed.

In the CY 2016 PFS final rule with comment period (80 FR 70901), we solicited comments on the appropriate standard minutes for the clinical labor tasks associated with services that use digital technology. After consideration of comments received, we finalized standard times for clinical labor tasks associated with digital imaging at 2 minutes for ''Availability of prior images confirmed'', 2 minutes for ''Patient clinical information and questionnaire reviewed by technologist, order from physician confirmed and exam protocoled by radiologist'', 2 minutes for ''Review examination with interpreting MD'', and 1 minute for ''Exam documents scanned into PACS.'' Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue.'' In the CY 2017 PFS final rule (81 FR 80184 through 80186), we finalized a policy to establish a range of appropriate standard minutes for the clinical labor activity, ''Technologist QCs images in PACS, checking for all images, reformats, and dose page.'' These standard minutes will be applied to new and revised codes that make use of this clinical labor activity when they are reviewed by us for valuation. We finalized a policy to establish 2 minutes as the standard for the simple case, 3 minutes as the standard for the intermediate case, 4 minutes as the standard for the complex case, and 5 minutes as the standard for the highly complex case. These values were based upon a review of the existing minutes assigned for this clinical labor activity; we determined that 2 minutes is the duration for most services and a small number of codes with more complex forms of digital imaging have higher values.

We also finalized standard times for clinical labor tasks associated with pathology services in the CY 2016 PFS final rule with comment period (80 FR 70902) at 4 minutes for ''Accession specimen/prepare for examination'', 0.5 minutes for ''Assemble and deliver slides with paperwork to pathologists'', 0.5 minutes for ''Assemble other light microscopy slides, open nerve biopsy slides, and clinical history, and present to pathologist to prepare clinical pathologic interpretation'', 1 minute for ''Clean room/equipment following procedure'', 1 minute for ''Dispose of remaining specimens, spent chemicals/other consumables, and hazardous waste'', and 1 minute for ''Prepare, pack and transport specimens and records for in-house storage and external storage (where applicable).'' We do not believe these activities would be dependent on number of blocks or batch size, and we believe that these values accurately reflect the typical time it takes to perform these clinical labor tasks.

In reviewing the RUC-recommended direct PE inputs for CY 2019, we noticed that the 3 minutes of clinical labor time traditionally assigned to the ''Prepare room, equipment and supplies'' (CA013) clinical labor activity were split into 2 minutes for the ''Prepare room, equipment and supplies'' activity and 1 minute for the ''Confirm order, protocol exam'' (CA014) activity. We proposed to maintain the 3 minutes of clinical labor time for the ''Prepare room, equipment and supplies'' activity and remove the clinical labor time for the ''Confirm order, protocol exam'' activity wherever we observed this pattern in the RUC-recommended direct PE inputs. Commenters explained in response that when the new version of the PE worksheet introduced the activity codes for clinical labor, there was a need to translate old clinical labor tasks into the new activity codes, and that a prior clinical labor task was split into two of the new clinical labor activity codes: CA007 (''Review patient clinical extant information and questionnaire'') in the preservice period, and CA014 (''Confirm order, protocol exam'') in the service period. Commenters stated that the same clinical labor from the old PE worksheet was now divided into the CA007 and CA014 activity codes, with a standard of 1 minute for each activity. We agreed with commenters that we would finalize the RUC-recommended 2 minutes of clinical labor time for the CA007 activity code and 1 minute for the CA014 activity code in situations where this was the case. However, when reviewing the clinical labor for the reviewed codes affected by this issue, we found that several of the codes did not include this old clinical labor task, and we also noted that several of the reviewed codes that contained the CA014 clinical labor activity code did not contain any clinical labor for the CA007 activity. In these situations, we continue to believe that in these cases the 3 total minutes of clinical staff time would be more accurately described by the CA013 ''Prepare room, equipment and supplies'' activity code, and we finalized these clinical labor refinements. For additional details, we direct readers to the discussion in the CY 2019 PFS final rule (83 FR 59463 and 59464).

Historically, the RUC has submitted a ''PE worksheet'' that details the recommended direct PE inputs for our use in developing PE RVUs. The format of the PE worksheet has varied over time and among the medical specialties

developing the recommendations. These variations have made it difficult for both the RUC's development and our review of code values for individual codes. Beginning with its recommendations for CY 2019, the RUC has mandated the use of a new PE worksheet for purposes of their recommendation development process that standardizes the clinical labor tasks and assigns them a clinical labor activity code. We believe the RUC's use of the new PE worksheet in developing and submitting recommendations will help us to simplify and standardize the hundreds of different clinical labor tasks currently listed in our direct PE database. As we did in previous calendar years, to facilitate rulemaking for CY 2020, we are continuing to display two versions of the Labor Task Detail public use file: One version with the old listing of clinical labor tasks, and one with the same tasks crosswalked to the new listing of clinical labor activity codes. These lists are available on the CMS website under downloads for the CY 2020 PFS final rule at *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html.*

Comment: A commenter wrote to express their concerns with the manner in which data was displayed in the Proposed CY 2020 Direct PE Refinements table in the proposed rule (84 FR 40623–40666), specifically the common refinements to equipment time. The commenter stated that nearly 64 percent of the total PE refinements were related to equipment, and 59 percent of these refinements were listed as ''E15: Refined equipment time to conform to changes in clinical labor time.'' The commenter stated that they did not agree that these are separate refinements; rather, they are the formulaic result of the applying refinements to the clinical labor time. The commenter stated that including these instances as refinements adds a large quantity of rows to the PE refinement table and gives the impression that there are major inaccuracies in the RUC PE recommendations. The commenter provided an example of a single clinical labor refinement to a code family creating 32 rows of subsequent equipment refinements, and contended that articulating these edits was not necessary as they do not reflect either an error or a policy discrepancy with the RUC. The commenter requested that CMS no longer include refinements based on ''E15: Refined equipment time to conform to changes in clinical labor time'' in the refinement table of the proposed rule.

Response: We agree with the commenter that these equipment time refinements generated in response to clinical labor time refinements are indeed the result of applying standard equipment time formulas, and they do not reflect errors in the equipment recommendations or policy discrepancies with the RUC. We also agree that these refinements add a significant number of rows to the table of direct PE refinements. However, we disagree with the commenter on the subject of whether these constitute separate refinements, and we believe that it is important to publish the specific equipment times that we are proposing (or finalizing in the case of the final rule) when they differ from the recommended values. We include the direct cost change in dollars resulting from our PE refinements on the aforementioned table, and if we were to avoid including these equipment refinements, it would not always be clear what effect they were having on the direct costs for the procedure. For example, a modest reduction of a few minutes in clinical labor time can result in a substantial decrease in direct costs for procedures that employ highly expensive equipment. We believe that it is more important to provide additional transparency regarding the changes in direct costs resulting from our equipment time refinements so that the public can better comment on our proposals, as opposed to limiting the total number of printed equipment refinements.

However, we agree with the commenter that the information displayed in the table of direct PE refinements can be confusing and overwhelming, and we believe that it could potentially be provided to the public in a more useful fashion. For this CY PFS 2020 final rule, we will separate out the ''E15: Refined equipment time to conform to changes in clinical labor time'' direct PE refinements and print them in a separate table of refinements. We believe that this will help to address the issues raised by the commenter while also retaining all of the data included in previous rules. We refer readers to Table 28 in section II.N. of this final rule, the Valuation of Specific Codes section, for additional details.

b. Equipment Recommendations for Scope Systems

During our routine reviews of direct PE input recommendations, we have regularly found unexplained inconsistencies involving the use of scopes and the video systems associated with them. Some of the scopes include video systems bundled into the equipment item, some of them include scope accessories as part of their price, and some of them are standalone scopes with no other equipment included. It is not always clear which equipment items related to scopes fall into which of these categories. We have also frequently found anomalies in the equipment recommendations, with equipment items that consist of a scope and video system bundle recommended, along with a separate scope video system. Based on our review, the variations do not appear to be consistent with the different code descriptions.

To promote appropriate relativity among the services and facilitate the transparency of our review process, during the review of the recommended direct PE inputs for the CY 2017 PFS proposed rule, we developed a structure that separates the scope, the associated video system, and any scope accessories that might be typical as distinct equipment items for each code. Under this approach, we proposed standalone prices for each scope, and separate prices for the video systems and accessories that are used with scopes.

(1) Scope Equipment

Beginning in the CY 2017 PFS proposed rule (81 FR 46176 through 46177), we proposed standardizing refinements to the way scopes have been defined in the direct PE input database. We believe that there are four general types of scopes: Non-video scopes; flexible scopes; semi-rigid scopes, and rigid scopes. Flexible scopes, semi-rigid scopes, and rigid scopes would typically be paired with one of the scope video systems, while the non-video scopes would not. The flexible scopes can be further divided into diagnostic (or non-channeled) and therapeutic (or channeled) scopes. We proposed to identify for each anatomical application: (1) A rigid scope; (2) a semi-rigid scope; (3) a non-video flexible scope; (4) a non-channeled flexible video scope; and (5) a channeled flexible video scope. We proposed to classify the existing scopes in our direct PE database under this classification system, to improve the transparency of our review process and improve appropriate relativity among the services. We planned to propose input prices for these equipment items through future rulemaking.

We proposed these changes only for the reviewed codes for CY 2017 that made use of scopes, along with updated prices for the equipment items related to scopes utilized by these services. We did not propose to apply these policies

to codes with inputs reviewed prior to CY 2017. We also solicited comment on this separate pricing structure for scopes, scope video systems, and scope accessories, which we noted we could consider proposing to apply to other codes in future rulemaking. We did not finalize price increases for a series of other scopes and scope accessories, as the invoices submitted for these components indicated that they are different forms of equipment with different product IDs and different prices. We did not receive any data to indicate that the equipment on the newly submitted invoices was more typical in its use than the equipment that we were currently using for pricing.

We did not make further changes to existing scope equipment in CY 2017 to allow the RUC's PE Subcommittee the opportunity to provide feedback. However, we believed there was some miscommunication on this point, as the RUC's PE Subcommittee workgroup that was created to address scope systems stated that no further action was required following the finalization of our proposal. Therefore, we made further proposals in the CY 2018 PFS proposed rule (82 FR 33961 through 33962) to continue clarifying scope equipment inputs, and sought comments regarding the new set of scope proposals. We considered creating a single scope equipment code for each of the five categories detailed in this rule: (1) A rigid scope; (2) a semi-rigid scope; (3) a non-video flexible scope; (4) a non-channeled flexible video scope; and (5) a channeled flexible video scope. Under the current classification system, there are many different scopes in each category depending on the medical specialty furnishing the service and the part of the body affected. We stated our belief that the variation between these scopes was not significant enough to warrant maintaining these distinctions, and we believed that creating and pricing a single scope equipment code for each category would help provide additional clarity. We sought public comment on the merits of this potential scope organization, as well as any pricing information regarding these five new scope categories.

After considering the comments on the CY 2018 PFS proposed rule, we did not finalize our proposal to create and price a single scope equipment code for each of the five categories previously identified. Instead, we supported the recommendation from the commenters to create scope equipment codes on a per-specialty basis for six categories of scopes as applicable, including the addition of a new sixth category of multi-channeled flexible video scopes. Our goal was to create an administratively simple scheme that would be easier to maintain and help to reduce administrative burden. In 2018, the RUC convened a Scope Equipment Reorganization Workgroup to incorporate feedback from expert stakeholders with the intention of making recommendations to us on scope organization and scope pricing. Since the workgroup was not convened in time to submit recommendations for the CY 2019 PFS rulemaking cycle, we delayed proposals for any further changes to scope equipment until CY 2020 in order to incorporate the feedback from the aforementioned workgroup.

(2) Scope Video System

We proposed in the CY 2017 PFS proposed rule (81 FR 46176 through 46177) to define the scope video system as including: (1) A monitor; (2) a processor; (3) a form of digital capture; (4) a cart; and (5) a printer. We believe that these equipment components represent the typical case for a scope video system. Our model for this system was the ''video system, endoscopy (processor, digital capture, monitor, printer, cart)'' equipment item (ES031), which we proposed to re-price as part of this separate pricing approach. We obtained current pricing invoices for the endoscopy video system as part of our investigation of these issues involving scopes, which we proposed to use for this re-pricing. In response to comments, we finalized the addition of a digital capture device to the endoscopy video system (ES031) in the CY 2017 PFS final rule (81 FR 80188). We finalized our proposal to price the system at $33,391, based on component prices of $9,000 for the processor, $18,346 for the digital capture device, $2,000 for the monitor, $2,295 for the printer, and $1,750 for the cart. In the CY 2018 PFS final rule (82 FR 52991 through 52993), we outlined, but did not finalize, a proposal to add an LED light source into the cost of the scope video system (ES031), which would remove the need for a separate light source in these procedures. We also described a proposal to increase the price of the scope video system by $1,000 to cover the expense of miscellaneous small equipment associated with the system that falls below the threshold of individual equipment pricing as scope accessories (such as cables, microphones, foot pedals, etc.). With the addition of the LED light (equipment code EQ382 at a price of $1,915), the updated total price of the scope video system would be set at $36,306.

We did not finalize this updated pricing to the scope video system in CY 2018, but we did propose and finalize the updated pricing for CY 2019 to $36,306 along with changing the name of the ES031 equipment item to ''scope video system (monitor, processor, digital capture, cart, printer, LED light)'' to reflect the fact that the use of the ES031 scope video system is not limited to endoscopy procedures.

(3) Scope Accessories

We understand that there may be other accessories associated with the use of scopes. We finalized a proposal in the CY 2017 PFS final rule (81 FR 80188) to separately price any scope accessories outside the use of the scope video system, and individually evaluate their inclusion or exclusion as direct PE inputs for particular codes as usual under our current policy based on whether they are typically used in furnishing the services described by the particular codes.

(4) Scope Proposals for CY 2020

The Scope Equipment Reorganization Workgroup organized by the RUC submitted detailed recommendations to CMS for consideration in the CY 2020 rule cycle, describing 23 different types of scope equipment, the HCPCS codes associated with each scope type, and a series of invoices for scope pricing. We appreciate the information provided by the workgroup and continue to welcome additional comments and feedback from stakeholders. Based on the recommendations from the workgroup, we proposed to establish 23 new scope equipment codes as detailed in Table 6.

TABLE 6: Proposed CY 2020 New Scope Equipment Codes

CMS Code	Proposed Scope Equipment Description	Proposed Price	Number of Invoices
ES070	rigid scope, cystoscopy		0
ES071	rigid scope, hysteroscopy		0
ES072	rigid scope, otoscopy		0
ES073	rigid scope, nasal/sinus endoscopy		0
ES074	rigid scope, proctosigmoidoscopy		0
ES075	rigid scope, laryngoscopy	$3,966.08	5
ES076	rigid scope, colposcopy	$14,500.00	1
ES077	non-channeled flexible digital scope, hysteroscopy		0
ES078	non-channeled flexible digital scope, nasopharyngoscopy		0
ES079	non-channeled flexible digital scope, bronchoscopy		0
ES080	non-channeled flexible digital scope, laryngoscopy	$21,485.51	7
ES081	channeled flexible digital scope, cystoscopy		0
ES082	channeled flexible digital scope, hysteroscopy		0
ES083	channeled flexible digital scope, bronchoscopy		0
ES084	channeled flexible digital scope, laryngoscopy	$18,694.39	5
ES085	multi-channeled flexible digital scope, flexible sigmoidoscopy	$17,360.00	1
ES086	multi-channeled flexible digital scope, colonoscopy	$38,058.81	6
ES087	multi-channeled flexible digital scope, esophagoscopy gastroscopy duodenoscopy (EGD)		0
ES088	multi-channeled flexible digital scope, esophagoscopy	$34,585.35	5
ES089	multi-channeled flexible digital scope, ileoscopy		0
ES090	multi-channeled flexible digital scope, pouchoscopy		0
ES091	ultrasound digital scope, endoscopic ultrasound		0
ES092	non-video flexible scope, laryngoscopy	$5,078.04	4

We note that we did not receive invoices for many of the new scope equipment items. There also was some inconsistency in the workgroup recommendations regarding the non-channeled flexible digital scope, laryngoscopy (ES080) equipment item and the non-video flexible scope, laryngoscopy (ES092) equipment item. These scopes were listed as a single equipment item in some of the workgroup materials and listed as separate equipment items in other materials. We proposed to establish them as separate equipment items based on the submitted invoices, which demonstrated that these were two different types of scopes with distinct price points of approximately $17,000 and $5,000 respectively.

We noted a similar issue with the submitted invoices for the rigid scope, laryngoscopy (ES075) equipment item. Among the eight total invoices, five of them were clustered around a price point of approximately $4,000 while the other three invoices had prices of roughly $15,000 apiece. The invoices indicated that these prices came from two distinct types of equipment, and as a result we proposed to consider these items separately. We proposed to use the initial five invoices to establish a proposed price of $3,966.08 for the rigid scope, laryngoscopy (ES075) equipment item. We noted that this is a close match for the current price of $3,178.08 used by the endoscope, rigid, laryngoscopy (ES010) equipment, which is the closest equivalent scope equipment. We also noted that the other three invoices appear to describe a type of stroboscopy system rather than a scope, and they have an average price of $14,737. This is a reasonably close match for the price of our current stroboscoby system (ES065) equipment, which has a CY 2020 price of $17,950.28 as it transitions to a final CY 2022 destination price of $16,843.87 (see the 4-year pricing transition of the market-based supply and equipment pricing update discussed later in this section for more information). We stated that we believe that these invoices reinforce the value established by the market-based pricing update for the stroboscoby system carried out last year, and we did not propose to update the price of the ES065 equipment. We also noted that we were open to feedback from stakeholders if they believe it would be more accurate to assign a price of $14,737 to the stroboscoby system based on these invoice submissions, as opposed to maintaining the current pricing transition to a CY 2022 price of $16,843.87.

For the eight new scope equipment items where we received submitted invoices for pricing, we proposed to replace the existing scopes with the new scope equipment. We noted that we received recommendations from the RUC's scope workgroup regarding which HCPCS codes make use of the new scope equipment items, and we proposed to make this scope replacement for approximately 100 HCPCS codes in total (see Table 7).

TABLE 7: Proposed Scope Equipment Replacement

HCPCS	Current CMS	Description	Price	New CMS	New Description	New Price
31505	ES010	endoscope, rigid, laryngoscopy	$3,178.08	ES075	rigid scope, laryngoscopy	$3,966.08

* See the discussion that follows.

In all but three cases (as identified with an asterisk (*) in Table 7), we proposed for the new scope equipment item to replace the existing scope with the identical amount of equipment time. For CPT codes 92612 (*Flexible endoscopic evaluation of swallowing by cine or video recording*), 92614 (*Flexible endoscopic evaluation, laryngeal sensory testing by cine or video recording*), and 92616 (*Flexible endoscopic evaluation of swallowing and laryngeal sensory testing by cine or video recording*), we noted the current scopes in use are the FEES video system

(ES027) and the FEESST video system (ES028). Since we proposed the use of a non-channeled flexible digital scope that requires a corresponding scope video system, we also proposed to add the ES080 equipment at the same equipment time to these three procedures rather than replacing the ES027 and ES028 equipment. In all other cases, we proposed to replace the current scope equipment listed in Table 7 with the new scope equipment, while maintaining the same amount of equipment time.

We identified inconsistencies with the workgroup recommendations for a small number of HCPCS codes. CPT code 45350 (*Sigmoidoscopy, flexible; with band ligation(s) (e.g., hemorrhoids)*) was recommended to include a multi-channeled flexible digital scope, flexible sigmoidoscopy (ES085); however, we noted that this CPT code does not include any scopes among its current direct PE inputs. CPT code 31595 was recommended to include a non-channeled flexible digital scope, laryngoscopy (ES080) but it no longer exists as a CPT code after having been deleted for CY 2019. CPT code 43232 (*Esophagoscopy, flexible, transoral; with transendoscopic ultrasound-guided intramural or transmural fine needle aspiration/ biopsy(s)*) was recommended to include a multi-channeled flexible digital scope, esophagoscopy (ES088), but it does not include a scope amongst its direct PE inputs any longer following clarification from the same workgroup recommendations that CPT code 43232 is never performed in the nonfacility setting. In all three of these cases, we did not propose to add one of the new scope equipment items to these procedures.

We noted that we did not receive pricing information along with the workgroup recommendations for the other 15 new scope equipment items. Therefore, we proposed to establish new equipment codes for these scopes as detailed in Table 6. However, we noted that due to a lack of pricing information, we did not propose to replace existing scope equipment with the new equipment items as we did for the other eight new scope equipment items for CY 2020. We welcomed additional feedback from stakeholders regarding the pricing of these scope equipment items, especially the submission of detailed invoices with pricing data. We proposed to transition the scopes for which we did have pricing information over to the new equipment items for CY 2020, and we noted that we looked forward to engaging with stakeholders to assist in pricing and then transitioning the remaining scopes in future rulemaking.

We received public comments on our scope equipment proposals. The following is a summary of the comments we received and our responses.

Comment: Several commenters stated that they appreciated the proposal of the recommended 23 new scope equipment codes and the proposed pricing of 8 of those new scope equipment codes. Commenters also stated that they appreciated the proposal of scope replacements for 100 CPT codes as recommended by the RUC utilizing the 8 scopes that CMS was able to price. One commenter encouraged CMS to continue to work with the RUC workgroup and other stakeholders to obtain detailed invoices for the scopes for which it did not have pricing data to assist in the correct pricing and transition of these equipment items.

Response: We appreciate the support for our proposals from the commenters. We welcome the submission of additional pricing data from the RUC scope workgroup and other stakeholders regarding the pricing of the remaining scope equipment items.

Comment: One commenter stated that they appreciated the recognition of the existing specialized equipment that is required in addition to the proposed scope equipment, and they supported the proposal to add ES080 and retain ES027 or ES028 at the same equipment time for CPT codes 92612, 92614, and 92616.

Response: We appreciate the support for our proposals from the commenter.

Comment: Several commenters stated it was their understanding that additional scope pricing information submitted now would be considered for the CY 2021 PFS proposed rule. These commenters asked for clarification that the CPT codes impacted by any scope proposals for CY 2021 will be outlined in a table just as the impacted codes for CY 2020 were outlined in Table 7, so that they will be subject to stakeholder review and comment prior to implementation.

Response: As we stated in the proposed rule, we welcome additional feedback from stakeholders regarding the pricing of these remaining scope equipment items, especially the submission of detailed invoices with pricing data. Any future proposals that we make regarding scope equipment will be subject to notice and comment rulemaking, including displaying information in a table similar Table 7, if it would be appropriate to do so.

Comment: A commenter stated that they had identified inconsistencies with the scope workgroup recommendations for a small number of HCPCS codes. The commenter stated that CPT code 45350 (*Sigmoidoscopy, flexible; with band ligation(s) (e.g., hemorrhoids)*) was recommended by the workgroup to include a multi-channeled flexible digital scope, flexible sigmoidoscopy (ES085); however, CMS noted in the proposed rule that this CPT code does not include any scopes among its current direct PE inputs. The commenter stated that all codes in the flexible sigmoidoscopy family require a flexible sigmoidoscope in order to perform the procedure, and therefore, the commenter requested that CMS add the ES085 scope equipment to CPT code 45350.

Response: We appreciate the feedback from the commenter in pointing out this inconsistency in the direct PE inputs for CPT code 45350. Based on the information supplied by the commenter, we are finalizing the addition of the ES085 scope equipment to CPT code 45350. We are finalizing an equipment time of 59 minutes based on the use of our standard equipment time formula for scopes.

Comment: A commenter requested that the ''rigid scope, hysteroscopy'' (ES071) equipment be updated to read ''rigid scope, channeled, hysteroscopy'' and that the hysteroscopy codes (that is, CPT codes 58555, 58562, 58565) be valued with ES071. The commenter submitted an invoice with pricing information associated with the ES071 scope equipment.

Response: We appreciate the submission of an invoice from the commenter for use in pricing the ES071 scope. Based on the information provided by the commenter, we are finalizing a change in the name of the ES071 scope from ''rigid scope, hysteroscopy'' to ''rigid scope, channeled, hysteroscopy.'' We are also finalizing a price of $6,795 for the ES071 scope based on the pricing data supplied by the commenter, and we are finalizing the replacement of the existing ''endoscope, rigid, hysteroscopy'' (ES009) scope with the new ES071 scope equipment. The CPT codes affected by this replacement are CPT codes 58555, 58562, and 58565 as identified by the commenter, as well as CPT code 58563 which is the only other code that previously employed the ES009 scope. These scope replacements are summarized below in Table 9.

Comment: One commenter provided a series of invoices for different types of rigid scopes in response to the comment solicitation.

Response: We appreciate the submission of additional invoices from the commenter. Based on the

information included in these invoices, we are finalizing prices for three scopes that did not previously have pricing data. We are finalizing a price of $2,333.98 for the ''rigid scope, otoscopy'' (ES072) equipment, a price of $3,004.75 for the ''rigid scope, nasal/sinus endoscopy'' (ES073) equipment, and a price of $21,923.425 for the ''non-channeled flexible digital scope, nasopharyngoscopy'' (ES078) equipment. We are not finalizing the replacement of any of the old scope equipment codes with these three new scope equipment items for CY 2020, as the commenter did not identify the HCPCS codes in which this replacement would take place. We will consider additional scope pricing information for these three scope equipment codes, including the HCPCS codes in which they would typically be employed, as part of the CY 2021 PFS proposed rule.

The commenter also provided five new invoices for the pricing of the ''non-video flexible scope, laryngoscopy'' (ES092) equipment. These five invoices had an average price of $5,105.97, which was nearly identical to our proposed price of $5,078.04 for the ES092 scope. We believe that these invoices reinforce the accuracy of the proposed pricing. We are finalizing an increase in the price of the ES092 scope to $5,105.97, which will slightly increase the direct costs for the 14 HCPCS codes containing this scope listed above in Table 7.

Comment: Several commenters sent a series of additional invoices, and recommended crosswalks from existing equipment codes to the proposed equipment codes to ensure that the equipment currently listed for GI endoscopy procedures was appropriately attributed to the correct new scopes. Although the commenters did not provide information to update any of the proposed scope equipment prices, the commenters did clarify that several of the new scope equipment items which lacked proposed prices in fact shared the same current scope equipment codes as other new scope equipment items that did have proposed pricing. For example, CMS proposed to replace the ''videoscope, gastroscopy'' (ES034) scope equipment with the new ''multi-channeled flexible digital scope, esophagoscopy'' (ES088) scope equipment. The commenters clarified that this same ES034 equipment, when used in additional CPT codes, would be replaced by either the ''multi-channeled flexible digital scope, esophagoscopy gastroscopy duodenoscopy'' (ES087) or the ''multi-channeled flexible digital scope, ileoscopy'' (ES089) equipment items, all of which should share the same proposed price of $34,585.35. The commenter also explained that the same ''Video Sigmoidoscope'' (ES043) equipment which CMS proposed to replace with the ''multi-channeled flexible digital scope, pouchoscopy'' (ES090) new scope equipment would, in additional CPT codes, be replaced by the new ''multi-channeled flexible digital scope, flexible sigmoidoscopy'' (ES085) scope equipment, and that both ES085 and ES090 should share the same proposed price of $19,308.56. Finally, the commenter also stated that the new ''ultrasound digital scope, endoscopic ultrasound'' (ES091) equipment item would only be used in the facility setting, and that none of the HCPCS codes that included this scope contained direct PE inputs.

Response: We appreciate the submission of additional invoices and the clarification of the relationship between the former scope equipment codes and the newly created scope equipment codes. After considering this additional information supplied by the commenters, we are updating Table 8 of CY 2020 new scope equipment codes.

TABLE 8: Final CY 2020 New Scope Equipment Codes

CMS Code	Proposed Scope Equipment Description	Proposed Price	Finalized Price
ES070	rigid scope, cystoscopy		
ES071	rigid scope, channeled, hysteroscopy		$6,795.00
ES072	rigid scope, otoscopy		$2,333.98
ES073	rigid scope, nasal/sinus endoscopy		$3,004.75
ES074	rigid scope, proctosigmoidoscopy		
ES075	rigid scope, laryngoscopy	$3,966.08	$3,966.08
ES076	rigid scope, colposcopy	$14,500.00	$14,500.00
ES077	non-channeled flexible digital scope, hysteroscopy		
ES078	non-channeled flexible digital scope, nasopharyngoscopy		$21,923.43
ES079	non-channeled flexible digital scope, bronchoscopy		
ES080	non-channeled flexible digital scope, laryngoscopy	$21,485.51	$21,485.51
ES081	channeled flexible digital scope, cystoscopy		
ES082	channeled flexible digital scope, hysteroscopy		
ES083	channeled flexible digital scope, bronchoscopy		
ES084	channeled flexible digital scope, laryngoscopy	$18,694.39	$18,694.39
ES085	multi-channeled flexible digital scope, flexible sigmoidoscopy	$17,360.00	$17,360.00
ES086	multi-channeled flexible digital scope, colonoscopy	$38,058.81	$38,058.81
ES087	multi-channeled flexible digital scope, esophagoscopy gastroscopy duodenoscopy (EGD)		$34,585.35
ES088	multi-channeled flexible digital scope, esophagoscopy	$34,585.35	$34,585.35
ES089	multi-channeled flexible digital scope, ileoscopy		$34,585.35
ES090	multi-channeled flexible digital scope, pouchoscopy		$17,360.00
ES091	ultrasound digital scope, endoscopic ultrasound		$0.00
ES092	non-video flexible scope, laryngoscopy	$5,078.04	$5,105.97

We note again that we are not finalizing changes to the pricing of the group of new scope equipment codes with previously proposed prices, aside from the minor increase in the price of the ES092 equipment, only newly pricing several scopes that previously lacked pricing, and extending proposed pricing such that the ES087 and ES089 scopes share the same price with the ES088 scope, and the ES090 scope shares the same price with the ES085 scope. The new scope equipment codes ES087, ES088, and ES089 all share the same price because they are replacing the same current scope equipment code (ES034), and similarly the new ES085 and ES090 scope equipment codes share the same price because they are both replacing the same current scope equipment code (ES043). There are 21 HCPCS codes which are affected by the new scope replacements; these codes are detailed in Table 9.

43270	ES034	videoscope, gastroscopy	$27,582.01	ES087	multi-channeled flexible digital scope, esophagoscopy gastroscopy duodenoscopy (EGD)	$34,585.35
44380	ES034	videoscope, gastroscopy	$27,582.01	ES089	multi-channeled flexible digital scope, ileoscopy	$34,585.35
44381	ES034	videoscope, gastroscopy	$27,582.01	ES089	multi-channeled flexible digital scope, ileoscopy	$34,585.35
44382	ES034	videoscope, gastroscopy	$27,582.01	ES089	multi-channeled flexible digital scope, ileoscopy	$34,585.35
44385	ES043	Video Sigmoidoscope	$19,308.56	ES090	multi-channeled flexible digital scope, pouchoscopy	$17,360.00
44386	ES043	Video Sigmoidoscope	$19,308.56	ES090	multi-channeled flexible digital scope, pouchoscopy	$17,360.00

BILLING CODE 4120–01–C

Although we are updating the scope equipment pricing for CY 2020 such that the ES087 and ES089 scopes share the same price with the ES088 scope, and the ES090 scope shares the same price with the ES085 scope, we do not mean to suggest that these scopes that share pricing are identical with one another. We are assigning the same price to these scopes because they are replacing the same current scope equipment codes, and because we do not have individual pricing information for them at the moment. We are open to the submission of additional invoices in future rule cycles to establish individual pricing for these scopes, and we continue to welcome more data to help identify pricing for the remaining 7 scope equipment codes that still lack invoices.

After consideration of the public comments, we are finalizing pricing for the new scope equipment as detailed above in Table 8. We are also finalizing the scope equipment replacements as detailed in Tables 7 and 9.

c. Technical Corrections To Direct PE Input Database and Supporting Files

Subsequent to the publication of the CY 2019 PFS final rule, stakeholders alerted us to several clerical inconsistencies in the direct PE database. We proposed to correct these inconsistencies as described below and reflected in the CY 2020 proposed direct PE input database displayed on the CMS website under downloads for the CY 2020 PFS proposed rule at *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html.*

For CY 2020, we proposed to address the following inconsistencies:

- The RUC's Scope Equipment Reorganization Workgroup recommended deletion of the non-facility inputs for CPT codes 43231 (*Esophagoscopy, flexible, transoral; with endoscopic ultrasound examination*) and 43232 (*Esophagoscopy, flexible, transoral; with transendoscopic ultrasound-guided intramural or transmural fine needle aspiration/biopsy(s)*). The gastroenterology specialty societies stated that these services are never performed in the non-facility setting. After our own review of these services, we agreed with the workgroup's recommendation, and we proposed to remove the non-facility direct PE inputs for these two CPT codes.
- In rulemaking for CY 2018, we reviewed a series of CPT codes describing nasal sinus endoscopy surgeries. At that time, we sought comments on whether the broader family of nasal sinus endoscopy surgery services should be subject to the special rules for multiple endoscopic procedures instead of the standard multiple procedure payment reduction. We received very few comments in response to our solicitation. In the CY 2018 PFS final rule (82 FR 53043), we indicated that we would continue to explore this option for future rulemaking. We proposed to apply the special rule for multiple endoscopic procedures to this family of codes beginning in CY 2020. We noted this proposal would treat this group of CPT codes consistently with other similar endoscopic procedures when codes within the CPT code family are billed together with another endoscopy service in the same family. Similar to other similar endoscopic procedure code families, we proposed that CPT code 31231 (*Nasal endoscopy, diagnostic, unilateral or bilateral (separate procedure)*) would be the base procedure for the remainder of nasal sinus endoscopies. The codes affected by the proposal are detailed in Table 10.

TABLE 10: Proposed Nasal Sinus Endoscopy Codes Subject to Special Rules for Multiple Endoscopic Procedures

CPT Code	Short Descriptor
31231	Nasal endoscopy dx
31233	Nasal/sinus endoscopy dx
31235	Nasal/sinus endoscopy dx
31237	Nasal/sinus endoscopy surg
31238	Nasal/sinus endoscopy surg
31239	Nasal/sinus endoscopy surg
31240	Nasal/sinus endoscopy surg
31241	Nsl/sins ndsc w/artery lig
31253	Nsl/sins ndsc total
31254	Nsl/sins ndsc w/prtl ethmdct
31255	Nsl/sins ndsc w/tot ethmdct
31256	Exploration maxillary sinus
31257	Nsl/sins ndsc tot w/sphendt
31259	Nsl/sins ndsc sphn tiss rmvl
31267	Endoscopy maxillary sinus
31276	Nsl/sins ndsc frnt tiss rmvl
31287	Nasal/sinus endoscopy surg
31288	Nasal/sinus endoscopy surg
31290	Nasal/sinus endoscopy surg
31291	Nasal/sinus endoscopy surg
31292	Nasal/sinus endoscopy surg
31293	Nasal/sinus endoscopy surg
31294	Nasal/sinus endoscopy surg
31295	Sinus endo w/balloon dil
31296	Sinus endo w/balloon dil
31297	Sinus endo w/balloon dil
31298	Nsl/sins ndsc w/sins dilat

Special rules for multiple endoscopic procedures would apply if any of the procedures listed in Table 10 are billed together for the same patient on the same day. We apply the multiple endoscopy payment rules to a code family before ranking the family with other procedures performed on the same day (for example, if multiple endoscopies in the same family are reported on the same day as endoscopies in another family, or on the same day as a non-endoscopic procedure). If an endoscopic procedure is reported together with its base procedure, we do not pay separately for the base procedure. Payment for the base procedure is included in the payment for the other endoscopy. For additional information about the payment adjustment under the special rule for multiple endoscopic services, we refer readers to the CY 1992 PFS final rule where this policy was established (56 FR 59515) and to Public Law 100–04, Medicare Claims Processing Manual, Chapter 23 (available on the CMS website at *https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/clm104c23.pdf*).

We received public comments on the proposed technical corrections to the direct PE input database and supporting files. The following is a summary of the comments we received and our responses.

Comment: One commenter agreed with the RUC workgroup's recommendation and the CMS proposal to remove the non-facility direct PE inputs from CPT code 43231 and 43232.

Response: We appreciate the support for our proposals from the commenter.

Comment: One commenter stated that the proposed approach for nasal sinus endoscopy procedure better reflects the work RVU associated with the different levels of sinus endoscopy procedures and stated their support for this payment change. The commenter requested clarification regarding the application of the bilateral adjustment in conjunction with the special rules for multiple endoscopic procedures. The commenter stated that it was their understanding that if the CPT code is reported as a bilateral procedure and is reported with other procedure codes on the same day, the guidance is to apply the bilateral adjustment before applying any form of multiple procedure rules.

Response: The special rule for multiple endoscopic procedures has been described correctly in general terms by the commenter, although we encourage readers once again to refer to the CY 1992 PFS final rule where this policy was established (56 FR 59515) and to Public Law 100–04, Medicare Claims Processing Manual, Chapter 23. This manual text states that special rules for multiple endoscopic procedures apply if the procedure is billed with another endoscopy in the same family (*i.e.,* another endoscopy that has the same base procedure). The base procedure for each code with this indicator is identified in the endoscopic base code field. In these situations, we apply the multiple endoscopy rules to a family before ranking the family with other procedures performed on the same day (for example, if multiple endoscopies in the same family are reported on the same day as endoscopies in another family or on the same day as a non-endoscopic procedure). If an endoscopic procedure is reported with only its base procedure, we do not pay separately for the base procedure. Payment for the base procedure is included in the payment for the other endoscopy.

Comment: A commenter requested clarification regarding the proposal to apply the special rule for multiple endoscopic procedures to the family of codes listed in Table 10. The commenter stated that it was their understanding that that the diagnostic endoscopy described by CPT code 31231 is included in the valuation of all of the surgical procedure codes on the list (for example, CPT codes 31254, 31256, 31276, etc.), and therefore, CPT Code 31231 would not be billed on the same side that any nasal endoscopic surgical code(s) are performed. However, the commenter stated that it was their understanding that CPT code 31231 could be billed for one side of the nose if it was the only procedure performed and there was no surgical intervention on that side. Assuming that this interpretation was correct, the commenter stated that they supported the application of the special rules for endoscopy to the nasal endoscopy family.

Response: We reiterate that the special rule for multiple endoscopic procedures has been described correctly in general terms by the commenter, although we encourage readers once again to refer to the CY 1992 PFS final rule where this policy was established (56 FR 59515) and to Public Law 100–

04, Medicare Claims Processing Manual, Chapter 23. We encourage stakeholders to contact their local Medicare Administrative Contractor (MAC) for information regarding proper billing instructions for CPT code 31231.

Comment: One commenter stated that they were troubled by the proposal to apply the multiple endoscopy payment methodology to the CPT codes included in Table 10 without further clarification in the regulatory language or the Medicare Carriers Manual about the number of multiple procedure modifiers CMS can append to one claim. The commenter questioned whether these 27 codes will be assigned a multiple procedure indicator of ''3'' and if that would override the prior multiple procedure indicator of ''4''. The commenter stated that they did not support the application of multiple endoscopy payment rules if CMS intended to assign reductions for both multiple endoscopy and multiple procedures, as application of both payment rules would result in inappropriate reductions to this set of services.

Response: In response to the commenter's question, only one multiple procedure indicator can be applied to each HCPCS code. We also clarify that our proposal would assign a multiple procedure indicator of ''3'' to all of the codes listed in Table 10 aside from CPT code 31231, which would be the endoscopic ''base code'' and would be assigned a multiple procedure indicator of ''2''. We also note that none of these codes previously contained a multiple procedure indicator of ''4'', which is associated with certain diagnostic imaging services. We encourage readers once again to refer to the CY 1992 PFS final rule where this policy was established (56 FR 59515) and to Pub. 100–04, Medicare Claims Processing Manual, Chapter 23.

Comment: One commenter stated that although they recognized that by including the nasal endoscopy family among the codes using the special rule for multiple endoscopies, CMS may be trying to harmonize endoscopic procedures, and they stated that the unique situation surrounding the nasal endoscopy code family should prohibit the application of this special rule. The commenter stated that the nasal endoscopy code family differed significantly from colonoscopy procedures in that there is not uniformity across the sites of service where these sinus procedures are performed, since these services could be performed in both the facility and non-facility settings. The commenter stated that applying the special rules for multiple endoscopic procedures to this group would result in a significant inappropriate reduction in the value of the secondary and subsequent nasal surgical codes performed on the same patient on the same day when performed in the office setting, and the commenter stated that they opposed the application of the special rules for multiple endoscopies to the nasal endoscopy family in the non-facility setting.

Response: We disagree that this nasal endoscopy code family differs significantly from other colonoscopy families where the special rule for multiple endoscopic procedures has long been in place. Although the commenter stated that the nasal endoscopy codes were unique in the sense that they could be performed in both the facility and non-facility settings, and that the base code for the family, CPT code 31231, is typically an office-based procedure with significant PE built into the code, we note in response that there are many other groups of codes which utilize the special rule for multiple endoscopic procedures and are also performed in both the facility and non-facility settings. These include CPT codes 31573–31579 (base CPT code 31575), CPT codes 43220–43229 (base CPT code 43220), CPT codes 44389–44394 (base CPT code 44388), and CPT codes 45303–45320 (base CPT code 45300). There are dozens of these codes which can be performed in both the facility and non-facility settings, many of them with significant PE inputs built into their non-facility valuation. In light of this evidence, we disagree with the commenter that there is a unique situation regarding the nasal endoscopy family of codes.

Comment: Several commenters requested that CMS utilize the RUC-recommended direct PE inputs to publish PE relative value units for CPT code 90460, which was reviewed by the RUC in October 2009. Rather than finalize the RUC recommendations, CMS crosswalked CPT code 90460 from CPT code 90471, which is crosswalked from CPT code 96372 (formerly CPT code 90772 and then 90782). Commenters stated that the recent measles crisis spotlights the importance of immunization administration being appropriately valued, and that the crosswalk from CPT code 96372 to codes CPT codes 90471/90460 has brought about a 60 percent reduction in PE RVUs. Commenters stated that CMS typically only uses a crosswalk for work values, not PE values, and requested that CMS disconnect the codes after the initial crosswalk so that changes to the source code no longer affect the crosswalked code. One commenter stated that CMS was proposing to reduce the non-facility PE RVUs for CPT code 90471 from 0.29 in 2019 to 0.22 in 2020, and while this may appear to be a relatively small change in RVUs, if finalized it would reduce the national unadjusted payment for CPT code 90471 (and consequently the payment rates for HCPCS codes G0008 and G0009) by 15 percent.

Response: We appreciate the feedback from the commenters and note that we finalized the crosswalks associated with CPT code 90460 in the CY 2011 final rule (75 FR 73306). However, we note that we are separately addressing the valuation of HCPCS codes G0008, G0009, and G0010 in the codes valuation section of this rule.

We also received comments regarding a variety of subjects about which we did not make proposals for CY 2020. These included comments regarding the proper specialty employed to determine indirect cost factors for home PT/INR monitoring services and the application of the multiple procedure payment reduction to physical therapist services. We will take the feedback from the commenters on these subjects into consideration for future rulemaking.

After consideration of the public comments, we are finalizing the proposal to remove the non-facility direct PE inputs from CPT code 43231 and 43232. We are also finalizing the proposal to apply the special rule for multiple endoscopic procedures to the family of codes listed in Table 10 without refinement.

d. Updates to Prices for Existing Direct PE Inputs

In the CY 2011 PFS final rule with comment period (75 FR 73205), we finalized a process to act on public requests to update equipment and supply price and equipment useful life inputs through annual rulemaking, beginning with the CY 2012 PFS proposed rule. For CY 2020, we proposed the following price updates for existing direct PE inputs.

We proposed to update the price of one supply and one equipment item in response to the public submission of invoices. As these pricing updates were each part of the formal review for a code family, we proposed that the new pricing take effect for CY 2020 for these items instead of being phased in over 4 years.

We also proposed to update the name of the EP001 equipment item from ''DNA/digital image analyzer (ACIS)'' to ''DNA/Digital Image Analyzer'' due to

clarification from stakeholders regarding the typical use of this equipment.

(1) Market-Based Supply and Equipment Pricing Update

Section 220(a) of the Protecting Access to Medicare Act of 2014 (PAMA) (Pub. L. 113–93) provides that the Secretary may collect or obtain information from any eligible professional or any other source on the resources directly or indirectly related to furnishing services for which payment is made under the PFS, and that such information may be used in the determination of relative values for services under the PFS. Such information may include the time involved in furnishing services; the amounts, types and prices of PE inputs; overhead and accounting information for practices of physicians and other suppliers, and any other elements that would improve the valuation of services under the PFS.

As part of our authority under section 1848(c)(2)(M) of the Act, we initiated a market research contract with StrategyGen to conduct an in-depth and robust market research study to update the PFS direct PE inputs (DPEI) for supply and equipment pricing for CY 2019. These supply and equipment prices were last systematically developed in 2004–2005. StrategyGen submitted a report with updated pricing recommendations for approximately 1,300 supplies and 750 equipment items currently used as direct PE inputs. This report is available as a public use file displayed on the CMS website under downloads for the CY 2019 PFS final rule at *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html.*

The StrategyGen team of researchers, attorneys, physicians, and health policy experts conducted a market research study of the supply and equipment items currently used in the PFS direct PE input database. Resources and methodologies included field surveys, aggregate databases, vendor resources, market scans, market analysis, physician substantiation, and statistical analysis to estimate and validate current prices for medical equipment and medical supplies. StrategyGen conducted secondary market research on each of the 2,072 DPEI medical equipment and supply items that CMS identified from the current DPEI. The primary and secondary resources StrategyGen used to gather price data and other information were:

- Telephone surveys with vendors for top priority items (Vendor Survey).
- Physician panel validation of market research results, prioritized by total spending (Physician Panel).
- The General Services Administration system (GSA).
- An aggregate health system buyers database with discounted prices (Buyers).
- Publicly available vendor resources, that is, Amazon Business, Cardinal Health (Vendors).
- **Federal Register**, current DPEI data, historical proposed and final rules prior to CY 2018, and other resources; that is, AMA RUC reports (References).

StrategyGen prioritized the equipment and supply research based on current share of PE RVUs attributable by item provided by CMS. StrategyGen developed the preliminary Recommended Price (RP) methodology based on the following rules in hierarchical order considering both data representativeness and reliability.

(1) If the market share, as well as the sample size, for the top three commercial products were available, the weighted average price (weighted by percent market share) was the reported RP. Commercial price, as a weighted average of market share, represents a more robust estimate for each piece of equipment and a more precise reference for the RP.

(2) If no data were available for commercial products, the current CMS prices were used as the RP.

GSA prices were not used to calculate the StrategyGen recommended prices, due to our concern that the GSA system curtails the number and type of suppliers whose products may be accessed on the GSA Advantage website, and that the GSA prices may often be lower than prices that are available to non-governmental purchasers. After reviewing the StrategyGen report, we proposed to adopt the updated direct PE input prices for supplies and equipment as recommended by StrategyGen.

StrategyGen found that despite technological advancements, the average commercial price for medical equipment and supplies has remained relatively consistent with the current CMS price. Specifically, preliminary data indicated that there was no statistically significant difference between the estimated commercial prices and the current CMS prices for both equipment and supplies. This cumulative stable pricing for medical equipment and supplies appears similar to the pricing impacts of non-medical technology advancements where some historically high-priced equipment (that is, desktop PCs) has been increasingly substituted with current technology (that is, laptops and tablets) at similar or lower price points. However, while there were no statistically significant differences in pricing at the aggregate level, medical specialties would experience increases or decreases in their Medicare payments if CMS were to adopt the pricing updates recommended by StrategyGen. At the service level, there may be large shifts in PE RVUs for individual codes that happened to contain supplies and/or equipment with major changes in pricing, although we note that codes with a sizable PE RVU decrease would be limited by the requirement to phase in significant reductions in RVUs, as required by section 1848(c)(7) of the Act. The phase-in requirement limits the maximum RVU reduction for codes that are not new or revised to 19 percent in any individual calendar year.

We believe that it is important to make use of the most current information available for supply and equipment pricing instead of continuing to rely on pricing information that is more than a decade old. Given the potentially significant changes in payment that would occur, both for specific services and more broadly at the specialty level, in the CY 2019 PFS proposed rule we proposed to phase in our use of the new direct PE input pricing over a 4-year period using a 25/75 percent (CY 2019), 50/50 percent (CY 2020), 75/25 percent (CY 2021), and 100/0 percent (CY 2022) split between new and old pricing. This approach is consistent with how we have previously incorporated significant new data into the calculation of PE RVUs, such as the 4-year transition period finalized in CY 2007 PFS final rule with comment period when changing to the ''bottom-up'' PE methodology (71 FR 69641). This transition period will not only ease the shift to the updated supply and equipment pricing, but will also allow interested parties an opportunity to review and respond to the new pricing information associated with their services.

We proposed to implement this phase-in over 4 years so that supply and equipment values transition smoothly from the prices we currently include to the final updated prices in CY 2022. We proposed to implement this pricing transition such that one quarter of the difference between the current price and the fully phased-in price is implemented for CY 2019, one third of the difference between the CY 2019 price and the final price is implemented for CY 2020, and one half of the difference between the CY 2020 price and the final price is implemented for CY 2021, with the new direct PE prices

fully implemented for CY 2022. An example of the transition from the current to the fully-implemented new pricing is provided in Table 11.

TABLE 11: Example of Direct PE Pricing Transition

Current Price	$100	
Final Price	$200	
Year 1 (CY 2019) Price	$125	1/4 difference between $100 and $200
Year 2 (CY 2020) Price	$150	1/3 difference between $125 and $200
Year 3 (CY 2021) Price	$175	1/2 difference between $150 and $200
Final (CY 2022) Price	$200	

For new supply and equipment codes for which we establish prices during the transition years (CYs 2019, 2020 and 2021) based on the public submission of invoices, we proposed to fully implement those prices with no transition since there are no current prices for these supply and equipment items. These new supply and equipment codes would immediately be priced at their newly established values. We also proposed that, for existing supply and equipment codes, when we establish prices based on invoices that are submitted as part of a revaluation or comprehensive review of a code or code family, they will be fully implemented for the year they are adopted without being phased in over the 4-year pricing transition. The formal review process for a HCPCS code includes a review of pricing of the supplies and equipment included in the code. When we find that the price on the submitted invoice is typical for the item in question, we believe it would be appropriate to finalize the new pricing immediately along with any other revisions we adopt for the code valuation.

For existing supply and equipment codes that are not part of a comprehensive review and valuation of a code family and for which we establish prices based on invoices submitted by the public, we proposed to implement the established invoice price as the updated price and to phase in the new price over the remaining years of the proposed 4-year pricing transition. During the proposed transition period, where price changes for supplies and equipment are adopted without a formal review of the HCPCS codes that include them (as is the case for the many updated prices we proposed to phase in over the 4-year transition period), we believe it is important to include them in the remaining transition toward the updated price. We also proposed to phase in any updated pricing we establish during the 4-year transition period for very commonly used supplies and equipment that are included in 100 or more codes, such as sterile gloves (SB024) or exam tables (EF023), even if invoices are provided as part of the formal review of a code family. We would implement the new prices for any such supplies and equipment over the remaining years of the proposed 4-year transition period. Our proposal was intended to minimize any potential disruptive effects during the proposed transition period that could be caused by other sudden shifts in RVUs due to the high number of services that make use of these very common supply and equipment items (meaning that these items are included in 100 or more codes).

We believed that implementing the proposed updated prices with a 4-year phase-in would improve payment accuracy, while maintaining stability and allowing stakeholders the opportunity to address potential concerns about changes in payment for particular items. Updating the pricing of direct PE inputs for supplies and equipment over a longer timeframe will allow more opportunities for public comment and submission of additional, applicable data. We welcomed feedback from stakeholders on the proposed updated supply and equipment pricing, including the submission of additional invoices for consideration.

We received many comments regarding the market-based supply and equipment pricing proposal following the publication of the CY 2019 PFS proposed rule. For a full discussion of these comments, we direct readers to the CY 2019 PFS final rule (83 FR 59475–59480). In each instance in which a commenter raised questions about the accuracy of a supply or equipment code's recommended price, the StrategyGen contractor conducted further research on the item and its price with special attention to ensuring that the recommended price was based on the correct item in question and the clarified unit of measure. Based on the commenters' requests, the StrategyGen contractor conducted an extensive examination of the pricing of any supply or equipment items that any commenter identified as requiring additional review. Invoices submitted by multiple commenters were greatly appreciated and ensured that medical equipment and supplies were re-examined and clarified. Multiple researchers reviewed these specified supply and equipment codes for accuracy and proper pricing. In most cases, the contractor also reached out to a team of nurses and their physician panel to further validate the accuracy of the data and pricing information. In some cases, the pricing for individual items needed further clarification due to a lack of information or due to significant variation in packaged items. After consideration of the comments and this additional price research, we updated the recommended prices for approximately 70 supply and equipment codes identified by the commenters. Table 9 in the CY 2019 PFS final rule lists the supply and equipment codes with price changes based on feedback from the commenters and the resulting additional research into pricing (83 FR 59479–59480).

After consideration of the public comments, we finalized our proposals associated with the market research study to update the PFS direct PE inputs for supply and equipment pricing. We continue to believe that implementing the proposed updated prices with a 4-year phase-in will improve payment accuracy, while maintaining stability and allowing stakeholders the opportunity to address potential concerns about changes in payment for particular items. We continue to welcome feedback from stakeholders on the proposed updated supply and equipment pricing, including the submission of additional invoices for consideration.

For CY 2020, we received invoice submissions for approximately 30 supply and equipment codes from stakeholders as part of the second year of the market-based supply and

equipment pricing update. These invoices were reviewed by the StrategyGen contractor and the submitted invoices were used in many cases to supplement the pricing originally proposed for the CY 2019 PFS rule cycle. The contractor reviewed the invoices, as well as prior data for the relevant supply/equipment codes to make sure the item in the invoice was representative of the supply/equipment item in question and aligned with past research. Based on this research, we proposed to update the prices of the supply and equipment items listed in Table 9 of the CY 2020 PFS proposed rule.

For most supply and equipment items, there was an alignment between the research carried out by the StrategyGen contractor and the submitted invoice. The updated CY 2020 pricing was calculated using an average between the previous market research and the newly submitted invoices in these cases. In some cases the submitted invoices were not representative of market prices, such as for the centrifuge with rotor (EP007) equipment item where the invoice price of $8,563 appeared to be an outlier. We did not use the invoices to calculate our pricing recommendation in these situations and instead continued to rely on our prior pricing data. In other instances, such as for the kit, probe, cryoablation, prostate (Galil-Endocare) (SA099) supply item, our research indicated that the submitted invoice price was more representative of the commercial price than our CY 2019 research and pricing. We proposed the new invoice prices for these supply and equipment items due to our belief in their greater accuracy.

For some of the remaining supply and equipment items, such as the five-gallon paraffin (EP031) equipment and the Olympus DP21 camera (EP089) equipment, we maintained the extant pricing for CY 2019 due to a lack of sufficient data to update the pricing. In these situations where we did not have an updated price for CY 2019, we believe that the newly submitted invoices are more representative of the current commercial prices that are being paid on the market. We proposed the new invoice prices for these supply and equipment items due to our belief in their greater accuracy.

In addition, we were alerted by stakeholders that the price of the EM visit pack (SA047) supply did not match the sum of the component prices of the supplies included in the pack. After reviewing the prices of the individual component supplies, we agree with the stakeholders that there was a discrepancy in the previous pricing of this supply pack. We proposed to update the price of the EM visit pack to $5.47 to match the sum of the prices of the component supplies, and proposed to continue to transition towards this price over the remaining years of the phase-in period.

We finalized a policy last year to phase in the new supply and equipment pricing over 4 years so that supply and equipment values transition smoothly from their current prices to the final updated prices in CY 2022. We finalized our proposal to implement this pricing transition such that one quarter of the difference between the current price and the fully phased in price was implemented for CY 2019, one third of the difference between the CY 2019 price and the final price is implemented for CY 2020, and one half of the difference between the CY 2020 price and the final price is implemented for CY 2021, with the new direct PE prices fully implemented for CY 2022. An example of the transition from the current to the fully-implemented new pricing is provided in Table 11. For CY 2020, one third of the difference between the CY 2019 price and the final price will be implemented as per the previously finalized policy. Table 12 contains the list of proposed CY 2020 market-based supply and equipment pricing updates:

BILLING CODE 4120–01–P

TABLE 12: Proposed CY 2020 Market-Based Supply and Equipment Pricing Updates

CMS CODE	Description	CMS 2019 Price	Prior CMS 2022 Price	Prior CMS 2020 Price	Updated CMS 2022 Price	Updated CMS 2020 Price
SA047	pack, EM visit	$4.176	$7.750	$5.367	$5.468	$4.606

BILLING CODE 4120–01–C

(2) Invoice Submission

The full list of updated supply and equipment pricing as it will be implemented over the 4-year transition period will be made available as a public use file displayed on the CMS website under downloads for the CY 2020 PFS proposed rule at *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html.*

We received public comments on updates to prices for existing direct PE inputs. The following is a summary of the comments we received and our responses.

Comment: Many commenters were supportive of the proposed update to supply and equipment pricing based on the submission of additional invoices as detailed in Table 12. One commenter thanked CMS for gathering additional pertinent information and proposing a more accurate price for the balloon sinus surgery kit (SA106) supply for CY 2020. Several commenters urged CMS to finalize the proposed updates to the direct PE supplies and equipment prices as listed in the table. One commenter encouraged CMS to continue to carefully consider all pricing data including invoices and other supporting evidence that they receive from the specialty societies throughout this comment period and the entirety of the 4-year transition period.

Response: We will continue to carefully consider all pricing data submitted from commenters throughout the 4-year transition period.

Comment: Several commenters stated that they were concerned that supply and equipment pricing will quickly become outdated once the transition to updated prices is complete in CY 2022. The commenters encouraged CMS to move to an ongoing update process for supplies and equipment, as well as for clinical labor staff costs, one that is open for public comment through the rulemaking process.

Response: We share the concerns from the commenters that the supply and equipment pricing will eventually become outdated again after the pricing transition is complete. We welcome additional feedback from stakeholders on potential solutions to this issue, and we will consider the possibility of different approaches to supply and equipment pricing for use in future rulemaking.

Comment: One commenter stated that they appreciated and supported recognition by CMS that the supplies and equipment associated with physician services were past due for review, but noted that there remains large numbers of supplies and equipment that are overdue for updates. The commenter stated that they supported a gradual transition of the pricing given the widespread impact on the PE values; however, doing so creates a situation in which items that have seen dramatic increases over a short time are not being adequately compensated for several years. The commenter asked CMS to consider shortening the transition period from 4 years to 3 years for the supply and equipment pricing.

Response: Although we appreciate the feedback from the commenter, we finalized a policy last year to phase in the new supply and equipment pricing over 4 years so that supply and equipment values transition smoothly from their current prices to the final updated prices in CY 2022 (83 FR 59479–59480). We did not propose any changes to this transition period, and therefore, we decline to adopt a different approach.

Comment: One commenter stated that they supported the CMS proposal to update the price of the EM visit pack (SA047) supply to $5.47 to match the sum of the prices of the component supplies. The commenter also stated that they had concerns over the pricing of the other bundled supply items (such as kits, trays, and packs) that may have been similarly mispriced by StrategyGen. The commenter stated that they could not assist CMS in correcting supply codes that may have been incorrectly priced without details about the pricing for individual component supplies.

Response: We appreciate the support for our proposed pricing of the EM visit pack (SA047) supply by the commenter. We encourage stakeholders to comment

upon and submit pricing information for any supply items that they believe may have been mispriced by StrategyGen. In the absence of alternative pricing information, we continue to believe that our proposed prices are the most accurate source of data.

Comment: One commenter recommended CMS consider only the best available evidence and market research data in proposing any changes to the pricing approach of the balloon sinus surgery kit (SA106). The commenter stated that the use of navigation instruments has increased for this supply kit, particularly in the lower cost office setting, which enhances the ability to navigate the complex sinus anatomy, resulting in improved safety and reliability of the procedure, which benefits the patient.

Response: We note that the commenter did not make any specific recommendations regarding the pricing of this supply or submit invoices with additional pricing information. In the absence of alternative pricing information, we continue to believe that our proposed prices are the most accurate source of data.

Comment: Several commenters stated that they supported and urged CMS to finalize the proposed prices for the general ultrasound room (EL015) and vascular ultrasound room (EL016) equipment. Commenters stated that the proposed prices more accurately reflected the costs faced by vascular ultrasound practitioners and would reduce health care costs by ensuring ultrasound services are readily available to the most vulnerable Medicare beneficiaries.

Response: We appreciate the support for our proposed pricing by the commenters.

Comment: One commenter disagreed with the proposed pricing of the general ultrasound room (EL015) equipment. The commenter stated that the proposed pricing would drastically reduce the general ultrasound room price by 65 percent, which would have a downstream impact on the vascular ultrasound room, resulting in a 57 percent reduction. The commenter stated that a 40 percent reduction in payment as a result of this pricing would significantly reduce patient access to ultrasound services across the board.

Response: We clarify for the commenter that we did not propose a reduction in the price of the general ultrasound room (EL015) equipment. We proposed to update the price of the general ultrasound room to $410,303.32 and proposed to continue to transition towards this price over the remaining years of the phase-in period, with a CY 2020 price of $383,397.77. We note that this is a slight increase over the finalized CY 2019 price of $369,945.00; we encourage readers to consult the full list of supply and equipment pricing as detailed in the public use files.

Comment: Several commenters disagreed with the proposed pricing of the ''HDR Afterload System, Nucletron—Oldelft'' (ER003) equipment, the ''treatment planning system, IMRT (Corvus w-Peregrine 3D Monte Carlo)'' (ED033) equipment, and the ''SRS system, SBRT, six systems, average'' (ER083) equipment. The commenters stated that all of these equipment items have proposed prices that are below industry standards, and that given the high cost of these items and their substantial utilization in certain radiation oncology delivery codes, it was imperative that the CMS inputs accurately reflect the marketplace pricing. The commenters recommended that CMS conduct additional research regarding fair and accurate market pricing for equipment items ER003, ED033 and ER083. Another commenter also disagreed with the proposed pricing of the ER003 equipment, and stated that StrategyGen may have included updated pricing for a less costly electronic brachytherapy system used to treat non-melanoma skin cancer, or alternatively the proposed price for ER003 may represent an equipment upgrade or refurbished equipment.

Response: We share the concerns of the commenters on the importance to ensure fair and accurate market-based pricing for supplies and equipment. However, the commenters did not submit invoices or other pricing data for the ER003, ED033, and ER083 equipment items, and, as previously stated, in the absence of alternative pricing information, we continue to believe that our proposed prices are the most accurate source of data. We continue to welcome feedback from stakeholders on the proposed updated supply and equipment pricing over the ongoing 4-year transition period, including the submission of additional invoices for consideration.

Comment: Several commenters stated that they supported the efforts by CMS to ensure accurate pricing for direct PE inputs and supported the updated valuation of the ultrasound room and vascular ultrasound room. However, the commenters stated that there was an inconsistency with the pricing for the CT room (EL007), PET room (EL009), and PET–CT room (EL010) equipment. The commenters stated that it did not follow logically that the EL009 equipment is increasing from $1,328,996 to $2,410,677 and the EL007 equipment is increasing from $1,284,000 to $1,429,967 while a room that is a combination of these two, EL010, is decreasing from $2,136,283 to $206,326. The commenters asked that CMS investigate this issue further while delaying any price change for this one item.

Response: With regards to the pricing of the PET–CT room (EL010) equipment, we share the desire of the commenters to ensure fair and accurate market-based pricing for this equipment item. However, as we noted in the previous comment response, the commenters did not submit invoices or other pricing data for the EL010 equipment, and, as previously stated, in the absence of alternative pricing information, we continue to believe that our proposed prices are the most accurate source of data. We remind stakeholders that the proposed pricing was based on market research carried out by the StrategyGen contractor during the prior rule cycle. We continue to welcome feedback from stakeholders on the proposed updated supply and equipment pricing over the ongoing 4-year transition period, and we are willing to revisit the subject of pricing for this equipment if provided with market-based pricing data.

Comment: Several commenters disagreed with the proposed price of the ''stent, vascular, deployment system, Cordis SMART'' (SA103) and ''stent, balloon, implantable'' (SD299) supplies. Commenters stated that the Cordis SMART stent (SA103) supply is not FDA approved to stent iliac veins in CPT codes 37238–37239 due to the markedly undersized diameters of the available stents, and that this supply is essentially never used in iliac veins due to its much smaller size. The commenter stated that they believe the proposed pricing of the SA103 supply to be inaccurate, and stated that they were submitting 10 invoices in the hopes of pricing a new supply code at $2,537 which would replace the SA103 supply in these CPT codes. The commenters also stated a desire to work with CMS to reconsider pricing of the SD299 supply given the likely non-viability by CY 2022 of the services represented by CPT codes 37236 and 37237 in the office setting, and to resolve the lack of clarity surrounding the implantable stent balloon.

Response: We appreciate the desire on the part of the commenters to submit invoices with additional pricing data. However, despite an exhaustive search of the comments, we were unable to find the 10 invoices mentioned in the letters from the commenters, which

were not included along with the rest of the submitted text. Although we are willing to consider these invoices if they were to be submitted, as previously stated, in the absence of alternative pricing information, we continue to believe that our proposed prices are the most accurate source of data. We urge commenters submitting invoices to include them as part of their comment letter to avoid any potential for miscommunication. We also note for the commenters that we did not make any proposals regarding CPT codes 37238–37239 or CPT codes 37236–37237, and therefore, we decline to make changes to the supplies for these codes at this time.

Comment: Several commenters disagreed with the proposed price of the percutaneous neuro test stimulation kit (SA022) supply. The commenters stated that the proposed price of $114.52 was insufficient to reflect the cost associated with the SA022 supply, and that there may have been some misunderstanding about what items comprise the sacral nerve test kit. The commenters stated that it appears that the line item reflecting the device that generates the neurostimulation, which is the most expensive component of the test kit, was not included in the proposed pricing for this supply, which instead reflects the costs of the test kit leads only. The commenters stated that they reviewed all of the paid invoices for kits sold during January and February 2019, which resulted in pricing that was more in line with the CY 2018 pricing of $420 for the kit. One commenter submitted a random sample of 120 paid invoices (out of the 481 paid invoices that the commenter accumulated in total) for consideration by CMS.

Response: We appreciate the submission of a large quantity of additional invoices with pricing data from the commenter. After further review, we agree with the commenters that the proposed price failed to incorporate all of the components of the test kit. Based on the data submitted by the commenters, we are finalizing an update in the price of the percutaneous neuro test stimulation kit (SA022) supply to $413.24, and we will continue to transition towards this price over the remaining years of the phase-in period.

Comment: One commenter stated that the proposed price of $752.40 for the ''plasma LDL adsorption column (Liposorber)'' (SD186) supply did not accurately reflect the actual average prices paid by their provider customers. The commenter submitted copies of all U.S. customer invoices for purchases of the SD186 supply for the most recent three-month period from June 1 through August 30, 2019 and requested that the price should be updated to reflect the average market pricing.

Response: We appreciate the submission of a large quantity of additional invoices with pricing data from the commenter. Based on the data submitted by the commenter, we are finalizing an update in the price of the ''plasma LDL adsorption column (Liposorber)'' (SD186) supply to $1118.06, and we will continue to transition towards this price over the remaining years of the phase-in period.

Comment: The same commenter stated that the ''plasma antibody adsorption column (Prosorba)'' (SD185) supply was withdrawn from the market by its manufacturer more than 10 years ago, and the associated procedure code (CPT code 36515) has been deleted. The commenter also stated that the blood warmer tubing set (SC084) supply is not utilized to perform LDL apheresis with a Liposorber System, and therefore, recommended that this supply should be delisted as a direct PE input for CPT code 36516.

Response: We appreciate the additional information provided by the commenter regarding these supply items. After conducting our own review, we agree with the commenter that there is no longer any need for the ''plasma antibody adsorption column (Prosorba)'' (SD185) supply, which is not utilized by any HCPCS codes and has been withdrawn from the market. Therefore, we are finalizing the deletion of the SD185 supply code. We are not finalizing the removal of the blood warmer tubing set (SC084) supply at this time, as it is currently utilized in two codes (CPT codes 36514 and 36516), and we did not make any proposals on this issue. We welcome additional feedback from stakeholders regarding the use of the SC084 supply for potential future rulemaking.

Comment: One commenter stated that they appreciated recent efforts by CMS to update the price of supply and equipment inputs to better reflect current market rates. The commenter requested that CMS update the price inputs for three inputs: The Biodegradable Material Kit—PeriProstatic (SA126) supply, the Rezum delivery device kit (SA128) supply, and the water thermotherapy procedure generator (EQ389) equipment. The commenter submitted invoices with updated pricing data for consideration by CMS.

Response: Based on the data submitted by the commenters, we are finalizing an update in the price of all three of these direct PE inputs. We are finalizing an increase in the price of the Biodegradable Material Kit—PeriProstatic (SA126) supply from $2,850 to $2,965 based on averaging the submission of eight invoices. We are finalizing an increase in the price of the Rezum delivery device kit (SA128) supply from $1,150 to $1,220 based on averaging the submission of ten invoices. Finally, we are finalizing an increase in the price of the water thermotherapy procedure generator (EQ389) equipment from $27,538 to $33,950 based on averaging the submission of two invoices.

Comment: One commenter disagreed with the proposed pricing for the ''fluorescein inj (5ml uou)'' (SH033) supply. The commenter stated that the proposed price for injectable fluorescein was concerning as it did not reflect the most recent price increase of nearly 60 percent. The commenter stated that for several months practices have been paying $38.02 per vial and submitted four invoices to this effect.

Response: After reviewing the submitted invoices, we are finalizing an increase of the price of the SH033 supply to $38.02 to match the information detailed by the commenter.

Comment: One commenter disagreed with the proposed pricing for HCPCS code G0166 (*External counterpulsation, per treatment session*) and stated that the reductions in the proposed pricing would decrease the availability of this service and have already impacted their ability to provide external counterpulsation (ECP) therapy. The commenter stated that the prior review of HCPCS code G0166 in the CY 2019 rule cycle contained major errors, including omissions that artificially deflated the cost of the equipment associated with ECP therapy, inappropriate valuation of the ECP therapy equipment, and a failure to reflect the clinical guidelines and requirements for delivering ECP therapy. The commenter requested that CMS reverse the CY 2019 RVU reductions such that ECP therapy would return to the CY 2018 payment rates, or alternately pause any future reductions until CMS considered and acted upon forthcoming RUC recommendations for HCPCS code G0166. The commenter also submitted a series of invoices for the EECP external counterpulsation system (EQ012) equipment and a number of additional equipment items that previously lacked pricing.

Response: We remind commenters that we nominated HCPCS code G0166 as potentially misvalued in the CY 2020 PFS proposed rule (84 FR 40516) due to concerns that the RVUs for this code did not fully reflect the total resources required to deliver the service. Aside from nominating HCPCS code G0166 as

potentially misvalued, we did not make any other proposals concerning this code. We are aware that the RUC plans to review HCPCS code G0166 for the CY 2021 PFS rule cycle, and we look forward to considering their recommendations for next year's rulemaking.

However, although we are not reviewing the work RVU or direct PE inputs for HCPCS code G0166 for CY 2020, we were able to consider the submission of invoices from the commenter as part of our market-based supply and equipment pricing transition. Based on the information provided by the commenters, we are finalizing an increase in the price of the EECP external counterpulsation system (EQ012) equipment from $61,490.75 to $117,495.00. For the additional equipment items submitted by the commenter, which are not currently included in the direct PE inputs for HCPCS code G0166, we are finalizing the use of a proxy item for equipment pricing. We are finalizing the addition of a medium instrument pack (EQ138) priced at $1,500.00 at the same equipment time of 73 minutes used by the EECP external counterpulsation system as a proxy to represent the cost of these additional items. Although the medium instrument pack is a collection of surgical instruments and not table accessories, it contains 20 different small items which individually fall under our $500 threshold for equipment pricing, much as the additional equipment items on the submitted invoices also failed to meet the typical $500 threshold. We will further consider pricing for both the EECP external counterpulsation as part of the review process for this code along with the RUC recommendations when they arrive for CY 2021.

Comment: One commenter disagreed with the proposed pricing of the INR analysis and reporting system w-software (EQ312) equipment. The commenter stated that the finalized price for the INR analysis and reporting system during the CY 2019 rule cycle was orders of magnitude lower than the amount submitted by the home INR manufacturers and suppliers, and the commenter was under the belief that the pricing for this equipment was not reviewed and/or updated. The commenter urged CMS to review and update the price for the PT/INR analysis and reporting system based on current market invoices; the commenter also submitted additional invoices from the same vendor with their letter.

Response: We clarify for the commenter that we did review the invoices that they submitted during the previous rule cycle in CY 2019. Those invoices, along with the additional invoices submitted for the current CY 2020 rule cycle from the same vendor, did not contain pricing information for the purchase of an INR analysis and reporting system (EQ312) equipment item. These invoices instead constituted a monthly service fee for ''customization and management of provided applications'' as detailed on the billing form. Under our PE methodology, monthly service fees are a form of administrative expense, and payment for these costs is included as part of our indirect PE allocation. We did not use these invoices for pricing in CY 2019 and we are not using them for pricing in CY 2020, as they detail a form of indirect PE under our methodology. We also note that the equipment per-minute cost formula includes maintenance costs, interest costs, and a useful life assumption; this formula already incorporates equipment costs that extend across multiple years. Taking a monthly service fee and multiplying it across 12 months and then again across 5 years, as the commenters suggested should take place for these invoices, would result in equipment costs that are inappropriately excessive, such as the $6 million equipment price detailed on these invoices. We will continue to price the INR analysis and reporting system at $19,325 and continue to transition towards this price over the remaining years of the phase-in period.

After consideration of the public comments, we are finalizing the market-based supply and equipment pricing updates listed in Table 12, along with the additional finalized pricing changes detailed in the preceding paragraphs. The full list of updated supply and equipment pricing as it will be implemented over the 4-year transition period will be made available as a public use file displayed on the CMS website under downloads for the CY 2020 PFS final rule at *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html.*

We routinely accept public submission of invoices as part of our process for developing payment rates for new, revised, and potentially misvalued codes. Often these invoices are submitted in conjunction with the RUC-recommended values for the codes. For CY 2020, we noted that some stakeholders have submitted invoices for new, revised, or potentially misvalued codes after the February 10th deadline established for code valuation recommendations. To be included in a given year's proposed rule, we generally need to receive invoices by the same February 10th deadline we noted for consideration of RUC recommendations. However, we would consider invoices submitted as public comments during the comment period following the publication of the PFS proposed rule, and would consider any invoices received after February 10th or outside of the public comment process as part of our established annual process for requests to update supply and equipment prices.

(3) Adjustment to Allocation of Indirect PE for Some Office-Based Services

In the CY 2018 PFS final rule (82 FR 52999 through 53000), we established criteria for identifying the services most affected by the indirect PE allocation anomaly that does not allow for a site of service differential that accurately reflects the relative indirect costs involved in furnishing services in nonfacility settings. We also finalized a modification in the PE methodology for allocating indirect PE RVUs to better reflect the relative indirect PE resources involved in furnishing these services. The methodology, as described, is based on the difference between the ratio of indirect PE to work RVUs for each of the codes meeting eligibility criteria and the ratio of indirect PE to work RVU for the most commonly reported visit code. We refer readers to the CY 2018 PFS final rule (82 FR 52999 through 53000) for a discussion of our process for selecting services subject to the revised methodology, as well as a description of the methodology, which we began implementing for CY 2018 as the first year of a 4-year transition. For CY 2020, we proposed to continue with the third year of the transition of this adjustment to the standard process for allocating indirect PE.

We did not receive any public comments on the proposed adjustments to allocation of indirect PE for some office-based services. Therefore, we are finalizing the continuation of the third year of the transition as proposed.

e. Technical Evaluation Panel Related to Practice Expense

The RAND Corporation is currently studying potential improvements to CMS' PE allocation methodology and the data that underlie it. As part of this study, RAND will be convening a technical expert panel in late 2019 or early 2020 to obtain input from stakeholders including physicians, practice and health system managers, health care accountants, and health policy experts. The expert panel's recommendations will be discussed in a

report to be published by RAND in CY 2020.

C. Determination of Malpractice Relative Value Units (RVUs)

1. Overview

Section 1848(c) of the Act requires that each service paid under the PFS be composed of three components: Work, PE, and malpractice (MP) expense. As required by section 1848(c)(2)(C)(iii) of the Act, beginning in CY 2000, MP RVUs are resource based. Section 1848(c)(2)(B)(i) of the Act also requires that we review, and if necessary adjust, RVUs no less often than every 5 years. In the CY 2015 PFS final rule with comment period (79 FR 67591 through 67596), we implemented the third review and update of MP RVUs. For a comprehensive discussion of the third review and update of MP RVUs, *see* the CY 2015 PFS proposed rule (79 FR 40349 through 40355) and final rule with comment period (79 FR 67591 through 67596). In the CY 2018 PFS proposed rule (82 FR 33965 through 33970), we proposed to update the specialty-level risk factors, used in the calculation of MP RVUs, prior to the next required 5 year update (CY 2020), using the updated MP premium data that were used in the eighth Geographic Practice Cost Index (GPCI) update for CY 2017; however the proposal was ultimately not finalized for CY 2018.

We consider the following factors when we determine MP RVUs for individual PFS services: (1) Specialty-level risk factors derived from data on specialty-specific MP premiums incurred by practitioners; (2) service-level risk factors derived from Medicare claims data of the weighted average risk factors of the specialties that furnish each service; and (3) an intensity/complexity of service adjustment to the service-level risk factor based on either the higher of the work RVU or clinical labor portion of the direct PE RVU. Prior to CY 2016, MP RVUs were only updated once every 5 years, except in the case of new and revised codes.

As explained in the CY 2011 PFS final rule with comment period (75 FR 73208), MP RVUs for new and revised codes effective before the next 5-year review of MP RVUs were determined either by a direct crosswalk from a similar source code or by a modified crosswalk to account for differences in work RVUs between the new/revised code and the source code. For the modified crosswalk approach, we adjusted (or scaled) the MP RVU for the new/revised code to reflect the difference in work RVU between the source code and the new/revised work RVU (or, if greater, the difference in the clinical labor portion of the fully implemented PE RVU) for the new code. For example, if the proposed work RVU for a revised code was 10 percent higher than the work RVU for its source code, the MP RVU for the revised code would be increased by 10 percent over the source code MP RVU. Under this approach, the same risk factor (RF) was applied for the new/revised code and source code, but the work RVU for the new/revised code was used to adjust the MP RVUs for risk.

In the CY 2016 PFS final rule with comment period (80 FR 70906 through 70910), we finalized a policy to begin conducting annual MP RVU updates to reflect changes in the mix of practitioners providing services (using Medicare claims data), and to adjust MP RVUs for risk for intensity and complexity (using the work RVU or clinical labor RVU). We also finalized a policy to modify the specialty mix assignment methodology (for both MP and PE RVU calculations) to use an average of the three most recent years of data instead of a single year of data. Under this approach, for new and revised codes, we generally assign a specialty-level risk factor to individual codes based on the same utilization assumptions we make regarding specialty mix we use for calculating PE RVUs and for PFS budget neutrality. We continue to use the work RVU or clinical labor RVU to adjust the MP RVU for each code for intensity and complexity. In finalizing this policy, we stated that the specialty-level risk factors would continue to be updated through notice and comment rulemaking every 5 years using updated premium data, but would remain unchanged between the 5-year reviews.

Section 1848(e)(1)(C) of the Act requires us to review, and if necessary, adjust the GPCIs at least every 3 years. For CY 2020, we are conducting the statutorily required 3-year review of the GPCIs, which coincides with the statutorily required 5-year review of the MP RVUs. We note that the MP premium data used to update the MP GPCIs are the same data used to determine the specialty-level risk factors, which are used in the calculation of MP RVUs. Going forward, we believe it would be logical and efficient to align the update of MP premium data used to determine the MP RVUs with the update of the MP GPCIs. Therefore, we proposed to align the update of MP premium data with the update to the MP GPCIs, that is, we proposed to review, and if necessary update the MP RVUs at least every 3 years, similar to our review and update of the GPCIs. If we align the two updates, we would conduct the next statutorily-mandated review and update of both the GPCI and MP RVU for implementation in CY 2023. We proposed to implement the fourth comprehensive review and update of MP RVUs for CY 2020 and are seeking comment on these proposals.

We received no specific comment regarding our proposal to align the update of MP premium data with the update to the MP GPCIs. That is, to review, and if necessary update the MP RVUs at least every 3 years, similar to our review and update of the GPCIs; therefore, we are finalizing as proposed.

2. Methodology for the Proposed Revision of Resource-Based Malpractice (MP) RVUs

a. General Discussion

We calculated the proposed MP RVUs using updated MP premium data obtained from state insurance rate filings. The methodology used in calculating the proposed CY 2020 review and update of resource-based MP RVUs largely parallels the process used in the CY 2015 update; however, we proposed to incorporate several methodological refinements, which are described below. The MP RVU calculation requires us to obtain information on specialty-specific MP premiums that are linked to specific services, and using this information, we derive relative risk factors (RFs) for the various specialties that furnish a particular service. Because MP premiums vary by state and specialty, the MP premium information must be weighted geographically and by specialty. We calculated the proposed MP RVUs using four data sources: MP premium data presumed to be in effect as of December 31, 2017; CY 2018 Medicare payment and utilization data; higher of the CY 2020 proposed work RVUs or the clinical labor portion of the direct PE RVUs); and CY 2019 GPCIs. We used the higher of the CY 2020 final work RVUs or clinical labor portion of the direct PE RVUs in our calculation to develop the CY 2020 final MP RVUs while maintaining overall PFS budget neutrality.

Similar to the CY 2015 update, the proposed MP RVUs were calculated using specialty-specific MP premium data because they represent the expense incurred by practitioners to obtain MP insurance as reported by insurers. For CY 2020, the most current MP premium data available, with a presumed effective date of no later than December 31, 2017, were obtained from insurers with the largest market share in each

state. We identified insurers with the largest market share using the National Association of Insurance Commissioners (NAIC) market share report. This annual report provides state-level market share for entities that provide premium liability insurance (PLI) in a state. Premium data were downloaded from the System for Electronic Rates & Forms Filing Access Interface (SERFF) (accessed from the NAIC website) for participating states. For non-SERFF states, data were downloaded from the state-specific website (if available online) or obtained directly from the state's alternate access to filings. For SERFF states and non-SERFF states with online access to filings, the 2017 market share report was used to select companies. For non-SERFF states without online access to filings, the 2016 market share report was used to identify companies. These were the most current data available during the data collection and acquisition process.

MP insurance premium data were collected from all 50 States, and the District of Columbia. Efforts were made to collect filings from Puerto Rico; however, no recent filings were submitted at the time of data collection, and therefore, filings from the previous update were used. Consistent with the CY 2015 update, no filings were collected for the other U.S. territories: American Samoa, Guam, Virgin Islands, or Northern Mariana Islands. MP premiums were collected for coverage limits of $1 million/$3 million, mature, claims-made policies (policies covering claims made, rather than those covering losses occurring, during the policy term). A $1 million/$3 million liability limit policy means that the most that would be paid on any claim is $1 million and the most that the policy would pay for claims over the timeframe of the policy is $3 million. Adjustments were made to the premium data to reflect mandatory surcharges for patient compensation funds (PCF, funds used to pay for any claim beyond the state's statutory amount, thereby limiting an individual physician's liability in cases of a large suit) in states where participation in such funds is mandatory.

Premium data were included for all physician and nonphysician practitioner (NPP) specialties, and all risk classifications available in the collected rate filings. Although premium data were collected from all states, the District of Columbia, and previous filings for Puerto Rico were utilized, not all specialties had distinct premium data in the rate filings from all states. In previous updates, specialties for which premium data were not available for at least 35 states, and specialties for which there were not distinct risk groups (surgical, non-surgical, and surgical with obstetrics) among premium data in the rate filings, were crosswalked to a similar specialty, either conceptually or based on available premium data. This resulted in not using those premium data because the 35 state threshold was not met. In the CY 2020 PFS proposed rule, we noted that the proposed methodological improvements discussed below expands the specialties and amount of filings data used to develop the proposed risk factors, which are used to develop the proposed MP RVUs.

b. Proposed Methodological Refinements

For the CY 2020 update, we proposed the following methodological improvements to the development of MP premium data:

(1) Downloading and using a broader set of filings from the largest market share insurers in each state, beyond those listed as ''physician'' and ''surgeon'' to obtain a more comprehensive data set.

We received public comments on the proposed methodological improvement to download and use a broader set of filings from the largest market share insurers in each state, beyond those listed as ''physician'' and ''surgeon'' to obtain a more comprehensive data. The following is a summary of the comments we received and our responses.

Comment: Commenters noted appreciation for CMS' efforts to improve the premium data collection process and the opportunity to provide comments on the new methodology. Commenters were supportive of our proposed methodological refinement to download and use a broader set of filings from the largest market share insurers in each state, beyond those listed as ''physician'' and ''surgeon'' to obtain a more comprehensive data set.

Response: We thank commenters for their feedback and support; we are finalizing as proposed.

(2) Combining minor surgery and major surgery premiums to create the surgery service risk group, which yields a more representative surgical risk factor. In the previous update, only premiums for major surgery were used in developing the surgical risk factor.

We received public comments on the proposed methodological improvement to combine minor surgery and major surgery premiums to create the surgery service risk group, which yields a more representative surgical risk factor. In the previous update, only premium data for major surgery were used in developing the surgical risk factor. The following is a summary of the comments we received and our responses.

Comment: Commenters stated they appreciated that CMS considered methods to calculate surgical risk factors, but noted concerns with the method CMS used to classify surgeries as either minor or major, stating it was arbitrary and inconsistent with other CMS policy. Commenters further noted that the definition of minor surgeries and major surgeries should be consistent and developed with a consensus methodology among physician specialties. Commenters recommended that CMS work with the physician community to more accurately define major and minor surgeries.

Response: We thank commenters for their appreciation of our work to calculate a more representative surgical risk factor. We note that we did not propose definitions for minor and major surgery and will continue to work with all interested stakeholders on our proposals.

Comment: Commenters were not supportive of our proposal to categorize services between HCPCS 59000 and HCPCS 59899 as OB services and services between HCPCS 10000 and HCPCS 69999 (excluding the OB services) as surgical, with a physician work value greater than 5.00 as ''major'' surgery, for the purpose of the analysis. Commenters noted that in doing so, CMS selected an arbitrary and misguided definition of ''minor'' surgery for any code between the HCPCS 10000 and HCPCS 69999 section of the CPT code book with a physician work value less than 5.00. Commenters noted that if CMS intends to collect data at the minor vs major level, the data must reflect the different risk factors for those specialties and specifically be applied to codes defined as minor vs major surgery, and not broadly applied to an entire specialty. Commenters noted that the proposal could lead to an unfair valuation for certain specialties and services. The commenter further noted that CMS should hold off on moving to differentiating between minor and major surgeries until CMS is able to work with the RUC and impacted specialties to establish such definitions.

Response: We reiterate that we did not propose to define minor surgery and major surgery. The proposal leveraged an existing policy (64 FR 59834), that categorized services within the surgical range of HCPCS codes (and the list of invasive cardiology services outside the surgical range) as surgical. Building upon that existing policy, we proposed a methodological improvement to

combine minor surgery and major surgery premiums when both were delineated in rate filings for a specialty and to set a threshold of a physician work RVU greater 5.00 to categorize surgical services as major surgery, (surgical services under 5.00 would be categorized as minor surgery) for the purpose of the analysis. The methodological improvement would have developed a more representative surgical risk factor by combining minor surgery and major surgery premiums. We further note that this would have produced more data to use in the analysis and enabled the analysis to reflect a more representative risk factor for specialties that could have been applied to the code level for services categorized as minor surgery or major surgery. We note that in previous updates only major surgery premium data were used (when both minor surgery and major surgery are delineated on the rate filings for a specialty) to develop the surgical risk factors, this was based on a physician work RVU threshold of greater than 5.0, but was based on rate filings that delineated major surgery for a specialty.

In consideration of concerns from commenters, we are not finalizing our proposed methodological refinement to combine major surgery and minor surgery premiums when both are delineated on the rate filings for a specialty nor are we finalizing our proposal to use a physician work RVU greater than 5.00 as a threshold to categorize surgical services as major surgery (or to categorize surgical services under 5.00 as minor surgery), for the purpose of the analysis. Instead we are finalizing to maintain the current methodology and only use major surgery premium data when both minor surgery and major surgery are delineated in the rate filings for a specialty (minor surgery premium data are discarded in those cases) and to use minor surgery premium data when only minor surgery premium data are delineated in the rate filings for a specialty—to develop surgical risk factors. However, we note that the objective of our proposal was to develop a more representative surgical risk factor by refining our current methodology to allow for the use of rate filings data that delineated minor and major surgery. Our work to establish methods to categorize surgical services as minor and major surgery is ongoing, we look forward to working with and receiving feedback from stakeholders for consideration in future rulemaking.

(3) Utilizing partial and total imputation to develop a more comprehensive data set when CMS specialty names are not distinctly identified in the insurer filings, which sometimes use unique specialty names.

In instances where insurers report data for some (but not all) specialties that explicitly corresponded to a CMS specialty, where those data were missing, we proposed to use partial imputation based on available data to establish what the premiums would likely have been had that specialty been delineated in the filing. In instances where there were no data corresponding to a CMS specialty in the filing, we proposed to use total imputation to establish premiums.

For example, if a specialty of Sleep Medicine is listed on some insurers' rate filings, this rate will be matched to the CMS specialty Sleep Medicine (C0)—partial imputation. However, if the Sleep Medicine specialty is not listed on the insurer's rate filing, under our proposed methodology, the insurer's rate filing for General Practice would be matched to the CMS specialty of Sleep Medicine (C0)—total imputation. In this example, we believe (consistent with the longstanding mappings of the regulatory impact table included in all PFS **Federal Register** notices) that the rate for General Practice is likely to be consistent with the rate that a Sleep Medicine provider would be charged by that insurer, this principle for mapping is used for the appropriate type of imputation. We note the proposed methodological improvement would mean that instead of discarding specialty-specific information from some insurers' filings because other insurers lacked that same level of detail, we would instead impute the missing rates at the insurer/specialty level to utilize as much of the information from the filings as possible.

We solicited comment on these proposed methodological improvements. Additional technical details about our proposal are available in our interim report, ''Interim Report for the CY 2020 Update of GPCIs and MP RVUs for the Medicare Physician Fee Schedule,'' on our website. It is located under the supporting documents section for the CY 2020 PFS proposed rule located at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/index.html.*

We received public comments on the proposed methodological improvement to utilize partial and total imputation to develop a more comprehensive data set when CMS specialty names are not distinctly identified in the insurer filings, which sometimes use unique specialty names. The following is a summary of the comments we received and our responses.

Comment: Several commenters disagreed with some of the proposed specialty mappings for partial and total imputation. Some of these commenters recommended that CMS use different mappings other than those that were proposed. A few commenters recommended that CMS publish impacts for all CMS specialties and not attempt to bundle or map specialties to what CMS believes are related specialties or professions.

Response: We note that the MP RVU calculation requires us to obtain information on specialty-specific MP premiums that are linked to specific services, and using this information, we derive relative risk factors for the various specialties that furnish a particular service. We reiterate that the proposed mappings for partial imputation parallel the longstanding mappings of the regulatory impact table included in all PFS **Federal Register** notices that group CMS specialties (present on Medicare claims) into clusters of related specialties (impact specialties) when CMS examines the potential impact of PFS payment policies on the distribution of payments by providers. This table is included in section VII. of this final rule, the Regulatory Impact Analysis.

Furthermore, the proposed mappings for total imputation (when a CMS specialty name is not listed on the insurer's rate filing) reflect the speciality-specifc relationship of the underlying principle to identify the premium that an individual in a specialty would have been charged. The proposed mappings for total imputation, specifically for NPP specialties, parallel the proposal to crosswalk NPP specialties for which we do not have sufficient comparable professional liability data, to the lowest physician specialty, which was found to be allergy/immunology.

We note that partial and total imputation are necessary to expand the specialty specific filings data used to develop the proposed risk factors, which are used to develop the proposed MP RVUs. This improvement resulted in the development of a more comprehensive data set, when CMS specialty names were not distinctly identified in the insurer filings, which sometimes use unique specialty names; we are finalizing as proposed.

Comment: A commenter noted that they joined the RUC in urging CMS to collect premium data for specialties that are missing data or where data are not available, and in the meantime, to work

with the RUC to better identify appropriate crosswalks.

Response: We reiterate that we have, and will continue to work with the RUC and all interested stakeholders to improve the premium data collection. Moreover, we continue to make progress in this area as evidenced in the CY 2020 PFS proposed rule (84 FR 40506), where we determined that there were sufficient data for surgery and non-surgery premiums, as well as sufficient differences in rates between classes for 15 specialties, there were 10 such specialties in the CY 2015 update.

Comment: Commenters recommended that CMS utilize any and all premium data available to determine accurate crosswalks for specialties that cannot be directly matched to one of CMS' specialty names.

Response: We reiterate that we use all of the premium data collected to match CMS specialties to the rate that a provider in the specialty would have been charged under each filing, even though PLI insurers use their own distinctive specialty names.

Comment: One commenter recommended that CMS map RFs for cardiac electrophysiology to the risk factor for cardiology (surgery) and cardiology (no surgery). The commenter noted that they did not understand the rationale that CMS applied to determine that the RF should be set at 1.89 and ask CMS to detail how it arrived at that recommended RF. One commenter noted that electrophysiology is a distinct specialty of cardiology, with eligibility for board certification in clinical cardiac electrophysiology through the American Board of Internal Medicine, as well as in cardiology. Several commenters noted that cardiac electrophysiology is a relatively small specialty that may not clearly show in premium data. These commenters further noted that it would not make sense for services like pacemaker implantation that includes placing transvenous wires inside the heart or catheter ablations to treat cardiac arrhythmias inside the heart to receive a non-surgical PLI risk factor. Several commenters noted that cardiac electrophysiology currently has a surgery and non-surgery risk factor.

Response: We reiterate that details on the data sources and the methodological approach used to develop RFs are detailed in the CY 2020 PFS proposed rule (84 FR 40504) and the interim report for the CY 2020 Update of GPCIs and MP RVUs for the Medicare PFS. We also remind stakeholders that we are using updated premium data as reported in the SERFF for participating states and downloaded from the state-specific website for non-SERFF states or obtained directly from the state's alternate access to filings to develop RFs. We were able to collect more data, and use those data to develop specialty-specific RFs for specialties that were previously entirely mapped to a different specialty out of necessity, because we did not have sufficient data. Therefore, we create a specialty-specific RF based on the distinct data of each specialty, as reflected in the rate filings, when sufficient. Thus, the RFs may be considerably different from the previous update, as a result of utilizing the specialty's own data and not that of a crosswalk to another specialty as was the case for cardiac electrophysiology in the proposed rule. Using these data, as reflected in the filings, more accurately reflects premiums associated with the specialty.

We appreciate the additional information provided by the commenters as to why cardiac electrophysiology should remain mapped to the RF for cardiology (surgery) and cardiology (no surgery). Upon additional review of the additional information provided by commenters, we are not finalizing our proposal to map cardiac electrophysiology to a RF of 1.89, and instead we are finalizing the mapping of RFs for cardiac electrophysiology to the risk factor for cardiology (surgery) and cardiology (no surgery).

Comment: One commenter stated that while the proposal maintains CMS' established policy of applying the cardiology surgical risk factor to the procedures identified in Table 15 of the CY 2015 PFS proposed rule (79 FR 40353 through 40354), it is inconsistent with the CY 2015 PFS final rule, wherein CMS finalized that the cardiology surgical risk factor would apply to a list of procedures (classified as injection procedures used in conjunction with cardiac catheterization) that are outside the code range that CMS considered surgical. This same commenter stated they are concerned that the proposal to have fewer subgroups for cardiac electrophysiology inadvertently undervalues many cardiology surgical procedures on the basis of subspecialty mix performing the procedure, rather than valuing the procedure on its surgical status.

Response: We believe the commenter may have misinterpreted both the CY 2015 PFS proposed rule (79 FR 40353) and CY 2015 PFS final rule (79 FR 67595), which led to a subsequently misinterpreting what CMS proposed to maintain in the CY 2020 PFS proposed rule (84 FR 40504). In CY 2015, we finalized a policy to classify invasive cardiology services (cardiac catheterizations and angioplasties) that are outside of the surgical HCPCS code range as surgery for purposes of assigning specialty-specific risk factors, and to apply the higher cardiology surgical risk factor to the list of codes outside of the surgical HCPCS code range, when those services are performed by providers with a specialty of cardiology. To that end, this is not to imply that we apply the higher cardiology surgical risk factor to the cardiology services that are outside the surgical code range regardless of the provider specialty performing those services, as indicated by the commenter. We note that the higher surgical risk factor is applied to the list of codes outside of the surgical HCPCS code range only when performed by a provider with a specialty of cardiology.

We reiterate, we calculate service level risk factors based on the mix of specialties that furnish a given service as indicated by Medicare claims data. Medicare claims data reflect the service volume by Medicare primary specialty designations. For CY 2020, we continue to classify services that are outside of the surgical HCPCS code range as surgery for purposes of assigning specialty-specific risk factors, and when furnished by providers with cardiology as the Medicare primary specialty code on the Medicare claim, apply the higher cardiology surgical risk factor.

Comment: One commenter expressed concern with the statement that cardiac electrophysiology is not typically associated with the number and mix of surgical services of other surgical specialties. The commenter further noted that cardiac electrophysiology accounts for about 75 percent of the utilization, on average, across the cardiac ablation codes, with the specialty of cardiology accounting for most of the remainder.

Response: We note that the statement ''cardiac electrophysiology is not typically associated with the number and mix of surgical services of cardiologists'' was not made to imply that providers with a specialty of cardiac electrophysiology do not perform surgical procedures. We acknowledge that providers with the specialty of cardiac electrophysiology perform surgical procedures, as evidenced by our classification of codes outside of the surgical HCPCS code range as surgery for purposes of assigning specialty-specific risk factors, which are performed by providers with specialty of cardiac electrophysiology and other specialties.

Furthermore, in the case of the list of invasive cardiology services, classified as surgery for purposes of assigning service level risk factors, we note that the percentage of allowed services attributed to cardiology decreased for some of these service codes while the percentage of allowed services furnished by other specialties with risk factors lower than cardiology, such as cardiac physiology, increased.

Additionally, we received several general comments related to the proposed methodological refinements.

Comment: One commenter noted appreciation for CMS' attempt to improve the premium data collection process, stating that the Agency was successful in acquiring national premium data for 16 specialties that were formerly mapped entirely to another specialty, and that there is no longer a mention of the arbitrary 35 state threshold used in the previous update that triggered the CMS crosswalk methodology used to develop PLI RVUs for specialties for which there was not premium data for at least 35 states.

Response: We note that implementation of the methodological refinements noted above, no longer necessitated the 35 state threshold.

Comment: One commenter noted concerns about the percentage of market share premium data that was collected for Connecticut and Massachusetts, noting that only 30 percent of market share data were collected in that locality, even though Connecticut has relatively high PLI premiums, when compared to the rest of the country.

Response: As detailed in the ''Final Report for the CY 2020 Update of GPCIs and MP RVUs for the Medicare PFS'', which is available on the CMS website under the downloads section of the CY 2020 PFS final rule at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/index.html* medical professional liability insurance is issued at maximum coverage limits. Premiums were collected for coverage limits of $1 million per occurrence and $3 million aggregate. States with Patient Compensation Funds may have different coverage limits, which we accounted for, as noted in the aforementioned final report. Although data collection for a state may not have met the threshold of collecting filings until either cumulative market share met or exceeded 50 percent or filings had been collected for four groups or companies, it does not imply that premiums were collected for coverage limits below $1 million per occurrence and $3 million aggregate.

We note that the market share filings for Connecticut met the threshold, because we collected data for four groups. In the case of Massachusetts, this is a non-SERFF state, so we were limited to the amount of data provided by the state in response to our request to the state for these data; we have revised Table 7.A in the final report to easily identify non-SERFF states.

Additionally, in our review of the findings reported in Table 7.A in the final report, we recognized the need for additional clarification for two states. We clarify that data collection for New York State did not meet either threshold, because some of the filings collected were incomplete and unusable, leaving data for three groups, accounting for 32 percent remaining for the market share analysis. In the case of Rhode Island, we identified a typographical error in the chart, which has been fixed.

Comment: Several commenters noted concerns with the data displayed in Table 8.B Volume-weighted Distribution of 2017 Physician Work RVUs by Service Type by CMS Specialty the final report.

Response: We thank commenters for noting their concerns. These data display the share of total work RVUs by service risk group used when combining or splitting premiums across service risk groups as reported by specialties on rate filings to match the final set of specialty/service risk groups used in the analysis. The data displayed in that table are solely for the purposes of the analysis. In consideration of the comments we received, we have provided additional details on the calculations in the ''Final Report for the CY 2020 Update of GPCIs and MP RVUs for the Medicare PFS'', which is available on the CMS website under the downloads section of the CY 2020 PFS final rule at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/index.html.* Additionally, the table has been revised to reflect that we are not finalizing our proposed methodological refinement to combine minor and major surgery premiums when both are present in the filings for a specialty.

c. Steps for Calculating Malpractice RVUs

Calculation of the proposed MP RVUs conceptually follows the specialty-weighted approach used in the CY 2015 PFS final rule with comment period (79 FR 67591), along with the above proposed methodological improvements. The specialty-weighted approach bases the MP RVUs for a given service on a weighted average of the risk factors of all specialties furnishing the service. This approach ensures that all specialties furnishing a given service are reflected in the calculation of the MP RVUs. The steps for calculating the proposed MP RVUs are described below. We note that not all of the proposed methodological refinements are being finalized, and therefore, some of steps for calculating malpractice RVUs differ from the proposal.

Step (1): Compute a preliminary national average premium for each specialty.

Insurance rating area MP premiums for each specialty are mapped to the county level. The specialty premium for each county is then multiplied by its share of the total U.S. population (from the U.S. Census Bureau's 2013–2017 American Community Survey (ACS) 5-year estimates). This is in contrast to the method used for creating national average premiums for each specialty in the 2015 update; in that update, specialty premiums were weighted by the total RVU per county, rather than by the county share of the total U.S. population. We refer readers to the CY 2016 PFS final rule with comment period (80 FR 70909) for a discussion of why we have adopted a weighting method based on share of total U.S. population. This calculation is then divided by the average MP GPCI across all counties for each specialty to yield a normalized national average premium for each specialty. The specialty premiums are normalized for geographic variation so that the locality cost differences (as reflected by the 2019 GPCIs) would not be counted twice. Without the geographic variation adjustment, the cost differences among fee schedule areas would be reflected once under the methodology used to calculate the MP RVUs and again when computing the service specific payment amount for a given fee schedule area.

Step (2): Determine which premium service risk groups to use within each specialty.

Some specialties had premium rates that differed for surgery, surgery with obstetrics, and non-surgery. These premium classes are designed to reflect differences in risk of professional liability and the cost of MP claims if they occur. To account for the presence of different classes in the MP premium data and the task of mapping these premiums to procedures, we calculated distinct risk factors for surgical, surgical with obstetrics, and nonsurgical procedures where applicable. However, the availability of data by surgery and non-surgery varied across specialties. Historically, no single approach accurately addressed the variability in premium class among specialties, and we previously employed several

methods for calculating average premiums by specialty. These methods are discussed below.

Developing Distinct Service Risk Groups: We determined that there were sufficient data for surgery and non-surgery premiums, as well as sufficient differences in rates between classes for 15 specialties (there were 10 such specialties in the CY 2015 update). These specialties are listed in Table 13. Additionally, as described in the proposed methodological refinements, in some instances, we combined minor surgery and major surgery premiums to create a premium to develop the surgery service risk group, rather than discard minor surgery premium data as was done in the previous update. We note that we are not finalizing the proposed methodological change to combine minor surgery and major surgery premium data when both are delineated the rate filings for a specialty. For all other specialties (those that are not listed in Table 13) that typically do not distinguish premiums as described above, a single risk factor was calculated, and that specialty risk factor was applied to all services performed by those specialties.

This is consistent with prior practice; however, we have refined the nomenclature to more precisely describe that some specialties are delineated into service risk groups, as is the case for surgical, non-surgical, and surgical with obstetrics, and some specialties are not further delineated into service risk subgroups and are instead referred to as ''All''—meaning that all services performed by that specialty receive the same risk factor.

TABLE 13: Specialties Subdivided into Service Risk Groups

Service Risk Groups	Specialties
Surgery/No Surgery	Otolaryngology (04), Cardiology (06), Dermatology (07), Gastroenterology (10), Neurology (13), Ophthalmology (18), Urology (34), Geriatric Medicine (38), Nephrology (39), Endocrinology (46), Podiatry (48), Emergency Medicine (93)
Surgery/No Surgery/OB	General Practice (01), Family Practice (08), OB/GYN (16)

Step (3): Calculate a risk factor for each specialty.

The relative differences in national average premiums between specialties are expressed in our methodology as a specialty-level risk factor. These risk factors are calculated by dividing the national average premium for each specialty by the national average premium for the specialty with the lowest premiums for which we had sufficient and reliable data, which remains allergy and immunology (03). For specialties with rate filings that are indicative of sufficient surgical and non-surgical premium data, we recognized those service-risk groups (that is, surgical, and non-surgical) as risk groups of the specialty and we calculated both a surgical and non-surgical risk factor. Similarly, for specialties with rate filings that distinguished surgical premiums with obstetrics, we recognized that service-risk subgroup of the specialty and calculated a separate surgical with obstetrics risk factor.

(a) Technical Component (TC) Only Services

We note that for determining the risk factor for suppliers of TC-only services in the CY 2015 update, we updated the premium data for independent diagnostic testing facilities (IDTFs) that we used in the CY 2010 update. Those data were obtained from a survey conducted by the Radiology Business Management Association (RBMA) in 2009; we ultimately used those data to calculate an updated TC specialty risk factor. We applied the updated TC specialty risk factor to suppliers of TC-only services. In the CY 2015 PFS final rule with comment period (79 FR 67595), RBMA voluntarily submitted updated MP premium information collected from IDTFs in 2014, and requested that we use those data to calculate the CY 2015 MP RVUs for TC-only services. We declined to utilize those data and stated that we believe further study is necessary and we would consider this matter and propose any changes through future rulemaking. We continue to believe that data for a broader set of TC-only services are needed, and are working to acquire a broader set of data.

For CY 2020, we proposed to assign a risk factor of 1.00 for TC-only services, which corresponds to the lowest physician specialty-level risk factor. We assigned the risk factor of 1.00 to the TC-only services because we do not have sufficient comparable professional liability premium data for the full range of clinicians that furnish TC-only services. In lieu of comprehensive, comparable data, we propose to assign 1.00, the lowest physician specialty-level risk factor calculated using the updated premium data, as the default minimum risk factor. However, we seek information on the most comparable and appropriate proxy for the broader set of TC-only services for future use, as well as any empirical information that would support assignment of an alternative risk factor for these services.

Table 14 shows the risk factors by specialty type and service risk group.

BILLING CODE 4120–01–C

We received public comments on the steps for calculating MP RVUs. The following is a summary of the comments we received and our responses.

Comment: Commenters disagreed with our proposal to assign a risk factor of 1.00, which is the risk factor of the lowest physician specialty, to TC-only services because of insufficient comparable professional liability premium data for the full range of health professionals that furnish TC-only services. The commenters recommended retaining the current RF for TC-only services until comprehensive data is acquired rather

than assigning the lowest physician specialty-level risk factor to these services. Commenters noted that we should continue to work with stakeholders to obtain these data.

Response: We reiterate that we have, and will continue to work in collaboration with all interested stakeholders to find sufficient comparable professional liability data for the full range of clinicians that furnish TC-only services. In general, we continue to make progress in acquiring premium data as evidenced by the fact that for the CY 2020 update we collected service-specific premium data for an increasing number of specialties, as compared to the CY 2015 update. We note that the current RF for TC-only services is 0.91. Although we were able to find some data for health professionals that furnish TC-only services, we were unable to find sufficient comparable professional liability premium data for the full range of health professionals that furnish TC-only services. We are finalizing our proposal to assign a RF of 1.00, which is the RF of the lowest physician specialty (allergy/immunology), to TC-only services.

Comment: Commenters noted that consistent with the previous update CMS continued to assign the RF of the lowest physician specialty to NPPs for which there were insufficient or no premium data. We received contrasting comments on this proposal. For instance, one commenter was supportive of our proposal to continue assigning the risk factor of the lowest physician specialty to NPPs for which CMS was unable to collect sufficient data. In contrast, a few commenters, including the RUC, stated that CMS should not crosswalk NPPs to the lowest physician specialty, which is allergy and immunology, and to continue to aggressively collect premium data on NPPs.

Response: Our efforts to improve the premium data collection for NPPs is ongoing. We have made progress in acquiring premium data as evidenced by the fact that for the CY 2020 update we collected service-specific premium data for an increasing number of specialties, as compared to the CY 2015 update, including some NPP specialties, for which we previously did not have data that were mapped entirely to another specialty. Although we were able to find data for several NPPs for which we previously did not have data, we were unable to find premium data for the full range of NPPs. Premium data collection for NPPs is ongoing and will continue ahead of the next MP RVU update. We are finalizing a policy to maintain the current assignment of a RF of 1.00 for NPP specialties, which corresponds to the lowest physician specialty RF, allergy and immunology.

Comment: One commenter stated that an alternate option to crosswalking NPPs to the lowest physician risk factor of allergy and immunology would be to assign them the RF of another NPP specialty for which CMS was able to obtain data, the commenter recommended optometry.

Response: We reiterate that our proposal was to maintain the crosswalk of NPPs for which we had insufficient or no premium data to the lowest physician specialty, not to crosswalk NPPs to the RF of a NPP for which we were able to collect data. At this time, because we were unable to find premium data for the full range of NPPs, we do not believe it is appropriate, as suggested by commenters, to assign all NPPs for which we had insufficient or no premium data to the RF of optometry, another NPP specialty for which we were able to find some data. We reiterate that CMS' efforts to improve the premium data collection for all NPP specialties is ongoing and will continue ahead of the next MP RVU update.

Comment: One commenter suggested that the Agency assign codes performed predominantly by the select NPPs a 0.00 PLI as their premiums are so inconsequential that even a 0.01 PLI overcompensate them for their minimal PLI premiums.

Response: We disagree that NPPs should be assigned a 0.00 PLI and moreover, we disagree that even a 0.01 PLI overcompensate them for their minimal PLI premiums. This incorrectly implies that there is zero risk for NPPs to provide medical services. We reiterate that although we were able to find data for several NPP specialties for which we previously did not have data, we were unable to find premium data for the full range of NPP specialties. Premium data collection for NPP specialties is ongoing and will continue ahead of the next update.

Comment: One commenter noted that they previously referenced an insurance carrier, Health Providers Service Organization (HPSO) (*www.hpso.com*), as a source of potential premium data for most NPPs. This same commenter provided PLI premium data for several NPPs for a single state from this source, which ranged from $153 to $1,008.

Response: We thank the commenter for their feedback and potential data source, as CMS continues efforts to collect premium data on the full range of NPP specialties ahead of the next MP RVU update.

Step (4): Calculate MP RVUs for each CPT/HCPCS code.

Resource-based MP RVUs were calculated for each CPT/HCPCS code that has work or PE RVUs. The first step was to identify the percentage of services furnished by each specialty for each respective CPT/HCPCS code. This percentage was then multiplied by each respective specialty's risk factor as calculated in Step 3. The products for all specialties for the CPT/HCPCS code were then added together, yielding a specialty-weighted service specific risk factor reflecting the weighted MP costs across all specialties furnishing that procedure. The service specific risk factor was multiplied by the greater of the work RVU or clinical labor portion of the direct PE RVU for that service, to reflect differences in the complexity and risk-of-service between services.

Low volume service codes: As we discussed above in this final rule, for low volume services code, we finalized the proposal in the CY 2018 PFS final rule (82 FR 53000 through 53006) to apply the list of expected specialties instead of the claims-based specialty mix for low volume services to address stakeholder concerns about the year to year variability in PE and MP RVUs for low volume services (which also includes no volume services); these are defined as codes that have 100 allowed services or fewer. These service-level overrides are used to determine the specialty for low volume procedures for both PE and MP.

In the CY 2018 PFS final rule (82 FR 53000 through 53006), we also finalized our proposal to eliminate general use of an MP-specific specialty-mix crosswalk for new and revised codes. However, we indicated that we would continue to consider, in conjunction with annual recommendations, specific recommendations regarding specialty mix assignments for new and revised codes, particularly in cases where coding changes are expected to result in differential reporting of services by specialty, or where the new or revised code is expected to be low-volume. Absent such information, the specialty mix assumption for a new or revised code would derive from the analytic crosswalk in the first year, followed by the introduction of actual claims data, which is consistent with our approach for developing PE RVUs.

For CY 2020, we solicited public comment on the list of expected specialties. We also noted that the list has been updated to include a column indicating if a service is identified as a low volume service for CY 2020, and therefore, whether or not the service-level override is being applied for CY

2020. The proposed list of codes and expected specialties is available on our website under downloads for the CY 2020 PFS proposed rule at *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html.*

We received public comments on the proposed updates to the expected specialty list for low volume services. The following is a summary of the comments we received and our responses.

Comment: Several commenters stated that CMS had indicated that the expected specialty list would be updated to include a column specifying if a service was identified as a low volume service for CY 2020, indicating if the service-level override was being applied for CY 2020. However, commenters noted that this additional column did not appear in the download version and asked for additional information.

Response: We thank the commenters for identifying this missing information and we apologize for the technical oversight that caused this information not to be displayed for the proposed rule. We are finalizing a policy to include this additional column in the public use files released with the final rule. Additional comments on the proposed updates to the expected specialty list have been addressed in section II.B. of this final rule.

Step (5): Rescale for budget neutrality.

The statute requires that changes to fee schedule RVUs must be budget neutral. Thus, the last step is to adjust for relativity by rescaling the proposed MP RVUs so that the total proposed resource based MP RVUs are equal to the total current resource based MP RVUs scaled by the ratio of the pools of the proposed and current MP and work RVUs. This scaling is necessary to maintain the work RVUs for individual services from year to year while also maintaining the overall relationship among work, PE, and MP RVUs.

Specialties Excluded from Ratesetting Calculation: In section II.B. of this final rule, Determination of Practice Expense Relative Value Units, we discuss specialties that are excluded from ratesetting for the purposes of calculating PE RVUs. We proposed to treat those excluded specialties in a consistent manner for the purposes of calculating MP RVUs. We note that all specialties are included for purposes of calculating the final BN adjustment. The list of specialties excluded from the ratesetting calculation for the purpose of calculating the PE RVUs that we proposed to also exclude for the purpose of calculating MP RVUs is available in section II.B. of this final rule, Determination of Practice Expense Relative Value Units. The resource-based MP RVUs are shown in Addendum B, which is available on the CMS website under the downloads section of the CY 2020 PFS rule at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/index.html.*

Because a different share of the resources involved in furnishing PFS services is reflected in each of the three fee schedule components, implementation of the resource-based MP RVU update will have much smaller payment effects than implementing updates of resource-based work RVUs and resource-based PE RVUs. On average, work represents about 50.9 percent of payment for a service under the fee schedule, PE about 44.8 percent, and MP about 4.3 percent. Therefore, a 25 percent change in PE RVUs or work RVUs for a service would result in a change in payment of about 11 to 13 percent. In contrast, a corresponding 25 percent change in MP values for a service would yield a change in payment of only about 1 percent. Estimates of the effects on payment by specialty type is detailed in section VII. of this final rule, the Regulatory Impact Analysis.

We received no specific comments regarding our proposal to treat excluded specialties in a consistent manner for the purposes of calculating MP RVUs, we are finalizing as proposed.

Additional information on our methodology for updating the MP RVUs is available in the ''Final Report for the CY 2020 Update of GPCIs and MP RVUs for the Medicare Physician Fee Schedule,'' which is available on the CMS website under the downloads section of the CY 2020 PFS final rule at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/index.html.*

After consideration of the comments, we are finalizing the CY 2020 update as proposed with minor modifications, as indicated above. We are finalizing our proposal to download and use a broader set of filings from the largest market share insurers in each state, beyond those listed as ''physician'' and ''surgeon'' to obtain a more comprehensive data set. We are not finalizing our proposal to combine minor and major surgery premiums when both are delineated on rate filings for a specialty nor are we finalizing our proposal to use a physician work RVU of greater than 5.00, as a threshold to identify surgical services as major surgery (or to categorize surgical services under 5.00 as minor surgery). Instead, we are finalizing a policy to develop RFs by maintaining the current methodology to only use major surgery premium data when both minor surgery and major surgery are delineated on rate filings for a specialty, and to use the minor surgery premium data when it is the only premium type in the rate filings for a specialty. We are finalizing a policy to map risk factors for cardiac electrophysiology to the risk factor for cardiology (surgery) and cardiology (no surgery). We are finalizing our proposal to assign the RF of the lowest physician specialty (allergy/immunology) to TC-only services, which is a RF of 1.00. We are finalizing a policy to maintain assigning the current RF of the lowest physician specialty (allergy/immunology), which is a RF of 1.00 to NPP specialties. We are finalizing our proposal to include an additional column on the anticipated low volume specialty list which specifies if a service was identified as a low volume service for CY 2020, indicating if the service-level override was being applied for CY 2020. We are finalizing our proposal to treat excluded specialties in a consistent manner for the purposes of calculating MP RVUs.

D. Geographic Practice Cost Indices (GPCIs)

1. Background

Section 1848(e)(1)(A) of the Act requires us to develop separate Geographic Practice Cost Indices (GPCIs) to measure relative cost differences among localities compared to the national average for each of the three fee schedule components (that is, work, practice expense (PE), and malpractice (MP)). We discuss the localities established under the PFS below in this section. Although the statute requires that the PE and MP GPCIs reflect full relative cost differences, section 1848(e)(1)(A)(iii) of the Act requires that the work GPCIs reflect only one-quarter of the relative cost differences compared to the national average. In addition, section 1848(e)(1)(G) of the Act sets a permanent 1.5 work GPCI floor for services furnished in Alaska beginning January 1, 2009, and section 1848(e)(1)(I) of the Act sets a permanent 1.0 PE GPCI floor for services furnished in frontier states (as defined in section 1848(e)(1)(I) of the Act) beginning January 1, 2011. Additionally, section 1848(e)(1)(E) of the Act provided for a 1.0 floor for the work GPCIs, which was set to expire at the end of 2017. Section 50201 of the Bipartisan Budget Act of 2018 (BBA of 2018) (Pub. L. 115–123,

enacted February 9, 2018) amended the statute to extend the 1.0 floor for the work GPCIs through CY 2019 (that is, for services furnished no later than December 31, 2019).

Section 1848(e)(1)(C) of the Act requires us to review and, if necessary, adjust the GPCIs at least every 3 years. Section 1848(e)(1)(C) of the Act requires that, if more than 1 year has elapsed since the date of the last previous GPCI adjustment, the adjustment to be applied in the first year of the next adjustment shall be ½ of the adjustment that otherwise would be made. Therefore, since the previous GPCI update was implemented in CYs 2017 and 2018, we proposed to phase in ½ of the latest GPCI adjustment in CY 2020.

We have completed a review of the GPCIs and are finalizing new GPCIs in this final rule. We also calculate a geographic adjustment factor (GAF) for each PFS locality. The GAFs are a weighted composite of each PFS locality's work, PE and MP expense GPCIs using the national GPCI cost share weights. While we do not actually use GAFs in computing the fee schedule payment for a specific service, they are useful in comparing overall areas costs and payments. The actual effect on payment for any actual service would deviate from the GAF to the extent that the proportions of work, PE and MP RVUs for the service differ from those of the GAF.

As noted above, section 50201 of the BBA of 2018 extended the 1.0 work GPCI floor for services furnished only through December 31, 2019. Therefore, the final CY 2020 work GPCIs and summarized GAFs do not reflect the 1.0 work floor. However, as required by sections 1848(e)(1)(G) and (I) of the Act, the 1.5 work GPCI floor for Alaska and the 1.0 PE GPCI floor for frontier states are permanent, and therefore, applicable in CY 2020. See Addenda D and E to this final rule for the CY 2020 final GPCIs and summarized GAFs available on the CMS website under the supporting documents section of the CY 2020 PFS final rule at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/index.html.*

2. Payment Locality Background

Prior to 1992, Medicare payments for physicians' services were made under the reasonable charge system. Payments under this system largely reflected the charging patterns of physicians, which resulted in large differences in payment for physicians' services among types of services, physician specialties and geographic payment areas.

Local Medicare carriers initially established 210 payment localities, to reflect local physician charging patterns and economic conditions. These localities changed little between the inception of Medicare in 1967 and the beginning of the PFS in 1992. In 1994, we undertook a study that culminated in a comprehensive locality revision (based on locality resource cost differences as reflected by the GPCIs) that we implemented in 1997. The development of the current locality structure is described in detail in the CY 1997 PFS final rule (61 FR 34615) and the subsequent final rule with comment period (61 FR 59494). The revised locality structure reduced the number of localities from 210 to 89, and increased the number of statewide localities from 22 to 34.

Section 220(h) of the Protecting Access to Medicare Act (PAMA) (Pub. L. 113–93, enacted April 1, 2014) required modifications to the payment localities in California for payment purposes beginning with 2017. As a result, in the CY 2017 PFS final rule (81 FR 80265 through 80268) we established 23 additional localities, increasing the total number of PFS localities from 89 to 112. The current 112 payment localities include 34 statewide areas (that is, only one locality for the entire state) and 75 localities in the other 16 states, with 10 states having two localities, two states having three localities, one state having four localities, and three states having five or more localities. The remainder of the 112 PFS payment localities are comprised as follows: the combined District of Columbia, Maryland, and Virginia suburbs; Puerto Rico; and the Virgin Islands. We note that the localities generally represent a grouping of one or more constituent counties.

The current 112 fee schedule areas, also referred to as payment localities, are defined alternatively by state boundaries (statewide areas for example, Wisconsin), metropolitan areas (for example, Metropolitan St. Louis, MO), portions of a metropolitan area (for example, Manhattan), or rest-of-state areas that exclude metropolitan areas (for example, Rest of Missouri). This locality configuration is used to calculate the GPCIs that are in turn used to calculate locality adjusted payments for physicians' services under the PFS.

As stated in the CY 2011 PFS final rule with comment period (75 FR 73261), changes to the PFS locality structure would generally result in changes that are budget neutral within a state. For many years, before making any locality changes, we have sought consensus from among the professionals whose payments would be affected. We refer readers to the CY 2014 PFS final rule with comment period (78 FR 74384 through 74386) for further discussion regarding additional information about locality configuration considerations.

3. GPCI Update

As required by the statute, we developed GPCIs to measure relative cost differences among payment localities compared to the national average for each of the three fee schedule components (that is, work, PE, and MP). We describe the data sources and methodologies we use to calculate each of the three GPCIs below in this section. Additional information on the CY 2020 GPCI update is available in a final report, ''Final Report for the CY 2020 Update of GPCIs and MP RVUs for the Medicare PFS,'' on our website located under the supporting documents section for the CY 2020 PFS final rule at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/index.html.*

a. Work GPCIs

The work GPCIs are designed to reflect the relative cost of physician labor by Medicare PFS locality. As required by statute, the work GPCI reflects one quarter of the relative wage differences for each locality compared to the national average.

To calculate the work GPCIs, we use wage data for seven professional specialty occupation categories, adjusted to reflect one-quarter of the relative cost differences for each locality compared to the national average, as a proxy for physicians' wages. Physicians' wages are not included in the occupation categories used in calculating the work GPCI because Medicare payments are a key determinant of physicians' earnings. Including physician wage data in calculating the work GPCIs would potentially introduce some circularity to the adjustment since Medicare payments typically contribute to or influence physician wages. That is, including physicians' wages in the physician work GPCIs would, in effect, make the indices, to some extent, dependent upon Medicare payments.

The work GPCI updates in CYs 2001, 2003, 2005, and 2008 were based on professional earnings data from the 2000 Census. However, for the CY 2011 GPCI update (75 FR 73252), the 2000 data were outdated and wage and earnings data were not available from the more recent Census because the ''long form'' was discontinued. Therefore, we used the median hourly earnings from the 2006 through 2008 Bureau of Labor Statistics (BLS) Occupational

Employment Statistics (OES) wage data as a replacement for the 2000 Census data. The BLS OES data meet several criteria that we consider to be important for selecting a data source for purposes of calculating the GPCIs. For example, the BLS OES wage and employment data are derived from a large sample size of approximately 200,000 establishments of varying sizes nationwide from every metropolitan area and can be easily accessible to the public at no cost. Additionally, the BLS OES is updated regularly, and includes a comprehensive set of occupations and industries (for example, 800 occupations in 450 industries). For the CY 2014 GPCI update, we used updated BLS OES data (2009 through 2011) as a replacement for the 2006 through 2008 data to compute the work GPCIs; and for the CY 2017 GPCI update, we used updated BLS OES data (2011 through 2014) as a replacement for the 2009 through 2011 data to compute the work GPCIs.

Because of its reliability, public availability, level of detail, and national scope, we believe the BLS OES data continue to be the most appropriate source of wage and employment data for use in calculating the work GPCIs (and as discussed below, the employee wage component and purchased services component of the PE GPCI). Therefore, for the CY 2020 GPCI update, we used updated BLS OES data (2014 through 2017) as a replacement for the 2011 through 2014 data to compute the work GPCIs.

b. Practice Expense (PE) GPCIs

The PE GPCIs are designed to measure the relative cost difference in the mix of goods and services comprising PEs (not including MP expenses) among the PFS localities as compared to the national average of these costs. Whereas the physician work GPCIs (and as discussed later in this section, the MP GPCIs) are comprised of a single index, the PE GPCIs are comprised of four component indices (employee wages; purchased services; office rent; and equipment, supplies and other miscellaneous expenses). The employee wage index component measures geographic variation in the cost of the kinds of skilled and unskilled labor that would be directly employed by a physician practice. Although the employee wage index adjusts for geographic variation in the cost of labor employed directly by physician practices, it does not account for geographic variation in the cost of services that typically would be purchased from other entities, such as law firms, accounting firms, information technology consultants, building service managers, or any other third-party vendor. The purchased services index component of the PE GPCI (which is a separate index from employee wages) measures geographic variation in the cost of contracted services that physician practices would typically buy. For more information on the development of the purchased service index, we refer readers to the CY 2012 PFS final rule with comment period (76 FR 73084 through 73085). The office rent index component of the PE GPCI measures relative geographic variation in the cost of typical physician office rents. For the medical equipment, supplies, and miscellaneous expenses component, we believe there is a national market for these items such that there is not significant geographic variation in costs. Therefore, the equipment, supplies and other miscellaneous expense cost index component of the PE GPCI is given a value of 1.000 for each PFS locality.

For the previous update to the GPCIs (implemented in CY 2017), we used 2011 through 2014 BLS OES data to calculate the employee wage and purchased services indices for the PE GPCI. As discussed previously in this section, because of its reliability, public availability, level of detail, and national scope, we continue to believe the BLS OES is the most appropriate data source for collecting wage and employment data. Therefore, in calculating the CY 2020 GPCI update, we used updated BLS OES data (2014 through 2017) as a replacement for the 2011 through 2014 data for purposes of calculating the employee wage component and purchased service index component of the PE GPCI. In calculating the CY 2020 GPCI update, for the office rent index component of the PE GPCI we used the most recently available, 2013 through 2017, American Community Survey (ACS) 5-year estimates as a replacement for the 2009 through 2013 ACS data.

c. Malpractice Expense (MP) GPCIs

The MP GPCIs measure the relative cost differences among PFS localities for the purchase of professional liability insurance (PLI). The MP GPCIs are calculated based on insurer rate filings of premium data for $1 million/$3 million mature claims-made policies (policies for claims made rather than losses occurring during the policy term). For the CY 2017 GPCI update, we used 2014 and 2015 malpractice premium data. The CY 2020 MP GPCI update reflects premium data presumed in effect as of December 30, 2017. We note that we finalized a few technical refinements to the MP GPCI methodology in CY 2017, and refer readers to the CY 2017 PFS final rule (81 FR 80270) for additional discussion.

d. GPCI Cost Share Weights

For CY 2020 GPCIs, we proposed to continue to use the current cost share weights for determining the PE GPCI values and locality GAFs. We refer readers to the CY 2014 PFS final rule with comment period (78 FR 74382 through 74383), for further discussion regarding the 2006-based MEI cost share weights revised in CY 2014 that we also finalized for use in the CY 2017 GPCI update.

The GPCI cost share weights for CY 2020 are displayed in Table 15.

TABLE 15: Cost Share Weights for CY 2020 GPCI Update

Expense Category	Current Cost Share Weight	CY 2020 Cost Share Weight
Work	50.866%	50.866%
Practice Expense	44.839%	44.839%
- Employee Compensation	16.553%	16.553%
- Office Rent	10.223%	10.223%
- Purchased Services	8.095%	8.095%
- Equipment, Supplies, Other	9.968%	9.968%
Malpractice Insurance	4.295%	4.295%
Total	**100.000%**	**100.000%**

e. PE GPCI Floor for Frontier States

Section 10324(c) of the Affordable Care Act added a new subparagraph (I) under section 1848(e)(1) of the Act to establish a 1.0 PE GPCI floor for physicians' services furnished in frontier states effective January 1, 2011. In accordance with section 1848(e)(1)(I) of the Act, beginning in CY 2011, we applied a 1.0 PE GPCI floor for physicians' services furnished in states determined to be frontier states. In general, a frontier state is one in which at least 50 percent of the counties are ''frontier counties,'' which are those that have a population per square mile of less than 6. For more information on the criteria used to define a frontier state, we refer readers to the FY 2011 Inpatient Prospective Payment System (IPPS) final rule (75 FR 50160 through 50161). There are no changes in the states identified as Frontier States for the CY 2020 PFS final rule. The qualifying states are: Montana; Wyoming; North Dakota; South Dakota; and Nevada. In accordance with statute, we will apply a 1.0 PE GPCI floor for these states in CY 2020.

f. Methodology for Calculating GPCIs in the U.S. Territories

Prior to CY 2017, for all the island territories other than Puerto Rico, the lack of comprehensive data about unique costs for island territories had minimal impact on GPCIs because we used either the Hawaii GPCIs (for the Pacific territories: Guam; American Samoa; and Northern Mariana Islands) or used the unadjusted national averages (for the Virgin Islands). In an effort to provide greater consistency in the calculation of GPCIs given the lack of comprehensive data regarding the validity of applying the proxy data used in the States in accurately accounting for variability of costs for these island territories, in the CY 2017 PFS final rule (81 FR 80268 through 80270), we finalized a policy to treat the Caribbean Island territories (the Virgin Islands and Puerto Rico) in a consistent manner. We do so by assigning the national average of 1.0 to each GPCI index for both Puerto Rico and the Virgin Islands. We refer readers to the CY 2017 PFS final rule for a comprehensive discussion of this policy.

g. California Locality Update to the Fee Schedule Areas Used for Payment Under Section 220(h) of the Protecting Access to Medicare Act

Section 220(h) of the PAMA added a new section 1848(e)(6) to the Act that modified the fee schedule areas used for payment purposes in California beginning in CY 2017. Prior to CY 2017, the fee schedule areas used for payment in California were based on the revised locality structure that was implemented in 1997 as previously discussed. Beginning in CY 2017, section 1848(e)(6)(A)(i) of the Act required that the fee schedule areas used for payment in California must be Metropolitan Statistical Areas (MSAs) as defined by the Office of Management and Budget (OMB) as of December 31 of the previous year; and section 1848(e)(6)(A)(ii) of the Act required that all areas not located in an MSA must be treated as a single rest-of-state fee schedule area. The resulting modifications to California's locality structure increased its number of localities from 9 under the current locality structure to 27 under the MSA-based locality structure; although for the purposes of payment the actual number of localities under the MSA-based locality structure is 32. We refer readers to the CY 2017 PFS final rule (81 FR 80267) for a detailed discussion of this operational consideration.

Section 1848(e)(6)(D) of the Act defined transition areas as the fee schedule areas for 2013 that were the rest-of-state locality, and locality 3, which was comprised of Marin County, Napa County, and Solano County. Section 1848(e)(6)(B) of the Act specified that the GPCI values used for payment in a transition area are to be phased in over 6 years, from 2017 through 2022, using a weighted sum of the GPCIs calculated under the new MSA-based locality structure and the GPCIs calculated under the PFS locality structure that was in place prior to CY 2017. That is, the GPCI values applicable for these areas during this transition period are a blend of what the GPCI values would have been for California under the locality structure that was in place prior to CY 2017, and what the GPCI values would be for California under the MSA-based locality structure. For example, in CY 2020, which represents the fourth year, the applicable GPCI values for counties that were previously in rest-of-state or locality 3 and are now in MSAs are a blend of ⅔ of the GPCI value calculated for the year under the MSA-based locality structure, and ⅓ of the GPCI value calculated for the year under the locality structure that was in place prior to CY 2017. The proportions continue to shift by ⅙ in each subsequent year so that, by CY 2021, the applicable GPCI values for counties within transition areas are a blend of ⅚ of the GPCI value for the year under the MSA-based locality structure, and ⅙ of the GPCI value for the year under the locality structure that was in place prior to CY 2017. Beginning in CY 2022, the applicable GPCI values for counties in transition areas are the values calculated solely under the new MSA-based locality structure. For clarity, we reiterate that this incremental phase-in is only applicable to those counties that are in transition areas that are now in MSAs, which are only some of the counties in the 2013 California rest-of state locality and locality 3.

Additionally, section 1848(e)(6)(C) of the Act establishes a hold harmless for transition areas beginning with CY 2017 whereby the applicable GPCI values for a year under the new MSA-based locality structure may not be less than what they would have been for the year under the locality structure that was in place prior to CY 2017. There are a total of 58 counties in California, 50 of which are in transition areas as defined in section 1848(e)(6)(D) of the Act. The eight counties that are not within transition areas are: Orange; Los Angeles; Alameda; Contra Costa; San Francisco; San Mateo; Santa Clara; and Ventura counties.

For the purposes of calculating budget neutrality and consistent with the PFS budget neutrality requirements as specified under section 1848(c)(2)(B)(ii)(II) of the Act, we finalized the policy to start by calculating the national GPCIs as if the localities that were in place prior to CY 2017 are still applicable nationwide; then, for the purposes of payment in California, we override the GPCI values with the values that are applicable for California consistent with the requirements of section 1848(e)(6) of the Act. This approach is consistent with the implementation of the GPCI floor provisions that have previously been implemented—that is, as an after-the-fact adjustment that is implemented for purposes of payment after both the GPCIs and PFS budget neutrality have already been calculated.

Additionally, section 1848(e)(1)(C) of the Act requires that, if more than 1 year has elapsed since the date of the last previous GPCI adjustment, the adjustment to be applied in the first year of the next adjustment shall be ½ of the adjustment that otherwise would be made. However, since section 1848(e)(6)(B) of the Act provides for a gradual phase in of the GPCI values under the new MSA-based locality structure for California, specifically in one-sixth increments over 6 years, if we were to also apply the requirement to phase in ½ of the adjustment in year 1 of the GPCI update then the first year increment would effectively be 1/12.

Therefore, in CY 2017, we finalized a policy that the requirement at section 1848(e)(1)(C) of the Act to phase in ½ of the adjustment in year 1 of the GPCI update would not apply to counties that were previously in the rest-of-state or locality 3 and are now in MSAs that are subject to the blended phase-in as described above in this section. We reiterate that this is only applicable through CY 2021 since, beginning in CY 2022, the GPCI values for such areas in an MSA would be fully based on the values calculated under the new MSA-based locality structure for California. For a comprehensive discussion of this provision, transition areas, and operational considerations, we refer readers to the CY 2017 PFS final rule (81 FR 80265 through 80268).

h. Refinements to the GPCI Methodology

In the process of calculating GPCIs for the purposes of this final rule, we identified two technical refinements to the methodology that yield improvements over the current method; these refinements are applicable to the work GPCI and the employee wage index and purchased services index components of the PE GPCI. We proposed to weight by total employment when computing county median wages for each occupation code which addresses the fact that the occupation wage can vary by industry within a county. Additionally, we proposed to use a weighted average when calculating the final county-level wage index; this removes the possibility that a county index would imply a wage of 0 for any occupation group not present in the county's data. These methodological refinements yield improved mathematical precision. Additional information on the GPCI methodology and the refinements are available in the final report, ''Final Report for the CY 2020 Update of GPCIs and MP RVUs for the Medicare PFS'' on our website located under the supporting documents section of the CY 2020 PFS final rule at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/index.html.*

i. Proposed GPCI Update Summary

As explained above in the Background section above in this section, the periodic review and adjustment of GPCIs is mandated by section 1848(e)(1)(C) of the Act. At each update, the GPCIs are published in the PFS proposed rule to provide an opportunity for public comment and further revisions in response to comments prior to implementation. The CY 2020 updated GPCIs for the first and second year of the 2-year phase-in, along with the GAFs, are displayed in Addenda D and E to this final rule available on our website under the supporting documents section of the CY 2020 PFS final rule web page at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/index.html.*

The following is a summary of the comments we received on the GPCI proposals and our responses.

Comment: A few commenters expressed concern over the expiring work GPCI floor of 1.0. Some of the commenters stated an objection to any proposals that could have a negative impact on rural areas such as the expiration of the work GPCI floor and stated that the GPCIs needs to account for the unique practice needs of rural providers.

Response: The 1.0 work GPCI floor is established by statute and expires on December 31, 2019. We do not have the authority to extend the 1.0 work GPCI floor beyond December 31, 2019. We note that 34 states have a statewide payment locality, which means that physicians, whether in urban or rural areas, receive the same geographic adjustment thus reducing rural/urban payment differentials within a state.

Comment: A few commenters expressed support for the elimination of all GAFs under the PFS, except those designed to achieve a specific public policy goal, such as to encourage physicians to practice in underserved areas. The commenters stated that GPCIs tend to favor urban localities over their rural counterparts and works at cross purposes to the health professional shortage area (HPSA) bonus and other incentives intended to encourage and support rural physicians. The commenters also stated that rural beneficiaries would be better served if the GPCIs were eliminated from the PFS so that the HPSA bonus and other incentives are not undermined in their efforts to sustain the rural physician workforce needed to care for those beneficiaries.

Response: As previously discussed, section 1848(e)(1)(A) of the Act requires us to develop separate GPCIs to measure resource cost differences among localities compared to the national average for each of the three GPCI components, and section 1848(e)(1)(C) of the Act requires us to review and, if necessary, adjust the GPCIs at least every 3 years; and based on new data GPCI values may increase or decrease. Additionally, as noted above, 34 states have a statewide locality, thus reducing rural/urban payment differentials within a state.

Comment: One commenter stated that CMS uses salary data for individuals with 5 or more years of college, and should instead evaluate the feasibility of using salary data only from individuals with graduate degrees in the work GPCI calculations. The commenter also stated that CMS should also consider that physicians invest a portion of their compensation in the practice and that portion should not be counted as salary.

Response: We note that physicians are not one of the seven occupation groups used in the work GPCI calculation; therefore, we are unclear about the commenter's assertion that investments of a portion of a physician's salary back into the practice should not be counted as salary. As described above, and consistent with our longstanding practice, a set of occupation groups representing a variety of professionals are used in the calculation. We note that the proxy occupations currently used represent highly educated professional occupation categories, and therefore, we believe we are already including salary data for individuals with advanced degrees.

Comment: One commenter stated concern that the work GPCI does not utilize actual physician wage data, and states that CMS' statement that including physician wage data in calculating the work GPCI would potentially introduce some circularity to the adjustment since Medicare payments typically contribute to physician wages is flawed. The commenter stated that in the era of increasing physician employment, more physicians receive a salary dependent upon local market conditions and not the portion of their patient panel on Medicare. The commenter also stated that two of the proxy professional wage categories—pharmacists, and registered nurses—are professions whose wages are also comprised, in part, of income gained from participation in the Medicare program.

Response: We note that we have long maintained that including physicians' wages in the physician work GPCI would, in effect make the physician work GPCI to some extent dependent upon Medicare payments which in turn are impacted by the indices. We do not dispute the assertion that local market conditions may also play a role in determination of a physician's salary; however, we do not believe that mitigates the potential for circularity and maintain that, still, Medicare payment is a significant determinant of physician's earnings. We also recognize that the seven proxy professional wage

categories span several different industries, including pharmacists, and registered nurses which demonstrates that the healthcare industry is represented in those proxy wage categories; however, physicians in particular are not included in those categories as previously described. We continue to believe in the majority of instances, the earnings of physicians will vary among areas to the same degree that the earnings of other professionals across an array of industries vary. We reiterate that the work GPCI is not an absolute measure of physician earnings, rather it is a measure of the relative wage differences for each locality as compared to the national average. Additionally, the work GPCI reflects only one quarter of those relative wage differences consistent with the statutory requirement as discussed previously in this section.

Comment: A few commenters stated that CMS should re-evaluate existing databases to find or develop a nationwide measure of commercial office rents for use in calculating PE GPCIs. One commenter stated that CMS should either collect true medical office expense data or alternatively use data sources available to federal agencies such as office expense data from the Federally Qualified Health Center Network.

Response: We appreciate the commenter's feedback. We note that our efforts are ongoing to identify a publicly-available, robust, nationally representative commercial rent data source that could be made available to CMS for this purpose. Further, we welcome opportunities to discuss such data sources with stakeholders and to incorporate such data, as appropriate in the GPCI calculation process, through our standard annual rulemaking process.

Comment: One commenter expressed support for the proposed methodological refinements and stated that it could yield improvements that would be beneficial to all fields of medicine.

Response: We thank the commenter for the support of our proposed methodological refinements.

Comment: A few commenters stated that the proposed refinement to the weighting of the physician work, employee wage, and purchased services indices results in inconsistent comparisons of occupational wages from one county to the next, because industry wages within an occupational group will vary from one county to the next based on employment. The commenters recommended using the previous methodology and also stated that for counties with zero inputs that we use inputs from MSAs as is done for the rent index or use the national average as used in the previous update.

Response: The use of employment weights better captures variation in median wages themselves, which is exactly what the indices are meant to reflect. As the commenter indicated, the unweighted approach captures variation in wages reported by category in an index-like manner. This is undesirable both substantively and mathematically, since it makes the GPCIs an index based on an index rather than on the underlying data of interest. We have reviewed the process for developing county-level median wages as described in the proposed rule, and continue to believe that the use of employment weights, as we proposed, is an improvement over the use of unweighted values as requested by the commenter. We intend to continue considering how measures are weighted and summarized throughout the GPCI development process and will invite public comment on any additional potential improvements we identify through future rulemaking.

Comment: A few commenters stated that they find it challenging to extract and collate the publicly-available BLS OES data (available from the BLS website), that are used for the work and PE GPCIs in a manner that enables them to reproduce the data sets used in the work GPCI and the employee wages, and purchased services components of the PE GPCI; the commenters stated that CMS should provide more detailed information in the interest of transparency.

Response: We note that we provide web links to the publicly-available data sources used in this GPCI update, the methodological parameters, as well as an overview of how we develop each GPCI component in the final report for the CY 2020 Update of GPCIs and MP RVUs for the Medicare PFS. This practice is consistent with previous updates. However, in consideration of the commenters' concerns that navigating the publicly-available BLS OES data on the BLS website is cumbersome, we have included more detailed steps in the aforementioned report to further assist interested parties in navigating these data.

Comment: One commenter stated that the GPCIs in Hawaii do not account for the unique costs of providing medical services in Hawaii and that this will lead to an accelerating shortage of health care providers across the state of Hawaii. The commenter stated that Hawaii's unique geography makes providing care more expensive and that the cost of living ranks amongst the highest in the nation, and the data used by CMS do not reflect the cost of living. The commenter stated that it disputes the assertion that the equipment, supplies, and miscellaneous expenses component of the PE GPCI do not vary by geographic area, and therefore, do not require updating. The commenter stated that the high cost of shipping equipment plays a major part in the high cost of healthcare in Hawaii and the PEs should reflect that additional cost that exists in Hawaii and not in the mainland United States. The commenter stated that the 1.5 work GPCI floor for Alaska, and the 1.0 PE GPCI floor for the frontier states should serve as a basis for reevaluating the cost of providing medical services in Hawaii. The commenter stated that the GPCIs should be adjusted to reflect a factor at least equal to Alaska's work GPCI.

Response: We reiterate that the GPCIs, in particular the work GPCI and the PE GPCI to which the commenter refers, are based on nationally-representative and publicly-available wage data from the BLS OES for the work GPCI and employee wage and purchased services components of the PE GPCI, and the Census Bureau's ACS data for the rent index component of the PE GPCI. The GPCIs are a measure of relative resource cost differences among localities compared to the national average as informed by the data (not a measure of absolute costs). With regards to the supplies, equipment, and miscellaneous expense cost index component of the PE GPCIs, we have stated that we believe there is a national market for these items and there is not significant geographic variation in those costs, and as such we assign a value of 1.00 for this component for each locality, consistent with the national average. Stakeholders have previously indicated that shipping and transportation expenses increase the cost of acquiring medical equipment and supplies in islands relative to the mainland. We have previously attempted to locate data sources specific to geographic variation in shipping costs, and we found no comprehensive national data source for this information, and therefore, we have not been able to quantify variation in costs specific to islands as indicated by the commenter (we refer readers to 78 FR 74387 through 74388 for a detailed discussion of this issue). The commenter did not provide any data to quantify the variation. We would encourage the commenter and other stakeholders to submit data supporting this assertion for consideration in future rulemaking; specifically, we would be

interested in information regarding potential data sources for shipping costs for medical equipment and supplies that are accessible to the public, available on a national basis for both urban and rural areas, and updated regularly. We remind commenters that the work GPCI value for Alaska is not based on the data for that state, instead section 1848(e)(1)(G) of the Act sets a permanent 1.5 work GPCI floor for Alaska. Similarly, section 1848(e)(1) of the Act sets a permanent PE GPCI floor of 1.0 for the frontier states. Additionally, we note that the GAF in Hawaii, displayed in Addendum D, which represents the weighted composite of each PFS localities GPCIs, is increasing in the GPCI update from CY 2019 to years 1 and 2 of the update (CY 2020 and CY 2021).

Comment: One commenter noted that the MP GPCIs changed more significantly than other GPCIs, but also acknowledged that MP accounts for a small share of average total payments so these swings generally translate into modest payment changes. The commenter urged CMS to give consideration to comments from state medical associations and other organizations representing physicians who practice in localities facing reductions to ensure that the data driving reductions are accurate.

Response: We note that larger changes in MP GPCI values in an update year are not unprecedented, and the commenter has correctly characterized that changes in MP will equate to minimal changes in payment because MP represents a small share of average total payments. As discussed in section II.C of this final rule, there were several proposed methodological refinements in the development of the MP premium data which underlies the MP risk factors used in determining both MP RVUs and MP GPCIs which has also contributed to some of the changes; we note that not all of those proposed methodological refinements were finalized for CY 2020, and the final MP GPCIs in Addendum E of this final rule are reflective of that.

We emphasize that we do give consideration to the public comments that we receive. We note that only a few comments were received with regards to the GPCI proposals, though during the process of developing the CY 2020 final rule GPCIs, which includes reviewing the underlying data (which are obtained from publicly-available sources as previously discussed) and reviewing our programming, we did observe the following issue. The work, PE, and MP GPCIs are based on the 2017 utilization data as described in the final report for the CY 2020 Update of GPCIs and MP RVUs for the Medicare PFS. These data became available after the CY 2020 PFS proposed rule analytic programs had been written for these measures, but for the purposes of developing the analytic programs the CY 2016 utilization data were used as a placeholder. During the final rule development we realized an oversight whereby the 2016 utilization data had not been replaced with the 2017 utilization data for the work and PE GPCIs, though we note that for the MP GPCI, the 2017 utilization data were being used. We have resolved this issue for the final rule and all 3 GPCI components reflect the updated 2017 utilization data as described in the aforementioned report. We note that utilization data are highly correlated year to year so the effect of this change on final GPCI values was quite modest; specifically, the updated utilization data had virtually no effect on the resulting work, PE, and MP GPCIs and the GAFs. Outside of California (see below for a discussion regarding California), the correlation coefficient between each of the three GPCIs and the GAF in the proposed rule, and their corresponding values in the final rule is 0.999.

Comment: A few commenters expressed concern with regards to the county rent indices delineated in the county-level data public use file whereby they noted consistent discrepancies in New England states as compared to the rest of the country. The commenters stated that before finalizing the PE GPCIs, CMS should review the indices to ensure that the relative differences in the indices accurately reflect the relative differences in rents from the source data file. One of the commenters indicated that this issue is not observed in any areas outside of New England.

Response: We note that during the review of the underlying data and analytic programs for the final rule, we identified an issue with the data in New England (Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, and Connecticut) where the raw data values were defined at sub-county areas in New England, but were not summarized to the county-level in the development of the proposed CY 2020 GPCI values. This led to distorted office rent index values for the six states in New England, which in turn affected the proposed PE GPCIs in those states. The CY 2020 PFS final rule office rent index that underlies the PE GPCI has been corrected so that the input data element is now summarized at the county-level *before* being used to develop the index. Similar to the aforementioned update to the utilization data, the corrected mapping of raw data values in New England as described above had virtually no effect on the resulting work, PE, and MP GPCIs and the GAFs. Outside of California (see below for a discussion regarding California), the correlation coefficient between each of the three GPCIs and the GAF in the proposed rule, and their corresponding values in the final rule is 0.999.

Comment: One commenter expressed concern with the implementation of the GPCI requirements in California consistent with section 1848(e)(6) of the Act which was implemented in the CY 2017 PFS final rule (81 FR 80261 through 80270). The commenter requested that CMS remedy any errors in the GPCI values. Specifically, the commenter indicated that CMS did not accurately implement the California MSA-based structure in the CY 2020 PFS proposed rule consistent with the methodology finalized in CY 2017 based on the requirements of the statute. The commenter specifically highlighted issues with the GPCIs for the San Francisco-Oakland-Hayward localities (localities 05, 06, 07, and 53); the San Jose-Sunnyvale-Santa Clara localities (localities 09, and 65); and the Los Angeles-Long Beach-Anaheim localities (localities 26, and 18). The commenter provided their analysis with their commenter letter, and stated that based on their findings, the proposed GPCIs for the nine counties contained in the eight aforementioned localities are inaccurate. The commenter also requested that CMS provide the traditional source data for the PE rent and wage indices or the relative value units (RVUs) by county that have been published in the past. Aside from the issues with these eight localities as described above, the commenter indicated that for the remaining California localities, they support and agree with the proposed GPCIs and commend CMS for accurately completing the difficult calculations as required by statute.

Response: We appreciate the analysis provided by the commenter with regards to the eight aforementioned localities and thank the commenter for bringing this to our attention. We agree with the commenter that there were issues with the calculation of the GPCI values reflected in the CY 2020 PFS proposed rule for California. In the programming, we inadvertently used the 32 MSA-based localities for which current GPCIs are defined to account for different treatment of some counties within MSAs when creating the new GPCIs, as opposed to using the 27 MSA-based localities to determine the new MSA-based payment area GPCI amounts. Additionally, we identified a

sequencing issue in our programming that led to issues in establishing the transition values and applying the hold harmless provision. We apologize for the confusion caused by these issues and have resolved these programming issues and recalculated the California GPCIs. The final CY 2020 GPCI values in California reflect the transition and hold harmless provisions executed in the proper order based on the requirements of the law. In summary, in California the issue was the level of aggregation used to create the proposed rule values, which erroneously resulted in different proposed rule values for counties within payment localities where there should not be any differences. Correcting this, along with other changes in the final rule relative to the proposed rule, led to GAFs that are higher in all but three of the 32 payment localities in California. In those three, the GAF is lower because it is now correctly equal among non-transition counties within the new MSA-based payment areas; these three counties had higher values when erroneously calculated as individual payment localities in the proposed rule than they have when correctly averaged within the MSA for the final rule GPCIs. The final rule GAFs for these three areas are lower than those published in the proposed rule by 0.1 percent in locality 26 (Los Angeles-Long Beach-Anaheim (Orange cty)), 1.4 percent in locality 05 (San Francisco-Oakland-Hayward (San Francisco cty)), and 1.8 percent in locality 06 (San Francisco-Oakland-Hayward (San Mateo cty)), but all three localities have CY 2020 PFS final rule GAFs that are higher than their current CY 2019 values. In the other 29 California payment localities, the increase in final rule GAFs relative to the proposed rule values ranges from 0.5 percent to 6.2 percent, with 13 areas experiencing an increase of 1.2 percent.

Additionally, we note that we have provided a county-level GPCI data file as one of the GPCI public use files in the downloads section of the CY 2020 PFS final rule on the CMS website, that delineates the requested source data, as well as the RVUs by county, consistent with what has been published in the past. We reiterate that the county-level data file also reflects the correction to the oversight in the proposed rule whereby we inadvertently used the 2016 utilization data for the work and PE GPCIs (though we correctly used the 2017 utilization data for the MP GPCIs) as previously discussed.

Comment: One commenter stated that for CY 2020 in California there should be 29 distinct fee schedule areas and not 32 fee schedule areas as finalized when this provision was implemented in CY 2017. The commenter stated that some of the distinct fee schedule areas that were used during the period between CY 2017 and CY 2018 are no longer necessary. The commenter stated that Orange and Los Angeles counties, which are both in the Los-Angeles-Long Beach-Anaheim MSA, should have the same GPCI values and be one locality number instead of two. Similarly, Alameda, Contra Cosa, San Francisco and San Mateo counties (all in the San Francisco-Oakland-Hayward MSA) should be identified by one locality number instead of three, and the San Francisco-Oakland-Hayward (Marin cnty) locality would remain its own distinct locality number.

Response: There are 27 MSAs in California, and when CMS implemented the MSA-based locality structure for California as discussed above, for operational considerations, we finalized 32 unique MSA-based locality numbers. We did not propose to make changes to the number of unique locality numbers for California for CY 2020. Since two of the MSAs that required multiple unique locality numbers (San Francisco-Oakland-Hayward, and San Jose-Sunnyvale-Santa Clara) to address operational considerations as described in the CY 2017 PFS final rule (81 FR 80265 through 80268) contain both transition and non-transition counties, we would still need to maintain some unique locality numbers. We remind the commenter that though starting in CY 2022, the applicable GPCIs for counties in transition areas will be calculated solely under the MSA-based locality structure as described above, the statutorily-required hold-harmless provision for counties in transition areas is permanent.

With regards to the Los Angeles-Long Beach-Anaheim MSA, which contains 2 counties (across two unique locality numbers: 18 and 26) that are not transition areas, we acknowledge that the Los Angeles-Long Beach-Anaheim MSA only needed separate unique locality numbers, for payment purposes, in year 1 (CY 2017) of the implementation of the MSA-based structure as neither of the counties in the MSA (Orange nor Los Angeles counties) are transition counties (and therefore, are not subject to aforementioned the one-sixth incremental phase-in nor hold-harmless provision). We will consider the feasibility of assigning one locality number for that MSA in future rulemaking since there will be no difference in the GPCI values, for payment purposes, for those localities going forward. Similarly, the San Francisco-Oakland-Hayward MSA contains four counties (across three unique locality numbers: 05, 06, and 07) that are not transition areas and will receive the same GPCI values, for payment purposes, going forward (San Francisco, San Mateo, Alameda, and Contra Costa counties). As such, we will consider the feasibility of collapsing those three unique locality numbers and assigning one unique locality number in future rulemaking. If we determine that to be operationally feasible, we would propose any changes in future rulemaking. We note that it would ultimately change the number of distinct fee schedule areas needed, for payment purposes, in California from 32 to 29 as suggested by the commenter.

Additionally, during the development of the CY 2020 PFS final rule GPCIs, we identified typographical errors in the naming conventions of four of the California MSA-based localities in Addendum D and Addendum E: Locality 05-San Francisco-Oakland-Hayward (San Francisco cnty) was listed as San Francisco; locality 06-San Francisco-Oakland-Hayward (San Mateo cnty) was listed as San Mateo; locality 07-San Francisco-Oakland-Hayward (Alameda/Contra Costa cnty) was listed as Oakland/Berkeley; and San Jose-Sunnyvale-Santa Clara (Santa Clara cnty) was listed as Santa Clara. This display issue has been corrected in Addendum D and Addendum E for the final rule.

Comment: One commenter stated that it believes large cuts to rural and rest-of-state areas should be avoided or minimized, but locality boundaries with large payment differences should not be in the middle of urban areas, because they create payment cliffs where payment can change if an office is moved across a street or down a block. The commenter stated that CMS should create locality definitions that are not constrained by county boundaries, and advocated implementing locality definitions based on Metropolitan Statistical Areas.

Response: We appreciate the suggestions for revisions to the PFS locality structure; however, we did not propose any changes to the PFS locality structure and decline to do so at this time. Further, we clarify that just as the localities under the locality structure used in the PFS are comprised of one or more constituent counties, so are Metropolitan Statistical Areas. Therefore, the concept of a payment cliff between neighboring counties as described by the commenter would not necessarily be mitigated by a change from PFS fee schedule areas to Metropolitan Fee Schedule Areas.

After consideration of the comments, we are finalizing the CY 2020 GPCI update, and the methodological refinements as proposed. The final GPCIs and summarized GAFs in Addenda D and E to this final rule also reflect the correction of the underlying programming issues described above.

E. Potentially Misvalued Services Under the PFS

1. Background

Section 1848(c)(2)(B) of the Act directs the Secretary to conduct a periodic review, not less often than every 5 years, of the RVUs established under the PFS. Section 1848(c)(2)(K) of the Act requires the Secretary to periodically identify potentially misvalued services using certain criteria and to review and make appropriate adjustments to the relative values for those services. Section 1848(c)(2)(L) of the Act also requires the Secretary to develop a process to validate the RVUs of certain potentially misvalued codes under the PFS, using the same criteria used to identify potentially misvalued codes, and to make appropriate adjustments.

As discussed in section II.N. of this final rule, Valuation of Specific Codes, each year we develop appropriate adjustments to the RVUs taking into account recommendations provided by the RUC, MedPAC, and other stakeholders. For many years, the RUC has provided us with recommendations on the appropriate relative values for new, revised, and potentially misvalued PFS services. We review these recommendations on a code-by-code basis and consider these recommendations in conjunction with analyses of other data, such as claims data, to inform the decision-making process as authorized by law. We may also consider analyses of work time, work RVUs, or direct PE inputs using other data sources, such as Department of Veteran Affairs (VA), National Surgical Quality Improvement Program (NSQIP), the Society for Thoracic Surgeons (STS), and the Merit-based Incentive Payment System (MIPS) data. In addition to considering the most recently available data, we assess the results of physician surveys and specialty recommendations submitted to us by the RUC for our review. We also consider information provided by other stakeholders. We conduct a review to assess the appropriate RVUs in the context of contemporary medical practice. We note that section 1848(c)(2)(A)(ii) of the Act authorizes the use of extrapolation and other techniques to determine the RVUs for physicians' services for which specific data are not available and requires us to take into account the results of consultations with organizations representing physicians who provide the services. In accordance with section 1848(c) of the Act, we determine and make appropriate adjustments to the RVUs.

In its March 2006 Report to the Congress (*http://www.medpac.gov/docs/default-source/reports/Mar06_Ch03.pdf?sfvrsn=0*), MedPAC discussed the importance of appropriately valuing physicians' services, noting that misvalued services can distort the market for physicians' services, as well as for other health care services that physicians order, such as hospital services. In that same report, MedPAC postulated that physicians' services under the PFS can become misvalued over time. MedPAC stated, ''When a new service is added to the physician fee schedule, it may be assigned a relatively high value because of the time, technical skill, and psychological stress that are often required to furnish that service. Over time, the work required for certain services would be expected to decline as physicians become more familiar with the service and more efficient in furnishing it.'' We believe services can also become overvalued when PE declines. This can happen when the costs of equipment and supplies fall, or when equipment is used more frequently than is estimated in the PE methodology, reducing its cost per use. Likewise, services can become undervalued when physician work increases or PE rises.

As MedPAC noted in its March 2009 Report to Congress (*http://www.medpac.gov/docs/default-source/reports/march-2009-report-to-congress-medicare-payment-policy.pdf*), in the intervening years since MedPAC made the initial recommendations, CMS and the RUC have taken several steps to improve the review process. Also, section 1848(c)(2)(K)(ii) of the Act augments our efforts by directing the Secretary to specifically examine, as determined appropriate, potentially misvalued services in the following categories:

- Codes that have experienced the fastest growth.
- Codes that have experienced substantial changes in PE.
- Codes that describe new technologies or services within an appropriate time period (such as 3 years) after the relative values are initially established for such codes.
- Codes which are multiple codes that are frequently billed in conjunction with furnishing a single service.
- Codes with low relative values, particularly those that are often billed multiple times for a single treatment.
- Codes that have not been subject to review since implementation of the fee schedule.
- Codes that account for the majority of spending under the PFS.
- Codes for services that have experienced a substantial change in the hospital length of stay or procedure time.
- Codes for which there may be a change in the typical site of service since the code was last valued.
- Codes for which there is a significant difference in payment for the same service between different sites of service.
- Codes for which there may be anomalies in relative values within a family of codes.
- Codes for services where there may be efficiencies when a service is furnished at the same time as other services.
- Codes with high intraservice work per unit of time.
- Codes with high PE RVUs.
- Codes with high cost supplies.
- Codes as determined appropriate by the Secretary.

Section 1848(c)(2)(K)(iii) of the Act also specifies that the Secretary may use existing processes to receive recommendations on the review and appropriate adjustment of potentially misvalued services. In addition, the Secretary may conduct surveys, other data collection activities, studies, or other analyses, as the Secretary determines to be appropriate, to facilitate the review and appropriate adjustment of potentially misvalued services. This section also authorizes the use of analytic contractors to identify and analyze potentially misvalued codes, conduct surveys or collect data, and make recommendations on the review and appropriate adjustment of potentially misvalued services. Additionally, this section provides that the Secretary may coordinate the review and adjustment of any RVU with the periodic review described in section 1848(c)(2)(B) of the Act. Section 1848(c)(2)(K)(iii)(V) of the Act specifies that the Secretary may make appropriate coding revisions (including using existing processes for consideration of coding changes) that may include consolidation of individual services into bundled codes for payment under the PFS.

2. Progress in Identifying and Reviewing Potentially Misvalued Codes

To fulfill our statutory mandate, we have identified and reviewed numerous

potentially misvalued codes as specified in section 1848(c)(2)(K)(ii) of the Act, and we intend to continue our work examining potentially misvalued codes in these areas over the upcoming years. As part of our current process, we identify potentially misvalued codes for review, and request recommendations from the RUC and other public commenters on revised work RVUs and direct PE inputs for those codes. The RUC, through its own processes, also identifies potentially misvalued codes for review. Through our public nomination process for potentially misvalued codes established in the CY 2012 PFS final rule with comment period, other individuals and stakeholder groups submit nominations for review of potentially misvalued codes as well. Individuals and stakeholder groups may submit codes for review under the potentially misvalued codes initiative to CMS in one of two ways. Nominations may be submitted to CMS via email or through postal mail. Email submissions should be sent to the CMS emailbox *MedicarePhysicianFeeSchedule@cms.hhs.gov,* with the phrase ''Potentially Misvalued Codes'' in the subject line. Physical letters for nominations should be sent via the U.S. Postal Service to the Centers for Medicare and Medicaid Service, Mail Stop: C4–01–26, 7500 Security Blvd., Baltimore, Maryland 21244. Envelopes containing the nomination letters must be labeled ''Attention: Division of Practitioner Services, Potentially Misvalued Codes''. Nominations for consideration in our next annual rule cycle should be received by our February 10th deadline. Since CY 2009, as a part of the annual potentially misvalued code review and Five-Year Review process, we have reviewed over 1,700 potentially misvalued codes to refine work RVUs and direct PE inputs. We have assigned appropriate work RVUs and direct PE inputs for these services as a result of these reviews. A more detailed discussion of the extensive prior reviews of potentially misvalued codes is included in the Medicare Program; Payment Policies Under the Physician Fee Schedule, Five-Year Review of Work Relative Value Units, Clinical Laboratory Fee Schedule: Signature on Requisition, and Other Revisions to Part B for CY 2012; Final Rule (76 FR 73052 through 73055) (hereinafter referred to as the ''CY 2012 PFS final rule with comment period''). In the CY 2012 PFS final rule with comment period (76 FR 73055 through 73958), we finalized our policy to consolidate the review of physician work and PE at the same time, and established a process for the annual public nomination of potentially misvalued services.

In the Medicare Program; Revisions to Payment Policies Under the Physician Fee Schedule, DME Face-to-Face Encounters, Elimination of the Requirement for Termination of Non-Random Prepayment Complex Medical Review and Other Revisions to Part B for CY 2013 (77 FR 68892) (hereinafter referred to as the ''CY 2013 PFS final rule with comment period''), we built upon the work we began in CY 2009 to review potentially misvalued codes that have not been reviewed since the implementation of the PFS (so-called ''Harvard-valued codes''). In the Medicare Program; Revisions to Payment Policies Under the Physician Fee Schedule and Other Revisions to Part B for CY 2009; and Revisions to the Amendment of the E-Prescribing Exemption for Computer Generated Facsimile Transmissions; Proposed Rule (73 FR 38589) (hereinafter referred to the ''CY 2009 PFS proposed rule''), we requested recommendations from the RUC to aid in our review of Harvard-valued codes that had not yet been reviewed, focusing first on high-volume, low intensity codes. In the fourth Five-Year Review (76 FR 32410), we requested recommendations from the RUC to aid in our review of Harvard-valued codes with annual utilization of greater than 30,000 services. In the CY 2013 PFS final rule with comment period, we identified specific Harvard-valued services with annual allowed charges that total at least $10,000,000 as potentially misvalued. In addition to the Harvard-valued codes, in the CY 2013 PFS final rule with comment period we finalized for review a list of potentially misvalued codes that have stand-alone PE (codes with physician work and no listed work time and codes with no physician work that have listed work time).

In the Medicare Program; Revisions to Payment Policies under the Physician Fee Schedule and Other Revisions to Part B for CY 2016 final rule with comment period (80 FR 70886) (hereinafter referred to as the ''CY 2016 PFS final rule with comment period''), we finalized for review a list of potentially misvalued services, which included eight codes in the neurostimulators analysis-programming family (CPT codes 95970–95982). We also finalized as potentially misvalued 103 codes identified through our screen of high expenditure services across specialties.

In the Medicare Program; Revisions to Payment Policies under the Physician Fee Schedule and Other Revisions to Part B for CY 2017; Medicare Advantage Bid Pricing Data Release; Medicare Advantage and Part D Medical Loss Ratio Data Release; Medicare Advantage Provider Network Requirements; Expansion of Medicare Diabetes Prevention Program Model; Medicare Shared Savings Program Requirements final rule (81 FR 80170) (hereinafter referred to as the ''CY 2017 PFS final rule''), we finalized for review a list of potentially misvalued services, which included eight codes in the end-stage renal disease home dialysis family (CPT codes 90963–90970). We also finalized as potentially misvalued 19 codes identified through our screen for 0-day global services that are typically billed with an evaluation and management (E/M) service with modifier 25.

In the CY 2018 PFS final rule, we finalized arthrodesis of sacroiliac joint (CPT code 27279) as potentially misvalued. Through the use of comment solicitations with regard to specific codes, we also examined the valuations of other services, in addition to, new potentially misvalued code screens (82 FR 53017 through 53018).

3. CY 2020 Identification and Review of Potentially Misvalued Services

In the CY 2012 PFS final rule with comment period (76 FR 73058), we finalized a process for the public to nominate potentially misvalued codes. In the CY 2015 PFS final rule with comment period (79 FR 67606 through 67608), we modified this process whereby the public and stakeholders may nominate potentially misvalued codes for review by submitting the code with supporting documentation by February 10th of each year. Supporting documentation for codes nominated for the annual review of potentially misvalued codes may include the following:

- Documentation in peer reviewed medical literature or other reliable data that demonstrate changes in physician work due to one or more of the following: Technique, knowledge and technology, patient population, site-of-service, length of hospital stay, and work time.
- An anomalous relationship between the code being proposed for review and other codes.
- Evidence that technology has changed physician work.
- Analysis of other data on time and effort measures, such as operating room logs or national and other representative databases.
- Evidence that incorrect assumptions were made in the previous valuation of the service, such as a

misleading vignette, survey, or flawed crosswalk assumptions in a previous evaluation.

- Prices for certain high cost supplies or other direct PE inputs that are used to determine PE RVUs are inaccurate and do not reflect current information.
- Analyses of work time, work RVU, or direct PE inputs using other data sources (for example, VA, NSQIP, the STS National Database, and the MIPS data).
- National surveys of work time and intensity from professional and management societies and organizations, such as hospital associations.

We evaluate the supporting documentation submitted with the nominated codes and assess whether the nominated codes appear to be potentially misvalued codes appropriate for review under the annual process. In the following year's PFS proposed rule, we publish the list of nominated codes and indicate for each nominated code whether we agree with its inclusion as a potentially misvalued code. The public has the opportunity to comment on these and all other proposed potentially misvalued codes. In that year's final rule, we finalize our list of potentially misvalued codes.

a. Public Nominations

We received three submissions that nominated codes for review under the potentially misvalued code initiative, prior to our February 10, 2019 deadline. In addition to three public nominations, CMS also nominated one additional code for review.

One commenter requested that CMS consider CPT code 10005 (*Fine needle aspiration biopsy, including ultrasound guidance; first lesion*) and CPT code 10021 (*Fine needle aspiration biopsy, without imaging guidance; first lesion*) for nomination as potentially misvalued. We note that these two CPT codes were recently reviewed within a family of 13 similar codes. Our review of these codes and our rationale for finalizing the current values are discussed extensively in the CY 2019 PFS final rule (83 FR 59517). For CPT code 10021, the RUC recommended a 32 percent reduction from its previous physician time and a 5 percent reduction in the work RVU. The commenter disagreed with this change and stated that there was a change in intensity of the procedure now as compared to what it was in 1995 when this code was last evaluated. The commenter also stated that there was a change in intensity of the work performed due to use of more complicated equipment, more stringent specimen sampling that allow for extensive examination of smaller and deeper lesions within the body. The commenter disagreed with the CMS' crosswalked CPT code 36440 (*Push blood transfusion, patient 2 years or younger*) and presented CPT codes 40490 (*Biopsy of lip*) and 95865 (*Needle measurement and recording of electrical activity of muscles of voice box*) as more appropriate crosswalks.

Another commenter requested that CMS consider HCPCS code G0166 (*External counterpulsation, per treatment session*) as potentially misvalued. This code was reviewed for the CY 2019 PFS final rule (83 FR 59578), and the work RVU and direct PE inputs as recommended by the AMA RUC were finalized by CMS. We finalized the valuation of this code with no refinements. However, the commenter noted that the PE inputs that were considered for this code did not fully reflect the total resources required to deliver the service. We stated we would review the commenter's submission of additional new data and public comments received in combination with what was previously presented in the CY 2019 PFS final rule.

CMS nominated CPT code 76377 (*3D rendering with interpretation and reporting of computed tomography, magnetic resonance imaging, ultrasound, or other tomographic modality with image postprocessing under concurrent supervision; requiring image postprocessing on an independent workstation*) as potentially misvalued. CPT code 76376 (*3D rendering with interpretation and reporting of computed tomography, magnetic resonance imaging, ultrasound, or other tomographic modality with image postprocessing under concurrent supervision; not requiring image postprocessing on an independent workstation*) was reviewed by the AMA RUC at the April 2018 RUC meeting. However, CPT code 76377, which is very similar to CPT code 76376, was not reviewed, and is likely now misvalued, in light of the similarities between the two codes. The specialty societies noted that the two codes are different because they are utilized by different patient populations (as evidenced by the ICD–10 diagnoses); however, we view both codes to be similar enough that CPT code 76377 should be reviewed to maintain relativity in the code family.

We have received and reviewed all public comments to all these codes that were nominated as potentially misvalued. Below, we present the summarizations of all these public comments.

Comment: One commenter provided information to CMS in which they stated that the work involved in furnishing services represented by the office/outpatient E/M code set (CPT codes 99201–99215) has changed sufficiently to warrant revaluation. Specifically, the commenter stated that these codes have not been reviewed in over 12 years and in that time have suffered passive devaluation as more and more procedures and other services have been added to the CPT code set, which are subsequently valued in a budget neutral manner, through notice and comment rulemaking, on the Medicare PFS. The commenter also stated that re-evaluation of these codes is critical to the success of CMS' objective of advancing value-based care through the introduction of Advanced Alternative Payment Models (APMs) as these APMs rely on the underlying E/M codes as the basis for payment or reference price for bundled payments.

Response: We acknowledge the points made by the commenter regarding the valuation of E/M codes for office and outpatient visits. We agreed, in principle, that the existing set of office/outpatient E/M CPT codes may not be correctly valued. In recent years, we have specifically considered how best to update and revalue the E/M codes, which represent a significant proportion of PFS expenditures, and have also engaged in ongoing dialogue with the practitioner community. In the CY 2019 PFS proposed and final rules, in part due to these ongoing stakeholder discussions, we proposed and finalized changes to E/M payment and documentation requirements to implement policy objectives focused on reducing provider documentation burden (83 FR 59625).

As we stated in the proposed rule, concurrently, the CPT Editorial Panel, under similar policy objectives, convened a workgroup and proposed to refine the existing E/M office/outpatient code set. Shortly thereafter, the AMA RUC revalued these services and submitted recommendations to CMS for review. In the CY 2020 PFS proposed rule, we considered the RUC-recommended values for office/outpatient E/M codes in proposing new values for CY 2021. For more detail on our review and consideration of the revalued office/outpatient E/M services please refer to section II.P of this final rule.

Table 16 lists the HCPCS and CPT codes that we proposed as potentially misvalued.

TABLE 16: HCPCS and CPT Codes Proposed as Potentially Misvalued

CPT/HCPCS Code	Short Description
10005	Fna bx w/us gdn 1st les
10021	Fna bx w/o img gdn 1st les
76377	3d render w/intrp postproces
G0166	Extrnl counterpulse, per tx

We received public comments on the HCPCS and CPT codes that we proposed as potentially misvalued. The following is a summary of the comments we received and our responses.

Comment: Several commenters submitted comments about HCPCS code G0166 and claimed that in the CY 2019 PFS final rule, CMS did not have the complete list of inputs for this ''Practice Expense only'' code, which resulted in an under-valuation of its payment.

Response: We note that the AMA RUC in its comment letter to the proposed rule informed CMS that it would review this service and forward any recommendations to CMS for review. We will review the AMA RUC's forthcoming recommendations and will consider any refinements to the valuation for this code through our standard rulemaking process for CY 2021.

Comment: Several commenters highlighted the payment reduction to code G0166 in CY 2019 relative to CY 2018 and requested that CMS revert back to the CY 2018 payment. Commenters also noted that the current and reduced payment may endanger continued offering of this service, particularly to beneficiaries with coronary artery disease with angina for whom surgical intervention may not be appropriate and where medications have proved to be ineffective.

Response: We acknowledge the receipt of all comments related to HCPCS code G0166 outlining that it may be inaccurately valued. We have reviewed the information included in the comments received, and look forward to reviewing the AMA RUC recommendations for this service. We will review the AMA RUC's forthcoming recommendations and will consider any refinements to the valuation for this code through our standard rulemaking process for CY 2021.

We refer readers to section II.B of this final rule for details on the limited updates to the supply and equipment pricing for HCPCS code G0166.

Comment: Several commenters responded to the inclusion of CPT codes 10005 and 10021 on the potentially misvalued codes list, with the majority urging CMS to revise the CY 2019 finalized RVUs by adopting the higher RUC recommended RVUs.

Response: We appreciate commenters' perspective on the valuation of CPT codes 10005 and 10021 but refer the commenters to our CY 2019 PFS final rule for our review of the relevant inputs and RUC recommendations for these codes. We have reviewed the comments received, including any additional information in response to our discussion of these codes under the potentially misvalued code initiative. We believe our refinements to the valuations for these services continue to be valid, as no new compelling information has been presented.

Comment: Commenters disagreed with using the crosswalked CPT code 36440 as the reference code for valuing CPT code 10021, even though the physician work times for both codes are very similar. One commenter stated that the previous values for work time (1995) were also based on a crosswalk (CPT codes 88170 and 88171) and not a survey, and therefore, the decrease in work time did not warrant a proportional change in work RVU as the previous times were inaccurate. Also, as discussed in the CY 2019 PFS final rule with comment period (83 FR 59517), commenters stated that the work intensity for both codes are unequal as well their incongruous procedure descriptors, pointing out the fact that CPT codes 36440, 88170, and 88171 are clinically very different to CPT code 10021.

Response: As we have discussed in previous rules, we agree that it is important to use the most recent data available regarding time, and we note that when many years have passed between when time is measured, significant discrepancies can occur. However, we continue to believe that our operating assumption regarding the validity of the existing values as a point of comparison is critical to the integrity of the relative value system as currently constructed. The times currently associated with codes play a very important role in PFS ratesetting, both as points of comparison in establishing work RVUs and in the allocation of indirect PE RVUs by specialty. If we were to operate under the assumption that previously recommended work times had routinely been overestimated, this would undermine the relativity of the work RVUs on the PFS in general, given the process under which codes are often valued by comparisons to codes with similar times, and it also would undermine the validity of the allocation of indirect PE RVUs to physician specialties across the PFS. Instead, we believe that it is crucial that the code valuation process take place with the understanding that the existing work times used in the PFS ratesetting processes are accurate. We recognize that adjusting work RVUs for changes in time is not always a straightforward process and that the intensity associated with changes in time is not necessarily always linear, which is why we apply various methodologies to identify several potential work values for individual codes. We continue to disagree with commenters' distinction of different types of physician work times as being better or worse in their measure of validity in comparison to each other, and believe that CPT code 36440 is a good comparable code to CPT code 10021 in physician work and physician work times.

Comment: For CPT code 10021, one commenter disagreed with CMS maintaining the code's global indicator of ''XXX'' (global concept does not apply) and recommended a change to ''000'' (minor surgery/zero day global).

Response: We did change the multiple procedure indicator for CPT code 10021 from a ''0'' (payment rules do not apply) to a ''2'' (standard payment adjustments do apply), but as we stated in CY 2019 PFS final rule (83 FR 59520), we do not agree that it would have been more accurate to use codes with a 0-day global period as references for the codes in this family, and the multiple procedure policy continues to apply for CPT code 10021.

In concluding our review of all the comments submitted for the nominated potentially misvalued CPT codes of 10005 and 10021, we do not believe we have received any additional

information to consider in the context of our previous review of these services. Therefore, we are not including CPT codes 10005 and 10021 on our final list of potentially misvalued codes for CY 2020.

Comment: One commenter noted on the CMS nominated CPT code 76377 (which we found to be very similar to CPT code 76376 that was AMA RUC reviewed for CY 2020), that although both code descriptors are similar, they have different clinical indications, different patients, different complexity in the work and require different resources and equipment, and that CPT code 76377 was not identified on any of the normal screens.

Response: CMS' nominated CPT code 76377 as potentially misvalued due to its similarity to CPT code 76376 (*3D rendering with interpretation and reporting of computed tomography, magnetic resonance imaging, ultrasound, or other tomographic modality with image postprocessing under concurrent supervision; not requiring image postprocessing on an independent workstation*), which is reviewed and finalized for 2020. Due to the refinements made to CPT code 76376, CPT code 76377 should be similarly reviewed to resolve the two codes' likely discrepancies. We will consider the valuation of this code in future rulemaking. During this review, we will determine if the clinical indications, the complexity of the work, and the resources that are required, are similar or different for both of these codes.

Comment: We received several comments regarding the AMA RUC's survey and recommended values for the E/M office/outpatient evaluation and management codes (99201–99015) for CY 2021.

Response: We refer readers to section II. P. of this final rule where we discuss these codes in detail.

After consideration of the comments received, in summary, we are including CPT code 76377 and HCPCS code G0166 on our final list of potentially misvalued codes for CY 2020. However, we are not including CPT codes 10005 and 10021 on our final list of potentially misvalued codes for CY 2020.

4. Insertion, Removal, and Removal and Insertion of Implantable Interstitial Glucose Sensor System (Category III CPT codes 0446T, 0447T, and 0448T)

Category III CPT codes 0446T, 0447T, and 0448T describe the services related to the insertion, removal, and removal and insertion of an implantable interstitial glucose sensor from subcutaneous pocket, in a subcutaneous pocket via incision. The implantable interstitial glucose sensors are part of systems that can allow real-time glucose monitoring, provides glucose trend information, and signal alerts for detection and prediction of episodes of low blood glucose (hypoglycemia) and high blood glucose (hyperglycemia).

Diabetes is the sixth leading cause of death in the United States, and approximately 20 million Americans have diabetes with an estimated 20.9 percent of the senior population age 60 and older being affected. Millions of people have diabetes and do not know it. Left undiagnosed, diabetes can lead to severe complications such as heart disease, stroke, blindness, kidney failure, leg and foot amputations, and death related to pneumonia and flu. Scientific evidence now shows that early detection and treatment of diabetes with diet, physical activity, and new medicines can prevent or delay much of the illness and complications associated with diabetes. As with management of other chronic conditions, we believe innovative technologies that provide improved data to physicians and patients can be important tools in promoting patient-centered care.

The codes that describe the implantation, removal, and removal and implantation of implantable interstitial glucose sensors are currently contractor-priced. Since the publication of the CY 2020 PFS proposed rule, we have become aware that the contractor pricing for these services has contributed to significant confusion in the community with regards to Medicare payment rules for these kinds of monitoring systems. We understand that this confusion has led to inhibited access to these services for Medicare beneficiaries.

Given the immediate needs of Medicare beneficiaries with diabetes, including some who could benefit from these innovative technologies, we are seeking information from stakeholders to ensure proper payment for this important physician's service by establishing national payment rates in future rulemaking.

We are seeking information from stakeholders on the resources involved in furnishing the services described by Category III CPT codes 0446T *(Creation of subcutaneous pocket with insertion of implantable interstitial glucose sensor, including system activation and patient training),* 0447T *(Removal of implantable interstitial glucose sensor from subcutaneous pocket via incision),* and 0448T *(Removal of implantable interstitial glucose sensor with creation of subcutaneous pocket at different anatomic site and insertion of new implantable sensor, including system activation).* We are specifically seeking recommendations, including the work RVUs, work time, and direct PE inputs, associated with the resources involved in inserting and removing the device, as well as the resource costs of the implantable device and disposable supplies (that is, the supply costs of the implantable device ''implantable interstitial glucose sensor'', and the smart transmitter).

Under our existing policies, we welcome recommendations on appropriate valuation for these services and any recommendations submitted by February 10, 2020 would be considered for CY 2021 PFS rulemaking.

F. Payment for Medicare Telehealth Services Under Section 1834(m) of the Act

As discussed in this rule and in prior rulemaking, several conditions must be met for Medicare to make payment for telehealth services under the PFS. For further details, *see* the full discussion of the scope of Medicare telehealth services in the CY 2018 PFS final rule (82 FR 53006) and in 42 CFR 410.78 and 414.65.

1. Adding Services to the List of Medicare Telehealth Services

In the CY 2003 PFS final rule with comment period (67 FR 79988), we established a process for adding services to or deleting services from the list of Medicare telehealth services in accordance with section 1834(m)(4)(F)(ii) of the Act. This process provides the public with an ongoing opportunity to submit requests for adding services, which are then reviewed by us. Under this process, we assign any submitted request to add to the list of telehealth services to one of the following two categories:

- *Category 1:* Services that are similar to professional consultations, office visits, and office psychiatry services that are currently on the list of telehealth services. In reviewing these requests, we look for similarities between the requested and existing telehealth services for the roles of, and interactions among, the beneficiary, the physician (or other practitioner) at the distant site and, if necessary, the telepresenter, a practitioner who is present with the beneficiary in the originating site. We also look for similarities in the telecommunications system used to deliver the service; for example, the use of interactive audio and video equipment.
- *Category 2:* Services that are not similar to those on the current list of

telehealth services. Our review of these requests includes an assessment of whether the service is accurately described by the corresponding code when furnished via telehealth and whether the use of a telecommunications system to furnish the service produces demonstrated clinical benefit to the patient. Submitted evidence should include both a description of relevant clinical studies that demonstrate the service furnished by telehealth to a Medicare beneficiary improves the diagnosis or treatment of an illness or injury or improves the functioning of a malformed body part, including dates and findings, and a list and copies of published peer reviewed articles relevant to the service when furnished via telehealth. Our evidentiary standard of clinical benefit does not include minor or incidental benefits.

Some examples of clinical benefit include the following:

- Ability to diagnose a medical condition in a patient population without access to clinically appropriate in-person diagnostic services.
- Treatment option for a patient population without access to clinically appropriate in-person treatment options.
- Reduced rate of complications.
- Decreased rate of subsequent diagnostic or therapeutic interventions (for example, due to reduced rate of recurrence of the disease process).
- Decreased number of future hospitalizations or physician visits.
- More rapid beneficial resolution of the disease process treatment.
- Decreased pain, bleeding, or other quantifiable symptom.
- Reduced recovery time.

The list of telehealth services, including the additions described later in this section, can be located on the CMS website at *https://www.cms.gov/Medicare/Medicare-General-Information/Telehealth/index.html.*

Historically, requests to add services to the list of Medicare telehealth services had to be submitted and received no later than December 31 of each calendar year to be considered for the next rulemaking cycle. However, beginning in CY 2019 we stated that for CY 2019 and onward, we intend to accept requests through February 10, consistent with the deadline for our receipt of code valuation recommendations from the RUC. For example, to be considered during PFS rulemaking for CY 2021, requests to add services to the list of Medicare telehealth services must be submitted and received by February 10, 2020. Each request to add a service to the list of Medicare telehealth services must include any supporting documentation the requester wishes us to consider as we review the request. Because we use the annual PFS rulemaking process as the vehicle to make changes to the list of Medicare telehealth services, requesters should be advised that any information submitted as part of a request is subject to public disclosure for this purpose. For more information on submitting a request to add services to the list of Medicare telehealth services, including where to mail these requests, see our website at *https://www.cms.gov/Medicare/Medicare-General-Information/Telehealth/index.html.*

2. Requests To Add Services to the List of Telehealth Services for CY 2020

Under our current policy, we add services to the telehealth list on a Category 1 basis when we determine that they are similar to services on the existing telehealth list for the roles of, and interactions among, the beneficiary, physician (or other practitioner) at the distant site and, if necessary, the telepresenter. As we stated in the CY 2012 PFS final rule with comment period (76 FR 73098), we believe that the Category 1 criteria not only streamline our review process for publicly requested services that fall into this category, but also expedite our ability to identify codes for the telehealth list that resemble those services already on this list.

We did not receive any requests from the public for additions to the Medicare Telehealth list for CY 2020. We believe that the vast majority of services under the PFS that can be appropriately furnished as Medicare telehealth services have already been added to the list.

However, we proposed adding three new HCPCS G codes describing new bundled services for treatment of opioid use disorders in section II.H. of the CY 2020 PFS proposed rule which we noted are sufficiently similar to services currently on the telehealth list to be added on a Category 1 basis. Therefore, we proposed to add the face-to-face portions of the following services to the telehealth list on a Category 1 basis for CY 2020:

- HCPCS code G2086: *Office-based treatment for opioid use disorder, including development of the treatment plan, care coordination, individual therapy and group therapy and counseling; at least 70 minutes in the first calendar month.*
- HCPCS code G2087: *Office-based treatment for opioid use disorder, including care coordination, individual therapy and group therapy and counseling; at least 60 minutes in a subsequent calendar month.*
- HCPCS code G2088: *Office-based treatment for opioid use disorder, including care coordination, individual therapy and group therapy and counseling; each additional 30 minutes beyond the first 120 minutes (List separately in addition to code for primary procedure).*

We note that in the CY 2020 PFS proposed rule (84 FR 40518), we referred to these services using placeholder codes, HCPCS codes GYYY1, GYYY2, and GYYY3, which are being replaced with the final G codes above. Similar to our addition of the required face-to-face visit component of TCM services to the Medicare Telehealth list in the CY 2014 PFS final rule with comment period (78 FR 74403), since HCPCS codes G2086, G2087, and G2088 include face-to-face psychotherapy services, we believe that the face-to-face portions of these services are sufficiently similar to services currently on the list of Medicare telehealth services for these services to be added under Category 1. Specifically, we believe that the psychotherapy portions of the bundled codes are similar to the psychotherapy codes described by CPT codes 90832 and 90853, which are currently on the Medicare telehealth list. We note that like certain other non-face-to-face PFS services, the other components of HCPCS codes G2086–G2088 describing care coordination are commonly furnished remotely using telecommunications technology, and do not require the patient to be present in-person with the practitioner when they are furnished. As such, we do not need to consider whether the non-face-to-face aspects of HCPCS codes G2086–G2088 are similar to other telehealth services. Were these components of HCPCS codes G2086–G2088 separately billable, they would not need to be on the Medicare telehealth list to be covered and paid in the same way as services delivered without the use of telecommunications technology. We also note that by considering the face-to-face portion of these services to be eligible for telehealth services, the originating site facility fee could be reported, consistent with all other rules, when these services are furnished via telehealth.

As discussed in the CY 2019 PFS final rule (83 FR 59496), we note that section 2001(a) of the SUPPORT Act (Pub. L. 115–271, October 24, 2018) amended section 1834(m) of the Act, adding a new paragraph (7) that removes the geographic limitations for telehealth services furnished on or after July 1, 2019, for individuals diagnosed with a

substance use disorder (SUD) for the purpose of treating the SUD or a co-occurring mental health disorder. Section 1834(m)(7) of the Act also allows telehealth services for treatment of a diagnosed SUD or co-occurring mental health disorder to be furnished to individuals at any telehealth originating site (other than a renal dialysis facility), including in a patient's home. Section 2001(a) of the SUPPORT Act additionally amended section 1834(m) of the Act to require that no originating site facility fee will be paid in instances when the individual's home is the originating site. We believe that adding HCPCS codes G2086, G2087, and G2088 to the Medicare telehealth list will complement the existing policies related to flexibilities in treating SUDs.

We note that we welcome public nominations for additions to the Medicare telehealth list. More information on the nomination process is posted under the Telehealth section of the CMS website, which can be accessed at the following web address *https://www.cms.gov/Medicare/Medicare-General-Information/Telehealth/index.html.*

We received public comments on the proposed HCPCS codes for addition to the telehealth list on a Category 1 basis. The following is a summary of the comments we received and our responses.

Comment: The majority of commenters supported our proposal to add HCPCS codes G2086, G2087, and G2088 to the Medicare telehealth list, although a few disagreed, stating that these services should only be furnished in person.

Response: We thank the commenters for their support and feedback. We note that the psychotherapy services that are included in this bundled payment are already on the list of Medicare telehealth services. After consideration of the comments received, we are finalizing our proposal to add HCPCS codes G2086, G2087, and G2088 to the Medicare telehealth list beginning in CY 2020.

Comment: Several commenters disagreed with CMS' statement that most eligible services had been added to the Medicare telehealth list and suggested that CMS should continue to engage with stakeholders to identify other services that could be furnished via Medicare telehealth or communication technology-based services. A few commenters also provided recommendations for additional services that could be added to the Medicare telehealth list, as well as suggestions for how CMS could improve the process of requesting that services be added. Commenters reiterated as they have for many years that the statutory restrictions under section 1834(m) of the Act limit availability of telehealth services, and many encouraged CMS to utilize its demonstration authority to waive restrictions.

Response: We will continue to engage with stakeholders to identify services to add to the Medicare telehealth list and other ways to leverage technology in furnishing services under the PFS within the scope of the statute. We note that the deadline for submitting requests for additions to the Medicare Telehealth list is February 10 of the year prior to the year in which the codes could be added to the Medicare telehealth list, and any requests that are received after that time will be considered in the following year's rulemaking.

Comment: A few commenters requested that CMS allow visits with the prescribing physician for medications that require medical visits for monitoring (for example, buprenorphine) to also be furnished via telehealth.

Response: We note that the majority of the E/M visit codes are already on the Medicare telehealth list and can be furnished in addition to HCPCS codes G2086, G2087, and G2088. Specific requests for consideration of additional codes for the Medicare telehealth list should be submitted through the process outlined above. We also note that there are existing rules related to telemedicine and prescribing buprenorphine for the treatment of OUD (*https://www.hhs.gov/opioids/sites/default/files/2018-09/hhs-telemedicine-hhs-statement-final-508compliant.pdf*).

3. Telehealth Originating Site Facility Fee Payment Amount Update

Section 1834(m)(2)(B) of the Act established the Medicare telehealth originating site facility fee for telehealth services furnished from October 1, 2001 through December 31, 2002, at $20.00. For telehealth services furnished on or after January 1 of each subsequent calendar year, the telehealth originating site facility fee is increased by the percentage increase in the Medicare Economic Index (MEI) as defined in section 1842(i)(3) of the Act. The originating site facility fee for telehealth services furnished in CY 2019 is $26.15. The MEI increase for 2020 is 1.9 percent and is based on the most recent historical update of the MEI through 2019Q2 (2.4 percent), and the most recent historical multifactor productivity adjustment (MFP) through calendar year 2018 (0.5 percent). Therefore, for CY 2020, the payment amount for HCPCS code Q3014 (Telehealth originating site facility fee) is 80 percent of the lesser of the actual charge or $26.65. The Medicare telehealth originating site facility fee and the MEI increase by the applicable time period is shown in Table 17.

TABLE 17: The Medicare Telehealth Originating Site Facility Fee

Time Period	MEI Increase	Facility Fee
10/01/2001–12/31/2002	N/A	$20.00
01/01/2003–12/31/2003	3.0	$20.60
01/01/2004–12/31/2004	2.9	$21.20
01/01/2005–12/31/2005	3.1	$21.86
01/01/2006–12/31/2006	2.8	$22.47
01/01/2007–12/31/2007	2.1	$22.94
01/01/2008–12/31/2008	1.8	$23.35
01/01/2009–12/31/2009	1.6	$23.72
01/01/2010–12/31/2010	1.2	$24.00
01/01/2011–12/31/2011	0.4	$24.10
01/01/2012–12/31/2012	0.6	$24.24
01/01/2013–12/31/2013	0.8	$24.43
01/01/2014–12/31/2014	0.8	$24.63
01/01/2015–12/31/2015	0.8	$24.83
01/01/2016-12/31/2016	1.1	$25.10
01/01/2017-12/31/2017	1.2	$25.40
01/01/2018-12/31/2018	1.4	$25.76
01/01/2019-12/31/2019	1.5	$26.15
01/01/2020-12/31/2020	1.9	$26.65

G. Medicare Coverage for Opioid Use Disorder Treatment Services Furnished by Opioid Treatment Programs (OTPs)

1. Overview

Opioid use disorder (OUD) and deaths from prescription and illegal opioid overdoses have reached alarming levels. The Centers for Disease Control and Prevention (CDC) estimated 47,000 overdose deaths were from opioids in 2017 and 36 percent of those deaths were from prescription opioids.[1] OUD has become a public health crisis. On October 26, 2017, Acting Health and Human Services Secretary, Eric D. Hargan declared a nationwide public health emergency on the opioid crisis as requested by President Donald Trump.[2] This public health emergency was renewed by Secretary Alex M. Azar II on January 24, 2018, April 24, 2018, July 23, 2018, and October 21, 2018, January 17, 2019, April 19, 2019, July 17, 2019, and most recently, October 16, 2019.[3]

The Medicare population, including individuals who are eligible for both Medicare and Medicaid, has the fastest growing prevalence of OUD compared to the general adult population, with more than 300,000 beneficiaries diagnosed with OUD in 2014.[4] An effective treatment for OUD is known as medication-assisted treatment (MAT). The Substance Abuse and Mental Health Services Administration (SAMHSA) defines MAT as the use of medication in combination with behavioral health services to provide an individualized approach to the treatment of substance use disorder (SUD), including OUD (§ 8.2). Currently, Medicare covers medications for MAT, including buprenorphine, buprenorphine-naloxone combination products, and extended-release injectable naltrexone under Part B or Part D, but does not cover methadone. Medicare also covers counseling and behavioral therapy services that are reasonable and necessary and furnished by practitioners that can bill and receive payment under Medicare.

Historically, Medicare has not covered methadone for MAT because of the unique manner in which this drug is dispensed and administered. Medicare Part B covers physician-administered drugs, drugs used in conjunction with durable medical equipment, and certain other statutorily-specified drugs. Medicare Part D covers drugs that are dispensed upon a prescription by a pharmacy. Methadone for MAT is not a drug administered by a physician under the ''incident to'' benefit like other MAT drugs (that is, implanted buprenorphine or injectable extended-release naltrexone) and therefore has not previously been covered by Medicare Part B. Methadone for MAT is also not a drug dispensed by a pharmacy like certain other MAT drugs (that is buprenorphine or buprenorphine-naloxone combination products) and therefore is not covered under Medicare Part D. Methadone for MAT is a schedule II controlled substance that is highly regulated because it has a high potential for abuse which may lead to severe psychological or physical dependence. As a result, methadone for MAT can only be dispensed and administered by an opioid treatment program (OTP) as provided under section 303(g)(1) of the Controlled Substances Act (21 U.S.C. 823(g)(1)) and 42 CFR part 8. Additionally, OTPs, which are healthcare entities that focus on providing MAT for people diagnosed with OUD, were not previously entities that could bill and receive payment from Medicare for the services they furnish. Therefore, there has historically been a gap in Medicare coverage of MAT for OUD since methadone (one of the three Food and Drug Administration (FDA)-approved drugs for MAT) has not been covered.

Section 2005 of the Substance Use–Disorder Prevention that Promotes Opioid Recovery and Treatment for Patients and Communities Act (the SUPPORT Act) (Pub. L. 115–271, enacted October 24, 2018) added a new

[1] *https://www.cdc.gov/drugoverdose/data/index.html.*

[2] *https://www.hhs.gov/about/news/2017/10/26/hhs-acting-secretary-declares-public-health-emergency-address-national-opioid-crisis.html.*

[3] *https://www.phe.gov/emergency/news/healthactions/phe/Pages/opioid-16oct2019.aspx.*

[4] *https://jamanetwork.com/journals/jamapsychiatry/fullarticle/2535238.*

section 1861(jjj) to the Act, establishing a new Part B benefit category for OUD treatment services furnished by an OTP beginning on or after January 1, 2020. Section 1861(jjj)(1) of the Act defines OUD treatment services as items and services furnished by an OTP (as defined in section 1861(jjj)(2) of the Act) for treatment of OUD. Section 2005 of the SUPPORT Act also amended the definition of ''medical and other health services'' in section 1861(s) of the Act to provide for coverage of OUD treatment services and added a new section 1834(w) to the Act and amended section 1833(a)(1) of the Act to establish a bundled payment to OTPs for OUD treatment services furnished during an episode of care beginning on or after January 1, 2020.

OTPs must have a current, valid certification from SAMHSA to satisfy the Controlled Substances Act registration requirement under 21 U.S.C. 823(g)(1). To obtain SAMHSA certification, OTPs must have a valid accreditation by an accrediting body approved by SAMHSA, and must be certified by SAMHSA as meeting federal opioid treatment standards in § 8.12. There are currently about 1,700 OTPs nationwide.[5] All states except Wyoming have OTPs. Approximately 74 percent of patients receiving services from OTPs receive methadone for MAT, with the vast majority of the remaining patients receiving buprenorphine.[6]

Many payers currently cover MAT services for treatment of OUD. Medicaid [7] is one of the largest payers of medications for SUD, including methadone for MAT provided in OTPs.[8] OUD treatment services and MAT are also covered by other payers such as TRICARE and private insurers. TRICARE established coverage and payment for MAT and OUD treatment services furnished by OTPs in late 2016 (81 FR 61068). In addition, as discussed in the ''Patient Protection and Affordable Care Act; HHS Notice of Benefit and Payment Parameters for 2020'' final rule, many qualified health plans covered MAT medications for plan year 2018 (84 FR 17536).

In the CY 2019 PFS final rule (83 FR 59497), we included a Request for Information (RFI) to solicit public comments on the implementation of the new Medicare benefit category for OUD treatment services furnished by OTPs established by section 2005 of the SUPPORT Act. We received 9 public comments. Commenters were generally supportive of the new benefit and expanding access to OUD treatment for Medicare beneficiaries. We received feedback that the bundled payments to OTPs should recognize the intensity of services furnished in the initiation stages, durations of care, the needs of patients with more complex needs, costs of emerging technologies, and use of peer support groups. We also received feedback that costs associated with care coordination among the beneficiary's practitioners should be included in the bundled payment given the myriad of health issues beneficiaries with OUD face. We considered this feedback as we developed our proposals for implementing the new benefit category for OUD treatment services furnished by OTPs and the proposed bundled payments for these services.

To implement section 2005 of the SUPPORT Act, we proposed to establish rules to govern Medicare coverage of and payment for OUD treatment services furnished in OTPs. We proposed to establish definitions of OUD treatment services and OTP for purposes of the Medicare Program. We also proposed a methodology for determining Medicare payment for such services provided by OTPs. We proposed to codify these policies in a new section of the regulations at § 410.67. For a discussion about Medicare enrollment requirements and the program integrity approach for OTPs, we refer readers to section III.H. in this final rule, Medicare Enrollment of Opioid Treatment Programs.

2. Definitions

a. Opioid Use Disorder Treatment Services

The SUPPORT Act amended section 1861 of the Act by adding a new subsection (jjj)(1) that defines ''opioid use disorder treatment services'' as the items and services that are furnished by an OTP for the treatment of OUD, as set forth in subparagraphs (A) through (F) of section 1861(jjj)(1) of the Act which include:

- Opioid agonist and antagonist treatment medications (including oral, injected, or implanted versions) that are approved by the Food and Drug Administration (FDA) under section 505 of the Federal Food, Drug, and Cosmetic Act (FFDCA) (21 U.S.C. 355) for use in the treatment of OUD;
- Dispensing and administration of such medications, if applicable;
- Substance use counseling by a professional to the extent authorized under state law to furnish such services;
- Individual and group therapy with a physician or psychologist (or other mental health professional to the extent authorized under state law);
- Toxicology testing; and
- Other items and services that the Secretary determines are appropriate (but in no event to include meals or transportation).

As described previously, section 1861(jjj)(1)(A) of the Act defines covered OUD treatment services to include oral, injected, and implanted opioid agonist and antagonist medications approved by the FDA under section 505 of the FFDCA for use in the treatment of OUD. There are three drugs currently approved by the FDA for the treatment of opioid dependence: Buprenorphine, methadone, and naltrexone.[9] FDA notes that all three of these medications have been demonstrated to be safe and effective in combination with counseling and psychosocial support and that those seeking treatment for an OUD should be offered access to all three options as this allows providers to work with patients to select the medication best suited to an individual's needs.[10] Each of these medications is discussed below in more detail.

Buprenorphine is FDA-approved for acute and chronic pain in addition to opioid dependence. It is listed by the Drug Enforcement Administration (DEA) as a Schedule III controlled substance because of its moderate to low potential for physical and psychological dependence.[11] [12] The medication's partial agonist properties allow for its use in opioid replacement therapy, which is a process of treating OUD by using a substance, for example, buprenorphine or methadone, to substitute for a stronger full agonist opioid.[13] Buprenorphine drug products that are currently FDA-approved and marketed for the treatment of opioid dependence include oral buprenorphine tablets, oral buprenorphine with

[6] *https://wwwdasis.samhsa.gov/dasis2/nssats.htm.*

[7] Medicaid provides health care coverage to 65.9 million Americans, including low-income adults, children, pregnant women, elderly adults and people with disabilities. Medicaid is administered by states, according to federal requirements, and is funded jointly by states and the federal government. States have the flexibility to administer the Medicaid program to meet their own state needs within the Medicaid program parameters set forth in federal statute and regulations. As a result, there is variation in how each state implements its programs.

naloxone [14] films and tablets, an extended-release buprenorphine injection for subcutaneous use, and a buprenorphine implant for subdermal administration.[15] In most patients with opioid dependence, the initial oral dose is 2 to 4 mg per day with a maintenance dose of 8–12 mg per day.[16] Dosing for the extended-release injection is 300 mg monthly for the first 2 months followed by a maintenance dose of 100 mg monthly.[17] The extended-release injection is indicated for patients who have initiated treatment with an oral buprenorphine product for a minimum of 7 days.[18] The buprenorphine implant consists of four rods containing 74.2 mg of buprenorphine each, and provides up to 6 months of treatment for patients who are clinically stable on low-to-moderate doses of an oral buprenorphine-containing product.[19] Currently, federal regulations permit buprenorphine to be prescribed or dispensed by qualifying physicians and qualifying other practitioners at office-based practices and dispensed in OTPs.[20] [21]

Methadone is FDA-approved for management of severe pain in addition to opioid dependence. It is listed by the DEA as a Schedule II controlled substance because of its high potential for abuse, with use potentially leading to severe psychological or physical dependence.[22] [23] Methadone drug products that are FDA-approved for the treatment of opioid dependence include oral methadone concentrate and tablets.[24] In patients with opioid dependence, the total daily dose of methadone on the first day of treatment should not ordinarily exceed 40 mg, unless the program physician documents in the patient's record that 40 mg did not suppress opioid abstinence, with clinical stability generally achieved at doses between 80 to 120 mg/day.[25] By law, methadone used for treatment of OUD can only be dispensed through an OTP certified by SAMHSA except in certain, very limited circumstances.[26]

Naltrexone is FDA-approved to treat alcohol dependence in addition to OUD.[27] Unlike buprenorphine and methadone, which activate opioid receptors, naltrexone binds and blocks opioid receptors and reduces opioid cravings.[28] Therefore, naltrexone is not a scheduled substance; there is no abuse and diversion potential with naltrexone.[29] [30] The naltrexone drug product that is FDA-approved for the treatment of opioid dependence is an extended-release, intramuscular injection.[31] The recommended dose is 380 mg delivered intramuscularly every 4 weeks or once a month after the patient has achieved an opioid-free duration of a minimum of 7–10 days.[32] Naltrexone can be prescribed by any health care provider who is licensed to prescribe medications.[33]

We proposed that the OUD treatment services that may be furnished by OTPs include the first five items and services listed in the statutory definition described above, specifically the medications approved by the FDA under section 505 of the FFDCA for use in the treatment of OUD; the dispensing and administration of such medication, if applicable; substance use counseling; individual and group therapy; and toxicology testing. We also proposed to use our discretion under section 1861(jjj)(1)(F) of the Act to include other items and services that the Secretary determines are appropriate to include the use of telecommunications for certain services, as discussed later in this section. We proposed to codify this definition of OUD treatment services furnished by OTPs at § 410.67(b). As part of this definition, we also proposed to specify that an OUD treatment service is an item or service that is furnished by an OTP that meets the applicable requirements to participate in the Medicare Program and receive payment.

We solicited comment on any other items and services (not including meals or transportation as they are statutorily prohibited) currently covered and paid for under Medicare Part B when furnished by Medicare-enrolled providers/suppliers that the Secretary should consider adding to this definition, including any evidence supporting the impact of the use of such items and services in the treatment of OUD and enumeration of their costs. We noted we were particularly interested in public feedback on whether intake activities, which may include services such as an initial physical examination, initial assessments and preparation of a treatment plan, as well as periodic assessments, should be included in the definition of OUD treatment services. Additionally, we noted that while the current FDA-approved medications under section 505 of the FFDCA for the treatment of OUD are opioid agonists and antagonist medications, other medications that are not opioid agonist and antagonist medications, including drugs and biologicals, could be developed for the treatment of OUD in the future. We solicited public feedback on whether there are any drug development efforts in the pipeline that could result in medications intended for use in the treatment of OUD with a novel mechanism of action that does not involve opioid agonist and antagonist mechanisms (that is, outside of activating and/or blocking opioid receptors). We also solicited comment on how medications that may be approved by the FDA in the future for use in the treatment of OUD with a novel mechanism of action, such as medications approved under section 505 of the FFDCA to treat OUD and biological products licensed under section 351 of the Public Health Service Act to treat OUD, should be considered in the context of OUD treatment services provided by OTPs, and whether CMS should use the discretion afforded under section 1861(jjj)(1)(F) of the Act to include such medications in the definition of OUD treatment services given the possibility that such medications could be approved in the future.

We received a number of public comments on the proposed definition of ''opioid use disorder treatment services.'' The following is a summary of the comments we received and our responses.

Comment: Commenters were generally supportive of including the five statutorily-required items and services in the definition of OUD treatment services: (1) Opioid agonist and antagonist treatment medications approved by the FDA for treatment of OUD; (2) dispensing and administration

[14] Naloxone is added to buprenorphine to reduce its abuse potential and limit diversion.

of such medications; (3) substance use counseling; (4) individual and group therapy; and (5) toxicology testing. Commenters were also generally supportive of the use of telecommunications for substance use counseling and individual and group therapy services.

Response: We thank commenters for their support of including the five statutorily-required items and services and the use of telecommunications for certain services in the definition of OUD treatment services. We are finalizing a definition of OUD treatment services that includes these items and services at § 410.67(b).

Comment: Many commenters expressed support for allowing licensed mental health professionals to directly bill Medicare for counseling and therapy services provided in an OTP. Some commenters requested clarification on whether OUD treatment services would only include substance use counseling and individual and group therapy services furnished by physicians, psychologists, and practitioners that can bill Medicare directly and not services furnished by other types of mental health professionals that are licensed by the state, such as licensed professional counselors, licensed mental health counselors, and licensed clinical professional counselors. These commenters raised concerns that only allowing physicians and psychologists to furnish these services and not including other mental health professionals authorized by the state to furnish counseling and therapy services would limit access to care due to workforce shortages. Some commenters requested that we clarify the distinction between substance use counseling and individual and group therapy services or allow these terms to be generally used interchangeably.

Response: Under sections 1861(jjj)(1)(C) and (D) of the Act, substance use counseling for OUD treatment can be provided by ''a professional to the extent authorized under State law to furnish such services,'' while individual and group therapy can be ''with a physician or psychologist (or other mental health professional to the extent authorized under State law).'' Consistent with the statute, in the proposed rule we did not propose to limit the professionals that can provide these services to physicians, psychologists, or other practitioners who can bill Medicare directly. Instead, we noted that the professionals that could provide such services could include licensed professional counselors, licensed clinical alcohol and drug counselors, and certified peer specialists that are permitted to furnish this type of therapy or counseling by state law and scope of practice. To the extent that the individuals furnishing therapy or counseling services are not authorized under state law to furnish such services, the therapy or counseling services provided by these professionals would not be covered as OUD treatment services. Regarding the commenters' request for clarification of the distinction between substance use counseling and therapy services, we are not specifying the differences between these two types of services, but would note that different types of professionals may be authorized to furnish substance use counseling versus therapy services under state law. Regarding the comments that supported allowing licensed mental health professionals to directly bill Medicare for counseling and therapy services provided in an OTP, we note that only OTPs can bill for the bundled payment for furnishing OUD treatment services.

Comment: Several commenters opined on the types of toxicology testing that should be included in the definition of OUD treatment services. One commenter recommended that we clarify the language regarding ''toxicology testing'' in the definition of OUD treatment services to include ''presumptive and definitive drug testing in line with clinical best practice'' to better de-stigmatize the use of these services. Other commenters suggested that only presumptive toxicology testing be included in the definition and that definitive testing be billed separately under the Medicare Clinical Laboratory Fee Schedule (CLFS). Alternatively, if definitive testing were to be included, commenters suggested that the bundled payment rate should be updated to reflect the cost of this type of toxicology testing by increasing the bundled payment rate or establishing add-on payments for definitive testing. Commenters raised the differences in complexities and costs between presumptive and definitive toxicology testing. These commenters explained that presumptive testing is an initial test that is conducted through point of care rapid result cup testing, which has testing and accuracy limitations. OTPs typically perform presumptive toxicology testing for drugs of abuse on-site using cups and dipsticks that indicate the presence or absence of drug classes as long as the test systems that are used are classified as waived test systems under the regulations implementing the Clinical Laboratory Improvement Amendments (CLIA) (Pub. L. 100–578, enacted October 31, 1988), as amended, 42 CFR part 493, and the OTP has a valid certificate of waiver that authorizes it to perform CLIA waived tests.

Due to limitations of presumptive testing, OTPs may also send urine samples to reference labs for definitive drug testing to make sure they know exactly which drugs have been ingested. Definitive drug testing uses liquid or gas chromatography coupled with mass spectrometry to identify hundreds of specific drugs and their metabolites. Definitive drug testing identifies and precisely quantifies specific drugs and/or metabolites that are positive in a sample. A treating physician may order a confirmatory test despite the outcome of the presumptive testing to obtain more information on the drugs that a patient is taking. Commenters raised the cost differences under the CY 2019 Medicare CLFS between the two types of tests ranging from $12.60–$64.65 for presumptive testing to $114.43–$246.92 for definitive testing. Some commenters requested clarification of the distinction between the toxicology testing that would be included in the definition of OUD treatment services and would be paid under the bundle and medically-necessary toxicology testing that is billed and paid under the Medicare CLFS.

Response: We noted in the CY 2020 PFS proposed rule that under SAMHSA certification standards at § 8.12(f)(6), OTPs are required to provide adequate testing or analysis for drugs of abuse, including at least eight random drug abuse tests per year, per patient in maintenance treatment in accordance with generally accepted clinical practice. These drug abuse tests are used for diagnosing, monitoring and evaluating progress in treatment (84 FR 40527). Consistent with the discussion of the different types of toxicology testing in the proposed rule, we are clarifying that the reference to toxicology testing in the definition of OUD treatment services includes both presumptive and definitive testing. We are also clarifying that all types of toxicology testing that are used for diagnosing, monitoring and evaluating the progress in treatment at the OTP are included in the definition of OUD treatment services and would be paid under the bundled payment. Toxicology tests that are unrelated to the care and treatment for OUD at an OTP may be paid separately under the CLFS, if reasonable and necessary, since toxicology tests for these purposes are not included in the bundled payments to OTPs. CMS expects that the ordering

practitioner would document the medical necessity for this additional testing in the beneficiary's medical record.

Comment: Many commenters supported the inclusion of intake activities, such as the initial physician examination, initial assessment and preparation of a treatment plan, as well as periodic assessments in the definition of OUD treatment services. One of the commenters noted these were significant activities performed by the treatment teams that were not included in the proposed bundle, nor are they paid for separately in the OTPs, and stated these services should be included. Another commenter stated that initial assessment and treatment planning activities are generally the first part of OUD treatment and that treatment planning cannot always be linear and must, at times, be revised. The commenter noted that these activities are typical of any substance abuse treatment program and should be included in the definition of OUD treatment services.

Response: We agree with commenters that intake activities, such as the initial physician examination, initial assessment and preparation of a treatment plan, should be included in the definition of OUD treatment services. We also agree with commenters that periodic assessment should be included in the definition of OUD treatment services. We note that an initial medical examination and both initial and periodic assessments are required under the SAMHSA regulations. Specifically, under the SAMHSA requirements at § 8.12(f)(2), OTPs shall require each patient to undergo a complete, fully documented physical evaluation by a program physician or a primary care physician, or an authorized healthcare professional under the supervision of a program physician, before admission to the OTP. The full medical examination, including the results of serology and other tests, must be completed within 14 days following admission.

Under § 8.12(f)(4), OTPs are required to do initial and periodic assessments. Each patient accepted for treatment at an OTP shall be assessed initially and periodically by qualified personnel to determine the most appropriate combination of services and treatment. The initial assessment must include preparation of a treatment plan that includes: The patient's short-term goals and the tasks the patient must perform to complete the short-term goals; the patient's requirements for education, vocational rehabilitation, and employment; and the medical, psychosocial, economic, legal, or other supportive services that a patient needs. The treatment plan also must identify the frequency with which these services are to be provided. The plan must be reviewed and updated to reflect that patient's personal history, his or her current needs for medical, social, and psychological services, and his or her current needs for education, vocational rehabilitation, and employment services. We understand that intake activities and periodic assessments are integral services for the establishment and maintenance of OUD treatment for a beneficiary at an OTP. Therefore, we are believe it is reasonable to include these services in the definition of OUD treatment services. Accordingly, we are finalizing a revised definition of OUD treatment services in § 410.67(b) that reflects the required intake activities and periodic assessments. We discuss coding and payment for these services in the Coding section below.

Comment: A few commenters requested that CMS publish a detailed list of the items and services that are covered as OUD treatment services and would be included in the bundled payment to the OTPs.

Response: The items and services included in the definition of OUD treatment services are listed in the preamble of this final rule and in the regulations at § 410.67(b). We note that the items and services that are medically-necessary for OUD treatment could in some cases also be furnished and billed by other Medicare practitioners under another Medicare benefit category. For example, we anticipate that some beneficiaries receiving counseling or therapy as part of an OTP bundle of services may also be receiving medically reasonable and necessary counseling or therapy as part of a physician's service during the same time period. In this scenario, the counseling or therapy provided as part of a physician's service could be billed separately.

Comment: One commenter supported a definition of OUD treatment services that would allow for coverage of innovative therapies in development that have not yet been approved by the FDA for treatment of OUD. The commenter suggested changing the proposed regulatory language in § 410.67(b)(1) to ''Therapies approved by the Food and Drug Administration under section 505 of the Federal, Food, Drug, and Cosmetic Act for use in treatment of opioid use disorder.'' A few commenters recommended that drugs used for opioid detoxification withdrawal and management maintenance such as naloxone, clonidine, and lofexidine be included in the definition of OUD treatment services.

Response: We thank the commenters for their feedback on including drugs that are not opioid agonist or antagonist medications in the definition of OUD treatment services. For CY 2020, we are finalizing a definition of OUD treatment services that reflects the statutory requirement in section 1861(jjj)(1)(A) of the Act to include opioid agonist and antagonist treatment medications approved by the FDA in the definition of OUD treatment services. We will consider these comments on additional drugs to include in the definition of OUD treatment services under our discretionary authority in section 1861(jjj)(1)(F) of the Act as we continue to work on refining this new Medicare benefit in future rulemaking.

Comment: In response to the request for comment on adding various other types of items and services to the definition of OUD treatment services, several commenters indicated that case management and care coordination are services furnished by OTPs and should be included in the definition of OUD treatment services. Some commenters also requested that peer-to-peer support, crisis management, and non-opioid alternative treatment be included in the definition of OUD treatment services. One commenter urged CMS to include Medical Nutrition Therapy services that are furnished by registered dietician nutritionists as a core component of OTPs because individuals with OUD suffer from gastrointestinal issues, eating disorders and malnutrition. The commenter stated it is essential that CMS build a payment model that leverages the different expertises of the full health care team, including registered dietician nutritionists. Another commenter urged CMS to include physical therapy within the list of OUD treatment services and recommended adjusting the bundled payment rates to account for instances in which effective treatment requires physical therapy and other nonpharmacological treatment services. Some commenters noted that the proposed bundled payment should include both e-prescribing and behavioral health information technology consultation and support services. One commenter urged that the definition of OUD treatment services include services performed by pharmacists including psychiatric pharmacists, such as medication adherence, management, and education or counseling. Some commenters suggested adding other laboratory tests, including HIV, Hepatitis, liver disease,

or infectious diseases. Other commenters noted SAMHSA requirements for treatment for tobacco use disorder, alcohol use disorder, and family services for OTPs and recommended that these should be included in the definition of OUD treatment.

Response: We appreciate the comments recommending additional types of items and services that could be added to the definition of OUD treatment services. For CY 2020, we are finalizing a definition of OUD treatment services that includes those items and services that we understand are required for all OTPs to furnish as specified in SAMHSA regulations (part 8). Because this is the first year of the OTP benefit, we believe it would be premature to include in the definition additional items and services until we have additional information regarding their use by OTPs in the treatment of Medicare beneficiaries with OUD. However, we note that the definition of OUD treatment services does not prevent an OTP from furnishing the additional items and services suggested above in accordance with best practices as clinically appropriate, SAMHSA regulations and guidance, and State law. We may consider the items and services suggested by commenters further as we continue to work on refining this new Medicare benefit in future rulemaking. Accordingly, we are interested in continued feedback and data on the specific items and services, including their frequency, furnished to beneficiaries by an OTP.

After consideration of the public comments, we are finalizing our proposal to include the five statutorily-required items and services in the definition of OUD treatment services in § 410.67(b). For the reasons discussed previously, we will also include intake activities and periodic assessments required under § 8.14(f)(4) in the definition of OUD treatment services in § 410.67(b).

b. Opioid Treatment Program

Section 2005 of the SUPPORT Act also amended section 1861 of the Act by adding a new subsection (jjj)(2) to define an OTP as an entity meeting the definition of OTP in 42 CFR 8.2 or any successor regulation (that is, a program or practitioner engaged in opioid treatment of individuals with an opioid agonist treatment medication registered under 21 U.S.C. 823(g)(1)), that meets the additional requirements set forth in subparagraphs (A) through (D) of section 1861(jjj)(2) of the Act. Specifically, the OTP:

- Is enrolled under section 1866(j) of the Act;
- Has in effect a certification by SAMHSA for such a program;
- Is accredited by an accrediting body approved by SAMHSA; and
- Meets such additional conditions as the Secretary may find necessary to ensure the health and safety of individuals being furnished services under such program and the effective and efficient furnishing of such services.

These requirements are discussed in more detail in this section.

(1) Enrollment

As discussed previously, under section 1861(jjj)(2)(A) of the Act, an OTP must be enrolled in Medicare to receive Medicare payment for covered OUD treatment services under section 1861(jjj)(1) of the Act. We refer the reader to section III.H. of this final rule, Medicare Enrollment of Opioid Treatment Programs, for further details on our policies related to enrollment of OTPs.

(2) Certification by SAMHSA

As provided in section 1861(jjj)(2)(B) of the Act, OTPs must be certified by SAMHSA to furnish Medicare-covered OUD treatment services. SAMHSA has created a system to certify and accredit OTPs, which is governed by part 8, subparts B and C. This regulatory framework allows SAMHSA to focus its oversight efforts on improving treatment rather than solely ensuring that OTPs are meeting regulatory criteria, and preserves states' authority to regulate OTPs. To be certified by SAMHSA, OTPs must comply with the federal opioid treatment standards as outlined in § 8.12, be accredited by a SAMHSA-approved accreditation body, and comply with any other conditions for certification established by SAMHSA. Specifically, SAMHSA requires OTPs to provide the following services:

- *General*—OTPs shall provide adequate medical, counseling, vocational, educational, and other assessment and treatment services.
- *Initial medical examination services*—OTPs shall require each patient to undergo a complete, fully documented physical evaluation by a program physician or a primary care physician, or an authorized healthcare professional under the supervision of a program physician, before admission to the OTP.
- *Special services for pregnant patients*—OTPs must maintain current policies and procedures that reflect the special needs of patients who are pregnant. Prenatal care and other gender specific services for pregnant patients must be provided either by the OTP or by referral to appropriate healthcare providers.
- *Initial and periodic assessment services*—Each patient accepted for treatment at an OTP shall be assessed initially and periodically by qualified personnel to determine the most appropriate combination of services and treatment.
- *Counseling services*—OTPs must provide adequate substance abuse counseling to each patient as clinically necessary by a program counselor, qualified by education, training, or experience to assess the patient's psychological and sociological background.
- *Drug abuse testing services*—OTPs must provide adequate testing or analysis for drugs of abuse, including at least eight random drug abuse tests per year, per patient in maintenance treatment, in accordance with generally accepted clinical practice. For patients in short-term detoxification treatment, defined in § 8.2 as detoxification treatment not in excess of 30 days, the OTP shall perform at least one initial drug abuse test. For patients receiving long-term detoxification treatment, the program shall perform initial and monthly random tests on each patient.

The provisions governing recordkeeping and patient confidentiality at § 8.12(g)(1) require that OTPs shall establish and maintain a recordkeeping system that is adequate to document and monitor patient care. All records are required to be kept confidential in accordance with all applicable federal and state requirements. The requirements at § 8.12(g)(2) state that OTPs shall document in each patient's record that the OTP made a good faith effort to review whether or not the patient is enrolled in any other OTP. A patient enrolled in an OTP shall not be permitted to obtain treatment in any other OTP except in exceptional circumstances, as determined by the medical director or program physician of the OTP in which the patient is enrolled (§ 8.12(g)(2)). Additionally, the requirements at § 8.12(h) address medication administration, dispensing, and use.

SAMHSA requires that OTPs shall ensure that opioid agonist treatment medications are administered or dispensed only by a practitioner licensed under the appropriate state law and registered under the appropriate state and federal laws to administer or dispense opioid drugs, or by an agent of such a practitioner, supervised by and under the order of the licensed practitioner. OTPs shall use only those

opioid agonist treatment medications that are approved by the FDA for use in the treatment of OUD. They must maintain current procedures that are adequate to ensure that the dosing requirements are met, and each opioid agonist treatment medication used by the program is administered and dispensed in accordance with its approved product labeling.

At § 8.12(i), regarding unsupervised or ''take-home'' use of opioid agonist treatment medications, SAMHSA has specified that OTPs must follow requirements specified by SAMHSA to limit the potential for diversion of opioid agonist treatment medications to the illicit market when dispensed to patients as take-homes, including maintaining current procedures to identify the theft or diversion of take-home medications. The requirements at § 8.12(j) for interim maintenance treatment, state that the program sponsor of a public or nonprofit private OTP subject to the approval of SAMHSA and the state, may place an individual, who is eligible for admission to comprehensive maintenance treatment, in interim maintenance treatment if the individual cannot be placed in a public or nonprofit private comprehensive program within a reasonable geographic area and within 14 days of the individual's application for admission to comprehensive maintenance treatment. Patients in interim maintenance treatment are permitted to receive daily dosing, but take-homes are not permitted. During interim maintenance treatment, initial treatment plans and periodic treatment plan evaluations are not required and a primary counselor is not required to be assigned to the patient. The OTP must be able to transfer these patients from interim maintenance into comprehensive maintenance treatment within 120 days. Interim maintenance treatment must be provided in a manner consistent with all applicable federal and state laws.

The SAMHSA requirements at § 8.12(b) address administrative and organizational structure, requiring that an OTP's organizational structure and facilities shall be adequate to ensure quality patient care and meet the requirements of all pertinent federal, state, and local laws and regulations. At a minimum, each OTP shall formally designate a program sponsor and medical director who is a physician who is licensed to practice medicine in the jurisdiction in which the OTP is located. The program sponsor shall agree on behalf of the OTP to adhere to all requirements set forth in part 8, subpart C, and any regulations regarding the use of opioid agonist treatment medications in the treatment of OUD that may be promulgated in the future. The medical director shall assume responsibility for administering all medical services performed by the OTP. In addition, the medical director shall be responsible for ensuring that the OTP is in compliance with all applicable federal, state, and local laws and regulations.

The provision governing patient admission criteria at § 8.12(e) requires that an OTP shall maintain current procedures designed to ensure that patients are admitted to maintenance treatment by qualified personnel who have determined, using accepted medical criteria such as those listed in the Diagnostic and Statistical Manual of Mental Disorders, that the person has had an OUD for at least 1 year before admission for treatment. If under 18 years of age, the patient is required to have had two documented unsuccessful attempts at short-term detoxification or drug-free treatment within a 12-month period and have the written consent of a parent, legal guardian, or responsible adult designated by the relevant state authority, to be eligible for maintenance treatment.

To ensure continuous quality improvement, the requirements at § 8.12(c) state that an OTP must maintain current quality assurance and quality control plans that include, among other things, annual reviews of program policies and procedures and ongoing assessment of patient outcomes, and a current Diversion Control Plan as part of its quality assurance program.

The requirements at § 8.12(d) with respect to staff credentials, state that each person engaged in the treatment of OUD must have sufficient education, training, and experience, or any combination thereof, to enable that person to perform the assigned functions. In addition, all physicians, nurses, and other licensed professional care providers, including addiction counselors, must comply with the credentialing requirements of their respective professions.

In addition to meeting the criteria described above, OTPs must apply to SAMHSA for certification. As part of the conditions for certification, SAMHSA specifies that OTPs shall:

- Comply with all pertinent state laws and regulations.
- Allow inspections and surveys by duly authorized employees of SAMHSA, by accreditation bodies, by the DEA, and by authorized employees of any relevant State or federal governmental authority.
- Comply with the provisions of 42 CFR part 2 (regarding confidentiality of SUD patient records).
- Notify SAMHSA within 3 weeks of any replacement or other change in the status of the program sponsor or medical director.
- Comply with all regulations enforced by the DEA under 21 CFR chapter II, and be registered by the DEA before administering or dispensing opioid agonist treatment medications.
- Operate in accordance with federal opioid treatment standards and approved accreditation elements.

Furthermore, SAMHSA has issued additional guidance for OTPs that describes how programs can achieve and maintain compliance with federal regulations.[34]

(3) Accreditation of OTPs by a SAMHSA-Approved Accrediting Body

As provided in section 1861(jjj)(2)(C) of the Act, OTPs must be accredited by a SAMHSA-approved accrediting body in order to furnish Medicare-covered OUD treatment services. In 2001, the Department of Health and Human Services (HHS) and SAMHSA issued final regulations to establish a new oversight system for the treatment of SUDs with MAT (part 8). SAMHSA-approved accrediting bodies evaluate OTPs and perform site visits to ensure SAMHSA's opioid dependency treatment standards are met. SAMHSA also requires OTPs to be accredited by a SAMHSA-approved accrediting body (§ 8.11).

The SAMHSA regulations establish procedures for an entity to apply to become a SAMHSA-approved accrediting body (§ 8.3). When determining whether to approve an applicant as an accreditation body, SAMHSA examines the following:

- Evidence of the nonprofit status of the applicant (that is, of fulfilling Internal Revenue Service requirements as a nonprofit organization) if the applicant is not a state governmental entity or political subdivision;
- The applicant's accreditation elements or standards and a detailed discussion showing how the proposed accreditation elements or standards will ensure that each OTP surveyed by the applicant is qualified to meet or is meeting each of the federal opioid treatment standards set forth in § 8.12;
- A detailed description of the applicant's decision-making process, including:

++ Procedures for initiating and performing onsite accreditation surveys of OTPs;

[34] *https://store.samhsa.gov/system/files/pep15-fedguideotp.pdf.*

++ Procedures for assessing OTP personnel qualifications;

++ Copies of an application for accreditation, guidelines, instructions, and other materials the applicant will send to OTPs during the accreditation process;

++ Policies and procedures for notifying OTPs and SAMHSA of deficiencies and for monitoring corrections of deficiencies by OTPs; for suspending or revoking an OTP's accreditation; and to ensure processing of applications for accreditation and for renewal of accreditation within a timeframe approved by SAMHSA; and;

++ A description of the applicant's appeals process to allow OTPs to contest adverse accreditation decisions.

• Policies and procedures established by the accreditation body to avoid conflicts of interest, or the appearance of conflicts of interest;

• A description of the education, experience, and training requirements for the applicant's professional staff, accreditation survey team membership, and the identification of at least one licensed physician on the applicant's staff;

• A description of the applicant's training policies;

• Fee schedules, with supporting cost data;

• Satisfactory assurances that the applicant will comply with the requirements of § 8.4, including a contingency plan for investigating complaints under § 8.4(e);

• Policies and procedures established to protect confidential information the applicant will collect or receive in its role as an accreditation body; and

• Any other information SAMHSA may require.

SAMHSA periodically evaluates the performance of accreditation bodies primarily by inspecting a selected sample of the OTPs accredited by the accrediting body and by evaluating the accreditation body's reports of surveys conducted, to determine whether the OTPs surveyed and accredited by the accreditation body are in compliance with the federal opioid treatment standards. There are currently six SAMHSA-approved accreditation bodies.[35]

(4) Provider Agreement

Section 2005(d) of the SUPPORT Act amended section 1866(e) of the Act by adding a new paragraph (3) which includes OTPs (but only with respect to the furnishing of OUD treatment services) as a ''provider of services'' for purposes of section 1866 of the Act. All providers of services under section 1866 of the Act must enter into a provider agreement with the Secretary and comply with other requirements specified in that section. These requirements are codified at 42 CFR part 489. Therefore, we proposed to amend part 489 to include OTPs (but only for furnishing OUD treatment services) as a provider. Specifically, we proposed to add OTPs (but only for the furnishing of OUD treatment services) to the list of providers in § 489.2. This addition makes clear that the other requirements specified in section 1866 of the Act, and implemented in part 489, which include the limits on charges to beneficiaries, will apply to OTPs (in connection with the furnishing of OUD treatment services). We also proposed additional changes to make clear that certain parts of part 489, which implement statutory requirements other than section 1866 of the Act, do not apply to OTPs. For example, since we did not propose any conditions of participation for OTPs, we proposed to amend § 489.10(a), which states that providers specified in § 489.2 must meet conditions of participation, to add that OTPs must meet the requirements set forth in part 489 and elsewhere in that chapter. In addition, we proposed to specify that the effective date of the provider agreement is the date on which CMS accepts a signed agreement (proposed amendment to § 489.13(a)(2)), and is not dependent on surveys or an accrediting organization's determination related to conditions of participation. As noted earlier in the preamble to this final rule, OTPs are required to be certified by SAMHSA and accredited by an accrediting body approved by SAMHSA. In § 489.53, we proposed to create a basis for termination of the provider agreement if the OTP no longer meets the requirements set forth in part 489 or elsewhere in that chapter (including if it no longer has a SAMHSA certification or accreditation by a SAMHSA-approved accrediting body). Finally, we proposed to revise 42 CFR part 498 to ensure that OTPs have access to the appeal process in case of an adverse determination concerning continued participation in the Medicare program. Specifically, we proposed to amend the definition of provider in § 498.2 to include OTPs. We also indicated that we would continue to review the application of the provider agreement requirements to OTPs to determine whether any further amendments to parts 489 and 498 were needed to ensure that the existing provider agreement regulations are applied to OTPs consistent with our proposals and section 2005 of the SUPPORT Act.

Comment: Multiple commenters questioned whether provider agreements, once executed, will be made retroactive to January 1, 2020.

Response: We proposed in § 489.13(a)(2)(i) that the effective date of an OTP provider agreement would be the date on which we accept a signed agreement that ensures that the OTP meets all federal requirements. Yet, as discussed in section III.H of the final rule we also proposed retrospective billing dates in § 424.520(d) and § 424.521(a) if the requirements of those sections were met. To ensure that the provider agreement and billing effective dates are uniform, we are not finalizing our proposed change to § 489.13(a)(2)(i). Instead, we will establish a new § 489.13(a)(2)(iii) stating that the provider agreement effective date is to be consistent with the billing effective date established pursuant § 424.520(d) or § 424.521(a), as applicable. In sum, the effective dates of OTP provider agreements will not automatically be made retroactive to January 1, 2020, but will instead be governed by § 489.13(a)(2)(iii).

After consideration of comments received, we are making changes to § 489.13(a)(2)(i) to align with the provider agreement effective date to the billing effective date under § 424.520(d) or § 424.521(a), as applicable. We did not receive any other comments on the proposals for the provider agreement requirements in §§ 489.2, 489.10, 489.43, and 498.2., and are finalizing these changes as proposed.

(5) Additional Conditions

As provided in section 1861(jjj)(2)(D) of the Act, to furnish Medicare-covered OUD treatment services, OTPs must meet any additional conditions as the Secretary may find necessary to ensure the health and safety of individuals being furnished services under such program and the effective and efficient furnishing of such services. The comprehensive OTP standards for certification of OTPs address the same topics as would be addressed by CMS supplier standards, such as client assessment and the services required to be provided. Furthermore, the detailed process established by SAMHSA for selecting and overseeing its accreditation organizations is similar to the accrediting organization oversight process that would typically be established by CMS. Thus, in the proposed rule, we stated that we believe the existing SAMHSA certification and accreditation requirements are both

[35] *https://www.samhsa.gov/medication-assisted-treatment/opioid-treatment-accrediting-bodies/approved.*

appropriate and sufficient to ensure the health and safety of individuals being furnished services by OTPs, as well as the effective and efficient furnishing of such services. We also indicated that we believe that creating additional conditions at this time for participation in Medicare by OTPs could create unnecessary regulatory duplication and could be potentially burdensome for OTPs. Therefore, we did not propose any additional conditions for participation in Medicare by OTPs in the CY 2020 PFS proposed rule. We solicited public comments on our proposed approach, including input on whether there are any additional conditions that should be required for OTPs furnishing Medicare-covered OUD treatment services.

(6) Proposed Definition of Opioid Treatment Program

We proposed to define ''opioid treatment program'' at § 410.67(b) as an entity that is an OTP as defined in § 8.2 (or any successor regulation) and meets the applicable requirements for an OTP. We proposed to codify this definition at § 410.67(b). In addition, we proposed that for an OTP to participate and receive payment under the Medicare program, the OTP must be enrolled under section 1866(j) of the Act, have in effect a certification by SAMHSA for such a program, and be accredited by an accrediting body approved by SAMHSA. We also proposed that an OTP must have a provider agreement as required by section 1866(a) of the Act. We proposed to codify these requirements at § 410.67(c). We solicited public comments on the proposed definition of OTP and the proposed Medicare requirements for OTPs.

The following is a summary of the comments we received and our responses.

Comment: Commenters generally supported the proposed definition of OTP, including the requirements that OTPs be enrolled under section 1866(j) of the Act, have in effect a certification by SAMHSA for such a program, and be accredited by an accrediting body approved by SAMHSA. One commenter stated that these policies represent only the start of an ongoing effort to address the opioid epidemic.

Response: We appreciate the support for the proposed definition of OTPs. We understand the importance of combating the opioid epidemic and intend to monitor the implementation of this new Medicare benefit and may propose further refinements in future rulemaking. After consideration of the comments received, we are finalizing our proposed definition of ''opioid treatment program'' at § 410.67(b).

Comment: Commenters supported the proposed Medicare requirements for OTPs, including the requirement that they have in effect a provider agreement with the Secretary. One commenter welcomed CMS' reminder to providers that being a Medicare provider carries with it a limit on charges to beneficiaries, and stated that in addition to the proposal for zero cost sharing for OTP services, this policy would help to protect beneficiary access to care and economic security.

Response: We appreciate the support for the proposal to require OTPs to enter into a provider agreement and are finalizing this requirement at § 410.67(c), along with § 424.67(b). Additionally, we reiterate that as indicated in the Health Insurance Benefit Agreement (Form CMS–1561),[36] the provider agrees to conform to the provisions of section 1866 of the Social Security Act and the applicable provisions in Title 42 Code of Federal Regulations (CFR), which in part establish the requirement that a provider must accept assignment of Medicare payment.

Comment: Many commenters supported CMS' view that the comprehensive OTP standards for certification of OTPs established by SAMHSA address the same topics as would be addressed by CMS conditions of participation, and that the detailed process established by SAMHSA for selecting and overseeing its accreditation organizations is similar to the accrediting organization oversight process that would typically be established by CMS. Furthermore, commenters agreed with CMS' conclusion that the existing SAMHSA certification and accreditation requirements are both appropriate and sufficient to ensure the health and safety of individuals receiving services from OTPs, as well as the effective and efficient furnishing of such services. Commenters also noted the regulations established by the DEA and the regulations established by states for licensure purposes as additional assurances of patient health and safety. The commenters agreed that creating additional conditions at this time for participation in Medicare by OTPs could create unnecessary regulatory duplication and could be potentially burdensome for OTPs. Thus, the commenters supported the proposal to accept the existing SAMHSA requirements for certification and accreditation as the health and safety standards that must be met in order for an OTP to participate in Medicare.

Response: We are finalizing our proposal to adopt the existing SAMHSA requirements for certification and accreditation as the health and safety standards that must be met in order for an OTP to participate in Medicare. This approach will avoid unnecessary regulatory duplication while assuring Medicare beneficiary safety at OTPs.

After consideration of the comments, we are finalizing the proposed definition of ''opioid treatment program'' at § 410.67(b). We are also finalizing the proposed Medicare requirements for OTPs at § 410.67(c). Specifically, in order for an OTP to participate and receive payment under the Medicare program, the OTP must be enrolled under section 1866(j) of the Act, have in effect certification by SAMHSA, and be accredited by an accrediting body approved by SAMHSA. Additionally, we are finalizing our proposal that an OTP must have a provider agreement as required by section 1866(a) of the Act.

3. Bundled Payments for OUD Treatment Services

Section 1834(w) of the Act, added by section 2005 of the SUPPORT Act, directs the Secretary to pay to the OTP an amount that is equal to 100 percent of a bundled payment for OUD treatment services that are furnished by the OTP to an individual during an episode of care. We proposed to establish bundled payments for OUD treatment services which, as discussed above, would include the medications approved by the FDA under section 505 of the FFDCA for use in the treatment of OUD; the dispensing and administration of such medication, if applicable; substance use counseling; individual and group therapy; and toxicology testing. In calculating the bundled payments, we proposed to apply separate payment methodologies for the drug component (which includes the medications approved by the FDA under section 505 of the FFDCA for use in the treatment of OUD) and the non-drug component (which includes the dispensing and administration of such medications, if applicable; substance use counseling; individual and group therapy; and toxicology testing) of the bundled payments. We proposed to calculate the full bundled payment rate by combining the drug component and the non-drug components. We outlined our proposals for determining the bundled payments for OUD treatment services addressing payment rates for these services under the Medicaid and

[36] *https://www.cms.gov/Medicare/CMS-Forms/CMS-Forms/Downloads/CMS1561.pdf.*

TRICARE programs, duration of the episode of care for which the bundled payment is made (including partial episodes), methodology for determining bundled payment rates for the drug and non-drug components, site of service, coding and beneficiary cost sharing. We proposed to codify the methodology for determining the bundled payment rates for OUD treatment services at § 410.67(d).

We received a number of public comments on the proposed approach to calculating the full bundled payment rate. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the proposal to calculate the full bundled payment rate by combining the drug component and the non-drug components. Another commenter stated that clinical services, such as individual and group counseling, should be billed separately from the medication.

Response: Section 1861(jjj) of the Act defines OUD treatment services to include certain opioid treatment medications furnished by an OTP, as well as other services such as substance use counseling and individual and group therapy. Section 1834(w) of the Act instructs the Secretary to make a bundled payment for the services that are furnished by an OTP to an individual during an episode of care. We do not believe the statute supports unbundling the medications from the other OUD treatment services furnished by OTPs during the same episode of care.

After consideration of the public comments, we are finalizing our proposal to calculate the full bundled payment rate for services furnished by OTPs by combining the drug component and the non-drug components. We are codifying the methodology for determining the bundled payment rates for OUD treatment services at § 410.67(d).

a. Review of Medicaid and TRICARE Programs

Section 1834(w)(2) of the Act, added by section 2005(c) of the SUPPORT Act, provides that in developing the bundled payment rates for OUD treatment services furnished by OTPs, the Secretary may consider payment rates paid to the OTPs for comparable services under the state plans under title XIX of the Act (Medicaid) or under the TRICARE program under chapter 55 of title 10 of the United States Code (U.S.C.). The payments for comparable services under TRICARE and Medicaid programs are discussed below. In the proposed rule, we acknowledged that many private payers cover services furnished by OTPs, and welcomed comment on the scope of private payer OTP coverage and the payment rates private payers have established for OTPs furnishing comparable OUD treatment services. We also indicated that we might consider this information as part of the development of the final bundled payment rates for OUD treatment services furnished by OTPs.

(1) TRICARE

In the ''TRICARE: Mental Health and Substance Use Disorder Treatment'' final rule, which appeared in the September 2, 2016 **Federal Register** (81 FR 61068) (hereinafter referred to as the 2016 TRICARE final rule), the Department of Defense (DOD) finalized its methodology for determining payments for services furnished to TRICARE beneficiaries by an OTP in the regulations at 32 CFR 199.14(a)(2)(ix). The payments are also described in Chapter 7, Section 5 and Chapter 1, Section 15 of the TRICARE Reimbursement Manual 6010.61–M, April 1, 2015. As discussed in the 2016 TRICARE final rule, a number of commenters indicated that they believed the rates established by DOD are near market rates and acceptable (81 FR 61079).

In the 2016 TRICARE final rule, DOD established separate payment methodologies for treatment in OTPs based on the particular medication being administered. DOD finalized a weekly all-inclusive per diem rate for OTPs when furnishing methadone for MAT. Under 32 CFR 199.14(a)(2)(ix)(A)(3)(i), this weekly rate includes the cost of the drug and the cost of related non-drug services (that is, the costs related to intake/assessment, drug dispensing and screening and integrated psychosocial and medical treatment and supportive services), hereafter referred as the non-drug services. In the proposed rule (84 FR 40524), we noted that the services included in the TRICARE weekly bundle are generally comparable to the definition of OUD treatment services in section 2005 of the SUPPORT Act. The weekly all-inclusive per diem rate for these services was determined based on preliminary review of industry billing practices (which included Medicaid and other third-party payers) for the dispensing of methadone, including an estimated daily drug cost of $3 and a daily estimated cost of $15 for the non-drug services. These daily costs were converted to an estimated weekly per diem rate of $126 ($18 per day × 7 days) in the 2016 TRICARE final rule. Under 32 CFR 199.14(a)(2)(iv)(C)(2), this rate is updated annually by the Medicare hospital inpatient prospective payment system (IPPS) update factor. The 2019 TRICARE weekly per diem rate for methadone treatment in an OTP is $133.15.[37] Beneficiary cost-sharing consists of a flat copayment that may be applied to this weekly rate.

DOD also established payment rates for other medications used for MAT (buprenorphine and extended-release injectable naltrexone) to allow OTPs to bill for the full range of medications available. Under 32 CFR 199.14(a)(2)(ix)(A)(3)(ii), DOD established a fee-for-service (FFS) payment methodology for buprenorphine and extended-release injectable naltrexone because they are more likely to be prescribed and administered in an office-based treatment setting but are still available for treatment furnished in an OTP. DOD stated in the 2016 TRICARE final rule (81 FR 61080) that treatment with buprenorphine and naltrexone is more variable in dosage and frequency than with methadone. Therefore, TRICARE pays for these medications and the accompanying non-drug services separately on a FFS basis. Buprenorphine is paid based on 95 percent of average wholesale price (AWP) and the non-drug component is paid on a per visit basis at an estimated cost of $22.50 per visit. Extended-release injectable naltrexone is paid at the average sales price (ASP) plus a drug administration fee while the non-drug services are also paid at an estimated per visit cost of $22.50. DOD also reserved discretion to establish the payment methodology for new drugs and biologicals that may become available for the treatment of SUDs in OTPs.

DOD instructed that OTPs use the ''Alcohol and/or other drug use services, not otherwise specified'' H-code for billing the non-drug services when buprenorphine or naltrexone is used, and required OTPs to also include both the J-code and the National Drug Code (NDC) for the drug used, as well as the dosage and acquisition cost on the claim form.[38] Drugs listed on Medicare's Part B ASP files are paid using the ASP.[39] Drugs not appearing on the Medicare ASP file are paid at the lesser of billed

charges or 95 percent of the AWP.[40] Using this methodology, TRICARE estimated a daily drug cost of $10 for buprenorphine and a monthly drug cost of $1,129 for extended-release injectable naltrexone.[41]

(2) Medicaid (Title XIX)

States have the flexibility to administer the Medicaid program to meet their own needs within the Medicaid program parameters set forth in federal statute and regulations. All states cover and pay for some form of medications for MAT of OUD under their Medicaid programs. However, as of 2018, only 42 states covered methadone for MAT for OUD under their Medicaid programs.[42] We note that section 1006(b) of the SUPPORT Act amended sections 1902 and 1905 of the Act to require that Medicaid State plans cover all drugs approved under section 505 of the FFDCA to treat OUD, including methadone, and all biological products licensed under section 351 of the Public Health Service Act to treat OUD, beginning October 1, 2020. This requirement sunsets on September 30, 2025.

In reviewing Medicaid payments for OUD treatment services furnished by OTPs in a few states, we found significant variation in the MAT coverage, OUD treatment services, and payment structure among the states. Thus, it is difficult to identify a standardized Medicaid payment amount for OTP services. A number of factors such as the unit of payment, types of services bundled within a payment code, and how MAT services are paid varied among the states. For example, for treatment of OUD using methadone for MAT, most OTPs bill under HCPCS code H0020 (Alcohol and/or drug services; methadone administration and/or service (provision of the drug by a licensed program)) under the Medicaid program; however, the unit of payment varies by state from daily, weekly, or monthly. For example, the unit of payment in California is daily for methadone treatment,[43] while the unit of payment in Maryland for methadone maintenance is weekly,[44] and Vermont uses a monthly unit[45] of payment of these OUD treatment items and services.

For the other MAT drugs, all states cover buprenorphine and the buprenorphine-naloxone medications;[46] however, fewer than 70 percent cover the implanted or extended-release injectable versions of buprenorphine.[47] In addition, all states cover the extended-release injectable naltrexone.[48] We also found that many states pay different rates based on the specific type of drug used for MAT.

Non-drug items and services may be included in a bundled payment with the drug or paid separately, depending on the state, and can include dosing, dispensing and administration of the drug, individual and group counseling, and toxicology testing. In some states, certain services such as assessments, individual and group counseling, and toxicology testing can be billed separately. For example, some states (such as Maryland,[49] Texas,[50] and California[51]) separately reimburse for individual and group counseling services, while other states (such as Vermont[52] and New Mexico[53]) include these services in the OUD bundled payment.

b. Aspects of the Bundle

(1) Duration of Bundle

Section 1834(w)(1) of the Act requires the Secretary to pay an OTP an amount that is equal to 100 percent of the bundled payment for OUD treatment services that are furnished by the OTP to an individual during an episode of care (as defined by the Secretary) beginning on or after January 1, 2020. We proposed that the duration of an episode of care for OUD treatment services would be a week (that is, a contiguous 7-day period that may start on any day of the week). As noted in the proposed rule, this is similar to the structure of the TRICARE bundled payment to OTPs for methadone, which is based on a weekly bundled rate (81 FR 61079), as well as the payments by some state Medicaid programs. Given this similarity to existing coding structures, we stated that we believe a weekly duration for an episode of care would be most familiar to OTPs, and therefore, the least disruptive to adopt. We proposed to define an episode of care at § 410.67(b) as a 1-week (contiguous 7-day) period; however, we also solicited comments on whether we should consider a daily or monthly bundled payment.

We also recognized that patients receiving MAT are often on this treatment regimen for an indefinite amount of time, and therefore, we did not propose any maximum number of weeks during an overall course of treatment for OUD.

We received a number of public comments on the duration of the bundled payment. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported the proposal to define an episode of care as a 1-week (contiguous 7-day) period, while several commenters stated that a monthly episode of care may be more appropriate in some circumstances, such as during the maintenance phase of treatment, and a few commenters supported daily bundles because that approach is more consistent with the payment structure under their state Medicaid program. Many commenters were supportive of our decision not to propose any maximum number of weeks for a course of treatment for OUD.

Response: While we recognize that the clinical needs of patients may differ depending on their stage of treatment, we are finalizing our proposal to define an episode of care as a 1-week (contiguous 7-day) period. OTPs are generally familiar with weekly episodes and we believe use of a weekly bundle will be less disruptive to the extent that an OTP already has processes in place to bill for weekly episodes. We recognize that patients receiving MAT are often on this treatment regimen for an indefinite amount of time, and therefore, we are not imposing any limit on the maximum number of weeks

during an overall course of treatment for OUD.

After consideration of the public comments, we are finalizing our proposal to define an episode of care as a 1-week (contiguous 7-day) period at § 410.67(b). We are not finalizing any limit on the maximum number of weeks during an overall course of treatment for OUD.

(a) Requirements for an Episode

In the proposed rule (84 FR 40525), we noted that SAMHSA requires OTPs to have a treatment plan for each patient that identifies the frequency with which items and services are to be provided (§ 8.12(f)(4)). We recognized that there is a range of service intensity depending on the severity of a patient's OUD and stage of treatment, and therefore, a ''full weekly bundle'' may consist of a very different frequency of services for a patient in the initial phase of treatment compared to a patient in the maintenance phase of treatment, but that we would still consider the requirements to bill for the full weekly bundle to be met if the patient is receiving the majority of the services identified in their treatment plan at that time. However, for the purposes of valuation, we assumed one substance use counseling session, one individual therapy session, and one group therapy session per week and one toxicology test per month. Given the anticipated changes in service intensity over time based on the individual patient's needs, we explained that we expect that treatment plans would be updated to reflect these changes or noted in the patient's medical record, for example, in a progress note. In cases where the OTP has furnished the majority (51 percent or more) of the services identified in the patient's current treatment plan (including any changes noted in the patient's medical record) over the course of a week, we proposed that it could bill for a full weekly bundle. We proposed to codify the payment methodology for full episodes of care (as well as partial episodes of care and non-drug episodes of care, as discussed below) in § 410.67(d)(2).

Comment: Several commenters stated that the frequency of services listed in the proposed rule for a typical case (we assumed one substance use counseling session, one individual therapy session, and one group therapy session per week and one toxicology test per month) would usually only occur during the initial phase of treatment/stabilization.

Response: We reiterate that we understand that the frequency of services will vary over time, and may be very different for a patient in the initial phase of treatment compared to a patient in the maintenance phase of treatment. We note that while we identified a set of services for purposes of calculating the payment rate for the weekly bundle, it is not a requirement for billing the bundled payment that all of those services be furnished in a given episode of care. Rather, as we discuss in more detail below, we are finalizing a policy under which the threshold to bill for an episode of care will be that at least one service was furnished to the patient during the week that corresponds to the episode of care.

(b) Partial Episode of Care

As we explained in the proposed rule, we understand that there may be instances in which a beneficiary does not receive all of the services expected in a given week due to any number of issues, including, for example, an inpatient hospitalization during which a beneficiary would not be able to go to the OTP or inclement weather that impedes access to transportation. To provide more accurate payment to OTPs in cases where a beneficiary is not able to or chooses not to receive all items and services described in their treatment plan or the OTP is unable to furnish services, for example, in the case of a natural disaster, we proposed to establish separate payment rates for partial episodes that correspond with each of the full weekly bundles. In cases where the OTP has furnished at least one of the items or services (for example, dispensing one day of an oral MAT medication or one counseling session or one toxicology test) but less than 51 percent of the items and services included in OUD treatment services identified in the patient's current treatment plan (including any changes noted in the patient's medical record) over the course of a week, we proposed that it could bill for a partial weekly bundle. In cases in which the beneficiary does not receive a drug during the partial episode, we proposed that the code describing a non-drug partial weekly bundle must be used. For example, the OTP could bill for a partial episode in instances where the OTP is transitioning the beneficiary from one OUD medication to another and therefore the beneficiary is receiving less than a week of one type of medication. In those cases, two partial episodes could be billed, one for each of the medications, or one partial episode and one full episode, if all requirements for billing are met. We noted our intent to monitor this issue and to consider the need to make changes to this policy in future rulemaking to ensure that the billing for partial episodes is not being abused. We proposed to define a partial episode of care in § 410.67(b) and to codify the payment methodology for partial episodes in § 410.67(d). We solicited comments on our proposed approach to full and partial episodes, including the threshold that should be applied to determine when an OTP may bill for the full weekly bundle versus a partial episode. We also solicited comment on the minimum threshold that should be applied to determine when a partial episode could be billed (for example, at least one item or service, or an alternative threshold such as 10 or 25 percent of the items and services included in the OUD treatment services identified in the patient's current treatment plan (including any changes noted in the patient's medical record) over the course of a week). We also solicited comment regarding whether any other payers of OTP services allow for billing of partial bundles and what thresholds they use.

We received public comments on our proposal to create separate coding and payment for partial episodes. The following is a summary of the comments we received and our responses.

Comment: Many commenters noted that determining the threshold for when to bill the partial episode versus the full episode was impractical, stating it would be cumbersome to implement and would require far more frequent updating of the treatment plan than is typical, especially since the frequency of services delivered can vary significantly from week to week. Commenters also requested clarification on how various services would count toward the 51 percent threshold, and urged CMS to eliminate the partial bundled payment to simplify billing and reduce confusion that could lead to billing compliance issues. A few commenters stated that the total number of services associated with a patient's treatment plan is not documented in a way that would facilitate using the proposed threshold for billing for a full bundle, and therefore, it would not be feasible for OTPs to operationalize the proposed approach. Some commenters also noted that operationalizing this approach would require them to obtain additional administrative resources to track the services provided to each patient in relation to their treatment plan in order to determine when the threshold for billing for a full bundle is met. A few commenters stated that applying partial episodes to the TRICARE bundled rate is inconsistent with TRICARE's approach, which already accounts for differences in treatment intensity in a single unified payment rate. Others recommended that

CMS should not apply partial week payments, as the reduced resource costs for some episodes are already reflected in the payment rate for the full week bundle. A few commenters supported the concept of partial episodes, but requested clarification about the billing threshold.

Response: Based on the concerns raised by the commenters, we are not finalizing partial episodes at this time. We understand that many OTPs would need to change their documentation patterns to operationalize the proposed threshold for determining when to bill a full episode versus a partial episode and that having to make such changes in a short amount of time could be burdensome and potentially create barriers to providing care. In the interest of combating the opioid crisis and in the best interest of beneficiaries, our goal is to minimize barriers to OTPs enrolling in Medicare and beginning to furnish services to Medicare beneficiaries. Accordingly, for CY 2020, we are finalizing only the proposal to establish full weekly bundled payments at § 410.67(d)(2). The threshold to bill a full episode will be that at least one service was furnished (from either the drug or non-drug component) to the patient during the week that corresponds to the episode of care. We are finalizing this threshold at § 410.67(d)(3). We note that we will be monitoring for abuse given this lower threshold for billing for full weekly bundled payment. We also note that we remain interested in implementing a payment policy for partial episodes at some point in the future. We would establish the policies to govern partial episodes through notice and comment rulemaking, and we are interested in working with OTPs to explore how such a policy would best be applied.

(c) Non-Drug Episode of Care

In addition to the bundled payments for full and partial episodes of care that are based on the medication administered for treatment (and include both a drug and non-drug component as described in detail below), we proposed to establish a non-drug episode of care to provide a mechanism for OTPs to bill for non-drug services, including substance use counseling, individual and group therapy, and toxicology testing that are rendered during weeks when a medication is not administered, for example, in cases where a patient is being treated with injectable buprenorphine or naltrexone on a monthly basis or has a buprenorphine implant. We proposed to codify this non-drug episode of care at § 410.67(d).

We did not receive any comments on non-drug episodes of care, and are finalizing the policies governing the use of non-drug episodes of care in § 410.67(d)(1)(iii).

(2) Drug and Non-Drug Components

As discussed above, in establishing the bundled payment rates, we proposed to develop separate payment methodologies for the drug component and the non-drug (which includes the dispensing and administration of such medication, if applicable; substance use counseling; individual and group therapy; and toxicology testing) components of the bundled payment. Each of these components is discussed in this section.

(a) Drug Component

As discussed previously, the cost of medications used by OTPs to treat OUD varies widely. Creating a single bundled payment rate that does not reflect the type of drug used could result in access issues for beneficiaries who might be best served by treatment using a more expensive medication. As a result, in the proposed rule (84 FR 40526), we stated our belief that the significant variation in the cost of these drugs would need to be reflected adequately in the bundled payment rates for OTP services to avoid impairing access to appropriate care.

Section 1834(w)(2) of the Act states that the Secretary may implement the bundled payment to OTPs though one or more bundles based on a number of factors, including the type of medication provided (such as buprenorphine, methadone, extended-release injectable naltrexone, or a new innovative drug). Accordingly, consistent with the discretion afforded under section 1834(w)(2) of the Act, and after consideration of payment rates paid to OTPs for comparable services by other payers as discussed above, we proposed to base the OTP bundled payment rates, in part, on the type of medication used for treatment. Specifically, we proposed the following categories of bundled payments to reflect those drugs currently approved by the FDA under section 505 of the FFDCA for use in treatment of OUD:

- Methadone (oral).
- Buprenorphine (oral).
- Buprenorphine (injection).
- Buprenorphine (implant).
- Naltrexone (injection).

In addition, we proposed to create a category of bundled payment describing a drug not otherwise specified to be used for new drugs (as discussed further below). We also proposed a non-drug bundled payment to be used when medication is not administered (as discussed further below) noting that we believe creating these categories of bundled payments based on the drug used for treatment would strike a reasonable balance between recognizing the variable costs of these medications and the statutory requirement to make a bundled payment for OTP services. We proposed to codify this policy of establishing the categories of bundled payments based on the type of opioid agonist and antagonist treatment medication in § 410.67(d)(1).

We received public comments related to our proposal to establish categories of OTP bundled payments based on the type of opioid agonist and antagonist treatment medication used during the episode of care. The following is a summary of the comments we received and our responses.

Comment: Several commenters submitted comments concerning our proposal to base the OTP bundled payment rates, in part, on the type of medication (that is, methadone (oral), buprenorphine (oral), buprenorphine (injection), buprenorphine (implant), naltrexone (injection)) used for treatment. A few commenters supported our proposal to use the five medication categories. Another commenter supported the medication categories but cautioned CMS to monitor and evaluate drug pricing and availability to ensure the payments are sufficient to cover the cost of medications. In contrast, another commenter stated that the medications should not be bundled and that the bundles, if used, were too broad. This commenter believed such an approach would inhibit the ability of the health care provider to choose the best treatment for a patient.

Response: Section 1861(jjj)(1) of the Act defines OUD treatment services to include certain opioid treatment medications furnished by an OTP. Section 1834(w) of the Act instructs the Secretary to make a bundled payment for these services. We do not believe the statute supports unbundling the medications from the other OUD treatment services furnished by OTPs. We defined the five medication categories to represent the distinct types of covered OTP medications currently on the market based on primary active ingredient, method of administration, and cost. We believe these categories of bundled payments strike a reasonable balance between recognizing the variable costs of these medications and the statutory requirement to make a bundled payment for OTP services. We discuss our treatment of new drugs below.

Comment: One commenter urged CMS to clarify whether the naltrexone bundled payment category referred to injectable or oral naltrexone.

Response: The naltrexone drug product that is FDA-approved for the treatment of opioid dependence is an extended-release, intramuscular injection.[54] The naltrexone bundled payment category refers to this injectable product.

Comment: A commenter brought to our attention the fact that buprenorphine-only products are both FDA-approved and marketed for the treatment of opioid dependence by generic manufacturers, whereas in the proposed rule, we stated our understanding that all oral buprenorphine products also contained naloxone as an active ingredient. The commenter recommended that we clarify the definition of buprenorphine products to note the inclusion of these products as well.

Response: Upon further inspection, we have identified marketed buprenorphine-only products. We have also reviewed the available pricing for both the buprenorphine-only and the buprenorphine with naloxone products and found them to be similar. We believe that including both types of products in the same drug category for payment purposes would not negatively impact patient access to either of these two versions of buprenorphine. Therefore, we are clarifying that the proposed ''Buprenorphine (oral)'' drug category includes both the buprenorphine-only and buprenorphine-naloxone products that are currently FDA-approved and marketed for the treatment of opioid dependence.

After consideration of the public comments, we are finalizing our proposal to base the OTP bundled payment rates, in part, on the type of medication used for treatment. These categories reflect those drugs currently approved by the FDA under section 505 of the FFDCA for use in treatment of OUD: that is, methadone (oral), buprenorphine (oral), buprenorphine (injection), buprenorphine (implant), naltrexone (injection)). We will codify this policy of establishing the categories of bundled payments based on the type of opioid agonist and antagonist treatment medication in § 410.67(d)(1).

i. New Drugs

We anticipate that there may be new FDA-approved opioid agonist and antagonist treatment medications to treat OUD in the future. In the scenario where an OTP furnishes MAT using a new FDA-approved opioid agonist or antagonist medication for OUD treatment that is not specified in one of our existing codes, we proposed that OTPs would bill for the episode of care using the medication not otherwise specified (NOS) code (HCPCS code G2075). In such cases, we proposed to use the typical or average maintenance dose to determine the drug cost for the new bundle. We also proposed that pricing would be determined based on the relevant pricing methodology (described in section II.G.3. of this final rule) or invoice pricing in the event the information necessary to apply the relevant pricing methodology is not available. For example, in the case of injectable and implantable drugs, which are generally covered and paid for under Medicare Part B, we proposed to use the methodology in section 1847A of the Act (which bases most payments on ASP). For oral medications, which are generally covered and paid for under Medicare Part D, we proposed to use ASP-based payment when we receive manufacturer-submitted ASP data for these drugs. In the event that we do not receive manufacturer-submitted ASP pricing data, we considered several potential pricing mechanisms (discussed further below) to estimate the payment amounts for oral drugs typically paid for under Medicare Part D but that would become OTP drugs paid under Part B when used as part of MAT furnished in an OTP. We did not propose a specific pricing mechanism for the situation in which we do not receive manufacturer-submitted ASP pricing data, but solicited public comment on several potential approaches for estimating the acquisition cost and payment amounts for these drugs. If the information necessary to apply the alternative pricing methodology chosen for the oral drugs is also not available to price the new medication, we proposed to use invoice pricing until either ASP pricing data or the information necessary to apply the chosen alternate pricing methodology becomes available to price the medication. We proposed to codify this approach for determining the amount of the bundled payment for new medications in § 410.67(d)(2). The medication NOS code would be used until we have the opportunity to consider through rulemaking establishing a unique bundled payment for episodes of care during which the new drug is furnished. We solicited comments on this proposed approach to the treatment of new drugs used for MAT in OTPs.

We received public comments on the proposals related to new drugs. The following is a summary of the comments we received and our responses.

Comment: A few commenters generally supported coverage of new FDA-approved medications for OUD. One commenter noted that a flexible approach to innovative therapies to treat OUD is critical to ensure that Medicare beneficiaries have access to all FDA-approved therapies that best meet their needs.

Response: We believe that our proposal to allow providers to bill using a medication NOS code would offer OTPs the flexibility to provide beneficiaries with quick access to new FDA-approved medications for OUD until we have the opportunity to consider through rulemaking establishing a unique bundled payment for episodes of care during which the new drug is furnished.

Therefore, we are finalizing our proposal to allow OTPs to bill for an episode of care using the medication not otherwise specified (NOS) code (HCPCS code G2075) in the scenario where an OTP furnishes MAT using a new FDA-approved opioid agonist or antagonist medication for OUD treatment that is not specified in one of our existing codes. In such cases, the typical or average maintenance dose would be used to determine the drug cost for the new bundle, which contractors would then add to the non-drug component payment amount that corresponds with the relevant payment for drug administration (oral, injectable, or implantable) to determine the total bundled payment for the episode of care. We are also finalizing our proposal that pricing would be determined based on the relevant pricing methodology as described in section II.G.3. of this final rule or through invoice pricing in the event the information necessary to apply the relevant pricing methodology is not available. We are codifying this approach for determining the amount of the bundled payment for episodes of care with new medications in § 410.67(d)(2)(i)(C).

As discussed above, we also solicited comments on how new medications that may be approved by the FDA in the future for use in the treatment of OUD with a novel mechanism of action (for example, not an opioid agonist and/or antagonist), such as medications approved under section 505 of the FFDCA to treat OUD and biological products licensed under section 351 of the Public Health Service Act to treat OUD, should be considered in the

[54] *https://www.fda.gov/drugs/drugsafety/informationbydrugclass/ucm600092.htm.*

context of OUD treatment services provided by OTPs. Additionally, we solicited comments on how such new drugs with a novel mechanism of action should be priced, and specifically whether pricing for these new non-opioid agonist and/or antagonist medications should be determined using the same pricing methodology proposed for new opioid agonist and antagonist treatment medications, described above or whether an alternative pricing methodology should be used.

We did not receive any comments on the pricing of new drugs with a novel mechanism of action. We intend to monitor for the development of such new drugs for the treatment of OUD, and may consider this topic further in future rulemaking.

(b) Non-Drug Component

i. Counseling, Therapy, Toxicology Testing, and Drug Administration

As discussed above, the bundled payment is for OUD treatment services furnished during the episode of care, which we proposed to define as the FDA-approved opioid agonist and antagonist treatment medications, the dispensing and administration of such medications (if applicable), substance use counseling by a professional to the extent authorized under state law to furnish such services, individual and group therapy with a physician or psychologist (or other mental health professional to the extent authorized under state law), and toxicology testing. The non-drug component of the OUD treatment services includes all items and services furnished during an episode of care except for the medication.

Under the SAMHSA certification standards at § 8.12(f)(5), OTPs must provide adequate substance abuse counseling to each patient as clinically necessary. We note that section 1861(jjj)(1)(C) of the Act, as added by section 2005(b) of the SUPPORT Act defines OUD treatment services as including ''substance use counseling by a professional to the extent authorized under state law to furnish such services.'' Therefore, professionals furnishing therapy or counseling services for OUD treatment must be operating within state law and scope of practice. These professionals could include licensed professional counselors, licensed clinical alcohol and drug counselors, and certified peer specialists that are permitted to furnish this type of therapy or counseling by state law and scope of practice. To the extent that the individuals furnishing therapy or counseling services are not authorized under state law to furnish such services, the therapy or counseling services would not be covered as OUD treatment services.

Additionally, under the SAMHSA certification standards at § 8.12(f)(6), OTPs are required to provide adequate testing or analysis for drugs of abuse, including at least eight random drug abuse tests per year, per patient in maintenance treatment, in accordance with generally accepted clinical practice. These drug abuse tests (which are identified as toxicology tests in the definition of OUD treatment services in section 1861(jjj)(1)(E) of the Act) are used for diagnosing, monitoring and evaluating progress in treatment. The testing typically includes tests for opioids and other controlled substances. Urinalysis is primarily used for this testing; however, there are other types of testing such as hair or fluid analysis that could be used. We note that any of these types of toxicology tests would be considered to be OUD treatment services and would be included in the bundled payment for services furnished by an OTP.

The non-drug component of the bundle also includes the cost of drug dispensing and/or administration, as applicable. Additional details regarding our proposed approach for pricing this aspect of the non-drug component of the bundle are included in our discussion of payment rates later in this section. We did not receive comments on our proposal to include counseling, therapy, toxicology testing, and drug administration in the non-drug component of the bundle.

ii. Other Services

As discussed in the CY 2020 PFS proposed rule, we proposed to define OUD treatment services as those items and services that are specifically enumerated in section 1861(jjj)(1) of the Act, including services that are furnished via telecommunications technology, and solicited comment on any other items and services we might consider including as OUD treatment services under the discretion given to the Secretary in subparagraph (F) of that section to determine other appropriate items and services. We noted that if we were to finalize a definition of OUD treatment services that includes any other items or services, such as intake activities or periodic assessments as discussed above, we would consider whether any changes to the payment rates for the bundled payments would be necessary. As discussed above, we received comments that were supportive of creating add-on payment adjustments for intake activities and periodic assessments, and we are finalizing including intake activities and periodic assessment in the definition of OUD treatment services.

(3) Adjustment to Bundled Payment Rate for Additional Counseling or Therapy Services

In addition to the items and services that we proposed to include in the bundles, we recognized that counseling and therapy are important components of MAT and that patients may need to receive counseling and/or therapy more frequently at certain points in their treatment. In developing our policies for the proposed rule, we sought to ensure that patients have access to these needed services. Accordingly, we proposed to adjust the bundled payment rates through the use of an add-on code in order to account for instances in which effective treatment requires additional counseling or group or individual therapy to be furnished for a particular patient that substantially exceeds the amount specified in the patient's individualized treatment plan. As noted previously, we understand that there is variability in the frequency of services a patient might receive in a given week depending on the patient's severity and stage of treatment; however, in the proposed rule, we assumed that a typical case might include one substance use counseling session, one individual therapy session, and one group therapy session per week. As we explained in the proposed rule, we understand that the frequency of services will vary among patients and will change over time based on the individual patient's needs. We expect that the patient's treatment plan or the medical record will be updated to reflect when there are changes in the expected frequency of medically-necessary services based on the patient's condition and following such an update, the add-on code should no longer be billed if the frequency of the patient's counseling and/or therapy services is consistent with the treatment plan or medical record. In the case of unexpected or unforeseen circumstances that are time-limited, resolve quickly, and do not lead to updates to the treatment plan, we explained that we expect the medical necessity for billing the add-on code would be documented in the medical record. The proposed add-on code would reflect each additional 30 minutes of counseling or group or individual therapy furnished in a week of MAT, and could be billed in conjunction with the codes describing the full episode of care. For example,

there may be some weeks when a patient has a relapse or unexpected psychosocial stressors arise that warrant additional reasonable and necessary counseling services that were not foreseen at the time that the treatment plan was developed. We acknowledged that an unintended consequence of using the treatment plan to determine when billing of the add-on code would be permissible is a potential incentive for OTPs to document minimal counseling and/or therapy needs for a beneficiary, thereby resulting in increased opportunity for billing the add-on code. We indicated that we expect OTPs will ensure that treatment plans reflect the full scope of services expected to be furnished during an episode of care and will update treatment plans regularly to reflect changes. We noted that we intend to monitor this issue and would consider making changes to this policy through future rulemaking if necessary to ensure that this payment adjustment is not being billed inappropriately. We solicited comments on the add-on code and the threshold for billing. We proposed to codify this adjustment to the bundled payment rate for additional counseling or therapy services in § 410.67(d)(3)(i).

We received several comments on our proposed adjustment to the bundled payment rate for additional counseling or therapy services. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported our proposal to create an add-on G-code to adjust the bundled payment rate for additional counseling or therapy services furnished. Several commenters stated that the number of therapy and counseling services described in the proposed rule usually only occurs during the initial stages of treatment and a few commenters stated that patients with that level of need in a given week may be referred for more intensive treatment, such as Intensive Outpatient (IOP) treatment. Some commenters noted the variation in payment rates for counseling across various state Medicaid programs and a few commenters suggested that we use HCPCS code G0396 as a reference code in valuing the payment rate for the counseling add-on code.

Response: After consideration of the public comments, we are finalizing our proposal to establish an add-on code to describe an adjustment to the bundled payment when additional counseling or therapy services are furnished. This add-on payment is codified in the regulations at § 410.67(d)(4)(i)(A). The payment rate we are finalizing for this add-on payment is discussed in more detail later in this final rule. This add-on code may be billed when counseling or therapy services are furnished that substantially exceed the amount specified in the patient's individualized treatment plan. OTPs will be required to document the medical necessity for these services in the patient's medical record. Additionally, we note that we understand the frequency with which counseling and therapy services are furnished will vary over time for each individual patient and will often decrease over time as a patient stabilizes. Nevertheless, we believe it is important to acknowledge that some patients will require more intensive counseling and therapy services at certain times during their treatment and to establish a payment methodology under which OTPs may receive payment for furnishing these medically necessary services.

(4) Site of Service (Telecommunications)

In recent years, we have sought to decrease barriers to access to care by furthering policies that expand the use of communication technologies. In the CY 2019 PFS final rule (83 FR 59482), we finalized new separate payments for communication technology-based services, including a virtual check-in and a remote evaluation of pre-recorded patient information. SAMHSA's federal guidelines (*https://store.samhsa.gov/system/files/pep15-fedguideotp.pdf*) for OTPs refer to the CMS guidance on telemedicine and also state that OTPs are advised to proceed with full understanding of requirements established by state or health professional licensing boards. SAMHSA's federal guidelines for OTPs state that exceptional attention needs to be paid to data security and privacy in this evolving field. Telemedicine services should, under no circumstances, expand the scope of practice of a healthcare professional or permit practice in a jurisdiction (the location of the patient) where the provider is not licensed.

We proposed to allow OTPs to furnish the substance use counseling, individual therapy, and group therapy included in the bundle via two-way interactive audio-video communication technology, as clinically appropriate, in order to increase access to care for beneficiaries. We believed this would be an appropriate approach because, as discussed previously, we expected the telehealth services that will be furnished by OTPs will be similar to the Medicare telehealth services furnished under section 1834(m) of the Act, and the use of two-way interactive audio-video communication technology is required for these Medicare telehealth services under § 410.78(a)(3). By allowing use of communication technology in furnishing these services, OTPs in rural communities or federally-designated geographic health professional shortage areas would be able to facilitate treatment through virtual care coming from an urban or other external site; however, we noted that the physicians and other practitioners furnishing these services would be required to comply with all applicable requirements related to professional licensing and scope of practice.

We noted that section 1834(m) of the Act applies only to Medicare telehealth services furnished by a physician or other practitioner. Because OUD treatment services furnished by an OTP are not considered to be services furnished by a physician or other practitioner, we indicated that the restrictions of section 1834(m) of the Act would not apply. Additionally, we noted that counseling or therapy furnished via communication technology as part of OUD treatment services furnished by an OTP must not be separately billed by the practitioner furnishing the counseling or therapy because these services would already be paid through the bundled payment made to the OTP.

We proposed to include language in § 410.67(b) in the definition of OUD treatment services to allow OTPs to use two-way interactive audio-video communication technology, as clinically appropriate, in furnishing substance use counseling and individual and group therapy services, respectively. We solicited comment as to whether the proposal, including the furnishing of these services through communication technology, would be clinically appropriate. We also solicited public comment on other components of the bundle that may be clinically appropriate to be furnished via communication technology, while considering SAMHSA's guidance that OTPs should pay exceptional attention to data security and privacy.

We received public comments on the proposal to include substance use counseling and individual and group therapy services furnished using telecommunications technology in the definition of OUD treatment services. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported the proposal to allow OTPs to use two-way interactive audio-video

communication technology, as clinically appropriate, in furnishing substance use counseling and individual and group therapy services, respectively. Several commenters noted that allowing the use of communication technology in furnishing these services has the potential to vastly expand OTPs' reach, particularly in underserved areas. A few commenters urged CMS to afford OTPs maximum flexibility in how telemedicine is deployed, such as allowing the provision of such services regardless of whether or not the counselor or patient is physically located at an OTP and noted that several states already support less restrictive telemedicine practices. One commenter recommended that CMS should also allow OTPs to furnish other important medical services to beneficiaries via telecommunications, including: Medication dose assessment and interactions, basic primary care, and HIV and hepatitis C risk reduction. A few commenters requested clarification as to whether a patient participating in individual and/or group counseling could do so from their home or another location of their choosing as opposed to a designated satellite location.

Response: We are finalizing our proposal to allow OTPs to use two-way interactive audio-video communication technology, as clinically appropriate, in furnishing substance use counseling and individual and group therapy services. In response to the requests for clarification regarding where the beneficiary and practitioner can be located at the time the service is furnished, we note that section 2001 of the SUPPORT Act allows telehealth services for treatment of a diagnosed SUD or co-occurring mental health disorder to be furnished to individuals at any telehealth originating site (other than a renal dialysis facility), including in a patient's home. Accordingly, consistent with this policy, we believe it is appropriate to permit beneficiaries to receive substance use counseling and individual group therapy services furnished by an OTP using telecommunications technology in their home or any other telehealth originating site, provided the requirements that apply to telehealth services payable under the PFS after July 1, 2019, are met. In response to commenters who recommended that CMS should allow OTPs to furnish other medical services to beneficiaries via telecommunications, we note that SAMHSA and the DEA have regulations related to OUD services furnished via telecommunications that we would need further time to consider, but we may revisit this recommendation in developing our policies for future rulemaking.

After consideration of the public comments, we are finalizing our proposal to allow OTPs to use two-way interactive audio-video communication technology, as clinically appropriate, in furnishing substance use counseling and individual and group therapy services. We are also finalizing our proposal to include substance use counseling and individual and group therapy services furnished via two-way interactive audio-video communication technology in the definition of opioid use disorder treatment service in § 410.67(b). We note that as OTP services are not PFS services, no originating site facility fee (HCPCS code Q3014) applies to OUD treatment services, and OTPs are not authorized to bill for the originating site facility fee.

(5) Coding

We proposed to adopt a coding structure for OUD treatment services that would vary by the medication administered. To operationalize this approach, we proposed to establish G codes for weekly bundles describing treatment with methadone, buprenorphine oral, buprenorphine injectable, buprenorphine implants (insertion, removal, and insertion/removal), extended-release injectable naltrexone, a non-drug bundle, and one for a medication not otherwise specified. We also proposed to establish partial episode G codes to correspond with each of those bundles, respectively. Additionally, we proposed to create an add-on code to describe additional counseling that is furnished beyond the amount specified in the patient's treatment plan. We also noted that were we to finalize including intake activities and periodic assessments in the definition of OUD treatment services, we welcomed feedback on whether we should consider modifying the payment associated with the bundle or creating add-on codes for services such as the initial physical examination, initial assessments and preparation of a treatment plan, periodic assessments or additional toxicology testing, and if so, what inputs we might consider in pricing such services, such as payment amounts for similar services under the PFS or CLFS. For example, we noted that to price the initial assessment, medical examination, and development of a treatment plan, we could crosswalk to the Medicare payment rate for a level 3 evaluation and management (E/M) visit for a new patient and to price the periodic assessments, we could crosswalk to the Medicare payment rate for a level 3 E/M visit for an established patient. To price additional toxicology testing, we could crosswalk to the Medicare payment for presumptive drug testing, such as that described by CPT code 80305. Additionally, we welcomed feedback on whether we should consider creating codes to describe bundled payments that include only the cost of the drug and drug administration as applicable in order to account for beneficiaries who are receiving interim maintenance treatment (as described previously in this section) or other situations in which the beneficiary is not receiving all of the services described in the full bundles.

Regarding the non-drug bundle, we noted that this code would be billed for services furnished during an episode of care or partial episode of care when a medication is not administered. For example, when a patient receives a buprenorphine injection on a monthly basis, the OTP will only require payment for the medication during the first week of the month when the injection is given, and therefore, would bill the code describing the bundle that includes injectable buprenorphine during the first week of the month and would bill the code describing the non-drug bundle for the remaining weeks in that month for services such as substance use counseling, individual and group therapy, and toxicology testing.

As discussed previously, we proposed that the codes describing the bundled payment for an episode of care or partial episode of care with a medication not otherwise specified should be used when the OTP furnishes MAT with a new opioid agonist or antagonist treatment medication approved by the FDA under section 505 of the FFDCA for the treatment of OUD. OTPs would use these codes until we have the opportunity to propose and finalize a new G code to describe the bundled payment for treatment using that drug and price it accordingly in the next rulemaking cycle. We noted that the code describing the weekly bundle for a medication not otherwise specified should not be used when the drug being administered is not a new opioid agonist or antagonist treatment medication approved by the FDA under section 505 of the FFDCA for the treatment of OUD, and therefore, for which Medicare would not have the authority to make payment since section 1861(jjj)(1)(A) of the Act requires that the medication must be an opioid agonist or antagonist treatment medication approved by the FDA under section 505 of the FFDCA for the treatment of OUD. Given the program integrity concerns regarding the

potential for misuse of a medication not otherwise specified code, we also welcomed comments as to whether this code was needed.

See Table 18 for a list of the HCPCS codes for the weekly bundles that we are finalizing (G2067–G2075). We proposed that only an entity enrolled with Medicare as an OTP could bill these codes. Additionally, we proposed that OTPs would be limited to billing only these codes describing bundled payments, and may not bill for other codes, such as those paid under the PFS.

We received many comments related to coding and payment for OTP services. The following is a summary of the comments we received and our responses.

Comment: As described previously, many commenters supported the inclusion of intake activities, such as the initial physician examination, initial assessment and preparation of a treatment plan, as well as periodic assessments in the definition of OUD treatment services. Many commenters suggested that we create add-on codes to describe these services, and several commenters specifically suggested that we use CPT codes 99204 and 99214 as reference codes for pricing the intake and periodic assessment add-ons, respectively. A few commenters recommended that CMS work with OTPs and/or SAMHSA to determine whether an add-on for periodic assessments would sufficiently cover the needs of pregnant and postpartum women who seek care at OTPs.

Response: As discussed above, we are finalizing including intake activities and periodic assessment in the definition of OUD treatment services. It is our understanding that these services are furnished much less frequently than the other services included in the weekly bundled payments; therefore, we are creating add-on G-codes to describe these services, which will allow us to make more targeted payments for these services. We note that the add-on code describing intake activities should only be billed for new patients (that is, patients starting treatment at the OTP). We agree with the commenters that the level 4 office/outpatient E/M visits are a good approximation of the services provided at intake and during periodic assessments at OTPs based on the expected acuity of patients with OUD receiving services at OTPs, who are likely to have multiple co-morbidities and present with problems that are of moderate to high severity and require medical decision making of moderate complexity. Therefore, we are pricing the add-on code describing intake activities using CPT code 99204 (*Office or other outpatient visit for the evaluation and management of a new patient, which requires these 3 key components: A comprehensive history; A comprehensive examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 45 minutes are spent face-to-face with the patient and/or family*) as a reference code, which is assigned a CY 2019 non-facility rate of $166.86 under the PFS in addition to accounting for one toxicology test furnished at intake, using CPT code 80305 (*Drug test(s), presumptive, any number of drug classes, any number of devices or procedures; capable of being read by direct optical observation only (e.g., utilizing immunoassay [e.g., dipsticks, cups, cards, or cartridges]), includes sample validation when performed, per date of service*) as a reference code, which is assigned a rate of $12.60 under the CLFS in CY 2019. Therefore, we summed those two amounts to calculate the total payment rate for the add-on code describing intake activities, which is $179.46. Similarly, we are pricing the add-on code describing periodic assessments using CPT code 99214 (*Office or other outpatient visit for the evaluation and management of an established patient, which requires at least 2 of these 3 key components: A detailed history; A detailed examination; Medical decision making of moderate complexity. Counseling and/or coordination of care with other physicians, other qualified health care professionals, or agencies are provided consistent with the nature of the problem(s) and the patient's and/or family's needs. Usually, the presenting problem(s) are of moderate to high severity. Typically, 25 minutes are spent face-to-face with the patient and/or family*) as a reference code, which is assigned a CY 2019 non-facility rate of $110.28 under the PFS. The medical services described by these add-on codes could be furnished by a program physician, a primary care physician or an authorized healthcare professional under the supervision of a program physician or qualified personnel such as nurse practitioners and physician assistants. The other assessments, including psychosocial assessments could be furnished by practitioners who are eligible to do so under their state law and scope of licensure. Additionally, we note that the add-on code describing periodic assessments could be billed for each periodic assessment performed for patients that require multiple assessments during an episode of care, such as patients who are pregnant or postpartum. We note that in order to bill for the add-on code, the services would need to be medically reasonable and necessary and that OTPs should document the rationale for billing the add-on code in the patient's medical record. We also plan to monitor utilization of the periodic assessment add-on code given program integrity concerns about overutilization, and may consider further refinements in future rulemaking.

Comment: Several commenters supported the creation of add-on codes to account for more frequent presumptive testing, including presumptive testing using instrumented chemistry analyzers, and for definitive testing. Several commenters highlighted the differences between presumptive and definitive tests, stating that CPT code 80305 describes a presumptive screen test by Dipstick or Point of Care rapid test cup, and noted that there is a significant difference in the payment rate for this code compared to the codes describing definitive drug testing. Several commenters requested that CMS set a rate that encompasses medically-appropriate testing frequencies, but also addresses the complexity of testing, noting that that the presumptive screening test uses limited technology and should not be relied upon by clinicians for providing true actionable and reliable information and stated that a bundled rate that includes only a crosswalk to a point-of-care rapid test will severely impact patient care. A few commenters noted that most basic drug tests will not detect Fentanyl and that failure to properly identify Fentanyl may place patients' lives at risk, and therefore, recommended that CMS consider referencing the current CLFS rates for codes HCPCS codes G0480–G0483, which describe definitive drug testing. A few commenters noted that point of care immunoassay testing is rarely able to detect methadone or buprenorphine and can never detect naltrexone and, if methadone or buprenorphine is detected, the immunoassay is unable to determine whether the patient is compliant or is adulterating the urine sample. In contrast, definitive testing is appropriate for detecting all of the drugs used for MAT therapy.

Response: We find the commenters' arguments that both higher level presumptive tests and definitive tests

can be clinically appropriate in the treatment of OUD to be compelling. Further, we want to avoid creating financial disincentives that would prevent OTPs from furnishing medically-necessary care. Accordingly, we are building into the bundled payments both presumptive and definitive testing. We understand from commenters that while SAMHSA requires at least 8 toxicology screenings per year per patient, toxicology screening is frequently done more often, including up to weekly in new patients and that this is most frequently presumptive testing, but in more rare circumstances definitive testing is also performed. Thus, in consideration of what we believe might be an average case, we are assuming that beneficiaries will receive an average of two presumptive tests and one definitive test per month.

We priced the presumptive test based on the CLFS rate for CPT code 80305, which is $12.60, and then prorated that amount by dividing that rate by 2 to reflect the presumption that this type of testing would be furnished only twice a month. We priced the definitive test based on the CLFS rate for HCPCS code G0480, which is $114.43 and then prorated that amount by dividing that rate by 4 to reflect our presumption that this type of testing would be furnished once a month. Additionally, we note that we interpret the statute to require that all toxicology testing furnished by the OTP must be included in the bundled payment or adjustments to the bundled payment and could not be billed separately under the CLFS. We have elected to build the payment for these tests into the weekly bundled rates, rather than creating add-on codes, in order to avoid creating an incentive to furnish testing more frequently than needed. However, as OTPs begin to bill Medicare, if we find that there is an issue with beneficiaries receiving access to medically-necessary definitive testing, we may consider making changes to how these tests are paid through future rulemaking.

Comment: Several commenters stated that OTPs often provide case management and/or care management services and requested that CMS consider reimbursing for these services either as part of the standard bundle or as an adjustment to the bundled payment, as applicable. A few commenters stated that OTPs serve as a fixed point of responsibility in the provision of whole person-centered care and improving health outcomes through collaborative arrangements with health care providers outside of the OTP and that the goal of care management is to reduce health care costs, specifically preventable hospital admissions, readmissions, and avoidable emergency room visits. The commenters also stated that OTP staff also help patients with accessing food benefits, housing, and employment searches, which are critical components for sustained recovery, as part of case management.

Response: We appreciate the feedback and note that we would like to work with OTPs to better understand how these services are furnished in the OTP setting and, as noted previously, we are interested in continued feedback and data on the specific items and services, including their frequency, furnished to beneficiaries by an OTP. We may consider making payment for case management/care management activities in future rulemaking.

We note that the definition of OUD treatment services described in this final rule would need to be revised in future rulemaking to include any such additional items and services.

Comment: A few commenters requested that CMS clarify whether the proposed billing codes could be used when a patient is undergoing detoxification in an OTP and some commenters requested a separate code describing a bundled payment for the costs associated with medications for medically-supervised management of opioid withdrawal, as well as counseling and toxicology testing. One commenter requested guidance to clarify how OTPs could bill for a ''naloxone challenge test'' prior to initiation of treatment with Vivitrol (naltrexone for extended-release injectable suspension).

Response: We note that there is no specified dosage required for billing the bundled payments, so if a patient is tapering off methadone or buprenorphine while undergoing detoxification, the bundled payments describing those drugs may be used if the requirements for billing are satisfied and the non-drug bundle could be billed during any time that the patient is not being dispensed or administered a covered OUD treatment medication. We may consider for future rulemaking whether additional coding or payment changes are needed with respect to detoxification or the provision of naloxone.

Comment: Several commenters requested clarification related to how take-home dosages of medication should be billed. A few commenters noted that the proposed definition of a partial episode does not account for patients who have earned take-home dose privileges and as a result may only attend the OTP once or twice in a month.

Response: We agree with the commenters that additional coding is required to accurately account for the costs associated with providing a patient with take-home doses of medication. Accordingly, we are finalizing two codes to describe adjustments to the bundled payments, one for take-home supplies of methadone, which describes up to 7 additional days of medication, and can be billed along with the respective weekly bundled payment in units of up to 3 (for a total of up to a one month supply), and one for take-home supplies of oral buprenorphine, which also describes up to 7 additional days of medication and can be billed along with the base bundle in units of up to 3 (for a total of up to a 1 month supply). We note that SAMHSA allows a maximum take-home supply of one month of medication; therefore, we do not expect the add-on codes describing take-home doses of methadone and oral buprenorphine to be billed any more than 3 times in one month (in addition to the weekly bundled payment). We also note that the add-on code for take-home doses of methadone can only be used with the methadone weekly episode of care code (HCPCS code G2067). Similarly, the add-on code for take-home doses of oral buprenorphine can only be used with the oral buprenorphine weekly episode of care code (HCPCS code G2068). We are pricing the add-on code describing take-home supplies of methadone, HCPCS code G2078, based on the payment rate for the drug component for the weekly bundle describing treatment with methadone ($35.28) and we are pricing the add-on code describing take home supplies of buprenorphine, HCPCS code G2079, based on the payment rate for the drug component for the weekly bundle describing treatment with oral buprenorphine ($86.26).

Comment: Several commenters requested clarification related to how the bundled payment codes should be billed in a variety of situations. A few commenters specifically requested clarification on how ''guest dosing'' should be billed and others inquired as to whether prior authorization would be required.

Response: In response to comments seeking clarification about the threshold to bill the partial vs. the full episodes, as noted above, we are finalizing only full episodes at this time and will consider partial episodes for future rulemaking. Additionally, as noted above, we are finalizing a number of add-on G codes to describe adjustments

to the bundle. Specifically, we are creating add-on codes for intake activities, periodic assessments, take-home supplies of methadone, take home supplies of oral buprenorphine, and additional counseling furnished. We note that some of the bundled payment codes describe a drug that is typically only administered once per month, such as the injectable drugs, or once in a 6-month period, in the case of the buprenorphine implants. In those cases, the code describing the bundled payment that includes the cost of the drug would be billed during the week that the drug is administered, and if at least once service is furnished in a subsequent week, the non-drug bundle would be billed. For example, in the case of a patient receiving injectable buprenorphine, we would expect that HCPCS code G2069 would be billed for the week during which the injection was administered and that HCPCS code G2074, which describes a bundle not including the drug, would be billed during any subsequent weeks that at least one non-drug service is furnished until the injection is administered again, at which time HCPCS code G2069 would be billed again for that week. We note that as HCPCS codes G2067–G2075 cover episodes of care of 7 contiguous days, we will not permit an OTP to bill any of these codes for the same beneficiary more than once per 7 contiguous day period. Additionally, consistent with FDA labelling, we do not generally expect the codes describing bundled payments including the injectable drugs (HCPCS codes G2069 and G2073) to be furnished more than once every 4 weeks. Similarly, consistent with FDA labelling, we do not generally expect the codes describing bundled payments including insertion of the buprenorphine implants (HCPCS codes G2070 and G2072) to be furnished more than once every 6 months.

However, we do understand there are limited clinical scenarios when a beneficiary may be appropriately furnished OUD treatment services at more than one OTP within a 7 contiguous day period, such as for guest dosing or when a beneficiary transfers care between OTPs. We note that in these limited circumstances, each of the involved OTPs may bill the appropriate HCPCS codes that reflect the services furnished to the beneficiary. We expect that both OTPs involved would provide sufficient documentation in the patient's medical record to reflect the clinical situation and services provided. We will be monitoring the claims data to ensure that this flexibility is not being abused. Additionally, in instances in which a patient is switching from one drug to another, the OTP should only bill for one code describing a weekly bundled payment for that week and should determine which code to bill based on which drug was furnished for the majority of the week. In response to commenters who requested clarification regarding prior authorization, we note that we did not propose, and are not finalizing any prior authorization requirements for services furnished in OTPs, as our goal is not to restrict access to necessary care.

The codes and long descriptors for the OTP bundled services and add-on services we are finalizing are:

- HCPCS code G2067: *Medication assisted treatment, methadone; weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing, if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program).*
- HCPCS code G2068: *Medication assisted treatment, buprenorphine (oral); weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program).*
- HCPCS code G2069: *Medication assisted treatment, buprenorphine (injectable); weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program).*
- HCPCS code G2070: *Medication assisted treatment, buprenorphine (implant insertion); weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program).*
- HCPCS code G2071: *Medication assisted treatment, buprenorphine (implant removal); weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program).*
- HCPCS code G2072: *Medication assisted treatment, buprenorphine (implant insertion and removal); weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program).*
- HCPCS code G2073: *Medication assisted treatment, naltrexone; weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program).*
- HCPCS code G2074: *Medication assisted treatment, weekly bundle not including the drug, including substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program).*
- HCPCS code G2075: *Medication assisted treatment, medication not otherwise specified; weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing, if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program).*
- HCPCS code G2076: *Intake activities, including initial medical examination that is a complete, fully documented physical evaluation and initial assessment conducted by a program physician or a primary care physician, or an authorized healthcare professional under the supervision of a program physician or qualified personnel that includes preparation of a treatment plan that includes the patient's short-term goals and the tasks the patient must perform to complete the short-term goals; the patient's requirements for education, vocational rehabilitation, and employment; and the medical, psycho-social, economic, legal, or other supportive services that a patient needs, conducted by qualified personnel (provision of the services by a Medicare-enrolled Opioid Treatment Program); List separately in addition to code for primary procedure.*
- HCPCS code G2077: *Periodic assessment; assessing periodically by qualified personnel to determine the most appropriate combination of services and treatment (provision of the services by a Medicare-enrolled Opioid Treatment Program); List separately in addition to code for primary procedure.*
- HCPCS code G2078: *Take-home supply of methadone; up to 7 additional day supply (provision of the services by a Medicare-enrolled Opioid Treatment*

Program); List separately in addition to code for primary procedure.

- HCPCS code G2079: *Take-home supply of buprenorphine (oral); up to 7 additional day supply (provision of the services by a Medicare-enrolled Opioid Treatment Program); List separately in addition to code for primary procedure.*
- HCPCS code G2080: *Each additional 30 minutes of counseling or group or individual therapy in a week of medication assisted treatment, (provision of the services by a Medicare-enrolled Opioid Treatment Program); List separately in addition to code for primary procedure.*

Finally, we proposed that only an entity enrolled with Medicare as an OTP could bill these codes. Additionally, we proposed that OTPs would be limited to billing only these codes describing bundled payments, and may not bill for other codes, such as those paid under the PFS. We did not receive comments on these proposals, and are finalizing both these proposals.

(6) Payment Rates

We proposed that the codes describing the OTP bundled services (HCPCS codes G2067–G2075) would be assigned flat dollar payment amounts, as listed in Table 18. As discussed previously, section 2005 of the SUPPORT Act amended the definition of ''medical and other health services'' in section 1861(s) of the Act to provide for coverage of OUD treatment services furnished by an OTP and also added a new section 1834(w) to the Act and amended section 1833(a)(1) of the Act to establish a bundled payment to OTPs for OUD treatment services furnished during an episode of care beginning on or after January 1, 2020. Therefore, OUD treatment services and the payments for such services are wholly separate from physicians' services, as defined under section 1848(j)(3) of the Act, and for which payment is made under section 1848 of the Act. Because OUD treatment services are not considered physicians' services and are paid outside the PFS, we indicated that they would not be priced using relative value units (RVUs).

Consistent with section 1834(w) of the Act, which requires the Secretary to make a bundled payment for OUD treatment services furnished by OTPs, we proposed to build the payment rates for OUD treatment services by combining the cost of the drug and the non-drug components (as applicable) into a single bundled payment as described in more detail below.

(a) Drug Component

As part of determining a payment rate for the proposed bundles for OUD treatment services, a dosage of the applicable medication must be selected in order to calculate the costs of the drug component of the bundle. We proposed to use the typical or average maintenance dose to determine the drug costs for each of the bundles. As dosing for some, but not all, of these drugs varies considerably, this approach attempts to strike an appropriate balance between high- and low-dose drug regimens in the context of a bundled payment. Specifically, we proposed to calculate payment rates using a 100 mg daily dose for methadone, a 10 mg daily dose for oral buprenorphine, a 100 mg monthly dose for the extended-release buprenorphine injection, four rods each containing 74.2 mg of buprenorphine for the 6-month buprenorphine implant, and a 380 mg monthly dose for extended-release injectable naltrexone. We solicited public comments on our proposal to use the typical maintenance dose in order to calculate the drug component of the bundled payment rate for each of the proposed codes. We also solicited comment on the specific typical maintenance dosage level that we have identified for each drug, and a process for identifying the typical maintenance dose for new opioid agonist or antagonist treatment medication approved by the FDA under section 505 of the FFDCA when such medications are billed using the medication NOS code, such as using the FDA-approved prescribing information or a review of the published, preferably peer-reviewed, literature. We noted that the bundled payment rates were intended to be comprehensive with respect to the drugs provided; therefore, we did not intend to include any other amounts related to drugs, other than for administration, as discussed below. This means, for example, that we would not pay for drug wastage, which we did not anticipate to be significant in the OTP setting.

We received several comments on our proposal to use typical maintenance dosage levels to calculate payment rates.

Comment: One commenter expressed concern over the proposal to use average maintenance doses to determine the drug cost component of the bundled payment. This commenter noted that TRICARE explicitly rejected this approach for buprenorphine and naltrexone due to significant variation in the dosage and frequency of administration for these drugs; and, instead, suggested an alternative methodology that would more appropriately account for variations in the clinical needs of patients.

Response: While the TRICARE payment rates for OTP services were considered in determining the Medicare payment for OTP services, we note that section 1834(w)(2) of the Act expressly directs the Secretary to implement the Medicare OTP benefit using one or more payment bundles. We recognize that there may be some variation in the dosage and frequency of administration of these medications. Some beneficiaries may receive a larger than average dose, while other beneficiaries will receive a smaller than average dose; but payment based on the typical dose means that, across the Medicare beneficiaries served by the OTP, the payment amount should be reasonable and represent the average costs incurred in furnishing the drug component of the OUD treatment services. We believe the proposal to use the typical maintenance dosages is a reasonable approach to address the variable dosing of these medications within the statutory direction to implement this payment through one or more bundles.

Comment: Most commenters agreed that the proposed 100 mg daily dose for methadone was reasonable. A couple of commenters also agreed with the proposed typical maintenance dosages of four rods each containing 74.2 mg of buprenorphine for the 6-month buprenorphine implant and a 380 mg monthly dose for extended-release injectable naltrexone. However, several commenters stated that the proposed typical maintenance dosage for oral buprenorphine of 10 mg is too low. A few commenters suggested that there is evidence indicating that higher doses of buprenorphine are associated with better treatment retention. Other commenters stated that OTP patients respond better to a higher dosing level of oral buprenorphine, in part, because they tend to have a longer history of opioid abuse. Commenters suggested potential alternative dosages ranging from 12–20 mg. Several commenters suggested setting the typical maintenance dosage for oral buprenorphine at 16 mg per day. One commenter noted this dosage is supported by SAMHSA's Treatment Improvement Protocol (TIP) 63 (located at *https://store.samhsa.gov/system/files/sma18–5063fulldoc.pdf*). In addition, while a few commenters stated that the 100 mg monthly dose for the extended-release buprenorphine injection was the appropriate maintenance dose, some commenters noted it would not adequately account for the first 2 months of treatment at the higher dose of 300 mg per month. Another commenter stated that there was

evidence indicating certain patients would require longer treatment with the higher dose of the extended-release buprenorphine injection and that the FDA label instructions allowed consideration of increasing the maintenance dose to 300 mg monthly for patients in which the benefits outweigh the risk. One commenter stated that CMS would need to better define how the average maintenance dose was calculated in order to allow for comment on the methodology.

Response: We disagree with the commenter who stated that there was insufficient detail provided in the proposed rule in order to comment on the proposed average maintenance doses. As we described in the proposed rule, we identified the typical maintenance dose for each medication using the FDA-approved prescribing information or through a review of the published, preferably peer-reviewed, literature. We also included a reference in the proposed rule to each of the sources used to identify the typical maintenance doses.

We note that, as the HCPCS codes for the extended-release buprenorphine injection (that is, Q9991: Buprenorphine XR 100 mg or less and Q9992: Buprenorphine XR over 100 mg) have the same payment rate; therefore, we do not believe that it is necessary to establish a second typical maintenance dose to calculate the payment rate for this drug. However, we agree that the typical maintenance dosage for oral buprenorphine should be set higher than the proposed 10 mg. The range offered by commenters was between 12 mg and 20 mg, with a 16 mg per day dose receiving the most support. We also note that SAMHSA's TIP 63 and the FDA labeling support a target dosage of 16 mg for maintenance treatment.[55]

After consideration of the public comments, we are finalizing our proposal to use the typical maintenance dosages to calculate payment rates for the drug component of the weekly bundles (that is, a 100 mg daily dose for methadone, a 100 mg monthly dose for the extended-release buprenorphine injection, four rods each containing 74.2 mg of buprenorphine for the 6-month buprenorphine implant, and a 380 mg monthly dose for extended-release injectable naltrexone) except that the payment rate for the drug component of the oral buprenorphine bundle will be calculated using a typical maintenance dose of 16 mg daily, rather than a 10 mg dose.

[55] See *https://www.accessdata.fda.gov/drugsatfda_docs/label/2019/022410s038lbl.pdf.*

i. Potential Drug Pricing Data Sources

Payment structures that are closely tailored to the provider's actual acquisition cost reduce the likelihood that a drug will be chosen primarily for a reason that is unrelated to the clinical care of the patient, such as the drug's profit margin for a provider. We proposed to estimate an OTP's costs for the drug component of the bundles based on available data regarding drug costs rather than a provider-specific cost-to-charge ratio or another more direct assessment of facility or industry-specific drug costs. OTPs do not currently report costs associated with their services to the Medicare program, and we did not believe that a cost-to-charge ratio based on such reported information could be available for a significant period of time. Furthermore, we explained that we are unaware of any industry-specific data that may be used to more accurately assess the prices at which OTPs acquire the medications used for OUD treatment. Therefore, we proposed to estimate an OTP's costs for the drugs used in MAT based on other available data sources, rather than applying a cost-to-charge ratio or another more direct assessment of drug acquisition cost; however, we also noted that we intended to continue to explore alternate ways to gather this information. As described in greater detail below, we proposed that the payment amounts for the drug component of the bundles be based on CMS pricing mechanisms currently in place. We solicited comment on other potential data sources for pricing OUD treatment medications either generally or specifically with respect to acquisition by OTPs. In the case of oral drugs that we proposed to include in the OTP bundled payments and for which we do not receive manufacturer-submitted ASP data, we explained that we were considering several potential approaches for determining the payment amounts for the drug component of the bundles. Although we did not propose a specific pricing mechanism, we solicited comments on several different approaches, and stated that we intended to develop a final policy for determining the payment amount for the drug component of the relevant bundles after considering the comments received.

In considering the payment amount for the drug component of each of the bundled payments that include a drug, we began by breaking the drugs into two categories based on their current coverage and payment by Medicare. First, we discussed the injectable and implantable drugs, which are generally covered and paid for under Medicare Part B, and then discussed the oral medications, which are generally covered and paid for under Medicare Part D.[56] Buprenorphine (injection), buprenorphine (implant), and naltrexone (injection) would fall into the former category and methadone and buprenorphine (oral) would fall into the latter category.

ii. Part B Drugs

Part B includes a limited drug benefit that encompasses drugs and biologicals described in section 1861(t) of the Act. Currently, covered Part B drugs fall into three general categories: Drugs furnished incident to a physician's services, drugs administered via a covered item of durable medical equipment, and other drugs specified by statute (generally in section 1861(s)(2) of the Act). Types of providers and suppliers that are paid for all or some of the Medicare-covered Part B drugs that they furnish include physicians, pharmacies, durable medical equipment suppliers, hospital outpatient departments, and end-stage renal disease (ESRD) facilities.

The majority of Part B drug expenditures are for drugs furnished incident to a physician's service. Drugs furnished incident to a physician's service are typically injectable drugs that are administered in a non-facility setting (covered under section 1861(s)(2)(A) of the Act) or in a hospital outpatient setting (covered under section 1861(s)(2)(B) of the Act). The statute (sections 1861(s)(2)(A) and 1861(s)(2)(B) of the Act) limits ''incident to'' services to drugs that are not usually self-administered; self-administered drugs, such as orally administered tablets and capsules are not paid for under the ''incident to'' provision. Payment for drugs furnished incident to a physician's service falls under section 1842(o) of the Act. In accordance with section 1842(o)(1)(C) of the Act, ''incident to'' drugs furnished in a non-facility setting are paid under the methodology in section 1847A of the Act. ''Incident to'' drugs furnished in a facility setting also are paid using the methodology in section 1847A of the Act when it has been incorporated under the relevant payment system (for

[56] Because, by law, methadone used in MAT cannot be dispensed by a pharmacy, it is not currently considered a Part D drug when used for MAT. Methadone used for this purpose can be dispensed only through an OTP certified by SAMHSA. However, methadone dispensed for pain may be considered a Part D drug and can be dispensed by a pharmacy.

example, the Hospital Outpatient Prospective Payment System (OPPS)).[57]

In most cases, payment using the methodology in section 1847A of the Act means payment is determined based on the ASP plus a statutorily-mandated 6 percent add-on. The payment for these drugs does not include costs for administering the drug to the patient (for example, by injection or infusion); payments for these physician and hospital services are made separately, and the payment amounts are determined under the PFS [58] and the OPPS, respectively. The ASP payment amount determined under section 1847A of the Act reflects a volume-weighted ASP for all NDCs that are assigned to a HCPCS code. The ASP is calculated quarterly using manufacturer-submitted data on sales to all purchasers (with limited exceptions as articulated in section 1847A(c)(2) of the Act, such as for sales at nominal charge and sales exempt from best price) with manufacturers' rebates, discounts, and price concessions reflected in the manufacturer's determination of ASP.

Although the Part B drug benefit is generally considered to be limited in scope, it includes many categories of drugs and encompasses a variety of care settings and payment methodologies. In addition to the ''incident to'' drugs described above, Part B also covers and pays for certain oral drugs with specific benefit categories defined under section 1861(s) of the Act, including certain oral anti-cancer drugs and certain oral antiemetic drugs. In accordance with section 1842(o)(1) of the Act or through incorporation under the relevant payment system as discussed above, most of these oral Part B drugs are also paid based on the ASP methodology described in section 1847A of the Act.

However, at times Part B drugs are paid based on wholesale acquisition cost (WAC) as authorized under section 1847A(c)(4) of the Act [59] or average manufacturer price (AMP)-based price substitutions as authorized under section 1847A(d) of the Act [60]. Also, in accordance with section 1842(o) of the Act, other payment methodologies may be applied to determine the payment amount for certain Part B drugs, for example, AWP-based payments (using current AWP) are made for influenza, pneumococcal pneumonia, and hepatitis B vaccines.[61] We also use current AWP to make payment under the OPPS for very new drugs without an ASP.[62] Contractors may also make independent payment amount determinations in situations where a national price is not available for physician and other supplier claims and for drugs that are specifically excluded from payment based on section 1847A of the Act (for example, radiopharmaceuticals as noted in section 303(h) of the Medicare Prescription Drug, Improvement and Modernization Act of 2003 (MMA) (Pub. L. 108–173, enacted December 8, 2003). In such cases, pricing may be determined based on compendia or invoices.[63]

While most Part B drugs are paid based on the ASP methodology, MedPAC has noted that the ASP methodology may encourage the use of more expensive drugs because the 6 percent add-on generates more revenue for more expensive drugs.[64] The ASP payment amount also does not vary based on the price an individual provider or supplier pays to acquire the drug. The statute does not identify a reason for the additional 6 percent add-on above ASP; however, as noted in the MedPAC report (and by sources cited in the report), the add-on is needed to account for handling and overhead costs and/or for additional mark-up in the distribution channels that are not captured in the manufacturer-reported ASP.[65]

We proposed to use the methodology in section 1847A of the Act (which bases most payments on ASP) to set the payment rates for the ''incident to'' drugs. However, we proposed to limit the payment amounts for ''incident to'' drugs to 100 percent of the volume-weighted ASP for a HCPCS code instead of 106 percent of the volume-weighted ASP for a HCPCS code. We explained our belief that limiting the add-on would incentivize the use of the most clinically appropriate drug for a given patient. In addition, we noted that it was our understanding that many OTPs purchase directly from drug manufacturers, thereby limiting the markup from distribution channels. We also proposed to use the same version of the quarterly manufacturer-submitted data used for calculating the most recently posted ASP data files in preparing the CY 2020 payment rates for OTPs. We noted that the quarterly ASP Drug Pricing Files include ASP plus 6 percent payment amounts.[66] Accordingly, we adjusted these amounts consistent with our proposal to limit the payment amounts for these drugs to 100 percent of the volume-weighted ASP for a HCPCS code. The proposed payment rates can be found in Table 15 of the CY 2020 PFS proposed rule (84 FR 40537). We proposed to codify the ASP payment methodology for the drug component of weekly bundles that include implantable or injectable medications at § 410.67(d)(2). We solicited public comment on the proposals, as well as on using alternative ASP-based payments to price these drugs, such as a rolling average of the past year's ASP payment rates.

We received several comments on our proposals regarding pricing of Part B drugs. The following is a summary of the comments received and our responses.

Comment: Several commenters expressed concern regarding the proposal to use the methodology in section 1847A of the Act (which bases most payments on ASP) to set the payment rates for the ''incident to'' drugs and to limit the payment amounts to 100 percent of the volume-weighted ASP for a code instead of 106 percent of the volume-weighted ASP for a code. (We note that a similar proposal for setting the payment rates for the oral OTP drugs follows and that several of the comments we received did not specifically reference which group of drugs they were addressing; therefore, we have included a discussion of these comments under both sections.) A few commenters supported the proposal, reasoning that ASP provides a transparent and public benchmark that would allow monitoring for unexpected and unnecessary price changes by manufacturers.

Several other commenters expressed concerns about the proposal to price the Part B injectable and implantable drugs used in the bundle using the ASP without the 6 percent add-on. Commenters noted that the add-on is a necessary part of the payment to account for items such as overhead costs and/or additional mark-ups in the traditional drug distribution channels that are not captured in the manufacturer-reported ASP. A few commenters stated that the 6 percent

add-on would allow the OTP to recoup costs associated with rigorous storage and inventory tracking systems required by the DEA. These commenters also stated that the large OTPs, hospitals, and physician systems could skew ASP lower than the prices that smaller or rural OTPs could negotiate on their own. One commenter expressed concerns that OTPs might not be able to afford Part B drugs without the add-on to cover these costs, and suggested a cautious approach to ensure the success of these programs. A few commenters noted that the proposal to price Part B drugs using ASP without the 6 percent add-on would provide a disincentive for an OTP to utilize the most appropriate product for the patient in order to limit their cost of care. Some commenters objected to CMS' statement in the proposed rule that limiting the 6 percent add-on would incentivize the use of the most clinically appropriate drug for a given patient asserting that the 6 percent add-on does not provide an incentive to choose high-cost treatment inappropriately because physicians do not profit from administering Part B drugs under the ASP methodology. Several commenters also questioned CMS' legal authority to limit the payment amount for these drugs to 100 percent of the ASP.

Response: We thank the commenters for their feedback on our proposal to set the payment amounts for ''incident to'' drugs at 100 percent of the volume-weighted ASP. We agree that use of ASP provides a transparent and public benchmark for manufacturers' pricing as it reflects the manufacturers' actual sales prices to all purchasers (with limited exceptions) and is the only pricing methodology that includes off-invoice rebates and discounts as described in section 1847A(c)(3) of the Act. For this reason, we believe the ASP to be the most market-based approach to set drug prices for the OTP bundled payments.

As noted above, section 1834(w) of the Act grants the Secretary significant discretion to establish bundled payment rates for OUD treatment services. The statute does not dictate the use of any specific methodology, such as the methodology in section 1847A of the Act, in setting the payment rate for the drug component of the bundled payments. Therefore, we do not agree with the comments that indicated CMS has a legal obligation to include the 6 percent add-on when using ASP to determine the payment rate for the drug component of the bundled payments to OTPs for OUD treatment services.

As noted in the proposed rule, we understand that many OTPs purchase medications directly from drug manufacturers, thereby limiting the markup from distribution channels. We received this information during a routine informational industry call with OTP advocates in preparation for drafting the proposed rule. We also note that this fact was not challenged by any of the commenters. Furthermore, we do not believe the record-keeping or storage requirements noted are unique to OTPs. In fact, the selection of drugs purchased by most OTPs is quite limited, which theoretically limits the utility of third-parties, such as wholesalers, and their associated costs and increases the purchase volume for OTPs and accompanying manufacturer discounts. We believe that this situation could lend itself to an OTP drug channel for purchasing at discounted rates either directly or through the use of buying groups as is the standard in the pharmacy industry today. Furthermore, we remain concerned that certain providers will look to differential drug costs to determine which therapies to offer. As a result, we believe that our proposed approach of paying for ''incident to'' drugs based on ASP offers the most appropriate balance between ensuring OTPs receive appropriate reimbursement for their drug acquisition costs, while also preserving the incentive to use the most clinically appropriate drug for the treatment of individual beneficiaries.

After consideration of the public comments, we are finalizing our proposal to use the methodology in section 1847A of the Act (which bases most payments on ASP) to set the payment rates for the ''incident to'' drugs and to limit the payment amounts for these drugs to 100 percent of the volume-weighted ASP for a drug category or code. We are codifying this policy in the regulations at § 410.67(d)(2)(i)(A). However, we continue to be interested in feedback regarding drug acquisition costs for OTP providers, and in particular any drug acquisitions that exceed these rates after factoring in discounts, rebates, etc., and, if necessary, may revisit the payment methodology for ''incident to'' OTP drugs in future rulemaking to ensure that OTPs' drug acquisition costs are appropriately reimbursed.

iii. Oral Drugs

We proposed to use ASP-based payment, which would be determined based on ASP data that have been calculated consistent with the provisions in 42 CFR part 414, subpart 800, to set the payment rates for the oral product categories when we receive manufacturer-submitted ASP data for these drugs. We stated that we believe using the ASP pricing data for oral OTP drugs currently covered under Part D [67] would facilitate the computation of the estimated costs of these drugs. However, we acknowledged that we do not collect ASP pricing information under section 1927(b) of the Act for these drugs. We solicited public comment on whether manufacturers would be willing to submit ASP pricing data for OTP drugs currently covered under Part D on a voluntary basis.

We also proposed to limit the payment amounts for oral drugs to 100 percent of the volume-weighted ASP for a HCPCS code instead of 106 percent of the volume-weighted ASP for that HCPCS code. We explained our belief that limiting the 6 percent add-on would incentivize the use of the most clinically appropriate drug for a given patient. In addition, we explained our understanding that many OTPs purchase directly from drug manufacturers, thereby limiting the markup from distribution channels. We proposed to use the same version of the quarterly manufacturer-submitted data used for calculating the most recently posted ASP data files in preparing the CY 2020 payment rates for OTPs. We noted that the quarterly ASP Drug Pricing Files include ASP plus 6 percent payment amounts.[68] Accordingly, we would adjust these amounts consistent with our proposal to limit the payment amounts for these drugs to 100 percent of the volume-weighted ASP for a HCPCS code. The proposed payment rates were provided in Table 15 of the proposed rule. We proposed to codify the ASP payment methodology for the drug component of weekly bundles that include an oral medication at § 410.67(d)(2)(i)(B). We solicited public comment on these proposals, as well as on using alternative ASP-based payments to price these drugs, such as a rolling average of the past year's ASP payment rates.

In the event that we do not receive manufacturer-submitted ASP pricing data, we also considered several potential alternative pricing mechanisms to estimate the payment amounts for oral drugs typically paid for under Medicare Part D but that would become OTP drugs paid under Part B when used as part of MAT in an OTP.

[67] Please note that methadone is not currently considered a Part D drug when used for MAT. Methadone used for this purpose can be dispensed only through an OTP certified by SAMHSA. However, methadone dispensed for pain may be considered a Part D drug.

[68] See *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Part-B-Drugs/McrPartBDrugAvgSalesPrice/2016ASPFiles.html.*

We did not propose a specific pricing mechanism for these drugs at this time, but solicited public comment on the following potential approaches for estimating the acquisition cost and payment amounts for these drugs and on alternative approaches. We noted that we would consider the comments received in developing our final policy for determining these drug prices.

Approach 1: The Methodology in Section 1847A of the Act

One approach for estimating the cost of the drugs that are currently covered under Part D and for which ASP data are not available would be to use the methodology in section 1847A of the Act. Please see above for a discussion of the payment methodology in section 1847A of the Act. Under the methodology in section 1847A of the Act, when ASP data are not available, this option would price drugs using, for example, WAC or invoice pricing.

Approach 2: Medicare Part D Prescription Drug Plan Finder Data

On January 28, 2005, we issued the ''Medicare Program; Medicare Prescription Drug Benefit'' final rule (70 FR 4194) which implemented the Medicare voluntary prescription drug benefit, as enacted by section 101 of the MMA. Beginning on January 1, 2006, a prescription drug benefit program was available to beneficiaries with much broader drug coverage than was previously provided under Part B to include: Brand-name prescription drugs and biologicals, generic drugs, biosimilars, vaccines, and medical supplies associated with the injection of insulin.[69] This prescription drug benefit is offered to Medicare beneficiaries through Medicare Advantage Drug Plans (MA–PDs) and stand-alone Prescription Drug Plans (PDPs). The prescription drug benefit under Medicare Part D is administered based on the ''negotiated prices'' of covered Part D drugs. Under § 423.100 of the Part D regulations, the negotiated price of a Part D drug equals the amount paid by the Part D sponsor (or its pharmacy benefit manager) to the pharmacy at the point-of-sale for that drug. Typically, these Part D ''negotiated prices'' are based on AWP minus a percentage for brand drugs or either the maximum allowable cost, which is based on proprietary methodologies used to establish the same payment for therapeutically equivalent products marketed by multiple labelers with different AWPs, or the Generic Effective Rate, which guarantees aggregate minimum reimbursement (for example, AWP–85 percent). The negotiated price under Part D also includes a dispensing fee (for example, $1–$2), which is added to the cost of the drug.

Many of the beneficiaries who choose to enroll in Part D drug plans must pay premiums, deductibles, and copayments/co-insurance. The Medicare Prescription Drug Plan Finder is an online tool available at *http://www.medicare.gov.* This web tool allows beneficiaries to make informed choices about enrolling in Part D plans by comparing the plans' benefit packages, premiums, formularies, pharmacies, and pricing data. PDPs and MA–PDs are required to submit this information to CMS for posting on the Medicare Drug Plan Finder. The database structure provides the drug pricing and pharmacy network information necessary to accurately communicate plan information in a comparative format. The Medicare Prescription Drug Plan Finder displays information on pharmacies that are contracted to participate in the sponsors' network as either retail or mail order pharmacies.

Another approach for estimating the cost of the drugs that are currently covered under Part D and for which ASP data are not available would be to use data retrieved from the online Medicare Prescription Drug Plan Finder. For example, the Part D drug prices for each drug used by an OTP as part of MAT could be estimated based on a national average price charged by all Part D plans and their network pharmacies. However, the prices listed in the Medicare Prescription Drug Plan Finder generally reflect the prices that are negotiated by larger buying groups, as larger pharmacies often have significant buying power and smaller pharmacies generally contract with a pharmacy services administrative organization (PSAO). As a result, we indicated that our primary concern with this pricing approach is that such prices may fail to reflect the drug prices that smaller OTP facilities may pay in acquiring these drugs and could therefore disadvantage these facilities. We explained that if we were to select this pricing approach for oral drugs for which ASP data are not available, we would anticipate setting the pricing for these drugs using the most recent Medicare Prescription Drug Plan Finder data available at the drafting of this CY 2020 PFS final rule. We noted that, for the Part B ESRD prospective payment system (PPS) outlier calculation, which provides ESRD facilities with additional payment in situations where the costs for treating patients exceed an established threshold under the ESRD PPS, we chose to adopt the ASP methodology in section 1847A of the Act, and the other pricing methodologies under section 1847A of the Act, as appropriate, when ASP data are not available, to price the renal dialysis drugs and biological products that were or would have been separately billable under Part B prior to implementation of the ESRD PPS,[70] and the national average drug prices based on the Medicare Prescription Drug Plan Finder as the data source for pricing the renal dialysis drugs or biological products that were or would have been separately covered under Part D prior to implementation of the ESRD PPS.[71]

In the proposed rule, we stated that we believe all of the MAT drugs proposed for inclusion in the OTP benefit that are currently covered under Part D have clinical treatment indications beyond MAT such as for the treatment of pain.[72] These drugs will continue to be covered under Part D for these other indications. Buprenorphine will continue to be covered under Part D for MAT as well. Consequently, Part D pricing information should continue to be available for these drugs and could be used in the computation of payment under the approach discussed above.

Because, by law, methadone used in MAT cannot be dispensed by a pharmacy, it is not currently considered a Part D drug when used for MAT. Methadone used for this purpose can be dispensed only through an OTP certified by SAMHSA. However, methadone dispensed for pain may be considered a Part D drug and can be dispensed by a pharmacy. Accordingly, we also solicited comment on the applicability of Part D payment rates for methadone dispensed by a pharmacy to methadone dispensed by an OTP for MAT.

Approach 3: Wholesale Acquisition Cost (WAC)

Another approach for estimating the cost of the oral drugs that we proposed to include as part of the bundled payments, but for which ASP data are not available, would be to use WAC. Section 1847A(c)(6)(B) of the Act defines WAC as the manufacturer's list price for the drug to wholesalers or direct purchasers in the U.S., not including prompt pay or other discounts, rebates, or reductions in price, for the most recent month for

[69] See section 1860D–2(e) of the Act.

[70] 82 FR 50742 through 50745.

[71] 75 FR 49142.

[72] For example, while methadone is not covered by Medicare Part D for MAT, methadone dispensed for pain may be considered a Part D drug.

which the information is available, as reported in wholesale price guides or other publications of drug pricing data. As noted above in the discussion of Part B drugs, WAC is used as the basis for pricing some Part B drugs; for example, it is used when it is less than ASP in the case of single source drugs (section 1847A(b)(4) of the Act) and in cases where ASP is unavailable during the first quarter of sales (section 1847A(c)(4) of the Act).

Because WAC is the manufacturer's list price to wholesalers, we noted that we believe it is more reflective of the price paid by the end user than the AWP. As a result, we believe that this pricing mechanism would be consistent with pricing that currently occurs for drugs that are separately billable under Part B. However, we have concerns about the fact that WAC does not include prompt pay or other discounts, rebates, or reductions in price. We noted that if we were to select this option to estimate the cost of certain drugs, we would develop pricing using the most recent data files available at the time of drafting this CY 2020 PFS final rule.

Approach 4: National Average Drug Acquisition Cost (NADAC)

Another approach for estimating the cost of the oral drugs that we proposed to include as part of the bundled payments, but for which ASP data are not available, would be to use Medicaid's NADAC survey. This survey provides another national drug pricing benchmark. CMS conducts surveys of retail community pharmacy prices, including drug ingredient costs, to develop the NADAC pricing benchmark. The NADAC was designed to create a national benchmark that is reflective of the prices paid by retail community pharmacies to acquire prescription and over-the-counter covered outpatient drugs and is available for consideration by states to assist with their individual pharmacy payment policies.

State Medicaid agencies reimburse pharmacy providers for prescribed covered outpatient drugs dispensed to Medicaid beneficiaries. The reimbursement formula consists of two parts: (1) Drug ingredient costs; and (2) a professional dispensing fee. In a final rule with comment period titled ''Medicaid Program; Covered Outpatient Drugs,'' which appeared in the February 1, 2016 **Federal Register** (81 FR 5169), we revised the methodology that state Medicaid programs use to determine drug ingredient costs, establishing an Actual Acquisition Cost (AAC) based determination, as opposed to a determination based on estimated acquisition costs (EAC). AAC is defined at 42 CFR 447.502 as the agency's determination of the pharmacy providers' actual prices paid to acquire drugs marketed or sold by specific manufacturers. As explained in the Covered Outpatient Drugs final rule with comment period (81 FR 5175), we believe shifting from an EAC to an AAC based determination of ingredient costs is more consistent with the dictates of section 1902(a)(30)(A) of the Act. In 2010, a working group within the National Association of State Medicaid Directors (NASMD) recommended the establishment of a single national pricing benchmark based on average drug acquisition costs. Pricing metrics based on actual drug purchase prices provide greater accuracy and transparency in how drug prices are established and are more resistant to manipulation. The NASMD requested that CMS coordinate, develop, and support this benchmark.

Section 1927(f) of the Act provides, in part, that CMS may contract with a vendor to conduct monthly surveys with respect to prices for covered outpatient drugs dispensed by retail community pharmacies. We entered into a contract with Myers & Stauffer, LLC to perform a monthly nationwide retail price survey of retail community pharmacy covered outpatient drug prices (CMS–10241, OMB 0938–1041) and to provide states with weekly updates on pricing files, that is, the NADAC files. The NADAC survey process focuses on drug ingredient costs for retail community pharmacies. The survey collects acquisition costs for covered outpatient drugs purchased by retail pharmacies, which include invoice prices from independent and chain retail community pharmacies. The survey data provide information that CMS uses to assure compliance with federal requirements. In the proposed rule, we explained that we believe NADAC data could be used to set the prices for the oral drugs furnished by OTPs for which ASP data are not available. Survey data on invoice prices provide the closest pricing metric to ASP that we are aware of. However, we also noted that similar to the other available pricing metrics, we have concerns about the applicability of retail pharmacy prices to the acquisition costs available to OTPs since we have no evidence to suggest that these entities would be able to acquire drugs at a similar price point. We noted that if we were to select this option to estimate the cost of certain drugs, we would develop pricing using the most recent data files available at the time of drafting this CY 2020 PFS final rule.

Alternative Methadone Pricing: TRICARE

We also considered an approach for estimating the cost of methadone using the amount calculated by TRICARE. As discussed above in this section of this final rule, the TRICARE rates for medications used in OTPs to treat OUD are spelled out in the 2016 TRICARE final rule (81 FR 61068); in the regulations at 32 CFR 199.14(a)(2)(ix); and in Chapter 7, Section 5 and Chapter 1, Section 15 of the TRICARE Reimbursement Manual 6010.61–M, April 1, 2015.

In the 2016 TRICARE final rule, DOD established separate payment methodologies for OTPs based on the particular medication being administered for treatment.[73] Based on TRICARE's review of industry billing practices, the initial weekly bundled rate for administration of methadone included a daily drug cost of $3, which is subject to an update factor.[74]

We noted that this option would only be applicable for methadone because TRICARE has developed a FFS payment methodology for buprenorphine and naltrexone.[75] In the 2016 TRICARE final rule, the DOD stated that the payments for buprenorphine and naltrexone are more variable in dosage and frequency for both the drug and non-drug services.[76] Accordingly, TRICARE pays for drugs listed on Medicare's Part B ASP files, such as the injectable and implantable versions of buprenorphine using the ASP; drugs not appearing on the Medicare ASP file, such as oral buprenorphine, are priced at the lesser of billed charges or 95 percent of the AWP.[77]

We stated that we believed that pricing methadone consistent with the TRICARE payment rate could provide a reasonable payment amount for methadone when ASP data are not available. As DOD noted in the 2016 TRICARE final rule, ''a number of commenters indicated that they believed the rates DOD proposed for OTPs' services are near market rates and are acceptable.'' [78]

We proposed to codify this proposal to apply an alternative approach for determining the payment rate for oral drugs only if ASP data are not available in § 410.67(d)(2)(i)(B). We solicited

[78] 81 FR 61080.

public comment on the potential alternative approaches for estimating the cost of oral drugs that we proposed to include as part of the bundled payments but for which ASP data are not available, including any other alternate sources of data to estimate the cost of these oral MAT drugs. Payment rates based on these different options were set forth in Table 14 of the proposed rule. We stated that we would consider the comments received on these different approaches when deciding on the approach that we would use to determine the payment rates for oral drugs in the CY 2020 PFS final rule. We also solicited public comment on any other potential data sources for estimating the provider acquisition costs of OTP drugs currently paid under either Part B or Part D.

We received several comments on our proposals regarding pricing of oral drugs. The following is a summary of the comments received and our responses.

Comment: Several commenters submitted comments on the proposal to use ASP-based payment to set the payment rates for the oral product categories when we receive manufacturer-submitted ASP data for these drugs and to limit the payment amounts for oral drugs to 100 percent of the volume-weighted ASP instead of 106 percent of the volume-weighted ASP. (We note that a similar proposal for the injectable and implantable Part B drugs is discussed above and that several of the comments we received did not specifically reference which group of drugs they were concerning; therefore, we have included a discussion of these comments under both sections.) A few commenters supported the proposal, reasoning that ASP provides a transparent and public benchmark that would allow monitoring for unexpected and unnecessary price changes by manufacturers; and a couple of commenters encouraged us to require manufacturers to report these data.

Several other commenters expressed concerns about the proposal to price the oral drugs used in the bundle using the ASP without the 6 percent add-on. Commenters stated that the add-on is a necessary part of the payment to account for things such as overhead costs and/or additional mark-ups in the traditional drug distribution channels that are not captured in the manufacturer-reported ASP. A few commenters stated that the 6 percent add-on would allow the OTP to recoup costs associated with rigorous storage and inventory tracking systems required by the DEA. These commenters also stated that large OTPs, hospitals, and physician systems could skew ASP lower than the prices that smaller or rural OTPs could negotiate on their own. One commenter expressed concerns that OTPs might not be able to afford the oral drugs used in MAT without the add-on to cover these costs, and suggested that the Administration should be overly cautious to ensure success of these programs. Some commenters expressed concerns that this proposal would provide a disincentive for an OTP to utilize the most appropriate product for the patient to limit their cost of care. Several commenters also questioned CMS' legal authority to limit the payment amount for these drugs to 100 percent of the ASP.

Response: We thank the commenters for their feedback on our proposal to use ASP-based payment to set the payment rates for the oral product categories when we receive manufacturer-submitted ASP data for these drugs and to limit the payment amounts for oral drugs to 100 percent of the volume-weighted ASP instead of 106 percent of the volume-weighted ASP. We agree that use of ASP provides a transparent and public benchmark for manufacturers' pricing as it reflects the manufacturers' actual sales prices to all purchasers (with limited exceptions) and is the only pricing methodology that includes off-invoice rebates and discounts as described in section 1847A(c)(3) of the Act. For this reason, we believe the ASP to be the most market-based approach to set drug prices for the OTP benefit.

As noted above, section 1834(w) of the Act grants the Secretary considerable discretion to establish bundled payment rates for OUD treatment services. The statute does not dictate use of any specific methodology, such as the methodology in section 1847A of the Act, in setting these payments. We used our discretion, granted by the Act, in proposing to modify the methodology in section 1847A of the Act to set payments to OTPs for oral drugs for which ASP data are available. Therefore, we do not agree with the comments that indicated CMS has a legal obligation to include the 6 percent add—when using ASP to determine payments to OTPs for oral drugs.

As noted in the proposed rule, we understand that many OTPs purchase medications directly from drug manufacturers, thereby limiting the markup from distribution channels. We received this information during a routine informational industry call with OTP advocates in preparation for drafting the proposed rule. We also note that this fact was not challenged by any of the commenters. Furthermore, we do not believe the record-keeping or storage requirements noted are unique to OTPs. In fact, the selection of drugs purchased by most OTPs is quite limited, which theoretically limits the utility of third-parties, such as wholesalers, and their associated costs and increases the purchase volume for OTPs and accompanying manufacturer discounts. We believe that this situation could lend itself to an OTP drug channel for purchasing at discounted rates either directly or through the use of buying groups as is the standard in the pharmacy industry today. Furthermore, we remain concerned that certain providers will look to differential drug costs to determine which therapies to offer. As a result, we believe that our proposed approach of paying for oral drugs based on ASP, when available, offers an appropriate balance between ensuring OTPs receive appropriate reimbursement for their drug acquisition costs, while also preserving the incentive to use the most clinically appropriate drug for the treatment of individual beneficiaries.

After consideration of the public comments, we are finalizing our proposal to use ASP-based payment to set the payment rates for the oral drugs and to limit the payment amounts for these drugs to 100 percent of the volume-weighted ASP when it is available. However, we continue to be interested in feedback regarding drug acquisition costs for OTP providers, and in particular any drug acquisitions that exceed these rates after factoring in discounts, rebates, etc., and if necessary, may revisit the payment methodology for oral OTP drugs in future rulemaking to ensure that OTPs' drug acquisition costs are appropriately reimbursed.

Comment: A few commenters submitted comments on the potential pricing mechanisms described in the proposed rule to estimate the payment amounts for oral OTP drugs in the event that we do not receive manufacturer-submitted ASP pricing data. Some commenters supported establishing payments based on current Medicare law and practice, such as the rates provided under Part D, for other oral drugs. Another commenter advised against using methods such as AWP and WAC as these options can be manipulated by the manufacturers. This commenter also noted that NADAC and the Medicare Plan Finder prices may not be relevant to all OTP medications as they are retail-based price measures and OTPs are providers. One commenter suggested use of the methodology in section 1847A of the

Act, which would generally default to WAC-based payment if ASP is not reported. One commenter generally opposed the use of TRICARE rates, while another specifically stated that the current TRICARE payment rate for methadone, as presented in the proposed rule, is fair and should be used as a reference price for Medicare.

Response: We agree with commenters that using current programmatic pricing mechanisms where available is preferable to a pricing methodology that is novel and unproven. As oral buprenorphine used for OUD is currently dispensed by retail pharmacies, we believe that a retail-based pricing method may be most relevant to this drug product and more reflective of actual costs than a list price. As noted above, the NADAC survey collects acquisition costs for covered outpatient drugs purchased by retail pharmacies, which include invoice prices from independent and chain retail community pharmacies. Pricing metrics based on actual drug purchase prices provide greater accuracy and transparency in how drug prices are established and are more resistant to manipulation. As the NADAC survey data on invoice prices provide the closest pricing metric to ASP that we are aware of, we believe, at this time, that NADAC data would be the best pricing benchmark to set the prices for non-methadone oral drugs (that is, currently only the oral buprenorphine products) furnished by OTPs for which ASP data are not available. We further agree that retail pricing benchmarks, such as NADAC and Part D Plan Finder data, may not be particularly relevant for methadone, because methadone is not dispensed by retail pharmacies for this indication and its use for OUD is limited to OTPs. As a result, we believe that use of the TRICARE rate for methadone, when ASP data are not available, is currently the most applicable reference price for Medicare payment of methadone used in the OTP setting.

After consideration of the public comments, we are finalizing our proposal to use ASP-based payment to set the payment rates for the oral product categories when we receive manufacturer-submitted ASP data for these drugs and to limit the payment amounts for oral drugs to 100 percent of the volume-weighted ASP. We have used the same version of the quarterly manufacturer-submitted data used for calculating the most recently posted ASP data files to determine the CY 2020 payment rates for OTPs. When ASP data are not available for the oral drugs used in OTPs, we are finalizing a policy under which we will use the TRICARE rate to set the payment for the drug component of the methadone bundle, and NADAC data to set the payment for the drug component of the oral buprenorphine bundle. Payment rates for these drugs are provided in Table 18. We note that, for purposes of determining payment for CY 2020, we were able to calculate an ASP for methadone using manufacturer reported data. However, we did not receive ASP data from any of the buprenorphine oral manufacturers. Therefore, the drug component of the oral buprenorphine weekly bundle will be priced using NADAC survey data. We are finalizing this payment methodology for the oral drugs at § 410.67(d)(2)(i)(B).

(b) Non-Drug Component

To price the non-drug component of the bundled payments, we proposed to use a crosswalk to the non-drug component of the TRICARE weekly bundled rate for services furnished when a patient is prescribed methadone. As described above, in 2016, TRICARE finalized a weekly bundled rate for administration of methadone that included a daily drug cost of $3, along with a $15 per day cost for non-drug services (that is, the costs related to the intake/assessment, drug dispensing and screening and integrated psychosocial and medical treatment and supportive services). The daily projected per diem cost ($18/day) was converted to a weekly rate of $126 ($18/day × 7 days) (81 FR 61079). TRICARE updates the weekly bundled methadone rate for OTPs annually using the Medicare update factor used for other mental health care services rendered under TRICARE (that is, the Inpatient Prospective Payment System update factor) (81 FR 61079). The updated amount for CY 2019 is $133.15 (of which $22.19 is the methadone cost and the remainder, $110.96, is for the non-drug services).[79] In the proposed rule, we stated that we believed using the TRICARE weekly bundled rate would be a reasonable approach to setting the payment rate for the non-drug component of the bundled payments to OTPs, particularly given the time constraints in developing a payment methodology prior to the January 1, 2020 effective date of this new Medicare benefit category. The TRICARE rate is an established national payment rate that was established through notice and comment rulemaking. As a result, OTPs and other interested parties had an opportunity to present information regarding the costs of these services. Furthermore, the TRICARE rate describes a generally similar bundle of services to those services that are included in the definition of OUD treatment services in section 1861(jjj)(1) of the Act. We recognized that there are differences in the patient population for TRICARE compared with the Medicare beneficiary population. However, as OTP services have not previously been covered by Medicare, we noted that it is not clear what impact, if any, these differences would have on the cost of the services included in the non-drug component of the bundled payments. We proposed to codify the methodology for determining the payment rate for the non-drug component of the bundled payments using the TRICARE weekly rate for non-drug services at § 410.67(d)(2). As part of the proposal, we noted that we would plan to monitor utilization of non-drug services by Medicare beneficiaries and, if needed, would consider in future rulemaking ways we could tailor the TRICARE payment rate for these non-drug services to the Medicare population, including dually eligible beneficiaries.

Because the TRICARE payment rate for the non-drug services included in its weekly bundled rate for methadone reflects the daily administration of methadone, as part of our proposed approach we indicated that we would adjust the TRICARE payment rate for non-drug services for most of the other bundled payments to more accurately reflect the cost of administering the other drugs used in MAT. For the oral buprenorphine bundled payment, we proposed to retain the same amount as the rate for the methadone bundled payment based on an assumption that this drug is also being dispensed daily. We stated that we understood that patients who have stabilized may be given 7–14 day supplies of oral buprenorphine at a time, but for the purposes of developing the proposed rates, we proposed to value this service to include daily drug dispensing to account for cases where daily drug dispensing is occurring. For the injectable drugs (buprenorphine and naltrexone), we proposed to subtract from the non-drug component, an amount that is comparable to the dispensing fees paid by several state Medicaid programs ($10.50) for a week of daily dispensing of methadone. This adjustment would account for the fact that these injectable drugs are not oral drugs that are dispensed daily; we proposed that we would then instead add the fee that Medicare pays for the

[79] *https://health.mil/Military-Health-Topics/Business-Support/Rates-and-Reimbursement/MHSUD-Facility-Rates.*

administration of an injection (which is currently $16.94 under the CY 2019 non-facility Medicare payment rate for CPT code 96372). We proposed to update the amount of this adjustment annually using the same methodology that we were proposing to use to update the non-drug component of the bundled payments.

Similarly, we proposed that the payment rates for the non-drug component of the codes for the weekly bundled payments for buprenorphine implants would be adjusted to add an amount for insertion and/or removal of the implants based on a direct crosswalk to the non-facility payment rates under the Medicare PFS for the insertion, removal, or insertion and removal of these implants, which describe the physician work, PE, and malpractice costs associated with these procedures, and to remove the costs of daily drug dispensing (determined based on the dispensing fees paid by several state Medicaid programs for a week of daily dispensing of methadone, currently $10.50). For the code describing implant insertion, we proposed that we would use a crosswalk to the rate for HCPCS code G0516 (*Insertion of non-biodegradable drug delivery implants, 4 or more (services for subdermal rod implant*)); for the code describing implant removal, we proposed that we would use a crosswalk to the rate for HCPCS code G0517 *(Removal of non-biodegradable drug delivery implants, 4 or more (services for subdermal implants)*); and for the code describing implant insertion and removal, we proposed that we would use a crosswalk to the rate for HCPCS code G0518 (*Removal with reinsertion, non-biodegradable drug delivery implants, 4 or more (services for subdermal implants*)). We note that in the proposed rule, we inadvertently misstated the amounts for HCPCS codes G0516, G0517, and G0518. The correct amounts for HCPCS codes G0516, G0517, and G0518 under the CY 2019 non-facility Medicare payment rate are $246.15, $265.61, and $465.26, respectively.

To determine the payment rates for the code describing a non-drug bundled payment, we proposed to use a crosswalk to the reimbursement rate for the non-drug services included in the TRICARE weekly bundled rate for administration of methadone, adjusted to subtract the cost of methadone dispensing (using an amount that is comparable to the dispensing fees paid by several state Medicaid programs for a week of daily dispensing of methadone, which is currently $10.50).

We proposed that the payment rate for the add-on code for each additional 30 minutes of counseling or group or individual therapy would be based on 30 minutes of substance use counseling and valued based on a crosswalk to the rates set by state Medicaid programs for similar services.

We received a number of public comments on our proposed payment rates for the non-drug component of the bundled payment and the add-on code for additional counseling or therapy services. The following is a summary of the comments we received and our responses.

Comment: Many commenters stated that the proposed rate for the non-drug component of the bundled payment was insufficient. A few commenters expressed concern that establishing a Medicare rate that is lower than the rates set by some state Medicaid programs would destabilize the market. Some commenters recommended that the single full week TRICARE payment rate should be the floor used to pay for a basic Medicare OTP benefit assuming a similar level of service and that any additional services, such as extra counseling and/or therapy visits, should be reimbursed outside of the bundle, as CMS proposed for counseling sessions above the basic benefit and stated that if additional services are added to the basic benefit, the bundled payment should increase to reflect the additional services. Some commenters stated that the proposed rate reflects a market rate that is significantly discounted, noting that it is benchmarked on an insurance industry practice rooted in stigma and limited resources and expressed concern that it may inadvertently limit access to care at a time when the opioid overdose epidemic continues to cause significant mortality. Additionally, a few commenters noted that the TRICARE rate reflects the average cost of care for the typical TRICARE patient, but that they believed Medicare patients would generally require more services. A few commenters noted that the only difference between OTPs and office-based OUD treatment is the means of regulation and medication offered, and that therefore, the different settings should not be cause to pay differentially. Some commenters encouraged CMS to adjust the payment rates to account for severity of illness. Several commenters stated that the proposed rate for counseling is too low, which would make it difficult for providers to employ qualified practitioners. Several commenters urged CMS to use a building block methodology, which sums the Medicare payment rates for similar services furnished in the non-facility setting, to calculate the payment rate for the non-drug component.

Response: After consideration of the public comments, we are finalizing a payment rate for the non-drug component that is calculated based on a building block methodology using the Medicare payment rates for similar services furnished in the non-facility setting. We note that we considered a variety of different rates, including TRICARE and Medicaid, and decided ultimately to use Medicare rates for similar services. We appreciate commenters' feedback about the TRICARE rate, including the concern that it reflects an average cost of care for the TRICARE patient population, and note that by finalizing payment rates using the established rates for similar services under Medicare, we believe these rates will be more reflective of the resource costs involved in furnishing services to the Medicare patient population. We also acknowledge that establishing a methodology under which Medicare payments would be less than those made by state Medicaid programs could create unnecessary barriers to access to care. Additionally, we recognize that a differential in payment OUD treatment services furnished by OTPs and OUD treatment furnished in the office setting may set up a disparity that could disadvantage OTPs.

The services that are included in the non-drug component of the weekly bundles are the same services that are included in the TRICARE rate, which are individual therapy, group therapy, substance use counseling, and toxicology testing. Therefore, we believe that a reasonable alternative approach is to finalize payment rates for the non-drug component of the bundled payments for CY 2020 that are determined using a building block methodology under which the payment rate for the same set of non-drug services is based on established rates for similar services under the Medicare PFS (non-facility rates), the Medicare CLFS, and state Medicaid programs.

Specifically, the payment rate we are finalizing for the non-drug component reflects the Medicare payment rates for the following codes as reference codes for the services that are included in the TRICARE rate, (individual therapy, group therapy, substance use counseling, and toxicology testing): CPT code 90832 (*Psychotherapy, 30 minutes with patient*), in CY 2019 is currently assigned a non-facility rate of $68.47 under the PFS; CPT code 90853 (*Group psychotherapy (other than of a multiple-family group)*), which in CY 2019 is assigned a non-facility rate of $27.39

under the PFS; HCPCS code G0396 (*Alcohol and/or substance (other than tobacco) abuse structured assessment (e.g., audit, dast), and brief intervention 15 to 30 minutes*), which in CY 2019 is assigned a non-facility rate of $30.94 under the PFS when furnished by nonphysician practitioners (NPPs), as we believe this is a more accurate reflection of the practitioner type who would be furnishing substance use counseling in an OTP; CPT code 80305 (*Drug test(s), presumptive, any number of drug classes, any number of devices or procedures; capable of being read by direct optical observation only (e.g., utilizing immunoassay [e.g., dipsticks, cups, cards, or cartridges]), includes sample validation when performed, per date of service*), which in CY 2019 is assigned a rate of $12.60 under the CLFS, and which we will prorate to account for two tests per month in the base bundled payment; and HCPCS code G0480 *(Drug test(s), definitive, utilizing (1) drug identification methods able to identify individual drugs and distinguish between structural isomers (but not necessarily stereoisomers), including, but not limited to gc/ms (any type, single or tandem) and lc/ms (any type, single or tandem and excluding immunoassays (e.g., ia, eia, elisa, emit, fpia) and enzymatic methods (e.g., alcohol dehydrogenase)), (2) stable isotope or other universally recognized internal standards in all samples (e.g., to control for matrix effects, interferences and variations in signal strength), and (3) method or drug-specific calibration and matrix-matched quality control material (e.g., to control for instrument variations and mass spectral drift); qualitative or quantitative, all sources, includes specimen validity testing, per day; 1–7 drug class(es), including metabolite(s) if performed*), which in CY 2019 is assigned a rate of $114.43 under the CLFS, and which we will prorate to account for one test per month in the base bundled payment, as discussed previously. The sum of these amounts is $161.71.

We are also finalizing our proposal to adjust the non-drug component rate to account for different administration and dispensing costs of the drug that is used in the episode of care (either oral, injectable, or implantable). We note that in calculating the proposed rates, the TRICARE weekly bundled rate included administration of oral drugs, which we then adjusted accordingly for the other bundled payments by subtracting the amount for dispensing oral drugs and adding a different amount to account for administration of the injectable and implantable drugs. We are finalizing the rate we proposed for dispensing oral drugs using an approximation of the average dispensing fees under state Medicaid programs, which is $10.50, since there is no Medicare Part B rate for oral MAT drugs. For the injectable drugs (buprenorphine and naltrexone), we proposed to subtract from the non-drug component an amount that is comparable to the dispensing fees paid by several state Medicaid programs ($10.50) for a week of daily dispensing of methadone, and to add the Medicare non-facility rate for administration of an injection. This adjustment was necessary to account for the fact that the TRICARE rate includes oral dispensing fees, whereas these injectable drugs are not oral drugs that are dispensed daily. However, because we are adopting a building block methodology in final rule to determine the payment rate for the non-drug component of the weekly bundles, it is no longer necessary to subtract the oral dispensing fee; however, as we proposed, we will include the Medicare non-facility rate for administration of an injection in our determination of the payment rate for the non-drug component for weekly bundles that include injectable drugs. We are finalizing the rate we proposed for administration of an injection, based on CPT code 96372 (*Therapeutic, prophylactic, or diagnostic injection (specify substance or drug); subcutaneous or intramuscular*) as a reference code, is $16.94.

For the codes describing the insertion, removal, or insertion and removal of the buprenorphine implants, we proposed to adjust the non-drug component payment rate to remove the cost of daily administration of an oral drug and by adding the Medicare non-facility payment rate for the insertion, removal, or insertion and removal of the implants, respectively. Again, removal of the cost of daily administration of an oral drug is no longer necessary under our building block methodology; but, we are finalizing our proposal to include the rates for the insertion, removal, or insertion and removal of the buprenorphine implants, as applicable. The reference codes, which we proposed and are finalizing are: HCPCS codes G0516 (*Insertion of non-biodegradable drug delivery implants, 4 or more (services for subdermal rod implant)*), which in CY 2019 is assigned a non-facility rate of $246.15. G0517 (*Removal of non-biodegradable drug delivery implants, 4 or more (services for subdermal implants)*), which in CY 2019 is assigned a non-facility rate of $265.61 under the PFS, and G0518 (*Removal with reinsertion, non-biodegradable drug delivery implants, 4 or more (services for subdermal implants)*), which in CY 2019 is assigned a non-facility rate of $465.26 under the PFS. Under the building block methodology we are adopting in this final rule, the total non-drug component payment for the non-drug bundle is $161.71, the total non-drug component payment for oral drugs is $172.21, the total non-drug component payment for the injectable drugs is $178.65, the total non-drug component payment for the buprenorphine implant insertion is $407.86, the total non-drug component payment for the buprenorphine implant removal is $427.32, and the total non-drug component payment for the buprenorphine implant insertion and removal is $626.97. See Table 18 for a full listing of the final payment rates that we are establishing in this final rule, which reflect the sum of the drug component and non-drug component for each bundled payment. We believe the rates we are finalizing are reflective of an average case, but we recognize that the number of services furnished for patients who have stabilized and are in the maintenance phase of treatment, may be significantly less. However, we note that while the reference codes listed above were considered for the purpose of valuation of the non-drug component of the weekly bundled payments, it is not a requirement for billing these codes (HCPCS codes G2067–G2075) that all of the services described by these reference codes would necessarily be furnished during each week that the bundled payment is billed. Rather, the threshold to bill for the bundled payment is that at least one service in the bundle is furnished during that week, which could be administration of the drug, individual therapy, group therapy, substance use counseling, or toxicology testing.

In response to commenters who stated that the proposed rate for the counseling add-on code was too low, we note that we are finalizing a rate of $30.94, which is based on the CY 2019 PFS non-facility rate for HCPCS code G0396 (*Alcohol and/or substance (other than tobacco) abuse structured assessment (e.g., audit, dast), and brief intervention 15 to 30 minutes*), when furnished by NPPs, and is higher than the proposed amount for this add-on code. Additionally, we believe that the availability of this add-on code will allow OTPs to receive reimbursement for additional counseling services furnished to patients with more needs, thereby accounting for varying levels of severity of illness. We will be

monitoring the claims data to ensure that use of this add-on code is not being abused.

i. Medication Not Otherwise Specified

In the proposed rule, we stated that we would expect the non-drug component for the medication not otherwise specified bundled payment (HCPCS code G2075) to be consistent with the pricing methodology for the other bundled payments and therefore, to be based on a crosswalk to the TRICARE rate, adjusted for any applicable administration and dispensing fees. For example, for oral medications, we would use the rate for the non-drug services included in the TRICARE methadone bundle, based on an assumption that the drug is also being dispensed daily. For the injectable medications, we similarly stated that we would adjust the TRICARE payment rate for non-drug services using the same methodology we proposed for the bundled payments with injectable medications (to subtract an amount for daily dispensing and add the non-facility Medicare payment rate for administration of the injection). For implantable medications, we stated that we would also use the same methodology we proposed for the bundled payments with implantable medications, with the same crosswalked non-facility Medicare payment rates (for insertion, removal, and insertion and removal). We solicited comments on how the price of the non-drug component of such bundled payments should be determined, in particular the dispensing and/or administration fees, including whether the methodology we proposed for determining the payment rate for the non-drug component of an episode of care that includes a new opioid agonist and antagonist medication (which is based on whether the drug is oral, injectable, or implantable) would be appropriate to use for these new drugs.

We did not receive any comments on our proposal relating to pricing the non-drug component for medication not otherwise specified bundled payments. Consistent with our original proposal, we intend to determine the payment for the non-drug component of the medication not otherwise specified bundle based on whether the drug is oral, injectable, or implantable. However, this payment would be determined using the building block payment methodology that we are adopting in this final rule to determine the non-drug component of the bundled payments for medications that have the same mode of administration.

(c) Partial Episode of Care

For the codes describing partial episodes for methadone and oral buprenorphine, we proposed that the payment rates for the non-drug component would be calculated by taking one half of the payment rate for the non-drug component for the corresponding weekly bundles. We chose one half as the best approximation of the median cost of the services furnished during a partial episode consistent with our proposal to make a partial episode bundled payment when the majority of services described in a beneficiary's treatment plan are not furnished during a specific episode of care. However, we solicited comment on other methods that could be used to calculate these payment rates. We proposed that the payment rates for the drug component of these partial episode bundles would be calculated by taking one half of the payment rate for the drug component of the corresponding weekly bundles.

For the codes describing partial episodes for injectable buprenorphine and naltrexone, we proposed that the payment rates for the drug component would be the same as the payment rate for the drug component of the full weekly bundle so that the OTP would be reimbursed for the cost of the drug that is given at the start of the episode. For the non-drug component, we proposed that the payment rate would be calculated as follows: The TRICARE non-drug component payment rate ($110.96), adjusted to remove the cost of daily administration of an oral drug ($10.50), then divided by two; that amount would be added to the fee that Medicare pays for the administration of an injection (which is currently $16.94 under the CY 2019 non-facility Medicare payment rate for CPT code 96372).

For the codes describing partial episodes for the buprenorphine implant insertion, removal, and insertion and removal, we proposed that the payment rates for the drug component would be the same as the payment rate for the corresponding weekly bundle. For the non-drug component, we proposed that the payment rate would be calculated as follows: The TRICARE non-drug component payment rate ($110.96), adjusted to remove the cost of daily administration of an oral drug ($10.50), then divided by two; that amount would be added to the Medicare non-facility payment rate for the insertion, removal, or insertion and removal of the implants, respectively (based on the non-facility rates for HCPCS codes G0516, G0517, and G0518, which are currently $246.15, $265.61, and $465.26, respectively).

For the code describing a non-drug partial episode of care, we proposed that the payment rate would be calculated by taking one half of the payment rate for the corresponding weekly bundle.

We proposed that the payment rate for the code describing partial episodes for a medication not otherwise specified would be calculated based on whether the medication is oral, injectable or implantable, following the methodology described above for the corresponding type of partial episode. We solicited comments on how partial episodes of care using new drugs with a novel mechanism of action (that is, non-opioid agonist and/or antagonist treatment medications) should be priced. For example, we could use the same approach described previously for pricing new opioid agonist and antagonist medications not otherwise specified, which is to follow the methodology based on whether the drug is oral, injectable or implantable.

We did not receive comments on our proposed methodology for determining payment rates for partial episodes. However, as discussed above, after consideration of the public comments, we are not finalizing our proposal to create partial episodes at this time, and thus will not be finalizing our proposed methodology for pricing partial episodes.

BILLING CODE 4120–01–P

TABLE 18: OTP Final Code Descriptors and Payment Amounts

HCPCS	Descriptor	Drug Cost*	Non-drug Cost**	Total Cost
G2067	Medication assisted treatment, methadone; weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing, if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program)	$35.28	$172.21	$207.49
G2068	Medication assisted treatment, buprenorphine (oral); weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program)	$86.26	$172.21	$258.47
G2069	Medication assisted treatment, buprenorphine (injectable); weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program)	$1,578.64	$178.65	$1,757.29
G2070	Medication assisted treatment, buprenorphine (implant insertion); weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program)	$4,918.98	$407.86	$5,326.84
G2071	Medication assisted treatment, buprenorphine (implant removal); weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program)	$0	$427.32	$427.32
G2072	Medication assisted treatment, buprenorphine (implant insertion and removal); weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program)	$4,918.98	$626.97	$5,545.95
G2073	Medication assisted treatment, naltrexone; weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program)	$1,164.02	$178.65	$1,342.67
G2074	Medication assisted treatment, weekly bundle not including the drug, including substance use counseling, individual and group therapy, and toxicology testing if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program)	$0	$161.71	$161.71
G2075	Medication assisted treatment, medication not otherwise specified; weekly bundle including dispensing and/or administration, substance use counseling, individual and group therapy, and toxicology testing, if performed (provision of the services by a Medicare-enrolled Opioid Treatment Program)	-	-	-
	Intensity Add-on Codes			
G2076	Intake activities, including initial medical examination that is a complete, fully documented physical evaluation and initial assessment conducted by a program physician or a primary care physician, or an authorized healthcare professional under the supervision of a program physician or qualified personnel that includes preparation of a treatment plan that	$0	$179.46	$ 179.46

HCPCS	Descriptor	Drug Cost*	Non-drug Cost**	Total Cost
	includes the patient's short-term goals and the tasks the patient must perform to complete the short-term goals; the patient's requirements for education, vocational rehabilitation, and employment; and the medical, psycho- social, economic, legal, or other supportive services that a patient needs, conducted by qualified personnel (provision of the services by a Medicare-enrolled Opioid Treatment Program); List separately in addition to code for primary procedure.			
G2077	Periodic assessment; assessing periodically by qualified personnel to determine the most appropriate combination of services and treatment (provision of the services by a Medicare-enrolled Opioid Treatment Program); List separately in addition to code for primary procedure.	$0	$110.28	$ 110.28
G2078	Take-home supply of methadone; up to 7 additional day supply (provision of the services by a Medicare-enrolled Opioid Treatment Program); List separately in addition to code for primary procedure.	$35.28	$0	$35.28
G2079	Take-home supply of buprenorphine (oral); up to 7 additional day supply (provision of the services by a Medicare-enrolled Opioid Treatment Program); List separately in addition to code for primary procedure.	$86.26	$0	$86.26
G2080	Each additional 30 minutes of counseling in a week of medication assisted treatment, (provision of the services by a Medicare-enrolled Opioid Treatment Program); List separately in addition to code for primary procedure.	$0	$30.94	$30.94

*Methadone drug costs are calculated using ASP data, oral buprenorphine drug costs are calculated using NADAC data, and the other drug costs are calculated using data from the quarterly ASP Drug Pricing Files. The payment amounts in this table are based on data files posted at the time of the drafting of this final rule.

**The non-drug component for the non-drug bundle is based on the sum of the rates under Medicare for the following codes: CPT codes 90832, 90853, 80305, and HCPCS codes G0396 and G0480. For the codes that include oral medications (HCPCS codes G2067 and G2068), we added to that amount the rate for dispensing oral drugs using an approximation of the average dispensing fees under state Medicaid programs, which is $10.50. For the codes that include injectable drugs (HCPCS codes G2069 and G2073), we added to the non-drug bundle amount the fee that Medicare pays for the administration of an injection (which is currently $16.94 under the CY 2019 non-facility Medicare payment rate for CPT code 96372). For the codes that include implantable buprenorphine (HCPCS codes G2070, G2071, and G2072), we added the rates under Medicare for the insertion, removal, and insertion/removal of buprenorphine implants (which is $$246.15, $265.61, and $465.26, respectively, based on the CY 2019 non-facility Medicare payment rates for HCPCS codes G0516, G0517 and G0518). The payment rate for HCPCS code G2076 is based on the CY 2019 non-facility Medicare payment rate for CPT code 99204 plus one presumptive toxicology test (CPT code 80305). The non-drug component for HCPCS code G2077 is based on the CY 2019 non-facility Medicare payment rate for CPT code 99214. The payment rate for HCPCS code G2080 is based on the CY 2019 non-facility Medicare payment rate for HCPCS code G2080 when furnished by an NPP. Additionally, the non-drug component of the bundled payment amounts will be geographically adjusted based on the PFS GAF, this adjustment will also be extended to the non-drug component add-on payments as discussed below.

BILLING CODE 4120–01–C

(8) Place of Service (POS) Code for Services Furnished at OTPs

In the proposed rule, we explained that we would be creating a new POS code specific to OTPs since there are no existing POS codes that specifically describe OTPs. We indicated that claims for OTP services would include this place of service code. We also noted that POS codes are available for use by all payers. We did not propose to make any differential payment based on the use of this new POS code.

The following is a summary of the comments we received regarding the discussion of creating a new POS and our responses.

Comment: Several commenters supported the plan to create a new POS code that would specifically describe OTPs. A few commenters stated that if non-OTP pharmacies were to dispense MAT drugs covered by an OTP bundle, it is not clear how the OTP POS code will be transmitted to Part D plans or pharmacies so that they will know whether an enrollee is also enrolled in an OTP. Another commenter stated that while POS codes currently distinguish inpatient from outpatient OUD treatment, they do not distinguish between a Medicare-enrolled OTP and a non-Medicare-enrolled OTP and recommended that CMS should consider multiple value sets for POS codes to help retail pharmacies dispense prescriptions and process claims appropriately.

Response: We have created a new place of service code, which will be described as Place of Service code 58 (*Non-residential Opioid Treatment Facility—a location that provides treatment for OUD on an ambulatory basis. Services include methadone and other forms of MAT*). We expect that POS code 58 will be noted on claims

submitted for the HCPCS G codes describing OTP services. Additionally, we note that the G codes describing the OTP bundled payments and add-on codes can only be billed by OTPs and cannot be billed by other providers. We note that POS codes are not specific to Medicare use and may be used by other payers.

In response to the comments about non-OTP pharmacies dispensing MAT drugs included in an OTP bundle, we encourage pharmacies and prescribing OTPs be in close communication in order to ensure proper billing procedures are followed and to prevent duplicative payments. The presence of POS code 58 on retail pharmacy claims will not mean that the pharmacy should process MAT claims any differently than they do now. We appreciate the suggestion to create multiple value sets for POS codes, and will take that under consideration.

c. Duplicative Payments Under Parts B or D

Section 1834(w)(1) of the Act, added by section 2005(c) of the SUPPORT Act, requires the Secretary to ensure, as determined appropriate by the Secretary, that no duplicative payments are made under Part B or Part D for items and services furnished by an OTP. In the proposed rule, we noted that many of the individual items or services provided by OTPs that would be included in the bundled payment rates under the proposed policies may also be appropriately available to beneficiaries through other Medicare benefits. Although we recognized the potential for significant program integrity concerns when similar items or services are payable under separate Medicare benefits, we also stated that we believe it is important that any efforts to prevent duplicative payments not inadvertently restrict Medicare beneficiaries' access to other Medicare benefits even for the time period they are being treated by an OTP. For example, a beneficiary receiving counseling or therapy as part of an OTP bundle of services may also be receiving medically reasonable and necessary counseling or therapy as part of a physician's service during the same time period. Similarly, there could be circumstances where Medicare beneficiaries with OUD could receive treatment and/or medication from non-OTP entities that would not result in duplicative payments, presuming that both the OTP and the other entity appropriately furnished separate medically-necessary services or items. Consequently, we explained that we do not believe that provision of the same kinds of services by both an OTP and a separate provider or supplier would itself constitute a duplicative payment.

We explained our belief that duplicative payments would result from the submission of claims to Medicare leading to payment for drugs furnished to a Medicare beneficiary and the associated dispensing fees on a certain date of service to both an OTP and another provider or supplier under a different benefit. In these circumstances, we would consider only one of the claims to be paid for appropriately. Accordingly, for purposes of implementing section 1834(w)(1) of the Act, we proposed to consider payment for medications delivered, administered or dispensed to the beneficiary as part of the OTP bundled payment to be a duplicative payment if delivery, administration or dispensing of the same medications was also separately paid under Medicare Parts B or D. We proposed to codify this policy at § 410.67(d)(4). We acknowledged that some OTPs may negotiate arrangements whereby community pharmacies supply MAT-related medications to OTPs. However, we stated that if the OTP provides medically-necessary MAT-related medications as part of an episode of care, we would expect the OTP to take measures to ensure that there is no claim for payment for these drugs other than as part of the OTP bundled payment. For example, the MAT drugs billed by an OTP as part of a bundled payment should not be reported to or paid under a Part D plan. We stated that we expect that OTPs will take reasonable steps to ensure that the items and services furnished under their care are not reported or billed under a different Medicare benefit. We also noted that CMS intends to monitor for duplicative payments, and would take appropriate action as needed when such duplicative payments are identified. Therefore, we proposed that in cases where a payment for drugs used as part of an OTP's treatment plan is identified as being a duplicative payment because the same costs were paid under a different Medicare benefit, CMS will generally recoup the duplicative payment made to the OTP as the OTP would be in the best position to know whether or not the drug that is included as part of the beneficiary's treatment plan is furnished by the OTP or by another provider or supplier given that the OTP is responsible for managing the beneficiary's overall OUD treatment. We proposed to codify this policy at § 410.67(d)(4). We noted that this general approach would not preclude CMS or other auditors from conducting appropriate oversight of duplicative payments made to the other provider or suppliers, particularly in cases of fraud and/or abuse.

We received a few comments on our proposed policy to address duplicative payments. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the proposal that the OTP should be accountable for ensuring duplicative payments are not made on the basis that OTPs are in the best position to know whether a drug included in the patient's treatment plan is furnished by the OTP.

Response: We thank the commenters for their feedback and support.

Comment: One commenter stated that the new Medicare bundled payments to OTPs should not impact payment for MAT prescriptions rightfully transmitted to a retail pharmacy unless the prescription is from an OTP. The commenter stated that having to determine whether a MAT drug presented to a retail pharmacy should be covered under the new Part B OTP bundle or Part D could introduce a delay in access to treatment. The commenter stated that retail pharmacies should continue to process any MAT prescription under Part D, as they do today. The commenter also stated that prescribers who administer implantable or injectable MAT drugs outside of a SAMHSA-certified OTP would continue to bill these drugs to Part B. Additionally, the commenter questioned if the Medicare bundled payments to OTPs will include MAT drugs that are prescribed within an OTP by a licensed prescriber, but dispensed outside of it.

Response: With regard to the commenter's question concerning MAT drugs prescribed within an OTP but dispensed outside of it, there is no issue of duplicative payment if the OTP has an arrangement with the pharmacy whereby CMS pays the OTP a bundled payment rate and the OTP reimburses the pharmacy through an independent arrangement (in which case the pharmacy would not bill the Part D plan, as it would be reimbursed by the OTP). However, if such an arrangement does not exist, and the pharmacy intends to submit a Part D claim, then the OTP should not bill for an episode of care that includes a drug component but instead should bill for a non-drug episode of care (HCPCS code G2074). Similarly, we note that if the drug administration for a Part B MAT drug occurs outside the OTP and the OTP is not also billing for a weekly bundle that includes that Part B drug, then the administering provider can bill Part B.

Comment: One commenter stated that while they agree with our proposal to recoup duplicative payments from OTPs, CMS should monitor for any unintended impacts to access or other challenges that may result. The commenter stated that CMS must not create a situation in which beneficiaries cannot access needed care because they are receiving OUD treatment through an OTP bundle.

Response: We have explicitly acknowledged that we do not believe a beneficiary receiving the same kinds of services from both an OTP and another provider or supplier would necessarily constitute a duplicative payment. We reiterate, however, that we do have an expectation that OTPs will take reasonable steps to ensure that the items and services furnished under their care are not reported or billed under a different Medicare benefit. For example, OTPs could actively coordinate care and facilitate information exchange between other prescribers, dispensers and plans who prescribe, administer, dispense, or pay for medications for OUD treatment. We also note that OTPs and other health care providers must comply with all applicable laws and regulations, such as the Health Insurance Portability and Accountability Act and the Substance Abuse Confidentiality Regulations (42 CFR part 2). We intend to conduct monitoring to ensure that our policies regarding duplicative payment do not have any such unintended consequences as described by the commenter.

Comment: A few commenters stated that drugs dispensed outside the OTP should not be included in the OTP bundle. One commenter stated that community pharmacies currently face challenges in knowing whether a prescription is from an inpatient OTP or whether the inpatient OTP is prescribing outpatient therapy for a patient who is being discharged. The commenter stated that the best way to avoid duplicate payments from occurring is to limit the OTP bundled payment to drugs dispensed by an OTP facility; similarly the commenter stated that if take-home medications are included in the OTP bundle, they should also be dispensed by the OTP.

Response: We disagree that only medications provided at the OTP should be included in the bundled payment. As indicated above, we are aware that some OTPs have arrangements with pharmacies whereby the OTP reimburses the pharmacy through an independent arrangement. In this case, it is appropriate for the OTP to bill for the weekly bundled payment that corresponds to the medication provided to the beneficiary. We also note that if questions arise regarding the purpose of the prescription, as described by the commenter, the pharmacy should contact the prescribing OTP for any necessary clarifications.

Comment: A few commenters stated that more information is needed to better understand how CMS will monitor and protect against duplicative billing/payment. The commenters recommended that CMS update the guidance in the Medicare Program Integrity Manual to better outline the process through which duplicative payments will be monitored and corrected.

Response: We will consider issuing further guidance either through future rulemaking or subregulatory guidance, as suggested.

Comment: One commenter disagreed that OTPs should be financially accountable for duplicative payments. The commenter stated that OTPs may not have access to prescribing information for every physician or clinician the beneficiary sees outside of the OTP, nor do reporting mechanisms exist for this information in order for OTPs to quickly and efficiently review prior to engaging patients in time-sensitive deployment of OUD treatment.

Response: We reiterate that we have explicitly acknowledged that we do not believe that payments for the same kinds of services from both an OTP and a separate provider or supplier would necessarily result in a duplicative payment. We also emphasize that we have narrowly defined duplicative payment to involve only those circumstances where medications that are delivered, administered or dispensed to a beneficiary are paid as part of the OTP bundled payment, and where the delivery, administration or dispensing of the same medications (that is, same drug, dosage and formulation) is also separately paid under Medicare Part B or Part D for the same beneficiary with the same date of service. As noted earlier, we do not intend to prevent the appropriate billing under Medicare Part B or Part D for individual items or services that could be provided by OTPs as part of an episode of care and included in the bundled payment rate, but that may also be appropriately available to beneficiaries through other Medicare benefits.

Comment: One commenter supported the proposal to hold OTPs accountable for duplicative payments, but stated that CMS should issue a non-enforcement or hold harmless grace period for CY 2020 for audits and other consequences such as Star Ratings related to the new OUD treatment services benefit.

Response: We appreciate the feedback and note that section 1834(w)(1) of the Act expressly requires that we take steps to ensure that no duplicative payments are made. Moreover, as explained above, we have narrowly defined duplicative payment, so we do not believe that a grace period would be necessary for CY 2020.

After consideration of the public comments, we clarifying that our final policy on duplicative payments refers to payment for the same medication for the same beneficiary on the same date of service. Thus we are finalizing our proposal that in cases where a payment for drugs used as part of an OTP's treatment plan is identified as being a duplicative payment because a claim for the same medications for the same beneficiary on the same date of service was paid under a different Medicare benefit, CMS will generally recoup the duplicative payment made to the OTP. We have updated the text at § 410.67(d)(5) to reflect this clarification.

d. Cost Sharing

Section 2005(c) of the SUPPORT Act amended section 1833(a)(1) of the Act, relating to payment of Part B services, by adding a new subparagraph (CC), which specifies with respect to OUD treatment services furnished by an OTP during an episode of care that the amount paid shall be equal to the amount payable under section 1834(w) of the Act less any copayment required as specified by the Secretary. Section 1834(w) of the Act, which was also added by section 2005(c) of the SUPPORT Act, requires that the Secretary pay an amount that is equal to 100 percent of a bundled payment under this part for OUD treatment services. Given these two provisions, we believe that there is flexibility for CMS to set the copayment amount for OTP services either at zero or at an amount above zero. Therefore, we proposed to set the copayment at zero for a time-limited duration (for example, for the duration of the national opioid crisis), as we believe this would minimize barriers to patient access to OUD treatment services. Setting the copayment at zero would also ensure OTP providers receive the full Medicare payment amount for Medicare beneficiaries if secondary payers are not available or do not pay the copayment, especially for those dually eligible for Medicare and Medicaid.[80] We solicited

[80] For those dually eligible individuals in the Qualified Medicare Beneficiary program (7.7

public comment on our proposal to set the copayment at zero for a time-limited duration, such as for the duration of the national opioid crisis, and any other metrics CMS might consider using to determine when to start requiring a copayment. In developing our approach, we also considered other alternatives, such as setting the copayment at a fixed fee calculated based on 20 percent of the payment rate for the bundle, consistent with the standard copayment requirement for other Part B services, or applying a flat dollar copayment amount similar to TRICARE's copayment; however, we recognized that setting the copayment for OUD services at an amount greater than zero could create a barrier to access to treatment for many beneficiaries. We proposed to codify the proposed copayment amount of zero at § 410.67(e). We solicited feedback on our proposal to set the copayment amount for OTP services at zero, and on the alternatives considered, including whether we should consider any of these alternatives for CY 2020 or future years.

Separately, we noted that the Part B deductible would apply for OUD treatment services, as mandated for all Part B services by section 1833(b) of the Act.

We received public comments on the proposals related to cost sharing for the bundled payments for OUD treatment services. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported the proposal to set the copayment at zero for a time limited duration. A few commenters encouraged CMS to consider setting the copayment at zero permanently, noting that individuals who require the services of an OTP will have difficulty making copayments for a variety of reasons, regardless of whether there is an opioid epidemic across the nation. One commenter noted that if a patient received OUD treatment services outside of an OTP, they would pay 20 percent Part B coinsurance under Medicare at other health care settings or Part D plan cost sharing for any pharmacy-dispensed prescription drugs which may disadvantage other established Medicare provider types. This commenter also noted that OTPs may not be available to patients in all geographic localities, which would seem to be unfair.

Response: We appreciate the support for our proposal. After consideration of the public comments, we are finalizing our proposal to set the copayment at zero for a time limited duration, as we believe this would minimize barriers to patient access to OUD treatment services. Setting the copayment at zero also ensures OTPs receive the full Medicare payment amount for Medicare beneficiaries if secondary payers are not available or do not pay the copayment, especially for those beneficiaries who are dually eligible for Medicare and Medicaid. However, as we explained in the proposed rule, we are interested in setting the copayment at zero for a time limited duration (for example, until such time as the Secretary does not renew the national public health emergency declaration for the continued consequence of the opioid crisis affecting our nation), and intend to address the copayment in future rulemaking at such a time we deem appropriate. Although we appreciate the concern that OUD treatment services furnished in other settings require beneficiary cost sharing, we believe it is important, especially in light of the opioid epidemic, to minimize barriers to patient access to OUD treatment services in such instances that we are able to and note that section 2005 of the SUPPORT Act does not provide authority to waive cost sharing for OUD treatment services furnished in other settings.

Comment: One commenter requested that OTPs be allowed to receive Medicare bad debt payments for any uncollected Part B deductible payments, noting that OTP providers are unlikely to be successful in collecting deductibles for many patients in this population. Another commenter expressed concern that the application of the Part B deductible to OUD treatment services furnished by OTPs might particularly affect dually eligible beneficiaries currently receiving OTP care as they are likely to visit an OTP provider in January, before they hit their annual Part B deductible. This could put them in the position of owing over $100 in January.

Response: We note that bad debts arising from covered services paid under a reasonable charge-based methodology or a fee schedule are not reimbursable under the Medicare program (42 CFR 413.89(i)). Additionally, we note that the majority of dually eligible individuals are Qualified Medicare Beneficiaries (QMBs), a program in which Medicaid covers the Medicare Part A (if any) and Part B premiums and other Medicare cost-sharing. States may pay for deductibles, coinsurance, and copayments for Medicare services furnished by Medicare providers to QMBs to the extent consistent with the Medicaid State Plan. States have the option to reduce or eliminate the state's Medicare cost sharing payments by adopting policies that limit payment to the lesser of (a) the Medicare cost sharing amount, or (b) the difference between the Medicare payment and the Medicaid rate for the service, consistent with the methodology identified in the state plan. When Medicaid rates are lower this can result in the provider receiving reduced or even no payment for the deductible. Regardless of the amount paid by the state for the deductible, coinsurance, and copayments, sections 1848(g)(3) and 1866(a)(1)(A) of the Act prohibit Medicare providers from billing QMBs for Medicare Parts A and B cost sharing amounts. States may also choose to cover Medicare cost-sharing for certain other full-benefit dually eligible individuals.

As discussed in more detail below, once a provider is enrolled in Medicare, Medicare will crossover the deductible portion of the claim to state Medicaid agencies, and the state will adjudicate the claim. However, as noted above, states often use different HCPCS billing codes for OTP services than Medicare does; in these cases, we note that the state's claims processing system may reject the claim and will notify the provider, who can re-code and resubmit the claim directly to the state.

In summary, we are finalizing our proposal to set the copayment for OUD treatment services furnished by OTPs at zero for a time limited duration, as we believe this would minimize barriers to patient access to OUD treatment services. We are codifying this beneficiary cost-sharing amount at § 410.67(e).

4. Adjustments to Bundled Payment Rates for OUD Treatment Services

The costs of providing OUD treatment services will likely vary over time and depending on the geographic location where the services are furnished. Below we discuss our proposed adjustments to the bundled payment rates to account for these factors.

million of the 12 million dually eligible individuals in 2017), state Medicaid programs cover the Medicare Part A and Part B deductible and coinsurance. However, section 4714 of the Balanced Budget Act of 1997 (Pub. L. 105–33) provides discretion for states to pay Medicare cost-sharing only if the Medicaid payment rate for the service is above the Medicare paid amount for the service. Since most states opt for this discretion, and most Medicaid rates are lower than Medicare's, states often do not pay the provider for the Medicare cost-sharing amount. Providers are further prohibited from collecting the Medicare cost-sharing amount from the beneficiary, effectively having to take a discount compared to the amount received for other Medicare beneficiaries.

a. Locality Adjustment

Section 1834(w)(2) of the Act, as added by section 2005(c) of the SUPPORT Act provides that the Secretary may implement the bundled payment for OUD treatment services furnished by OTPs through one or more bundles based on the type of medications, the frequency of services, the scope of services furnished, characteristics of the individuals furnished such services, or other factors as the Secretary determines appropriate. The cost for the provision of OUD treatment services, like many other healthcare services covered by Medicare, will likely vary across the country based upon the differing cost in a given geographic locality. To account for such geographic cost differences in the provision of services, in a number of payment systems, Medicare routinely applies geographic locality adjustments to the payment rates for particular services. Because we believe OUD treatment services furnished by OTPs will also be subject to varying cost based upon the geographic locality where the services are furnished, in the proposed rule we proposed to apply a geographic locality adjustment to the bundled payment rate for OUD treatment services. We discussed our proposed approach with respect to both the drug component (which reflects payment for the drug) and the non-drug component (which reflects payment for all other services furnished to the beneficiary by the OTP, such as drug administration, counseling, toxicology testing, etc.) of the bundled payment.

(1) Drug Component

Because our proposed approaches for pricing the MAT drugs included in the bundles all reflected national pricing, and because there is no GAF applied to the payment of Part B drugs under the ASP methodology, we did not believe that it would be necessary to adjust the drug component of the bundled payment rates for OTP services based upon geographic locality. Therefore, we proposed not to apply a geographic locality adjustment to the drug component of the bundled payment rate for OTP services. We did not receive any comments on this proposal and are finalizing as proposed not to make any geographic adjustment to the drug component of the bundled payment rates.

(2) Non-Drug Component

Unlike the national pricing of drugs, the costs for the services included in the non-drug component of the OTP bundled payment for OUD treatment services are not constant across all geographic localities. For example, OTPs' costs for rent or employee wages could vary significantly across different localities and could potentially result in disparate costs for the services included in the non-drug component of OUD treatment services. Because the costs of furnishing the services included in the non-drug component of the OTP bundled payment for OUD treatment services will vary based upon the geographic locality in which the services are provided, in the proposed rule we stated that we believed it would be appropriate to apply a geographic locality adjustment to the non-drug component of the bundled payments. We believed that the geographic variation in the cost of the non-drug services provided by OTPs would be similar to the geographic variation in the cost of services furnished in physician offices. Therefore, to account for the differential costs of OUD treatment services across the country, we proposed to adjust the non-drug component of the bundled payment rates for OUD treatment services using an approach similar to the established methodology used to geographically adjust payments under the PFS based upon the location where the service is furnished. The PFS currently provides for an adjustment to the payment for PFS services based upon the fee schedule area in which the service is provided through the use of Geographic Practice Cost Indices (GPCIs), which measure the relative cost differences among localities compared to the national average for each of the three fee schedule components (work, PE, and malpractice).

Although we proposed to adjust the non-drug component of the payments for OUD treatment services using an approach similar to the established methodology used to adjust PFS payment for geographic locality, because GPCIs provide for the application of geographic locality adjustments to the three distinct components of PFS services, and we proposed the OTP bundled payment as a flat rate payment for all OUD treatment services furnished during an episode of care, we explained that a single factor would be required to apply the geographic locality adjustment to the non-drug component of the OTP bundled payment rate. Therefore, to apply a geographic locality adjustment to the non-drug component of the OTP bundled payment for OUD treatment services through a single factor, we proposed to use the Geographic Adjustment Factor (GAF) at § 414.26. Specifically, we proposed to use the GAF to adjust the payment for the non-drug component of the OTP bundled payment to reflect the costs of furnishing the non-drug component of OUD treatment services in each of the PFS fee schedule areas. The GAF is calculated using the GPCIs under the PFS, and is used to account for cost differences in furnishing physicians' services in differing geographic localities. The GAF is calculated for each fee schedule area as the weighted composite of all three GPCIs (work, PE, and malpractice) for that given locality using the national GPCI cost share weights. In developing the proposal, we also considered geographically adjusting the payment for the non-drug component of the OTP bundled payment using only the PE GPCI value for each fee schedule area. However, because the non-drug component of OUD treatment services is comprised of work, PE, and malpractice expenses, we proposed using the GAF as we believe the weighted composite of all three GPCIs reflected in the GAF would be the more appropriate GAF to reflect geographic variations in the cost to OTPs of furnishing OUD treatment services.

The GAF, which is determined under § 414.26, is discussed earlier in section II.D.1. of this final rule and the specific GAF values for each payment locality are posted in Addendum D to this final rule. In developing the proposed geographic locality adjustment for the non-drug component of the OUD treatment services payment rate, we also considered other potential locality adjustments, such as the Inpatient Prospective Payment System (IPPS) hospital wage index. However, we proposed using the GAF as we believed the services provided in an OTP more closely resemble the services provided at a physician office than the services provided in other settings, such as inpatient hospitals. We proposed to codify using the GAF to adjust the non-drug component of the OTP bundled payments to reflect the cost differences in furnishing these services in differing geographic localities at § 410.67(d)(3)(ii). We solicited public comment on the proposal to adjust the non-drug component of the OTP bundled payments for geographic variations in the costs of furnishing OUD treatment services using the GAF. We also solicited comments on any factors, other than the GAF, that could be used to make this payment adjustment.

Additionally, we noted that the majority of OTPs operate in urban localities. In light of this fact, we

explained that we were interested in receiving information on whether rural areas have appropriate access to treatment for OUD. We were particularly interested in any potential limitations on access to care for OUD in rural areas and whether there are additional adjustments to the proposed bundled payments that should be made to account for the costs incurred by OTPs in furnishing OUD treatment services in rural areas. We solicited comment for future consideration on this issue and potential solutions we could consider adopting to address this potential issue through future rulemaking.

We received a few comments on the proposed locality adjustment. The following is a summary of the comments we received and our responses.

Comment: One commenter supported using the GAF to geographically adjust the non-drug component of the bundled payment.

Response: We thank the commenter for their support and feedback.

Comment: One commenter stated that CMS should create a 17 percent rural add-on payment to be applied to the bundled payment rate in low-population density areas where it is difficult to find doctors, nurses, and counselors to treat OUD patients. The commenter noted that Medicare provides a 17 percent rural add-on for inpatient psychiatric facilities which often treat substance abuse cases.

Response: We appreciate the suggestion and may consider whether to propose a rural add-on payment in future rulemaking. In the interim, we note that the current Medicare PFS locality structure contains 34 states with a statewide payment locality, which means that, in these states, the geographic adjustment is the same in all areas, whether urban or rural, thus reducing rural/urban payment differentials within a state. We intend to monitor this issue, and as previously stated, may revisit the issue of a rural add-on payment in the future.

After consideration of the public comments, we are finalizing our proposal to adjust the non-drug component of the OTP bundled payments using the GAF in § 410.67(d)(4)(ii). Additionally, although we did not explicitly address the application of a geographic adjustment in the context of the add-on payment adjustments for non-drug services in the proposed rule, we believe that the same logic regarding the differential costs for those services would apply and should be recognized. As such, we are also finalizing that the add-on payment adjustments for non-drug services will be geographically adjusted as described above.

b. Annual Update

Section 1834(w)(3) of the Act, as added by section 2005(c) of the SUPPORT Act, requires that the Secretary provide an update each year to the OTP bundled payment rates. To fulfill this statutory requirement, we proposed to apply a blended annual update, comprised of distinct updates for the drug and non-drug components of the bundled payment rates, to account for the differing rate of growth in the prices of drugs relative to other services. We proposed that this blended annual update for the OTP bundled payment rates would first apply for determining the CY 2021 OTP bundled payment rates. The specific details of the proposed updates for the drug and non-drug components respectively are discussed in this section.

(1) Drug Component

As stated above, we proposed to establish the pricing of the drug component of the OTP bundled payment rates for OUD treatment services based on CMS pricing mechanisms currently in place. To recognize the potential change in costs of the drugs used in MAT from year to year and to fulfill the requirement to provide an annual update to the OTP bundled payment rates, we proposed to update the payment for the drug component based upon the changes in drug costs reported under the pricing mechanism used to establish the pricing of the drug component of the applicable bundled payment rate, as discussed earlier. For example, if we were to price the drug component of the bundled payment rate for episodes of care using ASP data, the pricing of the drug component for these OTP bundled payments would be updated using the most recently available ASP data at the time of ratesetting for the applicable calendar year. In the proposed rule, we also discussed a number of alternative data sources that could be used to price oral drugs in the drug component of OTP bundled payments in cases when we do not receive manufacturer-submitted ASP pricing data. As an example, if we were to use NADAC data, as discussed as one of the alternatives, to determine the payment for the drug component of the bundled payment for oral drugs in cases when we do not have manufacturer-submitted ASP pricing data, this payment rate would be updated using the most recently available NADAC data at the time of ratesetting for the applicable calendar year.

In developing the proposal to annually update the pricing of the drug component of the OUD treatment services payment rate, we also considered other methodologies, including applying a single uniform update factor to the drug and non-drug components of the proposed payment rates. We ultimately determined not to propose the use of a single uniform update factor, because we believed that it was important to apply an annual update to the payment rates that recognizes the differing rate of growth of drug costs compared to the rate of growth in the cost of the other services. In addition, we also considered annually updating the pricing of the drug component of the OUD treatment services payment rate via an established update factor such as the Producer Price Index (PPI) for chemicals and allied products, analgesics (WPU06380202). The PPI for chemicals and allied products, analgesics is a subset of the PPI produced by the Bureau of Labor Statistics (BLS), which measures the average change over time in the selling prices received by domestic producers for their output. Ultimately we decided against proposing to update the pricing of the drug component of the OUD treatment services payment rate via an established update factor such as the PPI in favor of our proposed approach because we believed the proposed approach would update the pricing of the drug component of the OUD treatment services payment rate in the manner that would be most familiar to stakeholders. We solicited public comment on the proposed approach to updating the drug component of the bundled payment rates. We also solicited comment on possible alternate methodologies for updating the drug component of the payment rate for OUD treatment services, such as use of the PPI for chemicals and allied products, analgesics.

We did not receive any comments on the proposed approach to update the drug component of the bundled payment rates, and are finalizing our proposal to use the most recently available data from the applicable pricing mechanism finalized for drug pricing, as described above, to annually update the drug component of the bundled payment. We are codifying this policy at § 410.67(d)(2)(i), which provides that the payment for the drug component of episodes of care will be determined using the most recent data available at the time of ratesetting for the applicable calendar year.

(2) Non-Drug Component

To account for the potential changing costs of the services included in the non-drug component of the bundled payment rates for OUD treatment services, we proposed to update the non-drug component of the bundled payment for OUD treatment services based upon the Medicare Economic Index (MEI). The MEI is defined in section 1842(i)(3) of the Act and the methodology for computing the MEI is described in § 405.504(d). The MEI is used to update the payment rates for physician services under section 1842(b)(3) of the Act, which states that prevailing charge levels beginning after June 30, 1973, may not exceed the level from the previous year except to the extent that the Secretary finds, on the basis of appropriate economic index data, that such a higher level is justified by year-to-year economic changes. The MEI is a fixed-weight input price index that reflects the physicians' own time and the physicians' PEs, with an adjustment for the change in economy-wide, private nonfarm business multifactor productivity. The method for calculating the MEI was last revised in the CY 2014 PFS final rule with comment period (78 FR 74264). In developing the proposed update factor for the non-drug component of the OUD treatment services payment rate, we also considered other potential update factors, such as the BLS Consumer Price Index for All Items for Urban Consumers (CPI–U) (Bureau of Labor Statistics #CUUR0000SA0 (*https://www.bls.gov/cpi/data.htm*) and the IPPS hospital market basket reduced by the multifactor productivity adjustment. The CPI–U is a measure of the average change over time in the prices paid by urban consumers for a market basket of consumer goods and services. However, we concluded that a healthcare-specific update factor, such as the MEI, would be more appropriate for OTPs than the CPI–U, which measures general inflation, as the MEI would more accurately reflect the change in the prices of goods and services included in the non-drug component of the OTP bundled payments.

Similarly, we believed the MEI would be more appropriate than the IPPS market basket to update the non-drug component of the bundled payment rates as the services provided by an OTP more closely resemble the services provided at a physician office than the services provided by an inpatient hospital. Accordingly, we proposed to update the payment amount for the non-drug component of each of the bundled payment rates for OUD treatment services furnished by OTPs based upon the most recently available historical annual growth in the MEI available at the time of rulemaking. We proposed to codify this proposal at § 410.67(d)(3)(iii).

We received one comment on the annual update for the non-drug component of the bundled payment rate. The following is a summary of the comment we received and our response.

Comment: One commenter disagreed with using the MEI to increase the non-drug component payment and stated that the MEI focuses more narrowly on physician practices. The commenter stated that an OTP's cost structures are more similar to hospital outpatient departments than physician offices. The commenter stated that over time, updating rates by the MEI, which closely mirrors general inflation, will create access to care issues as federal and state mandated OTP costs grow faster than Medicare reimbursements. The commenter also stated that TRICARE utilizes the IPPS annual update factor and if CMS' goal is to align payment with the TRICARE model, it should act consistently and also adopt its annual adjustment policy.

Response: We clarify that CMS' goal is not to align payment with the TRICARE model. As indicated above, section 1834(w)(2) of the Act provides that the Secretary may consider the rates paid to OTPs for comparable services under Medicaid or under TRICARE. As we discussed in the CY 2020 PFS proposed rule, we considered payments for those comparable services in the development of our payment rates. However, we note that we also solicited comment on the scope of private payer OTP coverage and the payment rates private payers have established for OTPs furnishing comparable OUD treatment services for consideration.

We appreciate the commenter's concern about using the MEI to update the non-drug component of the OTP bundled payment rate. Ideally, we would develop a market basket that reflects the detailed cost structures of OTP facilities; however, these data are not currently available. Therefore, we have to use a price index that best approximates the cost of the medical services being provided by the OTP facilities. Although TRICARE uses the IPPS annual update factor, we believe the MEI is a more appropriate index to use to update the non-drug component of the OTP bundled payment rate based on both conceptual and compositional reasons.

From a conceptual standpoint, we believe physicians' services furnished in the office setting more closely align to the OUD treatment services furnished by OTPs as they both encompass minimally invasive medical care such as assessment, counseling, and administering of medications. The MEI measures the market price changes in the inputs used to furnish physicians' services, and represents both the medical and non-medical costs associated with providing this care. In contrast, hospitals engage in complex inpatient and outpatient medical services, such as surgical procedures and emergency room trauma, which are significantly different to the services furnished in OTP facilities. The IPPS market basket reflects these complex services and the non-medical costs associated with managing these large facilities, such as non-medical labor-related services (including but not limited to legal, accounting, financial, and installation and maintenance repair services), which account for almost 25 percent of the IPPS market basket.

From a compositional standpoint, the MEI more closely aligns with the services associated with the OTP payment system. In particular, the MEI does not reflect drug costs (which will be updated separately for OTPs, as discussed previously) as these costs are not reimbursed under the Medicare PFS, for which the MEI was originally developed. The IPPS market basket, however, is an operating market basket that reflects drug costs because these costs are included in the IPPS operating base payment rate. Additionally, the MEI includes PE associated with all operations, including any capital or leasing costs. The IPPS market basket, on the other hand, excludes capital costs because under the IPPS, capital costs are reimbursed separately and the IPPS capital payment rates are updated using the IPPS capital market basket, which reflects the complex capital acquisition and financing methods of IPPS hospitals. Finally, the MEI reflects an adjustment for expected productivity improvements associated with the provision of care (the MEI uses the change in economy-wide private non-farm business multifactor productivity), which, given the similarity in the nature of services furnished in the physician office and OTP settings, OTPs would also be anticipated to be able to achieve. The IPPS market basket does not include a productivity adjustment as that adjustment is applied separately as part of the payment rate update. These compositional differences account for many of the differences between the growth rates of the MEI and the IPPS market basket that the commenter identified as a concern. Because the

differences in growth rates between the IPPS market basket and the MEI are due to these compositional differences, we disagree with the commenter that there is a concern with using the MEI to update the non-drug component of the bundled payment rates. That is, we believe the MEI is an appropriate price index to serve as a proxy for changes in market costs associated with providing OTP services, as it reflects both the medical and non-medical costs of providing noninvasive medical care in a non-inpatient facility.

After consideration of the public comments, we are finalizing the proposal to update the non-drug component of the bundled payment for OUD treatment services based upon the MEI. These policies are codified in § 410.67(d)(4)(iii). Additionally, although we did not explicitly address the application of the annual update to the add-on payment adjustments for non-drug services in the proposed rule, we believe that the same logic regarding the potential changing costs of the services included in the non-drug component of the bundled payment rates is applicable. As such, we are finalizing that the add-on payment adjustments for non-drug services will be subject to the annual update as described above.

In addition to comments on our proposals and the related issues on which we specifically requested public input, we received a number of other public comments related to our implementation of this new Medicare benefit for OUD treatment services furnished in an OTP. Several comments focused on various aspects of how the OTP proposals intersect with Medicaid, those beneficiaries dually eligible for Medicare and Medicaid, Medicare Advantage, and certain requirements related to compliance, quality measurement, and Electronic Health Records. While these issues were not addressed specifically in the proposed rule, we believe it is important to clarify how the OTP policies interface with existing policies under these other programs. The following is a summary of the comments we received and our responses.

Comment: Most commenters expressed concerns that in the states that currently cover OTP services under Medicaid, the transition from Medicaid to Medicare as primary payer for those OTP services for dually eligible individuals could result in disruptions to dually eligible individuals' OTP treatment, as well as for OTP providers. Several commenters noted the tight timeframes for OTP providers to enroll in Medicare. For those OTPs currently serving dually eligible individuals under Medicaid, any enrollment backlog may create cash flow problems for these providers, as Medicaid is the payer of last resort, which normally means Medicaid stops paying for a benefit once Medicare starts to cover it. They also noted that the timing of the final regulation would result in less than 60 days to implement needed changes to billing systems. Commenters requested flexibilities during this transition, including a transition period in which OTP providers could still bill Medicaid, with well-publicized transition timelines for a grace period during which improperly submitted claims could be corrected.

Response: We appreciate the concerns expressed by commenters. As discussed in more detail below, Medicaid must pay for OTP services for dually eligible individuals if the service is covered by the Medicaid state plan and the OTP provider is enrolled in Medicaid and not yet enrolled in Medicare.

We will issue guidance to states on strategies to promote continuity of care for dually eligible individuals during this transition period while upholding their responsibilities under Medicaid as the payer of last resort. We will remind states that Medicaid must pay for services delivered to these beneficiaries by OTP providers who are not yet enrolled in Medicare. Recognizing that many OTP providers may not yet be enrolled in Medicare on January 1, 2020, we will recommend that states not impose systems edits to automatically reject claims, (under the assumption that the OTP is Medicare-enrolled and therefore Medicare is the appropriate primary payer for the dually eligible individual) for OTP services furnished to dually eligible individuals at the start of the year. We will encourage states to reach out to their Medicaid-enrolled OTP providers to advise them to enroll as quickly as possible in Medicare. To support continuity of care, we will ask states to offer OTPs options during the interim until Medicare approves the provider enrollment, including billing Medicaid for payment (with the understanding that Medicaid will later recoup the Medicaid payments made, back to the effective date of Medicare provider enrollment, and the provider will bill Medicare instead for those claims), or to hold claims and bill Medicare once the OTP provider is Medicare-enrolled. As requested by the commenters, we will also include in our outreach to OTP providers information about these transition options.

Comment: One commenter who supported a transition period requested that the transition period be extended in cases where OTP providers need to be credentialed and contract with a large number of Medicare Advantage plans, or when Medicaid Managed Care Organizations are involved in covering the Medicare cost-sharing. Commenters noted that unlike Medicare, where there is a single provider enrollment process, it will take significantly longer for OTP providers to become network providers with multiple Medicare Advantage plans, potentially delaying their ability to provide services to dually eligible enrollees of those plans.

Response: We share the concern around ensuring continuity of care for dually eligible individuals who are currently obtaining treatment from an OTP provider through Medicaid and are enrolled in a Medicare Advantage managed care plan. The factors impacting transition are different in Medicare Advantage from those discussed below for Original Medicare. Under section 1852(a) of the Act and 42 CFR 422.100, Medicare Advantage (MA) plans must cover the Medicare OTP benefit because it is a Part B benefit. MA plans may meet this obligation by contracting with OTP providers or making other arrangements with non-contracted OTP providers. Under current MA program requirements, MA plans may furnish OTP access for their enrollees either by establishing direct contracts with OTPs or by arranging access on a non-contract basis. If an MA plan furnishes access to OTPs by contracting with one or more OTPs the MA plan is not necessarily required to contract with all OTP providers in the area, but must ensure that the contracts with OTPs it does have furnish sufficient access and availability to OTP services for its enrollees and are also consistent with the community pattern of care based on the service area where the MA plan is being offered. If an MA plan allows its enrollees to obtain OTP services on a non-contract basis the MA plan must ensure that its enrollees are able to access OTP services that are available within the community pattern of care. (see § 422.112). If a dually eligible individual enrolled in the plan is currently in treatment with an OTP provider with which the plan does not contract, the plan should create a transition process under which the individual can continue to see their current OTP provider while the plan works with the individual to transition to a network provider. Allowing the individual to continue to see their current provider during this transition will ensure continuity of care for this vulnerable population.

Comment: One commenter specifically requested that dually

eligible individuals receiving services from an OTP provider not enrolled in Medicare be able to continue to receive treatment from that provider, and further requested this apply to dually eligible individuals not yet in treatment but who have no Medicare OTP providers in their area.

Response: As noted above, Medicaid must still cover OTP services for dually eligible individuals whose provider is not yet enrolled in Medicare. This flexibility promotes continuity of care for dually eligible individuals already receiving OTP services under Medicaid now, as well as providing beneficiaries access to Medicaid-enrolled OTP providers when there are no Medicare-enrolled OTP providers in their area.

Comment: Some commenters requested clarification on how OTP providers would bill for dually eligible individuals once Medicare starts covering these services on January 1, 2020, including the process for the Part B deductible to be paid by Medicaid.

Response: Once Medicare starts covering OTP services, a Medicare-enrolled OTP provider would bill Medicare for OUD treatment services furnished to dually eligible individuals under Original Medicare. For Original Medicare, if the dually eligible beneficiary has not yet met their annual Medicare Part B deductible, Medicare will automatically ''crossover'' the claim to Medicaid to adjudicate for payment of the deductible. In addition, please see responses to comments below for a discussion of the process when a state is using different billing codes than Medicare, and when an OTP provider is not yet enrolled in Medicare.

For OTP providers serving dually eligible individuals enrolled in Medicare Advantage, there is no automated crossover process. For cost sharing applicable to the OTP benefit under the MA plan, MA plans are required by § 422.504(g)(1) to specify in their contracts with providers that such dually eligible enrollees will not be held liable for Medicare Part A and Part B cost sharing when the State is responsible for paying such amounts, and to inform providers of Medicare and Medicaid benefits, and rules for enrollees eligible for Medicare and Medicaid. We understand most MA plans have not entered into coordination of benefit agreements with state Medicaid agencies. In these instances, the MA plan would not have any means to forward claims for cost sharing directly to state Medicaid programs for payment; and so an OTP provider would need to bill Medicaid directly for the cost sharing that the provider may not collect from the enrollee; this may also mean that the OTP provider has to re-code the claim if the state uses different billing codes than the Medicare Advantage plan uses.

Comment: One commenter specifically requested that the timeframe for state Medicaid agencies to update their respective fee schedules match the Medicare payment methodology to prevent denials when Medicare sends the crossover claim to Medicaid for the deductible.

Response: State Medicaid programs often use different codes and pay differently than Medicare. There is no requirement to match the Medicare payment methodology, but states do need to be able to process claims for the beneficiary's cost-sharing liability for most dually eligible individuals. If the state uses different billing codes, its claims processing system may initially deny the crossover claim, and send a remittance advice to the provider notifying the provider of the denial. The OTP provider should then re-code the claim using the Medicaid billing codes and resubmit to Medicaid for processing.

Comment: A few commenters suggested that CMS offer an expedited process for receiving a Medicare denial, to provide Medicaid with proof that Medicare will not cover the OTP services. A few other commenters also suggested CMS make available an up-to-date-listing of Medicare enrolled OTP providers in each state.

Response: We agree it is important to support OTP providers and states by providing the information needed to facilitate the process for an OTP provider to bill Medicaid for services furnished to a dually eligible individual, when that is permitted. Medicaid will often accept a Medicare claims denial as proof that Medicare will not cover the service, and will process the claim for Medicaid coverage. However, Medicare can only process a claim from a Medicare-enrolled provider, and thus can only issue a claims denial to a Medicare-enrolled provider.

As we note in our response to a prior comment, Medicaid must pay for OUD treatment services furnished by an OTP to a dually eligible individual when the service is covered by the Medicaid state plan and the OTP provider is enrolled in Medicaid, but is not enrolled in Medicare. We agree with the suggestion to make publicly-available and update a list of Medicare-enrolled OTP providers so OTPs and states have evidence that a given provider is not Medicare-enrolled. We anticipate this information will also have value for Medicare beneficiaries seeking OUD treatment services in OTPs. We also note that states already have access to the CMS Provider Enrollment, Chain, and Ownership System (PECOS) provider enrollment system, and can confirm provider enrollment or lack thereof through queries to that system.

Comment: Several commenters expressed concern about the intersection of Medicaid's ''Upper Payment Limit'' (UPL) policy with the proposed Medicare payment rates for OTP services. The commenters noted that most states that cover OTP services have payment rates that are higher than the proposed Medicare payment rates, and expressed a concern that Medicaid's UPL policy requires Medicaid rates to be lower than Medicare's. Commenters noted that unless Medicare significantly increases its proposed rates, state Medicaid agencies would be forced to lower theirs to comply with the UPL. Commenters requested that CMS increase the Medicare rates for services furnished by OTPs to exceed the Medicaid rate in every state, or not apply the UPL requirements to the Medicaid OTP services.

Response: We appreciate the concern expressed by the commenters. However, the UPL requirements do not directly impact payment rates for individual services such as the OUD treatment services furnished by OTPs in the way commenters describe, and states have policy options to address UPL-related concerns. As background, state Medicaid agencies can opt to cover OTP services under the Medicaid clinic benefit or the Medicaid rehabilitation benefit. The Medicaid clinic benefit is subject to a UPL based on estimated Medicare payments, but states demonstrate compliance with this requirement at an aggregate level across the range of services covered under the clinic benefit as a whole for a given year. States are not required to set Medicaid payment lower than Medicare at a service or code-level basis. Within the UPL requirements, states have significant flexibility in how they may pay for individual services or codes or make payments to clinics that specialize in providing certain types of care. As a result, states offering OTP services under the clinic benefit would not be required to reduce their payment rates to be less than Medicare for OTP services. We will issue guidance reminding states that the UPL policy for the clinic benefit applies at the aggregate level, and will work with states to determine how to comply with the UPL if they currently cover OTP under the clinic benefit. For states that offer OTP services under the rehabilitation benefit, we note there is no UPL for that benefit, so the Medicare

payment rate for OTP services does not impact Medicaid payment for those states. As a result, there is no need to adjust the Medicare payment rates for OUD treatment services furnished by OTPs that we are adopting in this final rule to address this concern.

Comment: One commenter suggested CMS provide guidance to states on what the Medicare OTP benefit does and does not cover, to facilitate Medicaid covering specific OTP services for dually eligible individuals that Medicare does not cover.

Response: We acknowledge that states may have a more expansive benefit for services provided by OTPs than Medicare's, and that in those situations, states may continue to cover specific OTP services that Medicare does not. To support a smooth transition, we will provide guidance to states to describe the Medicare OTP benefit and remind them that Medicaid may still cover specific OTP services not covered under the Medicare OTP benefit.

Comment: Several commenters suggested that CMS conduct significant outreach on coordination of benefits; that is, how Medicare will be primary payer and Medicaid will be secondary payer for dually eligible individuals. One commenter further suggested that OTP providers should receive training and technology to facilitate screening patients for Medicare, as well as Medicaid, eligibility and enrollment.

Response: We agree with the need for significant outreach to OTP providers regarding coordination of benefits, and are collaborating with SAMHSA—which certifies OTP providers—to do so. We will explore options around providing technical assistance on connecting eligible clients to Medicare and Medicaid coverage.

Comment: One commenter suggested that as part of supporting the transition from Medicaid to Medicare coverage of OTP services, CMS issue guidance to remind states to continue transportation coverage for full benefit dually eligible individuals receiving services under the Medicare OTP benefit.

Response: As noted elsewhere, Medicare is the primary payer for services that are payable by both Medicare and Medicaid. However, Medicare has a limited non-emergency ambulance transportation benefit. If a full benefit dually eligible individual is obtaining a Medicaid-coverable benefit for which Medicare is the primary payer, the state must assure, in certain circumstances, transportation to the medical service (in the limited instances in which Medicaid does not cover a service Medicare covers, it is optional for states to cover transportation). As a result, when states cover OTP services, and when the applicable criteria are met, Medicaid must assure non-emergency medical transportation for full benefit dually eligible individuals obtaining Medicare-covered OTP services.

Comment: Several commenters supported the proposal to initially set the copayment for OTP services zero, but requested that this policy be made permanent for dually eligible individuals.

Response: We will consider issues on future copayment rates, and on keeping the zero copayment for dually eligible individuals, as part of any future rulemaking on the cost-sharing requirements for the benefit as a whole.

Comment: A commenter raised concerns regarding the January 1, 2020 implementation date for the OTP benefit due to implementation barriers. The commenter stated that MAOs need final payment codes, payment information and clarity regarding any benefit caps or other benefit limits. The commenter further stated that MAOs need additional time to finalize contracting systems and to develop operational details for the benefit.

Response: Although we understand the concern, we do not plan to delay the implementation of this benefit due to the acute need for the OUD treatment services furnished by OTPs. We will work closely with MAOs to ensure timely implementation of this benefit. Plans must provide enrollees with a level of access to Medicare-covered OTP services that is consistent with prevailing community patterns of care in the areas where the network is being offered (§ 422.112(a)(10)). We note that, for CY 2020, Medicare Advantage plans may contract with an OTP provider so long as the requirements for such providers (such as licensure, certification, and other qualifications, etc.) under Titles XVIII and XI of the Act are met. Allowing the individual to continue to see their current provider during this transition will ensure continuity of care for this vulnerable population.

Comment: One commenter recommended that CMS issue a non-enforcement or ''hold harmless'' grace period against plans for Part B vs. Part D determinations for 2020, with respect to audits and other consequences such as Star Ratings related to the new OUD treatment services benefit.

Response: We do not believe it is appropriate for CMS to issue a ''hold harmless'' period regarding the implementation of the new OTP benefit. As we have noted in other responses, we believe there is an urgency in making this benefit available to people struggling with opioid use disorder. CMS will work closely with organizations to ensure a smooth implementation of this benefit. With regard to the Part B versus Part D determination, we remind Medicare Advantage plans that § 422.112(b)(7) requires plans that also cover Part D drugs to coordinate coverage and have a process in place to ensure provision of the covered drug to an enrollee in a timely fashion. CMS clarifies that buprenorphine prescribed by DATA 2000 providers outside of OTPs can continue to be covered under Part D. The DATA 2000 and OTP programs are designed to meet the needs of those needing opioid dependency treatment in different ways. Therefore, because buprenorphine is still covered under Part D when furnished outside an OTP, sponsors should not need to implement new point of service Part B versus Part D pharmacy edits for a buprenorphine claim. In addition, any substantive changes to the Star Ratings measure specifications must be adopted through rulemaking per §§ 422.164 and 423.184.

Comment: A commenter recommended that CMS delay the implementation of the OTP benefit until January 1, 2021, because MA plans did not have an opportunity to account for the new benefit in their 2020 year bids.

Response: In the CY 2020 Call Letter released April 1, 2019 available at the following web link: *https://www.cms.gov/Medicare/Health-Plans/MedicareAdvtgSpecRateStats/Downloads/Announcement2020.pdf,* CMS issued guidance to MAOs regarding section 2005 of the SUPPORT Act and implementing the OTP benefit. In the Call Letter, CMS reminded plans that opioid use disorder treatment services furnished by OTPs would be covered as a Medicare Part B benefit beginning January 1, 2020. We also stated that MA organizations should prepare their bids using available information and reiterated that MA plans must provide all medically necessary Part A and Part B covered services to enrollees consistent with section 1852 of the Act and the regulations in part 422. As such, MA plans were given the opportunity to account for the new benefit in their 2020 bids and did so when bids were submitted on June 3, 2019.

Comment: A commenter expressed concerns that there may be insufficient number of OTPs available in 2020 who are SAMSHA accredited with a Medicare provider agreement to contract with MA plans.

Response: We note that MA plans will be required to furnish access to OTP

services consistent with what is available to Original Medicare beneficiaries residing in the same geographic area. (see § 422.112) While OTPs will currently not be a specialty included in our evaluation of MA networks, all plan covered services must be furnished consistent with community patterns of care (see § 422.112(a)(10)). This means that a plan's enrollees, who are receiving services from an OTP, cannot be required to travel significantly farther than the distance Original Medicare beneficiaries are required to travel in order to access services from the OTP. MA plans are not required to furnish transportation to the OTP facilities as part of the OTP benefit. However, MA plans can furnish transportation to health care services as a supplemental benefit. In addition, as noted elsewhere, Medicaid must assure, in certain circumstances, non-emergency transportation for a dually eligible individual to obtain a Medicaid-coverable benefit for which Medicare is primary payer.

Comment: A commenter stated that, in order to administer this new benefit, guidance is needed on which services must be covered by an MA plan without cost-sharing and the timelines for coverage without cost-sharing (for example, no more than 12 months of active treatment). The commenter further stated that since OUD treatment is complex and can vary from patient to patient, it is important that plans understand whether there should be no cost-sharing on all components or if there are specific nuances in how to apply the requirement.

Response: MA plans can offer the OTP benefit consistent with the bids which were submitted for CY 2020, including proposed cost-sharing. We note that MA plans must assure that, in instances in which they impose cost-sharing for the OTP benefit, providers do not bill a Qualified Medicare Beneficiary for such cost-sharing. (see § 422.504(g)(1).)

Comment: A commenter requested clarification as to whether OTPs will be billing Medicare Part B—that is, the FFS Medicare program—for services furnished to Medicare Advantage enrollees.

Response: No. OTPs that furnish Medicare covered medically necessary services to MA enrollees will be paid by the enrollees' MA plans. MA plans are required to furnish or cover all benefits that are covered by Medicare Part A and Part B, excluding hospice, for their enrollees. As previously noted, MA plans are required to contract with, or arrange on a non-contract basis for, enrollee access to medically necessary OTP services consistent with the community pattern of care. MA plans may have direct contracts with OTPs in which they negotiate the terms and conditions of payment for the Medicare-covered services furnished by the OTP. An OTP treating an MA enrollee that does not have a contract with the enrollee's MA plan should contact the MA plan to confirm coverage and payment.

Comment: A commenter requested additional information about CMS' expectations of how the OTP benefit will be made available to Medicare Advantage enrollees.

Response: In the CY 2020 Call Letter released on April 1, 2019, CMS issued guidance to MA organizations regarding section 2005 of the SUPPORT Act and implementing the OTP benefit. In the CY 2020 Call Letter, CMS reminded plans that opioid use disorder treatment services furnished by OTPs would be covered as a Medicare Part B benefit by plans beginning January 1, 2020. We also stated that MA organizations should prepare their bids using available information and reiterated that MA plans must provide all medically necessary Part A and Part B covered services to enrollees consistent with section 1852 of the Act and the regulations in part 422.

For dually eligible individuals who may already be receiving OTP services through Medicaid, MA plans should ensure continuity of care for their enrollees any time there is a transition from a non-contracted to a contracted provider. In addition, as noted above, MA plans must assure that in instances in which they impose cost-sharing on the OTP benefit, providers do not bill a Qualified Medicare Beneficiary for such cost-sharing.

Comment: A commenter asks that CMS not allow MA plans to utilize prior authorization (PA) or step therapy for treatment of opioid withdrawal symptoms.

Response: MA plans may use step therapy for Part B drugs when medically appropriate and consistent with the requirements in § 422.136. We also note that when an MA plan processes a coverage request that involves prior authorization or other utilization management requirements, such as step therapy for Part B drugs, the plan's determination on whether to grant approval of a service or a drug for an enrollee constitutes an organization determination under part 422, subpart M, and is subject to appeal. Specifically, as described at § 422.568, the MA organization must notify the enrollee of its determination as expeditiously as the enrollee's health condition requires.

CMS is considering strategies we can use to monitor the implementation of the OTP benefit by MA plans and any issues that may impede access to medically necessary treatment of opioid use disorder, including what data might be available to evaluate plan performance.

Comment: A commenter questioned how MA–PD and Prescription Drug Plan sponsors will know what beneficiaries are eligible for this benefit. The commenter proposes that an option would be to provide an indicator in the CMS Medicare Advantage and Prescription Drug data System (MARx), with start and end dates, for beneficiary eligibility for OTP services.

Response: All beneficiaries needing treatment for opioid addiction are eligible for this benefit. We appreciate the data suggestion and will take it into consideration in our on-going implementation of the OTP benefit.

Comment: A commenter questioned how Medicare's managed care plan partners are supposed to reflect the use of this new benefit in their required data submissions.

Response: We will furnish guidance to MA organizations and cost plans on this topic at a later date.

Comment: A commenter requested that since OTPs are currently providing OUD services to Medicare beneficiaries, and that the provider enrollment process would not start until the new Part B benefit is available (January 1, 2020), will CMS allow for payments to OTPs for services delivered in the 30 days prior to their successful enrollment.

Response: As we noted in a previous response, MA plans cannot contract or furnish the Part B OTP services through any OTP that is SAMSHA accredited if that OTP has not yet enrolled in Medicare but the MA plan may cover or furnish services provided by such a provider as a supplemental benefit (§ 422.204(b)(3). Allowing the individual to continue to see their current provider during this transition will ensure continuity of care for this vulnerable population. Furthermore, in some situations, the MA plan may be required by § 422.112(a)(3) to provide out-of-network access for the OTP benefit and we remind MA organizations of their obligations under part 422 regulations to furnish all Part A and Part B benefits, excluding hospice, to their enrollees.

Comment: A commenter noted that the Annual Notice of Change and Evidence of Coverage (ANOC and EOC) documents can play an essential role in updating beneficiaries as to new benefits, but the timing for

implementation of the OTP benefit in 2020 makes this impractical, and instead suggested that CMS undertake a robust public education campaign aimed directly at beneficiaries.

Response: The SUPPORT Act became law in October 2018 and CMS issued guidance to MA organizations in the CY 2020 Draft Call Letter (issued in January 2019) and the CY 2020 Final Call Letter (issued in April 2019) about the requirement to cover the OTP benefit, so MA organizations had sufficient time to plan to include the necessary information in ANOCs and EOCs for 2020. Medicare Advantage plans are required to include the new OTP benefit in their 2020 ANOC/EOC. We are also implementing a comprehensive education campaign regarding the new OTP benefit. Our public education campaign will feature CMS information channels, education resources and outreach leveraging media/stakeholder networks to raise awareness and engage Medicare beneficiaries. Specifically it will include earned media (for example, drop-in article for local/community newspapers), social media (for example, tweets and Facebook posts), beneficiary publications, and outreach to beneficiary partners including State Health Insurance Assistance Programs (SHIPs) across the country, in addition to information available from 1–800–MEDICARE and our consumer website, *http://www.medicare.gov*.

Comment: One commenter requested more information about the compliance criteria, quality metrics, and electronic health record (EHR) requirements that will be used to evaluate OTPs, and whether OTPs will be subject to the requirements of the Quality Payment Program.

Response: We did not propose any compliance criteria, quality metrics, or EHR requirements for OTPs. As OTPs are not one of the eligible clinician types for the Quality Payment Program, they are not able to participate in MIPS or to be a Qualifying APM Participant (QP). However, OTPs may be able to participate in a Center for Medicare and Medicaid Innovation payment model, depending on the eligible participants identified for that specific model, and then would be subject to the requirements of that specific model, which could include quality or EHR-related requirements.

After a thorough review of the above policy considerations reflected in the public comments we received, we are finalizing the proposed provisions to implement the new OTP benefit under section 2005 of the SUPPORT Act, with modifications as described above, at § 410.67, part 489 and part 498.

H. Bundled Payments Under the PFS for Substance Use Disorders

1. Background and Provision

In the CY 2019 PFS proposed rule (83 FR 35730), we solicited comment on creating a bundled episode of care payment for management and counseling treatment for substance use disorders. We received approximately 50 comments on this topic, most of which were supportive of creating a separate bundled payment for these services. Some commenters recommended focusing the bundle on services related to medication assisted treatment (MAT) used in treatment for opioid use disorder (OUD). Several commenters also recommended that we establish higher payment amounts for patients with more complex needs who require more intensive services and management, and also expressed concern that an episode of care that limited the duration of treatment would not be conducive to treating OUD, given the chronic nature of this disorder. Other commenters recommended that we establish separate bundled payments for treatment of substance use disorders that does, and does not, involve MAT.

In response to the public comments, we proposed to establish bundled payments for the overall treatment of OUD, including management, care coordination, psychotherapy, and counseling activities. We noted that, if a patient's treatment involves MAT, this bundled payment would not include payment for the medication itself. Billing and payment for medications under Medicare Part B or Part D would remain unchanged. Additionally, payment for medically necessary toxicology testing would not be included in the proposed OUD bundle, and would continue to be billed separately under the Clinical Lab Fee Schedule. We also proposed to implement the new Medicare Part B benefit added by section 2005 of the SUPPORT Act for coverage of certain services furnished by Opioid Treatment Programs (OTPs) beginning in CY 2020. We believe the bundled payment under the PFS for OUD treatment described below will create an avenue for physicians and other health professionals to bill for a bundle of services that is similar to the new bundled OUD treatment services benefit, but not furnished by an OTP. By creating a separate bundled payment for these services under the PFS, we hope to incentivize increased provision of counseling and care coordination for patients with OUD in the office setting, thereby expanding access to OUD care. We note that use of these codes is limited to only beneficiaries diagnosed with OUD; however, we may consider other potential bundles describing services for other substance use disorders in future rulemaking.

To implement this new bundled payment, we proposed to create two HCPCS G-codes to describe monthly bundles of services that include overall management, care coordination, individual and group psychotherapy and counseling for office-based OUD treatment. Although we considered proposing weekly-reported codes to describe a bundle of services that would align with the proposed OTP bundle, we believe that monthly-reported codes will better align with the practice and billing of other types of care management services furnished in office settings and billed under the PFS (for example, behavioral health integration (BHI) services). We believe monthly-reported codes would be less administratively burdensome for practitioners, and more likely to be consistent with care management and prescribing patterns in the office setting (as compared with an OTP) given the increased use of long-acting MAT drugs (such as injectable naltrexone or implanted buprenorphine) in the office setting compared to the OTP setting. We note that these codes should not be billed for beneficiaries who are receiving treatment at an OTP, as we believe that would be duplicative since the bundled payments made to OTPs cover similar services for the treatment of OUD. Based on feedback we received through the comment solicitation, we proposed to create a code to describe the initial month of treatment, which would include intake activities and development of a treatment plan, as well as assessments to aid in development of the treatment plan in addition to care coordination, individual therapy, group therapy, and counseling; a code to describe subsequent months of treatment including care coordination, individual therapy, group therapy, and counseling; and an add-on code that could be billed in circumstances when effective treatment requires additional resources for a particular patient that substantially exceed the resources included in the base codes. In other words, the add-on code would address extraordinary circumstances that are not contemplated by the bundled code. We acknowledge that the course of treatment for OUD is variable, and in some instances, the first several months of treatment may be more resource intensive. We solicited comment on whether we should consider creating a separately billable

code or codes to describe additional resources involved in furnishing OUD treatment-related services after the first month, for example, when substantial revisions to the treatment plan are needed, and what resource inputs we might consider in setting values for such codes.

We believe that, in general, bundled payments create incentives to provide efficient care by mitigating incentives tied to volume of services furnished, and that these incentives can be undermined by creating separate billing mechanisms to account for higher resource costs for particular patients. However, we share some of the concerns raised by commenters that an OUD bundle should not inadvertently limit the appropriate amount of OUD care furnished to patients with varying medical needs. In consideration of this concern, we proposed to create an add-on code to make appropriate payment for additional resource costs in order to mitigate the risks that the bundled OUD payment might limit clinically-indicated patient care for patients that require significantly more care than is in the range of what is typical for the kinds of care described by the base codes. However, we are also interested in comments regarding ways we might better stratify the coding for OUD treatment to reflect the varying needs of patients (based on complexity or frequency of services, for example) while maintaining the full advantage of the bundled payment, including increased efficiency and flexibility in furnishing care.

We anticipate that these services would often be billed by addiction specialty practitioners, but note that these codes are not limited to any particular physician or nonphysician practitioner (NPP) specialty. Additionally, unlike the codes that describe care furnished using the psychiatric collaborative care model (CPT codes 99492, 99493, and 99494), which require consultation with a psychiatric consultant, we did not propose to require consultation with a specialist as a condition of payment for these codes, but we note that consultation with a specialist could be counted toward the minutes required for billing HCPCS codes G2086, G2087, and G2088.

The codes and descriptors for the services are:

- HCPCS code G2086: *Office-based treatment for opioid use disorder, including development of the treatment plan, care coordination, individual therapy and group therapy and counseling; at least 70 minutes in the first calendar month.*
- HCPCS code G2087: *Office-based treatment for opioid use disorder, including care coordination, individual therapy and group therapy and counseling; at least 60 minutes in a subsequent calendar month.*
- HCPCS code G2088: *Office-based treatment for opioid use disorder, including care coordination, individual therapy and group therapy and counseling; each additional 30 minutes beyond the first 120 minutes (List separately in addition to code for primary procedure).*

For the purposes of valuation for HCPCS codes G2086 and G2087, we are assuming two individual psychotherapy sessions per month and four group psychotherapy sessions per month; however, we understand that the number of therapy and counseling sessions furnished per month will vary among patients and also fluctuate over time based on the individual patient's needs. Consistent with the methodology for pricing other services under the PFS, HCPCS codes G2086, G2087, and G2088 are valued based on what we believe to be a typical case, and we understand that based on variability in patient needs, some patients will require more resources, and some fewer. In order to maintain the advantages inherent in developing a payment bundle, we proposed that the add-on code (HCPCS code G2088) can only be billed when the total time spent by the billing professional and the clinical staff furnishing the OUD treatment services described by the base code exceeds double the minimum amount of service time required to bill the base code for the month. We believe it is appropriate to limit billing of the add-on code to situations where medically necessary OUD treatment services for a particular patient exceed twice the minimum service time for the base code because, as noted above, the add-on code is intended to address extraordinary situations where effective treatment requires additional resources that substantially exceed the resources included in the base codes. For example, the needs of a particular patient in a month may be unusually acute, well beyond the needs of the typical patient; or there may be some months when psychosocial stressors arise that were unforeseen at the time the treatment plan was developed, but warrant additional or more intensive therapy services for the patient. We proposed that when the time requirement is met, HCPCS code G2088 could be billed as an add-on code during the initial month or subsequent months of OUD treatment. Practitioners should document the medical necessity for the use of the add-on code in the patient's medical record. We solicited comment on the proposal.

We proposed to value HCPCS codes G2086, G2087, and G2088 using a building block methodology that sums the work RVUs and direct PE inputs from codes that describe the component services we believe would be typical, consistent with the approach we have previously used in valuing monthly care management services that include face-to-face services within the payment. For HCPCS code G2086, we developed proposed inputs using a crosswalk to CPT code 99492 (*Initial psychiatric collaborative care management, first 70 minutes in the first calendar month of behavioral health care manager activities, in consultation with a psychiatric consultant, and directed by the treating physician or other qualified health care professional, with the following required elements: Outreach to and engagement in treatment of a patient directed by the treating physician or other qualified health care professional; initial assessment of the patient, including administration of validated rating scales, with the development of an individualized treatment plan; review by the psychiatric consultant with modifications of the plan if recommended; entering patient in a registry and tracking patient follow-up and progress using the registry, with appropriate documentation, and participation in weekly caseload consultation with the psychiatric consultant; and provision of brief interventions using evidence-based techniques such as behavioral activation, motivational interviewing, and other focused treatment strategies.*), which is assigned a work RVU of 1.70, plus CPT code 90832 (*Psychotherapy, 30 minutes with patient*), which is assigned a work RVU of 1.50 (assuming two over the course of the month), and CPT code 90853 (*Group psychotherapy (other than of a multiple-family group)*), which is assigned a work RVU of 0.59 (assuming four over the course of a month), for a work RVU of 7.06. The required minimum number of minutes described in HCPCS code G2086 is also based on a crosswalk to CPT code 99492. Additionally, for HCPCS code G2086, we proposed to use a crosswalk to the direct PE inputs associated with CPT code 99492, CPT code 90832 (times two), and CPT code 90853 (times four). We believe that the work and PE described by these crosswalk codes is analogous to the services described in HCPCS code G2086 because HCPCS code G2086 includes similar care

coordination activities as described in CPT code 99492 and bundles in the psychotherapy services described in CPT codes 90832 and 90853.

We proposed to value HCPCS code G2087 using a crosswalk to CPT code 99493 (*Subsequent psychiatric collaborative care management, first 60 minutes in a subsequent month of behavioral health care manager activities, in consultation with a psychiatric consultant, and directed by the treating physician or other qualified health care professional, with the following required elements: tracking patient follow-up and progress using the registry, with appropriate documentation; participation in weekly caseload consultation with the psychiatric consultant; ongoing collaboration with and coordination of the patient's mental health care with the treating physician or other qualified health care professional and any other treating mental health providers; additional review of progress and recommendations for changes in treatment, as indicated, including medications, based on recommendations provided by the psychiatric consultant; provision of brief interventions using evidence-based techniques such as behavioral activation, motivational interviewing, and other focused treatment strategies; monitoring of patient outcomes using validated rating scales; and relapse prevention planning with patients as they achieve remission of symptoms and/or other treatment goals and are prepared for discharge from active treatment*), which is assigned a work RVU of 1.53, plus CPT code 90832, which is assigned a work RVU of 1.50 (assuming two over the course of the month), and CPT code 90853, which is assigned a work RVU of 0.59 (assuming four over the course of a month), for a work RVU of 6.89. The required minimum number of minutes described in HCPCS code G2087 is also based on a crosswalk to CPT codes 99493. For HCPCS code G2087, we proposed to use a crosswalk to the direct PE inputs associated with CPT code 99493, CPT code 90832 (times two), and CPT code 90853 (times four). We believe that the work and PE described by these crosswalk codes is analogous to the services described in HCPCS code G2087 because HCPCS code G2087 includes similar care coordination activities as described in CPT code 99493 and bundles in the psychotherapy services described in CPT codes 90832 and 90853.

We proposed to value HCPCS code G2088 using a crosswalk to CPT code 99494 (*Initial or subsequent psychiatric collaborative care management, each additional 30 minutes in a calendar month of behavioral health care manager activities, in consultation with a psychiatric consultant, and directed by the treating physician or other qualified health care professional (List separately in addition to code for primary procedure)*), which is assigned a work RVU of 0.82. The required minimum number of minutes described in HCPCS code G2087 is also based on a crosswalk to CPT codes 99493. For HCPCS code G2088, we proposed to use a crosswalk to the direct PE inputs associated with CPT code 99494. We believe that the work and PE described by this crosswalk code is analogous to the services described in HCPCS code G2088 because HCPCS code G2088 includes similar care coordination activities as described in CPT code 99494.

We understand that many beneficiaries with OUD have comorbidities and may require medically-necessary psychotherapy services for other behavioral health conditions. In order to avoid duplicative billing, we proposed that, when furnished to treat OUD, CPT codes 90832, 90834, 90837, and 90853 may not be reported by the same practitioner for the same beneficiary in the same month as HCPCS codes G2086, G2087, and G2088. We solicited comments on the proposal.

We proposed that practitioners reporting the OUD bundle must furnish a separately reportable initiating visit in association with the onset of OUD treatment, since the bundle requires a level of care coordination that cannot be effective without appropriate evaluation of the patient's needs. This is similar to the requirements for chronic care management (CCM) services (CPT codes 99487, 99489, 99490, and 99491) and BHI services (CPT codes 99484, 99492, 99493, and 99494) finalized in the CY 2017 PFS final rule (81 FR 80239). The initiating visit would establish the beneficiary's relationship with the billing practitioner, ensure the billing practitioner assesses the beneficiary to determine clinical appropriateness of MAT in cases where MAT is being furnished, and provide an opportunity to obtain beneficiary consent to receive care management services (as discussed further below). We proposed that the same services that can serve as the initiating visit for CCM services and BHI services can serve as the initiating visit for the services described by HCPCS codes G2086–G2088. For new patients or patients not seen by the practitioner within a year prior to the commencement of CCM services and BHI services, the billing practitioner must initiate the service during a ''comprehensive'' E/M visit (levels 2 through 5 E/M visits), annual wellness visit (AWV) or initial preventive physical exam (IPPE). The face-to-face visit included in transitional care management (TCM) services (CPT codes 99495 and 99496) also qualifies as a ''comprehensive'' visit for CCM and BHI initiation. We proposed that these visits could similarly serve as the initiating visit for OUD services.

We proposed that the counseling, therapy, and care coordination described in the OUD treatment codes could be provided by professionals who are qualified to provide the services under state law and within their scope of practice ''incident to'' the services of the billing physician or other practitioner. We also proposed that the billing clinician would manage the patient's overall care, as well as supervise any other individuals participating in the treatment, similar to the structure of the BHI codes describing the psychiatric collaborative care model finalized in the CY 2017 PFS final rule (81 FR 80229), in which services are reported by a treating physician or other qualified health care professional and include the services of the treating physician or other qualified health care professional, as well as the services of other professionals who furnish services incident to the services of the treating physician or other qualified health care professional. Additionally, we proposed to add these codes to the list of designated care management services for which we allow general supervision of the non-face-to-face portion of the required services. Consistent with policies for other separately billable care management services under the PFS, because these proposed OUD treatment bundles include non-face-to-face care management components, we proposed that the billing practitioner or clinical staff must document in the beneficiary's medical record that they obtained the beneficiary's consent to receive the services, and that, as part of the consent, they informed the beneficiary that there is cost sharing associated with these services, including potential deductible and coinsurance amounts, for both in-person and non-face-to-face services that are provided.

We proposed to allow any of the individual therapy, group therapy and counseling services included in HCPCS codes G2086, G2087, and G2088 to be furnished via telehealth, as clinically appropriate, in order to increase access to care for beneficiaries. As discussed in section II.F. of this final rule regarding

Telehealth Services, like certain other non-face-to-face PFS services, the components of HCPCS codes G2086 through G2088 describing care coordination are commonly furnished remotely using telecommunications technology, and do not require the patient to be present in-person with the practitioner when they are furnished. As such, these services are not considered telehealth services for purposes of Medicare, and we do not need to consider whether the non-face-to-face aspects of HCPCS codes G2086 through G2088 are similar to other telehealth services. If the non-face-to-face components of HCPCS codes G2086 through G2088 were separately billable, they would not need to be on the Medicare telehealth list to be covered and paid in the same way as services delivered without the use of telecommunications technology.

Section 2001(a) of the SUPPORT Act amended section 1834(m) of the Act, adding a new paragraph (7) that removes the geographic limitations for telehealth services furnished on or after July 1, 2019, to an individual with a substance use disorder (SUD) diagnosis for purposes of treatment of such disorder or co-occurring mental health disorder. The new paragraph at section 1834(m)(7) of the Act also allows telehealth services for treatment of a diagnosed SUD or co-occurring mental health disorder to be furnished to individuals at any telehealth originating site (other than a renal dialysis facility), including in a patient's home. As discussed in section II.F. of this final rule, Telehealth Services, we proposed to add HCPCS codes G2086, G2087, and G2088 to the list of Medicare Telehealth services. Because certain required services (such as individual psychotherapy or group psychotherapy services) that are included in the proposed OUD bundled payment codes would be furnished to treat a diagnosed SUD, and would ordinarily require a face-to-face encounter, they could be furnished more broadly as telehealth services as permitted under section 1834(m)(7) of the Act.

For these services described above (HCPCS codes G2086, G2087, and G2088), we solicited comment on how these potential codes, descriptors, and payment rates align with state Medicaid coding and payment rates for the purposes of state payment of cost sharing for Medicare-Medicaid dually eligible individuals. Additionally, we understand that treatment for OUD can vary, and that MAT alone has demonstrated efficacy. In cases where a medication such as buprenorphine or naltrexone is used to treat OUD alone, without therapy or counseling, we note that existing applicable codes can be used to furnishing and bill for that care (for example, using E/M visits, in lieu of billing the bundled OUD codes proposed here).

As discussed in section II.G. of this final rule, Medicare Coverage for Certain Services Furnished by Opioid Treatment Programs, we proposed to set the copayment at zero for OUD services furnished by an OTP, given the flexibility in section 1834(w)(1) of the Act for us to set the copayment amount for OTP services either at zero or at an amount above zero. We note that we do not have the statutory authority to eliminate the deductible and coinsurance requirements for the bundled OUD treatment services under the PFS. We acknowledge the potential impact of coinsurance on patient health care decisions and intend to monitor its impact if these proposals were to be finalized.

Finally, we recognize that historically, the CPT Editorial Panel has frequently created CPT codes describing services that we originally established using G-codes and adopted them through the CPT Editorial Panel process. We note that we would consider using any newly available CPT coding to describe services similar to those described here in future rulemaking, as early as CY 2021. We would consider and adopt any such CPT codes through subsequent rulemaking.

Additionally, we understand that in some cases, OUD can first become apparent to practitioners in the emergency department setting. We recognize that there is not specific coding that describes diagnosis of OUD or the initiation of, or referral for, MAT in the emergency department setting. We solicited comment on the use of MAT in the emergency department setting, including initiation of MAT and the potential for either referral or follow-up care, as well as the potential for administration of long-acting MAT agents in this setting, in order to better understand typical practice patterns to help inform whether we should consider making separate payment for such services in future rulemaking. We solicited feedback from stakeholders and the public on other potential bundles describing services for other substance use disorders for our consideration in future rulemaking.

We received public comments on the proposed bundled payments under the PFS for substance use disorders. The following is a summary of the comments we received and our responses.

Comment: Many commenters expressed support for this proposal and a few noted that the PFS bundle would provide an opportunity to increase access to OUD treatment for beneficiaries who live in areas without an OTP, but also encouraged CMS to seek opportunities to more closely align the benefit across OTP and PFS settings before it is introduced and to monitor for any unintended responses to payment incentives, noting differences in the number of psychotherapy sessions included.

Response: We agree with the commenters regarding the importance of alignment in these services when furnished in different settings and note that we are finalizing several changes to the coding and payment for services furnished in an OTP (see section II.G of this final rule), which we believe more closely align the payments made by Medicare for OUD services across settings. For example, we are finalizing using a building block methodology to calculate the payment rate for the OTP bundled payments using Medicare rates, including the rates for CPT codes 90832 and 90853, which were also used to calculate the payment rates HCPCS codes G2086, G2087, and G2088. Additionally, we are finalizing an adjustment to the OTP bundled payments to account for intake activities, similar to activities included in HCPCS code G2086, which describes the initial month of treatment. In response to the comments related to monitoring for unintended responses to payment incentives, we note that we will be monitoring utilization of HCPCS codes G2086, G2087, and G2088 and their interaction with other services, as well as the codes describing bundled payments for services furnished at OTPs.

Comment: A few commenters commended CMS on several aspects of this proposal and urged that the proposed codes and valuations be finalized, and also recommended that CMS consider establishing bundled payment amounts that recognize services for different levels of patient need and different types of practice arrangements, including consultation with specialists.

Response: We thank the commenters for their statements of support. We are finalizing the payment amounts for HCPCS codes G2086, G2087, and G2088 as proposed. We also appreciate the commenters' views on coding for these services, and will consider whether it would be appropriate to create codes describing different levels of patient need and different practice arrangements for possible future rulemaking.

Comment: A few commenters recommended that CMS adjust the payment methodology for these services to account for patient complexity/severity using the American Society of Addiction Medicine (ASAM) Criteria or other equivalent criteria and to account for different types of practice arrangements and emerging technologies. These commenters also recommended that we lower the threshold for billing the add-on code to allow it to be billed when the OUD treatment services described by the base code exceeds 125–150 percent of the minimum time required to bill the base code for the month. Additionally, the commenters recommended that CMS urge health care practitioners to consult with physician addiction specialists, as appropriate, when treating patients with moderate to severe OUD.

Response: After considering public comments, we are finalizing our proposal without modification that HCPCS code G2088 can be billed when the total time spent by the billing professional and the clinical staff furnishing the OUD treatment services described by the base code exceeds double the minimum amount of service time required to bill the base code for the month. We continue to believe it is appropriate to limit billing of the add-on code to situations where medically necessary OUD treatment services for a particular patient exceed twice the minimum service time for the base code because, as noted above, the add-on code is intended to address extraordinary situations where effective treatment requires additional resources that substantially exceed the resources included in the base codes. Additionally, we agree with the commenter's recommendation that practitioners furnishing OUD treatment services should consult with addiction specialists, as clinically appropriate.

Comment: Many commenters requested that CMS allow additional psychotherapy services to be furnished for patients receiving treatment for OUD or another SUD. A few commenters expressed concern that a practitioner would not be able to bill separately for psychotherapy services furnished to beneficiaries with OUD and a co-occurring mental health condition, noting that in rural areas there may not be enough behavioral health providers for a patient to be seen by separate practitioners for SUD and mental health diagnoses.

Response: It is not our intention to limit access to medically necessary services through the creation of bundled payment for OUD treatment services. We clarify that while the psychotherapy services described by CPT codes 90832 (*Psychotherapy, 30 minutes with patient*), 90834 (*Psychotherapy, 45 minutes with patient*), 90837 (*Psychotherapy, 60 minutes with patient*), and 90853 (*Group psychotherapy (other than of a multiple-family group)*) cannot be reported by the same practitioner for the same beneficiary in the same month as the codes describing this bundled episode of care, practitioners can bill for additional psychotherapy furnished for the treatment of OUD using the add-on code (HCPCS code G2088). In cases where psychotherapy services are furnished for co-occurring diagnoses, any of the psychotherapy codes could be billed, as medically reasonable and necessary. We note that practitioners should determine which of the patient's diagnoses they are treating is the primary one being treated during that session in order to decide whether it is appropriate to bill separately for psychotherapy services furnished for co-occurring diagnoses. After reflecting on these and other comments, we also believe it is important to modify our proposal to establish a requirement that at least one psychotherapy service must be furnished in order to bill for HCPCS codes G2086 or G2087. Since the new G codes incorporate the resource costs involved in furnishing psychotherapy services into the payment rate, we believe it is appropriate that a minimum of at least one psychotherapy service be furnished in order to bill for HCPCS codes G2086 or G2087. We note that not all OUD treatment necessarily require provision of regular psychotherapy services for all patients, for example for patients receiving MAT over a long period of time. In these cases, we note that existing coding describing care management services (CPT codes 99484, 99492, 99493, and 99494) and E/M services can be billed for treatment of substance use disorders, including OUD, so we do not believe that this requirement will inhibit access to OUD services.

Comment: A few commenters expressed concern that the proposed G codes will inappropriately limit access to a variety of evidence-based, non-opioid pain management therapies.

Response: We note that the proposed bundled payment codes would not preclude practitioners from furnishing or billing for other non-opioid pain management treatments.

In summary, after consideration of the comments, we are finalizing HCPCS codes G2086, G2087, and G2088 with modifications to establish a requirement that at least one psychotherapy service must be furnished in order to bill for HCPCS codes G2086 or G2087. We are clarifying that practitioners can bill for additional psychotherapy furnished for the treatment of OUD using the add-on code (HCPCS code G2088) and, in cases where psychotherapy services furnished are furnished for co-occurring diagnoses, for any of the psychotherapy codes, as medically reasonable and necessary.

2. Rural Health Clinics (RHCs) and Federally-Qualified Health Centers (FQHCs)

In the CY 2018 PFS final rule (82 FR 53169 through 53180), we established payment for General Care Management (CCM) services using HCPCS G0511 which is an RHC and FQHC-specific G code for at least 20 minutes of CCM, complex CCM, or general behavioral health services. Payment for this code is currently set at the average of the non-facility, non-geographically adjusted payment rates for CPT codes 99490, 99487, 99491, and 99484. The types of chronic conditions that are eligible for care management services include mental health or behavioral health conditions, including substance use disorders.

In the CY 2018 PFS final rule with comment period (82 FR 53169 through 53180), we also established payment for psychiatric Collaborative Care Services (CoCM) using HCPCS code G0512, which is an RHC and FQHC specific G-code for at least 70 minutes in the first calendar month, and at least 60 minutes in subsequent calendar months of psychiatric CoCM services. Payment for this code is set at the average of the non-facility, non-geographically adjusted rates for CPT codes 99492 and 99493. The psychiatric CoCM model of care may be used to treat patients with any behavioral health condition that is being treated by the billing practitioner, including substance use disorders.

RHCs and FQHCs can also bill for individual psychotherapy services using CPT codes 90791, 90792, 90832, 90834, 90837, 90839, or 90845, which are billable visits under the RHC all-inclusive rate (AIR) and FQHC Prospective Payment System (PPS) when furnished by an RHC or FQHC practitioner. If a qualified mental health service is furnished on the same day as a qualified primary care service, the RHC or FQHC can bill for 2 visits.

RHCs and FQHCs are engaged primarily in providing services that are furnished typically in a physician's office or an outpatient clinic. As a result of the bundled payment under the PFS for OUD treatment furnished by physicians, we reviewed the applicability of RHCs and FQHCs

furnishing and billing for similar services. Specifically, we considered establishing a new RHC and FQHC specific G code for OUD treatment with the payment rate set at the average of the non-facility, non-geographically adjusted payment rates for G2086 and G2087, beginning on January 1, 2020. The requirements to bill the services would be similar to the requirements under the PFS for G2086 and G2087, including that an initiating visit with a primary care practitioner must occur within one year before OUD services begin, and that consent be obtained before services are furnished.

However, because RHCs and FQHCs that choose to furnish OUD services can continue to report these individual codes when treating OUD, and can also offer their patients comprehensive care coordination services using HCPCS codes G0511 and G0512, we stated that we did not believe that adding a new and separate code to report a bundle of OUD services was necessary. Therefore, we did not propose to add a new G code for a bundle of OUD services.

We received public comments on our decision not to add a new G code for a bundle of OUD services furnished by RHCs and FQHCs. The following is a summary of the comments we received and our responses.

Comment: Commenters requested that we create a new G code for RHCs and FQHCs to bill for a bundle of OUD services. None of these comments were from an RHC or FQHC or a representative of RHCs or FQHCs.

Response: As we have noted, RHCs and FQHCs that provide OUD services to their patients can bill for individual psychotherapy services using a range of CPT codes that are billable visits under the RHC all-inclusive rate (AIR) and FQHC Prospective Payment System (PPS) when furnished by an RHC or FQHC practitioner. These codes can be billed on the same day as a qualified primary care visit, and RHCs and FQHCs can also bill for care management services and receive a payment in addition to their AIR or PPS payment. We did not receive any comments that lead us to conclude that a separate G code for RHCs and FQHCs to bill for OUD services is necessary, or any comments on how such a code would not be duplicative of existing billing mechanisms.

After considering the comments, we are finalizing our proposal not to establish a separate G code for OUD payments to RHCs and FQHCs. If we become aware that a separate code would be beneficial to RHCs and FQHCs that choose to furnish these services, we will again consider this.

I. Physician Supervision for Physician Assistant (PA) Services

1. Background

Section 4072(e) of the Omnibus Budget Reconciliation Act of 1986 (Pub. L. 99–509, October 21, 1986), added section 1861(s)(2)(K)(i) of the Act to establish a benefit for services furnished by a physician assistant (PA) under the supervision of a physician. We have interpreted this physician supervision requirement in the regulation at § 410.74(a)(2)(iv) to require PA services to be furnished under the general supervision of a physician. This general supervision requirement was based upon another longstanding regulation at § 410.32(b)(3)(i) that defines three levels of supervision for diagnostic tests, which are general, direct and personal supervision. Of these three supervision levels, general supervision is the most lenient. Specifically, the general supervision requirement means that PA services must be furnished under a physician's overall direction and control, but the physician's presence is not required during the performance of PA services.

In the CY 2018 PFS proposed rule (82 FR 34172 through 34173), we published a request for information (RFI) on CMS flexibilities and efficiencies. In response to this RFI, commenters including PA stakeholders informed us about recent changes in the practice of medicine for PAs, particularly regarding physician supervision. These commenters also reached out separately to CMS with their concerns. They stated that PAs are now practicing more autonomously, like nurse practitioners (NPs) and clinical nurse specialists (CNSs), as members of medical teams that often consist of physicians, nonphysician practitioners (NPPs) and other allied health professionals. This changed approach to the delivery of health care services involving PAs has resulted in changes to scope of practice laws in some states for PAs regarding physician supervision. According to these commenters, some states have already updated their requirements for PAs related to physician supervision, some states have made changes and are now silent about their physician supervision requirements, while other states have not yet changed their PA scope of practice in terms of their physician supervision requirements. Overall, these commenters believe that as states continue to make changes to their physician supervision requirements for PAs, the Medicare requirement for general supervision of PA services may become increasingly out of step with current medical practice, imposing a more stringent standard than state laws governing physician supervision of PA services. Furthermore, as currently defined, stakeholders have suggested that the supervision requirement is often misinterpreted or misunderstood in a manner that restricts PAs' ability to practice to the full extent of their education and expertise. The stakeholders have suggested that the current regulatory definition of physician supervision as it applies to PAs could inappropriately restrict the practice of PAs in delivering their professional services to the Medicare population.

We note that we have understood our current policy to require general physician supervision for PA services to fulfill the statutory physician supervision requirement; and we believe that general physician supervision gives PAs flexibility to furnish their professional services without the need for a physician's physical presence or availability. Nonetheless, we appreciate the concerns articulated by stakeholders. To more fully understand the current landscape for medical practice involving PA services and how the current regulatory definition may be problematic, we invited public comments on specific examples of changes in state law and state scope of practice rules that enable PAs to practice more broadly such that those rules are in tension with the Medicare requirement for general physician supervision of PA services that has been in place since the inception of the PA benefit category under Medicare law.

Given the commenters' understanding of ongoing changes underway to the state scope of practice laws regarding physician supervision of PA services, commenters on our CY 2018 RFI have requested that CMS reconsider its interpretation of the statutory requirement that PA services must be furnished under the supervision of a physician to allow PAs to operate similarly to NPs and CNSs, who are required by section 1861(s)(2)(K)(ii) of the Act to furnish their services ''in collaboration'' with a physician. In general, we have interpreted collaboration for this purpose at §§ 410.75(c)(3) and 410.76(c)(3) of our regulations to mean a process in which an NP or CNS (respectively) works with one or more physicians to deliver health care services within the scope of the practitioner's expertise, with medical direction and appropriate supervision as provided by state law in which the services are performed. The commenters stated that allowing PA services to be furnished using such a collaborative

process would offer PAs the flexibility necessary to deliver services more effectively under today's health care system in accordance with the scope of practice in the state(s) where they practice, rather than being limited by the system that was in place when PA services were first covered under Medicare Part B over 30 years ago.

2. Summary of Proposal and Final Provisions

After considering the comments we received on the RFI, as well as information we received regarding the scope of practice laws in some states regarding supervision requirements for PAs, we proposed to revise the regulation at § 410.74 that establishes physician supervision requirements for PAs. Specifically, we proposed to revise § 410.74(a)(2) to provide that the statutory physician supervision requirement for PA services at section 1861(s)(2)(K)(i) of the Act would be met when a PA furnishes their services in accordance with state law and state scope of practice rules for PAs in the state in which the services are furnished, with medical direction and appropriate supervision as required by state law in which the services are performed. In the absence of state law governing physician supervision of PA services, the physician supervision required by Medicare for PA services would be evidenced by documentation in the medical record of the PA's approach to working with physicians in furnishing their services. Consistent with current rules, such documentation would need to be available to CMS, upon request. This change would substantially align the regulation on physician supervision for PA services at § 410.74(a)(2) with our current regulations on physician collaboration for NP and CNS services at §§ 410.75(c)(3) and 410.76(c)(3). We continue to engage with key stakeholders on this issue and receive information on the expanded role of NPPs as members of the medical team. As we are informed about transitions in state law and scope of practice governing physician supervision, as well as changes in the way that PAs practice, we acknowledge the state's role and autonomy to establish, uphold, and enforce their state laws and PA scope of practice requirements to ensure that an appropriate level of physician oversight occurs when PAs furnish their professional services to Medicare Part B patients. Our policy on this issue largely defers to state law and scope of practice and enables states the flexibility to develop requirements for PA services that are unique and appropriate for their respective state, allowing the states to be accountable for the safety and quality of health care services that PAs furnish.

We received public comments on the proposed physician supervision PA services provisions. The following is a summary of the comments we received and our responses.

Comment: The majority of commenters supported our proposal overall, to the extent that it considers state law and scope of practice rules for the state in which the services are furnished, to largely conform our interpretation of the statutory physician supervision requirement for PA services as interpreted under regulations at § 410.74(a)(2) with the statutory physician collaboration requirement for NP and CNS services as interpreted under regulations at §§ 410.75(c)(3) and 410.76(c)(3). Commenters indicated that aligning the physician supervision requirement for PA services with the physician collaboration requirement for NPs and CNSs would reduce practical differences in PA and NP/CNS utilization for employers, employees, States and even Medicare patients. They stated that deferring to state law and scope of practice rules for supervision of PA services will enable PAs to practice at the top of their education and expertise, and therefore, assist the State in which they practice with meeting its healthcare workforce needs, particularly in states that include remote rural and underserved areas. These commenters noted that PAs are authorized to provide medical and surgical care in all 50 States and the District of Columbia, and are committed to increasing access to high quality care for all, as well as continuity of care under the changing landscape of healthcare in the U.S. Commenters from 20 States provided evidence of changes in their state laws or scope of practice rules to move away from references to ''physician supervision'' of PAs, and in some cases replacing it with the term, ''physician collaboration'' to describe the PA-physician relationship. Commenters reported such changes in laws and rules for PA supervision in Arizona, California, Colorado, Connecticut, Florida, Idaho, Illinois, Massachusetts, Michigan, Missouri, Montana, Nevada, North Dakota, Oregon, Oklahoma, Rhode Island, South Carolina, Texas, Utah, and Virginia. PA commenters practicing in Kansas, Vermont and Wisconsin indicated that their state laws and scope of practice rules are currently undergoing similar changes that should be effective in 2020 or shortly thereafter. Additionally, these commenters supported CMS' efforts to reduce practice burdens on PAs and to develop regulations for the Medicare program that closely align with the transition in state laws and scope of practice rules for PAs regarding physician supervision. These commenters also noted that the changes being made to state laws and scope of practice rules were recommended by the December 2018 Federal government report on healthcare competition entitled, ''Reforming America's Healthcare System Through Choice and Competition'' available at *https://www.hhs.gov/sites/default/files/Reforming-Americas-Healthcare-System-Through-Choice-and-Competition.pdf.* The commenters directed our attention to the specific recommendation in the report that states should consider eliminating requirements for rigid collaborative practice and supervision agreements that are not justified by legitimate health and safety concerns to ensure continuity of care for American healthcare consumers.

Response: We appreciate the commenters' recognition of our efforts to reduce burden on PA practice given the changes in their professional practice since the inception of the Medicare Part B benefit category for PAs under Medicare law. We also appreciate the commenters' support of our proposal to consider state law and scope of practice rules governing PA supervision as an appropriate measure by which to ensure that the physician supervision requirement for PA services under Medicare statute at section 1861(s)(K)(i) of the Act is met. We particularly appreciate the feedback from commenters citing changes that have already been made to state laws and scope of practice rules to address evolution in PA practice. These comments are very helpful to inform our broader understanding of the current healthcare landscape for PAs, and to ensure that the statutory PA physician supervision requirement continues to be met.

Comment: Many commenters who supported our proposal to the extent that it relates to state law and scope of practice rules for physician supervision of PA services disagreed with our proposal to address situations where states are silent about their scope of practice requirements for physician supervision of PA services. Specifically, these commenters urged us to require that, in the absence of state law governing physician supervision of PA services, PAs should be required to document at the practice level, rather than in the medical record, the working relationship that they have with physicians. The commenters expressed

concern that requiring PAs to document their approach in the medical record for every patient that they treat would be a tremendous administrative burden that would have a significantly adverse impact on the PA's ability to deliver care. A few commenters suggested that there should not be a requirement for PAs to document the relationship with any supervising or collaborating physician in every patient chart because such documentation is already provided as part of the practice protocols for PAs that are maintained by the individual State boards of medicine. Furthermore, some commenters recommended that, in the absence of state law addressing physician supervision of PA services, documentation at the practice of the working relationship that PAs have with physicians should be required to address situations where PAs deal with issues outside their scope of practice.

Response: We are clarifying that it is not our intention to create an overly burdensome and unnecessary administrative documentation requirement governing PA physician supervision that results in a hindrance to PA practice. We believe that, in the absence of state law, if there is documentation at the practice which demonstrates the working relationship that PAs have with physicians in furnishing their professional services, then this would be adequate to ensure that the statutory requirement for PA physician supervision is met. However, we believe that in the absence of state law and scope of practice rules governing physician supervision of PAs, the relationship that PAs have with physicians in their practice should be required and documented at the practice for all services that PAs furnish, not solely for services outside their scope of practice.

Comment: One commenter suggested that the PA physician supervision requirement and the NP and CNS physician collaboration requirement should be totally removed so that these health care professionals are not tethered to a physician in any way. This commenter further suggested that the removal of a physician supervision requirement would enable PAs to be able to bill the Medicare program directly for their services like NPs and CNSs, rather than having their services billed by their employer as they currently are.

Response: The Medicare statute sets forth the requirements for physician supervision of PA services and the requirement for physician collaboration for NP and CNS services. As such, we do not have authority to remove those requirements. Additionally, our regulation at § 410.150(b)(15), which is based on the statutory requirements of section 1842(b)(6)(C)(i) of the Act governing payment for PA services requires that a PA's employer or independent contractor must bill the Medicare program for PA services. Accordingly, we are not making changes to requirements for Medicare Part B payment for PA professional services in this final rule.

Comment: Some commenters opposed the proposal overall, and particularly the standard CMS proposed to address the PA physician supervision requirement in the absence of state law and scope of practice rules. These commenters stressed that by just substituting ''physician supervision'' with ''physician collaboration,'' the proposal fails to meet the statutory physician supervision requirement and instead relies on unnecessary variations in standards of care based on differences in state law that are inappropriate for a federal program. These commenters stated that the PA educational curricula are not tailored to developing the responsibilities of PAs to perform all medical services and procedures such as ordering appropriate diagnostic tests and performing highly technical radiology procedures without physician oversight and direction. They believe that physician involvement, either through the physical presence of a physician or availability via telecommunications technology, was necessary to ensure that optimal patient care is not compromised. Additionally, these commenters alluded to high-profile lawsuits against provider organizations in the last year involving PA documentation and billing policy where audits revealed documentation and signature challenges for electronic medical records (EMR) systems in determining whether physician supervision had occurred, and in distinguishing work furnished by a physician, PA or other supplier involved in a patient's care. They suggested that these same obstacles could potentially apply to our proposed medical record documentation standard for PAs to demonstrate, in the absence of state law, the relationship that they have with physicians when furnishing their services. Overall, these commenters stated that the current requirement we established in regulation for a general level of physician supervision to meet the statutory physician supervision requirement for PA services is appropriately consistent with state laws, and enables physicians to maintain the ultimate responsibility for managing patient care without preempting state law and scope of practice rules or inadvertently eliminating any physician oversight of PA services. Accordingly, these commenters urged CMS to maintain the current regulatory standard for general physician supervision of PA services as a clearer standard for physician supervision across-the-board for the Medicare program, and consistent with statutory requirements.

Response: We appreciate the concerns that these commenters raised about our proposal and acknowledge that the statutory requirement for physician supervision of PA services remains in effect. Further, we believe it is appropriate for the Medicare program to recognize and consider the role of states in regulating medical practice and their autonomy to establish, uphold, and enforce their laws and PA scope of practice requirements that are uniquely appropriate for their respective states, just as we ensure that there is appropriate physician supervision of PA services, consistent with the requirement under Medicare law. Additionally, we believe that the commenters' concerns about obstacles for EMR systems to determine whether physician supervision occurred will be mitigated by our decision, as described above, to require in the absence of state law addressing physician supervision of PA services that PAs must document at the practice, rather than in the medical record, their relationship with physicians when furnishing their professional services.

Comment: Some of the commenters who opposed our proposal to require that PAs must document how they handle physician supervision of their services in the absence of state law recommended that we remove the documentation standard as proposed and replace it with a standard that imposes a requirement that PAs work within a health care team led by a physician, given that they believe no state allows PAs to practice independently without any physician supervision or collaboration.

Response: We appreciate this suggestion about how to ensure that physician supervision of PA services occurs in states that are silent about this requirement in their laws or scope of practice requirements for PA professional services. However, we disagree with the commenters' suggestion that, where state law or scope of practice requirements do not address physician supervision of PA services, we should not adopt the proposed requirement that PAs document their approach to working with physicians. We believe it is

important to continue to ensure that the statutory requirement for physician supervision of PA services is met. We also disagree with the commenters' suggestion that we should impose specific requirements that PAs must practice as part of a physician-led health care team. Based on information provided by other commenters, it seems clear that the way PAs practice is evolving, and that state laws and scope of practice rules are being modified to embrace that change. We believe our role and responsibility is to ensure continued compliance with Medicare statutory requirements without placing undue limitations on changes in PA medical practice. As such, we will recognize and consider state law and scope of practice rules principally to ensure that physician supervision occurs without mandating under our regulations that PAs work within a health care team led by a physician.

Comment: Commenters posed various questions about PA services that are outside the scope the proposals we included in the CY 2020 PFS proposed rule. These comments pertained to issues such as PA supervision requirements for both SAMHSA-designated physicians and PAs when furnishing medically-assisted treatment (MAT) services to patients with opioid use disorder; physician supervision requirements for PAs when furnishing services in PA-directed rural health clinics; hospice physician supervision requirements for PAs and the presence of hospice Medical Directors; extending the same considerations for PA physician supervision requirements to pharmacists when furnishing their services incident to the professional services of physicians; and, the Medicare payment implications under this proposal for PA services.

Response: We did not propose changes to the regulations regarding PA services other than the provision that generally addresses the statutory requirement for physician supervision of PA services. Therefore, we are not addressing these other issues in this final rule.

After considering the public comments, we are finalizing our proposal on PA physician supervision, with modifications as described above, to require under § 410.74(a)(2) the following:

- That a PA must furnish their professional services in accordance with state law and state scope of practice rules for PAs in the state in which the PA's professional services are furnished. Any state laws or state scope of practice rules that describe the required practice relationship between physicians and PAs, including explicit supervisory or collaborative practice requirements, describe a form of supervision for purposes of section 1861(s)(2)(K)(i) of the Act.
- For states with no explicit state law or scope of practice rules regarding physician supervision of PA services, physician supervision is a process in which a PA has a working relationship with one or more physicians to supervise the delivery of their health care services. Such physician supervision is evidenced by documenting at the practice level the PA's scope of practice and the working relationships the PA has with the supervising physician/s when furnishing professional services.

J. Review and Verification of Medical Record Documentation

1. Background

In an effort to reduce mandatory and duplicative medical record evaluation and management (E/M) documentation requirements, we finalized an amended regulatory provision at 42 CFR part 415, subpart D, in the CY 2019 PFS final rule (83 FR 59653 through 59654). Specifically, § 415.172(a) requires as a condition of payment under the PFS that the teaching physician (as defined in § 415.152) must be present during certain portions of services that are furnished with the involvement of residents (individuals who are training in a graduate medical education program). Section 415.174(a) provides for an exception to the teaching physician presence requirements in the case of certain E/M services under certain conditions, but requires that the teaching physician must direct and review the care provided by no more than four residents at a time. Sections 415.172(b) and 415.174(a)(6), respectively require that the teaching physician's presence and participation in services involving residents must be documented in the medical record. We amended these regulations to provide that a physician, resident, or nurse may document in the patient's medical record that the teaching physician presence and participation requirements were met. As a result, for E/M visits furnished beginning January 1, 2019, the extent of the teaching physician's participation in services involving residents may be demonstrated by notes in the medical records made by a physician, resident, or nurse.

For the same burden reduction purposes, we issued Change Request (CR) 10412, Transmittal 3971 *https://www.cms.gov/Regulations-and-Guidance/Guidance/Transmittals/2018Downloads/R3971CP.pdf* on February 2, 2018, which revised a paragraph in our manual instructions on ''Teaching Physician Services'' at Pub. 100–04, Medicare Claims Processing Manual, Chapter 12, Section 100.1.1B., to reduce duplicative documentation requirements by allowing a teaching physician to review and verify (sign/date) notes made by a student in a patient's medical record for E/M services, rather than having to re-document the information, largely duplicating the student's notes. We issued corrections to CR 10412 through Transmittal 4068 *https://www.cms.gov/Regulations-and-Guidance/Guidance/Transmittals/2018Downloads/R4068CP.pdf* and re-issued the CR on May 31, 2018. Pub. 100–04, Medicare Claims Processing Manual, Chapter 12, Section 100 contains a list of definitions pertinent to teaching physician services.

Following these amendments to our regulations and manual, certain stakeholders raised concerns about the definitions in this section, particularly those for teaching physician, student, and documentation; and when considered in conjunction with the interpretation of the manual provision at Pub. 100–04, Medicare Claims Processing Manual, Chapter 12, Section 100.1.1B., which addresses documentation of E/M services involving students. While there is no regulatory definition of student, the manual instruction defines a student as an individual who participates in an accredited educational program (for example, a medical school) that is not an approved graduate medical education (GME) program. The manual instructions also specify that a student is never considered to be an intern or a resident, and that Medicare does not pay for services furnished by a student (see Section 100.1.1B. for a discussion concerning E/M service documentation performed by students).

As stated in the CY 2020 PFS proposed rule, we are aware that nonphysician practitioners (NPPs) who are authorized under Medicare Part B to furnish and be paid for all levels of E/M services are seeking similar relief from burdensome E/M documentation requirements that would allow them to review and verify medical record notes made by their students, rather than having to re-document the information. These NPPs include nurse practitioners (NPs), clinical nurse specialists (CNSs), and certified nurse-midwives (CNMs), collectively referred to hereafter for purposes of this discussion as advanced practice registered nurses (APRNs), as well as physician assistants (PAs). Subsequent to the publication of the CY

2019 PFS final rule (83 FR 59653 through 59654), through feedback from listening sessions hosted by CMS' Documentation Requirements Simplification workgroup, we began to hear concerns from a variety of stakeholders about the requirements for teaching physician review and verification of documentation added to the medical record by other individuals. Physician and NPP stakeholders expressed concern about the scope of the changes to §§ 415.172(b) and 415.174(a)(6) which authorize only a physician, resident, or nurse to include notes in the medical record to document E/M services furnished by teaching physicians, because they believed that students and other members of the medical team should be similarly permitted to provide E/M medical record documentation. In addition to students, these stakeholders indicated that ''other members of the medical team'' could include individuals who the teaching physician, other physicians, PA and APRN preceptors designate as being appropriate to document services in the medical record, which the billing practitioner would then review and verify, and rely upon for billing purposes.

Subsequent to the publication of the student documentation manual instruction change at section 100.1.1B of the Medicare Claims Processing Manual, representatives of PAs and APRNs requested clarification about whether PA and APRN preceptors and their students were subject to the same E/M documentation requirements as teaching physicians and their medical students. These stakeholders suggested that the reference to ''student'' in the manual instruction on E/M documentation provided by students is ambiguous because it does not specify ''medical student''. These stakeholders also suggested that the definition of ''student'' in section 100 of this manual instruction is ambiguous because PA and APRN preceptors also educate students who are individuals who participate in an accredited educational program that is not an approved GME program. Accordingly, these stakeholders expressed concern that the uncertainty throughout the health care industry, including among our contractors, concerning the student E/M documentation review and verification policy under these manual guidelines results in unequal treatment as compared to teaching physicians. The stakeholders stated that depending on how the manual instruction is interpreted, PA and APRN preceptors may be required to re-document E/M services in full when their students include notes in the medical records, without having the same option that teaching physicians do to simply review and verify medical student documentation.

2. Proposed Provisions and Summaries of and Responses to Public Comments

After considering the concerns expressed by these stakeholders, we noted in the CY 2020 PFS proposed rule that we believe it would be appropriate to provide broad flexibility to the physicians, PAs and APRNs (regardless of whether they are acting in a teaching capacity) who document and who are paid under the PFS for their professional services. Therefore, we proposed to establish a general principle to allow the physician, the PA, or the APRN who furnishes and bills for their professional services to review and verify, rather than re-document, information included in the medical record by physicians, residents, nurses, students or other members of the medical team. We explained that this principle would apply across the spectrum of all Medicare-covered services paid under the PFS. We noted that because the proposal is intended to apply broadly, we proposed to amend regulations for teaching physicians, physicians, PAs, and APRNs to add this new flexibility for medical record documentation requirements for professional services furnished by physicians, PAs and APRNs in all settings.

Specifically, to reflect our simplified and standardized approach to medical record documentation for all professional services furnished by physicians, PAs and APRNs paid under the PFS, we proposed to amend §§ 410.20 (Physicians' services), 410.74 (PA services), 410.75 (NP services), 410.76 (CNS services) and 410.77 (CNM services) to add a new paragraph entitled, ''Medical record documentation.'' We noted that this paragraph would specify that, when furnishing their professional services, the clinician may review and verify (sign/date) notes in a patient's medical record made by other physicians, residents, nurses, students, or other members of the medical team, including notes documenting the practitioner's presence and participation in the services, rather than fully re-documenting the information. We also noted that, while the proposed change addresses who may document services in the medical record, subject to review and verification by the furnishing and billing clinician, it would not modify the scope of, or standards for, the documentation that is needed in the medical record to demonstrate medical necessity of services, or otherwise for purposes of appropriate medical recordkeeping.

We also proposed to make conforming amendments to §§ 415.172(b) and 415.174(a)(6) to also allow physicians, residents, nurses, students, or other members of the medical team to enter information in the medical record that can then be reviewed and verified by a teaching physician without the need for re-documentation.

We received public comments on the proposed Review and Verification of Medical Record Documentation provisions. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported the premise for this documentation proposal which they stated almost unanimously would relieve burdensome documentation requirements for PAs, NP, CNSs, and CNMs who are authorized providers under Medicare Part B in that it would minimize ''note bloat'' and clinician burnout, and would allow clinicians to focus their limited time instead on patient care. The commenters stated that enabling physicians other than teaching physicians, PAs and APRNs who furnish and bill for their professional services to review and verify, rather than re-document information included in the medical record by physicians, residents, nurses, students or other members of the medical team is forward-thinking, reflective of the professional healthcare setting and, it eliminates disparities in clinical training opportunities so that a student's experience ranks more than shadowing. The commenters noted that recognizing PA and APRN preceptors in the same manner as teaching physicians regarding student medical record documentation would advance access to quality care for Medicare beneficiaries particularly in rural and underserved areas by granting clinical training opportunities to PA and APRN students. Additionally, these commenters expressed support for this documentation proposal because they believed it would remove the disparity in burden reduction between physicians and clinicians such as PAs and APRNs and, instead would lead to parity for all suppliers of Medicare services paid under the PFS. The commenters also noted that another advantage of these documentation requirements is that they will lead to electronic health records (EHRs) being less cluttered with repetitive notes of little additional clinical use, making more meaningful

information easier for physicians and clinicians to identify while offering greater certainty to medical team members and Medicare Administrative Contractors (MACs) alike.

Response: We appreciate the insight provided by commenters about how the broad flexibility under our proposal would enhance the clinical training opportunities and experience for other physicians, PAs, APRNs and their students while still maintaining the integrity of the information documented in the medical record as it is reviewed and verified by the billing practitioner.

Comment: A commenter supported the merit of the broad flexibility provided under the medical record documentation proposal and suggested that we could improve our proposal by including certified registered nurse anesthetists (CRNAs) and their students under this proposal because CRNAs are also included under the nursing industry's ''APRN'' umbrella. The commenter pointed out that the proposal currently includes NPs, CNSs and CNMs, which are three out of the four categories of APRNs. However, this commenter stated that CRNAs should also be included under this proposal, because not only are CRNAs considered APRNs, they are also authorized by Medicare to furnish and bill for E/M services and all medically necessary services within their state scope of practice. CRNAs regularly complete comprehensive E/M documentation for patients, which is also well within their scope of practice. Accordingly, the commenter believed that since this criterion was a factor in proposing the medical record documentation policy for PAs, NPs, CNSs and CNMs, CRNAs should be included under this policy.

Response: We appreciate the commenter bringing to our attention that CRNAs are another type of clinical nurse that the nursing industry recognizes as an APRN, and that the commenter believed should be included under this medical record documentation proposal. The regulations at § 410.69 interpret the statutory CRNA benefit category at section 1861(bb)(1) of the Act to authorize Medicare Part B payment to CRNAs for anesthesia services and related care that CRNAs are legally authorized to perform by the state in which the services are furnished. We also acknowledge that some states license CRNAs to furnish E/M services as part of the ''related care'' services authorized under their Medicare Part B benefit category. Upon further reflection, we agree that it is appropriate to include CRNAs and their students, as well as other members of their health care team, for purposes of the medical record documentation proposal.

Comment: Several commenters suggested that CMS specifically name the types of students that it intends to include as those who are eligible to make notes in the medical record documentation in order to avoid unnecessary confusion by obscuring the intended scope of students as ''other members of the medical team.'' These commenters stated that explicitly naming the types of clinicians and students for which the documentation they add can be reviewed and verified by the billing professional would eliminate misinterpretation on the part of health systems, care providers, and educators, and would improve both clinical training opportunities and, ultimately, patient care.

Response: We acknowledge that uncertainty in the healthcare industry and for MACs about the specific types of students who were allowed to make notes in the medical record which teaching physicians could review and verify without re-documenting was a factor we considered in proposing to revise the documentation requirements in the CY 2020 PFS proposed rule. We find the comment to be persuasive regarding the need for us to be more explicit regarding the flexibility we intend to establish for other physicians, PAs and APRNs and their students. Given that the initial impetus for our proposal was to address potential confusion about our reference in a manual provision to ''students,'' we would not want to generate any further potential for confusion with this policy. In making our proposal, we referred not only to medical students, but more broadly to students in the disciplines of the clinicians who are authorized to bill the Medicare program for a broad spectrum of health care services, including all level E/M services. We agree with the commenters that it is important to be clear about the scope of this policy and, therefore, we will modify our proposal to explicitly list the types of students for which the medical records documentation policy applies rather than using a generic reference to ''students.'' Therefore, at §§ 410.20, 410.69, 410.74, 410.75, 410.76 and 410.77, we will modify our proposed amendments to the regulation to specify the types of students who may make notes in the medical record that may then be reviewed and verified, rather than re-documented, by the billing clinician.

Comment: Several commenters suggested that CMS specify that physicians, PAs, and APRNs may sign off on only those notes in the medical record made by someone of their same provider type or discipline. For example, a PA may only review and verify information included in a patient's chart by another PA or PA student. One of these commenters stated that CMS should withhold any documentation requirement changes until the agency establishes guidelines in future rulemaking that clarify the circumstances under which a clinician would be permitted to review and verify medical record documentation. Conversely, a few of these same commenters questioned the proposal and stated that it is unclear whether a PA or APRN can sign off on any resident or student documentation regardless of their credential level. For example, a PA would be able to attest and bill for work that was performed by a senior resident who is training to become a medical doctor. A few of these commenters warned that scope of practice laws may impose documentation requirements that lead to physicians and clinicians only reviewing documentation of their own student types and not that of other disciplines. Furthermore, the commenters stated that the teaching physician services requirements do not permit PAs and APRNs to formally act as teaching physicians.

Response: We did not propose any limitations that would restrict a billing professional to only reviewing and verifying documentation in the medical record entered by health care team members practicing or training within their same specialty or discipline. We believe that this type of limitation on our proposal would defeat our intended purpose to provide broad flexibility, establishing a generalized principle for medical record documentation for all professional services paid under the Medicare PFS in all settings. Therefore, we disagree with the commenters' recommendation, and are not finalizing restrictions on the scope of medical record documentation entered by members of the medical team that can be reviewed and verified by the billing professional. Additionally, our documentation proposal does not address any applicable billing or payment requirements for the work or services that others furnish in connection with the professional services that are billed by teaching physicians, other physicians, PAs or APRNs. Rather, our proposal is limited to addressing who is authorized, for purposes of the Medicare program, to review and verify documentation in the medical record entered by certain individuals, without having to re-document the information.

Comment: Similarly, several commenters representing physicians supported making the proposed changes to medical record documentation requirements for physicians only, and not for PAs and APRNs. They stated that only physicians submitting a claim for services are responsible and appropriately trained to review and verify documentation in the medical record provided by physicians, residents, nurses, students, or other members of the medical team across the spectrum of all Medicare-covered services paid under the PFS. They maintained that safeguards must be in place to ensure the medical record includes accurate documentation of clinical findings, treatments, and ongoing care plans by all members of the medical team.

Response: We note that the billing professional, in submitting a claim to Medicare for services paid under the PFS, is responsible for the accuracy of the information included on that claim. While we appreciate the perspective of these commenters, stakeholders and other commenters have made it clear to us that the role of PAs and APRNs has changed to the point that our current regulations present an unintended burden for billing practitioners, unnecessarily requiring them to re-document information entered into the medical record by physicians, residents, nurses, students, and other members of the medical team when it would be sufficient for them to simply review and verify it. Therefore, we are not establishing a requirement in this final rule that only a billing physician may review and verify documentation in the medical record added by physicians, residents, nurses, students, and other members of the medical team.

Comment: Commenters requested clarification about whether multiple students and residents can enter documentation into the medical record on the same day and during the same office visit. One commenter stated that, currently, MACs or auditing agencies will deny PA or APRN services when furnished on the same day as a service billed by a physician regardless of the physician's specialty.

Response: We appreciate the information and suggestion provided by these commenters. We did not propose a limitation on how many members of the medical team can enter information in the medical record for a given date of service or patient encounter, and do not believe such a limitation is warranted. We did not address the scope of services that can be billed for a patient on the same date of service. Therefore, this aspect of the comment is outside the scope of the proposed rule and we will not address it in this final rule.

Comment: Several commenters encouraged CMS to re-examine the current requirements regarding documentation of the billing practitioner's physical presence and participation in certain E/M services and procedures. The commenters stated that this physical presence and participation requirement results in significant burden for teaching physicians and PA and APRN preceptors when their students are participating in patient care. These commenters stated that while physical presence and participation of physicians and practitioners in the clinic is critical for safe patient care, presence in the examination room during documentation is onerous and unnecessary. The commenters also noted that this requirement greatly diminishes the learning experience for students, as they do not develop the ability to think or operate independently, formulate diagnoses, and generate treatment plans, producing less experienced graduate clinicians who are not as prepared as they could be to provide care on their own.

Response: We did not propose any changes to requirements pertaining to the documentation of physical presence and participation for certain E/M services and procedures at §§ 415.172 and 415.174, and we are not addressing these requirements in this final rule.

Comment: A commenter questioned whether this proposal recognizes ''scribes'' other than a medical assistant or a registered nurse for purposes of entering notes in a patient's medical record. The commenter defined a scribe as an independent individual assisting a single care provider, and expressed concern that utilizing clinical support staff as a scribe to document services will lead to dissatisfaction of employees and loss of clinical support staff, which would adversely affect the shortage in clinical support staff that already exists. Likewise, a commenter suggested that CMS should explicitly include dieticians and nutritionists among the other members of the medical team who are eligible to enter notes in the medical record.

Response: We proposed broad flexibility for teaching physicians, other physicians, PAs and APRNs to use their discretion in identifying, for each particular case, the individuals who are serving as members of the medical team, potentially including scribes, dieticians, nutritionists, or other members of their medical team. Although we are modifying our proposal to clarify the scope of students that may be considered members of the medical team for purposes of this documentation policy as explained above, we intentionally did not propose to specify who can be included as a member of the medical team.

Comment: One commenter questioned whether their assumption is correct that this proposal applies to all types of services (that is, procedures, E/M services, and diagnostic services).

Response: The commenter's assumption is accurate; our proposed medical record documentation policy would apply broadly to all services of physicians, PAs and APRNs, regardless of the type of service (E/M, procedure, diagnostic test) or the setting in which the service is furnished.

Comment: We received a number of comments that were outside the scope of the CY 2020 PFS proposed rule.

Response: We appreciate and will consider these comments for other purposes including possible future rulemaking.

After considering the comments, we are finalizing our proposal with a couple of modifications. We are explicitly naming PA and NP, CNS, CNM and CRNA students as APRN students, along with medical students, as the types of students who may document notes in a patient's medical record that may be reviewed and verified rather than re-documented by the billing professional; and revising §§ 410.20, 410.69, 410.74, 410.75, 410.76, 410.77, 415.172 and 415.174 to reflect this change. Additionally, similar to the revisions we are making to the regulations at §§ 410.20, 410.69, 410.74, 410.75, 410.76, 410.77, 415.172 and 415.174, we are amending our regulation at § 410.69 to add a new paragraph (5) under the definition of CRNA to include CRNAs as a category of APRNs for purposes of this policy, and to include CRNA students under the reference to APRN students.

K. Care Management Services

1. Background

In recent years, we have updated PFS payment policies to improve payment for care management and care coordination. Working with the CPT Editorial Panel and other clinicians, we have expanded the suite of codes describing these services. New CPT codes were created that distinguish between services that are face-to-face; represent a single encounter, monthly service or both; are timed services; represent primary care versus specialty care; address specific conditions; and represent the work of the billing

practitioner, their clinical staff, or both (*see* Table 19). Additional information regarding recent new codes and associated PFS payment rules is available on our website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/Care-Management.html.*

TABLE 19: Summary of Special Care Management Codes

Service	Summary
Care Plan Oversight (CPO) (also referred to as Home Health Supervision, Hospice Supervision) (HCPCS Codes G0181, G0182)	Supervision of home health, hospice, per month
ESRD Monthly Services (CPT Codes 90951-70)	ESRD management, with and without face-to-face visits, by age, per month
Transitional Care Management (TCM) (adopted in 2013) (CPT Codes 99495, 99496)	Management of transition from acute care or certain outpatient stays to a community setting, with face-to-face visit, once per patient within 30 days post-discharge
Chronic Care Management (CCM) (adopted in 2015, 2017, 2019) (CPT Codes 99487, 99489, 99490, 99491)	Management of all care for patients with two or more serious chronic conditions, timed, per month
Advance Care Planning (ACP) (adopted in 2016) (CPT Codes 99497, 99498)	Counseling/discussing advance directives, face-to-face, timed
Behavioral Health Integration (BHI) (adopted in 2017) (CPT Codes 99484, 99492, 99493, 99494)	Management of behavioral health conditions(s), timed, per month
Assessment/Care Planning for Cognitive Impairment (adopted in 2017) (CPT Code 99483)	Assessment and care planning of cognitive impairment, face-to-face visit
Prolonged Evaluation & Management (E/M) Without Direct Patient Contact (adopted in 2017) (CPT Codes 99358, 99359)	Non-face-to-face E/M work related to a face-to-face visit, timed
Remote Physiologic Monitoring (adopted beginning 2018 with CPT Code 99091; in 2019, added CPT codes 99453, 99454, 99457; for CY 2020, will add CPT code 99458)	Analysis of patient data used to develop and manage a treatment plan
Interprofessional Consultation (adopted in 2019) (CPT Codes 99446, 99447, 99448, 99449, 99451, 99452)	Inter-practitioner consultation

Based on our review of the Medicare claims data we estimate that approximately 3 million unique beneficiaries (9 percent of the Medicare fee-for-service (FFS) population) receive these services annually, with higher use of chronic care management (CCM), transitional care management (TCM), and advance care planning (ACP) services. We believe gaps remain in coding and payment, such as for care management of patients having a single, serious, or complex chronic condition. In this final rule, we continue our ongoing work in this area through code set refinement related to TCM services and CCM services, in addition to new coding for principal care management (PCM) services, and addressing chronic care remote physiologic monitoring (RPM) services.

2. Transitional Care Management (TCM) Services

Utilization of TCM services has increased each year since CMS established coding and began paying separately for TCM services. There were almost 300,000 TCM professional claims during 2013, the first year of TCM services, and almost 1.3 million professional claims during 2018, the most recent year of complete claims data. However, a recent analysis of TCM claims data by Bindman and Cox [81] found that use of TCM services is low when compared to the number of Medicare beneficiaries with eligible discharges. Bindman and Cox noted that the beneficiaries who received TCM services demonstrated reduced readmission rates, lower mortality, and decreased health care costs. Based upon these findings, we believe that increasing utilization of medically necessary TCM services could positively affect patient outcomes.

In developing the proposal designed to increase utilization of TCM services, we considered factors that could contribute to low utilization. Bindman and Cox identified two likely contributing factors: The administrative burdens associated with billing TCM services and the payment amount to physicians for furnishing these services.

We focused initially on the requirements for billing TCM services. In reviewing TCM billing requirements, we noted that we had established in the CY 2013 PFS final rule with comment period a list of 57 HCPCS codes that could not be billed during the 30-day period covered by TCM services by the same practitioner reporting TCM (77 FR 68990). This list mirrored reporting restrictions put in place by the CPT Editorial Panel for the TCM codes. At the time we established separate payment for the TCM CPT codes, we agreed with the CPT Editorial Panel that the services described by the 57 codes could be overlapping and duplicative with TCM in their definition and scope. Additionally, many of the codes were not separately payable or covered under the PFS so even if they had been reported for PFS payment, they would not have been paid separately (*see,* for example, 77 FR 68985).

[81] Bindman, AB, Cox DF. Changes in health care costs and mortality associated with transitional care management services after a discharge among Medicare beneficiaries [published online July 30, 2018]. *JAMA Intern Med,* doi:10.1001/jamainternmed.2018.2572.

In response to those initial concerns, we adopted billing restrictions to avoid duplicative billing and payment for covered services. In our recent analysis of the services associated with the 57 codes, we found that the majority of codes on the list are either bundled, noncovered by Medicare, or invalid for Medicare payment purposes. Table 20 provides detailed information regarding the subset of these codes that would be separately payable under the PFS (Status Indicator ''A'') and, as such, are the focus of CY 2020 policy for TCM. Fourteen (14) codes on the list represent active codes that are paid separately under the PFS and that upon reconsideration, we believe do not substantially overlap with TCM services and should be separately payable alongside medically necessary TCM. For example, CPT code 99358 (*Prolonged E/M service before and/or after direct patient care; first hour; non-face-to-face time spent by a physician or other qualified health care professional on a given date providing prolonged service*) would allow the physician or other qualified healthcare professional extra time to review records and manage patient support services after the face-to-face visit required as part of TCM services.

After review of the services described by the 14 HCPCS codes, we determined that the 14 codes, when medically necessary, may complement TCM services rather than substantially overlap or duplicate services. We also believed removing the billing restrictions associated with the 14 codes might increase use of TCM services.

TABLE 20: 14 HCPCS Codes that Currently Cannot be Billed Concurrently with TCM by the Same Practitioner and are Active Codes Payable by Medicare PFS

Code Family	HCPCS Code	Descriptor
Prolonged Services without Direct Patient Contact	99358	Prolonged E/M service before and/or after direct patient care; first hour; non-face-to-face time spent by a physician or other qualified health care professional on a given date providing prolonged service
	99359	Prolonged E/M service before and/or after direct patient care; each additional 30 minutes beyond the first hour of prolonged services
Home and Outpatient International Normalized Ratio (INR) Monitoring Services	93792	Patient/caregiver training for initiation of home INR monitoring
	93793	Anticoagulant management for a patient taking warfarin; includes review and interpretation of a new home, office, or lab INR test result, patient instructions, dosage adjustment and scheduling of additional test(s)
End Stage Renal Disease Services (patients who are 20+ years)	90960	ESRD related services monthly with 4 or more face-to-face visits per month; for patients 20 years and older
	90961	ESRD related services monthly with 2-3 face-to-face visits per month; for patients 20 years and older
	90962	ESRD related services with 1 face-to-face visit per month; for patients 20 years and older
	90966	ESRD related services for home dialysis per full month; for patients 20 years and older
	90970	ESRD related services for dialysis less than a full month of service; per day; for patient 20 years and older
*Analysis of Data	99091	Collection and interpretation of physiologic data
Complex Chronic Care Management Services	99487	Complex Chronic Care with 60 minutes of clinical staff time per calendar month
	99489	Complex Chronic Care; additional 30 minutes of clinical staff time per month
Care Plan Oversight Services	G0181	Physician supervision of a patient receiving Medicare-covered services provided by a participating home health agency (patient not present) requiring complex and multidisciplinary care modalities within a calendar month; 30+ minutes
	G0182	Physician supervision of a patient receiving Medicare-covered hospice services (Pt not present) requiring complex and multidisciplinary care modalities; within a calendar month; 30+ minutes

* In CY 2018, this code was unbundled and added as an active code to the PFS. The 2019 CPT Manual (p. 42) indicates the code cannot be billed concurrently with either TCM code.

Thus, with the goal of increasing medically appropriate use of TCM services, we proposed to revise our billing requirements for TCM by allowing TCM codes to be billed concurrently with any of these 14 codes. In the proposed rule, we solicited comment on four questions related to current billing policies. They included:

- Does overlap of services exist, and if so, which services should be

restricted from being billed concurrently with TCM?

- Does overlap depend upon whether the same or a different practitioner reports the services; we note that CPT reporting rules generally apply at the practitioner level?
- Should our policy differ based upon whether the same or different practitioner reports the services?
- Does the newest CPT code in the chronic care management services family (CPT code 99491 for CCM by a physician or other qualified health professional, established in 2019) overlap with TCM or should it be reportable and separately payable in the same service period?

The second part of our analysis examined how current payment rates for TCM might negatively affect the appropriate utilization of TCM services, an idea proposed by Bindman and Cox. Although we sought comment previously about factors affecting utilization of CCM and TCM services, we received too few comments related specifically to TCM to know if payment affected use of the service.

As part of a regular RUC review of new technologies or services during 2018, CPT code 99495 (*Transitional Care Management services with the following required elements: Communication (direct contact, telephone, electronic) with the patient and/or caregiver within two business days of discharge; medical decision making of at least moderate complexity during the service period; face-to-face visit within 14 calendar days of discharge*) and CPT code 99496 (*Transitional Care Management services with the following required elements: Communication (direct contact, telephone, electronic) with the patient and/or caregiver within two business days of discharge; medical decision making of at least high complexity during the service period; face-to-face visit within 7 calendar days of discharge*) were resurveyed. For this RUC resurvey, several years of claims data were available and clinicians had more experience to inform their views about the work required to furnish TCM services. Based upon the results of the 2018 RUC survey of the TCM codes, the RUC recommended a slight increase in work RVUs for both codes. We believe the results from the new survey better reflect the work involved in furnishing TCM services as care management services. Thus, also for CY 2020, we proposed the RUC-recommended work RVU of 2.36 for CPT code 99495 and the RUC-recommended work RVU of 3.10 for CPT code 99496. We did not propose any PE refinements to the TCM codes.

We received public comments to our proposed policies and questions. The following is a summary of the comments we received.

Comment: With regard to the questions about billing requirements, most commenters wrote in support of our proposal to remove billing restrictions associated with the 14 codes that, at present, cannot be billed concurrently with TCM. A few commenters indicated that overlap, if it does exist, is minimal. Some commenters cautioned that our suggested change to billing might cause increased confusion for payers other than Medicare and suggested that CMS instead work with the CPT Editorial Panel to review and possibly revise the restrictions. In response to our questions about overlap in services, commenters reported that overlap is not dependent upon whether the same or a different practitioner reports the services. Commenters added that policy should not be based upon what practitioner reports the services. Finally, commenters expressed support for allowing CPT code 99491 *(Chronic care management services, provided personally by a physician or other qualified healthcare professional, at least 30 minutes of professional time per calendar month)* to be reportable and separately payable in the same service period as TCM.

Response: We thank the many commenters for their comments regarding ways to increase utilization of TCM services. Our goal in proposing to remove the current billing restrictions was to increase appropriate utilization of TCM services, particularly in light of the potential benefits noted by Bindman and Cox. Since publication of the CY 2020 PFS proposed rule, we have identified two chronic care management codes, CPT codes 99490 and 99491 that are not listed in the TCM section of the CPT manual as being restricted from concurrent billing. However, in the care management section of the 2019 CPT Manual, prefatory language indicates that neither CPT code 99495 nor 99496 (*see,* page 50) can be billed during the same month as CPT code 99490. Given our proposal to remove current billing restrictions, we believe that both CPT codes 99490 and the new 99491 should be added to the list of care management codes that can be billed concurrently with TCM when relevant and medically necessary.

We continue to believe that revising the billing requirements and allowing TCM codes to be billed concurrently with codes currently restricted will help to achieve our goal and may result in other payers implementing similar changes. Additionally, this change may lead the CPT Editorial Panel to consider revising the current prohibitions on billing TCM with certain codes.

Comment: Commenters uniformly recommended that CMS finalize the increased valuations for the two TCM codes. Commenters expressed support for the agency's goal of increasing utilization of medically necessary TCM services given the potential benefits the services provide to patients as noted by Bindman and Cox.

Response: We believe that adopting the RUC-recommended increase in valuation of the work RVUs will support our goal of increasing medically necessary TCM services.

After considering public comments on our questions and proposals, and in light of our goal of increasing utilization of TCM services, we are finalizing our proposal to allow concurrent billing of the care management codes currently restricted from being billed with TCM. This includes allowing concurrent billing of TCM with the 14 codes specified in Table 20, as well as CPT codes 99490 and 99491, which we have identified as codes that also fit this policy. We are finalizing for both TCM codes the proposed increases in work RVUs and the RUC-recommended direct PE inputs. We look forward to working with the public and other stakeholders to potentially further refine our billing policies through future notice and comment rulemaking.

3. Chronic Care Management (CCM) Services

CCM services are comprehensive care coordination services per calendar month, furnished by a physician or nonphysician practitioner (NPP) managing overall care and their clinical staff, for patients with two or more serious chronic conditions. There are currently two general subsets of codes: One for non-complex chronic care management (starting in 2015, with a new code for 2019) and a set of codes for complex chronic care management (starting in 2017). Tables 21 and 22 list the applicable current codes (abbreviated) and provide a high-level summary of the CCM service elements. We refer readers to the following website for more comprehensive information regarding the CCM codes and the existing requirements for billing them to the PFS, available on our website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/Care-Management.html.*

TABLE 21: Chronic Care Management Codes (CY 2019)

CPT Code	Summary
99490 ("Non-Complex CCM")	Chronic care management services, at least 20 minutes of clinical staff time directed by a physician or other qualified health care professional (QHP), per calendar month
99491 ("Non-Complex CCM")	Chronic care management services, provided personally by a physician or other QHP, at least 30 minutes of physician or other QHP time, per calendar month
99487 ("Complex CCM")	Complex chronic care management services, first 60 minutes of clinical staff time with moderate or high complexity medical decision making by the reporting practitioner
99489 ("Complex CCM")	Complex chronic care management services, each additional 30 minutes of clinical staff time with moderate or high complexity medical decision making by the reporting practitioner

TABLE 22: Chronic Care Management Services Summary

CCM Service Summary*
Verbal Consent • Inform regarding availability of the service; that only one practitioner can bill per month; the right to stop services effective at the end of any service period; and that cost sharing applies (if no supplemental insurance). • Document that consent was obtained.
Initiating Visit for New Patients (separately paid)
Certified Electronic Health Record (EHR) Use • Structured Recording of Core Patient Information Using Certified EHR (demographics, problem list, medications, allergies).
24/7 Access ("On Call" Service)
Designated Care Team Member
Comprehensive Care Management • Systematic needs assessment (medical and psychosocial). • Ensure receipt of preventive services. • Medication reconciliation, management and oversight of self-management.
Comprehensive Electronic Care Plan • Plan is available timely within and outside the practice (can include fax). • Copy of care plan to patient/caregiver (format not prescribed). • Establish, implement, revise or monitor the plan.
Management of Care Transitions/Referrals (e.g., discharges, ED visit follow up, referrals). • Create/exchange continuity of care document(s) timely (format not prescribed).
Home- and Community-Based Care Coordination • Coordinate with any home- and community-based clinical service providers, and document communication with them regarding psychosocial needs and functional deficits.
Enhanced Communication Opportunities • Offer asynchronous non-face-to-face methods other than telephone, such as secure email.

*All elements that are medically reasonable and necessary must be furnished during the month, but all elements do not necessarily apply every month. Consent need only be obtained once, and initiating visits are only for new patients or patients not seen within a year prior to initiation of CCM.

Early data show that, in general, CCM services are increasing patient and practitioner satisfaction, saving costs and enabling solo practitioners to remain in independent practice.[82] Utilization has reached approximately 75 percent of the level we initially assumed under the PFS when we began paying for CCM services separately under the PFS. While these are positive results, we believe that CCM services (especially complex CCM services) continue to be underutilized. In addition, we note that, at the February 2019 CPT Editorial Panel meeting, certain specialty associations requested refinements to the existing CCM codes, and consideration of their proposal was postponed. Also, we have heard from some stakeholders suggesting that the time increments for non-complex CCM performed by clinical staff should be changed to recognize finer increments of time, and that certain requirements related to care planning are unclear. Based on our consideration of this ongoing feedback, we believe some of the refinements requested by specialty associations and other stakeholders may be necessary to improve payment accuracy, reduce unnecessary burden

[82] *https://innovation.cms.gov/Files/reports/chronic-care-mngmt-finalevalrpt.pdf.*

and help ensure that beneficiaries who need CCM services have access to them. Accordingly, we proposed the following changes to the CCM code set for CY 2020.

a. Non-Complex CCM Services by Clinical Staff (CPT Code 99490, HCPCS Codes GCCC1 and GCCC2)

Currently, the clinical staff CPT code for non-complex CCM, CPT code 99490 *(Chronic care management services, at least 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month, with the following required elements: Multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient; chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline; comprehensive care plan established, implemented, revised, or monitored.)* describes 20 or more minutes of clinical staff time spent performing chronic care management activities under the direction of a physician/qualified health care professional (QHP). When we initially adopted this code for payment and, in feedback we have since received, a number of stakeholders suggested that CMS undervalued the PE RVU because we assumed that the minimum time for the code (20 minutes of clinical staff time) would be typical (see, for example, 79 FR 67717 through 67718). In the CY 2017 PFS final rule with comment period, we continued to consider whether the payment amount for CPT code 99490 is appropriate, given the amount of time typically spent furnishing CCM services (81 FR 80243 through 80244). We adopted the complex CCM codes for payment beginning in CY 2017, in part, to pay more appropriately for services furnished to beneficiaries requiring longer service times (see below). Some stakeholders continue to recommend that we should create an add-on code for non-complex CCM performed by clinical staff, such that these services would be defined and valued in 20-minute increments of time with additional payment for each additional 20 minutes of clinical staff time spent performing care management activities.

We agreed that coding changes that identify additional time increments may improve payment accuracy for non-complex CCM. Accordingly, we proposed to adopt two new G codes with new increments of clinical staff time instead of the existing single CPT code (CPT code 99490). The first G code would have described the initial 20 minutes of clinical staff time, and the second G code would have described each additional 20 minutes thereafter. We intended these would be temporary G codes, to be used for PFS payment instead of CPT code 99490 until the CPT Editorial Panel can consider revisions to the current CPT code set. We said we would consider adopting any CPT code(s) once the CPT Editorial Panel completes its work. We acknowledged that imposing a transitional period during which G codes would be used under the PFS in lieu of the CPT codes is potentially disruptive, and solicited comment on whether the benefit of proceeding with the proposed G codes outweighs the burden of transitioning to their use in the intervening year(s) before a decision by the CPT Editorial Panel.

We proposed that the base code would be HCPCS code GCCC1 *(Chronic care management services, initial 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month, with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient; chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline; and comprehensive care plan established, implemented, revised, or monitored. (Chronic care management services of less than 20 minutes duration, in a calendar month, are not reported separately))*. We proposed a work RVU of 0.61 for HCPCS code GCCC1, which we crosswalked from CPT code 99490. We believed these codes would have a similar amount of work since they would have the same intra-service time of 15 minutes.

We proposed an add-on HCPCS code GCCC2 *(Chronic care management services, each additional 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month (List separately in addition to code for primary procedure). (Use GCCC2 in conjunction with GCCC1). (Do not report GCCC1, GCCC2 in the same calendar month as GCCC3, GCCC4, 99491))*. We proposed a work RVU of 0.54 for HCPCS code GCCC2 based on a crosswalk to CPT code 11107 (*Incisional biopsy of skin (e.g., wedge) (including simple closure, when performed); each separate/additional lesion (List separately in addition to code for primary procedure)*), which has a work RVU of 0.54, which we believed would accurately reflect the work associated with each additional 20 minutes of CCM services. Both codes would have the same intraservice time of 15 minutes. We noted that the nature of the PFS relative value system is such that all services are appropriately subject to comparisons to one another. Although codes that describe clinically similar services are sometimes stronger comparator codes, codes need not share the same site of service, patient population, or utilization level to serve as an appropriate crosswalk. In this case, we believed CPT code 11107 shared a similar work intensity to proposed HCPCS code GCCC2. Furthermore, although HCPCS codes GCCC1 and GCCC2 would share the same intraservice time, add-on codes may have lower intensity than the base codes because they describe the continuation of an already initiated service.

We solicited public comment on whether we should limit the number of times HCPCS code GCCC2 could be reported in a given service period for a given beneficiary. It was not clear how often more than 40 minutes of clinical staff time is currently spent or is medically necessary. In addition, once 60 minutes of clinical staff time is spent, many or most patients might also require complex medical decision-making, and such patients would already be described under existing coding for complex CCM. We believed a limit (such as allowing the add-on code to be reported only once per service period per beneficiary) may be appropriate in order to maintain distinctions between complex and non-complex CCM, as well as appropriately limit beneficiary cost sharing and program spending to medically necessary services. We noted that complex CCM already describes (in part) 60 or more minutes of clinical staff time in a service period. We solicited comment on whether and how often beneficiaries who do not require complex CCM (for example, do not require the complex medical decision making that is part of complex CCM) would need 60 or more minutes of non-complex CCM clinical staff time and thereby warrant more than one use of HCPCS code GCCC2 within a service period.

Comment: Several commenters supported the proposed add-on HCPCS code GCCC2, and recommended that there be a limit on its use (frequency) to keep non-complex CCM distinct from complex CCM. These commenters stated that patients requiring multiple uses of the add-on service likely require the moderate to high medical decision making of complex CCM. Other commenters stated that, while they have patients who do not require the complex

medical decision making that is part of complex CCM, care management for these patients is time-consuming and would require 60 or more minutes of non-complex CCM clinical staff time within a service period. These commenters suggested that limiting the frequency of reporting HCPCS code GCCC2 to twice during a service period allows for accurate payments, while preventing inappropriate use of the code. The Medicare Payment Advisory Commission (MedPAC) expressed support for the proposed add-on code for non-complex CCM because it would better reflect the resources involved in furnishing care management services and increase payment accuracy for CCM. Other commenters stated that G codes would help to facilitate earlier implementation and would ease transition to any updates made to CPT codes.

However, a number of commenters were not supportive of the introduction of temporary G codes within the CCM code set, believing it would produce administrative burden and cause confusion. These commenters stated that in September 2019 the CPT Editorial Panel was considering an application for similar changes to refine the code set. These commenters urged us to work with the CPT Editorial Panel regarding changes to the CCM code set and its revaluation. A few commenters suggested that CMS could achieve its burden reduction goals by continuing to recognize CPT codes 99490, 99487, and 99489 and also provide CMS-specific guidance for those codes for purposes of billing Medicare.

Response: We are not finalizing our proposal to create HCPCS codes GCCC1 (or GCCC3 or GCCC4, see below) in consideration of commenters' concerns that the introduction of temporary G codes replacing most of the CCM code set would create administrative burden, especially in light of the CPT Editorial Panel's currently ongoing work in this area. However we are finalizing GCCC2 (the add-on for non-complex CCM clinical staff time), henceforth referred to as G2058, because this code addresses what we believe is an important gap in the current code set that should be addressed more immediately, and that finalizing only this single G code rather than the full range of proposed G codes will allow payment for these services while creating significantly less administrative burden. Practitioners who choose to use G2058 can report the initial 20 minutes of non-complex CCM under CPT code 99490 and receive increased payment for their work under G2058. We are sympathetic to commenters' concerns that the introduction of temporary replacement G codes across the CCM code set may introduce substantial confusion or administrative burden, but we believe a single new G code to pay more for additional 20-minute increments of non-complex CCM clinical staff time is important to pursue now. We are finalizing the work RVU for G2058 as proposed.

We agree with commenters that there should be a frequency limit on the reporting of HCPCS code G2058 to maintain the distinction between complex and non-complex CCM and, in response to comments, we are finalizing that HCPCS code G2058 will be reportable a maximum of two times within a given service period for a given beneficiary. We believe the availability of this G code will further our policy goals to improve payment accuracy for care management services and allow practitioners and their teams to spend more time with their patients.

Comment: A few commenters suggested that CMS should revalue the work RVUs for the CCM codes given that we proposed to increase the work RVUs for TCM, and CCM was originally valued based upon the RVUs for TCM.

Response: We appreciate these suggestions but, given the ongoing work of the CPT Editorial Panel regarding these codes, we will consider potential revaluation of this code set in the context of any future changes or recommendations that may be made by the CPT Editorial Panel or the RUC.

b. Complex CCM Services (CPT Codes 99487 and 99489, and HCPCS Codes GCCC3 and GCCC4)

There are two CPT codes for complex CCM:

- CPT code 99487 *(Complex chronic care management services, with the following required elements: Multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient; chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline; establishment or substantial revision of a comprehensive care plan; moderate or high complexity medical decision making; 60 minutes of clinical staff time directed by physician or other qualified health care professional, per calendar month. (Complex chronic care management services of less than 60 minutes duration, in a calendar month, are not reported separately);* and
- CPT code 99489 *(each additional 30 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month (List separately in addition to code for primary procedure).*

Complex CCM describes care management for patients who require not only more clinical staff time, but also complex medical decision-making and establishment or substantial revision of the care plan. Specifically, the CPT codes for complex CCM include in the code descriptors a requirement for establishment or substantial revision of the comprehensive care plan. The code descriptors for complex CCM also include moderate to high complexity medical decision-making (moderate to high complexity medical decision-making is an explicit part of the services).

We proposed to adopt two new G codes that would be used for billing under the PFS instead of CPT codes 99487 and 99489, and that would not include the service component of substantial care plan revision. We believed it is not necessary to explicitly include substantial care plan revision because patients requiring moderate to high complexity medical decision making implicitly need and receive substantial care plan revision. The service component of substantial care plan revision is potentially duplicative with the medical decision making service component and, therefore, we believed it is unnecessary as a means of distinguishing eligible patients. Instead of CPT code 99487, we proposed to adopt HCPCS code GCCC3 *(Complex chronic care management services, with the following required elements: Multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient; chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline; comprehensive care plan established, implemented, revised, or monitored; moderate or high complexity medical decision making; 60 minutes of clinical staff time directed by physician or other qualified health care professional, per calendar month. (Complex chronic care management services of less than 60 minutes duration, in a calendar month, are not reported separately)).* We proposed a work RVU of 1.00 for HCPCS code GCCC3, which is a crosswalk to CPT code 99487.

Instead of CPT code 99489, we proposed to adopt HCPCS code GCCC4 *(each additional 30 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month (List separately in addition to code for primary procedure). (Report GCCC4 in conjunction with GCCC3). (Do not report GCCC4 for care*

management services of less than 30 minutes additional to the first 60 minutes of complex chronic care management services during a calendar month)). We proposed a work RVU of 0.50 for HCPCS code GCCC4, which is a crosswalk to CPT code 99489.

We intended these would be temporary G codes to remain in place until the CPT Editorial Panel can consider revising the current code descriptors for complex CCM services. We stated that we would consider adopting any new or revised complex CCM CPT code(s) once the CPT Editorial Panel completes its work. We acknowledged that imposing a transitional period during which G codes would be used under the PFS in lieu of the CPT codes is potentially disruptive. We solicited comment on whether the benefit of proceeding with the proposed G codes outweighs the burden of transitioning to their use in the intervening year(s) before a decision by the CPT Editorial Panel.

Comment: While expressing general support for the proposed changes to these codes to remove the element of substantial care plan revision, several commenters expressed concerns that the temporary introduction of G codes would produce administrative burden and cause confusion. These commenters stated that in September 2019 the CPT Editorial Panel was considering an application for similar changes to refine the code set and clarify care planning. These commenters urged us to work with the CPT Editorial Panel regarding changes to the CCM code set and its revaluation. However, other commenters stated that G codes would help to facilitate earlier implementation and would ease transition to any updates made to CPT codes. A few commenters suggested that CMS could achieve its burden reduction goals by continuing to recognize CPT codes 99490, 99487, and 99489 and also provide CMS-specific guidance for those codes for purposes of billing Medicare.

Response: We are not finalizing our proposal to create HCPCS codes GCCC3 and GCCC4 in light of concerns raised by commenters, especially in light of the CPT Editorial Panel's currently ongoing work in this area and the concerns expressed by those that we expect would likely provide these services. Instead, given the support for our proposed care planning changes, for CY 2020 we will continue to recognize CPT codes 99487 and 99489, but with a different care planning element for purposes of billing Medicare. Beginning in CY 2020, for PFS billing purposes for CPT codes 99487 and 99489, we will interpret the code descriptor ''establishment or substantial revision of a comprehensive care plan'' to mean that a comprehensive care plan is established, implemented, revised, or monitored. This will allow for consistency in the care planning service element of complex CCM and non-complex CCM services provided by clinical staff. While we usually create G codes with alternative code descriptors when our payment policy varies from what is included in a CPT code descriptor(s), the change we proposed for the complex CCM care plan code descriptor is a relatively minor modification to the CPT code descriptor that we believe can be accomplished without the use of G codes. We look forward to reviewing any refinements or other recommendations for these services that may come from the CPT Editorial Panel and the RUC, and will consider such recommendations through our rulemaking process.

c. Typical Care Plan

In 2013, in working with the physician community to develop and propose the CCM codes for PFS payment, the medical community recommended and CMS agreed that adequate care planning is integral to managing patients with multiple chronic conditions. We stated our belief that furnishing care management to beneficiaries with multiple chronic conditions requires complex and multidisciplinary care modalities that involve, among other things, regular physician development and/or revision of care plans and integration of new information into the care plan (78 FR 43337). In the CY 2014 PFS final rule with comment period (78 FR 74416 through 74418), consistent with recommendations CMS received in 2013 from the AMA's Complex Chronic Care Coordination Workgroup, we finalized a CCM scope of service element for a patient-centered plan of care with the following characteristics: It is a comprehensive plan of care for all health problems and typically includes, but is not limited to, the following elements: Problem list; expected outcome and prognosis; measurable treatment goals; cognitive and functional assessment; symptom management; planned interventions; medical management; environmental evaluation; caregiver assessment; community/social services ordered; how the services of agencies and specialists unconnected to the practice will be directed/coordinated; identify the individuals responsible for each intervention, requirements for periodic review; and when applicable, revisions of the care plan.

The CPT Editorial Panel also incorporated and adopted this language in the prefatory language for Care Management Services codes (page 49 of the 2019 CPT Codebook) including CCM services.

As we continue to consider the need for potential refinements to the CCM code set, we have heard that there is still some confusion in the medical community regarding what a care plan typically includes. We re-reviewed this language for CCM, and we believe there may be aspects of the typical care plan language we adopted for CCM that are redundant or potentially unduly burdensome. In our CY 2020 PFS proposed rule, we noted that because these are ''typical'' care plan elements, these elements do not comprise a set of strict requirements that must be included in a care plan for purposes of billing for CCM services; the elements are intended to reflect those that are typically, but perhaps not always, included in a care plan as medically appropriate for a particular beneficiary. Nevertheless, we proposed to eliminate the phrase ''community/social services ordered, how the services of agencies and specialists unconnected to the practice will be directed/coordinated, identify the individuals responsible for each intervention'' and insert the phrase ''interaction and coordination with outside resources and practitioners and providers.'' We believed simpler language could describe the important work of interacting and coordinating with resources external to the practice. While it is preferable, when feasible, to identify who is responsible for interventions, it may be difficult to maintain an up-to-date listing of responsible individuals especially when they are outside of the practice, for example, when there is staff turnover or assignment changes.

We proposed new language to read: The comprehensive care plan for all health issues typically includes, but is not limited to, the following elements:

- Problem list.
- Expected outcome and prognosis.
- Measurable treatment goals.
- Cognitive and functional assessment.
- Symptom management
- Planned interventions.
- Medical management.
- Environmental evaluation
- Caregiver assessment
- Interaction and coordination with outside resources and practitioners and providers.
- Requirements for periodic review.
- When applicable, revision of the care plan.

We welcomed feedback on our proposal, including language that would best guide practitioners as they decide what to include in their comprehensive care plan for CCM recipients.

Comment: Commenters largely supported CMS' proposed definition of the typical care plan, and stated that it was simpler than the current definition and also comprehensive.

Response: We thank the commenters for their support and are finalizing our proposed changes to the typical care plan for all CCM. We are eliminating the phrase ''community/social services ordered, how the services of agencies and specialists unconnected to the practice will be directed/coordinated, identify the individuals responsible for each intervention'' and inserting the phrase ''interaction and coordination with outside resources and practitioners and providers.'' The new language will read: ''The comprehensive care plan for all health issues typically includes, but is not limited to, the following elements:

- Problem list.
- Expected outcome and prognosis.
- Measurable treatment goals.
- Cognitive and functional assessment.
- Symptom management
- Planned interventions.
- Medical management.
- Environmental evaluation
- Caregiver assessment
- Interaction and coordination with outside resources and practitioners and providers.
- Requirements for periodic review.
- When applicable, revision of the care plan.''

We anticipate that this change will reduce burden and simplify the important work of interacting and coordinating with resources external to the practice.

4. Principal Care Management (PCM) Services

A gap we identified in coding and payment for care management services is care management for patients with only one chronic condition. The current CCM codes require patients to have two or more chronic conditions. These codes are primarily billed by practitioners who are managing a patient's total care over a month, including primary care practitioners and some specialists such as cardiologists or nephrologists. We have heard from a number of stakeholders, especially those in specialties that use the office/outpatient E/M code set to report the majority of their services, that there can be significant resources involved in care management for a single high risk disease or complex chronic condition that is not well accounted for in existing coding (FR 78 74415). This issue has also been raised by the stakeholder community in proposal submissions to the Physician-Focused Payment Model Technical Advisory Committee (PTAC), which are available at *https://aspe.hhs.gov/ptac-physician-focused-payment-model-technical-advisory-committee.* Therefore, we proposed separate coding and payment for Principal Care Management (PCM) services, which describe care management services for one serious chronic condition. A qualifying condition will typically be expected to last between 3 months and 1 year, or until the death of the patient, may have led to a recent hospitalization, and/or place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline.

Although we did not propose any restrictions on the specialties that could bill for PCM, we expect that most of these services will be billed by specialists who are focused on managing patients with a single complex chronic condition requiring substantial care management. We expect that, in most instances, initiation of PCM will be triggered by an exacerbation of the patient's complex chronic condition or recent hospitalization such that disease-specific care management is warranted. We anticipate that in the majority of instances, PCM services will be billed when a single condition is of such complexity that it cannot be managed as effectively in the primary care setting, and instead requires management by another, more specialized, practitioner. For example, a typical patient may present to their primary care practitioner with an exacerbation of an existing chronic condition. Although the primary care practitioner may be able to provide care management services for this one complex chronic condition, it is also possible that the primary care practitioner and/or the patient could instead decide that another clinician should provide relevant care management services. In this case, the primary care practitioner will still oversee the overall care for the patient while the practitioner billing for PCM services will provide care management services for the specific complex chronic condition. The treating clinician may need to provide a disease-specific care plan or may need to make frequent adjustments to the patient's medication regimen. The expected outcome of PCM is for the patient's condition to be stabilized by the treating clinician so that overall care management for the patient's condition can be returned to the patient's primary care practitioner. If the beneficiary only has one complex chronic condition that is overseen by the primary care practitioner, then the primary care practitioner will also be able to bill for PCM services. We proposed that PCM services include coordination of medical and/or psychosocial care related to the single complex chronic condition, provided by a physician or clinical staff under the direction of a physician or other qualified health care professional.

We anticipate that many patients will have more than one complex chronic condition. If a clinician is providing PCM services for one complex chronic condition, management of the patient's other conditions will continue to be managed by the primary care practitioner while the patient is receiving PCM services for a single complex condition. It is also possible that the patient could receive PCM services from more than one clinician if the patient experiences an exacerbation of more than one complex chronic condition simultaneously.

For CY 2020, we proposed to make separate payment for PCM services via two new G codes: HCPCS code G2064 *(Comprehensive care management services for a single high-risk disease, e.g., Principal Care Management, at least 30 minutes of physician or other qualified health care professional time per calendar month with the following elements: One complex chronic condition lasting at least 3 months, which is the focus of the care plan, the condition is of sufficient severity to place patient at risk of hospitalization or have been the cause of a recent hospitalization, the condition requires development or revision of disease-specific care plan, the condition requires frequent adjustments in the medication regimen, and/or the management of the condition is unusually complex due to comorbidities)* and HCPCS code G2065 *(Comprehensive care management for a single high-risk disease services, e.g., Principal Care Management, at least 30 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month with the following elements: One complex chronic condition lasting at least 3 months, which is the focus of the care plan, the condition is of sufficient severity to place patient at risk of hospitalization or have been cause of a recent hospitalization, the condition requires development or revision of disease-specific care plan, the condition requires frequent adjustments in the*

medication regimen, and/or the management of the condition is unusually complex due to comorbidities). HCPCS code G2064 would be reported when, during the calendar month, at least 30 minutes of physician or other qualified health care provider time is spent on comprehensive care management for a single high risk disease or complex chronic condition. HCPCS code G2065 would be reported when, during the calendar month, at least 30 minutes of clinical staff time is spent on comprehensive management for a single high risk disease or complex chronic condition.

For HCPCS code G2064, we proposed a crosswalk to the work value associated with CPT code 99217 *(Observation care discharge day management (This code is to be utilized to report all services provided to a patient on discharge from outpatient hospital ''observation status'' if the discharge is on other than the initial date of ''observation status.'' To report services to a patient designated as ''observation status'' or ''inpatient status'' and discharged on the same date, use the codes for Observation or Inpatient Care Services [including Admission and Discharge Services, 99234–99236 as appropriate]))* as we believe these values most accurately reflect the resource costs associated when the billing practitioner performs PCM services. CPT code 99217 has the same intraservice time as HCPCS code G2064 and the physician work is of similar intensity. Therefore, we proposed a work RVU of 1.28 for HCPCS code G2064.

For HCPCS code G2065, we proposed a crosswalk to the work and PE inputs associated with CPT code 99490 (clinical staff non-complex CCM) as we believe these values reflect the resource costs associated with the clinician's direction of clinical staff who are performing the PCM services, and the intraservice times and intensity of the work for the two codes will be the same. Therefore, we proposed a work RVU of 0.61 for HCPCS code G2065.

Although we proposed separate coding and payment for PCM services performed by clinical staff with the oversight of the billing professional and services furnished directly by the billing professional, we solicited comment on whether both codes are necessary to appropriately describe and bill for PCM services. We note that we are basing this coding structure on the codes for CCM services with CPT code 99491 reflecting care management by the billing professional and CPT code 99490 reflecting care management by clinical staff directed by a physician or other qualified health care professional.

We acknowledged that we concurrently proposed revisions for both complex and non-complex CCM services. Were we not to finalize the changes for both complex and non-complex CCM services, we stated our belief that the overall structure and description of the CCM services remain close enough to serve as a model for the coding structure and description of services for the proposed PCM services. We solicited public comment on whether it would be appropriate to create an add-on code for additional time spent each month (similar to HCPCS code GCCC2 discussed above) when PCM services are furnished by clinical staff under the direction of the billing practitioner.

Comment: Most commenters supported separate payment for PCM services, noting the gap in payment for care management and coordination for a patient's single complex or chronic condition. Other commenters were supportive of the policy goal but expressed concerns that the work described by PCM is duplicative of work being furnished as part of CCM and encouraged CMS to work with the CPT editorial panel to develop coding for this service.

Response: We appreciate the support for both the policy goal of appropriate payment for care management services conducted for a patient's single complex or chronic condition and for separate payment for PCM services. We look forward to reviewing and considering recommendations from the CPT Editorial Panel and the RUC, should they develop and value CPT codes describing this or similar services, through our rulemaking process.

Comment: A few commenters stated that HCPCS code G2064 was undervalued and should have a work RVU of 1.45, which is the same work RVU as CPT code 99491 (*Chronic care management services, provided personally by a physician or other qualified health care professional, at least 30 minutes of physician or other qualified health care professional time, per calendar month, with the following required elements: Multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient; chronic conditions place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline; comprehensive care plan established, implemented, revised, or monitored*). CPT code 99491 describes the work associated with care management performed by the billing practitioner, in contrast to CPT code 99490, which describes the work associated with supervision of care management performed by clinical staff. Commenters pointed out that CPT codes 99491 and 99490 served as the model for HCPCS codes G2064 and G2065. Commenters stated that CPT code 99491 was a more accurate crosswalk for HCPCS code G2064 because both codes describe the work associated with care management and coordination performed by the billing practitioner, and G2065 describes the work associated with supervising care management done by clinical staff and was valued the same as CPT code 99490. Commenters also pointed out that, although PCM services describe care management associated with a single condition, the fact that this condition has most likely experienced an exacerbation or has caused the patient to recently be hospitalized, results in greater intensity than the work associated with managing multiple chronic conditions, some of which may be more stable.

Response: After considering these comments, we agree that the work RVU we proposed for code G2064 (1.28 RVUs) should be valued through a crosswalk to CPT code 99491, and we agree with the points made by commenters regarding the intensity of care management for a single condition, especially when that condition has likely experienced an exacerbation. We also agree that the relativity between CPT codes 99490 and 99491 should be preserved in HCPCS codes G2064 and G2065. Therefore, we are finalizing an RVU of 1.45 for HCPCS code G2064.

Comment: A few commenters supported creation of an add-on code for additional time spent engaged in PCM services beyond the initial 30 minutes, similar to HCPCS code G2060 discussed above.

Response: We thank commenters for their input. Given that this is a new service, we believe it would be more appropriate to monitor uptake and stakeholder response, and we will consider whether to establish a separate add-on code for additional time spent furnishing PCM services beyond the initial 30 minutes for possible future rulemaking.

Although we believe that PCM services describe a situation where a patient's condition is severe enough to require care management for a single complex chronic condition beyond what is described by CCM or performed in the primary care setting, we are concerned that a possible unintended consequence of making separate payment for care management for a single chronic condition is that a patient with multiple

chronic conditions could have their care managed by multiple practitioners, each only billing for PCM, which could potentially result in fragmented patient care, overlaps in services, and duplicative services. Although we did not propose additional requirements for the PCM services, we did consider alternatives such as requiring that the practitioner billing PCM must document ongoing communication with the patient's primary care practitioner to demonstrate that there is continuity of care between the specialist and primary care settings, or requiring that the patient have had a face-to-face visit with the practitioner billing PCM within the prior 30 days to demonstrate that they have an ongoing relationship. We solicited comment on whether requirements such as these are necessary or appropriate, and whether there should be additional requirements to prevent potential care fragmentation or service duplication.

We received public comments on whether requirements such as these are necessary or appropriate, and whether there should be additional requirements to prevent potential care fragmentation or service duplication. The following is a summary of the comments we received and our responses.

Comment: Many commenters' shared CMS' concerns. Some commenters recommended that CMS not finalize separate payment for PCM services, stating that this would move away from patient-specific, continuous, comprehensive value based care management and coordination toward a more disease specific care management, resulting in fragmented care and service duplication. A few commenters with concerns about care fragmentation suggested that CMS first implement PCM through a demonstration. Others supported requiring the billing practitioner document ongoing communication and care coordination with any other practitioners overseeing care of the patient, such as primary care practitioners, pharmacists, hospitalists, or social workers, as applicable. These commenters stated that this would be sufficient to maintain coordination and continuity of care in the instance where multiple practitioners are involved in furnishing care to the beneficiary. A few commenters also suggested that CMS not allow billing of PCM services by multiple practitioners for the same indication. Still other commenters stated that it was not necessary to include any requirements pertaining to care fragmentation or service duplication, and that such requirements would be a barrier to uptake.

Response: While we share commenters' concerns regarding care fragmentation and service duplication, we do not believe they rise to the level that separate payment should not be adopted for these services. The type of care management services that we believe are appropriately described by the PCM codes involve work intensively focused on managing a single condition and, with very few exceptions, could not be replaced by a single practitioner billing CCM services for management of multiple chronic conditions. However, we also believe it necessary to put in place some requirements so as to avoid a situation where each of a patient's individual conditions are being managed separately by different practitioners who all bill for PCM services. Therefore, we are finalizing a requirement that ongoing communication and care coordination between all practitioners furnishing care to the beneficiary must be documented by the practitioner billing for PCM in the patient's medical record.

Due to the similarity between the description of the PCM and CCM services, both of which involve non-face-to-face care management services, we proposed that the full CCM scope of service requirements apply to PCM, including documenting the patient's verbal consent in the medical record. We solicited comment on whether there are required elements of CCM services that the public and stakeholders believe should not be applicable to PCM, and should be removed or altered.

A high level summary of these requirements is available in Table 23 and available at *https://www.cms.gov/Outreach-and-Education/Medicare-Learning-Network-MLN/MLNProducts/Downloads/ChronicCareManagement.pdf.* Both the initiating visit and the patient's verbal consent are necessary as not all patients who meet the criteria to receive separately billable PCM services may want to receive these services. The beneficiary should be educated as to what PCM services are and any cost sharing that may apply. Additionally, as practitioners have informed us that beneficiary cost sharing is a significant barrier to provision of other care management services, we solicited comment on how best to educate practitioners and beneficiaries on the benefits of PCM services.

TABLE 23: Chronic Care Management Services Summary

CCM Service Summary*
Verbal Consent • Inform regarding availability of the service; that only one practitioner can bill per month; the right to stop services effective at the end of any service period; and that cost sharing applies (if no supplemental insurance). • Document that consent was obtained.
Initiating Visit for New Patients (separately paid)
Certified Electronic Health Record (EHR) Use • Structured Recording of Core Patient Information Using Certified EHR (demographics, problem list, medications, allergies).
24/7 Access ("On Call" Service)
Designated Care Team Member
Comprehensive Care Management • Systematic needs assessment (medical and psychosocial). • Ensure receipt of preventive services. • Medication reconciliation, management and oversight of self-management.
Comprehensive Electronic Care Plan • Plan is available timely within and outside the practice (can include fax). • Copy of care plan to patient/caregiver (format not prescribed). • Establish, implement, revise or monitor the plan.
Management of Care Transitions/Referrals (e.g., discharges, ED visit follow up, referrals). • Create/exchange continuity of care document(s) timely (format not prescribed).
Home- and Community-Based Care Coordination • Coordinate with any home- and community-based clinical service providers, and document communication with them regarding psychosocial needs and functional deficits.
Enhanced Communication Opportunities • Offer asynchronous non-face-to-face methods other than telephone, such as secure email.

*All elements that are medically reasonable and necessary must be furnished during the month, but all elements do not necessarily apply every month. Consent need only be obtained once, and initiating visits are only for new patients or patients not seen within a year prior to initiation of CCM.

We received public comments on whether there are required elements of CCM services that the public and stakeholders believe should not be applicable to PCM, and should be removed or altered. The following is a summary of the comments we received and our responses.

Comment: Most commenters supported application of the required elements of CCM to PCM with a number of refinements, although a few urged CMS not to add overly burdensome billing requirements. Commenters requested that CMS clarify that elements of CCM, such as the ''systematic needs assessment,'' ''receipt of preventive services,'' and a ''comprehensive care plan'' must be furnished only for the specific chronic condition for which the billing practitioner is treating the patient. Some commenters pointed out that a ''comprehensive care plan'' was not needed when a practitioner is engaged in care management and coordination of a single complex or chronic condition, and instead suggested it be changed to ''disease-specific care plan.'' Other commenters suggest that we remove this language entirely. Commenters expressed concern with requiring that the EHR be certified to a particular standard. Commenters generally recommended that an initiating visit be furnished within a window of time to demonstrate that a relationship has been established between the beneficiary and the practitioner furnishing PCM. Commenters supported the retention of the requirement that there be the capacity for in-person care management. Commenters also recommended that verbal and or written consent be documented in the medical record so that the patient is aware of the service and any applicable cost sharing, although some stated that this was a burdensome requirement given that they may not know in advance which beneficiaries will require PCM services.

Response: We thank commenters for all their input. We agree with commenters that a ''disease-specific'' care plan is more appropriate than a comprehensive care plan, as the practitioner will be providing care coordination and management for a single condition, and as such, the care plan may be more limited. We also agree that certain aspects of CCM, such as ''systematic needs assessment'' and ''receipt of preventive services'' should only be furnished as applicable to the condition being treated and should not be a requirement to bill for PCM services. Table 24 shows the elements of CCM, as revised in response to comments, that will be required for PCM.

TABLE 24: Principal Care Management Services Summary

PCM Service Summary*
Verbal Consent • Inform regarding availability of the service; that only one practitioner can bill per month; the right to stop services effective at the end of any service period; and that cost sharing applies (if no supplemental insurance). • Document that consent was obtained.
Initiating Visit for New Patients (separately paid)
Certified Electronic Health Record (EHR) Use • Structured Recording of Core Patient Information Using EHR (demographics, problem list, medications, allergies).
24/7 Access ("On Call" Service)
Designated Care Team Member
Disease Specific Care Management Disease Specific Care Management may include, as applicable: • Systematic needs assessment (medical and psychosocial). • Ensure receipt of preventive services. • Medication reconciliation, management and oversight of self-management.
Disease Specific Electronic Care Plan • Plan is available timely within and outside the practice (can include fax). • Copy of care plan to patient/caregiver (format not prescribed). • Establish, implement, revise or monitor the plan.
Management of Care Transitions/Referrals (e.g., discharges, ED visit follow up, referrals, as applicable). • Create/exchange continuity of care document(s) timely (format not prescribed).
Home- and Community-Based Care Coordination • Coordinate with any home- and community-based clinical service providers, and document communication with them regarding psychosocial needs and functional deficits, as applicable.
Enhanced Communication Opportunities • Offer asynchronous non-face-to-face methods other than telephone, such as secure email.

*All elements that are medically reasonable and necessary must be furnished during the month, but all elements do not necessarily apply every month. Consent need only be obtained once, and initiating visits are only for new patients or patients not seen within a year prior to initiation of PCM.

With regard to the certified EHR, we continue to believe that use of certified EHR technology is vital to ensure that practitioners are capable of providing the full scope of PCM services, such as timely care coordination and continuity of care (see our prior discussion of this issue at 79 FR 67723). The use of certified EHR technology helps ensure that members of the care team have timely access to the patient's most updated health information. Also, we believe that use of certified EHR technology among physicians and other practitioners will increase as we move forward to implement the Quality Payment Program, including MIPS and Advanced Alternative Payment Models, as well as other value-based payment initiatives. Accordingly, we are not modifying the proposed use of certified EHR technology as an element of PCM services.

We received public comments on how best to educate practitioners and beneficiaries on the benefits of PCM services. The following is a summary of the comments we received and our responses.

Comment: Commenters recommended that CMS issue guidance for billing and coding criteria, clinical situations in which PCM may be billed, and what defines a complex condition.

Response: We look forward to continued engagement with the public to revise and refine PCM services as they are implemented. We encourage stakeholders to submit questions and information to CMS so that we might consider changes or clarification for future rulemaking.

Additionally, we proposed to add HCPCS code G2065 to the list of designated care management services for which we allow general supervision as described in our regulation at § 410.26(b)(5).

Comment: Commenters supported adding HCPCS code G2065 to the list of designated care management services for which we allow general supervision.

Response: We thank commenters for their support and are finalizing as proposed.

Due to the potential for duplicative payment, we proposed that PCM could not be billed by the same practitioner for the same patient concurrent with certain other care management services, such as CCM, behavioral health integration services, and monthly capitated ESRD payments. We also proposed that PCM will not be billable by the same practitioner for the same patient during a surgical global period, as we believe those resource costs will already be included in the valuation of the global surgical code.

We also solicited comment on any potential for duplicative payment between the PCM services and other services, such as interprofessional consultation services (CPT codes 99446–99449 (*Interprofessional telephone/internet/electronic health record assessment and management service provided by a consultative physician, including a verbal and written report to the patient's treating/requesting physician or other qualified health care professional*), CPT code 99451 (*Interprofessional telephone/*

internet/electronic health record assessment and management service provided by a consultative physician, including a written report to the patient's treating/requesting physician or other qualified health care professional, 5 minutes or more of medical consultative time), and CPT code 99452 (*Interprofessional telephone/internet/electronic health record referral service(s) provided by a treating/requesting physician or other qualified health care professional, 30 minutes*) or remote patient monitoring (CPT code 99091 *(Collection and interpretation of physiologic data (e.g., ECG, blood pressure, glucose monitoring) digitally stored and/or transmitted by the patient and/or caregiver to the physician or other qualified health care professional, qualified by education, training, licensure/regulation (when applicable) requiring a minimum of 30 minutes of time, each 30 days),* CPT code 99453 *(Remote monitoring of physiologic parameter(s) (e.g., weight, blood pressure, pulse oximetry, respiratory flow rate), initial; set-up and patient education on use of equipment),* and CPT code 99457 *(Remote physiologic monitoring treatment management services, 20 minutes or more of clinical staff/physician/other qualified health care professional time in a calendar month requiring interactive communication with the patient/caregiver during the month).*

Comment: Commenters generally supported restricting the number of care management services billable by the same practitioner for the same patient, stating that this was necessary to avoid service duplication. A few commenters also stated that services such as interprofessional consultation and chronic care RPM should not be separately billable in the same month as PCM by the same practitioner for the same beneficiary. Others disagreed, stating the RPM and interprofessional consultations describe distinct services not accounted for in the work of PCM. RPM in particular was described by these commenters as being complimentary to PCM services, rather than duplicative.

Commenters requested clarification as to potential overlap between PCM and CCM and some commenters suggested that PCM could be billed concurrent with CCM for the same beneficiary, if billed by different practitioners. Commenters also requested that CMS clarify any potential overlap between PCM and HCPCS code GPC1X (*Visit complexity inherent to evaluation and management associated with medical care services that serve as the continuing focal point for all needed health care services and/or with medical care services that are part of ongoing care related to a patient's single, serious, or complex chronic condition. (Add-on code, list separately in addition to office/outpatient evaluation and management visit, new or established).*

Response: We do not believe there will be a duplication of care management between PCM and other care management services solely as a result of separate payment for the new PCM codes, particularly with the revised list of required elements which better distinguish PCM services from CCM. However, we also agree with commenters that PCM services should not be furnished with other care management services by the same practitioner for the same beneficiary, nor should PCM services be furnished at the same time as interprofessional consultations for the same condition by the same practitioner for the same patient. However, we are convinced by stakeholders who stated that RPM services are distinct from PCM and could be billed concurrently by the same practitioner for the same beneficiary provided that the time is not counted twice. We will also be monitoring billing of these services. We will appreciate continued input and engagement on these issues with the public and stakeholder community, and may make refinements to these policies in future rulemaking.

With regard to the relationship between PCM services and HCPCS code GPC1X, we do not believe there is any overlap. We note that PCM describes ongoing care management services and is billed monthly, whereas HCPCS code GPC1X is an adjustment to an office/outpatient E/M visit (which are separately billable alongside PCM) to capture additional resource costs associated with performing either a primary care visit or a visit that is part of ongoing care of a patients single, serious, or complex condition.

Comment: A commenter requested that RHCs and FQHCs be allowed to furnish and report PCM services.

Response: We thank the commenter for the suggestion. While we did not propose a new mechanism for RHCs and FQHCs to report PCM services specifically, we recognize that the requirements for the new PCM codes are similar to the requirements for the services described by HCPCS code G0511, which is the RHC/FQHC-specific general care management code, and will consider adding PCM to G0511 in future rulemaking.

5. Chronic Care Remote Physiologic Monitoring Services

Chronic care remote physiologic monitoring (RPM) services involve the collection, analysis, and interpretation of digitally collected physiologic data, followed by the development of a treatment plan, and the managing of a patient under the treatment plan. The current CPT code 99457 is a treatment management code, billable after 20 minutes or more of clinical staff/physician/other qualified professional time with a patient in a calendar month.

In September 2018, the CPT Editorial Panel revised the CPT code structure for CPT code 99457 effective beginning CY 2020. The new code structure retains CPT code 99457 as a base code that describes the first 20 minutes of the treatment management services, and uses a new add-on code to describe subsequent 20 minute intervals of the service. The new code descriptors for CY 2020 are: CPT code 99457 (*Remote physiologic monitoring treatment management services, clinical staff/physician/other qualified health care professional time in a calendar month requiring interactive communication with the patient/caregiver during the month; initial 20 minutes*) and CPT code 99458 (*Remote physiologic monitoring treatment management services, clinical staff/physician/other qualified health care professional time in a calendar month requiring interactive communication with the patient/caregiver during the month; additional 20 minutes*).

In considering the work RVUs for the new add-on CPT code 99458, we first considered the value of its base code. We previously valued the base code at 0.61 work RVUs. Given the value of the base code, we did not agree with the RUC-recommended work RVU of 0.61 for CPT code 99458. Instead, we proposed a work RVU of 0.50 for the add-on code, which we believed was supported by CPT code 88381 (*Microdissection (i.e., sample preparation of microscopically identified target); manual*) and which has the same intraservice and total times of 20 minutes with an XXX global period and work RVU of 0.53, as well as the survey value at the 25th percentile. We proposed the RUC-recommended direct PE inputs for CPT code 99458.

Finally, we proposed that RPM services could be furnished under general supervision. Because care management services include establishing, implementing, revising, or monitoring treatment plans, as well as providing support services, and because

RPM services include establishing, implementing, revising, and monitoring a specific treatment plan for a patient related to one or more chronic conditions that are monitored remotely, we believed that CPT codes 99457 and 99458 should be included as designated care management services. Designated care management services can be furnished under general supervision. Section 410.26(b)(5) of our regulations states that designated care management services can be furnished under the general supervision of the ''physician or other qualified health care professional (who is qualified by education, training, licensure/regulation and facility privileging)'' (see also 2019 CPT Codebook, page xii) when these services or supplies are provided incident to the services of a physician or other qualified healthcare professional. The physician or other qualified healthcare professional supervising the auxiliary personnel need not be the same individual treating the patient more broadly. However, only the supervising physician or other qualified healthcare professional may bill Medicare for incident to services.

We received public comments on the proposed valuation of the RPM add-on CPT code 99458 and our proposal to designate CPT codes 99457 and 99458 as care management services. The following is a summary of the comments we received in response to our two proposals, as well as our responses.

Comment: We received numerous comments regarding our valuation of the new RPM code, CPT code 99458. Commenters uniformly disagreed with our proposed work RVU of 0.50 writing that there are no efficiencies to be gained when continuing the same treatment management service for an additional 20 minutes. Some commenters questioned our use of CPT code 88381 (*Microdissection (i.e., sample preparation of microscopically identified target); manual*) as a reference code, a code that does not resemble the work and the intensity of the work furnished during a care management session.

Response: We thank the many commenters for their insights into the work required for CPT codes 99457 and 99458.

Comment: Commenters uniformly agreed with our proposal to designate CPT codes 99457 and 99458 as care management services so that the services can be furnished under general supervision.

Response: We agree with commenters that the add-on code requires the same work time and intensity as the RPM base code. Therefore, we are finalizing the RUC-recommended work RVU 0.61 for CPT code 99458. We are also finalizing the RUC-recommended direct PE. In addition, we are finalizing our proposal to designate both CPT code 99457 and CPT code 99458 care management codes as defined in § 410.26(b)(5) of our regulations.

Comment: Several commenters expressed concerns about the ambiguity of the code descriptors for the RPM codes. Commenters requested that CMS define what is meant by ''physiologic parameters'', ''digitally transmitted data'' (as opposed to patient-reported data), ''medical device,'' and ''interactive communication''. Several commenters asked if we could expand the list of practitioners allowed to furnish RPM services, while others requested that we clarify who can furnish and bill for the RPM services. One commenter stated that the prefatory language for the codes should state explicitly that an established patient-practitioner relationship must exist prior to billing for RPM services. Another commenter recommended that we provide guidance related to billing and documentation for RPM. Some commenters questioned whether the codes could be used for patients that without chronic conditions.

Response: We appreciate the many questions raised by commenters about the set of RPM codes and understand the frustration commenters expressed with the current code descriptors. Therefore, given the numerous questions raised by commenters, we plan to consider these and other questions related to RPM in future rulemaking.

Comment: We received a few comments asking whether RPM is a billable service in RHCs and FQHCs.

Response: RHCs are paid an all-inclusive rate (AIR) when a medically necessary, face-to-face visit is furnished by an RHC practitioner. FQHCs are paid the lesser of their charges or the FQHC PPS rate when a medically-necessary, face-to-face visit is furnished by an FQHC practitioner. Both the RHC AIR and the FQHC PPS rate include all services and supplies furnished incident to the visit. Services such as RPM are not separately billable because they are already included in the RHC AIR or FQHC PPS payment.

6. Comment Solicitation on Consent for Communication Technology-Based Services

In the CY 2019 PFS final rule, we finalized separate payment for a number of services that could be furnished via telecommunications technology. Specifically, we finalized HCPCS code G2010 (*Remote evaluation of recorded video and/or images submitted by an established patient (e.g., store and forward), including interpretation with follow-up with the patient within 24 business hours, not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment*)), HCPCS code G2012 (*Brief communication technology-based service, e.g., virtual check-in, by a physician or other qualified health care professional who can report evaluation and management services, provided to an established patient, not originating from a related E/M service provided within the previous 7 days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 5–10 minutes of medical discussion*)), CPT codes 99446–99449 (*Interprofessional telephone/internet/electronic health record assessment and management service provided by a consultative physician, including a verbal and written report to the patient's treating/requesting physician or other qualified health care professional*), CPT code 99451 (*Interprofessional telephone/internet/electronic health record assessment and management service provided by a consultative physician, including a written report to the patient's treating/requesting physician or other qualified health care professional, 5 minutes or more of medical consultative time*), and CPT code 99452 (*Interprofessional telephone/internet/electronic health record referral service(s) provided by a treating/requesting physician or other qualified health care professional, 30 minutes*).

As discussed in that rule, (83 FR 59490 through 59491), while a few commenters suggested that it would be less burdensome to obtain a general consent for multiple services at once, we stipulated that verbal consent must be documented in the medical record for each service furnished so that the beneficiary is aware of any applicable cost sharing. This is similar to the requirements for other non-face-to-face care management services under the PFS.

We have continued to hear from stakeholders that requiring advance beneficiary consent for each of these services is burdensome. For HCPCS codes G2010 and G2012, stakeholders have stated that it is difficult and burdensome to obtain consent at the outset of each of what are meant to be brief check-in services. For CPT codes 99446–99449, 99451 and 99452, practitioners have informed us that it is

particularly difficult for the consulting practitioner to obtain consent from a patient they have never seen. Given our longstanding goals to reduce burden and promote the use of communication technology-based services (CTBS), we sought comment in the CY 2020 PFS proposed rule on whether a single advance beneficiary consent could be obtained for a number of communication technology-based services. During the consent process, the practitioner will make sure the beneficiary is aware that utilization of these services will result in a cost sharing obligation. We solicited comment on the appropriate interval of time or number of services for which consent could be obtained, for example, for all these services furnished within a 6-month or 1-year period, or for a set number of services, after which a new consent will need to be obtained. We also solicited comment on the potential program integrity concerns associated with allowing advance consent and how best to minimize those concerns.

We received public comments on the appropriate interval of time or number of services for which consent could be obtained and the potential program integrity concerns associated with allowing advance consent and how best to minimize those concerns. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported requiring a generalized consent for multiple communication technology-based services or interprofessional consultations. Most commenters suggested that a year was an appropriate interval for which consent should be obtained, although some commenters suggested other time intervals, such as every 6 months, quarterly, or no requirement at all.

A few commenters suggested that there should be separate consent processes for services that involve an interaction with the patient, such as HCPCS codes G2010 to report the remote evaluation of recorded video and/or images for an established patient and G2012 to report brief communication technology-based service for an established patient, and services that do not involve direct interaction with the patient, such as CPT codes 99446 through 99449, 99451 and 99452, which describe services such as electronic assessment and management by a consultative physician.

Other commenters raised more general concerns with beneficiary cost sharing, pointing out that beneficiaries may not be accustomed to being charged cost sharing for non-face-to-face services. These commenters urged CMS to eliminate cost sharing for these services.

Response: We appreciate commenters' support for allowing a single consent to be obtained for multiple CTBS or interprofessional consultation services over an interval of time, rather than requiring consent to be obtained prior to each service. Given the commenters' support, we are finalizing a policy to permit a single consent to be obtained for multiple CTBS or interprofessional consultation services. Based on feedback from commenters, we believe an appropriate interval for the single consent is one year, and we are finalizing that the single consent must be obtained at least annually. We will continue to consider whether a separate consent should be obtained for services that involve direct interaction between the patient and practitioner, and those that do not involve interaction such as interprofessional services; and we may address this issue in potential future rulemaking.

We also appreciate commenters' continued concerns about the burden associated with cost sharing for CTBS and interprofessional consultation services. Although we do not have statutory authority to eliminate cost sharing for these services, we appreciate the continued input from the public as to how best to educate both practitioners and beneficiaries to reduce instances of unexpected bills.

7. Rural Health Clinics (RHCs) and Federally-Qualified Health Centers (FQHCs)

RHCs and FQHCs are paid for general care management services using HCPCS code G0511, which is an RHC and FQHC-specific G-code for 20 minutes or more of CCM services, complex CCM services, CCM furnished by a physician or other qualified health care professional, or general behavioral health services, and we are allowing G0511 to also be billed when the requirements for PCM are met. Payment for this service is set at the average of the national, non-facility payment rates for CPT codes 99490, 99487, 99491, and 99484. We proposed to use the non-facility payment rates for HCPCS codes GCCC1 and GCCC3 instead of the non-facility payment rates for CPT codes 99490 and 99487, respectively, if these changes were finalized for practitioners billing under the PFS; as indicated above, these codes were not finalized. We note that we did not propose any changes in the valuation of these codes.

Comment: Regarding the use HCPCS codes GCCC1 and GCCC3, commenters noted they would be supportive of this change if they were finalized for practitioners billing under the PFS for RHCs and FQHCs.

Response: Since HCPCS codes GCCC1 and GCCC3 are not being finalized for use under the PFS, we are not finalizing this change for RHCs and FQHCs. Therefore, payment for HCPCS G0511 will continue to set based on the average of the national, non-facility payment rates for CPT codes 99490, 99487, 99491, and 99484.

L. Coinsurance for Colorectal Cancer Screening Tests

Section 1861(pp) of the Act defines ''colorectal cancer screening tests'' and, under sections 1861(pp)(1)(B) and (C) of the Act, ''screening flexible sigmoidoscopy'' and ''screening colonoscopy'' are two of the recognized procedures. Among other things, section 1861(pp)(1)(D) of the Act authorizes the Secretary to include other tests or procedures in the definition, and modifications to the tests and procedures described under this subsection, ''with such frequency and payment limits, as the Secretary determines appropriate, in consultation with appropriate organizations.'' Section 1861(s)(2)(R) of the Act includes these colorectal cancer screening tests in the definition of the medical and other health services that fall within the scope of Medicare Part B benefits described in section 1832(a)(1) of the Act. Section 1861(ddd)(3) of the Act includes these colorectal cancer screening services within the definition of ''preventive services.'' In addition, section 1833(a)(1)(Y) of the Act provides for payment for preventive services recommended by the United States Preventive Services Task Force (USPSTF) with a grade of A or B under the PFS at 100 percent of the lesser of the actual charge or the fee schedule amount for these colorectal cancer screening tests, and under the OPPS at 100 percent of the OPPS payment amount. As such, there is no beneficiary responsibility for coinsurance for recommended colorectal cancer screening tests as defined in section 1861(pp)(1) of the Act.

Under these statutory provisions, we have issued regulations governing payment for colorectal cancer screening tests at 42 CFR 410.152(l)(5). We pay 100 percent of the Medicare payment amount established under the applicable payment methodology for the setting for providers and suppliers, and beneficiaries are not required to pay Part B coinsurance.

In addition to screening tests, which typically are furnished to patients in the absence of signs or symptoms of illness

or injury, Medicare also covers various diagnostic tests (§ 410.32). In general, diagnostic tests must be ordered by the physician or practitioner who is treating the beneficiary, and who uses the results of the diagnostic test in the management of the patient's specific medical problem. Under Part B, Medicare may cover flexible sigmoidoscopies and colonoscopies as diagnostic tests when those tests are reasonable and necessary as specified in section 1862(a)(1)(A) of the Act. When these services are furnished as diagnostic tests rather than as screening tests, patients are responsible for the Part B coinsurance (normally 20 percent) associated with these services.

We define ''colorectal cancer screening tests'' in our regulation at § 410.37(a)(1) to include ''flexible screening sigmoidoscopies'' and ''screening colonoscopies, including anesthesia furnished in conjunction with the service.'' Under our current policies, we exclude from the definition of colorectal screening services colonoscopies and sigmoidoscopies that begin as a screening service, but where a polyp or other growth is found and removed as part of the procedure. The exclusion of these services from the definition of colorectal cancer screening services is based upon separate provisions of the statute dealing with the detection of lesions or growths during procedures (62 FR 59048, 59082, October 31, 1997). Section 1834(d)(2)(D) of the Act provides that if, during the course of a screening flexible sigmoidoscopy, a lesion or growth is detected which results in a biopsy or removal of the lesion or growth, payment under Medicare Part B shall not be made for the screening flexible sigmoidoscopy but shall be made for the procedure classified as a flexible sigmoidoscopy with such biopsy or removal. Similarly, section 1834(d)(3)(D) of the Act that provides if, during the course of a screening colonoscopy, a lesion or growth is detected which results in a biopsy or removal of the lesion or growth, payment under Medicare Part B shall not be made for the screening colonoscopy but shall be made for the procedure classified as a colonoscopy with such biopsy or removal.

Because we interpret sections 1834(d)(2)(C)(ii) and 1834(d)(3)(C)(ii) of the Act to require us to pay for these tests as diagnostic tests, rather than as screening tests, the 100 percent payment rate for recommended preventive services under section 1833(a)(1)(Y) of the Act, as codified in our regulation at § 410.152(l)(5), would not apply to those diagnostic procedures. As such, beneficiaries are responsible for the usual coinsurance that applies to the services (20 or 25 percent of the cost of the services depending on the setting).

Under section 1833(b) of the Act, before making payment under Medicare Part B for expenses incurred by a beneficiary for covered Part B services, beneficiaries must first meet the applicable deductible for the year. Section 4104 of the Affordable Care Act (that is, the Patient Protection and Affordable Care Act (Pub L. 111–148, enacted March 23, 2010), and the Health Care and Education Reconciliation Act of 2010 (Pub. L. 111–152, enacted March 30, 2010), collectively referred to as the ''Affordable Care Act'') amended section 1833(b)(1) of the Act to make the deductible inapplicable to expenses incurred for certain preventive services that are recommended with a grade of A or B by the USPSTF, including colorectal cancer screening tests as defined in section 1861(pp) of the Act. Section 4104 of the Affordable Care Act also added a sentence at the end of section 1833(b)(1) of the Act specifying that the exception to the deductible shall apply with respect to a colorectal cancer screening test regardless of the code that is billed for the establishment of a diagnosis as a result of the test, or for the removal of tissue or other matter or other procedure that is furnished in connection with, as a result of, and in the same clinical encounter as the screening test. Although the Affordable Care Act addressed the applicability of the deductible in the case of a colorectal cancer screening test that involves biopsy or tissue removal, it did not alter the coinsurance provision in section 1833(a) of the Act for such procedures. Although public commenters encouraged the agency to also eliminate the coinsurance in these circumstances, the agency found that the statute did not provide for elimination of the coinsurance (75 FR 73170, 73431, November 29, 2010).

Beneficiaries have continued to contact us noting their ''surprise'' that a coinsurance (20 or 25 percent depending on the setting) applies when they expected to receive a colorectal screening procedure to which coinsurance does not apply, but instead received what Medicare considers to be a diagnostic procedure because polyps were discovered and removed. Similarly, physicians have also expressed concerns about the reactions of beneficiaries when they are informed that they will be responsible for coinsurance if polyps are discovered and removed during what they expected to be a screening procedure to which coinsurance does not apply. Other stakeholders and some members of Congress have regularly expressed to us that they consider the agency's policy on coinsurance for colorectal screening procedures during which tissue is removed to be a misinterpretation of the law.

Over the years, we have released a wide variety of publicly available educational materials that explain the Medicare preventive services benefits as part of our overall outreach activities to Medicare beneficiaries. These materials contain a complete description of the Medicare preventive services benefits, including information on colorectal cancer screening, and also provide relevant details on the applicability of cost sharing. These materials are available at *https://www.cms.gov/Outreach-and-Education/Medicare-Learning-Network-MLN/MLNProducts/MLN-Publications-Items/CMS1243319.html.* We believe that the information in these materials can be instrumental in continuing to educate physicians and beneficiaries about cost sharing obligations in order to mitigate instances of ''surprise'' billing. In the CY 2020 PFS proposed rule (84 FR 40556), we solicited comment on whether we should consider establishing a requirement that the physician who plans to furnish a colorectal cancer screening notify the patient in advance that a screening procedure could result in a diagnostic procedure if polyps are discovered and removed, and that coinsurance may apply. Specifically, we solicited comment on whether we should require the physician, or their staff, to provide a verbal notice with a notation in the medical record, or whether we should consider a different approach to informing patients of the copay implications, such as a written notice with standard language that we would require the physician, or their staff, to provide to patients prior to a colorectal cancer screening. We also solicited comment on what mechanism, if any, we should consider using to monitor compliance with a notification requirement if we decide to finalize one for CY 2020 or through future rulemaking.

We received over 1,600 public comments on the requirements for coinsurance for colorectal cancer screening tests.

Comment: Many comments were on coverage and statutory issues, such as coverage for colorectal cancer screening more frequently and not requiring coinsurance for diagnostic colonoscopy.

Response: These comments are out of scope.

Comment: Many commenters were on professionals providing information to individuals receiving a screening colonoscopies. Several commenters noted that Medicare could do a better job of educating beneficiaries about when screening colonoscopies become diagnostic colonoscopies, and therefore, coinsurance applies. In addition to not understanding that when removal of a polyp, lesion or growth is discovered a screening colonoscopy becomes a diagnostic one, some commenters misunderstood that a screening colonoscopy can only occur every 10 years for most individuals, or the appropriate frequency for a high risk individual. Many commenters were confused that a diagnostic colonoscopy occurs after a positive Cologuard® or fetal occult blood tests rather than a screening colonoscopy.

Response: As a result of our review of the public comments, we intend to undertake a comprehensive review of all of our outreach materials, such as the Medicare & You Handbook and Medicare Preventive Services, to see if Medicare policies on payment and coverage for screening colonoscopies can be made clearer. We believe this would be a service to Medicare beneficiaries.

M. Therapy Services

1. Repeal of the Therapy Caps and Limitation To Ensure Appropriate Therapy

a. Background

In the CY 2019 PFS proposed and final rules (83 FR 34850; 83 FR 59654 and 59661), we discussed the statutory requirements of section 50202 of the Bipartisan Budget Act of 2018 (BBA of 2018) (Pub. L. 115–123, February 9, 2018). Beginning January 1, 2018, section 50202 of the BBA of 2018 repealed the Medicare outpatient therapy caps and the therapy cap exceptions process, while retaining the cap amounts as limitations and requiring medical review to ensure that therapy services are furnished when appropriate. Section 50202 of the BBA of 2018 amended section 1833(g) of the Act by adding a new paragraph (7)(A) requiring that after expenses incurred for the beneficiary's outpatient therapy services for the year have exceeded one or both of the previous therapy cap amounts, all therapy suppliers and providers must continue to use an appropriate modifier on claims. We implemented this provision by continuing to require use of the existing KX modifier. By using the KX modifier on the claim, the therapy supplier or provider is attesting that the services are medically necessary and that supportive justification is documented in the medical record. As with the incurred expenses for the prior therapy cap amounts, there is one amount for physical therapy (PT) and speech language pathology (SLP) services combined, and a separate amount for occupational therapy (OT) services. These KX modifier threshold amounts are indexed annually by the Medicare Economic Index (MEI). After the beneficiary's incurred expenditures for outpatient therapy services exceed the KX modifier threshold amount for the year, claims for outpatient therapy services without the KX modifier are denied.

Section 50202 of the BBA of 2018 also added a new paragraph 7(B) to section 1833(g) of the Act which retained the targeted medical review (MR) process for 2018 and subsequent years, but established a lower threshold amount of $3,000 rather than the $3,700 threshold amount that had applied for the original manual MR process established by section 3005(g) of the Middle Class Tax Relief and Jobs Creation Act of 2012 (MCTRJCA) (Pub. L. 112–96, February 22, 2012). The manual MR process with a threshold amount of $3,700 was replaced by the targeted MR process with the same threshold amount through amendments made by section 202 of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) (Pub. L. 114–10, April 16, 2015).

With the latest amendments made by the BBA of 2018, for CY 2018 (and each successive calendar year until 2028, at which time it is indexed annually by the MEI), the MR threshold is $3,000 for PT and SLP services and $3,000 for OT services. For purposes of applying the targeted MR process, we use a criteria-based process for selecting providers and suppliers that includes factors such as a high percentage of patients receiving therapy beyond the medical review threshold as compared to peers. For information on the targeted medical review process, please visit *https://www.cms.gov/Research-Statistics-Data-and-Systems/Monitoring-Programs/Medicare-FFS-Compliance-Programs/Medical-Review/TherapyCap.html.*

In the CY 2019 PFS final rule (83 FR 59661), when discussing our tracking and accrual process for outpatient therapy services in the section on the KX Threshold Amounts, we noted that we track each beneficiary's incurred expenses for therapy services annually by applying the PFS-based payment amount for each service less any applicable multiple procedure reduction for CMS-designated ''always therapy'' services. We also stated that we use the PFS rates to accrue expenses for therapy services provided in critical access hospitals (CAHs) as required by section 1833(g)(6)(B) of the Act, added by section 603(b) of the American Taxpayer Relief Act of 2012 (ATRA) (Pub. L. 112–240, January 2, 2013). As discussed below, we mistakenly indicated that this statutory requirement was extended by subsequent legislation, including section 50202 of the BBA of 2018.

b. Summary of Proposed Regulatory Revisions

While we explained and implemented the changes required by section 50202 of the BBA of 2018 in CY 2019 PFS rulemaking (83 FR 34850; 83 FR 59654 and 59661), we did not codify those changes in regulation text. In the CY 2020 PFS proposed rule, we proposed to revise the regulations at §§ 410.59 (outpatient occupational therapy) and 410.60 (physical therapy and speech-language pathology) to incorporate the changes made by section 50202 of the BBA of 2018. Specifically, we proposed to add a new paragraph (e)(1)(v) to §§ 410.59 and 410.60 to clarify that the specified amounts of annual per-beneficiary incurred expenses are no longer applied as limitations but as threshold amounts above which services require, as a condition of payment, inclusion of the KX modifier; and that use of the KX modifier confirms that the services are medically necessary as justified by appropriate documentation in the patient's medical record. We proposed to amend paragraph (e)(2) in §§ 410.59 and 410.60 to specify the therapy services and amounts that are accrued for purposes of applying the KX modifier threshold, including the continued accrual of therapy services furnished by CAHs directly or under arrangements at the PFS-based payment rates. We also proposed to amend paragraph (e)(3) in §§ 410.59 and 410.60 for the purpose of applying the medical review threshold to clarify the threshold amounts and the applicable years for both the manual MR process originally established through section 3005(g) of MCTRJCA and the targeted MR process established by the MACRA, and including the changes made through section 50202 of the BBA of 2018 as discussed previously.

In the CY 2019 PFS final rule (83 FR 59661), we incorrectly stated that section 1833(g)(6)(B) of the Act continues to require that we accrue expenses for therapy services furnished by CAHs at the PFS rate because the provision, originally added by section 603(b) of the ATRA, was extended by subsequent legislation, including section 50202 of the BBA of 2018. The

requirement in section 1833(g)(6)(B) of the Act was actually time-limited to services furnished in CY 2013. To apply the therapy caps (and now the KX modifier thresholds) after the expiration of the requirement in 1833(g)(6)(B) of the Act, we needed a process to accrue the annual expenses for therapy services furnished by CAHs and, in the CY 2014 PFS final rule with comment period, we elected to continue the process prescribed in section 1833(g)(6)(B) of the Act (78 FR 74405 through 74410).

We received public comments on the proposed revisions to regulation text to codify the changes required by section 50202 of the BBA of 2018. The following is a summary of the comments we received and our responses.

Comment: Several commenters appreciated our proposal to clarify and codify the requirements as outlined in section 50202 of the BBA of 2018.

Response: We thank commenters for their support.

After considering the comments, we are finalizing as proposed the changes in regulation text to reflect the requirements of section 50202 of the BBA of 2018.

2. Payment for Outpatient PT and OT Services Furnished by Therapy Assistants

a. Background

Section 53107 of the BBA of 2018 added a new subsection 1834(v) to the Act to require in paragraph (1) that, for services furnished on or after January 1, 2022, payment for outpatient physical and occupational therapy services for which payment is made under sections 1848 or 1834(k) of the Act which are furnished in whole or in part by a therapy assistant must be paid at 85 percent of the amount that is otherwise applicable. Section 1834(v)(2) of the Act further required that we establish a modifier to identify these services by January 1, 2019, and that claims for outpatient therapy services furnished in whole or in part by a therapy assistant must include the modifier effective for dates of service beginning on January 1, 2020. Section 1834(v)(3) of the Act required that we implement the subsection through notice and comment rulemaking.

In the CY 2019 PFS proposed and final rules (83 FR 35850 through 35852 and 83 FR 59654 through 50660, respectively), we established two modifiers—one to identify services furnished in whole or in part by a physical therapist assistant (PTA) and the other to identify services furnished in whole or in part by an occupational therapy assistant (OTA). The modifiers are defined as follows:

- *CQ Modifier:* Outpatient physical therapy services furnished in whole or in part by a physical therapist assistant.
- *CO Modifier:* Outpatient occupational therapy services furnished in whole or in part by an occupational therapy assistant.

In the CY 2019 PFS final rule, we clarified that the CQ and CO modifiers are required to be used when applicable for services furnished on or after January 1, 2020, on the claim line of the service alongside the respective GP or GO therapy modifier to identify services furnished under a PT or OT plan of care. The GP and GO therapy modifiers, along with the GN modifier for speech-language pathology (SLP) services, have been used since 1998 to track and accrue the per-beneficiary incurred expenses amounts to different therapy caps, now KX modifier thresholds, one amount for PT and SLP services combined and a separate amount for OT services. We also clarified in the CY 2019 PFS final rule that the CQ and CO modifiers will trigger application of the reduced payment rate for outpatient therapy services furnished in whole or in part by a PTA or OTA, beginning for services furnished in CY 2022.

In response to public comments on the CY 2019 PFS proposed rule, we did not finalize our proposed definition of ''furnished in whole or in part by a PTA or OTA'' as a service for which any minute of a therapeutic service is furnished by a PTA or OTA. Instead, we finalized a *de minimis* standard under which a service is considered to be furnished in whole or in part by a PTA or OTA when more than 10 percent of the service is furnished by the PTA or OTA.

We also explained in the CY 2019 PFS proposed and final rules (83 FR 35850 through 35852 and 83 FR 59654 through 59660, respectively) that the CQ and CO modifiers would not apply to claims for outpatient therapy services that are furnished by, or incident to the services of, physicians or nonphysician practitioners (NPPs) including nurse practitioners, physician assistants, and clinical nurse specialists. This is because our regulations for outpatient physical and occupational therapy services require that an individual furnishing outpatient therapy services incident to the services of a physician or NPP must meet the qualifications and standards for a therapist. As such, only therapists and not therapy assistants can furnish outpatient therapy services incident to the services of a physician or NPP (83 FR 59655 through 59656); and, the new PTA and OTA modifiers cannot be used on the line of service of the professional claim when the rendering NPI identified on the claim is a physician or an NPP. We also intend to revise our manual provisions at Pub. 100–02, Medicare Benefit Policy Manual (MBPM), Chapter 15, section 230, as appropriate, to reflect requirements for the new CQ and CO modifiers that will be used to identify services furnished in whole or in part by a PTA or OTA starting in CY 2020. We anticipate amending these manual provisions for CY 2020 to reflect the policies we adopt through the CY 2020 PFS notice and comment rulemaking process.

In PFS rulemaking for CY 2019, we identified certain situations when the therapy assistant modifiers do apply. The modifiers are applicable to:

- Therapeutic portions of outpatient therapy services furnished by PTAs/OTAs, as opposed to administrative or other non-therapeutic services that can be performed by others without the education and training of OTAs and PTAs.
- Services wholly furnished by PTAs or OTAs without physical or occupational therapists.
- Evaluative services that are furnished in part by PTAs/OTAs (keeping in mind that PTAs/OTAs are not recognized to wholly furnish PT and OT evaluation or re-evaluations).

We also identified some situations when the therapy assistant modifiers do not apply. They do not apply when:

- PTAs/OTAs furnish services that can be done by a technician or aide who does not have the training and education of a PTA/OTA.
- Therapists exclusively furnish services without the involvement of PTAs/OTAs.

Finally, we noted that we would be further addressing application of the modifiers for therapy assistant services and the 10 percent *de minimis* standard more specifically in PFS rulemaking for CY 2020, including how the modifiers are applied in different scenarios for different types of services.

b. Applying the CQ and CO Modifiers

We interpreted the references in section 1834(v)(1) and (2) of the Act to outpatient physical therapy ''service'' and outpatient occupational therapy ''service'' to mean a specific procedure code that describes a PT or OT service. This interpretation makes sense because section 1834(v)(2) of the Act requires the use of a modifier to identify on each request for payment, or bill submitted for an outpatient therapy service furnished in whole or in part by a PTA/OTA. For purposes of billing, each outpatient therapy service is identified by a procedure code.

To apply the *de minimis* standard under which a service is considered to be furnished in whole or in part by a PTA or OTA when more than 10 percent of the service is furnished by the PTA or OTA, we proposed to make the 10 percent calculation based on the respective therapeutic minutes of time spent by the therapist and the PTA/OTA, rounded to the nearest whole minute. The minutes of time spent by a PTA/OTA furnishing a therapeutic service can overlap partially or completely with the time spent by a physical or occupational therapist furnishing the service. We proposed that the total time for a service would be the total time spent by the therapist (whether independent of, or concurrent with, a PTA/OTA) plus any additional time spent by the PTA/OTA independently furnishing the therapeutic service. When deciding whether the therapy assistant modifiers apply, we proposed that if the PTA/OTA participates in the service concurrently with the therapist for only a portion of the total time that the therapist delivers a service, the CQ/CO modifiers apply when the minutes furnished by the therapy assistant are greater than 10 percent of the total minutes spent by the therapist furnishing the service. If the PTA/OTA and the therapist each separately furnish portions of the same service, we proposed that the CQ/CO modifiers would apply when the minutes furnished by the therapy assistant are greater than 10 percent of the total minutes—the sum of the minutes spent by the therapist and therapy assistant—for that service. We proposed to apply the CQ/CO modifier policies to all services that would be billed with the respective GP or GO therapy modifier. We believed this was appropriate because it is the same way that CMS currently identifies physical therapy or occupational therapy services for purposes of accruing incurred expenses for the thresholds and targeted review process.

For purposes of deciding whether the 10 percent *de minimis* standard is exceeded, we offered two different ways to compute this. The first is to divide the PTA/OTA minutes by the total minutes for the service—which is (a) the therapist's total time when PTA/OTA minutes are furnished concurrently with the therapist, or (b) the sum of the PTA/OTA and therapist minutes when the PTA/OTA's services are furnished separately from the therapist; and then to multiply this number by 100 to calculate the percentage of the service that involves the PTA/OTA. We proposed to round to the nearest whole number so that when this percentage is 11 percent or greater, the 10 percent *de minimis* standard is exceeded and the CQ/CO modifier is applied. The other method is simply to divide the total time for the service (as described above) by 10 to identify the 10 percent *de minimis* standard, and then to add one minute to identify the number of minutes of service by the PTA/OTA that would be needed to exceed the 10 percent standard. For example, where the total time of a service is 60 minutes, the 10 percent standard is six (6) minutes, and adding one minute yields seven (7) minutes. Once the PTA/OTA furnishes at least 7 minutes of the service, the CQ/CO modifier would be required to be added to the claim for that service. As noted above, we proposed to round the minutes and percentages of the service to the nearest whole integer. For example, when the total time for the service is 45 minutes, the 10 percent calculation would be 4.5 which would be rounded up to 5, and the PTA/OTA's contribution would need to meet or exceed 6 minutes before the CQ/CO modifier is required to be reported on the claim. See Table 25 for minutes needed to meet or exceed using the ''simple'' method with typical times for the total time of a therapy service.

TABLE 25: Simple Method for Determining When CQ/CO Modifiers Apply

METHOD TWO: Simple Method to apply 10 Percent *De Minimis* Standard			
Total Time* Examples Using Typical Service Total Times	Determine the 10 percent standard by dividing service Total Time by 10	Round 10 Percent standard to Next Whole Integer	PTA/OTA Minutes Needed to Exceed -- Apply CQ/CO
10	1.0	1.0	2.0
15	1.5	2.0	3.0
20	2.0	2.0	3.0
30	3.0	3.0	4.0
45	4.5	5.0	6.0
60	6.0	6.0	7.0
75	7.5	8.0	9.0

Total Time equals total therapist minutes plus any PTA/OTA independent minutes. Concurrent minutes: When PTA/OTA's minutes are furnished concurrently with the therapist, total time equals the total minutes of the therapist's service. Separate minutes: When PTA/OTA's minutes are furnished separately from the minutes furnished by the therapist, total time equals the sum of the minutes of the service furnished by the PT/OT plus the minutes of the service furnished separately by the PTA/OTA.

We also clarified that the 10 percent *de minimis* standard, and therefore, the CQ/CO modifiers are not applicable to services in which the PTA/OTA did not participate. To the extent that the PTA/OTA and the physical therapist/occupational therapist (PT/OT) separately furnish different services that are described by procedure codes defined in 15-minute increments, billing examples and proposed policies are included below in Scenario Two.

We proposed to address more specifically the application of the 10 percent *de minimis* standard in various clinical scenarios to decide when the CQ/CO modifiers apply. We acknowledged that application of the 10 percent *de minimis* standard can work differently depending on the types of services and scenarios involving both

the PTA/OTA and the PT/OT. Therapy services are typically furnished in multiple units of the same or different services on a given treatment day, which can include untimed services (not billable in multiple units) and timed services that are defined by codes described in 15-minute intervals. The majority of the untimed services that therapists bill for fall into three categories: (1) Evaluative procedures, (2) group therapy, and (3) supervised modalities. We discuss each of these in greater detail below. Only one (1) unit can be reported in the claim field labeled ''units'' for each procedure code representing an untimed service. The preponderance of therapy services, though, are billed using codes that are described in 15-minute increments. These services are typically furnished to a patient on a single day in multiple units of the same and/or different services. Under our current policy, the total number of units of one or more timed services that can be added to a claim depends on the total time for all the 15-minute timed codes that were delivered to a patient on a single date of service. A summary of our proposals for applying the CQ/CO modifiers using the 10 percent *de minimis* standard, along with applicable billing scenarios, are outlined below by category. In each of these scenarios, we assumed that the PTA/OTA minutes are for therapeutic services.

• *Evaluations and re-evaluations: CPT codes 97161 through 97163 for physical therapy evaluations for low, moderate, and high complexity level, and CPT code 97164 for physical therapy re-evaluation; and CPT codes 97165 through 97167 for occupational therapy evaluations for low, moderate, and high complexity level, and CPT 97168 for occupational therapy re-evaluation.* These PT and OT evaluative procedures are untimed codes and cannot be billed in multiple units—one unit is billed on the claim. As discussed in CY 2019 PFS rulemaking (83 FR 35852 and 83 FR 59656) and noted above, PTAs/OTAs are not recognized to furnish evaluative or assessment services, but to the extent that they furnish a portion of an evaluation or re-evaluation (such as completing clinical labor tasks for each code) that exceeds the 10 percent *de minimis* standard, the appropriate therapy assistant modifier (CQ or CO) must be used on the claim. We note that it is possible for the PTA/OTA to furnish these minutes either concurrently or separately from the therapist. For example, when the PTA/OTA assists the PT/OT concurrently for a 5-minute portion of the 30 minutes that a PT or OT spent furnishing an evaluation (for example, CPT code 97162 for moderate complexity PT evaluation or CPT code 97165 for a low complexity OT evaluation—each have a typical therapist face-to-face time of 30 minutes), the respective CQ or CO modifier is applied to the service because the 5 minutes surpasses the 10 percent *de minimis* standard. In other words, 10 percent of 30 minutes is 3 minutes, and the CQ or CO modifier applies if the PTA/OTA furnishes more than 3 minutes, meaning at least 4 minutes, of the service. If the PTA/OTA separately furnishes a portion of the service that takes 5 minutes (for example, performing clinical labor tasks such as obtaining vital signs, providing self-assessment tool to the patient and verifying its completion), and then the PT/OT separately (without the PTA/OTA) furnishes a 30 minute face-to-face evaluative procedure—bringing the total time of the service to 35 minutes (the sum of the separate PTA/OTA minutes, that is, 5 minutes, plus the 30-minute therapist service), the CQ or CO modifier would be applied to the service because the 5 minutes of OTA/PTA time exceeds 10 percent of the 35 total minutes for the service. In other words, 10 percent of 35 minutes is 3.5 minutes which is rounded up to 4 minutes. The CQ or CO modifier would apply when the PTA/OTA furnishes 5 or more minutes of the service, as discussed above and referenced in Table 25.

• *Group Therapy: CPT code 97150 (requires constant attendance of therapist or assistant, or both).* CPT code 97150 describes a service furnished to a group of 2 or more patients. Like evaluative services, this code is an untimed service and cannot be billed in multiple units on the claim, so one unit of the service is billed for each patient in the group. For the group service, the CQ/CO modifier would apply when the PTA/OTA wholly furnishes the service without the therapist. The CQ/CO modifier would also apply when the total minutes of the service furnished by the PTA/OTA (whether concurrently with, or separately from, the therapist), exceed 10 percent of the total time, in minutes, of the group therapy service (that is, the total minutes of service spent by the therapist (with or without the PTA/OTA) plus any minutes spent by the PTA/OTA separately from the therapist). For example, the modifiers would apply when the PTA/OTA participates concurrently with the therapist for 5 minutes of a total group therapy service time of 40-minutes (based on the time of the therapist); or when the PTA/OTA separately furnishes 5 minutes of a total group time of 40 minutes (based on the sum of minutes of the PTA/OTA (5) and therapist (35)).

• *Supervised Modalities: CPT codes 97010 through 97028, and HCPCS codes G0281, G0183, and G0329.* Modalities, in general, are physical agents that are applied to body tissue in order to produce a therapeutic change through various forms of energy, including but not limited to thermal, acoustic, light, mechanical or electric. Supervised modalities, for example vasopneumatic devices, paraffin bath, and electrical stimulation (unattended), do not require the constant attendance of the therapist or supervised therapy assistant, unlike the modalities defined in 15-minute increments that are discussed in the below category. When a supervised modality, such as whirlpool (CPT code 97022), is provided without the direct contact of a PT/OT and/or PTA/OTA, that is, it is furnished entirely by a technician or aide, the service is not covered and cannot be billed to Medicare. Supervised modality services are untimed, so only one unit of the service can be billed regardless of the number of body areas that are treated. For example, when paraffin bath treatment is provided to both of the patient's hands, one unit of CPT code 97018 can be billed, not two. For supervised modalities, the CQ or CO modifier would apply to the service when the PTA/OTA fully furnishes all the minutes of the service, or when the minutes provided by the PTA or OTA exceed 10 percent of total minutes of the service. For example, the CQ/CO modifiers would apply when either (1) the PTA/OTA concurrently furnishes 2 minutes of a total 8-minute service by the therapist furnishing paraffin bath treatment (HCPCS code 97018) because 2 minutes is greater than 10 percent of 8 minutes ((0.8 minute, or 1 minute after rounding); or (2) the PTA/OTA furnishes 3 minutes of the service separately from the therapist who furnishes 5 minutes of treatment for a total time of 8 minutes (total time equals the sum of the PT/OT minutes plus the separate PTA/OTA minutes) because 3 minutes is greater than 10 percent of 8 total minutes (0.8 minute rounded to 1 minute).

• *Services defined by 15-minute increments/units: These timed codes are included in the following current CPT code ranges: CPT codes 97032 through 97542—including the subset of codes for modalities in the series CPT codes 97032 through 97036; and, codes for procedures in the series CPT codes 97110–97542; CPT codes 97750–97755*

for tests and measurements; and CPT codes: 97760–97763 for orthotic management and training and prosthetic training. Based on CPT instructions for these codes, the therapist (or their supervised therapy assistant, as appropriate) is required to furnish the service directly in a one-on-one encounter with the patient, meaning they are treating only one patient during that time. Examples of modalities requiring one-on-one patient contact include electrical stimulation (attended), CPT code 97032, and ultrasound, CPT code 97035. Examples of procedures include therapeutic exercise, CPT code 97110, neuromuscular reeducation, CPT 97112, and gait training, CPT code 97116.

Our policy for reporting of service units with HCPCS codes for both untimed services and timed services (that is, only those therapy services defined in 15-minute increments) is explained in section 20.2 of Chapter 5 of the Medicare Claims Processing Manual (MCPM). To bill for services described by the timed codes (hereafter, those codes described per each 15-minutes) furnished to a patient on a date of service, the therapist or therapy assistant needs to first identify all timed services furnished to a patient on that day, and then total all the minutes of all those timed codes. Next, the therapist or therapy assistant needs to identify the total number of units of timed codes that can be reported on the claim for the physical or occupational therapy services for a patient in one treatment day. Once the number of billable units is identified, the therapist or therapy assistant assigns the appropriate number of unit(s) to each timed service code according to the total time spent furnishing each service. For example, to bill for one 15-minute unit of a timed code, the qualified professional (the therapist or therapy assistant) must furnish at least 8 minutes and up to 22 minutes of the service; to bill for 2 units, at least 23 minutes and up to 37 minutes, and to bill for 3 units, at least 38 minutes and up to 52 minutes. We note that these minute ranges are applicable when one service, or multiple services, defined by timed codes are furnished by the qualified professional on a treatment day. We understand that the therapy industry often refers to these billing conventions as the ''eight-minute rule.'' The idea is that when a therapist or therapy provider bills for one or more units of services that are described by timed codes, the therapist's direct, one-on-one patient contact time would average 15 minutes per unit. This idea is also the basis for the work values we have established for these timed codes. Our current policies for billing of timed codes and related documentation do not take into consideration whether a service is furnished ''in whole or in part'' by a PTA/OTA, or otherwise address the application of the CQ/CO modifier when the 10 percent *de minimis* standard is exceeded, for those services in which both the PTA/OTA and the PT/OT work together to furnish a service or services.

To support the number of 15-minute timed units billed on a claim for each treatment day, we require that the total timed-code treatment time be documented in the medical record, and that the treatment note must document each timed service, whether or not it is billed, because the unbilled timed service(s) can impact billing. The minutes that each service is furnished can be, but are not required to be, documented. We also require that each untimed service be documented in the treatment note in order to support these services billed on the claim; and, that the total treatment time for each treatment day be documented—including minutes spent providing services represented by the timed codes (the total timed-code treatment time) and the untimed codes. To minimize burden, we are not proposing changes to these documentation requirements in this proposed rule.

Beginning January 1, 2020, in order to provide support for application of the CQ/CO modifier(s) to the claim as required by section 1834(v)(2)(B) of the Act and our regulations at §§ 410.59(a)(4) and 410.60(a)(4), we proposed to add a requirement that the treatment notes explain, via a short phrase or statement, the application or non-application of the CQ/CO modifier for each service furnished that day. We would include this documentation requirement in subsection in Chapter 15, MBPM, section 220.3.E on treatment notes. Because the CQ/CO modifiers also apply to untimed services, our proposed revision to the documentation requirement for the daily treatment note would extend to those codes and services as well. For example, when PTAs/OTAs assist PTs/OTs to furnish services, the treatment note could state one of the following, as applicable: (a) ''Code 97110: CQ/CO modifier applied − PTA/OTA wholly furnished'' or, (b) ''Code 97150: CQ/CO modifier applied − PTA/OTA minutes = 15%'' or ''Code 97530: CQ/CP modifier not applied − PTA/OTA minutes less than 10% standard.'' For those therapy services furnished exclusively by therapists without the use of PTAs/OTA, the PT/OT could note one of the following: ''CQ/CO modifier NA'', or ''CQ/CO modifier NA − PT/OT fully furnished all services.'' Given that the minutes of service furnished by or with the PTA/OTA and the total time in minutes for each service (timed and untimed) are used to decide whether the CQ/CO modifier is applied to a service, we sought comment on whether it would be appropriate to require documentation of the minutes as part of the CQ/CO modifier explanation as a means to avoid possible additional burden associated with a contractor's medical review process conducted for these services. We solicited comment from therapists and therapy providers about current burden associated with the medical review process based on our current policy that does not require the times for individual services to be documented. Based on comments received, if we were to adopt a policy to include documentation of the PTA/OTA minutes and total time (TT) minutes, the CQ/CO modifier explanation could read similar to the following: ''Code 97162 (TT = 30 minutes): CQ/CO modifier not applied − PTA/OTA minutes (3) did not exceed the 10 percent standard.''

To recap, under our policy, therapists or therapy assistants would apply the therapy assistant modifiers to the timed codes by first following the usual process to identify all procedure codes for the 15-minute timed services furnished to a beneficiary on the date of service, add up all the minutes of the timed codes furnished to the beneficiary on the date of service, decide how many total units of timed services are billable for the beneficiary on the date of service (based on time ranges in the chart in the manual), and assign billable units to each billable procedure code. The therapist or therapy assistant would then need to decide for each billed procedure code whether or not the therapy assistant modifiers apply.

As previously explained, the CQ/CO modifier does not apply if all units of a procedure code were furnished entirely by the therapist; and, where all units of the procedure code were furnished entirely by the PTA/OTA, the appropriate CQ/CO modifier would apply. When some portion of the billed procedure code is furnished by the PTA/OTA, the therapist or therapy assistant would need to look at the total minutes for all the billed units of the service, and compare it to the minutes of the service furnished by the PTA/OTA as described above in order to decide whether the 10 percent *de minimis* standard is exceeded. If the minutes of the service furnished by the

PTA/OTA are more than 10 percent of the total minutes of the service, the therapist or therapy assistant would assign the appropriate CQ or CO modifier. We would make clarifying technical changes to chapter 5, section 20.2 of the MCPM to reflect the policies adopted through in this rulemaking related to the application or non-application of the therapy assistant modifiers. We anticipated that we would add examples to illustrate when the applicable therapy assistant modifiers must be applied, similar to the examples provided below.

In the CY 2020 PFS proposed rule, we provided detailed examples of clinical scenarios to illustrate how the 10 percent *de minimis* standard would be applied under our proposals when therapists and their assistants work together concurrently or separately to treat the same patient on the same day (84 FR 40562 through 40564).

c. Regulatory Provisions

In accordance with section 1834(v)(2)(B) of the Act, we proposed to amend §§ 410.59(a)(4) and 410.60(a)(4) for outpatient physical and occupational therapy services, respectively, and § 410.105(d) for physical and occupational therapy services furnished by comprehensive outpatient rehabilitation facilities (CORFs) as authorized under section 1861(cc) of the Act, to establish as a condition of payment that claims for services furnished in whole or in part by an OTA or PTA must include a prescribed modifier; and that services will not be considered furnished in part by an OTA or PTA unless they exceed 10 percent of the total minutes for that service, beginning for services furnished on and after January 1, 2020. To implement section 1834(v)(1) of the Act, we proposed to amend §§ 410.59(a)(4) and 410.60(a)(4) for outpatient physical and occupational therapy services, respectively, and at § 410.105(d) for physical and occupational therapy services furnished by CORFs to specify that claims from physical and occupational therapists in private practice paid under section 1848 of the Act and from providers paid under section 1834(k) of the Act for physical therapy and occupational therapy services that contain a therapy assistant modifier, are paid at 85 percent of the otherwise applicable payment amount for the service for dates of service on and after January 1, 2022. As specified in the CY 2019 PFS final rule, we also noted that the CQ or CO modifier is to be applied alongside the corresponding GP or GO therapy modifier that is required on each claim line of service for physical therapy or occupational therapy services. Beginning for dates of service and after January 1, 2020, claims missing the corresponding GP or GO therapy modifier will be rejected/returned to the therapist or therapy provider so they can be corrected and resubmitted for processing.

As discussed in the CY 2019 PFS proposed and final rules (*see* 83 FR 35850 and 83 FR 59654), we established that the reduced payment rate under section 1834(v)(1) of the Act for the outpatient therapy services furnished in whole or in part by therapy assistants is not applicable to outpatient therapy services furnished by CAHs, for which payment is made under section 1834(g) of the Act. We clarified that we do not interpret section 1834(v) of the Act to apply to outpatient physical therapy or occupational therapy services furnished by CAHs, or by other providers for which payment for outpatient therapy services is not made under section 1834(k) of the Act based on the PFS rates.

We received almost 9,000 public comments on the proposed payment provisions for outpatient PT and OT services furnished in whole or in part by therapy assistants. The following is a summary of the comments we received and our responses.

Comment: Many commenters objected to our proposal that the time for the therapeutic service furnished ''in part'' by the PTA/OTA that counts towards the 10 percent standard includes both the minutes spent concurrently with and separately from the therapist. These commenters also expressed concerns that this unfairly discounts services that are fully furnished by therapists in which the therapy assistant supports them while providing a service. Some of these commenters stated that section 53107 of the BBA of 2018 does not permit the application of the assistant modifier for a PT or OT service furnished by the respective physical or occupational therapist and that CMS exceeded its authority in proposing to do so.

Many commenters stated that when a therapy assistant and therapist furnish care to a patient at the same time, it is apparent the patient requires both professionals; and, that this clinical scenario either represents a highly skilled procedure or one where such services are required for safety reasons. Commenters stated their belief that applying the therapy assistant modifiers to discount payment for these services is not justified.

Many commenters stated they objected to the use of the term ''concurrent'' when applying the 10 percent standard for purposes of outpatient therapy services because it conflicts with the definition of ''concurrent'' as it applies to the SNF Part A patient. The SNF Minimum Data Set Resident Assessment Instrument (MDS–RAI) manual guidance defines ''concurrent'' to include the number of minutes of therapy when the therapist or assistant is treating two residents at the same time. Some commenters also disagreed with our use of the term ''concurrent'' because that term is not currently defined for outpatient therapy services in statute, regulation, or in our manuals to ''reflect when two clinicians (therapist and therapist assistant) are providing care to a beneficiary at the same time.'' These commenters recommended that CMS adopt the term ''team'' instead, based on a reference to a document on the CMS therapy services website titled ''11 Part B Billing Scenarios,'' because they stated it describes care being delivered to one patient at the same time by two professionals as ''team-based therapy.''

Other commenters suggested that instead of ''concurrent,'' that we use the term ''in tandem'' to describe the cases where a therapist and a therapy/therapist assistant are jointly furnishing services to a patient at the same time. One commenter recommended that CMS reconsider its definition of ''concurrent'' therapy and align it with the definition in Part A.

Some commenters supported our proposal including a few commenters that agreed there should be a payment differential for the services furnished by a therapy assistant; and, several stated they fully supported of all of the proposals. A few commenters shared their concerns that they have observed therapy assistants practicing outside their scope of practice and their level of training—such as managing a patient's plans of care, some without any therapist supervision.

Many commenters urged CMS to restructure the proposal to recognize as services furnished in whole or in part by therapy assistants only those minutes that the therapy assistant spends independently with the patient when the therapist is absent.

Response: After a review of commenters' concerns and our current policies, we are persuaded to reconsider our interpretation of what time counts as services furnished in whole or in part by therapy assistants, including for purposes of applying the 10 percent standard. We agree with commenters that we should not count the time when a therapist and a therapist assistant furnish services to the same patient at the same time. We believe this

interpretation is appropriate because we agree with commenters that when a therapist and therapist assistant furnish services together, the therapist is fully furnishing the service. Also, any time that the therapy assistant furnishes services alone or independent of the therapist is time that the therapist can be credited for furnishing services to a different patient. We also note the commenters' incorrect use of the term ''clinicians'' to refer to the both the therapist and the therapy assistant. We clarify that the term clinician refers only the physical or occupational therapist and that a therapy assistant is considered a qualified professional when furnishing services under the supervision of a therapist. For purposes of Medicare, therapy assistants are limited in the services they may furnish and may not supervise other therapy caregivers (see MBPM, Chapter 15, section 230.1 and 230.2).

We agree with commenters that using the term ''concurrent'' could be confusing because it is used for the SNF Part A patient to represent the number of minutes that a therapist or therapy assistant is treating two patients at the same time. Given that we are not finalizing the proposal to count the minutes of service furnished by the assistant together with the therapist, we no longer have a need to use the ''concurrent'' term. Regarding the suggestion that we use the term ''team'' instead of concurrent, we also do not define in our manuals the term ''team'' because we believe it is ambiguous. We have only used the term ''team'' in the ''Team'' billing scenario in one of the ''11 Billing Scenarios'' where it is used in an example in which the physical therapist and occupational therapist furnish all the minutes of a 30-minute service together—only the physical therapist or occupational therapist can bill for each 15 minute unit, but not both.

We find the commenters' concerns persuasive and are revising our proposed policy so that the time spent by a PTA/OTA furnishing a therapeutic service ''concurrently,'' or at the same time, with the therapist will not count for purposes of assessing whether the 10 percent standard has been met. Instead, we are finalizing a policy that only the minutes that the PTA/OTA spends independent of the therapist will count towards the 10 percent *de minimis* standard. We are revising our regulation text at §§ 410.59 (outpatient occupational therapy), 410.60 (physical therapy), and 410.105 (for PT and OT CORF services) accordingly. In the CY 2020 PFS proposed rule, we provided detailed examples of clinical scenarios to illustrate how the 10 percent *de minimis* standard would be applied under our proposals when therapists and their assistants work together concurrently or separately to treat the same patient on the same day (84 FR 40562 through 40564). We intend to provide further detail regarding examples of clinical scenarios to illustrate our final policies regarding the applicability of the therapy assistant modifiers through information that we will post on the *cms.gov* website.

Comment: Commenters opposed our proposal to apply the 10 percent time standard, for billing purposes, to all the billed units of a service defined by a single procedure code, and urged CMS to not finalize the proposal. These commenters requested that instead CMS finalize a policy that assesses the 10 percent standard for each 15-minute unit of each procedure code. Commenters noted that the proposal was contrary to the response to comments in the CY 2019 PFS final rule (83 FR 59659) in which we provided an example of how our systems would allow them to bill for 15-minute units of a timed service on 2 separate claim lines—one with an assistant modifier and the other without. Some commenters stated that the proposal would not allow proper payment when a therapist fully furnishes 30 minutes of a timed service, then hands off to a therapy assistant who fully performs another 15 minutes of the same service. Many commenters stated that the proposed policy does not reflect congressional intent because it would discount the therapists' services, rather than therapy assistants' services.

Response: We acknowledge that we provided a hypothetical billing example in the CY 2019 PFS final rule suggesting that our policy would allow the number of 15-minute units of a code furnished by the PT/OT and the PTA/OTA to be listed separately on two different claim lines, and that the example differed from the proposal we developed for the CY 2020 PFS proposed rule. As the commenters noted, we proposed, for billing purposes, that each outpatient therapy service that is subject to the 10 percent *de minimis* standard would be identified on the claim by a single procedure code, for both untimed codes and codes described in 15-minute-unit increments. After consideration of the public comments on our proposal and further reflection on our manual requirements to document timed codes, we find the commenters' concerns persuasive and, for purposes of billing, we are finalizing a revised definition of a service to which the *de minimis* standard is applied to include untimed codes and each 15-minute unit of codes described in 15-minute increments as a service. Accordingly, we are revising our final policy in response to comments to allow the separate reporting, on two different claim lines, of the number of 15-minute units of a code to which the therapy assistant modifiers do not apply, and the number of 15-minute units of a code to which the therapy assistant modifiers do apply. In the CY 2020 PFS proposed rule, we provided detailed examples of clinical scenarios to illustrate how the 10 percent *de minimis* standard would be applied under our proposals (84 FR 40562 through 40564). The revised policy we are finalizing here will apply generally in the same way as illustrated in those examples, except for the difference in the minutes of time that are counted toward the 10 percent standard (not counting the minutes furnished together by a therapist and therapy assistant), the application of the 10 percent standard to each billed unit of a timed code rather than to all billed units of a timed code, and the billing on two separate claim lines of the units of a timed code to which the therapy assistant modifiers do and do not apply. We intend to provide further detail regarding examples of clinical scenarios to illustrate our final policies regarding the applicability of the therapy assistant modifiers through information that we will post on the *cms.gov* website.

Comment: Nearly all commenters opposed our proposal to require that the treatment notes explain, in a short phrase or statement, the application or non-application of the therapy assistant modifier for each therapy service furnished. Many of these commenters stated that the statute does not require documentation to explain why a modifier was or was not applied for each code. Most commenters stated that the proposed documentation requirements associated with the *de minimis* standard for the therapy assistant modifiers are exceedingly burdensome and conflict with the Administration's ''Patients over Paperwork Initiative.'' The commenters stated that it is unreasonable to impose a new documentation requirement on therapists and therapy providers that is duplicative of current requirements. Many commenters stated that the Medicare Benefit Policy Manual (MBPM) already includes extensive documentation requirements, and that the Medicare Claims Processing Manual (MCPM) includes extensive detail on how to count minutes for therapy services.

Many commenters stated that if a therapist or therapy provider has a

mechanism to provide evidence as to whether a specific service was furnished independently by a therapist or an assistant, or was furnished ''in part'' by an assistant, in sufficient detail to permit a medical record reviewer to determine whether the *de minimis* threshold was met, they should not also be required to separately document this information in a narrative note. A few of the commenters opposing the addition of narrative phrases for each service stated that we should revise our current subregulatory guidance to include a statement such as the following: ''The provider should have a mechanism in place to provide evidence whether a specific service was furnished independently by a therapist or an assistant, or was furnished ''in part'' by an assistant in sufficient detail to permit the determination of whether the ''*de minimis*'' threshold was met.'' Another commenter stated that it is expected and appropriate for the documentation in the medical record to specify whether a certain service was furnished independently by a therapist or an assistant or was furnished ''in part'' by an assistant in enough detail to permit a medical record reviewer to determine whether the *de minimis* threshold was met.

Many commenters stated that they believe our proposed documentation requirement to explain in the medical record the use or non-use of the modifiers would serve as another tool for medical reviewers to use against therapy providers to justify a technical denial even though the medical record may otherwise contain sufficient documentation to justify the use or non-use of the CQ/CO modifier.

Many commenters submitted comments that were specific to our request for comment on documentation of the minutes for services furnished by the PTA/OTA as a means to avoid possible additional burden associated with a contractor's medical review process conducted for these services. Nearly all of the commenters stated they opposed adding a requirement to include a narrative phrase in the treatment note and requiring documentation of the minutes as duplicative of existing documentation requirements. One commenter, also not in favor of requiring the addition of narrative phrases to the medical record because they do not believe such phrases provide value to patient care or providers, stated that the therapy provider should document the number of minutes provided solely by the assistant and that this should be adequate to support the use and nonuse of the CO/CQ modifiers—citing an example that included ''CPT 97110—Assistant provided 8 minutes, Therapist provided 24 minutes'' and ''CPT 97530—Assistant provided 22 minutes, Therapist provided 0 minutes.''

Several commenters supported the proposed documentation requirements. One commenter stated they have already begun taking steps to support billing compliance via their electronic health record that creates a selection to attach the appropriate PTA/OTA modifier and includes the creation of a ''smart phrase'' which the therapist can document to support compliance of billing and review.

Response: We appreciate the comments regarding our documentation proposal. After consideration of the comments and a review of our manual provisions, we find many of the commenters' suggestions persuasive. We agree that the addition of narrative phrases for each service may be duplicative of existing documentation requirements in the MBPM, chapter 15, section 220 and in Chapter 5, MCPM. Although a few commenters supported the addition of narratives, we also took note of the many commenters who told us that therapists and therapy providers should not be required to include a narrative for each service explaining the application or non-application of the therapy assistant modifiers when the medical record contains evidence as to whether a specific service was furnished independently by a therapist or an assistant, or was furnished ''in part'' by an assistant, in sufficient detail to permit a medical record reviewer to determine whether the de minimis threshold was met.

As a result, we are not finalizing the proposed documentation requirement to explain in the treatment note, in a short phrase or statement, the application or non-application of the therapy assistant modifier for each therapy service furnished; nor are we finalizing a requirement that the therapist and therapy assistant minutes be included in the documentation. Instead, we remind therapists and therapy providers that correct billing requires sufficient documentation in the medical record to support the codes and units reported on the claim, including those reported with and without an assistant modifier.

Further, we clarify that we would expect the documentation in the medical record to be sufficient to know whether a specific service was furnished independently by a therapist or a therapist assistant, or was furnished ''in part'' by a therapist assistant, in sufficient detail to permit the determination of whether the 10 percent standard was exceeded.

Comment: Many commenters expressed concern that the application of the therapy assistant modifiers is likely to result in drastic underpayments for outpatient therapy services beginning in 2022, which they believe would severely restrict beneficiary access to vital therapy services, particularly in rural and underserved areas. Other commenters specifically requested that CMS exempt rural areas from the therapy assistant modifier policy.

Response: While we appreciate the concerns raised about the potential effects of the therapy assistant modifier policy, we do not believe that section 1834(v) of the Act permits us to exempt the application of the PTA/OTA modifier policies in rural and underserved areas. We intend to monitor the implementation of the therapy assistant modifiers, including any changes to access to outpatient therapy services.

Comment: One commenter stated their concerns about the correct ordering of modifiers on claims for therapy services to assure correct payment, but without adding to therapists' or therapy providers' administrative burden. They based their concerns on a CMS longstanding FAQ, which states that modifiers that impact payment should be in the first position, and are seeking clarification as to whether the CQ or CO modifier would need to be in the first position on claims for PT services (modifier GP) and OT services (modifier GO) where one of those new modifiers applies. The commenters stated that if the CQ or CO modifier is required to be in the first position, that would need to be done manually because therapists and therapy providers are not able to program their chargemasters to accommodate every possible modifier combination to meet Medicare and non-Medicare reporting requirements.

Response: We appreciate the commenter's comments. We note that we do not have central standard systems edits in place to reject or return claims for PT or OT services if the CQ or CO modifier is not in the first modifier position. However, some CMS contractors processing professional claims may have systems logic in place that would do so. We recently issued instructions to our contractors to reorder modifiers for PT and OT services so that claims with the therapy assistant modifiers are not returned. This reordering will be effective for claims containing CQ and CO modifiers with dates of service on and after January 1, 2020.

3. Therapy KX Modifier Threshold Amounts

The KX modifier thresholds, as discussed above in this section, were established through section 50202 of the Bipartisan Budget Act (BBA) of 2018. Formerly referred to as therapy caps, these KX modifier thresholds are a permanent provision of the law, meaning that the statute does not specify an end date. These per-beneficiary amounts under section 1833(g) of the Act (as amended by section 4541 of the Balanced Budget Act of 1997) (Pub. L. 105–33, August 5, 1997) are updated each year based on the MEI. Specifically, these amounts are calculated by updating the previous year's amount by the MEI for the upcoming calendar year and rounding to the nearest $10.00. Increasing the CY 2019 KX modifier threshold amount of $2,040 by the CY 2020 MEI of 1.9 percent and rounding to the nearest $10.00 results in a CY 2020 KX threshold amount of $2,080 for PT and SLP services combined and $2,080 for OT services.

Section 50202 of the Bipartisan Budget Act of 2018 also added section 1833(g)(7)(B) of the Act which retains the targeted medical review process, but at a lower threshold amount of $3,000 (until CY 2028) as detailed above in this section. Accordingly, for CY 2020, the MR threshold is $3,000 for PT and SLP services combined and $3,000 for OT services. Some, but not all claims exceeding the MR threshold amount are subject to review, under the established targeted review process. For information on the targeted manual medical review process, go to *https://www.cms.gov/ResearchStatistics-Data-and-Systems/MonitoringPrograms/Medicare-FFS-CompliancePrograms/Medical-Review/TherapyCap.html.*

We track each beneficiary's incurred expenses for therapy services annually and counts them toward the KX modifier and MR thresholds by applying the PFS rate for each service less any applicable multiple procedure payment reduction (MPPR) amount for services of CMS-designated ''always therapy'' services. As explained previously in this section, we apply the PFS-rate accrual process to outpatient therapy services furnished by critical access hospitals (CAHs) even though they may be paid on a cost basis (effective January 1, 2014).

When the expenses incurred for the beneficiary's outpatient therapy services for the year have exceeded one or both of the KX modifier thresholds, therapy suppliers and providers use the KX modifier on claims for subsequent medically necessary services. By using the KX modifier, the therapist and therapy provider attest that the services above the KX modifier thresholds are reasonable and necessary and that documentation of the medical necessity for the services is in the beneficiary's medical record. Claims for outpatient therapy services that exceed the KX modifier thresholds but do not include the KX modifier are denied.

N. Valuation of Specific Codes

1. Background: Process for Valuing New, Revised, and Potentially Misvalued Codes

Establishing valuations for newly created and revised CPT codes is a routine part of maintaining the PFS. Since the inception of the PFS, it has also been a priority to revalue services regularly to make sure that the payment rates reflect the changing trends in the practice of medicine and current prices for inputs used in the PE calculations. Initially, this was accomplished primarily through the 5-year review process, which resulted in revised work RVUs for CY 1997, CY 2002, CY 2007, and CY 2012, and revised PE RVUs in CY 2001, CY 2006, and CY 2011, and revised MP RVUs in CY 2010 and CY 2015. Under the 5-year review process, revisions in RVUs were proposed and finalized via rulemaking. In addition to the 5-year reviews, beginning with CY 2009, CMS and the RUC identified a number of potentially misvalued codes each year using various identification screens, as discussed in section II.E. of this final rule, Potentially Misvalued Services under the PFS. Historically, when we received RUC recommendations, our process had been to establish interim final RVUs for the potentially misvalued codes, new codes, and any other codes for which there were coding changes in the final rule with comment period for a year. Then, during the 60-day period following the publication of the final rule with comment period, we accepted public comment about those valuations. For services furnished during the calendar year following the publication of interim final rates, we paid for services based upon the interim final values established in the final rule. In the final rule with comment period for the subsequent year, we considered and responded to public comments received on the interim final values, and typically made any appropriate adjustments and finalized those values.

In the CY 2015 PFS final rule with comment period (79 FR 67547), we finalized a new process for establishing values for new, revised and potentially misvalued codes. Under the new process, we include proposed values for these services in the proposed rule, rather than establishing them as interim final in the final rule with comment period. Beginning with the CY 2017 PFS proposed rule (81 FR 46162), the new process was applicable to all codes, except for new codes that describe truly new services. For CY 2017, we proposed new values in the CY 2017 PFS proposed rule for the vast majority of new, revised, and potentially misvalued codes for which we received complete RUC recommendations by February 10, 2016. To complete the transition to this new process, for codes for which we established interim final values in the CY 2016 PFS final rule with comment period (81 FR 80170), we reviewed the comments received during the 60-day public comment period following release of the CY 2016 PFS final rule with comment period (80 FR 70886), and re-proposed values for those codes in the CY 2017 PFS proposed rule.

We considered public comments received during the 60-day public comment period for the proposed rule before establishing final values in the CY 2017 PFS final rule. As part of our established process, we will adopt interim final values only in the case of wholly new services for which there are no predecessor codes or values and for which we do not receive recommendations in time to propose values.

As part of our obligation to establish RVUs for the PFS, we thoroughly review and consider available information including recommendations and supporting information from the RUC, the Health Care Professionals Advisory Committee (HCPAC), public commenters, medical literature, Medicare claims data, comparative databases, comparison with other codes within the PFS, as well as consultation with other physicians and healthcare professionals within CMS and the federal government as part of our process for establishing valuations. Where we concur that the RUC's recommendations, or recommendations from other commenters, are reasonable and appropriate and are consistent with the time and intensity paradigm of physician work, we proposed those values as recommended. Additionally, we continually engage with stakeholders, including the RUC, with regard to our approach for accurately valuing codes, and as we prioritize our obligation to value new, revised, and potentially misvalued codes. We continue to welcome feedback from all interested parties regarding valuation of

services for consideration through our rulemaking process.

2. Methodology for Establishing Work RVUs

For each code identified in this section, we conduct a review that included the current work RVU (if any), RUC-recommended work RVU, intensity, time to furnish the preservice, intraservice, and postservice activities, as well as other components of the service that contribute to the value. Our reviews of recommended work RVUs and time inputs generally include, but have not been limited to, a review of information provided by the RUC, the HCPAC, and other public commenters, medical literature, and comparative databases, as well as a comparison with other codes within the PFS, consultation with other physicians and health care professionals within CMS and the federal government, as well as Medicare claims data. We also assess the methodology and data used to develop the recommendations submitted to us by the RUC and other public commenters and the rationale for the recommendations. In the CY 2011 PFS final rule with comment period (75 FR 73328 through 73329), we discussed a variety of methodologies and approaches used to develop work RVUs, including survey data, building blocks, crosswalks to key reference or similar codes, and magnitude estimation (see the CY 2011 PFS final rule with comment period (75 FR 73328 through 73329) for more information). When referring to a survey, unless otherwise noted, we mean the surveys conducted by specialty societies as part of the formal RUC process.

Components that we use in the building block approach may include preservice, intraservice, or postservice time and post-procedure visits. When referring to a bundled CPT code, the building block components could include the CPT codes that make up the bundled code and the inputs associated with those codes. We use the building block methodology to construct, or deconstruct, the work RVU for a CPT code based on component pieces of the code. Magnitude estimation refers to a methodology for valuing work that determines the appropriate work RVU for a service by gauging the total amount of work for that service relative to the work for a similar service across the PFS without explicitly valuing the components of that work. In addition to these methodologies, we frequently utilize an incremental methodology in which we value a code based upon its incremental difference between another code and another family of codes. The statute specifically defines the work component as the resources in time and intensity required in furnishing the service. Also, the published literature on valuing work has recognized the key role of time in overall work. For particular codes, we refine the work RVUs in direct proportion to the changes in the best information regarding the time resources involved in furnishing particular services, either considering the total time or the intraservice time.

Several years ago, to aid in the development of preservice time recommendations for new and revised CPT codes, the RUC created standardized preservice time packages. The packages include preservice evaluation time, preservice positioning time, and preservice scrub, dress and wait time. Currently, there are preservice time packages for services typically furnished in the facility setting (for example, preservice time packages reflecting the different combinations of straightforward or difficult procedure, and straightforward or difficult patient). Currently, there are three preservice time packages for services typically furnished in the nonfacility setting.

We developed several standard building block methodologies to value services appropriately when they have common billing patterns. In cases where a service is typically furnished to a beneficiary on the same day as an evaluation and management (E/M) service, we believe that there is overlap between the two services in some of the activities furnished during the preservice evaluation and postservice time. Our longstanding adjustments have reflected a broad assumption that at least one-third of the work time in both the preservice evaluation and postservice period is duplicative of work furnished during the E/M visit.

Accordingly, in cases where we believe that the RUC has not adequately accounted for the overlapping activities in the recommended work RVU and/or times, we adjust the work RVU and/or times to account for the overlap. The work RVU for a service is the product of the time involved in furnishing the service multiplied by the intensity of the work. Preservice evaluation time and postservice time both have a long-established intensity of work per unit of time (IWPUT) of 0.0224, which means that 1 minute of preservice evaluation or postservice time equates to 0.0224 of a work RVU.

Therefore, in many cases when we remove 2 minutes of preservice time and 2 minutes of postservice time from a procedure to account for the overlap with the same day E/M service, we also remove a work RVU of 0.09 (4 minutes $\times$ 0.0224 IWPUT) if we do not believe the overlap in time had already been accounted for in the work RVU. The RUC has recognized this valuation policy and, in many cases, now addresses the overlap in time and work when a service is typically furnished on the same day as an E/M service.

The following paragraphs contain a general discussion of our approach to reviewing RUC recommendations and developing proposed values for specific codes. When they exist we also include a summary of stakeholder reactions to our approach. We note that many commenters and stakeholders have expressed concerns over the years with our ongoing adjustment of work RVUs based on changes in the best information we had regarding the time resources involved in furnishing individual services. We have been particularly concerned with the RUC's and various specialty societies' objections to our approach given the significance of their recommendations to our process for valuing services and since much of the information we used to make the adjustments is derived from their survey process. We are obligated under the statute to consider both time and intensity in establishing work RVUs for PFS services. As explained in the CY 2016 PFS final rule with comment period (80 FR 70933), we recognize that adjusting work RVUs for changes in time is not always a straightforward process, so we have applied various methodologies to identify several potential work values for individual codes.

We have observed that for many codes reviewed by the RUC, recommended work RVUs have appeared to be incongruous with recommended assumptions regarding the resource costs in time. This has been the case for a significant portion of codes for which we recently established or proposed work RVUs that are based on refinements to the RUC-recommended values. When we have adjusted work RVUs to account for significant changes in time, we have started by looking at the change in the time in the context of the RUC-recommended work RVU. When the recommended work RVUs do not appear to account for significant changes in time, we have employed the different approaches to identify potential values that reconcile the recommended work RVUs with the recommended time values. Many of these methodologies, such as survey data, building block, crosswalks to key reference or similar codes, and magnitude estimation have long been used in developing work RVUs under

the PFS. In addition to these, we sometimes use the relationship between the old time values and the new time values for particular services to identify alternative work RVUs based on changes in time components.

In so doing, rather than ignoring the RUC-recommended value, we have used the recommended values as a starting reference and then applied one of these several methodologies to account for the reductions in time that we believe were not otherwise reflected in the RUC-recommended value. If we believe that such changes in time are already accounted for in the RUC's recommendation, then we do not make such adjustments. Likewise, we do not arbitrarily apply time ratios to current work RVUs to calculate proposed work RVUs. We use the ratios to identify potential work RVUs and consider these work RVUs as potential options relative to the values developed through other options.

We do not imply that the decrease in time as reflected in survey values should always equate to a one-to-one or linear decrease in newly valued work RVUs. Instead, we believe that, since the two components of work are time and intensity, absent an obvious or explicitly stated rationale for why the relative intensity of a given procedure has increased, significant decreases in time should be reflected in decreases to work RVUs. If the RUC's recommendation has appeared to disregard or dismiss the changes in time, without a persuasive explanation of why such a change should not be accounted for in the overall work of the service, then we have generally used one of the aforementioned methodologies to identify potential work RVUs, including the methodologies intended to account for the changes in the resources involved in furnishing the procedure.

Several stakeholders, including the RUC, have expressed general objections to our use of these methodologies and deemed our actions in adjusting the recommended work RVUs as inappropriate; other stakeholders have also expressed general concerns with CMS refinements to RUC-recommended values in general. In the CY 2017 PFS final rule (81 FR 80272 through 80277), we responded in detail to several comments that we received regarding this issue. In the CY 2017 PFS proposed rule (81 FR 46162), we requested comments regarding potential alternatives to making adjustments that would recognize overall estimates of work in the context of changes in the resource of time for particular services; however, we did not receive any specific potential alternatives. As described earlier in this section, crosswalks to key reference or similar codes are one of the many methodological approaches we have employed to identify potential values that reconcile the RUC-recommend work RVUs with the recommended time values when the RUC-recommended work RVUs did not appear to account for significant changes in time.

We received several comments regarding our methodologies for work valuation in response to the CY 2020 PFS proposed rule and those comments are summarized below.

Comment: Several commenters disagreed with our reference to older work time sources, and stated that their use led to the proposal of work RVUs based on flawed assumptions. Commenters stated that codes with ''CMS/Other'' or ''Harvard'' work time sources, used in the original valuation of certain older services, were not surveyed, and therefore, were not resource-based. Commenters also stated that it was invalid to draw comparisons between the current work time and work RVUs of these services to the newly surveyed work time and work RVUs as recommended by the RUC.

Response: We agree that it is important to use the recent data available regarding work times, and we note that when many years have passed between when time is measured, significant discrepancies can occur. However, we also believe that our operating assumption regarding the validity of the existing values as a point of comparison is critical to the integrity of the relative value system as currently constructed. The work times currently associated with codes play a very important element in PFS ratesetting, both as points of comparison in establishing work RVUs and in the allocation of indirect PE RVUs by specialty. If we were to operate under the assumption that previously recommended work times had routinely been overestimated, this would undermine the relativity of the work RVUs on the PFS in general, given the process under which codes are often valued by comparisons to codes with similar times. It also would undermine the validity of the allocation of indirect PE RVUs to physician specialties across the PFS. Instead, we believe that it is crucial that the code valuation process take place with the understanding that the existing work times, used in the PFS ratesetting processes, are accurate. We recognize that adjusting work RVUs for changes in time is not always a straightforward process and that the intensity associated with changes in time is not necessarily always linear, which is why we apply various methodologies to identify several potential work values for individual codes. However, we reiterate that we believe it would be irresponsible to ignore changes in time based on the best data available and that we are statutorily obligated to consider both time and intensity in establishing work RVUs for PFS services. For additional information regarding the use of old work time values that were established many years ago and have not since been reviewed in our methodology, we refer readers to our discussion of the subject in the CY 2017 PFS final rule (81 FR 80273 through 80274).

Comment: Several commenters disagreed with the use of time ratio methodologies for work valuation. Commenters stated that this use of time ratios is not a valid methodology for valuation of physician services. Commenters stated that treating all components of physician time (preservice, intraservice, postservice and post-operative visits) as having identical intensity is incorrect, and inconsistently applying it to only certain services under review creates inherent payment disparities in a payment system which is based on relative valuation. Commenters stated that in many scenarios, CMS selects an arbitrary combination of inputs to apply rather than seeking a valid clinically relevant relationship that would preserve relativity. Commenters urged CMS to determine the work valuation for each code based not only on surveyed work times, but also the intensity and complexity of the service and relativity to other similar services, rather than basing the work value entirely on time.

Response: We disagree and continue to believe that the use of time ratios is one of several appropriate methods for identifying potential work RVUs for particular PFS services, particularly when the alternative values recommended by the RUC and other commenters do not account for information provided by surveys that suggests the amount of time involved in furnishing the service has changed significantly. We reiterate that, consistent with the statute, we are required to value the work RVU based on the relative resources involved in furnishing the service, which include time and intensity. When our review of recommended values reveals that changes in the resource of time have been unaccounted for in a recommended RVU, then we believe we have the obligation to account for that change in establishing work RVUs since

the statute explicitly identifies time as one of the two elements of the work RVUs.

We recognize that it would not be appropriate to develop work RVUs solely based on time given that intensity is also an element of work, but in applying the time ratios, we are using derived intensity measures based on current work RVUs for individual procedures. We clarify again that we do not treat all components of physician time as having identical intensity. If we were to disregard intensity altogether, the work RVUs for all services would be developed based solely on time values and that is definitively not the case, as indicated by the many services that share the same time values but have different work RVUs. For example, among the codes reviewed in this current CY 2020 PFS final rule, CPT codes 52442 (*Cystourethroscopy, with insertion of permanent adjustable transprostatic implant; each additional permanent adjustable transprostatic implant*) and 92627 (*Evaluation of auditory function for surgically implanted device(s) candidacy or post-operative status of a surgically implanted device(s); each additional 15 minutes*) share the identical work time of 15 minutes but have very different work RVUs of 1.01 and 0.33 respectively. In addition, CPT codes 11983 (*Removal with reinsertion, non-biodegradable drug delivery implant), 64446 (Injection(s), anesthetic agent(s) and/or steroid; sciatic nerve, continuous infusion by catheter (including catheter placement)*), and 78804 (*Rp L.T.I.D. w/ flow when performed, wholebody 2 or more days*) all share the same intraservice work time of 15 minutes and total work time of 40 minutes but each code has a different work RVU. These examples demonstrate that we do not value services purely based on work time; instead, we incorporate time as one of multiple different factors employed in our review process. Furthermore, we reiterate that we use time ratios to identify potentially appropriate work RVUs, and then use other methods (including estimates of work from CMS medical personnel and crosswalks to key reference or similar codes) to validate these RVUs. For more details on our methodology for developing work RVUs, we direct readers to the discussion CY 2017 PFS final rule (81 FR 80272 through 80277).

We also want to clarify for the commenters that our review process is not arbitrary in nature. Our reviews of recommended work RVUs and time inputs generally include, but have not been limited to, a review of information provided by the RUC, the HCPAC, and other public commenters, medical literature, and comparative databases, as well as a comparison with other codes within the PFS, consultation with other physicians and health care professionals within CMS and the federal government, as well as Medicare claims data. We also assess the methodology and data used to develop the recommendations submitted to us by the RUC and other public commenters and the rationale for the recommendations. In the CY 2011 PFS final rule with comment period (75 FR 73328 through 73329), we discussed a variety of methodologies and approaches used to develop work RVUs, including survey data, building blocks, crosswalks to key reference or similar codes, and magnitude estimation (see the CY 2011 PFS final rule with comment period (75 FR 73328 through 73329) for more information). With regards to the invocation of clinically relevant relationships by the commenters, we emphasize that we continue to believe that the nature of the PFS relative value system is such that all services are appropriately subject to comparisons to one another. Although codes that describe clinically similar services are sometimes stronger comparator codes, we do not agree that codes must share the same site of service, patient population, or utilization level to serve as an appropriate crosswalk.

Comment: Several commenters discouraged the use of valuation based on work RVU increments. Commenters stated that this methodology inaccurately treats all components of the physician time as having identical intensity and would lead to incorrect work valuations. Commenters stated that CMS should carefully consider the clinical information justifying the changes in physician work intensity provided by the RUC and other stakeholders.

Response: We believe the use of an incremental difference between codes is a valid methodology for setting values, especially in valuing services within a family of revised codes where it is important to maintain appropriate intra-family relativity. Historically, we have frequently utilized an incremental methodology in which we value a code based upon its incremental difference between another code or another family of codes. We note that the RUC has also used the same incremental methodology on occasion when it was unable to produce valid survey data for a service. We have no evidence to suggest that the use of an incremental difference between codes conflicts with the statute's definition of the work component as the resources in time and intensity required in furnishing the service. We do consider clinical information associated with physician work intensity provided by the RUC and other stakeholders as part of our review process, although we remind readers again that we do not agree that codes must share the same site of service, patient population, or utilization level to serve as an appropriate crosswalk.

In response to comments, in the CY 2019 PFS final rule (83 FR 59515), we clarified that terms ''reference services'', ''key reference services'', and ''crosswalks'' as described by the commenters are part of the RUC's process for code valuation. These are not terms that we created, and we do not agree that we necessarily must employ them in the identical fashion for the purposes of discussing our valuation of individual services that come up for review. However, in the interest of minimizing confusion and providing clear language to facilitate stakeholder feedback, we will seek to limit the use of the term, ''crosswalk,'' to those cases where we are making a comparison to a CPT code with the identical work RVU. We also occasionally make use of a ''bracket'' for code valuation. A ''bracket'' refers to when a work RVU falls between the values of two CPT codes, one at a higher work RVU and one at a lower work RVU.

We look forward to continuing to engage with stakeholders and commenters, including the RUC, as we prioritize our obligation to value new, revised, and potentially misvalued codes; and will continue to welcome feedback from all interested parties regarding valuation of services for consideration through our rulemaking process. We refer readers to the detailed discussion in this section of the valuation considered for specific codes. Table 26 contains a list of codes and descriptors for which we are finalizing work RVUs; this includes all codes for which we received RUC recommendations by February 10, 2019. The work RVUs, work time and other payment information for all CY 2020 payable codes are available on the CMS website under downloads for the CY 2020 PFS final rule at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/index.html*).

3. Methodology for the Direct PE Inputs to Develop PE RVUs

a. Background

On an annual basis, the RUC provides us with recommendations regarding PE inputs for new, revised, and potentially

misvalued codes. We review the RUC-recommended direct PE inputs on a code by code basis. Like our review of recommended work RVUs, our review of recommended direct PE inputs generally includes, but is not limited to, a review of information provided by the RUC, HCPAC, and other public commenters, medical literature, and comparative databases, as well as a comparison with other codes within the PFS, and consultation with physicians and health care professionals within CMS and the federal government, as well as Medicare claims data. We also assess the methodology and data used to develop the recommendations submitted to us by the RUC and other public commenters and the rationale for the recommendations. When we determine that the RUC's recommendations appropriately estimate the direct PE inputs (clinical labor, disposable supplies, and medical equipment) required for the typical service, are consistent with the principles of relativity, and reflect our payment policies, we use those direct PE inputs to value a service. If not, we refine the recommended PE inputs to better reflect our estimate of the PE resources required for the service. We also confirm whether CPT codes should have facility and/or nonfacility direct PE inputs and refine the inputs accordingly.

Our review and refinement of the RUC-recommended direct PE inputs includes many refinements that are common across codes, as well as refinements that are specific to particular services. Table 27 details our refinements of the RUC's direct PE recommendations at the code-specific level. In section II.B. of this final rule, Determination of Practice Expense Relative Value Units (PE RVUs), we address certain refinements that would be common across codes. Refinements to particular codes are addressed in the portions of this section that are dedicated to particular codes. We note that for each refinement, we indicate the impact on direct costs for that service. We note that, on average, in any case where the impact on the direct cost for a particular refinement is $0.35 or less, the refinement has no impact on the PE RVUs. This calculation considers both the impact on the direct portion of the PE RVU, as well as the impact on the indirect allocator for the average service. We also note that approximately half of the refinements listed in Table 27 result in changes under the $0.35 threshold and are unlikely to result in a change to the RVUs.

We also note that the direct PE inputs for CY 2020 are displayed in the CY 2020 direct PE input files, available on the CMS website under the downloads for the CY 2020 PFS final rule at *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html.* The inputs displayed there have been used in developing the CY 2020 PE RVUs as displayed in Addendum B.

b. Common Refinements

(1) Changes in Work Time

Some direct PE inputs are directly affected by revisions in work time. Specifically, changes in the intraservice portions of the work time and changes in the number or level of postoperative visits associated with the global periods result in corresponding changes to direct PE inputs. The direct PE input recommendations generally correspond to the work time values associated with services. We believe that inadvertent discrepancies between work time values and direct PE inputs should be refined or adjusted in the establishment of proposed direct PE inputs to resolve the discrepancies.

(2) Equipment Time

Prior to CY 2010, the RUC did not generally provide CMS with recommendations regarding equipment time inputs. In CY 2010, in the interest of ensuring the greatest possible degree of accuracy in allocating equipment minutes, we requested that the RUC provide equipment times along with the other direct PE recommendations, and we provided the RUC with general guidelines regarding appropriate equipment time inputs. We appreciate the RUC's willingness to provide us with these additional inputs as part of its PE recommendations.

In general, the equipment time inputs correspond to the service period portion of the clinical labor times. We clarified this principle over several years of rulemaking, indicating that we consider equipment time as the time within the intraservice period when a clinician is using the piece of equipment plus any additional time that the piece of equipment is not available for use for another patient due to its use during the designated procedure. For those services for which we allocate cleaning time to portable equipment items, because the portable equipment does not need to be cleaned in the room where the service is furnished, we do not include that cleaning time for the remaining equipment items, as those items and the room are both available for use for other patients during that time. In addition, when a piece of equipment is typically used during follow-up postoperative visits included in the global period for a service, the equipment time would also reflect that use.

We believe that certain highly technical pieces of equipment and equipment rooms are less likely to be used during all of the preservice or postservice tasks performed by clinical labor staff on the day of the procedure (the clinical labor service period) and are typically available for other patients even when one member of the clinical staff may be occupied with a preservice or postservice task related to the procedure. We also note that we believe these same assumptions would apply to inexpensive equipment items that are used in conjunction with and located in a room with non-portable highly technical equipment items since any items in the room in question would be available if the room is not being occupied by a particular patient. For additional information, we refer readers to our discussion of these issues in the CY 2012 PFS final rule with comment period (76 FR 73182) and the CY 2015 PFS final rule with comment period (79 FR 67639).

(3) Standard Tasks and Minutes for Clinical Labor Tasks

In general, the preservice, intraservice, and postservice clinical labor minutes associated with clinical labor inputs in the direct PE input database reflect the sum of particular tasks described in the information that accompanies the RUC-recommended direct PE inputs, commonly called the ''PE worksheets.'' For most of these described tasks, there is a standardized number of minutes, depending on the type of procedure, its typical setting, its global period, and the other procedures with which it is typically reported. The RUC sometimes recommends a number of minutes either greater than or less than the time typically allotted for certain tasks. In those cases, we review the deviations from the standards and any rationale provided for the deviations. When we do not accept the RUC-recommended exceptions, we refine the proposed direct PE inputs to conform to the standard times for those tasks. In addition, in cases when a service is typically billed with an E/M service, we remove the preservice clinical labor tasks to avoid duplicative inputs and to reflect the resource costs of furnishing the typical service.

We refer readers to section II.B. of this final rule, Determination of Practice Expense Relative Value Units (PE RVUs), for more information regarding the collaborative work of CMS and the

RUC in improvements in standardizing clinical labor tasks.

(4) Recommended Items That Are Not Direct PE Inputs

In some cases, the PE worksheets included with the RUC's recommendations include items that are not clinical labor, disposable supplies, or medical equipment or that cannot be allocated to individual services or patients. We addressed these kinds of recommendations in previous rulemaking (78 FR 74242), and we do not use items included in these recommendations as direct PE inputs in the calculation of PE RVUs.

(5) New Supply and Equipment Items

The RUC generally recommends the use of supply and equipment items that already exist in the direct PE input database for new, revised, and potentially misvalued codes. However, some recommendations include supply or equipment items that are not currently in the direct PE input database. In these cases, the RUC has historically recommended that a new item be created and has facilitated our pricing of that item by working with the specialty societies to provide us copies of sales invoices. For CY 2020, we received invoices for several new supply and equipment items. Tables 28 and 29 detail the invoices received for new and existing items in the direct PE database. As discussed in section II.B. of this final rule, Determination of Practice Expense Relative Value Units, we encouraged stakeholders to review the prices associated with these new and existing items to determine whether these prices appear to be accurate. Where prices appear inaccurate, we encouraged stakeholders to submit invoices or other information to improve the accuracy of pricing for these items in the direct PE database by February 10th of the following year for consideration in future rulemaking, similar to our process for consideration of RUC recommendations.

We remind stakeholders that due to the relativity inherent in the development of RVUs, reductions in existing prices for any items in the direct PE database increase the pool of direct PE RVUs available to all other PFS services. Tables 28 and 29 also include the number of invoices received and the number of nonfacility allowed services for procedures that use these equipment items. We provide the nonfacility allowed services so that stakeholders will note the impact the particular price might have on PE relativity, as well as to identify items that are used frequently, since we believe that stakeholders are more likely to have better pricing information for items used more frequently. A single invoice may not be reflective of typical costs and we encourage stakeholders to provide additional invoices so that we might identify and use accurate prices in the development of PE RVUs.

In some cases, we do not use the price listed on the invoice that accompanies the recommendation because we identify publicly available alternative prices or information that suggests a different price is more accurate. In these cases, we include this in the discussion of these codes. In other cases, we cannot adequately price a newly recommended item due to inadequate information. Sometimes, no supporting information regarding the price of the item has been included in the recommendation. In other cases, the supporting information does not demonstrate that the item has been purchased at the listed price (for example, vendor price quotes instead of paid invoices). In cases where the information provided on the item allows us to identify clinically appropriate proxy items, we might use existing items as proxies for the newly recommended items. In other cases, we included the item in the direct PE input database without any associated price. Although including the item without an associated price means that the item does not contribute to the calculation of the final PE RVU for particular services, it facilitates our ability to incorporate a price once we obtain information and are able to do so.

(6) Service Period Clinical Labor Time in the Facility Setting

Generally speaking, our direct PE inputs do not include clinical labor minutes assigned to the service period because the cost of clinical labor during the service period for a procedure in the facility setting is not considered a resource cost to the practitioner since Medicare makes separate payment to the facility for these costs. We address code-specific refinements to clinical labor in the individual code sections.

(7) Procedures Subject to the Multiple Procedure Payment Reduction (MPPR) and the OPPS Cap

We note that the public use files for the PFS proposed and final rules for each year display the services subject to the MPPR for diagnostic cardiovascular services, diagnostic imaging services, diagnostic ophthalmology services, and therapy services. We also include a list of procedures that meet the definition of imaging under section 1848(b)(4)(B) of the Act, and therefore, are subject to the OPPS cap for the upcoming calendar year. The public use files for CY 2020 are available on the CMS website under downloads for the CY 2020 PFS final rule at *http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html.* For more information regarding the history of the MPPR policy, we refer readers to the CY 2014 PFS final rule with comment period (78 FR 74261 through 74263). For more information regarding the history of the OPPS cap, we refer readers to the CY 2007 PFS final rule with comment period (71 FR 69659 through 69662).

4. Proposed Valuation of Specific Codes for CY 2020

(1) Tissue Grafting Procedures (CPT Codes 15769, 15771, 15772, 15773, and 15774)

CPT code 20926 (*Tissue grafts, other (e.g., paratenon, fat, dermis)*), was identified through a review of services with anomalous sites of service when compared to Medicare utilization data. The CPT Editorial Panel subsequently replaced CPT code 20926 with five codes in the Integumentary section to better describe tissue grafting procedures.

We proposed the RUC-recommended work RVUs of 6.68 for CPT code 15769 (*Grafting of autologous soft tissue, other, harvested by direct excision (e.g., fat, dermis, fascia)*), 6.73 for CPT code 15771 (*grafting of autologous fat harvested by liposuction technique to trunk, breasts, scalp, arms, and/or legs; 50cc or less injectate*), 2.50 for CPT code 15772 (*grafting of autologous fat harvested by liposuction technique to trunk, breasts, scalp, arms, and/or legs; each additional 50cc injectate, or part thereof (list separately in addition to code for primary procedure)*), 6.83 for CPT code 15773 (*grafting of autologous fat harvested by liposuction technique to face, eyelids, mouth, neck, ears, orbits, genitalia, hands, and/or feet; 25cc or less injectate*), and 2.41 for CPT code 15774 (*grafting of autologous fat harvested by liposuction technique to face, eyelids, mouth, neck, ears, orbits, genitalia, hands, and/or feet; each additional 25cc injectate, or part thereof (list separately in addition to code for primary procedure)*).

We proposed the RUC-recommended direct PE inputs for this code family without refinement.

We received public comments on the proposed valuation of the codes in the Tissue Grafting Procedures family. The following is a summary of the comments we received and our responses.

Comment: A commenter stated that they supported our proposal to use the RUC-recommended work RVUs for these codes.

Response: We appreciate the support for our proposal from the commenter. After consideration of the public comments, we are finalizing the work RVUs and direct PE inputs for the codes in the Tissue Grafting Procedures family as proposed.

(2) Drug Delivery Implant Procedures (CPT Codes 11981, 11982, 11983, 20700, 20702, 20704, 20701, 20703, and 20705)

CPT codes 11980–11983 were identified as potentially misvalued since the majority specialty found in recent claims data differs from the two specialties that originally surveyed the codes. The current valuation of CPT code 11980 (*Subcutaneous hormone pellet implantation (implantation of estradiol and/or testosterone pellets beneath the skin)*) was reaffirmed by the RUC as the physician work had not changed since the last review. The CPT Editorial Panel revised the other three existing codes in the family and created six additional add-on codes to describe orthopaedic drug delivery. These codes were surveyed and reviewed for the October 2018 RUC meeting.

CPT code 11980 (*Subcutaneous hormone pellet implantation (implantation of estradiol and/or testosterone pellets beneath the skin)*) with the current work value of 1.10 RVUs and 12 minutes of intraservice time, and 27 minutes of total time, was determined to be unchanged since last reviewed and was recommended by the RUC to be maintained. We concur. We did not propose any direct PE refinements to CPT code 11980. CPT code 11981 (*Insertion, non-biodegradable drug delivery implant*) has a current work RVU of 1.48, with 39 minutes of total physician time. The specialty society survey recommended a work RVU of 1.30, with 31 minutes of total physician time and 5 minutes of intraservice time. The RUC recommended a work RVU of 1.30 (25th percentile), with 30 minutes of total physician time and 5 minutes of intraservice time. For comparable reference CPT codes to CPT code 11981, the RUC and the survey respondents had selected CPT code 55876 (*Placement of interstitial device(s) for radiation therapy guidance (e.g., fiducial markers, dosimeter), prostate (via needle, any approach), single or multiple (work RVU = 1.73, 20 minutes intraservice time and 59 total minutes)*) and CPT code 57500 (*Biopsy of cervix, single or multiple, or local excision of lesion, with or without fulguration (separate procedure) (work RVU = 1.20, 15 minutes intraservice time and 29 total minutes)*). The RUC further offered for comparison, CPT code 67515 (*Injection of medication or other substance into Tenon's capsule (work RVU = 1.40 (from CY 2018), 5 minutes intraservice time and 21 minutes total time*)), CPT code 12013 (*Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.6 cm to 5.0 cm (work RVU = 1.22 and 27 total minutes)*) and CPT code 12004 (*Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 7.6 cm to 12.5 cm) (work RVU = 1.44 and 29 total minutes)*). In addition, we offered CPT code 67500 (*Injection of medication into cavity behind eye) (work RVU = 1.18 and 5 minutes intraservice time and 33 total minutes*) for reference. Given that the CPT code 11981 incurs a 23 percent reduction in the new total physician time and with reference to CPT code 67500, we proposed a work RVU of 1.14, and accepted the survey-recommended 5 minutes for intraservice time and 30 minutes of total time. We did not propose any direct PE refinements to CPT code 11981.

CPT code 11982 (*Removal, non-biodegradable drug delivery implant*) has a current work RVU of 1.78, with 44 minutes of total physician time. The specialty society survey recommended a work RVU of 1.70 RVU, with 10 minutes of intraservice time and 34 minutes of total physician time. The RUC also recommended a work RVU of 1.70, with 10 minutes of intraservice time and 33 minutes of total physician time. The RUC confirmed that removal (CPT code 11982), requires more intraservice time to perform than the insertion (CPT code 11981). For comparable reference codes to CPT code 11982, the RUC and the survey respondents had selected CPT code 54150 (*Circumcision, using clamp or other device with regional dorsal penile or ring block) (work RVU = 1.90, 15 minutes intraservice time and 45 total minutes)*) and CPT code 12004 (*Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 7.6 cm to 12.5 cm) (work RVU = 1.44, with 17 minutes intraservice time and 29 minutes total time)*). We offered CPT code 64486 (*Injections of local anesthetic for pain control and abdominal wall analgesia on one side) (work RVU = 1.27, 10 minutes intraservice time and 35 total minutes)*) for reference. Given that the CPT code 11982 incurs a 25 percent reduction in the new total physician time and with reference to CPT code 64486, we proposed a work RVU of 1.34, and accepted the RUC-recommended 10 minutes for intraservice time and 33 minutes of total time. We did not propose any direct PE refinements to CPT code 11982.

CPT code 11983 (*Removal with reinsertion, non-biodegradable drug delivery implant*) has a current work RVU of 3.30, with 69 minutes of total physician time. The specialty society survey recommended a work RVU of 2.50 RVU, with 15 minutes of intraservice time and 41 minutes of total physician time. The RUC also recommended a work RVU of 2.10, with 15 minutes of intraservice time and 40 minutes of total physician time. The RUC confirmed that CPT code 11983 requires more intraservice time to perform than the insertion CPT code 11981. For comparable reference codes to CPT code 11983, the RUC and the survey respondents had selected CPT code 55700 (*Biopsy, prostate; needle or punch, single or multiple, any approach) (work RVU = 2.50, 15 minutes intraservice time and 35 total minutes)*), CPT code 54150 (*Circumcision, using clamp or other device with regional dorsal penile or ring block) (work RVU = 1.90, 15 minutes intraservice time and 45 total minutes)*) and CPT code 52281 (*Cystourethroscopy, with calibration and/or dilation of urethral stricture or stenosis, with or without meatotomy, with or without injection procedure for cystography, male or female) (work RVU = 2.75 and 20 minutes intraservice time and 46 minutes total time)*). We offered CPT code 62324 (*Insertion of indwelling catheter and administration of substance into spinal canal of upper or middle back) (work RVU = 1.89, 15 minutes intraservice time and 43 total minutes)*) for reference. Given that the CPT code 11983 incurs a 42 percent reduction in new total physician time and with reference to CPT code 62324, we proposed a work RVU of 1.91, and accepted the RUC-recommended 15 minutes for intraservice time and 40 minutes of total time. We did not propose any direct PE refinements to CPT code 11983.

The new proposed add-on CPT codes 20700–20705 are intended to be typically reported with CPT codes 11981–11983, with debridement or arthrotomy procedures done primarily by orthopedic surgeons. The specialty society's survey for CPT code 20700 (*Manual preparation and insertion of drug delivery device(s), deep (e.g., subfascial)*) found a 2.00 work RVU value at the median and a 1.50 work

RVU value at the 25th percentile, with 20 minutes of intraservice time and 30 minutes of total physician time, for the preparation of the antibiotic powder and cement, rolled into beads and threaded onto suture for insertion into the infected bone. The RUC recommended a work RVU of 1.50, with 20 minutes of intraservice time and 27 minutes of total physician time. The RUC's reference CPT codes included CPT code 11047 (*Debridement, bone (includes epidermis, dermis, subcutaneous tissue, muscle and/or fascia, if performed); each additional 20 sq cm, or part thereof) (work RVU = 1.80, and 30 minutes intraservice time)*), CPT codes 64484 (*Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); lumbar or sacral, each additional level) (work RVU = 1.00 and 10 minutes intraservice time)*), and CPT code 36227 (*Selective catheter placement, external carotid artery, unilateral, with angiography of the ipsilateral external carotid circulation and all associated radiological supervision and interpretation) (work RVU = 2.09 and 20 minutes intraservice time)*). Our review of similar add-on CPT codes yielded CPT code 64634 (*Destruction of upper or middle spinal facet joint nerves with imaging guidance) (work RVU = 1.32 and 20 minutes intraservice time)*). We proposed for CPT code 20700, a work RVU of 1.32, and accept the RUC-recommended 20 minutes of intraservice time and 27 minutes of total time.

The specialty society's survey for CPT code 20702 (*Manual preparation and insertion of drug delivery device(s), intramedullary*) found a 3.25 work RVU value at the median and a 2.50 work RVU value at the 25th percentile, with 25 minutes of intraservice time and 32 minutes of total physician time, for the preparation of the ''antibiotic nail'' ready for insertion into the intramedullary canal with fluoroscopic guidance. The RUC recommended a work RVU of 2.50, with 25 minutes of intraservice time and 32 minutes of total physician time. The RUC's reference CPT codes included CPT code 11047 (*Debridement, bone (includes epidermis, dermis, subcutaneous tissue, muscle and/or fascia, if performed); each additional 20 sq cm, or part thereof) (work RVU = 1.80, and 30 minutes intraservice time)*), CPT code 57267 (*Insertion of mesh or other prosthesis for repair of pelvic floor defect, each site (anterior, posterior compartment), vaginal approach (work RVU = 4.88 and 45 minutes intraservice time)*), and CPT code 36227 (*Selective catheter placement, external carotid artery, unilateral, with angiography of the ipsilateral external carotid circulation and all associated radiological supervision and interpretation (work RVU = 2.09 and 15 minutes intraservice time)*). We find that the reference CPT code 11047, with 30 minutes of intraservice time, is suitable, but we adjust our proposed work RVU of 1.70 to account for the 25 minutes, instead of our reference code's 30 minutes of intraservice time (and the 32 minutes of total time), for CPT code 20702.

The specialty society's survey for CPT code 20704 (*Manual preparation and insertion of drug delivery device(s), intra-articular*) found a 4.00 work RVU value at the median and a 2.60 work RVU value at the 25th percentile, with 30 minutes of intraservice time and 37 minutes of total physician time, for the preparation of the antibiotic cement inserted into a pre-fabricated silicone mold, when after setting up, will be cemented to the end of the bone (with the joint). The RUC recommended a work RVU of 2.60, with 30 minutes of intraservice time and 37 minutes of total physician time. The RUC's reference CPT codes included CPT code 11047 (*Debridement, bone (includes epidermis, dermis, subcutaneous tissue, muscle and/or fascia, if performed); each additional 20 sq cm, or part thereof (work RVU = 1.80, and 30 minutes intraservice time)*), CPT code 57267 (*Insertion of mesh or other prosthesis for repair of pelvic floor defect, each site (anterior, posterior compartment), vaginal approach (work RVU = 4.88 and 45 minutes intraservice time)*), and CPT code 36227 (*Selective catheter placement, external carotid artery, unilateral, with angiography of the ipsilateral external carotid circulation and all associated radiological supervision and interpretation (work RVU = 2.09 and 20 minutes intraservice time)*). We find that the reference CPT code 11047, with 30 minutes of intraservice time, is a suitable guide and we proposed the work RVU of 1.80 with the RUC-recommended 30 minutes of intraservice time and 37 minutes of total time, for CPT code 20704.

The specialty society's survey for CPT code 20701 (*Removal of drug delivery device(s), deep (e.g., subfascial)*) found a 1.75 work RVU value at the median and a 1.13 work RVU value at the 25th percentile, with 15 minutes of intraservice time and 18 minutes of total physician time. The work includes a marginal dissection to expose the drug delivery device and to remove it. The RUC recommended a work RVU of 1.13, with 18 minutes of total physician time and 15 minutes of intraservice time. The RUC's reference CPT codes included CPT code 11047 (*Debridement, bone (includes epidermis, dermis, subcutaneous tissue, muscle and/or fascia, if performed); each additional 20 sq cm, or part thereof (work RVU = 1.80, and 30 minutes intraservice time)*), CPT code 64484 (*Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); lumbar or sacral, each additional level (work RVU = 1.00 and 10 minutes intraservice time)*), and CPT code 64480 (*Injection(s), anesthetic agent and/or steroid, transforaminal epidural, with imaging guidance (fluoroscopy or CT); cervical or thoracic, each additional level (work RVU = 1.20 and 15 minutes intraservice time)*). We proposed the RUC-recommended work RVU of 1.13 with 15 minutes of intraservice time and 18 minutes of total time for 20701.

The specialty society's survey for CPT code 20703 (*Removal of drug delivery device(s), intramedullary*) found a 2.50 work RVU value at the median and a 1.80 work RVU value at the 25th percentile, with 20 minutes of intraservice time and 23 minutes of total physician time. The work includes a marginal dissection, in addition to what was in the base procedure, to loosen and expose the drug delivery device and to remove it, any remaining drug delivery device shards that may have broken off. The RUC recommended a work RVU of 1.80, with 20 minutes of intraservice time and 23 minutes of total physician time. The RUC's reference CPT codes included CPT code 11047 (*Debridement, bone (includes epidermis, dermis, subcutaneous tissue, muscle and/or fascia, if performed); each additional 20 sq cm, or part thereof (work RVU = 1.80, and 30 minutes intraservice time)*), CPT codes 37253 (*Intravascular ultrasound (noncoronary vessel) during diagnostic evaluation and/or therapeutic intervention, including radiological supervision and interpretation; each additional noncoronary vessel (work RVU = 1.44 and 20 minutes intraservice time)*), and CPT code 36227 (*Selective catheter placement, external carotid artery, unilateral, with angiography of the ipsilateral external carotid circulation and all associated radiological supervision and interpretation (work RVU = 2.09 and 15 minutes intraservice time)*). We proposed the RUC-recommended work RVU of 1.80 with 20 minutes of intraservice time and 23 minutes of total time for 20703.

The specialty society's survey for CPT code 20705 (*Removal of drug delivery*

device(s), intra-articular) found a 3.30 work RVU value at the median and a 2.15 work RVU value at the 25th percentile, with 25 minutes of intraservice time and 28 minutes of total physician time. The work includes the removal of the intra-articular drug delivery device that is cemented to both sides of the joint without removing too much bone in the process. The RUC recommended a work RVU of 2.15, with 25 minutes of intraservice time and 28 minutes of total physician time. The RUC's reference CPT codes included CPT code 11047 (*Debridement, bone (includes epidermis, dermis, subcutaneous tissue, muscle and/or fascia, if performed); each additional 20 sq cm, or part thereof (work RVU = 1.80, and 30 minutes intraservice time)*), CPT code 36476 (*Endovenous ablation therapy of incompetent vein, extremity, inclusive of all imaging guidance and monitoring, percutaneous, radiofrequency; subsequent vein(s) treated in a single extremity, each through separate access sites (work RVU = 2.65 and 30 minutes intraservice time)*), and CPT code 36227 (*Selective catheter placement, external carotid artery, unilateral, with angiography of the ipsilateral external carotid circulation and all associated radiological supervision and interpretation (work RVU = 2.09 and 15 minutes intraservice time)*). We proposed the RUC-recommended work RVU of 2.15 with 25 minutes of intraservice time and 28 minutes of total time for 20705.

We received public comments on the proposed valuation of the codes in the Drug Delivery Implant Procedures family. The following is a summary of the comments we received and our responses.

Comment: In an overall comment to code valuations, but also pertinent to this section, one commenter stated that they are increasingly concerned that CMS is eschewing the bedrock principles of valuation within the RBRVS (namely, magnitude estimation, survey data and clinical expertise) in favor of arbitrary mathematical formulas and in their opinion, make a distinction in the different types of physician time, which are ''CMS/Other'' time source, ''Harvard'' time source, and ''RUC'' time source (from physician surveys).

Response: As we have discussed in previous rules, we agree that it is important to use the most recent data available regarding time, and we note that when many years have passed between when physician times are measured, significant discrepancies can occur. However, we also continue to believe that our operating assumption regarding the validity of the existing time values as a point of comparison is critical to the integrity of the current relative value system.

The physician times and intensities currently associated with codes, play important roles in PFS ratesetting in their comparativeness to each other, in establishing work RVUs. If we were to operate under the assumption that previously recommended work times had routinely been overestimated, this would undermine the relativity of the work RVUs on the PFS. Given that the process under which codes are often valued by comparison to codes with similar times, we acknowledge the distinction between ''CMS/Other'' times, ''Harvard'' times, and ''RUC'' physician surveyed times, but we cannot apply different validation weights to any of these labels. They are all physician times data collected over many years. We understand that some time values may not have been reviewed or re-surveyed in a number of years, but that alone is not an indicator of how accurate or inaccurate a time value may be. We believe that over the years as more codes are being reviewed and examined, that collectively the entire fee schedule of procedure codes should all naturally align themselves into a very reliable and more accurate system reflecting every code's relativity to one another (in their work RVUs, in their procedure times, and in their work intensities).

We believe that it is crucial that the code valuation process with existing work times and work RVUs in the PFS ratesetting processes are accurate. We recognize that adjusting work RVUs for changes in physician times is not always a straightforward process and that the intensity associated with changes in time is not necessarily always linear, which is why we always try to apply various methodologies to identify several potential work values for individual codes. CMS CPT code review not only examines the relationships between work, time, and intensity, but we also look at magnitude and rank order anomalies particularly in families or groups of codes that are closely related, but may differ slightly in degrees found in their clinical descriptions and possibly in the typical beneficiary populations that each code might serve. Among these codes, we try to keep the differences in times, work, and intensity properly distant between each other. In some cases, where there are marked improvements in medical techniques and technological assistance, we may see better efficiencies in physician's work, and thus decreases in physician's times, but we also recognize that some improvements may introduce greater complexity and either a greater intensity and/or increase in physician times.

We reiterate that we believe it would be irresponsible to ignore or discount ''CMS/Other'' times or ''Harvard'' times in our data system and that we need to consider all times and all intensities and all procedure code's clinically relevant relatedness (or non-relatedness) to each other, in establishing more refined work RVUs for PFS services. Also note that ''RUC'' physician times are not always necessarily AMA RUC surveyed times. CMS may have adjusted AMA RUC surveyed times in our annual review of all HCPCS codes, as well as times that the AMA labels as ''Harvard'' or ''CMS/Other'' physician times.

Comment: One commenter stated the current source of time for CPT code 11981 is CMS/Other. The commenter also stated the crosswalk or methodology used in the original valuation of this service is unknown and not resource-based; therefore, it is invalid to compare the current time and work to the surveyed time and work. The commenter noted this code's source of time is CMS/Other, implying that the time was merely crosswalked or selected by a single CMS staffer some time ago, and CMS should not compare the valid survey time to the initial CMS/Other time because the initial CMS/Other source data is flawed and has no validity for comparison.

Response: The current physician time for CPT code 11981 is 39 minutes of total time and the current work RVUs is 1.48. The AMA RUC's new recommended times are 5 minutes intra-service time and 30 minutes total time (surveyed total time was 31 minutes). We accept the AMA RUC newly surveyed-recommended times. The AMA RUC selected multiple reference CPT codes 55876, 57500, 67515, 12013, and 12004 that they believe to be comparable to CPT code 11981. We selected the reference CPT code 67500, with 5 minutes intra-time and 33 minutes total time, which we believe to be a better reference code and is clearly comparable to the accepted recommended times for CPT code 11981. CPT code 67500 was last reviewed in 2005 and the time source was from the ''RUC'' who no doubt surveyed this code at that time, so CPT code 67500's time source is not ''CMS/Other'', which we do not believe is material to selecting a reference code for physician work and time. As discussed above, we believe there is no comparison flaw in time or work RVUs, based on the AMA RUC's distinction labeling of ''RUC'' times, ''CMS/Other

times'', or ''Harvard'' times. We believe that it is crucial that the code valuation process take place with the understanding that all existing work times, used in the PFS ratesetting processes, are accurate. Our reference CPT code 67500's work RVU is 1.18.

Comment: Some commenters stated that CPT code 11981 is not clinically related to our reference code of CPT code 67500, as it relates to both the physician description of work and the typical patient population treated with this service.

Response: As part of our review, we look for comparable codes that are similar in physician service times, work RVUs, work intensity, and clinical similarity. As discussed above, we believe there is no comparison flaw in time or work RVUs, based on the AMA RUC's distinction labeling of ''RUC'' times, ''CMS/Other times'', or ''Harvard'' times. We believe that it is crucial that the code valuation process take place with the understanding that all existing work times, used in the PFS ratesetting processes, are accurate. We continue to believe that CPT code 67500 is the better reference code for us to use to establish an appropriate valuation for CPT code 11981. Both codes require 5 minutes intra-service time and CPT code 11981 takes 30 minutes total time while CPT code 67500 takes a similar amount of 33 minutes of total time.

While the commenters object to CMS' reference CPT code of 67500 as being clinically related to CPT code 11981, the commenter's additional selected CPT reference codes of 67515, 12013, and 12004, are also very different from CPT code 11981. There appears to be a discrepancy in the AMA RUC's CPT (referencing) code 67515 (*Injection of medication or other substance into Tenon's capsule, work RVU = 1.40, 5 minutes intra-service time and 21 minutes total time).* CMS' data indicates a different work RVU and physician times for this code. For CPT code 67515, we have on record for work RVU = 0.75, 3 minutes intra-service time and 13 minutes total time.

The AMA RUC CPT (referencing) codes 12013 and 12004 appears to be at least partially valued on the length of a wound repair (2.6 cm to 5.0 cm or 7.6 cm to 12.5 cm), and assuming that the longer the wound repair is, the more work and physician time is required to perform the procedure. CPT code 11981 does not have this ''size length'' characteristic, so we question if CPT codes 12013 or 12004 more or less are a valid comparison referencing codes to CPT code 11981 where there is not this ''size length'' characteristic. As we have stated, the clinical relatedness of codes are not always exact, nor always available.

Comment: The RUC survey respondents offered CPT code 55876 (*Placement of interstitial device(s) for radiation therapy guidance (e.g., fiducial markers, dosimeter), prostate (via needle, any approach), single or multiple (work RVU = 1.73, 20 minutes intra-service time and 59 total minutes)*) and 57500 (*Biopsy of cervix, single or multiple, or local excision of lesion, with or without fulguration (separate procedure) (work RVU = 1.20, 15 minutes intra-service time and 29 total minutes)*) as referencing codes to CPT code 11981.

The AMA RUC recommendation offered CPT code 67515 (*Injection of medication or other substance into Tenon's capsule (work RVU = 1.40, 5 minutes intra-service time and 21 minutes total time)*), MPC codes 12013 (*Simple repair of superficial wounds of face, ears, eyelids, nose, lips and/or mucous membranes; 2.6 cm to 5.0 cm (work RVU = 1.22, 15 minutes intra-service time and 27 total minutes)*) and 12004 (*Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 7.6 cm to 12.5 cm (work RVU = 1.44 15 minutes intra-service time and 29 total minutes)*). The AMA RUC offer these reference codes to have similar physician work and total time to CPT code 11981.

Response: All of the commenter's reference comparison CPT codes have far more intra-service time than CPT code 11981 intra-service time of 5 minutes, except for CPT code 67515, but this code appears to only have 3 minutes of intra-service time and 0.75 work RVUs. CMS' CPT (reference) code of 67500 appears to have the closest physician times to CPT code 11981 and their work RVUs should be similar.

After consideration of the public comments for CPT code 11981, we are finalizing the proposed work RVU as 1.14.

Comment: Several commenters stated the current source of time for CPT code 11982 is CMS/Other. Commenters also stated the crosswalk or methodology used in the original valuation of this service is unknown and not resource-based; therefore, it is invalid to compare the current time and work to the surveyed time and work. Commenters noted this code's source of time is CMS/Other, implying that the time was merely crosswalked or selected by a single CMS staffer some time ago. CMS should not compare the valid survey time to the initial CMS/Other time because the initial CMS/Other source data is flawed and has no validity for comparison.

Response: The current physician times for CPT code 11982 are 44 minutes of total time and the current work RVUs is 1.78. The AMA RUC's new recommended times are 10 minutes intra-service time and 33 minutes total time (surveyed total time was 34 minutes). CMS accepts the AMA RUC newly surveyed recommended times and used CPT reference code 64486, with 10 minutes intra-service time and 35 minutes total time, which are clearly comparable to the accepted recommended times for CPT code 11982. CPT code 64486 was introduced by CPT in 2014 and the time source was from the ''RUC'' who no doubt surveyed this code at that time, so CPT code 64486's time source is not ''CMS/Other'', which we do not believe is material to selecting a reference code for physician work and time. As part of our review, we look for comparable codes that are similar in physician service times, work RVUs, work intensity, and clinical relatedness. As discussed above, we believe there is no comparison flaw in time or work RVUs, based on the AMA RUC's distinction labeling of ''RUC'' times, ''CMS/Other times'', or ''Harvard'' times. We believe that it is crucial that the code valuation process take place with the understanding that all existing work times, used in the PFS ratesetting processes, are accurate and there is no comparison flaw. Our reference CPT code 64486's work RVU is 1.27.

Comment: Commenters stated that CPT code 11982 is essentially not clinically related to our reference code of CPT code 64486, in physician description of work and the typical patient population that they treat.

Response: As part of our review, we look for comparable codes that are similar in physician service times, work RVUs, work intensity, and are clinically related. As discussed above, we believe there is no comparison flaw in time or work RVUs, based on the AMA RUC's distinction labeling of ''RUC'' times, ''CMS/Other times'', or ''Harvard'' times. We believe that it is crucial that the code valuation process take place with the understanding that all existing work times, used in the PFS ratesetting processes, are accurate. CPT codes 11982 and 64486 are not clinically related, but their work times and work RVUs are similar. The commenter's selected reference CPT codes of 54150 and 12004, can also be said to be very similar to CPT code 11982 as well. CPT (referencing) code 54150 appears to apply only to the male patient population, where CPT code 11982

applies to both the male and female population. CPT (referencing) code 12004 appears to be at least partially valued on the length of a wound repair (7.6 cm to 12.5 cm), assuming that the longer the wound repair is, the more work and physician time is required to perform the procedure, but CPT code 11982 does not have this ''size length'' characteristic. As previously stated, clinical relatedness between codes are not always exact, nor always available for exact comparison and we continue to believe that CMS' reference CPT code 64486 is equally as valid as the AMA RUC's reference CPT codes.

Comment: The AMA RUC and the survey respondents offered CPT code 54150 (*Circumcision, using clamp or other device with regional dorsal penile or ring block (work RVU = 1.90, 15 minutes intra-service time and 45 total minutes)*) and CPT code 12004 (*Simple repair of superficial wounds of scalp, neck, axillae, external genitalia, trunk and/or extremities (including hands and feet); 7.6 cm to 12.5 cm (work RVU = 1.44, with 17 minutes intra-service time and 29 minutes total time)*) as comparable reference codes to CPT code 11982.

Response: Both AMA RUC reference codes have more intra-service times than CPT code 11982, so accordingly, they have more work RVUs. We believe CPT code 11982 with 10 minutes of intra-service time should have a work RVU value that is less than the AMA RUC reference codes and less than their recommended 1.70 RVUs. CPT code 64486 physician times are very similar to CPT code 11982's physician times and their work RVUs should be similar.

After consideration of the public comments for CPT code 11982, we are finalizing its work RVU, as proposed, to 1.34 RVUs.

Comment: One commenter stated the current source of time for CPT code 11983 is CMS/Other and the crosswalk or methodology used in the original valuation of this service is unknown and not resource-based; therefore, it is invalid to compare the current time and work to the surveyed time and work. The commenter further stated this code's source of time is CMS/Other, implying that the time was merely crosswalked or selected by a single CMS staffer some time ago. CMS should not compare the valid survey time to the initial CMS/Other time because the initial CMS/Other source data is flawed and has no validity for comparison.

Response: The current physician times for CPT code 11983 are 49 minutes of total time and the current work RVUs is 3.30. The AMA RUC's new recommended times are 15 minutes intra-service time and 40 minutes total time (surveyed total time was 41 minutes). We accept the AMA RUC newly surveyed recommended times and used CPT code 62324, with 15 minutes intra-service time and 43 minutes total time, which are comparable to the AMA RUC recommended times for CPT code 11983. CPT code 62324 was introduced by CPT in 2017 and the time source was from the ''RUC'' who no doubt surveyed this code at that time, so CPT code 62324's time source is not ''CMS/Other'', which we do not believe is material to selecting a reference code for physician work and time. As part of our review, we look for comparable codes that are similar in physician service times, work RVUs, work intensity, and clinically similarity. As discussed above, we believe there is no comparison flaw in time or work RVUs, based on the AMA RUC's distinction labeling of ''RUC'' times, ''CMS/Other times'', or ''Harvard'' times. We believe that it is crucial that the code valuation process take place with the understanding that all existing work times, used in the PFS ratesetting processes, are accurate. We continue to believe that CPT code 62324 is the better reference code to CPT code 11983. Our reference CPT code 62324's work RVU is 1.89.

Comment: Commenters stated that the intensity of the work required to perform CPT code 11983 is not comparable to CMS' reference to injection of anesthetic code 62324 and yet in their original AMA RUC survey for CPT code 11983, the commenter stated the survey respondents indicated that CPT code 11983 (originally 15 minutes intra-service time, 69 minutes total time, and 3.30 work RVUs) overall requires the same or more intensity and complexity to perform as CPT code 55700 (15 minutes of intra-service time, 35 minutes of total time, and 2.50 work RVUs). The RUC noted that since CPT code 11983 has such a low intra-service time and is a 000-day service comparing the intra-service per unit of time (IWPUT) is not a useful comparison.

Response: The commenters stated that CPT (CMS reference) code 62324 (15 minutes intra-service time, 43 minutes total time and their work RVU is 1.89) is less intensive than CPT code 11983 and thus their work RVUs are not comparable. But, the original selected surveyees' reference CPT code of 55700 (15 minutes intra-service time, 35 minutes total time and work RVU is 2.50) has been stated as the same or less intensive than CPT code 11983. Therefore, we question if that is true. If CPT code 55700 (2.50 work RVUs) is the same or less intensive than CPT code 11983, CPT code 11983's proposed work RVU should be 2.50 or greater. The RUC recommended work RVU for CPT code 11983 is 2.10. This is less than 2.50. The survey median yielded 2.50. Further, the AMA RUC asserts that the work RVU for CPT code 11983 should be higher than 1.89 (62324) and also higher than 2.50 (55700) but recommends a proposed work RVU of 2.10. The AMA RUC noted that since CPT code 11983 has such a low intra-service time and is a 000-day service, comparing the intra-service per unit of time (IWPUT) is not a useful comparison. (The AMA RUC also referenced CPT code 54150 (work RVU is 1.90) and CPT code 52281 (work RVU is 2.75) as potential reference codes.

As part of our review, we look for comparable codes that are similar in physician service times, work RVUs, work intensity, and are clinical related. As discussed above, we believe there is no comparison flaw in time or work RVUs, based on the AMA RUC's distinction labeling of ''RUC'' times, ''CMS/Other times'', or ''Harvard'' times. We believe that it is crucial that the code valuation process take place with the understanding that all existing work times, used in the PFS ratesetting processes, are accurate and there is no comparison flaw. As for the question of our selection of CPT code 62324 being more or less clinically related to CPT code 11983, as we have previously stated in this regard, perfect clinical relatedness is not always available in selecting a reference code. The same is true with the AMA RUC selection of reference code(s).

After consideration of the public comments for CPT code 11983, we are finalizing the work RVU, as proposed, of 1.91 RVUs.

Comment: One commenter stated that CMS may have a typo in the text of the proposed rule because the CY 2020 PFS proposed rule Physician Time file indicated the same time as the RUC recommended with a total of 27 minutes for CPT code 20700.

Response: The commenter is correct that there was a typo in the text concerning CPT code 20700 (206X0) where in one sentence the total physician time was stated as 27 minutes and then in a subsequent sentence it was stated as 20 minutes. The typo has been corrected. Upon further review of the AMA RUC recommendations and CMS own examination, we believe that our proposed RVU value of 1.32 work RVUs on balance is not entirely supportable, and we are instead adopting the AMA RUC recommended

value of 1.50 work RVUs for CPT code 20700.

Comment: Concerning the paragraph on CPT code 20702 (206X1), commenters noted that there were two typos in the proposed rule for the CMS reference CPT code 11047. The commenter stated that the RUC total time recommended for CPT code 20702 (206X1) is 32 minutes not 38 minutes and the total time for CMS reference code 11047 is 31 minutes not 32 minutes, but both are listed correctly in the CY 2020 PFS proposed rule Physician Time file.

Response: The commenter is correct that there was a typo in the text concerning CPT code 20702 (206X1) where in one sentence the total physician time was stated as 38 minutes when it was actually 32 minutes. The 38 minutes was from the survey total time for this code, and it was inadvertently used. The typo has been corrected. Upon further review of the AMA RUC recommendations and CMS' own examination, we believe that our proposed value of 1.70 work RVUs on balance is not entirely supportable, and we are instead adopting the AMA RUC recommended value of 2.50 work RVUs for CPT code 20702.

Comment: One commenter noted that there is a typo in the text of the proposed rule for CPT code 20704 (206X2). The commenter stated the RUC recommended 5 minutes evaluation pre-service time, 30 minutes intra-service time and 2 minutes post-service time, totaling 37 minutes for CPT code 20704 (206X2), not 45 minutes. The physician time for CPT code 20704 (206X2) is listed correctly in the CY 2020 PFS proposed rule Physician Time file.

Response: The commenter is correct that there was a typo in the text concerning CPT code 20704 (206X2) where in one sentence the total physician time was stated as 45 minutes when it was actually 37 minutes. The 45 minutes was this from this CPT code's surveyed total time and the actual AMA RUC recommended total time was 37 minutes. The typo has been corrected. Upon further review of the AMA RUC recommendations and CMS' own examination, we believe our proposed value of 1.80 work RVUs on balance is not entirely supportable and we are instead adopting the AMA RUC recommended value of 2.60 work RVUs for CPT code 20704.

After consideration of the public comments, we are accepting the AMA RUC's surveyed times for CPT codes 11981, 11982, and 11983, however, we do not agree with the AMA RUC recommended work RVUs, and we are finalizing our proposed work RVUs of 1.14 for CPT code 11981, 1.34 for CPT code 11982, and 1.91 for CPT code 11983. For CPT codes 20700 to 20705, we agree with and are finalizing the AMA RUC's recommended work RVUs of 1.50 for CPT code 20700, 1.13 for CPT code 20701, 2.50 for CPT code 20702, 1.80 for CPT code 20703, 2.60 for CPT code 20704, and 2.15 for CPT code 20705. We recognize that the manual preparation and insertion of drug delivery device(s) should take more time than their removal code counterparts, and while we accepted the work RVUs for the removal codes, on the whole, they did not make as much sense in their relativity to each other, with our proposed work RVUs for the insertions. The AMA RUC recommended insertion work RVUs are a better fit with the removal work RVUs.

(3) Bone Biopsy Trocar-Needle (CPT Codes 20220 and 20225)

In October 2017, CPT code 20225 (*Biopsy, bone, trocar, or needle; deep (e.g., vertebral body, femur)*) was identified as being performed by a different specialty than the one that originally surveyed this service. CPT code 20220 (*Biopsy, bone, trocar, or needle; superficial (e.g., ilium, sternum, spinous process, ribs)*) was added as part of the family, and both codes were surveyed and reviewed for the January 2019 RUC meeting.

We disagree with the RUC-recommended work RVU of 1.93 for CPT code 20220 and we proposed a work RVU of 1.65 based on a crosswalk to CPT code 47000 (*Biopsy of liver, needle; percutaneous*). CPT code 47000 shares the same intraservice time of 20 minutes with CPT code 20220 and has slightly higher total time at 55 minutes as compared to 50 minutes. It is also one of the top reference codes selected by the survey respondents. In our review of CPT code 20220, we noted that the recommended intraservice time is decreasing from 22 minutes to 20 minutes (9 percent reduction), and that the recommended total time is increasing from 49 minutes to 50 minutes (2 percent increase). However, the RUC-recommended work RVU is increasing from 1.27 to 1.93, which is an increase of 52 percent. Although we do not imply that the decrease in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work are time and intensity, changes in surveyed work time should be appropriately reflected in the proposed work RVUs.

In the case of CPT code 20220, we believe that it was more accurate to propose a work RVU of 1.65, based on a crosswalk to CPT code 47000, to account for the decrease in the surveyed intraservice work time. We believe that the work carried out by the practitioner in CPT code 47000 is potentially more intense than the work performed in CPT code 20220, as the reviewed code is a superficial bone biopsy as opposed to the non-superficial biopsy taking place on an internal organ (the liver) described by CPT code 47000. We also note that the survey respondents considered CPT code 47000 to have similar intensity to CPT code 20220: 50 percent or more of the survey respondents rated the two codes as ''identical'' under the categories of Mental Effort and Judgment, Physical Effort Required, and Psychological Stress, along with a plurality of survey respondents rating the two codes as identical in the category of Technical Skill Required. We believe that this provides further support for our belief that CPT code 20220 should be crosswalked to CPT code 47000 at the same work RVU of 1.65.

We disagree with the RUC-recommended work RVU of 3.00 for CPT code 20225 and we proposed a work RVU of 2.45 based on a crosswalk to CPT code 30906 (*Control nasal hemorrhage, posterior, with posterior nasal packs and/or cautery, any method; subsequent*). CPT code 30906 shares the same intraservice time of 30 minutes and has 1 fewer minute of total time as compared to CPT code 20225. When reviewing this code, we observed a pattern similar to what we had seen with CPT code 20220. We note that the recommended intraservice time for CPT code 20225 is decreasing from 60 minutes to 30 minutes (50 percent reduction), and the recommended total time is decreasing from 135 minutes to 64 minutes (53 percent reduction); however, the RUC-recommended work RVU is increasing from 1.87 to 3.00, which is an increase of about 60 percent. As we noted earlier, we do not believe that the decrease in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, and we did not propose a linear decrease in the work valuation based on these time ratios. Indeed, we agree with the RUC recommendation that the work RVU of CPT code 20225 should increase over the current valuation. However, we believe that since the two components of work are time and intensity, significant decreases in time should be appropriately reflected in changes to the work RVUs, and we do not believe that it would be accurate to propose the recommended work RVU of 3.00 given

the significant decreases in surveyed work time.

Instead, we believe that it would be more accurate to propose a work RVU of 2.45 for CPT code 20225 based on a crosswalk to CPT code 30906. We note that this proposed work RVU is a very close match to the intraservice time ratio between the two codes in the family; we proposed a work RVU of 1.65 for CPT code 20220 with 20 minutes of intraservice work time, and a work RVU of 2.45 for CPT code 20225 with 30 minutes of intraservice work time. (The exact intraservice time ratio calculates to a work RVU of 2.47.) We believe that the proposed work RVUs maintain the relative intensity of the two codes in the family, and better preserve relativity with the rest of the codes on the PFS.

For the direct PE inputs, we proposed to replace the bone biopsy device (SF055) supply with the bone biopsy needle (SC077) in CPT code 20225. We note that this code currently makes use of the bone biopsy needle, and there was no rationale provided in the recommended materials to explain why it would now be typical for the bone biopsy needle to be replaced by the bone biopsy device. We proposed to maintain the use of the current supply item. We are also proposing to adopt a 90 percent utilization rate for the use of the CT room (EL007) equipment in CPT code 20225. We previously finalized a policy in the CY 2010 PFS final rule (74 FR 61754 through 61755) to increase the equipment utilization rate to 90 percent for expensive diagnostic equipment priced at more than $1 million, and specifically cited the use of CT and MRI equipment which would be subject to this utilization rate.

We received public comments on the proposed valuation of the codes in the Bone Biopsy Trocar-Needle family. The following is a summary of the comments we received and our responses.

Comment: Several commenters disagreed with the CMS proposed work RVU of 1.65 for CPT code 20220 and stated that CMS should instead finalize the RUC-recommended work RVU of 1.93. Commenters stated that a superficial bone biopsy as described in CPT code 20220 is more intense to perform than a liver biopsy as described in the CMS crosswalk code (47000), and that the typical indication for CPT code 20220, a potentially infectious or malignant lesion, requires a biopsy with an 11-gauge Jamshidi bone biopsy needle. Commenters stated that accurate placement and increased risk of adjacent structures results in a greater intensity of physician work relative to CPT code 47000.

Response: We appreciate the additional information from the commenters regarding the relative intensity of CPT codes 20220 and 47000. In light of this additional information, we agree with the commenters that the superficial bone biopsy service described by CPT code 20220 has a higher intensity than the liver biopsy service described by CPT code 47000. Although we stated that the crosswalk code was ''potentially more intense'' in the proposed rule, we ultimately proposed a higher intensity for CPT code 20220 than CPT code 47000 at our work RVU of 1.65. Based on the information provided by the survey respondents, who considered CPT code 47000 to have similar intensity to CPT code 20220, we continue to disagree with the RUC-recommended work RVU of 1.93, which would assign a significantly higher intensity to CPT code 20220. We continue to believe that it was more accurate to propose a work RVU of 1.65, based on the aforementioned crosswalk to CPT code 47000, which assigns both codes a similar intensity, accounts for the decrease in the surveyed intraservice work time, and incorporates the information provided by the survey respondents.

Comment: Several commenters disagreed with the CMS proposed work RVU of 2.45 for CPT code 20225 and stated that CMS should instead finalize the RUC-recommended work RVU of 3.00. Commenters stated that crosswalking a deep bone biopsy performed on patients with a destructive malignant lesion to CPT code 30906, a service used for controlling an established patient's nosebleed, was inappropriate. Commenters noted that the proposed intensity of CPT code 20225 was lower than the intensity of the crosswalk code.

Response: We disagree with the commenters that there is a meaningful difference in intensity between CPT code 20225 and our crosswalk CPT code 30906. These two codes share the same intraservice time of 30 minutes and differ by only 1 minute of total time, 64 minutes as compared to 63 minutes. The intensity of these two codes differs by less than one half of one percentage point, and it would be difficult for two procedures to match more closely on intensity (which is itself a derived number not measured directly) without sharing the same work times. We also disagree with the commenters that the choice of CPT code 30906 is an inappropriate crosswalk on clinical grounds. CPT code 30906 is far from a simple ''nosebleed'', instead describing a service in which the typical patient requires repeated treatment for control of nasal hemorrhages using anesthesia and extensive cautery. Like CPT code 20225, CPT code 30906 is a significant 0-day global procedure that requires 30 minutes of intraservice work time. We continue to believe that it was more accurate to propose a work RVU of 2.45 for CPT code 20225, based on the aforementioned crosswalk to CPT code 30906, which we believe better maintains the relative intensity of the two codes in the family, and better preserves relativity with the rest of the codes on the PFS.

Comment: Several commenters stated the crosswalk or methodology used in the original valuation of CPT code 20220 is unknown and not resource-based, and therefore, it was invalid for CMS to compare the current time and work to the surveyed time and work. Commenters stated that referencing physician times and derived intensities created almost 30 years ago under the Harvard study as a method to critique RUC recommendations was not appropriate. Commenters also stated that when CPT code 20225 was last evaluated in 1995, work times were evaluated with much less rigor, and that the near zero intensity of CPT code 20225 indicated a severely anomalous relationship between the current work value and current physician time.

Response: We disagree with the commenter that it was invalid to compare the current time and work to the surveyed time and work. We believe that it is crucial that the code valuation process take place with the understanding that the existing work times, used in the PFS ratesetting processes, are accurate. We recognize that adjusting work RVUs for changes in time is not always a straightforward process and that the intensity associated with changes in time is not necessarily always linear, which is why we apply various methodologies to identify several potential work values for individual codes. However, we reiterate that we believe it would be irresponsible to ignore changes in time based on the best data available and that we are statutorily obligated to consider both time and intensity in establishing work RVUs for PFS services. For additional information regarding the use of old work time values that were established many years ago and have not since been reviewed in our methodology, we refer readers to our discussion of the subject in the Methodology for Establishing Work RVUs section of this rule (section II.N.2. of this final rule), as well as a longer discussion in the CY 2017 PFS final rule (81 FR 80273 through 80274).

Comment: Several commenters disagreed with the CMS proposal to replace the bone biopsy device (SF055) supply with the bone biopsy needle (SC077) in CPT code 20225. Commenters stated that the bone biopsy device was necessary to perform this procedure and that the omission of this supply item when this service was last reviewed in 2004 was an oversight. Commenters stated that in the vast majority of cases, deep bone biopsies are performed percutaneously using a bone biopsy drill device that allows for access to sclerotic bony lesions in a manner that a bone biopsy needle cannot, and that failing to accurately include the devices typically used to perform this service in a nonfacility setting would likely result in the procedures being pushed to a more expensive facility setting.

Response: Although we appreciate the additional information about the bone biopsy device provided by the commenters, we disagree that its use would be typical for CPT code 20225. As we stated in the proposed rule, CPT code 20225 currently makes use of the bone biopsy needle and there was no rationale provided in the recommended materials to explain why it would now be typical for the bone biopsy needle to be replaced by the bone biopsy device. We believe it unlikely that the lack of a bone biopsy device in the current direct PE inputs for CPT code 20225 was an accidental omission, given that it has been omitted from the direct PE inputs for the past 15 years—had this been an oversight, we would expect that there would have been a previous attempt to address it. We also note that the clinical description of work for CPT code 20225 makes no mention of a bone biopsy drill, but does repeatedly mention the use of a needle for the bone biopsy. Based on this evidence, we continue to believe that the continued use of the bone biopsy needle supply would be typical for the procedure.

After consideration of the public comments, we are finalizing the work RVUs and direct PE inputs for the codes in the Bone Biopsy Trocar-Needle family as proposed.

(4) Trigger Point Dry Needling (CPT Codes 20560 and 20561)

For CY 2020, the CPT Editorial Panel approved two new codes to report dry needling of musculature trigger points. These codes were surveyed and reviewed by the HCPAC for the January 2019 RUC meeting.

We disagree with the HCPAC-recommended work RVU of 0.45 for CPT code 20560 (*Needle insertion(s) without injection(s), 1 or 2 muscle(s)*) and we proposed a work RVU of 0.32 based on a crosswalk to CPT code 36600 (*Arterial puncture, withdrawal of blood for diagnosis*). CPT code 36600 shares the identical intraservice time, total time, and intensity with CPT code 20560, which makes it an appropriate choice for a crosswalk. In our review of CPT code 20560, we compared the procedure to the top reference code chosen by the survey participants, CPT code 97140 (*Manual therapy techniques (e.g., mobilization/manipulation, manual lymphatic drainage, manual traction), 1 or more regions, each 15 minutes*). This therapy procedure has 50 percent more intraservice time than CPT code 20560, as well as higher total time; however, the recommended work RVU of 0.45 was higher than the work RVU of 0.43 for the top reference code from the survey. We did not agree that CPT code 20560 should be valued at a higher rate, and therefore, we proposed a work RVU of 0.32 based on the aforementioned crosswalk to CPT code 36600.

We disagree with the HCPAC-recommended work RVU of 0.60 for CPT code 20561 (*Needle insertion(s) without injection(s), 3 or more muscle(s)*) and we proposed a work RVU of 0.48 based on a crosswalk to CPT codes 97113 (*Therapeutic procedure, 1 or more areas, each 15 minutes; aquatic therapy with therapeutic exercises*) and 97542 (*Wheelchair management (e.g., assessment, fitting, training), each 15 minutes*). Both of these codes share the same work RVU of 0.48 and the same intraservice time of 15 minutes as CPT code 20561, with CPT code 97113 having two fewer minutes of total time and CPT code 97542 having two additional minutes of total time. We note that this proposed work RVU is an exact match of the intraservice time ratio between the two codes in the family; we proposed a work RVU of 0.32 for CPT code 20560 with 10 minutes of intraservice work time, and a work RVU of 0.48 for CPT code 20561 with 15 minutes of intraservice work time. We also considered crosswalking the work RVU of CPT code 20561 to the top reference code from the survey, CPT code 97140, at a work RVU of 0.43. However, we chose to employ the crosswalk to CPT codes 97113 and 97542 at a work RVU of 0.48 instead, due to the fact that the survey respondents indicated that CPT code 20561 was more intense than CPT code 97140.

We also proposed to designate CPT codes 20560 and 20561 as ''always therapy'' procedures, and we solicited comments on this designation. We proposed the RUC-recommended direct PE inputs for all codes in the family.

We received public comments on the proposed valuation of the codes in the Trigger Point Dry Needling family. The following is a summary of the comments we received and our responses.

Comment: Several commenters disagreed with the CMS proposed work RVU of 0.32 for CPT code 20560 and stated that CMS should instead finalize the HCPAC-recommended work RVU of 0.45. Commenters stated that CMS disregarded all factors that go into work valuation apart from time, as well as minimized the understanding of the service on the part of the survey respondents. Commenters stated that the survey respondents recognized that CPT code 20560 is more intense and complex to perform than the top reference code, CPT code 97140, because it is an invasive procedure rather than non-invasive manual therapy. Commenters stated that 70 percent of the survey respondents that selected this key reference code indicated that CPT code 20560 requires more mental effort and judgment and 84 percent indicated that more physiological stress is involved. Commenters stated that noninvasive techniques do not have the same risks or skill requirement as procedures described by 20560, and that a higher level of education for the qualified health care professional is required in addition to a higher level of skill and focus during and following the procedure when performing CPT code 20560.

Response: In response to the first issue raised by the commenters regarding work valuation based on time values, we recognize that it would not be appropriate to develop work RVUs solely based on time given that intensity is also an element of work. We clarify again that we do not treat all components of physician time as having identical intensity. If we were to disregard intensity altogether, the work RVUs for all services would be developed based solely on time values and that is definitively not the case, as indicated by the many services that share the same time values but have different work RVUs. For more details on our methodology for developing work RVUs, we refer readers to our discussion of the subject in the Methodology for Establishing Work RVUs section of this rule (section II.N.2 of this final rule), as well as a longer discussion in the CY 2017 PFS final rule (81 FR 80272 through 80277).

We also disagree with the commenters that CPT code 20560 is more intense and complex to perform than the top

reference code, CPT code 97140. Although it is true that a majority of survey respondents stated that CPT code 20560 requires more mental effort/judgment and additional physiological stress, 74 percent of the same survey respondents also stated that CPT code 20560 required less physical effort than CPT code 97140, which would suggest that the reviewed code instead has a lower intensity. We do not agree that the survey responses provide sufficient support for assigning a higher work RVU to CPT 20560 than CPT code 97140, especially given that this top reference code has 50 percent more intraservice time. We similarly do not agree that the intensity of the non-invasive manual therapy procedure described by CPT code 97140 is inherently lower on clinical grounds than the invasive procedure described by CPT code 20560. The manual therapy procedure described by CPT code 97140 has its own distinct type of skill requirements since there is more extensive direct contact between the practitioner and the patient than in CPT code 20560. We continue to believe that CPT code 20560 should not be valued at a higher rate than CPT code 97140, and therefore, we proposed a work RVU of 0.32 based on the aforementioned crosswalk to CPT code 36600.

Comment: Several commenters disagreed with the CMS proposed work RVU of 0.48 for CPT code 20561 and stated that CMS should instead finalize the HCPAC-recommended work RVU of 0.60. Commenters stated that CMS started with the work RVU they assigned to CPT code 20560 and then selected crosswalk codes that matched the intraservice time ratio between the codes in the family. Commenters stated that this is an erroneous methodology and, if finalized, would create a rank order anomaly between this and other similar services.

Response: We clarify that we did not use an intraservice time ratio to determine the work valuation of CPT code 20561. As we stated in the proposed rule, we proposed a work RVU of 0.48 based on a crosswalk to CPT codes 97113 and 97542 as both of these codes share the same work RVU of 0.48 and the same intraservice time of 15 minutes as CPT code 20561, with CPT code 97113 having 2 fewer minutes of total time and CPT code 97542 having 2 additional minutes of total time. We believe that the close match between the surveyed work time for CPT code 20561 and the work times of these two codes indicated that these three services should be valued similarly, and we disagree that the proposed work RVU would create a rank order anomaly due to the close relationship between the work times of these codes. We noted in the proposed rule that the proposed work RVU of 0.48 for CPT code 20561 is an exact match of the intraservice time ratio between the two codes in the family; however, we cited this fact as supporting evidence and not as the primary basis for valuation. Although we did not use a time ratio for work valuation in this case, we continue to believe that the use of time ratios is one of several appropriate methods for identifying potential work RVUs for particular PFS services. For more details on our methodology for developing work RVUs, we refer readers to our discussion of the subject in the Methodology for Establishing Work RVUs section of this rule (section II.N.2. of this final rule), as well as a longer discussion in the CY 2017 PFS final rule (81 FR 80272 through 80277).

Comment: Several commenters provided the same rationale for CPT code 20561 in relation to the top reference code from the survey, CPT code 97140, as they had made for CPT code 20560. Commenters stated that the survey respondents recognized that CPT code 20561 is more intense and complex to perform than the top reference code, CPT code 97140, because it is an invasive procedure rather than non-invasive manual therapy. Commenters stated that 71 percent of the survey respondents that selected this key reference code indicated that CPT code 20560 requires more mental effort and judgment and 88 percent indicated that more physiological stress is involved. Commenters stated that noninvasive techniques do not have the same risks or skill requirement as procedures described by 20561, and that a higher level of education for the qualified health care professional is required in addition to a higher level of skill and focus during and following the procedure when performing CPT code 20561.

Response: We continue to disagree with the commenters that CPT code 20561 is more intense and complex to perform than the top reference code, CPT code 97140, for many of the same reasons that we cited in our response to the same comments regarding CPT code 20560. As we observed for the first code in the family, 69 percent of the same survey respondents also stated that CPT code 20561 required less physical effort than CPT code 97140, which would again suggest that the reviewed code instead has a lower intensity. Unlike CPT code 20560, we agree that CPT code 20561 should have a higher work RVU than CPT code 97140, which is why we proposed a work RVU of 0.48 for the procedure. To the extent that the commenters are stating that CPT code 20561 should have a higher work RVU than CPT code 97140, we agree with the commenters and we proposed a work RVU accordingly. We do not agree with the commenters that CPT code 20561 should be valued nearly 50 percent higher than CPT code 97140 given their nearly identical work times and similar overall intensity.

Comment: One commenter agreed with the CMS proposal to designate CPT codes 20560 and 20561 as ''always therapy'' procedures. The commenter stated that acupuncturists would also use additional modalities and procedures in their scope along with these codes, and that these would not typically be billed independently.

Response: We appreciate the support for our proposals from the commenter.

Comment: Many commenters disagreed with the CMS proposal to designate CPT codes 20560 and 20561 as ''always therapy'' procedures. Commenters stated that these services may be performed by a wide range of professionals and that it may not be appropriate to bill the service under a therapy plan of care. Commenters also stated that assigning a designation of ''always therapy'' to these codes would be inconsistent with CMS' designation of other CPT codes as ''sometimes therapy'' codes that could be appropriately provided either as therapy services or non-therapy services. Other commenters objected to the proposal by stating that dry needling codes should be placed in the surgical section of the CPT codebook, and that due to the invasive nature of these procedures using needles, they should only be performed by licensed medical physicians or licensed acupuncturists. Commenters urged CMS to change the designation of CPT codes 20560 and 20561 to ''sometimes therapy'' procedures.

Response: We appreciate the feedback from the commenters in providing additional information about which providers will bill these services, and the fact that it may not be appropriate to bill these service under a therapy plan of care. After consideration of the comments, we are not finalizing our proposal to designate CPT codes 20560 and 20561 as ''always therapy'' procedures. We believe that a ''sometimes therapy'' designation would be more appropriate if we were to designate these codes as therapy procedures.

Comment: One commenter stated that if CPT codes 20560 and 20561 are covered services under Medicare then

an acupuncturist should be a qualified health care professional and should be recognized by Medicare to provide this service. The commenter described some of the clinical benefits associated with acupuncture and stated again that acupuncturists should be recognized by Medicare to provide dry needling.

Response: We appreciate the feedback from the commenter regarding the practice of acupuncture. However, we did not make a proposal regarding the classification of acupuncturists, and therefore, this comment is out of scope.

After consideration of the public comments, we are finalizing the work RVUs and direct PE inputs for the codes in the Trigger Point Dry Needling family as proposed. We are not finalizing these codes as ''always'' or ''sometimes'' therapy services because dry needling services are non-covered unless otherwise specified through a national coverage determination (NCD). Please refer to the NCD Manual, Section 30.3 at *https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/ncd103c1_Part1.pdf.*

(5) Closed Treatment Vertebral Fracture (CPT Code 22310)

This service was identified through a screen of services with a negative IWPUT and Medicare utilization over 10,000 for all services or over 1,000 for Harvard valued and CMS/Other source codes.

For CPT code 22310 (Closed treatment of vertebral body fracture(s), without manipulation, requiring and including casting or bracing), we disagreed with the recommended work-RVU of 3.75, stating that we did not think that this reduction in work RVU from the current value of 3.89 was commensurate with the RUC-recommended 33-minute reduction in intraservice time and 105-minute reduction in total time. We noted that while we understand that the RUC considers the current Harvard study time values for this service to be invalid estimations, we believed that a further reduction in work RVUs is warranted given the significance of the RUC-recommended reduction in physician time. We proposed a work RVU of 3.45 with a crosswalk to CPT code 21073 (*Manipulation of temporomandibular joint(s) (TMJ), therapeutic, requiring an anesthesia service (i.e., general or monitored anesthesia care)*), which has an identical intraservice time and similar total time as those proposed by the RUC for CPT code 22310 to more accurately account for the decrease in the surveyed work time.

For the direct PE inputs, we proposed to refine the equipment time for the power table (EF031) to conform to our established policies for non-highly technical equipment.

We received public comments on the proposed valuation of the codes in the Closed Treatment Vertebral Fracture family. The following is a summary of the comments we received and our responses.

Comment: A few commenters stated that CMS is inappropriately comparing accurate survey time to Harvard time, which the commenter stated holds zero validity for comparison. The commenters further stated that our proposed value fails to acknowledge that the Harvard work value was much higher based on the Harvard study physician work times than the current work value of the service. One commenter noted that in the June 1991 proposed rule, the work RVU for 22310, based on the Harvard study, was 6.31, then, in the November 1991 final rule for the 1992 PFS, the work RVU was reduced to 1.95, and then in 1997, hospital and office visits were assigned by algorithm for practice expense (PE) purposes. The commenter stated that the entire history of value of this code is fraught with misestimations of time and the current work RVU of 3.89 has nothing to do with the Harvard study.

Response: We believe that it is crucial that the code valuation process take place with the understanding that the existing work times, used in the PFS ratesetting processes, are accurate. We recognize that adjusting work RVUs for changes in time is not always a straightforward process and that the intensity associated with changes in time is not necessarily always linear, which is why we apply various methodologies to identify several potential work values for individual codes. However, we reiterate that we believe it would be irresponsible to ignore changes in time based on the best data available and that we are statutorily obligated to consider both time and intensity in establishing work RVUs for PFS services. For additional information regarding the use of old work time values that were established many years ago and have not since been reviewed in our methodology, we refer readers to our discussion of the subject in the CY 2017 PFS final rule (81 FR 80273 through 80274).

We recognize that this code has undergone revisions and that the work value has changed significantly from the Harvard value. If we accept the commenter's contention that the current work RVU is unrelated to the original Harvard work RVU, and we compare the time values to the original 1991 Harvard work value of 6.31, our proposed work RVU continues to appear to be appropriate. A ratio of the change in intraservice time to the original RVU of 6.31 is 3.50; a ratio of the change in total time to the original work RVU of 6.31 is 2.38. These ratios suggest that our proposed RVU of 3.45 is a more accurate valuation than the RUC's recommended RVU of 3.75. We continue to believe that a crosswalk to CPT code 21073, which describes manipulation under general or monitored care under anesthesia with manipulation of the TMJ, is appropriate. CPT code 22310 involves closed treatment without manipulation and the application of a brace, while CPT code 21073 involves anesthesia and manipulation; we believe the similar work and time of CPT code 21073 validates our work RVU of 3.45 for CPT Code 22310.

Comment: Several commenters stated that they agreed with our proposal to refine the equipment time for the power table (EF031) to conform to our established policies for non-highly technical equipment.

Response: We appreciate the support for our proposal from the commenters.

After consideration of the public comments, we are finalizing our work RVU of 3.45 as proposed. We are also finalizing the direct PE inputs as proposed.

(6) Tendon Sheath Procedures (CPT Codes 26020, 26055, and 26160)

The RUC identified these services through a screen of services with a negative IWPUT and Medicare utilization over 10,000 for all services or over 1,000 for Harvard valued and CMS/Other source codes. For CPT code 26020 (Drainage of tendon sheath, digit and/or palm, each), we do not agree with the RUC-recommended work RVU of 7.79 based on the survey median. While we agree that the survey data validate an increase in work RVU, we see no compelling reason that this service would be significantly more intense to furnish than services of similar time values. Therefore, we proposed a work RVU of 6.84 which is the survey 25th percentile. As further support for this value, we note that it falls between the work RVUs of CPT code 28122 (*Partial excision (craterization, saucerization, sequestrectomy, or diaphysectomy) bone (e.g., osteomyelitis or bossing); tarsal or metatarsal bone, except talus or calcaneus*), with a work RVU of 6.76, and CPT code 28289 (*Hallux rigidus correction with cheilectomy, debridement and capsular release of the first metatarsophalangeal joint; without implant*), with a work RVU of 6.90; both codes have intraservice time values that are identical to, and total time values

that are similar to, the RUC-recommended time values for CPT code 26020.

For CPT code 26055 (*Tendon sheath incision (e.g., for trigger finger)*), we do not agree with the RUC recommendation to increase the work RVU to 3.75 despite a reduction in physician time. Instead, we proposed to maintain the current work RVU of 3.11; we are supporting this based on a total time increment methodology between the CPT code 26020 and CPT code 26055. The total time ratio between the recommended time of 119 minutes and the recommended 262 minutes for code 26020 equals 45 percent, and 45 percent of our proposed RVU of 6.84 for CPT code 26020 equals a work RVU of 3.10, which we believe validates the current work RVU of 3.11. We proposed the RUC-recommended work RVU of 3.57 for CPT code 26160 (*Excision of lesion of tendon sheath or joint capsule (e.g., cyst, mucous cyst, or ganglion), hand or finger*). We note that our proposed work RVUs validate the RUC's contention that CPT code 26160 is slightly more intense to perform than CPT code 26055.

For the direct PE inputs, we proposed to refine the quantity of the impervious staff gown (SB027) supply from 2 to 1 for CPT codes 26055 and 26160. We believe that the second impervious staff gown supply is duplicative due to the inclusion of this same supply in the surgical cleaning pack (SA043). The recommended materials state that a gown is worn by the practitioner and one assistant, which are provided by one standalone gown and a second gown in the surgical cleaning pack.

We received public comments on the proposed valuation of the codes in the Tendon Sheath Procedures family. The following is a summary of the comments we received and our responses.

Comment: A few commenters stated that, for CPT code 26020, our supporting reference codes, CPT code 28122 and CPT code 28289, are inappropriate in that they have lower total time values than the surveyed total time of CPT code 26020, and that this reflects that these two reference codes typically involve a patient who is discharged within 23 hours of the procedure and are less intense. The commenter stated that the RUC's recommendation of the median survey value for CPT code 26020 is necessary because even at the survey median, the intraoperative intensity (0.027), is so low that there are no comparator codes with a lower work RVU. This commenter also stated that the survey 25th percentile work RVU would vastly underestimate the physician work, resulting in an intraoperative intensity of 0.006—or essentially zero.

Response: For CPT code 26020, we continue to believe that the RUC's recommended work RVU of 7.79 is disproportionately high, as it represents a 35 percent increase in work despite a 5 minute increase in intraservice time and a 30 minute increase in total time. We believe our proposal to value CPT code 26020 with the survey 25th percentile, which represents a roughly 26 percent increase is more proportionate. Further, we note that our proposed value recognizes the work inherent in this procedure, including the requisite inpatient monitoring, as it lies within the top quartile of all 90-day global period codes with an intraservice time of 45 minutes. We recognize that the relatively high total time value for this code results in a relatively low intensity value, however we continue to believe that our value appears to be consistent with other relatively low-intensity procedures of similar times. The intensity value that results from our proposed work RVU is extremely close to that which results from the RUC's recommended work RVU, and therefore, we continue to think that our value adequately reflects the work inherent in the procedure.

Comment: One commenter stated that our proposal to maintain the current work RVU for CPT code 26055 indicates that we inappropriately noted that the reduction in time should exactly correlate with a reduction in work RVU. The current times are based on a 2005 survey but the current work RVU is based on the Harvard study. The commenter stated that CMS should not compare the old times relative to the work RVU. The commenter disagreed with use of an incremental methodology to value CPT code 26055, as it inaccurately treats all components of the physician time as having identical intensity. In addition, the commenter stated maintaining the current work RVU for CPT code 26055 results in an inappropriately low intensity of 0.011 which does not reflect an open surgical procedure typically performed in a facility under moderate sedation and is not much higher than the assigned value for pre-service scrub/dress/wait time.

Response: We do not believe that our proposal assumes that the reduction in time for this service should exactly correlate with a reduction in work RVU; a proportionate reduction based solely on time would result in a lower RVU than that proposed. As discussed elsewhere in this rule, we believe that our operating assumption regarding the validity of the existing values as a point of comparison is critical to the integrity of the relative value system as currently constructed. We believe the use of an incremental difference between codes is a valid methodology for setting values, especially in valuing services within a family of revised codes where it is important to maintain appropriate intra-family relativity. Historically, we have frequently utilized an incremental methodology in which we value a code based upon its incremental difference between another code or another family of codes. We note that the RUC has also used the same incremental methodology on occasion when it was unable to produce valid survey data for a service. We have no evidence to suggest that the use of an incremental difference between codes conflicts with the statute's definition of the work component as the resources in time and intensity required in furnishing the service. For more details on our methodology for developing work RVUs, we refer readers to our discussion of the subject in the Methodology for Establishing Work RVUs section of this rule (section II.N.2. of this final rule), as well as a longer discussion in the CY 2017 PFS final rule (81 FR 80272 through 80277). We continue to believe that our proposed work RVU maintains the proportionate relationship with CPT code 26020.

We continue to believe that comparisons to similar procedures of similar time values indicate that our proposed value accurately reflects the intensity inherent in the procedure.

Comment: Several commenters disagreed with the CMS proposal to refine the quantity of the impervious staff gown (SB027) supply from 2 to 1 for CPT codes 26055 and 26160 and stated that this gown was not duplicative. Commenters stated that two gowns are required in the procedure room (for the practitioner and a clinical staff member) and a separate gown is required, typically for a second clinical staff individual, for the cleaning of instruments in a separate room. Commenters stated that the US Department of Labor, Occupational Safety and Health Administration (OSHA) regulations require that all personal protective equipment must be removed prior to leaving the work area, which includes removing the impervious staff gown worn during the procedure, and therefore, necessitating the inclusion of another gown as a supply input.

Response: We appreciate the additional information provided by the commenters regarding the number of impervious staff gowns typically used in these procedures. As a result of this additional information, we are not

finalizing our proposed refinement to reduce the quantity of the impervious staff gown (SB027) supply from 2 to 1 for CPT codes 26055 and 26160. We are instead finalizing the RUC-recommended direct PE inputs for all three codes in the family.

After consideration of the public comments, we are finalizing our proposed work RVUs of 6.84 for CPT code 26020, 3.11 for CPT code 26055, and 3.57 for CPT code 26160. We are finalizing the RUC-recommended direct PE inputs for all three codes in the family as stated previously.

(7) Closed Treatment Fracture—Hip (CPT Code 27220)

This service was identified through a screen of services with a negative IWPUT and Medicare utilization over 10,000 for all services or over 1,000 for Harvard valued and CMS/Other source codes. For CPT code 27220 (*Closed treatment of acetabulum (hip socket) fracture(s); without manipulation*), we disagree with the RUC-recommended work RVU of 6.00 based on the survey median value, because we do not believe that this reduction in work RVU from the current value of 6.83 is commensurate with the RUC-recommended a 19-minute reduction in intraservice time and an 80-minute reduction in total time. While we understand that the RUC considers the current Harvard study time values for this service to be invalid estimations, we believe that a further reduction in work RVUs is warranted given the significance of the RUC-recommended reduction in physician time. We believe that it would be more accurate to propose the survey 25th percentile work RVU of 5.50, and we are supporting this value with a crosswalk to CPT code 27267 (*Closed treatment of femoral fracture, proximal end, head; without manipulation*) to account for the decrease in the surveyed work time.

For the direct PE inputs, we proposed to refine the equipment time for the power table (EF031) to conform to our established policies for non-highly technical equipment.

We received public comments on the proposed valuation of the Closed Treatment Fracture—Hip code. The following is a summary of the comments we received and our responses.

Comment: A few commenters disagreed with our proposal, stating that it relies on a comparison of accurate survey time to Harvard time, the latter of which they stated holds zero validity for comparison.

Response: We believe that it is crucial that the code valuation process take place with the understanding that the existing work times, used in the PFS ratesetting processes, are accurate. We recognize that adjusting work RVUs for changes in time is not always a straightforward process and that the intensity associated with changes in time is not necessarily always linear, which is why we apply various methodologies to identify several potential work values for individual codes. However, we reiterate that we believe it would be irresponsible to ignore changes in time based on the best data available and that we are statutorily obligated to consider both time and intensity in establishing work RVUs for PFS services. For additional information regarding the use of old work time values that were established many years ago and have not since been reviewed in our methodology, we refer readers to our discussion of the subject in the Methodology for Establishing Work RVUs section of this rule (section II.N.2. of this final rule), as well as a longer discussion in the CY 2017 PFS final rule (81 FR 80273 through 80274).

Comment: One commenter stated that reducing the work RVU of this service based on a comparison to the current work value does not adequately take into account that the current value reflects adjustments made to the original Harvard work RVU in various rule cycles over many years to account for increases in the E/M services included in the global period of this service. A downward adjustment to the work RVU would essentially reverse increases that have been made to account for this post-operative work.

Response: We disagree that reducing the work RVU ignores the value of the E/M services included in the global period; while the Harvard work values for services such as this one have been adjusted upward in previous years to account for these services, we nevertheless have included the surveyed work time in our analysis of this code; and this surveyed time includes post-operative work. Our proposed work RVU was not based solely on the reduction in time. We note that our crosswalk code, CPT code 27267 (*Closed treatment of femoral fracture, proximal end, head; without manipulation*) includes a similar amount of postoperative work, and therefore, we believe that our value adequately reflects this work.

Comment: The RUC commented that our proposed work RVU will inappropriately value this service equally to the work RVU of the survey key reference service, CPT code 27267, and the latter has significantly less pre-service time, and is thus not an appropriate crosswalk. Furthermore, our proposed value does not adequately correct the negative IWPUT resulting from the current value, stating that the resulting IWPUT of 0.008 is essentially zero.

Response: We continue to believe that CPT code 27267 is an appropriate crosswalk; both procedures involve closed treatment of hip without manipulation. While the derived intensity value that results from our proposed value of 5.50 is lower than that which results from the RUC's value, it is only negligibly so, with a difference of 0.033 in IWPUT.

Comment: A commenter stated that they agreed with our proposal to refine the equipment time for the power table (EF031) to conform to our established policies for non-highly technical equipment.

Response: We appreciate the support for our proposals from the commenter.

After consideration of the public comments, we are finalizing as proposed a work RVU of 5.50 for CPT code 27220. We are also finalizing the direct PE inputs as proposed.

(8) Arthrodesis—Sacroiliac Joint (CPT Code 27279)

In the CY 2018 PFS final rule (82 FR 53017), CPT code 27279 (*Arthrodesis, sacroiliac joint, percutaneous or minimally invasive (indirect visualization), with image guidance, includes obtaining bone graft when performed, and placement of transfixing device*) was nominated for review by stakeholders as a potentially misvalued service. We stated that CPT code 27279 is potentially misvalued, and that a comprehensive review of the code values was warranted. This code was subsequently reviewed by the RUC. According to the specialty societies, the previous 2014 survey of CPT code 27279, was based on flawed methodology that resulted in an underestimation of intraoperative intensity. When CPT code 27279 was surveyed in 2014, there was a low rate of response. Due to the dearth of survey data and the RUC's agreement with the specialty society at the time that the survey respondents had somewhat overvalued the work involved in performing this service, the RUC used a crosswalk to CPT code 62287 (*Decompression procedure, percutaneous, of nucleus pulposus of intervertebral disc, any method utilizing needle based technique to remove disc material under fluoroscopic imaging or other form of indirect visualization, with discography and/or epidural injection(s) at the treated level(s), when performed, single or multiple levels, lumbar*) to recommend a work RVU of 9.03. The

specialty societies indicated that with increased and broader utilization of this technique, the 2018 survey is a more robust assessment of physician work and intensity and provides more data with which to make a crosswalk recommendation. According to the RUC, there is no compelling evidence that the physician work, intensity or complexity has changed for this service.

We proposed to maintain the current work RVU of 9.03 as recommended by the RUC. A stakeholder stated that maintaining this RVU would constitute the continued undervaluation of this service, and that this would incentivize use of a more intensive and invasive procedure, CPT code 27280 (*Arthrodesis, open, sacroiliac joint, including obtaining bone graft, including instrumentation, when performed*), as well as incentivize this service to be inappropriately furnished on an inpatient basis. This stakeholder has requested that, in the interest of protecting patient access, we implement payment parity between the two services by proposing to crosswalk the work RVU of CPT code 27279 to that of CPT code 27280, which has a work RVU of 20.00. While we proposed the RUC-recommended work RVU, we solicited public comment on whether an alternative valuation of 20.00 would be more appropriate. This alternative valuation would recognize relative parity between these two services in terms of the work inherent in furnishing them.

We proposed the RUC-recommended direct PE inputs for CPT code 27279.

We received public comments on the proposed valuation of the Arthrodesis—Sacroiliac Joint code. The following is a summary of the comments we received and our responses.

Comment: A commenter questioned how the most recent stakeholder comment was obtained, since the RUC recommendations are not public until after the publication of the proposed rule. The commenter stated that the recent stakeholder comment could not have been received by CMS via the formal comment process, and questioned if the comment was communicated via the passing of verbal comment between individuals at the RUC meeting or someone gained confidential information inappropriately. The commenter stated the reason this service was reviewed in 2019 is because it was nominated by a stakeholder that it may be undervalued.

Response: This communication between the agency and a stakeholder was not inappropriate. When considering potential valuation for services on the PFS, we may take into account information provided to us by stakeholders including specialty societies that may have participated in the RUC process but did not agree with what was submitted as part of the RUC's recommendations. In any event, we reiterate that the stakeholder's argument that the service is undervalued refers to the current valuation of the service.

Comment: The RUC restated that it had determined that there is not compelling evidence to revalue this procedure as the intensity required to perform CPT code 27279 has not changed. With no convincing rationale that the physician work, intensity or complexity has changed for this service, the RUC recommended to maintain the work RVU of 9.03 for CPT code 27279. The RUC did not believe that CPT code CPT code 27279 should be valued with a direct crosswalk to CPT code 27280, stating that the latter is vastly different than CPT code 27279 because it is an open procedure that includes instrumentation, requires double the amount of intra-service time to perform, and is more intense and complex to perform.

Many commenters stated that the work RVU of CPT code 27279 is undervalued, and stated that the service is complex and intense and involves significant risk and preoperative work. Commenters presented study results that demonstrate the advantages of this procedure over the open procedure, stating that it is minimally invasive and has vastly improved outcomes. Some commenters cited studies that they noted demonstrate cost-effectiveness metrics and patient reported outcome improvements that are better than nearly all orthopaedic and spinal procedures, and more cost-efficient than ongoing nonoperative care. Commenters stated that, while the procedure described by CPT code 27279 is less invasive than the open procedure; it nevertheless is similar in terms of intensity, as it requires significant pre and postoperative care, image guidance, and monitoring. A commenter cited risk associated with placement of the guide wires which may result in damage to vital structures including spinal nerve roots, blood vessels, and viscera. Similarly, commenters cited risks inherent in spinal procedures such as bleeding, infection, and pseudoarthrosis. One commenter discussed insertion of pins and pegs that run the risk of violating the sacral foraminas creating radiculopathies. In addition, a commenter mentioned the potential for postoperative hematomas. Other risks cited include considerable risk of nerve damage, vascular compressions and iatrogenic fractures caused by misplacement of the guide wires, broaches and large implants. According to a commenter, the anatomy involved in this procedure is more complex than for a discectomy or decompression laminectomy. Commenters stated that the procedure is significantly more intense than the crosswalk code that its current value was originally based on, CPT code 62287 (*Decompression procedure, percutaneous, of nucleus pulposus of intervertebral disc, any method utilizing needle based technique to remove disc material under fluoroscopic imaging or other form of indirect visualization, with discography and/or epidural injection(s) at the treated level(s), when performed, single or multiple levels, lumbar*). The commenters stated that this procedure requires special skill given the complexity of the anatomy and extensive preoperative time.

Commenters offered various suggestions for a more appropriate valuation for CPT code 27279; many commenters stated that 27279 is more appropriately valued with a work RVU of 20.00, as it is comparable in time and intensity to CPT code 27280. One commenter suggested a work RVU of 14.23 which resulted from a regression analysis of surveys. Other suggested crosswalk codes offered by commenters include CPT codes 63030 (*Laminotomy (hemilaminectomy), with decompression of nerve root(s), including partial facetectomy, foraminotomy and/or excision of herniated intervertebral disc; 1 interspace, lumbar*), with a work RVU of 13.18, 63047 (*Laminectomy, facetectomy and foraminotomy (unilateral or bilateral with decompression of spinal cord, cauda equina and/or nerve root[s], [e.g., spinal or lateral recess stenosis]), single vertebral segment; lumbar*), with a work RVU of 15.37, 22551 (*Arthrodesis, anterior interbody, including disc space preparation, discectomy, osteophytectomy and decompression of spinal cord and/or nerve roots; cervical below C2*), with a work RVU of 25.00, 27245 (*Treatment of intertrochanteric, peritrochanteric, or subtrochanteric femoral fracture; with intramedullary implant, with or without interlocking screws and/or cerclage*) with a work RVU of 18.18, 27130 (*Arthroplasty, acetabular and proximal femoral prosthetic replacement (total hip arthroplasty), with or without autograft or allograft*), with a work RVU of 20.72, 22612 (*Arthrodesis, posterior or posterolateral technique, single level; lumbar (with lateral transverse technique, when performed)*) with a

work RVU of 23.53, 63040 (*Laminotomy (hemilaminectomy), with decompression of nerve root(s), including partial facetectomy, foraminotomy and/or excision of herniated intervertebral disc, reexploration, single interspace; cervical*) with an RVU of 20.31, 63042 (*Laminotomy (hemilaminectomy), with decompression of nerve root(s), including partial facetectomy, foraminotomy and/or excision of herniated intervertebral disc, reexploration, single interspace; lumbar*) with an RVU of 18.76, 63045 (*Laminectomy, facetectomy and foraminotomy (unilateral or bilateral with decompression of spinal cord, cauda equina and/or nerve root[s], [e.g., spinal or lateral recess stenosis]), single vertebral segment; cervical*) with a work RVU of 17.95, and 63046 (*Laminectomy, facetectomy and foraminotomy (unilateral or bilateral with decompression of spinal cord, cauda equina and/or nerve root[s], [e.g., spinal or lateral recess stenosis]), single vertebral segment; thoracic*) with a work RVU of 17.25.

Response: Commenters have provided extensive evidence that leads us to believe that the current work RVU understates the inherent intensity of the procedure. We agree with the RUC's longstanding contention that survey data is critical in determining appropriate valuation of services. The fact that this code is valued based on a crosswalk from 2014 rather than on updated survey data raised concerns. The RUC's survey data, as well as extensive stakeholder comment indicates to us that this service continues to be undervalued.

We agree with the RUC that CPT code 27279 would not be accurately valued identically to the analogous open procedure CPT code 27280, as the latter is substantially more complex and requires twice the amount of intraservice time to perform. Therefore, finalizing an equivalent value for these two services would introduce a rank-order anomaly. While we are persuaded by extensive public comment that this service as currently valued does not adequately reflect the work inherent in performing the procedure, we note that all of the crosswalk codes recommended by commenters involve significantly more physician time than that required for CPT code 27279, and values crosswalked to these codes would not maintain appropriate rank-order between CPT codes 27279 and 27280, and would in many instances result in a valuation that is higher than that of the open procedure, CPT code 27280. We believe it is preferable to value this service in close adherence to the surveyed time values. After consideration of the comments, we are finalizing a work RVU of 12.13 with a direct crosswalk to CPT code 57288 (*Sling operation for stress incontinence (e.g., fascia or synthetic)*), which describes an open procedure of similar intensity. This procedure has an identical intraservice time value and similar total time value. We believe that the description of this service and its work and time values indicate that it is a strong crosswalk and a work RVU of 12.13 is a more accurate valuation for this service. We believe a value crosswalked to this service more accurately reflects the work inherent in performing the procedure while accounting for the surveyed work time.

After consideration of the public comments, we are finalizing a work RVU of 12.13 for this service. We are also finalizing the direct PE inputs as proposed.

(9) Pericardiocentesis and Pericardial Drainage (CPT Code 33016, 33017, 33018, and 33019)

CPT code 33015 (*Tube pericardiostomy*) was identified as potentially misvalued on a Relativity Assessment Workgroup (RAW) screen of codes with a negative IWPUT and Medicare utilization over 10,000 for all services or over 1,000 for Harvard valued and CMS or other source codes. In September 2018, the CPT Editorial Panel deleted four existing codes and created four new codes to describe pericardiocentesis drainage procedures to differentiate by age and to include imaging guidance.

We proposed to refine the work RVU for all four codes in the family. We disagree with the RUC-recommended work RVU of 5.00 for CPT code 33016 (*Pericardiocentesis, including imaging guidance, when performed*) and proposed a work RVU of 4.40 based on a crosswalk to CPT code 43244 (*Esophagogastroduodenoscopy, flexible, transoral; with band ligation of esophageal/gastric varices*). CPT code 43244 shares the same intraservice time of 30 minutes with CPT code 33016 and has a slightly longer total time of 81 minutes as compared to 75 minutes for the reviewed code. In our review of CPT code 33016, we noted that the recommended intraservice time as compared to the current initial pericardiocentesis procedure (CPT code 33010) is increasing from 24 minutes to 30 minutes (25 percent), and the recommended total time is remaining the same at 75 minutes; however, the RUC-recommended work RVU is increasing from 1.99 to 5.00, which is an increase of 151 percent. Although we did not imply that the decrease in time as reflected in survey values must equate to a one-to-one or linear increase in the valuation of work RVUs, we believe that since the two components of work are time and intensity, modest increases in time should be appropriately reflected with a commensurate increase the work RVUs. We also conducted a search in the RUC database among 0-day global codes with 30 minutes of intraservice time and comparable total time of 65–85 minutes. Our search identified 49 codes and all 49 of these codes had a work RVU lower than 5.00. We do not believe that it would serve the interests of relativity to establish a new maximum work RVU for this range of time values.

As a result, we believe that it is more accurate to propose a work RVU of 4.40 for CPT code 33016 based on a crosswalk to CPT code 43244 to account for these modest increases in the surveyed work time as compared to the predecessor pericardiocentesis codes. We are aware that CPT code 33016 is bundling imaging guidance into the new procedure, which was not included in the previous pericardiocentesis codes. However, we do not believe that the recoding of the services in this family has resulted in an increase in their intensity, only a change in the way in which they will be reported, and therefore, we do not believe that it would serve the interests of relativity to propose the RUC-recommended work values for all of the codes in this family. We also note that, through the bundling of some of these frequently reported services, it is reasonable to expect that the new coding system will achieve savings via elimination of duplicative assumptions of the resources involved in furnishing particular servicers. For example, a practitioner would not be carrying out the full preservice work twice for CPT codes 33010 and 76930, but preservice times were assigned to both codes under the old coding. We believe the new coding assigns more accurate work times, and thus, reflects efficiencies in resource costs that existed but were not reflected in the services as they were previously reported. If the addition of imaging guidance had made the new CPT codes significantly more intense to perform, we believe that this would have been reflected in the surveyed work times, which were largely unchanged from the predecessor codes.

We disagree with the RUC-recommended work RVU of 5.50 for CPT code 33017 (*Pericardial drainage with insertion of indwelling catheter, percutaneous, including fluoroscopy*

and/or ultrasound guidance, when performed; 6 years and older without congenital cardiac anomaly) and proposed a work RVU of 4.62 based on a crosswalk to CPT code 52234 (*Cystourethroscopy, with fulguration (including cryosurgery or laser surgery) and/or resection of; SMALL bladder tumor(s) (0.5 up to 2.0 cm)*). CPT code 52234 shares the same intraservice time of 30 minutes with CPT code 33017 and has 2 additional minutes of total time at 79 minutes as compared to 77 minutes for the reviewed code. In our review of CPT code 33017, we noted many of the same issues that we had raised with CPT code 33016, in particular with the increase in the work RVU greatly exceeding the increase in the surveyed work times as compared to the predecessor pericardiocentesis codes. We searched the RUC database again for 0-day global codes with 30 minutes of intraservice time and comparable total time of 67–87 minutes. Our search identified 43 codes and again all 43 of these codes had a work RVU lower than 5.50. As we stated with regard to CPT code 33016, we do not believe that it would serve the interests of relativity to establish a new maximum work RVU for this range of time values. We believe that it is more accurate to propose a work RVU of 4.62 for CPT code 33017 based on a crosswalk to CPT code 52234 based on the same rationale that we detailed with regards to CPT code 33016.

We disagree with the RUC-recommended work RVU of 6.00 for CPT code 33018 (*Pericardial drainage with insertion of indwelling catheter, percutaneous, including fluoroscopy and/or ultrasound guidance, when performed; birth through 5 years of age, or any age with congenital cardiac anomaly*) and proposed a work RVU of 5.00 based on the survey 25th percentile value. In our review of CPT code 33018, we noted many of the same issues that we had raised with CPT codes 33016 and 33017, in particular with the increase in the work RVU greatly exceeding the increase in the surveyed work times as compared to the predecessor pericardiocentesis codes. The recommended work RVU of 6.00 was based on a crosswalk to CPT code 31603 (*Tracheostomy, emergency procedure; transtracheal*), which shares the same intraservice time of 30 minutes with CPT code 33018 and very similar total time. While we agree that CPT code 31603 is a close match to the surveyed work times for CPT code 33018, we do not believe that it is the most accurate choice for a crosswalk due to the fact that CPT code 31603 is a clear outlier in work valuation. We searched for 0-day global codes in the RUC database with 30 minutes of intraservice time and a comparable 90–120 minutes of total time. There were 21 codes that met this criteria, and the recommended crosswalk to CPT code 31603 had the highest work RVU of any of these codes at the recommended 6.00. Furthermore, there was only one other code with a work RVU above 5.00, another tracheostomy procedure described by CPT code 31600 (Tracheostomy, planned (separate procedure)) at a work RVU of 5.56. None of the other codes had a work RVU higher than 4.69, and the median work RVU of the group comes out to only 4.00. The two tracheostomy procedures have work RVUs more than a full standard deviation above any of the other codes in this group of 0-day global procedures.

We do not mean to suggest that the work RVU for a given service must always fall in the middle of a range of codes with similar time values. We recognize that it would not be appropriate to develop work RVUs solely based on time given that intensity is also an element of work. Were we to disregard intensity altogether, the work RVUs for all services would be developed based solely on time values and that is definitively not the case, as indicated by the many services that share the same time values but have different work RVUs. However, we also do not believe that it would serve the interests of relativity by crosswalking the work RVU of CPT code 33018 to tracheostomy procedures that are higher than anything else in this group of codes, procedures that we believe to be outliers due to the serious risk of patient mortality associated with their performance. We believe that it is this patient risk which is responsible for the otherwise anomalously high intensity in CPT codes 31600 and 31603. Therefore, we proposed a work RVU of 5.00 for CPT code 33018 based on the survey 25th percentile, which we believe more accurately captures both the time and intensity associated with the procedure.

We disagree with the RUC-recommended work RVU of 5.00 for CPT code 33019 (*Pericardial drainage with insertion of indwelling catheter, percutaneous, including CT guidance*) and proposed a work RVU of 4.29 based on the survey 25th percentile value. In our review of CPT code 33019, we noted many of the same issues that we had raised with CPT codes 33016–33018, in particular with the increase in the work RVU greatly exceeding the increase in the surveyed work times as compared to the predecessor pericardiocentesis codes. We searched for 0-day global codes in the RUC database with 30 minutes of intraservice time (slightly higher than the 28 minutes of intraservice time in CPT code 33019) and a comparable 70–100 minutes of total time. Our search identified 45 codes and again all 45 of these codes had a work RVU lower than 5.00, which led us to believe that the recommended work RVU for CPT code 33019 was overvalued. We also compared CPT code 33019 to the most similar code in the family, CPT code 33017, and noted that the survey respondents indicated that CPT code 33019 should have a lower work RVU at both the survey 25th percentile and survey median values. Therefore, we proposed a work RVU of 4.29 for CPT code 33019 based on the survey 25th percentile value. We are supporting this proposal with a reference to CPT code 31254 (*Nasal/sinus endoscopy, surgical with ethmoidectomy; partial (anterior)*), a recently-reviewed code with an intraservice work time of 30 minutes, a total time of 84 minutes, and a work RVU of 4.27.

The RUC did not recommend and we did not propose any direct PE inputs for the codes in this family.

We received public comments on the proposed valuation of the codes in the Pericardiocentesis and Pericardial Drainage family. The following is a summary of the comments we received and our responses.

Comment: Several commenters stated the crosswalk or methodology used in the original valuation of CPT code 33015 is unknown and not resource-based, and therefore, it was invalid for CMS to compare the current time and work to the surveyed time and work of the newly created codes in the family. Commenters also stated since CPT codes 33010 and 33015 were last valued, there has been a change in the patient population; patients who receive these services have become more complex, acute, and heterogeneous. Commenters stated that several of these deleted codes being bundled into the new codes have negative intensities, which indicated a very anomalous relationship between the current work RVUs and the current work times.

Response: We disagree with the commenter that it was invalid to compare the current time and work to the surveyed time and work. We believe it is crucial that the code valuation process take place with the understanding that the existing work times used in the PFS ratesetting processes are accurate. We recognize that adjusting work RVUs for changes in time is not always a straightforward

process and that the intensity associated with changes in time is not necessarily always linear. That is why we apply various methodologies to identify several potential work values for individual codes. However, we reiterate that we believe it would be irresponsible to ignore changes in time based on the best data available, and that we are statutorily obligated to consider both time and intensity in establishing work RVUs for PFS services. For additional information regarding the use of old work time values that were established many years ago and have not since been reviewed in our methodology, we refer readers to our discussion of the subject in the Methodology for Establishing Work RVUs section of this rule (section II.N.2. of this final rule), as well as a longer discussion in the CY 2017 PFS final rule (81 FR 80273 through 80274).

Comment: Several commenters disagreed with the CMS proposed work RVU of 4.40 for CPT code 33016 and stated that CMS should instead finalize the RUC-recommended work RVU of 5.00. Commenters stated that CPT code 33016 is one of the more intense procedures that interventional cardiologists perform, with two of the most common complications being either lacerating the coronary artery or puncturing the right ventricle, either of which can be fatal. Commenters stated that the reduction in intensity for CPT code 33016 proposed by CMS would establish this service out of rank order with other services in the PFS, including the proposed crosswalk code. Commenters stated that the upper endoscopy service described by CPT code 43244 involves less work and less risk than performing CPT code 33016, even considering that the typical patient for CPT code 43244 presents with hematemesis, and therefore, it is not an appropriate crosswalk.

Response: We agree with the commenters that CPT code 33016 is a highly intense procedure with life-threatening risks to the patient. This is the reason we crosswalked the work RVU to CPT code 43244, a similarly high intensity Esophagogastroduodenoscopy procedure that involves inserting a flexible upper endoscope through the mouth and esophagus into the proximal stomach, then insufflating the stomach with air after suctioning its liquid contents to perform an examination of the entire stomach in the forward and retroflexed position. We note as well that our proposed work RVU of 4.40 for CPT code 33016 results in a higher intensity for the code than for CPT code 43244. We agree with the commenters that CPT code 33016 should have the higher intensity between the two codes, which is what we proposed.

We also mentioned in the proposed rule that we had conducted a search in the RUC database among 0-day global codes with 30 minutes of intraservice time and comparable total time of 65–85 minutes. We mentioned that our search identified 49 codes and all 49 of these codes had a work RVU lower than the recommended 5.00. We add that out of those 49 codes identified by our search, only 3 of them had a work RVU higher than the proposed 4.40: CPT code 37191 (*Insertion of intravascular vena cava filter, endovascular approach including vascular access, vessel selection, and radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance (ultrasound and fluoroscopy), when performed*) at a work RVU of 4.46, CPT code 45385 (*Colonoscopy, flexible; with removal of tumor(s), polyp(s), or other lesion(s) by snare technique*) at a work RVU of 4.57, and CPT code 52234 (*Cystourethroscopy, with fulguration (including cryosurgery or laser surgery) and/or resection of; SMALL bladder tumor(s) (0.5 up to 2.0 cm)*) at a work RVU of 4.62. Our proposed valuation for CPT code 33016 recognizes the dangerous nature of the procedure and places it above the 90th percentile of the distribution of codes with similar work times. However, as we stated in the proposed rule, we do not believe that it would serve the interests of relativity to establish a new maximum work RVU that goes beyond this range of time values. We do not believe that the recoding of the services in this family has resulted in an increase in their intensity, only a change in the way in which they will be reported, and through the bundling of some of these frequently reported services, it is reasonable to expect that the new coding system will achieve savings via elimination of duplicative assumptions of the resources involved in furnishing particular servicers. We believe the new coding assigns more accurate work times, and thus, reflects efficiencies in resource costs that existed but were not reflected in the services as they were previously reported. If the addition of imaging guidance had made the new CPT codes significantly more intense to perform, we believe that this would have been reflected in the surveyed work times, which were largely unchanged from the predecessor codes.

Comment: Several commenters disagreed with the CMS proposed work RVU of 4.62 for CPT code 33017 and stated that CMS should instead finalize the RUC-recommended work RVU of 5.50. Commenters stated that CPT code 52234 was not an appropriate crosswalk code as it is a planned procedure, whereas code 33017 is typically emergent and more intense as the patient has acute hemodynamic instability.

Response: We disagree with the commenters that CPT code 52234 is not an appropriate crosswalk code on the grounds that it is a planned procedure. We continue to believe that the nature of the PFS relative value system is that all services are appropriately subject to comparisons to one another. Although codes that describe clinically similar services are sometimes stronger comparator codes, we do not agree that codes must share the same site of service, patient population, or utilization level to serve as an appropriate crosswalk. To the extent that commenters stated that CPT code 33017 is a more intense procedure than CPT code 52234, we agree with the commenters, which is why we proposed a higher intensity for CPT code 33017 in the proposed rule.

Comment: Several commenters stated that the proposed work RVU increment between CPT codes 33016 and 33017 (0.22) does not align with the relative increased difficulty and additional work involved in performing CPT code 33017. Commenters stated that CPT code 33017 includes all work of CPT code 33016, with the addition of suturing an indwelling catheter in place, as well as the work of managing that catheter, and is an emergent procedure as opposed to a planned procedure. Commenters stated that the intensity of the proposed value for CPT code 33017 is only 5 percent higher than CPT code 33016, and that this would be insufficient.

Response: We agree with the commenters that CPT code 33017 is a more intense procedure than CPT code 33016, which is why we proposed a higher intensity for this emergent procedure. However, we do not agree with the commenters that this greater intensity justifies the RUC-recommended work increment of 0.50 work RVUs between the two procedures. We believe that if CPT code 33017 typically required a significant amount of additional work in comparison to CPT code 33016, it would have been reflected in the surveyed work times for the two procedures. Instead, the surveyed work times are nearly identical between the two procedures, with the same intraservice time and only 2 additional minutes of total time for CPT code 33017, 77 minutes in comparison to 75 minutes. Absent evidence of additional work time from the survey respondents,

we continue to believe that the proposed work RVU and proposed intensity for CPT code 33017 accurately capture the increased difficulty of the procedure in comparison to CPT code 33016.

Comment: Several commenters disagreed with the CMS proposed work RVU of 5.00 for CPT code 33018 and stated that CMS should instead finalize the RUC-recommended work RVU of 6.00. Commenters stated that the typical patient for CPT code 33018 is a small child, and that since there is less space for fluid to accumulate in a small child, the target-zone is smaller for the needle, and therefore, the procedure is more intense than the other codes in the family. Commenters stated that the proposed intensity of CPT code 33018 is nearly identical to the proposed intensity for CPT code 33016, a relatively less intense service to perform, which would create a rank order anomaly within the family with respect to intensity.

Response: We appreciate the additional information from the commenters highlighting the pediatric nature of the patient population for CPT code 33018, and the potential for a rank order anomaly within the family with respect to intensity at the proposed work valuation. We agree with the commenters that CPT code 33018 should have the highest intensity among the four codes in this family.

Therefore, we are finalizing a work RVU of 5.40 for CPT code 33018 based on the RUC-recommended incremental relationship between this code and CPT code 33016 (a difference of 1.00 RVUs), which we are applying to our proposed value for the latter code. This work RVU will result in CPT code 33018 having the highest intensity out of the four codes in the family, in recognition of the additional difficulty and complexity of its pediatric patient population. We considered finalizing the RUC-recommended work RVU of 6.00 for CPT code 33018, which is based on a crosswalk to the emergency tracheostomy procedure described by CPT code 31603. However, we continue to have reservations about the use of this code as a crosswalk, as we believe that CPT code 31603 is a clear outlier in work valuation. As we stated in the proposed rule, the recommended crosswalk to CPT code 31603 had the highest work RVU among all of the codes in the RUC database with similar work time values, with only one other code in this group (CPT code 31600, another emergency tracheostomy procedure) having a work RVU higher than 4.69. These two tracheostomy procedures have work RVUs more than a full standard deviation above any of the other codes in this group of 0-day global procedures, and we believe these two codes to be outliers due to the serious risk of patient mortality associated with their performance. We believe that it is more accurate to use the RUC-recommended incremental relationship between this code and CPT code 33016 and finalize a work RVU of 5.40 for CPT code 33018, which recognizes the increased intensity of the procedure without crosswalking it to an outlier code with much greater risk of patient mortality.

Comment: Several commenters disagreed with the CMS proposed work RVU of 4.29 for CPT code 33019 and stated that CMS should instead finalize the RUC-recommended work RVU of 5.00. Commenters stated that the proposed work RVU for CPT code 33019 would create a rank order anomaly with respect to CPT code 33016. Commenters stated that although both procedures have distinct attributes, they both involve an identical amount of physician work.

Response: We disagree with the commenters that CPT codes 33016 and 33019 involve the identical amount of work. The survey respondents clearly did not believe that these two codes shared the same amount of work, as the surveys produced distinctly different work RVUs at the 25th percentile (5.00 against 4.29), the median (6.00 against 5.00), and the 75th percentile (7.85 against 5.44) for CPT codes 33016 and 33019, respectively. The survey respondents also recorded different intraservice times (30 minutes against 28 minutes) and total times (75 minutes against 84 minutes) for the two procedures. We believe that the survey data clearly demonstrates that CPT code 33019 should be valued at a lower work RVU than 33016, and we continue to believe that it was more accurate to propose a work RVU of 4.29 based on the survey 25th percentile.

After consideration of the public comments, we are finalizing the work RVUs for the codes in the Pericardiocentesis and Pericardial Drainage family as proposed, with the exception of CPT code 33018 where we are instead finalizing a work RVU of 5.40. We are also finalizing our proposal to have no direct PE inputs for these codes.

(10) Pericardiotomy (CPT Codes 33020 and 33025)

The RUC identified services with a negative IWPUT and Medicare utilization over 10,000 for all services or over 1,000 for Harvard valued and CMS/Other source codes. CPT code 33020 (*Pericardiotomy for removal of clot or foreign body (primary procedure)*) and CPT code 33025 (*Creation of pericardial window or partial resection for drainage*) were surveyed for April 2018.

We disagreed with the RUC-recommended work RVU of 14.31 (25th percentile survey value) for CPT code 33020 and proposed a work RVU of 12.95. Our proposed work RVU is based on a crosswalk to CPT code 58700 (*Salpingectomy, complete or partial, unilateral or bilateral (separate procedure)*), which has an identical work RVU of 12.95, identical 60 minutes intraservice time, and near identical total time values as CPT code 33020.

In our review of CPT code 33020, we noted that the RUC-recommended intraservice time is decreasing from 85 minutes to 60 minutes (29 percent reduction), and that the RUC-recommended total time is decreasing from 565 minutes to 321 minutes (43 percent reduction). However, the RUC-recommended work RVU is only decreasing from 14.95 to 14.31, which is a reduction of less than 5 percent. Although we did not imply that the decrease in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work are time and intensity, significant decreases in time should be appropriately reflected in decreases to work RVUs. In the case of CPT code 33020, we believed that it would be more accurate to propose a work RVU of 12.95, based on a crosswalk to CPT code 58700 to account for these decreases in surveyed work times.

For CPT code 33025, the RUC recommended a work RVU of 13.20 (survey 25th percentile value). Although we disagreed with the RUC-recommended work RVU of 13.20, based on RUC survey results and the time resources involved in furnishing these two procedures we agreed that the relative difference in work RVUs between CPT codes 33020 and 33025 is equivalent to the RUC-recommended incremental difference of 1.11 less work RVUs. Therefore, we proposed a work RVU of 11.84 based on a reference to CPT code 34712 (*Transcatheter delivery of enhanced fixation devices(s) to the endograft (e.g., anchor, screw, tack) and all associated radiological supervision and interpretation),* which has a work RVU of 12.00, identical intraservice time of 60 minutes, and similar total time as CPT code 33025.

In reviewing CPT code 33025, we noted that the RUC-recommended intraservice time is decreasing from 66

minutes to 60 minutes (9 percent reduction), and that the RUC-recommended total time is decreasing from 410 minutes to 301 minutes (27 percent reduction). However, the RUC-recommended work RVU is only decreasing from 13.70 to 13.20, which is a reduction of less than 5 percent. Although we did not imply that the decrease in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work are time and intensity, significant decreases in time should be appropriately reflected in decreases to work RVUs. In the case of CPT code 33025, we believed that it would be more accurate to propose a work RVU of 11.84, based on less the incremental difference of 1.11 work RVUs between CPT codes 33020 and 33025 and a crosswalk to CPT code 34712 to account for these decreases in surveyed work times.

We proposed the RUC-recommended direct PE inputs for all the codes in this family.

We received public comments on the proposed valuation of the codes in the Pericardiotomy family. The following is a summary of the comments we received and our responses.

Comment: A commenter noted that CMS misstated which code was identified via the RUC screen.

Response: We thank the commenter for bringing this to our attention. We have clarified how these codes came under review to reflect, as written in the RUC recommendations, that the RUC identified services with a negative IWPUT and Medicare utilization over 10,000 for all services or over 1,000 for Harvard valued and CMS/Other source codes. The RUC recommended that these services be surveyed for April 2018.

Comment: Several commenters disagreed with the CMS-proposed work RVU of 12.95 for CPT code 33020 and stated that CMS should instead finalize the RUC-recommended work RVU of 14.31. Commenters stated the typical patient for CPT code 33020 is acutely ill and has typically encountered some type of trauma resulting in the need for intensive short-term care prior to and immediately following the procedure. A commenter further noted that CPT code 33020 requires more physician work and is more intense than the CMS cross walk, CPT code 58700, because during both the pre-service and intra-service time, continual monitoring of the patient's hemodynamics is required because of the risk of imminent cardiac tamponade.

Response: We appreciate the additional information from the commenters regarding the relative intensity of CPT codes 33020 and 58700. In light of this additional information, we agree with the commenters that CPT code 33020 has a higher intensity than CPT code 58700.

Comment: Several commenters stated that the incremental methodology used in valuing these services was flawed; commenters did not agree that it was appropriate to reduce the work RVU for CPT code 33025 from the value proposed by the RUC, relative to the RUC's recommended difference in work between this code and CPT code 33020. Commenters also noted that it is imperative to employ RUC survey data to value these codes, and that using an incremental approach in lieu of survey data, strong crosswalks, and input from the practitioners providing these services was unjustified.

Response: We appreciate the commenters' concerns regarding our use of time ratio methodologies in the code valuation process for establishing work RVUs. We have responded to concerns about our methodology earlier in this section of this final rule. For more details on our methodology for developing work RVUs, we refer readers to our discussion of the subject in the ''Methodology for Establishing Work RVUs'' section of this rule (section II.N.2. of this final rule), as well as a longer discussion in the CY 2017 PFS final rule (81 FR 80272 through 80277).

After consideration of the public comments, we are not finalizing the proposed work RUVs for CPT codes 33020 and 33025, and instead are finalizing the RUC-recommended RVUs for the codes in the Pericardiotomy family. We are finalizing the direct PE inputs as proposed.

(11) Transcatheter Aortic Valve Replacement (TAVR) (CPT Codes 33361, 33362, 33363, 33364, 33365, and 33366)

In October 2016, the RUC's RAW reviewed codes that had been flagged in the period from October 2011 to April 2012, using 3 years of available Medicare claims data (2013, 2014 and preliminary 2015 data). The RUC workgroup concluded that the technology for these transcatheter aortic valve replacement (TAVR) services was evolving, as the typical site of service had shifted from being provided in academic centers to private centers, and the RUC recommended that CPT codes 33361–33366 be resurveyed for physician work and PE. These six codes were surveyed and reviewed at the April 2018 RUC meeting using a survey methodology that reflected the unique nature of these codes. CPT codes 33361–33366 are currently the only codes on the PFS where the -62 co-surgeon modifier is required 100 percent of the time.

We proposed the RUC-recommended work RVU for all six of the codes in this family. We proposed a work RVU of 22.47 for CPT code 33361 (*Transcatheter aortic valve replacement (TAVR/TAVI) with prosthetic valve; percutaneous femoral artery approach*), a work RVU of 24.54 for CPT code 33362 (*Transcatheter aortic valve replacement (TAVR/TAVI) with prosthetic valve; open femoral artery approach*), a work RVU of 25.47 for CPT code 33363 (*Transcatheter aortic valve replacement (TAVR/TAVI) with prosthetic valve; open axillary artery approach*), a work RVU of 25.97 for CPT code 33364 (*Transcatheter aortic valve replacement (TAVR/TAVI) with prosthetic valve; open iliac artery approach*), a work RVU of 26.59 for CPT code 33365 (*Transcatheter aortic valve replacement (TAVR/TAVI) with prosthetic valve; transaortic approach (e.g., median sternotomy, mediastinotomy)*), and a work RVU of 29.35 for CPT code 33366 (*Transcatheter aortic valve replacement (TAVR/TAVI) with prosthetic valve; transapical exposure (e.g., left thoracotomy)*).

Although we have some concerns that the RUC-recommended work RVUs for these six codes do not match the decreases in surveyed work time, we recognize that the technology described by the TAVR procedures is in the process of being adopted by a much wider audience, and that there will be greater intensity on the part of the practitioner when this particular new technology is first being adopted. However, we intend to continue examining whether these services are appropriately valued, in light of the proposed national coverage determination proposing to use TAVR for the treatment of symptomatic aortic valve stenosis that we posted on March 26, 2019. We will also consider any further improvements to the valuation of these services, as their use becomes more commonplace, through future notice and comment rulemaking. The text of the proposed national coverage determination is available on the CMS website at *https://www.cms.gov/medicare-coverage-database/details/nca-proposed-decision-memo.aspx?NCAId=293.*

We proposed the RUC-recommended direct PE inputs for all codes in the family.

We received public comments on the proposed valuation of the codes in the

Transcatheter Aortic Valve Replacement family. The following is a summary of the comments we received and our responses.

Comment: A commenter stated that they appreciate recognition of the complexities of this evolving technology by CMS and agreed with the proposal of the RUC-recommended work RVUS for all six of these codes.

Response: We appreciate the support for our proposals from the commenter.

Comment: Several commenters disagreed with the proposed work RVUs. Commenters disagreed with the proposed reduction in work RVUs for CPT codes 33361–33366 on the basis that the proposed values were too low and did not accurately reflect the actual work time and intensity required to perform all aspects of the procedures. Commenters stated that the amount of effort spent is not decreasing, and RVUs are shared equally between the surgeon and cardiologist. A commenter stated that the number of Medicare beneficiaries receiving TAVR was increasing rapidly due to FDA approval of an expanded TAVR indication in low surgical risk patients and a revised National Coverage Determination (NCD) published by CMS. This commenter stated that the RUC-recommended and CMS-proposed valuations do not include the time and PE costs associated with physicians' TAVR-related data requirements, and the commenter recommended delaying the adoption of the new work RVUs.

Response: We disagree with the commenters that the proposed work RVUs for CPT codes 33361–33366 were too low and that the implementation of these work RVUs should be delayed. The work surveys conducted by the RUC indicated that the typical intraservice work time decreased substantially for each code in the family since the last time of review in 2012. For example, CPT code 33361 decreased from a previous intraservice work time of 135 minutes to a newly surveyed intraservice work time of 90 minutes. Although we do not imply that the decrease in time as reflected in survey values must equate to a one-to-one or linear decrease in the valuation of work RVUs, we believe that since the two components of work are time and intensity, significant decreases in time should be appropriately reflected in decreases to work RVUs. This was the rationale for the RUC's recommendation of decreased work RVUs for the six codes in the family, which we shared in proposing these valuations. We also do not agree that an increase in utilization for the TAVR codes would necessarily be sufficient rationale for delaying their implementation, as there are many other services experiencing a high rate of growth for which we have not proposed a delay in valuation.

After consideration of the public comments, we are finalizing the work RVUs and direct PE inputs for the codes in the Transcatheter Aortic Valve Replacement family as proposed.

(12) Aortic Graft Procedures (CPT Codes 33858, 33859, 33863, 33864, 33871, and 33866)

In 2017, CPT created a new add-on code, CPT code 33866 (*Aortic hemiarch graft including isolation and control of the arch vessels, beveled open distal aortic anastomosis extending under one or more of the arch vessels, and total circulatory arrest or isolated cerebral perfusion (List separately in addition to code for primary procedure)*). For CY 2019, we finalized the RUC's recommended work RVU for this code as proposed, and indicated that we would consider any coding changes or RUC recommendations in future rulemaking (83 FR 59528). CPT revised the code set to develop distinct codes for ascending aortic repair for dissection and ascending aortic repair for other ascending aortic disease such as aneurysms and congenital anomalies, creating two new codes, as well as revaluating the two other codes in the family.

For CPT code 33858 (*Ascending aorta graft, with cardiopulmonary bypass, includes valve suspension, when performed; for aortic dissection*), we disagree with the RUC-recommended work RVU of 65.00, because the RUC is recommending an increase in work RVU that is not commensurate with a reduction in physician time, and because we do not believe that the RUC's recommendation that this service be increased to a value that would place it among the highest valued of all services of similar physician time is appropriate; we believe a comparison to other services of similar time indicates that the RUC's recommended increase overstates the work. Instead, we proposed to increase the work RVU to 63.40 based on a crosswalk to CPT code 61697 (*Surgery of complex intracranial aneurysm, intracranial approach; carotid circulation*).

For CPT code 33859 (*Ascending aorta graft, with cardiopulmonary bypass, includes valve suspension, when performed; for aortic disease other than dissection (e.g., aneurysm)*), we disagree with the RUC-recommended work RVU of 50.00, because we do not believe it adequately reflects the recommended decrease in physician time, and because we do not believe this service should be assigned a value that is among the highest of all 90-day global services with similar physician time values. Instead, we proposed a work RVU of 45.13 based on a crosswalk to CPT code 33468 (*Tricuspid valve repositioning and plication for Ebstein anomaly*), which is a code with an identical intraservice time and similar total time value.

For CPT code 33863 (*Ascending aorta graft, with cardiopulmonary bypass, with aortic root replacement using valved conduit and coronary reconstruction (e.g., Bentall)*), according to the RUC, the survey respondents underestimated the intraservice time of the procedure and the RUC recommended a work RVU of 59.00 based on the 75th percentile of survey responses for intraservice time. We believe the use of the survey 75th percentile value to be problematic, as the intraservice time values should generally reflect the survey median. We are requesting that this code be resurveyed to determine more accurate physician time values, and we proposed to maintain the current RVU of 58.79 for CY 2020.

For CPT code 33864 (*Ascending aorta graft, with cardiopulmonary bypass with valve suspension, with coronary reconstruction and valve-sparing aortic root remodeling (e.g., David Procedure, Yacoub procedure)*), we do not agree with the RUC-recommended work RVU of 63.00, because we believe this increase is not justified given that the intraservice time is not changing from its current value, and the physician total time value is decreasing. Therefore, we proposed to maintain the current work RVU of 60.08 for this service.

For CPT code 33871 (*Transverse aortic arch graft, with cardiopulmonary bypass, with profound hypothermia, total circulatory arrest and isolated cerebral perfusion with reimplantation of arch vessel(s) (e.g., island pedicle or individual arch vessel reimplantation)*), we disagree with the RUC's recommended work RVU of 65.75. While we agree that an increase in work RVU is justified, as discussed above, we believe that the use of the 75th percentile of physician intraservice work time is problematic, and believe such a significant increase in work RVU is not validated. Therefore, we proposed a less significant increase to 60.88 using the RUC-recommended difference in work value between CPT code 33859 and the code in question, CPT code 33871 (a difference of 15.75). As further support for this value, we note that it falls between CPT codes 33782 (*Aortic root translocation with ventricular septal defect and pulmonary stenosis*

repair (i.e., Nikaidoh procedure); without coronary ostium reimplantation), which has a work RVU of 60.08, and CPT code 43112 (*Total or near total esophagectomy, with thoracotomy; with pharyngogastrostomy or cervical esophagogastrostomy, with or without pyloroplasty (i.e., McKeown esophagectomy or tri-incisional esophagectomy)*), which has a work RVU of 62.00. Both of these bracketing reference codes have similar intraservice and total time values.

For CPT code 33866 (*Aortic hemiarch graft including isolation and control of the arch vessels, beveled open distal aortic anastomosis extending under one or more of the arch vessels, and total circulatory arrest or isolated cerebral perfusion (List separately in addition to code for primary procedure)*), we proposed the RUC-recommended work RVU of 17.75.

For the direct PE inputs, we proposed to refine the clinical labor to align with the number of post-operative visits. Thus, we proposed to add 12 minutes of clinical labor time for ''Discharge day management'' for CPT codes 33859, 33863, 33864, and 33871, as each of these codes include a 99238 discharge visit within their global periods that should be reflected in the clinical labor inputs.

We received public comments on the proposed valuation of the codes in the Aortic Graft Procedures family. The following is a summary of the comments we received and our responses.

Comment: One commenter disagreed with our proposed value for CPT Code 33858, and stated that our proposal ignores that deleted CPT code 33860 is a more general code than CPT code 33858, as 33860 is both used for emergent procedures (*e.g.,* repairs for aortic dissection) and for planned procedures (*e.g.,* repair for aortic diseases other than dissection), whereas CPT code 33858 is only the portion of CPT code 33860's volume that is emergent. Therefore, the commenter suggested that we should not compare physician times for the two codes as they describe different intensities. This commenter stated that CMS inappropriately rejected the RUC recommendation and instead picked an arbitrary low-volume crosswalk, last reviewed almost 15 years ago, with a work RVU only 2.5 percent less than the RUC recommendation. Furthermore, the commenter stated that this selected crosswalk is not an appropriate comparator, as CPT code 33858 involves three critical care visits, whereas the crosswalk code 61697 does not include any critical care.

Response: As we explained in the CY 2020 PFS proposed rule (84 FR 40575), our determination that the RUC's value overstates the work was based on an analysis of all codes with 90-day global periods. Our use of a crosswalk based on physician time is consistent with longstanding valuation methodology. We note that crosswalk CPT code 61697 has an intraservice time value that is identical to that of CPT code 33858, and a total time value that is over 20 percent higher than that of CPT code 33858; thus, we believe that the critical care component is adequately reflected in this value. The vignettes for CPT code 33858 and our crosswalk code, CPT code 61697, both describe complicated procedures for acutely ill patients; both involve significant vascular structures and are performed on urgent or emergent bases. Our examination of time values indicated that the RUC's work RVU was somewhat overstated, and we continue to believe that CPT code 61697 provides an appropriate crosswalk.

Comment: For CPT Code 33859, a commenter questioned our statement that we did not believe that the RUC-recommended work RVU adequately reflects the recommended decrease in physician time, stating that the change in total time from 931 minutes to 778 minutes is in close proportion to the change in value from the current value of 59.46 for the deleted code to the RUC recommendation of 50.00. This commenter stated that our proposed value for CPT 33871 is also flawed as it is based on an increment to CPT 33859.

Response: We disagree that the RUC's recommended reduction in work RVU is closely proportionate to the decrease in time. We disagree that physician time ratios indicate that the RUC-recommended value is closely proportionate to the time decrease. We note that, while the commenter cites the total time ratio, the intraservice time ratio indicate that the RUC's recommended value is somewhat overstated. Our crosswalk code CPT code 33468 and CPT code 33859 both involve bypass procedures, and have similar time values; CPT code 33468 has more total time than CPT code 33859. We continue to believe, given the time values and intensity involved in the two procedures, that CPT code 33468 is a strong crosswalk. For CPT code 33871, we note that our reference code CPT code 43112 has almost the same intraservice time value and 196 more minutes of total time, and further validates our proposed work RVU.

Comment: For CPT codes 33863 and 33871, a commenter stated that our rationales, which in part included an assumption on our part that the physician intraservice times were overstated in that they are the 75th percentile survey values, neglected to acknowledge or account for the STS Database intra-service times for these codes, which in the commenter's view support the RUC's recommended intra-service times. The commenter suggested that our request that these services be resurveyed ignores the RUC's rationale regarding the STS database times.

Response: We note that we did not ignore the STS database time data, and our proposed values for CPT codes 33863 and 33871 rely on times from this database, and we are finalizing the time values as recommended for these codes. We primarily rely on survey data for time values, however we continue to remain interested in a range of data sources and how to integrate these data sources into our ratesetting process.

Comment: A commenter disagreed with our proposal to maintain the current work RVU for CPT code 33864, and stated that our proposed value for CPT code 33864 would not have appropriate relativity compared to our proposed value for CPT code 33863, and that the former service involves more difficult and intense work than the latter. The commenter stated that CPT code 33864 involves replacing the aortic root and ascending aorta, but unlike CPT code 33863, attempts to preserve the patient's own native aortic valve—a procedure far more complex and skill-intensive than aortic valve replacement reflected in CPT code 33863. The increment of the RUC recommendations between these two services is 4.00 RVUs, whereas the increment for the CMS-proposed values is only 1.29 RVUs, which is not sufficient to account for the difference in work between these two services.

Response: We agree that CPT code 33864 is a more intense procedure than CPT code 33863, which is why we proposed a higher intensity for this procedure. However, we do not agree with the commenters that this greater intensity justifies the RUC-recommended work increment of 4.00 work RVUs between the two procedures. We believe that if CPT code 33864 typically required a significant amount of additional work in comparison to CPT code 33863, that work would have been reflected in the surveyed work times for the two procedures. Instead, the surveyed work times are identical between the two procedures. Absent evidence of additional work time from the survey respondents, we continue to believe that the proposed work RVU and proposed intensity for CPT code 33864 accurately

capture the increased difficulty of the procedure in comparison to CPT code 33863.

Comment: One commenter stated that they agreed with the proposed direct PE clinical labor refinements for these codes.

Response: We appreciate the support for our proposals from the commenter.

After consideration of the public comments, we are finalizing work RVUs of 63.40 for 33858, 45.13 for 33859, 58.79 for CPT code 33863, 60.08 for CPT code 33864, 60.88 for CPT code 33871, and the RUC-recommended work RVU of 17.75 for CPT code 33866 as proposed. We are also finalizing the direct PE inputs as proposed.

(13) Iliac Branched Endograft Placement (CPT Codes 34717 and 34718)

For CY 2018, the CPT Editorial Panel created a family of 20 new and revised codes that redefined coding for endovascular repair of the aorta and iliac arteries. The iliac branched endograft technology has become more mainstream over time, and two new CPT codes were created to capture the work of iliac artery endovascular repair with an iliac branched endograft. These two new codes were surveyed and reviewed for the January 2019 RUC meeting.

We proposed the RUC-recommended work RVU of 9.00 for CPT code 34717 (*Endovascular repair of iliac artery at the time of aorto-iliac artery endograft placement by deployment of an iliac branched endograft including pre-procedure sizing and device selection, all ipsilateral selective iliac artery catheterization(s), all associated radiological supervision and interpretation, and all endograft extension(s) proximally to the aortic bifurcation and distally in the internal iliac, external iliac, and common femoral artery(ies), and treatment zone angioplasty/stenting, when performed, for rupture or other than rupture (e.g., for aneurysm, pseudoaneurysm, dissection, arteriovenous malformation, penetrating ulcer, traumatic disruption), unilateral*) and the RUC-recommended work RVU of 24.00 for CPT code 34718 (*Endovascular repair of iliac artery, not associated with placement of an aorto-iliac artery endograft at the same session, by deployment of an iliac branched endograft, including pre-procedure sizing and device selection, all ipsilateral selective iliac artery catheterization(s), all associated radiological supervision and interpretation, and all endograft extension(s) proximally to the aortic bifurcation and distally in the internal iliac, external iliac, and common femoral artery(ies), and treatment zone angioplasty/stenting, when performed, for other than rupture (e.g., for aneurysm, pseudoaneurysm, dissection, arteriovenous malformation, penetrating ulcer), unilateral*).

We proposed the RUC-recommended direct PE inputs for all codes in the family.

We received public comments on the proposed valuation of the codes in the Iliac Branched Endograft Placement family. The following is a summary of the comments we received and our responses.

Comment: A commenter stated that they supported the proposal of the RUC-recommended work RVU for both codes in the family.

Response: We appreciate the support for our proposals from the commenter.

After consideration of the public comments, we are finalizing the work RVUs and direct PE inputs for the codes in the Iliac Branched Endograft Placement family as proposed.

(14) Exploration of Artery (CPT Codes 35701, 35703, and 35703)

CPT code 35701 (*Exploration not followed by surgical repair, artery; neck (e.g., carotid, subclavian)*) was identified via a screen for services with a negative IWPUT and Medicare utilization over 10,000 for all services or over 1,000 for Harvard valued and CMS/Other source codes. In September 2018, the CPT Editorial Panel revised one code, added two new codes, and deleted three existing codes in the family to report major artery exploration procedures and to condense the code set due to low frequency.

We proposed the RUC-recommended work RVU for all three codes in the family. We proposed a work RVU of 7.50 for CPT code 35701, a work RVU of 7.12 for CPT code 35702 (*Exploration not followed by surgical repair, artery; upper extremity (e.g., axillary, brachial, radial, ulnar)*), and a work RVU of 7.50 for CPT code 35703 (*Exploration not followed by surgical repair, artery; lower extremity (e.g., common femoral, deep femoral, superficial femoral, popliteal, tibial, peroneal)*).

For the direct PE inputs, we proposed to refine the clinical labor, supplies, and equipment to match the number of office visits contained in the global periods of the codes under review. We proposed to refine the clinical labor time for the ''Post-operative visits (total time)'' (CA039) activity from 36 minutes to 27 minutes for CPT codes 35701 and 35702, and from 63 minutes to 27 minutes for CPT code 35703. Each of these CPT codes contains a single postoperative level 2 office visit (CPT code 99212) in its global period, and 27 minutes of clinical labor is the time associated with this office visit. We proposed to refine the equipment time for the exam table (EF023) to the same time of 27 minutes for each code to match the clinical labor time. Finally, we are also proposing to refine the quantity of the minimum multi-specialty visit pack (SA048) from 2 to 1 for CPT code 35703 to match the single postoperative visit in the code's global period. We believe that the additional direct PE inputs in the recommended materials were an accidental oversight due to revisions that took place at the RUC meeting following the approval of the PE inputs for these codes.

We received public comments on the proposed valuation of the codes in the Exploration of Artery family. The following is a summary of the comments we received and our responses.

Comment: A commenter stated that they supported the proposed work RVUs and thanked CMS for correcting the PE to reflect the number of office visits contained in the global period.

Response: We appreciate the support for our proposals from the commenter.

After consideration of the public comments, we are finalizing the work RVUs and direct PE inputs for the codes in the Exploration of Artery family as proposed.

(15) Intravascular Ultrasound (CPT Codes 37252 and 37253)

In the CY 2015 PFS proposed rule, a stakeholder requested that CMS establish non-facility PE RVUs for CPT codes 37250 and 37251. CMS sought comment regarding the setting and valuation of these services. The CPT Editorial Panel deleted CPT codes 37250 *((Ultrasound evaluation of blood vessel during diagnosis or treatment)* and 37251 *(Ultrasound evaluation of blood vessel during diagnosis or treatment)* and created new bundled codes 37252 (*Intravascular ultrasound (noncoronary vessel) during diagnostic evaluation and/or therapeutic intervention, including radiological supervision and interpretation; initial noncoronary vessel*) and 37253 *(Intravascular ultrasound (noncoronary vessel) during diagnostic evaluation and/or therapeutic intervention, including radiological supervision and interpretation; each additional noncoronary vessel)* to describe intravascular ultrasound (IVUS). CMS finalized the RUC recommended work RVUs for intravascular ultrasound.

When CPT codes 37252 and 37253 were reviewed at the January 2015 RUC meeting, they were assumed to be work neutral compared to predecessor codes

CPT codes 37250 and 37251, meaning they would not result in an overall increase in work spending, and that they would result in an overall savings of work RVUs that would be redistributed to the Medicare conversion factor. Services are considered work neutral if, despite changes in coding, the overall amount of work RVUs for a set of services is held constant from one year to the next.

The RUC determined that, between CY 2015 and CY 2016, the overall work spending for these services went up by 44 percent as compared to the predecessor codes, thus disrupting the projected work neutrality. Observed utilization also doubled. In April 2018, the RUC reviewed this code family and found that the utilization of these services was underestimated, considering that the newer bundled codes included radiological supervision and interpretation.

Consequently, the RUC recommended that these services be surveyed for October 2018. The RUC indicated that the specialty societies should research why there was such an increase in the utilization. Accordingly, the specialty society surveyed these add-on codes, and the survey results indicated the intraservice and total work times, along with the work RVU should remain the same despite the RUC's underestimation of utilization for these codes.

We disagreed with the RUC-recommended work RVU of 1.80 for CPT code 37252 and proposed a work RVU of 1.55 based on a crosswalk to CPT code 19084. CPT code 19084 is a recently reviewed code with 20 minutes of intraservice time and 25 minutes of total time. In reviewing CPT code 37252, we note, as mentioned above, that in CY 2015 the specialty society expected that bundling this service would achieve work neutrality, meaning that new coding would not result in an overall increase in work spending. However, since 2015, observed utilization for CPT code 37252 has greatly exceeded estimated utilization. Therefore, we proposed for CY 2020 work RVUs based on crosswalk codes that would have resulted in restored work neutrality for the intravascular ultrasound code family.

For CPT code 37253, we disagreed with the RUC-recommended work RVU of 1.44 and we proposed a work RVU of 1.19. Although we disagreed with the RUC-recommended work RVU, we note the relative difference in work between CPT codes 37252 and 37253 is an interval of 0.36 RVUs. Therefore, we proposed a work RVU of 1.19 for CPT code 37253, based on the recommended interval of 0.36 fewer RVUs than our proposed work RVU of 1.55 for CPT code 37252.

We proposed the RUC-recommended direct PE inputs for all codes in the family.

We received public comments on the proposed valuation of the codes in the Intravascular Ultrasound family. The following is a summary of the comments we received and our responses.
