FEDERAL REGISTER

Vol. 85 Friday,

No. 239 December 11, 2020

Pages 79777–80580

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097–6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see *www.federalregister.gov.*

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at *www.govinfo.gov*, a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 1, 1 (March 14, 1936) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, *gpocusthelp.com.*

The annual subscription price for the **Federal Register** paper edition is $860 plus postage, or $929, for a combined **Federal Register, Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is $330, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register,** including postage, is based on the number of pages: $11 for an issue containing less than 200 pages; $22 for an issue containing 200 to 400 pages; and $33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for $3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see *bookstore.gpo.gov.*

There are no restrictions on the republication of material appearing in the **Federal Register.**

How To Cite This Publication: Use the volume number and the page number. Example: 85 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

Presidential Documents

Title 3—

The President

Executive Order 13962 of December 8, 2020

Ensuring Access to United States Government COVID–19 Vaccines

By the authority vested in me as President by the Constitution and the laws of the United States of America, it is hereby ordered as follows:

Section 1. *Purpose.* Through unprecedented collaboration across the United States Government, industry, and international partners, the United States expects to soon have safe and effective COVID–19 vaccines available for the American people. To ensure the health and safety of our citizens, to strengthen our economy, and to enhance the security of our Nation, we must ensure that Americans have priority access to COVID–19 vaccines developed in the United States or procured by the United States Government (''United States Government COVID–19 Vaccines'').

Sec. 2. *Policy.* It is the policy of the United States to ensure Americans have priority access to free, safe, and effective COVID–19 vaccines. After ensuring the ability to meet the vaccination needs of the American people, it is in the interest of the United States to facilitate international access to United States Government COVID–19 Vaccines.

Sec. 3. *American Access to COVID–19 Vaccines.* (a) The Secretary of Health and Human Services, through Operation Warp Speed and with the support of the Secretary of Defense, shall ensure safe and effective COVID–19 vaccines are available to the American people, coordinating with public and private entities—including State, territorial, and tribal governments, where appropriate—to enable the timely distribution of such vaccines.

(b) The Secretary of Health and Human Services, in consultation with the Secretary of Defense and the heads of other executive departments and agencies (agencies), as appropriate, shall ensure that Americans have priority access to United States Government COVID–19 Vaccines, and shall ensure that the most vulnerable United States populations have first access to such vaccines.

(c) The Secretary of Health and Human Services shall ensure that a sufficient supply of COVID–19 vaccine doses is available for all Americans who choose to be vaccinated in order to safeguard America from COVID–19.

Sec. 4. *International Access to United States Government COVID–19 Vaccines.* After determining that there exists a sufficient supply of COVID–19 vaccine doses for all Americans who choose to be vaccinated, as required by section 3(b) of this order, the Secretary of Health and Human Services and the Secretary of State, in coordination with the Administrator of the United States Agency for International Development, the Chief Executive Officer of the United States International Development Finance Corporation, the Chairman and President of the Export-Import Bank of the United States, and the heads of other agencies, shall facilitate international access to United States Government COVID–19 Vaccines for allies, partners, and others, as appropriate and consistent with applicable law.

Sec. 5. *Coordination of International Access to United States Government COVID–19 Vaccines.* Within 30 days of the date of this order, the Assistant to the President for National Security Affairs shall coordinate development of an interagency strategy for the implementation of section 4 of this order.

Sec. 6. *General Provisions.* (a) Nothing in this order shall be construed to impair or otherwise affect:

(i) the authority granted by law to an executive department or agency, or the head thereof; or

(ii) the functions of the Director of the Office of Management and Budget relating to budgetary, administrative, or legislative proposals.

(b) This order shall be implemented consistent with applicable law and subject to the availability of appropriations.

(c) This order is not intended to, and does not, create any right or benefit, substantive or procedural, enforceable at law or in equity by any party against the United States, its departments, agencies, or entities, its officers, employees, or agents, or any other person.

RIN 0581–AD81

Undue and Unreasonable Preferences and Advantages Under the Packers and Stockyards Act

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Final rule.

SUMMARY: This final rule establishes a new regulation containing criteria the Secretary of Agriculture will consider when determining whether an undue or unreasonable preference or advantage has occurred in violation of the Packers and Stockyards Act, 1921 (Act). A provision of the Food, Conservation, and Energy Act of 2008 (2008 Farm Bill) requires the Secretary to establish the criteria. The Act protects fair trade, financial integrity, and competitive marketing for livestock, meat, and poultry.

DATES: Effective January 11, 2021.

FOR FURTHER INFORMATION CONTACT: S. Brett Offutt, Chief Legal Officer/Policy Advisor; Packers and Stockyards Division, USDA, AMS Fair Trade Practices Program; phone: 202–690–4355 or email: *S.Brett.Offutt@usda.gov.*

SUPPLEMENTARY INFORMATION: The Act at 7 U.S.C. 202(b) specifies that it is unlawful for any packer, swine contractor, or live poultry dealer to either make or give any undue or unreasonable preference or advantage to any particular person or locality in any respect. In administering this provision of the Act, the United States Secretary of Agriculture (Secretary) determines whether the conduct of regulated entities is considered a violation of the Act.

In the past, each determination was analyzed using general principles on a case-by-case basis, exercising the regulatory flexibility Congress provided when it passed the Act. Section 11006(1) of the 2008 Farm Bill (Pub. L. 110–234) requires the Secretary to promulgate regulations establishing criteria the Secretary will consider in determining whether an undue or unreasonable preference or advantage has occurred in violation of the Act. At that time, the Secretary delegated responsibility for establishing the required criteria to the Grain Inspection, Packers and Stockyards Administration (GIPSA). In 2017, GIPSA merged with the Agricultural Marketing Service (AMS). AMS now administers the regulations under the Act and undertook this rulemaking to meet the statutory requirement. This rule adds a new § 201.211 to 9 CFR part 201—Regulations Under the Packers and Stockyards Act (P&S regulations). This rule retains a flexible framework for the Secretary's determinations, while providing criteria to support transparency in the Secretary's determinations. Accordingly, the regulated industry and the public now have a reference to the general framework that AMS will use to determine whether there is an unlawful preference or advantage under section 202(b) of the Act.

Newly added § 201.211 requires the Secretary to consider four specified criteria when determining whether any undue or unreasonable preference or advantage has been given or made to any particular person or locality in any respect in violation of the Act. The Secretary is not limited to considering only these four criteria but can also take other factors into consideration as appropriate on a case-by-case basis. We discuss each of the four criteria later in this document.

AMS published a proposed rule regarding this matter in the **Federal Register** on January 13, 2020 (85 FR 1771). The proposed rule invited public comments on the addition of the proposed criteria to the P&S regulations. AMS allowed a 60-day public comment period for interested parties to submit comments. The comment period ended March 13, 2020. AMS received 2,351 comments on the proposed rule, of which 235 were unique. The remaining comments represented 48 groupings of similar comments, each group having at least 80 percent matching text. Commenters represented numerous segments of the livestock and poultry industry, from individual poultry growers and livestock producers to trade organizations representing producers, poultry companies, the meat packing industry, and state and national level agriculture groups. After considering the comments received, AMS determined to adopt the proposed criteria with two modifications. Analysis of the comments and AMS's responses are included later in this document.

Background

As mentioned above, the 2008 Farm Bill directs the Secretary to establish criteria the Secretary will consider in determining whether an undue or unreasonable preference or advantage has occurred in violation of the Act. At the time the 2008 Farm Bill was enacted, what is now the Packers and Stockyards Division (PSD) of AMS's Fair Trade Practices Program operated within GIPSA. GIPSA undertook the responsibility for developing criteria for consideration. In June 2010, GIPSA

published a proposed rule (75 FR 35338 (June 22, 2010)) that was never finalized, due to Congressional prohibitions included in the Consolidated Appropriations Acts for fiscal years 2012 through 2015, which disallowed any further work on the new criteria rulemaking. *See* Sec. 721, Public Law 112–55, November 18, 2011; Sec. 742, Public Law 113–6, March 26, 2013; Sec. 744, Public Law 113–76, January 17, 2014; and Sec. 731, Public Law 113–235, December 16, 2014. GIPSA resumed its efforts to promulgate the required criteria in December 2016 with publication of a second proposed rule (81 FR 92703 (December 20, 2016)), but decided to take no further action on that proposal (82 FR 48603 (October 18, 2017)). AMS accomplishes Congress's 2008 Farm Bill directive with the promulgation of this final rule that establishes the required criteria.

The PSD oversees day-to-day administration of the P&S regulations and is called upon to investigate alleged violations of section 202(b). Many of the alleged violations related to contractual dealings between regulated entities and the livestock producers, swine production contract growers, and poultry growers with whom they do business. Other entities, including retailers and the public, can also be harmed by violations of section 202(b). Difficulty lies in determining whether particular instances of preferences or advantages made or given to one or more persons or localities would be undue or unreasonable and violations of the Act.

New Provisions

Section 202(b) of the Act prohibits buyers to ''make or give any undue or unreasonable preference or advantage to any particular person or locality in any respect, or subject any particular person or locality to any undue or unreasonable prejudice or disadvantage in any respect.'' It is not unusual for buyers or sellers of livestock or poultry to receive advantages. For example, between two competing sellers, one may receive a better price from a buyer. The Act only prohibits those preferences or advantages that are undue or unreasonable. It follows that there are legitimate reasons for the existence of preferences or advantages that are not undue or unreasonable. Reasonable differences in contract terms may result from negotiations over particular interests between the parties. Some courts have gone so far as to say it is not the purpose of the Act to interfere with contract negotiations or to upset the traditional principles of freedom of contract.[1] The Act does not create an entitlement to obtain the same type of contract offered to other producers or growers. However, greater clarity on the terms associated with grower contracts may increase transparency in the marketplace and reduce the number of claims of undue or unreasonable preference.

Under new § 202.211, the Secretary will consider four specific criteria when determining whether a packer, swine contractor, or live poultry dealer has made or given any undue or unreasonable preference or advantage to any particular person or locality in any respect. Section 201.211 lists the criteria for consideration and provides that the Secretary is not limited to those four. Because § 202(b) of the P&S Act prohibits any undue or unreasonable preferences or advantages, in addition to considering the specified criteria in § 201.221, the Secretary may also consider other factors relevant to each situation on a case-by-case basis.

Under § 201.211(a), the Secretary will consider whether the preference or advantage in question cannot be justified on the basis of a cost savings related to dealing with different producers, sellers, or growers. Under § 201.211(b), the Secretary will consider whether the preference or advantage in question cannot be justified on the basis of meeting a competitor's prices. Under § 201.211(c), the Secretary will consider whether the preference or advantage in question cannot be justified on the basis of meeting other terms offered by a competitor. Under § 201.211(d), the Secretary will consider whether the preference or advantage in question cannot be justified as a reasonable business decision.

Historically, the Secretary has considered criteria similar to these when determining whether to commence disciplinary or judicial actions under the Act. PSD made these decisions on a case-by-case basis, examining the facts of each complaint separately. AMS chose these new criteria, and retained the flexibility to consider other criteria, based on this past experience. In doing so, AMS strikes a balance between the interests of all segments of the industry while carrying out its enforcement responsibilities. On the one hand, the law charges AMS with protecting producers, growers, retailers, and the public from potential harm resulting from undue or unreasonable preferences or advantages. On the other hand, AMS recognizes that among the numerous complaints the Secretary has examined in the past, many preferences or advantages given to individuals or groups have been determined to be lawful, while relatively few preferences or advantages were found undue or unreasonable.

Disparate contract terms are not undue or unreasonable just because the terms are not identical. Some disparities in contract terms can be attributed to reasonable business negotiations between contracting parties. For example, price differences offered to different sellers may reflect differences in transportation costs to a slaughter facility or may reflect one producer's ability and willingness to supply livestock in the early morning hours. In the case of a live poultry dealer that pays a premium to a poultry grower who agrees to use experimental vaccines, the grower has increased risk of financial loss if the vaccine proves to be unsuccessful. Based on the criteria in § 201.211, the apparent preference or advantage might be justified on the basis of the company saving the expense of testing the vaccines through other means. The premium paid to the grower for providing the extra service of testing vaccines and for accepting greater financial risk might not be considered undue or unreasonable. In another example, a livestock packer pays higher prices later in the day or week after competitors have raised the market price. Based on the criteria in § 201.211, the apparent preference or advantage might be justified as necessary to meet competitors' prices, and the higher price might not be considered undue or unreasonable. Finally, where a live poultry dealer's competitors have offered long term contracts to their growers, the poultry dealer finds that he must offer comparable terms to his growers in the same locality. Based on the criteria in § 201.211, the apparent preference given to growers in that locality might not be considered undue or unreasonable because the difference in contract terms might be justified by the need to meet a competitor's other contract terms in that locality.

Some preferences or advantages, however, might be considered undue or unreasonable if they are so unfair that they would tend to restrain trade, creating such excessively favorable conditions for one or more persons that the competitors would have reduced chances of business success. In such a case, a higher price, referred to as a premium, offered to one person or locality but not offered to other persons or localities similarly situated could

[1] *Jackson* v. *Swift Eckrich, Inc.,* 53 F.3d 1452 (8th Cir. 1995), *IBP* v. *Glickman,* 187 F.3d 974 (8th Cir. 1999), *Griffin* v. *Smithfield Foods,* 183 F. Supp. 2d 824 (E.D.Va. 2002).

constitute a violation of the Act. A livestock packer negotiating preferential live basis prices with only one favored livestock supplier and not with similarly situated suppliers, may be in violation of the Act. After considering the criteria in § 201.211, the Secretary may conclude that the packer cannot justify its actions on the basis of cost savings, meeting a competitor's prices, meeting other terms offered by a competitor, or making a reasonable business decision.

Under § 201.211(a) through (c), the Secretary will consider whether preferences or advantages given to one or more persons are based on cost savings related to dealing with different producers, sellers, or growers or on the need to meet a competitor's prices or other contract terms. For example, a live poultry dealer offering a higher base price to a favored grower, but not to other growers in the same complex with the same housing types, may be in violation of the Act. The Secretary will consider all of the specified criteria. Under criterion (a), there would be no cost savings in a higher base price. Under criteria (b) and (c), the Secretary will consider whether the higher base price meets a competitor's price or other terms. If the reason for giving the favored grower the higher price cannot be justified by meeting a competitor's price or other terms, and if consideration of other factors particular to the situation does not suggest otherwise, the higher base price may be an undue or unreasonable preference or advantage.

Under § 201.211(d), the Secretary will consider whether the preference or advantage in question cannot be justified as a reasonable business decision. A packer, swine contractor, or live poultry dealer may have a reasonable business reason for treating some persons or groups more favorably than others. For example, in the cattle industry a packer may pay producers a premium for delivering cattle that meet an established certified beef program, such as ''Certified Angus Beef,'' because the packer can realize a greater profit from the sale of meat branded under those programs. Based on the criterion in § 201.211(d), it is likely that the apparent preference or advantage to sellers of cattle meeting certain specifications in that situation would be justified as a reasonable business decision and not considered undue or unreasonable. In another example, a live poultry dealer may pay a premium to growers who raise test flocks utilizing a new breed of chicken, as this provides the live poultry dealer with data from which it can make future business decisions. Based on the criterion in § 201.211(d), the premium might be justified as a reasonable business decision, so the Secretary might not determine the preference or advantage to be undue or unreasonable.

Live poultry dealers, packers, and swine contractors should enter into contracts that do not discriminate, unless the differences are due to cost savings or meeting competitors' prices and terms or are legitimate business decisions. Preferences that are not grounded in ordinary business considerations may be based upon reasons of unjust advantage.

It should be noted that an alleged preference or advantage being seemingly justified under one criterion does not automatically confer immunity against all other criteria. For example, a preference or advantage may still be deemed undue or unreasonable, even though it is apparently given to meet a competitor's offer, if the Secretary determines the preference or advantage was unreasonable based on another criterion. Thus, the criteria specified in § 201.211 are not safe harbors, as suggested by some comments on the proposed rule.

The flexibility in § 201.211 to consider criteria other than the four specified in the rule allows the Secretary to determine whether other pertinent factors may have influenced the business decisions of contracting parties. For example, one comment submitted on the proposed rule recommended the Secretary consider whether an apparent preference or advantage could be ascribed to an emergency situation, such as a government requisition for food after a natural disaster or during a military crisis. While AMS did not add this particular criterion to the four specified in the rule, it is nevertheless a good example of the type of additional criteria the Secretary may consider. The discretion to consider other criteria, however, is not boundless.

In addition to the criteria enumerated in § 201.211, the Secretary may consider the overall competitive effects of any particular agreement. In doing so, the Secretary should apply the antitrust ''rule of reason'' analysis, as used by courts and antitrust agencies. Section 1 of the Sherman Act of 1890, 15 U.S.C. 1–38, prohibits agreements in ''restraint of trade.'' The Supreme Court interpreted this prohibition to be limited to unreasonable restraints. *See Ohio* v. *American Express Co.,* 138 S.Ct. 2274, 2283 (2018) (citing *State Oil Co.* v. *Khan,* 522 U.S. 3, 10 (1997)). Certain types of agreements (such as price fixing) are so likely to harm competition and to have no significant procompetitive benefit that they are challenged as per se unlawful. *See FTC* v. *Superior Court Trial Lawyers Ass'n,* 493 U.S. 411, 432–36 (1990). All other agreements are evaluated under the rule of reason, which involves a factual inquiry into an agreement's overall competitive effect. As the Supreme Court has explained, rule of reason analysis entails a flexible inquiry and varies in focus and detail depending on the nature of the agreement and market circumstances. *See California Dental Ass'n* v. *FTC,* 119 S. Ct. 1604, 1617–18 (1999); *FTC* v. *Indiana Fed'n of Dentists,* 476 U.S. 447, 459–61 (1986); *National Collegiate Athletic Ass'n* v. *Board of Regents of the Univ. of Okla.,* 468 U.S. 85, 104–13 (1984). The Supreme Court first applied this framework to antitrust cases under the Sherman Act in *United States* v. *Addyston Pipe & Steel Co.,* 85 F. 271, 282–283 (CA6 1898), aff'd, 175 U.S. 211 (1899). The rule of reason analysis focuses on the state of competition with, as compared to without, the relevant agreement. The central question is whether the relevant agreement likely harms competition by increasing the ability or incentive profitably to raise price above or reduce output, quality, service, or innovation below what likely would prevail in the absence of the relevant agreement. See ''U.S. Department of Justice & Federal Trade Commission, Antitrust Guidelines for Collaborations among Competitors U.S. Department of Justice & Federal Trade Commission, Antitrust Guidelines for Collaborations among Competitors the Licensing of Competitors the Licensing of Intellectual Property'' § 1.2 (April 2000). If the agreement raises competitive concerns, the analysis considers whether the agreement is necessary to achieve any procompetitive benefits that would offset competitive harm. *Id.* This rule provides the analytical framework for AMS to evaluate specific activity.

While the agency expects a short-term increase in the cost of review for livestock producers, poultry growers, and regulated entities in existing contracts, in the long-term, innovative contracts should be less costly to negotiate even when those contracts provide for preferences and advantages. Because this framework of criteria can be understood in the context of legitimate business decisions, regulated entities may more easily review contracts for compliance with the Act.

By following a framework of criteria that promote fair dealing based in rational decision-making, AMS promotes protection for producers and localities that might otherwise have

been unable to obtain preferential contract terms or price advantages. Therefore, this rule is expected to improve the negotiating position of growers and producers.

AMS expects adding the criteria in § 201.211 to the P&S regulations to provide a framework in which the Secretary will consider potential violations of the Act, help the industry understand what the Secretary will consider when evaluating violation claims, and fulfill the Congressional mandate to establish criteria for making determinations regarding potentially unacceptable conduct under the Act.

Changes From the Proposed Rule

As originally proposed, the regulation required the Secretary to consider one or more specific criteria listed in the regulation, and provided that the Secretary was not limited to considering those four criteria when determining whether an undue or unreasonable preference or advantage has been given in violation of the Act. One comment asked for clarification about whether the Secretary was required to consider at least one of the four specified criteria, in addition to being able to consider other criteria. The 2008 Farm Bill requires the Secretary to establish criteria that the Secretary will consider in determining whether an undue or unreasonable preference or advantage has occurred in violation of the Act. Therefore, based on its original understanding of the statute and on the comment, AMS revised the introductory paragraph of § 201.211 to make it clear that the Secretary must consider all four specified criteria, and that the Secretary may also consider additional criteria, in determining whether an undue preference or advantage has occurred in violation of the Act.

As originally proposed, criterion (d) would have required the Secretary to consider whether the alleged preference or advantage cannot be justified as a reasonable business decision that would be customary in the industry. Almost unanimously, public comments submitted in response to the proposal objected to the clause regarding whether a business decision is customary in the industry. Comments otherwise supporting the proposal said what is ''customary in the industry'' is ambiguous and could be open to broad interpretation. Comments opposed to the proposal generally opposed this clause specifically, asserting that illegal discrimination, retaliation, and use of unfair marketing practices have become customary in the industry and that the wording of the proposed provision would offer packers, swine contractors, and live poultry dealers a convenient justification for unacceptable actions. Based on the comments, AMS determined to remove the words ''that would be customary in the industry'' from the language of criterion (d). Thus, § 201.211(d) provides that the Secretary will consider among other criteria whether the preference or advantage under consideration cannot be justified as a reasonable business decision.

Comment Analysis

AMS received 2,351 comments on the proposed rule, some with multiple signatories. Comments are summarized by topic below and include AMS's responses.

Comment Period Extension

Comment: AMS provided 60 days for public comment on the proposed rule. Twelve comments included requests that AMS extend the comment period by at least 90 days. Requesters said that the proposed rule and the issues it addressed are complex and important and that commenters needed more time to analyze their implications across the industry and provide meaningful comments. Requesters also noted the comment period overlapped with some states' legislative sessions and that commenters were dealing with ongoing stress created by continued low farm prices, both requiring commenters' focus at the time.

AMS response: AMS proposed this rule following litigation that concerned a prior proposed rule on this subject. In the course of that litigation, the USDA committed to initiate timely rulemaking on this subject. As part of the rulemaking, the agency chose a 60-day comment period as it believed this to be an adequate amount of time for interested persons to review the proposal and to provide comment that the agency should consider. Therefore, AMS decided against extending the comment period beyond the deadline of March 13, 2020.

Criteria Generally

AMS proposed four specific criteria the Secretary will consider when making determinations about whether an action could be considered a violation of the Act. Some comments addressed one or more criteria individually, while some addressed them generally. Here we address comments on the proposed criteria in general.

Comment: Several comments supported the proposed criteria generally, saying farmers and ranchers have long been at a disadvantage due to uncertainty about what actions violate the Act. Comments agreed that the proposed criteria would provide much needed clarity for the industry and should minimize or eliminate legal uncertainty in the marketplace.

On the other hand, numerous comments opposed the proposed criteria generally, saying they are inadequate, vague, ambiguous, and open to a wide variety of interpretations. These comments said the proposed criteria fail to address significant and harmful practices in the industry that are both anti-competitive and detrimental to farmer livelihoods. Comments also claimed that AMS had proposed specific conclusory criteria for determining when a violation has not occurred. These comments opposed the structure of the proposed regulation, saying that framing the criteria in negative terms (*e.g.,* ''cannot be justified'') fails to articulate what *would* be considered an undue or unreasonable preference or advantage and a violation of the Act, thus failing to comply with Congress's mandate. Commenters claim that this is the reverse of Congress's directive and renders the Act's express prohibitions meaningless.

Comments also criticized the criteria for being too general. They argued that different adjudicators may come to different conclusions when considering the same facts.

For these reasons, comments asserted the criteria should establish standards on which to base decisions about whether a packer has violated the Act. Commenters asked for standards that state what conduct constitutes a violation. Comments urged USDA to develop clear, specific criteria, so that the violations would be unequivocal.

AMS response: AMS attempted to balance the interests of all segments of the livestock, meat, and poultry industries. Producers and growers must be protected from potential harm resulting from undue or unreasonable preferences or advantages. At the same time, regulated entities may give preferences or advantages to individuals or groups for lawful reasons. AMS believes that the proposed criteria will provide a framework from which both producers and processors can benefit, while not harming consumers.

Regarding the comments that suggest the rule should prohibit specific conduct—rather than providing criteria that can be applied across a wide range of behaviors—the 2008 Farm Bill directed the Secretary to establish criteria to consider when determining whether conduct gives an undue or unreasonable preference or advantage. AMS has chosen general criteria in this rule. Further, the criteria are not

conclusory; just because an action may appear justified under one criterion does not mean that it cannot be determined to be undue or unreasonable.

The criteria comply with the promulgation requirement, whether they are written in positive or negative terms. The Farm Bill provides: ''As soon as practicable, but not later than 2 years after the date of the enactment of this Act, the Secretary of Agriculture shall promulgate regulations with respect to the Packers and Stockyards Act, 1921 (7 U.S.C. 181 *et seq.*) to establish criteria that the Secretary will consider in determining (1) whether an undue or unreasonable preference or advantage has occurred in violation of such Act;'' Criteria are standards, rules, or tests on which a judgment or decision can be based. American Heritage Dictionary of the English Language (5th ed. 2020). Criteria are typically ''reference point[s] against which other things can be evaluated; a characterizing mark or trait.'' Black's Law Dictionary (11th ed. 2019). Nothing in the 2008 Farm Bill suggests that the Secretary was called upon to describe these criteria in a positive or negative form. All that is required is that the criteria provide traits and standards that the Secretary can use as a base for judgment. AMS considered drafting criteria in a positive form and determined that the negative form better represented Congressional intent. Criteria used to evaluate whether preferences or advantages ''cannot be justified . . .'' in some manner could establish that an undue preference or advantage has occurred. Conversely, if written in a positive form, the criteria would be presented as exceptions, for example, a criterion could state that a preference or advantage is undue or unreasonable, unless it ''can be justified . . .'' in some manner.

The Farm Bill does not require the Secretary to consider any specific factor or information in developing the criteria. AMS's criteria apply across a wide range of behaviors in multiple industries. This approach, rather than setting forth specific examples of unlawful conduct, provides the Secretary with the flexibility Congress intended when passing the Act. AMS made no changes to the rule as proposed based on these comments.

Comment: One comment asked AMS to clarify whether the Secretary would be required to consider at least one of the four criteria specified in the proposed regulation, in addition to considering any other criteria that may be relevant to the situation.

AMS response: AMS appreciates the comment requesting clarification of the proposed language. Our intention was to specify four criteria the Secretary is required to consider, and to provide flexibility for the consideration of additional criteria as appropriate for the situation. Accordingly, based on the comment, and to ensure that the meaning of the regulation is clear, we revised the introductory paragraph of proposed § 201.211 to clarify that the Secretary will consider each of the criteria specified in the regulation and may consider additional criteria.

Unlimited Criteria for Consideration

The proposed rule provides that the Secretary will consider certain criteria when determining whether a violation of section 202(b) of the Act has occurred. The proposed rule specifies four criteria for consideration but provides that the Secretary is not limited to considering those four.

Comment: Many comments supported including flexibility to consider additional criteria on a case-by-case basis, explaining that there can be many other relevant factors to consider in different situations. Other comments argued that the provision is too ambiguous, and that its application is unclear. Some comments recommended the Secretary be required to consider only one of the listed criteria, or that consideration of other criteria be limited to certain situations.

Some comments insisted the criteria list be exhaustive and not broad, as proposed. According to comments, no segment of the supply chain would know which practices are prohibited or permissible under the proposed language, making compliance with the Act nearly impossible, and exposing the contacting parties to unforeseeable liability and associated litigation and the cost of protecting their respective marketing arrangements.

One comment opposed to the provision said that AMS's approach is inconsistent with Congress's directive in the 2008 Farm Bill to establish criteria and with the agency's stated desire to provide transparency to the process of determining whether a violation of the Act has occurred. The comment asserted that giving the Secretary flexibility to consider other criteria would give both the Secretary and other right of action plaintiffs who believe they have been wronged the opportunity to file complaints based on unspecified criteria.

One comment supported the proposal not foreclosing the possibility that other activities could be violations of the Act. According to the comment, the four listed criteria identify the most familiar indications of unfair practices, but other non-competitive conduct might escape the scope of the identified criteria, or other criteria might be found to better capture predatory practices.

Another comment suggested AMS clarify in the final rule that the four criteria specified in the proposed rule are broadly encompassing of all potential scenarios and that the Secretary will rarely, if ever, need to consider other criteria.

AMS response: The final rule retains the provision allowing the Secretary to consider criteria other than the four set forth in § 201.211. The U.S. Supreme Court noted in 1922 in the case of *Stafford* v. *Wallace,* 258 U.S. 495, 521, that the Packers and Stockyards Act is ''remedial legislation.'' A remedial measure ''is to be construed liberally, and so as to effectuate the purpose of Congress and secure the relief which was designed'' (*U.S.* v. *Southern Pacific R. Co.,* 184 U.S. 49, 56 (1902); *Logan* v. *Davis,* 233 U.S. 613, 628 (1914)). ''It would be an 'unnatural construction' of a remedial statute to require an administrative agency 'to sit idly by and wink at practices' which are subversive of effective regulation.'' (quoting *American Trucking Assns.* v. *U.S.,* 344 U.S. 298, 311 (1953)).

AMS does not consider the criteria exhaustive; rather, the criteria provide notice to the industry of the types of conduct that may be found unlawful. It would be impossible to develop an exhaustive list of specific criteria that would remain relevant for very long in an evolving market environment. The criteria in this rule respond to a need for clarity among industry participants regarding practices that could be deemed unduly preferential. Although it is unlikely that all future litigation will be avoided, AMS believes contracting parties may be able to avoid some litigation by applying the criteria and the principles behind them when drafting—and contracting for—marketing arrangements.

Thus, this final rule allows the Secretary to consider other factors that may not be included among the four listed criteria, but are evidence of an undue preference or advantage, nonetheless. The rule gives the Secretary principles by which to analyze the conduct of regulated entities that may violate the Act, for the Secretary's investigations and administrative or judicial enforcement. The Secretary's analysis involves investigative methods currently in use, including examination of overall market conditions, competitors' pricing and practices, and individual entities' business records to substantiate and justify different pricing or other

differing treatment of suppliers or territories.

These criteria are for the Secretary's determination of whether preferences are undue or unreasonable; the rule does not apply to private plaintiffs filing suits for damages under section 308 of the Act. Accordingly, no changes were made to the rule as proposed based on these comments.

Criterion (a)—Cost Savings

The proposed rule requires the Secretary to consider certain criteria when determining whether a violation of the Act has occurred. The proposed rule lists four criteria for consideration but does not limit consideration to those four. The first of these, criterion (a), asks whether the preference or advantage under consideration cannot be justified on the basis of a cost savings related to dealing with different producers, sellers, or growers.

Comment: One comment said this criterion is subjective and does not incorporate clear standards for its application in relation to dealing with different producers, sellers, or growers. Another asserted that this criterion's vagueness could be interpreted to mean that if a packer, swine contractor, or live poultry dealer is using a business practice that saves themselves money, it can be justified under section 202(b) of the Act, no matter the impact on producers, sellers or growers.

AMS response: AMS intends this criterion to be broad and flexible for the Secretary to apply it across a wide range of conduct in the livestock, meat, and poultry industries. In applying the criteria generally, the Secretary will examine the facts of each case and apply those facts to the criteria. Costs are relevant to many preferential contracts. If a preference does not have a cost-based justification, then the absence of a cost-based justification could indicate an undue or unreasonable preference or advantage. Or the Secretary may find that cost savings justify a preference given to one producer over another. No changes were made to the rule as proposed based on the comments.

Comment: Several comments said that justifications under criterion (a) for costs savings based solely on volume should be prohibited to avoid discriminating against smaller livestock or poultry growers. Comments explained that an integrator can easily claim cost savings based on volume by contracting with a large-scale livestock or poultry grower over a smaller-scale livestock or poultry grower or an association of smaller growers. According to comments, this would result in small-to-medium sized growers routinely being unduly disadvantaged and undue preference being given to larger growers strictly based on size of operation. One comment said small farms are struggling to stay viable while larger farms are increasing in size. The comment argued that justifying a preference or advantage as a cost savings based solely on volume would only further contribute to the decline in sales and ultimately the viability of small and mid-sized poultry and livestock farms.

AMS response: The rule is not intended to set forth prohibitions but rather to establish criteria the Secretary will consider when determining whether a preference is undue or unreasonable. A packer's justification of a preference based solely on the size of the grower operation as the comment suggests does not automatically make the packer's conduct lawful. The criteria are broad and flexible for the Secretary to apply criteria across a wide range of conduct in the livestock, meat, and poultry industries. In applying these criteria, the Secretary will examine the facts of each case and apply those facts to each of the criteria. In the comment's example, resulting cost savings would need to be clearly demonstrated to the Secretary's satisfaction, and other criteria would have to be considered. AMS believes it is up to contracting parties to negotiate terms in marketing arrangements that make business sense for all. Accordingly, no changes were made to the rule as proposed based on these comments.

Comment: One comment said that criterion (a) should be revised to provide clear examples of when cost savings are or are not warranted. Other comments gave examples of when cost savings could be used as a justification for disparate treatment: When there are measurable and verifiable differences in carcass and meat quality, if those standards are applied to producers of all sizes; when there is a specified time of delivery or times of urgent need for delivery, if those criteria are offered to producers of all sizes; when there are volume-related savings that result from documented efficacies in the cost of procuring, transporting or handling livestock and conducting other transactions that occur outside of the plant.

AMS response: The purpose of the regulation is to provide criteria that are broad enough to cover a majority of the types of conduct that could be found in violation of the Act. AMS believes that narrow examples do not encompass all of the situations that might result in an undue or unreasonable preference or advantage. Therefore, it is not the intention of the agency to set forth a laundry list of examples, but rather to establish criteria the Secretary will consider when examining the facts of wide-ranging types of conduct within the livestock, meat, and poultry industries. The comment's proposed examples present the underlying factual situation that the agency would consider. For illustrative purposes, AMS suggests as one example where cost savings used as justification for disparate treatment could be unlawful, the use of consumer coupons for meat products. Where a packer offers a coupon discount on the price of bacon in a specific geographic region, for example, and the resulting price is below the packer's cost in order to undercut competition, the behavior could represent an undue preference in that geographic region. After consideration, no changes were made to the rule as proposed based on these comments.

Comment: Comments requested that the regulation specifically prohibit justifications under criterion (a) based on so-called efficiencies that occur within a processing plant or from operating the plant at full capacity. Comments explained for example that hog producers who pool their hogs and deliver a truckload that is the size commonly handled by a processing plant should be on the same footing as a larger single producer who provides the same size truckload to the plant.

AMS response: The rule is not intended to set forth prohibitions but rather to establish criteria the Secretary will consider when determining whether a preference is undue or unreasonable. One of the criteria the Secretary will consider is whether there is a cost savings in dealing with one producer or grower over another. Based on the limited facts in the example provided by the commenter, plant operating efficiencies alone would not necessarily justify paying a single supplier more for hogs than several suppliers who pool hogs to provide similar volume. The general criteria still apply to the comment's example, even if there is no explicit ban on a particular preference or advantage. No changes were made to the rule as proposed based on these comments.

Criteria (b) and (c)—Meeting Competitors' Prices and Other Terms

Comments generally addressed jointly criteria (b) and (c). Under proposed criterion (b), the Secretary would consider whether the preference or advantage in question cannot be justified on the basis of meeting a competitor's prices. Under proposed

criterion (c), the Secretary would consider whether the preference or advantage cannot be justified on the basis of meeting other terms offered by a competitor. In general, comments said the two criteria are vague, favor packers and integrators, invite collusion, and conflict with confidentiality laws.

Comment: Comments expressed concern that criteria (b) and (c) would disadvantage farmers and growers, who have no voice in negotiations between other farmers and competing packers and integrators. According to comments, packers and integrators could individually, or could conspire to, set low prices or otherwise impractical terms agreeable to one farmer and use criteria (b) and (c) to justify applying the same prices and terms to other farmers for whom those prices or terms would be unacceptable, unworkable, or—as the comment implies—fail to reflect the ordinary forces of supply and demand.

AMS response: The criteria are neither requirements nor prohibitions. Nor are they justifications for unlawful behavior. In applying these criteria, the Secretary will carefully examine the facts of each case. In the example provided by commenters, low prices and other impractical terms given to one farmer for the purpose of justifying low prices and terms offered to other farmers would likely violate one or more of sections 202(c) through 202(g) of the Act. Price manipulation, for example, violates other sections of the Act. No changes were made to the rule as proposed based on these comments.

Comment: Comments suggested that in a fully functioning competitive market with transparent price discovery, applying criterion (b) might be rational, but in the livestock and poultry sector, where commenters say price discovery and price transparency are broken at best, and in the case of poultry, completely nonexistent, criterion (b) is extremely dangerous to farmers. According to comments, criterion (b) invites competitors to collude on pricing because justification under this criterion would insulate them from scrutiny under section 202(b) of the Act.

AMS response: Collusion to fix prices among packers, swine contractors, and live poultry dealers is prohibited under the Packers and Stockyards Act.[2] When the Secretary considers a regulated entity's justification for granting a preference based on meeting either the prices or other terms offered by a competitor, the Secretary may also consider if this behavior resulted in other violations of the Act. The rule does not justify, require, promote, or encourage price fixing conduct. Regulated entities, however, legitimately receive information—in the form of market reports, open bids, and contract negotiations with sellers—that may result in granting legitimate price preferences to meet a competitor's price. No changes were made to the rule as proposed based on these comments.

Comment: Comments cited USDA policy that protects the confidentiality of prices and terms of sale that packers pay for livestock under the Livestock Mandatory Reporting Act of 1999 (Pub. L. 106–78, Title IX; October 22, 1999). According to comments, the proposed rule would establish a standard involving prices and other terms of sale as defense for a packer's alleged violation of the Act while the public is simultaneously precluded from knowing the prices and terms of sale offered by any particular packer. Thus, according to comments, the proposed rule appears to facilitate and promote collusion among packers to share confidential pricing and terms of sale information with each other to ensure that the prices and terms they offer are similar, if not identical, to the prices and terms offered by competitors.

AMS response: This rule provides the Secretary with broad and flexible criteria to consider when determining if a preference is undue or unreasonable. The rule does not require, promote, or encourage regulated entities to agree to share prices and other contract terms between themselves. Nothing within this rule is intended to limit or conflict with the Livestock Mandatory Reporting Act of 1999 or any other Federal law. No changes were made to the rule as proposed based on these comments.

Comment: Comments claimed criteria (b) and (c) encourage collusion and conspiracy between regulated entities and are in direct conflict with the overall intent of the statute, as well as the specific price manipulation and control prohibitions in sections 202(d) through 202(g) of the Act. One comment suggested criteria (b) and (c) seemingly incentivize collusion between competitors and could decrease competition in the livestock and poultry industries. The comment said proposed criterion (b) should be withdrawn, and criterion (c) should be modified to require packers, swine contractors, and live poultry dealers to provide verifiable proof that the decision to meet a competitor's terms results in performance of efficiency gains. The comment said that the regulations should make it clear that collusive behavior between competing firms is unacceptable.

AMS response: This rule provides the Secretary with broad and flexible criteria to consider when determining if a preference is undue or unreasonable. The rule does not require, promote, or encourage collusion between packers, swine contractors or live poultry dealers. Other subsections of section 202 of the Act make clear that such conduct is prohibited. Subject entities are required by other sections of the P&S Act and regulations to keep adequate records of their business operations. Such records should provide adequate information for the Secretary to consider in making determinations under § 201.211. Accordingly, no changes were made to the rule as proposed based on these comments.

Comment: Comments suggested regulated entities should be required to maintain and provide when challenged contemporaneous and detailed records to prove that costs, prices, and terms offered to one farmer are justified on the basis of meeting those given to other similarly situated farmers.

AMS response: Entities regulated under the Packers and Stockyards Act are required to keep adequate records of their business operations.[3] The regulations do not specify which records entities should keep. Regulated entities have the flexibility to determine what type of records best meet the needs of their individual businesses. AMS expects that these records would include those necessary to justify preferential terms offered to a producer on the basis of any of the criteria within this rule. No changes were made to the rule as proposed based on these comments.

Criterion (d)—Reasonable Business Decisions

The fourth proposed criterion for the Secretary to consider is criterion (d)—whether the preference or advantage cannot be justified as a reasonable business decision that would be customary in the industry. Many comments addressed this particular proposal.

Comment: Several comments supported the inclusion of criterion (d) with the other proposed criteria, saying in general that they appear all-encompassing. Those comments recommended no changes to proposed criterion (d). Other comments recommended clarifying criterion (d) to indicate what would be considered a reasonable business decision that would be customary in the industry. Many comments asked further that AMS list the marketing arrangements and other

[2] 7 U.S.C. 192(d) & (f) (prohibiting conspiracies to manipulate or control prices).

[3] 7 U.S.C. 221; 9 CFR 201.94, 201.95.

business practices commonly expected to constitute legitimate business justifications. Some comments further recommended developing different lists for different industry sectors. Other comments asked that such lists not be considered finite, giving the industry room to adopt new types of acceptable arrangements in the future.

One comment suggested the term ''reasonable business decision'' could change over time and vary from individual to individual and from one USDA administration to the next. The comment explained contracting parties might be uncertain about how a contract provision that appears reasonable today might be viewed at some point in the future. Thus, the comment recommended USDA define what it considers to be ''reasonable'' in making business decisions or simply limit any interpretation of what was a ''reasonable business decision'' to the relative positions, beliefs, and understandings of the contracting parties at the time and place the contract was entered into.

AMS response: AMS has not defined or standardized the meaning of ''reasonable'' in the regulation because the word ''reasonable'' assumes the commonly understood meaning of an objective standard. That is, a reasonable decision is a decision that a reasonable person would make under similar circumstances. Further, we do not agree that the regulation should attempt to identify every possible industry business decision or marketing arrangement that might be reasonable now and in the future. Rather, the Secretary can apply the timeless standard of reasonableness to examine an alleged preference or advantage. Accordingly, AMS made no changes to the rule as proposed based on these comments.

Comment: Several comments asked AMS to clarify that just because an unfair practice may have become common within the industry, that does not mean it would be justified under proposed criterion (d) and not a violation of section 202(b) of the Act. Others said that the proposed criteria protected regulated entities from legal challenges to practices that are customary in the industry when a practice that is ''customary'' may violate the Act. Many comments described practices they say are unfair but have become commonplace within the industry, such as retaliation, racial discrimination, favoritism, use of tournament systems in the poultry sector, poultry pay systems where buyers control most grower quality inputs, and giving ''sweetheart deals'' to certain ranchers or feeders in the cattle industry. Comments said that these practices, although they might be called ''customary,'' should not be justified under proposed criterion (d). Some comments recommended using examples from this list to develop other criteria for determining whether a preference or advantage is undue or unreasonable. Other comments asked that the qualifier ''that would be customary in the industry'' be decoupled from ''reasonable business decision,'' leaving the latter to stand on its own as a criterion. One comment suggested AMS could develop another criterion to incorporate ''customary in the industry.''

AMS response: While the agency's intent is to establish a criterion that would allow preferences supported by reasonable business decisions, AMS does not intend to legitimize unlawfully discriminatory practices in the industry. As noted, some comments raised concerns that some ''customary practices in the industry'' may also be unlawful preferences or advantages. Thus, comments have raised concerns which, after careful consideration, justify modification of the rule. Accordingly, based on consideration of comments, AMS revised proposed criterion (d) by deleting the phrase, ''customary in the industry,'' and providing that criterion (d) read, ''whether the preference or advantage cannot be justified as a reasonable business decision.''

Comment: Many comments advocated removing criterion (d) entirely from the proposed regulation, arguing that both ''reasonable'' and ''customary'' are subjective. Comments claimed application of criterion (d) would allow the Secretary to permit anticompetitive behavior of the type the Act was intended to prevent. Comments said AMS should instead adopt stronger rules that would fulfill Congress's intent to curb anticompetitive practices.

AMS response: As explained above, AMS believes reasonableness is an objective measure with timeless application to the determination of whether a preference or advantage might be undue or unreasonable and a violation of the Act. Under this objective standard, what is reasonable does not rely on the intent of the individual. An objective legal standard ''is based on conduct and perceptions external to a particular person.'' [4] Thus a ''reasonable-person standard'' is objective because it does not require a determination of what the regulated entity thinks. We removed the phrase ''customary in the industry'' from the language of criterion (d), and believe that change is sufficient to make the criterion a useful tool for the Secretary's determinations. Accordingly, we made no further changes to the rule as proposed based on these comments.

Additional Criteria for Consideration

A few comments suggested additional criteria the Secretary should consider when determining whether certain actions are violations of section 202(b) of the Act.

Comment: One comment suggested the Secretary consider the relative bargaining power of the parties involved in a dispute about an alleged violation. The comment gave the example of a poultry grower with five-year-old chicken houses trying to negotiate a contract with a party who knows the grower has no other real options. The comment said this situation does not allow for true freedom of negotiation, and provisions should be developed to protect against the imbalance.

AMS response: The example the commenter provides appears to illustrate a possible undue or unreasonable disadvantage imposed on the poultry grower. That is, poultry growers lack the economic resources to demand higher value for their work, and they are at a disadvantage. When they negotiate, they may receive a lower price under their contract. The relative strength of their bargaining power is a distinct disadvantage, leading to unfavorable terms to the poultry grower. The relative strength of bargaining power may be an additional factor to consider for a given preference or advantage, but, as the commenter's example illustrates, preferences or advantages are unlikely to result from the bargaining disparities between poultry growers and live poultry dealers. This rule is limited in scope to addressing undue or unreasonable preferences or advantages. Accordingly, AMS is making no changes to the rule as proposed based on this comment.

Comment: Another comment recommended addition of a fifth criterion (e) and proposed the Secretary consider whether an apparent preference or advantage ''cannot be justified as needed to address a natural disaster or military necessity, such as but not limited to an emergency for which the Federal government has invoked its authority in relation to food supplies under the Stafford Act or the Defense Production Act.'' The comment explained that packers, swine contractors, and live poultry dealers might be required to award preferential contracts to certain farmers or localities

[4] STANDARD, Black's Law Dictionary (11th ed. 2019).

to address emergencies such as natural disasters or military necessities. The comment suggested that without the recommended language, entities might hesitate to forge such contracts, despite the proposed rule's provision that other factors besides the four listed criteria could be considered.

AMS response: The commenter's suggestion of a fifth criterion (e) is appreciated and provides an example of a situation in which the Secretary's consideration of criteria should not be limited only to the four criteria set forth in the rule. Natural disasters and other emergencies would likely create situations in which a packer, swine contractor, or live poultry dealer may give a lawful preference or advantage to one producer as compared to another. A preference given in response to an Executive Order may also apply in these situations. While these are instances in which the Secretary would carefully examine the facts to determine whether a preference is undue or unreasonable, it is not necessary to explicitly include a criterion for this conduct. Accordingly, AMS is making no changes to the rule as proposed based on the comment.

Comment: Some comments encouraged AMS to include as criteria for the Secretary's consideration whether the alleged preference or advantage given to certain farmers reflects retaliation or racial discrimination against others; reflects unreasonable reductions in payments based on tournament incentive systems or other payment arrangements where the company, rather than the farmer, controls inputs that factor into the farmer's pay; or reflects unreasonable ''sweetheart'' deals given by companies to some farmers and ranchers to the disadvantage of others.

AMS response: Existing law prohibits retaliation and racial discrimination.[5] Issues of retaliation and racial discrimination typically would arise in complaints of undue or unreasonable prejudices or disadvantages. This rule is limited in scope to addressing undue or unreasonable preferences or advantages. AMS acknowledges, however, that retaliation and racial discrimination can be factors in cases of preferential treatment. Such conduct would also be considered by the Secretary under the broad authority granted by the Act when determining whether a preference is undue or unreasonable but need not be explicitly set forth in the rule. Accordingly, AMS is making no changes to the rule as proposed based on these comments.

Comment: Several comments stated that there are important differences between the marketing arrangements and structures of the cattle, swine, and poultry industries and that, where appropriate, separate criteria should be developed to account for these differences.

AMS response: The prohibitions of section 202 of the P&S Act apply to packers, swine contractors and live poultry dealers. The law does not specify prohibitions that apply only to cattle, or swine, or poultry. AMS proposed broad criteria that can apply across all segments of the livestock and poultry industries. If a behavior specific to only one segment of the livestock or poultry industry is unlawful, it will likely fit within one of the criteria set forth in this final rule. Criteria describing specific behaviors were not proposed as they could be viewed as limiting the Secretary's ability to enforce this regulation. Maintaining broadly written criteria also provides sufficient flexibility to easily adapt to changing technology and business practices used across the industry. Accordingly, no changes were made to the proposed rule based on the comments.

Other Recommended Modifications to the Proposed Rule

A number of comments recommended modifications to the proposed rule. Many comments referred to USDA's previous rulemaking efforts to establish the mandated criteria for considering alleged violations of § 202(b) of the Act and recommended proposed provisions from earlier attempts be reintroduced. Several comments addressed perceived inadequacies in the current regulations and enforcement of the Act.

Comment: Numerous comments called for the addition of specific protections for farmers, including ranchers and growers, and provided examples of the types of protection they sought. Comments asked for protection that would allow farmers to file complaints, identify wrongdoing, speak with the media and elected officials, and form and join farmer associations without the threat of retaliation. Comments asked for protection against discrimination of any kind, including national origin, sex, race, religion, disability, political beliefs, marital or family status, or any other protected category. Comments said the proposed rule does not provide that protection, despite there being several documented cases of discrimination in the industry. Several comments asked that the rule include detailed, specific protections for contract poultry and livestock producers that apply to all forms of poultry and livestock, that are suitable for the future of the industry, are enforceable, and provide for real consequences for violations of section 202(b) of the Act.

AMS response: Congress directed the Secretary in the 2008 Farm Bill to establish criteria to guide the Secretary's consideration of facts in determining whether an apparent preference or advantage is undue or unreasonable and a violation of the Act. Protection against some of the unfair and discriminatory practices described by commenters is afforded under existing laws and under other provisions of the P&S regulations.[6] Farmers have the right to file complaints regarding wrongdoing, speak with media and elected officials, and form and join farmer associations. If retaliation occurs, there is likely discrimination, which may be unlawful under the P&S Act or other laws. While this rule cannot specify protections for every grievance suggested by comments, AMS believes the establishment of the criteria in this rule serves broadly as protection for industry members and others who may be subjected to undue or unreasonable preferences in violation of the Act. Accordingly, no changes were made to the proposed rule based on these comments.

Comment: Comments asked that the rule require contract prices to be based on clear, transparent, and predictable standards. Comments said prices should not be based on inputs the packing or processing company provides that may dictate the health of animals or the quality of feed. Comments also called for enforcement of fair pricing systems that don't involve price fixing or collusion. Other comments said that poultry integrators should be required to communicate clearly to all their contracted growers about actions that appear to be, but are not, undue preferences, such as the examples provided in the proposed rule's preamble. Comments further recommended that this communication be required at the time of signing contracts between growers and integrators and in routinely updated communications from the integrator to all the growers under contract with that integrator.

AMS response: Comments appear to suggest that live poultry dealers should

[5] *See, e.g.,* Agricultural Fair Practices Act of 1967, 7 U.S.C. 2301–2036; Civil Rights Act of 1964, 42 U.S.C. 2000e–2000e–17.

[6] *See, e.g.,* Packers and Stockyards Act, 9 U.S.C. 192(a)–(g); 7 CFR 201.216–201.218; 7 CFR 203.12 (policy statement); Agricultural Fair Practices Act of 1967, 7 U.S.C. 2301–2036; Civil Rights Act of 1964, 42 U.S.C. 2000e–2000e–17; Sherman Act, 15 U.S.C. 1–7; Clayton Antitrust Act, 15 U.S.C. 12–27, 29 U.S.C. 52–53.

be required to discuss with poultry growers information about the business of other poultry growers. This rule does not require that confidential business information of some poultry growers be shared with other poultry growers. P&S regulations currently require that live poultry dealers furnish growers with a copy of their contract and all applicable terms.[7] Live poultry dealers must also provide settlement sheets and all information and supporting documents needed to compute payment. This rule does not change these existing disclosure requirements. Accordingly, no changes were made to the rule as proposed based on these comments.

Comment: Some comments suggested the proposed rule could be improved by the addition of implementation and enforcement methods. One comment suggested that the proposed rule include a methodology for the determination process the Secretary would employ prior to considering whether the allegedly undue or unreasonable preference or advantage meets the proposed criteria. According to the commenter, establishing such a methodology would provide a more standardized structure and make the process less subjective. Other comments asked AMS to establish methods to continuously review and monitor industry practices to ensure new practices are not evolving that would circumvent the purposes of the Act.

AMS response: The suggestions to establish implementation and enforcement methods have merit, but do not address the establishment of criteria for the determination of whether and are therefore outside the scope of this rule. The Act sets forth the Secretary's investigative and enforcement authority over packers, swine contractors, and live poultry dealers. These powers and procedures establish the methodology to be followed in applying the criteria. Accordingly, no changes were made to the proposed rule based on these comments.

Comment: One comment suggested the rule could be improved by codifying the need to show competitive harm, and the comment provided regulatory applicability language for such a provision. The comment's recommended language would require the Secretary to find that the challenged conduct or action lacks a legitimate business justification *and* harms—or is likely to harm—competition to bring a claim under sections 202(a) and (b) of the Act.

AMS response: Several, but not all, U.S. Circuit Courts of Appeal have established case precedent requiring a showing of harm to competition.[8] For that reason, USDA previously withdrew the December 2016 interim final rule that would have codified that harm to competition is not required to prove a violation. Given the history and conflicting opinions on this topic, AMS does not believe that this rulemaking is the appropriate avenue for interpreting the statute's intent. Accordingly, AMS is making no changes to the rule as proposed based on this comment.

Comment: Another comment suggested the proposed rule could be improved by first distinguishing between preferences, advantages, prejudices, and disadvantages; and second by defining what would be considered undue or unreasonable versions of each.

AMS response: The terms ''preferences'' and ''advantages'' have already been defined by the Judicial Officer. Giving an advantage to any person and not to other similarly situated persons is making or giving a preference. Conferring a benefit on any person and not on all similarly situated persons is making or giving an advantage. (See *In Re: IBP, Inc.,* 57 Agric. Dec. 1353 (July 31, 1998)). Thus, AMS finds it unnecessary to codify those definitions in the rule. Accordingly, AMS is making no changes to the rule as proposed based on the comments.

Comment: Several comments said that AMS should not finalize this rule but should instead adopt provisions from prior rules. This included two rules GIPSA published in December 2016 (81 FR 92703 and 81 FR 92723, December 20, 2016). One comment characterized the 2016 rules as making progress toward an antitrust framework that would protect farmers. One comment recommended restoring provisions from the June 2010 proposed rule. Comments preferred provisions from all those rules that would have formally established that proof of actual or likely competitive harm is not needed for violations of section 202(b); created lists of ''per se'' and likely violations of the Act (such as attempted delays of payment and ''hold-up'' scenarios, respectively); established that any conduct which harms or likely harms competition is a violation of the Act; and provided more specific, grounded criteria for evaluating violations of section 202(b), including whether a grower is treated fairly as compared to other similarly situated growers who have engaged in lawful assertion of their rights, or is treated differently due to arbitrary reasons unrelated to the grower's livestock or poultry operation. Comments claim that the provisions of those rules would better address the current competitive imbalance in the market.

Comments asked that many different provisions of the prior rules be incorporated into this rule. Comments asked for explicit prohibition against the use of tournament incentive system. Some comments also urged a ban on packer ownership of livestock, which is currently permitted. Comments also said that certain cattle procurement agreements, when offered selectively to some cattle sellers and not others, should be identified as per se violations of section 202(b) of the Act. Other comments listed specific conduct that commenters believe should be considered per se violations of the Act and recommended they be added to the regulations.

One comment recommended USDA republish for public comment a petition submitted to GIPSA in 1996 calling for rules to restrict certain procurement practices in the meat packing industry.[9] According to the comment, the petition's proposal would better define undue preference in live cattle markets, facilitate reestablishing price discovery for domestic and import markets, and lessen the pending threat of beef plant closures and the corresponding loss of good paying jobs.

AMS response: The prior rulemakings referenced in these comments contained greater breadth of rulemaking and proposed a number of prohibited acts. This rule does not have the same breadth as those previous rules. Nor does this rule expand on earlier rulemaking. As explained in the proposed rule, this rule represents a fresh start at fulfilling the 2008 Farm Bill mandate to establish criteria to consider when determining whether conduct makes or gives an undue or unreasonable preference or advantage. The criteria established in this rule can be applied across a wide range of behaviors and meets the 2008 Farm Bill mandate.

Further, some of the examples of prohibited behaviors comments cited from abandoned rulemaking would be examples of undue or unreasonable prejudices or disadvantages, rather than preferences or advantages, and are therefore outside the scope of this rule.

[8] For courts ruling that 202(b) cases require a showing of harm to competition for violations see *Wheeler* v. *Pilgrim's Pride Corp.,* 591 F.3d 355 (5th Cir. 2009)(sections 202(a) and (b) of the P&S Act) and *Terry* v. *Tyson Farms, Inc.,* 604 F.3d 272 (6th Cir. 2010)(sections 202(a) and (b) of the P&S Act).

[9] Filing of a Petition for Rulemaking: Packer Livestock Procurement Practices; 62 FR 1845, published January 14, 1997.

Accordingly, AMS is making no changes to the rule as proposed based on these comments.

Comment: Some comments recommended that the examples of potentially undue or unreasonable preferences or advantages given in the proposed rule's preamble be codified as explicit violations of section 202(b). Comments explained that doing so would help bring the proposed criteria into line with the purpose of the Act and the 2008 Farm Bill mandate from Congress. Comments cited examples of premiums offered to one person or locality but not offered to similarly situated other persons or localities, livestock packers negotiating preferential live basis prices with only one favored livestock supplier and not with similarly situated suppliers, and live poultry dealers offering a higher base price to a favored grower but not to other growers in the same complex with the same housing types.

AMS response: As explained in an earlier comment response, AMS has chosen not to codify a list of per se violations because we believe that narrow examples cannot possibly encompass all of the situations that might result in an undue or unreasonable preference or advantage. The purpose of the regulation is to provide criteria that are broad enough to cover a majority of the types of conduct that could be violations of the Act. Further, AMS believes the criteria established in this rule are aligned with the purposes of the Act and the 2008 Farm Bill mandate because they provide the framework the Secretary will use when examining the facts of wide-ranging types of conduct within the livestock, meat, and poultry industries. Accordingly, no changes were made to the proposed rule based on these comments.

Competitive Harm

Many comments addressed the notion of competitive harm and whether proof of such harm or likelihood of such harm is required to bring claims of violation of section 202(b) of the Act. Past findings in the Fifth, Sixth, Tenth, and Eleventh Circuits have held that under the Act plaintiffs must show competition, and not just an individual, is or is likely to be injured through preferences or advantages given to certain individuals or localities.[10] Other Circuits that are often cited for the proposition—in the Fourth, Seventh, Eighth, and Ninth Circuits—did not go so far. For example, courts in those circuits have agreed with USDA that certain violations of the Packers and Stockyards Act are ''unfair practices'' because those practices harm competition, or courts have opined on whether a specific practice would require harm to competition.[11] In past rulemaking efforts to establish the mandated criteria, USDA reiterated its position that harm to competition is not required in all cases under the Packers and Stockyards Act. AMS explained in the preamble of the current proposed rule that this rulemaking is independent of previous rulemaking efforts to establish the mandated criteria to guide determinations about undue and unreasonable preferences and advantages under the Act and did not make a policy statement about competitive harm.

Comments: Comments from the meat production, livestock production, and poultry segments of the industry expressed concern that AMS did not take a position on competitive harm in the proposed rule. Comments representing the interests of some livestock producers and poultry growers advocated clarifying that plaintiffs do not have to prove competitive harm to the entire industry to bring a case claiming undue and unreasonable practices. Comments said the burden of proof against large companies is too high for most farmers and that companies should not be allowed to continue unlawful practices just because a farmer cannot show harm to the entire industry.

One comment said it seems false to state in the proposed rule that AMS does not intend to create criteria that conflict with case precedent, when case precedent is mixed on the issue of the need to show competitive harm. The comment suggests AMS is apparently siding with the approach that requires demonstration of competitive harm to the entire industry. The comment perceived the proposed rule to be an unprecedented failure because it did not address the issue of competitive harm.

Comments asserted USDA has the authority and responsibility to issue rules for enforcing the Act that may conflict with court precedent under the Supreme Court doctrine of *Chevron* deference. According to comments, by not affirming in the proposed rule its historic position that a violation of section 202(b) may occur in some circumstances without a showing of competitive injury or likelihood of competitive injury, USDA could set a precedent that undermines its own policymaking power and codifies what commenters called judicial overreach and novel interpretation of the Act that contradicts the will of Congress. Thus, according to comments, the proposed rule leaves the Act largely unenforceable for individual farmers and ranchers.

One comment questioned AMS's refusal to adhere to its historic position on competitive harm and cited the October 2017 withdrawal of the December 2016 interim final rule on the Scope of Sections 202(a) and (b) of the Packers and Stockyards Act, which said: ''Contrary to comments that GIPSA failed to show that USDA's interpretation was longstanding, USDA has adhered to this interpretation of the P&S Act for decades. DOJ has filed amicus briefs with several federal appellate courts arguing against the need to show the likelihood of competitive harm for all violations of 7 U.S.C. 192(a) and (b).'' One comment said Congress has not amended section 202(b), so there is no apparent justification for USDA's refusal to assert its longstanding interpretation regarding the statute. Another said by not affirming its historic policy on competitive harm AMS is dismissing the possibility of industry reform and violating the intent of the Act.

Comments representing packers, swine contractors, and live poultry dealers disagreed with farmer comments and said the proposed rule must clarify that plaintiffs should be required to prove competitive injury across the industry to bring a claim of undue or unreasonable preference or advantage and violation under the Act. Comments argued that failure to recognize case precedent on competitive harm, in conjunction with the ''plus other criteria'' approach in the proposed rule, could create uncertainty about whether certain preferences or advantages are justifiable under the law and subject the industry to needless, costly lawsuits.

[10] London v. Fieldale Farms Corp., 410 F.3d 1295 (11th Cir. 2005) (section 202(a) of the P&S Act); Been v. O.K. Indus., Inc., 495 F.3d 1217 (10th Cir. 2007) (section 202(a) of the P&S Act); Wheeler v. Pilgrim's Pride Corp., 591 F.3d 355 (5th Cir. 2009) (sections 202(a) and (b) of the P&S Act); Terry v. Tyson Farms, Inc., 604 F.3d 272 (6th Cir. 2010)(sections 202(a) and (b) of the P&S Act).

[11] De Jong Packing Co. v. U.S. Dep't of Agric., 618 F.2d 1329 (9th Cir. 1980) (agreeing with USDA that conspiracy to fix ''subject'' term in bidding is harmful to competition); IBP, Inc. v. Glickman, 187 F.3d 974 (8th Cir. 1999) (agreeing with USDA on rights of first refusal can harm to competition); Philson v. Goldsboro Mill Co., 164 F.3d 625, Nos. 96–2542, 96–2631, 1998 WL 709324 (4th Cir. Oct. 5, 1998) (finding retaliation requires a showing of likelihood of harm to competition); Jackson v. Swift Eckrich, Inc., 53 F.3d 1452 (8th Cir. 1995) (finding that while allegations disparate contracting requires a showing of harm to competition, breach of contract and fraud claims under the Packers and Stockyards Act did not require harm to competition).

Comments argued that while Congress intended with the Act to combat restraints on trade and promote healthy competition in the livestock industry, it did not intend to discourage what comments called regular, healthy business competition. Comments referenced findings under other antitrust laws to assert that under the Act, alleged violations of sections 202(a) and (b) must show antitrust injury, which requires proof that competition as a whole was harmed by the defendant's conduct. Comments urged AMS to interpret sections 202(a) and (b) as requiring proof of actual or likely harm to competition to reinforce the Act's purpose, which according to comments is to protect competition in the industry.

One comment recommended AMS address both sections 202 (a) and (b) when discussing injury to competition because, according to the comment, both are rooted in antitrust jurisprudence and both require injury to competition as a prerequisite to establishing a violation. According to the comment, addressing injury to competition in the context of only section 202(b) risks creating unnecessary confusion about the interpretation of section 202(a).

AMS response: Given the history and conflicting opinions on this topic, AMS does not believe this rulemaking on preferences and advantages is the appropriate avenue for interpreting the statute's intent with respect to all portions of sections 202(a) and (b) of the Act.

The 2008 Farm Bill requires the Secretary to establish criteria to consider when determining if conduct is an undue or unreasonable preference or advantage. The criteria the Secretary establishes through the rulemaking are not exclusive, and pertain only to part of section 202(b) of the Act, which also prohibits undue or unreasonable prejudices and disadvantages. Whether competitive injury is required to establish a violation of the Act is a broader question applicable to the full provisions of sections 202(a) and 202(b) and is therefore outside the narrow scope of this rule. Accordingly, AMS is making no changes to the rule as proposed based on these comments.

Starting Over

Comment: Several comments urged AMS to abandon the proposed rule and start the rulemaking process all over. Comments claimed the proposed rule is inadequate and fails to meet the Congressional mandate to provide clear criteria for determining whether certain conduct or actions would be violations of section 202(b) of the Act. Other comments said the proposed rule failed to incorporate recommendations submitted in a June 2019 letter to AMS by associations representing farmers' interests and recommendations in a July 2019 letter to USDA from 17 members of Congress, both of which advocated stronger protections for farmers. Still other comments said the proposed rule does nothing more than fulfil a congressional mandate, while maintaining the status quo.

Some comments said AMS should start over because the proposed rule reduces and eliminates competition, facilitates corporate abuse of concentrated and predatory market power, invites collusion, and allows manipulation of live cattle prices.

One comment said the proposed rule was well intentioned, but does not accurately reflect needed modernization changes and improvements within the packers and stockyards industry. The comment urged USDA to withdraw the proposed rule and convene a livestock industry stakeholder summit to outline a course of action.

AMS response: The purpose of the rule is to provide criteria that are broad enough to cover a majority of the types of conduct that could be found in violation of the Act. It is not the intention of the agency to set forth a laundry list of examples, as many of the commenters suggest, but rather to establish criteria the Secretary will consider when examining the facts of wide-ranging types of conduct within the livestock, meat, and poultry industries. AMS is committed to finalizing the rule as required by the 2008 Farm Bill mandate to establish such criteria and fulfilling USDA's commitment to the Court to complete the rulemaking expeditiously. Therefore, AMS is neither withdrawing nor making changes to the rule as proposed based on these comments.

Additional Concerns Raised by Comments

Comment: Numerous comments expressed doubt that the proposed rule would remedy what they identified as serious problems in the livestock and poultry industry. Comments said farmers have little market power in dealings with large meat packing and poultry processing companies. Comments described what they called systematic discrimination and unchecked abusive treatment of farmers. Comments provided data demonstrating declines in farm prices that are not reflected in consumer prices, and they warned that the demise of small and family farms threatens U.S. food security, the economic health of rural communities, and the environment. Comments claimed finally that USDA does not act in the interest of small farmers.

AMS response: AMS appreciates the comments that expressed these concerns. Moreover, AMS understands the struggles farmers face across the U.S. Some of the concerns raised could be the result of preferences or advantages given by packers, swine contractors or live poultry dealers. Whether those preferences or advantages are undue or unreasonable is for the Secretary to determine utilizing the criteria set forth in this rule. The criteria are written broadly to cover wide ranging behaviors in the industry, including some of those identified by commenters, rather than narrowly addressing specific conduct. Some other concerns raised by the commenters are outside the scope of the Packers and Stockyards Act. AMS encourages commenters to continue the dialogue with USDA on these important issues so that together we can make improvements.

Regulatory and Economic Impact Analysis

Comment: Several comments addressed the regulatory impact analysis included (RIA) in the proposed rule. Most of those comments concerned statements in the analysis that some found contradictory. Comments asserted the RIA's cost-benefit analysis shows that the rule will have no meaningful impact on the anti-competitive and improper practices that are already in place. According to comments, the statement that AMS does not expect the proposed rule to result in a decrease in the use of alternative marketing agreements (AMAs), poultry tournament systems, or other incentive payment systems; or decreased economic efficiencies in the cattle, hog, and poultry industries shows that the proposed rule is essentially toothless. Comments argued that the Act was not intended to maximize economic efficiencies, but to provide for a fair, competitive marketplace by preventing abuses by large, supposedly ''efficient'' entities. One comment asserted that if AMS does not expect the proposed rule to change anything about the current state of the market nor give farmers any more protection than they currently have, the total cost to industry of this rule is effectively zero and the cost-benefit analysis in the final rule should reflect this.

AMS response: AMS believes the rule will have a meaningful impact on anti-competitive practices that may exist in the industry. Although the cost benefit

analysis in the proposed rule did not quantify projected benefits, it provided qualitative descriptions of the types of benefits expected from establishment of the proposed rule, such as improved parity of negotiating power between contracting parties with a clearer understand of what constitutes an undue or unreasonable preference or advantage under the Act.

The rule is not intended to dictate to industry the types of marketing arrangements employed. Understanding how the Secretary will evaluate allegations of violations of section 202(b) of the Act should induce packers, live poultry dealers, and swine contractors to reevaluate—and adjust if necessary—marketing agreements to make sure they comply with the law.

Even though the number and type of marketing agreements may not change because of the rule, this rule, like most rules, is expected to generate some costs. As explained in the RIA, most of the estimated costs for the final rule are associated with reviewing and, if necessary, adjusting contracts to make certain they comply with the rule.

Finally, AMS would like to distinguish operational efficiency of a firm from market efficiency. The operational efficiency of a firm improves when it can produce a good or service at a lower cost. A characteristic of market efficiency, on the other hand, is that the prices of goods or services represent unbiased indicators of their value to consumers and society, and contribute to the public benefit. The most efficient firm operations do not always lead to the most efficient markets. For example, industries in which unit costs continually decline with increased scale, such as water and electric utilities are considered natural monopolies. The firm that emerges as the monopolist in those industries will be the most operationally efficient, but if left unregulated, would be able to exploit its market power, for example by restricting output and charging a higher price. AMS believes this rule does not impede operational efficiency of the regulated firms, but does inhibit practices that could reduce market efficiency. Market efficiency, therefore, should be considered when evaluating the costs and benefits of this regulation.

AMS is making no changes to the rule or the RIA as proposed based on these comments.

Comment: One comment expressed concern with two statements in the regulatory impact analysis. The first projects that the proposed rule may lead to increased litigation costs to test case precedents regarding violations of the Act. The second states that AMS does not intend to create criteria that conflict with case precedent. The comment asked why, if the latter is true, did AMS not reduce confusion and the need for further litigation and affirmatively state the need to prove competitive harm in the regulation. Comments suggested that reinforcing the need to demonstrate injury or likely injury to competition would eliminate much of the precedent-confirming litigation that AMS anticipates flowing from the final rule, which in turn would significantly reduce the anticipated costs of the rule.

AMS response: This rule is intended to establish criteria the Secretary will consider when determining whether conduct is an undue or unreasonable preference or advantage. Whether competitive injury is required for a violation of sections 202(a) or 202(b) of the Act is beyond the narrow scope of this rule. Additionally, as explained earlier, the criteria in this rule pertain to the Secretary's evaluations of alleged misconduct and not to those of the courts. Even if AMS were to state a position on the need to show competitive harm, it would do little to limit litigation, as those opposing that position would likely challenge it in the courts. Thus, it is anticipated that litigation costs will increase initially as market participants—who choose to do so—test the provisions of the new regulation in court. Accordingly, AMS is making no changes to the rule as proposed based on the comment.

Comment: One comment questioned the claim in the RIA that the proposed rule would ''increase the amount of relevant information available to market participants and offset any potential abuse of buyer-side market power by clearly stating to all contracting parties'' the criteria for violations. The comment says it is not clear what basis AMS has to make this claim if all potential violations can be justified by cost savings, and no current customary practices across the industry will be considered a violation.

AMS response: AMS believes that establishment of the criteria in this rule will provide clearer information to market participants about how the Secretary will evaluate allegations of misconduct under section 202(b) of the Act. AMS anticipates that as producers and growers become aware of this information, they will be better able to negotiate fair contract terms with packers, contractors, and integrators considered to wield greater market power. AMS disagrees with the comment's conclusion that all potential violations can be justified by cost savings and that no currently customary practices will be considered violations. In fact, this rule gives the Secretary flexibility to consider multiple factors other than cost savings to determine whether a preference or advantage is undue or unreasonable. Removal of the ''customary in the industry'' clause from proposed criterion (d) also clarifies that the Secretary can make determinations about industry decisions and practices based on their reasonableness and not on whether they are widely adopted. AMS is making no changes to the rule as proposed based on this comment.

Miscellaneous Comments

Comment: One comment argued that the Secretary of Agriculture and those appointed by the Secretary should not act as judges in matters of law and that allegations of violations of the Act should only be tried in courts of law.

AMS response: The Act clearly establishes that the Secretary has authority to enforce administratively violations of section 202(b) against packers and swine contractors. Congress granted the Secretary authority to investigate persons subject to the Act and provided for administrative enforcement of violations. Changing these authorities is beyond the scope of this rule. Accordingly, AMS is making no changes to the rule as proposed based on the comment.

Comment: Once comment interpreted the RIA's statement that it is not the purpose of the Act to interfere with contract negotiations or to upset the traditional principles of freedom of contract to mean that the proposed rule is not expected to decrease the use of differing contracting structures, such as the incentive-based contracting arrangements often used in the poultry industry. The comment said it is crucial that the proposed rule not disrupt the existing contracting structures commonly used by the industry, and that any preferences or advantages arising from the use of these types of arrangements be evaluated first on whether they cause injury or likely injury to competition, and second based on the four criteria in the proposed rule.

AMS response: As explained in earlier comment responses, AMS does not intend the rule to promote or prohibit any particular types of contracting arrangements. This rule is intended only to establish criteria the Secretary will consider when determining if a preference or advantage is undue or unreasonable. Whether competitive injury is required to prove a violation is a concept broader than the narrow focus of this rule. Accordingly, AMS is making no changes to the rule as proposed based on the comment.

Required Impact Analyses

Executive Orders 12866, 13563, and 13771 and the Regulatory Impact Analysis

AMS is issuing this rule in conformance with Executive Orders 12866 and 13563, which direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits, including potential economic, environmental, public health and safety effects, distributive impacts, and equity. Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, reducing costs, harmonizing rules, and promoting flexibility.

In the development of this rule, AMS determined to take a different approach to developing the necessary criteria than had been taken in previous rulemaking efforts. AMS determined that including the criteria as part of the framework for consideration of preferences and advantages in buyer-seller contracts would best serve the needs of the industry and fulfill the 2008 Farm Bill mandate. AMS expects the new regulation to bring transparency to considerations of potential violations of sections 202(b) of the Act and certainty to industry members forging contracts related to the buying and selling of poultry and livestock. The rule is not expected to provide any environmental, public health, or safety benefits.

This rule has been determined to be significant for the purposes of Executive Order 12866 and therefore has been reviewed by OMB. This rule has also been determined to be an Executive Order 13771 regulatory action. Details on the estimated costs of this final rule can be found in the rule's economic analysis.

AMS is adding a new § 201.211, which provides four criteria in response to requirements of the 2008 Farm Bill for the Secretary of Agriculture to consider in determining whether a packer, swine contractor, or live poultry dealer has engaged in conduct resulting in an undue preference or advantage to any particular person or locality in any respect in violation of section 202(b) of the Act. Based on its familiarity with the industry, PSD prepared an economic analysis of new § 201.211 as part of the regulatory process. The economic analysis presents the cost-benefit analysis of implementing § 201.211. PSD then discusses the impact on small businesses.

This rule is independent of previous rulemaking. PSD reviewed certain cost projections developed in conjunction with previous rulemaking in analyzing the regulatory impact of this final rule. All costs and benefits described in this economic analysis pertain to the language in this final rule.

Regulatory Impact Analysis

The 2008 Farm Bill requires the Secretary of Agriculture to promulgate a regulation establishing criteria that the Secretary will consider in determining whether an undue or unreasonable preference or advantage has occurred in violation of section 202(b) of the Act. This rulemaking fulfills that requirement.

Responsibility for establishing the required criteria was originally delegated to the Grain Inspection, Packers and Stockyards Administration (GIPSA), which subsequently merged with AMS. AMS now administers the regulations under the Act and has undertaken this rulemaking.

For this economic analysis, PSD considered the impact of three alternatives for this rule. PSD considered the impact of maintaining the status quo, the impact of adopting regulatory language that had been proposed in 2016, and the impact of adopting the language in this final rule.

PSD considered the impact of taking no further action on a previous version of § 201.211 GIPSA [12] had proposed on December 20, 2016.[13] GIPSA subsequently provided notice in the **Federal Register** on October 18, 2017,[14] that it would take no further action on the 2016 proposed rule. Taking no further action would result in no additional out-of-pocket costs to businesses in the livestock and poultry industries but that action would not fulfill the requirements of the 2008 Farm Bill.

AMS could have proposed the same regulatory language as in the 2016 proposed rule. The 2016 proposed rule contained six criteria the Secretary would consider in determining whether conduct or action constitutes an undue or unreasonable preference or advantage and a violation of section 202(b) of the Act. To determine the impact of adopting the 2016 proposed rule, PSD looked to the estimated costs of the 2016 rule as described in that rule's economic analysis, which was provided in the 2016 notice of proposed rulemaking. The total first year costs of the 2016 proposed rule were projected to be $15.37 million.

This current rulemaking represents a different approach than used in previous rulemakings and establishes an analytical framework for considering whether a violation of section 202(b) of the Act has occurred. The final rule includes new criteria to bring transparency to the determination process for the industry. PSD estimates that the total first year costs of this rule are $9.67 million.

Introduction

As required by the 2008 Farm Bill, § 201.211 specifies criteria the Secretary will consider when determining whether an undue or unreasonable preference or advantage has occurred in violation of section 202(b) of the Act. The criteria provide a framework to analyze whether a particular person or locality receives an undue or unreasonable preference or advantage as compared to other similarly situated persons or localities. AMS expects the four criteria to clarify the legal standard for the public, promote honest competition and fair dealing, and improve the negotiating position of growers and producers.

Cost-Benefit Analysis

PSD estimated the costs and benefits of the final rule assuming its publication and effectuation in May 2020. The costs and benefits of the final rule are discussed in order below.

A. Cost Estimation

PSD believes that the costs of § 201.211 would mostly consist of the direct costs of reviewing and, if necessary, re-writing marketing and production contracts to ensure that packers, swine contractors, and live poultry dealers are not providing an undue or unreasonable preference or advantage to any livestock producer, swine production contract grower, or poultry grower compared to other similarly situated person or localities. PSD believes some in the industry may initiate litigation to test the new regulations, resulting in additional costs.

Section 201.211 does not impose any new requirements on regulated entities, but it serves as guidance for their compliance with section 202(b) of the Act. Since the rule clarifies the Secretary's consideration of unlawful undue or unreasonable preferences or advantages, regulated entities should face less risk of violating the Act. The rule does not prohibit the use of

[12] On November 14, 2017, Secretary of Agriculture, Sonny Perdue, issued a memorandum eliminating GIPSA as a standalone agency and transferred the regulatory authority for the Act to AMS. PSD has day-to-day oversight of the Packers and Stockyards activities in AMS.

[13] **Federal Register**, Volume 81, No. 244, pages 92703–92723.

[14] **Federal Register**, Volume 82, No. 200, pages 48603–48604.

alternative marketing agreements [15] (AMAs), poultry tournament systems, or other incentive payment systems, and is not expected to decrease economic efficiencies in the cattle, hog, and poultry industries. Additionally, PSD does not expect this rule to inhibit the ability of regulated entities and producers and growers to develop and enter into mutually advantageous contracts.

To estimate costs, PSD divided costs into two major categories, direct and indirect costs. In addition, PSD expects there are two direct costs: administrative costs and litigation costs.

With respect to direct costs, administrative costs for regulated entities would include items such as review of marketing and production contracts, additional record keeping,[16] and all other associated administrative office work to demonstrate that they do not provide an undue or unreasonable preference or advantage to any livestock producer, swine production contract grower, or poultry grower compared to other similarly situated person or localities.

Litigation costs for the livestock and poultry industries will initially increase until there is a body of case law interpreting the regulations. Once the courts establish precedent, PSD expects additional litigation to decline.

With respect to indirect costs, those costs include costs caused by changes in supply and/or demand and any resulting efficiency losses in the national markets for beef, pork, and chicken and the related input markets for cattle, hogs, and poultry resulting from the direct costs of the rule.

1. Direct Costs—Administrative Costs

To estimate administrative costs of the rule, PSD relied on its experience reviewing contracts and other business records commonly maintained in the livestock and poultry industries for compliance with the Act and regulations. PSD has data on the number of production contracts between swine production contract growers and swine contractors and poultry growers and live poultry dealers. PSD estimated the number of cattle marketing contracts between producers and packers based on the number of feedlots and the percentage of livestock procured under AMAs. PSD then multiplied hourly estimates of the administrative functions of reviewing and revising contracts by average hourly labor costs for administrative, management, and legal personnel to arrive at the total estimated administrative costs. PSD measured all costs in constant 2016 dollars in accordance with guidance on complying with E.O. 13771.[17]

Since packers, swine contractors, and live poultry dealers will likely choose to review their contracts as a precautionary measure to ensure that they are not engaging in conduct or action that in any way gives an undue or unreasonable preference or advantage to any livestock producer, swine production contract grower, or poultry grower, PSD estimates that the regulated entities will review each contract or each contract type once and will renegotiate any contracts that contain language that could be considered a violation of section 202(b) of the Act.

One may view this estimate as an upper bound to the direct cost of the rule, as not every packer, swine contractor, or live poultry dealer will choose to conduct such a review. Some may choose to ''wait and see'' what effect, if any, the rule has on the industry, and whether courts rule on it in any way that would warrant such a review of their contracts.

Based on PSD's experience, it developed estimates for regulated entities of the number of hours for attorneys and company managers to review and revise marketing and production contracts and for administrative staff to make changes, copy, and obtain signed copies of the contracts. For poultry contracts, PSD estimates that each unique contract type would require one hour of attorney time to review and rewrite a contract, two hours of company management time, and for each individual contract, one hour of administrative time, and one hour of additional record keeping time.[18] PSD estimates that each of the 93 live poultry dealers who report to PSD rely on 10 unique contract types on average. PSD data indicates that there are 24,101 individual poultry growing contracts. PSD estimates that each of the 237 hog packers has 10 marketing agreements. The 2017 Census of Agriculture (Ag. Census) [19] indicates that the universe of swine production contracts in the U.S. is 8,557. For hog production and marketing contracts, PSD estimates that each production contract and marketing agreement would require one-half hour of attorney time to review and rewrite a contract, one hour of company management time, one hour of administrative time, and one hour of additional record keeping time. For cattle processors, PSD estimates that each of the estimated 1,099 marketing agreements would require one hour of attorney time to review and rewrite a contract, two hours of company management time, one hour of administrative time, and one hour of additional record keeping time.[20]

PSD multiplied estimated hours to conduct these administrative tasks by the average hourly wages for managers at $62/hour, attorneys at $84/hour, and administrative assistants at $36/hour as reported by the U.S. Bureau of Labor Statistics in its Occupational Employment Statistics to arrive at its estimate of contract review costs for regulated entities.[21]

PSD recognizes that contract review costs will also be borne by livestock producers, swine production contract growers, and poultry growers. PSD estimates that each livestock producer, swine production contract grower, and poultry grower will, in its due course of business, spend one hour of time reviewing a contract or marketing agreement and will spend one-half hour of its attorney's time to review the contract. As with the regulated entities, one may view this estimate as an upper bound to the direct cost of the rule, as not every producer or grower will choose to conduct such a review. Some may choose to ''wait and see'' what effect, if any, the rule has on the industry, and whether courts rule on it in any way that would warrant such a review of their contracts.

[15] AMAs are marketing contracts, where producers market their livestock to a packer under a verbal or written agreement. Pricing mechanisms vary across AMAs. Some rely on a spot market for at least one aspect of their prices, while others involve complicated pricing formulas with premiums and discounts based on carcass merits. The livestock seller and packer agree on a pricing mechanism under AMAs, but usually not on a specific price.

[16] There are no additional mandatory record keeping requirements in the final rule. PSD expects that regulated entities may opt to keep additional records to justify advantages or preferences to demonstrate compliance with the final rule in case of a PSD investigation or private litigation action.

[17] *https://www.whitehouse.gov/sites/whitehouse.gov/files/omb/memoranda/2017/M-17-21-OMB.pdf*

[18] Again, there are no additional mandatory record keeping requirements in the final rule.

[19] *https://www.nass.usda.gov/Publications/AgCensus/2017/Full_Report/Volume_1,_Chapter_1_US/usv1.pdf.*

[20] Ibid.

[21] All salary costs are based on mean annual salaries for May 2018, adjusted for benefit costs, set to an hourly basis, and converted in to constant 2016 dollars. *http://www.bls.gov/oes/.* Accessed on April 9, 2019.

PSD multiplied one hour of livestock producer, swine production contract grower, and poultry grower management time and one-half hour of attorney time to conduct the marketing and production contract review by the average hourly wages for attorneys at $84/hour and managers at $62/hour as reported by the U.S. Bureau of Labor Statistics in its Occupational Employment Statistics to arrive at its estimate of contract review costs for livestock producers, swine contract growers, and poultry growers. PSD then applied this cost to the estimated 1,099 cattle marketing contracts, 2,370 hog marketing contracts, 8,557 hog production contracts, and 24,101 poultry growing contracts that have been reported to PSD.

After determining the administrative costs to both the regulated entities and those they contract with, PSD added the administrative costs of the regulated entities and the livestock producers, swine production contract growers, and poultry growers together to arrive at the first-year total estimated administrative costs attributable to the regulation. A summary of the first-year total estimated administrative costs for § 201.211 appear in the following table:

TABLE 1—FIRST-YEAR ADMINISTRATIVE COSTS

Regulation	Cattle ($ millions)	Hogs ($ millions)	Poultry ($ millions)	Total ($ millions)
201.211	$0.42	$3.05	$4.42	$7.89

The first-year total administrative costs are $7.89 million for § 201.211, and include costs for cattle, hogs, and poultry because packers, swine contractors, live poultry dealers, livestock producers, swine production contract growers, and poultry growers would conduct administrative functions of contract review and record keeping in response to the regulation. The administrative costs are the highest for poultry, followed by hogs and cattle. This is due to the greater prevalence of contract growing arrangements in the poultry industry.

Based on comments received to the proposed rule, AMS abbreviated criterion (d) in the final rule by removing the ''customary in the industry'' clause from proposed criterion. Since all contracts will likely be reviewed in their entirety for potential violations of the Packers and Stockyards Act, AMS does not expect the removal of this clause to appreciably reduce the amount of time for the administrative functions of contract review and additional record keeping. Thus, AMS expects the costs in the final rule to be unchanged from the proposed rule.

2. Direct Costs—Litigation Costs

In considering the costs of the rules it proposed in 2016, GIPSA performed an in-depth analysis of litigation costs expected as a result of the package of four proposed new regulations.[22] GIPSA estimated the total costs of litigating a case alleging violations of the Act. The main costs are attorney fees to litigate a case in a court of law. The cost of litigating a case includes the costs to all parties including the respondent and the USDA in a case brought by the USDA and the costs of the plaintiff and the defendant in the case of private litigation.

To estimate litigation costs for the 2016 proposed rules, GIPSA examined the actual cases decided under the Act from 1926 to 2014 as reported by the National Agricultural Law Center at the University of Arkansas.[23] The litigation costs estimated in the 2016 proposed rules are measured in constant 2016 dollars and are for regulated entities, producers, and growers. The 2016 analysis of litigation costs estimated that the interim final rule at § 201.3(a) was the primary source of litigation costs and that the litigation costs for all four proposed rules were counted under § 201.3(a).[24] The 2016 analysis split out the estimated litigation costs between sections 202(a) and 202(b).

The National Agricultural Law Center at the University of Arkansas has not reported any additional cases decided under the P&S Act since 2015. Since new § 201.211 establishes criteria for violations of section 202(b) and there has not been any recent litigation reported by the National Agricultural Law Center at the University of Arkansas, PSD used the estimated litigation costs associated with section 202(b) from the 2016 proposed rules as the starting point for this analysis.

The section 202(b) estimated litigation costs serve as an upper boundary of estimated costs since the estimates assumed that § 201.3(a) and § 201.211 would both be promulgated. PSD estimates that there would be additional litigation when § 201.211 becomes effective, even in the absence of § 201.3(a). Therefore, PSD uses the following section 202(b) litigation costs estimates in Table 14 from the 2016 proposed rule as the estimated first-year litigation costs assuming the rule becomes effective in May 2020.[25]

[22] The four proposed rules were published on December 20, 2016, in Volume 81, No. 244 of the **Federal Register**.

[23] *http://nationalaglawcenter.org/aglaw-reporter/case-law-index/packers-and-stockyards.*

[24] The USDA withdrew Section 201.3(a) on October 18, 2017, in Volume 82, No. 200 of the **Federal Register**.

[25] **Federal Register**, Volume 81, No. 244, page 92580.

TABLE 2—PROJECTED FIRST-YEAR LITIGATION COSTS

Section 202(b) of the act	Cattle ($ millions)	Hog ($ millions)	Poultry ($ millions)	Total ($ millions)
Total	$0.24	$0.04	$1.49	$1.77

PSD expects § 201.211 will result in an additional $1.77 million in litigation costs in the first full year after the rule becomes effective. Using the number of complaints PSD has received from industry participants as an indicator, PSD estimates that the majority of the litigation will be in the poultry industry. Most of the complaints concerning undue or unreasonable preferences that PSD has received since 2009 have come from the poultry industry.

3. Total Direct Costs

The total first-year direct costs of § 201.211 are the sum of administrative and litigation costs from above and are summarized in the following table.

TABLE 3—FIRST YEAR DIRECT COSTS [26]

Cost type	Cattle ($ millions)	Hogs ($ millions)	Poultry ($ millions)	Total ($ millions)
Admin Costs	$0.42	$3.05	$4.42	$7.89
Litigation Costs	0.24	0.04	1.49	1.77
Total Direct Costs	0.66	3.09	5.91	9.67

PSD estimates the total direct costs of § 201.211 to be $9.67 million. As the above table shows, the costs are highest for the poultry industry, followed by the hog and cattle industries. The primary reason is the high utilization of growing contracts and the corresponding higher estimated administrative costs in the poultry industry. To put this direct cost in perspective, the actual impact on retail prices from these direct costs would be less than one one-hundredth of a cent.

4. Indirect Costs

PSD estimates that the indirect costs of § 201.211 on the cattle, hog, and poultry industries are near zero. For the purposes of this analysis, indirect costs are social welfare losses due to any potential price and output changes from the direct costs of the rule and are in addition to the direct costs (administrative and litigation costs) on regulated entities, producers, and growers who are directly impacted by the rule. The economy will experience indirect costs, for example, if the rule causes packers and live poultry dealers to reduce production, increasing the price of meat products and reducing the amount of meat consumed by consumers.

As previously discussed, the regulation clarifies the Secretary's consideration of whether a conduct or action constitutes an undue or unreasonable preference or advantage. PSD does not expect, therefore, that § 201.211 will result in a decreased use of AMAs, use of poultry grower ranking systems or other incentive pay, reduced capital formation, inhibit development of new contracts, or decreased economic efficiencies in the livestock, meat, and poultry industries. Accordingly, PSD does not project indirect costs resulting from decreased use of AMAs, reduced capital, efficiency losses, or lost consumer and producer surplus. Indirect costs that could theoretically be anticipated are due to shifts in industry demand and supply curves resulting from the increases in industry direct costs attributable to the final rule. These shifts may result in quantity and price changes in the retail markets for beef, pork, and poultry, and the related input markets for cattle, hogs, and poultry. However, litigation costs are unrelated to the quantity of production—in other words, they are not marginal costs—so it is not appropriate to include them in the amount of a supply curve shift. Contract reviews and revisions are somewhat related to production quantity, but even they are less than fully compelling as a component of marginal cost. Litigation and administrative costs, however, are part of fixed costs of regulated entities. If the increase in fixed costs is significant enough, it could lead some firms to exit the industry in the long run. These nuances are not reflected in the assessment that follows, and thus it should be interpreted as a bounding exercise.

To calculate an upper bound on this type of indirect costs based on supply curves shifting, PSD modeled the impact of the increase in direct costs of implementing § 201.211 in a Marketing Margins Model (MMM) framework.[27] The MMM allows for the estimation of changes in consumer and producer prices and quantities produced caused by changes in supply and demand in the retail markets for beef, pork, and poultry and the input markets for cattle, hogs, and poultry.

PSD modeled—again, as a bounding exercise—the indirect costs as an inward (or upward) shift in the supply curves for beef, pork, and poultry. This has the effect of increasing the equilibrium prices and reducing the equilibrium quantity produced. This also has the effect of reducing the derived demand for cattle, hogs, and poultry, which causes a reduction in the equilibrium prices and quantity produced. Economic theory suggests that these shifts in the supply curves and derived demand curves will result in price and quantity impacts and potential dead weight losses to society.[28]

To estimate the output and input supply and demand curves for the MMM, PSD constructed linear supply and demand curves around equilibrium price and quantity points using price elasticities of supply and demand from the GIPSA Livestock Meat and Marketing Study and from USDA's

[26] The detail in this table and other tables in this analysis may not add to the totals due to rounding.

[27] The framework is explained in detail in Tomek, W.G. and K.L. Robinson ''Agricultural Product Prices,'' third edition, 1990, Cornell University Press.

[28] A dead weight loss is the cost to society of an inefficient allocation of resources in a market. Causes of deadweight losses can include market failures, such as market power or externalities, or an intervention by a non-market force, such as government regulation or taxation.

Economic Research Service.[29] With the supply curves established from this data, PSD then shifted the supply curves for beef, pork, and chicken up by the amount of the increase in direct costs for each industry. PSD calculated the new equilibrium prices and quantities in the input markets resulting from the decreases in derived demand that result from higher direct costs. This allows for the calculation of the indirect cost from the lower relative quantity produced at the relatively higher price when the industry's direct costs increase.

The calculation of an upper bound on the price impacts from the increases in direct costs from § 201.211 resulted in price increases of less than one one-hundredth of a cent per pound in retail prices for beef, pork, and poultry. This is because the increase in direct costs is very small in relation to total industry costs.[30] The result is that the price and quantity effects from the increases in direct costs are indistinguishable from zero and, therefore, PSD concludes that the indirect costs of § 201.211 for each industry are also zero.

5. Total Costs

PSD added all direct costs to the indirect costs (near zero), to arrive at the estimated total first-year costs of § 201.211. The total first-year costs are summarized in Table 4.

TABLE 4—TOTAL FIRST YEAR COSTS

Cost type	Cattle ($ millions)	Hogs ($ millions)	Poultry ($ millions)	Total ($ millions)
Admin Costs	$0.42	$3.05	$4.42	$7.89
Litigation Costs	0.24	0.04	1.49	1.77
Total Direct Costs	0.66	3.09	5.91	9.67
Total Indirect Costs	0.00	0.00	0.00	0.00
Total Costs	0.66	3.09	5.91	9.67

PSD estimates that the total costs will be $9.67 million in the first year of implementation.

6. Ten-Year Total Costs

To arrive at the estimated ten-year administrative costs of § 201.211, PSD estimates that in each of the first five years, 20 percent of all contracts will either expire and need to be renewed each year or new marketing and production contracts will be put in place each year. While PSD expects the costs of reviewing and revising, if necessary, each contract will remain constant in the first five years, it expects the administrative costs will be lower after the first year because the direct administrative costs of reviewing and revising contracts would only apply to the 20 percent of expiring contracts or new contracts. PSD estimates that in the second five years, the direct administrative costs of reviewing and revising contracts will decrease by 50 percent per year as the contracts would already reflect language modifications, if any, necessitated by implementation of the regulation. PSD estimates that after ten years, the direct administrative costs will return to where they would have been absent the rule, and the additional administrative costs associated with the rule will remain at $0 after ten years.

In estimating the estimated ten-year litigation costs of § 201.211, PSD expects the litigation costs to be constant for the first five years while courts are setting precedents for the interpretation of § 201.211. PSD expects that case law with respect to the regulation would be settled after five years and by then, industry participants will know how PSD would enforce the regulation and how courts would interpret the regulation. The effect of courts establishing precedents is that litigation costs would decline after five years as the livestock and poultry industries understand how the courts interpret the regulation.

To arrive at the estimated ten-year litigation costs of § 201.211, PSD estimates that litigation costs for the first five years will occur at the same rate and at the same cost as in the first full year of the rule ending in May 2021. In the sixth through tenth years, PSD estimates that additional litigation costs will decrease each year and return to where they would have been absent the rule in the tenth year after the rule is effective and remain at $0 after 10 years. PSD estimates this decrease in litigation costs to be linear, with the same decrease in costs each year.

The ten-year total costs of § 201.211 appear in the table below.[31]

TABLE 5—TEN-YEAR TOTAL COSTS—YEARS ENDED MAY [32]

Year	Administrative ($ millions)	Litigation ($ millions)	Total direct ($ millions)
2021	$7.89	$1.77	$9.67
2022	1.58	1.77	3.35
2023	1.58	1.77	3.35
2024	1.58	1.77	3.35
2025	1.58	1.77	3.35
2026	0.79	1.48	2.27
2027	0.39	1.18	1.58
2028	0.20	0.89	1.08
2029	0.10	0.59	0.69

[29] RTI International ''GIPSA Livestock Meat and Marketing Study'' prepared for Grain Inspection, Packers and Stockyards Administration, 2007. ERS Price Elasticities: *http://www.ers.usda.gov/data-products/commodity-and-food-elasticities/demand-elasticities-from-literature.aspx.*

[30] The $9.67 million increase in total industry costs from § 201.211 is only 0.0043 percent of direct industry costs of approximately $223 billion for the beef, pork, and poultry industries.

[31] As discussed above, PSD expects total administrative and litigation costs to return to where they would have been absent the rule and the additional costs associated with the rule will remain at $0 after ten years.

TABLE 5—TEN-YEAR TOTAL COSTS—YEARS ENDED MAY [32]—Continued

Year	Administrative ($ millions)	Litigation ($ millions)	Total direct ($ millions)
2030	0.05	0.30	0.35
Totals	15.74	13.31	29.05

Based on the analysis, PSD expects the ten-year total costs will be $29.05 million.

7. Present Value of Ten-Year Total Costs

The total costs of § 201.211 in the table above show that the costs are highest in the first year, decline to a constant and significantly lower level over the next four years, and then gradually decrease again over the subsequent five years. Costs to be incurred in the future are less expensive than the same costs to be incurred today. This is because the money that would be used to pay the costs in the future could be invested today and earn interest until the time period in which the costs are incurred.

To account for the time value of money, the costs of the regulation to be incurred in the future are discounted back to today's dollars using a discount rate. The sum of all costs discounted back to the present is called the present value (PV) of total costs. PSD relied on both a 3 percent and 7 percent discount rate as discussed in Circular A–4.[33] PSD measured all costs using constant 2016 dollars.

PSD calculated the PV of the ten-year total costs of the regulation using both a 3 percent and 7 percent discount rate and the PVs appear in the following table.

TABLE 6—PV OF TEN-YEAR TOTAL COSTS

Discount rate (percent)	($ millions)
3	$26.31
7	23.33

PSD expects the PV of the ten-year total costs would be $26.31 million at a 3 percent discount rate and $23.33 million at a 7 percent discount rate.

8. Annualized Costs

PSD annualized the PV of the ten-year total costs (referred to as annualized costs) of § 201.211 using both a 3 percent and 7 percent discount rate as required by Circular A–4 and the results appear in the following table.[34]

TABLE 7—TEN-YEAR ANNUALIZED COSTS

Discount rate (percent)	($ millions)
3	$3.08
7	3.32

PSD expects the annualized costs of § 201.211 would be $3.08 million at a 3 percent discount rate and $3.32 million at a 7 percent discount rate.

PSD also annualized the PV of the ten-year total costs into perpetuity of § 201.211 using both a 3 percent and 7 percent discount rate following the guidance on complying with E.O. 13771. The results appear in the following table.[35]

TABLE 8—ANNUALIZED COSTS INTO PERPETUITY

Discount rate (percent)	($ millions)
3	$0.69
7	1.21

PSD expects the costs of § 201.211 annualized into perpetuity would be $0.69 million at a 3 percent discount rate and $1.21 million at a 7 percent discount rate. Based on the costs in Table 8, and in accordance with guidance on complying with E.O. 13771, the single primary estimate of the costs of this final rule is $1.21 million, the total costs annualized in perpetuity using a 7 percent discount rate.

B. Benefits

PSD was unable to quantify the benefits of § 201.211. However, the rule contains several provisions that PSD expects to improve economic efficiencies in the regulated markets for cattle, hogs, and poultry and reduce market failures. Regulations that increase the amount of relevant information available to market participants, protect private property rights, and foster competition can improve economic efficiencies and generate benefits for consumers and producers.

Section 201.211 will increase the amount of relevant information available to market participants and offset any potential abuse of buyer-side market power by clearly stating to all contracting parties the criteria that the Secretary will consider in determining whether conduct or action constitutes an undue or unreasonable preference or advantage in violation of section 202(b) of the Act.

The regulation will also reduce the risk of violating section 202(b) because it clarifies the criteria the Secretary will consider in determining whether the conduct or action in the livestock and poultry industries constitutes an undue or unreasonable preference or advantage and a violation of section 202(b) of the Act. Other benefits of clarifying the criteria may include reducing litigation risk; decreasing contracting costs; promoting competitiveness and fairness in contracting; and providing protections for livestock producers, swine production contract growers, and poultry growers.

Benefits to the livestock and poultry industries and the cattle, hog, and poultry markets also arise from improving parity of negotiating power between packers, swine contractors, and live poultry dealers and livestock producers, swine production contract growers, and poultry growers. The improvement in parity comes when contracting parties negotiate new contracts and when they review and renegotiate any existing contract terms that contain language that could be considered a violation of section 202(b) of the Act.

Since the regulation increases the amount of relevant information by clarifying what might be considered an undue or unreasonable preference, it increases parity in negotiating contracts, and thereby reduces the ability to abuse buyer-side market power with the

[32] PSD uses May 2021 as the end of the first year after the rule is in effect for analytical purposes only. The date the rule becomes final was not known at the time of the analysis.

[33] *https://www.whitehouse.gov/sites/default/files/omb/assets/regulatory_matters_pdf/a-4.pdf.*

[34] Ibid.

[35] *https://www.whitehouse.gov/sites/whitehouse.gov/files/omb/memoranda/2017/M-17-21-OMB.pdf.*

resulting welfare losses.[36] Establishing parity of negotiating power in contracts promotes fairness and equity and is consistent with PSD's mission to protect fair trade practices, financial integrity, and competitive markets for livestock, meats, and poultry.[37]

C. Cost-Benefit Summary

PSD expects the ten-year annualized costs of § 201.211 to be $3.08 million at a 3 percent discount rate and $3.32 million at a 7 percent discount rate and the costs annualized into perpetuity to be $0.69 million at a 3 percent discount rate and $1.21 million at a 7 percent discount rate. PSD expects the costs will be highest for the poultry industry due to its extensive use of poultry growing contracts, followed by the hog industry and the cattle industry, respectively.

PSD was unable to quantify the benefits of the new regulation, but they explained numerous qualitative benefits that would protect livestock producers, swine production contract growers, and poultry growers; promote fairness and equity in contracting; increase economic efficiencies; and reduce the negative effects of market failures throughout the entire livestock and poultry value chain. The primary benefit of § 201.211 is expected to be reduced occurrences of undue or unreasonable preferences or advantages and increased economic efficiencies in the marketplace. This benefit of additional enforcement of the Act accrues to all segments of the value chain in the production of livestock and poultry, and ultimately to consumers.

Regulatory Flexibility Analysis

The Small Business Administration (SBA) defines small businesses by their North American Industry Classification System Codes (NAICS).[38] SBA considers broiler and turkey producers/growers and swine contractors, NAICS codes 112320, 112330, and 112210 respectively, to be small businesses if sales are less than $1,000,000 per year. Cattle feeders are considered small if they have less than $8 million in sales per year. Beef and pork packers, NAICS 311611, are small businesses if they have fewer than 1,000 employees.

The Packers and Stockyards Act regulates live poultry dealers, which is a group similar but not identical to the NAICS category for poultry processors. Poultry processors, NAICS 311611, are considered small business if they have fewer than 1,250 employees. PSD applied SBA's definition for small poultry processors to live poultry dealers as the best standard available, and it considers live poultry dealers with fewer than 1,250 employees to be small businesses.

PSD maintains data on live poultry dealers from the annual reports these firms file with PSD. Currently, 93 live poultry dealers would be subject to the new regulation. Seventy-Four of the live poultry dealers would be small businesses according to the SBA standard. Although there were many more small businesses than large, small businesses produced only about 6.5 percent of the poultry in the United States in 2017.

Live poultry dealers classified as large businesses are responsible for about 93.5 percent of the poultry contracts. Assuming that small businesses would bear 6.5 percent of the costs, in the first year the regulation is effective, $222,687[39] would fall on live poultry dealers classified as small businesses. This amounts to average estimated costs for each small live poultry dealer of $3,009.

As of February 2019, PSD records identified 381 beef and pork packers actively purchasing cattle or hogs for slaughter. Many firms slaughtered more than one species of livestock. Of the 381 beef and pork packers, 172 processed both cattle and hogs, 144 processed cattle but not hogs, and 65 processed hogs but not cattle.

PSD estimates that small businesses accounted for 23.1 percent of the cattle and 19.2 percent of the hogs slaughtered in 2017. If the costs of implementing § 201.211 are proportional to the number of head processed, then in the first full year the regulation is effective, PSD estimates that $126,501[40] in additional costs would fall on beef packers classified as small businesses. This amounts to estimated costs of $407 for each small beef packer.

In total, $81,603[41] in additional first-year costs would be expected to fall on pork packers classified as small businesses, and $30,863[42] would fall on swine contractors classified as small businesses. This amounts to average estimated costs for each small pork packer of $356, and average estimated costs for each small swine contractor of $286 in the first year the regulation is effective. To the extent that smaller beef and pork packers rely on AMA purchases less than large packers, the estimates might tend to overstate costs.

PSD then annualized the present value of ten-year total costs of the proposed rule on regulated entities, multiplied by the percent of small business. Ten-year annualized costs discounted at a 3 percent rate would be $61,097 for the cattle and beef industry, $32,463 for the hog and pork industry, and $119,271 for the poultry industry. This amounts to annualized costs of $196 for each beef packer, $103 for each pork packer, $82 for each swine contractor, and $1,612 for each live poultry dealer that is a small business. The total annualized costs for regulated small businesses would be $212,830.

Ten-year annualized costs at a 7 percent discount rate would be $64,458 for the regulated cattle and beef industry, $35,416 for the regulated hog and pork industry, and $125,696 for the poultry industry. This amounts to ten-year annualized costs of $207 for each beef packer, $112 for each pork packer, $90 for each swine contractor, and $1,699 for each live poultry dealer that is a small business. The total ten-year annualized costs at 7 percent for regulated small businesses would be $225,570.

The table below lists the estimated additional costs associated with the regulation in the first year. It also lists annualized costs discounted at 3 percent and 7 percent discount rates, and annualized PV of costs extended into perpetuity discounted at 3 and 7 percent.

[36] Nigel Key and Jim M. MacDonald discuss evidence for the effect of concentration on grower compensation in ''Local Monopsony Power in the Market for Broilers? Evidence from a Farm Survey'' selected paper American Agri. Economics Assn. meeting Orlando, Florida, July 27–29, 2008.

[37] See additional discussion in Steven Y. Wu and James MacDonald (2015) ''Economics of Agricultural Contract Grower Protection Legislation,'' *Choices* 30(3): 1–6.

[38] U.S. Small Business Administration. *Table of Small Business Size Standards Matched to North American Industry Classification System Codes. Effective August 19, 2019. https://www.sba.gov/sites/default/files/2019-08/SBA%20Table%20of%20Size%20Standards_Effective%20Aug%2019%2C%202019.pdf.*

[39] Estimated cost to live poultry dealers of $3,412,301 × 6.52 percent of firms that are small businesses = $222,687.

[40] Estimated cost to beef packers of $547,643 × 23.1 percent of firms that are small businesses = $126,501.

[41] Estimated cost to hogs and pork of $1,959,550 × 19.2 percent of slaughter in small businesses × 21.7 percent of costs attributed to packers = $81,603.

[42] Estimated cost to hogs and pork of $1,959,550 × 2.01 percent of contracted hogs produced by swine contractors that are small businesses × 78.3 percent of costs attributed to contractors = $30,863.

TABLE 9—ESTIMATED INDUSTRY TOTAL COSTS TO REGULATED SMALL BUSINESSES

Estimate type	Beef packers ($)	Pork packers and swine contractors ($)	Poultry processors ($)	Total ($)
First-Year Costs	$126,501	$112,466	$222,687	$461,653
10 years Annualized at 3%	61,097	32,463	119,271	212,830
10 years Annualized at 7%	64,458	35,416	125,696	225,570
Annualized Total Cost into Perpetuity Discounted at 3%	13,720	7,290	26,784	47,794
Annualized Total Cost into Perpetuity Discounted at 7%	23,492	12,907	45,810	82,209

In considering the impact on small businesses, PSD considered the average costs and revenues of each regulated small business impacted by § 201.211. The number of small businesses impacted, by NAICS code, as well as the costs per entity in the first-year, ten-year annualized costs per entity at both the 3 percent and 7 percent discount rates, and annualized PV of the total costs extended into perpetuity discounted at 3 and 7 percent appear in the following table.

TABLE 10—PER ENTITY COSTS TO REGULATED SMALL BUSINESSES

NAICS	Number of small businesses	First year ($)	Ten-year annualized costs-3% ($)	Ten-year annualized costs-7% ($)	Perpetuity 3% ($)	Perpetuity 7% ($)
112210—Swine Contractor	108	$286	$82	$90	$19	$33
311615—Poultry Processor	74	3,009	1,612	1,699	362	619
311611—Beef Packer	311	407	196	207	44	76
311611—Pork Packer	229	356	103	112	23	41

The following table compares the average per entity first-year and annualized costs of § 201.211 to the average revenue per establishment for all regulated small businesses in the same NAICS code. The annualized costs are slightly higher at the 7 percent rate than at the 3 percent rate, so only the 7 percent rate is included in the table as the more conservative estimate.

TABLE 11—COMPARISON OF PER ENTITY COST TO REVENUES FOR REGULATED SMALL BUSINESSES

NAICS	Average revenue per establishment ($)	First-year cost as percentage of revenue	Ten-year annualized cost as percentage of revenue	Annualized cost to perpetuity as percentage of revenue
112210—Swine Contractor	$485,860	$0.06	$0.02	$0.007
311615—Poultry Processor	13,842,548	0.02	0.01	0.004
311611—Beef Packer	6,882,205	0.01	0.00	0.001
311611—Pork Packer	6,882,205	0.01	0.00	0.001

The revenue figures in the above table come from U.S. Census data for live poultry dealers and cattle and hog slaughterers, NAICS codes 311615 and 311611, respectively.[43] Ag. Census data have the number of head sold by size classes for farms that sold their own hogs and pigs in 2017 and that identified themselves as contractors or integrators, but not the value of sales nor the number of head sold from the farms of the contracted production. To estimate average revenue per establishment, PSD used the estimated average value per head for sales of all swine operations and the production values for firms in the Ag. Census size classes for swine contractors. The results in Table 11 demonstrate, the costs of § 201.211 as a percent of revenue are less than 1 percent.[44]

Although the Packers and Stockyards Act does not regulate livestock producers or poultry growers, PSD recognizes that they will also incur contract review costs. PSD estimates that each livestock producer and poultry grower will, in its due course of business, spend one hour of time reviewing a contract or marketing agreement and will spend one-half hour of its attorney's time to review the contract. As with the regulated entities, one may view this estimate as an upper bound to the direct cost of the rule, as not every producer or grower will choose to conduct such a review. Some may choose to ''wait and see'' what effect, if any, the rule has on the industry, and whether courts rule on it in any way that would warrant such a review of their contracts.

[43] *https://www.nass.usda.gov/Publications/AgCensus/2017/Full_Report/Volume_1,_Chapter_1_US.*

[44] There are significant differences in average revenues between swine contractors and cattle, hog, and poultry processors, resulting from the difference in SBA thresholds.

PSD multiplied one hour of livestock producer, swine production contract grower, and poultry grower management time and one-half hour of attorney time to conduct the marketing and production contract review by the average hourly wages for attorneys at $84/hour and managers at $62/hour, as reported by the U.S. Bureau of Labor Statistics in its Occupational Employment Statistics, to arrive at its estimate of contract review costs for livestock producers, swine contract growers, and poultry growers. The result is that each small livestock producer and each small poultry that sells livestock or raises poultry on a contract is expected to bear $104 in first year costs, $23 in ten-year annualized costs discounted at 3 percent, $25 in ten-year annualized costs discounted at 7 percent, and $9 discounted into perpetuity at 7 percent. Table 12 lists expected costs to livestock producers and poultry growers that are small businesses.

TABLE 12—TOTAL COSTS TO UNREGULATED SMALL BUSINESSES

Estimate type	Cattle feeders ($)	Hog producers ($)	Poultry growers ($)	Total ($)
First-Year Costs	$111,866	$459,707	$2,501,106	$3,072,679
10 years Annualized at 3%	24,274	99,754	542,727	666,755
10 years Annualized at 7%	26,917	110,614	601,812	739,342
Annualized Total Cost into Perpetuity Discounted at 3%	$5,451	$22,401	$121,876	$149,728
Annualized Total Cost into Perpetuity Discounted at 7%	9,810	40,313	219,329	269,452

The Ag. Census indicates there were 575 farms that sold hogs or pigs in 2017 and identified themselves as contractors or integrators. About 19 percent of swine contractors had sales of less than $1,000,000 in 2017 and would have been classified as small businesses. These small businesses accounted for only 2 percent of the hogs produced under production contracts.

Additionally, there were 8,557 swine producers in 2017 with swine contracts, and about 41 percent of these producers would have been classified as small businesses. PSD estimated an additional 2,370 pork producers had marketing agreements with pork packers. If 41 percent are small businesses, then 4,480 hog producers could incur contract review costs. PSD estimated as many as 1,099 cattle feeders had marketing agreements or contracts that could need adjustment due to the new rule. If 98 percent are small businesses, 1,078 could bear costs of reviewing contracts. Table 13 compares cost to revenues for producer unregulated producers that are small businesses.

PSD records indicated poultry processors had 24,101 poultry production contracts in effect in 2017. The 24,101 poultry growers holding the other end of the contracts are almost all small businesses by SBA's definitions.

TABLE 13—COMPARISON OF TOTAL COST TO REVENUES FOR UNREGULATED SMALL BUSINESSES

NAICS	Number of small businesses	Average revenue ($)	First-year cost as percentage of revenue	Ten-year annualized cost as percentage of revenue	Annualized cost to perpetuity as percentage of revenue
112212—Cattle Feeders	1,078	$305,229	0.03	0.01	0.003
112210—Hog Producers	4,480	333,607	0.03	0.01	0.003
112320—Poultry Growers	24,101	181,545	0.06	0.01	0.005

Ten-year annualized cost savings of exempting small businesses would be $212,830 using a 3 percent discount rate and $225,570 using a 7 percent discount rate. The cost savings annualized into perpetuity of exempting small businesses would be $47,794 using a 3 percent discount rate and $82,209 using a 7 percent discount rate. However, one purpose of § 201.211 is to protect all livestock producers, swine production contract growers, and poultry growers from unfair and unreasonable preferences or advantages, regardless of whether the producer or grower and the packer, swine contractor, or live poultry dealer to which they sell or contract is a large or small business. PSD believes that the benefits of § 201.211 will be captured by all livestock producers, swine production contract growers, and poultry growers. For this reason, AMS did not consider exempting small business from this final rule.

The number of regulated entities that could experience a cost increase is substantial. Most regulated packers and live poultry dealers are small businesses. However, the expected cost increases for each entity are not significant. For all four groups of regulated entities—beef packers, pork packers, live poultry dealers, and swine contractors—average first year costs are expected to amount to less than one tenth of one percent of annual revenue. Ten-year annualized costs discounted at 7 percent are highest for swine contractors at two one hundredths of one percent of revenue. Annualized expected costs of $90 and $112 for swine contractors and pork packers, respectively, are near the cost of one hog. An annualized expected cost of $207 for beef packers is much less than the cost of one fed steer. Expected costs for live poultry dealers are higher, but as a percent of revenue, expected costs to live poultry dealers are very low. AMS expects that the additional costs to small packers, live poultry dealers, and swine contractors will not change their ability to continue operations or place any of them at a competitive disadvantage.

The number of unregulated entities that could experience a cost increase is also substantial. Most affected livestock producers and poultry growers are small businesses. Again, expected costs for individual entities are not significant. The expected first year cost for each unregulated livestock producer or poultry grower is $104. Annualized expected 10-year costs discounted at 3

percent are $23. Costs as a percent of revenue are expected to be well below 1 percent. AMS expects that $23 per year will not change any producer's or poultry grower's ability to continue operations or place any livestock producer or poultry grower at a competitive disadvantage.

As discussed in the Regulatory Impact Analysis, AMS does not expect welfare transfers among market segments or within segments. Estimated changes in prices and quantities are indistinguishable from zero. AMS does not expect § 201.211 to cause changes in production or marketing for small businesses, and the increase in direct costs is very small in relation to total costs.

Comments on the Regulatory Flexibility Analysis

In the proposed rule, AMS solicited public comment on whether § 201.211 as proposed would have a significant economic impact on a substantial number of small business entities. None of the public comments specifically addressed the Regulatory Flexibility Analysis in the proposed rule. However, several comments were submitted by small farmers who said they find it increasingly difficult to compete in the consolidated livestock and poultry industries. Many comments expected the proposed rule, particularly proposed criterion (d), to legitimize what they characterized as unfair, but customary, business arrangements in which they feel powerless to affect more favorable contract terms for themselves.

In response to comments, AMS revised the language of criterion (d) to provide that the Secretary can determine whether a preference or advantage is undue or unreasonable and a violation of the Act by considering whether the action is the result of a reasonable business decision. AMS removed the proposed language that examined whether the action was also customary in the industry, thus addressing some of the concerns expressed by comments. AMS does not expect revision of criterion (d) to impact the conclusions of this analysis.

Based on the above analyses and the comments received, AMS does not expect § 201.211 to have a significant economic impact on a substantial number of small business entities as defined in the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*).

Civil Rights Review

AMS has considered the potential civil rights implications of this rule on members of protected groups to ensure that no person or group would be adversely or disproportionately at risk or discriminated against on the basis of race, color, national origin, gender, religion, age, disability, sexual orientation, marital or family status, political beliefs, parental status, or protected genetic information. This rule does not contain any requirements related to eligibility, benefits, or services that would have the purpose or effect of excluding, limiting, or otherwise disadvantaging any individual, group, or class of persons on one or more prohibited bases. AMS has developed an outreach program to ensure information about the regulation is made available to socially and economically disadvantaged or limited resource farmers, producers, growers, and members of racial and ethnic minority groups.

In its review, AMS conducted a disparate impact analysis, using the required calculations, which resulted in a finding that Asian Americans, Pacific Islanders, and Native Hawaiians met the condition for adverse impacts. The regulation itself would provide benefits to all farmers and ranchers equally. AMS will institute enhanced efforts to notify the groups found to be adversely impacted of the regulation and its benefits. It is of particular importance that impacted individuals and groups be made aware of the benefits the new regulation may provide them. AMS will specifically target seven organizations representing the interests of these impacted groups for outreach.

Paperwork Reduction Act

This rule does not contain new or amended information collection requirements subject to the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*). It does not involve collection of new or additional information by the Federal Government. According to PSD records, there were approximately 312 bonded packers; 1,326 market agencies selling on commission; 4,582 livestock dealers and commission buyers; and 95 live poultry dealers regulated under the Act in 2018. The 2017 Census of Agriculture indicated that there were 575 swine contractors in 2017. The 2017 Census of Agriculture also indicated that there were 826,733 livestock producers and poultry growers. None of these entities are required to submit forms or other information to AMS or to keep additional records in consequence of this rule.

E-Government Act

USDA is committed to complying with the E-Government Act by promoting the use of the internet and other information technologies to provide increased opportunities for citizen access to Government information and services, and for other purposes.

Executive Order 13175

This rule has been reviewed in accordance with the requirements of Executive Order 13175—Consultation and Coordination with Indian Tribal Governments. Executive Order 13175 requires Federal agencies to consult with Tribes on a government-to-government basis on policies that have Tribal implications, including regulations, legislative comments or proposed legislation, and other policy statements or actions that have substantial direct effects on one or more Indian Tribes, on the relationship between the Federal Government and Indian Tribes, or on the distribution of power and responsibilities between the Federal Government and Indian Tribes.

The USDA's Office of Tribal Relations (OTR) has assessed the impact of this rule on Indian Tribes and determined that this rule may have Tribal implications that require continued outreach efforts to determine if Tribal consultation under Executive Order 13175 is required, but OTR does not believe that consultation is required at this time.

If a Tribe requests consultation, AMS will work with the OTR to ensure meaningful consultation is provided where changes, additions, and modifications identified herein are not expressly mandated by Congress.

Congressional Review Act

Pursuant to the Congressional Review Act (5 U.S.C. 801 *et seq.*), the Office of Information and Regulatory Affairs designated this rule as not a major rule as defined by 5 U.S.C. 804(2).

Executive Order 12988

This rule has been reviewed under Executive Order 12988—Civil Justice Reform. This rule is not intended to have retroactive effect. This rule does not preempt state or local laws, regulations, or policies, unless they present an irreconcilable conflict with this rule. There are no administrative procedures that must be exhausted prior to any judicial challenge to the provisions of this rule. Nothing in this rule is intended to interfere with a person's right to enforce liability against any person subject to the Act under authority granted in section 308 of the Act.

List of Subjects in 9 CFR Part 201

Confidential business information, Reporting and recordkeeping

requirements, Stockyards, Surety bonds, Trade practices.

For the reasons set forth in the preamble, USDA amends 9 CFR part 201 as follows:

PART 201—REGULATIONS UNDER THE PACKERS AND STOCKYARDS ACT

■ 1. The authority citation for part 201 continues to read as follows:

Authority: 7 U.S.C. 181—229c.

■ 2. Section 201.211 is added to read as follows:

§ 201.211 Undue or unreasonable preferences or advantages.

The Secretary will consider the following criteria, and may consider additional criteria, when determining whether a packer, swine contractor, or live poultry dealer has made or given any undue or unreasonable preference or advantage to any particular person or locality in any respect in violation of section 202(b) of the Act. The criteria include whether the preference or advantage under consideration:

(a) Cannot be justified on the basis of a cost savings related to dealing with different producers, sellers, or growers;

(b) Cannot be justified on the basis of meeting a competitor's prices;

(c) Cannot be justified on the basis of meeting other terms offered by a competitor; and

(d) Cannot be justified as a reasonable business decision.

Bruce Summers,

Administrator, Agricultural Marketing Service.

BILLING CODE P

DEPARTMENT OF ENERGY

10 CFR Parts 430 and 431

[EERE–2019–BT–NOA–0011]

RIN 1904–AE24

Test Procedure Interim Waiver Process

AGENCY: Office of Energy Efficiency and Renewable Energy, U.S. Department of Energy.

ACTION: Final rule.

SUMMARY: In this final rule, the U.S. Department of Energy (''DOE'') has adopted a streamlined approach to its test procedure waiver decision-making process that requires the Department to notify, in writing, an applicant for an interim waiver of the disposition of the request within 45 business days of receipt of the application. An interim waiver will remain in effect until a final waiver decision is published in the **Federal Register** or until DOE publishes a new or amended test procedure that addresses the issues presented in the application, whichever is earlier. DOE's regulations continue to specify that DOE will take either of these actions within 1 year of issuance of an interim waiver. This final rule addresses delays in DOE's current process for considering requests for interim waivers and waivers from the DOE test method, which in turn can result in significant delays for manufacturers in bringing new and innovative products to market. This final rule requires the Department to process interim waiver requests within the 45 business day window and clarifies the process by which interested stakeholders provide input into the development of an appropriate test procedure waiver.

DATES: The effective date of this rule is January 11, 2021.

ADDRESSES: The docket, which includes **Federal Register** notices, public meeting attendee lists and transcripts, comments, and other supporting documents/materials, is available for review at *http://www.regulations.gov.* All documents in the docket are listed in the *http://www.regulations.gov* index. However, some documents listed in the index, such as those containing information that is exempt from public disclosure, may not be publicly available.

A link to the docket web page can be found at: *http://www.regulations.gov/docket?D=EERE-2019-BT-NOA-0011.* The *http://www.regulations.gov* web page contains instructions on how to access all documents, including public comments, in the docket.

FOR FURTHER INFORMATION CONTACT: Ms. Francine Pinto, U.S. Department of Energy, Office of the General Counsel, GC–33, 1000 Independence Avenue SW, Washington, DC 20585–0121. Telephone: (202) 287–7432. Email: *Francine.Pinto@hq.doe.gov.*

SUPPLEMENTARY INFORMATION:

I. Legal Authority and Background

A. Legal Authority

The Energy Policy and Conservation Act (''EPCA'' or ''the Act''),[1] Public Law 94–163 (42 U.S.C. 6291–6317) authorizes the United States Department of Energy (DOE or, in context, the Department) to regulate the energy efficiency of a number of consumer products and industrial equipment types. Title III, Part B [2] of EPCA established the Energy Conservation Program for Consumer Products Other Than Automobiles. Title III, Part C [3] of EPCA established the Energy Conservation Program for Certain Industrial Equipment. Under EPCA, DOE's energy conservation program consists essentially of four parts: (1) Testing, (2) labeling, (3) Federal energy conservation standards, and (4) certification and enforcement procedures.

The Federal testing requirements consist of test procedures that manufacturers of covered products and equipment must use as the basis for: (1) Certifying to DOE that their products or equipment complies with the applicable energy conservation standards adopted pursuant to EPCA (42 U.S.C. 6295(s); 42 U.S.C. 6316(a)), and (2) making representations about the efficiency of those products or equipment (42 U.S.C. 6293(c); 42 U.S.C. 6314(d)). Similarly, DOE must use these test procedures to determine whether the product or equipment complies with relevant standards promulgated under EPCA. (42 U.S.C. 6295(s); 42 U.S.C. 6316 (a))

Under 42 U.S.C. 6293 and 42 U.S.C. 6314, EPCA sets forth the criteria and procedures DOE is required to follow when prescribing or amending test procedures for covered products and equipment. Specifically, test procedures must be reasonably designed to produce

[1] All references to EPCA in this document refer to the statute as amended through the America's Water Infrastructure Act of 2018, Public Law 115–270 (October 23, 2018).

[2] For editorial reasons, Part B was redesignated as Part A upon codification in the U.S. Code.

[3] For editorial reasons, Part C was redesignated as Part A–1 upon codification in the U.S. Code.

test results that reflect energy efficiency, energy use or estimated annual operating cost of a covered product or covered equipment during a representative average use cycle or period of use, and must not be unduly burdensome to conduct (42 U.S.C. 6293(b)(3); 42 U.S.C. 6314(a)(2)). As a waiver is the issuance of a test procedure applicable to certain products, these same requirements are applicable to any alternate test procedure that DOE may specify in an interim waiver or waiver. Subsequent to issuance of an interim waiver or waiver, DOE conducts a rulemaking to amend the generally applicable test procedure to address the issue that gave rise to the creation of a new test procedure for the requesting party.

DOE's regulations provide that upon receipt of a petition, DOE will grant a waiver from the test procedure requirements if DOE determines either that the basic model for which the waiver was requested contains a design characteristic that prevents testing of the basic model according to the prescribed test procedures, or that the prescribed test procedure evaluates the basic model in a manner so unrepresentative of its true energy consumption characteristics as to provide materially inaccurate comparative data. 10 CFR 430.27(a)(1) and 10 CFR 431.401(f)(2). DOE may grant the waiver subject to conditions, including adherence to alternate test procedures. DOE regulations also provide that in addition to the full waiver (''decision and order'') described previously, the waiver process permits parties to also file an application for interim waiver from the applicable test procedure requirements. 10 CFR 430.27(a) and 10 CFR 431.401(a). DOE will grant an interim waiver if it appears likely that the petition for waiver will be granted or if DOE determines that it would be desirable for public policy reasons to grant immediate relief pending a decision on the petition for waiver. 10 CFR 430.27(e)(2) and 10 CFR 431.401(e)(2).

B. Background

In May of 2019, DOE proposed to streamline its existing interim waiver process by amending its regulations to require that the Department would make a determination on an interim waiver request within 30 business days of receipt. Under that proposal, should DOE fail to notify the applicant in writing of the determination within 30 business days, the request for interim waiver would be granted based on the criteria set forth in DOE regulations. 84 FR 18414 (May 1, 2019). The petitioner would be authorized to use the alternate test procedure specified in the request for interim waiver. *Id.*

DOE specified in the 2019 notice of proposed rulemaking (''NOPR'') that an interim waiver would remain in effect until a waiver decision is published or until DOE publishes a new or amended test procedure that addresses the issues presented in the application, whichever is earlier. If the alternate test procedure ultimately required by DOE differed from what was specified in the interim waiver, manufacturers would then have a 180-day grace period to begin using the alternate test procedure specified in the decision and order. If DOE denied the waiver request, the 180-day grace period would apply to the use of the test procedure specified in DOE's regulations. The proposal was intended to address delays in DOE's current process for considering requests for interim waivers from the DOE test method that ultimately imposed costs on manufacturers because they could not certify and distribute their products while awaiting a response to their petitions. 84 FR 18414 (May 1, 2019). The NOPR provided for the submissions of comments by July 1, 2019.

During the comment period, DOE received several requests to hold a public meeting and to extend the NOPR's comment period after the meeting so that the public could engage in the rulemaking process. 84 FR 30047, 30047 (June 26, 2019). To address these requests, the Department held a webinar on July 11, 2019, and extended the comment period until July 15, 2019.[4]

DOE held the webinar to discuss the proposal and answer questions regarding the changes proposed to the existing process. (July 2019 Webinar, No. 31 at p. 5) DOE explained that the proposal was intended to improve public participation and decrease uncertainty in a long standing process, which provided manufactures of new and innovative products an alternative means of testing those products while the Department made a final adjudication on the waiver petition. (*Id.* at pp. 5–8) DOE continued that the proposal would streamline this process by removing the language ''if administratively feasible'' from the Department's regulations and thereby require the Department to issue decisions on interim waiver applications within 30-business days that would remain in effect until the waiver decision and order was published, or until DOE published a new or amended test procedure. (*Id.* at pp. 9–10) If a petition was ultimately denied or granted with a different alternative test procedure than specified in the interim waiver, then the manufacturer would have 180-days to begin using that new test procedure. DOE stated that its intent in issuing the proposal was to improve the waiver process for regulated entities by making it more transparent and participatory as well as addressing the financial burden manufacturers have experienced in the past. The proposal was intended to shift the burden of any delays in the review process onto the Department, rather than the requester. (*Id.* at p. 11; 23) Following the webinar, DOE received additional requests to extend the comment period, which DOE granted and extended the comment period until August 6, 2019. 84 FR 35040 (July 22, 2019).

II. Discussion of Amendments

In this final rule, DOE is amending its regulations to address stakeholder concerns regarding lengthy waiting times following submission of interim waiver and waiver applications, and the burden that lengthy processing time imposes on manufacturers, who are unable sell their products or equipment absent an interim waiver or waiver from DOE.[5] Specifically, this rule amends Parts 430 and 431 of Chapter II, Subchapter D, of Title 10 of the Code of Federal Regulations as set forth at the end of this document in a way that is intended to provide the public and industry with greater clarity and transparency to the existing waiver process, and to address specific administrative delays that have prevented innovative and new products from reaching the market.

In this final rule, DOE has amended the current regulations to require that the Department make a determination on an interim waiver request within 45 business days of receiving a complete petition. DOE extended this time period from the 30 business days specified in the NOPR in response to comments suggesting that the Department may need additional time to review the interim waiver prior to issuing its decision. The Department believes that 45 business days provides the Department sufficient time to review an interim waiver request and make a determination on the interim waiver based on the regulatory criteria applicable at that step of the process, *i.e.,* that the petition for waiver is likely

[4] Transcript of the webinar is available on the docket, *https://www.regulations.gov/document?D=EERE-2019-BT-NOA-0011-0031.*

[5] *See, e.g., https://energy.gov/sites/prod/files/2018/01/f46/NAFEM%20Regulatory%20Reform%20Roundtable%20Meeting%20Notes%20-%2010.31.17.pdf.*

to be granted, or it is desirable for public policy to grant immediate relief pending a decision on the waiver petition. 10 CFR 430.27(e)(2) and 10 CFR 431.401(e)(2). Extending the Department's review time will still reduce manufacturers' burdens relative to the baseline and retains the certainty for manufacturers that DOE will reach a decision on the interim waiver within a specified time period. DOE emphasizes that the grant or denial of an interim waiver is an intermediate step in DOE's consideration of the waiver petition, and that DOE will continue to provide, as it does now under the current regulations, opportunity for public input and further consideration by the Department prior to issuance of a decision and order on the waiver petition.

10 CFR 430.27 and 10 CFR 431.401 are amended by revising paragraph (e), which now requires the Department to post online a petition for an interim waiver within five business days of receiving an application and, as discussed in the preceding paragraph, will provide a decision on that petition for an interim waiver within 45 business days of receipt. 10 CFR 430.27(e)(1) and 10 CFR 431.401(e)(1). DOE added the requirement for posting the interim waiver in response to comments expressing concern that interested parties will be unaware that the Department received a petition for interim waiver. While DOE currently posts waiver and interim waiver requests on its website at *https://www.energy.gov/eere/buildings/current-test-procedure-waivers,* posting upon receipt is now specified in DOE's regulations to enhance public awareness of when DOE receives a request for interim waiver for processing pursuant to these amended regulations.

The Department may reach a decision on the petition at any point during the 45 business day window. The regulations also specify that the Department will post on its website a notice of the determination regarding a petition for interim waiver within five business days and will publish a notice of the decision in the **Federal Register** as soon as possible thereafter. 10 CFR 430.27(e)(1)(ii) and 10 CFR 431.401(e)(1)(ii). The Department updated these notification provisions from the NOPR for the same reasons of increased transparency and notice that it added the posting requirement for receipt of an interim waiver.

For purposes of determining the start of the 45 business day window, DOE considers a waiver and interim test procedure waiver petition received when the application request is accepted in the email box for receipt of waiver petition or if delivered by mail, on the date the petition is stamped as received by the Department. 10 CFR 430.27(e)(1)(iii) and 10 CFR 431.401(e)(1)(iii). DOE updated the NOPR to specify that failure to satisfy the criteria set forth in 10 CFR 430.27(b)(2) and 10 CFR 431.401(b)(2) would result in denial of the interim waiver. (*See* 10 CFR 430.27(e)(1)(ii) and 10 CFR 430.401(e)(1)(ii) of this final rule.) This change is consistent with the current regulatory requirements for submission of an interim waiver (identification of related petition and basic models, as well as information on the likely success of the petition and information on the economic hardship or competitive disadvantage that is likely to result absent a favorable determination and an authorized signature). This change is also consistent with the criteria for grant of an interim waiver, which require the applicant to show that the petition for waiver will likely be granted and/or that it is desirable for public policy reasons to grant immediate relief pending a decision on the petition for waiver. 10 CFR 430.27(e)(2) and 10 CFR 430.401(e)(2). DOE also considers this change consistent with the provision in its regulations, which remains unchanged by these amendments, specifying that a petitioner must submit an alternative test procedure to the extent that one is known with the waiver petition. 10 CFR 430.27(b)(1)(iii) and 10 CFR 431.401(b)(1)(iii). While DOE will not grant an interim waiver absent an alternate test procedure specified by the petitioner, and the information required by 10 CFR 430.27(b)(2) and 10 CFR 431.401(b)(2), DOE will continue to process the waiver request and work with the petitioner to develop an appropriate alternate test procedure and provide additional information as necessary to process the waiver.

Revised paragraph (h) clarifies the duration of interim waivers by stating that an interim waiver remains in effect until the Department publishes a decision and order on the petition for waiver in the **Federal Register** or, publishes in the **Federal Register** a new or amended test procedure that addresses the issue(s) covered in the waiver, whichever is earlier. 10 CFR 430.27(h)(1) and 10 CFR 431.401(h)(1). In response to comments on the NOPR, DOE retains the requirement that DOE will complete either of these actions within one year of the issuance of an interim waiver. 10 CFR 430.27(h)(2) and 10 CFR 431.401(h)(2). DOE did not amend the current regulatory requirement that a waiver or interim waiver will automatically terminate on the date by which use of an amended test procedure that addresses the issue presented in the waiver is required to demonstrate compliance. 10 CFR 430.27(h)(3) and 10 CFR 431.401(h)(3).

The Department also revised 10 CFR 430.27(i)(1) and 10 CFR 431.401(i)(1) to provide manufacturers with a 180-day grace period for compliance with a specified test procedure in this final rule. In the event DOE ultimately denies the petition for waiver or the alternate test procedure specified in the interim waiver differs from the alternate test procedure specified by DOE in a subsequent decision and order granting the petition, the affected manufacturers will have 180-days to come into compliance. The duration of this grace period mirrors the amount of time the Department provides manufactures to come into compliance when a new test procedure is prescribed under 42 U.S.C. 6293(e). This provision was specified in the 2019 NOPR regulatory text as 10 CFR 430.27(e)(1)(iii) and 10 CFR 431.401(e)(1)(iii), but has been relocated to 10 CFR 430.27(i)(1) and 10 CFR 431.401(i)(1) in response to comments that 10 CFR 430.27(i) and 10 CFR 431.401(i) already specified the outcome if DOE denies a waiver petition after granting an interim waiver, or specifies an alternate test procedure in the waiver decision than in the interim waiver, and so the addition of the originally included 10 CFR 430.27(e)(1)(iii) and 10 CFR 431.401(e)(1)(iii) in the NOPR was confusing.

The 2019 NOPR proposed that ''an application for interim waiver would be deemed granted, thereby permitting use of the alternate test procedure suggested by the applicant in its application, if DOE fails to notify the applicant in writing of the disposition of an application within 30 business days of receipt of the application.'' 85 FR 18414, 18415 (May 1, 2019). During the comment period several stakeholders supported DOE's proposed approach. FSI believed that the current delays in the interim waiver process lead to substantial direct and indirect costs to both businesses and to consumers by not allowing innovative and energy saving appliances to come to market in a timely manner. (FSI, No. 16 at p. 1) This commenter further stated that it is an unfair economic penalty to all manufacturers, but especially burdensome to smaller manufacturers, where the investment of time and development is held in limbo. (*Id.* at p. 2) FSI asserted that the proposal creates a reasonable incentive for DOE to respond to petitions and that the requirement for a speedy waiver process is not the equivalent of self-regulation as some commenters claimed. In addition, FSI stated that the current regulations already contained language protecting against manufacturers abusing the process, with penalties provided for doing so. (*Id.* at p. 2) Also, one commenter stated general agreement with DOE's proposal. (Hamdi, No. 34, at p. 1)

ITI agreed that DOE's proposal met the goal of addressing delays in DOE's current process for considering requests for interim waivers, which can result in significant delays for manufacturers in bringing new and innovative products to market. (ITI, No. 20 at p. 1).

In DOE's request for comments concerning the Department's prioritization of rulemakings, 85 FR 20886 (April 15, 2020) rulemaking, AHAM commented in support of amending the existing test procedure interim waiver process and prioritizing this action. AHAM agreed that the Department's efforts to streamline the waiver process would mitigate the burden for manufacturers associated with waiting for DOE to respond to interim waiver requests and allow DOE to instead focus its attention on the merits of granting a final test waiver. Based on the Fall 2019 Unified Agenda of Regulatory and Deregulatory Actions, AHAM anticipated that the finalization of the rule would not require the expenditure of significant resources and urged DOE to finalize the rule immediately. (AHAM, EERE–2020–BT–STD–0004, No. 10 at p. 3)

NAFEM fully supported the initial 30-day review deadline before petitions for interim waivers were deemed granted. This commenter stated that the proposal would greatly reduce the uncertainty and risk associated with the waiver process. (NAFEM, No. 26 at p. 3) The Joint Industry Commenters also agreed with DOE's determination that it is desirable for public policy reasons, including burden reduction on regulated parties and administrative efficiency, to grant immediate relief on each petition for interim waiver if DOE does not notify petitioner of its interim waiver decision within the 30 business days. (No. 52 at p. 2) This commenter stated that DOE's proposal will lead to the following benefits: (1) It will allow manufacturers to more swiftly provide innovative, energy saving products to consumers; (2) It will provide certainty to regulated entities; (3) It creates a compliance pathway for innovative products being introduced on the market for which the current test procedures do not apply; and (4) DOE's proposal provides a clear, transparent process so that regulated parties and other stakeholders know how DOE will operate. (*Id.* at pp. 2–5) While supporting the DOE proposal, the Joint Industry Commenters also recommended that DOE add to the final rule a provision indicating that, in cases where interim test procedures are deemed granted by the passage of time, DOE will publish the interim test procedure waiver (and the petition for test procedure waiver) in the **Federal Register** immediately. It stated that this would be consistent with DOE's current practice to publish its decisions on interim waivers together with the notice and request for comment on the test procedure waiver petition. (*Id.* at p. 4) This commenter expects that if DOE receives a petition that is incomplete, it will notify the petitioner and that such a petition could not be considered granted by the passage of time because it is not complete. (*Id.*)

Moreover, while NEMA stated its support for DOE's ''deemed granted'' approach, it would modify the proposal to provide for some action by DOE before an interim waiver is granted. NEMA suggested that the final rule provide that DOE will publish the interim test procedure application after the application is deemed complete by the Department. Then, it suggested a short comment period of 10 days to provide stakeholders the opportunity to raise red flags. If stakeholders and DOE do not identify any significant substantive problems with the petition for waiver, then 30 days after the interim test procedure application is published in the **Federal Register** the application should be deemed granted, unless DOE informs the manufacturer otherwise in writing. NEMA also believed that if significant and substantive concerns with the interim waiver are raised during the comment period or discovered by DOE in its preliminary review of the petition, DOE should be able to take another 30 days to review the petition before determining if the interim waiver is granted as-is, granted with modifications, or denied. (No. 55 at pp. 4–5) NEMA stated that these modifications will address the possibility of competitive gamesmanship and increase transparency.

The Office of Advocacy for the Small Business Association (SBA) fully supported DOE's proposal to streamline the test procedure interim waiver process so that small manufacturers have more regulatory certainty in the interim waiver process. According to the SBA, the delays have a significant impact on small businesses that sell product at much lower volumes and that are unable to sell their product for a significant amount of time, thus reducing their income flow. Therefore, these delays have the potential to put some small manufacturers out of business. (SBA, No. 23 at p. 1, 3, 4) It stated that abuse of the process is not a concern because the proposal only eliminates a bottleneck in the process by requiring DOE to meet the 30-day decision-making requirement. Even if the interim waiver is granted, the application is still required to go through a full review as the process remains unchanged. (SBA, No. 23 at p. 4)

On the other hand, many other commenters' objected to DOE's ''deemed granted'' approach. For example, Earthjustice argued that the proposal would weaken the energy conservation standards program by allowing manufacturers to abuse the process by placing noncompliant products in the market given the 30-day ''deemed granted'' requirement and the grace period after DOE revoked such waivers. This result could occur without any notice to either competitors or stakeholders and with no opportunity to object. (Earthjustice, No. 49 at p. 1 *See also* Hardin-Levine, No. 2 at p. 1; Stewart, No. 7, at p. 1; Lennox, No. 11 at p. 1; RBC, No. 12 at 1; Gould, No. 13 at p. 1; Anonymous 1, No. 17 at p. 1; NPCC, No. 21 at p. 1; WA State Energy Office, No. 22 at p. 1; Better Climate Research and Policy Analysis, No. 24 at p. 1; Traulsen, No. 25 at pp. 2–3; Sachs,

No. 29 at p. 2; Consumer Groups, No. 33 at p. 2; DEEP, No. 35 at p. 1; Carrier, No. 36 at p. 2; CA IOUs, No. 37 at p. 1; Nortek, No. 38 at p. 3; Ingersoll Rand, No. 39 at p. 1; CEC, No. 40 at p. 1; AHRI, No. 42 at p. 2; ASE. No. 43 at p. 3; A.O. Smith, No. 44 at p. 1–2; NASEO, No. 45 at p. 1; ASAP et al., No. 46, at pp. 1, 8; NRDC, No. 47, at p. 1–2, 5–6; Lennox, No. 48 at p. 1, 4; AG Joint Commenters, No. 51 at p. 2, 5; and Goodman, No. 54 at p. 1)

Many commenters, while ultimately objecting to the proposed automatic approval as noted in the preceding paragraph, commented that DOE should nonetheless be held to a timeline when processing interim waiver requests. Various commenters proposed alternative scenarios, such as maintaining the status quo, the 30-business day time limit proposed by DOE, and increasing the time limit to 120 days, with specific milestones along the way. (Franke, No. 8 at p. 1 for maintaining 30 days; BSH, No. 41 at 5, for maintaining 30 days, with notice and comment if application is deemed granted; Acuity, No. 14 at p. 2, for maintaining the 30 days but not more than 90; Lutron, No. 53 at p. 2, with providing stakeholders a brief opportunity for comment during the 30 business day window; FSI, No. 16 at p. 2, for maintaining 30 days; Anonymous 1, No. 17 at p. 1, if the proposal is finalized, use 60 to 90 days before granting; NAFEM, No. 26 at p. 2, supporting 30-day review process; Traulsen, No. 25 at p. 3, supporting a 60 business day review process; Carrier, No. 36 at p. 2, suggesting a review process that is not more than 120 days to conduct a review of the interim waiver application, public comment period, review of comments received, and additional communication with the petitioner; AHRI, No. 42 at pp. 2–3, supports a maximum of 120 days to review and process an interim waiver application; Sachs, No. 29 at p. 2, recommends creating time limits for each step of the process; CA IOUs, No. 37 at p. 2–3, suggesting a 6-month review process; Nortek, No. 38 at pp. 2–3, suggesting a maximum of 120 days; CEC, No. 40 at p. 9–10, suggesting an additional step for completion check and comment period and providing an automatic grant only if no adverse comments are received; ASE, No. 43, at p. 4, stating that a comment period is needed; A.O. Smith, No. 44 at p. 4–5, recommending an alternative process allowing 135 days, including stakeholder comment and a full technical review; ASAP et al., No. 46 at pp. 7–8, providing for a 90-day review period, including notice and comment but not replacing comment period after publication of interim waiver; Lennox, No. 48 at pp. 2–3, suggests setting a reasonable deadline with an expedited comment period of 30 days; and Goodman, No. 54 at pp. 1–2, 4, suggesting 90-day time period with opportunity for comment)

In response to these arguments, DOE's reiterates that these changes are being adopted in response to concerns that the current system for processing interim waiver petitions is not working as it should. In DOE's view, manufacturers should not be constrained from selling their products for significant periods of time while DOE undertakes a lengthy review of a temporary measure (the interim waiver) or applies its limited resources to other priorities, such as rulemakings subject to a statutory deadline. DOE also does not believe that manufacturers should be limited in their ability to sell their products while DOE works extensively, and without the benefit of public comment, to determine what the alternate test procedure should be in response to the interim waiver request.

As DOE explained in its modernized Process Rule, DOE should be held accountable for complying with its own procedures so that the public will have confidence in the transparency, predictability, clarity, and fairness of DOE's regulatory process. Procedures for Use in New or Revised Energy Conservation Standards and Test Procedures for Consumer Products and Commercial/Industrial Equipment (''Process Rule''), 85 FR 8626, 8632, 8634 (February 14, 2020). Under the procedures adopted in this final rule, DOE places the burden of delay on DOE rather than the manufacturer. If DOE does not notify the applicant in writing of the disposition of the interim waiver within 45 business days, the manufacturer would be authorized to test subject products under an interim waiver using the alternate test procedure submitted by the manufacturer while DOE processes the waiver request, including obtaining the benefit of comment from other manufacturers and stakeholders.

In consideration of the comments received suggesting a longer review period, however, DOE has determined that a 45 business day period will provide the Department with a small amount of additional time to review the interim waiver request while still providing certainty to the manufacturer that if DOE does not act within the prescribed time period, the interim waiver will be granted pursuant to DOE's existing regulatory criteria for the grant of interim waiver requests at 10 CFR 430.27(e)(2) and 10 CFR 431.401(e)(2).

Accordingly, after taking all comments into account concerning the adequacy of the 30 business day time period for consideration of interim waiver petitions, DOE is modifying this requirement to provide the Department 45 business days to review completed interim waiver petitions based on the criteria in its current regulations, 10 CFR 430.27(e)(2) or 10 CFR 431.401(e)(2). These are the same criteria that have been applied to every interim waiver petition acted upon by DOE and are not changed by this final rule. Because an interim waiver is meant to be a temporary measure to hold a requester harmless while a final decision on a waiver is processed, the criteria for granting an interim waiver are straightforward and intended to facilitate a quick review process. For example, if DOE has seen a particular technological issue in prior waivers that have been granted, it should quickly become apparent that it is likely that the petitions for waiver based on the same technological issue would be granted. In addition, the criterion that it is desirable for public policy reasons to grant ''immediate relief pending a determination on the petition for waiver'' in particular indicates that DOE's decision for interim waiver is intended to be a quick process to grant ''immediate'' relief rather than serve as the culmination of DOE's decision-making process on the petition for waiver. As a result, it is not intended to encompass a detailed review to determine all of the complex particulars of the alternate test procedure that may ultimately be granted as part of the decision and order on the waiver petition. DOE emphasizes that, as in the current regulations, it remains required to affirmatively make a decision as to whether to grant or deny the interim waiver petition. If DOE denies the interim waiver petition, it is required to notify the petitioner within the 45 business day time period and post the notice on the website as well as publish its determination in the **Federal Register** as soon as possible after such notification. Moreover, in DOE's past experience, the majority of interim waiver petitions were granted.[6] As a

[6] Of the 21 concluded interim waiver petitions that DOE had granted as of issuance of DOE's NOPR, the Department had granted 18 in full and granted the remaining 3 with modifications such as one was granted in part, one with minor modifications, and one with a different test procedure than proposed. 84 FR 18414, 18419 (May 1, 2019).

result, this final rule also states that if petitioner has not received notification of the disposition of the petition for interim waiver within 45 business days, the interim waiver petition is granted based on the criteria in DOE's regulations at 10 CFR 430.27(e)(2) and 10 CFR 431.401(e)(2)—specifically, that it is desirable for public policy reasons to grant immediate relief pending a determination on the petition for waiver or, such as in cases where DOE has granted waivers to other manufacturers for the same technology using the same or a similar alternate test procedure, that it is likely that the petition for waiver will be granted. The manufacturer may test and certify its products using the alternative test procedure included in the petition, and compliant products may be distributed in commerce. DOE will publish the grant or denial of the interim waiver in the **Federal Register** after its determination is made and posted online. 10 CFR 430.27(e)(1)(ii) and 10 CFR 431.401(e)(1)(ii).

In response to comments suggesting that DOE provide for a ''completeness check'' or ''full technical review'', it is DOE's intent to review the interim waiver request within the 45 business day time period. DOE notes the new provision in the final rule that for an interim waiver to be granted, the petitioner must submit an alternate test procedure. DOE reiterates that unless it acts to grant or deny the interim waiver within the 45 day period, the interim waiver will be granted at the end of the 45 days according to the criteria in DOE's regulations at 10 CFR 430.27(e)(2) and 10 CFR 431.401(e)(2), and DOE will then publish the grant of interim waiver and alternate procedure for public comment. During this time, DOE will conduct any necessary technical review, working with the manufacturer as necessary—and with the benefit of input from the public, including other manufacturers—to ensure that the alternate test procedure ultimately adopted upon the grant of any petition for waiver is appropriate. The benefit to the new process is that when DOE publishes a decision on the interim waiver and request for comment, DOE does not expect to have made significant changes to the alternate test procedure submitted with the interim waiver. If there are significant ''red flags'', as indicated in NEMA's comment, DOE would deny the request for interim waiver and continue to process the petition for waiver. As a result, interested stakeholders will be able to provide input on the alternate test procedure as it was submitted by the petitioner, rather than an alternate test procedure to which DOE may have made substantial changes without the benefit of public input. DOE intends for the changes finalized in this rule to increase transparency and the use of stakeholder input in the waiver process. This approach is also intended to facilitate the introduction of innovative products to market and ensure that the burden to act promptly is on DOE.

NEMA recommended that the final rule should include a short comment period of 10 days to provide stakeholders the opportunity to raise red flags if necessary before DOE finalized a petition for interim waiver and DOE agrees the process needs greater transparency. (NEMA, No. 55 at p. 4) Current regulations lack the transparency to provide manufacturers and concerned stakeholders notice of DOE activities when making changes to waivers petitions submitted by a manufacturer and an opportunity to engage in the process. This final rule seeks to increase transparency and provide a means of including stakeholder input in the Department's review process. The final rule provides that members of the public will receive notice of interim waiver petitions through posting on the DOE website and publication of its decision in the **Federal Register**, 10 CFR 430.27(e)(1) and 10 CFR 431.401(e)(1). Stakeholders and other manufacturers will be made aware of the Department's ongoing review and decision through these amendments to the existing regulation and can raise concerns during the processing of the interim waiver.

DOE believes that this final rule directly addresses the concern expressed by commenters that the ''deemed granted'' language included in the proposal would result in situations where DOE did not exercise its statutory responsibility to apply the regulatory requirements to all interim waiver petitions in an affirmative manner. (CA IOUs, No. 37 at p. 7) Some commenters argued that DOE's proposed approach results in an abdication of the Department's decision-making authority and does not meet DOE's obligation to consumers nor does it promote a fair and level playing field among manufacturers. (A.O. Smith, No. 44 at p. 1–3, concerned that the automatic granting of an interim waiver is an abdication of responsibility; NRDC, No. 47 at p. 2–3, the Department must affirmatively review the request and decide that it is technically and procedurally appropriate to grant the interim waiver; Lennox, No. 48 at p. 4, pp. 5–6; and AG Joint Commenters, No. 51 at p. 5, EPCA requires that DOE must make an affirmative determination)

In response, DOE maintains that the language included in this final rule continues to require that DOE engage in a decision-making process for each interim waiver petition and provide notice of that decision to petitioners and the public. DOE will continue to fulfill its statutory obligations with respect to all waiver petitions it receives. Interim waivers to which DOE does not respond within the 45 business day period are granted pursuant to the criteria in DOE regulations at 10 CFR 430.27(e)(2) and 10 CFR 431.401(e)(2)—specifically, that it is within the public interest to grant immediate relief pending a determination on the petition for waiver. The grant of an interim waiver ensures that the manufacturer subject to the interim waiver (and to any subsequent waiver) is testing and certifying its products pursuant to a DOE test procedure, as required by EPCA. DOE will then continue to review the petition for waiver and issue a decision and order on that petition after any further technical review and consideration of public input. By finalizing this rulemaking, DOE does not cede its authority to review interim waiver petitions or otherwise abdicate its decision-making responsibilities with regard to requests for waiver from the test procedure set forth in DOE's regulations.

In addition, as a result of the ''deemed granted'' language, commenters proposed revised notice and comment scenarios for consideration as part of the interim waiver process. Those commenters asserted that the proposal fails to require notice of a waiver be given to consumers and competitors, that consumers will lack the information needed to make informed decisions about appliances, and that the Department should provide prompt notice of approved petitions. (Anonymous 1, No. 17 at p. 1; Consumer Groups, No. 33 at p. 3; and DEEP, No. 35 at p. 2) Supporting the proposal, BSH recommended adding in the final rule a provision regarding interim test procedure waivers deemed granted by the passage of time that the Department shall publish the waiver in the **Federal Register** immediately to ensure adequate notice to the public is provided. (No. 41 at p. 4) Additionally, Goodman notes that the existing process under 10 CFR 430.27(c)(1), which requires that notification of an interim test procedure waiver is only given to competitors in the same product class and after publication in the **Federal Register**, should be expanded. This commenter suggests that other manufacturers of the same product class

should also receive notification and an opportunity to comment. Such action would provide manufacturers of a given product class greater certainty of notice and opportunity to respond before a product is introduced into commerce. (Goodman, No. 54 at p. 2–4).

In response to these comments, DOE agrees that public input is critical to DOE's consideration of petitions for waiver of the DOE test procedure. DOE values input from stakeholders because such comments contribute to a better work product and help to resolve complicated technical issues. In this final rule, DOE has provided that all determinations made in response to interim waiver petitions will be published in the **Federal Register** after such decisions are made, taking into account the 45 business day deadline. In addition, to promote transparency, the regulations will require DOE to continue its current practice of posting waiver petitions online when they are received, so that the public and other manufacturers are aware that a petition for waiver and interim waiver has been submitted. The regulations also add a requirement for DOE to post decisions on interim waivers when those decisions are made. Posting of both receipt of a petition for interim waiver and DOE's decision on an interim waiver will be made within 5 business days. 10 CFR 430.27(e)(1)(ii) and 10 CFR 431.401(e)(1)(ii).

DOE emphasizes that under the current regulatory requirements, the stakeholder comment period is triggered by DOE's granting of an interim waiver. 10 CFR 430.27(c) and (d) and 10 CFR 431.401(c) and (d). This final rule does not change those requirements. Accordingly, DOE is not taking away any previous opportunity stakeholders had for comment prior to the grant of an interim waiver. To the contrary, DOE is facilitating additional transparency through issuance of this final rule. Previously, DOE in many cases conducted significant discussions with the manufacturer and made changes to the alternate test procedure submitted by the manufacturer without the benefit of input from the public, including other manufacturers and stakeholders in the process, as well as any other interested parties. Under this final rule, all of these interested groups will be afforded input at the very beginning of DOE's process of considering an alternate test procedure.

This rule is intended to expedite the review process and increase the transparency of the Department's review of interim test procedure waivers. Under the amended requirements of this final rule, stakeholders will have the opportunity for comment on the waiver process as under the current regulations, with the added benefit of earlier engagement with the Department as it considers an alternate test procedure. DOE will leave in place its current comment procedure, seeking comment upon the grant or denial of any interim waiver request. DOE will continue to invite a robust discussion of technical and other issues during that comment period.

Some commenters questioned whether the Department can meet the proposed ''deemed granted'' 30 business day deadline given that DOE's data indicate that it has only met the 30-day deadline on one occasion. (NPCC, No. 21 at p. 2) Comments submitted by NRDC note that such a timeframe is unwarranted given that the Department has failed to respond to interim waiver requests in that timeline in the past. Further, commenters contend that it is unlikely DOE will meet this deadline because the NOPR does not include a rational explanation for meeting the proposed 30 business day time period. (NRDC, No. 47 at p. 4–5).

Upon further review of the proposed timeframe, DOE has decided to extend the internal review period from the 30 business days referenced in the NOPR to 45 business days in this final rule. DOE notes that its dataset includes an additional three interim waivers were granted during this 45-business day timeframe as opposed to the 30-business day timeline, further supporting that DOE is able to consider interim waivers during the 45-business day time period adopted in this final rule. As with the modernized Process Rule referred to above, DOE views its examination of the interim test procedure waiver process as an opportunity to improve how the Department administers its programs. As was mentioned earlier in this document, much of DOE's delay in responding to a request for an interim waiver involved lengthy, private technical discussions with the requester attempting to re-design an alternate test procedure before seeking public input. Under this final rule, DOE will ensure that it acts expeditiously on requests for interim waiver and that any in-depth technical review will take place with the benefit of public comment, during DOE's decision-making process on the petition for waiver. This final rule will increase the transparency of the process and ensure that the manufacturer can distribute its products in commerce under an interim waiver while DOE processes the waiver request.

Many commenters expressed their concern that if DOE codified its original proposal, the system for interim waivers would institutionalize a process that would allow for abuse. Commenters who took this position believe that the ''deemed granted'' language would allow manufacturers with ill-intent to abuse the process by submitting waiver applications with faulty alternate test procedures or perhaps no alternate test procedures at all and nevertheless have their interim waivers granted within the proposed 30-business day period. These commenters stated that manufacturers who play by the rules and are producing compliant products or equipment would be harmed. In addition, they argued that foreign importers would receive a competitive advantage to the detriment of American manufacturers. (Hardin-Levine, No. 2 at p. 1; Stewart, No. 7 at p. 1; Franke, No. 8 at p. 1; Gould, No. 13 at p. 1; Anonymous 1, No. 17 at p. 1–2; NPCC, No. 21 at pp. 1–2; Traulsen No. 25, at p. 3; Sachs, No. 29 at p. 2; Consumer Groups, No. 33 at p. 2; Carrier, No. 36 at p. 2; CA IOUs, No. 37 at pp. 1–2; Nortek, No. 38 at p. 3; CEC, No. 40 at p. 4; AHRI, No. 42 at p. 2; ASE No. 43 at p. 3; A.O. Smith, No. 44 at pp. 1–3, 5; NASEO, No. 45 at p. 1; ASAP et al., No. 46 at pg. 3, 5; Lennox, No. 48 at pp. 3–4; Earthjustice, No. 49 at p. 1, 4; and AG Joint Commenters, No. 51 at p. 2, 8). Commenters voiced their concerns that the proposal ''[c]ould open the floodgates for a deluge of substandard foreign products to enter U.S. markets to the detriment of U.S. manufacturers,'' therefore DOE should not finalize a ''deemed granted'' interim waiver approach if the Department does not act in 30 days. (Lennox, No. 48 at p. 3–4)

Other commenters did not believe that the proposed process would allow for abuse. Acuity disagreed with these arguments and counted that through stakeholder engagement conducted throughout the test procedure rulemaking process that interim waivers are likely to be used infrequently and will not become a general opt out mechanism. (No. 14 at p. 3) Some commenters argued against these concerns by highlighting that there is language in the proposal that protects against an abuse of the process and that there are penalties if a manufacturer breaks the law also in place. (FSI, No. 16 at p. 2) The SBA also commented that the concern regarding possible abuse of the process was unfounded because the proposal only eliminated a bottleneck in the review process by requiring DOE to meet a time limit and even if an interim waiver is automatically granted that the application for the full waiver will still undergo a review by the Department.

(No. 23 at p. 4) Lastly, some commenters noted that even if abuse were to happen, DOE's regulation already includes a remedy and nothing in the proposal removes this authority. Commenters cited 10 CFR 430.27(k), which provides DOE the authority to rescind or modify a waiver or interim waiver at any time if DOE determines that the underlying factual basis is incorrect or determines that the results from an alternative test procedure are unrepresentative of the true energy consumption. (Joint Industry Commenters, No. 52, at p. 5)

DOE emphasizes that if DOE has not notified the petitioner of the disposition of an interim waiver within the 45 business day period, that interim waiver is granted according to the existing criteria in 10 CFR 430.27(e)(2) and 10 CFR 431.401(e)(2)—specifically, that it is desirable for public policy reasons to grant immediate relief pending a determination on the petition for waiver or, such as in cases where DOE has granted waivers to other manufacturers for the same technology using the same or a similar alternate test procedure, that it is likely that the petition for waiver will be granted. DOE therefore no longer uses the term ''deemed granted'' in this rulemaking. DOE again notes a change to its regulatory text in response to these comments—specifically, if no alternate test procedure is submitted, DOE will not grant an interim waiver but will publish the denial of interim waiver and request for comment on the petition for public comment, so that it can process the waiver petition with the benefit of public comment on what the alternate test procedure should be.

DOE is not persuaded by commenters' concern regarding the likelihood of abuse of process by U.S. and foreign manufacturers. DOE finds the fear of speculative abuse unlikely as there is no evidence of such abuse and little reason to expect that the proposal would open the door to abuse by manufactures. (Joint Industry Commenters, No. 52 at p. 4) In DOE's experience over many years, the Department has not seen the waiver process abused as some commenters suggest. DOE believes that it is highly unlikely that a manufacturer would spend the time, effort, and funds to submit a faulty application on the hope that it might slip through and the risk that the requester might be alerting DOE to non-compliant products. As many commenters pointed out, manufacturers are incentivized to get their interim test procedure waivers right the first time. Commenters identified the following reasons as justification for why it is in the best interest of petitioners to ensure that the alternate test procedure is correct the first time around are as follows: Brand reputation, competitors will highlight any unfair procedures engaged in by others, the creation of significant marketing costs, and the fact that there are significant costs to conducting test procedures so manufacturers prefer not to retest if it can be avoided. (BSH, No. 41 at p. 4; and NEMA, No. 55 at p. 6) Commenters' concern overlooks the reality that DOE continues to review interim waiver petitions and waiver petitions and would find these abuses if they did exist.

Moreover, several commenters stated, and common sense suggests, that it is highly unlikely that stakeholders want to attract negative attention and incur the risk of DOE enforcement. While it is always possible that some stakeholder on some occasion will attempt to abuse any process, DOE believes this is a rare situation, if it were to happen at all. DOE agrees with the Joint Industry Commenters who reasonably point out that it would be ''odd that a manufacturer intent on abusing the system would notify DOE and the public by petitioning for a test procedure waiver'' using a faulty or fraudulent test procedure. (No. 52 at p. 4) Similarly, Lutron noted that the Department should not let the ''fear of a bad actor'' prevent this regulatory process from working for everyone else. (No. 53 at p. 3)

The Department does not base its decision-making process upon speculative behavior of alleged manufacturers who might act in bad faith. Further, DOE believes that if a manufacturer engaged in this behavior, it would likely be (as noted by commenters) detrimental to the reputation of the manufacturer. In addition, DOE's existing regulations already provide a remedy for abuse of the test procedure interim waiver and waiver process. 10 CFR 430.27(k) provides DOE with the authority to ''rescind or modify a waiver or interim waiver at any time upon DOE's determination that the factual basis underlying the petition for waiver or interim waiver incorrect, or upon a determination that the results from an alternative test procedure are unrepresentative of the basic model(s) true energy consumption characteristics.'' Nothing in this final rule removes this authority from the Department.

In their challenge to the NOPR as allowing for the sale of non-compliant products to enter the market, ASAP et al. remarked that incomplete interim waivers petitions would be ''deemed granted'' after 30 days. A manufacturer could circumvent the energy conservation standard by submitting a petition lacking an alternative test procedure, they argued, and therefore be able to sell a product without conducting any testing. (ASAP. et al., No. 46 at p. 3) Other commenters also expressed their concern about what DOE would do when an alternative test procedure is not included in the submission. (Lennox, No. 48 at pp. 4–5) Commenters suggested that DOE should reject all incomplete interim waiver and waiver applications, including those without a valid test method included, so that applicants can then revise and resubmit the petition. (A.O. Smith, No. 44 at p. 3)

In response to these questions concerning an interim test procedure petition submitted without the required alternate test procedure, DOE wants to make very clear that, in reality, this scenario does not happen. That is, petitions for interim waiver and waiver submitted to the Department do include an alternative test procedure. However, in the exceedingly rare case that a requestor may not include an alternate test procedure, DOE has added language to the regulatory text stating that, if a petition is submitted without an alternative test procedure, DOE will deny the petition for an interim waiver and move to consideration of the waiver request. Commenters agree that manufacturers must have a viable way to test a covered product in the situation where the current DOE test procedure is inadequate to properly test specific basic models with specific design characteristics. Because the denial of interim waiver is published for public comment, the alternate test procedure ultimately developed as part of any grant of a waiver petition will benefit from input from other manufacturers, stakeholders, and interested parties.

DOE received comments arguing that DOE had not taken the impact on consumers from this proposal into consideration. Commenters asserted that the Department's ''deemed granted'' approach would allow noncompliant products into the marketplace for an indefinite period of time thereby harming consumers who would unknowingly purchase a product that does not meet DOE energy conservation standards, thereby resulting in higher energy costs to consumers. (Stewart, No. 7 at p. 1; Anonymous 1, No. 17 at p. 1–2; NPCC, No. 21 at p. 2; WA State Energy Office, No. 22 at p. 1; Better Research Climate and Policy Analysis, No. 24 at pp. 1–2; Consumer Groups, No. 33 at p. 2–3; CA IOUs, No. 37 at p. 1; Ingersoll Rand, No. 39 at p. 2; CEC, No. 40 at p. 4–6, 8; ASE, No. 43 at pp. 2–3; A.O. Smith, No. 44 at p. 1, pp. 2–

3; NASEO, No. 45 at p. 1; ASAP et al., No. 46 at pg. 3, 5; Lennox, No. 48 at pp. 3–4; Earthjustice, No. 49 at pp. 1–2; AG Joint Commenters, No. 51 at p. 2, 8; and Goodman, No. 54 at p. 2)

This final rule requires DOE to make decisions on all interim waiver requests within 45 business days. Because DOE publishes the decision on the interim waiver (and, at the same time seeks comment on the waiver petition), during or as soon as possible after the conclusion of this time period, consumers will be situated in a better position under this final rule than under DOE's previous procedures. The alternate test procedure will be published for comment as part of the grant or denial of any interim waiver, and consumers will benefit from being able to see comments provided on the alternate test procedure, including those from other manufacturers, which will be publicly available on *http://www.regulations.gov.* Moreover, as stated previously, DOE reaffirms that it is extremely doubtful that a manufacturer would go to the time and expense of submitting a fraudulent waiver petition in the hope of getting a small period of time to sell noncompliant products that would cause adverse impacts to consumers. Instead, DOE maintains that consumers will likely benefit from this rulemaking as innovative products will be made available more quickly and expand consumer choice when selecting a product to best meets consumers' needs.

In challenging the validity of the NOPR, several commenters argued that DOE lacks the statutory authority to create and amend the waiver process. Earthjustice argued specifically that EPCA does not explicitly authorize a waiver process pursuant to which manufacturers can avoid applying DOE's test procedures to their products, but provides only an authorization to DOE to amend a test procedure in response to petitions submitted by interested persons, under 42 U.S.C. 6293(b)(2). (No. 49 at p. 2) These commenters argue the NOPR has violated the APA's requirement to reference the legal authority under which a rule is proposed. (Earthjustice, No. 49, at p. 2 citing 5 U.S.C. 553(b)(2); *see also* AG Joint Commenters, No. 51 at p. 4–5; and Lennox, No. 48 at p. 5) Stakeholders also commented that it is DOE's responsibility to provide a path to compliance for all manufacturers that sell covered product because they are legally subject to DOE standards regulation. (Joint Industry Commenters, No. 52 at p. 1).

Section 393 of EPCA (42 U.S.C. 6293) provides the Department with the authority to adopt new test procedures and to amend existing test procedures for covered products when such test procedures would more accurately or fully comply with the requirement that the test procedure be reasonably designed to produce results that measure energy efficiency, energy use, water use, or estimated annual operating costs of a representative average use cycle or period of use. DOE first adopted regulations implementing waiver procedures in 1980, and has updated the regulations three times in 1986, 1995, and most recently in 2014 with no concerns raised. 45 FR 64109 (September 26, 1980); 51 FR 42823 (November 26, 1986); 60 FR 15004 (March 21, 1995); and 79 FR 26591 (May 9, 2014). DOE emphasizes that the alternate test procedure specified in a waiver or interim waiver is a DOE test procedure, adopted by the Department. Manufacturers are authorized to use this alternate DOE test procedure through the decision and order issued by DOE upon consideration of the waiver petition. DOE further notes that alternate test procedures authorized through DOE decision and orders are used by DOE in developing appropriate test procedure amendments pursuant to 42 U.S.C. 6293. As the Department has done for decades under the existing ''waiver'' rules, the Department is simply issuing a test procedure under EPCA applicable to certain technologies not considered in the existing codified test procedure.

The waiver process, both interim and final, is the process codified in DOE's regulations by which DOE addresses new and emerging technologies as they come on the market between test procedure rulemakings. Without it, affected manufacturers would be excluded from the market and would have no recourse until DOE engages in future rulemaking. DOE does not read EPCA to prohibit manufacturers with new and innovative products from being able to test and certify their products for consumer use until DOE were to engage in a future rulemaking. DOE also does not believe that stakeholders are advocating for the elimination of the waiver process. There was overwhelming support for having such a process in place for those instances when products fall outside the scope of the applicable, codified test procedure requirements. Manufacturers, interested stakeholders, and consumers rely on DOE's ability to consider amendments to the test procedure to more fully or accurately comply with EPCA's requirement to measure the energy use of a representative average use cycle or period of use that authorizes the waiver process so that potential amendments to the test procedure can be considered in fact-specific circumstances. To read EPCA otherwise would likely place a barrier on the availability of future innovative and potentially energy conserving products.

Several commenters argued that the economic analysis included in the NOPR is based on faulty assumptions and that many of those assumptions assessing the impact of the NOPR resulted in a significant overestimation of the costs of the interim waiver process on manufacturers. (Better Climate Research and Policy Analysis, No. 24 at pp. 1–2; CEC, No. 40 at pp. 7–9; ASE, No. 43 at pp 4–5; ASAP et al., No. 46 at p. 6–7; NRDC, No. 47 at p. 5; and Goodman, No. 54 at p. 5) Some commenters stated that DOE severely underestimated the costs of allowing non-compliant products onto the marketplace through the proposed ''deemed granted'' approach. The CA IOUs argued that many of these assumptions used to assess the impact of the NOPR resulted in a significant overestimation of the monetary impacts facing manufacturers, while understating impacts to customers, competitors and the environment, including the potential abuse from allowing the introduction of noncompliant and less efficient product into the market for a period of time. These and other commenters seek additional information from DOE on the economic and environmental costs and benefits of the proposed rule and a full assessment of negative impacts of the rulemaking. (CA IOU's, No. 37 at pp. 3–7; and AG Joint Commenters, No. 51 at p. 8).

On the other hand, NAFEM commented that the proposal correctly identifies many of the real costs and impacts to companies from the current process that unreasonably delays decisions on interim waiver requests. The current process prohibits companies from bringing valuable products to the marketplace while waiver requests are reviewed and interim waiver decisions are delayed. Commenters assert that such delays are unreasonable, given the specificity of the regulatory requirements for grant of an interim waiver, and supported the changes proposed in the NOPR. (NAFEM, No. 26 at p. 3).

As discussed in section III of the NOPR, DOE reviewed the time lags between the receipt of the waiver application and issuance of an interim waiver, and considered the anticipated cost savings that could result from waivers granted following the proposal's

deemed granted approach. DOE relied on the 40 waiver applications submitted between 2016 and 2018, 33 [7] of which included interim waiver requests, to note that only one interim waiver request was granted within 30 business days of receipt of the application and one-fifth of the requests were resolved in under 100 days. On average, the Department determined, interim waiver requests received in 2016 took 162 days to resolve, those received in 2017 took 202 days, and those received in 2018 took 208 days. DOE's data illustrated that there was a need for issuance of a timely interim waiver while the full waiver was under review because the primary anticipated cost savings considered resulted by reducing the number of days by which a manufacturers revenues were delayed. 84 FR 18414, 18416–18417, 18418 (May 1, 2019). Setting mandatory timelines within the Department's review process will help prevent the financial impacts manufacturers currently experience as a result of delays in the processing of interim waiver requests.

In response to these concerns about the economic analysis conducted, DOE does not believe that the rule will allow noncompliant products onto the market for an indefinite period of time. To the contrary, the regulations allow manufacturers to test their product according to a DOE test procedure under an interim waiver while DOE considers public comment and other information in determining whether changes are warranted to the test procedure ultimately specified in the decision and order on the waiver petition. At all times, manufacturers will test and certify according to a DOE test procedure and will distribute in commerce only products that are compliant with the DOE standard.

Several commenters objected to DOE's proposal as unnecessary given that DOE already has an enforcement policy that addresses the underlying basis of the rule, that manufacturers with innovative products that cannot be tested under existing DOE test procedures will be harmed because delays in processing interim waivers prevent them from selling their product. These commenters point out that the current DOE enforcement policy addresses this issue. (ASAP et al., No. 46 at p. 5; Lennox, No. 48 at p. 10; and Earthjustice, No. 49 at p. 5–6) These commenters argue that under DOE's enforcement policy, as long as a petition for waiver has been filed, such products can be sold without fear of enforcement action. Accordingly, they state that because of the enforcement policy there is no reason that the existing interim waiver process should result in any delays concerning the introduction of innovative products. Hence, the NOPR cannot result in cost savings based on such delays and is therefore is unnecessary. (ASAP et al., No. 46 at p. 6; and A.O. Smith, No. 44 at p. 4) Some commenters noted that the Department's existing policy should remain the mechanism for dealing with the market introduction of truly innovative and ''first of its kind'' products while test procedure waiver applications are pending. (A.O. Smith, No. 44 at p. 4) Additionally, other commenters argued that DOE has failed to explain why its proposal is necessary given this non-enforcement policy. (AG Joint Commenters, No. 51 at p. 7) One commenter called the proposal a practical status quo that is consistent with the Department's 2010 enforcement policy.

NEMA supported the proposal because interim waivers provide a necessary pathway for manufactures to introduce innovative products into the market that would otherwise be barred as being noncompliant. NEMA continued that the Department's policy, in which DOE will not seek civil penalties for noncompliant products that have test procedure waiver application under review, reflects the realization that because waiver petitions require dedicated resources and significant time to evaluate that manufactures can be unfairly excluded from the market during delays. (No. 55 at pp. 3–4)

In response to commenters opposed to the proposed rule because they believe it would allow non-compliant products on the market, DOE views the non-enforcement policy as creating the same extremely low risk. As a practical matter, based on its experience, DOE believes that the enforcement policy alone is insufficient to address manufacturer concerns with the ability to sell products that they cannot test and certify pursuant to a DOE test procedure. Manufacturers argued that their business is protected from the possibility of an adverse DOE action only if DOE has granted either an interim waiver or final waiver under which they can operate. As ASE pointed out, the interim waiver process is worthy of revision to provide manufacturers with greater predictability and improve transparency so that the public can have confidence in the energy efficiency of a given product. Further, due to the long delays in making a decision on an interim waiver and publishing for comment a petition for waiver, the current practice of non-enforcement pending a decision from the Department allows manufacturers an extended period to sell into the market without competitors, consumers, or other interested stakeholders being made aware of a pending waiver decision. (ASE, No. 43 at pp. 2–3) DOE stating a position that it will not take enforcement action while a waiver request is pending also does nothing to provide the manufacturer with a means to test a product to show compliance. A non-enforcement policy is of little value if the product cannot be sold due to a manufacturer's inability to demonstrate to its customer that the product is legally compliant with the applicable energy conservation standard. A more efficient interim waiver process, as set forth in this final rule, is the best means of providing a clear, transparent path for a manufacturer to achieve compliance while their final waiver is under review or while DOE completes a rulemaking for a new or amended test procedure to address the issues raised in the waiver.

The NOPR included a provision providing that if DOE ultimately denies a petition for waiver or grants the petition with a different alternate test procedure than specified in the interim waiver, DOE would provide a grace period of 180-days for the manufacturer to use the test procedure specified in the DOE Decision and Order to make representations of energy efficiency. 84 FR 18414, 18416 (May 1, 2019). Comments identified several viewpoints on the Department's proposed revision. Some commenters voiced their support for the addition of the 180 day grace period. (AHRI, No. 42 p. 4; and Joint Industry Commenters, No. 52 at p. 5) Some commenters noted that the grace period provides manufacturers certainty and permits time to retest and recertify equipment accordingly, and recommended that this timeline should be discretionary as well. (NEMA, No. 55 at pg. 6; and Nortek, No. 38 at p. 2) Commenters also noted that without the inclusion of a grace period manufacturers would be less likely to use the waiver process, which would ultimately result in less innovative products being introduced to the market. (Lutron, No. 53 at p. 3).

Other commenters argued that the NOPR's proposed grace period was too long and should be reduced, from 30–60 days or capped at 60 days. (Anonymous 1, No. 17 at p. 1; and Carrier, No. 36, at p. 3) Reducing the compliance period to 60 days would limit the time a noncompliant product would be on the market. Some

[7] Of these, two waivers were withdrawn and one waiver was delayed pending ongoing litigation. 84 FR 18414, 18416 (May 1, 2019).

commenters believed that manufacturers who are granted waivers with a modified test procedure should receive less than 180 days, based upon the magnitude of changes between the prescribed test procedure and the one originally proposed by the manufacturer, to comply with the order. Alternatively, one commenter suggested that the final rule should include a longer grace period because product design changes and supply chain re-certifications needed to meet regulatory approvals are a complicated and lengthy process, but did not specify a specific alternative duration. (ITI, No. 20 at p. 1–2).

Still other commenters objected to the 180-day grace period and want it removed from the final rule. Generally, such commenters believe that manufacturers who are denied a waiver should be compelled to start testing immediately so they cannot sell non-compliant products for an extended period of time. (Sachs, No. 29 at p. 2; CA IOUs, No. 37 at p. 3; CEC, No. 40. at pp. 4–5; and ASE, No. 43, at p. 4) Commenters suggested that in the event information submitted by an applicant was grossly or intentionally inaccurate, unrepresentative or misleading, the grace period should be eliminated. (Lennox, No. 48 at pp. 8–9) Others argued that if DOE grants a waiver based on an alternate test procedure that DOE modified from the one proposed by the manufacturer, the existing regulations at 10 CFR 430.27(i) already provide a sufficient grace period, relieving a manufacturer of the burden of re-testing and re-rating when an alternate test procedure is directed by DOE in the final waiver. (CEC, No. 40 at p. 5).

As DOE explained in the NOPR, the grace period offers manufacturers a safe harbor in the event that a waiver is denied or revisions to an interim waiver are required. The Department recognizes that manufacturers need time to comply with a new test procedure. The 180 day duration was proposed because that time frame is consistent with the EPCA provision that provides manufacturers 180 days from issuance of a new or amended test procedure to begin using that test procedure for representation of energy efficiency. 84 FR 18414, 18416 (May 1, 2019); *See* 42 U.S.C. 6293(c)(2). The Department understands that less than 180 days may be needed if any changes to the alternate test procedure specified in an interim waiver are minor and emphasizes that nothing in DOE's waiver regulations prohibits a manufacturer from commencing use of the new alternate test procedure in less than 180 days. In the event that information submitted by the applicant was inaccurate or unrepresentative, DOE retains the ability under its regulations to rescind or modify a waiver at any time. After considering all of the many viewpoints on the 180 day grace period provision, the Department has decided that it is necessary to provide manufacturers time to comply before enforcement measures can be initiated. Because the waiver process concerns the issuance or amendment of a test procedure in light of the specific circumstances that gave rise to the need for a waiver, the waiver process is no different than the rulemaking process for the issuance or amendment of a test procedure. As a result, DOE maintains the 180 day grace period consistent with the time period provided in 42 U.S.C. 6293(c) and 42 U.S.C. 6314(d) in this final rule.

Additionally, in response to the comment indicating that the existing regulation already includes a grace period in 10 CFR 430.27(i) and 10 CFR 431.401(i) that makes the 2019 NOPR's inclusion of an grace period in the initially proposed 10 CFR 430.27(e)(1)(iii) and 10 CFR 431.401(e)(1)(iii) duplicative, DOE has relocated the 180-day grace period to 10 CFR 430.27(i)(1) and 10 CFR 431.401(i)(1) in this final rule.

Some commenters stated that finalizing this proposal could indirectly allow for backsliding of energy conservation standards. These commenters argued that if changes to the test procedure would impact measured efficiency, the efficiency standard must then be amended so that products minimally compliant under the original procedure will remain compliant under the new procedure. (NRDC, No. 47 at p. 3–4 referencing 42 U.S.C. 323(e)) Commenters continued by stating that if DOE amends a test procedure and that test procedure changes the measured efficiency such that the efficiency standard must be amended, DOE cannot pick a new efficiency threshold that is lower than the old efficiency standard. This proposal enables DOE to indirectly do what EPCA clearly forbids under its anti-backsliding provision, 42 U.S.C. 6295(o)(1). (NRDC, No. 47 at p. 4) Similarly, other commenters argued that the proposal amounted to a ''more tailored approach'' to rolling back test procedures and efficiency standards, which lead to the same loss of efficiency EPCA's anti-backsliding provision was intended to prevent. (AG Joint Commenters, No. 51 at p. 9).

In response to these concerns, DOE notes that the commenters' concern appears equally applicable to a grant of interim waiver or waiver pursuant to DOE's waiver regulations generally, irrespective of this final rule. DOE maintains that the issuance of a waiver or interim waiver pursuant to DOE's waiver regulations, including the amendments in this final rule, will not violate EPCA's prohibition against backsliding at 42 U.S.C. 6295(o)(1). As explained above, a test procedure waiver (decision and order) and interim waiver are a test procedure prescribed by the Department. Under 42 U.S.C. 6293 and 42 U.S.C. 6314, EPCA sets forth the criteria and procedures that DOE is required to follow when prescribing or amending test procedures. This final rule does not roll back energy conservation standards. This final rule provides clear direction on how manufacturers can test their product to determine compliance with energy conservation standards when they have manufactured a new and innovative product that cannot adequately be tested for compliance with the existing standard using the existing test procedure.

DOE also received comments challenging the Department's position in the NOPR, at Footnote 5, stating that granting an interim waiver application is not a final agency action as contemplated by the APA, which defines an ''agency action'' as including ''the whole or a part of an agency rule, order, license, sanction, relief, or the equivalent or denial thereof, or failure to act.'' 84 FR 18414, 18416 (May 1, 2019) referencing 5 U.S.C. 551(13). Commenters argued that the ''deemed granted'' interim waiver would constitute final agency action and that the Department's position overlooks the reality that an interim waiver application is a separate process that is distinct from the request for a decision and order granting a test procedure waiver. Commenters continued by stating that the finality of the interim waiver ensures that DOE cannot withhold judicial review indefinitely through prolonged inaction while an interim waiver is in effect; the separate process of issuing an interim waiver from the test procedure makes it a final decision. (Earthjustice, No. 49 at p. 7–8) Commenters continued that the finality of the interim waiver ensures that DOE cannot withhold judicial review indefinitely through prolonged inaction while an interim waiver is in effect and to find otherwise would lead to an absurd result. (AG Joint Commenters, No. 51 at p. 9).

While DOE recognizes that courts are responsible for determining whether judicial review is available under the APA for a particular agency action, DOE reiterates that interim waivers do not

represent the consummation of the Department's decision-making process. As noted in the NOPR, the Supreme Court has explained to be ''final,'' an agency action must ''mark the consummation of the agency's decision-making process, and must either determine rights or obligations or occasion legal consequences.'' *Alaska Dep't of Envtl. Conservation* v. *EPA,* 540 U.S. 461, 482 (2004) (quotation omitted); see *Bennett* v. *Spear,* 520 U.S. 154, 178 (1997). While manufacturers would be able to test and distribute their products or equipment in commerce if granted an interim waiver under the proposal, continued distribution is dependent upon DOE's decision on the petition for waiver. DOE regulations contemplate further process on the waiver request after issuance of an interim waiver decision, including publication of the interim waiver for comment, further indication that DOE's decision-making process on the waiver is not complete. DOE will consider any comments received, as well as any additional information provided by the petitioner or developed by the Department, in issuing a final decision on the associated petition for waiver, or a final rule amending the test procedure. Either of these actions could have rights or obligations, or consequences, that differ from those provided temporarily under an interim waiver. 84 FR 18414, 18416 (May 1, 2019), footnote 5.

Commenters argued that establishing a timeframe for final waiver determinations would encourage timely responses and communication during the process would ultimately provide certainty for the market. (Acuity, No. 14 at p. 2) Commenters also objected to the removal from the regulations in the proposal of the one year deadline for DOE to either grant or deny a waiver or, to complete a test procedure to address the issues raised by the waiver petition. (ITI, No. 20 at p. 1; Traulsen, No. 25 at 1; NAFEM, No. 26 at pp. 3–4; and Carrier, No. 36 at p. 2).

Lennox stated that interim waivers must not be allowed to continue indefinitely, but argued that if DOE fails to act within one year of issuing an interim waiver, the interim waiver should continue to remain in effect until DOE takes action. These commenters condition this extension by clarifying that petitioners or other stakeholders should not be able to bring judicial action to compel DOE to render a final determination. (Lennox, No. 48 at p. 8) Other commenters took a similar stance in that they supported the notice that interim waivers were to remain in effect until a decision was published in the **Federal Register** on the waiver petition or, an amended test procedure was published. (NEMA, No. 55 at p. 6).

In response, DOE understands the commenters' concerns about an interim waiver persisting indefinitely and retains the language at 10 CFR 430.27 and 10 CFR 431.401 in this final rule that DOE will issue a decision and order or amend the test procedure to address the issue(s) presented in the waiver petition within 1 year of issuance of an interim waiver.

DOE also received comments asserting that the Department's NOPR may not withstand the scrutiny of the APA because the Department has failed to provide satisfactory explanations for its proposed action and is proposing to forego independent judgment on this matter by deferring to private parties. The commenters suggest that if the Department will not withdraw the NOPR then it should consider issuing a Supplemental Notice of Proposed Rulemaking (SNOPR) to address the issues raised during the comment period. (CA IOUs, No. 37 at p. 8–9).

In response, DOE notes that the comment period was extended on multiple occasions to allow commenters to provide additional feedback on the NOPR. In both the NOPR and this final rule, DOE has provided detailed explanations regarding its decision-making process. DOE has explained its reasons for undertaking this action and considered the comments received by members of the public and industry when making the decision to move forward with this final rule. DOE has also determined that the minor changes DOE is making from the NOPR (*e.g.,* extending the time period from 30 to 45 business days) are the logical outgrowth of the issues raised in the proposed rule and the comments submitted by interested parties. As a result, DOE has determined that an SNOPR is unnecessary.

Some commenters argued that DOE has unlawfully changed its interpretation of its test procedure waiver regulations by failing to provide a reasoned explanation for allowing an interim waiver to be ''deemed granted'' if the Department fails to provide notice within 30-business days of receipt of the petition. (Earthjustice, No. 49 at p. 4 referencing *FCC* v. *Fox Television Stations,* 556 U.S. 502, 515–16 (2009); AG Joint Commenters, No. 51 at p. 6) Commenters look to the Department's 2014 amendments to the test procedure waiver regulations, noting that DOE did not in that rulemaking allow manufacturers to extend previously granted waivers to additional models with the same technology or characteristics because DOE would be unable to fulfill its responsibility to ensure that an alternative test procedure was appropriate for the new basic models. (Earthjustice, No. 49 at p. 4 referencing 79 FR 26591, 26593 (May 9, 2014)) These commenters argued that DOE failed to provide a reasoned explanation for why DOE proposed to allow manufacturers to ''write their own test procedures'' through the proposed ''deemed granted'' approach, thus removing the Department's oversight of the test procedure process.

Other commenters argued DOE failed to provide any justification for dispensing of public notice as to when an interim waiver is granted. Commenters note that under the proposal DOE need never make a formal determination before an interim waiver request is ''deemed granted,'' therefore the public notice requirement may never be triggered. These commenters asserted that the Department must also provide a reasoned explanation for this disparity otherwise the rulemaking is arbitrary and capricious. (AG Joint Commenters, No. 51 at p. 6).

Contrary to these commenters' assertions, this final rule does not change the Department's prior interpretation of its obligations under EPCA by offering manufacturers the possibility of writing their own test procedures absent DOE oversight. In the 2014 final rule, DOE responded to commenters suggesting that DOE allow manufacturers who had received a waiver for a particular basic model or group of basic models to extend that waiver to additional basic models without requesting a waiver extension from DOE. DOE determined in that case that DOE would need to make an independent waiver determination for those basic models. DOE is not changing this requirement in this final rule. This rule, as noted previously, affects DOE's process for a decision on an interim waiver, not a waiver petition. The rule specifies that if DOE does not notify a manufacturer within 45 business days of submitting an interim waiver, the interim waiver is granted and the manufacturer may test and certify its product while DOE processes the waiver petition. DOE also provides that DOE will not grant an interim waiver if the application does not include an alternative test procedure. Applicants will be made aware of the denial and can submit a petition including an alternate test procedure or work with DOE in a public process to develop an appropriate test procedure as DOE processes the petition for waiver.

DOE has also not eliminated its prior responsibility to provide public notice of granted interim waivers. Prior to the

issuance of this final rule, other manufacturers, stakeholders and interested parties were given an opportunity to comment on the interim waiver when DOE published the grant or denial of interim waiver in the **Federal Register**. That comment opportunity is unchanged by this final rule. The amended 10 CFR 430.27(e)(1)(i) and 10 CFR 431.401(e)(1)(i) provide members of the public with two specific opportunities to receive notice of a potential interim waiver. First, the Department specifies in its regulations that it will post a petition for an interim test procedure waiver on its website within five business days of receipt. While DOE currently posts waiver requests on its website, posting is now codified in DOE regulations as a requirement, and the posting is required to be done expeditiously. DOE will also provide notice of a decision regarding an interim waiver petition by posting the decision to the DOE website no later than 5 business days after the end of the 45 business day review period. Determinations regarding petitions for interim waivers will also be submitted for publication in the **Federal Register** as soon as possible after the determination is made. With this final rule, DOE continues to ensure the public remains notified and informed of waiver requests and has the ability to comment on them. The public also continues to receive timely notification of DOE's decision on any particular waiver request.

Commenters argued that by categorically excluding this proposed action from environmental review, the Department has violated the National Environmental Policy Act (NEPA), 42 U.S.C. 4321, *et seq.,* for applying an inapplicable categorical exclusion. Commenters assert that the Department has failed to meet the burden of proof for this claim by failing to determine, as required by DOE regulations, whether extraordinary circumstances exist that could ''affect the significance of the environmental effects of the proposal''. Commenters continued that DOE cannot simply conclude that the rulemaking will have no impact on environmental factors without providing an analysis into such factors. (CA IOUs, No. 37 at p. 8).

As stated in the NOPR, this rule amends existing regulations without changing the environmental effect of the regulations being amended. The Department reasonably asserted that the proposal was covered under the A5 Categorical Exclusion, 10 CFR part 1021, subpart D., and that neither an environmental assessment nor an environmental impact statement was required. 84 FR 18414, 18420 (May 1, 2019). DOE maintains that this final rule provides greater clarity and transparency throughout the interim test procedure waiver process. The rulemaking does not extend to setting energy conservation standards, but relates to the test procedures manufacturers may use to demonstrate compliance. DOE concludes in this final rule that the A5 categorical exclusion still applies. For these same reasons, because the rule only provides for manufacturers to use, on an interim basis, the test procedure specified in the interim waiver if DOE fails to act within a reasonable time period, no extraordinary circumstances exist that could affect the significance of the environmental effects of the proposal.

Commenters have also asserted that DOE should devote more resources towards reviewing test procedure waivers using the existing regulatory framework. (Earthjustice, No. 49 at p. 1, 6; and ASAP et al., No. 46 at p. 7) Commenters noted that the current delays in the test procedure waiver process are problems of efficiency and could be improved through the additional allocation of resources. (CEC, No. 40 at p. 7).

It is the Department's intent that by finalizing its test procedure waiver decision-making process in this rulemaking that it will increase response time and reduce manufacturers' burdens associated with the interim waiver application process, provide greater certainty and transparency it its administrative process, and reduce delays in manufacturers' availability to bring innovative product options to consumers. 84 FR 18414, 18415 (May 1, 2019).

Some commenters disagreed with DOE's use of public policy reasons as a basis for granting interim waivers. (CEC, No. 40 at p. 10) These commenters call DOE's action contrary to the intent of EPCA because the statute establishes clear criteria for any test procedure authorized by the Department under 42 U.S.C. 6293(b)(3). DOE, therefore, cannot permit a manufacturer to use an alternative test procedure without first finding that the alternative satisfies these statutory criteria. (Earthjustice, No. 49 at pp. 4–5).

In response, the Department is not changing the longstanding regulatory criteria for the grant of waiver that have existed since 1980, 45 FR 64109 (September 26, 1980), and were retained and extended to include interim waivers in amendments to the procedures in 1986, 51 FR 42823 (November 26, 1986). The Department's procedures were revised in 1995, 60 FR 15004 (March 21, 1995), and again in 2014, 79 FR 26591 (May 9, 2014). Under this final rule, for an interim waiver and waiver application to be granted, applicants are required to provide an application that includes an alternative test procedure. The Department's review of the application includes a review of the proposed alternative test procedure, and as noted previously, DOE is well aware of the EPCA requirements for the issuance or amendment of a test procedure at 42 U.S.C. 6293 and 42 U.S.C. 6314. If DOE does not otherwise act to affirmatively grant or deny the interim waiver within 45 business days, the waiver is granted based on the regulatory criterion that it is desirable for public policy reasons to grant immediate relief pending a determination on the petition for waiver. 10 CFR 430.27(e)(2) and 10 CFR 431.401(e)(2). DOE continues to believe that it is desirable for public policy reasons to allow manufacturers to test and certify their products using to the test procedure specified in the waiver petition, pursuant to an interim waiver, while DOE receives comment on the petition for waiver and works with the petitioner, and with the benefit of public input, to determine whether any changes to that test procedure are warranted.

Some commenters expressed confusion regarding what triggers the 30-day clock for granting an interim waiver. (ASE, No. 43 at p. 4; and Acuity, No. 14 at p. 2) Other commenters argued that the clock for review should only start once DOE has received all of the necessary information. (Earthjustice, No. 49 at p. 7).

DOE notes that the 30-day deadline of the proposed rule has been amended to 45 business days, which equates to approximately two months. To clarify when DOE considers a petition received and starts the clock, DOE notes that the 45 business day clock does not begin until an applicant submits a petition for an interim waiver that includes the information specified in 10 CFR 430.27(b)(2) or 10 CFR 431.401(b)(2) under 10 CFR 430.27(e)(1)(iii) and 10 CFR 431.401(e)(1)(iii) of this final rule. Inclusion of an alternate test procedure is necessary to allow DOE to consider the likelihood of success of the petition for waiver and is required for DOE to grant an interim waiver.

As a means of further streamlining the interim waiver process, DOE received comments suggesting the use of group waiver applications from trade associations or similar industry groups if they produce like or similar products.

Commenters asserted that this grouped approach would conserve manufacturers' compliance resources and save the Department resources from having to review repetitive applications. (Acuity, No. 14 at pp. 2–3)

Because each waiver submission is dependent on the specifics of each product that is the subject of any particular waiver request, DOE does not plan to implement such a practice through this final rule. To conserve resources, the Department suggests that manufacturers look to existing test procedure waivers for similar products as a means of identifying relevant alternative test procedures that can be included in their own, individual petitions for a waiver, *see https://www.energy.gov/eere/buildings/current-test-procedure-waivers.*

IV. Procedural Requirements

A. Review Under Executive Order 12866 and 13563

This regulatory action has been determined to be ''significant'' under Executive Order 12866, ''Regulatory Planning and Review'' (58 FR 51735, October 4, 1993). Accordingly, this action was subject to review under that Executive Order by the Office of Information and Regulatory Affairs (OIRA) of the Office of Management and Budget (OMB).

DOE has also reviewed this final regulation pursuant to Executive Order 13563, issued on January 18, 2011 (76 FR 3281, Jan. 21, 2011). E.O. 13563 is supplemental to and explicitly reaffirms the principles, structures, and definitions governing regulatory review established in Executive Order 12866. To the extent permitted by law, agencies are required by Executive Order 13563 to: (1) Propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs (recognizing that some benefits and costs are difficult to quantify); (2) tailor regulations to impose the least burden on society, consistent with obtaining regulatory objectives, taking into account, among other things, and to the extent practicable, the costs of cumulative regulations; (3) select, in choosing among alternative regulatory approaches, those approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity); (4) to the extent feasible, specify performance objectives, rather than specifying the behavior or manner of compliance that regulated entities must adopt; and (5) identify and assess available alternatives to direct regulation, including providing economic incentives to encourage the desired behavior, such as user fees or marketable permits, or providing information upon which choices can be made by the public. DOE concludes that this final rule is consistent with these principles. The amendments to DOE's regulations are intended to expedite DOE's processing of test procedure interim waiver applications, thereby reducing financial and administrative burdens for all manufacturers; as such, the final rule satisfies the criteria in Executive Order 13563.

B. Review Under Executive Orders 13771 and 13777

On January 30, 2017, the President issued Executive Order 13771, ''Reducing Regulation and Controlling Regulatory Costs.'' That Order stated the policy of the executive branch is to be prudent and financially responsible in the expenditure of funds, from both public and private sources. The Order stated that it is essential to manage the costs associated with the governmental imposition of private expenditures required to comply with Federal regulations. DOE considers this final rule to be an E.O. 13771 deregulatory action, resulting in expected cost savings to manufacturers.

Additionally, on February 24, 2017, the President issued Executive Order 13777, ''Enforcing the Regulatory Reform Agenda.'' The Order required the head of each agency designate an agency official as its Regulatory Reform Officer (RRO). Each RRO shall oversee the implementation of regulatory reform initiatives and policies to ensure that agencies effectively carry out regulatory reforms, consistent with applicable law. Further, E.O. 13777 requires the establishment of a regulatory task force at each agency. The regulatory task force will make recommendations to the agency head regarding the repeal, replacement, or modification of existing regulations, consistent with applicable law. At a minimum, each regulatory reform task force shall attempt to identify regulations that:

(i) Eliminate jobs, or inhibit job creation;

(ii) Are outdated, unnecessary, or ineffective;

(iii) Impose costs that exceed benefits;

(iv) Create a serious inconsistency or otherwise interfere with regulatory reform initiatives and policies;

(v) Are inconsistent with the requirements of Information Quality Act, or the guidance issued pursuant to that Act, in particular those regulations that rely in whole or in part on data, information, or methods that are not publicly available or that are insufficiently transparent to meet the standard for reproducibility; or

(vi) Derive from or implement Executive Orders or other Presidential directives that have been subsequently rescinded or substantially modified.

As noted, this final rule is deregulatory, and is expected to reduce both financial and administrative burdens on regulated parties. Specifically, the amendments to DOE's regulations discussed in this final rule should improve upon current waiver regulations, which potentially are inhibiting job creation; are ineffective in creating certainty for manufacturers with respect to business decisions; and impose costs that exceed benefits. Specifically, the length of time manufacturers have previously waited for DOE to provide notification of the disposition of applications for interim waiver (or final decisions on waiver petitions), made possible by the open-ended nature of the current regulations, will be significantly shortened. The cost savings and other benefits manufacturers should realize by waiting no more than 45 business days for an interim waiver determination should create cost savings, as manufacturers have a decision whether they could introduce their products and equipment into commerce in a timely fashion. These cost savings may lead to increased job creation, and create other potentially significant economic benefits.

i. National Cost Savings and Forgone Benefits

The primary anticipated cost saving is from reducing the number of days by which manufacturer revenues are delayed for affected products. DOE monetized this value for the NOPR using the interest that a manufacturer might have earned on product revenue if an interim waiver were approved within 45 business days. Between the proposed rule and the final rule, DOE has adjusted this time period from 30 business days to 45 business days. There are three interim waivers in this dataset that were granted after more than 30 business days but in fewer than 45 business days; however, those interim waivers did not cause any change in manufacturer revenues.[8] On average, between 2016 and 2018, DOE concluded interim waivers after 185

[8] All three interim waivers were granted for more efficient models of external power supplies, which could already test and certify compliance in the absence of the grant of interim waiver. As a result, speeding the grant of these interim waivers would not increase manufacturer revenues in either the NOPR analysis or final rule analysis.

days, or 118 days beyond the 45 business days specified in this final rule. Using a threshold of 45 business days rather than 30 business days changes the magnitude, though not the direction, of DOE's anticipated cost savings from this final rule. DOE uses 7% interest per the Office of Management and Budget's Circular A–4,[9] and calculates the forgone interest that could have accrued for each affected product during the 118 day delay period.

DOE monetized the scope of delay using average prices for products in interim waiver petitions and the proportion of affected shipments, based on the proportion of basic models listed in interim waiver petitions relative to the total number of basic models within each product category. A full list of petitions for interim waiver can be accessed at *https://www.energy.gov/eere/buildings/current-test-procedure-waivers.* This list indicates how many interim waiver petitions were received for each product category. Each petition for interim waiver also lists the number of affected basic models, which DOE used to assess the proportion of shipments affected by each petition. Total numbers of basic models per product category are accessible via the DOE's Compliance Certification Database.[10]

Between 2016 and 2018, 5,322 basic models of 12 residential and commercial products were affected by interim waiver delays, totaling 1.31 million in estimated annual shipments and $1.76 billion in annual sales. The affected products are outlined in Table IV.B.1 below.[11] While all affected shipments are represented in Table IV.B.1 below, DOE monetized the cost of delay only for those basic models for which manufacturers would be unable to test or certify absent an interim waiver. For one petition, the manufacturer was unable to test or certify half of the basic models requested absent a waiver; the estimated cost of delay is proportionate to those models. DOE calculated the interest that could have been earned on this revenue over the 118-day average delay period and multiplied the average cost of delay per petition by 11, the average number of interim waiver requests received per year, to reach an annual cost of delay. In undiscounted terms, DOE expects that this proposal will result in $14 million in annual cost savings. DOE assumes that these sales are delayed rather than forgone.

TABLE IV.B.1—SHIPMENTS AND AVERAGE PRICES OF PRODUCTS/EQUIPMENT AFFECTED BY INTERIM WAIVER DELAYS

[2016–2018]

Product/equipment	Affected shipments	Average price (2016$) [12]	Estimated product sales	Cost of delay
Residential:				
Battery Chargers	74,694	$7.92	$591,738	$13,391
Ceiling Fans	48,397	110.43	5,344,688	120,951
Central Air Conditioners & Heat Pumps	481,200	3,086.07	1,371,615,829	31,039,854
Clothes Washers	31,780	700.24	22,253,510	503,600
Dishwashers	24,912	301.92	7,521,486	170,212
Refrigerators	40,968	655.30	26,846,375	607,537
Commercial:				
Commercial Refrigeration Equipment	22,036	3,902.71	85,998,189	1,946,151
Walk-in Coolers & Freezers—Doors	190,950	585.60	111,821,271	2,503,440
Walk-in Coolers & Freezers—Systems	700	2,681.82	1,876,011	42,454
Total				36,947,591
Average Cost of Delay per Petition (29 petitions total)				1,274,055
Average Cost of Delay per Year (11 petitions/year)				14,014,604

Note that totals may not add due to rounding.

Forgone Benefits

To the extent that this policy would cause DOE to grant interim waiver requests that it would not have granted in the status quo, this proposal may result in forgone benefits to consumers or the environment. Based on historical data, these effects are anticipated to be relatively small. Of 21 concluded interim waiver petitions, DOE granted 18 in full and granted the remaining 3 with modifications. Of the modified interim waivers, one was granted in part, one was granted with minor modifications, and one was granted with a different alternative test measure than proposed. DOE estimated the forgone environmental benefits and energy savings of granting the petitions as received, rather than as modified by the Department.

All forgone benefits and savings are annual, rather than one-time, and are projected in the table below using a perpetual time horizon and discounted to 2016. DOE expects these changes to result in $359 million or $163 million in total cost savings, discounted at 3% and 7%, respectively. In annualized terms, DOE expects $10.8 million in net cost savings, discounted at 3%, or $11.4 million in net cost savings discounted at 7%.

[9] ''The 7 percent rate is an estimate of the average before-tax rate of return to private capital in the U.S. economy. It is a broad measure that reflects the returns to real estate and small business capital as well as corporate capital.'' *https://www.whitehouse.gov/sites/whitehouse.gov/files/omb/circulars/A4/a-4.pdf.*

[10] *https://www.regulations.doe.gov/certification-data/#q=Product_Group_s%3A*.

[11] Walk-in Coolers and Freezers (WICF) are counted as a single affected product. However, Table IV.B.1. breaks out which petitions concerned which WICF components, as their annual shipments and prices vary accordingly.

[12] Average price is generally the base case average MSP of equipment from the life-cycle cost year in the most recently published technical support document. This represents a shipment-weighted average across efficiency distribution and across all product classes.

TABLE IV.B.2—COST IMPACT OF PROPOSED INTERIM WAIVER RULE

[2016$]

	Costs or (savings)	Costs or (savings) *millions*
Annual Cost Savings of Reduced Delay	($14,014,604)	($14.01)
Annual Forgone Energy Savings	164,000	0.16
Annualized Carbon Emissions (SCC), 3% †	1,764,000	1.76
Annualized Carbon Emissions (SCC), 7% †	827,000	0.83
Net Present Value at 3%	(358,927,345)	(358.93)
Net Present Value at 7%	(163,068,216)	(163.07)
Annualized Costs or (Savings) at 3%	(10,767,820)	(10.77)
Annualized Costs or (Savings) at 7%	(11,414,775)	(11.41)

† Undiscounted annual SCC values are not available for comparison.

C. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act of 1980 (5 U.S.C. 601 *et seq.*) requires that a Federal agency prepare a final regulatory flexibility analysis (FRFA) for any final rule for which a general notice of proposed rulemaking is required, unless the agency certifies that the rule, if promulgated, will not have a significant economic impact on a substantial number of small entities (5 U.S.C. 605(b)).

This final rule would impose a requirement on the Department that it must make a decision on interim waiver applications within 45 business days after receipt of a petition. An interim waiver would remain in effect until a waiver decision is published or until DOE publishes a new or amended test procedure that addresses the issues presented in the waiver, whichever is earlier.

The final rule does not impose any new requirements on any manufacturers, including small businesses. DOE's economic analysis, presented in section IV.B. of this final rule, analyzed interim waiver requests submitted by 21 different manufacturers. Assuming that all of these manufacturers were small entities, because the final rule does not impose any new requirements on any small entity, the economic impact on small entities will be zero. Therefore, there will be no significant economic impact to affected small entities. The final rule provides greater certainty to manufacturers applying for interim waivers that their petitions would be considered and adjudicated promptly, allowing them, upon DOE grant of an interim waiver, to distribute their products or equipment in commerce while the Department considered its final decision on the petition for waiver. This may be especially true of any small manufacturers who may only sell one or two specialty products and rely on this as their sole stream of revenue. This rulemaking would allow such manufacturers to continue selling their product while the Department considers a final decision on the petition for waiver. The potential benefits of the rule to manufacturers, including small manufacturers, are as discussed in Section IV. B. of this final rule. No additional requirements with respect to the waiver application process would be imposed. DOE did not receive comments on this certification, and no commenters provided information that the rule would impose any economic impacts on small entities.

For these reasons, DOE certifies that this final rule will not have a significant economic impact on a substantial number of small entities, and therefore, no regulatory flexibility analysis has been prepared. DOE's certification and supporting statement of factual basis has been provided to the Chief Counsel of Advocacy of the SBA pursuant to 5 U.S.C. 605(b).

D. Review Under the Paperwork Reduction Act

Manufacturers of covered products and equipment must certify to DOE that their products or equipment comply with any applicable energy conservation standards. In certifying compliance, manufacturers must test their products and equipment according to the DOE test procedures, including any amendments adopted for those test procedures. DOE has established regulations for the certification and recordkeeping requirements for all covered consumer products and commercial equipment. 76 FR 12422 (Mar. 7, 2011); 80 FR 5099 (Jan. 30, 2015). The collection-of-information requirement for the certification and recordkeeping is subject to review and approval by OMB under the Paperwork Reduction Act (PRA). This requirement has been approved under OMB control number 1910–1400. Public reporting burden for the certification is estimated to average 35 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information.

Notwithstanding any other provision of the law, no person is required to respond to, nor shall any person be subject to a penalty for failure to comply with, a collection of information subject to the requirements of the PRA, unless that collection of information displays a currently valid OMB Control Number.

E. Review Under the National Environmental Policy Act

Pursuant to the National Environmental Policy Act (NEPA) of 1969, DOE has analyzed this proposed action in accordance with NEPA and DOE's NEPA implementing regulations (10 CFR part 1021). DOE has determined that this rule qualifies for categorical exclusion under 10 CFR part 1021, subpart D, Appendix A5 because it is an interruptive rulemaking that does not change the environmental effect of the rule and meets the requires for application of a categorical exclusion. See 10 CFR 1021.410. Therefore, DOE has determined that the promulgation of this rule is not a major Federal action significantly affecting the quality of the human environment within the meaning of NEPA, and does not require an environmental assessment or an environmental impact statement.

F. Review Under Executive Order 12988

With respect to the review of existing regulations and the promulgation of new regulations, section 3(a) of Executive Order 12988, ''Civil Justice Reform'' (61 FR 4729, February 7, 1996), imposes on Federal agencies the general duty to adhere to the following requirements: (1) Eliminate drafting errors and ambiguity; (2) write regulations to minimize litigation; and (3) provide a clear legal standard for

affected conduct rather than a general standard and promote simplification and burden reduction. Section 3(b)(2) of Executive Order 12988 specifically requires that Executive agencies make every reasonable effort to ensure that the regulation: (1) Clearly specifies the preemptive effect, if any, to be given to the regulation; (2) clearly specifies any effect on existing Federal law or regulation; (3) provides a clear legal standard for affected conduct while promoting simplification and burden reduction; (4) specifies the retroactive effect, if any, to be given to the regulation; (5) defines key terms; and (6) addresses other important issues affecting clarity and general draftsmanship under any guidelines issued by the Attorney General. Section 3(c) of Executive Order 12988 requires Executive agencies to review regulations in light of applicable standards in section 3(a) and section 3(b) to determine whether they are met or it is unreasonable to meet one or more of the standards. DOE has completed the required review and determined that, to the extent permitted by law, this final rule meets the relevant standards of Executive Order 12988.

G. Review Under Executive Order 13132

Executive Order 13132, ''Federalism'' (64 FR 43255, Aug. 10, 1999), imposes certain requirements on agencies formulating and implementing policies or regulations that preempt State law or that have federalism implications. Agencies are required to examine the constitutional and statutory authority supporting any action that would limit the policymaking discretion of the States and carefully assess the necessity for such actions. DOE has examined this final rule and has determined that it would not preempt State law and would not have a substantial direct effect on the States, the relationship between the national government and the States, or the distribution of power and responsibilities among the various levels of government. No further action is required by Executive Order 13132.

H. Review Under Executive Order 13175

Under Executive Order 13175 (65 FR 67249, November 6, 2000) on ''Consultation and Coordination with Indian Tribal Governments,'' DOE may not issue a discretionary rule that has ''tribal'' implications and imposes substantial direct compliance costs on Indian tribal governments. DOE has determined that the final rule would not have such effects and concluded that Executive Order 13175 does not apply to this final rule.

I. Review Under the Unfunded Mandates Reform Act of 1995

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA) requires each Federal agency to assess the effects of Federal regulatory actions on State, local, and Tribal governments and the private sector. Public Law 104–4, sec. 201 (codified at 2 U.S.C. 1531). For regulatory actions likely to result in a rule that may cause the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector of $100 million or more in any one year (adjusted annually for inflation), section 202 of UMRA requires a Federal agency to publish a written statement that estimates the resulting costs, benefits, and other effects on the national economy. (2 U.S.C. 1532(a), (b)) The UMRA also requires a Federal agency to develop an effective process to permit timely input by elected officers of State, local, and Tribal governments on a ''significant intergovernmental mandate,'' and requires an agency plan for giving notice and opportunity for timely input to potentially affected small governments before establishing any requirements that might significantly or uniquely affect them. On March 18, 1997, DOE published a statement of policy on its process for intergovernmental consultation under UMRA. 62 FR 12820. (This policy is also available at *http://energy.gov/gc/office-general-counsel*.) DOE examined this final rule according to UMRA and its statement of policy and has tentatively determined that the rule contains neither an intergovernmental mandate, nor a mandate that may result in the expenditure by State, local, and Tribal government, in the aggregate, or by the private sector, of $100 million or more in any year. Accordingly, no further assessment or analysis is required under UMRA.

J. Review Under Executive Order 13211

Executive Order 13211, ''Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use,'' 66 FR 28355 (May 22, 2001) requires Federal agencies to prepare and submit to OIRA a Statement of Energy Effects for any proposed significant energy action. A ''significant energy action'' is defined as any action by an agency that promulgated or is expected to lead to promulgation of a final rule, and that: (1)(i) Is a significant regulatory action under Executive Order 12866, or any successor order, and (ii) is likely to have a significant adverse effect on the supply, distribution, or use of energy; or (2) is designated by the Administrator of OIRA as a significant energy action. For any proposed significant energy action, the agency must give a detailed statement of any adverse effects on energy supply, distribution, or use should the proposal be implemented, and of reasonable alternatives to the action and their expected benefits on energy supply, distribution, and use. This regulatory action would not have a significant adverse effect on the supply, distribution, or use of energy, and it has not been designated by the Administrator of OIRA as a significant energy action; it therefore is not a significant energy action. Accordingly, DOE has not prepared a Statement of Energy Effects.

K. Review Under the Treasury and General Government Appropriations Act, 1999

Section 654 of the Treasury and General Government Appropriations Act, 1999 (Pub. L. 105–277) requires Federal agencies to issue a Family Policymaking Assessment for any proposed rule that may affect family well-being. This rule will not have any impact on the autonomy or integrity of the family as an institution. Accordingly, DOE has concluded that it is not necessary to prepare a Family Policymaking Assessment.

L. Review Under the Treasury and General Government Appropriations Act, 2001

The Treasury and General Government Appropriations Act, 2001 (44 U.S.C. 3516 note) provides for Federal agencies to review most disseminations of information to the public under guidelines established by each agency pursuant to general guidelines issued by OMB.

OMB's guidelines were published at 67 FR 8452 (Feb. 22, 2002), and DOE's guidelines were published at 67 FR 62446 (Oct. 7, 2002). DOE has reviewed this rule under the OMB and DOE guidelines and has concluded that it is consistent with applicable policies in those guidelines.

M. Congressional Notification

As required by 5 U.S.C. 801, DOE will report to Congress on the promulgation of this rule before its effective date. The report will state that it has been determined that the rule is not a ''major rule'' as defined by 5 U.S.C. 804(2).

V. Approval of the Office of the Secretary

The Secretary of Energy has approved publication of this final rule.

List of Subjects

10 CFR Part 430

10 CFR Part 431

Administrative practice and procedure, Confidential business information, Test procedures, Incorporation by reference, Reporting and recordkeeping requirements.

Signing Authority

This document of the Department of Energy was signed on November 6, 2020, by Daniel R. Simmons, Assistant Secretary for Energy Efficiency and Renewable Energy, pursuant to delegated authority from the Secretary of Energy. That document with the original signature and date is maintained by DOE. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DOE Federal Register Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of the Department of Energy. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

Signed in Washington, DC, on November 24, 2020.

Treena V. Garrett,

Federal Register Liaison Officer, U.S. Department of Energy.

For the reasons set forth in the preamble, the Department of Energy is amending parts 430 and 431 of chapter II, subchapter D, of title 10 of the Code of Federal Regulations, as set forth below:

PART 430—ENERGY CONSERVATION PROGRAM FOR CONSUMER PRODUCTS

■ 1. The authority citation for part 430 continues to read as follows:

Authority: 42 U.S.C. 6291–6309; 28 U.S.C. 2461 note.

■ 2. Section 430.27 is amended by revising paragraphs (e)(1), (h), and (i)(1) to read as follows:

§ 430.27 Petitions for waiver and interim waiver.

* * * * *

(e) *Provisions specific to interim waiver*—(1) *Disposition of petition.* (i) Within 5 business days of receipt of a petition for an interim waiver, DOE will post that petition for an interim waiver on its website.

(ii) In those cases where DOE receives a petition for an interim waiver in conjunction with a petition for waiver, DOE will review the petition for interim waiver within 45 business days of receipt of the petition. Where the manufacturer does not specify any alternate test procedure, or otherwise fails to satisfy the other required criteria specified under paragraph (b)(2) of this section, DOE will deny the petition for interim waiver. In such case, DOE will notify the applicant of the denial within the 45-day review period and process the request for waiver in accordance with this section. If DOE does not notify the applicant of the disposition of the petition for interim waiver, in writing, within 45 business days of receipt of the petition, the interim waiver is granted utilizing the alternate test procedure requested in the petition. Notice of DOE's determination on the petition for interim waiver will be posted on the Department's website not later than 5 business days after the end of the review period. Such determination will also be submitted for publication in the **Federal Register**.

(iii) A petition submitted under this paragraph (whether for an interim waiver or waiver) is considered ''received'' on the date it is received by the Department through the Department's established email box for receipt of waiver petitions or, if delivered by mail, on the date the waiver petition is stamped as received by the Department.

* * * * *

(h) *Duration.* (1) Interim waivers remain in effect until the earlier of the following:

(i) DOE publishes a decision and order on a petition for waiver in the **Federal Register** pursuant to paragraph (f) of this section; or

(ii) DOE publishes in the **Federal Register** a new or amended test procedure that addresses the issue(s) presented in the waiver.

(2) Within one year of a determination to grant an interim waiver, DOE will complete either paragraph (h)(1)(i) or (ii) of this section as specified in this section.

(3) When DOE amends the test procedure to address the issues presented in a waiver, the waiver will automatically terminate on the date on which use of that test procedure is required to demonstrate compliance.

(i) *Compliance certification.* (1) If the alternate test procedure specified in the interim waiver differs from the alternate test procedure specified by DOE in a subsequent decision and order granting the petition for waiver, a manufacturer who has already certified basic models using the procedure permitted in DOE's grant of an interim test procedure waiver is not required to re-test and re-rate those basic models so long as: The manufacturer used that alternative procedure to certify the compliance of the basic model after DOE granted the company's interim waiver request; changes have not been made to those basic models that would cause them to use more energy or otherwise be less energy efficient; and the manufacturer does not modify the certified rating. However, if DOE ultimately denies the petition of waiver or the alternate test procedure specified in the interim waiver differs from the alternate test procedure specified by DOE in a subsequent decision and order granting the petition for waiver, DOE will provide a period of 180 days before the manufacturer is required to use the DOE test procedure or the alternate test procedure specified in the decision and order to make representations of energy efficiency.

* * * * *

PART 431—ENERGY EFFICIENCY PROGRAM FOR CERTAIN COMMERCIAL AND INDUSTRIAL EQUIPMENT

■ 3. The authority citation for part 431 continues to read as follows:

Authority: 42 U.S.C. 6291–6317; 28 U.S.C. 2461 note.

■ 4. Section 431.401 is amended by revising paragraphs (e)(1), (h), and (i)(1) to read as follows:

§ 431.401 Petitions for waiver and interim waiver.

* * * * *

(e) *Provisions specific to interim waivers*—(1) *Disposition of petition.* (i) Within 5 business days of receipt of a petition for an interim waiver, DOE will post that petition for an interim waiver on its website.

(ii) In those cases where DOE receives a petition for an interim waiver in conjunction with a petition for waiver, DOE will review the petition for interim waiver within 45 business days of receipt of the petition. Where the manufacturer does not specify any alternate test procedure, or otherwise fails to satisfy any of the other required criteria specified under paragraph (b)(2) of this section, DOE will deny the petition for interim waiver. In such case, DOE will notify the applicant of the denial within the 45-day review period and process the request for waiver in

accordance with this section. If DOE does not notify the applicant of the disposition of the petition for interim waiver, in writing, within 45 business days of receipt of the petition, the interim waiver is granted utilizing the alternate test procedure requested in the petition. Notice of DOE's determination on the petition for interim waiver will be posted on the Department's website not later than 5 business days after the end of the review period. Such determination will also be submitted for publication in the **Federal Register**.

(iii) A petition submitted under this paragraph (whether for an interim waiver or waiver) is considered ''received'' on the date it is received by the Department through the Department's established email box for receipt of waiver petitions or, if delivered by mail, on the date the waiver petition is stamped as received by the Department.

* * * * *

(h) *Duration.* (1) Interim waivers remain in effect until the earlier of the following:

(i) DOE publishes a decision and order on a petition for waiver pursuant to paragraph (f) of this section in the **Federal Register**; or

(ii) DOE publishes in the **Federal Register** a new or amended test procedure that addresses the issues presented in the waiver.

(2) Within one year of a determination to grant an interim waiver, DOE will complete either paragraph (h)(1)(i) or (ii) of this section as specified in this section.

(3) When DOE amends the test procedure to address the issues presented in a waiver, the waiver will automatically terminate on the date on which use of that test procedure is required to demonstrate compliance.

(i) *Compliance certification.* (1) If the alternate test procedure specified in the interim waiver differs from the alternate test procedure specified by DOE in a subsequent decision and order granting the petition for waiver, a manufacturer who has already certified basic models using the procedure permitted in DOE's grant of an interim test procedure waiver is not required to re-test and re-rate those basic models so long as: The manufacturer used that alternative procedure to certify the compliance of the basic model after DOE granted the company's interim waiver request; changes have not been made to those basic models that would cause them to use more energy or otherwise be less energy efficient; and the manufacturer does not modify the certified rating. However, if DOE ultimately denies the petition for waiver, or if the alternate test procedure specified in the interim waiver differs from the alternate test procedure specified by DOE in a subsequent decision and order, DOE will provide a period of 180 days before the manufacturer is required to use the DOE test procedure or the alternate test procedure specified in the decision and order to make representations of energy efficiency.

[FR Doc. 2020–26321 Filed 12–10–20; 8:45 am]

BILLING CODE 6450–01–P

FEDERAL RESERVE SYSTEM

12 CFR Part 204

[Regulation D; Docket No. R–1733]

RIN 7100–AG 03

Reserve Requirements of Depository Institutions

AGENCY: Board of Governors of the Federal Reserve System.

ACTION: Final rule.

SUMMARY: The Board is amending Regulation D, Reserve Requirements of Depository Institutions, to reflect the annual indexing of the reserve requirement exemption amount and the low reserve tranche for 2021. The annual indexation of these amounts is required notwithstanding the Board's action in March 2020 setting all reserve requirement ratios to zero. The Regulation D amendments set the reserve requirement exemption amount for 2021 at $21.1 million of reservable liabilities (up from 16.9 million in 2020). The Regulation D amendments also set the amount of net transaction accounts at each depository institution (over the reserve requirement exemption amount) that could be subject to a reserve requirement ratio of not more than 3 percent (and which may be zero) in 2021 at $182.9 million (up from $127.5 million in 2020). This amount is known as the low reserve tranche. The adjustments to both of these amounts are derived using statutory formulas specified in the Federal Reserve Act (the ''Act''). The annual indexation of the reserve requirement exemption amount and low reserve tranche, though required by statute, will not affect depository institutions' reserve requirements, which will remain zero. The Board is also announcing changes in two other amounts, the nonexempt deposit cutoff level and the reduced reporting limit, that are used to determine the frequency at which depository institutions must submit deposit reports.

DATES: *Effective date:* January 11, 2021.

Compliance dates: The new low reserve tranche and reserve requirement exemption amount will apply to the fourteen-day reserve maintenance period that begins January 14, 2021. For depository institutions that report deposit data weekly, this maintenance period corresponds to the fourteen-day computation period that begins December 15, 2020. For depository institutions that report deposit data quarterly, this maintenance period corresponds to the seven-day computation period that begins December 15, 2020. The new values of the nonexempt deposit cutoff level, the reserve requirement exemption amount, and the reduced reporting limit will be used to determine the frequency at which a depository institution submits deposit reports effective in either June or September 2021.

FOR FURTHER INFORMATION CONTACT: Sophia H. Allison, Senior Special Counsel (202–452–3565), or Justyna Bolter, Senior Attorney (202/452–2686), Legal Division, or Kristen Payne, Senior Financial Institution and Policy Analyst (202–452–2872), or Francis A. Martinez, Lead Financial Institution and Policy Analyst (202–245–4217), Division of Monetary Affairs; for users of Telecommunications Device for the Deaf (TDD) only, contact (202–263–4869); Board of Governors of the Federal Reserve System, 20th and C Streets NW, Washington, DC 20551.

SUPPLEMENTARY INFORMATION: Section 19(b)(2) of the Act (12 U.S.C. 461(b)(2)) requires each depository institution to maintain reserves against its transaction accounts and nonpersonal time deposits, as prescribed by Board regulations, for the purpose of implementing monetary policy. Section 11(a)(2) of the Act (12 U.S.C. 248(a)(2)) authorizes the Board to require reports of liabilities and assets from depository institutions to enable the Board to conduct monetary policy. The Board's actions with respect to each of these provisions are discussed in turn below.

I. Reserve Requirements

Section 19(b) of the Act authorizes different ranges of reserve requirement ratios depending on the amount of transaction account balances at a depository institution. Section 19(b)(11)(A) of the Act (12 U.S.C. 461(b)(11)(A)) provides that a zero percent reserve requirement ratio shall apply at each depository institution to total reservable liabilities that do not exceed a certain amount, known as the

reserve requirement exemption amount. Section 19(b)(11)(B) provides that, before December 31 of each year, the Board shall issue a regulation adjusting the reserve requirement exemption amount for the next calendar year if total reservable liabilities held at all depository institutions increase from one year to the next. No adjustment is made to the reserve requirement exemption amount if total reservable liabilities held at all depository institutions should decrease during the applicable time period. The Act requires the percentage increase in the reserve requirement exemption amount to be 80 percent of the increase in total reservable liabilities of all depository institutions over the one-year period that ends on the June 30 prior to the adjustment.

Total reservable liabilities of all depository institutions increased by 31.0 percent, from $8,321 billion to $10,902 billion, between June 30, 2019, and June 30, 2020. Accordingly, the Board is amending Regulation D (12 CFR part 204) to set the reserve requirement exemption amount for 2021 at $21.1 million, an increase of $4.2 million from its level in 2020.[1]

Pursuant to Section 19(b)(2) of the Act (12 U.S.C. 461(b)(2)), transaction account balances maintained at each depository institution over the reserve requirement exemption amount and up to a certain amount, known as the low reserve tranche, may be subject to a reserve requirement ratio of not more than 3 percent (and which may be zero). Transaction account balances over the low reserve tranche may be subject to a reserve requirement ratio of not more than 14 percent (and which may be zero). Section 19(b)(2) also provides that, before December 31 of each year, the Board shall issue a regulation adjusting the low reserve tranche for the next calendar year. The Act requires the adjustment in the low reserve tranche to be 80 percent of the percentage increase or decrease in total transaction accounts of all depository institutions over the one-year period that ends on the June 30 prior to the adjustment.

Net transaction accounts of all depository institutions increased 54.3 percent, from $2,505 billion to $3,866 billion, between June 30, 2019, and June 30, 2020. Accordingly, the Board is amending Regulation D to set the low reserve tranche for net transaction accounts for 2021 at $182.9 million, an increase of $55.4 million from 2020.

The new low reserve tranche and reserve requirement exemption amount will be effective for all depository institutions for the fourteen-day reserve maintenance period beginning January 14, 2021. For depository institutions that report deposit data weekly, this maintenance period corresponds to the fourteen-day computation period that begins December 15, 2020. For depository institutions that report deposit data quarterly, this maintenance period corresponds to the seven-day computation period that begins December 15, 2020.

Effective March 26, 2020, the Board reduced reserve requirement ratios on all net transaction accounts to zero percent, eliminating reserve requirements for all depository institutions. The annual indexation of the reserve requirement exemption amount and the low reserve tranche for 2021 is required by statute but will not affect depository institutions' reserve requirements, which will remain zero.

II. Deposit Reports

Section 11(b)(2) of the Act authorizes the Board to require depository institutions to file reports of their liabilities and assets as the Board may determine to be necessary or desirable to enable it to discharge its responsibility to monitor and control the monetary and credit aggregates. The Board screens depository institutions each year and assigns them to one of four deposit reporting panels (weekly reporters, quarterly reporters, annual reporters, or nonreporters). The panel assignment for annual reporters is effective in June of the screening year; the panel assignment for weekly and quarterly reporters is effective in September of the screening year.

In order to ease reporting burden, the Board permits smaller depository institutions to submit deposit reports less frequently than larger depository institutions. The Board permits depository institutions with net transaction accounts above the reserve requirement exemption amount but total transaction accounts, savings deposits, and small time deposits below a specified level (the ''nonexempt deposit cutoff'') to report deposit data quarterly. Depository institutions with net transaction accounts above the reserve requirement exemption amount and with total transaction accounts, savings deposits, and small time deposits greater than or equal to the nonexempt deposit cutoff are required to report deposit data weekly. The Board requires certain large depository institutions to report weekly regardless of the level of their net transaction accounts if the depository institution's total transaction accounts, savings deposits, and small time deposits exceeds or is equal to a specified level (the ''reduced reporting limit''). The nonexempt deposit cutoff level and the reduced reporting limit are adjusted annually, by an amount equal to 80 percent of the increase, if any, in total transaction accounts, savings deposits, and small time deposits of all depository institutions over the one-year period that ends on the June 30 prior to the adjustment.

From June 30, 2019, to June 30, 2020, total transaction accounts, savings deposits, and small time deposits at all depository institutions increased 24.0 percent, from $13,053 billion to $16,191 billion. Accordingly, the Board is increasing the nonexempt deposit cutoff level by $203.5 million to $1.262 billion for 2021 (up from $1.058 billion in 2020). The Board is also increasing the reduced reporting limit by $424.6 million to $2.633 billion for 2021 (up from $2.208 billion in 2020).[2]

Beginning in 2021, the boundaries of the four deposit reporting panels will be defined as follows. Those depository institutions with net transaction accounts over $21.1 million (the reserve requirement exemption amount) or with total transaction accounts, savings deposits, and small time deposits greater than or equal to $2.633 billion (the reduced reporting limit) are subject to detailed reporting, and must file a Report of Transaction Accounts, Other Deposits and Vault Cash (FR 2900 report) either weekly or quarterly. Of this group, those with total transaction accounts, savings deposits, and small time deposits greater than or equal to $1.262 billion (the nonexempt deposit cutoff level) are required to file the FR 2900 report each week, while those with total transaction accounts, savings deposits, and small time deposits less than $1.262 billion are required to file the FR 2900 report each quarter. Those depository institutions with net transaction accounts less than or equal to $21.1 million (the reserve requirement exemption amount) and with total transaction accounts, savings deposits, and small time deposits less than $2.633 billion (the reduced reporting limit) are eligible for reduced reporting, and must either file a deposit report annually or not at all. Of this group, those with total deposits greater than $21.1 million (but with total transaction accounts, savings deposits, and small time deposits less than $2.633 billion) are required to file the Annual

[1] Consistent with Board practice, the low reserve tranche and reserve requirement exemption amounts have been rounded to the nearest $0.1 million.

[2] Consistent with Board practice, the nonexempt deposit cutoff level and the reduced reporting limit have been rounded to the nearest $1 million.

Report of Deposits and Reservable Liabilities (FR 2910a) report annually, while those with total deposits less than or equal to $21.1 million are not required to file a deposit report. A depository institution that adjusts reported values on its FR 2910a report in order to qualify for reduced reporting will be shifted to an FR 2900 reporting panel.

III. Regulatory Analysis

Administrative Procedure Act

The provisions of 5 U.S.C. 553(b) relating to notice of proposed rulemaking have not been followed in connection with the adoption of these amendments. The amendments involve expected, ministerial adjustments prescribed by statute and by the Board's policy concerning reporting practices. The adjustments in the reserve requirement exemption amount, the low reserve tranche, the nonexempt deposit cutoff level, and the reduced reporting limit serve to reduce regulatory burdens on depository institutions. Accordingly, the Board finds good cause for determining, and so determines, that notice in accordance with 5 U.S.C. 553(b) is unnecessary.

Regulatory Flexibility Act

The Regulatory Flexibility Act (RFA) does not apply to a rulemaking where a general notice of proposed rulemaking is not required.[3] As noted previously, the Board has determined that it is unnecessary to publish a general notice of proposed rulemaking for this final rule. Accordingly, the RFA's requirements relating to an initial and final regulatory flexibility analysis do not apply.

Paperwork Reduction Act

In accordance with the Paperwork Reduction Act of 1995,[4] the Board reviewed this final rule. No collections of information pursuant to the Paperwork Reduction Act are contained in the final rule.

List of Subjects in 12 CFR Part 204

Banks, banking, Reporting and recordkeeping requirements.

Authority and Issuance

For the reasons set forth in the preamble, the Board is amending 12 CFR part 204 as follows:

PART 204—RESERVE REQUIREMENTS OF DEPOSITORY INSTITUTIONS (REGULATION D)

■ 1. The authority citation for part 204 continues to read as follows:

Authority: 12 U.S.C. 248(a), 248(c), 461, 601, 611, and 3105.

■ 2. Section 204.4 is amended by revising paragraph (f) to read as follows:

§ 204.4 Computation of required reserves.

* * * * *

(f) For all depository institutions, Edge and Agreement corporations, and United States branches and agencies of foreign banks, required reserves are computed by applying the reserve requirement ratios in table 1 to this paragraph (f) to net transaction accounts, nonpersonal time deposits, and Eurocurrency liabilities of the institution during the computation period.

TABLE 1 TO PARAGRAPH (f)

Reservable liability	Reserve requirement
Net Transaction Accounts:.	
$0 to reserve requirement exemption amount ($21.1 million)	0 percent of amount.
Over reserve requirement exemption amount ($21.1 million) and up to low reserve tranche ($182.9 million)	0 percent of amount.
Over low reserve tranche ($182.9 million)	$0 plus 0 percent of amount over $182.9 million.
Nonpersonal time deposits	0 percent.
Eurocurrency liabilities	0 percent.

By order of the Board of Governors of the Federal Reserve System, acting through the Director of the Division of Monetary Affairs under delegated authority.

Ann Misback,

Secretary of the Board.

Federal Aviation Administration

14 CFR Parts 1, 61, 101, 107

[Docket No. FAA–2020–1067; Amdt. Nos. 1–73, 61–148, 101–10, 107–6]

RIN 2120–AL43

Removal of the Special Rule for Model Aircraft

AGENCY: Federal Aviation Administration (FAA), Department of Transportation (DOT).

ACTION: Final rule.

SUMMARY: This action removes regulations codifying the Special Rule for Model Aircraft because of a change in applicable law. This action also makes conforming updates to FAA regulations.

DATES: This rule is effective on December 11, 2020.

FOR FURTHER INFORMATION CONTACT: Jonathan W. Cross, Regulations Division, Office of the Chief Counsel, Federal Aviation Administration, 800 Independence Avenue SW, Washington, DC 20591; telephone 202–267–7173; email: *jonathan.cross@faa.gov.*

SUPPLEMENTARY INFORMATION: The FAA Modernization and Reform Act of 2012, Public Law 112–95 (February 14, 2012) (FMRA) included a number of provisions related to unmanned aircraft systems (UAS) operating in the National Airspace System (NAS). Section 336 of the Act, titled ''Special Rule for Model Aircraft,'' defined ''model aircraft'' and specifically prohibited FAA from promulgating a rule or regulation regarding model aircraft that were operated under certain circumstances. That prohibition notwithstanding,

section 336 preserved the right of FAA to pursue enforcement action against operators of model aircraft that endanger the NAS. On June 28, 2016, FAA issued a final rule to allow the operation of small unmanned aircraft systems (UAS) in the National Airspace System (NAS), *Operation and Certification of Small Unmanned Aircraft Systems,* 81 FR 42064. That rule also included a new subpart E to 14 CFR part 101, implementing section 336.

On October 5, 2018, the President signed into law the FAA Reauthorization Act of 2018 (Pub. L. 115–254) (FAARA 2018). Section 349 of that act repealed the ''Special Rule for Model Aircraft'' in section 336 of FMRA, and replaced it with the ''Exception for limited recreational operations of unmanned aircraft,'' creating a new framework for allowing certain small unmanned aircraft operations. As a result, 14 CFR part 101, subpart E, no longer reflects current statutory law.

This final rule removes 14 CFR part 101, subpart E, to remove the inconsistency between FAA's regulations and current statutory law. It also makes conforming amendments to remove references to part 101, subpart E, in both 14 CFR 61.8 (Inapplicability of unmanned aircraft operations) and 14 CFR 107.1(b)(2) (Applicability of part 107). Lastly, the final rule removes the obsolete definition of ''model aircraft'' from 14 CFR part 1.

Good Cause for Immediate Adoption

Section 553(b)(3)(B) of the Administrative Procedure Act (APA) (5 U.S.C.) authorizes agencies to dispense with notice and comment procedures for rules when the agency for ''good cause'' finds that those procedures are ''impracticable, unnecessary, or contrary to the public interest.'' Under this section, an agency, upon finding good cause, may issue a final rule without seeking comment prior to the rulemaking. Section 553(d) also authorizes agencies to forgo the delay in the effective date of the final rule for good cause found and published with the rule.

In this instance, FAA finds good cause to forgo notice and comment. Section 349 of FAARA 2018 repealed the statutory basis for Subpart E of part 101, putting the regulation into conflict with statutory law. Furthermore, FAA has no discretion to keep subpart E, irrespective of notice and comment. For these reasons, and the potential for public confusion resulting from regulations that are inconsistent with existing statutory law, notice and comment is unnecessary and contrary to the public interest.

In addition, FAA finds good cause to make the rule effective upon publication. FAARA 2018 superseded subpart E when the President signed the Act into law on October 5, 2018, repealing FMRA section 336. Subpart E has been ineffective since that date, eliminating any justification to delay the effective date of this final rule.

Authority for This Rulemaking

FAA's authority to issue rules on aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the Agency's authority.

This rulemaking is promulgated pursuant to 49 U.S.C. 44809, which repealed section 336 of Public Law 112–95.

III. Regulatory Notices and Analyses

Changes to Federal regulations must undergo several economic analyses. First, Executive Order 12866 and Executive Order 13563 direct that each Federal agency shall propose or adopt a regulation only upon a reasoned determination that the benefits of the intended regulation justify its costs. Second, the Regulatory Flexibility Act of 1980 (Pub. L. 96–354) requires agencies to analyze the economic impact of regulatory changes on small entities. Third, the Trade Agreements Act (Pub. L. 96–39) prohibits agencies from setting standards that create unnecessary obstacles to the foreign commerce of the United States. In developing U.S. standards, this statute requires agencies to consider international standards and, where appropriate, that they be the basis of U.S. standards. Fourth, the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4) requires agencies to prepare a written assessment of the costs, benefits, and other effects of proposed or final rules that include a Federal mandate likely to result in the expenditure by State, local, or tribal governments, in the aggregate, or by the private sector, of $100 million or more annually (adjusted for inflation with base year of 1995). This portion of the preamble summarizes FAA's analysis of the impacts of this rule.

In conducting these analyses, FAA has determined that this rule is not a significant regulatory action, as defined in section 3(f) of Executive Order 12866. As notice and comment under 5 U.S.C. 553 are not required for this final rule, the regulatory flexibility analyses described in 5 U.S.C. 603 and 604 regarding impacts on small entities are not required. This rule will not create unnecessary obstacles to the foreign commerce of the United States. This rule will not impose an unfunded mandate on State, local, or tribal governments, or on the private sector, by exceeding the threshold identified previously.

A. Regulatory Evaluation

As previously discussed, Section 349 of Public Law 115–254 repealed section 336 of Public Law 112–95 and thus subpart E of part 101 titled, *Special Rule for Model Aircraft* is no longer consistent with statutory law. As a result, this rule removes subpart E of part 101 and revises certain other provisions in 14 CFR to conform them to the removal of subpart E. This action will eliminate a conflict between FAA regulations and applicable statutory authority and reduce confusion for regulated entities. This rule does not convey additional regulations and does not result in additional regulatory costs.

Furthermore, in the 2016 final rule that added regulations to allow the operation of small UAS in the National Airspace System, 81 FR 42064, FAA found subpart E of part 101 would not result in any costs or benefits since it would simply codify FAA's enforcement authority. Therefore, the removal of subpart E of part 101 will not result in a revision of the previous regulatory analysis of its implementing rule.

B. Regulatory Flexibility Determination

Section 603 of the Regulatory Flexibility Act (RFA) requires an agency to prepare an initial regulatory flexibility analysis describing impacts on small entities whenever an agency is required by 5 U.S.C. 553 to publish a general notice of proposed rulemaking for any proposed rule. Similarly, section 604 of the RFA requires an agency to prepare a final regulatory flexibility analysis when an agency issues a final rule under 5 U.S.C. 553 after being required to publish a general notice of proposed rulemaking. RFA analysis requirements are limited to rulemakings for which the agency ''is required by section 553 or any other law, to publish a general notice of proposed rulemaking for any proposed rule.'' 5 U.S.C. 603(a). FAA has found good cause for implementing an immediate effective date in this case. As prior notice and comment under 5 U.S.C. 553 are not required to be provided in this situation, the analyses in 5 U.S.C. 603 and 604 likewise are similarly not required.

C. International Trade Impact Assessment

The Trade Agreements Act of 1979 (Pub. L. 96–39), as amended by the Uruguay Round Agreements Act (Pub. L. 103–465), prohibits Federal agencies from establishing standards or engaging in related activities that create unnecessary obstacles to the foreign commerce of the United States. Pursuant to these Acts, the establishment of standards is not considered an unnecessary obstacle to the foreign commerce of the United States, so long as the standard has a legitimate domestic objective, such as the protection of safety, and does not operate in a manner that excludes imports that meet this objective. The statute also requires consideration of international standards and, where appropriate, that they be the basis for U.S. standards. FAA has assessed the potential effect of this final rule and determined that it relates to domestic operation of certain unmanned aircraft systems and is not considered an unnecessary obstacle to trade.

D. Unfunded Mandates Assessment

Title II of the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4) requires each Federal agency to prepare a written statement assessing the effects of any Federal mandate in a proposed or final agency rule that may result in an expenditure of $100 million or more (in 1995 dollars) in any one year by State, local, and tribal governments, in the aggregate, or by the private sector; such a mandate is deemed to be a ''significant regulatory action.'' FAA currently uses an inflation-adjusted value of $155 million in lieu of $100 million. This rule does not contain such a mandate; therefore, the requirements of Title II of the Act do not apply.

E. Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. 3507(d)) requires that FAA consider the impact of paperwork and other information collection burdens imposed on the public. According to the 1995 amendments to the Paperwork Reduction Act (5 CFR 1320.8(b)(2)(vi)), an agency may not collect or sponsor the collection of information, nor may it impose an information collection requirement unless it displays a currently valid Office of Management and Budget (OMB) control number. FAA has determined that there are no information collections associated with this rule.

F. International Compatibility

In keeping with U.S. obligations under the Convention on International Civil Aviation, it is FAA policy to conform to International Civil Aviation Organization (ICAO) Standards and Recommended Practices to the maximum extent practicable. FAA has determined that there are no ICAO Standards and Recommended Practices that correspond to this rule.

G. Environmental Analysis

FAA Order 1050.1F identifies FAA actions that are categorically excluded from preparation of an environmental assessment or environmental impact statement under the National Environmental Policy Act in the absence of extraordinary circumstances. FAA has determined this rulemaking action qualifies for the categorical exclusion identified in paragraph 5–6.6 of this Order and involves no extraordinary circumstances.

VII. Executive Order Determinations

A. Executive Order 13132, Federalism

FAA has analyzed this immediately adopted final rule under the principles and criteria of Executive Order 13132, Federalism. The Agency has determined that this action would not have a substantial direct effect on the States, or the relationship between the Federal Government and the States, or on the distribution of power and responsibilities among the various levels of government, and, therefore, would not have federalism implications.

B. Executive Order 13211, Regulations That Significantly Affect Energy Supply, Distribution, or Use

FAA analyzed this final rule under Executive Order 13211, Actions Concerning Regulations that Significantly Affect Energy Supply, Distribution, or Use (May 18, 2001). The agency has determined that it would not be a ''significant energy action'' under the executive order and would not be likely to have a significant adverse effect on the supply, distribution, or use of energy.

C. Executive Order 13609, International Cooperation

Executive Order 13609, Promoting International Regulatory Cooperation, promotes international regulatory cooperation to meet shared challenges involving health, safety, labor, security, environmental, and other issues and to reduce, eliminate, or prevent unnecessary differences in regulatory requirements. FAA has analyzed this action under the policies and agency responsibilities of Executive Order 13609, and has determined that this action would have no effect on international regulatory cooperation.

D. Executive Order 13771, Reducing Regulation and Controlling Regulatory Costs

This rule is not an Executive Order 13771 regulatory action because this rule is not significant under Executive Order 12866.

List of Subjects

14 CFR Part 1

Air transportation.

14 CFR Part 61

Aircraft, Airmen, Aviation safety, Recreation and recreation areas, Reporting and recordkeeping requirements.

14 CFR Part 101

Aircraft, Aviation safety.

14 CFR Part 107

Aircraft, Airmen, Aviation safety, Reporting and recordkeeping requirements.

The Amendment

In consideration of the foregoing, the Federal Aviation Administration amends chapter I of title 14, Code of Federal Regulations as follows:

PART 1—DEFINITIONS AND ABBREVIATIONS

■ 1. The authority citation for part 1 continues to read as follows:

Authority: 49 U.S.C. 106(f), 106(g), 40113, 44701.

§ 1.1 [Amended]

■ 2. In § 1.1, remove the definition of ''Model aircraft''.

PART 61—CERTIFICATION: PILOTS, FLIGHT INSTRUCTORS, AND GROUND INSTRUCTORS

■ 3. The authority citation for part 61 continues to read as follows:

Authority: 49 U.S.C. 106(f), 106(g), 40113, 44701–44703, 44707, 44709–44711, 44729, 44903, 45102–45103, 45301–45302; Sec. 2307 Public Law 114–190, 130 Stat. 615 (49 U.S.C. 44703 note).

■ 4. Revise § 61.8 to read as follows:

§ 61.8 Inapplicability of unmanned aircraft operations.

Any action conducted pursuant to part 107 of this chapter cannot be used to meet the requirements of this part.

PART 101—MOORED BALLOONS, KITES, AMATEUR ROCKETS, AND UNMANNED FREE BALLOONS

■ 5. The authority citation for part 101 is revised to read as follows:

Authority: 49 U.S.C. 106(f), 106(g), 40101 note, 40103, 40113–40114, 45302, 44502, 44514, 44701–44702, 44721, 46308.

■ 6. The heading for part 101 is revised to read as set forth above.

§ 101.1 [Amended]

■ 7. Amend § 101.1 by removing paragraph (a)(5).

Subpart E—[Removed]

■ 8. Remove subpart E.

PART 107—SMALL UNMANNED AIRCRAFT SYSTEMS

■ 9. The authority citation for part 107 is revised to read as follows:

Authority: 49 U.S.C. 106(f), 40101 note, 40103(b), 44701(a)(5), 44807.

§ 107.1 [Amended]

■ 10. Amend § 107.1 as follows:
■ a. In paragraph (b)(1) by adding ''or'' after the semicolon;
■ b. Removing paragraph (b)(2); and
■ c. Redesignating paragraph (b)(3) as paragraph (b)(2).

Issued under the authority of 49 U.S.C. 106(f) and 44809, in Washington, DC, on November 23, 2020.

Steve Dickson,

Administrator.

[FR Doc. 2020–26726 Filed 12–10–20; 8:45 am]

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 27

[Docket No. FAA–2020–1102; Notice No. 27–052–SC]

Special Conditions: Garmin International, Inc., Bell Textron Canada Limited Model 505 Helicopter, Visual Flight Rules Autopilot and Stability Augmentation System

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final special conditions; request for comments.

SUMMARY: These special conditions are issued for the Bell Textron Canada Limited (BTCL) Model 505 helicopter. This helicopter as modified by Garmin International, Inc. (Garmin), will have a novel or unusual design feature when compared to the state of technology envisioned in the airworthiness standards for helicopters. This design feature is associated with the installation of an autopilot and stability augmentation system (AP/SAS). The applicable airworthiness regulations do not contain adequate or appropriate safety standards for this design feature. These special conditions contain the additional safety standards that the Administrator considers necessary to establish a level of safety equivalent to that established by the existing airworthiness standards.

DATES: Send comments on or before January 11, 2021.

ADDRESSES: Send comments identified by Docket No. FAA–2020–1102 using any of the following methods:

- *Federal eRegulations Portal:* Go to *http://www.regulations.gov/* and follow the online instructions for sending your comments electronically.
- *Mail: Send comments to Docket Operations, M–30, U.S. Department of Transportation (DOT), 1200 New Jersey Avenue SE, Room W12–140, West Building Ground Floor, Washington, DC 20590–0001.*
- *Hand Delivery or Courier: Take comments to Docket Operations in Room W12–140 of the West Building Ground Floor at 1200 New Jersey Avenue SE, Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.*
- *Fax: Fax comments to Docket Operations at 202–493–2251.*

Privacy: Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments it receives, without change, to *http://www.regulations.gov/,* including any personal information the commenter provides. Using the search function of the docket website, anyone can find and read the electronic form of all comments received into any FAA docket, including the name of the individual sending the comment (or signing the comment for an association, business, labor union, etc.). DOT's complete Privacy Act Statement can be found in the **Federal Register** published on April 11, 2000 (65 FR 19477–19478).

Confidential Business Information: CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to these special conditions contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to these special conditions, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as ''PROPIN.'' The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of these special conditions. Submissions containing CBI should be sent to Andy Shaw, Continued Operational Safety Section, AIR–682, Rotorcraft Standards Branch, Policy and Innovation Division, Aircraft Certification Service, Federal Aviation Administration, 10101 Hillwood Pkwy, Fort Worth, TX 76177; telephone (817) 222–5384. Any commentary that the FAA receives which is not specifically designated as CBI will be placed in the public docket for this rulemaking.

Docket: Background documents or comments received may be read at *http://www.regulations.gov/* at any time. Follow the online instructions for accessing the docket or go to Docket Operations in Room W12–140 of the West Building Ground Floor at 1200 New Jersey Avenue SE, Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: Andy Shaw, Continued Operational Safety Section, AIR–682, Rotorcraft Standards Branch, Policy and Innovation Division, Aircraft Certification Service, Federal Aviation Administration, 10101 Hillwood Pkwy, Fort Worth, TX 76177; telephone (817) 222–5384; email *Andy.Shaw@faa.gov.*

SUPPLEMENTARY INFORMATION:

Reason for No Prior Notice and Comment Before Adoption

The FAA has determined, in accordance with 5 U.S.C. 553(b)(3)(B) and 553(d)(3), that notice and opportunity for prior public comment hereon are unnecessary because substantially identical special conditions have been previously subject to the public comment process in several prior instances such that the FAA is satisfied that new comments are unlikely. For the same reason, the FAA finds that good cause exists for adopting these special conditions upon issuance. The FAA is requesting comments to allow interested persons to submit views that may not have been submitted in response to the prior opportunities for comment.

Special conditions number	Company and helicopter model
No. 27–048–SC [1]	Bell Helicopter Textron Canada Limited Bell Model 505 helicopter.
No. 27–046–SC [2]	Robinson Helicopter Company Model R66 helicopter.

Special conditions number	Company and helicopter model
No. 27–043–SC [3]	Airbus Helicopters Model AS350B2 and AS350B3 helicopters.

[1] 84 FR 64233, November 21, 2019.
[2] 84 FR 30050, June 26, 2019.
[3] 82 FR 57685, December 07, 2017.

Comments Invited

The FAA invites interested people to take part in this rulemaking by sending written comments, data, or views. The most helpful comments reference a specific portion of the special conditions, explain the reason for any recommended change, and include supporting data.

The FAA will consider all comments received by the closing date for comments. The FAA may change these special conditions based on the comments received.

Background

On December 18, 2019, Garmin applied for a supplemental type certificate (STC) to install an AP/SAS in the BTCL Model 505 helicopter. The BTCL Model 505 helicopter is a 14 CFR part 27 normal category, single turbine engine, conventional helicopter designed for civil operation. This helicopter model can carry up to four passengers with one pilot and has a maximum gross weight (MGW) of up to 4,475 pounds, depending on the model configuration. The major design features include a two-blade main rotor, an anti-torque tail rotor system, skid landing gear, and a visual flight rule (VFR) basic avionics configuration. Garmin proposes to modify this model helicopter by installing an AP/SAS.

The AP/SAS provides attitude stabilization in two or three axes (pitch and roll with optional yaw) and higher-level AP functions such as altitude hold, heading command, and navigation tracking. However, the possible failure conditions for this system, and their effect on the continued safe flight and landing of the helicopter, are more severe than those envisioned by the present rules.

The effect on safety is not adequately covered under 14 CFR 27.1309 for the application of new technology and the new application of standard technology. Specifically, the present provisions of § 27.1309(c) do not adequately address the safety requirements for systems whose failures could result in catastrophic or hazardous/severe-major failure conditions or complex systems whose failures could result in major failure conditions in VFR rotorcraft. The current regulations are inadequate because when § 27.1309(c) was promulgated, it was not envisioned that this type of VFR rotorcraft would use systems that are complex or whose failure could result in ''catastrophic'' or ''hazardous/severe-major'' effects on the rotorcraft. This inadequacy is particularly true with the application of new technology, a new application of standard technology, or other applications not envisioned by the rule that affect safety.

Type Certification Basis

Under 14 CFR 21.101, Garmin must show that the BTCL Model 505 helicopter, as changed, continues to meet the applicable regulations listed in Type Certificate Number R00008RD or the applicable regulation in effect on the date of application for the change. The regulations listed in the type certificate are commonly referred to as the ''original type certification basis.'' The regulations listed in Type Certificate Number R00008RD are as follows:

For approved MGW configuration of 1670 kg (3680 lb.) internal loading and 2030 kg (4475 lbs.) external loading:

14 CFR part 27, dated October 2, 1964, amendment 27–1 through 27–47

14 CFR part 36 Amendment 36–1 through 36–30

Equivalent Level of Safety Findings issued against:

(a) FAA Cover Issue Paper CIP–01

(b) 14 CFR part 27.307(b)(5) Proof of Structure Landing Gear Drop Test

(c) 14 CFR part 27.723 Landing Gear Shock Absorption Tests

(d) 14 CFR part 27.725 Landing Gear Limit Drop Test

(e) 14 CFR part 27.727 Landing Gear Reserve Energy Absorption Drop Test

(f) 14 CFR part 27.995(d) Fuel Shut-off Valve

(g) 14 CFR part 27.1545(b)(2) Airspeed Indicator

The Administrator has determined that the applicable airworthiness regulations (*e.g.,* 14 CFR part 27) do not contain adequate or appropriate safety standards for the BTCL Model 505 helicopter type certificate number R00008RD because of a novel or unusual design feature. Therefore, special conditions are prescribed under the provisions of § 21.16.

Special conditions are initially applicable to the model for which they are issued. Should Garmin apply for an STC to modify any other model included on the same type certificate to incorporate the same novel or unusual design feature, these special conditions would also apply to the other model under § 21.101.

In addition to the applicable airworthiness regulations and special conditions, the BTCL Model 505 helicopter must comply with the noise certification requirements of 14 CFR part 36.

The FAA issues special conditions, as defined in 14 CFR 11.19, in accordance with § 11.38, and they become part of the type certification basis under § 21.101.

Novel or Unusual Design Features

The BTCL Model 505 helicopter will incorporate the following novel or unusual design features: An AP/SAS. An AP system is a system used to control an aircraft trajectory without constant input from the pilot. This system allows the pilot to focus on other aspects of the operation, such as weather and other flight associated systems. SAS is another type of automatic flight control system; however, instead of maintaining the aircraft on a predetermined attitude or flight path, the SAS will reduce pilot workload by dampening the rotorcraft's buffeting regardless of the attitude or flight path.

Discussion

The BTCL Model 505 helicopter's type certification basis as modified by Garmin does not contain adequate airworthiness standards for the AP/SAS. The FAA requires these special conditions to comply with airworthiness standards. The FAA requires that Garmin provide the FAA with a systems safety assessment (SSA) for the final AP/SAS installation configuration to adequately address the safety objectives established by a functional hazard assessment (FHA). This assessment will ensure that all failure conditions and their effects are adequately addressed for the installed AP/SAS. The SSA process is part of the overall safety assessment process discussed in FAA Advisory Circular 27–1B, *Certification of Normal Category Rotorcraft,* and Society of Automotive Engineers document Aerospace Recommended Practice 4761, *Guidelines and Methods for Conducting the Safety Assessment Process on Civil Airborne Systems and Equipment.*

These special conditions require that the AP/SAS installed on the BTCL Model 505 helicopter meet the requirements to adequately address the failure effects identified by the FHA, and subsequently verified by the SSA, within the defined design integrity requirements.

Failure conditions are classified according to the severity of their effects on the rotorcraft. Radio Technical

Commission for Aeronautics, Inc. (RTCA) Document DO–178C, *Software Considerations in Airborne Systems and Equipment Certification,* provides software design assurance levels most commonly used for the major, hazardous/severe-major, and catastrophic failure condition categories. The AP/SAS equipment must be qualified for the expected installation environment. The test procedures prescribed in RTCA Document DO–160G, *Environmental Conditions and Test Procedures for Airborne Equipment,* are recognized by the FAA as acceptable methodologies for finding compliance with the environmental requirements. Equivalent environment test standards may also be acceptable.

The environmental qualification provides data to show that the AP/SAS can perform its intended function under the expected operating condition. Some considerations for environmental concerns are installation locations and the resulting exposure to environmental conditions for the AP/SAS equipment, including considerations for other equipment that may be environmentally affected by the AP/SAS equipment installation. The level of environmental qualification must be related to the severity of the considered failure conditions and effects on the rotorcraft.

These special conditions contain the additional safety standards that the Administrator considers necessary to establish a level of safety equivalent to that established by the existing airworthiness standards.

Applicability

As discussed above, these special conditions are applicable to the BTCL Model 505 helicopter. Should Garmin apply at a later date for a STC to modify any other model included on Type Certificate Number R00008RD to incorporate the same novel or unusual design feature, these special conditions would apply to that model as well.

Conclusion

This action affects only a certain novel or unusual design feature on the BTCL Model 505 helicopter. It is not a rule of general applicability and affects only the applicant who applied to the FAA for approval of this feature on the helicopter.

List of Subjects in 14 CFR Part 27

Aircraft, Aviation safety, Reporting and recordkeeping requirements.

Authority Citation

The authority citation for these special conditions is as follows:

Authority: 49 U.S.C. 106(f), 106(g), 40113, 44701, 44702, 44704.

The Special Conditions

Accordingly, pursuant to the authority delegated to me by the Administrator, the following special conditions are issued as part of the supplemental type certification basis for Bell Textron Canada Limited (BTCL) Model 505 helicopters, as modified by Garmin International, Inc.

Instead of the requirements of 14 CFR § 27.1309(b) and (c), the following must be met for certification of the autopilot and stability augmentation system installed on BTCL Model 505 helicopters:

(a) The equipment and systems must be designed and installed so that any equipment and systems do not adversely affect the safety of the rotorcraft or its occupants.

(b) The rotorcraft systems and associated components considered separately and in relation to other systems must be designed and installed so that:

(1) The occurrence of any catastrophic failure condition is extremely improbable;

(2) The occurrence of any hazardous failure condition is extremely remote; and

(3) The occurrence of any major failure condition is remote.

(c) Information concerning an unsafe system operating condition must be provided in a timely manner to the crew to enable them to take appropriate corrective action. An appropriate alert must be provided if immediate pilot awareness and immediate or subsequent corrective action is required. Systems and controls, including indications and annunciations, must be designed to minimize crew errors that could create additional hazards.

Issued in Fort Worth, Texas on November 19, 2020.

Jorge Castillo,

Manager, Rotorcraft Standards Branch, Policy and Innovation Division, Aircraft Certification Service.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2018–1077; Project Identifier 2018–NE–40–AD; Amendment 39–21354; AD 2020–25–12]

RIN 2120–AA64

Airworthiness Directives; Superior Air Parts, Inc. Engines and Lycoming Engines Reciprocating Engines With a Certain SAP Crankshaft Assembly

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for all Superior Air Parts, Inc. (SAP) Model IO–360-series and O–360-series reciprocating engines and certain Lycoming Engines (Lycoming) Model AEIO–360-, IO–360-, and O–360-series reciprocating engines with a certain SAP crankshaft assembly installed. This SAP crankshaft assembly is installed as original equipment on the affected SAP engines and as a replacement part under parts manufacturer approval (PMA) on the affected Lycoming engines. This AD was prompted by three crankshaft assembly failures that resulted in the loss of engine power and immediate or emergency landings. This AD requires the removal from service of all affected crankshaft assemblies. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective January 15, 2021.

Examining the AD Docket

You may examine the AD docket at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2018–1077; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, any comments received, and other information. The address for Docket Operations is U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

FOR FURTHER INFORMATION CONTACT: Justin Carter, Aviation Safety Engineer, Fort Worth ACO Branch, FAA, 10101 Hillwood Parkway, Fort Worth, TX 76177; phone: (817) 222–5146; fax: (817) 222–5245; email: *justin.carter@faa.gov.*

SUPPLEMENTARY INFORMATION:

Background

The FAA issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 by adding an AD that would apply to all SAP Model IO–360-series and O–360-series reciprocating engines and certain Lycoming Model AEIO–360-, IO–360-, and O–360-series reciprocating engines with a certain SAP crankshaft assembly installed. The NPRM published in the **Federal Register** on January 29, 2020 (85 FR 5173). The NPRM was prompted by three crankshaft assembly failures that resulted in the loss of engine power and immediate or emergency landings. The FAA determined that the crankshaft assembly failures resulted from the manufacturing process at SAP's crankshaft vendor during 2012 and 2014 causing excessive residual white layer of iron nitride forming on the assemblies. This white layer is brittle and can lead to spalling or fatigue cracking of the crankshaft assembly as a result of the normal mechanical loads during engine operation. The FAA's analysis concluded that all three SAP crankshaft assembly failures were the result of this fatigue cracking. In the NPRM, the FAA proposed to require the removal from service of all affected crankshaft assemblies. The unsafe condition, if not addressed, could result in failure of the engine, in-flight shutdown, and loss of the airplane.

Discussion of Final Airworthiness Directive Comments

The FAA received comments from seven commenters. The commenters were SAP, the Aircraft Owners and Pilots Association (AOPA), and five individual commenters. Three commenters requested that the FAA extend the comment period. One commenter requested the withdrawal of the AD. Two commenters asked the FAA to release more information. One commenter asked for the status of the AD and if the crankshaft assembly is safe to fly. The following presents the comments received on the NPRM and the FAA's response to each comment.

Request To Withdraw the NPRM: White Layer Does Not Contribute to Fracture

SAP stated that data from an independent laboratory test does not support the statement in the NPRM that the crankshaft failures were a result of residual white layer formation, also known as a compound layer, on certain crankshaft assemblies as a result of improper manufacturing by a third-party vendor. SAP stated that the fractured crankshafts were all within specifications. SAP found both the material and the heat treatment to be within all engineering requirements and consistent with other crankshafts in general aviation piston aircraft engines. SAP noted that these requirements were consistent with the engineering testing conducted by SAP in pursuit of FAA PMA certification. Additionally, SAP stated the fractures were not consistent with fatigue fractures due to excessive white layer, and that no manufacturing or material defect was found in independent metallurgical laboratory analysis. The FAA infers from this comment that SAP is requesting that the FAA withdraw the NPRM.

The FAA disagrees with SAP's analysis. BakerRisk Project No. 01–05929–003–17, dated August 15, 2017, for SAP crankshaft assembly S/N SP14–0202, which failed on March 6, 2017, found that there was a continuous white layer at the surface of the radius, extending up to the location of the fracture, and that the white layer may have contributed to early crack initiation.[1] The continuous white layer at the origin was 0.0007 inch. BakerRisk Project No. 01–05929–006–17, Rev. 1, dated May 8, 2018, for SAP crankshaft assembly S/N SP14–0194, which failed on August 3, 2017, found that the continuous white layer at the surface of the forward journal radius, extending up to the location of the fracture, was 0.0006 inch. According to the report, this indicates that the process being used to remove the white layer was not removing the entire white layer. Because it found that the presence of the white layer can lower fatigue resistance and result in premature fatigue crack initiation, the report included recommendations to review the material and the processes that define the crankshaft journals, especially the nitride case hardening and white layer removal process.[2]

SAP's comment cited Hurst Metallurgical Research Laboratory, Inc., (Hurst) Report No. 73900, dated February 22, 2019, for SAP crankshaft assembly S/N SP13–0150, which failed on October 31, 2018. This Hurst report found that the continuous white layer of iron nitride at the surface of the forward journal radius was 0.0001 inch. The FAA, however, disagrees with the reported thickness of the white layer. The report includes two scaled photographs (photographs No. 11 and 12), magnified 100 times and 500 times, respectively. Using the scaling bar provided in the photographs, the FAA determined that the white layer is 0.0009 inch. Although SAP stated a white layer of up to 0.001 inch is allowed, SAP based this figure on an SAE Aerospace Material specification and not on the original equipment manufacturer's (OEM) specifications. A white layer of 0.0009 inch exceeds the amount allowed by the OEM.

As supported by the reports, the FAA finds that white layer contributed to the early crack initiation and, on all failed crankshaft assemblies, exceeded OEM specifications. Based on the foregoing, the FAA finds no basis to withdraw the NPRM.

Request To Withdraw the NPRM: White Layer Does Not Increase Fatigue Resistance

SAP stated that the presence of a white layer does not reduce the fatigue resistance of material at the surface, but rather increases the fatigue resistance of that same material. SAP cited a study by Major, Jakl, and Hubálovský for the observation that the application of plasma carburizing can lead to about a 25% increase in fatigue resistance.[3] SAP stated a study by Hiraoka and Ishida[4] shows a marked increase in fatigue limit in a specimen with a 10 μm thick white layer as opposed to a specimen without a white layer, with a slight increase in the fatigue limit in a specimen with a 20 μm thick white layer as compared to the specimen with a 10 μm thick white layer. The FAA infers from this comment that SAP is requesting that the FAA withdraw the NPRM.

The FAA disagrees with the applicability of these studies to the unsafe condition identified in this AD. Although the application of plasma carburizing can lead to an increase in the fatigue resistance, the affected crankshaft assemblies were not plasma carburized. Therefore, the Major, Jakl, and Hubálovský study is not relevant here. Although the Hiraoka and Ishida study did reveal an increase in fatigue limit of gas nitrided steel with a white layer over one without a white layer, the study's test environment did not replicate the conditions applicable to an engine crankshaft as identified in Advisory Circular No. 33.19–1, ''Guidance Material for 14 CFR § 33.19, Durability, for Reciprocating Engine Redesigned Parts,'' dated September 27,

[1] See pp. 2–3 of BakerRisk Project No. 01–05929–003–17.

[2] See pp. 4–5 of BakerRisk Project No. 01–05929–006–17, Rev. 1.

[3] Štepán Major, Vladimir Jakl, & Štepán Hubálovský, *Effect of carburizing on fatigue life of high-strength steel specimen under push-pull loading,* Advances in Engineering Mechanics and Materials, 143 (2014).

[4] Yaushi Hiraoka & Akihiro Ishida, *Effect of Compound Layer Thickness Composed of γ'-Fe4N on Rotated-Bending Fatigue Strength in Gas-Nitrided JIS–SCM435 Steel,* 58 MATERIALS TRANSACTIONS 993 (2017).

2004 (AC 33.19–1). A crankshaft is a part whose primary fatigue mechanism is a forced vibratory response in combination with a resonant vibratory response that occurs at any engine speed at which the natural frequency of the part (or assembly that includes the part) coincides with the frequency of a combustion or inertia harmonic. AC 33.19–1 recommends 300 hours of engine tests, including a vibration test at peak torsional resonance conditions, to test the fatigue strength of the crankshaft.

The white layer is well-established to be problematic in that it is brittle. The OEM removes the white layer during the manufacturing process. As a PMA holder, 14 CFR 21.303 requires that SAP produce a part that is equivalent to the OEM part. Based on the foregoing, the FAA finds no basis to withdraw the NPRM.

Request To Withdraw the NPRM: Operation Outside of Normal Conditions

SAP stated the fractures of the crankshaft assemblies cited in the NPRM were due to misuse, abuse, or lack of lubrication. In support, SAP cited Hurst Report No. 73614, Rev. 1, dated December 7, 2018, for SAP crankshaft assembly S/N SP14–0202 and Hurst Report No. 73617, Rev. 1, dated December 7, 2018, for SAP crankshaft assembly S/N SP14–0194, which indicate that the fractures were likely initiated by abnormal service conditions, such as a propeller strike and a start-up of the engine in a low-temperature (below optimal performing temperature) environment. SAP also cited Hurst Report No. 73900 for SAP crankshaft assembly S/N SP13–0150, which indicates that likely contributors of the failure include rod sliding bearing failure due to insufficient lubrication, misalignment of the crankshaft, and improper engine performance from inadequate operation procedure resulting in high bending moment at the radius locations from excessive force from the piston assembly. SAP stated that all three of these crankshafts were operated in a flight school environment. The FAA infers from this comment that SAP is requesting that the FAA withdraw the NPRM.

The FAA disagrees that the fracture was initiated by the operation of the engines outside of ''normal'' conditions or parameters. With respect to Hurst Report No. 73614 for SAP crankshaft assembly S/N SP14–0202 and Hurst Report No. 73617 for SAP crankshaft assembly S/N SP14–0194, none of the engines exhibited evidence of propeller strikes, and none were started below optimal performance temperature. According to Lycoming,[5] cold weather requiring the use of pre-heat to avoid a cold engine start-up is 10 degrees Fahrenheit or below. Two of the incidents occurred in August (Canada) and October (Florida), making cold engine start-up unlikely. The third incident occurred in March (Massachusetts), which had a low of 16 degrees Fahrenheit at 6 a.m. and proceeded to a high of 41 degrees Fahrenheit in the afternoon.

With respect to Hurst Report No. 73900 for SAP crankshaft assembly S/N SP13–0150, the pilot and mechanic separately reported the engine had good oil pressure, indicating that the engine did not suffer from a lack of proper lubrication at the time of the crankshaft assembly failure. The report identifies possible contributors of single origin fatigue failure, including the misalignment of the crankshaft assembly or improper engine performance from inadequate operation procedure resulting in high bending moment at the radius locations from excessive force from the piston assembly. However, the report does not provide evidence to support these contributors. Based on the foregoing, the FAA declines to withdraw the NPRM.

Request To Review National Transportation Safety Board (NTSB) Reports

An individual commenter requested to review the NTSB reports on the accidents mentioned in the NPRM. The commenter was unable to locate anything in the NTSB database concerning engine stoppage in aircraft powered by Lycoming or SAP O–360 or IO–360 engines.

The NTSB did not generate reports for the three incidents that resulted from the crankshaft failures discussed in the NPRM. Therefore, the FAA did not rely on NTSB reports and is not in possession of any report generated as a result of the three incidents.

Request To Add Metallurgical Analyses to the Docket

An individual commenter requested that the FAA add its metallurgical analyses to the docket. The commenter stated that it was his understanding from discussions with the FAA that the FAA has shared its metallurgical analyses with SAP.

The FAA agrees and has uploaded the BakerRisk and Hurst metallurgical reports provided by SAP to the AD docket, as SAP has agreed to release these reports to the public. The FAA, however, did not perform its own metallurgical testing. The FAA instead relied on metallurgical testing performed by BakerRisk and Hurst for SAP.

Request To Release Pertinent Information

An individual commenter requested that the FAA release information it has on this issue, including the circumstances of the crankshaft assembly failures, the cost of crankshaft assembly replacement, and the scope of the proposed action.

The FAA agrees to provide additional information about the circumstances of the failures. In each incident, the crankshaft assembly broke into two pieces. The March 6, 2017, incident resulted in the crankshaft separating at journal #2 while the August 3, 2017, and October 31, 2018, incidents both resulted in a separation of the crankshaft at journal #4. All of the incidents involved flight-training aircraft. Additionally, as discussed previously, the FAA has uploaded the metallurgical reports to the AD docket.

Both the NPRM and this final rule adequately explain the scope of the AD and contain a detailed estimate of the costs of compliance within this AD, including the cost of the crankshaft assembly replacement, labor cost, and total estimated cost to U.S. operators. This final rule also discusses the net benefit of this AD.

Request To Consider Costs of Implementing This AD

An individual commenter requested that the FAA consider the financial costs and unintended consequences of this AD, such as decreased aircraft value. The commenter estimates that the value of his aircraft has been reduced by at least $15,000 since the publication of the NPRM.

The FAA disagrees. The cost analysis in AD rulemaking actions typically includes only the costs associated with complying with the AD and does not include indirect costs such as loss of aircraft value. The FAA acknowledges that the general obligation of the operator to maintain its aircraft in an airworthy condition is sometimes expensive. However, and as discussed in more detail in the Benefits section, the FAA estimates that the benefits of this AD greatly exceed its cost.

[5] Lycoming Service Instruction No. 1505, dated July 1, 2002: ''The use of pre-heat will facilitate starting during cold weather, and is required when the engine has been allowed to drop to temperatures below +10 °F/−12 °C.''

Request To Clarify Applicability

An individual commenter asked if SAP crankshaft assemblies earlier than 2012 are affected by this AD.

The first affected SAP crankshaft assembly was shipped on July 31, 2012. SAP crankshaft assemblies assembled before July 31, 2012, are not affected by this AD.

Request To Extend Comment Period

SAP and AOPA requested that the FAA extend the comment period by 60 days to enable SAP to gather more information. SAP asked for more time to research, gather, and respond appropriately to the NPRM. AOPA similarly requested an extension to review the costs and overall scope, and to gather information to respond to the NPRM. SAP, AOPA, and an individual commenter requested the FAA extend the comment period because of delays due to the COVID–19 pandemic, such as the closure of laboratories for further testing and the reduction in aircraft operations.

The FAA disagrees. At SAP's request, the FAA met with SAP and AOPA in April 2020 to discuss the NPRM. During that meeting, the participants discussed certain aspects of the NPRM, including the white layer and metallurgical reports, the three failed crankshaft assemblies, and SAP's request for a 60-day extension to the comment period. A summary of the meeting is available in the AD docket. None of the information provided by SAP or AOPA justifies an extension of the comment period. If investigations by SAP or others reveal information that changes the FAA's determination regarding the unsafe condition, the FAA will consider future rulemaking.

Request for a Status Update

An individual commenter requested information regarding the FAA's progress on issuing this AD. The commenter stated that based on feedback from SAP, the crankshaft assembly is safe and that a metallurgy company inspected one of the affected crankshaft assemblies and did not find any issues.

The FAA disagrees with the assessment from SAP. The FAA reviewed the metallurgical reports from the incidents of failed crankshaft assemblies and determined that an unsafe condition exists in other crankshaft assemblies of the same type design. In each incident, the crankshaft assembly broke into two pieces, leading to loss of engine power. The crankshaft assemblies involved in the three incidents were found to have excessive white layer. As a result, this AD requires removing all affected crankshaft assemblies from service within 25 engine operating hours after the effective date of this AD.

Conclusion

The FAA reviewed the relevant data, considered the comments received, and determined that air safety requires adopting the AD as proposed. Accordingly, the FAA is issuing this AD to address the unsafe condition on these products.

Regulatory Flexibility Determination

The Regulatory Flexibility Act of 1980 (Pub. L. 96–354, codified as amended at 5 U.S.C. 601–612) (RFA) establishes ''as a principle of regulatory issuance that agencies shall endeavor, consistent with the objectives of the rule and of applicable statutes, to fit regulatory and informational requirements to the scale of the businesses, organizations, and governmental jurisdictions subject to regulation. To achieve this principle, agencies are required to solicit and consider flexible regulatory proposals and to explain the rationale for their actions to assure that such proposals are given serious consideration.'' Public Law 96–354, 2(b), September 19, 1980. The RFA covers a wide-range of small entities, including small businesses, not-for-profit organizations, and small governmental jurisdictions. Agencies must perform a review to determine whether a rule will have a significant economic impact on a substantial number of small entities. If the agency determines that it will, the agency must prepare a regulatory flexibility analysis as described in the RFA.

The FAA published an Initial Regulatory Flexibility Analysis (IRFA) in the proposed rule to aid the public in commenting on the potential impacts to small entities. The FAA considered the public comments in developing the final rule and this Final Regulatory Flexibility Analysis (FRFA).

Benefits

The FAA found that SAP, the manufacturer of the crankshaft assemblies, sold 192 SAP crankshaft assemblies to date: 115 of these crankshaft assemblies are estimated to be installed on type certificated airplanes and the remaining 77 crankshaft assemblies are estimated to be installed on experimental aircraft. The FAA's risk analysis indicates that 100 percent of crankshaft assembly failures will destroy the engine. Using the historical incident data (2000–2014), the FAA assumes that 24.4 percent of crankshaft assembly failures will result in aircraft hull loss while 22 percent of crankshaft assembly failures will result in fatalities. There would be an average of 2.1 fatalities per each crankshaft assembly accident. Applying these probabilities to the estimated 115 crankshaft assemblies installed on type certificated airplanes, the FAA estimates that if these crankshaft assemblies are not replaced and continue to be used in these airplanes, this will result in 53 fatalities (2.1 fatalities per crankshaft accident × 22 percent probability of a crankshaft assembly failure resulting in fatalities × 115 crankshaft assemblies) and 28 aircraft losses (24.4 percent probability of a crankshaft assembly failure destroying the airplane). This AD will prevent all 53 fatalities and 28 aircraft losses.

Using an average price of $50,000 for a small single engine airplane, an average price of $30,000 for a 360-series engine and the Department of Transportation's $9.6 million estimate for the Value of Statistical Life (VSL) from the ''Revised Departmental Guidance on Valuation of a Statistical Life in Economic Analysis,'' [6] the FAA estimated this AD final rule will result in monetized benefits of $512.8 million. [7]

Costs of Compliance

The costs of compliance with this AD consist of the cost to remove and replace a crankshaft assembly. The FAA estimates that this AD will affect 115 crankshaft assemblies installed on airplanes of U.S. registry. This cost estimate does not include 77 SAP crankshaft assemblies installed on experimental engines since this AD does not apply to these engines. The estimated compliance cost per crankshaft assembly is identified below.

Labor cost = 61 hours per crankshaft assembly replacement × $85 Hourly Wage = $5,185.

Equipment costs per crankshaft assembly replacement = $9,636 (Source: Average of the two vendors).

$5,185 labor per crankshaft assembly + $9,636 equipment costs per crankshaft

[6] *https://www.transportation.gov/office-policy/transportation-policy/revised-departmental-guidance-on-valuation-of-a-statistical-life-in-economic-analysis.*

[7] 53 preventable fatalities will amount to $508.8 million in benefits of this rule. (53 × $9.6 million). The value of 28 airplane losses is $1.4 million (28 × $50,000). The remaining 75.6 percent of crankshaft failures (100 percent − 24.4 percent crankshaft failure destroying the airplane) will result in $2.6 million in engine damages. (115 × 0.756 probability of crankshaft failure damaging an airplane engine × $30,000 value of 360 engine). Therefore, the total estimated benefits are $512.8 million ($508.8 million preventable fatalities + $1.4 million avoidable airplane loss + $2.6 million preventable engine damages).

assembly replacement = $14,821 compliance cost per engine.

The total costs to U.S. operators is $1,704,415 ($14,821 × 115), or $119,309 in annualized costs in perpetuity using a 7 percent discount rate. There are no additional costs after removing and replacing the crankshaft assembly.

Therefore, the FAA estimates that the net benefit of this final rule will be $511.1 million ($512.8 million benefits −$1.7 million costs), or $35.77 million in annualized net benefits using a 7 percent discount rate in perpetuity.

Final Regulatory Flexibility Analysis

Under § 604(a) of the RFA, the final analysis must contain the following:

(1) A statement of the need for, and objectives of, the rule;

(2) A statement of the significant issues raised by the public comments in response to the IRFA, a statement of the assessment of the agency of such issues, and a statement of any changes made in the proposed rule as a result of such comments;

(3) The response of the agency to any comments filed by the Chief Counsel for Advocacy of the Small Business Administration (SBA) in response to the proposed rule, and a detailed statement of any change made to the proposed rule in the final rule as a result of the comments;

(4) A description of and an estimate of the number of small entities to which the rule will apply or an explanation of why no such estimate is available;

(5) A description of the projected reporting, record-keeping, and other compliance requirements of the proposed rule, including an estimate of the classes of small entities which will be subject to the requirement and the type of professional skills necessary for the preparation of the report or record;

(6) A description of the steps the agency has taken to minimize the significant economic impact on small entities consistent with the stated objectives of applicable statutes, including a statement of the factual, policy, and legal reasons for selecting the alternative adopted in the final rule and why each of the other significant alternatives to the rule considered by the agency which affect the impact on small entities was rejected.

1. Need for and Objectives of the Rule

This final rule AD was prompted by three crankshaft assembly failures that resulted in the loss of engine power and immediate or emergency landings. The FAA is issuing this AD to prevent failure of the crankshaft assembly by requiring the removal of all affected crankshaft assemblies from service. Failure of a crankshaft assembly, if not addressed, could result in failure of the engine, in-flight shutdown, and loss of the airplane.

2. Significant Issues Raised in Public Comments

An individual commenter noted that some owners of affected aircraft may not be in a position to absorb the $15,000 cost of the crankshaft assembly replacement. The commenter proposed that the financial costs of this AD would exceed the FAA estimates in some cases and, therefore, the unintended consequences of this AD would destroy value out of proportion to the preservation of the safety of the national airspace system and the general public.

The FAA estimates the cost of replacing a single crankshaft assembly at $14,821. The risk of not replacing the crankshaft is not insignificant, and the crankshaft failure could cause engine loss, airplane loss, or fatality valued at $30,000, $50,000, and $9.6 million, respectively. When these potentially substantial losses and risks of fatality to each airplane owner and operator are considered, the $14,821 compliance cost per airplane is minimal. Further, the FAA estimates the benefits of this AD to be $512.8 million, which greatly exceeds its cost of $1.7 million, justifying this final rule.

Based on the risk and benefits analysis above, the FAA determined that no changes are necessary to the final rule as a result of this individual comment.

3. Response to SBA Comments

The Chief Counsel for Advocacy of the SBA did not file any comments in response to the proposed rule.

4. Small Entities to Which the Rule Will Apply

This AD applies to all SAP Model IO–360-series and O–360-series reciprocating engines and certain Lycoming Model AEIO–360-, IO–360-, and O–360-series reciprocating engines with a certain SAP crankshaft assembly installed. This SAP crankshaft assembly is installed as original equipment on the affected SAP engines and as a replacement part under PMA on the affected Lycoming engines. These engines are installed on airplanes performing various activities including, but not limited to, flight training, charter flights, and agriculture.

Under the RFA, the FAA must determine whether a final rule significantly affects a substantial number of small entities. The FAA uses the SBA criteria for determining whether an affected entity is small. For aircraft and engine manufacturers, aviation operators, and any business using an aircraft, the SBA criterion is 1,500 or fewer employees. The FAA estimates that this AD affects 115 crankshaft assemblies installed on airplanes of U.S. registry. The FAA does not have any information or data on whether these entities are small businesses according to the definition established by the SBA. Although in the NPRM the FAA requested comments and data that would allow the agency to more accurately assess the number of employees and sales revenues of the affected entities, no such comments or data was received. Accordingly, the FAA assumes for purposes of this final rule that some of the affected entities are small businesses.[8] The FAA determines that the estimated $14,821 compliance cost per aircraft due to this rule will have a significant impact on a substantial number of small entities.

5. Projected Reporting, Record-Keeping, and Other Compliance Requirements

There are no record-keeping costs or other compliance costs associated with this final rule.

6. Significant Alternatives Considered

As part of the FRFA, the FAA is required to consider regulatory alternatives that may be less burdensome. The FAA considered the following alternatives:

Do nothing: This option is not acceptable because the risk of additional failures of these crankshaft assemblies constitutes a known unsafe condition. The FAA estimates that this AD will prevent 53 fatalities and 28 aircraft losses, and monetized benefits of $512.8 million.

Periodic inspections: This option is not possible as the crankshaft assembly cannot be inspected without destroying it.

There is no direct safety alternative to the replacement of the crankshaft assembly. The replacement addresses a safety issue aimed at preventing the failure of the crankshaft assembly.

Therefore, the FAA rejected these two regulatory alternatives and determined that this rulemaking may have a significant economic impact on a substantial number of small entities.

[8] The FAA recognizes that many of these affected airplanes are recreational. The 2016 GAMA Databook shows that of 141,141 active General Aviation piston aircraft, 104,669 are used for personal or recreational purposes (74 percent), Using this distribution, only 30 of the 115 crankshaft assemblies would be installed in airplanes operated for business use.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866, and

(2) Will not affect intrastate aviation in Alaska.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

2020–25–12 Superior Air Parts, Inc.: Amendment 39–21354; Docket No. FAA–2018–1077; Project Identifier 2018–NE–40–AD.

(a) Effective Date

This airworthiness directive (AD) is effective January 15, 2021.

(b) Affected ADs

None.

(c) Applicability

This AD applies to the reciprocating engine models identified in paragraphs (c)(1) and (2) of this AD with a Superior Air Parts, Inc. (SAP) crankshaft assembly, part number (P/N) SL36500–A20 or P/N SL36500–A31, with serial numbers 82976–01; 82976–02; SP12–0003 through SP12–0089, inclusive; SP13–0034 through SP13–0150, inclusive; or SP14–0151 through SP14–0202, inclusive; installed.

(1) With SAP crankshaft assembly, P/N SL36500–A20, installed:

(i) SAP Model IO–360-series and O–360-series reciprocating engines.

(ii) Lycoming Engines (Lycoming) Model IO–360–B2F, IO–360–L2A, O–360, O–360–A2A, O–360–A2D, O–360–A2E, O–360–A2F, O–360–A2G, O–360–B2A, O–360–C2A, O–360–C2C, O–360–C2D, O–360–C2E, O–360–D2A, and O–360–D2B reciprocating engines.

(2) With SAP crankshaft assembly, P/N SL36500–A31, installed:

(i) SAP Model IO–360-series and O–360-series reciprocating engines.

(ii) Lycoming Model AEIO–360–H1A, IO–360–B1A, IO–360–B1B, IO–360–B1D, IO–360–B1E, IO–360–B1F, IO–360–M1A, O–360, O–360–A1A, O–360–A1C, O–360–A1D, O–360–A2A, O–360–C1A, O–360–C1G, O–360–C1C, O–360–C1E, and O–360–C1F reciprocating engines.

Note 1 to paragraph (c): This SAP crankshaft assembly may be installed as a replacement part under parts manufacturer approval on the affected Lycoming engines.

(d) Subject

Joint Aircraft System Component (JASC) Code 8520, Reciprocating Engine Power Section.

(e) Unsafe Condition

This AD was prompted by three crankshaft assembly failures that resulted in the loss of engine power and immediate or emergency landings. The FAA is issuing this AD to prevent failure of the crankshaft assembly. The unsafe condition, if not addressed, could result in failure of the engine, in-flight shutdown, and loss of the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Required Action

Within 25 engine operating hours after the effective date of this AD, remove the crankshaft assembly from service.

(h) Special Flight Permit

A one-time special flight permit may be issued to fly the aircraft to a maintenance facility to perform the actions of this AD with the following limitations: No passengers, visual flight rules (VFR) day conditions only, and avoid areas of known turbulence.

(i) Alternative Methods of Compliance (AMOCs)

(1) The Manager, Fort Worth ACO Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the certification office, send it to the attention of the person identified in Related Information.

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(j) Related Information

For more information about this AD, contact Justin Carter, Aviation Safety Engineer, Fort Worth ACO Branch, FAA, 10101 Hillwood Parkway, Fort Worth, TX 76177; phone: (817) 222–5146; fax: (817) 222–5245; email: *justin.carter@faa.gov.*

(k) Material Incorporated by Reference

None.

Issued on December 3, 2020.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 71

[Docket No. FAA–2020–0726; Airspace Docket No. 20–AGL–28]

RIN 2120–AA66

Amendment of Class E Airspace; Cairo, IL

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This action amends Class E airspace extending upward from 700 feet above the surface at Cairo Regional Airport, Cairo, IL. This action is the result of an airspace review caused by the decommissioning of the Cape Girardeau very high frequency omnidirectional range (VOR) navigational aid as part of the VOR Minimum Operational Network (MON) Program. The name and geographic coordinates of the airport are updated to coincide with the FAA's aeronautical database.

DATES: Effective 0901 UTC, February 25, 2021. The Director of the Federal Register approves this incorporation by reference action under Title 1 Code of

Federal Regulations part 51, subject to the annual revision of FAA Order 7400.11 and publication of conforming amendments.

ADDRESSES: FAA Order 7400.11E, Airspace Designations and Reporting Points, and subsequent amendments can be viewed online at *https://www.faa.gov/air_traffic/publications/.* For further information, you can contact the Airspace Policy Group, Federal Aviation Administration, 800 Independence Avenue SW, Washington, DC, 20591; Telephone: (202) 267–8783. The Order is also available for inspection at the National Archives and Records Administration (NARA). For information on the availability of FAA Order 7400.11E at NARA, email *fedreg.legal@nara.gov* or go to *https://www.archives.gov/federal-register/cfr/ibr-locations.html.*

FOR FURTHER INFORMATION CONTACT: John Fornito, Operations Support Group, Eastern Service Center, Federal Aviation Administration, 1701 Columbia Ave, College Park, GA 30337; Telephone (404) 305–6364.

SUPPLEMENTARY INFORMATION:

Authority for This Rulemaking

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it amends Class E airspace at Cairo Regional Airport, Cairo, IL, to support instrument flight rules operations in the area.

History

The FAA published a notice of prosed rulemaking in the **Federal Register** (85 FR 64422, October 13, 2020) for Docket No. FAA–2020–0726 to amend Class E airspace extending upward from 700 feet above the surface to within a 6.5-mile (reduced from a 7-mile) radius of Cairo Regional Airport, Cairo, IL; adding an extension 2.5 miles each side of the 330° bearing from the Cairo Non-Directional Beacon (NDB) extending from the 6.5-mile radius of the Cairo Regional Airport to 7 miles northwest of the Cairo NDB; and updating the name (previously Cairo Airport) and geographic coordinates of the airport to coincide with the FAA's aeronautical database.

This action is the result of an airspace review caused by the decommissioning of the Cape Girardeau VOR, which provided navigation information for the instrument procedures at this airport, as part of the VOR MON Program.

Interested parties were invited to participate in this rulemaking effort by submitting written comments on the proposal to the FAA. No comments were received.

Class E airspace designations are published in Paragraph 6005, of FAA Order 7400.11E, dated July 21, 2020, and effective September 15, 2020, which is incorporated by reference in 14 CFR 71.1. The Class E airspace designations listed in this document will be published subsequently in the Order.

Availability and Summary of Documents for Incorporation by Reference

This document amends FAA Order 7400.11E, Airspace Designations and Reporting Points, dated July 21, 2020, and effective September 15, 2020. FAA Order 7400.11E is publicly available as listed in the **ADDRESSES** section of this document. FAA Order 7400.11E lists Class A, B, C, D, and E airspace areas, air traffic routes, and reporting points.

The Rule

This amendment to Title 14 Code of Federal Regulations (14 CFR) part 71 amends Class E airspace extending upward from 700 feet above the surface to within a 6.5-mile (reduced from a 7-mile) radius of Cairo Regional Airport, Cairo, IL; adding an extension 2.5 miles each side of the 330° bearing from the Cairo NDB extending from the 6.5-mile radius of the Cairo Regional Airport to 7 miles northwest of the Cairo NDB; and updating the name (previously Cairo Airport) and geographic coordinates of the airport to coincide with the FAA's aeronautical database.

FAA Order 7400.11, Airspace Designations and Reporting Points, is published yearly and effective on September 15.

Regulatory Notices and Analyses

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It therefore: (1) Is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that only affects air traffic procedures and air navigation, it is certified that this rule, when promulgated, does not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

The FAA has determined that this action qualifies for categorical exclusion under the National Environmental Policy Act in accordance with FAA Order 1050.1F, ''Environmental Impacts: Policies and Procedures,'' paragraph 5–6.5a. This airspace action is not expected to cause any potentially significant environmental impacts, and no extraordinary circumstances exist that warrant preparation of an environmental assessment.

Lists of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

Adoption of the Amendment

In consideration of the foregoing, the Federal Aviation Administration amends 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

■ 1. The authority citation for part 71 continues to read as follows:

Authority: 49 U.S.C. 106(f), 106(g); 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

■ 2. The incorporation by reference in 14 CFR 71.1 of FAA Order 7400.11E, Airspace Designations and Reporting Points, dated July 21, 2020, effective September 15, 2020, is amended as follows:

Paragraph 6005 Class E Airspace Areas Extending Upward From 700 Feet or More Above the Surface of the Earth.

* * * * *

AGL IL E5 Cairo, IL [Amended]

Cairo Regional Airport, IL
(Lat. 37°03′51″ N, long. 89°13′10″ W)
Cairo NDB
(Lat. 37°03′40″ N, long. 89°13′23″ W)

That airspace extending upward from 700 feet above the surface within a 6.5-mile radius of Cairo Regional Airport, and within 2.5 miles each side of the 330° bearing from the Cairo NDB extending from the 6.5-mile radius from the Cairo Regional Airport to 7 miles northwest of the Cairo NDB.

Issued in College Park, Georgia, on December 7, 2020.

Andreese C. Davis,

Manager, Airspace & Procedures Team South, Eastern Service Center, Air Traffic Organization.

RIN 2120–AA66

Amendment of Class E Airspace; Dubois, PA

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This action amends Class E surface airspace and Class E airspace extending upward from 700 feet above the surface in Dubois, PA, due to the decommissioning of the Clarion Very High Frequency Omnidirectional Range Tactical Air Navigational System (VORTAC) and cancellation of the associated instrument approach procedure at Dubois Regional Airport. This action also updates the name of the airport, as well as the name and geographic coordinates of Penn Highlands Healthcare-Dubois Heliport. Controlled airspace is necessary for the safety and management of instrument flight rules (IFR) operations in the area.

DATES: Effective 0901 UTC, February 25, 2021. The Director of the Federal Register approves this incorporation by reference action under Title 1 Code of Federal Regulations part 51, subject to the annual revision of FAA Order 7400.11 and publication of conforming amendments.

ADDRESSES: FAA Order 7400.11E, Airspace Designations and Reporting Points, and subsequent amendments can be viewed online at *https://www.faa.gov/air_traffic/publications/.* For further information, you can contact the Airspace Policy Group, Federal Aviation Administration, 800 Independence Avenue SW, Washington, DC 20591; Telephone: (202) 267–8783. The Order is also available for inspection at the National Archives and Records Administration (NARA). For information on the availability of FAA Order 7400.11E at NARA, email *fedreg.legal@nara.gov* or go to *https://www.archives.gov/federal-register/cfr/ibr-locations.html.*

FOR FURTHER INFORMATION CONTACT: John Fornito, Operations Support Group, Eastern Service Center, Federal Aviation Administration, 1701 Columbia Avenue, College Park, GA 30337; Telephone (404) 305–6364.

SUPPLEMENTARY INFORMATION:

Authority for This Rulemaking

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106, describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it amends Class E airspace in Dubois, PA, to support IFR operations in the area.

History

The FAA published a notice of prosed rulemaking in the **Federal Register** (85 FR 59465, September 22, 2020) for Docket No. FAA–2020–0826 to amend Class E surface airspace from a 4-mile radius to a 4.8-mile radius, and remove all extensions. Also, the FAA proposed the amendment of Class E airspace extending upward from 700 feet above the surface in Dubois, PA, from a 8.5-mile radius to a 9.2-mile radius. In addition, the FAA proposed to update the geographic coordinates and name of the airport, as well as Penn Highland Healthcare-Dubois Heliport to coincide with the FAA's aeronautical database.

Subsequent to publication, the FAA found the names of DuBois Regional Airport and Penn Highland Healthcare-DuBois Heliport required updating. The correct names are Dubois Regional Airport and Penn Highlands Healthcare-Dubois Heliport. This action makes the update.

Interested parties were invited to participate in this rulemaking effort by submitting written comments on the proposal to the FAA. One comment supporting this action was received.

Class E airspace designations are published in Paragraph 6005 of FAA Order 7400.11E, dated July 21, 2020, and effective September 15, 2020, which is incorporated by reference in 14 CFR 71.1. The Class E airspace designations listed in this document will be published subsequently in the Order.

Availability and Summary of Documents for Incorporation by Reference

This document amends FAA Order 7400.11E, Airspace Designations and Reporting Points, dated July 21, 2020, and effective September 15, 2020. FAA Order 7400.11E is publicly available as listed in the **ADDRESSES** section of this document. FAA Order 7400.11E lists Class A, B, C, D, and E airspace areas, air traffic routes, and reporting points.

The Rule

This amendment to Title 14 Code of Federal Regulations (14 CFR) part 71 amends Class E surface airspace and Class E airspace extending upward from 700 feet above the surface at Dubois Regional Airport, (previously Du Bois-Jefferson County Airport), Dubois, PA, due to the decommissioning of the Clarion VORTAC and cancellation of the associated approach. In addition, the FAA updates the airport's name and the name and geographic coordinates of Penn Highlands Healthcare-Dubois Heliport, (previously Du Bois Regional Medical Center) to coincide with the FAA's aeronautical database.

Class E airspace designations are published in Paragraphs 6002 and 6005, respectively, of FAA Order 7400.11E, dated July 21, 2020, and effective September 15, 2020, which is incorporated by reference in 14 CFR 71.1. The Class E airspace designations listed in this document will be published subsequently in the Order.

FAA Order 7400.11, Airspace Designations and Reporting Points, is published yearly and effective on September 15.

Regulatory Notices and Analyses

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore: (1) Is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that only affects air traffic procedures an air navigation, it is certified that this rule, when promulgated, does not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

The FAA has determined that this action qualifies for categorical exclusion under the National Environmental Policy Act in accordance with FAA Order 1050.1F, ''Environmental Impacts: Policies and Procedures,'' paragraph 5–6.5a. This airspace action is not expected to cause any potentially significant environmental impacts, and no extraordinary circumstances exist that warrant preparation of an environmental assessment.

Lists of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

Adoption of the Amendment

In consideration of the foregoing, the Federal Aviation Administration amends 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

■ 1. The authority citation for part 71 continues to read as follows:

Authority: 49 U.S.C. 106(f), 106(g); 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

■ 2. The incorporation by reference in 14 CFR 71.1 of FAA Order 7400.11E, Airspace Designations and Reporting Points, dated July 21, 2020, effective September 15, 2020, is amended as follows:

Paragraph 6002 Class E Surface Airspace.

* * * * *

AEA PA E2 Dubois, PA [Amended]

Dubois Regional Airport, PA
(Lat. 41°10′42″ N, long. 78°53′55″ W)

That airspace extending upward from the surface within a 4.8-mile radius of Dubois Regional Airport. This Class E airspace is effective during the dates and times established in advance by a Notice to Airmen. The effective date and time will thereafter be continuously published in the Chart Supplement.

Paragraph 6005 Class E Airspace Areas Extending Upward From 700 Feet or More Above the Surface of the Earth.

* * * * *

AEA PA E5 Dubois, PA [Amended]

Dubois Regional Airport, PA
(Lat. 41°10′42″ N, long. 78°53′55″ W)
Penn Highlands Healthcare-Dubois Heliport
Point In Space Coordinates
(Lat. 41°06′52″ N, long. 78°46′26″ W)

That airspace extending upward from 700 feet or more above the surface within a 9.2-mile radius of Dubois Regional Airport and within a 6-mile radius of the Point In Space Coordinates serving Penn Highlands Healthcare-Dubois Heliport.

Issued in College Park, Georgia, on December 7, 2020.

Andreese C. Davis,

Manager, Airspace & Procedures Team South, Eastern Service Center, Air Traffic Organization.

BILLING CODE 4910–13–P

DEPARTMENT OF STATE

22 CFR Part 120

[Public Notice: 11274]

International Traffic in Arms Regulations: Notification of Temporary Suspension, Modification, or Exception to Regulations

AGENCY: Department of State.

ACTION: Extension of temporary suspensions, modifications, and exceptions.

SUMMARY: The Department of State is issuing this document to inform the public of a second extension to certain temporary suspensions, modifications, and exceptions to certain provisions of the International Traffic in Arms Regulations (ITAR) to provide for continued telework operations during the current SARS–COV2 public health emergency. This extension will terminate on June 30, 2021 unless otherwise extended in writing by the Directorate of Defense Trade Controls (DDTC). This action is taken in order to ensure continuity of operations among members of the regulated community.

DATES: This document is issued December 11, 2020.

FOR FURTHER INFORMATION CONTACT: Ms. Engda Wubneh, Office of Defense Trade Controls Policy, U.S. Department of State, telephone (202) 663–1809, or email *ddtccustomerservice@state.gov.* ATTN: June 2021 Extension of Suspension, Modification, and Exception.

SUPPLEMENTARY INFORMATION: In March 2020, the President declared a national emergency as a result of the COVID–19 pandemic. On May 1, 2020, the Department of State (the Department) published in the **Federal Register** a notification of certain temporary suspensions, modifications, and exceptions to the ITAR, necessary in order to ensure continuity of operations within the Directorate of Defense Trade Controls (DDTC) and among entities registered with DDTC pursuant to part 122 of the ITAR (85 FR 25287). These actions were taken pursuant to ITAR § 126.2, which allows for the temporary suspension or modification of provisions of the ITAR, and ITAR § 126.3, which allows for exceptions to provisions of the ITAR. These actions were taken in the interest of the security and foreign policy of the United States and warranted as a result of the exceptional and undue hardships and risks to safety caused by the public health emergency related to the SARS–COV2 pandemic.

Subsequently, on June 10, 2020, the Department published in the **Federal Register** a request for comment from the regulated community regarding the efficacy and termination dates of the temporary suspensions, modifications, and exceptions provided in 85 FR 25287, and requesting comment as to whether additional measures should be considered in response to the public health crisis. Of the four temporary suspensions, modifications, and exceptions to the ITAR announced in the May 1 notification referenced above, DDTC reviewed the public comments and decided to extend two measures until December 31, 2020: (1) ITAR § 120.39(a)(2) allowance for remote work; and (2) authorization to allow remote work under technical assistance agreement, manufacturing agreement, or exemption.

Based upon continued public health recommendations and as informed by responses to request for public comment in June 2020, it is apparent to DDTC that regulated entities will continue to engage in social distancing measures for the foreseeable future. Many commenters, one industry association, and several individual entities endorsed the telework provisions and requested that these measures be effective until the end of the year, if not extended indefinitely. DDTC agreed and extended the two measures until the end of 2020. DDTC is now extending these measures again until June 30, 2021 because DDTC believes that a failure to extend these temporary suspensions, modifications, and exceptions would have a negative impact on regulated entities' ability to safely engage in continued operations in the midst of the ongoing global public health emergency.

This second extension beyond December 31, 2020 is also necessary to provide time for DDTC to consider a permanent revision to the ITAR provisions relating to remote work. Although the Department is of the opinion that the notice and comment requirements of the Administrative Procedure Act are not applicable, in the coming months the Department intends to provide notice of and solicit comment related to proposed revisions to the

ITAR provisions related to remote work. The notice and comment process will require additional time, including to allow DDTC to address any potential revisions through the interagency process.

Pursuant to ITAR §§ 126.2 and 126.3, in the interest of the security and foreign policy of the United States and as warranted by the exceptional and undue hardships and risks to safety caused by the public health emergency related to the SARS–COV2 pandemic, notice is provided that the following temporary suspensions, modifications, and exceptions are being extended as follows:

1. As of March 13, 2020, a temporary suspension, modification, and exception to the requirement that a regular employee, for purposes of ITAR § 120.39(a)(2), work at the company's facilities, to allow the individual to work at a remote work location, so long as the individual is not located in Russia or a country listed in ITAR § 126.1. This suspension, modification, and exception shall terminate on June 30, 2021, unless otherwise extended in writing.

2. As of March 13, 2020, a temporary suspension, modification, and exception to authorize regular employees of licensed entities who are working remotely in a country not currently authorized by a technical assistance agreement, manufacturing license agreement, or exemption to send, receive, or access any technical data authorized for export, reexport, or retransfer to their employer via a technical assistance agreement, manufacturing license agreement, or exemption so long as the regular employee is not located in Russia or a country listed in ITAR § 126.1. This suspension, modification, and exception shall terminate on June 30, 2021, unless otherwise extended in writing.

This notification makes no other revision to the document published at 85 FR 25287, nor does it make any other temporary suspension, modification, or exception to the requirements of the ITAR.

Authority: 22 CFR 126.2 and 126.3)

Michael F. Miller,

Deputy Assistant Secretary for Defense Trade Controls, U.S. Department of State.

RIN 1545–BP15

Guidance Under Sections 951A and 954 Regarding Income Subject to a High Rate of Foreign Tax; Correction

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Final regulations; correction.

SUMMARY: This document contains corrections to Treasury Decision 9902, which was published in the **Federal Register** on Thursday, July 23, 2020. Treasury Decision 9902 contained final regulations under the global intangible low-taxed income and subpart F income provisions of the Internal Revenue Code regarding the treatment of income that is subject to a high rate of foreign tax.

DATES: This correction is effective on December 11, 2020.

FOR FURTHER INFORMATION CONTACT: Jorge M. Oben or Larry R. Pounders at (202) 317–6934 (not a toll-free number).

SUPPLEMENTARY INFORMATION:

Background

The final regulations that are the subject of this correction are issued under section 951A of the Code.

Need for Correction

As published, the final regulations contain errors that need to be corrected.

Correction of Publication

Accordingly, the final regulations (TD 9902) that are the subject of FR Doc. 2020–15351, beginning on page 44620 in the issue of July 23, 2020, are corrected as follows:

On page 44629, in the first column, the text of footnote 6 is corrected to read:

''Under currently applicable § 1.951A–1(e)(2), a domestic partnership can be a controlling domestic shareholder—for example, for purposes of determining which party elects the GILTI high-tax exclusion under § 1.951A–2(c)(7)(viii)(A), including potentially for taxable years beginning after December 31, 2017, under § 1.951A–7(b), as discussed in part VIII of this Summary of Comments and Explanation of Revisions.''

Crystal Pemberton,

Senior Federal Register Liaison, Publications and Regulations Branch, Legal Processing Division, Associate Chief Counsel, (Procedure and Administration).

Source of Income From Certain Sales of Personal Property

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Final regulations.

SUMMARY: This document contains final regulations modifying the rules for determining the source of income from sales of inventory produced within the United States and sold without the United States or vice versa. These final regulations also contain new rules for determining the source of income from sales of personal property (including inventory) by nonresidents that are attributable to an office or other fixed place of business that the nonresident maintains in the United States. Finally, these final regulations modify certain rules for determining whether foreign source income is effectively connected with the conduct of a trade or business within the United States.

DATES:

Effective Date: These final regulations are effective on December 11, 2020.

Applicability Dates: For dates of applicability, see §§ 1.863–1(f), 1.863–2(c), 1.863–3(g), 1.863–8(h), 1.864–5(e), 1.864–6(c)(4), and 1.865–3(g).

SUPPLEMENTARY INFORMATION:

Background

The Tax Cuts and Jobs Act, Public Law 115–97, 131 Stat. 2054, 2208 (2017) (the ''Act''), enacted on December 22, 2017, amended section 863(b) of the Internal Revenue Code (''Code''). On December 30, 2019, the Department of the Treasury (''Treasury Department'') and the IRS published proposed regulations (REG–100956–19) under sections 863, 864, 865, 937, and 1502 in the **Federal Register** (84 FR 71836) (the

''proposed regulations''). A public hearing on the proposed regulations was held on June 3, 2020. All written comments received in response to the proposed regulations are available at *https://www.regulations.gov* or upon request. Terms used but not defined in this preamble have the meaning provided in these final regulations.

Summary of Comments and Explanation of Revisions

I. Overview

The final regulations retain the overall approach of the proposed regulations, with certain revisions. This Summary of Comments and Explanation of Revisions section discusses those revisions as well as comments received in response to the solicitation of comments in the notice of proposed rulemaking. Comments outside the scope of this rulemaking are generally not addressed but may be considered in connection with future guidance projects.

II. Comments on and Revisions to Proposed § 1.863–1—Allocation of Gross Income Under Section 863(a) and Proposed § 1.863–3—Allocation and Apportionment of Income From Certain Sales of Inventory

The Act amended section 863 of the Code, which provides special sourcing rules for determining the source of income, including income partly from within and partly from without the United States. Specifically, the Act amended section 863(b) to allocate or apportion income from the sale or exchange of inventory property produced (in whole or in part) by a taxpayer within the United States and sold or exchanged without the United States or produced (in whole or in part) by the taxpayer without the United States and sold or exchanged within the United States (collectively, ''Section 863(b)(2) Sales'') solely on the basis of production activities with respect to that inventory. Before the Act, section 863(b) provided that income from Section 863(b)(2) Sales would be treated as derived partly from sources within and partly from sources without the United States without providing the basis for such allocation or apportionment. Consistent with the Act's changes to section 863(b), the proposed regulations amended § 1.863–3 in order to properly allocate or apportion gross income from Section 863(b)(2) Sales based solely on production activity.

Under § 1.863–3(c)(1)(ii)(A) (which has been redesignated in the final regulations as § 1.863–3(c)(2)(i)), where the taxpayer's production assets are located both within and without the United States, the amount of income from sources without the United States is determined by multiplying all the income attributable to the taxpayer's production activities by a fraction, the numerator of which is the average adjusted basis of production assets that are located without the United States and the denominator of which is the average adjusted basis of all the production assets located within and without the United States.

For purposes of applying this formula, the adjusted basis of production assets is determined under section 1011, which is adjusted under section 1016 for depreciation deductions allowed. The Act also amended section 168(k) to allow an additional first-year depreciation deduction of 100 percent of the basis of certain property placed in service after September 27, 2017, and before January 1, 2023. Therefore, certain new and used production assets placed in service and used predominantly within the United States during this period may have an adjusted basis of zero. However, production assets either placed in service or used predominantly without the United States, or both, do not qualify for this accelerated depreciation and must be depreciated using the straight-line method under the alternative depreciation system (''ADS'') of section 168(g)(2). In light of the Act's change to section 168(k) to allow accelerated depreciation in some circumstances, the proposed regulations provided a new rule for computing the adjusted basis of production assets for purposes of applying the allocation formula in § 1.863–3.

A. Income Attributable to Sales Activity

Section 1.863–3, as in effect before this Treasury Decision, provided rules and corresponding methods for allocating or apportioning gross income from Section 863(b)(2) Sales between production activity and sales activity. To implement the changes to section 863(b) under the Act, the proposed regulations proposed removing § 1.863–3(c)(2) which allocates and apportions income attributable to sales activity.

One comment argued that removing § 1.863–3(c)(2) could lead to double taxation when a foreign jurisdiction imposes taxation on the sales activity. The Act amended section 863(b) to source income from the sale by a taxpayer of inventory produced by that taxpayer based only on production activity. Under the Code, sales activity is no longer a relevant factor for allocating and apportioning such income. Therefore, the final regulations remove § 1.863–3(c)(2). But see part V of this Summary of Comments and Explanation of Revisions section for a discussion of the interaction with income tax treaties.

Another comment suggested that two aspects of § 1.863–3(c)(2) have continued relevance even after the Act's changes to section 863(b)(2). First, § 1.863–3(c)(2) has a special rule modifying the rule in § 1.861–7(c) that generally sources income from the sale of personal property based on the place of sale. Under § 1.861–7(c), a sale is generally treated as consummated in the place where the rights, title, and interest of the seller in the property are transferred to the buyer. However, if a taxpayer wholly produces inventory in the United States and sells it for use, consumption, or disposition in the United States, § 1.863–3(c)(2) presumes that the place of sale is in the United States, even if title passes outside the United States. The comment recommended the final regulations include a similar rule and expand it to inventory wholly or partly produced in the United States that is acquired by a related party and resold for use, consumption, or disposition in the United States with title passing outside the United States. The comment observed that in the absence of such a rule, the sale by the related party would generate foreign source income, notwithstanding the fact that the inventory was produced wholly or partly in the United States and ultimately sold for use, consumption, or disposition in the United States.

The final regulations do not adopt this comment. The place of sale rule of § 1.861–7(c) already contains a broad anti-abuse rule that would apply to any sales transactions ''arranged in a particular manner for the primary purpose of tax avoidance,'' which may cover certain related party arrangements about which the comment is concerned. Section 482 also applies to require that compensation paid between related parties is consistent with the arm's length standard and will take into account the business functions and assets of, and risks assumed by, the related party intermediary. The Treasury Department and the IRS continue to study issues related to the distribution among related entities of the business functions, assets, and risks that generate business income, including sales income, and may address these issues in future guidance, particularly with respect to the sourcing of income from certain digital transactions.

Second, the comment observed that § 1.863–3(c)(2) treats inventory as

wholly produced in the United States for purposes of determining whether the place of sale is presumed to be in the United States if only minor assembly, packaging, repackaging, or labeling occurs outside the United States. The comment recommended including this rule as part of proposed § 1.863–3(c)(1)(i). The final regulations adopt this comment in § 1.863–3(c)(1)(i) by incorporating the ''principles of § 1.954–3(a)(4)'' (other than § 1.954–3(a)(4)(iv)). Section 1.954–3(a)(4) provides rules for determining when a corporation has manufactured, produced, or constructed personal property. Under § 1.954–3(a)(4)(iii), packaging, repackaging, labeling, or minor assembly operations do not constitute the manufacture, production, or construction of property. Accordingly, under the final regulations, these principles apply for purposes of determining whether a taxpayer's activities constitute production activity under § 1.863–3(c)(1)(i) as well. See part II.B. of this Summary of Comments and Explanation of Revisions section.

B. Definition of Production Activities

Proposed § 1.863–1(b)(2) provided the rule for sourcing gross receipts from the sale of natural resources where the taxpayer performs production activities in addition to its ownership of a farm, mine, oil or gas well, other natural deposit, or uncut timber. Section 1.863–1(b)(3)(ii) defines such ''additional production activities'' by reference to the ''principles of § 1.954–3(a)(4).''

Under section 951(a)(1)(A), a United States shareholder of a controlled foreign corporation (''CFC'') includes in gross income its pro rata share of the CFC's subpart F income for the CFC's taxable year which ends with or within the taxable year of the shareholder. Section 952(a)(2) defines the term subpart F income to include foreign base company income. Section 954(a)(2) defines foreign base company income to include foreign base company sales income (''FBCSI'') for the taxable year. Section 954(d)(1) defines FBCSI to mean income derived by a CFC in connection with certain related party transactions. Section 1.954–3(a)(4) provides an exception to FBCSI when a CFC manufactures property that it sells. One comment supported defining ''additional production activities'' by reference to ''the principles of § 1.954–3(a)(4),'' as described in § 1.863–1(b)(3)(ii), and requested that §§ 1.863–3 and 1.865–3 include a similar cross reference.

The final regulations adopt this recommendation, in part. Specifically, under the final regulations, §§ 1.863–3 and 1.865–3 incorporate the principles of § 1.954–3(a)(4), with the exception of the rules regarding a ''substantial contribution to the manufacturing of personal property'' under § 1.954–3(a)(4)(iv). See §§ 1.863–3(c)(1)(i) and 1.865–3(d)(2). The final regulations also modify § 1.863–1(b)(3)(ii) to incorporate the principles of § 1.954–3(a)(4), other than the ''substantial contribution to the manufacturing of personal property'' under § 1.954–3(a)(4)(iv). The substantial contribution rules were added to § 1.954–3(a)(4) in T.D. 9438 (December 29, 2008) after the adoption of § 1.863–1(b)(3)(ii) in T.D. 8687 (November 27, 1996). While the Treasury Department and the IRS agree with the comment that the principles of § 1.954–3(a)(4) may generally be helpful in determining the location of production activity for sourcing purposes, the substantial contribution rules of § 1.954–3(a)(4)(iv) are concerned with whether there is production activity and do not address the geographic location of that production activity, which is relevant for sourcing under sections 861, 863, and 865. Additionally, the substantial contribution rules are premised on treating a corporation as engaged in production activities even if it is not engaged in the direct use of production assets (other than oversight assets), while § 1.863–3 focuses on sourcing income based on the location of a corporation's production assets that are used for production activities. See § 1.863–3(c)(1)(ii) (which has been redesignated in the final regulations as § 1.863–3(c)(2)). In this regard, there is not a clear metric for quantifying production arising from substantial contribution activities, even if such activities are properly identified, in order to assign production activities to a particular geographic location for purposes of determining the place of production under sections 861, 863, and 865. Therefore, the final regulations provide that the principles of § 1.954–3(a)(4), other than the substantial contribution rules in § 1.954–3(a)(4)(iv), apply in determining whether production activities exist.

C. Measuring Adjusted Basis of Production Assets

For inventory produced both within and without the United States, the proposed regulations continued to allocate or apportion the gross income between U.S. and foreign sources based on the formula in § 1.863–3(c)(1)(ii)(A) (redesignated as proposed § 1.863–3(c)(2)(i)). This formula determined the amount of foreign source income by multiplying the total gross income by a fraction, the numerator of which is the average adjusted basis of production assets located outside the United States and the denominator of which is the average adjusted basis of all production assets within and without the United States. The remaining gross income is from U.S. sources.

In light of the Act's changes to section 168(k), proposed § 1.863–3(c)(2)(ii) measured the adjusted basis of the U.S. production assets for purposes of this formula based on the alternative depreciation system (''ADS'') of section 168(g)(2). The preamble to the proposed regulations observed that such rule allows the basis of both U.S. and non-U.S. production assets to be measured consistently on a straight-line method over the same recovery period, and requested comments on using ADS for this purpose or alternatives for measuring relative U.S. and non-U.S. production assets.

One comment suggested that some taxpayers such as partnerships and S corporations would face administrative burdens if they had to maintain separate ADS books that they may not otherwise maintain if section 951A(d)(3) or 250(b)(2)(B) do not apply to them. The comment observed that the Act, in contrast to those other sections, does not mandate the use of ADS in the section 863(b) context. The comment requested that the final regulations maintain the existing rule of § 1.863–3(c)(1)(ii)(B) measuring the basis under section 1011 (as adjusted by section 1016), either as the principal rule or, alternatively, at the election of the taxpayer.

The final regulations do not adopt this comment. The Treasury Department and the IRS have determined that the use of ADS for this purpose will prevent the Act's modifications to section 168(k) (resulting in accelerated depreciation) from inappropriately skewing the apportionment formula under § 1.863–3(c)(2)(i) in favor of foreign source income. While the Act does not mandate the use of ADS for this purpose, the Treasury Department and the IRS have authority to mandate the use of ADS under sections 863(a) and 7805 and have determined that the use of ADS is necessary to accurately measure the place of production using adjusted basis, as other basis measurements might inappropriately inflate foreign production activities.

III. Comments on and Revisions to Proposed § 1.865–3—Source of Gross Income From Sales of Personal Property (Including Inventory Property) by a Nonresident Attributable to an Office or Other Fixed Place of Business in the United States

Section 865 provides rules for sourcing income from sales of personal property. Section 865(e)(2) applies with respect to all sales of personal property (including inventory) by a nonresident, as that term is defined in section 865(g)(1)(B), attributable to an office or other fixed place of business in the United States. Section 865(e)(2)(A) generally provides that income from any sale of personal property attributable to such an office or other fixed place of business is sourced in the United States. An exception is provided in section 865(e)(2)(B) for a sale of inventory for use, disposition, or consumption outside the United States if a foreign office of the nonresident ''materially participated'' in the sale. Section 865(e)(3) provides that the ''principles of section 864(c)(5) shall apply'' to determine whether a nonresident has an office or other fixed place of business and whether a sale is attributable to such office or other fixed place of business. Where applicable, section 865(e)(2) applies ''[n]otwithstanding any other provisions'' of subchapter N, part I, including sections 863(b), 861(a)(6), and 862(a)(6). The proposed regulations under § 1.865–3 clarified the application of the principles of section 864(c)(5) in the context of section 865(e)(2) and provided that sales of inventory property produced outside the United States and sold through an office maintained by the nonresident in the United States must be sourced in the United States in part.

Proposed § 1.865–3(e) also included a cross-reference to the rules for allocating and apportioning expenses to gross income effectively connected with the conduct of a trade or business in the United States in §§ 1.882–4 and 1.882–5. Since those regulations apply only to foreign corporations, one comment requested that the final regulations also refer to § 1.873–1 to cover nonresident alien taxpayers subject to proposed § 1.865–3. In response to this comment, the final regulations broaden the cross-references to include sections 882(c)(1) and 873(a) for purposes of allocating and apportioning expenses. See § 1.865–3(e).

The final regulations also reorder and revise parts of § 1.865–3 in a non-substantive manner solely for purposes of improving clarity and ease of application. The revision also helps to clarify that § 1.865–3 applies only if a nonresident maintains an office or other fixed place of business in the United States to which a sale of personal property is attributable. Otherwise, the source of the income, gain, or loss from the sale will be determined under other applicable provisions of section 865, such as section 865(b) through (d).

The final regulations also retain, with certain modifications, the rules for determining the portion of gross income from sales and production activities under § 1.865–3(d). Under the proposed regulations, the ''50/50 method,'' described in § 1.865–3(d)(2)(i), was the default method because it was ''an appropriate and administrable way'' to apply section 865(e)(2), but the proposed regulations also allowed nonresidents to elect a books and records method that would ''more precisely'' reflect their gross income from both sales and production activities, if any, in the United States, provided the nonresidents met certain requirements for maintaining their books of account under proposed § 1.865–3(d)(2)(ii)(B)(*1*) through (*3*). See 84 FR 71836, 71843. Under the final regulations, the 50/50 method continues to be the default method and taxpayers continue to be permitted to elect the books and records method. However, the Treasury Department and the IRS have determined that, where taxpayers have demonstrated the ability to use their books of account to determine their U.S. source gross income under the books and records method, a limitation is appropriate to prevent a nonresident from returning to the less precise 50/50 method solely to obtain a better tax result. In addition, the Treasury Department and the IRS have determined that revising the election to provide that it remains in effect until revoked would reduce the risk to taxpayers of inadvertently failing to include the election with their Federal income tax return. Accordingly, under the final regulations, an election to apply the books and records method continues until revoked and may not be revoked, without the consent of the Commissioner, for any taxable year beginning within 48 months of the end of the taxable year in which the election was made.

The final regulations also revise § 1.864–5 to clarify the interaction with section 865(e)(2) and (3) and the promulgation of § 1.865–3. Gross income, gain, or loss from the sale of personal property treated as from sources within the United States under § 1.865–3 will generally be effectively connected with the conduct of a trade or business in the United States to the extent provided in section 864(c), other than section 864(c)(4) or (5). Gross income, gain, or loss from the sale of personal property treated as from sources without the United States under § 1.865–3 is not described in § 1.864–5(b) and thus will generally not be effectively connected with the conduct of a trade or business in the United States.

The rules of §§ 1.864–5, 1.864–6, and 1.864–7 continue to apply, however, in determining whether foreign source income of nonresident aliens and foreign corporations that does not arise from the sale of personal property described in § 1.865–3(c) is effectively connected with the conduct of a trade or business in the United States. The rules of §§ 1.864–5, 1.864–6, and 1.864–7 also continue to apply in determining whether foreign source income from the sale of inventory by nonresident aliens, who would be residents under section 865(g)(1)(A), is effectively connected with the conduct of a trade or business in the United States.

IV. Comments on the Rules for Determining the Location or Existence of Production Activity

The proposed regulations did not modify the rules in § 1.863–3 for determining the location or existence of production activity for purposes of determining the sourcing of income derived from the sale of inventory. Section 1.863–3(c)(1)(i)(A) (which has been redesignated in the final regulations as § 1.863–3(c)(1)(i)) provides the rule for sourcing of income where production occurs only within the United States or only within foreign countries. That paragraph generally limits the scope of ''production activities'' to only ''those conducted directly by the taxpayer.'' Similarly, § 1.863–3(c)(1)(i)(B) (which has been redesignated in the final regulations as § 1.863–3(c)(1)(ii)) provides that production assets are those ''owned directly by the taxpayer that are directly used by the taxpayer to produce inventory.'' Section 1.863–3(c)(1)(ii) (which has been redesignated in the final regulations as § 1.863–3(c)(2)) provides the rule for the sourcing of income where production occurs both within and without the United States, and, as discussed in part II.C of this Summary of Comments and Explanation of Revisions section, allocates gross income based on the relative adjusted basis of production assets located within and without the United States, respectively.

The final regulations clarify the determination of the adjusted basis of production assets under § 1.863–

3(c)(1)(ii)(B) (which has been redesignated in the final regulations as § 1.863–3(c)(2)(ii)(A)). Under the final regulations, the adjusted basis of production assets for a taxable year is determined by averaging the basis of the assets at the beginning and end of the year, except in the event that a change during the year would cause the average to ''materially distort'' the calculation for sourcing of income attributable to production activity under § 1.863–3(c)(1)(ii)(A) (which has been redesignated in the final regulations as § 1.863–3(c)(2)(i)). This clarification uses certain concepts from § 1.861–9(g)(2)(i)(A) to further explain when a change might ''materially distort'' the calculation. For example, the rule applies when an event such as a late-year disposition of substantially all the U.S. production assets of a corporation would cause a material distortion in the corporation's calculation of the split between U.S. and foreign production activities.

One comment provided a range of suggestions to modify the rules of proposed §§ 1.863–3(c) and 1.865–3(d). This comment suggested that the rules of proposed §§ 1.863–3(c) and 1.865–3(d) were adequate, in general, where a taxpayer independently manufactured its own inventory, but inadequate with respect to other business models that rely on limited risk contract manufacturers or where multiple members of a group each perform only limited manufacturing functions in various jurisdictions. The comment observed that apportionment of gross income using the relative adjusted basis of production assets may not reflect high value-adding core production and risk management functions and ownership of production assets by unrelated contract manufacturers.

The comment suggested expanding the scope of covered production activities and ownership of production assets to include activities conducted and assets owned by related parties and unrelated agents of the taxpayer. The comment also recommended that these rules include any activities that constitute a ''substantial contribution'' within the meaning of § 1.954–3(a)(4)(iv) to better conform to the rules under subpart F. See part II.B of this Summary of Comments and Explanation of Revisions section. In addition, the comment suggested that § 1.863–3 should not allocate and apportion gross income using only the relative adjusted basis of production assets located within and without the United States, and recommended allocation and apportionment based on other metrics, such as the location of personnel involved in the production activities or personnel costs. The comment suggested that these modifications could, alternatively, be rebuttable presumptions that a taxpayer could overcome by showing that allocating and apportioning gross income based on adjusted basis or some other approach provides a more appropriate result under the taxpayer's facts.

Another comment suggested that the existing allocation and apportionment rules that rely on the relative adjusted basis of production assets encourage businesses to move (or locate additional) production assets outside the United States. Specifically, the comment expressed concern that treating income from the sale of inventory produced, in whole or in part, in the United States as U.S. source income might result in double taxation if the income is also subject to tax in a foreign jurisdiction, since the U.S. source income would be excluded from the numerator of the section 904 limitation, reducing the section 904 limitation, and potentially limiting the U.S. taxpayer's ability to use its foreign tax credits. The comment requested replacing these rules with a more comprehensive formula, preferably one that minimizes the risk of double taxation. The comment did not suggest an alternative formula and observed that further legislation may be necessary in this regard.

The Treasury Department and the IRS appreciate the various concerns presented by these comments and suggested revisions. The final regulations do not adopt these comments, but the Treasury Department and the IRS may consider these recommendations as part of a more comprehensive review of the sourcing rules for production activity (for purposes of both § 1.863–3 and § 1.865–3) in a future notice of proposed rulemaking. Additionally, the anti-abuse rule in § 1.863–3(c)(1)(iii) (which has been redesignated in the final regulations as § 1.863–3(c)(3)) already applies to make appropriate adjustments where taxpayers enter into or structure certain transactions with a principal purpose of reducing U.S. tax liability under § 1.863–3, including by using production assets owned by a related party. To clarify the application of this rule, the final regulations provide that the anti-abuse rule applies to transactions inconsistent with the purpose of § 1.863–3(b) or (c), and adds as an example that the anti-abuse rule may cover acquisitions of domestic production assets by related partnerships (or subsidiaries thereof) with a principal purpose of reducing the transferor's U.S. tax liability by treating income from the sale of inventory property as subject to section 862(a)(6) rather than section 863(b). The Treasury Department and the IRS continue to request comments regarding potential approaches to determine the location or existence of production activity or other modifications to § 1.863–3 that may be appropriate.

V. Comments on Income Tax Treaties

The preamble to the proposed regulations included a statement about how proposed § 1.865–3 interacted with U.S. income tax treaties under which the business profits of foreign treaty residents may be taxable in the United States only if the profits are attributable to a permanent establishment in the United States. The preamble to the proposed regulations stated, ''[w]ith respect to taxpayers entitled to the benefits of an income tax treaty, the amount of profits attributable to a U.S. permanent establishment will not be affected by these regulations.'' See 84 FR 71836, 71844.

One comment supported the preamble's statement and requested that, consistent with the statement in the preamble, the final regulations not apply to Section 863(b)(2) Sales in a manner that results in double taxation to U.S. taxpayers engaged in business operations through a permanent establishment in a treaty jurisdiction, notwithstanding the Act's change to section 863(b). The comment also requested that competent authority relief be provided in this regard. These regulations do not affect the ability of a taxpayer to rely on treaty provisions to mitigate or relieve double taxation, including treaty provisions that permit a taxpayer to make a request to the competent authority for assistance pursuant to a mutual agreement procedure article of an applicable income tax treaty.

VI. Comment on Proposed Applicability Date

The proposed regulations were proposed to apply to taxable years ending on or after December 23, 2019, although taxpayers and their related parties could generally apply the rules in their entirety for taxable years beginning after December 31, 2017, and ending before December 23, 2019. One comment requested that the final regulations apply to taxable years ending after December 31, 2019, because some taxpayers have consistently relied on the existing methods of § 1.863–3(b) for many years. The final regulations do not adopt this comment. Under section 7805(b)(1)(B), a final regulation can

apply to any taxable period ending on or after the date on which the proposed regulation to which such final regulation relates was filed with the **Federal Register**, which for these final regulations was December 23, 2019. The final regulations implement the Act's statutory change to section 863(b), which was effective for taxable years beginning after December 31, 2017. To provide certainty to taxpayers and avoid a multiplicity of different interpretations of the statute, the Treasury Department and the IRS have determined that it is appropriate for the final regulations to apply as closely as possible to the effective date of the statutory change.

Applicability Date

The final regulations generally apply to taxable years ending on or after December 23, 2019. Taxpayers may choose to apply the final regulations for any taxable year beginning after December 31, 2017, and ending before December 23, 2019, provided that the taxpayer and all persons that are related to the taxpayer (within the meaning of section 267 or 707) apply the final regulations in their entirety and, once applied, the taxpayer and all persons related to the taxpayer (within the meaning of section 267 or 707) continue to apply the final regulations in their entirety for all subsequent taxable years. See section 7805(b)(7). Alternatively, taxpayers may rely on the proposed regulations for any taxable year beginning after December 31, 2017, and ending on or before September 29, 2020, provided that the taxpayer and all persons that are related to the taxpayer (within the meaning of section 267 or 707) rely on the proposed regulations in their entirety and provided that the taxpayer and all persons that are related to the taxpayer (within the meaning of section 267 or 707) have not applied the final regulations to any preceding year.

Special Analyses

These regulations are not subject to review under section 6(b) of Executive Order 12866 pursuant to the Memorandum of Agreement (April 11, 2018) between the Treasury Department and the Office of Management and Budget regarding review of tax regulations.

I. Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520) (''PRA'') generally requires that a federal agency obtain the approval of OMB before collecting information from the public, whether such collection of information is mandatory, voluntary, or required to obtain or retain a benefit.

The final regulations include a collection of information in § 1.865–3(d)(2)(ii)(B). Section 1.865–3(d)(2)(ii)(B) allows a nonresident, as defined in section 865(g)(1)(B), whose inventory sales are described in § 1.865–3(d)(2) (relating to inventory produced by the nonresident) to elect to allocate the profit from such sales to its U.S. office using a books and records method under § 1.865–3(d)(2)(ii), rather than using a default ''50/50 method'' under § 1.865–3(d)(2)(i). If the collection of information in § 1.865–3(d)(2)(ii)(B) applies to a nonresident, the nonresident must maintain detailed records of its receipts and expenditures attributable to its sales and production activities to support the allocation of its income, gain, or loss to its sales activities in the United States under the principles of section 482. See § 1.865–3(d)(2)(ii)(B)(*2*). The nonresident must also prepare an explanation of how the allocation was determined. See § 1.865–3(d)(2)(ii)(B)(*3*). The nonresident must make an election to apply the books and records method under § 1.865–3(d)(2)(ii) by attaching a statement to its original timely filed Federal income tax return (including extensions) that it elects to apply the books and records method under § 1.865–3(d)(2)(ii)(A) and has prepared the records described in § 1.865–3(d)(2)(ii)(B)(*2*) and (*3*). The nonresident must make available the explanation and records upon request of the Commissioner, within 30 days or some other time period as agreed between the Commissioner and the nonresident. See § 1.865–3(d)(2)(ii)(B)(*3*).

The reporting burdens associated with the collection of information in § 1.865–3(d)(2)(ii)(B) will be reflected in the Form 14029, Paperwork Reduction Act Submission, that the Treasury Department and the IRS will submit to OMB for tax returns in the Forms 1120–F, U.S. Income Tax Return of a Foreign Corporation, and Forms 1040–NR, U.S. Nonresident Alien Income Tax Return. In particular, the reporting burden associated with the information collection in § 1.865–3(d)(2)(ii)(B) will be included in the burden estimate for OMB control numbers 1545–0123 and 1545–0074. OMB control number 1545–0123 represents a total estimated burden time for all forms and schedules for corporations of 3.344 billion hours and total estimated monetized costs of $61.558 billion ($2019). OMB control number 1545–0074 represents a total estimated burden time, including all other related forms and schedules for individuals, of 1.717 billion hours and total estimated monetized costs of $33.267 billion ($2019). Table 1 summarizes the status of the PRA submissions of the Treasury Department and the IRS related to Forms 1120–F and 1040–NR.

The overall burden estimate provided by the Treasury Department and the IRS to OMB in the PRA submissions for OMB control numbers 1545–0123 and 1545–0074 are aggregate amounts related to the U.S. Business Income Tax Return and the U.S. Individual Income Tax Return, along with any associated forms. The burden estimates in these PRA submissions, however, do not account for any burden imposed by § 1.865–3(d)(2)(ii)(B). The Treasury Department and the IRS have not identified the estimated burden for the collections of information in § 1.865–3(d)(2)(ii)(B) because there are no burden estimates specific to § 1.865–3(d)(2)(ii)(B) currently available. The burden estimates in the PRA submissions that the Treasury Department and the IRS will submit to OMB will in the future include, but not isolate, the estimated burden related to the collection of information in § 1.865–3(d)(2)(ii)(B).

The Treasury Department and the IRS have included the burdens related to the PRA submissions for OMB control numbers 1545–0123 and 1545–0074 in the PRA analysis for other regulations issued by the Treasury Department and the IRS related to the taxation of cross-border income. The Treasury Department and the IRS encourage users of this information to take measures to avoid overestimating the burden that the collection of information in § 1.865–3(d)(2)(ii)(B), together with other international tax provisions, imposes. Moreover, the Treasury Department and the IRS also note that the Treasury Department and the IRS estimate PRA burdens on a taxpayer-type basis rather than a provision-specific basis because an estimate based on the taxpayer-type most accurately reflects taxpayers' interactions with the forms.

The Treasury Department and the IRS request comments on the forms that reflect the information collection burdens related to the final regulations, including estimates for how much time it would take to comply with the paperwork burden described above for each relevant form and ways for the IRS to minimize the paperwork burden. Proposed revisions (if any) to these forms that reflect the information collection contained in § 1.865–3(d)(2)(ii)(B) will be made available for public comment at *https://apps.irs.gov/app/picklist/list/draftTaxForms.html* and will not be finalized until after

these forms have been approved by OMB under the PRA.

TABLE 1—SUMMARY OF INFORMATION COLLECTION REQUEST SUBMISSIONS RELATED TO FORMS 1120–F AND FORMS 1040–NR

Form	Type of filer	OMB Nos.	Status
Form 1040–NR	Individual (NEW Model)	1545–0074	Approved by OIRA 1/30/2020 until 1/31/2021.
	Link: *https://www.reginfo.gov/public/do/PRAViewICR?ref_nbr=201909-1545-021.*		
Form 1120–F	Business (NEW Model)	1545–0123	Approved by OIRA 1/30/2020 until 1/31/2021.

II. Regulatory Flexibility Act

Pursuant to the Regulatory Flexibility Act (5 U.S.C. chapter 6), it is hereby certified that these final regulations will not have a significant economic impact on a substantial number of small entities. Although data are not readily available to assess the number of small entities potentially affected, any economic impact of these regulations is unlikely to be significant. Specifically, the regulations in §§ 1.863–1 and 1.863–3 (with conforming changes in cross-referencing regulations) implement the statutory change made to section 863(b) by the Act. This change affects sales of inventory property by any taxpayer where the taxpayer produces the inventory (in whole or in part) within the United States and sells that inventory without the United States, or vice versa. The change in sourcing for those entities is attributable to the change in section 863(b) made by the Act. Sections 1.863–1 and 1.863–3 merely implement the statutory change with limited additional guidance. The Treasury Department and the IRS do not anticipate that any differences between the changes in section 863(b) made by the Act and the changes in §§ 1.863–1 and 1.863–3 made by these regulations will have a significant economic impact on a substantial number of small entities.

The other regulations in this publication (other than changes to ensure consistency with section 863(b)) are the final regulations in §§ 1.864–5, 1.864–6, and 1.865–3. These regulations solely affect non-U.S. taxpayers, which are not subject to the Regulatory Flexibility Act.

Pursuant to section 7805(f) of the Code, the proposed regulations preceding these final regulations were submitted to the Chief Counsel for Advocacy of the Small Business Administration for comment on their impact on small businesses. No comments were received.

III. Unfunded Mandates Reform Act

Section 202 of the Unfunded Mandates Reform Act of 1995 requires that agencies assess anticipated costs and benefits and take certain other actions before issuing a final rule that includes any Federal mandate that may result in expenditures in any one year by a state, local, or tribal government, in the aggregate, or by the private sector, of $100 million in 1995 dollars, updated annually for inflation. These regulations do not include any Federal mandate that may result in expenditures by state, local, or tribal governments, or by the private sector in excess of that threshold.

IV. Executive Order 13132: Federalism

Executive Order 13132 (entitled ''Federalism'') prohibits an agency from publishing any rule that has federalism implications if the rule either imposes substantial, direct compliance costs on state and local governments, and is not required by statute, or preempts state law, unless the agency meets the consultation and funding requirements of section 6 of the Executive Order. These regulations do not have federalism implications and do not impose substantial direct compliance costs on state and local governments or preempt state law within the meaning of the Executive Order.

Drafting Information

The principal author of the regulations is Brad McCormack of the Office of Associate Chief Counsel (International). However, other personnel from the Treasury Department and the IRS participated in the development of the regulations.

List of Subjects in 26 CFR Part 1

Income taxes, Reporting and recordkeeping requirements.

Adoption of Amendments to the Regulations

Accordingly, 26 CFR part 1 is amended as follows:

PART 1—INCOME TAXES

■ **Paragraph 1.** The authority citation for part 1 is amended by adding an entry for § 1.865–3 in numerical order.

The addition reads in part as follows:

Authority: 26 U.S.C. 7805 * * *

* * * * *

Section 1.865–3 also issued under 26 U.S.C. 865(j).

* * * * *

■ **Par. 2.** Section 1.863–0 is revised to read as follows:

§ 1.863–0 Table of contents.

This section lists captions contained in §§ 1.863–1 through 1.863–10.

§ 1.863–1 Allocation of gross income under section 863(a).

(a) In general.
(b) Natural resources.
(1) In general.
(2) Additional production activities.
(3) Definitions.
(i) Production activity.
(ii) Additional production activities.
(4) Determination of fair market value.
(5) Determination of gross income.
(6) Tax return disclosure.
(7) Examples.
(i) Example 1. No additional production, foreign source gross receipts.
(ii) Example 2. No additional production, U.S. source gross receipts.
(iii) Example 3. Production in United States, foreign sales.
(iv) Example 4. Production and sales in United States.
(v) Example 5. Additional production.
(c) Determination of taxable income.
(d) Scholarships, fellowship grants, grants, prizes, and awards.
(1) In general.
(2) Source of income.
(i) United States source income.
(ii) Foreign source income.
(iii) Certain activities conducted outside the United States.
(3) Definitions.
(4) Effective dates.
(i) Scholarships and fellowship grants.
(ii) Grants, prizes and awards.
(e) Residual interest in a REMIC.
(1) REMIC inducement fees.
(2) Excess inclusion income and net losses.

■ **Par. 3.** Section 1.863–0A is added to read as follows:

§ 1.863–0A Table of contents.

This section lists captions contained in §§ 1.863–3A and 1.863–3AT.

■ **Par. 4.** Section 1.863–1 is amended as follows:
■ a. In paragraph (a):
■ i. Revising the third sentence.
■ ii. Removing ''§ 1.863–3(g)'' and adding in its place ''§ 1.863–3(f).''
■ b. Revising paragraph (b)(1).
■ c. In paragraph (b)(2):
■ i. Removing ''prior to export terminal'' from the heading and adding in its place ''activities.''
■ ii. Removing ''before the relevant product is shipped from the export terminal'' from the first sentence.
■ iii. Adding ''oil or gas'' before ''well'' and ''other natural'' before ''deposit'' in the second sentence.
■ d. Removing ''§§ 1.1502–13 or 1.863–3(g)(2)'' from paragraph (b)(3)(i) and adding in its place ''§ 1.1502–13 or 1.863–3(f)(2).''
■ e. In paragraph (b)(3)(ii):
■ i. Adding ''uncut'' before ''timber'' in the first sentence.
■ ii. Adding ''(except for § 1.954–3(a)(4)(iv))'' at the end of the second sentence.
■ iii. Removing ''to or from the export terminal'' from the third sentence.
■ f. Removing paragraph (b)(3)(iii).
■ g. In paragraph (b)(6), removing ''this paragraph (b)'' from the first sentence and adding in its place ''paragraph (b)(2) of this section.''
■ h. Designating *Examples 1, 2, 3, 4,* and *5* of paragraph (b)(7) as paragraphs (b)(7)(i) through (v).
■ i. Revising newly designated paragraphs (b)(7)(i) through (v).
■ j. In paragraph (f):
■ i. Revising the heading.
■ ii. Adding three sentences at the start of the paragraph.

The revisions and additions read as follows:

§ 1.863–1 Allocation of gross income under section 863(a).

(a) * * * See also section 865(b) for rules for sourcing income from the sale of inventory property, within the meaning of section 865(i)(1) (inventory), generally, and section 865(e)(2) and § 1.865–3 for sourcing income from the sale of personal property (including inventory) by a nonresident that is attributable to the nonresident's office or other fixed place of business in the United States. * * *

(b) *Natural resources*—(1) *In general.* Notwithstanding any other provision of this part, except to the extent provided in paragraph (b)(2) of this section or § 1.865–3, gross receipts from the sale outside the United States of products derived from the ownership or operation of any farm, mine, oil or gas well, other natural deposit, or uncut timber within the United States shall be treated as from sources within the United States, and gross receipts from the sale within the United States of products derived from the ownership or operation of any farm, mine, oil or gas well, other natural deposit, or uncut timber outside the United States shall be treated as from sources without the United States.

* * * * *

(7) * * *

(i) *Example 1. No additional production, foreign source gross receipts.* U.S. Mines, a domestic corporation, operates a copper mine and mill in Country X. U.S. Mines extracts copper-bearing rocks from the ground and transports the rocks to the mill where the rocks are ground and processed to produce copper-bearing concentrate. The concentrate is transported to a port where it is dried in preparation for export, stored, and then shipped to purchasers in the United States. Because, under the facts and circumstances, none of U.S. Mines' activities constitute additional production activities, within the meaning of paragraph (b)(3)(ii) of this section, paragraph (b)(2) of this section does not apply, and under paragraph (b)(1) of this section, gross receipts from the sale of the concentrate will be treated as from sources without the United States.

(ii) *Example 2. No additional production, U.S. source gross receipts.* U.S. Gas, a domestic corporation, extracts natural gas within the United States, and transports the natural gas to a Country X port where it is liquefied in preparation for shipment. The liquefied natural gas is then transported via freighter and sold without additional production activities in a foreign country. Under paragraph (b)(3)(ii) of this section, liquefaction of natural gas is not an additional production activity because liquefaction prepares the natural gas for transportation. Therefore, under paragraph (b)(1) of this section, gross receipts from the sale of the liquefied natural gas will be treated as from sources within the United States.

(iii) *Example 3. Production in United States, foreign sales.* U.S. Gold, a domestic corporation, mines gold in Country X, produces gold jewelry using production assets located in the United States, and sells the jewelry in Country Y. Assume that the fair market value of the gold before the additional production activities in the United States is $40x and that U.S. Gold ultimately sells the gold jewelry in Country Y for $100x. Under paragraph (b)(2) of this section, $40x of U.S. Gold's gross receipts will be treated as from sources without the United States, and the remaining $60x of gross receipts will be treated as from sources within the United States under § 1.863–3.

(iv) *Example 4. Production and sales in United States.* U.S. Oil, a domestic corporation, extracts oil in Country X, transports the oil via a pipeline to the United States, refines the oil using production assets located in the United States, and sells the refined product in the United States to unrelated persons.

Assume that the fair market value of the oil before refinement in the United States is $80x and U.S. Oil ultimately sells the refined product for $100x. Under paragraph (b)(2) of this section, $80x of gross receipts will be treated as from sources without the United States, and the remaining $20x of gross receipts will be treated as from sources within the United States under § 1.863–3.

(v) *Example 5. Additional production.* The facts are the same as in paragraph (b)(7)(i) of this section (the facts in *Example 1*), except that U.S. Mines also operates a smelter in Country X. The concentrate output from the mill is transported to the smelter where it is transformed into smelted copper. The smelted copper is exported to purchasers in the United States. Under the facts and circumstances, all the processes applied to make copper concentrate are considered mining. Therefore, under paragraph (b)(2) of this section, gross receipts equal to the fair market value of the concentrate at the smelter will be treated as from sources without the United States. Under the facts and circumstances, the conversion of the concentrate into smelted copper is an additional production activity in a foreign country within the meaning of paragraph (b)(3)(ii) of this section. Therefore, the source of U.S. Mines's excess gross receipts will be determined under § 1.863–3, pursuant to paragraph (b)(2) of this section.

* * * * *

(f) *Applicability date.* Paragraph (b) of this section applies to taxable years ending on or after December 23, 2019. However, a taxpayer may apply paragraph (b) of this section in its entirety for taxable years beginning after December 31, 2017, and ending before December 23, 2019, provided that the taxpayer and all persons related to the taxpayer (within the meaning of section 267 or 707) apply paragraph (b) of this section and §§ 1.863–2(b), 1.863–3, 1.863–8(b)(3)(ii), 1.864–5(a) and (b), 1.864–6(c)(2), and 1.865–3 in their entirety for the taxable year, and once applied, the taxpayer and all persons related to the taxpayer (within the meaning of section 267 or 707) continue to apply these regulations in their entirety for all subsequent taxable years. For regulations generally applicable to taxable years ending before December 23, 2019, see § 1.863–1 as contained in 26 CFR part 1 revised as of April 1, 2020. * * *

■ **Par. 5.** Section 1.863–2 is amended as follows:

■ a. In paragraph (a) introductory text:

■ i. Removing ''(and that is treated as derived partly from sources within and partly from sources without the United States)'' from the third sentence.

■ ii. Adding a colon after the word ''income'' at the end of the paragraph.

■ b. Revising paragraph (b).

■ c. Revising paragraph (c).

The revisions read as follows:

§ 1.863–2 Allocation and apportionment of taxable income.

* * * * *

(b) *Determination of source of taxable income.* Income treated as derived from sources partly within and partly without the United States under paragraph (a) of this section may be allocated or apportioned to sources within and without the United States pursuant to §§ 1.863–1, 1.863–3, 1.863–4, 1.863–8, and 1.863–9. To determine the source of certain types of income described in paragraph (a)(1) of this section, see § 1.863–4. To determine the source of gross income described in paragraph (a)(2) of this section, see § 1.863–1 for natural resources, § 1.863–3 for other sales of inventory property, and § 1.863–8 for source of gross income from space and ocean activity. Section 1.865–3 may apply instead of the provisions in this section to source gross income from sales of personal property (including inventory property) by nonresidents attributable to an office or other fixed place of business in the United States. To determine the source of income partly from sources within a possession of the United States, including income described in paragraph (a)(3) of this section, see § 1.863–3(e).

(c) *Applicability date.* Except as provided in this paragraph (c), this section applies to taxable years beginning after December 30, 1996. Paragraph (b) of this section applies to taxable years ending on or after December 23, 2019. However, a taxpayer may apply paragraph (b) of this section in its entirety for taxable years beginning after December 31, 2017, and ending before December 23, 2019, provided that the taxpayer and all persons related to the taxpayer (within the meaning of section 267 or 707) apply paragraph (b) of this section and §§ 1.863–1(b), 1.863–3, 1.863–8(b)(3)(ii), 1.864–5(a) and (b), 1.864–6(c)(2), and 1.865–3 in their entirety for the taxable year, and once applied, the taxpayer and all persons related to the taxpayer (within the meaning of section 267 or 707) continue to apply these regulations in their entirety for all subsequent taxable years. For regulations generally applicable to taxable years ending before December 23, 2019, see § 1.863–2 as contained in 26 CFR part 1 revised as of April 1, 2020.

■ **Par. 6.** Section 1.863–3 is revised as follows:

§ 1.863–3 Allocation and apportionment of income from certain sales of inventory.

(a) *In general*—(1) *Scope.* Subject to the rules of § 1.865–3, paragraphs (a) through (d) of this section apply to determine the source of income derived from the sale of inventory property (inventory) that a taxpayer produces (in whole or in part) within the United States and sells without the United States, or that a taxpayer produces (in whole or in part) without the United States and sells within the United States (collectively, Section 863(b)(2) Sales). See section 865(i)(1) for the definition of inventory. Paragraph (b) of this section provides that the source of gross income from Section 863(b)(2) Sales is based solely on the production activities with respect to the inventory. Paragraph (c) of this section describes how to determine source based on production activity, including when inventory is produced partly within the United States and partly without the United States. Paragraph (d) of this section determines taxable income from Section 863(b)(2) Sales. Paragraph (e) of this section applies to determine the source of certain income derived from a possession of the United States. Paragraph (f) of this section provides special rules for partnerships for all sales subject to §§ 1.863–1 through 1.863–3. Paragraph (g) of this section provides applicability dates for the rules in this section.

(2) *Cross references.* To determine the source of income derived from the sale of personal property (including inventory) by a nonresident that is attributable to the nonresident's office or other fixed place of business in the United States under section 865(e)(2) and § 1.865–3(c), the rules of § 1.865–3 apply, and the rules of this section do not apply except to the extent provided in § 1.865–3. To determine the source of income from sales of property produced by the taxpayer, when the property is either produced in whole or in part in space, as defined in § 1.863–8(d)(1)(i), or international water, as defined in § 1.863–8(d)(1)(ii), or is sold in space or international water, the rules of § 1.863–8 apply, and the rules of this section do not apply except to the extent provided in § 1.863–8.

(b) *Sourcing based solely on production activities.* Subject to the rules of § 1.865–3, all income, gain, or loss derived from Section 863(b)(2) Sales is allocated and apportioned solely on the basis of the production activities with respect to the inventory.

(c) *Determination of the source of gross income from production activity*—(1) *Production only within the United States or only within foreign countries*—(i) *Source of income.* For purposes of this section, production activity means an activity that creates, fabricates, manufactures, extracts, processes, cures, or ages inventory. See § 1.864–1. Whether a taxpayer's activities constitute production activity is determined under the principles of § 1.954–3(a)(4) (except for § 1.954–3(a)(4)(iv)). Subject to the provisions in § 1.1502–13 or paragraph (f)(2)(ii) of this section, the only production activities that are taken into account for purposes of §§ 1.863–1, 1.863–2, and this section are those conducted directly by the taxpayer. Where the taxpayer's production assets are located only within the United States or only outside the United States, gross income is sourced where the taxpayer's production assets are located. For rules regarding the source of income when production assets are located both within the United States and without the United States, see paragraph (c)(2) of this section. For rules regarding the source of income when production takes place, in whole or in part, in space or international water, the rules of § 1.863–8 apply, and the rules of this section do not apply except to the extent provided in § 1.863–8.

(ii) *Definition of production assets.* Subject to the provisions of § 1.1502–13 and paragraph (f)(2)(ii) of this section, production assets include only tangible and intangible assets owned directly by the taxpayer that are directly used by the taxpayer to produce inventory described in paragraph (a) of this section. Production assets do not include assets that are not directly used to produce inventory described in paragraph (a) of this section. Thus, production assets do not include such assets as accounts receivables, intangibles not related to production of inventory (*e.g.,* marketing intangibles, including trademarks and customer lists), transportation assets, warehouses, the inventory itself, raw materials, or work-in-process. In addition, production assets do not include cash or other liquid assets (including working capital), investment assets, prepaid expenses, or stock of a subsidiary.

(iii) *Location of production assets.* For purposes of this section, a tangible production asset will be considered located where the asset is physically located. An intangible production asset will be considered located where the tangible production assets owned by the taxpayer to which it relates are located.

(2) *Production both within and without the United States*—(i) *Source of income.* Where the taxpayer's production assets are located both within and without the United States, income from sources without the United States will be determined by multiplying the gross income by a fraction, the numerator of which is the average adjusted basis of production assets that are located outside the United States and the denominator of which is the average adjusted basis of all production assets within and without the United States. The remaining income is treated as from sources within the United States.

(ii) *Adjusted basis of production assets*—(A) *In general.* For purposes of paragraph (c)(2)(i) of this section, the adjusted basis of an asset is determined by using the alternative depreciation system under section 168(g)(2). The adjusted basis of all production assets for purposes of paragraph (c)(2)(i) of this section is determined as though the production assets were subject to the alternative depreciation system set forth in section 168(g)(2) for the entire period that such property has been in service. The adjusted basis of the production assets is determined without regard to the election to expense certain depreciable assets under section 179 and without regard to any additional first-year depreciation provision (for example, section 168(k), (l), and (m), and former sections 1400L(b) and 1400N(d)). The average adjusted basis of assets is computed by averaging the adjusted basis at the beginning and end of the taxable year, unless by reason of changes during the taxable year, as might be the case in the event of a major acquisition or disposition of assets, the average would materially distort the calculation in paragraph (c)(2)(i) of this section. In this event, the average adjusted basis is determined upon a more appropriate basis that is weighted to reasonably reflect the period for which the assets are held by the taxpayer during the taxable year.

(B) *Production assets used to produce other property.* If a production asset is used to produce inventory sold in Section 863(b)(2) Sales and also used to produce other property during the taxable year, the portion of its adjusted basis that is included in the fraction described in paragraph (c)(2)(i) of this section will be determined under any method that reasonably reflects the portion of the asset that produces inventory sold in Section 863(b)(2) Sales. For example, the portion of such an asset that is included in the formula may be determined by multiplying the asset's average adjusted basis by a fraction, the numerator of which is the gross receipts from sales of inventory from Section 863(b)(2) Sales produced by the asset, and the denominator of which is the gross receipts from all property produced by that asset.

(3) *Anti-abuse rule.* The purpose of paragraph (b) of this section and this paragraph (c) is to attribute the source of the taxpayer's gross income from certain sales of inventory property to the location of the taxpayer's production activity. Therefore, if the taxpayer has entered into or structured one or more transactions with a principal purpose of reducing its U.S. tax liability in a manner inconsistent with the purpose of paragraph (b) of this section or this paragraph (c), the Commissioner may make appropriate adjustments so that the source of the taxpayer's gross income more clearly reflects the location of production activity. For example, a taxpayer may be subject to the rule in this paragraph (c)(3) if domestic production assets are acquired by a related partnership (or a subsidiary of a related partnership) with a principal purpose of reducing its U.S. tax liability by claiming that the taxpayer's income from sales of inventory is subject to section 862(a)(6) rather than section 863(b).

(4) *Examples.* The following examples illustrate the rules of this paragraph (c):

(i) *Example 1. Source of gross income*—(A) *Facts.* A, a U.S. corporation, produces widgets that are sold both within the United States and within a foreign country. The initial manufacture of all widgets occurs in the United States. The second stage of production of widgets that are sold within a foreign country is completed within the country of sale. A's U.S. plant and machinery which is involved in the initial manufacture of the widgets has an average adjusted basis of $200, as determined using the alternative depreciation system under section 168(g)(2). A also owns warehouses used to store work-in-process. A owns foreign equipment with an average adjusted basis of $25. A's gross receipts from all sales of widgets is $100, and its gross receipts from export sales of widgets is $25. Assume that apportioning average adjusted basis using gross receipts is reasonable. Assume A's cost of goods sold from the sale of widgets in the foreign countries is $13 and thus, its gross income from widgets sold in foreign countries is $12.

(B) *Analysis.* A determines its gross income from sources without the United States by multiplying A's $12 of gross income from sales of widgets in foreign countries by a fraction, the numerator of which is all relevant foreign production

assets, or $25, and the denominator of which is all relevant production assets, or $75 ($25 foreign assets + ($200 U.S. assets × $25 gross receipts from export sales/$100 gross receipts from all sales)). Therefore, A's gross income from sources without the United States is $4 ($12 × ($25/$75)).

(ii) *Example 2. Location of intangible property.* Assume the same facts as in paragraph (c)(4)(i)(A) of this section (the facts in *Example 1*), except that A employs a patented process that applies only to the initial production of widgets. In computing the formula used to determine the source of gross income, A's patent, if it has an average adjusted basis, would be located in the United States.

(iii) *Example 3. Anti-abuse rule*—(A) *Facts.* Assume the same facts as in paragraph (c)(4)(i)(A) of this section (the facts in *Example 1*). A sells its U.S. assets to B, an unrelated U.S. corporation, with a principal purpose of reducing its U.S. tax liability by manipulating the property fraction. A then leases these assets from B. After this transaction, under the general rule of paragraph (c)(2) of this section, all of A's gross income would be considered from sources without the United States, because all of A's relevant production assets are located within a foreign country. Since the leased property is not owned by the taxpayer, it is not included in the fraction.

(B) *Analysis.* Because A has entered into a transaction with a principal purpose of reducing its U.S. tax liability by manipulating the formula described in paragraph (c)(2)(i) of this section, A's income must be adjusted to more clearly reflect the source of that income. In this case, the Commissioner may redetermine the source of A's gross income by ignoring the sale-leaseback transactions.

(d) *Determination of source of taxable income.* Once the source of gross income has been determined under paragraph (c) of this section, the taxpayer must properly allocate and apportion its expenses, losses, and other deductions to its respective amounts of gross income from sources within and without the United States from its Section 863(b)(2) Sales. See §§ 1.861–8 through 1.861–14T and 1.861–17.

(e) *Income partly from sources within a possession of the United States*—(1) *In general.* This paragraph (e) relates to certain sales that give rise to income, gain, or loss that is treated as derived partly from sources within the United States and partly from sources within a possession of the United States (Section 863 Possession Sales). This paragraph (e) applies to determine the source of income derived from the sale of inventory produced (in whole or in part) by a taxpayer within the United States and sold within a possession of the United States, or produced (in whole or in part) by a taxpayer in a possession of the United States and sold within the United States (collectively, Possession Production Sales). It also applies to determine the source of income derived from the purchase of personal property within a possession of the United States and its sale within the United States (Possession Purchase Sales). A taxpayer subject to this paragraph (e) must apportion gross income from Section 863 Possession Sales under paragraph (e)(2) of this section (in the case of Possession Production Sales) or under paragraph (e)(3) of this section (in the case of Possession Purchase Sales). The source of taxable income from Section 863 Possession Sales is determined under paragraph (d) of this section.

(2) *Allocation or apportionment for Possession Production Sales.* The source of gross income from Possession Production Sales is determined under the rules of paragraph (c) of this section, except that the term *possession of the United States* is substituted for *foreign country* wherever it appears.

(3) *Allocation or apportionment for Possession Purchase Sales*—(i) *Determination of source of gross income from Possession Purchase Sales.* Gross income from Possession Purchase Sales is allocated in its entirety to the taxpayer's business activity, and is then apportioned between sources within the United States and sources within a possession of the United States under paragraph (e)(3)(ii) of this section.

(ii) *Determination of source of gross income from business activity*—(A) *Source of gross income.* Gross income from the taxpayer's business activity is sourced in the possession in the same proportion that the amount of the taxpayer's business activity for the taxable year within the possession bears to the amount of the taxpayer's business activity for the taxable year both within the possession and outside the possession, with respect to Possession Purchase Sales. The remaining income is sourced in the United States.

(B) *Business activity.* For purposes of this paragraph (e)(3)(ii), the taxpayer's business activity is equal to the sum of—

(*1*) The amounts for the taxable period paid for wages, salaries, and other compensation of employees, and other expenses attributable to Possession Purchase Sales (other than amounts that are nondeductible under section 263A, interest, and research and development);

(*2*) Cost of goods sold attributable to Possession Purchase Sales during the taxable period; and

(*3*) Possession Purchase Sales for the taxable period.

(C) *Location of business activity.* For purposes of determining the location of the taxpayer's business activity within a possession, the following rules apply:

(*1*) *Sales activity.* Receipts from gross sales will be attributed to a possession in accordance with the principles of § 1.861–7(c).

(*2*) *Cost of goods sold.* Payments for cost of goods sold will be properly attributable to gross receipts from sources within the possession only to the extent that the property purchased was manufactured, produced, grown, or extracted in the possession (within the meaning of section 954(d)(1)(A)).

(*3*) *Expenses.* Expenses will be attributed to a possession under the rules of §§ 1.861–8 through 1.861–14T.

(*4*) *Examples.* The following examples illustrate the rules of paragraph (e)(3)(ii) of this section relating to the determination of source of gross income from business activity:

(i) *Example 1. Purchase of goods manufactured in possession*—(A) *Facts.* U.S. Co. purchases in a possession product X for $80 from A. A manufactures X in the possession. Without further production, U.S. Co. sells X in the United States for $100. Assume U.S. Co. has sales and administrative expenses in the possession of $10.

(B) *Analysis.* To determine the source of U.S. Co.'s gross income, the $100 gross income from sales of X is allocated entirely to U.S. Co.'s business activity. Forty-seven dollars of U.S. Co.'s gross income is sourced in the possession. [Possession expenses ($10) plus possession purchases (*i.e.,* cost of goods sold) ($80) plus possessions sales ($0), divided by total expenses ($10) plus total purchases ($80) plus total sales ($100).] The remaining $53 is sourced in the United States.

(ii) *Example 2. Purchase of goods manufactured outside possession*—(A) *Facts.* Assume the same facts as in paragraph (e)(4)(i)(A) of this section (the facts in *Example 1*), except that A manufactures X outside the possession.

(B) *Analysis.* To determine the source of U.S. Co.'s gross income, the $100 gross income is allocated entirely to U.S. Co.'s business activity. Five dollars of U.S. Co.'s gross income is sourced in the possession. [Possession expenses ($10) plus possession purchases ($0) plus possession sales ($0), divided by total expenses ($10) plus total purchases ($80) plus total sales ($100).] The $80 purchase is not included in the

numerator used to determine U.S. Co.'s business activity in the possession, since product X was not manufactured in the possession. The remaining $95 is sourced in the United States.

(5) *Special rules for partnerships.* In applying the rules of this paragraph (e) to transactions involving partners and partnerships, the rules of paragraph (f) of this section apply.

(f) *Special rules for partnerships*—(1) *General rule.* For purposes of § 1.863–1 and this section, a taxpayer's production activity does not include production activities conducted by a partnership of which the taxpayer is a partner either directly or through one or more partnerships, except as otherwise provided in paragraphs (c)(3) or (f)(2) of this section.

(2) *Exceptions*—(i) *In general.* For purposes of determining the source of the partner's distributive share of partnership income or determining the source of the partner's income from the sale of inventory property which the partnership distributes to the partner in kind, the partner's production activity includes an activity conducted by the partnership. In addition, the production activity of a partnership includes the production activity of a taxpayer that is a partner either directly or through one or more partnerships, to the extent that the partner's production activity is related to inventory that the partner contributes to the partnership in a transaction described under section 721.

(ii) *Attribution of production assets to or from a partnership.* A partner will be treated as owning its proportionate share of the partnership's production assets only to the extent that, under paragraph (f)(2)(i) of this section, the partner's activity includes production activity conducted through a partnership. A partner's share of partnership assets will be determined by reference to the partner's distributive share of partnership income for the year attributable to such production assets. Similarly, to the extent a partnership's activities include the production activities of a partner, the partnership will be treated as owning the partner's production assets related to the inventory that is contributed in kind to the partnership. See paragraph (c)(2)(ii) of this section for rules apportioning the basis of assets to Section 863 Sales.

(iii) *Basis.* For purposes of this section, in those cases where the partner is treated as owning its proportionate share of the partnership's production assets, the partner's basis in production assets held through a partnership shall be determined by reference to the partnership's adjusted basis in its assets (including a partner's special basis adjustment, if any, under section 743). Similarly, a partnership's basis in a partner's production assets is determined with reference to the partner's adjusted basis in its assets.

(3) *Examples.* The following examples illustrate the rules of this paragraph (f):

(i) *Example 1. Distributive share of partnership income.* A, a U.S. corporation, forms a partnership in the United States with B, a country X corporation. A and B each have a 50 percent interest in the income, gains, losses, deductions and credits of the partnership. The partnership is engaged in the manufacture and sale of widgets. The widgets are manufactured in the partnership's plant located in the United States and are sold by the partnership outside the United States. The partnership owns the manufacturing facility and all other production assets used to produce the widgets. A's distributive share of partnership income includes 50 percent of the sales income from these sales. In applying the rules of section 863 to determine the source of its distributive share of partnership income from the export sales of widgets, A is treated as carrying on the activity of the partnership related to production of these widgets and as owning a proportionate share of the partnership's assets related to production of the widgets, based upon its distributive share of partnership income.

(ii) *Example 2. Distribution in kind.* Assume the same facts as in paragraph (f)(3)(i) of this section (the facts in *Example 1*) except that the partnership, instead of selling the widgets, distributes the widgets to A and B. A then further processes the widgets and then sells them outside the United States. In determining the source of the income earned by A on the sales outside the United States, A is treated as conducting the activities of the partnership related to production of the distributed widgets. Thus, the source of gross income on the sale of the widgets is determined under section 863 and this section. In applying paragraph (c) of this section, A is treated as owning its proportionate share of the partnership's production assets based upon its distributive share of partnership income.

(g) *Applicability dates.* This section applies to taxable years ending on or after December 23, 2019. However, a taxpayer may apply this section in its entirety for taxable years beginning after December 31, 2017, and ending before December 23, 2019, provided that the taxpayer and all persons related to the taxpayer (within the meaning of section 267 or 707) apply this section and §§ 1.863–1(b), 1.863–2(b), 1.863–8(b)(3)(ii), 1.864–5(a) and (b), 1.864–6(c)(2), and 1.865–3 in their entirety for the taxable year, and once applied, the taxpayer and all persons related to the taxpayer (within the meaning of section 267 or 707) continue to apply these regulations in their entirety for all subsequent taxable years. For regulations generally applicable to taxable years ending before December 23, 2019, see § 1.863–3 as contained in 26 CFR part 1 revised as of April 1, 2020.

■ **Par. 7.** Section 1.863–8 is amended as follows:

■ a. Revising paragraph (b)(3)(ii)(A).

■ b. In paragraph (b)(3)(ii)(B):

■ i. Removing ''income allocable to production activity'' wherever it appears and adding in its place ''gross income''.

■ ii. Removing ''§ 1.863–3(c)(1)'' from the second sentence and adding in its place ''§ 1.863–3(c)''.

■ c. In paragraph (b)(3)(ii)(C):

■ i. Removing ''allocable to production activity'' wherever it appears.

■ ii. Removing ''allocated to production activity'' from the fifth sentence.

■ iii. Removing ''§ 1.863–3(c)(1)'' from the fifth sentence and adding in its place ''§ 1.863–3(c)''.

■ d. Removing paragraph (b)(3)(ii)(D).

■ e. In paragraph (c), removing ''(b)(3)(ii)(C)'' from the first sentence and adding in its place ''(b)(3)(ii)''.

■ f. Designating *Examples 1* through *14* of paragraph (f) as paragraphs (f)(1) through (14).

■ g. In newly designated paragraphs (f)(1) through (14), removing the period between the second and third level paragraph headings and adding an em-dash in its place.

■ h. Removing ''this *Example 4*'' from newly designated paragraph (f)(4)(i) wherever it appears and adding in its place ''paragraph (f)(4)(i) (*Example 4*)''.

■ i. Removing ''*Example 4*'' from newly designated paragraph (f)(5)(i) and adding in its place ''paragraph (f)(4)(i) of this section (the facts in *Example 4*)''.

■ j. Revising newly designated paragraph (f)(6)(ii).

■ k. Removing ''*Example 8*'' from newly designated paragraph (f)(9)(i) and adding in its place ''in paragraph (f)(8)(i) of this section (the facts in *Example 8*)''.

■ l. Removing ''*Example 8*'' from newly designated paragraph (f)(9)(ii) and adding in its place ''paragraph (f)(8)(ii) of this section (the analysis in *Example 8*)''.

■ m. Revising newly designated paragraph (f)(11)(ii).

■ n. In paragraph (g)(1), removing ''(b)(3)(ii)(C)'' from the first sentence and adding in its place ''(b)(3)(ii)''.

■ o. In paragraph (g)(4) introductory text, removing ''(b)(3)(ii)(C)'' from the first sentence and adding in its place ''(b)(3)(ii)''.

■ p. In paragraph (h), adding three sentences at the end of the paragraph.

The revisions and additions read as follows:

§ 1.863–8 Source of income derived from space and ocean activity under section 863(d).

* * * * *

(b) * * *

(3) * * *

(ii) *Sales of property produced by the taxpayer*—(A) *General.* If the taxpayer both produces property and sells such property and either the production (in whole or in part) or the sale takes place in space or international water, the taxpayer must allocate and apportion all income, gain, or loss derived from sales of such property solely on the basis of the production activities with respect to such property, and the source of that income will be determined under paragraph (b)(3)(ii)(B) or (C) of this section. To determine the source of income derived from the sale of personal property (including inventory) by a nonresident that is attributable to the nonresident's office or other fixed place of business in the United States under section 865(e)(2), the rules of § 1.865–3 apply, and the rules of this section do not apply.

* * * * *

(f) * * *

(6) * * *

(ii) *Analysis.* The collection of data and creation of images in space is characterized as the creation of property in space. Because S both produces and sells the data, the source of the gross income from the sale of the data is determined under paragraph (b)(3)(ii) of this section solely on the basis of the production activities. The source of S's gross income is determined under paragraph (b)(3)(ii)(C) of this section because production activities occur both in space and on land.

* * * * *

(11) * * *

(ii) *Analysis.* Because S's rights, title, and interest in the satellite pass to the customer in space, the sale takes place in space under § 1.861–7(c), and the sale transaction is space activity under paragraph (d)(1)(i) of this section. The source of income derived from the sale of the satellite manufactured in the United States and sold in space is determined under paragraph (b)(3)(ii) of this section solely on the basis of the production activities with respect to the satellite.

* * * * *

(h) * * * Paragraph (b)(3)(ii) of this section applies to taxable years ending on or after December 23, 2019. However, a taxpayer may apply paragraph (b)(3)(ii) of this section in its entirety for taxable years beginning after December 31, 2017, and ending before December 23, 2019, provided that the taxpayer and all persons related to the taxpayer (within the meaning of section 267 or 707) apply paragraph (b)(3)(ii) of this section and §§ 1.863–1(b), 1.863–2(b), 1.863–3, 1.864–5(a) and (b), 1.864–6(c)(2), and 1.865–3 in their entirety for the taxable year, and once applied, the taxpayer and all persons related to the taxpayer (within the meaning of section 267 or 707) continue to apply these regulations in their entirety for all subsequent taxable years. For regulations generally applicable to taxable years ending before December 23, 2019, see § 1.863–8 as contained in 26 CFR part 1 revised as of April 1, 2020.

■ **Par. 8.** Section 1.864–5 is amended as follows:

■ a. Adding a sentence to the end of paragraph (a);

■ b. Revising the first sentence of paragraph (b) introductory text; and

■ c. Adding paragraph (e).

The additions read as follows:

§ 1.864–5 Foreign source income effectively connected with U.S. business.

(a) * * * To determine the source of income, gain or loss from the sale of personal property (including inventory property) attributable to an office or other fixed place of business in the United States by nonresidents, as defined in section 865(g)(1)(B), see § 1.865–3.

(b) * * * Income, gain, or loss from sources without the United States other than income described in paragraph (c) of this section or income from section 865(e)(2) sales, as defined in § 1.865–3(c), shall be taken into account pursuant to paragraph (a) of this section in applying §§ 1.864–6 and 1.864–7 only if it consists of—

* * * * *

(e) *Applicability dates.* Paragraphs (a) and (b) of this section apply to taxable years ending on or after December 23, 2019. However, a taxpayer may apply paragraphs (a) and (b) of this section in their entirety for taxable years beginning after December 31, 2017, and ending before December 23, 2019, provided that the taxpayer and all persons related to the taxpayer (within the meaning of section 267 or 707) apply paragraphs (a) and (b) of this section and §§ 1.863–1(b), 1.863–2(b), 1.863–3, 1.863–8(b)(3)(ii), 1.864–6(c)(2), and 1.865–3 in their entirety for the taxable year, and once applied, the taxpayer and all persons related to the taxpayer (within the meaning of section 267 or 707) continue to apply these regulations in their entirety for all subsequent taxable years. For regulations generally applicable to taxable years ending before December 23, 2019, see § 1.864–5 as contained in 26 CFR part 1 revised as of April 1, 2020.

■ **Par. 9.** Section 1.864–6 is amended as follows:

■ a. Revising paragraph (c)(2).

■ b. Revising paragraph (c)(3).

■ c. Adding paragraph (c)(4).

The revisions and additions read as follows:

§ 1.864–6 Income, gain, or loss attributable to an office or other fixed place of business in the United States.

* * * * *

(c) * * *

(2) *Special limitation in case of sales of goods or merchandise through U.S. office.* Notwithstanding paragraph (c)(1) of this section, the special rules described in this paragraph (c)(2) apply with respect to a sale of goods or merchandise specified in § 1.864–5(b)(3), to which paragraph (b)(3)(i) of this section does not apply. In the case of a nonresident alien with a tax home within the United States, as defined in section 911(d)(3), the amount of income from the sale of goods or merchandise that is properly allocable to the individual's U.S. office is determined under § 1.865–3(d).

(3) *Examples.* The application of this paragraph (c) may be illustrated by the following examples—

(i) *Example 1. Sales of produced inventory through a U.S. sales office.* Individual A, who is a nonresident alien within the meaning of section 7701(b)(1)(B) and has a tax home in the United States, manufactures machinery in a foreign country and sells the machinery outside the United States through A's sales office in the United States for use in foreign countries. A is not a nonresident within the meaning of section 865(g)(1)(B). Therefore, § 1.865–3 does not apply to A's sale of the machinery, except to the extent provided in paragraph (c)(2) of this section. Title to the property sold is transferred to the foreign purchaser outside the United States, but no office or other fixed place of business of A in a foreign country materially participates in the sale made through A's U.S. office. By reason of its sales activities in the United States, A is engaged in business in the United States during the taxable year. During the taxable year, A derives a total income of $250,000x from these sales. Under paragraph (c)(2) of this

section, the amount of income that is allocable to A's U.S. office is determined under § 1.865–3(d)(2). The taxpayer does not allocate income from the sale under the books and records method described in § 1.865–3(d)(2)(ii). Thus, 50 percent of A's foreign source income of $250,000x, plus any additional income allocable based on the location of production activities under §§ 1.865–3(d)(2)(i) and 1.863–3 (in this case, $0x), is effectively connected for the taxable year with the conduct of A's U.S. trade or business, or $125,000x.

(ii) *Example 2. Sales of inventory purchased and resold through a U.S. sales office by a nonresident alien with a tax home in the United States.* Individual B, who is a nonresident alien within the meaning of section 7701(b)(1)(B) and has a tax home in the United States, has an office in a foreign country that purchases merchandise and sells it through B's sales office in the United States for use in various foreign countries, with title to the property passing outside the United States. B is not a nonresident within the meaning of section 865(g)(1)(B). Therefore, § 1.865–3 does not apply to B's sale of the merchandise, except to the extent provided in paragraph (c)(2) of this section. No other office of B materially participates in these sales made through its U.S. office. By reason of its sales activities in the United States, B is engaged in business in the United States during the taxable year. During the taxable year, B derives income of $300,000x from these sales made through its U.S. sales office. All of B's income from these sales is foreign source as B purchases the merchandise outside the United States and title to the merchandise also passes outside the United States. The amount of income properly allocable to B's U.S. office determined under § 1.865–3(d)(3) is $300,000x, and thus $300,000x is effectively connected for the taxable year with the conduct of B's U.S. trade or business.

(iii) *Example 3. Foreign sales office also materially participates in sale.* The facts are the same as in paragraph (c)(3)(ii) of this section (the facts in *Example 2*), except that B also has an office in a foreign country that is a material factor in the realization of income from the sales made through B's U.S. office. No income from the sale of merchandise is allocable to B's U.S. sales office for the taxable year, by reason of paragraph (b)(3)(i) of this section, and thus none of the $300,000x is effectively connected for the taxable year with the conduct of B's U.S. trade or business.

(iv) *Example 4. Sales of inventory purchased and resold through a U.S. sales office by a foreign corporation.* The facts are the same as in paragraph (c)(3)(ii) of this section (the facts in *Example 2*), except that B is a foreign corporation. B is a nonresident within the meaning of section 865(g)(1)(B). The income from such sales will be sourced in accordance with § 1.865–3(a) and (d)(3).

(4) *Applicability date.* Paragraph (c)(2) of this section applies to taxable years ending on or after December 23, 2019. However, a taxpayer may apply paragraph (c)(2) of this section in its entirety for taxable years beginning after December 31, 2017, and ending before December 23, 2019, provided that the taxpayer and all persons related to the taxpayer (within the meaning of section 267 or 707) apply paragraph (c)(2) of this section and §§ 1.863–1(b), 1.863–2(b), 1.863–3, 1.863–8(b)(3)(ii), 1.864–5(a) and (b), and 1.865–3 in their entirety for the taxable year, and once applied, the taxpayer and all persons related to the taxpayer (within the meaning of section 267 or 707) continue to apply these regulations in their entirety for all subsequent taxable years. For regulations generally applicable to taxable years ending before December 23, 2019, see § 1.864–6 as contained in 26 CFR part 1 revised as of April 1, 2020.

■ **Par. 10.** Section 1.865–3 is added to read as follows:

§ 1.865–3 Source of gross income from sales of personal property (including inventory property) by a nonresident attributable to an office or other fixed place of business in the United States.

(a) *In general.* Notwithstanding any provision of section 861 through 865 or other regulations in this part, this section provides the sole sourcing rules for gross income, gain, or loss from section 865(e)(2) sales. Gross income, gain, or loss from a section 865(e)(2) sale is U.S. source income to the extent that the gross income, gain, or loss is properly allocable to an office or other fixed place of business in the United States under paragraph (d) of this section.

(b) *Exception for certain inventory sales for use, disposition or consumption outside the United States.* A section 865(e)(2) sale does not include any sale of inventory property that is sold for use, disposition, or consumption outside the United States if an office or other fixed place of business of the nonresident in a foreign country materially participates in the sale. See § 1.864–6(b)(3) to determine whether a foreign office materially participates in the sale and whether the property was destined for foreign use.

(c) *Section 865(e)(2) sales.* For purposes of this section, a ''section 865(e)(2) sale'' is a sale of personal property by a nonresident, including inventory property, other than a sale described in paragraph (b) of this section, that is attributable to an office or other fixed place of business in the United States under the principles of section 864(c)(5)(B) as prescribed in § 1.864–6(b)(1) and (2). In determining whether a nonresident maintains an office or other fixed place of business in the United States, the principles of section 864(c)(5)(A) as prescribed in § 1.864–7 apply, including the rules of paragraph (d) of that section regarding the office or other fixed place of business of a dependent agent of the nonresident. For purposes of this section, ''inventory property'' has the meaning provided in section 865(i)(1), and ''nonresident'' has the meaning provided in section 865(g)(1)(B).

(d) *Amount of gross income, gain, or loss on sale of personal property properly allocable to a U.S. office*—(1) *In general.* Except as otherwise provided in paragraphs (d)(2) through (4) of this section, the amount of gross income, gain, or loss from a section 865(e)(2) sale that is properly allocable to an office or other fixed place of business in the United States is determined under the principles of § 1.864–6(c)(1).

(2) *Produced inventory property.* Gross income, gain, or loss from a section 865(e)(2) sale of inventory property that is produced by the nonresident seller is properly allocable to an office or other fixed place of business in the United States or to production activities in accordance with the ''50/50 method'' described in paragraph (d)(2)(i) of this section. However, in lieu of the 50/50 method, the nonresident seller may elect to allocate the gross income, gain, or loss under the ''books and records method'' described in paragraph (d)(2)(ii)(A) of this section, provided that the nonresident satisfies all of the requirements described in paragraph (d)(2)(ii)(B) of this section to the satisfaction of the Commissioner. Gross income allocable to production activities under this paragraph (d)(2) is sourced in accordance with § 1.863–3. For purposes of this paragraph (d)(2), the term ''produced'' includes created, fabricated, manufactured, extracted, processed, cured, and aged, as determined under the principles of § 1.954–3(a)(4) (except for § 1.954–3(a)(4)(iv)). See section 864(a) and § 1.864–1.

(i) *The 50/50 method.* Fifty percent of the gross income, gain, or loss from a section 865(e)(2) sale of inventory property that is produced by the nonresident seller is properly allocable to an office or other fixed place of business in the United States, and the remaining 50 percent of the gross income, gain, or loss is properly allocable to production activities (the ''50/50 method'').

(ii) *Books and records method*—(A) *Method.* Subject to paragraph (d)(2)(ii)(B) of this section, a nonresident may elect to determine the amount of its gross income, gain, or loss from the sale of inventory property produced by the nonresident seller that is properly allocable to production activities and sales activities for the taxable year based upon its books of account (the ''books and records method''). The gross income, gain, or loss allocable to sales activities under this method is treated as properly allocable to an office or other fixed place of business in the United States and the remaining gross income, gain, or loss is treated as properly allocable to production activities.

(B) *Election and reporting rules*—(*1*) *In general.* A nonresident may not make the election described in paragraph (d)(2)(ii)(A) of this section unless the requirements of paragraphs (d)(2)(ii)(B)(*2*) through (*4*) of this section are satisfied. Once the election is made, the nonresident must continue to satisfy the requirements of paragraphs (d)(2)(ii)(B)(*2*) through (*4*) of this section until the election is revoked. If the nonresident fails to satisfy the requirements in paragraphs (d)(2)(ii)(B)(*2*) through (*4*) of this section to the satisfaction of the Commissioner, the Commissioner may, in its sole discretion, apply the 50/50 method described in paragraph (d)(2)(i) of this section.

(*2*) *Books of account.* The nonresident must establish that it, in good faith and unaffected by considerations of tax liability, regularly employs in its books of account a detailed allocation of receipts and expenditures that, under the principles of section 482, clearly reflects both the amount of the nonresident's gross income, gain, or loss from its inventory sales that are attributable to its sales activities, and the amount of its gross income, gain, or loss from its inventory sales that are attributable to its production activities. For purposes of this paragraph (d)(2)(ii)(B)(*2*), section 482 principles apply as if the office or other fixed place of business in the United States were a separate organization, trade, or business (and, thus, a separate controlled taxpayer) from the nonresident (whether or not payments are made between the United States office or other fixed place of business and the nonresident's other offices, and whether or not the nonresident itself would otherwise constitute an organization, trade, or business).

(*3*) *Required records.* The nonresident must prepare and maintain the records described in paragraph (d)(2)(ii)(B)(*2*) of this section, which must be in existence when its return is filed. The nonresident must also prepare an explanation of how the allocation clearly reflects the nonresident's gross income, gain, or loss from production and sales activities under the principles of section 482. The nonresident must make available the explanation and records of the nonresident (including for the office or other fixed place of business in the United States and the offices or branches that perform the production activities) upon request of the Commissioner, within 30 days, unless some other period is agreed upon between the Commissioner and the nonresident.

(*4*) *Making and revoking the books and records method election; disclosure of election.* Except as otherwise provided in publications, forms, instructions, or other guidance, a nonresident makes or revokes the election to apply the books and records method by attaching a statement to its original timely filed Federal income tax return (including extensions) providing that it elects, or revokes the election, to apply the books and records method described in paragraph (d)(2)(ii)(A) of this section. For nonresidents making the election, the statement must provide that the nonresident has prepared the records described in paragraph (d)(2)(ii)(B)(*2*) and (*3*) of this section.

(*5*) *Limitation on revoking the books and records method election.* Once made, the books and records method election continues until revoked. An election cannot be revoked, without the consent of the Commissioner, for any taxable year beginning within 48 months of the last day of the taxable year for which the election was made.

(3) *Purchased inventory property.* All gross income, gain, or loss from a section 865(e)(2) sale of inventory property that is both purchased and sold by a nonresident is properly allocable to an office or other fixed place of business in the United States.

(4) *Depreciable personal property.* Gain from a section 865(e)(2) sale of depreciable personal property (as defined in section 865(c)(4)) is allocated under paragraphs (d)(4)(i) and (ii) of this section.

(i) The gain not in excess of the depreciation adjustments, if any, is properly allocable to an office or other fixed place of business in the United States to the same extent that the gain would be allocated to sources within the United States under the rules of section 865(c)(1). The remaining gain not in excess of the depreciation adjustments, if any, is allocated to sources without the United States in accordance with section 865(c)(1). However, notwithstanding the preceding sentences, if the property was predominantly used in the United States, within the meaning of section 865(c)(3)(B)(i), for a particular taxable year, all of the gain not in excess of depreciation for that year is properly allocable to the office or other fixed place of business in the United States.

(ii) The gain in excess of the depreciation adjustments, if any, is treated as if such gain was from the sale of inventory and the amount allocable to an office or fixed place of business in the United States is determined under paragraph (d)(2) or (3) of this section, as applicable.

(e) *Determination of source of taxable income.* For rules allocating and apportioning expenses to gross income effectively connected with the conduct of a trade or business of a foreign corporation in the United States (including gross income, gain, or loss sourced under this section), see section 882(c)(1). For rules allocating and apportioning expenses to gross income, gain, or loss effectively connected with the conduct of a trade or business of a nonresident alien in the United States (including gross income, gain, or loss sourced under this section), see section 873(a).

(f) *Export trade corporations.* This section does not apply for purposes of defining an export trade corporation under section 971(a).

(g) *Applicability date.* This section applies to taxable years ending on or after December 23, 2019. However, a nonresident may apply this section in its entirety for taxable years beginning after December 31, 2017, and ending before December 23, 2019, provided that the nonresident and all persons related to the nonresident (within the meaning of section 267 or 707) apply this section and §§ 1.863–1(b), 1.863–2(b), 1.863–3, 1.863–8(b)(3)(ii), 1.864–5(a) and (b), and 1.864–6(c)(2) in their entirety for the taxable year, and once applied, the nonresident and all persons related to the nonresident (within the meaning of section 267 or 707) continue to apply these regulations in their entirety for all subsequent taxable years.

§ 1.937–2 [Amended]

■ **Par. 11.** In § 1.937–2 amend paragraph (d) by removing ''§ 1.863–3(f)'' and adding in its place ''§ 1.863–3(e)''.

§ 1.937–3 [Amended]

■ **Par. 12.** In § 1.937–3 amend paragraph (d) by removing ''§ 1.863–3(f)'' and adding in its place ''§ 1.863–3(e)''.

■ **Par. 13.** Section 1.1502–13 is amended by revising paragraph (c)(7)(ii)(N) to read as follows:

§ 1.1502–13 Intercompany transactions.

* * * * *

(c) * * *

(7) * * *

(ii) * * *

(N) *Example (14): Source of income under section 863*—(*1*) *Intercompany sale*—(*i*) *Facts.* S manufactures inventory property solely in the United States and recognizes $75x of income on sales to B in Year 1. B conducts further production activity on the inventory property solely in Country Y and then sells the inventory property to X in Country Y and recognizes $25x of income on the sale to X, also in Year 1. Title passes from S to B, and from B to X, in Country Y. Assume that applying § 1.863–3 on a single entity basis, including the formula for apportionment of multi-country production activities by reference to the basis of production assets, $10x would be treated as foreign source income and $90x would be treated as U.S. source income (that is, 10 percent of the production occurred outside the United States and 90 percent occurred within the United States, as measured by the basis of assets used in production activities with respect to the property). Assume further that, on a separate entity basis, S would have $0x of foreign source income and $75x of U.S. source income and all of B's $25x of income would be foreign source income.

(*ii*) *Analysis.* Under the matching rule, both S's $75x intercompany item and B's $25x corresponding item are taken into account in Year 1. In determining the source of S and B's income from the inventory property sales, the attributes of S's intercompany item and B's corresponding item are redetermined to the extent necessary to produce the same effect on consolidated taxable income (and consolidated tax liability) as if S and B were divisions of a single corporation. See paragraph (c)(1)(i) of this section. On a single entity basis, S and B would have $10x that would be treated as foreign source income and $90x that would be treated as U.S. source income, but without application of this section (that is, on a separate entity basis), S would have $75x of U.S. source income and B would have $25x of foreign source income. Under paragraph (c)(4)(ii) of this section, a redetermined attribute must be allocated between S and B using a reasonable method. On a separate entity basis B would have only foreign source income and S would have only U.S. source income. Accordingly, under paragraph (c)(1)(i) of this section, $15x of B's $25x sales income that would be treated as foreign source income on a separate entity basis is redetermined to be U.S. source income.

(*2*) *Sale of property reflecting intercompany services or intangibles*—(*i*) *Facts.* S earns $10x of income performing services in the United States for B. B capitalizes S's fees into the basis of inventory property that it manufactures in the United States and sells to an unrelated person in Year 1 at a $90x profit, with title passing in Country Y. Assume that on a single entity basis, $100x is treated as U.S. source income and $0x is treated as foreign source income. Further assume that on a separate entity basis, S would have $10x of U.S. source income, and B would have $90x of U.S. source income, with neither having any foreign source income.

(*ii*) *Analysis.* Under the matching rule, S's $10x income and B's $90x income are taken into account in Year 1. In determining the source of S and B's income, the attributes of S's intercompany item and B's corresponding item are redetermined to the extent necessary to produce the same effect on consolidated taxable income (and consolidated tax liability) as if S and B were divisions of a single corporation. Because the results are the same on a single entity basis and a separate entity basis ($100x of U.S. source income and $0x of foreign source income), the attributes are not redetermined under paragraph (c)(1)(i) of this section.

Sunita Lough,

Deputy Commissioner for Services and Enforcement.

Approved: September 21, 2020.

David J. Kautter,

Assistant Secretary of the Treasury (Tax Policy).

BILLING CODE 4830–01–P

DEPARTMENT OF THE TREASURY

Internal Revenue Service

26 CFR Part 1

[TD 9902]

RIN 1545–BP15

Guidance Under Sections 951A and 954 Regarding Income Subject to a High Rate of Foreign Tax; Correcting Amendment

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Correcting amendments.

SUMMARY: This document contains corrections to Treasury Decision 9902, which was published in the **Federal Register** on Thursday, July 23, 2020. Treasury Decision 9902 contained final regulations under the global intangible low-taxed income and subpart F income provisions of the Internal Revenue Code regarding the treatment of income that is subject to a high rate of foreign tax.

DATES: This correction is effective on December 11, 2020.

FOR FURTHER INFORMATION CONTACT: Jorge M. Oben or Larry R. Pounders at (202) 317–6934 (not a toll-free number).

SUPPLEMENTARY INFORMATION:

Background

The final regulations (TD 9902) that are the subject of this correction are issued under section 951A of the Code.

Need for Correction

As published on July 23, 2020 (85 FR 44620) the final regulations (TD 9902) contain errors that need to be corrected.

List of Subjects in 26 CFR Part 1

Income taxes, Reporting and recordkeeping requirements.

Correction of Publication

Accordingly, 26 CFR part 1 is corrected by making the following correcting amendments:

PART 1—INCOME TAXES

■ **Paragraph 1.** The authority citation for part 1 continues to read in part as follows:

Authority: 26 U.S.C. 7805.

* * * * *

■ **Par. 2.** Section 1.951A–2 is amended by:

■ a. Revising the third sentence of paragraph (c)(3)(ii)(B).

■ b. Revising paragraphs (c)(7)(iii)(B)(*2*) and (c)(7)(viii)(A)(*2*)(*ii*).

■ c. Revising the first sentence of paragraph (c)(7)(viii)(A)(*4*) introductory text.

■ d. Revising paragraph (c)(7)(viii)(A)(*4*)(*i*).
■ e. Redesignating paragraph (c)(8)(iii)(C)(*2*)(vii) as paragraph (c)(8)(iii)(C)(*2*)(*vii*).
■ f. Removing ''DE1Y'' in paragraph (c)(8)(iii)(D)(*6*)(*i*) and adding in its place ''FDE1Y''.
■ g. Removing ''CFC1X'' in paragraph (c)(8)(iii)(D)(*6*)(*iii*) and adding in its place ''CFC2X''.

The revisions read as follows:

§ 1.951A–2 Tested income and tested loss.

* * * * *

(c) * * *

(3) * * *

(ii) * * *

(B) * * * Therefore, for example, interest expense that is apportioned under the modified gross income method to a tentative gross tested income item of a lower-tier corporation under paragraph (c)(7)(iii)(A) of this section may be allocated and apportioned to the tested income of the upper-tier corporation or to the residual grouping, depending on whether the lower-tier corporation's tentative gross tested income item is an item of gross tested income or is excluded from gross tested income under the high-tax exclusion. * * *

* * * * *

(7) * * *

(iii) * * *

(B) * * *

(*2*) In the case of payments to a tested unit that is treated as a foreign branch under paragraph (c)(7)(iii)(B)(*1*) of this section, applying the principles of § 1.904–6(a)(2)(ii) and (iii) as if the tested unit receiving the payment were a foreign branch owner (and as if the tested unit making the payment were a foreign branch); and

* * * * *

(viii) * * *

(A) * * *

(*2*) * * *

(*ii*) Each United States shareholder that owns within the meaning of section 958(a) (including both domestic partnerships that are United States shareholders that own stock within the meaning of section 958(a) without regard to § 1.951A–1(e)(1) and partners of a domestic partnership that are United States shareholders that are treated as owning stock withing the meaning of section 958(a) by reason of § 1.951A–1(e)(1)) stock of the controlled foreign corporation as of the end of the CFC's taxable year to which the election relates must file amended Federal income tax returns (or timely original federal income tax returns if a return has not yet been filed) reflecting the effect of such election (or revocation) for the U.S. shareholder inclusion year with or within which the CFC inclusion year ends as well as for any other taxable year in which the U.S. tax liability of the United States shareholder would be increased by reason of the election (or revocation) (or in the case of a partnership if any item reported by the partnership or any partnership-related item would change as a result of the election (or revocation)) within a single period no greater than six months within the 24-month period described in paragraph (c)(7)(viii)(A)(*2*)(*i*) of this section; and

* * * * *

(*4*) A United States shareholder that is a partner in a partnership that is also a United States shareholder in the controlled foreign corporation must generally file an amended return, as required under paragraph (c)(7)(viii)(A)(*2*)(*ii*) of this section, and must generally pay any additional tax owed as required under paragraph (c)(7)(viii)(A)(*2*)(*iii*) of this section.

* * *

(*i*) The partnership timely files an administrative adjustment request described in paragraph (c)(7)(viii)(A)(*2*)(*i*) or (*ii*) of this section, as applicable; and,

* * * * *

Crystal Pemberton,

Senior Federal Register Liaison, Publications and Regulations Branch, Legal Processing Division, Associate Chief Counsel, (Procedure and Administration).

BILLING CODE 4830–01–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket Number USCG–2020–0641]

RIN 1625–AA08

Safety Zone; Lower Mississippi River, Natchez, MS

AGENCY: Coast Guard, DHS.

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is establishing a temporary safety zone for all navigable waters of the Lower Mississippi River between Mile Marker (MM) 364.5 and MM 365.5. This action is necessary to provide for the safety of persons, vessels, and the marine environment during a fireworks display. Entry of persons or vessels into this zone is prohibited unless authorized by the Captain of the Port Sector Lower Mississippi River or a designated representative.

DATES: This rule is effective from 4 p.m. through 7 p.m. on December 31, 2020.

ADDRESSES: To view documents mentioned in this preamble as being available in the docket, go to *https://www.regulations.gov,* type USCG–2020–0641 in the ''SEARCH'' box and click ''SEARCH.'' Click on Open Docket Folder on the line associated with this rule.

FOR FURTHER INFORMATION CONTACT: If you have questions on this rule, call or email MSTC Lindsey Swindle, Sector Lower Mississippi River, U.S. Coast Guard; telephone 901–521–4813, email *Lindsey.M.Swindle@uscg.mil*.

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
COTP Captain of the Port
DHS Department of Homeland Security
FR Federal Register
NPRM Notice of proposed rulemaking
§ Section
U.S.C. United States Code

II. Background Information and Regulatory History

The Coast Guard is issuing this temporary rule without prior notice and opportunity to comment pursuant to authority under section 4(a) of the Administrative Procedure Act (APA) (5 U.S.C. 553(b)). This provision authorizes an agency to issue a rule without prior notice and opportunity to comment when the agency for good cause finds that those procedures are ''impracticable, unnecessary, or contrary to the public interest.'' Under 5 U.S.C. 553(b)(B), the Coast Guard finds that good cause exists for not publishing a notice of proposed rulemaking (NPRM) with respect to this rule because it is impracticable. We must establish this safety zone by December 31, 2020, and lack sufficient time to provide a reasonable comment period and then consider those comments before issuing this rule. The NPRM process would delay the establishment of the safety zone until after the date of the event and compromise public safety

Under 5 U.S.C. 553(d)(3), the Coast Guard finds that good cause exists for making this rule effective less than 30 days after publication in the **Federal Register**. Delaying the effective date of this rule would be impracticable because immediate action is necessary to protect persons and property from the potential hazards associated with the fireworks display.

III. Legal Authority and Need for Rule

The Coast Guard is issuing this rule under authority in 46 U.S.C. 70034 (previously 33 U.S.C. 1231). The Captain of the Port Sector Lower Mississippi River (COTP) has determined that potential hazards associated with the fireworks display located at mile marker (MM) 365.0 on the Lower Mississippi River and scheduled for 4 p.m. on December 31, 2020, would be a safety concern for all persons and vessels on the Lower Mississippi River between MM 364.5 and MM 365.5 from 4 p.m. through 7 p.m. on December 31, 2020. Hazards associated with the firework displays include accidental discharge of fireworks, dangerous projectiles, and falling hot embers or other debris. This rule is necessary to ensure the safety of persons, vessels, and the marine environment on these navigable waters before, during, and after the fireworks.

IV. Discussion of the Rule

This rule establishes a temporary safety zone from 4 p.m. through 7 p.m. on December 31, 2020. The safety zone will cover all navigable waters of the Lower Mississippi River from MM 364.5 to MM 365.5. The duration of this safety zone is intended to ensure the safety of waterway users on these navigable waters before, during, and after the scheduled fireworks display.

Entry of persons or vessels into this safety zone is prohibited unless authorized by the COTP or a designated representative. A designated representative is a commissioned, warrant, or petty officer of the U.S. Coast Guard assigned to units under the operational control of USCG Sector Lower Mississippi River. Persons or vessels seeking to enter the safety zones must request permission from the COTP or a designated representative on VHF–FM channel 16 or by telephone at 901–521–4822. If permission is granted, all persons and vessels shall comply with the instructions of the COTP or designated representative. The COTP or a designated representative will inform the public of the enforcement times and date for this safety zone through Broadcast Notices to Mariners (BNMs), Local Notices to Mariners (LNMs), and/or Marine Safety Information Bulletins (MSIBs) as appropriate.

V. Regulatory Analyses

We developed this rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive orders, and we discuss First Amendment rights of protestors.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. Executive Order 13771 directs agencies to control regulatory costs through a budgeting process. This rule has not been designated a ''significant regulatory action,'' under Executive Order 12866. Accordingly, this rule has not been reviewed by the Office of Management and Budget (OMB), and pursuant to OMB guidance it is exempt from the requirements of Executive Order 13771.

This regulatory action determination is based on the size, location, and duration of the safety zone. Vessel traffic will be prohibited from entering this safety zone, which will impact a one-mile stretch of Lower Mississippi River for three hours on one evening. Moreover, the Coast Guard will issue a Broadcast Notice to Mariners via VHF–FM marine channel 16 about the safety zone, and the rule allows vessels to seek permission to enter the zone.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the safety zone may be small entities, for the reasons stated in section V.A above, this rule will not have a significant economic impact on any vessel owner or operator.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

C. Collection of Information

This rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

F. Environment

We have analyzed this rule under Department of Homeland Security Directive 023–01, Rev. 1, associated implementing instructions, and Environmental Planning COMDTINST 5090.1 (series), which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have determined that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule involves a safety zone that will prohibit entry on a one-mile stretch of the Lower Mississippi River for three hours on one evening. It is categorically excluded from further review under paragraph L60(a) of Appendix A, Table 1 of UDHS Instruction Manual 023–01–001–01, Rev. 1. A Record of Environmental Consideration supporting this determination is available in the docket. For instructions on locating the docket, see the **ADDRESSES** section of this preamble.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places or vessels.

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS.

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 46 U.S.C. 70034, 70051; 33 CFR 1.05–1; 6.04–1, 6.04–6, and 160.5; Department of Homeland Security Delegation No. 0170.1.

■ 2. Add § 165.T08–0641 to read as follows:

§ 165.T08–0641 Safety Zone; Lower Mississippi River, Natchez, MS.

(a) *Location.* The following area is a safety zone: All navigable waters of the Lower Mississippi River from Mile Marker (MM) 364.5 through MM 365.5.

(b) *Regulations.* (1) Under the general safety zone regulations in subpart C of this part, you may not enter the safety zone described in paragraph (a) of this section unless authorized by the Captain of the Port Sector Lower Mississippi River (COTP) or the COTP's designated representative.

(2) To seek permission to enter, contact the COTP or the COTP's representative via VHF–FM channel 16 or by telephone at 901–521–4822. Those in the safety zone must comply with all lawful orders or directions given to them by the COTP or the COTP's designated representative.

(c) *Enforcement period.* This section will be enforced 4 p.m. through 7 p.m. on December 31, 2020. Periods of activation will be promulgated by Broadcast Notice to Mariners.

Dated: December 2, 2020.

R.S. Rhodes,

Captain, U.S. Coast Guard, Captain of the Port Sector Lower Mississippi River.

Federal Student Aid Programs (Student Assistance General Provisions, Federal Perkins Loan Program, William D. Ford Federal Direct Loan Program, and Federal-Work Study Programs)

AGENCY: Office of Postsecondary Education, Department of Education.

ACTION: Updated waivers and modifications of statutory and regulatory provisions.

SUMMARY: The Secretary is issuing updated waivers and modifications of statutory and regulatory provisions governing the Federal student financial aid programs under the authority of the Higher Education Relief Opportunities for Students Act of 2003 (HEROES Act or Act). The HEROES Act requires the Secretary to publish, in a document in the **Federal Register**, the waivers or modifications of statutory or regulatory provisions applicable to the student financial assistance programs under title IV of the Higher Education Act of 1965, as amended (HEA), to assist individuals who are performing qualifying military service, and individuals who are affected by a disaster, war, or other military operation or national emergency, as described in the **SUPPLEMENTARY INFORMATION** section of this document. On March 13, 2020, President Trump declared a national emergency based on the COVID–19 outbreak. (Proclamation on Declaring a National Emergency Concerning the Novel Coronavirus Disease (COVID–19) Outbreak, available at *https://www.whitehouse.gov/presidential-actions/proclamation-declaring-national-emergency-concerning-novel-coronavirus-disease-covid-19-outbreak/*).

DATES: Effective December 11, 2020. The waivers and modifications in this document expire as noted within each of the provisions below, unless extended by the Secretary in a document published in the **Federal Register**.

SUPPLEMENTARY INFORMATION:

The Secretary is issuing these waivers and modifications under the authority of the HEROES Act, as codified at 20 U.S.C. 1098bb(a)(2), which authorizes the Secretary to waive or modify any statutory or regulatory provision applicable to the Federal student financial assistance programs under title IV of the HEA, 20 U.S.C. 1070 *et seq.,* as the Secretary deems necessary in connection with a war or other military operation or national emergency to affected individuals who are recipients of Federal student financial assistance under title IV of the HEA, institutions of higher education (IHEs), eligible lenders, guaranty agencies, and other entities participating in the Federal student assistance programs under title IV of the HEA that are located in areas that are declared disaster areas by any Federal, State, or local official in connection with a national emergency, or whose operations are significantly affected by such a disaster. These entities may be granted temporary relief from requirements that are rendered infeasible or unreasonable by a national emergency, including due diligence requirements and reporting deadlines.

In 20 U.S.C. 1098bb(b)(1), the HEROES Act further provides that section 437 of the General Education Provisions Act (20 U.S.C. 1232) and section 553 of the Administrative Procedure Act (5 U.S.C. 553) do not apply to the contents of this document.

The terms ''institution of higher education'' and ''institution of higher education for purposes of title IV programs'' (IHE) used in this document are defined in sections 101 and 102 of the HEA.

In 20 U.S.C. 1098ee, the HEROES Act provides definitions critical to determining whether a person is an ''affected individual'' under the Act and, if so, which waivers and modifications apply to the affected individual. However, because these definitions do not include the specific circumstances under which these waivers and modifications are provided under the HEROES Act, we provide these definitions below.

For purposes of this document, ''affected individual'' means a student enrolled in a postsecondary institution. An ''affected borrower'' is one whose Federal student loans provided under title IV are in repayment. These definitions are in keeping with 20 U.S.C. 1098bb(a)(2) that establishes that statutory and regulatory provisions can be waived or modified ''as necessary to ensure that recipients of student financial assistance under title IV of the [HEA□ who are affected individuals are not placed in a worse position financially in relation to that financial assistance because of their status as affected individuals''. The statute also provides that administrative requirements placed on affected individuals who are recipients of student financial assistance are minimized, to the extent possible without impairing the integrity of the student financial assistance programs, to ease the burden on such students and avoid inadvertent, technical violations, or defaults.

In accordance with the HEROES Act, the Secretary is providing the following waivers and modifications of statutory and regulatory provisions applicable to the student assistance general provisions and student financial assistance programs under title IV of the HEA that the Secretary believes are necessary to ensure that, during and in response to the COVID–19 pandemic—

- Accrediting agencies and associations are permitted to conduct virtual site visits of institutions or programs currently under review, scheduled for initial or renewal of accreditation, or in a show-cause or probationary status;
- IHEs may ensure continuity of instruction and learning by employing distance education to protect the health of their students, faculty, and staff;
- IHEs that are undergoing a change of ownership are provided additional time to gather the records, data, financial information, and approvals necessary to support their change of ownership application, and their temporary program participation agreements are extended while the application is pending;
- Foreign graduate medical schools that participate in the Federal Direct Loan Program are not required to obtain and report test results from the Medical College Admission Test (MCAT) from applicants during admission years in which the COVID–19 national emergency is in effect;
- Entities not submitting single audits in accordance with the audit requirements of 2 CFR 200, subpart F, are provided an additional six months to submit their annual compliance and financial statement audits;
- IHEs that resume offering educational programs after temporarily closing or suspending their educational programs due to COVID–19 are not considered to have ended their participation in the title IV, HEA programs;
- IHEs that offer existing short-term programs that qualify for Federal Direct Loans, or began offering a short-term program prior to the COVID emergency, are given some flexibility for programs affected by COVID–19;
- IHEs are provided additional flexibility to approve leaves of absence for students whose coursework is suspended due to the COVID–19 pandemic;
- IHEs are provided additional time to comply with deadlines for campus security, fire safety, and equity in athletics disclosures;
- IHEs are permitted to waive the requirement for a parental signature in the event that it cannot be obtained, or accept a document signed and photographed and sent by email or text message attachment, on any verification documentation required to validate a student's title IV eligibility;
- IHEs that participate in the Federal student financial aid programs under the heightened cash monitoring one (HCM1) status are provided flexibility to pay student credit balances after drawing down title IV funds;
- IHEs are provided alternative methods for disbursing title IV, HEA credit balance funds to students;
- IHEs that were experiencing challenges accessing data and preparing their cohort default rate (CDR) appeals during the national emergency were permitted to submit appeals to the draft fiscal year (FY) 2017 CDRs on or before June 30, 2020;
- IHEs are provided additional time to complete and submit their Fiscal Operations Report and Application to Participate (FISAP);
- IHEs that participate in the Federal Work-Study (FWS) programs are not subject to the FWS community service requirements during the national emergency;
- Perkins Loan and HEAL borrowers whose loans are held by the Department of Education (Department) are afforded the same benefits extended to Direct Loan borrowers in the Coronavirus Aid, Relief, and Economic Security (CARES) Act; [1]
- Borrowers with loans under the Federal Family Education Loan (FFEL), Federal Perkins Loan, HEAL, and Direct Loan programs that are held by the Department, did not accrue interest on those loans from March 13, 2020 to March 27, 2020. Borrowers were also permitted to suspend payment on their loans without any penalties during this period. The automatic suspension of payment and the application of a zero percent interest rate on loans held by the Department was extended to October 1, 2020, under the CARES Act. Those benefits were further extended through December 31, 2020, by the President through the Presidential Memorandum issued on August 8, 2020; [2]
- Borrowers who, prior to July 1, 2020, submitted an application for borrower defense to repayment (BD) relief that included a FFEL or Perkins loan and who would need to consolidate those loans into a Direct Consolidation Loan (DCL) to receive BD relief will have their eligibility for relief be adjudicated under the standards for Direct Loans disbursed between July 1, 2017, and July 1, 2020.
- Borrowers participating in income-driven repayment plans are not required to recertify their income or family size until after the administrative forbearance period extended by the August 8, 2020, Presidential Memorandum expires, and will be notified of a new certification deadline thereafter;
- Borrowers participating in income-contingent repayment plans who do not make payments during the COVID–19 emergency will generally not have any interest capitalized upon the conclusion of the COVID–19-related administrative forbearance period; and
- IHEs are provided academic calendar flexibility to address scheduling complications that have

arisen as a result of the COVID–19 national emergency.

Prior waivers granted by the Secretary under this Act remain in effect for affected individuals, as defined in those waivers.

Statutory Waiver Granted Under the Heroes Act in Response to the Covid–19 Pandemic

Recognition of Accrediting Agency or Association (HEA § 496, 20 U.S.C. 1099b)

HEA § 496(c)(1) (20 U.S.C. 1099b(c)(1)) provides that a recognized accrediting agency or association must perform, at regularly established intervals, on-site inspections and reviews of IHEs (which may include unannounced site visits) with particular focus on educational quality and program effectiveness, and ensures that accreditation team members are well-trained and knowledgeable with respect to their responsibilities, including those regarding distance education.

HEA § 496(c)(1) (20 U.S.C. 1099b(c)(5)) provides that an accrediting agency or association must agree to conduct, as soon as practicable, but within a period of not more than six months of the establishment of a new branch campus or a change of ownership of an IHE, an on-site visit of that branch campus or of the institution after a change of ownership.

The Secretary is waiving these requirements, for the duration of the national emergency declaration and 180 days following the date on which the COVID–19 national emergency declaration is rescinded, to provide accrediting agencies and associations the flexibility to develop, adopt, modify, and implement temporary virtual site visit policies. Virtual site visits should rely on an engaged, interactive format (*e.g.,* telephonic meetings, video conference calls), rather than solely relying upon document reviews or exchanges of emails.

However, if a site visit within six months after a change of ownership is conducted virtually, a follow up in-person visit must be conducted within 90 days following the date on which the COVID–19 national emergency declaration is rescinded.

Regulatory Waivers Granted Under the Heroes Act in Response to the Covid–19 Pandemic Distance Education (34 CFR 600.9, 602.16, 602.18, 602.19, and 602.27)

Section 600.9(c) requires IHEs to obtain State authorization to provide postsecondary educational programs through distance education. The Secretary is waiving this requirement for payment periods that overlap March 5, 2020, or begin after March 5, 2020, through the end of the payment period that begins after the date on which the Federally-declared national emergency related to COVID–19 is rescinded.

This waiver applies only to the Department's requirements; IHEs will need to determine whether the distance education being provided meets the applicable State requirements.

The Secretary is providing this waiver so that IHEs may provide programs using distance education to accommodate students without requiring such institutions to obtain Department approval to provide the program through distance education. If an IHE chooses to continue offering a program or use distance education in a manner requiring the Department's approval after the waiver period ends, it must obtain approval under the Department's normal process.

Section 602.16 provides that an accrediting agency or association that has within its scope of recognition the evaluation of the quality of institutions or programs offering distance education, correspondence courses, or direct assessment education, must have standards that effectively address the quality of an institution's distance education, correspondence courses, or direct assessment education. The Secretary is waiving, for the duration of the national emergency declaration and 180 days following the date on which the COVID–19 national emergency declaration is rescinded, this requirement so that accreditors may waive their distance education review requirements for institutions working to accommodate students whose enrollment is otherwise interrupted as a result of COVID–19. This waiver is limited to distance learning opportunities developed specifically for the purpose of serving students who were already in attendance, and whose attendance was interrupted by COVID–19.

Section 602.16(a)(2)(ii) limits to five years the duration of preaccreditation status that can be granted by an accrediting agency before a final determination can be made. The Secretary is waiving, for the duration of the national emergency declaration and 180 days following the date on which the COVID–19 national emergency declaration is rescinded, this requirement to enable accrediting agencies sufficient opportunity to complete their assessment of a preaccredited institution for a final accreditation determination.

Section 602.19(a) requires accrediting agencies to reevaluate, at regularly established intervals, the institutions or programs it has accredited or preaccredited. The Secretary is waiving this requirement, for the duration of the national emergency declaration and 180 days following the date on which the COVID–19 national emergency declaration is rescinded, to provide accrediting agencies the flexibility to develop, adopt, modify, and implement temporary virtual site visit policies. With the approval of the accrediting agency's board, or other decision-making body, during a telephonic or video conference meeting, accrediting agencies may adopt or modify temporary virtual site visit policies without a public comment period. Because these policies would be temporary and arise from the unique set of circumstances and challenges presented by the COVID–19 pandemic, this approval would not require a vote of the full membership of the accrediting agency. Should an accrediting agency desire to make a temporary virtual site visit policy or policy modification permanent after the COVID–19 national emergency declaration is rescinded, it must adhere to applicable statutory and regulatory requirements.

The Secretary is also waiving the requirements under § 602.21(c), for the duration of the national emergency declaration and 180 days following the date on which the COVID–19 national emergency declaration is rescinded, to enable accrediting agencies to expedite the development of temporary standards to approve distance learning programs or courses, including agencies that did not previously have distance learning in their scope and for institutions that did not previously offer distance learning opportunities. However, in accrediting clock-hour programs for which licensure boards approved the use of distance learning to meet the ''clock-hour of instruction'' requirements, agencies must continue to meet the requirements under § 602.21(c).

On September 2, 2020, the Secretary amended the Department's regulations to permanently permit the use of synchronous and asynchronous distance learning in the delivery of clock-hour programs by distance learning if the relevant licensure body will accept distance learning hours to meet licensure requirements. Institutions are permitted to implement this new regulation immediately; otherwise, the new regulation goes into effect on July 1, 2021.

The Secretary is also waiving the requirement in § 602.27(a)(4) that an

accrediting agency must expand its scope of recognition by notifying the Secretary prior to accrediting programs and institutions that provide education through distance learning. During the COVID–19 national emergency, an accrediting agency need not expand its scope of recognition to include distance learning in order to approve its member programs or institutions to offer distance learning.

Notice and Application Procedures for Establishing, Reestablishing, Maintaining, or Expanding Institutional Eligibility and Certification (34 CFR 600.20)

Section 600.20(h)(3)(iii) provides that the Secretary will extend an institution's provisional Program Participation Agreement (PPA) on a month-to-month basis after the expiration date if, prior to that expiration date, the institution provides the Secretary with approval of the change of ownership from the institution's accrediting agency.

In keeping with the waivers provided in § 600.31, the Secretary is waiving, through the end of the payment period that begins after the date on which the Federally-declared national emergency related to COVID–19 is rescinded, the requirement to provide approval of the change of ownership from the institution's accrediting agency within the time period set forth in 600.20(h)(3)(iii).

Institutional Eligibility—Change of Ownership (34 CFR 600.31)

The Secretary is waiving § 600.31(a)(2) and providing an additional six months for IHEs to provide the approvals from the institution's accrediting agency and State, and the same-day balance sheet or statement of financial position prepared under required financial standards pursuant to § 600.20(h)(3), that is ordinarily due by the end of the month following the change of ownership. The Secretary will accept unaudited financial statements for the IHE's and new owner's most recently completed fiscal year within the time frame established under § 600.20(g)(1), provided that the submission includes the engagement letters for the audited financial statements under § 600.20(g)(2) to be completed for submission to the Department the earlier of six months after the change in ownership or 30 days after the date of the auditor's report with the financial statements. This waiver is in effect for the duration of the national emergency declaration and 180 days following the date on which the COVID–19 national emergency declaration is rescinded.

Medical College Admissions Test (MCAT) (34 CFR 600.55)

Section 600.55(c) requires a foreign graduate medical school having a post-baccalaureate or equivalent medical program that participates in the Federal Direct Loan program to require students accepted for admission who are U.S. citizens, nationals, or permanent residents to have taken the MCAT and to have reported their scores to the foreign graduate medical school.

The Secretary is waiving, for the duration of admissions years in which the COVID–19 national emergency declaration is in effect, the requirement that to participate in the Federal Direct Loan program, a foreign medical school must require students to take the MCAT.

Application of Standards in Reaching an Accrediting Decision (34 CFR 602.17)

As a result of travel restrictions, State-mandated campus closures, and administrative decisions to move instruction to distance learning, accrediting agencies may need to perform required site visits virtually. Therefore, beginning on March 13, 2020, for the duration of the national emergency declaration and 180 days following the date on which the COVID–19 national emergency declaration is rescinded, the Secretary is waiving the provisions of § 602.17(c) that require accrediting agencies to conduct at least one on-site review of the institution or program during which it obtains sufficient information to determine if the institution or program complies with the agency's standards. Accrediting agencies may conduct required site visits for monitoring performance virtually at regularly scheduled intervals or renewal of accreditation.

The Secretary continues to require that in the case such a site visit is associated with making an award of accreditation or preaccreditation, the agency must perform a limited in-person site visit as soon as practicable. This limited in-person site visit need not replicate the virtual visit, or elements thereof, and need not include the full team that participated in the virtual site visit, but could be conducted through a limited visit performed by agency staff or a single site visitor.

Virtual site visits should rely on an engaged, interactive format (*e.g.,* telephonic meetings, video conference calls), rather than solely relying upon document reviews or exchanges of emails.

Substantive Changes and Other Reporting Requirements (34 CFR 602.22)

Section 602.22(d) requires accrediting agencies to have an effective mechanism for conducting, at reasonable intervals, visits to a representative sample of additional locations they have approved.

Section 602.22(f)(1) requires an accrediting agency to conduct a site visit, within six months, to each additional location an institution establishes (when the total number of additional locations, where at least 50 percent of an educational program is offered, is three or fewer and the locations are not considered to be branch campuses).

Section 602.22(f)(2) requires an accrediting agency to have a mechanism for conducting, at reasonable intervals, visits to a representative sample of additional locations an institution establishes (when the total number of additional locations, where at least 50 percent of an educational program is offered, is more than three and the locations are not considered to be branch campuses).

The Secretary is waiving these requirements for the duration of the national emergency declaration and 180 days following the date on which the COVID–19 national emergency declaration is rescinded and permitting accrediting agencies to conduct these visits virtually. Virtual site visits should rely on an engaged, interactive format (*e.g.,* telephonic meetings, video conference calls), rather than solely relying upon document reviews or exchanges of emails.

Additional Procedures Certain Institutional Agencies Must Have (34 CFR 602.24)

Section 602.24(b) provides that an accrediting agency must undertake a site visit to a new branch campus, or following a change of ownership or control, as soon as practicable, but no later than six months, after the establishment of that campus or the change of ownership or control.

The Secretary is waiving these requirements, for the duration of the national emergency declaration and 180 days following the date on which the COVID–19 national emergency declaration is rescinded, to permit accrediting agencies to conduct these visits virtually. Virtual site visits should rely on an engaged, interactive format (*e.g.,* telephonic meetings, video conference calls), rather than solely relying upon document reviews or exchanges of emails.

However, if a site visit within six months after a change of ownership is

conducted virtually, a follow up in-person visit must be conducted within 90 days following the date on which the COVID–19 national emergency declaration is rescinded.

Program Eligibility (34 CFR 668.8)

Short-Term Programs

Sections 668.8(d)(3) and (e) provide that proprietary IHEs and postsecondary vocational institutions that offer short-term programs must demonstrate in their annual compliance audits that students enrolled in the programs had completion and job placement rates of at least 70 percent before those programs qualify, or continue to qualify, as eligible programs for Federal Direct Loans (the ''70/70 qualifying requirements'').

The Secretary waives the 70/70 qualifying requirements for any award year in which the COVID–19 national emergency declaration was in place for at least one day during the award year. Institutions must continue to report completion and placement rates for short-term programs for such award years in compliance audits, but the programs will remain eligible even if they do not meet the 70/70 requirements. Short-term programs will once again be required to meet the 70/70 qualifying requirements for any future award year in which the COVID–19 national emergency declaration is not in effect.

New Distance Education Programs

Section 668.8(m) provides that an otherwise eligible program that is offered in whole or in part through telecommunications is eligible for title IV, HEA program purposes if the program is offered by an institution, other than a foreign institution, that has been evaluated and is accredited for its effective delivery of distance education programs by an accrediting agency or association that is recognized by the Secretary under subpart 2 of part H of the HEA, and has accreditation of distance education within the scope of its recognition.

In recognition that many postsecondary institutions needed to implement distance learning solutions to continue educating students in response to campus interruptions or the unexpected return of students from travel abroad experiences, the Secretary is waiving, through the end of the payment period that begins after the date on which the Federally-declared national emergency related to COVID–19 is rescinded, the requirement that these IHEs must have obtained accreditation to offer distance education programs.

Approved Leaves of Absence (34 CFR 668.22)

Under § 668.22(d), an IHE is not permitted to place students on a leave of absence during the suspension of coursework, including clinicals or internships/externships. However, if the coursework suspension results from a COVID–19 related circumstance, IHEs may grant an approved leave of absence to affected students. Approved leaves of absence granted due to COVID–19-related concerns or limitations are considered to fall under the exception provided in § 668.22(d)(3)(iii)(B) permitting, in the case of unforeseen circumstances, an IHE to grant such leave prior to the student's request. A written request for leave of absence for that period must subsequently be obtained from the student. These flexibilities apply to all leaves of absence granted through the end of the payment period that begins after the date on which the Federally-declared national emergency related to COVID–19 is rescinded.

Section 668.22(d)(1)(vi) provides that the maximum number of days in an approved leave of absence, when added to the number of days in all other approved leaves of absence, may not exceed 180 in any 12-month period. The Secretary modifies this requirement and extends the maximum number of days from 180 (in any 12-month period) to allow a leave of absence to be extended to December 31, 2020.

Treatment of Direct Loan Funds if a Student Does Not Begin Attendance (34 CFR 668.21(a)(2)(ii))

The Secretary is waiving the requirement in § 668.21(a)(2)(ii) that an institution notify the Direct Loan Servicer when a borrower who has received a credit balance payment composed of Federal Direct Loan funds will not or has not begun attendance, so that the servicer will issue a final demand letter. Under this waiver, in such circumstances, the institution should not notify the servicer. The amount of the Direct Loan credit balance will be the borrower's responsibility to repay under the terms of the promissory note. This waiver expires at the end of the payment period that begins after the date on which the Federally-declared national emergency related to COVID–19 is rescinded.

Annual Compliance and Financial Statement Audit Submission Deadlines (34 CFR 668.23)

For IHEs and other entities subject to the Single Audit Act and the implementing regulations at 2 CFR Subpart F that submit an audit under the Single Audit Act, the Department will consider the audit submission of the IHE or other entity timely if it is submitted to the Department through eZ-Audit or as directed by the Department at the same time it is timely submitted to the Federal Audit Clearing House under Office of Management and Budget guidance M 20–26 for COVID–19 audit submissions and any future extensions provided by the Office of Management and Budget.

IHEs and other entities that do not submit audits under the Single Audit Act are required under § 668.23 to submit their annual compliance audit and financial statements no later than six months after the last day of their fiscal year. For any such audits that are due to be submitted to the Department no later than March 1, 2020, through December 31, 2020, or other periods specified by the Secretary, the Secretary is extending the submission deadline up to an additional six months t and other entities to provide more time for the IHE auditors to complete those audits. For IHEs and other entities choosing to submit their audits after the normal due date, the Department will consider the audits to be submitted timely if they are submitted to eZ-audit or as directed by the Department no later than 30 calendar days after the date of the audit report. If date of the audit report is prior to the date of this notice, IHEs and other entities have 30 calendar days from the date of this notice to submit their required audits.

End of an Institution's Participation in the Title IV, HEA Programs (34 CFR 668.26(a)(1) and (2))

Section 668.26 provides that an IHE's participation in a title IV, HEA program ends on the date that the IHE closes or stops providing educational programs for a reason other than a normal vacation period or a natural disaster that directly affects the IHE or the IHE's students, or on the date it loses its institutional eligibility under part 600. The Secretary is waiving this requirement in recognition that some IHEs are unable to convert their programs to an alternative instructional modality during the COVID–19 pandemic. IHEs that have interrupted their on-campus instruction without converting to an alternative instructional modality, either on-ground

or online, must resume instruction by the start of the institution's scheduled payment period, as published in the institution's academic calendar, one payment period after the payment period in which the COVID–19 national emergency is lifted to continue their participation in the title IV, HEA programs.

The Department retains the discretion to determine that an institution has closed based on its assessment of the institution's capacity to reopen at the end of the COVID–19 national emergency.

Campus Security, Fire Safety, and Equity in Athletics Disclosures (34 CFR 668.41)

The Secretary extends the October 1 deadline in § 668.41(e)(1) for IHEs to distribute their Annual Security Reports and Annual Fire Safety Reports (required under § 668.46(b) and § 668.49(b), respectively) to required recipients to December 31, 2020. Likewise, the October 15 deadline established in § 668.41(g)(1) for IHEs to distribute their annual Equity in Athletics Disclosure Act (EADA) disclosures (required under § 668.47(c)) to required recipients is extended to December 31, 2020.

Acceptable Documentation (34 CFR 668.57(b), (c), and (d))

Sections 668.57(b) and (c) require a statement signed by both the applicant and one of the applicant's parents if the applicant is a dependent student, or only the applicant if the applicant is an independent student, to verify the number of family members in the household and the number of family members enrolled in IHEs. Pursuant to § 668.57(d), an applicant may also be required to verify other information specified in the annual **Federal Register** document that announces the Free Application for Federal Student Aid (FAFSA) information as well as the acceptable documentation for verifying that FAFSA information. IHEs are permitted to waive the requirement for a parental signature in the event that it cannot be obtained, or accept a document signed and photographed and sent by email or text message attachment, on any verification documentation required to validate a student's title IV eligibility;. This waiver expires at the end of the payment period that begins after the date on which the Federally-declared national emergency related to COVID–19 is rescinded.

Cash Management Regulations (34 CFR 668.161 and 162)

Payment Methods

Under § 668.161(a)(2)(iv), an IHE may disburse title IV, HEA program funds by electronic funds transfer (EFT) if the EFT is an automated clearing house transaction, meaning that the EFT must be a direct deposit transaction. The Secretary waives the requirement that the EFT be a direct deposit transaction to allow IHEs and third-party servicers to use any type of EFT under the Treasury Department regulations in 31 CFR 208.2, including person-to-person payment methods such as Zelle and PayPal, or to enable an IHE to use a student's debit card number to transfer a title IV credit balance to the student's checking account using an original credit transaction. This waiver expires at the end of the payment period that begins after the date on which the Federally-declared national emergency related to COVID–19 is rescinded.

An IHE or third-party servicer must ensure that any payment method used complies with the disbursement requirements in the Cash Management regulations, and that the institution notifies its auditor of the alternative method used as part of its annual compliance audit for any fiscal year that alternative is used. We note that regardless of whether any audit deficiencies are identified, the IHE or servicer must disclose in the compliance audit the alternative method used and how it was used to make title IV disbursements.

Credit Balances

For IHEs that are on HCM1 under § 668.162(d)(1), the Secretary is temporarily modifying the cash management requirements to permit those institutions to submit a request for funds without first paying the credit balances due to the students for whom those funds were requested. For requests submitted between March 2020 and the end of the payment period that begins after the date on which the Federally-declared national emergency related to COVID–19 is rescinded, IHEs must pay the credit balances no later than three calendar days after receiving the funds for those students.

Cohort Default Rate (CDR) Appeals (34 CFR 668.204)

Section 668.204(b) provides that an IHE may challenge the accuracy of the data included on the loan record detail report by sending a challenge to the relevant data manager, or data managers, within 45 days after receiving the data.

On February 24, 2020, the Department posted an Electronic Announcement that draft CDRs for FY 2017 had been distributed to institutions and that included information about the process for appealing those draft rates.

In recognition that IHEs have encountered many difficulties and interruptions in day-to-day operations during the COVID–19 pandemic, the Secretary extended to June 30, 2020, the deadline for IHEs to appeal the draft CDRs that were distributed on or about February 24, 2020.

Deadline for Submission of Fiscal Operations Report and Application To Participate (34 CFR 673.7)

The Secretary extended until November 1, 2020, the October 1, 2020, deadline established in the **Federal Register** on January 3, 2020 (85 FR 303) for submission of the 2020–2021 Fiscal Operations Report and Application to Participate (FISAP).

Federal Work–Study (34 CFR 673.7)

The Secretary is waiving the Federal Work-Study (FWS) community service requirements in § 675.18(g) for all FWS-participating schools for at least the 2019–20 and 2020–21 award years. Schools do not need to apply for the waiver for either award year. The Department will administratively grant waivers to all schools. This waiver expires at the end of the award year that begins after the date on which the Federally-declared national emergency related to COVID–19 is rescinded.

Perkins Loans (34 CFR 674.2(b))

Under sections 428F(b) and 464(h)(2) of the HEA and under the definition of ''satisfactory repayment arrangement'', a defaulted Perkins Loan borrower may make six consecutive, on-time, voluntary, full, monthly payments to reestablish eligibility for title IV Federal student financial assistance. To assist Perkins Loan borrowers who are affected by the COVID–19 pandemic, the Secretary is waiving, through December 31, 2020, the statutory and regulatory provisions that require the borrower to make consecutive payments to reestablish eligibility. Loan holders are encouraged not to treat any payment missed during the time that a borrower is an affected individual in this category as an interruption in the six consecutive, on-time, voluntary, full, monthly payments required for reestablishing title IV eligibility. If there is an arrangement or agreement in place between the borrower and loan holder and the borrower makes a payment during this period, the loan holder must treat the payment as an eligible payment

in the required series of payments even if the borrower did not make additional payments during this period. At the conclusion of this waiver period, the required sequence of qualifying payments may resume at the point they were discontinued because of the borrower's status as an affected individual. The Secretary will apply the waivers described in this paragraph to loans held by the Department.

Loan Rehabilitation (34 CFR 674.39)

Federal Perkins Loan borrowers must make nine consecutive, on-time monthly payments to rehabilitate a defaulted Federal Perkins Loan in accordance with § 464(h)(1)(A) of the HEA and § 674.39. To assist title IV borrowers who are affected by the COVID–19 pandemic, the Secretary is waiving, through December 31, 2020, the statutory and regulatory loan rehabilitation requirements that eligible payments must be made over no more than 10 consecutive months, as follows. Loan holders other than the Department are encouraged to treat any payment missed during the time that a borrower is an affected individual in this category as a payment that counts toward a rehabilitation agreement. If there is an arrangement or agreement in place between the borrower and loan holder and the borrower makes a payment or payments during this period, the loan holder must treat the payment as an eligible payment in the required series of payments. When the borrower is no longer an affected individual in this category, the required sequence of qualifying payments may resume at the point they were discontinued because of the borrower's status as an affected individual to successfully rehabilitate a Perkins Loan. The Department will apply the waivers described in this paragraph to loans held by the Department.

Repayment of a Loan (34 CFR 682.209)

Section 682.209 provides that interest accrues on an FFEL loan during the interval between scheduled payments. On March 13, 2020, the President announced [3] that the interest on all FFEL loans held by the Department and on all Direct Loans would be waived amid the coronavirus outbreak. On March 20, 2020, the Secretary announced [4] that interest rates for such loans would be set to zero percent (0%) for a period of at least 60 days, during which time borrowers would have the option to suspend their monthly loan payments. On March 27th, 2020, the CARES Act was signed into law and provided that interest would not be charged on Perkins, HEAL, FFEL, or Direct Loans held by the Department through September 30, 2020. Following the President's Memorandum of August 8, 2020, the Secretary is further extending until December 31, 2020, in accordance with the prior announcement, the waivers of the regulatory provisions in §§ 682.202 and 682.209 that require that interest be charged on FFEL loans held by the Department from March 13, 2020, through March 27, 2020, and from October 1, 2020 through December 31, 2020. The affected loans include FFEL Program Loans that the Department acquired pursuant to the Ensuring Continued Access to Student Loans Act of 2008 (ECASLA), through the assignment of defaulted loans under § 682.409, and rehabilitated loans for which a guaranty agency could not secure a purchaser and assigned to the Department under § 682.405(a)(2)(ii). This does not apply to defaulted FFEL Program Loans for which a guaranty agency has paid a claim to the FFEL Program lender and on which the guaranty agency is pursuing the borrower for collection. However, the guaranty agencies may voluntarily provide interest or payment waivers, for the duration of the COVID–19 national emergency, to borrowers of loans on which collection activity continues.

Obligation To Repay (34 CFR 685.207)

Section 685.207 provides that a borrower is required to pay any interest not subsidized by the Secretary unless the borrower is relieved of the obligation to repay. On March 13, 2020, the President announced that the interest on all student loans held by the Department would be waived amid the coronavirus outbreak. On March 20, 2020, the Secretary announced that interest rates for such loans would be set to zero percent for a period of at least 60 days, during which time borrowers would have the option to suspend their monthly loan payments. On March 27th, 2020, the CARES Act was signed into law and extended this same benefit through September 30, 2020. The period of this benefit was further extended to December 31, 2020 by the President's Memorandum of August 8, 2020. Accordingly, Direct Loans are automatically placed in an administrative forbearance status that is currently scheduled to be in effect from March 13, 2020, through December 31, 2020.

Borrower Defense to Repayment (34 CFR 685.206 & 685.222)

When the Department expanded the utilization of the Borrower Defense to Repayment (BD) provision to provide potential loan forgiveness to borrowers who had enrolled in certain programs, during certain periods of time, it offered to review BD applications submitted by students who had FFEL or Perkins loans, and other loans that were not Direct Loans (non-Direct Loans), and notify the borrower of their eligibility for full or partial loan relief in the event that such students elected to consolidate those loans into a Direct Consolidation Loan. If the Department determined that the borrower had successfully established a defense to repayment, the borrower could apply for a Direct Consolidation Loan to receive the discharge. On July 1, 2020, new regulations regarding BD went into effect. In the months prior to July 1, 2020, BD applicants were not specifically notified that they would need to take action to consolidate the non-Direct loans included in their borrower defense applications into a Direct Consolidation Loan prior to July 1, 2020, to ensure that the Direct Consolidation Loan would be adjudicated under the 2016 BD regulations, which includes the standards under which the Department would make the determination of eligibility for BD relief on FFEL or Perkins loans, or other non-Direct Loans, in the event that the borrower chose to consolidate his or her eligible loans into a Direct Consolidation Loan. Applications for relief on Direct Consolidation Loans that include FFEL or Perkins loans originally included in BD applications received by the Department prior to July 1, 2020, will therefore be adjudicated under the standards for Direct Loans, including Direct Consolidation loans, disbursed between July 1, 2017, and July 1, 2020.

Recertification of Income-Driven Repayment Plans (34 CFR 685.209 & 685.221)

Sections 685.209 and 685.221 provide that a borrower participating in an income-driven repayment plan is required to provide documentation, acceptable to the Secretary, that enables the annual calculation of the borrower's payment amount for each year that the borrower remains on the plan. The Secretary is waiving §§ 685.209(a)(5)(i) and 685.221(e)(1) for one calendar year from the date on which a borrower would have been required to provide

[3] /*www.whitehouse.gov/presidential-actions/memorandum-continued-student-loan-payment-relief-covid-19-pandemic/*.

[4] *www.ed.gov/news/press-releases/delivering-president-trumps-promise-secretary-devos-suspends-federal-student-loan-payments-waives-interest-during-national-emergency*.

recertification documentation in 2020. Borrowers will be notified by their loan servicer of their new recertification date, in advance of the deadline on which such documentation is required.

Capitalization of Interest Under the Income-Contingent Repayment Plan (34 CFR 685.209)

Section 685.209(a)(2)(iv)(A) provides that interest is capitalized on a borrower's loans that are being repaid under the income-contingent repayment plan when a borrower is determined to no longer have a partial financial hardship or at the time a borrower chooses to leave the Pay As You Earn repayment plan. As noted above, all Direct Loans in repayment or default have been placed in an administrative forbearance status and interest has been suspended. If the borrower's loan payments were current before the administrative forbearance period began, interest accrued prior to March 13, 2020, will not capitalize at the end of the coronavirus-related administrative forbearance period.

However, if the borrower's loans were in the type of deferment or forbearance in which interest would normally capitalize before the coronavirus-related administrative forbearance period began, interest accrued prior to March 13, 2020, will capitalize when the borrower's original deferment or forbearance ends, or on January 1, 2021, whichever is later.

For borrowers whose loans were in a grace period before the coronavirus-related administrative forbearance period began, any outstanding or unpaid interest on a borrower's account will capitalize as it usually does when the loan(s) enter repayment.

This waiver expires on December 31, 2020.

Academic Calendar Flexibility (34 CFR 690.63)

Section 690.63(a)(3) requires, as a condition of calculating Pell grant eligibility under Formula 1,[5] that students not be allowed ''to be enrolled simultaneously in overlapping terms . . .''. The Secretary is waiving this requirement for academic years that include the latter of December 31, 2020, or the last date of the COVID–19 national emergency. All standard terms will be permitted to overlap with an adjacent term without the program being considered non-term. Additionally, a standard semester or trimester may consist of as few as 13 weeks of instructional time and a standard quarter as few as nine weeks of instructional time without the program being considered a non-standard term program.

The Secretary is waiving the provisions of § 690.63(a)(1)(ii)(B)(3) and permitting IHEs to treat as standard term any academic calendar comprised of semesters, trimesters, or quarters that overlap. For all academic years that include the later of December 31, 2020, or the end date for the COVID–19 Federally declared emergency, the existence of overlapping standard terms will not result in a program being considered non-term.

Section 3513 of the CARES Act

Section 3513 of the CARES Act directs the Secretary to: (1) Suspend all payments due, (2) cease interest accrual, and (3) suspend involuntary collections for loans made under part D and part B (that are held by the Department) of title IV of the HEA through September 30, 2020. The section also directs the Secretary to deem each month for which a loan payment was suspended as if the borrower of the loan had made a payment for the purpose of any loan forgiveness program or loan rehabilitation program authorized under part D or B for which the borrower would have otherwise qualified. Lastly, this section directs the Secretary to ensure that, for the purpose of reporting information about the loan to a consumer reporting agency, any payment that has been suspended is treated as if it were a regularly scheduled payment made by a borrower.

On August 8, 2020, the President issued a memorandum directing the Secretary to continue to waive interest and payments on such loans until December 31, 2020. Therefore, in accordance with the prior announcement, the Secretary is using her authority under the HEROES Act to modify the terms of the benefits provided under section 3513 of the CARES Act such that they will continue to be provided to borrowers until December 31, 2020.

Accessible Format: On request to Mr. Jean-Didier Gaina, by telephone: (202) 502–7526 or by email: *Jean-Didier.Gaina@ed.gov,* individuals with disabilities can obtain this document in an accessible format (such as braille, large print, audiotape, or compact disc), to the extent reasonably practicable.

Electronic Access to This Document: The official version of this document is the document published in the **Federal Register**. ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 82

[EPA–HQ–OAR–2003–0118; FRL–10016–19–OAR]

RIN 2060–AG12

Protection of Stratospheric Ozone: Determination 36 for Significant New Alternatives Policy Program

AGENCY: Environmental Protection Agency (EPA).

ACTION: Determination of acceptability.

SUMMARY: This determination of acceptability expands the list of acceptable substitutes pursuant to the U.S. Environmental Protection Agency's (EPA) Significant New Alternatives Policy (SNAP) program. This action lists as acceptable additional substitutes for use in the refrigeration and air conditioning, foam blowing, and fire suppression sectors.

DATES: This determination is applicable on December 11, 2020.

ADDRESSES: The EPA established a docket for this action under Docket ID No. EPA–HQ–OAR–2003–0118 (continuation of Air Docket A–91–42). All electronic documents in the docket

are listed in the index at *www.regulations.gov.* Although listed in the index, some information is not publicly available, *i.e.,* Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Publicly available docket materials are available either electronically at *www.regulations.gov* or in hard copy at the EPA Air Docket (Nos. A–91–42 and EPA–HQ–OAR–2003–0118), EPA Docket Center (EPA/DC), William J. Clinton West, Room 3334, 1301 Constitution Avenue NW, Washington, DC 20460. The telephone number for the Public Reading Room is (202) 566–1744, and the telephone number for the Air Docket is (202) 566–1742. Out of an abundance of caution for members of the public and our staff, the EPA Docket Center and Reading Room are closed to public visitors, with limited exceptions, to reduce the risk of transmitting COVID–19. Our Docket Center staff will continue to provide remote customer service via email, phone, and webform.

FOR FURTHER INFORMATION CONTACT: Chenise Farquharson by telephone at (202) 564–7768, by email at *Farquharson.chenise@epa.gov,* or by mail at U.S. Environmental Protection Agency, Mail Code 6205T, 1200 Pennsylvania Avenue NW, Washington, DC 20460. Overnight or courier deliveries should be sent to the office location at 1201 Constitution Avenue NW, Washington, DC 20004.

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Listing of New Acceptable Substitutes

This action is listing as acceptable additional substitutes for use in the refrigeration and air conditioning, foam blowing, and fire suppression sectors. This action presents EPA's most recent decision to list as acceptable several substitutes in different SNAP end-uses. New substitutes are:

- Hydrochlorofluoroolefin (HCFO)-1233zd(E) in industrial process refrigeration (new and retrofit equipment);
- R–515B in centrifugal and positive displacement chillers and industrial process air conditioning (new equipment);
- Blends of 10 to 99 percent by weight hydrofluoroolefin (HFO)-1336mzz(Z) and the remainder hydrofluorocarbon (HFC)-152a in polystyrene: Extruded boardstock and billet;
- HFO–1336mzz(E) in a number of foam blowing end-uses;
- Methylal in rigid polyurethane (PU) spray foam (high-pressure two-component, low-pressure two-component, and one-component foam sealants); and
- HCFO–1233zd(E)/C6-perfluoroketone blend in total flooding fire suppression (normally occupied and unoccupied spaces).

EPA's review of certain substitutes listed in this document is pending for other uses. Listing decisions in the end-uses and applications in this document do not prejudge EPA's listings of these substitutes for other end-uses. The substitutes being added through this action to the acceptable lists for specific end-uses have a similar or lower risk than other substitutes already listed as acceptable in those end-uses. However, certain substitutes may have a higher overall risk than certain other substitutes already listed as acceptable or acceptable subject to restrictions. In such cases, those already-listed alternatives have not yet proved feasible in those specific end-uses to date.

For additional information on SNAP, visit the SNAP portion of EPA's Ozone Layer Protection website at: *www.epa.gov/snap.* Copies of the full lists of acceptable substitutes for ozone-depleting substances (ODS) in all industrial sectors are available at *www.epa.gov/snap/substitutes-sector.* For more information on the Agency's process for administering the SNAP program or criteria for evaluation of substitutes, refer to the initial SNAP rulemaking published March 18, 1994 (59 FR 13044), and the regulations codified at 40 CFR part 82, subpart G. SNAP decisions and the appropriate **Federal Register** citations are found at: *www.epa.gov/snap/snap-regulations.* Substitutes listed as unacceptable; acceptable, subject to narrowed use limits; or acceptable, subject to use conditions are also listed in the appendices to 40 CFR part 82, subpart G.

The sections below discuss each substitute listing in detail. Appendix A contains tables summarizing each listing decision in this action. The statements in the ''Further Information'' column in the tables provide additional information but these are not legally binding under section 612 of the Clean Air Act (CAA). Although you are not required to follow recommendations in the ''Further Information'' column of the table to use a substitute consistent with section 612 of the CAA, some of these statements may refer to obligations that are enforceable or binding under federal or state programs other than the SNAP program. The identification of other enforceable or binding requirements should not be construed as a comprehensive list of such obligations. In many instances, the information simply refers to standard operating practices in existing industry standards and/or building codes. When using these substitutes in the identified end-use, EPA strongly encourages you to apply the information in the ''Further Information'' column. Many of these recommendations, if adopted, would not require significant changes to existing operating practices.

You can find submissions to EPA for the substitutes listed in this document, as well as other materials supporting the decisions in this action, in Docket EPA–HQ–OAR–2003–0118 at *www.regulations.gov.*

A. Refrigeration and Air Conditioning

1. HCFO–1233zd(E)

EPA's decision: EPA finds HCFO–1233zd(E) acceptable as a substitute for use in:

- Industrial Process Refrigeration (new and retrofit equipment)

HCFO–1233zd(E), marketed under the trade name Solstice™ N12 Refrigerant, is also known as *trans*-1-chloro-3,3,3-trifluoroprop-1-ene (Chemical Abstracts Service Registry Number [CAS Reg. No.] 102687–65–0).

You may find a copy of the applicant's submission, with CBI redacted, providing the required health and environmental information for this substitute in this end-use in Docket EPA–HQ–OAR–2003–0118 at *www.regulations.gov* under the name, ''Supporting Materials for Notice 36 Listing of HCFO–1233zd(E) in Refrigeration and Air Conditioning. SNAP Submission Received June 6, 2019.'' EPA performed an assessment to examine the health and environmental risks of this substitute. This assessment is available in Docket EPA–HQ–OAR–2003–0118: ''Risk Screen on Substitutes in Industrial Process Refrigeration. Substitute: HCFO–1233zd(E).''

EPA previously listed HCFO–1233zd(E) as acceptable for use in several refrigeration and air conditioning and foam blowing end-uses (August 10, 2012, 77 FR 47768; October 21, 2014, 79 FR 62863).

Environmental information: HCFO–1233zd(E) has an ozone depletion potential (ODP) of less than 0.0004 and a global warming potential (GWP) of

3.7.[1] HCFO–1233zd(E) is excluded from the definition of volatile organic compounds (VOC) under CAA regulations (see 40 CFR 51.100(s)) addressing the development of state implementation plans (SIPs) to attain and maintain the National Ambient Air Quality Standards (NAAQS). Knowingly venting or releasing this refrigerant blend is limited by the venting prohibition under section 608(c)(2) of the CAA, codified at 40 CFR 82.154(a)(1).

Flammability information: HCFO–1233zd(E) is not flammable.

Toxicity and exposure data: Potential health effects of exposure to this substitute include drowsiness or dizziness. The substitute may also irritate the skin or eyes or cause frostbite. The substitute could cause asphyxiation if air is displaced by vapors in a confined space. These potential health effects are common to many refrigerants.

The American Industrial Hygiene Association (AIHA) has established a Workplace Environmental Exposure Limit (WEEL) of 800 ppm on an eight-hour time-weighted average (8-hr TWA) for HCFO–1233zd(E). EPA anticipates that users will be able to meet the WEEL and address potential health risks by following requirements and recommendations in the manufacturer's safety data sheet (SDS), American Society of Heating, Refrigerating, and Air-Conditioning Engineers (ASHRAE) Standard 15, and other safety precautions common to the refrigeration and air conditioning industry.

Comparison to other substitutes in these end-uses: HCFO–1233zd(E) has an ODP of less than 0.0004, comparable to or less than other listed substitutes in this end-use with ODPs ranging from zero to 0.098.

For industrial process refrigeration, HCFO–1233zd(E)'s GWP of about 3.7 is comparable to or lower than that of other acceptable substitutes such as ammonia absorption for new equipment and carbon dioxide (CO_2), R–450A, R–513A and hydrofluorocarbon (HFC)-23 for new and retrofit equipment, with GWPs [2] ranging from zero to 14,800.

Flammability and toxicity risks are comparable to or lower than flammability and toxicity risks of other available substitutes in the same end-use. Toxicity risks can be minimized by use consistent with the AIHA WEEL, ASHRAE 15, and other industry standards, recommendations in the manufacturer's SDS, and other safety precautions common in the refrigeration and air conditioning industry.

EPA finds HCFO–1233zd(E) acceptable in the industrial process refrigeration (new and retrofit equipment) end-use because it does not pose greater overall environmental and human health risk than other available substitutes in the same end-use.

2. R–515B

EPA's decision: EPA finds R–515B acceptable as a substitute for use in:

- Centrifugal chillers (new equipment)
- Positive displacement chillers (new equipment)
- Industrial process air conditioning (new equipment)

R–515B is a weighted blend of 91.1 percent HFO–1234ze(E), which is also known as *trans*-1,3,3,3-tetrafluoroprop-1-ene (CAS Reg. No. 29118–24–9) and 8.9 percent HFC–227ea, also known as 1,1,1,2,3,3,3-heptafluoropropane (CAS Reg. No. 431–89–0).

You may find a copy of the applicant's submission, with CBI redacted, providing the required health and environmental information for this substitute in these end-uses in Docket EPA–HQ–OAR–2003–0118 at *www.regulations.gov* under the name, ''Supporting Materials for Notice 36 Listing of R–515B in Refrigeration and Air Conditioning. SNAP Submission Received September 6, 2019.'' EPA performed an assessment to examine the health and environmental risks of this substitute. This assessment is available in Docket EPA–HQ–OAR–2003–0118: ''Risk Screen on Substitutes in Centrifugal and Positive Displacement Chillers and Industrial Process Air Conditioning. Substitute: R–515B.''

Environmental information: R–515B has an ODP of zero. Its components, HFO–1234ze(E) and HFC–227ea, have a GWP of less than one [3] and 3,220, respectively. If these values are weighted by mass percentage, then R–515B has a GWP of about 287. The components of R–515B are excluded from the definition of VOC under CAA regulations (see 40 CFR 51.100(s)) addressing the development of SIPs to attain and maintain the NAAQS. Knowingly venting or releasing this refrigerant blend is limited by the venting prohibition under section 608(c)(2) of the CAA, codified at 40 CFR 82.154(a)(1).

Flammability information: R–515B is not flammable.

Toxicity and exposure data: Potential health effects of exposure to this substitute include drowsiness or dizziness. The substitute may also irritate the skin or eyes or cause frostbite. The substitute could cause asphyxiation if air is displaced by vapors in a confined space. These potential health effects are common to many refrigerants.

For the components of R–515B, the AIHA has established WEELs of 800 ppm and 1000 ppm as an 8-hr TWA for HFO–1234ze(E) and HFC–227ea, respectively. The manufacturer of R–515B recommends an acceptable exposure limit (AEL) for the blend of 810 ppm as an 8-hr TWA. EPA anticipates that users will be able to meet each of the WEELs, the manufacturer's AEL, and address potential health risks by following requirements and recommendations in the manufacturer's SDS, in ASHRAE Standard 15, and other safety precautions common to the refrigeration and air conditioning industry.

Comparison to other substitutes in these end-uses: R–515B has an ODP of zero, comparable to or less than other listed substitutes in these end-uses, with ODPs ranging from zero to 0.055.

For centrifugal and positive displacement chillers, R–515B's GWP of about 287 is comparable to or lower than that of other acceptable substitutes for new equipment, such as ammonia absorption, CO_2, HFO–1336mzz(Z), and R–513A, with GWPs ranging from zero to 630.

For industrial process air conditioning, R–515B's GWP of about 287 is comparable to or lower than that of other acceptable substitutes for new equipment, such as ammonia absorption, CO_2, HFO–1336mzz(Z), R–134a, and R–507A, with GWPs ranging from zero to 3,985.

Flammability and toxicity risks are comparable to or lower than flammability and toxicity risks of other available substitutes in the same end-uses. Toxicity risks can be minimized by use consistent with the AIHA WEEL, manufacturer's AEL, ASHRAE 15, and other industry standards,

[1] WMO (World Meteorological Organization), *Scientific Assessment of Ozone Depletion: 2018,* Global Ozone Research and Monitoring Project—Report No. 58, 588 pp., Geneva, Switzerland, 2018. Available at: *https://ozone.unep.org/sites/default/files/2019-05/SAP-2018-Assessment-report.pdf.* In this action, the 100-year GWP values are used.

[2] Unless otherwise stated, all GWPs in this document are 100-year values from: IPCC, 2007: *Climate Change 2007: The Physical Science Basis. Contribution of Working Group I to the Fourth Assessment Report of the Intergovernmental Panel on Climate Change* [Solomon, S., Qin, D., Manning, M., Chen, Z., Marquis, M., Averyt, K.B., Tignor M., and Miller, H.L. (eds.)]. Cambridge University Press, Cambridge, United Kingdom and New York, NY, USA. This document is accessible at *www.ipcc.ch/publications_and_data/ar4/wg1/en/contents.html.*

[3] WMO (World Meteorological Organization), *Scientific Assessment of Ozone Depletion: 2018,* Global Ozone Research and Monitoring Project—Report No. 58, 588 pp., Geneva, Switzerland, 2018. Available at: *https://ozone.unep.org/sites/default/files/2019-05/SAP-2018-Assessment-report.pdf.*

recommendations in the manufacturer's SDS, and other safety precautions common in the refrigeration and air conditioning industry.

EPA finds R–515B acceptable in the centrifugal chillers, positive displacement chillers, and industrial process air conditioning end-uses because it does not pose greater overall environmental and human health risk than other available substitutes in the same end-uses.

B. Foam Blowing

1. Blends of 10 to 99 percent by weight HFO–1336mzz(Z) and the remainder HFC–152a

EPA's decision: EPA finds blends of 10 to 99 percent by weight HFO–1336mzz(Z) andthe remainder HFC–152a (''HFO–1336mzz(Z)/HFC–152a blends'') acceptable as a substitute for use as a blowing agent in:

- *Polystyrene:* Extruded boardstock and billet

These blends range in composition from 10 percent HFO–1336mzz(Z) and 90 percent HFC–152a to 99 percent HFO–1336mzz(Z) and 1 percent HFC–152a. Accordingly, these blends are also referred to as blends of 10 to 99 percent by weight HFO–1336mzz(Z) and the remainder HFC–152a in this action. HFO–1336mzz(Z) is an HFO and is also called (Z)-1,1,1,4,4,4-hexafluorobut-2-ene or *cis*-1,1,1,4,4,4-hexafluorobut-2-ene (CAS Reg. No. 692–49–9); it also goes by the trade names of FEA–1100 or Formacel® 1100. HFC–152a is an HFC and is also called ethane, 1,1-difluoro (CAS Reg. No. 75–37–6).

You may find a copy of the applicant's submission, with CBI redacted, providing the required health and environmental information for this substitute in this end-use in Docket EPA–HQ–OAR–2003–0118 at *www.regulations.gov* under the name, ''SNAP Information Notice for Blends of 10 to 99 percent by Weight HFO–1336mzz(Z) and the Remainder HFC–152a as a Foam Blowing Agent. SNAP Submission Received October 10, 2019.'' EPA has performed an assessment to examine the health and environmental risks of this substitute. This assessment is available in docket EPA–HQ–OAR–2003–0118 under the name ''Risk Screen on Substitutes for Use in Extruded Polystyrene Boardstock and Billet Foam Substitute: HFO–1336mzz(Z) and HFC–152a Blends .''

Environmental information: These HFO–1336mzz(Z)/HFC–152a blends have an ODP of zero. Their components, HFO–1336mzz(Z) and HFC–152a, have GWPs of about two [4] and 124, respectively. If these values are weighted by mass percentage, then the blends range in GWP from about three to about 110. Both components of the blends are excluded from the definition of VOC under CAA regulations (see 40 CFR 51.100(s)) addressing the development of SIPs to attain and maintain the NAAQS.

Flammability information: The component HFC–152a is moderately flammable. HFO–1336mzz(Z) is not flammable at standard temperature and pressure using the standard test method ASTM E681. Certain of these HFO–1336mzz(Z)/HFC–152a blends are flammable, depending on the specific composition. For example, blends containing less than 91.5 percent HFO–1336mzz(Z) and more than 8.5 percent HFC–152a by weight are flammable.

Toxicity and exposure data: Potential health effects of this substitute include skin or eye irritation or frostbite. At sufficiently high concentrations, the substitute may cause irregular heartbeat. The substitute could cause asphyxiation if air is displaced by vapors in a confined space. These potential health effects are common to many foam blowing agents. The EPA anticipates that these HFO–1336mzz(Z)/HFC–152a blends will be used consistent with the recommendations specified in the SDS.

The AIHA has established a WEEL of 1,000 ppm as an 8-hr TWA for HFC–152a, and the WEEL committee of the Occupational Alliance for Risk Science (OARS) has established a WEEL of 500 ppm for HFO–1336mzz(Z). EPA anticipates that users will be able to meet the AIHA and OARS WEELs and will address potential health risks by following requirements and recommendations in the manufacturer's SDSs and other safety precautions common to the foam blowing industry.

Comparison to other foam blowing agents: These HFO–1336mzz(Z)/HFC–152a blends have an ODP of zero, comparable to all other acceptable substitutes in this end-use, such as HFC–152a, HFO–1234ze(E), methyl formate, and CO_2. These HFO–1336mzz(Z)/HFC–152a blends' GWPs from about three to 110 is lower than or comparable to those of other acceptable substitutes in the same end-use for which we are finding it acceptable, such as HFC–152a, HFO–1234ze(E), light saturated hydrocarbons C3–C6 and methyl formate, with respective GWPs of 124, one, [5] less than one,[6] and 11.[7] Flammability and toxicity risks are comparable to or lower than flammability and toxicity risks of other available substitutes in the same end-use. Toxicity risks can be minimized by use consistent with the AIHA's and OARS's WEELs, recommendations in the SDS, and other safety precautions common in the foam blowing industry.

EPA finds blends of 10 to 99 percent by weight HFO–1336mzz(Z) and the remainder HFC–152a acceptable in the polystyrene: extruded boardstock and billet end-use because they do not pose greater overall environmental and human health risk than other available substitutes in the same end-use.

2. HFO–1336mzz(E)

EPA's decision: EPA finds HFO–1336mzz(E) acceptable as a substitute for use in:

- Flexible Polyurethane (PU)
- Integral skin PU
- Rigid PU: Appliance
- Rigid PU: Commercial refrigeration
- Rigid PU and polyisocyanurate laminated boardstock
- Rigid PU: Sandwich panels
- Rigid PU: Slabstock and other
- Rigid PU: Spray—high-pressure two-component
- Rigid PU: Spray—low-pressure two-component
- Rigid PU: Spray—one-component foam sealants

HFO–1336mzz(E) is also known as (2E)-1,1,1,4,4,4-hexafluoro-2-butene and *trans*-1,1,1,4,4,4-hexafluoro-2-butene (CAS Reg. No. 66711–86–2). It is marketed under the trade names Opteon™ 1150 and Formacel™ 1150.

You may find a copy of the applicant's submission, with CBI redacted, providing the required health and environmental information for this substitute in these end-uses in Docket EPA–HQ–OAR–2003–0118 at *www.regulations.gov* under the name, ''Supporting Documentation for Notice 36 Listing of HFO–1336mzz(E) in Foam Blowing. SNAP Submission Received December 5, 2018.'' EPA performed assessments to examine the health and environmental risks of this substitute. These assessments are available in Docket EPA–HQ–OAR–2003–0118 under the following names:

- ''Foam Blowing Sector—Risk Screen on Substitutes in Rigid Polyurethane

[4] WMO (World Meteorological Organization), *Scientific Assessment of Ozone Depletion: 2018,* Global Ozone Research and Monitoring Project—Report No. 58, 588 pp., Geneva, Switzerland, 2018. Available at: *https://ozone.unep.org/sites/default/files/2019-05/SAP-2018-Assessment-report.pdf.*

[5] WMO (World Meteorological Organization), *Scientific Assessment of Ozone Depletion: 2018,* Global Ozone Research and Monitoring Project—Report No. 58, 588 pp., Geneva, Switzerland, 2018. Available at: *https://ozone.unep.org/sites/default/files/2019-05/SAP-2018-Assessment-report.pdf.*

[6] Ibid.

[7] Ibid.

Appliance; Rigid Polyurethane Commercial Refrigeration; Rigid Polyurethane Sandwich Panels; Rigid Polyurethane & Polyisocyanurate Laminate Boardstock; Rigid Polyurethane Slabstock and Other; Flexible Polyurethane; Integral Skin Polyurethane—Substitute: HFO–1336mzz(E)''

- ''Foam Blowing Sector—Risk Screen on Substitutes in Rigid Polyurethane Spray Foam—Substitute: HFO–1336mzz(E)''

Environmental information: HFO–1336mzz(E) has an ODP of zero. It has a GWP of about 16.[8] Under CAA regulations (see 40 CFR 51.100(s)) defining VOC for the purpose of addressing the development of SIPs to attain and maintain the NAAQS, HFO–1336mzz(E) would be considered a VOC. That definition provides that ''any compound of carbon'' which ''participates in atmospheric photochemical reactions'' is considered a VOC unless expressly excluded in that provision based on a determination of ''negligible photochemical reactivity.'' The manufacturer has petitioned the EPA to exclude HFO–1336mzz(E) from the definition of VOC under those regulations based on its claim that the chemical exhibits low photochemical reactivity. EPA has not yet taken action on that petition. EPA notes for informational purposes that this substitute is subject to a Toxic Substances Control Act (TSCA) section 5(e) Consent Order and a TSCA section 5(a)(2) Significant New Use Rule (SNUR).

EPA anticipates that HFO–1336mzz(E) will be used consistent with the recommendations specified in the SDS. The OARS WEEL committee recommends a WEEL for the workplace of 400 ppm on an 8-hour TWA. EPA anticipates that users will be able to meet the WEEL and address potential health risks by following requirements and recommendations in the SDS and other safety precautions common to the foam blowing industry.

Comparison to other substitutes in these end-uses: HFO–1336mzz(E) has an ODP of zero, comparable to or lower than that for other listed substitutes in these end-uses, with ODPs ranging from zero to 0.02.

HFO–1336mzz(E)'s GWP of about 16 is lower than that of other acceptable substitutes in the listed end-uses, such as HFC–152a with a GWP of 124. HFO–1336mzz(E)'s GWP is higher than or comparable to the GWPs of other acceptable substitutes for these end-uses, such as HFO–1336mzz(Z), methyl formate, saturated light hydrocarbons C3–C6,[9] and *trans*-1-chloro-3,3,3-trifluoroprop-1-ene with GWPs ranging from less than one to approximately 11.

Flammability and toxicity risks are comparable to or lower than flammability and toxicity risks of other available substitutes in the same end-use. Toxicity risks can be minimized by use consistent with the OARS WEEL, recommendations in the manufacturer's SDS, and other safety precautions common in the foam blowing industry; moreover, those risks are common to many foam blowing agents, including many of those already listed as acceptable under SNAP for these end-uses.

EPA finds HFO–1336mzz(E) acceptable in the end-uses listed above in section 1.B.2 because it does not pose greater overall environmental and human health risk than other available substitutes in the same end-uses.

3. Methylal

EPA's decision: EPA finds methylal acceptable as a substitute for use in:

- Rigid PU: Spray—high-pressure two-component
- Rigid PU: Spray—low-pressure two-component
- Rigid PU: Spray—one-component foam sealants

Methylal is also called dimethoxymethane (CAS Reg. No. 109–87–5) and belongs to a class of chemicals referred to as acetals; it also goes by the trade name Novicell™.

You may find a copy of the applicant's submission, with CBI redacted, providing the required health and environmental information for this substitute in these end-uses in Docket EPA–HQ–OAR–2003–0118 at *www.regulations.gov* under the name, ''Supporting Materials for Notice 36 Listing of Methylal in Foam Blowing. SNAP Submission Received April 18, 2014.'' EPA performed an assessment to examine the health and environmental risks of this substitute. This assessment is available in Docket EPA–HQ–OAR–2003–0118 under the following name: ''Risk Screen on Substitutes for Use in Rigid Polyurethane Spray Foam Substitute: Methylal.''

EPA previously listed methylal as acceptable for use as a foam-blowing agent in a variety of foam blowing end-uses (October 21, 2014; 79 FR 62863).

Environmental information: Methylal has an ODP of zero and a GWP less than one.[10] Under CAA regulations (see 40 CFR 51.100(s)) defining VOC for the purpose of addressing the development of SIPs to attain and maintain the NAAQS, methylal would be considered a VOC. That definition provides that ''any compound of carbon'' which ''participates in atmospheric photochemical reactions'' is considered a VOC unless expressly excluded in that provision based on a determination of ''negligible photochemical reactivity.''

Flammability information: Methylal is flammable. Under the Globally

[8] WMO (World Meteorological Organization), *Scientific Assessment of Ozone Depletion: 2018,* Global Ozone Research and Monitoring Project—Report No. 58, 588 pp., Geneva, Switzerland, 2018. Available at: *https://www.esrl.noaa.gov/csl/assessments/ozone/2018/.*

[9] That is, hydrocarbons with single bonds with three to six carbons, such as propane, isobutane, pentane, isopentane, cyclopentane, and hexane.

[9] That is, hydrocarbons with single bonds with three to six carbons, such as propane, isobutane, pentane, isopentane, cyclopentane, and hexane.

[10] WMO (World Meteorological Organization), *Scientific Assessment of Ozone Depletion: 2018,* Global Ozone Research and Monitoring Project—Report No. 58, 588 pp., Geneva, Switzerland, 2018. Available at: *https://ozone.unep.org/sites/default/files/2019-05/SAP-2018-Assessment-report.pdf.*

Harmonized System of Classification and Labelling of Chemicals, it is classified as a Class II flammable liquid and under the Occupational Safety and Health Administration's (OSHA's) regulations at 29 CFR 1910.106, it is classified as a Class IB flammable liquid. Some specific blends of methylal with other blowing agents are flammable as formulated and should be handled with proper precautions, as specified by the manufacturer. EPA recommends that users follow all requirements and recommendations specified in the SDS and other safety precautions for use of flammable blowing agents used in the foam blowing industry. Use of methylal will require safe handling and shipping as prescribed by OSHA and the Department of Transportation (for example, using personal protective equipment (PPE) and following requirements for shipping hazardous materials at 49 CFR parts 170 through 173).

Toxicity and exposure data: Potential health effects of exposure to this substitute include drowsiness or dizziness. Higher concentrations may cause central nervous system depression and loss of consciousness. The substitute may also irritate the skin or eyes. The substitute could cause asphyxiation if air is displaced by vapors in a confined space. These potential health effects are common to many foam-blowing agents.

For methylal, the American Conference of Governmental Industrial Hygienists (ACGIH) has established a threshold limit value (TLV) of 1,000 ppm on an 8-hr TWA. The National Institute of Occupational Safety and Health (NIOSH) has established a recommended exposure limit (REL) of 1,000 ppm for methylal on a 10-hour TWA. EPA anticipates that users will be able to meet workplace exposure limits (TLV and REL) and address potential health risks by following requirements and recommendations in the manufacturer's SDS and other safety precautions common to the foam-blowing industry.

Comparison to other substitutes in these end-uses: Methylal has an ODP of zero, comparable to other listed substitutes in these end-uses, with ODPs ranging from zero to 0.012.

Methylal's GWP of less than one is less than or comparable to the GWPs of other acceptable substitutes in the listed end-uses, including CO_2, Exxsol™ blowing agents, HFC–152a, HFO–1336mzz(Z), methyl formate,[11] and *trans*-1-chloro-3,3,3-trifluoroprop-1-ene, with GWPs ranging from less than 1 to approximately 124.[12]

Methylal's flammability risks are comparable to or lower than flammability risks of other available substitutes in the same end-uses, including Exxsol™ blowing agents and methyl formate. Other acceptable substitutes in these end-uses are nonflammable (*e.g.,* CO_2, HFO–1336mzz(Z), and *trans*-1-chloro-3,3,3-trifluoroprop-1-ene.

Toxicity risks are comparable to or lower than toxicity risks of other available substitutes in the same end-use. Toxicity risks can be minimized by use consistent with the ACGIH TLV, recommendations in the manufacturer's SDS, and other safety precautions common in the foam-blowing industry.

EPA finds methylal acceptable in the end-uses listed above in section I.B.3 because it does not pose greater overall environmental and human health risk than other available substitutes in the same end-use.

C. Fire Suppression and Explosion Protection

HCFO-1233zd(E)/C6-perfluoroketone blend

EPA's decision: EPA finds HCFO-1233zd(E)/C6-perfluoroketone blend acceptable as a substitute for:

- Total flooding (normally occupied and unoccupied spaces)

HCFO-1233zd(E)/C6-perfluoroketone blend is a weighted blend of 50 percent (E)-1-chloro-3,3,3-trifluoroprop-1-ene or HCFO-1233zd(E) (CAS Reg. No. 102687–65–0) and 50 percent C6-perfluoroketone (CAS Reg. No. 756–13–8), also known as 1,1,1,2,2,4,5,5,5-nonafluoro-4-(trifluoromethyl)-3-pentanone or FK-5-1-12. Both components are currently listed as acceptable under SNAP for use in this end-use. The blend is sold under the trade name Solstice™ Quench 55.

You may find a copy of the applicant's submission, with CBI redacted, providing the required health and environmental information for this substitute in this end-use in Docket EPA–HQ–OAR–2003–0118 at *www.regulations.gov* under the name, ''Supporting Documentation for Notice 36 Listing of HCFO-1233zd(E)/C6-perfluoroketone blend in Fire Suppression. SNAP Submission Received August 1, 2018.'' EPA performed an assessment to examine the health and environmental risks of this substitute. This assessment is available in Docket EPA–HQ–OAR–2003–0118: ''Risk Screen on Substitutes for Total Flooding Systems in Normally Occupied and Unoccupied Spaces. Substitute: HCFO-1233zd(E)/C6-perfluoroketone blend (Solstice™ Quench 55).''

Environmental information: The HCFO-1233zd(E) component of the blend has an ODP less than 0.0004 and a GWP of 3.7.[13] The C6-perfluoroketone component has no ODP and a GWP of less than one.[14] The blend has an average ODP of less than 0.0002 and an average GWP of less than two. The HCFO-1233zd(E) component is excluded from the definition of VOC under CAA regulations (see 40 CFR 51.100(s)) addressing the development of SIPs to attain and maintain the NAAQS; the C6-perfluoroketone component falls within the definition of VOC in those regulations.

Flammability information: HCFO-1233zd(E)/C6-perfluoroketone blend is not flammable.

Toxicity and exposure data: Potential health effects of this substitute include serious eye and skin irritation. If eye or skin contact occurs, end users should flush the affected area with large amounts of water. If inhaled, end users should be removed and exposed to fresh air. The potential health effects of HCFO-1233zd(E)/C6-perfluoroketone blend are unlikely to occur when following good industrial hygiene practices and the PPE and engineering control (*e.g.,* ventilation) recommendations outlined in the SDSs for HCFO-1233zd(E)/C6-perfluoroketone blend.

The OARS has established a WEEL as an 8-hr TWA of 800 ppm for HCFO-1233zd(E). The manufacturer of C6-perfluoroketone recommends an AEL of 150 ppm on an 8-hr TWA. During installation or servicing of HCFO-1233zd(E)/C6-perfluoroketone blend total flooding systems, exposure to the substitute is not likely if the instructions on system installation and servicing are adhered to; these instructions are included in manuals for the HCFO-

[11] Originally listed under the trade name ''ecomate™'' in these end-uses. 69 FR 5803, October 4, 2004.

[12] Except for HFC–152a, all the GWPs in this sentence are from WMO (World Meteorological Organization), *Scientific Assessment of Ozone Depletion: 2018,* Global Ozone Research and Monitoring Project—Report No. 58, 588 pp., Geneva, Switzerland, 2018. Available at: *https://ozone.unep.org/sites/default/files/2019-05/SAP-2018-Assessment-report.pdf.*

[13] WMO (World Meteorological Organization), *Scientific Assessment of Ozone Depletion: 2018,* Global Ozone Research and Monitoring Project—Report No. 58, 588 pp., Geneva, Switzerland, 2018. Available at: *https://ozone.unep.org/sites/default/files/2019-05/SAP-2018-Assessment-report.pdf.*

[14] Ibid.

1233zd(E)/C6-perfluoroketone blend systems and the relevant industry standards (*i.e.,* latest edition of the National Fire Protection Association [NFPA] 2001 Standard for Clean Agent Fire Extinguishing Systems and Underwriters' Laboratories [UL] 2166 Standard for Halocarbon Clean Agent Extinguishing System Units). In the event of an accidental release of the substitute from the total flooding system, potential acute exposures may be of concern. The design concentration is less than the cardiotoxic No Observed Adverse Effect Level of 8.66 percent (86,600 ppm) for the blend. Appropriate protective measures should be taken, and proper training administered for the manufacture, clean-up and disposal of this product and for the installation and maintenance of the total flooding systems using this product.

NFPA 2001 provides that in the case of accidental release in normally occupied spaces, required engineering controls as specified in NFPA 2001 should be employed to limit personnel exposure to clean agent discharges. Specifically, audible and visual pre-discharge alarms and a 30–60 second time delay should be employed within the protected space to indicate the operation of the system and pending discharge to ensure egress for all personnel prior to activation. EPA's evaluation indicates that the use of HCFO-1233zd(E)/C6-perfluoroketone blend is not expected to pose a significant toxicity risk to personnel or the general population. In addition, the risks it may pose after exposure are common to many total flooding agents, including those already listed as acceptable under SNAP for this same end-use. EPA's review of the human health impacts of HCFO-1233zd(E)/C6-perfluoroketone blend, including the summary of available toxicity studies, is in the risk screen mentioned above in the docket for this action (EPA–HQ–OAR–2003–0118).

Protective gloves and tightly sealed goggles should be worn for installation and servicing activities to protect workers in any event of potential discharge of the substitute, accidental or otherwise. Filling or servicing operations should be performed in well-ventilated areas. Toxicity risks can be minimized by use consistent with NFPA 2001 standard, recommendations in the SDS, and other safety precautions common in the fire suppression industry. EPA provides additional information on safe use of this substitute in the ''Further Information'' column of the table summarizing this listing for total flooding agents (see Appendix A).

Comparison to other substitutes in this end-use: HCFO–1233zd(E)/C6-perfluoroketone blend has an average ODP of less than 0.0002, comparable to or less than that for other listed substitutes in this end-use, with ODPs ranging from zero to 0.048.

For total flooding agents, HCFO–1233zd(E)/C6-perfluoroketone blend's average GWP of less than two is lower than that of other acceptable substitutes, such as HFC–227ea and other HFCs, with GWPs which range from about 1,430 to 14,800. Other acceptable substitutes in this end-use, such as water, inert gases, and a number of powdered aerosol fire suppressants, have lower or comparable GWPs ranging from zero to seven.

Toxicity risks can be minimized by use consistent with the NFPA 2001 standard, recommendations in the SDS, and other safety precautions common in the fire suppression industry. The potential toxicity risks due to inhalation exposure are common to many total flooding agents, including those already listed as acceptable under SNAP for this same end-use. HCFO–1233zd(E)/C6-perfluoroketone blend is nonflammable, as are all other available total flooding agents.

EPA finds HCFO–1233zd(E)/C6-perfluoroketone blend acceptable in the total flooding end-use because it does not pose greater overall environmental and human health risk than other available substitutes in this end-use.

List of Subjects in 40 CFR Part 82

Environmental protection, Administrative practice and procedure, Air pollution control, Reporting and recordkeeping requirements.

Hans Christopher Grundler,

Director, Office of Atmospheric Programs.

Note: The following appendix will not appear in the Code of Federal Regulations:

APPENDIX A: SUMMARY OF DECISIONS FOR NEW ACCEPTABLE SUBSTITUTES

REFRIGERATION AND AIR CONDITIONING

End-use	Substitute	Decision	Further information [1]
Centrifugal chillers *(new equipment).*	R–515B	Acceptable	This substitute is a blend of HFO–1234ze(E), which is also known as *trans*-1,3,3,3-tetrafluoroprop-1-ene (Chemical Abstracts Service Registry Number [CAS Reg. No.] 29118–24–9) and HFC–227ea, also known as 1,1,1,2,3,3,3-heptafluoropropane (CAS Reg. No. 431–89–0). R–515B has a 100-year global warming potential (GWP) of 287. The blend is not flammable. The American Industrial Hygiene Association (AIHA) has established Workplace Environmental Exposure Limits (WEELs) of 800 ppm and 1000 ppm on an eight-hour Time-Weighted Average (8-hr TWA), respectively, for HFO–1234ze(E) and for HFC–227ea. The manufacturer has established an Acceptable Exposure Limit (AEL) of 810 ppm, on an 8-hr TWA for R–515B.
Industrial process air conditioning *(new equipment).*	R–515B	Acceptable	This substitute is a blend of HFO–1234ze(E), which is also known as *trans*-1,3,3,3-tetrafluoroprop-1-ene (CAS Reg. No. 29118–24–9) and HFC–227ea, also known as 1,1,1,2,3,3,3-heptafluoropropane (CAS Reg. No. 431–89–0). R–515B has a GWP of 287. The blend is not flammable. The AIHA has established WEELs of 800 ppm and 1000 ppm on an 8-hr TWA, respectively, for HFO–1234ze(E) and for HFC–227ea. The manufacturer has established an AEL of 810 ppm on an 8-hr TWA for R–515B.

REFRIGERATION AND AIR CONDITIONING—Continued

End-use	Substitute	Decision	Further information [1]
Industrial process refrigeration *(new and retrofit equipment)*.	HCFO–1233zd(E).	Acceptable	HCFO–1233zd(E) is also known as *trans*-1-chloro-3,3,3-trifluoroprop-1-ene (CAS Reg. No 102687–65–0). HCFO–1233zd(E) has an ozone-depleting potential (ODP) of less than 0.0004 and a GWP of about 3.7. HCFO–1233zd(E) is nonflammable. The AIHA has established a WEEL of 800 ppm on an 8-hr TWA for HCFO–1233zd(E).
Positive displacement chillers *(new equipment)*.	R–515B	Acceptable	This substitute is a blend of HFO–1234ze(E), which is also known as *trans*-1,3,3,3-tetrafluoroprop-1-ene (CAS Reg. No. 29118–24–9) and HFC–227ea, also known as 1,1,1,2,3,3,3-heptafluoropropane (CAS Reg. No. 431–89–0). R–515B has a GWP of 287. The blend is not flammable. The AIHA has established WEELs of 800 ppm and 1000 ppm on an 8-hr TWA, respectively, for HFO–1234ze(E) and for HFC–227ea. The manufacturer has established an AEL of 810 ppm on an 8-hr TWA for R–515B.

[1] Observe recommendations in the manufacturer's SDS and guidance for all listed refrigerants.

FOAM BLOWING AGENTS

End-use	Substitute	Decision	Further information [1]
Extruded Polystyrene: Boardstock and Billet.	Blends of 10 to 99 percent by weight HFO–1336mzz(Z) and the remainder HFC–152a.	Acceptable	HFO–1336mzz(Z) is also known as (2Z)-1,1,1,4,4,4-hexafluoro-2-butene and *cis*-1,1,1,4,4,4-hexafluoro-2-butene (CAS Reg. No. 692–49–9). HFC–152a is also known as ethane, 1,1-difluoro (CAS Reg. No. 75–37–6). The blends range in composition from 10 percent HFO–1336mzz(Z) and 90 percent HFC–152a to 99 percent HFO–1336mzz(Z) and 1 percent HFC–152a. These blends have 100-year global warming potentials (GWPs) from about three to about 110, depending on the specific composition. Certain blends of these compounds are flammable, depending on the specific composition. The American Industrial Hygiene Association (AIHA) has established a Workplace Environmental Exposure Limit (WEEL) of 1,000 ppm as an 8-hour Time-Weighted Average (8-hr TWA) for HFC–152a and Occupational Alliance for Risk Science (OARS) has established a WEEL of 500 ppm for HFO–1336mzz(Z).
Flexible Polyurethane (PU).	HFO–1336mzz(E) ..	Acceptable	HFO–1336mzz(E) is also known as (2E)-1,1,1,4,4,4-hexafluoro-2-butene and *trans*-1,1,1,4,4,4-hexafluoro-2-butene (CAS Reg. No. 66711–86–2). HFO–1336mzz(E) has a GWP of approximately 16. HFO–1336mzz(E) is nonflammable. The OARS recommends a WEEL for the workplace of 400 ppm on an 8-hr TWA. This substitute is subject to a Toxic Substances Control Act (TSCA) section 5(e) Consent Order and a TSCA section 5(a)(2) Significant New Use Rule (SNUR).
Integral skin PU	HFO–1336mzz(E) ..	Acceptable	HFO–1336mzz(E) is also known as (2E)-1,1,1,4,4,4-hexafluoro-2-butene and *trans*-1,1,1,4,4,4-hexafluoro-2-butene (CAS Reg. No. 66711–86–2). HFO–1336mzz(E) has a GWP of approximately 16. HFO–1336mzz(E) is nonflammable. The OARS recommends a WEEL for the workplace of 400 ppm on an 8-hr TWA. This substitute is subject to a TSCA section 5(e) Consent Order and a TSCA section 5(a)(2) SNUR.
Rigid PU: Appliance	HFO–1336mzz(E) ..	Acceptable	HFO–1336mzz(E) is also known as (2E)-1,1,1,4,4,4-hexafluoro-2-butene and *trans*-1,1,1,4,4,4-hexafluoro-2-butene (CAS Reg. No. 66711–86–2). HFO–1336mzz(E) has a GWP of approximately 16. HFO–1336mzz(E) is nonflammable. The OARS recommends a WEEL for the workplace of 400 ppm on an 8-hr TWA. This substitute is subject to a TSCA section 5(e) Consent Order and a TSCA section 5(a)(2) SNUR.
Rigid PU: Commercial refrigeration.	HFO–1336mzz(E) ..	Acceptable	HFO–1336mzz(E) is also known as (2E)-1,1,1,4,4,4-hexafluoro-2-butene and *trans*-1,1,1,4,4,4-hexafluoro-2-butene (CAS Reg. No. 66711–86–2). HFO–1336mzz(E) has a GWP of approximately 16. HFO–1336mzz(E) is nonflammable. The OARS recommends a WEEL for the workplace of 400 ppm on an 8-hr TWA. This substitute is subject to a TSCA section 5(e) Consent Order and a TSCA section 5(a)(2) SNUR.

FOAM BLOWING AGENTS—Continued

End-use	Substitute	Decision	Further information [1]
Rigid PU and polyisocyanurate laminated boardstock.	HFO–1336mzz(E) ..	Acceptable	HFO–1336mzz(E) is also known as (2E)-1,1,1,4,4,4-hexafluoro-2-butene and *trans*-1,1,1,4,4,4-hexafluoro-2-butene (CAS Reg. No. 66711–86–2). HFO–1336mzz(E) has a GWP of approximately 16. HFO–1336mzz(E) is nonflammable. The OARS recommends a WEEL for the workplace of 400 ppm on an 8-hr TWA. This substitute is subject to a TSCA section 5(e) Consent Order and a TSCA section 5(a)(2) SNUR.
Rigid PU: Sandwich panels.	HFO–1336mzz(E) ..	Acceptable	HFO–1336mzz(E) is also known as (2E)-1,1,1,4,4,4-hexafluoro-2-butene and *trans*-1,1,1,4,4,4-hexafluoro-2-butene (CAS Reg. No. 66711–86–2). HFO–1336mzz(E) has a GWP of approximately 16. HFO–1336mzz(E) is nonflammable. The OARS recommends a WEEL for the workplace of 400 ppm on an 8-hr TWA. This substitute is subject to a TSCA section 5(e) Consent Order and a TSCA section 5(a)(2) SNUR.
Rigid PU: Slabstock and other.	HFO–1336mzz(E) ..	Acceptable	HFO–1336mzz(E) is also known as (2E)-1,1,1,4,4,4-hexafluoro-2-butene and *trans*-1,1,1,4,4,4-hexafluoro-2-butene (CAS Reg. No. 66711–86–2). HFO–1336mzz(E) has a GWP of approximately 16. HFO–1336mzz(E) is nonflammable. The OARS recommends a WEEL for the workplace of 400 ppm on an 8-hr TWA. This substitute is subject to a TSCA section 5(e) Consent Order and a TSCA section 5(a)(2) SNUR.
Rigid PU: spray-high-pressure two-component.	HFO–1336mzz(E) ..	Acceptable	HFO–1336mzz(E) is also known as (2E)-1,1,1,4,4,4-hexafluoro-2-butene and *trans*-1,1,1,4,4,4-hexafluoro-2-butene (CAS Reg. No. 66711–86–2). HFO–1336mzz(E) has a GWP of approximately 16. HFO–1336mzz(E) is nonflammable. The OARS recommends a WEEL for the workplace of 400 ppm on an 8-hr TWA. This substitute is subject to a TSCA section 5(e) Consent Order and a TSCA section 5(a)(2) SNUR.
Rigid PU: Spray-high-pressure two-component.	Methylal	Acceptable	Methylal is also known as dimethoxymethane and belongs to a class of chemicals referred to as acetals (CAS Reg. No. 109–87–5). Methylal has a GWP of less than one. Methylal is flammable. The American Conference of Governmental Industrial Hygienists (ACGIH) has established a threshold limit value (TLV) of 1,000 ppm, on an 8-hr TWA for methylal. The National Institute of Occupational Safety and Health (NIOSH) has established a recommended exposure limit (REL) of 1,000 ppm for methylal on a 10-hour TWA.
Rigid PU: Spray-low-pressure two-component.	HFO–1336mzz(E) ..	Acceptable	HFO–1336mzz(E) is also known as (2E)-1,1,1,4,4,4-hexafluoro-2-butene and *trans*-1,1,1,4,4,4-hexafluoro-2-butene (CAS Reg. No. 66711–86–2). HFO–1336mzz(E) has a GWP of approximately 16. HFO–1336mzz(E) is nonflammable. The OARS recommends a WEEL for the workplace of 400 ppm on an 8-hr TWA. This substitute is subject to a TSCA section 5(e) Consent Order and a TSCA section 5(a)(2) SNUR.
Rigid PU: Spray-low-pressure two-component.	Methylal	Acceptable	Methylal is also known as dimethoxymethane and belongs to a class of chemicals referred to as acetals (CAS Reg. No. 109–87–5). Methylal has a GWP of approximately less than one. Methylal is flammable. ACGIH has established a TLV of 1,000 ppm on an 8-hr TWA for methylal. The NIOSH has established a REL of 1,000 ppm for methylal on a 10-hour TWA.
Rigid PU: Spray-one-component foam sealants.	HFO–1336mzz(E) ..	Acceptable	HFO–1336mzz(E) is also known as (2E)-1,1,1,4,4,4-hexafluoro-2-butene and *trans*-1,1,1,4,4,4-hexafluoro-2-butene (CAS Reg. No. 66711–86–2). HFO–1336mzz(E) has a GWP of approximately 16. HFO–1336mzz(E) is nonflammable. The OARS recommends a WEEL for the workplace of 400 ppm on an 8-hr TWA. This substitute is subject to a TSCA section 5(e) Consent Order and a TSCA section 5(a)(2) SNUR.
Rigid PU: Spray-one-component foam sealants.	Methylal	Acceptable	Methylal is also known as dimethoxymethane and belongs to a class of chemicals referred to as acetals (CAS Reg. No. 109–87–5). Methylal has a GWP of less than one. Methylal is flammable. ACGIH has established a TLV of 1,000 ppm on an 8-hr TWA for methylal. NIOSH has established a REL of 1,000 ppm for methylal on a 10-hour TWA.

[1] Observe recommendations in the manufacturer's SDS and guidance for all listed foam blowing agents.

FIRE SUPPRESSION AND EXPLOSION PROTECTION

End-use	Substitute	Decision	Further information
Total flooding (normally occupied and unoccupied spaces).	HCFO–1233zd(E)/C6-perfluoroketone blend.	Acceptable	HCFO–1233zd(E)/C6-perfluoroketone blend is a blend of (E)-1-chloro-3,3,3-trifluoroprop-1-ene or HCFO–1233zd(E) (CAS Reg. No. 102687–65–0) and C6-perfluoroketone (CAS Reg. No. 756–13–8), also known as 1,1,1,2,2,4,5,5,5-nonafluoro-4-(trifluoromethyl)-3-pentanone or FK–5–1–12. This blend has an average ozone depletion potential (ODP) of <0.0002 and an average 100-year global warming potential (GWP) of less than two. The blend is nonflammable. The Occupational Alliance for Risk Science (OARS) has established a Workplace Environmental Exposure Limit (WEEL) as an 8-hour Time-Weighted Average (8-hr TWA) of 800 ppm for HCFO–1233zd(E). The manufacturer of C6-perfluoroketone recommends an Acceptable Exposure Limit (AEL) of 150 ppm on an 8-hr TWA. The cardiotoxic No Observed Adverse Effect Level (NOAEL) is 8.66 percent for the blend. Use of this agent should be in accordance with the safety guidelines in the latest edition of the National Fire Protection Association (NFPA) 2001 Standard on Clean Agent Fire Extinguishing Systems. Safety features that are typical of total flooding systems such as pre-discharge alarms, time delays, and system abort switches should be provided, as directed by applicable Occupational Safety and Health Administration (OSHA) regulations and NFPA standards. For establishments manufacturing, installing and maintaining equipment using this agent, EPA recommends the following: • In the case that HCFO–1233zd(E)/C6-perfluoroketone blend is inhaled, person(s) should be immediately removed and exposed to fresh air; if breathing is difficult, person(s) should seek medical attention. • Eye wash and quick drench facilities should be available. In case of ocular exposure, person(s) should immediately flush the eyes, including under the eyelids, with water for 15 minutes. • In the case of dermal exposure, the safety data sheet (SDS) recommends that person(s) should immediately wash the affected area with water and remove all contaminated clothing to avoid irritation. • Although unlikely, in case of ingestion of HCFO–1233zd(E)/C6-perfluoroketone blend, the person(s) should drink a cup of water, if fully conscious, and consult a physician immediately. • Manufacturing space should be equipped with engineering controls, specifically an adequate exhaust ventilation system, to effectively mitigate potential occupational exposure. • Employees responsible for chemical processing should wear the appropriate personnel protective equipment (PPE), such as protective gloves, tightly sealed goggles, protective work clothing, and suitable respiratory protection in case of release or insufficient ventilation. • All spills should be cleaned up immediately in accordance with good industrial hygiene practices. • Training for safe handling procedures should be provided to all employees that would be likely to handle containers of the agent or extinguishing units filled with the agent. See additional comments 1, 2, 3, 4, 5.

[1] The EPA recommends that users consult Section VIII of the OSHA Technical Manual for information on selecting the appropriate types of personal protective equipment for all listed fire suppression agents. The EPA has no intention of duplicating or displacing OSHA coverage related to the use of personal protective equipment (*e.g.,* respiratory protection), fire protection, hazard communication, worker training or any other occupational safety and health standard with respect to halon substitutes.

[2] Use of all listed fire suppression agents should conform to relevant OSHA requirements, including 29 CFR part 1910, subpart L, sections 1910.160 and 1910.162.

[3] Per OSHA requirements, protective gear (SCBA) should be available in the event personnel should reenter the area.

[4] Discharge testing should be strictly limited to that which is essential to meet safety or performance requirements.

[5] The agent should be recovered from the fire protection system in conjunction with testing or servicing, and recycled for later use or destroyed.

[FR Doc. 2020–23861 Filed 12–10–20; 8:45 am]

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 282

[EPA–R01–UST–2020–0207; FRL–10015–22–Region 1]

Rhode Island: Final Approval of State Underground Storage Tank Program Revisions, Codification, and Incorporation by Reference

AGENCY: Environmental Protection Agency (EPA).

ACTION: Direct final rule.

SUMMARY: Pursuant to the Resource Conservation and Recovery Act (RCRA or Act), the Environmental Protection Agency (EPA) is taking direct final action to approve revisions to the State of Rhode Island's Underground Storage Tank (UST) program submitted by the Rhode Island Department of Environmental Management (RI DEM). This action also codifies EPA's approval of Rhode Island's State program and incorporates by reference those

provisions of the State regulations that we have determined meet the requirements for approval. The provisions will be subject to EPA's inspection and enforcement authorities under sections 9005 and 9006 of RCRA Subtitle I and other applicable statutory and regulatory provisions.

DATES: This rule is effective February 9, 2021, unless EPA receives adverse comment by January 11, 2021. If EPA receives adverse comments, it will publish a timely withdrawal in the **Federal Register** informing the public that the rule will not take effect. The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register, as of February 9, 2021, in accordance with 5 U.S.C. 552(a) and 1 CFR part 51.

ADDRESSES: Submit your comments by one of the following methods:

1. *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the on-line instructions for submitting comments.

2. *Email: beland.andrea@epa.gov.*

Instructions: Direct your comments to Docket ID No. EPA–R01–UST–2020–0207. EPA's policy is that all comments received will be included in the public docket without change and may be available online at *https://www.regulations.gov,* including any personal information provided, unless the comment includes information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Do not submit information that you consider to be CBI or otherwise protected through *https://www.regulations.gov,* or email. The Federal *https://www.regulations.gov* website is an ''anonymous access'' system, which means the EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an email comment directly to the EPA without going through *https://www.regulations.gov,* your email address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the internet. If you submit an electronic comment, EPA recommends that you include your name and other contact information in the body of your comment and also with any disk or CD–ROM you submit. If EPA cannot read your comment due to technical difficulties, and cannot contact you for clarification, EPA may not be able to consider your comment. Electronic files should avoid the use of special characters, any form of encryption, and be free of any defects or viruses. EPA encourages electronic submittals, but if you are unable to submit electronically, please reach out to the EPA contact person listed in the notice for assistance.

Docket: All documents in the docket are listed in the *https://www.regulations.gov* index. Although listed in the index, some information might not be publicly available, *e.g.,* CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, might be publicly available only in hard copy form. Publicly available docket materials are available either electronically through *www.regulations.gov* or in hard copy.

IBR and supporting material: You can view and copy the documents that form the basis for this codification and associated publicly available materials either through *www.regulations.gov* or at the EPA Region 1 Office, 5 Post Office Square, 1st floor, Boston, MA 02109–3912. The facility is open from 8:30 a.m. to 4:00 p.m., Monday through Friday, excluding Federal holidays and facility closures due to COVID–19. We recommend that you telephone Andrea Beland, RCRA Waste Management, UST, and Pesticides Section, at (617) 918–1313, before visiting the Region 1 office. Interested persons wanting to examine these documents should make an appointment with the office at least two weeks in advance.

FOR FURTHER INFORMATION CONTACT: Andrea Beland, (617) 918–1313, *beland.andrea@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. Approval of Revisions to Rhode Island's Underground Storage Tank Program

A. Why are revisions to state programs necessary?

States that have received final approval from the EPA under RCRA section 9004(b) of RCRA, 42 U.S.C. 6991c(b), must maintain an underground storage tank program that is equivalent to, consistent with, and no less stringent than the Federal UST program. Either EPA or the approved state may initiate program revision. When EPA makes revisions to the regulations that govern the UST program, states must revise their programs to comply with the updated regulations and submit these revisions to the EPA for approval. Program revision may be necessary when the controlling Federal or state statutory or regulatory authority is modified or when responsibility for the state program is shifted to a new agency or agencies.

B. What decisions has the EPA made in this rule?

On February 4, 2020, in accordance with 40 CFR 281.51(a), Rhode Island submitted a complete program revision application seeking the EPA approval for its UST program revisions (State Application). Rhode Island's revisions correspond to the EPA final rule published on July 15, 2015 (80 FR 41566), which revised the 1988 UST regulations and the 1988 State program approval (SPA) regulations (2015 Federal Revisions). As required by 40 CFR 281.20, the State Application contains the following: A transmittal letter requesting approval, a description of the program and operating procedures, a demonstration of the State's procedures to ensure adequate enforcement, a Memorandum of Agreement outlining the roles and responsibilities of the EPA and the implementing agency, a statement of certification from the Attorney General, and copies of all relevant State statutes and regulations. We have reviewed the State Application and determined that the revisions to Rhode Island's UST program are equivalent to, consistent with, and no less stringent than the corresponding Federal requirements in subpart C of 40 CFR part 281, and that the Rhode Island program provides for adequate enforcement of compliance (40 CFR 281.11(b)). Therefore, the EPA grants Rhode Island final approval to operate its UST program with the changes described in the program revision application, and as outlined below in section I.G. of this document.

C. What is the effect of this approval decision?

This action does not impose additional requirements on the regulated community because the regulations being approved by this rule are already effective in Rhode Island, and they are not changed by this action. This action merely approves the existing State regulations as meeting the Federal requirements and renders them federally enforceable.

D. Why is EPA using a direct final rule?

EPA is publishing this direct final rule concurrent with a proposed rule because we view this as a noncontroversial action and anticipate no adverse comment. EPA is providing an opportunity for public comment now.

E. What happens if the EPA receives comments that oppose this action?

Along with this direct final rule, the EPA is publishing a separate document in the ''Proposed Rules'' Section of this issue of the **Federal Register** that serves as the proposal to approve the State's UST program revisions, providing opportunity for public comment. If EPA receives comments that oppose this approval, EPA will withdraw the direct final rule by publishing a document in the **Federal Register** before the rule becomes effective. The EPA will base any further decision on the approval of the State program changes after considering all comments received during the comment period. EPA will then address all public comments in a later final rule. You may not have another opportunity to comment. If you want to comment on this approval, you must do so at this time.

F. For what has Rhode Island previously been approved?

On February 3, 1993, the EPA finalized a rule approving the UST program, effective March 5, 1993, to operate in lieu of the Federal program. On February 20, 1996, effective April 22, 1996, the EPA codified the approved Rhode Island program, incorporating by reference the State statutes and regulatory provisions that are subject to EPA's inspection and enforcement authorities under RCRA sections 9005 and 9006, 42 U.S.C. 6991d and 6991e, and other applicable statutory and regulatory provisions.

G. What changes are we approving with this action?

On February 4, 2020, in accordance with 40 CFR 281.51(a), Rhode Island submitted a complete application for final approval of its UST program revisions adopted on November 20, 2018. The EPA now makes an immediate final decision, subject to receipt of written comments that oppose this action, that Rhode Island's UST program revisions satisfy all of the requirements necessary to qualify for final approval. Therefore, EPA grants Rhode Island final approval for the following program changes:

Required federal element	Implementing state authority
40 CFR 281.30, New UST Systems and Notification	250–RICR–140–25 Part(s): 1.4; 1.7; 1.8; 1.11; 1.11(C); 1.11(L); and 1.12.
40 CFR 281.31, Upgrading Existing UST Systems	250–RICR–140–25 Part(s): 1.10(E); and 1.15.
40 CFR 281.32, General Operating Requirements	250–RICR–140–25 Part(s): 1.4(I) 1.5(A)(8) and (27); 1.7P(2)(b); 1.10(B)(4) and (5); 1.10(E); 1.10(F)(1)(f); 1.10(G)(2)(d); 1.10(N); 1.10(N)(3); 1.10(U)(9); 1.11(C)(6); 1.11(D); 1.12(C) and (D); 1.12(D)(1)(g); and 1.13.
40 CFR 281.33, Release Detection	250–RICR–140–25–1 Part(s): 1.10(A), (F), (G) and (M); 1.11(A), (N), (O) and (P).
40 CFR 281.34, Release Reporting, Investigation, and Confirmation	250–RICR–140–25–1 Part(s): 1.14.
40 CFR 281.35, Release Response and Corrective Action	250–RICR–140–25–1 Part(s): 1.14.
40 CFR 281.36, Out-of-service Systems and Closure	250–RICR–140–25–1 Part(s): 1.15(C); 1.15(D); and 1.15(D)(12).
40 CFR 281.37, Financial Responsibility for USTs Containing Petroleum.	250–RICR–140–25–1 Part(s): 1.8; and 1.9.
40 CFR 281.39, Operator Training	250–RICR–140–25–1 Part(s): 1.10(U).
40 CFR 281.40, Legal Authorities for Compliance Monitoring	250–RICR–140–25–1 Part(s): 1.4; 1.10; 1.13; 1.14(I); 1.16.
40 CFR 281.41, Legal Authorities for Enforcement Response	250–RICR–140–25–1 Part(s): 1.10(T).

The State also demonstrates that its program provides adequate enforcement of compliance as described in 40 CFR 281.11(b) and part 281, subpart D. The RI DEM has broad statutory authority with respect to USTs to regulate installation, operation, maintenance, closure, and UST releases, and to the issuance of orders. These statutory authorities are found in: Rhode Island General Laws, Title 38: Public Records, Chapters 38–1, 2, and 3; Rhode Island General Laws, Title 42: State Affairs and Government, Chapter 42–17.1–2(20), Department of Environmental Management; and Rhode Island General Laws, Title 46: Waters and Navigation, Chapter 46–12: Water Pollution, Section 12–3, Sections 12–9 and 10, 12–13 through 15, and Section 46–12–22.

H. Where are the revised rules different from the Federal rules?

Broader in Scope Provisions

The following statutory and regulatory provisions are considered broader in scope than the Federal program, and are therefore not enforceable as a matter of Federal law:

The State of Rhode Island regulates heating oil of all grades at non-residential locations and partially regulates residential tanks storing heating oil at one, two, or three-unit dwellings; farm tanks storing heating oil for non-commercial purposes, and holding tanks.

All owners and operators of USTs must comply with registration requirements, with the exception of those exempted under 250–RICR–140–25 section 1.4(D). Registration applies to all farm and residential tanks containing heating or fuel oils consumed on-site and containing motor fuels for on-site use.

The Rhode Island Underground Storage Tank Financial Responsibility Fund (RI UST FR Fund) was established to provide a mechanism to comply with financial responsibility requirements and to ensure that the environmental and public health impacts of leaks from USTs are addressed in an effective and timely manner.

Owners/operators must ensure that their facilities comply with Rhode Island's UST regulations by conducting their own inspections and certifying their compliance by completing and submitting the Environmental Results Program Certification (ERP) Booklet. At least every three years the RI DEM will issue an ERP Certification Booklet to all operating UST facilities.

With the exception of UST systems that store fuel oil of any grade consumed on-site for heating, all single-walled tanks and/or piping installed before May 8, 1985 were required to be permanently closed by December 22, 2017. All single-walled tanks and/or piping installed between May 8, 1985 and July 20, 1992, shall be permanently closed within thirty-two (32) years of the date of installation. If the installation date is not known, then any single-walled tank and/or piping shall be permanently closed immediately.

All USTs containing heating oil of any grade at commercial or industrial facilities are required to be tested for tightness beginning in 2021.

Remote pumping systems, including dispensers, shall be equipped with an emergency shut-off valve designed to close automatically in the event that a dispensing unit is significantly impacted or exposed to fire.

New USTs are prohibited from being installed in wellhead protection areas for community water systems. However, USTs registered before November 20, 2018 that were not abandoned or removed for more than 180 days are permitted to be replaced with tanks of equivalent size, or less, and substance stored.

The installation of an UST within 200 feet of a public drilled (rock), driven, or dug well or within 400 feet of a gravel-packed or gravel-developed well is prohibited.

USTs are to be installed as far away as possible from private wells.

Construction of a new tank system or replacement tank system, and modification (including product piping replacement) to any UST facility for which an application for a certificate of registration is required, is prohibited without prior written notification to, and approval by, the Director.

Before installing or replacing any USTs or product piping, the owner is required to submit a completed UST Registration Form; a completed Equipment List Addendum; a completed UST Installation/Modification/Upgrade Supplemental Information form; a site plan, including all of the information listed in 250–RICR–140–25 section 1.7(D)(1)(a)(3) which must be reviewed and stamped by a registered Professional Engineer; specifications or a diagram indicating depth of excavation, bedding, and backfill, supports and anchorage used, distance between tanks, and dimensions (including thickness) of traffic pad; and the appropriate registration fees.

All new and replacement tanks and piping (primary and secondary) shall be tightness tested after all paving over the tanks and piping has been completed and before commencing regular UST operation.

USTs storing heating oil used onsite for heating purposes only with aboveground fill pipes do not require spill containment as long as the ground around the fill pipe is covered with a positive-limiting barrier constructed of material impervious to the substance stored and can contain spills less than three gallons; the fill pipe extends a minimum of six inches above the finished grade; and aboveground fill pipes in high traffic areas are protected by concrete-filled bollards.

When permanently closing any UST system and/or product pipeline, a $75.00 per UST fee must be submitted at least 10 days prior to the removal date.

No person can conduct tightness or interstitial testing on USTs or tank components in Rhode Island unless they are in compliance with the licensing and other provisions of these regulations. Any individual wishing to be licensed must submit a completed application with the required documentation and application fee. Any business who employs or subcontracts licensed testers to conduct tank and/or piping tests are required to submit a completed application for a tank testing business license to the RI DEM.

Any owner/operator of a facility, or person subject to these regulations may submit a written request to the Director for a variance from some or all provisions of these regulations.

More Stringent Provisions

Facilities subject to leak detection requirements must post or provide, in a location readily accessible to the facility staff, emergency response procedures, including instructions on responding to alarms, releases, spills, and other abnormal events, and include current contact information for the Class A and B operator or a 24-hour call center or spill response hotline.

All USTs and product piping installed after 1992 are required to have liquid-tight secondary containment and be equipped with continuous monitoring of the interstitial space.

Double-walled USTs with a dry interstice (except those for heating fuels for on-site use, emergency generators, and waste or motor oil) must have a tightness test of the interstitial space completed every two years once the tanks have been installed for 20 years. If the test fails, the primary wall must be tested within 48 hours. Any product remaining in the tank can be consumed for up to 30 days if the primary tank tests tight. If the primary wall is unable to be tested or fails, the tank must be taken out of service, the contents removed within 24 hours, and the tank tester must notify DEM immediately. Within 30 days and before adding product to the repaired tank, an additional interstitial tightness test must be done to confirm the repair. All failed USTs must be repaired or replaced within 60 days or be temporarily closed. Test results are to be maintained on-site at all times as permanent records.

If a piping interstitial space tightness test fails, and there is no evidence of a release, the primary product pipeline wall must be tested for tightness within 48 hours. If it is tight, any product remaining in the failed product pipeline and all USTs directly connected to that pipeline may be consumed for no longer than 30 days. No additional product may be added to any UST connected to the failed product pipeline until it has been repaired or replaced and passes a final tightness test. The repaired pipeline must be re-tested within 30 days and before placing it back into regular service. Test results are to be maintained on-site at all times as permanent records.

If the primary wall of the piping is unable to be tested or fails, the failed line must be taken out of service immediately, the contents removed, and the tank tester must notify the RI DEM immediately. No product may be added to an UST that services the failed pipeline until it has been repaired or replaced and passed a final tightness test to confirm the repair. All failed USTs must be repaired or replaced within 60 days or be temporarily closed. Test results are to be maintained on-site at all times as permanent records.

All single-walled USTs and all single-walled product pipelines, including pressurized, U.S. suction, and European suction, must be tested for tightness by a third-party licensed tester on an annual basis, regardless of age or installation date.

Statistical inventory reconciliation, groundwater, and vapor monitoring are not accepted as leak detection methods.

Owners/Operators of single-walled USTs are required to operate an approved automatic tank gauging system that tests for loss or gain of the contents stored, perform a leak test capable of detecting a leak rate of 0.2 gal/hour or less at least once per month, perform daily and monthly inventory recordkeeping, and perform a tank tightness test annually.

Interior lining is no longer accepted as a method of corrosion protection. USTs lined prior to November 20, 2018, must be inspected within 10 years after lining, and every five years thereafter. Any pitting, tearing, discoloration, failure to adhere to the tank structure, or other damage will be considered a lining failure. The USTs must be removed from service and permanently closed within 90 days. Failed lining inspections must be reported to the RI DEM by the inspector within 24 hours and the final report/results are to be submitted within 30 calendar days. Records of all tank lining inspections are required to be permanently kept.

Impressed current cathodic protection systems are required to be tested every 2 years.

All facilities are required to have a trained and certified Class A and Class B operator registered with RI DEM who

are required to perform monthly walk-through inspections and complete the Department's monthly inspection checklist. Class A and B operator certification is valid for five years from the date of passing provided the facility remains in compliance with these regulations. Class C operators must be trained every two years, by a Class A or B operator.

Written approval is needed to operate as an unmanned facility before operating without a Class C operator being present during all operating hours. Certified Class A and Class B operators must be designated to the facility and registered with the RI DEM. A sign must be posted with the names and telephone numbers of the Class A and B operators, facility owner/operator, 911, local emergency responders, and must include a statement advising persons to call these numbers to report a spill or other emergency. This sign must be visible for the person fueling the vehicle or the USTs to read. A designated person(s) must be available to respond to emergencies immediately when the owner or operator is contacted.

Airport hydrant fuel distribution systems and UST systems with field-constructed tanks shall meet release detection requirements for tanks and piping systems. Piping associated with airport hydrant distribution systems and field constructed UST systems shall have secondary containment.

All new and replacement spill containment basins must be capable of holding a minimum of three gallons, be double-walled and capable of periodic interstitial monitoring. Single-walled spill containment basins are prohibited from being installed as of November 20, 2018.

USTs and/or their associated piping can be modified or repaired only once.

Owners and operators of all UST facilities must maintain the following records for three years beyond the facility's operational life: Data used in the certificate of registration application; modifications or repairs to pipes, fittings, or other UST system components; storage of regulated substances greater than 10% ethanol and 20% biodiesel, and the UST system compatibility of those substances; annual test results of leak detection equipment and systems; records of closure activities; tank and line tightness test results; corrosion protection methods documentation; records of leaks, spills, releases, overfill, site investigations, and remedial response activities; equipment warranties and manufacturers' checklists; monitoring, testing, and/or inspections for single-walled and double-walled spill prevention equipment, containment sumps, and overfill prevention equipment.

All confirmed and suspected leaks or releases from USTs must be immediately reported.

A temporary closure application must be submitted to the RI DEM for approval at least 15 days prior to the requested closure date. Class A, Class B, or Class A/B operator must be registered with RI DEM for the entire duration of the temporary closure, must visit the site biannually to ensure the facility and the UST components are in good condition, there are no missing components, and no unsafe situations exist on the property. The operator must complete the monthly inspection checklist and at least once per year measure the product and water level in the tanks. The RI DEM must be notified within 24 hours if there is any change in the product or water level, and corrective action may be required. The facility owner/operator must notify RI DEM 30 days before re-opening the UST system and must receive written approval before adding or dispensing any regulated substances or hazardous materials.

Prior approval and oversight from the RI DEM is required for the permanent closure of any UST, UST system, or an UST and product pipeline.

II. Codification

A. What is codification?

Codification is the process of placing a state's statutes and regulations that comprise the state's approved UST program into the CFR. Section 9004(b) of RCRA, as amended, allows the EPA to approve State UST programs to operate in lieu of the Federal program. The EPA codifies its authorization of state programs in 40 CFR part 282 and incorporates by reference state statutes and regulations that the EPA will enforce under sections 9005 and 9006 of RCRA and any other applicable state provisions. The incorporation by reference of state authorized programs in the CFR should substantially enhance the public's ability to discern the current status of the approved state program and state requirements that can be federally enforced. This effort provides clear notice to the public of the scope of the approved program in each state.

B. What is the history of codification of Rhode Island's UST program?

EPA incorporated by reference the Rhode Island DEM approved UST program effective April 22, 1996 (61 FR 6320; February 20, 1996). In this document, EPA is revising 40 CFR 282.89 to include the approved revisions.

C. What codification decisions have we made in this rule?

Incorporation by reference: In this rule, we are finalizing regulatory text that includes incorporation by reference. In accordance with the requirements of 1 CFR 51.5, we are finalizing the incorporation by reference of the federally approved Rhode Island UST program described in the amendments to 40 CFR part 282 set forth below. The EPA has made, and will continue to make, this document generally available through *www.regulations.gov* and at the EPA Region 1 office (see the **ADDRESSES** Section of this preamble for more information).

The purpose of this **Federal Register** document is to codify Rhode Island's approved UST program. The codification reflects the State program that would be in effect at the time EPA's approved revisions to the Rhode Island UST program addressed in this direct final rule become final. The document incorporates by reference Rhode Island's UST statutes and regulations and clarifies which of these provisions are included in the approved and federally enforceable program. By codifying the approved Rhode Island program and by amending the CFR, the public will more easily be able to discern the status of the federally-approved requirements of the Rhode Island program.

EPA is incorporating by reference the Rhode Island approved UST program in 40 CFR 282.89. Section 282.89(d)(1)(i)(A) incorporates by reference for enforcement purposes the State's statutes and regulations.

Section 282.89 also references the Attorney General's Statement, Demonstration of Adequate Enforcement Procedures, the Program Description, and the Memorandum of Agreement, which are approved as part of the UST program under Subtitle I of RCRA. These documents are not incorporated by reference.

D. What is the effect of Rhode Island's codification on enforcement?

The EPA retains the authority under sections 9005 and 9006 of Subtitle I of RCRA, 42 U.S.C. 6991d and 6991e, and other applicable statutory and regulatory provisions to undertake inspections and enforcement actions and to issue orders in approved States. With respect to these actions, EPA will rely on Federal sanctions, Federal inspection authorities, and Federal procedures rather than the state

authorized analogues to these provisions. Therefore, the EPA is not incorporating by reference such particular, approved Rhode Island procedural and enforcement authorities. Section 282.89(d)(1)(ii) of 40 CFR lists those approved Rhode Island authorities that would fall into this category.

E. What State provisions are not part of the codification?

The public also needs to be aware that some provisions of the State's UST program are not part of the federally approved State program. Such provisions are not part of the RCRA Subtitle I program because they are ''broader in scope'' than Subtitle I of RCRA. Section 281.12(a)(3)(ii) of 40 CFR states that where an approved state program has provisions that are broader in scope than the Federal program, those provisions are not a part of the federally approved program. As a result, State provisions which are broader in scope than the Federal program are not incorporated by reference for purposes of enforcement in Part 282. Section 282.89(d)(1)(iii) lists for reference and clarity the Rhode Island statutory and regulatory provisions which are broader in scope than the Federal program and which are not, therefore, part of the approved program being codified in this document. Provisions that are broader in scope cannot be enforced by EPA; the State, however, will continue to implement and enforce such provisions under State law.

III. Statutory and Executive Order Reviews

This action only applies to Rhode Island's UST Program requirements pursuant to RCRA section 9004 and imposes no requirements other than those imposed by State law. It complies with applicable Executive orders (EOs) and statutory provisions as follows:

A. Executive Order 12866: Regulatory Planning and Review; Executive Order 13563: Improving Regulation and Regulatory Review

The Office of Management and Budget (OMB) has exempted this action from the requirements of Executive Orders 12866 (58 FR 51735, October 4, 1993) and 13563 (76 FR 3821, January 21, 2011). This action approves and codifies State requirements for the purpose of RCRA section 9004 and imposes no additional requirements beyond those imposed by State law. Therefore, this action is not subject to review by OMB.

B. Executive Order 13771: Reducing Regulations and Controlling Regulatory Costs

This action is not a regulatory action subject to Executive Order 13771 (82 FR 9339, February 3, 2017) because actions such as this final approval of Rhode Island's revised underground storage tank program under RCRA are exempted under Executive Order 12866. Accordingly, I certify that this action will not have a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*).

C. Unfunded Mandates Reform Act and Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

Because this action approves and codifies pre-existing requirements under State law and does not impose any additional enforceable duty beyond that required by State law, it does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538). As discussed above, EPA is not acting on approval to operate the State's UST program as it applies to Tribal lands in the State. Therefore, this action also does not significantly or uniquely affect the communities of Tribal governments, as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

D. Executive Order 13132: Federalism

This action will not have substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government, as specified in Executive Order 13132 (64 FR 43255, August 10, 1999), because it merely approves and codifies State requirements as part of the State RCRA underground storage tank program without altering the relationship or the distribution of power and responsibilities established by RCRA.

E. Executive Order 13045: Services of Children From Environmental Health and Safety Risks

This action also is not subject to Executive Order 13045 (62 FR 19885, April 23, 1997), because it is not economically significant, and it does not make decisions based on environmental health or safety risks.

F. Executive Order 13211: Actions That Significantly Affect Energy Supply, Distribution, or Use

This rule is not subject to Executive Order 13211, ''Actions Concerning Regulations that Significantly Affect Energy Supply, Distribution, or Use'' (66 FR 28355, May 22, 2001) because it is not a ''significant regulatory action'' as defined under Executive Order 12866.

G. National Technology Transfer and Advancement Act

Under RCRA section 9004(b), EPA grants a State's application for approval as long as the State meets the criteria required by RCRA. It would thus be inconsistent with applicable law for EPA, when it reviews a State approval application, to require the use of any particular voluntary consensus standard in place of another standard that otherwise satisfies the requirements of RCRA. Thus, the requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) do not apply.

H. Executive Order 12988: Civil Justice Reform

As required by Section 3 of Executive Order 12988 (61 FR 4729, February 7, 1996), in issuing this rule, EPA has taken the necessary steps to eliminate drafting errors and ambiguity, minimize potential litigation, and provide a clear legal standard for affected conduct.

I. Executive Order 12630: Governmental Actions and Interference With Constitutionally Protected Property Rights

EPA has complied with Executive Order 12630 (53 FR 8859, March 15, 1988) by examining the takings implications of the rule in accordance with the ''Attorney General's Supplemental Guidelines for the Evaluation of Risk and Avoidance of Unanticipated Takings'' issued under the Executive order.

J. Paperwork Reduction Act

This rule does not impose an information collection burden under the provisions of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*). ''Burden'' is defined at 5 CFR 1320.3(b).

K. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations

Executive Order 12898 (59 FR 7629, February 16, 1994) establishes Federal executive policy on environmental justice. Its main provision directs Federal agencies, to the greatest extent

practicable and permitted by law, to make environmental justice part of their mission by identifying and addressing, as appropriate, disproportionately high and adverse human health or environmental effects of their programs, policies, and activities on minority populations and low-income populations in the United States. Because this rule approves pre-existing State rules which are at least equivalent to, and no less stringent than existing Federal requirements, and imposes no additional requirements beyond those imposed by State law, and there are no anticipated significant adverse human health or environmental effects, the rule is not subject to Executive Order 12898.

L. Congressional Review Act

The Congressional Review Act, 5 U.S.C. 801–808, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. EPA will submit a report containing this document and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication in the **Federal Register**. A major rule cannot take effect until 60 days after it is published in the **Federal Register**. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2). However, this action will be effective February 9, 2021 because it is a direct final rule.

Authority: This rule is issued under the authority of sections 2002(a), 7004(b), and 9004 of the Solid Waste Disposal Act, as amended, 42 U.S.C. 6912, 6991c, 6991d, and 6991e.

List of Subjects in 40 CFR Part 282

Environmental protection, Administrative practice and procedure, Confidential business information, Hazardous substances, Incorporation by reference, Insurance, Intergovernmental relations, Penalties, Petroleum, Reporting and recordkeeping requirements, Surety bonds, Underground storage tanks, Water supply.

Dated: November 10, 2020.

Dennis Deziel,

Regional Administrator, EPA Region 1.

For the reasons set forth in the preamble, EPA is amending 40 CFR part 282 as follows:

PART 282—APPROVED UNDERGROUND STORAGE TANK PROGRAMS

■ 1. The authority citation for part 282 continues to read as follows:

Authority: 42 U.S.C. 6912, 6991c, 6991d, and 6991e.

■ 2. Revise § 282.89 to read as follows:

§ 282.89 Rhode Island State-Administered Program.

(a) The State of Rhode Island is approved to administer and enforce an underground storage tank program in lieu of the Federal program under Subtitle I of the Resource Conservation and Recovery Act of 1976 (RCRA), as amended, 42 U.S.C. 6991 *et seq.* The State's program, as administered by the Rhode Island Department of Environmental Management (RI DEM), was approved by EPA pursuant to 42 U.S.C. 6991c and 40 CFR part 281. EPA approved the Rhode Island program on February 3, 1993, which was effective on March 5, 1993.

(b) Rhode Island has primary responsibility for administering and enforcing its federally approved underground storage tank program. However, EPA retains the authority to exercise its inspection and enforcement authorities under sections 9005 and 9006 of Subtitle I of RCRA, 42 U.S.C. 6991d and 6991e, as well as under any other applicable statutory and regulatory provisions.

(c) To retain program approval, Rhode Island must revise its approved program to adopt new changes to the Federal Subtitle I program which makes it more stringent, in accordance with section 9004 of RCRA, 42 U.S.C. 6991c and 40 CFR part 281, subpart E. If Rhode Island obtains approval for the revised requirements pursuant to section 9004 of RCRA, 42 U.S.C. 6991c, the newly approved statutory and regulatory provisions will be added to this subpart and notification of any change will be published in the **Federal Register**.

(d) Rhode Island has final approval for the following elements of its program application originally submitted to EPA and approved effective March 5, 1993, and the program revision application approved by EPA, effective on February 9, 2021.

(1) *State statutes and regulations*—(i) *Incorporation by reference.* The material cited in this paragraph (d)(1)(i), and listed in appendix A to this part, is incorporated by reference as part of the underground storage tank program under Subtitle I of RCRA, 42 U.S.C. 6991 *et seq.* (See § 282.2 for incorporation by reference approval and inspection information.) You may obtain copies of the Rhode Island regulations and statutes that are incorporated by reference in this paragraph (d)(1)(i) from Kevin Gillen, Rhode Island DEM, 235 Promenade Street, Providence, RI 02908–5767; Phone number: 401–222–2797; *kevin.gillen@dem.ri.gov,* Hours: Monday–Friday, 7:00 a.m. to 3:30 p.m.; link to statutes and regulations: State of Rhode Island General Laws: *https://webserver.rilin.state.ri.us/Statutes/; http://www.dem.ri.gov/programs/wastemanagement/ust/.* You may inspect all approved material at the EPA Region 1 Office, 5 Post Office Square, 1st floor, Boston, MA 02109–3912; Phone Number: (617) 918–1313; or the National Archives and Records Administration (NARA), Email: *fedreg.legal@nara.gov,* website: *https://www.archives.gov/federal-register/cfr/ibr-locations.html.*

(A) ''EPA-Approved Rhode Island Statutory and Regulatory Requirements Applicable to the Underground Storage Tank Program, May 2020.''

(B) [Reserved]

(ii) *Legal basis.* EPA evaluated the following statutes and regulations which are part of the approved program, but they are not being incorporated by reference for enforcement purposes, and do not replace Federal authorities:

(A) The statutory provisions include:

(*1*) *Rhode Island General Laws, Title 38: Public Records;* Chapter 38–1, Custody and Protection of Public Records; Chapter 38–2, Access to Public Records; and 38–3, Administration of Public Records.

(*2*) *Rhode Island General Laws, Title 42—Affairs and Government;* Chapter 42–17.1–2(20), Department of Environmental Management, Powers and Duties to Enter, Examine or Survey for Criminal Investigations; Chapter 42–17.6, Administrative Penalties for Environmental Violations.

(*3*) *Rhode Island General Laws, Title 46—Waters and Navigation;* Chapter 46–12—Water Pollution, Section 12–3, Powers and Duties of the Director, except (21); Section 12–9, Notices of Violation and Compliance Orders; 12–10, Emergency Powers; 12–13, Civil Penalties; 12–14, Criminal Penalties; 12–15, Inspection Powers—Rules and Regulations; and Section 12–22. Access of Enforcement Officers to Premises.

(B) The regulatory provisions include:

(*1*) *Title 250—Department of Environmental Management, Chapter 140—Waste and Materials Management, Subchapter 25—Oil and Underground Tanks, Part 1—Rhode Island Rules and Regulations for Underground Storage Facilities Used for Regulated Substances*

and Hazardous Materials, adopted as 250–RICR–140–25–1, Section: 1.10(T) Delivery Prohibition; 1.16(F) Suspension or Revocation of License; 1.16(G) Procedure for Suspension and Revocation; 1.16(H) Requests for Hearings; 1.21 Appeals; 1.22 Penalties.

(*2*) *Title 250—Department of Environmental Management, Chapter 20—Legal Services, Subchapter 00—N/A, Part 1—Administrative Rules of Practice and Procedure for the Department of Environmental Management 20–00–1, adopted as 250–RICR–20–00–1.*

(*3*) *Title 250—Department of Environmental Management, Chapter 130—Compliance and Inspection, Subchapter 00—N/A, Part 1—Rules and Regulations for Assessment of Penalties, adopted as 250–RICR–130–00–1.*

(iii) *Provisions not incorporated by reference.* The following specifically identified statutory and regulatory provisions applicable to the Rhode Island's UST program are broader in scope than the Federal program, are not part of the approved program, and are not incorporated by reference in this section for enforcement purposes:

(A) *Rhode Island Rules and Regulations for Underground Storage Facilities Used for Regulated Substances and Hazardous Materials, 250–RICR–140–25–1,* Section: 1.4(E) Partial regulation of residential tanks storing heating oil at one, two, or three-unit dwellings and farm tanks storing heating oil for non-commercial purposes; 1.4(G) Partial regulation of holding tanks; 1.7(A) Registration applies to all farm and residential tanks containing heating or fuel oils consumed on-site and containing motor fuels for on-site use; 1.9 The Rhode Island UST Financial Responsibility Fund; 1.10 Minimum UST Operation and Maintenance Requirements, (C), (D), (F)(4) and (J); 1.11 New and Replacement UST System Requirements, (B)(1–3) and (5), (C)(1), (J)(1), and (L)(2); 1.12 Facility Modifications or Repairs, (A); 1.15 Closure, (D)(5); 1.16 Approval of Tank and/or Line Tightness Tests, Leak Detection Methods and Licensing Requirements, (B), (D), and (E); 1.19 Holding Tanks; 1.20 Variances.

(B) [Reserved]

(2) *Statement of legal authority.* The Attorney General's Statements, signed by the Attorney General of Rhode Island on July 1, 1992, and January 23, 2020, though not incorporated by reference, are referenced as part of the approved underground storage tank program under Subtitle I of RCRA, 42 U.S.C. 6991 *et seq.*

(3) *Demonstration of procedures for adequate enforcement.* The ''Demonstration of Procedures for Adequate Enforcement'' submitted as part of the original application on July 2, 1992, and as part of the program revision application for approval on February 4, 2020, though not incorporated by reference, is referenced as part of the approved underground storage tank program under Subtitle I of RCRA, 42 U.S.C. 6991 *et seq.*

(4) *Program description.* The program description and any other material submitted as part of the original application on July 2, 1992, and as part of the program revision application on February 4, 2020, though not incorporated by reference, are referenced as part of the approved underground storage tank program under Subtitle I of RCRA, 42 U.S.C. 6991 *et seq.*

(5) *Memorandum of Agreement.* The Memorandum of Agreement between EPA Region 1 and the Rhode Island Department of Environmental Services, signed by the EPA Regional Administrator on February 12, 2019, though not incorporated by reference, is referenced as part of the approved underground storage tank program under Subtitle I of RCRA, 42 U.S.C. 6991 *et seq.*

■ 3. Appendix A to part 282 is amended by revising the entry for Rhode Island to read as follows:

Appendix A to Part 282—State Requirements Incorporated by Reference in Part 282 of the Code of Federal Regulations

* * * * *

Rhode Island

(a) The statutory provisions include:

1. *Rhode Island General Laws, Title 42: State Affairs and Government; Chapter 42–17.1, Department of Environmental Management; Section 42–17.1–2, Powers and Duties.*

(31) standards for the quality of air, and water, and the location, design, construction, and operation of all underground storage facilities used for storing petroleum products or hazardous materials.

2. *Rhode Island General Laws, Title 46: Waters and Navigation; Chapter 46–12. Water Pollution; Section 46–12–3, Powers and Duties of the Director.*

(4) accepting and administering loans and grants.

(21) standards for location, design, construction, maintenance, and operation of underground storage facilities used for storing petroleum products or hazardous materials to prevent, abate, and remedy the discharge of petroleum products and hazardous materials into the waters of the state.

(22) promulgate regulations for monitoring wells.

(b) The regulatory provisions include:

1. *Rhode Island Rules and Regulations for Underground Storage Facilities Used for Regulated Substances and Hazardous Materials, 250–RICR–140–25–1, (effective November 20, 2018)*

Section 1.1 Purpose.
Section 1.2. Authority.
Section 1.3 Incorporated Materials.
Section 1.4 Applicability, except (E) and (G).
Section 1.5 Definitions.
Section 1.6 Administrative Findings.
Section 1.7 Facility Registration.
Section 1.8 Financial Responsibility, except (D).
Section 1.10 Minimum UST Operation and Maintenance Requirements, except (C), (D), and (F)(4) and (T).
Section 1.11 New and Replacement UST System Requirements, except (B)(1–3) and (5), (C)(1), (J)(1), and (L)(2).
Section 1.12 Facility Modifications or Repairs, except (A).
Section 1.13 Maintaining Records.
Section 1.14 Leak and Spill Response.
Section 1.15 Closure, except (D)(5).
Section 1.16 Approval of Tank and/or Line Tightness Tests, Leak Detection Methods and Licensing Requirements, except (B), (D), (E), (F), (G) and (H).
Section 1.17 Signatories to Registration and Closure Applications.
Section 1.18 Transfer of Certificates of Registration and Closure.

Correction

In rule document 2020–24954, appearing in the Issue of Friday, November 27, 2020, appearing on pages 75874–75892, make the following changes:

§ 2569.404 (Corrected)

■ 1. In section 2569.404, on page 75889, in the second column, delete the paragraph designation ''(d)'' at the end of the section.

§ 2569.405 (Corrected)

■ 2. In section 2569.405 on page 75889, in the second column, delete the paragraph designation ''(e)'' immediately following the section heading and immediately prior to paragraph designation ''(a)''.

§ 2569.405 (Corrected)

■ 3. In section 2569.405, on page 75889, in the third column, delete the second ''(d)'' immediately after the paragraph designated ''(d)''.

§ 2569.411 (Corrected)

■ 4. In section 2569.411, on page 75890, in the first column, delete the second ''(c)'' immediately after the paragraph designated ''(c)''.

§ 2569.501 (Corrected)

■ 5. In section 2569.501, on page 75891, in the first column, delete the second ''(j)'' immediately after the paragraph designated ''(j)''.

§ 2569.506 (Corrected)

■ 6. In section 2569.506, on page 75892, in the first column, make the second paragraph ''(c)'' into a paragraph ''(d)''.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 660

[Docket No. 201204–0325]

RIN 0648–BJ74

Magnuson-Stevens Act Provisions; Fisheries Off West Coast States; Pacific Coast Groundfish Fishery; Pacific Coast Groundfish Fishery Management Plan; Amendment 29; 2021–22 Biennial Specifications and Management Measures

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Final rule.

SUMMARY: This final rule establishes the 2021–22 harvest specifications for groundfish taken in the U.S. exclusive economic zone off the coasts of Washington, Oregon, and California, consistent with the Magnuson-Stevens Fishery Conservation and Management Act and the Pacific Coast Groundfish Fishery Management Plan (PCGFMP). This final rule revises the management measures that are intended to keep the total annual catch of each groundfish stock or stock complex within the annual catch limits. These measures are intended to help prevent overfishing, rebuild overfished stocks, achieve optimum yield, and ensure that management measures are based on the best scientific information available. Additionally, this final rule implements Amendment 29 to the PCGFMP, which designates shortbelly rockfish as an ecosystem component species, and changes the trawl and nontrawl allocations for blackgill rockfish within the southern slope complex south of 40°10' North latitude (N. lat.), petrale sole, lingcod south of 40°10′ N lat., and widow rockfish.

DATES: This final rule is effective January 1, 2021.

ADDRESSES:

Electronic Access

This rule is accessible via the internet at the Office of the Federal Register website at *https://www.federalregister.gov/.* Background information and documents including an integrated analysis for this action (Analysis), which addresses the statutory requirements of the Magnuson Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act), the National Environmental Policy Act, Presidential Executive Order 12866, and the Regulatory Flexibility Act are available at the NMFS West Coast Region website at *https://www.fisheries.noaa.gov/region/west-coast* and at the Pacific Fishery Management Council's website at *http://www.pcouncil.org.* The final 2020 Stock Assessment and Fishery Evaluation (SAFE) report for Pacific Coast groundfish, as well as the SAFE reports for previous years, are also available from the Pacific Fishery Management Council's website at *http://www.pcouncil.org.*

SUPPLEMENTARY INFORMATION:

I. Harvest Specifications

This final rule sets 2021–22 harvest specifications and management measures for 127 of the 128 groundfish stocks which currently have annual catch limits (ACLs) or ACL contributions to stock complexes managed under the PCGFMP, except for Pacific whiting. Pacific whiting harvest specifications are established annually through a separate bilateral process with Canada. Under Amendment 29, shortbelly rockfish, which was managed with harvest specifications in the most recent biennium (2019–20), will no longer be managed with harvest specifications and will be instead designated as an ecosystem component species.

The overfishing limits (OFLs), acceptable biological catch (ABCs), and ACLs are based on the best available biological and socioeconomic data, including projected biomass trends, information on assumed distribution of stock biomass, and revised technical methods used to calculate stock biomass. See Tables 1a and 2a to Part 660, Subpart C in the regulatory text supporting this rule for the 2021–22 OFLs, ABCs, and ACLs for each stock or stock complex.

A detailed description of each stock and stock complex for which the Council establishes harvest specifications set through this rule can be found in the 2020 SAFE document posted on the Council's website at *http://www.pcouncil.org/groundfish/safe-documents/.* A summary of how the 2021–22 harvest specifications were developed, including a description of off-the-top deductions for tribal, research, incidental, and experimental fisheries, was provided in the proposed rule and is not repeated here. Additional information on the development of these harvest specifications is also provided in the Analysis.

For most stocks, the Council recommended harvest specifications based on the default harvest control rule used in the prior biennium. The Council recommended deviating from the default harvest control rule for four stocks in 2021–2022. Table 1 presents a summary of the changes to the harvest control rules for these four stocks for the 2021–22 biennium. Each of these changes was discussed in the proposed rule and that discussion is not repeated here.

Table 1 -- Changes to Harvest Control Rules for 2021–22 Biennium between the Default Harvest Control Rule used in the 2019-2020 Biennium, and the New Harvest Control Rule, recommended by the Council, and being implemented by NMFS in this Final Rule

Stock	Alternative	Harvest Control Rule	ACL[a/]
Cowcod. south of 40°10' N lat.	Default	ACL=ABC (P*=0.45)	98 mt (2021), 96 mt (2022)
	New Harvest Control Rule	ACL=ABC (P*=0.40)	84 mt (2021), 82 mt (2022)
Oregon Black Rockfish	Default	ACL=ABC (P*=0.45)	479 mt (2021), 472 mt (2022)
	New Harvest Control Rule	ACL=2020 ABC	512 mt (2021), 512 mt (2022)
Sablefish[b]	Default	ACL=ABC (P*=0.40)	ACL North-6,435 mt, South-1,773 mt (2021), ACL North-6,124 mt, South-1,687 mt (2022)
	New Harvest Control Rule	ACL=ABC (P*=0.45)	ACL North- 6,892 mt, South-1,899 mt (2021), ACL North-6,566 mt, South-1,809 mt (2022)
Shortbelly Rockfish	Default	P*=0.40, fixed ACL	500 mt
	New Harvest Control Rule	Designate as an Ecosystem Component Species	N/A

[a/] Default ACL is for 2021 and 2022 under the default harvest control rule, new harvest control rule ACL is for 2021 and 2022 under the Council's recommended harvest specifications.

[b/]The coastwide ABC is apportioned 78.4 percent north of 36° N. lat. (ACL North) and 21.6 percent south of 36° N. lat. (ACL South).

II. Management Measures

This section describes management measures (*i.e.,* biennial fishery harvest guidelines and set-asides) used to further allocate the ACLs to the various sectors of the fishery and to manage the fishery. Management measures for the commercial fishery modify fishing behavior during the fishing year to ensure that catch does not exceed the ACL, and include trip and cumulative landing limits, time/area closures, size limits, and gear restrictions. Management measures for the recreational fisheries include bag limits, size limits, gear restrictions, fish dressing requirements, and time/area closures. Each of these changes was discussed in the proposed rule and that discussion is not repeated here.

A. Deductions From the ACLs

Before making allocations to the primary commercial and recreational components of groundfish fisheries, the Council recommends ''off-the-top deductions,'' or deductions from the ACLs to account for anticipated mortality for certain types of activities: Harvest in Pacific Coast treaty Indian tribal fisheries; harvest in scientific research activities; harvest in non-groundfish fisheries (incidental catch); and harvest that occurs under exempted fishing permits (EFPs). These off-the-top deductions are for individual stocks or stock complexes and can be found in the footnotes to Tables 1a and 2a to part 660, subpart C.

B. Tribal Fisheries

The Quileute Tribe, Quinault Indian Nation, Makah Indian Tribe, and Hoh Indian Tribe (collectively, ''the Pacific Coast Tribes'') implement management measures for Tribal fisheries both independently as sovereign governments and cooperatively with the management measures in the Federal regulations. The Pacific Coast Tribes may adjust their Tribal fishery management measures inseason to stay within the Tribal harvest targets and estimated impacts to overfished stocks. Table 2 provides the Tribal harvest targets for the 2021–22 biennium.

Table 2 -- Tribal Harvest Targets for the 2021–22 Biennium Compared to Those in Place in 2020

Stock	Off the Top Deduction	
	2020 (mt)	2021-2022 (mt)
Arrowtooth Flounder	2,041	2,041
Big Skate	15	15
WA Black Rockfish	18	18
Canary Rockfish	50	50
Darkblotched Rockfish	0.2	0.2
Dover Sole	1,497	1,497
English Sole	200	200
Lingcod N. of 40°10' N. lat.	250	250
Longnose Skate	130	220
Longspine Thornyhead N. of 34°27' N. lat.	30	30
Pacific cod	500	500
Pacific Ocean Perch	9.2	9.2
Pacific whiting	36,251	TBD
Petrale Sole	220	350
Sablefish N. of 36° N. lat.	604	689.2
Shortspine Thornyhead S. of 34°27 N. lat.	50	50
Spiny Dogfish	275	275
Widow rockfish	200	200
Yellowtail Rockfish	1,000	1,000
WA Cabezon/Kelp Greenling	-	2
Nearshore Rockfish North	1.5	1.5
Other Flatfish	60	60
Shelf Rockfish North	30	30
Slope Rockfish North	36	36

C. Biennial Fishery Allocations

The Council recommends two-year trawl and nontrawl allocations during the biennial specifications process for all stocks without formal allocations (as defined in Section 6.3.2 of the PCGFMP) or stocks where the long-term allocation is suspended because the stock is declared overfished. As part of the 2021–22 biennium, the Council also decided to revise the trawl and nontrawl allocations for canary rockfish, as well as Petrale sole, widow rockfish, lingcod south of 40°10′ N lat., and the slope rockfish complex south of 40°10′ N. lat., which were established through Amendment 21 to the PCGFMP (75 FR 32993, June 10, 2010), to better align these allocations with current harvest trends. The changes to these allocations are part of Amendment 29 and were discussed in the Notice of Availability for that amendment (85 FR 54529, September 2, 2020).

The trawl and nontrawl allocations, with the exception of sablefish north of 36° N lat., are based on the fishery harvest guideline. The fishery harvest guideline is the tonnage that remains after subtracting the off-the-top deductions described in Section II, A, entitled ''Deductions from the ACLs,'' in this preamble. The trawl and nontrawl allocations are designed to accommodate anticipated mortality in each sector as well as variability and uncertainty in those mortality estimates. Additional information on the Council's allocation framework and formal allocations can be found in Section 6.3 of the PCGFMP and § 660.55 of the Federal regulations. Trawl and nontrawl allocations are detailed in Tables 1b and 2b in the regulatory text for this rule.

D. Corrections to Waypoints for Rockfish Conservation Areas

Rockfish Conservation Areas (RCAs) are large groundfish area closures intended to reduce the catch of a stock or stock complex by restricting fishing activity at specific depths. The boundaries for RCAs are defined by straight lines connecting a series of latitude and longitude coordinates that approximate depth contours. These sets of coordinates, or lines, are not gear or fishery specific, but can be used in combination to define an area. NMFS then implements fishing restrictions for a specific gear and/or fishery within each defined area. Table 3 below shows the RCA boundaries by gear type in place starting in 2021.

For the 2021–22 biennium, the Council recommended and NMFS is implementing minor adjustments to the 40 fathom (fm) depth contour offshore of San Mateo in Central California, and the 100 fm depth contours off of California to more accurately refine the depth contours, as well as the addition of coordinates to define the 100 fm line around the Channel Islands (Table 3).

Table 3 – Trawl and Non-Trawl RCA Boundaries for 2021

Sector	Area	RCA in effect
Trawl	North of 45°46' N. lat.	100 fm - 150 fm
	South of 45°46' N. lat.	None
Limited entry fixed gear and open access	North of 46°16' N. lat.	shoreline - 100 fm
	46°16' N. lat. - 40°10' N. lat.[1]	30 fm - 40 fm
		40 fm - 100 fm
	40°10' N. lat. - 38°57.5' N. lat.	40 fm – 125 fm
	38°57.5' N. lat. - 34°27' N. lat.	50 fm – 125 fm
	South of 34°27' N. lat.	100 fm - 125 fm (also applies around islands)

[1]Between 46°16' N. lat. and 40°10' N. lat. limited entry fixed gear and open access vessels may only use hook-and-line gear other than bottom longline and dinglebar gear.

E. Limited Entry Trawl

The limited entry trawl fishery is made up of the Shorebased IFQ Program, which includes both whiting and non-whiting targets, and the at-sea whiting sectors. For some stocks and stock complexes with a trawl allocation, an amount is first set-aside for the at-sea whiting sector with the remainder of the trawl allocation going to the Shorebased IFQ Program. Set-asides are not actively managed by NMFS or the Council except in the case of a risk to the ACL.

At-Sea Set-Asides

For several species, the trawl allocation is reduced by an amount set-aside for the at-sea whiting sector. This amount is designed to accommodate catch by the at-sea whiting sector when they are targeting Pacific whiting. The Council recommended and NMFS is implementing the set-asides in Table 4 for the 2021–22 biennium.

Table 4 -- 2021–22 At-sea Set-asides for Vessels Targeting Pacific Whiting While Fishing as Part of the At-sea Sector

Stock or Stock Complex	Area	At-sea Set Aside Amount (mt)
Arrowtooth Flounder	Coastwide	70
Canary rockfish	Coastwide	36
Darkblotched rockfish	Coastwide	76.4
Dover sole	Coastwide	10
Lingcod	N. of 40°10' N. lat.	15
Longnose skate	Coastwide	5
Minor shelf rockfish	N. of 40°10' N. lat.	35
Minor slope rockfish	N. of 40°10' N. lat.	300
Other flatfish	Coastwide	35
Pacific halibut [b/]	Coastwide	10
Pacific ocean perch	N. of 40°10' N. lat.	300
Petrale sole	Coastwide	5
Sablefish	N. of 36° N. lat.	100
Shortspine thornyhead	N. of 34°27' N. lat.	70
Widow rockfish	Coastwide	476
Yellowtail rockfish	N. of 40°10' N. lat.	320

Incidental Trip Limits for IFQ Vessels

For vessels fishing in the Shorebased IFQ Program, with either groundfish trawl gear or nontrawl gears, the following incidentally-caught stocks are managed with trip limits: Minor Nearshore Rockfish north and south, black rockfish, cabezon (46°16′ to 40°10′ N lat. and south of 40°10′ N lat.), spiny dogfish, shortbelly rockfish, big skate, Pacific whiting, and the Other Fish complex. For all these stocks, except big skate, this rule is implementing the same IFQ fishery trip limits for these stocks for the 2021–22 biennium as those in place in 2020. For big skate, the Council recommended, and NMFS is implementing, an unlimited trip limit at the start of 2021. Additionally, the Council recommended and NMFS is implementing a trip limit for blackgill rockfish within the southern slope rockfish complex. The trip limit is unlimited to start the 2021 fishing year. The purpose of the blackgill trip limit is to allow the Council to reduce targeting

of blackgill rockfish inseason, if needed. Trip limits for the IFQ fishery can be found in Table 1 North and Table 1 South to part 660, subpart D in the regulatory text of this rule. Changes to trip limits for the IFQ fishery are considered a routine measure under § 660.60(c), and may be implemented or adjusted, if determined necessary, through inseason action.

F. Limited Entry Fixed Gear and Open Access Nontrawl Fishery

Management measures for the Limited Entry Fixed Gear (LEFG) and Open Access (OA) nontrawl fisheries tend to be similar because the majority of participants in both fisheries use hook-and-line gear. Management measures, including area restrictions (*e.g.,* nontrawl RCA) and trip limits in these nontrawl fisheries, are generally designed to allow harvest of target stocks while keeping catch of overfished stocks low. For the 2021–22 biennium, the Council recommended, and NMFS is implementing, increased trip limits for almost all LEFG and OA fisheries, many of which were first implemented decades ago and do not reflect stocks that rebuilt in previous biennium or other management changes (*e.g.,* stock complex reorganizations). LEFG and OA trip limits are specified in Table 2 (North), Table 2 (South) to subpart E for LEFG and in Table 3 (North) and Table 3 (South) to subpart F for OA in the regulatory text of this rule.

Sablefish Trip Limits

Sablefish are managed separately north and south of 36°N lat. For the portion of the stock north of 36°N lat., the Council recommended and NMFS is implementing higher trip limits for the LEFG and OA fisheries in 2021. For the portion south of 36°N lat., the Council recommended, and NMFS is implementing, removing the daily trip limit for the OA fishery but maintaining the same weekly and bimonthly trip limits as were in place in the start of 2020. The sablefish trip limits for 2021–22 are shown in Table 5.

Table 5 -- Sablefish Trip Limits for Limited Entry and Open Access Sectors North and South of 36° N. lat.

Sector	Area	Jan-Feb	Mar-Apr	May-Jun	Jul-Aug	Sept-Oct	Nov-Dec
Limited entry	north of 36° N. lat.	1,700 lb (771 kg)/week; not to exceed 5,100 lb (2,313 kg) per two months					
	south of 36° N. lat.	2,500 lb (1,134 kg) per week					
Open Access	north of 36° N. lat.	600 lb (272 kg) per day, or one landing per week up to 2,000 lb (907 kg), not to exceed 4,000 lb (1,814 kg) per two months					
	south of 36° N. lat.	2,000 lb (907 kg) per week; not to exceed 6,000 lb (2722 kg) per two months					

LEFG and OA Trip Limits

The Council recommended, and NMFS is implementing, higher trip limits for LEFG and OA fisheries in 2021, including trip limits for shortspine thornyhead, longspine thornyhead, widow rockfish, shelf rockfish, shortbelly rockfish, canary rockfish, Pacific ocean perch, yellowtail rockfish, slope rockfish, darkblotched rockfish, Lingcod, nearshore rockfish, black rockfish, Other Flatfish, bocaccio south of 40°10′ N lat., and chilipepper rockfish.

As discussed in the proposed rule for this action (85 FR 62492; October 2, 2020), the Council recommended establishing an OA trip limit for shortspine and longspine thornyheads in the area between 40°10′ N lat. and 34°27′ N lat. Therefore, NMFS is implementing a 50 lb (22.7 kg) per month limit for OA fisheries targeting shortspine and longspine thornyheads in the area between 40°10′ N lat. and 34°27′ N lat.

Primary Sablefish Tier Limits

Some limited entry fixed gear permits are endorsed to receive annual sablefish quota, or tier limits. Vessels registered with one, two, or up to three of these permits may participate in the primary sablefish fishery. The tier limits are as follows: In 2021, Tier 1 at 58,649 lb (26,602 kg), Tier 2 at 26,659 lb (12,092 kg), and Tier 3 at 15,234 lb (6,910 kg). For 2022 the limits are: Tier 1 at 55,858 lb (25,337 kg), Tier 2 at 25,390 lb (11,517 kg), and Tier 3 at 14,509 lb (6,581 kg).

Yellowtail Trip Limit for the Salmon Troll Fishery North and South of 40°10′ N Lat.

The Council recommended and NMFS is implementing an increase to the yellowtail rockfish limit in the salmon troll fishery north of 40°10′ N lat. from 200 lbs (91 kg) to 500 lbs (227 kg) and removing the ratio for yellowtail to salmon.

The Council also recommended, and NMFS is implementing, a yellowtail rockfish trip limit in the salmon troll fishery south of 40°10′ N lat. of 1 lb (0.45 kg) of yellowtail rockfish for every 2 lbs (0.9 kg) of Chinook salmon landed, with a cumulative limit of 200 lb (91 kg) per month, both within and outside of the RCA. This second change was included in the regulatory text of the proposed rule. However, the description

of this change was inadvertently left out of the preamble. This was highlighted by a commenter during the public comment period. See Comment 4 in Section III, entitled ''Response to Comments.''

Removal of Other Flatfish Gear Restriction Off California

The Council recommended and NMFS is removing the gear restrictions for the LEFG and OA fisheries targeting stocks in the Other Flatfish complex inside the nontrawl RCA south of 42° N lat.

Nontrawl RCA Adjustments

In addition to increasing the LEFG and OA trip limits, the Council recommended and NMFS is implementing the following changes to the Nontrawl RCA off Oregon and Washington:

- Between 40°10′ N lat. and 46°16′ N lat. (the Oregon-Washington border): Open the area between the 30- and 40-fm management lines to hook-and-line gear except bottom longline and dinglebar, as defined in the ''general definitions'' section of the Federal regulations at 50 CFR 660.11;
- Between 38°57.5′ N lat. and 34°27′ N lat., (Point Arena to Point Conception): Open the area between 40 fm and 50 fm; and
- South of 34°27′ N lat.: Open the area between 75 fm and 100 fm.

These changes, along with the changes to recreational conservation areas (discussed in Section II, H., Recreational Fisheries) will provide much needed access to these areas for the LEFG and OA fisheries to better attain their trip limits. Nontrawl RCA closures can be found in the LEFG and OA trip limits in Table 2 (North), Table 2 (South) to subpart E for LEFG and in Table 3 (North) and Table 3 (South) to subpart F for OA in the regulatory text of this rule.

New Management Line at 38°57.5′ N Lat.

In order to make some of the changes to the Nontrawl RCA, the Council also recommended and NMFS is implementing a new management line at 38°57.5′ N lat., which is Point Arena, California. Point Arena is already defined in Federal regulations under the definition for North-South Management Areas, as a commonly used geographic coordinate.

H. Recreational Fisheries

This section outlines the recreational fisheries management measures for 2021–22. Washington, Oregon, and California each proposed, the Council recommended, and NMFS is implementing different combinations of seasons, bag limits, area closures, and size limits for stocks targeted in recreational fisheries.

Washington

This rule implements the following season structure in Table 6.

Table 6 -- Washington Recreational Fishing Season Structure

Marine Area	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
3 and 4 (North Coast)	Closed		Open		Open<20 fm June 1-August 31 [a/ b/]				Open		Closed	
2 (South Coast)	Closed		Open [c/d/]			Open [d/]					Closed	
1 (Columbia River)	Closed		Open [e/ f/]								Closed	

a/ Retention of lingcod, Pacific cod and sablefish allowed >20 fm on days when Pacific halibut is open.
b/ Retention of yellowtail and widow rockfish is allowed > 20 fm in July.
c/ From May 1 through May 31 lingcod retention prohibited > 30 fathoms except on days that the primary halibut season is open.
d/ When lingcod is open, retention is prohibited seaward of line drawn from Queets River (47°31.70' N. lat. 124°45.00' W. Lon.) to Leadbetter Point (46° 38.17' N. lat. 124°30.00' W. Lon.), except on days open to the primary halibut fishery and, June 1 – 15 and September 1 - 30.
e/ Retention of groundfish allowed during the all-depth Pacific halibut fishery. Lingcod retention is only allowed north of the WA-OR border with halibut on board.
f/ Retention of lingcod is prohibited seaward of a line drawn from Leadbetter Point (46° 38.17' N. lat. 124°21.00' W. Lon.) to 46° 33.00' N. lat. 124°21.00' W. Lon. year round except lingcod retention is allowed from June 1 - June 15 and Sept 1 - Sept 30.

The aggregate groundfish bag limits in waters adjacent to Washington will continue to be nine fish in all areas with a sub-bag limit for cabezon (one per day), rockfish (seven per day), and lingcod (two per day). The flatfish limit will be five fish, and is not counted towards the groundfish bag limit of nine but is in addition to it.

Consistent with the 2019–20 biennium, the Council recommended and NMFS is implementing to continue to prohibit recreational fishing for groundfish and Pacific halibut inside the North Coast Recreational Yelloweye Rockfish Conservation Area (YRCA), a C-shaped closed area off the northern Washington coast. However, the Council recommended and NMFS is implementing opening the South Coast Recreational YRCA and the Westport Offshore YRCA to recreational fishing for the 2021–22 biennium. Coordinates for YRCAs are defined at § 660.70.

Oregon

The Council recommended, and NMFS is implementing, an all months all depths season structure for the Oregon recreational fishery to start the 2021 fishing year. The Council recommended, and NMFS is implementing, the following aggregate bag and size limits: Three lingcod per day, with a minimum size of 22 in (56 cm); 25 flatfish per day, excluding

Pacific halibut; and a marine fish aggregate bag limit of 10 fish per day, where cabezon have a minimum size of 16 in (41 cm).

As part of the 2021–22 biennium, the ODFW also requested that the Council consider allowing longleader gear fishing and ''all-depth'' Pacific halibut fishing on the same trip, which is currently prohibited. Therefore, the Council recommended, and NMFS is removing the prohibition on combining Oregon longleader trips with all depths halibut trips.

California

Table 7 shows the season structure and depth limits by California management area for 2021 and 2022.

Table 7 – California Season Structure and Depth Limits by Management Area for 2021 and 2022

Management Area	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
Northern (42° N. lat. to 40°10' N. lat.)	CLOSED				May 1-October 31 <30 fm						All Depths	
Mendocino (40°10' N. lat. to 38°57.50' N. lat.)	CLOSED				May 1-October 31 <30 fm						All Depths	
San Francisco (38°57.50' N. lat. to 37°11' N. lat.)	CLOSED				April 1-December 31 <50 fm							
Central (37°11'N. lat. to 34°27' N. lat.)	CLOSED				April 1-December 31 <50 fm							
Southern (South of 34°27' N. lat)	CLOSED				March 1-December 31 <100 fm							

The Council recommended, and NMS is implementing, size limits that are the same in 2021 as they were for 2020 for all stocks. However, the Council recommended and NMFS is eliminating the sub-bag limits for black rockfish, canary rockfish, and cabezon, and NMFS is implementing a sub-bag limit for vermillion rockfish of five fish.

III. Response to Comments

NMFS received nine unique comment letters during the public comment period on the proposed rule (October 2, 2020 through November 2, 2020). Two state agencies submitted comments, the California Department of Fish and Wildlife (CDFW) and the Oregon Department of Fish and Wildlife (ODFW). The letters from the state agencies included requests for clarifications on information included in the preamble to the proposed rule, noted several small errors and inconsistencies in the regulatory text of the proposed rule, and also provided more substantive comments. The Northwest Fisheries Science Center (NWFSC) also submitted a comment noting an error. NMFS has addressed those small errors and inconsistencies in Section IV, ''Corrections to the Proposed Rule.'' The more substantive comments are addressed below.

The seven other comment letters were from private citizens and non-governmental organizations (NGOs). Two of those letters made comments that were outside the scope of this action and are not addressed here. Four letters were received from members of industry and made substantially similar comments. The responses to these comments have been grouped together and addressed below. The remaining comment letter contained substantive comments. NMFS addresses all substantive comments below. Changes from the proposed rule as a result of substantive comments received during the comment period are addressed in Section V, ''Changes to the Proposed Rule.''

Comment 1: Two commenters stated their support for the at-sea set-aside values.

NMFS Response: We agree and appreciate the collaborative work undertaken by the members of different sectors of the Pacific whiting fishery to come together to develop a proposal for the at-sea set-aside values for the 2021–22 biennium. Collaborative work always delivers a better product, and we hope this type of collaboration will continue into future harvest specification cycles.

Comment 2: Three commenters stated their support for Amendment 29 and the designation of shortbelly rockfish as an ecosystem component species based on extensive discussion over several meetings at the Council and based on the best available science.

NMFS Response: We agree that the Council has spent significant time over the past two years in order to develop the best approach to managing shortbelly rockfish based on the best available science and in a way in which it will not significantly impact industry or the resource.

Comment 3: One commenter stated their support for the changes in Amendment 29 to the trawl and nontrawl allocations for blackgill rockfish south of 40°10 N lat., petrale sole, lingcod south of 40°10 N lat., and widow rockfish, and for keeping blackgill rockfish in the slope rockfish complex south of 40°10 N lat.

NMFS Response: We agree with the changes in Amendment 29 to the trawl and nontrawl allocations for these species. These changes better reflect the current distribution of catch and will likely allow more of the ACLs for these stocks and the stock complex to be

caught, resulting in more economic benefit to the fishing communities without significantly impacting the resources.

Comment 4: One commenter stated that the discussion in the proposed rule for yellowtail trip limits in the salmon troll fishery north of 40°10″ N lat. neglected to include any discussion on the change for the salmon troll fishery south of 40°10′ N lat.

NMFS response: We agree. The commenter is correct that the discussion of the yellowtail trip limits in the salmon troll fishery south of 40°10′ N lat. was inadvertently left out of the preamble of the proposed rule. Therefore, in this final rule, we updated the heading and added a discussion of the rationale for the regulatory change, as now found above, under the subheading ''Yellowtail Trip Limits in the Salmon Troll Fishery North and South of 40°10′ N lat.'' in Section II, ''Management Measures,'' paragraph ''F. Limited Entry Fixed Gear and Open Access Nontrawl Fishery''.

Comment 5: One commenter stated that the regulatory text of the proposed rule for the removal of the gear restriction for other flatfish gear in the open access fishery correctly reflected the changes in the trip limit tables for south of 40°10′ N lat., but neglected to include this change in Table 1 for the open access fishery between 40°10′ and 42° N lat. The Council intended to remove this restriction for the entire state of California (south of 42° N lat.). Therefore, the change should also be, made in both Tables 2 North and South for the open access fishery.

NMFS response: We agree. The proposed rule inadvertently left in the gear restrictions for other flatfish gear for the open access fishery for the area between 40°10′ and 42° N lat. in Table 2 North. Therefore, Table 2 North in the regulatory text of this final rule has been corrected to reflect that this change was made for the entire state of California (south of 42° N lat.).

Comment 6: One commenter stated their concern with allowing vessels to fish with hook and line gears, except dinglebar and longline, in the RCA between 42° N lat. and 40°10′ N lat. and 30 fm to 40 fm. The commenter is concerned that having differential gear allowances within the nontrawl RCA will complicate enforcement in these areas, particularly without the addition of a new declaration to clarify if a vessel was fishing with hook and line gear, but not fishing with longline or dinglebar gear. Additionally, because the Council is also removing the limitation on the number and size of hooks allowed by the open access fishery when fishing for other flatfish inside the RCAs off California, the commenter is concerned about the compounded impacts by removing these two provisions at once.

NMFS response: We disagree that the change to allow vessels using hook and line gears, except dinglebar and bottom longline gear, to fish between 30 fm and 40 fms in this area will cause confusion and complication amongst members of law enforcement. The Council's Groundfish Management Team (GMT) has worked with the Council's Enforcement Committee and NMFS' Office of Law Enforcement (OLE) to ensure that there are no enforcement issues associated with this action. Although the Council did not recommend and NMFS is not implementing changes to the declarations so that vessels can declare hook and line gear that is not dinglebar or longline, this does not appear to be an issue. In recent years, vessels have been notifying NMFS OLE when making declarations of the type of hook and line gear used when making their declaration for hook and line gears. Additionally, in recent years, the total number of vessels that have used bottom longline or dinglebar gear versus other types of hook-and-line gear have been a small proportion of the total landings, because other gears are more efficient for the types of species targeted. For example, for vessels targeting lingcod between 2017 and 2019, 20.7 percent of landings by commercial non-trawl gear were taken by bottom longline and 78.6 percent were taken by other hook-and-line gears. For midwater shelf rockfishes (*i.e.,* yellowtail, canary, widow, vermillion and other rockfishes that occur on the shelf), 37.3 percent was taken by bottom longline compared to 62.7 percent taken by other hook-and-line gears. In addition, based on conversations with NMFS OLE, of the other hook-and-line gears being used, only about five vessels use dinglebar gear annually. Therefore, NMFS also does not have concerns over the allowing the use of hook and line gear, except bottom longline or dinglebar, in the nontrawl RCA between 42° N lat. and 40°10′ N lat.

Comment 7: Two commenters stated their opposition to the Council's recommendation and NMFS's proposal to designate shortbelly rockfish as an ecosystem component species beginning with the 2021–22 biennium. In stating their opposition, the commenters raised multiple issues, and we provide a response for each stated issue below.

Shortbelly Rockfish Issue 1: Shortbelly rockfish must remain in the fishery because the species is in need of conservation and management.

NMFS Response: We disagree. Section 302(h)(1) of the Magnuson-Stevens Act requires a Council to prepare an FMP for each fishery under its authority that is in need of conservation and management. ''Conservation and management'' is defined in section 3(5) of the Magnuson-Stevens Act. The National Standard guidelines at § 600.305(c) provide direction for determining which stocks will require conservation and management and provide direction to regional councils and NMFS for how to consider these factors in making this determination. First, NMFS must consider whether the stocks are ''predominately caught in Federal waters and are overfished or subject to overfishing, or likely to become overfished or subject to overfishing.'' 50 CFR 600.305(c). Such stocks require conservation and management. If a stock is not likely to become overfished or be subject to overfishing, Councils may still decide that it is appropriate for conservation and management. The guidelines direct regional fishery management councils and NMFS to consider a non-exhaustive list of ten factors when deciding whether stocks require conservation and management. After considering the 10 factors, based on the best available science, the Council recommended and NMFS is implementing designating shortbelly rockfish as an ecosystem component species.

Conservation and management, as defined under the MSA and the National Standard guidelines, is needed when a stock must be rebuilt, restored, or to maintain the status of a stock. Shortbelly rockfish is not under a rebuilding status, and it is not overfished, subject to overfishing or likely to become overfished or subject to overfishing. Stock status was estimated during the last stock assessment to be above 73 percent of the unfished biomass, and less than 20 percent of the ABC has been taken annually in the past several years; these metrics indicate the stock does not need to be rebuilt or restored. Over the past 10 years the population has remained constant and likely has even increased in abundance, with new information suggesting that the population could be booming. As was discussed in the Analysis, based on multiple strong incoming year-classes and as supported by current scientific literature, the shortbelly rockfish stock is expected to thrive for at least the next decade or so.

We agree with the commenter that shortbelly rockfish are an important forage species and are increasingly caught in federally managed fisheries. However, these factors are not

determinative that a stock is in need of conservation and management as defined under the MSA. Nor do these factors disqualify a stock from being designated an ecosystem component species. Because there is no directed fishing and incidental fishing-related mortality has been low in comparison to the ABC, it is very unlikely that catch would exceed the overfishing limit for shortbelly rockfish, resulting in shortbelly rockfish becoming overfished and in need of rebuilding. There are no known conservation concerns for shortbelly rockfish, since they are not targeted (shortbelly are primarily caught as bycatch in the Pacific whiting fishery), are not profitable, and future uses of shortbelly rockfish remain unavailable. Therefore, maintaining shortbelly rockfish as a target species in the PCGFMP is not likely to change stock condition. As discussed in the Council meetings, Council reports, and the Analysis, after reviewing each of the ten factors, the Council recommended and NMFS agrees that shortbelly rockfish are not in need of conservation and management, as defined by the MSA.

Finally, we disagree with the requester that designating shortbelly rockfish as an ecosystem component species would prevent NMFS from addressing bycatch in the future, should that become an issue. As stated in the scope of the action in the Analysis, the Council has the ability to change the designation of a stock or stock complex every biennium based on new information. While we agree that we are unable to predict whether or not this fishery will become a target in the future, designating shortbelly rockfish as an ecosystem component species does not mean that NMFS will not monitor the stock or be unable to revisit that designation. Catch of shortbelly rockfish will continue to be reported on fish tickets and that catch data is available to the public on a daily basis through the Pacific Fisheries Information Network (PacFIN) database.[1] Additionally, the Council has already tasked the Council's GMT with providing updates at each Council meeting on the current catch of shortbelly rockfish. If bycatch of the stock starts to increase or a fishery for the stock were to begin to develop, the Council would have the ability to take action to reevaluate the designation of shortbelly rockfish. In the event that the stock becomes in need of conservation and management, the Council would have the obligation to include it in the PCGFMP.

Shortbelly Rockfish Issue 2: Shortbelly rockfish play a vital role in the California current ecosystem.

NMFS Response: We agree. As discussed in the Analysis, shortbelly rockfish is a vital species in the California Current Ecosystem. However, while importance in the marine ecosystem is one of the factors we consider, it alone is not determinative of whether a stock is in need of conservation and management as defined under the MSA. In recommending Amendment 29, the Council relied on the best available science, which indicated increased stock abundance in recent years, to determine that there was a lack of a need for conservation and management of this stock in the 2021–22 biennium. Recent scientific literature indicates that the increased abundance due to high recruitment in 2013 (51 times higher than in 2014) and 2014 (1,750 times higher than 2005) and the extension of the stock's range into more northern waters where Pacific whiting is targeted likely resulted in the higher bycatch in 2018 and 2019 (Agenda Item H.6.a, GMT Report 2, November 2019). Even with the higher bycatch of shortbelly rockfish in recent years, total shortbelly rockfish catch has stayed below 50 percent of the stock's OFL and less than 75 percent of the stock's ABC since 2011. There is no evidence to demonstrate that these catch trends would increase exponentially under an ecosystem component species designation.

The commenters also stated their specific concerns for the marbled murrelet in California, Oregon, and Washington, as the species is listed as threatened under the Endangered Species Act (ESA), and for the California least tern, which is listed as endangered. On May 2, 2017, the U.S. Fish and Wildlife Service (FWS) issued a biological opinion (2017 biological opinion) concurring with NMFS that the fishery is not likely to adversely affect the marbled murrelet or California least tern, among other species, because adverse interactions with vessels and forage depletion are extremely unlikely to occur. Notably, the FWS concluded that small pelagic rockfish, including shortbelly rockfish, are expected to increase in abundance during the continued operation of the groundfish fishery. This action is not expected to change the conclusions from the 2017 biological opinion, because it does not modify the action analyzed in that opinion in a manner or to an extent that would cause an effect to listed species or critical habitat that was not previously considered =.

Shortbelly Rockfish Issue 3: NMFS has not shown that reclassifying shortbelly rockfish as an ecosystem component species would prevent overfishing.

NMFS Response: We disagree. National Standard 9 provides that ''[c]onservation and management measures shall, to the extent practicable: (1) Minimize bycatch; and (2) To the extent bycatch cannot be avoided, minimize the mortality of such bycatch.'' Designating shortbelly rockfish does not impair the PCGFMP's ability to meet this requirement. All of the PCGFMP's bycatch reduction components are unaffected by this action. Furthermore, there is no evidence to suggest that bycatch of shortbelly rockfish will increase due to this action.

There is no evidence to suggest that designating shortbelly rockfish as an ecosystem component species would result in a significant increase in catch. As has been discussed by members of industry at every Council meeting since November 2018, and as was also stated in the Analysis, the proposed rule, and the NOA for this action, industry has significant incentives not to catch shortbelly rockfish. Currently, shortbelly rockfish prices for processing are extremely low and often don't cover the cost of the vessel to catch and deliver the shortbelly rockfish. Shortbelly rockfish can also clog nets and may spoil Pacific whiting catch. There are no known conservation concerns for shortbelly rockfish since they are not targeted, are not profitable, and future uses of shortbelly rockfish remain unavailable. Therefore, the incentives exist to avoid shortbelly rockfish, and there is no indication that changing the designation of this stock will alter these incentives.

In the future, if there were indications of bycatch of shortbelly rockfish at significantly higher levels than what has been caught in recent years, the Council would be able to revisit the ecosystem component species designation. The Council has previously done exactly this for big skate. The Council designated big skate as an ecosystem component species in the 2017–18 biennium, but after catch of big skate began to increase, the Council re-designated big skate as a stock that is in need of conservation and management in the 2019–20 biennium. As discussed above and below, designation of shortbelly rockfish as an ecosystem component species does not preclude NMFS or the Council from monitoring the stock or taking action to minimize

[1] *https://reports.psmfc.org/pacfin/f?p=501:1000:13391209073431:::::.*

bycatch, if necessary. Catch of shortbelly rockfish will continue to be reported, and that catch data is available publicly through the PacFIN database.

Shortbelly Rockfish Issue 4: Removing all management measures to constrain or reduce shortbelly rockfish bycatch ignores NMFS' ongoing mandate to reduce bycatch.

NMFS Response: We disagree. Designating shortbelly rockfish as an ecosystem component species does not preclude the Council from monitoring catch of shortbelly rockfish or developing management measures to reduce bycatch, if necessary. As stated in the 2020 SAFE document and at § 600.305(c)(5), consistent with National Standard 9, MSA section 303(b)(12), and other applicable MSA sections, management measures can be adopted in order to, for example, collect data on the ecosystem component species, minimize bycatch or bycatch mortality of ecosystem component species, protect the associated role of ecosystem component species in the ecosystem, and/or to address other ecosystem issues. Further, the PCGFMP clarifies that ecosystem component species should be monitored to the extent that any new pertinent scientific information becomes available (*e.g.,* catch trends, vulnerability, etc.) to determine changes in their status or their vulnerability to the fishery. In making its decision in June 2020 to recommend designating shortbelly rockfish as an ecosystem component species, the Council specifically noted that catch of shortbelly rockfish would continue to be monitored by the Council's GMT, and inseason catches will be reported out to the Council at each meeting using the species scorecard. Therefore, in the event that bycatch of shortbelly rockfish does increase significantly in the future, the Council will be notified and will have the ability to adopt management measures in order to minimize bycatch of shortbelly rockfish while it is an ecosystem component species. In designating shortbelly rockfish as an ecosystem component species, the Council still has the ability to recommend, and NMFS can still implement, management measures for shortbelly rockfish to address high bycatch in the future.

The most recent scientific literature indicates that population abundance has increased, accompanied by a northern range expansion. These changes are the most likely explanation for the increased bycatch levels since 2018. Following the ACL (the ACL is a harvest specification) overages in 2018 and 2019, the Council considered this issue extensively and was unable to conclude that any specific management measure would prevent the ACL overages, largely because the stock is not directly targeted and industry already has significant incentives to avoid the stock. However, even without effective management measures, bycatch of shortbelly rockfish has remained less than 50 percent of the stock's OFL. Because of the increasing abundance of the stock and the lack of apparent management measures which will maintain or improve stock status, the Council recommended, and NMFS is implementing, designating shortbelly rockfishas an ecosystem component species.

Shortbelly Rockfish Issue 5: Designating shortbelly rockfish as an ecosystem component species ignores the best available science.

NMFS Response: We disagree. The Council recommended and NMFS is implementing designation of shortbelly rockfish as an ecosystem component species based on the best available peer-reviewed scientific information. The Council and NMFS relied on the most recent and best information available to make determinations on the management of shortbelly rockfish. This information is extensively documented throughout the record of Council meetings discussing shortbelly rockfish since 2018, including Council discussions, advisory body reports and meeting briefing books, and in the Analysis for this rule.

Shortbelly Rockfish Issue 6: As applied to shortbelly rockfish, the regulations authorizing NMFS to designate ecosystem component species violate the Magnuson-Stevens Act.

NMFS Response: We disagree. After extensive analysis and consideration of the best available scientific information and public comment, the Council recommended, and NMFS is implementing, designation of shortbelly rockfish as an ecosystem component species for the 2021–22 biennium. Since 2018, the Council and its advisory bodies have considered this issue extensively, as documented in Council discussion, briefing books and advisory body reports. Both the Council and NMFS have extensively discussed and analyzed the best way to conserve and manage shortbelly rockfish. The most recent information on stock abundance, the likely extension of the stock into northern waters, the lack of a targeted fishery, and the existing disincentives for industry to catch shortbelly rockfish all support the designation of shortbelly rockfish as an ecosystem component species. As discussed above, designation as an ecosystem species does not preclude the Council from monitoring catch of the stock, adopting management measures to reduce bycatch, or revisiting the designation.

Shortbelly Rockfish Issue 7: NMFS must consult on the designation of shortbelly rockfish as an ecosystem component species as it may affect ESA-listed species.

NMFS Response: We disagree that additional consultation is needed due to the designation of shortbelly rockfish as an ecosystem component species for the 2021–22 biennium. As discussed above, the USFWS issued the 2017 biological opinion regarding the effects of the continued operation of the Pacific Coast groundfish fishery (which includes shortbelly rockfish) on California least tern, southern sea otter, bull trout, marbled murrelet, and short-tailed albatross. This action is not expected to change the conclusions of the 2017 biological opinion because it does not modify the action analyzed in that opinion in a manner or to an extent that would cause an effect to listed species or critical habitat that was not previously considered . On December 11, 2017, NMFS issued a biological opinion finding that the effects of the continued operation of the Pacific Coast groundfish fishery is likely to adversely affect, but is not likely to jeopardize, the continued existence of the following listed salmon evolutionarily significant units: Puget Sound Chinook, Snake River Fall Chinook, Lower Columbia River Chinook, Upper Willamette River Chinook, Snake River spring/summer Chinook, California Coastal Chinook, Lower Columbia River Coho, Oregon Coast Coho, Southern Oregon/Northern California coho, and Central California Coast coho. This action does not modify the action analyzed in the December 2017 biological opinion in a manner that may affect listed species in a manner or to an extent not previously considered.

Shortbelly Rockfish Issue 8: Designating shortbelly rockfish as an ecosystem component species could result in the deprioritization of it as a stock to be assessed as part of the 2023–24 biennium.

NMFS Response: We neither agree nor disagree. The Council has adopted a list of candidate stocks for assessment in 2023 for which shortbelly rockfish is included. The Council will make a final decision on this candidate list in June 2022. While we do not know what decision the Council will ultimately make, we have no indication that the Council will remove shortbelly rockfish from this list based on designation as an ecosystem component species. There is no requirement that the Council prioritize only those stocks that are in need of conservation and management

for stock assessments. We anticipate that the Council will continue to weigh all options and needs when finalizing their prioritized list of stocks to be assessed for the 2023–24 biennium.

IV. Corrections to the Proposed Rule

NMFS received comment letters from the NWFSC, the CDFW, and the ODFW noting inaccuracies in information presented in the preamble to the proposed rule. NMFS offers the following corrections in this final rule. These clarifications and corrections to the information described in the preamble to the proposed rule do not change the substance or intent of this action. Where necessary, corrections to harvest specifications numbers in the preamble have been carried through to the regulatory text of this final rule.

Table 1 in the preamble of the proposed rule was not labeled correctly. Instead of being labeled as the ''Old and New σ Values for Category 1–3 Stocks Over a 10-Year Period'' the table should have been labeled, ''A Comparison of the Old and New Scientific Uncertainty Reductions for P*=0.45''. These percentages represent the buffer between the OFL, given a P* value of 0.45, and the ABC.

Table 2 in the preamble, and subsequent discussion thereafter, provided incorrect values for the ACLs for sablefish north and south of 36° N lat. and the coastwide apportionment of the ABC for sablefish south of 36° N lat. It was determined during review of the Analysis that these errors were the result of typographical errors in the Council's background material. The errors were not carried through to the calculations for allocations made below the ACLs. The Council recommended these technical changes be made at their September 2020 meeting. Therefore, this final rule corrects the Sablefish ACLs and the Sablefish apportionment, as follows:

Table 8 -- Incorrect and Corrected Values for Sablefish ACLs and Sablefish Apportionment for the 2021-22 biennium

Year	Area	Incorrect ACLs used in the Proposed Rule	Correct ACLs
2021	N. of 36° N. lat.	6,479 mt	6,892 mt
	S. of 36° N. lat.	6,172 mt	6,566 mt
2022	N. of 36° N. lat.	2,312 mt	1,899 mt
	S. of 36° N. lat.	2,203 mt	1,809 mt

On page 62495 of the proposed rule, the section header, entitled ''C. Proposed ACLs for 2019 and 2020'', used the incorrect years; the title should have used the correct years, 2021 and 2022.

On page 62498 of the proposed rule, the section header entitled ''D. Summary of ACL Changes from 2019 to 2021–22'', used the incorrect year. The year 2019 was incorrect and should have read 2020.

Table 5—ACLs for Major Stocks for 2020, and 2021–22, on page 62499 of the proposed rule, included incorrect values for the ACL for Nearshore Rockfish North. These number should be 79 mt and 77 mt for 2021 and 2022, respectively.

In the proposed rule, there were two tables labeled as ''Table 9'': Table 9—2021 and 2022 Allocations of Canary Rockfish on page 62502, and Table 9—2021 and 2022 Trawl/NonTrawl Allocations of Cowcod on page 62503. The second Table 9 for cowcod should have been numbered as Table 10.

In the proposed rule's Table 9—2021 and 2022 Trawl/NonTrawl Allocations of Cowcod on page 62502, the nontrawl and trawl allocation values were transposed. They should have been 32 mt for the non-trawl fishery and 18 mt for the trawl fishery in both 2021 and 2022. In Table 10 of this final rule, these values have been updated to reflect the correct allocations.

In the proposed rule's Table 10—2021 and 2022 Trawl/Nontrawl Allocations of Lingcod south of 40°10′ N lat. on page 62503, the allocations for trawl and non-trawl were transposed. The nontrawl allocation should be 653.4 mt for 2021 and 695.4 mt for 2022. The trawl allocation should be 435.6 mt in 2021 and 463.6 mt in 2022. The correct allocations can be found in Table 11 of this final rule.

In the proposed rule's Table 19—Proposed Season Structure and Depth Limits by Management Area for 2021 and 2022 on page 62509, for the southern management area, the depth limit was incorrectly listed as <50 fm which was the same depth for the two areas north of the southern management area (San Francisco and Central management areas). This depth was inadvertently carried through to the southern management area. However, the depth limit should be <100 fm, as recommended by the Council. The correct value is included in Table 20 of this final rule.

The CDFW and the ODFW also highlighted several technical errors in the regulatory text of the proposed rule. These technical errors are discussed below, and are corrected in the regulatory text of this final rule, but do not change the substance of this final rule.

In Table 1a, Subpart C—2021 Specifications of OFL, ABC, ACL, ACT, and Fishery HG in the regulatory text, in footnote ''h'' for bocaccio on page 62515, the nearshore and non-nearshore allocation listed was the allocation for 2022 (315.7 mt) instead of for 2021 (320.2 mt). In this final rule, the same table contains the corrected allocation, 320.2 mt for 2021.

In Table 1a, Subpart C—2021 Specifications of OFL, ABC, ACL, ACT, and Fishery HG in the regulatory text of the proposed rule, in footnote ''aa'' for sablefish south of 36° N. lat. on page 62517, the percentage of the coastwide catch was shown as 21.5 percent. This number has been corrected in this final rule to be shown as 21.6 percent, which accurately reflects the Council's recommended allocation percentage of sablefish south of 36° N. lat..

In Table 1b, Subpart C—2021 Allocations by Species or Species Group of the regulatory text of the proposed rule on page 62519, the trawl allocation for English sole had a comma in the wrong place. In this final rule, the value is correctly listed as 8,478.2 mt.

In Table 2a, Subpart C—2022 Specifications of OFL, ABC, ACL, ACT and Fishery Harvest Guidelines in the regulatory text of the proposed rule, in footnote ''h'' for bocaccio on page 62523, there was no listed amount for the combined nearshore and non-nearshore fishery. In this final rule, footnote ''h'' of this table states that the 2022 combined allocation to the nearshore and non-nearshore fishery is 315.7 mt.

In Table 2a, Subpart C—2022 Specifications of OFL, ABC, ACL, ACT and Fishery Harvest Guidelines in the regulatory text of the proposed rule, in footnote ''u'' for longspine thornyhead on page 52523, the value was incorrectly listed as 77771.8 mt. In this final rule, the value has been corrected so that it is 771.8 mt.

In Table 2a, Subpart C—2022 Specifications of OFL, ABC, ACL, ACT and Fishery Harvest Guidelines in the regulatory text of the proposed rule, in footnote ''w'' on page 62524, the harvest guideline value for Pacific ocean perch was incorrectly listed as 3,829.3 mt. In this final rule, the value has been corrected to 3,686.2 mt.

In Table 2a, Subpart C—2022 Specifications of OFL, ABC, ACL, ACT and Fishery Harvest Guidelines in the regulatory text of the proposed rule, in footnote ''mm'' for Nearshore Rockfish north of 40°10′ N lat. on page 62525, the last sentence in the footnote referred to the harvest guidelines as recreational harvest guidelines. However, these guideline apply to more than just recreational fisheries. Therefore, in this final rule this text has been corrected by changing ''Recreational HGs are'' to ''State-specific HGs are''.

In Table 2b, Subpart C—2022 and Beyond, Allocations by Species or Species Group, in the regulatory text of the proposed rule on page 62526, the fishery harvest guideline for yellowtail rockfish was incorrectly listed in the proposed rule as 4,793.5 mt. This value has been corrected to 4,783.5 mt in this final rule.

In Table 1 to paragraph (d)(1)(ii)(D) in § 660.140 ''Shorebased IFQ Program'' in the regulatory text of the proposed rule on page 62528, the 2021 and 2022 shorebased trawl allocations for Sablefish south of 36° N lat. were incorrectly listed as 782.3 mt and 744.9 mt, respectively. These values have been corrected to 786 mt and 748 mt, respectively, in this final rule.

In Table 1 to paragraph (d)(1)(ii)(D) in § 660.140 ''Shorebased IFQ Program'' in the regulatory text of the proposed rule on page 62528, the 2022 shorebased trawl allocations for Yellowtail Rockfish were incorrectly listed as 3,889.4 mt. This value has been corrected to 3,898.24 mt, in this final rule.

In Table 3 (North), Subpart F—Non-Trawl Rockfish Conservation Areas and Trip Limits for Open Access Gears North of 40°10′ N lat., in the regulatory text of the proposed rule on page 62534, the text describing the salmon troll limit in the north was been cut off. In this final rule, the table cell has been resized so that all the text is shown.

In Table 3 (South), Subpart F—Non-Trawl Rockfish Conservation Areas and Trip Limits for Open Access Gears South of 40°10′ N lat., in the regulatory text of the proposed rule on page 62535, the text of the salmon troll trip limit incorrectly stated the area of the limit as ''This limit is within the 4,000 lbs per 2 month limit for minor shelf rockfish between 40°10′ N lat. and 24°27′ N lat.'' In this final rule, the text has been corrected to state that ''This limit is within the 4,000 lbs per 2 month limit for minor shelf rockfish between 40°10′ N lat. and 34°27′ N lat.''.

In Table 3 (South), Subpart F—Non-Trawl Rockfish Conservation Areas and Trip Limits for Open Access Gears South of 40°10′ N lat., in the regulatory text of the proposed rule on page 62535, the text describing the Pink shrimp Nongroundfish Trawl fishery (Line 49) was been cut off. In this final rule, the table cell has been resized so that all the text is shown.

In § 660.360(c)(3)(i)(A) in the regulatory text of the proposed rule on page 62537, the text inadvertently referenced the coordinates approximating the boundary lines at 10-fm (18 m) through 40-fm (73 m) depth contours at § 660.71. However, because the recreational fisheries extend from 50-fm to 100-fm, the referenced coordinates should be at §§ 660.72 and 660.73. In this final rule, this text has been amended to include reference to the correct sections.

In § 660.360(c)(3)(ii)(B) in the regulatory text of the proposed rule on page 62537, the text states ''In times and areas when the recreational season for the RCG Complex is open, there is a limit of 2 hooks and 1 line when fishing for the RCG complex and lingcod.'' Lingcod does not need to be listed here, as it is address in § 660.360(c)(3)(iii); therefore, the reference has been removed from the regulatory text in this final rule.

V. Changes From the Proposed Rule

As a result of comments received on the proposed rule, NMFS is making the following changes to the proposed rule. In addition, one set of minor changes is being made to the proposed rule in accordance with a November 2020 Council recommendation based on newly updated catch data that was not available before the proposed rule was published.

In § 660.230(d)(10)(i), current regulations include reference to the other flatfish gear prohibition on the number and size of hooks allowed for the open access fishery. This text was not suggested to be deleted in the proposed rule. However, because the Council recommended, and NMFS is implementing, changes to this prohibition, conforming amendments to this text should also have been proposed to reflect this change. Because the text at § 660.230(d)(10)(i) is no longer necessary, this final rule removes pargraph § 660.230(d)(10)(i).

The regulatory text in the proposed rule removed the recreational season structure text in § 660.360(c)(3)(i)(A)(1)-(5), and replaced it with a table. The CDFW commented that it had concerns with the change and felt that it omitted text that was critical for state enforcement and which was referenced in state regulations. Based on this concern, in this final rule, NMFS has removed Table 2 in this section and replaced it with the paragraph structure used in the 2019–20 biennium. All Council recommendations are reflected in the new paragraph structure.

In § 660.360(c)(3)(i)(A)(1) of the regulatory text in the proposed rule, there is only reference to the depth contour (''prohibited seaward of the 30 fm (55 m) depth contour along the mainland coast and along islands and offshore seamounts''), without any reference to the boundary line. To remain consistent with other sections of the regulatory text that describe the boundary lines for the recreational fisheries, this final rule is corrected to to read, ''prohibited seaward of the boundary line approximating the 30 fm (55 m) depth contour along the mainland coast and along islands and offshore seamounts''.

In § 660.360(c)(3)(i)(A)(2) of the regulatory text in the proposed rule, there is only reference to the depth contour, without any reference to the boundary line. To remain consistent with other section of the regulatory text that describe the boundary lines for the recreational fisheries, in this final rule, this text has been updated from ''is prohibited seaward of the 20 fm (37 m) depth contour along the mainland coast and along islands and offshore seamounts'' to read, ''is prohibited seaward of the boundary line approximating the 20 fm (37 m) depth contour along the mainland coast and along islands and offshore seamounts''.

Finally, at its November 2020 meeting, the Council recommended changes to the trip limits for the limited entry and open access fisheries north and south of 36° N lat. for sablefish and lingcod south of 40°10′ N lat., and the open access trip limit for shortspine and longspine thornyhead south of 34°27′ N lat. All changes are to increase trip limits as a result of updated catch data that show lower than projected attainment for these stocks in the most recent fishing season. As a result, trip limits can be raised to allow for full attainment of the HG for both of these stocks in 2021. These changes were recommended by the Council to NMFS through the inseason action process and are incorporated into this final rule for implementation for the 2021 fisheries. Because these trip limits are within the range of what was previously analyzed, they constitute a minor, routine adjustment to the management measures for the 2021 groundfish fisheries.

VI. Classification

Pursuant to section 304 (b)(3) of the Magnuson-Stevens Act, the NMFS Assistant Administrator has determined that this final rule is consistent with the PCGFMP, other provisions of the Magnuson-Stevens Act, and other applicable law.

NMFS finds good cause to waive the 30-day delay in effectiveness pursuant to 5 U.S.C. 553(d)(3), so that this final rule may become effective on January 1, 2021. This action establishes the final specifications (*i.e.,* annual catch limits) for the Pacific Coast groundfish fisheries for the 2021 fishing year, which begins on January 1, 2021. If this final rule is not effective on January 1, 2021, then the fishing year begins using the catch limits and management measures from 2020.

Because this final rule increases the catch limits for several species for 2021, leaving 2020 harvest specifications in place could unnecessarily delay fishing opportunities until later in the year, potentially reducing the total catch for these species in 2021. Thus, a delay in effectiveness could ultimately cause economic harm to the fishing industry and associated fishing communities or result in harvest levels inconsistent with the best available scientific information.

This final rule is not unexpected or controversial. The groundfish harvest specifications are published biennially and are intended to be effective on January 1 of odd numbered years. Additionally, the subject of this final rule has been developed over a series of six public meetings of the Council from June 2019 to June 2020. The public is given notice of these meetings, and the public is provided opportunity to comment on actions through that venue as well as through the rulemaking process.

Because of the potential harm to fishing communities that could be caused by delaying the effectiveness of this final rule, and because of the previous notification to the regulated public of these changes through the Council process, NMFS finds there is good cause to waive the 30-day delay in effectiveness.

Pursuant to Executive Order 13175, this rule was developed after meaningful consultation and collaboration with tribal officials from the area covered by the PCGFMP. Under the Magnuson-Stevens Act at 16 U.S.C. 1852(b)(5), one of the voting members of the Pacific Council must be a representative of an Indian tribe with federally recognized fishing rights from the area of the Council's jurisdiction. In addition, regulations implementing the PCGFMP establish a procedure by which the tribes with treaty fishing rights in the area covered by the PCGFMP request new allocations or regulations specific to the tribes, in writing, before the first of the two meetings at which the Council considers groundfish management measures. The regulations at 50 CFR 660.324(d) further direct NMFS to develop tribal allocations and regulations in consultation with the affected tribes. The tribal management measures in this proposed rule have been developed following these procedures. The tribal representative on the Council made a motion to adopt the non-whiting tribal management measures, which was passed by the Council. Those management measures, which were developed and proposed by the tribes, are included in this final rule.

The Council prepared an environmental assessment for Amendment 29 to the PCGFMP and the 2021–22 harvest specifications and management measures, and concluded that there will be no significant impact on the human environment as a result of this rule. A copy of the integrated analysis is available from NMFS (see **ADDRESSES**).

This final rule has been determined to be not significant for purposes of Executive Order 12866.

This final rule is not an Executive Order 13771 regulatory action because this action is not significant under Executive Order 12866.

The Chief Counsel for Regulation of the Department of Commerce certified to the Chief Counsel for Advocacy of the Small Business Administration during the proposed rule stage that this action would not have a significant economic impact on a substantial number of small entities. The factual basis for the certification was published in the proposed rule, and is not repeated here. No comments were received regarding this certification. As a result, a final regulatory flexibility analysis was not required and none was prepared.

This final rule contains no information collection requirements under the Paperwork Reduction Act of 1995.

List of Subjects in 50 CFR Part 660

Fisheries, Fishing, Reporting and recordkeeping requirements.

Dated: December 7, 2020.

Samuel D. Rauch III,

Deputy Assistant Administrator for Regulatory Programs, National Marine Fisheries Service.

For the reasons set out in the preamble, 50 CFR part 660 is amended as follows:

PART 660—FISHERIES OFF WEST COAST STATES

■ 1. The authority citation for part 660 continues to read as follows:

Authority: 16 U.S.C. 1801 *et seq.,* 16 U.S.C. 773 *et seq.,* and 16 U.S.C. 7001 *et seq.*

■ 2. In § 660.11, revise the introductory text and paragraph (2)(xviii) of the definition of ''*North-South management area*'' to read as follows:

§ 660.11 General definitions.

* * * * *

North-South management area means the management areas defined in paragraph (1) of this definition, or defined and bounded by one or more or the commonly used geographic coordinates set out in paragraph (2) of this definition for the purposes of implementing different management measures in separate geographic areas of the U.S. West Coast.

* * * * *

(2) * * *

(xviii) Point Arena, CA—management line—38°57.50′ N lat.

* * * * *

■ 3. Amend § 660.40 by:
■ a. Revising the section heading;
■ b. Removing paragraph (a);
■ c. Redesignating paragraph (b) as paragraph (a), and revising newly redesignated paragraph (a); and
■ d. Adding and reserving a new paragraph (b).

The revision reads as follows:

§ 660.40 Rebuilding plans.

* * * * *

(a) *Yelloweye rockfish.* Yelloweye rockfish was declared overfished in

2002. The target year for rebuilding the yelloweye rockfish stock to B_{MSY} is 2029. The harvest control rule to be used to rebuild the yelloweye rockfish stock is an annual SPR harvest rate of 65.0 percent.

(b) [Reserved]

■ 4. In § 660.50, revise paragraphs (f)(2)(ii) and (f)(6) to read as follows:

§ 660.50 Pacific Coast treaty Indian fisheries.

* * * * *

(f) * * *

(2) * * *

(ii) The Tribal allocation is 689.2 mt in 2021 and 656.6 mt in 2022 per year. This allocation is, for each year, 10 percent of the Monterey through Vancouver area (North of 36° N lat.) ACL. The Tribal allocation is reduced by 1.7 percent for estimated discard mortality.

* * * * *

(6) *Petrale sole.* For petrale sole, treaty fishing vessels are restricted to a fleetwide harvest target of 350 mt each year.

* * * * *

■ 5. Amend § 660.71 by:

■ a. Redesignating paragraphs (o)(133) through (216) as paragraphs (o)(135) through (218); and

■ b. Adding new paragraphs (o)(133) and (134) to read as follows:

§ 660.71 Latitude/longitude coordinates defining the 10-fm (18-m) through 40-fm (73-m) depth contours.

* * * * *

(o) * * *

(133) 37°25.00′ N lat., 122°38.66′ W long.;

(134) 37°20.68′ N lat., 122°36.79′ W long.;

* * * * *

■ 6. Amend § 660.73 by:

■ a. Revising paragraphs (a)(2902) and (a)(309) through (315);

■ b. Adding paragraphs (a)(316) through (321);

■ c. Revising paragraphs (b)(1) through (14);

■ d. Adding paragraph (b)(15);

■ e. Revising paragraphs (c)(10) through (14);

■ f. Redesignatng paragraphs (d) through (l) as paragraphs (e) through (m); and

■ g. Adding new paragraph (d).

The additions and revisions read as follows:

§ 660.73 Latitude/longitude coordinates defining the 100 fm (183 m) through 150 fm (274 m) depth contours.

* * * * *

a/ Annual catch limits (ACLs), annual catch targets (ACTs) and harvest guidelines (HGs) are specified as total catch values.

b/ Fishery HGs means the HG or quota after subtracting Pacific Coast treaty Indian tribes allocations and projected catch, projected research catch, deductions for fishing mortality in non-groundfish fisheries, and deductions for EFPs from the ACL or ACT.

c/ Yelloweye rockfish. The 50 mt ACL is based on the current rebuilding plan with a target year to rebuild of 2029 and an SPR harvest rate of 65 percent. 8.85 mt is deducted from the ACL to accommodate the Tribal fishery (5 mt), EFP catch (0.24 mt), research (2.92 mt), and the incidental open access fishery (0.69 mt) resulting in a fishery HG of 41.2 mt. The non-trawl HG is 37.9 mt. The combined non-nearshore/nearshore HG is 7.9 mt. Recreational HGs are: 9.7 mt (Washington); 8.8 mt (Oregon); and 11.4 mt (California). In addition, the non-trawl ACT is 29.5, and the combined non-nearshore/nearshore ACT is 6.2 mt. Recreational ACTs are: 7.5 mt (Washington), 6.9 (Oregon), and 8.9 mt (California).

d/ Arrowtooth flounder. 2,095.08 mt is deducted from the ACL to accommodate the Tribal fishery (2,041 mt), EFP fishing (0.1 mt), research (12.98 mt) and incidental open access (41 mt), resulting in a fishery HG of 7,837.9 mt.

e/ Big skate. 57.31 mt is deducted from the ACL to accommodate the Tribal fishery (15 mt), EFP fishing (0.1 mt), and research catch (5.49 mt), and incidental open access (36.72 mt), resulting in a fishery HG of 1,419.7 mt.

f/ Black rockfish (California). 2.26 mt is deducted from the ACL to accommodate EFP fishing (1.0 mt), research (0.08 mt), and incidental open access (1.18 mt), resulting in a fishery HG of 345.7 mt.

g/ Black rockfish (Washington). 18.1 mt is deducted from the ACL to accommodate the Tribal fishery (18 mt) and research catch (0.1 mt), resulting in a fishery HG of 274.9 mt.

h/ Bocaccio south of 40°10' N lat. 47.82 mt is deducted from the ACL to accommodate EFP catch (40 mt), research (5.6 mt), and incidental open access (2.22 mt), resulting in a fishery HG of 1,700.2 mt. The combined non-nearshore and nearshore HG is 320.2 mt. The California recreational fishery HG is 716.2 mt.

i/ Cabezon (California). 1.28 mt is deducted from the ACL to accommodate EFP (1 mt), research (0.02 mt), and incidental open access fishery (0.26 mt), resulting in a fishery HG of 208.7 mt.

j/ California scorpionfish south of 34°27' N lat. 3.89 mt is deducted from the ACL to accommodate research (0.18 mt) and the incidental open access fishery (3.71 mt), resulting in a fishery HG of 287.1 mt.

k/ Canary rockfish. 69.39 mt is deducted from the ACL to accommodate the Tribal fishery (50 mt), EFP catch (8 mt), and research catch (10.08 mt), and the incidental open access fishery (1.31 mt), resulting in a fishery HG of 1,268.6 mt. The combined nearshore/non-nearshore HG is 126.6 mt. Recreational HGs are: 43.3 mt (Washington); 65.1 mt (Oregon); and 116.7 mt (California).

l/ Chilipepper rockfish south of 40°10' N lat. 97.7 mt is deducted from the ACL to accommodate EFP fishing (70 mt), research (14.04 mt), the incidental open access fishery (13.66 mt), resulting in a fishery HG of 2,260.3 mt.

m/ Cowcod south of 40°10' N lat. 11.17 mt is deducted from the ACL to accommodate EFP fishing (1.0 mt), research (10 mt), and incidental open access (0.17 mt), resulting in a

fishery harvest guideline of 72.8 mt. A single ACT of 50 mt is being set for the Conception and Monterey areas combined.

n/ Darkblotched rockfish. 19.06 mt is deducted from the ACL to accommodate the Tribal fishery (0.2 mt), EFP catch (0.6 mt), and research catch (8.46 mt), and the incidental open access fishery (9.8 mt) resulting in a fishery HG of 862.9 mt.

o/ Dover sole. 1,597.21 mt is deducted from the ACL to accommodate the Tribal fishery (1,497 mt), EFP fishing (0.1 mt), research (50.84 mt), and incidental open access (49.27 mt), resulting in a fishery HG of 48,402.8 mt.

p/ English sole. 250.63 mt is deducted from the ACL to accommodate the Tribal fishery (200 mt), EFP fishing (0.1 mt), research (8.01 mt), and the incidental open access fishery (42.52 mt), resulting in a fishery HG of 8,924.37 mt.

q/ Lingcod north of 40°10' N lat. 278.38 mt is deducted from the ACL for the Tribal fishery (250 mt), EFP catch (0.1 mt), research (16.6 mt), and the incidental open access fishery (11.68 mt) resulting in a fishery HG of 5,090.6 mt.

r/ Lingcod south of 40°10' N lat. 13 mt is deducted from the ACL to accommodate EFP catch (1.5 mt), research (3.19 mt), and incidental open access fishery (8.31 mt), resulting in a fishery HG of 1,089 mt.

s/ Longnose skate. 251.40 mt is deducted from the ACL to accommodate the Tribal fishery (220 mt), EFP catch (0.1 mt), and research catch (12.46 mt), and incidental open access fishery (18.84 mt), resulting in a fishery HG of 1,571.6 mt.

t/ Longspine thornyhead north of 34°27′ N. lat. 53.71 mt is deducted from the ACL to accommodate the Tribal fishery (30 mt), research catch (17.49 mt), and the incidental open access fishery (6.22 mt), resulting in a fishery HG of 2,580.3 mt.

u/ Longspine thornyhead south of 34°27′ N. lat. 2.24 mt is deducted from the ACL to accommodate research catch (1.41 mt) and the incidental open access fishery (0.8 mt), resulting in a fishery HG of 829.6 mt.

v/ Pacific cod. 506.1 mt is deducted from the ACL to accommodate the Tribal fishery (500 mt), EFP fishing (0.1 mt), research catch (5.47 mt), and the incidental open access fishery (0.53 mt), resulting in a fishery HG of 1,093.9 mt.

w/ Pacific ocean perch north of 40°10' N lat. 24.73 mt is deducted from the ACL to accommodate the Tribal fishery (9.2 mt), EFP fishing (0.1 mt), research catch (5.39 mt), and the incidental open access fishery (10.04 mt), resulting in a fishery HG of 3,829.3 mt.

x/ Pacific whiting. Pacific whiting are assessed annually. The final specifications will be determined consistent with the U.S.-Canada Pacific Whiting Agreement and will be announced after the Council's April 2021 meeting.

y/ Petrale sole. 387.54 mt is deducted from the ACL to accommodate the Tribal fishery (350 mt), EFP catch (0.1 mt), research (24.14 mt), and the incidental open access fishery (13.3 mt), resulting in a fishery HG of 3,727.5 mt.

z/ Sablefish north of 36° N lat. This coastwide ACL value is not specified in regulations. The coastwide ACL value is apportioned north and south of 36° N. lat., using a rolling 5-year average estimated swept area biomass from the NMFS NWFSC trawl survey, with 78.4 percent apportioned north of 36° N. lat. and 21.6 percent apportioned south of 36° N. lat. The northern ACL is 6,892 mt and is reduced by 689.2 mt for the Tribal allocation (10 percent of the ACL north of 36° N. lat.). The 689.2 mt Tribal allocation is reduced by 1.7 percent to account for discard mortality. Detailed sablefish allocations are shown in Table 1c.

aa/ Sablefish south of 36° N lat. The ACL for the area south of 36° N. lat. is 1,899 mt (21.6 percent of the calculated coastwide ACL value). 27.4 mt is deducted from the ACL to accommodate research (2.40 mt) and the incidental open access fishery (25 mt), resulting in a fishery HG of 1,871.6 mt.

bb/ Shortspine thornyhead north of 34°27′ N. lat. 78.4 mt is deducted from the ACL to accommodate the Tribal fishery (50 mt), EFP catch (0.1 mt), and research catch (10.48 mt), and

the incidental open access fishery (17.82 mt), resulting in a fishery HG of 1,349.6 mt for the area north of 34°27′ N. lat.

cc/ Shortspine thornyhead south of 34°27′ N. lat. 6.71 mt is deducted from the ACL to accommodate research catch (0.71 mt) and the incidental open access fishery (6 mt), resulting in a fishery HG of 749.3 mt for the area south of 34°27′ N. lat.

dd/ Spiny dogfish. 344 mt is deducted from the ACL to accommodate the Tribal fishery (275 mt), EFP catch (1.1 mt), research (34.27 mt), and the incidental open access fishery (33.63 mt), resulting in a fishery HG of 1,277 mt.

ee/ Splitnose rockfish south of 40°10' N lat. 18.42 mt is deducted from the ACL to accommodate EFP catch (1.5 mt), research (11.17 mt), and the incidental open access fishery (5.75 mt), resulting in a fishery HG of 1,647.6 mt.

ff/ Starry flounder. 48.38 mt is deducted from the ACL to accommodate the Tribal fishery (2 mt), EFP catch (0.1 mt), research (0.57 mt), and the incidental open access fishery (45.71 mt), resulting in a fishery HG of 343.6 mt.

gg/ Widow rockfish. 248.32 mt is deducted from the ACL to accommodate the Tribal fishery (200 mt), EFP catch (28 mt), research (17.27 mt), and the incidental open access fishery (3.05 mt), resulting in a fishery HG of 14,476.7 mt.

hh/ Yellowtail rockfish north of 40°10' N lat. 1,047.55 mt is deducted from the ACL to accommodate the Tribal fishery (1,000 mt), EFP catch (10 mt), research (20.55 mt), and the incidental open access fishery (7 mt), resulting in a fishery HG of 5,012.5 mt.

ii/ Black rockfish/Blue rockfish/Deacon rockfish (Oregon). 2.32 mt is deducted from the ACL to accommodate the EFP catch (0.5 mt), research (0.08 mt), and the incidental open access fishery (1.74 mt), resulting in a fishery HG of 600.7 mt.

jj/ Cabezon/kelp greenling (Oregon). 0.21 mt is deducted from the ACL to accommodate EFP catch (0.1 mt), research (0.05 mt), and the incidental open access fishery (0.06 mt), resulting in a fishery HG of 197.8 mt.

kk/ Cabezon/kelp greenling (Washington). 2 mt is deducted from the ACL to accommodate the Tribal fishery, therefore the fishery HG is 18 mt.

ll/Nearshore Rockfish north of 40°10' N lat. 3.08 mt is deducted from the ACL to accommodate the Tribal fishery (1.5 mt), EFP catch (0.5 mt), research (0.47 mt), and the incidental open access fishery (0.61 mt), resulting in a fishery HG of 75.9 mt. State specific HGs are Washington (18.4 mt), Oregon (22.7 mt), and California (37.6 mt).

mm/ Nearshore Rockfish south of 40°10' N lat. 4.42 mt is deducted from the ACL to accommodate research catch (2.68 mt) and the incidental open access fishery (2.68 mt), resulting in a fishery HG of 1,011.6 mt.

nn/ Other Fish. The Other Fish complex is comprised of kelp greenling off California and leopard shark coastwide. 21.34 mt is deducted from the ACL to accommodate EFP catch (0.1 mt), research (6.29 mt), and the incidental open access fishery (14.95 mt), resulting in a fishery HG of 201.7 mt.

oo/ Other Flatfish. The Other Flatfish complex is comprised of flatfish species managed in the PCGFMP that are not managed with stock-specific OFLs/ABCs/ACLs. Most of the species in the Other Flatfish complex are unassessed and include: butter sole, curlfin sole, flathead sole, Pacific sanddab, rock sole, sand sole, and rex sole. 220.89 mt is deducted from the ACL to accommodate the Tribal fishery (60 mt), EFP catch (0.1 mt), research (23.63 mt), and the incidental open access fishery (137.16 mt), resulting in a fishery HG of 4,581.1 mt.

pp/ Shelf Rockfish north of 40°10' N lat. 72.44 mt is deducted from the ACL to accommodate the Tribal fishery (30 mt), EFP catch (1.5 mt), research (15.32 mt), and the incidental open access fishery (25.62 mt), resulting in a fishery HG of 1,438.66 mt.

qq/ Shelf Rockfish south of 40°10' N lat. 132.77 mt is deducted from the ACL to accommodate EFP catch (50 mt), research catch (15.1 mt), and the incidental open access fishery (67.67 mt) resulting in a fishery HG of 1,305.2 mt.

rr/ Slope Rockfish north of 40°10’ N lat. 65.89 mt is deducted from the ACL to accommodate the Tribal fishery (36 mt), EFP catch (0.5 mt), and research (10.51 mt), and the incidental open access fishery (18.88 mt), resulting in a fishery HG of 1,529.1 mt.

ss/ Slope Rockfish south of 40°10’ N lat. 38.94 mt is deducted from the ACL to accommodate EFP catch (1 mt), and research (18.21 mt), and the incidental open access fishery (19.73 mt), resulting in a fishery HG of 670.1 mt. Blackgill rockfish has a stock-specific HG for the entire groundfish fishery south of 40°10' N lat. set equal to the species' contribution to the ACL. Harvest of blackgill rockfish in all groundfish fisheries south of 40°10’ N lat. counts against this HG of 176.5 mt.

■ 8. Revise Table 1b to subpart C to read as follows

Table 1b. to Part 660, Subpart C—2021, Allocations by Species or Species Group (Weight in Metric Tons)

Stocks/Stock Complexes	Area	Fishery HG or ACT a/ b/	Trawl		Non-Trawl	
			%	Mt	%	Mt
YELLOWEYE ROCKFISH a/	Coastwide	41.2	8	3.3	92	37.9

Slope Rockfish a/	S of 40° 10' N. lat.	670.1		526.4		143.7

a/ Allocations decided through the biennial specification process.
b/ The cowcod fishery harvest guideline is further reduced to an ACT of 50 mt. The non-trawl allocation is further split 50:50 between the commercial and recreational sectors.
c/ Consistent with regulations at §660.55(i)(2), the commercial harvest guideline for Pacific whiting is allocated as follows: 34 percent for the C/P Coop Program; 24 percent for the MS

Coop Program; and 42 percent for the Shorebased IFQ Program. No more than 5 percent of the Shorebased IFQ Program allocation may be taken and retained south of 42° N lat. before the start of the primary Pacific whiting season north of 42° N lat.

■ 9. Revise Table 1c to subpart C to read as follows:

Table 1c. to Part 660, Subpart C - Sablefish North of 36° N. lat. Allocations, 2021

Year	ACL	Set-asides		Recreational Estimate	EFP	Commercial HG	Limited Entry HG		Open Access HG	
		Tribal a/	Research				Percent	mt	Percent	mt b/
2021	6,892	689	30.7	6	1.1	6,165	91	5,586	9	580

Year	LE All	Limited Entry Trawl c/			Limited Entry Fixed Gear d/		
		All Trawl	At-sea Whiting	Shorebased IFQ	All FG	Primary	DTL
2021	5,586	3,240	100	3,139.59	2,346	1,994	352

a/ The tribal allocation is further reduced by 1.7 percent for discard mortality resulting in 677.5 mt in 2021.

b/ The open access HG is taken by the incidental OA fishery and the directed OA fishery.

c/ The trawl allocation is 58 percent of the limited entry HG.

d/ The limited entry fixed gear allocation is 42 percent of the limited entry HG.

■ 10. Revise Table 2a to Subpart C, are revised to read as follows:

Table 2a. to Part 660, Subpart C—2022, and Beyond, Specifications of OFL, ABC, ACL, ACT and Fishery Harvest Guidelines (Weights in Metric Tons). Capitalized stocks are overfished.

a/ Annual catch limits (ACLs), annual catch targets (ACTs) and harvest guidelines (HGs) are specified as total catch values.

b/ Fishery HGs means the HG or quota after subtracting Pacific Coast treaty Indian tribes allocations and projected catch, projected research catch, deductions for fishing mortality in non-groundfish fisheries, and deductions for EFPs from the ACL or ACT.

c/ Yelloweye rockfish. The 51 mt ACL is based on the current rebuilding plan with a target year to rebuild of 2029 and an SPR harvest rate of 65 percent. 8.85 mt is deducted from the ACL to accommodate the Tribal fishery (5 mt), EFP catch (0.24 mt), research (2.92 mt), and the incidental open access fishery (0.69 mt) resulting in a fishery HG of 42.2 mt. The non-trawl HG is 38.8 mt. The combined non-nearshore/nearshore HG is 8.1 mt. Recreational HGs are: 9.9 mt (Washington); 9 mt (Oregon); and 11.7 mt (California). In addition, the nontrawl ACT is 30.4 mt and the combined non-nearshore/nearshore ACT is 6.3 mt. Recreational ACTs are: 7.8 mt (Washington), 7.1 (Oregon), and 9.2 mt (California).

d/ Arrowtooth flounder. 2,095.08 mt is deducted from the ACL to accommodate the Tribal fishery (2,041 mt), EFP fishing (0.1 mt), research (12.98 mt) and incidental open access (41 mt), resulting in a fishery HG of 6,362.9 mt.

e/ Big skate. 57.31 mt is deducted from the ACL to accommodate the Tribal fishery (15 mt), EFP fishing (0.1 mt), and research catch (5.49 mt), and incidental open access (36.72 mt), resulting in a fishery HG of 1,331.7 mt.

f/ Black rockfish (California). 2.26 mt is deducted from the ACL to accommodate EFP fishing (1.0 mt), research (0.08 mt), and incidental open access (1.18 mt), resulting in a fishery HG of 338.7 mt.

g/ Black rockfish (Washington). 18.1 mt is deducted from the ACL to accommodate the Tribal fishery (18 mt) and research catch (0.1 mt), resulting in a fishery HG of 272.9 mt.

h/ Bocaccio south of 40°10’ N lat. The stock is managed with stock-specific harvest specifications south of 40°10' N. lat. and within the Minor Shelf Rockfish complex north of 40°10' N. lat. 47.82 mt is deducted from the ACL to accommodate EFP catch (40 mt), research (5.6 mt), and incidental open access (2.22 mt), resulting in a fishery HG of 1,676.2 mt. The 2022 combined allocation to the nearshore and non-nearshore fishery is 315.7 mt. The California recreational fishery south of 40°10’ N lat has an HG of 706.1 mt.

i/ Cabezon (California). 1.28 mt is deducted from the ACL to accommodate EFP (1 mt), research (0.02 mt), and incidental open access fishery (0.26 mt), resulting in a fishery HG of 193.7 mt.

j/ California scorpionfish south of 34°27’ N lat. 3.89 mt is deducted from the ACL to accommodate research (0.18 mt) and the incidental open access fishery (3.71 mt), resulting in a fishery HG of 271.1 mt.

k/ Canary rockfish. 69.39 mt is deducted from the ACL to accommodate the Tribal fishery (50 mt), EFP catch (8 mt), and research catch (10.08 mt), and the incidental open access fishery (1.31 mt), resulting in a fishery HG of 1,237.6 mt. The combined nearshore/non-nearshore HG is 123.5 mt. Recreational HGs are: 42.2 mt (Washington); 63.5 mt (Oregon); and 113.9 mt (California).

l/ Chilipepper rockfish south of 40°10' N lat. Chilipepper are managed with stock-specific harvest specifications south of 40°10′N. lat. and within the Minor Shelf Rockfish complex north of 40°10′ N. lat. 97.7 mt is deducted from the ACL to accommodate EFP fishing (70 mt), research (14.04 mt), the incidental open access fishery (13.66 mt), resulting in a fishery HG of 2,161.3 mt.

m/ Cowcod south of 40°10' N lat. 11.17 mt is deducted from the ACL to accommodate EFP fishing (1 mt), research (10 mt), and incidental open access (0.17 mt), resulting in a fishery harvest guideline of 70.83 mt. A single ACT of 50 mt is being set for the Conception and Monterey areas combined.

n/ Darkblotched rockfish. 19.06 mt is deducted from the ACL to accommodate the Tribal fishery (0.2 mt), EFP catch (0.6 mt), and research catch (8.46 mt), and the incidental open access fishery (9.8 mt) resulting in a fishery HG of 811.9 mt.

o/ Dover sole. 1,597.21 mt is deducted from the ACL to accommodate the Tribal fishery (1,497 mt), EFP fishing (0.1 mt), research (50.84 mt), and incidental open access (49.27 mt), resulting in a fishery HG of 48,402.8 mt.

p/ English sole. 250.63 mt is deducted from the ACL to accommodate the Tribal fishery (200 mt), EFP fishing (0.1 mt), research (8 mt), and the incidental open access fishery (42.52 mt), resulting in a fishery HG of 8,850.4 mt.

q/ Lingcod north of 40°10' N lat. 278.38 mt is deducted from the ACL for the Tribal fishery (250 mt), EFP catch (0.1 mt), research (16.6 mt), and the incidental open access fishery (11.68 mt) resulting in a fishery HG of 4,679.6 mt.

r/ Lingcod south of 40°10' N lat. 13 mt is deducted from the ACL to accommodate EFP catch (1.5 mt), research (3.19 mt), and incidental open access fishery (8.31 mt), resulting in a fishery HG of 1,159 mt.

s/ Longnose skate. 251.40 mt is deducted from the ACL to accommodate the Tribal fishery (220 mt), EFP catch (0.1 mt), and research catch (12.46 mt), and incidental open access fishery (18.84 mt), resulting in a fishery HG of 1,509.6 mt.

t/ Longspine thornyhead north of 34°27′ N. lat. 53.71 mt is deducted from the ACL to accommodate the Tribal fishery (30 mt), research catch (17.49 mt), and the incidental open access fishery (6.22 mt), resulting in a fishery HG of 2,398.3 mt.

u/ Longspine thornyhead south of 34°27′ N. lat. 2.24 mt is deducted from the ACL to accommodate research catch (1.41 mt) and the incidental open access fishery (0.83 mt), resulting in a fishery HG of 771.8mt.

v/ Pacific cod. 506.1 mt is deducted from the ACL to accommodate the Tribal fishery (500 mt), EFP fishing (0.1 mt), research catch (5.47 mt), and the incidental open access fishery (0.53 mt), resulting in a fishery HG of 1,093.9 mt.

w/ Pacific ocean perch north of 40°10’ N lat. 24.73 mt is deducted from the ACL to accommodate the Tribal fishery (9.2 mt), EFP fishing (0.1 mt), research catch (5.39 mt), and the incidental open access fishery (10.04 mt), resulting in a fishery HG of 3,686.2 mt.

x/ Pacific whiting. Pacific whiting are assessed annually. The final specifications will be determined consistent with the U.S.-Canada Pacific Whiting Agreement and will be announced after the Council's April 2021 meeting.

y/ Petrale sole. 387.54 mt is deducted from the ACL to accommodate the Tribal fishery (350 mt), EFP catch (0.1 mt), research (24.14 mt), and the incidental open access fishery (13.3 mt), resulting in a fishery HG of 3,272.5 mt.

z/ Sablefish north of 36° N lat. This coastwide ACL value is not specified in regulations. The coastwide ACL value is apportioned north and south of 36° N. lat., using the a rolling 5-year average estimated swept area biomass from the NMFS NWFSC trawl survey, with 78.4 percent apportioned north of 36° N. lat. and 21.5 percent apportioned south of 36° N. lat. The northern ACL is 6,566 mt and is reduced by 656.6 mt for the Tribal allocation (10 percent of the ACL

north of 36° N. lat.). The 656.6 mt Tribal allocation is reduced by 1.7 percent to account for discard mortality. Detailed sablefish allocations are shown in Table 1c.

aa/ Sablefish south of 36° N lat. The ACL for the area south of 36° N. lat. is 1,809 mt (21.6 percent of the calculated coastwide ACL value). 27.4 mt is deducted from the ACL to accommodate research (2.40 mt) and the incidental open access fishery (25 mt), resulting in a fishery HG of 1,781.6 mt.

bb/ Shortspine thornyhead north of 34°27′ N. lat. 78.4 mt is deducted from the ACL to accommodate the Tribal fishery (50 mt), EFP catch (0.1 mt), and research catch (10.48 mt), and the incidental open access fishery (17.82 mt), resulting in a fishery HG of 1,314.6 mt for the area north of 34°27′ N. lat.

cc/ Shortspine thornyhead south of 34°27′ N. lat. 6.71 mt is deducted from the ACL to accommodate research catch (0.71 mt) and the incidental open access fishery (6 mt), resulting in a fishery HG of 730.3 mt for the area south of 34°27′ N. lat.

dd/ Spiny dogfish. 344 mt is deducted from the ACL to accommodate the Tribal fishery (275 mt), EFP catch (1.1 mt), research (34.27 mt), and the incidental open access fishery (33.63 mt), resulting in a fishery HG of 1,241 mt.

ee/ Splitnose rockfish south of 40°10' N lat. Splitnose rockfish in the north is managed in the Slope Rockfish complex and with stock-specific harvest specifications south of 40°10′ N. lat. 18.42 mt is deducted from the ACL to accommodate EFP catch (1.5 mt), research (11.17 mt), and the incidental open access fishery (5.75 mt), resulting in a fishery HG of 1,611.6 mt.

ff/ Starry flounder. 48.38 mt is deducted from the ACL to accommodate the Tribal fishery (2 mt), EFP catch (0.1 mt), research (0.57 mt), and the incidental open access fishery (45.71 mt), resulting in a fishery HG of 343.6 mt.

gg/ Widow rockfish. 248.32 mt is deducted from the ACL to accommodate the Tribal fishery (200 mt), EFP catch (28 mt), research (17.27 mt), and the incidental open access fishery (3.05 mt), resulting in a fishery HG of 13,539.7 mt.

hh/ Yellowtail rockfish north of 40°10' N lat. 1,037.55 mt is deducted from the ACL to accommodate the Tribal fishery (1,000 mt), EFP catch (10 mt), research (20.55 mt), and the incidental open access fishery (7 mt), resulting in a fishery HG of 4,793.5 mt.

ii/ Black rockfish/Blue rockfish/Deacon rockfish (Oregon). 2.32 mt is deducted from the ACL to accommodate the EFP catch (0.5 mt), research (0.08 mt), and the incidental open access fishery (1.74 mt), resulting in a fishery HG of 597.7 mt.

jj/ Cabezon/kelp greenling (Washington). 2 mt is deducted from the ACL to accommodate the Tribal fishery, therefore the fishery HG is 15 mt.

kk/ Cabezon/kelp greenling (Oregon). 0.21 mt is deducted from the ACL to accommodate EFP catch (0.1 mt), research (0.05 mt), and the incidental open access fishery (0.06 mt), resulting in a fishery HG of 189.8 mt.

ll/Nearshore Rockfish north of 40°10' N lat. 3.08 mt is deducted from the ACL to accommodate the Tribal fishery (1.5 mt), EFP catch (0.5 mt), research (0.47 mt), and the incidental open access fishery (0.61 mt), resulting in a fishery HG of 73.9 mt. State-specific HGs are 17.7 mt (Washington), 22.2 mt (Oregon), and 37.4 mt (California).

mm/ Nearshore Rockfish south of 40°10' N lat. 4.42 mt is deducted from the ACL to accommodate research catch (2.68 mt) and the incidental open access fishery (1.74 mt), resulting in a fishery HG of 1,005.6 mt.

nn/ Other Fish. The Other Fish complex is comprised of kelp greenling off California and leopard shark coastwide. 21.34 mt is deducted from the ACL to accommodate EFP catch (0.1 mt), research (6.29 mt), and the incidental open access fishery (14.95 mt), resulting in a fishery HG of 201.7 mt.

oo/ Other Flatfish. The Other Flatfish complex is comprised of flatfish species managed in the PCGFMP that are not managed with stock-specific OFLs/ABCs/ACLs. Most of the species in the Other Flatfish complex are unassessed and include: butter sole, curlfin sole, flathead sole, Pacific sanddab, rock sole, sand sole, and rex sole. 220.89 mt is deducted from the

ACL to accommodate the Tribal fishery (60 mt), EFP catch (0.1 mt), research (23.63 mt), and the incidental open access fishery (137.16 mt), resulting in a fishery HG of 4,617.1 mt.

pp/ Shelf Rockfish north of 40°10' N lat. 72.44 mt is deducted from the ACL to accommodate the Tribal fishery (30 mt), EFP catch (1.5 mt), research (15.32 mt), and the incidental open access fishery (25.62 mt), resulting in a fishery HG of 1,377.6 mt.

qq/ Shelf Rockfish south of 40°10' N lat. 132.77 mt is deducted from the ACL to accommodate EFP catch (50 mt), research catch (15.1 mt), and the incidental open access fishery (67.67 mt) resulting in a fishery HG of 1,295.2 mt.

rr/ Slope Rockfish north of 40°10' N lat. 65.89 mt is deducted from the ACL to accommodate the Tribal fishery (36 mt), EFP catch (1.5 mt), and research (10.51 mt), and the incidental open access fishery (18.88 mt), resulting in a fishery HG of 1,502.1 mt.

ss/ Slope Rockfish south of 40°10' N lat. 38.94 mt is deducted from the ACL to accommodate EFP catch (1 mt), and research (18.21 mt), and the incidental open access fishery (19.73 mt), resulting in a fishery HG of 666.1 mt. Blackgill rockfish has a stock-specific HG for the entire groundfish fishery south of 40°10' N lat. set equal to the species' contribution to the 40-10-adjusted ACL. Harvest of blackgill rockfish in all groundfish fisheries south of 40°10' N lat. counts against this HG of 174 mt.

■ 11. Revise Table 2b to subpart C to read as follows:

Table 2b. to Part 660, Subpart C—2022, and Beyond, Allocations by Species or Species Group [Weight in Metric Tons]

Stocks/Stock Complexes	Area	Fishery HG or ACT a/ b/	Trawl		Non-Trawl	
			%	Mt	%	Mt

a/ Allocations decided through the biennial specification process.

b/ The cowcod fishery harvest guideline is further reduced to an ACT of 50 mt.

c/ Consistent with regulations at §660.55(i)(2), the commercial harvest guideline for Pacific whiting is allocated as follows: 34 percent for the C/P Coop Program; 24 percent for the MS

Coop Program; and 42 percent for the Shorebased IFQ Program. No more than 5 percent of the Shorebased IFQ Program allocation may be taken and retained south of 42° N lat. before the start of the primary Pacific whiting season north of 42° N lat.

■ 12. Revise Table 2c to subpart C to read as follows:

Table 2c. to Part 660, Subpart C - Sablefish North of 36° N. lat. Allocations, 2022 and Beyond

Year	ACL	Set-asides		Recreational Estimate	EFP	Commercial HG	Limited Entry HG		Open Access HG	
		Tribal a/	Research				Percent	mt	Percent	mt b/
2022	6,566	657	30.7	6	1.1	5,872	91	5,320	9	552

Year	LE All	Limited Entry Trawl c/			Limited Entry Fixed Gear d/	
		All Trawl	At-sea Whiting	Shorebased IFQ	All FG	Primary	DTL
2022	5,320	3,085	100	2,985.42	2,234	1,899	335

a/ The tribal allocation is further reduced by 1.7 percent for discard mortality resulting in 645.4 mt in 2022.
b/ The open access HG is taken by the incidental OA fishery and the directed OA fishery.
c/ The trawl allocation is 58 percent of the limited entry HG
d/ The limited entry fixed gear allocation is 42 percent of the limited entry HG

■ 13. In § 660.140, revise paragraphs (d)(1)(ii)(D) to read as follows:

§ 660.140 Shorebased IFQ Program.

* * * * *

(d) * * *

(1) * * *

(ii) * * *

(D) For the trawl fishery, NMFS will issue QP based on the following shorebased trawl allocations:

Table 1 To Paragraph (d)(1)(ii)(D)

■ 14. Revise Tables 1 (North) and 1 (South) to part 660, subpart D to read as follows:

BILLING CODE 3510–22–P

Table 1 (North) to Part 660, Subpart D -- Limited Entry Trawl Rockfish Conservation Areas and Landing Allowances for non-IFQ Species and Pacific Whiting North of 40°10' N. Lat.

This table describes Rockfish Conservation Areas for vessels using groundfish trawl gear. This table describes incidental landing allowances for vessels registered to a Federal limited entry trawl permit and using groundfish trawl or groundfish non-trawl gears to harvest individual fishing quota (IFQ) species.

Other Limits and Requirements Apply -- Read § 660.10 - § 660.399 before using this table 01/01/2021

		JAN-FEB	MAR-APR	MAY-JUN	JUL-AUG	SEP-OCT	NOV-DEC
Rockfish Conservation Area (RCA)[1/]:							
1	North of 45°46' N. lat.	100 fm line[1/] - 150 fm line[1/]					
2	45°46' N. lat. - 40°10' N. lat.	Block Area Closures (BACs) may be implemented, and will be announced in the Federal Register.					

See provisions at § 660.130 for gear restrictions and requirements by area. Vessels fishing groundfish trawl quota pounds with groundfish non-trawl gears, under gear switching provisions at § 660.140, are subject to the limited entry groundfish trawl fishery landing allowances in this table, regardless of the type of fishing gear used. Vessels fishing groundfish trawl quota pounds with groundfish non-trawl gears, under gear switching provisions at § 660.140, are subject to the limited entry fixed gear non-trawl RCA, as described in Tables 2 (North) and 2 (South) to Part 660, Subpart E.

See § 660.60, § 660.130, and § 660.140 for Additional Gear, Trip Limit, and Conservation Area Requirements and Restrictions. See §§ 660.70-660.74 and §§ 660.76-660.79 for Conservation Area Descriptions and Coordinates (including RCAs, YRCA, CCAs, Farallon Islands, Cordell Banks, and EFHCAs).

State trip limits and seasons may be more restrictive than federal trip limits, particularly in waters off Oregon and California.

11	**Longnose skate**	Unlimited
12	**Other Fish [4/]**	Unlimited

TABLE 1 (North)

1/ The Rockfish Conservation Area is an area closed to fishing by particular gear types, bounded by lines specifically defined by latitude and longitude coordinates set out at §§ 660.71-660.74. This RCA is not defined by depth contours, and the boundary lines that define the RCA may close areas that are deeper or shallower than the depth contour. Vessels that are subject to the RCA restrictions may not fish in the RCA, or operate in the RCA for any purpose other than transiting.

2/ The "modified" fathom lines are modified to exclude certain petrale sole areas from the RCA.

3/ As specified at §660.131(d), when fishing in the Eureka Area, no more than 10,000 lb of whiting may be taken and retained, possessed, or landed by a vessel that, at any time during the fishing trip, fished in the fishery management area shoreward of 100 fm contour.

4/ "Other Fish" are defined at § 660.11 and include kelp greenling off California and leopard shark.

To convert pounds to kilograms, divide by 2.20462, the number of pounds in one kilogram.

Table 1 (South) to Part 660, Subpart D -- Limited Entry Trawl Rockfish Conservation Areas and Landing Allowances for non-IFQ Species and Pacific Whiting South of 40°10' N. Lat.

This table describes Rockfish Conservation Areas for vessels using groundfish trawl gear. This table describes incidental landing allowances for vessels registered to a Federal limited entry trawl permit and using groundfish trawl or groundfish non-trawl gears to harvest individual fishing quota (IFQ) species.

Other Limits and Requirements Apply -- Read § 660.10 - § 660.399 before using this table 01/01/2021

		JAN-FEB	MAR-APR	MAY-JUN	JUL-AUG	SEP-OCT	NOV-DEC
Rockfish Conservation Area (RCA)[1/]:

TABLE 1 (South)

1/ The Rockfish Conservation Area is an area closed to fishing by particular gear types, bounded by lines specifically defined by latitude and longitude coordinates set out at §§ 660.71-660.74. This RCA is not defined by depth contours, and the boundary lines that define the RCA may close areas that are deeper or shallower than the depth contour. Vessels that are subject to the RCA restrictions may not fish in the RCA, or operate in the RCA for any purpose other than transiting.

2/ "Other Fish" are defined at § 660.11 and include kelp greenling off California and leopard shark.

To convert pounds to kilograms, divide by 2.20462, the number of pounds in one kilogram.

■ 14. Amend § 660.230 by removing and reserving paragraph (d)(10)(i) and revising paragraph (d)(10)(ii) to read as follows:

§ 660.230 Fixed gear fishery—management measures.

* * * * *

(d) * * *

(10) * * *

(ii) Fishing for rockfish and lingcod is permitted shoreward of the boundary line approximating the 40 fm (73 m) depth contour within the CCAs when trip limits authorize such fishing and provided a valid declaration report as required at § 660.13(d) has been filed with NMFS OLE. Coordinates for the boundary line approximating the 40 fm (73 m) depth contour are listed in § 660.71.

* * * * *

■ 15. In § 660.231, revise paragraph (b)(3)(i) to read as follows:

§ 660.231 Limited entry fixed gear sablefish primary fishery.

* * * * *

(b) * * *

(3) * * * (i) A vessel participating in the primary season will be constrained by the sablefish cumulative limit associated with each of the permits registered for use with that vessel. During the primary season, each vessel authorized to fish in that season under paragraph (a) of this section may take, retain, possess, and land sablefish, up to the cumulative limits for each of the permits registered for use with that vessel (*i.e.,* stacked permits). If multiple limited entry permits with sablefish endorsements are registered for use with a single vessel, that vessel may land up

to the total of all cumulative limits announced in this paragraph for the tiers for those permits, except as limited by paragraph (b)(3)(ii) of this section. Up to 3 permits may be registered for use with a single vessel during the primary season; thus, a single vessel may not take and retain, possess or land more than 3 primary season sablefish cumulative limits in any one year. A vessel registered for use with multiple limited entry permits is subject to per vessel limits for species other than sablefish, and to per vessel limits when participating in the daily trip limit fishery for sablefish under § 660.232. In 2021, the following annual limits are in effect: Tier 1 at 58,649 lb (26,602 kg), Tier 2 at 26,659 lb (12,092 kg), and Tier 3 at 15,234 lb (6,910 kg). In 2022 and beyond, the following annual limits are in effect: Tier 1 at 55,858 lb (25,337 kg), Tier 2 at 25,390 lb (11,517 kg), and Tier 3 at 14,509 lb (6,581 kg).

TABLE 2 (North)

1/ The Rockfish Conservation Area is an area closed to fishing by particular gear types, bounded by lines specifically defined by latitude and longitude coordinates set out at §§ 660.71-660.74. This RCA is not defined by depth contours (with the exception of the 20-fm depth contour boundary south of 42° N. lat.), and the boundary lines that define the RCA may close areas that are deeper or shallower than the depth contour. Vessels that are subject to RCA restrictions may not fish in the RCA, or operate in the RCA for any purpose other than transiting.

2/ Between 46°16' N. lat. and 40°10' N. lat. and the 30 fm and 40 fm lines, fishing is only allowed with hook-and-line gear except bottom longline and dinglebar gear, as defined in §660.11

3/ Bocaccio, chilipepper and cowcod are included in the trip limits for Minor Shelf Rockfish and splitnose rockfish is included in the trip limits for Minor Slope Rockfish.

4/ "Other flatfish" are defined at § 660.11 and include butter sole, curlfin sole, flathead sole, Pacific sanddab, rex sole, rock sole, and sand sole.

5/ For black rockfish north of Cape Alava (48°09.50' N. lat.), and between Destruction Is. (47°40' N. lat.) and Leadbetter Pnt. there is an additional limit of 100 lb or 30 percent by weight of all fish on board, whichever is greater, per vessel, per fishing trip.(46°38.17' N. lat.),

6/ The minimum size limit for lingcod is 22 inches (56 cm) total length North of 42° N. lat. and 24 inches (61 cm) total length South of 42° N. lat.

7/ "Other Fish" are defined at § 660.11 and include kelp greenling off California and leopard shark.

To convert pounds to kilograms, divide by 2.20462, the number of pounds in one kilogram.

TABLE 2 (South)

1/ The Rockfish Conservation Area is an area closed to fishing by particular gear types, bounded by lines specifically defined by latitude and longitude coordinates set out at §§ 660.71-660.74. This RCA is not defined by depth contours (with the exception of the 20-fm depth contour boundary south of 42° N. lat.), and the boundary lines that define the RCA may close areas that are deeper or shallower than the depth contour. Vessels that are subject to RCA restrictions may not fish in the RCA, or operate in the RCA for any purpose other than transiting.

2/ POP is included in the trip limits for Minor Slope Rockfish. Blackgill rockfish have a species specific trip sub-limit within the Minor Slope Rockfish cumulative limit. Yellowtail rockfish are included in the trip limits for Minor Shelf Rockfish. Bronzespotted rockfish have a species specific trip limit.

3/ "Other Flatfish" are defined at § 660.11 and include butter sole, curlfin sole, flathead sole, Pacific sanddab, rex sole, rock sole, and sand sole.

4/ "Shallow Nearshore" are defined at § 660.11 under "Groundfish" (7)(i)(B)(*1*).

5/ "Deeper Nearshore" are defined at § 660.11 under "Groundfish" (7)(i)(B)(*2*).

6/ The commercial mimimum size limit for lingcod is 24 inches (61 cm) total length South of 42° N. lat.

7/ "Other Fish" are defined at § 660.11 and include kelp greenling off California and leopard shark.

To convert pounds to kilograms, divide by 2.20462, the number of pounds in one kilogram.

19 **Minor Nearshore Rockfish, Oregon black/blue/deacon rockfish & CA black rockfish**						
20 North of 42°00' N. lat.	5,000 lb/ 2 months, no more than 1,200 lb of which may be species other than black rockfish or blue/deacon rockfish[5/]					
21 42°00' N. lat. - 40°10' N. lat.	7,000 lb/ 2 months, no more than 2,000 lb of which may be species other than black rockfish					
22 **Lingcod[6/]**						
23 North of 42°00' N. lat.	2,000 lbs/ month					
24 42°00' N. lat. - 40°10' N. lat.	1,000 lbs / month					
25 **Pacific cod**	1,000 lbs/ 2 months					
26 **Spiny dogfish**	200,000 lbs/ 2 months		150,000 lbs/ 2 months		100,000 lbs/ 2 months	
27 **Longnose skate**	Unlimited					
28 **Big skate**	Unlimited					
29 **Other Fish[7/] & Cabezon in California**	Unlimited					
30 **Oregon Cabezon/Kelp Greenling**	Unlimited					
31 **SALMON TROLL** *(subject to RCAs when retaining all species of groundfish, except for yellowtail rockfish and lingcod, as described below)*						
32 North	Salmon trollers may retain and land up to 500 lbs of yellowtail rockfish per month as long as salmon is on board, both within and outside of the RCA. Salmon trollers may retain and land up to 1 lingcod per 5 Chinook per trip, plus 1 lingcod per trip, up to a trip limit of 10 lingcod, on a trip where any fishing occurs within the RCA. The limit only applies during times when lingcod retention is allowed, and is not "CLOSED." The limit is within the per month limit for lingcod described in the table above, and not in addition to that limit. All groundfish species are subject to the open access limits, seasons, size limits and RCA restrictions listed in the table above, unless otherwise stated here.					
33 **PINK SHRIMP NON-GROUNDFISH TRAWL** *(not subject to RCAs)*						
34 North	Effective April 1 - October 31: Groundfish: 500 lbs/day, multiplied by the number of days of the trip, not to exceed 1,500 lbs/trip. The following sublimits also apply and are counted toward the overall 500 lbs/day and 1,500 lbs/trip groundfish limits: lingcod 300 lbs/month (minimum 24 inch size limit); sablefish 2,000 lbs/month; canary, thornyheads and yelloweye rockfish are PROHIBITED. All other groundfish species taken are managed under the overall 500 lbs/day and 1,500 lbs/trip groundfish limits. Landings of these species count toward the per day and per trip groundfish limits and do not have species-specific limits. The amount of groundfish landed may not exceed the amount of pink shrimp landed.					

TABLE 3 (North)

1/ The Rockfish Conservation Area is an area closed to fishing by particular gear types, bounded by lines specifically defined by latitude and longitude coordinates set out at §§ 660.71-660.74. The amount of groundfish landed may not exceed the amount of pink shrimp landed.					

Table 3 (South) Continued

1/ The Rockfish Conservation Area is an area closed to fishing by particular gear types, bounded by lines specifically defined by latitude and longitude coordinates set out at §§ 660.71-660.74. This RCA is not defined by depth contours (with the exception of the 20-fm depth contour boundary south of 42° N. lat.), and the boundary lines that define the RCA may close areas that are deeper or shallower than the depth contour. Vessels that are subject to RCA restrictions may not fish in the RCA, or operate in the RCA for any purpose other than transiting.

2/ POP is included in the trip limits for minor slope rockfish. Blackgill rockfish have a species specific trip sub-limit within the minor slope rockfish cumulative limits. Yellowtail rockfish is included in the trip limits for minor shelf rockfish. Bronzespotted rockfish have a species specific trip limit.

3/ "Other flatfish" are defined at § 660.11 and include butter sole, curifin sole, flathead sole, Pacific sanddab, rex sole, rock sole, and sand sole.

4/ "Shallow Nearshore" are defined at § 660.11 under "Groundfish" (7)(i)(B)(*1*).

5/ "Deeper Nearshore" are defined at § 660.11 under "Groundfish" (7)(i)(B)(*2*).

6/ The commercial mimimum size limit for lingcod is 24 inches (61 cm) total length South of 42° N. lat.

7/ "Other fish" are defined at § 660.11 and includes kelp greenling off California and leopard shark.

To convert pounds to kilograms, divide by 2.20462, the number of pounds in one kilogram.

BILLING CODE 3510–22–C

■ 18. Amend § 660.360 by:

■ a. Removing paragraphs (c)(1)(i)(D)(*1*) through (*3*); and

■ b. Revising paragraphs (c)(1) introductory text, (c)(1)(i)(B), (c)(1)(i)(C), (c)(1)(i)(D), (c)(2)(i)(B), (c)(2)(i)(D), (c)(3)(i)(A), and (c)(3)(ii)(B).

The revisions read as follows:

§ 660.360 Recreational fishery—management measures.

* * * * *

(c) * * *

(1) *Washington.* For each person engaged in recreational fishing off the coast of Washington, the groundfish bag limit is 9 groundfish per day, including rockfish, cabezon and lingcod. Within the groundfish bag limit, there are sublimits for rockfish, lingcod, and cabezon outlined in paragraph (c)(1)(i)(D) of this section. In addition to the groundfish bag limit of 9, there will be a flatfish limit of 5 fish, not to be counted towards the groundfish bag limit but in addition to it. The recreational groundfish fishery will open the second Saturday in March through the third Saturday in October for all species. In the Pacific halibut fisheries, retention of groundfish is governed in part by annual management measures for Pacific halibut fisheries, which are published in the **Federal Register**. The following seasons, closed areas, sublimits and size limits apply:

(i) * * *

(B) *South coast recreational yelloweye rockfish conservation area.* Recreational fishing for groundfish and halibut is allowed within the South Coast Recreational YRCA. The South Coast Recreational YRCA is defined by latitude and longitude coordinates specified at § 660.70, subpart C.

(C) *Westport offshore recreational yelloweye rockfish conservation area.* Recreational fishing for groundfish and halibut is allowed within the Westport Offshore Recreational YRCA. The Westport Offshore Recreational YRCA is defined by latitude and longitude coordinates specified at § 660.70, subpart C.

(D) *Recreational rockfish conservation area.* Fishing for groundfish with recreational gear is prohibited within the recreational RCA unless otherwise stated. It is unlawful to take and retain, possess, or land groundfish taken with recreational gear within the recreational RCA unless otherwise stated. A vessel fishing in the recreational RCA may not be in possession of any groundfish unless otherwise stated. [For example, if a vessel participates in the recreational salmon fishery within the RCA, the vessel cannot be in possession of groundfish while in the RCA. The vessel may, however, on the same trip fish for and retain groundfish shoreward of the RCA on the return trip to port.] Coordinates approximating boundary lines at the 10-fm (18-m) through 100-fm (183-m) depth contours can be found at § 660.71 through § 660.73. The Washington recreational fishing season structure is as follows:

TABLE 1 TO PARAGRAPH ((C)(1)(I)(D)—WASHINGTON RECREATIONAL FISHING SEASON STRUCTURE

Marine Area	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
3 and 4 (North Coast)	Closed		Open		Open<20 fm June 1-July 31 [a/ b/]			Open			Closed	
2 (South Coast)	Closed		Open [c/d/]			Open [d/]					Closed	
1 (Columbia River)	Closed		Open [e/ f/]								Closed	

a/ Retention of Pacific cod, sablefish, lingcod, bocaccio, silvergray rockfish, canary rockfish, widow rockfish, and yellowtail rockfish allowed >20 fm on days when recreational Pacific halibut is open.
b/ Retention of yellowtail and widow rockfish is allowed > 20 fm in July.
c/ From May 1 through May 31 lingcod retention prohibited > 30 fathoms except on days that the primary halibut season is open.
d/ When lingcod is open, retention is prohibited seaward of line drawn from Queets River (47°31.70' N. Lat. 124°45.00' W. Lon.) to Leadbetter Point (46° 38.17' N. Lat. 124°30.00' W. Lon.), except on days open to the primary halibut fishery and, June 1 – 15 and September 1 - 30.
e/ Retention of flatfish, sablefish, Pacific cod, yellowtail rockfish, widow rockfish, canary rockfish, redstriped rockfish, greenstriped rockfish, silvergray rockfish, chilipepper, bocaccio, and blue/deacon rockfish allowed during the all-depth Pacific halibut fishery. Lingcod retention is only allowed north of the WA-OR border with halibut on board.
f/ Retention of lingcod is prohibited seaward of a line drawn from Leadbetter Point (46° 38.17' N. Lat. 124°21.00' W. Lon.) to 46° 33.00' N. Lat. 124°21.00' W. Lon. year round except lingcod retention is allowed from June 1 - June 15 and Sept 1 - Sept 30.

* * * * *

(2) * * *

(i) * * *

(B) *Recreational rockfish conservation area (RCA).* Fishing for groundfish with recreational gear is prohibited within the recreational RCA, a type of closed area or groundfish conservation area, except with long-leader gear (as defined at § 660.351). It is unlawful to take and retain, possess, or land groundfish taken with recreational gear within the recreational RCA, except with long-leader gear (as defined at § 660.351). A vessel fishing in the recreational RCA may not be in possession of any groundfish. [For example, if a vessel fishes in the recreational salmon fishery within the RCA, the vessel cannot be in possession of groundfish while within the RCA. The vessel may, however, on the same trip fish for and retain groundfish shoreward of the RCA on the return trip to port.] Off Oregon, from January 1 through December 31, recreational fishing for groundfish is allowed in all depths. Coordinates approximating boundary lines at the 10-fm (18 m) through 100-fm (183-m) depth contours can be found at § 660.71 through § 660.73.

* * * * *

(D) *In the Pacific halibut fisheries.* Retention of groundfish is governed in part by annual management measures for Pacific halibut fisheries, which are published in the **Federal Register**. Between the Columbia River and Humbug Mountain, during days open to the ''all-depth'' sport halibut fisheries, when Pacific halibut are onboard the vessel, no groundfish, except sablefish, Pacific cod, and other species of flatfish (sole, flounder, sanddab), may be taken and retained, possessed or landed, except with long-leader gear (as defined at § 660.351). ''All-depth'' season days are established in the annual management measures for Pacific halibut fisheries, which are published in the **Federal Register** and are announced on the NMFS Pacific halibut hotline, 1–800–662–9825.

(3) * * *

(i) * * *

(A) *Recreational rockfish conservation areas.* The recreational RCAs are areas that are closed to recreational fishing for groundfish. Fishing for groundfish with recreational gear is prohibited within the recreational RCA, except that recreational fishing for species in the Other Flatfish complex, petrale sole, and starry flounder is permitted within the recreational RCA as specified in paragraph (c)(3)(iv) of this section. It is unlawful to take and retain, possess, or land groundfish taken with recreational gear within the recreational RCA, unless otherwise authorized in this section. A vessel fishing in the recreational RCA may not be in possession of any species prohibited by the restrictions that apply within the recreational RCA. For example, if a vessel fishes in the recreational salmon fishery within the RCA, the vessel cannot be in possession of rockfish while in the RCA. The vessel may, however, on the same trip fish for and retain rockfish shoreward of the RCA on the return trip to port. If the season is closed for a species or species group, fishing for that species or species group is prohibited both within the recreational RCA and shoreward of the recreational RCA, unless otherwise authorized in this section. Coordinates approximating boundary lines at the 10-fm (18 m) through 100-fm (183-m) depth contours can be found at § 660.71 through § 660.73. The California recreational fishing season structure and RCA depth boundaries by management area and month are as follows:

(*1*) Between 42° N lat. (California/Oregon border) and 40°10′ N lat. (Northern Management Area), recreational fishing for all groundfish (except petrale sole, starry flounder, and ''Other Flatfish'' as specified in paragraph (c)(3)(iv) of this section) is closed from January 1 through April 30;

is prohibited seaward of the 30 fm (55 m) depth contour along the mainland coast and along islands and offshore seamounts from May 1 through October 31 (shoreward of 30 fm is open); and is open at all depths from November 1 through December 31.

(*2*) Between 40°10′ N lat. and 38°57.50′ N lat. (Mendocino Management Area), recreational fishing for all groundfish (except petrale sole, starry flounder, and ''Other Flatfish'' as specified in paragraph (c)(3)(iv) of this section) is closed from January 1 through April 30; prohibited seaward of the 30 fm (55 m) depth contour along the mainland coast and along islands and offshore seamounts from May 1 through October 31 (shoreward of 30 fm is open), and is open at all depths from November 1 through December 31.

(*3*) Between 38°57.50′ N lat. and 37°11′ N lat. (San Francisco Management Area), recreational fishing for all groundfish (except petrale sole, starry flounder, and ''Other Flatfish'' as specified in paragraph (c)(3)(iv) of this section) is closed from January 1 through March 31; is prohibited seaward of the boundary line approximating the 50 fm (91 m) depth contour along the mainland coast and along islands and offshore seamounts from April 1 through December 31 (shoreward of 50 fm is open). Closures around Cordell Bank (see paragraph (c)(3)(i)(C) of this section) also apply in this area.

(*4*) Between 37°11′ N lat. and 34°27′ N lat. (Central Management Area), recreational fishing for all groundfish (except petrale sole, starry flounder, and ''Other Flatfish'' as specified in paragraph (c)(3)(iv) of this section) is closed from January 1 through March 31; and is prohibited seaward of a boundary line approximating the 50 fm (91 m) depth contour along the mainland coast and along islands and offshore seamounts from April 1 through December 31.

(*5*) South of 34°27′ N lat. (Southern Management Area), recreational fishing for all groundfish (except California scorpionfish, ''Other Flatfish,'' petrale sole, and starry flounder) is closed entirely from January 1 through the last day of February. Recreational fishing for all groundfish (except ''Other Flatfish,'' petrale sole, and starry flounder, as specified in paragraph (c)(3)(iv) of this section) is prohibited seaward of a boundary line approximating the 100 fm (137 m) depth contour from April 1 through December 31 along the mainland coast and along islands and offshore seamounts, except in the CCAs where fishing is prohibited seaward of the 40 fm (73 m) depth contour when the fishing season is open (see paragraph (c)(3)(i)(B) of this section).

* * * * *

(ii) * * *

(B) *Bag limits, hook limits.* In times and areas when the recreational season for the RCG Complex is open, there is a limit of 2 hooks and 1 line when fishing for the RCG complex. The bag limit is 10 RCG Complex fish per day coastwide, with a sub-bag limit of 5 fish for vermilion rockfish. This sub-bag limit counts towards the bag limit for the RCG Complex and is not in addition to that limit. Retention of yelloweye rockfish, bronzespotted rockfish, and cowcod is prohibited. Multi-day limits are authorized by a valid permit issued by California and must not exceed the daily limit multiplied by the value of days in the fishing trip.

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 665

[Docket No. 201204–0324]

RIN 0648–BJ84

Pacific Islands Fisheries; 2020–2023 Annual Catch Limit and Accountability Measures for Hawaii Kona Crab

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Department of Commerce.

ACTION: Final rule.

SUMMARY: In this final rule, NMFS implements an annual catch limit (ACL) of 30,802 lb (13,972 kg), and an annual catch target (ACT) of 25,491 lb (11,563 kg), of Hawaii Kona crab for fishing years 2020–2023. This rule also implements, as accountability measures (AM), an in-season closure of the fishery if catch is projected to reach the ACT, and a post-season adjustment if catch exceeds the ACL. This action support the long-term sustainability of the Hawaii Kona crab fishery.

DATES: The final rule is effective January 11, 2021. The final rule is applicable in fishing years 2020, 2021, 2022, and 2023.

ADDRESSES: Copies of the Fishery Ecosystem Plan for the Hawaii Archipelago (Hawaii FEP) are available from the Western Pacific Fishery Management Council (Council), 1164 Bishop St., Suite 1400, Honolulu, HI 96813, tel. 808–522–8220, fax 808–522–8226, or *www.wpcouncil.org.*

Copies of the environmental analyses and other supporting documents for this action are available from *https://www.regulations.gov/docket?D=NOAA-NMFS-2020-0091,* or from Michael D. Tosatto, Regional Administrator, NMFS Pacific Islands Region (PIR), 1845 Wasp Blvd., Bldg. 176, Honolulu, HI 96818.

FOR FURTHER INFORMATION CONTACT: Kate Taylor, NMFS PIRO Sustainable Fisheries, 808–725–5182.

SUPPLEMENTARY INFORMATION: NMFS is implementing an ACL of 30,802 lb (13,972 kg) and an ACT of 25,491 lb (11,563 kg) of Hawaii Kona crab for each of the 2020–2023 fishing years, as recommended by the Council. The fishing year is the calendar year, and catch from State and Federal waters will count toward the ACL and ACT.

NMFS is also implementing both an in-season and post-season AM. Under the in-season AM, when NMFS projects that the catch of Kona crab will reach the ACT, we will close the commercial and non-commercial fisheries for Kona crab in Federal waters for the remainder of the year. For the post-season AM, if NMFS and the Council determine, after the end of each fishing year, that the catch exceeded the ACL, NMFS will reduce the ACL and ACT in the subsequent fishing year by the amount of the overage. In the event that the catch exceeds the ACT, but is below the ACL, we will not apply a post-season correction.

This final rule will make a housekeeping change in the regulations for Hawaii Kona crab and deepwater shrimp ACLs and AMs. Specifically, this rule adds a separate paragraph for each stock in 50 CFR 665.253 to distinguish between the ACLs for Hawaii Kona crab and deepwater shrimp.

Additional background information on this action is found in the preamble to the proposed specifications; we do not repeat it here.

Comments and Responses

On October 15, 2020, NMFS published a proposed rule and request for comments (85 FR 65336). The comment period for the proposed specification ended on November 5, 2020. NMFS received comments from four individuals that generally supported the action and responds below.

Comment 1: This rule is necessary to ensure the sustainability of the main Hawaiian Islands (MHI) Kona crab populations and the proposed ACL and ACT are very reasonable.

Response: NMFS agrees. This action is based upon the best available scientific information and support the long-term sustainability of the Hawaii Kona crab fishery.

Comment 2: The sustainability of MHI Kona crab populations helps to maintain a healthy marine ecosystem, including Kona crab prey or predators.

Response: NMFS agrees that a sustainably managed Kona crab fishery contributes to a healthy marine ecosystem.

Comment 3: A short term ACL is preferred since it will allow NMFS and the Council to review and adjust the ACL and ACT as needed in the future.

Response: NMFS concurs; a 4-year ACL provides stability to fishermen, businesses, and Kona crab populations.

Comment 4: It is beneficial that fishermen cannot retain female Kona crabs, per State of Hawaii regulations. There is a high survivability rate for released crabs.

Response: NMFS acknowledges that the State of Hawaii prohibits the retention of female Kona crabs.

Comment 5: It is important to include accountability measures and provide timely notification to fishermen if the ACT or ACL is exceeded.

Response: NMFS agrees. This final rule includes an accountability measure that would require NMFS to close the fishery in Federal waters when the ACT is projected to be reached to prevent the fishery from exceeding the ACL. The final rule also requires NMFS to provide fishermen timely notification of any fishery closure at least 7 days before the effective date of the closure.

Changes From the Proposed Specification

This final rule contains no changes from the proposed rule.

Classification

Pursuant to section 304(b)(3) of the Magnuson-Stevens Act, the NMFS Assistant Administrator has determined that this final rule is consistent with the Hawaii FEP, other provisions of the Magnuson-Stevens Act, and other applicable law.

The Chief Counsel for Regulation of the Department of Commerce certified to the Chief Counsel for Advocacy of the Small Business Administration during the proposed rule stage that this action would not have a significant economic impact on a substantial number of small entities. The factual basis for the certification was published in the proposed rule and is not repeated here. No comments were received regarding this certification. As a result, a regulatory flexibility analysis was not required and none was prepared.

This final rule has been determined to be not significant for purposes of Executive Order 12866. This rule is not an Executive Order 13771 regulatory action because this rule is not significant under Executive Order 12866.

This final rule contains no information collection requirements under the Paperwork Reduction Act of 1995.

List of Subjects in 50 CFR Part 665

Annual catch limits, Accountability measures, Kona crab, Fisheries, Fishing, Hawaii.

Dated: December 7, 2020.

Samuel D. Rauch III,

Deputy Assistant Administrator for Regulatory Programs, National Marine Fisheries Service.

For the reasons set out in the preamble, NMFS amends 50 CFR part 665 as follows:

PART 665—FISHERIES IN THE WESTERN PACIFIC

■ 1. The authority citation for 50 CFR part 665 continues to read as follows:

Authority: 16 U.S.C. 1801 *et seq.*

■ 2. In § 665.243, add paragraph (d) to read as follows:

§ 665.243 Prohibitions.

* * * * *

(d) In Crustacean Permit Area 2, it is unlawful for any person to fish for, possess, sell, or offer for sale any Kona crab from a closed fishery in the Federal waters of the MHI in violation of § 665.253(b).

■ 3. Revise § 665.253 to read as follows:

§ 665.253 Annual Catch Limits (ACL) and Annual Catch Targets (ACT).

(a) *Deepwater Shrimp.* (1) In accordance with § 665.4, the ACLs for each fishing year are as follows:

TABLE 1 TO PARAGRAPH (a)(1)

Fishing year	2020	2021
ACL (lb)	250,733	250,733

(2) If the average catch of the three most recent years of deepwater shrimp exceeds the specified ACL in a fishing year, the Regional Administrator will reduce the ACL for the subsequent year by the amount of the overage.

(b) *MHI Kona crab.* (1) In accordance with § 665.4, the ACLs and ACTs for each fishing year are as follows:

TABLE 2 TO PARAGRAPH (b)(1)

Fishing year	2020	2021	2022	2023
ACL (lb)	30,802	30,802	30,802	30,802
ACT (lb)	25,491	25,491	25,491	25,491

(2) When the ACT is projected to be reached based on analyses of available information, the Regional Administrator shall publish a document to that effect in the **Federal Register** and shall use other means to notify affected fishermen. The document will include an advisement that the fishery will be closed beginning on a specified date, which is not earlier than 7 days after the date of filing the closure notice for public inspection at the Office of the Federal Register, until the end of the fishing year in which the ACL is reached.

(3) On and after the date specified in paragraph (b)(2) of this section, no person may fish for, possess, sell, or offer for sale any Kona crab from a closed fishery in the Federal waters of the MHI, except as otherwise allowed in this section.

(4) If landings exceed the specified ACL in a fishing year, the Regional Administrator will reduce the ACL and the ACT for the subsequent year by the amount of the overage.

BILLING CODE 3510–22–P

Proposed Rules

Federal Register
Vol. 85, No. 239
Friday, December 11, 2020

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2020–1120; Product Identifier 2019–SW–056–AD]

RIN 2120–AA64

Airworthiness Directives; Goodrich Externally-Mounted Hoist Assemblies

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: The FAA proposes to adopt a new airworthiness directive (AD) for various model helicopters with certain part-numbered Goodrich externally-mounted hoist assemblies (hoists) installed. This proposed AD would require replacing unmodified hoists, installing placards, revising the existing Rotorcraft Flight Manual (RFM) for your helicopter, deactivating or removing a hoist if a partial peel out occurs, reviewing the helicopter's hoist slip load test records, repetitively inspecting the hoist cable and overload clutch (clutch), and reporting information to the FAA. This proposed AD would also require establishing operating limitations on the hoist and prohibit installing an unmodified hoist. This proposed AD was prompted by hoists failing lower load limit inspections. The actions of this proposed AD are intended to address an unsafe condition on these products.

DATES: The FAA must receive comments on this proposed AD by January 25, 2021.

ADDRESSES: You may send comments by any of the following methods:

- *Federal eRulemaking Docket:* Go to *https://www.regulations.gov.* Follow the online instructions for sending your comments electronically.
- *Fax:* 202–493–2251.
- *Mail:* Send comments to the U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590–0001.
- *Hand Delivery:* Deliver to the ''Mail'' address between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

Examining the AD Docket

You may examine the AD docket on the internet at *https://www.regulations.gov* by searching for and locating Docket No. FAA–2020–1120; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this proposed AD, the European Union Aviation Safety Agency (EASA) AD, any comments received, and other information. The street address for Docket Operations is listed above. Comments will be available in the AD docket shortly after receipt.

For service information identified in this proposed rule, contact Collins Aerospace; 2727 E Imperial Hwy., Brea, CA 92821; telephone 714–984–1461. You may view the referenced service information at the FAA, Office of the Regional Counsel, Southwest Region, 10101 Hillwood Pkwy, Room 6N–321, Fort Worth, TX 76177.

FOR FURTHER INFORMATION CONTACT: Kristi Bradley, Aerospace Engineer, General Aviation & Rotorcraft Section, International Validation Branch, FAA, 10101 Hillwood Pkwy., Fort Worth, TX 76177; telephone 817–222–5110; email *kristin.bradley@faa.gov.*

SUPPLEMENTARY INFORMATION:

Comments Invited

The FAA invites you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under **ADDRESSES**. Include ''Docket No. FAA–2020–1120; Product Identifier 2019–SW–056–AD'' at the beginning of your comments. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. The FAA will consider all comments received by the closing date and may amend this proposal because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to *http://www.regulations.gov,* including any personal information you provide. The agency will also post a report summarizing each substantive verbal contact received about this proposal.

Confidential Business Information

CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this NPRM contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this NPRM, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as ''PROPIN.'' The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this NPRM. Submissions containing CBI should be sent to Kristi Bradley, Aerospace Engineer, General Aviation & Rotorcraft Section, International Validation Branch, FAA, 10101 Hillwood Pkwy., Fort Worth, TX 76177; telephone 817–222–5110; email *kristin.bradley@faa.gov.* Any comments that the FAA receives which are not specifically designated as CBI will be placed in the public docket for this rulemaking.

Discussion

EASA, which is the Technical Agent for the Member States of the European Union, has issued a series of ADs, the most recent being EASA AD No. 2015–0226R5, Revision 5, dated July 23, 2020 (EASA AD 2015–0226R5), to correct an unsafe condition for various model helicopters with a Goodrich externally-mounted hoist that has one of the following part numbers (P/Ns) or base P/Ns installed: 42315, 42325, 44301–10–1, 44301–10–2, 44301–10–4, 44301–10–5, 44301–10–6, 44301–10–7, 44301–10–8, 44301–10–9, 44301–10–10, 44301–10–11, 44311, 44312, 44314, 44315, 44316, or 44318. These hoists have a common overload clutch design. EASA advises of an initial incident of a rescue hoist containing a dummy test

load of 552 lbs. that reeled-out without command of the operator and impacted the ground during a maintenance check flight. Examination of the hoist determined that the overload clutch had failed. EASA states that this condition, if not detected and corrected, could lead to further cases of in-flight loss of the hoist load, possibly resulting in injury to persons on the ground or in a hoisting accident.

EASA also determined that some versions of the existing clutch had not been approved for aircraft use. EASA advises that Goodrich developed a new overload clutch with improved process control to mitigate some of the factors resulting in the degraded clutch performance. EASA's series of ADs were issued to adjust compliance intervals and replacement times, and include revised service information. EASA AD 2015–0226R5 was prompted by a major change approval for Leonardo S.p.a. Model AW109SP helicopters that allows a longer overhaul interval for hoists with the new overload clutch installed.

Accordingly, EASA AD 2015–0226R5 requires a records review to determine if the cable has exceeded the allowable limit in previous load testing, a repetitive load check and test of the clutch slip value, removal or deactivation of a hoist that cannot be tested due to lack of approved instructions, replacement of the old clutch P/N with a new clutch developed by Goodrich to mitigate some of the factors resulting in clutch degradation, periodic replacement of the hoist, reduction of the maximum allowable load on the hoist, addition of operational limitations to the RFM, and replacement of the hoist after a partial peel out. EASA AD 2015–0226R5 also prohibits the installation of a replacement cable that has exceeded the allowable limit in previous load testing. EASA considers AD 2015–0226R5 to be interim action and advises further AD action may follow.

FAA's Determination

Affected helicopters include helicopters that have been approved by the aviation authorities of Canada, Italy, France, and Germany and are approved for operation in the United States. Pursuant to the FAA's bilateral agreement with the European Union, EASA has notified the FAA about the unsafe condition described in its AD. The FAA is proposing this AD after evaluating all known relevant information and determining that an unsafe condition is likely to exist or develop on other helicopters.

Related Service Information Under 1 CFR Part 51

The FAA reviewed Goodrich Alert Service Bulletin (ASB) 44301–10–18, Revision 6, dated October 10, 2016 (ASB 44301–10–18, Rev 6), which specifies maximum hoist load limitations with respect to ambient temperature and describes actions and conditions that could reduce the capacity of the clutch. This service information also specifies procedures for inspecting the cable and inspecting the clutch by performing a cable conditioning lift and a hoist slip load test.

This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Proposed AD Requirements

This proposed AD would require:

- Replacing any hoist without a ''4'' as the first digit of its serial number (S/N) within 12 months after the effective date of this AD or before the hoist accumulates 55 operating hours, 1,200 hoist cycles (cycles), or 1,600 hoist lifts (lifts), whichever occurs first.
- Installing placards and revising the existing RFM for your helicopter to add maximum hoist load limitations, an excessive maneuvering warning, a maximum sustained bank angle in turn, and a prohibition on operating the hoist in the event of a partial peel out.
- Deactivating or removing any hoist that experiences partial peel out from service.
- Reviewing records for cable load-testing that was previously performed, and depending on the findings, replacing the cable.
- Repetitively inspecting the cable, inspecting the clutch by performing a cable conditioning lift and hoist slip load test, inspecting the cable a second time, reporting certain information to the FAA, and depending on these inspection outcomes, replacing the cable or removing the hoist from service.
- This proposed AD would also prohibit installing an affected replacement or original installation hoist that has not been re-identified to indicate a new improved clutch assembly.

Installation of a hoist with an improved overload clutch assembly, which is indicated by having a ''4'' as the first digit of its S/N, would not terminate the actions required by this proposed AD.

Differences Between This Proposed AD and the EASA AD

The EASA AD requires repetitively replacing the hoist with a modified hoist, whereas this proposed AD would not require repetitive replacement once a modified hoist with the improved clutch assembly is installed. The EASA AD requires adding a placard or operational limitation to the RFM warning that exceeding 15° of lateral pendulum angle/helicopter vertical axis can lead to clutch slippage, and this proposed AD would not. The EASA AD requires adding an operating limitation to the RFM limiting the number of persons who can be hoisted, whereas this proposed AD would not. This proposed AD would require replacing the cable before the next hoist operation if a cable has previously been load-tested at more than 1,500 lbs or at an unknown weight during at least one cable pull, while the EASA AD requires this replacement during multiple cable pulls. This proposed AD would require visually inspecting and measuring the diameter of the cable before and after performing a cable conditioning and a hoist slip load test, whereas the EASA AD does not. This proposed AD would require performing the cable conditioning and hoist slip load test within 30 days and thereafter at intervals not to exceed 6 months, 400 lifts, or 300 cycles. The EASA AD specifies performing the hoist slip load test according to the compliance time of the design approval holder instead. After the installation (not reinstallation) of a modified hoist, the EASA AD requires performing an initial hoist load check/test prior to hoisting operation, whereas this proposed AD would not.

Interim Action

The FAA considers this proposed AD to be an interim action. The inspection reports that would be required by this proposed AD will enable better insight into the condition of the hoists, and eventually to develop final action to address the unsafe condition. Once final action has been identified, the FAA might consider further rulemaking.

Costs of Compliance

The FAA estimates that this proposed AD affects 2,911 helicopters of U.S. Registry. Labor rates are estimated at $85 per work-hour. Based on these numbers, the FAA estimates that operators may incur the following costs in order to comply with this proposed AD.

Replacing a hoist would take about 8 work-hours and parts would cost about

$200,000 for an estimated cost of $200,680.

Revising the existing RFM for your helicopter and installing placards would take about 0.5 work-hour for an estimated cost of $43 per helicopter and $125,173 for the U.S. fleet.

Deactivating or removing a hoist that experiences partial peel out would take about 2 work-hours for an estimated cost of $170.

Reviewing records would take about 0.5 work-hour for an estimated cost of $43 per helicopter and $125,173 for the U.S. fleet.

Inspecting the cable and performing a cable conditioning lift and hoist slip load test would take about 2 work-hours for an estimated cost of $170 per helicopter and $494,870 for the U.S. fleet per inspection cycle. Reporting the hoist slip load test information would take about 0.25 work-hour for a cost of $21 per helicopter and $61,131 for the U.S. fleet per reporting cycle.

Replacing the cable would take about 3 work-hours and parts would cost about $3,150 for a total replacement cost of $3,405.

Paperwork Reduction Act

A federal agency may not conduct or sponsor, and a person is not required to respond to, nor shall a person be subject to a penalty for failure to comply with a collection of information subject to the requirements of the Paperwork Reduction Act unless that collection of information displays a currently valid OMB Control Number. The OMB Control Number for this information collection is 2120–0056. Public reporting for this collection of information is estimated to be approximately 0.25 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. All responses to this collection of information are mandatory. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden to: Information Collection Clearance Officer, Federal Aviation Administration, 10101 Hillwood Parkway, Fort Worth, TX 76177–1524.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

The FAA determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed, I certify this proposed regulation:

1. Is not a ''significant regulatory action'' under Executive Order 12866,

2. Will not affect intrastate aviation in Alaska, and

3. Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

Goodrich Externally-Mounted Hoist Assemblies: Docket No. FAA–2020–1120; Product Identifier 2019–SW–056–AD.

(a) Applicability

This AD applies to helicopters, certificated in any category, with an externally-mounted hoist assembly (hoist) with a part number (P/N) or base P/N listed under the Hoist Family column in Table 1 of Goodrich Alert Service Bulletin No. 44301–10–18, Revision 6, dated October 10, 2016 (ASB 44301–10–18 Rev 6), installed. An affected hoist may be installed on but not limited to the following:

Note 1 to the introductory text of paragraph (a): The hoist P/N may be included as a component of a different part-numbered kit.

(1) Airbus Helicopters (previously Eurocopter France) Model AS332L, AS332L1, AS332L2, AS350B2, AS350B3, AS365N3, and EC225LP helicopters;

(2) Airbus Helicopters Deutschland GmbH (AHD) (previously Eurocopter Deutschland GmbH) Model EC135P1, EC135P2, EC135P2+, EC135P3, EC135T1, EC135T2, EC135T2+, EC135T3, MBB–BK 117 C–2, and MBB–BK 117 D–2 helicopters;

(3) Bell Textron Canada Limited (previously Bell Helicopter Textron Canada Limited) Model 429 and 430 helicopters;

(4) Bell Textron Inc. (previously Bell Helicopter Textron Inc.) Model 205A, 205A–1, 205B, 212, 412, 412CF, and 412EP helicopters;

(5) Leonardo S.p.a. (previously Finmeccanica S.p.A., AgustaWestland S.p.A) Model A109, A109A, A109A II, A109C, A109E, A109K2, A109S, AB139, AB412, AB412 EP, AW109SP, and AW139, helicopters;

(6) MD Helicopters, Inc. (MDHI) Model MD900 helicopters;

(7) Transport and restricted category helicopters, originally manufactured by Sikorsky Aircraft Corporation, Models S–61A, S–61L, S–61N, S–76A, S–76B, S–76C, S–76D, and S–92A; and

(8) Restricted category Model HH–1K, TH–1F, TH–1L, UH–1A, UH–1B, UH–1E, UH–1F, UH–1H, UH–1L, and UH–1P helicopters.

(b) Unsafe Condition

This AD defines the unsafe condition as failure of the hoist overload clutch resulting in an in-flight failure of the hoist, which could result in injury to a person being lifted.

(c) Comments Due Date

The FAA must receive comments by January 25, 2021.

(d) Compliance

You are responsible for performing each action required by this AD within the specified compliance time unless it has already been accomplished prior to that time.

(e) Required Actions

(1) For a hoist without the number ''4'' as the first digit of its serial number (S/N), before further flight:

(i) For hoists that use operating hours to monitor hoist operation, within 12 months after the effective date of this AD or before the hoist accumulates 55 hoist operating hours, whichever occurs first, replace the hoist. For purposes of this AD, hoist operating hours are counted anytime the hoist motor is operating.

(ii) For hoists that use hoist cycles (cycles) to monitor hoist operation, within 12 months after the effective date of this AD or before the hoist accumulates 1,200 cycles, whichever occurs first, replace the hoist. For purposes of this AD, a cycle is counted anytime the cable is extended and then retracted a minimum of 16 feet (5 meters) during flight or on the ground, with or without a load.

(iii) For hoists that use hoist lifts (lifts) to monitor hoist operation, within 12 months after the effective date of this AD or before the hoist accumulates 1,600 lifts, whichever occurs first, replace the hoist. For purposes of this AD, a lift is counted anytime the cable is unreeled or recovered or both with a load attached to the hook, regardless of the length of the cable that is deployed or recovered. An unreeling or recovery of the cable with no load on the hook is not a lift. If a load is applied for half an operation (*i.e.* unreeling or recovery), it must be counted as one lift.

(2) For all hoists identified in the introductory text of paragraph (a) of this AD, before further flight, install placards and revise the existing Rotorcraft Flight Manual (RFM) for your helicopter by inserting a copy of this AD or by making pen-and-ink changes in Section 2, Limitations, of the RFM Supplement for the hoist as follows:

(i) For 500 pound (lb) rated hoists, install a placard with the information in Figure 1 to paragraph (e)(2)(i) of this AD in full view of the hoist operator and add the information in Figure 1 to paragraph (e)(2)(i) of this AD to the existing RFM for your helicopter:

500 lb Rated Hoist

OAT at or above 32°F (0°C): Maximum hoist load 450 lbs (204 kg)
OAT between -4°F (-20°C) and 32°F (0°C): Maximum hoist load 400 lbs (181 kg)

Figure 1 to Paragraph (e)(2)(i)

(ii) For 600 lb rated hoists, install a placard with the information in Figure 2 to paragraph (e)(2)(ii) of this AD in full view of the hoist operator and add the information in Figure 2 to paragraph (e)(2)(ii) of this AD to the existing RFM for your helicopter:

600 lb Rated Hoist

OAT at or above 32°F (0°C): Maximum hoist load 550 lbs (249 kg)
OAT between -4°F (-20°C) and 32°F (0°C): Maximum hoist load 500 lbs (227 kg)

Figure 2 to Paragraph (e)(2)(ii)

(iii) For 500 and 600 lb rated hoists, install a placard with the information in Figure 3 to paragraph (e)(2)(iii) of this AD in full view of the pilot and add the information in Figure 3 to paragraph (e)(2)(iii) of this AD to the existing RFM for your helicopter.

(iv) For 500 and 600 lb rated hoists, install a placard with the information in Figure 4 to paragraph (e)(2)(iv) of this AD in full view of the pilot and add the information in Figure 4 to paragraph (e)(2)(iv) of this AD to the existing RFM for your helicopter:

Hoist Operations

Warning: Excessive maneuvering with extended cable and load on the hook may cause uncommanded peel out of the cable.

Maximum sustained bank angle in turn is 20°

Figure 3 to Paragraph (e)(2)(iii)

(3) For all hoists identified in the introductory text of paragraph (a) of this AD, as of the effective date of this AD, if a partial peel out occurs, deactivate or remove the hoist from service before further flight. For purposes of this AD, a partial peel out occurs when 20 inches (0.5 meter) or more of the hoist cable reels off of the hoist cable drum in one overload clutch slip incident.

(4) For all hoists identified in the introductory text of paragraph (a) of this AD, within 30 days after the effective date of this AD, review the helicopter's hoist slip load test records. If the cable was load-tested at more than 1,500 lbs or at an unknown weight during one or more cable pulls, replace the cable with an airworthy cable before the next hoist operation.

(5) For all hoists identified in the introductory text of paragraph (a) of this AD, within 30 days after the effective date of this AD, and thereafter at intervals not to exceed 6 months, 400 lifts, or 300 cycles, whichever occurs first:

(i) Visually inspect the first 18 inches (45 cm) of the cable from the hook assembly for broken wires and necked down sections. If there is a broken wire or necked down section, replace the cable with an airworthy cable before further flight.

(ii) Within the first 18 inches (45 cm) of the cable from the hook assembly, measure the diameter of the cable at the most necked down area. If the diameter measurement is less than 0.185 inch (4.7 mm), replace the cable with an airworthy cable before further flight.

(iii) Using load check tool P/N 49900–889–104, perform a cable conditioning and a hoist

slip load test by following the Accomplishment Instructions, paragraphs 3.C.(1) through 3.C.(3)(g) of ASB 44301–10–18 Rev 6. If the average of the five test values is less than the limit shown in Table 2 for 600 lb rated hoists or Table 3 for 500 lb rated hoists of ASB 44301–10–18 Rev 6, remove the hoist from service before further flight.

(iv) Visually inspect the first 30 feet (10 meters) of the cable from the hook assembly for broken wires, necked down sections, kinks, bird-caging, flattened areas, abrasion, and gouging. It is permissible for the cable to have a slight curve immediately after performing the hoist slip load test. If there is a broken wire, necked down section, kink, or any bird-caging; or if there is a flattened area, any abrasion, or a gouge that exceeds allowable limits, replace the cable with an airworthy cable before further flight.

(v) Repeat the actions specified in paragraphs (e)(5)(i) and (ii) of this AD. If there is a broken wire or necked down section or the cable diameter measurement is less than 0.185 inch (4.7 mm), replace the cable with an airworthy cable before further flight.

(6) Within 30 days after accomplishing the hoist slip load test, report the information requested in Appendix 1 to this AD by email to *ASB.SIS-CA@utas.utc.com;* or mail to Goodrich, Collins Aerospace; 2727 E. Imperial Hwy., Brea, CA 92821.

(7) As of the effective date of this AD, do not install as a replacement part or as an original installation an externally-mounted hoist with a P/N identified in the introductory text of paragraph (a) of this AD unless it has an improved overload clutch assembly with the number ''4'' as the first digit of the S/N.

(f) Paperwork Reduction Act Burden Statement

A federal agency may not conduct or sponsor, and a person is not required to respond to, nor shall a person be subject to a penalty for failure to comply with a collection of information subject to the requirements of the Paperwork Reduction Act unless that collection of information displays a currently valid OMB Control Number. The OMB Control Number for this information collection is 2120–0056. Public reporting for this collection of information is estimated to be approximately 0.25 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. All responses to this collection of information are mandatory. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden to: Information Collection Clearance Officer, Federal Aviation Administration, 10101 Hillwood Parkway, Fort Worth, TX 76177–1524.

(g) Alternative Methods of Compliance (AMOCs)

(1) The Manager, International Validation Branch, FAA, may approve AMOCs for this AD. Send your proposal to: Kristi Bradley, Aerospace Engineer, General Aviation & Rotorcraft Section, International Validation Branch, FAA, 10101 Hillwood Pkwy., Fort Worth, TX 76177; telephone 817–222–5110; email *kristin.bradley@faa.gov.*

(2) For operations conducted under a 14 CFR part 119 operating certificate or under 14 CFR part 91, subpart K, the FAA suggests that you notify your principal inspector, or lacking a principal inspector, the manager of the local flight standards district office or certificate holding district office before operating any aircraft complying with this AD through an AMOC.

(h) Additional Information

The subject of this AD is addressed in European Union Aviation Safety Agency (EASA) AD No. 2015–0226R5, Revision 5, dated July 23, 2020. You may view the EASA AD on the internet at *https://www.regulations.gov* in the AD Docket.

(i) Subject

Joint Aircraft Service Component (JASC) Code: 2500, Cabin Equipment/Furnishings.

[Docket No. FAA–2020–0727; Airspace Docket No. 20–ACE–18]

RIN 2120–AA66

Proposed Amendment of Class E Airspace; Cambridge NE

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This action proposes to amend Class E airspace, extending upward from 700 feet above the surface. This action also proposes several administrative corrections to the airspace's legal description. This action would ensure the safety and management of instrument flight rules (IFR) operations at the airport.

DATES: Comments must be received on or before January 25, 2021.

ADDRESSES: Send comments on this proposal to the U.S. Department of Transportation, Docket Operations, 1200 New Jersey Avenue SE, West Building Ground Floor, Room W12–140, Washington, DC 20590; telephone: 1–800–647–5527, or (202) 366–9826. You must identify FAA Docket No. FAA–2020–0727; Airspace Docket No. 20–ACE–18, at the beginning of your comments. You may also submit comments through the internet at *https://www.regulations.gov.*

FAA Order 7400.11E, Airspace Designations and Reporting Points, and subsequent amendments can be viewed online at *https://www.faa.gov/air_traffic/publications/.* For further information, you can contact the Airspace Policy Group, Federal Aviation Administration, 800 Independence Avenue SW, Washington, DC 20591; telephone: (202) 267–8783. The Order is also available for inspection at the National Archives and Records Administration (NARA). For information on the availability of FAA Order 7400.11E at NARA, email *fedreg.legal@nara.gov* or go to *https://www.archives.gov/federal-register/cfr/ibr-locations.html.*

FOR FURTHER INFORMATION CONTACT: Matthew Van Der Wal, Federal Aviation Administration, Western Service Center, Operations Support Group, 2200 S 216th Street, Des Moines, WA 98198; telephone (206) 231–3695.

SUPPLEMENTARY INFORMATION:

Authority for This Rulemaking

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority, as it would amend the Class E airspace at Cambridge Municipal Airport, Cambridge NE, to support IFR operations at the airport.

Comments Invited

Interested parties are invited to participate in this proposed rulemaking by submitting such written data, views, or arguments, as they may desire. Comments that provide the factual basis supporting the views and suggestions presented are particularly helpful in developing reasoned regulatory decisions on the proposal. Comments are specifically invited on the overall regulatory, aeronautical, economic, environmental, and energy-related aspects of the proposal. Communications should identify both docket numbers and be submitted in triplicate to the address listed above. Persons wishing the FAA to acknowledge receipt of their comments on this notice must submit with those comments a self-addressed, stamped postcard on which the following statement is made: ''Comments to Docket No. FAA–2020–0727; Airspace Docket No. 20–ACE–18''. The postcard will be date/time stamped and returned to the commenter.

All communications received before the specified closing date for comments will be considered before taking action on the proposed rule. The proposal contained in this notice may be changed in light of the comments received. A report summarizing each substantive public contact with FAA personnel concerned with this rulemaking will be filed in the docket.

Availability of NPRMs

An electronic copy of this document may be downloaded through the internet at *https://www.regulations.gov.* Recently published rulemaking documents can also be accessed through the FAA's web page at *https://www.faa.gov/air_traffic/publications/airspace_amendments/.*

You may review the public docket containing the proposal, any comments received, and any final disposition in person in the Dockets Office (see the ''**ADDRESSES**'' section for the address and phone number) between 9:00 a.m. and 5:00 p.m., Monday through Friday, except federal holidays. An informal docket may also be examined during normal business hours at the Northwest Mountain Regional Office of the Federal Aviation Administration, Air Traffic Organization, Western Service Center, Operations Support Group, 2200 S 216th Street, Des Moines, WA 98198.

Availability and Summary of Documents for Incorporation by Reference

This document proposes to amend FAA Order 7400.11E, Airspace Designations and Reporting Points, dated July 21, 2020, and effective September 15, 2020. FAA Order 7400.11E is publicly available as listed in the **ADDRESSES** section of this document. FAA Order 7400.11E lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

The Proposal

The FAA is proposing an amendment to Title 14 Code of Federal Regulations (14 CFR) Part 71 by amending the Class E airspace extending upward from 700 feet above the surface. To properly contain IFR departures to 700 feet above the surface the 6.4-mile radius should be increased to a 7.5-mile radius of the airport. This area would be described as follows: That airspace extending upward from 700 feet above the surface within a 7.5-mile radius of Cambridge Municipal Airport.

Further, this action proposes to remove Harry Strunk NDB from the airspace text header and the airspace description. The FAA proposes the removal of the navigation aid (NAVAID) because it is being decommissioned. Also, the NAVAID is not needed to describe the airspace.

Lastly, this action proposes an administrative correction to the airspace legal description. The airport's geographic coordinates do not match the FAA database and should be updated to lat. 40°18′24″ N, long. 100°09′43″ W.

Class E5 airspace designations are published in paragraph 6005 of FAA Order 7400.11E, dated July 21, 2020, and effective September 15, 2020, which is incorporated by reference in 14 CFR 71.1. The Class E airspace designations listed in this document will be published subsequently in the Order.

FAA Order 7400.11, Airspace Designations and Reporting Points, is published yearly and effective on September 15.

Regulatory Notices and Analyses

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current, is non-controversial, and unlikely to result in adverse or negative comments. It, therefore: (1) Is not a ''significant regulatory action'' under Executive Order 12866; (2) is not a ''significant rule'' under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule, when promulgated, would not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

This proposal will be subject to an environmental analysis in accordance with FAA Order 1050.1F, ''Environmental Impacts: Policies and Procedures'' prior to any FAA final regulatory action.

List of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me, the Federal Aviation Administration proposes to amend 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

■ 1. The authority citation for 14 CFR part 71 continues to read as follows:

Authority: 49 U.S.C. 106(f), 106(g), 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

■ 2. The incorporation by reference in 14 CFR 71.1 of FAA Order 7400.11E, Airspace Designations and Reporting Points, dated July 21, 2020, and effective September 15, 2020, is amended as follows:

Paragraph 6005 Class E Airspace Areas Extending Upward From 700 Feet or More Above the Surface of the Earth.

* * * * *

ACE NE E5 Cambridge, NE

Cambridge Municipal Airport, NE
(Lat. 40°18′24″ N, long. 100°09′43″ W)

That airspace extending upward from 700 feet above the surface within a 7.5-mile radius of Cambridge Municipal Airport.

Issued in Seattle, Washington, on December 7, 2020.

B.G. Chew,

Acting Group Manager, Operations Support Group, Western Service Center.

Temporary Rules to Include Certain ''Platform Workers'' in Compensatory Offerings Under Rule 701 and Form S–8

AGENCY: Securities and Exchange Commission.

ACTION: Proposed rule.

SUMMARY: The Securities and Exchange Commission (''Commission'') is proposing for public comment amendments to the exemption from registration under the rules of the Securities Act of 1933 (''Securities Act'') for securities issued by non-reporting companies pursuant to compensatory arrangements and to Form S–8, the registration statement for offerings by reporting companies pursuant to employee benefit plans. The amendments would establish a temporary provision under Securities Act rules that, on a trial basis, would permit a non-reporting issuer to offer and sell securities for a compensatory purpose to an expanded group of workers without having to register the offers and sales under the Securities Act, as long as certain conditions are met. Specifically, the proposed amendments would permit the issuer to offer and sell securities to those workers who provide services available through the issuer's internet-based marketplace platform or through another widespread, technology-based marketplace platform or system (''platform workers''). The amendments would similarly, on a trial basis, permit a reporting issuer to include such workers in compensatory offerings registered on Form S–8. These proposed rule amendments would expire, absent further action by the Commission, five years from the date of their effectiveness. We are also proposing to amend the rules under the Securities Exchange Act of 1934 (''Exchange Act''). The amendment would extend the exclusion from the definition of ''held of record'' and corresponding safe harbor, which currently applies to securities held by persons who received them pursuant to an employee compensation plan, to securities held by persons who received them pursuant to a compensation plan for platform workers under the proposed Securities Act rule amendment. The proposed exclusion and safe harbor for securities issued to platform workers under Exchange Act rules would not be temporary.

DATES: Comments should be received on or before February 9, 2021.

ADDRESSES: Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/submitcomments.htm*).

Paper Comments

- Send paper comments to Vanessa A. Countryman, Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to File Number S7–19–20. To help us process and review your comments more efficiently, please use only one method. We will post all comments on our internet website (*https://www.sec.gov/rules/proposed.shtml*). Comments are also available for website viewing and printing in our Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10 a.m. and 3 p.m. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly.

We or the staff may add studies, memoranda, or other substantive items to the comment file during this rulemaking. A notification of the inclusion in the comment file of any such materials will be made available on our website. To ensure direct electronic receipt of such notifications, sign up through the ''Stay Connected'' option at *www.sec.gov* to receive notifications by email.

FOR FURTHER INFORMATION CONTACT: Elliot Staffin, Office of Rulemaking, at (202) 551–3430, in the Division of Corporation Finance, U.S. Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549.

SUPPLEMENTARY INFORMATION: We are proposing to amend 17 CFR 230.428 (''Rule 428''), 17 CFR 230.701 (''Rule 701''), and 17 CFR 239.16b (''Form S–8'') under the Securities Act,[1] and 17 CFR 240.12g5–1 (''Rule 12g5–1'') under the Exchange Act.[2]

I. Introduction

A. Rule 701, Form S–8, and the Concept Release

Title 17, section 230.701 (''Rule 701'') provides an exemption from the registration requirements of Securities Act Section 5 [3] for offers and sales of securities by non-reporting companies [4] to their employees, officers, directors, trustees, consultants, or advisors [5] under written compensatory benefit plans [6] or written agreements relating to compensation.[7] The rule reflects the Commission's long-standing position that offers and sales of securities for compensatory purposes raise different issues, and therefore should be treated differently, from offers and sales that raise capital for the issuer of the securities.[8]

For example, when first proposing Rule 701, the Commission recognized that employee equity incentive arrangements are ''a potentially important tool to attract, compensate and motivate employees.'' [9] It further expressed the concern that private, smaller companies were forgoing this potentially valuable means of compensation because of the costs of complying with Securities Act registration requirements.[10] The Commission also has expressly addressed the role that equity compensation may play in the employment relationship by indicating that using equity as a component of compensation may align the incentives of employees with the success of the enterprise, facilitate recruitment and retention, and preserve cash for the issuer's operations.[11]

Form S–8 is the simplified form for the registration of securities transactions involving an issuance to a registrant's employees in a compensatory or incentive context and for a non-capital-raising purpose.[12] For purposes of Form S–8, the term ''employee'' includes consultants and advisors as long as they are natural persons and provide *bona fide* services to the registrant not in connection with a capital-raising transaction or promoting or maintaining a market for the registrant's securities.[13] Form S–8 provides for an abbreviated disclosure format, allows for updating through forward incorporation by reference of Exchange Act reports, and is effective immediately upon filing.[14] It also requires the issuer to provide disclosure to employees and others receiving securities in the offering. In addition, the full spectrum of investor protections associated with registration under the Securities Act applies to the transaction.

In July 2018, the Commission published a concept release to solicit comment on whether and how best to modernize the exemption under Rule 701 and to update Form S–8.[15] In the release, the Commission requested comment on how to address, consistent with investor protection, the significant evolution that has taken place in the types of compensatory offerings issuers make and the composition of the workforce since the Commission last substantively amended this rule and form.[16] Regarding workforce changes, the Commission focused on the new types of work relationships between companies and individuals that have

[3] 15 U.S.C. 77e.

[4] Only issuers that are not subject to the reporting requirements of Section 13 or 15(d) of the Exchange Act (15 U.S.C. 78m and 78o(d)) and are not investment companies registered or required to be registered under the Investment Company Act of 1940 (15 U.S.C. 80a–1 *et seq.*) are eligible to use Rule 701. *See* 17 CFR 230.701(b).

[5] When the Commission first proposed Rule 701, it initially limited the exemption to the issuer's employees, directors, trustees or officers (or those of its parents or subsidiaries). *See Regulation D Revisions; Exemption for Certain Employee Benefit Plans,* Release No. 33–6683 [52 FR 3015 (Jan. 30, 1987)] (''Rule 701 Proposing Release''). The Commission specifically excluded consultants and ''independent agents'' due to a concern that including them could lead to an exemption broader than the intended compensatory purpose. *See, e.g., Employee Benefit Plans and Compensation Contracts,* Release No. 33–6726 (July 24, 1987) [52 FR 29033 (Aug. 5, 1987)] (''Rule 701 Reproposing Release''). Eventually, however, when adopting Rule 701, the Commission included issuances to consultants and advisors within the rule's scope. The Commission noted comments pointing out that securities issuances to such persons could be for compensatory and non-capital-raising purposes and determined that there was no meaningful basis for distinguishing issuances to them and to employees. *See Compensatory Benefit Plans and Contracts,* Release No. 33–6768 [53 FR 12918–02 (Apr. 20, 1988)] (''Rule 701 Adopting Release''). In 1999, the Commission amended Rule 701, consistent with amendments to Form S–8, to prevent the misuse of that form for capital-raising transactions. *See Rule 701—Exempt Offerings Pursuant to Compensatory Arrangements,* Release No. 33–7645 (Feb. 25, 1999) [64 FR 11095 (Mar. 8, 1999)] (''1999 Rule 701 Adopting Release''). Specifically, the Commission modified the definition of consultants and advisors to require that they be natural persons, provide *bona fide* services, and the services not be in connection with the offer or sale of securities in a capital-raising transaction and not directly or indirectly promote or maintain a market for the issuer's securities. *See id.*

[6] 17 CFR 230.701(c)(2) defines a ''compensatory benefit plan'' as ''any purchase, savings, option, bonus, stock appreciation, profit sharing, thrift, incentive, deferred compensation, pension or similar plan.''

[7] *See* 17 CFR 230.701(c). The exemption also extends to offers and sales of securities under written compensatory plans or contracts established by the issuer's parent or the issuer's or parent's majority-owned subsidiaries. *See id.* The Commission has also indicated that a person in a *de facto* employment relationship with the issuer, such as a nonemployee providing services that traditionally are performed by an employee, with compensation paid for those services being the primary source of the person's earned income, would qualify as an eligible person under the exemption. *See* 1999 Rule 701 Adopting Release, *supra* note 5.

[8] *See* Rule 701 Reproposing Release, *supra* note 5, at 29033 (stating that ''[t]he Commission historically has recognized that when transactions of this nature are primarily compensatory and incentive oriented, some accommodation should be made under the Securities Act'').

[9] *See* Rule 701 Proposing Release, *supra* note 5, at 3020.

[10] *See id.; see also* 1999 Rule 701 Adopting Release, *supra* note 5, at 11095 (stating that when adopting Rule 701, ''we determined that it would be an unreasonable burden to require these private companies, many of which are small businesses, to incur the expenses and disclosure obligations of public companies when their only public securities sales were to employees,'' and further noting that ''these sales are for compensatory and incentive purposes, rather than for capital-raising'').

[11] *See Executive Compensation and Related Person Disclosure,* Release No. 33–8732A (Aug. 29, 2006) [71 FR 53158 (Sept. 6, 2006)] (''2006 Executive Compensation Adopting Release'') (stating that unlike salary and bonus compensation, stock option compensation does not require the payment of cash by the registrant, and therefore can be particularly attractive to registrants for which cash is a scarce resource; noting that stock option compensation may also provide an incentive for employees to work to increase the registrant's stock price; and additionally indicating that some registrants may be able to use stock option compensation to help retain employees, because an employee with unvested in-the-money options forfeits his potential value if he leaves the registrant's employ.).

[12] *See Registration of Securities on Form S–8,* Release No. 33–7646 (Feb. 25, 1999) [64 FR 11103 (Mar. 8, 1999)] (''1999 Form S–8 Adopting Release'').

[13] *See* Form S–8, General Instruction A.1.(a)(1). *See also* 1999 Form S–8 Adopting Release (stating that issuers may continue to use securities registered on Form S–8 to compensate persons who have a de facto employment relationship with them. Such a relationship may exist where a person not employed by a registrant provides the registrant with *bona fide* services that traditionally are performed by an employee, and the compensation paid by the registrant for those services is the primary source of the person's earned income.).

[14] *See Registration and Reporting Requirements for Employee Benefit Plans,* Release No. 33–6867 (June 6, 1990) [55 FR 23909 (June 13, 1990)] (''1990 Form S–8 Adopting Release'').

[15] *See Concept Release on Compensatory Securities Offerings and Sales,* Release No. 33–10521 (July 18, 2018) [83 FR 34958 (July 24, 2018)] (''Concept Release''). Unless otherwise indicated, comments cited in this release are to the public comments on the Concept Release, which are available at *https://www.sec.gov/comments/s7-18-18/s71818.htm.*

[16] *See id.* While the Commission amended Rule 701 in 2018 to implement the Congressional mandate to raise the Rule 701(e) disclosure threshold from $5 million to $10 million, *see* Release No. 33–10520 (Jul. 18, 2018) [83 FR 34940 (Jul. 24, 2018)], the last substantive amendment of Rule 701 prior to then was in 1999. *See* 1999 Rule 701 Adopting Release *supra* note 5. The Commission last substantively amended Form S–8 in 2005. *See* Release No. 33–8587 (Jul. 15, 2005) [70 FR 42234 (Jul. 21, 2005)].

emerged in the so-called ''gig economy.'' [17]

These new types of work relationships have arisen in large part due to the internet and reductions in the costs of communication and information processing. They typically involve an individual's use of an internet ''platform'' provided by a company (the ''platform provider'') to find a particular type of work, or ''gig'' (*i.e.,* task or job). The work could involve the individual providing services to end users, such as ride-sharing, food delivery, household repairs, dog-sitting, or tech support, or using the platform to sell goods or lease property to third parties.[18] Other new work relationships may involve individuals using the platform to perform tasks or services for the platform provider itself.[19]

A significant characteristic of these new work relationships is that the individual worker may have greater flexibility in determining when and how much he or she works than in a traditional employment relationship where those determinations are typically made by the issuer. In addition, these new work relationships can be, and often are, on a short-term, part-time, or freelance basis. Another significant characteristic is that an individual who provides services or goods through these platforms may have similar relationships with multiple companies through which the individual may engage in the same or different business activities. Given the characteristics of these new work relationships, the individual workers might not be employees, consultants, advisors, or de-facto employees [20] eligible to receive securities in compensatory arrangements under Rule 701.

Numerous commenters on the Concept Release who addressed issues relating to ''gig economy'' workers supported including them within the scope of Rule 701 and Form S–8.[21] Several noted that they did not believe or were uncertain that ''gig economy'' workers would fall within Rule 701's current categories of employees, consultants, or advisors, and recommended adding a new category of worker to include them.[22]

The new work relationships of the gig economy have become increasingly significant to the broader U.S. economy.[23] They also raise some of the same considerations that led the Commission to adopt Rule 701. For example, ''gig economy'' issuers may have the same compensatory and incentive motivations to offer equity compensation to individuals participating in the companies' platform-based businesses. Permitting gig economy issuers to utilize the Rule 701 exemption on a temporary basis would allow the Commission to assess the appropriateness of the exemption for these new work relationships and thus should help inform the Commission's ongoing efforts to modernize its rules in light of changing economic and market conditions.

For the above reasons, we propose to include a new category of worker, the ''platform worker,'' within the scope of Rule 701 and Form S–8.[24] As we stated in the Concept Release, any such expansion of Rule 701 and Form S–8 must be consistent with the Commission's mandate to protect investors.[25] It should not facilitate offers and sales of unregistered securities under the guise of being compensatory when in fact they are undertaken for capital-raising purposes. Therefore, we are proposing to expand Rule 701 and the use of Form S–8 to facilitate compensatory transactions with platform workers while also proposing conditions designed to limit the possibility that the rule changes could result in offers and sales for capital-raising purposes.[26]

We are also proposing these changes on a temporary basis [27] to allow us to assess whether unregistered issuances of securities to platform workers under expanded Rule 701, or issuances registered on expanded Form S–8, are being made for appropriate compensatory purposes and not for capital-raising purposes. Similarly, we intend to assess whether such issuances have the expected beneficial effects for issuers in the ''gig economy,'' their platform workers, and ultimately their investors and whether such issuances have resulted in any unintended consequences. This assessment, in turn, should help us determine whether to modify or expand the scope of Rule 701 and Form S–8 on a permanent basis.

We welcome feedback and encourage interested parties to submit comments on any or all aspects of the proposed rule amendments. When commenting, it would be most helpful if you include the reasoning behind your position or recommendation.

B. Summary of the Proposed Amendments

We propose to amend Rule 701 by adding a temporary rule provision that, for five years, would enable issuers to use Rule 701 to compensate certain ''platform workers,'' subject to specified conditions. Under the amendments, an issuer would be able to use the Rule 701 exemption to offer and sell its securities on a compensatory basis to platform workers who, pursuant to a written contract or agreement, provide *bona fide* services by means of an internet-based platform or other widespread, technology-based marketplace platform or system provided by the issuer if:

- The issuer operates and controls the platform, as demonstrated by its ability to provide access to the platform, to establish the principal terms of service for using the platform and terms and

[27] *See infra* Section II.G.

conditions by which the platform worker receives payment for the services provided through the platform, and to accept and remove platform workers participating in the platform;

- The issuance of securities to participating platform workers is pursuant to a compensatory arrangement, as evidenced by a written compensation plan, contract, or agreement, and is not for services that are in connection with the offer or sale of securities in a capital-raising transaction, or services that directly or indirectly promote or maintain a market for the issuer's securities;
- No more than 15 percent of the value of compensation received by a participating worker from the issuer for services provided by means of the platform during a 12-month period, and no more than $75,000 of such compensation received from the issuer during a 36-month period, shall consist of securities, with such value determined at the time the securities are granted;
- The amount and terms of any securities issued to a platform worker may not be subject to individual bargaining or the worker's ability to elect between payment in securities or cash; and
- The issuer must take reasonable steps to prohibit the transfer of the securities issued to a platform worker pursuant to this exemption, other than a transfer to the issuer or by operation of law.[28]

The proposed amendments also would permit an Exchange Act reporting issuer to register the offer and sale of its securities to its platform workers using Form S–8. The same conditions proposed for Rule 701 issuances would apply to issuances to platform workers that are registered on Form S–8, except for the proposed transferability restriction. Like the proposed amendments to Rule 701, the proposed Form S–8 amendments would be temporary and would expire, absent further Commission action, on the same date as the Rule 701 amendments.

In order to help in our evaluation of the proposed expanded scope of Rule 701 and Form S–8, we are also proposing that any issuer that issues securities to platform workers would be required to furnish information to the Commission at six-month intervals (each, an ''interval''), regarding:

1. The criteria used to determine eligibility for awards, whether those criteria are the same as for other compensatory transactions, and whether those criteria, including any revisions to the criteria, are communicated to platform workers in advance as an incentive;
2. The type and terms of securities issued and whether they are the same as for other compensatory transactions by the issuer during that interval;
3. If pursuant to Rule 701, the reasonable steps taken to prohibit the transfer of the securities sold pursuant to this temporary rule;
4. The percentage of overall outstanding securities that the amount issued cumulatively under this temporary rule represents;
5. During the interval, the number of platform workers, the number of non-platform workers, the number of platform workers who received securities pursuant to the temporary rule, and the number of non-platform workers who received securities pursuant to the issuer's Rule 701 or Form S–8 issuances;
6. Both in absolute amounts and as a percentage of the issuer's total Rule 701 or Form S–8 issuances during the interval:
   a. The aggregate number of securities issued to platform workers; and
   b. The aggregate dollar amount of securities issued to platform workers.

II. Description of the Proposed Amendments

A. Proposed Inclusion and Definition of ''Platform Worker'' Under Rule 701 and Form S–8

We propose to amend Rule 701 and Form S–8 to permit an issuer on a temporary basis to offer and sell securities to certain platform workers. Under the proposed definition of ''platform worker,'' [29] eligible workers would be those persons unaffiliated with the issuer who meet two conditions. First, the worker must provide *bona fide* services through or by means of the issuer's internet-based or other widespread, technology-based marketplace platform or system (''platform''). Workers providing services to third-party end-users would qualify, as long as the issuer benefits from such services (*e.g.,* by receiving a fee for the worker's use of the platform or a percentage of the compensation received from the end-user for the worker's services).[30] Consistent with the treatment of persons eligible for the current exemption under 17 CFR 230.701(c) (''Rule 701(c)''), platform workers providing services to the issuer, or the issuer's parents, subsidiaries,[31] or subsidiaries of the issuer's parent, would also qualify.[32] Second, the services must be provided pursuant to a written contract or agreement between the issuer and the platform worker [33] and must be provided through a platform-based marketplace (or other widespread, technology-based marketplace platform or system) that the issuer operates and controls.[34]

Commenters who supported expanding the scope of Rule 701 and Form S–8 to include offers and sales of securities to platform workers stated that updating Rule 701 and Form S–8 to include such workers is necessary to keep pace with evolutions in the economy and the labor market.[35] One commenter indicated that such an update would be consistent with the goals of the Jumpstart Our Business Startups Act (''JOBS'' Act) to spur entrepreneurship and support the business startups and private companies that are vital to the U.S. economy, and that increased alignment of incentives between gig economy companies and

[28] An issuer using proposed Rule 701(h) would also be able to continue to use Rule 701 for transactions to persons eligible under 17 CFR 230.701(c).

[29] *See* proposed Rule 701(h)(1); *see also* proposed 17 CFR 239.16b(c) and proposed amended General Instruction A.1.(b)(1) to Form S–8, which reference the proposed definition of ''platform worker'' under proposed Rule 701(h)(1).

[30] *See* proposed new Rule 701(h)(2)(i) (the first prong of the proposed definition of platform worker); *see also* proposed 17 CFR 239.16b(c)(1) and proposed amended General Instruction A.1.(b)(1) to Form S–8. As explained below in Section II.B., the services may not be in connection with the offer or sale of securities in a capital-raising transaction.

[31] In a companion rulemaking, we are proposing to expand the scope of coverage of the Rule 701 exemption, which currently includes compensatory issuances to employees of an issuer's or its parent's majority-owned subsidiaries, to include compensatory issuances to employees of all of an issuer's or its parent's subsidiaries. *See* Release No. 33–10891 (Nov. 24, 2020), at Section II.C.3 (proposing to amend Rule 701(c)). Our proposed inclusion of platform workers of an issuer's subsidiaries, without regard to whether they are majority-owned, would be consistent with the proposed amendment of Rule 701(c). Like this proposed amendment, the meaning of ''subsidiary'' under Rule 701(h) would be governed by the general definition of subsidiary for purposes of the Securities Act. Under that definition, a ''subsidiary'' of a specified person is an affiliate controlled by such person directly or indirectly through one or more intermediaries. *See* 17 CFR 230.405.

[32] *See* proposed Rule 701(h)(2)(i).

[33] For the purpose of Rule 701(h), the term ''written contract or agreement'' would include an electronic, internet-based contract or agreement. We believe that a similar interpretation applies to the term ''written compensation contract'' in Rule 701(c). Because the proposed Rule 701(h) definition of ''platform worker'' would also be used in Form S–8, the same meaning of ''written contract or agreement'' would apply in that context. *See* proposed General Instruction A.1.(b)(1) of Form S–8; *see also* proposed 17 CFR 239.16b(c)(1).

[34] *See* proposed Rule 701(h)(2)(ii).

[35] *See, e.g.,* letter from Chamber; *see also* letter from Airbnb.

participating platform workers would benefit both.[36]

Some commenters emphasized the potential benefits to platform workers of expanding Rule 701. Commenters stated that expanding eligibility for Rule 701 issuances would help democratize share ownership and wealth by allowing the many ordinary Americans participating in the gig economy to make significant strides toward greater wealth and financial security.[37]

Other commenters noted the potential benefits to the platform providers of expanding Rule 701. One commenter indicated that enabling privately held companies to grant equity compensation to platform workers performing services would enable those platforms to attract and retain talent.[38] Another commenter stated that the ability to grant equity compensation to platform workers would significantly enhance the growth and expansion of new economy companies and help level the playing field between private companies and public companies participating in the new economy.[39]

Some commenters, however, opposed the expansion of the scope of Rule 701 and Form S–8 to include offers and sales of securities to platform workers because of their belief that the Commission lacks the expertise to assess accurately changes in the labor market, and due to their concern that such regulatory changes to Rule 701 and Form S–8 would encourage companies to misclassify employees and undermine American workers.[40]

We agree with commenters that expanding the scope of Rule 701 and Form S–8 to include offers and sales of securities to platform workers participating in an issuer's platform-based marketplace could benefit the issuer and its investors, including those platform workers that are new equity holders. We are mindful, however, that the gig economy is evolving. We are therefore making the rule amendments temporary so that we can reassess their impact as these markets develop.[41]

Although we understand that the development of the gig economy raises a number of issues under labor, tax, and other regulatory regimes, our proposed amendments to Rule 701 and Form S–8 to include these workers solely reflect considerations relevant to the U.S. Federal securities laws. The proposed amendments are not meant, and should not be construed, to address issues raised under any other regulatory regimes. We express no opinion on whether or not these ''gig economy'' or platform workers would be considered ''employees'' for purposes of other laws or regulations.

The proposed amendments would require an eligible platform worker to be a natural person or an entity meeting specified conditions. We recognize that the ''gig economy'' is a fluid, developing market in which participating workers may be organized in various ways. In this regard, we note that some commenters recommended that platform workers should not be subject to a natural person requirement to participate in Rule 701 offerings.[42] We recognize that some platform workers may form limited liability companies or similar legal entities for a variety of reasons, such as tax planning and personal liability protection. In order to accommodate such workers and provide additional flexibility for an evolving market, the proposed rules provide that a platform worker may be an entity as long as substantially all of its activities involve the performance of *bona fide* services that meet the requirements of proposed Rule 701(h), and the ownership interest of the entity is wholly and directly held by the natural person performing the services pursuant to the proposed rule. This proposed approach would be similar to the Commission's recognition of personal services businesses as corporate alter egos of natural persons with respect to the ability to participate in Form S–8 offerings under existing employee, consultant, and advisor categories, where such businesses are wholly-owned by (or jointly owned with the spouse of) the natural person who provides services to the issuer.[43]

We also recognize that the ''gig economy'' is a multi-faceted economic phenomenon and that, in some cases, participants may sell goods or conduct other activities—beyond providing services—by means of platforms. Some commenters recommended expanding the Rule 701 exemption to include any activity where there is an issuer providing a technology-based marketplace platform as long as the activity does not include capital-raising of the type currently prohibited by Rule 701.[44] Nevertheless, we are limiting this initial expansion of Rule 701 and Form S–8 eligibility to participants who provide *bona fide* services not in connection with capital-raising or with promoting or maintaining a market for the issuer's securities. The proposed expansion would not cover the use of a platform for the sale or transfer of permanent ownership of discrete, tangible goods.[45] We view the expansion of Rule 701 and Form S–8 to include platform workers who provide services, subject to the above limitations, as an incremental

[36] *See* letter from Airbnb.

[37] *See* letter from Sament; *see also* letter from Airbnb.

[38] *See* letter from Postmates.

[39] *See* letter from Indigo.

[40] *See* letter from Sen. Sherrod Brown (Mar. 7, 2019); *see also* letter from National Employment Law Project (Mar. 4, 2019) (''NELP'') (''Expanding the rule has the potential to further muddy the waters on 'gig' workers' employment status and even legitimize their independent contractor status at a time when this issue is being examined by legislatures, courts, and agencies with expertise on employment status.''); and letter from Chairwoman Maxine Waters (Apr. 1, 2020) (opposing ''weakening Rule 701 of the Securities Act of 1933 to allow companies to compensate certain non-traditional employees with equity compensation in lieu of a traditional paycheck and without important investor protections''). *But see, e.g., infra* Section II.B for a discussion of certain investor protection conditions; and letter from Rep. Patrick McHenry (Mar. 30, 2020) (requesting that any recipient of funds under the Coronavirus, Aid, Relief, and Economic Security (CARES) Act be encouraged to provide equity compensation to its entire workforce, including non-traditional workers).

[41] The proposed amendments provide, however, that, following the expiration of temporary Rule 701(h), an issuer may continue to rely on the Rule 701(h) exemption for the sale of securities underlying options, warrants, or rights previously issued in an exempt transaction pursuant to Rule 701(h). *See* proposed Rule 701(h)(1)(ii) and *infra* Section II.G. We believe this provision is necessary in order to remove a potential disincentive to the use of the proposed exemption to issue options to platform workers. The Commission has taken a similar approach regarding securities sold by an issuer after it has become public that were initially offered pursuant to Rule 701. *See* 17 CFR 230.701(b)(2).

[42] *See* letters from Chamber and Davis Polk. In the companion rulemaking, we are proposing to eliminate the ''natural person'' requirement in connection with Rule 701 eligibility for consultants and advisors by extending such eligibility to service-providing entities meeting specified conditions (*e.g.,* limits on the number of persons owning an entity and requiring a certain percentage of those persons to provide services). *See* Release No. 33–10891 at Section II.C.1. We are also proposing a similar change regarding consultant and advisor eligibility under Form S–8. *See* Release No. 33–10891 at Section II.C.2.

[43] *See* 1999 Form S–8 Adopting Release at Section II.A.1 (''We agree with commenters that it should not matter if the consulting contract is with an entity or a natural person, as long as the securities registered are issued to the natural persons working for the consulting entity who provide bona fide services to the issuer. Where the securities are issued to these persons, contracting with a consulting entity would not abuse Form S–8. We have revised the amendments to eliminate the proposed requirement that issuers contract only with natural persons, while retaining the requirement that the securities must be issued to natural persons.''); *see also* letter from Davis Polk.

[44] *See, e.g.,* letter from ABA; *see also* letter from Sullivan (stating that to encompass the new types of alternative work arrangements, Rule 701 (and Form S–8) should encompass those individuals providing services to or on behalf of an issuer or making or distributing the products sold or provided to the issuer's consumers).

[45] *See* proposed Rule 701(h)(2)(i). For example, a platform that provided for the permanent transfer of real estate in fee simple, as opposed to the temporary rental of real estate, would not constitute bona fide services within the meaning of the rule.

evolutionary step that is consistent with the compensatory function of Rule 701 and Form S–8 while limiting the potential for abuse. Depending on the results of the initial expanded use of Rule 701 and Form S–8, if adopted, the Commission could consider expanding eligibility to other activities, such as selling goods or other non-service-providing activities in the future.

The proposed definition of platform worker would also include the condition that the issuer operates the platform for the provision of services pursuant to a written contract or agreement [46] between the issuer and the platform worker under which the issuer controls the use of the internet platform. We believe that this ''issuer control'' condition would help maintain an appropriate compensatory nexus between the issuer and participating platform workers.[47]

The appropriate nexus would be demonstrated by meeting three express requirements. First, the issuer must be able to provide access to the platform and establish the principal terms of service for using the platform. Second, the issuer must be able to establish terms and conditions by which the platform worker receives payment for the services provided through the platform. This could include an ability to establish the amount of the fees charged for using the platform. Such fees may include any fee charged to the participating worker for the use of the platform as well as any fee or percentage of payment charged to an end-user for the services provided by the worker. If there are no end-users, and multiple workers provide services directly to the issuer via the platform, the issuer must be able to determine the amount and method of payment for such services. Third, the issuer must have the authority to accept and remove the platform workers providing services through the platform.

We believe that these three requirements are necessary and appropriate to demonstrate the requisite nexus for purposes of an expanded Rule 701 and Form S–8. A written contract or agreement providing the issuer with control over the platform's terms of use, including payment terms, would evidence that the issuance of securities to the worker is for compensatory and incentive purposes relating to the services being provided. In addition, requiring that the issuer control who may provide services through its platform would help prevent participating workers from using the platform primarily for non-compensatory purposes. The proposed conditions would not, however, limit what services an issuer could facilitate through its platform or how participating workers could provide the services.

Rule 701 currently exempts offers and sales of securities to former employees, directors, general partners, trustees, officers, consultants, and advisors only if such persons were employed by or providing services to the issuer at the time the securities were offered.[48] The proposed amendment to Rule 701 would similarly exempt offers and sales to former platform workers if such workers met the conditions of § 230.701(h) at the time the securities were offered.[49]

In a companion rulemaking, at the suggestion of commenters, we are proposing to expand the eligibility of former employees under Rule 701 to include post-resignation or termination offers and sales to:

- Persons who were employed by or providing services to an issuer during a performance period ending within 12 months preceding resignation or termination of their employment or service for which the securities were issued; and
- Former employees of an acquired entity, as long as the securities are being issued in substitution or exchange for securities that were issued to the former employees of the acquired entity on a compensatory basis while such persons were employed by or providing services to the acquired entity.[50]

In the interest of providing consistent treatment, we are similarly proposing to include under Rule 701 offers and sales to former platform workers who met the conditions of § 230.701(h) during a period of service ending within 12 months preceding the termination of service for which the securities were issued.[51] We believe that exempting post-termination grants of securities to former platform workers that are made in respect of prior service during the specified 12-month period would benefit both issuers and platform workers by facilitating compensatory transactions. Moreover, because we believe that expanding the use of Form S–8 to former platform workers would be consistent with the compensatory purposes of Form S–8, we are similarly proposing to amend Form S–8 to include securities issued to former platform workers, including post-termination grants made in respect of prior service during the 12 months preceding the cessation of service.[52]

For similar reasons, we also are proposing to include in the exemption under Rule 701(h), and to allow the registration on Form S–8 of, securities issued to former platform workers of an acquired entity in substitution or exchange for securities that were issued to the former platform workers of the acquired entity on a compensatory basis while such workers were providing *bona fide* services to the acquired entity.[53] Those persons would be able to participate in the acquiring issuer's plan with respect to equity awards granted in connection with the acquisition to replace awards issued by the acquired entity while such workers provided services to the acquired entity.[54]

In addition to former employees, Form S–8 currently includes under its scope executors, administrators, or beneficiaries of the estates of deceased employees, guardians or members of a committee for incompetent former employees, or similar persons duly authorized by law to administer the estate or assets of former employees.[55]

[46] The Commission has similarly included a ''written contract or agreement'' requirement as a condition of using the Rule 701 exemption to help ensure that an issuance of securities is being undertaken for a compensatory purpose. *See* the Rule 701 Adopting Release, *supra* note 5, at 12919 (justifying the inclusion of issuances to consultants or advisors under Rule 701 in part because of the condition requiring a written plan or contract).

[47] Although one commenter stated that ''it is not necessary for a revised Rule 701 to micromanage the level of control'' over a worker, *see* letter from Chamber, we agree with another commenter that indicated that some level of control by an issuer over the use of its platform would help ensure that the issuance of securities to workers participating in its marketplace platform under an expanded Rule 701 is compensatory only. *See* letter from Airbnb.

[48] *See* Rule 701(c).

[49] *See* proposed Rule 701(h)(1)(i).

[50] *See* Release No. 33–10891 at Section II.C.2.

[51] *See* proposed Rule 701(h)(1)(i).

[52] *See* proposed General Instruction A.1.(b)(4)(i) of Form S–8.

[53] *See* proposed Rule 701(h)(1)(i); *see also* proposed General Instruction A.1.(b)(4)(ii) of Form S–8. Such treatment would be consistent with the expanded scope of Form S–8 proposed in the companion rulemaking. *See* Release No. 33–10891 at Section III.D.1.

[54] The companion release includes other proposed amendments pertaining to business combinations that could be applicable to issuances to platform workers if adopted. For example, we are proposing to amend Rule 701(e) to address the disclosure delivery obligations regarding acquired entity derivative securities that the acquiring issuer assumes in a business combination transaction. Another proposed amendment would clarify that, in determining whether the amount of securities the acquiring issuer sold during any consecutive 12-month period exceeds $10 million under Rule 701(e) [17 CFR 230.701(e)], the acquiring issuer would consider only the securities that it sold in reliance on Rule 701 during that period, and would not be required to include any securities sold by the acquired entity pursuant to the rule during the same 12-month period. *See* Release No. 33–10891 at Section II.A.6.

[55] *See* General Instruction A.1.(a)(3) of Form S–8. In the companion release, we are proposing to

Continued

We are proposing a similar provision under Rule 701 and Form S–8 for the estates of deceased platform workers and the representatives of incompetent former platform workers.[56] Although the proposed changes to Rule 701 to include platform workers would be temporary rules, we believe that this proposed provision could prove useful to the administration of the estate of a deceased platform worker or the representation of an incompetent former platform worker, particularly because, under the proposed rules, sales of securities underlying options issued pursuant to the temporary rules may occur following the rules' expiration.

Request for Comment

1. Should we expand the scope of Rule 701 and Form S–8 to include offers and sales of securities to platform workers unaffiliated with the issuer who provide *bona fide* services to an issuer by means of the issuer's internet-based platform, or through other widespread technology-based marketplace platforms, as proposed? Should the expansion of Rule 701 and Form S–8 also include services provided by such workers to the issuer's parents, majority-owned subsidiaries, or majority-owned subsidiaries of the issuer's parent, as proposed?

2. Is there a basis for treating platform workers differently than any other non-employees not covered under the current exemption? Does the use of an internet-based platform establish a sufficient basis for treating those workers differently than non-employees in a different context?

3. Should we also expand the scope of Rule 701 and Form S–8 to include offers and sales of securities to platform workers unaffiliated with the issuer who provide *bona fide* services to third-party end-users by means of the issuer's internet-based marketplace platform, or through other widespread technology-based marketplace platforms or systems, and from which the issuer benefits, as proposed?

4. Should we define or provide examples of a ''widespread, technology-based marketplace platform or system'' (other than an internet-based marketplace platform) that would fall within the scope of the proposed amendments? If so, how should we define that term, or what examples should we include?

5. Is the term ''services'' sufficiently clear? Should we define it differently? If so, what should the definition be? Should we provide additional specific guidance concerning what activities constitute ''services'' for purposes of the proposed expansion of Rule 701 and Form S–8?

6. Should we limit issuances under Rule 701(h) or an expanded Form S–8 to platform workers who are unaffiliated with the issuer, as proposed? If so, should we provide a definition of or additional guidance concerning the meaning of ''unaffiliated with the issuer''? For example, should we define ''unaffiliated'' as a person who is not an ''affiliate'' as defined by 17 CFR 230.405? Should we instead specify the types of persons that would satisfy the ''unaffiliated'' provision? For example, should ''unaffiliated'' mean persons who are not an issuer's employees, officers, directors, advisors, or consultants, or certain family members of such persons? If so, which family members would be treated as affiliates of the issuer and therefore be ineligible to receive securities under the proposed amendments to Rule 701 and Form S–8?

7. Should we limit the use of the expanded Rule 701 and Form S–8 only to workers who provide *bona fide* services through an issuer's marketplace platform, as proposed? Or should we consider other alternatives? For example:

a. Should we permit an issuer to offer or sell securities to workers who engage in other platform-based activities, such as selling goods? If so, should we limit the types of goods? For example, should we only permit an issuer to offer or sell securities to workers who engage in selling of unique or value-added goods and not workers who merely use a platform to resell goods?

b. If we were to permit an issuer to offer or sell securities to workers who engage in other platform-based activities, such as selling goods, what characteristics or factors would help ensure that the nexus between the issuer and worker is compensatory and the issuance of securities is not in connection with capital-raising or for speculative purposes? For example, should we require that the worker meets minimum annual or aggregate sales thresholds or that the worker has been engaged in performing platform-based activities for the issuer for a minimum period of time before she is eligible to receive shares under expanded Rule 701 and Form S–8. Should we only permit securities that do not have capital-raising features, such as restricted stock units, to be issued to platform workers for platform-based activities that involve the sale of goods?

c. Should we include offers and sales of securities to workers having other types of new work relationships? If so, which types of new work relationships should we include, and what characteristics or factors would help ensure that the nexus between the issuer and worker is compensatory and the issuance of securities is not in connection with capital-raising? Are there new work relationships that are not provided through an internet-based or other widespread, technology-based marketplace platform or system that we should include in the exemption?

8. Should we require that a platform worker be a natural person or an entity meeting specified criteria to be able to receive securities pursuant to an expanded Rule 701 or Form S–8, as proposed? Should we instead require a platform worker to be a natural person? Do a significant number of platform workers currently operate through a business entity? If so, would a natural person requirement impact the extent to which they would continue to perform as platform workers or continue to do so through a business entity? Should we limit the types of business entities through which a platform worker would be able to operate? Should we permit an entity to be a platform worker, as proposed, if substantially all of its activities involve the performance of *bona fide* services that meet the requirements of proposed Rule 701(h), and the ownership interest of the entity is wholly and directly held by the natural person performing the services pursuant to the proposed rule? Are there different or additional eligibility conditions that we should adopt to allow platform workers to perform services as entities pursuant to the temporary rules? For example, should we permit more than one natural person to own the entity through which the services are being performed by the platform worker? If so, should we limit the number of natural persons that may own the entity or require that a co-owner be the spouse or other family member? Should we condition allowing more than one natural person to own the entity by requiring each owner to perform the services of a platform worker?

9. Should we require that an issuer operating a platform control the platform as a condition to using the Rule 701 exemption and Form S–8 registration for issuances of securities to workers providing services through the platform, as proposed? Should we

amend Rule 701 to include a similar provision for the executors, administrators, or beneficiaries of the estates of deceased employees who may receive securities underlying options previously issued to former employees pursuant to Rule 701. *See* Release No. 33–10891 at Section II.C.2.

[56] *See* proposed General Instruction A.1.(b)(4)(iii) to Form S–8 and proposed Rule 701(h)(1)(i).

permit the use of the exemption for issuances to such workers if an issuer's affiliate controls the platform?

10. Should we require that services be provided pursuant to a written contract or agreement, as proposed? If so, should we include an express provision that the term ''written contract or agreement'' includes an electronic, internet-based contract or agreement? Should we provide the same provision for the term ''written compensation contract'' in Rule 701(c)?

11. Are the proposed conditions demonstrating control of the platform appropriate? Should we require that an issuer satisfy all of the specified conditions? Should we only require that an issuer have the ability to determine terms of use, including payment terms? Should we instead only require that an issuer have the ability to accept and remove the workers providing services through its platform?

12. Are there other conditions, in addition to or in lieu of the proposed conditions, that we should adopt?

13. Instead of, or in addition to, an issuer control requirement, are there other issuer eligibility conditions that we should adopt to help ensure that the issuance of securities to platform workers is for a compensatory purpose? For example, when the issuer's platform is used to provide services to end-users, should we require that an issuer earn a substantial amount of its annual revenues from fees or other payments resulting from platform workers using the issuer's platform? Would such a condition make it less likely that the issuance of securities to those workers would be for a capital-raising purpose?

14. Should we expand the scope of Rule 701 and Form S–8 to include offers and sales of securities to former platform workers, including former platform workers of an entity acquired by an issuer, as proposed? Should such expansion include securities issued to former platform workers, including post-termination grants made in respect of prior service during the 12 months following the cessation of service, as proposed? Should we include under Form S–8 issuances to executors, administrators, or beneficiaries of the estates of deceased platform workers, or other persons similar to those included for deceased or incompetent former employees, as proposed? Should we amend Rule 701 to include a similar provision for the estates of deceased employees or deceased platform workers and representatives of incompetent former employees or incompetent former platform workers, as proposed?

15. Would state blue-sky laws affect the operation of the proposed temporary platform worker exemption? If so, how? Are there changes we should consider to address state law issues? For example, should we provide for the preemption of state securities law registration requirements for offers made pursuant to Rule 701(h)? Are there other state law implications that would be relevant to consider in connection with the proposed amendments? For example, would the proposed temporary platform worker exemption have any implications regarding the enforceability of state laws pertaining to non-competition arrangements? Would the proposed exemption result in an increase in the use of non-compete provisions regarding issuers' arrangements with platform workers? Would the proposed exemption affect the ability of issuers under state law to provide additional benefits to platform workers, such as minimum wage guarantees, healthcare stipends, and occupational auto insurance?

B. Additional Requirements for Issuances to Platform Workers Under Rule 701 and Form S–8

We are proposing four additional requirements with which an issuer must comply in order to use the exemption for issuances to platform workers under Rule 701.[57] In addition, we are proposing that the first three of these conditions would also apply to issuances to platform workers registered on Form S–8.[58]

Because of certain structural differences between platform-based work relationships and traditional employer-employee relationships, we are mindful that compensatory offerings in this context may be more susceptible to misuse. For example, a traditional employer-employee work relationship will involve some degree of interpersonal interactions between the issuer and the employee by which the former supervises and monitors the work and conduct of the latter. In contrast, there may be no or very few interpersonal interactions in the issuer-platform worker relationship. In addition, platform workers frequently work for multiple companies and may have exclusive control over their work schedules, including how often and for how long they will work. These short-term and/or intermittent work relationships across multiple issuers may increase the likelihood that workers would establish a work relationship with a platform as a means of realizing an investment opportunity with the issuer or that issuers would use the proposed provisions to engage in capital-raising activities. The additional requirements we are proposing are designed to work together to help ensure that issuances made to platform workers pursuant to revised Rule 701 are for compensatory purposes while reducing any opportunity for a platform worker to use her relationship with the issuer to engage in speculative activity.[59]

The first condition is that the issuance must be pursuant to a compensatory arrangement that is evidenced by a written compensation plan, contract, or agreement between the issuer and the platform worker.[60] The compensatory arrangement may not be for services in connection with the offer or sale of securities in a capital-raising transaction or services that directly or indirectly promote or maintain a market for the issuer's securities. Thus, an issuer may not rely on the exemption to issue securities to a platform worker for compensation for performing services analogous to those of an underwriter or promoter or otherwise made in connection with a capital-raising transaction. An issuer also may not rely on the exemption to issue securities to a platform worker as part of a plan or scheme to evade the compensatory purpose of Rule 701 or otherwise evade the registration requirements of the Securities Act.[61] This condition is based on the requirements under Rule 701 and Form S–8 currently applicable to consultants and advisors,[62] which were designed to prevent abuse of the rules as conduits for unregistered securities distributions to the general public and for securities issuances to stock promoters.[63]

[57] *See* proposed Rule 701(h)(3).

[58] *See* proposed 17 CFR 239.16b(c)(1) and proposed General Instruction A.1(b)(2)(i) through (iii) to Form S–8.

[59] One commenter specifically recommended imposing additional restrictions regarding the issuance of securities to platform workers beyond those typically applicable to equity issuances under Rule 701 because of the third-party, contractual relationship between the issuer and platform worker. *See* letter from Airbnb.

[60] *See* proposed Rule 701(h)(3)(i).

[61] *See* Preliminary Note 5 to Rule 701, which would remain applicable to issuances under proposed Rule 701(h).We are also proposing to add a similar note in proposed General Instruction A.1(b)(2) to Form S–8.

[62] *See* Rule 701(c)(1)(ii) and (iii) [17 CFR 230.701(c)(1)(ii) and (iii)], and General Instruction A.1(a)(1)(ii) and (iii) to Form S–8.

[63] *See* 1999 Rule 701 Adopting Release, *supra* note 5, at Section II.D., and 1999 Form S–8 Adopting Release (" at Sections I.A. and II.A. A number of commenters that addressed expanding our rules to encompass ''gig economy'' workers generally supported such a condition. *See, e.g.,* letters from ABA, Airbnb, Chamber, and Uber.

Second, as proposed, no more than 15 percent of the value of compensation received by a platform worker from the issuer for services provided during a consecutive 12-month period, and no more than $75,000 of such compensation received from the issuer during a consecutive 36-month period, may consist of securities issued pursuant to Rule 701 or a registration statement on Form S–8.[64] The issuer would be required to determine the value of such securities as of the time the securities are granted.[65] For the purpose of assessing compliance with these limits, an issuer would be able to use any reasonable, recognized valuation methodology [66] as long as the methodology is consistently applied during the same 12-month or 36-month period.[67]

This proposed cap on the amount of compensation that a platform worker may receive as securities from the issuer is designed to limit an issuer's incentive and ability to use the new exemptive rule as a conduit for a public distribution of its securities, contrary to the compensatory purpose of Rule 701 and Form S–8.[68] In addition, we believe the proposed cap would reduce any incentive for platform workers to use the exemption primarily for realizing speculative investment opportunities and would limit the risk that issuances would be for capital-raising or other non-compensatory purposes.[69]

Third, we are proposing that the amount and terms of any securities issued to a platform worker may not be subject to individual bargaining. Similarly, as proposed, platform workers would not be permitted to elect between payment in securities or cash.[70] We believe this proposed requirement would also reduce any incentive for platform workers to use the exemption as a means of realizing speculative investment opportunities rather than receiving the securities as a compensatory grant.[71]

The preceding three conditions would apply equally to securities issuances to platform workers under both Rule 701 and Form S–8.[72] For purposes of Rule 701, however, we are proposing a fourth condition that would require the issuer to take reasonable steps to prohibit the transferability of securities issued to platform workers pursuant to the exemption except for transfers to the issuer or by operation of law.[73] Such reasonable steps could include the placement of special legends on the securities to be issued to platform workers or appropriate instructions to transfer agents that would provide adequate notice of the transfer prohibition to platform workers. The purpose of this provision is to help ensure that the shares are obtained for compensatory and not speculative purposes. Specifically, it would prevent the development of a market in such securities until after the issuer becomes subject to the reporting requirements of Section 13 or 15(d) of the Exchange Act, which would in turn greatly reduce, if not eliminate, any incentive for a worker to seek out securities issued pursuant to Rule 701 for speculative purposes.

Currently, all securities issued pursuant to Rule 701 are ''restricted securities,'' and any resales must comply with Securities Act registration requirements or qualify for an exemption therefrom.[74] As proposed, the additional transferability prohibition on Rule 701 securities issued to platform workers would preclude any transfers, except transfers back to the issuer or by operation of law.[75] Transfers by operation of law would include, for example, transfers pursuant to the laws of descent and distribution and domestic relations orders in divorces. One commenter recommended the adoption of enhanced transfer restrictions for securities issued to gig economy workers beyond those applicable to equity currently issuable pursuant to Rule 701 because of the third-party contractual relationship between gig economy participants and gig economy companies.[76] As noted earlier, we agree that applying enhanced transfer restrictions is appropriate in light of the more remote contractual relationship between an issuer and its platform workers, compared to the relationship with its employees.[77] As with other securities issued pursuant to Rule 701, however, ninety days after the issuer becomes subject to Exchange Act reporting requirements, securities issued to platform workers would become available for resale under 17 CFR 230.701(g)(3).[78]

We are not proposing similar transfer restrictions for securities issued to platform workers pursuant to a Form S–8 registration statement. Securities Act and Exchange Act protections for such securities would already exist, making the use of the issued securities for speculative purposes by a platform worker less likely.[79]

Request for Comment

16. Would the proposed conditions for issuances to platform workers under Rule 701 or Form S–8 help ensure that the issuances are for a compensatory purpose? Should we adopt only some of the conditions? If so, which ones? For example, should we require only that the issuance be pursuant to a compensatory arrangement for services

[64] For example, if a platform worker received $1,000 in total compensation during a 12-month period from Issuer X for services provided to or for the benefit of Issuer X, no more than $150 of that compensation could consist of securities. These proposed annual limits on the amount of securities a platform worker could receive as compensation from an issuer are in addition to the limits on the aggregate sales price or amount of securities that an issuer can sell in reliance on Rule 701 during any consecutive 12-month period. *See* 17 CFR 230.701(d). As discussed below, the Rule 701(d) limits would continue to apply, and an issuer would be required to aggregate issuances to platform workers with all other issuances under Rule 701 during a 12-month period for the purpose of complying with Rule 701(d). *See infra* Section II.C.

[65] *See* proposed Rule 701(h)(3)(ii).

[66] We expect that issuers would use the same valuation methods that they currently use to make valuations for compensatory issuances under Rule 701(c).

[67] In this regard, an issuer's use of multiple, different valuation methodologies during the same period could raise concerns that the issuer was doing so as part of a plan or scheme to evade the compensatory purpose of Rule 701.

[68] Some commenters supported imposing a limitation on the amount of equity compensation a ''gig economy'' worker could receive to prevent abuses under an expanded Rule 701 and Form S–8. *See* letters from ABA and Airbnb.

[69] The Commission has historically expressed concern about the potential for abuse in the area of issuances of securities for compensation. *See, e.g.,* 1999 Rule 701 Adopting Release, 64 FR at 11098; *see also* Rule 701 Reproposing Release, 52 FR at 29034.

[70] *See* proposed Rule 701(h)(3)(iii).

[71] One commenter recommended the adoption of this type of condition in order to prevent abuses from occurring under any expanded rules. *See* letter from Airbnb. This proposed condition is also consistent with the ''no sale'' position taken by the staff that, where securities are awarded to employees at no direct cost through broad-based bonus plans, there has been no sale, and therefore no public distribution of the securities, since employees do not individually bargain to contribute cash or other tangible or definable consideration to such plans. *See Changes to Exchange Act Registration Requirements to Implement Title V and Title VI of the JOBS Act,* Release No. 33–10075 (May 3, 2016) [81 FR 28689 (May 10, 2016)].

[72] *See* proposed 17 CFR 239.16b(c)(1) and proposed General Instruction A.1.(a)(3) to Form S–8.

[73] *See* proposed Rule 701(h)(3)(iv).

[74] *See* 17 CFR 230.701(g)(1) and (2).

[75] *See* proposed Rule 701(h)(3)(iv).

[76] Letter from Airbnb.

[77] *See supra* note 59 and accompanying text.

[78] *See* proposed Rule 701(h)(3)(iv). Following that 90-day period, persons who are not affiliates may resell Rule 701 securities in reliance on 17 CFR 230.144 without compliance with the current public information requirements under 17 CFR 230.144(c) and holding period requirements under 17 CFR 230.144(d), and affiliates may resell such securities without compliance with the holding period requirements.

[79] For example, to be eligible to use Form S–8, the issuer must be a reporting issuer and must have filed all reports and other materials required to be filed during the preceding 12 months (or for such shorter period that the registrant was required to file such reports and materials).

not in connection with the offer or sale of securities in a capital-raising transaction?

17. Should we impose a cap on the amount of compensation that a platform worker may receive as securities from the issuer on an annual basis under Rule 701 and Form S–8 to limit the potential that the issuance to platform workers would be used for capital-raising or speculative purposes, as proposed? If so, should we require that no more than 15 percent of the value of compensation received by a platform worker from the issuer for services provided during a 12-month period be in securities, as proposed? Should the annual cap be less than or greater than 15 percent of the compensation received by the platform worker during a 12-month period? Should the annual cap apply only to issuances under Rule 701 rather than both Rule 701 and Form S–8? Should the annual cap apply only to issuances under Form S–8?

18. Should we impose a cap on the amount of compensation that a platform worker may receive as securities from the issuer during a 36-month period (under Rule 701 and registered on Form S–8) to limit the potential that the issuance to platform workers would be used for capital-raising or speculative purposes, as proposed? Should we require that no more than $75,000 of such compensation received from the issuer during a 36-month period may consist of securities, as proposed? Should this cap be less than or greater than $75,000, and/or apply to a shorter or longer period than 36 months? For example, should we limit the amount of securities a platform worker may receive as compensation from an issuer to no more than $50,000 for a consecutive 24-month period? Instead of, or in addition to, the 36-month cap, should there be an aggregate limit on the dollar amount of securities that a platform worker may ever receive from an issuer? If so, what should that cap be? Should the $75,000 cap apply only to issuances under Rule 701? Should the $75,000 limitation apply only for as long as the issuer is not subject to the reporting requirements of Section 13 or 15(d) of the Exchange Act? Should the $75,000 cap apply only to issuances registered on Form S–8?

19. Should we impose only the proposed 12-month cap or only the proposed 36-month cap, but not both? Should we not impose any cap on the amount of compensation that a platform worker may receive as securities in light of other proposed conditions? Should either cap apply to limit the total amount of compensation issued as securities to platform workers by an issuer as well as an issuer's affiliates, or should either cap apply individually to each issuer or issuer's affiliate?

20. For purposes of the 12- and 36-month caps on the amount of compensation that a platform worker may receive as securities from the issuer, should the value of compensation be measured at the time the securities are granted, as proposed? For the same purposes, should an issuer be able to use any reasonable, recognized valuation methodology for purposes of determining the fair market value of the securities issued to platform workers under Rule 701? Should an issuer be able to change the valuation methodology used for purposes of the proposed caps as long as the change is motivated by bona fide reasons unrelated to the proposed exemption for platform workers?

21. Should we specify in Rule 701 and Form S–8 that the issuer must use the same valuation method that it currently uses to make valuations for compensatory issuances under Rule 701(c), if applicable, and apply the methodology consistently during the same period?

22. Should we require that the amount and terms of any securities issued to a platform worker may not be subject to individual bargaining or the worker's ability to elect between payment in securities or cash, as proposed? If a platform worker is unable to negotiate the amount and terms of securities to be issued as compensation, should that worker be able to elect to receive payment only in cash?

23. For issuances pursuant to the Rule 701 exemption, should we require the issuer to take reasonable steps to prohibit the transfer of securities issued to platform workers, other than to the issuer or by operation of law, as proposed? Should we limit the prohibition on transferability to a specific period, *e.g.,* for two or three years? Should we mandate the specific steps that an issuer must take to prohibit the transfer of such securities? If so, what should those steps be? For example, should we require that issuers put special legends on the securities issued to platform workers, or should we require that issuers provide appropriate instructions to transfer agents concerning the transfer prohibition on shares issued to platform workers? Are there other reasonable steps that we should require an issuer to take in connection with the proposed prohibition on transferability to help ensure that the shares issued to platform workers are for compensatory and not speculative purposes?

24. Instead of requiring an issuer to take reasonable steps to prohibit the transfer of securities issued to platform workers, should we instead allow platform workers to resell their securities using an applicable exemption or safe harbor? For example, should platform workers be allowed to resell their securities pursuant to Rule 144? Alternatively, in Rule 701(h), should we require a different holding period than is in Rule 144, such as a two-year holding period, or is any holding period insufficient to mitigate concerns about misuse of the temporary exemption? Are there other transfer restrictions that would be more appropriate in this context?

25. Should we apply the proposed conditions only to securities that have capital-raising features (*e.g.,* stock options) and not to securities that do not have such features (*e.g.,* restricted stock units)? If so, which of the proposed conditions should not apply to such securities?

26. Should we limit the type of securities that can be issued to platform workers under Rule 701 or on Form S–8? For example, should we limit issuances to equity securities and securities convertible into or exchangeable for equity securities?

27. Are there other conditions in addition to, or instead of, the proposed conditions that we should adopt to help ensure that issuances to platform workers under Rule 701 or registered on Form S–8 are undertaken for compensatory and not capital-raising or speculative purposes? For example, should we require that a platform worker provide services through an issuer's platform (or other widespread, technology-based marketplace platform or system) for a certain period of time before the worker is eligible to receive securities from the issuer? If so, should the minimum period be six months, one year, or some other period? Should we require that the platform worker provide services for a continuous period of time? Should we require that the securities issued to a platform worker not vest until after a particular period of time? If so, should the vesting period be six months, one year, or some other period after the grant of securities?

28. Do the additional conditions for issuances to platform workers provide adequate investor protections for platform workers who receive shares pursuant to Rule 701 or registered on Form S–8? If not, what additional conditions or measures would be appropriate to provide an acceptable level of investor protection?

C. Integration of Proposed Rule 701(h) With the Existing Rule 701 Exemption

Title 17, section 230.701(d) (''Rule 701(d)'') imposes limits on the aggregate sales price or amount of securities that an issuer can sell in reliance on the rule during any consecutive 12-month period.[80] In addition, 17 CFR 230.701(e) (''Rule 701(e)'') provides that if the aggregate sales price or amount of securities sold during any consecutive 12-month period exceeds $10 million, the issuer must deliver certain disclosure to investors a reasonable period of time before the date of sale.[81]

Proposed Rule 701(h) would not create a separate and independent ceiling on the amount of securities that could be offered or sold under Rule 701. Rather, platform workers would be an additional class of persons temporarily eligible under Rule 701(c) to participate in the issuer's Rule 701 offers and sales, and would be subject to the same Rule 701(d) limitations on the total amount of securities that an issuer may sell. In this regard, the securities sold to platform workers would be aggregated with all other securities sold by the issuer to persons meeting existing Rule 701(c) eligibility conditions for purposes of applying the Rule 701(d) ceiling.

We believe that it is appropriate to apply the same ceiling to all Rule 701 exempt offerings rather than to provide a separate ceiling for offers to persons eligible to receive securities under the temporary provision. If we were to provide separate ceilings, issuers with technology-based marketplace platforms would be able to sell securities in excess of the amount they are permitted to sell to traditional workers, while issuers that rely only on traditional employment would be limited to the ceiling imposed under Rule 701(d). We believe it is better to propose an approach that treats all issuers equally, rather than one that favors issuers conducting their businesses through platforms as defined by the proposed rule.

Similarly, an issuer that offered and sold securities to platform workers pursuant to proposed Rule 701(h) would be subject to the same Rule 701(e) disclosure requirements. Those securities would be aggregated with all other securities offered and sold by the issuer to persons meeting existing Rule 701(c) eligibility conditions for purposes of applying the $10 million disclosure threshold in Rule 701(e).[82]

Request for Comment

29. Should we require that the securities sold to platform workers be aggregated with all other securities sold by the issuer to persons meeting existing Rule 701(c) eligibility conditions for purposes of applying the Rule 701(d) ceiling, as proposed? Should we instead impose a separate and independent ceiling on the amount of securities that an issuer could sell to platform workers during any consecutive 12-month period? If so, what should the ceiling be?

30. Should we require that the securities issued to platform workers be aggregated with all other securities sold by the issuer to persons meeting existing Rule 701(c) eligibility conditions for purposes of applying the Rule 701(e) disclosure threshold, as proposed? Should we instead impose a separate disclosure threshold for issuances to platform workers? If so, what should that threshold be?

D. Integration With Exchange Act Rule 12g5–1

For purposes of determining whether an issuer is required to register a class of equity securities with the Commission pursuant to Section 12(g)(1) of the Exchange Act,[83] 17 CFR 240.12g5–1 (''Rule 12g5–1'') permits the exclusion of certain securities.[84] Specifically, 17 CFR 240.12g5–1(a)(8)(i)(A) permits the exclusion of securities held by persons who received the securities pursuant to an employee compensation plan in transactions exempt from, or not subject to, the registration requirements of Securities Act Section 5. Title 17, section 240.12g5–1(a)(8)(i)(B) permits the exclusion of securities held by persons who received the securities in a transaction exempt from, or not subject to, the registration requirements of Securities Act Section 5 from the issuer, a predecessor of the issuer or an acquired company in substitution or exchange for securities received pursuant to a compensatory plan in transactions exempt from, or not subject to, the registration requirements of Securities Act Section 5, as long as the persons were eligible to receive securities pursuant to Rule 701(c) at the time the excludable securities were originally issued to them. In addition, Rule 12g5–1 provides a non-exclusive safe harbor by which an issuer may deem a person to have received the securities pursuant to an employee compensation plan if such plan and the person who received the securities pursuant to the plan met the plan and participant conditions of Rule 701(c).[85]

We are proposing similar treatment for issuances to platform workers under proposed Rule 701(h).[86] We believe that these proposed amendments to Rule 12g5–1 are appropriate because they would remove a potential disincentive to an issuer's offer and sale of securities as compensation to platform workers and would avoid favoring companies that do not have platform workers over companies that have them. Specifically, the proposed revisions would eliminate the requirement for an issuer to count platform workers who receive shares pursuant to a compensation plan[87]

[80] *See* 17 CFR 230.701(d)(2), which imposes alternative caps on the aggregate sales price or amount of securities sold under the rule during a consecutive 12-month period. In the companion Rule 701/Form S–8 release, we are proposing to raise: The cap under 17 CFR 230.701(d)(2)(i) permitting issuance from $1 million to $2 million, to reflect inflation; and the cap under 17 CFR 230.701(d)(2)(ii) from 15% to 25% of the issuer's total assets, to reflect that start-up companies may be more dependent upon human capital than fixed assets. *See* Release No. 33–10891 at Section II.B.

[81] In the companion release, we are proposing to require that Rule 701(e) enhanced disclosure be provided only for those sales that exceed the rule's $10 million threshold. *See* Release No. 33–10891 at Section II.A.1. If adopted, this provision would be applicable to all Rule 701-exempt issuances, including those granted to platform workers.

[82] In the companion release, we are proposing amendments to the disclosure requirements under Rule 701(e) that, if adopted, would be applicable to issuances to platform workers under proposed Rule 701(h). For example, we are proposing to conform the age of financial statement requirement in Rule 701(e) to the corresponding requirement in Part F/S of Form 1–A. *See* Release No. 33–10891 at Section II.A.2. In addition, we are proposing to allow issuers to provide alternative valuation information, similar to that required under Internal Revenue Code Section 409A, in lieu of financial statements, for purposes of Rule 701(e) disclosure. *See id.* at Section II.A.4.

[83] 15 U.S.C. 78l(g)(1). Section 12(g)(1) requires, among other things, that an issuer with assets exceeding $10,000,000 and a class of equity securities held of record by either 2,000 persons, or 500 persons who are not accredited investors, register such class of securities with the Commission.

[84] *See* 17 CFR 240.12g5–1(a)(8). The Commission adopted this provision of Rule 12g5–1 pursuant to Section 503 of the JOBS Act, which instructed the Commission to amend the definition of ''held of record'' to exclude securities held by persons who received them pursuant to an ''employee compensation plan'' in transactions exempted from the registration requirements of Section 5 of the Securities Act. Section 503 also instructed the Commission to adopt a safe harbor that issuers can use when determining whether holders of their securities received them pursuant to an employee compensation plan in transactions exempted from the registration requirements of Section 5 of the Securities Act. The Commission adopted the term ''employee compensation plan'' and left it undefined so that ''issuers will have appropriate flexibility to make a principles based determination about securities received as employee compensation when determining their holders of record under Section 12(g)(5).'' *See* Release No. 33–10075.

[85] *See* 17 CFR 240.12g5–1(a)(8)(ii)(A).

[86] Two commenters supported excluding platform workers from the definition of record holder under Rule 12g5–1. *See* letters from Airbnb and Davis Polk.

[87] Similar to the current Rule 12g5–1 exclusion for securities issued pursuant to an employee

under Rule 701(h) as record holders for the purpose of determining its Section 12(g) registration obligations.[88] In addition, similar to the existing exclusion in 17 CFR 240.12g5–1(a)(8)(i)(B), the proposed amendment would exclude securities received in a transaction exempt from, or not subject to, the registration requirements of Securities Act Section 5 in substitution or exchange for securities received pursuant to Rule 701, as long as the persons were eligible to receive the securities when they were originally issued to them.[89] Finally, the proposed amendments would extend the safe harbor in 17 CFR 240.12g5–1(a)(8)(ii), for securities received in a Rule 701(c) offering, to compensatory issuances to platform workers pursuant to Rule 701(h).[90]

The proposed amendments to Rule 12g5–1 would also include a note to remind issuers of the temporary nature of Rule 701(h).[91] Upon expiration of Rule 701(h), without further Commission action, an issuer would no longer be able to issue additional Rule 701-exempt securities to its platform workers. Importantly, however, we are not proposing the Rule 12g5–1 exclusion and safe harbor for securities issued to platform workers on a temporary basis. Therefore, an issuer could continue to rely on the exclusion and safe harbor subsequent to Rule 701(h)'s expiration date.

Request for Comment

31. Should we permit an issuer to exclude platform workers to which it has issued securities under Rule 701(h) from the definition of ''holders of record'' for the purpose of determining its registration obligations under Section 12(g), as proposed?

32. Should we extend the Rule 12g5–1 safe harbor to cover issuances to platform workers under Rule 701(h) pursuant to a compensation plan, as proposed?

33. Should we leave ''compensation plan'' for platform workers undefined, as proposed? If not, how should we define a ''compensation plan'' for platform workers?

E. Considerations Specific to Form S–8

Form S–8 provides a number of accommodations to registrants that seek to register the offer and sale of securities to their employees, consultants, and advisors.[92] For example, to satisfy the Securities Act prospectus delivery requirements set forth in Rule 428, the form requires only abbreviated disclosure and permits the delivery of regularly prepared materials advising employees and other eligible persons about employee benefit plans, together with a statement of availability of documents containing registrant information.[93] Form S–8 also permits the incorporation by reference of a registrant's Exchange Act reports without regard to the length of the issuer's reporting history or the aggregate market value of its securities held by the non-affiliated public (its ''public float'').[94] The Commission has justified this differing treatment for Form S–8 offerings because of their compensatory, incentivizing, and non-capital-raising purpose.[95]

We propose to amend Form S–8 so that the accommodations available to registrants currently offering securities on that form to employees and other covered persons would generally be available to registrants offering securities to platform workers. We also propose to amend Rule 428 so that its prospectus content, delivery, updating, and related procedural requirements are applicable to offerings to platform workers pursuant to a written compensation plan, contract, or agreement. Thus, a registrant registering an offering of securities to platform workers on Form S–8 would be able to deliver a Section 10(a) prospectus consisting of plan or compensation contract information, a statement of availability of registrant information, and other documents required of current Form S–8 registrants, and follow the same Form S–8 procedural requirements.[96] We believe that the proposed conditions designed to help ensure that an offering to such workers is for a compensatory purpose justify extending the same treatment to issuers seeking to register an offering of securities to platform workers on Form S–8.

Many of the substantive plan disclosure requirements for Form S–8 pertain to tax qualified defined contribution plans. We believe, however, that issuers that elect to register an offering of securities on Form S–8 for issuance to platform workers would do so to incentivize those workers in the short-term by offering options and restricted stock units, rather than pursuant to a defined contribution plan for the purpose of retirement savings. Accordingly, we are not proposing amendments to those items of Form S–8 that pertain to defined contribution plans to include platform workers.

Request for Comment

34. Platform workers may not be as familiar with the registrant's operations as employees and other persons currently eligible to receive securities under Form S–8 may be. As such, should registrants offering securities to platform workers be subject to different information content, prospectus delivery, or other procedural requirements than those applicable to current Form S–8 registrants? If so, what additional requirements under Form S–8 or Rule 428 or what different or additional disclosure requirements should apply to offerings to platform workers?

35. Are there circumstances in which registrants would issue securities to platform workers pursuant to defined contribution plans? If so, should we amend those items of Form S–8 that pertain to defined contribution plans to include platform workers?

F. Requirement To Furnish Certain Information

As explained in detail below, the proposed expansion of Rule 701 and Form S–8 to include securities issuances to platform workers would be temporary.[97] Related to this, we are also proposing a requirement that an issuer furnish certain information to the Commission. If the proposed amendments are adopted, we plan to use this information to assist us in evaluating the expanded use of Rule 701

compensation plan, we propose to use and leave undefined the term ''compensation plan'' to provide issuers with the appropriate flexibility to make a principles based determination about securities issued as compensation to their platform workers when determining their holders of record under Section 12(g)(5). Not defining a ''compensation plan'' for platform workers would also avoid unnecessary complexity and potential conflict with existing terms, such as ''compensatory benefit plan.'' *See* Release No. 33–10075, 81 FR at 28694.

[88] *See* proposed Exchange Act Rule 12g5–1(a)(8)(i)(A).

[89] *See* proposed Exchange Act Rule 12g5–1(a)(8)(i)(B).

[90] *See* proposed Exchange Act Rule 12g5–1(a)(8)(ii)(A)(*2*). The Rule 12g5–1 safe harbor would continue to provide that an issuer may, solely for the purposes of Exchange Act Section 12(g), deem the securities to have been issued in a transaction exempt from, or not subject to, the registration requirements of Securities Act Section 5 if the issuer had a reasonable belief at the time of the issuance that the securities were issued in such a transaction. *See* 17 CFR 240.12g5–1(a)(8)(ii)(B).

[91] *See* proposed Note 1 to paragraph (a)(8)(ii) of Rule 12g5–1.

[92] *See* 1999 Form S–8 Adopting Release, *supra* note 12, at 11103; *see also* 1990 Form S–8 Adopting Release, *supra* n. 14.

[93] *See* Form S–8, Part I, Item 2.

[94] *See* Form S–8, Part II, Item 3.

[95] *See, e.g.,* 1999 Form S–8 Adopting Release, *supra* note 12, at 11103. The Commission has also justified the abbreviated disclosure format of Form S–8 because of ''employees' familiarity with the issuer's business through the employment relationship.'' *Id.*

[96] *See* proposed Rule 428(d).

[97] *See infra* Section II.G.

and Form S–8, in order to help determine whether to permit such use on a permanent basis and under the same or different conditions. The information should provide insight into how, and to what extent, the exemptions are being used, as well as the extent and type of benefits provided to issuers, platform workers, and other investors. This would enable us to assess the utility of the issuances of securities to platform workers under Rule 701 or Form S–8 and to assess whether the proposed conditions have achieved their purpose of helping to prevent non-compensatory issuances. Although the proposed rule would require issuers to furnish certain information, furnishing the identified information would not be a condition to rely on Rule 701 or Form S–8. Thus, a failure to furnish the information would not result in the loss of the proposed exemption in Rule 701 or Form S–8 eligibility for issuances to platform employees. The information would, however, be important for determining whether the exemptions should expire, be extended, or be made permanent.

The required information would be furnished, rather than filed, and therefore would not be subject to potential liability under Section 18 of the Exchange Act.[98] The information would be intended only for the Commission's use and would be non-public. It would not be furnished through the Commission's Electronic Data Gathering, Analysis, and Retrieval (EDGAR) system. Rather, it would be furnished in a non-public manner designated by the Division of Corporation Finance for this purpose, for example, electronically by email or by some other means of electronic communication.

As proposed, the issuer would be required to provide the following information concerning its issuances to platform workers to the Commission at six-month intervals commencing six months after the first such issuance:

1. The criteria used to determine eligibility for securities awards to platform workers, whether they are the same as for other compensatory transactions, and whether those criteria, including any revisions to such criteria, are communicated to workers in advance as an incentive;

2. The type and terms of securities issued to platform workers during the prior six months, and whether they are the same as for other securities issued in compensatory transactions by the issuer during that interval;

3. If issuing securities pursuant to Rule 701(h), the steps taken to ensure that the securities sold are non-transferable;

4. The percentage of overall outstanding securities that the amount issued to platform workers cumulatively under Rule 701(h) or pursuant to a registration statement on Form S–8 (pursuant to § 239.16b(c)), as applicable, represents;

5. During the interval, the number of platform workers, the number of non-platform workers, the number of platform workers receiving securities pursuant to the temporary rule, and the number of non-platform workers who received securities pursuant to the issuer's Rule 701 or Form S–8 sales; and

6. The number and dollar amount of securities issued to platform workers under Rule 701 or pursuant to a registration statement on Form S–8, both in absolute amounts and as a percentage of the issuer's total sales under Rule 701 or total sales pursuant to a registration statement on Form S–8, as applicable during the interval.[99]

We recognize that some non-reporting issuers may view certain information concerning compensation practices for platform workers as privileged or confidential. For that reason, the proposed rules would provide that to the extent that the issuer treats such information as privileged or confidential, it may submit a confidential treatment request pursuant to 17 CFR 200.83 [100] for the furnished information.[101]

Request for Comment

36. Should the temporary rules require an issuer to furnish certain information to the Commission if it seeks to register issuances to platform workers on Form S–8, as proposed? If so, should an issuer be required to furnish the information at six-month intervals, as proposed? Should the issuer be required to furnish the information annually or on another periodic basis? If so, which periodic basis would be appropriate?

37. Should the same reporting interval apply to issuances of securities both under Rule 701 and pursuant to a registration statement on Form S–8?

38. Is the proposed information appropriate for the purpose for which it is being sought? Should issuers be required to furnish less information or other information in addition to, or instead of, the proposed information?

39. What method should the Commission require issuers to use to furnish the information required? For example, should the information be furnished electronically via email for this purpose? Should the Commission provide a form for this purpose?

Are there other steps that the Commission should take to facilitate the reporting requirement?

40. Should we require that an issuer notify the Commission that it intends to make offers or sales to platform workers pursuant to the exemption in proposed Rule 701(h)? If so, when and how should issuers be required to provide such notice?

G. Expiration of the Temporary Rules Authorizing Issuances to Platform Workers Under Rule 701 and Form S–8

With limited exceptions, we propose to make this exemptive rule temporary in order to have an opportunity to evaluate the appropriateness of extending the Rule 701 exemption to issuances to workers in this relatively new type of work arrangement, including whether such issuances are being made for compensatory, incentive, and non-capital-raising purposes.[102] Moreover, given the rapid pace of technological change, particularly in the area of the internet and platform software, and the evolving nature of the platform worker labor market, making the expanded Rule 701 exemption temporary would also provide us with the opportunity, subject to public notice and comment, to implement amendments to this area of the

[98] 15 U.S.C. 78r.

[99] *See* proposed Rule 701(h)(4) and proposed 17 CFR 239.16b(c)(3). The amounts calculated as a percentage should compare the amount of securities issued to platform workers under Rule 701 or Form S–8 with the total amount of securities issued to all workers (both platform and non-platform) and other covered persons under Rule 701 or on Form S–8.

[100] Under Rule 83, an issuer can request that the non-public information not be disclosed pursuant to a request under the Freedom of Information Act (''FOIA''). Written requests for confidential treatment under Rule 83 relating to the furnished materials may be submitted either in paper format or electronically. If there are no FOIA requests, the information will remain non-public for 10 years. After 10 years, the confidential treatment request will expire unless an issuer requests and is granted an extension. In the event of a FOIA request, the Commission may require the issuer to provide substantiation of its confidential treatment request.

[101] *See* proposed Rule 701(h)(5) and proposed 17 CFR 239.16b(c)(4).

[102] As previously discussed, the exemption would continue to be available to issuers for the post-expiration issuance of securities underlying options previously issued in an exempt transaction pursuant to Rule 701(h). *See supra* note 41 and accompanying text. In addition, as previously noted, an issuer could continue to rely on the Rule 12g5–1 exclusion and safe harbor for securities issued to its platform workers prior to the expiration of Rule 701(h) and continue to exclude those workers as record holders subsequent to Rule 701(h)'s expiration date. *See supra* Section II.D.

exemptive framework in light of such technological and labor market changes.

As proposed, Rule 701(h) would apply only to offers and sales of securities occurring within five years following the date of the rule's effectiveness. On that date, Rule 701(h) would expire and no longer be effective.[103] Prior to the expiration date, the Commission may decide to let the exemption expire, extend the temporary exemption, or adopt the exemption on a permanent basis. If the Commission extends the exemption or adopts it on a permanent basis, it may also consider whether any revisions to the rule are appropriate. We believe that five years is an appropriate period for the temporary exemption. On the one hand, it would provide issuers with sufficient time to develop and conduct successful securities offerings to platform workers, the demand for which initially may not be readily apparent. On the other hand, the limited period would allow the Commission to evaluate the temporary exemption and make necessary adjustments in response to technological, labor market, or other changes.

The rule authorizing the temporary use of Form S–8 for issuances to platform workers (17 CFR 239.16b(c)) would also expire five years from the date of that rule's effectiveness, which we expect would be the same date as the expiration date for Rule 701(h). Rule 428(d), the temporary rule authorizing the application of the same streamlined disclosure, prospectus delivery, and related procedural requirements to issuances to platform workers as those currently applicable to other Form S–8 issuances, would expire on the same date as 17 CFR 239.16b(c).

Request for Comment

41. Should we adopt each of proposed Rule 701(h), the proposed amendment to Form S–8 (17 CFR 239.16b(c)), and proposed Rule 428(d) as temporary rules, as proposed? If we do, should the rules expire five years from the date of their effectiveness, as proposed? Should the rules expire on a different date (*e.g.,* one, two, three, or four years from the date of effectiveness)?

42. Should we permit an issuer, following expiration of Rule 701(h), to issue securities underlying options, warrants, or rights that were previously issued to platform workers in an exempt transaction pursuant to Rule 701(h), as proposed?

43. Should we make the expiration date for the temporary Form S–8 provisions different from the expiration date for issuances under Rule 701(h)? If so, should the effective period of the Form S–8 provisions be longer or shorter than the effective period of Rule 701(h)?

44. Should the proposed extension of Rule 701 and Form S–8 to platform workers expire absent further Commission action, as proposed? Are there any transition or related issues (*e.g.,* related to transfer restrictions) that we should address in connection with the proposed expiration of the temporary rules?

45. Rather than making the rules temporary,[104] should we adopt any of the proposed rules on a permanent basis? If so, which ones?

III. General Request for Comments

We request and encourage any interested person to submit comments on any aspect of the proposed amendments, other matters that might have an impact on the proposed amendments, and any suggestions for additional changes. With respect to any comments, we note that they are of greatest assistance to our rulemaking initiative if accompanied by supporting data and analysis of the issues addressed in those comments and by alternatives to our proposals where appropriate.

IV. Economic Analysis

The Commission is proposing amendments to Rule 701 to establish a temporary provision that, on a trial basis, would expand the scope of the rule to include a new category of worker, the platform worker, to whom an issuer would offer and sell securities, under certain conditions, without registration under the Securities Act. Similarly, the Commission is proposing amendments to permit an Exchange Act reporting issuer to register offers and sales to platform workers on Form S–8.[105] The Commission is proposing these amendments on a temporary basis for a five-year period. Permitting gig economy issuers to utilize the Rule 701 exemption on a temporary basis would allow the Commission to assess the appropriateness of the exemption for these new work relationships and thus should help inform the Commission's ongoing efforts to modernize its rules in light of changing economic and market conditions. In connection with the proposed amendments, issuers that offer and sell securities to platform workers would be required to furnish certain information to the Commission at six-month intervals to assist in evaluating the proposed expanded scope of Rule 701 and Form S–8. The Commission also is proposing to amend Rule 12g5–1 under the Exchange Act to extend the exclusion from the definition of ''held of record'' and corresponding safe harbor, for securities issued to platform workers.

We are mindful of the costs imposed by and the benefits obtained from our rules and amendments.[106] The discussion below summarizes information about the gig economy in general, various attributes of platform workers and specific information about the online platform economy. We then discuss the potential economic effects of the proposed amendments. These include the likely benefits and costs, effects on efficiency, competition, and capital formation, and reasonable alternatives. We attempt to quantify these economic effects whenever possible; however, due to data limitations, we are not able to quantify many of the economic effects.

A. Economic Baseline

The baseline for the economic analysis consists of the current regulatory requirements applicable to issuers issuing securities to their employees as part of their compensation arrangements. Non-reporting issuers are able to rely on Rule 701 to offer compensatory securities to their employees. Registrants are able to register the offer and sale of compensatory securities to their employees on Form S–8. As discussed above, these provisions currently are not available for platform workers because of their non-traditional employment status. Thus, the affected parties for the proposed amendments would consist of online platform-based businesses wishing to offer securities as compensation, their platform workers,

[103] In the event that the Commission determines to let the exemption expire, we anticipate addressing any transition or related issues at that time.

[104] *But see supra* note 102.

[105] Unlike the proposed amendment to Rule 701, the proposed amendment to Form S–8 does not include a transfer prohibition. We discuss the anticipated economic effects of this difference below.

[106] Section 2(b) of the Securities Act [15 U.S.C. 77b(b)] and Section 3(f) of the Exchange Act [15 U.S.C. 78c(f)] requires the Commission, when engaging in rulemaking where it is required to consider or determine whether an action is necessary or appropriate in the public interest, to consider, in addition to the protection of investors, whether the action will promote efficiency, competition and capital formation. Further, Section 23(a)(2) of the Exchange Act [15 U.S.C. 78w(a)(2)] requires the Commission, when making rules under the Exchange Act, to consider the impact that the rules would have on competition, and prohibits the Commission from adopting any rule that would impose a burden on competition not necessary or appropriate in furtherance of the Exchange Act.

and any companies with which these businesses compete in the labor market.

1. Overview of the Gig Economy

Numerous recent studies document an evolution and expansion of the gig economy over time. These studies examine various aspects of the nature of non-traditional (or alternative) work arrangements and corresponding trends in this area. The findings across these studies may vary for multiple reasons. For example, there is no general consensus on the definition/scope of the gig economy, or its various constituents.[107] Consequently, the results of these studies may vary because they use different definitions of the gig economy. Moreover, various sources of data are utilized to study the field. The three main sources of data used in these studies are government surveys such as the Current Population Survey,[108] administrative data such as IRS filings, and private sector data. Due to the differing nature of the data analyzed, different types of errors or biases in the data may affect the findings of these studies.[109] We discuss some of the main findings of this literature below and then focus on data and statistics from studies using definitions of gig economy that are more likely to be relevant to the scope of the proposed amendments to Rule 701 and Form S–8.

A 2019 study,[110] using a broad definition of alternative work arrangements,[111] finds a significant increase in alternative work arrangements over the 2005–2015 period. It estimates that about 15.8 percent of survey participants engaged in some form of alternative work arrangement in 2015 as compared to 10.7 percent in 2005.[112] It also finds that workers providing services through an online intermediary accounted for 0.5 percent of all workers in 2015.[113]

The 2019 Abraham Study reports self-employment rates increasing from 13 percent in 2004 to 15 percent in 2016, based on published Census Bureau statistics on non-employer businesses.[114] The largest increase in non-employers between 2010 and 2016 took place in the Ground Passenger Transportation sector,[115] which grew by almost 300 percent (651,000 drivers) during the period.[116] The study also finds positive growth in non-employers for the following sectors: NAICS 488 (Support Activities for Transportation), NAICS 611 (Educational Services), NAICS 448 (Clothing and Clothing Accessories Stores), and NAICS 446 (Health and Personal Care Stores), although to a much less extent as compared to the growth observed in the Ground Passenger Transportation sector.

The 2017 Contingent Worker Supplement estimated that there were about 1.6 million electronically mediated workers in the United States,[117] accounting for one percent of total employment.

The Federal Reserve 2018 Survey of Household Economics and Decision Making (the ''2018 SHED Survey'') [118] finds that 30 percent of adults engaged in gig economy related work, including both the provision of services and the sale of goods, and using both online and offline methods, in 2018. The survey also finds that three percent of adults surveyed participated in gig economy work enabled by the internet or a mobile app to connect to customers.

Another study uses private data to examine various characteristics and trends of a subsection of the gig economy, namely the online platform economy and its participants.[119] It analyzed a sample comprised of 39 million unique checking accounts over the October 2012–March 2018 period [120] and found a significant increase in the number of families receiving income from providing goods and services using online platforms.[121] For example, in 2013, less than 0.5 percent of the sample checking accounts received income from work performed through an online platform, whereas that number increased to 1.6 percent in 2018.[122] The study further breaks down income sources from online platform utilization into four categories: (1) Transportation, (2) non-transport work (includes services such as dog walking and home repair), (3) selling of goods, and (4) leasing.[123] As of March 2018, online

[107] Katherine Abraham, John Haltiwanger, Kristin Sandusky, and James Spletzer, *The Rise of the Gig Economy: Fact or Fiction,* 109 AEA PAPERS & PROCEEDINGS 357 (2019) (the ''2019 Abraham Study'').

[108] The Current Population Survey (CPS) is conducted on a monthly basis by the United States Census Bureau on behalf of the Bureau of Labor and Statistics. The CPS may include supplementary questions/topics on a non-periodic basis. In 2005 and again in 2017 the supplementary questions focused on contingent workers. *See, e.g.,* U.S. Bureau of Labor Statistics, Electronically mediated work: New questions in the Contingent Worker Supplement, MONTHLY LAB. REV. (Sept. 2018) (the ''2017 Contingent Worker Supplement''), *https://www.bls.gov/opub/mlr/2018/article/electronically-mediated-work-new-questions-in-the-contingent-worker-supplement.htm.*

[109] *See, e.g.,* Katherine Abraham, John Haltiwagner, Kristin Sandusky, and James Spletzer, *Measuring the gig economy: Current Knowledge and Open Issues* (Nat'l Bureau of Econ. Research Working Paper 24950, 2018) (the ''2018 Abraham Study''). The 2018 Abraham Study finds that there has been a growing discrepancy between the level of self-employment as measured in core household surveys versus the level of self-employment as measured in administrative data. The study concludes that examining integrated data sets that combine survey, administrative, and private data are likely to improve the measurement of self-employment activity.

[110] Lawrence Katz & Alan Krueger, *The Rise and Nature Of Alternative Work Arrangements in the United States, 1995–2015,* 72 ILR REV. 382 (2019) (the ''Katz Study'').

[111] The definition of alternative work arrangements used in the Katz Study includes temporary help agency workers, on-call workers, contract workers, and independent contractors or freelancers.

[112] The 2005 results in the Katz Study were based on data from the 2005 Contingent Worker Supplement and the 2015 results in the Katz Study were based on a survey conducted by RAND-Princeton as part of the RAND American Life Panel (the ''Rand-Princeton Survey'').

[113] The Katz Study does not discuss 2005 online platform participation rates.

[114] A non-employer business is defined by the Census Bureau as one that has no paid employees, has annual business receipts of $1,000 or more ($1 or more in the construction industries), and is subject to federal income taxes. Most non-employers are self-employed individuals operating very small, unincorporated businesses, which may or may not be the owner's principal source of income. *https://www.census.gov/quickfacts/fact/note/US/NES010217.*

[115] This sector corresponds to North American Industry Classification System (NAICS) code 485.

[116] *See also* Jonathan Hall & Alan Krueger, *An Analysis of the Labor Market for Uber's Driver-Partners in the United States,* 71 ILR Review 705 (2018) (the ''Hall Study''). The Hall Study finds that the number of Uber drivers increased from a base of zero in 2012 to 460,000 active drivers by the end of 2015.

[117] The 2017 Contingent Worker Supplement defines electronically mediated work as an employment arrangement where workers: (1) Use a platform provider's website or mobile app to connect to clients or customers and obtain short jobs, projects, or tasks; (2) are paid by or through the platform provider that owns the website or mobile app, (3) choose when and whether to work, (4) may do these short jobs, projects, or tasks in person or online.

[118] The Federal Reserve has conducted the Survey of Household Economics and Decision Making on an annual basis starting in 2013.

[119] Diana Farrell, Fiona Greig & Amar Hamoudi, *The Online Platform Economy in 2018: Drivers, Workers, Sellers, and Lessors,* JPMorgan Chase Institute, (2018) (the ''Farrell Study'').

[120] The study applies multiple filters to select the accounts in the final sample. These filters are described in the Appendix of the study.

[121] In order for an online platform to be included in the Farrell Study, it had to meet the following criteria: (1) The platform connects independent suppliers to customers, (2) the platform mediates the flow of payment from customer to supplier, (3) the platform empowers participants to enter and leave the market whenever they want. The study identified 128 online platforms based on the three criteria above. We believe the definition of gig economy applied in this study most closely resembles the definition of online platform workers used in the proposed amendments to Rule 701 and Form S–8.

[122] The Farrell Study also notes that as of March 2018, about 4.5% of accounts examined received income from an online platform at some point over the prior year.

[123] Companies identified in categories (1) and (2) in the Farrell Study are likely to have a significant overlap with the companies that are likely to be included in the proposed expansion of Rule 701 and Form S–8, given the overlap between the provided definition of these categories and the

platform workers in categories (1) and (2) constituted approximately 65 percent of the workers in all four categories. Over the 2013–2018 period, the transportation services category has shown the most significant growth, increasing from less than 10 percent of online platform workers in 2013 to approximately 60 percent of online platform workers in 2018.

2. Characteristics of Gig Economy Workers

In this section, we summarize findings from studies and surveys on the gig economy with respect to the characteristics of participants in such work arrangements. In general, multiple sources lead to the conclusion that, although the frequency of participation varies, the average gig economy worker engages in such work periodically throughout the year. In addition, the average gig economy worker seems to participate in such work in order to supplement her basic source of income and is relatively younger in age than traditional employees.

The 2018 SHED Survey finds that the majority of gig economy workers tend to engage in such work to generate income in addition to their primary source of income. For example, the survey finds that about 37 percent of gig economy workers indicated that they engage in such work to supplement their income, whereas 18 percent indicated that their primary source of income comes from gig-related work. In addition, only 30 percent of gig economy workers responded that they earn income from such activities in all or most months of the year. With respect to participation rates involving the use of a website or mobile app to connect to customers, the survey documents five percent of individuals between the ages of 18 and 29 using such methods to find customers, whereas one percent of individuals aged 60 or older used such method to find work. The 2018 SHED Survey also documents that individuals younger in age tend to be more active in gig-related work. Overall participation rates ranged from 37 percent for individuals between the ages of 18 and 29 to 21 percent for individuals 60 year old or older.

The Farrell Study finds that among individuals or families participating in the gig economy through online platforms, more than 60 percent derived earnings from online platform related work between one and three months out of the year. About 10 percent of workers received payments due to online platform related work between 10 and 12 months of the year. For transportation platforms specifically, 12.5 percent of individuals generated income between 10 and 12 months of the year. These statistics indicate that the majority of online platform workers generated income from the use of these online platforms periodically throughout the year.

The Hall Study analyzes the labor market for Uber drivers in the United States based on a survey of Uber drivers in 2014 and 2015. Among other findings, the study documents that more than half of Uber drivers who started on the platform in the first half of 2013 remained active a year after starting, and one-third were still active two years after starting. In general, the study finds that the majority of Uber drivers use the platform because they value the flexibility to choose when to work and the ability to generate additional income when needed.

3. The Online Platform Economy

As discussed above, we observe that there is a trend of increased activity under all definitions of the ''gig economy,'' although the extent of that increase varies across the data analyzed in various studies. Concerning online platform work specifically, the trends are relatively clear in that there has been a significant expansion of both online platforms and individuals using these online platforms to generate income in the last few years. Moreover, the majority of users of such platforms use them to supplement their income when needed and value the flexibility of the working hours that the platform work offers.

The Rand-Princeton Survey estimates that about 0.5 percent of the workforce in 2015 used an online platform to connect to customers. The 2017 Contingent Worker Supplement estimates that 1.6 million workers, or approximately one percent of the workforce, used an online platform to connect to customers and provide services. The Farrell Study estimates that about one percent of the 37 million checking accounts examined received income from the use of an online platform to connect with customers to provide services, with a growth rate from 2016 to 2018 of 100 percent. Finally, the 2018 SHED Survey documents that three percent of adults surveyed participated in gig work enabled by the internet or a mobile app to connect to customers, a percentage that includes both the provision of services and the sale of goods. Among all sectors examined, the passenger transportation services sector is the only sector where all available evidence suggests a dramatic increase in the use of online platforms as an intermediary for such work.[124]

B. Broad Economic Considerations

Below, we discuss broad economic considerations derived from the academic literature focusing on non-executive employee incentive-based pay and identify certain limitations of the applicability of such literature to platform providers and platform workers due to their differing characteristics relative to traditional employees.

In general, economic theory suggests that variable pay, including equity-based pay,[125] can serve as a mechanism to align the incentives of agents with those of principals and can lead to enhanced agent performance.[126] Academic literature that examines compensation arrangements of Chief Executive Officers (CEOs), in general, finds a positive correlation between various forms of variable pay and future outcomes, such as issuer performance, when such forms of variable pay are used appropriately.[127] There is also academic literature that examines non-executive employee compensation arrangements. Although this stream of literature highlights the potential incentive alignment effect that equity-based pay may have on employees, it also highlights other important considerations that may drive issuers to use such compensatory benefit plans. Specifically, it finds that issuers may use non-executive employee compensation arrangements to attract and retain talent. Thus, we expect that the proposed amendments likely would enhance the ability of affected issuers to compete in the labor market. This benefit likely would be more important if these issuers compete with traditional issuers for the same pool of workers,

scope of the proposed amendments. Specifically, categories (1) and (2) represent companies that are online platforms specializing in connecting customers with independent suppliers for the provision of services. Some of the companies in the Farrell Study's leasing category may also fall within our proposed definition of services.

[124] *See* 2019 Abraham Study, *supra* note 107.

[125] Although the scope of the proposed rules is broader than ''equity-based'' compensation, we believe that most, if not all, issuances under Rule 701(h) will be equity-based securities.

[126] Academic literature usually considers the agency relationship between investors or issuer owners (principals) and issuer management (agents). Within the issuer, agency relationships can also exist between management (principal) and non-management employees (agents). *See, e.g.,* Michael Jensen & William Meckling, *Theory of the Firm: Managerial Behavior, Agency Costs, and Ownership Structure,* 3 J. FIN. ECON. 305 (1976).

[127] Under certain circumstances, inappropriate structures of compensation contracts may lead to undesirable outcomes, such as inappropriate risk taking.

particularly for workers with specialized skills.

Academic literature also finds that issuers with non-executive employee option plans use funds that would otherwise be used to compensate employees in other areas of the issuer. We expect affected issuers would be able to improve their allocation of capital as a consequence of the proposed rules. The latter may be particularly important for issuers that are financially constrained.

Although academic theory and findings concerning the economic effects of the use of equity-based pay may apply to both traditional employees and platform workers up to a certain extent, there could be differences due to the differences between online platform workers and traditional employees. Specifically, platform workers may have different motives for undertaking such work and different employment horizons.[128] As such, online platform workers might respond differently to equity-based pay as compared to traditional employees, making the economic effects of equity-based pay for these workers difficult to predict. Moreover, the economic effects of the proposed amendments will be affected by the restrictions on the use of equity-based pay under the proposed amendments and will depend on how affected issuers structure compensation arrangements based on each issuer's facts and circumstances.

Equity-based pay also will introduce liquidity and valuation risks to the compensation of platform workers. Such risks are likely to be more significant for compensation offered by non-reporting issuers. For example, the transferability prohibition in the proposed amendments to Rule 701 will introduce illiquidity in the compensation of non-reporting issuers' platform workers. Further, the relatively more opaque information environment of non-reporting issuers is likely to lead to increased valuation risk in the equity-based compensation offered. These increased risks are likely to reduce the expected benefits of the proposed amendments for non-reporting issuers and their platform workers.

Below we discuss the expected benefits and costs from the proposed rules in more detail.

[128] For example, the majority of gig economy workers appear to engage in such work to supplement their basic income, and may engage in such work on a more sporadic basis, relative to traditional employees. *See supra* Section IV.A.2.

C. Expected Economic Benefits and Costs

In this section, we discuss the expected economic benefits from the proposed amendments, including potential factors that are likely to introduce some uncertainty as to the expected benefits from the proposed amendments. We then discuss how the furnished information concerning how platform providers use the provisions in the proposed amendments may serve to inform the Commission about whether to undertake further action. Finally, we discuss potential costs related to the proposed amendments.

1. Expected Economic Benefits

Providing issuers greater flexibility in the use of equity-based compensation may allow issuers to design compensation contracts or arrangements that are more efficient in aligning employee incentives with those of investors. Improved incentives could lead to increased effort and improved decision-making by platform workers.[129] Evidence in the academic literature shows a positive correlation between the use of non-executive stock option compensation and measures of operating performance and issuer innovation, but that such effect varies depending on facts and circumstances.[130] Evidence also shows that the effect of non-executive stock options tends to be stronger when such plans are broadly implemented within the issuer.[131]

The proposed amendments may provide affected companies with additional resources, which may particularly benefit issuers that face capital constraints. Permitting issuers to use securities to compensate online platform workers may free up resources. This would permit issuers to reallocate resources towards other productive uses. Academic literature that examines the use of non-executive employee stock options finds that such compensatory plans are more frequently used by issuers facing capital requirements and financing constraints.[132] We expect that capital constraints are more likely to be a concern for at least a subset of non-reporting issuers. We thus expect the proposed amendments to provide these issuers with increased flexibility in terms of available resources.

The proposed amendments would permit affected issuers to offer compensatory securities to, in addition to natural persons, entities meeting specified conditions. As stated above, the gig economy is an evolving market in which participating workers may be organized in various ways. We expect this proposed amendment to expand the set of affected issuers that would be eligible to use securities to compensate platform workers. Also, the proposed amendment may benefit platform workers as it would allow them to optimize their preferred organizational structure while being eligible to receive

[129] It should be noted that the efficiency of variable pay may be higher when the metric/signal used to determine the variable component of pay accurately reflects the agent's effort and performance. Due in part to the business model of online platforms, and in part due to technological advances, online platform workers' effort and performance may be measured with higher accuracy than in traditional business models. For example, Uber drivers have an individual rating that is based on direct inputs from multiple customers receiving the service. This characteristic of the online platform business model may facilitate more efficient contracting between the issuer and workers.

[130] *See* Xin Chang, Kangkang Fu, Angie Low & Wenrui Zhang, *Non-executive employee stock options and corporate innovation,* 115 J. FIN. ECON. 168 (2015). The study uses a sample of S&P 1500 companies over the 1998–2003 period to examine the effect of stock options granted to non-executive employees on corporate innovation, as measured by patent applications and patent citations. The study documents a positive relation between the use of stock options to compensate non-executive employees and proxies for corporate innovation. The study also finds that the effect of employee stock options on innovation is due mostly to the risk-taking incentive that stock options provide to employees rather than the incentive to exert effort. *See also* Yael Hochberg & Laura Lindsey, *Incentives, Targeting, and Firm Performance: An Analysis of Non-executive Stock Options,* 23 REV. FIN. STUD. 4148 (2010) (the ''Hochberg Study''). The study uses a sample of S&P 1500 companies over the 1997–2004 period to examine the effect of employee stock options on issuer performance. The study documents a positive relation between implied incentives from employee stock options and future operating performance, on average. The study also documents that the positive relation between employee stock options and firm performance is concentrated in smaller firms and firms with significant growth options. Moreover, the study shows that such effect is stronger for broad-based option plans as they induce a mutual monitoring effect within employees.

[131] *See* Hochberg Study, *supra* note 130.

[132] *See* John Core & Wayne Guay, *Stock Option Plans for Non-Executive Employees,* 61 J. FIN. ECON. 253 (2001). The study examines detailed information about non-executive employee stock option holdings, grants, and exercises for 756 companies during the 1994–1997 period. Among other findings, the study's results support the hypothesis that options are granted to non-executives more intensively when firms have greater financing needs and face financing constraints. *See also* Ilona Babenko, Michael Lemmon & Yuri Tserlukevich, *Employee Stock Options and Investment,* 66 J. FIN. 981 (2011). The study examines a sample of 1,773 companies over the period 2000 to 2005 with regards to their broad-based employee stock option programs. The study finds evidence consistent with the idea that stock options can mitigate financing constraints by substituting for cash wages at the time of the grant, and by providing significant cash inflows at the time of exercise, conditional on a high stock price. The study further estimates that $0.34 of each dollar of cash inflow received by the firm from the exercise of stock options is allocated to increasing capital and R&D expenditures.

compensatory securities for services provided through the online platform.

Finally, to the extent that issuers that use platform workers—*i.e.,* ''platform providers''—compete for labor with issuers that offer traditional employment, the use of equity-based compensation could permit platform providers to be more competitive in the labor market. Currently, platform providers cannot rely on Rule 701 or use Form S–8 to issue securities as compensation to their platform workers. They are thus at a disadvantage in terms of offering compensation contracts that are likely to attract and retain platform workers. Facilitating platform providers' efforts to attract and retain platform workers could increase their competitiveness.

To the extent that platform providers require platform workers with specialized skills, the academic literature provides evidence that issuers are more likely to use employee stock option plans when they need to attract employees with skills that may be critical for an issuer's success.[133] Relatedly, to the extent that platform providers benefit from having exclusive access to platform workers, we expect the proposed amendments to facilitate such efforts.

There are, however, potential factors that likely introduce some uncertainty as to the expected benefits from the proposed amendments. First, issuing securities as compensation would introduce liquidity and valuation risks. These risks are likely to create uncertainty in the value of platform workers' compensation. This may partially offset benefits arising from greater incentive alignment. Specifically, depending on the facts and circumstances, this uncertainty could lead platform workers to discount the value of such pay to varying extents. We expect the liquidity and valuation risks to be relatively more pronounced for non-reporting issuers, as their information environment is more opaque and the compensatory securities would not be sellable. If platform workers demand additional pay as compensation for bearing these risks, equity-based pay would be a more costly form of compensation for the issuer (relative to cash).[134] Thus, issuers may need to provide increased amounts of equity-based pay to be able to offer an overall compensation value that would attract and retain employees.[135]

In addition, the motives of workers that choose to engage in platform work differs from those of workers that engage in traditional forms of employment. As discussed above, surveys of the online platform economy show that the majority of online platform workers (1) earn secondary income from such work and (2) tend to participate selectively in such work during times when their demand for immediate income is high. As such, it may be reasonable to assume that the majority of online platform workers place particular value on the ability to generate immediate income from platform-based work. Therefore, the transfer prohibitions in the proposed amendments [136] may limit the benefit of the amendments in terms of platform worker attraction and retention, and platform worker incentive alignment.[137]

Platform workers may benefit from the proposed amendments, depending on how affected issuers structure compensation contracts under the proposed amendment. For example, the proposed amendments would provide an opportunity for platform workers to own equity in the platform provider, possibly at an earlier stage of development. If the platform provider's value increases in the future, platform workers holding its securities would experience an increase in their wealth.

Under the proposed amendments, issuers that issue securities to platform workers would be required to furnish certain information to the Commission on a periodic basis.[138] We believe that this information would provide insight into how affected companies are using these compensatory securities. We also believe it could help inform our assessment of the potential benefits of broadening the scope of work relationships for which issuers may issue securities as compensation.[139] If, however, not all of the issuers furnish the required information, the collected information would be incomplete and could be biased, which could weaken the magnitude of this benefit.

The proposed amendments to Rule 12g5–1 would extend the exclusion from the definition of securities ''held of record,'' and the corresponding safe harbor, to securities held by platform workers who received them under the proposed amendment to Rule 701. This would allow non-reporting issuers that issue compensatory securities to platform workers to control how and when they become subject to reporting requirements. The proposed amendment to Rule 12g5–1 could be particularly beneficial for cash-constrained issuers, which would be able to issue compensatory securities to their platform workers without being subject to the compliance costs associated with the Exchange Act reporting requirements. The proposed amendment to Rule 12g5–1 would not be temporary. We expect that issuers will benefit from the non-temporary nature of this proposed amendment because it will allow them to weigh the costs and benefits of using the exemption without it causing them to become subject to Exchange Act reporting requirements and the associated compliance costs, if the exemption is not extended.

The proposed amendments would ensure that estates of deceased employees and representatives of incompetent former employees would receive securities underlying options, warrants, or rights issued to a former employee pursuant to Rule 701. Given that such options, warrants, or rights typically include a vesting period, the proposed amendment would benefit issuers and platform workers as it would provide certainty to platform workers that securities related to options, warrants, or rights would be received by executors, administrators, or beneficiaries in the future. We expect the proposed amendment to strengthen the anticipated benefits described above.

---

[133] *See id.*

[134] *See* Brian Hall & Kevin Murphy, *Stock Options for Undiversified Executives,* 33 J. ACCT. & ECON. 3 (2002). The study analyzes the value of non-tradeable options held by undiversified and risk-averse executives. The study distinguishes between the value of the option to the executive, and the cost of the option to the issuer. Intuitively, the paper provides evidence that risk-aversion and non-diversification create a difference between the issuer cost and the executive value of stock options. *See also* Lisa Meulbroek, *The Efficiency of Equity-Linked Compensation: Understanding the Full Cost of Awarding Executive Stock Options,* 30 FIN. MGMT. 2 (2001). The study argues that undiversified managers will value stock or option-based compensation at less than its market value and derives a method to measure such deadweight costs, ultimately concluding that undiversified managers at rapidly growing, entrepreneurial-based firms heavily discount the value of these options.

[135] In economic theory, this is referred to as the reservation wage of the agent/employee. The expected value of the compensation offered must meet the minimum required compensation that the employee requires to participate in a specific job or task.

[136] Specifically, the proposed amendments to Rule 701 require the issuer to take reasonable steps to prohibit the transfer of securities issued to platform workers pursuant to the exemption, other than a transfer to the issuer or by operation of law.

[137] Transfer restrictions reduce the liquidity of equity-based compensation, leading recipients of such compensation to discount the value of the equity-based pay they are offered. Companies thus may need to provide additional pay to compensate online platform workers for the possible lack of liquidity in their compensation arrangements.

[138] Although the proposed rule would require issuers to furnish certain information, furnishing the identified information would not be a condition to rely on Rule 701 or Form S–8. *See supra* Section II.F.

[139] Relatedly, while it is too early to assess the long-term effects of the COVID–19 pandemic on the gig economy, we intend to monitor developments in this area.

2. Expected Economic Costs

To the extent that the proposed amendments result in an expanded use of Rule 701 and Form S–8 to issue compensatory securities, there would be a corresponding increase in the overall burden estimates associated with these provisions for purposes of the Paperwork Reduction Act. We discuss these increased burden estimates in Section V.C below.

Under the proposed amendments, any issuer that grants compensatory securities to platform workers would be required to furnish certain information to the Commission at six-month intervals. Furnishing this required information would impose certain costs on affected issuers to compile and submit the specified information. As discussed in Section V.C below, for purposes of the Paperwork Reduction Act, we estimate that this aspect of the proposed amendments would result in an additional 1.5 burden hours per semi-annual response for non-reporting issuers and 1 additional burden hour per semi-annual response for registrants.

Affected issuers may incur costs in establishing and administering a compensation program for platform workers. We expect such costs (including but not limited to accounting and legal costs, and costs related to preparing and filing a registration statement, if applicable) to vary based on facts and circumstances. If an affected issuer already has an established compensation plan for employees, then the incremental cost to administer a similar program for, or amend the plan to include, platform workers is likely to be relatively low. Such costs are likely to be relatively higher for issuers that do not have an existing employee compensation plan in place.[140] Similarly, the incremental costs incurred by registrants that already register offers and sales of securities on Form S–8 under their employee compensation plans would be lower than those for registrants registering securities on Form S–8 for the first time. We are not able to quantify these potential costs due to lack of data.

Affected workers could incur costs that could vary based on how issuers structure compensation packages and to the extent awards under compensation plans are substituted for cash or other compensation. As discussed above, any illiquidity and valuation risks associated with these securities could lower their value to the holder. If affected companies offer securities in lieu of cash compensation, the overall value of the compensation to the platform worker may decline. We expect such potential costs to be mitigated by the limit on the amount of compensatory securities that may be offered by affected issuers, as well as by competition for platform workers in labor markets.

D. Effects on Efficiency, Competition, and Capital Formation

The proposed amendments are expected to increase the competitiveness of affected issuers in their efforts to attract and retain workers, to the extent that the affected issuers compete with one another and with traditional issuers for the same workers. As discussed above, however, the extent of any increase in their competitiveness would depend on how affected issuers use the increased flexibility offered by the proposed amendments in designing compensation arrangements for online platform workers.

To the extent that the proposed amendments enable affected issuers to improve the quality and the incentive alignment of their workforce, it could improve these issuers' overall operational efficiency and thus enhance their ability to attract capital. Similarly, the additional flexibility to issue securities as compensation for platform workers may free up resources, particularly for capital-constrained issuers, permitting these issuers to reallocate resources to other productive uses.

E. Reasonable Alternatives

The amendments are proposed primarily on a five-year temporary basis. We could have proposed all of the amendments on a permanent basis. A permanent rule would provide more certainty to issuers and might encourage additional use of the proposed amendments, particularly if the initial set-up costs for such compensation programs are high. As noted above, however, there are uncertainties surrounding the nature of these companies' business models, and the gig economy continues to evolve. Moreover, data shows that platform workers, on average, may have different motivations than traditional employees for undertaking work. Specifically, as discussed above, platform workers appear to be driven mainly by an effort to supplement basic sources of income when additional income is needed. As such, platform workers are likely to differ from traditional employees in their time horizon for such work. Due to these uncertainties, it is challenging to predict how issuers affected by the rule would use securities for compensatory purposes and how platform workers receiving such compensation would perceive its value.

Adopting the amendments on a temporary basis would allow the Commission to assess their effectiveness and make any necessary adjustments before implementing a permanent rule. Specifically, the information furnished by issuers that choose to rely on the proposed amendments would serve to inform the Commission on any potential future adjustments. For example, information collected would inform the Commission on the extent to which gig economy companies issue compensatory securities and how they structure such compensation across the various online platforms based on their facts and circumstances. Such information could be used to assess whether and how the proposed amendments should be extended or made permanent.

The proposed amendments' scope is limited to a part of the gig economy. We could have proposed amendments that apply to all gig economy issuers and corresponding workers. Such an alternative would have allowed additional gig economy companies, for example online platforms that facilitate the sale of goods, to compensate their platform workers with securities. Under such alternative, a broader set of gig economy companies would be able to issue securities as compensation to platform workers, with the expected benefits as described above for gig economy companies with platform workers who provide services. The different nature of platform workers as compared to traditional employees introduces some uncertainty as to the effects of the proposed amendments, as discussed above. Thus, proposing the amendments with an expanded scope would likely carry increased uncertainty as to the amendments' economic impact.

Further, we could have proposed different limits, including no limits, on the amount of compensatory securities that may be offered to individual platform workers. The proposed rule would limit equity-based compensation to 15 percent of the total compensation provided on a 12-month basis and no more than $75,000 over a 36-month period. The proposed limits could have been higher or lower, or could apply to longer or shorter periods, allowing affected issuers to include different amounts of securities in compensation

[140] We expect that platform providers would incur legal costs to create the equity-based compensation contract. We do not expect plan administration costs to be material, however, as it is our understanding that most plans are not tax-qualified plans and therefore are not required to adhere to ERISA requirements, which can be costly.

arrangements. We are unable to evaluate with precision whether a higher or lower cap or a longer or shorter period would be preferable in comparison to the proposed amendments' requirements, due mostly to the lack of data and also due to uncertainty as to how affected issuers may use the new form of compensation available to them. In general, allowing for greater amounts of equity-based compensation would provide companies with additional flexibility to structure compensation arrangements that might provide stronger incentives, a potentially increased ability to compete for talent, and more flexibility in terms of internal capital-allocation options. Going further, we could have proposed no individual limit on the amount of compensatory securities that may be offered to individual platform workers. However, as discussed above, due in part to the nature of equity-based compensation and in part due to the characteristics of platform workers, equity-based compensation may be a more costly way to compensate and provide incentives. Accordingly, it is unclear to what extent issuers would take advantage of the ability to issue greater amounts of securities-based compensation. Limiting issuers to lower amounts of securities-based compensation, on the other hand, may not provide adequate flexibility to affected issuers to incorporate equity-based compensation into compensation arrangements, thus limiting the potential benefits of the proposed amendments.

The proposed changes to Rule 701 would require the issuer to take reasonable steps to prohibit the transferability of securities issued to platform workers pursuant to the exemption, except for transfers to the issuer or by operation of law, while the proposed changes to Form S–8 would not include such a requirement. As discussed above, the transferability restriction is likely to affect the perceived value of compensatory securities offered pursuant to revised Rule 701 and as a consequence weaken the magnitude of expected benefits from the proposed amendments to Rule 701. We could have proposed an extended holding period in lieu of an outright restriction on transfer, or eliminate the transfer restrictions altogether. Eliminating the transfer restriction would provide issuers issuing shares pursuant to Rule 701 and registrants registering the issuance of shares on Form S–8 with the same expected benefits in terms of their ability to attract and retain platform workers. Introducing a defined holding period would provide some certainty as to when these securities become transferable and potentially increase their value for platform workers. However, doing so could increase the risk of an informal market developing for such securities, which given the opaque information environment of non-reporting issuers, could lead to adverse consequences for platform workers and other investors.

Securities offered to platform workers under the proposed amendment to Rule 701 would be aggregated with securities offered to employees under the current Rule 701 exemption in order to determine whether the issuer is required to deliver certain disclosure under Rule 701(e), and whether the overall cap on compensatory securities offerings has been met under Rule 701(d). Alternatively, we could have proposed a separate cap for compensatory securities offered to platform workers. Such alternative would increase the amount of securities that could be issued to platform workers for issuers with a mix of traditional employees and platform workers, leading to potentially greater benefits for these issuers. However, it is possible that such an alternative could adversely affect issuers that employ traditional workers as compared to issuers that employ both traditional and platform workers.

The proposed amendments to Rule 12g5–1 would extend the exclusion from the definition of securities ''held of record,'' and corresponding safe harbor, to securities held by platform workers who receive them pursuant to a compensation plan under the proposed amendments to Rule 701. Absent such proposed amendments, platform workers holding compensatory securities of non-reporting issuers would be considered holders of record. We believe that this would weaken the expected economic benefits from the proposed amendments to Rule 701. Under such an alternative, gig economy issuers may be disinclined to issue compensatory securities to their platform workers to avoid being subject to Exchange Act reporting requirements and the associated compliance costs. The proposed amendments to Rule 12g5–1 are not temporary. We could have proposed these amendments on a five-year temporary basis. Such alternative would result in platform workers holding compensatory securities becoming holders of record at the end of the five-year period if the exemption were not extended. We believe that under such alternative, gig economy issuers would be disinclined to issue compensatory securities to their platform workers to avoid being subject to Exchange Act reporting requirements and the associated compliance costs, at the expiration of the five-year period.

Request for Comment

We request comment on all aspects of our economic analysis, including the potential costs and benefits of the proposed amendments and alternatives thereto, and whether the proposed amendments, if adopted, would promote efficiency, competition, and capital formation or have an impact or burden on competition. Commenters are requested to provide empirical data, estimation methodologies, and other factual support for their views, in particular, on costs and benefits estimates.

In particular, we seek comment with respect to the following questions: Are there any costs and benefits that are not identified or are misidentified in the above analysis? Are there any effects on efficiency, competition, and capital formation that are not identified or are misidentified in the above analysis? Should we consider any of the alternative approaches outlined above instead of the proposed rules? Which approach and why? Are there any other alternative approaches that we should consider? If so, what are they and what would be the associated costs or benefits of these alternative approaches?

V. Paperwork Reduction Act

A. Summary of the Collection of Information

Certain provisions of our rules and forms that would be affected by the proposed amendments contain ''collection of information'' requirements within the meaning of the Paperwork Reduction Act of 1995 (''PRA'').[141] The Commission is submitting the proposal to the Office of Management and Budget (''OMB'') for review in accordance with the PRA.[142] The hours and costs associated with preparing and filing the forms and reports constitute reporting and cost burdens imposed by each collection of information. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information requirement unless it displays a currently valid OMB control number. Compliance with the information collections is mandatory. Responses to the information collections are not kept confidential and there is no mandatory retention period for the

[141] *See* 44 U.S.C. 3501 *et seq.*

[142] 44 U.S.C. 3507(d) and 5 CFR 1320.11.

information disclosed. The titles for the affected collections of information are:

- ''Form S–8'' (OMB Control No. 3235–0066); and
- ''Rule 701'' (OMB Control No. 3235–0522).

We adopted Form S–8 and Rule 701 pursuant to the Securities Act. Form S–8 sets forth the disclosure requirements for a registration statement for securities to be offered by a registrant under an employee benefit plan to its employees, or employees of a subsidiary or parent company, to help such investors make informed investment decisions. Rule 701 provides an exemption from registration for offers and sales of securities pursuant to certain compensatory benefit plans and contracts relating to compensation. Issuers conducting compensatory benefit plan offerings in excess of $10 million in reliance on Rule 701 during any consecutive 12-month period are required to provide plan participants with certain disclosures, including financial statement disclosures.[143] This disclosure constitutes a collection of information. A description of the proposed rule amendments, including the need for the information and its proposed use, as well as a description of the likely respondents, can be found in Section II above, and a discussion of the economic effects of the proposed amendments can be found in Section IV above.

B. Summary of the Proposed Amendments' Effects on the Collections of Information

The following table summarizes the estimated effects of the proposed amendments on the paperwork burdens associated with the affected collections of information.

PRA TABLE 1—ESTIMATED PAPERWORK BURDEN EFFECTS OF THE PROPOSED AMENDMENTS

Collection of information	Proposed amendment	Expected estimated PRA effect of proposed amendment	Current number of average annual responses	Estimated increase in number of average annual respondents [1]
Form S–8	• Would temporarily expand the scope of Form S–8 to include issuances to a registrant's platform workers in addition to its employees.	• Expected to increase the average annual number of Form S–8s filed during the temporary 4-year period.	• 2,140	• 17
	• Issuers would be required to furnish certain information every six months.	• Expected to increase PRA burden by 2 hours per affected respondent annually (*i.e.,* 1 hour for each semi-annual response).	• 0	• 17
Rule 701	• Would temporarily expand the scope of Rule 701 to exempt issuances to an issuer's platform workers in addition to its employees.	• Expected to increase average annual number of issuers required to provide Rule 701(e) disclosure because offers and sales to platform workers would be integrated with offers and sales to employees for purpose of determining whether an issuer has exceeded the $10 million threshold under Rule 701(e).	• 800	• 6
	• Issuers would be required to furnish certain information every six months.	• Expected to increase PRA burden by 3 hours per affected respondent annually (*i.e.,* 1.5 hours for each semi-annual response) [2].	• 0	• 105

[1] These estimates are based on the Farrell study, which identified 106 companies making payments to online platform workers providing services during 2012–2018. *See supra* Section IV.A, note 119 and accompanying text. The staff updated this study's findings using an assumed growth rate of 15 percent for such companies in 2019, which yielded an estimate of 122 companies making payments to platform workers as of calendar year-end 2019. Upon a review of Commission filings, the staff estimated that 17 of those companies are public, and 105 private. The staff further estimated that 5 percent of those private companies (six companies) would likely exceed the $10,000,000 threshold for aggregate annual securities offerings to its employees and platform workers and would be required to provide the disclosure pursuant to Rule 701(e). In making this estimate, the staff relied on the PRA estimates in Release No. 33–10520, which increased the Rule 701(e) disclosure threshold from $5,000,000 to $10,000,000.

[2] We estimate a greater increase in the PRA burden for Rule 701(h)'s furnished disclosure provision because it would solicit more information compared to the similar proposed provision for Form S–8.

C. Incremental and Aggregate Burden and Cost Estimates for the Proposed Amendments

Below we estimate the incremental and aggregate increase in paperwork burden as a result of the proposed amendments. These estimates represent the average burden for all issuers, both large and small. In deriving our estimates, we recognize that the burdens will likely vary among individual issuers based on a number of factors, including the nature of their business. For purposes of the PRA, the burden is to be allocated between internal burden hours and outside professional costs. The table below sets forth the percentage estimates we typically use for the burden allocation for each affected collection of information. We also estimate that the average cost of retaining outside professionals is $400 per hour.[144]

[143] *See* 17 CFR 230.701(e).

[144] We recognize that the costs of retaining outside professionals may vary depending on the nature of the professional services, but for purposes of this PRA analysis, we estimate that such costs would be an average of $400 per hour. This estimate is based on consultations with several registrants, law firms, and other persons who regularly assist registrants in preparing and filing reports with the Commission.

PRA TABLE 2—STANDARD ESTIMATED BURDEN ALLOCATION FOR SPECIFIED COLLECTIONS OF INFORMATION

Collection of information	Internal (%)	Outside professionals (%)
Form S–8	50	50
Rule 701	25	75

We estimate that the proposed amendments would change both the frequency of responses to, and the burden per response of, the existing collections of information. The burden increase estimates were calculated by multiplying the estimated increased number of responses by the increased estimated average amount of time it would take to prepare and review the disclosure required under the affected collection of information. The table below illustrates the incremental change to the annual compliance burden of the affected collection of information, in hours and in costs.

PRA TABLE 3—CALCULATION OF THE INCREMENTAL CHANGE IN BURDEN ESTIMATES OF CURRENT RESPONSES RESULTING FROM THE PROPOSED AMENDMENTS

Collection of information	Number of estimated affected respondents (A)	Burden hour annual increase per affected respondent (B)	Increase in burden hours for affected respondents (C) = (A) × (B)	Increase in internal burden hours for affected respondents (D) = (C) × 0.5 or 0.25	Increase in professional hours for affected respondents (E) = (C) × 0.5 or 0.75	Increase in professional costs for affected respondents (F) = (E) × $400
S–8 (including furnished disclosure)	17	[1] 29	493	246.5	246.5	$98,600
Rule 701(e) + Rule 701(h) furnished disclosure	6	[2] 5	30	7.5	22.5	9,000
Rule 701 (only furnished disclosure)	99	3	297	74.25	222.75	89,100
Rule 701 (total)	105		327	81.75	245.25	98,100

[1] Based on the current OMB inventory of 27 annual burden hours per response + 1 burden hour for each semi-annual required furnished disclosure (2 additional annual burden hours) = an increase of 29 burden hours per response.
[2] Based on the current OMB inventory of 2 annual burden hours per response + 1.5 burden hours for each semi- annual required furnished disclosure (3 additional annual burden hours) = an increase of 5 burden hours per response.

The table below illustrates the program change expected to result from the proposed rule amendments together with the total requested change in reporting burden and costs.

PRA TABLE 4—REQUESTED PAPERWORK BURDEN UNDER THE PROPOSED AMENDMENTS

Collection of information	Current burden			Program change			Requested change in burden		
	Current annual responses (A)	Current burden Hours (B)	Current cost burden (C)	Number of affected responses (D)	Change in issuer hours (E)	Change in professional costs (F)	Requested annual responses (G)	Requested burden hours [1] (H) = (B) + (E)	Cost burden (I) = (C) + (F)
S–8	2,140	28,890	$11,556,000	17	246.5	$98,600	2,157	29,137	$11,654,600
Rule 701	800	400	$480,000	105	81.75	$98,100	905	[2] 482	$578,100

[1] Rounded to nearest whole number.
[2] Thus, the estimated change in internal burden would result in an annual internal burden per response of 2.13 hours, which is a slight increase in the current annual internal burden of 2 hours. 482/.25 = 1,928; 1,928/905 = 2.13.

D. Request for Comment

We request comment in order to:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information would have practical utility;
- Evaluate the accuracy of our estimate of the burden of the proposed collection of information;
- Determine whether there are ways to enhance the quality, utility, and clarity of the information to be collected;
- Evaluate whether there are ways to minimize the burden of the collection of information on those who are to respond, including through the use of automated collection techniques or other forms of information technology; and
- Evaluate whether the proposed amendments would have any effects on any other collections of information not previously identified in this section.[145]

Any member of the public may direct to us any comments about the accuracy of these burden estimates and any suggestions for reducing these burdens. Persons submitting comments on the collection of information requirements should direct the comments to the Office of Management and Budget,

[145] We request comment pursuant to 44 U.S.C. 3506(c)(2)(B).

Attention: Desk Officer for the Securities and Exchange Commission, Office of Information and Regulatory Affairs, Washington, DC 20503, and should send a copy to Vanessa A. Countryman, Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090, with reference to File No. S7–19–20. Requests for materials submitted to OMB by the Commission with regard to these collections of information should be in writing, refer to File No. S7–19–20, and be submitted to the Securities and Exchange Commission, Office of FOIA Services, 100 F Street NE, Washington, DC 20549–2736. OMB is required to make a decision concerning the collection of information between 30 and 60 days after publication of this release. Consequently, a comment to OMB is best assured of having its full effect if OMB receives it within 30 days of publication.

VI. Initial Regulatory Flexibility Act Analysis

This Initial Regulatory Flexibility Act Analysis (''IRFA'') has been prepared, and made available for public comment, in accordance with the Regulatory Flexibility Act (''RFA'').[146] It relates to the proposed amendments to Securities Act Rule 701 and Form S–8 to permit the offer and sale of securities to internet platform workers, subject to specified conditions, for a temporary, five-year period. The Commission also is proposing to amend Exchange Act Rule 12g5–1 to exclude from the definition of ''held of record'' securities held by platform workers who received them pursuant to a compensation plan under proposed Rule 701(h) and to provide a safe harbor for issuers in connection with such exclusion. Neither the proposed exclusion nor the corresponding safe harbor would be temporary. As required by the RFA, this IRFA describes the impact of these proposed amendments on small entities.[147]

A. Reasons for, and Objectives of, the Proposed Action

The proposed amendments would expand the scope of Rule 701 and Form S–8 to address recent changes in the workforce caused by the rise of the ''gig economy'' by permitting the issuance of securities to an issuer's platform workers, in addition to its employees, for compensatory purposes. The proposed amendments would include conditions designed to limit the possibility of the changes to Rule 701 and Form S–8 resulting in offers and sales for capital-raising purposes. The proposed amendments to Rule 701 and Form S–8 would be temporary to enable the Commission to assess whether issuances of securities to platform workers are being made for legitimate compensatory purposes, and not for capital-raising purposes, and whether such issuances have the expected beneficial effects for issuers in the ''gig economy'' and their investors.

The proposed amendments to Exchange Act Rule 12g5–1 would extend the exclusion from the definition of ''held of record'' and safe harbor, for purposes of Section 12(g), which currently applies to securities held by persons who received them pursuant to an employee compensation plan, to securities held by platform workers pursuant to a compensation plan under proposed Rule 701(h). The proposed amendments to Rule 12g5–1, which would not be temporary, are intended to remove a potential disincentive to the issuance of securities as compensation to platform workers and to avoid favoring issuers that do not have platform workers over issuers that have them. The reasons for, and objectives of, all of the proposed amendments are discussed in more detail in Sections II.A. through II.F., above.

B. Legal Basis

We are proposing the amendments contained in this release under the authority set forth in Sections 7, 10, and 19(a) of the Securities Act, as amended, and Sections 3(b), 12, 13, 15, 23(a), and 36 of the Exchange Act, as amended.

C. Small Entities Subject to the Proposed Rules

The proposed changes would affect some issuers that are small entities. The RFA defines ''small entity'' to mean ''small business,'' ''small organization,'' or ''small governmental jurisdiction.'' [148] For purposes of the RFA, under 17 CFR 240.0–10(a), an issuer, other than an investment company, is a ''small business'' or ''small organization'' if it had total assets of $5 million or less on the last day of its most recent fiscal year and, under 17 CFR 230.157, is also engaged or proposing to engage in an offering of securities that does not exceed $5 million.

The proposed amendments would apply only to issuers whose platform workers provide services; they would not apply to issuers whose platform workers are providing goods. We estimate that there are only a limited number of companies with platforms providing services that would be affected by the proposed rules.[149] Although it is possible that the proposed amendment to Form S–8 could cause a small entity to file a Form S–8 for the issuance of securities to its platform workers, based upon staff review of Commission filings during 2018–2019, and due to the resulting burden and expense, we do not believe that this outcome is likely.[150] There is, however, a lack of information concerning the assets of potentially affected private companies, and as such, it is difficult to estimate with certainty the number of private issuers that qualify as small entities that would be eligible to rely on the proposed amendments to Rule 701 and Rule 12g5–1 or that would choose to become public companies and then rely on the proposed amendments to Form S–8. We therefore are soliciting comment on the number of small entities that would be affected by the proposed amendments.

D. Reporting, Recordkeeping, and Other Compliance Requirements

As noted above, the purpose of the proposed amendments is to permit the issuance of securities for compensatory purposes under Rule 701 and Form S–8 to a new category of worker, the ''platform worker.'' By expanding the scope of Rule 701 to include issuances of unregistered securities to a non-reporting issuer's platform workers, the proposed amendments likely would result in cost savings for such an issuer, which would otherwise have to incur the costs of registering the securities, absent another exemption from registration, and thereby become an Exchange Act reporting issuer. In addition, by extending the current exclusion and safe harbor under Exchange Act Rule 12g5–1 to securities held by platform workers who received them pursuant to a compensation plan under the proposed Rule 701 amendment, a non-reporting issuer would benefit by not being required to count those platform workers as record holders for the purpose of determining its Section 12(g) registration obligations.

We believe that the proposed amendments to Rule 701 and Rule 12g5–1 could be of particular benefit to small entities, which may be financially constrained, by enabling them to issue securities as compensation, instead of

[146] 5 U.S.C. 601 *et seq.*

[147] 5 U.S.C. 603(a).

[148] 5 U.S.C. 601(6).

[149] Based upon a review of Commission filings and other relevant data, the staff estimated that the proposed rules would affect 122 companies, 17 of which are public and 105 of which are private. *See supra* Section V.B.

[150] None of the 17 Forms S–8 filed by issuers with service-providing platforms were small entities.

cash, within the proposed limits. This could help small entities attract potential workers and enhance their competitive position.

In contrast, we do not believe that the compliance costs of the proposed Rule 701 amendment would be significant. The most significant compliance burden under current Rule 701 is the financial disclosure requirement under Rule 701(e) for issuers that exceed the $10 million threshold during a 12-month period. Due to the $10 million threshold, this requirement would not apply to small entities.[151] Moreover, although under the proposed rules, an issuer offering securities to its platform workers pursuant to the amended Rule 701 would be required to furnish certain information every six months, we do not expect the resulting compliance burden to be significant.[152]

The proposed amendment to Form S–8 would benefit public companies with platforms offering services by permitting them to issue registered securities to their platform workers in addition to their employees, which could enhance their competitive position vis-à-vis companies that only have employees. The proposed amendments likely would result in the filing of additional Form S–8 registration statements to cover offers and sales to such workers. Those registrants would incur the compliance burden and costs typically associated with preparing and filing Form S–8. In addition, because we are proposing a requirement to furnish information every six months for Form S–8 issuers, similar to the proposal for Rule 701 issuers, those registrants would incur the compliance burden and costs associated with furnishing the required information, which we similarly estimate would not be significant.[153] Although it is possible that the proposed amendment to Form S–8 could cause a small entity to file a Form S–8 for the issuance of securities to its platform workers, based upon staff review of Commission filings during 2018–2019, and due to the resulting burden and expense, we do not believe that this outcome is likely.[154] Nevertheless, we are soliciting comment on the costs and benefits of the proposed amendments for small entities.

Compliance with the proposed amendments would require the use of professional skills, including legal skills, both to help ensure that an issuer has met the proposed conditions under Rule 701 designed to prevent the issuance of securities for a capital-raising purpose, and to enable a registrant to meet the requirements of Form S–8. We discuss the economic impact, including the estimated compliance burdens and costs, of the proposed amendments to all issuers, including small entities, in greater detail in Sections IV and V above.

E. Duplicative, Overlapping, or Conflicting Federal Rules

We believe that the proposed amendments would not duplicate, overlap, or conflict with other Federal rules.

F. Significant Alternatives

The RFA directs us to consider alternatives that would accomplish our stated objectives, while minimizing any significant economic impact on small entities. In connection with the proposed amendments, we considered the following alternatives:

- Establishing different compliance or reporting requirements that take into account the resources available to small entities;
- Clarifying, consolidating, or simplifying compliance and reporting requirements under the rules for small entities;
- Using performance rather than design standards; and
- Exempting small entities from all or part of the requirements.

The proposed amendments to Rule 701 and Form S–8 would permit the issuance of securities to platform workers subject to specified conditions. Although an issuer, including a small entity, would incur some compliance costs to ensure that it has met those conditions, issuers proceeding under the proposed amendment to Rule 701 would largely benefit due to the savings derived from not having to register the securities. In addition, we expect the increase in Form S–8 compliance costs to be limited because, although the proposed amendment to Form S–8 would likely result in more registration statements on that form being filed, we believe that the proposed amendment would only slightly increase the actual burden of preparing and filing each Form S–8. We also believe that it is unlikely that the proposed amendment would result in a small entity filing a Form S–8. We are not proposing an amendment to reduce the costs of preparing and filing a Form S–8 because we believe the requirements that result in those costs are necessary to protect investors. We also are not proposing to exempt small entities from the costs associated with the proposed requirement to furnish information on a semi-annual basis because we believe that requirement is necessary to assess fully the impact of the temporary rules. Accordingly, we do not believe it is necessary to establish different compliance or reporting requirements for small entities or to exempt small entities from all or part of the proposed amendments.

Finally, with respect to using performance rather than design standards, the proposed amendments generally contain elements similar to performance standards. For example, the proposed definition of platform worker would include the condition that the issuer operates the platform for the provision of services pursuant to a written contract or agreement between the issuer and the platform worker under which the issuer controls the use of the platform. Issuer control would be demonstrated by the issuer being able to establish the amount of the fees charged for using the platform and the terms and conditions by which the platform worker receives payment for the services provided through the platform. In addition, the issuer must have the authority to accept and remove the internet platform workers providing services through the platform. However, the proposed amendments would not require that a specific fee be charged or that a specific payment mechanism be utilized. The proposed amendments would also not limit what services an issuer could facilitate through its platform or how participating workers could provide the services.

[151] *See* 17 CFR 230.701(d), which limits the aggregate sales price or amount of securities sold under Rule 701 during any consecutive 12-month period to the greatest of $1,000,000, 15 percent of the total assets of the issuer, or 15 percent of the outstanding amount of the class of securities being offered and sold in reliance on Rule 701. The purpose of the Rule 701(d) caps is to help curb non-compensatory sales in reliance on the rule. For example, applying the asset cap, a small entity would only be able to offer 15 percent of $5,000,000, or $750,000 during a consecutive 12-month period. Although in a companion rulemaking, the Commission is proposing to increase the asset limitation to 25 percent, under this increased limit, if adopted, a small entity would still be able to offer only 25 percent of $5,000,000, or $1,250,000. While the Commission is also proposing to raise the dollar cap, the new cap would only increase to $2,000,000. *See* Release No. 33–10891 at Section II.B.

[152] We estimate that the compliance burden associated with furnishing the required information under the proposed Rule 701 amendment would be 1.5 hours for each semi-annual disclosure per issuer, or a total of 3 hours per issuer on an annual basis. *See supra* Section V.B.

[153] We estimate that the compliance burden associated with furnishing the required information under the proposed Form S–8 amendment would be 1.0 hours for each semi-annual disclosure per issuer, or a total of 2 hours per issuer on an annual basis. *See supra* Section V.B.

[154] *See supra* note 150.

Request for Comment

We encourage the submission of comments with respect to any aspect of this IRFA. In particular, we request comments regarding:

- How the proposed rule and form amendments can achieve their objective while lowering the burden on small entities;
- The number of small entity companies that may be affected by the proposed rule and form amendments;
- The existence or nature of the potential effects of the proposed amendments on small entity companies discussed in the analysis;
- How to quantify the effects of the proposed amendments; and
- Whether there are any federal rules that duplicate, overlap, or conflict with the proposed amendments.

Commenters are asked to describe the nature of any effect and provide empirical data supporting the extent of that effect. Comments will be considered in the preparation of the Final Regulatory Flexibility Analysis, if the proposed rules are adopted, and will be placed in the same public file as comments on the proposed rules themselves.

VII. Small Business Regulatory Enforcement Fairness Act

For purposes of the Small Business Regulatory Enforcement Fairness Act of 1996 (''SBREFA''),[155] the Commission must advise OMB as to whether the proposed amendments constitute a ''major'' rule. Under SBREFA, a rule is considered ''major'' where, if adopted, it results in or is likely to result in:

- An annual effect on the U.S. economy of $100 million or more;
- A major increase in costs or prices for consumers or individual industries; or
- Significant adverse effects on competition, investment, or innovation.

We request comment on whether our proposal would be a ''major rule'' for purposes of SBREFA. In particular, we request comment and empirical data on:

- The potential effect on the U.S. economy on an annual basis;
- Any potential increase in costs or prices for consumers or individual industries; and
- Any potential effect on competition, investment, or innovation.

VIII. Statutory Authority

The amendments contained in this release are being proposed under the authority set forth in Sections 7, 10, and 19(a) of the Securities Act, as amended, and Sections 3(b), 12, 13, 15, 23(a), and 36 of the Exchange Act.

Reporting and recordkeeping requirements, Securities.

Text of the Proposed Amendments

For the reasons set out in the preamble, the Commission is proposing to amend title 17, chapter II of the Code of Federal Regulations as follows:

PART 230—GENERAL RULES AND REGULATIONS, SECURITIES ACT OF 1933

■ 1. The authority citation for part 230 continues to read, in part, as follows:

Authority: 15 U.S.C. 77b, 77b note, 77c, 77d, 77f, 77g, 77h, 77j, 77r, 77s, 77z–3, 77sss, 78c, 78d, 78j, 78*l*, 78m, 78n, 78o, 78o–7 note, 78t, 78w, 78*ll*(d), 78mm, 80a–8, 80a–24, 80a–28, 80a29, 80a–30, and 80a–37, and Pub. L. 112–106, sec. 201(a), sec. 401, 126 Stat. 313 (2012), unless otherwise noted.

* * * * *

Sections 230.400 to 230.499 issued under secs. 6, 8, 10, 19, 48 Stat. 78, 79, 81, and 85, as amended (15 U.S.C. 77f, 77h, 77j, 77s).

* * * * *

■ 2. Amend § 230.428 by adding paragraph (d) to read as follows:

§ 230.428 Documents constituting a section 10(a) prospectus for Form S–8 registration statement; requirements relating to offerings of securities registered on Form S–8.

* * * * *

(d)(1) Where securities are to be offered to platform workers pursuant to a registration statement on Form S–8 (§ 239.16b(c)), the documents and other information identified in paragraph (a) of this section shall, taken together, constitute a Section 10(a) prospectus for offerings to platform workers pursuant to a written compensation plan, contract, or agreement. The document retention requirements in paragraph (a)(2) of this section and the delivery, updating, and related procedural requirements in paragraph (b) of this section shall also apply to such offerings to platform workers.

(2) This paragraph (d) will expire on the same date that 17 CFR 239.16b(c) will expire pursuant to 17 CFR 239.16b(c)(4).

■ 3. Amend § 230.701 by adding Note 1 to paragraph (c) and adding paragraph (h) to read as follows:

§ 230.701 Exemption for offers and sales of securities pursuant to certain compensatory benefit plans and contracts relating to compensation.

* * * * *

(c) * * *

Note 1 to paragraph (c): Refer to § 230.701(h) for the exemption under § 230.701 applicable to offers and sales of securities to platform workers. *Platform worker* is defined in § 230.701(h)(2).

* * * * *

(h)(1) *Transactions with platform workers.* (i) In addition to the transactions exempted by paragraph (c) of this section, this section exempts offers and sales of securities (including plan interests and guarantees pursuant to paragraph (d)(2)(ii) of this section) under a written compensatory benefit plan (or written compensation contract) established by the issuer, its parents, its subsidiaries, or subsidiaries of the issuer's parent, for the participation of platform workers as defined in paragraph (h)(2) of this section. As used in this section, the term ''platform worker'' includes former platform workers, executors, administrators, or beneficiaries of the estates of deceased platform workers, guardians or members of a committee for incompetent former platform workers, or similar persons duly authorized by law to administer the estate or assets of former platform workers. This section exempts offers and sales to former platform workers only if such workers met the conditions of paragraph (h) of this section at the time the securities were offered or during a period of service ending within 12 months preceding the termination of service for which the securities were issued. This section also exempts offers and sales to former platform workers of an acquired entity of securities issued in substitution or exchange for securities issued to such workers by the acquired entity on a compensatory basis while such persons were providing services to the acquired entity.

(ii) The exemption for offers and sales of securities to platform workers under this section is temporary and will expire pursuant to paragraph (h)(6) of this section, except that, following the expiration date specified in paragraph (h)(6) of this section, an issuer may continue to rely on the exemption in this paragraph (h) for the sale of securities underlying options, warrants, or rights previously issued in an exempt transaction pursuant to this paragraph (h).

(2) *Definition of platform worker.* A platform worker is a natural person or an entity specified in paragraph (h)(2)(iii) of this section, who is unaffiliated with the issuer and meets the following conditions:

(i) The worker provides *bona fide* services to the issuer (or the issuer's parents, the issuer's subsidiaries or subsidiaries of the issuer's parent) or to third-party end-users, and such services

[155] 5 U.S.C. 801 *et seq.*

benefit the issuer. Selling or transferring permanent ownership of discrete, tangible goods would not constitute services for purposes of this section;

(ii) The services are provided pursuant to a written contract or agreement between the issuer and the worker and are provided through an internet-based platform or other widespread, technology-based marketplace platform or system that the issuer operates and controls, as demonstrated by the following:

(A) The issuer provides access to the platform and establishes the principal terms of service for using the platform;

(B) The issuer establishes the terms and conditions by which the platform worker receives payment for the services provided through the platform; and

(C) The issuer can accept and remove the platform worker.

(iii) A platform worker may be an entity if:

(A) Substantially all of its activities involve the performance of *bona fide* services that meet the requirements of paragraphs (h)(2) and (h)(3) of this section; and

(B) The ownership interest of the entity is wholly and directly held by the natural person performing the services pursuant to paragraph (h) of this section through the entity.

(3) *Additional requirements for issuances to platform workers.* Offers and sales of securities to platform workers are eligible for an exemption under this section if the following, additional requirements are met:

(i) The issuance is pursuant to a compensatory arrangement, as evidenced by a written compensation plan, contract, or agreement, and is not for services that are in connection with the offer or sale of securities in a capital-raising transaction, or services that directly or indirectly promote or maintain a market for the issuer's securities;

(ii) No more than 15 percent of the value of compensation received by a platform worker from the issuer for services provided during a consecutive 12-month period, and no more than $75,000 of the value of compensation received by the platform worker from the issuer during a consecutive 36-month period, shall consist of securities, with such value determined at the time the securities are granted;

(iii) The amount and terms of any securities issued to a platform worker may not be subject to individual bargaining or the worker's ability to elect between payment in securities or cash; and

(iv) The issuer must take reasonable steps to prohibit the transfer of the securities issued to a platform worker pursuant to this exemption, other than a transfer to the issuer or by operation of law, except that 90 days after the issuer becomes subject to the reporting requirements of Section 13 or 15(d) of the Exchange Act (15 U.S.C. 78m or 78o(d)), securities issued under this section may be resold pursuant to paragraph (g)(3) of this section.

(4) *Requirement to furnish certain information.* An issuer using the exemption under this section for the issuance of securities to platform workers is required to furnish the following information to the Commission at six-month intervals commencing six months after the first such issuance:

(i) The criteria used to determine eligibility for securities awards to platform workers, whether they are the same as for other compensatory transactions and whether those criteria, including revisions to the criteria, are communicated to workers in advance as an incentive;

(ii) The type and terms of securities issued to platform workers during each six-month interval, and whether they are the same as for other compensatory transactions by the issuer during that interval;

(iii) The reasonable steps taken to prohibit the transfer of the securities sold pursuant to this paragraph (h);

(iv) The percentage of overall outstanding securities that the amount issued cumulatively under this paragraph (h) represents;

(v) During each six-month interval, the number of platform workers, the number of non-platform workers, the number of platform workers receiving securities pursuant to this paragraph (h), and the number of non-platform workers who received securities pursuant to § 230.701; and

(vi) The number and dollar amount of securities issued to platform workers in each six-month interval, both in absolute amounts and as a percentage of the issuer's total exempt sales under § 230.701.

Instruction to § 230.701(h)(4). An issuer should furnish the required information specified in this paragraph in the manner designated by the Division of Corporation Finance for this purpose.

(5) *Request for confidential treatment.* An issuer may request confidential treatment under § 200.83 for information furnished pursuant to paragraph (h)(3) of this section. Written requests for confidential treatment under § 200.83 relating to the furnished materials may be submitted either in paper format or electronically.

(6) *Expiration of temporary exemptive rule.* Except as provided in paragraph (h)(1)(ii) of this section, the exemption for the issuance of securities to platform workers pursuant to this paragraph (h) applies only to offers or sales of securities occurring prior to five years following the date of the section's effectiveness.

(7) This paragraph (h) will expire five years from the date of effectiveness of § 230.701(h).

PART 239—FORMS PRESCRIBED UNDER THE SECURITIES ACT OF 1933

■ 4. The general authority citation for part 239 continues to read as follows:

Authority: 15 U.S.C. 77c, 77f, 77g, 77h, 77j, 77s, 77z–2, 77z–3, 77sss, 78c, 78*l,* 78m, 78n, 78o(d), 78o–7 note, 78u–5, 78w(a), 78*ll,* 78mm, 80a–2(a), 80a–3, 80a–8, 80a–9, 80a–10, 80a–13, 80a–24, 80a–26, 80a–29, 80a–30, and 80a–37; and sec. 107, Pub. L. 112–106, 126 Stat. 312, unless otherwise noted.

* * * * *

■ 5. Amend § 239.16b by adding ''or other compensatory plans'' at the end of the title and adding paragraphs (a)(3) and (c) to read as follows:

§ 239.16b Form S–8, for registration under the Securities Act of 1933 of securities to be offered to employees pursuant to employee benefit plans or other compensatory plans.

(a) * * *

(3) Securities of the registrant to be offered to marketplace platform workers pursuant to § 239.16b(c).

* * * * *

(c) *Issuances to platform workers.* (1) A registrant may register on Form S–8 securities to be offered or sold to platform workers, as defined by § 230.701(h), for the temporary period set forth in § 239.16b(c)(4), only if:

(i) The issuance is pursuant to a compensatory arrangement, as evidenced by a written compensation plan, contract or agreement, and is not for services that are in connection with the offer or sale of securities in a capital-raising transaction or that directly or indirectly promote or maintain a market for the issuer's securities;

(ii) No more than 15 percent of the value of compensation received by a platform worker from the issuer for services provided during a consecutive 12-month period shall consist of securities, with such value determined at the time the securities are granted, with the remainder of compensation received by the platform worker from the issuer paid in cash, and no more than $75,000 of such compensation received from the issuer during a

consecutive 36-month period shall consist of securities, with such value determined at the time the securities are granted; and

(iii) The amount and terms of any securities issued to a platform worker may not be subject to individual bargaining or the worker's ability to elect between payment in securities or cash.

(2) A registrant using Form S–8 for the issuance of securities to platform workers is required to furnish the following information in the manner designated by the Division of Corporation Finance for this purpose at six-month intervals commencing six months after the first such issuance:

(i) The criteria used to determine eligibility for securities awards to platform workers, whether they are the same as the criteria for other compensatory transactions, and whether those criteria, including revisions to the criteria, are communicated to workers in advance as an incentive;

(ii) The type and terms of securities issued to platform workers during each six-month interval and whether they are the same as for other compensatory transactions by the registrant during that interval;

(iii) The percentage of overall outstanding securities that the amount issued cumulatively to platform workers under this section represents;

(iv) During each six-month interval, the number of platform workers, the number of non-platform workers, the number of platform workers receiving securities registered on Form S–8, and the number of non-platform workers who received securities registered on Form S–8;

(v) The number of platform workers, in an absolute amount and as a percentage of the total number of platform workers, employees, and other persons eligible to receive securities on Form S–8; and

(vi) The number and dollar amount of securities issued to platform workers, both in absolute amounts and as a percentage of the issuer's total sales on Form S–8 during each six-month interval.

(3) A registrant may request confidential treatment under § 200.83 for information furnished pursuant to this section. Written requests for confidential treatment under § 200.83 relating to the furnished materials may be submitted either in paper format or electronically.

(4) This paragraph (c) applies only to offers or issuances of securities occurring prior to five years from the date of the section's effectiveness.

(5) This paragraph (c) will expire five years from the date of effectiveness of § 239.16b(c).

■ 6. Amend Form S–8 (referenced in § 239.16b) by:

■ a. Redesignating paragraph (b) of General Instruction A.1. as paragraph (c);

■ b. Adding paragraph (b) of General Instruction A.1.;

■ c. Revising paragraph 1 of General Instruction G. (''Updating'');

■ d. Revising the Note immediately following the heading ''Part I—INFORMATION REQUIRED IN THE SECTION 10(a) PROSPECTUS;''

■ e. Revising Item 2 of Part I; and

■ f. Revising the ''Signatures'' section for ''the Plan'' by replacing the parenthetical ''or other persons who administer the employee benefit plan'' with ''or other persons who administer the plan'' in the first sentence.

The additions and revisions read as follows:

Note: The text of Form S–8 does not, and this amendment will not, appear in the Code of Federal Regulations.

United States Securities and Exchange Commission Washington, DC 20549

Form S–8 Registration Statement Under the Securities Act of 1933

* * * * *

General Instructions

A. Rule as to Use of Form S–8

1. * * *

(a) * * *

(b)(1) Securities of the registrant to be offered to platform workers pursuant to a written compensation plan, contract, or agreement. The term ''platform worker'' is defined by Rule 701(h)(2) (§ 230.701(h)(2)). As used in this form, the term ''plan'' includes a written compensation plan, contract, or agreement for the issuance of securities to platform workers.

(2) Form S–8 is available for the issuance of securities to platform workers only if, pursuant to § 239.16b(c):

(i) The issuance is pursuant to a compensatory arrangement, as evidenced by a written compensation plan, contract, or agreement, and is not for services that are in connection with the offer or sale of securities in a capital-raising transaction, or services that directly or indirectly promote or maintain a market for the issuer's securities;

(ii) No more than 15 percent of the value of compensation received by a platform worker from the issuer for services provided during a consecutive 12-month period shall consist of securities, with such value determined at the time the securities are granted, with the remainder of compensation received by the platform worker from the issuer paid in cash, and no more than $75,000 of such compensation received from the issuer during a consecutive 36-month period shall consist of securities, with such value determined at the time the securities are granted;

(iii) The amount and terms of any securities issued to a platform worker may not be subject to individual bargaining or the worker's ability to elect between payment in securities or cash; and

(iv) The offers or sales of securities occur prior to five years from the date of the effectiveness of § 239.16b(c)]. On that date, § 239.16b(c) will expire and will no longer be effective.

Note: The purpose of § 239.16b(c) is to permit the issuance of securities to platform workers for a compensatory purpose. This section is not available for plans or schemes to circumvent this purpose, such as to raise capital. This section also is not available to any transaction that is in technical compliance with § 239.16b(c) but is part of a plan or scheme to evade the compensatory purpose of this section.

(3) A registrant using Form S–8 for the issuance of securities to platform workers is required to furnish the information specified in § 239.16b(c)(3) in the manner designated by the Division of Corporation Finance for this purpose at six-month intervals commencing six months after the first issuance of securities to platform workers on this form.

Note: A registrant may request confidential treatment under § 200.83 for information furnished pursuant to § 239.16b(c)(3). Written requests for confidential treatment under § 200.83 relating to the furnished materials may be submitted either in paper format or electronically.

(4) The term ''platform worker'' includes:

(i) Former platform workers, only if such workers provided services pursuant to § 239.16b(c) of this chapter at the time the securities were offered or during a period of service ending within 12 months preceding the termination of service for which the securities were issued;

(ii) Former platform workers of an entity acquired by the issuer who may receive securities registered on this form in substitution or exchange for securities issued to them by the acquired entity on a compensatory basis

while such persons were providing services to the acquired entity; and

(iii) Executors, administrators, or beneficiaries of the estates of deceased platform workers, guardians or members of a committee for incompetent former platform workers, or similar persons duly authorized by law to administer the estate or assets of former platform workers.

(5) The inclusion of individuals described in paragraph (4) of General Instruction A.1.(b) in the term ''platform worker'' is only to permit registration on Form S–8 of the exercise of stock options issued to platform workers pursuant to a plan, and the subsequent sale of the securities, if these exercises and sales are permitted under the terms of the plan.

* * * * *

G. Updating

Updating of information constituting the Section 10(a) prospectus pursuant to Rule 428(a) (§ 230.428(a)) during the offering of the securities shall be accomplished as follows:

1. Plan information specified by Item 1 of Form S–8 required to be sent or given to employees or platform workers shall be updated as specified in Rule 428(b)(l) (§ 230.428(b)(l)) or Rule 428(d)(1) (§ 230.428(d)(1)). Such information need not be filed with the Commission.

* * * * *

Part I Information Required in the Section 10(a) Prospectus

Note: The document(s) containing the information specified in this Part I will be sent or given to employees or platform workers as specified by Rules 428(b)(1) and 428(d) (§§ 230.428(b)(1) and 428(d)). Such documents need not be filed with the Commission either as part of this registration statement or as prospectuses or prospectus supplements pursuant to Rule 424 (§ 230.424). These documents and the documents incorporated by reference in the registration statement pursuant to Item 3 of Part II of this Form, taken together, constitute a prospectus that meets the requirements of Section 10(a) of the Securities Act. *See* Rules 428(b)(1) and 428(d) (§§ 230.428(b)(1) and 428(d)).

* * * * *

Item 2. Registrant Information and Participant Plan Annual Information

The registrant shall provide a written statement to participants advising them of the availability without charge, upon written or oral request, of the documents incorporated by reference in Item 3 of Part II of the registration statement, and stating that these documents are incorporated by reference in the Section 10(a) prospectus. The statement also shall indicate the availability without charge, upon written or oral request, of other documents required to be delivered to employees pursuant to Rule 428(b) (§ 230.428(b)), and to platform workers pursuant to Rule 428(d). The statement shall include the address (giving title or department) and telephone number to which the request is to be directed.

* * * * *

PART 240—GENERAL RULES AND REGULATIONS, SECURITIES EXCHANGE ACT OF 1934

■ 7. The general authority citation for part 240 continues to read as follows:

Authority: 15 U.S.C. 77c, 77d, 77g, 77j, 77s, 77z–2, 77z–3, 77eee, 77ggg, 77nnn, 77sss, 77ttt, 78c, 78c–3, 78c–5, 78d, 78e, 78f, 78g, 78i, 78j, 78j–1, 78k, 78k–1, 78*l*, 78m, 78n, 78n–1, 78o, 78o–4, 78o–10, 78p, 78q, 78q–1, 78s, 78u–5, 78w, 78x, 78dd, 78*ll,* 78mm, 80a–20, 80a–23, 80a–29, 80a–37, 80b–3, 80b–4, 80b–11, and 7201 *et seq.,* and 8302; 7 U.S.C. 2(c)(2)(E); 12 U.S.C. 5221(e)(3); 18 U.S.C. 1350; Pub. L. 111–203, 939A, 124 Stat. 1376 (2010); and Pub. L. 112–106, secs. 503 and 602, 126 Stat. 326 (2012), unless otherwise noted.

* * * * *

■ 8. Amend § 240.12g5–1 by revising paragraph (a)(8) to read as follows:

§ 240.12g5–1 Definition of securities ''held of record''.

(a) * * *

(8)(i) For purposes of determining whether an issuer is required to register a class of equity securities with the Commission pursuant to Section 12(g)(1) of the Act (15 U.S.C. 78l(g)(1)), an issuer may exclude securities:

(A) Held by persons who received the securities pursuant to an employee compensation plan, or a compensation plan for platform workers pursuant to § 230.701(h) of this chapter, in transactions exempt from, or not subject to, the registration requirements of Section 5 of the Securities Act of 1933 (15 U.S.C. 77e); and

(B) Held by persons who received the securities in a transaction exempt from, or not subject to, the registration requirements of Section 5 of the Securities Act (15 U.S.C. 77e) from the issuer, a predecessor of the issuer, or an acquired company in substitution or exchange for excludable securities under paragraph (a)(8)(i)(A) of this section, as long as the persons were eligible to receive securities pursuant to § 230.701 of this chapter at the time the excludable securities were originally issued to them.

(ii) As a non-exclusive safe harbor under this paragraph (a)(8):

(A) An issuer may deem a person to have received the securities:

(*1*) Pursuant to an employee compensation plan if such plan and the person who received the securities pursuant to the plan met the plan and participant conditions of § 230.701(c) of this chapter; or

(*2*) Pursuant to a compensation plan for platform workers if such plan and the person who received the securities pursuant to the plan met the plan and participant conditions of § 230.701(h) of this chapter.

(B) An issuer may, solely for the purposes of Section 12(g) of the Act (15 U.S.C. 78l(g)(1)), deem the securities to have been issued in a transaction exempt from, or not subject to, the registration requirements of Section 5 of the Securities Act (15 U.S.C. 77e) if the issuer had a reasonable belief at the time of the issuance that the securities were issued in such a transaction.

Note 1 to paragraph (a)(8)(ii): Section 230.701(h) applies only to offers or sales of securities occurring prior to five years following the date of effectiveness of § 230.701(h). On that date, § 230.701(h) will expire and will no longer be effective.

* * * * *

By the Commission.

Dated: November 24, 2020.

Vanessa A. Countryman,

Secretary.

SOCIAL SECURITY ADMINISTRATION

20 CFR Part 401

[Docket No. SSA–2018–0012]

RIN 0960–AI31

Anti-Fraud System

AGENCY: Social Security Administration.

ACTION: Notice of proposed rulemaking.

SUMMARY: We separately published, in today's **Federal Register**, notice of a modified system of records entitled Anti-Fraud (AF) System. Because this system will contain some investigatory material compiled for law enforcement purposes, this proposed rule will exempt those records within this system of records from specific provisions of the Privacy Act.

DATES: To ensure that your comments are considered, we must receive them no later than January 11, 2021.

ADDRESSES: You may submit comments by any one of three methods—internet,

fax, or mail. Do not submit the same comments multiple times or by more than one method. Regardless of which method you choose, please state that your comments refer to docket number SSA–2018–0012, in order that we may associate your comments with the correct regulation.

Caution: You should be careful to include in your comments only information that you wish to make publicly available. We strongly urge you not to include in your comments any personal information, such as Social Security numbers or medical information.

1. *Internet:* We strongly recommend that you submit your comments via the internet. Please visit the Federal eRulemaking portal at *http://www.regulations.gov.* Use the Search function to find docket number SSA–2018–0012. The system will issue a tracking number to confirm your submission. You will not be able to view your comment immediately because we must post each comment manually. It may take up to a week for your comment to be viewable.

2. *Fax:* Fax comments to (410) 966–2830.

3. *Mail:* Address your comments to the Office of Regulations and Reports Clearance, Social Security Administration, 3100 West High Rise, 6401 Security Boulevard, Baltimore, Maryland 21235–6401.

Comments are available for public viewing on the Federal eRulemaking portal at *http://www.regulations.gov* or in person, during regular business hours, by arranging with the contact person identified below.

FOR FURTHER INFORMATION CONTACT: Melissa Feldhan, Supervisory Government Information Specialist, SSA, Office of Privacy & Disclosure, 6401 Security Boulevard, Baltimore, Maryland 21235–6401, Phone: (410) 965–1416, for information about this rule. For information on eligibility or filing for benefits, call our national toll-free number, 1–800–772–1213 or TTY 1–800–325–0778, or visit our internet site, Social Security Online, at *http://www.socialsecurity.gov.*

SUPPLEMENTARY INFORMATION:

Background

In accordance with the Privacy Act,[1] we are issuing public notice of our intent to establish a modified system of records, the Anti-Fraud (AF) System (60–0388). The AF System is an agency-wide and overarching system that includes the ability to detect, prevent, and mitigate fraud in our programs. The AF System collects and maintains personally identifiable information (PII) for assisting us in identifying suspicious or potentially fraudulent activities performed by individuals across all of the agency's programs and service delivery methods.

We established the AF System to support our goal of enhancing SSA's fraud prevention and detection activities by protecting the public's data, providing secure online services, and increasing payment accuracy. The AF System provides us with access to a single repository of data that currently resides across many of our different systems of records. We use the PII in the AF System to employ advanced data analytics solutions to identify patterns indicative of fraud, improve the functionality of data-driven fraud activations, conduct real-time risk analysis, and integrate developing technology into our anti-fraud business processes. This solution also provides true business intelligence to agency leadership with assistance in data-driven anti-fraud decision-making. We use the records in the AF System to detect indications of fraud in all of our programs and operations initiated by individuals outside of SSA or internal to SSA (*e.g.,* SSA employees).

We are claiming that the AF System is exempt from certain provisions of the Privacy Act pursuant to 5 U.S.C. 552a(k)(2). Some information in the AF System relates to our efforts to mitigate, detect, and investigate fraud in our programs and systems and to collaborate with the Office of the Inspector General in fraud investigations and prosecutions. Therefore, we need these exemptions to protect information from public access. The exemptions are required to avoid disclosure of screening techniques; to protect the identities and physical safety of confidential informants; to ensure our ability to obtain information from third parties and other sources; and to protect the privacy of third parties. Allowing an individual to access the information in the AF System could permit the individual to avoid detection or apprehension.

In appropriate circumstances, when compliance would not appear to interfere with or adversely affect the law enforcement purposes of the AF System and the overall law enforcement process, we may, at our discretion, grant notification of or access to a record in the AF System. If an individual is denied any right, privilege, or benefit to which he or she is otherwise entitled under Federal law due to the maintenance of material in the AF System, we will provide such material to such individual, except to the extent that the disclosure of such material would reveal the identity of a source who furnished information to us under an express promise that the identity of the source would be held in confidence.

We are claiming exemption from Privacy Act subsection (c)(3) (Accounting and Disclosure); subsection (d) (Access and Amendment to Records); subsection (e)(4)(G), (e)(4)(H), and (e)(4)(I) (Agency Requirements); and subsection (f) (Agency Rules) for this system of records. We claim exemption from these Privacy Act subsections for the AF System because release of the accounting of disclosures, access to the records, and notice to individuals with respect to existence of records could alert the individual whom might be a subject of an investigation of an actual or potential criminal, civil, or regulatory violation to the existence of that investigation. Disclosures of accounting would therefore present a serious impediment to law enforcement efforts. These Privacy Act subsections would permit the individual who is the subject of a record to impede the investigation, to tamper with witnesses, or evidence, and to avoid detection or apprehension, which would undermine the investigative process. Thereby, these Privacy Act subsections would undermine SSA investigative efforts and reveal the identities of witnesses, and potential witnesses, and confidential informants.

In summary, due to the investigatory nature of information that we maintain in this system of records, we propose to add the AF System to the list of our systems that are exempt from specific provisions of the Privacy Act pursuant to 5 U.S.C. 552a(k)(2).

Rulemaking Analyses and Notices

We will consider all comments received on or before the close of business on the comment closing date indicated above and we will make the comments available for examination in the docket at the previously noted address. We will file comments received after the comment closing date in the docket, and we will consider them to the extent practicable. We may publish a final rule at any time after close of the comment period.

Clarity of This Rule

Executive Order 12866, as supplemented by Executive Order 13563, requires each agency to write all rules in plain language. In addition to your substantive comments on this proposed rule, we invite your comments

[1] 5 U.S.C. 552a.

on how to make the rule easier to understand.

For example:

- Would more, but shorter, sections be better?
- Are the requirements in the rule clearly stated?
- Have we organized the material to suit your needs?
- Could we improve clarity by adding tables, lists, or diagrams?
- What else could we do to make the rule easier to understand?
- Does the rule contain technical language or jargon that is not clear?
- Would a different format make the rule easier to understand, *e.g.,* grouping and order of sections, use of headings, paragraphing?

Regulatory Procedures

Executive Order 12866, as Supplemented by Executive Order 13563

We consulted with the Office of Management and Budget (OMB) and determined that this NPRM does not meet the criteria for a significant regulatory action under Executive Order 12866, as supplemented by Executive Order 13563.

We also determined that this NPRM meets the plain language requirement of Executive Order 12866.

Executive Order 13132 (Federalism)

We analyzed this proposed rule in accordance with the principles and criteria established by Executive Order 13132, and we determined that the proposed rule will not have sufficient Federalism implications to warrant the preparation of a Federalism assessment. We also determined that this proposed rule will not preempt any State law or State regulation or affect the States' abilities to discharge traditional State governmental functions.

Executive Order 12372 (Intergovernmental Review)

The regulations effectuating Executive Order 12372 regarding intergovernmental consultation on Federal programs and activities apply to this proposed rule.

Regulatory Flexibility Act

We certify that this proposed rule will not have a significant economic impact on a substantial number of small entities because it affects individuals only. Therefore, the Regulatory Flexibility Act, as amended, does not require us to prepare a regulatory flexibility analysis.

Paperwork Reduction Act

These rules do not create any new or affect any existing collections and, therefore, do not require Office of Management and Budget approval under the Paperwork Reduction Act.

List of Subjects in 20 CFR Part 401

Administrative practice and procedure, Privacy.

The Commissioner of the Social Security Administration, Andrew Saul, having reviewed and approved this document, is delegating the authority to electronically sign this document to Faye I. Lipsky, who is the primary Federal Register Liaison for SSA, for purposes of publication in the **Federal Register**.

Faye I. Lipsky,

Federal Register Liaison, Office of Legislation and Congressional Affairs, Social Security Administration.

For the reasons stated in the preamble, we are revising subpart B of part 401 of title 20 of the Code of Federal Regulations as set forth below:

PART 401—PRIVACY AND DISCLOSURE OF OFFICIAL RECORDS AND INFORMATION

Subpart B—[Amended]

■ 1. The authority citation for subpart B of part 401 continues to read as follows:

Authority: Secs. 205, 702(a)(5), 1106, and 1141 of the Social Security Act (42 U.S.C. 405, 902(a)(5), 1306, and 1320b–11); 5 U.S.C. 552 and 552a; 8 U.S.C. 1360; 26 U.S.C. 6103; 30 U.S.C. 923.

■ 2. In § 401.85, add paragraph (b)(2)(ii)(H) to read as follows.

* * * * *

(b)(2) * * *

(ii) * * *

(H) Anti-Fraud, SSA.

BILLING CODE 4191–02–P

DEPARTMENT OF THE INTERIOR

Bureau of Indian Affairs

25 CFR Part 150

[201A2100DD, AAKC001030, A0A501010.999900]

RIN 1076–AF56

Indian Land Title and Records

AGENCY: Bureau of Indian Affairs, Interior.

ACTION: Proposed rule.

SUMMARY: The Bureau of Indian Affairs (BIA) is proposing a rule to modernize the current regulations governing the Land Title and Records Office (LTRO). The LTRO maintains title documents for land held in trust or restricted status for individual Indians and Tribes (Indian land). This proposed rule would replace outdated provisions and allow for more widespread efficiencies by reflecting current practices, while creating a framework for future LTRO operations.

DATES: Please submit written comments by February 9, 2021. If you wish to comment on the information collection requirements in this proposed rule, please note that the Office of Management and Budget (OMB) is required to make a decision concerning the collection of information contained in this proposed rule between 30 and 60 days after publication of this proposed rule in the **Federal Register**. Therefore, comments should be submitted to OMB by January 11, 2021. See the **SUPPLEMENTARY INFORMATION** section of this rulemaking for dates of Tribal consultation sessions.

ADDRESSES: You may send comments, identified by RIN number 1076–AF56 by any of the following methods:

- *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the instructions for sending comments.
- *Email: consultation@bia.gov.* Include RIN number 1076–AF56 in the subject line of the message.
- *Mail or Hand-Delivery/Courier:* Office of Regulatory Affairs & Collaborative Action—Indian Affairs (RACA), U.S. Department of the Interior, 1849 C Street NW, Mail Stop 4660, Washington, DC 20240.

All submissions received must include the Regulatory Information Number (RIN) for this rulemaking (RIN 1076–AF56). All comments received will be posted without change to *http://www.regulations.gov,* including any personal information provided.

Comments on the Paperwork Reduction Act information collections contained in this document are separate from comments on the substance of the rulemaking. Send your comments and suggestions on the information collection requirements to the Desk Officer for the Department of the Interior at OMB–OIRA at (202) 395–5806 (fax) or *OIRA_Submission@omb.eop.gov* (email). Please provide a copy of your comments to *consultation@bia.gov.*

We cannot ensure that comments received after the close of the comment period (see **DATES**) will be included in the docket for this rulemaking and considered. Comments sent to an address other than those listed above will not be included in the docket for this rulemaking.

FOR FURTHER INFORMATION CONTACT: Elizabeth Appel, Director, Office of Regulatory Affairs & Collaborative Action, (202) 273–4680; *elizabeth.appel@bia.gov.*

SUPPLEMENTARY INFORMATION:

I. Background & Summary of Proposed Rule

The LTRO maintains title documents for land that the United States holds in trust or restricted status for individual Indians or Tribes (Indian land), roughly similar to how counties and other localities maintain title documents for fee land within their jurisdictions. Several Acts authorize BIA maintenance of these title records. *See, e.g.,* 25 U.S.C. 5, 9; 64 Stat. 1262; 34 Stat. 137; 35 Stat. 312; and 38 Stat. 582, 598.

The LTRO has several physical offices throughout the country. These LTRO offices are the successors to the ''title plants'' that were established by regulation in 1965 to serve what were then BIA ''area offices.'' *See* 30 FR 11676 (September 11, 1965). Updates to the regulations in 1981 defined the role of the LTRO and assigned each LTRO office a geographic service area, containing certain BIA area offices or Tribal reservations. *See* 46 FR 47537 (September 29, 1981), later redesignated at 47 FR 13327 (March 30, 1982).

The regulations finalized in 1981 are still in place (though redesignated from 25 CFR part 120 to 25 CFR part 150). Now, 40 years later, BIA ''area offices'' are BIA Regions, and the LTRO maintains title documents primarily through an electronic system: The Trust Asset Accounting Management System (TAAMS). Each LTRO office records land title documents that are primarily within its designated geographic area; however, it is BIA's vision that, eventually, all title documents will be electronically stored and accessible to LTRO offices regardless of geographic area.

The proposed rule modernizes the LTRO regulations to provide a framework for continued operations and future electronic maintenance of most title documents. This approach will more efficiently address title-related actions that support Indian land transactions (such as a title examination to take land into trust) by allowing workloads to be shifted among LTRO offices to promptly address each request and prevent the risk of any backlogs. The proposed rule continues to provide that each LTRO office is primarily responsible for certain geographic areas, but rather than specifying those LTRO offices in the proposed rule, it instead points to a web page where BIA can keep the list accurately updated.

The proposed rule also addresses changes that have evolved over the past 40 years that have removed requirements for Secretarial approval of certain title documents in support of Tribal self-governance and self-determination (*e.g.,* individual leases under approved Helping Expedite and Advance Responsible Tribal Homeownership (HEARTH) Act regulations) by clarifying that these documents must still be recorded in the LTRO because the documents affect who is authorized to use Indian land.

The proposed rule would also make more transparent the LTRO's role as a support office to BIA and, with respect to title-related matters related to probate, the Office of Hearings and Appeals (OHA). Generally, the Realty staff in BIA are the primary liaison to the LTRO, as the Realty staff are responsible for processing land transactions requested by Indian and Tribal landowners. Similarly, the proposed rule would clarify the LTRO's role with respect to any defects to title: The LTRO provides a notation of the defect in the record of title, but the originating office is responsible for providing the LTRO with a corrected title document for the LTRO to record.

Finally, the proposed rule would allow the BIA Director to delegate recording responsibilities to another office for certain transactions on an as-needed basis. This provision provides flexibility to facilitate future electronic recording capabilities for efficiency.

The following table shows changes from the current regulation to the proposed rule.

Current 25 CFR §	Proposed 25 CFR §	Description of changes
150.1 Purpose and scope	150.1 What is the purpose of this part?.	Provides more general description of responsibilities (e.g., to account for other types of reports beyond land title status reports that LTRO provides).
150.2 Definitions	150.2 What terms do I need to know?.	Alphabetizes terms. Adds definitions for ''certify,'' ''certified copy,'' ''Certifying Officer,'' ''defect'' or ''title defect,'' ''I'' or ''you'' (for plain language purposes), ''Office of Hearings and Appeals (OHA),'' ''Probate Inventory Report,'' ''record of title,'' ''Region,'' and ''title.'' Deletes definitions of ''Administrative Law Judge,'' ''Commissioner,'' ''land,'' and ''Superintendent.'' Revises definition of ''Agency'' to clarify that contracting and compacting Tribes are included. Revises definition of ''Indian land'' to limit to trust or restricted land only, in accordance with other regulatory definitions, while moving provisions regarding other categories of land to proposed § 150.201(c). Revises definition of ''recording'' to move substantive statement as to the significance of recording a document to the body of the regulation at proposed § 150.101. Revises definition of ''title document'' to provide examples. Revises definition of ''title examination'' to add detail. Revises definition of ''Tribe'' to cite the List Act of 1994.

Current 25 CFR §	Proposed 25 CFR §	Description of changes
	150.3 May Tribes administer this part on LTRO's behalf?.	New section to address that Tribes may compact or contract for LTRO functions under Tribal self-governance and self-determination compacts and contracts.
	150.101 What is the purpose of the record of title?.	New section to address the significance of recording a document in the record of title.
150.3 Maintenance of land records and title documents.	150.102 Who maintains the record of title?.	No substantive change.
	150.103 What services does the LTRO perform to maintain the record of title?.	New section to provide a list of services that the LTRO performs.
	150.104 How does the LTRO maintain the record of title?.	New section to address that the LTRO primarily maintains the record of title electronically.
150.4 Locations and service areas for land titles and records offices.	150.105 Are certain LTRO offices responsible for certain geographic areas?.	Revises to provide flexibility to allow for workload sharing across LTRO offices while noting LTRO offices have primary responsibility for certain geographic areas. Replaces the list of addresses for each LTRO office with a webpage for a more frequently updated list of each LTRO office's area of primary geographic area.
150.5 Other Bureau offices with title service responsibility.	.....	Deleted because this section is no longer necessary.
150.6 Recordation of title documents.	150.201 What is recorded in the record of title?.	Removes language assuming hard copy transmission of documents. Adds language to account for the need to record certain documents that are not subject to Secretarial approval. Adds that LTRO offices may also maintain documents demonstrating the rights of use, occupancy, and/or benefit of certain Tribes to non-Indian land and certain documents related to Indian land that are not title documents.
	150.202 Must I check with any other governmental office to find title documents for Indian land?.	New section to specify that in some instances, due diligence may require examination of other records of title for Indian land.
	150.203 Who may submit a title document for recording?.	Clarifies the role of the LTRO as a service office for BIA Agencies, Regions, and OHA, who act as the primary liaison to Indian and Tribal landowners.
	150.204 Who records title documents?.	Clarifies that the BIA Director may delegate the recording function to other Agency offices by documenting the delegation and types of transactions to which it applies in the Indian Affairs Manual.
	150.205 What are the minimum requirements for recording a title document?.	New section to clarify what must be included in a title document that is approved by the Secretary and what must be included in title documents that are deemed approved.
150.7 Curative action to correct title defects.	150.206 What actions will LTRO take if it discovers a title defect?.	Revises to provide that LTRO offices will no longer complete administrative modifications; rather they will put a notation in the record of title and contact the originating office for correction.
150.8 Title status reports	.....	Incorporated into proposed § 150.302.
150.9 Land status maps.	.....	Incorporated into proposed § 150.302.
150.10 Certification of land records and title documents.	150.301 How does LTRO certify copies of title documents?.	Revised for plain language.
	150.302 What reports does the LTRO provide?.	Lists the universe of reports that the LTRO may provide for Indian land.
150.11 Disclosure of land records, title documents, and title reports.	150.303 Who may request and receive copies of title documents in the record of title or reports from LTRO without filing a Freedom of Information Act request?.	Revises to include the categories of persons/entities that may obtain information under current laws including the American Indian Probate Reform Act of 2004, 25 U.S.C. 2204.
	150.304 Where do I request copies of title documents or reports from LTRO?.	New section to clarify that the BIA Agency or Region is the liaison to the LTRO.
	150.305 What information must I provide when requesting copies of title documents and reports?.	New section to list what information BIA will require in order to identify the land for which a report is being requested.
	150.306 Will I be charged a fee for obtaining copies of records?.	New section to provide that the LTRO may charge fees in accordance with the Freedom of Information Act fee schedule, but will not charge fees to Indian or Tribal landowners.
	150.401 Who owns the records associated with this part?.	New section to clarify what records are Federal records as opposed to Tribal records in cases where a Tribe has contracted or compacted for LTRO functions.
	150.402 How must records associated with this part be preserved?.	New section regarding preservation requirements for Federal records.
	150.403 How does the Paperwork Reduction Act affect this part?.	New section required because the regulation imposes an information collection by requiring individuals to provide certain information in order to obtain copies of records.

II. Tribal Consultation

The Department is hosting the following consultation sessions on this proposed rule:

Date	Time	Location
Tuesday, January 12, 2021	2 p.m.–4 p.m. Eastern Time	Teleconference: 888–606–8412 Passcode: "DOI" (Operator will answer)
Thursday, January 14, 2021	2 p.m.–4 p.m. Eastern Time	Teleconference: 888–606–8412 Passcode: "DOI" (Operator will answer)

III. Procedural Requirements

A. Regulatory Planning and Review (E.O. 12866)

Executive Order (E.O.) 12866 provides that the Office of Information and Regulatory Affairs (OIRA) at the Office of Management and Budget (OMB) will review all significant rules. OIRA has determined that this proposed rule is not significant.

E.O. 13563 reaffirms the principles of E.O. 12866 while calling for improvements in the Nation's regulatory system to promote predictability, to reduce uncertainty, and to use the best, most innovative, and least burdensome tools for achieving regulatory ends. The E.O. directs agencies to consider regulatory approaches that reduce burdens and maintain flexibility and freedom of choice for the public where these approaches are relevant, feasible, and consistent with regulatory objectives. E.O. 13563 emphasizes further that regulations must be based on the best available science and that the rulemaking process must allow for public participation and an open exchange of ideas. We have developed this proposed rule in a manner consistent with these requirements.

B. Regulatory Flexibility Act

The Department of the Interior certifies that this document will not have a significant economic effect on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*). The proposed rule addresses how Indian land title and records are maintained.

C. Small Business Regulatory Enforcement Fairness Act

This proposed rule is not a major rule under 5 U.S.C. 804(2), the Small Business Regulatory Enforcement Fairness Act. This proposed rule:

(a) Will not have an annual effect on the economy of $100 million or more.

(b) Will not cause a major increase in costs or prices for consumers, individual industries, Federal, State, or local government agencies, or geographic regions.

(c) Will not have significant adverse effects on competition, employment, investment, productivity, innovation, or the ability of the U.S.-based enterprises to compete with foreign-based enterprises.

D. Unfunded Mandates Reform Act

This proposed rule does not impose an unfunded mandate on State, local, or Tribal governments or the private sector of more than $100 million per year. The proposed rule does not have a significant or unique effect on State, local, or Tribal governments or the private sector. A statement containing the information required by the Unfunded Mandates Reform Act (2 U.S.C. 1531 *et seq.*) is not required.

E. Takings (E.O. 12630)

This proposed rule does not affect a taking of private property or otherwise have taking implications under Executive Order 12630. A takings implication assessment is not required.

F. Federalism (E.O. 13132)

Under the criteria in section 1 of Executive Order 13132, this proposed rule does not have sufficient federalism implications to warrant the preparation of a federalism summary impact statement. A federalism summary impact statement is not required.

G. Civil Justice Reform (E.O. 12988)

This proposed rule complies with the requirements of Executive Order 12988. Specifically, this rule:

(a) Meets the criteria of section 3(a) requiring that all regulations be reviewed to eliminate errors and ambiguity and be written to minimize litigation; and

(b) Meets the criteria of section 3(b)(2) requiring that all regulations be written in clear language and contain clear legal standards.

H. Consultation With Indian Tribes (E.O. 13175)

The Department of the Interior strives to strengthen its government-to-government relationship with Indian Tribes through a commitment to consultation with Indian Tribes and recognition of their right to self-governance and Tribal sovereignty. We have evaluated this proposed rule under the Department's consultation policy and under the criteria in Executive Order 13175 and have determined that Tribal consultation is appropriate because the rule addresses maintenance of land held in trust or restricted status for Tribes. Tribes are invited to join the Tribal consultation sessions listed in Section II of this preamble, above.

I. Paperwork Reduction Act

This proposed rule contains new information collections. All information collections require approval under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*). We may not conduct or sponsor and you are not required to respond to a collection of information unless it displays a currently valid Office of Management and Budget (OMB) control number. The Department is seeking approval of a new information collection, as follows.

Brief Description of Collection: The Bureau of Indian Affairs (BIA) Land Title and Records Office (LTRO) maintains title documents for land that the United States holds in trust or restricted status for individual Indians or Tribes (Indian land), much like counties and other localities maintain title documents for fee land within their jurisdictions. Individuals or entities that are requesting information regarding title documents—either for property they own or for property they seek to lease or encumber—must provide certain information to the LTRO in order for LTRO to accurately identify the property for which they are seeking information. LTRO uses the information provided by individuals or entities in order to identify the property so that they can retrieve the appropriate title documents and produce reports for that property. The collection of information is found in § 150.305, which provides that anyone requesting title documents or reports must provide certain information, such as the name of the reservation where the land is located

and the tract number or legal description.

Title: Requests for Indian Land Title and Records Information.

OMB Control Number: 1076–NEW.

Form Number: None.

Type of Review: Existing collection in use without an OMB Control Number.

Respondents/Affected Public: Individuals, Private Sector, Government.

Total Estimated Number of Annual Respondents: 36.

Total Estimated Number of Annual Responses: 36.

Estimated Completion Time per Response: 0.5 hours.

Total Estimated Number of Annual Burden Hours: 19 hours (consisting of 10 hours for private sector respondents, 3 hours for individual respondents—rounded up from 2.5 hours, and 6 hours for government respondents—rounded up from 5.5 hours).

Respondents' Obligation: Required to obtain a benefit.

Frequency of Response: Occasionally.

Total Estimated Annual Non-Hour Burden Cost: $500.

As part of our continuing effort to reduce paperwork and respondent burdens, we invite the public and other Federal agencies to comment on any aspect of this information collection, including:

(1) Whether or not the collection of information is necessary for the proper performance of the functions of the agency, including whether or not the information will have practical utility;

(2) The accuracy of our estimate of the burden for this collection of information, including the validity of the methodology and assumptions used;

(3) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(4) Ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of response.

Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this rulemaking to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function. Please provide a copy of your comments to *consultation@bia.gov.* Please reference OMB Control Number 1076–NEW in the subject line of your comments.

J. National Environmental Policy Act

This proposed rule does not constitute a major Federal action significantly affecting the quality of the human environment. A detailed statement under the National Environmental Policy Act of 1969 (NEPA) is not required because the environmental effects of this proposed rule are too speculative to lend themselves to meaningful analysis and will later be subject to the NEPA process, unless covered by a categorical exclusion. (For further information see 43 CFR 46.210(i)). We have also determined that the rule does not involve any of the extraordinary circumstances listed in 43 CFR 46.215 that would require further analysis under NEPA.

K. Effects on the Energy Supply (E.O. 13211)

This proposed rule is not a significant energy action under the definition in Executive Order 13211. A Statement of Energy Effects is not required.

L. Clarity of This Regulation

We are required by Executive Orders 12866 and 12988 and by the Presidential Memorandum of June 1, 1998, to write all rules in plain language. This means that each rule we publish must:

a. Be logically organized;

b. Use the active voice to address readers directly;

c. Use clear language rather than jargon;

d. Be divided into short sections and sentences; and

e. Use lists and tables wherever possible.

If you feel that we have not met these requirements, send us comments by one of the methods listed in the **ADDRESSES** section. To better help us revise the rulemaking, your comments should be as specific as possible. For example, you should tell us the numbers of the sections or paragraphs that are unclearly written, which sections or sentences are too long, the sections where you believe lists or tables would be useful, etc.

M. Public Availability of Comments

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

List of Subjects in 25 CFR Part 150

Indians—lands.

■ For the reasons given in the preamble, the Department of the Interior proposes to amend 25 CFR chapter I, subchapter H by revising part 150 to read as follows:

PART 150—RECORD OF TITLE TO INDIAN LAND

Subpart A—Purpose and Definitions

Subpart B—Record of Title to Indian Land

Subpart C—Procedures and Requirements to Record Documents

Subpart D—Disclosure of Title Documents and Reports

Subpart E—Records

Authority: 5 U.S.C. 301; 5 U.S.C. 552a; 25 U.S.C. 2; 25 U.S.C. 5; 25 U.S.C. 7; 25 U.S.C. 9; 25 U.S.C. 14b; 25 U.S.C. 25; 25 U.S.C. 199; 25 U.S.C. 343; 25 U.S.C. 355; 25 U.S.C. 413; 25 U.S.C. 2201 *et. seq.*; 44 U.S.C. 2901 *et.*

seq.; 44 U.S.C. 3101 *et. seq.*; and 44 U.S.C. 3301 *et. seq.*

Subpart A—Purpose and Definitions

§ 150.1 What is the purpose of this part?

This part describes the BIA repository of title documents for Indian land and responsibilities for recording title documents, maintaining the repository, and providing reports on title to Indian land.

§ 150.2 What terms do I need to know?

Agency means the BIA agency or field office with jurisdiction over a particular tract of Indian land or another BIA office through delegation and documentation of responsibilities in the Indian Affairs Manual. This term also means any Tribe acting on behalf of the Secretary or BIA under a contract or compact under the Indian Self-Determination and Education Assistance Act (25 U.S.C. 5301 *et seq.*).

BIA means the Bureau of Indian Affairs within the Department of the Interior.

Certify for the purposes of certifying Title Status Reports, probate inventory reports, title status maps, and findings of title examinations means that an LTRO Certifying Officer has determined that the report, map, or examination of land title status is complete, correct, and current, based on the record of title.

Certified copy means a copy of a title document that is a true and correct copy of the title document as recorded in the record of title and evidenced by an official seal.

Certifying Officer means the LTRO Manager or another properly authorized or delegated Federal official who certifies the status of title to Indian lands or copies of title documents.

Defect or *title defect* means an error contained within, or created by, a title document that makes the title to Indian land uncertain.

I or *you* means the person to whom these regulations directly apply.

Indian land means land, or an interest therein, that is:

(1) Held in trust by the United States for one or more individual Indians or Tribes; or

(2) Owned by one or more individual Indians or Tribes and can only be alienated or encumbered by the owner with the approval of the Secretary because of restrictions or limitations in the conveyance instrument or in Federal law.

LTRO means the Land Title and Records Office within the BIA, which is responsible for recording title documents, maintaining the record of title, and providing certified copies of title documents and reports. The term LTRO, as used herein, includes any Tribe acting on behalf of the Secretary or BIA under § 150.3.

Manager is the designated officer in charge of a LTRO office or his or her designated representative.

OHA means the Office of Hearings and Appeals within the Department of the Interior.

Probate Inventory Report means a report of Indian land owned by an individual Indian at the time of his or her death.

Record of title means the BIA's repository of title documents for Indian land.

Recording is the acceptance of a title document and entry into the record of title of a title document by LTRO. An official LTRO stamp affixed to the title document provides evidence that the title document has been recorded.

Region means a BIA regional office.

Secretary means the Secretary of the Interior or his or her authorized representative.

Title means ownership of Indian land.

Title examination means a review and evaluation by the LTRO of: (1) Title documents submitted to it for recording, and (2) the status of title for a particular tract of Indian land based on the record of title, and a finding, certified by the LTRO Manager, that title is complete, correct, current, and without defect, or identifies defects that must be corrected.

Title document means any document that affects the title to or encumbers Indian land, including but not limited to conveyances, probate orders, encumbrances (such as mortgages, liens, permits, covenants, leases, easements, rights-of-way), plats, cadastral surveys, and other surveys.

Title Status Report means a report issued after a title examination that shows the proper legal description of a tract of Indian land; current ownership, including any applicable conditions, exceptions, restrictions or encumbrances of record; and whether interests in the land are in unrestricted, restricted, trust, and/or other status as indicated by the record of title in the LTRO.

Tribe means an Indian Tribe under section 102 of the Federally Recognized Indian Tribe List Act of 1994, 25 U.S.C. 5129(a).

§ 150.3 May Tribes administer this part on LTRO's behalf?

A Tribe may contract or compact under the Indian Self-Determination and Education Assistance Act (25 U.S.C. 5301 *et seq.*) to administer on LTRO's behalf any portion of this part that is not an inherently Federal function.

Subpart B—Record of Title to Indian Land

§ 150.101 What is the purpose of the record of title?

The record of title provides the BIA with a record of title documents to Indian land and provides the public (including but not limited to future purchasers, creditors, and other interested parties) with constructive notice that the title documents exist.

§ 150.102 Who maintains the record of title?

The LTRO is designated as the office responsible for maintaining the record of title.

§ 150.103 What services does the LTRO perform to maintain the record of title?

The LTRO is responsible for performing the following services to maintain the record of title:

(a) Recording title documents submitted by an Agency, Region, or OHA;

(b) Providing certified copies of the title documents in the record of title;

(c) Examining the record of title and certifying the findings of title examinations;

(d) Providing and certifying Title Status Reports;

(e) Preparing, maintaining, and providing land status maps;

(f) Providing and certifying probate inventory reports; and

(g) Providing other services and reports based upon the information in the record of title.

§ 150.104 How does the LTRO maintain the record of title?

The LTRO maintains the record of title electronically in a system of record. However, certain title documents may exist only as physical copies and not electronically.

§ 150.105 Are certain LTRO offices responsible for certain geographic areas?

Staff at each LTRO office will have primary responsibility to maintain the record of title for Indian land under that LTRO office's assigned geographic area, based on BIA Region, Tribal reservation, or otherwise, as prescribed by BIA through internal procedures. BIA will keep an updated list of each LTRO office's assigned geographic area of responsibility on *www.bia.gov/bia/ots/dltr.* LTRO offices may assist in maintaining the record of title for Indian land not under their assigned geographic area as needed.

Subpart C—Procedures and Requirements to Record Documents

§ 150.201 What is recorded in the record of title?

(a) All title documents for Indian land must be recorded in the record of title, regardless of whether the document reflects a transaction that required Secretarial approval. For example, the following do not require Secretarial approval, but are title documents required to be recorded:

(1) Service line agreements must be recorded under 25 CFR 169.56;

(2) Individual leases under approved Helping Expedite and Advance Responsible Tribal Homeownership (HEARTH) Tribal regulations must be recorded under the Indian Affairs Manual (IAM) at 52 IAM 13;

(3) Individual leases, business agreements, and rights-of-way under Tribal Energy Resource Agreements approved by the Secretary under 25 CFR part 224 must be recorded;

(4) Leases between a Tribe and a Tribal energy development organization under 25 CFR 224 must be recorded;

(5) Leases of Tribal land by a 25 U.S.C. 477 corporate entity under its charter to a third party for a period not to exceed 25 years must be recorded under 25 CFR 162.006(b)(3)(i); and

(6) Subleasehold mortgages under 25 CFR 162.009 must be recorded.

(b) The requirement in paragraph (a) of this section does not eliminate or supersede any Federal statute or regulation requiring the recording of title documents for Indian land in other records of title, including title documents for Indian land within the jurisdiction of the Five Civilized Tribes or the Osage Nation.

(c) LTRO may also record:

(1) Documents that demonstrate the rights of use, occupancy, and/or benefit of certain Tribes to U.S. Government land or other non-Indian lands; and

(2) Certain documents regarding Indian lands that are not title documents.

§ 150.202 Must I check with any other governmental office to find title documents for Indian land?

In certain circumstances, due diligence may require examination of other Federal, State, and local records of title.

§ 150.203 Who may submit a title document for recording?

Only an Agency, Region, or OHA may submit title documents to the LTRO for recording. All other government offices and individuals must submit title documents to the Agency, Region, or OHA, as appropriate, for that Agency, Region, or OHA to submit to the LTRO.

§ 150.204 Who records title documents?

The LTRO is the designated office to record title documents. The BIA Director may delegate the authority to record title documents to another BIA office by documenting the delegation and the types of transactions to which it applies in the Indian Affairs Manual.

§ 150.205 What are the minimum requirements for recording a title document?

(a) A title document must include the following information to be recorded in the record of title, except as provided in paragraph (b) of this section:

(1) A legal description of the Indian land and, if required, the tract number;

(2) The signatures of the parties to the document;

(3) Proper notarization or other acknowledgment of the signatures of the parties, if applicable;

(4) Signature and citation to the authority of the approving official, if applicable; and

(5) Approval date.

(b) If the title document reflects a transaction that was deemed approved under a statute or regulation providing that a transaction is deemed approved after a certain period of time without Secretarial action to approve or deny, then, at a minimum, the title document must include the following items:

(1) A legal description of the Indian land and, if required, the tract number;

(2) The signatures of the parties to the document;

(3) Proper acknowledgement or authentication of the signatures of the parties, if applicable; and

(4) A citation to the statutory or regulatory authority for the transaction to be deemed approved.

§ 150.206 What actions will the LTRO take if it discovers a title defect?

(a) If the LTRO discovers that a title document omits one or more of the items required for recording by § 150.205(a) or (b), then the LTRO will notify the originating office to request correction. Once the omission is corrected, the LTRO will record the title document.

(b) If the LTRO discovers there is an error in one or more of the items required for recording by § 150.205(a) or (b), then the LTRO will record the title document with a notation on title and notify the originating office to request correction. Once the error is corrected, the LTRO will record the corrected title document and remove the notation.

(c) If the LTRO discovers a title defect during a title examination, the LTRO will notify the originating office of the defect, request correction, and make a notation in the record of title. Once the defect is corrected, the LTRO will record the corrected title document or other legal instruments to correct the title document and remove the notation.

(d) If the defect is contained in a probate record, the LTRO will notify the Agency or Region to initiate corrective action with the OHA.

Subpart D—Disclosure of Title Documents and Reports

§ 150.301 How does the LTRO certify copies of title documents?

The Certifying Officer certifies copies of title documents in the record of title by affixing an official seal to the copy of the title document. The official seal attests that the certified copy is a true and correct copy of the recorded title document.

§ 150.302 What reports does the LTRO provide?

The LTRO provides the following types of reports for Indian land to those persons or entities authorized to receive such information:

(a) Certified reports, including a Title Status Report, Land Status Map, and, as part of the probate record, the Probate Inventory Report; and

(b) Uncertified reports or other reports based upon the information in the record of title.

§ 150.303 Who may request and receive copies of title documents in the record of title or reports from the LTRO without filing a Freedom of Information Act request?

The following individuals and entities may request and receive copies of title documents in the record of title or reports for Indian land from the LTRO without filing a Freedom of Information Act request to the extent that disclosure would not violate the Privacy Act or other law restricting access to such records, for example, 25 U.S.C. 2216(e):

(a) Owners of an interest in Indian land (or their legally authorized representative) may request copies of title documents in the record of title or reports for the Indian land in which they own an interest;

(b) The Tribe with jurisdiction over the Indian land may request title documents or reports for Indian land subject to the Tribe's jurisdiction; and

(c) Any person (or their legally authorized representative) or entity who is leasing, using, or consolidating Indian land or is applying to lease, use, or consolidate Indian land may request title documents or reports for such Indian land.

§ 150.304 Where do I request copies of title documents or reports from the LTRO?

You may request LTRO information, such as copies of title documents or reports, at any Region or Agency office with access to the record of title, regardless of geographic location. If the Region or Agency office does not have access to the title documents or the ability to generate the reports requested, it will refer the request to the office with access to the title documents or ability to generate the reports requested.

§ 150.305 What information must I provide when requesting copies of title documents and reports?

(a) Except as provided in paragraph (b) of this section, to request title documents or reports, you must provide only one of the following items of information:

(1) If you are inquiring about your own interest in the tract, then your name and date of birth, or identification number; or

(2) The name of the reservation where the land is located and either the tract number or legal description; or

(3) The Agency name and either the tract number or legal description; or

(4) A legal description of the tract; or

(5) A title document number pertaining to the tract; or

(6) The allotment number including the Tribe or land area code; or

(7) The name of the original allottee.

(b) Individuals and entities described in § 150.303(c) must also provide documents showing that they are entitled to the information they are requesting from the LTRO because they are leasing, using, or consolidating Indian land or the interests in Indian land, or because they are applying to lease, use, or consolidate Indian land or the interests in Indian land.

§ 150.306 Will I be charged a fee for obtaining copies of records?

(a) The LTRO may charge a fee to any of the parties listed in § 150.303(b) and (c) for each copy of recorded title documents, Title Status Reports, and land status maps to cover the costs in reviewing, preparing, or processing the documents.

(b) The fee will be at the rate established by 43 CFR part 2, Appendix A.

(c) The LTRO may waive all or part of these fees, at its discretion.

(d) Paid fees are non-refundable.

Subpart E—Records

§ 150.401 Who owns the records associated with this part?

(a) The records associated with this part are the property of the United States if they:

(1) Are made or received by the Secretary or a Tribe or Tribal organization in the conduct of a Federal trust function under 25 U.S.C. 5301 *et seq.,* including the operation of a trust program; and

(2) Evidence the organization, functions, policies, decisions, procedures, operations, or other activities undertaken in the performance of a Federal trust function under this part.

(b) Records not covered by paragraph (a) of this section that are made or received by a Tribe or Tribal organization in the conduct of business with the Department of the Interior under this part are the property of the Tribe.

§ 150.402 How must records associated with this part be preserved?

(a) Tribes, Tribal organizations, and any other organization that make or receives records described in § 150.401(a) must preserve the records in accordance with approved Departmental records retention procedures under the Federal Records Act, 44 U.S.C. chapters 29, 31 and 33. These records and related records management practices and safeguards required under the Federal Records Act are subject to inspection by the Secretary and the Archivist of the United States.

(b) A Tribe or Tribal organization should preserve the records identified in § 150.401(b) for the period of time authorized by the Archivist of the United States for similar Department of the Interior records in accordance with 44 U.S.C. chapter 33.

§ 150.403 How does the Paperwork Reduction Act affect this part?

The information collections contained in this part have been approved by the Office of Management and Budget under 44 U.S.C 3301 *et seq.* and assigned OMB Control Number 1076-. Response is required to obtain a benefit. A Federal agency may not conduct or sponsor, and you are not required to respond to, a collection of information unless the form or regulation containing the collection of information has a currently valid OMB Control Number.

Tara Sweeney,

Assistant Secretary—Indian Affairs.

BILLING CODE 4337–15–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 282

[EPA–R01–UST–2020–0207; FRL–10016–70-Region 1]

Rhode Island: Final Approval of State Underground Storage Tank Program Revisions, Codification, and Incorporation by Reference

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: Pursuant to the Resource Conservation and Recovery Act (RCRA or Act), the Environmental Protection Agency (EPA) is proposing to approve revisions to the State of Rhode Island's Underground Storage Tank (UST) program submitted by the Rhode Island Department of Environmental Management (RIDEM). This action is based on EPA's determination that these revisions satisfy all requirements needed for program approval. This action also proposes to codify EPA's approval of Rhode Island's State program and to incorporate by reference those provisions of the State regulations that we have determined meet the requirements for approval. The provisions will be subject to EPA's inspection and enforcement authorities under sections 9005 and 9006 of RCRA subtitle I and other applicable statutory and regulatory provisions.

DATES: Send written comments by January 11, 2021.

ADDRESSES: Submit any comments, identified by EPA–R01–UST–2020–0207, by one of the following methods:

1. *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the on-line instructions for submitting comments.

2. *Email: beland.andrea@epa.gov.*

Instructions: Direct your comments to Docket ID No. EPA–R01–UST–2020–0207. EPA's policy is that all comments received will be included in the public docket without change and may be available online at *https://www.regulations.gov,* including any personal information provided, unless the comment includes information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Do not submit information that you consider to be CBI or otherwise protected through *https://www.regulations.gov,* or email. The Federal *https://www.regulations.gov* website is an ''anonymous access'' system, which means EPA will not know your identity or contact

information unless you provide it in the body of your comment. If you send an email comment directly to EPA without going through *https://www.regulations.gov,* your email address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the internet. If you submit an electronic comment, EPA recommends that you include your name and other contact information in the body of your comment and with any disk or CD–ROM you submit. If EPA cannot read your comment due to technical difficulties, and cannot contact you for clarification, EPA may not be able to consider your comment.- Electronic files should avoid the use of special characters, any form of encryption, and be free of any defects or viruses. EPA encourages electronic submittals, but if you are unable to submit electronically, please reach out to the EPA contact person listed in the notice for assistance. You can view and copy the documents that form the basis for this codification and associated publicly available materials either through *www.regulations.gov* or at the EPA Region 1 Office, 5 Post Office Square, 1st floor, Boston, MA 02109–3912. The facility is open from 8:30 a.m. to 4 p.m., Monday through Friday, excluding Federal holidays and facility closures due to COVID–19. We recommend that you telephone Andrea Beland, RCRA Waste Management, UST, and Pesticides Section, at (617) 918–1313, before visiting the Region 1 office. Interested persons wanting to examine these documents should make an appointment with the office at least two weeks in advance.

FOR FURTHER INFORMATION CONTACT: Andrea Beland, (617) 918–1313, *beland.andrea@epa.gov.*

SUPPLEMENTARY INFORMATION: For additional information, see the direct final rule published in the ''Rules and Regulations'' section of this **Federal Register**.

Authority: This proposed rule is issued under the authority of Sections 2002(a), 9004, and 7004(b) of the Solid Waste Disposal Act, as amended, 42 U.S.C. 6912, 6991c, 6991d, and 6991e.

Dated: November 10, 2020.

Dennis Deziel,

Regional Administrator, EPA Region 1.

BILLING CODE 6560–50–P

DEPARTMENT OF TRANSPORTATION

Federal Railroad Administration

49 CFR Part 214

[Docket No. FRA–2019–0074]

RIN 2130–AC78

Railroad Workplace Safety

AGENCY: Federal Railroad Administration (FRA), Department of Transportation (DOT).

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: FRA is proposing to revise its regulations governing railroad workplace safety to: Allow for the use of alternative security standards for electronic display systems used to view track authority information for roadway worker safety, and exempt certain drone roadway maintenance machines from existing environmental control requirements. These proposals would reduce regulatory burdens on the railroad industry while maintaining the existing level of safety.

DATES: Written comments must be received by February 9, 2021. Comments received after that date will be considered to the extent practicable.

FRA anticipates being able to resolve this rulemaking without a public, oral hearing. However, if FRA receives a specific request for a public, oral hearing prior to January 11, 2021, one will be scheduled and FRA will publish a supplemental notice in the **Federal Register** to inform interested parties of the date, time, and location of any such hearing.

ADDRESSES: *Comments:* Comments related to Docket No. FRA–2019–0074 may be submitted by any of the following methods:

- *Website:* Federal eRulemaking Portal, *www.regulations.gov.* Follow the online instructions for submitting comments.
- *Mail:* Docket Management Facility, U.S. Department of Transportation, 1200 New Jersey Avenue SE, W12–140, Washington, DC 20590.

Instructions: All submissions must include the agency name and docket number or Regulatory Identification Number (RIN) for this rulemaking. Note that all comments received will be posted without change to *www.regulations.gov,* including any personal information. Please see the Privacy Act heading in the **SUPPLEMENTARY INFORMATION** section of this document for information related to any submitted comments or materials.

Docket: For access to the docket to read background documents or comments received, go to *www.regulations.gov* at any time.

FOR FURTHER INFORMATION CONTACT: Lance Hawks, Track Specialist, Office of Railroad Safety, Federal Railroad Administration, 1200 New Jersey Avenue SE, Washington, DC 20590, telephone: 678–633–7400, email: *Lance.Hawks@dot.gov;* or Sam Gilbert, Attorney Adviser, Office of Chief Counsel, Federal Railroad Administration, 1200 New Jersey Avenue SE, Washington, DC 20590, telephone: 202–493–0270, email: *Samuel.Gilbert@dot.gov.*

SUPPLEMENTARY INFORMATION:

I. Executive Summary

To streamline and update existing rules, agencies periodically review and propose amendments to their regulations. Various statues and Executive Orders also encourage or require such review with an emphasis on cost-savings. *See, e.g.,* 5 U.S.C. 610; Executive Order 13771, *Reducing Regulation and Controlling Regulatory Costs,* 82 FR 9339, Jan. 30, 2017.

Increasingly, the railroad industry has also petitioned FRA to amend its safety regulations to acknowledge and reflect technological innovations that improve operational efficiencies. Within this context, FRA reviewed its 49 CFR part 214—Railroad Workplace Safety regulations. FRA identified potential amendments to subparts C and D of part 214 addressing Roadway Worker Protection and On-Track Roadway Maintenance Machines and Hi-Rail Vehicles, respectively, that would lead to operational efficiencies and cost-savings. FRA expects these amendments can be implemented without compromising safety. Accordingly, FRA is proposing to amend § 214.322 to allow the use of alternative security standards for electronic display systems to view track authority information, and amend § 214.505 to exempt certain drone roadway maintenance machines from environmental control requirements. FRA expects that these proposals would reduce regulatory burdens on the railroad industry without impacting safety.

FRA estimates that railroads would experience approximately $5,900 in cost savings over the ten-year period of this analysis. The present value (PV) [1] of this

[1] The present value of costs and cost savings flows are calculated in this analysis (over a 10-year period) because PV provides a way of converting future amounts into equivalent dollars today. The formula used to calculate these flows is: 1/(1+r)^t, where ''r'' is the discount rate, and ''t'' is the year. Discount rates of 3 and 7 percent are used in this analysis.

cost savings, when discounted at 3- and 7-percent, is approximately $5,000 and $4,100, respectively. The annualized cost savings is estimated to be approximately $590 at both discount rates. The table below presents the estimated 10-year total cost savings associated with the proposed rule.

TABLE I–1—TOTAL 10-YEAR COST SAVINGS

[2018 Dollars]

	Present value 3%	Present value 7%	Annualized 3%	Annualized 7%
Total Cost Savings	$5,045	$4,139	$591	$589

Because this proposed rulemaking provides railroads the flexibility to utilize an updated National Institute of Standards and Technology (NIST) standard for electronic display systems at their discretion, and codifies an existing waiver, FRA estimates that there will be no costs associated with this proposed rulemaking.

II. Background and Overview of the Proposals

Exclusive Track Occupancy Track Authority Electronic Display Systems

When a roadway worker or work group establishes exclusive track occupancy working limits, and an electronic display device is used to view track authority information for that worker or work group, § 214.322(h) requires the device to meet the security standards of NIST Special Publication 800–63–2, Electronic Authentication Guideline, ''Computer Security,'' August 2013 (2013 Standard).[2]

Under § 214.322(h), new electronic display systems must provide Level 3 assurance as defined by the 2013 Standard, *i.e.,* they must provide multi-factor remote network authentication (for example, a password or a biometric factor, such as a fingerprint, used in combination with a software or hardware token). FRA incorporated this 2013 Standard into part 214 based on the agency's determination that the standard ''provides technical guidelines for widely used methods of electronic authentication, and is reasonably available to all interested parties online . . . or by contacting NIST,'' and that Level 3 assurance, specifically, ''requires . . . stringent identity proofing and multi-factor authentication.'' 81 FR 37840, 37869 (June 10, 2016).

Since adoption of § 214.322(h), NIST has updated its computer security standards several times in separate documents addressing the various components of identity assurance. *See, e.g.,* SP 800–63–3 (Digital Identity Guidelines) (last updated March 2, 2020); SP 800–63A (Enrollment & Identity Proofing) (last updated March 2, 2020); SP 800–63B (Authentication & Lifecycle Management) (last updated March 2, 2020); SP 800–63C (Federation & Assertions) (last updated March 2, 2020). Recognizing that computer security standards change, and that other standards may also provide multi-factor authentication, FRA is providing additional flexibility for meeting the electronic authentication requirements of § 214.322(h). As discussed in more detail below, FRA is proposing a new paragraph (i), which provides that paragraph (h)'s requirements may be satisfied so long as an electronic display system uses multi-factor authentication.

Drone Waiver Incorporation

FRA may waive compliance with its regulations. *See* 49 U.S.C. 20103(d) (''The Secretary [of Transportation] may waive compliance with any part of a regulation prescribed or order issued under this chapter if the waiver is in the public interest and consistent with railroad safety.''); *see also* 49 CFR 1.89(a). FRA implemented regulations to exercise this authority under subpart C to 49 CFR part 211, which provides a process and requirements for receiving and responding to waiver petitions. Each properly filed petition for a permanent or temporary waiver of a safety rule, regulation, or standard is referred to the FRA Railroad Safety Board (Board) for decision. *See* § 211.41(a). The Board's decision is typically rendered after a notice is published in the **Federal Register** and an opportunity for public comment is provided. *See* § 211.41(b). If the Board grants a waiver petition, the Board may impose conditions on the grant of relief to ensure the decision is in the public interest and consistent with railroad safety. *See* § 211.41(c).

Activity under a waiver of regulatory compliance may generate sufficient data and experience to support an expansion of its scope, applicability, and duration. For instance, in many cases, FRA has expanded the scope of certain waivers or issued the same or similar waivers to additional applicants. FRA has also extended various waivers' expiration dates. A waiver's success and its continued expansion may warrant consideration of regulatory codification. Codifying a waiver, and thereby making its exemptions and requirements universally applicable, can result in industry cost-savings larger than from the waiver alone.

In this NPRM, FRA proposes to incorporate a longstanding waiver for certain roadway maintenance machines (RMM) from the environmental control and protection system requirements currently found in subpart D of part 214. Part 214 defines an RMM as ''a device powered by any means of energy other than hand power which is being used on or near railroad track for maintenance, repair, construction or inspection of track, bridges, roadway, signal, communications, or electric traction systems.'' Common types of RMMs include ballast regulators, tampers, mechanical brooms, rotary scarifiers, and undercutters. Each of these machines is typically operated by an individual occupying a cab mounted on the machine.

Existing § 214.505(a) requires certain types of new RMMs to be equipped with enclosed cabs with heating, air conditioning, and positive pressurized ventilation systems. In 2008, Harsco Track Technologies, a railroad equipment manufacturer, requested a waiver of § 214.505(a) for a newly developed RMM designed to function without a dedicated operator located on the machine (*i.e.,* a drone machine). *See* Docket No. FRA–2008–0070 (available at *www.regulations.gov*). Harsco's tamper machine (*i.e.,* a machine used to pack or ''tamp'' ballast under railway tracks) was designed to be operated by a person in the cab of a separate, ''leading'' machine, such that the drone machine itself would not even be equipped with a cab. In support of its request for relief, Harsco explained that the leading machine in which the operator of the drone machine would sit would have a cab fully compliant with § 214.505(a).

[2] ''Authentication'' is the process through which the identity of an individual user, or ''subject,'' is validated.

By notice in the **Federal Register**, FRA invited public comment on Harsco's waiver request. The Brotherhood of Maintenance of Way Employes Division (BMWED) expressed the view that the drone machine must be ''devoid of any operator controls or other capabilities that would allow it to be operated from a position on, beside, or in proximity to,'' the machine. FRA granted Harsco the requested relief from 214.505(a) for the operation of its drone tamper machine for an initial five-year period and conditioned the grant of relief on the following conditions:

- The drone machine could only be operated by someone located in the cab of a lead machine with a § 214.505–compliant cab and this restriction was required to be clearly identified by stenciling, marking, or other written notice in a conspicuous location on each drone machine.
- If, for maintenance and/or testing of the drone machine, the machine was operated outside of the main cab of the lead machine in a manner that would expose an employee to air contaminants, as outlined in Occupational Safety and Health Administration (OSHA) regulations defining exposure limits for various substances (29 CFR 1910.1000), the employee operating the machine was required to be protected in compliance with OSHA's personal respiratory protection regulations (29 CFR 1910.134).
- Employees were prohibited from being on the machine during operation.
- The machine was not physically equipped with controls that would allow the equipment to be operated.
- Harsco maintained a list of the equipment subject to the waiver.

Since granting the initial waiver in 2008, at Harsco's request, FRA has renewed the relief twice—in 2013 and 2018. Harsco supported each request for relief by noting that no injuries or safety issues had been reported and that ''customers are pleased with the safety and performance of the drone tamper.'' FRA has not independently received any reports of injuries related to the use of Harsco's drone RMMs.

In 2018, FRA added the condition that Harsco provide each purchaser of the drone tamper with a copy of the approved waiver. FRA estimates that approximately 30 drone RMMs have been used under the waiver.

Given this safety record, FRA is proposing to amend subpart D of part 214 to allow the use of drone RMMs similar to Harsco's drone tamping machine without the requirement for a waiver from FRA's regulations.

III. Section-by-Section Analysis

FRA seeks comments on all proposals made in this NPRM.

Section 214.322 Exclusive Track Occupancy, Electronic Display

Section 214.321(b) requires exclusive track occupancy authority to be transmitted to the roadway worker in charge by the train dispatcher or control operator in charge of the track, which may be done by data transmission. Many railroads use electronic devices to view these authorities, which must meet the requirements of § 214.322. Recognizing the importance of the integrity and secure transmission of this data, paragraph (h) of existing § 214.322 generally requires new electronic display systems used to view track authorities to meet NIST's 2013 authentication standard discussed above. Specifically, existing paragraph (h) requires new electronic display systems to provide Level 3 assurance as defined by the 2013 Standard (*i.e.,* provide multi-factor remote network authentication), while electronic display systems implemented prior to July 1, 2017, must provide Level 2 assurance as defined by the 2013 Standard (*i.e.,* single factor remote network authentication). Since FRA adopted this requirement, the 2013 Standard has been updated several times. To allow for the use of standards other than the 2013 Standard's Level 3 assurance that also provide multi-factor authentication, FRA proposes to add a new paragraph (i), which would provide that electronic display systems comply with paragraph (h) so long as they provide multi-factor authentication for digital authentication of the subject. Examples of multi-factor authentication include, but are not limited to, a password or biometric factor (*e.g.,* fingerprint or voice pattern) used in combination with a one-time PIN sent to the subject's mobile phone. FRA does not intend this proposed revision to change the substance of paragraph (h)'s current requirement, or require that the authentication standards already in use for existing electronic display systems be changed. Instead, FRA intends this revision to allow industry to adopt new and improved authentication technologies that also provide multi-factor authentication.

A railroad using an electronic display system with multi-factor authentication that employs a standard other than the 2013 Standard would not have to notify FRA of its choice or file any supporting documentation with FRA. However, in exercising its enforcement authority, FRA may request documentation or other evidence from a railroad using an alternative standard demonstrating that the standard provides multi-factor authentication to determine compliance with the requirement.

Section 214.505 Required Environmental Control and Protection Systems for New On-track Roadway Maintenance Machines With Enclosed Cabs

As discussed above, technological developments since the promulgation of § 214.505 have led to the use of drone RMMs that do not possess operator controls, or a position on the machine for an operator to be located. The purpose of the cab on an RMM is to protect the operator from the harmful airborne contaminants produced by the work operations (*e.g.,* silica ballast dust) and excessive noise produced by the machine itself. Such environmentally controlled cabs are expensive to install and maintain, but without an operator on the machine to protect, serve no purpose. Accordingly, as discussed in the *Background* section above, FRA proposes to incorporate into part 214 the longstanding waiver from the requirements of § 214.505 that allows for the use of drone RMMs. FRA is not aware of any safety issues or injuries resulting from the use of these drone machines operated under the conditions of the waiver.

Specifically, FRA proposes to add new paragraph (i) to existing § 214.505 to allow for the use of drone RMMs. The proposed requirements of new paragraph (i) are consistent with the conditions of the waiver discussed in the *Background* section above, which currently allows for the use of certain drone RMMs on a limited basis. Paragraph (i) would specify that existing paragraph (a) of § 214.505 (requiring certain RMMs to be equipped with operational heating, air conditioning, and ventilation systems) does not apply to RMMs that are not capable of performing work functions other than by remote operation and are equipped with no operating controls. Instead, proposed new paragraph (i) would require that if a drone RMM is operated from the cab of a separate machine, that cab must be compliant with paragraph (a) of § 214.505, and if a drone RMM is operated outside of the cab of a separate machine in a way that will expose the operator to air contaminants, the operator must be protected in accordance with OSHA's regulations.

Further, proposed new paragraph (i) prohibits a person from being on a drone RMM while it is operating and requires drone RMMs to be clearly marked to indicate the potential hazards

of the machine being operated from a distance or that the machine may move automatically. FRA is not prescribing a specific marking requirement, instead § 214.505(i) requires any marking to provide notice that roadway workers should stay clear of the equipment because it may move automatically, and that no person may be on the equipment while it is operating.

FRA requests comment on the proposed revisions to § 214.505 allowing for the use of drone RMMs.

IV. Regulatory Impact and Notices

Executive Order 12866, Executive Order 13771, and DOT Regulatory Policies and Procedures

This proposed rule is not a significant regulatory action within the meaning of Executive Order (E.O.) 12866, ''Regulatory Planning and Review,'' and DOT's Administrative Rulemaking, Guidance, and Enforcement Procedures in 49 CFR part 5. This proposed rule is expected to result in a deregulatory action under E.O. 13771, ''Reducing Regulation and Controlling Regulatory Costs.''

FRA proposes to revise its regulations governing the minimum safety requirements for railroad workplace safety. The proposed changes amend part 214 to permit the use of alternative security standards for electronic display systems used to view track authority information in § 214.322, and, consistent with an existing waiver, exempt certain drone roadway maintenance machines from environmental control requirements in § 214.505(a), which include heating, air conditioning, and ventilation systems.

Costs

Electronic Display Systems

Section 214.322(h) requires that electronic display systems used to view track authority information meet the security standards defined by NIST Special Publication 800–63–2, Electronic Authentication Guideline, ''Computer Security.'' August 2013. FRA proposes to allow electronic display systems subject to § 214.322 to use alternative standards for electronic authentication, provided those systems require stringent identity proofing through multi-factor authentication. FRA expects no additional costs for this proposed requirement as it is simply adding flexibility.

Drone Waiver Incorporation

As discussed above, FRA approved Harsco's 2008 waiver petition for a five-year period with conditions, and has since renewed waivers in 2013 and 2018. FRA expects no additional costs for this proposed requirement because FRA is codifying a long-standing waiver.

Cost Savings

The proposed rule would be beneficial for regulated entities seeking to use electronic display systems that meet alternative standards for electronic authentication and provide a comparable or better level of identity proofing and digital authentication as that required by the 2013 NIST Special Publication. The proposed rule would also reduce the regulatory burden on regulated entities by providing relief from submitting waivers to FRA for the use of certain roadway maintenance machines.

FRA has estimated that cost savings of this proposed rule will result due to waiver codification, as the proposed rule would reduce the need for industry to submit waivers. These estimates assume that, without the proposed regulation, Harsco Track Technologies would continue submitting petitions for extending the waiver, which would occur every five years. The last renewal was approved in 2018. To date, Harsco has been the sole entity requesting this waiver from FRA, and FRA does not expect any other entities to apply for similar waivers over the period of analysis.

FRA assumes that the cost for Harsco to prepare and submit each waiver would be approximately the same as it is for FRA to process it. FRA seeks comments on this assumption. To estimate the cost savings associated with this waiver, FRA estimated the labor hours required for FRA to review and approve each waiver. Table IV–1 below displays the breakdown of the waiver review and submission cost for each waiver.

TABLE IV–1—WAIVER SUBMISSION COSTS

Title	Pay grade	Wage rate	Burdened wage rate (wages × 1.75)	Hours	Total wages
FRA Field Inspector	GS–12	$47.82	$83.69	8	$669.48
Administrative Assistant (Field Office)	GS–12	47.82	83.69	4	334.74
Administrative Assistant (DC)	GS–9	30.54	53.45	4	213.78
Motive Power and Equipment Specialist (DC)	GS–14	62.23	108.90	16	1,742.44
Total FRA Labor Cost per Renewal Waiver					2,960.44

For purposes of estimating waiver costs for this analysis, FRA estimates the associated renewals that would occur over the next 10 years. Table IV–2 shows the total cost savings for regulated entities to review and submit waivers to FRA.

TABLE IV–2—INDUSTRY WAIVER COST SAVINGS

Analysis year	Number of waivers	Cost savings (undiscounted)	Cost savings (discounted 3%)	Cost savings (discounted 7%)
1				
2				
3	1	$2,960	$2,709	$2,416
4				
5				
6				
7				

TABLE IV–2—INDUSTRY WAIVER COST SAVINGS—Continued

Analysis year	Number of waivers	Cost savings (undiscounted)	Cost savings (discounted 3%)	Cost savings (discounted 7%)
8	1	2,960	2,337	1,723
9				
10				
Total		5,920	5,045	4,139

Alternatives

FRA is proposing this rulemaking to provide relief to regulated entities by allowing the use of alternative standards for electronic display systems to comply with § 214.322(h) and by not having to submit waivers to FRA. An alternative to this rulemaking would be to maintain the status quo.

If FRA does not modify § 214.322, entities would continue to use the NIST 2013 Special Publication as the standard for securing and transmitting data for electronic display systems. Although this standard is safe, FRA recognizes that updated NIST standards after the 2013 Special Publication could allow the industry to adopt newly developed technologies and methods of data transmission that are still compliant with § 214.322(h) while providing comparable, or better, levels of security.

In addition, absent this proposal, entities would be required to continue submitting waivers for the use of approved roadway maintenance machines and, therefore, would not receive the cost savings associated with not having to submit waivers. This would continue to be an unnecessary burden. FRA views the drone tamper machines as an example of using emerging modern technology to make railroad roadway maintenance safer and more efficient. FRA has verified that waivers allowing drone RMMs do not negatively impact safety because FRA has not seen an adverse impact to safety while railroads have been operating under this waiver. This waiver has given industry some relief from unnecessary requirements and eased their burden. Therefore, issuing this proposed regulation provides cost savings from avoiding petitioning for and processing waivers.

Results

FRA has estimated the cost savings of this proposed rule. The cost savings of this proposed rule are displayed in the table below.

TABLE IV–3—TOTAL 10-YEAR COST SAVINGS

[2018 Dollars]

	Present value 3%	Present value 7%	Annualized 3%	Annualized 7%
Total Cost Savings	$5,045	$4,139	$591	$589

As noted in the table above, FRA estimates the total cost savings for this proposed rule to be approximately $5,000 (PV, 3-percent) and $4,100 (PV, 7-percent). The annualized cost savings is estimated to be approximately $590 (PV, 3-percent) and $590 (PV, 7-percent).

Regulatory Flexibility Act

When an agency issues a rulemaking proposal, the Regulatory Flexibility Act requires the agency to ''prepare and make available for public comment an initial regulatory flexibility analysis'' which will ''describe the impact of the proposed rule on small entities.'' 5 U.S.C. 603(a). Section 605 of the RFA allows an agency to certify a rule, in lieu of preparing an analysis, if the proposed rulemaking is not expected to have a significant economic impact on a substantial number of small entities.

This proposed rule directly affects all railroads, of which there are approximately 746 on the general system, and FRA estimates that approximately 93 percent of these railroads are small entities. Therefore, FRA has determined that this proposed rule will have an impact on a substantial number of small entities.

However, FRA has determined that the impact on entities affected by the proposed rule will not be significant. The effect of the proposed rule will be to allow railroads the flexibility to choose the optimal electronic display equipment currently in the market, with the required level of security without having to notify or seek approval from FRA. Further, equipment manufacturers will no longer need to seek FRA approval to remove operator control stations to a remote piece of equipment, consistent with the established safety of a longstanding waiver. FRA expects the impact of the proposed rule will be a reduction in the paperwork burden for railroads and manufacturers, as well as future benefits from allowing continually advancing security standards to be incorporated without a regulatory change. FRA asserts that the economic impact of the reduction in paperwork, if any, will be minimal and entirely beneficial to small railroads.

Accordingly, the FRA Administrator hereby certifies that this proposed rule will not have a significant economic impact on a substantial number of small entities. FRA invites comment from members of the public who believe there will be a significant impact on small railroads.

Paperwork Reduction Act

FRA is submitting the information collection requirements in this proposed rule to the Office of Management and Budget (OMB) for approval under the Paperwork Reduction Act of 1995, 44 U.S.C. 3501, *et seq.* The sections that contain the proposed and current information collection requirements and the estimated time to fulfill each requirement are as follows:

CFR Section/subject	Respondent universe	Total annual responses	Average time per response	Total annual burden hours	Total annual dollar cost equivalent [3]
Form FRA F 6180.119—Part 214 Railroad Workplace Safety Violation Report.	350 Safety Inspectors	129 forms	4 hours	516	$29,412
214.307—Railroad on-track safety programs—RR programs that comply with this part + copies at system/division headquarters.	741 railroads	276 programs + 325 copies	2 hours + 2 minutes	563	42,788
—RR notification to FRA not less than one month before on-track safety program takes effect.	741 railroads	276 notices	20 minutes	92	6,992
—RR amended on-track safety programs after FRA disapproval.	741 railroads	1 program	4 hours	4	304
—RR written response in support of disapproved program.	741 railroads	1 written response	20 hours	20	1,520
214.309—RR publication of bulletins/notices reflecting changes in on-track safety manual.	60 railroads	100 bulletins/notices	60 minutes	100	7,600
214.311—RR written procedure to achieve prompt and equitable resolution of good faith employee challenges.	19 railroads	5 developed procedures	2 hours	10	760
214.317—On-track safety procedures, generally, for snow removal, weed spray equipment, tunnel niche or clearing by.	19 railroads	5 operating procedures	2 hours	10	760
214.318—Procedures established by railroads for workers to perform duties incidental to those of inspecting, testing, servicing, or repairing rolling equipment.	741 railroads	19 rules/procedures	2 hours	38	2,888
214.320—Roadway maintenance machines movement over signalized non-controlled track—RR request to FRA for equivalent level of protection to that provided by limiting all train and locomotive movements to restricted speed.	741 railroads	5 requests	4 hours	20	1,520
214.322—Exclusive track occupancy, electronic display—Written authorities/printed authority copy if electronic display fails or malfunctions.	3 Class I Railroads	1,000 written authorities	10 minutes	167	9,519
214.329—Train approach warning—Written designation of watchmen/lookouts.	741 railroads	26,250 designations	30 seconds	219	16,644
214.336—Procedures for adjacent track movements over 25 mph: Notifications/watchmen/lookout warnings.	100 railroads	10,000 notices	5 seconds	14	798
—Procedures for adjacent track movements 25 mph or less: Notifications/watchmen/lookout warnings.	100 railroads	3,000 notices	5 seconds	4	228
214.339—Audible warning from trains: Written procedures that prescribe effective requirements for audible warning by horn and/or bells for trains.	19 railroads	19 written procedures	4 hours	76	5,776
214.343/345/347/349/351/353/355—Annual training for all roadway workers (RWs)—Records of training.	50,000 roadway workers	50,000 records	2 minutes	1,667	126,692
214.503—Notifications for non-compliant roadway maintenance machines or unsafe condition.	50,000 roadway workers	125 notices	10 minutes	21	1,197
—Resolution procedures	19 railroads/contractors	5 procedures	2 hours	10	760
214.505 Required environmental control and protection systems for new on-track roadway maintenance machines with enclosed cabs.	741/200 railroads/contractors.	500 lists	1 hour	500	38,000
—Designations/additions to list	692/200 railroads/contractors.	150 additions/designations	5 minutes	13	988
—Stenciling or marking of drone roadway maintenance machine (Revised requirement).	30 drones	10 stencils/displays	5 minutes	1	57
214.507—A-Built Light Weight on new roadway maintenance machines.	692/200 railroads/contractors.	1,000 stickers/stencils	5 minutes	83	4,731
214.511—Required audible warning devices for new on-track roadway maintenance machines.	692/200 railroads/contractors.	3,700 identified mechanisms.	5 minutes	308	17,556
214.515—Overhead covers for existing on-track roadway maintenance machines.	692/200 railroads/contractors.	500 + 500 requests + responses.	10 + 20 minutes	250	17,423
214.517—Retrofitting of existing on-track roadway maintenance machines manufactured on or after Jan. 1, 1991.	692/200 railroads/contractors.	500 stencils/displays	5 minutes	42	2,394
214.523—Hi-rail vehicles	692/200 railroads/contractors.	5,000 records	5 minutes	417	23,769
—Non-complying conditions	692/200 railroads/contractors.	500 tags + 500 reports	10 minutes + 15 minutes	208	11,856

CFR Section/subject	Respondent universe	Total annual responses	Average time per response	Total annual burden hours	Total annual dollar cost equivalent [3]
214.527—Inspection for compliance—Repair schedules.	692/200 railroads/contractors.	550 tags + 550 reports	5 minutes + 15 minutes	183	10,431
214.533—Schedule of repairs—Subject to availability of parts.	692/200 railroads/contractors.	250 records	15 minutes	63	4,788
Totals	741 railroads	105,751 responses	N/A	5,619	388,151

[3] Throughout the tables in this document, the dollar equivalent cost is derived from the Surface Transportation Board's Full Year Wage A&B data series using the appropriate employee group hourly wage rate that includes 75 percent overhead charges.

All estimates include the time for reviewing instructions, searching existing data sources, gathering or maintaining the needed data, and reviewing the information. Pursuant to 44 U.S.C. 3506(c)(2)(B), FRA solicits comments concerning: Whether these information collection requirements are necessary for the proper performance of the functions of FRA, including whether the information has practical utility; the accuracy of FRA's estimates of the burden of the information collection requirements; the quality, utility, and clarity of the information to be collected; and whether the burden of collection of information on those who are to respond, including through the use of automated collection techniques or other forms of information technology, may be minimized. For information or a copy of the paperwork package submitted to OMB, contact Ms. Hodan Wells, Information Clearance Officer, at 202–493–0440.

Organizations and individuals desiring to submit comments on the collection of information requirements should direct them to Ms. Hodan Wells, Federal Railroad Administration, 1200 New Jersey Avenue SE, 3rd Floor, Washington, DC 20590. Comments may also be submitted via email to Ms. Wells at the following address: *Hodan.Wells@dot.gov*.

OMB is required to make a decision concerning the collection of information requirements contained in this proposed rule between 30 and 60 days after publication of this document in the **Federal Register**. Therefore, a comment to OMB is best assured of having its full effect if OMB receives it within 30 days of publication. The final rule will respond to any OMB or public comments on the information collection requirements contained in this proposal.

FRA is not authorized to impose a penalty on persons for violating information collection requirements which do not display a current OMB control number, if required. FRA intends to obtain current OMB control numbers for any new information collection requirements resulting from this rulemaking action prior to the effective date of the final rule. The OMB control number, when assigned, will be announced by separate notice in the **Federal Register**.

Federalism Implications

Executive Order 13132, ''Federalism'' (64 FR 43255, Aug. 10, 1999), requires FRA to develop an accountable process to ensure ''meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications.'' ''Policies that have federalism implications'' are defined in the Executive Order to include regulations that have ''substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.'' Under Executive Order 13132, agencies may not issue a regulation with federalism implications that imposes substantial direct compliance costs and that is not required by statute, unless the Federal government provides the funds necessary to pay the direct compliance costs incurred by State and local governments, or the agency consults with State and local government officials early in the process of developing the regulation.

This proposed rule has been analyzed consistent with the principles and criteria in Executive Order 13132. This proposed rule would not have a substantial effect on the States or their political subdivisions; it would not impose any substantial direct compliance costs; and it would not affect the relationships between the Federal government and the States or their political subdivisions, or the distribution of power and responsibilities among the various levels of government. Therefore, the consultation and funding requirements of Executive Order 13132 do not apply.

However, this proposed rule could have preemptive effect under certain provisions of the Federal railroad safety statutes, specifically the former Federal Railroad Safety Act of 1970 (former FRSA), repealed and re-codified at 49 U.S.C. 20106, and the former Locomotive Boiler Inspection Act (LIA) at 45 U.S.C. 22–34, repealed and re-codified at 49 U.S.C. 20701–03. The former FRSA provides that States may not adopt or continue in effect any law, regulation, or order related to railroad safety or security that covers the subject matter of a regulation prescribed or order issued by the Secretary of Transportation (with respect to railroad safety matters) or the Secretary of Homeland Security (with respect to railroad security matters), except when the State law, regulation, or order qualifies under the ''local safety or security hazard'' exception to section 20106. Moreover, the U.S. Supreme Court has held the former LIA preempts the field concerning locomotive safety. *See Napier* v. *Atl. Coast Line R.R.,* 272 U.S. 605 (1926) and *Kurns* v. *R.R. Friction Prods. Corp.,* 565 U.S. 625 (2012). Therefore, if this proposed rule is finalized, it is possible States would be preempted from addressing the subjects covered by the proposed rule (security standards for electronic display systems used to display track authority information and environmental controls in drone machines).

Environmental Impact

FRA has evaluated this proposed rule consistent with the National Environmental Policy Act (NEPA; 42 U.S.C. 4321, *et seq.*), the Council of Environmental Quality's NEPA implementing regulations at 40 CFR parts 1500–1508, and FRA's NEPA implementing regulations at 23 CFR part 771, and determined that it is categorically excluded from environmental review and does not require the preparation of an environmental assessment (EA) or environmental impact statement (EIS). Categorical exclusions (CEs) are actions identified in an agency's NEPA implementing regulations that do not normally have a significant impact on the environment and, therefore, do not require either an EA or EIS. *See* 40 CFR 1508.4. Specifically, FRA has determined that this proposed rule is categorically excluded from detailed environmental review pursuant to 23 CFR 771.116(c)(15), ''[p]romulgation of

rules, the issuance of policy statements, the waiver or modification of existing regulatory requirements, or discretionary approvals that do not result in significantly increased emissions of air or water pollutants or noise.''

This proposed rule does not directly or indirectly impact any environmental resources and will not result in significantly increased emissions of air or water pollutants or noise. In analyzing the applicability of a CE, FRA must also consider whether unusual circumstances are present that would warrant a more detailed environmental review. *See* 23 CFR 771.116(b). FRA has concluded that no such unusual circumstances exist with respect to this proposed regulation and the proposal meets the requirements for categorical exclusion under 23 CFR 771.116(c)(15).

Pursuant to Section 106 of the National Historic Preservation Act and its implementing regulations, FRA has determined this undertaking has no potential to effect historic properties. *See* 16 U.S.C. 470. FRA has also determined that this rulemaking does not approve a project resulting in use of a resource protected by Section 4(f). *See* Department of Transportation Act of 1966, as amended (Pub. L. 89–670, 80 Stat. 931); 49 U.S.C. 303.

Unfunded Mandates Reform Act of 1995

Under Section 201 of the Unfunded Mandates Reform Act of 1995, 2 U.S.C. 1531, each Federal agency ''shall, unless otherwise prohibited by law, assess the effects of Federal regulatory actions on State, local, and tribal governments, and the private sector (other than to the extent that such regulations incorporate requirements specifically set forth in law).'' Section 202 of the Act, 2 U.S.C. 1532, further requires that before promulgating any general notice of proposed rulemaking that is likely to result in promulgation of any rule that includes any Federal mandate that may result in the expenditure by State, local, and tribal governments, in the aggregate, or by the private sector, of $100,000,000 or more (adjusted annually for inflation) in any 1 year, and before promulgating any final rule for which a general notice of proposed rulemaking was published, the agency shall prepare a written statement detailing the effect on State, local, and tribal governments and the private sector. The proposed rule would not result in the expenditure, in the aggregate, of $100,000,000 or more in any one year (adjusted annually for inflation), and thus preparation of such a statement is not required.

Privacy Act

In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to better inform its rulemaking process. DOT posts these comments, without edit, to *www.regulations.gov,* as described in the system of records notice, DOT/ALL–14 FDMS, accessible through *www.dot.gov/privacy.* To facilitate comment tracking and response, FRA encourages commenters to provide their name, or the name of their organization; however, submission of names is completely optional. Whether or not commenters identify themselves, all timely comments will be fully considered. If you wish to provide comments containing proprietary or confidential information, please contact the agency for alternate submission instructions.

List of Subjects in 49 CFR Part 214

Railroad Workplace Safety.

The Proposed Rule

For the reasons discussed in the preamble, FRA proposes to amend part 214 of chapter II, subtitle B of title 49, Code of Federal Regulations, as follows:

PART 214—RAILROAD WORKPLACE SAFETY

■ 1. The authority citation for part 214 continues to read as follows:

Authority: 49 U.S.C. 20102–20103, 20107, 21301–21302, 21304, 28 U.S.C. 2461, note; and 49 CFR 1.89.

■ 2. In § 214.322, add paragraph (i) to read as follows:

§ 214.322 Exclusive track occupancy, electronic display.

* * * * *

(i) For purposes of complying with paragraph (h) of this section, electronic display systems may use multi-factor authentication for digital authentication of the subject.

■ 3. Amend § 214.505 by revising the introductory text of paragraph (a) and by adding paragraph (i) to read as follows:

§ 214.505 Required environmental control and protection systems for new on-track roadway maintenance machines with enclosed cabs.

(a) With the exception of machines subject to paragraph (i) of this section, the following new on-track roadway maintenance machines shall be equipped with operative heating systems, operative air conditioning systems, and operative positive pressurized ventilation systems:

* * * * *

(i) Paragraph (a) of this section is not applicable to machines that are incapable of performing work functions other than by remote operation and are equipped with no operating controls (*i.e.,* drone roadway maintenance machines) if the following conditions are met.

(1) If a drone roadway maintenance machine is operated from the cab of a separate machine, that separate machine must comply with paragraph (a) of this section.

(2) If a drone roadway maintenance machine is operated outside of the main cab of the separate machine in a manner that will expose the operator to air contaminants, as outlined in 29 CFR 1910.1000, Air contaminants, the employee shall be protected in compliance with 29 CFR 1910.134, Personal respiratory protection.

(3) No person is permitted on the drone roadway maintenance machine while the equipment is operating.

(4) Each drone roadway maintenance machine must be clearly identified by stenciling, marking, or other written notice in a conspicuous location on the machine indicating the potential hazards of the machine being operated from a distance or that the machine may move automatically.

Issued in Washington, DC.

Quintin C. Kendall,

Deputy Administrator.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 223

[Docket No. 201125–0320]

RIN 0648–BK00

Endangered and Threatened Species: Designation of Nonessential Experimental Population of Central Valley Spring-Run Chinook Salmon in the Upper Yuba River Upstream of Englebright Dam, CA

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Proposed rule; availability of a draft environmental assessment; request for comments.

SUMMARY: We, NMFS, propose a rule to designate and authorize the release of a nonessential experimental population (NEP) of Central Valley (CV) spring-run Chinook salmon (*Oncorhynchus*

tshawytscha) under the Endangered Species Act (ESA) in the upper Yuba River and its tributaries upstream of Englebright Dam, California and establish take exceptions for the NEP for particular activities. A draft environmental assessment (EA) has been prepared on this proposed action and is available for comment.

DATES: Comments on this proposed rule and EA, must be received no later than January 11, 2021.

ADDRESSES: You may submit comments on this proposed rule, identified by NOAA–NMFS–2020–0139 by any of the following methods:

- *Electronic submission:* Submit all electronic public comments via the Federal e-Rulemaking Portal. Go to *www.regulations.gov/#!docketDetail;D=NOAA-NMFS-2020-0139* click the ''Comment Now!'' icon, complete the required fields, and enter or attach your comments.
- *Mail:* Submit written comments to Jonathan Ambrose, National Marine Fisheries Service, 650 Capitol Mall, Suite 5–100, Sacramento, California 95814.
- *Phone:* (916) 930–3717; Fax: (916) 930–3629.

Instructions: Comments sent by any other method, to any other address or individual, or received after the end of the comment period, may not be considered by NMFS. All comments received are part of the public record and will generally be posted to *http://www.regulations.gov* without change. All personal identifying information (*e.g.,* name, address, etc.), confidential business information, or otherwise sensitive information submitted voluntarily by the sender will be publicly accessible. NMFS will accept anonymous comments (enter ''N/A'' in the required fields if you wish to remain anonymous). Attachments to electronic comments will be accepted in Microsoft Word, Excel, or Adobe PDF file formats only.

You may access a copy of the draft EA by the following:

- Visit NMFS' National Environmental Policy Act (NEPA) website at: *http://www.westcoast.fisheries.noaa.gov/publications/nepa/nepa_documents.html.*

FOR FURTHER INFORMATION CONTACT: Jonathan Ambrose, by phone at (916) 930–3717, or by mail at National Marine Fisheries Service, 650 Capitol Mall, Suite 5–100, Sacramento, CA 95814; or by mail at National Marine Fisheries Service, 1315 East-West Highway, Silver Spring, MD 20910.

SUPPLEMENTARY INFORMATION:

Background Information Relevant to Experimental Population Designation

NMFS listed the CV spring-run Chinook salmon Evolutionarily Significant Unit (ESU) [1] as threatened under the ESA, 16 U.S.C. 1531 *et seq.,* on September 16, 1999 (64 FR 50394), and reaffirmed this status in a final rule on June 28, 2005 (70 FR 37160) and 5-year reviews announced on August 15, 2011 (76 FR 50447) and May 26, 2016 (81 FR 33468). The listed ESU of CV spring-run Chinook salmon currently includes all naturally spawned populations of spring-run Chinook salmon in the Sacramento River and its tributaries, as well as the Feather River Hatchery (FRH) spring-run Chinook salmon program. On January 9, 2002 (67 FR 1116), NMFS issued protective regulations under section 4(d) of the ESA for CV spring-run Chinook salmon that apply the take prohibitions of section 9(a)(1) of the ESA, except for listed exceptions (see 50 CFR 223.203). Critical habitat has been designated for CV spring-run Chinook salmon (70 FR 52488, September 2, 2005), and includes most of the occupied riverine habitat within their extant range. CV spring-run Chinook salmon are also listed as a threatened species by the State of California under the California Endangered Species Act (CESA), California Fish and Game Code, Division 3, Chapter 1.5.

On December 31, 2013, a final rule was published in which NMFS designated a nonessential experimental population of CV spring-run Chinook salmon in portions of the San Joaquin River, California, under ESA section 10(j) (78 FR 79622).

In 2014, we adopted a final recovery plan for the CV spring-run Chinook salmon ESU (79 FR 42504, July 22, 2014). The Central Valley Recovery Plan identifies re-establishing populations of CV spring-run Chinook salmon above impassable barriers to unoccupied historical habitats as an important recovery action (NMFS 2014). More specifically, the Central Valley Recovery Plan explains that re-establishing populations above impassable barriers, such as Englebright Dam, would aid in recovery of the ESU by increasing abundance, spatial structure and diversity and by reducing the risk of extinction to the ESU as a whole.

To facilitate and encourage future reintroduction efforts into the upper Yuba River, NMFS is proposing a rule to (a) designate and authorize the release of an NEP of CV spring-run Chinook salmon pursuant to ESA section 10(j) in the upper Yuba River and its tributaries upstream of Englebright Dam, and (b) establish take prohibitions for the NEP and exceptions for particular activities.

Statutory and Regulatory Framework for Experimental Population Designation

Section 10(j) of the ESA (16 U.S.C. 1539(j)), allows the Secretary of Commerce to authorize the release of any population of a listed species outside their current range if the release furthers their conservation. An experimental population is a population that is geographically separate from nonexperimental populations of the same species. Before authorizing the release of an experimental population the Secretary must determine whether or not the population is essential to the continued existence of the listed species.

An experimental population is treated as a threatened species, except that non-essential populations do not receive the benefit of certain protections normally applicable to threatened species (ESA section 10(j)(2)(C)). Below we discuss the impact of treating experimental populations as threatened species and of exceptions that apply to NEPs.

For endangered species, section 9 of the ESA prohibits take of those species. For a threatened species, ESA section 9 does not specifically prohibit take of those species, but the ESA instead authorizes NMFS to adopt regulations under section 4(d) that prohibit take, or that it deems necessary and advisable for species conservation. The proposed experimental population of CV spring-run Chinook salmon must generally be treated as a threatened species. Therefore, we propose to issue tailored protective regulations under ESA section 4(d) for the proposed experimental population of CV spring-run Chinook salmon to identify take prohibitions to provide for the conservation of the species with exceptions for particular activities.

Section 7 of the ESA provides for Federal interagency cooperation and consultation on Federal agency actions. Section 7(a)(1) directs all Federal agencies, in consultation with NMFS as applicable depending on the species, to use their authorities to further the purposes of the ESA by carrying out

[1] The ESA defines ''species'' to include ''any distinct population segment of any species of vertebrate fish or wildlife which interbreeds when mature'' (16 U.S.C. 1532(16); see also 50 CFR 424.02). For Pacific salmon, NMFS determined that an ESU will be considered a distinct population segment and thus a species (56 FR 58612, November 20, 1991). A group of Pacific salmon is considered an ESU if it (1) is substantially reproductively isolated from other nonspecific population units; and (2) represents an important component in the evolutionary legacy of the species.

programs for the conservation of listed species. Section 7(a)(2) requires all Federal agencies, in consultation with NMFS as applicable depending on the species, to insure any action they authorize, fund or carry out is not likely to jeopardize the continued existence of a listed species or result in the destruction or adverse modification of designated critical habitat. Section 7 applies equally to endangered and threatened species.

Although ESA section 10(j) provides that an experimental population must generally be treated as a threatened species, for the purposes of ESA section 7, if the experimental population is determined to be a NEP, section 10(j)(C)(i) requires that we treat the experimental population as a species proposed to be listed, rather than a species that is listed (except when it occurs within a National Wildlife Refuge or National Park, in which case it is treated as listed). ESA Section 7(a)(4) requires Federal agencies to confer (rather than consult under ESA section 7(a)(2)) with NMFS on actions likely to jeopardize the continued existence of a species proposed to be listed. The results of a conference are advisory recommendations, if any, on ways to minimize or avoid adverse effects rather than mandatory terms and conditions under ESA section 7(a)(2) consultations (compare 50 CFR 402.10(c) with 50 CFR 402.14(i)(1)(iv)). ESA section 7(a)(1) also applies to nonessential experimental populations. As described above, section 7(a)(1) requires Federal agencies, in consultation with NMFS as applicable depending on the species, to use their authorities in furtherance of the purposes of the ESA by carrying out programs for the conservation of threatened and endangered species. ESA section 7(a)(2) consultation requirements would not apply to any Federal agency action affecting a NEP in the NEP area, except when the NEP occurs within a National Wildlife Refuge or National Park. Section 7(a)(2) consultation requirements would still apply to any Federal agency action in the NEP area that may affect CV spring-run Chinook salmon or designated critical habitat outside of the NEP area or other ESA-listed species or designated critical habitat for those species.

NMFS has designated three experimental populations (78 FR 2893, January 15, 2013; 78 FR 79622, December 31, 2013; 79 FR 40004, July 11, 2014) and promulgated regulations, codified at 50 CFR part 222, subpart E, to implement section 10(j) of the ESA (81 FR 33416, May 26, 2016). NMFS' implementing regulations include the following provisions.

50 CFR 222.501(b) defines an ''essential experimental population'' as a population whose loss would reduce the likelihood of the survival of the species in the wild.''All other experimental populations are classified as nonessential.

50 CFR 222.502(b) provides, before authorizing the release of an experimental population, the Secretary must find that such release will further the conservation of the species. In addition, 50 CFR 222.502(b) provides:

In making such a finding, the Secretary shall utilize the best scientific and commercial data available to consider:

(1) Any possible adverse effects on extant populations of a species as a result of removal of individuals, eggs, or propagules for introduction elsewhere;

(2) The likelihood that any such experimental population will become established and survive in the foreseeable future;

(3) The effects that establishment of an experimental population will have on the recovery of the species; and

(4) The extent to which the introduced population may be affected by existing or anticipated Federal or State actions or private activities within or adjacent to the experimental population area.

50 CFR 222.502(c) describes four components that must be provided in any NMFS regulations designating an experimental population under ESA section 10(j):

(1) Appropriate means to identify the experimental population, including, but not limited to, its actual or proposed location; actual or anticipated migration; number of specimens released or to be released; and other criteria appropriate to identify the experimental population(s);

(2) A finding, based solely on the best scientific and commercial data available, and the supporting factual basis, on whether the experimental population is, or is not, essential to the continued existence of the species in the wild;

(3) Management restrictions, protective measures, or other special management concerns of that population, as appropriate, which may include, but are not limited to, measures to isolate and/or to contain the experimental population designated in the regulation from nonexperimental populations and protective regulations established pursuant to section 4(d) of the ESA; and

(4) A process for periodic review and evaluation of the success or failure of the release and the effect of the release on the conservation and recovery of the species.

In addition, as described above, ESA section 10(j)(1) defines an ''experimental population'' as any population authorized for release under paragraph (2), when the population is separate geographically from the nonexperimental populations of the same species. Accordingly, we must establish that there are such times and places when the experimental population is wholly geographically separate. Similarly, the statute requires that we identify the experimental population; the legislative history indicates that the purpose of this requirement is to provide notice as to which populations of listed species are experimental (see Joint Explanatory Statement of the Committee of Conference, H.R. Conf. Rep No. 97–835, at 34 (1982)).

Status of the Species

Life history and the historical population trend of CV spring-run Chinook salmon are summarized by Healy (1991), USFWS (1995), Yoshiyama *et al.,* (1998), Yoshiyama *et al.,* (2001), and Moyle (2002). Section 4(f) of the ESA requires the Secretary of Commerce to develop recovery plans for all listed species unless the Secretary determines that such a plan will not promote the conservation of a listed species. Prior to developing the Central Valley Recovery Plan (NMFS 2014), we assembled a team of scientists from Federal and State agencies, consulting firms, non-profit organizations and academia. This group, known as the Central Valley Technical Recovery Team (CVTRT), was tasked with identifying population structure and recommending recovery criteria (also known as delisting criteria) for ESA-listed salmon and steelhead in the Sacramento River and San Joaquin Rivers and their tributaries. The CVTRT recommended biological viability criteria at the ESU level and population level (Lindley *et al.,* 2007) for recovery planning consideration. The CVTRT identified the current risk level of each population based on the gap between recent abundance and productivity and the desired recovery goals. The CVTRT concluded that the greatest risk facing the ESUs resulted from the loss of historical diversity following the construction of major dams that blocked access to historical spawning and rearing habitat (Lindley *et al.,* 2007).

The CVTRT also recommended spatial structure and diversity metrics for each population (Lindley *et al.,* 2004). Spatial structure refers to the

geographic distribution of a population and the processes that affect the distribution. Populations with restricted distribution and few spawning areas are at a higher risk of extinction from catastrophic environmental events (*e.g.,* a volcanic eruption) than are populations with more widespread and complex spatial structure. A population with complex spatial structure typically has multiple spawning areas which allows the expression of diverse life history characteristics. Diversity is the combination of genetic and phenotypic characteristics within and between populations (McElhany *et al.,* 2000). Phenotypic diversity allows more diverse populations to use a wider array of environments and protects populations against short-term temporal and spatial environmental changes. Genotypic diversity, on the other hand, provides populations with the ability to survive long-term changes in the environment by providing genetic variations that may prove successful under different situations. The combination of phenotypic and genotypic diversity, expressed in a natural setting, provides populations with the ability to utilize the full range of habitat and environmental conditions and to have the resiliency to survive and adapt to long-term changes in the environment.

In 2016, NMFS completed a periodic review as required by the ESA section 4(c)(2)(A), and concluded that the CV spring-run Chinook salmon ESU should remain listed as threatened (81 FR 33468, May 26, 2016). An analysis conducted by NMFS' Southwest Fisheries Science Center (Johnson and Lindley, 2016) indicated that the extant independent populations of the CV spring-run Chinook salmon ESU remained at a moderate to low extinction risk since the last status review (Williams *et al.,* 2011). The analysis noted some improvements in the viability of the ESU, particularly with respect to the increased spatial diversity of the dependent Battle Creek and Clear Creek populations. The analysis identified as key threats the recent catastrophic declines of many of the extant populations, high pre-spawn mortality during the 2012–2015 drought in California, uncertain juvenile survival due to drought and ocean conditions, as well as straying of CV spring-run Chinook salmon from the FRH (Johnson and Lindley, 2016).

Analysis of the Statutory Requirements

1. Will authorizing release of an experimental population further the conservation of the species?

Section 3(3) of the ESA, 16 U.S.C. 1532(3), defines ''conservation'' as ''the use of all methods and procedures which are necessary to bring any endangered species or threatened species to the point at which the measures provided pursuant to this [Act] are no longer necessary.'' We discuss in more detail below each of the factors we considered in determining if authorizing release of an experimental population in the upper Yuba River and its tributaries upstream of Englebright Dam would further the conservation of CV spring-run Chinook salmon.

As described above, under 50 CFR 222.502(b), NMFS must consider several factors in finding whether authorizing release of an experimental population will further the conservation of the species, including any possible adverse effects on extant populations of the species as a result of removal of individuals for introduction elsewhere; the likelihood that the experimental population will become established and survive in the foreseeable future; the effects that establishment of the experimental population will have on the recovery of the species; and the extent to which the experimental populations may be affected by existing or anticipated Federal or State actions or private activities within or adjacent to the experimental population area. We describe authorizing release as reintroduction below, because spring-run Chinook salmon historically used habitat in the upper Yuba River upstream of Englebright Dam (NMFS 2014).

We discuss possible adverse effects on extant populations below in relation to a donor source for reintroduction into the upper Yuba River.

Regarding the likelihood that reintroduction efforts will be successful in the foreseeable future, important questions are: What are the most appropriate sources of broodstock to establish the experimental population, and are the sources available? Reintroduction efforts have the best chance for success when the donor population has life-history characteristics compatible with the anticipated environmental conditions of the habitat into which fish will be reintroduced (Araki *et al.,* 2008). Populations found in watersheds closest to the reintroduction area are most likely to have adaptive traits that will lead to a successful reintroduction. Therefore, only CV spring-run Chinook salmon populations found in Central Valley will be used in establishing the experimental populations in the NEP area.

We preliminarily identify a donor source for reintroduction into the upper Yuba River as CV spring-run Chinook salmon produced from the FRH. The Yuba River is a tributary to the Feather River, and CV spring-run Chinook salmon from the FRH are the geographically closest donor source that could be used with minimal impact to the wild population for reintroduction into the upper Yuba River. The donor stock raised at the FRH may include CV spring-run Chinook salmon from either the Feather or Yuba River. NMFS, in consultation with the California Department of Fish and Wildlife, may later consider diversifying the donor stock with CV spring-run Chinook salmon from other nearby streams if those populations can sustain removal of fish. Any collection of CV spring-run Chinook salmon would be subject to a Hatchery and Genetic Management Plan (HGMP) in relation to a hatchery source and approval of a permit under ESA section 10(a)(l)(A), which includes analysis under NEPA and ESA section 7.

Use of donor stock from the FRH for the initial phases of a reintroduction program will minimize the number of individuals needed from existing populations. Supplementation to the donor stock, if necessary, would be dependent upon genetic diversity needs and the extent of adverse effects to other populations. It is anticipated that over time, the FRH would produce juveniles and adults for a future reintroduction program in sufficient numbers to enable the return of a sufficient number of adults to establish a self-sustaining population in the upper Yuba River. Once a self-sustaining population is established, it is anticipated that the FRH contribution of CV spring-run Chinook salmon would be phased out.

We also consider the suitability of habitat available to the experimental population. NMFS initiated a habitat assessment of the upper Yuba River and determined conditions were suitable for Chinook salmon spawning, adult holding, and juvenile rearing (Stillwater Sciences 2013). The relative abundance of habitat types, habitat quality and environmental conditions vary between the North, Middle, and South Yuba Rivers. Under current conditions when compared to one another, habitat suitability is best in the North Yuba River. The Middle Yuba River maintains significant quantities of suitable habitat and habitat conditions are less suitable in the South Yuba River. Habitat conditions in the Middle and South Yuba Rivers could improve with anticipated additional instream flow releases from dams in the upper

watersheds as part of the Federal Energy Regulatory Commission's relicensing process pursuant to the Federal Power Act.

In addition, there are Federal and State laws and regulations that will help ensure the establishment and survival of the experimental population by protecting aquatic and riparian habitat in the NEP area. Section 404 of the Clean Water Act (CWA), 33 U.S.C. 1344, establishes a program to regulate the discharge of dredged or fill material into waters of the United States, which generally requires avoidance, minimization, and mitigation for potential adverse effects of dredge and fill activities within the nation's waterways. Under CWA section 401, 33 U.S.C. 1341, a Federal agency may not issue a permit or license to conduct any activity that may result in any discharge into waters of the United States, unless a state or authorized tribe where the discharge would originate issues a section 401 water quality certification verifying compliance with existing water quality requirements or waives the certification requirement. In addition, construction and operational storm water runoff is subject to restrictions under CWA section 402, 33 U.S.C. 1342, which establishes the National Pollutant Discharge Elimination System permit program, and state water quality laws.

At the state level, the California Fish and Game Code (CFGC) Fish and Wildlife Protection and Conservation provisions (CFGC section 1600, *et seq.*), the CESA (CFGC section 2050, *et seq.*), and the California Environmental Quality Act (CEQA) (Public Resources Code section 21000, *et seq.*) set forth criteria for the incorporation of avoidance, minimization, and feasible mitigation measures for on-going activities as well as for individual projects. The CFGC Fish and Wildlife Protection and Conservation provisions were enacted to provide conservation for the state's fish and wildlife resources and include requirements to protect riparian habitat resources on the bed, channel, or bank of streams and other waterways. The CESA prohibits the taking of listed species except as otherwise provided in State law. Under the CEQA, no public agency shall approve or carry out a project without identifying all feasible mitigation measures necessary to reduce impacts to a less than significant level, and public agencies shall incorporate such measures absent overriding consideration.

Regarding the effects that establishment of the experimental population will have on the recovery of the species, the Central Valley Recovery Plan characterizes the NEP area as having the potential to support a viable population of Chinook salmon (NMFS 2014). The Central Valley Recovery Plan establishes a framework for reintroduction of Chinook salmon and steelhead to historical habitats upstream of dams. The framework recommends that a reintroduction program should include feasibility studies, habitat evaluations, fish passage design studies, and a pilot reintroduction phase prior to implementation of the long-term reintroduction program. In addition, the Central Valley Recovery Plan contains specific management strategies for recovering CV spring-run Chinook salmon that include securing existing populations and reintroducing this species into historically occupied habitats above rim dams in the Central Valley of California (NMFS 2014). The Central Valley Recovery Plan concludes, and we continue to agree, that establishing an experimental population in the NEP area that persists into the foreseeable future is expected to reduce extinction risk from natural and anthropogenic factors by increasing abundance, productivity, spatial structure, and diversity within California's Central Valley. These expected improvements in the overall viability CV spring-run Chinook salmon, in addition to other actions being implemented throughout the Central Valley, which are described next, will contribute to this species' near-term viability and recovery.

Across the Central Valley, a number of actions are being undertaken to improve habitat quality and quantity for CV spring-run Chinook salmon. Collectively, implementation of the San Joaquin River Restoration Program (*http://www.restoresjr.net/*), Battle Creek Salmon and Steelhead Restoration Project (*http://www.usbr.gov/mp/battlecreek/*), and the Central Valley Flood Protection Plan (DWR 2011) will result in many projects that will improve habitat conditions. The San Joaquin River Restoration Program will improve passage survival and spatial distribution for CV spring-run Chinook salmon in the San Joaquin River corridor. The Battle Creek Salmon and Steelhead Restoration Project will improve passage and rearing survival, spawning opportunities and spatial distribution in Battle Creek. The Central Valley Flood Protection Plan (DWR 2011) will improve juvenile rearing conditions during outmigration by creating and improving access to high quality floodplain habitats.

Climate change is expected to exacerbate existing habitat stressors in California's Central Valley and increase threats to Chinook salmon and steelhead by reducing the quantity and quality of freshwater habitat (Lindley *et al.,* 2007). Significant contraction of thermally suitable habitat is predicted, and as cold water sources contract, access to cooler headwater streams is expected to become increasingly important for CV spring-run Chinook salmon in the Central Valley (Crozier *et al.,* 2018). For this reason and other reasons described above, we anticipate reintroduction of CV spring-run Chinook salmon into headwater streams upstream of Englebright Dam will contribute to their conservation and recovery.

Regarding the extent to which the experimental populations may be affected by existing or anticipated Federal or State actions or private activities within or adjacent to the experimental population area, the NEP and adjacent areas are characterized by snow-covered subalpine zones near the Sierra-Nevada Mountain crest, are largely forested, and have been affected by mining, logging, dams and water diversions, with limited residential development. The NEP area is sparsely populated and ongoing State, Federal and local activities include forest management, limited mining, road maintenance, limited residential development, grazing, and tourism and recreation. These activities are anticipated to have minor impacts to CV spring-run Chinook salmon in the NEP and adjacent areas. Potential impacts are further minimized through application of the aforementioned State and Federal regulations. Dams and water diversions in the NEP area currently limit fish populations in some parts of the NEP area. NMFS anticipates a future reintroduction project will target stream reaches that are not blocked by dams or impaired from inadequate flows due to water diversions. NMFS further anticipates a reintroduction program will specifically target river reaches in the NEP area with abundant high quality habitat.

The habitat improvement actions called for in the Central Valley Recovery Plan, in combination with the protective measures proposed in this rule, as well as compliance with existing Federal, State, and local laws, statutes, and regulations, including those mentioned above, are expected to contribute to the establishment and survival of the proposed experimental population in the upper Yuba River in the foreseeable future. Although the donor source for this reintroduction effort is anticipated to include hatchery-origin individuals from the FRH, based on the factors discussed above, we conclude it is

probable that a self-sustaining experimental population of CV spring-run Chinook salmon will become established and survive in the upper Yuba River. Furthermore, we conclude that such a self-sustaining experimental population of genetically compatible individuals is likely to further the conservation of the species, as discussed above.

2. Identification of the Experimental Population and Geographic Separation From the Nonexperimental Populations of the Same Species

ESA section 10(j)(2)(B) requires that we identify experimental populations by regulation. ESA section 10(j)(1) also provides that a population is considered an experimental population only when, and at such times as, it is wholly separate geographically from the nonexperimental population of the same species. NMFS proposes that the NEP area would extend upstream from Englebright Dam and include the North, Middle, and South Yuba Rivers and their tributaries up to the ridgeline. Under this proposed rule, the experimental population would be identified as the CV spring-run Chinook salmon population when it is geographically located anywhere in the NEP area. Reintroduced CV spring-run Chinook salmon would only be part of the experimental population when they are present in the NEP area, and would not be part of the experimental population when they are outside the NEP area, even if they originated within the NEP area. When reintroduced juvenile CV spring-run Chinook salmon pass downstream of Englebright Dam into the lower Yuba River, through the lower Feather River and Sacramento River and when they migrate further downstream to the Sacramento River Delta and the Pacific Ocean, they would no longer be geographically separated from other extant CV spring-run Chinook salmon populations, and thus the ''experimental population'' designation would not apply, unless and until they return as adults and re-enter the NEP area.

The proposed NEP area provides the requisite level of geographic separation because CV spring-run Chinook salmon are currently extirpated from this area due to the presence of Englebright Dam, which blocks their upstream migration. Straying of fish from other spring-run Chinook populations into the NEP area is not possible due to the presence of this dam. As a result, the geographic description of the CV spring-run Chinook ESU does not include the NEP area. The ''experimental population'' designation is geographically based and does not travel with the fish outside of the NEP area.

NMFS anticipates that CV spring-run Chinook salmon used for the initial stages of a reintroduction program would be marked, for example, with specific fin clips and/or coded-wire tags to evaluate stray rates and allow for brood stock collection of returning adults that originated from the experimental population. Any marking of individuals of the experimental population, such as clips or tags, would be for the purpose of evaluating the effectiveness of a near-term and long-term fish passage program, and would not be for the purpose of identifying fish from the NEP area other than for brood stock collection of returning adults. As discussed above, the experimental population is identified based on the geographic location of the fish. Indeed, if the reintroduction is successful as expected, and fish begin reproducing naturally, their offspring would not be distinguishable from fish from other Chinook salmon populations. Outside of the NEP area, *e.g.,* downstream of Englebright Dam in the lower Yuba, lower Feather and Sacramento Rivers, or in the ocean, any such unmarked fish (juveniles and adults alike) would not be considered members of an experimental population. They would be considered part of the CV spring-run Chinook salmon ESU currently listed under the ESA. Likewise, any fish that were marked for reintroduction in the NEP area would not be considered part of the experimental population once they left the NEP area; rather, they would be considered part of the ESU currently listed under the ESA.

3. Is the experimental population essential to the continued existence of the species?

As discussed above, ESA section 10(j)(2)(B) requires the Secretary to determine whether experimental populations would be ''essential to the continued existence'' of the listed species. The statute does not elaborate on how this determination is to be made. However, as noted above, Congress gave some further attention to the term when it described an essential experimental population as one whose loss ''would be likely to appreciably reduce the likelihood of survival of that species in the wild.'' (Joint Explanatory Statement, supra, at 34). NMFS regulations incorporated this concept into its definition of an essential experimental population at 50 CFR 222.501(b), which provides, in relevant part, ''The term essential experimental population means an experimental population whose loss would be likely to appreciably reduce the likelihood of the survival of the species in the wild.''

In determining whether the experimental population of CV spring-run Chinook salmon is essential, we used the best available information as required by ESA section 10(j)(2)(B). Furthermore, we considered the geographic location of the experimental population in relation to other populations of CV spring-run Chinook salmon, and the likelihood of survival of these populations without the existence of the experimental population.

The CV spring-run Chinook salmon ESU includes four independent populations and several dependent or establishing populations. Given current protections and restoration efforts, these populations are persisting without the presence of a population in the NEP area. It is expected that the experimental population will exist as a separate population from those in the Sacramento River basin and will not be essential to the survival of those populations. Based on these considerations, we conclude that the loss of the experimental population of CV spring-run Chinook in the NEP area is not likely to appreciably reduce the likelihood of the survival of the species in the wild. Accordingly, NMFS is proposing to designate this experimental population as nonessential. Under section 10(j)(2)(C)(ii) of the ESA, we cannot designate critical habitat for a nonessential experimental population.

Additional Management Restrictions, Protective Measures, and Other Special Management Considerations

As indicated above, ESA section 10(j)(2)(C) requires that experimental populations be treated as threatened species, except that for nonessential experimental populations, certain portions of ESA section 7 do not apply and critical habitat cannot be designated. Congress intended that the Secretary would issue regulations, under ESA section 4(d), deemed necessary and advisable to provide for the conservation of experimental populations as for any threatened species (Joint Explanatory Statement, supra, at 34). In addition, when amending the ESA to add section 10(j), Congress specifically intended to provide broad discretion and flexibility to the Secretary in managing experimental populations so as to reduce opposition to releasing listed species outside their current range (H.R. Rep. No. 567, 97th Cong. 2d Sess. 34 (1982)). Therefore, we propose to exercise the authority to issue protective regulations under ESA section 4(d) for

the proposed experimental population of CV spring-run Chinook salmon to identify take prohibitions necessary to provide for the conservation of the species and otherwise provide assurances to people in the NEP area.

The ESA defines ''take'' to mean harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct (16 U.S.C. 1532(19)). Concurrent with the proposed ESA section 10(j) experimental population designation, we propose protective regulations under ESA section 4(d) for the experimental population that would prohibit take of CV spring-run Chinook salmon that are part of the experimental population, except in the following circumstances in the NEP area:

1. Any take by authorized governmental entity personnel acting in compliance with 50 CFR 223.203(b)(3) to aid a sick, injured or stranded fish; dispose of a dead fish; or salvage a dead fish which may be useful for scientific study.

2. Any take that is incidental [2] to an otherwise lawful activity and is unintentional, not due to negligent conduct. Otherwise lawful activities include, but are not limited to, recreation, forestry, water management, agriculture, power production, mining, transportation management, rural development, or livestock grazing, when such activities are in full compliance with all applicable laws and regulations.

3. Any take that is pursuant to a permit issued by NMFS under section 10 of the ESA (16 U.S.C. 1539) and regulations in 50 CFR part 222 applicable to such a permit.

Process for Periodic Review

Evaluation of a future reintroduction program is likely to be assessed by certain new monitoring programs developed specifically for this purpose. NMFS anticipates monitoring in the NEP area, including fish passage efficiency, spawning success, adult and smolt injury and mortality rates, juvenile salmon collection efficiencies, competition with resident species, predation, disease and other types of monitoring will be necessary to gauge the success of the program. As data are collected through monitoring efforts, NMFS and other partners in a future reintroduction project can evaluate the success of the program. In addition, results of a reintroduction project will be evaluated during subsequent 5-year status reviews for the CV spring-run Chinook salmon ESU under ESA section 4(c)(2).

Proposed Experimental Population Findings

Based on the best available scientific information, we have determined that the designation and authorization for the release of a NEP of CV spring-run Chinook salmon in the NEP area upstream of Englebright Dam will further the conservation of CV spring-run Chinook salmon. CV spring-run Chinook salmon used to initiate the reintroduction are anticipated to come from the FRH using either donor stock from the Feather or Yuba Rivers, which is part of the CV spring-run Chinook salmon ESU. The collection of donor stock from the FRH will be permitted only after issuance of a permit under section 10(a)(1)(A) of the ESA, which includes analysis under NEPA and ESA section 7. The experimental population fish are expected to remain geographically separate from fish in other populations of the CV spring-run Chinook salmon ESU during the life stages in which they remain in, or are returned to, the NEP area. At all times when members of the experimental population are downstream of Englebright Dam, the experimental population designation will not apply. Establishing an experimental population of CV spring-run Chinook salmon in the NEP area would likely contribute to the viability of the ESU as a whole. Reintroduction is a recommended recovery action in the Central Valley Recovery Plan (NMFS 2014). Designation of CV spring-run Chinook salmon in the NEP area as a nonessential experimental population would ensure that their reintroduction does not impose undue regulatory restrictions on landowners and others because this proposed rule would apply only limited take prohibitions, as compared to the prohibitions that typically apply to CV spring-run Chinook salmon. In particular, the proposed rule expressly provides an exception for take of NEP fish in the NEP area provided that the take is incidental to otherwise lawful activity and unintentional, not due to negligent conduct.

We further determine, based on the best available scientific information, that the proposed experimental population would not be essential to the continued existence of the CV spring-run Chinook salmon ESU, because absence of the experimental population would not be likely to appreciably reduce the likelihood of the survival of the ESU in the wild. However, as described above, the experimental population is expected to contribute to the recovery of the CV spring-run Chinook salmon ESU if reintroduction is successful. We therefore propose that the experimental population would be a nonessential experimental population.

Public Comment

We want the final rule to be as effective and accurate as possible, and the final EA to evaluate the potential issues and reasonable range of alternatives. Therefore, we invite the public, State, Tribal, and government agencies, the scientific community, environmental groups, industry, local landowners, and all interested parties to provide comments on the proposed rule and draft EA (see **ADDRESSES** section above). We request that submitted comments be relevant to the proposed designation of an experimental population in the NEP area. The most helpful comments are as specific as possible, provide relevant information or suggested changes, the basis for the suggested changes, and any additional supporting information where appropriate. For example, comments could tell us the numbers or titles of the sections or paragraphs that are unclearly written, which sections or sentences are too long, or the sections where lists or tables would be useful.

Prior to issuing a final rule, we will take into consideration the comments and supporting materials received. We are interested in all public comments, but are specifically interested in obtaining feedback on:

(1) The best source of ESA-listed fish for establishing an experimental population of CV spring-run Chinook salmon in the NEP area and the scientific basis for such comments.

(2) The proposed NEP area (geographical scope) for the experimental population.

(3) The extent to which the experimental population would be affected by current or future Federal, State, Tribal, or private actions within or adjacent to the experimental population area.

(4) Any necessary management restrictions, protective measures, or other management measures that we may not have considered.

(5) The likelihood that the experimental population will become established in the NEP area.

(6) Whether the proposed experimental population is essential or nonessential.

(7) Whether the proposed experimental population designation and release will further the conservation of the species and whether we have

[2] Incidental take refers to takings that result from, but are not the purpose of, carrying out an otherwise lawful activity conducted by the Federal agency or applicant. 50 CFR 402.02

used the best available scientific information in making this determination.

Information Quality Act and Peer Review

Pursuant to the Information Quality Act (Section 515 of Pub. L. 106–554), the Office of Management and Budget (OMB) issued a Final Information Quality Bulletin for Peer Review, which was published in the **Federal Register** on January 14, 2005 (70 FR 2664). The Bulletin established minimum peer review standards, a transparent process for public disclosure of peer review planning, and opportunities for public participation with regard to certain types of information disseminated by the Federal Government. The peer review requirements of the OMB Bulletin apply to influential or highly influential scientific information disseminated on or after June 16, 2005. There are no documents supporting this proposed rule that meet these criteria.

Classification

Executive Order 12866

This proposed rule has been determined to be not significant under Executive Order 12866.

Regulatory Flexibility Act (5 U.S.C. 601 et seq.)

Under the Regulatory Flexibility Act (as amended by the Small Business Regulatory Enforcement Fairness Act (SBREFA) of 1996; 5 U.S.C. 801 *et seq.*), whenever a Federal agency is required to publish a notice of rulemaking for any proposed or final rule, it must prepare, and make available for public comment, a regulatory flexibility analysis that describes the effect of the rule on small entities (*i.e.,* small businesses, small organizations, and small government jurisdictions). However, no regulatory flexibility analysis is required if the head of an agency certifies that the rule will not have a significant economic impact on a substantial number of small entities. The SBREFA amended the Regulatory Flexibility Act to require Federal agencies to provide a statement of the factual basis for certifying that a rule will not have a significant economic impact on a substantial number of small entities.

We are certifying that this proposed rule, if implemented, would not have a significant economic effect on a substantial number of small entities. The following discussion explains our rationale.

This proposal would designate and authorize the release of a nonessential experimental population of CV spring-run salmon in the NEP area. While in the NEP area, the experimental population would be protected from some types of take, but we would impose no prohibitions on the take of the experimental population fish that is incidental to otherwise lawful activity and unintentional, not due to negligent conduct (see below). The effect of the proposal would not increase the regulatory burdens associated with the ESA on affected entities, including small entities, to conduct otherwise lawful activities as a result of reintroduction of CV spring-run Chinook salmon to the NEP area. If this proposal is adopted, the area affected by this rule includes the entire NEP area. Land ownership includes Federal lands and private lands with the primary uses being recreation, forestry, water management, power production, mining, transportation management, rural development, and livestock grazing. Accordingly, the rule, if implemented, may impact those uses.

However, this proposed rule would apply only limited take prohibitions as compared with the prohibitions that typically apply to listed CV spring-run Chinook salmon. In particular, the proposed rule expressly provides an exception for the take of experimental population fish in the NEP area provided that the take is incidental to otherwise lawful activity and unintentional, not due to negligent conduct. Based on the nonexperimental population designation under the proposed rule, there would only be the requirement under ESA section 7 (other than section (a)(1) requiring Federal agencies, in consultation with NMFS as applicable depending on the species, to use their authorities to further the purposes of the ESA by carrying out programs for the conservation of listed species) for Federal agencies to confer with NMFS. The more burdensome requirement to consult, with respect to effects of agency actions on the experimental population is not applicable. Additionally, critical habitat cannot be designated for a nonessential experimental population. Due to the minimal regulatory overlay provided by the nonessential experimental population designation, we do not expect this rule to have any significant effect on recreation, forestry, water management, power production, mining, transportation management, rural development, livestock grazing or other lawful activities within the NEP area.

Because this proposal would require no additional regulatory requirements on small entities and would impose little to no regulatory requirements for activities within the affected area, the Chief Council for Regulation certified that this proposed rule would not have a significant economic effect on a substantial number of small entities. Accordingly, no initial regulatory flexibility analysis is required, and none has been prepared.

Executive Order 12630

In accordance with Executive Order 12630, the proposed rule does not have significant takings implications. A takings implication assessment is not required because this proposed rule: (1) Would not effectively compel a property owner to have the government physically invade their property, and (2) would not deny all economically beneficial or productive use of the land or aquatic resources. This proposed rule would substantially advance a legitimate government interest (conservation and recovery of a listed fish species) and would not present a barrier to all reasonable and expected beneficial use of private property.

Executive Order 13132

In accordance with Executive Order 13132, we have determined that this proposed rule does not have federalism implications as that term is defined in Executive Order 13132.

Executive Order 13771

This proposed rule is not an Executive Order 13771 regulatory action because this rule is not significant under Executive Order 12866.

Paperwork Reduction Act of 1995 (44 U.S.C. 3501 et seq.)

OMB regulations at 5 CFR 1320, which implement provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*), require that Federal agencies obtain approval from OMB before collecting information from the public. A Federal agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. This proposed rule does not include any new collections of information that require approval by OMB under the Paperwork Reduction Act.

National Environmental Policy Act

In compliance with all provisions of the National Environmental Policy Act of 1969 (NEPA), we have analyzed the impact on the human environment and considered a reasonable range of alternatives for this proposed rule. We have prepared a draft EA on this proposed action and have made it

available for public inspection (see **ADDRESSES** section above). All appropriate NEPA documents will be finalized before this rule is finalized.

Government-to-Government Relationship With Tribes (Executive Order 13175)

Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, outlines the responsibilities of the Federal Government in matters affecting tribal interests. If we issue a regulation with tribal implications (defined as having a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes), we must consult with those governments or the Federal Government must provide funds necessary to pay direct compliance costs incurred by tribal governments.

There are no tribally owned or managed lands in the NEP area. As part of NMFS's obligations under the National Historic Preservation Act, NMFS inquired with federally recognized and non-federally recognized tribes with potential interest in the NEP area to inform them of the proposed rule and solicit information on cultural resources eligible for listing on the National Register of Historic Places. To date, responses have been limited and no concerns over the proposed rule have been raised. NMFS invites tribes to meet with us to have detailed discussions that could lead to government-to-government consultation meetings with tribal governments. We will continue to coordinate with potentially affected tribes as we gather public comment on this proposed rule and consider next steps.

References Cited

A complete list of all references cited in this proposed rule is available upon request from National Marine Fisheries Service office (see **FOR FURTHER INFORMATION CONTACT**).

Dated: December 2, 2020.

Samuel D. Rauch, III,

Deputy Assistant Administrator for Regulatory Programs, National Marine Fisheries Service.

For the reasons set out in the preamble, 50 CFR part 223 is proposed to be amended as follows:

PART 223—THREATENED MARINE AND ANADROMOUS SPECIES

■ 1. The authority citation for part 223 continues to read as follows:

Authority: 16 U.S.C. 1531–1543; subpart B, § 223.201–202 is also issued under 16 U.S.C. 1361 *et seq.;* 16 U.S.C. 5503(d) for § 223.206(d)(9).

■ 2. In § 223.102, amend the table in paragraph (e) by adding, in alphabetical order, an entry under Fishes for ''Salmon, Chinook (Central Valley spring-run ESU–XN: Yuba)'' to read as follows:

§ 223.102 Enumeration of threatened marine and anadromous species.

* * * * *

(e) * * *

Species [1]			Citation(s) for listing determinations(s)	Critical habitat	ESA rules
Common name	Scientific name	Description of listed entity			
*	*	*	*	*	
FISHES					
*	*	*	*	*	
Salmon, Chinook (Central Valley spring-run ESU–XN: Yuba).	*Oncorhynchus tshawytscha.*	Central Valley spring-run Chinook salmon only when, and at such times as, they are found in the upper Yuba River watershed, upstream of Englebright Dam.	[**Federal Register** citation and date when published as a final rule].	NA	223.301
*	*	*	*	*	

[1] Species includes taxonomic species, subspecies, distinct population segments (DPSs) (for a policy statement, see 61 FR 4722, February 7, 1996), and evolutionarily significant units (ESUs) (for a policy statement, see 56 FR 58612, November 20, 1991).

* * * * *

■ 3. In § 223.301, add paragraph (d) to read as follows:

§ 223.301 Special rules—marine and anadromous fishes.

* * * * *

(d) *Upper Yuba River Central Valley spring-run Chinook Salmon Experimental Population* (*Oncorhynchus tshawytscha*). (1) The Upper Yuba River Central Valley spring-run Chinook salmon population identified in paragraph (d)(2) of this section is designated as a nonessential experimental population under section 10(j) of the ESA and shall be treated as a ''threatened species'' pursuant to 16 U.S.C. 1539(j)(2)(C).

(2) Upper Yuba River Central Valley spring-run Chinook Salmon Experimental Population. All Central Valley spring-run Chinook salmon within the experimental population area in the upper Yuba River watershed upstream of Englebright Dam, as defined here, are considered part of the Upper Yuba River Central Valley spring-run Chinook salmon experimental population. The boundaries of the experimental population area include Englebright Dam and all tributaries draining into Englebright Reservoir up to the ridgeline.

(3) Prohibitions. Except as expressly allowed in paragraph (d)(4) of this section, all prohibitions of section 9(a)(1) of the ESA (16 U.S.C. 1538 (a)(1)) apply to fish that are part of the Upper Yuba River Central Valley spring-run Chinook salmon nonessential experimental population identified in paragraph (d)(2) of this section.

(4) Exceptions to the Application of Section 9 Take Prohibitions in the Experimental Population Area. The following forms of take in the experimental population area identified in paragraph (d)(2) of this section are not prohibited by this section:

(i) Any taking of Central Valley spring-run Chinook salmon by authorized governmental entity personnel acting in compliance with 50 CFR 223.203(b)(3) to aid a sick, injured or stranded fish; dispose of a dead fish; or salvage a dead fish which may be useful for scientific study.

(ii) Any taking of Central Valley spring-run Chinook salmon that is unintentional, not due to negligent conduct, and incidental to, and not the purpose of, the carrying out of an otherwise lawful activity.

(iii) Any taking of Central Valley spring-run Chinook salmon pursuant to a permit issued by NMFS under section 10 of the ESA (16 U.S.C. 1539) and regulations in part 222 of this chapter applicable to such a permit.

Notices

Federal Register
Vol. 85, No. 239
Friday, December 11, 2020

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

DEPARTMENT OF AGRICULTURE

Submission for OMB Review; Comment Request

December 8, 2020.

The Department of Agriculture has submitted the following information collection requirement(s) to OMB for review and clearance under the Paperwork Reduction Act of 1995, Public Law 104–13. Comments are requested regarding: whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; the accuracy of the agency's estimate of burden including the validity of the methodology and assumptions used; ways to enhance the quality, utility and clarity of the information to be collected; and ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Comments regarding this information collection received by January 11, 2021 will be considered. Written comments and recommendations for the proposed information collection should be submitted within 30 days of the publication of this notice on the following website *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function

An agency may not conduct or sponsor a collection of information unless the collection of information displays a currently valid OMB control number and the agency informs potential persons who are to respond to the collection of information that such persons are not required to respond to the collection of information unless it displays a currently valid OMB control number.

Rural Housing Service

Title: Single Family Housing Guaranteed Loan Program.

OMB Control Number: 0575–0179.

Summary of Collection: The Housing and Community Facilities Program (HCFP), hereinafter referred to as the ''Agency,'' is a credit agency for the Rural Housing Service of the U.S. Department of Agriculture. The Agency offers supervised credit programs to build modest housing and essential community facilities in rural areas. This regulation prescribes the policy necessary to process Rural Housing loan guarantees to low- and moderate-income applicants. Section 517 (d) of Title V of the Housing Act of 1949, as amended, provides the authority for the Secretary of Agriculture to issue loan guarantees for the acquisition of new or existing dwellings and related facilities to provide decent, safe, and sanitary living conditions and other structures in rural areas.

The purpose of the Single-Family Housing Guaranteed Loan Program (SFHGLP) is to assist low and moderate-income individuals and families in acquiring or constructing a single-family residence in designated rural areas with loans originated and serviced by private lenders. Eligibility for this program includes very low, low, and moderate-income families or persons whose income does not exceed 115 percent of the median income for the area, as determined by the Secretary.

Need and Use of the Information: Information is collected from both a potential homebuyer and lender. To participate in the program, lenders must submit to standards which ensure the loan objectives of the SFHGLP are met. The lender submits qualifications to the Agency and enters into an agreement that outlines both the lender and Agency's commitments and responsibilities under the guaranteed program. Information from a homebuyer includes financial documents such as confirmation of household income, assets and liabilities, a credit record, evidence the homebuyer has adequate repayment ability for the loan amount requested and if the condition and location of the property meet program guidelines. All information collected is vital for the Agency to determine if borrowers qualify for all assistance for which they are eligible.

Description of Respondents: Business or other for-profit; State, Local or Tribal Government.

Number of Respondents: 2,520.

Frequency of Responses: Reporting: Monthly; Quarterly; Annually.

Total Burden Hours: 1,327,476.

Levi S. Harrell,

Departmental Information Collection Clearance Officer.

BILLING CODE 3410–XV–P

DEPARTMENT OF AGRICULTURE

Federal Crop Insurance Corporation

[Docket No. FCIC–20–0009]

Notice of Request for Renewal and Revision of the Currently Approved Information Collection

AGENCY: Federal Crop Insurance Corporation, USDA.

ACTION: Renewal and Revision of the Currently Approved Information Collection.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, this notice announces a public comment period on the information collection requests (ICRs) associated with the Standard Reinsurance Agreement and Appendices I, II and IV administered by Federal Crop Insurance Corporation (FCIC). Appendix III is excluded because it contains the Data Acceptance System requirements.

DATES: Written comments on this notice will be accepted until close of business February 9, 2021.

ADDRESSES: We invite you to submit comments on this information collection request. In your comments, include the date, volume, and page number of this issue of the **Federal Register**, and the title of rule. You may submit comments by any of the following methods, although FCIC prefers that you submit comments electronically through the Federal eRulemaking Portal:

- *Federal eRulemaking Portal:* Go to *http://www.regulations.gov* and search for Docket ID FCIC–20–0009. Follow the online instructions for submitting comments.

• *Mail:* David L. Miller, Director, Reinsurance Services Division, Federal Crop Insurance Corporation, United States Department of Agriculture (USDA), 1400 Independence Avenue SW, Stop 0801, Washington, DC 20250.

All comments received, including those received by mail, will be posted without change to *http://www.regulations.gov,* including any personal information provided, and can be accessed by the public. All comments must include the agency name and docket number or Regulatory Information Number (RIN) for this rule. For detailed instructions on submitting comments and additional information, see *http://www.regulations.gov*. If you are submitting comments electronically through the Federal eRulemaking Portal and want to attach a document, we ask that it be in a text-based format. If you want to attach a document that is a scanned Adobe PDF file, it must be scanned as text and not as an image, thus allowing FCIC to search and copy certain portions of your submissions. For questions regarding attaching a document that is a scanned Adobe PDF file, please contact the RMA Web Content Team at (816)823–4694 or by email at *rmaweb.content@rma.usda.gov*.

Privacy Act: Anyone is able to search the electronic form of all comments received for any dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, etc.). You may review the complete User Notice and Privacy Notice for *Regulations.gov* at *http://www.regulations.gov/#!privacyNotice*.

FOR FURTHER INFORMATION CONTACT: David L. Miller, Director, Risk Management Agency, at the address listed above, telephone (202) 720–9830.

SUPPLEMENTARY INFORMATION: *Title:* Standard Reinsurance Agreement; Appendices I, II and IV.

OMB Number: 0563–0069.

Type of Request: Renewal and Revision of current Information Collection.

Abstract: The Federal Crop Insurance Act (Act), Title 7 U.S.C. Chapter 36, Section 1508(k), authorizes the FCIC to provide reinsurance to insurers approved by FCIC that insure producers of any agricultural commodity under one or more plans acceptable to FCIC. The Act also states that the reinsurance shall be provided on such terms and conditions as the Board may determine to be consistent with subsections (b) and (c) of this section and sound reinsurance principles.

FCIC executes the same form of reinsurance agreement, called the Standard Reinsurance Agreement (SRA), with fourteen participating insurers approved for the 2021 reinsurance year. Appendix I of the SRA, Regulatory Duties and Responsibilities, sets forth the company's responsibilities as required by statute. Appendix I includes; a) Conflict of Interest data collection, which in addition to the insurance companies reinsured by FCIC, encompasses the insurance companies' employees and their contracted agents and loss adjusters; and b) Controlled Business data collection from all employed or contracted agents. Appendix II of the SRA, the Plan of Operations (Plan), sets forth the information the insurer is required to file with RMA for each reinsurance year they wish to participate. The Plan's information enables RMA to evaluate the insurer's financial and operational capability to deliver the crop insurance program in accordance with the Act. Estimated premiums by fund by state, and retained percentages along with current policyholders surplus are used in calculations to determine whether to approve the insurer's requested maximum reinsurable premium volume for the reinsurance year per 7 CFR 400 Subpart L. This information has a direct effect upon the insurer's amount of retained premium and associated liability and is required to calculate the insurer's underwriting gain or loss.

Appendix IV of the SRA, Quality Control and Program Integrity, establishes the minimum annual agent and loss adjuster training requirements, and quality control review procedures and performance standards required of the insurance companies. FCIC requires each insurer to submit, for each reinsurance year, a Quality Control Report to FCIC containing details of the results of their completed reviews. The insurance companies must also provide an annual Training and Performance Evaluation Report which details the evaluation of each agent and loss adjuster and reports of any remedial actions taken by the Company to correct any error or omission or ensure compliance with the SRA. The submission of these reports is included in Appendix II.

FCIC is requesting the Office of Management and Budget (OMB) to extend the approval of this information collection for an additional 3 years.

The purpose of this notice is to solicit comments from the public concerning the continuation of the current information collection activity as associated with the SRA in effect for the 2021 and subsequent reinsurance years. These comments will help us:

(1) Evaluate whether the current collection of information is necessary for the proper performance of the functions of the agency, including whether the information has practical utility;

(2) Evaluate the accuracy of the agency's estimate of the burden of the current collection of information;

(3) Enhance the quality, utility, and clarity of the information being collected; and

(4) Minimize the burden of the collection of information on those who are to respond, through use, as appropriate, of automated, electronic, mechanical, and other collection technologies, *e.g.,* permitting electronic submission of responses.

The estimate below shows the burden that will be placed upon the following affected entities.

Appendix I—Regulatory Duties and Responsibilities

Conflict of Interest

Estimate of Burden: The public reporting burden of employees, agents and loss adjusters for the Appendix I collection of Conflict of Interest information is estimated to average 1 hour per response.

Respondents/Affected Entities: Insurance company employees and their contracted agents and loss adjusters.

Estimated annual number of respondents: 22,000.

Estimated annual number of responses per respondent: 1.

Estimated annual number of responses: 22,000.

Estimated total annual burden on respondents (hours): 22,000.

Estimate of Burden: The public reporting burden of the insurance companies of the Appendix I collection of Conflict of Interest information is estimated to average 24 hours per response.

Respondents/Affected Entities: Insurance companies reinsured by FCIC.

Estimated annual number of respondents: 14.

Estimated annual number of responses per respondent: 1.

Estimated annual number of responses: 14.

E*stimated total annual burden on respondents (hours):* 336.

Controlled Business

Estimate of Burden: The public reporting burden of agents for the Appendix I collection of Controlled Business information is estimated to average 1 hour per response.

Respondents/Affected Entities: Insurance company agents.

Estimated annual number of respondents: 14,000.

Estimated annual number of responses per respondent: 1.

Estimated annual number of responses: 14,000.

Estimated total annual burden on respondents (hours): 14,000.

Estimate of Burden: The public reporting burden of the insurance companies for the Appendix I collection of Controlled Business information is estimated to average 24 hours per response.

Respondents/Affected Entities: Insurance companies reinsured by FCIC.

Estimated annual number of respondents: 14.

Estimated annual number of responses per respondent: 1.

Estimated annual number of responses: 14.

Estimated total annual burden on respondents (hours): 336.

Appendix II—Plan of Operations

Estimate of Burden: The public reporting burden of the insurance companies for the collection of Appendix II information is estimated to average 128 hours per response.

Respondents/Affected Entities: Insurance companies reinsured by FCIC.

Estimated annual number of respondents: 14.

Estimated annual number of responses per respondent: 1.

Estimated annual number of responses: 14.

Estimated total annual burden on respondents (hours): 1,792.

Appendix IV—Quality Control and Program Integrity

Quality Control and Training Plan and Report

Estimate of Burden: The public reporting burden of the insurance companies for the collection of Appendix IV information is estimated to average 74 hours per response.

Respondents/Affected Entities: Insurance companies reinsured by FCIC.

Estimated annual number of respondents: 14.

Estimated annual number of responses per respondent: 1.

Estimated annual number of responses: 14.

Estimated total annual burden on respondents (hours): 1,036.

Agent Training Requirements

Estimate of Burden: The public reporting burden of agents the Appendix IV training requirements is estimated to average 4 hours per response.

Respondents/Affected Entities: Insurance company agents.

Estimated annual number of respondents: 14,000.

Estimated annual number of responses per respondent: 1.

Estimated annual number of responses: 14,000.

Estimated total annual burden on respondents (hours): 56,000.

Loss Adjuster Training Requirements

Estimate of Burden: The public reporting burden of loss adjusters for the Appendix IV training requirements is estimated to average 17 hours per response.

Respondents/Affected Entities: Insurance company loss adjusters.

Estimated annual number of respondents: 5,500.

Estimated annual number of responses per respondent: 1.

Estimated annual number of responses: 5,500.

Estimated total annual burden on respondents (hours): 93,500.

All responses to this notice will be summarized and included in the request for OMB approval. All comments will also become a matter of public record.

Martin R. Barbre,

Manager, Federal Crop Insurance Corporation.

DEPARTMENT OF AGRICULTURE

Food Safety and Inspection Service

[Docket Number FSIS–2020–0033]

2021 Rate Changes for the Basetime, Overtime, Holiday, Laboratory Services, and Export Application Fees

AGENCY: Food Safety and Inspection Service, USDA.

ACTION: Notice.

SUMMARY: The Food Safety and Inspection Service (FSIS) is announcing the 2021 rates it will charge meat and poultry establishments, egg products plants, and importers and exporters for providing voluntary, overtime, and holiday inspection and identification, certification, and laboratory services. Additionally, FSIS is announcing that there will be no changes to the fee FSIS assesses to exporters that choose to apply for export certificates electronically through the export component of the Agency's Public Health Information System.

The 2021 basetime, overtime, holiday, and laboratory services rates will be applied on January 3, 2021.

DATES: FSIS will charge the rates announced in this notice beginning January 3, 2021.

FOR FURTHER INFORMATION CONTACT: For further information contact Michael Toner, Director, Budget Division, Office of the Chief Financial Officer, FSIS, U.S. Department of Agriculture, Room 2159, South Building, 1400 Independence Avenue SW, Washington, DC 20250–3700; Telephone: (202) 690–8398, Fax: (202) 690–4155.

SUPPLEMENTARY INFORMATION:

Background

On April 12, 2011, FSIS published a final rule amending its regulations to establish formulas for calculating the rates it charges meat and poultry establishments, egg products plants, and importers and exporters for providing voluntary, overtime, and holiday inspection and identification, certification, and laboratory services (76 FR 20220).

In the final rule, FSIS stated that it would use the formulas to calculate the annual rates, publish the rates in **Federal Register** notices prior to the start of each calendar year, and apply the rates on the first FSIS pay period at the beginning of the calendar year. This notice provides the 2021 rates, which will be applied starting on January 3, 2021.

Public Health Information System Export Application Fee

On June 29, 2016, FSIS published the final rule, ''Electronic Export Application and Certification Charge; Flexibility in the Requirements for Export Inspection Marks, Devices, and Certificates; Egg Products Export Certification'' (81 FR 42225). The preamble to the final rule explained that FSIS would implement an electronic export application and certification system available through the Agency's Public Health Information System (PHIS) export component.

The electronic export application and certification process provides service options to U.S. exporters, enabling them to electronically submit, track, and manage their export applications. To cover the costs of providing this service, the final rule established a formula-based fee for electronic export applications. The final rule stated that, on an annual basis, the Agency would update the fee and publish the new fee in the **Federal Register**.

On September 6, 2017, FSIS published a **Federal Register** notice, ''Public Health Information System (PHIS) Export Component Country Implementation'' (FR 82 42056). The

notice announced the delayed implementation of the export component to ensure sufficient testing and outreach to stakeholders and that the application fee would be recalculated based on available costs and number of applications, but would not be assessed prior to January 1, 2019. In addition, FSIS announced that it would implement the PHIS Export Component with a limited number of countries and gradually expand implementation to additional countries.

On April 29, 2019, FSIS published a **Federal Register** notice, ''Public Health Information System Export Component Fee'' (84 FR 17999). This notice announced that starting June 1, 2019, FSIS would assess a fee of $4.01 to exporters that chose to apply for export certificates electronically through the export component of PHIS. As noted below, that fee remains unchanged since 2019. The 2021 export component fee will be applied starting on January 3, 2021.

2021 Rates and Calculations

The following table lists the 2021 Rates per hour, per employee, by type of service:

Service	2021 Rate (estimates rounded to reflect billable quarters)
Basetime	$66.56
Overtime	81.72
Holiday	96.88
Laboratory	84.64
Export Application	*4.01

*Per application

The regulations that cover these fees (other than the export application fee) state that FSIS will calculate the rates using formulas that include the Office of Field Operations (OFO) inspection program personnel's previous fiscal year's regular direct pay and regular hours (9 CFR 391.2, 391.3, 391.4, 590.126, 590.128, 592.510, 592.520, and 592.530). In 2013, an Agency reorganization eliminated the Office of International Affairs program office and transferred all of its inspection program personnel to OFO. Therefore, inspection program personnel's pay and hours are identified in the calculations as ''OFO inspection program personnel's'' pay and hours.

FSIS determined the 2021 rates using the following calculations:

Basetime Rate = The quotient of dividing the Office of Field Operations (OFO) inspection program personnel's previous fiscal year's regular direct pay by the previous fiscal year's regular hours, plus the quotient multiplied by the calendar year's percentage of cost of living increase, plus the benefits rate, plus the travel and operating rate, plus the overhead rate, plus the allowance for bad debt rate.

The calculation for the 2021 basetime rate per hour per program employee is:

[FY 2020 OFO Regular Direct Pay divided by the previous fiscal year's Regular Hours ($434,649,264/14,468,095)] = $30.04 + ($30.04 * 1.0% (calendar year 2020 Cost of Living Increase)) = $30.34 + $11.15 (benefits rate) + $2.67 (travel and operating rate) + $22.39 (overhead rate) + $0.00 (bad debt allowance rate) = $66.55, rounded up to $66.56, so that it is divisible by 4.

Overtime Rate = The quotient of dividing the Office of Field Operations (OFO) inspection program personnel's previous fiscal year's regular direct pay by the previous fiscal year's regular hours, plus that quotient multiplied by the calendar year's percentage of cost of living increase, multiplied by 1.5 (for overtime), plus the benefits rate, plus the travel and operating rate, plus the overhead rate, plus the allowance for bad debt rate.

The calculation for the 2021 overtime rate per hour per program employee is:

[FY 2020 OFO Regular Direct Pay divided by previous fiscal year's Regular Hours ($434,649,264/14,468,065)] = $30.04 + ($30.04 * 1.0% (calendar year 2021 Cost of Living Increase)) = $30.34 * 1.5 = $45.51 + $11.15 (benefits rate) + $2.67 (travel and operating rate) + $22.39 (overhead rate) + $0.00(bad debt allowance rate) = $81.72, which is divisible by 4.

Holiday Rate = The quotient of dividing the Office of Field Operations (OFO) inspection program personnel's previous fiscal year's regular direct pay by the previous fiscal year's regular hours, plus that quotient multiplied by the calendar year's percentage of cost of living increase, multiplied by 2 (for holiday pay), plus the benefits rate, plus the travel and operating rate, plus the overhead rate, plus the allowance for bad debt rate.

The calculation for the 2021 holiday rate per hour per program employee calculation is:

[FY 2020 OFO Regular Direct Pay divided by Regular Hours ($434,649,264/14,468,095)] = $30.04 + ($30.04 * 1.0% (calendar year 2020 Cost of Living Increase)) = $30.34 * 2 = $60.68 + $11.15(benefits rate) + $2.67 (travel and operating rate) + $22.39 (overhead rate) + $0.00 (bad debt allowance rate) = $96.89, rounded down to 96.88, so that it is divisible by 4.

Laboratory Services Rate = The quotient of dividing the Office of Public Health Science (OPHS) previous fiscal year's regular direct pay by the OPHS previous fiscal year's regular hours, plus the quotient multiplied by the calendar year's percentage cost of living increase, plus the benefits rate, plus the travel and operating rate, plus the overhead rate, plus the allowance for bad debt rate.

The calculation for the 2021 laboratory services rate per hour per program employee is:

[FY 2020 OPHS Regular Direct Pay/OPHS Regular hours ($24,151,169/503,692)] = $47.95 + ($47.95 * 1.0% (calendar year 2020 Cost of Living Increase)) = $48.43 + $11.15 (benefits rate) + $2.67 (travel and operating rate) + $22.39 (overhead rate) + $0.00 (bad debt allowance rate) = $84.64, which is already divisible by 4.

Calculations for the Benefits, Travel and Operating, Overhead, and Allowance for Bad Debt Rates

These rates are components of the basetime, overtime, holiday, and laboratory services rates formulas.

Benefits Rate: The quotient of dividing the previous fiscal year's direct benefits costs by the previous fiscal year's total hours (regular, overtime, and holiday), plus that quotient multiplied by the calendar year's percentage cost of living increase. Some examples of direct benefits are health insurance, retirement, life insurance, and Thrift Savings Plan basic and matching contributions.

The calculation for the 2021 benefits rate per hour per program employee is:

[FY 2020 Direct Benefits/(Total Regular hours + Total Overtime hours + Total Holiday hours) ($197,034,144/17,848,090)] = $11.04 + ($11.04* 1.0% (calendar year 2020 Cost of Living Increase)) = $11.15.

Travel and Operating Rate: The quotient of dividing the previous fiscal year's total direct travel and operating costs by the previous fiscal year's total hours (regular, overtime, and holiday), plus that quotient multiplied by the calendar year's percentage of inflation.

The calculation for the 2021 travel and operating rate per hour per program employee is:

[FY 2020 Total Direct Travel and Operating Costs/(Total Regular hours + Total Overtime hours + Total Holiday hours) ($46,500,647/17,848,090)] = $2.61 + ($2.61 * 2.3% (2021 Inflation) = $2.67.

Overhead Rate: The quotient of dividing the previous fiscal year's indirect costs plus the previous fiscal year's information technology (IT) costs

in the Public Health Data Communication Infrastructure System Fund plus the provision for the operating balance less any Greenbook costs (*i.e.,* costs of USDA support services prorated to the service component for which fees are charged) that are not related to food inspection by the previous fiscal year's total hours (regular, overtime, and holiday) worked across all funds, plus the quotient multiplied by the calendar year's percentage of inflation.

The calculation for the 2021 overhead rate per hour per program employee is:

[FY 2020 Total Overhead/(Total Regular hours + Total Overtime hours + Total Holiday hours) ($ 390,719,959/17,848,090)] = $21.89 + ($21.89 * 2.3% (2020 Inflation) = $22.39.

Allowance for Bad Debt Rate = Previous fiscal year's total allowance for bad debt (for example, debt owed that is not paid in full by plants and establishments that declare bankruptcy) divided by previous fiscal year's total hours (regular, overtime, and holiday) worked.

The 2021 calculation for bad debt rate per hour per program employee is:

[FY 2020 Total Bad Debt/(Total Regular hours + Total Overtime hours + Total Holiday hours) = ($49,837/17,848,090)] = $0.00.

2021 Electronic Export Application Fee The 2021 Electronic Export Application Fee:

$$\frac{\text{Labor Cost } (\$560{,}901.60 + (\$337{,}369)) + \text{IT Cost } (\$1{,}414{,}285.60 + \$0)}{576{,}192} = \$4.01$$

As published in the 2016 final rule, the Electronic Export Application Fee Formula is:

$$\frac{\text{Labor Cost (Technical Support + Export Library Maintenance) + IT Cost (Ongoing Operations and Maintenance + eAuthentication)}}{\text{Number of Export Applications}}$$

The 2021 electronic export application fee remains unchanged since 2019. FSIS stated in the 2016 final rule (81 FR 42225) and the 2017 **Federal Register** notice (FR 82 42056) that it would update and recalculate the fee based on the best available estimates for costs and number of applications; however, the number of export applications (the denominator in the formula) cannot be accurately assessed until a majority of countries are included in the export component. Therefore, because a majority of countries are not yet included in the PHIS Export component, the cost estimates and projected export applications in the final rule remain the best estimate for 2021, leaving the electronic export application fee unchanged.

Additional Public Notification

FSIS will make copies of this **Federal Register** publication available through the FSIS *Constituent Update,* which is used to provide information regarding FSIS policies, procedures, regulations, **Federal Register** notices, FSIS public meetings, and other types of information that could affect or would be of interest to our constituents and stakeholders. The *Constituent Update* is available on the FSIS web page. Through the web page, FSIS can provide information to a much broader, more diverse audience. In addition, FSIS offers an email subscription service which provides automatic and customized access to selected food safety news and information. This service is available at: *http://www.fsis.usda.gov/subscribe.* Options range from recalls to export information, regulations, directives, and notices. Customers can add or delete subscriptions themselves and have the option to password protect their accounts.

USDA Non-Discrimination Statement

No agency, officer, or employee of the USDA shall, on the grounds of race, color, national origin, religion, sex, gender identity, sexual orientation, disability, age, marital status, family/parental status, income derived from a public assistance program, or political beliefs, exclude from participation in, deny the benefits of, or subject to discrimination any person in the United States under any program or activity conducted by the USDA.

How to File a Complaint of Discrimination

To file a complaint of discrimination, complete the USDA Program Discrimination Complaint Form, which may be accessed online at *http://www.ocio.usda.gov/sites/default/files/docs/2012/Complain_combined_6_8_12.pdf,* or write a letter signed by you or your authorized representative.

Send your completed complaint form or letter to USDA by mail, fax, or email:

Mail: U.S. Department of Agriculture, Director, Office of Adjudication, 1400 Independence Avenue SW, Washington, DC 20250–9410, Fax: (202) 690–7442.

Email: program.intake@usda.gov.

Persons with disabilities who require alternative means for communication (Braille, large print, audiotape, etc.), should contact USDA's TARGET Center at (202) 720–2600 (voice and TDD).

Done at Washington, DC.

Paul Kiecker,

Administrator.

4th Tier Cigarettes From the Republic of Korea: Final Affirmative Determination of Sales at Less Than Fair Value, and Final Negative Determination of Critical Circumstances

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (Commerce) determines that 4th tier cigarettes from the Republic of Korea (Korea) are being, or are likely to be, sold in the United States at less than fair value (LTFV) during the period of investigation (POI), October 1, 2018 through September 30, 2019. The final weighted-average dumping margins are listed below in the section entitled ''Final Determination.''

DATES: Applicable December 11, 2020.

FOR FURTHER INFORMATION CONTACT: Thomas Martin, AD/CVD Operations, Office IV, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401

Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–3936.

SUPPLEMENTARY INFORMATION:

Background

On July 22, 2020, Commerce published the *Preliminary Determination* in this investigation, and invited interested parties to comment on our findings.[1] The petitioner in this investigation is the Coalition Against Korean Cigarettes.[2] The mandatory respondent subject to this investigation is KT&G Corporation (KT&G). A summary of the events that occurred since Commerce published the *Preliminary Determination,* as well as a full discussion of the issues raised by parties for this final determination, may be found in the Issues and Decision Memorandum.[3]

The Issues and Decision Memorandum is a public document and is available electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at *https://access.trade.gov.* In addition, a complete version of the Issues and Decision Memorandum can be accessed directly at *http://enforcement.trade.gov/frn/index.html.* The signed and electronic versions of the Issues and Decision Memorandum are identical in content.

Period of Investigation

The POI is October 1, 2018 through September 30, 2019.

Scope of the Investigation

The products covered by this investigation are 4th tier cigarettes from Korea. For a complete description of the scope of this investigation, *see* Appendix I.

Analysis of Comments Received

All issues raised in the case briefs and rebuttal briefs submitted by interested parties in this proceeding are discussed in the Issues and Decision Memorandum. A list of the issues raised by parties and responded to by Commerce in the Issues and Decision Memorandum is attached to this notice as Appendix II.

Verification

Commerce normally verifies information relied upon in making its final determination, pursuant to section 782(i)(1) of the Tariff Act of 1930 amended (the Act). However, during the course of this investigation, we were unable to conduct verification.[4] Pursuant to section 776(a)(2)(D) of the Act, in situations where information has been provided but the information cannot be verified, Commerce will use ''facts otherwise available'' in reaching the applicable determination. Accordingly, we relied on facts available in making our final determination.

Changes Since the Preliminary Determination

Based on our analysis of the comments received, we made no changes to the scope of the merchandise under investigation but made one change to the margin calculation for KT&G since the *Preliminary Determination.* For a discussion of this change, *see* the Issues and Decision Memorandum.

All-Others Rate

Section 735(c)(5)(A) of the Act provides that the estimated weighted-average dumping margin for all other producers and exporters not individually investigated shall be equal to the weighted average of the estimated weighted-average dumping margins established for individually investigated exporters and producers, excluding any margins that are zero, *de minimis,* or any margins determined entirely under section 776 of the Act.

Commerce calculated a weighted-average dumping margin for KT&G, the only individually examined exporter/producer in this investigation, that is above *de minimis.* We have assigned KT&G's margin to all other producers and exporters, pursuant to section 735(c)(5)(A) of the Act.

Final Determination

The final weighted-average dumping margins are as follows:

Exporter/producer	Weighted-average dumping margin (percent)
KT&G Corporation	5.48
All Others	5.48

Disclosure

We intend to disclose to interested parties the calculations and analysis performed in this final determination within five days of any public announcement or, if there is no public announcement, within five days of the date of the publication of this notice to parties in this proceeding in accordance with 19 CFR 351.224(b).

Continuation of Suspension of Liquidation

In accordance with section 735(c)(1)(B) of the Act, we will instruct U.S. Customs and Border Protection (CBP) to continue the suspension of liquidation of all appropriate entries of 4th tier cigarettes, as described in Appendix I of this notice, which were entered, or withdrawn from warehouse, for consumption on or after July 22, 2020, the date of publication of the *Preliminary Determination* of this investigation in the **Federal Register**.

Further, Commerce will instruct CBP to require a cash deposit equal to the amount by which the normal value exceeds the U.S. price as follows: (1) For KT&G, the cash deposit rate will be equal to the weighted-average dumping margin determined in this final determination; (2) if KT&G is the producer, but not the exporter, then the cash deposit rate will be equal 5.48 percent; and (3) the cash deposit rate for all other producers and exporters will be 5.48 percent. These suspension of liquidation instructions will remain in effect until further notice.

International Trade Commission Notification

In accordance with section 735(d) of the Act, we will notify the International Trade Commission (ITC) of the final affirmative determination of sales at LTFV. Because the final determination in this proceeding is affirmative, in accordance with section 735(b)(2) of the Act, the ITC will make its final determination as to whether the domestic industry in the United States is materially injured, or threatened with material injury, by reason of imports, or sales (or the likelihood of sales) for importation of 4th tier cigarettes no later than 45 days after our final determination. If the ITC determines that material injury or threat of material injury does not exist, the proceeding

[1] *See 4th Tier Cigarettes from the Republic of Korea: Preliminary Affirmative Determination of Sales at Less Than Fair Value, and Preliminary Negative Determination of Critical Circumstances,* 85 FR 44281 (July 22, 2020) (*Preliminary Determination*), and accompanying Preliminary Decision Memorandum.

[2] The members of the Coalition Against Korean Cigarettes are Xcaliber International and Cheyenne International.

[3] *See* Memorandum, ''Issues and Decision Memorandum for the Final Affirmative Determination in the Less-Than-Fair-Value Investigation of 4th Tier Cigarettes from the Republic of Korea,'' dated concurrently with, and hereby adopted by, this notice (Issues and Decision Memorandum).

[4] *See* Memorandum, ''Cancellation of Verification,'' dated October 21, 2020.

will be terminated, and all cash deposits will be refunded. If the ITC determines that material injury or threat of material injury does exist, Commerce will issue an antidumping duty order directing CBP to assess, upon further instruction by Commerce, antidumping duties on all imports of the subject merchandise, entered, or withdrawn from warehouse, for consumption on or after the effective date of the suspension of liquidation.

Notification Regarding Administrative Protective Order

This notice serves as the only reminder to parties subject to an administrative protective order (APO) of their responsibility concerning the disposition of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3). Timely notification of the return or destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and the terms of an APO is a violation subject to sanction.

Notification to Interested Parties

We are issuing and publishing this determination and notice in accordance with sections 735(d) and 777(i) of the Act and 19 CFR 351.210(c).

Dated: December 4, 2020.

Jeffrey I. Kessler,

Assistant Secretary for Enforcement and Compliance.

Appendix I

Scope of the Investigation

The merchandise covered by this investigation is certain tobacco cigarettes, commonly referred to as ''4th tier cigarettes.'' The subject cigarettes are composed of a tobacco blend rolled in paper, have a nominal minimum total length of 7.0 cm but do not exceed 12.0 cm in total nominal length, and have a nominal diameter of less than 1.3 cm. These sizes of cigarettes are frequently referred to as ''Kings'' and ''100's,'' but subject merchandise that meets the physical description of the scope is included regardless of the marketing description of the size of the cigarettes. Subject merchandise typically has a tobacco blend that consists of 10% or more tobacco stems.

Subject merchandise is typically sold in packs of 20 cigarettes per pack which generally includes the marking ''20 Class A Cigarettes'' but are included regardless of packaging. 4th tier cigarette packages are typically sold in boxes without a rounded internal corner and without embossed aluminum foil inside the pack.

Both menthol and non-menthol cigarettes and cigarettes with or without a filter attached are covered by the scope of this investigation.

Merchandise covered by this investigation is currently classified in the Harmonized Tariff Schedule of the United States (HTSUS) under subheading 2402.20.8000. This HTSUS subheading is provided for convenience and customs purposes; the written description of the scope of the investigation is dispositive.

Forged Steel Fluid End Blocks From Italy: Final Affirmative Determination of Sales at Less Than Fair Value

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (Commerce) determines that imports of forged steel fluid end blocks (fluid end blocks) from Italy are being, or are likely to be, sold in the United States at less than fair value (LTFV) for the period of investigation October 1, 2018 through September 30, 2019.

DATES: Applicable December 11, 2020.

FOR FURTHER INFORMATION CONTACT: Dmitry Vladimirov or Hermes Pinilla, AD/CVD Operations, Office I, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–0665 or (202) 482–3477, respectively.

SUPPLEMENTARY INFORMATION:

Background

On July 23, 2020, Commerce published in the **Federal Register** its preliminary affirmative determination in the LTFV investigation of fluid end blocks from Italy, in which we also postponed the final determination until December 7, 2020.[1] We invited interested parties to comment on the *Preliminary Determination.* A summary of the events that occurred since Commerce published the *Preliminary Determination,* as well as a full discussion of the issues raised by parties for this final determination, may be found in the Issues and Decision Memorandum.[2]

Scope of the Investigation

The products covered by this investigation are fluid end blocks from Italy. For a full description of the scope of this investigation, *see* the ''Scope of the Investigation'' in Appendix I.

Scope Comments

During the course of this investigation, Commerce received scope comments from interested parties. Commerce issued a Preliminary Scope Decision Memorandum to address these comments.[3] We received comments from interested parties on the Preliminary Scope Decision

[1] *See Forged Steel Fluid End Blocks from Italy: Preliminary Affirmative Determination of Sales at Less Than Fair Value, Postponement of Final Determination, and Extension of Provisional Measures,* 85 FR 44500 (July 23, 2020) (*Preliminary Determination*), and accompanying Preliminary Decision Memorandum.

[2] *See* Memorandum, ''Issues and Decision Memorandum for the Final Affirmative Determination in the Less-Than-Fair-Value Investigation of Forged Steel Fluid End Blocks from Italy,'' dated concurrently with, and hereby adopted by, this notice (Issues and Decision Memorandum).

[3] *See* Memorandum, '' Forged Steel Fluid End Blocks from the Federal Republic of Germany, India, Italy, and the People's Republic of China: Scope Comments Decision Memorandum for the Preliminary Determinations,'' dated May 18, 2020 (Preliminary Scope Decision Memorandum).

Memorandum, which we address in the Final Scope Decision Memorandum, dated concurrently with, and hereby adopted by, this final determination.[4] Commerce is not modifying the scope language as it appeared in the *Preliminary Determination. See* Appendix I for the final scope of the investigation.

Analysis of Comments Received

All issues raised in the case and rebuttal briefs that were submitted by parties in this investigation are addressed in the Issues and Decision Memorandum. A list of the issues addressed in the Issues and Decision Memorandum is attached to this notice at Appendix II. The Issues and Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at *https://access.trade.gov.* In addition, a complete version of the Issues and Decision Memorandum can be accessed directly at *http://enforcement.trade.gov/frn/.*

Verification

Commerce was unable to conduct on-site verification of the information relied upon in making its final determination in this investigation as provided for in section 782(i) of the Tariff Act of 1930, as amended (the Act). Accordingly, we took additional steps in lieu of on-site verification and requested additional documentation and information.[5]

Changes Since the Preliminary Determination

Based on our analysis of the comments received, we made certain changes to the margin calculations for Lucchini. For a discussion of these changes, *see* the ''Changes from the Preliminary Determination'' section of the Issues and Decision Memorandum.

Use of Adverse Facts Available

Companies that did not respond to our quantity and value questionnaires, IMER International S.p.A., Galperti Group, Mimest S.p.A., and P. Technologies S.r.l., failed to cooperate in this investigation. Therefore, in the *Preliminary Determination,* pursuant to sections 776(a) and (b) of the Act, Commerce assigned these companies a rate based on adverse facts available (AFA). There is no new information on the record that would cause us to revisit our determination to apply AFA to IMER International S.p.A., Galperti Group, Mimest S.p.A., and P. Technologies S.r.l. Accordingly, we continue to find that the application of AFA pursuant to sections 776(a) and (b) of the Act is warranted with respect to these companies. Commerce has assigned to these companies' exports of the subject merchandise the rate of 58.48 percent, which is Lucchini's highest comparison-specific margin.[6] Because this rate is not secondary information, but rather is based on information obtained in the course of the investigation, Commerce need not corroborate this rate pursuant to section 776(c) of the Act.

All-Others Rate

Section 735(c)(5)(A) of the Act provides that the estimated weighted-average dumping margin for all other producers and exporters not individually investigated shall be equal to the weighted average of the estimated weighted-average dumping margins established for exporters and producers individually investigated excluding rates that are zero, *de minimis,* or determined entirely under section 776 of the Act. Commerce has determined that the estimated weighted-average dumping margin for Metalcam S.p.A. is zero. Therefore, the only rate that is not zero, *de minimis,* or based entirely on facts otherwise available, is the rate calculated for Lucchini Mame Forge S.p.A. Consequently, the rate calculated for Lucchini Mame Forge S.p.A., is assigned as the rate for all other producers and exporters.

Final Determination

The final estimated weighted-average dumping margins are as follows:

Exporter or producer	Estimated weighted-average dumping margin (percent)
Metalcam S.p.A	[7] 0.00
Lucchini Mame Forge S.p.A	[8] 7.33
IMER International S.p.A	** 58.48
Galperti Group	** 58.48
Mimest S.p.A	** 58.48
P. Technologies S.r.l	** 58.48
All Others	7.33

Disclosure

We intend to disclose the calculations performed for Lucchini in this final determination within five days of the date of publication of this notice to parties in this proceeding in accordance with 19 CFR 351.224(b).[9]

Continuation of Suspension of Liquidation

In accordance with section 735(c)(1)(B) of the Act, Commerce will instruct U.S. Customs and Border Protection (CBP) to continue to suspend liquidation of all appropriate entries of subject merchandise, as described in Appendix I of this notice, entered, or withdrawn from warehouse, for consumption on or after July 23, 2020, the date of publication of *Preliminary Determination* in the **Federal Register** except for those entries of subject merchandise produced and exported by Metalcam S.p.A. Because the estimated weighted-average dumping margin for Metalcam S.p.A. is zero, we will not be directing CBP to suspend liquidation of entries of the subject merchandise produced and exported by this company.

Pursuant to section 735(c)(1)(B)(ii) of the Act and 19 CFR 351.210(d), where appropriate, Commerce will instruct CBP to require a cash deposit equal to the estimated weighted-average dumping margin or the estimated all-others rate, as follows: (1) The cash deposit rate for the respondents listed above will be equal to the company-specific estimated weighted-average dumping margin determined in this final determination; (2) if the exporter is not a respondent identified above but the producer is, then the cash deposit rate will be equal to the company-specific estimated weighted-average dumping margin established for that producer of the subject merchandise; and (3) the cash deposit rate for all other producers and exporters will be equal to

[4] *See* Memorandum, ''Forged Steel Fluid End Blocks from the Federal Republic of Germany, India, Italy, and the People's Republic of China: Scope Comments Decision Memorandum for the Final Determinations,'' dated December 7, 2020 (Final Scope Decision Memorandum).

[5] *See* Commerce's Letters, dated September 2, 2020; *see also* Metalcam's Letters, both titled ''Antidumping Duty Investigation of Forged Steel Fluid End Blocks from Italy: Metalcam Post-Prelim Questionnaire Response,'' and dated September 11, 2020 (submitting, separately, responses to the sales and cost portions of the questionnaire in lieu of verification); and Lucchini's Letter, ''Antidumping Duty Investigation of Forged Steel Fluid End Blocks from Italy: Lucchini Mame Forge S.p.A Post-Preliminary Questionnaire,'' dated September 11, 2020.

[6] *See* Memorandum, ''Forged Steel Fluid End Blocks from Italy—Final Determination Analysis Memorandum for Lucchini Mamè Forge S.p.A.,'' dated December 7, 2020 (Lucchini Final Analysis Memorandum) at 90 of the attached margin-calculation program output.

[7] *See* Memorandum, ''Forged Steel Fluid End Blocks from Italy—Preliminary Determination Analysis Memorandum for Metalcam S.p.A.,'' dated July 16, 2020.

[8] *See* Lucchini Final Analysis Memorandum.

[9] We are not disclosing any final margin calculations for Metalcam because we made no changes to the preliminary margin calculations for Metalcam.

the all-others estimated weighted-average dumping margin. These suspension-of-liquidation instructions will remain in effect until further notice.

Because the estimated weighted-average dumping margin for Metalcam S.p.A. is zero, entries of shipments of subject merchandise from this company will not be subject to suspension of liquidation or cash deposit requirements. In such situations, Commerce also applies the exclusion to the provisional measures to the producer/exporter combination that was examined in the investigation. Accordingly, Commerce will be directing CBP not to suspend liquidation of entries of subject merchandise produced and exported by Metalcam S.p.A. However, entries of shipments of subject merchandise from this company in any other producer/exporter combination (*i.e.,* where Metalcam S.p.A, is either the producer or the exporter, but not both), or by third parties that sourced subject merchandise from the excluded producer/exporter combination, will be subject to suspension of liquidation at the all-others rate.

Because the estimated weighted-average dumping margin is zero for the producer/exporter combination identified above, entries of shipments of subject merchandise from this producer/exporter combination will be excluded from the potential antidumping duty order. Such an exclusion will not be applicable to merchandise exported to the United States by this respondent in any other producer/exporter combinations or by third parties that sourced subject merchandise from the excluded producer/exporter combination.

While Commerce normally adjusts cash deposits for estimated antidumping duties by the amount of export subsidies countervailed in a companion countervailing duty (CVD) proceeding when CVD provisional measures are in effect, we have not adjusted the cash deposit rates listed above because Commerce found no countervailable export subsidies in the final determination of the companion CVD investigation.[10]

International Trade Commission Notification

In accordance with section 735(d) of the Act, we will notify the International Trade Commission (ITC) of the final affirmative determination of sales at LTFV. Because Commerce's final determination is affirmative, in accordance with section 735(b)(2) of the Act, the ITC will make its final determination as to whether the domestic industry in the United States is materially injured, or threatened with material injury, by reason of imports or sales (or the likelihood of sales) for importation of fluid end blocks from Italy no later than 45 days after this final determination. If the ITC determines that such injury does not exist, this proceeding will be terminated, and all cash deposits posted will be refunded and suspension of liquidation will be lifted. If the ITC determines that such injury does exist, Commerce will issue an AD order directing CBP to assess, upon further instruction by Commerce, antidumping duties on all imports of the subject merchandise entered, or withdrawn from warehouse, for consumption on or after the effective date of the suspension of liquidation, as discussed above in the ''Continuation of Suspension of Liquidation'' section.

Notification Regarding Administrative Protective Orders

This notice will serve as a final reminder to the parties subject to administrative protective order (APO) of their responsibility concerning the disposition of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3). Timely written notification of return or destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and the terms of an APO is a sanctionable violation.

Notification to Interested Parties

This determination and this notice are issued and published pursuant to sections 735(d) and 777(i)(1) of the Act and 19 CFR 351.210(c).

Dated: December 7, 2020.

Jeffrey I. Kessler,

Assistant Secretary for Enforcement and Compliance.

Appendix I

Scope of the Investigation

The products covered by this investigation are forged steel fluid end blocks (fluid end blocks), whether in finished or unfinished form, and which are typically used in the manufacture or service of hydraulic pumps.

The term ''forged'' is an industry term used to describe the grain texture of steel resulting from the application of localized compressive force. Illustrative forging standards include, but are not limited to, American Society for Testing and Materials (ASTM) specifications A668 and A788.

For purposes of this investigation, the term ''steel'' denotes metal containing the following chemical elements, by weight: (i) Iron greater than or equal to 60 percent; (ii) nickel less than or equal to 8.5 percent; (iii) copper less than or equal to 6 percent; (iv) chromium greater than or equal to 0.4 percent, but less than or equal to 20 percent; and (v) molybdenum greater than or equal to 0.15 percent, but less than or equal to 3 percent. Illustrative steel standards include, but are not limited to, American Iron and Steel Institute (AISI) or Society of Automotive Engineers (SAE) grades 4130, 4135, 4140, 4320, 4330, 4340, 8630, 15–5, 17–4, F6NM, F22, F60, and XM25, as well as modified varieties of these grades.

The products covered by this investigation are: (1) Cut-to-length fluid end blocks with an actual height (measured from its highest point) of 8 inches (203.2 mm) to 40 inches (1,016.0 mm), an actual width (measured from its widest point) of 8 inches (203.2 mm) to 40 inches (1,016.0 mm), and an actual length (measured from its longest point) of 11 inches (279.4 mm) to 75 inches (1,905.0 mm); and (2) strings of fluid end blocks with an actual height (measured from its highest point) of 8 inches (203.2 mm) to 40 inches (1,016.0 mm), an actual width (measured from its widest point) of 8 inches (203.2 mm) to 40 inches (1,016.0 mm), and an actual length (measured from its longest point) up to 360 inches (9,144.0 mm).

The products included in the scope of this investigation have a tensile strength of at least 70 KSI (measured in accordance with ASTM A370) and a hardness of at least 140 HBW (measured in accordance with ASTM E10).

A fluid end block may be imported in finished condition (*i.e.,* ready for incorporation into a pump fluid end assembly without further finishing operations) or unfinished condition (*i.e.,* forged but still requiring one or more finishing operations before it is ready for incorporation into a pump fluid end assembly). Such finishing operations may include: (1) Heat treating; (2) milling one or more flat surfaces; (3) contour machining to custom shapes or dimensions; (4) drilling or boring holes; (5) threading holes; and/or (6) painting, varnishing, or coating.

Excluded from the scope of this investigation are fluid end block assemblies which (1) include (a) plungers and related housings, adapters, gaskets, seals, and packing nuts, (b) valves and related seats, springs, seals, and cover nuts, and (c) a discharge flange and related seals, and (2) are otherwise ready to be mated with the ''power end'' of a hydraulic pump without the need for installation of any plunger, valve, or discharge flange components, or any other further manufacturing operations.

The products included in the scope of this investigation may enter under Harmonized Tariff Schedule of the United States (HTSUS) subheadings 7218.91.0030, 7218.99.0030, 7224.90.0015, 7224.90.0045, 7326.19.0010, 7326.90.8688, or 8413.91.9055. While these HTSUS subheadings are provided for convenience and customs purposes, the written description of the scope of the investigation is dispositive.

DEPARTMENT OF COMMERCE

International Trade Administration

[C–533–894]

Forged Steel Fluid End Blocks from India: Final Affirmative Countervailing Duty Determination

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (Commerce) determines that countervailable subsidies are being provided to producers and exporters of forged steel fluid end blocks (fluid end blocks) from India.

DATES: Applicable December 11, 2020.

FOR FURTHER INFORMATION CONTACT: William Langley or Nicholas Czajkowski, AD/CVD Operations, Office I, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–3861 or (202) 482–1395, respectively.

SUPPLEMENTARY INFORMATION:

Background

On May 26, 2020, Commerce published the *Preliminary Determination* of this countervailing duty (CVD) investigation, which also aligned the final determination of this CVD investigation with the final determination in the companion antidumping duty investigation of fluid end blocks from India.[1] A summary of the events that occurred since Commerce published the *Preliminary Determination,* as well as a full discussion of the issues raised by parties for this final determination, may be found in the Issues and Decision Memorandum which is hereby adopted by this notice.[2] The Issues and Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at *http://access.trade.gov*. In addition, a complete version of the Final Decision Memorandum can be accessed directly at *http://enforcement.trade.gov/frn/*. The signed and electronic versions of the Issues and Decision Memorandum are identical in content.

Period of Investigation

The period of investigation is April 1, 2018 through March 31, 2019.

Scope of the Investigation

The products covered by this investigation are forged steel fluid end blocks from India. For a complete description of the scope of this investigation, *see* Appendix I.

Scope Comments

During the course of this investigation, Commerce received scope comments from interested parties. Commerce issued a Preliminary Scope Decision Memorandum to address these comments.[3] We received comments from interested parties on the Preliminary Scope Decision Memorandum, which we address in the Final Scope Decision Memorandum, dated concurrently with, and hereby adopted by, this final determination.[4] Commerce is not modifying the scope language as it appeared in the *Preliminary Determination. See* Appendix I for the final scope of this investigation.

Analysis of Subsidy Programs and Comments Received

The subsidy programs under investigation and the issues raised in the case and rebuttal briefs by parties in this investigation are discussed in the Issues and Decision Memorandum. A list of the issues raised by parties is attached to this notice at Appendix II.

Methodology

Commerce conducted this investigation in accordance with section 701 of the Tariff Act of 1930, as amended (the Act). For each of the subsidy programs found countervailable, Commerce determines that there is a subsidy, *i.e.,* a financial contribution by an ''authority'' that gives rise to a benefit to the recipient, and that the subsidy is specific.[5] For a full description of the methodology underlying our final determination, *see* the Issues and Decision Memorandum.

Verification

Commerce normally verifies information relied upon in making its final determination, pursuant to section 782(i)(1) of the Tariff Act of 1930, as amended (the Act). However, during the course of this investigation, we were unable to conduct on-site verification due to travel restrictions.[6] Consistent with section 776(a)(2)(D) of the Act, Commerce relied on the information submitted on the record, which we used in making our *Preliminary Determination* and Post-Preliminary Analysis,[7] as facts available in making our final determination.

Changes Since the Preliminary Determination and Post-Preliminary Analysis

Based on our review and analysis of the comments received from parties, we made certain changes to the subsidy rate calculations for Bharat Forge Limited (Bharat Forge). For a discussion of these changes, *see* the Issues and Decision Memorandum.

[5] *See* sections 771(5)(B) and (D) of the Act regarding financial contribution; section 771(5)(E) of the Act regarding benefit; and section 771(5A) of the Act regarding specificity.

[6] *See* Memorandum, ''Countervailing Duty Investigation of Forged Steel Fittings from India: Cancellation of Verification and Setting of Briefing Schedule,'' dated August 31, 2020.

[7] *See* Memorandum, ''Countervailing Duty Investigation of Forged Steel Fluid End Blocks from India: Post-Preliminary Analysis,'' dated August 10, 2020 (Post-Preliminary Analysis).

All-Others Rate

We continue to calculate the all-others rate using the rate of the only mandatory respondent, Bharat Forge.[8]

Final Determination

Commerce determines that the following estimated countervailable subsidy rates exist:

Company	Subsidy rate *ad valorem* (percent)
Bharat Forge Limited	5.20
All Others	5.20

Disclosure

Commerce intends to disclose to interested parties its calculations and analysis performed in this final determination within five days of its public announcement, or if there is no public announcement, within five days of the date of publication of this notice in accordance with 19 CFR 351.224(b).

Continuation of Suspension of Liquidation

As a result of our *Preliminary Determination* and pursuant to sections 703(d)(1)(B) and (d)(2) of the Act, Commerce instructed U.S. Customs and Border Protection (CBP) to suspend liquidation of entries of subject merchandise as described in the scope of the investigation section entered, or withdrawn from warehouse, for consumption on or after May 26, 2020, the date of publication of the *Preliminary Determination* in the **Federal Register**. In accordance with section 703(d) of the Act, effective September 23, 2020, we instructed CBP to discontinue the suspension of liquidation of all entries at that time, but to continue the suspension of liquidation of all entries between May 26, 2020 and September 22, 2020.

If the U.S. International Trade Commission (ITC) issues a final affirmative injury determination, we will issue a CVD order and require a cash deposit of estimated countervailing duties for such entries of subject merchandise in the amounts indicated above, in accordance with section 706(a) of the Act. If the ITC determines that material injury, or threat of material injury, does not exist, this proceeding will be terminated, and all estimated duties deposited or securities posted as a result of the suspension of liquidation will be refunded or canceled.

[8] *See Preliminary Determination,* 85 FR at 31453.

ITC Notification

In accordance with section 705(d) of the Act, Commerce will notify the ITC of its final affirmative determination that countervailable subsidies are being provided to producers and exporters of fluid end blocks from India. As Commerce's final determination is affirmative, in accordance with section 705(b) of the Act, the ITC will determine, within 45 days, whether the domestic industry in the United States is materially injured or threatened with material injury. In addition, we are making available to the ITC all non-privileged and nonproprietary information related to this investigation. We will allow the ITC access to all privileged and business proprietary information in our files, provided the ITC confirms that it will not disclose such information, either publicly or under an administrative protective order (APO), without the written consent of the Assistant Secretary for Enforcement and Compliance.

Notification Regarding Administrative Protective Orders

In the event that the ITC issues a final negative injury determination, this notice will serve as the only reminder to parties subject to the APO of their responsibility concerning the destruction of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3). Timely written notification of the return/destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and terms of an APO is a violation which is subject to sanction.

Notification to Interested Parties

This determination is issued and published pursuant to sections 705(d) and 771(i) of the Act and 19 CFR 351.210(c).

Dated: December 7, 2020.

Jeffrey I. Kessler,

Assistant Secretary for Enforcement and Compliance.

APPENDIX I

Scope of the Investigation

The products covered by this investigation are forged steel fluid end blocks (fluid end blocks), whether in finished or unfinished form, and which are typically used in the manufacture or service of hydraulic pumps.

The term ''forged'' is an industry term used to describe the grain texture of steel resulting from the application of localized compressive force. Illustrative forging standards include, but are not limited to, American Society for Testing and Materials (ASTM) specifications A668 and A788.

For purposes of this investigation, the term ''steel'' denotes metal containing the following chemical elements, by weight: (i) Iron greater than or equal to 60 percent; (ii) nickel less than or equal to 8.5 percent; (iii) copper less than or equal to 6 percent; (iv) chromium greater than or equal to 0.4 percent, but less than or equal to 20 percent; and (v) molybdenum greater than or equal to 0.15 percent, but less than or equal to 3 percent. Illustrative steel standards include, but are not limited to, American Iron and Steel Institute (AISI) or Society of Automotive Engineers (SAE) grades 4130, 4135, 4140, 4320, 4330, 4340, 8630, 15–5, 17–4, F6NM, F22, F60, and XM25, as well as modified varieties of these grades.

The products covered by this investigation are: (1) Cut-to-length fluid end blocks with an actual height (measured from its highest point) of 8 inches (203.2 mm) to 40 inches (1,016.0 mm), an actual width (measured from its widest point) of 8 inches (203.2 mm) to 40 inches (1,016.0 mm), and an actual length (measured from its longest point) of 11 inches (279.4 mm) to 75 inches (1,905.0 mm); and (2) strings of fluid end blocks with an actual height (measured from its highest point) of 8 inches (203.2 mm) to 40 inches (1,016.0 mm), an actual width (measured from its widest point) of 8 inches (203.2 mm) to 40 inches (1,016.0 mm), and an actual length (measured from its longest point) up to 360 inches (9,144.0 mm).

The products included in the scope of this investigation have a tensile strength of at least 70 KSI (measured in accordance with ASTM A370) and a hardness of at least 140 HBW (measured in accordance with ASTM E10).

A fluid end block may be imported in finished condition (*i.e.,* ready for incorporation into a pump fluid end assembly without further finishing operations) or unfinished condition (*i.e.,* forged but still requiring one or more finishing operations before it is ready for incorporation into a pump fluid end assembly). Such finishing operations may include: (1) Heat treating; (2) milling one or more flat surfaces; (3) contour machining to custom shapes or dimensions; (4) drilling or boring holes; (5) threading holes; and/or (6) painting, varnishing, or coating.

Excluded from the scope of this investigation are fluid end block assemblies which (1) include (a) plungers and related housings, adapters, gaskets, seals, and packing nuts, (b) valves and related seats, springs, seals, and cover nuts, and (c) a discharge flange and related seals, and (2) are otherwise ready to be mated with the ''power end'' of a hydraulic pump without the need for installation of any plunger, valve, or discharge flange components, or any other further manufacturing operations.

The products included in the scope of this investigation may enter under Harmonized Tariff Schedule of the United States (HTSUS) subheadings 7218.91.0030, 7218.99.0030, 7224.90.0015, 7224.90.0045, 7326.19.0010, 7326.90.8688, or 8413.91.9055. While these HTSUS subheadings are provided for convenience and customs purposes, the written description of the scope of the investigation is dispositive.

Prestressed Concrete Steel Wire Strand From Argentina, Colombia, Egypt, the Netherlands, Saudi Arabia, Taiwan, the Republic of Turkey, and the United Arab Emirates: Final Affirmative Determinations of Sales at Less Than Fair Value and Final Affirmative Critical Circumstances Determinations, in Part

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (Commerce) determines that imports of prestressed concrete steel wire strand (PC strand) from Argentina, Colombia, Egypt, the Netherlands, Saudi Arabia, Taiwan, the Republic of Turkey (Turkey), and the United Arab Emirates (UAE) are being, or are likely to be, sold in the United States at less than fair value (LTFV).

DATES: Applicable December 11, 2020.

FOR FURTHER INFORMATION CONTACT: Kabir Archuletta at (202) 482–2593 (Argentina), Hermes Pinilla at (202) 482–3477 (Colombia), David Crespo at (202) 482–3693 (Egypt), Bryan Hansen at (202) 482–3683 (the Netherlands), Drew Jackson at (202) 482–4406 (Saudi Arabia), Joy Zhang at (202) 482–1168 (Taiwan), David Goldberger at (202) 482–4136 (Turkey), and Charles Doss at (202) 482–4474 (UAE); AD/CVD Operations, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230.

SUPPLEMENTARY INFORMATION:

Background

On September 30, 2020, Commerce published in the **Federal Register** the *Preliminary Determinations* of sales at LTFV of PC strand from: (1) Argentina, Colombia, Egypt, the Netherlands, Saudi Arabia, Turkey, and the UAE; [1] and (2) Taiwan.[2] We invited interested parties to comment on the *Preliminary Determinations*. Except for PC strand from Turkey, we received no comments from interested parties on the *Preliminary Determinations*. For PC strand from Turkey, a summary of the events that occurred since Commerce published the *Preliminary Determinations,* as well as a full discussion of the issues raised by parties for the final determination, may be found in the Turkey Issues and Decision Memorandum.[3]

Period of Investigation

The period of investigation is April 1, 2019 through March 31, 2020.

Scope of the Investigations

The product covered by these investigations is PC strand. For a full description of the scope of these investigations, *see* Appendix I of this notice.

Changes Since the Preliminary Determinations

Because we received no comments, we have made no changes to our calculations with regards to Argentina, Colombia, Egypt, the Netherlands, Saudi Arabia, UAE, and Taiwan. We have considered the comments received in the PC strand from Turkey investigation, but have made no changes to our calculations for the final determination. In addition, for the final determination we have revised our critical circumstances determination with respect to Celik Halat ve Tel Sanayi A.S. (Celik Halat). *See* ''Final Affirmative Determinations of Critical Circumstances,'' below.

Analysis of Comments Received

All issues raised in the case and rebuttal briefs submitted by parties in the PC strand from Turkey investigation are addressed in the Turkey Issues and Decision Memorandum accompanying this notice. A list of the issues addressed in the Turkey Issues and Decision Memorandum is attached to this notice as Appendix II. The Turkey Issues and Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at *https://access.trade.gov*. In addition, a complete version of the Turkey Issues and Decision Memorandum can be accessed directly at *http://enforcement.trade.gov/frn/*. The signed and electronic versions of the Turkey Issues and Decision Memorandum are identical in content.

Final Affirmative Determinations of Critical Circumstances

For the *Preliminary Determinations,* in accordance with section 733(e)(1) of the Tariff Act of 1930, as amended (the Act) and 19 CFR 351.206(c)(1), Commerce found that critical circumstances exist with respect to imports of PC strand exported by: (1) Knight S.A.S. from Colombia; (2) United Wires Company Elsewedy (United Wires) and all other producers/exporters from Egypt; (3) Nedri Spanstaal BV from the Netherlands; and (4) Celik Halat, Güney Çelik Hasir ve Demir (Güney

[1] *See Prestressed Concrete Steel Wire Strand from Argentina, Colombia, Egypt, the Netherlands, Saudi Arabia, the Republic of Turkey, and the United Arab Emirates: Preliminary Affirmative Determinations of Sales at Less than Fair Value and Preliminary Affirmative Critical Circumstances Determinations, in Part,* 85 FR 61722 (September 30, 2020) (*Seven Countries Preliminary Determinations*).

[2] *See Prestressed Concrete Steel Wire Strand from Taiwan: Preliminary Affirmative Determination of Sales at Less Than Fair Value and Negative Preliminary Determination of Critical Circumstances,* 85 FR 61726 (September 30, 2020) (*Taiwan Preliminary Determination*) (collectively, *Preliminary Determinations*).

[3] *See* Memorandum, ''Issues and Decision Memorandum for the Final Affirmative Determination in the Less-Than-Fair-Value Investigation of PC Strand from Turkey,'' dated concurrently with, and hereby adopted by, this notice (Turkey Issues and Decision Memorandum).

Celik), and all other producers/exporters from Turkey.[4]

Our determinations of critical circumstances are unchanged for the final determinations, except with respect to Celik Halat.[5] Accordingly, pursuant to section 735(a)(3) of the Act and 19 CFR 351.206, we continue to find that critical circumstances exist for: (1) Knight S.A.S. from Colombia; (2) United Wires and all other producers/exporters from Egypt; (3) Nedri Spanstaal BV from the Netherlands; and (4) Güney Celik and all other producers/exporters from Turkey.

All-Others Rates

As discussed in the *Preliminary Determinations,* Commerce based the all-others rate for each country on the alleged dumping margin from the petition applicable to each country, in accordance with section 735(c)(5)(A) of the Act.[6] We made no changes to the selection of the all-others rates for these final determinations.

Final Determinations

Commerce determines that the estimated dumping margins are as follows:

ARGENTINA

Exporter/producer	Dumping margin (percent)
Acindar Industria (Argentina) de Sinal S.A.	60.40
All Others	60.40

COLOMBIA

Exporter/Producer	Dumping margin (percent)
Knight S.A.S.	86.09
All Others	86.09

EGYPT

Exporter/producer	Dumping margin (percent)
United Wires Company Elsewedy	29.72
All Others	29.72

THE NETHERLANDS

Exporter/producer	Dumping margin (percent)
Nedri Spanstaal BV	30.86
All Others	30.86

SAUDI ARABIA

Exporter/producer	Dumping margin (percent)
National Metal Manufacturing & Casting Co.	194.40
All Others	194.40

TAIWAN

Exporter/producer	Dumping margin (percent)
Chia Ta World Co., Ltd.	23.89
All Others	23.89

TURKEY

Exporter/producer	Dumping margin (percent)
Celik Halat ve Tel Sanayi A.S.	53.65
Güney Çelik Hasir ve Demir	53.65
All Others	53.65

UNITED ARAB EMIRATES

Exporter/producer	Dumping margin (percent)
GSS International Trading FZE	170.65
Gulf Steel Strands FZE	170.65
All Others	170.65

Disclosure

Normally, Commerce discloses to interested parties the calculations performed in connection with a final determination, in accordance with 19 CFR 351.224(b). However, because Commerce applied AFA to each mandatory respondent in these investigations, in accordance with section 776 of the Act, there are no calculations to disclose.

Continuation of Suspension of Liquidation

In accordance with section 735(c)(1)(B) of the Act, Commerce will instruct U.S. Customs and Border Protection (CBP) to continue to suspend liquidation of all entries of PC strand from Argentina, Colombia, Egypt, the Netherlands, Saudi Arabia, Taiwan, Turkey, and the UAE, as described in the ''Scope of the Investigations'' in Appendix I, which entered, or were withdrawn from warehouse, for consumption on or after the date of publication of the *Preliminary Determinations.*

In accordance with section 733(e)(2)(A) of the Act, suspension of liquidation of PC strand from Colombia, Egypt, the Netherlands, and Turkey as described in the ''Scope of the Investigations'' in Appendix I, shall continue to apply to unliquidated entries of PC strand exported by: (1) Knight S.A.S. from Colombia; (2) United Wires and all other producers/exporters from Egypt; (3) Nedri Spanstaal BV from the Netherlands; and (4) Güney Celik and all other producers/exporters from Turkey,[7] which entered, or were withdrawn from warehouse, for consumption on or after July 2, 2020, which is 90 days prior to the date of publication of the *Preliminary Determinations.*

Pursuant to section 735(c)(1)(B)(ii) of the Act and 19 CFR 351.210(d), we will instruct CBP to require a cash deposit for such entries of merchandise equal to the estimated dumping margin as follows: (1) The cash deposit rate for the company listed in the tables above will be equal to the company-specific estimated dumping margin identified for that company in the table; (2) if the exporter is not a company identified above, but the producer is, then the cash deposit rate will be equal to the company-specific estimated dumping margin established for that producer of the subject merchandise; and (3) the cash deposit rate for all other producers and exporters will be equal to the all-others estimated dumping margin. These suspension of liquidation instructions will remain in effect until further notice.

International Trade Commission Notification

In accordance with section 735(d) of the Act, we will notify the International Trade Commission (ITC) of the final affirmative determinations of sales at LTFV. Because Commerce's final determinations are affirmative, in accordance with section 735(b)(2) of the Act, the ITC will make its final determinations as to whether the domestic industry in the United States is materially injured, or threatened with

[4] *See Seven Countries Preliminary Determinations,* 85 FR at 61723.

[5] *See* Turkey Issues and Decision Memorandum at 2; and Memorandum, ''Final Determination Critical Circumstances Analysis,'' dated concurrently with this memorandum.

[6] *See Seven Countries Preliminary Determinations,* 85 FR at 61723–24; and *Taiwan Preliminary Determination,* 85 FR at 61726.

[7] Because we are making a negative final determination of critical circumstances for Celik Halat, we will instruct CBP to terminate suspension of liquidation, and release any cash deposits on merchandise which was entered, or withdrawn from warehouse, during the 90 day period prior to the date of publication of the *Preliminary Determinations.*

material injury, by reason of imports, or sales (or the likelihood of sales) for importation of PC strand from Argentina, Colombia, Egypt, the Netherlands, Saudi Arabia, Taiwan, Turkey, and the UAE no later than 45 days after these final determinations. If the ITC determines that such injury does not exist, these proceedings will be terminated, and all cash deposits will be refunded. If the ITC determines that such injury does exist, Commerce will issue antidumping duty orders directing CBP to assess, upon further instruction by Commerce, antidumping duties on all imports of the subject merchandise entered, or withdrawn from warehouse, for consumption on or after the effective date of the suspension of liquidation, as discussed above in the ''Continuation of Suspension of Liquidation'' section.

Notification Regarding Administrative Protective Orders

This notice serves as a reminder to parties subject to an administrative protective order (APO) of their responsibility concerning the disposition of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3). Timely written notification of return or destruction of APO materials, or conversion to judicial protective order, is hereby requested. Failure to comply with the regulations and the terms of an APO is a sanctionable violation.

Notification to Interested Parties

These determinations are issued and published pursuant to sections 735(d) and 777(i)(1) of the Act, and 19 CFR 351.210(c).

Dated: December 7, 2020.

Jeffrey I. Kessler,

Assistant Secretary for Enforcement and Compliance.

Appendix I

Scope of the Investigations

The merchandise covered by these investigations is prestressed concrete steel wire strand (PC strand), produced from wire of non-stainless, non-galvanized steel, which is suitable for use in prestressed concrete (both pretensioned and post-tensioned) applications. The product definition encompasses covered and uncovered strand and all types, grades, and diameters of PC strand. PC strand is normally sold in the United States in sizes ranging from 0.25 inches to 0.70 inches in diameter. PC strand made from galvanized wire is only excluded from the scope if the zinc and/or zinc oxide coating meets or exceeds the 0.40 oz./ft2 standard set forth in ASTM–A–475.

The PC strand subject to these investigations is currently classifiable under subheadings 7312.10.3010 and 7312.10.3012 of the Harmonized Tariff Schedule of the United States (HTSUS). Although the HTSUS subheadings are provided for convenience and customs purposes, the written description of the scope of these investigations is dispositive.

Forged Steel Fluid End Blocks From India: Final Negative Determination of Sales at Less Than Fair Value

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (Commerce) determines that imports of forged steel fluid end blocks (fluid end blocks) from India are not being, or are not likely to be, sold in the United States at less than fair value (LTFV) for the period of investigation (POI) October 1, 2018 through September 30, 2019.

DATES: Applicable December 11, 2020.

FOR FURTHER INFORMATION CONTACT: Michael Romani or Jacob Keller, AD/CVD Operations, Office I, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–0198 or (202) 482–4849, respectively.

SUPPLEMENTARY INFORMATION:

Background

On July 23, 2020, Commerce published in the **Federal Register** its preliminary negative determination in the LTFV investigation of fluid end blocks from India, in which it also postponed the final determination until December 7, 2020.[1] Commerce invited interested parties to comment on the *Preliminary Determination.* A summary of the events that occurred since Commerce published the *Preliminary Determination,* as well as a full discussion of the issues raised by parties for this final determination, may be found in the Issues and Decision Memorandum.[2]

Scope of the Investigation

The products covered by this investigation are fluid end blocks from India. For a complete description of the scope of this investigation, *see* Appendix I.

Scope Comments

During the course of this investigation, Commerce received scope comments from interested parties. Commerce issued a Preliminary Scope Decision Memorandum to address these comments.[3] We received comments from interested parties on the Preliminary Scope Decision Memorandum, which we address in the Final Scope Decision Memorandum, dated concurrently with, and hereby adopted by, this final determination.[4] Commerce is not modifying the scope language as it appeared in the *Preliminary Determination. See* Appendix I for the final scope of the investigation.

Analysis of Comments Received

All issues raised in the case and rebuttal briefs that were submitted by parties in this investigation are addressed in the Issues and Decision Memorandum. A list of the issues addressed in the Issues and Decision Memorandum is attached to this notice at Appendix II. The Issues and Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at *https://access.trade.gov.* In addition, a complete version of the Issues and Decision Memorandum can be accessed

[1] *See Forged Steel Fluid End Blocks from India: Preliminary Negative Determination of Sales at Less Than Fair Value and Postponement of Final Determination,* 85 FR 44517 (July 23, 2020) (*Preliminary Determination*), and accompanying memorandum, ''Decision Memorandum for the Preliminary Negative Determination in the Less-Than-Fair-Value Investigation of Forged Steel Fluid End Blocks from India,'' dated July 16, 2020 (Preliminary Decision Memorandum).

[2] *See* Memorandum, ''Issues and Decision Memorandum for the Final Negative Determination in the Less-Than-Fair-Value Investigation of Forged Steel Fluid End Blocks from India,'' dated concurrently with, and hereby adopted by, this notice (Issues and Decision Memorandum).

[3] *See* Memorandum, '' Forged Steel Fluid End Blocks from the Federal Republic of Germany, India, Italy, and the People's Republic of China: Scope Comments Decision Memorandum for the Preliminary Determinations,'' dated May 18, 2020 (Preliminary Scope Decision Memorandum).

[4] *See* Memorandum, ''Forged Steel Fluid End Blocks from the Federal Republic of Germany, India, Italy, and the People's Republic of China: Scope Comments Decision Memorandum for the Final Determinations,'' dated December 7, 2020 (Final Scope Decision Memorandum).

directly at *http://enforcement.trade.gov/frn/.*

Verification

Commerce was unable to conduct on-site verification of the information relied upon in making its final determination in this investigation pursuant to section 782(i) of the Tariff Act of 1930, as amended (the Act). Accordingly, we took additional steps in lieu of an on-site verification and requested additional documentation and information.[5]

Changes Since the Preliminary Determination

Based on our analysis of the comments received and examination of the record, we made certain changes to the margin calculations for Bharat Forge Limited. For a discussion of these changes, *see* the ''Changes from the Preliminary Determination'' section of the Issues and Decision Memorandum. Consistent with section 776(a) and (b) of the Act, Commerce relied on partial adverse facts available in making our final determination.

Final Determination

The final estimated weighted-average dumping margins are as follows:

Exporter or producer	Estimated weighted-average dumping margin (percent)
Bharat Forge Limited	[6] 0.00

Commerce preliminarily determined that Ultra Engineers (Ultra), the only other known producer or exporter of subject merchandise identified in the *Initiation Notice,*[7] had no sales of in-scope merchandise to the United States during the POI. Therefore, we did not calculate an estimated weighted-average dumping margin for Ultra in the *Preliminary Determination*.[8] No party commented on the *Preliminary Determination* with respect to Ultra. Accordingly, for the final Determination, we continue to find that Ultra had no sales of in-scope merchandise to the United States during the POI.

Consistent with section 733(d) of the Act, Commerce has not calculated an estimated weighted-average dumping margin for all other producers and exporters because it has not made a final affirmative determination of sales at LTFV.

Disclosure

We intend to disclose the calculations performed in this final determination within five days of the date of publication of this notice to parties in this proceeding in accordance with 19 CFR 351.224(b).

Suspension of Liquidation

Because Commerce has made a final negative determination of sales at LTFV with regard to subject merchandise, Commerce will not direct U.S. Customs and Border Protection to suspend liquidation or to require a cash deposit of estimated antidumping duties for entries of fluid end blocks from India.

International Trade Commission Notification

In accordance with section 735(d) of the Act, we will notify the U.S. International Trade Commission of our final negative determination.

Notification Regarding Administrative Protective Orders

This notice will serve as a final reminder to the parties subject to administrative protective order (APO) of their responsibility concerning the disposition of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3). Timely written notification of return or destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and the terms of an APO is a sanctionable violation.

Notification to Interested Parties

This determination and this notice are issued and published pursuant to sections 735(d) and 777(i)(1) of the Act and 19 CFR 351.210(c).

Dated: December 7, 2020.

Jeffrey I. Kessler,

Assistant Secretary for Enforcement and Compliance.

Appendix I

Scope of the Investigation

The products covered by this investigation are forged steel fluid end blocks (fluid end blocks), whether in finished or unfinished form, and which are typically used in the manufacture or service of hydraulic pumps.

The term ''forged'' is an industry term used to describe the grain texture of steel resulting from the application of localized compressive force. Illustrative forging standards include, but are not limited to, American Society for Testing and Materials (ASTM) specifications A668 and A788.

For purposes of this investigation, the term ''steel'' denotes metal containing the following chemical elements, by weight: (i) Iron greater than or equal to 60 percent; (ii) nickel less than or equal to 8.5 percent; (iii) copper less than or equal to 6 percent; (iv) chromium greater than or equal to 0.4 percent, but less than or equal to 20 percent; and (v) molybdenum greater than or equal to 0.15 percent, but less than or equal to 3 percent. Illustrative steel standards include, but are not limited to, American Iron and Steel Institute (AISI) or Society of Automotive Engineers (SAE) grades 4130, 4135, 4140, 4320, 4330, 4340, 8630, 15–5, 17–4, F6NM, F22, F60, and XM25, as well as modified varieties of these grades.

The products covered by this investigation are: (1) Cut-to-length fluid end blocks with an actual height (measured from its highest point) of 8 inches (203.2 mm) to 40 inches (1,016.0 mm), an actual width (measured from its widest point) of 8 inches (203.2 mm) to 40 inches (1,016.0 mm), and an actual length (measured from its longest point) of 11 inches (279.4 mm) to 75 inches (1,905.0 mm); and (2) strings of fluid end blocks with an actual height (measured from its highest point) of 8 inches (203.2 mm) to 40 inches (1,016.0 mm), an actual width (measured from its widest point) of 8 inches (203.2 mm) to 40 inches (1,016.0 mm), and an actual length (measured from its longest point) up to 360 inches (9,144.0 mm).

The products included in the scope of this investigation have a tensile strength of at least 70 KSI (measured in accordance with ASTM A370) and a hardness of at least 140 HBW (measured in accordance with ASTM E10).

A fluid end block may be imported in finished condition (*i.e.,* ready for incorporation into a pump fluid end assembly without further finishing operations) or unfinished condition (*i.e.,* forged but still requiring one or more finishing operations before it is ready for incorporation into a pump fluid end assembly). Such finishing operations may include: (1) Heat treating; (2) milling one or more flat surfaces; (3) contour machining to custom shapes or dimensions; (4) drilling or boring holes; (5) threading holes; and/or (6) painting, varnishing, or coating.

Excluded from the scope of this investigation are fluid end block assemblies which (1) include (a) plungers and related housings, adapters, gaskets, seals, and packing nuts, (b) valves and related seats, springs, seals, and cover nuts, and (c) a discharge flange and related seals, and (2) are otherwise ready to be mated with the ''power end'' of a hydraulic pump without the need for installation of any plunger, valve, or discharge flange components, or any other further manufacturing operations.

The products included in the scope of this investigation may enter under Harmonized Tariff Schedule of the United States (HTSUS) subheadings 7218.91.0030, 7218.99.0030, 7224.90.0015, 7224.90.0045, 7326.19.0010,

[5] *See* Commerce's Letter with attached questionnaire in lieu of verification, dated September 2, 2020; *see also* Bharat Forge Limited's Letter, ''Forged Steel Fluid End Blocks from India: Submission of Bharat Forge Limited's Post-Preliminary Response,'' dated September 14, 2020.

[6] *See* Memorandum, ''Forged Steel Fluid End Blocks from India—Final Determination Analysis Memorandum for Bharat Forge Limited,'' dated December 7, 2020.

[7] *See Initiation Notice,* 85 FR at 2395.

Prestressed Concrete Steel Wire Strand From the Republic of Turkey: Final Affirmative Countervailing Duty Determination and Final Negative Critical Circumstances Determination

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (Commerce) determines that countervailable subsidies are being provided to producers and exporters of prestressed concrete steel wire strand (PC strand) from the Republic of Turkey (Turkey).

DATES: Applicable December 11, 2020.

FOR FURTHER INFORMATION CONTACT: Whitley Herndon or Jacob Garten, AD/CVD Operations, Office II, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–6274, or (202) 482–3342, respectively.

SUPPLEMENTARY INFORMATION:

Background

The petitioners in this investigation are Insteel Wire Products, Sumiden Wire Products Corporation, and Wire Mesh Corporation. In addition to the Government of Turkey, the mandatory respondents in this investigation are Celik Halat ve Tel San A.S. (Celik Halat) and Guney Celik Hasir ve Demir (Guney Celik).

A summary of the events that occurred since Commerce published the *Preliminary Determination,*[1] as well as a full discussion of the issues raised by parties for this final determination, are discussed in the Issues and Decision Memorandum, which is hereby adopted by this notice.[2] The Issues and Decision Memorandum is a public document and on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at *http://access.trade.gov*. In addition, a complete version of the Issues and Decision Memorandum can be accessed directly at *http://enforcement.trade.gov/frn/*. The signed and electronic versions of the Issues and Decision Memorandum are identical in content.

Period of Investigation

The period of investigation is January 1, 2019 through December 31, 2019.

Scope of the Investigation

The scope of the investigation is PC strand from Turkey. For a complete description of the scope of this investigation, *see* Appendix I.

Analysis of Subsidy Programs and Comments Received

The subsidy programs under investigation and the issues raised in the case and rebuttal briefs by parties in this investigation are discussed in the Issues and Decision Memorandum. A list of the issues that parties raised, and to which we responded in the Issues and Decision Memorandum, is included as Appendix II.

Methodology

Commerce conducted this investigation in accordance with section 701 of the Tariff Act of 1930, as amended (the Act). For each of the subsidy programs found countervailable, Commerce determines that there is a subsidy, *i.e.,* a financial contribution by an ''authority'' that gives rise to a benefit to the recipient and that the subsidy is specific.[3] For a full description of the methodology underlying our final determination, *see* the Issues and Decision Memorandum.

Verification

Commerce was unable to conduct on-site verification of the information relied upon in making its final determination in this investigation, pursuant to section 782(i) of the Act. Accordingly, we took additional steps in lieu of on-site verification and requested additional documentation and information.[4] Consistent with section 776(a)(2)(D) of the Act, Commerce relied on the information submitted on the record as facts available in making our final determination.

Changes Since the *Preliminary Determination*

Based on our review and analysis of the information received in lieu of on-site verification and comments received from parties, we made certain changes to the respondents' subsidy rate calculations since the *Preliminary Determination* and the Post-Preliminary Analysis Memorandum.[5] As a result of these changes, Commerce has also revised the all-others rate. For a discussion of these changes, *see* the Issues and Decision Memorandum and the Final Analysis Memoranda.[6]

Final Negative Determination of Critical Circumstances

Pursuant to section 705(a)(2) of the Act, Commerce determines that critical circumstances do not exist for imports of PC strand from Turkey. For full description of the methodology and results of Commerce's critical circumstances analysis, *see* the Issues and Decision Memorandum.

All-Others Rate

In accordance with section 705(c)(1)(B)(i)(I) of the Act, we calculated countervailable subsidy rates for Celik Halat and Guney Celik. Section 705(c)(5)(A)(i) of the Act states that, for

[1] *See Prestressed Concrete Steel Wire from the Republic of Turkey: Preliminary Affirmative Countervailing Duty Determination, Preliminary Affirmative Critical Circumstances Determination, in Part,* 85 FR 59287 (September 21, 2020) (*Preliminary Determination*), and accompanying Preliminary Decision Memorandum (PDM).

[2] *See* Memorandum, ''Decision Memorandum for the Final Determination of the Countervailing Duty Investigation of Prestressed Concrete Steel Wire Strand from the Republic of Turkey,'' dated concurrently with this determination (Issues and Decision Memorandum).

[3] *See* sections 771(5)(B) and (D) of the Act regarding financial contribution; section 771(5)(E) of the Act regarding benefit; and section 771(5A) of the Act regarding specificity.

[4] *See* Commerce's Letter, dated October 26, 2020; and Guney Celik's Letter, ''Prestressed Concrete Steel Wire Strand from Turkey; In Lieu of Verification Questionnaire Response,'' dated November 3, 2020.

[5] *See* Memorandum, ''Countervailing Duty Investigation of Prestressed Concrete Steel Wire Strand from the Republic of Turkey: Post-Preliminary Analysis,'' dated November 19, 2020 (Post-Preliminary Analysis Memorandum).

[6] *See* Memoranda, ''Countervailing Duty Investigation of Prestressed Concrete Steel Wire Strand from the Republic of Turkey: Final Determination Calculation Memorandum for Celik Halat ve Tel San A.S.'' and ''Countervailing Duty Investigation of Prestressed Concrete Steel Wire Strand from the Republic of Turkey: Final Determination Calculation Memorandum for Guney Celik Hasir ve Demir,'' both dated concurrently with this notice (collectively, Final Analysis Memoranda).

all exporters and producers not individually investigated, we will determine an all-others rate equal to the weighted-average countervailable subsidy rates established for exporters and producers individually investigated, excluding any zero and *de minimis* countervailable subsidy rates, and any rates determined entirely under section 776 of the Act.

Notwithstanding the language of section 705(c)(5)(A)(i) of the Act, we have not calculated the all-others rate by weight averaging the rates of Celik Halat and Guney Celik because doing so risks disclosure of business proprietary information. Rather, we used a simple average to calculate the all-others rate.[7]

Final Determination

Commerce determines the total estimated net countervailable subsidy rates to be:

Company	Subsidy rate (percent)
Celik Halat ve Tel San A.S.[8]	158.44
Guney Celik Hasir ve Demir	30.78
All Others	94.61

In accordance with section 705(c)(1)(B)(i) of the Act, we calculated a rate for each company respondent. Section 705(c)(5)(A)(i) of the Act states that, for companies not individually investigated, we will determine an ''all others'' rate equal to the weighted-average countervailable subsidy rates established for exporters and producers individually investigated, excluding any zero and de minimis countervailable subsidy rates, and any rates determined entirely under section 776 of the Act. Notwithstanding the language of section 705(c)(5)(A)(i) of the Act, we have not calculated the ''all others'' rate by weight averaging the rates of Celik Halat and Guney Celik because doing so risks disclosure of proprietary information. Therefore, we calculated a simple average of Celik Halat and Guney Celik's rates.

Disclosure

Commerce will disclose the calculations performed in connection with this final determination within five days of the date of publication of this notice to parties in this proceeding in accordance with 19 CFR 351.224(b).

Continuation of Suspension of Liquidation

As a result of our *Preliminary Determination* and pursuant to section 703(d)(1)(B) and (d)(2) of the Act, Commerce instructed U.S. Customs and Border Protection (CBP) to suspend liquidation of entries of subject merchandise as described in the scope of the investigation section, that was entered or withdrawn from warehouse for consumption on or after the date of publication of the *Preliminary Determination* in the **Federal Register**.

Because we find critical circumstances do not exist for Celik Halat, we will direct CBP to terminate the retroactive suspension of liquidation ordered at the *Preliminary Determination* and release any cash deposits that were required prior to September 21, 2020, the date of publication of the *Preliminary Determination* in the **Federal Register**, consistent with section 705(c)(3) of the Act.

If the U.S. International Trade Commission (ITC) issues a final affirmative injury determination, we will issue a countervailing duty order and require a cash deposit of estimated countervailing duties for such entries of subject merchandise in the amounts indicated above. If the ITC determines that material injury, or threat of material injury, does not exist, this proceeding will be terminated and all estimated duties deposited or securities posted as a result of the suspension of liquidation will be refunded or canceled.

ITC Notification

In accordance with section 705(d) of the Act, we will notify the ITC of our determination. In addition, we are making available to the ITC all non-privileged and non-proprietary information related to this investigation. We will allow the ITC access to all privileged and business proprietary information in our files, provided the ITC confirms that it will not disclose such information, either publicly or under an administrative protective order (APO), without the written consent of the Assistant Secretary for Enforcement and Compliance.

Because the final determination in this proceeding is affirmative, in accordance with section 705(b) of the Act, the ITC will make its final determination as to whether the domestic industry in the United States is materially injured, or threatened with material injury, by reason of imports of welded pipe from Turkey no later than 45 days after our final determination. If the ITC determines that material injury or threat of material injury does not exist, this proceeding will be terminated and all cash deposits will be refunded. If the ITC determines that such injury does exist, Commerce will issue a countervailing duty order directing CBP to assess, upon further instruction by Commerce, countervailing duties on all imports of the subject merchandise that are entered, or withdrawn from warehouse, for consumption on or after the effective date of the suspension of liquidation, as discussed above in the ''Continuation of Suspension of Liquidation'' section.

Notification Regarding APO

In the event that the ITC issues a final negative injury determination, this notice will serve as the only reminder to parties subject to the APO of their responsibility concerning the destruction of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3). Timely written notification of the return/destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and terms of an APO is a violation which is subject to sanction.

This determination is issued and published pursuant to sections 705(d) and 777(i) of the Act.

Dated: December 7, 2020.

Jeffrey I. Kessler,

Assistant Secretary for Enforcement and Compliance.

Appendix I

Scope of the Investigation

The merchandise covered by this investigation is prestressed concrete steel wire strand (PC strand), produced from wire of non-stainless, non-galvanized steel, which is suitable for use in prestressed concrete (both pretensioned and post-tensioned) applications. The product definition encompasses covered and uncovered strand and all types, grades, and diameters of PC strand. PC strand is normally sold in the United States in sizes ranging from 0.25 inches to 0.70 inches in diameter. PC strand made from galvanized wire is only excluded from the scope if the zinc and/or zinc oxide coating meets or exceeds the 0.40 oz./ft2 standard set forth in ASTM–A–475.

The PC strand subject to this investigation is currently classifiable under subheadings 7312.10.3010 and 7312.10.3012 of the Harmonized Tariff Schedule of the United States (HTSUS). Although the HTSUS subheadings are provided for convenience and customs purposes, the written description of the scope of this investigation is dispositive.

[7] We have calculated the simple average of the two responding firm's rates for the all-others rate using the following

calculation: (158.44 (Celik Halat's calculated rate) + 30.78 (Guney Celik's calculated rate))/2 = 94.61 (the all-others rate).

[8] Commerce found the following companies to be cross-owned with Celik Halat: Dogan Sirketler Grubu Holding A.S. and Adilbey Holding A.S. *See Preliminary Determination* PDM at ''Attribution of Subsidies.''

Seamless Carbon and Alloy Steel Standard, Line, and Pressure Pipe From the Russian Federation: Preliminary Affirmative Countervailing Duty Determination and Alignment of Final Determination With Final Antidumping Duty Determination

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (Commerce) preliminarily determines that countervailable subsidies are being provided to producers and exporters of seamless carbon and alloy steel standard, line, and pressure pipe (seamless pipe) from the Russian Federation (Russia). The period of investigation is January 1, 2019 through December 31, 2019. Interested parties are invited to comment on this preliminary determination.

DATES: Applicable December 11, 2020.

FOR FURTHER INFORMATION CONTACT: Caitlin Monks, AD/CVD Operations, Office VII, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–2670, respectively.

SUPPLEMENTARY INFORMATION:

Background

This preliminary determination is made in accordance with section 703(b) of the Tariff Act of 1930, as amended (the Act). Commerce published the notice of initiation of this investigation on August 4, 2020.[1] On September 2, 2020, Commerce postponed the preliminary determination of this investigation to December 7, 2020.[2] For a complete description of the events that followed the initiation of this investigation, *see* the Preliminary Decision Memorandum.[3] A list of topics discussed in the Preliminary Decision Memorandum is included as Appendix II to this notice. The Preliminary Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at *http://access.trade.gov.* In addition, a complete version of the Preliminary Decision Memorandum can be accessed directly at *http://enforcement.trade.gov/frn/.* The signed and electronic versions of the Preliminary Decision Memorandum are identical in content.

Scope of the Investigation

The products covered by this investigation are seamless pipe from Russia. For a complete description of the scope of this investigation, *see* Appendix I.

Scope Comments

In accordance with the *Preamble* to Commerce's regulations,[4] we set aside a period of time, as stated in the *Initiation Notice,* for parties to raise issues regarding product coverage (*i.e.,* scope).[5] We received comments concerning the scope of the antidumping duty (AD) and countervailing duty (CVD) investigations of seamless pipe as it appeared in the *Initiation Notice.* We are currently evaluating the scope comments filed by the interested parties. We intend to issue our preliminary decision regarding the scope of this and the companion AD and CVD investigations no later than February 3, 2021, the deadline for the preliminary determinations in the companion AD investigations with respect to Russia, the Republic of Korea, and Ukraine.[6] We will issue a final scope decision after considering any relevant comments submitted in case and rebuttal briefs.[7]

Methodology

Commerce is conducting this investigation in accordance with section 701 of the Act. For each of the subsidy programs found countervailable, Commerce preliminarily determines that there is a subsidy, *i.e.,* a financial contribution by an ''authority'' that gives rise to a benefit to the recipient, and that the subsidy is specific.[8]

Commerce notes that, in making these findings, it relied, in part, on facts available and, because it finds that the respondent did not act to the best of its ability to respond to Commerce's requests for information, Commerce drew an adverse inference where appropriate in selecting from among the facts otherwise available.[9] For further information, *see* ''Use of Facts Otherwise Available and Adverse Inferences'' in the Preliminary Decision Memorandum.

Alignment

As noted in the Preliminary Decision Memorandum, in accordance with section 705(a)(1) of the Act and 19 CFR 351.210(b)(4), Commerce is aligning the final CVD determination in this investigation with the final determination in the companion AD investigation of seamless pipe from Russia based on a request made by the petitioner.[10] Consequently, the final

CVD determination will be issued on the same date as the final AD determination, which is currently scheduled to be issued no later than April 19, 2021, unless postponed.

All-Others Rate

Sections 703(d) and 705(c)(5)(A) of the Act provide that in the preliminary determination, Commerce shall determine an estimated all-others rate for companies not individually examined. This rate shall be an amount equal to the weighted average of the estimated subsidy rates established for those companies individually examined, excluding any zero and *de minimis* rates and any rates based entirely under section 776 of the Act.

In this investigation, Commerce preliminarily calculated an individual estimated countervailable subsidy rate for PAO TMK/Volzhsky Pipe Plant JSC,[11] the only individually examined exporter/producer in this investigation. Because the only individually calculated rate is not zero, *de minimis,* or based entirely on facts otherwise available, we are preliminarily assigning the estimated countervailable subsidy rate calculated for TMK to all other producers and exporters, pursuant to section 705(c)(5)(A)(i) of the Act.

Preliminary Determination

Commerce preliminarily determines that the following estimated countervailable subsidy rates exist:

Company	Subsidy rate (percent)
PAO TMK/Volzhsky Pipe Plant Joint Stock Company[12]	4.39
All Others	4.39

Suspension of Liquidation

In accordance with section 703(d)(1)(B) and (d)(2) of the Act, Commerce will direct U.S. Customs and Border Protection (CBP) to suspend liquidation of entries of subject merchandise as described in the scope of the investigation section entered, or withdrawn from warehouse, for consumption on or after the date of publication of this notice in the **Federal Register**. Further, pursuant to 19 CFR 351.205(d), Commerce will instruct CBP to require a cash deposit equal to the rates indicated above.

Disclosure

Commerce intends to disclose its calculations and analysis performed to interested parties in this preliminary determination within five days of its public announcement, or if there is no public announcement, within five days of the date of this notice in accordance with 19 CFR 351.224(b).

Verification

Commerce is currently unable to conduct on-site verification of the information relied upon in making its final determination in this investigation. Accordingly, we intend to take additional steps in lieu of on-site verification. Commerce will notify interested parties of any additional documentation or information required.

Public Comment

As noted above, Commerce will issue a preliminary scope decision no later than February 3, 2021. All interested parties will have the opportunity to submit case and rebuttal briefs on the preliminary scope determination by the deadline established in the memorandum. All parties filing scope briefs or rebuttals thereto, must file identical documents simultaneously on the records of all the ongoing AD and CVD seamless pipe investigations. No new factual information or business proprietary information may be included in either scope briefs or rebuttal scope briefs.

Case briefs or other written comments may be submitted to the Assistant Secretary for Enforcement and Compliance. Interested parties will be notified of the deadline for the submission of such case briefs and written comments at a later date. Rebuttal briefs, limited to issues raised in case briefs, may be submitted no later than seven days after the deadline date for case briefs.[13] Commerce has modified certain of its requirements for serving documents containing business proprietary information until further notice.[14] Pursuant to 19 CFR 351.309(c)(2) and (d)(2), parties who submit case briefs or rebuttal briefs in this investigation are encouraged to submit with each argument: (1) A statement of the issue; (2) a brief summary of the argument; and (3) a table of authorities.

Pursuant to 19 CFR 351.310(c), interested parties who wish to request a hearing, limited to issues raised in the case and rebuttal briefs, must submit a written request to the Assistant Secretary for Enforcement and Compliance, U.S. Department of Commerce within 30 days after the date of publication of this notice. Requests should contain the party's name, address, and telephone number, the number of participants, whether any participant is a foreign national, and a list of the issues to be discussed. If a request for a hearing is made, Commerce intends to hold the hearing at a time and date to be determined. Parties should confirm by telephone the date, time, and location of the hearing two days before the scheduled date.

International Trade Commission Notification

In accordance with section 703(f) of the Act, Commerce will notify the International Trade Commission (ITC) of its preliminary determination. If Commerce's final determination is affirmative, the ITC will make its final injury determination before the later of 120 days after the date of Commerce's preliminary determination or 45 days after its final determination.

Notification to Interested Parties

This determination is issued and published pursuant to sections 703(f) and 777(i) of the Act and 19 CFR 351.205(c).

[11] Commerce selected ''TMK'' and ''TMK Volzhsky'' as mandatory respondents. The TMK Group subsequently submitted a questionnaire response on behalf of both companies, explaining that they are cross-owned members of the TMK Group. The TMK Group also clarified that its registered names include: ''PAO TMK'' and ''Volzhsky Pipe Plant JSC.'' The TMK Group refers to a group of companies involved in the production, sale, and distribution of subject merchandise which meet the definition of cross-ownership pursuant to 19 CFR 351.525(b)(6). As discussed in the Preliminary Decision Memorandum, we preliminarily determine that the cross-owned companies comprising the TMK Group during the POI are: PAO TMK; Volzhsky Pipe Plant JSC; Sinarsky Pipe Plant; Taganrog Metallurgical Plant Joint Stock Company; Sinarsky Pipe Plant Joint Stock Company; Seversky Pipe Plant Joint Stock Company; TMK CHERMET LLC; TMK CHERMET LLC Volzhsky; TMK CHERMET LLC Ekaterinburg; TMK CHERMET LLC Rostov; TMK CHERMET LLC Saratov; and TMK CHERMET LLC Service.

[12] As discussed in the Preliminary Decision Memorandum, Commerce has found the following companies to be cross-owned with PAO TMK and Volzhsky Pipe Plant Joint Stock Company: Sinarsky Pipe Plant; Taganrog Metallurgical Plant Joint Stock Company; Sinarsky Pipe Plant Joint Stock Company; Seversky Pipe Plant Joint Stock Company; TMK CHERMET LLC; TMK CHERMET LLC Volzhsky; TMK CHERMET LLC Ekaterinburg; TMK CHERMET LLC Rostov; TMK CHERMET LLC Saratov; and TMK CHERMET LLC Service.

[13] *See* 19 CFR 351.309; *see also* 19 CFR 351.303 (for general filing requirements); *see also Temporary Rule Modifying AD/CVD Service Requirements Due to COVID–19,* 85 FR 17006, 17007 (March 26, 2020).

[14] *See Temporary Rule Modifying AD/CVD Service Requirements Due to COVID–19; Extension of Effective Period,* 85 FR 41363 (July 10, 2020).

Dated: December 7, 2020.

Jeffrey I. Kessler,

Assistant Secretary for Enforcement and Compliance.

Appendix I

Scope of the Investigation

The merchandise covered by the scope of this investigation is seamless carbon and alloy steel (other than stainless steel) pipes and redraw hollows, less than or equal to 16 inches (406.4 mm) in nominal outside diameter, regardless of wall-thickness, manufacturing process (*e.g.,* hot-finished or cold-drawn), end finish (*e.g.,* plain end, beveled end, upset end, threaded, or threaded and coupled), or surface finish (*e.g.,* bare, lacquered or coated). Redraw hollows are any unfinished carbon or alloy steel (other than stainless steel) pipe or ''hollow profiles'' suitable for cold finishing operations, such as cold drawing, to meet the American Society for Testing and Materials (ASTM) or American Petroleum Institute (API) specifications referenced below, or comparable specifications. Specifically included within the scope are seamless carbon and alloy steel (other than stainless steel) standard, line, and pressure pipes produced to the ASTM A–53, ASTM A–106, ASTM A–333, ASTM A–334, ASTM A–589, ASTM A–795, ASTM A–1024, and the API 5L specifications, or comparable specifications, and meeting the physical parameters described above, regardless of application, with the exception of the exclusions discussed below.

Specifically excluded from the scope of the investigation are: (1) All pipes meeting aerospace, hydraulic, and bearing tubing specifications, including pipe produced to the ASTM A–822 standard; (2) all pipes meeting the chemical requirements of ASTM A–335, whether finished or unfinished; and (3) unattached couplings. Also excluded from the scope of the investigations are all mechanical, boiler, condenser and heat exchange tubing, except when such products conform to the dimensional requirements, *i.e.,* outside diameter and wall thickness, of ASTM A–53, ASTM A–106 or API 5L specifications.

Subject seamless standard, line, and pressure pipe are normally entered under Harmonized Tariff Schedule of the United States (HTSUS) subheadings 7304.19.1020, 7304.19.1030, 7304.19.1045, 7304.19.1060, 7304.19.5020, 7304.19.5050, 7304.31.6050, 7304.39.0016, 7304.39.0020, 7304.39.0024, 7304.39.0028, 7304.39.0032, 7304.39.0036, 7304.39.0040, 7304.39.0044, 7304.39.0048, 7304.39.0052, 7304.39.0056, 7304.39.0062, 7304.39.0068, 7304.39.0072, 7304.51.5005, 7304.51.5060, 7304.59.6000, 7304.59.8010, 7304.59.8015, 7304.59.8020, 7304.59.8025, 7304.59.8030, 7304.59.8035, 7304.59.8040, 7304.59.8045, 7304.59.8050, 7304.59.8055, 7304.59.8060, 7304.59.8065, and 7304.59.8070. The HTSUS subheadings and specifications are provided for convenience and customs purposes; the written description of the scope is dispositive.

Silicon Metal From Bosnia and Herzegovina and Iceland: Preliminary Affirmative Determinations of Sales at Less Than Fair Value

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (Commerce) preliminarily determines that silicon metal from Bosnia and Herzegovina (Bosnia) and Iceland is being, or is likely to be, sold in the United States at less than fair value (LTFV). The period of investigation (POI) is April 1, 2019 through March 31, 2020. The estimated margins of sales at LTFV are shown in the ''Preliminary Determinations'' section of this notice. Interested parties are invited to comment on these preliminary determinations.

DATES: Applicable December 11, 2020.

FOR FURTHER INFORMATION CONTACT: Robert Galantucci at (202) 482–2923 (Bosnia); and Emily Halle at (202) 482–0176 (Iceland), Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230.

SUPPLEMENTARY INFORMATION:

Background

Commerce published the notice of initiation of these investigations on July 27, 2020.[1] R–S Silicon D.O.O. (R–S Silicon) is the sole mandatory respondent in the investigation covering silicon metal from Bosnia; PCC Bakki Silicon hf (PCC Bakki) is the sole mandatory respondent in the investigation covering silicon metal from Iceland. For a complete description of the events that followed the initiation of these investigations, *see* the Preliminary Decision Memorandum.[2] A list of topics included in the Preliminary Decision Memorandum is included as Appendix II to this notice. The Preliminary Decision Memorandum is a public document and is made available to the public via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at *https://access.trade.gov.* In addition, a complete version of the Preliminary Decision Memorandum can be accessed directly at *http://enforcement.trade.gov/frn/.* The signed and the electronic versions of the Preliminary Decision Memorandum are identical in content.

Scope of the Investigations

The product covered by these investigations is silicon metal. For a full description of the scope of these investigations, *see* the ''Scope of the Investigations,'' in Appendix I of this notice. *Scope Comments*

In accordance with the *Preamble* to Commerce's regulations,[3] the *Initiation Notice* set aside a period of time for parties to raise issues regarding product coverage (*i.e.,* scope).[4] However, Commerce received no comments on the scope of these investigations from interested parties.

Methodology

Commerce is conducting these investigations in accordance with section 731 of the Tariff Act of 1930, as amended (the Act). Pursuant to sections 776(a) and (b) of the Act, Commerce has preliminarily relied upon facts otherwise available to assign dumping margins to R–S Silicon and PCC Bakki in these investigations because neither respondent submitted a response to Commerce's antidumping duty questionnaire. Further, Commerce is preliminarily determining that R–S Silicon and PCC Bakki failed to cooperate by not acting to the best of their abilities to comply with a request for information and is using an adverse inference when selecting from among

[4] *See Initiation Notice,* 85 FR at 45177.

the facts otherwise available (*i.e.,* applying adverse facts available (AFA)) to R–S Silicon and PCC Bakki, in accordance with section 776(b) of Act. For a full description of the methodology underlying our preliminary determinations, *see* the Preliminary Decision Memorandum.

Critical Circumstances

On October 20, 2020, the petitioners [5] timely filed a critical circumstances allegation, pursuant to section 733(e)(1) of the Act and 19 CFR 351.206(c)(1), alleging that critical circumstances exist with respect to imports of the subject merchandise from Iceland.[6] On November 5, 2020, Commerce determined the allegation was insufficient and informed the petitioners that we had no basis to pursue the critical circumstances allegation at that time.[7] In response, on November 11, 2020, the petitioners timely filed an updated critical circumstances allegation, pursuant to section 733(e)(1) of the Act and 19 CFR 351.206(c)(1), alleging that critical circumstances exist with respect to imports of silicon metal from Iceland.[8]

Section 733(e)(1) of the Act provides that Commerce will preliminarily determine that critical circumstances exist in an LTFV investigation if there is a reasonable basis to believe or suspect that: (A) There is a history of dumping and material injury by reason of dumped imports in the United States or elsewhere of the subject merchandise, or the person by whom, or for whose account, the merchandise was imported knew or should have known that the exporter was selling the subject merchandise at less than its fair value and that there was likely to be material injury by reason of such sales; and (B) there have been massive imports of the subject merchandise over a relatively short period. We preliminarily determine that critical circumstances exist with respect to imports of silicon metal exported by PCC Bakki and all other producers/exporters from Iceland.[9]

All-Others Rate

Sections 733(d)(1)(ii) of the Act provides that in the preliminary determination Commerce shall determine an estimated all-others rate for all exporters and producers not individually investigated, in accordance with section 735(c)(5) of the Act. Section 735(c)(5)(A) of the Act states that generally the estimated rate for all-others shall be an amount equal to the weighted average of the estimated weighted-average dumping margins established for exporters and producers individually investigated, excluding any zero and *de minimis* margins, and any margins determined entirely under section 776 of the Act. Pursuant to section 735(c)(5)(B) of the Act, if the estimated weighted-average dumping margins established for all exporters and producers individually examined are zero, *de minimis,* or determined entirely under section 776 of the Act, Commerce may use any reasonable method to establish the estimated weighted-average dumping margin for all other producers or exporters. The estimated weighted-average dumping margins in these preliminary determinations were determined entirely under section 776 of the Act. In cases where no weighted-average dumping margins other than those determined entirely under section 776 of the Act have been established for individually examined entities, in accordance with section 735(c)(5)(B) of the Act, Commerce typically averages the margins alleged in the petitions and applies the results to all other entities not individually examined.

With respect to Bosnia, in the Petitions,[10] the petitioners provided only one dumping margin, which was based on a price-to-constructed value comparison. Therefore, for the all-others rate in the investigation covering silicon metal from Bosnia, we preliminarily assigned this estimated dumping margin, which is 21.41 percent, as the all-others rate.[11]

With respect to Iceland, in the Petitions,[12] the petitioners provided dumping margins based on price-to-price comparisons. The estimated dumping margins for the price-to-price comparisons range from 28.12 percent to 47.54 percent. Therefore, for the all-others rate in the investigation covering silicon metal from Iceland, we preliminarily assigned the simple average of the range of margins alleged for subject merchandise from Iceland in the Petitions, which is 37.83 percent.[13]

Preliminary Determinations

Commerce preliminarily determines that the following estimated weighted-average dumping margins exist during the period April 1, 2019 through March 31, 2020:

BOSNIA AND HERZEGOVINA

Exporter/producer	Dumping margin (percent)
R–S Silicon D.O.O	21.41
All Others	21.41

ICELAND

Exporter/producer	Dumping margin (percent)
PCC Bakki Silicon hf	47.54
All Others	37.83

Suspension of Liquidation

In accordance with section 733(d)(2) of the Act, Commerce will direct U.S. Customs and Border Protection (CBP) to suspend liquidation of all entries of silicon metal from Bosnia and Iceland, as described in the ''Scope of the Investigations'' in Appendix I, entered, or withdrawn from warehouse, for consumption on or after the date of publication of this notice in the **Federal Register**.

Further, section 733(e)(2) of the Act provides that, given an affirmative determination of critical circumstances, any suspension of liquidation shall apply to unliquidated entries of merchandise entered, or withdrawn from warehouse, for consumption on or after the later of: (a) The date which is 90 days before the date on which the suspension of liquidation was first ordered; or (b) the date on which notice of initiation of the investigation was published. In accordance with section

[5] The petitioners are Globe Specialty Metals, Inc. and Mississippi Silicon LLC (collectively, the petitioners).

[6] *See* Petitioners' Letter, ''Silicon Metal from Iceland: Allegation of Critical Circumstances,'' dated October 20, 2020.

[7] *See* Commerce's Letter, ''Antidumping Duty Investigation of Silicon Metal from Iceland: Response to Petitioners' Critical Circumstances Allegation,'' dated November 5, 2020.

[8] *See* Petitioners' Letter, ''Silicon metal from Iceland: Revised Allegation of Critical Circumstances,'' dated November 11, 2020.

[9] For a full description of Commerce's preliminary critical circumstances determination, *see* Preliminary Decision Memorandum.

[10] *See* Petitioners' Letter, ''Silicon Metal from Bosnia and Herzegovina, Iceland, The Republic of Kazakhstan, and Malaysia—Petition for the Imposition of Antidumping and Countervailing Duties,'' dated June 30, 2020 (the Petitions) at Volume II; *see also* AD Investigation Initiation Checklist: Silicon Metal from Bosnia and Herzegovina, dated July 20, 2020 (AD Investigation Initiation Checklist: Bosnia).

[11] *See, e.g., Notice of Final Determination of Sales at Less Than Fair Value: Sodium Nitrite from the Federal Republic of Germany,* 73 FR 38986, 38987 (July 8, 2008), and accompanying Issues and Decision Memorandum at Comment 2; and AD Investigation Initiation Checklist: Bosnia.

[12] *See* the Petitions at Volume III; *see also* AD Investigation Initiation Checklist: Silicon Metal from Iceland, dated July 20, 2020 (AD Investigation Initiation Checklist: Iceland).

[13] *See, e.g., Notice of Final Determination of Sales at Less Than Fair Value: Sodium Nitrite from the Federal Republic of Germany,* 73 FR 38986, 38987 (July 8, 2008), and accompanying Issues and Decision Memorandum at Comment 2; and AD Investigation Initiation Checklist: Iceland.

733(e)(2)(A) of the Act, suspension of liquidation of silicon metal from Iceland as described in the ''Scope of the investigations'' in Appendix I, shall apply to unliquidated entries of merchandise from imports of silicon metal exported by PCC Bakki and all other producers/exporters from Iceland, that are entered, or withdrawn from warehouse, for consumption on or after the date which is 90 days before the publication of this notice, the date suspension of liquidation is first ordered.

We will also instruct CBP, pursuant to section 733(d)(1)(B) of the Act and 19 CFR 351.205(d) to require a cash deposit equal to the margins indicated in the charts above. These suspension of liquidation instructions will remain in effect until further notice.

Verification

Because each mandatory respondent in these investigations did not act to the best of their abilities to provide information requested by Commerce, and Commerce preliminarily determines each of the mandatory respondents to be uncooperative, we will not conduct verifications.

Disclosure

Normally, Commerce discloses to interested parties the calculations performed in connection with a preliminary determination within five days of any public announcement or, if there is no public announcement, within five days of the date of publication of the notice of preliminary determination in the **Federal Register**, in accordance with 19 CFR 351.224(b). However, because Commerce preliminarily applied AFA to each mandatory respondent in these investigations, in accordance with section 776 of the Act, there are no calculations to disclose.

Public Comment

Interested parties are invited to comment on these preliminary determinations no later than 30 days after the date of publication of these preliminary determinations.[14] Rebuttal briefs, limited to issues raised in case briefs, may be submitted no later than seven days after the deadline date for case briefs.[15] Pursuant to 19 CFR 351.309(c)(2) and (d)(2), parties who submit case briefs or rebuttal briefs in these proceedings are encouraged to submit with each argument: (1) A statement of the issue; (2) a brief summary of the argument; and (3) a table of authorities.

Pursuant to 19 CFR 351.310(c), interested parties who wish to request a hearing, limited to issues raised in the case and rebuttal briefs, must submit a written request to the Assistant Secretary for Enforcement and Compliance, U.S. Department of Commerce, within 30 days after the date of publication of this notice. Requests should contain: (1) The party's name, address, and telephone number; (2) the number of participants and whether any participant is a foreign national; and (3) a list of the issues to be discussed. If a request for a hearing is made, Commerce intends to hold the hearing at a time and date to be determined. Parties should confirm by telephone the date, time, and location of the hearing two days before the scheduled date.

An electronically filed document must be received successfully in its entirety by ACCESS by 5:00 p.m. Eastern Time on the established deadline. Note that Commerce has temporarily modified certain of its requirements for serving documents containing business proprietary information, until further notice.[16]

Final Determinations

Section 735(a)(1) of the Act and 19 CFR 351.210(b)(1) provide that Commerce will issue the final determination within 75 days after the date of its preliminary determination. Accordingly, Commerce will make its final determinations no later than 75 days after the signature date of these preliminary determinations.

International Trade Commission Notification

In accordance with section 733(f) of the Act, Commerce will notify the International Trade Commission (ITC) of our affirmative preliminary determinations. If our final determinations are affirmative, the ITC will determine before the later of 120 days after the date of these preliminary determinations or 45 days after our final determinations whether these imports are materially injuring, or threaten material injury to, the U.S. industry.

Notification to Interested Parties

These determinations are issued and published in accordance with sections 733(f) and 777(i)(1) of the Act and 19 CFR 351.205(c).

Dated: December 7, 2020.

Jeffrey I. Kessler,

Assistant Secretary for Enforcement and Compliance.

Appendix I

Scope of the Investigations

The scope of these investigations covers all forms and sizes of silicon metal, including silicon metal powder. Silicon metal contains at least 85.00 percent but less than 99.99 percent silicon, and less than 4.00 percent iron, by actual weight. Semiconductor grade silicon (merchandise containing at least 99.99 percent silicon by actual weight and classifiable under Harmonized Tariff Schedule of the United States (HTSUS) subheading 2804.61.0000) is excluded from the scope of these investigations.

Silicon metal is currently classifiable under subheadings 2804.69.1000 and 2804.69.5000 of the HTSUS. While the HTSUS numbers are provided for convenience and customs purposes, the written description of the scope remains dispositive.

SUPPLEMENTARY INFORMATION:

Background

On May 26, 2020, Commerce published the *Preliminary Determination* of this countervailing duty (CVD) investigation, which also aligned the final determination of this CVD investigation with the final determination in the companion antidumping duty investigation of fluid end blocks from Germany.[1] A summary of the events that occurred since Commerce published the *Preliminary Determination,* as well as a full discussion of the issues raised by parties for this final determination, may be found in the Issues and Decision Memorandum which is hereby adopted by this notice.[2] The Issues and Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at *http://access.trade.gov*. In addition, a complete version of the Final Decision Memorandum can be accessed directly at *http://enforcement.trade.gov/frn/*. The signed and electronic versions of the Issues and Decision Memorandum are identical in content.

Period of Investigation

The period of investigation (POI) is January 1, 2018 through December 31, 2018.

Scope of the Investigation

The products covered by this investigation are fluid end blocks from Germany. For a full description of the scope of this investigation, *see* the ''Scope of the Investigation'' in Appendix I.

Scope Comments

During the course of this investigation, Commerce received scope comments from interested parties. Commerce issued a Preliminary Scope Decision Memorandum to address these comments.[3] We received comments from interested parties on the Preliminary Scope Memorandum, which we address in the Final Scope Decision Memorandum, dated concurrently with, and hereby adopted by, this final determination.[4] Commerce is not modifying the scope language as it appeared in the *Preliminary Determination*. *See* Appendix I for the final scope of the investigation.

Analysis of Subsidy Programs and Comments Received

The subsidy programs under investigation and the issues raised in the case and rebuttal briefs by parties in this investigation are discussed in the Issues and Decision Memorandum. A list of the issues raised by parties raised is attached to this notice at Appendix II.

Methodology

Commerce conducted this investigation in accordance with section 701 of the Tariff Act of 1930, as amended (the Act). For each of the subsidy programs found countervailable, Commerce determines that there is a subsidy, *i.e.,* a financial contribution by an ''authority'' that gives rise to a benefit to the recipient, and that the subsidy is specific.[5] For a full description of the methodology underlying our final determination, *see* the Issues and Decision Memorandum.

Verification

Commerce normally verifies information relied upon in making its final determination, pursuant to section 782(i)(1) of the Tariff Act of 1930, as amended (the Act). However, during the course of this investigation, we were unable to conduct on-site verification due to travel restrictions.[6] Consistent with section 776(a)(2)(D) of the Act, Commerce relied on the information submitted on the record, which we used in making our *Preliminary Determination* and Post-Preliminary Determination,[7] as facts available in making our final determination.

All-Others Rate

We continue to calculate the all-others rate using a weighted average of the individual estimated subsidy rates calculated for the examined respondents (BGH Edelstahl Siegen GmbH and Schmiedewerke Gröditz GmbH) using each company's publicly ranged data for the value of their exports of subject merchandise to the United States.[8]

Final Determination

Commerce determines that the following estimated countervailable subsidy rates exist:

Company	Subsidy rate (percent)
BGH Edelstahl Siegen GmbH[9]	5.86
Schmiedewerke Gröditz GmbH[10]	6.71
voestalpine Bohler Group[11]	14.81
All Others[12]	6.29

Disclosure

We intend to disclose to parties in this proceeding the calculations performed for this final determination within five days of the date of publication of this notice, in accordance with 19 CFR 351.224(b).

Continuation of Suspension of Liquidation

As a result of our *Preliminary Determination* and pursuant to sections 703(d)(1)(B) and (d)(2) of the Act, Commerce instructed U.S. Customs and Border Protection (CBP) to suspend liquidation of entries of subject merchandise from Germany that were

[4] *See* Memorandum, ''Forged Steel Fluid End Blocks from the Federal Republic of Germany, India, Italy, and the People's Republic of China: Scope Comments Decision Memorandum for the Final Determinations,'' dated December 7, 2020 (Final Scope Decision Memorandum).

[5] *See* sections 771(5)(B) and (D) of the Act regarding financial contribution; section 771(5)(E) of the Act regarding benefit; and section 771(5A) of the Act regarding specificity.

[6] *See* Memorandum, ''Cancellation of Verification and Establishment of the Briefing Schedule,'' dated October 23, 2020.

[7] *See* Memorandum, ''Countervailing Duty Investigation of Forged Steel Fluid End Blocks from the Federal Republic of Germany: Post-Preliminary Analysis,'' dated October 26, 2020 (Post-Preliminary Determination).

[8] *See Preliminary Determination,* 85 FR at 31454.

[9] As discussed in the Preliminary Decision Memorandum, Commerce found the following companies to be cross-owned with BGH Edelstahl Siegen GmbH: Boschgotthardshütte O. Breyer GmbH, BGH Edelstahlwerke GmbH, Rohstoff-, Press- und Schneidbetrieb Siegen GmbH, and SRG Schrott und Recycling GmbH.

[10] As discussed in the Preliminary Decision Memorandum, Commerce found the following companies to be cross-owned with Schmiedewerke Gröditz GmbH: GMH Schmiedetechnik GmbH, Georgsmarienhütte Holding GmbH, and GHM Recycling GmbH.

[11] *See* Memorandum, ''AFA Calculation Memorandum for the Final Determination,'' dated December 7, 2020.

[12] For discussion of the calculation of this rate, *see* Memorandum, ''Countervailing Duty Investigation of Forged Steel Fluid End Blocks from the Federal Republic of Gemany: Final Determination Calculation of All Other's Rate,'' dated December 7, 2020.

entered or withdrawn from warehouse, for consumption on or after May 26, 2020, the date of publication of the *Preliminary Determination* in the **Federal Register**. In accordance with section 703(d) of the Act, effective September 23, 2020, we instructed CBP to discontinue the suspension of liquidation of all entries of subject merchandise, but to continue the suspension of liquidation of all entries of subject merchandise between May 26, 2020 and September 22, 2020.

If the U.S. International Trade Commission (ITC) issues a final affirmative injury determination, we will issue a CVD order and require a cash deposit of estimated countervailing duties for entries of subject merchandise in the amounts indicated above, in accordance with section 706(a) of the Act. If the ITC determines that material injury, or threat of material injury, does not exist, this proceeding will be terminated, and all estimated duties deposited or securities posted as a result of the suspension of liquidation will be refunded or canceled.

ITC Notification

In accordance with section 705(d) of the Act, Commerce will notify the ITC of its final affirmative determination that countervailable subsidies are being provided to producers and exporters of fluid end blocks from Germany. As Commerce's final determination is affirmative, in accordance with section 705(b) of the Act, the ITC will determine, within 45 days, whether the domestic industry in the United States is materially injured, or threatened with material injury. In addition, we are making available to the ITC all non-privileged and nonproprietary information related to this investigation. We will allow the ITC access to all privileged and business proprietary information in our files, provided the ITC confirms that it will not disclose such information, either publicly or under an administrative protective order (APO), without the written consent of the Assistant Secretary for Enforcement and Compliance.

Notification Regarding Administrative Protective Orders

In the event that the ITC issues a final negative injury determination, this notice will serve as the only reminder to parties subject to the APO of their responsibility concerning the destruction of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3). Timely written notification of the return/destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and terms of an APO is a violation which is subject to sanction.

Notification to Interested Parties

This determination is issued and published pursuant to sections 705(d) and 777(i) of the Act and 19 CFR 351.210(c).

Dated: December 7, 2020.

Jeffrey I. Kessler,

Assistant Secretary for Enforcement and Compliance.

Appendix I

Scope of the Investigation

The products covered by this investigation are forged steel fluid end blocks (fluid end blocks), whether in finished or unfinished form, and which are typically used in the manufacture or service of hydraulic pumps.

The term ''forged'' is an industry term used to describe the grain texture of steel resulting from the application of localized compressive force. Illustrative forging standards include, but are not limited to, American Society for Testing and Materials (ASTM) specifications A668 and A788.

For purposes of this investigation, the term ''steel'' denotes metal containing the following chemical elements, by weight: (i) Iron greater than or equal to 60 percent; (ii) nickel less than or equal to 8.5 percent; (iii) copper less than or equal to 6 percent; (iv) chromium greater than or equal to 0.4 percent, but less than or equal to 20 percent; and (v) molybdenum greater than or equal to 0.15 percent, but less than or equal to 3 percent. Illustrative steel standards include, but are not limited to, American Iron and Steel Institute (AISI) or Society of Automotive Engineers (SAE) grades 4130, 4135, 4140, 4320, 4330, 4340, 8630, 15–5, 17–4, F6NM, F22, F60, and XM25, as well as modified varieties of these grades.

The products covered by this investigation are: (1) Cut-to-length fluid end blocks with an actual height (measured from its highest point) of 8 inches (203.2 mm) to 40 inches (1,016.0 mm), an actual width (measured from its widest point) of 8 inches (203.2 mm) to 40 inches (1,016.0 mm), and an actual length (measured from its longest point) of 11 inches (279.4 mm) to 75 inches (1,905.0 mm); and (2) strings of fluid end blocks with an actual height (measured from its highest point) of 8 inches (203.2 mm) to 40 inches (1,016.0 mm), an actual width (measured from its widest point) of 8 inches (203.2 mm) to 40 inches (1,016.0 mm), and an actual length (measured from its longest point) up to 360 inches (9,144.0 mm).

The products included in the scope of this investigation have a tensile strength of at least 70 KSI (measured in accordance with ASTM A370) and a hardness of at least 140 HBW (measured in accordance with ASTM E10).

A fluid end block may be imported in finished condition (*i.e.,* ready for incorporation into a pump fluid end assembly without further finishing operations) or unfinished condition (*i.e.,* forged but still requiring one or more finishing operations before it is ready for incorporation into a pump fluid end assembly). Such finishing operations may include: (1) Heat treating; (2) milling one or more flat surfaces; (3) contour machining to custom shapes or dimensions; (4) drilling or boring holes; (5) threading holes; and/or (6) painting, varnishing, or coating.

Excluded from the scope of this investigation are fluid end block assemblies which (1) include (a) plungers and related housings, adapters, gaskets, seals, and packing nuts, (b) valves and related seats, springs, seals, and cover nuts, and (c) a discharge flange and related seals, and (2) are otherwise ready to be mated with the ''power end'' of a hydraulic pump without the need for installation of any plunger, valve, or discharge flange components, or any other further manufacturing operations.

The products included in the scope of this investigation may enter under Harmonized Tariff Schedule of the United States (HTSUS) subheadings 7218.91.0030, 7218.99.0030, 7224.90.0015, 7224.90.0045, 7326.19.0010, 7326.90.8688, or 8413.91.9055. While these HTSUS subheadings are provided for convenience and customs purposes, the written description of the scope of this investigation is dispositive.

DEPARTMENT OF COMMERCE

International Trade Administration

[A–533–891; A–580–904]

Forged Steel Fittings From India and the Republic of Korea: Antidumping Duty Orders

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: Based on affirmative final determinations by the Department of Commerce (Commerce) and the International Trade Commission (ITC), Commerce is issuing antidumping duty orders on forged steel fittings from India and the Republic of Korea (Korea).

DATES: Applicable December 11, 2020.

FOR FURTHER INFORMATION CONTACT: Caitlin Monks, AD/CVD Operations, Office VII, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–2670.

SUPPLEMENTARY INFORMATION:

Background

In accordance with sections 735(d) and 777(i)(1) of the Tariff Act of 1930, as amended (the Act), and 19 CFR 351.210(c), on October 19, 2020, Commerce published its final affirmative determinations in the less-than-fair-value (LTFV) investigations of forged steel fittings from India and Korea.[1] On November 25, 2020, the ITC notified Commerce of its final affirmative determinations that an industry in the United States is materially injured within the meaning of section 735(b)(1)(A)(i) of the Act, by reason of LTFV imports of forged steel fittings from India and Korea.[2]

Scope of the Orders

The products covered by these orders are forged steel fittings from India and Korea. For a complete description of the scope of the orders, *see* the Appendix to this notice.

Antidumping Duty Orders

On November 25, 2020, in accordance with sections 735(b)(1)(A)(i) and 735(d) of the Act, the ITC notified Commerce of its final determinations in this investigation, in which it found that an industry in the United States is materially injured by reason of imports of forged steel fittings from India and Korea.[3] Therefore, in accordance with section 735(c)(2) of the Act, Commerce is issuing these antidumping duty orders. Because the ITC determined that imports of forged steel fittings from India and Korea are materially injuring a U.S. industry, unliquidated entries of such merchandise from India and Korea, entered or withdrawn from warehouse for consumption, are subject to the assessment of antidumping duties.

As a result of the ITC's final affirmative determinations, in accordance with section 736(a)(1) of the Act, Commerce will direct U.S. Customs and Border Protection (CBP) to assess, upon further instruction by Commerce, antidumping duties equal to the amount by which the normal value of the merchandise exceeds the export price or constructed export price of the merchandise, for all relevant entries of forged steel fittings from India. Antidumping duties will be assessed on unliquidated entries of forged steel fittings from India and Korea entered, or withdrawn from warehouse, for consumption on or after May 28, 2020, the date of publication of the *Preliminary Determinations,*[4] but will not include entries occurring after the expiration of the provisional measures period and before publication of the ITC's final injury determination, as further described below.

Continuation of Suspension of Liquidation

In accordance with section 736 of the Act, Commerce will instruct CBP to continue to suspend liquidation of all relevant entries of forged steel fittings from India and Korea, as described in the Appendix of this notice, which are entered, or withdrawn from warehouse, for consumption on or after the date of publication of the ITC's notice of final determination in the **Federal Register**. These instructions suspending liquidation will remain in effect until further notice. Because the rate for Shakti Forge Industries Pvt. Ltd (Shakti) [5] is zero, we will not instruct CBP to suspend liquidation of entries of subject merchandise produced and exported by Shakti or to require cash deposits on such entries. Entries of subject merchandise exported to the United States by any other producer/exporter combination, *e.g.,* merchandise produced by a third party and exported by Shakti, or produced by Shakti and exported by a third party, are not entitled to this exclusion from suspension of liquidation and are subject to the applicable cash deposit rates noted below.

Commerce will also instruct CBP to require cash deposits equal to the estimated weighted-average dumping margins included in the tables below. Accordingly, effective on the date of publication in the **Federal Register** of the notice of the ITC's final affirmative injury determinations, CBP will require, at the same time as importers would

[15] Concession Fee Ordinance (Konzessionsabgabenverordung or KAV) Relief.

[16] Energy Tax Act or Energiesteuergesetz (EnergieStG).

[17] Electricity Tax Act or Stromsteuergesetz (StromStG).

[2] *See* ITC's Letter, ''Notification of ITC Final Determinations,'' dated November 25, 2020.

[3] *See* ITC Notification; *see also* Forged Steel Fittings from India and Korea (Inv. Nos. 701–TA–631 and 731–TA–1463–1464 (Final), USITC Publication 5137, November 2020).

[4] *See Forged Steel Fittings from India: Preliminary Affirmative Determination of Sales at Less-Than-Fair-Value, Postponement of Final Determination, and Extension of Provisional Measures,* 85 FR 32007 (May 28, 2020); *see also Forged Steel Fittings from the Republic of Korea: Preliminary Affirmative Determination of Sales at Less-Than-Fair-Value, Postponement of Final Determination, and Extension of Provisional Measures,* 85 FR 32010 (May 28, 2020); (*Preliminary Determinations*).

[5] Commerce has determined Shakti Forge Industries Pvt. Ltd and its affiliate Shakti Forge to constitute a single entity. *See* Preliminary Decision Memorandum.

normally deposit estimated duties on subject merchandise, a cash deposit equal to the estimated weighted-average dumping margins listed in the tables below. The all-others rate for each country applies to all producers or exporters not specifically listed.

Estimated Weighted-Average Dumping Margins

The estimated weighted-average dumping margins for each antidumping duty order are as follows:

INDIA

Exporter/producer	Estimated weighted-average dumping margin (percent)	Cash deposit rate (adjusted for subsidy offset(s)) (percent) [6]
Shakti Forge Industries Pvt. Ltd [7]	* 0.00	Not Applicable.
Nikoo Forge Pvt. Ltd.	** 293.40	290.88.
Pan International	** 293.40	290.88.
Disha Auto Components Pvt. Ltd	** 293.40	290.88.
Dynamic Flow Products	** 293.40	290.88.
Kirtanlal Steel Pvt Ltd	** 293.40	290.88.
Metal Forgings Pvt Ltd	** 293.40	290.88.
Patton International Limited	** 293.40	290.88.
Sage Metals Limited	** 293.40	290.88.
Technotrak Engineers	** 293.40	290.88.
All Others	195.60	193.08.

* (*de minimis*).
** (adverse facts available (AFA)).

KOREA

Exporter/producer	Estimated weighted-average dumping margin (percent)
Samyoung Fitting Co., Ltd	17.08
Sandong Metal Industry Co., Ltd	** 198.38
ZEOtech Co., Ltd	** 198.38
Pusan Coupling Corporation	** 198.38
Shinchang Industries	** 198.38
Shinwoo Tech	** 198.38
Titus Industrial Korea Co, Ltd	** 198.38
All Others	17.08

** AFA.

Provisional Measures

Section 733(d) of the Act states that suspension of liquidation pursuant to an affirmative preliminary determination may not remain in effect for more than four months, except that Commerce may extend the four-month period to no more than six months at the request of exporters representing a significant portion of exports of the subject merchandise. At the request of exporters that account for a significant proportion of forged steel fittings from India and Korea, Commerce extended the four-month period to six months in the *Preliminary Determinations,* published on May 28, 2020. Therefore, the extended provisional measures period, beginning on the date of publication of the *Preliminary Determinations,* ended on November 23, 2020. Pursuant to section 737(b) of the Act, the collection of cash deposits at the rates listed above will begin on the date of publication of the ITC's final injury determination.

Therefore, in accordance with section 733(d) of the Act and our practice, we will instruct CBP to terminate the suspension of liquidation and to liquidate, without regard to antidumping duties, unliquidated entries of forged steel fittings from India and Korea entered, or withdrawn from warehouse, for consumption on or after November 24, 2020, the first day provisional measures were no longer in effect, until and through the day preceding the date of publication of the ITC's final injury determinations in the **Federal Register**.

Notifications to Interested Parties

This notice constitutes the antidumping duty orders with respect to forged steel fittings from India and Korea, pursuant to section 736(a) of the Act. Interested parties can find a list of antidumping duty orders currently in effect at *https://enforcement.trade.gov/stats/iastats1.html.*

These orders are issued and published in accordance with section 736(a) of the Act and 19 CFR 351.211(b).

Dated: December 4, 2020.

Jeffrey I. Kessler,

Assistant Secretary for Enforcement and Compliance.

Appendix

Scope of the Orders

The merchandise covered by these orders is carbon and alloy forged steel fittings, whether unfinished (commonly known as blanks or rough forgings) or finished. Such fittings are made in a variety of shapes including, but not limited to, elbows, tees, crosses, laterals, couplings, reducers, caps, plugs, bushings, unions (including hammer unions), and outlets. Forged steel fittings are covered regardless of end finish, whether threaded, socket-weld or other end connections. The scope includes integrally reinforced forged branch outlet fittings, regardless of whether they have one or more ends that is a socket welding, threaded, butt welding end, or other end connections.

While these fittings are generally manufactured to specifications ASME B16.11, MSS SP–79, MSS SP–83, MSS–SP–97, ASTM A105, ASTM A350 and ASTM A182, the scope is not limited to fittings made to these specifications.

The term forged is an industry term used to describe a class of products included in applicable standards, and it does not reference an exclusive manufacturing process. Forged steel fittings are not manufactured from casings. Pursuant to the applicable standards, fittings may also be machined from bar stock or machined from seamless pipe and tube.

All types of forged steel fittings are included in the scope regardless of nominal pipe size (which may or may not be expressed in inches of nominal pipe size), pressure class rating (expressed in pounds of pressure, *e.g.,* 2,000 or 2M; 3,000 or 3M;

[6] *See* Memorandum, ''Final Countervailing Duty Determination Calculations for Shakti Forge Industries Pvt. Ltd. and Shakti Forge,'' dated October 13, 2020.

[7] Commerce has determined Shakti Forge Industries Pvt. Ltd and its affiliate Shakti Forge to constitute a single entity. *See* Preliminary Decision Memorandum.

6,000 or 6M; 9,000 or 9M), wall thickness, and whether or not heat treated.

Excluded from this scope are all fittings entirely made of stainless steel. Also excluded are flanges, nipples, and all fittings that have a maximum pressure rating of 300 pounds per square inch/PSI or less.

Also excluded from the scope are fittings certified or made to the following standards, so long as the fittings are not also manufactured to the specifications of ASME B16.11, MSS SP–79, MSS SP–83, MSS SP–97, ASTM A105, ASTM A350 and ASTM A182:

- American Petroleum Institute (API) 5CT, API 5L, or API 11B;
- American Society of Mechanical Engineers (ASME) B16.9;
- Manufacturers Standardization Society (MSS) SP–75;
- Society of Automotive Engineering (SAE) J476, SAE J514, SAE J516, SAE J517, SAE J518, SAE J1026, SAE J1231, SAE J1453, SAE J1926, J2044 or SAE AS 35411;
- Hydraulic hose fittings (*e.g.,* fittings used in high pressure water cleaning applications, in the manufacture of hydraulic engines, to connect rubber dispensing hoses to a dispensing nozzle or grease fitting) made to ISO 12151–1, 12151–2, 12151–3, 12151–4, 12151–5, or 12151–6;
- Underwriter's Laboratories (UL) certified electrical conduit fittings;
- ASTM A153, A536, A576, or A865;
- Casing conductor connectors made to proprietary specifications;
- Machined steel parts (*e.g.,* couplers) that are not certified to any specifications in this scope description and that are not for connecting steel pipes for distributing gas and liquids;
- Oil country tubular goods (OCTG) connectors (*e.g.,* forged steel tubular connectors for API 5L pipes or OCTG for offshore oil and gas drilling and extraction);
- Military Specification (MIL) MIL–C–4109F and MIL–F–3541; and
- International Organization for Standardization (ISO) ISO6150–B.

Also excluded from the scope are assembled or unassembled hammer unions that consist of a nut and two subs. To qualify for this exclusion, the hammer union must meet each of the following criteria: (1) The face of the nut of the hammer union is permanently marked with one of the following markings: ''FIG 100,'' ''FIG 110,'' ''FIG 100C,'' ''FIG 200,'' ''FIG 200C,'' ''FIG 201,'' ''FIG 202,'' ''FIG 206,'' ''FIG 207,'' ''FIG 211,'' ''FIG 300,'' ''FIG 301,'' ''FIG 400,'' ''FIG 600,'' ''FIG 602,'' ''FIG 607,'' ''FIG 1002,'' ''FIG 1003,'' ''FIG 1502,'' ''FIG 1505,'' ''FIG 2002,'' or ''FIG 2202''; (2) the hammer union does not bear any of the following markings: ''Class 3000,'' ''Class 3M,'' ''Class 6000,'' ''Class 6M,'' ''Class 9000,'' or ''Class 9M''; and (3) the nut and both subs of the hammer union are painted.

Also excluded from the scope are subs or wingnuts made to ASTM A788, marked with ''FIG 1002,'' ''FIG 1502,'' or ''FIG 2002,'' and with a pressure rating of 10,000 PSI or greater. These parts are made from AISI/SAE 4130, 4140, or 4340 steel and are 100 percent magnetic particle inspected before shipment.

Also excluded from the scope are tee, elbow, cross, adapter (or ''crossover''), blast joint (or ''spacer''), blind sub, swivel joint and pup joint which have wing nut or not. To qualify for this exclusion, these products must meet each of the following criteria: (1) Manufacturing and Inspection standard is API 6A or API 16C; and, (2) body or wing nut is permanently marked with one of the following markings: ''FIG 2002,'' ''FIG 1502,'' ''FIG 1002,'' ''FIG 602,'' ''FIG 206,'' or ''FIG any other number'' or MTR (Material Test Report) shows these FIG numbers.

To be excluded from the scope, products must have the appropriate standard or pressure markings and/or be accompanied by documentation showing product compliance to the applicable standard or pressure, *e.g.,* ''API 5CT'' mark and/or a mill certification report.

Subject carbon and alloy forged steel fittings are normally entered under Harmonized Tariff Schedule of the United States (HTSUS) 7307.92.3010, 7307.92.3030, 7307.92.9000, 7307.99.1000, 7307.99.3000, 7307.99.5045, and 7307.99.5060. They may also be entered under HTSUS 7307.93.3010, 7307.93.3040, 7307.93.6000, 7307.93.9010, 7307.93.9040, 7307.93.9060, and 7326.19.0010.

The HTSUS subheadings and specifications are provided for convenience and customs purposes; the written description of the scope is dispositive.

Forged Steel Fittings from India: Countervailing Duty Order

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: Based on affirmative final determinations by the Department of Commerce (Commerce) and the International Trade Commission (ITC), Commerce is issuing a countervailing duty order on forged steel fittings from India.

DATES: Applicable December 11, 2020.

FOR FURTHER INFORMATION CONTACT: Lauren Caserta, AD/CVD Operations, Office VII, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–4737.

SUPPLEMENTARY INFORMATION:

Background

In accordance with section 705(d) of the Tariff Act of 1930, as amended (the Act), on October 20, 2020, Commerce published its affirmative final determination that countervailable subsidies are being provided to producers and exporters of forged steel fittings from India.[1] On November 25, 2020, the ITC notified Commerce of its affirmative determination that an industry in the United States is materially injured within the meaning of section 705(b)(1)(A)(i) of the Act, by reason of subsidized imports of subject merchandise from India.[2]

Scope of the Order

The scope of this order covers forged steel fittings from India. For a complete description of the scope, *see* the Appendix to this notice.

Countervailing Duty Order

On November 25, 2020, in accordance with sections 705(b)(1)(A)(i) and 705(d) of the Act, the ITC notified Commerce of its final determination in this investigation, in which it found that an industry in the United States is materially injured by reason of imports of forged steel fittings from India. Therefore, in accordance with section 705(c)(2) of the Act, Commerce is issuing this countervailing duty order. Because the ITC determined that imports of forged steel fittings from India are materially injuring a U.S. industry, unliquidated entries of such merchandise from India, entered or withdrawn from warehouse for consumption, are subject to the assessment of countervailing duties.

Therefore, in accordance with section 706(a) of the Act, Commerce will direct U.S. Customs and Border Protection (CBP) to assess, upon further instruction by Commerce, countervailing duties for all relevant entries of forged steel fittings from India. Countervailing duties will be assessed on unliquidated entries of forged steel fittings from India entered, or withdrawn from warehouse, for consumption on or after March 30, 2020, the date of publication of the *Preliminary Determination,*[3] but will not include entries occurring after the expiration of the provisional measures period and before publication of the ITC's final injury determination, as further described below.

Suspension of Liquidation

In accordance with section 706 of the Act, Commerce will instruct CBP to

[1] *See Forged Steel Fittings from India: Final Affirmative Countervailing Duty Determination,* 85 FR 66535 (October 20, 2020).

[2] *See* ITC's Letter, ''Notification of ITC Final Determinations,'' dated November 25, 2020.

[3] See Forged Steel Fittings from India: Preliminary Affirmative Countervailing Duty Determination, and Alignment of Final Determination with Final Antidumping Duty Determination, 85 FR 17536 (March 30, 2020) (Preliminary Determination).

reinstitute the suspension of liquidation of forged steel fittings from India. We will also instruct CBP to require, pursuant to section 706(a)(1) of the Act, countervailing duties for each entry of the subject merchandise in an amount based on the net countervailable subsidy rates for the subject merchandise. These instructions suspending liquidation will remain in effect until further notice.

Company	Subsidy rate *ad valorem* (percent)
Shakti Forge Industries Pvt. Ltd[4]	2.64
Nikoo Forge Pvt. Ltd., Pan International, Patton International Limited, Sage Metals Limited, Kirtanlal Steel Private Limited, Disha Auto Components Private Limited, Dynamic Flow Products, Sara Sae Private Limited, and Parveen Industries Private Limited	300.77
All Others	2.64

Provisional Measures

Section 703(d) of the Act states that instructions issued pursuant to an affirmative preliminary determination may not remain in effect for more than four months. In the underlying investigation, Commerce published the *Preliminary Determination* on March 30, 2020. Therefore, the four-month period beginning on the date of the publication of the *Preliminary Determinations* ended on July 27, 2020.

In accordance with section 703(d) of the Act and our practice, we instructed CBP to terminate the suspension of liquidation and to liquidate, without regard to countervailing duties, unliquidated entries of forged steel fittings from India entered, or withdrawn from warehouse, for consumption on or after July 28, 2020, the day after the date the provisional measures expired, until and through the day preceding the date of publication of the ITC's final injury determination in the **Federal Register**. Suspension of liquidation will resume on the date of publication of the ITC's final determination in the **Federal Register**.

Notifications to Interested Parties

This notice constitutes the countervailing duty order with respect to forged steel fittings from India pursuant to sections 706(a) of the Act. Interested parties can find a list of countervailing duty orders currently in effect at *https://enforcement.trade.gov/stats/iastats1.html.*

This order is issued and published in accordance with section 706(a) of the Act and 19 CFR 351.211(b).

Dated: December 4, 2020.

Jeffrey I. Kessler,

Assistant Secretary for Enforcement and Compliance.

Appendix

Scope of the Order

The merchandise covered by this order is carbon and alloy forged steel fittings, whether unfinished (commonly known as blanks or rough forgings) or finished. Such fittings are made in a variety of shapes including, but not limited to, elbows, tees, crosses, laterals, couplings, reducers, caps, plugs, bushings, unions (including hammer unions), and outlets. Forged steel fittings are covered regardless of end finish, whether threaded, socket-weld or other end connections. The scope includes integrally reinforced forged branch outlet fittings, regardless of whether they have one or more ends that is a socket welding, threaded, butt welding end, or other end connections.

While these fittings are generally manufactured to specifications ASME B16.11, MSS SP–79, MSS SP–83, MSS–SP–97, ASTM A105, ASTM A350 and ASTM A182, the scope is not limited to fittings made to these specifications.

The term forged is an industry term used to describe a class of products included in applicable standards, and it does not reference an exclusive manufacturing process. Forged steel fittings are not manufactured from casings. Pursuant to the applicable standards, fittings may also be machined from bar stock or machined from seamless pipe and tube.

All types of forged steel fittings are included in the scope regardless of nominal pipe size (which may or may not be expressed in inches of nominal pipe size), pressure class rating (expressed in pounds of pressure, *e.g.,* 2,000 or 2M; 3,000 or 3M; 6,000 or 6M; 9,000 or 9M), wall thickness, and whether or not heat treated.

Excluded from this scope are all fittings entirely made of stainless steel. Also excluded are flanges, nipples, and all fittings that have a maximum pressure rating of 300 pounds per square inch/PSI or less.

Also excluded from the scope are fittings certified or made to the following standards, so long as the fittings are not also manufactured to the specifications of ASME B16.11, MSS SP–79, MSS SP–83, MSS SP–97, ASTM A105, ASTM A350 and ASTM A182:

- American Petroleum Institute (API) 5CT, API 5L, or API 11B;
- American Society of Mechanical Engineers (ASME) B16.9;
- Manufacturers Standardization Society (MSS) SP–75;
- Society of Automotive Engineering (SAE) J476, SAE J514, SAE J516, SAE J517, SAE J518, SAE J1026, SAE J1231, SAE J1453, SAE J1926, J2044 or SAE AS 35411;
- Hydraulic hose fittings (*e.g.,* fittings used in high pressure water cleaning applications, in the manufacture of hydraulic engines, to connect rubber dispensing hoses to a dispensing nozzle or grease fitting) made to ISO 12151–1, 12151–2, 12151–3, 12151–4, 12151–5, or 12151–6;
- Underwriter's Laboratories (UL) certified electrical conduit fittings;
- ASTM A153, A536, A576, or A865;
- Casing conductor connectors made to proprietary specifications;
- Machined steel parts (*e.g.,* couplers) that are not certified to any specifications in this scope description and that are not for connecting steel pipes for distributing gas and liquids;
- Oil country tubular goods (OCTG) connectors (*e.g.,* forged steel tubular connectors for API 5L pipes or OCTG for offshore oil and gas drilling and extraction);
- Military Specification (MIL) MIL–C–4109F and MIL–F–3541; and
- International Organization for Standardization (ISO) ISO6150–B.

Also excluded from the scope are assembled or unassembled hammer unions that consist of a nut and two subs. To qualify for this exclusion, the hammer union must meet each of the following criteria: (1) The face of the nut of the hammer union is permanently marked with one of the following markings: ''FIG 100,'' ''FIG 110,'' ''FIG 100C,'' ''FIG 200,'' ''FIG 200C,'' ''FIG 201,'' ''FIG 202,'' ''FIG 206,'' ''FIG 207,'' ''FIG 211,'' ''FIG 300,'' ''FIG 301,'' ''FIG 400,'' ''FIG 600,'' ''FIG 602,'' ''FIG 607,'' ''FIG 1002,'' ''FIG 1003,'' ''FIG 1502,'' ''FIG 1505,'' ''FIG 2002,'' or ''FIG 2202''; (2) the hammer union does not bear any of the following markings: ''Class 3000,'' ''Class 3M,'' ''Class 6000,'' ''Class 6M,'' ''Class 9000,'' or ''Class 9M''; and (3) the nut and both subs of the hammer union are painted.

Also excluded from the scope are subs or wingnuts made to ASTM A788, marked with ''FIG 1002,'' ''FIG 1502,'' or ''FIG 2002,'' and with a pressure rating of 10,000 PSI or greater. These parts are made from AISI/SAE 4130, 4140, or 4340 steel and are 100 percent magnetic particle inspected before shipment.

Also excluded from the scope are tee, elbow, cross, adapter (or ''crossover''), blast joint (or ''spacer''), blind sub, swivel joint and pup joint which have wing nut or not. To qualify for this exclusion, these products must meet each of the following criteria: (1) Manufacturing and Inspection standard is API 6A or API 16C; and, (2) body or wing nut is permanently marked with one of the following markings: ''FIG 2002,'' ''FIG 1502,'' ''FIG 1002,'' ''FIG 602,'' ''FIG 206,'' or ''FIG any other number'' or MTR (Material Test Report) shows these FIG numbers.

To be excluded from the scope, products must have the appropriate standard or pressure markings and/or be accompanied by documentation showing product compliance to the applicable standard or pressure, *e.g.,* ''API 5CT'' mark and/or a mill certification report.

Subject carbon and alloy forged steel fittings are normally entered under Harmonized Tariff Schedule of the United

[4] Commerce has found Shakti Forge Industries Pvt. Ltd. and Shakti Forge to be cross-owned, pursuant to 19 CFR 351.525(b)(6)(vi).

States (HTSUS) 7307.92.3010, 7307.92.3030, 7307.92.9000, 7307.99.1000, 7307.99.3000, 7307.99.5045, and 7307.99.5060. They may also be entered under HTSUS 7307.93.3010, 7307.93.3040, 7307.93.6000, 7307.93.9010, 7307.93.9040, 7307.93.9060, and 7326.19.0010.

The HTSUS subheadings and specifications are provided for convenience and customs purposes; the written description of the scope is dispositive.

Forged Steel Fluid End Blocks From the Federal Republic of Germany: Final Determination of Sales at Less Than Fair Value

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (Commerce) determines that imports of forged steel fluid end blocks (fluid end blocks) from the Federal Republic of Germany (Germany) are being, or are likely to be, sold in the United States at less than fair value (LTFV) for the period of investigation October 1, 2018 through September 30, 2019.

DATES: Applicable December 11, 2020.

FOR FURTHER INFORMATION CONTACT: Alexis Cherry or Katherine Johnson, AD/CVD Operations, Office VIII, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–0607 or (202) 482–4929, respectively.

SUPPLEMENTARY INFORMATION:

Background

On July 23, 2020, Commerce published in the **Federal Register** its preliminary affirmative determination in the LTFV investigation of fluid end blocks from Germany, in which we also postponed the final determination until December 7, 2020.[1] We invited interested parties to comment on the *Preliminary Determination.* A summary of the events that occurred since Commerce published the *Preliminary Determination,* as well as a full discussion of the issues raised by parties for this final determination, may be found in the Issues and Decision Memorandum.[2]

Scope of the Investigation

The products covered by this investigation are fluid end blocks from Germany. For a complete description of the scope of this investigation, *see* Appendix I.

Scope Comments

During the course of this investigation, Commerce received scope comments from interested parties. Commerce issued a Preliminary Scope Decision Memorandum to address these comments.[3] We received comments from interested parties on the Preliminary Scope Decision Memorandum, which we address in the Final Scope Decision Memorandum, dated concurrently with, and hereby adopted by, this final determination.[4] Commerce is not modifying the scope language as it appeared in the *Preliminary Determination.* See Appendix I for the final scope of the investigation.

Analysis of Comments Received

All issues raised in the case and rebuttal briefs that were submitted by parties in this investigation are addressed in the Issues and Decision Memorandum. A list of the issues addressed in the Issues and Decision Memorandum is attached to this notice at Appendix II. The Issues and Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at *https://access.trade.gov.* In addition, a complete version of the Issues and Decision Memorandum can be accessed directly at *http://enforcement.trade.gov/frn.* The signed and electronic versions of the Issues and Decision Memorandum are identical in content.

Verification

Commerce was unable to conduct on-site verification of the information relied upon in making its final determination in this investigation as provided for in section 782(i) of the Tariff Act of 1930, as amended (the Act). Accordingly, we took additional steps in lieu of on-site verification and requested additional documentation and information.[5]

Changes Since the Preliminary Determination

Based on our analysis of the comments received and our findings related to our request for information in lieu of verification, we made certain changes to the margin calculations. For a discussion of these changes, *see* the ''Margin Calculations'' section of the Issues and Decision Memorandum.

Use of Adverse Facts Available

The respondents Schmiedewerke Groditz GmbH (SWG) and voestalpine Bohler Group (voestalpine) failed to cooperate in this investigation. Therefore, in the *Preliminary Determination,* pursuant to sections 776(a) and (b) of the Act, Commerce assigned SWG and voestalpine a rate based on adverse facts available (AFA). There is no new information on the record that would cause us to revisit our determination to apply AFA to these companies. Accordingly, we continue to find that the application of AFA pursuant to sections 776(a) and (b) of the Act is warranted with respect to SWG and voestalpine. Commerce has assigned to SWG's and voestalpine's exports of the subject merchandise the rate of 70.84 percent, which is BGH's highest transaction-specific margin.[6] Because this rate is not secondary information, but rather is based on information obtained in the course of the investigation, Commerce need not corroborate this rate pursuant to section 776(c) of the Act.

All-Others Rate

Section 735(c)(5)(A) of the Act provides that the estimated weighted-average dumping margin for all other producers and exporters not individually investigated shall be equal to the weighted average of the estimated weighted-average dumping margins established for exporters and producers

[1] *See Forged Steel Fluid End Blocks from the Federal Republic of Germany: Preliminary Affirmative Determination of Sales at Less Than Fair Value, Postponement of Final Determination, and Extension of Provisional Measures,* 85 FR 44513 (July 23, 2020) (*Preliminary Determination*) and accompanying Preliminary Decision Memorandum.

[2] *See* Memorandum, ''Issues and Decision Memorandum for the Final Affirmative Determination in the Less-Than-Fair-Value Investigation of Forged Steel Fluid End Blocks from the Federal Republic of Germany,'' dated concurrently with, and hereby adopted by, this notice (Issues and Decision Memorandum).

[3] *See* Memorandum, ''Forged Steel Fluid End Blocks from the Federal Republic of Germany, India, Italy, and the People's Republic of China: Scope Comments Decision Memorandum for the Preliminary Determinations,'' dated May 18, 2020 (Preliminary Scope Decision Memorandum).

[4] *See* Memorandum, ''Forged Steel Fluid End Blocks from the Federal Republic of Germany, India, Italy, and the People's Republic of China: Scope Comments Decision Memorandum for the Final Determinations,'' dated December 7, 2020 (Final Scope Decision Memorandum).

[5] *See* Commerce's Letter to BGH, ''Less-Than-Fair-Value Investigation of Forged Steel Fluid End Blocks from the Federal Republic of Germany,'' dated October 20, 2020; *see also* BGH's Letter, ''Forged Steel Fluid End Blocks from Germany: Response to Questionnaire in Lieu of Performing On-Site Verification,'' dated October 28, 2020.

[6] *See* Issues and Decision Memorandum.

individually investigated excluding rates that are zero, *de minimis,* or determined entirely under section 776 of the Act. Commerce assigned a rate based entirely on facts available to SWG and voestalpine. Therefore, the only rate that is not zero, *de minimis,* or based entirely on facts otherwise available is the rate calculated for BGH. Consequently, the rate calculated for BGH is also assigned as the rate for all other producers and exporters.

Final Determination

The final estimated weighted-average dumping margins are as follows:

Exporter/producer	Estimated weighted-average dumping margin (percent)
BGH Edelstahl Siegen GmbH	[7] 3.82
Schmiedewerke Groditz GmbH ..	** 70.84
voestalpine Bohler Group	** 70.84
All Others	3.82

** Adverse Facts Available.

Disclosure

We intend to disclose the calculations performed in this final determination within five days of the date of publication of this notice to parties in this proceeding in accordance with 19 CFR 351.224(b).

Continuation of Suspension of Liquidation

In accordance with section 735(c)(1)(B) of the Act, Commerce will instruct U.S. Customs and Border Protection (CBP) to continue to suspend liquidation of all appropriate entries of fluid end blocks from Germany, as described in Appendix I of this notice, which are entered, or withdrawn from warehouse, for consumption on or after July 23, 2020, the date of publication in the **Federal Register** of the affirmative *Preliminary Determination.*

Pursuant to section 735(c)(1)(B)(ii) of the Act and 19 CFR 351.210(d), we will instruct CBP to require a cash deposit for such entries of merchandise equal to the estimated weighted-average dumping margin as follows: (1) The cash deposit rate for the respondents listed above will be equal to the respondent-specific estimated weighted-average dumping margin determined in this final determination; (2) if the exporter is not a respondent identified above but the producer is, then the cash deposit rate will be equal to the respondent-specific estimated weighted-average dumping margin established for that producer of the subject merchandise; and (3) the cash deposit rate for all other producers and exporters will be equal to the all-others estimated weighted-average dumping margin. These suspension-of-liquidation instructions will remain in effect until further notice.

While Commerce normally adjusts cash deposits for estimated antidumping (AD) duties by the amount of export subsidies countervailed in a companion CVD proceeding when CVD provisional measures are in effect, we have not adjusted the cash deposit rates listed above because Commerce found no countervailable export subsidies in the final determination of the companion CVD investigation.[8]

International Trade Commission Notification

In accordance with section 735(d) of the Act, we will notify the International Trade Commission (ITC) of the final affirmative determination of sales at LTFV. Because Commerce's final determination is affirmative, in accordance with section 735(b)(2) of the Act, the ITC will make its final determination as to whether the domestic industry in the United States is materially injured, or threatened with material injury, by reason of imports or sales (or the likelihood of sales) for importation of fluid end blocks no later than 45 days after this final determination. If the ITC determines that such injury does not exist, this proceeding will be terminated, and all cash deposits posted will be refunded and suspension of liquidation will be lifted. If the ITC determines that such injury does exist, Commerce will issue an AD order directing CBP to assess, upon further instruction by Commerce, AD duties on all imports of the subject merchandise entered, or withdrawn from warehouse, for consumption on or after the effective date of the suspension of liquidation, as discussed above in the ''Continuation of Suspension of Liquidation'' section.

Notification Regarding Administrative Protective Orders

This notice will serve as a final reminder to the parties subject to administrative protective order (APO) of their responsibility concerning the disposition of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3). Timely written notification of return or destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and the terms of an APO is a sanctionable violation.

Notification to Interested Parties

This determination and this notice are issued and published pursuant to sections 735(d) and 777(i)(1) of the Act and 19 CFR 351.210(c).

Dated: December 7, 2020.

Jeffrey I. Kessler,

Assistant Secretary for Enforcement and Compliance.

Appendix I—Scope of the Investigation

The products covered by this investigation are forged steel fluid end blocks (fluid end blocks), whether in finished or unfinished form, and which are typically used in the manufacture or service of hydraulic pumps.

The term ''forged'' is an industry term used to describe the grain texture of steel resulting from the application of localized compressive force. Illustrative forging standards include, but are not limited to, American Society for Testing and Materials (ASTM) specifications A668 and A788.

For purposes of this investigation, the term ''steel'' denotes metal containing the following chemical elements, by weight: (i) Iron greater than or equal to 60 percent; (ii) nickel less than or equal to 8.5 percent; (iii) copper less than or equal to 6 percent; (iv) chromium greater than or equal to 0.4 percent, but less than or equal to 20 percent; and (v) molybdenum greater than or equal to 0.15 percent, but less than or equal to 3 percent. Illustrative steel standards include, but are not limited to, American Iron and Steel Institute (AISI) or Society of Automotive Engineers (SAE) grades 4130, 4135, 4140, 4320, 4330, 4340, 8630, 15–5, 17–4, F6NM, F22, F60, and XM25, as well as modified varieties of these grades.

The products covered by this investigation are: (1) Cut-to-length fluid end blocks with an actual height (measured from its highest point) of 8 inches (203.2 mm) to 40 inches (1,016.0 mm), an actual width (measured from its widest point) of 8 inches (203.2 mm) to 40 inches (1,016.0 mm), and an actual length (measured from its longest point) of 11 inches (279.4 mm) to 75 inches (1,905.0 mm); and (2) strings of fluid end blocks with an actual height (measured from its highest point) of 8 inches (203.2 mm) to 40 inches (1,016.0 mm), an actual width (measured from its widest point) of 8 inches (203.2 mm) to 40 inches (1,016.0 mm), and an actual length (measured from its longest point) up to 360 inches (9,144.0 mm).

The products included in the scope of this investigation have a tensile strength of at least 70 KSI (measured in accordance with ASTM A370) and a hardness of at least 140 HBW (measured in accordance with ASTM E10).

[7] *See* Memorandum, ''Antidumping Duty Investigation of Forged Steel Fluid End Blocks from the Republic of Germany: Final Determination Margin Calculation for BGH Edelstahl Siegen GmbH,'' dated concurrently with, and hereby adopted by, this notice.

[8] *See* Forged Steel Fluid End Blocks from the Federal Republic of Germany: Final Affirmative Countervailing Duty Determination, and accompanying Issues and Decision Memorandum, dated December 7, 2020.

A fluid end block may be imported in finished condition (*i.e.,* ready for incorporation into a pump fluid end assembly without further finishing operations) or unfinished condition (*i.e.,* forged but still requiring one or more finishing operations before it is ready for incorporation into a pump fluid end assembly). Such finishing operations may include: (1) Heat treating; (2) milling one or more flat surfaces; (3) contour machining to custom shapes or dimensions; (4) drilling or boring holes; (5) threading holes; and/or (6) painting, varnishing, or coating.

Excluded from the scope of this investigation are fluid end block assemblies which (1) include (a) plungers and related housings, adapters, gaskets, seals, and packing nuts, (b) valves and related seats, springs, seals, and cover nuts, and (c) a discharge flange and related seals, and (2) are otherwise ready to be mated with the ''power end'' of a hydraulic pump without the need for installation of any plunger, valve, or discharge flange components, or any other further manufacturing operations.

The products included in the scope of this investigation may enter under Harmonized Tariff Schedule of the United States (HTSUS) subheadings 7218.91.0030, 7218.99.0030, 7224.90.0015, 7224.90.0045, 7326.19.0010, 7326.90.8688, or 8413.91.9055. While these HTSUS subheadings are provided for convenience and customs purposes, the written description of the scope of the investigation is dispositive.

DEPARTMENT OF COMMERCE

International Trade Administration

[C–570–116]

Forged Steel Fluid End Blocks From the People's Republic of China: Final Affirmative Countervailing Duty Determination

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (Commerce) determines that countervailable subsidies are being provided to producers and exporters of forged steel fluid end blocks (fluid end blocks) from the People's Republic of China (China).

DATES: Applicable December 11, 2020.

FOR FURTHER INFORMATION CONTACT: Jaron Moore or Janae Martin, AD/CVD Operations, Office VIII, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–3640 or (202) 482–0238, respectively.

SUPPLEMENTARY INFORMATION:

Background

On May 26, 2020, Commerce published the *Preliminary Determination* of this countervailing duty (CVD) investigation, which also aligned the final determination of this CVD investigation with the final determination of the concurrent antidumping duty (AD) investigation.[1] A summary of the events that occurred since Commerce published the *Preliminary Determination,* as well as a full discussion of the issues raised by parties for this final determination, may be found in the Issues and Decision Memorandum which is hereby adopted by this notice.[2] The Issues and Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at *http://access.trade.gov.* In addition, a complete version of the Final Decision Memorandum can be accessed directly at *http://enforcement.trade.gov/frn/.* The signed and electronic versions of the Issues and Decision Memorandum are identical in content.

Period of Investigation

The period of investigation is January 1, 2018 through December 31, 2018.

Scope of the Investigation

The products covered by this investigation are fluid end blocks from China. For a complete description of the scope of this investigation, *see* Appendix I.

Scope Comments

During the course of this investigation, Commerce received scope comments from interested parties. Commerce issued a Preliminary Scope Decision Memorandum to address these comments.[3] We received comments from interested parties on the Preliminary Scope Memorandum, which we address in the Final Scope Decision Memorandum, dated concurrently with, and hereby adopted by, this final determination.[4] Commerce is not modifying the scope language as it appeared in the *Preliminary Determination. See* Appendix I for the final scope of the investigation.

Analysis of Subsidy Programs and Comments Received

The subsidy programs under investigation and the issues raised in the case and rebuttal briefs by parties in this investigation are discussed in the Issues and Decision Memorandum. A list of the issues raised by parties is attached to this notice at Appendix II.

Methodology

Commerce conducted this investigation in accordance with section 701 of the Tariff Act of 1930, as amended (the Act). For each of the subsidy programs found countervailable, Commerce determines that there is a subsidy, *i.e.,* a financial contribution by an ''authority'' that gives rise to a benefit to the recipient, and that the subsidy is specific.[5] For a

[1] *See Forged Steel Fluid End Blocks from the People's Republic of China: Preliminary Affirmative Countervailing Duty Determination, and Alignment of Final Determination With Final Antidumping Duty Determination,* 85 FR 31457 (May 26, 2020) (*Preliminary Determination*).

[2] *See* Memorandum, ''Issues and Decision Memorandum for the Final Affirmative Determination of the Countervailing Duty Investigation of Forged Steel Fluid End Blocks from the People's Republic of China,'' dated concurrently with, and hereby adopted by, this notice (Issues and Decision Memorandum).

[3] *See* Memorandum to the File, ''Forged Steel Fluid End Blocks from the Federal Republic of Germany, India, Italy, and the People's Republic of China: Scope Comments Decision Memorandum for the Preliminary Determinations,'' dated May 18, 2020 (Preliminary Scope Decision Memorandum).

[4] *See* Memorandum, ''Forged Steel Fluid End Blocks from the Federal Republic of Germany, India, Italy, and the People's Republic of China: Scope Comments Decision Memorandum for the Final Determinations,'' dated December 7, 2020 (Final Scope Decision Memorandum).

[5] *See* sections 771(5)(B) and (D) of the Act regarding financial contribution; section 771(5)(E)

full description of the methodology underlying our final determination, *see* the Issues and Decision Memorandum.

In making this final determination, Commerce relied, in part, on facts available pursuant to section 776(a) of the Act. Additionally, as discussed in the Issues and Decision Memorandum, because one or more respondents did not act to the best of their ability in responding to our requests for information, we drew adverse inferences, where appropriate, in selecting from among the facts otherwise available, pursuant to section 776(b) of the Act.[6]

Verification

Commerce normally verifies information relied upon in making its final determination, pursuant to section 782(i)(1) of the Tariff Act of 1930, as amended (the Act). However, during the course of this investigation, we were unable to conduct on-site verification due to travel restrictions.[7] Consistent with section 776(a)(2)(D) of the Act, Commerce relied on the information submitted on the record, which we used in making our *Preliminary Determination* and Post-Preliminary Determination,[8] as facts available in making our final determination.

All-Others Rate

We continue to calculate the all-others rate using a weighted average of the individual estimated subsidy rates calculated for the examined respondents (Shanghai Qinghe Machinery Co., Ltd. and Nanjing Develop Advanced Manufacturing Co., Ltd.) using each company's publicly-ranged data for the value of their exports to the United States of subject merchandise.[9]

Final Determination

Commerce determines that the following estimated countervailable subsidy rates exist:

Company	Subsidy rate *ad valorem* (percent)
Nanjing Develop Advanced Manufacturing Co., Ltd[10]	16.80
Shanghai Qinghe Machinery Co., Ltd[11]	19.88
China Machinery Industrial Products Co., Ltd	[12] 337.07

Disclosure

Commerce intends to disclose to interested parties the calculations and analysis performed in this final determination within five days of any public announcement or, if there is no public announcement, within five days of the date of the publication of this notice in proceeding in accordance with 19 CFR 351.224(b).

Continuation of Suspension of Liquidation

As a result of our *Preliminary Determination* and pursuant to sections 703(d)(1)(B) and (d)(2) of the Act, we instructed U.S. Customs and Border Protection (CBP) to suspend liquidation of entries of subject merchandise as described in the scope of the investigation section entered, or withdrawn from warehouse, for consumption on May 26, 2020, the date of publication of the *Preliminary Determination* in the **Federal Register**. In accordance with section 703(d) of the Act, effective September 23, 2020, we instructed CBP to discontinue the suspension of liquidation of all entries at that time, but to continue the suspension of liquidation of all entries between May 26, 2020 and September 22, 2020.

If the U.S. International Trade Commission (ITC) issues a final affirmative injury determination, we will issue a CVD order and require a cash deposit of estimated countervailing duties for entries of subject merchandise in the amounts indicated above, in accordance with section 706(a) of the Act. If the ITC determines that material injury, or threat of material injury, does not exist, this proceeding will be terminated, and all estimated duties deposited or securities posted as a result of the suspension of liquidation will be refunded or canceled.

ITC Notification

In accordance with section 705(d) of the Act, Commerce will notify the ITC of its final affirmative determination that countervailable subsidies are being provided to producers and exporters of fluid end blocks from China. As Commerce's final determination is affirmative, in accordance with section 705(b) of the Act, the ITC will determine, within 45 days, whether the domestic industry in the United States is materially injured, or threatened with material injury. In addition, we are making available to the ITC all non-privileged and nonproprietary information related to this investigation. We will allow the ITC access to all privileged and business proprietary information in our files, provided the ITC confirms that it will not disclose such information, either publicly or under an administrative protective order (APO), without the written consent of the Assistant Secretary for Enforcement and Compliance.

of the Act regarding benefit; and section 771(5A) of the Act regarding specificity.

Notification Regarding Administrative Protective Orders

In the event that the ITC issues a final negative injury determination, this notice will serve as the only reminder to parties subject to an APO of their responsibility concerning the destruction of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3). Timely written notification of the return/destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and terms of an APO is a violation which is subject to sanction.

Notification to Interested Parties

This determination is issued and published pursuant to sections 705(d) and 777(i) of the Act and 19 CFR 351.210(c).

Dated: December 7, 2020.

Jeffery I. Kessler,

Assistant Secretary for Enforcement and Compliance.

APPENDIX I

Scope of the Investigation

The products covered by this investigation are forged steel fluid end blocks (fluid end blocks), whether in finished or unfinished form, and which are typically used in the manufacture or service of hydraulic pumps.

The term ''forged'' is an industry term used to describe the grain texture of steel resulting from the application of localized compressive force. Illustrative forging standards include, but are not limited to, American Society for Testing and Materials (ASTM) specifications A668 and A788.

For purposes of this investigation, the term ''steel'' denotes metal containing the following chemical elements, by weight: (i) Iron greater than or equal to 60 percent; (ii) nickel less than or equal to 8.5 percent; (iii) copper less than or equal to 6 percent; (iv) chromium greater than or equal to 0.4 percent, but less than or equal to 20 percent; and (v) molybdenum greater than or equal to 0.15 percent, but less than or equal to 3 percent. Illustrative steel standards include, but are not limited to, American Iron and Steel Institute (AISI) or Society of Automotive Engineers (SAE) grades 4130, 4135, 4140, 4320, 4330, 4340, 8630, 15–5, 17–4, F6NM, F22, F60, and XM25, as well as modified varieties of these grades.

The products covered by this investigation are: (1) Cut-to-length fluid end blocks with an actual height (measured from its highest point) of 8 inches (203.2 mm) to 40 inches (1,016.0 mm), an actual width (measured from its widest point) of 8 inches (203.2 mm) to 40 inches (1,016.0 mm), and an actual length (measured from its longest point) of 11 inches (279.4 mm) to 75 inches (1,905.0 mm); and (2) strings of fluid end blocks with an actual height (measured from its highest point) of 8 inches (203.2 mm) to 40 inches (1,016.0 mm), an actual width (measured from its widest point) of 8 inches (203.2 mm) to 40 inches (1,016.0 mm), and an actual length (measured from its longest point) up to 360 inches (9,144.0 mm).

The products included in the scope of this investigation have a tensile strength of at least 70 KSI (measured in accordance with ASTM A370) and a hardness of at least 140 HBW (measured in accordance with ASTM E10).

A fluid end block may be imported in finished condition (*i.e.,* ready for incorporation into a pump fluid end assembly without further finishing operations) or unfinished condition (*i.e.,* forged but still requiring one or more finishing operations before it is ready for incorporation into a pump fluid end assembly). Such finishing operations may include: (1) Heat treating; (2) milling one or more flat surfaces; (3) contour machining to custom shapes or dimensions; (4) drilling or boring holes; (5) threading holes; and/or (6) painting, varnishing, or coating.

Excluded from the scope of this investigation are fluid end block assemblies which (1) include (a) plungers and related housings, adapters, gaskets, seals, and packing nuts, (b) valves and related seats, springs, seals, and cover nuts, and (c) a discharge flange and related seals, and (2) are otherwise ready to be mated with the ''power end'' of a hydraulic pump without the need for installation of any plunger, valve, or discharge flange components, or any other further manufacturing operations.

The products included in the scope of this investigation may enter under Harmonized Tariff Schedule of the United States (HTSUS) subheadings 7218.91.0030, 7218.99.0030, 7224.90.0015, 7224.90.0045, 7326.19.0010, 7326.90.8688, or 8413.91.9055. While these HTSUS subheadings are provided for convenience and customs purposes, the written description of the scope of the investigation is dispositive.

International Trade Administration

[C–475–841]

Forged Steel Fluid End Blocks from Italy: Final Affirmative Countervailing Duty Determination

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (Commerce) determines that countervailable subsidies are being provided to producers and exporters of forged steel fluid end blocks (fluid end blocks) from Italy.

DATES: Applicable December 11, 2020.

FOR FURTHER INFORMATION CONTACT: Nicholas Czajkowski or Konrad Ptaszynski, AD/CVD Operations, Office I, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–1395 or (202) 482–6187, respectively.

SUPPLEMENTARY INFORMATION:

Background

On May 26, 2020, Commerce published the *Preliminary Determination* of this countervailing duty (CVD) investigation, which also aligned the final determination of this CVD investigation with the final determination in the companion antidumping duty investigation of fluid end blocks from Italy.[1]

A summary of the events that occurred since Commerce published the *Preliminary Determination,* as well as a full discussion of the issues raised by parties for this final determination, may be found in the Issues and Decision Memorandum which is hereby adopted by this notice.[2] The Issues and Decision Memorandum is a public document and

[1] *See Forged Steel Fluid End Blocks from Italy: Preliminary Affirmative Countervailing Duty Determination, and Alignment of Final Determination with Final Antidumping Duty Determination,* 85 FR 31460 (May 26, 2020) (*Preliminary Determination*).

[2] *See* Memorandum, ''Issues and Decision Memorandum for the Final Determination in the Countervailing Duty Investigation of Fluid End Blocks from Italy,'' dated concurrently with, and hereby adopted by, this notice (Issues and Decision Memorandum).

is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at *http://access.trade.gov*. In addition, a complete version of the Final Decision Memorandum can be accessed directly at *http://enforcement.trade.gov/frn/*. The signed and electronic versions of the Issues and Decision Memorandum are identical in content.

Period of Investigation

The period of investigation is January 1, 2018 through December 31, 2018.

Scope of the Investigation

The products covered by this investigation are forged steel fluid end blocks from Italy. For a complete description of the scope of this investigation, *see* Appendix I.

Scope Comments

During the course of this investigation, Commerce received scope comments from interested parties. Commerce issued a Preliminary Scope Decision Memorandum to address these comments.[3] We received comments from interested parties on the Preliminary Scope Memorandum, which we address in the Final Scope Decision Memorandum, dated concurrently with, and hereby adopted by, this final determination.[4] Commerce is not modifying the scope language as it appeared in the *Preliminary Determination. See* Appendix I for the final scope of the investigation.

Analysis of Subsidy Programs and Comments Received

The subsidy programs under investigation and the issues raised in the case and rebuttal briefs and parties in this investigation are discussed in the Issues and Decision Memorandum. A list of the issues raised by parties raised is attached to this notice at Appendix II.

Methodology

Commerce conducted this investigation in accordance with section 701 of the Tariff Act of 1930, as amended (the Act). For each of the subsidy programs found countervailable, Commerce determines that there is a subsidy, *i.e.,* a financial contribution by an ''authority'' that gives rise to a benefit to the recipient, and that the subsidy is specific.[5] For a full description of the methodology underlying our final determination, *see* the Issues and Decision Memorandum.

Verification

Commerce normally verifies information relied upon in making its final determination, pursuant to section 782(i)(1) of the Tariff Act of 1930, as amended (the Act). However, during the course of this investigation, we were unable to conduct on-site verification due to travel restrictions.[6] Consistent with section 776(a)(2)(D) of the Act, Commerce relied on the information submitted on the record, which we used in making our *Preliminary Determination* and Post-Preliminary Determination,[7] as facts available in making our final determination.

All-Others Rate

We continue to calculate the all-others rate using a weighted average of the individual estimated subsidy rates calculated for the examined respondents (Lucchini Mame Forge S.p.A and Metalcam S.p.A) using each company's publicly-ranged data for the value of their exports to the United States of subject merchandise.[8]

Final Determination

Commerce determines that the following estimated countervailable subsidy rates exist:

Company	Subsidy rate *ad valorem* (percent)
Lucchini Mame Forge S.p.A.	4.76
Metalcam S.p.A.	3.12
All Others	3.52
Companies Subject to AFA (non-respondent companies): Forge Mochieri S.p.A.; Imer International S.p.A.; Galperti Group, Mimest S.p.A.; P.Technologies S.r.L	44.86

Disclosure

Commerce intends to disclose to interested parties its calculations and analysis performed in this final determination within five days of its public announcement, or if there is no public announcement, within five days of the date of publication of this notice in accordance with 19 CFR 351.224(b).

Continuation of Suspension of Liquidation

As a result of our *Preliminary Determination,* and pursuant to sections 703(d)(1)(B) and (d)(2) of the Act, Commerce instructed U.S. Customs and Border Protection (CBP) to suspend liquidation of entries of subject merchandise under consideration from Italy that were entered or withdrawn from warehouse, for consumption on or after May 26, 2020, the date of publication of the *Preliminary Determination* in the **Federal Register**. In accordance with section 703(d) of the Act, effective September 23, 2020, we instructed CBP to discontinue the suspension of liquidation of all entries at that time, but to continue the suspension of liquidation of all entries between May 26, 2020 and September 22, 2020.

If the U.S. International Trade Commission (ITC) issues a final affirmative injury determination, we will issue a CVD order and require a cash deposit of estimated countervailing duties for such entries of subject merchandise in the amounts indicated above, in accordance with section 706(a) of the Act. If the ITC determines that material injury, or threat of material injury, does not exist, this proceeding will be terminated, and all estimated duties deposited or securities posted as a result of the suspension of liquidation will be refunded or canceled.

ITC Notification

In accordance with section 705(d) of the Act, Commerce will notify the ITC of its final affirmative determination that countervailable subsidies are being provided to producers and exporters of fluid end blocks from India. As Commerce's final determination is affirmative, in accordance with section 705(b) of the Act, the ITC will determine, within 45 days, whether the domestic industry in the United States is materially injured, or threatened with material injury. In addition, we are making available to the ITC all non-privileged and nonproprietary information related to this investigation. We will allow the ITC access to all privileged and business proprietary information in our files, provided the

[3] *See* Memorandum, '' Forged Steel Fluid End Blocks from the Federal Republic of Germany, India, Italy, and the People's Republic of China: Scope Comments Decision Memorandum for the Preliminary Determinations,'' dated May 18, 2020 (Preliminary Scope Decision Memorandum).

[4] *See* Memorandum, ''Forged Steel Fluid End Blocks from the Federal Republic of Germany, India, Italy, and the People's Republic of China: Scope Comments Decision Memorandum for the Final Determinations,'' dated December 7, 2020 (Final Scope Decision Memorandum).

[5] *See* sections 771(5)(B) and (D) of the Act regarding financial contribution; section 771(5)(E) of the Act regarding benefit; and section 771(5A) of the Act regarding specificity.

[6] *See* Memorandum, ''Countervailing Duty Investigation of Forged Steel Fittings from India: Verification and Schedule for Submission of Case and Rebuttal Briefs,'' dated August 3, 2020.

[8] *See Preliminary Determination,* 85 FR at 31462.

ITC confirms that it will not disclose such information, either publicly or under an administrative protective order (APO), without the written consent of the Assistant Secretary for Enforcement and Compliance.

Notification Regarding Administrative Protective Orders

In the event that the ITC issues a final negative injury determination, this notice will serve as the only reminder to parties subject to the APO of their responsibility concerning the destruction of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3). Timely written notification of the return/destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and terms of an APO is a violation which is subject to sanction.

Notification to Interested Parties

This determination is issued and published pursuant to sections 705(d) and 771(i) of the Act and 19 CFR 351.210(c).

Dated: December 7, 2020.

Jeffrey I. Kessler,

Assistant Secretary for Enforcement and Compliance.

Appendix I

Scope of the Investigation

The products covered by this investigation are forged steel fluid end blocks (fluid end blocks), whether in finished or unfinished form, and which are typically used in the manufacture or service of hydraulic pumps.

The term ''forged'' is an industry term used to describe the grain texture of steel resulting from the application of localized compressive force. Illustrative forging standards include, but are not limited to, American Society for Testing and Materials (ASTM) specifications A668 and A788.

For purposes of this investigation, the term ''steel'' denotes metal containing the following chemical elements, by weight: (i) Iron greater than or equal to 60 percent; (ii) nickel less than or equal to 8.5 percent; (iii) copper less than or equal to 6 percent; (iv) chromium greater than or equal to 0.4 percent, but less than or equal to 20 percent; and (v) molybdenum greater than or equal to 0.15 percent, but less than or equal to 3 percent. Illustrative steel standards include, but are not limited to, American Iron and Steel Institute (AISI) or Society of Automotive Engineers (SAE) grades 4130, 4135, 4140, 4320, 4330, 4340, 8630, 15–5, 17–4, F6NM, F22, F60, and XM25, as well as modified varieties of these grades.

The products covered by this investigation are: (1) Cut-to-length fluid end blocks with an actual height (measured from its highest point) of 8 inches (203.2 mm) to 40 inches (1,016.0 mm), an actual width (measured from its widest point) of 8 inches (203.2 mm) to 40 inches (1,016.0 mm), and an actual length (measured from its longest point) of 11 inches (279.4 mm) to 75 inches (1,905.0 mm); and (2) strings of fluid end blocks with an actual height (measured from its highest point) of 8 inches (203.2 mm) to 40 inches (1,016.0 mm), an actual width (measured from its widest point) of 8 inches (203.2 mm) to 40 inches (1,016.0 mm), and an actual length (measured from its longest point) up to 360 inches (9,144.0 mm).

The products included in the scope of this investigation have a tensile strength of at least 70 KSI (measured in accordance with ASTM A370) and a hardness of at least 140 HBW (measured in accordance with ASTM E10).

A fluid end block may be imported in finished condition (*i.e.,* ready for incorporation into a pump fluid end assembly without further finishing operations) or unfinished condition (*i.e.,* forged but still requiring one or more finishing operations before it is ready for incorporation into a pump fluid end assembly). Such finishing operations may include: (1) Heat treating; (2) milling one or more flat surfaces; (3) contour machining to custom shapes or dimensions; (4) drilling or boring holes; (5) threading holes; and/or (6) painting, varnishing, or coating.

Excluded from the scope of this investigation are fluid end block assemblies which (1) include (a) plungers and related housings, adapters, gaskets, seals, and packing nuts, (b) valves and related seats, springs, seals, and cover nuts, and (c) a discharge flange and related seals, and (2) are otherwise ready to be mated with the ''power end'' of a hydraulic pump without the need for installation of any plunger, valve, or discharge flange components, or any other further manufacturing operations.

The products included in the scope of this investigation may enter under Harmonized Tariff Schedule of the United States (HTSUS) subheadings 7218.91.0030, 7218.99.0030, 7224.90.0015, 7224.90.0045, 7326.19.0010, 7326.90.8688, or 8413.91.9055. While these HTSUS subheadings are provided for convenience and customs purposes, the written description of the scope of the investigation is dispositive.

DEPARTMENT OF COMMERCE

International Trade Administration

[C–580–910]

Seamless Carbon and Alloy Steel Standard, Line, and Pressure Pipe from the Republic of Korea: Preliminary Affirmative Countervailing Duty Determination and Alignment of Final Determination With Final Antidumping Duty Determination

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (Commerce) preliminarily determines that countervailable subsidies are being provided to producers and exporters of seamless carbon and alloy steel standard, line, and pressure pipe (seamless pipe) from the Republic of Korea (Korea). The period of investigation is January 1, 2019 through December 31, 2019. Interested parties are invited to comment on this preliminary determination.

DATES: Applicable December 11, 2020.

FOR FURTHER INFORMATION CONTACT: Moses Song or Natasia Harrison, AD/CVD Operations, Office VI, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–7885 or (202) 482–1240, respectively.

SUPPLEMENTARY INFORMATION:

Background

This preliminary determination is made in accordance with section 703(b) of the Tariff Act of 1930, as amended

(the Act). Commerce published the notice of initiation of this investigation on August 4, 2020.[1] On September 2, 2020, Commerce postponed the preliminary determination of this investigation to December 7, 2020.[2] For a complete description of the events that followed the initiation of this investigation, *see* the Preliminary Decision Memorandum.[3] A list of topics discussed in the Preliminary Decision Memorandum is included as Appendix II to this notice. The Preliminary Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at *http://access.trade.gov.* In addition, a complete version of the Preliminary Decision Memorandum can be accessed directly at *http://enforcement.trade.gov/frn/.* The signed and electronic versions of the Preliminary Decision Memorandum are identical in content.

Scope of the Investigation

The products covered by this investigation are seamless pipe from Korea. For a complete description of the scope of this investigation, *see* Appendix I.

Scope Comments

In accordance with the *Preamble* to Commerce's regulations,[4] we set aside a period of time, as stated in the *Initiation Notice,* for parties to raise issues regarding product coverage (*i.e.,* scope).[5] We received comments concerning the scope of the antidumping duty (AD) and countervailing duty (CVD) investigations of seamless pipe as it appeared in the *Initiation Notice.* We are currently evaluating the scope comments filed by the interested parties. We intend to issue our preliminary decision regarding the scope of this and the companion AD and CVD investigations no later than February 3, 2021, the deadline for the preliminary determinations in the companion AD investigations with respect to Korea, Russia, and Ukraine.[6] We will issue a final scope decision after considering any relevant comments submitted in case and rebuttal briefs.[7]

Methodology

Commerce is conducting this investigation in accordance with section 701 of the Act. For each of the subsidy programs found countervailable, Commerce preliminarily determines that there is a subsidy, *i.e.,* a financial contribution by an ''authority'' that gives rise to a benefit to the recipient, and that the subsidy is specific.[8]

Commerce notes that, in making these findings, it relied, in part, on facts available and, because it finds that the respondent did not act to the best of its ability to respond to Commerce's requests for information, Commerce drew an adverse inference where appropriate in selecting from among the facts otherwise available.[9] For further information, *see* ''Use of Facts Otherwise Available and Adverse Inferences'' in the Preliminary Decision Memorandum.

Alignment

As noted in the Preliminary Decision Memorandum, in accordance with section 705(a)(1) of the Act and 19 CFR 351.210(b)(4), Commerce is aligning the final CVD determination in this investigation with the final determination in the companion AD investigation of seamless pipe from Korea based on a request made by the petitioner.[10] Consequently, the final CVD determination will be issued on the same date as the final AD determination, which is currently scheduled to be issued no later than April 19, 2021, unless postponed.

All-Others Rate

Sections 703(d) and 705(c)(5)(A) of the Act provide that in the preliminary determination, Commerce shall determine an estimated all-others rate for companies not individually examined. This rate shall be an amount equal to the weighted average of the estimated subsidy rates established for those companies individually examined, excluding any zero and *de minimis* rates and any rates based entirely under section 776 of the Act.

In this investigation, Commerce preliminarily calculated an individual estimated countervailable subsidy rate for Iljin Steel Corporation (Iljin), the only individually examined exporter/producer in this investigation. Because the only individually calculated rate is not zero, *de minimis,* or based entirely on facts otherwise available, we are preliminarily assigning the estimated countervailable subsidy rate calculated for Iljin to all other producers and exporters, pursuant to section 705(c)(5)(A)(i) of the Act.

Preliminary Determination

Commerce preliminarily determines that the following estimated countervailable subsidy rates exist:

Company	Subsidy rate percent
Iljin Steel Corporation	2.13
All Others	2.13 percent

Suspension of Liquidation

In accordance with section 703(d)(1)(B) and (d)(2) of the Act, Commerce will direct U.S. Customs and Border Protection (CBP) to suspend liquidation of entries of subject merchandise as described in the scope of the investigation section entered, or withdrawn from warehouse, for consumption on or after the date of publication of this notice in the **Federal Register**. Further, pursuant to 19 CFR 351.205(d), Commerce will instruct CBP to require a cash deposit equal to the rates indicated above.

Disclosure

Commerce intends to disclose its calculations and analysis performed to interested parties in this preliminary determination within five days of its public announcement, or if there is no public announcement, within five days of the date of this notice in accordance with 19 CFR 351.224(b).

Verification

Commerce is currently unable to conduct on-site verification of the information relied upon in making its

final determination in this investigation. Accordingly, we intend to take additional steps in lieu of on-site verification. Commerce will notify interested parties of any additional documentation or information required.

Public Comment

As noted above, Commerce will issue a preliminary scope decision no later than February 3, 2021. All interested parties will have the opportunity to submit case and rebuttal briefs on the preliminary scope determination by the deadline established in the memorandum. All parties filing scope briefs or rebuttals thereto, must file identical documents simultaneously on the records of all the ongoing AD and CVD seamless pipe investigations. No new factual information or business proprietary information may be included in either scope briefs or rebuttal scope briefs.

Case briefs or other written comments may be submitted to the Assistant Secretary for Enforcement and Compliance. Interested parties will be notified of the deadline for the submission of such case briefs and written comments at a later date. Rebuttal briefs, limited to issues raised in case briefs, may be submitted no later than seven days after the deadline date for case briefs.[11] Commerce has modified certain of its requirements for serving documents containing business proprietary information until further notice.[12] Pursuant to 19 CFR 351.309(c)(2) and (d)(2), parties who submit case briefs or rebuttal briefs in this investigation are encouraged to submit with each argument: (1) A statement of the issue; (2) a brief summary of the argument; and (3) a table of authorities.

Pursuant to 19 CFR 351.310(c), interested parties who wish to request a hearing, limited to issues raised in the case and rebuttal briefs, must submit a written request to the Assistant Secretary for Enforcement and Compliance, U.S. Department of Commerce within 30 days after the date of publication of this notice. Requests should contain the party's name, address, and telephone number, the number of participants, whether any participant is a foreign national, and a list of the issues to be discussed. If a request for a hearing is made, Commerce intends to hold the hearing at a time and date to be determined. Parties should confirm by telephone the date, time, and location of the hearing two days before the scheduled date.

International Trade Commission Notification

In accordance with section 703(f) of the Act, Commerce will notify the International Trade Commission (ITC) of its preliminary determination. If Commerce's final determination is affirmative, the ITC will make its final injury determination before the later of 120 days after the date of Commerce's preliminary determination or 45 days after its final determination.

Notification to Interested Parties

This determination is issued and published pursuant to sections 703(f) and 777(i) of the Act and 19 CFR 351.205(c).

Dated: December 7, 2020.

Jeffrey I. Kessler,

Assistant Secretaryfor Enforcement and Compliance.

Appendix I

Scope of the Investigation

The merchandise covered by the scope of this investigation is seamless carbon and alloy steel (other than stainless steel) pipes and redraw hollows, less than or equal to 16 inches (406.4 mm) in nominal outside diameter, regardless of wall-thickness, manufacturing process (*e.g.,* hot-finished or cold-drawn), end finish (*e.g.,* plain end, beveled end, upset end, threaded, or threaded and coupled), or surface finish (*e.g.,* bare, lacquered or coated). Redraw hollows are any unfinished carbon or alloy steel (other than stainless steel) pipe or ''hollow profiles'' suitable for cold finishing operations, such as cold drawing, to meet the American Society for Testing and Materials (ASTM) or American Petroleum Institute (API) specifications referenced below, or comparable specifications. Specifically included within the scope are seamless carbon and alloy steel (other than stainless steel) standard, line, and pressure pipes produced to the ASTM A–53, ASTM A–106, ASTM A–333, ASTM A–334, ASTM A–589, ASTM A–795, ASTM A–1024, and the API 5L specifications, or comparable specifications, and meeting the physical parameters described above, regardless of application, with the exception of the exclusions discussed below.

Specifically excluded from the scope of the investigation are: (1) All pipes meeting aerospace, hydraulic, and bearing tubing specifications, including pipe produced to the ASTM A–822 standard; (2) all pipes meeting the chemical requirements of ASTM A–335, whether finished or unfinished; and (3) unattached couplings. Also excluded from the scope of the investigations are all mechanical, boiler, condenser and heat exchange tubing, except when such products conform to the dimensional requirements, *i.e.,* outside diameter and wall thickness, of ASTM A–53, ASTM A–106 or API 5L specifications.

Subject seamless standard, line, and pressure pipe are normally entered under Harmonized Tariff Schedule of the United States (HTSUS) subheadings 7304.19.1020, 7304.19.1030, 7304.19.1045, 7304.19.1060, 7304.19.5020, 7304.19.5050, 7304.31.6050, 7304.39.0016, 7304.39.0020, 7304.39.0024, 7304.39.0028, 7304.39.0032, 7304.39.0036, 7304.39.0040, 7304.39.0044, 7304.39.0048, 7304.39.0052, 7304.39.0056, 7304.39.0062, 7304.39.0068, 7304.39.0072, 7304.51.5005, 7304.51.5060, 7304.59.6000, 7304.59.8010, 7304.59.8015, 7304.59.8020, 7304.59.8025, 7304.59.8030, 7304.59.8035, 7304.59.8040, 7304.59.8045, 7304.59.8050, 7304.59.8055, 7304.59.8060, 7304.59.8065, and 7304.59.8070. The HTSUS subheadings and specifications are provided for convenience and customs purposes; the written description of the scope is dispositive.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Notice To Suspend Applications for Certification for Printing NOAA Nautical Charts and Publications

AGENCY: National Ocean Service, National Oceanic and Atmospheric Administration (NOAA), Department of Commerce (DOC).

ACTION: Notice to suspend accepting new applications for certification for printing and distribution of NOAA nautical charts and the United States Coast Pilot, and to update the public on digital distribution of NOAA's products.

SUMMARY: The federal government ceased printing of paper nautical charts in April 2014. Since then, the Office of Coast Survey has successfully transitioned the printing of paper nautical charts to the private sector and, since the **Federal Register** Notice of January 2, 2014, has certified more than three dozen companies to print and sell NOAA nautical charts and the United

States Coast Pilot®. This transition has resulted in a broad market providing product differentiation with optional value-added features. However, Coast Survey is in the process of reducing the amount of traditional NOAA paper nautical products that it maintains as it moves to facilitating a method from which paper charts can be derived from the NOAA's electronic navigational charts (NOAA ENC®) found on website: *https://nauticalcharts.noaa.gov/charts/noaa-enc.html.* Within the next five years, the number of unique charts that will be available for vendors to print will be reduced by roughly 60%. Coast Survey recognized that a hold on accepting new applications must be put in place until the final number of traditional paper charts that NOAA will maintain is determined. The plan for transitioning away from the traditional NOAA paper charts is available in the ''Sunsetting Traditional NOAA Paper Charts'' document found on the following website: *https://nauticalcharts.noaa.gov/publications/docs/raster-sunset.pdf.*

To maintain a healthy market that meets the needs of recreational and commercial mariners, Coast Survey is suspending the certifications for new, non-certified printers of charts while continuing to maintain certification of printers who continue to meet standards as provided under their current agreements. There are currently eight certified printers of the Coast Pilot. Coast Survey feels the market can bear no more that 10 of these printers. Once there are 10 certified printers of the Coast Pilot, Coast Survey will suspend the certifications for new, non-certified printers of the Coast Pilot.

DATES: Send comments on or before February 9, 2021.

ADDRESSES: Comments can be submitted online to the Office of Coast Survey's inquiry system, ASSIST, at the following site *https://www.nauticalcharts.noaa.gov/customer-service/assist/.*

FOR FURTHER INFORMATION CONTACT: Matthew Kroll, Deputy Chief, Navigation Services Division, NOAA's Office of Coast Survey at *matt.kroll@noaa.gov,* 240–533–0063

SUPPLEMENTARY INFORMATION: NOAA privatized the printing of nautical charts in October 2013. In January 2014, Coast Survey started soliciting private companies to apply for NOAA certification to print, sell, and distribute paper nautical charts that NOAA's National Ocean Service considered ''published'', and that therefore meet carriage requirements. After review, Coast Survey certifies applicants who meet all NOAA chart standards.

At the time of Coast Survey's January 2014 solicitation, NOAA had two certified printing agents. As of October 29, 2020, NOAA had 36 certified agents found here, *https://nauticalcharts.noaa.gov/publications/print-agents.html#paper-charts,* with two additional companies under review.

Coast Survey has concluded that the current certified printers are meeting market needs, and that the companies with pending applications for certification will adequately fill any additional market openings. Therefore, until further notice, Coast Survey will not accept any new applications for certification, except for printers of the Coast Pilot until 10 Coast Pilot printers has been achieved.

Coast Survey began the transition away from traditional paper products and considers the NOAA ENC as its primary product to meet navigation needs, and makes the following resources available:

1. NOAA's electronic navigational charts (NOAA ENC®) (*https://nauticalcharts.noaa.gov/charts/noaa-enc.html*) are available for free download.

2. See Coast Survey's plan to improve the ENC, ''Transforming the NOAA ENC.'' (*https://nauticalcharts.noaa.gov/publications/docs/enc-transformation.pdf*).

3. United States Coast Pilot (*https://nauticalcharts.noaa.gov/publications/coast-pilot/index.html*) is available online in a digital format.

4. NOAA's Custom Chart tool (*https://devgis.charttools.noaa.gov/pod/*) gives the user the ability to create and download charts based on your own scale, extent, and paper size settings.

The National Charting Plan outlines several improvements to chart content (*https://nauticalcharts.noaa.gov/charts/docs/NCP-1-pager-v2.pdf*).

Authority: 33 U.S.C. Chapter 17, Coast and Geodetic Survey Act of 1947.

Shepard M. Smith,

Director, Office of Coast Survey, National Ocean Service, National Oceanic and Atmospheric Administration.

Takes of Marine Mammals Incidental to Specified Activities; Taking Marine Mammals Incidental to Naval Base San Diego Pier 6 Replacement Project, San Diego, California

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; proposed incidental harassment authorization; request for comments on proposed authorization and possible renewal.

SUMMARY: NMFS has received a request from the U.S. Navy (Navy) for authorization to take marine mammals incidental to the Naval Base San Diego Pier 6 Replacement Project in San Diego, California. Pursuant to the Marine Mammal Protection Act (MMPA), NMFS is requesting comments on its proposal to issue an incidental harassment authorization (IHA) to incidentally take marine mammals during the specified activities. NMFS is also requesting comments on a possible one-year renewal that could be issued under certain circumstances and if all requirements are met, as described in Request for Public Comments at the end of this notice. NMFS will consider public comments prior to making any final decision on the issuance of the requested MMPA authorizations and agency responses will be summarized in the final notice of our decision.

DATES: Comments and information must be received no later than January 11, 2021.

ADDRESSES: Comments should be addressed to Jolie Harrison, Chief, Permits and Conservation Division, Office of Protected Resources, National Marine Fisheries Service and should be sent to *ITP.Meadows@noaa.gov.*

Instructions: NMFS is not responsible for comments sent by any other method, to any other address or individual, or received after the end of the comment period. Comments received electronically, including all attachments, must not exceed a 25-megabyte file size. Attachments to electronic comments will be accepted in Microsoft Word or Excel or Adobe PDF file formats only. All comments received are a part of the public record and will generally be posted online at *https://www.fisheries.noaa.gov/permit/incidental-take-authorizations-under-*

marine-mammal-protection-act without change. All personal identifying information (*e.g.,* name, address) voluntarily submitted by the commenter may be publicly accessible. Do not submit confidential business information or otherwise sensitive or protected information.

FOR FURTHER INFORMATION CONTACT: Dwayne Meadows, Ph.D., Office of Protected Resources, NMFS, (301) 427–8401. Electronic copies of the application and supporting documents, as well as a list of the references cited in this document, may be obtained online at: *https://www.fisheries.noaa.gov/permit/incidental-take-authorizations-under-marine-mammal-protection-act.* In case of problems accessing these documents, please call the contact listed above.

SUPPLEMENTARY INFORMATION:

Background

The MMPA prohibits the ''take'' of marine mammals, with certain exceptions. Sections 101(a)(5)(A) and (D) of the MMPA (16 U.S.C. 1361 *et seq.*) direct the Secretary of Commerce (as delegated to NMFS) to allow, upon request, the incidental, but not intentional, taking of small numbers of marine mammals by U.S. citizens who engage in a specified activity (other than commercial fishing) within a specified geographical region if certain findings are made and either regulations are issued or, if the taking is limited to harassment, a notice of a proposed incidental take authorization may be provided to the public for review.

Authorization for incidental takings shall be granted if NMFS finds that the taking will have a negligible impact on the species or stock(s) and will not have an unmitigable adverse impact on the availability of the species or stock(s) for taking for subsistence uses (where relevant). Further, NMFS must prescribe the permissible methods of taking and other ''means of effecting the least practicable adverse impact'' on the affected species or stocks and their habitat, paying particular attention to rookeries, mating grounds, and areas of similar significance, and on the availability of the species or stocks for taking for certain subsistence uses (referred to in shorthand as ''mitigation''); and requirements pertaining to the mitigation, monitoring and reporting of the takings are set forth.

The definitions of all applicable MMPA statutory terms cited above are included in the relevant sections below.

National Environmental Policy Act

To comply with the National Environmental Policy Act of 1969 (NEPA; 42 U.S.C. 4321 *et seq.*) and NOAA Administrative Order (NAO) 216–6A, NMFS must review our proposed action (*i.e.,* the issuance of an IHA) with respect to potential impacts on the human environment.

This action is consistent with categories of activities identified in Categorical Exclusion B4 (IHAs with no anticipated serious injury or mortality) of the Companion Manual for NOAA Administrative Order 216–6A, which do not individually or cumulatively have the potential for significant impacts on the quality of the human environment and for which we have not identified any extraordinary circumstances that would preclude this categorical exclusion. Accordingly, NMFS has preliminarily determined that the issuance of the proposed IHA qualifies to be categorically excluded from further NEPA review.

We will review all comments submitted in response to this notice prior to concluding our NEPA process or making a final decision on the IHA request.

Summary of Request

On July 14, 2020, NMFS received an application from the Navy requesting an IHA to take small numbers of California sea lions incidental to pile driving and removal associated with the Naval Base San Diego Pier 6 Replacement Project. The application was deemed adequate and complete on November 25, 2020. The Navy's request is for take of a small number of California sea lions by Level B harassment. Neither the Navy nor NMFS expects serious injury or mortality to result from this activity, and therefore, an IHA is appropriate.

Description of Proposed Activity

Overview

The purpose of the project is to remove and replace a decaying and inadequate pier for Navy ships. Specifically, in-water construction work includes removing the existing pier (by vibratory pile extraction, water jetting, hydraulic underwater chainsaw, direct pulling, and/or pile clippers) consisting of a total of 1,998 12 to 24-inch piles, after removing above water structures and utilities. Once demolition has opened up space, construction will begin in the same location on a new pier measuring 37 m (120 ft) wide by 457 m (1,500 ft) long. New construction work involves impact driving of 966 piles. This includes 528 24-inch structural concrete piles, 208 24-inch concrete fender piles, 4 20-inch piles for a load-out ramp, and 226 16-inch fiberglass secondary and corner fender piles. Pile driving/removal is expected to take no more than 250 days. Pile driving would be by vibratory pile driving until resistance is too great and driving would switch to an impact hammer.

The pile driving/removal can result in take of marine mammals from sound in the water which results in behavioral harassment or auditory injury.

Dates and Duration

The work described here is scheduled for October 1, 2021 through September 30, 2022. In-water activities are planned for daylight hours only.

Specific Geographic Region

The activities would occur in the south-central portion of San Diego Bay (Figure 1). San Diego Bay is a narrow, crescent-shaped natural embayment oriented northwest-southeast with an approximate length of 24 kilometers (km) (15 miles (mi)) and a total area of roughly 4 km^2 (11,000 acres; Port of San Diego, 2007). The width of the Bay ranges from 0.3 to 5.8 km (0.2 to 3.6 mi), and depths range from 23 m (74 ft) Mean Lower Low Water (MLLW) near the tip of Ballast Point to less than 1.2 m (4 ft) at the southern end (Merkel and Associates, Inc., 2009). Approximately half of the Bay is less than 4.5 meters (m) (15 feet (ft)) deep and much of it is less than 15 m (50 ft) deep (Merkel and Associates, Inc., 2009). The northern and central portions of the Bay have been shaped by historical dredging and filling to support large ship navigation and shoreline development. The United States Army Corps of Engineers dredges the main navigation channel in the Bay to maintain a depth of 14 m (47 ft) MLLW and is responsible for providing safe transit for private, commercial, and military vessels within the bay (NOAA 2012). Outside of the navigation channel, the bay floor consists of platforms at depths that vary slightly (Merkel and Associates, Inc., 2009). Within the Central Bay, typical depths range from 10.7–11.6 m (35–38 ft) MLLW to support large ship turning and anchorage, and small vessel marinas are typically dredged to depths of 4.6 m (15 ft) MLLW (Merkel and Associates, Inc., 2009).

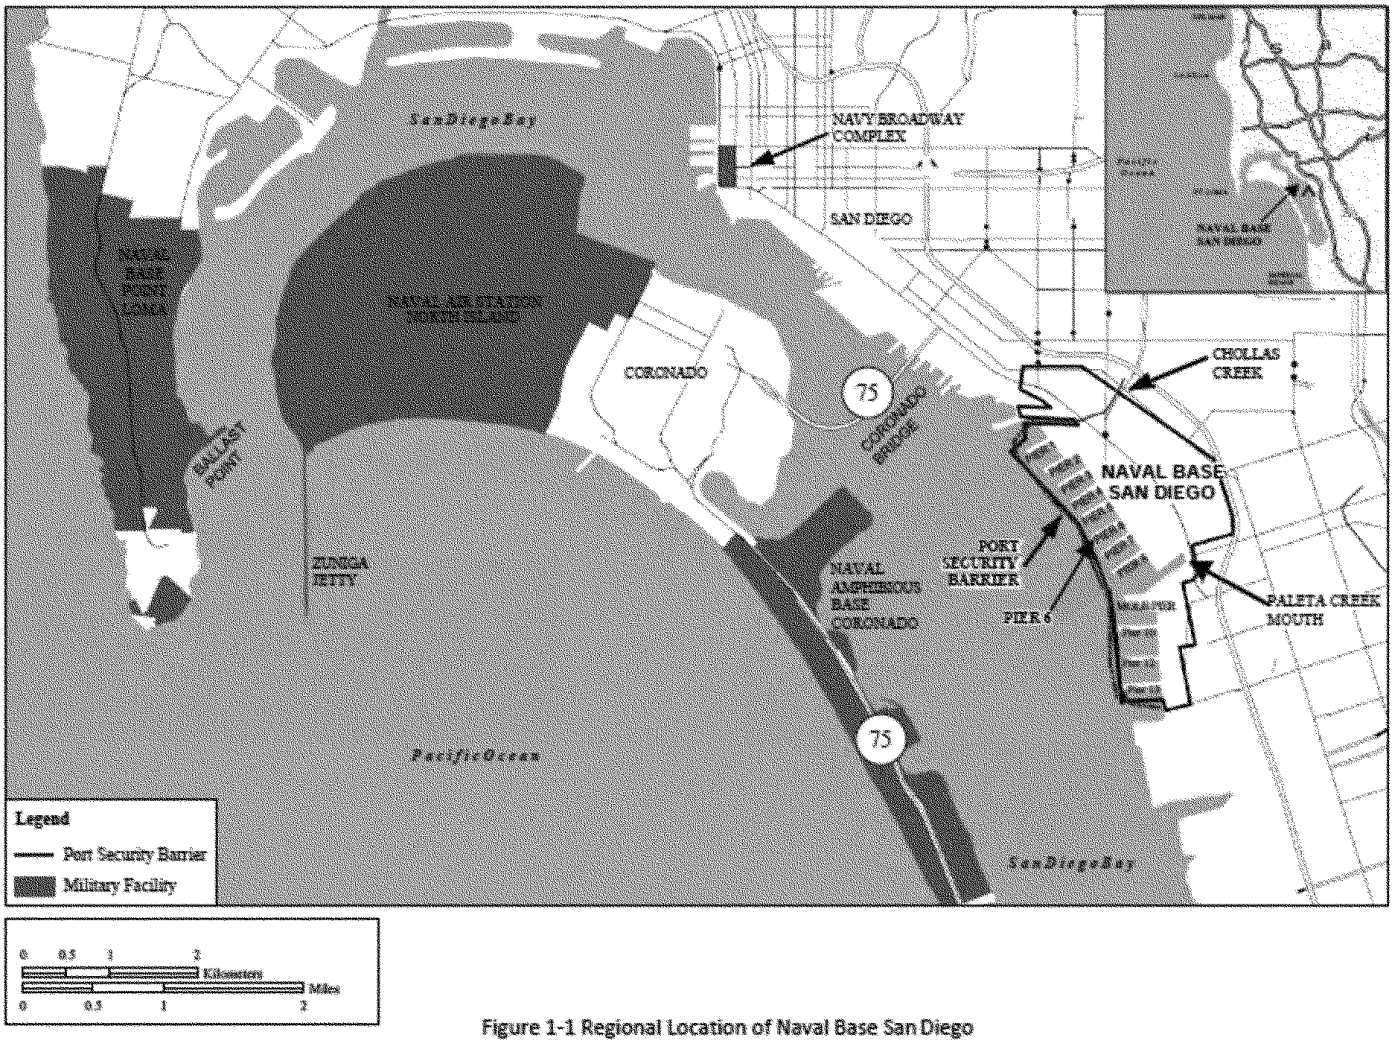

Figure 1-1 Regional Location of Naval Base San Diego

Figure 1-- Map of Proposed Project Area in San Diego, CA. The proposed project would occur at Pier 6 near the center of the base

San Diego Bay is heavily used by commercial, recreational, and military vessels, with an average of 82,413 vessel movements (in or out of the Bay) per year (approximately 225 vessel transits per day), a majority of which are presumed to occur during daylight hours. This number of transits does not include recreational boaters that use San Diego Bay, estimated to number 200,000 annually (San Diego Harbor Safety Committee, 2009). Background (ambient) noise in the south-central San Diego Bay averaged 126 decibels (dB) in 2019 (Dahl and Dall'Osto 2019). Noise from non-impulsive sources associated with the proposed activities is, therefore assumed to become indistinguishable from background noise as it diminishes to 126 dB re: 1 micropascal (µPa) with distance from the source (Dahl and Dall'Osto, 2019).

Section 2.2 of the application provides extensive additional details about the project area.

Detailed Description of Specific Activity

The purpose of the project is to remove and replace a decaying and inadequate pier built in 1945 that is now too narrow, structurally weakened and decaying. A new, wider pier is needed to provide adequate ship berthing infrastructure to support modern Navy ships and fleet readiness. The Navy will abate any hazardous materials, and then disconnect and remove all utilities and mechanical equipment from the old pier. After the old pier deck and associated structures are removed, the exiting 1,998 in-water piles will be removed. Existing piles include 1,833 20 or 24-inch concrete piles, 149 12-inch timber-plastic composite piles, and 16 16-inch steel I piles (Table 1). Workers would initially attempt to remove the piles by dead-pull with or without water jetting the pile (where an external high-pressure water jet is used to loosen the sediment around the pile). A vibratory hammer may also be used to loosen the piles prior to removal. If a pile cannot be removed by these methods, workers would use a hydraulic cutter or underwater hydraulic chainsaw to cut the piles at the mudline. Once the piles are cut, a crane would remove the pile and set it onto a barge for transport to a concrete processing yard. The Navy expects to be able to remove up to 8 piles per day, meaning 250 days of work will be required to remove all old piles.

Once demolition has opened up space, construction will begin in the same location on the new pier. New construction work involves vibratory and impact driving of 966 piles (Table

1). This includes 528 24-inch structural concrete piles, 208 24-inch concrete fender piles, 4 20-inch piles for a load-out ramp, and 226 16-inch fiberglass secondary and corner fender piles. Pile driving/removal is expected to take no more than 250 days. Pile driving would be by impact hammer only. The total length of the piles would range from approximately 26 m (85 ft) (fender piles) to 34 m (110 ft) (structural piles); the length of the portion of the piles in the water column would range from approximately 3 to 9 m (10 to 30 ft), depending on pile type, location, and tide. The Navy estimates they will install 7 piles per day, meaning in-water construction will take 138 days.

It is anticipated that overlap between demolition and installation activities would occur over the 250-day project period. Pile removal would begin on day 1 while pile installation is anticipated to begin after removal of one third of the piles (after approximately 83 days of pile removal). Pile installation is expected to periodically occur alongside ongoing pile removal activities over 138 days of the remaining 167 project days of pile removal. Because pile installation cannot continue where demolition activities are incomplete, there would be 29 days (167 days—138 days of pile installation) where only pile removal would occur after pile installation has started. In summary, the 250-day project period would include 112 days of pile removal-only activities and 138 days of concurrent pile removal and installation activities. There may be simultaneous use of no more than two of the various pile extraction methods (pile clippers, water jetting, underwater chainsaws or vibratory pile removal) during pile removal.

The pile driving equipment will be deployed and operated from barges, on water. Materials will be delivered on barges.

TABLE 1—SUMMARY OF PILE DRIVING ACTIVITIES

Method	Pile type	Number of piles	Piles/day	Total estimated days
Demolition of Existing Pier				
Vibratory Extraction High-pressure Water Jetting Hydraulic Pile Clipper Hydraulic Chainsaw.	24-inch square pre-cast concrete, 20-inch square pre-stressed/pre-cast concrete piles.	1,833	8	250
	12-inch composite (timber-plastic) piles	149		
Vibratory Extraction	16-inch I-shaped steel piles	16		
Total		1,998		
Construction of New Pier				
Impact Pile Driving	24-inch octagonal concrete structural test piles.	15	7	138
	24-inch octagonal concrete structural piles	513		
	24-inch square concrete fender system test piles.	4		
	24-inch square concrete primary fender piles	204		
	20-inch square concrete pile for load-out ramp cradle.	4		
	16-inch fiberglass secondary and corner fender piles.	226		
High-pressure Water Jetting	20- and 24-inch concrete piles	Within Above Counts		
Total		966		

Proposed mitigation, monitoring, and reporting measures are described in detail later in this document (please see Proposed Mitigation and Proposed Monitoring and Reporting).

Description of Marine Mammals in the Area of Specified Activities

Sections 3 and 4 of the application summarize available information regarding status and trends, distribution and habitat preferences, and behavior and life history, of the potentially affected species. Additional information regarding population trends and threats may be found in NMFS's Stock Assessment Reports (SARs; *https://www.fisheries.noaa.gov/national/marine-mammal-protection/marine-mammal-stock-assessments*) and more general information about these species (*e.g.,* physical and behavioral descriptions) may be found on NMFS's website (*https://www.fisheries.noaa.gov/find-species*).

Table 2 lists all species with expected potential for occurrence in the project area in San Diego Bay and summarizes information related to the population or stock, including regulatory status under the MMPA and Endangered Species Act (ESA) and potential biological removal (PBR), where known. For taxonomy, we follow Committee on Taxonomy (2020). PBR is defined by the MMPA as the maximum number of animals, not including natural mortalities, that may be removed from a marine mammal stock while allowing that stock to reach or maintain its optimum sustainable population (as described in NMFS's SARs). While no mortality is anticipated or authorized here, PBR and annual serious injury and mortality from anthropogenic sources are included here

as gross indicators of the status of the species and other threats.

Marine mammal abundance estimates presented in this document represent the total number of individuals that make up a given stock or the total number estimated within a particular study or survey area. NMFS's stock abundance estimates for most species represent the total estimate of individuals within the geographic area, if known, that comprises that stock. For some species, this geographic area may extend beyond U.S. waters. All managed stocks in this region are assessed in NMFS's U.S. Pacific SARs (*e.g.,* Caretta *et al.,* 2020).

TABLE 2—SPECIES THAT SPATIALLY CO-OCCUR WITH THE ACTIVITY TO THE DEGREE THAT TAKE IS REASONABLY LIKELY TO OCCUR

Common name	Scientific name	Stock	ESA/ MMPA status; Strategic (Y/N) [1]	Stock abundance (CV, N_{min}, most recent abundance survey) [2]	PBR	Annual M/SI [3]
Order Carnivora—Superfamily Pinnipedia						
Family Otariidae (eared seals and sea lions): California Sea Lion	*Zalophus californianus*	United States	-, -, N	257,606 (N/A, 233,515, 2014).	14,011	>321

[1]—Endangered Species Act (ESA) status: Endangered (E), Threatened (T)/MMPA status: Depleted (D). A dash (-) indicates that the species is not listed under the ESA or designated as depleted under the MMPA. Under the MMPA, a strategic stock is one for which the level of direct human-caused mortality exceeds PBR or which is determined to be declining and likely to be listed under the ESA within the foreseeable future. Any species or stock listed under the ESA is automatically designated under the MMPA as depleted and as a strategic stock.

[2]—NMFS marine mammal stock assessment reports online at: *https://www.fisheries.noaa.gov/national/marine-mammal-protection/marine-mammal-stock-assessments.* CV is coefficient of variation; Nmin is the minimum estimate of stock abundance.

[3]—These values, found in NMFS's SARs, represent annual levels of human-caused mortality plus serious injury from all sources combined (*e.g.,* commercial fisheries, ship strike). Annual M/SI often cannot be determined precisely and is in some cases presented as a minimum value or range. A CV associated with estimated mortality due to commercial fisheries is presented in some cases.

California sea lions (*Zalophus californianus*) spatially co-occur with the activity to the degree that take is reasonably likely to occur, and we have proposed authorizing take of this species. Other marine mammal species observed in San Diego Bay are the coastal bottlenose dolphin (*Tursiops truncatus*), which is regularly seen in the North Bay; Pacific harbor seal (*Phoca vitulina*), which frequently enters the North Bay; and common dolphins (*Delphinus* spp.), which are rare visitors in the North Bay. Gray whales (*Eschrichtius robustus*) are occasionally sighted near the mouth of San Diego Bay during their winter migration (Naval Facilities Engineering Command, Southwest and Port of San Diego Bay, 2013). Based on many years of observations and numerous Navy-funded surveys in San Diego Bay (Merkel and Associates, Inc., 2008; Sorensen and Swope, 2010; Graham and Saunders, 2014; Tierra Data Inc., 2016), these other marine mammals rarely occur south of the Coronado Bay Bridge, are not known to occur near Naval Base San Diego, and any occurrence in the project area would be very rare. Therefore, while coastal bottlenose dolphins, Pacific harbor seals, common dolphins, and gray whales have been reported in San Diego Bay, they are not anticipated to occur in the project area and no take of these species is anticipated or proposed to be authorized.

California Sea Lion

California sea lions occur from Vancouver Island, British Columbia, to the southern tip of Baja California. Sea lions breed on the offshore islands of southern and central California from May through July (Heath and Perrin, 2008). During the non-breeding season, adult and subadult males and juveniles migrate northward along the coast to central and northern California, Oregon, Washington, and Vancouver Island (Jefferson *et al.,* 1993). They return south the following spring (Heath and Perrin 2008, Lowry and Forney 2005). Females and some juveniles tend to remain closer to rookeries (Antonelis *et al.,* 1990; Melin *et al.,* 2008).

Pupping occurs primarily on the California Channel Islands from late May until the end of June (Peterson and Bartholomew 1967). Weaning and mating occur in late spring and summer during the peak upwelling period (Bograd *et al.,* 2009). After the mating season, adult males migrate northward to feeding areas as far away as the Gulf of Alaska (Lowry *et al.,* 1992), and they remain away until spring (March–May), when they migrate back to the breeding colonies. Adult females generally remain south of Monterey Bay, California throughout the year, feeding in coastal waters in the summer and offshore waters in the winter, alternating between foraging and nursing their pups on shore until the next pupping/breeding season (Melin and DeLong, 2000; Melin *et al.,* 2008).

In San Diego Bay, California sea lions regularly occur on rocks, buoys and other structures, and especially on bait barges. California sea lion occurrence in the project area is expected to be rare based on sighting of only two individuals in the water off of Navy Base San Diego during one 2010 survey (Sorensen and Swope, 2010). Different age classes of California sea lions are found in the San Diego region throughout the year (Lowry *et al.,* 1991). Although adult male California sea lions feed in areas north of San Diego, animals of all other ages and sexes spend most, but not all, of their time feeding at sea during winter. During warm-water months, a high proportion of the adult males and females are hauled-out at terrestrial sites.

Marine Mammal Hearing

Hearing is the most important sensory modality for marine mammals underwater, and exposure to anthropogenic sound can have deleterious effects. To appropriately assess the potential effects of exposure to sound, it is necessary to understand the frequency ranges marine mammals are able to hear. Current data indicate that not all marine mammal species have equal hearing capabilities (*e.g.,* Richardson *et al.,* 1995; Wartzok and

Ketten, 1999; Au and Hastings, 2008). To reflect this, Southall *et al.* (2007) recommended that marine mammals be divided into functional hearing groups based on directly measured or estimated hearing ranges on the basis of available behavioral response data, audiograms derived using auditory evoked potential techniques, anatomical modeling, and other data. Note that no direct measurements of hearing ability have been successfully completed for mysticetes (*i.e.,* low-frequency cetaceans). Subsequently, NMFS (2018) described generalized hearing ranges for these marine mammal hearing groups. Generalized hearing ranges were chosen based on the approximately 65 decibel (dB) threshold from the normalized composite audiograms, with the exception for lower limits for low-frequency cetaceans where the lower bound was deemed to be biologically implausible and the lower bound from Southall *et al.* (2007) retained. Marine mammal hearing groups and their associated hearing ranges are provided in Table 3.

TABLE 3—MARINE MAMMAL HEARING GROUPS

[NMFS, 2018]

Hearing group	Generalized hearing range *
Low-frequency (LF) cetaceans (baleen whales)	7 Hz to 35 kHz.
Mid-frequency (MF) cetaceans (dolphins, toothed whales, beaked whales, bottlenose whales)	150 Hz to 160 kHz.
High-frequency (HF) cetaceans (true porpoises, *Kogia,* river dolphins, cephalorhynchid, *Lagenorhynchus cruciger* & *L. australis*).	275 Hz to 160 kHz.
Phocid pinnipeds (PW) (underwater)(true seals)	50 Hz to 86 kHz.
Otariid pinnipeds (OW) (underwater)(sea lions and fur seals)	60 Hz to 39 kHz.

* Represents the generalized hearing range for the entire group as a composite (*i.e.,* all species within the group), where individual species' hearing ranges are typically not as broad. Generalized hearing range chosen based on ~65 dB threshold from normalized composite audiogram, with the exception for lower limits for LF cetaceans (Southall *et al.,* 2007) and PW pinniped (approximation).

The pinniped functional hearing group was modified from Southall *et al.* (2007) on the basis of data indicating that phocid species have consistently demonstrated an extended frequency range of hearing compared to otariids, especially in the higher frequency range (Hemilä *et al.,* 2006; Kastelein *et al.,* 2009; Reichmuth and Holt, 2013).

For more detail concerning these groups and associated frequency ranges, please see NMFS (2018) for a review of available information. California sea lions are in the otariid family group.

Potential Effects of Specified Activities on Marine Mammals and their Habitat

This section includes a summary and discussion of the ways that components of the specified activity may impact marine mammals and their habitat. The Estimated Take section later in this document includes a quantitative analysis of the number of individuals that are expected to be taken by this activity. The Negligible Impact Analysis and Determination section considers the content of this section, the Estimated Take section, and the Proposed Mitigation section, to draw conclusions regarding the likely impacts of these activities on the reproductive success or survivorship of individuals and how those impacts on individuals are likely to impact marine mammal species or stocks.

Acoustic effects on marine mammals during the specified activity can occur from vibratory and impact pile driving/removal and underwater chainsaws, pile clippers and water jetting. The effects of underwater noise from the Navy's proposed activities have the potential to result in Level A or Level B harassment of marine mammals in the action area.

Description of Sound Sources

The marine soundscape is comprised of both ambient and anthropogenic sounds. Ambient sound is defined as the all-encompassing sound in a given place and is usually a composite of sound from many sources both near and far (ANSI 1994, 1995). The sound level of an area is defined by the total acoustical energy being generated by known and unknown sources. These sources may include physical (*e.g.,* waves, wind, precipitation, earthquakes, ice, atmospheric sound), biological (*e.g.,* sounds produced by marine mammals, fish, and invertebrates), and anthropogenic sound (*e.g.,* vessels, dredging, aircraft, construction).

The sum of the various natural and anthropogenic sound sources at any given location and time—which comprise ''ambient'' or ''background'' sound—depends not only on the source levels (as determined by current weather conditions and levels of biological and shipping activity) but also on the ability of sound to propagate through the environment. In turn, sound propagation is dependent on the spatially and temporally varying properties of the water column and sea floor, and is frequency-dependent. As a result of the dependence on a large number of varying factors, ambient sound levels can be expected to vary widely over both coarse and fine spatial and temporal scales. Sound levels at a given frequency and location can vary by 10–20 dB from day to day (Richardson *et al.,* 1995). The result is that, depending on the source type and its intensity, sound from the specified activity may be a negligible addition to the local environment or could form a distinctive signal that may affect marine mammals.

In-water construction activities associated with the project would include impact pile driving and vibratory pile removal as well as water jetting, underwater chainsaws, and pile clippers. The sounds produced by these activities fall into one of two general sound types: Impulsive and non-impulsive. Impulsive sounds (*e.g.,* explosions, gunshots, sonic booms, impact pile driving) are typically transient, brief (less than 1 second), broadband, and consist of high peak sound pressure with rapid rise time and rapid decay (ANSI, 1986; NIOSH, 1998; ANSI, 2005; NMFS, 2018). Non-impulsive sounds (*e.g.,* machinery operations such as drilling or dredging, vibratory pile driving, water jetting, chainsaws, pile clippers, and active sonar systems) can be broadband, narrowband or tonal, brief or prolonged (continuous or intermittent), and typically do not have the high peak sound pressure with raid rise/decay time that impulsive sounds do (ANSI 1995; NIOSH 1998; NMFS 2018). The distinction between these two sound types is important because they have differing potential to cause physical effects, particularly with regard to hearing (*e.g.,* Ward 1997 in Southall *et al.,* 2007).

Two types of pile hammers would be used on this project: impact and vibratory. Impact hammers operate by repeatedly dropping a heavy piston onto a pile to drive the pile into the substrate. Sound generated by impact hammers is characterized by rapid rise times and high peak levels, a potentially injurious combination (Hastings and Popper, 2005). Vibratory hammers install piles by vibrating them and allowing the weight of the hammer to push them into the sediment. Vibratory hammers produce significantly less sound than impact hammers. Peak Sound pressure Levels (SPLs) may be 180 dB or greater, but are generally 10 to 20 dB lower than SPLs generated during impact pile driving of the same-sized pile (Oestman *et al.,* 2009). Rise time is slower, reducing the probability and severity of injury, and sound energy is distributed over a greater amount of time (Nedwell and Edwards, 2002; Carlson *et al.,* 2005).

Pile clippers and underwater chainsaws are hydraulically operated equipment. A pile clipper is a large, heavy elongated horizontal guillotine-like structure that is mechanically lowered over a pile down to the mudline or substrate where hydraulic force is used to push a sharp blade to cut a pile. The underwater chainsaws are operated by SCUBA divers. Water jet systems use very high pressure jets of water to move and even cut materials. Sounds generated by this demolition equipment are non-impulsive and continuous (NAVAC Southwest, 2020)

The likely or possible impacts of the Navy's proposed activity on marine mammals could involve both non-acoustic and acoustic stressors. Potential non-acoustic stressors could result from the physical presence of the equipment and personnel; however, any impacts to marine mammals are expected to primarily be acoustic in nature. Acoustic stressors include effects of heavy equipment operation during pile installation and removal.

Acoustic Impacts

The introduction of anthropogenic noise into the aquatic environment from pile driving and removal and the various demolition equipment is the primary means by which marine mammals may be harassed from the Navy's specified activity. In general, animals exposed to natural or anthropogenic sound may experience physical and psychological effects, ranging in magnitude from none to severe (Southall *et al.,* 2007). Generally, exposure to pile driving and removal and other construction noise has the potential to result in auditory threshold shifts and behavioral reactions (*e.g.,* avoidance, temporary cessation of foraging and vocalizing, changes in dive behavior). Exposure to anthropogenic noise can also lead to non-observable physiological responses such an increase in stress hormones. Additional noise in a marine mammal's habitat can mask acoustic cues used by marine mammals to carry out daily functions such as communication and predator and prey detection. The effects of pile driving and demolition noise on marine mammals are dependent on several factors, including, but not limited to, sound type (*e.g.,* impulsive vs. non-impulsive), the species, age and sex class (*e.g.,* adult male vs. mom with calf), duration of exposure, the distance between the pile and the animal, received levels, behavior at time of exposure, and previous history with exposure (Wartzok *et al.,* 2004; Southall *et al.,* 2007). Here we discuss physical auditory effects (threshold shifts) followed by behavioral effects and potential impacts on habitat.

NMFS defines a noise-induced threshold shift (TS) as a change, usually an increase, in the threshold of audibility at a specified frequency or portion of an individual's hearing range above a previously established reference level (NMFS, 2018). The amount of threshold shift is customarily expressed in dB. A TS can be permanent or temporary. As described in NMFS (2018), there are numerous factors to consider when examining the consequence of TS, including, but not limited to, the signal temporal pattern (*e.g.,* impulsive or non-impulsive), likelihood an individual would be exposed for a long enough duration or to a high enough level to induce a TS, the magnitude of the TS, time to recovery (seconds to minutes or hours to days), the frequency range of the exposure (*i.e.,* spectral content), the hearing and vocalization frequency range of the exposed species relative to the signal's frequency spectrum (*i.e.,* how animal uses sound within the frequency band of the signal; *e.g.,* Kastelein *et al.,* 2014), and the overlap between the animal and the source (*e.g.,* spatial, temporal, and spectral).

Permanent Threshold Shift (PTS)—NMFS defines PTS as a permanent, irreversible increase in the threshold of audibility at a specified frequency or portion of an individual's hearing range above a previously established reference level (NMFS 2018). Available data from humans and other terrestrial mammals indicate that a 40 dB threshold shift approximates PTS onset (see Ward *et al.,* 1958, 1959; Ward, 1960; Kryter *et al.,* 1966; Miller, 1974; Ahroon *et al.,* 1996; Henderson and Hu, 2008). PTS levels for marine mammals are estimates, with the exception of a single study unintentionally inducing PTS in a harbor seal (Kastak *et al.,* 2008), there are no empirical data measuring PTS in marine mammals, largely due to the fact that, for various ethical reasons, experiments involving anthropogenic noise exposure at levels inducing PTS are not typically pursued or authorized (NMFS, 2018).

Temporary Threshold Shift (TTS)—A temporary, reversible increase in the threshold of audibility at a specified frequency or portion of an individual's hearing range above a previously established reference level (NMFS, 2018). Based on data from cetacean TTS measurements (see Southall *et al.,* 2007), a TTS of 6 dB is considered the minimum threshold shift clearly larger than any day-to-day or session-to-session variation in a subject's normal hearing ability (Schlundt *et al.,* 2000; Finneran *et al.,* 2000, 2002). As described in Finneran (2016), marine mammal studies have shown the amount of TTS increases with cumulative sound exposure level (SEL_{cum}) in an accelerating fashion: At low exposures with lower SEL_{cum}, the amount of TTS is typically small and the growth curves have shallow slopes. At exposures with higher SEL_{cum}, the growth curves become steeper and approach linear relationships with the noise SEL.

Depending on the degree (elevation of threshold in dB), duration (*i.e.,* recovery time), and frequency range of TTS, and the context in which it is experienced, TTS can have effects on marine mammals ranging from discountable to serious (similar to those discussed in auditory masking, below). For example, a marine mammal may be able to readily compensate for a brief, relatively small amount of TTS in a non-critical frequency range that takes place during a time when the animal is traveling through the open ocean, where ambient noise is lower and there are not as many competing sounds present. Alternatively, a larger amount and longer duration of TTS sustained during time when communication is critical for successful mother/calf interactions could have more serious impacts. We note that reduced hearing sensitivity as a simple function of aging has been observed in marine mammals, as well as humans and other taxa (Southall *et al.,* 2007), so we can infer that strategies exist for coping with this condition to some degree, though likely not without cost.

Currently, TTS data only exist for four species of cetaceans (bottlenose

dolphin, beluga whale (*Delphinapterus leucas*), harbor porpoise, and Yangtze finless porpoise (*Neophocoena asiaeorientalis*)) and five species of pinnipeds exposed to a limited number of sound sources (*i.e.,* mostly tones and octave-band noise) in laboratory settings (Finneran, 2015). TTS was not observed in trained spotted (*Phoca largha*) and ringed (*Pusa hispida*) seals exposed to impulsive noise at levels matching previous predictions of TTS onset (Reichmuth *et al.,* 2016). In general, harbor seals and harbor porpoises have a lower TTS onset than other measured pinniped or cetacean species (Finneran, 2015). The potential for TTS from impact pile driving exists. After exposure to playbacks of impact pile driving sounds (rate 2760 strikes/hour) in captivity, mean TTS increased from 0 dB after 15 minute exposure to 5 dB after 360 minute exposure; recovery occurred within 60 minutes (Kastelein *et al.,* 2016). Additionally, the existing marine mammal TTS data come from a limited number of individuals within these species. No data are available on noise-induced hearing loss for mysticetes. For summaries of data on TTS in marine mammals or for further discussion of TTS onset thresholds, please see Southall *et al.* (2007), Finneran and Jenkins (2012), Finneran (2015), and Table 5 in NMFS (2018).

Installing piles requires impact pile driving. There would likely be pauses in activities producing the sound during each day. Given these pauses and that many marine mammals are likely moving through the action area and not remaining for extended periods of time, the potential for TS declines.

Behavioral Harassment - Exposure to noise from pile driving and removal also has the potential to behaviorally disturb marine mammals. Available studies show wide variation in response to underwater sound; therefore, it is difficult to predict specifically how any given sound in a particular instance might affect marine mammals perceiving the signal. If a marine mammal does react briefly to an underwater sound by changing its behavior or moving a small distance, the impacts of the change are unlikely to be significant to the individual, let alone the stock or population. However, if a sound source displaces marine mammals from an important feeding or breeding area for a prolonged period, impacts on individuals and populations could be significant (*e.g.,* Lusseau and Bejder, 2007; Weilgart, 2007; NRC, 2005).

Disturbance may result in changing durations of surfacing and dives, number of blows per surfacing, or moving direction and/or speed; reduced/increased vocal activities; changing/cessation of certain behavioral activities (such as socializing or feeding); visible startle response or aggressive behavior (such as tail/fluke slapping or jaw clapping); avoidance of areas where sound sources are located. Pinnipeds may increase their haul out time, possibly to avoid in-water disturbance (Thorson and Reyff, 2006). Behavioral responses to sound are highly variable and context-specific and any reactions depend on numerous intrinsic and extrinsic factors (*e.g.,* species, state of maturity, experience, current activity, reproductive state, auditory sensitivity, time of day), as well as the interplay between factors (*e.g.,* Richardson *et al.,* 1995; Wartzok *et al.,* 2004; Southall *et al.,* 2007; Weilgart, 2007; Archer *et al.,* 2010). Behavioral reactions can vary not only among individuals but also within an individual, depending on previous experience with a sound source, context, and numerous other factors (Ellison *et al.,* 2012), and can vary depending on characteristics associated with the sound source (*e.g.,* whether it is moving or stationary, number of sources, distance from the source). In general, pinnipeds seem more tolerant of, or at least habituate more quickly to, potentially disturbing underwater sound than do cetaceans, and generally seem to be less responsive to exposure to industrial sound than most cetaceans. Please see Appendices B and C of Southall *et al.* (2007) for a review of studies involving marine mammal behavioral responses to sound.

Disruption of feeding behavior can be difficult to correlate with anthropogenic sound exposure, so it is usually inferred by observed displacement from known foraging areas, the appearance of secondary indicators (*e.g.,* bubble nets or sediment plumes), or changes in dive behavior. As for other types of behavioral response, the frequency, duration, and temporal pattern of signal presentation, as well as differences in species sensitivity, are likely contributing factors to differences in response in any given circumstance (*e.g.,* Croll *et al.,* 2001; Nowacek *et al.,* 2004; Madsen *et al.,* 2006; Yazvenko *et al.,* 2007). A determination of whether foraging disruptions incur fitness consequences would require information on or estimates of the energetic requirements of the affected individuals and the relationship between prey availability, foraging effort and success, and the life history stage of the animal.

In 2016, the Alaska Department of Transportation and Public Facilities (ADOT&PF) documented observations of marine mammals during construction activities (*i.e.,* pile driving) at the Kodiak Ferry Dock (see 80 FR 60636, October 7, 2015). In the marine mammal monitoring report for that project (ABR 2016), 1,281 Steller sea lions were observed within the Level B disturbance zone during pile driving or drilling (*i.e.,* documented as Level B harassment take). Of these, 19 individuals demonstrated an alert behavior, 7 were fleeing, and 19 swam away from the project site. All other animals (98 percent) were engaged in activities such as milling, foraging, or fighting and did not change their behavior. In addition, two sea lions approached within 20 meters of active vibratory pile driving activities. Three harbor seals were observed within the disturbance zone during pile driving activities; none of them displayed disturbance behaviors. Fifteen killer whales and three harbor porpoise were also observed within the Level B harassment zone during pile driving. The killer whales were travelling or milling while all harbor porpoises were travelling. No signs of disturbance were noted for either of these species. Given the similarities in activities and habitat, we expect similar behavioral responses of marine mammals to the Navy's specified activity. That is, disturbance, if any, is likely to be temporary and localized (*e.g.,* small area movements).

Stress responses—An animal's perception of a threat may be sufficient to trigger stress responses consisting of some combination of behavioral responses, autonomic nervous system responses, neuroendocrine responses, or immune responses (*e.g.,* Seyle 1950; Moberg 2000). In many cases, an animal's first and sometimes most economical (in terms of energetic costs) response is behavioral avoidance of the potential stressor. Autonomic nervous system responses to stress typically involve changes in heart rate, blood pressure, and gastrointestinal activity. These responses have a relatively short duration and may or may not have a significant long-term effect on an animal's fitness.

Neuroendocrine stress responses often involve the hypothalamus-pituitary-adrenal system. Virtually all neuroendocrine functions that are affected by stress—including immune competence, reproduction, metabolism, and behavior—are regulated by pituitary hormones. Stress-induced changes in the secretion of pituitary hormones have been implicated in failed reproduction, altered metabolism, reduced immune competence, and behavioral disturbance (*e.g.,* Moberg 1987; Blecha 2000).

Increases in the circulation of glucocorticoids are also equated with stress (Romano *et al.,* 2004).

The primary distinction between stress (which is adaptive and does not normally place an animal at risk) and ''distress'' is the cost of the response. During a stress response, an animal uses glycogen stores that can be quickly replenished once the stress is alleviated. In such circumstances, the cost of the stress response would not pose serious fitness consequences. However, when an animal does not have sufficient energy reserves to satisfy the energetic costs of a stress response, energy resources must be diverted from other functions. This state of distress will last until the animal replenishes its energetic reserves sufficient to restore normal function.

Relationships between these physiological mechanisms, animal behavior, and the costs of stress responses are well-studied through controlled experiments and for both laboratory and free-ranging animals (*e.g.,* Holberton *et al.,* 1996; Hood *et al.,* 1998; Jessop *et al.,* 2003; Krausman *et al.,* 2004; Lankford *et al.,* 2005). Stress responses due to exposure to anthropogenic sounds or other stressors and their effects on marine mammals have also been reviewed (Fair and Becker 2000; Romano *et al.,* 2002b) and, more rarely, studied in wild populations (*e.g.,* Romano *et al.,* 2002a). For example, Rolland *et al.* (2012) found that noise reduction from reduced ship traffic in the Bay of Fundy was associated with decreased stress in North Atlantic right whales. These and other studies lead to a reasonable expectation that some marine mammals will experience physiological stress responses upon exposure to acoustic stressors and that it is possible that some of these would be classified as ''distress.'' In addition, any animal experiencing TTS would likely also experience stress responses (NRC, 2003), however distress is an unlikely result of this project based on observations of marine mammals during previous, similar projects in the area.

Masking—Sound can disrupt behavior through masking, or interfering with, an animal's ability to detect, recognize, or discriminate between acoustic signals of interest (*e.g.,* those used for intraspecific communication and social interactions, prey detection, predator avoidance, navigation) (Richardson *et al.,* 1995). Masking occurs when the receipt of a sound is interfered with by another coincident sound at similar frequencies and at similar or higher intensity, and may occur whether the sound is natural (*e.g.,* snapping shrimp, wind, waves, precipitation) or anthropogenic (*e.g.,* pile driving, shipping, sonar, seismic exploration) in origin. The ability of a noise source to mask biologically important sounds depends on the characteristics of both the noise source and the signal of interest (*e.g.,* signal-to-noise ratio, temporal variability, direction), in relation to each other and to an animal's hearing abilities (*e.g.,* sensitivity, frequency range, critical ratios, frequency discrimination, directional discrimination, age or TTS hearing loss), and existing ambient noise and propagation conditions. Masking of natural sounds can result when human activities produce high levels of background sound at frequencies important to marine mammals. Conversely, if the background level of underwater sound is high (*e.g.,* on a day with strong wind and high waves), an anthropogenic sound source would not be detectable as far away as would be possible under quieter conditions and would itself be masked. The San Diego area contains active military and commercial shipping, cruise ship and ferry operations, as well as numerous recreational and other commercial vessel and background sound levels in the area are already elevated as described in Dahl and Dall'Osta (2019).

Potential Effects of High-Pressure Water Jetting, Underwater Chainsaw, and Pile Clipper Sounds—High-pressure water jetting, underwater chainsaws, and pile clippers may be used to assist with removal of piles (and water jetting may be used to aid installation). The sounds produced by these activities are of similar frequencies to the sounds produced by vessels (NAVFAC Southwest, 2020), and are anticipated to diminish to background noise levels (or be masked by background noise levels) in the Bay relatively close to the project site. Therefore, the effects of this equipment are likely to be similar to those discussed above in the *Behavioral Harassment* section.

Airborne Acoustic Effects—Pinnipeds that occur near the project site could be exposed to airborne sounds associated with pile driving and removal that have the potential to cause behavioral harassment, depending on their distance from pile driving activities. Cetaceans are not expected to be exposed to airborne sounds that would result in harassment as defined under the MMPA.

Airborne noise would primarily be an issue for pinnipeds that are swimming or hauled out near the project site within the range of noise levels elevated above the acoustic criteria. We recognize that pinnipeds in the water could be exposed to airborne sound that may result in behavioral harassment when looking with their heads above water. Most likely, airborne sound would cause behavioral responses similar to those discussed above in relation to underwater sound. For instance, anthropogenic sound could cause hauled-out pinnipeds to exhibit changes in their normal behavior, such as reduction in vocalizations, or cause them to temporarily abandon the area and move further from the source. However, these animals would previously have been 'taken' because of exposure to underwater sound above the behavioral harassment thresholds, which are in all cases larger than those associated with airborne sound. Thus, the behavioral harassment of these animals is already accounted for in these estimates of potential take. Therefore, we do not believe that authorization of incidental take resulting from airborne sound for pinnipeds is warranted, and airborne sound is not discussed further here.

Marine Mammal Habitat Effects

The Navy's construction activities could have localized, temporary impacts on marine mammal habitat and their prey by increasing in-water sound pressure levels and slightly decreasing water quality. Increased noise levels may affect acoustic habitat (see masking discussion above) and adversely affect marine mammal prey in the vicinity of the project area (see discussion below). During impact and vibratory pile driving or removal, elevated levels of underwater noise would ensonify San Diego Bay where both fishes and mammals occur and could affect foraging success. Additionally, marine mammals may avoid the area during construction, however, displacement due to noise is expected to be temporary and is not expected to result in long-term effects to the individuals or populations. Construction activities are of short duration and would likely have temporary impacts on marine mammal habitat through increases in underwater and airborne sound.

A temporary and localized increase in turbidity near the seafloor would occur in the immediate area surrounding the area where piles are installed or removed. In general, turbidity associated with pile installation is localized to about a 25-foot (7.6-meter) radius around the pile (Everitt *et al.* 1980). The sediments of the project site are sandy and will settle out rapidly when disturbed. Cetaceans are not expected to be close enough to the pile driving areas to experience effects of turbidity, and any pinnipeds could

avoid localized areas of turbidity. Local strong currents are anticipated to disburse any additional suspended sediments produced by project activities at moderate to rapid rates depending on tidal stage. Therefore, we expect the impact from increased turbidity levels to be discountable to marine mammals and do not discuss it further.

In-Water Construction Effects on Potential Foraging Habitat

The area likely impacted by the project is relatively small compared to the available habitat (*e.g.,* the impacted area is in the south central bay only) of San Diego Bay and does not include any Biologically Important Areas or other habitat of known importance. The area is highly influenced by anthropogenic activities. The total seafloor area affected by pile installation and removal is a very small area compared to the vast foraging area available to marine mammals in the San Diego Bay. At best, the impact area provides marginal foraging habitat for marine mammals and fish. Furthermore, pile driving and removal at the project site would not obstruct movements or migration of marine mammals.

Avoidance by potential prey (*i.e.,* fish) of the immediate area due to the temporary loss of this foraging habitat is also possible. The duration of fish avoidance of this area after pile driving stops is unknown, but a rapid return to normal recruitment, distribution and behavior is anticipated. Any behavioral avoidance by fish of the disturbed area would still leave significantly large areas of fish and marine mammal foraging habitat in the nearby vicinity.

In-water Construction Effects on Potential Prey—Sound may affect marine mammals through impacts on the abundance, behavior, or distribution of prey species (*e.g.,* crustaceans, cephalopods, fish, zooplankton). Marine mammal prey varies by species, season, and location. Here, we describe studies regarding the effects of noise on known marine mammal prey.

Fish utilize the soundscape and components of sound in their environment to perform important functions such as foraging, predator avoidance, mating, and spawning (*e.g.,* Zelick and Mann, 1999; Fay, 2009). Depending on their hearing anatomy and peripheral sensory structures, which vary among species, fishes hear sounds using pressure and particle motion sensitivity capabilities and detect the motion of surrounding water (Fay *et al.,* 2008). The potential effects of noise on fishes depends on the overlapping frequency range, distance from the sound source, water depth of exposure, and species-specific hearing sensitivity, anatomy, and physiology. Key impacts to fishes may include behavioral responses, hearing damage, barotrauma (pressure-related injuries), and mortality.

Fish react to sounds which are especially strong and/or intermittent low-frequency sounds, and behavioral responses such as flight or avoidance are the most likely effects. Short duration, sharp sounds can cause overt or subtle changes in fish behavior and local distribution. The reaction of fish to noise depends on the physiological state of the fish, past exposures, motivation (*e.g.,* feeding, spawning, migration), and other environmental factors. Hastings and Popper (2005) identified several studies that suggest fish may relocate to avoid certain areas of sound energy. Additional studies have documented effects of pile driving on fish, although several are based on studies in support of large, multiyear bridge construction projects (*e.g.,* Scholik and Yan, 2001, 2002; Popper and Hastings, 2009). Several studies have demonstrated that impulse sounds might affect the distribution and behavior of some fishes, potentially impacting foraging opportunities or increasing energetic costs (*e.g.,* Fewtrell and McCauley, 2012; Pearson *et al.,* 1992; Skalski *et al.,* 1992; Santulli *et al.,* 1999; Paxton *et al.,* 2017). However, some studies have shown no or slight reaction to impulse sounds (*e.g.,* Pena *et al.,* 2013; Wardle *et al.,* 2001; Jorgenson and Gyselman, 2009; Cott *et al.,* 2012).

SPLs of sufficient strength have been known to cause injury to fish and fish mortality. However, in most fish species, hair cells in the ear continuously regenerate and loss of auditory function likely is restored when damaged cells are replaced with new cells. Halvorsen *et al.* (2012a) showed that a TTS of 4–6 dB was recoverable within 24 hours for one species. Impacts would be most severe when the individual fish is close to the source and when the duration of exposure is long. Injury caused by barotrauma can range from slight to severe and can cause death, and is most likely for fish with swim bladders. Barotrauma injuries have been documented during controlled exposure to impact pile driving (Halvorsen *et al.,* 2012b; Casper *et al.,* 2013).

Because of the rarity of use and research, the effects of pile clippers, underwater chainsaws, and water jetting are not fully known; but given their similarity to ship noises we do not expect unique effects from these activities.

The most likely impact to fish from pile driving and removal and demolition activities at the project area would be temporary behavioral avoidance of the area. The duration of fish avoidance of this area after pile driving stops is unknown, but a rapid return to normal recruitment, distribution and behavior is anticipated.

Construction activities, in the form of increased turbidity, have the potential to adversely affect forage fish in the project area. Forage fish form a significant prey base for many marine mammal species that occur in the project area. Increased turbidity is expected to occur in the immediate vicinity (on the order of 10 feet (3 m) or less) of construction activities. However, suspended sediments and particulates are expected to dissipate quickly within a single tidal cycle. Given the limited area affected and high tidal dilution rates any effects on forage fish are expected to be minor or negligible. Finally, exposure to turbid waters from construction activities is not expected to be different from the current exposure; fish and marine mammals in San Diego Bay are routinely exposed to substantial levels of suspended sediment from natural and anthropogenic sources.

In summary, given the short daily duration of sound associated with individual pile driving events and the relatively small areas being affected, pile driving activities associated with the proposed action are not likely to have a permanent, adverse effect on any fish habitat, or populations of fish species. Any behavioral avoidance by fish of the disturbed area would still leave significantly large areas of fish and marine mammal foraging habitat in the nearby vicinity. Thus, we conclude that impacts of the specified activity are not likely to have more than short-term adverse effects on any prey habitat or populations of prey species. Further, any impacts to marine mammal habitat are not expected to result in significant or long-term consequences for individual marine mammals, or to contribute to adverse impacts on their populations.

Estimated Take

This section provides an estimate of the number of incidental takes proposed for authorization through this IHA, which will inform both NMFS' consideration of ''small numbers'' and the negligible impact determination.

Harassment is the only type of take expected to result from these activities. Except with respect to certain activities not pertinent here, section 3(18) of the MMPA defines ''harassment'' as any act of pursuit, torment, or annoyance,

which (i) has the potential to injure a marine mammal or marine mammal stock in the wild (Level A harassment); or (ii) has the potential to disturb a marine mammal or marine mammal stock in the wild by causing disruption of behavioral patterns, including, but not limited to, migration, breathing, nursing, breeding, feeding, or sheltering (Level B harassment).

Authorized takes would be by Level B harassment, as use of the acoustic source (*i.e.,* vibratory or impact pile driving) has the potential to result in disruption of behavioral patterns for individual marine mammals. Based on the nature of the activity and the anticipated effectiveness of the mitigation measures (*i.e.,* shutdown)—discussed in detail below in Proposed Mitigation section, Level A harassment is neither anticipated nor proposed to be authorized.

As described previously, no mortality is anticipated or proposed to be authorized for this activity. Below we describe how the take is estimated.

Generally speaking, we estimate take by considering: (1) Acoustic thresholds above which marine mammals will be behaviorally harassed or incur some degree of permanent hearing impairment; (2) the area or volume of water that will be ensonified above these levels in a day; (3) the density or occurrence of marine mammals within these ensonified areas; and, (4) and the number of days of activities. We note that while these basic factors can contribute to a basic calculation to provide an initial prediction of takes, additional information that can qualitatively inform take estimates is also sometimes available (*e.g.,* previous monitoring results or average group size). Due to the lack of marine mammal density, NMFS relied on local occurrence data and group size to estimate take. Below, we describe the factors considered here in more detail and present the proposed take estimate.

Acoustic Thresholds

NMFS recommends the use of acoustic thresholds that identify the received level of underwater sound above which exposed marine mammals would be reasonably expected to be behaviorally harassed (equated to Level B harassment) or to incur PTS of some degree (equated to Level A harassment).

Level B Harassment for non-explosive sources—Though significantly driven by received level, the onset of behavioral disturbance from anthropogenic noise exposure is also informed to varying degrees by other factors related to the source (*e.g.,* frequency, predictability, duty cycle), the environment (*e.g.,* bathymetry), and the receiving animals (hearing, motivation, experience, demography, behavioral context) and can be difficult to predict (Southall *et al.,* 2007, Ellison *et al.,* 2012). Based on what the available science indicates and the practical need to use a threshold based on a factor that is both predictable and measurable for most activities, NMFS uses a generalized acoustic threshold based on received level to estimate the onset of behavioral harassment. NMFS predicts that marine mammals are likely to be behaviorally harassed in a manner we consider Level B harassment when exposed to underwater anthropogenic noise above received levels of 120 dB re 1 microPascal (μPa) (root mean square (rms)) for continuous (*e.g.,* vibratory pile-driving) and above 160 dB re 1 μPa (rms) for non-explosive impulsive (*e.g.,* impact pile driving) or intermittent (*e.g.,* scientific sonar) sources.

The Navy's proposed activity includes the use of continuous (vibratory pile-driving, water jetting, chainsaw and pile clippers) and impulsive (impact pile-driving) sources, and therefore the 120 and 160 dB re 1 μPa (rms) thresholds are applicable. However, as discussed above, the Navy has established that the ambient noise in the project area is 126 dB re 1 μPa (rms). Since this is louder than the 120 dB threshold for continuous sources, 126 dB becomes the effective threshold for Level B harassment for continuous sources.

Level A harassment for non-explosive sources—NMFS' Technical Guidance for Assessing the Effects of Anthropogenic Sound on Marine Mammal Hearing (Version 2.0) (Technical Guidance, 2018) identifies dual criteria to assess auditory injury (Level A harassment) to five different marine mammal groups (based on hearing sensitivity) as a result of exposure to noise from two different types of sources (impulsive or non-impulsive). The Navy's activity includes the use of impulsive (impact pile-driving) and non-impulsive (vibratory pile driving/removal and other removal methods) sources.

These thresholds are provided in Table 4. The references, analysis, and methodology used in the development of the thresholds are described in NMFS 2018 Technical Guidance, which may be accessed at *https://www.fisheries.noaa.gov/national/marine-mammal-protection/marine-mammal-acoustic-technical-guidance.*

TABLE 4—THRESHOLDS IDENTIFYING THE ONSET OF PERMANENT THRESHOLD SHIFT

Hearing group	PTS onset acoustic thresholds * (Received level)	
	Impulsive	Non-impulsive
Low-Frequency (LF) Cetaceans	*Cell 1:* $L_{pk,flat}$: 219 dB; $L_{E,LF,24h}$: 183 dB	*Cell 2:* $L_{E,LF,24h}$: 199 dB.
Mid-Frequency (MF) Cetaceans	*Cell 3:* $L_{pk,flat}$: 230 dB; $L_{E,MF,24h}$: 185 dB	*Cell 4* $L_{E,MF,24h}$: 198 dB.
High-Frequency (HF) Cetaceans	*Cell 5:* $L_{pk,flat}$: 202 dB $L_{E,HF,24h}$: 155 dB	*Cell 6* $L_{E,HF,24h}$: 173 dB.
Phocid Pinnipeds (PW) (Underwater)	*Cell 7:* $L_{pk,flat}$: 218 dB $L_{E,PW,24h}$: 185 dB	*Cell 8:* $L_{E,PW,24h}$: 201 dB.
Otariid Pinnipeds (OW) (Underwater)	*Cell 9:* $L_{pk,flat}$:232 dB $L_{E,OW,24h}$: 203 dB	*Cell 10:* $L_{E,OW,24h}$: 219 dB.

* Dual metric acoustic thresholds for impulsive sounds: Use whichever results in the largest isopleth for calculating PTS onset. If a non-impulsive sound has the potential of exceeding the peak sound pressure level thresholds associated with impulsive sounds, these thresholds should also be considered.

Note: Peak sound pressure (L_{pk}) has a reference value of 1 μPa, and cumulative sound exposure level (L_E) has a reference value of 1μPa^{2}s. In this Table, thresholds are abbreviated to reflect American National Standards Institute standards (ANSI 2013). However, peak sound pressure is defined by ANSI as incorporating frequency weighting, which is not the intent for this Technical Guidance. Hence, the subscript "flat" is being included to indicate peak sound pressure should be flat weighted or unweighted within the generalized hearing range. The subscript associated with cumulative sound exposure level thresholds indicates the designated marine mammal auditory weighting function (LF, MF, and HF cetaceans, and PW and OW pinnipeds) and that the recommended accumulation period is 24 hours. The cumulative sound exposure level thresholds could be exceeded in a multitude of ways (*i.e.,* varying exposure levels and durations, duty cycle). When possible, it is valuable for action proponents to indicate the conditions under which these acoustic thresholds will be exceeded.

Ensonified Area

Here, we describe operational and environmental parameters of the activity that will feed into identifying the area ensonified above the acoustic thresholds, which include source levels and transmission loss coefficient.

The sound field in the project area is the existing background noise plus additional construction noise from the proposed project. Marine mammals are expected to be affected via sound generated by the primary components of the project (*i.e.,* impact pile driving, vibratory pile removal, water jetting, pile clippers and underwater chainsaws).

Vibratory hammers produce constant sound when operating, and produce vibrations that liquefy the sediment surrounding the pile, allowing it to penetrate to the required seating depth or be withdrawn more easily. An impact hammer is a steel device that works like a piston, producing a series of independent strikes to drive the pile. Impact hammering typically generates the loudest noise associated with pile installation. The actual durations of each installation method vary depending on the type and size of the pile.

In order to calculate distances to the Level A harassment and Level B harassment sound thresholds for piles of various sizes being used in this project, NMFS used acoustic monitoring data from other locations to develop source levels for the various pile types, sizes and methods (see Table 5). Data for the removal methods including water jetting, pile clippers and underwater chainsaws come from data gathered at other nearby Navy projects in San Diego Bay (NAVFAC SW, 2020), the source levels used are from the averages of the maximum source levels measured, a somewhat more conservative measure than the median sound levels we typically use.

TABLE 5—PROJECT SOUND SOURCE LEVELS

Pile driving activity		Estimated sound source level at 10 meters without attenuation			Data source and proxy
Method	Pile Type	dB RMS	dB SEL	dB peak	
Vibratory Extraction	12-inch timber/plastic	152			Greenbusch Group (2018).
	20 and 24-inch concrete	160			Caltrans (2015), Table I.2–2, 24-inch steel sheet.
	16-inch steel	160			Caltrans (2015), Table I.2–2, 24-inch steel sheet.
Water Jetting	20-inch concrete	158			NAVFAC SW (2020), 24 x 30-inch concrete.
Underwater Chainsaw	12 to 24-inch concrete	150			NAVFAC SW (2020), 16-inch concrete.*
Small Pile Clipper	12-inch timber/plastic	154			NAVFAC SW (2020), 13-inch polycarbonate.
Large Pile Clipper	20-inch concrete	161			NAVFAC SW (2020), 24-inch concrete.
Impact Hammer	20 and 24-inch concrete	176	166	188	Caltrans (2015), Table I.2–1, 24-inch concrete.
	16-inch fiberglass	153	** 144	** 177	Caltrans (2015), 13-inch plastic.

Note: SEL = single strike sound exposure level; dB peak = peak sound level; rms = root mean square.
* Source level was 147 dB at 17m from source, back calculated to 150dB using transmission loss coefficient of 15.
** Average of the peak values was 166 and that value was used in modelling in Dell'Osto and Dahl (2019) rather than the absolute peak we recommend for use in the user spreadsheet, SEL calculated from assumed strike rate in Dell'Osto and Dahl (2019).

During pile driving installation activities, there may be times when two pile extraction methods (pile clippers, water jetting, underwater chainsaws or vibratory pile removal) are used simultaneously. The likelihood of such an occurrence is anticipated to be infrequent, will depend on the specific methods chosen by the contractor, and would be for short durations on that day. In-water pile removal occurs intermittently, and it is common for removal to start and stop multiple times as each pile is adjusted and its progress is measured. Moreover, the Navy has multiple options for pile removal depending on the pile type and condition, sediment, and how stuck the pile is, etc. When two continuous noise sources, such as pile clippers, have overlapping sound fields, there is potential for higher sound levels than for non-overlapping sources. When two or more pile removal methods (pile clippers, water jetting, underwater chainsaws or vibratory pile removal) are used simultaneously, and the sound field of one source encompasses the sound field of another source, the sources are considered additive and combined using the following rules (see Table 6): For addition of two simultaneous methods, the difference between the two sound source levels (SSLs) is calculated, and if that difference is between 0 and 1 dB, 3 dB are added to the higher SSL; if difference is between 2 or 3 dB, 2 dB are added to the highest SSL; if the difference is between 4 to 9 dB, 1 dB is added to the highest SSL; and with differences of 10 or more dB, there is no addition (NMFS 2018b; WSDOT 2018).

TABLE 6—RULES FOR COMBINING SOUND LEVELS GENERATED DURING PILE REMOVAL

Difference in SSL	Level A zones	Level B zones
0 or 1 dB	Add 3 dB to the higher source level	Add 3 dB to the higher source level.
2 or 3 dB	Add 2 dB to the higher source level	Add 2 dB to the higher source level.
4 to 9 dB	Add 1 dB to the higher source level	Add 1 dB to the higher source level.

TABLE 6—RULES FOR COMBINING SOUND LEVELS GENERATED DURING PILE REMOVAL—Continued

Difference in SSL	Level A zones	Level B zones
10 dB or more	Add 0 dB to the higher source level	Add 0 dB to the higher source level.

Source: Modified from USDOT 1995, WSDOT 2018, and NMFS 2018b
Note: dB = decibels; SSL = sound source level.

There is also the possibility that impact installation of piles could happen simultaneously with any of the non-impulsive removal methods over large portions of the project as described above. On days when this occurs the Level A harassment zones would be based on the zones calculated for impact pile driving while the Level B harassment zone would be the largest of the zones for whatever construction methods are being used that day.

Level B Harassment Zones

Transmission loss (TL) is the decrease in acoustic intensity as an acoustic pressure wave propagates out from a source. TL parameters vary with frequency, temperature, sea conditions, current, source and receiver depth, water depth, water chemistry, and bottom composition and topography. The general formula for underwater TL is:

$$TL = B * \mathrm{Log10}\,(R1/R2),$$

where

TL = transmission loss in dB
B = transmission loss coefficient; for practical spreading equals 15
R1 = the distance of the modeled SPL from the driven pile, and
R2 = the distance from the driven pile of the initial measurement

The recommended TL coefficient for most nearshore environments is the practical spreading value of 15. This value results in an expected propagation environment that would lie between spherical and cylindrical spreading loss conditions, which is the most appropriate assumption for the Navy's proposed activity in the absence of specific modelling. For this project however, the Navy did model sound propagation for the impact and vibratory hammering methods (Dall'Osto and Dahl 2019). For all other pile removal methods we used the practical spreading value.

The Navy determined underwater noise would fall below the behavioral effects threshold of 126 dB rms for marine mammals at distances of less than 10 to 7,140 m depending on the pile type(s) and methods (Table 7). It should be noted that based on the bathymetry and geography of San Diego Bay, sound will not reach the full distance of the Level B harassment isopleths in all directions. Because the Navy's as yet unhired contractor has not decided which of the various pile removal methods it will use, we only calculate a worst-case scenario of simultaneous operation of two of the loudest sound producing methods (large pile clippers) to consider the largest possible harassment zones for simultaneous pile removal.

TABLE 7—LEVEL A AND LEVEL B ISOPLETHS FOR EACH PILE DRIVING TYPE AND METHOD

Pile Driving Activity		Radial distance or maximum modeled length × width (m)	
Method	Pile type	Level A	Level B
Vibratory Extraction	12-inch timber/plastic	<10	2167 × 1065.
	20 and 24-inch concrete	<10	6,990 × 1,173.
	16-inch steel	<10	7,140 × 1,595.
Water Jetting	20-inch concrete	<10	1359.
Underwater Chainsaw	12 to 24-inch concrete	<10	398.
Small Pile Clipper	12-inch timber/plastic	<10	736.
Large Pile Clipper	20 to 24-inch concrete	<10	2154.
Two Large Pile Clippers	20 to 24-inch concrete	<10	3415.
Impact Hammer	20 and 24-inch concrete	<10	192.
	16-inch fiberglass	<10	<10.

Level A Harassment Zones

When the NMFS Technical Guidance (2016) was published, in recognition of the fact that ensonified area/volume could be more technically challenging to predict because of the duration component in the new thresholds, we developed a User Spreadsheet that includes tools to help predict a simple isopleth that can be used in conjunction with marine mammal density or occurrence to help predict takes. We note that because of some of the assumptions included in the methods used for these tools, we anticipate that isopleths produced are typically going to be overestimates of some degree, which may result in some degree of overestimate of take by Level A harassment. However, these tools offer the best way to predict appropriate isopleths when more sophisticated 3D modeling methods are not available, and NMFS continues to develop ways to quantitatively refine these tools, and will qualitatively address the output where appropriate. For stationary sources such as impact/vibratory pile driving or removal using any of the methods discussed above, NMFS User Spreadsheet predicts the closest distance at which, if a marine mammal remained at that distance the whole duration of the activity, it would not incur PTS.

As discussed above, the Navy modelled sound propagation for impact and vibratory hammering of piles (Dall'Osto and Dahl 2019) and used those models to calculate Level A harassment isopleths. For all other pile removal methods we used the User Spreadsheet to determine the Level A harassment isopleths. Inputs used in the User Spreadsheet or models are reported in Table 8 and the resulting isopleths are reported in Table 7 for each of construction methods.

TABLE 8—NMFS TECHNICAL GUIDANCE USER SPREADSHEET INPUT TO CALCULATE LEVEL A ISOPLETHS FOR A COMBINATION OF PILE DRIVING

Pile Driving Activity		Radial distance or maximum modeled length × width (m)	
Method	Pile Type	Piles per day	Strikes per pile/ duration to drive a single pile
Vibratory Extraction	12-inch timber/plastic	8	10 minutes.
	20 and 24-inch concrete	8	10 minutes.
	16-inch steel	8	10 minutes.
Water Jetting	20-inch concrete	8	20 minutes.
Underwater Chainsaw	12 to 24-inch concrete	8	10 minutes.
Small Pile Clipper	12-inch timber/plastic	8	10 minutes.
Large Pile Clipper	20-inch concrete	8	10 minutes.
Impact Hammer	20 and 24-inch concrete	7	600 strikes.
	16-inch fiberglass	7	600 strikes.

The above input scenarios lead to PTS isopleth distances (Level A thresholds) of less than 10 m for all methods and piles (Table 7).

Marine Mammal Occurrence and Take Calculation and Estimation

In this section we provide the information about the presence, density, or group dynamics of marine mammals that will inform the take calculations. Here we describe how the information provided above is brought together to produce a quantitative take estimate.

No California sea lion density information is available for south San Diego Bay. Potential exposures to impact and vibratory pile driving noise for each threshold for California sea lions were estimated using data collected during a 2010 survey as reported in Sorensen and Swope (2010). During this survey two separate sea lions were observed in the project area.

The available survey data from Sorenson and Swope (2010) and other unpublished monitoring data from recent nearby projects on Naval Base San Diego suggests two California sea lions could be present each day in the project area. However given the limited data available and the more northerly location of this project relative to the recent dry dock project (*https://www.fisheries.noaa.gov/action/incidental-take-authorization-us-navy-floating-dry-dock-project-naval-base-san-diego*) where we estimate two California sea lions per day, to be conservative, we have estimated four California sea lions could be present each day. As noted above, there are 250 days of in-water work for this project. Multiplication of the above estimate of animals per day (4) times the days of work (250) results in a proposed Level B harassment take of 1000 California sea lions (Table 9). The Navy intends to avoid Level A harassment take by shutting down activities if a California sea lion approaches within 20 m of the project site, which encompasses all Level A harassment ensonification zones. Therefore, no take by Level A harassment is anticipated or proposed for authorization.

TABLE 9—PROPOSED AUTHORIZED AMOUNT OF TAKING, BY LEVEL A HARASSMENT AND LEVEL B HARASSMENT, BY SPECIES AND STOCK AND PERCENT OF TAKE BY STOCK

Species	Authorized Take		Percent of Stock
	Level B	Level A	
California sea lion (*Zalophus californianus*) U.S. Stock	1000	0	0.4

Proposed Mitigation

In order to issue an IHA under section 101(a)(5)(D) of the MMPA, NMFS must set forth the permissible methods of taking pursuant to the activity, and other means of effecting the least practicable impact on the species or stock and its habitat, paying particular attention to rookeries, mating grounds, and areas of similar significance, and on the availability of the species or stock for taking for certain subsistence uses (latter not applicable for this action). NMFS regulations require applicants for incidental take authorizations to include information about the availability and feasibility (economic and technological) of equipment, methods, and manner of conducting the activity or other means of effecting the least practicable adverse impact upon the affected species or stocks and their habitat (50 CFR 216.104(a)(11)).

In evaluating how mitigation may or may not be appropriate to ensure the least practicable adverse impact on species or stocks and their habitat, as well as subsistence uses where applicable, we carefully consider two primary factors:

(1) The manner in which, and the degree to which, the successful implementation of the measure(s) is expected to reduce impacts to marine mammals, marine mammal species or stocks, and their habitat. This considers the nature of the potential adverse impact being mitigated (likelihood, scope, range). It further considers the likelihood that the measure will be effective if implemented (probability of accomplishing the mitigating result if implemented as planned), the likelihood of effective implementation (probability implemented as planned); and

(2) The practicability of the measures for applicant implementation, which may consider such things as cost, impact on operations, and, in the case of a military readiness activity, personnel safety, practicality of implementation, and impact on the effectiveness of the military readiness activity.

The following mitigation measures are proposed in the IHA:

- For in-water heavy machinery work other than pile driving, if a marine

mammal comes within 10 m, operations shall cease and vessels shall reduce speed to the minimum level required to maintain steerage and safe working conditions. This type of work could include the following activities: (1) Movement of the barge to the pile location; or (2) positioning of the pile on the substrate via a crane (*i.e.,* stabbing the pile);

• Conduct briefings between construction supervisors and crews and the marine mammal monitoring team prior to the start of all pile driving activity and when new personnel join the work, to explain responsibilities, communication procedures, marine mammal monitoring protocol, and operational procedures;

• For those marine mammals for which Level B harassment take has not been requested, in-water pile installation/removal will shut down immediately if such species are observed within or entering the Level B harassment zone; and

• If take reaches the authorized limit for an authorized species, pile installation will be stopped as these species approach the Level B harassment zone to avoid additional take.

The following mitigation measures would apply to the Navy's in-water construction activities.

• *Establishment of Shutdown Zones*—The Navy will establish shutdown zones for all pile driving and removal activities. The purpose of a shutdown zone is generally to define an area within which shutdown of the activity would occur upon sighting of a marine mammal (or in anticipation of an animal entering the defined area). Shutdown zones typically vary based on the activity type and marine mammal hearing group (Table 4). In this case there is only one species affected and all level A harassment isopleths are less than 10 m radius. To be conservative, the Navy will establish a 20 m shutdown zone for all pile driving or removal activities.

• The placement of Protected Species Observers (PSOs) during all pile driving and removal activities (described in detail in the Proposed Monitoring and Reporting section) will ensure that the entire shutdown zone is visible during pile installation. Should environmental conditions deteriorate such that marine mammals within the entire shutdown zone would not be visible (*e.g.,* fog, heavy rain), pile driving and removal must be delayed until the PSO is confident marine mammals within the shutdown zone could be detected.

• *Monitoring for Level B Harassment*—The Navy will monitor the Level A and B harassment zones. Monitoring zones provide utility for observing by establishing monitoring protocols for areas adjacent to the shutdown zones. Monitoring zones enable observers to be aware of and communicate the presence of marine mammals in the project area outside the shutdown zone and thus prepare for a potential halt of activity should the animal enter the shutdown zone. Placement of PSOs will allow PSOs to observe marine mammals within the Level B harassment zones.

• *Pre-activity Monitoring*—Prior to the start of daily in-water construction activity, or whenever a break in pile driving/removal of 30 minutes or longer occurs, PSOs will observe the shutdown and monitoring zones for a period of 30 minutes. The shutdown zone will be considered cleared when a marine mammal has not been observed within the zone for that 30-minute period. If a marine mammal is observed within the shutdown zone, a soft-start cannot proceed until the animal has left the zone or has not been observed for 15 minutes. When a marine mammal for which Level B harassment take is authorized is present in the Level B harassment zone, activities may begin and Level B harassment take will be recorded. If the entire Level B harassment zone is not visible at the start of construction, pile driving activities can begin. If work ceases for more than 30 minutes, the pre-activity monitoring of the shutdown zones will commence.

• *Soft Start*—Soft-start procedures are believed to provide additional protection to marine mammals by providing warning and/or giving marine mammals a chance to leave the area prior to the impact hammer operating at full capacity. For impact pile driving, contractors will be required to provide an initial set of three strikes from the hammer at reduced energy, followed by a 30-second waiting period. This procedure will be conducted three times before impact pile driving begins. Soft start will be implemented at the start of each day's impact pile driving and at any time following cessation of impact pile driving for a period of 30 minutes or longer.

Based on our evaluation of the applicant's proposed measures, as well as other measures considered by NMFS, NMFS has preliminarily determined that the proposed mitigation measures provide the means effecting the least practicable impact on the affected species or stocks and their habitat, paying particular attention to rookeries, mating grounds, and areas of similar significance.

Proposed Monitoring and Reporting

In order to issue an IHA for an activity, section 101(a)(5)(D) of the MMPA states that NMFS must set forth requirements pertaining to the monitoring and reporting of such taking. The MMPA implementing regulations at 50 CFR 216.104 (a)(13) indicate that requests for authorizations must include the suggested means of accomplishing the necessary monitoring and reporting that will result in increased knowledge of the species and of the level of taking or impacts on populations of marine mammals that are expected to be present in the proposed action area. Effective reporting is critical both to compliance as well as ensuring that the most value is obtained from the required monitoring.

Monitoring and reporting requirements prescribed by NMFS should contribute to improved understanding of one or more of the following:

• Occurrence of marine mammal species or stocks in the area in which take is anticipated (*e.g.,* presence, abundance, distribution, density);

• Nature, scope, or context of likely marine mammal exposure to potential stressors/impacts (individual or cumulative, acute or chronic), through better understanding of: (1) Action or environment (*e.g.,* source characterization, propagation, ambient noise); (2) affected species (*e.g.,* life history, dive patterns); (3) co-occurrence of marine mammal species with the action; or (4) biological or behavioral context of exposure (*e.g.,* age, calving or feeding areas);

• Individual marine mammal responses (behavioral or physiological) to acoustic stressors (acute, chronic, or cumulative), other stressors, or cumulative impacts from multiple stressors;

• How anticipated responses to stressors impact either: (1) Long-term fitness and survival of individual marine mammals; or (2) populations, species, or stocks;

• Effects on marine mammal habitat (*e.g.,* marine mammal prey species, acoustic habitat, or other important physical components of marine mammal habitat); and

• Mitigation and monitoring effectiveness.

Visual Monitoring

Marine mammal monitoring must be conducted in accordance with the Monitoring Plan and Section 5 of the IHA. Marine mammal monitoring during pile driving and removal must be conducted by NMFS-approved PSOs in a manner consistent with the following:

• Independent PSOs (*i.e.,* not construction personnel) who have no other assigned tasks during monitoring periods must be used;

• At least one PSO must have prior experience performing the duties of a PSO during construction activity pursuant to a NMFS-issued incidental take authorization.

• Other PSOs may substitute education (degree in biological science or related field) or training for experience;

• Where a team of three or more PSOs are required, a lead observer or monitoring coordinator must be designated. The lead observer must have prior experience performing the duties of a PSO during construction activity pursuant to a NMFS-issued incidental take authorization; and

• The Navy must submit PSO Curriculum Vitae for approval by NMFS prior to the onset of pile driving.

PSOs must have the following additional qualifications:

• Ability to conduct field observations and collect data according to assigned protocols;

• Experience or training in the field identification of marine mammals, including the identification of behaviors;

• Sufficient training, orientation, or experience with the construction operation to provide for personal safety during observations;

• Writing skills sufficient to prepare a report of observations including but not limited to the number and species of marine mammals observed; dates and times when in-water construction activities were conducted; dates, times, and reason for implementation of mitigation (or why mitigation was not implemented when required); and marine mammal behavior; and

• Ability to communicate orally, by radio or in person, with project personnel to provide real-time information on marine mammals observed in the area as necessary.

Up to four PSOs will be employed. PSO locations will provide an unobstructed view of all water within the shutdown zone, and as much of the Level A and Level B harassment zones as possible. PSO locations are as follows:

(1) At the pile driving/removal site or best vantage point practicable to monitor the shutdown zones;

(2) For activities with Level B harassment zones larger than 400 m two additional PSO locations will be used. One will be across from the project location along Inchon Road at Naval Amphibious Base Coronado; and

(3) Two additional PSOs will be located in a small boat. The boat will conduct a pre-activity survey of the entire monitoring area prior to in-water construction. The boat will start from south of the project area (where potential marine mammal occurrence is lowest) and proceed to the north. When the boat arrives near the northern boundary of the Level B harassment zone (*e.g.,* just north of the western side of the Coronado Bridge as depicted in the Figures in the monitoring plan) it will set up station so the PSOs are best situated to detect any marine mammals that may approach from the north. The two PSOs aboard will split monitoring duties in order to monitor a 360 degree sweep around the vessel with each PSO responsible for 180 degrees of observable area.

Monitoring will be conducted 30 minutes before, during, and 30 minutes after pile driving/removal activities. In addition, observers shall record all incidents of marine mammal occurrence, regardless of distance from activity, and shall document any behavioral reactions in concert with distance from piles being driven or removed. Pile driving activities include the time to install or remove a single pile or series of piles, as long as the time elapsed between uses of the pile driving or drilling equipment is no more than 30 minutes.

Hydroacoustic Monitoring and Reporting

The Navy has volunteered to conduct hydroacoustic monitoring of all pile driving and removal methods. Data will be collected for a representative number of piles (three to five) for each installation or removal method. As part of the below-mentioned report, or in a separate report with the same timelines as above, the Navy will provide an acoustic monitoring report for this work. Hydroacoustic monitoring results can be used to adjust the size of the Level B harassment and monitoring zones after a request is made and approved by NMFS. The acoustic monitoring report must, at minimum, include the following:

• Hydrophone equipment and methods: recording device, sampling rate, distance (m) from the pile where recordings were made; depth of recording device(s).

• Type of pile being driven or removed, substrate type, method of driving or removal during recordings.

• For impact pile driving: Pulse duration and mean, median, and maximum sound levels (dB re: 1µPa): SELcum, peak sound pressure level (SPLpeak), and single-strike sound exposure level (SELs-s).

• For vibratory removal and other non-impulsive sources: Mean, median, and maximum sound levels (dB re: 1µPa): root mean square sound pressure level (SPLrms), SELcum.

• Number of strikes (impact) or duration (vibratory or other non-impulsive sources) per pile measured, one-third octave band spectrum and power spectral density plot.

Reporting

A draft marine mammal monitoring report will be submitted to NMFS within 90 days after the completion of pile driving and removal activities, or 60 days prior to a requested date of issuance of any future IHAs for projects at the same location, whichever comes first. The report will include an overall description of work completed, a narrative regarding marine mammal sightings, and associated PSO data sheets. Specifically, the report must include:

• Dates and times (begin and end) of all marine mammal monitoring;

• Construction activities occurring during each daily observation period, including how many and what type of piles were driven or removed and by what method (*i.e.,* impact or vibratory and if other removal methods were used);

• Weather parameters and water conditions during each monitoring period (*e.g.,* wind speed, percent cover, visibility, sea state);

• The number of marine mammals observed, by species, relative to the pile location and if pile driving or removal was occurring at time of sighting;

• Age and sex class, if possible, of all marine mammals observed;

• PSO locations during marine mammal monitoring;

• Distances and bearings of each marine mammal observed to the pile being driven or removed for each sighting (if pile driving or removal was occurring at time of sighting);

• Description of any marine mammal behavior patterns during observation, including direction of travel and estimated time spent within the Level A and Level B harassment zones while the source was active;

• Number of individuals of each species (differentiated by month as appropriate) detected within the monitoring zone;

• Detailed information about any implementation of any mitigation triggered (*e.g.,* shutdowns and delays), a description of specific actions that ensued, and resulting behavior of the animal, if any; and

• Description of attempts to distinguish between the number of individual animals taken and the number of incidences of take, such as ability to track groups or individuals.

If no comments are received from NMFS within 30 days, the draft final report will constitute the final report. If comments are received, a final report addressing NMFS comments must be submitted within 30 days after receipt of comments.

Reporting Injured or Dead Marine Mammals

In the event that personnel involved in the construction activities discover an injured or dead marine mammal, the Navy shall report the incident to the Office of Protected Resources (OPR), NMFS and to the regional stranding coordinator as soon as feasible. If the death or injury was clearly caused by the specified activity, the Navy must immediately cease the specified activities until NMFS is able to review the circumstances of the incident and determine what, if any, additional measures are appropriate to ensure compliance with the terms of the IHA. The IHA-holder must not resume their activities until notified by NMFS. The report must include the following information:

• Time, date, and location (latitude/longitude) of the first discovery (and updated location information if known and applicable);

• Species identification (if known) or description of the animal(s) involved;

• Condition of the animal(s) (including carcass condition if the animal is dead);

• Observed behaviors of the animal(s), if alive;

• If available, photographs or video footage of the animal(s); and

• General circumstances under which the animal was discovered.

Negligible Impact Analysis and Determination

NMFS has defined negligible impact as an impact resulting from the specified activity that cannot be reasonably expected to, and is not reasonably likely to, adversely affect the species or stock through effects on annual rates of recruitment or survival (50 CFR 216.103). A negligible impact finding is based on the lack of likely adverse effects on annual rates of recruitment or survival (*i.e.,* population-level effects). An estimate of the number of takes alone is not enough information on which to base an impact determination. In addition to considering estimates of the number of marine mammals that might be ''taken'' through harassment, NMFS considers other factors, such as the likely nature of any responses (*e.g.,* intensity, duration), the context of any responses (*e.g.,* critical reproductive time or location, migration), as well as effects on habitat, and the likely effectiveness of the mitigation. We also assess the number, intensity, and context of estimated takes by evaluating this information relative to population status. Consistent with the 1989 preamble for NMFS's implementing regulations (54 FR 40338; September 29, 1989), the impacts from other past and ongoing anthropogenic activities are incorporated into this analysis via their impacts on the environmental baseline (*e.g.,* as reflected in the regulatory status of the species, population size and growth rate where known, ongoing sources of human-caused mortality, or ambient noise levels).

Pile driving activities have the potential to disturb or displace marine mammals. Specifically, the project activities may result in take, in the form of Level B harassment from underwater sounds generated from pile driving and removal. Potential takes could occur if individuals are present in the ensonified zone when these activities are underway.

The takes from Level B harassment would be due to potential behavioral disturbance, TTS, and PTS. No mortality is anticipated given the nature of the activity and measures designed to minimize the possibility of injury to marine mammals. The potential for harassment is minimized through the construction method and the implementation of the planned mitigation measures (see Proposed Mitigation section).

The nature of the pile driving project precludes the likelihood of serious injury or mortality. Take would occur within a limited, confined area (south-central San Diego Bay) of the stock's range. Level B harassment will be reduced to the level of least practicable adverse impact through use of mitigation measures described herein. Further the amount of take proposed to be authorized is extremely small when compared to stock abundance.

Behavioral responses of marine mammals to pile driving at the project site, if any, are expected to be mild and temporary. Marine mammals within the Level B harassment zone may not show any visual cues they are disturbed by activities (as noted during modification to the Kodiak Ferry Dock) or could become alert, avoid the area, leave the area, or display other mild responses that are not observable such as changes in vocalization patterns. Given the short duration of noise-generating activities per day and that pile driving and removal would occur across six months, any harassment would be temporary. There are no other areas or times of known biological importance for any of the affected species.

In addition, it is unlikely that minor noise effects in a small, localized area of habitat would have any effect on the stocks' ability to recover. In combination, we believe that these factors, as well as the available body of evidence from other similar activities, demonstrate that the potential effects of the specified activities will have only minor, short-term effects on individuals. The specified activities are not expected to impact rates of recruitment or survival and will therefore not result in population-level impacts.

In summary and as described above, the following factors primarily support our preliminary determination that the impacts resulting from this activity are not expected to adversely affect the species or stock through effects on annual rates of recruitment or survival:

• No mortality or Level A harassment is anticipated or authorized;

• No important habitat areas have been identified within the project area;

• For all species, San Diego Bay is a very small and peripheral part of their range;

• The Navy would implement mitigation measures such as vibratory driving piles to the maximum extent practicable, soft-starts, and shut downs; and

• Monitoring reports from similar work in San Diego Bay have documented little to no effect on individuals of the same species impacted by the specified activities.

Based on the analysis contained herein of the likely effects of the specified activity on marine mammals and their habitat, and taking into consideration the implementation of the proposed monitoring and mitigation measures, NMFS preliminarily finds that the total marine mammal take from the proposed activity will have a negligible impact on all affected marine mammal species or stocks.

Small Numbers

As noted above, only small numbers of incidental take may be authorized under section 101(a)(5)(D) of the MMPA for specified activities other than military readiness activities. The MMPA does not define small numbers and so, in practice, where estimated numbers are available, NMFS compares the number of individuals taken to the most appropriate estimation of abundance of the relevant species or stock in our

determination of whether an authorization is limited to small numbers of marine mammals. When the predicted number of individuals to be taken is fewer than one third of the species or stock abundance, the take is considered to be of small numbers. Additionally, other qualitative factors may be considered in the analysis, such as the temporal or spatial scale of the activities.

The amount of take NMFS proposes to authorize is below one third of the estimated stock abundance of California sea lions (in fact, take of individuals is less than 1% of the abundance of the affected stock). This is likely a conservative estimate because they assume all takes are of different individual animals which is likely not the case. Some individuals may return multiple times in a day, but PSOs would count them as separate takes if they cannot be individually identified.

Based on the analysis contained herein of the proposed activity (including the proposed mitigation and monitoring measures) and the anticipated take of marine mammals, NMFS preliminarily finds that small numbers of marine mammals will be taken relative to the population size of the affected species or stocks.

Unmitigable Adverse Impact Analysis and Determination

There are no relevant subsistence uses of the affected marine mammal stocks or species implicated by this action. Therefore, NMFS has determined that the total taking of affected species or stocks would not have an unmitigable adverse impact on the availability of such species or stocks for taking for subsistence purposes.

Endangered Species Act

Section 7(a)(2) of the ESA (16 U.S.C. 1531 *et seq.*) requires that each Federal agency insure that any action it authorizes, funds, or carries out is not likely to jeopardize the continued existence of any endangered or threatened species or result in the destruction or adverse modification of designated critical habitat. To ensure ESA compliance for the issuance of IHAs, NMFS consults internally, in this case with the West Coast Region Protected Resources Division Office, whenever we propose to authorize take for endangered or threatened species.

No incidental take of ESA-listed species is proposed for authorization or expected to result from this activity. Therefore, NMFS has determined that formal consultation under section 7 of the ESA is not required for this action.

Proposed Authorization

As a result of these preliminary determinations, NMFS proposes to issue an IHA to the Navy to conduct the Naval Base San Diego Pier 6 Replacement project in San Diego, CA from October 1, 2021 through September 30, 2022, provided the previously mentioned mitigation, monitoring, and reporting requirements are incorporated. A draft of the proposed IHA can be found at *https://www.fisheries.noaa.gov/permit/incidental-take-authorizations-under-marine-mammal-protection-act.*

Request for Public Comments

We request comment on our analyses, the proposed authorization, and any other aspect of this notice of proposed IHA for the proposed Naval Base San Diego Pier 6 Replacement project. We also request at this time comment on the potential renewal of this proposed IHA as described in the paragraph below. Please include with your comments any supporting data or literature citations to help inform decisions on the request for this IHA or a subsequent Renewal IHA.

On a case-by-case basis, NMFS may issue a one-time one-year Renewal IHA following notice to the public providing an additional 15 days for public comments when (1) up to another year of identical, or nearly identical, activities as described in the Description of Proposed Activity section of this notice is planned or (2) the activities as described in the Description of Proposed Activity section of this notice would not be completed by the time the IHA expires and a Renewal would allow for completion of the activities beyond that described in the *Dates and Duration* section of this notice, provided all of the following conditions are met:

- A request for renewal is received no later than 60 days prior to the needed Renewal IHA effective date (recognizing that Renewal IHA expiration date cannot extend beyond one year from expiration of the initial IHA);
- The request for renewal must include the following:

(1) An explanation that the activities to be conducted under the requested Renewal IHA are identical to the activities analyzed under the initial IHA, are a subset of the activities, or include changes so minor (*e.g.,* reduction in pile size) that the changes do not affect the previous analyses, mitigation and monitoring requirements, or take estimates (with the exception of reducing the type or amount of take); and

(2) A preliminary monitoring report showing the results of the required monitoring to date and an explanation showing that the monitoring results do not indicate impacts of a scale or nature not previously analyzed or authorized; and

- Upon review of the request for Renewal, the status of the affected species or stocks, and any other pertinent information, NMFS determines that there are no more than minor changes in the activities, the mitigation and monitoring measures will remain the same and appropriate, and the findings in the initial IHA remain valid.

Dated: December 7, 2020.

Donna S. Wieting,

Director, Office of Protected Resources, National Marine Fisheries Service.

Takes of Marine Mammals Incidental To Specified Activities; Taking Marine Mammals Incidental to the U.S. Coast Guard's Base Los Angeles/Long Beach Wharf Expansion Project, Los Angeles, California

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; issuance of an incidental harassment authorization.

SUMMARY: In accordance with the regulations implementing the Marine Mammal Protection Act (MMPA) as amended, notification is hereby given that NMFS has issued an incidental harassment authorization (IHA) to the U. S. Coast Guard (Coast Guard) to incidentally harass, by Level B harassment only, marine mammals during activities associated with the Base Los Angeles/Long Beach Wharf Expansion Project in Los Angeles, California.

DATES: This Authorization is effective from February 1, 2021 through January 31, 2022.

FOR FURTHER INFORMATION CONTACT: Dwayne Meadows, Ph.D., Office of Protected Resources, NMFS, (301) 427–8401. Electronic copies of the application and supporting documents, as well as a list of the references cited in this document, may be obtained online at: *https://www.fisheries.noaa.gov/permit/incidental-take-authorizations-under-*

marine-mammal-protection-act. In case of problems accessing these documents, please call the contact listed above.

SUPPLEMENTARY INFORMATION:

Background

The MMPA prohibits the ''take'' of marine mammals, with certain exceptions. Sections 101(a)(5)(A) and (D) of the MMPA (16 U.S.C. 1361 *et seq.*) direct the Secretary of Commerce (as delegated to NMFS) to allow, upon request, the incidental, but not intentional, taking of small numbers of marine mammals by U.S. citizens who engage in a specified activity (other than commercial fishing) within a specified geographical region if certain findings are made and either regulations are issued or, if the taking is limited to harassment, a notice of a proposed incidental take authorization may be provided to the public for review.

Authorization for incidental takings shall be granted if NMFS finds that the taking will have a negligible impact on the species or stock(s) and will not have an unmitigable adverse impact on the availability of the species or stock(s) for taking for subsistence uses (where relevant). Further, NMFS must prescribe the permissible methods of taking and other ''means of effecting the least practicable adverse impact'' on the affected species or stocks and their habitat, paying particular attention to rookeries, mating grounds, and areas of similar significance, and on the availability of the species or stocks for taking for certain subsistence uses (referred to in shorthand as ''mitigation''); and requirements pertaining to the mitigation, monitoring and reporting of the takings are set forth.

The definitions of all applicable MMPA statutory terms cited above are included in the relevant sections below.

Summary of Request

On July 2, 2020, NMFS received an application from the Coast Guard requesting an IHA to take small numbers of five species of marine mammals incidental to pile driving associated with the Base Los Angeles Long Beach Wharf Expansion Project in Los Angeles, California. The application was deemed adequate and complete on October 5, 2020. The Coast Guard's request is for take of a small number of five species of marine mammals by Level A and/or Level B harassment. Neither the Coast Guard nor NMFS expects serious injury or mortality to result from this activity and, therefore, an IHA is appropriate.

Description of Specified Activity

Overview

The purpose of the project is to expand the existing wharf and other base infrastructure for hosting two additional offshore patrol cutters. The existing 1255-foot (383 meters (m)) long by 30-foot (9 m) wide wharf will be extended 265 feet (81 m). The waterfront improvements also include repair of the bank erosion area and placement of small rocks for slope protection near the new onshore electrical substation. Specifically, construction work includes installing up to 102 pier support piles (16 to 30-inch diameter concrete piles) and 126 fender and corner protection piles (16 to 30-inch diameter concrete piles). Pile driving will be by impact hammering. Because of other permitting restrictions, in-water pile driving can only occur between September 1 and April 14, to avoid the nesting season of the California least tern. A detailed description of the planned project is provided in the **Federal Register** notice for the proposed IHA (85 FR 66939; October 21, 2020). Since that time, no changes have been made to the planned activities. Therefore, a detailed description is not provided here. Please refer to that **Federal Register** notice for the description of the specific activity.

Comments and Response

A notice of NMFS's proposal to issue an IHA to the Coast Guard was published in the **Federal Register** on October 21, 2020 (85 FR 66939). That notice described, in detail, the Coast Guard's activity, the marine mammal species that may be affected by the activity, and the anticipated effects on marine mammals. During the 30-day public comment period, NMFS received public comment from one commenter. The U.S. Geological Survey noted they have ''no comment to offer at this time''. A comment letter from the Marine Mammal Commission (Commission) was separately received pursuant to the Commission's authority to recommend steps it deems necessary or desirable to protect and conserve marine mammals (16 U.S.C. 1402.202(a)). We are obligated to respond to the Commission's recommendations within 120 days, and we do so below.

Comment: The Commission recommends that NMFS refrain from issuing renewals for any authorization unless it is consistent with the procedural requirements specified in section 101(a)(5)(D)(iii) of the MMPA.

Response: In prior responses to comments about IHA Renewals (*e.g.,* 84 FR 52464; October 02, 2019 and 85 FR 53342, August 28, 2020), NMFS has explained how the Renewal process, as implemented, is consistent with the statutory requirements contained in section 101(a)(5)(D) of the MMPA, and promotes NMFS' goals of improving conservation of marine mammals and increasing efficiency in the MMPA compliance process. Therefore, we intend to continue implementing the Renewal process.

Comment: The Commission recommends that NMFS reinforce that USCG must keep a running tally of the total Level A and B harassment takes for each species consistent with condition 4(j) of the final authorization.

Response: We agree that the USCG must ensure they do not exceed authorized takes but do not concur with the recommendation. NMFS is not responsible for ensuring that the USCG does not operate in violation of an issued IHA.

Comment: The Commission recommends that NMFS include in the final authorization the requirement that USCG conduct pile-driving activities during daylight hours only.

Response: We do not fully concur with the Commission's recommendation, or with their underlying justification, and do not adopt it as stated. While the USCG has no intention of conducting pile driving activities at night, it is unnecessary to preclude such activity should the need arise (*e.g.,* on an emergency basis or to complete driving of a pile begun during daylight hours, should the construction operator deem it necessary to do so). We disagree with the statement that a prohibition on pile driving activity outside of daylight hours is necessary to meet the MMPA's least practicable adverse impact standard, and the Commission does not justify this assertion.

Comment: The Commission recommends that NMFS prioritize resolving the issue of the appropriate timeframes over which sound exposure levels should be accumulated when estimating the extents of the Level A harassment zones in the near future and consider incorporating animat modeling into its user spreadsheet.

Response: NMFS concurs with this recommendation and has prioritized the issue.

Comment: The Commission recommends that NMFS (1) specify why it has used a smaller source level reduction for bubble curtains from prior projects based on the same referenced data, (2) refrain from using the 5-decibel (dB) bubble curtain source level reduction factor for far-field impacts (≤ 100 m) and (3) consult with

acousticians, including those at the University of Washington-Applied Physics Laboratory, regarding the appropriate source level reduction factor, if any, to use to minimize far-field effects on marine mammals.

Response: NMFS does not agree with the Commission's assessment of bubble curtains. As is their right, the USCG wished to use a more conservative source level reduction for bubble curtains, their application reflected this desire, and we concurred that a 5 dB source level reduction was acceptable and we proposed this reduction.

NMFS does not agree with the Commission's assessment on bubble curtain efficacy that is based on near- and far-distance (referred as ''near-field'' and ''far-field'' by the Commission). Although the measured levels at far-distances (*i.e.,* >100 m) often show less differences from those measured near the source (*e.g.,* at 10 m), this is likely due to propagation effects that some of the sediment-borne acoustic energy that was not attenuated by the bubble curtain re-emerged into the water-column at much further distances. However, this information should not be used to suggest that a different noise level reduction needs to be used for long-distance impact assessment. Since the applicant used a conservative practical spreading modeling (*i.e.,* 15 log (r)), acoustic energy that is lost due to boundary refraction and reflection is not considered in determining the impact distances, and this loss is in addition to the practical spreading. Therefore, the small differences at far-distances between with and without bubble curtains indicates that the bubble curtain is less effective in attenuating additional acoustic energy beyond that within the water column. Further, NMFS has previously outlined our rationale for the bubble curtain source level reduction factor (*e.g.,* 84 FR 64833, November 25, 2019; 84 FR 28474, June 19, 2019) in response to a similar comment from the Commission.

Comment: The Commission recommends that NMFS work with USCG to ensure that the near-source hydrophone location is 10 m from the pile and the far-field hydrophone location(s) are 100–200 m from the pile.

Response: NMFS agrees that it is important to ensure adequate review of hydroacoustic monitoring plans before they are implemented by applicants. The USCG's request for proposals to contract the work for this project (which was announced before this IHA was proposed) does not specify exact distances or locations of hydrophones for the hydroacoustic monitoring. We will work with the USCG and their hydroacoustic monitoring contractor, within the constraints of USCG's contract, to achieve the best possible monitoring data.

Comment: The Commission recommends that NMFS authorize at least 38 Level A harassment takes of harbor seals based on the possibility that at least one seal could occur in the project area on each of the 38 days of proposed activities.

Response: We do not concur with the Commission's recommendation. As noted in our proposed authorizations, we typically estimate take based on the area of the harassment zone and the density of potentially taken species. As also noted in our proposed authorizations, when density data are not available for a species (as is the case for harbor seals in this project area) we use proxy density or abundance data to help calculate take. Just as with density data, the proxies often result in fractional estimates of animals potentially affected per day of activity. As the Commission has been aware, our standard practice is to round estimates based on significant digits after calculating daily take, not to round to whole numbers of take each day as the Commission suggests. We do not round to whole numbers of take until the end of the series of calculations used to estimate take. Using those standard practices we arrived at an estimate of 19 takes of harbor seals.

The Commission also notes higher occurrences of harbor seals in areas far away from the project site (*i.e.,* survey zone 8). They raised this issue in their informal comments. As we told the Commission in our response to those informal comments, based on the numerous surveys in areas closer to the project area, and anecdotal evidence that the harbor seals located near the breakwall (such as zone 8) do not venture further into the harbor near the project area, we believe that the proposed 19 takes of harbor seals are sufficiently representative of take that may be expected to occur.

Comment: The Commission recommends that NMFS either (1) increase the number of takes of common dolphins from 200 to 280 if USCG intended to assume that one group of dolphins could be present each full week of activities and activities would occur only five days per week or (2) clarify that it assumed that one group of common dolphins would be present every 7 days rather than every full week of activities.

Response: We do not concur with the Commission's recommendation. The Commission raised this issue in their informal comments. The Commission mistakenly asserted we had used the term ''work week'' in our analysis and made an unsubstantiated assumption that construction activities would occur only 5 days per week and that our analysis depends on how many days per week an applicant is actually able to work (*e.g.,* because of weather or mechanical issues, etc.). As noted in our informal comment response to the Commission, our take analysis assumed that one group of common dolphins would be present every 7 days of work and thus there is no need to change the number of takes of common dolphins.

Changes From the Proposed IHA to Final IHA

We made minor clarifications in our standard language in the Mitigation section of this notice and in the IHA to reflect that because only impact hammering is being used, in some cases shutdown zones are larger than the Level B harassment and monitoring zones. Minor typographical errors were corrected.

Description of Marine Mammals in the Area of Specified Activities

Sections 3 and 4 of the application summarize available information regarding status and trends, distribution and habitat preferences, and behavior and life history, of the potentially affected species. Additional information regarding population trends and threats may be found in NMFS's Stock Assessment Reports (SARs; *https://www.fisheries.noaa.gov/national/marine-mammal-protection/marine-mammal-stock-assessments*) and more general information about these species (*e.g.,* physical and behavioral descriptions) may be found on NMFS's website (*https://www.fisheries.noaa.gov/find-species*).

Table 1 lists all species or stocks for which take is expected and authorized for this action, and summarizes information related to the population or stock, including regulatory status under the MMPA and Endangered Species Act (ESA) and potential biological removal (PBR), where known. For taxonomy, we follow Committee on Taxonomy (2020). PBR is defined by the MMPA as the maximum number of animals, not including natural mortalities, that may be removed from a marine mammal stock while allowing that stock to reach or maintain its optimum sustainable population (as described in NMFS's SARs). While no mortality is anticipated or authorized here, PBR and annual serious injury and mortality from anthropogenic sources are included here as gross indicators of the status of the species and other threats.

Marine mammal abundance estimates presented in this document represent the total number of individuals that make up a given stock or the total number estimated within a particular study or survey area. NMFS's stock abundance estimates for most species represent the total estimate of individuals within the geographic area, if known, that comprises that stock. For some species, this geographic area may extend beyond U.S. waters. All managed stocks in this region are assessed in NMFS's U.S. Pacific SARs (*e.g.,* Carretta *et al.* 2020).

TABLE 1—SPECIES THAT SPATIALLY CO-OCCUR WITH THE ACTIVITY TO THE DEGREE THAT TAKE IS REASONABLY LIKELY TO OCCUR

Common name	Scientific name	Stock	ESA/ MMPA status; Strategic (Y/N) [1]	Stock abundance (CV, N_{min}, most recent abundance survey) [2]	PBR	Annual M/SI [3]
Order Cetartiodactyla—Cetacea—Superfamily Mysticeti (baleen whales)						
Family Eschrichtiidae:.						
Gray Whale	*Eschrichtius robustus*	Eastern North Pacific	-, -, N	26,960 (0.05, 25,849, 2016) ..	801	138
Order Cetartiodactyla—Cetacea—Superfamily Odontoceti (toothed whales, dolphins, and porpoises)						
Family Delphinidae:						
Bottlenose Dolphin	*Tursiops truncatus*	California Coastal	-, -, N	453 (0.06, 346, 2011)	2.7	>2.0
Short-beaked common dolphin.	*Delphinus delphis*	California/Oregon/Washington	-, -, N	969,861 (0.17, 839,325, 2016)	8,393	≥40
Order Carnivora—Superfamily Pinnipedia						
Family Otariidae (eared seals and sea lions):						
California Sea Lion	*Zalophus californianus*	United States	-, -, N	257,606 (N/A, 233,515, 2014)	14,011	>321
Family Phocidae (earless seals):						
Harbor seal	*Phoca vitulina*	California	-, -, N	30,968 (N/A, 27,348, 2012) ...	1,641	43

[1] Endangered Species Act (ESA) status: Endangered (E), Threatened (T)/MMPA status: Depleted (D). A dash (-) indicates that the species is not listed under the ESA or designated as depleted under the MMPA. Under the MMPA, a strategic stock is one for which the level of direct human-caused mortality exceeds PBR or which is determined to be declining and likely to be listed under the ESA within the foreseeable future. Any species or stock listed under the ESA is automatically designated under the MMPA as depleted and as a strategic stock.

[2] NMFS marine mammal stock assessment reports online at: *https://www.fisheries.noaa.gov/national/marine-mammal-protection/marine-mammal-stock-assessments.* CV is coefficient of variation; Nmin is the minimum estimate of stock abundance.

[3] These values, found in NMFS's SARs, represent annual levels of human-caused mortality plus serious injury from all sources combined (*e.g.,* commercial fisheries, ship strike). Annual Mortality/Serious Injury (M/SI) often cannot be determined precisely and is in some cases presented as a minimum value or range. A CV associated with estimated mortality due to commercial fisheries is presented in some cases.

California sea lion, harbor seal, and bottlenose dolphin spatially co-occur with the activity to the degree that take is reasonably likely to occur, and we have authorized take of these species. Short-beaked common dolphin and gray whale occurrence and density is such that take is possible, and we have authorized take of these species also. A detailed description of the species likely to be affected by the project, including brief introductions to the species and relevant stocks as well as available information regarding population trends and threats, and information regarding local occurrence, were provided in the **Federal Register** notice for the proposed IHA (85 FR 66939; October 21, 2020); since that time, we are not aware of any changes in the status of these species and stocks; therefore, detailed descriptions are not provided here. Please refer to that **Federal Register** notice for these descriptions. Please also refer to NMFS' website (*https://www.fisheries.noaa.gov/find-species*) for generalized species accounts.

Potential Effects of Specified Activities on Marine Mammals and Their Habitat

The effects of underwater noise from the Coast Guard's construction activities have the potential to result in behavioral harassment of marine mammals in the vicinity of the survey area. The notice of proposed IHA (85 FR 66939; October 21, 2020) included a discussion of the effects of anthropogenic noise on marine mammals and the potential effects of underwater noise from the Coast Guard's construction activities on marine mammals and their habitat. That information and analysis is incorporated by reference into this final IHA determination and is not repeated here; please refer to the notice of proposed IHA (85 FR 66939; October 21, 2020).

Estimated Take

This section provides an estimate of the number of incidental takes authorized through this IHA, which will inform both NMFS' consideration of ''small numbers'' and the negligible impact determination.

Harassment is the only type of take expected to result from these activities. Except with respect to certain activities not pertinent here, section 3(18) of the MMPA defines ''harassment'' as any act of pursuit, torment, or annoyance, which (i) has the potential to injure a marine mammal or marine mammal stock in the wild (Level A harassment); or (ii) has the potential to disturb a marine mammal or marine mammal stock in the wild by causing disruption of behavioral patterns, including, but not limited to, migration, breathing, nursing, breeding, feeding, or sheltering (Level B harassment).

Authorized takes would be by Level B harassment, as use of the acoustic source (*i.e.,* impact pile driving) has the potential to result in disruption of behavioral patterns for individual marine mammals. There is also some potential for auditory injury (Level A harassment) to result for gray whales and harbor seals because predicted auditory injury zones are larger. The mitigation and monitoring measures are expected to minimize the severity of the taking to the extent practicable.

As described previously, no mortality is anticipated or authorized for this activity. Below we describe how the take is estimated.

Generally speaking, we estimate take by considering: (1) Acoustic thresholds

above which NMFS believes the best available science indicates marine mammals will be behaviorally harassed or incur some degree of permanent hearing impairment; (2) the area or volume of water that will be ensonified above these levels in a day; (3) the density or occurrence of marine mammals within these ensonified areas; and, (4) and the number of days of activities. We note that while these basic factors can contribute to a basic calculation to provide an initial prediction of takes, additional information that can qualitatively inform take estimates is also sometimes available (*e.g.,* previous monitoring results or average group size). NMFS relied on local occurrence data and group size to estimate take. Below, we describe the factors considered here in more detail and present the take estimate.

Acoustic Thresholds

Using the best available science, NMFS has developed acoustic thresholds that identify the received level of underwater sound above which exposed marine mammals would be reasonably expected to be behaviorally harassed (equated to Level B harassment) or to incur PTS of some degree (equated to Level A harassment).

Level B Harassment for non-explosive sources—Though significantly driven by received level, the onset of behavioral disturbance from anthropogenic noise exposure is also informed to varying degrees by other factors related to the source (*e.g.,* frequency, predictability, duty cycle), the environment (*e.g.,* bathymetry), and the receiving animals (hearing, motivation, experience, demography, behavioral context) and can be difficult to predict (Southall *et al.,* 2007, Ellison *et al.,* 2012). Based on what the available science indicates and the practical need to use a threshold based on a factor that is both predictable and measurable for most activities, NMFS uses a generalized acoustic threshold based on received level to estimate the onset of behavioral harassment. NMFS predicts that marine mammals are likely to be behaviorally harassed in a manner we consider Level B harassment when exposed to underwater anthropogenic noise above received levels of 120 dB re 1 (micro Pascal) µPa root mean square (rms) for continuous (*e.g.,* vibratory pile-driving) and above 160 dB re 1 µPa (rms) for non-explosive impulsive (*e.g.,* impact pile driving) or intermittent (*e.g.,* scientific sonar) sources.

The Coast Guard's proposed activity includes the use of impulsive (impact pile-driving) sources, and therefore the 160 dB re 1 µPa (rms) threshold is applicable.

Level A harassment for non-explosive sources—NMFS' Technical Guidance for Assessing the Effects of Anthropogenic Sound on Marine Mammal Hearing (Version 2.0) (Technical Guidance, 2018) identifies dual criteria to assess auditory injury (Level A harassment) to five different marine mammal groups (based on hearing sensitivity) as a result of exposure to noise from two different types of sources (impulsive or non-impulsive). The Coast Guard's activity includes the use of impulsive (impact pile-driving) sources.

These thresholds are provided in Table 2. The references, analysis, and methodology used in the development of the thresholds are described in NMFS 2018 Technical Guidance, which may be accessed at *https://www.fisheries.noaa.gov/national/marine-mammal-protection/marine-mammal-acoustic-technical-guidance.*

TABLE 2—THRESHOLDS IDENTIFYING THE ONSET OF PERMANENT THRESHOLD SHIFT

Hearing group	PTS onset acoustic thresholds * (Received Level)	
	Impulsive	Non-impulsive
Low-Frequency (LF) cetaceans	*Cell 1:* $L_{pk,flat}$: 219 dB; $L_{E,LF,24h}$: 183 dB	*Cell 2:* $L_{E,LF,24h}$: 199 dB.
Mid-Frequency (MF) Cetaceans	*Cell 3:* $L_{pk,flat}$: 230 dB; $L_{E,MF,24h}$: 185 dB	*Cell 4:* $L_{E,MF,24h}$: 198 dB.
High-Frequency (HF) Cetaceans	*Cell 5:* $L_{pk,flat}$: 202 dB; $L_{E,HF,24h}$: 155 dB	*Cell 6:*$L_{E,HF,24h}$: 173 dB.
Phocid Pinnipeds (PW) (Underwater)	*Cell 7:* $L_{pk,flat}$: 218 dB; $L_{E,PW,24h}$: 185 dB	*Cell 8:* $L_{E,PW,24h}$: 201 dB.
Otariid Pinnipeds (OW) (Underwater)	*Cell 9:* $L_{pk,flat}$: 232 dB; $L_{E,OW,24h}$: 203 dB	*Cell 10:* $L_{E,OW,24h}$: 219 dB.

* Dual metric acoustic thresholds for impulsive sounds: Use whichever results in the largest isopleth for calculating PTS onset. If a non-impulsive sound has the potential of exceeding the peak sound pressure level thresholds associated with impulsive sounds, these thresholds should also be considered.

Note: Peak sound pressure (L_{pk}) has a reference value of 1 µPa, and cumulative sound exposure level (L_E) has a reference value of 1µPa^{2}s. In this Table, thresholds are abbreviated to reflect American National Standards Institute standards (ANSI 2013). However, peak sound pressure is defined by ANSI as incorporating frequency weighting, which is not the intent for this Technical Guidance. Hence, the subscript "flat" is being included to indicate peak sound pressure should be flat weighted or unweighted within the generalized hearing range. The subscript associated with cumulative sound exposure level thresholds indicates the designated marine mammal auditory weighting function (LF, MF, and HF cetaceans, and PW and OW pinnipeds) and that the recommended accumulation period is 24 hours. The cumulative sound exposure level thresholds could be exceeded in a multitude of ways (*i.e.,* varying exposure levels and durations, duty cycle). When possible, it is valuable for action proponents to indicate the conditions under which these acoustic thresholds will be exceeded.

Ensonified Area

Here, we describe operational and environmental parameters of the activity that will feed into identifying the area ensonified above the acoustic thresholds, which include source levels and transmission loss coefficient.

The sound field in the project area is the existing background noise plus additional construction noise from the project. Marine mammals are expected to be affected via sound generated by the primary components of the project (*i.e.,* impact pile driving).

An impact hammer would be used to place the pile at its intended depth through rock or harder substrates. An impact hammer is a steel device that works like a piston, producing a series of independent strikes to drive the pile. Impact hammering typically generates the loudest noise associated with pile installation. The actual durations of each installation method vary depending on the type and size of the pile.

In order to calculate distances to the Level A harassment and Level B harassment sound thresholds for piles of various sizes being used in this project, NMFS used acoustic monitoring data from other locations to develop source levels for the various pile sizes and methods (see Table 3). Data are provided for 16 and 30-inch concrete piles that are the extremes of the possible range of sizes. As noted above, the Coast Guard will use a bubble curtain to reduce sounds from pile driving. A 5dB reduction is applied to

the source levels for calculating distances to the Level A harassment and Level B harassment sound thresholds. This is a conservative reduction based on several studies including CALTRANS (2015) and Austin *et al.* (2016).

TABLE 3—PROJECT SOUND SOURCE LEVELS

Pile driving activity		Data source			Estimated sound source level at 10 meters without attenuation
Hammer type	Pile type	dB RMS	dB SEL	dB peak	
Impact	16-inch concrete	166	155	185	CALTRANS (2015) (Table I.2–1,18-inch concrete).
Impact	30-inch concrete	176	166	200	CALTRANS (2015) (Table I.2–3).

Note: RMS = root mean square, SEL = single strike sound exposure level; dB peak = peak sound level. A 5-db reduction for use of a bubble curtain reduces these source levels when calculating isopleth distances below.

Level B Harassment Zones

Transmission loss (TL) is the decrease in acoustic intensity as an acoustic pressure wave propagates out from a source. TL parameters vary with frequency, temperature, sea conditions, current, source and receiver depth, water depth, water chemistry, and bottom composition and topography. The general formula for underwater TL is:

TL = B * Log10 (R1/R2)

where:

TL = transmission loss in dB
B = transmission loss coefficient; for practical spreading equals 15
R1 = the distance of the modeled SPL from the driven pile, and
R2 = the distance from the driven pile of the initial measurement

The recommended TL coefficient for most nearshore environments is the practical spreading value of 15. This value results in an expected propagation environment that would lie between spherical and cylindrical spreading loss conditions, which is the most appropriate assumption for the Coast Guard's activity.

Using the practical spreading model, the Coast Guard determined underwater noise would fall below the behavioral effects threshold for marine mammals at distances no greater than 55 m with an effective source level of 171 dB rms for the 30-inch piles (Table 4). This distance determines the maximum Level B harassment zone for the project.

TABLE 4—CALCULATED DISTANCES (METERS) TO LEVEL B HARASSMENT ISOPLETHS (M) FOR EACH PILE TYPE

Pile type	Level B isopleth (m)
16-inch concrete	12
30-inch concrete	55

Level A Harassment Zones

When the NMFS Technical Guidance (2016) was published, in recognition of the fact that ensonified area/volume could be more technically challenging to predict because of the duration component in the new thresholds, we developed a User Spreadsheet that includes tools to help predict a simple isopleth that can be used in conjunction with marine mammal density or occurrence to help predict takes. We note that because of some of the assumptions included in the methods used for these tools, we anticipate that isopleths produced are typically going to be overestimates of some degree, which may result in some degree of overestimate of take by Level A harassment. However, these tools offer the best way to predict appropriate isopleths when more sophisticated 3D modeling methods are not available, and NMFS continues to develop ways to quantitatively refine these tools, and will qualitatively address the output where appropriate. For stationary sources such as impact pile driving, NMFS User Spreadsheet predicts the closest distance at which, if a marine mammal remained at that distance the whole duration of the activity, it would not incur PTS.

Inputs used in the User Spreadsheet (Table 5), and the resulting isopleths are reported below (Table 6) for each of the pile types.

TABLE 5—NMFS TECHNICAL GUIDANCE USER SPREADSHEET INPUT TO CALCULATE LEVEL A ISOPLETHS

Pile type	Piles/day	Strikes per pile *	Days of pile driving **
16-inch concrete	6	1564 strikes	17.
30-inch concrete	6	1748 strikes	21 or 30.

Note: Propagation loss coefficient is 15LogR and Weighting Factor Adjustment is 2 for all cells.
* Strikes per pile are an estimate from a geotechnical report for the project (TCG, 2019).
** Days depends on size of pile ultimately used for wharf support. Take will be calculated using largest zones (30 inch piles) and longest duration (38 days using 16 inch support piles and 30-inch fender and corner piles).

The above input scenarios lead to PTS isopleth distances (Level A thresholds) of 1 to 194.6 meters (3 to 639 feet), depending on the marine mammal group and scenario (Table 7). Note that the Level A harassment isopleths are larger than the level B harassment isopleths for the low-frequency and high-frequency cetaceans and the phocid pinnipeds because of the large number of piles and strikes per day and use of only an impact hammer.

TABLE 6—CALCULATED DISTANCES (METERS) TO LEVEL A HARASSMENT ISOPLETHS (M) FOR EACH HEARING GROUP AND PILE TYPE

Pile type	Low-frequency cetaceans (meters)	Mid-frequency cetaceans (meters)	High-frequency cetaceans (meters)	Phocid pinnipeds (meters)	Otariid pinnipeds (meters)
16-inch concrete	28.0	1	33.4	15	1.1
30-inch concrete	163.4	5.8	194.6	87.4	6.4

Note: a 10-meter shutdown zone will be implemented for all species and activity types to prevent direct injury of marine mammals.

Marine Mammal Occurrence and Take Calculation and Estimation

In this section we provide the information about the presence, abundance, or group dynamics of marine mammals that will inform the take calculations. Density data in the port and harbor does not exist for any species, but as described above, there are three baseline biological surveys since 2000 (MEC, 2002; SAIC, 2010; MBC, 2016) that provide observations in over 30 defined zones within the harbor, three of which are near the ensonified area of the project and are used to estimate take.

Here we describe how the information provided above is brought together to produce a quantitative take estimate. Take by Level A and Level B harassment is summarized in Table 7.

Gray Whale

Because live gray whales were not sighted during the baseline surveys (see above), but are periodically known from the harbor, and the Level A harassment and shutdown zone radius is 170 m (656 feet), we authorize two Level A harassment takes (Table 7) for inadvertent takes of animals that could enter the shutdown zone undetected or before shutdown could be implemented. Because the Level A harassment and shutdown zones are larger than the Level B harassment zone, we do not authorize take by Level B harassment, but recognize animals could also inadvertently enter the smaller Level B harassment zone after already being recorded as Level A harassment within the larger Level A harassment zone.

Bottlenose Dolphin

The highest observation on any given day in the three zones surrounding the Coast Guard Base from the three biological baseline surveys (MEC, 2002; SAIC, 2010; MBC, 2016) is 12. Given the small zone size relative to the study area an expected number of three animals in the project area per day is a reasonable representation of daily occurrence for the species. Given a maximum pile driving period of 38 days, 3 animals per day would equate a take of 114 incidents of Level B harassment. Based on the above, we conservatively authorize 114 Level B harassment takes of bottlenose dolphins (Table 7). Because the Level A harassment and shutdown zones are very small and we believe the protected species observer (PSO) will be able to effectively monitor and implement the shutdown zones, we do not authorize take by Level A harassment.

Short-beaked Common Dolphin

Observations during biological surveys in 2013 through 2014 included one pod of 40 individuals in the Los Angeles Main Channel where the project occurs (MBC, 2016). This number of individuals is highly unlikely to be present in the project area on a daily basis. We conservatively assume one pod of 40 could be present each full week. Given a maximum pile driving period of 38 days, this would equate to 5 full weeks or 200 takes through Level B harassment. Based on the above, we authorize 200 Level B harassment takes of short-beaked common dolphins (Table 7). Because the Level A harassment and shutdown zones are very small and we believe the PSO will be able to effectively monitor and implement the shutdown zones, we do not authorize take by Level A harassment.

California Sea Lion

The highest observation on any given day in the three zones surrounding the Coast Guard Base from the three biological baseline surveys (MEC, 2002; SAIC, 2010; MBC, 2016) is 65 sea lions. Given the small zone size relative to the study area an expected number of 10 animals in the project area per day is a reasonable representation of daily occurrence for the species. Given a maximum pile driving period of 38 days, 10 animals per day would equate to 380 incidents of Level B harassment. Based on the above, we authorize 380 Level B harassment takes of California sea lions (Table 7). Because the Level A harassment and shutdown zones are very small and we believe the PSO will be able to effectively monitor and implement the shutdown zones, we do not authorize take by Level A harassment.

Harbor Seal

The highest observation on any given day in the three zones surrounding the Coast Guard Base from the three biological baseline surveys (MEC, 2002; SAIC, 2010; MBC, 2016) is 1 seal. The Level A harassment zone for this species is 90 m (295 feet), however the Coast Guard proposed a smaller shutdown zone to minimize work stoppages. We are authorizing a shutdown zone of 55 m (180 feet, see Mitigation section below) that coincides with the size of the Level B harassment zone for ease of implementation. It is conservatively estimated that 0.5 animals per day might enter the shutdown zone or Level A harassment zone between 55 and 90 m (180 –295 feet). Given a maximum pile driving period of 38 days, this would equate to a take of 19 individuals through Level A harassment (Table 7). Because the Level A harassment and shutdown zones are larger than the Level B harassment zone, we do not authorize take by Level B harassment, but recognize animals could also enter the smaller Level B harassment zone after already being recorded within the larger Level A harassment zone.

TABLE 7—AUTHORIZED AMOUNT OF TAKING, BY LEVEL A AND LEVEL B HARASSMENT, BY SPECIES AND STOCK AND PERCENT OF TAKE BY STOCK

Species	Authorized take		
	Level B	Level A	Percent of stock
Harbor seal (*Phoca vitulina*) California Stock	0	19	<0.1
California sea lion (*Zalophus californianus*) U.S. Stock	380	0	0.2
Gray whale (*Eschrichtius robustus*) Eastern North Pacific Stock	0	2	<0.1
Common bottlenose dolphin (*Tursiops truncatus*) California Coastal Stock	114	0	25.2
Short-beaked common dolphin (*Delphinus delphis*) California/Oregon/Washington Stock	200	0	<0.1

Mitigation

In order to issue an IHA under section 101(a)(5)(D) of the MMPA, NMFS must set forth the permissible methods of taking pursuant to the activity, and other means of effecting the least practicable impact on the species or stock and its habitat, paying particular attention to rookeries, mating grounds, and areas of similar significance, and on the availability of the species or stock for taking for certain subsistence uses (latter not applicable for this action). NMFS regulations require applicants for incidental take authorizations to include information about the availability and feasibility (economic and technological) of equipment, methods, and manner of conducting the activity or other means of effecting the least practicable adverse impact upon the affected species or stocks and their habitat (50 CFR 216.104(a)(11)).

In evaluating how mitigation may or may not be appropriate to ensure the least practicable adverse impact on species or stocks and their habitat, as well as subsistence uses where applicable, we carefully consider two primary factors:

(1) The manner in which, and the degree to which, the successful implementation of the measure(s) is expected to reduce impacts to marine mammals, marine mammal species or stocks, and their habitat. This considers the nature of the potential adverse impact being mitigated (likelihood, scope, range). It further considers the likelihood that the measure will be effective if implemented (probability of accomplishing the mitigating result if implemented as planned), the likelihood of effective implementation (probability implemented as planned); and

(2) The practicability of the measures for applicant implementation, which may consider such things as cost, impact on operations, and, in the case of a military readiness activity, personnel safety, practicality of implementation, and impact on the effectiveness of the military readiness activity.

The following mitigation measures are authorized in the IHA:

- For in-water heavy machinery work other than pile driving, if a marine mammal comes within 10 m, operations shall cease and vessels shall reduce speed to the minimum level required to maintain steerage and safe working conditions. This type of work could include the following activities: (1) Movement of the barge to the pile location; or (2) positioning of the pile on the substrate via a crane (*i.e.,* stabbing the pile);
- Conduct briefings between construction supervisors and crews and the marine mammal monitoring team prior to the start of all pile driving activity and when new personnel join the work, to explain responsibilities, communication procedures, marine mammal monitoring protocol, and operational procedures;
- For those marine mammals for which Level A or B harassment take has not been requested, in-water pile installation/removal (if necessary) will shut down immediately if such species are observed within or entering the Level A or B harassment zone; and
- If take reaches the authorized limit for an authorized species, pile installation will be stopped as these species approach the Level A or B harassment zone to avoid additional take.

The following mitigation measures would apply to the Coast Guard's in-water construction activities.

- *Establishment of Shutdown Zones*—The Coast Guard will establish shutdown zones for all pile driving activities. The purpose of a shutdown zone is generally to define an area within which shutdown of the activity would occur upon sighting of a marine mammal (or in anticipation of an animal entering the defined area). Shutdown zones will vary based on the activity type and marine mammal hearing group (Table 8). Shutdown zones are rounded up to the next 10 m from the largest Level A harassment zones in Table 7, except in the case of the phocid group where the shutdown zone is reduced to the same size as the largest Level B harassment zone (55 m) and the applicant has requested the authorization of Level A harassment takes for the area within the Level A harassment one and outside the shutdown zone;
- *PSOs*—The placement of PSOs during all pile driving activities (described in detail in the Monitoring and Reporting section) will ensure that the entire shutdown zone is visible during pile installation. Should environmental conditions deteriorate such that marine mammals within the entire shutdown zone would not be visible (*e.g.,* fog, heavy rain), pile driving and removal must be delayed until the PSO is confident marine mammals within the shutdown zone could be detected;

TABLE 8—SHUTDOWN ZONES

Pile type	Low-frequency cetaceans (meters)	Mid-frequency cetaceans (meters)	High-frequency cetaceans (meters)	Phocid pinnipeds (meters)	Otariid pinnipeds (meters)
16-inch concrete	30	10	40	20	10
30-inch concrete	170	10	200	55	10

• *Monitoring for Level A and B Harassment*—The Coast Guard will monitor the Level A and B harassment zones. Monitoring zones provide utility for observing by establishing monitoring protocols for areas adjacent to the shutdown zones. Monitoring zones enable observers to be aware of and communicate the presence of marine mammals in the project area outside the shutdown zone and thus prepare for a potential halt of activity should the animal enter the shutdown zone. Placement of PSOs will allow PSOs to observe marine mammals within the Level B harassment zones;

• *Pre-activity Monitoring*—Prior to the start of daily in-water construction activity, or whenever a break in pile driving/removal of 30 minutes or longer occurs, PSOs will observe the shutdown and monitoring zones for a period of 30 minutes. The shutdown zone will be considered cleared when a marine mammal has not been observed within the zone for that 30-minute period. If a marine mammal is observed within the shutdown zone, a soft-start cannot proceed until the animal has left the zone or has not been observed for 15 minutes. When a marine mammal for which Level B harassment take is authorized is present in the Level B harassment zone, activities may begin and Level B harassment take will be recorded. If the entire Level B harassment zone is not visible at the start of construction, pile driving activities can begin. If work ceases for more than 30 minutes, the pre-activity monitoring of the shutdown zones will be required;

• *Soft Start*—Soft-start procedures are believed to provide additional protection to marine mammals by providing warning and/or giving marine mammals a chance to leave the area prior to the hammer operating at full capacity. For impact pile driving, contractors will be required to provide an initial set of three strikes from the hammer at reduced energy, followed by a 30-second waiting period. This procedure will be conducted three times before impact pile driving begins. Soft start will be implemented at the start of each day's impact pile driving and at any time following cessation of impact pile driving for a period of 30 minutes or longer;

• *Bubble Curtain*—The Coast Guard is required to employ a bubble curtain during all impact pile driving and operate it in a manner consistent with the following performance standards: (1) The bubble curtain must distribute air bubbles around 100 percent of the piling perimeter for the full depth of the water column; (2) The lowest bubble ring must be in contact with the mudline for the full circumference of the ring, and the weights attached to the bottom ring shall ensure 100 percent mudline contact. No parts of the ring or other objects shall prevent full mudline contact; and (3) Air flow to the bubblers must be balanced around the circumference of the pile;

• *Hydroacoustic monitoring*—The Coast Guard is required to conduct hydroacoustic monitoring of at least two piles of each pile diameter; and

• Pile driving is planned to occur during daylight hours.

Based on our evaluation of the applicant's proposed measures, as well as other measures considered by NMFS, NMFS has determined that the mitigation measures provide the means effecting the least practicable impact on the affected species or stocks and their habitat, paying particular attention to rookeries, mating grounds, and areas of similar significance.

Monitoring and Reporting

In order to issue an IHA for an activity, section 101(a)(5)(D) of the MMPA states that NMFS must set forth requirements pertaining to the monitoring and reporting of such taking. The MMPA implementing regulations at 50 CFR 216.104 (a)(13) indicate that requests for authorizations must include the suggested means of accomplishing the necessary monitoring and reporting that will result in increased knowledge of the species and of the level of taking or impacts on populations of marine mammals that are expected to be present in the action area. Effective reporting is critical both to compliance as well as ensuring that the most value is obtained from the required monitoring.

Monitoring and reporting requirements prescribed by NMFS should contribute to improved understanding of one or more of the following:

• Occurrence of marine mammal species or stocks in the area in which take is anticipated (*e.g.,* presence, abundance, distribution, density);

• Nature, scope, or context of likely marine mammal exposure to potential stressors/impacts (individual or cumulative, acute or chronic), through better understanding of: (1) Action or environment (*e.g.,* source characterization, propagation, ambient noise); (2) affected species (*e.g.,* life history, dive patterns); (3) co-occurrence of marine mammal species with the action; or (4) biological or behavioral context of exposure (*e.g.,* age, calving or feeding areas);

• Individual marine mammal responses (behavioral or physiological) to acoustic stressors (acute, chronic, or cumulative), other stressors, or cumulative impacts from multiple stressors;

• How anticipated responses to stressors impact either: (1) Long-term fitness and survival of individual marine mammals; or (2) populations, species, or stocks;

• Effects on marine mammal habitat (*e.g.,* marine mammal prey species, acoustic habitat, or other important physical components of marine mammal habitat); and

• Mitigation and monitoring effectiveness.

Visual Monitoring

Marine mammal monitoring must be conducted in accordance with the Monitoring section of the application and section 5 of the IHA. Marine mammal monitoring during pile driving must be conducted by NMFS-approved PSOs in a manner consistent with the following:

• Independent PSOs (*i.e.,* not construction personnel) who have no other assigned tasks during monitoring periods must be used;

• At least one PSO must have prior experience performing the duties of a PSO during construction activity pursuant to a NMFS-issued incidental take authorization.

• Other PSOs may substitute education (degree in biological science or related field) or training for experience; and

• The Coast Guard must submit PSO Curriculum Vitae for approval by NMFS prior to the onset of pile driving.

PSOs must have the following additional qualifications:

• Ability to conduct field observations and collect data according to assigned protocols;

• Experience or training in the field identification of marine mammals, including the identification of behaviors;

• Sufficient training, orientation, or experience with the construction operation to provide for personal safety during observations;

• Writing skills sufficient to prepare a report of observations including but not limited to the number and species of marine mammals observed; dates and times when in-water construction activities were conducted; dates, times, and reason for implementation of mitigation (or why mitigation was not implemented when required); and marine mammal behavior; and

• Ability to communicate orally, by radio or in person, with project

personnel to provide real-time information on marine mammals observed in the area as necessary.

One PSO will be employed. PSO location will provide an unobstructed view of all water within the shutdown and Level A and Level B harassment zones.

Monitoring will be conducted 30 minutes before, during, and 30 minutes after pile driving/removal activities. In addition, observers shall record all incidents of marine mammal occurrence, regardless of distance from activity, and shall document any behavioral reactions in concert with distance from piles being driven or removed. Pile driving activities include the time to install or remove a single pile or series of piles, as long as the time elapsed between uses of the pile driving or drilling equipment is no more than 30 minutes.

Reporting

A draft marine mammal monitoring report will be submitted to NMFS within 90 days after the completion of pile driving and removal activities, or 60 days prior to a requested date of issuance of any future IHAs for projects at the same location, whichever comes first. The report will include an overall description of work completed, a narrative regarding marine mammal sightings, and associated PSO data sheets. Specifically, the report must include:

- Dates and times (begin and end) of all marine mammal monitoring;
- Construction activities occurring during each daily observation period, including how many and what type of piles were driven or removed and by what method (*i.e.,* impact or vibratory);
- Environmental conditions during monitoring periods (at beginning and end of PSO shift and whenever conditions change significantly), including Beaufort sea state and any other relevant weather conditions including cloud cover, fog, sun glare, and overall visibility to the horizon, and estimated observable distance (if less than the harassment zone distance);
- The number of marine mammals observed, by species, relative to the pile location and if pile driving or removal was occurring at time of sighting;
- Age and sex class, if possible, of all marine mammals observed;
- PSO locations during marine mammal monitoring;
- Distances and bearings of each marine mammal observed to the pile being driven or removed for each sighting (if pile driving or removal was occurring at time of sighting);
- Description of any marine mammal behavior patterns during observation, including direction of travel and estimated time spent within the Level A and Level B harassment zones while the source was active;
- Number of marine mammals detected within the harassment zones, by species.
- Detailed information about any implementation of any mitigation triggered (*e.g.,* shutdowns and delays), a description of specific actions that ensued, and resulting behavior of the animal, if any;
- Description of attempts to distinguish between the number of individual animals taken and the number of incidences of take, such as ability to track groups or individuals;
- Submit all PSO datasheets and/or raw sighting data (in a separate file from the Final Report referenced immediately above).

If no comments are received from NMFS within 30 days, the draft final report will constitute the final report. If comments are received, a final report addressing NMFS comments must be submitted within 30 days after receipt of comments.

Hydroacoustic Monitoring and Reporting—The Coast Guard will monitor the driving of at least two piles of each diameter. As part of the above-mentioned report, or in a separate report with the same timelines as above, the Coast Guard will provide an acoustic monitoring report for this work. The acoustic monitoring report must, at minimum, include the following:

- Hydrophone equipment and methods: recording device, sampling rate, distance (m) from the pile where recordings were made; depth of recording device(s);
- Type of pile being driven, substrate type, method of driving during recordings, and if a sound attenuation device is used;
- For impact pile driving: Pulse duration and mean, median, and maximum sound levels (dB re: 1µPa): cumulative sound exposure level (SELcum), peak sound pressure level (SPLpeak), and single-strike sound exposure level (SELs-s); and
- Number of strikes per pile measured, one-third octave band spectrum and power spectral density plot.

Reporting Injured or Dead Marine Mammals

In the event that personnel involved in the construction activities discover an injured or dead marine mammal, the Coast Guard shall report the incident to the Office of Protected Resources (OPR), NMFS and to the regional stranding coordinator as soon as feasible. If the death or injury was clearly caused by the specified activity, the Coast Guard must immediately cease the specified activities until NMFS is able to review the circumstances of the incident and determine what, if any, additional measures are appropriate to ensure compliance with the terms of the IHA. The IHA-holder must not resume their activities until notified by NMFS. The report must include the following information:

- Time, date, and location (latitude/longitude) of the first discovery (and updated location information if known and applicable);
- Species identification (if known) or description of the animal(s) involved;
- Condition of the animal(s) (including carcass condition if the animal is dead);
- Observed behaviors of the animal(s), if alive;
- If available, photographs or video footage of the animal(s); and
- General circumstances under which the animal was discovered.

Negligible Impact Analysis and Determination

NMFS has defined negligible impact as an impact resulting from the specified activity that cannot be reasonably expected to, and is not reasonably likely to, adversely affect the species or stock through effects on annual rates of recruitment or survival (50 CFR 216.103). A negligible impact finding is based on the lack of likely adverse effects on annual rates of recruitment or survival (*i.e.,* population-level effects). An estimate of the number of takes alone is not enough information on which to base an impact determination. In addition to considering estimates of the number of marine mammals that might be ''taken'' through harassment, NMFS considers other factors, such as the likely nature of any responses (*e.g.,* intensity, duration), the context of any responses (*e.g.,* critical reproductive time or location, migration), as well as effects on habitat, and the likely effectiveness of the mitigation. We also assess the number, intensity, and context of estimated takes by evaluating this information relative to population status. Consistent with the 1989 preamble for NMFS's implementing regulations (54 FR 40338; September 29, 1989), the impacts from other past and ongoing anthropogenic activities are incorporated into this analysis via their impacts on the environmental baseline (*e.g.,* as reflected in the regulatory status of the species, population size and

growth rate where known, ongoing sources of human-caused mortality, or ambient noise levels).

To avoid repetition, this introductory discussion of our analyses applies to all of the species listed in 7, given that many of the anticipated effects of this project on different marine mammal stocks are expected to be relatively similar in nature. Pile driving activities have the potential to disturb or displace marine mammals. Specifically, the project activities may result in take, in the form of Level A harassment and Level B harassment from underwater sounds generated from pile driving. Potential takes could occur if individuals are present in the ensonified zone when these activities are underway.

The takes from Level A and Level B harassment would be due to potential behavioral disturbance, TTS, and PTS. No mortality is anticipated given the nature of the activity and measures designed to minimize the possibility of injury to marine mammals. The potential for harassment is minimized through the construction method and the implementation of the planned mitigation measures (see Mitigation section).

The Level A harassment zones identified in Table 6 are based upon an animal exposed to impact pile driving multiple piles per day. Considering duration of impact driving each pile (up to 45 minutes) and breaks between pile installations (to reset equipment and move pile into place), this means an animal would have to remain within the area estimated to be ensonified above the Level A harassment threshold for multiple hours. This is highly unlikely given marine mammal movement throughout the area. So while the take we are proposing to authorize is expected to occur, if an animal was exposed to accumulated sound energy, the resulting PTS would likely be small (*e.g.,* PTS onset) at lower frequencies where pile driving energy is concentrated, and unlikely to result in impacts to individual fitness, reproduction, or survival.

The nature of the pile driving project precludes the likelihood of serious injury or mortality. For all species and stocks, take would occur within a limited, confined area (Los Angeles port) of any given stock's range. Level A and Level B harassment will be reduced to the level of least practicable adverse impact through use of mitigation measures described herein. Further the amount of take authorized for any given stock is small when compared to stock abundance.

Behavioral responses of marine mammals to pile driving at the project site, if any, are expected to be mild and temporary. Marine mammals within the Level B harassment zone may not show any visual cues they are disturbed by activities (as noted during modification to the Kodiak Ferry Dock; see *Behavioral Harassment* section of the **Federal Register** notice for the proposed IHA (85 FR 66939; October 21, 2020)) or could become alert, avoid the area, leave the area, or display other mild responses that are not observable such as changes in vocalization patterns. Given the short duration of noise-generating activities per day and that pile driving and removal would occur across a few weeks, any harassment would be temporary. There are no other areas or times of known biological importance for any of the affected species.

In addition, it is unlikely that minor noise effects in a small, localized area of habitat would have any effect on the stocks' ability to recover. In combination, we believe that these factors, as well as the available body of evidence from other similar activities, demonstrate that the potential effects of the specified activities will have only minor, short-term effects on individuals. The specified activities are not expected to impact rates of recruitment or survival and will therefore not result in population-level impacts.

In summary and as described above, the following factors primarily support our determination that the impacts resulting from this activity are not expected to adversely affect the species or stock through effects on annual rates of recruitment or survival:

- No mortality is anticipated or authorized;
- Authorized Level A harassment would be very small amounts and of low degree;
- No biologically important areas have been identified within the project area;
- For all species, the project area is a very small, human-altered and peripheral part of their range;
- The Coast Guard would implement mitigation measures such soft-starts, bubble curtain, and shut downs; and
- Monitoring reports from similar work in the ports have documented little to no effect on individuals of the same species impacted by the specified activities.

Based on the analysis contained herein of the likely effects of the specified activity on marine mammals and their habitat, and taking into consideration the implementation of the proposed monitoring and mitigation measures, NMFS finds that the total marine mammal take from the activity will have a negligible impact on all affected marine mammal species or stocks.

Small Numbers

As noted above, only small numbers of incidental take may be authorized under section 101(a)(5)(D) of the MMPA for specified activities other than military readiness activities. The MMPA does not define small numbers and so, in practice, where estimated numbers are available, NMFS compares the number of individuals taken to the most appropriate estimation of abundance of the relevant species or stock in our determination of whether an authorization is limited to small numbers of marine mammals. When the predicted number of individuals to be taken is fewer than one third of the species or stock abundance, the take is considered to be of small numbers. Additionally, other qualitative factors may be considered in the analysis, such as the temporal or spatial scale of the activities.

The amount of take NMFS authorizes of all species or stocks is below one third of the estimated stock abundance. These are all likely conservative estimates of individuals taken because they assume all takes are of different individual animals which is likely not the case. Some individuals may return multiple times in a day, but PSOs would count them as separate takes if they cannot be individually identified.

Based on the analysis contained herein of the proposed activity (including the mitigation and monitoring measures) and the anticipated take of marine mammals, NMFS finds that small numbers of marine mammals will be taken relative to the population size of the affected species or stocks.

Unmitigable Adverse Impact Analysis and Determination

There are no relevant subsistence uses of the affected marine mammal stocks or species implicated by this action. Therefore, NMFS has determined that the total taking of affected species or stocks would not have an unmitigable adverse impact on the availability of such species or stocks for taking for subsistence purposes.

National Environmental Policy Act

To comply with the National Environmental Policy Act of 1969 (NEPA; 42 U.S.C. 4321 *et seq.*) and NOAA Administrative Order (NAO) 216–6A, NMFS must review our proposed action (*i.e.,* the issuance of an

IHA) and alternatives with respect to potential impacts on the human environment.

This action is consistent with categories of activities identified in Categorical Exclusion B4 (IHAs with no anticipated serious injury or mortality) of the Companion Manual for NOAA Administrative Order 216–6A, which do not individually or cumulatively have the potential for significant impacts on the quality of the human environment and for which we have not identified any extraordinary circumstances that would preclude this categorical exclusion. Accordingly, NMFS has determined that the issuance of the IHA qualifies to be categorically excluded from further NEPA review.

Endangered Species Act (ESA)

Section 7(a)(2) of the ESA (16 U.S.C. 1531 *et seq.*) requires that each Federal agency insure that any action it authorizes, funds, or carries out is not likely to jeopardize the continued existence of any endangered or threatened species or result in the destruction or adverse modification of designated critical habitat.

No incidental take of ESA-listed species is authorized or expected to result from this activity. Therefore, NMFS has determined that formal consultation under section 7 of the ESA is not required for this action.

Authorization

NMFS has issued an IHA to the Coast Guard for the potential harassment of small numbers of five marine mammal species incidental to the Base Los Angeles/Long Beach Wharf Expansion project in Los Angeles, California, provided the previously mentioned mitigation, monitoring and reporting requirements are followed.

Dated: December 7, 2020.

Donna S. Wieting,

Director, Office of Protected Resources, National Marine Fisheries Service.

DEPARTMENT OF COMMERCE

National Telecommunications and Information Administration

Multistakeholder Process on Promoting Software Component Transparency

AGENCY: National Telecommunications and Information Administration, Department of Commerce.

ACTION: Notice of open meeting.

SUMMARY: The National Telecommunications and Information Administration (NTIA) will convene a virtual meeting of a multistakeholder process on promoting software component transparency on January 13, 2021.

DATES: The meeting will be held on January 13, 2021, from 12:00 p.m. to 4:00 p.m., Eastern Time.

ADDRESSES: The meeting will be held virtually, with online slide share and dial-in information to be posted at *https://www.ntia.gov/SoftwareTransparency.*

FOR FURTHER INFORMATION CONTACT: Allan Friedman, National Telecommunications and Information Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Room 4725, Washington, DC 20230; telephone: (202) 482–4281; email: *afriedman@ntia.gov.* Please direct media inquiries to NTIA's Office of Public Affairs: (202) 482–7002; email: *press@ntia.gov.*

SUPPLEMENTARY INFORMATION:

Background

This NTIA cybersecurity multistakeholder process focuses on promoting software component transparency.[1] Most modern software is not written completely from scratch, but includes existing components, modules, and libraries from the open source and commercial software world. Modern development practices such as code reuse, and a dynamic IT marketplace with acquisitions and mergers, make it challenging to track the use of software components. The Internet of Things compounds this phenomenon, as new organizations, enterprises, and innovators take on the role of software developer to add ''smart'' features or connectivity to their products. While the majority of libraries and components do not have known vulnerabilities, many do, and the sheer quantity of software means that some software products ship with vulnerable or out-of-date components.

The first meeting of this multistakeholder process was held on July 19, 2018, in Washington, DC.[2] Stakeholders presented multiple perspectives, and identified several inter-related work streams: Understanding the Problem, Use Cases and State of Practice, Standards and Formats, and Healthcare Proof of Concept. Since then, stakeholders have been discussing key issues and developing products such as guidance documents. NTIA acts as the convener, but stakeholders drive the outcomes. Success of the process will be evaluated by the extent to which broader findings on software component transparency are implemented across the ecosystem.

The first set of stakeholder-drafted documents on Software Bills of Materials was published by NTIA in November 2019. Those documents, and subsequent consensus-approved drafts from the community, are available at: *https://www.ntia.gov/SBOM.* The main objectives of the January 13, 2021 meeting are to share progress from the working groups; to give feedback on the ongoing work around technical challenges, tooling, demonstrations, and awareness and adoption; and to continue discussions around potential guidance or playbook documents. This meeting will also feature short demonstrations of SBOM-related tools and services to help the community understand the growth of the broader ecosystem. Demonstration suggestions and proposals should be 250 words or less and should be submitted to Allan Friedman at *afriedman@ntia.gov* by December 21, 2020. More information about stakeholders' work is available at: *https://www.ntia.gov/SoftwareTransparency.*

Time and Date: NTIA will convene the next meeting of the multistakeholder process on Software Component Transparency on January 13, 2021, from 12:00 p.m. to 4:00 p.m. Eastern Time. The exact time of the meeting is subject to change. Please refer to NTIA's website, *https://www.ntia.gov/SoftwareTransparency,* for the most current information.

Place: The meeting will be held virtually, with online slide share and dial-in information to be posted at *https://www.ntia.gov/SoftwareTransparency.* Please refer to NTIA's website, *https://www.ntia.gov/SoftwareTransparency,* for the most current information.

Other Information: The meeting is open to the public and the press on a first-come, first-served basis.

The virtual meeting is accessible to people with disabilities. Requests for real-time captioning or other auxiliary aids should be directed to Allan Friedman at (202) 482–4281 or *afriedman@ntia.gov* at least seven (7) business days prior to the meeting. Access details for the meeting are subject to change. Please refer to NTIA's website, *https://www.ntia.gov/SoftwareTransparency,* for the most current information.

BILLING CODE 3510–60–P

COMMITTEE FOR PURCHASE FROM PEOPLE WHO ARE BLIND OR SEVERELY DISABLED

Procurement List; Additions and Deletions

AGENCY: Committee for Purchase From People Who Are Blind or Severely Disabled.

ACTION: Additions to and deletions from the procurement list.

SUMMARY: This action adds product(s) and service(s) to the Procurement List that will be furnished by nonprofit agencies employing persons who are blind or have other severe disabilities, and deletes product(s) and service(s) from the Procurement List previously furnished by such agencies.

DATES: *Date added to and deleted from the Procurement List:* January 10, 2021

ADDRESSES: Committee for Purchase From People Who Are Blind or Severely Disabled, 1401 S Clark Street, Suite 715, Arlington, Virginia 22202–4149.

FOR FURTHER INFORMATION CONTACT: Michael R. Jurkowski, Telephone: (703) 603–2117, Fax: (703) 603–0655, or email *CMTEFedReg@AbilityOne.gov.*

SUPPLEMENTARY INFORMATION:

Additions

On 8/21/2020, 9/4/2020 and 9/11/2020, the Committee for Purchase From People Who Are Blind or Severely Disabled published notice of proposed additions to the Procurement List. This notice is published pursuant to 41 U.S.C. 8503 (a)(2) and 41 CFR 51–2.3.

After consideration of the material presented to it concerning capability of qualified nonprofit agencies to provide the service(s) and impact of the additions on the current or most recent contractors, the Committee has determined that the service(s) listed below are suitable for procurement by the Federal Government under 41 U.S.C. 8501–8506 and 41 CFR 51–2.4.

Regulatory Flexibility Act Certification

I certify that the following action will not have a significant impact on a substantial number of small entities. The major factors considered for this certification were:

1. The action will not result in any additional reporting, recordkeeping or other compliance requirements for small entities other than the small organizations that will furnish the service(s) to the Government.

2. The action will result in authorizing small entities to furnish the service(s) to the Government.

3. There are no known regulatory alternatives which would accomplish the objectives of the Javits-Wagner-O'Day Act (41 U.S.C. 8501–8506) in connection with the service(s) proposed for addition to the Procurement List.

End of Certification

Accordingly, the following service(s) are added to the Procurement List:

Service(s)

Service Type: Base Supply Center and Retail Gift Shop
Mandatory for: Bureau of Alcohol, Firearms, Tobacco and Explosives, Washington, DC
Designated Source of Supply: Virginia Industries for the Blind, Charlottesville, VA
Contracting Activity: ATF ACQUISITION AND PROPERTY MGMT DIV, ATF
Service Type: Janitorial Service
Mandatory for: FAA, Portland Air Traffic Control Tower and SSC Office Space, Portland, ME
Designated Source of Supply: Northern New England Employment Services, Portland, ME
Contracting Activity: FEDERAL AVIATION ADMINISTRATION, 697DCK REGIONAL ACQUISITIONS SVCS
Service Type: Janitorial Service
Mandatory for: Federal Aviation Administration, Norfolk Air Traffic Control Tower, Virginia Beach, VA and Patrick Henry Field Air Traffic Control Tower, Newport News, VA
Designated Source of Supply: Portco, Inc., Portsmouth, VA
Contracting Activity: FEDERAL AVIATION ADMINISTRATION, 697DCK REGIONAL ACQUISITIONS SVCS
Service Type: Janitorial Service
Mandatory for: FAA, Air Traffic Control Tower, Roanoke, VA
Designated Source of Supply: Goodwill Industries of the Valleys, Inc., Roanoke, VA
Contracting Activity: FEDERAL AVIATION ADMINISTRATION, 697DCK REGIONAL ACQUISITIONS SVCS

Deletions

On 11/6/2020, the Committee for Purchase From People Who Are Blind or Severely Disabled published notice of proposed deletions from the Procurement List. This notice is published pursuant to 41 U.S.C. 8503 (a)(2) and 41 CFR 51–2.3.

After consideration of the relevant matter presented, the Committee has determined that the product(s) and service(s) listed below are no longer suitable for procurement by the Federal Government under 41 U.S.C. 8501–8506 and 41 CFR 51–2.4.

Regulatory Flexibility Act Certification

I certify that the following action will not have a significant impact on a substantial number of small entities. The major factors considered for this certification were:

1. The action will not result in additional reporting, recordkeeping or other compliance requirements for small entities.

2. The action may result in authorizing small entities to furnish the product(s) and service(s) to the Government.

3. There are no known regulatory alternatives which would accomplish the objectives of the Javits-Wagner-O'Day Act (41 U.S.C. 8501–8506) in connection with the product(s) and service(s) deleted from the Procurement List.

End of Certification

Accordingly, the following product(s) and service(s) are deleted from the Procurement List:

Product(s)

NSN(s)—Product Name(s):
7510–01–357–6830—Pad, Executive Message Recording, White/Yellow, 2⅝″ x 6¼″, 400 Message Forms
Designated Source of Supply: Winston-Salem Industries for the Blind, Inc., Winston-Salem, NC; The Arkansas Lighthouse for the Blind, Little Rock, AR
Contracting Activity: GSA/FAS ADMIN SVCS ACQUISITION BR (2, NEW YORK, NY

NSN(s)—Product Name(s):
7530–01–600–2026—Notebook, Memorandum Book, 100% PCW, 3x5″, 60 sheets, Narrow Rule, White
7530–01–600–2028—Notebook, Spiral Bound, 100% PCW, 8½x11″, 80 sheets, College Rule, White
7530–01–600–2027—Notebook, Spiral Bound, 100% PCW, 8½x11″, 100 sheets, Wide Rule, White
7530–01–600–2016—Notebook, Spiral Bound, 100% PCW, 8½x11'', 120 sheets, College Rule, White
7530–01–600–2015—Notebook, Spiral Bound, 100% PCW, 8½x11″, 200 sheets, College Rule, White
7530–01–600–2021—Notebook, Spiral Bound, 100% PCW, 8x10½″, 70 sheets, Wide Rule, White
Designated Source of Supply: Winston-Salem Industries for the Blind, Inc., Winston-Salem, NC
Contracting Activity: GSA/FAS ADMIN SVCS ACQUISITION BR(2, NEW YORK, NY

NSN(s)—Product Name(s):
1005–01–134–3621—Index, Elevation
Designated Source of Supply: Arizona Industries for the Blind, Phoenix, AZ
Contracting Activity: DLA LAND AND MARITIME, COLUMBUS, OH

Service(s)

Service Type: Cutting and Assembly
Mandatory for: Robins Air Force Base, Robins AFB, GA
Designated Source of Supply: Middle Georgia Diversified Industries, Inc., Dublin, GA
Contracting Activity: DEFENSE LOGISTICS AGENCY, DLA AVIATION
Service Type: Janitorial/Custodial
Mandatory for: Denver Federal Center: Building 95, Denver, CO
Designated Source of Supply: North Metro Community Services for Developmentally Disabled, Westminster, CO
Contracting Activity: GENERAL SERVICES ADMINISTRATION, FPDS AGENCY COORDINATOR
Service Type: Vehicle Washing Service
Mandatory for: US Customs and Border Protection, Island of Puerto Rico & Virgin Islands, San Juan, PR
Designated Source of Supply: The Corporate Source, Inc., Garden City, NY
Contracting Activity: U.S. CUSTOMS AND BORDER PROTECTION, BORDER ENFORCEMENT CTR DIV
Service Type: Janitorial/Grounds Maintenance
Mandatory for: US Customs and Border Protection, Big Bend Sector Texas, Marfa, TX
Designated Source of Supply: Professional Contract Services, Inc., Austin, TX
Contracting Activity: U.S. CUSTOMS AND BORDER PROTECTION, BORDER ENFORCEMENT CTR DIV
Service Type: Janitorial/Custodial
Mandatory for: Naval Intelligence Command Building: (NIC II including trailers 1, 2 and 3), Suitland, MD
Designated Source of Supply: Melwood Horticultural Training Center, Inc., Upper Marlboro, MD
Contracting Activity: GENERAL SERVICES ADMINISTRATION, FPDS AGENCY COORDINATOR
Service Type: Custodial & Grounds Maintenance
Mandatory for: Immigration and Customs Enforcement: Penthouse Floor and Parking Floor, San Juan, PR
Immigration and Customs Enforcement: Calle Gonzalez Clemente #30, Mayaguez, PR
Designated Source of Supply: The Corporate Source, Inc., Garden City, NY
Contracting Activity: U.S. IMMIGRATION AND CUSTOMS ENFORCEMENT, MISSION SUPPORT DALLAS
Service Type: Janitorial/Custodial
Mandatory for: GSA, Leased Space: 603–11 East 2nd Street, Des Moines, IA
Mandatory for: U.S. Courthouse Annex, Des Moines, IA
Designated Source of Supply: Goodwill Solutions, Inc., Johnston, IA
Contracting Activity: PUBLIC BUILDINGS SERVICE, GSA/PUBLIC BUILDINGS SERVICE
Service Type: Custodial service
Mandatory for: National Counterdrug Training Center Campus, Annville, PA
Designated Source of Supply: Opportunity Center, Incorporated, Wilmington, DE
Contracting Activity: DEPT OF THE ARMY, W7NX USPFO ACTIVITY PA ARNG
Service Type: Janitorial/Custodial
Mandatory for: Annapolis USARC, Annapolis, MD
Mandatory for: Jecelin USARC, Baltimore, MD
Designated Source of Supply: CHI Centers, Inc., Silver Spring, MD
Contracting Activity: DEPT OF THE ARMY, W6QK ACC–PICA
Service Type: Janitorial/Custodial
Mandatory for: U.S. Federal Building, Courthouse and Post Office, Thomasville, GA
Designated Source of Supply: Thomas Grady Service Center, Inc., Thomasville, GA
Contracting Activity: PUBLIC BUILDINGS SERVICE, ACQUISITION DIVISION/SERVICES BRANCH
Service Type: Grounds Maintenance
Mandatory for: U.S. Army Reserve Center: 1635 Armor Road, Akron, OH
Contracting Activity: DEPT OF THE ARMY, W40M RHCO–ATLANTIC USAHCA

Michael R. Jurkowski,

Deputy Director, Business & PL Operations.

BILLING CODE 6353–01–P

COMMITTEE FOR PURCHASE FROM PEOPLE WHO ARE BLIND OR SEVERELY DISABLED

Procurement List; Proposed Additions and Deletions

AGENCY: Committee for Purchase From People Who Are Blind or Severely Disabled.

ACTION: Proposed additions to and deletions from the procurement list.

SUMMARY: The Committee is proposing to add service(s) to the Procurement List that will be furnished by nonprofit agencies employing persons who are blind or have other severe disabilities, and deletes product(s) previously furnished by such agencies.

DATES: Comments must be received on or before: January 10, 2021.

ADDRESSES: Committee for Purchase From People Who Are Blind or Severely Disabled, 1401 S Clark Street, Suite 715, Arlington, Virginia 22202–4149.

FOR FURTHER INFORMATION CONTACT: For further information or to submit comments contact: Michael R. Jurkowski, Telephone: (703) 603–2117, Fax: (703) 603–0655, or email *CMTEFedReg@AbilityOne.gov.*

SUPPLEMENTARY INFORMATION: This notice is published pursuant to 41 U.S.C. 8503 (a)(2) and 41 CFR 51–2.3. Its purpose is to provide interested persons an opportunity to submit comments on the proposed actions.

Additions

If the Committee approves the proposed additions, the entities of the Federal Government identified in this notice will be required to procure the service(s) listed below from nonprofit agencies employing persons who are blind or have other severe disabilities.

The following service(s) are proposed for addition to the Procurement List for production by the nonprofit agencies listed:

Service(s)

Service Type: Custodial and Related Services
Mandatory for: GSA PBS Region 5, Theodore Levin US Courthouse, Detroit, MI
Mandatory for: GSA PBS Region 5, Rosa Parks Federal Building, Detroit, MI
Mandatory for: GSA PBS Region 5, Rosa Parks Federal Garage, Detroit, MI
Mandatory for: GSA PBS Region 5, US Customs Cargo Inspection Facilities, Detroit, MI
Designated Source of Supply: Jewish Vocational Service and Community Workshop, Southfield, MI (Prime Contractor)
Designated Source of Supply: Services to Enhance Potential, Dearborn, MI (Subcontractor for the Rosa Parks Federal Building and Garage, and US Customs Cargo Inspection Facilities
Contracting Activity: PUBLIC BUILDINGS SERVICE, PBS R5

Deletions

The following product(s) are proposed for deletion from the Procurement List:

Product(s)

NSN(s)—Product Name(s):
MR 13120—Set, Container, Pop, 5pc
MR 13130—Set, Bowl, Colander, Large, 3 pc
MR 13131—Container, Rectangle, Pop, 1.5 Qt
MR 13132—Container, Square, Pop, Small, 0.9 Qt.
MR 13133—Container, Rectangle, Pop, 2.5 Qt.
MR 13134—Container, Square, Pop, Small, 0.3 Qt.
Designated Source of Supply: Cincinnati Association for the Blind, Cincinnati, OH
Contracting Activity: Military Resale-Defense Commissary Agency
NSN(s)—Product Name(s):
9905–00–NIB–0001—Link, Hasp and Strap Assembly
9905–00–NIB–0014—Link, Hasp and Strap Assembly
Designated Source of Supply: Mississippi Industries for the Blind, Jackson, MS
Contracting Activity: U.S. Postal Service, Washington, DC, Washington, DC

Michael R. Jurkowski,

Deputy Director, Business & PL Operations.

DEFENSE SECURITY COOPERATION AGENCY
201 12TH STREET SOUTH, SUITE 101
ARLINGTON, VA 22202-5408

October 26, 2020

The Honorable Nancy Pelosi
Speaker of the House
U.S. House of Representatives
H-209, The Capitol
Washington, DC 20515

Dear Madam Speaker:

Pursuant to the reporting requirements of Section 36(b)(1) of the Arms Export Control Act, as amended, we are forwarding herewith Transmittal No. 20-68 concerning the Navy's proposed Letter(s) of Offer and Acceptance to the Taipei Economic and Cultural Representative Office in the United States (TECRO) for defense articles and services estimated to cost $2.37 billion. After this letter is delivered to your office, we plan to issue a news release to notify the public of this proposed sale.

Sincerely,

Heidi H. Grant
Director

Enclosures:

BILLING CODE 5001–06–C

Transmittal No. 20–68

Notice of Proposed Issuance of Letter of Offer Pursuant to Section 36(b)(1) of the Arms Export Control Act, as Amended

(i) *Prospective Purchaser*: Taipei Economic and Cultural Representative Office in the United States (TECRO)

(ii) *Total Estimated Value*:

Major Defense Equipment*	$1.16 billion
Other	$1.21 billion
TOTAL	$2.37 billion

(iii) *Description and Quantity or Quantities of Articles or Services under Consideration for Purchase*: TECRO has requested to buy up to one hundred (100) Harpoon Coastal Defense Systems (HCDS) consisting of:

Major Defense Equipment (MDE):
Up to four hundred (400) RGM-84L-4 Harpoon Block II Surface Launched Missiles
Four (4) RTM-84L-4 Harpoon Block II Exercise Missiles
Non-MDE:
Also included are four hundred eleven (411) containers, one hundred (100) Harpoon Coastal

Defense System Launcher Transporter Units, twenty-five (25) radar trucks, spare and repair parts, support and test equipment, publications and technical documentation, personnel training and training equipment, U.S. Government and contractor representatives' technical assistance, engineering and logistics support services, and other related elements of logistics support.

(iv) *Military Department*: Navy (TW-P-LHX)

(v) *Prior Related Cases, if any*: TW-P-LGV, TW-P-LGN, TW-P-LGL

(vi) *Sales Commission, Fee, etc., Paid, Offered, or Agreed to be Paid*: None

(vii) *Sensitivity of Technology Contained in the Defense Article or Defense Services Proposed to be Sold*: See Attached Annex

(viii) *Date Report Delivered to Congress*: October 26, 2020

*As defined in Section 47(6) of the Arms Export Control Act.

POLICY JUSTIFICATION

Taipei Economic and Cultural Representative Office in the United States (TECRO) – RGM-84L-4 Harpoon Surface Launched Block II Missiles

TECRO has requested to buy up to one hundred (100) Harpoon Coastal Defense Systems (HCDS) consisting of up to four hundred (400) RGM-84L-4 Harpoon Block II Surface Launched Missiles; and four (4) RTM-84L-4 Harpoon Block II Exercise Missiles. Also included are four hundred and eleven (411) containers, one hundred (100) Harpoon Coastal Defense System Launcher Transporter Units, twenty-five (25) radar trucks, spare and repair parts, support and test equipment, publications and technical documentation, personnel training and training equipment, U.S. Government and contractor representatives' technical assistance, engineering and logistics support services, and other related elements of logistics support. The total estimated program cost is $2.37 billion.

This proposed sale is consistent with U.S. law and policy as expressed in Public Law 96–8.

This proposed sale serves U.S. national, economic, and security interests by supporting the recipient's continuing efforts to modernize its armed forces and to maintain a credible defensive capability. The proposed sale will help improve the security of the recipient and assist in maintaining political stability, military balance, economic and progress in the region.

This proposed sale will improve the recipient's capability to meet current and future threats by providing a flexible solution to augment existing surface and air defenses. The recipient will be able to employ a highly reliable and effective system to counter or deter maritime aggressions, coastal blockades, and amphibious assaults. This capability will easily integrate into existing force infrastructure. The recipient will have no difficulty absorbing these systems into its armed forces.

The proposed sale of this equipment and support will not alter the basic military balance in the region.

The principal contractor will be The Boeing Company, St. Louis, MO. There are no known offset agreements proposed in connection with this potential sale.

Implementation of this proposed sale will require the assignment of two (2) U.S. contractor representatives to the recipient for a duration of 8 years to support technical reviews, support, and oversight.

There will be no adverse impact on U.S. defense readiness as a result of this proposed sale.

Transmittal No. 20–68

Notice of Proposed Issuance of Letter of Offer Pursuant to Section 36(b)(1) of the Arms Export Control Act

Annex

Item No. vii

(vii) *Sensitivity of Technology*:

1. The RGM-84L Harpoon Surface Launched Block II missile system is a non-nuclear tactical weapon system. It provides a day, night, and adverse weather, standoff air-to-surface capability and is an effective Anti-Surface Warfare missile. The RGM-84L incorporates components, software, and technical design information that are considered sensitive. These elements are essential to the ability of the Harpoon missile to selectively engage hostile targets under a wide range of operations, tactical and environmental conditions:

- The Radar Seeker,
- The Radar Altimeter,
- The GPS/INS System,
- Operational Flight Program Software, and
- Missile operational characteristics and performance data.

2. The highest level of classification of defense articles, components, and services included in this potential sale is CONFIDENTIAL.

3. If a technologically advanced adversary were to obtain knowledge of the hardware and software elements, the information could be used to develop countermeasures or equivalent systems, which might reduce system effectiveness or be used in the development of a system with similar or advanced capabilities.

4. A determination has been made that the recipient can provide substantially the same degree of protection for the sensitive technology being released as the U.S. Government. This sale is necessary in furtherance of the U.S. foreign policy and national security objectives outlined in the Policy Justification.

5. All defense articles and services listed in this transmittal have been authorized for release and export to the recipient.

Speaker of the House
U.S. House of Representatives
H-209, The Capitol
Washington, DC 20515

Dear Madam Speaker:

Pursuant to the reporting requirements of Section 36(b)(1) of the Arms Export Control Act, as amended, we are forwarding herewith Transmittal No. 20-72 concerning the Navy's proposed Letter(s) of Offer and Acceptance to the Government of Romania for defense articles and services estimated to cost $300 million. After this letter is delivered to your office, we plan to issue a news release to notify the public of this proposed sale.

Sincerely,

Heidi H. Grant
Director

Transmittal No. 20–72

Notice of Proposed Issuance of Letter of Offer Pursuant to Section 36(b)(1) of the Arms Export Control Act, as amended

(i) *Prospective Purchaser:* Government of Romania

(ii) *Total Estimated Value:*

Major Defense Equipment *	$ 10 million
Other	$290 million
Total	$300 million

(iii) *Description and Quantity or Quantities of Articles or Services under Consideration for Purchase:* The Government of Romania has requested to buy two (2) Coastal Defense Systems (CDS) consisting of:

Major Defense Equipment (MDE):

Up to ten (10) Link-16 Multifunctional Information Distribution System—Joint Tactical Radio Systems (MIDS–JTRS)

Non-MDE:

Also included are two Coastal Defense System Fire Distribution Centers; four Mobile Launch Vehicles; Transport Loading Vehicles; Naval Strike Missiles; non-operational Inert Handling/Loading Missile (IHM) to support missile handling and loading/unloading; training missile and equipment spares; associated containers; training and training equipment; publications and technical documentation; spares parts; loading and mobile

maintenance support; U.S. Government and contractor engineering, technical, and logistics support services; and other related elements of logistical and program support.

(iv) *Military Department:* Navy (RO–P–SAE)

(v) *Prior Related Cases, if any:* None

(vi) *Sales Commission, Fee, etc., Paid, Offered, or Agreed to be Paid:* None

(vii) *Sensitivity of Technology Contained in the Defense Article or Defense Services Proposed to be Sold:* See Attached Annex

(viii) *Date Report Delivered to Congress:* October 16, 2020

* As defined in Section 47(6) of the Arms Export Control Act.

POLICY JUSTIFICATION

Romania—Naval Strike Missile (NSM) Coastal Defense System (CDS)

The Government of Romania has requested to buy two (2) Coastal Defense Systems (CDS) consisting of: Up to ten (10) Link-16 Multifunctional Information Distribution System—Joint Tactical Radio Systems (MIDS–JTRS). Also included are two Coastal Defense System Fire Distribution Centers; four Mobile Launch Vehicles; Transport Loading Vehicles; Naval Strike Missiles; non-operational Inert Handling/Loading Missile (IHM) to support missile handling and loading/unloading; training missile and equipment spares; associated containers; training and training equipment; publications and technical documentation; spares parts; loading and mobile maintenance support; U.S. Government and contractor engineering, technical, and logistics support services; and other related elements of logistical and program support. The estimated total cost is $300 million.

This proposed sale will support the foreign policy and national security of the United States by helping to improve the security of a NATO Ally in developing and maintaining a strong and ready self-defense capability. This proposed sale will enhance U.S. national security objectives in the region.

The proposed sale will improve Romania's capability to meet current and future threats by improving Romania's maritime defense capabilities in the Black Sea and increasing interoperability with the United States. Romania will use this long-range, precision strike weapon to enhance mission effectiveness, survivability, and NATO interoperability in current and future missions and operations. Romania will have no difficulty absorbing this equipment and support into its armed forces.

The proposed sale of this equipment and support will not alter the basic military balance in the region.

The principal U.S. contractor will be Raytheon Missile and Defense, Tucson, AZ. There are no known offset agreements proposed in connection with this potential sale.

Implementation of the proposed sale will require U.S. Government and contractor personnel to visit Romania on a temporary basis in conjunction with program technical oversight and support requirements, including program and technical reviews, as well as to provide training and maintenance support in country.

There will be no adverse impact on U.S. defense readiness as a result of this proposed sale.

Transmittal No. 20–72

Notice of Proposed Issuance of Letter of Offer Pursuant to Section 36(b)(1) of the Arms Export Control Act

Annex

Item No. vii

1. The Naval Strike Missile (NSM) Coastal Defense System (CDS) provides a high performance, mobile, ground-based coastal defense capability. It has a net centric architecture, which enables multiple simultaneous engagements and over-the-horizon (OTH) targeting. The system can be closely integrated and adapted to a country's adjacent weapons and command and control systems. This expands the defended area and enhances the total fighting capability of the force. The NSM CDS is a ''turn-key'' solution that includes equipment, prime movers, spares, training, training equipment, logistics support equipment, documentation, services, and communications. This configuration consists of mobile Command and Control (C2) Fire Distribution Centers (FDCs) with an integrated communication subsystem and associated software; Mobile Launch Vehicles (MLVs) that perform a complete fire mission; Transport Loading Vehicles (TLVs) for the missiles; communication subsystem; Uninterrupted Power Supply (UPS); tactical missiles; telemetered missiles to support test firings; inert or ''dummy'' missiles for handling/loading training; and an inert operational missile to support ground based integration and system verification testing.

2. Multifunctional Information Distribution System—Joint Tactical Radio System (MIDS–JTRS) is a secure data and voice communication network using Link-16 architecture. MIDS–JTRS provides a high capacity, low latency internet Protocol (IP) based waveform that can quickly transmit large amounts of data. Advanced algorithms allow cooperative detection and engagement of a wider array of targets, improving fused track accuracy and increasing lethality/survivability through Situational Awareness.

3. The highest level of classification of defense articles, components, and services included in this potential sale is SECRET.

4. If a technologically advanced adversary were to obtain knowledge of the specific hardware and software elements, the information could be used to develop countermeasures that might reduce weapon system effectiveness or be used in the development of a system with similar or advanced capabilities.

5. A determination has been made that Romania can provide substantially the same degree of protection for the sensitive technology being released as the U.S. Government. This sale is necessary in furtherance of the U.S. foreign policy and national security objectives outlined in the Policy Justification.

6. All defense articles and services listed in this transmittal have been authorized for release and export to the Government of the Romania.

Transmittal No. 20-66

Notice of Proposed Issuance of Letter of Offer Pursuant to Section 36(b)(1) of the Arms Export Control Act, as amended

(i) *Prospective Purchaser*: Government of Finland

(ii) *Total Estimated Value*:

Major Defense Equipment*	$ 8.4 billion
Other	$ 4.1 billion
Total	$12.5 billion

(iii) *Description and Quantity or Quantities of Articles or Services under Consideration for Purchase*:

Major Defense Equipment (MDE):
- Sixty-four (64) F-35 Joint Strike Fighter CTOL Aircraft
- Sixty-six (66) Pratt & Whitney F-135 Engines (64 installed and 2 spares)
- Five hundred (500) GBU-53/B Small Diameter Bomb II (SDB II) All-Up Round (AUR)
- Twelve (12) GBU-53/B SDB II Guided Test Vehicles (GTV)
- Twelve (12) GBU-53/B SDB II Captive Carry Vehicles (CCV)
- One hundred fifty (150) Sidewinder, AIM-9X Block II+ (Plus) Tactical Missiles
- Thirty-two (32) Sidewinder, AIM-9X Block II+ (Plus) Captive Air Training Missiles (CATMs)
- Thirty (30) AIM-9X Block II+ (Plus) Sidewinder Tactical Guidance Units
- Eight (8) AIM-9X Block II Sidewinder CATM Guidance Units
- One hundred (100) AGM-154C-1 Joint Stand Off Weapon (JSOW-C1) Tactical Missiles
- Two hundred (200) Joint Air-to-Surface Standoff Missile-Extended Range (JASSM-ER) AGM-158B-2 Missiles
- Two (2) AGM-158B-2 JASSM-ER Separation Test Vehicles
- Two (2) AGM-158B-2 JASSM-ER Instrumented Test Vehicles
- Two (2) AGM-158B-2 JASSM-ER Jettison Test Vehicles
- Two (2) AGM-158B-2 Inert JASSM w/ Intelligent Telemetry Instrumentation Kits
- Two (2) AGM-158 Dummy Air Training Missiles
- One hundred twenty (120) KMU-556 JDAM Guidance Kits for GBU-31
- Three hundred (300) FMU-139D/B Fuzes
- Two (2) KMU-556(D-2)/B Trainer JDAM Guidance Kits for GBU-31
- Thirty (30) KMU-557 JDAM Guidance Kits for GBU-31
- One hundred fifty (150) KMU-572 JDAM Guidance Kits for GBU-38/54
- One hundred twenty (120) BLU-117, General Purpose Bomb
- Thirty-two (32) BLU-109, General Purpose Bomb
- One hundred fifty (150) BLU-111, General Purpose Bomb
- Six (6) MK-82, Inert Bomb
- One (1) FMU-139D/B (D-1) Inert Fuze

Non-MDE:
- Also included are Electronic Warfare Systems; Command, Control, Communications, Computer and Intelligence/Communications, Navigational, and Identification (C4I/CNI); Autonomic Logistics Global Support System (ALGS); Operational Data Integrated Network (ODIN); Air System Training Devices; Weapons Employment Capability and other Subsystems, Features, and Capabilities; F-35 unique infrared flares; reprogramming center access; F-35 Performance Based Logistics; software development/integration; aircraft ferry and tanker support; Detector Laser DSU-38A/B, Detector Laser DSU-38A(D-2)/B, KMU-572(D-2)/B Trainer (JDAM), 40 inch Wing Release Lanyard; GBU-53/B SDB II Weapon Load Crew Trainers (WLCT); GBU-53/B SDB II Practical Explosive Ordnance Disposal System Trainers (PEST); AGM-154C-1 JSOW Captive Flight Vehicles; AGM-154C-1 JSOW Dummy Air Training Missiles; AGM-154C-1 JSOW mission planning, integration support and testing, munitions storage security and training, weapon operational flight program software development; integration of the Joint Strike Missile; weapons containers; aircraft and munitions support and test equipment; communications equipment; provisioning, spares and repair parts; weapons repair and return support; personnel training and training equipment; weapon systems software, publications and technical documents; U.S. Government and contractor engineering, technical, and logistics support services; and other related elements of logistical and program support.

(iv) *Military Department*: Air Force (FI-D-SAB; FI-D-YAB, FI-D-YAE, FI-D-YAJ); Navy (FI-P-AAQ, FI-P-AAS)

(v) *Prior Related Cases, if any*: None

(vi) *Sales Commission, Fee, etc., Paid, Offered, or Agreed to be Paid*: None

(vii) *Sensitivity of Technology Contained in the Defense Article or Defense Services Proposed to be Sold*: See Attached Annex

(viii) *Date Report Delivered to Congress*: October 9, 2020

*As defined in Section 47(6) of the Arms Export Control Act.

POLICY JUSTIFICATION

Finland – F-35 Joint Strike Fighter Aircraft with Air-to-Air Missiles and Air-to-Ground Precision Guided Munitions

The Government of Finland has requested to buy sixty-four (64) F-35 Joint Strike Fighter CTOL aircraft; sixty-six (66) Pratt & Whitney F-135 engines (64 installed and 2 spares); five hundred (500) GBU-53/B Small Diameter Bomb II (SDB II) All-Up Round (AUR); twelve (12) GBU-53/B SDB II Guided Test Vehicles (GTV); twelve (12) GBU-53/B SDB II Captive Carry Vehicles (CCV); one hundred fifty (150) Sidewinder AIM-9X Block II+ (Plus) Tactical Missiles; thirty-two (32) Sidewinder AIM-9X Block II+ (Plus) Captive Air Training Missiles (CATMs); thirty (30) AIM-9X Block II+ (Plus) Sidewinder Tactical Guidance Units; eight (8) AIM-9X Block II Sidewinder CATM Guidance Units; one hundred (100) AGM-154C-1 Joint Stand Off Weapon (JSOW-C1) Tactical Missiles; two hundred (200) Joint Air-to-Surface Standoff Missile-Extended Range (JASSM-ER) AGM-158B-2 Missiles; two (2) AGM-158B-2 JASSM-ER Separation Test Vehicles; two (2) AGM-158B-2 JASSM-ER Instrumented Test Vehicles; two (2) AGM-158B-2 JASSM-ER Jettison Test Vehicles; two (2) AGM-158B-2 Inert JASSM w/Intelligent Telemetry Instrumentation Kits; two (2) AGM-158 Dummy Air Training Missiles; one hundred twenty (120) KMU-556 JDAM Guidance Kits for GBU-31; three hundred (300) FMU-139D/B Fuzes; two (2) KMU-556(D-2)/B Trainer JDAM Guidance Kits for GBU-31; thirty (30) KMU-557 JDAM Guidance Kits for GBU-31; one hundred fifty (150) KMU-572 JDAM Guidance Kits for GBU-38/54; one hundred twenty (120) BLU-117, General Purpose Bombs; thirty-two (32) BLU-109, General Purpose Bomb; one hundred fifty (150) BLU-111, General Purpose Bomb; six (6) MK-82, Inert Bomb; one (1) FMU-139D/B (D-1) Inert Fuze. Also included are Electronic Warfare Systems; Command, Control, Communications, Computer and Intelligence/Communications, Navigational, and Identification (C4I/CNI); Autonomic Logistics Global Support System (ALGS); Operational Data Integrated Network (ODIN); Air System Training Devices; Weapons Employment Capability and other Subsystems, Features, and Capabilities; F-35 unique infrared flares; reprogramming center access; F-35 Performance Based Logistics; software

development/integration; aircraft ferry and tanker support; Detector Laser DSU-38A/B, Detector Laser DSU-38A(D-2)/B, KMU-572(D-2)/B Trainer (JDAM), 40 inch Wing Release Lanyard; GBU-53/B SDB II Weapon Load Crew Trainers (WLCT); GBU-53/B SDB II Practical Explosive Ordnance Disposal System Trainers (PEST); AGM-154C-1 JSOW Captive Flight Vehicles; AGM-154C-1 JSOW Dummy Air Training Missiles; AGM-154C-1 JSOW mission planning, integration support and testing, munitions storage security and training, weapon operational flight program software development; integration of the Joint Strike Missile; weapons containers; aircraft and munitions support and test equipment; communications equipment; provisioning, spares and repair parts; weapons repair and return support; personnel training and training equipment; weapon systems software, publications and technical documents; U.S. Government and contractor engineering, technical, and logistics support services; and other related elements of logistical and program support. The total estimated cost is $12.5 billion.

This proposed sale will support the foreign policy and national security of the United States by improving the security of a trusted partner which is an important force for political stability and economic progress in Europe. It is vital to the U.S. national interest to assist Finland in developing and maintaining a strong and ready self-defense capability.

The proposed sale of F-35s and associated missiles and munitions will provide Finland with a credible defense capability to deter aggression in the region and ensure interoperability with U.S. forces. The proposed sale will replace Finland's retiring F/A-18s and enhance its air-to-air and air-to-ground self-defense capability. Finland will have no difficulty absorbing these aircraft into its armed forces.

The proposed sale of this equipment and support will not alter the basic military balance in the region.

The prime contractors will be Lockheed Martin Aeronautics Company, Fort Worth, TX; Pratt & Whitney Military Engines, East Hartford, CT; The Boeing Company, St. Charles, MO; and Raytheon Missiles and Defense, Tucson, AZ. This proposal is being offered in the context of a competition. If the proposal is accepted, it is expected that offset agreements will be required. Any offset agreement will be defined in negotiations between the purchaser and the contractor(s).

Implementation of this proposed sale will require multiple trips to Finland involving U.S. Government and contractor representatives for technical reviews/support, program management and training over the life of the program. U.S. contractor representatives will be required in Finland to conduct Contractor Engineering Technical Services (CETS) and Autonomic Logistics and Global Support (ALGS) for after-aircraft delivery.

There will be no adverse impact on U.S. defense readiness as a result of this proposed sale.

Transmittal No. 20–66

Notice of Proposed Issuance of Letter of Offer Pursuant to Section 36(b)(1) of the Arms Export Control Act

Annex

Item No. vii

(vii) *Sensitivity of Technology*:

1. The F-35A Conventional Take Off and Landing (CTOL) aircraft is a single-seat, singleengine, all-weather, stealth, fifth-generation, multirole aircraft. The F-35A CTOL contains sensitive technology including the low observable airframe/outer mold line, the Pratt and Whitney F135 engine, AN/APG-81 radar, an integrated core processor central computer, a mission systems/ electronic warfare suite, a multiple sensor suite, technical data/ documentation, and associated software. Sensitive elements of the F-35A are also included in operational flight and maintenance trainers. Sensitive and classified elements of the F-35A CTOL aircraft include hardware, accessories, components, and associated software for the following major subsystems:

a. The Pratt and Whitney F135 engine is a single 40,000-lb thrust class engine designed for the F-35 and assures highly reliable, affordable performance. The engine is designed to be utilized in all F-35 variants, providing unmatched commonality and supportability throughout the worldwide base of F-35 users.

b. The AN/APG-81 Active Electronically Scanned Array (AESA) is a high processing power/high transmission power electronic array capable of detecting air and ground targets from a greater distance than mechanically scanned array radars. It also contains a synthetic aperture radar (SAR), which creates high-resolution ground maps and provides weather data to the pilot, and provides air and ground tracks to the mission system, which uses it as a component to fuse sensor data.

c. The Electro-Optical Targeting System (EOTS) provides long-range detection and tracking as well as an infrared search and track (IRST) and forward-looking infrared (FLIR) capability for precision tracking, weapons delivery, and bomb damage assessment (BDA). The EOTS replaces multiple separate internal or podded systems typically found on legacy aircraft.

d. The Electro-Optical Distributed Aperture System (EODAS) provides the pilot with full spherical coverage for air-to-air and air-to-ground threat awareness, day/night vision enhancements, a fire control capability, and precision tracking of wingmen/ friendly aircraft. The EODAS provides data directly to the pilot's helmet as well as the mission system.

e. The Electronic Warfare (EW) system is a reprogrammable, integrated system that provides radar warning and electronic support measures (ESM) along with a fully integrated countermeasures (CM) system. The EW system is the primary subsystem used to enhance situational awareness, targeting support and self-defense through the search, intercept, location and identification of in-band emitters and to automatically counter IR and RF threats.

f. The Command, Control, Communications, Computers and Intelligence/ Communications, Navigation, and Identification (C4I/CNI) system provides the pilot with unmatched connectivity to flight members, coalition forces, and the battlefield. It is an integrated subsystem designed to provide a broad spectrum of secure, anti-jam voice and data communications, precision radio navigation and landing capability, self-identification, beyond visual range target identification, and connectivity to off-board sources of information. It also includes an inertial navigation and global positioning system (GPS) for precise location information. The functionality is tightly integrated within the mission system to enhance efficiency.

g. The aircraft C4I/CNI system includes two data links, the Multi-Function Advanced Data Link (MADL) and Link 16. The MADL is designed specifically for the F-35 and allows for stealthy communications between F-35s. Link 16 data link equipment allows the F-35 to communicate with legacy aircraft using widely-distributed J-series message protocols.

h. The F-35 Autonomic Logistics Global Sustainment (ALGS) provides a fully integrated logistics management solution. ALGS integrates a number of functional areas, including supply chain management, repair, support equipment, engine support, and training. The ALGS infrastructure

employs a state-of-the-art information system that provides real-time, decision-worthy information for sustainment decisions by flight line personnel. Prognostic health monitoring technology is integrated with the air system and is crucial to predictive maintenance of vital components.

i. The F-35 Operational Data Integrated Network (ODIN) provides an intelligent information infrastructure that binds all the key concepts of ALGS into an effective support system. ODIN establishes the appropriate interfaces among the F-35 Air Vehicle, the warfighter, the training system, government information technology (IT) systems, and supporting commercial enterprise systems. Additionally, ODIN provides a comprehensive tool for data collection and analysis, decision support and action tracking.

j. The F-35 Training System includes several training devices to provide integrated training for pilots and maintainers. The pilot training devices include a Full Mission Simulator (FMS) and Deployable Mission Rehearsal Trainer (DMRT). The maintainer training devices include an Aircraft Systems Maintenance Trainer (ASMT), Ejection System Maintenance Trainer (ESMT), Outer Mold Line (OML) Lab, Flexible Linear Shaped Charge (FLSC) Trainer, F135 Engine Module Trainer, and Weapons Loading Trainer (WLT). The F-35 Training System can be integrated, where both pilots and maintainers learn in the same Integrated Training Center (ITC). Alternatively, the pilots and maintainers can train in separate facilities (Pilot Training Center and Maintenance Training Center).

k. Other subsystems, features, and capabilities include the F-35's low observable air frame, Integrated Core Processor (ICP) Central Computer, Helmet Mounted Display System (HMDS), Pilot Life Support System (PLSS), Off-Board Mission Support (OMS) System and publications/maintenance manuals. The HMDS provides a fully sunlight readable, bi-ocular display presentation of aircraft information projected onto the pilot's helmet visor. The use of a night vision camera integrated into the helmet eliminates the need for separate Night Vision Goggles. The PLSS provides a measure of Pilot Chemical, Biological, and Radiological Protection through use of an OnBoard Oxygen Generating System (OBOGS); and an escape system that provides additional protection to the pilot. OBOGS takes the Power and Thermal Management System (PTMS) air and enriches it by removing gases (mainly nitrogen) by adsorption, thereby increasing the concentration of oxygen in the product gas and supplying breathable air to the pilot. The OMS provides a mission planning, mission briefing, and a maintenance/intelligence/tactical debriefing platform for the F-35.

2. The Reprogramming Center is located in the United States and provides F-35 customers a means to update F-35 electronic warfare databases.

3. The AGM-158B Joint Air-to-Surface Standoff Missile Extended Range (JASSM-ER) is an extended range low-observable, highly survivable subsonic cruise missile designed to penetrate next generation air defense systems en-route to target. It is designed to kill hard, medium-hardened, soft and area type targets. The extended range over the baseline was obtained by going from a turbo jet to a turbo-fan engine and by reconfiguring the fuel tanks for added capacity. Purchase will include test and training missiles.

4. The AGM-154 Joint Standoff Weapon (JSOW) is used by the Navy, Marine Corps, and Air Force, and allows aircraft to attack well-defended targets in day, night, and adverse weather conditions. The JSOW C and C-1 utilize GPS/INS guidance and an uncooled imaging infrared (IIR) seeker for terminal guidance, autonomous acquisition, and provides a precision targeting, 500-lb-class tandem warhead that is the Navy's primary standoff weapon against hardened targets. The JSOW C-1 added the Link 16 data link enabling a robust and flexible capability against high-value stationary land targets and moving maritime target capability. JSOW C-1 can fly via two dimensional and three dimensional waypoints to the target, offering the optimal path around integrated air defense systems (IADS).

5. The AIM-9X Block II+ (Plus) SIDEWINDER Missile is a supersonic, short-range Air-to-Air (A/A) guided missile which employs a passive Infrared (IR) target acquisition system, proportional navigational guidance, and a closed-loop position servo Fin Actuator Unit (FAU). It represents a substantial increase in missile acquisition and kinematics performance over the AIM-9M and replaces the AIM-9X Block I Missile configuration. The missile includes a high off-boresight seeker, enhanced countermeasure rejection capability, low drag/high angle of attack airframe and the ability to integrate the Helmet Mounted Cueing System. The software algorithms are the most sensitive portion of the AIM-9X missile. The software continues to be modified via a pre-planned product improvement (P3I) program in order to improve its counter-countermeasure capabilities. No software source code or algorithms will be released.

a. AIM-9X BLK II Captive Air Training Missile (CATM) is a flight certified inert mass simulator with a functioning Guidance Unit (GU). The CATM is the primary aircrew training device providing all pre-launch functions as well as realistic aerodynamic performance that equate to carrying a tactical missile. The CATM provides pilot training in aerial target acquisition and use of aircraft controls/displays.

b. AIM-9X BLK II+ (Plus) Tactical GU, WGU-57/B, provides the missile tracking, guidance, and control signals. The GU provides counter-countermeasures, improved reliability and maintainability over earlier Sidewinder models. Improvements include: (1) upgrade/redesign to the Electronics Unit Circuit Card Assemblies, (2) a redesigned center section harnessing, and (3) a larger capacity missile battery.

c. AIM-9X BLK II CATM GU, WGU-57/B, is identical to the tactical GU except the GU and Control Actuation System (CAS) batteries are inert and the software Captive. The software switch tells the missile processor that it is attached to a CATM and to ignore missile launch commands. The switch also signals software to not enter abort mode because there is no FAU connected to the GU.

d. AIM-9X BLK II Multi-Purpose Training Missile (MPTM) is a ground training device used to train ground personnel in aircraft loading, sectionalization, maintenance, transportation, storage procedures, and techniques. The missile replicates external appearance and features of a tactical AIM-9X-2 missile. The MPTM will physically interface with loading equipment, maintenance equipment, launchers, and test equipment. The missile is explosively and electrically inert and is NOT flight certified.

e. AIM-9X BLK II Dummy Air Training Missile (DATM) is used to train ground personnel in missile maintenance, loading, transportation, and storage procedures. All components are completely inert. The missile contains no programmable electrical components and is not approved for flight.

f. AIM-9X BLK II Active Optical Target Detector (AOTD) is newly designed for Block II. The AOTD/Data Link (AOTD/DL) uses the latest laser technology allowing significant increases in sensitivity, aerosol performance, low altitude performance, and Pk (Probability of Kill). The AOTD/

DL design includes a DL for 2-way platform communication. The AOTD/DL communicates with the GU over a serial interface which allows the GU to receive and transmit data so that a target position and status communication with a launching platform is possible during missile flight.

6. The GBU-31 Joint Direct Attack Munition (JDAM) is a 2,000 pound Inertial Navigation System/Global Positioning System (INS/GPS) guided precision air to ground munition. The GBU-31 has two JDAM tailkit variants, KMU-556 and the KMU-557. Each tailkit is bomb body specific. The KMU-556 is assembled to the MK-84 or BLU-117 bomb body to make the GBU-31v1, and the KMU-557 is assembled with BLU-109 bomb body to make the GBU-31v3.

7. The GBU-38 Joint Direct Attack Munition (JDAM) is a 500 pound INS/GPS guided precision air to ground munition. The GBU-38 consists of a KMU-572 bomb body specific tail kit, and MK-82 or BLU-111 bomb body.

8. The GBU-54 Laser Joint Direct Attack Munition (LJDAM) is a 500 pound JDAM which incorporates all the capabilities of the JDAM guidance tail kit and adds a precision laser guidance set. The LJDAM gives the weapon system an optional semi-active laser guidance in addition to INS/GPS guidance. This provides the optional capability to strike moving targets. The GBU-54 consists of a DSU-38 laser guidance set, and a KMU-572 bomb body specific tail kit, and MK-82 or BLU-111 bomb body.

9. The GBU-53/B Small Diameter Bomb Increment II (SDB II) is a 250-lb class precision-guided, semi-autonomous, conventional, air-to-ground munition used to defeat moving targets through adverse weather from standoff range. The SDB II has deployable wings and fins and uses GPS/INS guidance, network-enabled datalink (Link-16 and UHF), and a multi-mode seeker (millimeter wave radar, imaging infrared, semi-active laser) to autonomously search, acquire, track, and defeat targets from a standoff range. The SDB II employs a multi-effects warhead (Blast, Fragmentation, and Shaped-Charge) for maximum lethality against armored and soft targets. The SDB II weapon system consists of the tactical all-up round (AUR) weapon, a 4-place common carriage system, and mission planning system munitions application program (MAP). The carriage system is the BRU-61B/A. Two other operable configurations and two maintenance training configurations are described as follows:

a. SDB II Guided Test Vehicle (GTV) is an SDB II configuration used for land or sea range-based testing of the SDB II weapon system. The GTV has common flight characteristics of an SDB II AUR, but in place of the multi-effects warhead is a Flight Termination, Tracking, and Telemetry (FTTT) subassembly that mirrors the AUR multi-effects warhead's size and mass properties, but provides safe flight termination, free flight tracking and telemetry of encrypted data from the GTV to the data receivers. The SDB II GTV can have either inert or live fuses. All other flight control, guidance, data-link, and seeker functions are representative of the SDB II AUR.

b. SDB II Captive Carry Vehicles (CCV), formerly known as Captive Carry Reliability Test (CCRT) vehicles, are an SDB II configuration primarily used for reliability data collection during carriage. The CCV has common characteristics of an SDB II AUR but with an inert warhead and fuze. The CCV has an inert mass in place of the warhead that mimics the warhead's mass properties.

c. The SDB II Weapon Load Crew Trainer (WLCT) is a mass mockup of the tactical AUR used for load crew and maintenance training. It does not contain energetics, a live fuze, any sensitive components, or hazardous material. It is not flight certified.

d. The SDB II Practical Explosive Ordnance Disposal Trainer (PEST) is an EOD training unit with sections and internal subassemblies which are identical to, or correlate to, the external hardware, sections and internal subassemblies of the tactical AUR. The PEST does not contain energetics, a live fuze, any sensitive components, or hazardous material. It is not flight certified.

10. The highest level of classification of information included in this potential sale is SECRET.

11. If a technologically advanced adversary were to obtain knowledge of the specific hardware and software elements, the information could be used to develop countermeasures that might reduce weapon system effectiveness or be used in the development of a system with similar or advanced capabilities.

12. A determination has been made that Finland can provide substantially the same degree of protection for the sensitive technology being released as the U.S. Government. This sale is necessary in furthering U.S. foreign policy and national security objectives outlined in the Policy Justification.

13. All defense articles and services listed in this transmittal have been authorized for release and export to Finland.

The Honorable Nancy Pelosi
Speaker of the House
U.S. House of Representatives
H-209, The Capitol
Washington, DC 20515

Dear Madam Speaker:

Pursuant to the reporting requirements of Section 36(b)(1) of the Arms Export Control Act, as amended, we are forwarding herewith Transmittal No. 20-69 concerning the Navy's proposed Letter(s) of Offer and Acceptance to the Taipei Economic and Cultural Representative Office in the United States (TECRO) for defense articles and services estimated to cost $1.008 billion. After this letter is delivered to your office, we plan to issue a news release to notify the public of this proposed sale.

Sincerely,

Heidi H. Grant
Director

BILLING CODE 5001–06–C

Transmittal No. 20–69

Notice of Proposed Issuance of Letter of Offer Pursuant to Section 36(b)(1) of the Arms Export Control Act, as amended

(i) *Prospective Purchaser:* Taipei Economic and Cultural Representative Office in the United States (TECRO)

(ii) *Total Estimated Value:*

Major Defense Equipment *	$ .608 billion
Other	$ .400 billion
Total	$1.008 billion

(iii) *Description and Quantity or Quantities of Articles or Services under Consideration for Purchase:*

Major Defense Equipment (MDE):

One hundred thirty-five (135) AGM–84H Standoff Land Attack Missile Expanded Response (SLAM–ER) Missiles

Four (4) ATM–84H SLAM–ER Telemetry Missiles

Twelve (12) CATM–84H Captive Air Training Missiles (CATM)

Non-MDE:

Also included are one hundred fifty-one (151) containers, spare and repair parts, support and test equipment, publications and technical documentation, personnel training and training equipment, U.S. Government and contractor representatives' technical

assistance, engineering and logistics support services, and other related elements of logistics support.

(vi) *Military Department:* Navy (TW–P–LIB)

(v) *Prior Related Cases, if any:* None

(vi) Sales Commission, Fee, etc., Paid, Offered, or Agreed to be Paid: None

(vii) *Sensitivity of Technology Contained in the Defense Article or Defense Services Proposed to be Sold:* See Attached Annex

(viii) *Date Report Delivered to Congress:* October 21, 2020

*As defined in Section 47(6) of the Arms Export Control Act.

POLICY JUSTIFICATION

Taipei Economic and Cultural Representative Office in the United States (TECRO)—AGM–84H Standoff Land Attack Missile-Expanded Response (SLAM–ER) Missiles

TECRO has requested to buy one hundred thirty-five (135) AGM–84H Standoff Land Attack Missile Expanded Response (SLAM–ER) Missiles; four (4) ATM–84H SLAM–ER Telemetry Missiles; and twelve (12) CATM–84H Captive Air Training Missiles (CATM). Also included are one hundred fifty-one (151) containers, spare and repair parts, support and test equipment, publications and technical documentation, personnel training and training equipment, U.S. Government and contractor representatives' technical assistance, engineering and logistics support services, and other related elements of logistics support. The total estimated program cost is $1.008 billion.

This proposed sale is consistent with U.S. law and policy as expressed in Public Law 96–8.

This proposed sale serves U.S. national, economic, and security interests by supporting the recipient's continuing efforts to modernize its armed forces and to maintain a credible defensive capability. The proposed sale will help improve the security of the recipient and assist in maintaining political stability, military balance, economic and progress in the region.

This proposed sale will improve the recipient's capability to meet current and future threats as it provides all-weather, day and night, precision attack capabilities against both moving and stationary targets. The recipient will be able to employ a highly reliable and effective system to increase their warfighting effectiveness as needed, which can counter or deter aggressions by demonstrated precision against surface targets. This capability will easily integrate into existing force infrastructure as it will only improve defense against opposing threats. The recipient will have no difficulty absorbing these systems into its armed forces.

The proposed sale of this equipment and support will not alter the basic military balance in the region.

The principal contractor will be the Boeing Company, St. Louis, MO. There are no known offset agreements proposed in connection with this potential sale.

Implementation of this proposed sale will require the assignment of two (2) U.S. contractor representatives to the recipient for a duration of 8 years to support technical reviews, support, and oversight.

There will be no adverse impact on U.S. defense readiness as a result of this proposed sale.

Transmittal No. 20–69

Notice of Proposed Issuance of Letter of Offer Pursuant to Section 36(b)(1) of the Arms Export Control Act

Annex

Item No. vii

(vii) *Sensitivity of Technology:*

1. The AGM–84H Standoff Land Attack Missile-Expanded Response (SLAM–ER) is a non-nuclear tactical weapon system currently in service in the U.S. Navy and three other foreign nations. SLAM–ER is a follow on to the SLAM missile that is no longer in production. It is a variant of the Harpoon missile that uses an Imaging Infrared (IIR) seeker, planar wings, and a penetrating warhead. SLAM–ER is effective against a wide range of land-based targets and has a secondary anti-ship mission capability. The following components are being conveyed by the proposed sale and are essential to the ability of the SLAM–ER missile to selectively engage hostile targets under a wide range of operations, tactical and environmental conditions.

- The Imaging Infrared Seeker,
- The GPS/INS System,
- Operational Flight Program Software, and
- Missile operational characteristics and performance data.

2. The highest level of classification of defense articles, components, and services included in this potential sale is CONFIDENTIAL.

3. If a technologically advanced adversary were to obtain knowledge of the hardware and software elements, the information could be used to develop countermeasures or equivalent systems, which might reduce system effectiveness or be used in the development of a system with similar or advanced capabilities.

4. A determination has been made that the recipient can provide substantially the same degree of protection for the sensitive technology being released as the U.S. Government. This sale is necessary in furtherance of the U.S. foreign policy and national security objectives outlined in the Policy Justification.

5. All defense articles and services listed in this transmittal have been authorized for release and export to the recipient.

Notice of Proposed Issuance of Letter of Offer Pursuant to Section 36(b)(1) of the Arms Export Control Act, as amended

(i) *Prospective Purchaser:* Government of Finland

(ii) *Total Estimated Value:*

Major Defense Equipment *	$ 9.2 billion
Other	$ 5.5 billion
Total	$14.7 billion

(iii) *Description and Quantity or Quantities of Articles or Services under Consideration for Purchase:*

Major Defense Equipment (MDE):
- Fifty (50) F/A-18E Super Hornet Aircraft
- Eight (8) F/A-18F Super Hornet Aircraft
- Fourteen (14) EA-18G Growler Aircraft
- One hundred sixty-six (166) F414-GE-400 Engines (144 installed and 22 spares)
- Five hundred (500) GBU-53/B Small Diameter Bomb II (SDB II) All-Up Round (AUR)
- Twelve (12) GBU-53/B SDB II Guided Test Vehicles (GTV)
- Twelve (12) GBU-53/B SDB II Captive Carry Reliability Trainers
- One hundred fifty (150) AIM-9X Block II Sidewinder Tactical Missiles
- Thirty-two (32) AIM-9X Block II Sidewinder Captive Air Training Missiles (CATMs)

Thirty (30) AIM-9X Block II Sidewinder Tactical Guidance Units
Eight (8) AIM-9X Block II Sidewinder CATM Guidance Units
One hundred sixty (160) AGM-154C-1 Joint Stand Off Weapons (JSOW)
Two Hundred (200) AGM-158B-2B Joint Air-to-Surface Standoff Missile Extended Range All Up Rounds (JASSM ER AUR)
Two (2) AGM-158B-2 JASSM Separation Test Vehicles (STV)
Two (2) AGM-158B-2 JASSM Instrumented Test Vehicles (ITV)
Two (2) AGM-158B-2 JASSM Jettison Test Vehicles (JTV)
Two (2) AGM-158B-2 Inert Joint Air-to-Surface Standoff Missile (JASSM) with Telemetry Instrumental Kits
Two (2) AGM-158B-2 JASSM Maintenance Training Missiles (DATM)
One hundred twenty (120) BLU-117B/B 2000LB GP Bombs
One hundred twenty (120) KMU-556F/B Bomb Tail Kits (JDAM)
Three hundred (300) FMU-139D/B Fuzes
Two (2) KMU-556(D-2)/B Trainers (JDAM)
Thirty (30) BLU-109C/B 2000LB Bombs
Thirty (30) KMU-557F/B Bomb Tail Kits (JDAM)
Two (2) BLU-109(D-1)/B 2000LB Bombs
One hundred two (102) BLU-111B/B 500LB General Purpose Bombs
One hundred two (102) KMU-572F/B JDAM Bomb Tail Kits
Six (6) MK-82-0,1 500LB, General Purpose Bombs, Inert
Fifty-one (51) BLU-110B/B 1000LB General Purpose Bombs
Fifty (50) KMU-559F/B Bomb Tail Kits
Fifty-eight (58) M61A2 20MM Gun Systems
Thirty-two (32) Advanced Targeting Forward-Looking Infrared (ATFLIR)
Thirty-two (32) Sniper Targeting Pods
Fourteen (14) Advanced Electronic Attack Kit for EA-18G
Sixty-five (65) AN/ALR-67(V)3 Electric Warfare Countermeasures Receiving Sets
Sixty-five (65) AN/ALQ-214 Integrated Countermeasures Systems
Seventy-four (74) Multifunctional Information Distribution Systems – Joint Tactical Radio Systems (MIDS JTRS)
Eighty-nine (89) Joint Helmet Mounted Cueing Systems (JHMCS)
Three hundred seventy-seven (377) LAU-127E/A Guided Missile Launchers
Seventy-four (74) AN/AYK-29 Distributed Targeting Processor – Networked (DTP-N)
Twenty-five (25) Infrared Search and Track (IRST) Systems
Eight (8) Next Generation Jammer Mid-Band (NGJ-MB) Sets

Non-MDE:

Also included are AN/APG-79 Active Electronically Scanned Array (AESA) radars; High Speed Video Network (HSVN) Digital Video Recorder (HDVR); AN/AVS-9 Night Vision Goggles (NVG); AN/AVS-11 Night Vision Cueing Devices (NVCD); AN/ALE-47 Electronic Warfare Countermeasures Systems; AN/ARC-210 Communication System; AN/APX-111 Combined Interrogator Transponder; AN/ALE-55 Towed Decoys; Launchers (LAU-115D/A, LAU-116B/A, LAU118A); AN/AAQ-28(V) Litening Targeting Pod; Joint Mission Planning System (JMPS); Accurate Navigation (ANAV) Global Positioning System (GPS) Navigation; Aircraft Armament Equipment (AAE); Aircraft Ferry transportation; Foreign Liaison Officer (FLO) Support; Auxiliary Fuel Tanks, FMU-139D(D-2)/B fuzes; MK84–4 2000LB General Purpose Inert Bombs, MK83 Bomb General Purpose Inert Bombs; KMU-557C(D-2)/B tail kits; KMU-572C(D-2)/B tail kits; Detector Laser DSU-38A/B, Detector Laser DSU-38A(D-2)/B, KMU-559C(D-2)/B load trainer; Wing Release Lanyard Assemblies; AGM-154C-1 JSOW Captive Flight Vehicles, Dummy Air Training Missiles, AGM-154C-1 JSOW mission planning, integration support and testing, munitions storage security and training, weapon operational flight program software development; weapons containers; aircraft and munitions support and test equipment; communications equipment; provisioning, spares and repair parts; weapons repair and return support; personnel training and training equipment; weapon systems software, publications and technical documents; U.S. Government and contractor engineering, technical, and logistics support services; and other related elements of logistical and program support.

(iv) *Military Department*: Navy (FI-P-SAC; FI-P-AAN; FI-P-AAO); Air Force (FI-D-YAB; FI-D-YAE; FI-D-YAJ)

(v) *Prior Related Cases, if any*: None

(vi) *Sales Commission, Fee, etc., Paid, Offered, or Agreed to be Paid*: None

(vii) *Sensitivity of Technology Contained in the Defense Article or Defense Services Proposed to be Sold*: See Attached Annex

(viii) *Date Report Delivered to Congress*: October 9, 2020

* As defined in Section 47(6) of the Arms Export Control Act.

POLICY JUSTIFICATION

Finland — F/A-18E/F Super Hornet Aircraft and Weapons

The Government of Finland has requested to buy fifty (50) F/A-18E Super Hornet aircraft; eight (8) F/A-18F Super Hornet aircraft; fourteen (14) EA-18G Growler aircraft; one hundred sixty-six (166) F414-GE-400 engines (144 installed and 22 spares); five hundred (500) GBU-53/B Small Diameter Bomb II (SDB II) All-Up Round (AUR); twelve (12) GBU-53/B SDB II Guided Test Vehicles (GTV); twelve (12) GBU-53/B SDB II Captive Carry Reliability Trainers; one hundred fifty (150) AIM-9X Block II Sidewinder Tactical Missiles; thirty-two (32) AIM-9X Block II Sidewinder Captive Air Training Missiles (CATMs); thirty (30) AIM-9X Block II Sidewinder Tactical Guidance Units; eight (8) AIM-9X Block II Sidewinder CATM Guidance Units; one hundred sixty (160) AGM-154C-1 Joint Stand Off Weapons (JSOW); two hundred (200) AGM-158B-2B Joint Air-to-Surface Standoff Missile Extended Range All Up Rounds (JASSM ER AUR); two (2) AGM-158B-2 JASSM Separation Test Vehicles (STV); two (2) AGM-158B-2 JASSM Instrumented Test Vehicles (ITV); two (2) AGM-158B-2 JASSM Jettison Test Vehicles (JTV); two (2) AGM-158B-2 Inert Joint Air-to-Surface Standoff Missile (JASSM) with Telemetry Instrumental Kits; two (2) AGM-158B-2 JASSM Maintenance Training Missiles (DATM); one hundred twenty (120) BLU-117B/B 2000LB GP Bombs; one hundred twenty (120) KMU-556F/B Bomb Tail Kits (JDAM); three hundred (300) FMU-139D/B Fuzes; two (2) KMU-556(D-2)/B Trainers (JDAM); thirty (30) BLU-109C/B 2000LB Bombs; thirty (30) KMU-557F/B Bomb Tail Kits (JDAM); two (2) BLU-109(D-1)/B 2000LB Bombs; one hundred two (102) BLU-111B/B 500LB General Purpose Bombs; one hundred two (102) KMU-572F/B JDAM Bomb Tail Kits; six (6) MK-82–0,1 500LB, General Purpose Bombs, Inert; fifty-one (51) BLU-110B/B 1000LB General Purpose Bombs; fifty (50) KMU-559F/B Bomb Tail Kits; fifty-eight (58) M61A2 20MM Gun Systems; thirty-two (32) Advanced Targeting Forward-Looking Infrared (ATFLIR); thirty-two (32) Sniper Targeting Pods; fourteen (14) Advanced Electronic Attack Kit for EA-

18G; sixty-five (65) AN/ALR-67(V)3 Electric Warfare Countermeasures Receiving Sets; sixty-five (65) AN/ALQ-214 Integrated Countermeasures Systems; seventy-four (74) Multifunctional Information Distribution Systems – Joint Tactical Radio Systems (MIDS JTRS); eighty-nine (89) Joint Helmet Mounted Cueing Systems (JHMCS); three hundred seventy-seven (377) LAU-127E/A Guided Missile Launchers; seventy-four (74) AN/AYK-29 Distributed Targeting Processor – Networked (DTP-N); twenty-five (25) Infrared Search and Track (IRST) Systems; and eight (8) Next Generation Jammer Mid-Band (NGJ-MB) sets. Also included are AN/APG-79 Active Electronically Scanned Array (AESA) radars; High Speed Video Network (HSVN) Digital Video Recorder (HDVR); AN/AVS-9 Night Vision Goggles (NVG); AN/AVS-11 Night Vision Cueing Devices (NVCD); AN/ALE-47 Electronic Warfare Countermeasures Systems; AN/ARC-210 Communication System; AN/APX-111 Combined Interrogator Transponder; AN/ALE-55 Towed Decoys; Launchers (LAU-115D/A, LAU-116B/A, LAU118A); AN/AAQ-28(V) Litening Targeting Pod; Joint Mission Planning System (JMPS); Accurate Navigation (ANAV) Global Positioning System (GPS) Navigation; Aircraft Armament Equipment (AAE); Aircraft Ferry transportation; Foreign Liaison Officer (FLO) Support; Auxiliary Fuel Tanks, FMU-139D(D-2)/B fuzes; MK84–4 2000LB General Purpose Inert Bombs, MK83 Bomb General Purpose Inert Bombs; KMU-557C(D-2)/B tail kits; KMU-572C(D-2)/B tail kits; Detector Laser DSU-38A/B, Detector Laser DSU-38A(D-2)/B, KMU-559C(D-2)/B load trainer; Wing Release Lanyard Assemblies; AGM-154C-1 JSOW Captive Flight Vehicles, Dummy Air Training Missiles, AGM-154C-1 JSOW mission planning, integration support and testing, munitions storage security and training, weapon operational flight program software development; weapons containers; aircraft and munitions support and test equipment; communications equipment; provisioning, spares and repair parts; weapons repair and return support; personnel training and training equipment; weapon systems software, publications and technical documents; U.S. Government and contractor engineering, technical, and logistics support services; and other related elements of logistical and program support. The total estimated cost is $14.7 billion.

This proposed sale will support the foreign policy and national security of the United States by improving the security of a trusted partner which is an important force for political stability and economic progress in Europe. It is vital to the U.S. national interest to assist Finland in developing and maintaining a strong and ready self-defense capability.

The proposed sale of F/A-18E/Fs and EA-18Gs and associated weapons will provide Finland with a credible defense capability to deter aggression in the region and ensure interoperability with U.S. Forces. The proposed sale will replace Finland's retiring F/A-18C/Ds and enhance its air-to-air and air-to-ground self-defense capability. Finland will have no difficulty absorbing these aircraft into its armed forces.

The proposed sale of this equipment and support will not alter the basic military balance in the region.

The principal contractors will be The Boeing Company, St. Louis, MO; Northrop Grumman, Los Angeles, CA; Raytheon Company, El Segundo, CA; Raytheon Missile Systems Company, Tucson, AZ; General Electric, Lynn, MA; and Lockheed Martin, Troy, AL. This proposal is being offered in the context of a competition. If the proposal is accepted, it is expected that offset agreements will be required. Any offset agreement will be defined in negotiations between the purchaser and the contractor(s).

Implementation of this proposed sale will require the assignment of six (6) additional U.S. contractor representatives to Finland on an intermittent basis for a duration of the life of the case to support delivery of the F/A-18E/F Super Hornet and EA-18G Growler aircraft and provide supply support management, inventory control, and equipment familiarization.

There will be no adverse impact on U.S. defense readiness as a result of this proposed sale.

Transmittal No. 20–67

Notice of Proposed Issuance of Letter of Offer Pursuant to Section 36(b)(1) of the Arms Export Control Act

Annex

Item No. vii

(vii) *Sensitivity of Technology:*

1. The F/A-18E Super Hornet (single seat) and F/A-18F Super Hornet and EA-18G Growler (dual seat), twin engine, multi-mission fighter/attack aircraft that can operate from either aircraft carriers or land bases. The F/A-18E/F Super Hornet and EA-18G Growler fills a variety of roles and provides air superiority, fighter escort, suppression of enemy air defenses, reconnaissance, forward air control, close and deep air support, and day and night strike missions.

a. The AN/APG-79 Active Electronically Scanned Array (AESA) Radar System provides the F/A-18E/F Super Hornet and EA-18G Growler aircraft with all-weather, multi-mission capability for performing Air-to-Air and Air-to-Ground targeting and attack. Air-to-Air modes provide the capability for all-aspect target detection, long-range search and track, automatic target acquisition, and tracking of multiple targets. Air-to-Surface attack modes provide high-resolution ground mapping navigation, weapon delivery, and sensor cueing.

b. The AN/ALR-67(V)3 Electric Warfare Countermeasures Receiving Set provides the F/A-18E/F aircrew with radar threat warnings by detecting and evaluating friendly and hostile radar frequency threat emitters and providing identification and status information about the emitters to on-board Electronic Warfare (EW) equipment and the aircrew. The Operational Flight Program (OFP) and User Data Files (UDF) used in the AN/ALR-67(V)3 contain threat parametric data used to identify and establish priority of detected radar emitters.

c. The AN/ALE-47 Countermeasures Dispensing System is a threat-adaptive dispensing system that dispenses chaff, flares, and expendable jammers for self-protection against airborne and ground-based Radio Frequency (RF) and Infrared threats. The Operational Flight Program (OFP) and Mission Data Files (MDF) used in the AN/ALE-47 contain algorithms used to calculate the best defense against specific threats.

d. The AN/ALQ-214 is an advanced airborne Integrated Defensive Electronic Countermeasures (IDECM) programmable modular automated system capable of intercepting, identifying, processing received radar signals (pulsed and continuous) and applying an optimum countermeasures technique in the direction of the radar signal, thereby improving individual aircraft probability of survival from a variety of Surface-to-Air and Air-to-Air Radio Frequency (RF) threats. The system operates in a standalone or Electronic Warfare (EW) suite mode. In the EW suite mode, the AN/ALQ-214 operates in a fully coordinated mode with the towed dispensable decoy, Radar Warning Receiver (RWR), and the onboard radar in the F/A-18E/F Super Hornet in a coordinated, non-interference manner sharing information for enhanced information. The AN/ALQ-214 was designed to operate in a

high-density Electromagnetic Hostile Environment with the ability to identify and counter a wide variety of multiple threats, including those with Doppler characteristics.

e. The AN/APX-111 Combined Interrogator/Transponder (CIT) with the Conformal Antenna System (CAS) is a complete MARK-XII identification system compatible with Identification Friend or Foe (IFF) Modes 1, 2, 3/A, C and 4 (secure). A single slide-in module that can be customized to the unique cryptographic functions for a specific country provides the systems secure mode capabilities. As a transponder, the CIT is capable or replying to interrogation modes 1, 2, 3/A C (altitude) and secure mode 4. The requirement is to upgrade Finland's Combined Interrogator Transponder (CIT) AN/APX-111 (V) IFF system software to implement Mode Select (Mode S) capabilities. Beginning in early 2005 EUROCONTROL mandated the civil community in Europe to transition to a Mode S only system and for all aircraft to be compliant by 2009. The Mode S Beacon System is a combined data link and Secondary Surveillance Radar (SSR) system that was standardized in 1985 by the International Civil Aviation Organization (ICAO). Mode S provides air surveillance using a data link with a permanent unique aircraft address. Selective Interrogation provides higher data integrity, reduced Radio Frequency (RF) interference levels, increased air traffic capacity, and adds air-to-ground data link.

f. The Joint Helmet Mounted Cueing System (JHMCS) is a modified HGU-55/P helmet that incorporates a visor-projected Heads-Up Display (HUD) to cue weapons and aircraft sensors to air and ground targets. In close combat, a pilot must currently align the aircraft to shoot at a target. JHMCS allows the pilot to simply look at a target to shoot. This system projects visual targeting and aircraft performance information on the back of the helmet's visor, enabling the pilot to monitor this information without interrupting his field of view through the cockpit canopy, the system uses a magnetic transmitter unit fixed to the pilot's seat and a magnetic field probe mounted on the helmet to define helmet pointing positioning. A Helmet Vehicle Interface (HVI) interacts with the aircraft system bus to provide signal generation for the helmet display. This provides significant improvement for close combat targeting and engagement.

g. The Joint Mission Planning System (JMPS) will provide mission planning capability for support of military aviation operations. It will also provide support for unit-level mission planning for all phases of military flight operations and have the capability to provide necessary mission data for the aircrew. JMPS will support the downloading of data to electronics data transfer devices for transfer to aircraft and weapon systems. A JMPS for a specific aircraft type will consist of basic planning tools called the Joint Mission Planning Environment (JMPE) mated with a Unique Planning Component (UPC) provided by the aircraft program. In addition, UPCs will be required for specific weapons, communication devices, and moving map displays. The JMPS will be tailored to the specific releasable configuration for the F/A-18E/F Super Hornet and EA-18G Growler.

h. The AN/AVS-9 Night Vision Goggles (NVG) provide imagery sufficient for an aviator to complete night time missions down to starlight and extreme low light conditions. The AN/AVS-9 is designed to satisfy the F/A-18E/F mission requirements for covert night combat, engagement, and support. The third generation light amplification tubes provide a high-performance, image-intensification system for optimized F/A-18E/F and EA-18G night flying at terrain-masking altitudes.

i. The AN/AVS-11 Night Vision Goggles (NVG) is capable of high resolution imaging. This capability allows reduced visibility weapon delivery. While the NVCD hardware is UNCLASSIFIED, this item requires Enhanced End Use Monitoring (EEUM).

j. The AN/ALE-55 Towed Decoy improves aircraft survivability by providing an enhanced, coordinated onboard/off-board countermeasure response to enemy threats.

k. The Multifunctional Informational Distribution System (MIDS) Joint Tactical Radio System (JTRS) a secure data and voice communication network using Link-16 architecture. The system provides enhanced situational awareness, positive identification of participants within the network, secure fighter-to-fighter connectivity, secure voice capability, and ARN-118 TACAN functionality. It provides three major functions: Air Control, Wide Area Surveillance, and Fighter-to-Fighter. The MIDS JTRS can be used to transfer data in Air-to-Air, Air-to-Surface, and Air-to-Ground scenarios. The MIDS Enhanced Interference Blanking Unit (EIBU) provides validation and verification of equipment and concept. EIBU enhances input/output signal capacity of the MIDS JTRS and addresses parts obsolescence.

l. LAU-127E/A Guided Missile Launchers designed to enable F/A-18E/F Super Hornet aircraft to carry and launch missiles. It provides the electrical and mechanical interface between the missile and launch aircraft as well as the two-way data transfer between missile and cockpit controls and displays to support preflight orientation and control circuits to prepare and launch the missile.

m. Accurate Navigation (ANAV) Global Positioning System (GPS) also includes Key Loading Installation and Facility Charges. The ANAV is a 24-channel SAASM based pulse-per-second GPS receiver built for next generation GPS technology.

n. The AN/ARC-210 Radio's Line-of-sight data transfer rates up to 80 kb/s in a 25 kHz channel creating high-speed communication of critical situational awareness information for increased mission effectiveness. Software that is reprogrammable in the field via Memory Loader/Verifier Software making flexible use for multiple missions. The AN/ARC-210 has embedded software with programmable cryptography for secure communications.

o. AN/PYQ-10(C) is the next generation of the currently fielded AN/CYZ-10 Data Transfer Device (DTD). The AN/PYQ-10(C) provides automated, secure and user-friendly methods for managing and distributing cryptographic key material, Signal Operating Instructions (SOI), and Electronic Protection data. This course introduces some of the basic components and activities associated with the AN/PYQ-10(C) in addition to hands-on training. Learners will become familiar with the security features of the SKL, practice the initial setup of the SKL, and will receive and distribute electronic keys using the SKL.

p. KIV-78 Dual Channel Encryptor Mode 4/Mode 5 Identify Friend or Foe (IFF) Crypto applique includes aircraft installs and initial spares, to ensure proper identification of aircraft during coalition efforts. The KIV-78 provides cryptographic and time-of-day services for a Mark XIIA (Mode 4 and Mode 5) IFF Combined Interrogator/Transponder (CIT), individual interrogator, and individual transponder.

q. Data Transfer Unit (DTU) with CRYPTO Type 1 and Ground Encryption Device (GED). The DTU (MU-1164(C)/A) has an embedded DAR-400EX and the GED (DI-12(C)/A) has an embedded DAR-400ES. Both versions of the DAR-400 are Type 1 devices.

r. High Speed Video Network (HSVN) Digital Video Recorder (HDVR) with CRYPTO Type 1 and Ground Encryption Device (GED). The HDVR

has an embedded DAR-400EX and the GED has an embedded DAR-400ES. Both versions of the DAR-400 are Type 1 devices.

s. The Advanced Targeting Forward Looking Infrared (ATFLIR) pod is a multi-sensor, electro-optical targeting pod incorporating infrared, low-light television camera, laser range finder/target designator, and laser spot tracker. It is used to provide navigation and targeting for military aircraft in adverse weather and using precision-guided weapons such as laser-guided bombs. It offers much greater target resolution and imagery accuracy than previous systems.

t. The Infrared Search and Track (IRST) is a long wave infrared targeting pod in an external fuel tank outer mold and carried on the centerline station. The IRST has an upgraded infrared receiver and processor to provide full system capability.

u. The Distributed Targeting Processor – Networked (DTP-N) will host the geo-location capability previously resident in the DTS, providing increased memory and speed, improving overall functionality. DTP-N enabled geo-registration and targeting enhancements, when used in conjunction with the advanced networking capabilities, will provide near real-time dissemination of actionable warfighting data thereby reducing kill chain times.

v. The M61A2 20MM Gun is a hydraulically, electrically or pneumatically driven, six-barrel, air-cooled, electrically fired Gatling-style rotary cannon which fires 20MM rounds at an extremely high rate. The M61 and its derivatives have been the principal cannon armament of United States military fixed-wing aircraft.

w. The F414-GE-400 Engines is a 22,000-pound class afterburning turbofan engine. The engine features an axial compressor with 3 fan stages and 7 high-pressure compressor stages, and 1 high-pressure and 1 low-pressure turbine stage. It incorporates advanced technology with the proven design base and features a Full Authority Digital Engine Control (FADEC) system - to provide the F/A-18E/F Super Hornet with a durable, reliable, and easy-to-maintain engine.

x. LAU-115D/A is a rail Launcher designed to enable F/A-18E/F Super Hornet aircraft to carry and launch missiles. The launcher is suspended from the bomb rack on wing stations. The LAU-127 launchers may be attached to the sides of the LAU-115 for carriage missiles.

y. LAU-116B/A Guided Missile Launchers designed to enable F/A-18E/F Super Hornet aircraft to carry and launch missiles. Two launchers, one left hand and one right hand, are installed in the underside of the aircraft fuselage at stations 4 and 6. The launchers are recessed in cavities within the aircraft fuselage, allowing the missiles to be semi recessed for aerodynamic purposes. Both versions of the LAU-116 are ejection launchers.

z. LAU-118A Guided Missile Launchers designed to enable F/A-18E/F Super Hornet aircraft to carry and launch missiles. It provides the electrical and mechanical interface between the missile and launch aircraft, as well as the two-way data transfer between missile and cockpit controls and displays to support preflight orientation and control circuits to prepare and launch the missile.

aa. The Advanced Electronic Attack Kit for the EA-18G Growler consists of the ALQ-218(V)2 Tactical Jamming Receiver, ALQ-227(V)1 Communication Countermeasure Set, CN-1717/A Interference Cancellation System, CP-2640/ALQ Electronic Attack Unit, R-2674(C)/A Joint Tactical Terminal Receiver (JTTR) and associated hardware required for installation.

bb. Next Generation Jammer Mid-Band (NGJ-MB) Sets provides a mid-band jamming capability for the EA-18G. On aircraft, two NGJ-MB pods, referred to as a shipset, work in conjunction with one another to provide full-uninterrupted azimuth coverage. NGJ-MB is designed to operate as a symmetric loadout, with one each on stations 3 and 9.

cc. The SNIPER Pod is a multi-sensor, electro-optical targeting pod incorporating infrared, low-light television camera, laser rangefinder/target designator, and laser spot tracker. It is used to provide navigation and targeting for military aircraft in adverse weather and using precision-guided weapons such as laser-guided bombs. It offers much greater target resolution and imagery accuracy than previous systems.

dd. AN/AAQ-28(V) Litening Targeting Pod is a multi-sensor, electro-optical targeting pod incorporating infrared, low-light television camera, laser rangefinder/target designator, and laser spot tracker. It significantly increases the combat effectiveness of the aircraft curing day night and other weather conditions in the attack of air and ground missions. The targeting pod contains high resolution forward looking infrared sensors that displays and infrared image of the target to the aircrew.

ee. Cartridge Actuated Devices (CADs) are designed for the F/A-18E/F Super Hornet as small explosive devices used to eject stores from launched devices, actuate other explosive systems, or provide initiation for aircrew escape devices. Propellant Actuated Devices (PADs) are a tool or specialized mechanized device or gas generator system that is activated by a propellant or releases or directs work through a propellant charge. Weapons release, aircraft ejection, life support, and fire-suppression systems are some facets that rely heavily on CADs and PADs.

ff. Books and Other Publications includes flight manuals, technical manuals and support of technical data and updates, release and distribution of classified publications for the operation and/or maintenance of the F/A-18E/F aircraft or systems.

gg. Software provides for initial design and development of the Electronic Warfare Software suite which encompasses AN/ALQ-214, AN/ALE-47, ALE-55, ALR-67, as part of the System Configuration Set (SCS) builds.

hh. Technical Data provides for the F/A-18E/F post-production of classified test reports and other related documentation.

ii. Training Aide and Devices provides for upgraded classified lessons, hardware and installation for the Tactical Operational Flight Trainers (TOFT), Low Cost Trainers (LCT), Aircrew courseware and spares for delivery and installation of Systems Configuration Sets (SCS).

2. The AIM-9X Block II Sidewinder Missile is a supersonic, short-range Air-to-Air (A/A) guided missile which employs a passive Infrared (IR) target acquisition system, proportional navigational guidance, and a closed-loop position servo Fin Actuator Unit (FAU). It represents a substantial increase in missile acquisition and kinematics performance over the AIM-9M and replaces the AIM-9X Block I Missile configuration. The missile includes a high off-boresight seeker, enhanced countermeasure rejection capability, low drag/high angle of attack airframe and the ability to integrate the Helmet Mounted Cueing System. The software algorithms are the most sensitive portion of the AIM-9X missile. The software continues to be modified via a pre-planned product improvement (P3I) program in order to improve its counter-countermeasure capabilities. No software source code or algorithms will be released.

a. AIM-9X BLK II Captive Air Training Missile (CATM) is a flight certified inert mass simulator with a functioning Guidance Unit (GU). The CATM is the primary aircrew training device providing all pre-launch functions as well as realistic

aerodynamic performance that equate to carrying a tactical missile. The CATM provides pilot training in aerial target acquisition and use of aircraft controls/displays.

b. AIM-9X BLK II Tactical GU, WGU-57/B, provides the missile tracking, guidance, and control signals. The GU provides counter-countermeasures, improved reliability and maintainability over earlier Sidewinder models. Improvements include: (1) upgrade/redesign to the Electronics Unit Circuit Card Assemblies, (2) a redesigned center section harnessing, and (3) a larger capacity missile battery.

c. AIM-9X BLK II CATM GU, WGU-57/B, is identical to the tactical GU except the GU and Control Actuation System (CAS) batteries are inert and the software Captive. The software switch tells the missile processor that it is attached to a CATM and to ignore missile launch commands. The switch also signals software to not enter abort mode because there is no FAU connected to the GU.

d. AIM-9X BLK II Multi-Purpose Training Missile (MPTM) is a ground training device used to train ground personnel in aircraft loading, sectionalization, maintenance, transportation, storage procedures, and techniques. The missile replicates external appearance and features of a tactical AIM-9X-2 missile. The MPTM will physically interface with loading equipment, maintenance equipment, launchers, and test equipment. The missile is explosively and electrically inert and is NOT flight certified.

e. AIM-9X BLK II Dummy Air Training Missile (DATM) is used to train ground personnel in missile maintenance, loading, transportation, and storage procedures. All components are completely inert. The missile contains no programmable electrical components and is not approved for flight.

f. AIM-9X BLK II Active Optical Target Detector (AOTD) is newly designed for Block II. The AOTD/Data Link (AOTD/DL) uses the latest laser technology allowing significant increases in sensitivity, aerosol performance, low altitude performance, and Pk (Probability of Kill). The AOTD/DL design includes a DL for 2-way platform communication. The AOTD/DL communicates with the GU over a serial interface which allows the GU to receive and transmit data so that a target position and status communication with a launching platform is possible during missile flight.

3. The GBU-53/B Small Diameter Bomb Increment II (SDB II) is a 250-lb class precision-guided, semi-autonomous, conventional, air-to-ground munition used to defeat moving targets through adverse weather from standoff range. The SDB II has deployable wings and fins and uses GPS/INS guidance, network-enabled datalink (Link-16 and UHF), and a multi-mode seeker (millimeter wave radar, imaging infrared, semi-active laser) to autonomously search, acquire, track, and defeat targets. The SDB II employs a multi-effects warhead (Blast, Fragmentation, and Shaped Charge) for maximum lethality against armored and soft targets. The SDB II weapon system consists of the tactical all-up round (AUR) weapon, a 4-place common carriage system, and mission planning system munitions application program (MAP). The carriage system is the BRU-61B/A. The BRU and the MAP are not further described here. Two other operable configurations, two maintenance training configurations, and two containers of the system are described as follows:

a. SDB II Guided Test Vehicle (GTV) is an SDB II configuration used for land or sea range-based testing of the SDB II weapon system. The GTV has common flight characteristics of an SDB II AUR, but in place of the multi-effects warhead is a Flight Termination, Tracking, and Telemetry (FTTT) subassembly that mirrors the AUR multi-effects warhead's size and mass properties, but provides safe flight termination, free flight tracking and telemetry of encrypted data from the GTV to the data receivers. The SDB II GTV can have either inert or live fuzes. All other flight control, guidance, data-link, and seeker functions are representative of the SDB II AUR.

b. SDB II Captive Carry Vehicles (CCVs), formerly known as Captive Carry Reliability Test (CCRT) vehicles are an SDB II configuration primarily used for reliability data collection during carriage. The CCV has common characteristics of an SDB II AUR but with an inert warhead and fuze. The CCV has an inert mass in place of the warhead that mimics the warhead's mass properties. The CCV is a flight capable representative of the SDB II AUR but has not yet been approved for release from any aircraft. Since all other flight control, guidance, data-link, and seeker functions are representative of the SDB II AUR, with flight release approval, this configuration could be used for any purpose where an inert round without telemetry or termination capability would be useful.

c. The SDB II Weapon Load Crew Trainer (WLCT) is a mass mockup of the tactical AUR used for load crew and maintenance training. It does not contain energetics, a live fuze, or any classified or hazardous material. It is not flight certified.

d. The SDB II Practical Explosive Ordinance Disposal Trainer (PEST) is an EOD training unit with sections and internal subassemblies which are identical to, or correlate to, the external hardware, sections and internal subassemblies of the tactical AUR. The PEST does not contain energetics, a live fuze, classified or hazardous material. It is not flight certified.

e. The SDB II single round container, nomenclature CNU-714/U, is airtight sealable and contains a BIT harness assembly that allows for BIT testing and software reprogramming without the need for removing the cover assembly. The base assembly contains a humidity indicator, a breather valve, and a desiccant port/BIT access cover on the aft side of the container. There are also two forklift pockets located on the base assembly. Internally, the CNU-714/U contains separate upper and lower cradle assemblies. The lower cradle assembly is attached to the base assembly on top of four wire rope shock insulators, which provide shock isolation during transport. The upper cradle assembly provides an interface with standard Air Force loading equipment. The CNU-714/U lower cradle assembly contains indexing blocks that allow multiple lower cradle assemblies to be placed on the ground, side-by-side, for quick loading of a BRU-61.

f. The SDB II dual round container, nomenclature CNU-715/U, is airtight sealable and contains two BIT harness assemblies that allow for BIT testing and software reprogramming without the need for removing the cover assembly. The base assembly contains a breather valve and a desiccant port/BIT access cover on the aft side of the container. The dual container has two separate lower cradle assemblies. Each lower cradle assembly is attached to the base assembly on top of four wire rope shock insulators, which provide shock isolation during transport. The lower cradles of the CNU-715/U are not detachable from the base assembly. The cover assembly contains a humidity indicator and four latch assemblies to aid in the stacking of CNU-715/U containers on top of each other. There are also two sets of forklift pockets, laterally and longitudinally, located on the base assembly.

4. The AGM-158B Joint Air-to-Surface Standoff Missile Extended Range (JASSM ER) is an extended range low-observable, highly survivable subsonic cruise missile designed to penetrate next generation air defense systems en-

route to target. It is designed to kill hard, medium-hardened, soft and area type targets. The extended range over the baseline was obtained by going from a turbo jet to a turbo-fan engine and by reconfiguring the fuel tanks for added capacity. Classification of the technical data and information on the AGM-158's performance, capabilities, systems, subsystems, operations, and maintenance will range from UNCLASSIFIED to SECRET.

a. The AGM-158B Joint Air-to-Surface Standoff Missile (JASSM) software-in-the-Loop (SIL) testing assets are required for software development, integration, and test in the lab environment as well as ground mount operations before STV or Live Fire assets can be loaded on the aircraft to execute Airworthiness, Flight Test, and Live Fire events. These assets are for testing in the contiguous United States and will not be exported. Software development will be to the extent necessary to produce Engineering Releases needed to conduct airworthiness, integration and live fire testing. Testing equipment is CLASSIFIED.

b. The AGM-158B-2 JASSM Separation Test Vehicle (STV) is equipped with Intelligent Test Instrumentation Kit (iTIK). These assets will be used as part of the airworthiness data collection process to ensure safe separation of the munition from the aircraft. These missiles will be handled and stored in custom individual containers. These two (2) missiles are for testing in the contiguous United States and will not be exported. Software development will be to the extent necessary to produce Engineering Releases needed to conduct airworthiness, integration and live fire testing.

c. The AGM-158B-2 (JASSM) Instrumented Test Vehicle (ITV) is equipped with iTIK. This asset will be utilized to capture flight data information in a ''Captive Carry'' configuration. The information collected will ensure the munition can be safely carried and is required as part of the airworthiness process prior to launch of the STV, JTV, and the Live Fire asset. These missiles will be handled and stored in custom individual containers. This missile is for testing in the contiguous United States and will not be exported. Software development will be to the extent necessary to produce Engineering Releases needed to conduct airworthiness, integration and live fire testing.

d. The AGM-158B-2 JASSM Jettison Test Vehicle (JTV) is not equipped with an iTIK. These assets will be used as part of the airworthiness data collection process to ensure safe jettison of the munition from the aircraft. These missiles will be handled and stored in custom individual containers. These two (2) missiles are for testing in the contiguous United States and will not be exported. Software development will be to the extent necessary to produce Engineering Releases needed to conduct airworthiness, integration and live fire testing.

e. The AGM-158B-2 JASSM Maintenance Training Missile (DATM) is a missile for maintenance (Weapon Load Crew) training with container.

5. The GBU-31 Joint Direct Attack Munition (JDAM) is a 2,000-lb Internal Navigation System/Global Positioning System (INS/GPS) guided precision air-to-ground munition. The GBU-31 consists of a KMU-556 warhead specific tail kit, and MK-84 bomb body.

6. The GBU-38 Joint Direct Attack Munition (JDAM) is a 500-lb Internal Navigation System/Global Positioning System (INS/GPS) guided precision air-to-ground munition. The GBU-38 consists of a KMU-572 warhead specific tail kit, and MK-82 bomb body.

7. The GBU-54 Laser Joint Direct Attack Munition (LJDAM) is a 500-lb JDAM which incorporates all the capabilities of the JDAM guidance tail it and adds a precision laser guidance set. The LJDAM gives the weapon system an optional semi-active laser guidance in addition to the Internal Navigation System/Global Positioning System (INS/GPS) guidance. This provides the optional capability to strike moving targets. The GBU-54 consists of a laser guidance set, KMU-572 warhead specific tail kit, and MK-82 bomb body.

8. The AGM-154 JSOW is used by Navy, Marine Corps, and Air Force, and allows aircraft to attack well-defended targets in day, night, and adverse weather conditions. The JSOW C and C-1 utilize GPS/INS guidance and an uncooled imaging infrared seeker for terminal guidance, Autonomous Acquisition, and provides a precision targeting, 500-lb-class tandem warhead that is the Navy's primary standoff weapon against hardened targets. The JSOW C-1 added the Link-16 datalink enabling a robust and flexible capability against high-value stationary land targets and moving maritime target capability. JSOW C-1 can fly via two dimensional and three dimensional waypoints to the target, offering the optimal path around Integrated Air Defense Systems (IADS).

The JSOW incorporates components, software, and technical design information that are considered sensitive. The following JSOW-C components being conveyed by the proposed sale include the GPS/INS, IIR seeker, INS OFP software and missile operational characteristics and performance data. These elements are essential to the ability of the JSOW-C missile to selectively engage hostile targets under a wide range of operational, tactical, and environmental conditions.

9. The highest level of classification of defense articles, components, and services included in this potential sale is SECRET.

10. If a technologically advanced adversary were to obtain knowledge of the specific hardware or software elements, the information could be used to develop countermeasures that might reduce weapon system effectiveness or be used in the development of a system with similar or advanced capabilities.

11. A determination has been made that Finland can provide substantially the same degree of protection for the sensitive technology being released as the U.S. Government. This sale is necessary in furtherance of the U.S. foreign policy and national security objectives outlined in the Policy Justification.

12. All defense articles and services listed in this transmittal have been authorized for release and export to Finland.

BILLING CODE 5001–06–P

DEPARTMENT OF DEFENSE

Department of the Navy

Notice of Virtual Public Meetings for the Draft Supplemental Environmental Impact Statement/Overseas Environmental Impact Statement for Gulf of Alaska Navy Training Activities

AGENCY: Department of the Navy, Department of Defense.

ACTION: Notice of availability; notice of public meeting.

SUMMARY: Pursuant of the National Environmental Policy Act (NEPA) of 1969, as implemented by the Council on Environmental Quality, and Presidential Executive Order 12114, the Department of the Navy (DON) has prepared and filed with the United States Environmental Protection Agency a draft supplement to the 2011 Gulf of Alaska (GOA) Navy Training Activities Final Environmental Impact Statement/Overseas Environmental Impact Statement (EIS/OEIS) (referred to as the 2011 GOA Final EIS/OEIS) and the 2016 GOA Navy Training Activities Final

Supplemental EIS/OEIS (referred to as the 2016 GOA Final Supplemental EIS/OEIS). In the 2020 Draft Supplemental EIS/OEIS, the DON assesses the potential environmental effects associated with continuing periodic military readiness activities in the GOA Temporary Maritime Activities Area (TMAA). This notice announces the public review and comment period and the dates of the virtual public meetings, includes information about how the public can review and comment on the document, and provides supplementary information about the environmental planning effort.

DATES: All comments must be postmarked or received online by 11:59 p.m. Pacific Standard Time on February 16, 2021, for consideration in the development of the Final Supplemental EIS/OEIS. Federal agencies and officials, Alaska Native Tribes, state and local agencies and officials, and interested organizations and individuals are encouraged to provide comments on the 2020 Draft Supplemental EIS/OEIS during the public review and comment period.

Due to COVID–19 travel and public event restrictions, the DON is holding virtual public meetings, consisting of a presentation and question and answer sessions, to discuss the Proposed Action and the draft environmental impact analysis. Visit *www.GOAEIS.com/VPM* to learn more about and attend a virtual public meeting. An audio-only option will also be available. Meetings will occur as follows:

1. Tuesday, January 19, 2021, from 3 to 4 p.m. Alaska Standard Time

2. Wednesday, February 3, 2021, from 5 to 6 p.m. Alaska Standard Time

Substantive questions for discussion with Navy representatives at the virtual public meetings can be submitted between January 11 and 18, 2021, for the January 19, 2021, meeting, and between January 26 and February 2, 2021, for the February 3, 2021, meeting. Email questions to *projectmanager@goaeis.com* or complete the form at *www.GOAEIS.com.*

ADDRESSES: Written comments may be mailed to Naval Facilities Engineering Command Northwest, Attention: GOA Supplemental EIS/OEIS Project Manager, 1101 Tautog Circle, Suite 203, Silverdale, WA 98315–1101, or submitted electronically via the project website at *www.GOAEIS.com.*

FOR FURTHER INFORMATION CONTACT: Naval Facilities Engineering Command Northwest, Attention: Ms. Kimberly Kler, GOA Supplemental EIS/OEIS Project Manager, 1101 Tautog Circle, Suite 203, Silverdale, WA 98315–1101, 360–315–5103, *projectmanager@goaeis.com.*

SUPPLEMENTARY INFORMATION: The DON's Proposed Action is to continue periodic military training activities within the GOA TMAA. Proposed training activities are similar to those that have occurred in the GOA TMAA for decades. The geographic extent of the GOA TMAA and Proposed Action, including the location, number, and frequency of major training exercises, remain unchanged from the 2016 Final Supplemental EIS/OEIS. Although the types of activities and number of events in the Proposed Action are the same as in previous documents (Alternative 1 in both the 2011 and 2016 impact analyses), there have been changes in the platforms and systems used in those activities. For example, the EA–6B aircraft and frigate, and their associated systems, have been replaced by the EA–18G aircraft, Littoral Combat Ship, and Destroyer. The 2020 Draft Supplemental EIS/OEIS includes the analysis of at-sea training activities projected to meet readiness requirements beyond 2022 and into the reasonably foreseeable future, and reflects the most up-to-date compilation of training activities deemed necessary to accomplish military readiness during that time period.

The 2020 Draft Supplemental EIS/OEIS also updates the 2011 and 2016 impact analyses with new information and analytical methods the DON developed and has used since 2016. New information includes an updated acoustic effects model, updated marine mammal density data and sea turtle hearing criteria, and other emergent best available science. The DON is preparing a Supplemental EIS/OEIS to renew required federal regulatory permits and authorizations under the Marine Mammal Protection Act and the Endangered Species Act. The DON will consult with the National Marine Fisheries Service (NMFS) and United States Fish and Wildlife Service to renew these permits and authorizations. Additionally, NMFS is a cooperating agency for this Supplemental EIS/OEIS.

The 2020 Draft Supplemental EIS/OEIS is available for electronic viewing or download at *www.GOAEIS.com.* The 2020 Draft Supplemental EIS/OEIS was distributed to federal agencies and federally recognized Alaska Native Tribes with which the DON is consulting.

All comments submitted during the public review and comment period from December 11, 2020, to February 16, 2021, will become part of the public record, and substantive comments will be addressed in the Final Supplemental EIS/OEIS.

The DON is committed to providing the public an accessible version of the 2020 Draft Supplemental EIS/OEIS during COVID–19 conditions. If you need assistance accessing the document or attending the virtual public meetings, please contact Ms. Julianne Stanford, Navy Region Northwest Public Affairs Office, at *julianne.stanford@navy.mil* or 360–867–8525. For all other queries or if you require additional information about the project, please contact Ms. Kimberly Kler, GOA Supplemental EIS/OEIS Project Manager, at *projectmanager@goaeis.com.*

Individuals interested in receiving electronic project updates can subscribe on the project website to receive notifications via email for key milestones throughout the environmental planning process.

Dated: December 3, 2020.

K. R. Callan,

Commander, Judge Advocate General's Corps, U.S. Navy, Federal Register Liaison Officer.

BILLING CODE 3810–FF–P

DEPARTMENT OF EDUCATION

Applications for New Awards; Personnel Development To Improve Services and Results for Children With Disabilities—Improving Retention of Special Education Teachers and Early Intervention Personnel

AGENCY: Office of Special Education and Rehabilitative Services, Department of Education.

ACTION: Notice.

SUMMARY: The Department of Education (Department) is issuing a notice inviting applications for new awards for fiscal year (FY) 2021 for Personnel Development to Improve Services and Results for Children with Disabilities—Improving Retention of Special Education Teachers and Early Intervention Personnel, Assistance Listing Number 84.325P. This notice relates to the approved information collection under OMB control number 1820–0028.

DATES:

Applications Available: December 11, 2020.

Deadline for Transmittal of Applications: February 9, 2021.

Deadline for Intergovernmental Review: April 12, 2021.

ADDRESSES: For the addresses for obtaining and submitting an application, please refer to our Common

Instructions for Applicants to Department of Education Discretionary Grant Programs, published in the **Federal Register** on February 13, 2019 (84 FR 3768), and available at *www.govinfo.gov/content/pkg/FR-2019-02-13/pdf/2019-02206.pdf.*

FOR FURTHER INFORMATION CONTACT: Sarah Allen, U.S. Department of Education, 400 Maryland Avenue SW, Room 5160, Potomac Center Plaza, Washington, DC 20202–5076. Telephone: (202) 245–7875. Email: *Sarah.Allen@ed.gov.*

If you use a telecommunications device for the deaf (TDD) or a text telephone (TTY), call the Federal Relay Service (FRS), toll free, at 1–800–877–8339.

SUPPLEMENTARY INFORMATION:

Full Text of Announcement

I. Funding Opportunity Description

Purpose of Program: The purposes of this program are to (1) help address State-identified needs for personnel preparation in special education, early intervention, related services, and regular education to work with children, including infants and toddlers, and youth with disabilities; and (2) ensure that those personnel have the necessary skills and knowledge, derived from practices that have been determined through scientifically based research, to be successful in serving those children.

Priorities: This competition includes one absolute priority and one competitive preference priority. In accordance with 34 CFR 75.105(b)(2)(v), the absolute priority and competitive preference priority are from allowable activities specified in the statute (see sections 662 and 681 of the Individuals with Disabilities Education Act (IDEA); 20 U.S.C. 1462 and 1481).

Absolute Priority: For FY 2021 and any subsequent year in which we make awards from the list of unfunded applications from this competition, this priority is an absolute priority. Under 34 CFR 75.105(c)(3), we consider only applications that meet this priority.

This priority is:

Improving Retention of Special Education Teachers and Early Intervention Personnel.

Background:

Many local educational agencies (LEAs) and early intervention service (EIS) providers face challenges with retention [1] of qualified personnel who serve and support children with disabilities in schools, classrooms, and natural environments under IDEA (Espinoza et al., 2018; IDEA Infant and Toddlers Coordinators Association, 2019). Across all subject areas, national estimates suggest that approximately 8 percent of teachers leave the profession each year, and two-thirds of them leave for reasons other than retirement. Within special education, teacher turnover is estimated to exceed 14 percent annually (Carver-Thomas & Darling-Hammond, 2017). These staffing shortages are costly for the systems faced with repeatedly replacing those who move out of the system or leave the profession. Moreover, low retention rates among special education teachers and early intervention personnel have negative implications for the development, learning, and academic success of infants, toddlers, children, and youth with disabilities (Council for Exceptional Children, 2019). Staff turnover is disruptive to instructional programming and practices, which in turn decreases student learning and achievement (Sutcher et al., 2016).

Efforts to improve retention of special education teachers and early intervention personnel require understanding factors associated with, or contributing to, their decisions to stay, move, or leave the profession. Factors impacting retention consistently include preparation and qualifications, support for new hires, compensation, school or program characteristics, working conditions, and demographic and nonwork influences (Billingsley & Bettini, 2019; Carver-Thomas & Darling-Hammond, 2017; Mason-Williams et al., 2020). Further, policies and practices that research has shown to improve personnel retention include offering service scholarships and loan forgiveness, creating career pathway programs that bring well-prepared candidates into teaching (*e.g.,* ''Grow Your Own'' and teacher cadet programs), establishing teacher residency models in hard-to-staff districts, mentoring and induction for new hires, strengthening school principals' and administrators' understanding of special education, and providing competitive compensation (Billingsley & Bettini, 2019; Carver-Thomas & Darling-Hammond, 2017; Espinoza et al., 2018; Mason-Williams et al., 2020).

Finally, comprehensive strategies to address retention of special education teachers and EIS providers benefit from effective organizational partnerships between relevant stakeholders (Espinoza et al., 2018), including personnel preparation faculty and researchers, parents and families, professional organizations, and practitioners and administrators at the State, regional, and local levels. With the goal of ensuring alignment between preparation programs and the needs of the local systems serving children with disabilities, stronger partnerships bring stakeholders together regularly to share knowledge, address common challenges, and develop enduring relationships around shared goals. By connecting these research findings with available resources from technical assistance centers funded by the Office of Special Education Programs (OSEP), such as *The Educator Shortages in Special Education Toolkit* (Great Teachers and Leaders Center, 2020) and *A System Framework for Building High-Quality Early Intervention and Preschool Special Education Programs* (Early Childhood Technical Assistance Center, 2015), States, regional, and local systems will be better able to develop, implement, evaluate, scale-up, and sustain comprehensive retention plans, resulting in meaningful improvement in retention of special education teachers and early intervention personnel.

Over the past year, OSEP has engaged the field in numerous activities related to attracting, preparing, and retaining effective personnel and received considerable feedback that State educational agencies (SEAs) and Part C lead agencies would benefit from investments that support their efforts to improve retention. The proposed investment under the absolute priority would fund efforts by SEAs or Part C lead agencies, in collaboration with LEAs or EIS providers, to plan, implement, evaluate, scale-up, and sustain a comprehensive retention plan that uses evidence-based policies and practices to address factors contributing to low retention in these systems. This priority is consistent with the Secretary's Supplemental Priority 5: Meeting the Unique Needs of Students and Children with Disabilities and/or Those with Unique Gifts and Talents; and Supplemental Priority 8: Promoting Effective Instruction in Classrooms and Schools.

Priority:

The purpose of this priority is to fund grants to achieve, at a minimum, the following expected outcomes:

(a) Increased capacity of State, regional, and local systems to develop, implement, evaluate, scale-up, and sustain comprehensive retention plans that use evidence-based policies and practices to address identified factors contributing to low retention of special education teachers and early intervention personnel. Such a plan might include mentorship or induction

[1] For the purposes of this competition, the term ''retention'' means that special education teachers and early intervention service providers stay in their current position or field serving children with disabilities.

programs, career pathways programs, recognition and incentive programs, competitive compensation, service scholarships, or student loan repayment for continued service.

(b) Increased capacity of State, regional, and local systems to evaluate their comprehensive retention plans and how the plans are implemented.

(c) Increased capacity of State, regional, and local systems to effectively partner with a broad range of stakeholder groups—including, but not limited to, the business community, personnel preparation programs at institutions of higher education (IHEs), parent training and information centers [2] (PTIs), and other community-based organizations—needed to develop, implement, evaluate, scale-up, and sustain comprehensive retention plans that improve retention of special education teachers and early intervention personnel.

(d) Improved retention of special education teachers and early intervention personnel.

To be considered for funding under this priority, all applicants must meet the application requirements contained in the priority. All projects funded under this absolute priority also must meet the programmatic and administrative requirements specified in the priority.

Note: OSEP intends to fund projects that address retention of special education teachers and early intervention personnel. OSEP may fund high-quality applications out of rank order to ensure that projects are funded across both SEAs and Part C lead agencies.

Note: An applicant may submit an application that addresses retention of special education teachers or an application that addresses retention of early intervention personnel. An applicant may submit one application that addresses retention of special education teachers and another that addresses early intervention personnel.

Note: To be reviewed and be considered eligible to receive an award, applicants must demonstrate matching support for the proposed project at 10 percent of the total amount of the grant as specified in paragraph (f)(1) of the application requirements of this priority.

To meet the requirements of this priority, an applicant must—

(a) Demonstrate, in the narrative section of the application under ''Significance,'' how the proposed project will—

(1) Address the State, regional, or local need to retain special education teachers or early intervention personnel across the career continuum and at every level of experience. To meet this requirement, the applicant must—

(i) Present applicable State, regional, or local data demonstrating the current and projected number and percentage of special education teachers or early intervention personnel leaving their current positions (disaggregated, to the extent possible, by those retiring and those leaving for other reasons, such as promotion, moving to general education, or leaving the field);

(ii) Present applicable State, regional, or local data demonstrating the impact of teachers or early intervention personnel leaving their systems such as impacts on fiscal or academic outcomes; and

(iii) Describe factors contributing to special education teachers or early intervention personnel leaving their systems; and

(2) Address the need for improved infrastructure and partnerships with a broad range of stakeholder groups to retain special education teachers or early intervention personnel. To meet this requirement, the applicant must—

(i) Describe current State, regional, and local strategies that have been used or are being used to improve retention of special education teachers or early intervention personnel;

(ii) Describe the impact of implementing the strategies identified in paragraph (a)(2)(i) of this section;

(iii) Describe the changes in State, regional, and local infrastructure (*e.g.,* governance, finance, personnel, coordination, data, and accountability and improvement) needed to improve retention of special education teachers or early intervention personnel;

(iv) Describe the collaborative relationships with a broad range of stakeholder groups that need to be strengthened or established to improve retention of special education teachers or early intervention personnel; and

(v) Describe the likely magnitude or importance of retaining more special education teachers or early intervention personnel at State, regional, and local levels.

(b) Demonstrate, in the narrative section of the application under ''Quality of project services,'' how the proposed project will—

(1) Ensure equal access and treatment for members of groups that have traditionally been underrepresented based on race, color, national origin, gender, age, or disability;

(2) Achieve its goals, objectives, and intended outcomes. To meet this requirement, the applicant must provide—

(i) Measurable intended project outcomes; and

(ii) In Appendix A, the logic model [3] by which the proposed project will achieve its intended outcomes that depicts, at a minimum, the goals, activities, outputs, and intended outcomes of the proposed project;

(3) Use a conceptual framework (and provide a copy in Appendix A) to develop project plans and activities, describing any underlying concepts, assumptions, expectations, beliefs, or theories, as well as the presumed relationships or linkages among these variables, and any empirical support for this framework;

Note: The following websites provide more information on logic models and conceptual frameworks: *www.osepideasthatwork.org/logicModel* and *www.osepideasthatwork.org/resources-grantees/program-areas/ta-ta/tad-project-logic-model-and-conceptual-framework.*

(4) Use up to the first 12 months of the project period to develop a comprehensive retention plan, or a plan to evaluate, scale-up, and sustain an existing comprehensive retention plan, that uses evidence-based policies and practices that address identified factors contributing to low retention to retain special education teachers or early intervention personnel. To meet this requirement, the applicant must include—

(i) Its proposed plan to collect and analyze additional data, as appropriate, to understand the factors, including policies and practices, contributing to low retention of special education teachers or early intervention personnel at the State, regional, and local levels;

(ii) The current and additional evidence-based policies and practices that will guide the development of the comprehensive retention plan or the plan to scale-up an already existing comprehensive retention plan, and the proposed process the applicant will use to address the identified factors contributing to low retention;

[2] For the purpose of this priority, the term ''parent training and information centers'' means OSEP-funded parent training and information centers that serve parents of children of all ages (birth to 26) and all types of disabilities. Discretionary grants are awarded only to parent organizations as defined by IDEA under Assistance Listing Number 84.328. For more information, including centers located in each State and territory, see *www.parentcenterhub.org/find-your-center/.*

[3] ''Logic model'' (34 CFR 77.1) (also referred to as a theory of action) means a framework that identifies key project components of the proposed project (*i.e.,* the active ''ingredients'' that are hypothesized to be critical to achieving the relevant outcomes) and describes the theoretical and operational relationships among the key project components and relevant outcomes.

(iii) Its proposed process for identifying LEAs or EIS providers that the State will partner with to develop comprehensive retention plans, or plan to scale-up already existing comprehensive retention plans, to improve the retention of special education or early intervention personnel. The applicant should indicate the extent to which the poverty level of youth served, geography (*e.g.,* rural, urban) or other demonstrated needs (*e.g.,* staff shortages, historic pattern of high turnover rates) will factor into its process for identifying LEAs or EIS providers to partner with; and

(iv) Its proposed plan for identifying and establishing meaningful partnerships, as appropriate, with a broad range of stakeholder groups, including but not limited to the business community, IHEs, PTIs, and other community-based organizations, necessary to successfully develop a comprehensive retention plan, or to evaluate, scale-up, and sustain existing comprehensive retention plans;

(5) Implement, scale-up, and sustain a comprehensive retention plan that uses evidence-based policies and practices to address identified factors contributing to low retention of special education teachers or early intervention personnel. To meet this requirement, the applicant must include its approach to—

(i) Ensure an infrastructure (*e.g.,* governance, finance, personnel, data, and accountability and improvement) is in place to implement the comprehensive retention plan at the State, regional, or local level;

(ii) Establish additional partnerships, as needed, including agreements that outline responsibilities, sharing of resources, and decision-making and communication processes among all partners;

(iii) Recruit LEAs or EIS providers to partner with to implement, evaluate, scale-up, and sustain the comprehensive recruitment plan. To meet this requirement, the applicant must include—

(A) The proposed process for identifying LEAs or EIS providers that the State will partner with to implement, evaluate, scale-up, and sustain the comprehensive retention plan, and expectations for participation, which must include the data that partners will need to be collected to demonstrate progress in implementing the comprehensive retention plan; and

(B) The proposed process the applicant will use to identify additional LEAs or EIS providers that it will partner with in years four and five if the project period is extended; and

(iv) The proposed process the applicant will use to sustain the comprehensive retention plan once Federal support ends; and

(6) Disseminate information on the effectiveness of evidence-based policies and practices used within the comprehensive retention plan and the impact of implementing the plan to other SEAs and LEAs or Part C lead agencies and local service providers to support other systems in increasing the retention of special education teachers or early intervention personnel.

(c) Demonstrate, in the narrative section of the application under ''Quality of the project evaluation,'' how—

(1) The applicant will use comprehensive and appropriate methodologies to evaluate how well the goals or objectives of the proposed project have been met, including project processes and intended outcomes. The applicant must describe performance measures for the project that include retention rates for special education teachers or early intervention personnel; and

(2) The applicant will collect, analyze, and use data related to specific and measurable goals, objectives, and intended outcomes of the project. To meet this requirement, the applicant must describe how—

(i) Retention of special education teachers or early intervention personnel and other project processes and outcomes will be measured for formative evaluation purposes, including proposed instruments, data collection methods, and proposed analyses;

(ii) Proposed evaluation methods will provide performance feedback that allows for periodic assessment of progress towards meeting the project outcomes;

(iii) Results of the evaluation will be used as a basis for improving the proposed project; and

(iv) Evaluation results will be reported to OSEP in its annual and final performance reports.

(d) Demonstrate, in the narrative section of the application under ''Adequacy of resources and quality of project personnel,'' how—

(1) The proposed project will encourage applications for employment from persons who are members of groups that have traditionally been underrepresented based on race, color, national origin, gender, age, or disability, as appropriate;

(2) The proposed key project personnel, consultants, and subcontractors have the qualifications and experience to carry out the proposed activities and achieve the project's intended outcomes;

(3) The applicant and any key partners have adequate resources to carry out the proposed activities; and

(4) The proposed costs are reasonable in relation to the anticipated results and benefits.

(e) Demonstrate, in the narrative section of the application under ''Quality of the management plan,'' how—

(1) The proposed management plan will ensure that the project's intended outcomes will be achieved on time and within budget. To meet this requirement, the applicant must describe—

(i) Clearly defined responsibilities for key project personnel, consultants, and subcontractors, as applicable; and

(ii) Timelines and milestones for accomplishing the project tasks;

(2) Key project personnel and any consultants and subcontractors will be allocated and how these allocations are appropriate and adequate to achieve the project's intended outcomes;

(3) The proposed project will benefit from a diversity of perspectives, including those of individuals with disabilities, families of students with disabilities, administrators, teachers and personnel, faculty, technical assistance and professional development providers, PTIs, researchers, business leaders, and policymakers, among others, in its development and operation.

(f) Address the following application requirements. The applicant must—

(1) Demonstrate, in the budget information (ED Form 524, Section B) and budget narrative, matching support for the proposed project at 10 percent of the total amount of the grant;

Note: Matching support can be either cash or in-kind donations. Under 2 CFR 200.306, a cash expenditure or outlay of cash with respect to the matching budget by the grantee is considered a cash contribution. However, certain cash contributions that the organization normally considers an indirect cost should not be counted as a direct cost for the purposes of meeting matching support. Specifically, in accordance with 2 CFR 200.306(c), unrecovered indirect costs cannot be used to meet the non-Federal matching support. Under 2 CFR 200.434, third-party in-kind contributions are services or property (*e.g.,* land, buildings, equipment, materials, supplies) that are contributed by a non-Federal third party at no charge to the grantee.

The Secretary does not, as a general matter, anticipate waiving this requirement in the future. Furthermore,

given the importance of cost share or matching funds to the long-term success of the project, eligible entities must identify appropriate cost share or matching funds in the proposed three-year budget.

(2) Include, in Appendix A, personnel-loading charts and timelines, as applicable, to illustrate the management plan described in the narrative; and

(3) Include, in the budget, attendance at a two- and one-half day meeting in conjunction with either the OSEP project directors' conference or the OSEP leadership conference in Washington, DC, during each year of the project period.

Fourth and Fifth Year of Project

The Secretary may extend a project two years beyond the initial 36 months if the grantee is achieving the intended outcomes of the project (as demonstrated by data gathered as part of the project evaluation). Each applicant must include in its application a plan and a budget for the full 60-month period. In deciding whether to extend funding the project for the fourth and fifth years, the Secretary will consider the requirements of 34 CFR 75.253(a) and will consider the success and timeliness with which the intended outcomes of the project requirements have been or are being met by the project.

Competitive Preference Priority: Within this absolute priority, we give competitive preference to applications that address the following competitive preference priority. Under 34 CFR 75.105(c)(2)(i), we award up to an additional 5 points to an application, depending on how well the application meets the competitive preference priority.

This priority is:

Matching Support (Up to 5 points).

An application that demonstrates matching support for the proposed project at—

(a) 20 percent of the requested Federal award (1 point);

(b) 40 percent of the total amount of the requested Federal award (2 points);

(c) 60 percent of the total amount of the requested Federal award (3 points);

(d) 80 percent of the total amount of the requested Federal award (4 points); or

(e) 100 percent of the total amount of the requested Federal award (5 points).

Applicants must address this competitive preference priority in the budget information (ED Form 524, Section B) and budget narrative.

Waiver of Proposed Rulemaking: Under the Administrative Procedure Act (APA) (5 U.S.C. 553) the Department generally offers interested parties the opportunity to comment on proposed priorities. Section 681(d) of IDEA, however, makes the public comment requirements of the APA inapplicable to the priority in this notice.

Program Authority: 20 U.S.C. 1462 and 1481.

Note: Projects must be awarded and operated in a manner consistent with the nondiscrimination requirements contained in the U.S. Constitution and the Federal civil rights laws.

Applicable Regulations: (a) The Education Department General Administrative Regulations in 34 CFR parts 75, 77, 79, 81, 82, 84, 86, 97, 98, and 99. (b) The Office of Management and Budget Guidelines to Agencies on Governmentwide Debarment and Suspension (Nonprocurement) in 2 CFR part 180, as adopted and amended as regulations of the Department in 2 CFR part 3485. (c) The Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards in 2 CFR part 200, as adopted and amended as regulations of the Department in 2 CFR part 3474. (d) The regulations for this program in 34 CFR part 304.

Note: The regulations in 34 CFR part 86 apply to IHEs only.

II. Award Information

Type of Award: Discretionary grants.

Estimated Available Funds: The Administration has requested $89,700,000 for the Personnel Development to Improve Services and Results for Children with Disabilities program for FY 2021, of which we intend to use an estimated $2,250,000 for this competition. The actual level of funding, if any, depends on final congressional action. However, we are inviting applications to allow enough time to complete the grant process if Congress appropriates funds for this program.

Contingent upon the availability of funds and the quality of applications, we may make additional awards in FY 2022 from the list of unfunded applications from this competition.

Estimated Range of Awards: $700,000–$750,000.

Estimated Average Size of Awards: $725,000.

Maximum Award: We will not make an award exceeding $750,000 for a project period of 36 months for applications addressing the retention of either special education teachers or early intervention personnel.

Note: Applicants must describe, in their applications, the amount of funding being requested for each 12-month budget period.

Estimated Number of Awards: 9.

Project Period: Up to 36 months.

Note: The Department is not bound by any estimates in this notice.

III. Eligibility Information

1. *Eligible Applicants:* SEAs and Part C lead agencies are the only eligible applicants.

2. a. *Cost Sharing or Matching:* Cost sharing or matching is required for this competition.

b. *Indirect Cost Rate Information:* This program uses an unrestricted indirect cost rate. For more information regarding indirect costs, or to obtain a

negotiated indirect cost rate, please see *www2.ed.gov/about/offices/list/ocfo/intro.html.*

c. *Administrative Cost Limitation:* This program does not include any program-specific limitation on administrative expenses. All administrative expenses must be reasonable and necessary and conform to Cost Principles described in 2 CFR part 200 subpart E of the Uniform Guidance.

3. *Subgrantees:* A grantee under this competition may not award subgrants to entities to directly carry out project activities described in its application. Under 34 CFR 75.708(e), a grantee may contract for supplies, equipment, and other services in accordance with 2 CFR part 200.

4. *Other General Requirements:* (a) Recipients of funding under this competition must make positive efforts to employ and advance in employment qualified individuals with disabilities (see section 606 of IDEA).

(b) Applicants for, and recipients of, funding must, with respect to the aspects of their proposed project relating to the absolute priority, involve individuals with disabilities, or parents of individuals with disabilities ages birth through 26, in planning, implementing, and evaluating the project (see section 682(a)(1)(A) of IDEA).

IV. Application and Submission Information

1. *Application Submission Instructions:* Applicants are required to follow the Common Instructions for Applicants to Department of Education Discretionary Grant Programs, published in the **Federal Register** on February 13, 2019 (84 FR 3768), and available at *www.govinfo.gov/content/pkg/FR–2019–02–13/pdf/2019–02206.pdf,* which contain requirements and information on how to submit an application.

2. *Intergovernmental Review:* This competition is subject to Executive Order 12372 and the regulations in 34 CFR part 79. Information about Intergovernmental Review of Federal Programs under Executive Order 12372 is in the application package for this competition.

3. *Funding Restrictions:* We reference regulations outlining funding restrictions in the *Applicable Regulations* section of this notice.

4. *Recommended Page Limit:* The application narrative is where you, the applicant, address the selection criteria that reviewers use to evaluate your application. We recommend that you (1) limit the application narrative to no more than 50 pages and (2) use the following standards:

- A ''page'' is 8.5″ x 11″, on one side only, with 1'' margins at the top, bottom, and both sides.
- Double-space (no more than three lines per vertical inch) all text in the application narrative, including titles, headings, footnotes, quotations, reference citations, and captions, as well as all text in charts, tables, figures, graphs, and screen shots.
- Use a font that is 12 point or larger.
- Use one of the following fonts: Times New Roman, Courier, Courier New, or Arial.

The recommended page limit does not apply to the cover sheet; the budget section, including the narrative budget justification; the assurances and certifications; or the abstract (follow the guidance provided in the application package for completing the abstract), the table of contents, the list of priority requirements, the resumes, the reference list, the letters of support, or the appendices. However, the recommended page limit does apply to all of the application narrative, including all text in charts, tables, figures, graphs, and screen shots.

V. Application Review Information

1. *Selection Criteria:* The selection criteria for this competition are from 34 CFR 75.210 and are as follows:

(a) *Significance (15 points).*

(1) The Secretary considers the significance of the proposed project.

(2) In determining the significance of the proposed project, the Secretary considers the following factors:

(i) The extent to which specific gaps or weaknesses in services, infrastructure, or opportunities have been identified and will be addressed by the proposed project, including the nature and magnitude of those gaps or weaknesses.

(ii) The importance or magnitude of the results or outcomes likely to be attained by the proposed project, especially improvements in teaching and student achievement.

(b) *Quality of project services (35 points).*

(1) The Secretary considers the quality of the services to be provided by the proposed project.

(2) In determining the quality of the services to be provided by the proposed project, the Secretary considers the quality and sufficiency of strategies for ensuring equal access and treatment for eligible project participants who are members of groups that have traditionally been underrepresented based on race, color, national origin, gender, age, or disability.

(3) In addition, the Secretary considers the following factors:

(i) The extent to which the goals, objectives, and outcomes to be achieved by the proposed project are clearly specified and measurable.

(ii) The extent to which the services to be provided by the proposed project reflect up-to-date knowledge from research and effective practice.

(iii) The extent to which the training or professional development services to be provided by the proposed project are of sufficient quality, intensity, and duration to lead to improvements in practice among the recipients of those services.

(iv) The extent to which the services to be provided by the proposed project involve the collaboration of appropriate partners for maximizing the effectiveness of project services.

(v) The extent to which the proposed activities constitute a coherent, sustained program of training in the field.

(c) *Quality of the project evaluation (20 points).*

(1) The Secretary considers the quality of the evaluation to be conducted of the proposed project.

(2) In determining the quality of the evaluation, the Secretary considers the following factors:

(i) The extent to which the methods of evaluation are thorough, feasible, and appropriate to the goals, objectives, and outcomes of the proposed project.

(ii) The extent to which the goals, objectives, and outcomes to be achieved by the proposed project are clearly specified and measurable.

(iii) The extent to which the methods of evaluation include the use of objective performance measures that are clearly related to the intended outcomes of the project and will produce quantitative and qualitative data to the extent possible.

(iv) The extent to which the methods of evaluation will provide performance feedback and permit periodic assessment of progress toward achieving intended outcomes.

(d) *Adequacy of resources and quality of project personnel (15 points).*

(1) The Secretary considers the adequacy of resources and quality of project personnel for the proposed project.

(2) In determining the quality of project personnel, the Secretary considers the extent to which the applicant encourages applications for employment from persons who are members of groups that have traditionally been underrepresented based on race, color, national origin, gender, age, or disability.

(3) In addition, the Secretary considers the following factors:

(i) The qualifications, including relevant training and experience, of key project personnel.

(ii) The adequacy of support, including facilities, equipment, supplies, and other resources, from the applicant organization or the lead applicant organization.

(iii) The extent to which the costs are reasonable in relation to the objectives, design, and potential significance of the proposed project.

(e) *Quality of the management plan (15 points).*

(1) The Secretary considers the quality of the management plan for the proposed project.

(2) In determining the quality of the management plan for the proposed project, the Secretary considers the following factors:

(i) The adequacy of the management plan to achieve the objectives of the proposed project on time and within budget, including clearly defined responsibilities, timelines, and milestones for accomplishing project tasks.

(ii) The extent to which the time commitments of the project director and principal investigator and other key project personnel are appropriate and adequate to meet the objectives of the proposed project.

(iii) The adequacy of mechanisms for ensuring high-quality products and services from the proposed project.

(iv) How the applicant will ensure that a diversity of perspectives are brought to bear in the operation of the proposed project, including those of parents, teachers, the business community, a variety of disciplinary and professional fields, recipients or beneficiaries of services, or others, as appropriate.

2. *Review and Selection Process:* We remind potential applicants that in reviewing applications in any discretionary grant competition, the Secretary may consider, under 34 CFR 75.217(d)(3), the past performance of the applicant in carrying out a previous award, such as the applicant's use of funds, achievement of project objectives, and compliance with grant conditions. The Secretary may also consider whether the applicant failed to submit a timely performance report or submitted a report of unacceptable quality.

In addition, in making a competitive grant award, the Secretary requires various assurances, including those applicable to Federal civil rights laws that prohibit discrimination in programs or activities receiving Federal financial assistance from the Department (34 CFR 100.4, 104.5, 106.4, 108.8, and 110.23).

3. *Additional Review and Selection Process Factors:* In the past, the Department has had difficulty finding peer reviewers for certain competitions because so many individuals who are eligible to serve as peer reviewers have conflicts of interest. The standing panel requirements under section 682(b) of IDEA also have placed additional constraints on the availability of reviewers. Therefore, the Department has determined that for some discretionary grant competitions, applications may be separated into two or more groups and ranked and selected for funding within specific groups. This procedure will make it easier for the Department to find peer reviewers by ensuring that greater numbers of individuals who are eligible to serve as reviewers for any particular group of applicants will not have conflicts of interest. It also will increase the quality, independence, and fairness of the review process, while permitting panel members to review applications under discretionary grant competitions for which they also have submitted applications.

4. *Risk Assessment and Specific Conditions:* Consistent with 2 CFR 200.205, before awarding grants under this competition the Department conducts a review of the risks posed by applicants. Under 2 CFR 3474.10, the Secretary may impose specific conditions and, in appropriate circumstances, high-risk conditions on a grant if the applicant or grantee is not financially stable; has a history of unsatisfactory performance; has a financial or other management system that does not meet the standards in 2 CFR part 200, subpart D; has not fulfilled the conditions of a prior grant; or is otherwise not responsible.

5. *Integrity and Performance System:* If you are selected under this competition to receive an award that over the course of the project period may exceed the simplified acquisition threshold (currently $250,000), under 2 CFR 200.205(a)(2) we must make a judgment about your integrity, business ethics, and record of performance under Federal awards—that is, the risk posed by you as an applicant—before we make an award. In doing so, we must consider any information about you that is in the integrity and performance system (currently referred to as the Federal Awardee Performance and Integrity Information System (FAPIIS)), accessible through the System for Award Management. You may review and comment on any information about yourself that a Federal agency previously entered and that is currently in FAPIIS.

Please note that, if the total value of your currently active grants, cooperative agreements, and procurement contracts from the Federal Government exceeds $10,000,000, the reporting requirements in 2 CFR part 200, Appendix XII, require you to report certain integrity information to FAPIIS semiannually. Please review the requirements in 2 CFR part 200, Appendix XII, if this grant plus all the other Federal funds you receive exceed $10,000,000.

VI. Award Administration Information

1. *Award Notices:* If your application is successful, we notify your U.S. Representative and U.S. Senators and send you a Grant Award Notification (GAN); or we may send you an email containing a link to access an electronic version of your GAN. We may notify you informally, also.

If your application is not evaluated or not selected for funding, we notify you.

2. *Administrative and National Policy Requirements:* We identify administrative and national policy requirements in the application package and reference these and other requirements in the *Applicable Regulations* section of this notice.

We reference the regulations outlining the terms and conditions of an award in the *Applicable Regulations* section of this notice and include these and other specific conditions in the GAN. The GAN also incorporates your approved application as part of your binding commitments under the grant.

3. *Open Licensing Requirements:* Unless an exception applies, if you are awarded a grant under this competition, you will be required to openly license to the public grant deliverables created in whole, or in part, with Department grant funds. When the deliverable consists of modifications to pre-existing works, the license extends only to those modifications that can be separately identified and only to the extent that open licensing is permitted under the terms of any licenses or other legal restrictions on the use of pre-existing works. Additionally, a grantee that is awarded competitive grant funds must have a plan to disseminate these public grant deliverables. This dissemination plan can be developed and submitted after your application has been reviewed and selected for funding. For additional information on the open licensing requirements please refer to 2 CFR 3474.20.

4. *Reporting:* (a) If you apply for a grant under this competition, you must ensure that you have in place the necessary processes and systems to

comply with the reporting requirements in 2 CFR part 170 should you receive funding under the competition. This does not apply if you have an exception under 2 CFR 170.110(b).

(b) At the end of your project period, you must submit a final performance report, including financial information, as directed by the Secretary. If you receive a multiyear award, you must submit an annual performance report that provides the most current performance and financial expenditure information as directed by the Secretary under 34 CFR 75.118. The Secretary may also require more frequent performance reports under 34 CFR 75.720(c). For specific requirements on reporting, please go to *www.ed.gov/fund/grant/apply/appforms/appforms.html.*

(c) Under 34 CFR 75.250(b), the Secretary may provide a grantee with additional funding for data collection analysis and reporting. In this case the Secretary establishes a data collection period.

5. *Performance Measures:* For the purposes of the Government Performance and Results Act of 1993 (GPRA) and reporting under 34 CFR 75.110, we have established the following performance measures for this grant program (84.325P):

(a) Number and percent of special education teachers and early intervention service providers that participated in project-funded activities that are retained in their current position, or continuing to primarily serve children with disabilities in early intervention or school settings; and

(b) Retention rate for special education teachers or EIS providers at the State, regional, or local system level that participated in project-funded activities compared to the historical retention of providers in the same State, regional, or local system(s) in years prior to participation in the proposed project.

Grantees will be required to report information on their project's performance in annual and final performance reports to the Department (34 CFR 75.590).

6. *Continuation Awards:* In making a continuation award under 34 CFR 75.253, the Secretary considers, among other things: whether a grantee has made substantial progress in achieving the goals and objectives of the project; whether the grantee has expended funds in a manner that is consistent with its approved application and budget; and, if the Secretary has established performance measurement requirements, the performance targets in the grantee's approved application.

In making a continuation award, the Secretary also considers whether the grantee is operating in compliance with the assurances in its approved application, including those applicable to Federal civil rights laws that prohibit discrimination in programs or activities receiving Federal financial assistance from the Department (34 CFR 100.4, 104.5, 106.4, 108.8, and 110.23).

VII. Other Information

Accessible Format: On request to the program contact person listed under **FOR FURTHER INFORMATION CONTACT**, individuals with disabilities can obtain this document and a copy of the application package in an accessible format. The Department will provide the requestor with an accessible format that may include Rich Text Format (RTF) or text format (txt), a thumb drive, an MP3 file, braille, large print, audiotape, or compact disc, or other accessible format.

Electronic Access to This Document: The official version of this document is the document published in the **Federal Register**. You may access the official edition of the **Federal Register** and the Code of Federal Regulations at *www.govinfo.gov.* At this site you can view this document, as well as all other documents of this Department published in the **Federal Register**, in text or Portable Document Format (PDF). To use PDF you must have Adobe Acrobat Reader, which is available free at the site.

You may also access documents of the Department published in the **Federal Register** by using the article search feature at *www.federalregister.gov.* Specifically, through the advanced search feature at this site, you can limit your search to documents published by the Department.

Mark Schultz,

Commissioner, Rehabilitation Services Administration. Delegated the authority to perform the functions and duties of the Assistant Secretary for the Office of Special Education and Rehabilitative Services.

BILLING CODE 4000–01–P

DEPARTMENT OF EDUCATION

[Docket No.: ED–2020–SCC–0149]

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Comment Request; The Student Support and Academic Enrichment Grant Program (Title IV, Part A) Waiver Request

AGENCY: Office of Elementary and Secondary Education (OESE), Department of Education (ED).

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, ED is proposing an extension without change of a currently approved collection.

DATES: Interested persons are invited to submit comments on or before January 11, 2021.

ADDRESSES: Written comments and recommendations for proposed information collection requests should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection request by selecting ''Department of Education'' under ''Currently Under Review,'' then check ''Only Show ICR for Public Comment'' checkbox.

FOR FURTHER INFORMATION CONTACT: For specific questions related to collection activities, please contact Bryan Williams, 202–453–6715.

SUPPLEMENTARY INFORMATION: The Department of Education (ED), in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)), provides the general public and Federal agencies with an opportunity to comment on proposed, revised, and continuing collections of information. This helps the Department assess the impact of its information collection requirements and minimize the public's reporting burden. It also helps the public understand the Department's information collection requirements and provide the requested data in the desired format. ED is soliciting comments on the proposed information collection request (ICR) that is described below. The Department of Education is especially interested in public comment addressing the following issues: (1) is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the

burden of this collection on the respondents, including through the use of information technology. Please note that written comments received in response to this notice will be considered public records.

Title of Collection: The Student Support and Academic Enrichment Grant Program (Title IV, Part A) Waiver Request.

OMB Control Number: 1810–0747.

Type of Review: An extension of a currently approved collection.

Respondents/Affected Public: State, Local, and Tribal Governments.

Total Estimated Number of Annual Responses: 52.

Total Estimated Number of Annual Burden Hours: 156.

Abstract: The Student Support and Academic Enrichment Grant Program (Title IV, Part A) grant program intends to offer waivers, for the 2020–2021 school year only, to State educational agencies (SEAs), based on section 8401 [20 U.S.C. 7861] of the Elementary and Secondary Education Act, as reauthorized by the Every Student Succeeds Act (ESSA) in 2015, for specific requirements in the program. The purpose for this new collection is to collect waiver requests from each State wishing to take advantage of these waivers.

Dated: December 8, 2020.

Kate Mullan,

PRA Coordinator,Strategic Collections and ClearanceGovernance and Strategy Division,Office of Chief Data Officer,Office of Planning, Evaluation and Policy Development.

DEPARTMENT OF EDUCATION

[Docket No.: ED–2020–SCC–0181]

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Comment Request; Indian Education Professional Development (PD) Application Package

AGENCY: Office of Elementary and Secondary Education (OESE), Department of Education (ED).

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, ED is proposing a reinstatement with change of a previously approved collection.

DATES: Interested persons are invited to submit comments on or before January 11, 2021.

ADDRESSES: Written comments and recommendations for proposed information collection requests should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection request by selecting ''Department of Education'' under ''Currently Under Review,'' then check ''Only Show ICR for Public Comment'' checkbox.

FOR FURTHER INFORMATION CONTACT: For specific questions related to collection activities, please contact Angela Hernandez-Marshall, 202–205–1909.

SUPPLEMENTARY INFORMATION: The Department of Education (ED), in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)), provides the general public and Federal agencies with an opportunity to comment on proposed, revised, and continuing collections of information. This helps the Department assess the impact of its information collection requirements and minimize the public's reporting burden. It also helps the public understand the Department's information collection requirements and provide the requested data in the desired format. ED is soliciting comments on the proposed information collection request (ICR) that is described below. The Department of Education is especially interested in public comment addressing the following issues: (1) Is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology. Please note that written comments received in response to this notice will be considered public records.

Title of Collection: Indian Education Professional Development (PD) Application Package.

OMB Control Number: 1810–0580.

Type of Review: A reinstatement with change of a previously approved collection.

Respondents/Affected Public: State, Local, and Tribal Governments.

Total Estimated Number of Annual Responses: 40.

Total Estimated Number of Annual Burden Hours: 1,600.

Abstract: The Office of Indian Education (OIE) of the Department of Education (ED) requests a reinstatement for the Indian Education Professional Development Grant Application authorized under Title VI, Part A, of the Elementary and Secondary Education Act, as amended. The Every Student Succeeds Act (ESSA) amended the Elementary and Secondary Education Act (ESEA); included amongst those amendments was new statutory language for the Professional Development (PD) program in section 6122 of the ESSA. It is a competitive discretionary grant program. The grant application submitted for this program is evaluated on the basis of how well an applicant addresses the selection criteria, and is used to determine applicant eligibility and amount of award for projects selected for funding.

BILLING CODE 1301–00–D

DEPARTMENT OF ENERGY

[OE Docket No. EA–487]

Application to Export Electric Energy; Mercuria Energy America, LLC.

AGENCY: Office of Electricity, Department of Energy.

ACTION: Notice of application.

SUMMARY: Mercuria Energy America, LLC. (Applicant or MEA) has applied for authorization to transmit electric energy from the United States to Canada pursuant to the Federal Power Act.

DATES: Comments, protests, or motions to intervene must be submitted on or before January 11, 2021.

ADDRESSES: Comments, protests, motions to intervene, or requests for

more information should be addressed by electronic mail to *Electricity.Exports@hq.doe.gov,* or by facsimile to (202) 586–8008.

SUPPLEMENTARY INFORMATION: The Department of Energy (DOE) regulates exports of electricity from the United States to a foreign country, pursuant to sections 301(b) and 402(f) of the Department of Energy Organization Act (42 U.S.C. 7151(b) and 42 U.S.C. 7172(f)). Such exports require authorization under section 202(e) of the Federal Power Act (16 U.S.C. 824a(e)).

On December 1, 2020, MEA filed an application with DOE (Application or App.) to transmit electric energy from the United States to Canada for a term of five years. MEA states that it ''is a direct, wholly-owned subsidiary of Mercuria Energy Company, LLC (MEC), a Delaware limited liability company having its principal place of business in Houston, Texas.'' App. at 1. MEA represents that it does not ''own, operate or control electric transmission or distribution facilities in the United States over which the export of wholesale electricity could have reliability, fuel use, or system stability impact,'' and that it has no ''affiliation with any entity that owns, operates, or controls electric transmission or distribution facilities in the United States over which the export of wholesale electricity could have a reliability, fuel use, or system stability impact.'' *Id.* at 3.

MEA further states that it ''will buy and sell wholesale electricity in the wholesale electricity in the wholesale electricity markets within the United States, and will export electricity transmitted across international transmission facilities to be utilized by Presidential permits issued pursuant to Executive Order 10485, as amended.'' App. at 2. MEA contends that its exports ''will not impair or tend to impede the sufficiency of electricity supplies in the United States or the regional coordination of electric utility planning or operations.'' *Id.* at 4.

MEA states that its exports ''will be purchased from other suppliers (*i.e.* generators, electric utilities, and other power marketers) voluntarily, and therefore will be surplus to the needs of the selling entities.'' App. at 3–4.

The existing international transmission facilities to be utilized by the Applicant have previously been authorized by Presidential permits issued pursuant to Executive Order 10485, as amended, and are appropriate for open access transmission by third parties.

Procedural Matters: Any person desiring to be heard in this proceeding should file a comment or protest to the Application at the address provided above. Protests should be filed in accordance with Rule 211 of the Federal Energy Regulatory Commission's (FERC) Rules of Practice and Procedure (18 CFR 385.211). Any person desiring to become a party to this proceeding should file a motion to intervene at the above address in accordance with FERC Rule 214 (18 CFR 385.214).

Comments and other filings concerning MEA's application to export electric energy to Canada should be clearly marked with OE Docket No. EA–487. Additional copies are to be provided directly to Chloe Cromarty, 20 E. Greenway Plaza, Suite 650, Houston, Texas 77046, *ccromarty@mercuria.com;* and Mark Greenberg, 20 E. Greenway Plaza, Suite 650, Houston, Texas 77046, *mgreenberg@mercuria.com.*

A final decision will be made on the Application after the environmental impacts have been evaluated pursuant to DOE's National Environmental Policy Act Implementing Procedures (10 CFR part 1021) and after DOE determines that the proposed action will not have an adverse impact on the sufficiency of supply or reliability of the U.S. electric power supply system.

Copies of the Application will be made available, upon request, by accessing the program website at *http://energy.gov/node/11845,* or by emailing Matthew Aronoff at *matthew.aronoff@hq.doe.gov.*

Signed in Washington, DC, on December 7, 2020.

Christopher Lawrence,

Management and Program Analyst, Energy Resilience Division,Office of Electricity.

BILLING CODE 6450–01–P

DEPARTMENT OF ENERGY

[OE Docket No. EA–280–C]

Application to Export Electric Energy; Direct Energy Marketing Inc.

AGENCY: Office of Electricity, Department of Energy.

ACTION: Notice of application.

SUMMARY: Direct Energy Marketing Inc. (Applicant or DEMI) has applied for authorization to transmit electric energy from the United States to Canada pursuant to the Federal Power Act.

DATES: Comments, protests, or motions to intervene must be submitted on or before January 11, 2021.

ADDRESSES: Comments, protests, motions to intervene, or requests for more information should be addressed by electronic mail to *Electricity.Exports@hq.doe.gov,* or by facsimile to (202) 586–8008.

SUPPLEMENTARY INFORMATION: The Department of Energy (DOE) regulates exports of electricity from the United States to a foreign country, pursuant to sections 301(b) and 402(f) of the Department of Energy Organization Act (42 U.S.C. 7151(b) and 42 U.S.C. 7172(f)). Such exports require authorization under section 202(e) of the Federal Power Act (16 U.S.C. 824a(e)).

On November 13, 2020, DEMI filed an application with DOE (Application or App.) for renewal of its authorization to transmit electric energy from the United States to Canada for a term of ten years. DEMI states that it is a Delaware corporation with its principal place of business in Houston, TX. App. at 1. DEMI further represents that it ''is wholly owned by Centrica US Holdings Inc., an indirect, wholly-owned subsidiary of Centrica plc (Centrica).'' *Id.* DEMI adds that it ''does not own or control any electric generation facilities in any wholesale market in interstate commerce'' and that ''neither DEMI nor any of its affiliates own or control transmission facilities or has a electric franchised service territory or captive wholesale or retail customers.'' *Id.*

DEMI further states that it ''will purchase the power to be exported from electric utilities and federal power marketing agencies pursuant to voluntary agreements.'' App. at 3. DEMI contends that ''the electric power that [it] will export on either a firm or interruptible basis will not impair the sufficiency of the electric power supply within the United States'' and that its ''exports of electric energy to Canada will not impede or tend to impede the regional coordination of electric utility planning or operations.'' *Id.* at 3–4.

DEMI states that all its electricity exports ''will be transmitted pursuant to arrangements with utilities that own and operate existing transmission facilities and will be consistent with the export limitations and other terms and conditions contained in the existing Presidential Permits and electricity export authorizations associated with those facilities.'' App. at 4. DEMI also represents that it ''will comply with the terms and conditions contained in the authorizations issued for these cross-border facilities as well as other export limitations that DOE may deem appropriate.'' *Id.*

The existing international transmission facilities to be utilized by

the Applicant have previously been authorized by Presidential permits issued pursuant to Executive Order 10485, as amended, and are appropriate for open access transmission by third parties.

Procedural Matters: Any person desiring to be heard in this proceeding should file a comment or protest to the Application at the address provided above. Protests should be filed in accordance with Rule 211 of the Federal Energy Regulatory Commission's (FERC) Rules of Practice and Procedure (18 CFR 385.211). Any person desiring to become a party to this proceeding should file a motion to intervene at the above address in accordance with FERC Rule 214 (18 CFR 385.214).

Comments and other filings concerning DEMI's application to export electric energy to Canada should be clearly marked with OE Docket No. EA–280–C. Additional copies are to be provided directly to Ryan Harwell, 12 Greenway Plaza, Suite 250, Houston, TX 77046, *Ryan.Harwell@directenergy.com;* Deonne Cunningham, 12 Greenway Plaza, Suite 250, Houston, TX 77046, *Deonne.Cunningham@directenergy.com;* and Bray Dohrwardt, 12 Greenway Plaza, Suite 250, Houston, TX 77046, *Bray.Dohrwardt@directenergy.com.*

A final decision will be made on the Application after the environmental impacts have been evaluated pursuant to DOE's National Environmental Policy Act Implementing Procedures (10 CFR part 1021) and after DOE determines that the proposed action will not have an adverse impact on the sufficiency of supply or reliability of the U.S. electric power supply system.

Copies of the Application will be made available, upon request, by accessing the program website at *http://energy.gov/node/11845,* or by emailing Matthew Aronoff at *matthew.aronoff@hq.doe.gov.*

Signed in Washington, DC, on December 7, 2020.

Federal Energy Regulatory Commission

Combined Notice of Filings #1

Take notice that the Commission received the following electric corporate filings:

Docket Numbers: EC21–31–000.

Applicants: Chalk Point Power, LLC, Chalk Point Steam, LLC, Dickerson Power, LLC, Lanyard Power Holdings, LLC, Morgantown Station, LLC, Morgantown Power, LLC.

Description: Application for Authorization Under Section 203 of the Federal Power Act, et al. of Chalk Point Power, LLC, et al.

Filed Date: 12/4/20.

Accession Number: 20201204–5246.

Comments Due: 5 p.m. ET 12/28/20.

Take notice that the Commission received the following exempt wholesale generator filings:

Docket Numbers: EG21–45–000.

Applicants: Dickerson Power, LLC.

Description: Notice of Self-Certification of EWG Status of Dickerson Power, LLC.

Filed Date: 12/4/20.

Accession Number: 20201204–5186.

Comments Due: 5 p.m. ET 12/28/20.

Docket Numbers: EG21–46–000.

Applicants: Morgantown Power, LLC.

Description: Notice of Self-Certification of Exempt Wholesale Generator Status of Morgantown Power, LLC.

Filed Date: 12/4/20.

Accession Number: 20201204–5190.

Comments Due: 5 p.m. ET 12/28/20.

Docket Numbers: EG21–47–000.

Applicants: Morgantown Station, LLC.

Description: Notice of Self-Certification of Exempt Wholesale Generator Status of Morgantown Station, LLC.

Filed Date: 12/4/20.

Accession Number: 20201204–5195.

Comments Due: 5 p.m. ET 12/28/20.

Docket Numbers: EG21–48–000.

Applicants: Water Strider Solar, LLC.

Description: Notice of Self-Certification of Exempt Wholesale Generator Status of Water Strider Solar, LLC.

Filed Date: 12/7/20.

Accession Number: 20201207–5019.

Comments Due: 5 p.m. ET 12/28/20.

Take notice that the Commission received the following electric rate filings:

Docket Numbers: ER19–470–005.

Applicants: ISO New England Inc., New England Power Pool Participants Committee, New England Power Company, Eversource Energy Service Company (as agent).

Description: Compliance filing: ISO–NE & NEPOOL; Rev. in Compliance with the Order No. 841 Order on Compliance to be effective 3/1/2021.

Filed Date: 12/7/20.

Accession Number: 20201207–5088.

Comments Due: 5 p.m. ET 12/28/20.

Docket Numbers: ER19–2259–001.

Applicants: Turquoise Nevada LLC.

Description: Compliance filing: Turquoise Nevada Tariff Update to be effective 12/8/2020.

Filed Date: 12/7/20.

Comments Due: 5 p.m. ET 12/28/20.

The filings are accessible in the Commission's eLibrary system (*https://elibrary.ferc.gov/idmws/search/fercgensearch.asp*) by querying the docket number.

Any person desiring to intervene or protest in any of the above proceedings must file in accordance with Rules 211 and 214 of the Commission's Regulations (18 CFR 385.211 and 385.214) on or before 5:00 p.m. Eastern time on the specified comment date. Protests may be considered, but intervention is necessary to become a party to the proceeding.

eFiling is encouraged. More detailed information relating to filing requirements, interventions, protests, service, and qualifying facilities filings can be found at: *http://www.ferc.gov/docs-filing/efiling/filing-req.pdf.* For other information, call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

Dated: December 7, 2020.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. ER21–575–000]

Lanyard Power Marketing, LLC; Supplemental Notice That Initial Market-Based Rate Filing Includes Request for Blanket Section 204 Authorization

This is a supplemental notice in the above-referenced Lanyard Power Marketing, LLC's application for market-based rate authority, with an accompanying rate tariff, noting that such application includes a request for blanket authorization, under 18 CFR part 34, of future issuances of securities and assumptions of liability.

Any person desiring to intervene or to protest should file with the Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). Anyone filing a motion to intervene or protest must serve a copy of that document on the Applicant.

Notice is hereby given that the deadline for filing protests with regard to the applicant's request for blanket authorization, under 18 CFR part 34, of future issuances of securities and assumptions of liability, is December 28, 2020.

The Commission encourages electronic submission of protests and interventions in lieu of paper, using the FERC Online links at *http://www.ferc.gov.* To facilitate electronic service, persons with internet access who will eFile a document and/or be listed as a contact for an intervenor must create and validate an eRegistration account using the eRegistration link. Select the eFiling link to log on and submit the intervention or protests.

Persons unable to file electronically may mail similar pleadings to the Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426. Hand delivered submissions in docketed proceedings should be delivered to Health and Human Services, 12225 Wilkins Avenue, Rockville, Maryland 20852.

In addition to publishing the full text of this document in the **Federal Register**, the Commission provides all interested persons an opportunity to view and/or print the contents of this document via the internet through the Commission's Home Page (*http://ferc.gov*) using the ''eLibrary'' link. Enter the docket number excluding the

last three digits in the docket number field to access the document. At this time, the Commission has suspended access to the Commission's Public Reference Room, due to the proclamation declaring a National Emergency concerning the Novel Coronavirus Disease (COVID–19), issued by the President on March 13, 2020. For assistance, contact the Federal Energy Regulatory Commission at *FERCOnlineSupport@ferc.gov* or call toll-free, (886) 208–3676 or TYY, (202) 502–8659.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Western Area Power Administration

Wildfire Risk Reduction, Reliability, and Asset Protection (WRAP) Project, Trinity County, California (DOE/EIS–0548)

AGENCY: Western Area Power Administration, Department of Energy.

ACTION: Notice of Intent to prepare a joint Environmental Impact Statement/Environmental Impact Report and to conduct scoping meetings; Notice of Floodplain and Wetlands Involvement.

SUMMARY: The Western Area Power Administration (WAPA) and Trinity Public Utility District (Trinity PUD) are proposing a proactive Wildfire Risk Reduction, Reliability, and Asset Protection (WRAP) Project to reduce fire risk to the surrounding communities and public lands, as well as to increase electric reliability to maintain critical services in local communities. WAPA and Trinity PUD will prepare a joint Environmental Impact Statement (EIS) and Environmental Impact Report (EIR) in accordance with the National Environmental Policy Act of 1969 (NEPA), U.S. Department of Energy (DOE) NEPA Implementing Procedures, Council on Environmental Quality (CEQ) regulations for implementing NEPA, and the California Environmental Quality Act (CEQA) as codified in California's Public Resource Code, and the Guidelines for Implementation of the California Quality Act (CEQA Guidelines) in Title 14 of the California Code of Regulations. Portions of the proposed action may affect floodplains or wetlands, so this Notice of Intent (NOI) also serves as a notice of proposed floodplain or wetlands action in accordance with DOE floodplain and wetlands review requirements.

DATES: WAPA invites public comments on the scope of the WRAP EIS/EIR during a 45-day public scoping period. WAPA will provide a notice in local media outlets of the dates of the scoping period and scoping meetings. Public notice of the date and time of the public scoping meetings will also be posted on the Project website at *https://www.wapa.gov/regions/SN/environment/Pages/WRAP.aspx.*

ADDRESSES: Written comments on the scope of the EIS/EIR and requests to be added to the EIS/EIR distribution list may be submitted by any of the following methods:

- Electronic comments via the Project website at: *https://www.wapa.gov/regions/SN/environment/Pages/WRAP.aspx*.
- *Email: saare@wapa.gov*.
- *U.S. Mail:* Tish Saare, Western Area Power Administration, 114 Parkshore Dr., Folsom, CA 95630.

WAPA will consider all comments on the scope of the EIS received or postmarked by the end of the scoping period. The public is invited to submit comments on the proposed WRAP Project for WAPA's consideration at any time during the EIS process.

FOR FURTHER INFORMATION CONTACT: For additional information or to have your name added to our mailing list, contact Tish Saare, Western Area Power Administration, 114 Parkshore Dr., Folsom, CA 95630, telephone (916) 847–3608, email at *saare@wapa.gov*.

For general information on DOE's NEPA review process, contact Brian Costner, Office of NEPA Policy and Compliance, GC–54, U.S. Department of Energy, 1000 Independence Avenue SW, Washington, DC 20585–0119, email *AskNEPA@hq.doe.gov,* telephone (202) 586–4600 or (800) 472–2756, facsimile (202) 586–7031.

For more information related to Trinity PUD's participation, contact Mr. Andy Lethbridge, Electric Superintendent, 26 Ponderosa Ln, Weaverville, CA 96093, telephone (530) 623–5537, email *alethbridge@trinitypud.com.*

SUPPLEMENTARY INFORMATION: WAPA is a power marketing administration within DOE. WAPA has a statutory responsibility to make the necessary arrangements to deliver Federal power to Federally authorized water projects and to market and deliver cost-based Federal power in excess of that needed to meet Federal load to wholesale preference customers in regions within the central and western United States. WAPA's preference customers include Federal and State agencies, Native American tribes, electric cooperatives, municipal utilities, public utility districts, irrigation districts, and water districts. Trinity PUD receives the majority of its power from WAPA's Trinity Interconnect 60-kilovolt (kV) Transmission Line.

Trinity PUD is the local electric utility provider for Trinity County, California. It provides most of the customers in Trinity County with 100-percent renewable hydroelectric energy from the Trinity Dam. Trinity PUD supplies power through its 604 miles of power lines that are located in rugged and mountainous terrain. Its service area covers approximately 2,100 square miles in Trinity County and is sparsely

populated, with fewer than 12 customers per mile of line.

The areas surrounding WAPA's and Trinity PUD's electric transmission and distribution systems in Trinity County are particularly vulnerable to fire risk due to the dense vegetation and steep terrain. The proposed WRAP Project would reduce these fire risks by expanding WAPA's and Trinity PUD's existing transmission/distribution rights-of-way (ROWs) and implementing a proactive, integrated vegetation management program within the expanded ROWs.

WAPA has determined that an EIS is the appropriate level of review under NEPA. WAPA will prepare the EIS in accordance with NEPA, DOE's NEPA Implementing Procedures, and the CEQ regulations for implementing NEPA. WAPA will be the lead Federal agency for the NEPA EIS review process, and the U.S. Forest Service (USFS), Bureau of Land Management (BLM), and Bureau of Reclamation (BOR) will be cooperating agencies. WAPA intends to prepare a joint EIS/EIR for the proposed WRAP Project. Trinity PUD will be the lead agency for the CEQA EIR review process. As portions of the proposed action may affect floodplains and wetlands, this NOI also serves as a notice of proposed floodplain or wetland action in accordance with DOE floodplain and wetland environmental review requirements (10 CFR parts 1021 and 1022).

Purpose and Need for Agency Action: The purpose of WRAP is to: (1) Reduce the risk of wildfire by proactive vegetation management; (2) enhance protection of the WAPA and Trinity PUD electrical transmission and distribution line systems; (3) improve the reliability of power delivery to Trinity PUD under WAPA's contract; (4) improve transmission line access by road improvement; and (5) protect the health and safety of the Trinity County community and surrounding biological and natural resources from transmission- and distribution-related wildfires.

Proposed Action and Alternatives: In accordance with the proposed Project purpose and need, WAPA and Trinity PUD propose the WRAP Project.

WAPA proposes to expand the width of its ROW for its 17.5-mile, 60–kV transmission line between Trinity Substation and Weaverville Switchyard from 80 feet to up to 130 feet on USFS, BLM, and private lands. This transmission line provides the majority of the electricity to the Trinity PUD system.

Trinity PUD proposes to expand its utility ROW width from 20 feet to up to 130 feet for its overhead transmission and distribution system (216.8 miles) in high-fire risk areas on USFS, BLM, BOR, and private or other lands. The existing ROW easement for the underground distribution lines would not change.

The proposed Project would also include the improvement of WAPA's existing legal access roads using best management practices for routine access road maintenance and associated rehabilitation. Trinity PUD would maintain their existing local access roads to the standards set by the land managers.

Vegetation in the ROW may be cleared using a combination of mechanical, manual, and herbicidal control methods. Manual methods may include cutting, girdling, topping and trimming, slash disposal/fuels reduction techniques, and burning. Mechanical methods would be used in areas in which vegetation can be removed non-selectively. Most pieces of mechanical equipment are not safe to operate on slopes over 30-to 35-percent; mechanical methods are also constrained where soils are susceptible to compaction or erosion. Herbicidal control is another option that WAPA and Trinity PUD are exploring as an option to manage vegetation. Only those herbicides that have been approved for use in ROW maintenance based on evaluations of toxicity, solubility, soil adsorption potential, and persistence in water and soil would be used. Additionally, herbicides would only be applied by individuals with applicator licenses/certificates and in accordance with label requirements.

In order to maintain long-term vegetation clearances along the expanded ROWs, the proposed Project would include an updated and improved operation and maintenance plan (O&M Plan) and GIS database of all assets and sensitive resources along the subject ROWs. As part of the updated O&M Plan and GIS database, the proposed Project would develop Standard Operating Procedures, which would be implemented for all O&M tasks, as well as Project Conservation Measures that would be implemented to protect specific sensitive species in the ROW.

As part of the proposed Project, WAPA and Trinity PUD would submit applications for ROW authorizations for the expansion of transmission and distribution line ROWs on BLM and USFS administered lands. Trinity PUD would also amend its Interagency Agreement with BOR. In addition, the proposed Project may include timber sale contracts with the USFS, BLM, BOR, and private landowners for merchantable timber resulting from ROW expansions and vegetation removal.

No Action Alternative: NEPA requires WAPA to consider a no action alternative. The no action alternative serves as a baseline to measure the environmental impacts of action alternatives. No action does not mean no change; the no action alternative would include current vegetation management, access road maintenance, and other ongoing O&M activities within existing ROWs. There would be no ROW expansion under the no action alternative. As part of the EIS/EIR process, WAPA will consider a no action alternative.

Notice of Floodplain or Wetlands Involvement: Floodplains and wetlands may be present in the Project area. As the proposal may involve action in floodplains or wetlands, this NOI serves as a notice of proposed floodplain or wetland action. The EIS/EIR will include an assessment of impacts to floodplains and wetlands. If needed, WAPA will prepare a floodplain statement of findings following DOE regulations for compliance with floodplains and wetlands environmental review requirements and include that statement in the EIS/EIR.

Preliminary Identification of Environmental Issues: WAPA proposes to analyze potential short-term environmental impacts, such as those from implementation, and potential long-term environmental impacts of maintaining the expanded ROW. DOE's guidance for the preparation of an EIS/EIR recommends the use of a sliding-scale approach when evaluating environmental impacts. This approach would focus the analysis and discussion of impacts on significant environmental issues in proportion to the level of the potential impacts. WAPA identified the following preliminary list of impact areas for evaluation in the EIS/EIR:

- Air Quality and Greenhouse Gas Emissions
- Biological Resources
- Cultural and Tribal Resources
- Energy
- Hazards and Hazardous Materials
- Hydrology and Water Quality
- Land Use and Recreation
- Noise and Vibration
- Population and Housing
- Soils and Mineral Resources
- Transportation
- Utilities/Service Systems/Public Services
- Visual Resources
- Wildfire and Forestry Resources

This list is not intended to be all-inclusive or to imply a predetermination

of impacts. WAPA invites interested stakeholders to suggest specific issues, including possible mitigation measures, within these general categories, or other categories not included above, to be considered in the EIS/EIR.

Public Participation: The purpose of the scoping process is to identify issues, concerns, possible alternatives, and potential environmental impacts that WAPA should analyze in the EIS/EIR. There will be two scoping meetings, one in the morning and one in the evening on the date determined, to accommodate and encourage public participation. Each meeting will use Zoom Webinar and will be virtual or online consistent with statewide restrictions with in-person meetings because of the COVID–19 pandemic.

WAPA will also announce the public scoping meetings in local news media and by posting on the Project environmental website at *https://www.wapa.gov/regions/SN/environment/Pages/WRAP.aspx* at least 14 days before the meetings.

The public will have the opportunity to learn about the Project, view maps, and present comments on the scope of the WRAP EIS/EIR. Representatives from WAPA and Trinity PUD will be available to answer questions and provide additional information to meeting attendees.

In addition to providing comments at the webinar public scoping meetings, stakeholders may submit written comments as described in the **ADDRESSES** section above. WAPA will consider all comments postmarked or received during the public scoping period identified in the **DATES** section above. The public is also invited to submit comments on the proposed Project for WAPA's consideration at any time during the EIS process.

WAPA will coordinate with appropriate Federal, State, and local agencies, and potentially affected Native American tribes during the preparation of the EIS/EIR. Agencies with legal jurisdiction or special expertise are invited to participate as cooperating agencies in preparation of the EIS, as defined in 40 CFR 1501.8(a).[1] Designated cooperating agencies have responsibilities to support the NEPA process, as specified in 40 CFR 1501.8(b).[2] WAPA will contact tribes and inform them of the planned EIS/EIR. Government-to-government consultations will be conducted in accordance with Executive Order 13175, Consultation and Coordination with Indian Tribal Governments (65 FR 67249); the President's memorandum of April 29, 1994, Government-to-Government Relations with Native American Tribal Governments (59 FR 22951); DOE-specific guidance on tribal interactions; and other applicable Federal and State natural and cultural resources laws and regulations.

Upon completion of the scoping period, WAPA will draft an EIS/EIR. A Notice of Availability of the Draft EIS/EIR will be published in the **Federal Register**, which will begin a minimum 45-day public comment period. WAPA will announce how to comment on the Draft EIS/EIR and will hold two public hearings during the comment period. People who would like to receive a copy of the Draft EIS/EIR should submit a request as provided in the **ADDRESSES** section above. For those requesting to be added to the distribution list, you are encouraged to download the EIS/EIR and other documents from the above website; however, if you prefer to be mailed a copy, please specify the format of the EIS/EIR that you would like to receive (CD or printed) and a preference for either the complete EIS/EIR or the Summary only. WAPA will maintain information about the process, including documents, meeting information, and important dates, on the Project website given above. The EIS/EIR, along with other Project information, will be available for download from the Project website. Please visit the Project website for current information.

Signing Authority

This document of the Department of Energy was signed on December 1, 2020, by Mark A. Gabriel, Administrator, Western Area Power Administration, pursuant to delegated authority from the Secretary of Energy. That document, with the original signature and date, is maintained by DOE. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DOE Federal Register Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of the Department of Energy. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

Signed in Washington, DC, on December 7, 2020

Treena V. Garrett,

Federal Register Liaison Officer, U.S. Department of Energy.

ENVIRONMENTAL PROTECTION AGENCY

Charter Renewal for the Great Lakes Advisory Board

AGENCY: Environmental Protection Agency (EPA)

ACTION: Notice of charter renewal.

SUMMARY: Notice is hereby given that the Environmental Protection Agency (EPA) has determined that, in accordance with the provisions of the Federal Advisory Committee Act (FACA), the EPA Great Lakes Advisory Board is a necessary committee which is in the public's interest. Accordingly, the Advisory Board will be renewed for an additional two-year period. The purpose of the Advisory Board is to provide advice and recommendations to the EPA Administrator through the Great Lakes National Program Manager on matters related to the Great Lakes Restoration Initiative and on domestic matters related to the implementation of the Great Lakes Water Quality Agreement. The Advisory Board's major objectives are to provide advice and recommendations on: Great Lakes protection and restoration activities; long term goals, objectives and priorities for Great Lakes protection and restoration; and other issues identified by the Great Lakes Interagency Task Force/Regional Working Group.

FOR FURTHER INFORMATION CONTACT: Edlynzia Barnes, Designated Federal Officer (DFO), Great Lakes National Program Office, Environmental Protection Agency, 77 W Jackson Boulevard, Chicago IL; telephone number: 312–886–6249; email address: *Barnes.Edlynzia@epa.gov.*

Kurt Thiede,

Regional Administrator, Great Lakes National Program Manager.

EXPORT-IMPORT BANK

Sunshine Act Meetings; Notice of an Open Meeting of the Board of Directors of the Export-Import Bank of the United States

TIME AND DATE: Tuesday, December 22, 2020 at 10:00 a.m.

PLACE: The meeting will be held via teleconference.

STATUS: The meeting will be open to public observation for Item Number 1 only.

MATTERS TO BE CONSIDERED: Credit Risk Appetite—Linkage to the Budget Cost Level.

CONTACT PERSON FOR MORE INFORMATION: Joyce B. Stone (202–257–4086). Members of the public who wish to attend the meeting via audio only teleconference should register via *https://attendee.gotowebinar.com/register/7315218396872121868* by noon Monday, December 21, 2020. Individuals will be directed to a Webinar registration page and provided call-in information.

Joyce B. Stone,

Assistant Corporate Secretary.

BILLING CODE 6690–01–P

FARM CREDIT SYSTEM INSURANCE CORPORATION

Regular Meeting; Farm Credit System Insurance Corporation Board

AGENCY: Farm Credit System Insurance Corporation.

ACTION: Notice, regular meeting.

SUMMARY: Notice is hereby given, in accordance with the provisions of Article VI of the Bylaws of the Farm Credit System Insurance Corporation (FCSIC), that a regular meeting of the Board of Directors of FCSIC will be held.

DATES: December 17, 2020, at 10:00 a.m. EDT, until such time as the Board may conclude its business. *Note: Because of the COVID–19 pandemic, we will conduct the board meeting virtually. If you would like to observe the open portion of the virtual meeting, see instructions below for board meeting visitors.*

ADDRESSES: To observe the open portion of the virtual meeting, go to *FCSIC.gov*, select ''News & Events,'' then ''Board Meetings.'' There you will find a description of the meeting and ''Instructions for board meeting visitors.'' See **SUPPLEMENTARY**

INFORMATION for further information about attendance requests.

FOR FURTHER INFORMATION CONTACT: Dale Aultman, Secretary to the Board of the Farm Credit System Insurance Corporation, (703) 883–4009. TTY is (703) 883–4056.

SUPPLEMENTARY INFORMATION: Parts of this meeting of the Board will be open to the public and parts will be closed. If you wish to observe the open portion, follow the instructions above in the ''ADDRESSES'' section at least 24 hours before the meeting.

Assistance: If you need assistance for accessibility reasons or if you have any questions, contact Dale Aultman, Secretary to the Farm Credit Administration Board, at (703) 883–4009. The matters to be considered at the meeting are as follows:

A. Open Session

Approval of Minutes

- September 24, 2020 Regular Board Minutes

B. Quarterly Business Reports

- Financial Reports
- Report on Insured Obligations
- Report on Annual Performance Plan

C. Closed Session—Risk Management Reports

- Report on Insurance Risk

D. Closed Session—Audit Committee

- Federal Managers Financial Integrity Act Review
- Audit Plan for the Year Ended December 31, 2020
- Executive Session of the Audit Committee with Auditor

Dated: December 8, 2020.

Dale Aultman,

Secretary, Farm Credit System Insurance Corporation.

FEDERAL COMMUNICATIONS COMMISSION

[OMB 3060–1180; FRS 17268]

Information Collection Being Reviewed by the Federal Communications Commission Under Delegated Authority

AGENCY: Federal Communications Commission.

ACTION: Notice and request for comments.

SUMMARY: As part of its continuing effort to reduce paperwork burdens, and as required by the Paperwork Reduction Act of 1995 (PRA), the Federal Communications Commission (FCC or Commission) invites the general public and other Federal agencies to take this opportunity to comment on the following information collections. Comments are requested concerning: Whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; the accuracy of the Commission's burden estimate; ways to enhance the quality, utility, and clarity of the information collected; ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology; and ways to further reduce the information collection burden on small business concerns with fewer than 25 employees. The FCC may not conduct or sponsor a collection of information unless it displays a currently valid Office of Management and Budget (OMB) control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the PRA that does not display a valid OMB control number.

DATES: Written PRA comments should be submitted on or before February 9, 2021. If you anticipate that you will be submitting comments but find it difficult to do so within the period of time allowed by this notice, you should advise the contact listed below as soon as possible.

ADDRESSES: Direct all PRA comments to Cathy Williams, FCC, via email to *PRA@fcc.gov* and to *Cathy.Williams@fcc.gov.*

FOR FURTHER INFORMATION CONTACT: For additional information about the information collection, contact Cathy Williams at (202) 418–2918.

SUPPLEMENTARY INFORMATION:

OMB Control Number: 3060–1180.

Title: Expanding the Economic and Innovation Opportunities of Spectrum Through Incentive Auctions.

Form Number: N/A.

Type of Review: Extension of a currently approved collection.

Respondents: Business or other for-profit entities, state, local, or tribal government and not for profit institutions.

Number of Respondents: 2,490 respondents; 2,490 responses.

Estimated Time per Response: 0.5 to 2 hours.

Frequency of Response: One-time and on occasion reporting requirements, twice within 12 years reporting requirement, 6, 10 and 12-years reporting requirements and third party disclosure requirement.

Obligation to Respond: Required to obtain or retain benefits. Statutory authority for these collections are contained in 47 U.S.C. 151, 154, 301, 303, 307, 308, 309, 310, 316, 319, 325(b), 332, 336(f), 338, 339, 340, 399b, 403, 534, 535, 1404, 1452, and 1454 of the Communications Act of 1934.

Total Annual Burden: 4,980 hours.

Total Annual Cost: No cost.

Privacy Impact Assessment: No impact(s).

Nature and Extent of Confidentiality: There is no need for confidentiality with this collection of information.

Needs and Uses: The FCC adopted the Expanding the Economic and Innovation Opportunities of Spectrum Through Incentive Auctions Report and Order, FCC 14–50, on May 15, 2014, published at 79 FR 48442 (Aug. 15, 2014). The Commission seeks to extend for a period of three years from the Office of Management and Budget (OMB) some of the information collection requirements contained in FCC 14–50. The Commission will use the information to ensure compliance with required filings of notifications, certifications, license renewals, license cancelations, and license modifications. Also, such information will be used to minimize interference and to determine compliance with Commission's rules.

The following is a description of the information collection requirements approved under this collection:

Section 27.14(k) requires 600 MHz licensees to demonstrate compliance with performance requirements by filing a construction notification with the Commission, within 15 days of the applicable benchmark.

Section 27.14(t)(6) requires 600 MHz licensees to make a renewal showing as a condition of each renewal. The showing must include a detailed description of the applicant's provision of service during the entire license period and address: (i) The level and quality of service provided by the applicant (including the population served, the area served, the number of subscribers, the services offered); (ii) the date service commenced, whether service was ever interrupted, and the duration of any interruption or outage; (iii) the extent to which service is provided to rural areas; (iv) the extent to which service is provided to qualifying tribal land as defined in 47 CFR 1.2110(f)(3)(i); and (v) any other factors associated with the level of service to the public.

Section 27.17(c) requires 600 MHz licensees to notify the Commission

within 10 days of discontinuance if they permanently discontinue service by filing FCC Form 601 or 605 and requesting license cancellation.

Section 27.1321(b) previously designated as 27.19(b) requires 600 MHz licensees with base and fixed stations in the 600 MHz downlink band within 25 kilometers of Very Long Baseline Array (VLBA) observatories to coordinate with the National Science Foundation (NSF) prior to commencing operations.

Section 27.1321(c) previously designated as 27.19(c) requires 600 MHz licensees that intend to operate base and fixed stations in the 600 MHz downlink band in locations near the Radio Astronomy Observatory site located in Green Bank, Pocahontas County, West Virginia, or near the Arecibo Observatory in Puerto Rico, to comply with the provisions in 47 CFR 1.924.

Section 74.602(h)(5)(ii) requires 600 MHz licensees to notify the licensee of a studio-transmitter link (TV STL), TV relay station, or TV translator relay station of their intent to commence wireless operations and the likelihood of harmful interference from the TV STL, TV relay station, or TV translator relay station to those operations within the wireless licensee's licensed geographic service area. The notification is to be in the form of a letter, via certified mail, return receipt requested and must be sent not less than 30 days in advance of approximate date of commencement of operations.

Section 74.602(h)(5)(iii) requires all TV STL, TV relay station and TV translator relay station licensees to modify or cancel their authorizations and vacate the 600 MHz band no later than the end of the post-auction transition period as defined in 47 CFR 27.4.

These rules which contain information collection requirements are designed to provide for flexible use of this spectrum by allowing licensees to choose their type of service offerings, to encourage innovation and investment in mobile broadband use in this spectrum, and to provide a stable regulatory environment in which broadband deployment would be able to develop through the application of standard terrestrial wireless rules. Without this information, the Commission would not be able to carry out its statutory responsibilities.

Federal Communications Commission.

Marlene Dortch,

Secretary, Office of the Secretary.

[FR Doc. 2020–27217 Filed 12–10–20; 8:45 am]

BILLING CODE 6712–01–P

FEDERAL COMMUNICATIONS COMMISSION

[17294]

Open Commission Meeting, Thursday, December 10, 2020

The Federal Communications Commission will hold an Open Meeting on the subjects listed below on Thursday, December 10, 2020, which is scheduled to commence at 10:30 a.m. Due to the current COVID–19 pandemic and related agency telework and headquarters access policies, this meeting will be in a wholly electronic format and will be open to the public on the internet via live feed from the FCC's web page at *www.fcc.gov/live* and on the FCC's YouTube channel.

Item No.	Bureau	Subject
1	WIRELINE COMPETITION	TITLE: Securing the Communications Supply Chain (WC Docket No. 18–89). SUMMARY: The Commission will consider a Report and Order that would require Eligible Telecommunications Carriers to remove equipment and services that pose an unacceptable risk to the national security of the United States or the security and safety of its people, would establish the Secure and Trusted Communications Networks Reimbursement Program, and would establish the procedures and criteria for publishing a list of covered communications equipment and services that must be removed.
2	WIRELINE COMPETITION AND PUBLIC SAFETY & HOMELAND SECURITY.	TITLE: National Security Matter. SUMMARY: The Commission will consider a national security matter.
3	INTERNATIONAL	TITLE: National Security Matter. SUMMARY: The Commission will consider a national security matter.
4	OFFICE OF ENGINEERING AND TECHNOLOGY.	TITLE: Allowing Earlier Equipment Marketing and Importation Opportunities (ET Docket No. 20–382); Petition to Expand Marketing Opportunities for Innovative Technologies (RM–11857). SUMMARY: The Commission will consider a Notice of Proposed Rulemaking that would propose updates to its marketing and importation rules to permit, prior to equipment authorization, conditional sales of radiofrequency devices to consumers under certain circumstances and importation of a limited number of radiofrequency devices for certain pre-sale activities.
5	MEDIA	TITLE: Promoting Broadcast Internet Innovation Through ATSC 3.0 (MB Docket No. 20–145). SUMMARY: The Commission will consider a Report and Order that would modify and clarify existing rules to promote the deployment of Broadcast Internet services as part of the transition to ATSC 3.0.
6	MEDIA	TITLE: Florida Community Radio, Inc., Construction Permit for Proposed NCE Station DWRBD (FM), Horseshoe Beach, Florida. SUMMARY: The Commission will consider an Order on Reconsideration concerning the expiration of the construction permit of Florida Community Radio, Inc, for a new noncommercial educational FM station at Horseshoe Beach, Florida.
7	CONSUMER & GOVERNMENTAL AFFAIRS.	TITLE: Rules and Regulations Implementing the Telephone Consumer Protection Act of 1991; Broadnet Teleservices LLC Petition for Declaratory Ruling; National Consumer Law Center Petition for Reconsideration and Request for Stay Pending Reconsideration of Broadnet Teleservices LLC Petition for Declaratory Ruling; Professional Services Council Petition for Reconsideration of Broadnet Teleservices LLC Petition for Declaratory Ruling (CG Docket No. 02–278).

Item No.	Bureau	Subject
		SUMMARY: The Commission will consider an Order on Reconsideration of its previous interpretation of the Telephone Consumer Protection Act that permitted certain government and government contractor calls without consumers' prior express consent.
8	ENFORCEMENT	TITLE Implementing Section 10(a) of the Pallone-Thune Telephone Robocall Abuse Criminal Enforcement and Deterrence Act (TRACED Act) (EB Docket No. 20–374).
		SUMMARY: The Commission will consider a Notice of Proposed Rulemaking that would begin the process of implementing section 10(a) of the TRACED Act, which directs the Commission, no later than June 30, 2021, to ''prescribe regulations to establish a process that streamlines the ways in which a private entity may voluntarily share with the Commission information relating'' to violations of section 227(b) or 227(e) of the Communications Act.
9	WIRELINE COMPETITION	TITLE: Modernizing the E-Rate Program for Schools and Libraries (WC Docket No. 13–184).
		SUMMARY: The Commission will consider an Order that would amend the invoice filing deadline rule to enhance the efficient administration of the E-Rate Program and ensure program participants have sufficient time to complete the invoice payment process.
10	OFFICE OF MANAGING DIRECTOR	TITLE: Amendment of Part 1 of the Commission's Rules (MD Docket No. 20–64).
		SUMMARY: The Commission will consider an Order that would modify its rules to require the electronic payment of fees for activities delegated to the FCC's Media Bureau.

The meeting will be webcast with open captioning at: *www.fcc.gov/live.* Open captioning will be provided as well as a text only version on the FCC website. Other reasonable accommodations for people with disabilities are available upon request. In your request, include a description of the accommodation you will need and a way we can contact you if we need more information. Last minute requests will be accepted but may be impossible to fill. Send an email to: *fcc504@fcc.gov* or call the Consumer & Governmental Affairs Bureau at 202–418–0530.

Additional information concerning this meeting may be obtained from the Office of Media Relations, (202) 418–0500. Audio/Video coverage of the meeting will be broadcast live with open captioning over the internet from the FCC Live web page at *www.fcc.gov/live.*

Federal Communications Commission.

Dated: December 3, 2020.

Marlene Dortch,

Secretary.

[FR Doc. 2020–27216 Filed 12–10–20; 8:45 am]

BILLING CODE 6712–01–P

FEDERAL RESERVE SYSTEM

Proposed Agency Information Collection Activities; Comment Request

AGENCY: Board of Governors, Federal Reserve System.

ACTION: Notice, request for comment.

SUMMARY: The Board of Governors of the Federal Reserve System (Board) invites comment on a proposal extend for three years, without revision, the Reporting, Recordkeeping, and Disclosure Requirements Associated with Regulation BB (FR BB; OMB No. 7100–0197).

DATES: Comments must be submitted on or before February 9, 2021.

ADDRESSES: You may submit comments, identified by FR BB, by any of the following methods:

- *Agency Website: https://www.federalreserve.gov/.* Follow the instructions for submitting comments at *https://www.federalreserve.gov/apps/foia/proposedregs.aspx.*
- *Email: regs.comments@federalreserve.gov.* Include the OMB number in the subject line of the message.
- *FAX:* (202) 452–3819 or (202) 452–3102.
- *Mail:* Ann E. Misback, Secretary, Board of Governors of the Federal Reserve System, 20th Street and Constitution Avenue NW, Washington, DC 20551.

All public comments are available from the Board's website at *https://www.federalreserve.gov/apps/foia/proposedregs.aspx* as submitted, unless modified for technical reasons or to remove personally identifiable information at the commenter's request. Accordingly, comments will not be edited to remove any identifying or contact information. Public comments may also be viewed electronically or in paper in Room 146, 1709 New York Avenue NW, Washington, DC 20006, between 9:00 a.m. and 5:00 p.m. on weekdays. For security reasons, the Board requires that visitors make an appointment to inspect comments. You may do so by calling (202) 452–3684. Upon arrival, visitors will be required to present valid government-issued photo identification and to submit to security screening in order to inspect and photocopy comments.

Additionally, commenters may send a copy of their comments to the Office of Management and Budget (OMB) Desk Officer—Shagufta Ahmed—Office of Information and Regulatory Affairs, Office of Management and Budget, New Executive Office Building, Room 10235, 725 17th Street NW, Washington, DC 20503, or by fax to (202) 395–6974.

FOR FURTHER INFORMATION CONTACT: Federal Reserve Board Clearance Officer—Nuha Elmaghrabi—Office of the Chief Data Officer, Board of Governors of the Federal Reserve System, Washington, DC 20551, (202) 452–3829.

SUPPLEMENTARY INFORMATION: On June 15, 1984, OMB delegated to the Board authority under the PRA to approve and assign OMB control numbers to collections of information conducted or sponsored by the Board. In exercising this delegated authority, the Board is directed to take every reasonable step to solicit comment. In determining whether to approve a collection of information, the Board will consider all comments received from the public and other agencies.

A copy of the Paperwork Reduction Act (PRA) OMB submission, including the reporting form and instructions, supporting statement, and other documentation will be available at *https://www.reginfo.gov/public/do/PRAMain,* if approved. These

documents will also be made available on the Board's public website at *https://www.federalreserve.gov/apps/reportforms/review.aspx* or may be requested from the agency clearance officer, whose name appears above.

Request for Comment on Information Collection Proposal

The Board invites public comment on the following information collection, which is being reviewed under authority delegated by the OMB under the PRA. Comments are invited on the following:

a. Whether the proposed collection of information is necessary for the proper performance of the Board's functions, including whether the information has practical utility;

b. The accuracy of the Board's estimate of the burden of the proposed information collection, including the validity of the methodology and assumptions used;

c. Ways to enhance the quality, utility, and clarity of the information to be collected;

d. Ways to minimize the burden of information collection on respondents, including through the use of automated collection techniques or other forms of information technology; and

e. Estimates of capital or startup costs and costs of operation, maintenance, and purchase of services to provide information.

At the end of the comment period, the comments and recommendations received will be analyzed to determine the extent to which the Board should modify the proposal.

Proposal Under OMB Delegated Authority To Extend for Three Years, Without Revision, the Following Information Collection

Report title: Reporting, Recordkeeping, and Disclosure Requirements Associated with Regulation BB.

Agency form number: FR BB.

OMB control number: 7100–0197.

Frequency: Annually.

Respondents: State Member Banks (SMBs), with the exception of special purpose banks that do not perform commercial or retail banking services by granting credit to the public in the ordinary course of business, other than as incident to their specialized operations. These banks include bankers' banks and banks that engage only in one or more of the following activities: Providing cash management controlled disbursement services or serving as correspondent banks, trust companies, or clearing agents.

Estimated number of respondents: Assessment area delineation, 117; Loan data: Small business and small farm, 113; Loan data: Community development, 98; Loan data: Home Mortgage Disclosure Act (HMDA) out of Metropolitan Statistical Areas (MSA), 117; Request for designation as a wholesale or a limited purpose bank, 1; Request for strategic plan approval, 2; Affiliate lending data, 5; Data on lending by a consortium or a third party, 12; Small business and small farm loan register, 113; Consumer loan data, 28; Other loan data, 20; and Public file and public notice, 778.

Estimated average hours per response: Assessment area delineation, 2; Loan data: Small business and small farm, 8; Loan data: Community development, 13; Loan data: HMDA out of MSA, 253; Request for designation as a wholesale or a limited purpose bank, 4; Request for strategic plan approval, 275; Affiliate lending data, 38; Data on lending by a consortium or a third party, 17; Small business and small farm loan register, 219; Consumer loan data, 326; Other loan data, 25; and Public file and public notice, 10.

Estimated annual burden hours: Assessment area delineation, 234; Loan data: Small business and small farm, 904; Loan data: Community development, 1,274; Loan data: HMDA out of MSA, 29,601; Request for designation as a wholesale or a limited purpose bank, 4; Request for strategic plan approval, 550; Affiliate lending data, 190; Data on lending by a consortium or a third party, 204; Small business and small farm loan register, 24,747; Consumer loan data, 9,128; Other loan data, 500; and Public file and public notice, 7,780.

General description of report: The Community Reinvestment Act (CRA) directs the Board, the Federal Deposit Insurance Corporation, and the Office of the Comptroller of the Currency (collectively, the agencies) to evaluate financial institutions' (banks and savings associations) records of helping to meet the credit needs of their entire communities, including low- and moderate-income areas, consistent with the safe and sound operation of the institutions. The CRA is implemented through regulations issued by the agencies. The Board's regulation applies to SMBs.

Legal authorization and confidentiality: The FR BB is authorized by section 806 of the CRA, which permits the Board to issue ''[r]egulations to carry out the purposes of [the CRA]''; section 11 of the Federal Reserve Act, which permits the Board to ''require such statements and reports as it deems necessary'' of state member banks; and section 9 of the Federal Reserve Act, which permits the Board to examine state member banks.

Most of the recordkeeping, reporting, and disclosure requirements of Regulation BB are mandatory. However, there are several limited parts of the collection that are required to obtain a benefit: Specifically, the request for designation as a wholesale or limited purpose bank, the strategic plan, and the recordkeeping and reporting requirements associated with data regarding consumer loans and lending performance, affiliate lending data, and data on lending by a consortium or a third party.

Most of the information collected under Regulation BB is not considered confidential. However, if a respondent elects to submit a strategic plan pursuant to 12 CFR 228.27, the respondent may submit additional information to the Board relating to the strategic plan on a confidential basis, so long as the goals in the plan are sufficiently specific to enable the public and the Board to judge the merits of the plan. The Board will determine whether the additional information is entitled to confidential treatment on a case-by-case basis.

To the extent a respondent submits information contained in or related to examination, operating, or condition reports prepared by, or on behalf of, or for the use of an agency responsible for the regulation or supervision of financial institutions, the respondent may request confidential treatment pursuant to exemption 8 of the Freedom of Information Act (FOIA). To the extent a respondent submits nonpublic commercial or financial information which is both customarily and actually treated as private by the respondent, the respondent may request confidential treatment pursuant to exemption 4 of the FOIA.

Board of Governors of the Federal Reserve System, December 7, 2020.

Michele Taylor Fennell,

Deputy Associate Secretary of the Board.

[FR Doc. 2020–27341 Filed 12–10–20; 8:45 am]

BILLING CODE 6210–01–P

FEDERAL RESERVE SYSTEM

Formations of, Acquisitions by, and Mergers of Savings and Loan Holding Companies

The companies listed in this notice have applied to the Board for approval, pursuant to the Home Owners' Loan Act (12 U.S.C. 1461 *et seq.*) (HOLA), Regulation LL (12 CFR part 238), and Regulation MM (12 CFR part 239), and all other applicable statutes and

regulations to become a savings and loan holding company and/or to acquire the assets or the ownership of, control of, or the power to vote shares of a savings association.

The public portions of the applications listed below, as well as other related filings required by the Board, if any, are available for immediate inspection at the Federal Reserve Bank(s) indicated below and at the offices of the Board of Governors. This information may also be obtained on an expedited basis, upon request, by contacting the appropriate Federal Reserve Bank and from the Board's Freedom of Information Office at *https://www.federalreserve.gov/foia/request.htm.* Interested persons may express their views in writing on whether the proposed transaction complies with the standards enumerated in the HOLA (12 U.S.C. 1467a(e)).

Comments regarding each of these applications must be received at the Reserve Bank indicated or the offices of the Board of Governors, Ann E. Misback, Secretary of the Board, 20th Street and Constitution Avenue NW, Washington DC 20551–0001, not later than January 11, 2021.

A. Federal Reserve Bank of Kansas City (Dennis Denney, Assistant Vice President) 1 Memorial Drive, Kansas City, Missouri 64198–0001:

1. *The G. Jeffrey Records, Jr. 2020 Family Trust, Oklahoma City, Oklahoma;* to become a savings and loan holding company by acquiring voting shares of Midland Financial Co., and thereby indirectly acquire voting shares of MidFirst Bank, both of Oklahoma City, Oklahoma.

Board of Governors of the Federal Reserve System, December 8, 2020.

Michele Taylor Fennell,

Deputy Associate Secretary of the Board.

BILLING CODE P

FEDERAL RESERVE SYSTEM

Agency Information Collection Activities: Announcement of Board Approval Under Delegated Authority and Submission to OMB

AGENCY: Board of Governors, Federal Reserve System.

SUMMARY: The Board of Governors of the Federal Reserve System (Board) is adopting a proposal to extend for three years, with revision, the Reporting Requirements Associated with Regulation XX (FR XX; OMB No. 7100–0363) and the Financial Company (as defined) Report of Consolidated Liabilities (FR XX–1; OMB No. 7100–0363). The revisions are effective immediately.

FOR FURTHER INFORMATION CONTACT: Federal Reserve Board Clearance Officer—Nuha Elmaghrabi—Office of the Chief Data Officer, Board of Governors of the Federal Reserve System, Washington, DC 20551, (202) 452–3829. Office of Management and Budget (OMB) Desk Officer—Shagufta Ahmed—Office of Information and Regulatory Affairs, Office of Management and Budget, New Executive Office Building, Room 10235, 725 17th Street NW, Washington, DC 20503, or by fax to (202) 395–6974.

SUPPLEMENTARY INFORMATION: On June 15, 1984, OMB delegated to the Board authority under the PRA to approve and assign OMB control numbers to collections of information conducted or sponsored by the Board. Board-approved collections of information are incorporated into the official OMB inventory of currently approved collections of information. The OMB inventory, as well as copies of the PRA Submission, supporting statements, and approved collection of information instrument(s) are available at *https://www.reginfo.gov/public/do/PRAMain.* These documents are also available on the Federal Reserve Board's public website at *https://www.federalreserve.gov/apps/reportforms/review.aspx* or may be requested from the agency clearance officer, whose name appears above.

Final Approval Under OMB Delegated Authority of the Extension for Three Years, With Revision, of the Following Information Collection

Report title: Reporting Requirements Associated with Regulation XX; Financial Company (as defined) Report of Consolidated Liabilities.

Agency form number: FR XX; FR XX–1.

OMB control number: 7100–0363.

Frequency: Event-generated; annual.

Respondents: Insured depository institutions, bank holding companies, savings and loan holding companies, any other companies that control insured depository institutions, nonbank financial companies designated by the Financial Stability Oversight Council (Council) for supervision by the Board, or foreign banks or companies that are treated as a bank holding company for purposes of the Bank Holding Company Act of 1956 (BHC Act); Certain financial companies that do not otherwise report consolidated financial information to the Board or another Federal banking agency.

Estimated number of respondents: FR XX (Section 251.3(e))–1; FR XX (Sections 251.4(b) and (c))–1; FR XX–1–37.

Estimated average hours per response: FR XX (Section 251.3(e))–6; FR XX (Sections 251.4(b) and (c))–20; FR XX–1–2.

Estimated annual burden hours: FR XX (Section 251.3(e))–6; FR XX (Sections 251.4(b) and (c))–20; FR XX–1–74.

General description of report: The Board's Regulation XX—Concentration Limit (12 CFR part 251) implements section 14 of the BHC Act,[1] which establishes a financial sector concentration limit that generally prohibits a financial company from merging or consolidating with, or otherwise acquiring, another company if the resulting company's liabilities upon consummation would exceed 10 percent of the aggregate liabilities of all financial companies (a covered acquisition). Under section 14 of the BHC Act and Regulation XX, a financial company means (1) an insured depository institution, (2) a bank holding company, (3) a savings and loan holding company, (4) any other company that controls an insured depository institution, (5) a nonbank financial company designated by the Council for supervision by the Board, or (6) a foreign bank or company that is treated as a bank holding company for purposes of the BHC Act. Regulation XX includes certain reporting requirements that apply to financial companies, and the FR XX–1 collects information from certain financial companies that do not otherwise report consolidated financial information to the Board or another Federal banking agency.

Legal authorization and confidentiality: The FR XX and the FR XX–1 are authorized by section 14 of the BHC Act, which, in relevant part, expressly authorizes the Board to issue ''regulations implementing this section'' and ''interpretations or guidance regarding the application of this section to an individual financial company or to financial companies in general'' (12 U.S.C. 1852(d)). The Board also has the authority to require reports from bank holding companies (12 U.S.C. 1844(c)), savings and loan holding companies (12 U.S.C. 1467a(b) and (g)), state member banks (12 U.S.C. 248(a) and 324), and state-licensed branches and agencies of foreign banks, other than insured branches (12 U.S.C. 3105(c)(2)). The obligation to respond is mandatory.

[1] 12 U.S.C. 1852.

Individual respondents may request that information submitted to the Board through the FR XX or FR XX–1 be kept confidential. If a respondent requests confidential treatment, the Board will determine whether the information is entitled to confidential treatment on a case-by-case basis. To the extent a respondent submits nonpublic commercial or financial information in connection with the FR XX or FR XX–1, which is both customarily and actually treated as private by the respondent, the respondent may request confidential treatment pursuant to exemption 4 of the Freedom of Information Act (FOIA) (5 U.S.C. 552(b)(4)). The entity should separately designate such information as ''confidential commercial information'' or ''confidential financial information'' as appropriate, and the Board will treat such designated information as confidential to the extent permitted by law, including the FOIA.

Current actions: On August 21, 2020, the Board published a notice in the **Federal Register** (85 FR 51713) requesting public comment for 60 days on the extension, with revision, of the FR XX and FR XX–1. The Board proposes to revise the FR XX to account for the reporting provision located at section 251.3(e). This provision of the regulation implements the Council's recommendation to allow a financial company that does not use U.S. generally accepted accounting principles (GAAP) to use another appropriate accounting standard or method of estimation for determining compliance with section 14 of the BHC Act, while ensuring that the Board has an opportunity to review the appropriateness of the company's proposed approach. The Board proposes to revise the due date for the FR XX–1 report. The FR XX–1 implements section 251.6(a) of Regulation XX, which requires a financial company that does not otherwise report consolidated financial information to the Board or another Federal banking agency to report to the Board its consolidated liabilities as of the previous calendar year-end. Regulation XX provides that this report must be submitted by March 31 of each year. However, the instructions to the FR XX–1 currently state that the report must be submitted 90 calendar days after the December 31 as of date or, if the submission deadline falls on a weekend or holiday, the first business day after the weekend or holiday. Under these instructions, the FR XX–1 could be due prior to March 31 (in a leap year) or after March 31 (if March 31 falls on a weekend or holiday). In order to ensure that the due date of the FR XX–1 coincides with the date set forth in Regulation XX, the Board proposes to revise the FR XX–1 so that it is due by March 31 of the year following the December 31 as of date. The comment period for this notice expired on October 20, 2020. The Board did not receive any comments. The revisions will be implemented as proposed.

Board of Governors of the Federal Reserve System, December 7, 2020.

Michele Taylor Fennell,

Deputy Associate Secretary of the Board.

[FR Doc. 2020–27342 Filed 12–10–20; 8:45 am]

BILLING CODE 6210–01–P

FEDERAL RESERVE SYSTEM

Agency Information Collection Activities: Announcement of Board Approval Under Delegated Authority and Submission to OMB

AGENCY: Board of Governors of the Federal Reserve System.

SUMMARY: The Board of Governors of the Federal Reserve System (Board) is adopting a proposal to extend for three years, with revision, the Consolidated Holding Company Report of Equity Investments in Nonfinancial Companies (FR Y–12; OMB No. 7100–0300) and the Annual Report of Merchant Banking Investments Held for an Extended Period (FR Y–12A; OMB No. 7100–0300). The revisions are applicable for the December 31, 2020 reporting date.

FOR FURTHER INFORMATION CONTACT: Federal Reserve Board Clearance Officer—Nuha Elmaghrabi—Office of the Chief Data Officer, Board of Governors of the Federal Reserve System, Washington, DC 20551, (202) 452–3829. Office of Management and Budget (OMB) Desk Officer—Shagufta Ahmed—Office of Information and Regulatory Affairs, Office of Management and Budget, New Executive Office Building, Room 10235, 725 17th Street NW, Washington, DC 20503, or by fax to (202) 395–6974.

SUPPLEMENTARY INFORMATION: On June 15, 1984, OMB delegated to the Board authority under the PRA to approve and assign OMB control numbers to collections of information conducted or sponsored by the Board. Board-approved collections of information are incorporated into the official OMB inventory of currently approved collections of information. The OMB inventory, as well as copies of the PRA Submission, supporting statements, and approved collection of information instrument(s) are available at *https://www.reginfo.gov/public/do/PRAMain.* These documents are also available on the Federal Reserve Board's public website at *https://www.federalreserve.gov/apps/reportforms/review.aspx* or may be requested from the agency clearance officer, whose name appears above.

Final Approval under OMB Delegated Authority of the Extension for Three Years, With Revision, of the Following Information Collection:

Report Title: Consolidated Bank Holding Company Report of Equity Investments in Nonfinancial Companies, and the Annual Report of Merchant Banking Investments Held for an Extended Period.

Agency form number: FR Y–12 and FR Y–12A, respectively.

OMB control number: 7100–0300.

Effective Date: December 31, 2020.

Frequency: FR Y–12, quarterly and semiannually; and FR Y–12A, annually.

Respondents: Bank holding companies (BHCs), savings and loan holding companies (SLHCs), U.S. intermediate holding companies (IHCs), and financial holding companies (FHCs) that hold merchant banking investments that are approaching the end of the holding periods permissible under Regulation Y.[1]

Number of respondents: FR Y–12 quarterly, 22; FR Y–12 semiannual, 7; and FR Y–12A, 91.

Estimated average hours per response: FR Y–12, 16.5; and FR Y–12A, 7.5.

Estimated annual reporting hours: FR Y–12 quarterly, 1,452; FR Y–12 semiannual, 231; and FR Y–12A, 683.

General description of report: The mandatory FR Y–12 report collects information from certain domestic bank

[1] In 2012, the Board indicated that it would require supervised securities holding companies (''SHCs'') to file the FR Y–12 and FR Y–12A reports. 77 FR 32881, 32883 (June 4, 2012). However, no such revisions were ever made to include SHCs as respondents on either report. Upon reflection, the Board has determined that it would not be appropriate at this time to add supervised SHCs to the respondent panel for the FR Y–12 or FR Y–12A reports. A supervised SHCs would not be subject to the restrictions on nonbanking activities that limit the investments of other holding companies. Therefore, any information gathered about SHCs' investments on the FR Y–12 would be of limited use, and would not be comparable to data gathered from other holding companies. Moreover, adding supervised SHCs to the FR Y–12 reporting panel would require significant revisions to the FR Y–12 instructions in order to account for the differences in legal treatment between supervised SHCs and the other respondents. Such revisions could lead to confusion among current FR Y–12 reporters. With respect to the FR Y–12A, the Board is not proposing to add supervised SHCs to the respondent panel because supervised SHCs are not restricted in their ability to make investments in nonfinancial companies, and their investments are not subject to the merchant bank holding periods that apply to FHC investments.

holding companies (BHCs), savings and loan holding companies (SLHCs), and U.S. intermediate holding companies (IHCs) on their equity investments in nonfinancial companies. Respondents report the FR Y–12 either quarterly or semi-annually based on criteria in the report. The mandatory FR Y–12A report is filed annually by financial holding companies (FHCs) that hold merchant banking investments that are approaching the end of the holding periods permissible under the Board's Regulation Y.

Legal authorization and confidentiality: The Board is authorized to collect information on the FR Y–12 and FR Y–12A reports from BHCs (including BHCs that are FHCs) pursuant to section 5(c) of the Bank Holding Company Act (BHC Act), 12 U.S.C. 1844(c)(1)(A); from SLHCs pursuant to section 10(b)(2) of the Home Owners' Loan Act, 12 U.S.C. 1467a(b)(2), as amended by sections 369(8) and 604(h)(2) of the Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act); and from IHCs pursuant to section 5(c) of the BHC Act, 12 U.S.C. 1844(c)(1)(A), as well as pursuant to sections 102(a)(1) and 165 of the Dodd-Frank Act, 12 U.S.C. 5311(a)(1) and 5365 [2] and Regulation YY, 12 CFR 252.153(b)(2).

In addition, with respect to the FR Y–12A report, section 4(k)(7)(A) of the BHC Act, 12 U.S.C. 1843(k)(7)(A), authorizes the Board and the Treasury Department to jointly develop implementing regulations governing merchant banking activities for purposes of section 4(k)(4)(H) of the BHC Act. Section 4(k)(4)(H) of the BHC Act, 12 U.S.C. 1843(k)(4)(H), and subpart J of the Board's Regulation Y, 12 CFR 225.170 *et seq.,* authorize a BHC that has made an effective FHC election to acquire merchant banking investments that are not otherwise permissible for an FHC. Section 10(c)(2)(H) of HOLA, as amended by section 606(b) of the Dodd-Frank Act, 12 U.S.C. 1467a(c)(2)(H), and section 8(a) of the International Bank Act, 12 U.S.C. 3106(a), extend certain authorities and requirements of the BHC Act to SLHCs and to foreign banks, respectively.

The obligation to respond to the FR Y–12 and FR Y–12A reports is mandatory. The Board does not consider information collected on the FR Y–12 report to be confidential, and the completed version of this report generally is made available to the public upon request. However, in certain instances, specific information collected on an individual institution's FR Y–12 report may be exempt from disclosure pursuant to exemption 4 of the Freedom of Information Act (FOIA), which protects from public disclosure ''trade secrets and commercial or financial information obtained from a person [that is] privileged or confidential'' (5 U.S.C. 552(b)(4)). A reporting holding company may request confidential treatment for the specific data items the company believes should be withheld pursuant to exemption 4 of the FOIA, as provided in the Board's Rules Regarding Availability of Information (12 CFR part 261.15). A request for confidential treatment should be submitted in writing concurrently with the submission of the FR Y–12 report. This written request must identify the specific data for which confidential treatment is sought and must provide the legal justification for which confidentiality is requested. The Federal Reserve will review any such request on a case-by-case basis to determine if confidential treatment is appropriate. The Federal Reserve may subsequently release information for which confidential treatment is requested, if (1) disclosure of such information is required by law (other than 5 U.S.C. 552); (2) the reporting holding company requested confidential treatment pursuant to 5 U.S.C. 552(b)(4) and more than 10 years have passed since the date of the submission unless the reporting company has requested and provided justification for a longer designation period; or (3) less than 10 years have passed since the request, but the Board believes that the information cannot be withheld from disclosure under 5 U.S.C. 552(b)(4), and the reporting holding company is provided with written notice of the Board's views and with an opportunity to object to the Board's disclosure.

Current actions: On August 21, 2020, the Board published an initial notice in the **Federal Register** (85 FR 51719) requesting public comment for 60 days on the extension, with revision, of the FR Y–12 and the extension, without revision, of the FR Y–12A. The Board revised the FR Y–12 by (1) adding a new column to Schedules A and C to capture unrealized holding gains (losses) on equity securities not held for trading recognized as income in accordance with Accounting Standards Update (ASU 2016–01, ''Recognition and Measurement of Financial Assets and Financial Liabilities''); (2) adding guidance to the instructions for the reporting of equity securities in accordance with ASU 2016–01; and (3) making other minor clarifications and conforming edits to the form and instructions. The revisions to the FR Y–12 are applicable as of the December 31, 2020, reporting date. The comment period for this notice expired on October 20, 2020. The Board did not receive any comments. The revisions will be implemented as proposed.

Board of Governors of the Federal Reserve System, December 7, 2020.

Michele Taylor Fennell,

Deputy Associate Secretary of the Board.

[FR Doc. 2020–27345 Filed 12–10–20; 8:45 am]

BILLING CODE 6210–01–P

[2] Section 165(b)(2) of the Dodd-Frank Act, 12 U.S.C. 5365(b)(2), refers to ''foreign-based bank holding company.'' Section 102(a)(1) of the Dodd-Frank Act, 12 U.S.C. 5311(a)(1), defines ''bank holding company'' for purposes of Title I of the Dodd-Frank Act to include foreign banking organizations that are treated as bank holding companies under section 8(a) of the International Banking Act, 12 U.S.C. 3106(a). The Board has required, pursuant to section 165(b)(1)(B)(iv) of the Dodd-Frank Act, 12 U.S.C. 5365(b)(1)(B)(iv), certain of the foreign banking organizations that are subject to section 165 of the Dodd-Frank Act to form U.S. intermediate holding companies. Accordingly, the parent foreign-based organization of a U.S. IHC is treated as a BHC for purposes of the BHC Act and section 165 of the Dodd-Frank Act. Because section 5(c) of the BHC Act authorizes the Board to require reports from subsidiaries of BHCs, section 5(c) provides additional authority to require U.S. IHCs to report the information contained in the FR Y–12 and FR Y–12A reports.

DEPARTMENT OF DEFENSE

GENERAL SERVICES ADMINISTRATION

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

[OMB Control No. 9000–0201; Docket No. 2020–0053; Sequence No. 6]

Submission for OMB Review; Prohibition on Contracting with Entities Using Certain Telecommunications and Video Surveillance Services or Equipment (FAR Case 2019–009)

AGENCY: Department of Defense (DOD), General Services Administration (GSA), and National Aeronautics and Space Administration (NASA).

ACTION: Notice.

SUMMARY: Under the provisions of the Paperwork Reduction Act, the Regulatory Secretariat Division has submitted to the Office of Management and Budget (OMB) a request to review and approve a revision and extension of a previously approved information collection requirement regarding representations and reporting associated with implementation of Federal Acquisition Regulation (FAR) rule 2019–009, Prohibition on Contracting with Entities Using Certain Telecommunications and Video Surveillance Services or Equipment.

DATES: Submit comments on or before January 11, 2021.

ADDRESSES: Written comments and recommendations for this information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under Review—Open for Public Comments'' or by using the search function. Additionally, submit a copy to GSA through *http://www.regulations.gov* and follow the instructions on the site. This website provides the ability to type short comments directly into the comment field or attach a file for lengthier comments.

Instructions: All items submitted must cite OMB Control No. 9000–0201, Prohibition on Contracting with Entities Using Certain Telecommunications and Video Surveillance Services or Equipment (FAR Case 2019–009). Comments received generally will be posted without change to *http://www.regulations.gov,* including any personal and/or business confidential information provided. To confirm receipt of your comment(s), please check *regulations.gov,* approximately two-to-three days after submission to verify posting. If there are difficulties submitting comments, contact the GSA Regulatory Secretariat Division at 202–501–4755 or *GSARegSec@gsa.gov.*

FOR FURTHER INFORMATION CONTACT: FAR Policy at telephone 202–969–4075, or *farpolicy@gsa.gov.*

SUPPLEMENTARY INFORMATION:

A. OMB Control Number, Title, and any Associated Form(s)

9000–0201, Prohibition on Contracting with Entities Using Certain Telecommunications and Video Surveillance Services or Equipment (FAR Case 2019–009).

B. Need and Uses

This information collection supports implementation of subparagraph (a)(1)(B) of Section 889 of the John S. McCain National Defense Authorization Act for Fiscal Year 2019 (Pub. L. 115–232). This section prohibits executive agencies from entering into, or extending or renewing, a contract with an entity that uses any equipment, system, or service that uses covered telecommunications equipment or services as a substantial or essential component of any system, or as critical technology as part of any system, on or after August 13, 2020, unless an exception applies or a waiver has been granted.

This requirement is implemented in the FAR through the provision at FAR 52.204–24, Representation Regarding Certain Telecommunications and Video Surveillance Services or Equipment, the clause at FAR 52.204–25, Prohibition on Contracting for Certain Telecommunications and Video Surveillance Services or Equipment, and the provision at FAR 52.204–26, Covered Telecommunications Equipment or Services—Representation.

Information collected under the provision at FAR 52.204–24 will be used to identify if an offeror uses any equipment, system, or service that uses covered telecommunications equipment or services as a substantial or essential component of any system, or as critical technology as part of any system, and their intended use in order to determine whether the prohibition applies.

Information collected under the clause at FAR 52.204–25 will consist of reports from contractors who have identified, post-award, the use of any equipment, system, or service that uses covered telecommunications equipment or services as a substantial or essential component of any system, or as critical technology as part of any system, and requires a disclosure that will be used by agency personnel to identify and consult with legal counsel and the program office on next steps regarding the prohibited equipment or services.

If the Government seeks a waiver from the prohibition, the offeror will be required to provide a full and complete laydown of the presence of covered telecommunications or video surveillance equipment or services in the entity's supply chain, a phase-out plan to eliminate such covered telecommunications equipment or services from the offeror's systems, and any other information necessary for the agency to process the waiver.

Information collected under the provision at FAR 52.204–26 will be used to identify if an offeror uses any covered telecommunications equipment or services, or any equipment, system, or service that uses covered telecommunications equipment or services.

C. Annual Burden

The first notice for this information collection was published prior to the second interim rule that published on August 2 at 85 FR 53126. The information collection has been updated to reflect the second interim rule that added the representation in FAR 52.204–26.

The annual public reporting burden for this collection of information is estimated as follows:

Agency: DoD, GSA, and NASA.
Type of Information Collection: New Collection.
Title of Collection: Representation Regarding Certain Telecommunications and Video Surveillance Services or Equipment.
FAR Provision: 52.204–24
Affected Public: Private Sector—Business.
Total Estimated Number of Respondents: 81,902.
Average Responses per Respondent: 380.
Total Estimated Number of Responses: 31,083,433.
Average Time (for both positive and negative representations) per Response: 3 hours.
Total Annual Time Burden: 93,250,299.
Agency: DoD, GSA, and NASA.
Type of Information Collection: New Collection.
Title of Collection: Prohibition on Contracting for Certain Telecommunications and Video Surveillance Services or Equipment.
FAR Clause: 52.204–25
Affected Public: Private Sector—Business.
Total Estimated Number of Respondents: 5,140.
Average Responses per Respondent: 5.
Total Estimated Number of Responses: 25,700.
Average Time per Response: 3 hours.
Total Annual Time Burden: 77,100.
Agency: DoD, GSA, and NASA.
Type of Information Collection: New Collection.
Title of Collection: Waiver from Prohibition on Contracting for Certain Telecommunications and Video Surveillance Services or Equipment.
FAR Clause: 52.204–25
Affected Public: Private Sector—Business.
Total Estimated Number of Respondents: 20,000.
Average Responses per Respondent: 1.
Total Estimated Number of Responses: 20,000.
Average Time per Response: 160 hours.
Total Annual Time Burden: 3,200,000.
Agency: DoD, GSA, and NASA.
Type of Information Collection: New Collection.
Title of Collection: Covered Telecommunications Equipment or Services—Representation.
FAR Provision: 52.204–26
Affected Public: Private Sector—Business.
Total Estimated Number of Respondents: 387,967.
Average Responses per Respondent: 1.

Total Estimated Number of Responses: 387,967.

Average Time per Response: 1 hour.

Total Annual Time Burden: 387,967.

The public reporting burden for this collection of information consists of a representation to identify whether an offeror uses covered telecommunications equipment or services for each offer as required by FAR 52.204–26 and 52.204–24, information required for a waiver from the prohibition in FAR 52.204–25, and reports of identified use of covered telecommunications equipment or services as required by FAR 52.204–25.

The representation at FAR 52.204–24 is estimated to average 3 hours per response to review the prohibitions, research the source of the product or service, and complete the additional detailed disclosure, if applicable. Reports required by FAR 52.204–25 are estimated to average 3 hours per response, including the time for reviewing definitions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the report.

If the Government seeks a waiver from the prohibition, the offeror will be required to provide a full and complete laydown of the presence of covered telecommunications or video surveillance equipment or services in the entity's supply chain and a phase-out plan to eliminate such covered telecommunications equipment or services from the offeror's systems. There is no way to estimate the total number of waivers at this time. For the purposes of complying with the PRA analysis, DoD, GSA, and NASA estimate 20,000 waivers; however there is no data for the basis of this estimate. This estimate may be higher or lower once the rule is in effect.

The representation at FAR 52.204–26 must be completed by each offeror at least annually. This provision requires an offeror to represent whether it ''does'' or ''does not'' use covered telecommunications equipment or services, or any equipment, system, or service that uses covered telecommunications equipment or services. The representation at FAR 52.204–26 is estimated to average 1 hour per response to review and complete the representation.

D. Public Comments

The first interim rule to implement Section 889(a)(1)(B) was published in the **Federal Register** at 85 FR 42665 on July 14, 2020 and included the information collection for the updates to FAR at 52.204–24 and 52.204–25. The request for public comment (60-day notice) on that information collection was published separately at 85 FR 50026 on August 17, 2020. Subsequently, a second interim rule was published at 85 FR 53126 on August 27, 2020 that added an information collection requirement for the provision at FAR 52.204–26 and included a request for public comment (60-day notice) on the revised information collection.

A total of four comments were received on the 60-day notice published on August 17th, and no comments were received on the revised information collection in response to the second interim rule. The comments did not address Paperwork Reduction Act issues. None of the commenters expressed an opinion on whether these collections of information are needed; whether the estimated number of burden hours is accurate; or ways to minimize the burden of the collection of information. We have not changed the estimate of the burden in the rule.

Obtaining Copies: Requesters may obtain a copy of the information collection documents from the GSA Regulatory Secretariat Division by calling 202–501–4755 or emailing *GSARegSec@gsa.gov.*

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Agency for Toxic Substances and Disease Registry

[30Day–21–0055]

Agency Forms Undergoing Paperwork Reduction Act Review

In accordance with the Paperwork Reduction Act of 1995, the Agency for Toxic Substances and Disease Registry (ATSDR) has submitted the information collection request titled ''ATSDR Communication Activities Survey (ACAS)'' to the Office of Management and Budget (OMB) for review and approval. ATSDR previously published a ''Proposed Data Collection Submitted for Public Comment and Recommendations'' notice on 04/03/2020 to obtain comments from the public and affected agencies. ATSDR did not receive comments related to the previous notice. This notice serves to allow an additional 30 days for public and affected agency comments.

ATSDR will accept all comments for this proposed information collection project. The Office of Management and Budget is particularly interested in comments that:

(a) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(b) Evaluate the accuracy of the agencies estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

(c) Enhance the quality, utility, and clarity of the information to be collected;

(d) Minimize the burden of the collection of information on those who are to respond, including, through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses; and

(e) Assess information collection costs.

To request additional information on the proposed project or to obtain a copy of the information collection plan and instruments, call (404) 639–7570. Comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function. Direct written comments and/or suggestions regarding the items contained in this notice to the Attention: CDC Desk Officer, Office of Management and Budget, 725 17th Street NW, Washington, DC 20503 or by fax to (202) 395–5806. Provide written comments within 30 days of notice publication.

Proposed Project

ATSDR Communication Activities Survey (ACAS) (OMB Control No. 0923–0055, Exp. 06/30/2020)—Reinstatement with Change—Agency for Toxic Substances and Disease Registry (ATSDR).

Background and Brief Description

The Agency for Toxic Substances and Disease Registry (ATSDR) is seeking a

three-year Paperwork Reduction Act clearance for this reinstatement with change information collection request (ICR) titled the ''ATSDR Communication Activities Survey (ACAS)'' (OMB Control No. 0923–0055, expiration date 06/30/2020).

ATSDR serves the public through responsive public health actions to promote healthy and safe environments and to prevent harmful exposures. The agency aims to work effectively with communities in proximity to hazardous waste sites by listening to and understanding their health concerns and seeking their guidance on where, when, and how to take public health actions.

Community members are key participants in the agency's public health assessment process and should be actively involved in decisions that impact their community. Thus, agency goals for this ICR are to continue to ascertain the effectiveness of, the differences in, and the consistency of the delivery of ATSDR activities and respondent perceptions across sites and over time. ATSDR will use the ACAS to: (1) Determine how effectively it's site teams engage community members; (2) discover how well ATSDR provides effective, clear, and consistent communication and information on how to promote healthy and safe environments; (3) understand whether the agency's activities are helping the communities address environmental issues; and (4) improve ATSDR's activities to make a greater impact within the communities served.

Over the next three years, ATSDR will continue to conduct the ACAS at communities where ATSDR and state or local agencies have implemented site activities to address environmental issues. For each engaged community, the ACAS will be used to assess a set of effectiveness indicators for ATSDR site-specific activities about the respondents' involvement, knowledge, satisfaction, observations, and opinions about ATSDR's community engagement and educational outreach efforts to inform communities. The indicators will measure ATSDR effectiveness in the following respondent areas: (1) Their involvement with the site activities; (2) how they received, and prefer to receive, ATSDR information; (3) their knowledge and understanding of ATSDR site activities and how to reduce hazardous exposures; (4) their observations and opinions of ATSDR's role in community preparedness; (5) their self-evaluation on their risk of exposure to possible environmental hazards; (6) their demographic profile; (7) their environmental concerns; and (8) any additional feedback.

ATSDR has assessed its recent uses of the ACAS and proposes several changes to increase the utility and efficiency of this survey. During 2018, 125 surveys were collected from seven sites (62% paper/38% online). ATSDR proposes to eliminate telephone surveys, given that none were requested. Thus, the estimated time burden and number of respondents for the ACAS has been reapportioned between hardcopy and online collections. ATSDR would like to remove one question and add three additional questions on the ACAS. As an additional change, ATSDR will no longer seek PRA clearance to provide incentives for community members who respond to the ACAS.

In addition, ATSDR would like to pilot using text messaging as a way of collecting data quickly; thus, ATSDR proposes to conduct a highly abbreviated three-question form of the survey via SMS text messaging using ''Poll Everywhere'' software. Respondents, using their own cell phones, will text their answers to a number generated by the software. ATSDR does not propose to offer incentives for those who respond to the SMS Text Survey.

ATSDR anticipates that approximately six to seven sites will be engaged for feedback per year (or about 20 sites over the next three years). Each year, ATSDR will recruit approximately 367 individuals, aged 18 and older, to participate in the ACAS or the abbreviated SMS Text Survey where ATSDR is holding public community meetings. Therefore, respondents will include approximately 52 to 61 community members and agency stakeholders per meeting (6 to 7 meetings per year). The community members may include, but are not limited to, the general public, community leaders, faith-based leaders, and business leaders. The agency stakeholders may include, but are not limited to, state and local environmental health department employees, such as environmental health assessors, toxicologists, and departmental officials. The mix of respondents will be approximately 75% community members (n=275 per year) and 25% agency stakeholders (n=92 per year).

For meetings where the ACAS is offered, trained ATSDR staff will have a table set up at the entrance of the community meeting where community meeting attendees will pick up a fact sheet which explains what ATSDR does, and the purpose of ATSDR's site activities and the two different survey options. At the end of these ATSDR public community meetings, there will be an announcement to ask interested attendees to take the ACAS. All interested attendees will sign in (n=167) and provide their preferred mode for taking the ACAS (in-person or online). The ACAS will preferably be self-administered right after the public community meetings. If this is not a convenient time for the respondent, the ACAS may be completed online. When offered, we estimate that most respondents will choose the self-administered ACAS (n=103) and fewer will choose the online ACAS (n=64). For purposes of burden estimation, 125 (75%) of the respondents will be community members and 42 will be agency stakeholders (25%).

We will offer the abbreviated SMS Text Survey at selected sites where the number of meeting attendees is large. Sign-in for this mode of collection will not be required. For purposes of burden estimation, ATSDR anticipates that an additional 200 respondents will consent to this abbreviated SMS Text Survey each year; we have apportioned the respondent type as applied to the ACAS (150 community members and 50 agency stakeholders).

ATSDR is requesting an increase in the annual number of responses from 334 in 2017 to 534 in 2020, and an increase in the annual time burden from 49 hours in 2017 to 58 hours in 2020. These increases are based on the addition of the pilot SMS Text Survey. There are no costs to the respondents other than their time.

ESTIMATED ANNUALIZED BURDEN HOURS
