6. *Notice of Intent to Apply:* The Department will be able to review grant applications more efficiently if we know the approximate number of applicants that intend to apply. Therefore, we strongly encourage each potential applicant to notify us of their intent to submit an application. To do so, please email the program contact person listed under **FOR FURTHER INFORMATION CONTACT** with the subject line ''Intent to Apply,'' and include the applicant's name and a contact person's name and email address. Applicants that do not submit a notice of intent to apply may still apply for funding; applicants that do not submit a notice of intent to apply are not bound to apply or bound by the information provided.

V. Application Review Information

1. *Selection Criteria:* The selection criteria for this program are from 34 CFR 75.210 or are established in accordance with section 437(d)(1) of GEPA. The source and maximum score for each criterion are indicated in parentheses.

(a) *Quality of the project design* (Up to 50 points). The Secretary considers the quality of the design of the proposed project. In determining the quality of the design of the proposed project, the Secretary considers the following factors:

(1) The extent to which the services to be provided by the proposed project will create and offer activities that focus on enabling participants to obtain the skills necessary to gain employment in high-skill, high-wage, and in-demand occupations in emerging fields or in a specific career field. (Section 437(d)(1) of GEPA). (Up to 20 points).

(2) The extent to which the services to be provided by the proposed project reflect up-to-date knowledge from research and effective practice. (34 CFR 75.210). (Up to 15 points).

(3) The extent to which the design of the proposed project is appropriate to, and will successfully address, the needs of the target population or other identified needs. (34 CFR 75.210). (Up to 5 points).

(4) The extent to which the proposed project will integrate with or build on similar or related efforts to improve relevant outcomes (as defined in 34 CFR 77.1(c)), using existing funding streams from other programs or policies supported by community, State, and Federal resources. (34 CFR 75.210). (Up to 5 points).

(5) The extent to which the training or professional development services to be provided by the proposed project are of sufficient quality, intensity, and duration to lead to improvements in practice among the recipients of those services. (34 CFR 75.210). (Up to 5 points).

(b) *Quality of the management plan and project personnel* (Up to 25 points). The Secretary considers the quality of the management plan for, and the quality of the personnel who will carry out, the proposed project. In determining the quality of the management plan and the project personnel for the proposed project, the Secretary considers the following factors:

(1) The adequacy of the management plan to achieve the objectives of the proposed project on time and within budget, including clearly defined responsibilities, timelines, and milestones for accomplishing project tasks. (34 CFR 75.210). (Up to 10 points).

(2) The extent to which the applicant encourages applications for employment from persons who are members of groups that have traditionally been underrepresented based on race, color, national origin, gender, age, or disability. (34 CFR 75.210). (Up to 5 points).

(3) The extent to which the time commitments of the project director and principal investigator and other key project personnel are appropriate and adequate to meet the objectives of the proposed project. (34 CFR 75.210). (Up to 5 points).

(4) The qualifications, including relevant training and experience, of the project director or principal investigator, key project personnel, and project consultants or subcontractors. (34 CFR 75.210). (Up to 5 points).

(c) *Adequacy of resources* (Up to 10 points). The Secretary considers the adequacy of resources for the proposed project. In determining the adequacy of resources for the proposed project, the Secretary considers the following factors:

(1) The adequacy of support, including facilities, equipment, supplies, and other resources, from the applicant organization or the lead applicant organization. (34 CFR 75.210). (Up to 2 points).

(2) The extent to which the budget is adequate to support the proposed project and the costs are reasonable in relation to the objectives, design, and potential significance of the proposed project. (34 CFR 75.210). (Up to 5 points).

(3) The relevance and demonstrated commitment of each partner in the proposed project to the implementation and success of the project. (34 CFR 75.210). (Up to 3 points).

(d) *Quality of the project evaluation* (Up to 10 points). The Secretary considers the quality of the evaluation to be conducted of the proposed project. In determining the quality of the evaluation, the Secretary considers the following factors:

(1) The extent to which the methods of evaluation include the use of objective performance measures that are clearly related to the intended outcomes of the project and will produce quantitative and qualitative data to the extent possible. (34 CFR 75.210). (Up to 5 points).

(2) The extent to which the methods of evaluation will provide performance feedback and permit periodic assessment of progress toward achieving intended outcomes. (34 CFR 75.210). (Up to 5 points).

2. *Review and Selection Process:* We remind potential applicants that in reviewing applications in any discretionary grant competition, the Secretary may consider, under 34 CFR 75.217(d)(3), the past performance of the applicant in carrying out a previous award, such as the applicant's use of funds, achievement of project objectives, and compliance with grant conditions. The Secretary may also consider whether the applicant failed to submit a timely performance report or submitted a report of unacceptable quality.

In addition, in making a competitive grant award, the Secretary requires various assurances, including those applicable to Federal civil rights laws that prohibit discrimination in programs or activities receiving Federal financial assistance from the Department (34 CFR 100.4, 104.5, 106.4, 108.8, and 110.23).

3. *Risk Assessment and Special Conditions:* Consistent with 2 CFR 200.205, before awarding grants under this competition, the Department conducts a review of the risks posed by applicants. Under 2 CFR 3474.10, the Secretary may impose special conditions and, in appropriate circumstances, high-risk conditions on a grant if the applicant or grantee is not financially stable; has a history of unsatisfactory performance; has a financial or other management system that does not meet the standards in 2 CFR part 200, subpart D; has not fulfilled the conditions of a prior grant; or is otherwise not responsible.

4. *Integrity and Performance System:* If you are selected under this competition to receive an award that over the course of the project period may exceed the simplified acquisition threshold (currently $250,000), under 2 CFR 200.206(a)(2) we must make a judgment about your integrity, business ethics, and record of performance under Federal awards—that is, the risk posed by you as an applicant—before we make an award. In doing so, we must consider any information about you that is in the integrity and performance system (currently referred to as the Federal Awardee Performance and Integrity Information System (FAPIIS)), accessible through the System for Award Management (SAM). You may review and comment on any information about yourself that a Federal agency previously entered and that is currently in FAPIIS.

Please note that, if the total value of your currently active grants, cooperative agreements, and procurement contracts from the Federal Government exceeds $10,000,000, the reporting requirements in 2 CFR part 200, Appendix XII, require you to report certain integrity information to FAPIIS semiannually. Please review the requirements in 2 CFR part 200, Appendix XII, if this grant plus all the other Federal funds you receive exceed $10,000,000.

5. *In General:* In accordance with the Office of Management and Budget's guidance located at 2 CFR part 200, all applicable Federal laws, and relevant Executive guidance, the Department will review and consider applications for funding pursuant to this notice inviting applications in accordance with—

a. Selecting recipients most likely to be successful in delivering results based on the program objectives through an objective process of evaluating Federal award applications (2 CFR 200.205);

b. Prohibiting the purchase of certain telecommunication and video surveillance services or equipment in alignment with section 889 of the National Defense Authorization Act of 2019 (Pub. L. 115–232) (2 CFR 200.216);

c. Promoting the freedom of speech and religious liberty in alignment with Promoting Free Speech and Religious Liberty (E.O. 13798) and Improving Free Inquiry, Transparency, and Accountability at Colleges and Universities (E.O. 13864) (2 CFR 200.300, 200.303, 200.339, and 200.341);

d. Providing a preference, to the extent permitted by law, to maximize use of goods, products, and materials produced in the United States (2 CFR 200.322); and

e. Terminating agreements in whole or in part to the greatest extent authorized by law if an award no longer effectuates the program goals or agency priorities (2 CFR 200.340).

VI. Award Administration Information

1. *Award Notices:* If your application is successful, we notify your U.S. Representative and U.S. Senators and send you a Grant Award Notification (GAN), or we may send you an email containing a link to access an electronic version of your GAN. We may notify you informally, also.

If your application is not evaluated or not selected for funding, we notify you.

2. *Administrative and National Policy Requirements:* We identify administrative and national policy requirements in the application package and reference these and other requirements in the *Applicable Regulations* section of this notice.

We reference the regulations outlining the terms and conditions of an award in the *Applicable Regulations* section of this notice and include these and other specific conditions in the GAN. The GAN also incorporates your approved application as part of your binding commitments under the grant.

3. *Open Licensing Requirement:* Unless an exception applies, if you are awarded a grant under this competition, you will be required to openly license to the public grant deliverables created in whole, or in part, with Department grant funds. When the deliverable consists of modifications to pre-existing works, the license extends only to those modifications that can be separately identified and only to the extent that open licensing is permitted under the terms of any licenses or other legal restrictions on the use of pre-existing works. Additionally, a grantee or subgrantee that is awarded competitive grant funds must have a plan to disseminate these public grant deliverables. The dissemination plan can be developed and submitted after your application has been reviewed and selected for funding. For additional information on the open licensing requirements, please refer to 2 CFR 3474.20.

4. *Reporting:* (a) If you apply for a grant under this competition, you must ensure that you have in place the necessary processes and systems to comply with the reporting requirements in 2 CFR part 170 should you receive funding under the competition. This does not apply if you have an exception under 2 CFR 170.110(b).

(b) At the end of your project period, you must submit a final performance report, including financial information, as directed by the Secretary. If you receive a multiyear award, you must submit an annual performance report

that provides the most current performance and financial expenditure information as directed by the Secretary under 34 CFR 75.118. The Secretary may also require more frequent performance reports under 34 CFR 75.720(c). For specific requirements on reporting, please go to *www.ed.gov/fund/grant/apply/appforms/appforms.html.*

(c) Under 34 CFR 75.250(b), the Secretary may provide a grantee with additional funding for data collection analysis and reporting. In this case the Secretary establishes a data collection period.

5. *Performance Measures:* The Department has established the following performance measures for purposes of GPRA and for Department reporting under 34 CFR 75.110, which it will use to evaluate the overall performance of the grantee's project, as well as NHCTEP as a whole:

(a) *At the secondary level:* An increase in—

(1) The percentage of CTE concentrators who graduate high school, as measured by—

(A) The four-year adjusted cohort graduation rate (defined in section 8101 of ESEA); and

(B) At the grantee's discretion, the extended-year adjusted cohort graduation rate (defined in section 8101 of ESEA);

(2) The percentage of CTE concentrators graduating from high school having attained postsecondary credits in the relevant CTE program earned through a dual or concurrent enrollment program or another credit transfer agreement;

(3) The percentage of CTE concentrators graduating from high school having participated in work-based learning;

(4) The percentage of CTE concentrators graduating from high school having attained a recognized postsecondary credential; and

(5) The percentage of CTE concentrators who, after exiting from secondary education, are in postsecondary education or advanced training, military service, or a service program, or are employed.

(b) *At the postsecondary level:* An increase in—

(1) The percentage of CTE concentrators who remain enrolled in postsecondary education, are in advanced training, military service, or a service program, or are employed; and

(2) The percentage of CTE concentrators who receive a recognized postsecondary credential.

Project-Specific Performance Measures:

In addition to these measures, applicants may propose project-specific performance measures and performance targets consistent with the objectives of the proposed project. Examples of such project-specific performance measures could include student recruitment, student participation in work-based learning at the postsecondary level, and teacher and faculty participation in professional development.

Note: All grantees will be expected to submit a semi-annual and an annual performance report addressing these performance measures, to the extent that these performance measures apply to each grantee's NHCTEP project.

6. *Continuation Awards:* In making a continuation award under 34 CFR 75.253, the Secretary considers, among other things: Whether a grantee has made substantial progress in achieving the goals and objectives of the project; Whether the grantee has expended funds in a manner that is consistent with its approved application and budget; and, if the Secretary has established performance measurement requirements, the performance targets in the grantee's approved application.

In making a continuation award, the Secretary also considers whether the grantee is operating in compliance with the assurances in its approved application, including those applicable to Federal civil rights laws that prohibit discrimination in programs or activities receiving Federal financial assistance from the Department (34 CFR 100.4, 104.5, 106.4, 108.8, and 110.23).

VII. Other Information

Accessible Format: On request to the program contact person listed under **FOR FURTHER INFORMATION CONTACT**, individuals with disabilities can obtain this document and a copy of the application package in an accessible format. The Department will provide the requestor with an accessible format that may include Rich Text Format (RTF) or text format (txt), a thumb drive, an MP3 file, braille, large print, audiotape, or compact disc, or other accessible format.

Electronic Access to This Document: The official version of this document is the document published in the **Federal Register**. You may access the official edition of the **Federal Register** and the Code of Federal Regulations at *www.govinfo.gov.* At this site you can view this document, as well as all other documents of this Department published in the **Federal Register**, in text or Portable Document Format (PDF). To use PDF you must have Adobe Acrobat Reader, which is available free at the site.

You may also access documents of the Department published in the **Federal Register** by using the article search feature at *www.federalregister.gov.* Specifically, through the advanced search feature at this site, you can limit your search to documents published by the Department.

Scott Stump,

Assistant Secretary for Career, Technical, and Adult Education.

BILLING CODE 4000–01–P

DEPARTMENT OF EDUCATION

Notice of the Rescission of Outdated Guidance Documents

AGENCY: Office of the Secretary, Department of Education.

ACTION: Notice; correction.

SUMMARY: On August 31, 2020, we published in the **Federal Register** a notice announcing the guidance documents the Department of Education (Department) is rescinding because they are outdated, after conducting a review of its guidance under Executive Order (E.O.) 13891 (85 FR 54148). This notice makes corrections to the included list of documents for the Office of Postsecondary Education.

DATES: This correction is applicable on January 19, 2021.

FOR FURTHER INFORMATION CONTACT: Lynn Mahaffie, Department of Education, 400 Maryland Avenue SW, Room 6E–231, Washington, DC 20202. Telephone: (202) 453–7862. Email: *Lynn.Mahaffie@ed.gov.*

If you use a telecommunications device for the deaf (TDD) or a text telephone (TTY), call the Federal Relay Service (FRS), toll-free, at 1–800–877–8339.

SUPPLEMENTARY INFORMATION: On October 9, 2019, the President issued E.O. 13891 titled ''Promoting the Rule of Law Through Improved Agency Guidance Documents.'' 84 FR 55235. Section 3(b) of the E.O. requires the Department to ''review its guidance documents and, consistent with applicable law, rescind those guidance documents that it determines should no longer be in effect.'' On August 31, 2020, we published a notice in the **Federal Register** notifying the public, including the Department's stakeholders, of the guidance documents the Department was rescinding as outdated (*e.g.,* superseded by subsequent statutory amendments or enactments), in accordance with section

3(b) of E.O. 13891 (85 FR 54148) (the August 31 Notice).

The August 31 Notice inadvertently included 18 documents that were not intended to be rescinded. We are revising the list of rescinded documents for the Office of Postsecondary Education to remove the inadvertently included documents.

Corrections

In FR Doc 2020–19144 appearing on page 54148 in the **Federal Register** of August 31, 2020, the following corrections are made:

1. On page 54167, the 27th entry from the top of the page, entitled ''Sample Default Prevention and Management Plan . . . 9/30/2005'' is removed.

2. On page 54169, the 17th entry from the top of the page, entitled ''FWS Community Service Requirements . . . 5/17/2007'' is removed.

3. On page 54171, the third entry from the bottom of the page, entitled ''Guidance to Institutions and Accrediting Agencies Regarding a Credit Hour as Defined in the Final Regulations Published on October 29, 2010 . . . 3/18/2011'' is removed.

4. On page 54172, the third entry from the top of the page, entitled ''Implementation of Program Integrity regulations . . . 7/20/2011'' is removed.

5. On page 54172, the 36th entry from the top of the page, entitled ''Title IV Eligibility for Students Without a Valid High School Diploma . . . 12/6/2012'' is removed.

6. On page 54172, the 39th entry from the top of the page, entitled ''Charges Incurred at Bookstores . . . 11/28/2012'' is removed.

7. On page 54173, the 26th entry from the bottom of the page, entitled ''Competency-Based Education Programs—Q&A . . . 12/19/2014'' is removed.

8. On page 54173, the fourth entry from the bottom of the page, entitled ''FY 2016 Sequester Required Changes to the Title IV Student Aid Programs . . . 4/23/2015'' is removed.

9. On page 54174, the 29th entry from the top of the page, entitled ''2017–2018 Award Year: FAFSA® Information to be Verified and Acceptable Documentation . . . 4/5/2016'' is removed.

10. On page 54174, the 30th entry from the top of the page, entitled ''Changes to Title IV Eligibility for Students Without a Valid High School Diploma Who Are Enrolled in Eligible Career Pathway Programs . . . 5/9/2016'' is removed.

11. On page 54174, the 31st entry from the top of the page, entitled ''FY 2017 Sequester Required Changes to the Title IV Student Aid Programs . . . 5/31/2016'' is removed.

12. On page 54174, the 34th entry from the top of the page, entitled ''2017–2018 Federal Pell Grant Payment and Disbursement Schedules . . . 10/18/2016'' is removed.

13. On page 54174, the 19th entry from the bottom of the page, entitled ''Withdrawal of Dear Colleague Letter 15–14 . . . 3/16/2017'' is removed.

14. On page 54174, the 17th entry from the bottom of the page, entitled ''Subject: 2018–2019 Award Year: FAFSA® Information to be Verified and Acceptable Documentation . . . 5/25/2017'' is removed.

15. On page 54174, the third entry from the bottom of the page, entitled ''Subject: Modifications to the Campus-Based Programs for institutions and students affected by Hurricanes or Tropical Storms Harvey, Irma, and Maria . . . 3/26/2018'' is removed.

16. On page 54174, the second entry from the bottom of the page, entitled ''Subject: REVISED 2018–2019 Federal Pell Grant Payment and Disbursement Schedules . . . 4/10/2018'' is removed.

17. On page 54175, the second entry from the top of the page, entitled ''Subject: Webinar Recording–How to Correct Historical Enrollment Reporting in NSLDS . . . 6/19/2019'' is removed.

18. On page 54175, the fourth entry from the top of the page, entitled ''Subject: Online Training Resource–Financial Aid Administrator's Took Kit . . . 9/10/2019'' is removed.

Accessible Format: On request to the program contact person listed under **FOR FURTHER INFORMATION CONTACT**, individuals with disabilities can obtain this document in an accessible format. The Department will provide the requestor with an accessible format that may include Rich Text Format (RTF) or text format (txt), a thumb drive, an MP3 file, braille, large print, audiotape, or compact disc, or other accessible format.

Electronic Access to This Document: The official version of this document is the document published in the **Federal Register**. You may access the official edition of the **Federal Register** and the Code of Federal Regulations at *www.govinfo.gov.* At this site you can view this document, as well as all other documents of this Department published in the **Federal Register**, in text or Portable Document Format (PDF). BILLING CODE 4000–01–P

DEPARTMENT OF ENERGY

High-Level Radioactive Waste Interpretation Limited Change to DOE Manual 435.1–1, Radioactive Waste Management Manual and Administrative Change to DOE Order 435.1, Radioactive Waste Management

AGENCY: Office of Environmental Management, Department of Energy.

ACTION: Notice.

SUMMARY: The Department of Energy (Department or DOE) announces the availability of a limited change to DOE Manual 435.1–1, *Radioactive Waste Management Manual,* to formally incorporate the Department's interpretation of the statutory definition of high-level radioactive waste (HLW). In support of that effort, DOE made an administrative change to DOE Order 435.1, *Radioactive Waste Management.* The HLW interpretation was described in the *Supplemental Notice Concerning U.S. Department of Energy Interpretation of High-Level Radioactive Waste,* published in the **Federal Register** on June 10, 2019 (Supplemental Notice). The revised Manual includes DOE's interpretation of the statutory term HLW as defined in the Atomic Energy Act of 1954, as amended (AEA), and the Nuclear Waste Policy Act of 1982, as amended (NWPA).

ADDRESSES: This **Federal Register** Notice (Notice), the Supplemental Notice (which contains responses to public comments on the HLW interpretation) and other documents relevant to DOE's HLW interpretation are available on the Department's website at: *https://www.energy.gov/em/high-levelradioactive-waste-hlw-interpretation.* The revised Order and Manual are available at the DOE Office of Management's DOE Directives website at: *https://www.directives.doe.gov/directives-browse#c8-operator=or&b_start=0.*

FOR FURTHER INFORMATION CONTACT: Theresa Kliczewski and/or James Joyce, U.S. Department of Energy, Office of Environmental Management, Office of Waste and Materials Management (EM–4.2), 1000 Independence Avenue SW, Washington, DC 20585. Emails:

Theresa.Kliczewski@em.doe.gov and *James.Joyce@em.doe.gov.* Phone number: (202) 586–5000.

SUPPLEMENTARY INFORMATION:

I. Background

DOE Order 435.1, *Radioactive Waste Management,* establishes the requirements that DOE programs must follow in managing DOE radioactive waste to protect human health, safety, and the environment. The Order is accompanied by DOE Manual 435.1–1, *Radioactive Waste Management Manual,* which establishes the requirements that DOE must follow in managing DOE radioactive waste.

In October 2018, the Department issued a **Federal Register** notice [1] (October 10, 2018, FRN) seeking public comments on its HLW interpretation. The 90-day public comment period, including a 30-day extension to submit comments, invited public input in order to better understand stakeholder perspectives. The **Federal Register** notice sought to enhance public understanding of DOE's views of its legal authority and to increase transparency. DOE received a total of 5,555 comments from a variety of stakeholders: Members of the public, Native American tribes, members of Congress, numerous state and local governments, and one federal agency, the Nuclear Regulatory Commission (NRC). Of that number, there were roughly 360 distinct comments (that is, excluding duplicative form comments). DOE received both critical and supportive comments, with the majority of comments expressing concerns or questions relating to health and safety and environmental outcomes associated with the interpretation. Positive comments on the HLW interpretation were received from, among others, the NRC; the nuclear industry; DOE contractors; the Energy Facility Contractors Group; the city of Carlsbad, NM; Nye County, NV; Idaho Falls, ID, stakeholder groups such as Energy Communities Alliance; Savannah River Site (SRS) Community Reuse Organization; Tri-Cities Washington Economic Development Council; Hanford Communities; DOE National Laboratories; and individuals. Critical or negative comments were received from, among others, the Washington Department of Ecology; the Yakama Nation; the Consolidated Tribes of the Umatilla Indian Reservation; the Seneca Nation; the Shoshone-Bannock Tribes; and stakeholder groups such as the Natural Resources Defense Council, Nuclear Watch New Mexico, and Alliance for Nuclear Accountability; and individuals.

In June 2019, after careful consideration of all comments received on the October 2018 FRN, DOE issued the *Supplemental Notice Concerning U.S. Department of Energy Interpretation of High-Level Radioactive Waste* [2] (June 10, 2019 FRN). The Supplemental Notice provided additional explanation of DOE's interpretation as informed by public review and comment and further consideration by DOE following the October 2018 FRN. The Supplemental Notice also provided responses to significant comments received through the public comment process. In the Supplemental Notice, DOE did not make any changes or revisions to current policies, legal requirements, or agreements with respect to HLW.

In its Supplemental Notice, DOE explained its interpretation of the term HLW, as defined in the AEA and NWPA.[3] DOE has the long-standing authority and responsibility under the AEA to ensure that all DOE radioactive waste—including reprocessing waste—is managed and disposed of in a safe manner. The AEA and NWPA define HLW as:

(A) The highly radioactive material resulting from the reprocessing of spent nuclear fuel, including liquid waste produced directly in reprocessing and any solid material derived from such liquid waste that contains fission products in sufficient concentrations; and

(B) Other highly radioactive material that the Commission, consistent with existing law, determines by rule requires permanent isolation.

42 U.S.C. 10101(12); see 42 U.S.C. 2014(dd). In Paragraph A, Congress limited HLW to those materials that are ''highly radioactive.'' This limiting term applies to all reprocessing waste, including the ''liquid waste produced directly in reprocessing'' and ''any solid material derived from such liquid waste.'' The use of the limiting term ''highly radioactive'' demonstrates that Congress intended to distinguish between reprocessing waste that is ''highly radioactive'' and waste that is not. If Congress had intended to define all reprocessing waste as HLW regardless of its radiological characteristics, it would not have included the ''highly radioactive'' requirement and instead defined HLW as ''all waste material resulting from the reprocessing of spent nuclear fuel.'' Similarly, for ''any solid material derived from'' the ''liquid waste produced directly in reprocessing,'' Congress also specified that in addition to being ''highly radioactive'' it must also contain fission products in ''sufficient concentrations.'' The terms ''highly radioactive'' and ''sufficient concentrations'' are not defined in the AEA or the NWPA. By providing in Paragraph A that liquid reprocessing waste is HLW only if it is ''highly radioactive,'' and that solid material derived from liquid reprocessing waste is HLW only if it is ''highly radioactive'' and contains fission products in ''sufficient concentrations'' without further defining these standards, Congress left it to DOE, for its reprocessing wastes, to determine when the standards are met. That is what DOE has done through its interpretation. DOE has evaluated the meaning of those terms based on its historical knowledge, experience, and expertise in managing reprocessing wastes. DOE's interpretation is an articulation of the technical criteria that can be applied to individual waste streams on a case-by-case basis to determine whether the standard for HLW has been met. DOE also notes that in their comments on the interpretation, the NRC staff stated that they ''agree with the concept proposed in **Federal Register** October 10 Notice (83 FR 50909) that radioactive waste may be classified and disposed of in accordance with its radiological characteristics.'' DOE places significant weight on the NRC's views of matters relating to the safe management and disposal of radioactive waste, including this HLW interpretation.

As explained in the Supplemental Notice, DOE has the legal authority to interpret the term HLW in these statutes to determine that certain of its reprocessing wastes are not HLW based on their radiological characteristics. Accordingly, DOE interpreted those statutes to provide that reprocessing wastes are properly classified as non-HLW where the radiological characteristics of the waste, in combination with appropriate disposal facility requirements for safe disposal demonstrate that disposal of such waste are fully protective of human health and the environment. DOE revised the interpretation set forth in the October 2018 FRN after consideration of public comments, in particular those of the NRC and affected state and local stakeholders, in order to clarify its meaning and import. Based on comments received in response to the October 2018 FRN, DOE interpreted the statutes to provide that a reprocessing waste may be determined to be non-

[1] 83 FR 50909.

[2] 84 FR 26835.

[3] 42 U.S.C. 10101 *et seq.*

HLW if the waste meets either of the following two criteria:

(I) Does not exceed concentration limits for Class C low-level radioactive waste as set out in section 61.55 of title 10, Code of Federal Regulations, and meets the performance objectives of a disposal facility; or

(II) Does not require disposal in a deep geologic repository and meets the performance objectives of a disposal facility as demonstrated through a performance assessment conducted in accordance with applicable requirements.

Reprocessing waste meeting either I or II of the above criteria is non-HLW, and—pursuant to appropriate processes—may be classified and disposed in accordance with its radiological characteristics in an appropriate disposal facility provided all applicable requirements of the disposal facility are met.

During 2019–2020, in determining whether and how to implement the HLW interpretation specific to a particular waste stream, DOE initiated a public process pursuant to the National Environmental Policy Act (NEPA) to analyze the potential environmental impacts associated with disposing of that waste. DOE completed its environmental analysis and decided to apply the HLW interpretation to a specific waste stream, shipping eight gallons of the SRS Defense Waste Processing Facility (DWPF) recycle wastewater to the Waste Control Specialists, LLC Federal Waste Facility, a licensed commercial low-level radioactive waste facility located near Andrews, Texas, for stabilization and disposal as non-HLW.[4]

Each reprocessing waste stream has unique radiological characteristics and, accordingly, the interpretation will continue to be implemented for subsequent proposed actions on a case-by-case basis, following consideration of: Evaluation and characterization of specific reprocessing waste streams in conjunction with the waste acceptance criteria and requirements of a specific waste disposal facility; input from affected stakeholders (*e.g.,* federal, state, local and tribal officials; and members of the public); and compliance with applicable federal and state laws, regulations, and agreements.

II. Summary Description of Changes

DOE Manual 435.1–1 has been updated to include as Departmental policy DOE's interpretation of the statutory term HLW, as defined in the AEA and NWPA and consistent with the Supplemental Notice. Specifically, Chapter II of the Manual is revised to include a new Section C that sets forth the HLW interpretation and provides a basis for its use by DOE. DOE Manual 435.1–1 also is revised to set forth the roles and responsibilities of Field Managers and the Deputy Assistant Secretary for Waste and Materials Management with respect to the application of the HLW interpretation.

The HLW interpretation limited change to DOE Manual 435.1–1 does not affect DOE's current policies and practices relating to determinations under Chapter II.B of the Manual or under Section 3116 of the Ronald W. Reagan National Defense Authorization Act for Fiscal Year 2005.[5] Section 3116 will continue to apply to reprocessing waste covered under Section 3116. Chapter II.B of the Manual will continue to be used for tank closures not covered by Section 3116 and may be used in other cases determined to be appropriate by DOE.

In addition, DOE is canceling DOE Guide 435.1–1, *Implementation Guide for Use with DOE Manual 435.1–1,* as it is out of date. The cancellation of DOE Guide 435.1–1 is recognized in the administrative change to DOE Order 435.1. The definition of ''reprocessing waste'' in the Guide has now been incorporated in DOE Manual 435.1–1.

These directives can be viewed at *https://www.directives.doe.gov/.*

III. Reviews Under the National Environmental Policy Act

The objective of the limited change to DOE Manual 435.1–1 is to continue to ensure that all DOE radioactive waste, including reprocessing waste, is managed in a manner that protects worker and public health and safety, and the environment. When proposing to apply the HLW interpretation to future waste streams, DOE will prepare the necessary environmental analyses and documentation in accordance with Council on Environmental Quality regulations and DOE NEPA implementing procedures at 40 CFR parts 1500 through 1508 and 10 CFR part 1021, respectively, as was done with the application of the interpretation to the disposal of SRS DWPF recycle wastewater[6] (August 10, 2020 FRN).

Signing Authority

This document of the Department of Energy was signed on January 13, 2021, by William I. White, Senior Advisor for Environmental Management to the Under Secretary for Science, Office of Environmental Management, pursuant to delegated authority from the Secretary of Energy. That document with the original signature and date is maintained by DOE. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DOE **Federal Register** Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of the Department of Energy. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

Signed in Washington, DC, January 13, 2021.

Treena V. Garrett,

Federal Register Liaison Officer, U.S. Department of Energy.

DEPARTMENT OF ENERGY

Draft Environmental Assessment for the Commercial Disposal of Savannah River Site Contaminated Process Equipment

AGENCY: Office of Environmental Management, U.S. Department of Energy.

ACTION: Notice.

SUMMARY: The U.S. Department of Energy (DOE) announces its intent to prepare a draft environmental assessment (EA) pursuant to the National Environmental Policy Act of 1969 (NEPA) to dispose of contaminated process equipment from the Savannah River Site (SRS) at a commercial low-level radioactive waste (LLW) disposal facility located outside of South Carolina licensed by either the Nuclear Regulatory Commission (NRC) or an Agreement State. This effort will analyze capabilities for alternative disposal options through the use of existing, licensed, off-site commercial disposal facilities. The SRS contaminated process equipment would be characterized, stabilized as appropriate, and packaged, and if the waste acceptance criteria and performance objectives of a specific disposal facility are met, DOE could consider whether to dispose of the waste as LLW under the Department's interpretation of the statutory term ''high-level radioactive waste'' (HLW) as defined in the Atomic Energy Act of 1954, as amended (AEA), and Nuclear

Waste Policy Act of 1982, as amended (NWPA). As a result of this NEPA process, DOE may consider what actions, if any, are needed and appropriate to implement any decision to dispose of the SRS contaminated process equipment as LLW.

ADDRESSES: This **Federal Register** Notice is available on *https://www.energy.gov/em/high-level-radioactive-waste-hlw-interpretation.* The Draft Environmental Assessment for the Commercial Disposal of Savannah River Site Contaminated Process Equipment (Draft EA) will also be made available at this website.

FOR FURTHER INFORMATION CONTACT: Theresa Kliczewski and/or James Joyce, U.S. Department of Energy, Office of Environmental Management, Office of Waste and Materials Management (EM–4.2), 1000 Independence Avenue SW, Washington, DC 20585. Emails: *Theresa.Kliczewski@em.doe.gov* and *James.Joyce@em.doe.gov.* Phone number: (202) 586–5000.

SUPPLEMENTARY INFORMATION:

Background

SRS occupies approximately 300 square miles primarily in Aiken and Barnwell Counties, South Carolina. Until the early 1990s, the primary SRS mission was the production of special radioactive isotopes to support national defense programs. More recently, the SRS mission has emphasized waste management, environmental restoration, and the decontamination and decommissioning of facilities that are no longer needed for SRS's traditional defense activities.

The SRS contaminated process equipment is generated during the on-site treatment of the reprocessing waste. The Draft EA will analyze commercial disposal options for three specific types of process equipment contaminated with reprocessing waste: Tank 28F salt sampling drill string, glass bubblers, and glass pumps. These waste streams do not meet the criteria for disposal at existing SRS disposal facilities given the waste form, radionuclide inventory, dose rates, and internal lead shielding.

The Tank 28F salt sampling drill string was used to collect reprocessing waste samples from the waste storage tank. The drill string consists of steel piping measuring 2.25 inches outer diameter by 41 feet long, contaminated with reprocessing waste (supernatant) from Tank 28F. Contaminants include a mixture of beta, gamma, and alpha emitting radionuclides (*e.g.,* cesium 137 and plutonium 238). The drill string is currently stored in a large container on-site until a disposal path can be established.

The glass bubblers are used to increase efficiency of Defense Waste Processing Facility (DWPF) melter operations, where high-activity tank waste is vitrified into glass under high-temperature. Each bubbler is comprised of a ¾ inch Schedule 160 Inconel pipe, which is inserted into the DWPF melter and through which an inert gas is introduced to increase melter efficiency. Approximately three feet of the lower portion of the bubbler was in the melt pool and contains contaminated glass, including transuranic radionuclides (*e.g.,* plutonium 238) and short-lived radionuclides (*e.g.,* cesium 137). SRS currently has approximately 60 contaminated bubblers in storage and will generate four contaminated glass bubblers every six months until DWPF operations are completed in the 2034 timeframe.

The glass pumps were used to support melter efficiency and are no longer in use at SRS having been replaced by the glass bubblers. Each pump is comprised of an Inconel pipe, measuring approximately 3 ⅝ inches in outer diameter. The lower two feet was in the melt pool and contains contaminated glass similar to the glass bubblers. There are approximately 10 glass pumps in storage at SRS requiring final disposal.

In August 2020, DOE completed its first NEPA analysis and waste determination for a waste stream (SRS DWPF recycle wastewater) under the HLW interpretation.[1] This was implemented in accordance with the June 10, 2019 *Supplemental Notice Concerning U.S. Department of Energy Interpretation of High-Level Radioactive Waste* [2] (Supplemental Notice) in which DOE provided its interpretation of the statutory term HLW as defined in the AEA [3] and NWPA.[4]

Purpose and Need for Action

Currently there is no disposal pathway for the SRS process equipment contaminated with reprocessing waste (Tank 28F salt sampling drill string, glass bubblers, and glass pumps). DOE's purpose and need for this action is to dispose of SRS contaminated process equipment at a commercial LLW facility outside of South Carolina and licensed by either the NRC or an Agreement State under 10 CFR part 61. Therefore, no NEPA analyses on disposal at Federal facilities will be conducted. Any proposal to dispose of additional SRS process equipment contaminated with reprocessing waste, other than those identified and analyzed in the Draft EA, would be evaluated in separate NEPA documentation. Disposal of the SRS contaminated process equipment at a licensed off-site commercial LLW facility would help to mitigate on-site storage constraints, improve worker safety, and support accelerated completion of the environmental cleanup mission at SRS.

Proposed Action and Alternatives

Under the proposed action, DOE would dispose of the SRS contaminated process equipment (Tank 28F salt sampling drill string, glass bubblers, and glass pumps) at a commercial LLW facility outside of South Carolina and licensed by either the NRC or an Agreement State under 10 CFR part 61. The Draft EA will analyze the potential environmental impacts associated with the proposed commercial disposal of the contaminated process equipment. Prior to a disposal decision, DOE would characterize the contaminated process equipment to verify with the licensed off-site commercial LLW disposal facility whether the waste meets DOE's HLW interpretation for disposal as non-HLW, in accordance with DOE Order 435.1, *Radioactive Waste Management,* DOE Manual 435.1–1, *Radioactive Waste Management Manual,* and consistent with the Supplemental Notice. DOE would also demonstrate compliance with the waste acceptance criteria and all other requirements of the disposal facility, including any applicable regulatory requirements (*e.g.,* Resource Conservation and Recovery Act) for treatment of the waste prior to disposal and applicable Department of Transportation requirements for packaging and transportation from SRS to the commercial disposal facility. DOE has identified two action alternatives for the proposed action:

- *Alternative 1*—If determined to be Class A LLW,[5] stabilize and package the waste at SRS and ship to either Energy*Solutions* [6] in Clive, Utah or Waste Control Specialists, LLC (WCS) in Andrews County, Texas for disposal.

[1] NEPA documents and technical documents for the commercial disposal of DWPF recycle wastewater from SRS under the HLW interpretation can be found at: *https://www.energy.gov/em/program-scope/high-level-radioactive-waste-hlw-interpretation.*

[2] 84 FR 26835.

[3] 42 U.S.C. 2011 *et seq.*

[4] 42 U.S.C. 10101 *et seq.*

[5] In its 10 CFR part 61 regulations, NRC has identified classes of LLW—Class A, B, or C—for which near-surface disposal is safe for public health and the environment. This waste classification regime is based on the concentration levels of a combination of specified short-lived and long-lived radionuclides in a waste stream, with Class C LLW having the highest concentration levels.

[6] Energy*Solutions* is currently licensed to only dispose of Class A LLW and mixed LLW.

This is dependent upon waste content and compliance with facility waste acceptance criteria.

• *Alternative 2*—If determined to be Class B or C LLW, stabilize and package the waste at SRS and ship to WCS. This is dependent upon waste content and compliance with facility waste acceptance criteria.

The EA will also analyze a no action alternative under which the contaminated process equipment would remain in storage at SRS until disposition occurs.

Potential Areas of Environmental Analysis

DOE has tentatively identified the following areas for detailed analysis in the EA: Human health and safety; land use; air quality; water, cultural, and ecological resources; waste management; socioeconomics; and transportation. This list is not intended to be comprehensive or to predetermine the potential impacts to be analyzed. The level of analysis for different impacts will be in proportion to their significance.

NEPA Process and Public Participation

DOE will prepare the Draft EA in accordance with the Council on Environmental Quality regulations at 40 CFR parts 1500–1508 and DOE NEPA implementing procedures at 10 CFR part 1021. DOE plans to issue a **Federal Register** notice in 2021 on the availability of the Draft EA. Based on the EA analysis, DOE will either issue a Finding of No Significant Impact or announce its intention to prepare an environmental impact statement.

Signing Authority

This document of the Department of Energy was signed on January 12, 2021 by Mark A. Gilbertson, Associate Principal Deputy Assistant Secretary for Regulatory and Policy Affairs, Office of Environmental Management, pursuant to delegated authority from the Secretary of Energy. That document with the original signature and date is maintained by DOE. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DOE Federal Register Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of the Department of Energy. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

Signed at Washington, DC, on January 13, 2021.

Treena V. Garrett,

Federal Register Liaison Officer, U.S. Department of Energy.

Combined Notice of Filings

Take notice that the Commission has received the following Natural Gas Pipeline Rate and Refund Report filings:

Docket Numbers: RP21–377–000.

Applicants: Gas Transmission Northwest LLC.

Description: Compliance filing Report of Refunds—Coyote Springs Lateral IT Revenue (Nov 2019–Oct 2020).

Filed Date: 1/8/21.

Accession Number: 20210108–5216

Comments Due: 5 p.m. ET 1/21/21.

Docket Numbers: RP21–378–000.

Applicants: Carolina Gas Transmission, LLC.

Description: Compliance filing 2020 Interruptible Revenue Sharing Report.

Filed Date: 1/11/21.

Accession Number: 20210111–5118.

Comments Due: 5 p.m. ET 1/25/21.

Docket Numbers: RP21–379–000.

Applicants: Maritimes & Northeast Pipeline, L.L.C.

Description: § 4(d) Rate Filing: Maritimes & Northeast Pipeline, L.L.C RCA Modifications to be effective 3/1/2021.

Filed Date: 1/11/21.

Accession Number: 20210111–5166.

Comments Due: 5 p.m. ET 1/25/21.

The filings are accessible in the Commission's eLibrary system (*https://elibrary.ferc.gov/idmws/search/fercgensearch.asp*) by querying the docket number.

Any person desiring to intervene or protest in any of the above proceedings must file in accordance with Rules 211 and 214 of the Commission's Regulations (18 CFR 385.211 and 385.214) on or before 5:00 p.m. Eastern time on the specified date. Protests may be considered, but intervention is necessary to become a party to the proceeding.

eFiling is encouraged. More detailed information relating to filing requirements, interventions, protests, service, and qualifying facilities filings can be found at: *http://www.ferc.gov/docs-filing/efiling/filing-req.pdf.* For other information, call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

Dated: January 12, 2021.

Federal Energy Regulatory Commission

[Project No. 4718–039]

Notice of Application Tendered for Filing With the Commission and Soliciting Additional Study Requests and Establishing Procedural Schedule for Relicensing and a Deadline for Submission of Final Amendments; Cocheco Falls Associates

Take notice that the following hydroelectric application has been filed with the Commission and is available for public inspection.

a. *Type of Application:* Subsequent Minor License.

b. *Project No.:* 4718–039.

c. *Date filed:* December 29, 2020.

d. *Applicant:* Cocheco Falls Associates.

e. *Name of Project:* Cocheco Falls Dam Project.

f. *Location:* On the Cocheco River in Dover, Strafford County, New Hampshire. The project does not occupy any federal land.

g. *Filed Pursuant to:* Federal Power Act 16 U.S.C. 791(a)–825(r).

h. *Applicant Contact:* Mr. John Webster, Cocheco Falls Associates, P.O. Box 178, South Berwick, ME 03908; Phone at (207) 384–5334, or email at *Hydromagnt@gwi.net.*

i. *FERC Contact:* Amy Chang at (202) 502–8250, or *amy.chang@ferc.gov.*

j. *Cooperating agencies:* Federal, state, local, and tribal agencies with jurisdiction and/or special expertise with respect to environmental issues that wish to cooperate in the preparation of the environmental document should follow the instructions for filing such requests described in item l below. Cooperating agencies should note the Commission's policy that agencies that cooperate in the preparation of the environmental document cannot also intervene. *See* 94 FERC 61,076 (2001).

k. Pursuant to section 4.32(b)(7) of 18 CFR of the Commission's regulations, if any resource agency, Indian Tribe, or person believes that an additional scientific study should be conducted in order to form an adequate factual basis for a complete analysis of the application on its merit, the resource agency, Indian Tribe, or person must file

a request for a study with the Commission not later than 60 days from the date of filing of the application, and serve a copy of the request on the applicant.

l. *Deadline for filing additional study requests and requests for cooperating agency status:* February 27, 2021.

The Commission strongly encourages electronic filing. Please file additional study requests and requests for cooperating agency status using the Commission's eFiling system at *https://ferconline.ferc.gov/FERCOnline.aspx.* For assistance, please contact FERC Online Support at *FERCOnlineSupport@ferc.gov,* (866) 208–3676 (toll free), or (202) 502–8659 (TTY). In lieu of electronic filing, you may submit a paper copy. Submissions sent via the U.S. Postal Service must be addressed to: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Room 1A, Washington, DC 20426. Submissions sent via any other carrier must be addressed to: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, Maryland 20852. All filings must clearly identify the project name and docket number on the first page: Cocheco Falls Dam Project (P–4718–039).

m. The application is not ready for environmental analysis at this time.

n. *Project Description:* The existing Cocheco Falls Dam Project consists of: (1) A 150-foot-long, 13.5-foot-high stone masonry arch dam that includes the following sections: (a) A left abutment section; (b) a 140-foot-long spillway section with 24-inch-high flashboards, a 5-foot-wide, 10-foot-high low-level outlet gate, and a crest elevation of 37.0 feet mean sea level (msl) at the top of the flashboards; and (c) a right abutment section with a debris sluice gate; (2) a 20-acre impoundment with a storage capacity of 150 acre-feet at an elevation of 37.0 feet msl; (3) a 64-foot-wide, 10-foot-high intake structure equipped with a trashrack with 1-inch clear bar spacing; (4) an 8.5-foot-diameter, 184-foot-long gated steel penstock that trifurcates into three 5-foot-diameter, 8-foot-long sections, each controlled by a 5-foot-diameter butterfly valve; (5) a 40-foot-long, 40-foot-wide concrete and brick masonry powerhouse containing three 238-kilowatt (kW) vertical Flygt submersible turbine-generator units for a total installed capacity of 714 kW; (6) a 40-foot-long, 40-foot-wide tailrace that discharges into the Cocheco River; (7) a 1,000-foot-long, 34.5-kilovolt (kV) underground transmission line and a 34.5-kV transformer that connects the project to the local utility distribution system; and (8) appurtenant facilities.

Cocheco Falls Associates voluntarily operates the project in a run-of-river mode using an automatic pond level control system to regulate turbine operation, such that outflow from the project approximates inflow. The project creates an approximately 100-foot-long bypassed reach of the Cocheco River.

Downstream fish passage is provided by a bypass facility located on the left side of the dam and consist of a 5.6-foot-wide, 7-foot-long fish collection box, a trashrack with 6-inch clear bar spacing, and a 24-inch-diameter PVC fish passage pipe. Upstream fish passage is provided by a Denil fish ladder located on the right side of the dam.

The current license requires the release of: (1) 20 cubic feet per second (cfs) from the upstream fish passage facility from April 15 until June 30; (2) 20 cfs through the trash sluiceway from April 15 until June 15, to attract anadromous fish to the fish ladder; and (3) 20 cfs through the downstream fish passage facility from April 15 until ice forms on the river. The average annual generation of the project is approximately 3,000 megawatt-hours.

Cocheco Falls Associates proposes to: (1) Continue to operate the project in a run-of-river mode; (2) continue to facilitate upstream and downstream fish passage by providing the minimum flows required by the current license; (3) design and install an upstream eel passage facility at the Denil fish ladder location within 4 years of the effective date of a subsequent license; and (4) consult with the New Hampshire State Historic Preservation Officer before beginning any land-disturbing activities or alterations to known historic structures within the project boundary.

o. In addition to publishing the full text of this notice in the **Federal Register**, the Commission provides all interested persons an opportunity to view and/or print the contents of this notice, as well as other documents in the proceeding (*e.g.,* license application) via the internet through the Commission's Home Page (*http://www.ferc.gov*) using the ''eLibrary'' link. Enter the docket number excluding the last three digits in the docket number field to access the document (P–4718). At this time, the Commission has suspended access to the Commission's Public Reference Room due to the proclamation declaring a National Emergency concerning the Novel Coronavirus Disease (COVID–19) issued by the President on March 13, 2020. For assistance, contact FERC at *FERCOnlineSupport@ferc.gov* or call toll-free, (866) 208–3676 or (202) 502–8659 (TTY).

You may also register online at *https://ferconline.ferc.gov/FERCOnline.aspx* to be notified via email of new filings and issuances related to this or other pending projects. For assistance, contact FERC Online Support.

p. *Procedural schedule:* The application will be processed according to the following preliminary schedule. Revisions to the schedule will be made as appropriate.

Issue Deficiency Letter (if necessary) February 2021
Request Additional Information February 2021
Issue Acceptance Letter May 2021
Issue Scoping Document 1 for comments June 2021
Request Additional Information (if necessary) August 2021
Issue Scoping Document 2 September 2021
Issue Notice of Ready for Environmental Analysis September 2021

q. Final amendments to the application must be filed with the Commission no later than 30 days from the issuance date of the notice of ready for environmental analysis.

Dated: January 12, 2021.

Kimberly D. Bose,

Secretary.

Federal Energy Regulatory Commission

[Docket No. ER21–856–000]

Supplemental Notice That Initial Market-Based Rate Filing Includes Request for Blanket Section 204 Authorization; PGR Lessee P, LLC

This is a supplemental notice in the above-referenced proceeding of PGR Lessee P, LLC's application for market-based rate authority, with an accompanying rate tariff, noting that such application includes a request for blanket authorization, under 18 CFR part 34, of future issuances of securities and assumptions of liability.

Any person desiring to intervene or to protest should file with the Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). Anyone filing a motion to intervene or protest must serve a copy of that document on the Applicant.

Notice is hereby given that the deadline for filing protests with regard to the applicant's request for blanket authorization, under 18 CFR part 34, of future issuances of securities and assumptions of liability, is February 1, 2021.

The Commission encourages electronic submission of protests and interventions in lieu of paper, using the FERC Online links at *http://www.ferc.gov*. To facilitate electronic service, persons with internet access who will eFile a document and/or be listed as a contact for an intervenor must create and validate an eRegistration account using the eRegistration link. Select the eFiling link to log on and submit the intervention or protests.

Persons unable to file electronically may mail similar pleadings to the Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426. Hand delivered submissions in docketed proceedings should be delivered to Health and Human Services, 12225 Wilkins Avenue, Rockville, Maryland 20852.

In addition to publishing the full text of this document in the **Federal Register**, the Commission provides all interested persons an opportunity to view and/or print the contents of this document via the internet through the Commission's Home Page (*http://ferc.gov*) using the ''eLibrary'' link. Enter the docket number excluding the last three digits in the docket number field to access the document. At this time, the Commission has suspended access to the Commission's Public Reference Room, due to the proclamation declaring a National Emergency concerning the Novel Coronavirus Disease (COVID–19), issued by the President on March 13, 2020. For assistance, contact the Federal Energy Regulatory Commission at *FERCOnlineSupport@ferc.gov* or call toll-free, (886) 208–3676 or TYY, (202) 502–8659.

Dated: January 12, 2021.

Comments Due: 5 p.m. ET 2/1/21.

The filings are accessible in the Commission's eLibrary system (*https://elibrary.ferc.gov/idmws/search/fercgensearch.asp*) by querying the docket number.

Any person desiring to intervene or protest in any of the above proceedings must file in accordance with Rules 211 and 214 of the Commission's Regulations (18 CFR 385.211 and 385.214) on or before 5:00 p.m. Eastern time on the specified comment date. Protests may be considered, but intervention is necessary to become a party to the proceeding.

eFiling is encouraged. More detailed information relating to filing requirements, interventions, protests, service, and qualifying facilities filings can be found at: *http://www.ferc.gov/docs-filing/efiling/filing-req.pdf.* For other information, call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

Dated: January 12, 2021.

Federal Energy Regulatory Commission

[Docket No. EL21–34–000]

Upper Missouri G. & T. Electric Cooperative, Inc.; Notice of Institution of Section 206 Proceeding and Refund Effective Date

On January 11, 2021, the Commission issued an order in Docket No. EL21–34–000, pursuant to section 206 of the Federal Power Act (FPA), 16 U.S.C. 824e, instituting an investigation into whether Upper Missouri G. & T. Electric Cooperative, Inc.'s proposed Formula Rate and Wholesale Power Contracts are unjust, unreasonable, unduly discriminatory or preferential, or otherwise unlawful. *Upper Missouri G. & T. Electric Cooperative, Inc.,* 174 FERC 61,019 (2021).

The refund effective date in Docket No. Docket No. EL21–34–000, established pursuant to section 206(b) of the FPA, will be the date of publication of this notice in the **Federal Register**.

Any interested person desiring to be heard in Docket No. EL21–34–000 must file a notice of intervention or motion to intervene, as appropriate, with the Federal Energy Regulatory Commission, in accordance with Rule 214 of the Commission's Rules of Practice and Procedure, 18 CFR 385.214 (2020), within 21 days of the date of issuance of the order.

In addition to publishing the full text of this document in the **Federal Register**, the Commission provides all interested persons an opportunity to view and/or print the contents of this document via the internet through the Commission's Home Page (*http://www.ferc.gov*) using the ''eLibrary'' link. Enter the docket number excluding the last three digits in the docket number field to access the document. At this time, the Commission has suspended access to the Commission's Public Reference Room, due to the proclamation declaring a National Emergency concerning the Novel Coronavirus Disease (COVID–19), issued by the President on March 13, 2020. For assistance, contact FERC at *FERCOnlineSupport@ferc.gov* or call toll-free, (886) 208–3676 or TYY, (202) 502–8659.

The Commission strongly encourages electronic filings of comments, protests and interventions in lieu of paper using the ''eFile'' link at *http://www.ferc.gov.* In lieu of electronic filing, you may submit a paper copy. Submissions sent via the U.S. Postal Service must be addressed to: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Room 1A, Washington, DC 20426. Submissions sent via any other carrier must be addressed to: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, Maryland 20852.

Dated: January 12, 2021.

Federal Energy Regulatory Commission

[Docket No. ER21–857–000]

Supplemental Notice That Initial Market-Based Rate Filing Includes Request for Blanket Section 204 Authorization; Trent River Solar, LLC

This is a supplemental notice in the above-referenced proceeding of Trent River Solar, LLC's application for market-based rate authority, with an accompanying rate tariff, noting that such application includes a request for blanket authorization, under 18 CFR part 34, of future issuances of securities and assumptions of liability. Any person desiring to intervene or to protest should file with the Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). Anyone filing a motion to intervene or protest must serve a copy of that document on the Applicant.

Notice is hereby given that the deadline for filing protests with regard to the applicant's request for blanket authorization, under 18 CFR part 34, of future issuances of securities and assumptions of liability, is February 1, 2021.

The Commission encourages electronic submission of protests and interventions in lieu of paper, using the FERC Online links at *http://www.ferc.gov.* To facilitate electronic service, persons with internet access who will eFile a document and/or be listed as a contact for an intervenor must create and validate an eRegistration account using the eRegistration link. Select the eFiling link to log on and submit the intervention or protests.

Persons unable to file electronically may mail similar pleadings to the Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426. Hand delivered submissions in docketed proceedings should be delivered to Health and Human Services, 12225 Wilkins Avenue, Rockville, Maryland 20852.

In addition to publishing the full text of this document in the **Federal Register**, the Commission provides all interested persons an opportunity to view and/or print the contents of this document via the internet through the Commission's Home Page (*http://ferc.gov*) using the ''eLibrary'' link. Enter the docket number excluding the last three digits in the docket number field to access the document. DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Project No. 2456–086]

CRP NH Ayers Island, LLC; Notice of Application for Amendment of License, Soliciting Comments, Motions To Intervene, and Protests

Take notice that the following hydroelectric application has been filed with the Commission and is available for public inspection:

a. *Type of Proceeding:* Application for non-capacity amendment of license.

b. *Project No.:* 2456–086.

c. *Date Filed:* December 17, 2020.

d. *Licensee:* CRP NH Ayers Island, LLC.

e. *Name of Project:* Ayers Island Hydroelectric Project.

f. *Location:* The project is located on the Pemigewasset River in Belknap and Grafton counties, New Hampshire.

g. *Filed Pursuant to:* Federal Power Act, 16 U.S.C. 791a–825r.

h. *Licensee Contact:* Curt Mooney, Central Rivers Power MA, LLC, 670 N Commercial Street, Suite 204, Manchester, NH 03101, (603) 744–0846, *cmooney@centralriverspower.com.*

i. *FERC Contact:* Rebecca Martin, (202) 502–6012, *Rebecca.martin@ferc.gov.*

j. *Deadline for filing comments, interventions, and protests Deadline for filing comments, motions to intervene, and protests:* February 12, 2021.

The Commission strongly encourages electronic filing. Please file comments, motions to intervene, and protests using the Commission's eFiling system at *http://www.ferc.gov/docs-filing/efiling.asp.* Commenters can submit brief comments up to 6,000 characters, without prior registration, using the eComment system at *http://www.ferc.gov/docs-filing/ecomment.asp.* You must include your name and contact information at the end of your comments. For assistance, please contact FERC Online Support at *FERCOnlineSupport@ferc.gov,* (866) 208–3676 (toll free), or (202) 502–8659 (TTY). In lieu of electronic filing, you may submit a paper copy. Submissions sent via the U.S. Postal Service must be addressed to: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Room 1A, Washington, DC 20426. Submissions sent via any other carrier must be addressed to: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, Maryland 20852. The first page of any filing should include docket number P–2456–086. Comments emailed to Commission staff are not considered part of the Commission record.

The Commission's Rules of Practice and Procedure require all intervenors filing documents with the Commission to serve a copy of that document on each person whose name appears on the official service list for the project. Further, if an intervenor files comments or documents with the Commission relating to the merits of an issue that may affect the responsibilities of a particular resource agency, they must also serve a copy of the document on that resource agency.

k. *Description of Request:* The applicant proposes to formally change the Project operating regime from ''modified'' peaking to run-of-river mode and to eliminate the top one-foot flashboard section from the spillway, which typically is installed for a limited seasonal period during the summer. Historically the project was operated in a daily peaking mode with maximum daily drawdowns of approximately two feet. The Licensee has not utilized peaking operations for many years and is therefore proposing to eliminate peaking operations and formally amend the license to require run-of-river operations, except when whitewater flow releases are provided, and during temporary modification of operations for maintenance or emergency operations.

l. *Locations of the Application:* This filing may be viewed on the Commission's website at *http://www.ferc.gov* using the ''eLibrary'' link. Enter the docket number excluding the last three digits in the docket number field to access the document. You may also register online at *http://www.ferc.gov/docs-filing/esubscription.asp* to be notified via

email of new filings and issuances related to this or other pending projects. For assistance, call 1–866–208–3676 or email *FERCOnlineSupport@ferc.gov,* for TTY, call (202) 502–8659. Agencies may obtain copies of the application directly from the applicant.

m. Individuals desiring to be included on the Commission's mailing list should so indicate by writing to the Secretary of the Commission.

n. *Comments, Protests, or Motions to Intervene:* Anyone may submit comments, a protest, or a motion to intervene in accordance with the requirements of Rules of Practice and Procedure, 18 CFR 385.210, .211, .214, respectively. In determining the appropriate action to take, the Commission will consider all protests or other comments filed, but only those who file a motion to intervene in accordance with the Commission's Rules may become a party to the proceeding. Any comments, protests, or motions to intervene must be received on or before the specified comment date for the particular application.

o. *Filing and Service of Documents:* Any filing must (1) bear in all capital letters the title COMMENTS, PROTEST, or MOTION TO INTERVENE as applicable; (2) set forth in the heading the name of the applicant and the project number of the application to which the filing responds; (3) furnish the name, address, and telephone number of the person commenting, protesting or intervening; and (4) otherwise comply with the requirements of 18 CFR 385.2001 through 385.2005. All comments, motions to intervene, or protests must set forth their evidentiary basis. Any filing made by an intervenor must be accompanied by proof of service on all persons listed in the service list prepared by the Commission in this proceeding, in accordance with 18 CFR 385.2010.

Dated: January 12, 2021.

Kimberly D. Bose,

Secretary.

Federal Energy Regulatory Commission

[Project No. 13–039]

Green Island Power Authority and Albany Engineering Corporation; Notice of Availability of Environmental Assessment

In accordance with the National Environmental Policy Act of 1969 and the Federal Energy Regulatory Commission's (Commission) regulations, 18 CFR part 380, the Office of Energy Projects has reviewed an application submitted by Green Island Power Authority and Albany Engineering Corporation to amend its Green Island Hydroelectric Project license (FERC No. 13) and has prepared an environmental assessment (EA) for the project. The Green Island Project is located at the U.S. Army Corps of Engineers (Corps) Green Island-Troy Lock and Dam on the Hudson River in Albany County, New York. The project occupies federal land under the jurisdiction of the Corps.

The EA contains staff's analysis of the potential environmental effects of the proposed action and concludes that approval of the amendment application, with appropriate environmental measures, would not constitute a major federal action significantly affecting the quality of the human environment.

The EA may be viewed on the Commission's website at *http://www.ferc.gov* using the ''eLibrary'' link. Enter the docket number excluding the last three digits in the docket number field to access the document. For assistance, contact FERC Online Support at *FERCOnlineSupport@ferc.gov,* (866) 208–3676 (toll free), or (202) 502–8659 (TTY). At this time, the Commission has suspended access to the Commission's Public Reference Room, due to the proclamation declaring a National Emergency concerning the Novel Coronavirus Disease (COVID–19), issued by the President on March 13, 2020.

You may also register online at *http://www.ferc.gov/docs-filing/esubscription.asp* to be notified via email of new filings and issuances related to this or other pending projects. For assistance, contact FERC Online Support.

Any comments should be filed within 30 days from the date of this notice.

The Commission strongly encourages electronic filing. Please file comments using the Commission's eFiling system at *http://www.ferc.gov/docs-filing/efiling.asp.* Commenters can submit brief comments up to 6,000 characters, without prior registration, using the eComment system at *http://www.ferc.gov/docs-filing/ecomment.asp.* You must include your name and contact information at the end of your comments. For assistance, please contact FERC Online Support. In lieu of electronic filing, you may submit a paper copy. Submissions sent via the U.S. Postal Service must be addressed to: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Room 1A, Washington, DC 20426. Submissions sent via any other carrier must be addressed to: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, Maryland 20852. The first page of any filing should include docket number P–13–039.

For further information, contact Joseph Enrico at (212) 273–5917 or by email at *joseph.enrico@ferc.gov.*

BILLING CODE 6717–01–P

ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OAR–2020–0322; FRL–10011–04–OAR]

Notice of Receipt of Petitions for a Waiver of the 2019 and 2020 Renewable Fuel Standards

AGENCY: Environmental Protection Agency (EPA).

ACTION: Request for comment on petitions received.

SUMMARY: EPA has received a number of petitions last year for a waiver of the Renewable Fuel Standard (RFS) obligations that apply in 2019 and 2020. These petitions argue that recent events warrant EPA exercising its general waiver authority on the basis of severe economic harm. In late March, a group of small refineries requested a waiver of the 2019 and 2020 obligations of their individual small refineries. In April and May, the Governors of several states submitted three separate petitions for waivers of the nationwide volumes. The Clean Air Act grants EPA the discretion to waive the requirements of the RFS program in whole or in part if the Administrator determines, after notice and comment, that implementation of the applicable annual volume requirements would severely harm the economy or environment of a State,

region, or the United States. EPA is inviting comment on the petitions we have received.

DATES: *Comments:* Comments must be received on or before February 18, 2021.

ADDRESSES: You may send your comments, identified by Docket ID No. EPA–HQ–OAR–2020–0322, by any of the following methods:

- *Federal eRulemaking Portal: http://www.regulations.gov* (our preferred method) Follow the online instructions for submitting comments.
- *Email: a-and-r-Docket@epa.gov.* Include Docket ID No. EPA–HQ–OAR–2020–0322 in the subject line of the message.

Instructions: All submissions received must include the Docket ID No. for this rulemaking. Comments received may be posted without change to *https://www.regulations.gov,* including any personal information provided. For the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit *http://www.epa.gov/dockets/commenting-epa-dockets.*

Out of an abundance of caution for members of the public and our staff, the EPA Docket Center and Reading Room will be closed to public visitors beginning at the close of business on March 31, 2020 (4:30 p.m.) to reduce the risk of transmitting COVID–19. Our Docket Center staff will continue to provide remote customer service via email, phone, and webform. We encourage the public to submit comments via *https://www.regulations.gov* or email, as there will be a delay in process mail and no hand deliveries will be accepted. For further information on EPA Docket Center services, please visit us online at *https://www.epa.gov/dockets.*

FOR FURTHER INFORMATION CONTACT: Lauren Michaels, Office of Transportation and Air Quality, Assessment and Standards Division, Environmental Protection Agency, 2000 Traverwood Drive, Ann Arbor, MI 48105; telephone number: (734) 214–4640; email address: *michaels.lauren@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

The Renewable Fuel Standard (RFS) program began in 2006 pursuant to the requirements in Clean Air Act (CAA) section 211(o) that were added through the Energy Policy Act of 2005 (EPAct). The statutory requirements for the RFS program were subsequently modified through the Energy Independence and Security Act of 2007 (EISA), leading to the publication of major revisions to the regulatory requirements on March 26, 2010.[1] EISA's stated goals include moving the United States (U.S.) toward ''greater energy independence and security [and] increas[ing] the production of clean renewable fuels.'' [2]

The statute includes annual volume targets and requires EPA to translate those volume targets (or alternative volume requirements established by EPA in accordance with statutory waiver authorities) into compliance obligations that obligated parties must meet every year. EPA promulgated a rulemaking establishing the RFS volume obligations for 2019 that was published in the **Federal Register** on December 11, 2018.[3] EPA promulgated a rulemaking establishing the RFS volume obligations for 2020 that was published in the **Federal Register** on February 6, 2020.[4] In those rulemakings, EPA waived the statutory volumes for cellulosic biofuel, advanced biofuel, and total renewable fuel utilizing EPA's cellulosic waiver authority; determined the biomass-based diesel volume for the subsequent year; and established annual percentage standards for obligated parties. Under the RFS program, obligated parties, typically gasoline or diesel refiners or importers, are required to meet annual percentage standards to be in compliance.

Section 211(o)(7)(A) of the CAA provides the Administrator the discretion to waive the national quantity of renewable fuel required under the RFS program, in whole or in part, upon petition by one or more States, or by any party subject to the requirements of the RFS program. The Administrator may also waive the volume requirements on his own motion. The Administrator may do so only after consultation with the Secretary of Agriculture and the Secretary of Energy, and after public notice and opportunity for comment. A waiver may be issued if the Administrator determines that implementation of the RFS volume requirement would severely harm the economy or environment of a State, region, or the United States, or that there is an inadequate domestic supply. EPA has previously interpreted this waiver authority in prior denials of requests for a waiver of the RFS volume requirements [5] and in annual rulemakings.[6]

II. Petitions Before the Agency

Last year EPA received several petitions from a group of small refineries and several states seeking a waiver under CAA section 211(o)(7)(A) on the basis of severe economic harm. These petitions are described below.

A group of small refineries submitted a petition to the Administrator, dated March 30, 2020, requesting a waiver of the 2019 and 2020 RFS obligations. These parties seek a waiver of their individual renewable volume obligations (RVOs). They argue that EPA must grant the waiver under CAA section 211(o)(7)(A) to avoid severe economic harm to the States and regions in which they operate. The petition argues that the harm to their individual small refineries is caused by the coronavirus pandemic and the ensuing drop in transportation fuel demand; the court decision in *Renewable Fuels Association* v. *EPA,* 948 F.3d 1206, (10th Cir. 2020) (*RFA*), if the decision is implemented nationwide; and a rise in RIN prices. The petition also puts forth a new legal interpretation allowing EPA to waive individual obligations under the general waiver authority; EPA's prior interpretations of the general waiver authority only allowed a reduction in the nationwide volume requirements. EPA also received a petition from a single small refinery, dated December 30, 2020, requesting a waiver of its 2019 and 2020 RFS obligations. This petition provided similar justifications as the above described petition.

Subsequently, several Governors submitted three separate petitions under CAA section 211(o)(7)(A) on the basis of severe economic harm. These petitions ask EPA to lower the nationwide renewable volume obligations. They argue that reduced gasoline and diesel demand due to the coronavirus pandemic has harmed refiners, and that the 2020 RFS volume requirements are and will continue to inflict further harm on these parties. Specifically, the Governor of Louisiana submitted a petition to the Administrator, dated April 7, 2020, seeking a waiver of the RFS obligations by an amount commensurate with the current projected shortfall in national gasoline and diesel consumption. The Governors of Oklahoma, Texas, Utah, and Wyoming submitted a single similar petition, dated April 15, 2020; unlike

[1] 75 FR 14670, March 26, 2010.

[2] Pub. L. 110–140, 121 Stat. 1492 (2007) (''EISA'').

[3] 83 FR 63704.

[4] 85 FR 7016.

[5] See 73 FR 47168 (August 13, 2008) and 77 FR 70752 (November 27, 2012).

[6] See, *e.g.,* Renewable Fuel Standard Program—Standards for 2020 and Biomass-Based Diesel Volume for 2021 and Other Changes: Response to Comments, EPA–420–R–19–018; see also *American Fuel & Petrochemical Manufacturers* v. *EPA,* 937 F.3d 559, 580 (D.C. Cir. 2019) (upholding EPA's interpretation of the severe economic harm waiver authority in the 2018 RFS rulemaking).

the Louisiana petition, this petition does not specify the volume that should be waived.

Finally, the Governor of Pennsylvania submitted a similar petition on May 11, 2020, seeking a waiver of the RFS volume requirements. The Pennsylvania petition alleges that increasing annual RFS volume obligations severely harmed Pennsylvania and the East Coast region, and that such harm was compounded both by the Tenth Circuit's *RFA* decision, and the coronavirus pandemic and ensuing fall in gasoline and diesel demand.

Several organizations and individuals, including the environmental group National Wildlife Federation (NWF), and Members of Congress, have submitted letters expressing support for the granting of a waiver. Other organizations and individuals, including the Renewable Fuels Association and various mayors, have submitted letters expressing opposition to the granting of a waiver. These petitions and related letters are available in the docket for this action. Should we receive additional petitions and letters, we will also add those petitions and letters to the docket and consider them together with requests already received. We encourage commenters to carefully review both the petitions and the letters in the docket in formulating their comments.

EPA is seeking comment on the above-described petitions and the discrete issues the petitions raise, including:

- In general, whether the petitioners have satisfied the criteria for granting a waiver that EPA previously set forth and/or whether EPA should modify those criteria as requested by the petitioners; [7]
- Whether the petitioners have demonstrated severe economic harm to a State, a region, or the United States;
- Whether the petitioners have demonstrated a sufficient causal nexus between the RFS volume requirements and such harm (including whether that nexus is actual causation, significant contribution, or some other relationship);
- Whether the petitioners have accurately assessed the impacts of a waiver on other directly and indirectly affected persons (including but not limited to biofuel producers, farmers, consumers of transportation fuel, and any affected petroleum refiners and importers), and how such impacts should affect EPA's decision on the petitions;
- Whether, as requested by the petition from the group of small refineries, EPA may target relief to certain refineries under the general waiver authority; and
- Ultimately, whether EPA should exercise the general waiver authority in response to any of the petitions. If the commenter believes EPA should waive volumes, we ask that the commenter identify the specific obligation that should be waived (*e.g.,* the 2019 or 2020 RFS volume obligations), the amount of the waiver, and any other details of the remedy desired.

We strongly encourage commenters to include data, specific supporting examples, and technical analysis, to the extent feasible.

EPA also received a letter from the National Wildlife Federation suggesting that relief could be granted on the basis of severe environmental harm. The NWF letter suggests there is evidence of environmental harm due to land conversion to cropland resulting in habitat loss and climate change, agricultural runoff and resulting water quality impacts, an increase in water use to irrigate crop fields, and increasing smog and corresponding impacts on air quality due to increasing ethanol content in gasoline. We also solicit comment on the discrete issues raised by this letter and whether the evidence presented in the letter would support a waiver on the basis of severe environmental harm.

EPA is publishing and seeking comment on these petitions to foster public dialogue on these issues and to inform our future decision-making. At this time, we are not reconsidering or otherwise reexamining the 2019 or 2020 RFS rulemakings or any other prior action,[8] or soliciting comment on any issues beyond those specifically raised by the petitions and the NWF letter in support.[9] We are also not proposing to either grant or to deny any of the petitions.

[7] See 73 FR 47168 (August 13, 2008) and 77 FR 70752 (November 27, 2012).

[8] See *Nat'l Mining Ass'n* v. *United States Dep't of the Interior,* 70 F.3d 1345, 1351 (D.C. Cir. 1995) (''The decision to publish a petition for rulemaking . . . is not evidence of a reexamination of the policy at issue in the petition.''); *P & V Enterprises* v. *U.S. Army Corps of Engineers,* 516 F.3d 1021, 1026 (D.C. Cir. 2008) (''an agency must be able to initiate a public dialogue without inadvertently reopening established precedent, or its communications with the public would be unnecessarily stifled'').

[9] For example, we are not soliciting comment on EPA's small refinery exemption policy, the point of obligation, the generation of RINs for exported fuel, or any other issue beyond those discrete issues raised by the petitions and the NWF letter.

Dated: January 7, 2021.

Anne L. Austin,

Principal Deputy Assistant Administrator, Office of Air and Radiation.

ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OAR–2020–0579; FRL–10018–63–OAR]

Proposed Information Collection Request; Comment Request; Mobile Air Conditioner Retrofitting Program (Renewal)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The Environmental Protection Agency is planning to submit an information collection request (ICR), ''Mobile Air Conditioner Retrofitting Program (Renewal)'' (EPA ICR No. 1774.08, OMB Control No. 2060–0350) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act. Before doing so, EPA is soliciting public comments on specific aspects of the proposed information collection as described below. This is a proposed extension of the ICR, which is currently approved through August 31, 2021. An Agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

DATES: Comments must be submitted on or before March 22, 2021.

ADDRESSES: Submit your comments, referencing Docket ID No. EPA–HQ–OAR–2020–0579, online using *https://www.regulations.gov* (our preferred method), or by email to *a-and-r-docket@epa.gov.* Out of an abundance of caution for members of the public and our staff, the EPA Docket Center and Reading Room are closed to the public, with limited exceptions, to reduce the risk of transmitting COVID–19. Our Docket Center staff will continue to provide remote customer service via email, phone, and webform. We encourage the public to submit comments via *https://www.regulations.gov* or email, as there may be a delay in processing mail and faxes. Hand deliveries and couriers may be received by scheduled appointment only. For further information on EPA Docket Center services and the current status, please visit us online at *https://www.epa.gov/dockets.*

EPA's policy is that all comments received will be included in the public

docket without change including any personal information provided, unless the comment includes profanity, threats, information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute.

FOR FURTHER INFORMATION CONTACT: Christina Thompson, Environmental Protection Agency, Stratospheric Protection Division, Office of Atmospheric Programs, MC 6205T, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460; telephone number: (202) 564–0983; email address: *thompson.christina@epa.gov.*

SUPPLEMENTARY INFORMATION: Supporting documents which explain in detail the information that the EPA will be collecting are available in the public docket for this ICR. The docket can be viewed online at *https://www.regulations.gov.* The EPA is temporarily suspending its Docket Center and Reading Room for public visitors, with limited exceptions, to reduce the risk of transmitting COVID–19. Our Docket Center staff will continue to provide remote customer service via email, phone, and webform. The telephone number for the Docket Center is 202–566–1744. For further information and updates on EPA Docket Center services, please visit us online at *https://www.epa.gov/dockets.*

Pursuant to section 3506(c)(2)(A) of the PRA, EPA is soliciting comments and information to enable it to: (i) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the Agency, including whether the information will have practical utility; (ii) evaluate the accuracy of the Agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (iii) enhance the quality, utility, and clarity of the information to be collected; and (iv) minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses. EPA will consider the comments received and amend the ICR as appropriate. The final ICR package will then be submitted to OMB for review and approval. At that time, EPA will issue another **Federal Register** notice to announce the submission of the ICR to OMB and the opportunity to submit additional comments to OMB.

Abstract: EPA's Significant New Alternatives Policy (SNAP) program implements Section 612 of the 1990 Clean Air Act (CAA) Amendments which authorized the Agency to establish regulatory requirements to ensure that ozone-depleting substances (ODS) are replaced by alternatives that reduce overall risks to human health and the environment, and to promote an expedited transition to safe substitutes. To promote this transition, CAA specified that EPA establish an information clearinghouse of available alternatives, and coordinate with other Federal agencies and the public on research, procurement practices, and information and technology transfers.

Since the program's inception in 1994, SNAP has reviewed close to 500 new chemicals and alternative manufacturing processes for a wide range of consumer, industrial, space exploration, and national security applications. Roughly 90% of alternatives submitted to EPA for review have been listed as acceptable for a specific use, typically with some condition or limit to minimize risks to human health and the environment.

Regulations promulgated under SNAP require that Motor Vehicle Air Conditioners (MVACs) retrofitted to use a SNAP substitute refrigerant include basic information on a label to be affixed to the air conditioner. The label includes the name of the substitute refrigerant, when and by whom the retrofit was performed, environmental and safety information about the substitute refrigerant, and other information. This information is needed so that subsequent technicians working on the MVAC system will be able to service the equipment properly, decreasing the likelihood of significant refrigerant cross-contamination and potential failure of air conditioning systems and recovery/recycling equipment.

Form Numbers: None.

Respondents/affected entities: Entities potentially affected by this action are new and used car dealers, gas service stations, top and body repair shops, general automotive repair shops, automotive repair shops not elsewhere classified, including air conditioning and radiator specialty shops.

Respondent's obligation to respond: Mandatory under 40 CFR 82.180.

Estimated number of respondents: 3 (total).

Frequency of response: Once per retrofit of a motor vehicle air conditioner.

Total estimated burden: 0.08 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: $3.64 (per year), includes $0.10 (per year) annualized capital or operation & maintenance costs.

Changes in Estimates: There is a decrease of 0.3 hours in the total estimated respondent burden compared with the ICR currently approved by OMB (per year). This decrease is based on the decline of MVACs in service today using chlorofluorocarbons (CFCs), specifically CFC–12. After 1994, new cars in the U.S. were no longer manufactured with CFC–12 MVACs. The number of MVACs originally designed to use CFC–12 as well as the number of those retrofitted has been decreasing every year and EPA estimates a continued reduction in the number of CFC–12 MVAC retrofits will occur during the next three years. EPA estimates that in 2020 there were 1,500 MVACs originally designed to use CFC–12 operating in the U.S., and estimates that in 2021, 2022 and 2023 the number of cars originally designed to use CFC–12 will decrease to 600, 200 and 100, respectively. Of these, EPA estimates that 1 MVAC will be retrofitted annually to use alternative refrigerants. Therefore, EPA estimates that in 2021, 2022 and 2023 the number of MVACs to be retrofitted is 1 for each year; resulting in a total of 3 MVAC retrofits over the three years of this ICR. These reductions are due to the decrease of CFC–12 MVACs available on the road for retrofitting.

Hans Christopher Grundler,

Director, Office of Atmospheric Programs.

ENVIRONMENTAL PROTECTION AGENCY

[FRL–10016–81–Region 3]

Delegation of Authority to the State of West Virginia To Implement and Enforce Additional or Revised National Emission Standards for Hazardous Air Pollutants Standards and New Source Performance Standards

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of delegation of authority.

SUMMARY: On October 8, 2020, the Environmental Protection Agency (EPA) sent the State of West Virginia (West Virginia) a letter acknowledging that West Virginia's delegation of authority to implement and enforce the National Emissions Standards for Hazardous Air Pollutants (NESHAP) and New Source

Performance Standards (NSPS) had been updated, as provided for under previously approved delegation mechanisms. To inform regulated facilities and the public, EPA is making available a copy of EPA's letter to West Virginia through this notice.

DATES: On October 8, 2020, EPA sent West Virginia a letter acknowledging that West Virginia's delegation of authority to implement and enforce Federal NESHAPs and NSPS had been updated.

ADDRESSES: Copies of documents pertaining to this action are available for public inspection during normal business hours at the Air & Radiation Division, U.S. Environmental Protection Agency, Region III, 1650 Arch Street, Philadelphia, PA 19103–2029. Copies of West Virginia's submittal are also available at the West Virginia Department of Environmental Protection, Division of Air Quality, 601 57th Street SE, Charleston, WV 25304.

FOR FURTHER INFORMATION CONTACT: Riley Burger, Permits Branch (3AD10), Air & Radiation Division, U.S. Environmental Protection Agency, Region III, 1650 Arch Street, Philadelphia, PA 19103. The telephone number is (215) 814–2217. Mr. Burger can also be reached via electronic mail at *burger.riley@epa.gov.*

SUPPLEMENTARY INFORMATION: On May 6, 2019, West Virginia notified EPA that West Virginia had updated its incorporation by reference of Federal NESHAP and NSPS to include many such standards as found in Title 40 of the Code of Federal Regulations (CFR), parts 60, 61, and 63 as of June 1, 2018. On June 3, 2020, West Virginia notified EPA that West Virginia had updated its incorporation by reference of Federal NESHAP and NSPS to include many such standards as found in Title 40 of the CFR, parts 60, 61, and 63 as of June 1, 2019. On October 8, 2020, EPA sent West Virginia a letter acknowledging that West Virginia now has the authority to implement and enforce the NESHAP and NSPS as specified by West Virginia in its notices to EPA, as provided for under previously approved automatic delegation mechanisms. All notifications, applications, reports, and other correspondence required pursuant to the delegated NESHAP and NSPS must be submitted to both EPA Region III and to the West Virginia Department of Environmental Protection, unless the delegated standard specifically provides that such submittals may be sent to EPA or a delegated State. In such cases, the submittals should be sent only to the West Virginia Department of Environmental Protection. A copy of EPA's October 8, 2020 letter to West Virginia follows:

Mr. Laura M. Crowder, Director
Division of Air Quality
West Virginia Department of Environmental Protection
601 57th Street SE
Charleston, West Virginia 25304

Dear Ms. Crowder:

The United States Environmental Protection Agency (EPA) has previously delegated to the State of West Virginia the authority to implement and enforce various federal National Emissions Standards for Hazardous Air Pollutants (NESHAP) and New Source Performance Standards (NSPS), which are found at 40 CFR parts 60, 61, and 63. In those actions EPA also delegated to West Virginia the authority to implement and enforce any future EPA NESHAP or NSPS on the condition that West Virginia legally adopt the future standards, make only allowed wording changes, and provide specified notice to EPA.

In a letter dated May 6, 2019, West Virginia informed EPA that West Virginia had updated its incorporation by reference of federal NESHAP and NSPS to include many such standards as found in 40 CFR parts 60, 61, and 63 as of June 1, 2018. In a letter dated June 3, 2020, West Virginia informed EPA that West Virginia had updated its incorporation by reference of federal NESHAP and NSPS to include many such standards as found in 40 CFR parts 60, 61, and 63 as of June 1, 2019. West Virginia noted in both letters that it understood it was automatically delegated the authority to implement these standards. West Virginia committed to enforcing the standards in conformance with the terms of EPA's previous delegations of authority. West Virginia made only allowed wording changes.

West Virginia provided copies of the revised West Virginia Legislative Rules which specify the NESHAP and NSPS which West Virginia has adopted by reference. These revised Legislative Rules are entitled 45 CSR 34—''Emission Standards for Hazardous Air Pollutants,'' and 45 CSR 16—''Standards of Performance for New Stationary Sources.'' These revised Rules have an effective date of June 1, 2019 for the 2019 letter and June 1, 2020 for the 2020 letter.

Accordingly, EPA acknowledges that West Virginia now has the authority, as provided for under the terms of EPA's previous delegation actions, to implement and enforce the NESHAP and NSPS standards which West Virginia adopted by reference in West Virginia's revised Legislative Rules 45 CSR 34 and 45 CSR 16, as effective on June 1, 2019 and subsequently on June 1, 2020.

Please note that on December 19, 2008 in Sierra Club vs. EPA,[1] the United States Court of Appeals for the District of Columbia Circuit vacated certain provisions of the General Provisions of 40 CFR part 63 relating to exemptions for startup, shutdown, and malfunction (SSM). On October 16, 2009, the Court issued the mandate vacating these SSM exemption provisions, which are found at 40 CFR part 63, 63.6(f)(1), and (h)(1).

Accordingly, EPA no longer allows sources to use the SSM exemption as provided for in the vacated provisions at 40 CFR 63.6(f)(1), and (h)(1), even though EPA has not yet formally removed the SSM exemption provisions from the General Provisions of 40 CFR part 63. Because West Virginia incorporated 40 CFR part 63 by reference, West Virginia should also no longer allow sources to use the former SSM exemption from the General Provisions of 40 CFR part 63 due to the Court's ruling in Sierra Club vs. EPA.

EPA appreciates West Virginia's continuing NESHAP and NSPS enforcement efforts, and also West Virginia's decision to take automatic delegation of additional and more recent NESHAP and NSPS by adopting them by reference.

If you have any questions, please contact me or Ms. Mary Cate Opila, Chief, Permits Branch, at 215–814–2041.

Sincerely,

Cristina Fernandez, Director
Air and Radiation Division
EPA Region III

This notice acknowledges the updates of West Virginia's delegation of authority to implement and enforce NESHAP and NSPS.

Dated: November 17, 2020.

Cristina Fernandez,

Director, Air & Radiation Division, Region III.

ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OAR–2016–0731; FRL–10017–49–OAR]

Proposed Information Collection Request; Renewal; EPA's Methane Challenge Program

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The Environmental Protection Agency is planning to submit a renewal information collection request (ICR), ''EPA's Natural Gas STAR and Methane Challenge Programs'' (EPA ICR No. 2547.01, OMB Control No. 2060–0722) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*). Before doing so, EPA is soliciting public comments on specific aspects of the proposed information collection as described below. Specifically, EPA is proposing to merge the ICR with ''EPA's Natural Gas STAR Program'' (EPA ICR

No. 2004–0082, OMB Control No. 2060–0328). This is a renewal with modification of the existing ICR, which is currently approved through August 31, 2021. An Agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number.

DATES: Comments must be submitted on or before March 22, 2021.

ADDRESSES: Submit your comments, referencing Docket ID No. EPA–HQ–OAR–2016–0731 online using *www.regulations.gov* (our preferred method), by email to *a-and-r-Docket@epa.gov,* or by mail to: EPA Docket Center, Environmental Protection Agency, Mail Code 28221T, 1200 Pennsylvania Ave. NW, Washington, DC 20460.

EPA's policy is that all comments received will be included in the public docket without change including any personal information provided, unless the comment includes profanity, threats, information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute.

FOR FURTHER INFORMATION CONTACT: Patrick Lau, Office of Atmospheric Programs, Climate Change Division, (6207A), Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460; telephone number: (202) 564–7312; email address: *lau.patrick@epa.gov.*

SUPPLEMENTARY INFORMATION: Supporting documents for the two existing ICR, which explain in detail the information that the EPA will be collecting, are available in the public docket for this ICR and the Natural Gas STAR ICR (Docket ID: EPA–HQ–OAR–2016–2004–0082). The docket can be viewed online at *www.regulations.gov* or in person at the EPA Docket Center, WJC West, Room 3334, 1301 Constitution Ave. NW, Washington, DC. The telephone number for the Docket Center is 202–566–1744. For additional information about EPA's public docket, visit *http://www.epa.gov/dockets.*

Pursuant to section 3506(c)(2)(A) of the PRA, EPA is soliciting comments and information to enable it to: (i) Evaluate whether the proposed collection of information is Necessary for the proper performance of the functions of the Agency, including whether the information will have practical utility; (ii) evaluate the accuracy of the Agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (iii) enhance the quality, utility, and clarity of the information to be collected; and (iv) minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses. EPA will consider the comments received and amend the ICR as appropriate. The final ICR package will then be submitted to OMB for review and approval. At that time, EPA will issue another **Federal Register** notice to announce the submission of the ICR to OMB and the opportunity to submit additional comments to OMB.

Abstract: The Natural Gas STAR and Methane Challenge programs (''Gas STAR Programs'') are voluntary programs sponsored by the U.S. Environmental Protection Agency (EPA) that encourage oil and natural gas companies to adopt cost effective technologies and practice that improve operational efficiency and reduce methane emissions. Methane is the primary component of natural gas and a potent greenhouse gas. The Programs work with oil and natural gas companies in the production, gathering & boosting, processing, transmission & storage, and distribution segments to remove barriers that inhibit the implementation of technologies and practices that reduce methane emissions. The Programs effectively promote the adoption of emission reduction technologies and practices by helping partners evaluate Best Management Practices (BMPs) in the context of their current operations and implement them where cost-effective. Implementation of the Programs' BMPs saves participants money, improves operational efficiency, and enhances the protection of the environment. Combining the ICR's for the Methane Challenge and the Natural Gas STAR programs is expected to streamline partners' engagement with the programs and simplify communications about reporting.

Form Numbers: The Natural Gas STAR and Methane Challenge Programs each have Partnership Agreements (''PA'') that describe the terms of participation in the Program. A company that wishes to become a Natural Gas STAR or Methane Challenge partner signs and submits the applicable PA to EPA. The PA forms covered under this ICR include:

- *Natural Gas STAR Program—Partnership Agreement:* EPA Form No. 5900–105
- *Methane Challenge Program—Partnership Agreement for Best Management Practice Commitment Option:* EPA Form No. 5900–412
- *Methane Challenge Program—Partnership Agreement for ONE Future Emissions Intensity Commitment Option:* EPA Form No. 5900–411

Partners agree to complete and submit a Natural Gas STAR or Methane Challenge Implementation Plan (as applicable) within six to twelve months of signing the PA. The Implementation Plan forms covered under this ICR include:

- *Natural Gas STAR Program—Production Implementation Plan:* EPA Form No. 5900–103
- *Natural Gas STAR Program—Transmission Implementation Plan:* EPA Form No. 5900–109
- *Natural Gas STAR Program—Distribution Implementation Plan:* EPA Form No. 5900–97
- *Natural Gas STAR Program—Gathering and Processing Implementation Plan:* EPA Form No. 5900–100
- *Methane Challenge Program—Implementation Plan Template:* EPA Form No. 5900–410

After one full year of participation in either Program, partners submit an annual report documenting the previous year's methane emission reduction activities. Partners only need to submit the applicable form(s) for the Program/commitment option/segments they have joined. The annual reporting forms covered under this ICR include:

- *Natural Gas STAR Program—Production Reporting Form:* EPA Form No. 5900–104
- *Natural Gas STAR Program—Transmission Reporting Form:* EPA Form No. 5900–95
- *Natural Gas STAR Program—Distribution Reporting Form:* EPA Form No. 5900–99
- *Natural Gas STAR Program—Gathering and Processing Reporting Form:* EPA Form No. 5900–102
- *Methane Challenge Program—BMP Commitment Option Reporting Form:* EPA Form No. 5900–434
- *Methane Challenge Program—ONE Future Commitment Option Reporting Form:* EPA Form No. 5900–435

Upon becoming a partner in the Methane Challenge Program, companies are given an opportunity to draft and submit a Historical Actions Fact Sheet, which provides information on historical methane reduction actions taken prior to joining Methane Challenge. A two-page fact sheet template is made available to partner companies and allows entry of up to five key methane mitigation activities, including text, photos, and graphics.

Submitting this document is *not* a requirement of the Methane Challenge Program partnership. The fact sheet template covered under this ICR is:

- *Methane Challenge Program—Historical Actions Fact Sheet Template:* EPA Form No. 5900–413

Respondents/affected entities: The Natural Gas STAR Programs are open to companies in the production segment of the oil industry, and to companies in the production, gathering & boosting, processing, transmission & storage, and distribution segments of the natural gas industry.

Respondent's obligation to respond: Voluntary.

Estimated number of respondents: 97 (Natural Gas STAR) and 58 (Methane Challenge) partners, and 50 vendors (total).

Frequency of response: Annual for partners and semi-annual for vendors.

Total estimated burden: 2,846 hours (per year) for the Natural Gas STAR Program plus 2,978 hours (per year) for the Methane Challenge Program. Burden is defined at 5 CFR 1320.03(b).

Total estimated cost: $268,577.00 (per year) for the Natural Gas STAR Program plus $268,952 hours (per year) for the Methane Challenge Program. There are no capital/start-up costs or O&M costs associated with this information collection.

Changes in Estimates: EPA expects that the burden associated with the final ICR submission for the Methane Challenge Program will increase compared to its previous estimated burden due to modifying this ICR to include the addition of respondents from the Natural Gas STAR Program. However, the final total burden for the total of the two programs is not expected to exceed the sum of the burdens for Natural Gas STAR and Methane Challenge Programs.

Hans Christopher Grundler,

Director, Office of Atmospheric Programs.

ENVIRONMENTAL PROTECTION AGENCY

[FRL–10016–80-Region 3]

Delegation of Authority to the Commonwealth of Virginia To Implement and Enforce Additional or Revised National Emission Standards for Hazardous Air Pollutants Standards and New Source Performance Standards

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of delegation of authority.

SUMMARY: On October 8, 2020, the Environmental Protection Agency (EPA) sent the Commonwealth of Virginia (Virginia) a letter acknowledging that Virginia's delegation of authority to implement and enforce the National Emissions Standards for Hazardous Air Pollutants (NESHAPs) and New Source Performance Standards (NSPS) had been updated, as provided for under previously approved delegation mechanisms. To inform regulated facilities and the public, EPA is making available a copy of EPA's letter to Virginia through this notice.

DATES: On October 8, 2020, EPA sent Virginia a letter acknowledging that Virginia's delegation of authority to implement and enforce Federal NESHAPs had been updated.

ADDRESSES: Copies of documents pertaining to this action are available for public inspection during normal business hours at the Air and Radiation Division, U.S. Environmental Protection Agency, Region III, 1650 Arch Street, Philadelphia, PA 19103–2029. Copies of Virginia's submittal are also available at the Virginia Department of Environmental Quality, 1111 East Main Street, Richmond, VA 23219.

FOR FURTHER INFORMATION CONTACT: Riley Burger, Permits Branch (3AD10), Air & Radiation Division, U.S. Environmental Protection Agency, Region III, 1650 Arch Street, Philadelphia, PA 19103. The telephone number is (215) 814 2217, or by Mr. Burger can also be reached via electronic mail at *burger.riley@epa.gov.*

SUPPLEMENTARY INFORMATION: On March 5, 2020, Virginia notified EPA that Virginia had updated its incorporation by reference of Federal NESHAP, NSPS, and Maximum Achievable Control Technology (MACT) standards to include many such standards, as they were published in final form in the Code of Federal Regulations (CFR) dated July 1, 2019. On October 8, 2020, EPA sent Virginia a letter acknowledging that Virginia now has the authority to implement and enforce the NESHAPs as specified by Virginia in its notice to EPA, as provided for under previously approved automatic delegation mechanisms. All notifications, applications, reports, and other correspondence required pursuant to the delegated NESHAPs must be submitted to both EPA, Region III and to the Virginia Department of Environmental Quality, unless the delegated standard specifically provides that such submittals may be sent to EPA or a delegated State. In such cases, the submittals should be sent only to the Virginia Department of Environmental Quality. A copy of EPA's letter to Virginia follows:

''Michael G. Dowd, Director,
Air Division,
Virginia Department of Environmental Quality,
P.O. Box 1105,
Richmond, Virginia 23218
Dear Mr. Dowd:

The United States Environmental Protection Agency (EPA) has previously delegated to the Commonwealth of Virginia (Virginia) the authority to implement and enforce various federal New Source Performance Standards (NSPS), National Emission Standards for Hazardous Air Pollutants (NESHAP), and National Emission Standards for Hazardous Air Pollutants for Source Categories (MACT standards) which are found at 40 CFR parts 60, 61 and 63, respectively. In those actions, EPA also delegated to Virginia the authority to implement and enforce any future federal NSPS, NESHAP or MACT Standards on the condition that Virginia legally adopt the future standards, make only allowed wording changes, and provide specified notice to EPA.

In a letter dated March 5, 2020, Virginia submitted to EPA revised versions of Virginia's regulations which incorporate by reference specified federal NSPS, NESHAP and MACT standards, as those federal standards had been published in final form in the Code of Federal Regulations dated July 1, 2019. Virginia committed to enforcing the federal standards in conformance with the terms of EPA's previous delegations of authority and made only allowed wording changes.

Virginia stated that it had submitted the revisions ''to retain its authority to enforce the NSPSs and NESHAPs under the delegation of authority granted by EPA on August 27, 1981 (46 FR 43300) and to enforce the MACT standards under the delegation of authority granted by EPA on January 26, 1999 (64 FR 3938) and January 8, 2002 (67 FR 825).''

Virginia provided copies of its revised regulations which specify the NSPS, NESHAP and MACT Standards which it had adopted by reference. Virginia's revised regulations are entitled 9 VAC 5–50 ''New and Modified Stationary Sources,'' and 9 VAC 5–60 ''Hazardous Air Pollutant Sources.'' These revised regulations have an effective date of March 4, 2020.

Based on Virginia's submittal, EPA acknowledges that EPA's delegations to Virginia of the authority to implement

and enforce EPA's NSPS, NESHAP, and MACT standards have been updated, as provided for under the terms of EPA's previous delegation of authority actions, to allow Virginia to implement and enforce the federal NSPS, NESHAP and MACT standards which Virginia has adopted by reference as specified in Virginia's revised regulations 9 VAC 5–50 and 9 VAC 5–60, both effective on March 4, 2020.

Please note that on December 19, 2008, in *Sierra Club* v. *EPA*,[1] the United States Court of Appeals for the District of Columbia Circuit vacated certain provisions of the General Provisions of 40 CFR part 63 relating to exemptions for startup, shutdown, and malfunction (SSM). On October 16, 2009, the Court issued a mandate vacating these SSM exemption provisions, which are found at 40 CFR 63.6(f)(1) and (h)(1).

Accordingly, EPA no longer allows sources the SSM exemption as provided for in the vacated provisions at 40 CFR 63.6(f)(1) and (h)(1), even though EPA has not yet formally removed these SSM exemption provisions from the General Provisions of 40 CFR part 63. Because Virginia incorporated 40 CFR part 63 by reference, Virginia should also no longer allow sources to use the former SSM exemption from the General Provisions of 40 CFR part 63 due to the Court's ruling in Sierra Club vs. EPA.

EPA appreciates Virginia's continuing NSPS, NESHAP and MACT standards enforcement efforts, and also Virginia's decision to take automatic delegation of additional or updated NSPS, NESHAP and MACT standards by adopting them by reference.

Sincerely,
Cristina Fernandez,
Director Air and Radiation Division''

This notice acknowledges the update of Virginia's delegation of authority to implement and enforce NESHAP, NSPS, and MACT standards.

Dated: November 17, 2020.

Cristina Fernandez,

Director, Air and Radiation Division, Region III.

ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–SFUND–2012–0104; FRL—10019–10–OMS]

Information Collection Request Submitted to OMB for Review and Approval; Comment Request; Brownfields Program—Accomplishment Reporting (Renewal)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The Environmental Protection Agency (EPA) has submitted an information collection request (ICR), Brownfields Program—Accomplishment Reporting (EPA ICR Number 2104.08, OMB Control Number 2050–0192) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act. This is a proposed extension of the ICR, which is currently approved through January 31, 2021. Public comments were previously requested via the **Federal Register** on June 18, 2020 during a 60-day comment period. This notice allows for an additional 30 days for public comments. A fuller description of the ICR is given below, including its estimated burden and cost to the public. An agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

DATES: Additional comments may be submitted on or before February 18, 2021.

ADDRESSES: Submit your comments to EPA, referencing Docket ID No. EPA–HQ–SFUND–2012–0104, online using *www.regulations.gov* (our preferred method), by email to *docket.superfund@epa.gov,* or by mail to: EPA Docket Center, Environmental Protection Agency, Mail Code 28221T, 1200 Pennsylvania Ave. NW, Washington, DC 20460. EPA's policy is that all comments received will be included in the public docket without change including any personal information provided, unless the comment includes profanity, threats, information claimed to be Confidential Business Information (CBI), or other information whose disclosure is restricted by statute.

Submit written comments and recommendations to OMB for the proposed information collection within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Kelly Gorini, Office of Brownfields and Land Revitalization, (5105T), Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460; telephone number: (202) 566–1702; fax number: (202) 566–1476; email address: *gorini.kelly@epa.gov*

SUPPLEMENTARY INFORMATION: Supporting documents, which explain in detail the information that the EPA will be collecting, are available in the public docket for this ICR. The docket can be viewed online at *www.regulations.gov* or in person at the EPA Docket Center, WJC West, Room 3334, 1301 Constitution Ave. NW, Washington, DC. The telephone number for the Docket Center is 202–566–1744. For additional information about EPA's public docket, visit *http://www.epa.gov/dockets.*

Abstract: This ICR covers the collection of information from those organizations that receive cooperative agreements from EPA under the authority of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) as amended by the Brownfields Utilization, Investment, and Local Development (BUILD) Act (Pub. L. 115–141). CERCLA, as amended, authorizes EPA to award grants or cooperative agreements to states, tribes, local governments, and other eligible entities to support the assessment and cleanup of brownfields sites. Under the Brownfields Amendments, a brownfields site means real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. For funding purposes, EPA uses the term ''brownfields property(ies)'' synonymously with the term ''brownfields sites.'' The Brownfields Amendments authorize EPA to award several types of cooperative agreements to eligible entities on a competitive basis.

Under subtitle A of the Small Business Liability Relief and Brownfields Revitalization Act, states, tribes, local governments, and other eligible entities can receive assessment cooperative agreements to inventory, characterize, assess, and conduct planning and community involvement related to brownfields properties; cleanup cooperative agreements to carry out cleanup activities at brownfields properties; multipurpose cooperative agreements to conduct activities

allowed under both assessment and cleanup cooperative agreements; cooperative agreements to capitalize revolving loan funds and provide subgrants for cleanup activities; area-wide planning cooperative agreements to develop revitalization plans for brownfields; and environmental workforce and development job training and placement programs. Under subtitle C of the Small Business Liability Relief and Brownfields Revitalization Act, states and tribes can receive cooperative agreements to establish and enhance their response programs through the four elements and meet the public record requirements under the statute. Cooperative agreement recipients (''recipients'') have general reporting and record keeping requirements as a condition of their cooperative agreement that result in burden. A portion of this reporting and record keeping burden is authorized under 2 CFR part 1500 and identified in the EPA's general grants ICR (OMB Control Number 2030–0020). EPA requires Brownfields program recipients to maintain and report additional information to EPA on the uses and accomplishments associated with funded brownfields activities. EPA uses several forms to assist recipients in reporting the information and to ensure consistency of the information collected. EPA uses this information to meet Federal stewardship responsibilities to manage and track how program funds are being spent, to evaluate the performance of the Brownfields Cleanup and Land Revitalization Program, to meet the Agency's reporting requirements under the Government Performance Results Act, and to report to Congress and other program stakeholders on the status and accomplishments of the program.

Respondents/affected entities: State/local/tribal governments; Non-Profits.

Respondent's obligation to respond: Required to obtain or Retain Benefits (2 CFR part 1500).

Estimated number of respondents: 2969 (total).

Frequency of response: Bi-annual for subtitle C recipients; quarterly for subtitle A recipients.*Total estimated burden:* 6,144 hours (per year). Burden is defined at 5 CFR 1320.03(b).

Total estimated cost: $712,108 (per year), includes $0 annualized capital or operation & maintenance costs.

Changes in the Estimates: The overall burden has increased slightly by 379 hours since the last ICR submittal. This is the result of an increased response total of 123 additional responses. Respondents indicated that improvements in the ACRES reporting system and increased familiarity with the program lead to a lower burden per individual entry.

Courtney Kerwin,

Director, Regulatory Support Division.

ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OLEM–2020–0689; FRL–10018–16–OLEM]

Hazardous and Solid Waste Management System: Land Disposal Restrictions; Information for Petitioners Seeking a No-Migration Variance Under the RCRA Land Disposal Restrictions for Temporary Placement of Treated Hazardous Waste Within a Permitted Subtitle C Landfill

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The Environmental Protection Agency (EPA) is requesting comment on guidance on petitions for a No Migration Variance (NMV) under the Land Disposal Restrictions (LDRs) pursuant to the Resource Conservation and Recovery Act (RCRA). Under existing regulations, persons may apply for an NMV to allow for the land placement (*e.g.,* landfill, impoundment, waste pile) of hazardous waste that, if approved, would allow for the placement of hazardous waste in such a unit where the waste does not meet applicable LDR treatment standards. This guidance provides information to persons applying for an NMV for a waste pile temporarily located within a RCRA-permitted landfill cell.

DATES: Comments must be received on or before February 18, 2021.

ADDRESSES: You may send comments, identified by Docket ID No. EPA–HQ–OLEM–2020–0689, by any of the following methods:

- *Federal eRulemaking Portal: https://www.regulations.gov/* (our preferred method). Follow the online instructions for submitting comments.
- *Mail:* U.S. Environmental Protection Agency, EPA Docket Center, Office of Land and Emergency Management Docket, Mail Code 28221T, 1200 Pennsylvania Avenue NW, Washington, DC 20460.
- *Hand Delivery/Courier:* EPA Docket Center, WJC West Building, Room 3334, 1301 Constitution Avenue NW, Washington, DC 20004. The Docket Center's hours of operations are 8:30 a.m.–4:30 p.m., Monday–Friday (except Federal Holidays).

Instructions: All submissions received must include the Docket ID No. for this notice. Comments received may be posted without change to *https://www.regulations.gov/,* including any personal information provided. For detailed instructions on sending comments and additional information on the rulemaking process, see the ''Public Participation'' heading of the **SUPPLEMENTARY INFORMATION** section of this notice.

FOR FURTHER INFORMATION CONTACT: Bethany Russell, Waste Characterization Branch, Materials Recovery and Waste Management Division, Office of Resource Conservation and Recovery (5304P), Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460; telephone number: 404–562–8542; email address: *russell.bethany@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. Public Participation

A. Docket

EPA has established a docket for this action under Docket ID No. EPA–HQ–OLEM–2020–0689. All documents in the docket are listed in the *https://www.regulations.gov* index. Publicly available docket materials are available either electronically at *https://www.regulations.gov* or in hard copy at the EPA Docket Center. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding holidays. The telephone number for the Public Reading Room is (202) 566–1744, and the telephone number for the EPA Docket Center is (202) 566–1742.

EPA is temporarily suspending its Docket Center and Reading Room for public visitors, with limited exceptions, to reduce the risk of transmitting COVID–19. Our Docket Center staff will continue to provide remote customer service via email, phone, and webform. We encourage the public to submit comments via *https://www.regulations.gov/* as there may be a delay in processing mail. Hand deliveries or couriers will be received by scheduled appointment only. For further information and updates on EPA Docket Center services, please visit us online at *https://www.epa.gov/dockets.*

EPA continues to carefully and continuously monitor information from the Centers for Disease Control and Prevention (CDC), local area health departments, and our Federal partners so that we can respond rapidly as conditions change regarding COVID–19.

B. Written Comments

Submit your comments, identified by Docket ID No. EPA–HQ–OLEM–2020–0689, at *https://www.regulations.gov* (our preferred method), or the other methods identified in the **ADDRESSES** section. Once submitted, comments cannot be edited or removed from the docket. The EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.* on the web, cloud, or other file sharing system). For additional submission methods, the full EPA public comment policy, information about CBI or multimedia submissions, and general guidance on making effective comments, please visit *https://www.epa.gov/dockets/commenting-epa-dockets.*

C. Submitting CBI

Do not submit information that you consider to be CBI electronically through *https://www.regulations.gov* or email. Send or deliver information identified as CBI to only the following address: ORCR Document Control Officer, Mail Code 5305–P, Environmental Protection Agency, 1200 Pennsylvania Avenue NW, Washington, DC 20460; Attn: Docket ID No. EPA–HQ–OLEM–2020–0689.

Clearly mark the part or all of the information that you claim to be CBI. For CBI information in a disk or CD–ROM that you mail to EPA, mark the outside of the disk or CD–ROM as CBI and then identify electronically within the disk or CD–ROM the specific information that is claimed as CBI. In addition to one complete version of the comment that includes information claimed as CBI, a copy of the comment that does not contain the information claimed as CBI must be submitted for inclusion in the public docket. If you submit a CD–ROM or disk that does not contain CBI, mark the outside of the disk or CD–ROM clearly that it does not contain CBI. Information marked as CBI will not be disclosed except in accordance with procedures set forth in Title 40 of the Code of Federal Regulations (CFR) Part 2.

II. General Information

A. Purpose of This Notice

The Land Disposal Restrictions (LDRs) are a key part of the hazardous waste regulatory program under the Resource Conservation and Recovery Act (RCRA) and require that hazardous wastes meet certain treatment standards prior to land disposal. If these standards are not met, land disposal of the waste is prohibited. The RCRA statute and implementing regulations allow land disposal of hazardous waste not meeting applicable treatment standards where a No Migration Variance (NMV) is approved by EPA. An NMV is a formal decision that can be rendered by EPA in response to a petition filed with the Agency, to allow the land disposal at a particular facility of specific prohibited waste, *i.e.,* a waste not meeting the applicable LDR treatment standards. In Section III of this notice, EPA is providing information for persons who may wish to apply for an NMV for one or more temporary waste piles, where treated hazardous waste that is expected to meet LDR standards is temporarily stored within the boundary of a hazardous waste landfill prior to moving that waste within the landfill to its final disposal or removing it for further treatment.

B. Background

The regulatory requirements for an NMV under the RCRA LDRs were first established in 1986,[1] and in 1992, EPA issued guidance on these requirements.[2] The 1992 guidance is applicable to landfills, surface impoundments, and waste piles, and also acknowledges temporary placement of waste under an approved NMV; however, the guidance did not address the specific situation identified in this notice where temporary piles of treated waste are placed within the boundary of a RCRA-permitted hazardous waste landfill.

Some commercial hazardous waste landfill facilities offer services for treating hazardous waste in addition to providing landfill disposal. In determining the appropriate treatment, facilities evaluate the incoming waste streams to identify the best treatment strategy (*e.g.,* type and quantity of reagents, mixing times). Facilities rely on information in waste profiles provided by generators, waste characterization conducted by the facility (including characterization specified in their Waste Analyses Plan or WAP), as well as familiarity with waste streams (*e.g.,* if a waste stream is received on a routine basis from the same source). Once treated, facilities may store the treated (*e.g.,* stabilized) waste temporarily in units such as tanks, containers or containment buildings to allow the treated waste to ''cure'' and/or to confirm that the treated waste meets the applicable LDR standards. The treated waste is then moved into the landfill for disposal.

EPA is aware that some facilities have established procedures whereby a pile of treated hazardous waste is temporarily staged within the boundaries of the permitted subtitle C landfill while awaiting confirmation by the facility through testing results that the treatment program is performing as expected and that the treated waste meets the applicable LDR standards. Where the treated waste is confirmed to meet the LDR standards, the pile is moved to the ''working face'' of the landfill for final disposal. If there is an exceedance of an LDR standard, the pile is picked up and returned to the treatment process for further treatment. Any instance where a pile does not meet the applicable LDR standards and has not been granted an NMV would be a violation of the LDR requirements—the hazardous waste must either meet the LDR standards, or an approved NMV must be in place.[3]

C. The NMV Process

The NMV petition submittal and decision process is found in 40 CFR 268.6. Review and approval of an NMV petition is delegated to the EPA Regional Administrator for the EPA Region in which the waste management unit is located. EPA does not authorize states to implement the NMV authority. As part of the petition process, EPA may request additional information from the petitioner to evaluate the demonstration. EPA will provide notice in the **Federal Register** of the intent to approve or deny the NMV petition with an opportunity for public comment. The final decision is to be published in the **Federal Register**, and petitions to renew must undergo notice and comment procedures as well. An NMV that has been issued can be revoked for cause, including if migration occurs. Once approved, the term of an NMV shall be no longer than the term of the RCRA subtitle C permit for a permitted disposal unit, and no longer than 10 years for a unit operating under interim status. The 1992 guidance should be

[1] 51 FR 40572, November 7, 1986.

[2] *No Migration Variances to the Hazardous Waste Land Disposal Prohibitions: A Guidance Manual for Petitioners,* EPA Office of Solid Waste, July 1992, EPA–530–R92–023.

[3] Memorandum from Barnes Johnson to EPA Regional Division Directors, April 11, 2014; *https://rcrapublic.epa.gov/files/14843.pdf.*

considered a resource for preparation of any submittal, in addition to the considerations described here for which EPA is requesting comment.

III. NMV for Temporary Waste Piles Within a Subtitle C Landfill

EPA is requesting comment on the information provided below. The contents of the guidance document do not have the force and effect of law and the Agency does not bind the public in any way and intends only to provide clarity to the public regarding existing requirements under the law or Agency policies, except as authorized by law or as incorporated into a contract. This information is not a substitute for compliance with 40 CFR 268.6, but provides additional information in the specific situation where hazardous waste is treated and then is temporarily stored in piles within a permitted subtitle C landfill, prior to either transfer to the working face of the landfill, or removal for retreatment if necessary.

A. Demonstration Addressed by This Guidance

This guidance addresses how to make a demonstration that the treated waste and constituents will not migrate beyond the temporary waste pile. The RCRA statutory language requires a demonstration ''to a reasonable degree of certainty, that there will be no migration of hazardous constituents from the disposal unit or injection zone for as long as the waste remains hazardous'' (RCRA § 3004(d)(1)). EPA has interpreted this language to mean that it must be demonstrated, to a reasonable degree of certainty, that hazardous constituents will not exceed Agency-approved health-based levels (or environmentally protective levels, if they are appropriate) beyond the boundary of the disposal unit. While it is EPA's interpretation that man-made barriers or engineered systems (*e.g.,* liner systems) alone generally will not meet the ''no migration'' standard, this is not the case for temporary land-based storage of treated waste as is being considered in this document. The containment of hazardous waste within engineered barriers can be considered in making the ''no migration'' demonstration for waste awaiting the results of verification sampling after treatment, provided that wastes are to be removed after a reasonably short storage period that may be conservatively projected to be well before the failure of the engineered barrier system.[4]

B. Information To Be Submitted to EPA

EPA expects that petitioners will be able to take advantage of existing facility information (*e.g.,* existing monitoring, inspections, engineered barriers, waste analyses), where appropriate, as part of any demonstration. In developing an NMV petition, a petitioner must satisfy the no migration criteria set forth in 40 CFR 268.6, and petitioners should describe any and all controls that will be applied to the temporary waste pile to prevent the migration of hazardous constituents from the pile, and, the monitoring that will be used to detect migration at the earliest practicable time. For example, the use of temporary barriers, such as plastic covers above and below the piles; visual monitoring and prompt responses to possible releases; and generally good housekeeping practices that ensure the treated waste remains in the pile during the temporary storage period would be elements to consider. Attributes of the permitted landfill cell (*e.g.,* design, existing controls, monitoring) in which the pile or piles are located should also be taken into account to the extent that they support the demonstration criteria being applied to the piles themselves. In other words, if a particular control or requirement is in place for the landfill cell, and can prevent potential releases from the pile or piles, it should be described in the petition (and petitioners should specify how that control or requirement prevents migration from the boundary of the temporary waste pile).

The regulations in 40 CFR 268.6(a) describe the components of what a demonstration must address; § 268.6(b) specifies certain criteria that must be satisfied for that demonstration, and § 268.6(c) describes the monitoring program that will be used to verify that the conditions of the NMV are being met. The components for an NMV demonstration outlined in § 268.6(a) are:

- Descriptions of the specific waste(s) and specific unit for which the demonstration will be made;
- Waste analysis describing the chemical and physical characteristics of the waste;
- Comprehensive characterization of the disposal unit site, including air, soil, and water quality;
- Monitoring plan to detect migration at the earliest practicable time;
- Sufficient information to assure EPA that the owner/operator of the unit receiving the wastes will comply with other applicable federal, state, and local laws.

Below are some considerations regarding these components with respect to NMV petition submittals for piles temporarily storing waste within a subtitle C landfill that has been treated with the expectation that it meets the applicable LDR standards for permanent disposal in the landfill.

Facility Description—The NMV petition should include a description of the hazardous waste management facility where the waste will be treated, temporarily stored, and permanently disposed in sufficient detail to familiarize the reviewer with its overall operation. This type of information and level of detail will be similar to those included in the facility's RCRA permit application. The facility name, mailing address, and physical location should be provided, together with information on a point of contact for correspondence concerning the petition. Detailed design, layout, and operating plans should be provided for the unit covered by the petition. Unit descriptions should focus on waste isolation capabilities of the unit.

Unit(s) Covered by the NMV—While the temporary waste piles addressed in this document are located within the boundaries of the RCRA-permitted landfill cell, the unit to which the variance applies, as envisioned in this guidance, is the pile itself. The information presented here is for a demonstration that the treated waste and constituents will not migrate beyond the temporary waste pile. Where different piles containing different types of treated hazardous waste are simultaneously staged within the landfill cell, each pile should be described and will be evaluated, as necessary, individually by EPA in order to properly assess potential releases when evaluating petitions, and for evaluating the monitoring that will be part of implementing any approved variance. Where multiple piles contain the same or similar wastes, the petition can address these units as a group. For example, where two or more piles are similar in terms of the nature and concentration of constituents, treatment used, waste matrices, etc., the petition need not separately specify or discuss such information for each individual pile where such piles are effectively being managed as a single unit. Similarly, where the design, inspection, and monitoring of the pile coverings and liners that will be used to prevent releases from the piles are the same for multiple piles, such information on each individual pile need not be specified. In other words, a successful petition could include several categories of treated waste piles, but sufficient

[4] *No Migration Variances to the Hazardous Waste Land Disposal Prohibitions: A Guidance Manual for Petitioners,* EPA Office of Solid Waste, July 1992, EPA–530–R92–023.

information must be included so that the potential for releases, and proposed inspection and monitoring, can be evaluated by EPA.

While the unit(s) to be evaluated under this guidance are the temporary waste piles, petitioners should also submit information related to the landfill to the extent the information aids in any demonstration that hazardous constituents will not migrate beyond the boundary of the temporary waste pile. For example, hazardous waste landfill design and operating requirements (40 CFR 264.301) include run-on and run-off controls that may be important in any demonstration that hazardous waste will not migrate from the pile. The specific location of where the temporary waste piles will be placed within the landfill cell should be identified in the petition, together with any pertinent information as to why this location was selected and how it will prevent the migration of hazardous constituents from the pile. These locations will be identified as part of any approved variance.

This document only applies where wastes managed in the temporary waste piles have been treated with the expectation that the waste meets the applicable LDR standards for permanent disposal in the landfill. A facility should include information about what types and quantities of waste are to be managed in the temporary waste piles and what treatment standards apply. Most of this information is presumed to already be available as part of the facility's WAP and associated program for sampling and monitoring for compliance with the LDRs.

Duration of Temporary Storage—The NMV is necessary to ensure that any temporary storage of treated hazardous waste complies with the stringent statutory and regulatory standards in those instances where the hazardous waste that was treated and placed in a temporary waste pile does not meet LDRs. The approach described in this document is conditioned upon the temporary nature of the storage of treated hazardous waste within the landfill, and is intended for situations where the temporary waste piles are used as part of an overall strategy to confirm consistent and compliant treatment that meets the applicable LDR treatment standards.

The petition should include a description of the length of time the waste is managed in the pile before either transfer to the working face of the landfill, or removal for retreatment, if necessary. A range of time may be provided, but EPA emphasizes that the temporary nature of the pile must be clearly characterized in the petition, such as through maximum storage times or other procedures described in the application, that may become part of the conditions established in an approved variance.

However, if any particular staging location *routinely* receives treated waste that does not meet applicable LDR standards, then the ''temporary'' aspect of storage for a given location may be called into question, which could affect the ability for EPA to grant the NMV. This also raises the separate question of whether the overall treatment process is operating as well as it should. Therefore, it is important for the petition to describe in sufficient detail the procedures used to treat, test, and confirm that wastes meet LDR standards, and how this information will be used to determine when a pile will be removed either for retreatment, or for final disposal. Such information should be available as part of the facility's WAP and may include:

- Number and type (*e.g.,* random grab) of samples taken after treatment for LDR compliance;
- Methodology used to select number and type of samples;
- Level of confidence that all waste is treated to LDR treatment standards (level of confidence related to number of samples achieving LDRs);
- List of regulated constituents (suite of metals, selected organics, cyanide).

Monitoring Plan—40 CFR 268.6(a)(4) requires a petition to include a monitoring plan to verify continued compliance with the conditions of the no migration variance. Pursuant to 40 CFR 268.6(a)(4), the monitoring plan must be designed to detect migration ''at the earliest practicable time.'' 40 CFR 268.6(c) lays out the specific information required in the monitoring plan. In addition to these requirements, the monitoring plan should also describe the sampling and analysis of the treated waste that determines *when* the temporary waste pile will be moved to the working face of the landfill for final disposal. The demonstration should allow EPA to understand the process and timing of LDR treatment and confirmation that LDRs are met; this is fundamental to defining the scope and duration of storing treated waste temporarily.

Peter Wright,

Assistant Administrator, Office of Land and Emergency Management.

ADDRESSES: You may submit comments by any of the following methods—please use only one method:

Federal eRulemaking Portal: http://www.regulations.gov. Follow the instructions on the website for submitting comments.

Mail: Comments may be submitted by mail to Rachel See, Acting Executive Officer, Executive Secretariat, Equal Employment Opportunity Commission, 131 M Street NE, Washington, DC 20507.

Fax: Comments totaling six or fewer pages can be sent by facsimile (''fax'') machine to (202) 663–4114. (This is not a toll-free number.) Receipt of fax transmittals will not be acknowledged, except that the sender may request confirmation of receipt by calling the Executive Secretariat staff at (202) 663–4070 (voice) or 800–669–6820 (TTY). (These are not toll-free telephone numbers.)

Instructions: All comments received must include the agency name and docket number. All comments received will be posted without change to *http://www.regulations.gov,* including any personal information provided. However, the EEOC reserves the right to refrain from posting libelous or otherwise inappropriate comments, including those that contain obscene, indecent, or profane language; that contain threats or defamatory statements; that contain hate speech directed at race, color, sex, national origin, age, religion, disability, or genetic information; or that promote or endorse services or products.

Although copies of comments received are usually also available for

review at the Commission's library, given the EEOC's current 100% telework status due to the Coronavirus Disease 2019 (COVID–19) public health emergency, the Commission's library is closed until further notice. Once the Commission's library is re-opened, copies of comments received in response to this notice will be made available for viewing by appointment only at 131 M Street NE, Suite 4NW08R, Washington, DC 20507, between the hours of 9:30 a.m. and 5:00 p.m.

FOR FURTHER INFORMATION CONTACT: Rashida Dorsey, Employer Data Team, Data Development and Information Products Division, Equal Employment Opportunity Commission, 131 M Street NE, Room 4SW32J, Washington, DC 20507; (202) 663–4355 (voice), (202) 663–7063 (TTY) or email at *Rashida.dorsey@eeoc.gov.*

SUPPLEMENTARY INFORMATION: Pursuant to the Paperwork Reduction Act of 1995 and OMB regulation 5 CFR 1320.8(d)(1), the Commission solicits public comment to enable it to: (1) Evaluate whether the proposed collection of information is necessary for the proper performance of the Commission's functions, including whether the information will have practical utility; (2) Evaluate the accuracy of the Commission's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) Enhance the quality, utility, and clarity of the information to be collected; and (4) Minimize the burden of the collection of information on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

Overview of Information Collection

Collection Title: State and Local Government Information (EEO–4).

OMB-Number: 3046–0008.

Frequency of Report: Biennial, odd years.

Type of Respondent: State and local governments with 100 or more employees within the 50 U.S. states and District of Columbia.

Description of Affected Public: State and local governments with 100 or more employees within the 50 U.S. states and District of Columbia.

Reporting Hours: 95,542 per biennial collection.

Respondent Cost: $4,719,509.02 per biennial collection.

Federal Cost: $386,609.20 per biennial collection.

Number of Respondents: 5,687.

Number of Responses: 13,649.

Number of Forms: 1.

Form Number: EEOC Form 164.

Abstract: Section 709(c) of Title VII of the Civil Rights Act of 1964, as amended, 42 U.S.C. 2000e–8(c), requires State and local governments to make and keep records relevant to a determination of whether unlawful employment practices have been or are being committed and produce reports required by the EEOC. Accordingly, the EEOC issued regulations, 29 CFR 1602.30 and 1602.32–.37, which set forth the reporting requirements and related record retention policies for State and local governments. 29 CFR 1602.30 requires every covered State and local government to make or keep all records necessary for completion of an EEO–4 submission and retain those records for three years. 29 CFR 1602.32 requires filers to retain a copy of each filed EEO–4 report for three years. These requirements are related to record keeping which is part of standard administrative practices, and as a result, the EEOC believes that any impact on burden would be negligible and nearly impossible to quantify. State and local governments with 100 or more employees have been required to submit EEO–4 reports since 1974 (biennially since 1993). The EEOC uses EEO–4 data for research and to investigate charges of discrimination. The individual reports are confidential.

Burden Statement: The methodology for calculating annual burden reflects the different staff that are responsible for preparing and filing the EEO–4. These estimates are based on the estimated submission time of 7 hours per reporting unit, as published in the 2018 EEO–4 Information Collection Review as required by the Paperwork Reduction Act.[1] The EEOC accounts for time to be spent biennially on EEO–4 reporting by senior and administrative staff, as well as time spent by attorneys who may consult briefly during the reporting process. The estimated number of respondents included in the biennial EEO–4 survey is 5,687 State and local governments, as this is the average number of reporting units between 2005 and 2019. These 5,687 respondents will submit an estimated 13,649 reports during each biennial reporting cycle. The estimated hour burden per report will be 7 hours, and the estimated total biennial respondent burden hours will be 95,542. Burden hour cost was calculated using median hourly wage rates for administrative staff and legal counsel, and average hourly wage rates for State and local government staff. The burden hour cost per report will be $214.77, and the estimated total burden hour cost per biennial collection will be $4,719,509.02 (See Table 1 for calculations).

TABLE 1—ESTIMATE OF BURDEN FOR EEO–4 REPORT

	Hourly wage rate[2]	Burden hours per government entity	Cost per local	Total burden hours	Total burden hour cost[3]
	Number Reporting Units = 5,687.	.....	.....	.....	Number of Records Submitted= 13,649
Chief Executive	$52.90	0.35	$18.52	4,777.1	$88,447.64
Legal Counsel	50.50	0.35	17.68	4,777.1	84,434.89
Computer Support Specialist (IT Professional).	29.75	0.7	20.83	9,554.2	198,965.38
Executive Administrative Staff.	27.40	1.4	38.36	19,108.3	732,995.16
Human Resource Specialist	32.59	2.45	79.85	33,439.6	2,669,998.39
Payroll Clerks	22.60	1.75	39.55	23,885.4	944,667.57

[1] Please see here for more information: *https://www.reginfo.gov/public/do/PRAViewICR?ref_nbr=201804-3046-001.*

TABLE 1—ESTIMATE OF BURDEN FOR EEO–4 REPORT—Continued

	Hourly wage rate [2]	Burden hours per government entity	Cost per local	Total burden hours	Total burden hour cost [3]
Sub Total	N/A	7	214.77	95,542	4,719,509.02

These estimates are based upon filers' use of the EEO–4 online filing system to submit reports. The EEOC has made electronic submission much easier for respondents required to file the EEO–4 Report and as a result, more respondents are using this electronic filing method. During the 2019 EEO–4 data collection cycle, 4,988 EEO–4 filers completed and certified their submission. Of the 4,988 EEO–4 filers who submitted data in 2019, 5% uploaded a data file, 91% filed through the online application, and 4% submitted paper records. Electronic filing remains the most efficient, accurate, and secure means of reporting for respondents required to submit the EEO–4 report. Accordingly, the EEOC will continue to encourage EEO–4 filers to submit data through electronic filing, and will only accept paper records from filers who have secured permission to submit data via paper submission.

For the Commission.

Janet Dhillon,

Chair.

EQUAL EMPLOYMENT OPPORTUNITY COMMISSION

Sunshine Act Notice: Cancellation of Meeting

FEDERAL REGISTER CITATION OF PREVIOUS ANNOUNCEMENT: 86 FR 1966, January 11, 2021.

PREVIOUSLY ANNOUNCED TIME AND DATE OF THE MEETING: January 14, 2021 at 1:00 p.m. ET.

SUMMARY: The Equal Employment Opportunity Commission is issuing this notice to cancel the audio-only conference scheduled to be held at 1:00 p.m. on January 14, 2021.

[2] Occupational titles and wages are from the Bureau of Labor Statistics' National Industry-Specific Occupational Employment and Wage Estimates—NAICS 999000—Federal, State, and local Government, excluding state and local schools and hospitals and the U.S. Postal Service: *https://www.bls.gov/oes/current/naics3_999000.htm#11-0000.* The wages cited are median hourly wages.

[3] Burden hour cost is estimated by multiplying the 'Cost Per Local' column by the 'Total Burden Hours' column.

CONTACT PERSON FOR MORE INFORMATION: Rachel V. See, Acting Executive Officer, (202) 921–2545.

Dated: January 13, 2021.

Rachel V. See,

Acting Executive Officer, Executive Secretariat.

FEDERAL COMMUNICATIONS COMMISSION

[IB Docket No. 16–185; DA 21–35; FRS 17387]

World Radiocommunication Conference Advisory Committee Meetings of Informal Working Groups One, Two, Three and Four

AGENCY: Federal Communications Commission.

ACTION: Notice.

SUMMARY: This notice advises interested persons that Informal Working Group 1 (IWG–1), Informal Working Group 2 (IWG–2), Informal Working Group 3 (IWG–3) and Informal Working Group 4 (IWG–4) of the 2023 World Radiocommunication Conference Advisory Committee (WRC–23 Advisory Committee) have scheduled meetings as set forth below. The meetings are open to the public.

DATES: IWG–3: Tuesday, January 26, 2021 (11:00 a.m.–1:00 p.m. EST); IWG–4: Tuesday, January 26, 2021 (1:00 p.m.–3:00 p.m. EST); IWG–1: Thursday, January 28, 2021 (1:00 p.m.–3:00 p.m. EST); IWG–3: Tuesday, February 2, 2021 (11:00 a.m.–1:00 p.m. EST); IWG–2: Tuesday, February 2, 2021 (1:00 p.m.–3:00 p.m. EST); IWG–1: Thursday, February 4, 2021 (11:00 a.m.–1:00 p.m. EST).

ADDRESSES: The meetings will be held virtually.

FOR FURTHER INFORMATION CONTACT: Dante Ibarra, Designated Federal Official, World Radiocommunication Conference Advisory Committee, FCC International Bureau, Global Strategy and Negotiation Division, at *Dante.Ibarra@fcc.gov,* (202)–418–0610 or *WRC-23@fcc.gov.*

SUPPLEMENTARY INFORMATION: The FCC established the Advisory Committee to provide advice, technical support and recommendations relating to the preparation of United States proposals and positions for the 2023 World Radiocommunication Conference (WRC–23).

In accordance with the Federal Advisory Committee Act, Public Law 92–463, as amended, this notice advises interested persons of the IWG–1, IWG–2, IWG–3 and IWG–4 of the WRC–23 Advisory Committee scheduled meetings. The Commission's WRC–23 website (*www.fcc.gov/wrc-23*) contains the latest information on all scheduled meetings and WRC–23 Advisory Committee matters.

The schedule of Informal Working Group meetings are as follows:

WRC–23 Advisory Committee Schedule of Meetings of Informal Working Groups 1, 2, 3 and 4

Informal Working Group 1: Maritime, Aeronautical and Radar Services

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration for Children and Families

Proposed Information Collection Activity; Placement and Transfer of Unaccompanied Alien Children Into ORR Care Provider Facilities (0970–0554)

AGENCY: Office of Refugee Resettlement, Administration for Children and Families, Department of Health and Human Services.

ACTION: Request for public comment.

SUMMARY: The Office of Refugee Resettlement (ORR), Administration for Children and Families (ACF), U.S. Department of Health and Human Services (HHS), is inviting public comments on revisions to an approved information collection. The request consists of several forms that allow the Unaccompanied Alien Children (UAC) Program to place UAC referred to ORR by Federal agencies into care provider facilities and to transfer UAC within the ORR care provider network.

DATES: *Comments due within 60 days of publication.* In compliance with the requirements of Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, the Administration for Children and Families is soliciting public comment on the specific aspects of the information collection described above.

ADDRESSES: Copies of the proposed collection of information can be obtained and comments may be forwarded by emailing *infocollection@acf.hhs.gov.* Alternatively, copies can also be obtained by writing to the Administration for Children and Families, Office of Planning, Research, and Evaluation (OPRE), 330 C Street, SW, Washington, DC 20201, Attn: ACF Reports Clearance Officer. All requests, emailed or written, should be identified by the title of the information collection.

SUPPLEMENTARY INFORMATION:

Description: ORR plans to revise all 13 instruments currently approved under OMB #0970–0554, all of which will be incorporated into ORR's new case management system, UAC Path. Five of the instruments contain revisions to the formatting, organization, or wording of field labels with no

changes to the content. The remaining eight instruments contain changes in content. In addition, ORR plans to add four new instruments to this collection that will also be incorporated into UAC Path.

1. Placement Authorization (Form P–1): This instrument is used by ORR to authorize a care provider to provide care and services to UAC placed in their facility. Care providers sign the instrument to acknowledge certain responsibilities related to the care of the UAC. ORR revised the formatting, but no changes were made to the content. The average burden minutes per response was increased from 1 to 5 minutes.

2. Authorization for Medical, Dental, and Mental Health Care (Form P–2): This instrument is used by ORR to authorize a care provider to provide medical, dental, and mental health care services to UAC placed in their facility. Care providers sign the instrument to acknowledge certain responsibilities related to the care of the UAC. ORR revised the formatting, but no changes were made to the content. The average burden minutes per response was increased from 1 to 5 minutes.

3. Notice of Placement in a Restrictive Setting (Form P–4/4s): This instrument is used by care providers to document and inform UAC of the reason they have been placed in a restrictive setting. ORR revised the formatting, but no changes were made to the content.

4. Long Term Foster Care Placement Memo (Form P–5): This instrument is used by care providers to ensure placement in a foster home that meets the UAC's needs and continuity of services. ORR revised the formatting and the order in which the fields appear. ORR added two new questions asking respondents to (1) describe any specials skills or training of the foster family or group home, and (2) provide any further available information and/or considerations about the time line for physical transfer of the minor.

5. UAC Referral (formerly titled Intakes Placement Checklist and Add New UAC) (Form P–7): This instrument is used by Federal agencies to refer UAC to ORR custody and by ORR Intakes staff to place UAC in an ORR care provider facility. It also contains a checklist that is used by ORR Intakes staff to determine whether initial placement in a restrictive setting is appropriate for a UAC. ORR combined 2 of its current instruments, *Intakes Placement Checklist* and *Add New UAC,* into 1 instrument. The average burden minutes per response was increased from 15 to 60 minutes, plus an additional 30 minutes if the placement checklist must be completed. In addition, ORR made the following revisions:

○ Moved the ''Immigration Status at Referral'' field to the *UAC Profile* instrument.

○ Created a new ''Parent/Legal Guardian Separation'' section. This section contains 5 fields, and replaces the single question on the current version of the *Add New UAC* instrument.

○ Created a new ''MPP Information'' section to capture information about enrollment in the Migrant Protection Protocol (MPP) program. This section contains 2 fields.

○ Moved the field ''Related to Other UAC(s)?'' to the *UAC Profile* instrument.

○ Moved fields related to family groups to the *UAC Profile* and *Family Group Entity* instruments.

○ Added the following fields to the ''Apprehension and Referral Information'' section: ''Referring Sector Name'', ''POC Primary Email'', ''POC Secondary Email'', ''Referring Sector Code''.

○ Moved fields in the ''Parent/Relative Information'' section to the *UAC Profile* instrument.

○ Renamed the ''Notes'' field in the ''Referral Notes'' section to ''Apprehension/Journey Notes'' and added a new field, ''Referral Cancellation Reason''.

○ Renamed the ''ORR Placement Information'' section to ''Placement Request'' and added the following fields: ''Required Placement Request'', ''Placement Requested Date/Time'', ''Program/Facility'', ''Not Accepted Reason'', ''Placement Decision Date/Time'', ''Placement Notes'', and ''Override Stop Placement Reason''.

○ Added a new section titled ''Special Placement Request'' that contains the fields found in the ''Placement Determination'' section of the current version of the *Intakes Placement Checklist.*

○ Created a new ''Criminal Information'' section. This section contains 9 fields, and replaces the two questions on criminal charges and acting as a footguide on the current version of the *Add New UAC* instrument.

○ A new section titled ''Criminal Charges'' as added to capture more detailed information if the UAC has any criminal charges, which contains 9 fields.

○ A new ''Detention Facilities'' section as created to capture more detailed information if the UAC was ever held in a detention facility. This section contains 9 fields.

○ Added a new ''Documents'' section where documents related directly to the UAC's referral may be uploaded.

○ Added a new ''Entry Team'' section in which read and/or write access can be granted to individuals who need access privileges to the record, but do not typically need such privileges for a referral record.

○ Revised the *Intakes Placement Checklist* as follows:

■ Reorganized the checklist into distinct sections for staff secure and secure placement criteria.

■ Removed ''UAC will be turning 18 year of age in the next month'' as an escape risk criteria.

■ Removed the ''Danger to Self'' section.

■ Revised the lists of criminal offenses in both the staff secure and secure sections.

○ Added a new ''Initial Health Information'' section to capture more detailed information about the UAC's health. This section contains 31 fields.

6. Care Provider Checklist for Transfers to Influx Care Facilities (Form P–8): This instrument is used by care providers to ensure that all criteria for transfer of a UAC to an influx care facility have been met. ORR revised the formatting and reworded some field labels, but no changes were made to the content.

7. Medical Checklist for Non-Influx Transfers (Form P–9A): This instrument is used by care providers to ensure that UAC are medically cleared for transfer within the ORR care provider network, excluding transfer to an influx care facility. ORR revised the formatting and reworded the questions. In addition, ORR removed the question asking if the child is free of all medical conditions requiring specialist care.

8. Medical Checklist for Transfers to Influx Care Facilities (Form P–9B): This instrument is used by care providers to ensure that UAC are medically cleared for transfer to an influx care facility. ORR revised the formatting and instructions, reworded most questions, and clarified which questions are only applicable to influx care facilities located on Department of Defense (DOD) sites. ORR also added 4 new questions that ask about sexually transmitted disease, injection drug use, allergies, and the completion of lab and diagnosis field in UAC Path.

9. Transfer Request (Form P–10A): This instrument is used by care provider facilities, ORR contractor staff, and ORR Federal staff to process recommendations and decisions for transfer of a UAC within the ORR care provider network for non-influx transfers. ORR revised the formatting

and reworded many of the section titles and fields. In addition, ORR made the following revisions to this instrument:

○ In the ''Transfer Request'' section, ORR removed the field ''Requested Date'' and added the following fields: ''Status'', ''Transfer Type'', ''High Priority'', ''Transfer Cancellation Reason'', ''Case Coordinator'', and ''Legal Eligibility''.

○ Added the following fields to the ''Case Coordinator Recommendation'' section: ''Pending Information'', ''FFS Authorized to Proceed'', and ''Add to Waitlist?''.

○ Moved fields related to the UAC's attorney of record from the ''Reason for Transfer Request'' section to the ''Casefile Summaries'' section.

○ Added a new ''Transfer Designation'' section containing 3 fields.

○ Added a ''Remand for Further Information'' to the ''ORR Decision'' section.

○ Removed the ''Transfer Packet'' section.

○ Added the following fields to the ''COA–COV'' section: ''Specify UAC Special Needs'' and ''Other Change Venue Cause''.

○ Added a new ''Entry Team'' section in which read and/or write access can be granted to individuals who need access privileges to the record, but do not typically need such privileges for a referral record.

○ Added a new ''Documents'' sections where documents related directly to the UAC's transfer may be uploaded.

○ Added a new ''Program Referrals'' section in which care providers can search for programs that fit the UAC's transfer criteria and make referrals.

10. Influx Transfer Request (Form P–10B): This instrument is used by care provider facilities and ORR Federal staff to process recommendations and decisions for transfers to an influx care facility. This is a new instrument that ORR plans to add to this collection.

11. Transfer Summary and Tracking (formerly titled Transfer Request and Tracking Form) (Form P–11): This instrument is used by care providers to track the physical transfer of the UAC and their belongings. ORR revised the formatting and reworded some of the fields. ORR also removed the field ''FINS Number'' and added the fields ''Gender'' and Gender Other.''

12. Program Entity (formerly titled UAC Portal Capacity Report) (Form P–12): This instrument is used by care providers and ORR to track certain information related to care provider programs, such as location, contact information, bed capacity, state licensure, grant information, monitoring, and program census. ORR greatly expanded this instrument to track multiple types of information related to care provider programs. The average burden minutes per response was increased from 5 to 30 minutes. In addition to bed capacity, this instrument contains the following information:

○ An overview of the program that includes name, status, parent entity, type, address, region, and acceptable placement types.

○ Various program points of contact.

○ Stakeholder information (child advocate program, legal service provider, field office juvenile coordinator (FOJC)).

○ Information related to the program's State licensing agency and licensing status.

○ Information related to the program's Administration for Children and Families grant.

○ Fields tracking the reason and dates of stop placements, if applicable.

○ Information related to the program's ORR monitoring schedule.

○ Sections that list all events and incident reports created for the program (cleared as separate instruments in OMB #0970–0547).

○ Census information and the ability to initiate prescreening for transfers to influx care facilities (cleared as *Influx Transfer Manual and Prescreen Review* in this collection).

○ An area to add individuals to the program's team (*e.g.,* assigned Federal Field Specialist, Project Officer).

○ An area to upload document relation to the facility and its operations and/or compliance.

13. UAC Profile (formerly titled Add New UAC) (Form P–13): This instrument is used by referring Federal agencies and care providers to create a profile for a UAC from which all information related to their case can be accessed. Previously, the purpose of this instrument was to (1) create an initial profile and (2) receive/process referrals. The function of receiving/processing referrals and the related fields from the *Add New UAC* instrument were moved to the *UAC Referral* instrument, as noted above in the description of changes for *UAC Referral.* The function of creating an initial profile in the system and related fields containing basic UAC information remain with this instrument. However, this purpose of this instrument has been expanded. It now acts as a hub where users can assess all records related to a UAC's case. Most of the records accessible from the UAC Profile are being cleared as separate instruments, either in this or another one of ORR's information collections. The sections being cleared under this instrument are as follows: Profile Information, Program Designation, Legal-Immigration, Legal-Administrative, System Information, Apprehended Relationships, Other Relationships, Adult Contact Relationships, Entity Team, and Documents. The average burden minutes per response was increased from 15 to 45 minutes.

14. ORR Transfer Notice—Notice of Transfer to ICE Chief Counsel—Change of Address/Change of Venue (Form P–14): This instrument is used by care providers to notify DHS of the transfer of a UAC within the ORR care provider network so that DHS may file a Motion for Change of Venue and/or Change of Address with the Executive Office for Immigration Review to ensure the UAC's immigration case is transferred to the local immigration court, if applicable. ORR revised the formatting, but no changes were made to the content.

15. Family Group Entity (Form P–15): This instrument is used by the ORR Intakes Team to associate UACs who are members of the same family with each other. This is a new instrument that ORR plans to add to this collection.

16. Influx Transfer Manifest (Form P–16): This instrument is used by designated care provider staff and ORR staff to plan, track, and notify stakeholders of group transfers to an influx care facility. This is a new instrument that ORR plans to add to this collection.

17. Influx Transfer Manual and Prescreen Review (Form P–17): This instrument is used by designated care provider staff to evaluate each UAC's eligibility to be transferred to an influx care facility. Care provider staff review and update information on daily during times of influx. This is a new instrument that ORR plans to add to this collection.

Respondents: ORR grantee and contractor staff; other Federal agencies.

ANNUAL BURDEN ESTIMATES

Instrument	Annual number of respondents	Annual number of responses per respondent	Average burden *minutes* per response	Annual total burden *hours*

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration for Children and Families

Proposed Information Collection Activity; Phase II Evaluation Activities for Implementing a Next Generation Evaluation Agenda for the Chafee Foster Care Program for Successful Transition to Adulthood—Extension (OMB #0970–0489)

AGENCY: Office of Planning, Research, and Evaluation, Administration for Children and Families, HHS.

ACTION: Request for public comment.

SUMMARY: The Administration for Children and Families (ACF) at the U.S. Department of Health and Human Services (HHS) requests an extension to continue data collection for the Phase II Evaluation Activities for Implementing a Next Generation Evaluation Agenda for the Chafee Foster Care Program for Successful Transition to Adulthood (OMB #0970–0489; Previously titled: Phase II Evaluation Activities for Implementing a Next Generation Evaluation Agenda for the Chafee Foster Care Independence Program). Information collection activities requested include interviews, focus group discussions and administrative data collection. There are no changes proposed to the currently approved materials.

DATES: *Comments due within 60 days of publication.* In compliance with the requirements of Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, ACF is soliciting public comment on the specific aspects of the information collection described above.

ADDRESSES: Copies of the proposed collection of information can be obtained and comments may be forwarded by emailing *OPREinfocollection@acf.hhs.gov.* Alternatively, copies can also be obtained by writing to the Administration for Children and Families, Office of Planning, Research, and Evaluation, 330 C Street SW, Washington, DC 20201, Attn: OPRE Reports Clearance Officer. All requests, emailed or written should be identified by the title of the information collection.

SUPPLEMENTARY INFORMATION:

Description: The ACF, Office of Planning, Research, and Evaluation (OPRE) requests public comment on a proposed extension to a currently approved information collection for the Chafee Foster Care Program for Successful Transition to Adulthood (previously known as the Chafee Foster Care Independence Program). Activities include preliminary visits to discuss the evaluation process with program administrators and site visits to each program to speak with program leaders, partners and key stakeholders, front-line staff, and participants. These formative evaluations will determine programs' readiness for more rigorous evaluation

in the future. The activities and products from this project will help ACF to fulfill the ongoing legislative mandate for program evaluation specified in the Foster Care Independence Act of 1999.

Respondents: Semi-structured interviews will be held with program leaders, partners and stakeholders, and front-line staff as well as young adults being served by the programs.

ANNUAL BURDEN ESTIMATES

Instrument	Number of respondents (total over request period)	Number of responses per respondent (total over request period)	Avg. burden per response (in hours)	Total burden (in hours)	Annual burden (in hours)
Outreach email for discussion with program administrators and staff	38	1	8	304	152
Outreach email for Focus Group Recruiters	96	1	8	768	384
Discussion Guide for program leaders	23	1	1	23	12
Discussion Guide for program partners and stakeholders	14	1	1	14	7
Discussion Guide for program front-line staff	66	1	1	66	33
Focus Group Guide for program participants	240	1	2	480	240

Estimated Total Annual Burden Hours: 828.

Comments: The Department specifically requests comments on (a) whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Consideration will be given to comments and suggestions submitted within 60 days of this publication.

Authority: Title IV–E of the Social Security Act, IV–E § 477(g) (1–2), as amended by the Foster Care Independence Act of 1999.

Food and Drug Administration

[Docket No. FDA–2020–N–2358]

Authorizations of Emergency Use of Two Biological Products During the COVID–19 Pandemic; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing the issuance of two Emergency Use Authorizations (EUAs) (the Authorizations) under the Federal Food, Drug, and Cosmetic Act (FD&C Act) for biological products for use during the COVID–19 pandemic. FDA issued one Authorization for a biological product as requested by Pfizer, Inc, and one Authorization for a biological product as requested by ModernaTX, Inc. The Authorizations contain, among other things, conditions on the emergency use of the authorized products. The Authorizations follow the February 4, 2020, determination by the Secretary of Health and Human Services (HHS) that there is a public health emergency that has a significant potential to affect national security or the health and security of U.S. citizens living abroad and that involves a novel (new) coronavirus. The virus, now named SARS–CoV–2, causes the illness COVID–19. On the basis of such determination, the Secretary of HHS declared on March 27, 2020, that circumstances exist justifying the authorization of emergency use of drugs and biological products during the COVID–19 pandemic, pursuant to the FD&C Act, subject to the terms of any authorization issued under that section. The Authorizations, which include an explanation of the reasons for issuance, are reprinted in this document.

DATES: The Authorization for Pfizer, Inc. is effective as of December 11, 2020; the Authorization for ModernaTX, Inc. is effective as of December 18, 2020.

ADDRESSES: Submit written requests for single copies of the EUAs to the Office of Counterterrorism and Emerging Threats, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 1, Rm. 4338, Silver Spring, MD 20993–0002. Send one self-addressed adhesive label to assist that office in processing your request or include a Fax number to which the Authorizations may be sent. See the **SUPPLEMENTARY INFORMATION** section for electronic access to the Authorizations.

FOR FURTHER INFORMATION CONTACT: Michael Mair, Office of Counterterrorism and Emerging Threats, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 1, Rm. 4340, Silver Spring, MD 20993–0002, 301–796–8510 (this is not a toll-free number).

SUPPLEMENTARY INFORMATION:

I. Background

Section 564 of the FD&C Act (21 U.S.C. 360bbb–3) allows FDA to strengthen the public health protections against biological, chemical, nuclear, and radiological agents. Among other things, section 564 of the FD&C Act allows FDA to authorize the use of an unapproved medical product or an unapproved use of an approved medical product in certain situations. With this EUA authority, FDA can help ensure that medical countermeasures may be used in emergencies to diagnose, treat, or prevent serious or life-threatening diseases or conditions caused by biological, chemical, nuclear, or radiological agents when there are no adequate, approved, and available alternatives.

II. Criteria for EUA Authorization

Section 564(b)(1) of the FD&C Act provides that, before an EUA may be issued, the Secretary of HHS must declare that circumstances exist justifying the authorization based on one of the following grounds: (1) A determination by the Secretary of Homeland Security that there is a domestic emergency, or a significant potential for a domestic emergency, involving a heightened risk of attack

with a biological, chemical, radiological, or nuclear agent or agents; (2) a determination by the Secretary of Defense that there is a military emergency, or a significant potential for a military emergency, involving a heightened risk to U.S. military forces, including personnel operating under the authority of title 10 or title 50, United States Code, of attack with (i) a biological, chemical, radiological, or nuclear agent or agents; or (ii) an agent or agents that may cause, or are otherwise associated with, an imminently life-threatening and specific risk to U.S. military forces; [1] (3) a determination by the Secretary of HHS that there is a public health emergency, or a significant potential for a public health emergency, that affects, or has a significant potential to affect, national security or the health and security of U.S. citizens living abroad, and that involves a biological, chemical, radiological, or nuclear agent or agents, or a disease or condition that may be attributable to such agent or agents; or (4) the identification of a material threat by the Secretary of Homeland Security pursuant to section 319F–2 of the Public Health Service (PHS) Act (42 U.S.C. 247d–6b) sufficient to affect national security or the health and security of U.S. citizens living abroad.

Once the Secretary of HHS has declared that circumstances exist justifying an authorization under section 564 of the FD&C Act, FDA may authorize the emergency use of a drug, device, or biological product if the Agency concludes that the statutory criteria are satisfied. Under section 564(h)(1) of the FD&C Act, FDA is required to publish in the **Federal Register** a notice of each authorization, and each termination or revocation of an authorization, and an explanation of the reasons for the action. Section 564 of the FD&C Act permits FDA to authorize the introduction into interstate commerce of a drug, device, or biological product intended for use when the Secretary of HHS has declared that circumstances exist justifying the authorization of emergency use. Products appropriate for emergency use may include products and uses that are not approved, cleared, or licensed under sections 505, 510(k), 512, or 515 of the FD&C Act (21 U.S.C. 355, 360(k), 360b, and 360e) or section 351 of the PHS Act (42 U.S.C. 262), or conditionally approved under section 571 of the FD&C Act (21 U.S.C. 360ccc). FDA may issue an EUA only if, after consultation with the HHS Assistant Secretary for Preparedness and Response, the Director of the National Institutes of Health, and the Director of the Centers for Disease Control and Prevention (to the extent feasible and appropriate given the applicable circumstances), FDA [2] concludes: (1) That an agent referred to in a declaration of emergency or threat can cause a serious or life-threatening disease or condition; (2) that, based on the totality of scientific evidence available to FDA, including data from adequate and well-controlled clinical trials, if available, it is reasonable to believe that: (A) The product may be effective in diagnosing, treating, or preventing (i) such disease or condition; or (ii) a serious or life-threatening disease or condition caused by a product authorized under section 564, approved or cleared under the FD&C Act, or licensed under section 351 of the PHS Act, for diagnosing, treating, or preventing such a disease or condition caused by such an agent; and (B) the known and potential benefits of the product, when used to diagnose, prevent, or treat such disease or condition, outweigh the known and potential risks of the product, taking into consideration the material threat posed by the agent or agents identified in a declaration under section 564(b)(1)(D) of the FD&C Act, if applicable; (3) that there is no adequate, approved, and available alternative to the product for diagnosing, preventing, or treating such disease or condition; (4) in the case of a determination described in section 564(b)(1)(B)(ii), that the request for emergency use is made by the Secretary of Defense; and (5) that such other criteria as may be prescribed by regulation are satisfied.

No other criteria for issuance have been prescribed by regulation under section 564(c)(4) of the FD&C Act.

III. The Authorizations

The Authorizations follow the February 4, 2020, determination by the Secretary of HHS that there is a public health emergency that has a significant potential to affect national security or the health and security of U.S. citizens living abroad and that involves a novel (new) coronavirus. The virus, now named SARS–CoV–2, causes the illness COVID–19. Notice of the Secretary of HHS's determination was provided in the **Federal Register** on February 7, 2020 (85 FR 7316). On the basis of such determination, the Secretary of HHS declared on March 27, 2020, that circumstances exist justifying the authorization of emergency use of drugs and biological products during the COVID–19 pandemic, pursuant to section 564 of the FD&C Act, subject to the terms of any authorization issued under that section. Notice of the Secretary of HHS's declaration was provided in the **Federal Register** on April 1, 2020 (85 FR 18250). Having concluded that the criteria for issuance of the Authorizations under section 564(c) of the FD&C Act are met, FDA issued two authorizations for the emergency use of biological products during the COVID–19 pandemic. On December 11, 2020, FDA issued an EUA to Pfizer, Inc. for the Pfizer-BioNTech COVID–19 Vaccine, subject to the terms of the Authorization. On December 18, 2020, FDA issued an EUA to ModernaTX, Inc. for the Moderna COVID–19 Vaccine, subject to the terms of the Authorization. The Authorizations, which are included below after section IV. Electronic Access in their entirety (not including the authorized versions of the fact sheets and other written materials), provide an explanation of the reasons for issuance, as required by section 564(h)(1) of the FD&C Act. Any subsequent reissuances of these Authorizations can be found on FDA's web page: *https://www.fda.gov/emergency-preparedness-and-response/mcm-legal-regulatory-and-policy-framework/emergency-use-authorization.*

IV. Electronic Access

An electronic version of this document and the full text of the Authorizations are available on the internet at *https://www.fda.gov/emergency-preparedness-and-response/mcm-legal-regulatory-and-policy-framework/emergency-use-authorization.*

BILLING CODE 4164–01–P

[1] In the case of a determination by the Secretary of Defense, the Secretary of HHS shall determine within 45 calendar days of such determination, whether to make a declaration under section 564(b)(1) of the FD&C Act, and, if appropriate, shall promptly make such a declaration.

[2] The Secretary of HHS has delegated the authority to issue an EUA under section 564 of the FD&C Act to the Commissioner of Food and Drugs.

December 11, 2020

Pfizer Inc.
Attention: Ms. Elisa Harkins
500 Arcola Road
Collegeville, PA 19426

Dear Ms. Harkins:

This letter is in response to a request from Pfizer Inc. that the Food and Drug Administration (FDA) issue an Emergency Use Authorization (EUA) for emergency use of Pfizer-BioNTech COVID-19 Vaccine for the prevention of Coronavirus Disease 2019 (COVID-19) for individuals 16 years of age and older, as described in the Scope of Authorization (Section II) of this letter, pursuant to Section 564 of the Federal Food, Drug, and Cosmetic Act (the FD&C Act or the Act) (21 U.S.C. 360bbb-3).

On February 4, 2020, pursuant to Section 564(b)(1)(C) of the Act, the Secretary of the Department of Health and Human Services (HHS) determined that there is a public health emergency that has a significant potential to affect national security or the health and security of United States citizens living abroad, and that involves the virus that causes COVID-19.[1] On the basis of such determination, the Secretary of HHS on March 27, 2020, declared that circumstances exist justifying the authorization of emergency use of drugs and biological products during the COVID-19 pandemic, pursuant to Section 564 of the Act, subject to terms of any authorization issued under that section.[2]

Pfizer-BioNTech COVID-19 Vaccine is for use for active immunization to prevent COVID-19 caused by severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) in individuals 16 years of age and older. The vaccine contains a nucleoside-modified messenger RNA (modRNA) encoding the viral spike (S) glycoprotein of SARS-CoV-2 formulated in lipid particles. It is an investigational vaccine not licensed for any indication.

FDA reviewed safety and efficacy data from an ongoing phase 1/2/3 trial in approximately 44,000 participants randomized 1:1 to receive Pfizer-BioNTech COVID-19 Vaccine or saline control. The trial has enrolled participants 12 years of age and older. FDA's review has considered the safety and effectiveness data as they relate to the request for emergency use authorization in individuals 16 years of age and older. FDA's review of the available safety data

[1] U.S. Department of Health and Human Services, *Determination of a Public Health Emergency and Declaration that Circumstances Exist Justifying Authorizations Pursuant to Section 564(b) of the Federal Food, Drug, and Cosmetic Act, 21 U.S.C. § 360bbb-3*. February 4, 2020.

[2] U.S. Department of Health and Human Services, *Declaration that Circumstances Exist Justifying Authorizations Pursuant to Section 564(b) of the Federal Food, Drug, and Cosmetic Act, 21 U.S.C. § 360bbb-3*, 85 FR 18250 (April 1, 2020).

from 37,586 of the participants 16 years of age and older, who were followed for a median of two months after receiving the second dose, did not identify specific safety concerns that would preclude issuance of an EUA. FDA's analysis of the available efficacy data from 36,523 participants 12 years of age and older without evidence of SARS-CoV-2 infection prior to 7 days after dose 2 confirm the vaccine was 95% effective (95% credible interval 90.3, 97.6) in preventing COVID-19 occurring at least 7 days after the second dose (with 8 COVID-19 cases in the vaccine group compared to 162 COVID-19 cases in the placebo group). Based on these data, and review of manufacturing information regarding product quality and consistency, it is reasonable to believe that Pfizer-BioNTech COVID-19 Vaccine may be effective. Additionally, it is reasonable to conclude, based on the totality of the scientific evidence available, that the known and potential benefits of Pfizer-BioNTech COVID-19 Vaccine outweigh the known and potential risks of the vaccine, for the prevention of COVID-19 in individuals 16 years of age and older. Finally, on December 10, 2020, the Vaccines and Related Biological Products Advisory Committee voted in agreement with this conclusion.

Having concluded that the criteria for issuance of this authorization under Section 564(c) of the Act are met, I am authorizing the emergency use of Pfizer-BioNTech COVID-19 Vaccine for the prevention of COVID-19, as described in the Scope of Authorization section of this letter (Section II) and subject to the terms of this authorization.

I. Criteria for Issuance of Authorization

I have concluded that the emergency use of Pfizer-BioNTech COVID-19 Vaccine for the prevention of COVID-19 when administered as described in the Scope of Authorization (Section II) meets the criteria for issuance of an authorization under Section 564(c) of the Act, because:

1. SARS-CoV-2 can cause a serious or life-threatening disease or condition, including severe respiratory illness, to humans infected by this virus;

2. Based on the totality of scientific evidence available to FDA, it is reasonable to believe that Pfizer-BioNTech COVID-19 Vaccine may be effective in preventing COVID-19, and that, when used under the conditions described in this authorization, the known and potential benefits of Pfizer-BioNTech COVID-19 Vaccine when used to prevent COVID-19 outweigh its known and potential risks; and

3. There is no adequate, approved, and available alternative to the emergency use of Pfizer-BioNTech COVID-19 Vaccine to prevent COVID-19.[3]

II. Scope of Authorization

I have concluded, pursuant to Section 564(d)(1) of the Act, that the scope of this authorization is limited as follows:

[3] No other criteria of issuance have been prescribed by regulation under Section 564(c)(4) of the Act.

- Pfizer Inc. will supply Pfizer-BioNTech COVID-19 Vaccine either directly or through authorized distributor(s)[4], who will distribute to emergency response stakeholders[5] as directed by the U.S. government, including the Centers for Disease Control and Prevention (CDC) and/or other designee, for use consistent with the terms and conditions of this EUA;
- The Pfizer-BioNTech COVID-19 Vaccine covered by this authorization will be administered by vaccination providers[6] and used only to prevent COVID-19 in individuals ages 16 and older; and
- Pfizer-BioNTech COVID-19 Vaccine may be administered by a vaccination provider without an individual prescription for each vaccine recipient.

Product Description

The Pfizer-BioNTech COVID-19 Vaccine is supplied as a frozen suspension in multiple dose vials; each vial must be diluted with 1.8 mL of sterile 0.9% Sodium Chloride Injection, USP prior to use to form the vaccine. After dilution, each vial contains 5 doses of 0.3 mL per dose. The Pfizer-BioNTech COVID-19 Vaccine does not contain a preservative.

Each 0.3 mL dose of the Pfizer-BioNTech COVID-19 Vaccine contains 30 mcg of a nucleoside-modified messenger RNA (modRNA) encoding the viral spike (S) glycoprotein of SARS-CoV-2. Each dose of the Pfizer-BioNTech COVID-19 Vaccine also includes the following ingredients: lipids (0.43 mg (4-hydroxybutyl)azanediyl)bis(hexane-6,1-diyl)bis(2-hexyldecanoate), 0.05 mg

[4] "Authorized Distributor(s)" are identified by Pfizer Inc. or, if applicable, by a U.S. government entity, such as the Centers for Disease Control and Prevention (CDC) and/or other designee, as an entity or entities allowed to distribute authorized Pfizer-BioNTech COVID-19 Vaccine.

[5] For purposes of this letter, "emergency response stakeholder" refers to a public health agency and its delegates that have legal responsibility and authority for responding to an incident, based on political or geographical boundary lines (e.g., city, county, tribal, territorial, State, or Federal), or functional (e.g., law enforcement or public health range) or sphere of authority to administer, deliver, or distribute vaccine in an emergency situation. In some cases (e.g., depending on a state or local jurisdiction's COVID-19 vaccination response organization and plans), there might be overlapping roles and responsibilities among "emergency response stakeholders" and "vaccination providers" (e.g., if a local health department is administering COVID-19 vaccines; if a pharmacy is acting in an official capacity under the authority of the state health department to administer COVID-19 vaccines). In such cases, it is expected that the conditions of authorization that apply to emergency response stakeholders and vaccination providers will all be met.

[6] For purposes of this letter, "vaccination provider" refers to the facility, organization, or healthcare provider licensed or otherwise authorized by the emergency response stakeholder (e.g., non-physician healthcare professionals, such as nurses and pharmacists pursuant to state law under a standing order issued by the state health officer) to administer or provide vaccination services in accordance with the applicable emergency response stakeholder's official COVID-19 vaccination and emergency response plan(s) and who is enrolled in the CDC COVID-19 Vaccination Program. For purposes of this letter, "healthcare provider" also refers to a person authorized by the U.S. Department of Health and Human Services (e.g., under the PREP Act Declaration for Medical Countermeasures against COVID-19) to administer FDA-authorized COVID-19 vaccine (e.g., qualified pharmacy technicians and State-authorized pharmacy interns acting under the supervision of a qualified pharmacist). See, e.g., HHS. *Fourth Amendment to the Declaration Under the Public Readiness and Emergency Preparedness Act for Medical Countermeasures Against COVID-19 and Republication of the Declaration.* 85 FR 79190 (December 9, 2020).

2[(polyethylene glycol)-2000]-N,N-ditetradecylacetamide, 0.09 mg 1,2-distearoyl-sn-glycero-3-phosphocholine, and 0.2 mg cholesterol), 0.01 mg potassium chloride, 0.01 mg monobasic potassium phosphate, 0.36 mg sodium chloride, 0.07 mg dibasic sodium phosphate dihydrate, and 6 mg sucrose. The diluent (0.9% Sodium Chloride Injection) contributes an additional 2.16 mg sodium chloride per dose.

The dosing regimen is two doses of 0.3 mL each, 3 weeks apart.

The manufacture of the authorized Pfizer-BioNTech COVID-19 Vaccine is limited to those facilities identified and agreed upon in Pfizer's request for authorization.

The Pfizer-BioNTech COVID-19 Vaccine vial label and carton labels are clearly marked for "Emergency Use Authorization." The Pfizer-BioNTech COVID-19 Vaccine is authorized to be distributed, stored, further redistributed, and administered by emergency response stakeholders when packaged in the authorized manufacturer packaging (i.e., vials and cartons), despite the fact that the vial and carton labels may not contain information that otherwise would be required under the FD&C Act.

Pfizer-BioNTech COVID-19 Vaccine is authorized for emergency use with the following product-specific information required to be made available to vaccination providers and recipients, respectively (referred to as "authorized labeling"):

- Fact Sheet for Healthcare Providers Administering Vaccine (Vaccination Providers): Emergency Use Authorization (EUA) of Pfizer-BioNTech COVID-19 Vaccine to Prevent Coronavirus Disease 2019 (COVID-19)

- Fact Sheet for Recipients and Caregivers: Emergency Use Authorization (EUA) of Pfizer-BioNTech COVID-19 Vaccine to Prevent Coronavirus Disease 2019 (COVID-19) in Individuals 16 Years of Age and Older

I have concluded, pursuant to Section 564(d)(2) of the Act, that it is reasonable to believe that the known and potential benefits of Pfizer-BioNTech COVID-19 Vaccine, when used to prevent COVID-19 and used in accordance with this Scope of Authorization (Section II), outweigh its known and potential risks.

I have concluded, pursuant to Section 564(d)(3) of the Act, based on the totality of scientific evidence available to FDA, that it is reasonable to believe that Pfizer-BioNTech COVID-19 Vaccine may be effective in preventing COVID-19 when used in accordance with this Scope of Authorization (Section II), pursuant to Section 564(c)(2)(A) of the Act.

Having reviewed the scientific information available to FDA, including the information supporting the conclusions described in Section I above, I have concluded that Pfizer-BioNTech COVID-19 Vaccine (as described in this Scope of Authorization (Section II)) meets the criteria set forth in Section 564(c) of the Act concerning safety and potential effectiveness.

The emergency use of Pfizer-BioNTech COVID-19 Vaccine under this EUA must be consistent with, and may not exceed, the terms of the Authorization, including the Scope of Authorization (Section II) and the Conditions of Authorization (Section III). Subject to the terms of this EUA and under the circumstances set forth in the Secretary of HHS's determination under Section 564(b)(1)(C) described above and the Secretary of HHS's corresponding declaration under Section 564(b)(1), Pfizer-BioNTech COVID-19 Vaccine is authorized to prevent COVID-19 in individuals 16 years of age and older as described in the Scope of Authorization (Section II) under this EUA, despite the fact that it does not meet certain requirements otherwise required by applicable federal law.

III. Conditions of Authorization

Pursuant to Section 564 of the Act, I am establishing the following conditions on this authorization:

Pfizer Inc. and Authorized Distributor(s)

A. Pfizer Inc. and authorized distributor(s) will ensure that the authorized Pfizer-BioNTech COVID-19 Vaccine is distributed, as directed by the U.S. government, including CDC and/or other designee, and the authorized labeling (i.e., Fact Sheets) will be made available to vaccination providers, recipients, and caregivers consistent with the terms of this letter.

B. Pfizer Inc. and authorized distributor(s) will ensure that appropriate storage and cold chain is maintained until delivered to emergency response stakeholders' receipt sites.

C. Pfizer Inc. will ensure that the terms of this EUA are made available to all relevant stakeholders (e.g., emergency response stakeholders, authorized distributors, and vaccination providers) involved in distributing or receiving authorized Pfizer-BioNTech COVID-19 Vaccine. Pfizer Inc. will provide to all relevant stakeholders a copy of this letter of authorization and communicate any subsequent amendments that might be made to this letter of authorization and its authorized labeling.

D. Pfizer Inc. may develop and disseminate instructional and educational materials (e.g., video regarding vaccine handling, storage/cold-chain management, preparation, disposal) that are consistent with the authorized emergency use of the vaccine as described in the letter of authorization and authorized labeling, without FDA's review and concurrence, when necessary to meet public health needs during an emergency. Any instructional and educational materials that are inconsistent with the authorized labeling are prohibited.

E. Pfizer Inc. may request changes to this authorization, including to the authorized Fact Sheets for Pfizer-BioNTech COVID-19 Vaccine, that do not alter the analysis of benefits and risks that underlies this authorization and FDA may determine that such changes may be permitted without amendment of this EUA. That determination must be made by joint decision of the Office of Vaccines Research and Review (OVRR)/Center for Biologics Evaluation and Research (CBER), the Preparedness and Response Team (PREP)/Office of the Center Director (OD)/CBER, and the

Office of Counterterrorism and Emerging Threats (OCET)/Office of the Chief Scientist/Office of the Commissioner (OCS).

F. Pfizer Inc. will report to Vaccine Adverse Event Reporting System (VAERS):
- Vaccine administration errors whether or not associated with an adverse event;
- Serious adverse events (irrespective of attribution to vaccination);
- Cases of Multisystem Inflammatory Syndrome in children and adults; and
- Cases of COVID-19 that result in hospitalization or death, that are reported to Pfizer Inc.

These reports should be submitted to VAERS as soon as possible but no later than 15 calendar days from initial receipt of the information by Pfizer Inc.

G. Pfizer Inc. must submit to Investigational New Drug application (IND) number 19736 periodic safety reports at monthly intervals, within 15 days after the last day of a month, beginning after the first full calendar month after authorization. Each periodic safety report is required to contain descriptive information which includes:
- A narrative summary and analysis of adverse events submitted during the reporting interval, including interval and cumulative counts by age groups, special populations (e.g., pregnant women), and adverse events of special interest.
- Newly identified safety concerns in the interval; and
- Actions taken since the last report because of adverse experiences (for example, changes made to Healthcare Providers Administering Vaccine (Vaccination Providers) Fact Sheet, changes made to studies or studies initiated).

H. No changes will be implemented to the description of the product, manufacturing process, facilities, or equipment without notification to and concurrence by the Agency.

I. All manufacturing facilities will comply with Current Good Manufacturing Practice requirements.

J. Pfizer Inc. will submit to the EUA file Certificates of Analysis (CoA) for each drug product lot at least 48 hours prior to vaccine distribution. The CoA will include the established specifications and specific results for each quality control test performed on the final drug product lot.

K. Pfizer Inc. will submit to the EUA file quarterly manufacturing reports that include a listing of all Drug Substance and Drug Product lots produced after issuance of this authorization. This report must include lot number, manufacturing site, date of manufacture, and lot disposition, including those lots that were quarantined for investigation or those lots that were rejected. Information on the reasons for lot quarantine or rejection must be included in the report. The first report is due July 2021.

L. Pfizer Inc. and authorized distributor(s) will maintain records regarding release of Pfizer-BioNTech COVID-19 Vaccine for distribution (i.e., lot numbers, quantity, release date).

M. Pfizer Inc. and authorized distributor(s) will make available to FDA upon request any records maintained in connection with this EUA.

N. Pfizer Inc. will conduct post-authorization observational study(ies) to evaluate the association between Pfizer-BioNTech COVID-19 Vaccine and a pre-specified list of adverse events of special interest, along with deaths and hospitalizations, and severe COVID-19. The study population should include individuals administered the authorized Pfizer-BioNTech COVID-19 Vaccine under this EUA in the general U.S. population (16 years of age and older), populations of interest such as healthcare workers, pregnant women, immunocompromised individuals, subpopulations with specific comorbidities. The study(ies) should be conducted in large scale databases with an active comparator. Pfizer Inc. will provide protocols and status update reports to the IND 19736 with agreed-upon study designs and milestone dates.

Emergency Response Stakeholders

O. Emergency response stakeholders will identify vaccination sites to receive authorized Pfizer-BioNTech COVID-19 Vaccine and ensure its distribution and administration, consistent with the terms of this letter and CDC's COVID-19 Vaccination Program.

P. Emergency response stakeholders will ensure that vaccination providers within their jurisdictions are aware of this letter of authorization, and the terms herein and any subsequent amendments that might be made to the letter of authorization, instruct them about the means through which they are to obtain and administer the vaccine under the EUA, and ensure that the authorized labeling [i.e., Fact Sheet for Healthcare Providers Administering Vaccine (Vaccination Providers) and Fact Sheet for Recipients and Caregivers] is made available to vaccination providers through appropriate means (e.g., e-mail, website).

Q. Emergency response stakeholders receiving authorized Pfizer-BioNTech COVID-19 Vaccine will ensure that appropriate storage and cold chain is maintained.

Vaccination Providers

R. Vaccination providers will administer the vaccine in accordance with the authorization and will participate and comply with the terms and training required by CDC's COVID-19 Vaccination Program.

S. Vaccination providers will provide the Fact Sheet for Recipients and Caregivers to each individual receiving vaccination and provide the necessary information for receiving their second dose.

T. Vaccination providers administering Pfizer-BioNTech COVID-19 Vaccine must report the following information associated with the administration of Pfizer-BioNTech COVID-19 Vaccine of which they become aware to VAERS in accordance with the Fact Sheet for Healthcare Providers Administering Vaccine (Vaccination Providers):

- Vaccine administration errors whether or not associated with an adverse event
- Serious adverse events (irrespective of attribution to vaccination)
- Cases of Multisystem Inflammatory Syndrome in children and adults
- Cases of COVID-19 that result in hospitalization or death

Complete and submit reports to VAERS online at https://vaers.hhs.gov/reportevent.html or by calling 1-800-822-7967. The VAERS reports should include the words "Pfizer-BioNTech COVID-19 Vaccine EUA" in the description section of the report. To the extent feasible, report to Pfizer Inc. by contacting 1-800-438-1985 or by providing a copy of the VAERS form to Pfizer Inc.; Fax: 1-866-635-8337.

U. Vaccination providers will conduct any follow-up requested by the U.S government, including CDC, FDA, or other designee, regarding adverse events to the extent feasible given the emergency circumstances.

V. Vaccination providers will monitor and comply with CDC and/or emergency response stakeholder vaccine management requirements (e.g., requirements concerning obtaining, tracking, and handling vaccine) and with requirements concerning reporting of vaccine administration data to CDC.

W. Vaccination providers will ensure that any records associated with this EUA are maintained until notified by FDA. Such records will be made available to CDC, and FDA for inspection upon request.

Conditions Related to Printed Matter, Advertising, and Promotion

X. All descriptive printed matter, advertising, and promotional material, relating to the use of the Pfizer-BioNTech COVID-19 Vaccine shall be consistent with the authorized labeling, as well as the terms set forth in this EUA, and meet the requirements set forth in section 502(a) and (n) of the FD&C Act and FDA implementing regulations.

Y. All descriptive printed matter, advertising, and promotional material relating to the use of the Pfizer-BioNTech COVID-19 Vaccine clearly and conspicuously shall state that:

- This product has not been approved or licensed by FDA, but has been authorized for emergency use by FDA, under an EUA to prevent Coronavirus Disease 2019 (COVID-19) for use in individuals 16 years of age and older; and

- The emergency use of this product is only authorized for the duration of the declaration that circumstances exist justifying the authorization of emergency use of the medical product under Section 564(b)(1) of the FD&C Act unless the declaration is terminated or authorization revoked sooner.

IV. Duration of Authorization

This EUA will be effective until the declaration that circumstances exist justifying the authorization of the emergency use of drugs and biological products during the COVID-19 pandemic is terminated under Section 564(b)(2) of the Act or the EUA is revoked under Section 564(g) of the Act.

Sincerely,

--/S/--

RADM Denise M. Hinton
Chief Scientist
Food and Drug Administration

Enclosures

U.S. FOOD & DRUG ADMINISTRATION

December 18, 2020

ModernaTX, Inc.
Attention: Ms. Carlota Vinals
200 Technology Square
Cambridge, MA 02139

Dear Ms. Vinals:

This letter is in response to a request from ModernaTX, Inc. that the Food and Drug Administration (FDA) issue an Emergency Use Authorization (EUA) for emergency use of Moderna COVID-19 Vaccine for the prevention of Coronavirus Disease 2019 (COVID-19) for individuals 18 years of age and older, as described in the Scope of Authorization (Section II) of this letter, pursuant to Section 564 of the Federal Food, Drug, and Cosmetic Act (the FD&C Act or the Act) (21 U.S.C. 360bbb-3).

On February 4, 2020, pursuant to Section 564(b)(1)(C) of the Act, the Secretary of the Department of Health and Human Services (HHS) determined that there is a public health emergency that has a significant potential to affect national security or the health and security of United States citizens living abroad, and that involves the virus that causes COVID-19.[1] On the basis of such determination, the Secretary of HHS on March 27, 2020, declared that circumstances exist justifying the authorization of emergency use of drugs and biological products during the COVID-19 pandemic, pursuant to Section 564 of the Act, subject to terms of any authorization issued under that section.[2]

Moderna COVID-19 Vaccine is for use for active immunization to prevent COVID-19 caused by severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) in individuals 18 years of age and older. The vaccine contains a nucleoside-modified messenger RNA encoding the viral spike (S) glycoprotein of SARS-CoV-2 formulated in lipid particles. It is an investigational vaccine not licensed for any indication.

FDA reviewed safety and efficacy data from an ongoing phase 3 trial in approximately 30,000 participants randomized 1:1 to receive Moderna COVID-19 Vaccine or saline control. The trial has enrolled participants 18 years of age and older.

---

[1] U.S. Department of Health and Human Services, *Determination of a Public Health Emergency and Declaration that Circumstances Exist Justifying Authorizations Pursuant to Section 564(b) of the Federal Food, Drug, and Cosmetic Act, 21 U.S.C. § 360bbb-3*. February 4, 2020.

[2] U.S. Department of Health and Human Services, *Declaration that Circumstances Exist Justifying Authorizations Pursuant to Section 564(b) of the Federal Food, Drug, and Cosmetic Act, 21 U.S.C. § 360bbb-3*, 85 FR 18250 (April 1, 2020).

FDA's review of the available safety data from 30,351 participants 18 years of age and older, who were followed for a median of 7 weeks after receiving the second dose, did not identify specific safety concerns that would preclude issuance of an EUA. Review of additional safety data from these participants with a median of 9 weeks of follow-up after receipt of the second dose did not change FDA's assessment of safety of the vaccine.

FDA's analysis of the efficacy data from 28,207 participants 18 years of age and older without evidence of SARS-CoV-2 infection prior to dose 1 confirms the vaccine was 94.1% effective (95% confidence interval (CI) 89.3, 96.8) in preventing COVID-19 occurring at least 14 days after the second dose (with 11 COVID-19 cases in the vaccine group compared to 185 COVID-19 cases in the placebo group). In this final scheduled analysis participants had been followed for a median of 9 weeks following the second dose. This result is consistent with that obtained from an interim analysis of efficacy conducted after these participants had been followed for a median of 7 weeks after the second dose (vaccine efficacy 94.5%, 95% CI: 86.5, 97.8).

Based on the safety and effectiveness data, and review of manufacturing information regarding product quality and consistency, it is reasonable to believe that Moderna COVID-19 Vaccine may be effective. Additionally, it is reasonable to conclude, based on the totality of the scientific evidence available, that the known and potential benefits of Moderna COVID-19 Vaccine outweigh the known and potential risks of the vaccine, for the prevention of COVID-19 in individuals 18 years of age and older. Finally, on December 17, 2020, the Vaccines and Related Biological Products Advisory Committee voted in agreement with this conclusion.

Having concluded that the criteria for issuance of this authorization under Section 564(c) of the Act are met, I am authorizing the emergency use of Moderna COVID-19 Vaccine for the prevention of COVID-19, as described in the Scope of Authorization section of this letter (Section II) and subject to the terms of this authorization.

I. Criteria for Issuance of Authorization

I have concluded that the emergency use of Moderna COVID-19 Vaccine for the prevention of COVID-19 when administered as described in the Scope of Authorization (Section II) meets the criteria for issuance of an authorization under Section 564(c) of the Act, because:

1. SARS-CoV-2 can cause a serious or life-threatening disease or condition, including severe respiratory illness, to humans infected by this virus;

2. Based on the totality of scientific evidence available to FDA, it is reasonable to believe that Moderna COVID-19 Vaccine may be effective in preventing COVID-19, and that, when used under the conditions described in this authorization, the known and potential benefits of Moderna COVID-19 Vaccine when used to prevent COVID-19 outweigh its known and potential risks; and

3. There is no adequate, approved, and available alternative to the emergency use of Moderna COVID-19 Vaccine to prevent COVID-19.[3]

II. Scope of Authorization

I have concluded, pursuant to Section 564(d)(1) of the Act, that the scope of this authorization is limited as follows:

- ModernaTX, Inc. will supply Moderna COVID-19 Vaccine either directly or through authorized distributor(s)[4], to emergency response stakeholders[5] as directed by the U.S. government, including the Centers for Disease Control and Prevention (CDC) and/or other designee, for use consistent with the terms and conditions of this EUA;
- The Moderna COVID-19 Vaccine covered by this authorization will be administered by vaccination providers[6] and used only to prevent COVID-19 in individuals ages 18 and older; and
- The Moderna COVID-19 Vaccine may be administered by a vaccination provider without an individual prescription for each vaccine recipient.

[3] No other criteria of issuance have been prescribed by regulation under Section 564(c)(4) of the Act.

[4] "Authorized Distributor(s)" are identified by ModernaTX, Inc. or, if applicable, by a U.S. government entity, such as the Centers for Disease Control and Prevention (CDC) and/or other designee, as an entity or entities allowed to distribute authorized Moderna COVID-19 Vaccine.

[5] For purposes of this letter, "emergency response stakeholder" refers to a public health agency and its delegates that have legal responsibility and authority for responding to an incident, based on political or geographical boundary lines (e.g., city, county, tribal, territorial, State, or Federal), or functional (e.g., law enforcement or public health range) or sphere of authority to administer, deliver, or distribute vaccine in an emergency situation. In some cases (e.g., depending on a state or local jurisdiction's COVID-19 vaccination response organization and plans), there might be overlapping roles and responsibilities among "emergency response stakeholders" and "vaccination providers" (e.g., if a local health department is administering COVID-19 vaccines; if a pharmacy is acting in an official capacity under the authority of the state health department to administer COVID-19 vaccines). In such cases, it is expected that the conditions of authorization that apply to emergency response stakeholders and vaccination providers will all be met.

[6] For purposes of this letter, "vaccination provider" refers to the facility, organization, or healthcare provider licensed or otherwise authorized by the emergency response stakeholder (e.g., non-physician healthcare professionals, such as nurses and pharmacists pursuant to state law under a standing order issued by the state health officer) to administer or provide vaccination services in accordance with the applicable emergency response stakeholder's official COVID-19 vaccination and emergency response plan(s) and who is enrolled in the CDC COVID-19 Vaccination Program. For purposes of this letter, "healthcare provider" also refers to a person authorized by the U.S. Department of Health and Human Services (e.g., under the PREP Act Declaration for Medical Countermeasures against COVID-19) to administer FDA-authorized COVID-19 vaccine (e.g., qualified pharmacy technicians and State-authorized pharmacy interns acting under the supervision of a qualified pharmacist). See, e.g., HHS. *Fourth Amendment to the Declaration Under the Public Readiness and Emergency Preparedness Act for Medical Countermeasures Against COVID-19 and Republication of the Declaration.* 85 FR 79190 (December 9, 2020).

Product Description

The Moderna COVID-19 Vaccine is supplied as a frozen suspension in multiple dose vials.. The Moderna COVID-19 Vaccine does not contain a preservative.

Each 0.5 mL dose of the Moderna COVID-19 Vaccine contains 100 mcg of a nucleoside-modified messenger RNA encoding the viral spike (S) glycoprotein of SARS-CoV-2. Each dose of the Moderna COVID-19 Vaccine also includes the following ingredients: lipids (SM-102; 1,2-dimyristoyl-rac-glycero-3-methoxypolyethylene glycol-2000 [PEG2000-DMG]; cholesterol; and 1,2-distearoyl-sn-glycero-3-phosphocholine [DSPC]), tromethamine, tromethamine hydrochloride, acetic acid, sodium acetate, and sucrose.

The dosing regimen is two doses of 0.5 mL each, one month apart.

The manufacture of the authorized Moderna COVID-19 Vaccine is limited to those facilities identified and agreed upon in the ModernaTX, Inc. request for authorization.

The Moderna COVID-19 Vaccine vial label and carton labels are clearly marked for "Emergency Use Authorization." The Moderna COVID-19 Vaccine is authorized to be distributed, stored, further redistributed, and administered by emergency response stakeholders when packaged in the authorized manufacturer packaging (i.e., vials and cartons), despite the fact that the vial and carton labels may not contain information that otherwise would be required under the FD&C Act.

The Moderna COVID-19 Vaccine is authorized for emergency use with the following product-specific information required to be made available to vaccination providers and recipients, respectively (referred to as "authorized labeling"):

- Fact Sheet for Healthcare Providers Administering Vaccine (Vaccination Providers): Emergency Use Authorization (EUA) of the Moderna COVID-19 Vaccine to Prevent Coronavirus Disease 2019 (COVID-19)

- Fact Sheet for Recipients and Caregivers: Emergency Use Authorization (EUA) of the Moderna COVID-19 Vaccine to Prevent Coronavirus Disease 2019 (COVID-19) in Individuals 18 Years of Age and Older

I have concluded, pursuant to Section 564(d)(2) of the Act, that it is reasonable to believe that the known and potential benefits of Moderna COVID-19 Vaccine, when used to prevent COVID-19 and used in accordance with this Scope of Authorization (Section II), outweigh its known and potential risks.

I have concluded, pursuant to Section 564(d)(3) of the Act, based on the totality of scientific evidence available to FDA, that it is reasonable to believe that Moderna COVID-19 Vaccine may be effective in preventing COVID-19 when used in accordance with this Scope of Authorization (Section II), pursuant to Section 564(c)(2)(A) of the Act.

Having reviewed the scientific information available to FDA, including the information supporting the conclusions described in Section I above, I have concluded that Moderna COVID-19 Vaccine (as described in this Scope of Authorization (Section II)) meets the criteria set forth in Section 564(c) of the Act concerning safety and potential effectiveness.

The emergency use of Moderna COVID-19 Vaccine under this EUA must be consistent with, and may not exceed, the terms of the Authorization, including the Scope of Authorization (Section II) and the Conditions of Authorization (Section III). Subject to the terms of this EUA and under the circumstances set forth in the Secretary of HHS's determination under Section 564(b)(1)(C) described above and the Secretary of HHS's corresponding declaration under Section 564(b)(1), Moderna COVID-19 Vaccine is authorized to prevent COVID-19 in individuals 18 years of age and older as described in the Scope of Authorization (Section II) under this EUA, despite the fact that it does not meet certain requirements otherwise required by applicable federal law.

III. Conditions of Authorization

Pursuant to Section 564 of the Act, I am establishing the following conditions on this authorization:

ModernaTX, Inc. and Authorized Distributor(s)

A. ModernaTX, Inc. and authorized distributor(s) will ensure that the authorized Moderna COVID-19 Vaccine is distributed, as directed by the U.S. government, including CDC and/or other designee, and the authorized labeling (i.e., Fact Sheets) will be made available to vaccination providers, recipients, and caregivers consistent with the terms of this letter.

B. ModernaTX, Inc. and authorized distributor(s) will ensure that appropriate storage and cold chain is maintained until delivered to emergency response stakeholders' receipt sites.

C. ModernaTX, Inc. will ensure that the terms of this EUA are made available to all relevant stakeholders (e.g., emergency response stakeholders, authorized distributors, and vaccination providers) involved in distributing or receiving authorized Moderna COVID-19 Vaccine. ModernaTX, Inc. will provide to all relevant stakeholders a copy of this letter of authorization and communicate any subsequent amendments that might be made to this letter of authorization and its authorized labeling.

D. ModernaTX, Inc. may develop and disseminate instructional and educational materials (e.g., video regarding vaccine handling, storage/cold-chain management, preparation, disposal) that are consistent with the authorized emergency use of the vaccine as described in the letter of authorization and authorized labeling, without FDA's review and concurrence, when necessary to meet public health needs during an emergency. Any instructional and educational materials that are inconsistent with the authorized labeling are prohibited.

E. ModernaTX, Inc. may request changes to this authorization, including to the authorized Fact Sheets for Moderna COVID-19 Vaccine, that do not alter the analysis

of benefits and risks that underlies this authorization and FDA may determine that such changes may be permitted without amendment of this EUA. That determination must be made by joint decision of the Office of Vaccines Research and Review (OVRR)/Center for Biologics Evaluation and Research (CBER), the Preparedness and Response Team (PREP)/Office of the Center Director (OD)/CBER, and the Office of Counterterrorism and Emerging Threats (OCET)/Office of the Chief Scientist/Office of the Commissioner (OCS).

F. ModernaTX, Inc. will report to Vaccine Adverse Event Reporting System (VAERS):
- Vaccine administration errors whether or not associated with an adverse event;
- Serious adverse events (irrespective of attribution to vaccination);
- Cases of Multisystem Inflammatory Syndrome in adults; and
- Cases of COVID-19 that result in hospitalization or death, that are reported to ModernaTX, Inc.

These reports should be submitted to VAERS as soon as possible but no later than 15 calendar days from initial receipt of the information by ModernaTX, Inc.

G. ModernaTX, Inc. must submit to Investigational New Drug application (IND) number 19745 periodic safety reports at monthly intervals, within 15 days after the last day of a month, beginning after the first full calendar month after authorization. Each periodic safety report is required to contain descriptive information which includes:
- A narrative summary and analysis of adverse events submitted during the reporting interval, including interval and cumulative counts by age groups, special populations (e.g., pregnant women), and adverse events of special interest.
- Newly identified safety concerns in the interval; and
- Actions taken since the last report because of adverse experiences (for example, changes made to Healthcare Providers Administering Vaccine (Vaccination Providers) Fact Sheet, changes made to studies or studies initiated).

H. No changes will be implemented to the description of the product, manufacturing process, facilities, or equipment without notification to and concurrence by the Agency.

I. All manufacturing facilities will comply with Current Good Manufacturing Practice requirements.

J. ModernaTX, Inc. will submit to the EUA file Certificates of Analysis (CoA) for each drug product lot at least 48 hours prior to vaccine distribution. The CoA will include the established specifications and specific results for each quality control test performed on the final drug product lot.

K. ModernaTX, Inc. will submit to the EUA file quarterly manufacturing reports that include a listing of all Drug Substance and Drug Product lots produced after issuance of this authorization. This report must include lot number, manufacturing site, date of manufacture, and lot disposition, including those lots that were quarantined for investigation or those lots that were rejected. Information on the reasons for lot

quarantine or rejection must be included in the report. The first report is due July 2021.

L. ModernaTX, Inc. and authorized distributor(s) will maintain records regarding release of Moderna COVID-19 Vaccine for distribution (i.e., lot numbers, quantity, release date).

M. ModernaTX, Inc. and authorized distributor(s) will make available to FDA upon request any records maintained in connection with this EUA.

N. ModernaTX, Inc. will conduct post-authorization observational studies to evaluate the association between Moderna COVID-19 Vaccine and a pre-specified list of adverse events of special interest, along with deaths and hospitalizations, and severe COVID-19. The study population should include individuals administered the authorized Moderna COVID-19 Vaccine under this EUA in the general U.S. population (18 years of age and older), populations of interest such as healthcare workers, pregnant women, immunocompromised individuals, subpopulations with specific comorbidities. The studies should be conducted in large scale databases with an active comparator. ModernaTX, Inc. will provide protocols and status update reports to the IND 19745 with agreed-upon study designs and milestone dates.

O. ModernaTX, Inc., working with its contract research organization, will continue to monitor the performance of its clinical investigators in ongoing clinical studies of its vaccine and will report to FDA promptly any significant deviations from the protocols.

Emergency Response Stakeholders

P. Emergency response stakeholders will identify vaccination sites to receive authorized Moderna COVID-19 Vaccine and ensure its distribution and administration, consistent with the terms of this letter and CDC's COVID-19 Vaccination Program.

Q. Emergency response stakeholders will ensure that vaccination providers within their jurisdictions are aware of this letter of authorization, and the terms herein and any subsequent amendments that might be made to the letter of authorization, instruct them about the means through which they are to obtain and administer the vaccine under the EUA, and ensure that the authorized labeling [i.e., Fact Sheet for Healthcare Providers Administering Vaccine (Vaccination Providers) and Fact Sheet for Recipients and Caregivers] is made available to vaccination providers through appropriate means (e.g., e-mail, website).

R. Emergency response stakeholders receiving authorized Moderna COVID-19 Vaccine will ensure that appropriate storage and cold chain is maintained.

Vaccination Providers

S. Vaccination providers will administer the vaccine in accordance with the authorization and will participate and comply with the terms and training required by CDC's COVID-19 Vaccination Program.

T. Vaccination providers will provide the Fact Sheet for Recipients and Caregivers to each individual receiving vaccination and provide the necessary information for receiving their second dose.

U. Vaccination providers administering Moderna COVID-19 Vaccine must report the following information associated with the administration of Moderna COVID-19 Vaccine of which they become aware to VAERS in accordance with the Fact Sheet for Healthcare Providers Administering Vaccine (Vaccination Providers):

- Vaccine administration errors whether or not associated with an adverse event
- Serious adverse events (irrespective of attribution to vaccination)
- Cases of Multisystem Inflammatory Syndrome in adults
- Cases of COVID-19 that result in hospitalization or death

Complete and submit reports to VAERS online at https://vaers.hhs.gov/reportevent.html. The VAERS reports should include the words " Moderna COVID-19 Vaccine EUA" in the description section of the report. More information is available at vaers.hhs.gov or by calling 1-800-822-7967. To the extent feasible, report to ModernaTX, Inc., by contacting 1-866-663-3762, by providing a copy of the VAERS form to ModernaTX, Inc., Fax: 1-866-599-1342 or by email; ModernaPV@modernatx.com.

V. Vaccination providers will conduct any follow-up requested by the U.S government, including CDC, FDA, or other designee, regarding adverse events to the extent feasible given the emergency circumstances.

W. Vaccination providers will monitor and comply with CDC and/or emergency response stakeholder vaccine management requirements (e.g., requirements concerning obtaining, tracking, and handling vaccine) and with requirements concerning reporting of vaccine administration data to CDC.

X. Vaccination providers will ensure that any records associated with this EUA are maintained until notified by FDA. Such records will be made available to CDC and FDA for inspection upon request.

Conditions Related to Printed Matter, Advertising, and Promotion

Y. All descriptive printed matter, advertising, and promotional material relating to the use of the Moderna COVID-19 Vaccine shall be consistent with the authorized

labeling, as well as the terms set forth in this EUA, and meet the requirements set forth in section 502(a) and (n) of the FD&C Act and FDA implementing regulations.

Z. All descriptive printed matter, advertising, and promotional material relating to the use of the Moderna COVID-19 Vaccine clearly and conspicuously shall state that:
- This product has not been approved or licensed by FDA, but has been authorized for emergency use by FDA, under an EUA to prevent Coronavirus Disease 2019 (COVID-19) for use in individuals 18 years of age and older; and
- The emergency use of this product is only authorized for the duration of the declaration that circumstances exist justifying the authorization of emergency use of the medical product under Section 564(b)(1) of the FD&C Act unless the declaration is terminated or authorization revoked sooner.

IV. Duration of Authorization

This EUA will be effective until the declaration that circumstances exist justifying the authorization of the emergency use of drugs and biological products during the COVID-19 pandemic is terminated under Section 564(b)(2) of the Act or the EUA is revoked under Section 564(g) of the Act.

Sincerely,

--/S/--

Food and Drug Administration

[Docket No. FDA–2014–N–0345]

Agency Information Collection Activities; Submission for Office of Management and Budget Review; Comment Request; Data To Support Drug Product Communications as Used by the Food and Drug Administration

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA or we) is announcing that a proposed collection of information has been submitted to the Office of Management and Budget (OMB) for review and clearance under the Paperwork Reduction Act of 1995.

DATES: Submit written comments (including recommendations) on the collection of information by February 18, 2021.

ADDRESSES: To ensure that comments on the information collection are received, OMB recommends that written comments be submitted to *https://www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under Review—Open for Public Comments'' or by using the search function. The OMB control number for this information collection is 0910–0695. Also include the FDA docket number found in brackets in the heading of this document.

FOR FURTHER INFORMATION CONTACT: Ila S. Mizrachi, Office of Operations, Food and Drug Administration, Three White Flint North, 10A–12M, 11601 Landsdown St., North Bethesda, MD 20852, 301–796–7726, *PRAStaff@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION: In compliance with 44 U.S.C. 3507, FDA has submitted the following proposed collection of information to OMB for review and clearance.

Data to Support Drug Product Communications as Used by the Food and Drug Administration

OMB Control Number 0910–0695—Extension

This information collection supports Agency outreach efforts. Testing of communication messages in advance of a communication campaign provides an important role in improving FDA communications as they allow for an indepth understanding of individuals' attitudes, beliefs, motivations, and feelings. The methods to be employed include individual indepth interviews, general public focus group interviews, intercept interviews, self-administered surveys, gatekeeper surveys, and professional clinician focus group interviews, all on a voluntary basis.

The methods to be used serve the narrowly defined need for direct and informal opinion on a specific topic and, as a qualitative research tool, have two major purposes: (1) To obtain information that is useful for developing variables and measures for formulating the basic objectives of risk

communication campaigns and (2) to assess the potential effectiveness of messages and materials in reaching and successfully communicating with their intended audiences. We will use these methods to test and refine our ideas and to help develop messages and other communications but will generally conduct further research before making important decisions, such as adopting new policies and allocating or redirecting significant resources to support these policies. We will use this mechanism to test messages about regulated drug products on a variety of subjects related to consumer, patient, or healthcare professional perceptions and about use of drug products and related materials, including but not limited to, direct-to-consumer prescription drug promotion, physician labeling of prescription drugs, medication guides, over-the-counter drug labeling, emerging risk communications, patient labeling, online sale of medical products, and consumer and professional education.

Annually, we project about 45 communication studies using the variety of test methods listed in this document. We are requesting an extension of these burden hours so as not to restrict our ability to gather information on public sentiment for FDA's proposals in its regulatory and communications programs.

In the **Federal Register** of June 17, 2020 (85 FR 36591), we published a 60-day notice requesting public comment on the proposed collection of information. No comments were received.

FDA estimates the burden of this collection of information as follows:

TABLE 1—ESTIMATED ANNUAL REPORTING BURDEN [1]

Activity	Number of respondents	Number of responses per respondent	Total annual responses	Average burden per response	Total hours
Interviews/Surveys	43,875	1	43,875	0.21925 (12 minutes)	9,620

[1] There are no capital costs or operating and maintenance costs associated with this collection of information.

Based on a review of the information collection since our last request for OMB approval, we have made no adjustments to our burden estimate.

Dated: January 11, 2021.

Lauren K. Roth,

Acting Principal Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Health Resources and Services Administration

Agency Information Collection Activities: Submission to OMB for Review and Approval; Public Comment Request; Information Collection Request Title: National Practitioner Data Bank for Adverse Information on Physicians and Other Health Care Practitioners—45 CFR Part 60 Regulations and Forms, OMB No. 0915–0126—Revision

AGENCY: Health Resources and Services Administration (HRSA), Department of Health and Human Services.

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act of 1995, HRSA submitted an Information Collection Request (ICR) to the Office of Management and Budget (OMB) for review and approval. Comments submitted during the first public review of this ICR will be provided to OMB. OMB will accept further comments from the public during the review and approval period. OMB may act on HRSA's ICR only after the 30 day comment period for this notice has closed.

DATES: Comments on this ICR should be received no later than February 18, 2021.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: To request a copy of the clearance requests submitted to OMB for review, email Lisa Wright-Solomon, the HRSA Information Collection Clearance Officer at *paperwork@hrsa.gov* or call (301) 443–1984.

SUPPLEMENTARY INFORMATION:

Information Collection Request Title: National Practitioner Data Bank for Adverse Information on Physicians and Other Health Care Practitioners—45 CFR Part 60 Regulations and Forms, OMB No. 0915–0126—Revision.

Abstract: This is a request for OMB's approval for a revision to the information collection contained in regulations found at 45 CFR part 60 governing the National Practitioner Data Bank (NPDB) and the forms to be used in registering with, reporting information to, and requesting information from the NPDB. Administrative forms are also included to aid in monitoring compliance with federal reporting and querying requirements. Responsibility for NPDB implementation and operation resides in HRSA's Bureau of Health Workforce.

The intent of the NPDB is to improve the quality of health care by encouraging entities such as hospitals, State licensing boards, professional societies, and other eligible entities [1] providing health care services to identify and discipline those who engage in unprofessional behavior, and to restrict the ability of incompetent health care practitioners, providers, or suppliers to move from state to state without disclosure or discovery of previous damaging or incompetent performance. It also serves as a fraud and abuse clearinghouse for the reporting and disclosing of certain final adverse actions (excluding settlements in which no findings of liability have been made) taken against health care practitioners, providers, or suppliers by health plans, federal agencies, and state agencies. Users of the NPDB include reporters (entities that are required to

[1] ''Other eligible entities'' that participate in the NPDB are defined in the provisions of Title IV, Section 1921, Section 1128E, and implementing regulations. In addition, a few federal agencies also participate with the NPDB through federal memorandums of understanding. Eligible entities are responsible for complying with all reporting and/or querying requirements that apply; some entities may qualify as more than one type of eligible entity. Each eligible entity must certify its eligibility in order to report to the NPDB, query the NPDB, or both. Information from the NPDB is available only to those entities specified as eligible in the statutes and regulations. Not all entities have the same reporting requirements or level of query access.

submit reports) and queriers (entities and individuals that are authorized to request for information).

The reporting forms, request for information forms (query forms), and administrative forms (used to monitor compliance) are accessed, completed, and submitted to the NPDB electronically through the NPDB website at *https://www.npdb.hrsa.gov/.* All reporting and querying is performed through the secure portal of this website.

This revision proposes changes to improve overall data integrity. In addition, this revision contains the five NPDB forms that were originally approved in: ''NPDB Attestation of Reports by Hospitals, Medical Malpractice Payers, Health Plans, and Certain Other Health Care Entities, OMB No. 0906–0028'' which will be discontinued upon approval of this ICR.

A 60-day notice published in the **Federal Register** on October 16, 2020, vol. 85, No. 201; pp. 65834–65837. There were two public comments that addressed ways to enhance the quality, utility, and clarity of the information to be collected by the NPDB.

Need and Proposed Use of the Information: The NPDB acts primarily as a flagging system; its principal purpose is to facilitate comprehensive review of practitioners' professional credentials and background. Information is collected from, and disseminated to, eligible entities (entities that are entitled to query and/or report to the NPDB as authorized in Title 45 CFR part 60 of the Code of Federal Regulations) on the following: (1) Medical malpractice payments, (2) licensure actions taken by Boards of Medical Examiners, (3) State licensure and certification actions, (4) Federal licensure and certification actions, (5) negative actions or findings taken by peer review organizations or private accreditation entities, (6) adverse actions taken against clinical privileges, (7) federal or state criminal convictions related to the delivery of a health care item or service, (8) civil judgments related to the delivery of a health care item or service, (9) exclusions from participation in Federal or State health care programs, and (10) other adjudicated actions or decisions. It is intended that NPDB information should be considered with other relevant information in evaluating credentials of health care practitioners, providers, and suppliers.

Likely Respondents: Eligible entities or individuals that are entitled to query and/or report to the NPDB as authorized in regulations found at 45 CFR part 60.

Burden Statement: Burden in this context means the time expended by persons to generate, maintain, retain, disclose, or provide the information requested. This includes the time needed to review instructions; to develop, acquire, install, and utilize technology and systems for the purpose of collecting, validating, and verifying information, processing and maintaining information, and disclosing and providing information; to train personnel and to be able to respond to a collection of information; to search data sources; to complete and review the collection of information; and to transmit or otherwise disclose the information. The total annual burden hours estimated for this ICR are summarized in the table below.

TOTAL ESTIMATED ANNUALIZED BURDEN—HOURS

Regulation citation	Form name	Number of respondents	Number of responses per respondent	Total responses	Average burden per response (in hours)	Total burden hours (rounded up)
§ 60.6: Reporting errors, omissions, revisions or whether an action is on appeal.	Correction, Revision-to-Action, Void, Notice of Appeal (manual).	11,918	1	11,918	.25	2,980
	Correction, Revision-to-Action, Void, Notice of Appeal (automated).	18,301	1	18,301	.0003	5
§ 60.7: Reporting medical malpractice payments.	Medical Malpractice Payment (manual).	11,481	1	11,481	.75	8,611
	Medical Malpractice Payment (automated).	296	1	296	.0003	1
§ 60.8: Reporting licensure actions taken by Boards of Medical Examiners.	State Licensure or Certification (manual).	19,749	1	19,749	.75	14,812
§ 60.9: Reporting licensure and certification actions taken by States.	State Licensure or Certification (automated).	17,189	1	17,189	.0003	5
§ 60.10: Reporting Federal licensure and certification actions.	DEA/Federal Licensure	600	1	600	.75	450
§ 60.11: Reporting negative actions or findings taken by peer review organizations or private accreditation entities.	Peer Review Organization.	10	1	10	.75	8
	Accreditation	10	1	10	.75	8
§ 60.12: Reporting adverse actions taken against clinical privileges.	Title IV Clinical Privileges Actions.	978	1	978	.75	734
	Professional Society	41	1	41	.75	31
§ 60.13: Reporting Federal or State criminal convictions related to the delivery of a health care item or service.	Criminal Conviction (Guilty Plea or Trial) (manual).	1,174	1	1,174	.75	881

TOTAL ESTIMATED ANNUALIZED BURDEN—HOURS—Continued

Regulation citation	Form name	Number of respondents	Number of responses per respondent	Total responses	Average burden per response (in hours)	Total burden hours (rounded up)
	Criminal Conviction (Guilty Plea or Trial) (automated).	683	1	683	.0003	1
	Deferred Conviction or Pre-Trial Diversion.	70	1	70	.75	53
	Nolo Contendere (no contest plea).	127	1	127	.75	95
	Injunction	10	1	10	.75	8
§ 60.14: Reporting civil judgments related to the delivery of a health care item or service.	Civil Judgment	9	1	9	.75	7

BILLING CODE 4165–15–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

[Document Identifier: OS–0990–new]

Agency Information Collection Request. 30-Day Public Comment Request

AGENCY: Office of the Secretary, HHS.

ACTION: Notice.

SUMMARY: In compliance with the requirement of the Paperwork Reduction Act of 1995, the Office of the Secretary (OS), Department of Health and Human Services, is publishing the following summary of a proposed collection for public comment.

DATES: Comments on the ICR must be received on or before February 18, 2021.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain*. Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Sherrette Funn, *Sherrette.Funn@hhs.gov* or (202) 795–7714. When submitting comments or requesting information, please include the document identifier 0990–New–30D and project title for reference.

SUPPLEMENTARY INFORMATION: Interested persons are invited to send comments regarding this burden estimate or any other aspect of this collection of information, including any of the following subjects: (1) The necessity and utility of the proposed information collection for the proper performance of the agency's functions; (2) the accuracy of the estimated burden; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

Title of the Collection: Incident Report Form.

Type of Collection: New.

OMB No. 0990–NEW—Office of the Assistant Secretary for Health, Office for Human Research Protections.

Abstract: The Office of the Assistant Secretary for Health, Office for Human Research Protections is requesting approval for three years of a new information collection on the OHRP Incident Report Form. This form will facilitate prompt reporting of specific human subject protection incidents to OHRP by organizations and institutions conducting or reviewing human subjects research, and will provide a simplified standardized format for the reports. The information collected on the form will help OHRP to ensure the safety of human research subjects involved in non-exempt HHS-conducted or -supported research and to ensure that the research is conducted in accordance with the HHS Protection of Human Subjects regulations at 45 CFR part 46.

Likely Respondents: Institutions or organizations conducting non-exempt HHS-conducted or -supported human subjects research.

ANNUALIZED BURDEN HOUR TABLE

Forms	Respondents	Responses per respondent	Number of responses	Hours per response	Total burden hours
Incident Report Form	500	*1*	500	0.5	250
Incident Report Form	200	*2*	400	0.5	200
Incident Report Form	100	*3*	300	0.5	150
Total					600

Dated: January 12, 2021.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

National Institute of General Medical Sciences; Notice of Closed Meeting

Pursuant to section 10(d) of the Federal Advisory Committee Act, as amended, notice is hereby given of the following meeting.

The meeting will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: National Institute of General Medical Sciences Special Emphasis Panel, Review of NIGMS Pathway to independence Award K99/R00 Applications.

Date: March 25, 2021.

Time: 10:00 a.m. to 4:00 p.m.

Agenda: To review and evaluate grant applications.

Place: National Institutes of Health, Natcher Building, 45 Center Drive, Bethesda, MD 20892 (Virtual Meeting).

Contact Person: Isaah S. Vincent, Ph.D., Scientific Review Officer, Office of Scientific Review, National Institute of General Medical Sciences, National Institutes of Health, 45 Center Drive, Room 3AN12L, Bethesda, MD 20892, 301–594–2948, *isaah.vincent@nih.gov*.

BILLING CODE 4140–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

National Institute of Environmental Health Sciences; Notice of Meeting

Pursuant to section 10(d) of the Federal Advisory Committee Act, as amended, notice is hereby given of the following meeting.

The meeting will be open to the public as indicated below, with attendance limited to space available. Individuals who plan to attend and need special assistance, such as sign language interpretation or other reasonable accommodations, should notify the Contact Person listed below in advance of the meeting.

The meeting will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: National Advisory Environmental Health Sciences Council.

Date: February 16–17, 2021.

Closed: February 16, 2021, 10:00 a.m. to 10:30 a.m.

Agenda: To review and evaluate grant applications.

Place: Division of Extramural Research and Training, National Institute of Environmental Health Sciences, 111 T.W. Alexander Drive, Research Triangle Park, NC 27709 (Virtual Meeting).

Open: February 16, 2021, 10:45 a.m. to 1:45 p.m.

Agenda: Discussion of program policies and issues.

Place: Division of Extramural Research and Training, National Institute of Environmental Health Sciences, 111 T.W. Alexander Drive, Research Triangle Park, NC 27709, *https://www.niehs.nih.gov/news/webcasts/* (Virtual Meeting).

Open: February 17, 2021, 10:00 a.m. to 2:00 p.m.

Agenda: Proposed DERT Actions/Discussion about UNITE Committees/DEI Discussion—roll out of WG.

Place: Division of Extramural Research and Training, National Institute of Environmental Health Sciences, 111 T.W. Alexander Drive, Research Triangle Park, NC 27709, *https://www.niehs.nih.gov/news/webcasts/* (Virtual Meeting).

Contact Person: Patrick Mastin, Ph.D., Acting Division Director, Division of Extramural Research and Training, National Institute of Environmental Health Sciences, Research Triangle Park, NC 27709 984–287–3285, *mastin@niehs.nih.gov*.

Any interested person may file written comments with the committee by forwarding the statement to the Contact Person listed on this notice. The statement should include the name, address, telephone number and when applicable, the business or professional affiliation of the interested person.

Information is also available on the Institute's/Center's home page: *https://www.niehs.nih.gov/about/boards/naehsc/index.cfm,* where an agenda and any additional information for the meeting will be posted when available.

BILLING CODE 4140–01–P

DEPARTMENT OF HOMELAND SECURITY

Federal Emergency Management Agency

[Docket ID FEMA–2021–0002; Internal Agency Docket No. FEMA–B–2101]

Proposed Flood Hazard Determinations

AGENCY: Federal Emergency Management Agency, DHS.

ACTION: Notice.

SUMMARY: Comments are requested on proposed flood hazard determinations, which may include additions or modifications of any Base Flood Elevation (BFE), base flood depth, Special Flood Hazard Area (SFHA) boundary or zone designation, or regulatory floodway on the Flood Insurance Rate Maps (FIRMs), and where applicable, in the supporting Flood Insurance Study (FIS) reports for the communities listed in the table below. The purpose of this notice is to seek general information and comment regarding the preliminary FIRM, and where applicable, the FIS report that the Federal Emergency Management Agency (FEMA) has provided to the affected communities. The FIRM and FIS report are the basis of the floodplain management measures that the community is required either to adopt or to show evidence of having in effect in order to qualify or remain qualified for participation in the National Flood Insurance Program (NFIP). In addition, the FIRM and FIS report, once effective, will be used by insurance agents and others to calculate appropriate flood insurance premium rates for new buildings and the contents of those buildings.

DATES: Comments are to be submitted on or before April 19, 2021.

ADDRESSES: The Preliminary FIRM, and where applicable, the FIS report for each community are available for inspection at both the online location *https://hazards.fema.gov/femaportal/prelimdownload* and the respective Community Map Repository address listed in the tables below. Additionally, the current effective FIRM and FIS report for each community are accessible online through the FEMA Map Service Center at *https://msc.fema.gov* for comparison.

You may submit comments, identified by Docket No. FEMA–B–2101, to Rick Sacbibit, Chief, Engineering Services Branch, Federal Insurance and Mitigation Administration, FEMA, 400 C Street SW, Washington, DC 20472, (202) 646–7659, or (email) *patrick.sacbibit@fema.dhs.gov.*

FOR FURTHER INFORMATION CONTACT: Rick Sacbibit, Chief, Engineering Services Branch, Federal Insurance and Mitigation Administration, FEMA, 400 C Street SW, Washington, DC 20472, (202) 646–7659, or (email) *patrick.sacbibit@fema.dhs.gov;* or visit the FEMA Mapping and Insurance eXchange (FMIX) online at *https://www.floodmaps.fema.gov/fhm/fmx_main.html.*

SUPPLEMENTARY INFORMATION: FEMA proposes to make flood hazard determinations for each community listed below, in accordance with section 110 of the Flood Disaster Protection Act of 1973, 42 U.S.C. 4104, and 44 CFR 67.4(a).

These proposed flood hazard determinations, together with the floodplain management criteria required by 44 CFR 60.3, are the minimum that are required. They should not be construed to mean that the community must change any existing ordinances that are more stringent in their floodplain management requirements. The community may at any time enact stricter requirements of its own or pursuant to policies established by other Federal, State, or regional entities. These flood hazard determinations are used to meet the floodplain management requirements of the NFIP and are used to calculate the appropriate flood insurance premium rates for new buildings built after the FIRM and FIS report become effective.

The communities affected by the flood hazard determinations are provided in the tables below. Any request for reconsideration of the revised flood hazard information shown on the Preliminary FIRM and FIS report that satisfies the data requirements outlined in 44 CFR 67.6(b) is considered an appeal. Comments unrelated to the flood hazard determinations also will be considered before the FIRM and FIS report become effective.

Use of a Scientific Resolution Panel (SRP) is available to communities in support of the appeal resolution process. SRPs are independent panels of experts in hydrology, hydraulics, and other pertinent sciences established to review conflicting scientific and technical data and provide recommendations for resolution. Use of the SRP only may be exercised after FEMA and local communities have been engaged in a collaborative consultation process for at least 60 days without a mutually acceptable resolution of an appeal. Additional information regarding the SRP process can be found online at *https://www.floodsrp.org/pdfs/srp_overview.pdf.*

The watersheds and/or communities affected are listed in the tables below. The Preliminary FIRM, and where applicable, FIS report for each community are available for inspection at both the online location *https://www.fema.gov/preliminaryfloodhazarddata* and the respective Community Map Repository address listed in the tables. For communities with multiple ongoing Preliminary studies, the studies can be identified by the unique project number and Preliminary FIRM date listed in the tables. Additionally, the current effective FIRM and FIS report for each community are accessible online through the FEMA Map Service Center at *https://msc.fema.gov* for comparison.

BILLING CODE 9110–12–P

DEPARTMENT OF HOMELAND SECURITY

Federal Emergency Management Agency

[Docket ID FEMA–2021–0002; Internal Agency Docket No. FEMA–B–2100]

Changes in Flood Hazard Determinations

AGENCY: Federal Emergency Management Agency, DHS.

ACTION: Notice.

SUMMARY: This notice lists communities where the addition or modification of Base Flood Elevations (BFEs), base flood depths, Special Flood Hazard Area (SFHA) boundaries or zone designations, or the regulatory floodway (hereinafter referred to as flood hazard determinations), as shown on the Flood Insurance Rate Maps (FIRMs), and where applicable, in the supporting Flood Insurance Study (FIS) reports, prepared by the Federal Emergency Management Agency (FEMA) for each community, is appropriate because of new scientific or technical data. The FIRM, and where applicable, portions of the FIS report, have been revised to reflect these flood hazard determinations through issuance of a Letter of Map Revision (LOMR), in accordance with Federal Regulations. The LOMR will be used by insurance agents and others to calculate appropriate flood insurance premium rates for new buildings and the contents of those buildings. For rating purposes, the currently effective community number is shown in the table below and must be used for all new policies and renewals.

DATES: These flood hazard determinations will be finalized on the dates listed in the table below and revise the FIRM panels and FIS report in effect prior to this determination for the listed communities.

From the date of the second publication of notification of these changes in a newspaper of local circulation, any person has 90 days in which to request through the community that the Deputy Associate Administrator for Insurance and Mitigation reconsider the changes. The flood hazard determination information may be changed during the 90-day period.

ADDRESSES: The affected communities are listed in the table below. Revised flood hazard information for each community is available for inspection at both the online location and the respective community map repository address listed in the table below. Additionally, the current effective FIRM and FIS report for each community are accessible online through the FEMA Map Service Center at *https://msc.fema.gov* for comparison.

Submit comments and/or appeals to the Chief Executive Officer of the community as listed in the table below.

FOR FURTHER INFORMATION CONTACT: Rick Sacbibit, Chief, Engineering Services Branch, Federal Insurance and Mitigation Administration, FEMA, 400 C Street SW, Washington, DC 20472, (202) 646–7659, or (email) *patrick.sacbibit@fema.dhs.gov;* or visit the FEMA Mapping and Insurance eXchange (FMIX) online at *https://www.floodmaps.fema.gov/fhm/fmx_main.html.*

SUPPLEMENTARY INFORMATION: The specific flood hazard determinations are not described for each community in this notice. However, the online location and local community map repository address where the flood hazard determination information is available for inspection is provided.

Any request for reconsideration of flood hazard determinations must be submitted to the Chief Executive Officer of the community as listed in the table below.

The modifications are made pursuant to section 201 of the Flood Disaster Protection Act of 1973, 42 U.S.C. 4105, and are in accordance with the National Flood Insurance Act of 1968, 42 U.S.C. 4001 *et seq.,* and with 44 CFR part 65.

The FIRM and FIS report are the basis of the floodplain management measures that the community is required either to adopt or to show evidence of having in effect in order to qualify or remain qualified for participation in the National Flood Insurance Program (NFIP).

These flood hazard determinations, together with the floodplain management criteria required by 44 CFR 60.3, are the minimum that are required. They should not be construed to mean that the community must change any existing ordinances that are more stringent in their floodplain management requirements. The community may at any time enact stricter requirements of its own or pursuant to policies established by other Federal, State, or regional entities. The flood hazard determinations are in accordance with 44 CFR 65.4.

The affected communities are listed in the following table. Flood hazard determination information for each community is available for inspection at both the online location and the respective community map repository address listed in the table below. Additionally, the current effective FIRM and FIS report for each community are accessible online through the FEMA Map Service Center at *https://msc.fema.gov* for comparison.

BILLING CODE 9110–12–P

DEPARTMENT OF HOMELAND SECURITY

Federal Emergency Management Agency

[Docket ID FEMA–2021–0002]

Final Flood Hazard Determinations

AGENCY: Federal Emergency Management Agency, DHS.

ACTION: Notice.

SUMMARY: Flood hazard determinations, which may include additions or modifications of Base Flood Elevations (BFEs), base flood depths, Special Flood Hazard Area (SFHA) boundaries or zone designations, or regulatory floodways on the Flood Insurance Rate Maps (FIRMs) and where applicable, in the supporting Flood Insurance Study (FIS) reports have been made final for the communities listed in the table below. The FIRM and FIS report are the basis of the floodplain management measures that a community is required either to adopt or to show evidence of having in effect in order to qualify or remain qualified for participation in the Federal Emergency Management Agency's (FEMA's) National Flood Insurance Program (NFIP). In addition, the FIRM and FIS report are used by insurance agents and others to calculate appropriate flood insurance premium rates for buildings and the contents of those buildings.

DATES: The date of May 4, 2021 has been established for the FIRM and, where applicable, the supporting FIS report showing the new or modified flood hazard information for each community.

ADDRESSES: The FIRM, and if applicable, the FIS report containing the final flood hazard information for each community is available for inspection at the respective Community Map Repository address listed in the tables below and will be available online through the FEMA Map Service Center at *https://msc.fema.gov* by the date indicated above.

FOR FURTHER INFORMATION CONTACT: Rick Sacbibit, Chief, Engineering Services Branch, Federal Insurance and Mitigation Administration, FEMA, 400 C Street SW, Washington, DC 20472, (202) 646–7659, or (email) *patrick.sacbibit@fema.dhs.gov;* or visit the FEMA Mapping and Insurance eXchange (FMIX) online at *https://www.floodmaps.fema.gov/fhm/fmx_main.html.*

SUPPLEMENTARY INFORMATION: The Federal Emergency Management Agency (FEMA) makes the final determinations listed below for the new or modified flood hazard information for each community listed. Notification of these changes has been published in newspapers of local circulation and 90 days have elapsed since that publication. The Deputy Associate Administrator for Insurance and Mitigation has resolved any appeals resulting from this notification.

This final notice is issued in accordance with section 110 of the Flood Disaster Protection Act of 1973, 42 U.S.C. 4104, and 44 CFR part 67. FEMA has developed criteria for floodplain management in floodprone areas in accordance with 44 CFR part 60.

Interested lessees and owners of real property are encouraged to review the new or revised FIRM and FIS report available at the address cited below for each community or online through the FEMA Map Service Center at *https://msc.fema.gov.*

The flood hazard determinations are made final in the watersheds and/or communities listed in the table below.

(Catalog of Federal Domestic Assistance No. 97.022, ''Flood Insurance.'')

Michael M. Grimm,

Assistant Administrator for Risk Management, Department of Homeland Security, Federal Emergency Management Agency.

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

[FWS–R2–ES–2020–N163; FXES11130200000–212–FF02ENEH00]

Endangered and Threatened Wildlife and Plants; Recovery Permit Applications

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of receipt of permit applications; request for comments.

SUMMARY: We, the U.S. Fish and Wildlife Service, invite the public to comment on the following applications for a permit to conduct activities intended to recover and enhance endangered species survival. With some exceptions, the Endangered Species Act of 1973, as amended (ESA), prohibits certain activities that may impact endangered species unless a Federal permit allows such activity. The ESA also requires that we invite public comment before issuing these permits.

DATES: To ensure consideration, please submit your written comments by February 18, 2021.

ADDRESSES: *Document availability:* Request documents by phone or email: Beth Forbus, 505–248–6681, *beth_forbus@fws.gov.*

Comment submission: Submit comments by email to *fw2_te_permits@fws.gov.* Please specify the permit you are interested in by number (*e.g.,* Permit No. TE–123456).

FOR FURTHER INFORMATION CONTACT: Beth Forbus, Supervisor, Classification and Restoration Division, 505–248–6681. Individuals who are hearing or speech impaired may call the Federal Relay Service at 1–800–877–8339 for TTY assistance.

SUPPLEMENTARY INFORMATION:

Background

With some exceptions, the ESA prohibits activities that constitute take of listed species unless a Federal permit is issued that allows such activity. The ESA's definition of ''take'' includes hunting, shooting, harming, wounding, or killing but also such activities as pursuing, harassing, trapping, capturing, or collecting.

The ESA and our implementing regulations in the Code of Federal Regulations (CFR) at title 50, part 17, provide for issuing such permits and require that we invite public comment before issuing permits for activities involving endangered species.

A recovery permit we issue under the ESA, section 10(a)(1)(A), authorizes the permittee to conduct activities with endangered or threatened species for scientific purposes that promote recovery or enhance the species' propagation or survival. These activities often include such prohibited actions as capture and collection. Our regulations implementing section 10(a)(1)(A) for these permits are found at 50 CFR 17.22 for endangered wildlife species, 50 CFR 17.32 for threatened wildlife species, 50 CFR 17.62 for endangered plant species, and 50 CFR 17.72 for threatened plant species.

Permit Applications Available for Review and Comment

Documents and other information submitted with these applications are available for review by any party who submits a request as specified in **ADDRESSES**. Releasing documents is subject to Privacy Act (5 U.S.C. 552a) and Freedom of Information Act (5 U.S.C. 552) requirements.

Proposed activities in the following permit requests are for the recovery and enhancement of propagation or survival of the species in the wild. We invite local, State, Tribal, and Federal agencies and the public to submit written data, views, or arguments with respect to these applications. The comments and recommendations that will be most useful and likely to influence agency decisions are those supported by quantitative information or studies. Please refer to the application number when submitting comments.

Public Land Order No. 7899; Partial Revocation of Public Land Orders No. 5169, 5170, 5171, 5173, 5179, 5180, 5184, 5186, 5187, 5188, 5353, Alaska

AGENCY: Bureau of Land Management, Interior.

ACTION: Public land order.

SUMMARY: This order partially revokes 11 Public Land Orders (PLO) insofar as they affect approximately 9,727,730.01 acres of public lands reserved for study and classification, as appropriate, by the Department of the Interior and supersedes PLO Nos. 6477 and 6559. The purposes for which these lands were withdrawn no longer exist as described in the analysis and decisions made through the Kobuk-Seward Peninsula Record of Decision and Approved Resource Management Plan of 2008 (Kobuk-Seward Pen RMP).

DATES: This Public Land Order takes effect on January 19, 2021.

FOR FURTHER INFORMATION CONTACT: David V. Mushovic, Bureau of Land Management (BLM) Alaska State Office, 222 West Seventh Avenue, Mailstop #13, Anchorage, AK 99513–7504, 907–271–4682, or *dmushovi@blm.gov.* People who use a telecommunications device for the deaf (TDD) may call the Federal Relay Service (FRS) at 1–800–877–8339 to contact the above individual during normal business hours. The FRS is available 24 hours a day, 7 days a week, to leave a message or question with the above individual. You will receive a reply during normal business hours.

SUPPLEMENTARY INFORMATION: This Order implements the recommendations made in the BLM's Kobuk-Seward Pen RMP that serves as the detailed statement required under the National Environmental Policy Act Section 102(2)(C). PLO Nos. 5169, 5170, 5171, and 5173, as amended, modified or corrected, withdrew lands for selection by Village and Regional Corporations under Sec. 11(a)(3) of Alaska Native Claims Settlement Act (ANCSA), and for classification. Sec. 22(h)(4) of ANCSA states ''the Secretary is authorized to terminate any withdrawal . . . whenever he determines the withdrawal is no longer necessary.'' The purposes for which these lands were withdrawn were satisfied by the analysis conducted during the development of the BLM's Kobuk-Seward Pen RMP. PLO No. 5179, as amended, modified or corrected, withdrew lands in aid of legislation concerning addition to, or creation of, units of the National Park, National Forest, Wildlife Refuge, and Wild and Scenic Rivers systems, and to allow for classification of the lands. Any additions to or creation of new units of National Parks, National Forests, Wildlife Refuges or Wild and Scenic Rivers from the land withdrawn by PLO No. 5179 were met by the Alaska National Interest Lands Conservation Act (ANILCA). The classification of the lands withdrawn by PLO No. 5179 was satisfied by the analysis conducted during the development of the Kobuk-Seward Pen RMP. PLO No. 5180, as amended, modified or corrected, withdrew lands to allow for classification and for the protection of the public interest in these lands. The classification and protection of the public interest in the lands withdrawn by PLO No. 5180 has been satisfied by the analysis conducted during the development of the Kobuk-Seward Pen RMP. PLO No. 5184, as amended, modified or corrected, withdrew lands to allow for classification or reclassification of some of areas withdrawn by ANCSA Sec. 11. These purposes were satisfied by the analysis conducted during the development of the Kobuk-Seward Pen RMP. PLO No. 5186, as amended, modified, or corrected, withdrew lands for classification and protection of the public interest in lands not selected by the State of Alaska. The classification of the lands withdrawn by PLO No. 5186 has been satisfied by the analysis conducted during the development of the Kobuk-Seward Pen RMP. PLO No. 5187, as amended, modified or corrected, withdrew lands for classification and protection of the public interest in lands in military reservations. The classification of the lands withdrawn by PLO No. 5187 has been satisfied by the analysis conducted

during the development of the Kobuk-Seward Pen RMP. PLO No. 5188, as amended, modified, or corrected, withdrew the lands in former reservations for classification and protection of the public interest for the use and benefit of Alaska Natives pursuant to Section 17(d)(1) of the Alaska Native Claims Settlement Act. The purposes of PLO No. 5188 were satisfied by the analysis conducted during the development of the BLM's Kobuk-Seward Pen RMP. PLO No. 5353, as amended, modified, or corrected, withdrew lands under the authority of ANCSA Sec. 17(d)(1), pending determination of eligibility of certain Native communities under ANCSA Sec. 11(b)(3), and classification of lands not conveyed pursuant to ANCSA Sec. 14. In the Kobuk-Seward Peninsula area, the Native Village of Council, Alaska, was determined eligible February 11, 1974, as well as the analysis conducted during the development of the Kobuk-Seward Pen RMP; therefore, the purpose for which PLO No. 5353 was withdrawn has been satisfied. Some lands covered by the revocation of the above listed withdrawals have been top filed by the State of Alaska per the Alaska Statehood Act. Upon revocation of the above listed withdrawals, the top filings will convert to selections, subject to valid existing rights. Lands validly selected by or conveyed to the State of Alaska are not subject to ANILCA Sec. 810, as they no longer fit the definition of public lands. The Sec. 810 analysis for the approved Kobuk-Seward Pen RMP found no significant restriction on subsistence uses due to this action.

Order

By virtue of the authority vested in the Secretary of the Interior by Section 204 of the Federal Land Policy and Management Act of 1976, 43 U.S.C. 1714, and Section 22(h)(4) of the Alaska Native Claims Settlement Act of 1971, 43 U.S.C. 1621(h)(4), it is ordered as follows:

1. Subject to valid existing rights, Public Land Orders No. 5169 (37 FR 4472 (1972)); 5170 (37 FR 5573 (1972)); 5171 (37 FR 5573 (1972)); 5173 (37 FR 5575 (1972)); 5179 (37 FR 5579 (1972)); 5180 (37 FR 5583 (1972)); 5184 (37 FR 5588 (1972)); 5186 (37 FR 5589 (1972)); 5187 (37 FR 5591 (1972)); 5188 (37 FR 5591 (1972)); and 5353 (38 FR 19825 (1973)) and any amendments, modifications or corrections to these Orders, if any, are hereby revoked insofar as they affect the following described Federal lands:

Kateel River Meridian, Alaska

T. 21 N., R. 3 E.,
Sec. 3, that portion outside the boundary of the Kobuk Valley National Park;
Secs. 4 thru 9;
Secs. 10 and 11, those portions outside the boundary of the Kobuk Valley National Park;
Secs. 13 thru 24 and secs. 28 thru 33.

Sec. 1, secs. 9 thru 15, secs. 22 thru 27, and secs. 35 and 36.
T. 7 N., R. 11 W.,
Secs. 1 thru 25 and sec. 36.
T. 8 N., R. 11 W.,
Secs. 1 thru 4, secs. 8 thru 17, and secs. 19 thru 36.
T. 10 N., R. 11 W., unsurveyed,
Secs. 1, 2, and 3, secs. 9 thru 15, secs. 23 thru 26, and secs. 35 and 36.
T. 11 N., R. 11 W., unsurveyed,
Secs. 1 thru 29 and secs. 33 thru 36.
T. 12 N., R. 11 W., unsurveyed,
Secs. 6, 7, and 8 and secs. 16 thru 21;
Sec. 26, excepting U.S. Survey No. 12326;
Secs. 27 thru 36.
T. 18 N., R. 11 W.,
Secs. 1 thru 24.
T. 19 N., R. 11 W.
T. 20 N., R. 11 W., unsurveyed,
Secs. 4, 12, and 19 and secs. 29 thru 34.
T. 21 N., R. 11 W., unsurveyed,
Sec. 1;
Secs. 2 and 3, excepting U.S. Survey No. 9139;
Secs. 9 thru 16;
Sec. 17, E½ and those lands west of the easterly bank of the Squirrel River, excepting U.S. Survey No. 6711;
Secs. 18 and 19, those lands west of the easterly bank of the Squirrel River, excepting U.S. Survey No. 6711;
Secs. 21 thru 24 and secs. 26, 27, 28, and 34.
T. 22 N., R. 11 W., unsurveyed,
Sec. 1 and secs. 3 thru 9;
Sec. 10, NW¼;
Sec. 11, E½;
Secs. 12, 13, and 14, secs. 17 thru 27, secs. 29 thru 32, and secs. 34, 35, and 36.
T. 23 N., R. 11 W., unsurveyed,
Secs. 3 thru 10, secs. 15 thru 22, and secs. 27 thru 34.
T. 24 N., R. 11 W., unsurveyed,
Secs. 1 thru 11;
Secs. 12 and 13, excepting U.S. Survey No. 13860;
Secs. 14 thru 24 and secs. 27 thru 34.
T. 25 N., R. 11 W., unsurveyed.
T. 26 N., R. 11 W., unsurveyed,
Secs. 17 and 18, those portions outside the boundary of the Noatak National Preserve and Wilderness;
Sec. 19;
Secs. 20 thru 24, those portions outside the boundary of the Noatak National Preserve and Wilderness;
Secs. 25 thru 29;
Secs. 30 and 31, those portions outside the boundary of the Noatak National Preserve and Wilderness;
Secs. 32 thru 36.
T. 5 N., R. 12 W.
T. 9 N., R. 12 W.,
Secs. 15 thru 22 and secs. 27 thru 34.
T. 11 N., R. 12 W., unsurveyed,
Secs. 1 thru 6 and secs. 9 thru 14.
T. 12 N., R. 12 W., unsurveyed.
T. 13 N., R. 12 W., unsurveyed,
Sec. 23, excepting lot 6, U.S. Survey No. 6249;
Secs. 26, 27, 33, 34, and 35.
Tps. 18 and 19 N., R. 12 W.
T. 20 N., R. 12 W., unsurveyed,
Secs. 6 thru 9 and secs. 14 thru 36.
T. 21 N., R. 12 W., unsurveyed,
Secs. 4 thru 11;
Sec. 12, those lands right of the left bank of the Squirrel River;
Secs. 13 thru 27, secs. 29 thru 32, and sec. 36.
T. 22 N., R. 12 W., unsurveyed,
Secs. 1 and 2, secs. 4 thru 8, secs. 11 thru 14, secs. 17 thru 20, and secs. 23 thru 26;
Sec. 29, those lands right of the left bank of the Squirrel River;
Sec. 30, those lands within the left and right banks of the Squirrel River;
Sec. 31;
Sec. 32, those lands right of the left bank of the Squirrel River;
Sec. 33, those lands within the left and right banks of the Squirrel River;
Secs. 35 and 36.
Tps. 23 and 24 N., R. 12 W., unsurveyed.
T. 25 N., R. 12 W., unsurveyed,
Secs. 1, 2, 3, 9, and 10, those portions outside the boundary of the Noatak National Preserve;
Sec. 11;
Sec. 12, that portion outside the boundary of the Noatak National Preserve;
Secs. 13, 14, and 15;
Secs. 16, 17, 19, and 20, those portions outside the boundary of the Noatak National Preserve;
Secs. 21 thru 29;
Sec. 30, that portion outside the boundary of the Noatak National Preserve;
Secs. 31 thru 36.
T. 26 N., R. 12 W., unsurveyed,
Sec. 13, that portion outside the boundary of the Noatak National Preserve and Wilderness;
Secs. 24, 25, and 36, those portions outside the boundary of the Noatak National Preserve.
T. 5 N., R. 13 W.
T. 6 N., R. 13 W.,
Secs. 3 thru 10 and secs. 14 thru 36.
T. 7 N., R. 13 W.,
Secs. 1 thru 23 and secs. 27 thru 34.
T. 8 N., R. 13 W.
T. 9 N., R. 13 W., unsurveyed.
T. 10 N., R. 13 W., unsurveyed,
Secs. 26 thru 29 and secs. 31 thru 35.
T. 12 N., R. 13 W., unsurveyed,
Sec. 11, excepting lots 1 and 5, U.S. Survey No. 12324;
Sec. 12, excepting lot 5, U.S. Survey No. 12324;
Secs. 13 thru 16, secs. 19 thru 30, and secs. 33 thru 36.
T. 19 N., R. 13 W.,
Secs. 1 thru 30 and secs. 32 thru 36.
T. 20 N., R. 13 W., unsurveyed,
Secs. 1, 2, and 3;
Secs. 4 and 5, excepting U.S. Survey No. 8795;
Secs. 6 and 7;
Secs. 8 and 9, excepting U.S. Survey No. 8794;
Secs. 10 thru 15;
Secs. 16 and 17, excepting U.S. Survey No. 8794;
Secs. 18 thru 36.
T. 21 N., R. 13 W., unsurveyed,
Sec. 1, secs. 4 thru 9, and secs. 12 thru 36.
T. 22 N., R. 13 W., unsurveyed,
Secs. 1 thru 18;
Sec. 20, N½;
Secs. 22 and 27 and secs. 31 thru 36.
T. 23 N., R. 13 W., unsurveyed.
T. 24 N., R. 13 W., unsurveyed,
Sec. 1;
Secs. 2, 3, 8, 9, and 10, those portions outside the boundary of the Noatak National Preserve;
Secs. 11 thru 16;
Secs. 17 and 18, those portions outside the boundary of the Noatak National Preserve;
Secs. 19 thru 36.
T. 25 N., R. 13 W., unsurveyed,
Secs. 25 and 36, those portions outside the boundary of the Noatak National Preserve.
Tps. 5, 6, and 7 N., R. 14 W.
T. 8 N., R. 14 W.,
Secs. 1 thru 4, secs. 9 thru 16, secs. 21 thru 28, and secs. 32 thru 36.
T. 9 N., R. 14 W., unsurveyed,
Secs. 12 and 13, secs. 23 thru 26, and secs. 35 and 36.
T. 12 N., R. 14 W., unsurveyed,
Secs. 5 thru 8 and secs. 15 thru 30.
T. 13 N., R. 14 W., unsurveyed,
Sec. 31.
T. 19 N., R. 14 W.,
Secs. 1 thru 5, unsurveyed;
Sec. 6, unsurveyed, excepting U.S. Survey No. 10933;
Secs. 7 and 8;
Sec. 9, unsurveyed, excepting lot 2, U.S. Survey No. 10927;
Secs. 10 thru 14, unsurveyed;
Sec. 15, unsurveyed, excepting lots 1 and 2, U.S. Survey No. 10927;
Sec. 16;
Sec. 24, unsurveyed, excepting lot 1, U.S. Survey No. 10891.
T. 20 N., R. 14 W., unsurveyed.
T. 21 N., R. 14 W., unsurveyed,
Secs. 1 thru 29;
Secs. 30 and 31, those portions outside the boundary of the Noatak National Preserve;
Secs. 32 thru 36.
T. 22 N., R. 14 W., unsurveyed,
Secs. 1 thru 9, secs. 11 thru 14, secs. 16 thru 20, secs. 23 and 26, and secs. 29 thru 36.
T. 23 N., R. 14 W., unsurveyed,
Secs. 1 thru 4;
Secs. 5, 7, 8, and 9, those portions outside the boundary of the Noatak National Preserve;
Secs. 10 thru 17;
Sec. 18, that portion outside the boundary of the Noatak National Preserve;
Secs. 19 thru 36.
T. 24 N., R. 14 W., unsurveyed,
Secs. 13, 14, 21, 22, and 23, those portions outside the boundary of the Noatak National Preserve;
Secs. 24 and 25;
Secs. 26 thru 29 and secs. 31 and 32, those portions outside the boundary of the Noatak National Preserve;

Secs. 33 thru 36.
T. 11 N., R. 15 W., unsurveyed,
Secs. 2 and 3.
T. 12 N., R. 15 W., unsurveyed,
Secs. 1 and 2;
Sec. 3, excepting lot 1, U.S. Survey No. 11667;
Sec. 10, excepting lots 1 and 2, U.S. Survey No. 11667;
Secs. 11 thru 15;
Sec. 22, excepting lot 1, U.S. Survey No. 12330;
Secs. 23 thru 27;
Secs. 34, 35, and 36.
T. 13 N., R. 15 W., unsurveyed,
Secs. 26 and 36.
T. 19 N., R. 15 W.,
Secs. 1, 2, and 3.
T. 20 N., R. 15 W., unsurveyed,
Secs. 1, 2, 9, 10, and 11, those portions outside the boundary of the Noatak National Preserve;
Secs. 12 thru 15;
Secs. 16 and 17, those portions outside the boundary of the Noatak National Preserve;
Secs. 20 thru 29 and secs. 31 thru 36.
T. 21 N., R. 15 W., unsurveyed,
Secs. 1 thru 4;
Secs. 5, 8, and 9, those portions outside the boundary of the Noatak National Preserve;
Secs. 10 thru 14;
Secs. 15, 16, 17, 22, and 23, those portions outside the boundary of the Noatak National Preserve;
Sec. 24;
Secs. 25 and 26, those portions outside the boundary of the Noatak National Preserve.
T. 22 N., R. 15 W., unsurveyed,
Secs. 1 thru 18;
Secs. 19 and 20, those portions outside the boundary of the Noatak National Preserve;
Secs. 21 thru 27;
Secs. 28, 29, 32, and 33, those portions outside the boundary of the Noatak National Preserve;
Secs. 34, 35, and 36.
T. 23 N., R. 15 W., unsurveyed,
Secs. 6 thru 12, those portions outside the boundary of the Noatak National Preserve;
Secs. 13 thru 36.
T. 15 N., R. 16 W.,
Secs. 2 thru 6 and secs. 8, 9, 10, 15, 16, 22, and 27.
T. 16 N., R. 16 W.,
Secs. 29, 31, and 32.
T. 19 N., R. 16 W.,
Sec. 9, excepting Interim Conveyance Nos. 2150 and 2151;
Sec. 27, lots 1 and 2.
T. 22 N., R. 16 W., unsurveyed,
Secs. 1 and 2;
Secs. 3, 4, and 5, and secs. 8 thru 11, those portions outside the boundary of the Noatak National Preserve;
Sec. 12;
Secs. 13, 14, and 24, those portions outside the boundary of the Noatak National Preserve.
T. 23 N., R. 16 W., unsurveyed,
Secs. 1, 11, and 12, those portions outside the boundary of the Noatak National Preserve;
Sec. 13;
Secs. 14 and 23, those portions outside the boundary of the Noatak National Preserve;
Secs. 24 and 25;
Secs. 26, 27, 33, and 34, those portions outside the boundary of the Noatak National Preserve;
Secs. 35 and 36.
T. 15 N., R. 17 W.,
Secs. 1, 4, and 5.
T. 20 N., R. 17 W.,
Secs. 16, 17, 19, 20, and 23 and secs. 29 thru 32.
T. 26 N., R. 17 W.,
Secs. 5, 6, and 7.
T. 27 N., R. 17 W.,
Secs. 32 and 33.
T. 17 N., R. 18 W.,
Sec. 14, NW¼, excepting Patent No. 50–97–0162; tract 37.
T. 18 N., R. 18 W.,
Sec. 25, lot 6.
T. 20 N., R. 18 W.,
Secs. 5 thru 8 and secs. 16 thru 30.
T. 21 N., R. 18 W.,
Secs. 7 thru 11, secs. 13 thru 24, and secs. 26 thru 34.
T. 22 N., R. 18 W.,
Secs. 6 and 7, secs. 17 thru 21, and secs. 28, 29, and 30.
T. 23 N., R. 18 W.,
Secs. 1, 2, and 3, secs. 10 thru 15, secs. 22, 23, 24, and 27, and secs. 31 thru 34.
T. 24 N., R. 18 W.,
Secs. 25, 26, 34, 35, and 36.
T. 25 N., R. 18 W.,
Sec. 5, lot 1;
Secs. 8 and 17;
Sec. 19, lots 1 thru 4;
Secs. 30 and 31.
T. 26 N., R. 18 W.,
Secs. 12 thru 15 and sec. 21.
T. 27 N., R. 18 W.,
Sec. 33.
T. 32 N., R. 18 W., tract A.
T. 33 N., R. 18 W., tract A.
T. 6 N., R. 19 W.,
Sec. 19 and secs. 29 thru 32.
T. 20 N., R. 19 W., unsurveyed,
Sec. 1, that portion outside the boundary of the Cape Krusenstern National Monument.
T. 21 N., R. 19 W.,
Secs. 1 thru 17;
Secs. 18, 21, and 22, those portions outside the boundary of the Cape Krusenstern National Monument;
Secs. 23, 24, and 25;
Secs. 26, 27, and 36, those portions outside the boundary of the Cape Krusenstern National Monument.
T. 22 N., R. 19 W.,
Secs. 1 thru 29 and secs. 31 thru 36.
T. 25 N., R. 19 W.,
lot 3, U.S. Survey No. 3778.
T. 33 N., R. 19 W.,
tract C.
T. 21 N., R. 20 W., unsurveyed,
Secs. 1, 2, and 3;
Secs. 4, 9, 10, and 11, those portions outside the boundary of the Cape Krusenstern National Monument;
Sec. 12;
Secs. 13 and 14, those portions outside the boundary of the Cape Krusenstern National Monument.
T. 22 N., R. 20 W.,
Secs. 1 thru 4, secs. 10 thru 14, secs. 18, 19, 20, and 24, and secs. 28 thru 35.
T. 24 N., R. 20 W.,
Secs. 7, 21, and 28.
T. 25 N., R. 20 W.,
Sec. 1, secs. 5 thru 8, secs. 17 thru 20, secs. 29 thru 32, and sec. 35.
T. 26 N., R. 20 W.,
Secs. 3, 4, and 5;
Secs. 6 and 7, those portions outside the boundary of the Cape Krusenstern National Monument;
Secs. 8 thru 17;
Secs. 18 and 19, those portions outside the boundary of the Cape Krusenstern National Monument;
Secs. 20 thru 36.
T. 27 N., R. 20 W., unsurveyed,
Secs. 1, 2, and 3;
Secs. 4 thru 7, those portions outside the boundary of the Cape Krusenstern National Monument;
Secs. 8, 9, 10, 15, 16, and 17;
Secs. 18 and 19, those portions outside the boundary of the Cape Krusenstern National Monument;
Secs. 20, 21, and 22;
Secs. 23, 24, and 25, excepting lot 1, U.S. Survey No. 6734;
Sec. 26, excepting lots 1 and 2, U.S. Survey No. 6734;
Sec. 27;
Sec. 28, excepting U.S. Survey No. 6733;
Secs. 29 thru 32;
Sec. 33, excepting U.S. Survey No. 6733;
Sec. 34;
Sec. 35, excepting lot 2, U.S. Survey No. 6734;
Sec. 36.
T. 33 N., R. 20 W., that portion of tract A, within secs. 13 thru 36.
T. 24 N., R. 21 W., unsurveyed,
Secs. 1 thru 3;
Secs. 4, 9, and 10, those portions outside the boundary of the Cape Krusenstern National Monument;
Secs. 11 thru 14;
Secs. 15, 22, and 23, those portions outside the boundary of the Cape Krusenstern National Monument;
Sec. 24;
Sec. 26, those portions outside the boundary of the Cape Krusenstern National Monument, excepting U.S. Survey No. 13923.
T. 25 N., R. 21 W., unsurveyed,
Secs. 1, 12, 13, 24, 25, 26, and 35, those portions outside the boundary of the Cape Krusenstern National Monument;
Sec. 36.
T. 26 N., R. 21 W., unsurveyed,
Secs. 1, 24, 25, and 36, those portions outside the boundary of the Cape Krusenstern National Monument.
T. 27 N., R. 21 W., unsurveyed,
Secs. 4, 5, 6, 13, 24, 25, and 36, those portions outside the boundary of the Cape Krusenstern National Monument.
T. 28 N., R. 21 W., unsurveyed,
Secs. 35 and 36, those portions outside the boundary of the Cape Krusenstern National Monument.
T. 30 N., R. 21 W., unsurveyed,
Secs. 27 and 34.
T. 33 N., R. 21 W.,

that portion of tract A, within secs. 25 thru 36.
T. 34 N., R. 21 W.,
tracts A, B, D, and E.
T. 30 N., R. 22 W., unsurveyed.
T. 31 N., R. 22 W., unsurveyed,
Secs. 19 thru 36.
T. 33 N., R. 22 W., unsurveyed,
Secs. 1 thru 12 and secs. 15 thru 19.
T. 34 N., R. 22 W., unsurveyed,
Sec. 13, secs. 24 thru 28, and secs. 33 thru 36.
T. 30 N., R. 23 W., unsurveyed.
T. 31 N., R. 23 W., unsurveyed,
Secs. 4 thru 9 and secs. 16 thru 36.
T. 32 N., R. 23 W., unsurveyed,
Secs. 4 thru 9, secs. 16 thru 21, and secs. 28 thru 33.
T. 33 N., R. 23 W., unsurveyed,
Secs. 6 and 13, secs. 23 thru 28, and secs. 30 thru 36.
T. 34 N., R. 23 W., unsurveyed,
Secs. 7 thru 24 and secs. 27 thru 33.
T. 27 N., R. 24 W.,
Secs. 1 thru 10, secs. 16 thru 21, and secs. 30 and 31.
T. 28 N., R. 24 W.,
Secs. 1 thru 12 and secs. 25, 35, and 36.
T. 29 N., R. 24 W.,
Secs. 1, 2, 11, and 12, secs. 24 thru 27, and secs. 34, 35, and 36.
T. 30 N., R. 24 W., unsurveyed,
Sec. 1;
Secs. 2 and 3, excepting U.S. Survey No. 13179;
Secs. 4 thru 16;
Secs. 17 and 18, excepting U.S. Survey No. 11923;
Secs. 19 thru 36.
T. 31 N., R. 24 W., unsurveyed.
T. 32 N., R. 24 W., unsurveyed,
Secs. 5 thru 8 and secs. 15 thru 36.
T. 33 N., R. 24 W., unsurveyed,
Secs. 1 thru 24 and secs. 26 thru 34.
T. 34 N., R. 24 W., unsurveyed.
T. 26 N., R. 25 W.,
Secs. 1, 2, 3, 11, and 12.
T. 27 N., R. 25 W.,
Secs. 1 thru 5, secs. 8 thru 30, and secs. 32 thru 36.
T. 28 N., R. 25 W.,
Secs. 1, 2, 11, 12, 14, 15, 16, 21, 22, and 23.
T. 29 N., R. 25 W.,
Secs. 1 thru 11, secs. 14 thru 22, and sec. 30.
Tps. 30 thru 34 N., R. 25 W., unsurveyed.
T. 29 N., R. 26 W., unsurveyed,
Secs. 1 thru 4;
Secs. 5 and 6, excepting U.S. Survey No. 6852;
Secs. 7, 8, and 9;
Sec. 10, excepting U.S. Survey No. 6819;
Secs. 11 thru 36.
T. 30 N., R. 26 W., unsurveyed,
Secs. 1 thru 26;
Sec. 27, excepting U.S. Survey No. 6827;
Sec. 28, excepting U.S. Survey Nos. 6827 and 6830;
Secs. 29 thru 32;
Sec. 33, excepting U.S. Survey No. 6830;
Secs. 34, 35, and 36.
Tps. 31 thru 34 N., R. 26 W., unsurveyed.
T. 1 N., R. 27 W., unsurveyed,
Sec. 1, excepting M.S. No. 2545;
Secs. 2 thru 36;
M.S. No. 2545.
T. 2 N., R. 27 W., unsurveyed,
Sec. 5, that portion outside the boundary of the Bering Land Bridge National Preserve;
Secs. 6, 7, and 8;
Secs. 9, 10, 11, and 14, those portions outside the boundary of the Bering Land Bridge National Preserve;
Secs. 15 thru 22;
Secs. 23 and 24, those portions outside the boundary of the Bering Land Bridge National Preserve;
Secs. 25 thru 36.
T. 3 N., R. 27 W., unsurveyed,
Secs. 7, 18, and 31, those portions outside the boundary of the Bering Land Bridge National Preserve.
T. 4 N., R. 27 W., unsurveyed,
Secs. 4, 5, and 6, those portions outside the boundary of the Bering Land Bridge National Preserve;
Secs. 7, 8, and 9;
Secs. 10 and 11, those portions outside the boundary of the Bering Land Bridge National Preserve;
Secs. 14 thru 21;
Secs. 22 and 23, those portions outside the boundary of the Bering Land Bridge National Preserve;
Secs. 29, 30, and 31;
Sec. 32, that portion outside the boundary of the Bering Land Bridge National Preserve.
Tps. 30 thru 34 N., R. 27 W., unsurveyed.
T. 29 N., R. 28 W., unsurveyed,
Secs. 1 and 2;
Secs. 3 and 11, those portions outside the boundary of the Alaska Maritime National Wildlife Refuge;
Secs. 12 and 13.
Tps. 31 thru 34 N., R. 28 W., unsurveyed.
T. 30 N., R. 29 W., unsurveyed,
Sec. 3, that portion outside the boundary of the Alaska Maritime National Wildlife Refuge;
Sec. 11.
T. 31 N., R. 29 W., unsurveyed,
Secs. 1 thru 4;
Secs. 5 and 8, those portions outside the boundary of the Alaska Maritime National Wildlife Refuge;
Secs. 9 thru 14;
Secs. 15, 16, 17, and 22, those portions outside the boundary of the Alaska Maritime National Wildlife Refuge;
Secs. 23 thru 26;
Secs. 27 and 34, those portions outside the boundary of the Alaska Maritime National Wildlife Refuge.
T. 32 N., R. 29 W., unsurveyed,
Secs. 1 thru 18;
Secs. 19 and 20, those portions outside the boundary of the Alaska Maritime National Wildlife Refuge;
Secs. 21 thru 27;
Secs. 28, 29, and 32, those portions outside the boundary of the Alaska Maritime National Wildlife Refuge;
Secs. 33 thru 36.
T. 32 N., R. 30 W., unsurveyed,
Secs. 1, 2, and 3;
Secs. 4 and 9, those portions outside the boundary of the Alaska Maritime National Wildlife Refuge;
Secs. 10, 11, and 12;
Secs. 13 thru 16 and secs. 23, 24, and 25, those portions outside the boundary of the Alaska Maritime National Wildlife Refuge.
T. 34 N., R. 30 W., unsurveyed,
Secs. 10 thru 15, secs. 22 thru 27, and secs. 34, 35, and 36.
T. 8 N., R. 32 W.,
Secs. 23 thru 26 and secs. 35 and 36.
T. 9 N., R. 32 W.,
Secs. 2 thru 6 and secs. 8 thru 11.
T. 8 N., R. 33 W.,
Sec. 31.
T. 10 N., R. 33 W.,
Secs. 1 and 2, secs. 11 thru 14, secs. 23 thru 26, and sec. 36.
T. 11 N., R. 33 W.,
Secs. 25, 35, and 36.
T. 8 N., R. 34 W.,
Secs. 30 thru 36.
T. 8 N., R. 35 W.,
Secs. 24, 25, and 36.
T. 1 N., R. 36 W.
T. 8 N., R. 36 W.,
Secs. 2 and 3, secs. 7 thru 11, secs. 14 thru 23, and secs. 27 thru 34.
T. 8 N., R. 37 W.,
Secs. 10 thru 15 and secs. 19 thru 36.
T. 1 N., R. 38 W.,
tracts A and B.
T. 5 N., R. 38 W., unsurveyed,
Secs. 1 thru 5;
Sec. 6, excepting U.S. Survey No. 12266;
Secs. 7 thru 36.
T. 1 N., R. 39 W.,
Secs. 1, 2, and 3.
T. 5 N., R. 39 W., unsurveyed.
T. 4 N., R. 40 W., unsurveyed,
Secs. 1, 2, and 3, secs. 10 thru 15, and secs. 19 thru 36.
T. 2 N., R. 41 W.,
Secs. 5, 8, and 17.
T. 3 N., R. 41 W.,
Secs. 13 thru 16, secs. 21 thru 28, and secs. 32 thru 36.
T. 4 N., R. 41 W., unsurveyed,
Secs. 19 thru 36.
T. 2 N., R. 42 W.,
Secs. 4, 5, 6, 9, and 16, secs. 21 thru 24, and secs. 26 and 27.
T. 3 N., R. 42 W.,
Secs. 1 thru 18.
T. 4 N., R. 42 W., unsurveyed,
Secs. 1, 2, and 3, secs. 8 thru 16, and secs. 21 thru 26;
Sec. 27, excepting U.S. Survey No. 13902;
Sec. 28;
Sec. 29, excepting U.S. Survey No. 13183;
Secs. 31 thru 36.
T. 2 N., R. 43 W.,
Secs. 5, 6, and 7.
T. 3 N., R. 43 W.,
Secs. 31 and 32.
T. 2 N., R. 44 W.,
tract 37.
T. 3 N., R. 44 W.,
Secs. 25, 26, and 27 and secs. 33 thru 36.
T. 2 N., R. 45 W.,
tracts 37 and 38.
Tps. 1 and 2 S., R. 4 W., unsurveyed.
Tps. 1 thru 6 S., R. 5 W., unsurveyed.
Tps. 1 thru 5 S., R. 6 W., unsurveyed.
T. 6 S., R. 6 W., unsurveyed,
Secs. 1 thru 31;
Sec. 32, excepting U.S. Survey No. 13579;
Secs. 33 thru 36.

Tps. 7 and 8 S., R. 6 W., unsurveyed.
Tps. 1 thru 10 S., R. 7 W., unsurveyed.
T. 11 S., R. 7 W., unsurveyed,
Secs. 1 thru 28;
Sec. 29, excepting U.S. Survey No. 13578;
Secs. 30 thru 36.
Tps. 1 thru 13 S., R. 8 W., unsurveyed.
Tps. 1 thru 4 S., R. 9 W., unsurveyed.
T. 5 S., R. 9 W., unsurveyed,
Secs. 1 thru 30;
Sec. 31, excepting lot 1, U.S. Survey No. 12420;
Secs. 32 thru 36.
T. 6 S., R. 9 W., unsurveyed,
Secs. 1 thru 4;
Secs. 5 and 6, excepting U.S. Survey No. 12420;
Secs. 7 thru 36.
Tps. 7, 8, and 9 S., R. 9 W., unsurveyed.
T. 10 S., R. 9 W., unsurveyed,
Secs. 1 thru 30 and secs. 32 thru 36.
T. 11 S., R. 9 W., unsurveyed,
Secs. 1 thru 5 and secs. 8 and 9;
Sec. 10, excepting U.S. Survey No. 13575;
Secs. 11 thru 36.
Tps. 12, 13, and 14 S., R. 9 W., unsurveyed.
Tps. 4, 5, and 6 S., R. 10 W., unsurveyed.
T. 7 S., R. 10 W.,
Secs. 1 thru 29 and secs. 34, 35, and 36.
T. 8 S., R. 10 W., unsurveyed,
Sec. 1, excepting U.S. Survey No. 12432;
Sec. 2 and secs. 6 thru 36.
T. 9 S., R. 10 W.,
Sec. 36;
tracts A thru T.
T. 10 S., R. 10 W.,
Secs. 1, 12, 13, 24, and 25;
tracts A thru U.
T. 11 S., R. 10 W., unsurveyed,
Secs. 3 thru 5;
Sec. 6, excepting U.S. Survey No. 13564;
Sec. 7, excepting M.S. Nos. 1245, 1894, 1895, 2331, and U.S. Survey No. 13564;
Sec. 8, excepting M.S. Nos. 1245, 1894, and U.S. Survey No. 13564;
Secs. 9 and 10 and secs. 13 thru 16;
Secs. 17 and 18, excepting M.S. No. 1894;
Secs. 19 thru 36.
T. 12 S., R. 10 W., unsurveyed.
T. 13 S., R. 10 W., unsurveyed,
Secs. 1 thru 5;
Secs. 6 and 7, excepting U.S. Survey No. 13903;
Secs. 8 thru 36.
Tps. 14 and 15 S., R. 10 W., unsurveyed.
T. 3 S., R. 11 W.
T. 4 S., R. 11 W.,
Secs. 1 thru 16, sec. 18, secs. 21 thru 28, and secs. 34, 35, and 36.
T. 5 S., R. 11 W.,
Secs. 1 thru 4, secs. 9 thru 15, sec. 19, secs. 22 thru 27, secs. 30, 31, 34, 35, and 36.
T. 6 S., R. 11 W.,
Secs. 1, 2, 6, and 7, secs. 11 thru 15, secs. 22 thru 28, and secs. 32 thru 36.
T. 7 S., R. 11 W.,
Secs. 1 thru 22, secs. 24, 27, and 28.
T. 8 S., R. 11 W., unsurveyed,
Secs. 13, 14, 24, and 25.
T. 10 S., R. 11 W., unsurveyed,
Sec. 24, excepting lot 1, U.S. Survey No. 12250;
Sec. 25;
Sec. 34, excepting lot 1, U.S. Survey No. 12265;
Secs. 35 and 36.
T. 11 S., R. 11 W.,
Sec. 12;
Secs. 29 thru 36;
M.S. No. 2331.
T. 12 S., R. 11 W., unsurveyed.
T. 13 S., R. 11 W.,
Secs. 19 thru 36.
T. 14 S., R. 11 W., unsurveyed,
Secs. 1 thru 28 and secs. 33 thru 36.
T. 15 S., R. 11 W.,
Secs. 1 thru 5 and secs. 8 thru 36.
T. 3 S., R. 12 W.,
Secs. 1, 2, 3, 6, and 7, secs. 10 thru 15, secs. 18 and 19, secs. 22 thru 27, secs. 30, 34, 35, and 36.
T. 4 S., R. 12 W.,
Secs. 1, 2, and 3 and secs. 10 thru 13.
T. 5 S., R. 12 W.,
Secs. 1 thru 5, secs. 8 thru 12, secs. 16, 17, 19, 20, 24, 25, and 26, and secs. 29 thru 36.
T. 12 S., R. 12 W.,
Secs. 1 thru 4, secs. 9 thru 16, and secs. 23 and 24.
T. 13 S., R. 12 W.,
Sec. 25;
U.S. Survey No. 2046.
T. 14 S., R. 12 W.,
Sec. 1.
T. 1 S., R. 13 W.,
that portion of tract A, within sec. 24, S½;
that portion of tract A, within sec. 25, N½;
U.S. Survey No. 13586.
T. 3 S., R. 13 W.
T. 4 S., R. 13 W.,
Secs. 5, 6, 7, 19, 27, and 28 and secs. 33 thru 36.
T. 5 S., R. 13 W.,
Secs. 1 thru 12, secs. 14 thru 23, and secs. 28 thru 36.
T. 6 S., R. 13 W.,
Secs. 1 thru 30.
T. 7 S., R. 13 W.,
Secs. 2 thru 10, secs. 15 thru 20, and secs. 29, 30, and 31.
T. 8 S., R. 13 W.,
Sec. 6.
Tps. 3 and 4 S., R. 14 W., unsurveyed.
T. 5 S., R. 14 W.,
Sec. 12;
tracts A, B, and C.
Tps. 6 and 7 S., R. 14 W.
T. 8 S., R. 14 W.,
Secs. 1 thru 4, secs. 9 thru 12, secs. 14, 15, and 16, and secs. 21 thru 24.
Tps. 3, 4, and 5 S., R. 15 W., unsurveyed.
T. 6 S., R. 15 W.,
Secs. 1 and 2.
Tps. 3, 4 and 5 S., R. 16 W., unsurveyed.
T. 6 S., R. 16 W.,
tract A.
T. 3 S., R. 17 W., unsurveyed,
Secs. 1, 2, 6, and 7, secs. 11 thru 15, sec. 18, secs. 22 thru 28, and secs. 33 thru 36.
T. 4 S., R. 17 W., unsurveyed,
Secs. 1 thru 29 and secs. 32 thru 36.
T. 5 S., R. 17 W.,
Secs. 1, 2, and 3, secs. 10 thru 15, and secs. 22 thru 36.
T. 6 S., R. 17 W.,
Sec. 35;
tract A.
T. 3 S., R. 18 W.,
Secs. 1 thru 6 and secs. 10 thru 13;
Sec. 25, S½, excepting U.S. Survey No. 13777;
Sec. 36, N½, excepting U.S. Survey No. 13777.
T. 6 S., R. 18 W., unsurveyed,
Secs. 1 thru 4, secs. 9 thru 16, secs. 21 thru 29, and secs. 32 thru 36.
T. 7 S., R. 18 W.,
that portion of tract A, within secs. 1 thru 5, secs. 7 thru 11, secs. 15 thru 21, and secs. 29 thru 32.
T. 8 S., R. 18 W.,
tract A.
T. 2 S., R. 19 W., unsurveyed.
T. 3 S., R. 19 W., unsurveyed,
Secs. 1 thru 10 and sec. 18.
T. 4 S., R. 19 W., unsurveyed,
Secs. 4 thru 9, secs. 15 thru 21, and secs. 29 and 30.
T. 7 S., R. 19 W., unsurveyed,
Secs. 24, 25, 35, and 36.
Tps. 8 and 9 S., R. 19 W.,
T. 2 S., R. 20 W., unsurveyed,
Secs. 1, 2, and 3 and secs. 10 thru 15;
Sec. 22, that portion outside the boundary of the Bering Land Bridge National Preserve;
Sec. 23 thru 26;
Secs. 27, 32, and 33, those portions outside the boundary of the Bering Land Bridge National Preserve;
Secs. 34, 35, and 36.
T. 3 S., R. 20 W., unsurveyed,
Secs. 1 thru 4;
Secs. 5 and 6, those portions outside the boundary of the Bering Land Bridge National Preserve;
Secs. 7 thru 24 and secs. 26 thru 34.
T. 4 S., R. 20 W., unsurveyed,
Secs. 4 thru 8, secs. 13 and 14, and secs. 22 thru 29;
Sec. 30, excepting U.S. Survey No. 13778;
Secs 31 thru 34.
T. 5 S. R. 20 W., unsurveyed,
Secs. 5 thru 8, secs. 16 thru 20, and secs. 28 thru 34.
T. 6 S., R. 20 W., unsurveyed,
Secs. 5 thru 10, secs. 15 thru 22, and secs. 27 thru 33;
Sec. 34, excepting U.S. Survey No. 9550.
T. 7 S., R. 20 W., unsurveyed,
Secs 3, 4, and 5;
Sec. 6, excepting U.S. Survey No. 13781;
Secs. 7 thru 10 and secs. 16 thru 19;
Secs. 20 and 21, excepting U.S. Survey No. 13780;
Sec. 26, W½;
Sec. 27, E½;
Secs. 28 thru 33.
T. 8 S., R. 20 W., unsurveyed,
Secs. 3 thru 10 and secs. 14 thru 17;
Sec. 18, excepting U.S. Survey No. 13785;
Secs. 19 thru 23 and secs. 25 thru 36.
T. 9 S., R. 20 W.,
Secs. 1, 12, 13, and 24;
tract A.
T. 10 S., R. 20 W.,
that portion of tract A, within secs. 6, 7, 18, and 19, and secs. 29 thru 32.
T. 11 S., R. 20 W.,
Secs. 4 thru 9, secs. 16 thru 21, and secs. 28 thru 33.
T. 12 S., R. 20 W.,
Sec. 4;
Sec. 5, excepting U.S. Survey No. 13782;
Secs. 6 thru 9 and secs. 16, 17, and 18.
T. 2 S., R. 21 W., unsurveyed,

Secs. 18, 19, 20, 27, 28, and 29, those portions outside of the Bering Land Bridge National Preserve;
Secs. 30 thru 33;
Secs. 34, 35, and 36, those portions outside the boundary of the Bering Land Bridge National Preserve.
T. 3 S., R. 21 W.,
Sec. 1, unsurveyed, that portion outside the boundary of the Bering Land Bridge National Preserve;
Secs. 2 thru 12, unsurveyed;
Sec. 13, unsurveyed, excepting lots 1 and 2, U.S. Survey No. 10284;
Sec. 14, unsurveyed, excepting lot 1, U.S. Survey No. 10284;
Secs. 15 thru 22, unsurveyed;
Sec. 24, unsurveyed, excepting tract 37, and lot 3, U.S. Survey No. 10284 and U.S. Survey No. 13775;
Sec. 25, unsurveyed, secs. 27 thru 34, and sec. 36;
tract 37.
T. 4 S., R. 21 W., unsurveyed,
Secs. 6, 22, 23, 25, 26, 27, 34, 35, and 36.
T. 5 S., R. 21 W., unsurveyed,
Secs. 1 thru 4, secs. 9 thru 16, secs. 21 thru 28, and secs. 33 thru 36.
T. 6 S., R. 21 W., unsurveyed,
Secs. 1 thru 4 and secs. 7 and 8;
Sec. 9, excepting U.S. Survey No. 9715;
Secs. 10 thru 15;
Sec. 16, excepting U.S. Survey No. 9715;
Secs. 17 thru 22;
Secs. 23, 24, and 25, excepting U.S. Survey No. 9714;
Secs. 26 thru 36.
T. 7 S., R. 21 W., unsurveyed,
Sec. 1, excepting U.S. Survey No. 13781;
Secs. 2 thru 33;
Secs. 34 and 35, excepting U.S. Survey No. 14002;
Sec. 36.
T. 8 S., R. 21 W., unsurveyed,
Sec. 1;
Secs. 2 and 3, excepting U.S. Survey No. 14002;
Secs. 4 thru 30;
Sec. 31, excepting U.S. Survey No. 10048;
Secs. 32 thru 36.
T. 9 S., R. 21 W.,
tract A.
T. 10 S., R. 21 W.,
tract A., excepting U.S. Survey No. 13783.
T. 11 S., R. 21 W.,
Secs. 1, 2, and 3;
Sec. 10, lot 1;
Sec. 11;
Secs 12 and 13, excepting U.S. Survey No. 13784.
T. 1 S., R. 22 W., unsurveyed,
Secs 32 and 33, those portions outside the boundary of the Bering Land Bridge National Preserve.
T. 2 S., R. 22 W., unsurveyed,
Secs. 3 thru 6, those portions outside the boundary of the Bering Land Bridge National Preserve;
Secs. 7, 8 and 9;
Secs. 10 thru 13, those portions outside the boundary of the Bering Land Bridge National Preserve;
Secs. 14 thru 36.
T. 3 S., R. 22 W., unsurveyed,
Secs. 1 thru 30 and secs. 32 thru 36.
T. 5 S., R. 22 W., unsurveyed,
Sec. 24, excepting lots 3 and 4, U.S. Survey No. 9706.
T. 6 S., R. 22 W., unsurveyed,
Secs. 7 and 8;
Sec. 9, excepting lot 1, U.S. Survey No. 9934;
Sec. 10, excepting lots 2 and 3, U.S. Survey No. 9931, lots 1 and 2, U.S. Survey No. 9934, and lots 1 thru 3, U.S. Survey No. 9935;
Secs. 11 thru 14;
Sec. 15, excepting lots 1 and 2, U.S. Survey 9930, lots 1 thru 3, U.S. Survey No. 9931, lots 1 thru 3, U.S. Survey No. 9932, lots 1 and 2, U.S. Survey No. 9933, and lot 2, U.S. Survey No. 9934.
Sec. 16, excepting lot 2, U.S. Survey No. 9930 and lot 2, U.S. Survey No. 9932;
Secs. 17, 18, and 19;
Sec. 20, excepting lot 1, U.S. Survey No. 14004;
Sec. 21, excepting lots 1 thru 3, U.S. Survey No. 14004;
Secs. 22 thru 27;
Sec. 28, excepting lots 1 and 2, U.S. Survey No. 14004;
Sec. 29, excepting U.S. Survey No. 13996 and lot 1, U.S. Survey No. 14004;
Secs. 30 thru 36.
T. 7 S., R. 22 W.,
tract B.
T. 8 S., R. 22 W.,
tracts A thru E.
T. 9 S., R. 22 W.,
Secs. 4 and 9;
tract B.
T. 12 S., R. 22 W.,
Secs. 6, 7, 18, 19, and 30.
T. 1 S., R. 23 W., unsurveyed,
Sec. 33, that portion outside the boundary of the Bering Land Bridge National Preserve.
T. 2 S., R. 23 W., unsurveyed,
Secs. 1 thru 6, those portions outside the boundary of the Bering Land Bridge National Preserve;
Secs. 7, 8, and 9;
Secs. 10 and 11, those portions outside the boundary of the Bering Land Bridge National Preserve;
Secs. 12 thru 36.
T. 3 S., R. 23 W., unsurveyed,
Secs. 1 thru 33.
T. 4 S., R. 23 W., unsurveyed,
Secs. 5 and 6.
T. 5 S., R. 23 W., unsurveyed,
Secs. 31 thru 34.
T. 6 S., R. 23 W.,
that portion of tract A, within secs. 2 thru 17, and 19 thru 36.
T. 7 S., R. 23 W.,
Sec. 1, excepting U.S. Survey No. 13861;
Secs. 2 thru 10, sec. 13, secs. 16 thru 20, secs. 23 thru 26, and secs. 35 and 36.
T. 8 S., R. 23 W.,
Secs. 1 and 2, secs. 11 thru 14, and sec. 25.
T. 11 S., R. 23 W.,
Secs. 17 thru 20 and secs. 27, 28, and 29;
Secs. 34 and 35.
T. 1 S., R. 24 W., unsurveyed,
Secs. 34 and 36, that portion outside the boundary of the Bering Land Bridge National Preserve.
T. 2 S., R. 24 W., unsurveyed,
Secs. 1, 2, 3, 9, and 10, those portions outside the boundary of the Bering Land Bridge National Preserve;
Secs. 11 thru 15;
Secs. 16, 17, 19, and 20, those portions outside the boundary of the Bering Land Bridge National Preserve;
Secs. 21 thru 29;
Sec. 30, that portion outside the boundary of the Bering Land Bridge National Preserve;
Secs. 31 thru 36.
T. 3 S., R. 24 W., unsurveyed.
T. 4 S., R. 24 W., unsurveyed,
Secs. 1 thru 22 and secs. 27 thru 33.
T. 5 S., R. 24 W.,
Secs. 19, 20, 29, and 30, and secs. 33 thru 36, unsurveyed;
tract A.
T. 6 S., R. 24 W.,
Secs. 1 thru 6, sec. 12, secs. 21 thru 28, and secs. 33 thru 36.
T. 7 S., R. 24 W.,
Secs. 4, 9, 22, 23, and 24;
tract U.
T. 8 S., R. 24 W.,
tract D.
T. 10 S., R. 24 W.,
Secs. 4 thru 9, secs. 16 thru 21, and secs. 28 thru 33.
T. 2 S., R. 25 W., unsurveyed,
Secs. 19, 25, 30, 31, 32, 35, and 36, those portions outside the boundary of the Bering Land Bridge National Preserve.
T. 3 S., R. 25 W. unsurveyed,
Sec. 1;
Secs. 2, 3, and 5, those portions outside the boundary of the Bering Land Bridge National Preserve;
Secs. 6 and 7;
Secs. 8, 9, and 10, those portions outside the boundary of the Bering Land Bridge National Preserve;
Secs. 11 thru 16;
Sec. 17, that portion outside the boundary of the Bering Land Bridge National Preserve;
Secs. 18 thru 36.
T. 4 S., R. 25 W., unsurveyed.
T. 6 S., R. 25 W.,
Sec. 22;
tracts D, E, F, P thru U, X, and Y;
that portion of tract Z, within secs. 16, 21, and 33;
tract B1.
T. 9 S., R. 25 W.,
Sec. 1, lot 2;
Secs. 2 and 3 and secs. 7 thru 24.
T. 10 S., R. 25 W.,
Secs. 1 thru 4, secs. 10 thru 15, secs. 22 thru 26, and secs. 35 and 36.
T. 1 S., R. 26 W., unsurveyed,
Secs. 7, 17 and 18, those portions outside the boundary of the Bering Land Bridge National Preserve;
Sec. 19,
Secs. 20, 21, 27, and 28, those portions outside the boundary of the Bering Land Bridge National Preserve;
Secs. 29 thru 33;
Secs. 34 and 35, those portions outside the boundary of the Bering Land Bridge National Preserve.
T. 2 S., R. 26 W., unsurveyed,
Sec. 2, that portion outside the boundary of the Bering Land Bridge National Preserve;
Secs. 3 thru 10;

Secs. 11, 12, and 13, those portions outside the boundary of the Bering Land Bridge National Preserve;
Secs. 14 thru 23;
Sec. 24, those portions outside the boundary of the Bering Land Bridge National Preserve;
Secs. 25 thru 36.
T. 3 S., R. 26 W., unsurveyed.
T. 4 S., R. 26 W., unsurveyed,
Secs. 1 thru 5;
Sec. 6, excepting U.S. Survey No. 13788;
Secs. 7 thru 36.
T. 5 S., R. 26 W., unsurveyed.
T. 1 S., R. 27 W., unsurveyed,
Secs. 1, 2 and 3, those portions outside the boundary of the Bering Land Bridge National Preserve;
Secs. 4 thru 11;
Sec. 12, that portion outside the boundary of the Bering Land Bridge National Preserve;
Secs. 13 thru 36.
Tps. 2, 3, and 4 S., R. 27 W., unsurveyed.
Tps. 1 thru 4 S., R. 28 W., unsurveyed.
T. 2 S., R. 29 W.,
Secs. 1, 2, and 3 and secs. 10 thru 14, unsurveyed;
Sec. 15, unsurveyed, excepting U.S. Survey No. 11133;
Sec. 21, unsurveyed, excepting M.S. 1144;
Secs. 22 thru 26, unsurveyed;
Sec. 27, unsurveyed, excepting M.S. 1144;
Secs. 31 thru 34, unsurveyed;
Secs. 35 and 36, unsurveyed, excepting U.S. Survey No. 14169;
tracts F and G.
T. 4 S., R. 29 W., unsurveyed,
Secs. 1 thru 18, secs. 21 thru 28, and secs. 33 thru 36.
T. 4 S., R. 30 W.,
that portion of tract E, within secs.7 thru 9, secs. 15 thru 22, and sec. 28;
tracts F, G, and H;
that portion of tract X, within sec. 28;
tracts Y and Z;
that portion of tract GG, within sec. 28.

T. 11 S., R. 61 W., unsurveyed,
Secs. 1 and 2 and secs. 11 thru 14.

The areas described aggregate approximately 9,727,730.01 acres.

2. PLO No. 5418, effective March 1974, amends PLO No. 5180 to add all unreserved public lands in Alaska, or those lands that may become unreserved unless specified by order at that time. Upon revocation, the lands in this order will not be subject to the terms and conditions of PLO No. 5418, which amended PLO No. 5180, but will continue to be subject to the terms and conditions of any other withdrawal, application, segregation of record, and other applicable law. In 1983, PLO No. 6477 modified the segregation of PLO Nos. 5170, 5179, 5180, and 5184. In 1984, PLO No. 6559 further modified the segregation of PLO No. 5180. PLO Nos. 6477 and 6559 will be superseded by this Order.

3. At 8 a.m. AKST on February 18, 2021, the lands described in Paragraph 1 shall be open to all forms of appropriation under the general public land laws, including location and entry under the mining laws, leasing under the Mineral Leasing Act of February 25, 1920, as amended, subject to valid existing rights, the provisions of existing withdrawals, other segregations of record, and the requirements of applicable law. All valid applications received at or prior to 8 a.m. AKST on February 18, 2021, shall be considered as simultaneously filed at that time. Those received thereafter shall be considered in the order of filing. Appropriation of any of the lands referenced in this PLO under the general mining laws prior to the date and time of revocation remain unauthorized. Any such attempted appropriation, including attempted adverse possession under 30 U.S.C. 38, shall vest no rights against the United States. State law governs acts required to establish a location and to initiate a right of possession where not in conflict with Federal law. The BLM will not intervene in disputes between rival locators over possessory rights since Congress has provided for such determinations in local courts.

Dated: January 11, 2021.

David L. Bernhardt,

Secretary of the Interior.

Notice of Availability of the Draft Environmental Impact Statement for the Proposed Gold Acquisition Corporation Relief Canyon Gold Mine Phase II Mine Expansion Amendment, Pershing County, Nevada

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of availability.

SUMMARY: In accordance with the National Environmental Policy Act of 1969, as amended (NEPA), and the Federal Land Policy and Management Act of 1976, as amended, the Bureau of Land Management (BLM) Humboldt River Field Office, Winnemucca, Nevada has prepared a Draft Environmental Impact Statement (EIS) to analyze the potential impacts of approving the proposed expansion to the Relief Canyon gold mining operation in Pershing County, Nevada. This notice announces the beginning of the public comment period to solicit public comments on the Draft EIS.

DATES: To ensure comments will be considered, BLM must receive written comments on the Draft EIS no later than 45 days after the Environmental Protection Agency publishes its notice of availability of the Relief Canyon Mine Expansion Project Draft EIS DOI–BLM–NV–W010–2020–0030–EIS in the **Federal Register**. The BLM will announce the dates and locations of any future meetings or hearings and any other public involvement activities at least 15 days in advance through local media, newspapers and the BLM website at: *https://www.blm.gov/office/winnemucca-district-office.*

ADDRESSES: You may submit comments related to the Project by any of the following methods:

- *Website: https://eplanning.blm.gov/eplanning-ui/project/2000567/510.*
- *Email: wfoweb@blm.gov,* include ''Relief Canyon Mine Expansion'' in the subject line.
- *Fax:* (775) 623–1740, please mark ''Attn: Relief Canyon Mine Expansion''.
- *Mail:* Bureau of Land Management, Attn: Relief Canyon Mine Expansion, 5100 East Winnemucca Boulevard, Winnemucca, NV 89445.

FOR FURTHER INFORMATION CONTACT: For questions about the proposed Project contact Ms. Jeanette ''Jean'' Black, telephone: (775) 623–1500, address: 5100 EastWinnemuccaBoulevard, Winnemucca, NV 89445. Contact Ms. Black to have your name added to our mailing list. Persons who use a telecommunications device for the deaf (TDD) may call the Federal Relay Service (FRS) at 1–800–877–8339 to contact the above individual during normal business hours. The FRS is available 24-hours a day, 7-days a week, to leave a message or question with the above individual. You will receive a reply during normal business hours.

SUPPLEMENTARY INFORMATION: Gold Acquisition Corporation (GAC), a wholly-owned subsidiary of Pershing Gold Corporation, itself a wholly-owned subsidiary of Americas Gold and Silver Corporation, proposes an expansion to the existing Relief Canyon Gold Mine. The mine is located in Pershing County, Nevada, approximately 16 miles east-northeast of Lovelock, Nevada. The proposed expansion is located within GAC's authorized Plan of Operations boundary and proposes to modify the existing Plan of Operations as follows:

- Create roughly 576 acres of new surface disturbance on public and private land including re-disturbance of about 137 acres of previously disturbed vegetation communities.
- Expand the footprint of the existing approved pit area by approximately 84 acres (68 acres of public land and 16 acres of private land) with resultant elimination of a portion of existing Waste Rock Storage Facility (WRSF) 4.
- Mine to final pit bottom elevation of 4,420 feet above mean sea level (ft amsl), which will involve continued mining below the water table, and result in a post-mining pit lake that is predicted to reach an equilibrium elevation of 4,887 ft amsl roughly 50 years after completion of mining.
- Construct a dewatering conveyance pipeline and Rapid Infiltration to re-infiltrate up to 900 gallons per minute of mine dewatering water during the last three months of proposed Phase II mining.
- Install up to 50 vertical and horizontal drains in the pit wall to ensure pit slope stability and supplement pit dewatering operations.
- Convert up to 50 exploration drill holes located in and adjacent to the pit as vertical or near vertical drains and/or piezometer to monitor water levels to ensure pit slope stability and supplement pit dewatering operations.
- Expand WRSFs, heap leach pads, and construct process ponds, new growth media stockpiles, diversion ditches for stormwater control, and ancillary facilities.
- Expand yard and crusher-conveyor areas, roads, and fences.
- Close and reclaim all project facilities at the completion of Phase II.

Draft EIS Analysis Process

The purpose of the comment period is for the public to comment on the Draft EIS. The Draft EIS, through scoping, has identified and analyzed impacts to the following resources: Air and atmospheric resources, migratory birds and special status species, golden eagles, water quality (creation of a pit lake), and groundwater quantity. The Draft EIS describes and analyzes the proposed Project's direct, indirect, and cumulative impacts on all affected resources.

The BLM has consulted and continues to consult with Native American tribes on a government-to-government basis in accordance with Executive Order 13175 and other policies. Tribal concerns, including impacts on Indian trust assets and potential impacts to cultural resources, will be given due consideration.

Federal, State, and local agencies, along with tribes and other stakeholders that may be interested in or affected by the proposed project that the BLM is evaluating, are invited to participate in the comment process.

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you may request in your comment that your personal identifying information be withheld from public review, we cannot guarantee that we will be able to do so.

Authority: 40 CFR 1501.7.

Ester M. McCullough,

District Manager, Winnemucca District Office.

BILLING CODE 4310–HC–P

DEPARTMENT OF THE INTERIOR

National Park Service

[NPS–WASO–IEV–NPS0031130; PPWOIEADC0, PPMVSIE1Y.Y00000 (211); OMB Control Number 1024–NEW]

Agency Information Collection Activities; Education Reservation Request Form

AGENCY: National Park Service, Interior.

ACTION: Notice of information collection; request for comment.

SUMMARY: In accordance with the Paperwork Reduction Act (PRA) of 1995, we, the National Park Service (NPS) are proposing a new information collection.

DATES: Interested persons are invited to submit comments on or before March 22, 2021.

ADDRESSES: Send your comments on this information collection request (ICR) by mail to Phadrea Ponds, NPS Information Collection Clearance Officer, 1201 Oakridge Drive Fort Collins, CO 80525; or by email to *phadrea_ponds@nps.gov.* Please reference Office of Management and Budget (OMB) Control Number 1024–NEW in the subject line of your comments.

FOR FURTHER INFORMATION CONTACT: To request additional information about this ICR, contact Linda Rosenblum, Education Program Manager, by email at *linda_rosenblum@nps.gov,* or by telephone at (202) 577–6469.

SUPPLEMENTARY INFORMATION: In accordance with the PRA and 5 CFR 1320.8(d)(1), all information collections require approval under the PRA. We may not conduct or sponsor and you are not required to respond to a collection of information unless it displays a currently valid OMB control number.

As part of our continuing effort to reduce paperwork and respondent burdens, we invite the public and other Federal agencies to comment on new, proposed, revised, and continuing collections of information. This helps us assess the impact of our information collection requirements and minimize the public's reporting burden. It also helps the public understand our information collection requirements and provide the requested data in the desired format.

We are especially interested in public comment addressing the following:

(1) Whether or not the collection of information is necessary for the proper performance of the functions of the agency, including whether or not the information will have practical utility;

(2) The accuracy of our estimate of the burden for this collection of information, including the validity of the methodology and assumptions used;

(3) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(4) How might the agency minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of response.

Comments that you submit in response to this notice are a matter of public record. We will include or summarize each comment in our request to OMB to approve this ICR. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Abstract: NPS is authorized by 54 U.S.C. 100701, Protection, interpretation, and research in System, to administer education programs for education audiences including but not limited to school groups, scouting groups, extracurricular groups, and home school groups. To effectively manage requests received for NPS educational programs, the NPS Washington Support Office Division of Interpretation, Education, and Volunteers seeks approval for the use of a new Service-wide form, the Education Reservation Request Form.

The proposed form would collect necessary reservation information, including: (1) Person(s) or organization(s) requesting education program services, (2) type of program requested, (3) logistical details including, date, time, grade level, number of students, (4) technology available to group for distance learning programming, and (5) criteria for academic fee waiver eligibility.

This information will facilitate operational aspects of scheduling groups for in-park education programs, ranger in classroom programs, and/or online distance learning programs. The form will be fully electronic and available on participating parks websites for the purpose of making school group reservations and accommodating public requests for group education programming.

Title of Collection: Education Reservation Request Form.

OMB Control Number: 1024–NEW.

Form Number: None.

Type of Review: New.

Respondents/Affected Public: Educators at public and private schools, homeschool groups, school-age clubs.

Total Estimated Number of Annual Respondents: 62,000.

Total Estimated Number of Annual Responses: 62,000.

Estimated Completion Time per Response: 5 minutes.

Total Estimated Number of Annual Burden Hours: 5,167.

Respondent's Obligation: Required to obtain a benefit.

Frequency of Collection: On occasion.

Total Estimated Annual Nonhour Burden Cost: None.

An agency may not conduct or sponsor nor is a person required to respond to a collection of information unless it displays a currently valid OMB control number.

The authority for this action is the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

Phadrea Ponds,

Information Collection Clearance Officer, National Park Service.

BILLING CODE 4312–52–P

INTERNATIONAL TRADE COMMISSION

[Investigation Nos. 701–TA–662 and 731–TA–1554 (Preliminary)]

R–125 (Pentafluoroethane) From China; Institution of Anti-Dumping and Countervailing Duty Investigations and Scheduling of Preliminary Phase Investigations

AGENCY: United States International Trade Commission.

ACTION: Notice.

SUMMARY: The Commission hereby gives notice of the institution of investigations and commencement of preliminary phase antidumping and countervailing duty investigation Nos. 701–TA–662 and 731–TA–1554 (Preliminary) pursuant to the Tariff Act of 1930 (''the Act'') to determine whether there is a reasonable indication that an industry in the United States is materially injured or threatened with material injury, or the establishment of an industry in the United States is materially retarded, by reason of imports of R–125 (Pentafluoroethane)

from China, provided for in subheading 2903.39.20 of the Harmonized Tariff Schedule of the United States, and merchandise including certain mixtures containing R–125 provided for in subheading 3824.78.00 of the Harmonized Tariff Schedule of the United States, that are alleged to be sold in the United States at less than fair value and alleged to be subsidized by the Government of China. Unless the Department of Commerce (''Commerce'') extends the time for initiation, the Commission must reach a preliminary determination in antidumping and countervailing duty investigations in 45 days, or in this case by February 26, 2021. The Commission's views must be transmitted to Commerce within five business days thereafter, or by March 5, 2021.

DATES: January 12, 2021.

FOR FURTHER INFORMATION CONTACT: Ahdia Bavari ((202) 205–3191) and Andres Andrade ((202) 205–2078), Office of Investigations, U.S. International Trade Commission, 500 E Street SW, Washington, DC 20436. Hearing-impaired persons can obtain information on this matter by contacting the Commission's TDD terminal on 202–205–1810. Persons with mobility impairments who will need special assistance in gaining access to the Commission should contact the Office of the Secretary at 202–205–2000. General information concerning the Commission may also be obtained by accessing its internet server (*https://www.usitc.gov*). The public record for these investigations may be viewed on the Commission's electronic docket (EDIS) at *https://edis.usitc.gov.*

SUPPLEMENTARY INFORMATION:

Background.—These investigations are being instituted, pursuant to sections 703(a) and 733(a) of the Tariff Act of 1930 (19 U.S.C. 1671b(a) and 1673b(a)), in response to a petition filed on January 12, 2021, by Honeywell International, Inc., Charlotte, North Carolina.

For further information concerning the conduct of these investigations and rules of general application, consult the Commission's Rules of Practice and Procedure, part 201, subparts A and B (19 CFR part 201), and part 207, subparts A and B (19 CFR part 207).

Participation in the investigations and public service list.—Persons (other than petitioners) wishing to participate in the investigations as parties must file an entry of appearance with the Secretary to the Commission, as provided in §§ 201.11 and 207.10 of the Commission's rules, not later than seven days after publication of this notice in the **Federal Register**. Industrial users and (if the merchandise under investigation is sold at the retail level) representative consumer organizations have the right to appear as parties in Commission antidumping duty and countervailing duty investigations. The Secretary will prepare a public service list containing the names and addresses of all persons, or their representatives, who are parties to these investigations upon the expiration of the period for filing entries of appearance.

Limited disclosure of business proprietary information (BPI) under an administrative protective order (APO) and BPI service list.—Pursuant to § 207.7(a) of the Commission's rules, the Secretary will make BPI gathered in these investigations available to authorized applicants representing interested parties (as defined in 19 U.S.C. 1677(9)) who are parties to the investigations under the APO issued in the investigations, provided that the application is made not later than seven days after the publication of this notice in the **Federal Register**. A separate service list will be maintained by the Secretary for those parties authorized to receive BPI under the APO.

Conference.— In light of the restrictions on access to the Commission building due to the COVID–19 pandemic, the Commission is conducting the staff conference through video conferencing on Tuesday, February 2, 2021. Requests to appear at the conference should be emailed to *preliminaryconferences@usitc.gov* (DO NOT FILE ON EDIS) on or before January 29, 2021. Please provide an email address for each conference participant in the email. Information on conference procedures will be provided separately and guidance on joining the video conference will be available on the Commission's Daily Calendar. A nonparty who has testimony that may aid the Commission's deliberations may request permission to participate by submitting a short statement.

Please note the Secretary's Office will accept only electronic filings during this time. Filings must be made through the Commission's Electronic Document Information System (EDIS, *https://edis.usitc.gov*). No in-person paper-based filings or paper copies of any electronic filings will be accepted until further notice.

Written submissions.—As provided in §§ 201.8 and 207.15 of the Commission's rules, any person may submit to the Commission on or before February 5, 2021, a written brief containing information and arguments pertinent to the subject matter of the investigations. Parties may file written testimony in connection with their presentation at the conference. All written submissions must conform with the provisions of § 201.8 of the Commission's rules; any submissions that contain BPI must also conform with the requirements of §§ 201.6, 207.3, and 207.7 of the Commission's rules. The Commission's *Handbook on Filing Procedures,* available on the Commission's website at *https://www.usitc.gov/documents/handbook_on_filing_procedures.pdf,* elaborates upon the Commission's procedures with respect to filings.

In accordance with §§ 201.16(c) and 207.3 of the rules, each document filed by a party to the investigations must be served on all other parties to the investigations (as identified by either the public or BPI service list), and a certificate of service must be timely filed. The Secretary will not accept a document for filing without a certificate of service.

Certification.—Pursuant to § 207.3 of the Commission's rules, any person submitting information to the Commission in connection with these investigations must certify that the information is accurate and complete to the best of the submitter's knowledge. In making the certification, the submitter will acknowledge that any information that it submits to the Commission during these investigations may be disclosed to and used: (i) By the Commission, its employees and Offices, and contract personnel (a) for developing or maintaining the records of these or related investigations or reviews, or (b) in internal investigations, audits, reviews, and evaluations relating to the programs, personnel, and operations of the Commission including under 5 U.S.C. Appendix 3; or (ii) by U.S. government employees and contract personnel, solely for cybersecurity purposes. All contract personnel will sign appropriate nondisclosure agreements.

Authority: These investigations are being conducted under authority of title VII of the Tariff Act of 1930; this notice is published pursuant to § 207.12 of the Commission's rules.

By order of the Commission.

Issued: January 13, 2021.

Lisa Barton,

Secretary to the Commission.

BILLING CODE 7020–02–P

INTERNATIONAL TRADE COMMISSION

[Investigation No. 337–TA–1153]

Certain Bone Cements, Components Thereof and Products Containing the Same; Notice of Commission Determination Finding No Violation of Section 337; Termination of the Investigation

AGENCY: International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that the U.S. International Trade Commission (''Commission'') has determined to affirm in part, reverse in part, and vacate in part the final initial determination's (''ID'') finding that no violation of section 337 has occurred. The investigation is terminated.

FOR FURTHER INFORMATION CONTACT: Ronald A. Traud, Office of the General Counsel, U.S. International Trade Commission, 500 E Street SW, Washington, DC 20436, telephone (202) 205–3427. Copies of non-confidential documents filed in connection with this investigation may be viewed on the Commission's electronic docket (EDIS) at *https://edis.usitc.gov.* For help accessing EDIS, please email *EDIS3Help@usitc.gov.* General information concerning the Commission may also be obtained by accessing its internet server at *https://www.usitc.gov.* Hearing-impaired persons are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on (202) 205–1810.

SUPPLEMENTARY INFORMATION: The Commission instituted this investigation on April 10, 2019, based on a complaint filed by Heraeus Medical LLC of Yardley, Pennsylvania, and Heraeus Medical GmbH of Wehrheim, Germany (collectively, ''Complainants''). 84 FR 14394–95 (Apr. 10, 2019). The complaint alleges a violation of section 337 of the Tariff Act of 1930, as amended, by reason of misappropriation of trade secrets, the threat or effect of which is to destroy or substantially injure an industry in the United States or to prevent the establishment of such an industry. The complaint named the following respondents: Zimmer Biomet Holdings, Inc. of Warsaw, Indiana; Biomet, Inc. of Warsaw, Indiana; Zimmer Orthopaedic Surgical Products, Inc. of Dover, Ohio; Zimmer Surgical, Inc. of Dover, Ohio; Biomet France S.A.R.L. of Valence, France; Biomet Deutschland GmbH of Berlin, Germany; Zimmer Biomet Deutschland GmbH of Freiburg im Breisgau, Germany; Biomet Europe B.V. of Dordrecht, Netherlands; Biomet Global Supply Chain Center B.V. of Dordrecht, Netherlands; Zimmer Biomet Nederland B.V. of Dordrecht, Netherlands; Biomet Orthopedics, LLC of Warsaw, Indiana; and Biomet Orthopaedics Switzerland GmbH of Dietikon, Switzerland. The Commission's Office of Unfair Import Investigations (''OUII'') also was named as a party.

The investigation has terminated as to respondents Zimmer Orthopaedic Surgical Products, Inc. and Biomet Europe B.V., Order No. 10 (May 23, 2019), *unreviewed,* Notice (June 14, 2019), and as to certain accused products, Order No. 30 (Nov. 24, 2019), *unreviewed,* Notice (Dec. 10, 2019). Also, the first amended complaint and notice of investigation were amended to add three entities as respondents: Zimmer US, Inc.; Zimmer, GmbH; and Biomet Manufacturing, LLC. Order No. 18 (June 26, 2019), *unreviewed,* 84 FR 35884–85 (July 25, 2019). The remaining respondents are referred to collectively herein as ''Zimmer Biomet.''

On May 6, 2020, the presiding administrative law judge (''ALJ'') issued the final ID, which found that Zimmer Biomet did not violate section 337. On May 18, 2020, the parties filed petitions for review of the final ID.

On July 13, 2020, the Commission determined to review in part the final ID and requested briefing from the parties on the issues under review. In particular, the Commission determined to review the following: (1) The ALJ's findings and conclusions as to TS 1–35 and 121–23; and (2) the ALJ's domestic industry findings, including whether there has been a substantial injury to the alleged domestic industry. The Commission also sought briefing from the parties, interested government agencies, and any other interested parties on remedy, bonding, and the public interest.

Having examined the record of this investigation, including the final ID, the petitions for review, the responses thereto, and the written submissions in response to the Commission's request for briefing, the Commission finds that no violation of section 337 has occurred. Specifically, the Commission finds that the Complainants did not establish that an industry in the United States exists as required by section 337(a)(1)(A)(i) and therefore did not establish injury to a domestic industry. The investigation is hereby terminated.

The Commission vote for this determination took place on January 12, 2021.

The authority for the Commission's determination is contained in section 337 of the Tariff Act of 1930, as amended (19 U.S.C. 1337), and in Part 210 of the Commission's Rules of Practice and Procedure (19 CFR part 210).

By order of the Commission.

Issued: January 12, 2021.

Lisa Barton,

Secretary to the Commission.

[FR Doc. 2021–00996 Filed 1–15–21; 8:45 am]

BILLING CODE 7020–02–P

INTERNATIONAL TRADE COMMISSION

[Investigation No. 337–TA–1200]

Certain Electronic Devices, Including Streaming Players, Televisions, Set Top Boxes, Remote Controllers, and Components Thereof; Notice of a Commission Determination Not To Review an Initial Determination Correcting the Notice of Investigation

AGENCY: International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that the U.S. International Trade Commission (''Commission'') has determined not to review an initial determination (''ID'') (Order No. 33), granting the parties' joint motion to amend the notice of institution of the investigation by clarifying that claims 2 and 4–5 of U.S. Patent No. 10,593,196 (''the '196 patent'') are among the domestic industry claims but are not being asserted against any respondent for purposes of infringement. The notice of investigation is amended accordingly.

FOR FURTHER INFORMATION CONTACT: Carl P. Bretscher, Esq., Office of the General Counsel, U.S. International Trade Commission, 500 E Street SW, Washington, DC 20436, telephone (202) 205–2382. Copies of non-confidential documents filed in connection with this investigation may be viewed on the Commission's electronic docket (EDIS) at *https://edis.usitc.gov.* For help accessing EDIS, please email *EDIS3Help@usitc.gov.* General information concerning the Commission may also be obtained by accessing its internet server at *https://www.usitc.gov.* Hearing-impaired persons are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on (202) 205–1810.

SUPPLEMENTARY INFORMATION: The Commission instituted this investigation on May 22, 2020, based on a complaint

filed by Universal Electronics, Inc. (''UEI'') of Scottsdale, Arizona. 85 FR 31211–212 (May 22, 2020). The complaint, as supplemented, alleges violations of section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. 1337 (''Section 337''), in the importation into the United States, sale for importation, or sale in the United States after importation of certain electronic devices, including streaming players, televisions, set top boxes, remote controllers, and components thereof, by reason of infringement of one of more of the asserted claims of the '196 patent and U.S. Patent No. 7,696,514 (''the '514 patent''); 9,911,325 (''the '325 patent''); 7,589,642 (''the '642 patent''); 10,600,317 (''the '317 patent''); and 9,716,853 (''the '853 patent''). *Id.* The complaint also alleges that a domestic industry exists. *Id.* The Commission's notice of investigation named the following respondents: Roku Inc. of Los Gatos, California; TCL Electronics Holdings Ltd. of New Territories, Hong Kong; Shenzhen TCL New Technology Co. Ltd. of Shenzhen, China; TCL King Electrical Appliances Co. Ltd., Huizhou, China; TTE Technology Inc. of Corona, California; TCL Corp. of Huizhou City, China; TCL Moka Int'l Ltd. of New Territories, Hong Kong; TCL Overseas Marketing Ltd. of New Territories, Hong Kong; TCL Industries Holdings Co., Ltd. of New Territories, Hong Kong; TCL Smart Device Co. of Bac Tan Uyen District, Vietnam; Hisense Co. Ltd. of Qingdao, China; Hisense Electronics Manufacturing Co. of America Corp. of Suwanee, Georgia; Hisense Import & Export Co. Ltd. of Qingdao, China; Qingdao Hisense Electric Co., Ltd. of Qingdao, China; Hisense International Co., Ltd. of Shen Wang, Hong Kong; Funai Electric Co., Ltd. of Osaka, Japan; Funai Corp. Inc. of Rutherford, New Jersey; and Funai Co., Ltd. of Nakhon Ratchasima, Thailand (collectively, ''Respondents''). *Id.* The Office of Unfair Import Investigations is not participating in this investigation. *Id.*

The Commission previously terminated the investigation with respect to the '853 patent, claims 19 and 20 of the '196 patent, and claims 14 and 20 of the '642 patent due to the withdrawal of those patent claims. Order No. 27 at 1 (Dec. 2, 2020), *unreviewed by* Comm'n Notice (Dec. 23, 2020). The Commission subsequently terminated the investigation with respect to claim 20 of the '514 patent. Order No. 32 (Dec. 21, 2020), *unreviewed by* Comm'n Notice (Jan. 5, 2021).

On December 29, 2020, the presiding administrative law judge issued the subject ID (Order No. 33), granting a joint motion by UEI and Respondents to correct the notice of institution of the investigation by clarifying that claims 2 and 4–5 of the '196 patent are domestic industry claims only and are not being asserted against any Respondent for purposes of infringement.

No petition for review of the subject ID was filed.

The Commission has determined not to review the subject ID. The notice of institution of the investigation is corrected accordingly.

The Commission vote for this determination took place on January 13, 2021.

The authority for the Commission's determination is contained in section 337 of the Tariff Act of 1930, as amended (19 U.S.C. 1337), and in Part 210 of the Commission's Rules of Practice and Procedure (19 CFR part 210).

By order of the Commission.

Issued: January 13, 2021.

Lisa Barton,

Secretary to the Commission.

Notice Pursuant to the National Cooperative Research and Production Act of 1993—Medical CBRN Defense Consortium

Notice is hereby given that, on January 8, 2021, pursuant to Section 6(a) of the National Cooperative Research and Production Act of 1993, 15 U.S.C. 4301 *et seq.* (''the Act''), Medical CBRN Defense Consortium (''MCDC'') has filed written notifications simultaneously with the Attorney General and the Federal Trade Commission disclosing changes in its membership. The notifications were filed for the purpose of extending the Act's provisions limiting the recovery of antitrust plaintiffs to actual damages under specified circumstances. Specifically, Aldevron, LLC, Fargo, ND; Applied Nanotech, Inc., Austin, TX; Clark Street Associates, Los Altos, CA; Encryptor, Inc., Plano, TX; Entasis Therapeutics, Waltham, MA; ImmunityBio, Inc., El Segundo, CA; Polaris Sensor Technologies, Huntsville, AL; Qorvo Biotechnologies, LLC, Bend, OR; Rigel Pharmaceuticals, San Francisco, CA; SafetySpect, Inc., Los Angeles, CA; and Somnio Global, LLC, Novi, MI have been added as parties to this venture.

Also, 7 Hills Pharma, LLC, Houston, TX; ARMSTEL, Inc., Plano, TX; Captura Biopharma, Inc., Little Rock, AR; Chenega Reliable Services, LLC, San Antonio, TX; Data Intelligence Technologies, Inc., Arlington, VA; DEFTEC Corporation, Huntsville, AL; HDT Bio Corporation, Seattle, WA; MAE Group, LLC, Deerfield, NH; Metabiota, Inc., San Francisco, CA; Microscale Devices, LLC, Apex, NC; One Health Group, LLC, Chantilly, VA; Pathology Assist-Temp, Inc., Chantilly, VA; Peregrine Technical Solutions, LLC, Yorktown, VA; Profectus BioSciences, Inc., Baltimore, MD; TensorX, Inc., Vienna, VA and the University of Michigan, Ann Arbor, MI have withdrawn as parties to this venture.

No other changes have been made in either the membership or planned activity of the group research project. Membership in this group research project remains open, and MCDC intends to file additional written notifications disclosing all changes in membership.

On November 13, 2015, MCDC filed its original notification pursuant to Section 6(a) of the Act. The Department of Justice published a notice in the **Federal Register** pursuant to Section 6(b) of the Act on January 6, 2016 (81 FR 513).

The last notification was filed with the Department on October 20, 2020. A notice was published in the **Federal Register** pursuant to Section 6(b) of the Act on November 20, 2020 (85 FR 74386).

Suzanne Morris,

Chief, Premerger and Division Statistics, Antitrust Division.

Notice Pursuant to the National Cooperative Research and Production Act of 1993—Countering Weapons of Mass Destruction

Notice is hereby given that, on January 7, 2021, pursuant to Section 6(a) of the National Cooperative Research and Production Act of 1993, 15 U.S.C. 4301 *et seq.* (''the Act''), Countering Weapons of Mass Destruction (''CWMD'') has filed written notifications simultaneously with the Attorney General and the Federal Trade Commission disclosing changes in its membership. The notifications were filed for the purpose of extending the Act's provisions limiting the recovery of antitrust plaintiffs to actual damages under specified circumstances.

Specifically, AimLock dba Dev-Lock Systems, Inc., Littleton, CO; Cahaba Micro, LLC, Pelham, AL; Consolidated Cordage Corporation, Boca Raton, FL; Encryptor, Inc., Plano, TX; Florida Institute for Human & Machine Cognition, Pensacola, FL; Intellisense Systems, Inc., Torrance, CA; INTERFUZE Corporation, Huntsville, AL; Pacific Advanced Technology, Inc., Los Olivos, CA; SciTec, Inc., Princeton, NJ; Shield AI, Inc., San Diego, CA; Technology In Images, Inc. (Ti2Inc), Pittsburgh, PA; University of Southern California, Los Angeles, CA have been added as parties to this venture.

Also, BAE Systems, Greenland, NY; Bill Baugh Associates, LLC, Millersville, MD; Bohemia Interactive Simulations, Inc. (BISim), Orlando, FL; Chenega Reliable Services, LLC, San Antonio, TX; Citadel Defense Company, National City, CA; CogniTech Corporation, Salt Lake City, UT; Continuum Dynamics, Inc., Ewing, NJ; Eirene Technologies, Inc., La Mesa, CA; GenScript USA, Inc., Knight Aerospace Medical Systems, LLC, San Antonio, TX; Military Battery Systems, Inc., Denver, CO; Morphix Technologies, Inc., Virginia Beach, VA; Nucsafe, Inc., Oak Ridge, TN; QinetiQ North America, Waltham, MA; VITNI Corporation, Hilo, HI; Women Veterans Contracting, Inc. (WVC), San Diego, CA have withdrawn from this venture.

No other changes have been made in either the membership or planned activity of the group research project. Membership in this group research project remains open, and CWMD intends to file additional written notifications disclosing all changes in membership.

On January 31, 2018, CWMD filed its original notification pursuant to Section 6(a) of the Act. The Department of Justice published a notice in the **Federal Register** pursuant to Section 6(b) of the Act on March 12, 2018 (83 FR 10750).

The last notification was filed with the Department on October 28, 2020. A notice was published in the **Federal Register** pursuant to Section 6(b) of the Act on November 20, 2020 (85 FR 74386).

Notice Pursuant to the National Cooperative Research and Production Act of 1993—CHEDE–8

Notice is hereby given that, on January 7, 2021, pursuant to Section 6(a) of the National Cooperative Research and Production Act of 1993, 15 U.S.C. 4301 *et seq.* (''the Act''), CHEDE–8 (''CHEDE–8'') has filed written notifications simultaneously with the Attorney General and the Federal Trade Commission disclosing changes in its membership. The notifications were filed for the purpose of extending the Act's provisions limiting the recovery of antitrust plaintiffs to actual damages under specified circumstances. Specifically, Mahle Engine Components USA, Inc., Farmington Hills, MI, has been added as a party to this venture.

No other changes have been made in either the membership or planned activity of the group research project. Membership in this group research project remains open, and CHEDE–8 intends to file additional written notifications disclosing all changes in membership.

On December 4, 2019, CHEDE–8 filed its original notification pursuant to Section 6(a) of the Act. The Department of Justice published a notice in the **Federal Register** pursuant to Section 6(b) of the Act on December 30, 2019 (84 FR 71977).

The last notification was filed with the Department on December 1, 2020. A notice was published in the **Federal Register** pursuant to section 6(b) of the Act on December 22, 2020 (85 FR 83613).

Suzanne Morris,

Chief, Premerger and Division Statistics, Antitrust Division.

DEPARTMENT OF JUSTICE

Antitrust Division

Notice Pursuant to the National Cooperative Research and Production Act of 1993—National Armaments Consortium

Notice is hereby given that, on January 12, 2021, pursuant to Section 6(a) of the National Cooperative Research and Production Act of 1993, 15 U.S.C. 4301 *et seq.* (''the Act''), National Armaments Consortium (''NAC'') has filed written notifications simultaneously with the Attorney General and the Federal Trade Commission disclosing changes in its membership. The notifications were filed for the purpose of extending the Act's provisions limiting the recovery of antitrust plaintiffs to actual damages under specified circumstances. Specifically, Acutronic USA Inc., Pittsburgh, PA; Applied Nanotech Inc., Austin, TX; Arquimea USA, Inc., Torrance, CA; Belcan Engineering Group, LLC, Cincinnati, OH; Capstone Research Corporation, Madison, AL; Cohere Solutions, LLC, Reston, VA; Del Sigma Technologies LLC, Rockford, MI; Epirus Inc., Hawthorne, CA; HII Technical Solutions Corporation, Virginia Beach, VA; Hydraulics International, Inc., Chatsworth, CA; Iowa State University of Science and Technology, Ames, IA; KMS Solutions, LLC, Alexandria, VA; Kowalski Heat Treating, Cleveland, OH; L3Harris Technologies Power Paragon, Inc., Anaheim, CA; Onodi Tool & Engineering, Melvindale, MI; Phased n Research, Inc., Huntsville, AL; Prasad, Sarita dba IMS-Pro LLC (Innovative Microwave System Prototypes), Albuquerque, NM; ProSync Technology Group, Inc., Ellicott City, MD; Reheat, LLC, Marquette, MI; Rocal Corp. dba Rebling Plastics, Warrington, PA; Starwin Industries LLC, Dayton, OH; Synthetik Applied Technologies, LLC, Pierre, SD; Telesis a Belcan Company, McLean, VA; Testek Solutions, Wixom, MI; Trusted Science and Technology, Inc., Bethesda, MD; Universal Technology Professional, LLC, Laurel, MD; University of South Carolina, Columbia, SC; Venturi, LLC, Huntsville, AL; VetAble Technologies, LLC, Brandon, FL; Veth Research Associates, LLC, Niceville, FL have been added as parties to this venture.

Also, AAI Corporation Inc., Hunt Valley, MD; Anthem Engineering, LLC, Elkridge, MD; Black River Systems Company, Utica, NY; Continuum Dynamics, Inc., Ewing, NJ; Cummings Aerospace, Inc., Huntsville, AL; Keystone Automation, Duryea, PA; Lancer Systems, LP, Quakertown, PA; ODAT Machine Inc., Gorham, ME; Optimax Systems, Inc., Ontario, NY; Remington Arms Company, LLC, Madison, NC; SemQuest Incorporated, Colorado Springs, CO; Syntek Technologies, Inc., Fairfax, VA; The University of Southern Mississippi, Hattiesburg, MS; Trijicon Inc., Wixom, MI have withdrawn as parties to this venture.

No other changes have been made in either the membership or planned activity of the group research project. Membership in this group research project remains open, and NAC intends

to file additional written notifications disclosing all changes in membership.

On May 2, 2000, NAC filed its original notification pursuant to Section 6(a) of the Act. The Department of Justice published a notice in the **Federal Register** pursuant to Section 6(b) of the Act on June 30, 2000 (65 FR 40693).

The last notification was filed with the Department on October 9, 2020. A notice was published in the **Federal Register** pursuant to Section 6(b) of the Act on October 30, 2020 (85 FR 68916).

Suzanne Morris,

Chief, Premerger and Division Statistics, Antitrust Division.

Notice Pursuant to the National Cooperative Research and Production Act of 1993—MLCommons Association

Notice is hereby given that on January 5, 2021 pursuant to Section 6(a) of the National Cooperative Research and Production Act of 1993, 15 U.S.C. Section 4301 et seq (the ''Act''), MLCommons Association (''MLCommons'') has filed written notifications simultaneously with the Attorney General and the Federal Trade Commission disclosing changes in its membership. The notifications were filed for the purpose of extending the Act's provisions limiting the recovery of antitrust plaintiffs to actual damages under specified circumstances. Specifically, Landing AI, Palo Alto, CA; Lingjie Xu (individual member), San Jose, CA; Neuchips Corporation, Hsinchu, TAIWAN; VerifAI Inc., Palo Alto, CA; CTUNING FOUNDATION, Cachan, FRANCE; VMind Technologies, Inc., San Francisco, CA; Poonam Yadav (individual member), York, UNITED KINGDOM; Relja Markovic (individual member), Bothell, WA; Emily Potyraj (individual member), Houston, TX; Tom St. John (individual member), Mountain View, CA; Debojyoti Dutta (individual member), Santa Clara, CA; Hanlin Tang (individual member), San Francisco, CA; and LSDTech, Seoul, KOREA have joined as parties to this venture.

No other changes have been made in either the membership or planned activity of the group research project. Membership in this group research project remains open and MLCommons intends to file additional written notifications disclosing all changes in membership.

On September 15, 2020, MLCommons filed its original notification pursuant to Section 6(a) of the Act. The Department of Justice published a notice in the **Federal Register** pursuant to Section 6(b) of the Act on September 29, 2020 (85 FR 61032).

Suzanne Morris,

Chief, Premerger and Division Statistics, Antitrust Division.

BILLING CODE 4410–11–P

DEPARTMENT OF LABOR

Office of the Secretary

Agency Information Collection Activities; Submission for OMB Review; Comment Request; Refuse Piles and Impoundment Structures, Recordkeeping and Reporting Requirements

ACTION: Notice of availability; request for comments.

SUMMARY: The Department of Labor (DOL) is submitting this Mining Safety and Health Administration (MSHA)-sponsored information collection request (ICR) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995 (PRA). Public comments on the ICR are invited.

DATES: The OMB will consider all written comments that agency receives on or before February 18, 2021.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

Comments are invited on: (1) Whether the collection of information is necessary for the proper performance of the functions of the Department, including whether the information will have practical utility; (2) if the information will be processed and used in a timely manner; (3) the accuracy of the agency's estimates of the burden and cost of the collection of information, including the validity of the methodology and assumptions used; (4) ways to enhance the quality, utility and clarity of the information collection; and (5) ways to minimize the burden of the collection of information on those who are to respond, including the use of automated collection techniques or other forms of information technology.

FOR FURTHER INFORMATION CONTACT: Anthony May by telephone at 202–693–4129 (this is not a toll-free number) or by email at *DOL_PRA_PUBLIC@dol.gov.*

SUPPLEMENTARY INFORMATION: Section 103(h) of the Federal Mine Safety and Health Act of 1977 (Mine Act), 30 U.S.C. 813(h), authorizes MSHA to collect information necessary to carry out its duty in protecting the safety and health of miners. Further, section 101(a) of the Mine Act, 30 U.S.C. 811, authorizes the Secretary of Labor to develop, promulgate, and revise as may be appropriate, improved mandatory health or safety standards for the protection of life and prevention of injuries in coal or other mines. Title 30 CFR part 77, subpart C, sets forth standards for surface installations to prevent accidents and injuries to miners. More specifically, section 77.215 addresses refuse piles and section 77.216 addresses impoundments. Refuse piles are deposits of coal mine waste (other than overburden or spoil) that are removed during mining operations or separated from mined coal and deposited on the surface. Impoundments are structures that can impound water, sediment, or slurry or any combination of materials. The failure of these structures can have a devastating effect on mine employees, communities, and nearby areas. To avoid or minimize such failures, MSHA has promulgated standards for the design, construction, and maintenance of these structures; for annual certifications; for certification for hazardous refuse piles; for the frequency of inspections; and the methods of abandonment for impoundments and impounding structures. For additional substantive information about this ICR, see the related notice published in the **Federal Register** on October 6, 2020 (85 FR 63144).

This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless the OMB approves it and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information that does not display a valid OMB Control Number. *See* 5 CFR 1320.5(a) and 1320.6.

DOL seeks PRA authorization for this information collection for three (3) years. OMB authorization for an ICR cannot be for more than three (3) years

without renewal. The DOL notes that information collection requirements submitted to the OMB for existing ICRs receive a month-to-month extension while they undergo review.

Agency: DOL–MSHA.

Title of Collection: Refuse Piles and Impoundment Structures, Recordkeeping and Reporting Requirements.

OMB Control Number: 1219–0015.

Affected Public: Businesses or other for-profits institutions.

Total Estimated Number of Respondents: 548.

Total Estimated Number of Responses: 28,047.

Total Estimated Annual Time Burden: 68,692 hours.

Total Estimated Annual Other Costs Burden: $1,509,202.

Authority: 44 U.S.C. 3507(a)(1)(D).

Dated: January 12, 2021.

Anthony May,

Management and Program Analyst.

BILLING CODE 4510–43–P

DEPARTMENT OF LABOR

Office of the Secretary

Agency Information Collection Activities; Submission for OMB Review; Comment Request; Division of Energy Employees Occupational Illness (DEEOIC) Authorization Forms

ACTION: Notice of availability; request for comments.

SUMMARY: The Department of Labor (DOL) is submitting this Office of the Workers' Compensation Programs (OWCP)-sponsored information collection request (ICR) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995 (PRA). Public comments on the ICR are invited.

DATES: The OMB will consider all written comments that agency receives on or before February 18, 2021.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

Comments are invited on: (1) Whether the collection of information is necessary for the proper performance of the functions of the Department, including whether the information will have practical utility; (2) if the information will be processed and used in a timely manner; (3) the accuracy of the agency's estimates of the burden and cost of the collection of information, including the validity of the methodology and assumptions used; (4) ways to enhance the quality, utility and clarity of the information collection; and (5) ways to minimize the burden of the collection of information on those who are to respond, including the use of automated collection techniques or other forms of information technology.

FOR FURTHER INFORMATION CONTACT: Anthony May by telephone at 202–693–4129 (this is not a toll-free number) or by email at *DOL_PRA_PUBLIC@dol.gov.*

SUPPLEMENTARY INFORMATION: The Office of Workers' Compensation Programs (OWCP) is the primary agency responsible for administration of the Energy Employees Occupational Illness Compensation Program Act of 2000, as amended (EEOICPA), 42 U.S.C. 7384 *et seq.* EEOICPA provides for the payment of compensation to covered employees and, where applicable, survivors of deceased employees, who sustained either an ''occupational illness'' or a ''covered illness'' in the performance of duty for the Department of Energy and certain of its contractors and subcontractors. One element of the compensation provided to covered employees is medical benefits for the treatment of their occupational or covered illnesses that are accepted as compensable. OWCP contracts with a private sector bill processing agent that handles many of the tasks associated with paying bills for medical treatment provided to covered employees under EEOICPA. This bill processing agent uses an automated system that matches incoming bills with the authorized medical treatment of covered employees before it issues payments, and a provider of medical treatment, supplies or services to covered employees must provide the bill processing agent with information necessary for creation of an authorization within the agent's automated system before a bill can be paid. The collection of this information is authorized by 20 CFR 30.400(a) and (c), 30.403, 30.404(b) and 30.700. The information collections in this ICR collect demographic, factual and medical information that OWCP and/or its bill processing agent needs to process bills for medical treatment, supplies or services. For additional substantive information about this ICR, see the related notice published in the **Federal Register** on October 2, 2020 (85 FR 62327).

This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless the OMB approves it and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information that does not display a valid OMB Control Number. *See* 5 CFR 1320.5(a) and 1320.6.

DOL seeks PRA authorization for this information collection for three (3) years. OMB authorization for an ICR cannot be for more than three (3) years without renewal. The DOL notes that information collection requirements submitted to the OMB for existing ICRs receive a month-to-month extension while they undergo review.

Agency: DOL–OWCP.

Title of Collection: Division of Energy Employees Occupational Illness (DEEOIC) Authorization Forms.

BILLING CODE 4510–CR–P

DEPARTMENT OF LABOR

Occupational Safety and Health Administration

[Docket No. OSHA–2019–0008]

Ballard Marine Construction; Application for Permanent Variance and Interim Order; Grant of Interim Order

AGENCY: Occupational Safety and Health Administration (OSHA), Labor.

ACTION: Notice; request for comments.

SUMMARY: In this notice, OSHA announces Ballard Marine Construction's application for a Permanent Variance and Interim Order

from provisions of OSHA standards that regulate work in compressed air environments and presents the agency's preliminary finding to grant the Permanent Variance. OSHA also announces the granting of an Interim Order. OSHA invites the public to submit comments on the variance application to assist the agency in determining whether to grant the applicant a Permanent Variance based on the conditions specified in this application.

DATES: Submit comments, information, documents in response to this notice, and request for a hearing on or before February 18, 2021. The Interim Order described in this notice will become effective on January 19, 2021, and shall remain in effect until the completion of the Suffolk County Outfall Tunnel, in West Babylon, New York or the Interim Order is modified or revoked.

ADDRESSES:

Electronically: You may submit comments and attachments electronically at: *http://www.regulations.gov,* which is the Federal eRulemaking Portal. Follow the instructions online for submitting comments.

Mail, hand delivery, express mail, messenger, or courier service: When using this method, you must submit a copy of your comments and attachments to the OSHA Docket Office, Docket No. OSHA–2019–0008, Occupational Safety and Health Administration, U.S. Department of Labor, Room N–3653, 200 Constitution Avenue NW, Washington, DC 20210; telephone (202) 693–2350. OSHA's TTY number is (877) 889–5627. Please note: While OSHA's docket office is continuing to accept and process submissions by regular mail, due to the COVID–19 pandemic, the Docket Office is closed to the public and not able to receive submissions to the rulemaking record by express delivery, hand delivery and messenger service.

Instructions: All submissions must include the agency name and OSHA docket number (OSHA–2019–0008). All comments, including any personal information you provide, are placed in the public docket without change, and may be made available online at *http://www.regulations.gov.*

Docket: To read or download comments or other material in the docket, go to *http://www.regulations.gov* or the OSHA Docket Office at the above address. All documents in the docket (including this **Federal Register** notice) are listed in the *http://www.regulations.gov* index; however, some information (*e.g.,* copyrighted material) is not publicly available to read or download through the website. All submissions, including copyrighted material, are available for inspection through the OSHA Docket Office. You may also contact Kevin Robinson, Director Office of Technical Programs and Coordination Activities (OTPCA) at the below address.

FOR FURTHER INFORMATION CONTACT: Information regarding this notice is available from the following sources:

Press inquiries: Contact Mr. Frank Meilinger, Director, OSHA Office of Communications, U.S. Department of Labor; telephone: (202) 693–1999; email: *meilinger.francis2@dol.gov.*

General and technical information: Contact Mr. Kevin Robinson, Director, Office of Technical Programs and Coordination Activities, Directorate of Technical Support and Emergency Management, Occupational Safety and Health Administration, U.S. Department of Labor; telephone: (202) 693–2110; email: *robinson.kevin@dol.gov.*

Copies of this **Federal Register** *notice.* Electronic copies of this **Federal Register** notice are available at *http://www.regulations.gov.* This **Federal Register** notice, as well as news releases and other relevant information, also are available at OSHA's web page at *http://www.osha.gov.*

Hearing Requests. According to 29 CFR 1905.15, hearing requests must include: (1) A short and plain statement detailing how the permanent variance would affect the requesting party; (2) a specification of any statement or representation in the variance application that the commenter denies, and a concise summary of the evidence offered in support of each denial; and (3) any views or arguments on any issue of fact or law presented in the variance application.

SUPPLEMENTARY INFORMATION:

I. Notice of Application

OSHA's standards in subpart S of 29 CFR part 1926 govern underground construction, caissons, cofferdams, and compressed air. On January 2, 2019, Ballard Marine Construction (''Ballard'' or ''the applicant''), 727 S. 27th Street, Washougal, Washington 98761, submitted under Section 6(d) of the Occupational Safety and Health Act of 1970 (the ''Act''), 29 U.S.C. 655, and 29 CFR 1905.11 an application for a Permanent Variance from several provisions of the OSHA standard that regulates work in compressed air, 1926.803 of subpart S, and an Interim Order allowing it to proceed while OSHA considers the request for a Permanent Variance (OSHA–2019–0008–0001). This notice addresses Ballard's application for a Permanent Variance and Interim Order for construction of the Suffolk County Outfall Tunnel Project in West Babylon, New York only and is not applicable to future Ballard tunneling projects.

Specifically, this notice addresses Ballard's application for a Permanent Variance and Interim Order from the provisions of the standard that: (1) Require the use of the decompression values specified in decompression tables in Appendix A of subpart S (29 CFR 1926.803(f)(1)); and (2) require the use of automated operational controls and a special decompression chamber (29 CFR 1926.803(g)(1)(iii) and (xvii), respectively).

OSHA has previously approved nearly identical provisions when granting several other very similar variances, as discussed in more detail in Section II. OSHA preliminarily concludes that the proposed variance is appropriate, grants an Interim Order temporarily allowing the proposed activity, and seeks comment on the proposed variance.

A. Background

Ballard is a contractor that works on complex tunnel projects using innovations in tunnel-excavation methods. The applicant's workers engage in the construction of tunnels using advanced shielded mechanical excavation techniques in conjunction with an earth pressure balanced micro-tunnel boring machine (EPBMTBM). Using shielded mechanical excavation techniques, in conjunction with precast concrete tunnel liners and backfill grout, EPBMTBMs provide methods to achieve the face pressures required to maintain a stabilized tunnel face through various geologies, and isolate that pressure to the forward section (the excavation working chamber) of the EPBMTBM.

Ballard asserts that generally it bores tunnels using an EPBMTBM at levels below the water table through soft soils. EPBMTBMs are capable of maintaining pressure at the tunnel face and stabilizing existing geological conditions through the controlled use of propel cylinders, a mechanically driven cutter head, bulkheads within a protective shield, ground-treatment foam, and a screw conveyor that moves excavated material from the working chamber. The forward-most portion of the EPBMTBM is the working chamber, and this chamber is the only pressurized segment of the EPBMTBM. Within the shield, the working chamber consists of two sections: the forward working chamber and the staging chamber. The forward working chamber is

immediately behind the cutter head and tunnel face. The staging chamber is behind the forward working chamber and between the manlock door and the entry door to the forward working chamber.

The EPBMTBM has twin manlocks located between the pressurized working chamber and the non-pressurized portion of the machine. Each manlock has two compartments. This configuration allows workers to access the manlocks for compression and decompression, and medical personnel to access the manlocks if required in an emergency.

The applicant will pressurize the working chamber to the level required to maintain a stable tunnel face, which for this project Ballard estimates will be up to a pressure not exceeding 30 pounds per square in gauge (p.s.i.g.). Pressure in the staging chamber ranges from atmospheric (no increased pressure) to a maximum pressure equal to the pressure in the forward excavation working chamber.

Ballard employs specially trained personnel for the construction of the tunnel. Ballard asserts that to keep the machinery working effectively, these workers must periodically enter the excavation working chamber of the EPBMTBM to perform hyperbaric interventions during which workers would be exposed to air pressures up to 30 p.s.i.g., which does not exceed the maximum pressure specified by the existing OSHA standard at 29 CFR 1926.803(e)(5). These interventions consist of conducting inspections or maintenance work on the cutter-head structure and cutting tools of the EPBMTBM, such as changing replaceable cutting tools and disposable wear bars, and, in rare cases, repairing structural damage to the cutter head. These interventions are the only time that workers are exposed to compressed air. Interventions in the excavation working chamber (the pressurized portion of the EPBMTBM) take place only after halting tunnel excavation and preparing the machine and crew for an intervention.

During interventions, workers enter the excavation working chamber through one of the twin manlocks that open into the staging chamber. To reach the forward part of the working chamber, workers pass through a door in a bulkhead that separates the staging chamber from the forward excavation working chamber. The manlocks and the excavation working chamber are designed to accommodate three people, which is the maximum crew size allowed under the proposed variance (Ballard only plans to employ a crew of two people for these activities). When the required decompression times are greater than work times, the twin manlocks allow for crew rotation. During crew rotation, one crew can be compressing or decompressing while the second crew is working. Therefore, the working crew always has an unoccupied manlock available for use.

Ballard asserts that these innovations in tunnel excavation have greatly reduced worker exposure to hazards of pressurized air work because they have eliminated the need to pressurize the entire tunnel for the project and thereby reduced the number of workers exposed, as well as the total duration of exposure, to hyperbaric pressure during tunnel construction. These advances in technology have substantially modified the methods used by the construction industry to excavate subaqueous tunnels compared to the caisson work that was typical when OSHA adopted the compressed-air standard for construction, 29 CFR 1926.803.

In addition to the reduced exposures resulting from the innovations in tunnel-excavation methods, Ballard asserts that innovations in hyperbaric medicine and technology improve the safety of decompression from hyperbaric exposures. These procedures, however, would deviate from the decompression process that OSHA requires for construction in 29 CFR 1926.803(f)(1) and the decompression tables in Appendix A of 29 CFR part 1926, subpart S. Nevertheless, according to Ballard, their use of decompression protocols incorporating oxygen is more efficient, effective, and safer for tunnel workers than compliance with the decompression tables specified by the existing OSHA standard.

Ballard therefore believes its workers will be at least as safe under its proposed alternatives as they would be under OSHA's existing standard because of the reduction in the number of workers and duration of hyperbaric exposures, improved application of hyperbaric medicine, and the development of a project-specific Hyperbaric Operations Manual (HOM) (OSHA–2019–0008–0002) that requires specialized medical support and hyperbaric supervision to provide assistance to a team of specially trained manlock attendants and hyperbaric or compressed-air workers (CAWs).

Based on an initial review of Ballard's application for a Permanent Variance and Interim Order for the construction of the Suffolk County Outfall Tunnel in West Babylon, New York, OSHA has preliminarily determined that Ballard has proposed an alternative that would provide a workplace at least as safe and healthful as that provided by OSHA's existing standard.

II. The Variance Application

Pursuant to the requirements of OSHA's variance regulations, the applicant certifies that it provided employee representatives of affected workers with a copy of the variance application.[1] The applicant also certifies that it notified its workers of the variance application by posting, at prominent locations where it normally posts workplace notices, a summary of the application and information specifying where the workers can examine a copy of the application. In addition, the applicant informed its workers and their representatives of their rights to petition the Assistant Secretary of Labor for Occupational Safety and Health for a hearing on the variance application.

A. OSHA History of Approval of Nearly Identical Variance Requests

OSHA previously approved several nearly identical variances involving the same types of tunneling equipment used for similar projects. OSHA notes that it granted four subaqueous tunnel construction permanent variances from the same provisions of OSHA's compressed-air standard (29 CFR 1926.803(f)(1), (g)(1)(iii), and (g)(1)(xvii)) that are the subject of the present application: (1) Impregilo, Healy, Parsons, Joint Venture (IHP JV) for the completion of the Anacostia River Tunnel in Washington, DC, 80 FR 50652 (Aug. 20, 2015); (2) Traylor JV for the completion of the Blue Plains Tunnel in Washington, DC, 80 FR 16440 (March 27, 2015); (3) Tully/OHL USA Joint Venture for the completion of the New York Economic Development Corporation's New York Siphon Tunnel project, 79 FR 29809 (May 23, 2014); and (4) Salini-Impregilo Joint Venture in Washington, DC, 85 FR 27767 (May 11, 2020). The proposed alternate conditions in this notice are nearly identical to the alternate conditions of the previous Permanent Variances.[2] OSHA is not aware of any injuries or other safety issues that arose from work

[1] See the definition of ''Affected employee or worker'' in section VI. D.

[2] Most of the other subaqueous tunnel construction variances allowed further deviation from OSHA standards by permitting employee exposures above 50 p.s.i.g. based on the composition of the soil and the amount of water above the tunnel for various sections of those projects. The current proposed variance includes substantively the same safeguards as the variances that OSHA granted previously, even though employees will only be exposed to pressures up to 30 p.s.i.g.

performed under these conditions in accordance with the previous variances.

B. Variance From Paragraph (f)(1) of 29 CFR 1926.803, Requirement to Use OSHA Decompression Tables

OSHA's compressed-air standard for construction requires decompression according to the decompression tables in Appendix A of 29 CFR part 1926, subpart S (see 29 CFR 1926.803(f)(1)). As an alternative to the OSHA decompression tables, the applicant proposes to use newer decompression schedules (the 1992 French Decompression Tables), which rely on staged decompression, and to supplement breathing air used during decompression with air or oxygen (as appropriate).[3] The applicant asserts decompression protocols using the 1992 French Decompression Tables for air or oxygen as specified by the Suffolk County Outfall Tunnel-specific HOM are safer for tunnel workers than the decompression protocols specified in Appendix A of 29 CFR part 1926, subpart S. Accordingly, the applicant would commit to following the decompression procedures described in its HOM, which would require it to follow the 1992 French Decompression Tables to decompress compressed-air workers (CAWs) after they exit the hyperbaric conditions in the excavation working chamber.

Depending on the maximum working pressure and exposure times, the 1992 French Decompression Tables provide for air decompression with or without oxygen. Ballard asserts that oxygen decompression has many benefits, including (1) keeping the partial pressure of nitrogen in the lungs as low as possible; (2) maintaining appropriate levels of external pressure to reduce the formation of bubbles in the blood; (3) removing nitrogen from the lungs and arterial blood and increasing the rate of nitrogen elimination; (4) improving the quality of breathing during decompression stops to diminish worker fatigue and to prevent bone necrosis; (5) reducing decompression time by about 33 percent as compared to air decompression; and (6) reducing inflammation.

In addition, Ballard has stated that a physician certified in hyperbaric medicine will be required to manage the medical condition of CAWs during hyperbaric exposures and decompression. The project-specific HOM also requires a trained and experienced manlock attendant to be present during hyperbaric exposures and decompression. This manlock attendant, who will be a competent person with respect to hyperbaric systems, is to operate the hyperbaric system to ensure compliance with the specified decompression table. A intervention supervisor (competent person), who is trained in hyperbaric operations, procedures, and safety, directly oversees all hyperbaric interventions and ensures that staff follow the procedures delineated in the HOM or by the attending physician.

C. Variance From Paragraph (g)(1)(iii) of 29 CFR 1926.803, Automatically Regulated Continuous Decompression

The applicant is applying for a Permanent Variance from the OSHA standard at 29 CFR 1926.803(g)(1)(iii), which requires automatic controls to regulate decompression. As noted above, the applicant is committed to conducting the staged decompression according to the 1992 French Decompression Tables under the direct control of the trained manlock attendant and under the oversight of the hyperbaric supervisor.

Breathing air under hyperbaric conditions increases the amount of nitrogen gas dissolved in a CAW's tissues. The greater the hyperbaric pressure under these conditions and the more time spent under the increased pressure, the greater the amount of nitrogen gas dissolved in the tissues. When the pressure decreases during decompression, tissues release the dissolved nitrogen gas into the blood system, which then carries the nitrogen gas to the lungs for elimination through exhalation. Releasing hyperbaric pressure too rapidly during decompression can increase the size of the bubbles formed by nitrogen gas in the blood system, resulting in decompression illness (''DCI''), commonly referred to as ''the bends.'' This description of the etiology of DCI is consistent with current scientific theory and research on the issue.[4]

The 1992 French Decompression Tables proposed for use by the applicant provide for stops during worker decompression (*i.e.,* staged decompression) to control the release of nitrogen gas from tissues into the blood system. Studies show that staged decompression, in combination with other features of the 1992 French Decompression Tables such as the use of oxygen, result in a lower incidence of DCI than the use of automatically regulated continuous decompression.[5] In addition, the applicant asserts that staged decompression administered in accordance with its HOM is at least as effective as an automatic controller in regulating the decompression process because the HOM includes an intervention supervisor (a competent person experienced and trained in hyperbaric operations, procedures, and safety) who directly supervises all hyperbaric interventions and ensures that the manlock attendant, who is a competent person in the manual control of hyperbaric systems, follows the schedule specified in the decompression tables, including stops.

D. Variance From Paragraph (g)(1)(xvii) of 29 CFR 1926.803, Requirement of Special Decompression Chamber

The OSHA compressed-air standard for construction requires employers to use a special decompression chamber of sufficient size to accommodate all CAWs being decompressed at the end of the shift when total decompression time exceeds 75 minutes (see 29 CFR 1926.803(g)(1)(xvii)). Use of the special decompression chamber enables CAWs to move about and flex their joints to prevent neuromuscular problems during decompression.

[3] In 1992, the French Ministry of Labour replaced the 1974 French Decompression Tables with the 1992 French Decompression Tables, which differ from OSHA's decompression tables in Appendix A by using: (1) Staged decompression as opposed to continuous (linear) decompression; (2) decompression tables based on air or both air and pure oxygen; and (3) emergency tables when unexpected exposure times occur (up to 30 minutes above the maximum allowed working time). Source: J.C. Le Pechon, P. Barre, J.P. Baudi, F. Olivier, *Compressed Air Work—French Tables 1992—Operational Results.* JCLP Hyperbarie Paris, Centre Medical Subaquatique Interentreprise, Marseille: Communication a l'EUBS, pp. 1–5 (September 1996) (see Ex. OSHA–2012–0036–0005).

[4] See infra note 6, discussing a 1985 NIOSH report on DCI.

[5] See, *e.g.,* Eric Kindwall, *Compressed Air Tunneling and Caisson Work Decompression Procedures: Development, Problems, and Solutions,* 24(4) Undersea and Hyperbaric Medicine 337, 337–45 (1997). This article reported 60 treated cases of DCI among 4,168 exposures between 19 and 31 p.s.i.g. over a 51-week contract period, for a DCI incidence of 1.44% for the decompression tables specified by the OSHA standard. Dr. Kindwall notes that the use of automatically regulated continuous decompression in the Washington State safety standards for compressed-air work (from which OSHA derived its decompression tables) was at the insistence of contractors and the union, and against the advice of the expert who calculated the decompression table and recommended using staged decompression. Dr. Kindwall then states, ''Continuous decompression is inefficient and wasteful. For example, if the last stage from 4 p.s.i.g. . . . to the surface took 1h, at least half the time is spent at pressures less than 2 p.s.i.g. . . ., which provides less and less meaningful bubble suppression . . . .'' In addition, Dr. Kindwall addresses the continuous-decompression protocol in the OSHA compressed-air standard for construction, noting that ''[a]side from the tables for saturation diving to deep depths, no other widely used or officially approved diving decompression tables use straight line, continuous decompressions at varying rates. Stage decompression is usually the rule, since it is simpler to control.''

The applicant proposes that it be permitted to rely on the manlocks and staging chamber in lieu of adding a separate, special decompression chamber. Because only a few workers out of the entire crew are exposed to hyperbaric pressure, the manlocks (which, as noted earlier, connect directly to the working chamber) and the staging chamber are of sufficient size to accommodate all of the exposed workers during decompression. The applicant uses the existing manlocks, each of which adequately accommodates a three-member crew for this purpose when decompression lasts up to 75 minutes. Under Ballard's application, only two crew members would have to decompress at the same time. When decompression exceeds 75 minutes, crews can open the door connecting the two compartments in each manlock (during decompression stops) or exit the manlock and move into the staging chamber where additional space is available. The applicant asserts that this alternative arrangement is at least as effective as a special decompression chamber in that it has sufficient space for all the CAWs at the end of a shift and enables the CAWs to move about and flex their joints to prevent neuromuscular problems.

III. Agency Preliminary Determinations

After reviewing the proposed alternatives OSHA has preliminarily determined that collectively the applicant's proposed alternatives, subject to the conditions in the request and imposed by this Interim Order, provide measures that are as safe and healthful as those required by the cited OSHA standard addressed in section II of this document.

In addition, OSHA has preliminarily determined that each of the following alternatives are at least as effective as the specified OSHA requirements:

29 CFR 1926.803(f)(1), Requirement to Use OSHA Decompression Tables.

Ballard has proposed to implement equally effective alternative measures to the requirement in 29 CFR 1926.803(f)(1) for compliance with OSHA's decompression tables. The HOM specifies the procedures and personnel qualifications for performing work safely during the compression and decompression phases of interventions. The HOM also specifies the use of the 1992 French Decompression Tables. Depending on the maximum working pressure and exposure times during the interventions, these tables provide for decompression using air, pure oxygen, or a combination of air and oxygen. The decompression tables also include delays or stops for various time intervals at different pressure levels during the transition to atmospheric pressure (*i.e.,* staged decompression). In all cases, a physician certified in hyperbaric medicine will manage the medical condition of CAWs during decompression. In addition, a trained and experienced manlock attendant, experienced in recognizing decompression sickness or illnesses and injuries, will be present. Of key importance, a hyperbaric supervisor (competent person), trained in hyperbaric operations, procedures, and safety, will directly supervise all hyperbaric operations to ensure compliance with the procedures delineated in the project-specific HOM or by the attending physician.

As it did when granting the four previous variances to IHP JV, Traylor JV, Tully JV, and Salini-Impregilo, OSHA conducted a review of the scientific literature and concluded that the alternative decompression method (*i.e.,* the 1992 French Decompression Tables) Ballard proposes would be at least as safe as the decompression tables specified by OSHA when applied by trained medical personnel under the conditions that would be imposed by the proposed variance.

Some of the literature concluded that decompression performed in accordance with these tables resulted in a lower occurrence of DCI than decompression conducted in accordance with the decompression tables specified by the standard.[6] For example, H. L. Anderson studied the occurrence of DCI at maximum hyperbaric pressures ranging from 4 p.s.i.g. to 43 p.s.i.g. during construction of the Great Belt Tunnel in Denmark (1992–1996).[7] This project used the 1992 French Decompression Tables to decompress the workers during part of the construction. Anderson observed 6 DCI cases out of 7,220 decompression events, and reported that switching to the 1992 French Decompression tables reduced the DCI incidence to 0.08% compared to a previous incidence rate of 0.14%.

OSHA found no studies in which the DCI incidence reported for the 1992 French Decompression Tables were higher than the DCI incidence reported for the OSHA decompression tables.[8]

OSHA's experience with the previous four variances, which all incorporated nearly identical decompression plans and did not result in safety issues, also provides evidence that the alternative procedure as a whole is at least as effective for this type of tunneling project as compliance with OSHA's decompression tables. The experience of State Plans[9] that either granted variances (Nevada, Oregon and Washington)[10] or promulgated a standard (California)[11] for hyperbaric exposures occurring during similar subaqueous tunnel-construction work, provide additional evidence of the effectiveness of this alternative procedure.

29 CFR 1926.803(g)(1)(iii), Automatically Regulated Continuous Decompression

Ballard developed, and has proposed to implement, an equally effective alternative to 29 CFR 1926.803(g)(1)(iii), which requires the use of automatic controllers that continuously decrease pressure to achieve decompression in accordance with the tables specified by the standard. The applicant's alternative includes using the 1992 French Decompression Tables for guiding staged decompression to achieve lower occurrences of DCI, using a trained and competent attendant for implementing appropriate hyperbaric entry and exit procedures, and providing a competent hyperbaric supervisor and attending physician certified in hyperbaric medicine, to oversee all hyperbaric operations.

In reaching this preliminary conclusion, OSHA again notes the experience of previous, nearly identical

[6] In 1985, the National Institute for Occupational Safety and Health (NIOSH) published a report entitled ''Criteria for Interim Decompression Tables for Caisson and Tunnel Workers''; this report reviewed studies of DCI and other hyperbaric-related injuries resulting from use of OSHA's tables. This report is available on NIOSH's website: *http://www.cdc.gov/niosh/topics/decompression/default.html.*

[8] J.C. Le Péchon, P. Barre, J.P. Baud, F. Ollivier, *Compressed Air Work—French Tables 1992—Operational Results,* JCLP Hyperbarie Paris, Centre Medical Subaquatique Interentreprise, Marseille: Communication a l'EUBS, pp. 1–5 (September 1996) (see Ex. OSHA–2012–0036–0005).

[9] Under Section 18 of the OSH Act, Congress expressly provides that States and U.S. territories may adopt, with Federal approval, a plan for the development and enforcement of occupational safety and health standards. OSHA refers to such States and territories as ''State Plan States.'' Occupational safety and health standards developed by State Plan States must be at least as effective in providing safe and healthful employment and places of employment as the Federal standards. See 29 U.S.C. 667.

[10] These state variances are available in the docket for the 2015 Traylor JV variance: Exs. OSHA–2012–0035–0006 (Nevada), OSHA–2012–0035–0005 (Oregon), and OSHA–2012–0035–0004 (Washington).

[11] See California Code of Regulations, Title 8, Subchapter 7, Group 26, Article 154, available at *http://www.dir.ca.gov/title8/sb7g26a154.html.*

approved tunneling variances, the experiences of State Plan states, and a review of the literature and other information noted earlier.

29 CFR 1926.803(g)(1)(xvii), Requirement of Special Decompression Chamber

Ballard developed, and proposed to implement, an alternative that is at least as effective as the use of the special decompression chamber required by 29 CFR 1926.803(g)(1)(xvii). The EPBMTBM's manlock and excavation working chamber appear to satisfy most of the conditions of the special decompression chamber, including that they provide sufficient space for the maximum crew of three CAWs to stand up and move around. While the alternative does not indicate that their chambers would be able to safely accommodate decompression times up to 360 minutes, Ballard addressed this issue in correspondence with OSHA and explained how their process is at least as effective as OSHA's requirement, which was designed to accommodate a different process:

With the relatively low pressure expected during hyperbaric interventions, the decompression process with oxygen (French tables) proposed could never reach this [360 minute] duration. The maximum decompression duration at 30 psi (2.07 bar) is 121 minutes.

(Justin Costello email August 11, 2020) (OSHA–2019–0008–0003). Ballard later added that their decompression chamber is fully capable of operating for much longer than the necessary 121 minutes:

The manlock where decompression occurs is capable of continuous operation, 24 hours per day for multiple days at a time. Operators of the manlock change shifts at the control station.

(Justin Costello email November 25, 2020) (OSHA–2019–0008–0004). Therefore, again noting OSHA's previous experience with nearly identical variances including the same alternative, OSHA preliminarily determined that the EPBMTBM's manlock and working chamber function at least as effectively as the special decompression chamber required by the standard.

Pursuant to section 6(d) of the Occupational Safety and Health Act of 1970 (29 U.S.C. 655), and based on the record discussed above, the agency preliminarily finds that when the employer complies with the conditions of this Interim Order, the working conditions of the employer's workers would be at least as safe and healthful as if the employer complied with the working conditions specified by paragraphs 29 CFR 1926.803(f)(1), (g)(1)(iii), and (g)(1)(xvii).

IV. Grant of Interim Order, Proposal for Permanent Variance, and Request for Comment

OSHA announces the decision to grant an Interim Order allowing Ballard's CAWs to perform interventions in hyperbaric conditions not exceeding 30 p.s.i.g. during the Suffolk County Outfall Tunnel, subject to the conditions that follow in this document. This Interim Order will remain in effect until completion of the Suffolk County Outfall Tunnel or until the agency modifies or revokes the Interim Order or makes a decision on Ballard's application for a Permanent Variance. During the period starting with the publication of this notice until completion of the Suffolk County Outfall Tunnel, or until the agency modifies or revokes the Interim Order or makes a decision on its application for a Permanent Variance, the applicant is required to comply fully with the conditions of the Interim Order as an alternative to complying with the following requirements of 29 CFR 1926.803 (''the standard'') that:

1. Require the use of decompression values specified by the decompression tables in Appendix A of the compressed-air standard (29 CFR 1926.803(f)(1));
2. Require the use of automated operational controls (29 CFR 1926.803(g)(1)(iii)); and
3. Require the use of a special decompression chamber (29 CFR 1926.803(g)(1)(xvii)).

In order to avail itself of the Interim Order, Ballard must: (1) comply with the conditions listed in the Interim Order for the period starting with the grant of the Interim Order and ending with Ballard's completion of the Suffolk County Outfall Tunnel (or until the agency modifies or revokes the Interim Order or makes a decision on its application for a Permanent Variance); (2) comply fully with all other applicable provisions of 29 CFR part 1926; and (3) provide a copy of this **Federal Register** notice to all employees affected by the proposed conditions, including the affected employees of other employers, using the same means it used to inform these employees of its application for a Permanent Variance.

OSHA is also proposing that the same requirements (see above section IV, parts A through C) would apply to a Permanent Variance if OSHA ultimately issues one for this project. OSHA requests comment on those conditions as well as OSHA's preliminary determination that the specified alternatives and conditions would provide a workplace as safe and healthful as those required by the standard from which a variance is sought. After reviewing comments, OSHA will publish in the **Federal Register** the agency's final decision approving or rejecting the request for a Permanent Variance.

V. Description of the Specified Conditions of the Interim Order and the Application for a Permanent Variance

This section describes the alternative means of compliance with 29 CFR 1926.803(f)(1), (g)(1)(iii), and (g)(1)(xvii) and provides additional detail regarding the proposed conditions that form the basis of Ballard's application for an Interim Order and for a Permanent Variance. The conditions are listed in Section VI. For brevity, the discussion that follows refers only to the Permanent Variance, but the same conditions apply to the Interim Order.

Proposed Condition A: Scope

The scope of the proposed Permanent Variance would limit coverage to the work situations specified. Clearly defining the scope of the proposed Permanent Variance provides Ballard, Ballard's employees, potential future applicants, other stakeholders, the public, and OSHA with necessary information regarding the work situations in which the proposed Permanent Variance would apply. To the extent that Ballard exceeds the defined scope of this variance, it would be required to comply with OSHA's standards.

Pursuant to 29 CFR 1905.11, an employer (or class or group of employers) [12] may request a Permanent Variance for a specific workplace or workplaces. If OSHA approves a Permanent Variance, it would apply only to the specific employer(s) that submitted the application and only to the specific workplace or workplaces designated as part of the project. In this instance, if OSHA were to grant a Permanent Variance, it would apply to only the applicant, Ballard Marine Construction, and only to the Suffolk County Outfall Tunnel. As a result, it is important to understand that if OSHA were to grant Ballard a Permanent Variance, it would not apply to any other employers or projects the

[12] A class or group of employers (such as members of a trade alliance or association) may apply jointly for a Variance provided an authorized representative for each employer signs the application and the application identifies each employer's affected facilities.

applicant may undertake in the future. However, 29 CFR 1905.13 does contain provisions for future modification of Permanent Variances to add or include additional employers if future joint ventures are established.

Proposed Condition B: Duration

The Interim Order is only intended as a temporary measure pending OSHA's decision on the Permanent Variance, so this condition specifies the duration of the Order. If OSHA approves a Permanent Variance, it would specify the duration of the Permanent Variance as the remainder of the Suffolk County Outfall Tunnel.

Proposed Condition C: List of Abbreviations

Proposed condition C defines a number of abbreviations used in the proposed Permanent Variance. OSHA believes that defining these abbreviations serves to clarify and standardize their usage, thereby enhancing the applicant's and its employees' understanding of the conditions specified by the proposed Permanent Variance.

Proposed Condition D: Definitions

The proposed condition defines a series of terms, mostly technical terms, used in the proposed Permanent Variance to standardize and clarify their meaning. Defining these terms serves to enhance the applicant's and its employees' understanding of the conditions specified by the proposed Permanent Variance.

Proposed Condition E: Safety and Health Practices

This proposed condition requires the applicant to develop and submit to OSHA an HOM specific to the Suffolk County Outfall Tunnel at least six months before using the EPBMTBM for tunneling operations. The applicant must also submit, at least six months before using the EPBMTBM, proof that the EPBMTBM's hyperbaric chambers have been designed, fabricated, inspected, tested, marked, and stamped in accordance with the requirements of ASME PVHO–1.2019 (or the most recent edition of *Safety Standards for Pressure Vessels for Human Occupancy*). These requirements ensure that the applicant develops hyperbaric safety and health procedures suitable for the project.

The submission of the HOM to OSHA, which Ballard has already completed, enables OSHA to determine whether the safety and health instructions and measures Ballard specifies are appropriate to the field conditions of the tunnel (including expected geological conditions), conform to the conditions of the variance, and adequately protect the safety and health of the CAWs. It also facilitates OSHA's ability to ensure that the applicant is complying with these instructions and measures. The requirement for proof of compliance with ASME PVHO–1.2019 is intended to ensure that the equipment is structurally sound and capable of performing to protect the safety of the employees exposed to hyperbaric pressure.

Additionally, the proposed condition includes a series of related hazard prevention and control requirements and methods (*e.g.,* decompression tables, job hazard analyses (JHA), operations and inspections checklists, incident investigation, and recording and notification to OSHA of recordable hyperbaric injuries and illnesses) designed to ensure the continued effective functioning of the hyperbaric equipment and operating system.

Proposed Condition F: Communication

This proposed condition requires the applicant to develop and implement an effective system of information sharing and communication. Effective information sharing and communication are intended to ensure that affected workers receive updated information regarding any safety-related hazards and incidents, and corrective actions taken, prior to the start of each shift. The proposed condition also requires the applicant to ensure that reliable means of emergency communications are available and maintained for affected workers and support personnel during hyperbaric operations. Availability of such reliable means of communications would enable affected workers and support personnel to respond quickly and effectively to hazardous conditions or emergencies that may develop during EPBMTBM operations.

Proposed Condition G: Worker Qualification and Training

This proposed condition requires the applicant to develop and implement an effective qualification and training program for affected workers. The proposed condition specifies the factors that an affected worker must know to perform safely during hyperbaric operations, including how to enter, work in, and exit from hyperbaric conditions under both normal and emergency conditions. Having well-trained and qualified workers performing hyperbaric intervention work is intended to ensure that they recognize, and respond appropriately to, hyperbaric safety and health hazards. These qualification and training requirements enable affected workers to cope effectively with emergencies, as well as the discomfort and physiological effects of hyperbaric exposure, thereby preventing worker injury, illness, and fatalities.

Paragraph (2)(e) of this proposed condition requires the applicant to provide affected workers with information they can use to contact the appropriate healthcare professionals if the workers believe they are developing hyperbaric-related health effects. This requirement provides for early intervention and treatment of DCI and other health effects resulting from hyperbaric exposure, thereby reducing the potential severity of these effects.

Proposed Condition H: Inspections, Tests, and Accident Prevention

Proposed Condition H requires the applicant to develop, implement, and operate a program of frequent and regular inspections of the EPBMTBM's hyperbaric equipment and support systems, and associated work areas. This condition would help to ensure the safe operation and physical integrity of the equipment and work areas necessary to conduct hyperbaric operations. The condition would also enhance worker safety by reducing the risk of hyperbaric-related emergencies.

Paragraph (3) of this proposed condition requires the applicant to document tests, inspections, corrective actions, and repairs involving the EPBMTBM, and maintain these documents at the jobsite for the duration of the job. This requirement would provide the applicant with information needed to schedule tests and inspections to ensure the continued safe operation of the equipment and systems, and to determine that the actions taken to correct defects in hyperbaric equipment and systems were appropriate, prior to returning them to service.

Proposed Condition I: Compression and Decompression

This proposed condition would require the applicant to consult with the designated medical advisor regarding special compression or decompression procedures appropriate for any unacclimated CAW and then implement the procedures recommended by the medical consultant. This proposed provision would ensure that the applicant consults with the medical advisor, and involves the medical advisor in the evaluation, development, and implementation of compression or decompression protocols appropriate for any CAW requiring acclimation to the hyperbaric conditions encountered

during EPBMTBM operations. Accordingly, CAWs requiring acclimation would have an opportunity to acclimate prior to exposure to these hyperbaric conditions. OSHA believes this condition would prevent or reduce adverse reactions among CAWs to the effects of compression or decompression associated with the intervention work they perform in the EPBMTBM.

Proposed Condition J: Recordkeeping

Under OSHA's existing recordkeeping requirements in 29 CFR part 1904 regarding Recording and Reporting Occupational Injuries and Illnesses, Ballard must maintain a record of any recordable injury, illness, or fatality (as defined by 29 CFR part 1904) resulting from exposure of an employee to hyperbaric conditions by completing the OSHA's Form 301 Injury and Illness Incident Report and OSHA's Form 300 Log of Work-Related Injuries and Illnesses. The applicant did not seek a variance from this standard, and therefore must comply fully with those requirements.

Examples of important information to include on the OSHA's Form 301 Injury and Illness Incident Report (along with the corresponding question on the form) are:

Q14

- the task performed;
- the composition of the gas mixture (*e.g.,* air or oxygen);
- an estimate of the CAW's workload;
- the maximum working pressure;
- temperature in the work and decompression environments; and
- unusual occurrences, if any, during the task or decompression.

Q15

- time of symptom onset; and
- duration between decompression and onset of symptoms.

Q16

- type and duration of symptoms; and
- a medical summary of the illness or injury.

Q17

- duration of the hyperbaric intervention;
- possible contributing factors; and
- the number of prior interventions completed by the injured or ill CAW; and the pressure to which the CAW was exposed during those interventions.[13]

Proposed Condition J would add additional reporting responsibilities, beyond those already required by the OSHA standard. The applicant would be required to maintain records of specific factors associated with each hyperbaric intervention. The information gathered and recorded under this provision, in concert with the information provided under proposed Condition K (using OSHA's Form 301 Injury and Illness Incident Report to investigate and record hyperbaric recordable injuries as defined by 29 CFR 1904.4, 1904.7, 1904.8–.12), would enable the applicant and OSHA to assess the effectiveness of the Permanent Variance in preventing DCI and other hyperbaric-related effects.

Proposed Condition K: Notifications

Under the proposed condition, the applicant is required, within specified periods of time, to: (1) Notify OSHA of any recordable injury, illness, in-patient hospitalization, amputation, loss of an eye, or fatality that occurs as a result of hyperbaric exposures during EPBMTBM operations; (2) provide OSHA a copy of the hyperbaric exposures incident investigation report (using OSHA's Form 301 Injury and Illness Incident Report) of these events within 24 hours of the incident; (3) include on OSHA's Form 301 Injury and Illness Incident Report information on the hyperbaric conditions associated with the recordable injury or illness, the root-cause determination, and preventive and corrective actions identified and implemented; (4) provide the certification that affected workers were informed of the incident and the results of the incident investigation; (5) notify OSHA's Office of Technical Programs and Coordination Activities (OTPCA) and the Long Island New York OSHA Area Office (LIAO) within 15 working days should the applicant need to revise the HOM to accommodate changes in its compressed-air operations that affect Ballard's ability to comply with the conditions of the proposed Permanent Variance; and (6) provide OTPCA and the LIAO, at the end of the project, with a report evaluating the effectiveness of the decompression tables.

It should be noted that the requirement for completing and submitting the hyperbaric exposure-related (recordable) incident investigation report (OSHA's Form 301 Injury and Illness Incident Report) is more restrictive than the existing recordkeeping requirement of completing OSHA's Form 301 Injury and Illness Incident Report within 7 calendar days of the incident (1904.29(b)(3)). This modified, more stringent incident investigation and reporting requirement is restricted to intervention-related hyperbaric (recordable) incidents only. Providing rapid notification to OSHA is essential because time is a critical element in OSHA's ability to determine the continued effectiveness of the variance conditions in preventing hyperbaric incidents, and the applicant's identification and implementation of appropriate corrective and preventive actions.

Further, these notification requirements also enable the applicant, its employees, and OSHA to assess the effectiveness of the Permanent Variance in providing the requisite level of safety to the applicant's workers and, based on this assessment, whether to revise or revoke the conditions of the proposed Permanent Variance. Timely notification permits OSHA to take whatever action may be necessary and appropriate to prevent possible further injuries and illnesses. Providing notification to employees informs them of the precautions taken by the applicant to prevent similar incidents in the future.

Additionally, this proposed condition requires the applicant to notify OSHA if it ceases to do business, has a new address or location for the main office, or transfers the operations covered by the proposed Permanent Variance to a successor company. In addition, the condition specifies that the transfer of the Permanent Variance to a successor company must be approved by OSHA. These requirements allow OSHA to communicate effectively with the applicant regarding the status of the proposed Permanent Variance, and expedite the agency's administration and enforcement of the Permanent Variance. Stipulating that an applicant is required to have OSHA's approval to transfer a variance to a successor company provides assurance that the successor company has knowledge of, and will comply with, the conditions specified by proposed Permanent Variance, thereby ensuring the safety of workers involved in performing the operations covered by the proposed Permanent Variance.

VI. Specific Conditions of the Interim Order and the Proposed Permanent Variance

The following conditions apply to the Interim Order OSHA is granting to Ballard. These conditions specify the alternative means of compliance with the requirements of paragraphs 29 CFR 1926.803(f)(1), (g)(1)(iii), and (g)(1)(xvii). In addition, these conditions are specific to the alternative means of

[13] See 29 CFR 1904, Recording and Reporting Occupational Injuries and Illnesses *(http://www.osha.gov/pls/oshaweb/owadisp.show_document?p_table=STANDARDS&p_id=9631);* recordkeeping forms and instructions *(http://www.osha.gov/recordkeeping/RKform300pkg-fillable-enabled.pdf)*; and OSHA Recordkeeping Handbook *(http://www.osha.gov/recordkeeping/handbook/index.html)*.

compliance with the requirements of paragraphs 29 CFR 1926.803(f)(1), (g)(1)(iii), and (g)(1)(xvii) that OSHA is proposing for Ballard's Permanent Variance. To simplify the presentation of the conditions, OSHA generally refers only to the conditions of the proposed Permanent Variance, but the same conditions apply to the Interim Order except where otherwise noted.[14]

The conditions would apply with respect to all employees of Ballard exposed to hyperbaric conditions. These conditions are outlined in this Section:

Scope

The Interim Order applies, and the Permanent Variance would apply, only when Ballard stops the tunnel-boring work, pressurizes the working chamber, and the CAWs either enter the working chamber to perform an intervention (*i.e.,* inspect, maintain, or repair the mechanical-excavation components), or exit the working chamber after performing interventions.

The Interim Order and Proposed Variance apply only to work:

1. That occurs in conjunction with construction of the Suffolk County Outfall Tunnel, a tunnel constructed using advanced shielded mechanical-excavation techniques and involving operation of an EPBMTBM;

2. In the EPBMTBM's forward section (the excavation working chamber) and associated hyperbaric chambers used to pressurize and decompress employees entering and exiting the working chamber; and

3. Performed in compliance with all applicable provisions of 29 CFR part 1926 except for the requirements specified by 29 CFR 1926.803(f)(1), (g)(1)(iii), and (g)(1)(xvii).

Duration

The Interim Order granted to Ballard will remain in effect until OSHA modifies or revokes this Interim Order or grants Ballard's request for a Permanent Variance in accordance with 29 CFR 1905.13. The proposed Permanent Variance, if granted, would remain in effect until the completion of Ballard's Suffolk County Outfall Tunnel.

List of Abbreviations

Abbreviations used throughout this proposed Permanent Variance would include the following:

1. CAW—Compressed-air worker
2. CFR—Code of Federal Regulations
3. DCI—Decompression illness
4. DMT—Diver medical technician
5. EPBMTBM—Earth pressure balanced micro-tunnel boring machine
6. HOM—Hyperbaric operations manual
7. JHA—Job hazard analysis
8. OSHA—Occupational Safety and Health Administration
9. OTPCA—Office of Technical Programs and Coordination Activities

Definitions

The following definitions would apply to this proposed Permanent Variance. These definitions would supplement the definitions in Ballard's project-specific HOM.

1. *Affected employee or worker*—an employee or worker who is affected by the conditions of this proposed Permanent Variance, or any one of his or her authorized representatives. The term ''employee'' has the meaning defined by and used under the Occupational Safety and Health Act of 1970, 29 U.S.C. 651 *et seq.*

2. *Atmospheric pressure*—the pressure of air at sea level, generally 14.7 pounds per square inch absolute (p.s.i.a.), 1 atmosphere absolute, or 0 p.s.i.g.

3. *Compressed-air worker*—an individual who is specially trained and medically qualified to perform work in a pressurized environment while breathing air at pressures not exceeding 30 p.s.i.g.

4. *Competent person*—an individual who is capable of identifying existing and predictable hazards in the surroundings or working conditions that are unsanitary, hazardous, or dangerous to employees, and who has authorization to take prompt corrective measures to eliminate them.[15]

5. *Decompression illness*—an illness (also called decompression sickness or ''the bends'') caused by gas bubbles appearing in body compartments due to a reduction in ambient pressure. Examples of symptoms of decompression illness include, but are not limited to: Joint pain (also known as the ''bends'' for agonizing pain or the ''niggles'' for slight pain); areas of bone destruction (termed dysbaric osteonecrosis); skin disorders (such as cutis marmorata, which causes a pink marbling of the skin); spinal cord and brain disorders (such as stroke, paralysis, paresthesia, and bladder dysfunction); cardiopulmonary disorders, such as shortness of breath; and arterial gas embolism (gas bubbles in the arteries that block blood flow).[16]

Note: Health effects associated with hyperbaric intervention, but not considered symptoms of DCI, can include: Barotrauma (direct damage to air-containing cavities in the body such as ears, sinuses, and lungs); nitrogen narcosis (reversible alteration in consciousness that may occur in hyperbaric environments and is caused by the anesthetic effect of certain gases at high pressure); and oxygen toxicity (a central nervous system condition resulting from the harmful effects of breathing molecular oxygen (O_2) at elevated partial pressures).

6. *Diver Medical Technician*—member of the dive team who is experienced in first aid.

7. *Earth Pressure Balanced Micro-Tunnel Boring Machine*—the machinery used by Ballard to excavate the tunnel in the Suffolk County Outfall Tunnel Project in West Babylon, New York.

8. *Hot work*—any activity performed in a hazardous location that may introduce an ignition source into a potentially flammable atmosphere.[17]

9. *Hyperbaric*—at a higher pressure than atmospheric pressure.

10. *Hyperbaric intervention*—a term that describes the process of stopping the EPBMTBM and preparing and executing work under hyperbaric pressure in the working chamber for the purpose of inspecting, replacing, or repairing cutting tools and/or the cutterhead structure.

11. *Hyperbaric Operations Manual*—a detailed, project-specific health and safety plan developed and implemented by Ballard for working in compressed air during the Suffolk County Outfall Tunnel.

12. *Job hazard analysis*—an evaluation of tasks or operations to identify potential hazards and to determine the necessary controls.

13. *Manlock*—an enclosed space capable of pressurization, and used for compressing or decompressing any employee or material when either is passing into, or out of, a working chamber.

14. *Pressure*—a force acting on a unit area, usually expressed as pounds per square inch (p.s.i.).

15. *p.s.i.a.*—pounds per square inch absolute, or absolute pressure, is the sum of the atmospheric pressure and gauge pressure. At sea-level, atmospheric pressure is approximately 14.7 p.s.i.a. Adding 14.7 to a pressure expressed in units of p.s.i.g. will yield the absolute pressure, expressed as p.s.i.a.

16. *p.s.i.g.*—pounds per square inch gauge, a common unit of pressure;

[14] In these conditions, OSHA is using the future conditional form of the verb (*e.g.,* ''would''), which pertains to the application for a Permanent Variance (designated as ''Permanent Variance'') but the conditions are mandatory for purposes of the Interim Order.

[15] Adapted from 29 CFR 1926.32(f).

[16] *See* U.K. Health & Safety Executive, A Guide to the Work in Compressed-Air Regulations 1996, 69 (2002), *available at http://www.cdc.gov/niosh/docket/archive/pdfs/NIOSH-254/compReg1996.pdf (Appendix 10).*

[17] See also 29 CFR 1910.146(b).

pressure expressed as p.s.i.g. corresponds to pressure relative to atmospheric pressure. At sea-level, atmospheric pressure is approximately 14.7 p.s.i.a. Subtracting 14.7 from a pressure expressed in units of p.s.i.a. yields the gauge pressure, expressed as p.s.i.g. At sea level the gauge pressure is 0 p.s.i.g.

17. *Qualified person*—an individual who, by possession of a recognized degree, certificate, or professional standing, or who, by extensive knowledge, training, and experience, successfully demonstrates an ability to solve or resolve problems relating to the subject matter, the work, or the project.[18]

18. *Working chamber*—an enclosed space in the EPBMTBM in which CAWs perform interventions, and which is accessible only through a manlock.

Safety and Health Practices

1. Ballard would have to adhere to the project-specific HOM submitted to OSHA as part of the application (see OSHA–2019–0018–0002). The HOM provides the minimum requirements regarding protections from expected safety and health hazards (including anticipated geological conditions) and hyperbaric exposures during the tunnel-construction project.

2. Ballard would have to demonstrate that the EPBMTBM on the project is designed, fabricated, inspected, tested, marked, and stamped in accordance with the requirements of ASME PVHO–1.2019 (or most recent edition of *Safety Standards for Pressure Vessels for Human Occupancy*) for the EPBMTBM's hyperbaric chambers.

3. Ballard would have to implement the safety and health instructions included in the manufacturer's operations manuals for the EPBMTBM, and the safety and health instructions provided by the manufacturer for the operation of decompression equipment.

4. The decompression chamber must be capable of providing a minimum decompression duration of 121 minutes.

5. Ballard would have to ensure that air or oxygen is the only breathing gas in the working chamber.

6. Ballard would have to follow the 1992 French Decompression Tables for air or oxygen decompression as specified in the HOM; specifically, the extracted portions of the 1992 French Decompression tables titled, ''French Regulation Air Standard Tables.''

7. Ballard would have to equip manlocks used by employees with an air or oxygen delivery system, as specified by the HOM, for the project. Ballard would be required not to store in the tunnel any oxygen or other compressed gases used in conjunction with hyperbaric work.

8. Workers performing hot work under hyperbaric conditions would have to use flame-retardant personal protective equipment and clothing.

9. In hyperbaric work areas, Ballard would have to maintain an adequate fire-suppression system approved for hyperbaric work areas.

10. Ballard would have to develop and implement one or more JHA(s) for work in the hyperbaric work areas, and review, periodically and as necessary (*e.g.,* after making changes to a planned intervention that affects its operation), the contents of the JHAs with affected employees. The JHAs would have to include all the job functions that the risk assessment [19] indicates are essential to prevent injury or illness.

11. A qualified person must perform a post-intervention physical assessment of each CAW for signs and symptoms of decompression illness, barotrauma, nitrogen narcosis, oxygen toxicity, or other health effects associated with work in compressed air for each hyperbaric intervention.

12. Ballard would have to develop a set of checklists to guide compressed-air work and ensure that employees follow the procedures required by the proposed Permanent Variance and this Interim Order (including all procedures required by the HOM approved by OSHA for the project, which this proposed Permanent Variance would incorporate by reference). The checklists would have to include all steps and equipment functions that the risk assessment indicates are essential to prevent injury or illness during compressed-air work.

Ballard would have to ensure that the safety and health provisions of this project-specific HOM adequately protect the workers of all contractors and subcontractors involved in hyperbaric operations for the project to which the HOM applies.

Communication

Ballard would have to:

1. Prior to beginning each shift, implement a system that informs workers exposed to hyperbaric conditions of any hazardous occurrences or conditions that might affect their safety, including hyperbaric incidents, gas releases, equipment failures, earth or rock slides, cave-ins, flooding, fires, or explosions.

2. Provide a power-assisted means of communication among affected workers and support personnel in hyperbaric conditions where unassisted voice communication is inadequate.

(a) Use an independent power supply for powered communication systems, and these systems would have to operate such that use or disruption of any one phone or signal location will not disrupt the operation of the system from any other location.

(b) Test communication systems at the start of each shift and as necessary thereafter during each shift to ensure proper operation.

Worker Qualifications and Training

Ballard would have to:

1. Ensure that each affected worker receives effective training on how to safely enter, work in, exit from, and undertake emergency evacuation or rescue from, hyperbaric conditions, and document this training.

2. Provide effective instruction on hyperbaric conditions, before beginning hyperbaric operations, to each worker who performs work, or controls the exposure of others, and document this instruction. The instruction would need to include:

(a) The physics and physiology of hyperbaric work;

(b) Recognition of pressure-related injuries;

(c) Information on the causes and recognition of the signs and symptoms associated with decompression illness, and other hyperbaric intervention-related health effects (*e.g.,* barotrauma, nitrogen narcosis, and oxygen toxicity);

(d) How to avoid discomfort during compression and decompression;

(e) Information the workers can use to contact the appropriate healthcare professionals should the workers have concerns that they may be experiencing adverse health effects from hyperbaric exposure; and

(f) Procedures and requirements applicable to the employee in the project-specific HOM.

3. Repeat the instruction specified in paragraph (G)(2) of this proposed condition periodically and as necessary (*e.g.,* after making changes to its hyperbaric operations).

4. When conducting training for its hyperbaric workers, make this training available to OSHA personnel and notify the OTPCA at OSHA's national office and OSHA's nearest affected Area Office before the training takes place.

Inspections, Tests, and Accident Prevention

1. Ballard would have to initiate and maintain a program of frequent and

[18] Adapted from 29 CFR 1926.32(m).

[19] See ANSI/AIHA Z10–2012, American National Standard for Occupational Health and Safety Management Systems, for reference.

regular inspections of the EPBMTBM's hyperbaric equipment and support systems (such as temperature control, illumination, ventilation, and fire-prevention and fire-suppression systems), and hyperbaric work areas, as required under 29 CFR 1926.20(b)(2), including:

(a) Developing a set of checklists to be used by a competent person in conducting weekly inspections of hyperbaric equipment and work areas; and

(b) Ensuring that a competent person conducts daily visual checks and weekly inspections of the EPBMTBM.

2. Remove from service any equipment that constitutes a safety hazard until it corrects the hazardous condition and has the correction approved by a qualified person.

3. Ballard would have to maintain records of all tests and inspections of the EPBMTBM, as well as associated corrective actions and repairs, at the job site for the duration of the job.

Compression and Decompression

Ballard would have to consult with its attending physician concerning the need for special compression or decompression exposures appropriate for CAWs not acclimated to hyperbaric exposure.

Recordkeeping

In addition to completing OSHA's Form 301 Injury and Illness Incident Report and OSHA's Form 300 Log of Work-Related Injuries and Illnesses, Ballard would have to maintain records of:

1. The date, times (*e.g.,* time compression started, time spent compressing, time performing intervention, time spent decompressing), and pressure for each hyperbaric intervention.

2. The names of all supervisors and DMTs involved for each intervention.

3. The name of each individual worker exposed to hyperbaric pressure and the decompression protocols and results for each worker.

4. The total number of interventions and the amount of hyperbaric work time at each pressure.

5. The results of the post-intervention physical assessment of each CAW for signs and symptoms of decompression illness, barotrauma, nitrogen narcosis, oxygen toxicity, or other health effects associated with work in compressed air for each hyperbaric intervention.

Notifications

1. To assist OSHA in administering the conditions specified herein, Ballard would have to:

(a) Notify the OTPCA and the LIAO of any recordable injury, illness, in-patient hospitalization, amputation, loss of an eye, or fatality that occurs as a result of hyperbaric exposures during EPBMTBM operations, including those that do not require recompression treatment (*e.g.,* nitrogen narcosis, oxygen toxicity, barotrauma), but still meet the recordable injury or illness criteria of 29 CFR 1904. The notification would have to be made within 8 hours of the incident or 8 hours after becoming aware of a recordable injury, illness, or fatality; a copy of the incident investigation (OSHA's Form 301 Injury and Illness Incident Report) must be submitted to OSHA within 24 hours of the incident or 24 hours after becoming aware of a recordable injury, illness, or fatality. In addition to the information required by OSHA's Form 301 Injury and Illness Incident Report, the incident-investigation report would have to include a root-cause determination, and the preventive and corrective actions identified and implemented.

(b) Provide certification to the LIAO within 15 working days of the incident that Ballard informed affected workers of the incident and the results of the incident investigation (including the root-cause determination as well as the preventive and corrective actions identified and implemented).

(c) Notify the OTPCA and the LIAO within 15 working days and in writing, of any change in the compressed-air operations that affects Ballard's ability to comply with the proposed conditions specified herein.

(d) Upon completion of the Suffolk County Outfall Tunnel, evaluate the effectiveness of the decompression tables used throughout the project, and provide a written report of this evaluation to the OTPCA and the LIAO.

Note: The evaluation report would have to contain summaries of (1) the number, dates, durations, and pressures of the hyperbaric interventions completed; (2) decompression protocols implemented (including composition of gas mixtures, air, and/or oxygen), and the results achieved; (3) the total number of interventions and the number of hyperbaric incidents (decompression illnesses and/or health effects associated with hyperbaric interventions as recorded on OSHA's Form 301 Injury and Illness Incident Report and OSHA's Form 300 Log of Work-Related Injuries and Illnesses, and relevant medical diagnoses, and treating physicians' opinions); and (4) root causes of any hyperbaric incidents, and preventive and corrective actions identified and implemented.

(e) To assist OSHA in administering the proposed conditions specified herein, inform the OTPCA and the LIAO as soon as possible, but no later than seven (7) days, after it has knowledge that it will:

(i) Cease doing business;

(ii) Change the location and address of the main office for managing the tunneling operations specified herein; or

(iii) Transfer the operations specified herein to a successor company.

(f) Notify all affected employees of this proposed Permanent Variance by the same means required to inform them of its application for a Variance.

2. OSHA would have to approve the transfer of the proposed Permanent Variance to a successor company.

VII. Authority and Signature

Loren Sweatt, Principal Deputy Assistant Secretary of Labor for Occupational Safety and Health, 200 Constitution Avenue NW, Washington, DC 20210, authorized the preparation of this notice. Accordingly, the agency is issuing this notice pursuant to Section 29 U.S.C. 655(6)(d), Secretary of Labor's Order No. 8–2020 (85 FR 58393; Sept. 18, 2020), and 29 CFR 1905.11.

Signed at Washington, DC, on January 13, 2021.

Loren Sweatt,

Principal Deputy Assistant Secretary of Labor for Occupational Safety and Health.

BILLING CODE 4510–26–P

OFFICE OF MANAGEMENT AND BUDGET

Recommendations From the Metropolitan and Micropolitan Statistical Area Standards Review Committee to the Office of Management and Budget Concerning Changes to the 2010 Standards for Delineating Metropolitan and Micropolitan Statistical Areas

AGENCY: Executive Office of the President, Office of Management and Budget.

ACTION: Notice and request for comment.

SUMMARY: The Office of Management and Budget (OMB) requests public comment on the recommendations it has received from the Metropolitan and Micropolitan Statistical Area Standards Review Committee for changes to OMB's metropolitan and micropolitan statistical area standards. These standards determine the procedures for delineating and updating the statistical areas as new data become available, and responses to this request will be

carefully considered by OMB in establishing revised standards.

DATES: Comments must be submitted in writing. To ensure consideration of comments, they must be received no later than 60 days from the publication of this notice. Because of delays in the receipt of regular mail related to security screening, respondents are encouraged to send comments electronically (see **ADDRESSES**, below).

ADDRESSES: Comments may be sent electronically via *www.regulations.gov*—a Federal E-Government website that allows the public to find, review, and submit comments on documents that agencies have published in the **Federal Register** and that are open for comment. Simply type ''OMB–2021–0001'' (including quotation marks) in the Comment or Submission search box, click ''Go,'' and follow the instructions for submitting comments. Comments received by the date specified above will be included as part of the official record.

Comments submitted in response to this notice may be made available to the public. For this reason, please do not include in your comments information of a confidential nature, such as sensitive personal or proprietary information. If you send an email comment, your email address will be automatically captured and included as part of the comment that is placed in the public docket. Please note that responses to this public comment request containing any routine notice about the confidentiality of the communication will be treated as public comments that may be made available to the public notwithstanding the inclusion of the routine notice.

Electronic Availability: This notice is available on the internet on the OMB website at *https://www.whitehouse.gov/omb/.* **Federal Register** notices are also available electronically at *https://www.federalregister.gov/.*

FOR FURTHER INFORMATION CONTACT: James D. Fitzsimmons, Chair, Metropolitan and Micropolitan Statistical Area Standards Review Committee, telephone (301) 763–1465; or Email *statistical_directives@omb.eop.gov.*

SUPPLEMENTARY INFORMATION:

Outline of Notice

1. Background

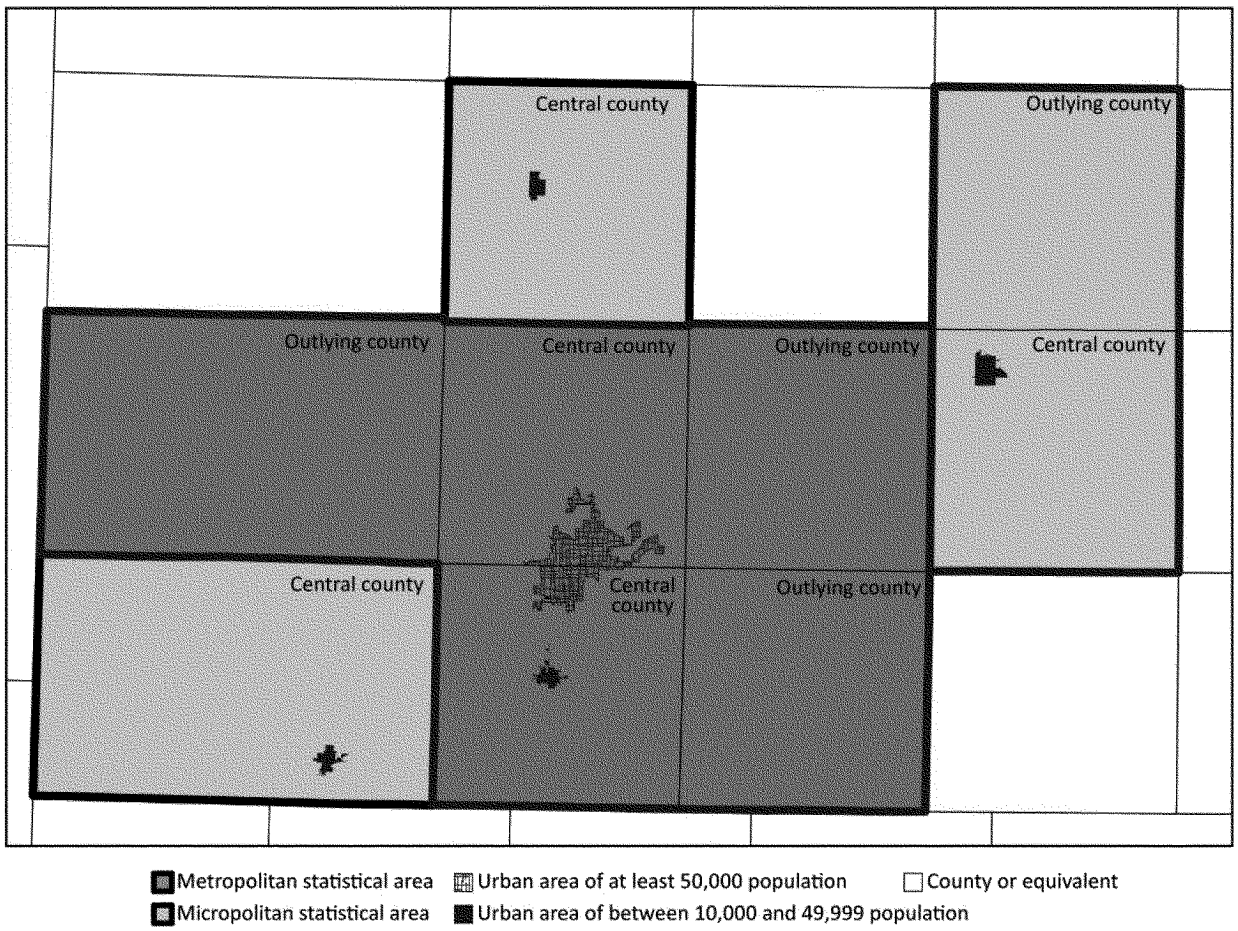
The metropolitan area program has provided standard statistical area delineations for approximately 70 years. In the 1940s, it became clear that the value of statistics produced by Federal agencies would be greatly enhanced if agencies used a single set of geographic delineations for the Nation's largest centers of population and activity. OMB's predecessor, the Bureau of the Budget, led the effort to develop what were then called ''standard metropolitan areas'' in time for their use in 1950 census publications. Since then, comparable data products for metropolitan areas have been available.

The general concept of a metropolitan statistical area is that of an area containing a large population nucleus and adjacent communities that have a high degree of integration with that nucleus. The concept of a micropolitan statistical area closely parallels that of the metropolitan statistical area, but a micropolitan statistical area features a smaller nucleus.

As currently operationalized, a metropolitan statistical area must contain a Census Bureau-delineated urban area with a population of 50,000 or more, while a micropolitan statistical area must contain a Census Bureau-delineated urban area with a population of 10,000 to 49,999. (Areas delineated in annual updates based on Census Bureau place population estimates are excepted from this requirement until the following decade.)

Both metropolitan and micropolitan statistical areas are composed of entire counties (Figure 1). ''Central counties'' are those that have substantial population residing in the largest urban area of the metropolitan or micropolitan statistical area. ''Outlying counties'' qualify based on having sufficient commuting with the central county or counties of the area. Counties that do not fall within metropolitan or micropolitan statistical areas are termed ''outside core based statistical area.''

Figure 1. Representative Metropolitan and Micropolitan Statistical Areas with Urban Areas



The purpose of these statistical areas is unchanged from when standard metropolitan areas were first delineated: The classification provides a nationally consistent set of delineations for collecting, tabulating, and publishing Federal statistics for geographic areas.

OMB establishes and maintains these areas solely for statistical purposes. *In reviewing and revising these areas, OMB does not take into account or attempt to anticipate any public or private sector nonstatistical uses that may be made of the delineations. These areas are not designed to serve as a general-purpose geographic framework applicable for nonstatistical activities or for use in program funding formulas.*

2. Review Process

Periodic review of the standards is necessary to ensure their continued usefulness and relevance. OMB reviews the statistical area standards and, if warranted, revises them prior to their application to new decennial census data. The current review of the metropolitan and micropolitan statistical area standards is the seventh such review. In 2018, OMB charged the Metropolitan and Micropolitan Statistical Area Standards Review Committee with examining the 2010 metropolitan and micropolitan statistical area standards and providing recommendations on the standards scheduled to be issued no later than December 2020. Agencies represented on the review committee include the U.S. Census Bureau (Chair), Bureau of Economic Analysis, Bureau of Justice Statistics, Bureau of Labor Statistics, Bureau of Transportation Statistics, Economic Research Service, National Center for Health Statistics, Statistics of Income, and *ex officio,* OMB. The Census Bureau provided research support to the committee.

This notice is the first of two anticipated notices related to the review of the 2010 standards. After OMB considers the recommendations of the review committee and the comments received through this notice, any revisions to the standards will be announced in a final notice.

3. Overview of Recommendations From the Metropolitan and Micropolitan Statistical Area Standards Review Committee

The committee noted that the 2010 standards have served the Federal statistical community well over the past decade. There are aspects of the standards, however, that require evaluation in light of experiences from the implementation of the 2010 standards and continuing change in U.S. population and activity patterns.

The committee made the following recommendations in their report to OMB, available as a supplemental document to this Notice at *www.regulations.gov:*

(1) The minimum urban area population to qualify a metropolitan statistical area should be increased from 50,000 to 100,000 (see Appendix, Part A: Table 1 for a list of current metropolitan statistical areas likely to be among those that would be affected by this recommendation).

(2) The delineation of New England city and town areas (NECTAs), NECTA

divisions, and combined NECTAs should be discontinued.

(3) Research should be undertaken on an additional, territorially exhaustive classification that covers all of the United States and Puerto Rico.

(4) The first annual delineation update of the coming decade should be combined with the decennial-based delineations.

(5) OMB should make publicly available a schedule for updates to the core based statistical areas (see proposed update schedule below).

(6) OMB should continue use of American Community Survey commuting data in measurement of intercounty connectivity, though changing societal and economic trends may warrant considering changes in the 2030 standards.

Under the recommendations of the committee, OMB would release three different types of updates, subject to the proposed standards.

(1) Annual Updates—These updates would address qualification of new metropolitan and micropolitan statistical areas and typically would affect a small number of counties. (In some years, there may be no updates warranted by the data.)

(2) Five-Year (''mid-decade'') Update—This broader update would include: Qualification of metropolitan and micropolitan statistical areas, qualification of outlying counties, merging of adjacent metropolitan or micropolitan statistical areas, qualification of principal cities, categorization of metropolitan and micropolitan statistical areas, qualification of metropolitan divisions, qualification of combined statistical areas, and titling of metropolitan and micropolitan statistical areas, metropolitan divisions, and combined statistical areas.

(3) Decennial Delineation—The initial re-delineation following adoption of revised standards would include all of the changes listed for the five-year update, plus the qualification of central counties.

The schedule for these updates as described in the attached proposed standards is as follows:

Update type	Release date
Decennial Delineation	June 2023.
Annual Update	December 2024.
Annual Update	December 2025.
Annual Update	December 2026.
Annual Update	December 2027.
Five-Year Update	December 2028.
Annual Update	December 2029.

4. Issues for Comment

OMB is seeking comments on the specific recommendations of the committee for revising the 2010 standards and their potential effects on the statistical area delineations (see Section 3 above). Comments are also sought on any other aspect of the current 2010 Standards that are of interest to reviewers, including topics such as commuting thresholds, alternative sources of data, stakeholder engagement, and procedures for OMB dissemination of updates to the delineations, as well as editorial suggestions to help improve the clarity of the standards.

Dominic J. Mancini,

Deputy Administrator.

BILLING CODE 3110–01–P

NUCLEAR REGULATORY COMMISSION

[NRC–2020–0153]

Updated Aging Management Criteria for Reactor Vessel Internal Components for Pressurized-Water Reactors

AGENCY: Nuclear Regulatory Commission.

ACTION: Interim staff guidance; issuance.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is issuing Interim Staff Guidance (ISG) SLR–ISG–2021–01–PWRVI, ''Updated Aging Management Criteria for Reactor Vessel Internal Components for Pressurized-Water Reactors.'' This ISG updates the aging management criteria for pressurized-water reactor (PWR) vessel internals components in the NRC's subsequent license renewal (SLR) guidance documents. Specifically, the ISG revises guidance contained in NUREG–2191, ''Generic Aging Lessons Learned for Subsequent License Renewal (GALL–SLR) Report,'' and NUREG–2192, ''Standard Review Plan for Review of Subsequent License Renewal Applications for Nuclear Power Plants.'' This ISG is intended to facilitate preparation of SLR applications by clarifying existing guidance for aging management and adding new guidance, which also will facilitate the NRC staff's review of SLR applications.

DATES: This guidance is effective on February 18, 2021.

ADDRESSES: Please refer to Docket ID NRC–2020–0153 when contacting the NRC about the availability of information regarding this document. You may obtain publicly available information related to this document using any of the following methods:

- *Federal Rulemaking Website:* Go to *https://www.regulations.gov* and search for Docket ID NRC–2020–0153. Address questions about Docket IDs in *Regulations.gov* to Jennifer Borges; telephone: 301–287–9127; email: *Jennifer.Borges@nrc.gov.* For technical questions, contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.
- *NRC's Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly available documents online in the ADAMS Public Documents collection at *https://www.nrc.gov/reading-rm/adams.html.* To begin the search, select ''Begin Web-based ADAMS Search.'' For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1–800–397–4209, 301–415–4737, or by email to *pdr.resource@nrc.gov.* For the convenience of the reader, instructions about obtaining materials referenced in this document are provided in the ''Availability of Documents'' section.
- *Attention:* The PDR, where you may examine and order copies of public documents, is currently closed. You may submit your request to the PDR via email at *pdr.resource@nrc.gov* or call 1–800–397–4209 or 301–415–4737, between 8:00 a.m. and 4:00 p.m. (EST), Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: Jeffrey Mitchell, Office of Nuclear Reactor Regulation, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001, telephone: 301–415–0833; email: *jeffrey.mitchell2@nrc.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

On August 3, 2020 (85 FR 46735), the staff requested public comments on draft SLR–ISG–PWRVI–2020–XX, ''Updated Aging Management Criteria for Reactor Vessel Internal Components for Pressurized-Water Reactors.'' The NRC received comments from the Electric Power Research Institute, Materials Reliability Program (EPRI MRP) by letter dated September 1, 2020 (ADAMS Accession No. ML20245E539), and from the Nuclear Energy Institute by letter dated September 2, 2020 (ADAMS Accession No. ML20246G654). No other comments were submitted. The NRC staff considered those comments in developing the final version of the ISG. The staff's responses to the comments are provided in

Appendix H, ''Disposition of Public Comments,'' of the final ISG.

This ISG updates NUREG–2191, ''Generic Aging Lessons Learned for Subsequent License Renewal (GALL–SLR) Report,'' and NUREG–2192, ''Standard Review Plan for Review of Subsequent License Renewal Applications for Nuclear Power Plants.'' NUREG–2191 and NUREG–2192 were published in July 2017, and a full review and revision to these documents is not scheduled to be performed for several years. The staff has reviewed the first three subsequent license renewal applications (SLRAs) that were based on the above guidance documents. During these reviews, the staff and applicants identified improvements to the guidance that would assist in preparing and reviewing future SLRAs more effectively and efficiently. This ISG provides an interim update to NUREG–2191 and NUREG–2192 to implement these improvements.

This ISG is not intended for standalone use. It provides revisions to NUREG–2191 and NUREG–2192 sections and tables that supersede the content in the NUREGs and is intended to be used within the context of the NUREGs. The revisions captured in this ISG include:

- Updates to GALL–SLR Report aging management program XI.M16A, ''PWR Vessel Internals'';
- changes to aging management review items in NUREG–2191 tables and corresponding summary tables in NUREG–2192;
- new aging management review items in NUREG–2191 tables and corresponding summary tables in NUREG–2192;
- changes to NUREG–2192 ''further evaluation'' guidance sections;
- updates to references listed in affected NUREG–2191 sections; and
- editorial corrections to relevant sections.

II. Availability of Documents

The documents identified in the following table are available to interested persons in ADAMS, as indicated.

Document	ADAMS accession No.
NUREG–2191, ''Generic Aging Lessons Learned for Subsequent License Renewal (GALL–SLR) Report''	ML16274A389 (Vol. 1) ML16274A399 (Vol. 2).
NUREG–2192, ''Standard Review Plan for Review of Subsequent License Renewal Applications for Nuclear Power Plants''.	ML16274A402.
Draft SLR–ISG–PWRVI–2020–XX, ''Updated Aging Management Criteria for Reactor Vessel Internal Components for Pressurized-Water Reactors''.	ML20156A343.
Final SLR–ISG–2021–01–PWRVI, ''Updated Aging Management Criteria for Reactor Vessel Internal Components for Pressurized-Water Reactors''.	ML20217L203.
March 28, 2019, Summary of Category 2 Public Meeting on Lessons Learned from the Review of the First Subsequent License Renewal Applications.	ML19112A206.
Summary of December 12, 2019, Category 2 Public Meeting on Lessons Learned from the Review of the First Subsequent License Renewal Applications.	ML20016A347.
February 20, 2020, Summary of Category 2 Public Meeting on Lessons Learned from the Review of the First Subsequent License Renewal Applications.	ML20076E074.
Summary of March 25, 2020 Meeting with Industry Related to Revisions to Subsequent License Renewal Guidance Documents.	ML20107F702.
Summary of April 3, 2020, Meeting with Industry Regarding Changes to Subsequent License Renewal Guidance Documents.	ML20107F733.
Summary of April 7, 2020, Meeting with Industry Regarding Revisions to the Subsequent License Renewal Guidance Documents.	ML20107F699.
Comment Letter (1) of Christopher Koehler and Brian Burgos, on behalf of the Electric Power Research Institute, Subject: ''Industry Comments to Draft Interim Staff Guidance (ISG)–SLR–ISG–PWRVI–2020–XX''.	ML20245E539.
Comment Letter (2) of Peter W. Kissinger, on behalf of Nuclear Energy Institute, Subject: ''Comments on the proposed changes to subsequent license renewal document SLR–ISG–PWRVI–2020–XX''.	ML20246G654.

III. Backfit Discussion

This ISG intends to revise guidance for the NRC staff reviewing SLRAs and for prospective applicants in preparing SLRAs. Issuance of this ISG does not constitute a backfit as defined in section 50.109(a)(1) of title 10 of the *Code of Federal Regulations* (10 CFR) and is not otherwise inconsistent with the issue finality provisions in 10 CFR part 52. As discussed in the ''Backfitting'' section of the final ISG, the ISG positions do not constitute backfitting inasmuch as the ISG is guidance directed to the NRC staff with respect to its regulatory responsibilities and to applicants who choose to follow the guidance. Applicants and potential applicants are not, with certain exceptions, the subject of either the backfit rule or any issue finality provisions under 10 CFR part 52. The NRC staff has no intention to impose the ISG positions on existing nuclear power plant licensees either now or in the future (absent a voluntary request for a change from the licensee).

IV. Congressional Review Act

This ISG is a rule as defined in the Congressional Review Act (5 U.S.C. 801–808). However, the Office of Management and Budget has not found it to be a major rule as defined in the Congressional Review Act.

Dated: January 13, 2021.

For the Nuclear Regulatory Commission.

Robert Caldwell,

Deputy Director, Division of New and Renewed Licenses, Office of Nuclear Reactor Regulation.

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

[NRC–2020–0279]

Application and Testing of Safety-Related Diesel Generators in Nuclear Power Plants

AGENCY: Nuclear Regulatory Commission.

ACTION: Draft regulatory guide; request for comment.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is issuing for public comment draft regulatory guide (DG), DG–1303, ''Application and Testing of Safety-Related Diesel Generators in Nuclear Power.'' This draft guide is proposed revision 5 of Regularity Guide (RG) 1.9. DG–1303 provides updated guidance that the staff of the NRC considers acceptable to demonstrate

compliance with the NRC regulations for safety-related alternating current (AC) power supplies intended for use as onsite emergency power sources in nuclear power plants. This revision of RG 1.9 would endorse, with supplements and clarifications, Institute of Electrical and Electronics Engineers (IEEE) Std 387–2017, ''IEEE Standard for Criteria for Diesel Generator Units Applied as Standby Power Supplies for Nuclear Power Generating Stations'' and IEEE Std 2420–2019, ''IEEE Standard for Combustion Turbine Generator Units Applied as Standby Power Supplies for Nuclear Power Generating Stations.'' This guidance would help ensure that the standby emergency power supplies are qualified, have sufficient capacity, and have the necessary reliability and availability for design-basis events.

DATES: Submit comments by February 18, 2021. Comments received after this date will be considered if it is practical to do so, but the NRC is able to ensure consideration only for comments received on or before this date. Although a time limit is given, comments and suggestions in connection with items for inclusion in guides currently being developed or improvements in all published guides are encouraged at any time.

ADDRESSES: You may submit comments by any of the following methods; however, the NRC encourages electronic comment submission through the Federal Rulemaking website:

- *Federal Rulemaking website:* Go to *https://www.regulations.gov* and search for Docket ID NRC–2020–0279. Address questions about Docket IDs in *Regulations.gov* to Jennifer Borges; telephone: 301–287–9127; email: *Jennifer.Borges@nrc.gov.* For technical questions, contact the individuals listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.
- *Mail comments to:* Office of Administration, Mail Stop: TWFN–7–A60M, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001, ATTN: Program Management, Announcements and Editing Staff.

For additional direction on accessing information and submitting comments, see ''Obtaining Information and Submitting Comments'' in the **SUPPLEMENTARY INFORMATION** section of this document.

FOR FURTHER INFORMATION CONTACT: Lilianna Ramadan, telephone: 301–415–2463, email: *Liliana.Ramadan@nrc.gov,* and Stanley Gardocki, telephone: 301–415–1067, email: *Stanley.Gardocki@nrc.gov.* Both are staff of the Office of Nuclear Regulatory Research, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001.

SUPPLEMENTARY INFORMATION:

I. Obtaining Information and Submitting Comments

A. Obtaining Information

Please refer to Docket ID NRC–2020–0279 when contacting the NRC about the availability of information regarding this action. You may obtain publicly available information related to this action, by any of the following methods:

- *Federal Rulemaking Website:* Go to *https://www.regulations.gov* and search for Docket ID NRC–2020–0279.
- *NRC's Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly available documents online in the ADAMS Public Documents collection at *https://www.nrc.gov/reading-rm/adams.html.* To begin the search, select ''Begin Web-based ADAMS Search.'' For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1–800–397–4209, 301–415–4737, or by email to *pdr.resource@nrc.gov.*
- *Attention:* The PDR, where you may examine and order copies of public documents, is currently closed. You may submit your request to the PDR via email at *pdr.resource@nrc.gov* or call 1–800–397–4209 or 301–415–4737, between 8:00 a.m. and 4:00 p.m. (EST), Monday through Friday, except Federal holidays.

B. Submitting Comments

The NRC encourages electronic comment submission through the Federal Rulemaking website (*https://www.regulations.gov*). Please include Docket ID NRC–2020–0279 in your comment submission.

The NRC cautions you not to include identifying or contact information that you do not want to be publicly disclosed in your comment submission. The NRC posts all comment submissions at *https://www.regulations.gov/* as well as enters the comment submissions into ADAMS. The NRC does not routinely edit comment submissions to remove identifying or contact information.

If you are requesting or aggregating comments from other persons for submission to the NRC, then you should inform those persons not to include identifying or contact information that they do not want to be publicly disclosed in their comment submission. Your request should state that the NRC does not routinely edit comment submissions to remove such information before making the comment submissions available to the public or entering the comment submissions into ADAMS.

II. Additional Information

The NRC is issuing for public comment a draft regulatory guide in the NRC's ''Regulatory Guide'' series. This series was developed to describe methods that are acceptable to the NRC staff for implementing specific parts of the NRC's regulations, to explain techniques that the staff uses in evaluating specific issues or postulated events, and to describe information that the staff needs in its review of applications for permits and licenses.

This DG titled, ''Application and Testing of Safety-Related Diesel Generators in Nuclear Power Plants,'' is identified by its temporary task number, DG–1303. The draft guide is proposed revision 5 of RG 1.9 of the same name (ADAMS Accession No. ML14281A071). This DG provides updated guidance for actions and information that is needed for licensees, applicants, and combined operating license (COL) holders to meet the NRC regulations for safety-related standby AC power supplies intended for use as onsite emergency power sources in nuclear power plants. Information provided in this DG may be used by NRC staff, applicants, COLs holders, and licensees. This guidance helps ensure that the emergency standby AC power supplies are qualified, have sufficient capacity, and have the necessary reliability and availability for design-basis events.

The staff is also issuing for public comment a draft regulatory analysis (ADAMS Accession No. ML14297A097). The staff develops a regulatory analysis to assess the value of issuing or revising a regulatory guide as well as alternative courses of action.

III. Backfitting, Forward Fitting, and Issue Finality

DG–1303, if finalized, would revise RG 1.9, revision 4, which describes methods acceptable to the NRC staff for complying with the NRC's regulations for safety-related standby AC power supplies intended for use as onsite emergency power sources in nuclear power plants.

Issuance of DG–1303, if finalized, would not constitute backfitting as defined in section 50.109 of title 10 of the Code of Federal Regulations (10 CFR) 50.109, ''Backfitting,'' and as described in NRC Management Directive (MD) 8.4, ''Management of Backfitting, Forward Fitting, Issue Finality, and Information Requests''; constitute forward fitting as that term is defined and described in MD 8.4; or affect the

issue finality of any approval issued under 10 CFR part 52. As explained in DG–1303, applicants and licensees would not be required to comply with the positions set forth in DG–1303.

Dated: January 12, 2021.

For the Nuclear Regulatory Commission.

Meraj Rahimi,

Chief, Regulatory Guidance and Generic Issues Branch, Division of Engineering, Office of Nuclear Regulatory Research.

Issuance of Multiple Exemptions in Response to COVID–19 Public Health Emergency

AGENCY: Nuclear Regulatory Commission.

ACTION: Exemptions; issuance.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) issued 68 exemptions in response to requests from 26 licensees. The exemptions afford these licensees temporary or permanent relief from certain requirements under NRC regulations. The exemptions are in response to the licensees' requests for relief due to the coronavirus disease 2019 (COVID–19) public health emergency (PHE). The NRC is issuing a single notice to announce the issuance of the exemptions.

DATES: During the period from December 1, 2020, to December 28, 2020, the NRC granted 68 exemptions in response to requests submitted by licensees from September 30, 2020, to December 23, 2020.

ADDRESSES: Please refer to Docket ID NRC–2020–0110 when contacting the NRC about the availability of information regarding this document. You may obtain publicly available information related to this document using any of the following methods:

- *Federal Rulemaking website:* Go to *https://www.regulations.gov* and search for Docket ID NRC–2020–0110. Address questions about NRC Docket IDs in *Regulations.gov* to Jennifer Borges; telephone: 301–287–9127; email: *Jennifer.Borges@nrc.gov.* For technical questions, contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.
- *NRC's Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly available documents online in the ADAMS Public Documents collection at *https://www.nrc.gov/reading-rm/adams.html.* To begin the search, select ''Begin Web-based ADAMS Search.'' For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1–800–397–4209, 301–415–4737, or by email to *pdr.resource@nrc.gov.*
- *Attention:* The PDR, where you may examine and order copies of public documents, is currently closed. You may submit your request to the PDR via email at *pdr.resource@nrc.gov* or call 1–800–397–4209 or 301–415–4737, between 8:00 a.m. and 4:00 p.m. (EST), Monday through Friday, except Federal holidays.

For the convenience of the reader, instructions about obtaining materials referenced in this document are provided in the ''Availability of Documents'' section.

FOR FURTHER INFORMATION CONTACT: James Danna, Office of Nuclear Reactor Regulation, U.S. Nuclear Regulatory Commission, Washington DC 20555–0001; telephone: 301–415–7422, email: *James.Danna@nrc.gov.*

SUPPLEMENTARY INFORMATION:

I. Introduction

During the period from December 1, 2020, to December 28, 2020, the NRC granted 68 exemptions in response to requests submitted by licensees from September 30, 2020, to December 23, 2020. These exemptions allow the licensees to deviate from certain requirements (as cited in this notice) of various parts of chapter I of title 10 of the *Code of Federal Regulations* (10 CFR).

The exemptions from certain requirements of 10 CFR part 26, ''Fitness for Duty Programs,'' for Exelon Generation Company, LLC (for Braidwood Station, Units 1 and 2; Byron Station, Unit Nos. 1 and 2; Clinton Power Station, Unit No. 1; LaSalle County Station, Units 1 and 2; and Quad Cities Nuclear Power Station, Units 1 and 2); for Vistra Operations Company LLC (for Comanche Peak Nuclear Power Plant, Unit Nos. 1 and 2); for Arizona Public Service Company (for Palo Verde Nuclear Generating Station, Units 1, 2, and 3); for PSEG Nuclear LLC (for Hope Creek Generating Station and Salem Nuclear Generating Station, Unit Nos. 1 and 2); and for Indiana Michigan Power Company (for Donald C. Cook Nuclear Plant, Unit Nos. 1 and 2), afford these licensees temporary relief from the work-hour controls under 10 CFR 26.205(d)(1) through (d)(7). The exemptions from 10 CFR 26.205(d)(1) through (d)(7) ensure that the control of work hours and management of worker fatigue do not unduly limit licensee flexibility in using personnel resources to most effectively manage the impacts of the COVID–19 PHE on maintaining the safe operation of these facilities. Specifically, these licensees have stated that their staffing levels are affected or are expected to be affected by the COVID–19 PHE, and they can no longer meet or likely will not meet the work-hour controls of 10 CFR 26.205(d)(1) through (d)(7). These licensees have committed to effecting site-specific administrative controls for COVID–19 PHE fatigue management for personnel specified in 10 CFR 26.4(a).

The exemptions from certain requirements of 10 CFR part 50, appendix E, ''Emergency Planning and Preparedness for Production and Utilization Facilities,'' section IV.F., ''Training,'' for Energy Northwest (for Columbia Generating Station); for DTE Electric Company (for Fermi-2); for PSEG Nuclear LLC (for Hope Creek Generating Station and Salem Nuclear Generating Station, Unit Nos. 1 and 2); for Entergy Nuclear Operations, Inc. (for Indian Point Nuclear Generating Station, Unit Nos. 1, 2, and 3; and Palisades Nuclear Plant); for Virginia Electric and Power Company (for North Anna Power Station, Unit Nos. 1 and 2); for Exelon Generation Company, LLC (for LaSalle County Station, Units 1 and 2); for Oregon State University (for the Oregon State TRIGA Reactor); for Entergy Operations, Inc. (for River Bend Station, Unit 1); for NextEra Energy Seabrook, LLC (for Seabrook Station, Unit No. 1), grant temporary exemptions from the biennial emergency preparedness exercise requirement. The exemptions allow a temporary exemption from the requirements of 10 CFR part 50, appendix E, regarding the conduct of the biennial emergency preparedness exercise. These exemptions will not adversely affect the emergency response capability of the facilities because affected licensee

personnel are currently qualified, and the licensees' proposed compensatory measures will enable their staff to maintain their knowledge, skills, and abilities without the conduct of the biennial emergency preparedness exercise during the exemption term.

The exemptions from certain requirements of 10 CFR part 73, appendix B, ''General Criteria for Security Personnel,'' section VI, ''Nuclear Power Reactor Training and Qualification Plan for Personnel Performing Security Program Duties,'' for Energy Harbor Nuclear Corp. (for Beaver Valley Power Station, Units 1 and 2; Davis-Besse Nuclear Power Station, Unit No. 1; and Perry Nuclear Power Plant, Unit No. 1); for Exelon Generation Company, LLC (for Braidwood Station, Units 1 and 2; Byron Station, Unit Nos. 1 and 2; Calvert Cliffs Nuclear Power Plant, Units 1 and 2; Clinton Power Station, Unit No. 1; Dresden Nuclear Power Station, Units 2 and 3; James A. FitzPatrick Nuclear Power Plant; LaSalle County Station, Units 1 and 2; Limerick Generating Station, Units 1 and 2; Nine Mile Point Nuclear Station, Units 1 and 2; Peach Bottom Atomic Power Station, Units 2 and 3; Quad Cities Nuclear Power Station, Units 1 and 2; and R. E. Ginna Nuclear Power Plant); for Tennessee Valley Authority (for Browns Ferry Nuclear Plant, Units 1, 2, and 3; and Watts Bar Nuclear Plant, Units 1 and 2); for Duke Energy Progress, LLC (for Brunswick Steam Electric Plant, Units 1 and 2; Shearon Harris Nuclear Power Plant, Unit 1; and H. B. Robinson Steam Electric Plant, Unit No. 2); for Nebraska Public Power District (for Cooper Nuclear Station); for Duke Energy Carolinas, LLC (for Catawba Nuclear Station, Units 1 and 2; McGuire Nuclear Station, Unit Nos. 1 and 2; and Oconee Nuclear Station, Units 1, 2, and 3); for Energy Northwest (for Columbia Generating Station); for Vistra Operations Company LLC (for Comanche Peak Nuclear Power Plant, Unit Nos. 1 and 2); for Pacific Gas and Electric Company (for Diablo Canyon Nuclear Power Plant, Units 1 and 2); for Indiana Michigan Power Company (for Donald C. Cook Nuclear Plant, Unit Nos. 1 and 2); for Southern Nuclear Operating Co., Inc. (for Edwin I. Hatch Nuclear Plant, Unit Nos. 1 and 2; Joseph M. Farley Nuclear Plant, Units 1 and 2; and Vogtle Electric Generating Plant, Units 1 and 2); for DTE Electric Company (for Fermi-2); for Entergy Nuclear Operations, Inc. (for Indian Point Nuclear Generating Unit Nos. 2 and 3; and Palisades Nuclear Plant); for Dominion Energy Nuclear Connecticut, Inc. (for Millstone Power Station, Unit Nos. 1, 2, and 3); for Northern States Power Company (for Monticello Nuclear Generating Plant and Prairie Island Nuclear Generating Plant, Units 1 and 2); for Virginia Electric and Power Company (for North Anna Power Station, Unit Nos. 1 and 2; and Surry Power Station, Unit Nos. 1 and 2); for NextEra Energy Point Beach, LLC (for Point Beach Nuclear Plant, Units 1 and 2); for Florida Power & Light Company (for St. Lucie Plant, Unit Nos. 1 and 2); for NextEra Energy Seabrook, LLC (for Seabrook Station, Unit No. 1); STP Nuclear Operating Company (for South Texas Project, Units 1 and 2); for Susquehanna Nuclear LLC (for Susquehanna Steam Electric Station, Units 1 and 2), for Dominion Energy South Carolina, Inc. (for Virgil C. Summer Nuclear Station, Unit No. 1); and Entergy Operations, Inc. (for Waterford Steam Electric Station, Unit 3), will help to ensure that these regulatory requirements do not unduly limit licensee flexibility in using personnel resources in a manner that most effectively manages the impacts of the COVID–19 PHE on maintaining the safe and secure operation of these facilities and the implementation of the licensees' NRC approved security plans, protective strategy, and implementing procedures. These licensees have committed to certain security measures to ensure response readiness and for their security personnel to maintain performance capability.

The NRC is providing compiled tables of exemptions using a single **Federal Register** notice for COVID–19 related exemptions instead of issuing individual **Federal Register** notices for each exemption. The compiled tables in this notice provide transparency regarding the number and type of exemptions the NRC has issued. Additionally, the NRC publishes tables of approved regulatory actions related to the COVID–19 PHE on its public website at *https://www.nrc.gov/about-nrc/covid-19/reactors/licensing-actions.html.*

II. Availability of Documents

The tables in this notice provide the facility name, docket number, document description, and ADAMS accession number for each exemption issued. Additional details on each exemption issued, including the exemption request submitted by the respective licensee and the NRC's decision, are provided in each exemption approval listed in the tables in this notice. For additional directions on accessing information in ADAMS, see the **ADDRESSES** section of this document.

Document description	ADAMS accession No.
Beaver Valley Power Station, Units 1 and 2 Docket Nos. 50–334 and 50–412	
Beaver Valley Power Station, Units 1 and 2 -Request for a One-Time Exemption from 10 CFR part 73, appendix B, section VI, subsection C.3.(1)(1) Regarding Annual Force-on-Force Exercises due to COVID–19 Pandemic, dated October 28, 2020.	ML20303A213.
Beaver Valley Power Station, Units 1 and 2—Exemption from Annual Force-on-Force Exercise Requirement of 10 CFR part 73, appendix B, ''General Criteria for Security Personnel,'' subsection VI.C.3.(I)(1) (EPID L–2020–LLE–0171 [COVID–19]), dated December 15, 2020.	ML20324A089.
Braidwood Station, Units 1 and 2 Docket Nos. 50–456 and 50–457	
Exelon Generation—Request for Exemption from 10 CFR part 73, appendix B, section VI, subsection C.3.(I)(1) Regarding 2020 Annual Force-on-Force Exercises due to COVID–19 Public Health Emergency, dated November 13, 2020.	non-public, withheld pursuant to 10 CFR 2.390.
Braidwood Station, Units 1 and 2—Exemption from Annual Force-on-Force Exercise Requirements of 10 CFR part 73, appendix B, ''General Criteria for Security Personnel,'' subsection VI.C.3.(I)(1) (EPID L–2020–LLE–0198) [COVID–19], dated December 10, 2020.	ML20322A338.

Columbia Generating Station Docket No. 50–397	
Columbia Generating Station—Exemption Request from 10 CFR part 50, appendix E due to COVID–19 Pandemic, dated October 29, 2020.	ML20303A348.
Columbia Generating Station—Temporary Exemption from Biennial Emergency Preparedness Exercise Frequency Requirements of 10 CFR part 50, appendix E, sections IV.F.2.B and IV.F.2.C (EPID L–2020–LLE–0173 [COVID–19]), dated December 17, 2020.	ML20336A183.
Columbia Generating Station Docket No. 50–397	
Columbia Generating Station—Request for a One-Time Exemption from 10 CFR part 73, appendix B, section VI, subsection C.3.(l)(1) regarding Annual Force-On-Force Exercises due to COVID–19 Pandemic, dated October 29, 2020.	ML20303A286.
Columbia Generating Station—Response to Request for Additional Information Related to Request for a One-Time Exemption from 10 CFR part 73, appendix B, section VI, subsection C.3.(l)(1) Regarding Annual Force-On-Force Exercises due to COVID–19, dated December 3, 2020.	ML20338A541.
Columbia Generating Station—Exemption from Annual Force-On-Force Exercise Requirements of 10 CFR part 73, appendix B, ''General Criteria for Security Personnel,'' subsection VI.C.3.(l)(1) (EPID L–2020–LLE–0172 [COVID–19]), dated December 17, 2020.	ML20342A211.
Comanche Peak Nuclear Power Plant, Unit Nos. 1 and 2 Docket Nos. 50–445 and 50–446	
Comanche Peak Nuclear Power Plant, Unit Nos. 1 and 2—Request for a One-Time Exemption from 10 CFR part 73, appendix B, section VI, subsection C.3.(l)(l) Regarding Annual Force-on-Force Exercises due to COVID–19 Pandemic, dated December 10, 2020.	ML20345A341.
Comanche Peak Nuclear Power Plant, Unit Nos. 1 and 2—Exemption from Annual Force-On-Force Exercise Requirement of 10 CFR part 73, appendix B, ''General Criteria for Security Personnel,'' subsection VI.C.3.(l)(1) (EPID L–2020–LLE–0235 [COVID–19]), dated December 22, 2020.	ML20350B666.
Comanche Peak Nuclear Power Plant, Unit Nos. 1 and 2 Docket Nos. 50–445 and 50–446	
Comanche Peak Nuclear Power Plant, Unit Nos. 1 and 2—Request for Exemption from Specific Requirements of 10 CFR part 26, ''Fitness for Duty Programs,'' dated December 11, 2020.	ML20346A565.
Comanche Peak Nuclear Power Plant, Unit Nos. 1 and 2—Supplement to Request for Exemption from Specific Requirements of 10 CFR part 26, ''Fitness for Duty Programs,'' dated December 15, 2020.	ML20350B830.
Comanche Peak, Unit Nos. 1 and 2—Exemption from Selection from Requirements of 10 CFR part 26 (EPID L–2020–LLE–0236 [COVID–19]), dated December 16, 2020.	ML20349A038.
Cooper Nuclear Station Docket No. 50–298	
Cooper Nuclear Station—Request for a One-Time Exemption from 10 CFR part 73, appendix B, section VI, subsection C.3.(1)(1) Regarding Annual Force-on-Force Exercises due to COVID–19 Pandemic, dated October 27, 2020.	ML20309A663.
Cooper Nuclear Station—Exemption from Annual Force-On-Force Exercise Requirements of 10 CFR part 73, appendix B, ''General Criteria for Security Personnel,'' subsection VI.C.3.(l)(1) (EPID L–2020–LLE–0178 [COVID–19]), dated December 11, 2020.	ML20323A237.

Document description	ADAMS accession No.
Davis-Besse Nuclear Power Station, Unit No. 1 Docket No. 50–346	
Davis-Besse Nuclear Power Station, Unit No. 1—Request for a One-Time Exemption from 10 CFR part 73, appendix B, section VI, subsection C.3.(I)(1) Regarding Annual Force-on-Force Exercises due to COVID–19 Pandemic, dated October 29, 2020.	ML20304A046.
Davis-Besse Nuclear Power Station, Unit No. 1—Response to Request for Additional Information Regarding Request for Exemption—10 CFR part 73 Force-on-Force Exercises (EPID L–2020–LLE–0175), dated December 7, 2020.	ML20342A199.
Davis-Besse Nuclear Power Station, Unit No. 1—Exemption from Annual Force-on-Force Exercise Requirement of 10 CFR part 73, appendix B, ''General Criteria for Security Personnel,'' subsection VI.C.3.(I)(1) (EPID L–2020–LLE–0175 [COVID–19]), dated December 15, 2020.	ML20345A205.
Diablo Canyon Nuclear Power Plant, Units 1 and 2 Docket Nos. 50–275 and 50–323	
Diablo Canyon Nuclear Power Plant, Units 1 and 2—Request for a One-Time Exemption from 10 CFR part 73, appendix B, section VI, subsection C.3.(I)(1) Regarding Annual Force-on-Force Exercises due to COVID–19 Pandemic, dated October 14, 2020.	non-public, withheld pursuant to 10 CFR 2.390.
Diablo Canyon Nuclear Power Plant, Units 1 and 2—Response to Request for Additional Information Regarding Request for a One-Time Exemption from 10 CFR part 73, appendix B, section VI, subsection C.3.(I)(1) Regarding Annual Force-on-Force Exercises due to COVID–19 Pandemic, dated December 3, 2020.	non-public, withheld pursuant to 10 CFR 2.390.
Diablo Canyon Nuclear Power Plant, Units 1 and 2—Exemption from Annual Force-On-Force Exercise Requirement of 10 CFR part 73, appendix B, ''General Criteria for Security Personnel,'' subsection VI.C.3.(I)(1) (EPID L–2020–LLE–0166 [COVID–19]), dated December 17, 2020.	ML20346A024.
Diablo Canyon Nuclear Power Plant, Units 1 and 2 Docket Nos. 50–275 and 50–323	
Diablo Canyon Power Plant, Units 1 and 2—Request for a One-Time Exemption from 10 CFR part 73, appendix B, section VI, subsection F.5.(a) Regarding Firearms Requalification due to COVID–19 Pandemic, dated October 14, 2020.	non-public, withheld pursuant to 10 CFR 2.390.
Diablo Canyon Nuclear Power Plant, Units 1 and 2—Response to Request for Additional Information Regarding Request for a One-Time Exemption from 10 CFR part 73, appendix B, section VI, subsection F.5.(a) Regarding Firearms Requalification due to COVID–19 Pandemic, dated December 3, 2020.	non-public, withheld pursuant to 10 CFR 2.390.
Diablo Canyon Nuclear Power Plant, Units 1 and 2—Exemption from Annual Firearms Tactical Qualification Course Requirement of 10 CFR part 73, appendix B, ''General Criteria for Security Personnel,'' subsection VI.F.5.(a) (EPID L–2020–LLE–0167 [COVID–19]), dated December 18, 2020.	ML20346A120.
Donald C. Cook Nuclear Plant, Units Nos. 1 and 2 Docket Nos. 50–315 and 50–316	
Donald C. Cook Nuclear Plant, Unit Nos. 1 and 2—Request for a One-Time Exemption from 10 CFR part 73, appendix B, section VI, subsection C.3.(I)(1) Regarding Annual Force-on-Force Exercises due to COVID–19 Pandemic, dated November 4, 2020.	ML20318A034.
Donald C. Cook Nuclear Plant, Unit Nos. 1 and 2—Exemption from Certain Requirements of 10 CFR part 73, appendix B, ''General Criteria for Security Personnel,'' section VI (EPID L–2020–LLE–0182 [COVID–19]), dated December 8, 2020.	ML20324A003.
Donald C. Cook Nuclear Plant, Units Nos. 1 and 2 Docket Nos. 50–315 and 50–316	
Donald C. Cook Nuclear Plant, Unit Nos. 1 and 2—Request for a One-Time Exemption from 10 CFR 26.205(d) due to COVID–19 Pandemic, dated November 30, 2020.	ML20338A324.
Donald C. Cook Nuclear Plant, Unit Nos. 1 and 2—Exemption from Select Requirements of 10 CFR part 26 (EPID L–2020–LLE–0221 [COVID–19]), dated December 3, 2020.	ML20336A111.
Dresden Nuclear Power Station, Units 2 and 3 Docket Nos. 50–237 and 50–249	
Exelon Generation—Request for Exemption from 10 CFR part 73, appendix B, section VI, subsection C.3.(I)(1) Regarding 2020 Annual Force-on-Force Exercises due to COVID–19 Public Health Emergency, dated November 13, 2020.	non-public, withheld pursuant to 10 CFR 2.390.
Dresden Nuclear Power Station, Units 2 and 3—Exemption from Annual Force-On-Force Exercise Requirements of 10 CFR part 73, appendix B, ''General Criteria for Security Personnel,'' subsection VI.C.3.(I)(1) (EPID L–2020–LLE–0203 [COVID–19]), dated December 14, 2020.	ML20322A303.
Edwin I. Hatch Nuclear Plant, Unit Nos. 1 and 2 Docket Nos. 50–321 and 50–366	
Request for One-Time Exemptions from 10 CFR part 73, appendix B, section VI, subsection C.3.(I)(1) Regarding Annual Force-on-Force Exercises due to COVID–19 Pandemic, dated November 6, 2020.	ML20311A662.

Document description	ADAMS accession No.
Edwin I. Hatch Nuclear Plant, Unit Nos. 1 and 2—Exemption from Annual Force-on-Force Exercise Requirement of 10 CFR part 73, appendix B, ''General Criteria for Security Personnel,'' subsection VI.C.3.(l)(1) (EPID L–2020–LLE–0215 [COVID–19]), dated December 4, 2020.	ML20329A488.
Fermi-2 Docket No. 50–341	
Fermi-2—Request for One-Time Exemption from 10 CFR part 50, appendix E, ''Biennial Emergency Preparedness Exercise Requirements,'' due to COVID–19 Pandemic, dated November 12, 2020.	ML20317A203.
Fermi-2—Temporary Exemption from Biennial Emergency Preparedness Exercise Frequency Requirements of 10 CFR part 50, appendix E, sections IV.F.2.B and IV.F.2.C (EPID L–2020–LLE–0188 [COVID–19]), dated December 8, 2020.	ML20332A179.
Fermi-2 Docket No. 50–341	
Fermi-2—Request for Exemption from the Annual Force-on-Force Training Requirements of 10 CFR part 73, appendix B, section VI due to the COVID–19 Public Health Emergency, dated November 13, 2020.	ML20318A383.
Fermi-2—Response to Request for Additional Information Regarding Exemption from the Annual Force-on-Force Training Requirements of 10 CFR part 73, appendix B, section VI due to the COVID–19 Public Health Emergency, dated December 3, 2020.	ML20338A333.
Fermi-2—Exemption from Annual Force-on-Force Exercise Requirement of 10 CFR part 73, appendix B, ''General Criteria for Security Personnel,'' subsection VI.C.3.(l)(1) (EPID L–2020–LLE–0204 [COVID–19]), dated December 18, 2020.	ML20343A350.
Hope Creek Generating Station Docket No. 50–354 Salem Nuclear Generating Station, Unit Nos. 1 and 2 Docket Nos. 50–272 and 50–311	
Hope Creek Generating Station and Salem Generating Station, Units Nos. 1 and 2—Exemption Request from 10 CFR part 50, appendix E, ''Biennial Emergency Preparedness Exercise Requirements,'' due to COVID–19 Pandemic, dated October 13, 2020.	ML20287A628.
Hope Creek Generating Station and Salem Nuclear Generating Station, Unit Nos. 1 and 2—Temporary Exemption from the Exercise Requirements of 10 CFR part 50, appendix E, sections IV.F.2.B and IV.F.2.C (EPID L–2020–LLE–0164 [COVID–19]), dated December 7, 2020.	ML20315A434.
Hope Creek Generating Station Docket No. 50–354 Salem Nuclear Generating Station, Unit Nos. 1 and 2 Docket Nos. 50–272 and 50–311	
Hope Creek Generating Station and Salem Generating Station, Unit Nos. 1 and 2—Request for Exemption from Specific Requirements of 10 CFR part 26, ''Fitness for Duty Programs,'' dated December 23, 2020.	ML20358A186.
Hope Creek Generating Station and Salem Nuclear Generating Station, Unit Nos. 1 and 2—Exemption from Select Requirements of 10 CFR part 26 (EPID L–2020–LLE–0239 [COVID–19]), dated December 28, 2020.	ML20358A281.
Indian Point Nuclear Generating Station, Unit Nos. 1, 2, and 3 Docket Nos. 50–003, 50–247, and 50–286	
Indian Point Nuclear Generating Station, Unit Nos. 1, 2, and 3—One-time Scheduler Exemption Request from 10 CFR part 50, appendix E, ''Biennial Emergency Preparedness Exercise Requirements,'' due to COVID–19 Public Health Emergency, dated October 8, 2020.	ML20282A612.
Indian Point Nuclear Generating Station, Unit Nos. 1, 2, and 3—Supplement to One-Time Exemption Request from 10 CFR part 50, appendix E, ''Biennial Emergency Preparedness Exercise Requirements'' (EPID L–2020–LLE–0160 [COVID–19]), dated November 12, 2020.	ML20317A344.
Indian Point Nuclear Generating Station, Unit Nos. 1, 2, and 3—Temporary Exemption from Exercise Frequency Requirements of 10 CFR part 50, appendix E, section IV.F.2.B (EPID L–2020–LLE–0160 [COVID–19]), dated December 8, 2020.	ML20320A000.
Indian Point Nuclear Generating Unit Nos. 2 and 3 Docket Nos. 50–247 and 50–286	
Indian Point Nuclear Generating Unit Nos. and 3—Request for a One-Time Exemption from 10 CFR 73, appendix B, section VI, subsection C.3.(l)(1) Regarding Annual Force-on-Force (FOF) Exercises, Due to COVID 19 Pandemic, dated November 12, 2020.	ML20317A299.
Indian Point Nuclear Generating Unit Nos. 2 and 3—Exemption from Annual Force-on-Force Exercise Requirement of 10 CFR part 73, appendix B, ''General Criteria for Security Personnel,'' subsection VI.C.3.(l)(1) (EPID L–2020–LLE–0189 [COVID–19]), dated December 14, 2020.	ML20321A121.

Document description	ADAMS accession No.
James A. FitzPatrick Nuclear Power Plant Docket No. 50–333	
Exelon Generation—Request for Exemption from 10 CFR part 73, appendix B, section VI, subsection C.3.(I)(1) Regarding 2020 Annual Force-on-Force Exercises due to COVID–19 Public Health Emergency, dated November 13, 2020.	ML20318A288.
James A. Fitzpatrick Nuclear Power Plant—Exemption from Annual Force-On-Force Exercise Requirements of 10 CFR part 73, appendix B, ''General Criteria for Security Personnel,'' subsection VI.C.3.(I)(1) (EPID L–2020–LLE–0197 [COVID 19]), dated December 8, 2020.	ML20337A004.
Joseph M. Farley Nuclear Plant, Units 1 and 2 Docket Nos. 50–348 and 50–364	
Request for One-Time Exemptions from 10 CFR part 73, appendix B, section VI, subsection C.3.(I)(1) Regarding Annual Force-on-Force Exercises due to COVID–19 Pandemic, dated November 6, 2020.	ML20311A662.
Joseph M. Farley Nuclear Plant, Units 1 and 2—Exemption from Certain Requirements of 10 CFR part 73, appendix B, ''General Criteria for Security Personnel,'' subsection VI C.3.(I)(1) (EPID L–2020–LLE–0183 [COVID–19]), dated December 4, 2020.	ML20315A374.
H. B. Robinson Steam Electric Plant, Unit No. 2 Docket No. 50–261	
Duke Energy—Request for One-Time Exemption from 10 CFR part 73, appendix B, section VI, subsection C.3.(I)(1) Regarding Annual Force-on-Force Exercises due to COVID–19 Pandemic, dated November 4, 2020.	non-public, withheld pursuant to 10 CFR 2.390.
Duke Energy—Response to Request for Additional Information for One-Time Exemption from 10 CFR part 73, appendix B, section VI, subsection C.3.(I)(1) Regarding Annual Force-on-Force Exercises due to COVID–19 Pandemic, dated November 19, 2020.	non-public, withheld pursuant to 10 CFR 2.390.
H. B. Robinson Steam Electric Plant, Unit No. 2—Exemption from Annual Force-On-Force Exercise Requirements of 10 CFR part 73, appendix B, ''General Criteria for Security Personnel,'' subsection VI.C.3.(I)(1), dated December 17, 2020.	ML20339A521.
LaSalle County Station, Units 1 and 2 Docket Nos. 50–373 and 50–374	
LaSalle County Station, Units 1 and 2—Request for Exemption from the Biennial Emergency Preparedness Exercise Requirements in 10 CFR part 50, appendix E, section IV.F.2.b, dated November 23, 2020.	ML20328A292.
LaSalle County Station, Units 1 and 2—Supplemental Information Regarding Request for Exemption from the Biennial Emergency Preparedness Exercise Requirements of 10 CFR part 50, appendix E, section IV.F.2.b, dated December 7, 2020.	ML20342A259.
LaSalle County Station, Units 1 and 2—Temporary Exemption from Biennial Emergency Preparedness Exercise Frequency Requirements of 10 CFR part 50, appendix E, section IV.F.2.b (EPID–L–2020–LLE–0223 [COVID–19]), dated December 18, 2020.	ML20346A014.
LaSalle County Station, Units 1 and 2 Docket Nos. 50–373 and 50–374	
Exelon Generation—Request for Exemption from 10 CFR part 73, appendix B, section VI, subsection C.3.(I)(1) Regarding 2020 Annual Force-on-Force Exercises due to COVID–19 Public Health Emergency, dated November 13, 2020.	non-public, withheld pursuant to 10 CFR 2.390.
LaSalle County Station, Units 1 and 2—Exemption from Annual Force-on-Force Exercise Requirements of 10 CFR part 73, appendix B, ''General Criteria for Security Personnel,'' subsection VI.C.3(I)(1) (EPID L–2020–LLE–0191 [COVID–19]), dated December 9, 2020.	ML20324A104.
LaSalle County Station, Units 1 and 2 Docket Nos. 50–373 and 50–374	
LaSalle County Station, Units 1 and 2- COVID–19 Related Request for Exemption from 10 CFR part 26 Work Hours Requirements, dated November 24, 2020.	ML20329A301.
LaSalle County Station, Units 1 and 2—Exemption from Select Requirements of 10 CFR part 26 (EPID L–2020–LLE–0217 [COVID–19]), dated December 1, 2020.	ML20330A326.
Limerick Generating Station, Units 1 and 2 Docket Nos. 50–352 and 50–353	
Exelon Generation—Limerick Generating Station, Units 1 and 2—Request for Exemption from 10 CFR part 73, appendix B, section VI, subsection C.3.(I)(1) Regarding 2020 Annual Force-on-Force Exercises due to COVID–19 Public Health Emergency, dated November 13, 2020.	ML20318A288.
Limerick Generating Station, Units 1 and 2—Exemption from Annual Force-on-Force Exercise Requirement of 10 CFR part 73, appendix B, ''General Criteria for Security Personnel,'' subsection VI.C.3.(I)(1) (EPID L–2020–LLE–0201 [COVID–19]), dated December 10, 2020.	ML20330A295.

Document description	ADAMS accession No.
McGuire Nuclear Station, Unit Nos. 1 and 2 Docket Nos. 50–369 and 50–370	
Duke Energy—Request for One-Time Exemption from 10 CFR part 73, appendix B, section VI, subsection C.3.(I)(1) Regarding Annual Force-on-Force Exercises due to COVID–19 Pandemic, dated November 4, 2020.	non-public, withheld pursuant to 10 CFR 2.390.
Duke Energy—Response to Request for Additional Information for One-Time Exemption from 10 CFR part 73, appendix B, section VI, subsection C.3.(I)(1) Regarding Annual Force-on-Force Exercises due to COVID–19 Pandemic, dated November 19, 2020.	non-public, withheld pursuant to 10 CFR 2.390.
McGuire Nuclear Station, Unit Nos. 1 and 2—Exemption from Annual Force-on-Force Exercise Requirements of 10 CFR part 73, appendix B, ''General Criteria for Security Personnel,'' subsection VI.C.3.(I)(1) (EPID L–2020–LLE–0180) [COVID–19], dated December 9, 2020.	ML20330A321.
Millstone Power Station, Unit Nos. 1, 2, and 3 Docket Nos. 50–245, 50–336, and 50–423	
Millstone Power Station, Unit Nos. 1, 2, and 3—Request for a One-Time Exemption from 10 CFR part 73, appendix B, section VI, subsection C.3.(1)(1) Regarding Annual Force-On-Force Exercises due to COVID–19 Pandemic, dated December 3, 2020.	non-public, withheld pursuant to 10 CFR 2.390.
Millstone Power Station, Unit Nos. 1, 2, and 3—Exemption from Annual Force-on-Force Exercise Requirement of 10 CFR part 73, appendix B, ''General Criteria for Security Personnel,'' subsection VI.C.3.(I)(1) (EPID L–2020–LLE–0227 [COVID–19]), dated December 16, 2020.	ML20338A552.
Monticello Nuclear Generating Plant Docket No. 50–263	
Monticello and Prairie Island—Request for a One-Time Exemption from 10 CFR part 73, appendix B, section VI, subsection C.3(I)(1) Regarding Annual Force-on-Force Exercises due to COVID–19 Pandemic, dated October 30, 2020.	non-public, withheld pursuant to 10 CFR 2.390.
Response to Request for Additional Information Regarding Request for a One-Time Exemption from 10 CFR part 73, appendix B, section VI, subsection C.3(I)(1) Regarding Annual Force-on-Force Exercises due to COVID–19 Pandemic, dated December 14, 2020.	non-public, withheld pursuant to 10 CFR 2.390.
Monticello Nuclear Generating Plant—Exemption from Certain Requirements of 10 CFR part 73, appendix B, ''General Criteria for Security Personnel,'' subsection VI.C.3.(I)(1) (EPID L–2020–LLE–0174 [COVID–19]), dated December 22, 2020.	ML20317A136.
Nine Mile Point Nuclear Station, Units 1 and 2 Docket Nos. 50–220 and 50–410	
Exelon Generation—Request for Exemption from 10 CFR part 73, appendix B, section VI, subsection C.3.(I)(1) Regarding 2020 Annual Force-on-Force Exercises due to COVID–19 Public Health Emergency, dated November 13, 2020.	ML20318A288.
Nine Mile Point Nuclear Station, Units 1 and 2—Exemption from Annual Force-on-Force Exercise Requirement of 10 CFR part 73, appendix B, ''General Criteria for Security Personnel,'' subsection VI.C.3.(I)(1) (EPID L–2020–LLE–0195 [COVID–19]), dated December 14, 2020.	ML20321A290.
North Anna Power Station, Unit Nos. 1 and 2 Docket Nos. 50–338 and 50–339	
North Anna Power Station, Unit Nos. 1 and 2—Request for One-Time Schedular Exemption from Offsite Biennial Emergency Preparedness Exercise Requirement in 10 CFR part 50, appendix E, section IV.F.2.c, dated November 10, 2020.	ML20317A162.
North Anna Power Station, Unit Nos. 1 and 2—Temporary Exemption from Biennial Emergency Preparedness Exercise Frequency Requirements of 10 CFR part 50, appendix E, section IV.F.2.C (EPID L–2020–LLE–0184 [COVID–19]), dated December 8, 2020.	ML20324A222.
North Anna Power Station, Unit Nos. 1 and 2 Docket Nos. 50–338 and 50–339	
North Anna Power Station, Unit Nos. 1 and 2—Request for a One-Time Exemption from 10 CFR part 73, appendix B, section VI, subsection C.3.(I)(1) Regarding Annual Force-On-Force Exercises due to COVID–19 Pandemic, dated December 3, 2020.	non-public, withheld pursuant to 10 CFR 2.390.
North Anna Power Station, Units Nos. 1 and 2—Exemption from Annual Force-On Force Exercise Requirement of 10 CFR part 73, appendix B, ''General Criteria for Security Personnel,'' subsection VI.C.3.(I)(1) (EPID L–2020–LLE–0231 [COVID–19]), dated December 15, 2020.	ML20342A293.
Oconee Nuclear Station, Units 1, 2, and 3 Docket Nos. 50–269, 50–270, and 50–287	
Duke Energy—Request for One-Time Exemption from 10 CFR part 73, appendix B, section VI, subsection C.3.(I)(1) Regarding Annual Force-on-Force Exercises due to COVID–19 Pandemic, dated November 4, 2020.	non-public, withheld pursuant to 10 CFR 2.390.
Duke Energy—Response to Request for Additional Information for One-Time Exemption from 10 CFR part 73, appendix B, section VI, subsection C.3.(I)(1) Regarding Annual Force-on-Force Exercises due to COVID–19 Pandemic, dated November 19, 2020.	non-public, withheld pursuant to 10 CFR 2.390.

Document description	ADAMS accession No.
Oconee Nuclear Station, Units 1, 2, and 3—Exemption from Annual Force-On-Force Exercise Requirements of 10 CFR part 73, appendix B, ''General Criteria for Security Personnel,'' subsection VI.C.3.(I)(1) (EPID L–2020–LLE–0180 [COVID–19]), dated December 17, 2020.	ML20344A004.
Oregon State University Docket No. 50–243	
Oregon State University—Extension of Timeframe Required to Complete Biennial Emergency Exercise per Oregon State TRIGA Reactor Emergency Response Plan, dated November 3, 2020.	ML20318A035.
Oregon State University—Extension of Timeframe required to Complete Biennial Emergency Exercise per Oregon State TRIGA Reactor Emergency Response Plan, dated December 10, 2020.	ML20350B726.
Oregon State University—Temporary Exemption from the Requirements of 10 CFR part 50, appendix E, section IV.F.2.b Related to Biennial Emergency Exercise [COVID–19], dated December 18, 2020.	ML20318A380.
Palisades Nuclear Plant Docket No. 50–255	
Palisades Nuclear Plant—Request for One-Time Exemption from 10 CFR part 50, appendix E, ''Biennial Emergency Preparedness Exercise Requirements,'' due to COVID–19 Pandemic, dated September 30, 2020.	ML20275A110.
Palisades Nuclear Plant—Temporary Exemption from Biennial Emergency Preparedness Exercise Frequency Requirements of 10 CFR part 50, appendix E, section IV.F (EPID L–2020–LLE–0155 [COVID–19]), dated December 9, 2020.	ML20308A607.
Palisades Nuclear Plant Docket No. 50–255	
Palisades Nuclear Plant—Request for a One-Time Exemption from 10 CFR part 73, appendix B, section VI, subsection C.3.(I)(1) Regarding Annual Force-on-Force Exercises due to COVID–19 Pandemic, dated November 12, 2020.	ML20317A300.
Palisades Nuclear Plant—Exemption from Annual Force-on-Force Exercise Requirements of 10 CFR part 73, appendix B, ''General Criteria for Security Personnel,'' subsection VI.C.3.(I)(1) (EPID L–2020–LLE–0190 [COVID–19]), dated December 3, 2020.	ML20330A000.
Palo Verde Nuclear Generating Station, Units 1, 2, and 3 Docket Nos. 50–528, 50–529, 50–530	
Palo Verde Nuclear Generating Station, Units 1, 2, and 3, and Independent Spent Fuel Storage Installation—Subsequent Request for Exemption from Specific Requirements of 10 CFR part 26, ''Fitness for Duty Programs,'' dated December 21, 2020.	ML20356A292.
Palo Verde Nuclear Generating Station, Units 1, 2, and 3—Subsequent Request for Exemption from Select Requirements of 10 CFR part 26 (EPID L–2020–LLE–0238 [COVID–19]), dated December 23, 2020.	ML20357A055.
Peach Bottom Atomic Power Station, Units 2 and 3 Docket Nos. 50–277 and 50–278	
Exelon Generation—Request for Exemption from 10 CFR part 73, appendix B, section VI, subsection C.3.(I)(1) Regarding 2020 Annual Force-on-Force Exercises due to COVID–19 Public Health Emergency, dated November 13, 2020.	ML20318A288.
Peach Bottom Atomic Power Station, Units 2 and 3—Exemption from Annual Force-on-Force Exercise Requirement of 10 CFR part 73, appendix B, ''General Criteria for Security Personnel,'' subsection VI.C.3.(I)(1) (EPID L–2020–LLE–0192 [COVID–19]), dated December 10, 2020.	ML20325A017.
Perry Nuclear Power Plant, Unit No. 1 Docket No. 50–440	
Perry Nuclear Power Plant, Unit No. 1—Request for a One-Time Exemption from 10 CFR part 73, appendix B, section VI, subsection C.3.(1)(1) Regarding Annual Force-on-Force Exercises due to COVID–19 Pandemic, dated October 29, 2020.	ML20304A191.
Perry Nuclear Power Plant, Unit No. 1—Response to Request for Additional Information Regarding Request for Exemption—10 CFR part 73 Force-on-Force Exercises (EPID L–2020–LLE–0176), dated November 25, 2020.	ML20335A531.
Perry Nuclear Power Plant, Unit No. 1—Exemption from Certain Requirements of 10 CFR part 73, appendix B, section VI.C.3.(I)(1) Re: Annual Force-on-Force Exercise for CY 2020 (EPID L–2020–LLE–0176 [COVID–19]), dated December 14, 2020.	ML20309A135.
Point Beach Nuclear Plant, Units 1 and 2 Docket Nos. 50–266 and 50–301	
Point Beach Nuclear Plant, Units 1 and 2—Request for a One-Time Exemption from 10 CFR part 73, appendix B, section VI, subsection C.3.(1)(1) Regarding Annual Force-on-Force Exercises due to COVID–19 Pandemic, dated November 19, 2020.	non-public, withheld pursuant to 10 CFR 2.390.
Point Beach Nuclear Plant, Units 1 and 2—Response to Request for Additional Information, Request for Exemption from 10 CFR part 73, appendix B, section VI Regarding Annual Force-On-Force Exercise, dated December 8, 2020.	non-public, withheld pursuant to 10 CFR 2.390.

Document description	ADAMS accession No.
Point Beach Nuclear Plant, Units 1 and 2—Exemption from Annual Force-on-Force Exercise Requirement of 10 CFR part 73, appendix B, ''General Criteria for Security Personnel,'' subsection VI.C.3.(I)(1) (EPID L–2020–LLE–0210 [COVID–19]), dated December 15, 2020.	ML20345A000.
Prairie Island Nuclear Generating Plant, Units 1 and 2 Docket Nos. 50–282 and 50–306	
Monticello and Prairie Island—Request for a One-Time Exemption from 10 CFR part 73, appendix B, section VI, subsection C.3(I)(1) Re: Annual Force-on-Force Exercises due to COVID–19 Pandemic, dated October 30, 2020.	non-public, withheld pursuant to 10 CFR 2.390.
Response to Request for Additional Information, Request for a One-Time Exemption from 10 CFR part 73, appendix B, section VI, subsection C.3(I)(1) Regarding Annual Force-on-Force Exercises due to COVID–19 Pandemic, dated December 14, 2020.	non-public, withheld pursuant to 10 CFR 2.390.
Prairie Island Nuclear Generating Plant, Units 1 and 2—Exemption from Certain Requirements of 10 CFR part 73, appendix B, ''General Criteria for Security Personnel,'' subsection VI.C.3.(I)(1) (EPID L–2020–LLE–0177 [COVID–19]), dated December 21, 2020.	ML20317A259.
Quad Cities Nuclear Power Station, Units 1 and 2 Docket Nos. 50–254 and 50–265	
Exelon Generation—Request for Exemption from 10 CFR part 73, appendix B, section VI, subsection C.3.(I)(1) Regarding 2020 Annual Force-on-Force Exercises due to COVID–19 Public Health Emergency, dated November 13, 2020.	non-public, withheld pursuant to 10 CFR 2.390.
Quad Cities Nuclear Power Station, Units 1 and 2—Exemption from Annual Force-on-Force Exercise Requirement of 10 CFR part 73, appendix B, ''General Criteria for Security Personnel,'' subsection VI.C.3.(I)(1) (EPID L–2020–LLE–0193 [COVID–19]), dated December 4, 2020.	ML20332A175.
Quad Cities Nuclear Power Station, Units 1 and 2 Docket Nos. 50–254 and 50–265	
Quad Cities Nuclear Power Station, Units 1 and 2—COVID–19 Related Request for Exemption from 10 CFR part 26 Work Hours Requirements, dated December 4, 2020.	ML20339A474.
Quad Cities Nuclear Power Station, Units 1 and 2—Exemption from Select Requirements of 10 CFR part 26 (EPID L–2020–LLE–0228 [COVID–19]), dated December 17, 2020.	ML20343A027.
R. E. Ginna Nuclear Power Plant Docket No. 50–244	
Exelon Generation—Request for One-Time Exemptions from 10 CFR part 73, appendix B, section VI, subsection C.3.(I)(1) Regarding Annual Force-on-Force Exercises due to COVID–19 Pandemic, dated November 13, 2020.	ML20318A288.
R. E. Ginna Nuclear Power Plant—Exemption from Annual Force-on-Force Exercise Requirement of 10 CFR part 73, appendix B, ''General Criteria for Security Personnel,'' subsection VI.C.3.(I)(1) (EPID L–2020–LLE–0202 [COVID–19]), dated December 10, 2020.	ML20330A291.
River Bend Station, Unit 1 Docket No. 50–458	
River Bend Station, Unit 1—One-Time Schedular Exemption Request from 10 CFR part 50, appendix E, ''Biennial Emergency Preparedness Exercise Requirements,'' due to COVID–19 Public Health Emergency, dated December 3, 2020.	ML20338A539.
River Bend Station, Unit 1—Temporary Exemption from Biennial Emergency Preparedness Exercise Frequency Requirements of 10 CFR part 50, appendix E, section IV.F.2.b (EPID–L–2020–LLE–0212 [COVID–19]), dated December 22, 2020.	ML20344A135.
St. Lucie Plant, Unit Nos. 1 and 2 Docket Nos. 50–335 and 50–389	
St. Lucie Plant, Unit Nos. 1 and 2—Request for a One-Time Exemption from 10 CFR part 73, appendix B, section VI, subsection C.3.(I)(1) Regarding Annual Force-on-Force Exercises due to COVID–19 Pandemic, dated December 9, 2020.	non-public, withheld pursuant to 10 CFR 2.390.
St. Lucie Plant, Unit Nos. 1 and 2—Exemption from Annual Force-on-Force Exercise Requirement of 10 CFR part 73, appendix B, ''General Criteria for Security Personnel,'' subsection VI.C.3.(I)(1) (EPID L–2020–LLE–0234) [COVID–19], dated December 18, 2020.	ML20352A118.
Seabrook Station, Unit No. 1 Docket No. 50–443	
Seabrook Station, Unit No. 1—Request for a One-Time Exemption from 10 CFR part 73, appendix B, section VI, subsection C.3.(1)(1) Regarding Annual Force-on-Force Exercises due to COVID–19 Pandemic, dated November 23, 2020.	ML20329A205.
Seabrook Station, Unit No. 1—Response to Request for Additional Information in Response to One-Time Exemption from 10 CFR part 73, appendix B, section VI, subsection C.3.(I)(1) Regarding Annual Force-on-Force Exercises due to COVID–19 Pandemic, dated December 8, 2020.	ML20343A112.

NUCLEAR REGULATORY COMMISSION

[Docket Nos. 50–438 and 50–439; NRC–2020–0273]

Tennessee Valley Authority Bellefonte, Units 1 and 2 Environmental Assessment and Finding of No Significant Impact

AGENCY: Nuclear Regulatory Commission.

ACTION: Environmental assessment and finding of no significant impact; issuance.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is considering extending the completion dates for Construction Permit Nos. CPPR–122 and CPPR–123, issued to the Tennessee Valley Authority (TVA) for Bellefonte Nuclear Plant, Units 1 and 2 (BLN), located on the west shore of the Guntersville Reservoir at Tennessee River Mile (RM) 392 in Jackson County, Alabama. The NRC prepared this environmental assessment (EA) documenting the environmental review and finding of no significant impact (FONSI) for this proposed action.

DATES: The EA and FONSI are available January 13, 2021.

ADDRESSES: Please refer to Docket ID NRC–2020–0273 when contacting the NRC about the availability of information regarding this document. You may obtain publicly available information related to this document using any of the following methods:

- *Federal Rulemaking Website:* Go to *https://www.regulations.gov* and search for Docket ID NRC–2020–0273. Address questions about Docket IDs in *Regulations.gov* to Jennifer Borges; telephone: 301–287–9127; email: *Jennifer.Borges@nrc.gov.* For technical questions, contact the individuals listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.
- *NRC's Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly available documents online in the ADAMS Public Documents collection at *https://www.nrc.gov/reading-rm/adams.html.* To begin the search, select ''Begin Web-based ADAMS Search.'' For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1–800–397–4209 or 301–415–4737, or by email to *pdr.resource@nrc.gov.* For the convenience of the reader, the ADAMS accession numbers are provided in a table in the ''Availability of Documents'' section of this document.
- *Attention:* The PDR, where you may examine and order copies of public documents, is currently closed. You may submit your request to the PDR via email at *pdr.resource@nrc.gov* or call 1–800–397–4209 or 301–415–4737, between 8:00 a.m. and 4:00 p.m. (EST), Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: Omid Tabatabai, Office of Nuclear Reactor Regulation, telephone: 301–415–6616; email: *Omid.Tabatabai@nrc.gov,* and Jeffrey Rikhoff, Office of Nuclear Materials Safety and Safeguards, telephone: 301–415–1090, email: *Jeffrey.Rikhoff@nrc.gov.* Both are staff of the U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001.

SUPPLEMENTARY INFORMATION:

I. Introduction

The NRC is considering extending the completion dates specified in Construction Permit Nos. CPPR–122 and CPPR–123, issued to TVA for BLN, Units 1 and 2. The Bellefonte site is located on the west shore of the Guntersville Reservoir at Tennessee RM 392, near Hollywood, Alabama, in Jackson County, about 6 miles east-northeast of Scottsboro, Alabama.

As required by section 51.21 of the *Code of Federal Regulations* (10 CFR), ''Criteria for and identification of licensing and regulatory actions requiring environmental assessments,'' the NRC has conducted an environmental review and prepared an EA that evaluates the environmental effects of extending the construction permit completion dates (proposed action). Based on the results of the environmental review conducted for this EA, and in accordance with 10 CFR 51.31(a), the NRC has determined not to prepare an environmental impact statement and is issuing a FONSI.

Facility Site and Environs

The unfinished two-unit pressurized-water reactor nuclear power plant is situated on a peninsula between Town Creek and the Tennessee River at RM 392 on the west shore of Guntersville Reservoir in Jackson County near Hollywood, Alabama. Most of the 1,600-acre Bellefonte site has been impacted by the construction of BLN Unit 1 and 2.

The affected environment at the Bellefonte site is described in the June 1974 final environmental statement (FES) for the construction of BLN Units 1 and 2 (FES–CP) prepared by the U.S.

Atomic Energy Commission's (AEC; now the NRC); the NRC's January 2003 BLN Units 1 and 2 construction permit extension EA; and the NRC's September 2011 BLN Unit 1 construction permit extension EA. Also, TVA has issued several EAs that describe the environment at the Bellefonte site, including a January 2006 final EA and a May 2010 final supplemental Environmental Impact Statement. Environmental conditions at the Bellefonte site have not changed appreciably from the descriptions portrayed in these documents.

II. Environmental Assessment

Description of the Proposed Action

The proposed action would extend the construction completion date of the BLN Unit 1 construction permit (CPPR–122) from October 1, 2020, to October 1, 2021, and the BLN Unit 2 construction permit (CPPR–123) from October 1, 2014, to October 1, 2021. TVA submitted the extension request for Unit 1 CPPR–122 on August 28, 2020, and the extension request for Unit 2 CPPR–123 on June 10, 2014, as supplemented on March 31, 2017. With respect to both construction permits, TVA submitted its requests at least 30 days before the expiration of the existing permits. Therefore, in accordance with 10 CFR 2.109(a), ''Effect of timely renewal application,'' the existing construction permits remain in effect until the NRC completes its review of the requests. The proposed extensions would not allow any work to be performed that is not already authorized under the existing construction permits; the extensions would merely grant the permittee additional time to complete the construction of both units.

Need for the Proposed Action

The proposed action is needed to provide time for the continued construction of BLN Units 1 and 2. The construction permits, both issued December 24, 1974, were originally set to expire on December 1, 1979 (Unit 1) and September 1, 1980 (Unit 2). At the request of TVA, the NRC has subsequently extended the completion dates of both BLN Units 1 and 2 several times. The BLN Unit 2 construction permit completion date was last extended to October 1, 2014. Most recently, the NRC extended the BLN Unit 1 construction completion date to October 1, 2020. In its March 31, 2017 and August 28, 2020 letters, TVA noted that it sold the Bellefonte property at auction, the sale of BLN Units 1 and 2 did not close, and the purchaser filed a lawsuit against TVA. TVA stated that an extension is needed to allow the parties additional time to obtain a decision in the lawsuit.

Environmental Impacts of the Proposed Action

The AEC evaluated the environmental impacts from constructing BLN Units 1 and 2 in the 1974 FES–CP. Subsequently, the NRC reevaluated the environmental impacts of completing the construction of BLN Units 1 and 2 in several EAs. These include the January 2003 and September 2011 construction permit extension EAs, both of which addressed environmental impact issues identified after the publication of the FES–CP. New issues included groundwater quality, public services, noise, socioeconomics, severe accident mitigation alternatives, cultural and historical resources, environmental justice, greenhouse gas emissions, and cumulative impacts. Additionally, these EAs evaluated changes to regional demography, natural resource use, meteorology, ecology, impacts to humans and the environment, severe accident mitigation design alternatives, and socioeconomic impacts, including environmental justice. Based on these reviews, NRC staff concluded that there were no significant differences in the environmental impacts previously addressed in the FES–CP. Further, the staff also did not identify any significant environmental impacts that have not already been addressed in the construction permit extension EAs. The NRC staff determined that the environmental impacts associated with completing the construction of BLN would be generally consistent with the impacts disclosed in the FES–CP and subsequent construction permit extension EAs. Specifically, in the 2011 EA, the NRC staff concluded that the environmental impacts of extending the BLN Unit 1 construction permit would not be significant, and the completion of BLN Unit 1 would not result in any disproportionately high and adverse human health and environmental effects on minority and low-income populations and communities residing near the Bellefonte site. The staff also determined that the environmental impacts from completing BLN Unit 1 would not be significant since the most environmentally disruptive construction activities have already been completed and any remaining construction activities would take place within completed structures at the Bellefonte site. Because of the conclusions reached in the January 2003 and September 2011 EAs, the NRC staff issued FONSIs extending the construction permit completion dates for both units.

In addition, extending the BLN Units 1 and 2 construction permit completion dates would have no effect on federally listed species or critical habitats protected under the Endangered Species Act of 1973, as amended, because all ground and river disturbances associated with construction have long since been completed. Federal agencies are not required to consult with the U.S. Fish and Wildlife Service or National Marine Fisheries Service if they determine that an action will not affect listed species or critical habitats. Thus, the Endangered Species Act does not require consultation for the proposed action, and the staff considers NRC's Section 7 obligations to be fulfilled.

Since the proposed action would only extend the period of construction activities described in the FES–CP and subsequent construction permit extension EAs, it would not create any new or different impacts or significantly change the impacts from those previously evaluated in these environmental documents. The NRC concludes that, based on this information, extending the construction completion date of the BLN Unit 1 construction permit (CPPR–122) from October 1, 2020, to October 1, 2021, and the BLN Unit 2 construction permit (CPPR–123) from October 1, 2014, to October 1, 2021, would have no significant environmental impacts.

Environmental Impacts of the Alternatives to the Proposed Action

As an alternative, the NRC considered denying the proposed action (*i.e.,* the ''no-action'' alternative). This alternative would result in expiration of the BLN Units 1 and 2 construction permits and, thus, would require the submittal of a new construction permit application in order to complete the nuclear facility with no significant environmental benefit. Therefore, the environmental impacts of the proposed action and the no-action alternative are similar.

Several alternatives to constructing and operating BLN Units 1 and 2 were considered in the FES–CP, including various sources of base load generation and alternative plant locations. Alternatives considered include not requiring new generating capacity and combinations of power generation.

Alternatives that could potentially replace new generating capacity include power purchases, repowering electrical generating plants, and energy conservation. Non-nuclear power generating alternatives include fossil fuel, wind, solar, biomass, and hydropower. Combining energy-generating alternatives could achieve an

energy profile similar to base load operation from BLN Units 1 and 2. Storage technology with wind or solar technology could augment the variability of wind and solar power with the dispatchability of fossil generation (coal and gas) or biomass generation.

Alternative Use of Resources

The proposed action does not involve any different environmental resources beyond those previously considered in the construction permit final environmental statement.

Agencies and Persons Consulted

The NRC staff did not consult with any other Federal agencies or with the State of Alabama regarding the environmental impacts of the proposed action. However, on December 1, 2020, the NRC notified the Alabama State official, Mr. David A. Turberville, Director, Office of Radiation Control of Alabama Department of Public Health, of the proposed action. Mr. Turberville had no comments.

III. Finding of No Significant Impact

The TVA has requested the NRC to extend the dates for completing the construction of BLN Units 1 and 2. The NRC is therefore considering extending the completion dates of Construction Permit Nos. CPPR–122 and CPPR–123, issued to TVA for BLN from October 1, 2020, to October 1, 2021 (Unit 1), and CPPR–123 from October 1, 2014, to October 1, 2021 (Unit 2). Based on the review of available information, the NRC determined that the proposed action would not affect safety, would not have a significant adverse effect on the probability of an accident, and would not have any significant radiological and non-radiological environmental impacts beyond what has been described in the FES–CP and subsequent construction permit extension EAs. The NRC also considered information provided in the licensee's application and related TVA environmental documents.

Consistent with 10 CFR 51.21, the NRC conducted an environmental review of the proposed action, and this FONSI incorporates Section II of the EA by reference in this notice. Therefore, the NRC concludes that the proposed action will not have a significant effect on the quality of the human environment. Accordingly, the NRC has determined there is no need to prepare an environmental impact statement for the proposed action.

This FONSI and other related environmental documents are accessible online in the ADAMS Public Documents collection at *https://www.nrc.gov/reading-rm/adams.html.* Persons who do not have access to ADAMS or who encounter problems in accessing the documents located in ADAMS should contact the NRC's PDR reference staff by telephone at 1–800–397–4209 or 301–415–4737, or by email to *pdr.resource@nrc.gov.*

IV. Availability of Documents

The documents identified in the following table are available to interested persons through one or more of the following methods, as indicated.

Document	ADAMS accession No.

NUCLEAR REGULATORY COMMISSION

[NRC–2021–0001]

Sunshine Act Meetings

TIME AND DATE: Weeks of January 11, 18, 25, February 1, 8, 15, 22, 2021.

PLACE: Commissioners' Conference Room, 11555 Rockville Pike, Rockville, Maryland.

STATUS: Public.

Week of January 11, 2021

Friday, January 15, 2021

10:00 a.m. Affirmation Session (Public Meeting) (Tentative)

a. Entergy Nuclear Operations, Inc. (Indian Point Nuclear Generating Station Units 1, 2, and 3 and ISFSI), Memorandum and Order Ruling on Petitions to Intervene (Tentative)

b. FirstEnergy Companies and TMI–2 Solutions, LLC (Three Mile Island Nuclear Station, Units 1 and 2), Petition to Intervene in License Transfer Proceeding (Tentative)

c. In the Matter of Joseph Shea (Order

Prohibiting Involvement in NRC-Licensed Activities Immediately Effective), Review of LBP–20–11 (Tentative)

(Contact: Wesley Held: 301–287–3591)

Additional Information: By a vote of 5–0 on January 13 and 14, 2021, the Commission determined pursuant to 5 U.S.C. 552b(e)(1) and 10 CFR 9.107 of the Commission's rules that the above referenced Affirmation Session be held with less than one week notice to the public. The meeting will be held on January 15, 2021. Due to COVID–19, there will be no physical public attendance. The public is invited to attend the Commission's meeting live via teleconference. Details for joining the teleconference in listen only mode can be found at *https://www.nrc.gov/pmns/mtg.*

Week of January 18, 2021

There are no meetings scheduled for the week of January 18, 2021.

Week of January 25, 2021—Tentative

There are no meetings scheduled for the week of January 25, 2021.

Week of February 1, 2021—Tentative

There are no meetings scheduled for the week of February 1, 2021.

Week of February 8, 2021—Tentative

There are no meetings scheduled for the week of February 8, 2021.

Week of February 15, 2021—Tentative

Thursday, February 18, 2021

10:00 a.m. Briefing on Equal Employment Opportunity, Affirmative Employment, and Small Business (Public Meeting) (Contact: Nadim Khan: 301–415–1119)

Additional Information: Due to COVID–19, there will be no physical public attendance. The public is invited to attend the Commission's meeting live by webcast at the Web address—*https://video.nrc.gov/.*

Week of February 22, 2021—Tentative

There are no meetings scheduled for the week of February 22, 2021.

CONTACT PERSON FOR MORE INFORMATION: For more information or to verify the status of meetings, contact Wesley Held at 301–287–3591 or via email at *Wesley.Held@nrc.gov.* The schedule for Commission meetings is subject to change on short notice.

The NRC Commission Meeting Schedule can be found on the internet at: *https://www.nrc.gov/public-involve/public-meetings/schedule.html.*

The NRC provides reasonable accommodation to individuals with disabilities where appropriate. If you need a reasonable accommodation to participate in these public meetings or need this meeting notice or the transcript or other information from the public meetings in another format (*e.g.,* braille, large print), please notify Anne Silk, NRC Disability Program Specialist, at 301–287–0745, by videophone at 240–428–3217, or by email at *Anne.Silk@nrc.gov.* Determinations on requests for reasonable accommodation will be made on a case-by-case basis.

Members of the public may request to receive this information electronically. If you would like to be added to the distribution, please contact the Nuclear Regulatory Commission, Office of the Secretary, Washington, DC 20555, at 301–415–1969, or by email at *Tyesha.Bush@nrc.gov.*

The NRC is holding the meetings under the authority of the Government in the Sunshine Act, 5 U.S.C. 552b.

Dated: January 14, 2021.

SECURITIES AND EXCHANGE COMMISSION

[Investment Company Act Release No. 34172; File No. 812–15178]

ActiveShares ETF Trust, et al.

January 12, 2021.

AGENCY: Securities and Exchange Commission (''Commission'').

ACTION: Notice.

Notice of an application for an order under section 6(c) of the Investment Company Act of 1940 (''Act'') for an exemption from sections 2(a)(32), 5(a)(1), and 22(d) of the Act and rule 22c–1 under the Act, and under sections 6(c) and 17(b) of the Act for an exemption from sections 17(a)(1) and 17(a)(2) of the Act.

Applicants: ActiveShares ETF Trust (the ''Trust''), Legg Mason Partners Fund Advisor, LLC (the ''Initial Adviser''), and Legg Mason Investor Services, LLC (the ''Distributor'').

Summary of Application: Applicants request an order (''Order'') that permits: (a) ActiveShares ETFs (as described in the Reference Order (as defined below)) to issue shares (''Shares'') redeemable in large aggregations only (''creation units''); (b) secondary market transactions in Shares to occur at negotiated market prices rather than at net asset value; and (c) certain affiliated persons of an ActiveShares ETF to deposit securities into, and receive securities from, the ActiveShares ETF in connection with the purchase and redemption of creation units. The relief in the Order would incorporate by reference terms and conditions of the same relief of a previous order granting the same relief sought by applicants, as that order may be amended from time to time (''Reference Order'').[1]

Filing Date: The application was filed on November 5, 2020 and amended on December 23, 2020.

Hearing or Notification of Hearing: An order granting the requested relief will be issued unless the Commission orders a hearing. Interested persons may request a hearing by emailing the Commission's Secretary at *Secretarys-Office@sec.gov* and serving applicants with a copy of the request by email. Hearing requests should be received by the Commission by 5:30 p.m. on February 8, 2021, and should be accompanied by proof of service on applicants, in the form of an affidavit or, for lawyers, a certificate of service. Pursuant to rule 0–5 under the Act, hearing requests should state the nature of the writer's interest, any facts bearing upon the desirability of a hearing on the matter, the reason for the request, and the issues contested. Persons who wish to be notified of a hearing may request notification by emailing the Commission's Secretary at *Secretarys-Office@sec.gov.*

ADDRESSES: The Commission: *Secretarys-Office@sec.gov.* Applicants: ActiveShares ETF Trust, Legg Mason Partners Fund Advisor, LLC, and Legg Mason Investor Services, LLC: c/o Marc De Oliveira, ActiveShares ETF Trust, *MADeoliveira@leggmason.com;* Laura E. Flores, Morgan, Lewis & Bockius LLP, *laura.flores@morganlewis.com.*

FOR FURTHER INFORMATION CONTACT: Kay M. Vobis, Senior Counsel, at (202) 551–6728 or Trace W. Rakestraw, Branch Chief, at (202) 551–6825 (Division of Investment Management, Chief Counsel's Office).

SUPPLEMENTARY INFORMATION: The following is a summary of the

[1] Precidian ETFs Trust, *et al.,* Investment Company Act Release Nos. 33440 (April 8, 2019) (notice) and 33477 (May 20, 2019) (order). Applicants are not seeking relief under section 12(d)(1)(J) of the Act for an exemption from sections 12(d)(1)(A) and 12(d)(1)(B) of the Act (the ''Section 12(d)(1) Relief''), and relief under sections 6(c) and 17(b) of the Act for an exemption from sections 17(a)(1) and 17(a)(2) of the Act relating to the Section 12(d)(1) Relief, as granted in the Reference Order. Accordingly, to the extent the terms and conditions of the Reference Order relate to such relief, they are not incorporated by reference into the Order.

application. The complete application may be obtained via the Commission's website by searching for the file number, or for an applicant using the Company name box, at *http://www.sec.gov/search/search.htm* or by calling (202) 551–8090.

Applicants

1. The Trust is a statutory trust established under the laws of the State of Maryland and will consist of one or more series operating as ActiveShares ETFs. The Trust is registered as an open-end management investment company under the Act. Applicants seek relief with respect to Funds (as defined below), including an initial Fund (the ''Initial Fund''). The Funds will operate as ActiveShares ETFs as described in the Reference Order.[2]

2. The Initial Adviser, a Delaware limited liability company, will be the investment adviser to the Initial Fund. An Adviser (as defined below) will serve as investment adviser to each Fund. The Initial Adviser is, and any other Adviser will be, registered as an investment adviser under the Investment Advisers Act of 1940 (''Advisers Act''). The Adviser may enter into sub-advisory agreements with other investment advisers to act as sub-advisers with respect to the Funds (each a ''Sub-Adviser''). Any Sub-Adviser will be registered under the Advisers Act.

3. The Distributor is a Delaware limited liability company and a broker-dealer registered under the Securities Exchange Act of 1934, as amended, and will act as the principal underwriter of Shares of the Funds. Applicants request that the requested relief apply to any distributor of Shares, whether affiliated or unaffiliated with the Adviser and/or Sub-Adviser (included in the term ''Distributor''). Any Distributor will comply with the terms and conditions of the Order.

Applicants' Requested Exemptive Relief

4. Applicants seek the requested Order under section 6(c) of the Act for an exemption from sections 2(a)(32), 5(a)(1), and 22(d) of the Act and rule 22c–1 under the Act, and under sections 6(c) and 17(b) of the Act for an exemption from sections 17(a)(1) and 17(a)(2) of the Act. The requested Order would permit applicants to offer ActiveShares ETFs. Because the relief requested is the same as certain of the relief granted by the Commission under the Reference Order and because the Initial Adviser, or an affiliate thereof, has entered into a license agreement with Precidian Investments LLC, or an affiliate thereof, in order to offer ActiveShares ETFs,[3] the Order would incorporate by reference the terms and conditions of the same relief of the Reference Order.

5. Applicants request that the Order apply to the Initial Fund and to any other existing or future registered open-end management investment company or series thereof that: (a) Is advised by the Initial Adviser or any entity controlling, controlled by, or under common control with the Initial Adviser (any such entity, along with the Initial Adviser, included in the term ''Adviser''); (b) operates as an ActiveShares ETF as described in the Reference Order; and (c) complies with the terms and conditions of the Order and the terms and conditions of the Reference Order that are incorporated by reference into the Order (each such company or series and the Initial Fund, a ''Fund'').[4]

6. Section 6(c) of the Act provides that the Commission may exempt any person, security or transaction, or any class of persons, securities or transactions, from any provisions of the Act, if and to the extent that such exemption is necessary or appropriate in the public interest and consistent with the protection of investors and the purposes fairly intended by the policy and provisions of the Act. Section 17(b) of the Act authorizes the Commission to exempt a proposed transaction from section 17(a) of the Act if evidence establishes that the terms of the transaction, including the consideration to be paid or received, are reasonable and fair and do not involve overreaching on the part of any person concerned, and the transaction is consistent with the policies of the registered investment company and the general purposes of the Act. Applicants submit that for the reasons stated in the Reference Order the requested relief meets the exemptive standards under sections 6(c) and 17(b) of the Act.

[2] To facilitate arbitrage, an ActiveShares ETF disseminates a ''verified intraday indicative value'' or ''VIIV,'' reflecting the value of its portfolio holdings, calculated every second during the trading day. To protect the identity and weightings of its portfolio holdings, an ActiveShares ETF sells and redeems its Shares in creation units to authorized participants only through an unaffiliated broker-dealer acting on an agency basis.

[3] Aspects of the Funds are covered by intellectual property rights, including but not limited to those which are described in one or more patent applications.

[4] All entities that currently intend to rely on the Order are named as applicants. Any other entity that relies on the Order in the future will comply with the terms and conditions of the Order and the terms and conditions of the Reference Order that are incorporated by reference into the Order.

For the Commission, by the Division of Investment Management, pursuant to delegated authority.

J. Matthew DeLesDernier,

Assistant Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–90903; File No. SR–ISE–2020–43]

Self-Regulatory Organizations; Nasdaq ISE, LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Delete the Exchange Membership Rules and Incorporate by Reference the Membership Rules of The Nasdaq Stock Market LLC

January 12, 2021.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on December 29, 2020, Nasdaq ISE, LLC (''ISE'' or ''Exchange'') filed with the Securities and Exchange Commission (''SEC'' or ''Commission'') the proposed rule change as described in Items I, II, and III, below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to delete the Exchange's membership rules currently under the General 3 title, incorporate by reference The Nasdaq Stock Market LLC's (''Nasdaq'') rules in the General 3 Rule 1000 Series, and other related changes.

The text of the proposed rule change is available on the Exchange's website at *https://listingcenter.nasdaq.com/rulebook/ise/rules,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

General 3 of the Exchange's General Rules and Nasdaq's General 3, Rules 1000 Series prescribe the qualifications and procedures for applying for membership, respectively, on the Exchange and Nasdaq. The Exchange proposes to delete in their entirety the rules under its General 3 title, entitled ''Membership and Access,'' and incorporate by reference the Nasdaq General 3, Rules 1000 Series (the ''Nasdaq Rule 1000 Series'' or ''Nasdaq Membership Rules'') as described below.[3] The Exchange will also relocate the text under its rule General 3, Section 5(g) and place it under new Options 2A, Section 1(f) rule and General 3, Section 4(b) which will be placed under new Exchange General 2, Section 11, as further described below.

This proposal is part of the Exchange's plan to harmonize its membership rules with the membership rules of the Nasdaq and Nasdaq BX, Inc. (''BX'') exchanges.[4] The Exchange notes that Nasdaq GEMX, LLC, Nasdaq MRX, LLC, and Nasdaq Phlx, LLC (''Phlx'') (together with Nasdaq and BX, the ''Affiliated Exchanges'') each plan to propose similar rule changes that will render their membership rules substantially similar to those of Nasdaq and BX. To account for any differences that may exist, the proposed introductory paragraphs list instances in which cross references in the Nasdaq Series 1000 Rules to other Nasdaq rules shall be read to refer instead to the Exchange Rules, and references to Nasdaq terms (whether or not defined) shall be read to refer to the Exchange-related meanings of those terms. For instance, references to defined terms ''Exchange'' or ''Nasdaq'' shall be read to refer to the Nasdaq ISE Exchange; ''Rule'' or ''Exchange Rule'' shall be read to refer to the Exchange Rules; the defined term ''Applicant'' in the Nasdaq Rule 1000 Series shall be read to refer to an Applicant to the Nasdaq ISE Exchange; the defined terms ''Board'' or ''Exchange Board'' in the Nasdaq Rule 1000 Series shall be read to refer to the Nasdaq ISE Board of Directors; the defined term ''Director'' in the Nasdaq Rule 1000 Series shall be read to refer to a Director of the Board of the Nasdaq ISE Exchange; the defined term ''Exchange Review Council'' in the Nasdaq Rule 1000 Series shall be read to refer to the Nasdaq ISE Exchange Review Council; the defined term ''Subcommittee'' in the Nasdaq Rule 1000 Series shall be read to refer to a Subcommittee of the Nasdaq ISE Exchange Review Council; the defined term ''Interested Staff'' in the Nasdaq Rule 1000 Series shall be read to refer to Interested Staff of Nasdaq ISE; the defined term ''Member'' in the Nasdaq Rule 1000 Series shall be read to refer to a Nasdaq ISE Member who acts in its capacity as an Electronic Access Member, a Primary Market Maker, or a Competitive Market Maker (including a ''Foreign Member,'' as defined under Nasdaq General 9, Section 50); the defined term ''Associated Person'' shall be read to refer to a Nasdaq ISE Associated Person; the defined terms ''Exchange Membership Department'' or ''Membership Department'' shall be read to refer to the Nasdaq ISE Membership Department; and the defined term ''Exchange Regulation Department'' shall be read to refer to the Nasdaq ISE Regulation Department.

Additionally, cross references in the Nasdaq Rule 1000 Series to ''General 1 and Equity 1'' shall be read as references to Nasdaq ISE General 1, Section 1; cross references in the Nasdaq Rule 1000 Series to ''General 9, Section 20'' shall be read as references to Nasdaq ISE Options 10, Section 5(c)(2); cross references in the Nasdaq Rule 1000 Series to ''General 9, Section 37'' shall be read as references to Nasdaq ISE Options 9, Section 21; and cross references to the ''General 4, Rule 1200 Series'' shall be read as references to Nasdaq ISE General 4, Section 1.[5]

Finally, as explained below, the introductory paragraph will indicate that the Nasdaq Rule 1000 Series shall also apply to Nasdaq ISE Members who meet the requirements of a ''Foreign Member.''

As compared to the Exchange's existing General 3, by virtue of incorporating by reference the Nasdaq Membership Rules into the Exchange's rulebook, the Exchange's membership rules will be organized in a more logical order. The incorporated rules will eliminate unnecessary or vague provisions that exist under the current General 3 title, eliminate unnecessary complexity in the membership process, and otherwise streamline the Exchange's existing membership rules and their associated procedures.

Summary of Proposed Changes

A comparison between the Exchange's existing General 3 and the Nasdaq Membership Rules is summarized below. As a general matter, in comparison to the Exchange's existing membership rules, the Nasdaq Membership Rules provide for more specific membership procedures and due process. Moreover, as described below, some of the Nasdaq Rule 1000 Series rules have no analogue in the existing Exchange rules. Finally, as explained later, the Exchange will also relocate the text under its General 3, Section 5(g) rule and place it under new Options 2A, Section 1(f) rule and General 3, Section 4(b) which will be relocated under new Exchange General 2, Section 11.

Rule 1001

Nasdaq Rule 1001 states that Nasdaq and the Financial Industry Regulatory Authority (''FINRA'') are parties to a Regulatory Contract, pursuant to which FINRA has agreed to perform certain functions described in the Rule 1000 Series and the General 4, Rule 1200 Series on behalf of Nasdaq.[6] Moreover, Nasdaq Rule 1001 provides that Nasdaq rules that refer to Nasdaq's Regulation Department, Nasdaq Regulation Department staff, Nasdaq staff, and Nasdaq departments should be understood as also referring to FINRA staff and FINRA departments acting on behalf of Nasdaq pursuant to the Regulatory Contract.

Nasdaq Rule 1001 also provides that, notwithstanding the fact that Nasdaq has entered into the Regulatory Contract with FINRA to perform some of Nasdaq's functions, Nasdaq shall retain ultimate legal responsibility for, and control of, such functions. In addition, the rule informs that Nasdaq has incorporated by reference certain FINRA rules and that Nasdaq members shall comply with those rules and

[3] The Exchange will separately request an exemption from the rule filing requirements of Section 19(b) of the Act for changes to General 3 to the extent such rules are effected solely by virtue of a change to the Nasdaq Rule 1000 Series. The Exchange's proposed rule change will not become effective unless and until the Commission approves this exemption request.

[4] The BX membership rules were previously amended to incorporate by reference Nasdaq's membership rules. *See* Securities Exchange Act Release No. 34–86425 (July 22, 2019), 84 FR 36139 (July 26, 2019) (SR–BX–2019–022).

[5] The Exchange notes that its General 4 title (entitled ''Regulation'') currently incorporates by reference the rules contained in Nasdaq's General 4 title. *See* Securities Exchange Act Release No. 85728 (April 26, 2019), 84 FR 18892 (May 2, 2019) (SR–ISE–2019–12).

[6] Nasdaq's General 4, Section 1 (Registration, Qualification and Continuing Education) is currently incorporated by reference into the Exchange's General 4 title. *See supra* note 5.

interpretations as if such rules and interpretations were part of Nasdaq's Rules.

The Exchange is proposing to incorporate by reference Nasdaq Rule 1001, which currently has no analogue rule under its membership rules. The language of Nasdaq Rule 1001 is applicable to the Exchange, as the Exchange is, similarly, a signatory of a Regulatory Contract with FINRA, pursuant to which FINRA has agreed to perform certain membership functions on its behalf, and also retains the ultimate legal responsibility for the performance of said functions. The Exchange believes that the incorporation by reference to Nasdaq Rule 1001 is not a substantive amendment to the Exchange rules.

Rule 1002

Nasdaq Rule 1002, which will be incorporated by reference under the Exchange's General 3 title, describes the qualifications of Nasdaq members and associated persons, the registration of branch offices, and the designation of a Member's office of supervisory jurisdiction. The Exchange will adopt by incorporation the provisions of Nasdaq Rule 1002 and delete those under current General 3, Section 1. The Exchange believes that incorporating by reference this rule will further the Exchange's objective to provide uniformity and clarity to its rules by aligning them with the membership rules of the Nasdaq and BX exchanges.

Nasdaq Rule 1002(a) provides that any registered broker or dealer shall be eligible for membership in Nasdaq (except for those excluded under paragraph (b) of the rule); additionally, paragraph (a) provides that any person shall be eligible to become an Associated Person of a Member (except for those excluded under Rule 1002(b)). Rule 1002(a) is similar to General 3, Section 1(a) of the Exchange's membership rules to the extent that it describes that brokers or dealers may become Exchange members (''Members''). General 3, Section 1(a) provides that a Member may be a corporation, partnership, or limited liability company, and must be a registered broker-dealer and meet the qualifications for Exchange membership. The Exchange believes that incorporating by reference Nasdaq Rule 1002(a) expands upon Exchange General 3, Section 1(a) by including an associated person of a Member (''Associated Person'') under this threshold requirement.

The Exchange's General 3, Section 1(b) provides that a Member that does not maintain an office in the United States (''Foreign Member'') that is responsible for preparing and maintaining financial and other reports required to be filed with the Commission and with the Exchange must prepare such reports in English and in U.S. dollars, reimburse the Exchange for any expense incurred in examining the Member to the extent that such expense is in excess of the cost associated with examining a Member located within the continental United States, and ensure the availability of an individual who is fluent in English and knowledgeable in securities and financial matters to assist representatives of the Exchange during examinations. Nasdaq General 9, Section 50 is a Nasdaq rule substantially similar to the provisions in General 3, Section 1(b). In order to preserve the enumerated characteristics of a Foreign Member, which would otherwise be deleted from its Rulebook by incorporating by reference the Nasdaq Rule 1000 Series, the Exchange proposes to include the text of its General 3, Section 1(b) under the General 3's introductory paragraph and indicate that the Nasdaq Membership Rules will also apply to the members who meet the Foreign Member requirements.

Furthermore, General 3, Section 1(c) provides that every Member shall have as the principal purpose of being a Member the conduct of a public securities business, and that purpose shall be deemed to exist if and so long as: (1) The Member has qualified and acts in respect of its business on the Exchange in one or more of the following capacities: (i) An Electronic Access Member; (ii) a Primary Market Maker; or (iii) a Competitive Market Maker; and (2) all transactions effected by the Member are in compliance with Section 11(a) of the Exchange Act and the rules and regulations adopted thereunder. The Exchange believes that the membership qualifications described in this section are consistent with the eligibility criteria described in Nasdaq Rule 1002 and the disclosures and information provided by Applicant pursuant to Nasdaq Rule 1013. To account for the Exchange rights referenced in Section 1(c) (Electronic Access Member, Primary Market Maker, or Competitive Market Maker), as defined under the Exchange's Options 1, Section 1 provisions, the Exchange will also indicate in the proposed General 3 introductory paragraph that the defined term ''Member'' in the Nasdaq Rule 1000 Series shall be read to refer to a Nasdaq ISE Member who acts in its capacity as an Electronic Access Member, a Primary Market Maker, or a Competitive Market Maker. The Exchange notes that the rules related to a Primary Market Maker's and Competitive Market Maker's trading rights are not being impacted by this proposal. These rules are preserved and located in the Exchange's Options 2A title, ISE Market Maker Rights.

Nasdaq Rule 1002(b)(1) establishes that subject to such exceptions as may be explicitly provided elsewhere in the Nasdaq rules, no registered broker or dealer shall be admitted to membership, and no Member shall be continued in membership, if such broker, dealer, or Member fails or ceases to satisfy the qualification requirements established by Nasdaq rules, or if such broker, dealer, or Member is or becomes subject to a statutory disqualification, or if such broker, dealer, or Member fails to file such forms as may be required in accordance with such process as Nasdaq may prescribe. Nasdaq Rule 1002(b)(1) can be compared to the provision currently under Exchange's General 3, Section 2(b) that establishes that the Exchange may deny or condition the approval of a Member, or preclude or condition a person from becoming associated with a Member, for the same reasons that the Commission may deny or revoke a broker-dealer registration and for those reasons required or allowed under the Act. Furthermore, the requirement to comply with Nasdaq rules under Section (b)(1), is also consistent with the provision under Exchange General 3, Section 4(c) that states that every Member shall pledge to abide by the by-laws and rules of the Exchange, as amended from time to time, and by all Options Regulatory Alerts, notices, directives or decisions adopted pursuant to or made in accordance with the Exchange's by-laws and rules.

Nasdaq Rule 1002(b)(2) establishes that, subject to such exceptions as may be explicitly provided elsewhere in Nasdaq rules, no person shall become associated with a Member, continue to be associated with a Member, or transfer association to another Member, if such person fails or ceases to satisfy the qualification requirements established by Nasdaq rules, or if such person is or becomes subject to a statutory disqualification; and no broker or dealer shall be admitted to membership, and no Member shall be continued in membership, if any person associated with it is ineligible to be an Associated Person under Nasdaq Membership Rules. Nasdaq Rule 1002(b)(2) is similar to the requirement that applies to Associated Persons under General 3, Section 3(a) of the Exchange rules. The

Exchange's General 3, Section 3 rules enumerate conditions that apply to persons associated with Members of the Exchange. Exchange General 3, Section 3(a) provides that Associated Persons are bound by the Exchange's by-laws and rules and the rules of the Clearing Corporation and describes the circumstances concerning the barring of an Associated Person in such role. Exchange General 3, Sections 2(b), 3(a), and 4(c) are, substantially similar to the provisions of Nasdaq Rule 1002(b),[7] which the Exchange proposes be incorporated by reference into its membership rules. The Exchange notes that General 3, Section 3(b) requires that Members file and keep current a list of its associated persons who are its executive officers, directors, principals, shareholders, and general partners. A Member's obligation to maintain updated information for their registered representatives or principals is prescribed under Nasdaq's General 4 title which was previously incorporated by reference into the Exchange rules,[8] rendering Exchange General 3, Section 3(b) unnecessary.

Exchange General 3, Section 3(c) provides that a claim of any Associated Person described in the first sentence of General 3, Section 3(b) (*i.e.,* a Member's executive officers, directors, principal shareholders, and general partners) against a Member shall be subordinate in right of payment of customers and other Members. This subordination rule was approved as part of the Exchange's Form 1 filing on February 24, 2000.[9] At that time, Exchange members had equity ownership interest in the Exchange and the subordination language was relevant. In April of 2002, the Exchange demutualized, which ultimately resulted in Exchange members no longer having any equity ownership interest in ISE. As such, this language became obsolete.[10] The Exchange proposes to delete this provision in its entirety.

Nasdaq Rule 1002(c) establishes, as a condition to maintaining Nasdaq membership, that Members shall at all times maintain membership in a registered securities association or another registered exchange. Furthermore, the rule prescribes that Members that transact business with customers shall at all times be members of FINRA. The Exchange proposes to incorporate this rule by reference. Because the Exchange does not act in the capacity of a designated examining authority (''DEA''), like the Nasdaq and BX exchanges, it requires that all applicants for membership have an assigned DEA in place as a condition of its membership.

Nasdaq Rule 1002(d) states that Nasdaq members are deemed to comply with Nasdaq's branch office registration requirements to the extent that they keep current a Uniform Branch Office Registration Form (''Form BR''), which contains the requisite information and which is accessible electronically to Nasdaq. Members that are not FINRA members shall continue to submit to Nasdaq a Branch Office Disclosure Form, as they have done previously. The Exchange proposes to incorporate by reference this rule, which is consistent with the provisions under the Exchange's Options 10, Section 5, entitled Branch Offices. The Exchange proposes that the cross-reference in Nasdaq Rule 1002(d)(2) to General 9, Section 20 shall be read as a reference to Exchange Options 10, Section 5(c)(2).

Rule 1011

Nasdaq Rule 1011 contains definitions applicable to the Nasdaq Membership Rules. Nasdaq Rule 1011 has no analogue rule in the existing Exchange's General 3 title. By incorporating by reference the Nasdaq definitions under Rule 1011, the Exchange believes it will further harmonize its rules with respect to the membership rules of Nasdaq and BX. The Exchange notes that the defined terms in Nasdaq Rule 1011, to be incorporated by reference into the Exchange's rules, are self-contained and have no impact on ISE rules outside its membership rules. The terms ''Applicant,'' ''Department,'' ''Director,'' ''Interested Staff,'' ''Securities business,'' ''Exchange Board,'' ''principal place of business,'' ''registered broker or dealer,'' ''Representative,'' ''sales practice event,'' ''Subcommittee,'' and ''statutory disqualification'' have not been defined in the Exchange's rulebook. The Exchange notes that the term ''associated person'' as defined in the Exchange's rulebook [11] is substantially similar to the definition in Nasdaq General 1(b)(2). Relatedly, the term ''Proprietary Trading Firm'' as defined in Nasdaq Rule 1011(o) is substantially similar with the definition of ''proprietary trading'' as defined in the Exchange's rulebook.[12] The Exchange proposes to adopt by incorporation the text of Nasdaq Rule 1011 in its entirety. The Exchange believes that incorporating by reference this rule will further the Exchange's objective to provide uniformity and clarity to its rules by aligning them with the membership rules of the Nasdaq and BX exchanges.

Rule 1012

Nasdaq Rule 1012 (''General Application Provisions'') provides a detailed outline of the requirements that an Applicant must follow in order to file an application for membership with Nasdaq. In contrast, the Exchange membership rules contain vague provisions describing the manner in which an application shall be submitted or how service shall be performed. The Exchange believes that Nasdaq Rule 1012 provides a more detailed set of instructions for Applicants, Members, and Associated Persons to submit materials and the requirements for service of documents. The Exchange believes that incorporating Rule 1012 by reference will further the Exchange's objective to provide uniformity and clarity to its rules by aligning them with the membership rules of the Nasdaq and BX exchanges.

Nasdaq Rule 1012(a) provides that Applicants and Nasdaq Members may submit an application or other documents and information to Nasdaq by first-class mail, overnight courier, hand delivery, or by electronic means; this section also provides that Nasdaq shall serve a notice or decision issued under the Nasdaq Membership Rules by first-class mail or electronic means on the Applicant or Member or its counsel, unless a Nasdaq rule specifies a different method of service; finally, this section also details when service by Nasdaq or an Applicant shall be deemed complete. The Exchange membership rules contain no such provision. The Exchange believes that incorporating Nasdaq 1012(a) by reference improves its membership application process by adopting specific provisions regarding the manner of submission and service of documents.

Nasdaq Rule 1012(b) provides a definition of the term ''calendar days'' and describes the manner in which times under the Nasdaq Membership Rule shall be computed. The Exchange

[7] The Exchange notes that it will not relocate or carve-out this duplicative provision concerning The Options Clearing Corporation (''OCC''). Pursuant to the Exchange's Options 9, Section 2 (''Adherence to Law''), Members are required to abide by the Act, the Exchange's by-laws, the rules of the Exchange, and OCC rules.

[11] Exchange General 1, Section 1(a)(1).

[12] Exchange Options 1, Section 1(a)(41)

membership rules contain no such provision. The Exchange believes that adopting this rule by incorporation will provide further clarity to the calculation of times under its membership rules.

Nasdaq Rule 1012(c) describes a(n) Applicant's, Member's, and Associated Person's duty to ensure that the information they provide to Nasdaq at the time of the filing is accurate, complete, and current. Moreover, this provision requires that Applicant's, Member's, and Associated Person's shall ensure that membership applications and supporting materials filed with Nasdaq remain accurate, complete, and current at all times by filing supplementary amendments, which must be filed within 15 business days of their learning of the facts or circumstances giving rise to the need for an amendment. Furthermore, this section requires that Applicants, Members, and Associated Persons promptly notify Nasdaq, in writing, of any material adverse change in their financial condition. The Exchange membership rules contain no such provision. The Exchange believes that incorporating Nasdaq 1012(c) by reference improves its membership rules by adopting provisions concerning a Member's duty to ensure the accuracy, completeness, and current nature of membership information.

Exchange General 3, Section 4(b) states that every Member shall report to the Exchange all contact information required by the Exchange via the FINRA Contact System. Section 4(b) also requires Exchange Members to update their contact information promptly when necessary, but in no event later than 30 days following any change, and within 17 business days after the end of each calendar year; furthermore, it requires members to comply with any request for such information by the Exchange within 15 days or any longer period agreed upon with Exchange staff. The Exchange proposes the relocation of this provision, with minor lettering changes, to Exchange General 2 title (''Organization and Administration'') under new Section 11, entitled Contact Information Requirements. Exchange General 3, Section 4(b) is substantially similar to the rule text in both Nasdaq's and BX's General 2, Section 11.

As previously stated, the Exchange proposes to adopt by incorporation the text of Nasdaq Rule 1012 in its entirety, as the rule's provisions provide clear instructions concerning the submission of membership applications and other materials; the requirements for service of documents; and the Applicants', Members', and Associated Persons' duty to ensure that the information filed with the Exchange is up to date.

Rule 1013

Nasdaq Rule 1013 sets forth the procedure for filing applications for new membership on the Exchange. The Exchange proposes to incorporate Nasdaq Rule 1013 by reference under its General 3 title. The Exchange is adopting Nasdaq Rule 1013 as it expands upon and provides clarity to the procedure in the Exchange's General 3, Section 5. The Exchange believes that incorporating Rule 1013 by reference will further the Exchange's objective to provide uniformity and clarity to its rules by aligning them with the membership rules of the Nasdaq and BX exchanges.

Nasdaq Rule 1013(a) describes in detail the membership application process. Subsection (a)(1) (''Where to File; Contents''), provides that an application shall include (A) a copy of the Applicant's current Form BD, if not otherwise available to Nasdaq electronically through the Central Registration Depository (''CRD''); (B) an original Nasdaq-approved fingerprint card for each Associated Person who will be subject to SEC Rule 17f-2 and for whom a fingerprint card has not been filed with another self-regulatory organization (SRO), if such fingerprints are not otherwise available electronically to Nasdaq through CRD; (C) payment for such fee as may be required under the Rules; (D) a description of the Applicant's proposed trading activities on Nasdaq, such as the types of securities it will trade, whether it will be a market maker, or an order entry firm, and/or engage in block trading activities, and the extent to which the Applicant is conducting such activities as a member of other SROs; (E) a copy of the Applicant's most recent audited financial statements and a description of any material changes in the Applicant's financial condition since the date of the financial statements; (F) an organizational chart; (G) the intended location of the Applicant's principal place of business and all other branch offices, if any, and the names of the persons who will be in charge of each office; (H) a description of the communications and operational systems the Applicant will employ to conduct business and the plans and procedures the Applicant will employ to ensure business continuity, including: system capacity to handle the anticipated level of usage; contingency plans in the event of systems or other technological or communications problems or failures; system redundancies; disaster recovery plans; and system security; (I) a copy of any decision or order by a federal or state authority or SRO taking permanent or temporary adverse action with respect to a registration or licensing determination regarding the Applicant or an Associated Person; (J) a statement indicating whether the Applicant or any person listed on Schedule A of the Applicant's Form BD is currently, or has been in the last ten years, the subject of any investigation or disciplinary proceeding conducted by any SRO, the foreign equivalent of a SRO, a foreign or international securities exchange, a contract market designated pursuant to the Commodity Exchange Act (''CEA'') or any substantially equivalent foreign statute or regulation, a futures association registered under the CEA or any substantially similar foreign statute or regulation, the Commission or any other ''appropriate regulatory agency'' (as defined in the Act), the Commodity Futures Trading Commission, or any state financial regulatory agency regarding the Applicant's activities that has not been reported to the CRD, together with all relevant details, including any sanctions imposed; (K) a statement indicating whether any person listed on Schedule A of the Applicant's Form BD is currently, or has been in the last ten years, the subject of any investigation or disciplinary proceeding conducted by any SRO, the foreign equivalent of an SRO, a foreign or international securities exchange, a contract market designated pursuant to the CEA or any substantially equivalent foreign statute or regulation, a futures association registered under the CEA or any substantially similar foreign statute or regulation, the Commission or any other ''appropriate regulatory agency'', the CFTC, or any state financial regulatory agency regarding the Applicant's activities that has not been reported to the CRD, together with all relevant details, including any sanctions imposed; (L) a copy of any contract or agreement with another broker-dealer, a bank, a clearing entity, a service bureau or a similar entity to provide the Applicant with services regarding the execution or clearance and settlement of transactions effected on Nasdaq; (M) if the Applicant proposes to make markets on Nasdaq, a description of the source and amount of Applicant's capital to support its market making activities on Nasdaq, and the source of any additional capital that may become necessary; (N) a description of the financial controls to be employed by the Applicant with respect to anti-money laundering compliance rules as set forth in General 9, Section 37; (O) a copy of

the Applicant's written supervisory procedures with respect to the activities identified in paragraph (a)(1)(D); (P) a list of the persons conducting the Applicant's market making and other trading activities, and a list of the persons responsible for such persons' supervision, together with the CRD numbers; (R) a copy of the Applicant's most recent ''FOCUS Report'' (Form X–17A–5) filed with the SEC pursuant to SEC Rule 17a–5; (S) all examination reports and corresponding responses regarding the Applicant for the previous two years from the SROs of which it is a member; (T) a copy of Nasdaq's Membership Agreement, duly executed by the Applicant, which includes, among other things: (1) An agreement to comply with the federal securities laws, the rules and regulations thereunder, Nasdaq rules, and all rulings, orders, directions, and decisions issued and sanctions imposed under Nasdaq rules; (2) an agreement to pay such dues, assessments, and other charges in the manner and amount as from time to time shall be fixed pursuant to Nasdaq rules; and (U) such other reasonable information with respect to the Applicant as Nasdaq may require.

In contrast, current General 3, Section 2(a) states simply that to become a Member of the Exchange an Applicant must seek approval in the form and manner prescribed by the Exchange. Relatedly, General 3, Section 4(a) provides a short list of documents that Applicants and Members may submit with their application for membership with the Exchange. Section 4(a) states that Members and Applicants shall file with (and be subject to review by) the Exchange, at a minimum, their partnership agreements and any subsequent amendments, in the case of partnerships; articles of incorporation, by-laws and their amendments, in the case of corporations; the articles of organization and operating agreements and their respective amendments, in the case of limited liability companies; and any lease agreements that Members may be subject to.[13] The paragraph further provides that no action or failure by the Exchange to act shall be construed to mean that the Exchange has in any way passed on the investment merits of or approved the submitted document. The Exchange believes that deleting General 3, Section 4(a) is appropriate because the Exchange's current rule is ambiguous while Nasdaq Rule 1013(a)(1), which will be incorporated by reference, lists in detail all of the supplementary application materials required for submission by an Applicant. Incorporating this provision by reference will further standardize the Exchange's membership application process.

Exchange's General 3, Section 5(a) provides that to become a Member of the Exchange an Applicant shall file an application, which must be accompanied by a non-refundable application fee. The Exchange proposes to delete Section 5(a) because the provisions in this section are already included in Nasdaq Rule 1013, New Member Application which is being incorporated by reference.

The Exchange also believes that the provision under General 3, Section 5(c) that indicates that an applicant must be approved by the Exchange to perform in at least one of the recognized capacities of a Member as stated in General 3, Section 1(c) (discussed above when describing the incorporation by reference of Nasdaq Rule 1002) is substantially similar to the language contained in Nasdaq Rule 1013(a)(1)(D).

Nasdaq Rule 1013(a)(2) provides that the Membership Department will deem an application to be filed on the date when it is substantially complete, meaning the date on which the Membership Department receives from the Applicant all material documentation and information required under Rule 1013. This rule also provides that Nasdaq will notify the Applicant in writing when it deems the Applicant's application to be substantially complete. The Exchange's General 3, Section 5(d) contains a parallel, although brief, provision when describing the completion of the application process (''Upon completion of the application process, the Exchange shall consider whether to approve the application, unless there is just cause for delay'').

Nasdaq Rule 1013(a)(3) provides the procedure concerning incomplete applications (including the conditions necessary for the refund of application fees); and the request for additional documents or supporting information. Specifically, Nasdaq Rule 1013(a)(3)(A) (''Lapse of Applications that are not Substantially Complete'') provides that if an application that was initiated under 1013 is not deemed to be substantially complete by the Membership Department within 90 calendar days after an Applicant initiates it, then absent a showing of good cause by the Applicant, the Membership Department may, at its discretion, deem the application to have lapsed without filing, and the Membership Department will take no action in furtherance of the application. If the Membership Department deems an application to have lapsed, then the Membership Department shall serve a written notice of that determination on the Applicant. If an Applicant still wishes to apply for membership on Nasdaq after receiving notice of a lapse in its application, then the Applicant will be required to submit a new application pursuant to Nasdaq Membership Rules and pay a new application fee for doing so, if applicable. The Membership Department will refund fees that an Applicant has paid to the Nasdaq in connection with a lapsed application, in accordance with Nasdaq rules regarding fees, provided that the Nasdaq has not proceeded to process the application at the time it lapses. The rule also provides that, for purposes of Rule 1013(a)(3)(A), the Membership Department will deem an application to be not ''substantially complete'' if the Applicant fails to submit to the Membership Department materially important information or documentation that is required or requested under these Rules.

Nasdaq Rule 1013(a)(3)(B) (''Rejection of Filed Applications that Remain or Become Incomplete After Filing'') provides that if an application that was initiated under Rule 1013 is substantially complete and thus is deemed to be filed with Nasdaq under Rule 1013(a)(2), but the application nevertheless remains or becomes incomplete with respect to any required or requested information or documentation, then the Membership Department shall serve written notice to the Applicant of such incompleteness and describe the missing information or documentation. If the Applicant fails to submit to Nasdaq the missing information or documentation within a reasonable period after it receives a notice of incompleteness, then absent a showing of good cause by the Applicant, the Membership Department may, at its discretion, reject the application. If the Membership Department rejects an application on the basis of incompleteness, then the Membership Department shall serve a written notice on the Applicant of the Membership Department's determination and the reasons therefor. Nasdaq shall not refund the application fees that an Applicant has paid to Nasdaq in connection with an application that Nasdaq rejects. If the Applicant determines to continue to seek membership on Nasdaq, then the Applicant shall submit a new

[13] Concerning the lease agreements referenced in Section 4(a), the Exchange also believes it unnecessary to preserve this text for purposes of the General 3 amendments. The lease agreements are fully described in Options 2A, Section 4. (''Leasing Memberships'') in the Exchange's rulebook.

application and pay a new application fee in accordance with Nasdaq rules.

The Exchange currently contains two provisions related to the lapsing of its membership applications. Pursuant to General 3, Section 5(f), if the membership application process is not completed within six (6) months of the filing of the application form and payment of the appropriate fee, the application shall be deemed to be automatically withdrawn. The Exchange plans to replace General 3, Section 5(f) by incorporating by reference Rule 1013(a)(3) which provides well-defined processes for the treatment of applications that become stale or result in the Applicant's failure to pursue membership by not responding to requests for additional information.

The second rule describing the lapsing of an application is currently located under the Exchange's General 3, Section 5(g). Section 5(g) is specific to Applicants who are seeking approval as either a Competitive Market Maker or a Primary Market Maker on the Exchange, either of which require the Applicant to purchase or lease trading rights. This provision establishes that approved Applicants must become effective Members within 90 days of the date of approval by owning or leasing a membership or else the approval will expire (unless the Exchange grants an extension). Because this rule specifically relates to the requirement for Market Makers to promptly secure their trading rights, the Exchange believes that it will be better situated under the Options 2A, Section 1 (''Market Maker Rights'') title. The Exchange thus proposes to relocate the rule text in General 3, Section 5(g) and create new subsection Options 2A, Section 1(f) in the Exchange's rulebook (the Exchange will make some minor style changes to the rule text to facilitate its reading). The Exchange intends to preserve the rules related to Competitive Market Makers and Primary Market Makers in Options 2A due to the unique nature of this structure. As stated above, the Exchange is not amending this structure nor the process by which Exchange Members secure and exercise Market Maker trading rights.

Nasdaq Rule 1013(a)(4) (''Requests by the Department for Additional Documents or Information from the Applicant or from Third Parties'') establishes that (A) at any time before the Membership Department serves its decision as to an application for new membership in Nasdaq, the Membership Department may serve a written request for additional information or documentation, from the Applicant or from a third party, if the Membership Department deems such information or documentation to be necessary to clarify, verify, or supplement the application materials. The Membership Department may, at its discretion, request that the Applicant or the third party provide the requested information or documentation in writing or through an in-person or telephonic interview. In the written request, the Membership Department shall afford the Applicant or the third party a reasonable period of time within which to respond to the request; moreover, (B) in the event that the Membership Department obtains information or documentation about an Applicant from a third party that the Membership Department reasonably believes could adversely impact its decision on an application, then the Membership Department shall promptly inform the Applicant in writing and provide the Applicant with a description of the information or a copy of the documentation that the Membership Department obtained, where appropriate under the circumstances. Prior to rendering an application decision on the basis of information or documentation obtained from a third party source, the Membership Department shall afford the Applicant with a reasonable opportunity to discuss or to otherwise address the information or documentation that the Membership Department obtained from the third party.

The provisions under the Nasdaq Rule 1013(a)(4) are similar to the Exchange's General 3, Section 4(a), to the extent that they describe the Exchange's authority to request additional documents or information from the Applicant or Member. Relatedly, General 3, Section (d) also provides the Exchange with authority to request Associated Persons to provide additional information or testimony. The Exchange believes that incorporating by reference Nasdaq Rule 1013(a)(4) into its membership rules will provide a greater degree of detail concerning the Exchange's discretion and authority to request additional information.

Nasdaq Rule 1013(b)(1) sets forth the procedure that allows an Applicant who is a FINRA member to ''waive-in'' to become an Exchange Member and to register with the Exchange all persons associated with it whose registrations FINRA has approved (in categories recognized by the Exchange's rules). This section defines the term ''waive-in'' to mean that the Membership Department will rely substantially upon FINRA's prior determination to approve the Applicant for FINRA membership when the Membership Department evaluates the Applicant for Exchange membership. That is, the Membership Department will normally permit a FINRA member to waive-into Exchange membership without conducting an independent examination of the Applicant's qualifications for membership on the Exchange, provided that the Membership Department is not otherwise aware of any basis set forth in Nasdaq Rule 1014 to deny or condition approval of the application.

The second special application process, which is set forth in Nasdaq 1013(b)(2), permits Applicants for Nasdaq membership that are already approved members of one or more of the affiliated exchanges to waive-into Nasdaq. In this context, ''waive-in'' means that the Membership Department will rely substantially upon an affiliated exchange's prior determination to approve the Applicant for Nasdaq membership. The procedures in Nasdaq Rule 1013(b)(2) for an Applicant to submit a waive-in application under this provision and for the Membership Department to issue a decision based upon such an application are identical to the procedures described above for FINRA members that seek to waive-into Nasdaq membership. Applicants who meet the criteria for this waive-in review process have already demonstrated their ability to meet membership standards on one or more of the affiliated exchanges which eliminates the need for a full review.

Nasdaq Rule 1013(b) (''Special Application Procedures'') was adopted by Nasdaq to expedite the membership application process of Applicants who were already members of FINRA or members of one of the affiliated exchanges. The Special Application Procedures also include updated provisions requiring compliance with Nasdaq's anti-money laundering rules.[14] The Exchange proposes to adopt by incorporation these same provisions to facilitate Applicants who meet the rule requirements. The adoption of this rule will offer members of FINRA, Nasdaq, and BX the option to apply for membership on the Exchange through an expedited membership application process.

Current Exchange rules do not allow this expedited process. However, today, this concept does exist in both GEMX and MRX General 3, Section 5. Both GEMX and MRX rules afford an Exchange member in good standing the ability to become a GEMX or MRX

[14] *See* Securities Exchange Act Release No. 34–85513 (April 4, 2019), 84 FR 14429 (April 10, 2019) (SR–NASDAQ–2019–022).

member of the same category without application. The Exchange believes that incorporating by reference Nasdaq's waive-in provisions will further the Exchange's objective to provide uniformity and clarity to its rules by aligning its membership application process with the Nasdaq and BX exchanges.

Rule 1014

Nasdaq Rule 1014 (''Department Decision'') describes the Membership Department's process for the issuance of a decision. The Exchange proposes to incorporate by reference Nasdaq Rule 1014 in its entirety as it provides a more organized, detailed, and logical description of the procedure currently described in General 3, Section 2 (in addition to the grounds for approval or disapproval referenced in General 3, Section 5(d) and (e)). Incorporating Nasdaq Rule 1014 by reference in the Exchange's rules will improve the membership application and decision making process by better defining the Membership Department's authority and obligations, describing the basis for approval, conditional approval or denial of an application. Further, the Exchange believes that this proposed change provides consistency in the treatment of Exchange Applicants. Nasdaq Rule 1014(a) describes the Membership Department's authority to act on an application by approving it, denying it, or approving it subject to restrictions: (1) That are reasonably designed to address a specific (financial, operational, supervisory, disciplinary, investor protection, or other regulatory) concern; or (2) that mirror a restriction placed upon the Applicant by FINRA or an affiliated exchange.

Nasdaq Rule 1014(b), entitled ''Bases for Approval, Conditional Approval, or Denial,'' provides that the Membership Department will approve, grant conditional approval, or deny a membership application filed under Nasdaq Rules 1013 and 1017 by an Applicant that is not, and is not required to become, a FINRA member. Nasdaq Rule 1014(b)(1) indicates that the Membership Department may deny or condition membership approval for the same reasons that the Commission may deny or revoke a broker or dealer's registration; this Nasdaq Rule parallels existing General 3, Section 2(b), which describes the Exchange's authority to deny an application for the same reasons that the SEC may deny or revoke a broker-dealer registration and for those reasons required or allowed under the Act.

Nasdaq Rule 1014(b)(2) enumerates the reasons for denial or conditional approval of a membership application in the cases when the Applicant (A) is unable to satisfactorily demonstrate its capacity to adhere to the Exchange and Commission rules; (B) has previously violated, and there is a reasonable likelihood that such Applicant will again engage in violative acts or practices, of any Exchange or Commission policies, rules, and regulations; (C) has engaged in acts or practices inconsistent with just and equitable principles of trade, and there is a reasonable likelihood that such Applicant will again engage in violative acts or practices, of any Exchange or Commission policies, rules, and regulations; (D) is not in compliance with the Commission's net capital rule or has financial difficulties greater than 5% of their net worth; (E) has been itself, or is the successor to an entity subject to a bankruptcy, proceeding, receivership, or arrangement for the benefit of creditors within the past 3 years; (F) has engaged in an established pattern of failure to pay just debts; (G) does not hold required licenses or registrations; or (H) is unable to satisfactorily demonstrate reasonably adequate systems capacity and capability.

The Exchange notes that the basis for denial listed under its General 3, Section 2(c)(1), regarding an Applicant who has a negative net worth, has financial difficulties involving an amount that is more than five percent (5%) of the applicant's net worth, or has a pattern of failure to pay just debts (whether or not such debts have been the subject of a bankruptcy action), is parallel to Nasdaq Rule 1014(b)(2)(D). Similarly, the Exchange's basis for denial under General 3, Section 2(c)(2), regarding an Applicant unable satisfactorily to demonstrate a capacity to adhere to all applicable Exchange, SEC, the Clearing Corporation and Federal Reserve Board policies, rules and regulations, including those concerning record-keeping, reporting, finance and trading procedures, is parallel to Nasdaq Rule 1014(b)(2)(A). Finally, the provision under General 3, Section 2(c)(3), regarding an Applicant unable satisfactorily to demonstrate reasonably adequate systems capability and capacity, is parallel to Nasdaq Rule 1014(b)(2)(H).

Furthermore, the Exchange believes that the provisions under Nasdaq Rule 1014(b)(2)(A), (B), and (C), which describe the basis for a decision regarding the Applicant's inability to satisfy the Exchange and securities rules, previous violative conduct, and past or potential conduct inconsistent with just and equitable principles of trade, provide the Exchange with greater authority than the one described under General 3, Section 2(d), which provides that when an Applicant is a subject of an investigation conducted by any SRO or government agency involving its fitness for becoming a Member, the Exchange need not act on the application until the matter has been resolved.

The Exchange notes that current General 3, Section 2(e) and (f), which refer to the basis for membership denial as it relates to statutory disqualification, are substantially similar to Nasdaq Rule 1002(b)(1) and (2), which describe an Applicant's ineligibility of certain persons for membership or association due to statutory disqualification. As stated above, the Exchange proposes to incorporate Nasdaq Rule 1002 in its entirety.

Nasdaq Rule 1014(b)(3) provides that the Membership Department will not approve an Applicant unless the Applicant is a member of another registered securities exchange or association that is not registered solely under Section 6(g) or Section 15A(k) of the Act. This rule also provides that an Applicant that will transact business with the public must be a member of FINRA. This requirement exists in the Exchange's rulebook in Options 10, Section 1 (''Exchange Approval''); however, to maintain harmonization of the rules, the Exchange proposes to incorporate by reference this same parallel rule. There are no proposed changes to rule text found in Exchange Options 10, Section 1 at this time.

The Exchange proposes to incorporate by reference Nasdaq Rule 1014(c) to establish the time and content of a decision and the recourse available to an Applicant if the Membership Department fails to timely issue a decision on a membership application. Current Exchange General 3, Section 5(d), broadly prescribes that the Exchange will consider approval of the membership application, ''unless there is just cause for delay.'' Nasdaq Rule 1014(c) outlines this process in greater detail. The Nasdaq rule requires the Membership Department to serve a decision on the membership application within a reasonable time period, not to exceed 45 (calendar) days after the Applicant files and provides to the Exchange all required and requested information or documents in connection with the application. Additionally, the rule allows the Membership Department and the Applicant the ability to agree to further extensions of the decision deadlines. Nasdaq Rule 1014(c) also provides that the decision will detail the reason(s) for the denial of membership

or the approval of the application subject to restrictions. This provision is similar to General 3, Section 5(e), which currently establishes that the Exchange will inform the Applicant of the grounds for disapproval of a membership application. Moreover, if the Membership Department fails to timely issue a decision, the rule prescribes that the Applicant may request the Exchange Board to direct the Membership Department to issue a decision. The rule further provides that the Exchange Board, within seven days, will direct the Membership Department to serve its decision or to show good cause for a time extension. If the Membership Department shows good cause, the Exchange Board may grant the Membership Department up to 45 days to issue the decision.

Nasdaq Rule 1014(e) prescribes that service of the Membership Department's decision shall be made pursuant to Nasdaq Rule 1012. Further, the rule provides that the decision shall become effective upon service and shall remain in effect during the pendency of any review until a decision constituting final action of the Exchange is issued under Rule 1015 or 1016, unless otherwise directed by the Exchange Review Council, the Exchange Board, or the Commission. Current Exchange General 3, Section 5(e) prescribes that a notice of the Exchange's decision shall be provided to the Applicant but does not specify the manner of such notification. In addition, Exchange General 3, Section 5(h) indicates that once an Applicant's membership becomes effective, the Exchange will promptly notify the Applicant of such decision. The Exchange believes that incorporating this rule by reference clarifies the process for serving the Membership Department's decision on applications.

Nasdaq Rules 1014(f) and (g), respectively, provide for the effectiveness of restrictions on an approved application and what constitutes final action in the Membership Department's decision. Rule 1014(f) establishes that a restriction imposed under Rule 1014 shall remain in effect and bind the Applicant and all successors to the ownership or control of the Applicant unless (1) it is removed or modified by a decision constituting final action of the Exchange issued under Nasdaq Rules 1015, 1016, or 1017; or (2) stayed by the Exchange Review Council, the Exchange Board, or the Commission. Rule 1014(g) provides that unless the Applicant files a written request for a review under Rule 1015, the Membership Department's decision shall constitute final action by Nasdaq.

Rule 1015

The Exchange proposes to incorporate by reference Nasdaq Rule 1015 in its entirety under its General 3 title. Nasdaq Rule 1015, subsections (a) through (j) are substantially similar to the current provisions concerning a review by the Exchange Review Council detailed in Exchange General 3, Section 2(g).[15]

Current Exchange General 3, Section 2(g) (formerly Exchange Rule 302(g)) was amended in 2018 [16] to base the Exchange's procedures on those set forth in Nasdaq and BX Rules 1015 and 1016 (which were identical to Nasdaq's and now incorporate by reference the Nasdaq Membership rules [17]). The Exchange believes that incorporating by reference Nasdaq Rule 1015 it will further the Exchange's objective to provide uniformity and clarity to its rules by aligning them with the membership rules of the Nasdaq and BX exchanges.

The Exchange proposes also to incorporate by reference Nasdaq Rule 1015(k) and (l) (respectively, ''Ex Parte Communications'' and ''Recusal or Disqualification''). Both paragraphs (k) and (l) were, respectively, previously located under Nasdaq Rule 1012(c) and (d) but were moved to their current location in the Nasdaq rulebook as the two provisions logically fit within the section of the membership rules that govern appeals of membership decisions.[18] Nasdaq Rule 1015(k) prohibits *ex parte* communications involving membership decisions subject to review among certain Exchange staff, members of the Exchange Review Council, members of a Subcommittee of the Council, and the Board of Directors. Nasdaq Rule 1015(l) governs the recusal and disqualification of a member of the Exchange Review Council, a Subcommittee thereof, or the Board of Directors from participating in a review of a membership decision. The Exchange has no parallel provisions in its rulebook to Nasdaq Rule 1015(k) and (l). The Exchange believes that incorporating Rule 1015(k) and (l) by reference enhances the Exchange Review Council's procedures and is in line with the Exchange's goal of harmonizing its rules with those of the Nasdaq and BX exchanges.

Rule 1016

Aside from their respective internal cross-references, the text in Nasdaq Rule 1016 and Exchange General 3, Section 2(h) (both entitled ''Discretionary Review by the Exchange Board'') are identical. The Exchange proposes to incorporate by reference Nasdaq Rule 1016 under its General 3 title. The Exchange believes that incorporating by reference this rule will further the Exchange's objective to provide uniformity and clarity to its rules by aligning them with the membership rules of the Nasdaq and BX exchanges.

Rule 1017

Nasdaq Rule 1017, ''Application for Approval of Change in Ownership, Control, or Material Business Operations,'' has no analogue rule in the Exchange's current General 3 title. Incorporating Nasdaq Rule 1017 by reference in its entirety in the Exchange's rules will enhance the Exchange's ongoing regulatory oversight capabilities by clearly identifying events that would trigger the requirement for an approved Member to file an application with the Exchange. As stated below, Nasdaq Rule 1017 outlines in detail the circumstances that trigger the filing of an application pursuant to this rule. While the Exchange has no corresponding rule, it does have a similar process in place that it administers procedurally. For example, if an existing Electronic Access Member of the Exchange is seeking market maker status for the first time, the current Exchange process is to require that the Member submit an amended Exchange application along with relevant supplementary material. The Exchange believes that incorporating Nasdaq Rule 1017 by reference and harmonizing its process with that of Nasdaq and BX will improve its current practice by further streamlining its current practices. As stated previously, the objective is to eventually harmonize membership rules across all Affiliated Exchanges in order to advance uniformity within the membership rules and procedures.

Nasdaq Rule 1017(a) prescribes the events that require Members to file applications with the Exchange. Paragraph (a) provides that a Member shall file an application for approval prior to effecting the following changes: (1) A merger of the Member with another Member; (2) a direct or indirect

[15] The Exchange notes that, recently, Nasdaq adopted Rule 1015(f)(5) which provides for the Exchange Review Council to conduct its hearings via video conferencing. *See* Securities Exchange Act Release No. 34–90390 (November 10, 2020), 85 FR 73302 (November 17, 2020) (SR–NASDAQ–2020–076). The Exchange has adopted an identical provision under General 3, Section 2(g)(6)(E). *See* Securities Exchange Act Release No. 34–90756 (December 21, 2020), 85 FR 85817 (December 29, 2020) (SR–ISE–2020–42).

[16] *See* Securities Exchange Act Release No. 34–83703 (July 25, 2018), 83 FR 36992 (July 31, 2018) (SR–ISE–2018–59).

[17] *See supra* note 4.

[18] *See supra* note 14.

acquisition by the Member of another Member; (3) direct or indirect acquisitions or transfers of 25% or more in the aggregate of the Member's assets or any asset, business line or line of operations that generates revenues comprising 25% or more in the aggregate of the Member's earnings measured on a rolling 36 month basis; (4) a change in the equity ownership or partnership capital of the Member that results in one person or entity directly or indirectly owning or controlling 25% or more of the equity or partnership capital; or (5) a material change in business operations, which consist of (A) removing or modifying a membership restriction; (B) acting as a dealer or a market maker for the first time; (C) adding business activities that require a higher minimum net capital under SEC Rule 15c3–1; or (D) adding business activities that would cause a proprietary trading firm no longer to meet the definition of that term contained in the Rule 1000 Series.

Nasdaq Rule 1017(b), governs the filing and content of applications filed under Nasdaq Rule 1017. This Rule provides that the application should be filed with the Membership Department; if the Applicant seeks approval of change of ownership or control or a material change in the Member's business operations, the application should (A) provide a detailed description of the proposed change, (B) provide a business plan, pro forma financials, an organizational chart, and written supervisory procedures reflecting the proposed change; and (C) if the application requests approval of a change in ownership or control, the application also shall include the names of the new owners, their percentage of ownership, and the sources of their funding for the purchase and recapitalization of the member.

Furthermore, Nasdaq Rule 1017(b) provides that if the application requests the removal or modification of a membership restriction, the application also shall, (A) present facts showing that the circumstances that gave rise to the restriction have changed; and (B) state with specificity why the restriction should be modified or removed in light of the applicable bases for denial or standards for approval set forth in Nasdaq Rules 1014 or 1017 and the articulated rationale for the imposition of the restriction. Moreover, the Rule indicates that if the application requests approval of an increase in Associated Persons involved in sales, offices, or markets made, the application shall set forth the increases in such areas during the preceding 12 months.

Nasdaq Rule 1017(c) indicates when an application shall or may be filed. Specifically, the Rule provides that (1) an application for approval of a change in ownership or control shall be filed at least 30 days prior to such change; (2) that an application to remove or modify a membership restriction may be filed at any time (clarifying that an existing restriction shall remain in effect during the pendency of the proceeding); and that (3) an application for approval of a material change in business operations, other than the modification or removal of a restriction, may be filed at any time, but the Member may not effect such change until the conclusion of the proceeding, unless the Membership Department and the Member otherwise agree.

Nasdaq Rule 1017(d) prescribes that an application will be deemed to be filed on the date when it is substantially complete, meaning the date on which the Membership Department receives from the Applicant all material documentation and information required under this Rule, and that the Membership Department will notify the Applicant in writing when the Membership Department deems the Applicant's application to be substantially complete.

Nasdaq Rule 1017(e) indicates that, pursuant to Nasdaq Rule 1013(a)(3), the Membership Department may treat an application filed under this Rule as having lapsed or it may reject such an application, except that the Membership Department may treat an application as having lapsed if it is not substantially complete for 30 days or more after the Applicant initiates it.

Nasdaq Rule 1017(f) provides that the Membership Department, at any time before it serves its decision, may request additional information or documentation from the Applicant or from a third party in accordance with Nasdaq Rule 1013(a)(4).

Nasdaq Rule 1017(g) establishes that a Membership Department's decision shall be issued in accordance with Nasdaq Rule 1014, except that (1) In rendering a decision on an application submitted under the Rule that requests the modification or removal of a membership restriction, the Membership Department shall consider whether maintenance of the restriction is appropriate in light of: (A) The applicable bases for denial or standards for approval set forth in Nasdaq Rule 1014; (B) the circumstances that gave rise to the imposition of the restriction; (C) the Applicant's operations since the restriction was imposed; (D) any change in ownership or control or supervisors and principals; and (E) any new evidence submitted in connection with the application. Furthermore, this Rule provides that the Membership Department shall serve a written decision on an application filed under this Rule in accordance with Nasdaq Rule 1013(c). Moreover, the Rule provides that in the event that a proposed change in ownership, control, or business operations by a Member requires such Member to become a member of FINRA, the Membership Department shall not be required to serve a written decision under this Rule until 10 business days after the Member becomes a FINRA member.

Nasdaq Rule 1017(h) provides that service of the decision on the Applicant in accordance with Nasdaq Rule 1012. Moreover, the Rule indicates that the decision shall become effective upon service and shall remain in effect during the pendency of any review until a decision constituting final action of the Exchange is issued under Rules 1015 or 1016, unless otherwise directed by the Exchange Review Council, the Exchange Board, or the Commission.

Nasdaq Rule 1017(i) indicates that an Applicant may file a written request for review of the Membership Department's decision with the Exchange Review Council pursuant to Nasdaq Rule 1015, the rule further clarifies that the procedures set forth in Nasdaq Rule 1015 shall apply to such review, and the Exchange Review Council's decision shall be subject to discretionary review by the Exchange Board pursuant to Nasdaq Rule 1016. If the Applicant does not file a request for a review, the Membership Department's decision shall constitute final action by Nasdaq.

Nasdaq Rule 1017(j) prescribes that the Membership Department shall modify or remove a restriction on its own initiative if the Membership Department determines such action is appropriate in light of the considerations set forth in paragraph (g)(1) of the Rule. The Membership Department shall notify the member in writing of the Membership Department's determination and inform the member that it may apply for further modification or removal of a restriction by filing an application under paragraph Rule 1017(a).

Rule 1018

Nasdaq Rule 1018, ''Resignation, Reinstatement, Termination, and Transfer of Membership,'' has no analogue rule in the Exchange's current General 3 title. The Exchange proposes to incorporate the rule by reference under its General 3 title. Nasdaq Rule 1018 outlines the process for resignation, reinstatement, termination,

and transfers of memberships. Incorporating Nasdaq Rule 1018 by reference will eventually allow the Exchange to standardize the processing of these requests across all the Affiliated Exchanges.

Nasdaq Rule 1018(a) provides that membership in Nasdaq may be voluntarily terminated only by formal resignation. Resignations of Members must be filed via electronic process or such other process as the Exchange may prescribe. Any Member may resign from Nasdaq at any time. Such resignation shall not take effect until all indebtedness due to Nasdaq from such Member shall have been paid in full and so long as any complaint or action is pending against the Member under the Rules. Nasdaq, however, may in its discretion declare a resignation effective at any time.

Nasdaq Rule 1018(b) indicates that no Member may transfer its membership or any right arising therefrom; the membership of a corporation, partnership, or any other business organization that is a Member shall terminate upon its liquidation, dissolution, or winding up; and the membership of a sole proprietorship that is a Member shall terminate at death, provided that all obligations of membership under the Rules have been fulfilled. Moreover, the Rule provides that the consolidation, reorganization, merger, change of name, or similar change in any corporate Member shall not terminate the membership of such corporate Member, provided that the Exchange Member or surviving corporation, if any, shall be deemed a successor to the business of the corporate Member, and the Member or the surviving organization shall continue in the securities business, and shall possess the qualifications for membership in the Exchange. Furthermore, the death, change of name, withdrawal of any partner, the addition of any new partner, reorganization, consolidation, or any change in the legal structure of a partnership Member shall not terminate the membership of such partnership Member, provided that the Member or surviving organization, if any, shall be deemed a successor to the business of the partnership Member, and the Member or surviving organization shall possess the qualifications for membership in the Exchange. If the business of any predecessor Member is to be carried on by an organization deemed to be a successor organization by the Exchange, the membership of such predecessor Member shall be extended to the successor organization subject to the notice and application requirements of the Rules and the right of the Exchange to place restrictions on the successor organization pursuant to the Rules; otherwise, any surviving organization shall be required to satisfy all of the membership application requirements of the Exchange's Rules.

Nasdaq Rule 1018(c) establishes that any membership or registration suspended or canceled under the Rules may be reinstated by the Exchange upon such terms and conditions as are permitted under the Act and the Exchange rules; provided, however, that any applicant for reinstatement of membership or registration shall possess the qualifications required for membership or registration in the Exchange.

Rule 1019

Nasdaq Rule 1019 (''Application to Commission for Review'') has no analogue rule in the Exchange's current General 3 title. Nasdaq Rule 1019 allows Applicants to request the Commission to review an Exchange final action, as provided under the Nasdaq Rule 1010 Series. Incorporating Nasdaq Rule 1019 by reference standardizes the process by which an Applicant may dispute any final action of the Exchange.

Nasdaq Rule 1019 provides that a person aggrieved by a Nasdaq's final action under Nasdaq Membership Rules may apply for review by the Commission pursuant to Section 19(d)(2) of the Act. The filing of an application for review shall not stay the effectiveness of a decision constituting final action of the Exchange, unless the Commission otherwise orders.

Revised Membership Application

As part of the harmonization of its membership rules and procedures with those of Nasdaq and BX, the Exchange is adopting a standardized Broker-Dealer Membership Application (''Membership Application''). The Membership Application is submitted as Exhibit 3A of this proposed rule change with underlined changes concerning the ISE market. Each Exchange Membership Application will be accompanied by a ''Membership Agreement'' (submitted as Exhibit 3B of the attached), which should be signed by all applicants to membership with the Exchange.

Conclusion

The changes proposed herein will allow the Exchange to harmonize its membership rules and processes with those of Nasdaq and BX, and ultimately, with the other Affiliated Exchanges, which will eventually provide a uniform criteria across the Affiliated Exchanges for membership qualifications and a consistent process across the Affiliated Exchanges for processing membership applications. The proposal will also provide for full membership reciprocity between Nasdaq, BX, and the Exchange—and hopefully, in time, across all of the Affiliated Exchanges—so that a member of one Affiliated Exchange would receive expedited treatment in applying for membership on any other Affiliated Exchange. Similarly, harmonized membership rules and processes will benefit Exchange Applicants and Members by establishing consistent membership requirements and processes that must be followed to apply for membership on the Exchange.

Moreover, as to the Exchange itself, the proposed changes described herein will render the Exchange's membership rules and processes clearer, better organized, simpler, and easier to comply with. Again, such changes will provide benefits both to the Exchange's Membership Department and to Exchange Applicants.

The proposed membership rules and processes are substantially similar to the existing rules and process, and where there are differences between the new and old processes, the Exchange believes that the new process does not disadvantage its Members or Associated Persons. To the contrary, the Exchange believes that the new rules and processes will benefit all parties as it again provides greater clarity, simplicity, and efficiency than the retired rules and processes.

Implementation

To facilitate an orderly transition from the existing rules under the General 3 title and the Nasdaq Membership Rules to be incorporated by reference, the Exchange is proposing to apply the existing Rules to all applications which have been submitted to the Exchange (including applications that are not yet complete) and are pending approval prior to the operative date. The Exchange also will apply the existing Rules to any appeal of an Exchange membership decision or any request for the Board to direct action on an application pending before the Exchange Review Council, the Board, or the Commission, as applicable. As a consequence of this transition process, the Exchange will retain the existing processes during the transition period until such time that there are no longer any applications or matters proceeding under the existing rules. To facilitate this transition process, the Exchange will retain a transitional rulebook that will contain the Exchange's membership

rules as they are at the time that this proposal is filed with the Commission. This transitional rulebook will apply only to matters initiated prior to the operational date of the changes proposed herein and it will be posted to the Exchange's public rules website. When the transition is complete, the Exchange will remove the transitional rulebook from its public rules website.

The Exchange will announce and explain this transition process in a regulatory alert.

The Exchange notes that Nasdaq applied the same process described above to govern its transition to its amended membership rules.

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act,[19] in general, and furthers the objectives of Section 6(b)(5) and of the Act,[20] in particular, in that it is designed to promote just and equitable principles of trade, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general to protect investors and the public interest. It is also consistent with Section 6(b)(7) of the Act in that it provides for a fair procedure for denying Exchange membership to any person who seeks it, barring any person from becoming associated with an Exchange Member, and prohibiting or limiting any person with respect to access to services offered by the Exchange or a Member thereof.[21]

As a general matter, the Exchange believes that its proposal to delete its existing membership rules, incorporate by reference the Nasdaq Membership Rules, and other related changes will promote a free and open market, and will benefit investors, the public, and the markets, because the new rules will be clearer, better organized, and simpler.

The proposal is just and equitable because it will render the Exchange's membership rules easier for Applicants and Members to read and understand, including by doing the following:

- Establishing a ''roadmap'' paragraph as shown in Nasdaq Rule 1014(a) that sets forth the basic authority of the Membership Department to approve, approve with conditions, or deny applications for membership before the Rule goes on to enumerate criteria for the Membership Department to apply when taking each of those actions;
- Making the titles of the rules more accurate and descriptive (*e.g.,* Nasdaq Rule 1014(b));
- Grouping logically-related provisions together in the rules (*e.g.,* provisions governing resignation, termination, transfer, and reinstatement of membership) and recusals and disqualifications;
- Clarifying when the Membership Department will deem an application to be filed (when the application is ''substantially complete,'' as set forth in Nasdaq Rule 1013(a)(2)) and by requiring the Membership Department to notify an Applicant in writing of the filing date;
- Clarifying what the Exchange means when it states that an Applicant may ''waive-in'' to Exchange membership (as set forth in Nasdaq Rule 1013(b)); and

The proposal will also make compliance with the membership rules simpler and less burdensome for Applicants and Members by, for example, doing the following:

- Eliminating obsolete requirements to submit paper copies of Forms U–4 and BD or explain information listed on the forms where the Membership Department already has electronic access to the Forms and the information contained therein;
- Permitting electronic filing of applications (Nasdaq Rule 1012(a)(1);
- Allowing payment of application fees by means other than paper check (Nasdaq Rule 1013(a)(1)(C));
- Harmonizing disparate procedures under Nasdaq Rules 1013 and 1017 for filing, evaluating, and responding to initial membership applications and applications for approval of business changes;
- Detailing the circumstances in which an Applicant may waive-into Exchange membership to include the Applicant's membership in any of the affiliated exchanges and defining procedures for processing and responding to waive-in applications (Nasdaq Rule 1013(b));

In sum, the foregoing changes will update, rationalize, and streamline the Exchange's membership rules and processes, all to the benefit of Applicants and Members. Moreover, these changes will not adversely impact the rights of Applicants or Members to appeal adverse Membership Department decisions under these Rules or to request Board action to compel the Membership Department to render decisions on applications.

Last, the Exchange believes that its proposal to phase-in the implementation of the new membership rules and processes is consistent with Section 6(b)(7) of the Act[22] because both the current and proposed processes provide fair procedures for granting and denying applications for becoming an Exchange Member, becoming an Associated Person, and making material changes to the business operations of a Member. The Exchange is proposing to provide advanced notice of the implementation date of the new processes, and will apply the new processes to new applications, appeals, and requests for Board action that are initiated on or after that implementation date. Any application, appeal, or request for Board action initiated prior to the implementation date will be completed using the current processes. As a consequence, the Exchange will maintain a transitional rulebook on the Exchange's public rules website which will contain the Exchange Rules as they are at the time of filing this rule change. These transitional rules will apply exclusively to applications, appeals, and requests for Board action initiated prior to the implementation date. Upon conclusion of the last decision on a matter to which the transitional rules apply, the Exchange will remove the defunct transitional rules from its public rules website. Thus, the transition will be conducted in a fair, orderly, and transparent manner. Lastly, the proposed transition process is the same process that Nasdaq and BX implemented during its transition to new membership rules.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act. The Exchange does not expect that its proposed changes to the membership rules will have any competitive impact on its existing or prospective membership. The proposed changes will apply equally to all similarly situated Applicants and Members and they will confer no relative advantage or disadvantage upon any category of Exchange Applicant or Member. Moreover, the Exchange does not expect that its proposal will have an adverse impact on competition among exchanges for members; to the contrary, the Exchange hopes that by clarifying, reorganizing, and streamlining its membership rules, the Exchange's membership process will be less burdensome for Applicants and Members and the Exchange will

[19] 15 U.S.C. 78f(b).

[20] 15 U.S.C. 78f(b)(5).

[21] 15 U.S.C. 78f(b)(7).

[22] 15 U.S.C. 78f(b)(7).

improve its competitive standing relative to other exchanges.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) Significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A)(iii) of the Act [23] and subparagraph (f)(6) of Rule 19b–4 thereunder.[24]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*http://www.sec.gov/rules/sro.shtml);* or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–ISE–2020–43 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street, NE, Washington, DC 20549–1090.

All submissions should refer to File Number *SR–ISE–2020–43.* This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*http://www.sec.gov/rules/sro.shtml).* Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change. Persons submitting comments are cautioned that we do not redact or edit personal identifying information from comment submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number *SR–ISE–2020–43* and should be submitted on or before February 9, 2021.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[25]

J. Matthew DeLesDernier,

Assistant Secretary.

[FR Doc. 2021–00948 Filed 1–15–21; 8:45 am]

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–90906; File No. SR–PEARL–2020–38]

Self-Regulatory Organizations; MIAX PEARL, LLC; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change to Amend the MIAX PEARL Fee Schedule

January 12, 2021.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'') [1] and Rule 19b-4 thereunder,[2] notice is hereby given that on December 31, 2020, MIAX PEARL, LLC (''MIAX PEARL'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') a proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange is filing a proposal to amend the MIAX PEARL Fee Schedule (the ''Fee Schedule'') for the Exchange's options market.

The text of the proposed rule change is available on the Exchange's website at *http://www.miaxoptions.com/rule-filings/pearl* at MIAX PEARL's principal office, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend the Add/Remove Tiered Rebates/Fees set forth in Section (1)(a) of the Fee Schedule that apply to the MIAX PEARL Market Maker [3] Origin, to: (i) Modify the volume threshold for the alternative Volume Criteria in Tier 2; and (ii) add a new, alternative Volume Criteria to Tier 3.

Background

The Exchange currently assesses transaction rebates and fees to all market participants which are based upon the total monthly volume

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] ''Market Maker'' means a Member registered with the Exchange for the purpose of making markets in options contracts traded on the Exchange and that is vested with the rights and responsibilities specified in Chapter VI of Exchange Rules. *See* the Definitions Section of the Fee Schedule.

executed by the Member [4] on MIAX PEARL in the relevant, respective origin type (not including Excluded Contracts) [5] (as the numerator) expressed as a percentage of (divided by) TCV [6] (as the denominator). In addition, the per contract transaction rebates and fees are applied retroactively to all eligible volume for that origin type once the respective threshold tier (''Tier'') has been reached by the Member. The Exchange aggregates the volume of Members and their Affiliates.[7] Members that place resting liquidity, *i.e.,* orders resting on the book of the MIAX PEARL System,[8] are paid the specified ''maker'' rebate (each a ''Maker''), and Members that execute against resting liquidity are assessed the specified ''taker'' fee (each a ''Taker''). For opening transactions and ABBO [9] uncrossing transactions, per contract transaction rebates and fees are waived for all market participants. Finally, Members are assessed lower transaction fees and receive lower rebates for order executions in standard option classes in the Penny Interval Program [10] (''Penny Classes'') than for order executions in standard option classes which are not in the Penny Interval Program (''Non-Penny Classes''), where Members are assessed higher transaction fees and receive higher rebates.

Alternative Volume Criteria Threshold Change in Tier 2

The Exchange proposes to amend the Add/Remove Tiered Rebates/Fees set forth in Section (1)(a) of the Fee Schedule that apply to the MIAX PEARL Market Maker Origin, to modify the volume threshold for the alternative Volume Criteria in Tier 2. The MIAX PEARL Market Maker Origin set forth in Section 1)a) of the Fee Schedule currently provides an alternative Volume Criteria in Tier 2, which is based upon the total monthly volume executed by a MIAX PEARL Market Maker collectively in SPY/QQQ/IWM options on MIAX PEARL, expressed as a percentage of total consolidated national volume in SPY/QQQ/IWM options.[11] Pursuant to this alternative Volume Criteria, a Market Maker is able to reach the Tier 2 threshold if the Market Maker's total executed monthly volume, not including Excluded Contracts, in SPY/QQQ/IWM options on MIAX PEARL is above 0.45% of total consolidated national monthly volume in SPY/QQQ/IWM options. For this calculation, volume that is from resting liquidity (Maker) and taking liquidity (Taker) in SPY/QQQ/IWM options is counted towards the alternative Volume Criteria, and the 0.45% threshold does not have to be reached individually in each of the three symbols. A Market Maker is able to qualify for Tier 2 rebates and fees which will then be applicable to all volume executed by the MIAX PEARL Market Maker on MIAX PEARL. The two Volume Criteria available for Tier 2 is based upon either: (a) The total monthly volume executed by the Market Maker in all options classes on MIAX PEARL, not including Excluded Contracts, (as the numerator), expressed as a percentage of (divided by) TCV (as the denominator); or (b) the total monthly volume executed by the MIAX PEARL Market Maker collectively in SPY/QQQ/IWM options on MIAX PEARL, not including Excluded Contracts, (as the numerator), expressed as a percentage of (divided by) SPY/QQQ/IWM TCV [12] (as the denominator). Once either Volume Criteria threshold in Tier 2 is reached by the Market Maker, the Tier 2 per contract rebates and fees apply to all volume in all options classes executed by that MIAX PEARL Market Maker on MIAX PEARL.

The Exchange proposes to modify the threshold for the alternative Volume Criteria in Tier 2 from 0.45% to 0.75% of total consolidated national monthly volume in SPY/QQQ/IWM options. With the proposed change, a Market Maker will be able to reach the alternative Volume Criteria in Tier 2 if the Market Maker's total executed monthly volume, not including Excluded Contracts, in SPY/QQQ/IWM options on MIAX PEARL is above 0.75% of total consolidated national monthly volume in SPY/QQQ/IWM options. The Exchange is not modifying the calculation method for a Market Maker to reach the alternative Volume Criteria in Tier 2, only the threshold percentage. The Exchange proposes to make the corresponding change to the volume threshold percentage described in the explanatory paragraph for the alternative Volume Criteria for Tier 2 that is below the tables in Section 1)a) of the Fee Schedule.

The purpose of this proposed change is for business and competitive reasons. In order to attract order flow, the Exchange initially set its volume threshold for the alternative Volume Criteria in Tier 2 at a meaningful low level. The Exchange now believes that it is appropriate to adjust this volume threshold so that it is more in line with

[4] ''Member'' means an individual or organization that is registered with the Exchange pursuant to Chapter II of the Exchange Rules for purposes of trading on the Exchange as an ''Electronic Exchange Member'' or ''Market Maker.'' Members are deemed ''members'' under the Exchange Act. *See* the Definitions Section of the Fee Schedule and Exchange Rule 100.

[5] ''Excluded Contracts'' means any contracts routed to an away market for execution. *See* the Definitions Section of the Fee Schedule.

[6] ''TCV'' means total consolidated volume calculated as the total national volume in those classes listed on MIAX PEARL for the month for which the fees apply, excluding consolidated volume executed during the period time in which the Exchange experiences an ''Exchange System Disruption'' (solely in the option classes of the affected Matching Engine (as defined below)). The term Exchange System Disruption, which is defined in the Definitions section of the Fee Schedule, means an outage of a Matching Engine or collective Matching Engines for a period of two consecutive hours or more, during trading hours. The term Matching Engine, which is also defined in the Definitions section of the Fee Schedule, is a part of the MIAX PEARL electronic system that processes options orders and trades on a symbol-by-symbol basis. Some Matching Engines will process option classes with multiple root symbols, and other Matching Engines may be dedicated to one single option root symbol (for example, options on SPY may be processed by one single Matching Engine that is dedicated only to SPY). A particular root symbol may only be assigned to a single designated Matching Engine. A particular root symbol may not be assigned to multiple Matching Engines. The Exchange believes that it is reasonable and appropriate to select two consecutive hours as the amount of time necessary to constitute an Exchange System Disruption, as two hours equates to approximately 1.4% of available trading time per month. The Exchange notes that the term ''Exchange System Disruption'' and its meaning have no applicability outside of the Fee Schedule, as it is used solely for purposes of calculating volume for the threshold tiers in the Fee Schedule. *See* the Definitions Section of the Fee Schedule.

[7] ''Affiliate'' means (i) an affiliate of a Member of at least 75% common ownership between the firms as reflected on each firm's Form BD, Schedule A, or (ii) the Appointed Market Maker of an Appointed EEM (or, conversely, the Appointed EEM of an Appointed Market Maker). An ''Appointed Market Maker'' is a MIAX PEARL Market Maker (who does not otherwise have a corporate affiliation based upon common ownership with an EEM) that has been appointed by an EEM and an ''Appointed EEM'' is an EEM (who does not otherwise have a corporate affiliation based upon common ownership with a MIAX PEARL Market Maker) that has been appointed by a MIAX PEARL Market Maker, pursuant to the process described in the Fee Schedule. *See* the Definitions Section of the Fee Schedule.

[8] The term ''System'' means the automated trading system used by the Exchange for the trading of securities. *See* Exchange Rule 100.

[9] ''ABBO'' means the best bid(s) or offer(s) disseminated by other Eligible Exchanges (defined in Exchange Rule 1400(g) and calculated by the Exchange based on market information received by the Exchange from OPRA. *See* the Definitions Section of the Fee Schedule and Exchange Rule 100.

[10] *See* Securities Exchange Act Release No. 88992 (June 2, 2020), 85 FR 35142 (June 8, 2020) (SR–PEARL–2020–06).

[11] *See* Securities Exchange Act Release No. 84592 (November 14, 2018), 83 FR 58646 (November 20, 2018) (SR–PEARL–2018–23).

[12] ''SPY/QQQ/IWM TCV'' means total consolidated volume in SPY, QQQ, and IWM calculated as the total national volume in SPY, QQQ, and IWM for the month for which the fees apply, excluding consolidated volume executed during the period of time in which the Exchange experiences an Exchange System Disruption (solely in SPY, QQQ, or IWM options). *See* the Definitions Section of the Fee Schedule.

the volume threshold that Market Makers currently achieve in SPY/QQQ/IWM options on MIAX PEARL. The Exchange believes that the proposed volume threshold will still remain highly competitive such that the threshold should enable the Exchange to continue to attract order flow in SPY/QQQ/IWM options and maintain market share. The Exchange cannot predict with certainty how many Market Makers would achieve the alternative Volume Criteria in Tier 2 with the increased threshold percentage, but the Exchange anticipates that each Market Maker that is currently in Tier 2 with that alternative method will likely continue to reach that Tier.

Alternative Volume Criteria for Tier 3

The Exchange proposes to amend the Add/Remove Tiered Rebates/Fees set forth in Section (1)(a) of the Fee Schedule that apply to the MIAX PEARL Market Maker Origin, to add a new, alternative Volume Criteria to Tier 3, based upon the total monthly volume executed in SPY options on MIAX PEARL by a MIAX PEARL Market Maker when adding liquidity. Pursuant to this alternative Volume Criteria, Market Makers will qualify for: (i) Maker rebates of ($0.44) in SPY, QQQ and IWM options for their Market Maker Origin when trading against Origins not Priority Customer, and (ii) Maker rebates of ($0.42) in SPY, QQQ and IWM options for their Market Maker Origin when trading against Priority Customer Origins, if the Market Maker executes at least 1.10% in SPY options when adding liquidity. The Exchange proposes that, in Tier 3 for MIAX PEARL Market Makers, the alternative Volume Criteria (above 1.10% in SPY when Adding Liquidity) will be calculated based on the total monthly volume that added liquidity executed by the Market Maker solely in SPY options on MIAX PEARL, not including Excluded Contracts, (as the numerator) expressed as a percentage of (divided by) SPY TCV [13] (as the denominator). The Exchange notes that Market Makers that achieve the standard Tier 3 volume percentage but do not qualify for the proposed alternative Volume Criteria in that Tier, will receive the Tier 3 rates in the Market Maker Origin table in Penny Classes and Non-Penny Classes. Members will receive the highest tier based on the thresholds achieved. Other Penny classes and Non-Penny classes will receive the Tier 3 rates in the Market Maker Origin table. The Exchange proposes to designate the Tier 3 alternative Volume Criteria with the new symbol ''✦'' in Tier 3 of the Market Maker Origin table in Section (1)(a) of the Fee Schedule, with an explanatory paragraph listed below the tables in Section (1)(a) of the Fee Schedule.

The purpose of this proposed change is for business and competitive reasons. The Exchange cannot predict with certainty how many Market Makers would achieve the proposed Tier 3 alternative Volume Criteria, but anticipates that approximately three Market Makers are within reasonable proximity to potentially achieve the higher rebates in SPY/QQQ/IWM options based upon the total monthly volume executed in SPY options on MIAX PEARL by the current MIAX PEARL Market Makers.

The proposed changes are scheduled to become operative January 4, 2021.

2. Statutory Basis

The Exchange believes that its proposal to amend its Fee Schedule is consistent with Section 6(b) of the Act [14] in general, and furthers the objectives of Section 6(b)(4) of the Act,[15] in that it is an equitable allocation of reasonable dues, fees and other charges among Exchange members and issuers and other persons using its facilities, and 6(b)(5) of the Act,[16] in that it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, to remove impediments to and perfect the mechanisms of a free and open market and a national market system and, in general, to protect investors and the public interest.

The Exchange believes its proposal to modify the volume threshold for the alternative Volume Criteria in Tier 2 and add a new, alternative Volume Criteria to Tier 3 provides for the equitable allocation of reasonable dues and fees and is not unfairly discriminatory for the following reasons. The Exchange operates in a highly competitive market. The Commission has repeatedly expressed its preference for competition over regulatory intervention in determining prices, products, and services in the securities markets. In Regulation NMS, the Commission highlighted the importance of market forces in determining prices and SRO revenues and, also, recognized that current regulation of the market system ''has been remarkably successful in promoting market competition in its broader forms that are most important to investors and listed companies.'' [17] There are currently 16 registered options exchanges competing for order flow. Based on publicly-available information, and excluding index-based options, no single exchange has more than approximately 15% of the market share of executed volume of multiply-listed equity and ETF options trades as of December 24, 2020, for the month of December 2020.[18] Therefore, no exchange possesses significant pricing power in the execution of multiply-listed equity and ETF options order flow. More specifically, as of December 30, 2020, the Exchange had an approximately 3.10% market share of executed volume of multiply-listed equity and ETF options for the month of December 2020.[19]

The Exchange believes that the ever-shifting market shares among the exchanges from month to month demonstrates that market participants can shift order flow, or discontinue or reduce use of certain categories of products, in response to transaction and/or non-transaction fee changes. For example, on February 28, 2019, the Exchange filed with the Commission a proposal to increase Taker fees in certain Tiers for options transactions in certain Penny classes for Priority Customers and decrease Maker rebates in certain Tiers for options transactions in Penny classes for Priority Customers (which fee was to be effective March 1, 2019).[20] The Exchange experienced a decrease in total market share between the months of February and March of 2019, after the fees were in effect. Accordingly, the Exchange believes that the March 1, 2019 fee change may have contributed to the decrease in the Exchange's market share and, as such, the Exchange believes competitive forces constrain options exchange transaction fees and market participants can shift order flow based on fee changes instituted by the exchanges.

The Exchange believes its proposal to modify the volume threshold for the alternative Volume Criteria in Tier 2

[13] ''SPY TCV'' means total consolidated volume in SPY calculated as the total national volume in SPY for the month for which the fees apply, excluding consolidated volume executed during the period of time in which the Exchange experiences an Exchange System Disruption (solely in SPY options). *See* the Definitions Section of the Fee Schedule.

[20] *See* Securities Exchange Act Release No. 85304 (March 13, 2019), 84 FR 10144 (March 19, 2019) (SR–PEARL–2019–07).

and add a new, alternative Volume Criteria to Tier 3 is reasonable, equitably allocated and not unfairly discriminatory because these changes are for business and competitive reasons. In order to attract order flow, the Exchange initially set its volume threshold for the alternative Volume Criteria in Tier 2 at a meaningful low level. The Exchange now believes that it is appropriate to adjust this volume threshold so that it is more in line with the volume threshold that Market Makers currently achieve in SPY/QQQ/IWM options on MIAX PEARL. The Exchange believes that the proposed volume threshold will still remain highly competitive such that the threshold should enable the Exchange to continue to attract order flow in SPY/QQQ/IWM options and maintain market share.

The Exchange believes its proposal to establish the alternative Volume Criteria for Tier 3 is reasonable, equitable, and not unfairly discriminatory, as it is a form of pricing already adopted by the Exchange [21] and a form of pricing based upon trading activity in a select group of symbols, which is a common practice on many U.S. options exchanges as a means to incentivize order flow to be sent to an exchange for execution in actively traded options classes. The Exchange's affiliate, Miami International Securities Exchange, LLC (''MIAX Options''), offers differentiated pricing for transactions in options underlying certain select symbols.[22] Other options exchanges' fee schedules distinguish by symbol and specifically assess different fees and rebates for transactions in select symbols for the same market participants.[23]

The Exchange believes its proposal to offer an alternative Tier 3 Volume Criteria based upon the total monthly volume executed in SPY options on MIAX PEARL by a MIAX PEARL Market Maker when adding liquidity, will incentivize Market Makers to improve their posted liquidity to the benefit of the entire market, which will increase order flow sent to the Exchange, benefiting all market participants through increased liquidity, tighter markets and order interaction.

The Exchange also believes that its proposal is not unfairly discriminatory as all Market Makers can qualify for the alternative Volume Criteria in Tiers 2 and 3 by meeting the requirements that are designed to incentivize Market Makers to maintain quality markets. In addition, the Exchange continues to believe that it is not unfairly discriminatory to offer rebates pursuant to this proposal to only Market Makers because Market Makers add value through continuous quoting and are subject to additional requirements and obligations (such as quoting obligations) that other market participants are not.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule changes will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act.

The Exchange believes its proposal will not impose any burden on intra-market competition because the Exchange believes that its proposal will not place any category of Exchange market participant at a competitive disadvantage. The proposal to modify the volume threshold for the alternative Volume Criteria in Tier 2 and add a new, alternative Volume Criteria to Tier 3, is intended to improve market quality. The Exchange believes that its proposal will encourage Market Makers to improve market quality by providing an additional incentive to Market Makers in SPY and QQQ/IWM options to send additional SPY and QQQ/IWM orders, which results in narrower bid-ask spreads and increased depth of liquidity. This in turn will attract additional order flow to the Exchange. Accordingly, the Exchange believes that the proposed changes will continue to attract order flow to the Exchange, thereby encouraging additional volume and liquidity to the benefit of all market participants.

The Exchange believes its proposal will not impose any burden on inter-market competition because the Exchange notes that it operates in a highly competitive market in which market participants can readily favor competing venues if they deem fee levels at a particular venue to be excessive, or rebate opportunities available at other venues to be more favorable. In such an environment, the Exchange must continually adjust its fees to remain competitive with other options exchanges. Because competitors are free to modify their own fees in response, and because market participants may readily adjust their order routing practices, the Exchange believes that the degree to which fee changes in this market may impose any burden on competition is extremely limited. The Exchange believes that the proposed rule changes reflect this competitive environment because they modify the Exchange's fees in a manner that encourages market participants to continue to provide liquidity and to send order flow to the Exchange.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Act,[24] and Rule 19b–4(f)(2) [25] thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form *(http://www.sec.gov/rules/sro.shtml)*; or
- Send an email *to rule-comments@sec.gov.* Please include File Number SR–PEARL–2020–38 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

SECURITIES AND EXCHANGE COMMISSION

[Investment Company Act Release No. 34171; 812–15157]

Natixis ETF Trust II, et al.

January 12, 2021.

AGENCY: Securities and Exchange Commission (''Commission'').

ACTION: Notice of an application to amend a prior order for exemptive relief.

SUMMARY OF APPLICATION: Applicants request an order (''Amended Order'') that would amend a prior order to permit the Funds, as defined below, to use Creation Baskets (as defined below) that include instruments that are not included, or are included with different weightings, in the Fund's proxy portfolio.

APPLICANTS: Natixis Advisors, L.P. (''Natixis''), Natixis ETF Trust II (the ''Trust'') and NYSE Group, Inc. (''NYSE'').

FILING DATES: The application was filed on August 31, 2020, and amended on November 16, 2020 and on December 8, 2020.

HEARING OR NOTIFICATION OF HEARING: An order granting the requested relief will be issued unless the Commission orders a hearing. Interested persons may request a hearing by emailing the Commission's Secretary at *Secretarys-Office@sec.gov* and serving Applicants with a copy of the request by email. Hearing requests should be received by the Commission by 5:30 p.m. on February 8, 2021 and should be accompanied by proof of service on the Applicants, in the form of an affidavit, or, for lawyers, a certificate of service. Pursuant to rule 0–5 under the Investment Company Act of 1940 (''Act''), hearing requests should state the nature of the writer's interest, any facts bearing upon the desirability of a hearing on the matter, the reason for the request, and the issues contested. Persons who wish to be notified of a hearing may request notification by emailing to the Commission's Secretary at *Secretarys-Office@sec.gov.*

ADDRESSES: The Commission: *Secretarys-Office@sec.gov.* Applicants: *peter.shea@klgates.com.*

FOR FURTHER INFORMATION CONTACT: Marc Mehrespand, Senior Counsel; Trace Rakestraw, Branch Chief, at (202) 551–6825 (Division of Investment Management, Chief Counsel's Office).

SUPPLEMENTARY INFORMATION: The following is a summary of the application. The complete application may be obtained via the Commission's website by searching for the file number, or for an applicant using the Company name box, at *http://www.sec.gov/search/search.htm* or by calling (202) 551–8090.

I. Introduction

1. On December 10, 2019, the Commission issued an order (''Prior Order'') [1] under section 6(c) of the Act for an exemption from sections 2(a)(32), 5(a)(1), 22(d), and 22(e) of the Act and rule 22c–1 under the Act, under sections 6(c) and 17(b) of the Act for an exemption from sections 17(a)(1) and 17(a)(2) of the Act, and under section 12(d)(1)(J) of the Act for an exemption from sections 12(d)(1)(A) and 12(d)(1)(B) of the Act.[2] The Prior Order permitted Applicants to introduce a novel type of actively-managed exchange-traded fund (''ETF'') that is not required to disclose its portfolio holdings on a daily basis (each, a ''Fund''). Rather, pursuant to the Prior Order, each Business Day [3] a Fund publishes a basket of securities and cash that, while different from the Fund's portfolio, is designed to closely track its daily performance (the ''Proxy Portfolio'').

2. Pursuant to the Prior Order, a Fund sells and redeems its shares (''Shares'') only in Creation Units and generally on an in-kind basis. Purchasers are required to purchase Creation Units by making a deposit of Deposit Instruments and shareholders redeeming their Shares receive a transfer of Redemption Instruments.[4] Under the Prior Order, the names and quantities of the instruments that constitute the Deposit Instruments and the Redemption Instruments for a Fund (collectively, the ''Creation Basket'') are the same as the Fund's Proxy Portfolio, except to the extent purchases and redemptions are made entirely or in part on a cash basis.

3. Applicants now seek to amend the Prior Order to, in effect, give the Funds the same flexibility with respect to Creation Basket composition as afforded to ETFs relying on rule 6c–11.[5] More

[26] 17 CFR 200.30–3(a)(12).

[1] *See* Natixis ETF Trust II, *et al.,* Investment Company Act Release No. 33684 (Nov. 14, 2019) (notice) and Investment Company Act Release No. 33711 (Dec. 10, 2019) (order). Except as specifically noted in the application, all representations and conditions contained in the application previously submitted with the Commission (File No. 812–14870), as amended and restated, and filed with the Commission on October 21, 2019 (the ''Prior Application'') remain applicable to the operation of the Funds and will apply to any Funds relying on the Amended Order.

[2] The relief granted in the Prior Order under section 12(d)(1)(J) of the Act for an exemption from sections 12(d)(1)(A) and 12(d)(1)(B) of the 1940 Act (the ''Section 12(d)(1) Relief''), and relief under sections 6(c) and 17(b) of the Act for an exemption from sections 17(a)(1) and 17(a)(2) of the Act relating to the Section 12(d)(1) Relief, will expire one year from the effective date of rule 12d1–4. *See* Fund of Funds Arrangements, Investment Company Act Rel. No. 10871 (Oct. 7, 2020), at III.

[3] All capitalized terms not otherwise defined in this notice have the meanings ascribed to them in the Prior Application.

[4] Deposit Instruments and Redemption Instruments may include cash and/or securities.

[5] The Funds are not be able to operate in reliance on rule 6c–11 because they do not disclose their portfolio holdings on a daily basis as required by the rule. *See* rule 6c–11(c)(1)(i) (requiring an ETF to disclose prominently on its website, publicly available and free of charge, the portfolio holdings that will form the basis for each calculation of NAV per share).

specifically, Applicants have requested that the Funds be allowed to use Creation Baskets that include instruments that are not included, or are included with different weightings, in the Fund's Proxy Portfolio.

II. The Application

A. Applicants' Proposal

4. Upon amending the Prior Order, the names and quantities of the instruments that may constitute a Creation Basket will generally be the same as the Fund's Proxy Portfolio, but a Fund may accept Creation Baskets that differ from the Proxy Portfolio. Each Business Day, before the open of trading on the Exchange where a Fund is listed, the Fund will publish on its website the composition of any Creation Basket exchanged with an authorized participant on the previous Business Day that differed from such Business Day's Proxy Portfolio other than with respect to cash.

5. Applicants represent that, for portfolio management or other reasons, the Funds may determine that it is desirable to use Creation Baskets that differ from the Proxy Portfolio (beyond cash substitutions). For example, a Fund may want to use a Creation Basket that contains instruments that are not included in a Fund's Proxy Portfolio if the Adviser or Sub-Adviser seeks to add an instrument to the Fund's Actual Portfolio) without incurring transaction costs associated with the purchase of the instrument for cash. Similarly, if the Adviser or Sub-Adviser decides to sell an instrument from a Fund's Actual Portfolio, the instrument may be included in a Creation Basket with the expectation that the Fund will deliver it in-kind during a redemption transaction.

6. The Funds will use the requested basket flexibility only in circumstances under which Applicants believe there will be no harm to the Funds or their shareholders, and in order to benefit the Funds and their shareholders by reducing costs, increasing efficiency and improving trading.

7. Pursuant to condition 10 herein, each Fund will adopt and implement written policies and procedures regarding the construction of its Creation Baskets in accordance with rule 6c–11 under the Act. For purposes of the requirement to comply with the policies and procedures provision in rule 6c–11, only Creation Baskets that differ from a Fund's Proxy Portfolio will be treated as a ''custom basket'' under rule 6c–11(c)(3).

8. Furthermore, pursuant to condition 9 herein, each Fund will comply with the recordkeeping requirements of rule 6c–11.[6] For purposes of the requirement to comply with the recordkeeping provision in rule 6c–11, only Creation Baskets different from a Fund's Proxy Portfolio will be treated as a ''custom basket'' under rule 6c–11(d)(2)(ii).

B. Considerations Relating to the Requested Relief

9. Applicants represent that the ability to utilize a Creation Basket that includes instruments that are not included, or are included with different weightings, in a Fund's Proxy Portfolio, or are included in different weightings, does not raise any new policy concerns about reverse engineering of a Fund's portfolio, self-dealing or overreaching, or selective disclosure beyond those concerns addressed in connection with the Prior Order.

10. *Reverse Engineering.* Applicants acknowledge that, by using a Creation Basket that includes instruments that are not included in a Fund's Proxy Portfolio, or are included in different percentages, and by publishing such Creation Basket on its website, the Fund would provide market participants with additional information about which instruments it adds or removes from the Fund's Actual Portfolio. However, Applicants represent that they will operate the Funds in a manner designed to minimize the risk of reverse engineering and, for the reasons set forth in the application, believe successful front-running or free-riding is highly unlikely.

11. *Self-Dealing or Overreaching.* Applicants state that authorized participants and other market participants will not have the ability to disadvantage the Funds by manipulating or influencing the composition of Creation Baskets, including those that differ from the Proxy Portfolio. Like the basket and custom basket policies and procedures required of ETFs by rule 6c–11, the Funds will adopt and implement written policies and procedures that govern the construction of Creation Baskets and the process that will be used for the acceptance of Creation Baskets to safeguard the best interests of the Funds and their shareholders.[7]

12. *Selective Disclosure.* The Funds and each person acting on behalf of the Funds will continue to be required to comply with Regulation Fair Disclosure as if it applied to them (except that the exemptions provided in rule 100(b)(2)(iii) therein shall not apply). Applicants believe that the new Creation Basket flexibility being sought by the Applicants does not raise any new concerns about selective disclosure of non-public material information. First, a Fund's use of, or conversations with authorized participants about, Creation Baskets that would result in such disclosure would effectively be limited by the Funds' obligation to comply with Regulation Fair Disclosure. Second, as noted above, each Business Day, before the open of trading on the Exchange where a Fund is listed, the Fund will publish on its website the composition of any basket accepted by the Fund on the previous Business Day that differed from such Business Day's Proxy Portfolio other than with respect to cash.

III. Requested Exemptive Relief

For the reasons stated above, Applicants believe that the Prior Order, as amended, continues to meet the relevant standards for relief pursuant to section 6(c) of the Act for an exemption from sections 2(a)(32), 5(a)(1), 22(d), and 22(e) of the Act and rule 22c–1 under the Act, and under sections 6(c) and 17(b) of the Act for an exemption from sections 17(a)(1) and 17(a)(2) of the Act, and under section 12(d)(1)(J) of the Act for an exemption from sections 12(d)(1)(A) and 12(d)(1)(B) of the Act.[8]

IV. Applicants' Conditions

Applicants agree that the Amended Order granting the requested relief will be subject to all of the conditions in the Prior Order, except that condition 9 of the Prior Order is deleted in its entirety and replaced with the conditions 9–10 as follows:

9. Each Fund will comply with the recordkeeping requirements of rule 6c–11 under the Act, as amended, except that for purposes of this condition, only Creation Baskets different from the Fund's Proxy Portfolio will be treated as a ''custom basket'' under rule 6c–11(d)(2)(ii). In addition, each Fund will maintain and preserve, for a period of not less than five years, in an easily accessible place, (i) a copy of the Proxy Portfolio published on the Fund's website for each Business Day; and (ii) a copy of each Creation Basket made available.

[6] Pursuant to condition 9, each Fund will also maintain and preserve a copy of the Proxy Portfolio published on the Fund's website for each Business Day and a copy of each Creation Basket made available.

[7] *See* Exchange-Traded Funds, Investment Company Act Release No. 33646 (Sept. 25, 2019) (''ETF Adopting Release''), at 80–94 (discussion of rule 6c–11 requirement for ETF policies and procedures concerning basket construction and acceptance and heightened policies and procedures for custom baskets).

[8] *See supra* note 2.

10. Each Fund will adopt and implement written policies and procedures that govern the construction of Creation Baskets, as required under rule 6c–11(c)(3) under the Act, as amended, except that for purposes of this condition, only Creation Baskets different from the Fund's Proxy Portfolio will be treated as a ''Custom Basket''. The Fund's basket policies and procedures will be covered by the Fund's compliance program and other requirements under rule 38a–1 under the Act, as amended.

For the Commission, by the Division of Investment Management, pursuant to delegated authority.

J. Matthew DeLesDernier,

Assistant Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Investment Company Act Release No. 34170; 812–15182]

Invesco Capital Management LLC, et al.

January 12, 2021.

AGENCY: Securities and Exchange Commission (''Commission'').

ACTION: Notice of an application to amend a prior order for exemptive relief.

SUMMARY OF APPLICATION: Applicants request an order (''Amended Order'') that would amend a prior order to permit the Funds, as defined below, to use Creation Baskets (as defined below) that include instruments that are not included, or are included with different weightings, in the Fund's Substitute Basket (as defined below).

APPLICANTS: Invesco Capital Management LLC, Invesco Actively Managed Exchange-Traded Fund Trust and Invesco Distributors, Inc.

FILING DATES: The application was filed on December 1, 2020, and amended on December 7, 2020.

HEARING OR NOTIFICATION OF HEARING: An order granting the requested relief will be issued unless the Commission orders a hearing. Interested persons may request a hearing by emailing the Commission's Secretary at *Secretarys-Office@sec.gov* and serving Applicants with a copy of the request by email. Hearing requests should be received by the Commission by 5:30 p.m. on February 8, 2021 and should be accompanied by proof of service on the Applicants, in the form of an affidavit, or, for lawyers, a certificate of service. Pursuant to rule 0–5 under the Investment Company Act of 1940 (''Act''), hearing requests should state the nature of the writer's interest, any facts bearing upon the desirability of a hearing on the matter, the reason for the request, and the issues contested. Persons who wish to be notified of a hearing may request notification by emailing to the Commission's Secretary at *Secretarys-Office@sec.gov.*

ADDRESSES:

The Commission: Secretarys-Office@sec.gov.

Applicants: anna.paglia@invesco.com, paulita.pike@ropesgray.com and *edward.baer@ropesgray.com.*

FOR FURTHER INFORMATION CONTACT: Marc Mehrespand, Senior Counsel; Trace Rakestraw, Branch Chief, at (202) 551–6825 (Division of Investment Management, Chief Counsel's Office).

SUPPLEMENTARY INFORMATION: The following is a summary of the application. The complete application may be obtained via the Commission's website by searching for the file number, or for an applicant using the Company name box, at *http://www.sec.gov/search/search.htm* or by calling (202) 551–8090.

I. Introduction

1. On December 2, 2020, the Commission issued an order (''Prior Order'') [1] under section 6(c) of the Act for an exemption from sections 2(a)(32), 5(a)(1), 22(d), and 22(e) of the Act and rule 22c–1 under the Act, under sections 6(c) and 17(b) of the Act for an exemption from sections 17(a)(1) and 17(a)(2) of the Act. The Prior Order permitted Applicants to introduce a novel type of actively-managed exchange-traded fund (''ETF'') that is not required to disclose its portfolio holdings on a daily basis (each, a ''Fund''). Rather, pursuant to the Prior Order, each Business Day [2] a Fund publishes a basket of securities and cash that, while different from the Fund's portfolio, is designed to closely track its daily performance (the ''Substitute Basket'').

2. Pursuant to the Prior Order, a Fund sells and redeems its shares (''Shares'') only in Creation Units and generally on an in-kind basis. Purchasers are required to purchase Creation Units by making a deposit of Deposit Instruments and shareholders redeeming their Shares receive a transfer of Redemption Instruments.[3] Under the Prior Order, the names and quantities of the instruments that constitute the Deposit Instruments and the Redemption Instruments for a Fund (collectively, the ''Creation Basket'') are the same as the Fund's Substitute Basket, except to the extent purchases and redemptions are made entirely or in part on a cash basis.

3. Applicants now seek to amend the Prior Order to, in effect, give the Funds the same flexibility with respect to Creation Basket composition as afforded to ETFs relying on rule 6c–11.[4] More specifically, Applicants have requested that the Funds be allowed to use Creation Baskets that include instruments that are not included, or are included with different weightings, in the Fund's Substitute Basket.

II. The Application

A. Applicants' Proposal

4. Upon amending the Prior Order, the names and quantities of the instruments that may constitute a Creation Basket will generally be the same as the Fund's Substitute Basket, but a Fund may accept Creation Baskets that differ from the Substitute Basket. Each Business Day, before the open of trading on the Exchange where a Fund is listed, the Fund will publish on its website the composition of any Creation Basket exchanged with an authorized participant on the previous Business Day that differed from such Business Day's Substitute Basket other than with respect to cash.

5. Applicants represent that, for portfolio management or other reasons, the Funds may determine that it is desirable to use Creation Baskets that differ from the Substitute Basket (beyond cash substitutions). For example, a Fund may want to use a Creation Basket that contains instruments that are not included in a Fund's Substitute Basket if the Adviser

[1] *See* Invesco Capital Management LLC, *et al.,* Investment Company Act Release No. 34087 (Nov. 6, 2020) (notice) and Investment Company Act Release No. 34127 (Dec. 2, 2020) (order). Except as specifically noted in the application, all representations and conditions contained in the application previously submitted with the Commission (File No. 812–15070), as amended and restated, and filed with the Commission on November 6, 2020 (the ''Prior Application'') remain applicable to the operation of the Funds and will apply to any Funds relying on the Amended Order.

[2] All capitalized terms not otherwise defined in this notice have the meanings ascribed to them in the Prior Application.

[3] Deposit Instruments and Redemption Instruments may include cash and/or securities.

[4] The Funds are not be able to operate in reliance on rule 6c–11 because they do not disclose their portfolio holdings on a daily basis as required by the rule. *See* rule 6c–11(c)(1)(i) (requiring an ETF to disclose prominently on its website, publicly available and free of charge, the portfolio holdings that will form the basis for each calculation of NAV per share).

or Sub-Adviser seeks to add an instrument to the Fund's then-current portfolio (''Actual Portfolio'') without incurring transaction costs associated with the purchase of the instrument for cash. Similarly, if the Adviser or Sub-Adviser decides to sell an instrument from a Fund's Actual Portfolio, the instrument may be included in a Creation Basket with the expectation that the Fund will deliver it in-kind during a redemption transaction.

6. The Funds will use the requested basket flexibility only in circumstances under which Applicants believe there will be no harm to the Funds or their shareholders, and in order to benefit the Funds and their shareholders by reducing costs, increasing efficiency and improving trading.

7. Pursuant to condition 10 herein, each Fund will adopt and implement written policies and procedures regarding the construction of its Creation Baskets in accordance with rule 6c–11 under the Act. For purposes of the requirement to comply with the policies and procedures provision in rule 6c–11, only Creation Baskets that differ from a Fund's Substitute Basket will be treated as a ''custom basket'' under rule 6c–11(c)(3).

8. Furthermore, pursuant to condition 9 herein, each Fund will comply with the recordkeeping requirements of rule 6c–11.[5] For purposes of the requirement to comply with the recordkeeping provision in rule 6c–11, only Creation Baskets different from a Fund's Substitute Basket will be treated as a ''custom basket'' under rule 6c–11(d)(2)(ii).

B. Considerations Relating to the Requested Relief

9. Applicants represent that the ability to utilize a Creation Basket that includes instruments that are not included, or are included with different weightings, in a Fund's Substitute Basket, or are included in different weightings, does not raise any new policy concerns about reverse engineering of a Fund's portfolio, self-dealing or overreaching, or selective disclosure beyond those concerns addressed in connection with the Prior Order.

10. *Reverse Engineering.* Applicants acknowledge that, by using a Creation Basket that includes instruments that are not included in a Fund's Substitute Basket, or are included in different percentages, and by publishing such Creation Basket on its website, the Fund would provide market participants with additional information about which instruments it adds or removes from the Fund's Actual Portfolio. However, Applicants represent that they will operate the Funds in a manner designed to minimize the risk of reverse engineering and, for the reasons set forth in the application, believe successful front-running or free-riding is highly unlikely.

11. *Self-Dealing or Overreaching.* Applicants state that authorized participants and other market participants will not have the ability to disadvantage the Funds by manipulating or influencing the composition of Creation Baskets, including those that differ from the Substitute Basket. Like the basket and custom basket policies and procedures required of ETFs by rule 6c–11, the Funds will adopt and implement written policies and procedures that govern the construction of Creation Baskets and the process that will be used for the acceptance of Creation Baskets to safeguard the best interests of the Funds and their shareholders.[6]

12. *Selective Disclosure.* The Funds and each person acting on behalf of the Funds will continue to be required to comply with Regulation Fair Disclosure as if it applied to them (except that the exemptions provided in rule 100(b)(2)(iii) therein shall not apply). Applicants believe that the new Creation Basket flexibility being sought by the Applicants does not raise any new concerns about selective disclosure of non-public material information. First, a Fund's use of, or conversations with authorized participants about, Creation Baskets that would result in such disclosure would effectively be limited by the Funds' obligation to comply with Regulation Fair Disclosure. Second, as noted above, each Business Day, before the open of trading on the Exchange where a Fund is listed, the Fund will publish on its website the composition of any basket accepted by the Fund on the previous Business Day that differed from such Business Day's Substitute Basket other than with respect to cash.

III. Requested Exemptive Relief

For the reasons stated above, Applicants believe that the Prior Order, as amended, continues to meet the relevant standards for relief pursuant to section 6(c) of the Act for an exemption from sections 2(a)(32), 5(a)(1), 22(d), and 22(e) of the Act and rule 22c–1 under the Act, and under sections 6(c) and 17(b) of the Act for an exemption from sections 17(a)(1) and 17(a)(2) of the Act.

IV. Applicants' Conditions

Applicants agree that the Amended Order granting the requested relief will be subject to all of the conditions in the Prior Order, except that condition 9 of the Prior Order is deleted in its entirety and replaced with the conditions 9–10 as follows:

9. Each Fund will comply with the recordkeeping requirements of rule 6c–11 under the Act, as amended, except that for purposes of this condition, only Creation Baskets different from the Fund's Substitute Basket will be treated as a ''custom basket'' under rule 6c–11(d)(2)(ii). In addition, each Fund will maintain and preserve, for a period of not less than five years, in an easily accessible place, (i) a copy of the Substitute Basket published on the Fund's website for each Business Day; and (ii) a copy of each Creation Basket made available.

10. Each Fund will adopt and implement written policies and procedures that govern the construction of Creation Baskets, as required under rule 6c–11(c)(3) under the Act, as amended, except that for purposes of this condition, only Creation Baskets different from the Fund's Substitute Basket will be treated as a ''Custom Basket''. The Fund's basket policies and procedures will be covered by the Fund's compliance program and other requirements under rule 38a–1 under the Act, as amended.

For the Commission, by the Division of Investment Management, pursuant to delegated authority.

J. Matthew DeLesDernier,

Assistant Secretary.

SOCIAL SECURITY ADMINISTRATION

[Docket No. SSA–2016–0039]

Use of Electronic Payroll Data to Improve Program Administration

AGENCY: Social Security Administration.

ACTION: Notice and request for comments.

SUMMARY: This is advance notification to the public regarding the implementation of an information exchange between the Social Security Administration (SSA)

and Equifax, a payroll data provider. We expect that the information exchange will enable us to administer Social Security Disability Insurance (SSDI) benefits and Supplemental Security Income (SSI) payments more efficiently, while helping to prevent improper payments.

DATES: Comments must be received by February 18, 2021.

ADDRESSES: You may submit comments by any one of three methods—internet, fax, or mail. Do not submit the same comments multiple times or by more than one method. No matter which method you choose, please state that your comments refer to Docket No. SSA–2016–0039 so that we may associate your comments with the correct document.

Caution: You should be careful to include in your comments only information that you wish to make publicly available. We strongly urge you not to include in your comments any personal information, such as Social Security numbers or medical information.

1. *Internet:* We strongly recommend that you submit your comments via the internet. Please visit the Federal eRulemaking portal at *https://www.regulations.gov/.* Use the ''Search'' function to find docket number SSA–2016–0039. The system will issue you a tracking number to confirm your submission. You will not be able to view your comment immediately because we must post each comment manually. It may take up to a week for your comment to be viewable.

2. *Fax:* Fax comments to (410) 966–2830.

3. *Mail:* Address your comments to the Reports Clearance Director, 3100 West High Rise Building, 6401 Security Boulevard, Baltimore, Maryland 21235.

Comments are available for public viewing on the Federal eRulemaking portal at *https://www.regulations.gov* or in person, during regular business hours, by arranging with the contact person identified below.

FOR FURTHER INFORMATION CONTACT: Betsy Blair, Office of Income Security Programs, Social Security Administration, 6401 Security Boulevard, Baltimore, MD 21235, (410) 965–0041. For information on eligibility or filing for benefits, call our national toll-free number, 1–800–772–1213 or TTY 1–800–325–0778, or visit our internet site, Social Security Online at *http://www.socialsecurity.gov.*

SUPPLEMENTARY INFORMATION:

Description of Information Exchange

Congress enacted the Bipartisan Budget Act (BBA) of 2015 [1] on November 2, 2015. Section 824 of the BBA added section 1184 to the Social Security Act (Act) [2] and authorized us to enter into information exchanges with payroll data providers for the purposes of efficient program administration and prevention of improper SSDI and SSI payments. Section 824 defines information exchanges as the automated comparison of our system(s) of records with records of payroll data providers.[3] Section 824 further defines payroll data providers to include payroll providers, wage verification companies, and other commercial or non-commercial entities that collect and maintain data regarding employment and wages.[4] Although the Act and our rules require individuals to report any changes that could affect SSDI entitlement, SSI eligibility, or benefit amounts, we do not always receive these reports timely. By entering into an information exchange with the payroll data provider Equifax, we will be able to obtain the wage and employment records of Equifax and will therefore be able to receive wage information timely without the need for additional verification from other sources.

We will request authorization [5] from SSDI and SSI claimants, recipients, or deemors, to obtain their wage and employment information from payroll data providers, like Equifax. However, failure to sign the authorization does not lead to ineligibility for benefits. Once the authorization is signed, it will remain in effect until the earliest of the following occurrences: (1) It has been revoked in writing by the individual or their legal guardian; (2) all entitlement to or eligibility for benefits or payments has terminated, there are no other claims or appeals pending, and all periods for appealing any adverse determinations or decisions have lapsed; (3) there has been an adverse determination or decision on the claim, the individual is not otherwise currently entitled to or eligible for payments, there are no other claims or appeals pending and all periods for appealing any adverse determinations or decisions have lapsed; or (4) for SSI deemors, the deeming relationship ends. Authorizing us to obtain information directly from a payroll data provider like Equifax protects the beneficiary or recipient from a penalty of non-payment or ineligibility under section 1129A of the Act,[6] for any omission or error from wages reported by Equifax. Additionally, we will find good cause and not subject recipients who receive SSI payments to a monetary deduction penalty of their payments under section 1631(e)(2) of the Act [7] if they fail or delay to report a change in employer and gave us the authorization to obtain information from Equifax.

We will request the wage and employment information listed below from Equifax via a secure means of electronic transmission, every month, for each beneficiary and recipient with a valid authorization and who is actively requesting or receiving benefits. In response to our request, Equifax will provide the wage and employment information or respond that it has no records. We will conduct this information exchange in accordance with all applicable laws, to include the Privacy Act of 1974, 5 U.S.C. 552a and the Social Security Act, 42 U.S.C. 1306(a).

Equifax will use reasonable procedures [8] to ensure maximum accuracy, relevance, and timeliness of its wage and employment information and must notify us within 24 hours if it discovers that it submitted incorrect information to us.

We have determined that the general quality of the wage and employment information that will be received via the information exchange meets our standards and is:

- Sufficiently accurate, up-to-date, and complete.
  - Equifax tests the data of employers to ensure it contains all of the data elements identified below and conforms to its system requirements; regularly conducts quality assurance assessments to ensure accuracy; and makes wage and employment data available within 24 hours of receipt from employers.
- Vital to accurately determine (a) entitlement to SSDI, (b) eligibility for SSI, and (c) SSI payment amounts.
  - We require this information because wage and employment data are factors that can affect entitlement, eligibility, and payment amounts.

[1] Public Law 114–74, 129 Stat. 584, 607.

[2] 42 U.S.C. 1320e–3.

[3] 42 U.S.C. 1320e–3(c)(2).

[4] 42 U.S.C. 1320e–3(c)(1).

[5] We request such authorization by using form SSA–8240, OMB 0960–0807, ''Authorization for the Social Security Administration to Obtain Wage and Employment Information from Payroll Data Providers.''

[6] 42 U.S.C. 1320a–8a.

[7] 42 U.S.C. 1383(e)(2).

[8] Equifax shall follow all technical specifications provided by us. We provided technical specifications, characteristics, and needs. The technical specifications include detailed requirements and pertinent information regarding the request, response, security requirements, Web Service, data retention, and processing guidelines related to the information exchange.

Because the information is coming directly from the employer through Equifax, we will receive timely and accurate wage and employment reporting and will be able to administer SSDI benefits and SSI payments more efficiently.

- Needed to prevent improper payments of SSDI and SSI benefits.
  - As indicated above, we do not always receive timely reports of changes that could affect SSDI entitlement, SSI eligibility, or SSI benefit amounts, and this may cause improper payments. Requirements to verify wages may also cause delays that lead to improper payments. Changes in a person's work and wages are a leading cause of improper payments in the SSDI and SSI programs. While we use a number of sources to verify wage amounts, verifying wages is currently a manual process, and we continue to rely on beneficiaries to self-report wages.[9] With automated information exchanges, we will be able to obtain the wage and employment records timely and without the need for additional verification from other sources.

Data Elements

The information exchange will require SSA and Equifax to exchange specific data elements. We will send the data elements below to Equifax to ensure we are requesting employment and wage information for the correct individual and timeframe. Equifax and SSA will use a federally compliant, secure means to exchange data and conduct the automated comparison of SSA to Equifax records under this information exchange.

In order to request wage and employment information, we will provide the following information from the Supplemental Security Income Record and Special Veterans Benefits for SSI [10] and the eWork for SSDI [11] to Equifax:

(1) Social Security number (SSN) of the beneficiary, recipient, or deemor;

(2) Start date and end date (month and year) of wage and employment information being requested;

(3) Tracking identification number.

(In response to our request, Equifax will provide the following wage and employment information to us, if available:

(1) Wage earner's SSN

(2) Wage earner's first name

(3) Wage earner's last name

(4) Employer name

(5) Employer identification number

(6) Employer address

(7) Transmission date of wage and employment response from Equifax to us

(8) Date of payment

(9) Amount of gross pay

(10) Frequency of pay

(11) Pay period begin and end date

(12) Year-to-date gross wage amount

(13) Applicable deductions, including but not limited to the following:

a. Federal, state and local taxes

b. Federal Insurance Contributions Act taxes

c. Medicare taxes

d. Garnishment

e. Cafeteria plans

(14) Employer telephone number

(15) Wage earner's job title

(16) Employment begin date

(17) Employment end date

(18) Amount of net pay

(19) Pay rate

(20) Hours worked per pay period

Request for Comments

We are requesting comments concerning the specifics of our proposal to implement an information exchange under section 824 of the BBA. We ask that, in preparing comments, you address questions such as:

1. Have we identified the appropriate design for an information exchange?

2. Are there any additional operational elements of an information exchange that we should include?

We will not respond to your comments, but we will consider them as we review our plan to implement the information exchange under section 824 of the BBA.

The Commissioner of the Social Security Administration, Andrew Saul, having reviewed and approved this document, is delegating the authority to electronically sign this document to Faye I. Lipsky, who is the primary Federal Register Liaison for SSA, for purposes of publication in the **Federal Register**.

Faye I. Lipsky,

Federal Register Liaison, Office of Legislation and Congressional Affairs, Social Security Administration.

DEPARTMENT OF STATE

[Public Notice: 11325]

In the Matter of the Designation of Ansarallah (and other Aliases) as a Foreign Terrorist Organization

Based upon a review of the Administrative Record assembled in this matter, and in consultation with the Attorney General and the Secretary of the Treasury, I conclude that there is a sufficient factual basis to find that the relevant circumstances described in section 219 of the Immigration and Nationality Act, as amended (hereinafter ''INA'') (8 U.S.C. 1189), exist with respect to Ansarallah, also known as Ansar Allah; also known as Ansarullah; also known as Partisans of God; and also known as Supporters of God. Therefore, I hereby designate the aforementioned organization and its aliases as a foreign terrorist organization pursuant to section 219 of the INA.

This determination shall be published in the **Federal Register**.

Dated: January 12, 2021.

Michael R. Pompeo,

Secretary of State.

BILLING CODE 4710–AD–P

DEPARTMENT OF STATE

[Public Notice: 11320]

30-Day Notice of Proposed Information Collection: Special Immigrant Visa Biodata Form

ACTION: Notice of request for public comment and submission to OMB of proposed collection of information.

SUMMARY: The Department of State has submitted the information collection described below to the Office of Management and Budget (OMB) for approval. In accordance with the Paperwork Reduction Act of 1995, we are requesting comments on this collection from all interested individuals and organizations. The purpose of this Notice is to allow 30 days for public comment.

DATES: Submit comments directly to the Office of Management and Budget (OMB) up to February 18, 2021.

ADDRESSES: Direct comments to the Department of State Desk Officer in the Office of Information and Regulatory Affairs at the Office of Management and Budget (OMB). You may submit comments by the following methods:

- *Email: oira_submission@omb.eop.gov.* You must include the DS form number, information collection

title, and the OMB control number in the subject line of your message.

• *Fax:* 202–395–5806. Attention: Desk Officer for Department of State.

FOR FURTHER INFORMATION CONTACT: Direct requests for additional information regarding the collection listed in this notice, including requests for copies of the proposed collection instrument and supporting documents, to Irving Jones, PRM/Admissions, 2025 E Street NW, SA–9, 8th Floor, Washington, DC 20522–0908, who may be reached on 202.453.9248 or at *JonesJI2@state.gov.*

SUPPLEMENTARY INFORMATION:

• *Title of Information Collection:* Special Immigrant Visa Biodata Form.

• *OMB Control Number:* 1405–0203.

• *Type of Request:* Revision of a Currently Approved Collection.

• *Originating Office:* Office of Admissions, Bureau of Population, Refugees, and Migration (PRM/A).

• *Form Number:* DS–0234.

• *Respondents:* Iraqi and Afghan Special Immigrant Visa Applicants.

• *Estimated Number of Respondents:* 14,000.

• *Estimated Number of Responses:* 14,000.

• *Average Time per Response:* 30 minutes.

• *Total Estimated Burden Time:* 7,000 annual hours.

• *Frequency:* On Occasion.

• *Obligation to Respond:* Required to Obtain or Retain a Benefit.

We are soliciting public comments to permit the Department to:

• Evaluate whether the proposed information collection is necessary for the proper functions of the Department.

• Evaluate the accuracy of our estimate of the time and cost burden for this proposed collection, including the validity of the methodology and assumptions used.

• Enhance the quality, utility, and clarity of the information to be collected.

• Minimize the reporting burden on those who are to respond, including the use of automated collection techniques or other forms of information technology.

Please note that comments submitted in response to this Notice are public record. Before including any detailed personal information, you should be aware that your comments as submitted, including your personal information, will be available for public review.

Abstract of Proposed Collection

Form DS–234 elicits information used to determine the eligibility of certain Iraqis and Afghan SIV recipients for refugee resettlement benefits.

Methodology

The SIV Biodata information form (DS–234) is submitted electronically by the applicant to the National Visa Center, which will forward the forms to the Refugee Processing Center of the Bureau of Population, Refugees, and Migration.

Zachary A. Parker,

Director, Office of Directives Management, Department of State.

BILLING CODE 4710–33–P

DEPARTMENT OF STATE

[Public Notice: 11327]

Designation of Abd al-Aziz Malluh Mirjirash al-Muhammadawi as a Specially Designated Global Terrorist

Acting under the authority of and in accordance with sections 1(a)(ii)(A) of Executive Order 13224 of September 23, 2001, as amended by Executive Order 13268 of July 2, 2002, Executive Order 13284 of January 23, 2003, and Executive Order 13886 of September 9, 2019, I hereby determine that the person known as Abd al-Aziz Malluh Mirjirash al-Muhammadawi, also known as Abdul Aziz Al-Mohammedawi, also known as Abdulazeez Mlawwah Mjeresh Mjeresh, also known as Abu Fadak Al-Mohammedawi, also known as Abu Fadak, also known as Al Khal, is a foreign person who poses a significant risk of committing an act of terrorism that threaten the security of U.S. nationals or the national security, foreign policy, or economy of the United States.

Consistent with the determination in section 10 of Executive Order 13224 that prior notice to persons determined to be subject to the Order who might have a constitutional presence in the United States would render ineffectual the blocking and other measures authorized in the Order because of the ability to transfer funds instantaneously, I determine that no prior notice needs to be provided to any person subject to this determination who might have a constitutional presence in the United States, because to do so would render ineffectual the measures authorized in the Order.

This notice shall be published in the **Federal Register**.

Dated: September 3, 2020.

Michael R. Pompeo,

Secretary of State.

BILLING CODE 4710–AD–P

DEPARTMENT OF STATE

[Public Notice: 11295]

60-Day Notice of Proposed Information Collection: Grant Request Automated Submissions Program (GRASP)

ACTION: Notice of request for public comment.

SUMMARY: The Department of State is seeking Office of Management and Budget (OMB) approval for the information collection described below. In accordance with the Paperwork Reduction Act of 1995, we are requesting comments on this collection from all interested individuals and organizations. The purpose of this notice is to allow 60 days for public comment preceding submission of the collection to OMB.

DATES: The Department will accept comments from the public up to March 22, 2021.

ADDRESSES:

You may submit comments by any of the following methods:

• *Web:* Persons with access to the internet may comment on this notice by going to *www.Regulations.gov.* You can search for the document by entering ''Docket Number: DOS–2020–0056'' in the Search field. Then click the ''Comment Now'' button and complete the comment form.

• *Email: Shearertp@state.gov.*

• *Regular Mail:* Send written comments to: Thomas P. Shearer, Office of Overseas Schools, U.S. Department of State, Room H328, 2301 C Street NW, Washington, DC 20522–0132.

• *Fax:* 202–261–8224.

• *Hand Delivery or Courier:* Thomas P. Shearer, Office of Overseas Schools, U.S. Department of State, Room H328, 2401 E Street NW, Washington, DC 20037.

You must include the DS form number (if applicable), information collection title, and the OMB control number in any correspondence.

FOR FURTHER INFORMATION CONTACT: Direct requests for additional information regarding the collection listed in this notice, including requests for copies of the proposed collection instrument and supporting documents, to Thomas P. Shearer, Office of Overseas Schools, U.S. Department of State, Room H328, 2301 C Street NW, Washington, DC 20522–0132, who may be reached on 202–261–8201 or at *Shearertp@state.gov.*

SUPPLEMENTARY INFORMATION:

• *Title of Information Collection:* Grant Request Automated Submissions Program (GRASP)

- *OMB Control Number:* 1405–0036
- *Type of Request:* Extension of a Currently Approved Collection
- *Originating Office:* Bureau of Administration, A/OPR/OS
- *Form Number:* DS–0573, DS–0574, DS–0575, DS–0576
- *Respondents:* Recipients of grants
- *Estimated Number of Respondents:* 193
- *Estimated Number of Responses:* 193
- *Average Time per Response:* 90 minutes
- *Total Estimated Burden Time:* 289.5 hours
- *Frequency:* Annually
- *Obligation to Respond:* Required to Obtain or Retain a Benefit

We are soliciting public comments to permit the Department to:

- Evaluate whether the proposed information collection is necessary for the proper functions of the Department.
- Evaluate the accuracy of our estimate of the time and cost burden for this proposed collection, including the validity of the methodology and assumptions used.
- Enhance the quality, utility, and clarity of the information to be collected.
- Minimize the reporting burden on those who are to respond, including the use of automated collection techniques or other forms of information technology.

Please note that comments submitted in response to this Notice are public record. Before including any detailed personal information, you should be aware that your comments as submitted, including your personal information, will be available for public review.

Abstract of Proposed Collection

In accordance with the Consolidated Overseas Schools Program as outlined in 2 FAM 610, the Office of Overseas Schools of the Department of State (A/OPR/OS) is responsible for determining that adequate educational opportunities exist at Foreign Service posts for dependents of U.S. Government personnel stationed abroad and for assisting American-sponsored overseas schools in demonstrating U.S. educational philosophy and practice. The information gathered enables A/OPR/OS to advise the Department and other foreign affairs agencies regarding current and constantly changing conditions, and enables A/OPR/OS to make judgments regarding assistance to schools for the improvement of educational opportunities.

The legal requirements that authorize the function of A/OPR/OS and thereby authorize the collection of information are the Foreign Assistance Act of 1961 (as amended), and the Mutual Educational and Cultural Affairs Act of 1961 (as amended), and the Department of State Basic Authorities Act of 1956, as amended by the Foreign Service Act of 1980, Public Law 96–465.

Methodology

Information is collected via electronic media.

Thomas P. Shearer,

Director, A/OPR/OS, Department of State.

30-Day Notice of Proposed Information Collection: Special Immigrant Visa Biodata Form

ACTION: Notice of request for public comment and submission to OMB of proposed collection of information.

SUMMARY: The Department of State has submitted the information collection described below to the Office of Management and Budget (OMB) for approval. In accordance with the Paperwork Reduction Act of 1995 we are requesting comments on this collection from all interested individuals and organizations. The purpose of this Notice is to allow 30 days for public comment.

DATES: Submit comments directly to the Office of Management and Budget (OMB) up to February 18, 2021.

ADDRESSES: Direct comments to the Department of State Desk Officer in the Office of Information and Regulatory Affairs at the Office of Management and Budget (OMB). You may submit comments by the following methods:

- *Email: oira_submission@omb.eop.gov.* You must include the DS form number, information collection title, and the OMB control number in the subject line of your message.
- *Fax:* 202–395–5806. Attention: Desk Officer for Department of State.

FOR FURTHER INFORMATION CONTACT: Direct requests for additional information regarding the collection listed in this notice, including requests for copies of the proposed collection instrument and supporting documents, to Irving Jones, PRM/Admissions, 2025 E Street NW, SA–9, 8th Floor, Washington, DC 20522–0908, who may be reached on 202.453.9248 or at *JonesJI2@state.gov.*

SUPPLEMENTARY INFORMATION:

- *Title of Information Collection:* Special Immigrant Visa Biodata Form.
- *OMB Control Number:* 1405–0203.
- *Type of Request:* Revision of a Currently Approved Collection.
- *Originating Office:* Office of Admissions, Bureau of Population, Refugees, and Migration (PRM/A).
- *Form Number:* DS–0234.
- *Respondents:* Iraqi and Afghan Special Immigrant Visa Applicants.
- *Estimated Number of Respondents:* 14,000.
- *Estimated Number of Responses:* 14,000.
- *Average Time per Response:* 30 minutes.
- *Total Estimated Burden Time:* 7,000 annual hours.
- *Frequency:* On Occasion.
- *Obligation to Respond:* Required to Obtain or Retain a Benefit.

We are soliciting public comments to permit the Department to:

- Evaluate whether the proposed information collection is necessary for the proper functions of the Department.
- Evaluate the accuracy of our estimate of the time and cost burden for this proposed collection, including the validity of the methodology and assumptions used.
- Enhance the quality, utility, and clarity of the information to be collected.
- Minimize the reporting burden on those who are to respond, including the use of automated collection techniques or other forms of information technology.

Please note that comments submitted in response to this Notice are public record. Before including any detailed personal information, you should be aware that your comments as submitted, including your personal information, will be available for public review.

Abstract of Proposed Collection

Form DS–234 elicits information used to determine the eligibility of certain Iraqis and Afghan SIV recipients for refugee resettlement benefits.

Methodology

The SIV Biodata information form (DS–234) is submitted electronically by the applicant to the National Visa Center, which will forward the forms to the Refugee Processing Center of the Bureau of Population, Refugees, and Migration.

U.S. Advisory Commission on Public Diplomacy Notice of Meeting

The U.S. Advisory Commission on Public Diplomacy (ACPD) will hold a virtual public meeting from 12:00 p.m. until 1:30 p.m., Thursday, February 11, 2021. The meeting will showcase the Commission's *2020 Comprehensive Annual Report on Public Diplomacy and International Broadcasting,* and a panel of independent experts will examine the challenges and opportunities facing U.S. government public diplomacy in 2021 and beyond. The ongoing COVID–19 pandemic and the continuously evolving information and political environments at home and abroad are profoundly affecting public diplomacy policies and practices in the new decade.

This meeting is open to the public, including the media and members and staff of governmental and non-governmental organizations. To obtain the web conference link and password and to request reasonable accommodation, please email ACPD Program Assistant Kristy Zamary at *ZamaryKK@state.gov.* Please send any request for reasonable accommodation no later than February 4, 2021. Requests received after that date will be considered, but might not be possible to fulfill. Attendees should plan to enter the web conference waiting room by 11:50 a.m. to allow for a prompt start. Since 1948, the ACPD has been charged with appraising activities intended to understand, inform, and influence foreign publics and to increase the understanding of, and support for, these same activities. The ACPD conducts research that provides honest assessments of public diplomacy efforts, and disseminates findings through reports, white papers, and other publications. It also holds public symposiums that generate informed discussions on public diplomacy issues and events. The Commission reports to the President, Secretary of State, and Congress. The Office of the Under Secretary of State for Public Diplomacy and Public Affairs supports it.

For more information on the U.S. Advisory Commission on Public Diplomacy, please contact Executive Director Vivian S. Walker at *WalkerVS@state.gov* or Senior Advisor Shawn Baxter at *BaxterGS@state.gov,* or please visit *https://www.state.gov/bureaus-offices/under-secretary-for-public-diplomacy-and-public-affairs/united-states-advisory-commission-on-public-diplomacy/.*

[Public Notice: 11324]

Designation of Ansarallah as a Specially Designated Global Terrorist

Acting under the authority of and in accordance with section 1(a)(ii)(A) of Executive Order 13224 of September 23, 2001, as amended by Executive Order 13268 of July 2, 2002, Executive Order 13284 of January 23, 2003, and Executive Order 13886 of September 9, 2019, I hereby determine that the person known as Ansarallah, also known as Ansar Allah; also known as Ansarullah; also known as Partisans of God; and also known as Supporters of God, is a foreign person who has committed or has attempted to commit, or poses a significant risk of committing, or has participated in training to commit, acts of terrorism that threaten the security of U.S. nationals or the national security, foreign policy, or economy of the United States.

Consistent with the determination in section 10 of Executive Order 13224 that prior notice to persons determined to be subject to the Order who might have a constitutional presence in the United States would render ineffectual the blocking and other measures authorized in the Order because of the ability to transfer funds instantaneously, I determine that no prior notice needs to be provided to any person subject to this determination who might have a constitutional presence in the United States, because to do so would render ineffectual the measures authorized in the Order.

This notice shall be published in the **Federal Register**.

DEPARTMENT OF STATE

[Public Notice:11290]

Notice of Department of State Sanctions Actions; Reimposing Certain Sanctions With Respect to Iran

SUMMARY: The Secretary of State has imposed sanctions on 1 entity and 1 individual.

DATES: The Secretary of State's determination and selection of certain sanctions to be imposed upon the 1 entity and 1 individual identified in the **SUPPLEMENTARY INFORMATION** section are effective on December 16, 2020.

FOR FURTHER INFORMATION CONTACT: Taylor Ruggles, Director, Office of Economic Sanctions Policy and Implementation, Bureau of Economic and Business Affairs, Department of State, Washington, DC 20520, tel.: (202) 647 7677, email: *RugglesTV@state.gov.*

SUPPLEMENTARY INFORMATION: Pursuant to Section 3(a) of E.O. 13846, the Secretary of State, in consultation with the Secretary of the Treasury, the Secretary of Commerce, the Secretary of Homeland Security, and the United States Trade Representative, and with the President of the Export-Import Bank, the Chairman of the Board of Governors of the Federal Reserve System, and other agencies and officials as appropriate, is authorized to impose on a person any of the sanctions described in section 4 or 5 of E.O. 13846 upon determining that the person met any criteria set forth in sections 3(a)(i)—3(a)(vi) of E.O. 13846.

The Secretary of State has determined, pursuant to Section 3(a)(ii) of E.O. 13846, that Vietnam Gas and Chemicals Transportation Corporation has knowingly, on or after November 5, 2018, engaged in a significant transaction for the purchase, acquisition, sale, transport, or marketing of petroleum products from Iran.

Pursuant to Section 5(a) of E.O. 13846, the Secretary of State has selected the following sanctions to be imposed upon Vietnam Gas and Chemicals Transportation Corporation:

- Prohibit any transactions in foreign exchange that are subject to the jurisdiction of the United States and in which the entities have any interest;
- Prohibit any transfers of credit or payments between financial institutions or by, through, or to any financial institution, to the extent that such transfers or payments are subject to the jurisdiction of the United States and involve any interest of the entities;
- Block all property and interests in property that are in the United States, that hereafter come within the United States, or that are or hereafter come within the possession or control of any United States person of the entities, and provide that such property and interests in property may not be transferred, paid, exported, withdrawn, or otherwise dealt in;
- Prohibit any United States person from investing in or purchasing significant amounts of equity or debt instruments of the entities;
- Restrict or prohibit imports of goods, technology, or services, directly or indirectly, into the United States from the entities; and
- Impose on the principal executive officer or officers, or persons performing similar functions and with similar authorities, of the entities the sanctions described in sections 5(a)(i)–5(a)(iv) and 5(a)(vi) of E.O. 13846, as selected by the Secretary of State.

Pursuant to Sections 4(e) and 5(a) of E.O. 13846, the Secretary of State has selected the following sanctions to be imposed upon, Vo Ngoc Phung, who has been determined to be (i) a corporate officer or principal of the aforementioned entities and (ii) a principal executive officer of the aforementioned entities, or perform similar functions with similar authorities as a principal executive officer:

- Prohibit any transactions in foreign exchange that are subject to the jurisdiction of the United States and in which, Vo Ngoc Phung, has any interest;
- Prohibit any transfers of credit or payments between financial institutions or by, through, or to any financial institution, to the extent that such transfers or payments are subject to the jurisdiction of the United States and involve any interest of, Vo Ngoc Phung;
- Block all property and interests in property that are in the United States, that hereafter come within the United States, or that are or hereafter come within the possession or control of any United States person of, Vo Ngoc Phung; and provide that such property and interests in property may not be transferred, paid, exported, withdrawn, or otherwise dealt in; and
- Restrict or prohibit imports of goods, technology, or services, directly or indirectly, into the United States from Vo Ngoc Phung.

Additionally, pursuant to Section 4(e) of E.O. 13846, the Secretary of State shall deny a visa to, and the Secretary of Homeland Security shall exclude from the United States, any alien that the Secretary of State determines is a corporate officer or principal of, or a shareholder with a controlling interest

in, a sanctioned person subject to this action.

Peter D. Haas,

Principal Deputy Assistant Secretary, Bureau of Economic and Business Affairs, Department of State.

60-Day Notice of Proposed Information Collection: Overseas Schools Grant Status Report

ACTION: Notice of request for public comment.

SUMMARY: The Department of State is seeking Office of Management and Budget (OMB) approval for the information collection described below. In accordance with the Paperwork Reduction Act of 1995, we are requesting comments on this collection from all interested individuals and organizations. The purpose of this notice is to allow 60 days for public comment preceding submission of the collection to OMB.

DATES: The Department will accept comments from the public up to March 22, 2021.

ADDRESSES: You may submit comments by any of the following methods:

- *Web:* Persons with access to the internet may comment on this notice by going to *www.Regulations.gov.* You can search for the document by entering ''Docket Number: DOS–2020–0054'' in the Search field. Then click the ''Comment Now'' button and complete the comment form.
- *Email: shearertp@state.gov.*
- *Regular Mail:* Send written comments to: Office of Overseas Schools, U.S. Department of State, 2201 C Street NW, Washington, DC 20520.
- *Fax:* 202–261–8224.

You must include the DS form number (if applicable), information collection title, and the OMB control number in any correspondence.

FOR FURTHER INFORMATION CONTACT: Direct requests for additional information regarding the collection listed in this notice, including requests for copies of the proposed collection instrument and supporting documents, to Thomas Shearer, Department of State, Office of Overseas Schools, A/OPR/OS, Room H328, SA–1, Washington, DC 20522–0132, who may be reached on 202–261–8200 or at *shearertp@state.gov.*

SUPPLEMENTARY INFORMATION:

- *Title of Information Collection:* Overseas Schools Grant Status Report.
- *OMB Control Number:* 1405–0033.
- *Type of Request:* Extension of a currently approved collection.
- *Originating Office:* Bureau of Administration, A/OPR/OS.
- *Form Number:* DS–2028.
- *Respondents:* Overseas schools grantees.
- *Estimated Number of Respondents:* 193.
- *Estimated Number of Responses:* 193.
- *Average Time per Response:* 15 minutes.
- *Total Estimated Burden Time:* 48.25 hours.
- *Frequency:* Annually.
- *Obligation to Respond:* Required to Obtain or Retain a Benefit.

We are soliciting public comments to permit the Department to:

- Evaluate whether the proposed information collection is necessary for the proper functions of the Department.
- Evaluate the accuracy of our estimate of the time and cost burden for this proposed collection, including the validity of the methodology and assumptions used.
- Enhance the quality, utility, and clarity of the information to be collected.
- Minimize the reporting burden on those who are to respond, including the use of automated collection techniques or other forms of information technology.

Please note that comments submitted in response to this Notice are public record. Before including any detailed personal information, you should be aware that your comments as submitted, including your personal information, will be available for public review.

Abstract of Proposed Collection

The Office of Overseas Schools of the Department of State (A/OPR/OS) is responsible for determining that adequate educational opportunities exist at Foreign Service Posts for dependents of U.S. Government personnel stationed abroad, and for assisting American-sponsored overseas schools to demonstrate U.S. educational philosophy and practice. The information gathered provides the technical and professional staff of A/OPR/OS the means by which obligations, expenditures and reimbursements of the grant funds are monitored to ensure the grantee is in compliance with the terms of the grant.

Methodology

Information is collected via electronic and paper submission. The Department has placed the form DS–2028 in a Microsoft Excel spreadsheet, and is sent as a link to the school along with the grant documents. School officials can complete the form electronically and forward the form to post for forwarding to A/OPR/OS.

Thomas P. Shearer,

Director, A/OPR/OS, Department of State.

BILLING CODE 4710–24–P

DEPARTMENT OF STATE

[Public Notice: 11319]

Notice of Department of State Sanctions Blocking Property and Suspending Entry of Certain Persons Contributing to the Situation in Syria

SUMMARY: The Secretary of State has imposed sanctions on three individuals.

DATES: The Secretary of State's determination and selection of certain sanctions to be imposed upon the six individuals identified in the **SUPPLEMENTARY INFORMATION** section were effective on December 22, 2020.

FOR FURTHER INFORMATION CONTACT: Taylor Ruggles, Director, Office of Economic Sanctions Policy and Implementation, Bureau of Economic and Business Affairs, Department of State, Washington, DC 20520, tel.: (202) 647 7677, email: *RugglesTV@state.gov.*

SUPPLEMENTARY INFORMATION: Pursuant to Section 2(a) of E.O. 13894 of October 14, 2019, the Secretary of State, in consultation with the Secretary of the Treasury, the Secretary of Commerce, the Secretary of Homeland Security, and the United States Trade Representative, and with the President of the Export-Import Bank, the Chairman of the Board of Governors of the Federal Reserve System, and other agencies and officials as appropriate, is authorized to impose on a person any of the sanctions described in section 2(c) of E.O. 13894 upon determining that the person met any criteria set forth in section 2(a)(i) or section 2(a)(ii) of E.O. 13894.

The Secretary of State has determined, pursuant to Section 2(a)(i)(A) of E.O. 13894, that Kifah Moulhem is complicit in, has directly or indirectly engaged in, or attempted to engage in, or financed, the obstruction, disruption, or prevention of a ceasefire in northern Syria.

The Secretary of State has determined, pursuant to Section 2(a)(i)(D) of E.O. 13894, that Asma al-Assad is responsible the obstruction, disruption, or prevention of efforts to promote a political solution to the conflict in Syria, including: The development of a new Syrian government that is representative and reflects the will of the Syrian people, per Section 2(a)(i)(D)(3) of the E.O.

The Secretary of State has determined, pursuant to Section 2(a)(ii) of E.O. 13894, that Fawaz Akhras, Sahar Otri Akhras, Firas al-Akhras, and Eyad Akhras shall be designated as adult family members of a person (Asma al-Assad) designated under Section 2(a)(i) of E.O. 13894.

Pursuant to Sections 2(b) and 2(c) of E.O. 13894, the Secretary of State has selected the following sanctions to be imposed upon Kifah Moulhem, Asma al-Assad, Fawaz Akhras, Sahar Otri Akhras, Firas al-Akhras, and Eyad Akhras:

- Block all property and interests in property that are in the United States, that hereafter come within the United States, or that are or hereafter come within the possession or control of any United States person of Kifah Moulhem, Asma al-Assad, Fawaz Akhras, Sahar Otri Akhras, Firas al-Akhras, and Eyad Akhras, and provide that such property and interests in property may not be transferred, paid, exported, withdrawn, or otherwise dealt in (Section 2(c)(iv) of E.O. 13894).

Peter D. Haas,

Principal Deputy Assistant Secretary, Bureau of Economic and Business Affairs, Department of State.

BILLING CODE 4710–AE–P

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

[Docket No. NHTSA–2020–0099; Notice 1]

Tesla, Inc., Receipt of Petition for Decision of Inconsequential Noncompliance

AGENCY: National Highway Traffic Safety Administration (NHTSA), Department of Transportation (DOT).

ACTION: Receipt of petition.

SUMMARY: Tesla, Inc. (Tesla) has determined that certain Model Year (MY) 2012–2020 Tesla motor vehicles do not fully comply with Federal Motor Vehicle Safety Standard (FMVSS) No. 101, *Controls and Displays.* Tesla filed a noncompliance report dated September 24, 2020. Tesla subsequently petitioned NHTSA on September 25, 2020, and later provided supplemental information on October 23, 2020, for a decision that the subject noncompliance is inconsequential as it relates to motor vehicle safety. This notice announces receipt of Tesla's petition.

DATES: Send comments on or before February 18, 2021.

ADDRESSES: Interested persons are invited to submit written data, views, and arguments on this petition. Comments must refer to the docket and notice number cited in the title of this notice and submitted by any of the following methods:

- *Mail:* Send comments by mail addressed to the U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.
- *Hand Delivery:* Deliver comments by hand to the U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590. The Docket Section is open on weekdays from 10 a.m. to 5 p.m. except for Federal holidays.
- *Electronically:* Submit comments electronically by logging onto the Federal Docket Management System (FDMS) website at *https://www.regulations.gov/.* Follow the online instructions for submitting comments.
- Comments may also be faxed to (202) 493–2251.

Comments must be written in the English language, and be no greater than 15 pages in length, although there is no limit to the length of necessary attachments to the comments. If comments are submitted in hard copy form, please ensure that two copies are provided. If you wish to receive confirmation that comments you have submitted by mail were received, please enclose a stamped, self-addressed postcard with the comments. Note that all comments received will be posted without change to *https://www.regulations.gov,* including any personal information provided.

All comments and supporting materials received before the close of business on the closing date indicated above will be filed in the docket and will be considered. All comments and supporting materials received after the closing date will also be filed and will be considered to the fullest extent possible.

When the petition is granted or denied, notice of the decision will also be published in the **Federal Register** pursuant to the authority indicated at the end of this notice.

All comments, background documentation, and supporting materials submitted to the docket may be viewed by anyone at the address and times given above. The documents may also be viewed on the internet at *https://www.regulations.gov* by following the online instructions for accessing the docket. The docket ID number for this petition is shown in the heading of this notice.

DOT's complete Privacy Act Statement is available for review in a **Federal Register** notice published on April 11, 2000 (65 FR 19477–78).

SUPPLEMENTARY INFORMATION:

I. Overview

Tesla has determined that certain MY 2012–2020 Tesla Model S, Tesla Model X, Tesla Model 3, and Tesla Model Y motor vehicles do not fully comply with the requirements of paragraph S5.2.1 (Table 1) of FMVSS No. 101, *Controls and Displays* (49 CFR 571.101). Tesla filed a noncompliance report dated September 24, 2020, pursuant to 49 CFR 573, *Defect and Noncompliance Responsibility and Reports.* Tesla subsequently petitioned NHTSA on September 25, 2020 for an exemption from the notification and remedy requirements of 49 U.S.C. Chapter 301 on the basis that this noncompliance is inconsequential as it relates to motor vehicle safety, pursuant to 49 U.S.C. 30118(d) and 30120(h) and 49 CFR 556, *Exemption for Inconsequential Defect or Noncompliance.* Tesla also provided supplemental information related to the petition on October 23, 2020.

This notice of receipt of Tesla's petition is published under 49 U.S.C. 30118 and 30120 and does not represent any Agency decision or other exercise of judgment concerning the merits of the petition.

II. Motor Vehicles Involved

Approximately 612,065 MY 2012–2020 Tesla Model S, Tesla Model X, Tesla Model 3, and Tesla Model Y motor vehicles, manufactured between December 1, 2011, and August 31, 2020, are potentially involved.

III. Noncompliance

Tesla explains that the noncompliance is that the subject motor vehicles are equipped with speedometers that can be switched by the operator to display the vehicle's speed in units of either miles per hour (MPH) or kilometers-per-hour (km/h) and therefore, do not meet the requirements set forth in paragraph S5.2.1 and Table 1, Column 3 of FMVSS No. 101.

IV. Rule Requirements

Paragraph S5.2.1 and Table 1, Column 3 of FMVSS No. 101 includes the requirements relevant to this petition. Each passenger car, multipurpose passenger vehicle, truck, and bus that is fitted with a control, a telltale, or an indicator listed in Table 1 or Table 2 of FMVSS No. 101 must meet the requirements for the location, identification, color, and illumination of that control, telltale, or indicator. Each control, telltale, and indicator that is listed in column 1 of Table 1 or Table 2 must be identified by the symbol specified for it in column 2 or the word or abbreviation specified for it in column 3 of Table 1 or Table 2. Specifically, the speedometer must only allow the speed to be displayed in ''MPH, or MPH and km/h.''

V. Summary of Tesla's Petition

The following views and arguments presented in this section, ''V. Summary of Tesla's Petition,'' are the views and arguments provided by Tesla. They have not been evaluated by the Agency and do not reflect the views of the Agency. Tesla describes the subject noncompliance and contends that the noncompliance is inconsequential as it relates to motor vehicle safety.

In support of its petition, Tesla offers the following reasoning:

1. All affected vehicles are originally configured to display speed in mph and are delivered for first sale in the United States market in a compliant state. Because distance is most commonly measured in the United States in Imperial units (including mph), the majority of owners will continue to operate their vehicle using the factory-configured unit displayed (*i.e.,* with the speed displayed in mph) and are unlikely to ever attempt to change to metric units.

2. Only through driver interaction within the display settings menu can the unit of measurement be changed from miles to kilometers. This change must be done intentionally and cannot be accomplished inadvertently.

3. When the display is set to kilometers, the indicated vehicle speed in km/h is 1.6 times greater than the speed in mph. As a result, if a vehicle operator changes the display to indicate km/h and later forgets or neglects to change the display back to mph, they (or a subsequent operator) would be more likely to travel at a slower speed rather than a faster speed. Moreover, because the operator will be able to easily recognize that the vehicle is moving at a lower speed than intended, they will likely adjust their vehicle speed to match road and traffic conditions.

4. If the vehicle operator has set the display to kilometers, all functions relying on, or otherwise tied to, the speed limit (*e.g.,* Traffic Aware Cruise Control and Speed Assist) will convert mapped data from mph to km/h, resulting in the vehicle speed automatically matching the appropriate speed limit even though the display is km/h.

5. If the vehicle operator needs to change the display back from km/h to mph, the method for doing so can be easily located in the display menu and is not buried in sub-menus.

6. If the operator nevertheless has difficulty finding the menu to change the unit setting within the center display, instructions are available in the Owner's Manual. For example, in the chapter on Controls in the Model 3 Owner's Manual, there are instructions on how to navigate the menu and an explanation that within the ''Display'' menu, there is a ''Distance'' toggle that allows operators to ''Choose to display miles or kilometers for range, speed, energy, trip meters, map searches, and navigation routes.''

7. On September 1, 2020, factory firmware release 2020.28.102.2 was introduced in production, updating the speedometer units to display km/h and mph when the display distance is set to kilometers. The change was also included in firmware release 2020.36.11, which began rolling out to field vehicles on or about September 16, 2020, so all vehicles accepting the update (and future updates) will receive compliant speedometer units. Tesla expects a majority of vehicles will have the update completed within a few weeks and expects nearly all vehicles to have completed the update within 6 months.

8. To date, Tesla has not received any reports of loss of control, collision, injury or fatality, property damage, or fire related to this issue.

9. Finally, Tesla notes that NHTSA has recently granted two petitions for inconsequential treatment involving speedometer unit display noncompliances, both of which involved a km/h display that did not also display mph. *See, e.g.,* Volkswagen Group of America, Inc., Grant of Petition for Decision of Inconsequential Noncompliance, 85 FR 39675 (July 1, 2020); BMW of North America, LLC, Grant of Petition for Decision of Inconsequential Noncompliance, 80 FR 61884 (Oct. 14, 2015). Because this issue is identical to the noncompliances in those cases, NHTSA should grant this petition for the same reasons.

10. In Tesla's supplemental materials they stated that the display setting has been corrected in production, as of September 1, 2020. Tesla states that more than 75 percent of the affected U.S. vehicles have accepted the firmware update released on September 16, 2020.

Tesla concludes by again contending that the subject noncompliance is inconsequential as it relates to motor vehicle safety, and that its petition to be exempted from providing notification of the noncompliance, as required by 49 U.S.C. 30118, and a remedy for the noncompliance, as required by 49 U.S.C. 30120, should be granted.

NHTSA notes that the statutory provisions (49 U.S.C. 30118(d) and

30120(h)) that permit manufacturers to file petitions for a determination of inconsequentiality allow NHTSA to exempt manufacturers only from the duties found in sections 30118 and 30120, respectively, to notify owners, purchasers, and dealers of a defect or noncompliance and to remedy the defect or noncompliance. Therefore, any decision on this petition only applies to the subject vehicles that Tesla no longer controlled at the time it determined that the noncompliance existed. However, any decision on this petition does not relieve vehicle distributors and dealers of the prohibitions on the sale, offer for sale, or introduction or delivery for introduction into interstate commerce of the noncompliant vehicles under their control after Tesla notified them that the subject noncompliance existed.

Authority: 49 U.S.C. 30118, 30120: delegations of authority at 49 CFR 1.95 and 501.8.

Otto G. Matheke III,

Director, Office of Vehicle Safety Compliance.

BILLING CODE 4910–59–P

DEPARTMENT OF TRANSPORTATION

Pipeline and Hazardous Materials Safety Administration

[Docket No. PHMSA–2020–0006]

Pipeline Safety: Request for Special Permit; Tennessee Gas Pipeline, L.L.C.

AGENCY: Pipeline and Hazardous Materials Safety Administration (PHMSA); DOT.

ACTION: Notice.

SUMMARY: PHMSA is publishing this notice to solicit public comments on a request for special permit received from the Tennessee Gas Pipeline, L.L.C. (TGP). The special permit request is seeking relief from compliance with certain requirements in the Federal pipeline safety regulations. At the conclusion of the 30-day comment period, PHMSA will review the comments received from this notice as part of its evaluation to grant or deny the special permit request.

DATES: Submit any comments regarding this special permit request by February 18, 2021.

ADDRESSES: Comments should reference the docket number for this specific special permit request and may be submitted in the following ways:

- *E-Gov Website: http://www.Regulations.gov.* This site allows the public to enter comments on any **Federal Register** notice issued by any agency.
- *Fax:* 1–202–493–2251.
- *Mail:* Docket Management System: U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.
- *Hand Delivery:* Docket Management System: U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590, between 9:00 a.m. and 5:00 p.m., Monday through Friday, except Federal holidays.

Instructions: You should identify the docket number for the special permit request you are commenting on at the beginning of your comments. If you submit your comments by mail, please submit two (2) copies. To receive confirmation that PHMSA has received your comments, please include a self-addressed stamped postcard. Internet users may submit comments at *http://www.Regulations.gov.*

Note: There is a privacy statement published on *http://www.Regulations.gov.* Comments, including any personal information provided, are posted without changes or edits to *http://www.Regulations.gov.*

Confidential Business Information: Confidential Business Information (CBI) is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this notice contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this notice, it is important that you clearly designate the submitted comments as CBI. Pursuant to 49 Code of Federal Regulations (CFR) § 190.343, you may ask PHMSA to give confidential treatment to information you give to the agency by taking the following steps: (1) Mark each page of the original document submission containing CBI as ''Confidential''; (2) send PHMSA, along with the original document, a second copy of the original document with the CBI deleted; and (3) explain why the information you are submitting is CBI. Unless you are notified otherwise, PHMSA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this notice. Submissions containing CBI should be sent to Kay McIver, DOT, PHMSA–PHP–80, 1200 New Jersey Avenue SE, Washington, DC 20590–0001. Any commentary PHMSA receives that is not specifically designated as CBI will be placed in the public docket for this matter.

FOR FURTHER INFORMATION CONTACT:

General: Ms. Kay McIver by telephone at 202–366–0113, or by email at *kay.mciver@dot.gov.*

Technical: Mr. Steve Nanney by telephone at 713–272–2855, or by email at *steve.nanney@dot.gov.*

SUPPLEMENTARY INFORMATION: PHMSA received a special permit request from TGP seeking a waiver from the requirements of 49 CFR 192.611(a) and (d): Change in class location: Confirmation or revision of maximum allowable operating pressure, and § 192.619(a): Maximum allowable operating pressure: Steel or plastic pipelines. This special permit is being requested in lieu of pipe replacement or pressure reduction for six (6) special permit segments of 16,116 feet (3.052 miles) on the TGP pipeline system. The proposed special permit segments are located in Harris County, Texas, Ouachita Parish, Louisiana, and Robertson County, Tennessee. The TGP pipeline class location in the special permit segments has changed from a Class 1 or Class 2 to a Class 3 location. The TGP pipeline special permit segments are 24-inch, 26-inch, and 30-inch diameter pipelines with an existing maximum allowable operating pressure of 750 pounds per square inch gauge. The installation of the special permit segments occurred in 1966 and 1989.

The special permit request, proposed special permit with conditions, and Draft Environmental Assessment (DEA) for the TGP pipeline are available for review and public comment in Docket No. PHMSA–2020–0006. We invite interested persons to review and submit comments on the special permit request and DEA in the docket. Please include any comments on potential safety and environmental impacts that may result if the special permit is granted. Comments may include relevant data.

Before issuing a decision on the special permit request, PHMSA will evaluate all comments received on or before the comment closing date. Comments received after the closing date will be evaluated, if it is possible to do so without incurring additional expense or delay. PHMSA will consider each relevant comment it receives in making its decision to grant or deny this special permit request.

Issued in Washington, DC, under authority delegated in 49 CFR 1.97.

Alan K. Mayberry,

Associate Administrator for Pipeline Safety.

BILLING CODE 4910–60–P

DEPARTMENT OF TRANSPORTATION

[Docket Number: DOT–OST–2020–0254]

Extension of the Comment Deadline Date; Request for Information for the Inclusive Design Reference Hub

AGENCY: Office of the Secretary of Transportation (OST), Department of Transportation.

ACTION: Notice; request for information (RFI).

SUMMARY: On December 21, 2020, DOT published in the **Federal Register** a request for information (RFI) regarding an Inclusive Design Reference Hub. This notice extends the deadline date for receiving comments until February 19, 2021 at 5:00 p.m. (ET).

DATES: Responses to the RFI must be received by February 19, 2021, no later than 5:00 p.m. (ET) to ensure consideration of your views.

ADDRESSES: Written comments may be submitted using any one of the following methods:

• *Electronic mail:* Email comments to *inclusivedesign@dot.gov* with a courtesy copy to *Robin.Gates@dot.gov.* Responses must be provided as attachments to an email. It is recommended that attachments with file sizes exceeding 25MB be compressed (*i.e.,* zipped) to ensure message delivery. Responses must be provided as a Microsoft Word (.docx) attachment to the email, and be no more than 5 pages in length, with 12-point font and 1-inch margins.

• *Internet:* To submit comments electronically, go to the Federal regulations website at *http://www.regulations.gov.* Search by using the docket number (DOT–OST–2020–0254). Follow the online instructions for submitting comments.

Respondents may answer as many or as few questions (see the questions below) as they wish.

DOT will not respond to individual submissions or publish publicly a compendium of responses. A response to this RFI will not be viewed as a binding commitment to develop or pursue the project or ideas discussed.

Respondents are requested to provide the following information at the beginning of their response to this RFI:

• Company/institution name
• Company/institution contact
• Contact's address, phone number, and email address

Proprietary Information

Because information received in response to this RFI may be used to structure future programs and/or otherwise be made available to the public, respondents are strongly advised to NOT include any information in their responses that might be considered business sensitive, proprietary, or otherwise confidential. However, respondents may choose to include such information in their submissions if they believe it will significantly assist DOT in the design of the program.

Responses containing confidential, proprietary, or privileged information must be conspicuously marked as described below. Failure to comply with these marking requirements may result in the disclosure of the unmarked information under the Freedom of Information Act, 5 U.S.C. 552.

If a response contains trade secrets or confidential commercial or financial information, the respondent must include a cover sheet identifying the specific pages containing that information. The cover sheet must also provide evidence that the respondent actually or customarily treats the information as private.

In addition, the respondent must (1) mark the header and footer of every page that contains trade secrets or confidential commercial or financial information with ''Contains Confidential Information Exempt from Public Disclosure'' and (2) identify every line and paragraph containing such information with double brackets or highlighting.

FOR FURTHER INFORMATION CONTACT: The monitored inbox at *inclusivedesign@dot.gov.* You may also contact the Contracting Officer, Robin Gates, at *Robin.Gates@dot.gov* or (202) 366–1408.

Please reference ''RFI for Inclusive Design Reference Hub'' in the subject line when submitting your response.

DOT looks forward to your submission in response to this notice.

SUPPLEMENTARY INFORMATION:

Summary

On December 21, 2020, DOT published in the **Federal Register** (85 FR 83152) a request for information (RFI) regarding an Inclusive Design Reference Hub. This notice extends the deadline date for receiving comments until February 19, 2021 at 5:00 p.m. (ET). *Note:* All other information in the December 21, 2020 **Federal Register** Notice (85 FR 83152) remain the same, and is included below for easy reference.

In July 2020, as part of an event celebrating the 30th anniversary of the Americans with Disabilities Act, DOT committed to undertake a new initiative to establish a library of resources for accessibility in automation, and work with outside experts to study voluntary best practices for ensuring accessibility in automated vehicles. DOT invites stakeholders to provide input on critical first steps in this process, the qualifications of entities that are best suited to perform this work, and considerations to ensure long-term sustainability of this initiative. This notice is not a Solicitation, and it does not seek the submission of formal, binding quotations/proposals. In the event OST–P determines that services will be procured, a formal Request for Quote/Proposal will be issued. OST–P cannot and will not reimburse any organization for its time, effort, or costs expended in responding to this RFI.

The purpose of this RFI is to collect input on a proposed initiative to establish and curate a *library* of existing technical specifications, voluntary consensus or consortia standards, and best practices and a *roadmap* of such resources that may be needed to enable accessibility of automated vehicles for persons with physical, sensory, and cognitive disabilities. This initiative, tentatively entitled the *Inclusive Design Reference Hub,* will involve consultation with a range of stakeholders. This RFI will serve to refine DOT's vision, next steps, and long-term ownership and maintenance plan for this initiative. Respondents are encouraged to visit *https://www.transportation.gov/accessibility* for more information on DOT's accessibility initiatives.

Background

As transportation evolves, DOT is committed to a more accessible future and exploring accessibility opportunities that may materialize as vehicles and mobility services evolve. DOT encourages research into technologies that have the potential to remove barriers to accessibility in the transportation system and will seek to complement research done by leading academic institutions, the private sector and other entities to fill gaps that industry is not already covering. To this end, DOT recently announced its intent to establish a library of resources for accessibility in automation, and to work with outside experts to study voluntary best practices for ensuring accessibility in automated vehicles.

Needs Statement

DOT has made early investments intended to begin unlocking this potential through its Accessible Transportation Technologies Research Initiative (ATTRI), the Inclusive Design Challenge, the Complete Trip—ITS4US Deployment Program, and numerous research projects.

Industry stakeholders and others have reported difficulty in finding existing technical specifications and best practices for designing accessible vehicle features, or in prioritizing development of new resources where there are knowledge gaps. In addition, the expertise for developing such resources is fragmented across traditional organizational and sectoral bounds, making it difficult to begin new technical resource development. Early and widespread action by a coalition of industry, disability advocacy, academia, and government partners can help ensure shared understanding of the needs of individuals with a range of disabilities and corresponding technical specifications and best practices. An open and inclusive partnership to develop voluntary, consensus-based technical specifications, best practices, and standards can provide a foundation for consistently and comprehensively meeting the needs of people with disabilities and inform the design of future automated vehicles (AVs).

A robust research pipeline can accelerate the accumulation of knowledge and encourage private sector experimentation. Tracking and sharing less mature, early stage research through technical specifications and best practices—in addition to developing and maintaining published technical standards—can help clarify where technical consensus is emerging and where investment and attention is most needed to fill long-term gaps.

Numerous voluntary consensus standards, technical specifications, recommended practices, and other technical resources currently exist that relate either directly to vehicle accessibility or could indirectly inform future automated vehicle accessibility. For example, the former category includes numerous voluntary consensus standards focused on the safety, functionality, and interoperability of wheelchair-accessible vehicles, while the latter includes voluntary consensus and consortia standards from the consumer electronics sector that provide insights into how to design interfaces that are useable by people with sensory or cognitive disabilities. A list of such resources is included at the end of this RFI for reference. While these existing resources form a starting point for considering the accessibility of passenger vehicles, DOT also recognizes that gaps likely exist between current technical standards and specifications and best practices and a set of resources that would comprehensively address the physical, sensory, and cognitive accessibility needs of future vehicle users, including users of automated vehicles.

Proposed Approach

This initiative will serve as a ''one-stop shop'' for engineers, designers, and individuals with disabilities to find and to collaborate on technical resources for an inclusive future. The *Hub* could either be a stand-alone resource or built within an existing platform. All content will need to be compliant with requirements stated in Section 508 of the Rehabilitation Act of 1973 and accompanying standards developed by the U.S. Access Board.

An initial investment to launch this initiative will seek to establish a process to maintain this resource in regular consultation with stakeholders, including relevant standards development organizations, primarily through existing forums. DOT will assess potential approaches in terms of how likely they are to result in a self-sustaining long-term effort that includes active participation from all stakeholders with relevant expertise and perspective.

Request for Information

In launching the proposed initiative outlined above, DOT is seeking input from its stakeholders and potential partners on defining its scope, the most critical first steps, the necessary qualifications and expertise to support it, and how to ensure long-term ownership and maintenance of the resulting resources. To clarify input provided in response to this notice, DOT may seek additional follow-up information. Through this notice specifically, DOT seeks input on the following questions:

Background and Current Condition Information

1. What existing initiatives, industry activities, best practices, or other resources/actions could help to inform this initiative?

2. What existing technical standards and specifications and best practices are relevant or potentially relevant to the accessibility of vehicles for people with physical, sensory, and cognitive disabilities? What dependencies exist between existing resources and needed resources?

3. What information could help stakeholders understand the user population, potential market, and business case for inclusive design solutions? What information does not exist but could potentially help fill gaps in knowledge regarding the user population, potential market, and business case for inclusive design solutions?

4. What existing and needed resources are applicable to all vehicles? What existing and needed resources are specific to automated vehicles and when will they be needed?

5. How can this initiative support improved accessibility of conventional vehicles in the short-term while also enabling the accessibility of automated vehicles in the long-term?

Initiative Scope, Focus, and Proposed Initial Steps

1. Are there any technical references in this area that do not currently exist and should be prioritized for development?

(a) Please describe the need and ways to expedite the development of needed references with relevant stakeholders, including consumers.

(b) Please also discuss the extent to which the topic(s) identified are at an appropriate stage for voluntary standards development in terms of industry consensus and technological maturity.

2. Are there any existing resources or programs on which DOT could build or model this effort? Should the Inclusive Design Reference Hub be developed as a stand-alone resource, or integrated into an existing platform?

3. Are there any aspects of DOT's vision for this effort that could be clarified or improved ahead of a potential procurement?

4. Should the DOT directly host the resource, or should it be hosted by a third-party organization or coalition of organizations serving as the convener(s) and technical curator(s) on behalf of DOT?

5. How can this initiative be maintained in the long term with more limited federal involvement? What conditions need to be met in order for partner organizations to continue support for this initiative following an initial phase?

6. How could DOT assess the success of this activity over a two-year period? How can processes to support long-term sustainability be established in this timeframe?

Performing Organization Qualifications—General Input

1. What entities, organizations, groups, or Government agencies are most qualified and appropriate to perform this work?

2. What perspectives need to be represented in the execution of this initiative? Which groups should represent these perspectives?

3. What partnerships are critical?

4. What organizations currently play a role with respect to the development of standards around automated vehicles, transportation accessibility, and the intersection of the two? For responding organizations that currently have a role, please discuss your organizational and technical capabilities and experience in this area. Please also discuss how you might augment your qualifications with those of potential partner organizations.

BILLING CODE 4910–9X–P

DEPARTMENT OF THE TREASURY

Internal Revenue Service

Proposed Collection; Comment Request for Electronic Deposit of Tax Refund of $1 Million or More

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice and request for comments.

SUMMARY: The Internal Revenue Service, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on continuing information collections, as required by the Paperwork Reduction Act of 1995. The IRS is soliciting comments concerning electronic deposit of tax refund of $1 million or more.

DATES: Written comments should be received on or before March 22, 2021 to be assured of consideration.

ADDRESSES: Direct all written comments to Kinna Brewington, Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW, Washington, DC 20224.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the form should be directed to Kerry Dennis, at (202) 317–5751 or Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW,

Washington, DC 20224, or through the internet, at *Kerry.Dennis@irs.gov.*

SUPPLEMENTARY INFORMATION:

Title: Electronic Deposit of Tax Refund of $1 Million or More.

OMB Number: 1545–1763.

Form Number: 8302.

Abstract: This form is used to request an electronic deposit of a tax refund of $1 million or more directly into an account at any U.S. bank or other financial institution that accepts electronic deposits.

Current Actions: There is no change to the form, or the paperwork burden previously approved by OMB.

Type of Review: Extension of a currently approved collection.

Affected Public: Business or other for-profit organizations, individuals or households.

Estimated Number of Respondents: 584.

Estimated Time per Response: 2.96 hours.

Estimated Total Annual Burden Hours: 1,729.

The following paragraph applies to all the collections of information covered by this notice.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid OMB control number. Books or records relating to a collection of information must be retained if their contents may become material in the administration of any internal revenue law. Generally, tax returns and tax return information are confidential, as required by 26 U.S.C. 6103.

Request for Comments: Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record. Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Approved: January 12, 2021.

Chakinna B. Clemons,

Supervisory Tax Analyst.

BILLING CODE 4830–01–P

DEPARTMENT OF THE TREASURY

Internal Revenue Service

Proposed Collection; Comment Request for Certain Returned Magazines, Paperbacks, or Records

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice and request for comments.

SUMMARY: The Internal Revenue Service, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on continuing information collections, as required by the Paperwork Reduction Act of 1995. The IRS is soliciting comments concerning certain returned magazines, paperbacks, or records.

DATES: Written comments should be received on or before March 22, 2021 to be assured of consideration.

ADDRESSES: Direct all written comments to Kinna Brewington, Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW, Washington, DC 20224.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the form should be directed to Kerry Dennis, at (202) 317–5751 or Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW, Washington, DC 20224, or through the internet, at *Kerry.Dennis@irs.gov.*

SUPPLEMENTARY INFORMATION:

Title: Certain Returned Magazines, Paperbacks, or Records.

OMB Number: 1545–0879.

Regulation Project Number: TD 8426 (IA–195–78).

Abstract: The regulations provide rules relating to an exclusion from gross income for certain returned merchandise. The regulations provide that in addition to physical return of the merchandise, a written statement listing certain information may constitute evidence of the return. Taxpayers who receive physical evidence of the return may, in lieu of retaining physical evidence, retain documentary evidence of the return. Taxpayers in the trade or business of selling magazines, paperbacks, or records, who elect a certain method of accounting, are affected.

Current Actions: There is no change in the paperwork burden previously approved by OMB. The regulation is being submitted for renewal purposes only.

Type of Review: Extension of a currently approved collection.

Affected Public: Business or other for-profit organizations.

Estimated Number of Respondents: 19,500.

Estimated Time per Response: 25 minutes.

Estimated Total Annual Burden Hours: 8,125.

The following paragraph applies to all the collections of information covered by this notice.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid OMB control number. Books or records relating to a collection of information must be retained if their contents may become material in the administration of any internal revenue law. Generally, tax returns and tax return information are confidential, as required by 26 U.S.C. 6103.

Request for Comments: Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record. Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Approved: January 12, 2021.

BILLING CODE 4830–01–P

DEPARTMENT OF THE TREASURY

Internal Revenue Service

Proposed Collection; Comment Request for General Revision of Regulations Relating To Withholding of Tax on Certain U.S. Source Income Paid to Foreign Persons

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice and request for comments.

SUMMARY: The Internal Revenue Service, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on continuing information collections, as required by the Paperwork Reduction Act of 1995. The IRS is soliciting comments concerning general revision of regulations relating to withholding of tax on certain U.S. source income paid to foreign persons.

DATES: Written comments should be received on or before March 22, 2021 to be assured of consideration.

ADDRESSES: Direct all written comments to Kinna Brewington, Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW, Washington, DC 20224.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the form should be directed to Kerry Dennis, at (202) 317–5751 or Internal Revenue Service, Room 6526, 1111 Constitution Avenue NW, Washington, DC 20224, or through the internet, at *Kerry.Dennis@irs.gov.*

SUPPLEMENTARY INFORMATION:

Title: General Revision of Regulations Relating to Withholding of Tax on Certain U.S. Source Income Paid to Foreign Persons.

OMB Number: 1545–1484.

Regulation Project Number: REG–242282–97 (TD 8881-final).

Abstract: This regulation prescribes collections of information for foreign persons that received payments subject to withholding under sections 1441, 1442, 1443, or 6114 of the Internal Revenue Code. This information is used to claim foreign person status and, in appropriate cases, to claim residence in a country with which the United States has an income tax treaty in effect, so that withholding at a reduced rate of tax may be obtained at source. The regulation also prescribes collections of information for withholding agents. This information is used by withholding agents to report to the IRS income paid to a foreign person that is subject to withholding under Code sections 1441, 1442, and 1443. The regulation also requires that a foreign taxpayer claiming a reduced amount of withholding tax under the provisions of an income tax treaty must disclose its reliance upon a treaty provision by filing Form 8833 with its U.S. income tax return. The burden for Form 8833 is reported under 1545–1354.

Current Actions: There is no change in the paperwork burden previously approved by OMB. The regulation is being submitted for renewal purposes only.

Type of Review: Extension of a currently approved collection.

Affected Public: Business or other for-profit organizations, individuals or households, not-for-profit institutions, farms, and Federal, state, local or tribal governments.

Estimated Number of Respondents: 1.

Estimated Time per Response: 1 hour.

Estimated Total Annual Burden Hours: 1 hour.

The following paragraph applies to all the collections of information covered by this notice.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid OMB control number. Books or records relating to a collection of information must be retained if their contents may become material in the administration of any internal revenue law. Generally, tax returns and tax return information are confidential, as required by 26 U.S.C. 6103.

Request for Comments: Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record. Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Approved: January 12, 2021.

BILLING CODE 4830–01–P

DEPARTMENT OF VETERANS AFFAIRS

[OMB Control No. 2900–0856]

Agency Information Collection Activity Under OMB Review: Authorization To Disclose Information to a Third Party

AGENCY: Veterans Benefits Administration, Department of Veterans Affairs.

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act (PRA) of 1995, this notice announces that the Veterans Benefits Administration, Department of Veterans Affairs, will submit the collection of information abstracted below to the Office of Management and Budget (OMB) for review and comment. The PRA submission describes the nature of the information collection and its expected cost and burden and it includes the actual data collection instrument.

DATES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day review—Open for Public Comments'' or by using the search function. Refer to ''OMB Control No. 2900–0856''.

FOR FURTHER INFORMATION CONTACT: Danny S. Green, Enterprise Records Service (005R1B), Department of Veterans Affairs, 810 Vermont Avenue NW, Washington, DC 20420, (202) 421–1354 or email *danny.green2@va.gov.* Please refer to ''OMB Control No. 2900–0856'' in any correspondence.

SUPPLEMENTARY INFORMATION:

Authority: 44 U.S.C. 3501–21.

Title: Authorization to Disclose Information to a Third Party, VA Form 29–0975.

OMB Control Number: 2900–0856.

Type of Review: Extension of a currently approved collection.

Abstract: The Department of Veterans Affairs (VA), through its Veterans Benefits Administration (VBA), administers an integrated program of benefits and services, established by law, for veterans, service personnel, and their dependents and/or beneficiaries. Title 38 U.S.C. 5101(a) provides that a

specific claim in the form provided by the Secretary must be filed in order for benefits to be paid to any individual under the laws administered by the Secretary. This form will be used by Department of Veterans Affairs Insurance Center (VAIC) to enable a third party to act on behalf of the insured Veteran/beneficiary. Many of our customers are of advanced age or suffer from limiting disabilities and need assistance from a third party to conduct their affairs. The information collected provides an optional service and is not required to receive insurance benefits.

An agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. The **Federal Register** Notice with a 60-day comment period soliciting comments on this collection of information was published at 85 FR 213 on November 3, 2020, pages 69696 and 69697.

Affected Public: Individuals or Households.

Estimated Annual Burden: 100 hours

Estimated Average Burden per Respondent: 5 minutes.

Frequency of Response: On occasion.

Estimated Number of Respondents: 1,200.

By direction of the Secretary.

Danny S. Green,

VA PRA Clearance Officer, Office of Quality, Performance and Risk, Department of Veterans Affairs.

[FR Doc. 2021–00941 Filed 1–15–21; 8:45 am]

BILLING CODE 8320–01–P

DEPARTMENT OF VETERANS AFFAIRS

[OMB Control No. 2900–0788]

Agency Information Collection Activity: Description of Materials

AGENCY: Veterans Benefits Administration, Department of Veterans Affairs.

ACTION: Notice.

SUMMARY: Veterans Benefits Administration, Department of Veterans Affairs (VA), is announcing an opportunity for public comment on the proposed collection of certain information by the agency. Under the Paperwork Reduction Act (PRA) of 1995, Federal agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of a currently approved collection, and allow 60 days for public comment in response to the notice.

DATES: Written comments and recommendations on the proposed collection of information should be received on or before March 22, 2021.

ADDRESSES: Submit written comments on the collection of information through Federal Docket Management System (FDMS) at *www.Regulations.gov* or to Nancy J. Kessinger, Veterans Benefits Administration (20M33), Department of Veterans Affairs, 810 Vermont Avenue NW, Washington, DC 20420 or email to *nancy.kessinger@va.gov.* Please refer to ''OMB Control No. 2900–0788'' in any correspondence. During the comment period, comments may be viewed online through FDMS.

FOR FURTHER INFORMATION CONTACT: Danny S. Green, (202) 421–1354 or email *Danny.Green2@va.gov.* Please refer to ''OMB Control No. 2900–0788'' in any correspondence.

SUPPLEMENTARY INFORMATION: Under the PRA of 1995, Federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. This request for comment is being made pursuant to Section 3506(c)(2)(A) of the PRA.

With respect to the following collection of information, VBA invites comments on: (1) Whether the proposed collection of information is necessary for the proper performance of VBA's functions, including whether the information will have practical utility; (2) the accuracy of VBA's estimate of the burden of the proposed collection of information; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or the use of other forms of information technology.

Authority: Public Law 104–13; 44 U.S.C. 3501–3521.

Title: Description of Materials, VA Form 26–1852.

OMB Control Number: 2900–0788.

Type of Review: Extension of a currently approved collection.

Abstract: VA Form 26–1852 is completed by builders in Specially Adapted Housing (SAH) projects involving construction as authorized under Title 38, U.S.C., section 2101 (a), section 2101 (b), and the Temporary Residence Adaptations (TRA) grant under Title 38, U.S.C., section 2102A. This form is also completed by builders who propose to construct homes to be purchased by veterans using their VA home loan benefit as granted in Title 38 U.S.C., section 3710(a)(1). SAH field staff review the data furnished on the form for completeness and it is essential to determine the acceptability of the construction materials to be used. In cases of new home construction, a technically qualified individual, not VA staff, is required to review the list of materials and certify they meet or exceed general residential construction material requirements, as specified by the International Residential Code and residential building codes adopted by local building authorities, and are in substantial conformity with VA Minimum Property requirements.

Affected Public: Private Sector.

Estimated Annual Burden: 9,518 hours.

Estimated Average Burden per Respondent: 30 minutes.

Frequency of Response: One-time.

Estimated Number of Respondents: 16,950 per year and for SAH cases it is 2,086 per year.

By direction of the Secretary:

Danny S. Green,

VA PRA Clearance Officer, Office of Quality, Performance and Risk, Department of Veterans Affairs.

BILLING CODE 8320–01–P

FEDERAL REGISTER

Vol. 86 Tuesday,
No. 11 January 19, 2021

Part II

Department of Commerce

National Oceanic and Atmospheric Administration

50 CFR Part 217

Taking and Importing Marine Mammals; Taking Marine Mammals Incidental to Geophysical Surveys Related to Oil and Gas Activities in the Gulf of Mexico; Final Rule

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 217

[Docket No. 201204–0326]

RIN 0648–BB38

Taking and Importing Marine Mammals; Taking Marine Mammals Incidental to Geophysical Surveys Related to Oil and Gas Activities in the Gulf of Mexico

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Final rule.

SUMMARY: NMFS, upon request from the Bureau of Ocean Energy Management (BOEM), hereby issues regulations to govern the unintentional taking of marine mammals incidental to geophysical survey activities conducted by oil and gas industry operators, and those persons authorized to conduct activities on their behalf (collectively ''industry operators''), in Federal waters of the U.S. Gulf of Mexico (GOM) over the course of five years. These regulations, which allow for the issuance of Letters of Authorization (LOA) to industry operators for the incidental take of marine mammals during the described activities and specified timeframe, prescribe the permissible methods of taking and other means of effecting the least practicable adverse impact on marine mammal species or stocks and their habitat, as well as requirements pertaining to the monitoring and reporting of such taking.

DATES: Effective from April 19, 2021 through April 19, 2026.

ADDRESSES: Electronic copies of the application and supporting documents, as well as a list of the references cited in this document, may be obtained online at: *www.fisheries.noaa.gov/action/incidental-take-authorization-oil-and-gas-industry-geophysical-survey-activity-gulf-mexico.* In case of problems accessing these documents, please call the contact listed below.

FOR FURTHER INFORMATION CONTACT: Ben Laws, Office of Protected Resources, NMFS, (301) 427–8401.

SUPPLEMENTARY INFORMATION:

Purpose and Need for Regulatory Action

These incidental take regulations (ITR) establish a framework under the authority of the MMPA (16 U.S.C. 1361 *et seq.*) to allow for the authorization of take of marine mammals incidental to the conduct of geophysical survey activities in the GOM. We received a petition from BOEM requesting the regulations. Subsequent LOAs may be requested by industry operators. Take is expected to occur by Level A and/or Level B harassment incidental to use of active acoustic sound sources. Please see the Background section below for definitions of harassment.

Legal Authority for the Action

Section 101(a)(5)(A) of the MMPA (16 U.S.C. 1371(a)(5)(A)) directs the Secretary of Commerce to allow, upon request, the incidental, but not intentional, taking of small numbers of marine mammals by U.S. citizens who engage in a specified activity (other than commercial fishing) within a specified geographical region for up to five years if, after notice and public comment, the agency makes certain findings and issues regulations that set forth permissible methods of taking pursuant to that activity and other means of effecting the ''least practicable adverse impact'' on the affected species or stocks and their habitat (see the discussion below in the Mitigation section), as well as monitoring and reporting requirements. Section 101(a)(5)(A) of the MMPA and the implementing regulations at 50 CFR part 216, subpart I, provide the legal basis for issuing this rule containing the regulations, and for any subsequent LOAs. As directed by this legal authority, the regulations contain mitigation, monitoring, and reporting requirements.

Summary of Major Provisions Within the Regulations

Following is a summary of the major provisions of these regulations regarding geophysical survey activities. These measures include:

- Standard detection-based mitigation measures, including use of visual and acoustic observation to detect marine mammals and shut down acoustic sources in certain circumstances;
- A time-area restriction designed to avoid effects to bottlenose dolphins in times and places believed to be of particular importance;
- Vessel strike avoidance measures; and
- Monitoring and reporting requirements.

These incidental take regulations govern and allow for the subsequent issuance of letters of authorization for the take of marine mammals incidental to the specified activity described in this Notice, within the upper bounds of take that was evaluated for this rule, and prescribe measures for mitigation, monitoring, and reporting. They do not preclude a U.S. citizen from applying for an incidental take authorization for a specified activity with different parameters or required measures through a separate request and process.

Background

Section 101(a)(5)(A) of the MMPA (16 U.S.C. 1361 *et seq.*) directs the Secretary of Commerce (as delegated to NMFS) to allow, upon request, the incidental, but not intentional, taking of small numbers of marine mammals by U.S. citizens who engage in a specified activity (other than commercial fishing) within a specified geographical region if certain findings are made, regulations are issued, and notice is provided to the public.

An authorization for incidental taking shall be granted if NMFS finds that the taking will have a negligible impact on the species or stock(s) and will not have an unmitigable adverse impact on the availability of the species or stock(s) for subsistence uses (where relevant), and if the permissible methods of taking and requirements pertaining to the mitigation, monitoring, and reporting of such takings are set forth.

NMFS has defined ''negligible impact'' in 50 CFR 216.103 as an impact resulting from the specified activity that cannot be reasonably expected to, and is not reasonably likely to, adversely affect the species or stock through effects on annual rates of recruitment or survival.

The MMPA states that the term ''take'' means to harass, hunt, capture, or kill, or attempt to harass, hunt, capture, or kill, any marine mammal.

Except with respect to certain activities not pertinent here, the MMPA defines ''harassment'' as: Any act of pursuit, torment, or annoyance which (i) has the potential to injure a marine mammal or marine mammal stock in the wild (Level A harassment); or (ii) has the potential to disturb a marine mammal or marine mammal stock in the wild by causing disruption of behavioral patterns, including, but not limited to, migration, breathing, nursing, breeding, feeding, or sheltering (Level B harassment).

Summary of Request

On October 17, 2016, BOEM submitted a revised petition [1] to NMFS for rulemaking under section 101(a)(5)(A) of the MMPA to authorize take of marine mammals incidental to conducting geophysical surveys during

[1] In the notice of proposed rulemaking (83 FR 29212; June 22, 2018), NMFS provided a brief history of prior petitions received from BOEM's predecessor agencies.

oil and gas industry exploration and development activities in the GOM. This revised petition was deemed adequate and complete based on NMFS' implementing regulations at 50 CFR 216.104.

On December 8, 2016 (81 FR 88664), we published a notice of receipt of the petition in the **Federal Register**, requesting comments and information related to the request. This 30-day comment period was extended to January 23, 2017 (81 FR 92788), for a total review period of 45 days. The comments and information received during this public review period informed development of the proposed ITR, and all comments received are available online at *www.fisheries.noaa.gov/action/incidental-take-authorization-oil-and-gas-industry-geophysical-survey-activity-gulf-mexico*.

In August 2017, BOEM produced a final Programmatic Environmental Impact Statement (PEIS) to evaluate potential significant environmental effects of geological and geophysical (G&G) activities on the Outer Continental Shelf (OCS) of the GOM, pursuant to the National Environmental Policy Act (NEPA). The PEIS is available online at: *www.boem.gov/Gulf-of-Mexico-Geological-and-Geophysical-Activities-Programmatic-EIS/*. NOAA participated as a cooperating agency in the development of the PEIS.

NMFS published a notice of proposed rulemaking in the **Federal Register** for a 60-day public review on June 22, 2018 (83 FR 29212). The comments and information received during this public review period informed development of the final ITR, and NMFS has responded to all comments received (see Comments and Responses).

On February 24, 2020, BOEM submitted a notice to NMFS of its ''updated proposed action and action area for the ongoing [ITR] process[.]'' This update consisted of removal of the area currently under a Congressional leasing moratorium under the Gulf of Mexico Energy Security Act (GOMESA) (Pub. L. 109–432, § 104) from consideration in the ITR. BOEM stated in its notice to NMFS that G&G activities are not likely to be proposed within the area subject to the leasing moratorium during the 5-year period of effectiveness for the ITR and, therefore, that the ''number, type, and effects of any such proposed G&G activities are simply too speculative and uncertain for BOEM to predict or meaningfully analyze.'' These Congressional leasing restrictions are in place until June 30, 2022. Based on this updated scope, BOEM on March 26, 2020, submitted revised projections of expected activity levels and corresponding changes to modeled acoustic exposure numbers. BOEM's notice and updated information are available online at: *www.fisheries.noaa.gov/action/incidental-take-authorization-oil-and-gas-industry-geophysical-survey-activity-gulf-mexico.* These changes are addressed as appropriate throughout this final ITR. On September 8, 2020, the President effectively extended this moratorium through withdrawal under the Outer Continental Shelf Lands Act (OCSLA) of the same area covered by the GOMESA moratorium from disposition by leasing for 10 years, beginning on July 1, 2022, and ending on June 30, 2032.

Geophysical surveys are conducted in support of hydrocarbon exploration and development in the GOM, typically by companies that provide such services to the oil and gas industry. Broadly, these surveys include (1) deep penetration surveys using large airgun arrays as the acoustic source; (2) shallow penetration surveys using a small airgun array, single airgun, or similar systems as the acoustic source; and (3) high-resolution surveys, which may use a variety of acoustic sources. Generally speaking, these surveys may occur within Federal territorial waters and waters of the U.S. Exclusive Economic Zone (EEZ) (*i.e.,* to 200 nautical miles (nmi)) within the GOM, and corresponding with BOEM's GOM OCS planning areas (*i.e.,* Western Planning Area (WPA), Central Planning Area (CPA), Eastern Planning Area (EPA)). The use of these acoustic sources is expected to produce underwater sound at levels that have the potential to result in harassment of marine mammals. Cetacean species with the potential to be present in the GOM are described below (see Table 4).

These regulations establish a framework under the authority of the MMPA (16 U.S.C. 1361 *et seq.*) and NMFS' implementing regulations (50 CFR 216.101 *et seq.*) to allow for the authorization, through LOAs, of take of marine mammals incidental to the conduct of geophysical surveys for oil and gas activities in the GOM. The regulations are effective for five years.

Description of the Specified Activity

Overview

The specified activity consists of geophysical surveys conducted by industry operators for a variety of reasons related to hydrocarbon exploration, development, and production. These operators are typically companies that provide geophysical services, such as data acquisition and processing, to the oil and gas industry, including exploration and production companies. The petition describes a five-year period of geophysical survey activity and provides estimates of the amount of effort by survey type and location. BOEM's PEIS (BOEM, 2017) describes a range of potential survey effort. The levels of effort in the petition (which form the basis for the modeling effort described later in the Estimated Take section) were the high-end estimates. Following BOEM's update of the petition's geographic scope, these estimates were revised accordingly. Actual total amounts of effort (including by survey type and location) would not be known in advance of receiving LOA requests from industry operators, but take in excess of what is analyzed for this rulemaking would not be authorized. As noted above, BOEM has updated the scope of the specified activity/specified geographical region by removing the area currently under leasing moratorium through GOMESA from consideration. The removed area largely covers the EPA, including areas in which NMFS had proposed time-area restrictions as mitigation, but also includes a portion of the CPA. Applicants seeking authorization for take of marine mammals incidental to survey activities within the GOMESA area during the 5-year period of effectiveness for this rule will need to pursue a separate MMPA incidental take authorization. See Figures 1 and 2.

Geophysical surveys are conducted to obtain information on marine seabed and subsurface geology for a variety of reasons, including to: (1) Obtain data for hydrocarbon and mineral exploration and production; (2) aid in siting of oil and gas structures, facilities, and pipelines; (3) identify possible seafloor or shallow depth geologic hazards; and (4) locate potential archaeological resources and benthic habitats that should be avoided. In addition, geophysical survey data inform Federal government decisions. For example, BOEM uses such data for resource estimation and bid evaluation to ensure that the government receives a fair market value for OCS leases, as well as to help to evaluate worst-case discharge for potential oil-spill analysis and to evaluate sites for potential hazards prior to drilling.

Deep penetration seismic surveys using airgun arrays as an acoustic source (sound sources are described in the ''Detailed Description of Activities'' section) are a primary method of obtaining geophysical data used to characterize subsurface structure. These surveys are designed to illuminate

deeper subsurface structures and formations that may be of economic interest as a reservoir for oil and gas exploitation. A deep penetration survey uses an acoustic source suited to provide data on geological formations that may be thousands of meters (m) beneath the seafloor, as compared with a shallow penetration or high resolution geophysical (HRG) survey that may be intended to evaluate shallow subsurface formations or the seafloor itself (*e.g.,* for hazards).

Deep penetration surveys may be two-dimensional (2D) or three-dimensional (3D) (see Figure 1–2 of the petition), and there are a variety of survey methodologies designed to provide the specific data of interest. 2D surveys are designed to acquire data over large areas (thousands of square miles) in order to screen for potential hydrocarbon prospectivity, and provide a cross-sectional image of the structure. In contrast, 3D surveys may use similar acoustic sources but are designed to cover smaller areas with greater resolution (*e.g.,* with closer survey line spacing), providing a volumetric image of underlying geological structures. Repeated 3D surveys are referred to as four-dimensional (4D), or time-lapse, surveys that assess the depletion of a reservoir.

Shallow penetration and high-resolution surveys are designed to highlight seabed and near-surface potential obstructions, archaeology, and geohazards that may have safety implications during rig installation or well and development facility siting. Shallow penetration surveys may use a small airgun array, single airgun, or similar sources, while high-resolution surveys (which are limited to imaging the seafloor itself) may use a variety of sources, such as sub-bottom profilers, single or multibeam echosounders, or side-scan sonars.

Dates and Duration

The specified activities may occur at any time during the five-year period of validity of these regulations. Actual dates and duration of individual surveys are not known. Survey activities are generally 24-hour operations. However, BOEM estimates that a typical seismic survey involves approximately 20 to 30 percent of non-operational downtime due to a variety of factors, including technical or mechanical problems, standby for weather or other interferences, and implementation of mitigation measures.

Specified Geographical Region

The OCS planning areas are depicted in Figure 1, and the overlap of the GOMESA moratorium area with the planning areas (as well as with the modeling zones, see discussion of modeling zones below) is depicted in Figure 2, showing the updated specified geographical region.

Only the northern portion of the GOM contains Federal waters. BOEM manages development of U.S. Federal OCS energy and mineral resources within OCS regions, which are divided into planning areas. Within planning areas are lease blocks, on which specific production activities may occur. Geophysical survey activities may occur on scales ranging from entire planning areas to multiple or specific lease blocks, or could occur at specific potential or existing facilities within a lease block. NMFS provided a detailed discussion of the specified geographical region in the notice of proposed rulemaking (83 FR 29212; June 22, 2018).

The prospective survey activities may occur in the U.S. waters of the GOM, within BOEM's Western, Central, and Eastern GOM OCS planning areas (approximately within the U.S. EEZ; Figure 1), but excluding the GOMESA moratorium area (Figure 2). Although survey activity in the GOMESA moratorium area is no longer being considered, the region has not changed compared with what was described, nor has substantive new information regarding the region become available. Therefore, we do not reprint that discussion here and refer the reader to that notice of proposed rulemaking for additional detail.

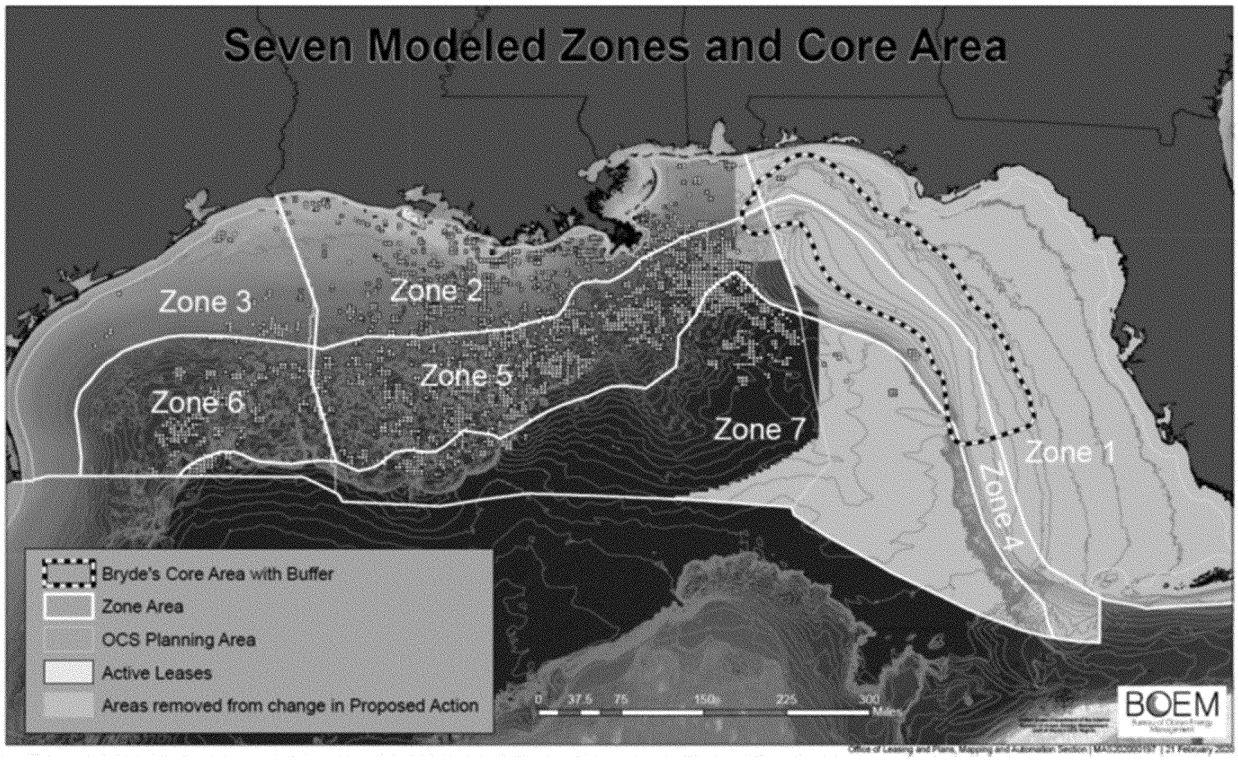

Figure 2. Specified Geographical Region.

BILLING CODE 3510–22–C

Detailed Description of Activities

An airgun is a device used to emit acoustic energy pulses into the seafloor, and generally consists of a steel cylinder that is charged with high-pressure air. There are different types of airguns; differences between types of airguns are generally in the mechanical parts that release the pressurized air, and the bubble and acoustic energy released are effectively the same. Airguns are typically operated at a firing pressure of 2,000 pounds per square inch (psi). Release of the compressed air into the water column generates a signal that reflects (or refracts) off the seafloor and/or subsurface layers having acoustic impedance contrast. Individual airguns are available in different volumetric sizes and, for deep penetration seismic surveys, are towed in arrays (*i.e.,* a certain number of airguns of varying sizes in a certain arrangement) designed according to a given company's method of data acquisition, seismic target, and data processing capabilities.

Airgun arrays are typically configured in subarrays of 6–12 airguns each. Towed hydrophone streamers (described below) may follow the array by 100–200 m and can be 5–12 kilometer (km) long. The airgun array and streamers are typically towed at a speed of approximately 4.5 to 5 knots (kn). BOEM notes that arrays used for deep penetration surveys typically have between 20–80 individual elements, with a total volume of 1,500–8,460 in^3. The output of an airgun array is directly proportional to airgun firing pressure or to the number of airguns, and is expressed as the cube root of the total volume of the array.

Airguns are considered to be low-frequency acoustic sources, producing sound with energy in a frequency range from less than 10 Hz to 2 kHz (though there may be energy at higher frequencies), with most energy radiated at frequencies below 500 Hz. Frequencies of interest to industry are below approximately 100 Hz. The amplitude of the acoustic wave emitted from the source is equal in all directions (*i.e.,* omnidirectional) for a single airgun, but airgun arrays do possess some directionality due to phase delays between guns in different directions. Airgun arrays are typically tuned to maximize functionality for data acquisition purposes, meaning that sound transmitted in horizontal directions and at higher frequencies is minimized to the extent possible.

When fired, a brief (~0.1 second) pulse of sound is emitted by all airguns in an array nearly simultaneously, in order to increase the amplitude of the overall source pressure signal. The combined signal amplitude and directivity is dependent on the number and sizes of individual airguns and their geometric positions within the array. The airguns are silent during the intervening periods, with the array typically fired on a fixed distance (or shot point) interval. The intervals are optimized for water depth and the distance of important geological features below seafloor, but a typical interval in relatively deep water might be approximately every 10–20 seconds (or 25–50 m, depending on vessel speed). The return signal is recorded by a listening device, and later analyzed with computer interpretation and mapping systems used to depict the subsurface. There must be enough time between shots for the sound signals to propagate down to and reflect from the feature of interest, and then to propagate upward to be received on hydrophones or geophones. Reverberation of sound from previous shots must also be given time to dissipate. The receiving hydrophones can be towed behind or in front of the airgun array (may be towed from the source vessel or from a separate receiver vessel), or geophone receivers can be deployed on the seabed. Receivers may be displaced several kilometers horizontally away from the source, so horizontal propagation time is also

considered in setting the interval between shots.

Sound levels for airgun arrays are typically modeled or measured at some distance from the source and a nominal source level then back-calculated. Because these arrays constitute a distributed acoustic source rather than a single point source (*i.e.,* the ''source'' is actually comprised of multiple sources with some predetermined spatial arrangement), the highest sound levels measurable at any location in the water will be less than the nominal source level. A common analogy is to an array of light bulbs; at sufficient distance—in the far field—the array will appear to be a single point source of light but individual sources, each with less intensity than that of the whole, may be discerned at closer distances (Caldwell and Dragoset (2000) define the far field as greater than 250 m). Therefore, back-calculated source levels are not typically considered to be accurate indicators of the true maximum amplitude of the output in the far field, which is what is typically of concern in assessing potential impacts to marine mammals. In addition, the effective source level for sound propagating in near-horizontal directions (*i.e.,* directions likely to impact most marine mammals in the vicinity of an array) is likely to be substantially lower (*e.g.,* 15–24 decibels (dB); Caldwell and Dragoset, 2000) than the nominal source level applicable to downward propagation because of the directional nature of the sound from the airgun array. The horizontal propagation of sound is reduced by noise cancellation effects created when sound from neighboring airguns on the same horizontal plane partially cancel each other out.

Survey protocols generally involve a predetermined set of survey, or track, lines. The seismic acquisition vessel(s) (source vessel) will travel down a linear track for some distance until a line of data is acquired, then turn and acquire data on a different track. In some cases, data is acquired as the source vessel(s) turns continuously rather than moving on a linear track (*i.e.,* coil surveys). The spacing between track lines and the length of track lines can vary greatly, depending on the objectives of a survey. In addition to the line over which data acquisition is desired, full-power operation may include run-in and run-out. Run-in is approximately 1 km of full-power source operation before starting a new line to ensure equipment is functioning properly, and run-out is additional full-power operation beyond the conclusion of a trackline (*e.g.,* half the distance of the acquisition streamer behind the source vessel, when used) to ensure that all data along the trackline are collected by the streamer. Line turns can require two to six hours when towed hydrophones are used, due to the long trailing streamers, but may be much faster when streamers are not used. Spacing and length of tracks varies by survey. Survey operations often involve the source vessel(s), supported by a chase vessel. Chase vessels typically support the source vessel(s) by protecting the long hydrophone streamer (when used) from damage (*e.g.,* from other vessels) and otherwise lending logistical support (*e.g.,* returning to port for fuel, supplies, or any necessary personnel transfers). Chase vessels do not deploy acoustic sources for data acquisition purposes; the only potential effects of the chase vessels are those associated with normal vessel operations.

The general activities described here could occur pre- or post-leasing and/or on- or off-lease. Pre-lease surveys are more likely to involve larger-scale activity designed to explore or evaluate geologic formations. Post-lease activities may also include deep penetration surveys, but would be expected to be smaller in spatial and temporal scale as they are associated with specific leased blocks. Shallow penetration and HRG surveys are more likely to be associated with specific leased blocks and/or facilities, with HRG surveys used along pipeline routes and to search for archaeological resources and/or benthic communities. Specific types of surveys, including 2D and 3D surveys and various survey geometries typically associated with 3D surveys (*e.g.,* narrow- and wide-azimuth (NAZ and WAZ) and coil surveys), were described in summary in the notice of proposed rulemaking (83 FR 29212; June 22, 2018). We also described surveys involving the placement of seismic sensors in a drilled well or borehole, including various types of vertical seismic profiling and other types of borehole seismic surveys. For full detail, please refer to that notice or sections 1.2 and 1.3 of BOEM's petition.

Surveys may be designed as either multi-source (*i.e.,* multiple arrays towed by one or more source vessel(s)) or single source. Surveys may also be differentiated by the way in which they record the return signals using hydrophones and/or geophones. Hydrophones may be towed in streamers behind a vessel (either the source vessel(s) or a separate vessel) or in some cases may be placed in boreholes (called vertical seismic profiling) or spaced at various depths on vertical cables in the water column. Sensors may also be incorporated into ocean-bottom cables (OBC) or autonomous ocean-bottom nodes (OBN) and placed on the seafloor—these surveys are referred to generally as ocean-bottom seismic (OBS). Autonomous nodes can be tethered to coated lines and deployed from ships or remotely-operated vehicles, with current technology allowing use in water depths to approximately 3,000 m. OBS surveys are most useful to acquire data in shallow water and obstructed areas, as well as for acquisition of four-component survey data (*i.e.,* including pressure and 3D linear acceleration collected via geophone). For OBS surveys, one or two vessels usually are needed to lay out and pick up cables, one ship is needed to record data, one ship tows an airgun array, and two smaller utility boats support survey operations.

In summary, 3D survey design involves a vessel with one or more acoustic sources covering an area of interest with relatively tight spatial configuration (compared with 2D surveys). In order to provide richer, more useful data, particularly in areas with more difficult geology, survey designs become more complicated with additional source and/or receiver vessels operating in potentially increasingly complicated choreographies.

As compared with 2D and 3D deep penetration surveys, shallow penetration and HRG surveys are conducted to provide data informing initial site evaluation, drilling rig emplacement, and platform or pipeline design and emplacement. Identification of geohazards (*e.g.,* gas hydrates, buried channels) is necessary to avoid drilling and facilities emplacement problems, and operators are required to identify and avoid archaeological resources and certain benthic communities. These surveys may use single airguns or small airgun arrays, but generally use various types of electromechanical acoustic sources. Please see our notice of proposed rulemaking or BOEM's petition for additional detail regarding these survey types and electromechanical acoustic sources.

Summary of Representative Sound Sources

Because the specifics of acoustic sources to be used cannot be known in advance of receiving LOA requests from industry operators, it was necessary to define representative acoustic source parameters, as well as representative survey patterns. BOEM determined realistic representative proxy sound sources and survey patterns, which were used in acoustic exposure

modeling and more broadly to support the analysis, after discussions with individual geophysical companies. Acoustic exposure modeling is described in detail in ''*Acoustic Propagation and Marine Mammal Exposure Modeling of Geological and Geophysical Sources in the Gulf of Mexico*'' and ''*Addendum to Acoustic Propagation and Marine Mammal Exposure Modeling of Geological and Geophysical Sources in the Gulf of Mexico*'' (Zeddies *et al.,* 2015, 2017a), hereafter referred to collectively as ''the modeling report,'' as well as in ''*Gulf of Mexico Acoustic Exposure Model Variable Analysis*'' (Zeddies *et al.,* 2017b), which evaluated a smaller, alternative airgun array. The reports are available online at: *www.fisheries.noaa.gov/action/incidental-take-authorization-oil-and-gas-industry-geophysical-survey-activity-gulf-mexico.*

Representative sources for the modeling include a single airgun, an airgun array, and multiple electromechanical sources. Two major survey types were considered: Large-area seismic (including 2D, 3D NAZ, 3D WAZ, and coil surveys) and small-area, high-resolution geotechnical (including single airgun surveys and surveys using a CHIRP sub-bottom profiler in combination with multibeam echosounder and side-scan sonar; the single airgun was used as a reasonable proxy for surveys using a boomer). The nominal airgun sources used for analysis of the proposed action include a small single airgun (90 in^3 airgun) and a large airgun array (8,000 in^3). In addition, the supplemental Model Variable Analysis (Zeddies *et al.,* 2017b) provides analysis of an alternative 4,130 in^3 array (see Letters of Authorization section). We note that while high-resolution geophysical sources were conservatively included for consideration in this rule to allow for take authorization if necessary, some of these types of sources would not necessarily be expected to cause the incidental take of marine mammals, depending on the source type and/or the manner in which it is operated (*e.g.,* operational settings, mitigation measures), and Letters of Authorization would not be necessary in those cases.

Additional characteristics of the representative acoustic sources and representative operational parameters of the different survey types that were used in the modeling simulations to predict the exposure of marine mammals to different received levels of sound are described in the modeling report and in our notice of proposed rulemaking. Please see those documents for additional detail.

We note that while it was necessary to identify representative sources for the purposes of modeling the number of takes to be included in the analysis under the rule, the analysis is intended to be, and is appropriately, applicable to takes resulting from the use of other sizes or configurations of airguns (*e.g.,* the alternative, smaller airgun array modeled in the ''*Gulf of Mexico Acoustic Exposure Model Variable Analysis*'' report (Zeddies *et al.,* 2017b) referenced in the proposed rule and available for public review as supplementary material to the proposed rule).

While these descriptions reflect existing technologies and current practice, new technologies and/or uses of existing technologies may come into practice during the period of validity of these regulations. NMFS will evaluate any such developments on a case-specific basis to determine whether expected impacts on marine mammals are consistent with those described or referenced in this document and, therefore, whether any anticipated take incidental to use of those new technologies or practices may appropriately be authorized under the existing regulatory framework. We also note here that activities that may result in incidental take of marine mammals, and which would therefore appropriately require authorization under the MMPA, are not limited to those activities requiring permits from BOEM. There may be some activities that do not require permits from BOEM, such as certain ancillary activities, for which an LOA under this rule may be appropriate. Operators should consult NMFS regarding the appropriateness of applying for an LOA under this rule prior to conducting such activities.

Estimated Levels of Effort

As noted previously, actual total amounts of effort by survey type and location cannot be known in advance of receiving LOA requests from industry operators. Therefore, BOEM's PEIS provided projections of survey level of effort for the different survey types for a 10-year period (and BOEM's updated scope refined those projections to a five-year period). In order to construct a realistic scenario for future geophysical survey effort, BOEM evaluated trends in permit applications as well as industry estimates of future survey activity. In addition, GOMESA precludes leasing, pre-leasing, or any related activity (though not geophysical surveys) in the GOM east of 86°41′ W, in BOEM's Eastern Planning Area (EPA) and within 125 mi (201 km) of Florida, or in BOEM's Central Planning Area (CPA) and within 100 mi of Florida (and according to certain other detailed stipulations). These leasing restrictions are in place until June 30, 2022. On September 8, 2020, the President effectively extended this moratorium through withdrawal under OCSLA of the same area covered by the GOMESA moratorium from disposition by leasing for 10 years, beginning on July 1, 2022, and ending on June 30, 2032. This withdrawal prevents consideration of these areas for any leasing for purposes of exploration, development, or production during the 10-year period beginning on July 1, 2022, and ending on June 30, 2032. Although the withdrawal does not preclude geophysical survey activity, similar to the moratorium under GOMESA, the lack of leasing opportunities may be expected to curtail interest in exploratory surveys to some degree.

In order to provide some spatial resolution to the projections of survey effort and to provide reasonably similar areas within which acoustic modeling might be conducted, the geographic region was divided into seven zones, largely on the basis of water depth, seabed slope, and defined BOEM planning area boundaries. Shelf regions typically extend from shore to approximately 100–200 m water depths where bathymetric relief is gradual (off Florida's west coast, the shelf extends approximately 150 km). The slope starts where the seabed relief is steeper and extends into deeper water. In the GOM water deepens from 100–200 m to 1,500–2,500 m over as little as a 50 km horizontal distance. As the slope ends, water depths become more consistent, though depths can vary from 2,000–3,300 m. Three primary bathymetric areas were defined as shelf (0–200 m water depth), slope (200–2,000 m), and deep (>2,000 m).

Available information regarding cetacean density in the GOM (*e.g.,* Roberts *et al.,* 2016) shows that, in addition to water depth, animal distribution tends to vary from east to west in the GOM and appears correlated with the width of shelf and slope areas from east to west. The western region is characterized by a relatively narrow shelf and moderate-width slope. The central region has a moderate-width shelf and moderate-width slope, and the eastern region has a wide shelf and a very narrow slope. Therefore, BOEM's western, central, and eastern planning area divisions provide appropriate longitudinal separations for the shelf and slope areas. Due to relative consistency in both physical properties

and predicted animal distribution, the deep area was not subdivided. As shown in Figure 3, Zones 1–3 represent the shelf area (from east to west), Zones 4–6 represent the slope area (from east to west), and Zone 7 is the deep area.

BILLING CODE 3510–22–P

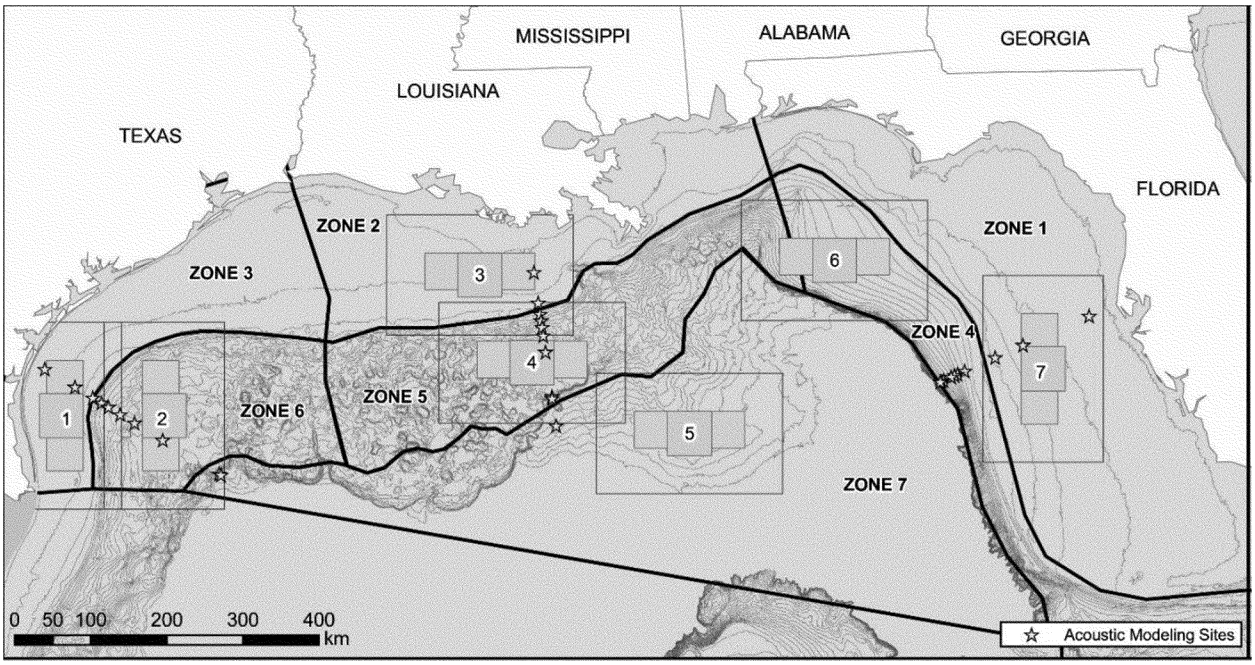

Figure 110 in Zeddies *et al.* (2015). Zones 1-3 represent the shelf region; Zones 4-6 the slope region, and Zone 7 the deep region. Within each of the seven zones, a set of representative survey-simulation rectangles (smaller numbered boxes) for each of the survey types was defined. For additional detail regarding Figure 3, please see discussion under "Modeling Overview," later in this document.

Figure 3. Gulf of Mexico Modeling Zones.

BILLING CODE 3510–22–C

Table 1 in the notice of proposed rulemaking provided the 10-year estimated levels of effort from BOEM's PEIS, estimated as 24-hr survey days, including annual totals by survey type and by zone for deep penetration and shallow penetration surveys, respectively. As the basis for the analysis supporting the proposed rulemaking, NMFS selected one high survey effort scenario and two each of moderate and low survey effort scenarios from the ten survey effort scenarios provided by BOEM. Of the ten ''years'' or effort scenarios, Year 1 (high), Years 4 and 5 (moderate), and Years 8 and 9 (low) were selected as representative effort scenarios and carried forward for further evaluation.

However, as noted previously, BOEM subsequently revised its proposed action by removing the area subject to leasing moratorium under GOMESA from consideration in the rule. In support of this revision, BOEM provided revised 5-year level of effort predictions and associated acoustic exposure estimates. BOEM's process for developing this information, described in detail in ''Revised Modeled Exposure Estimates,'' available online, was straightforward. Rather than using the PEIS's 10-year period, BOEM provided revised levels of effort for a 5-year period, using Years 1–5 of the original level of effort projections. BOEM stated that the first five years were selected to be carried forward ''because they were contiguous, they included the three years with the most activity, and they were the best understood in relation to the historical data upon which they are based.'' NMFS concurs with this choice. Levels of effort were revised based on the basic assumption that if portions of areas are removed from consideration, then the corresponding effort previously presumed to occur in those areas also is removed from consideration. Revised estimates of future effort and associated acoustic exposures draw upon the prior projections and modeling approach, which were subject to notice and comment. Table 1 shows the percentage reduction in survey area for each modeling zone that results from BOEM's scope revisions, and Table 2 provides the subsequent revised level of effort projections for the 5-year period.

[1] Projected levels of effort in 24-hr survey days.
[2] Zones follow the zones depicted in Figure 3.
[3] Deep penetration survey types include 2D, which uses one source vessel with one large array (8,000 in^3); 3D NAZ, which uses two source vessels using one large array each; 3D WAZ and coil, each of which uses four source vessels using one large array each (but with differing survey design); and VSP, which uses one source vessel with a large array. ''Deep'' refers to survey type, not to water depth.
[4] Shallow penetration/HRG survey types include shallow hazards surveys, assumed to use a single 90 in^3 airgun or boomer, and high-resolution surveys using the multibeam echosounder, side-scan sonar, and chirp sub-bottom profiler systems concurrently. ''Shallow'' refers to survey type, not to water depth.

This description of the specified activity is a summary of critical information. The interested reader should refer to the notice of proposed rulemaking (83 FR 29212; June 22, 2018), as well as BOEM's petition (with recent addenda) and PEIS, for additional detail regarding these prospective activities and the region. Required mitigation, monitoring, and reporting measures are described in detail later in this document (please see Mitigation and Monitoring and Reporting).

Changes From the Proposed Rule

This section provides a summary of changes from the proposed rule. Each section in which changes were made (*e.g.,* Mitigation) includes a more detailed list of changes made and a fuller description of the rationale. The following Comments and Responses section also provides additional detail relating to changes, in cases where the change resulted from a public comment.

Most notably, as described in greater detail above, BOEM updated the scope of the specified activity/specified geographical region that is the subject of this rule by removing from consideration the area that is subject to the GOMESA leasing moratorium. In accordance with this updated spatial scope, BOEM provided revised activity level projections and revised estimated acoustic exposure numbers based on the same modeling that informed the numbers evaluated in the proposed rule. BOEM's revised activity level projections correspond with Years 1–5 of the original 10-year projections (see Table 1 of the notice of proposed rulemaking), which is a conservative choice as these years contained higher levels of effort than Years 6–10. In the proposed rule, NMFS selected years that were representative of different levels of effort as the basis for the total taking over five years, including one year of relatively high effort (Year 1), two years of relatively moderate effort (Years 4 and 5), and two years of relatively low effort (Years 8 and 9). This selection is now in part supplanted (with the two

representative ''low effort'' years replaced by one relatively high effort year and one relatively moderate effort year) by BOEM's selection of Years 1–5 and the associated updated levels of effort.

The revised acoustic exposure numbers form the basis for our analyses in this final rule. Of note, the maximum total taking, as well as the annual maximum, that would be allowable under the regulations has decreased for most species and stocks, with the exception of the annual maximums for Atlantic spotted dolphin and bottlenose dolphins, and the total taking over five years for the Atlantic spotted dolphin, which have increased slightly (please see Estimated Take for additional information). These changes (largely decreases) in the take numbers do not have a meaningful effect on the analysis (except where impacts are significantly reduced, *e.g.,* for Bryde's whales) and do not change any of the findings.

In the proposed rule, NMFS included several time-area restrictions, including a seasonal restriction on airgun survey activity in the ''Bryde's whale core habitat'' area (as well as alternatives to this proposal that were offered for public comment, including a year-round restriction in the same area). Following BOEM's update to the scope of the rule, two of these areas (the Bryde's whale area and the ''Dry Tortugas'' area that was, in part, designed to provide protection for sperm whales and beaked whales) were removed from consideration, as the specified activity/specified geographical region no longer includes surveys in the areas where these proposed restrictions are located.

A third time-area restriction—the ''Coastal Restriction,'' designed to protect bottlenose dolphins in coastal waters most heavily impacted by the Deepwater Horizon oil spill—has been modified in consideration of public comments. The restriction was proposed to be GOM-wide within coastal waters inside the 20-m isobath, and to be in effect from February through May. The area encompassed by the restriction has been reduced to match the assumed range of the northern coastal stock of bottlenose dolphins (*i.e.,* between 90–84° W, but in effect only to the eastern extent of the coastal waters portion of BOEM's updated specified geographic region) while the temporal window has been expanded to include January. In addition, a proposed 13-km buffer to this area has been removed.

In the proposed rule, NMFS defined ''deep penetration'' surveys as those using arrays greater than 400 in^3 total volume. That delineation has been revised to include surveys using arrays greater than 1,500 in^3 total volume, with arrays of 1,500 in^3 total volume and less considered ''shallow penetration'' surveys.

In the notice of proposed rulemaking, NMFS proposed an exception to the general shutdown requirements for certain species of dolphins in relation to airgun surveys, in which the acoustic source would be powered down to the smallest single element of the array. Power-down conditions would be maintained until the animal(s) is observed exiting the exclusion zone or for 15 minutes beyond the last observation of the animal, following which full-power operations may be resumed without ramp-up. NMFS also provided an alternative proposal for consideration by the public, in which no shutdown or power-down would be required upon observation of the same species of dolphins. Following review of public comments, NMFS removes the power-down measure for small delphinids, in favor of the no-shutdown and no power-down alternative. No shutdown or power-down is required for these species.

NMFS proposed a number of extended distance shutdown requirements on the basis of detections of certain species deemed particularly sensitive (*e.g.,* beaked whales) or of particular circumstances deemed to warrant the extended distance shutdown requirement (*e.g.,* whales with calves). These extended distance shutdowns were all conditioned upon observation or detection of these species or circumstances ''at any distance'' from the vessel. However, NMFS also included as an alternative proposal for public consideration a distance limit of 1,000 m for these shutdown requirements. Following review of public comments, NMFS determined that a distance limit on extended shutdown zones for relevant species or circumstances was appropriate, but determined 1,500 m was the appropriate distance (rather than 1,000 m).

The proposed rule included an extended distance shutdown for sperm whales that was applicable upon acoustic detection, but was not applicable to visual detection. Following review of public comments, the shutdown requirement has been expanded to include any detection of sperm whales within the extended distance shutdown zone, including visual detection.

For shallow penetration surveys, NMFS reduces the standard exclusion zone from 200 m to 100 m, while including an extended distance shutdown requirement mirroring the requirements for deep penetration surveys, but within a distance of 500 m. NMFS eliminates shutdown requirements for HRG surveys (defined here as surveys using electromechanical sources such as multi-beam echosounders, side-scan sonars, and chirp sub-bottom profilers). The proposed regulations required shutdown for marine mammals within the proposed exclusion zone for surveys operating in water depths greater than 200 m.

NMFS eliminates proposed requirements for visual observation during nighttime ramp-up and pre-clearance, and for the use of third-party PSOs aboard node retrieval vessels.

In the proposed rule, NMFS discussed the use of an extrapolation method recommended by the Marine Mammal Commission for use in estimating potential unobserved takes. NMFS agrees with public commenters that the appropriateness of the method for application to observations conducted from working source vessels (versus research vessels) is unknown and, as suggested through public comment, NMFS will not require use of this method but will continue to evaluate approaches for assessment of effects to marine mammal stocks, including those based on extrapolation of marine mammal detections, through the adaptive management process and subsequently apply them through LOAs as appropriate.

NMFS has revised requirements relating to reporting of injured or dead marine mammals and has added newly crafted requirements relating to actions that should be taken in response to notification of live stranding events in certain circumstances, in order to reflect current best practice.

The proposed rule indicated that LOA applications with take estimates based on modeling other than that specifically included in the modeling report used to support the EIS and the proposed rule (the modeling report; Zeddies *et al.,* 2015, 2017a) would necessarily be published for public comment prior to the issuance of an LOA. Upon consideration of public comment and related supplemental materials, the final rule more flexibly allows that if applicants do not use the modeling provided by the rule, NMFS will publish a notice in the **Federal Register** soliciting public comment, when the model or inputs differ substantively from those that have been reviewed by NMFS and the public previously. Please see the Letters of Authorization section for more detail.

Comments and Responses

NMFS published a notice of proposed rulemaking in the **Federal Register** on June 22, 2018 (83 FR 29212), beginning a 60-day comment period. In that notice, we requested public input on the proposed rule and regulations, including the variations of the proposed rule, two economic baselines, and other information provided in the Regulatory Impact Analysis and associated appendices, and requested that interested persons submit relevant information, suggestions, and comments. In response to BOEM's change in scope and in consideration of public comments, we modified our action, as discussed in the following responses to comments. Please also see the Changes from the Proposed Rule section, above. We note that one area of significant concern for some members of the public was potential impacts to Bryde's whales and related mitigation measures. The reduced geographic scope eliminates the need to consider activity in the Bryde's whale ''core habitat area'' and eliminates the majority of the incidental take of Bryde's whale that was evaluated in the proposed rule.

During the 60-day comment period, we received 17 comment letters. A letter was submitted jointly by the International Association of Geophysical Contractors, the American Petroleum Institute, the National Ocean Industries Association, and the Offshore Operators Committee (hereafter, the ''Associations''). A separate letter was submitted jointly by the Natural Resources Defense Council (NRDC), Center for Biological Diversity, Earthjustice, Gulf Restoration Network, Humane Society Legislative Fund, The Humane Society of the United States, and Sierra Club (hereafter, ''NRDC''). Additional letters were submitted by the following: BP Exploration & Production Inc. (BP), Consumer Energy Alliance, CGG, Chevron USA Inc. (Chevron), the Center for Regulatory Effectiveness (CRE), the Florida Department of Environmental Protection, the Marine Mammal Commission (MMC), and eight private citizens. NMFS has reviewed all public comments received on the proposed rulemaking. All relevant comments and our responses are described below, with comment responses outlined by major categories. All comments received are available online at: *www.regulations.gov.* A direct link to these comments is provided at: *www.fisheries.noaa.gov/action/incidental-take-authorization-oil-and-gas-industry-geophysical-survey-activity-gulf-mexico.*

General Comments

As an initial matter, we note that under the MMPA, NMFS generally does not have discretion regarding issuance of requested incidental take authorizations for small numbers of marine mammals, provided that (1) the total taking associated with a specified activity will have a negligible impact on the affected species or stock(s); (2) the total taking associated with a specified activity will not have an unmitigable adverse impact on the availability of the species or stock(s) for subsistence uses (not relevant here); and (3) mitigation, monitoring, and reporting of such takings are set forth, including mitigation measures sufficient to meet the standard of least practicable adverse impact on the affected species or stocks and their habitat.

In addition, NMFS' proposed action—the issuance of the ITR and any subsequent LOAs authorizing incidental take of marine mammals—addresses only marine mammals (and their habitat). As such, effects of the surveys on other aspects of the marine environment are not relevant to NMFS' analyses under the MMPA.

The MMPA does require that we evaluate potential effects to marine mammal habitat, which includes prey species (*e.g.,* zooplankton, fish, squid). However, consideration of potential effects to taxa other than marine mammals and their prey, or consideration of effects to potential prey species in a context other than the import of such effects on marine mammals, is not relevant to our action under the MMPA. We have appropriately considered effects to marine mammal habitat. Separately, BOEM evaluated effects to all relevant aspects of the human environment (including marine mammals and other taxa) through the analysis presented in BOEM's PEIS (available online at: *www.boem.gov/Gulf-of-Mexico-Geological-and-Geophysical-Activities-Programmatic-EIS/*), and effects to all potentially affected species that are listed under the Endangered Species Act (ESA) and any critical habitat designated for those species were addressed through consultation between BOEM and NMFS pursuant to section 7 of the ESA. That Biological Opinion, which evaluated NMFS' proposed action (issuance of the ITR and any subsequent LOAs) as well as all BOEM and Bureau of Safety and Environmental Enforcement (BSEE) approvals of activities associated with the OCS oil and gas program in the GOM, is available online at: *www.fisheries.noaa.gov/national/endangered-species-conservation/biological-opinions-issued-noaa-fisheries-office-protected.* We do not further address taxa other than marine mammals and marine mammal prey.

Comment: The Associations comment that the proposed ITR is a well-structured and thorough document that appropriately concludes that geophysical activities in the GOM would have no more than a negligible impact on marine mammal populations, and that they appreciate NMFS' effort in preparing the proposed ITR and consideration of some of the Associations' previous comments.

Response: NMFS appreciates the comment.

Comment: The Associations comment that geophysical surveys play a critical role in the safe and orderly development of the oil and gas resources of the GOM.

Response: We acknowledge the background operational information provided by the Associations.

Comment: BP comments that the ITR is a much-needed process to govern the authorization of incidental takes of marine mammals associated with geophysical survey activity in the GOM. Chevron also indicates support for promulgation of the ITRs.

Response: NMFS appreciates the comments.

Comment: BP comments that projected survey efforts are underestimated but did not provide specific justification or recommendations.

Response: Projected levels of survey effort were formulated by BOEM and included in their PEIS. BOEM's PEIS stated, ''the scenarios contain projections based on the analysis of recent historic activity levels and trends made by BOEM's subject-matter experts who also considered industry-projected activity levels in their estimates.'' These projected levels of survey effort were made available for public review on multiple occasions during the development of the PEIS, as well as during the notice of receipt comment period, in which the public was given the opportunity to review and comment on the petition itself (81 FR 88664; December 8, 2016). Neither BP nor other industry stakeholders submitted comments on the BOEM-developed effort levels, and no evidence was provided that projected survey efforts are underestimated. The projected levels of effort were subsequently updated by BOEM based on the removal of the GOMESA area from consideration.

Comment: The Florida Department of Environmental Protection (FLDEP) expressed its concern regarding the potential impacts of OCS oil and gas

activities on marine and coastal environments and the biological resources and critical habitats associated with them. The FLDEP also indicated that former Secretary of the Interior Zinke had made a commitment to former Governor Scott to remove the State of Florida from future consideration for offshore drilling.

Response: NMFS acknowledges the comments. Assuming that the requirements of the MMPA are met, *e.g.,* findings of negligible impact and small numbers are made, NMFS does not have discretion as to whether it may issue ITRs and LOAs under those ITRs, and NMFS has no authority to limit oil and gas activities outside of prescribing appropriate mitigation requirements.

Marine Mammal Impacts

Comment: The Associations (as well as other industry commenters and the CRE) stated, in summary, that there is no scientific evidence that geophysical survey activities have caused adverse consequences to marine mammal stocks or populations, and that there are no known instances of injury to individual marine mammals as a result of such surveys, stating that similar surveys have been occurring for years without significant impacts. The Associations stated that surveys have been ongoing in the GOM for years and have not resulted in any negative impacts to marine mammals, including reducing fitness in individuals or populations. Referring to other regions, the commenters stated that bowhead whale numbers have increased in the Arctic despite survey activity. The Associations go further in claiming that ''NMFS misconstrues its legal obligations'' and ''NMFS violates the MMPA's best available science requirement.''

Response: Disruption of behavioral patterns (*i.e.,* Level B harassment) has been documented numerous times for marine mammals in the presence of airguns, in the form of avoidance of areas, notable changes in vocalization or movement patterns, or other shifts in important behaviors. See Potential Effects of the Specified Activity on Marine Mammals and Their Habitat in the notice of proposed rulemaking. In addition, there is growing scientific evidence demonstrating the connections between sub-lethal effects, such as behavioral disturbance, and population-level effects on marine mammals (*e.g.,* Lusseau and Bedjer, 2007; New *et al.,* 2014; Pirotta *et al.,* 2018). Disruptions of important behaviors, in certain contexts and scales, have been shown to have energetic effects that can translate to reduced survivorship or reproductive rates of individuals (*e.g.,* feeding is interrupted, so growth, survivorship, or ability to bring young to term may be compromised), which in turn can adversely affect populations depending on their health, abundance, and growth trends.

With specific regard to sound, as a 2017 report from the National Academy of Sciences noted, while it is true that ''[n]o scientific studies have conclusively demonstrated a link between exposure to sound and adverse effects on a marine mammal population,'' this is largely because such impacts are very difficult to demonstrate (NRC, 2005; NAS, 2017), not because they do not exist. Population-level effects are inherently difficult to assess because of high variability, migrations, and multiple factors affecting the populations. Appropriate studies are exceedingly difficult to carry out, and no appropriate study and reference populations have yet been established. Nonetheless there is a growing body of literature and science illustrating the connections between prolonged behavioral disturbance and impacts to reproductive success and survivorship. Accordingly, it is not defensible to conclude that sub-lethal acoustic stressors cannot have population level consequences. Based on the available evidence, a sufficient analysis of the potential impacts of airgun noise requires consideration of impacts on individuals *and* the potential for population level effects. NMFS has carefully considered the available evidence in making the necessary determinations (see Negligible Impact Analysis and Determinations) and determining the most appropriate suite of mitigation measures.

Because some commenters repeatedly cite (and misunderstand) public statements by BOEM in support of a contention that there is ''no harm from seismic,'' we clarify the record by citing BOEM's own responses to similar comments on their PEIS (BOEM, 2017). BOEM stated: ''It is critically important to understand that BOEM's . . . Science Note . . . refers to impacts on marine mammal . . . population sustainability rather than effects on individual animals. Studies have shown that marine mammals may and do react to sound through physical displacement from or avoidance of the area of ensonification and/or by altering their vocalizations. This [PEIS] acknowledges that significant acute physical injury to or death of marine mammals is not likely to be a direct result of seismic noise. It does, however, acknowledge that sublethal injurious effects are possible and may, over time, result in the eventual death of the individual(s) from these physical injuries and/or loss of hearing with (as in the case of marine mammals) the resultant inability to forage and communicate with conspecifics. Another prominent concern is whether anthropogenic sounds such as those generated during seismic survey activities may ''mask'' communications between some marine mammals. Depressed survival rates related to energetic effects or other impacts of noise are difficult to determine. BOEM, however, does not assume that lack of demonstrated adverse population-level effects from seismic surveys means that those effects may not occur.''

In support of assertions that there are ''no effects'' to marine mammals from seismic surveys and that there is a ''lack of any harm'' to marine mammals, CRE cites statements made by NMFS, in which we conclude that there is no evidence that serious injury, death, or stranding is reasonably likely to occur as a result of such surveys, and that Level A harassment is not reasonably likely to occur for mid-frequency cetaceans. CRE's assertion that there are ''no effects'' and ''no harm'' to marine mammals as a result of seismic surveys is based on the fact that marine mammals still exist in the GOM despite survey activity. CRE overlooks the evidence put forward for Level B harassment, and the potential effects of behavioral disruption, as well as the additional effects of noise that do not rise to the level of a take, but which nevertheless must be considered when evaluating the effects of a specified activity on a species or stock.

The Associations assert that we premise our decisions on the idea that we must act conservatively because effects that have not been conclusively proven—which the Associations claim, without evidence, do not and cannot occur—could occur in the future. The Associations state that we misconstrue our legal obligations via the application of ''an additional layer of precautionary bias'' beyond that established in the MMPA standards themselves, though they do not demonstrate that the bias exists. The Associations acknowledge that the MMPA requires mitigation sufficient to meet the standard of least practicable adverse impact. Therefore, some portion of the mitigation requirements contained in the proposed ITR would be necessary to meet that standard. However, they provide no analysis to support the contention that specific mitigation requirements exceed that standard. In fact, we have declined to adopt the recommendations of other commenters that are based on vague and unexplained standards of

''conservatism'' that are not required in the MMPA. Here, we conducted the requisite analyses of mitigation and found that the requirements contained in this final ITR, as modified on the basis of new information and review of public comments, meet the least practicable adverse impact (LPAI) standard.

We base our conclusions, relating to the potential effects of the specified activity on the affected species and stocks, on reasonable interpretation of the available science, which we summarize in this preamble and described in detail in our notice of proposed rulemaking. While we acknowledge the lack of conclusive evidence for population-level consequences, this is an artifact of the extreme difficulty of empirically demonstrating such effects (as concluded by the National Academies of Science, stated above). The best available scientific information provides considerable evidence that the activities evaluated in this ITR have the potential to adversely affect the fitness of individual animals. The best available science clearly demonstrates that, given adverse impacts to an animal's fitness, population-level effects are plausible. The Associations' comments on this topic treat the lack of empirical evidence as evidence that such effects do not occur. However, NMFS does not agree that absence of evidence is evidence of absence of effects. The comments further incorrectly frame our decision-making as being premised on the idea that such effects could occur in the future, when they are actually based on a reasonable interpretation of the best available scientific information regarding what the effects of the specified activity are likely to be in the absence of prescribed mitigation. Despite the paucity of empirical research on population effects, the best available information demonstrates impacts at the individual level that, at a high enough level of take, have reasonably foreseeable population-level impacts.

Similarly, the Associations imply that our interpretation of the existing scientific information reflects speculation about what future research might demonstrate. The Associations' statements that NMFS dismissed current scientific findings and premised decisions on hypothesized future impacts are inaccurate, and their assertion that NMFS ''has effectively required conclusive scientific proof that seismic surveys do not impact marine mammal populations'' misunderstands NMFS' use of the scientific literature. The best available information demonstrates that the effects of seismic surveys on marine mammals may include adverse impacts on behavior in ways that can also have energetic consequences. To draw different conclusions regarding the need for the strong suite of mitigation requirements included in this final ITR, NMFS would require scientific evidence that demonstrates that seismic surveys do not have energetic consequences or, alternatively, do not reach a point where there are population-level consequences. NMFS is not aware of such evidence. NMFS' final rule is based on the best available scientific information and the requirements of the MMPA.

Chevron states that we do not account for ''real-world'' protected species observer (PSO) observations, calling this ''arbitrary and capricious,'' and seems to imply that these ''ignored'' PSO observations of marine mammals are evidence that seismic activities produce no more than ''negligible effects on species.'' Chevron does not provide evidence to support its comment or otherwise develop the suggestion to enable a specific response. However, we incorporated the best available scientific information for our analysis, as evidenced (for example) by our references in the notice of proposed rulemaking to BOEM's synthesis study of PSO data from 2002–08 (Barkaszi *et al.,* 2012) (as well as other similar syntheses from other locations). In this final rulemaking, we have incorporated analysis of a newly available study of PSO data from 2009–15 (Barkaszi and Kelly, 2018). These data are also key to the evaluation of direct costs found in our RIA. We disagree with Chevron's apparent contention that we ''ignore[d]'' BOEM's earlier ''admissions that no scientific evidence exists contradicting the real-world observations of negligible impact'' (citing to BOEM's ''Science Notes''). NMFS addressed BOEM's ''Science Notes'' in some detail in our notice of proposed rulemaking (83 FR 29264–65). Chevron misinterprets a statement from BOEM regarding the absence of evidence (''no documented evidence of noise from air guns . . . adversely affecting animal populations) as evidence itself of no adverse effects. According to Chevron, our ''failure to account for'' this is ''arbitrary and capricious.'' These issues have been addressed both above and in the notice of proposed rulemaking.

Comment: NRDC referenced studies showing that noise from airgun surveys can travel great distances underwater, suggesting that due to the scale of this propagation, marine mammals in the GOM are consistently compromised in their ability to perform important life functions.

Response: NMFS acknowledges that relatively loud, low-frequency noise (as is produced by airgun arrays) has the potential to propagate across large distances. However, propagation and received sound levels are highly variable based on many biological and environmental factors. For example, while one commonly cited study (Nieukirk *et al.,* 2012) described detection of airgun sounds almost 4,000 km from the acoustic source, the sensors were located within the deep sound channel (SOFAR), where low-frequency signals may travel great distances due to the advantageous propagation environment. While sounds within this channel are unlikely to be heard by most marine mammals due to the depth of the SOFAR channel—which is dependent primarily on temperature and water pressure and therefore variable with latitude—it is arguable whether sounds that travel such distances may be heard by whales as a result of refraction to shallower depths (Nieukirk *et al.,* 2012; McDonald *et al.,* 1995). Regardless, while the extreme propagation distances cited in some comments may not be realistic, we acknowledge that contraction of effective communication space for Bryde's whales, which vocalize and hear at frequencies overlapping those emitted by airgun arrays, can occur at distances on the order of tens to hundreds of kilometers (*e.g.,* Hatch *et al.,* 2012). However, attenuation to levels below which more acute effects are likely to occur is expected over much shorter distances (Zeddies *et al.,* 2015, 2017a) and, therefore, we do not agree with the contention that the GOM would be ensonified to a degree that marine mammals would find it an unsuitable habitat or would be consistently compromised in their ability to perform important life functions. Rather, it is likely that displacement would occur within a much smaller region in the vicinity of the acoustic source (*e.g.,* within 10–20 km of the source, depending on season and location). Overall, the specific geographic region and marine mammal use of the area is sufficiently large that, although some displacement may occur (*i.e.,* Level B harassment as a result of acoustic exposure beyond the exclusion zone), the GOM offers enough habitat for marine mammals to seek temporary viable habitat elsewhere, if necessary. Many of the affected species occupy a wide portion of the GOM, and it is expected that individuals of these species can reasonably find temporary

foraging grounds or other suitable habitat areas consistent with their natural use of the region. Further, although the surveys are expected to occur over large portions of the GOM, they will only be transitory in any given area. Therefore, NMFS does not expect displacement to occur frequently or for long durations. Please see Negligible Impact Analysis and Determinations for additional analysis.

Comment: NRDC states that airgun surveys have been linked to significant reductions in the probability of calf survival in western Pacific gray whales (an endangered baleen whale population), implying that these findings indicate that such surveys would similarly have significant negative effects on whales in the GOM.

Response: Commenters cite a preliminary report (Cooke *et al.,* 2015) that documented a reduction in calf survival that the authors suggested may be related to disruption of foraging from airgun survey activity and pile driving in Russia due to presumed avoidance of foraging areas. However, a more recent analysis (Cooke *et al.,* 2017) invalidated these findings, showing that this was a sampling effect, as those calves that were assumed dead in the 2015 study have since been observed alive elsewhere. The new study found no significant annual variation in calf survival. Johnson *et al.* (2007) had previously reported that foraging gray whales exposed to airgun sounds during surveys in Russia did not experience any biologically significant or population-level effects.

Comment: NRDC asserts that we have not adequately accounted for vessel collision risk, stating that the surveys will drive marine mammals into shipping lanes, thereby increasing their risk of ship strike. Relatedly, NRDC noted that NMFS' conclusion that ship strikes will not occur indicates an assumption that required ship-strike avoidance procedures will be effective. NRDC disagrees that the ship-strike avoidance measures will be effective.

Response: NMFS is not aware of any scientific information suggesting that the surveys would drive marine mammals into shipping lanes and disagrees that this would be a reasonably anticipated effect of the specified activities. While the primary stressor to marine mammals from the specified activities is acoustic exposure to the sound source, NMFS takes seriously the risk of vessel strike and has prescribed measures sufficient to avoid the potential for ship strike to the extent practicable (see Mitigation). NMFS has required these measures despite a very low likelihood of vessel strike; vessels associated with the surveys will add a discountable amount of vessel traffic to the specific geographic region and, furthermore, vessels towing survey gear travel at very slow speeds (*i.e.,* roughly 4–5 kn).

Comment: The MMC criticizes one aspect of the methodology for the analysis of chronic effects to Bryde's and sperm whales conducted by NMFS with the support of JASCO Applied Sciences (JASCO), *i.e.,* removing the top ten percent of the greatest pulse exposures. (JASCO is a consulting company contracted by NMFS and BOEM to model acoustic exposures of marine mammals to noise produced by industry survey activity.) The MMC recommends re-estimation of the various lost listening and communication space parameters without removing the greatest ten percent of pulse exposures.

Response: The goal of this modeling exercise was to create a tool that could help evaluate loss of ability to detect signals of biological importance over spatial scales relevant to the sources and hearing capabilities of a wide variety of regional animals. In order to do so, we attempt to examine the portion of low-frequency acoustic energy lost from seismic surveys that has been empirically measured in many contexts around the world to generate higher chronic, longer-term average noise levels. Masking experienced by individual calling and receiving animals due to noise at relatively close proximity to a single intermittent source is an important but limited aspect of the real-world contexts within which populations of marine mammals are exposed to noise from multiple seismic surveys in a region like the GOM. This modeling sought to account for the known attributes of airgun noise, by which low-frequency energy lost laterally attenuates over large spatial scales with loss of impulsive features, leading to elevated background noise conditions, particularly when multiple surveys are concurrent within an acoustic region. Close range pulse energy would entirely drown out such evaluation, and would not account for the different acoustic characteristics of the signal and potential masking at such scales. Thus, while masking of specific signals relative to the near-field of operating airgun arrays is an impact that may occur, for the purposes of the analysis conducted for this rule, near-field impacts have been addressed through the modeling of acoustic exposures. The chronic and cumulative impacts analysis that is the subject of this comment addresses far-field chronic impacts. Additionally, there are technical concerns with modifying the analysis specifically as recommended and, accordingly, we disagree with the recommendation for purposes of this analysis of potential chronic effects.

The purpose of this modeling exercise was not to evaluate exposure implications for animals close to the modeling locations (*i.e.,* ''acute'' effects). Evaluation of acute effects, such as injury and behavioral disruption, was achieved through the primary acoustic exposure modeling effort (Zeddies *et al.,* 2015, 2017a). These evaluated effects (evaluated through the primary acoustic modeling effort) are separate and separable from loss of hearing opportunities experienced by animals farther from source locations, which are evaluated through the chronic and cumulative effects modeling discussed here.

Marine Mammal Impacts—Habitat

Comment: NRDC expressed concern regarding potential impacts to marine mammal prey and/or food webs from the planned surveys. NRDC provided numerous citations in claiming that the surveys could impact marine mammal prey through the following: (1) Cause severe physical injury and mortality; (2) damage hearing and sensory abilities of fish and marine invertebrates; (3) impede development of early life history stages; (4) induce stress that physically damages marine invertebrates and compromises fish health; (5) cause startle and alarm responses that interrupt vital behaviors; (6) alter predator avoidance behavior that may reduce probability of survival; (7) affect catchability of prey species; (8) mask important biological sounds essential to survival; (9) reduce reproductive success, potentially jeopardizing long-term sustainability of fish populations; (10) interrupt feeding behaviors and induce other species-specific effects that may increase risk of starvation, reduce reproduction, and alter community structure; and (11) compromise orientation of fish larvae with potential ecosystem-level effects. Additionally, NRDC cited a publication by McCauley *et al.* (2017) as evidence that the surveys could potentially impact zooplankton and consequently marine mammal food webs.

Response: NMFS strongly disagrees with the suggestion that we ignored effects to prey species. In fact, we considered relevant literature (including that cited by NRDC) in finding that the most likely impact of survey activity to prey species such as fish and invertebrates would be temporary avoidance of an area, with a rapid return to pre-survey distribution and behavior,

and minimal impacts to recruitment or survival anticipated. While there is a lack of specific scientific information to allow an assessment of the duration, intensity, or distribution of effects to prey in specific locations at specific times and in response to specific surveys, NMFS' review of the available information does not indicate that such effects could be significant enough to impact marine mammal prey to the extent that marine mammal fitness would be affected. We agree that seismic surveys could affect certain marine mammal prey species, and addressed these potential effects, as well as the potential for those effects to impact marine mammal populations, in our notice of proposed rulemaking (83 FR 29241–29242). As stated in that notice, our review of the available information and the specific nature of the activities considered herein suggest that the activities evaluated in this ITR are not likely to have more than short-term adverse effects on any prey habitat or populations of prey species. Further, any impacts to prey species are not expected to result in significant or long-term consequences for individual marine mammals, or to contribute to adverse impacts on their populations. In support of this conclusion, we refer the commenter to discussion provided in our notice of proposed rulemaking. Additional information is summarized below.

In summary, fish react to sounds which are especially strong and/or intermittent low-frequency sounds, and behavioral responses such as flight or avoidance are the most likely effects. However, the reaction of fish to airguns depends on the physiological state of the fish, past exposures, motivation (*e.g.,* feeding, spawning, migration), and other environmental factors. While we agree that some studies have demonstrated that airgun sounds might affect the distribution and behavior of some fishes, potentially impacting foraging opportunities or increasing energetic costs (*e.g.,* Fewtrell and McCauley, 2012; Pearson *et al.,* 1992; Skalski *et al.,* 1992; Santulli *et al.,* 1999; Paxton *et al.,* 2017), our review shows that the weight of evidence indicates either no or only a slight reaction to noise (*e.g.,* Miller and Cripps, 2013; Dalen and Knutsen, 1987; Pena *et al.,* 2013; Chapman and Hawkins, 1969; Wardle *et al.,* 2001; Sara *et al.,* 2007; Jorgenson and Gyselman, 2009; Blaxter *et al.,* 1981; Cott *et al.,* 2012; Boeger *et al.,* 2006), and that, most commonly, while there may be impacts to fish as a result of noise from nearby airguns, any effects will be temporary. For example, investigators reported significant, short-term declines in commercial fishing catch rate of gadid fishes during and for up to five days after seismic survey operations, but the catch rate subsequently returned to normal (Engas *et al.,* 1996; Engas and Lokkeborg, 2002). Other studies have reported similar findings (*e.g.,* Hassel *et al.,* 2004). Skalski *et al.* (1992) also found a reduction in catch rates—for rockfish (*Sebastes* spp.) in response to controlled airgun exposure—but suggested that the mechanism underlying the decline was not dispersal but rather decreased responsiveness to baited hooks associated with an alarm behavioral response. A companion study showed that alarm and startle responses were not sustained following the removal of the sound source (Pearson *et al.,* 1992). Therefore, Skalski *et al.* (1992) suggested that the effects on fish abundance may be transitory, primarily occurring during the sound exposure itself. In some cases, effects on catch rates are variable within a study, which may be more broadly representative of temporary displacement of fish in response to airgun noise (*i.e.,* catch rates may increase in some locations and decrease in others) than any long-term damage to the fish themselves (Streever *et al.,* 2016).

SPLs of sufficient strength have been known to cause injury to fish and fish mortality and, in some studies, fish auditory systems have been damaged by airgun noise (McCauley *et al.,* 2003; Popper *et al.,* 2005; Song *et al.,* 2008). However, in most fish species, hair cells in the ear continuously regenerate and loss of auditory function likely is restored when damaged cells are replaced with new cells. Halvorsen *et al.* (2012b) showed that a temporary threshold shift (TTS) of 4–6 dB was recoverable within 24 hours for one species. Impacts would be most severe when the individual fish is close to the source and when the duration of exposure is long—both of which are conditions unlikely to occur for surveys that are necessarily transient in any given location and likely result in brief, infrequent noise exposure to prey species in any given area. For these surveys, the sound source is constantly moving, and most fish would likely avoid the sound source prior to receiving sound of sufficient intensity to cause physiological or anatomical damage. In addition, ramp-up may allow certain fish species the opportunity to move further away from the sound source.

NMFS considered the research provided by NRDC and disagrees with its interpretation of the literature. A recent comprehensive review (Carroll *et al.,* 2017) found that results are mixed as to the effects of airgun noise on the prey of marine mammals. While some studies suggest a change in prey distribution and/or a reduction in prey abundance following the use of seismic airguns, others suggest no effects or even positive effects in prey abundance. As one specific example—regarding Paxton *et al.* (2017), which describes findings related to the effects of a 2014 seismic survey on a reef off of North Carolina—NRDC asserts that the study supports a conclusion that seismic surveys ''cause significant shifts in distribution that may compromise life history behaviors.'' However, our own review of this work shows that a reasonable interpretation leads to a more moderate conclusion. While the study did show a 78 percent decrease in observed nighttime abundance for certain species—which NRDC interprets as a significant shift in distribution that could compromise life history behaviors—it is important to note that the evening hours during which the decline in fish habitat use was recorded (via video recording) occurred on the same day that the seismic survey passed, and no subsequent data is presented to support an inference that the response was long-lasting. Additionally, given that the finding is based on video images, the lack of recorded fish presence does not support a conclusion that the fish actually moved away from the site or suffered any serious impairment because fish may remain present yet not be recorded on video. In summary, this particular study corroborates prior studies demonstrating a startle response or short-term displacement.

Available data suggest that cephalopods are capable of sensing the particle motion of sounds and detect low frequencies up to 1–1.5 kHz, depending on the species, and so are likely to detect airgun noise (Kaifu *et al.,* 2008; Hu *et al.,* 2009; Mooney *et al.,* 2010; Samson *et al.,* 2014). Auditory injuries (lesions occurring on the statocyst sensory hair cells) have been reported upon controlled exposure to low-frequency sounds, suggesting that cephalopods are particularly sensitive to low-frequency sound (Andre *et al.,* 2011; Sole *et al.,* 2013). Behavioral responses, such as inking and jetting, have also been reported upon exposure to low-frequency sound (McCauley *et al.,* 2000b; Samson *et al.,* 2014). Similar to fish, however, the transient nature of the surveys leads to an expectation that effects will be largely limited to

behavioral reactions and would occur as a result of brief, infrequent exposures.

We discussed impacts to benthic communities from impulsive sound generated by active acoustic sound sources in our notice of proposed rulemaking, including one study showing that exposure to airgun signals was found to significantly increase mortality in scallops, in addition to causing significant changes in behavioral patterns and disruption of hemolymph chemistry during exposure (although the authors state that the observed levels of mortality were not beyond naturally occurring rates) (Day *et al.,* 2017). In addition, Fitzgibbon *et al.* (2017) found significant changes to hemolymph cell counts in spiny lobsters subjected to repeated airgun signals, with the effects lasting up to a year post-exposure. However, despite the high levels of exposure, direct mortality was not observed. Further, in reference to the study, Day *et al.* (2016) stated that ''[s]eismic surveys appear to be unlikely to result in immediate large scale mortality [. . .] and, on their own, do not appear to result in any degree of mortality'' and that ''[e]arly stage lobster embryos showed no effect from air gun exposure, indicating that at this point in life history, they are resilient to exposure and subsequent recruitment should be unaffected.'' A majority of the studies reviewed by NMFS have observed no increased mortality in invertebrates exposed to airgun noise (*e.g.,* Wardle *et al.,* 2001; Parry *et al.,* 2002; Christian *et al.,* 2003; Andriguetto-Filho *et al.,* 2005; Parry and Gason, 2006; Payne *et al.,* 2007; Harrington *et al.,* 2010; Przeslawski *et al.,* 2018).

With regard to potential impacts on zooplankton, McCauley *et al.* (2017) found that exposure to airgun noise resulted in significant depletion for more than half the taxa present and that there were two to three times more dead zooplankton after airgun exposure compared with controls for all taxa, within 1 km of the airguns. However, the authors also stated that in order to have significant impacts on *r*-selected species (*i.e.,* those with high growth rates and that produce many offspring) such as plankton, the spatial or temporal scale of impact must be large in comparison with the ecosystem concerned, and it is possible that the findings reflect avoidance by zooplankton rather than mortality (McCauley *et al.,* 2017). In addition, the results of this study are inconsistent with a large body of research that generally finds limited spatial and temporal impacts to zooplankton as a result of exposure to airgun noise (*e.g.,* Dalen and Knutsen, 1987; Payne, 2004; Stanley *et al.,* 2011). Most prior research on this topic, which has focused on relatively small spatial scales, has showed minimal effects (*e.g.,* Kostyuchenko, 1973; Booman *et al.,* 1996; Sætre and Ona, 1996; Pearson *et al.,* 1994; Bolle *et al.,* 2012).

A modeling exercise was conducted as a follow-up to the McCauley *et al.* (2017) study (as recommended by McCauley *et al.*), in order to assess the potential for impacts on ocean ecosystem dynamics and zooplankton population dynamics (Richardson *et al.,* 2017). Richardson *et al.* (2017) found that a full-scale airgun survey would impact copepod abundance within the survey area, but that effects at a regional scale were minimal (2 percent decline in abundance within 150 km of the survey area and effects not discernible over the full region). The authors also found that recovery within the survey area would be relatively quick (3 days following survey completion), and suggest that the quick recovery was due to the fast growth rates of zooplankton, and the dispersal and mixing of zooplankton from both inside and outside of the impacted region. The authors also suggest that surveys in areas with more dynamic ocean circulation in comparison with the study region and/or with deeper waters (*i.e.,* typical GOM survey locations) would have less net impact on zooplankton.

Notably, a recently described study produced results inconsistent with those of McCauley *et al.* (2017). Researchers conducted a field and laboratory study to assess if exposure to airgun noise affects mortality, predator escape response, or gene expression of the copepod *Calanus finmarchicus* (Fields *et al.,* 2019). Immediate mortality of copepods was significantly higher, relative to controls, at distances of 5 m or less from the airguns. Mortality one week after the airgun blast was significantly higher in the copepods placed 10 m from the airgun but was not significantly different from the controls at a distance of 20 m from the airgun. The increase in mortality, relative to controls, did not exceed 30 percent at any distance from the airgun. Moreover, the authors caution that even this higher mortality in the immediate vicinity of the airguns may be more pronounced than what would be observed in free-swimming animals due to increased flow speed of fluid inside bags containing the experimental animals. There were no sublethal effects on the escape performance or the sensory threshold needed to initiate an escape response at any of the distances from the airgun that were tested. Whereas McCauley *et al.* (2017) reported an SEL of 156 dB at a range of 509–658 m, with zooplankton mortality observed at that range, Fields *et al.* (2019) reported an SEL of 186 dB at a range of 25 m, with no reported mortality at that distance.

Regardless, if we assume a worst-case likelihood of severe impacts to zooplankton within approximately 1 km of the acoustic source, the typically wide dispersal of survey vessels and brief time to regeneration of the potentially affected zooplankton populations does not lead us to expect any meaningful follow-on effects to the prey base for odontocete predators (the region considered in this rule is not an important feeding area for taxa that feed directly on zooplankton, *i.e.,* mysticetes).

Given the inconsistency of the McCauley *et al.* (2017) results with prior research on impacts to zooplankton as a result of exposure to airgun noise and with the research of Fields *et al.* (2019), further validation of those findings would be necessary for NMFS to reach a determination that these impacts are likely to occur. Moreover, a single study is not sufficient to evaluate the potential impacts, and further study in additional locations must be conducted. Therefore, BOEM proposed to fund such a study as part of their 2019–21 Studies Development Plan (*www.boem.gov/FY-2019-2021-SDP/*).

A recent review article concluded that, while laboratory results provide scientific evidence for high-intensity and low-frequency sound-induced physical trauma and other negative effects on some fish and invertebrates, the sound exposure scenarios in some cases are not realistic to those encountered by marine organisms during routine seismic operations (Carroll *et al.,* 2017). The review finds that there has been no evidence of reduced catch or abundance following seismic activities for invertebrates, and that there is conflicting evidence for fish with catch observed to increase, decrease, or remain the same. Further, where there is evidence for decreased catch rates in response to airgun noise, these findings provide no information about the underlying biological cause of catch rate reduction (Carroll *et al.,* 2017).

NRDC's assertions regarding the likely effects of airgun survey noise on marine mammal prey include, for example, the assertion that the specified activity would harm fish and invertebrate species over the long-term, cause reductions in recruitment and effects to behavior that may reduce reproductive potential and foraging success and

increase the risk of predation, and induce changes in community composition via such population-level impacts. We have addressed these claims both in this response and in our review of the available literature. We also reviewed available information regarding populations of representative prey stocks in the northern GOM, *i.e.,* the only U.S. location where marine seismic surveys are a routinely occurring activity. While we recognize the need for caution in assuming correlation between the ongoing survey activity in the GOM and the health of assessed stocks there, we also believe this information has some value in informing the likelihood of population-level effects to prey species and, therefore, the likelihood that the specified activity would negatively impact marine mammal populations via effects to prey. We note that the information reported below is in context of managed commercial and recreational fishery exploitation, in addition to any other impacts (*e.g.,* noise) on the stocks. The species listed below are known prey species for marine mammals and represent groups with different life histories and patterns of habitat use. Numerous other managed stocks are similarly healthy.

- Red snapper (*Lutjanus campechanus*): Red snapper are bottom-dwelling fish generally found at approximately 10–190 m deep that typically live near hard structures on the continental shelf that have moderate to high relief (for example, coral reefs, artificial reefs, rocks, ledges, and caves), sloping soft-bottom areas, and limestone deposits. Larval snapper swim freely within the water column. Increases in total and spawning stock biomass are predicted beginning in about 1990 (Cass-Calay *et al.,* 2015). Regional estimates suggest that recruitment in the west has generally increased since the 1980s, and has recently been above average, while recruitment in the east peaked in the mid-2000s, and has since declined. However, the most recent assessment suggests a less significant decline (to moderate levels) (Cass-Calay *et al.,* 2015).
- Yellowfin tuna (*Thunnus albacares*): Yellowfin tuna are highly migratory, living in deep pelagic waters, and spawn in the GOM from May to August. However, we note that a single stock is currently assumed for the entire Atlantic, with additional spawning grounds in the Gulf of Guinea, Caribbean Sea, and off Cabo Verde. The most recent assessment indicates that spawning stock biomass for yellowfin tuna is stable or increasing somewhat and that, overall, the stock is near levels that produce the maximum sustainable yield (ICCAT, 2016).
- King mackerel (*Scomberomorus cavalla*): King mackerel are a coastal pelagic species, found in open waters near the coast in waters from approximately 35–180 m deep. King mackerel migrate in response to changes in water temperature, and spawn in shelf waters from May through October. Estimates of recruitment demonstrate normal cyclical patterns over the past 50 years, with a period of higher recruitment most recently (1990–2007) (SEDAR, 2014). Long-term spawning stock biomass patterns indicate that the spawning stock has been either rebuilding or remained relatively consistent over the last 20 years, with nothing indicating that the stock has declined in these recent decades (SEDAR, 2014).

In summary, the scientific literature demonstrates that impacts of seismic surveys on marine mammal prey species will likely be limited to behavioral responses, the majority of prey species will be capable of moving out of the area during surveys, a rapid return to normal recruitment, distribution, and behavior for prey species is anticipated, and, overall, impacts to prey species, if any, will be minor and temporary. Prey species exposed to sound might move away from the sound source, experience TTS, experience masking of biologically relevant sounds, or show no obvious direct effects. Mortality from decompression injuries is possible in close proximity to a sound, but only limited data on mortality in response to airgun noise exposure are available (Hawkins *et al.,* 2014). The most likely impacts for most prey species in a given survey area would be temporary avoidance of the area. Surveys using towed airgun arrays move through an area relatively quickly, limiting exposure to multiple impulsive sounds. In all cases, sound levels would return to ambient once a survey moves out of the area or ends and the noise source is shut down and, when exposure to sound ends, behavioral and/or physiological responses are expected to end relatively quickly (McCauley *et al.,* 2000b). The duration of fish avoidance of a given area after survey effort stops is unknown, but a rapid return to normal recruitment, distribution, and behavior is anticipated. While the potential for disruption of spawning aggregations or schools of important prey species can be meaningful on a local scale, the mobile and temporary nature of most surveys and the likelihood of temporary avoidance behavior suggest that impacts would be minor.

Finally, and relevant to NMFS' findings under the MMPA, NRDC does not demonstrate that even the asserted worst-case effects on prey species would have any meaningful impact on marine mammals or their respective populations. Referencing a single study on zooplankton effects (*i.e.,* McCauley *et al.,* 2017), NRDC implies that airgun surveys will definitively reduce ''the abundance and diversity of zooplankton over vast areas and induc[e] changes in community composition due to the aggregation of individual- and population-level impacts across multiple fish and invertebrate species,'' thereby leading to ecosystem-level effects that would harm marine mammal populations. NMFS disagrees with this interpretation of the scientific literature and notes the presence of healthy stocks of marine mammal prey species currently found in the GOM, despite decades of routine geophysical survey operations, but also a devastating oil spill (discussed in detail in the notice of proposed rulemaking). NMFS believes that no evidence is presented to contradict our conclusions regarding likely impacts to marine mammals due to effects on prey species, *i.e.,* that impacts of the specified activity are not likely to have more than short-term adverse effects on any prey habitat or populations of prey species, and that any effects that do occur are not expected to result in significant or long-term consequences for individual marine mammals, or to contribute to adverse impacts on their populations.

Comment: The Associations object to NMFS' use of an analysis of chronic and cumulative impacts of noise on marine mammals in the GOM (*i.e.,* the CCE report), which was described in detail in our notice of proposed rulemaking. The Associations state that ''[c]oncepts such as ''soundscape,'' ''communication space,'' or ''acoustic footprint'' have no basis in any existing statutory or regulatory authorities, and are therefore inapplicable to this rulemaking.''

Response: The purpose of the analysis was to evaluate the more cumulative nature of low-frequency, long-distance propagation of relatively low-intensity energy from multiple seismic surveys operating concurrently in a region, and to evaluate potential loss of ability to detect signals of biological importance over spatial scales relevant to the sources and hearing capabilities of representative species. NMFS is required to evaluate the effects of the specified activity on the potentially impacted marine mammal stocks and their habitat. Noise can disrupt marine mammals' behavioral patterns through the contraction of their communication

space, among other impacts. Moreover, NMFS is required to mitigate impacts on marine mammal species or stocks and their habitat. Concepts such as listening area and communication space are not novel, having been published in peer-reviewed literature and previously applied in impact assessment contexts. NMFS is required to consider these effects.

Comment: NRDC argues that NMFS fails to consider chronic harm, including masking effects and impacts on acoustic habitat. For example, NRDC asserts that the consideration of masking in NMFS' negligible impact analysis was cursory in that it only came through the vulnerability ratings and ''seems to misapprehend the spatial and temporal scope of the effects'' of masking. Similarly, in addition to citing general concerns about chronic effects to Bryde's whales and other species, NRDC asserts that acoustic habitat is discussed, but not factored into the negligible impact analysis.

Response: The potential impacts of masking were properly considered. NRDC significantly understates the consideration given to masking effects in the Expert Working Group (EWG) risk assessment framework (see Negligible Impact Analysis and Determinations). Broadly, the results of the EWG analysis for any given species are based on the integration of two components: The severity of the impacts (which reflects the extent of the activities overlaid with the presence and distribution of the given species) and the vulnerability of that species based on multiple biological and environmental risk factors, including explicit consideration of masking. The maximum possible vulnerability score any species can attain under the assessment across all of these factors is 30. The masking component of the vulnerability score considers communication masking, foraging masking, and navigation/orientation masking—for a total of seven points. The minimum score that any species assessed in the context of these survey activities could (and did) attain is 1, while the Bryde's whale was given the maximum scores across all types of masking for a score of 7. The differential across the highest and lowest possible masking scores is 6, out of a maximum possible total of 30 for the overall vulnerability score, which means that masking accounts for twenty percent of a species' vulnerability rating. Twenty percent is an appropriate and not insubstantial proportion of the vulnerability score, given that the total score (with its 30-point maximum) also accounts for behavioral impacts, whether there are biologically important areas or times overlaying the activities, whether there are additional chronic anthropogenic (*e.g.,* other anthropogenic noise) or chronic biological factors (*e.g.,* disease), and the status and trends of the population.

NMFS recognizes that masking is not necessarily co-extensive with harassment and explicitly recognizes this in our discussion of effects, although we also note that the distances at which behavioral harassment is quantified for this rule are farther than those contemplated in the past, due to the behavioral harassment thresholds used (see the Estimated Take section and comment responses later in this section for further discussion of acoustic thresholds). As discussed elsewhere, NMFS designed and supported the implementation of a chronic and cumulative effects analysis (the CCE report, discussed later in this preamble) for the specific purpose of addressing the effects of these activities on the listening space of all species and the communication space of Bryde's whales specifically. This modeling effort explicitly considered the effects of masking over realistic spatial scales. In their 2017 public comments on incidental harassment authorizations NMFS had proposed for seismic survey activities in the Atlantic Ocean, NRDC specifically recommended that NMFS conduct a modeling exercise like the effort conducted here for the GOM rule to better support those findings (see 83 FR 63268; December 7, 2018), yet they now suggest that this analysis is inadequate, even paired with the quantitative analysis included in the EWG analysis as it is here. See Potential Effects of the Specified Activities on Marine Mammals and Their Habitat in the notice of proposed rulemaking for additional discussion.

Comment: A private citizen offers commentary and clarifications regarding the discussions of acoustic masking and acoustic habitat provided in our notice of proposed rulemaking.

Response: We appreciate the discussion provided by the commenter, but note that no specific recommendations are provided towards an improved assessment of the effects of chronic aggregate noise from survey activity, as the commenter suggests is needed.

Cumulative Impacts and Related Issues

Comment: NRDC expressed concern regarding cumulative impacts, claiming that NMFS' negligible impact determination underestimates impacts to marine mammal species and populations because it fails to consider the effects of other anticipated activities on the same marine mammal populations. NRDC also stated that NMFS must include geophysical surveys occurring within state waters within the scope of the ITR.

Response: Neither the MMPA nor NMFS' codified implementing regulations address consideration of other unrelated activities and their impacts on populations. However, the preamble for NMFS' implementing regulations (54 FR 40338; September 29, 1989) states in response to comments that the impacts from other past and ongoing anthropogenic activities are to be incorporated into the negligible impact analysis via their impacts on the baseline. Consistent with that direction, NMFS has factored into its negligible impact analysis the impacts of other past and ongoing anthropogenic activities via their impacts on the baseline, *e.g.,* as reflected in the density/distribution and status of the species, population size and growth rate, the chronic and cumulative effects analysis (the ''CCE report'' discussed later in this preamble), and other relevant stressors. Some of these are addressed explicitly through the environmental risk factor scoring in the population vulnerability analysis of the Expert Working Group Assessment (including consideration of Deepwater Horizon (DWH) oil spill effects and risk from other anthropogenic activities). In addition, we consider these factors as relevant contextual elements of the analysis. See the Negligible Impact Analysis and Determinations section of this notice for full detail.

Our 1989 final rule for the MMPA implementing regulations also addressed public comments regarding cumulative effects from future, unrelated activities. There we stated that such effects are not considered in making findings under section 101(a)(5) concerning negligible impact. We indicated (1) that NMFS would consider cumulative effects that are reasonably foreseeable when preparing a NEPA analysis, and (2) that reasonably foreseeable cumulative effects would also be considered under section 7 of the ESA for ESA-listed species.

Here, we recognize the potential for cumulative impacts, as analyzed through BOEM's PEIS, which addressed the impacts of an extended time period of survey activity that may be permitted by BOEM (ten years versus the five years that the ITR is limited to), and which NMFS adopted as the basis for its Record of Decision. In that analysis, the assessment was focused on whether the predicted level of take from the forecasted level of survey effort, when considered in context, would have a

meaningful biological consequence at a species or population level. NMFS, therefore, assessed and integrated other contextual factors (*e.g.,* species' life history and biology, distribution, abundance, and status of the stock; mitigation and monitoring; characteristics of the surveys and sound sources) in determining the overall impact of issuance of the ITR and subsequent LOAs on the human environment. Key considerations included the nature of the surveys and the required mitigation. In all cases, it is expected that sound levels will return to previous background levels once the acoustic source moves a certain distance from the area, or the surveys cease. The proposed rule also identified several time-area restrictions to minimize risk or severity of impacts to the extent practicable, consistent with the MMPA's least practicable adverse impact standard. In the final rule, two of those areas were removed from consideration based on the reduction in the scope of the rule per BOEM's request. The other proposed mitigation area remains (as modified; see Mitigation). Although those two areas have been removed from consideration as mitigation due to the reduction in scope of the rule, the practical effect on GOM stocks is similar, in that no survey activity within those areas may be considered for take authorization pursuant to the rule. The similar result is a reduction in the overall numbers of take but also, importantly, elimination or minimization of impacts to marine mammal species or stocks in the areas most important to them for feeding, breeding, and other important functions. Therefore, the severity of takes that may occur pursuant to the rule is expected to be meaningfully lower due to the reduction in impacts that could reduce reproductive success or survivorship.

In summary, NMFS does not expect aggregate impacts from the forecast level of survey effort to affect rates of recruitment or survival for marine mammals, either alone or in combination with other past, present, or ongoing activities. The cumulative impacts of these surveys (*i.e.,* the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions) were addressed as required through the NEPA documents cited above. These documents, as well as the relevant Stock Assessment Reports, are part of NMFS' Administrative Record for this action, and provided the decision-maker with information regarding other activities in the action area that affect marine mammals, an analysis of cumulative impacts, and other information relevant to the determinations made under the MMPA.

Separately, cumulative effects were analyzed as required through NMFS' required intra-agency consultation under section 7 of the ESA, which concluded that NMFS' action of issuing the ITR and subsequent LOAs was not likely to jeopardize the continued existence of listed marine mammals.

We disagree with NRDC's suggestion that we include geophysical surveys in state waters within the scope of this rulemaking. Section 101(a)(5)(A) of the MMPA requires NMFS to make a determination that the take incidental to a ''specified activity'' will have a negligible impact on the affected species or stocks of marine mammals, and will not result in an unmitigable adverse impact on the availability of marine mammals for taking for subsistence uses. NMFS' implementing regulations require applicants to include in their request a detailed description of the specified activity or class of activities that can be expected to result in incidental taking of marine mammals. 50 CFR 216.104(a)(1). Thus, the ''specified activity'' for which incidental take coverage is being sought under section 101(a)(5)(A) is generally defined and described by the applicant. Here, BOEM is the applicant for the ITR in support of industry operators, and we are responding to the specified activity as described in that petition (and making the necessary findings on that basis). As BOEM's PEIS makes clear, BOEM does not have a regulatory role regarding surveys occurring in state waters. (See, *e.g.,* BOEM's PEIS, Chapter 1.1.3)

NRDC's representation of our action—''The agency's decision to evaluate the impacts of state water surveys separately as if they would occur in isolation''—also ignores the fact that we have no information about the possible extent of potential future geophysical survey activity in state waters, including type, amount, duration, timing, location, etc., even if such activity were to occur. Although it may be reasonable to assume that such activity occurs, we have no specific knowledge of any past, present, or reasonably foreseeable future survey activity in state waters. No prospective applicant has contacted NMFS to request incidental take authorization for any such survey activity planned or expected within state waters, on either a programmatic or specific basis. NRDC did not provide any information about the expected future extent of survey activity in state waters.

Acoustic Thresholds

Comment: NRDC expressed concerns regarding NMFS' proposed use of the probabilistic response function described by Wood *et al.* (2012), in which 10 percent, 50 percent, and 90 percent of individuals exposed are assumed to produce a behavioral response (of a sufficient degree of severity to constitute Level B harassment) at exposures of 140, 160, and 180 dB root mean square (rms), respectively. (The function is shifted for the more behaviorally sensitive beaked whales such that 50 percent and 90 percent response probabilities are assumed to occur at 120 and 140 dB rms, respectively.) NRDC stated that the function is inconsistent with the best available science, asserting that behavioral disruptions occur at higher percentages at lower noise exposure levels than those suggested by Wood *et al.* (2012). NRDC's criticism of the function also focused on the use of horizontal displacement studies as the supposed basis of analysis for Wood *et al.* (2012), as well as on the function's nature as a series of step functions. In addition, NRDC expressed concerns that the use of frequency weighting in the Wood *et al.* (2012) approach is inappropriate. NRDC requested that NMFS revise the threshold as suggested in Nowacek *et al.* (2015), which recommended a similar function (but centered on 140 dB rms rather than 160 dB rms), while simultaneously stating that the use of such step-based risk functions is ''biologically irrational.'' Overall, NRDC claims that reliance on this function results in underestimation of impacts. A private citizen echoed some of NRDC's comments on this topic while CRE supports use of the Wood *et al.* approach.

Response: NMFS has been criticized in the past for the use of the single-step 160-dB rms approach. Those criticisms are based on the idea that an approach reflecting a more complex multi-step probabilistic function would more effectively represent the known variation in responses at different levels due to differences in the receivers, the context of the exposure, and other factors, as well as the science indicating that animals may react in ways constituting Level B harassment when exposed to lower received levels. In developing the acoustic exposure analysis for the proposed rulemaking, we reviewed relevant past public comments as well as the best available science, determining that a more complex probabilistic function is indeed better reflective of available scientific information, and that it was appropriate

to take the fundamental step of recognizing the potential for Level B harassment occurring at exposures to received levels below 160 dB rms (as well as the potential for *no* Level B harassment occurring at exposures above 160 dB rms). This approach necessarily also accounts for differential hearing sensitivity by incorporating frequency-weighting functions, as behavioral responses in cetaceans are best explained by the interaction between sound source type and functional hearing group (Gomez *et al.,* 2016). NMFS has determined that the general approach used for this rule—a probabilistic risk function that allows for the likelihood of differential response probability at given received levels on the basis of multiple factors, including behavioral context and distance from the source, and that addresses particularly sensitive species—is appropriate in light of the best available scientific information.

However, because behavioral responses to sound depend on the context in which an animal receives the sound, including the animal's behavioral mode when it hears sounds, prior experience, additional biological factors, and other contextual factors, defining sound levels that disrupt behavioral patterns is extremely difficult. Even experts have not previously been able to suggest specific new criteria due to these difficulties (*e.g.,* Southall *et al.* 2007; Gomez *et al.,* 2016). Agency expertise is appropriate in defining the particular steps at which specific response probabilities are assumed to occur, and while we acknowledge our approach reduces a complex suite of interactions to make reasonable inferences, it is consistent with the best available science.

NRDC expressed concerns regarding our approach by noting the size discrepancy between the area ensonified to 140 dB versus that ensonified to 160 dB, implying that we ignore potential responses at the lower received level. To clarify, the difference between our approach and NRDC's recommendation is solely in the proportion of a population assumed to be taken upon exposure to the specified received level which, as stated above, is determined on the basis of expert judgement based on the best available science. We believe that the Wood *et al.* (2012) function is consistent with the best available science, and is therefore an appropriate approach. Below, we address NRDC's concerns in greater detail.

NRDC referenced ''recent'' research they claim is not consistent with the recommendations of Wood *et al.* (2012). We note that, of the nine studies cited by NRDC, five were published prior to the Wood *et al.* (2012) study, and were therefore available for those authors' consideration (and some were specifically referenced by those authors in discussion of their recommendations). Further, we disagree that the referenced findings are inconsistent with Wood *et al.* (2012). First, a mere reaction to noise exposure does not mean that a take by Level B harassment, as defined by the MMPA, has occurred. For a take to occur requires that an act have ''the potential to disturb by causing disruption of behavioral patterns,'' not simply result in a detectable change in motion or vocalization. NRDC also suggests that some of these studies were not incorporated into Wood *et al.'s* recommendations, or our consideration of those and other potential approaches in context of the available science, and criticize what they view as an over-reliance on horizontal displacement studies as the supposed basis of analysis. While it is true that the majority of available behavioral data focus on avoidance responses, Wood *et al.* (2012) does not mention excluding behavioral studies involving vocal changes, and the precedent Southall *et al.* (2007) specifically incorporates numerous studies that do mention changes in vocalization associated with sound exposure. Thus, these datasets were not excluded and, as discussed in our notice of proposed rulemaking, we adequately considered all studies addressed by NRDC.

Regarding baleen whales, we acknowledge that changes in vocalization have been observed in association with exposure to airgun surveys within migratory and non-migratory contexts (*e.g.,* Castellote *et al.,* 2012; Blackwell *et al.,* 2013; Cerchio *et al.,* 2014). The potential for such effects to occur over relatively large spatial scales is not surprising for species with large communication spaces (*e.g.,* Clark *et al.,* 2009), but we reiterate our disagreement with NRDC's apparent contention that every detected change to vocalizations rises to the level of a take. NRDC cites reports of changes in vocalization, typically for baleen whales, as evidence in support of lower thresholds, claiming these reactions result in biological consequences indicating that the reaction was indeed a take. However, NMFS is not aware of research that provides a well-supported link between the reported reactions at lower received levels and the putative consequences. In conflict with NRDC's interpretation of the literature are documented instances of marine mammal exposure to greater received levels that did not elicit any response (*e.g.,* Malme *et al.,* 1983, 1984, 1985, 1988; McCauley *et al.,* 1998, 2000a, 2000b; Barkaszi *et al.,* 2012; Stone, 2015a; Gailey *et al.,* 2016; Barkaszi and Kelly, 2018).

The received level associated with stoppage of calling for bowhead whales (*Balaena mysticetus*) observed by Blackwell *et al.* (2013, 2015)—a response that may arguably rise to the level of harassment—is consistent with the Wood *et al.* (2012) scheme, in which the potential for take upon exposure to received levels as low as 140 dB is accounted for. Similarly, the findings of Pirotta *et al.* (2014) for harbor porpoise (*Phocoena phocoena*) are consistent with the treatment of behaviorally sensitive species by Wood *et al.,* in which the potential for take at even lower received levels is accounted for (though irrelevant here, as harbor porpoise are not found in the GOM). The response levels reported by McDonald *et al.* (1995) and Di Iorio and Clark (2009) for blue whales (*Balaenoptera musculus*) also comport with the Wood *et al.* function, if we assume that the observed responses equate to harassment (though it is not clear that they do). With regard to NRDC's citation of Clark and Gagnon (2006), a non-peer reviewed white paper, NRDC incorrectly overestimated the area over which the effect was observed by an order of magnitude (the paper discusses an area of 100 x 100 nmi, which equates to 10,000 nmi^2—not 100,000 nmi^2).

In regard to Cerchio *et al.* (2014), it is important to note that received levels provided in this study are those recorded at locations of their underwater recording devices. The authors indicated ''we did not have the ability to locate the singers or the seismic survey vessel, estimate the source level of the pulses, the distance between the source and potentially impacted singers, or the received level of the pulses at the singers.'' The same situation, *i.e.,* actual received levels at the location of the animals are unknown, is true for Castellote *et al.* (2012) and Clark and Gagnon (2006), which provide average background sound levels with and without the presence of airgun surveys. Thus, not having the location of the animals at the time of exposure makes it difficult to draw conclusions based strictly on received level. NMFS has evaluated the papers and determined they are not informative about appropriate Level B harassment thresholds.

Regarding sperm whales, NMFS disagrees that assuming a 100 percent

probability of take of sperm whales upon exposure to survey noise at 135 dB—as suggested by NRDC—is an accurate reflection of the results of the Miller *et al.* (2009) study. While we agree that the work of Miller *et al.* (2009) suggests that sperm whales in the GOM may be susceptible to disruption of foraging behavior upon exposure to relatively moderate sound levels, NRDC incorrectly interprets results of the study in claiming that sperm whale ''foraging success'' was found to ''decline significantly.'' Instead, the authors report that buzz rates (a proxy for attempts to capture prey) were approximately 20 percent lower, meaning that the appropriate interpretation would be that foraging activity (versus foraging success) was reduced by 20 percent (Jochens *et al.,* 2008). Of the eight whales tagged in that study, only one was observed to actually cease foraging.

Moreover, while we do believe that these results support a conclusion that exposure to survey noise can impact foraging activity, other commenters have interpreted them differently, *e.g.,* by focusing on the finding that exposed whales did not change behavioral state during exposure or show horizontal avoidance (a finding replicated in other studies, *e.g.,* Madsen *et al.,* 2002a; Winsor *et al.,* 2017). Importantly, the observed effect was not statistically significant and, as reported by the authors, constituted ''subtle effects on their foraging behavior.'' Furthermore, the authors of the Wood *et al.* (2012) study explicitly described their consideration of Miller *et al.* (2009) in the development of their recommended criteria. Therefore, the Wood *et al.* (2012) recommendation is indeed consistent with the Miller *et al.* (2009) study.

In referencing Bowles *et al.* (1994), NRDC fails to state that the observed cessation of vocalization was likely in response to a low-frequency tone (dissimilar to airgun signals), though a distant airgun survey was noted as producing signals that were detectable above existing background noise. NRDC recommends that NMFS base a sperm whale threshold on the findings of a separate study of exposure of sperm whales and other species to sonar signals (Miller *et al.,* 2012). NMFS disagrees that behavioral response data for sperm whales exposed to mid-frequency active sonar (Miller *et al.,* 2012) is more appropriate than using data from the airgun exposures described by Miller *et al.* (2009) and already considered within the Wood *et al.* function. Furthermore, the alternative recommendation of Nowacek *et al.* (2015), which is repeatedly mentioned by NRDC as a more appropriate alternative to Wood *et al.* (2012), does not make a distinction between sperm whales and other odontocetes and instead advocates for a criteria that treats all marine mammal species the same (we address this in greater detail below).

Regarding other odontocetes, NRDC's representation of the available scientific information is also inaccurate. Miller *et al.* (2005) specifically state that ''[s]ighting rates at distances of 10–20 km from the airgun array were significantly lower than those in areas 20–30 km from the airgun array, where sighting rates were unexpectedly high'' (*i.e.,* the study indicates sighting rates of beluga whales (*Delphinapterus leucas*) were lower, not ''100% avoidance'' as claimed by NRDC). Miller *et al.* (2005) reported seven aerial beluga whale sightings from 8 to 18 km from the survey vessel and two vessel-based beluga whale sightings at 1.5 and 2.5 km from the survey vessel. Furthermore, Southall *et al.* (2007) described the findings of the Miller *et al.* (2005) study as temporary avoidance behaviors at these lower received levels, while Gomez *et al.* (2016) (which NRDC agrees reflects the best available science) evaluated Miller *et al.* (2005) based on a received level of 150 dB. Thus, the Wood *et al.* (2012) approach does capture responses associated with this study.

Additionally, Wood *et al.* (2012) has the advantage of accounting for sensitive species such as beaked whales, meaning that a response of a beaked whale at 140 dB (as cited by NRDC) is covered within the Wood *et al.* (2012) recommended criteria (*e.g.,* Wood *et al.* assumes 90 percent of an exposed beaked whale population will respond at 140 dB). If Nowacek *et al.* (2015) was instead used, as advocated by NRDC, the probability of response would only be 50 percent at 140 dB.

It should be noted that the systematic review by Gomez *et al.* (2016), cited by NRDC in support of their position, found that received level was not appropriate as the sole indicator of behavioral response. For example, this review shows that ''low'' effects were actually found to reach peak probability at a higher received level than ''moderate'' effects for baleen whales. As we discussed in our notice of proposed rulemaking, the results of the Gomez *et al.* (2016) review are not inconsistent with Wood *et al.* (2012). With regard to NRDC's comment that the authors consider their results ''non-conservative,'' Gomez *et al.* (2016) only indicates that they may have scored the severity of vocal responses higher if they had more information on the ecological significance of these types of responses. There is no indication elsewhere in Gomez *et al.* (2016) that their overall results and analysis are ''non-conservative.''

NRDC repeatedly cites Nowacek *et al.* (2015) in public comments. We note first that while NRDC repeatedly refers to this paper as a ''study'' (implying that it presents new scientific data or the results of new analyses of existing scientific data), the paper (which is co-authored by the author of NRDC's comment letter) in fact makes policy recommendations rather than presenting any new science. The more substantive reviews presented by Southall *et al.* (2007) and Gomez *et al.* (2016) were unable to present any firm recommendations, as noted above. We addressed the Nowacek *et al.* (2015) approach relative to the Wood *et al.* (2012) approach, in context of the best available scientific information, in detail in our notice of proposed rulemaking. Then, as now, we found that those recommendations are not justified by the available scientific evidence.

Other than suggesting a 50 percent midpoint for a probabilistic function, Nowacek *et al.* (2015) offer minimal detail on how their recommended probabilistic function should be derived/implemented or exactly how this midpoint value (*i.e.,* 140 dB rms) was derived (*i.e.,* what studies support this point). In contrast with elements of a Level B harassment function that NRDC indicates as important, Nowacek *et al.* (2015) does not make distinctions between any species or species groups and provides no quantitative recommendations for acknowledging that behavioral responses can vary by species group and/or behavioral context. In summary, little substantive support is provided by Nowacek *et al.* (2015) for the proposal favored by NRDC. Few studies are offered in support of the recommended midpoint and the proposal is offered only in a one-page supplementary document. The Nowacek *et al.* (2015) approach is not well-supported scientific consensus, as NRDC's comment suggests.

Additionally, the application of the Nowacek *et al.* (2015) approach disregards the important role that distance from a source plays in the likelihood that an animal will respond to a given received level from that source type in a particular manner. By assuming, for example, a 50 percent midpoint at 140 dB rms, the approach implies an unrealistically high probability of marine mammal response

to signals received at very far distances from a source (*e.g.,* greater than 50 km). DeRuiter *et al.* (2013) found that beaked whales exposed to similar received levels responded when the sound was coming from a closer source and did not respond to the same level received from a distant source. Although the Wood *et al.* (2012) approach does not specifically include a distance cut-off, the distances at which marine mammals are predicted to respond better comport with the distances at which behavioral responses have been detected and reported in the literature.

NRDC also criticizes the use of weighting functions in evaluating potential Level B harassment, and specifically criticizes use of the M-weighting scheme of Southall *et al.* (2007). Gomez *et al.* (2016) suggest that incorporation of frequency-weighting is necessary to account for differential hearing sensitivity, as behavioral responses in cetaceans are best explained by the interaction between sound source type and functional hearing group. That is, implementing weighting functions allows for consideration that different marine mammal groups do not hear varying frequencies of sound equally well. Thus, it is appropriate to account for sounds below a group's best hearing range having a lower likelihood of resulting in a behavioral response (let alone that animals are likely unable to effectively detect sounds at frequencies completely outside their hearing range).

The M-weighting functions are described in Southall *et al.* (2007) as ''intentionally precautionary (wide)'' (as opposed to the weighting functions used in NMFS' 2018 Revised Technical Guidance [2] to account for noise-induced hearing loss) and are used to account for the functional hearing ranges of different marine mammal hearing groups. This frequency weighting scheme was intentionally selected because it is more conservative in accounting for hearing sensitivity (as is appropriate in evaluating potential Level B harassment) than are more recently developed filters designed to better assess potential noise-induced hearing loss.

NRDC asserts that because M-weighting assumes that mid- and high-frequency (MF and HF) cetaceans are relatively insensitive to noise below 1 kHz, it is likely that the incorporation of M-weighting has a significant downwards effect on take estimates. This is incorrect. The table below illustrates the impact of M-weighting functions on frequencies ranging from 100 Hz to 1 kHz.

TABLE 3—IMPACT OF M-WEIGHTING FUNCTIONS ON FREQUENCIES RANGING FROM 100 HZ TO 1 KHZ

	Weighting (−dB)			
Hearing group	1 kHz	500 Hz	250 Hz	100 Hz
Mid-frequency Cetaceans	−0.186 dB	−0.76 dB	−2.77 dB	−10 dB.
High-frequency Cetaceans	−0.034 dB	−1.33 dB	−4.45 dB	−13.6 dB.

We see that, at 250 Hz and above, the M-weighting functions do not result in a significant reduction (less than 3 dB for MF cetaceans and less than 5 dB for HF cetaceans). Furthermore, the lower bound of the functional hearing range of these groups is 150 Hz for MF cetaceans and 275 Hz for HF cetaceans (*i.e.,* sounds below 100 Hz, where most energy in airgun noise is found and where M-weighting results in the greatest reductions, are outside functional hearing range). At 1 kHz, where these species are most likely to be able to detect and respond to airgun noise, there is very little assumed reduction in sensitivity.

Finally, NRDC advocates for the use of a linear risk function as opposed to the multiple step function of Wood *et al.* (2012), stating that linear risk functions are scientifically accepted methodology that better acknowledge individuals may vary in responsiveness. Although NRDC does not specifically define what they mean by ''linear risk function,'' NMFS assumes a linear risk function is a smooth, continuous function, as opposed to a function defined by multiple steps, as is the case of Wood *et al.* (2012) (and Nowacek *et al.* (2015), which NRDC recommends as an alternative to Wood *et al.*). NRDC states that Wood *et al.* (2012) ''has a significant negative bias on take estimates'' where ''all exposures from 140 dB to 159.9 dB are considered to produce the same risk.'' While it is true that relying upon Wood *et al.* (2012) results in all exposures within a particular step (*e.g.,* 140 dB and 159.9 dB) having the same risk, and future risk functions may be further refined by incorporating more steps, Wood *et al.* (2012) better represents known variation in behavioral responses at different received levels than Nowacek *et al.* (2015), which provides only a suggested midpoint for a risk function without any guidance on what should be done above or below this midpoint, much less the linear risk function NRDC states should be used. Wood *et al.* (2012) does acknowledge that responsiveness varies with received levels, while relying on broad steps, rather than a continuous function. These broad steps allow for easier implementation of a risk function and are more practical for most users, which is an important consideration, especially in the context of users that may not have the ability or access to more sophisticated modeling (*i.e.,* non-Navy users). Therefore, if new linear risk functions become available, NMFS may still provide a more simplistic function broken down in broad steps, so that it can be applied by all users.

In referencing NMFS' proposal to use the recommendations of Wood *et al.,* and prior to even attempting to characterize the scientific evidence, NRDC states, ''Incredibly [NMFS'] approach produces take estimates that are substantially lower than the much-criticized, non-conservative, 160 dB threshold [. . .].'' NRDC (1) mischaracterizes criticism of the historic 160-dB threshold as being about the results of its use, rather than being about whether it adequately represents the best available science; (2) introduces an MMPA standard that does not exist in the statute (implying that NMFS is being unlawfully or improperly ''non-conservative''); and (3) suggests that NRDC favors whichever method of evaluating potential Level B harassment returns the highest estimate. This is repeated later in their comment when they assert that use of the Wood *et al.* recommendations are ''arbitrary and capricious'' because use of the recommendations ''appears, in its results, even less conservative than the outdated 160 dB threshold.'' However,

[2] NMFS. 2018. 2018 revision to: Technical guidance for assessing the effects of anthropogenic sound on marine mammal hearing (Version 2.0). NOAA Technical Memorandum NMFS–OPR–59, National Marine Fisheries Service: 178.

selection of an evaluation scheme on the basis of the results it returns, rather than on how well the scheme reflects the available scientific literature, would be truly arbitrary and capricious and run counter to our mandates.

Overall, we reiterate the lack of scientific consensus regarding what criteria might be most appropriate for evaluating Level B harassment. Defining sound levels that disrupt behavioral patterns is difficult because responses depend on complex, difficult to predict contextual factors much more so than received level. Therefore, levels at which responses occur are not necessarily consistent and can be difficult to predict. However, although better methods of assessing likely behavioral response to acoustic stimuli than the relatively simple multi-step function used here may be forthcoming from the scientific community, NMFS is compelled to move forward with the best available information. We believe the recommendations of Wood *et al.* (2012) reflect the best available science.

Comment: NRDC notes NMFS' reference to a ''preliminary analysis'' in the discussion of acoustic thresholds for Level B harassment and asserts that NMFS must make the analysis publicly available and allow opportunity for public comment before finalizing the rule.

Response: Our use of the phrase ''preliminary analysis'' in the notice of proposed rulemaking merits some clarification. The particular analysis we referred to is not in and of itself pre-decisional or preliminary. Rather, it is a discrete analytical product with a result that will not change—it is one way (non-parametric regression method) of looking at one subset (Malme *et al.,* 1984, 1988; Houser *et al.,* 2013; Antunes *et al.,* 2014; Moretti *et al.,* 2014) of the data related to marine mammal behavioral responses to intermittent sound. NMFS conducted an analysis of relevant data starting with the premise of deriving a generic exposure-response curve using previously published exposure-response curves. This exercise was conducted as part of an ongoing separate and broader agency effort to evaluate behavioral response data. We also clarify that the Level B harassment criteria for this rule did not substantively rely upon that analysis.

Comment: NRDC claims that NMFS misapplies the MMPA's statutory definition of harassment by adopting a probability standard other than ''potential'' in setting thresholds for auditory injury, stating that a take estimate based on ''potential'' should either count take from the lowest exposure level at which hearing loss can occur or establish a probability function that accounts for variability in the acoustic sensitivity of individual marine mammals. NRDC states that NMFS instead derived auditory injury thresholds from average exposure levels at which tested marine mammals experience hearing loss, which discounts instances of hearing loss at lower levels of exposure. The comment further states that for purposes of take estimation, thresholds based on mean or median values will lead to roughly half of an exposed cohort experiencing the impacts that the threshold is designed to avoid, at levels that are considered ''safe,'' therefore resulting in substantial underestimates of auditory injury. NRDC makes similar statements with regard to the criteria for Level B harassment.

Response: The 2018 Revised Technical Guidance's (NMFS, 2018) onset thresholds for TTS for non-impulsive sounds encompass more than 90 percent of available TTS data (*i.e.,* for mid-frequency cetaceans, only two data points are below the onset threshold, with maximum point only 2 dB below), and in some situations 100 percent of TTS data (*e.g.,* high-frequency cetaceans; although this group is data-limited). Thus, the 2018 Revised Technical Guidance thresholds provide realistic predictions, based on currently available data, of noise-induced hearing loss in marine mammals. For impulsive sounds, data are limited to two studies, and NMFS directly adopted the TTS onset levels from these two studies for the applicable hearing groups.

Our **Federal Register** notice announcing the availability of the original 2016 Technical Guidance (81 FR 51694; August 4, 2016; NMFS, 2016), indicated that onset of auditory injury (*i.e.,* permanent threshold shift (PTS)) equates to Level A harassment under the MMPA. We explained in that notice that because the acoustic thresholds for PTS conservatively predict the onset of PTS, they are inclusive of the ''potential'' language contained in the definition of Level A harassment. See 81 FR 51697, 51721.

Regarding Level B harassment, based on the language and structure of the definition of Level B harassment, we interpret the concept of ''potential to disturb'' as embedded in the assessment of the behavioral response that results from an act of pursuit, torment, or annoyance (collectively referred to hereafter as an ''annoyance''). The definition refers to a ''potential to disturb'' by causing disruption of behavioral patterns. Thus, an analysis that indicates a disruption in behavioral patterns establishes the ''potential to disturb.'' A separate analysis of ''potential to disturb'' is not needed. In the context of an ITR such as this, our analysis is forward-looking. The inquiry is whether we would reasonably expect a disruption of behavioral patterns; if so, we would conclude a potential to disturb and therefore expect Level B harassment. We addressed NRDC's concerns regarding the scientific support for the Level B harassment criteria in a previous comment response.

Comment: NRDC raised concerns regarding use of NMFS' 2018 Revised Technical Guidance (NMFS, 2018), claiming that the guidance is not based on the best available science and underestimates potential auditory injury. We also note that NRDC's comment references an attachment that was not provided.

Response: The 2018 Revised Technical Guidance (NMFS, 2018) is a compilation, interpretation, and synthesis of the scientific literature that provides the best available information regarding the effects of anthropogenic sound on marine mammals' hearing. The 2016 Technical Guidance was classified as a Highly Influential Scientific Assessment and, as such, underwent three independent peer reviews, at three different stages in its development, including a follow-up to one of the peer reviews, prior to its dissemination by NMFS. In addition, there were three separate public comment periods, during which time NMFS received and responded to similar comments on the guidance (81 FR 51694), and more recent public and interagency review under Executive Order 13795. While new information may help to improve the guidance in the future, and NMFS will review the available literature to determine when revisions are appropriate, the final guidance reflects the best available science and all information received through peer review and public comment. The concerns raised by NRDC have been addressed by NMFS in responses associated with the guidance (see *www.fisheries.noaa.gov/national/marine-mammal-protection/marine-mammal-acoustic-technical-guidance*). In light of these considerations, NRDC's argument that use of the guidance is ''arbitrary and capricious'' is unpersuasive. As was stated in our notice of proposed rulemaking, NMFS considers the 2018 Revised Technical Guidance to represent the best scientific information currently available and, given the incorporation of multiple peer reviews and public comment opportunities during its development, we did not solicit and are not

responding in detail to comments concerning the contents of the Technical Guidance (NMFS, 2016, 2018), as such comments are outside the scope of this rulemaking.

NRDC also referenced information related to occupational noise standards established by the National Institute of Occupational Safety and Health (NIOSH). Human noise risk assessments (NIOSH, 1998) are not equivalent (or applicable) to thresholds provided in the guidance, because they are used to predict hearing loss based on a daily 8-h exposure over 40 years (*i.e.,* current marine mammal TTS data are only available to predict exposure periods of 24-h or less and cannot be used to assess or predict risk associated with a lifetime of exposure) and are based on larger sample sizes of human listeners (*e.g.,* NIOSH 1972 and 1997 risk assessments were based on a sample size of 1,172 people). As pointed out in Wright (2015), NIOSH criteria provide a 95 percent confidence interval for their human noise standards but also allow for an excess risk of material hearing impairment, defined as an average threshold elevation for both ears that exceeds 25 dB, of eight percent (*i.e.,* human noise standards limits do allow for some risk; risk is not zero percent and specifically that eight percent of the population is still capable of developing noise-induced hearing loss exceeding 25 dB when exposed to the 85 dB NIOSH level).

Finally, we note that a group of scientists recently published an update to their original, seminal publication concerning noise exposure criteria to predict the onset of auditory effects in marine mammals (Southall *et al.,* 2007, 2019a), the topic of this comment. The newer publication evaluates the recommendations of the original publication in light of subsequent scientific findings, including those findings that form the basis for the recommendations of NMFS (2018). While Southall *et al.* (2019a) provide recommendations for future research that could lead to revisions, the fundamental aspects of an evaluation of the onset of auditory effects for the marine mammals considered in this ITR (*i.e.,* auditory weighting functions and noise exposure criteria) are identical to those presented by NMFS (2018) and incorporated into the modeling process developed for this ITR.

Sound Field Modeling

Comment: NRDC asserts that NMFS has not appropriately accounted for hard-bottom habitat in our propagation analysis, stating that there are areas of hard bottom in the GOM and that we cannot assume that proposed surveys will take place entirely in areas with soft or sandy bottoms.

Response: Sound propagation modeling performed in support of BOEM's PEIS and this ITR was developed to adequately represent a wide range of conditions for a variety of parameters, including bottom composition. NMFS does not assume that hard bottom does not exist in the GOM, but rather that it is not sufficiently predominant to warrant specific representation in a propagation modeling exercise covering the whole GOM. As shown in Figure 50 of the modeling report—depicting a compilation of surficial sediment composition available through a hydrographic survey database from NOAA's National Ocean Service and its predecessor, the U.S. Coast and Geodetic Survey—muds and sands are the dominant substrate types throughout the GOM (as stated in our notice of proposed rulemaking), with only small, scattered areas of hard bottom. The Minerals Management Service (MMS) report cited by NRDC, which concerns conversion of seafloor maps existing at the time to MMS-approved GIS format for use in geohazards evaluations, does not contradict this.

Substrate types for propagation modeling are based on grain size, porosity, and shear velocity, etc., and do not include ''hard'' or ''coral'' bottom. It is also important to note that, while some hard bottom habitats would increase propagation due to increased reflectivity, NRDC's statement that coral bottom can ''significantly increase propagation of airgun noise'' is erroneous. In fact, the roughness of the coral habitat would cause severe bottom loss due to scattering. As noted above, bottom composition in the region is mostly mud and sand and, therefore, selection of parameter values associated with these bottom types for propagation modeling is appropriate. We also note that, for the shelf region of the eastern GOM, where sand is predominant, a larger grain size value was selected to account for this. The acoustic modeling provided by Zeddies *et al.* (2015, 2017a) appropriately and reasonably accounts for variability in bottom composition throughout the region.

The modeling process requires the use of simplifying assumptions about oceanographic and seabed parameters, and these assumptions carry some uncertainty, which may lead to uncertainty in the form of variance or error in individual model outputs and in the final estimates of marine mammal acoustic exposures. It is for this reason that parametric uncertainty analysis was performed to evaluate the effects of this uncertainty ''envelope.'' (This analysis was summarized in our notice of proposed rulemaking and described in detail in the modeling report. NRDC does not reference this assessment.) Uncertainties in the results of acoustic propagation modeling were estimated by examining the variation in model outputs when model inputs were offset by realistic errors. The environmental properties were selected so that the median, or expected, value could be compared to a worst-case outcome (*e.g.,* assuming an extreme case of a more reflective bottom), which was generated by selecting extreme values for several input parameters. These comparisons represent the maximum errors in the predicted sound fields that result from incorrect specification of the parameters tested. As described in the modeling report, the greatest uncertainty due to geoacoustic parameters of the sea bottom is 4 dB (in the deep zone). The effect of the geoacoustic uncertainty increased when the sound speed profile was downwardly refracting. In the case of a surface channel (slope zone, winter season), the average difference between the median and worst-case was only 0.5 dB, *i.e.,* in this case the geoacoustic parameters had virtually no effect on the sound levels at the top of the water column (where marine mammals are likely to be present).

Marine Mammal Densities

Comment: NRDC criticized NMFS' use of the Roberts *et al.* (2016) model outputs for purposes of deriving abundance estimates, as used for comparison to exposure estimates herein. NRDC states that we should use the NMFS Stock Assessment Report (SAR) abundance estimates for this purpose, while allowing that model-predicted abundance estimates may be used for ''data-deficient'' stocks. NRDC implies that use of model-predicted abundances would overestimate actual abundances, apparently based on the fact that the density models are informed by many years of data rather than only the most recent year of data. Where model-predicted abundance estimates are used, NRDC recommends that we adjust the averaged model outputs to the lower bound of the standard deviation estimated by the model for each grid cell.

Response: The approach recommended by NRDC is inappropriate. Comparing take estimates generated through use of the outputs of a density model to an unrelated abundance estimate provides a meaningless comparison. As explained in our notice of proposed rulemaking,

we compare the take estimates generated through use of the density outputs to the abundance predicted through use of the model precisely to provide a meaningful comparison of predicted takes to predicted population.

The two potential sources of abundance data—the output of cetacean density models (Roberts *et al.,* 2016) and the available SARs data—provide different results, with the SARs estimates typically much lower. Differences between the two separate sets of abundance estimates result from key methodological differences. In order to produce sufficiently reliable and detailed density surfaces (maps), Roberts *et al.* (2016) combined multiple NMFS cetacean surveys and modeled density using a habitat-based approach (Miller *et al.,* 2013), while the SARs estimates utilized only the most recent NMFS survey and estimated density using traditional distance sampling (Buckland *et al.,* 2001). The two approaches, while compatible and based on a common statistical framework (distance sampling), can yield different results, depending on complex factors such as whether population sizes have changed, or species habitat preferences have shifted over time. Neither approach will necessarily yield a higher abundance estimate than the other, but use of multiple years of data in developing an abundance estimate minimizes the influence of interannual variation in over- or underestimating actual abundance. By linking sightings with environmental conditions, habitat-based density layers represent smoothed surfaces that are not biased by anomalous conditions. This makes them particularly appropriate for the five-year timeframe of this ITR, which will span varying environmental conditions.

To illustrate why this smoothing of interannual variation helps to create a meaningful comparison to take estimates, we provide the extreme example of the GOM Clymene dolphin. NMFS' three most recent SAR abundance estimates for this stock have fluctuated between 129 and 17,355 animals, *i.e.,* varying by a maximum factor of more than 100. For most species, such fluctuations across these ''snapshot'' abundance estimates (*i.e.,* that are based on only the most recent year of survey data) reflect interannual variations in dynamic oceanographic characteristics that influence whether animals will be seen when surveying in predetermined locations, rather than any true increase or decline in population abundance. In fact, NMFS' SARs typically caution that trends should not be inferred from multiple such estimates, that differences in temporal abundance estimates are difficult to interpret without an understanding of range-wide stock abundance, and that temporal shifts in abundance or distribution cannot be effectively detected by surveys that only cover portions of a stock's range (*i.e.,* U.S. waters). The corresponding density model for Clymene dolphins predicts a mean abundance of 11,000 dolphins. Therefore, in this example, NRDC would have us compare takes predicted by a model in which 11,000 dolphins are assumed to exist against an abundance estimate of 129 dolphins. Our goal in assessing predicted takes is to generate a meaningful comparison, which is accomplished through use of the model-predicted abundance.

A second key methodological difference explains the tendency for the model-predicted abundance estimates to be higher than the SARs estimates. SAR abundance estimates are typically underestimates of actual abundance because they do not account for bias on the ability of observers to detect animals—in contrast, Roberts *et al.* (2016) do account for availability bias and perception bias on the probability of sighting an animal. Availability bias occurs when a model assumes that animals are always available to be observed by the survey team when, in fact, they are not. Cetaceans are diving animals; while submerged, they are unavailable. Assuming diving animals are always available results in an underestimation of abundance, because while they are diving they are present but not counted by the survey team. Perception bias occurs when a model assumes that animals will always be detected when they are on the survey trackline, when, in fact, detection is not certain.

With regard to bias correction, NRDC suggests that such corrections are incorporated into NMFS' GOM SARs. However, some correction has been performed only for the more-recently surveyed shelf and coastal stocks of bottlenose dolphin, *i.e.,* four out of the 25 stocks of GOM marine mammals considered herein. NRDC also strangely suggests that ''NMFS doesn't show that applying trackline correction factors consistent with Barlow (2015), who reported trackline detection probabilities for marine mammals in the Pacific, would result in population estimates consistent with the ones the agency has derived from Roberts *et al.* (2016).'' We can safely assume that these would be consistent, given that the models developed by Roberts *et al.* (2016) considered, and in some cases directly incorporated, the correction factors of Barlow (1999) and Barlow and Forney (2007) (the original work upon which Barlow (2015) builds).

These issues, which are typical for NMFS' SAR abundance estimates, are particularly exacerbated for GOM stocks. For the majority of stocks, the most recent abundance estimates are derived from the results of vessel-based surveys in 2009, *i.e.,* even if one believes that such ''snapshot'' estimates are most appropriate, the GOM estimates are out of date and NMFS' guidelines state that data greater than eight years old should not be used for abundance estimates. (We note that more recent survey effort has been conducted, but corresponding abundance estimates have only recently been made available via unpublished draft SARs for most stocks that have yet to be available for public comment or finalized at the time the analyses were completed for these regulations.) More important for cryptic species, *i.e.,* those species that spend little time at the surface and/or are difficult to detect when at the surface, is the lack of any bias correction. For example, the Cuvier's beaked whale—a cosmopolitan species and perhaps the most widespread and most commonly observed species of beaked whale—is officially estimated by NMFS to number 74 individuals in the GOM, a clear underestimate. For purposes of reference, current abundance estimates for the U.S. Pacific and Atlantic stocks—for which some bias corrections have been made—are 3,274 and 5,744 individuals, respectively. Marine mammal scientists working in the GOM have acknowledged that the likely abundance of beaked whales (and other cryptic species, such as *Kogia* spp.) should be expected to be closer to the values predicted by Roberts *et al.* (2016) than those given in the SARs. For example, Dias and Garrison (2016) state that current abundance estimates for *Kogia* spp. may be considerably underestimated due to the cryptic behavior of these species and difficulty of detection in Beaufort sea state greater than one, while density estimates for certain species derived from long-term passive acoustic monitoring are much higher than are estimates derived from visual observations (*e.g.,* Hildebrand *et al.,* 2015). Separately, NMFS' announcement of a negative 90-day finding on a petition to list the GOM Cuvier's beaked whale as endangered (84 FR 11058) included adoption of the abundance estimate of Roberts *et al.* (2016) as being most appropriate. Roberts *et al.* (2015b) summarize this situation: ''Because [NMFS' SAR] estimates are very low relative to the

abundance we estimated, it is likely that if our [density] results are used to estimate population-level impacts from potentially harmful human activities (*i.e.* ''takes'', as defined by the Marine Mammal Protection Act), the estimated impacts will be very high [. . .].''

NRDC suggests that the SARs are an appropriate representation of ''actual'' abundance, whereas the Roberts *et al.* (2016) predictions are not. NRDC also appears to claim, without substantiation, that an abundance estimate derived from multiple years of data would typically overestimate actual abundance. However, these estimates are not directly comparable—not because one represents a ''snapshot,'' while one represents multiple years of data—but because one does not correct for one or more known biases against the probability of observing animals during survey effort, while the other does. Because of this important caveat, NMFS' SAR abundance estimates should not be considered ''actual'' abundance more than any other accepted estimate. Therefore, when multiple estimates of a stock's abundance are available, they should be evaluated based on quality, *e.g.,* does the estimate account for relevant biases, does it minimize the effect of interannual variability, and, importantly, should provide a meaningful comparison. In this light, our use of the Roberts *et al.* (2016) abundance estimates are not a ''radical departure from past practice,'' as claimed by NRDC. Our practice, as mandated by our implementing regulations, is to use the best scientific evidence available. NRDC states that ''NMFS cannot simply discard this Congressionally mandated estimate in favor of the larger population estimates derived from its misapplication of the [. . .] model.'' The statute does not mandate use of the SARs for comparison with take estimates.

Aside from their failure to explain the claim of ''misapplication,'' and the unwarranted implication that we must make use of the model-generated abundance estimates simply because they are larger (and not because they are the best available scientific information), NRDC errs in asserting that the MMPA requires that we use SAR abundance estimates. Section 117 of the MMPA requires the development of SARs, and dictates certain information that SARs must provide. However, there is no part of the MMPA that requires the population abundance estimates given in a SAR to be used in any specific application and, importantly, the MMPA does not even require that the SAR include a best population estimate. The MMPA requires only that SARs provide a minimum population estimate, which is used in the formulation of a potential biological removal (PBR) level, which is then required by section 118 of the MMPA for certain uses in the management of marine mammal take incidental to commercial fisheries. In summary, NRDC's comment reflects an inaccurate interpretation of the available information, and NMFS disagrees with the approach recommended by the comment.

Take Estimates

Comment: The Associations state that ''NMFS substantially overestimates the number of incidental takes predicted to result'' from the specified activity. The comment goes on to discuss the modeling that is ''intentionally designed to overestimate takes,'' and discusses the findings of the *Acoustic Exposure Model Variable Analysis* (Zeddies *et al.,* 2017b) (which was provided for public review in association with the proposed rule). Other industry commenters and the CRE echo these points.

Response: The commenters' statements that NMFS has substantially overestimated takes are incorrect. We used current scientific information and state-of-the-art acoustic propagation and animal movement modeling to reasonably estimate potential exposures to noise. Chevron stated that the modeling used ''admittedly erroneous models'' but provides no supporting information or citation. Chevron further describes ''errors in methodology'' and ''admissions'' that the modeling methodology and the data used are not ''rigorous science,'' while asserting that NMFS ''repeatedly rejects and omits science that is available.'' Chevron's comments do not provide any illumination as to what specifically these errors may be, what data it believes is flawed, or what ''science'' NMFS has rejected or omitted. NMFS has considered all relevant available scientific information.

To summarize in a basic way, it is foreseeable that a large amount of noise-producing activity, such as BOEM's application and PEIS describe, results in a substantial number of predicted acoustic exposures. Despite recommending that ''a better approach would be to use the best and most likely values for all of the input variables to the model,'' the Associations' comments do not include substantive recommendations for improvement. They do not specify which of the many data inputs are ''conservative'' or to what degree, nor do they recommend alternatives to the choices that were painstakingly documented in developing the modeling.

As was noted in the notice of proposed rulemaking, NMFS disagrees with the Associations' characterization of the modeling and with certain statements in BOEM's draft PEIS regarding the modeling that are frequently cited by the Associations. As we stated in the notice, BOEM's draft PEIS included unsupported and erroneous statements that characterized the modeling results—which BOEM and NMFS developed collaboratively—as ''unrealistically high,'' ''overly conservative,'' and representative of a ''worst-case scenario,'' among other things. These statements were included in that document without NMFS' prior knowledge. Importantly, as a result of NOAA's public comments on that draft PEIS in its role as a cooperating agency, the statements referenced by the commenters were properly removed from the final PEIS, which more accurately characterizes the modeling process and results.

The Associations take out of context a number of statements from the discussion in NMFS' notice of proposed rulemaking of the modeling process, data inputs, and user selections. We address these in turn:

- The Associations quote NMFS as stating that our modeling likely ''leads to substantial overestimates of the numbers of individuals potentially disturbed [and] . . . to an overestimation of the population-level consequences of the estimated exposures'' and that, even with the application of a correction factor, the modeling still represents an ''overestimate.'' (83 FR 29261, 29291). But the full statement in our notice is as follows: ''While the modeling provides reasonable estimates of the total number of instances of exposure exceeding Level B harassment criteria, it is likely that it leads to substantial overestimates of the numbers of individuals potentially disturbed, given that all animals within the areas modeled are unlikely to be completely replaced on a daily basis. Therefore, in assuming an increased number of individuals impacted, these results would lead to an overestimation of the potential population-level consequences of the estimated exposures.'' Our point was that, although the modeling provides reasonable estimates of the total amount of acoustic exposures, it would be an overestimate to interpret this total as representative of the number of individuals impacted. We then discussed our development of a correction factor to address this issue

(see Table 12 of the notice of proposed rulemaking).

• The Associations highlight our ''admission'' that the modeling is purposely conservative. We address this below by explaining why, in some cases, it is appropriate to make reasonably conservative choices.

• The Associations mischaracterize the Wood *et al.* (2012) Level B harassment criteria as ''expressly rejecting the best available science.'' In discussing different versions of frequency weighting functions, we stated that ''Type III filters'' are better designed to predict the onset of auditory injury, while explaining why use of ''Type I filters'' (or M-weighting) was appropriate for use in evaluation of Level B harassment (83 FR 29248). The Type III filters, as adopted by NMFS (2018), were appropriately used for evaluation of Level A harassment (which includes auditory injury).

• Although characterized as ''conservative'' NMFS has made reasonable choices through the application of professional judgment by subject matter experts. For example, using single airgun modeling results in lieu of boomer results was a choice made for computational efficiency precisely because it was not significantly influential on the results. (83 FR 29251). And selecting an estimate for standard deviation in an investigation of model sensitivity to source level variance was in response to a concern of the commenters—overall sensitivity of the model to uncertainty in input parameters and the resulting uncertainty in model results—and had no bearing on the model results (83 FR 29257).

• The Associations also highlight our statement that ''the lack of aversion within the animal movement modeling process results in overestimates of potential injurious exposure,'' without noting that we corrected this issue through a post-hoc correction to reasonably account for aversion.

The modeling required that a number of assumptions and choices be made by subject matter experts and, in most cases, the most representative data or methods were used. As we acknowledged, in some cases, some assumptions or choices are purposely conservative (where the conservative choice is reasonable) to minimize the likelihood of underestimating the potential impacts on marine mammals represented by a specified level of survey effort. These are reasonable, scientifically acceptable choices that do not create, as the Associations state, ''multiplicatively accumulating bias as the conservative assumptions interact with each other to multiply uncertainty''). To the extent that the results of the modeling may be conservative, they are the most credible, science-based information available at this time (assuming the notional 8,000 in^3 array and activity level projections specified by BOEM in the petition).

These comments provide no reasonable justification as to why the modeling results in overestimates of take. The Associations instead seem to rely on the incorrect premise that real-time mitigation would somehow reduce actual levels of acoustic exposure (versus reducing the duration and/or intensity of exposure). NMFS disagrees that ''each of the inputs is purposely developed to be conservative''—again, the Associations do not provide any support for this assertion, and none is to be found in the administrative record for this action. Although it may be correct that some conservativeness accumulates throughout the analysis, the Associations do not adequately describe the nature of conservativeness associated with model inputs or the degree to which such conservativeness ''accumulates'' (either quantitatively or qualitatively), nor do they offer more appropriate alternatives.

The modeling effort incorporated representative sound sources and projected survey scenarios (both based on the best available information obtained by BOEM), physical and geological oceanographic parameters at multiple locations within the GOM and during different seasons, the best available information regarding marine mammal distribution and density, and available information regarding known behavioral patterns of the affected species. Current scientific information and state-of-the-art acoustic propagation and animal movement modeling were used to reasonably estimate potential exposures to noise. The notice of proposed rulemaking described all aspects of the modeling effort in significant detail, including numerous investigations (test scenarios) designed by the agencies to understand various model sensitivities and the effects of certain choices on model results. The modeling report itself was provided for public review, in association with both BOEM's PEIS and NMFS' notice of proposed rulemaking.

We quote the Marine Mammal Commission's public comment on this topic: ''Complex sound propagation and animat modeling was used to estimate the numbers of potential takes from various types of geophysical surveys in the Gulf. NMFS received comments from industry operators suggesting that the modeling results were overly conservative and that the take estimates were 'higher than BOEM expects would actually occur in a real world environment.' However, the Commission has reviewed the modeling approach and parameters used to estimate takes and believes they represent the best available information regarding survey scenarios, sound sources, physical and oceanographic conditions in the Gulf, and marine mammal densities and behavior. As such, the Commission agrees with NMFS and BOEM that the resulting take estimates were conservative but reasonable, thereby minimizing the likelihood that actual takes would be underestimated.''

The CRE says, absent citation or reference, that ''everyone agrees'' that takes are overestimated. Their assertion that we ''greatly overestimate both exposures and takes'' is based on their view that we relied on ''flawed models and on Risk Assessment Frameworks that are unfinished and have not been peer reviewed.'' While the Associations focus on supposed conservatism built into the modeling process, the CRE appears to believe that there is some unknown process by which modeled exposures are ''converted'' to takes. (''These take overestimates stem primarily from [NMFS'] use of various models to convert exposures to takes [. . .]. They have no credible framework for converting exposure to takes.'') We believe the CRE is likely referring to the EWG risk assessment framework, which is a systematic analysis used as an aid to understanding the significance of the modeled takes to the affected stocks. However, this framework plays no role in the estimation of takes (takes are an input to the EWG framework) and is not itself a ''model.'' CRE also makes the claim, addressed elsewhere in this response, that the take estimates ''do not include the impact of mitigation measures.''

Regarding the modeling variable analysis submitted by the Associations (Zeddies *et al.,* 2017b), we have fully considered the results in developing this final ITR,[3] but do not find that the

[3] The Associations misunderstand the timeline relating to the availability of the report for NMFS' consideration for developing the proposed rule. (''NMFS inexplicably dismisses [the report] as being provided too late despite the fact that it was provided to NMFS 11 months ago''). We must correct the record on this point. The analysis was submitted by IAGC for NMFS' consideration on September 6, 2017, well after the total 45-day comment period on the petition had closed (81 FR 88664 (December 8, 2016, notice of receipt of petition providing for 30-day comment period); 81 FR 92788 (extending comment period an additional 15 days to January 23, 2017)). The final PEIS was then issued in August 2017. Subsequent materials could no longer be considered as NMFS prepared

analysis supports any changes to the modeling. IAGC and API contracted with JASCO Applied Sciences, which performed the original modeling effort, to conduct additional analysis regarding the effect that various acoustic model parameters or inputs have on the outputs used to estimate numbers of animals exposed to threshold levels of sound from geophysical sources used in the GOM. The analysis investigated five factors:

- Airgun array size (including total volume, number of array elements, element air pressure, array geometry and spacing) used in source and propagation models;
- Acoustic threshold criteria and associated weighting used to calculate exposures;
- Animal densities used for adjusting simulated computer model exposures to potential real-world animal exposures;
- Natural aversive behaviors of marine mammals; and
- The addition of mitigative measures that lessen the potential for animals' exposure to threshold levels of seismic sound.

The primary finding of the Acoustic Exposure Model Variable Analysis is that use of appropriate acoustic injury criteria (*i.e.,* NMFS, 2016, 2018) decreased predictions of injurious exposure. At the time the Associations submitted this report, they were apparently unaware that, as described herein, *NMFS had already made the change that the Associations' analysis indicates is most significant:* The appropriate acoustic injury criteria (*i.e.,* NMFS, 2016, 2018), representing the best available science, were used in NMFS' analysis in the proposed rule. Other significant investigations in the Associations' modeling variable analysis included an alternative array size and quantitative consideration of animal aversion and mitigation effectiveness. We address these below.

The Associations state that the selected array (8,000 in^3) is unrealistically large, resulting in an overestimation of likely source levels and, therefore, size of the sound field with which marine mammals would interact. Zeddies *et al.* (2017b) evaluated the use of a substitute 4,130 in^3 array, finding that reduction in array volume reduces the number of predicted exposures. Use of a smaller airgun array volume with lower source level unsurprisingly creates a smaller ensonified area resulting in fewer numbers of animals expected to exceed exposure thresholds. However, selection of the representative array to be used in the modeling was directed by the ITR applicant (*i.e.,* BOEM). Given that the array used was selected by the applicant and included in the petition for the ITR (which was available for public comment in our **Federal Register** notice of receipt of BOEM's application), any complaint regarding this or other aspects of the specified activity, including activity level projections and representative source characteristics or survey geometry, should be addressed to BOEM. According to BOEM, the particular array was selected as a realistic representative proxy after BOEM's discussions with individual geophysical companies. An 8,000-in^3 array was considered reasonable, as it falls within the range of typical airgun arrays currently used in the GOM, which are roughly 4,000–8,475 in^3 (BOEM, 2017). According to BOEM's permitting records, approximately one-third of arrays used in a recent year were 8,000 in^3 or greater. Also, as noted previously, regardless of the representative airgun array size used to model the number of takes of marine mammals for the purposes of the analysis conducted in this rule, the analysis of the take and the associated findings are applicable to take incurred from the use of other sizes of airgun arrays, including smaller ones such as those modeled in the Acoustic Exposure Model Variable Analysis report.

The Associations' comments also focus significantly on the need to incorporate quantitative adjustments to account for aversion and mitigation. As discussed in the notice of proposed rulemaking, the effects of mitigation and aversion on exposure estimates were investigated via test scenarios, and NMFS acknowledges that both of these factors would lead to a reduction in likely injurious exposure to some degree. (As noted above, the issue of aversion was addressed via post-hoc quantitative adjustment). Ultimately these factors were not quantified in the modeling because, in summary, there is too much inherent uncertainty regarding the effectiveness of detection-based mitigation for these activities to support any reasonable quantification of its effect in reducing injurious exposure, and there is too little information regarding the likely level of onset and degree of aversion to justify its use in the modeling via precise quantitative control of animat movements (as compared to post-hoc adjustment of the modeling results, as is done here). Zeddies *et al.* (2017b) found that incorporation of aversion into the modeling process appears to reduce the number of predicted injurious exposures, though the magnitude of the effect was variable. The authors state that this variability is likely because there are few samples of injurious exposure exceedance, meaning that the statistical variability of re-running simulations is evident.

While aversion and mitigation implementation are expected to reduce somewhat the modeled levels of injurious exposure, it is important to note that they would not be expected to result in any meaningful reduction in assumed exposures resulting in Level B harassment, nor in total takes by harassment, as any averted injurious (Level A harassment) takes would not be alleviated, but rather would be appropriately changed to behavioral disturbance (Level B harassment) takes. The Associations, acknowledging the analysis we have done to produce more realistic estimates of potential Level A harassment, are focused on the supposed overestimation of Level B harassment. Yet their focal areas of complaint are limited to array size, which is a decision made by BOEM, and mitigation effectiveness, a factor that would have no effect on the amount of predicted Level B harassment. With regard to the large number of other data inputs and/or choices made in the modeling, the Associations conclude that ''NMFS has admittedly chosen conservative numerical values to assess allegedly uncertain variables to overestimate adverse effects,'' without specifically identifying a single issue where they feel a meaningful data or process error was made.

Comment: The CRE recommends a different method of estimating potential take of marine mammals, stating that NMFS ''should continue to use Line Transect to estimate exposures and takes.''

Response: Although CRE does not actually describe the method they recommend, we infer that they are referencing a relatively simplistic method historically used in estimating acoustic exposures, typically on a survey-specific basis. Essentially, this methodology consists of: (1) Determination of estimated isopleth ranges from the source for a specified acoustic threshold (nominally this threshold was historically the 160 dB

the draft proposed rule for interagency review. The rule was submitted to OMB on October 3, 2017. Upon submission, no further changes could be made to the rule other than those arising pursuant to the interagency review. The Office of Information and Regulatory Affairs cleared the proposed rule on June 11, 2018, whereupon it was submitted to the **Federal Register** on June 12 and published on June 22. Therefore, the analysis was not able to be considered by NMFS in the notice of proposed rulemaking despite the length of time between submission of the report to NMFS and publication of the proposed rule.

rms received level for Level B harassment); (2) assumption that a cylinder whose radius matched the range to these isopleths and encompassed the entire water column was ensonified to that threshold; (3) calculating the surface area ensonified by this water column as the source moved along its track; and (4) multiplying that resultant ensonified surface area by the density of each marine mammal species present to estimate potential harassment takes. (Note that this process is somewhat more complicated for evaluation of 3D surveys.) In this case, following a modeling workshop held in 2014 as a collaborative effort between the American Petroleum Institute (API) and the International Association of Geophysical Contractors (IAGC), NMFS, and BOEM, the agencies determined that it would be most appropriate to collaborate on a more sophisticated approach, in which more detailed modeling of the source and its properties, the acoustic propagation field in three dimensions, and three dimensional animal placement and movement is used to better calculate the potential impacts to marine mammals. To summarize aspects of the process:

- *Operational Scenario Development:* According to BOEM, the source and operations scenarios presented in the petition and which underlie the modeling effort were based on historical permit information. BOEM sought industry input and used historical data to develop the specification of the nominal airgun array. The array specifications and level of survey effort were intended to be representative of future activity, not a conservative over-estimate.
- *Acoustic Modeling:* The propagation model output has been compared with measured data and been shown to be reliable. The physical inputs to the model are the best available data. The full sound field was used to predict exposures, not a 'maximum over depth' simplification.
- *Animal Modeling:* The animal movement model used is one of the few models available that incorporates full four-dimensional movement. Properly applied, such models provide the most accurate predictions of acoustic exposure.
- *Animal Density:* The density and distribution data used were the best available and represent the latest synthesis and analysis.
- *Effects Criteria:* The historical Level B harassment threshold of 160 dB has been criticized for multiple reasons, and the use of the Wood *et al.* (2012) criteria in this analysis allows for the application of current scientific information to address some of the issues raised. The best available science relating to potential auditory injury, as synthesized in NMFS (2018) and more recently described by Southall *et al.* (2019a), was used in the modeling effort.

Taking advantage of these more sophisticated tools allows for a more accurate and detailed model of the exposures of a population of marine animals in the three dimensions and time, and also provides: (1) Statistical data on each individually modeled animal and the population as a whole; (2) rate of exposure (threshold exceedance per unit time) over the duration of a survey; and (3) the data necessary to determine effects based on more sophisticated thresholds, such as cumulative sound exposure level. A comparison of these methods—animat method involving three-dimensional animal movement modeling and static distribution, in which a static two-dimensional density is overlaid on a simplified representation of the sound field—found that differences consistently arise between the two methods. The static distribution method was found to consistently underestimate the number of takes by Level B harassment compared with the animat method. In addition, repeating many simulations with the animat method provides a more robust risk assessment and provides a better measure of variability (Schecklman *et al.,* 2011).

We agree with CRE (and our own statements, as cited by CRE) that sophisticated modeling is not a requirement of the MMPA process. However, all take estimation requires the use of modeling; the difference between various approaches to estimating take is the degree of sophistication of the modeling approach employed. We note that the National Science Foundation (NSF) typically utilizes the method espoused by CRE in take authorization requests for specific surveys. In order to derive the necessary estimated isopleth distance, NSF applications typically use Nucleus (a source model) in conjunction with ray trace modeling to approximate propagation of the acoustic signatures. The modeling developed by BOEM and NMFS supports both BOEM's 2017 PEIS and the analyses conducted for this rulemaking, and additionally is available for use in supporting LOA applications to maximize efficiency of the LOA process for disparate applicants. However, we have made clear that LOA applicants are free to pursue a different method of estimating takes than the modeling effort developed collaboratively by NMFS and BOEM. Use of a different analytical method in support of an LOA application will necessarily require additional review.

CRE compares ''Line Transect'' modeling performed in support of a 2004 Minerals Management Service Environmental Assessment to that developed in support of this effort, stating that the take estimates generated in that effort are ''orders of magnitude smaller than the take estimates'' evaluated here. CRE's erroneous implication is that the only difference between the two efforts is the modeling approach. (''The great difference between GOM takes as estimated by Line Transect, and as estimated by [NMFS]'s current models, demonstrates just how inaccurate and exaggerated the model take estimates are.'') However, the inputs to the two efforts are significantly different. Most notably, the assumptions relating to projected effort, animal occurrence, and sound source output are not comparable. Effort projections for the 2004 modeling were roughly 53 percent of those given by BOEM for the high effort scenario in the PEIS, and included only relatively archaic 3D survey geometries, versus the more complex azimuth designs and coil surveys considered herein. Advances in cetacean density modeling provide estimates for use here that are, in some cases, multiple orders of magnitude greater than the poor estimates used in the 2004 effort. The 15-year old modeling held up by CRE as a good example assumed a 4,550 in^3 acoustic source with a uniform 3 km isopleth distance to the 160-dB rms threshold. BOEM specified use of an 8,000 in^3 acoustic source for the modeling effort here, with a mean distance to the 160 dB isopleths of 12.7 km, but even more recent modeling of a more comparable source (4,130 in^3) shows that the isopleth distance may be as large as 8.4 km, depending on the season (Zeddies *et al.,* 2017b). Moreover, the 2004 modeling reduced even that ensonified area by an arbitrary 50 percent to account for an ''elliptical zone of ensonification.'' It is clear that the two modeling efforts are in no way comparable.

Comment: NRDC asserts that NMFS fails to account for forms of injury that are reasonably anticipated, stating that permanent hearing loss (*i.e.,* Level A harassment) may occur through mechanisms other than PTS, and that behaviorally-mediated injury may occur as a result of exposure to airgun noise. NRDC states that NMFS must account for these mechanisms in its assessment of potential injury.

Response: NMFS is aware of the work by Kujawa and Liberman (2009), which is cited by NRDC. The authors report that in mice, despite completely reversible threshold shifts that leave cochlear sensory cells intact, there were synaptic level changes and delayed cochlear nerve degeneration. However, the large threshold shifts measured (*i.e.,* maximum 40 dB) that led to the synaptic changes shown in this study are within the range of the large shifts used by Southall *et al.* (2007, 2019a) and in NMFS' 2018 Revised Technical Guidance to define PTS onset (*i.e.,* 40 dB). It is unknown whether smaller levels of TTS would lead to similar changes or what may be the long-term implications of irreversible neural degeneration. The effects of sound exposure on the nervous system are complex, and this will be re-examined as more data become available. It is important to note that NMFS' 2018 Revised Technical Guidance incorporated various conservative factors, such as a 6-dB threshold shift to represent TTS onset (*i.e.,* minimum amount of threshold shift that can be differentiated in most experimental conditions); the incorporation of exposures only with measured levels of TTS (*i.e.,* did not incorporate exposures where TTS did not occur); and assumed no potential of recovery between intermittent exposures. NMFS disagrees that consideration of likely PTS is not sufficient to account for reasonably expected incidents of auditory injury.

There is no conclusive evidence that exposure to airgun noise results in behaviorally-mediated forms of injury. Behaviorally-mediated injury (*i.e.,* mass stranding events) has been primarily associated with beaked whales exposed to mid-frequency active (MFA) navy sonar. Military tactical sonar and the alerting stimulus used in Nowacek *et al.* (2004) are very different from the noise produced by airguns. One should therefore not expect the same reaction to airgun noise as to these other sources. Yet NRDC infers that because strandings of beaked whales have been correlated with navy MFA sonar use, strandings are also likely to occur due to seismic surveys. As explained below, navy MFA sonar is very different from airguns, and it is not reasonable to assume that airguns will cause the same effects as navy MFA sonar (including strandings).

To understand why navy MFA sonar affects beaked whales differently than airguns do, it is important to note the distinction between behavioral sensitivity and susceptibility to auditory injury. To understand the potential for auditory injury in a particular marine mammal species in relation to a given acoustic signal, the frequency range the species is able to hear is critical, as well as the species' auditory sensitivity to frequencies within that range. Current data indicate that not all marine mammal species have equal hearing capabilities across all frequencies and, therefore, species are grouped into hearing groups with generalized hearing ranges assigned on the basis of available data (Southall *et al.,* 2007, 2019a). Hearing ranges as well as auditory sensitivity/susceptibility to frequencies within those ranges vary across the different groups. For example, in terms of hearing range, the high-frequency cetaceans (*e.g., Kogia* spp.) have a generalized hearing range of frequencies between 275 Hz and 160 kHz, while mid-frequency cetaceans—such as dolphins and beaked whales—have a generalized hearing range between 150 Hz to 160 kHz. Regarding auditory susceptibility within the hearing range, while mid-frequency cetaceans and high-frequency cetaceans have roughly similar hearing ranges, the high-frequency group is much more susceptible to noise-induced hearing loss during sound exposure, *i.e.,* these species have lower thresholds for these effects than other hearing groups (NMFS, 2018). Referring to a species as behaviorally sensitive to noise simply means that an animal of that species is more likely to respond to lower received levels of sound than an animal of another species that is considered less behaviorally sensitive. So, while dolphin species and beaked whale species—both in the mid-frequency cetacean hearing group—are assumed to (generally) hear the same sounds equally well and be equally susceptible to noise-induced hearing loss (auditory injury), the best available information indicates that a beaked whale is more likely to behaviorally respond to that sound at a lower received level compared to an animal from other mid-frequency cetacean species that is less behaviorally sensitive. This distinction is important because, while beaked whales are more likely to respond behaviorally to sounds than are many other species (even at lower levels), they cannot hear the predominant, lower frequency sounds from seismic airguns as well as sounds that have more energy at frequencies that beaked whales can hear better (such as navy MFA sonar).

Navy MFA sonar affects beaked whales differently than airguns do because it produces energy at different frequencies than airguns. Mid-frequency cetacean hearing is generically thought to be best between 8.8 to 110 kHz, *i.e.,* these cutoff values define the range above and below which a species in the group is assumed to have declining auditory sensitivity, until reaching frequencies that cannot be heard (NMFS, 2018). However, beaked whale hearing is likely best within a higher, narrower range (20–80 kHz, with best sensitivity around 40 kHz), based on a few measurements of hearing in stranded beaked whales (Cook *et al.,* 2006; Finneran *et al.,* 2009; Pacini *et al.,* 2011) and several studies of acoustic signals produced by beaked whales (*e.g.,* Frantzis *et al.,* 2002; Johnson *et al.,* 2004, 2006; Zimmer *et al.,* 2005). While precaution requires that the full range of audibility be considered when assessing risks associated with noise exposure (Southall *et al.,* 2007, 2019a), animals typically produce sound at frequencies where they hear best. More recently, Southall *et al.* (2019a) suggested that certain species amongst the historical mid-frequency hearing group (beaked whales, sperm whales, and killer whales) are likely more sensitive to lower frequencies within the group's generalized hearing range than are other species within the group and state that the data for beaked whales suggest sensitivity to approximately 5 kHz. However, this information is consistent with the general conclusion that beaked whales (and other mid-frequency cetaceans) are relatively insensitive to the frequencies where most energy of an airgun signal is found. Navy MFA sonar is typically considered to operate in the frequency range of approximately 3–14 kHz (D'Amico *et al.,* 2009), *i.e.,* outside the range of likely best hearing for beaked whales but within or close to the lower bounds, whereas most energy in an airgun signal is radiated at much lower frequencies, below 500 Hz (Dragoset, 1990).

It is important to distinguish between energy (loudness, measured in dB) and frequency (pitch, measured in Hz). In considering the potential impacts of mid-frequency components of airgun noise (1–10 kHz, where beaked whales can be expected to hear) on marine mammal hearing, one needs to account for the energy associated with these higher frequencies and determine what energy is truly ''significant.'' Although there is mid-frequency energy associated with airgun noise (as expected from a broadband source and as we acknowledged in the notice of proposed rulemaking), airgun sound is predominantly below 1 kHz (Breitzke *et al.,* 2008; Tashmukhambetov *et al.,* 2008; Tolstoy *et al.,* 2009). As stated by Richardson *et al.* (1995), ''[. . .] most emitted [seismic airgun] energy is at 10–120 Hz, but the pulses contain some

energy up to 500–1,000 Hz.'' Tolstoy *et al.* (2009) conducted empirical measurements, demonstrating that sound energy levels associated with airguns were at least 20 decibels (dB) lower at 1 kHz (considered ''mid-frequency'') compared to higher energy levels associated with lower frequencies (below 300 Hz) (''all but a small fraction of the total energy being concentrated in the 10–300 Hz range'' [Tolstoy *et al.,* 2009]), and at higher frequencies (*e.g.,* 2.6–4 kHz), power might be less than 10 percent of the peak power at 10 Hz (Yoder, 2002). Energy levels measured by Tolstoy *et al.* (2009) were even lower at frequencies above 1 kHz. In addition, as sound propagates away from the source, it tends to lose higher-frequency components faster than low-frequency components (*i.e.,* low-frequency sounds typically propagate longer distances than high-frequency sounds) (Diebold *et al.,* 2010). Although higher-frequency components of airgun signals have been recorded, it is typically in surface-ducting conditions (*e.g.,* DeRuiter *et al.,* 2006; Madsen *et al.,* 2006) or in shallow water, where there are advantageous propagation conditions for the higher frequency (but low-energy) components of the airgun signal (Hermannsen *et al.,* 2015). This should not be of concern because the likely behavioral reactions of beaked whales that can result in acute physical injury would result from noise exposure at depth (because of the potentially greater consequences of severe behavioral reactions) and because, even if near-surface exposure to such higher-frequency components were of concern, oceanographic conditions in the GOM do not consistently support such ducting conditions. In summary, the frequency content of airgun signals is such that beaked whales will not be able to hear the signals well (compared to MFA sonar), especially at depth where we expect the consequences of noise exposure could be more severe.

Aside from frequency content, there are other significant differences between MFA sonar signals and the sounds produced by airguns that minimize the risk of severe behavioral reactions that could lead to strandings or deaths at sea, *e.g.,* significantly longer signal duration, horizontal sound direction, typical fast and unpredictable source movement. All of these characteristics of MFA sonar tend towards greater potential to cause severe behavioral or physiological reactions in exposed beaked whales that may contribute to stranding. Although both sources are powerful, MFA sonar contains significantly greater energy in the mid-frequency range, where beaked whales hear better. Short-duration, high energy pulses—such as those produced by airguns—have greater potential to cause damage to auditory structures (though this is unlikely for mid-frequency cetaceans, as explained later in this document), but it is longer duration signals that have been implicated in the vast majority of beaked whale strandings. Faster, less predictable movements in combination with multiple source vessels are more likely to elicit a severe, potentially anti-predator response. Of additional interest in assessing the divergent characteristics of MFA sonar and airgun signals and their relative potential to cause stranding events or deaths at sea is the similarity between the MFA sonar signals and stereotyped calls of beaked whales' primary predator: The killer whale (Zimmer and Tyack, 2007). Although generic disturbance stimuli—as airgun noise may be considered in this case for beaked whales—may also trigger antipredator responses, stronger responses should generally be expected when perceived risk is greater, as when the stimulus is confused for a known predator (Frid and Dill, 2002). In addition, because the source of the perceived predator (*i.e.,* MFA sonar) will likely be closer to the whales (because attenuation limits the range of detection of mid-frequencies) and moving faster (because it will be on faster-moving vessels), any antipredator response would be more likely to be severe (with greater perceived predation risk, an animal is more likely to disregard the cost of the response; Frid and Dill, 2002). Indeed, when analyzing movements of a beaked whale exposed to playback of killer whale predation calls, Allen *et al.* (2014) found that the whale engaged in a prolonged, directed avoidance response, suggesting a behavioral reaction that could pose a risk factor for stranding. Overall, these significant differences between sound from MFA sonar and the mid-frequency sound component from airguns and the likelihood that MFA sonar signals will be interpreted in error as a predator are critical to understanding the likely risk of behaviorally-mediated injury due to seismic surveys.

The available scientific literature also provides a useful contrast between airgun noise and MFA sonar regarding the likely risk of behaviorally-mediated injury. There is strong evidence for the association of beaked whale stranding events with MFA sonar use, and particularly detailed accounting of several events is available (*e.g.,* a 2000 Bahamas stranding event for which investigators concluded that MFA sonar use was responsible; Evans and England, 2001). D'Amico *et al.* (2009) reviewed 126 beaked whale mass stranding events over the period from 1950 (*i.e.,* from the development of modern MFA sonar systems) through 2004. Of these, there were two events where detailed information was available on both the timing and location of the stranding and the concurrent nearby naval activity, including verification of active MFA sonar usage, with no evidence for an alternative cause of stranding. An additional ten events were at minimum spatially and temporally coincident with naval activity likely to have included MFA sonar use and, despite incomplete knowledge of timing and location of the stranding or the naval activity in some cases, there was no evidence for an alternative cause of stranding.[4] Separately, the International Council for the Exploration of the Sea reported in 2005 that, worldwide, there have been about 50 known strandings, consisting mostly of beaked whales, with a potential causal link to MFA sonar (ICES, 2005). In contrast, very few such associations have been made to seismic surveys, despite widespread use of airguns as a geophysical sound source in numerous locations around the world.

A more recent review of possible stranding associations with seismic surveys (Castellote and Llorens, 2016) states plainly that, ''[s]peculation concerning possible links between seismic survey noise and cetacean strandings is available for a dozen events but without convincing causal evidence.'' The authors' ''exhaustive'' search of available information found ten events worth further investigation via a ranking system representing a rough metric of the relative level of confidence offered by the data for inferences about the possible role of the seismic survey in a given stranding event. Only three of these events involved beaked whales. Whereas D'Amico *et al.* (2009) used a 1–5 ranking system, in which ''1'' represented the most robust evidence connecting the event to MFA sonar use, Castellote and Llorens (2016) used a 1–6 ranking system, in which ''6'' represented the most robust evidence

[4] The U.S. Navy has publicly stated its agreement that five such events since 1996 were associated in time and space with MFA sonar use, either by the U.S. Navy alone or in joint training exercises with the North Atlantic Treaty Organization. The U.S. Navy additionally noted that, as of 2017, a 2014 beaked whale stranding event in Crete coincident with naval exercises was under review and had not yet been determined to be linked to sonar activities (DoN, 2017).

connecting the event to the seismic survey. As described above, D'Amico *et al.* (2009) found that two events were ranked ''1'' and ten events were ranked ''2'' (*i.e.,* 12 beaked whale stranding events were found to be associated with MFA sonar use). In contrast, Castellote and Llorens (2016) found that none of the three beaked whale stranding events achieved their highest ranks of 5 or 6.[5] However, we acknowledged in the notice of proposed rulemaking that one of these stranding events, involving two Cuvier's beaked whales, was contemporaneous with and reasonably associated spatially with a 2002 seismic survey in the Gulf of California, and here acknowledge the same for the 2007 Gulf of Cadiz seismic survey discussed by Castellote and Llorens (also involving two Cuvier's beaked whales). However, neither event was considered a ''true atypical mass stranding'' (according to Frantzis [1998]) as used in the analysis of Castellote and Llorens (2016). While we agree with the authors that this lack of evidence should not be considered conclusive, it is clear that there is very little evidence that seismic surveys should be considered as posing a significant risk of acute harm to marine mammals.

Comment: NRDC asserts that NMFS has failed to account adequately for the effects of stress on marine mammals.

Response: As NRDC acknowledges, we addressed the available literature regarding potential impacts of stress resulting from noise exposure in marine mammals. As described in that discussion, stress responses are complicated and may or may not have meaningful impacts on marine mammals. NRDC implies that NMFS must (1) enumerate takes resulting from stress alone and (2) specifically address stress in its negligible impact analysis. The effects of stress are not straightforward, and there is no information available to inform an understanding of whether it is reasonably likely that an animal may experience a stress response upon noise exposure that would not be accounted for in NMFS' existing enumeration of takes via exposure to noise, which includes an accounting for exposures above received levels as low as 140 dB rms (and as low as 120 dB rms for beaked whales). NRDC provides nothing informative regarding how such an analysis might be carried out. With regard to NMFS' negligible impact analysis, we believe that the potential effects of stress are addressed and subsumed within NMFS' considerations of severity of effect and vulnerability of affected populations. Similarly, NRDC provides no justification as to why stress would appropriately be considered separately in this analysis, and no useful recommendation as to how to do so, if appropriate. We believe we have appropriately acknowledged the potential effects of stress, and that these potential effects are accounted for within our overall assessment of potential effects on marine mammals.

Comment: NRDC states that masking results in take of marine mammals and that NMFS must account for this in its take estimates.

Response: We addressed our consideration of masking in greater detail in a previous response. We acknowledge that masking may impact marine mammals, particularly baleen whales such as the Bryde's whale, and particularly when considered in the context of the full suite of regulated and unregulated anthropogenic sound contributions overlaying an animal's acoustic habitat. We acknowledge that masking can constitute a take, depending on the particular circumstances, but do not agree that masking effects from the incremental noise contributions of individual activities or sound sources always rise to the level of take. Further, not all takes are readily quantifiable. In this case, while masking is considered in the analysis, we do not believe it will result in take of marine mammals beyond those that have already been quantified as taken by behavioral harassment. Specifically, in the case of these proposed activities, in the event that some masking incidents rise to the level of a take, we would expect them to be accounted for in the quantified exposures above the harassment thresholds. Given the short duration of expected noise exposures, any take by masking in the case of these surveys would be most likely to be incurred by individuals either exposed briefly to notably higher levels or those that are generally in the wider vicinity of the source for comparatively longer times. Both of these situations would be captured in the enumeration of takes by Level B harassment, which accounts for takes that may occur upon exposure at relatively low levels of received sound (*e.g.,* 140 dB).

Comment: MMC commented that the aversion adjustment applied to estimates of Level A harassment proposed by NMFS for low- and high-frequency cetaceans is not supported. NRDC provided similar comments.

Response: NMFS disagrees with these comments, and clarifies our position given the misunderstanding evident in the comments. The MMC cites NMFS' statements that ''too little is known about the factors that lead to avoidance of sounds to quantify aversive behavior for survey activities when modeling marine mammal exposure to sound'' and that ''aversion is a context-dependent behavioral response affected by biological factors, including energetic and reproductive state, sociality, and health status of individual animals'' in characterizing our subsequent use of a post-hoc correction factor to account for aversion as an ''apparent contradiction.'' Similarly, NRDC cites NMFS' statement that aversion was not quantified in the modeling process due to lack of information regarding species-specific degree of aversion and level of onset in criticizing the adjustment that was later made.

Aversion is a known real-world phenomenon. It is well-known that animals will avoid unpleasant stimuli, such as very high received levels of sound. A large and growing literature has demonstrated behavioral aversion in a number of contexts for many marine mammal species in increasingly controlled and well-documented contexts. While considerable species, individual, and context-dependencies exist in terms of received noise levels associated with behavioral aversion, clear patterns of behavioral aversion have been demonstrated empirically within odontocetes and mysticetes (*e.g.,* Miller *et al.,* 2012, 2014; DeRuiter *et al.,* 2013; Southall *et al.,* 2019b). This is particularly true for exposure scenarios in which animals occur relatively close to sources and at the high levels that would be required for even TTS (much less PTS) to occur. In some instances, in these and other studies, behavioral avoidance has been measured at received levels many orders of magnitude below those required for predicted PTS onset and even below the nominal, 50 percent behavioral response probability at 160 dB rms that NMFS has applied historically.

However, accounting for aversion quantitatively in an acoustic exposure modeling process is a significantly data-

[5] Of the ten total events, none achieved the highest rank of 6. Two events were ranked as 5: One stranding in Peru involving dolphins and porpoises and a 2008 stranding in Madagascar. This latter ranking can only broadly be associated with the survey itself, as opposed to use of seismic airguns. An exhaustive investigation of this stranding event, which did not involve beaked whales, concluded that use of a high-frequency mapping system (12-kHz multibeam echosounder) was the most plausible and likely initial behavioral trigger of the event, which was likely exacerbated by several site- and situation-specific secondary factors. The review panel found that seismic airguns were used after the initial strandings and animals entering a lagoon system, that airgun use clearly had no role as an initial trigger, and that there was no evidence that airgun use dissuaded animals from leaving (Southall *et al.,* 2013).

heavy endeavor and, as we noted, despite the growing body of evidence there is at this time still not sufficient data regarding the specific degree of aversion and level of onset on a species-specific basis. That is, in order to account for aversion within the modeling process, one must program individual animats representing different species to respond at a specific received level by changing their direction of travel by a specific degree and assuming a specific rate of speed. Through a test scenario evaluation (discussed in the notice of proposed rulemaking), we determined that while this is possible to do, the specific values that must be used in programming the animat response could not be adequately derived. Instead, a nominal offset factor was applied to the modeled injurious exposures based on published model result evaluation to account for aversion.

Ellison *et al.* (2016) modeled scenarios using animal movement models to evaluate predicted PTS in which no aversion was assumed relative to scenarios where reasonable assumptions were made about aversion, in line with historical response probability assumptions and that existing scientific literature suggest are appropriate. Scenarios where no aversion probability was used overestimated the potential for high levels of exposure required for PTS by about five times. Accordingly, total modeled injurious exposures calculated without accounting for behavioral aversion (for low- and high-frequency species) were multiplied by 0.2 as part of the EWG risk analysis. NMFS consulted the EWG in selecting the specific offset factor, and discussed that selection again in context of the public comments received. The EWG—which is composed of some of the foremost scientists in the field of marine mammal behavioral response study, and includes the lead author of the Ellison *et al.* (2016) study—agreed that the approach and specific offset factor was a reasonable and likely conservative approach to addressing the issue of aversion.

The commenters do not dispute that aversion is a meaningful real-world phenomenon that is significantly influential on actual occurrence of Level A harassment. As NRDC acknowledges, ''it is certainly true that some marine mammals will flee the sound.'' Yet the commenters would have us ignore this phenomenon and assume unrealistically high amounts of auditory injury for marine mammals in the GOM. NMFS does not agree that this would be appropriate. As described above, there is extensive information supporting the aversion concept in marine mammals, but limited quantitative data with which to develop precise, species-specific offset factors. Accordingly, utilizing the available data and expert input, NMFS applied its professional judgement in order to account for this meaningful phenomenon.

Comment: NRDC disagrees with NMFS' conclusion that Level A harassment is not likely to occur for mid-frequency (MF) cetaceans and states that this ''problem [. . .] must be addressed.''

Response: As was explained in the notice of proposed rulemaking, the number of modeled incidents of Level A harassment for MF cetacean species is not realistic. The modeled isopleth distance to the relevant Level A harassment threshold, *i.e.,* the predominant MF peak pressure threshold, is only 18 m. As we explained in the notice of proposed rulemaking, it is understandable that even such a small assumed area could lead to the results given when a real-world density value is sufficiently high to lead to non-zero scaled 24-hr modeled exposure results, which are then multiplied by large numbers of notional survey days. We explain in greater detail below why relatively small zones, *i.e.,* zones contained within the near-field of an airgun array, should not be expected to result in actual injurious exposure. NRDC also appears to be under the impression that the conclusion was based on what they refer to as ''shorter injurious take distances assumed in the Gulf of Mexico modeling than in modeling for seismic in other regions, such as the Atlantic,'' an apparent misunderstanding on the part of the commenter that they refer to as a ''discrepancy'' that is ''never explained'' and ''appears arbitrary.'' Given the lack of detail provided, NMFS cannot be sure what NRDC is referring to. However, we do know that state-of-science propagation modeling performed for a notional array here provided the 18 m result described above. For five different, real-world arrays evaluated for use in the Atlantic Ocean (83 FR 63268; December 7, 2018), the calculated isopleth distance to the 230 dB peak sound pressure level (SPL) MF Level A harassment threshold was an average 27 m (range 14–63 m), in keeping with the value calculated here.

For MF cetaceans, the only potential injury zones will be based on the peak pressure metric, as such zones will be larger than those calculated on the basis of the cumulative sound exposure level (SEL) metric (which are essentially non-existent for MF and HF cetaceans). As noted, the estimated zone size for the 230 dB peak threshold for MF cetaceans is only 18 m. In a theoretical modeling scenario, it is possible for animats to engage with such a small assumed zone around a notional point source and, subsequently, for these interactions to scale to predictions of real-world exposures given a sufficient number of predicted 24-hr survey days in confluence with sufficiently high predicted real-world animal densities—*i.e.,* the modeling process that resulted in the predicted exposure estimates for MF cetaceans in the modeling report. However, this is not a realistic outcome. The source level of the array is a theoretical definition assuming a point source and measurement in the far-field of the source (MacGillivray, 2006). As described by Caldwell and Dragoset (2000), an array is not a point source, but one that spans a small area. In the far-field, individual elements in arrays will effectively work as one source because individual pressure peaks will have coalesced into one relatively broad pulse. The array can then be considered a ''point source.'' For distances within the near-field, *i.e.,* approximately 2–3 times the array dimensions, pressure peaks from individual elements do not arrive simultaneously because the observation point is not equidistant from each element. The effect is destructive interference of the outputs of each element, so that peak pressures in the near-field will be significantly lower than the output of the largest individual element. Here, the 230 dB peak isopleth distances would be expected to be within the near-field of the arrays where the definition of source level breaks down. Therefore, actual locations within this distance (*i.e.,* within 18 m) of the array center where the sound level exceeds 230 dB peak SPL would not necessarily exist. In general, Caldwell and Dragoset (2000) suggest that the near-field for airgun arrays is considered to extend out to approximately 250 m.

In order to provide quantitative support for this theoretical argument, we calculated expected maximum distances at which the near-field would transition to the far-field for five specific, real-world arrays proposed for use in the Atlantic Ocean (83 FR 63268). The average distance to the near-field calculated for the five arrays, following the process described below, was 203 m (range 80–417 m).

For a specific array one can estimate the distance at which the near-field transitions to the far-field by:

$$D = \frac{L^2}{4\lambda}$$

with the condition that $D >> \lambda$, and where D is the distance, L is the longest dimension of the array, and λ is the wavelength of the signal (Lurton, 2002). Given that λ can be defined by:

$$\lambda = \frac{v}{f}$$

where f is the frequency of the sound signal and v is the speed of the sound in the medium of interest, one can rewrite the equation for D as:

$$D = \frac{fL^2}{4v}$$

and calculate D directly given a particular frequency and known speed of sound (here assumed to be 1,500 meters per second in water, although this varies with environmental conditions).

To determine the closest distance to the array at which the modeled source level prediction is valid (*i.e.,* maximum extent of the near-field), we calculated D based on an assumed frequency of 1 kHz. A frequency of 1 kHz is commonly used in near-field/far-field calculations for airgun arrays (Zykov and Carr, 2014; MacGillivray, 2006; NSF and USGS, 2011), and based on representative airgun spectrum data and field measurements of an airgun array used on the R/V *Marcus G. Langseth,* nearly all (greater than 95 percent) of the energy from airgun arrays is below 1 kHz (Tolstoy *et al.,* 2009). Thus, using 1 kHz as the upper cut-off for calculating the maximum extent of the near-field should reasonably represent the near-field extent in field conditions.

If the largest distance to the peak sound pressure level threshold was equal to or less than the longest dimension of the array (*i.e.,* under the array), or within the near-field, then received levels that meet or exceed the threshold in most cases are not expected to occur. This is because within the near-field and within the dimensions of the array, the specified source level is overestimated and not applicable. In fact, until one reaches a distance of approximately three or four times the near-field distance, the average intensity of sound at any given distance from the array is still less than that based on calculations that assume a directional point source (Lurton, 2002). For example, an airgun array used on the R/V *Marcus G. Langseth* has an approximate diagonal of 29 m, resulting in a near-field distance of 140 m at 1 kHz (NSF and USGS, 2011). Field measurements of this array indicate that the source behaves like multiple discrete sources, rather than a directional point source, beginning at approximately 400 m (deep site) to 1 km (shallow site) from the center of the array (Tolstoy *et al.,* 2009), distances that are actually greater than four times the calculated 140-m near-field distance. Within these distances, the recorded received levels were always lower than would be predicted based on calculations that assume a directional point source, and increasingly so as one moves closer towards the array (Tolstoy *et al.,* 2009). Given this, relying on the calculated distances as the distances at which we expect to be in the near-field is a conservative approach because even beyond this distance the acoustic modeling still overestimates the actual received level.

Within the near-field, in order to explicitly evaluate the likelihood of exceeding any particular acoustic threshold, one would need to consider the exact position of the animal, its relationship to individual array elements, and how the individual acoustic sources propagate and their acoustic fields interact. Given that within the near-field and dimensions of the array source levels would be below the modeled notional source level, we believe exceedance of the peak pressure threshold would only be possible under highly unlikely circumstances.

Therefore, we expect the potential for Level A harassment of MF cetaceans to be *de minimis,* even before the likely moderating effects of aversion and/or other compensatory behaviors (*e.g.,* Nachtigall *et al.,* 2018) are considered. We do not believe that Level A harassment is a likely outcome for any MF cetacean.

Comment: The MMC comments that the estimated numbers of Level B harassment must be increased to account for the incidents of acoustic exposure that were modeled as injurious but subsequently discounted due to aversion. NRDC commented similarly.

Response: NMFS agrees that animals that avoid Level A harassment through aversive behavior should be considered as having been subject to Level B harassment and increased the Level B harassment estimates accordingly. However, these estimates have been superseded by the revised estimates submitted by BOEM in support of their revised scope of activity.

Marine Mammal Protection Act—General

Comment: The MMC recommended that any ''formal interpretation'' by NMFS of MMPA standards, such as the least practicable adverse impact standard and small numbers standard, be issued in stand-alone, generally applicable rulemakings (*e.g.,* in amendments to 50 CFR 216.103 or 216.105) or in a separate policy directive, rather than in the preambles to individual proposed rules.

Response: We appreciate the recommendation and may consider the recommended approaches in the future. However, providing directly relevant explanations of programmatic approaches or interpretations related to the incidental take provisions of the MMPA in a proposed incidental take authorization is an effective and efficient way to provide information to and solicit focused input from the public. Further, this approach ultimately affords the same

opportunities for public comment as a stand-alone rulemaking would.

Regarding the least practicable adverse impact standard, NMFS has provided similar explanations in other recent section 101(a)(5)(A) rules. See, *e.g.,* 83 FR 66846 (December 27, 2018) (U.S. Navy Training and Testing Activities for Hawaii-Southern California Study Area).

Least Practicable Adverse Impact

Comment: NRDC believes NMFS relies on a ''flawed interpretation'' of the least practicable adverse impact standard. They state that NMFS (1) wrongly imports a population-level focus into the standard, contrary to the ''clear'' holding of the Ninth Circuit in *NRDC* v. *Pritzker,* 828 F.3d 1125 (9th Cir. 2016); and (2) inappropriately ''balances'' or weighs effectiveness against practicability without sufficient analysis, counter to *Pritzker.*

Response: NMFS carefully evaluated the Ninth Circuit's opinion in *Pritzker* and believe we have fully addressed the court's concerns. NMFS' discussion of the least practicable adverse impact standard in the Mitigation section explains why we believe a population focus is a reasonable interpretation of the standard.

With regard to the second point, NMFS disagrees that the analysis is insufficient. NMFS' interpretation of the LPAI standard is a reasonable interpretation that gives effect to the language in the statute and the underlying legislative intent. Congress intended the agencies administering section 101(a)(5)(A) to consider practicability when determining appropriate mitigation, and we do not believe the analysis must be conducted in a rigid sequential fashion. There is a tension inherent in the phrase ''least practicable adverse impact'' in that ''least [. . .] adverse impact'' pulls in favor of one direction (*i.e.,* expanding mitigation) while ''practicable'' pulls in favor of the other direction (*i.e.,* limiting mitigation), and weighing the relative costs and benefits is, in NMFS' view, a meaningful way to address and resolve this tension. Further, as described in the proposed rule and augmented in this final rule in both the Mitigation section and the response to comments, NMFS considered all recommended mitigation in the context of both the reduction of impacts on marine mammal species and stocks and their habitat and the practicability of such mitigation in reaching the required set of measures that we believe satisfy the least practicable adverse impact standard.

Comment: The Associations assert that NMFS failed to provide sufficient practicability analyses for the proposed mitigation requirements.

Response: No guidance is provided by the MMPA or NMFS' implementing regulations as to what constitutes ''practicability'' for the non-military readiness activities considered here, or how to ascertain whether a proposed measure is practicable. Neither the term ''practicable'' nor the phrase ''least practicable adverse impact'' is defined by the MMPA or in NMFS' implementing regulations. (See Mitigation, later in this document, for extensive discussion on NMFS' interpretation of the meaning of ''least practicable adverse impact.'') Therefore, while the MMPA's requirement to prescribe mitigation achieving the ''least practicable adverse impact'' demands consideration of practicability, the need for additional ''analysis'' of unspecified scope, detail, or methodology, as demanded by the Associations, cannot be found in the statute, legislative history, regulations, or case law.

However, NMFS does not start from scratch. Our implementing regulations at 50 CFR 216.104(a)(11) require applications for incidental take authorizations to include information about the availability and feasibility (economic and technological) of equipment, methods, and manner of conducting such activity or other means of effecting the least practicable adverse impact upon the affected species or stocks, their habitat, and on their availability for subsistence uses, paying particular attention to rookeries, mating grounds, and areas of similar significance. This often provides the foundation of NMFS' proposed mitigation, after consideration of the objectives of those and other possible measures and how they may achieve those objectives as well as, when possible, what we know about the practicability of the proposed measures.

As a general matter, where an applicant proposes measures that are likely to reduce impacts to marine mammals, the fact that they are included in the proposal and application indicates that the measures are practicable, and it is not necessary for NMFS to conduct a detailed analysis of the measures the applicant proposed (rather, they are simply included). However, it is incumbent on NMFS to consider whether there are other practicable measures that would contribute to the reduction of risk or severity of adverse effects on the species or stocks.

We then seek public comment on the proposal and, if contradictory information is presented by members of the public (including prospective applicants), the information is considered in making a decision regarding whether to retain, modify, or eliminate a proposed measure.

Our notice of proposed rulemaking presented specific discussion of practicability considerations, including both the monetized direct costs of proposed measures as well as what we understand about potential indirect costs, and provided detailed discussion relating to certain measures. While much of this analysis was conducted under a regulatory impact analysis (RIA) conducted pursuant to Executive Order 12866, as stated by the Associations, the utility of the analysis is not limited to use there. For example, while the Associations claim that NMFS fails to ''consider impacts beyond immediate operational impacts,'' the RIA provides a detailed analysis of the sort of speculative indirect costs of concern to industry, and the RIA's analysis is incorporated into NMFS' consideration of practicability. Overall, we note that the Associations' comments are peppered with reference to cost increases, both vague (''resulting in millions of dollars of added cost'') and specific (''increase costs an estimated 5% to 20%''), but without sufficient supporting data.

NMFS interprets ''practicable'' simply as capable of being put into practice or of being done or accomplished. Practicability of the standard operational protocols was reasonably assumed in consideration of the fact that they are included in many incidental take authorizations and that we did not receive any specific public comments to the contrary. Moreover, many of these measures were proposed by the applicant (BOEM) in their petition for regulations, including ramp-up and shutdown requirements and a requirement to observe a time-area restriction in coastal waters to protect bottlenose dolphins during the time of their reproductive activity peak. The Associations claim that our proposal applies these standard measures in such a way as to extend their ''geographic and temporal scope or to circumstances where they are unnecessary or impossible to implement,'' but provide no specific information as to what measures they specifically refer to, in what circumstances they believe specific measures are unnecessary, or in what circumstances specific measures are impossible to implement. The Associations assert that NMFS' considerations of practicability ''fail to adequately estimate levels of current and future geophysical work or consider costs and impacts beyond the immediate survey work,'' but their

comments provide no specific information to enable NMFS to assess its consideration of practicability. NMFS' consideration of practicability was sufficient and in accordance with law, and the Associations provided no specific contradictory information for NMFS' evaluation.

Comment: The MMC recommended that NMFS rework its evaluation criteria for applying the least practicable adverse impact standard to separate the factors used to determine whether a potential impact on marine mammal species or stocks or their habitat is adverse and whether possible mitigation measures would be effective. In this regard, the MMC asserted that it seems as though the proposed ''effectiveness'' criterion more appropriately fits as an element of practicability and should be addressed under that prong of the analysis. In other words, a measure not expected to be effective should not be considered a practicable means of reducing impacts.

Response: In the Mitigation section, NMFS has explained in detail its interpretation of the least practicable adverse impact standard, the rationale for the interpretation, and our approach for implementing the interpretation. The ability of a measure to reduce effects on marine mammals is entirely related to its ''effectiveness'' as a measure, whereas the effectiveness of a measure is not connected to its practicability. The MMC did not support its argument with scientific information, and NMFS has not implemented the suggestion.

Comment: The MMC recommended that NMFS address the habitat component of the least practicable adverse impact provision in greater detail. It asserted that NMFS' discussion of critical habitat, marine sanctuaries, and biologically important areas (BIA) in the proposed rule is not integrated with the discussion of the least practicable adverse impact standard. As stated by the MMC, it would seem that, under the least practicable adverse impact provision, adverse impacts on important habitat should be avoided whenever practicable. Therefore, to the extent that activities would be allowed to proceed in these areas, NMFS should explain why it is not practicable to constrain them further. The MMC also suggests that NMFS intends to defer consideration of measures to protect habitat to individual LOAs, rather than addressing such measures in the regulations, as the MMC contends is required.

Response: Marine mammal habitat value is informed by marine mammal presence and use and, in some cases, there may be overlap in mitigation measures for the species or stock directly and for use of habitat. In this rule, NMFS has identified one time-area restriction (carried forward from the proposed rule) based on a combination of factors that include higher densities and observations of specific important behaviors of marine mammals themselves, but also that clearly reflect preferred habitat. In addition to being delineated based on physical features that drive habitat function (*e.g.,* bathymetric features, among others for some BIAs), the high densities and concentration of certain important behaviors (*e.g.,* feeding) in these particular areas indicate the presence of preferred habitat. The MMC seems to suggest that NMFS must always consider separate measures aimed at marine mammal habitat. However, the MMPA does not specify that effects to habitat must be mitigated in separate measures, and NMFS has identified measures that provide significant reduction of impacts to both ''marine mammal species and stocks and their habitat,'' as required by the statute. Finally, we clarify here that all measures to reduce impacts to both marine mammal species and stocks and their habitat are included in the regulations and then implemented through activity-specific LOAs.

Negligible Impact

Comment: The Associations and Chevron concur with NMFS' finding that the incidental taking that may be authorized under the ITR will have a negligible impact on the affected marine mammal stocks. The Associations additionally specify their agreement with NMFS' conclusions that Level A harassment will not play a meaningful role in the overall degree of impact experienced by marine mammal populations as a result of the projected survey activity and that mid-frequency cetaceans are unlikely to incur Level A harassment, as well as with NMFS' use of the Wood *et al.* (2012) probabilistic risk function.

Response: NMFS appreciates the comments.

Comment: NRDC claims that NMFS did not define the total amount of take it evaluated in making the negligible impact determination and asserts that the proposed rule is unclear about the data and calculations that informed the basis of the negligible impact finding.

Response: NMFS disagrees with these comments. NMFS explicitly defined the basis, as well as the process, for the negligible impact analysis. Although the negligible impact analysis was built upon relatively sophisticated acoustic exposure modeling, and incorporated advances in the science of risk assessment, the informational inputs to the analysis and the analytical framework were clearly elucidated and the supporting documentation identified and provided as companion documents to the public for review in association with our negligible impact analysis. The notice of proposed rulemaking identified a point of contact available to provide further information or answer questions if necessary.

NMFS stated that the ''specified activity'' for the proposed regulations is a broad program of geophysical survey activity that could occur at any time of year in U.S. waters of the GOM. This conceptual program, as defined by BOEM through projected levels of survey effort, was described and shown in Table 1 of the notice of proposed rulemaking. These annual survey projections aligned generally with ''low,'' ''moderate,'' and ''high'' effort years (83 FR 29224). These projected levels of survey effort informed the acoustic modeling report (Zeddies *et al.* 2015, 2017a), which was extensively and clearly summarized in the notice of proposed rulemaking, while the report itself was made available for public review concurrently with the notice of proposed rulemaking. In order to reasonably estimate the actual effort that might occur over the five-year timeframe of the proposed ITR, NMFS determined for the proposed rule analysis that it would be appropriate to assume that one high-effort year, two moderate-effort years, and two low-effort years (and, therefore, associated acoustic exposure estimates) would occur. NMFS then selected and identified the specific effort scenarios that formed the basis for the analysis in association with Table 9 of the notice of proposed rulemaking, titled ''Scenario-Specific Expected Take Numbers and Mean Annual Take Level.'' Table 9 of the notice identified the annual and total amounts of take that NMFS expected to occur under the ITR. The preliminary negligible impact analysis then referred back to Table 9 as the basis for the analytical process and discussion provided therein (See 83 FR 29290–29291).

NRDC complains that ''NMFS never defines the total amount of take it proposes to authorize.'' However, as is typical for a programmatic analysis, the ITR and its associated analysis (including negligible impact) do not propose to authorize take per se, but rather to provide a description of the upper bound within which take may be authorized via LOAs. The upper bounds of the instances of take that may be authorized under this rule are indicated

in Table 9 in this final rule. The actual amount of take authorized through LOAs under the ITR will be determined by applicant interest (subject to the upper bound).

NMFS also identified the Expert Working Group (EWG) report (Southall *et al.,* 2017) as an essential companion to the notice of proposed rulemaking and, similar to the acoustic modeling report, provided the document for concurrent public review. The EWG report describes the systematic risk assessment framework that, in part, forms the basis for the negligible impact analysis. We concisely described the analytical framework in the notice and provided the results of that analysis. Ultimately, the EWG report provides overall evaluated relative risk for each of the three effort scenarios (low, moderate, high) for each species in each of seven different zones. As stated in the notice, the severity and vulnerability ratings (facets of the analytical framework that are also clearly explained both in the EWG report and the notice) are integrated to provide relative impact ratings of overall risk. These zone-specific relative impact ratings for each species were then integrated using basic calculations to produce species-specific, GOM-wide overall evaluated relative risk ratings for each of the three effort scenarios. Overall vulnerability scores for each species were produced by summing the zone-specific vulnerability scores, as scaled to the zone-specific population. For example, the Zone 1 vulnerability score is multiplied by the ratio of the Zone 1 population to the total population. These zone-specific products are then summed. Overall severity scoring is calculated as the proportion of the sum of scenario-specific takes to the total population. These two factors are then integrated as described in the EWG report.

NRDC also states that the ''actual percentages of populations affected by takes'' are not provided. NMFS disagrees, as this information can be replicated using information that was provided to the public via the acoustic modeling report. Additional underlying data are necessary to replicate zone-specific findings. Excel workbooks containing these data were made publicly available by BOEM during review of their PEIS. NMFS did not view these additional data as essential to understanding the modeling report or the proposed ITR and did not publish these data on its website. Members of the public interested in further exploration of the information provided in the modeling report, or in need of assistance regarding their independent analysis of the modeling report, could have contacted the NMFS point of contact identified in the notice of proposed rulemaking.

In sum, NMFS provided sufficient information in support of its negligible impact analysis affording the public meaningful opportunity to comment. Further, consistent with a potential alternative scope identified in the proposed rule that would remove the Eastern Planning Area (EPA), the scope of this final rule has been modified to remove the GOMESA area, which includes most of the EPA (and a small portion of the Central Planning Area), based on BOEM's update to its action. This has resulted in a reduction in the upper bounds of the instances of take that may be authorized for all species pursuant to this final rule (see Tables 8 and 9).

Comment: The MMC commented similarly to NRDC, expressing some concern regarding the risk assessment framework and asserting ''apparent inconsistencies,'' while recommending that NMFS (1) provide the final risk assessment framework, underlying results, and its interpretation of those results to the public and (2) allow for an additional 30-day comment period to review the findings sufficiently in advance of issuing the final rule.

Response: NMFS disagrees with the MMC comments. They state that the EWG report and analysis ''has some apparent inconsistencies'' as compared against the preamble to the proposed rule because the scenario-specific high, moderate, and low values presented in Table 3 of the EWG report do not align with the summary minimum, maximum, and mean values given in Table 2 of the notice of proposed rulemaking. We note that the MMC provided clarifying questions to NMFS during the public comment period in advance of submitting a formal comment letter and expressed some confusion regarding Table 2 of that notice at that time. As was explained to the MMC then, Table 2 of the preamble was provided for illustrative purposes only, as a way of providing a more concise look at the information given in Table 1 of the preamble. As was explained, the values given in Table 2 were not consequential with regard to anything that followed in the preamble. NMFS regrets any confusion caused by inclusion of Table 2 in the notice of proposed rulemaking but explained clearly to the MMC that the table was not related to the analysis. It has been removed from this final rule.

Separately, the MMC states that ''neither NMFS nor BOEM stipulated why only certain years were selected for analysis,'' claiming that NMFS indicated that years 1, 4, and 9 were used in the analysis ''upon further inquiry.'' This is incorrect. In the notice of proposed rulemaking, we stated that ''Year 1 provides an example of what might be a high-effort year in the GOM, while Year 9 is representative of a low-effort year. A moderate level of effort in the GOM, according to these projections, would be similar to the level of effort projected for Year 4.'' (83 FR 29224.) NMFS provided explanation of its choices in the notice of proposed rulemaking (see, *e.g.,* 83 FR 29261–29262, 29290).

This portion of the MMC's recommendation regarding representative years is no longer relevant to this final rule. As discussed previously, BOEM revised the scope of the activity and provided revised effort projections and resulting take estimates accordingly. The revised take estimates provided by BOEM reflect years 1–5 of their original level of effort projections and, therefore, the question of rationale behind the selection of years 1, 4, and 9 is no longer relevant.

Regarding the notice of proposed rulemaking, the MMC also states that supposed discrepancies between zone-specific risk ratings and risk derived per year across the GOM are ''inconsistencies.'' Zone-specific risk ratings for any given effort scenario are driven by the actual effort within that zone for that scenario, while the overall level of effort GOM-wide underlies the labeling of scenarios as ''high,'' ''moderate,'' and ''low.'' For example, although year 1 was designated as the ''high'' effort scenario and year 4 the ''moderate'' effort scenario on the basis of the total projected GOM-wide survey days (2,286 and 1,902, respectively), the ''high'' effort scenario actually includes significantly less projected effort in zones 2 and 4 than does the ''moderate'' effort scenario. Therefore, risk ratings for certain species were higher in those specific zones for the ''moderate'' effort scenario than they were for the ''high'' effort scenario. This was explained in our notice of proposed rulemaking: ''[P]er-zone ranges can provide a different outlook than does an assessment of total year projected effort across zones. For example, in the ''high'' effort annual scenario (Year 1; considering total projected survey days across zones), there are 263 projected survey days in Zone 2, while the ''moderate'' effort annual scenario (Year 4) projects 446 survey days in Zone 2.'' This was explained directly to the MMC upon its informal inquiry during the public comment period. The MMC also stated to NMFS at that time that ''the

relative risk scores for certain species [. . .] do not make sense, presumably because they are based on the incorrect number of estimated survey days,'' giving as an example that ''rough-toothed dolphins in Zone 5 have an overall Moderate risk in the High and Low scenario years, but a Low risk in the Moderate scenario year.'' We reiterated to the MMC at that time that what the MMC viewed as illogical and erroneous did not in fact reflect errors, but rather the confluence of zone-specific activity levels and species presence for a given year. The effort scenarios used as the basis for the analysis were clearly identified, and there were no inconsistencies in terms of risk ratings in consideration of the zone-specific information underlying those ratings (which was explained in the notice of proposed rulemaking).

Separately, the MMC stated its view that ''the basis for determining the relative risk thresholds, relative rating thresholds, species-specific biological risk factors, and environmental risk factors was not provided'' and that ''many of the quantitative aspects have not been substantiated.'' While NMFS disagrees with this statement and refers the reader to the EWG report (Southall *et al.,* 2017), we also point out that, in the absence of precise quantitative information on these aspects of the risk assessment framework (on a species- and zone-specific basis), the application of the framework necessarily requires the application of professional judgment. As NMFS acknowledged, ''[e]lements of this approach are subjective and relative within the context of this program of projected actions and, overall, the analysis necessarily requires the application of professional judgment.'' (83 FR 29290.) The MMC comments do not find fault with any specific element or attribute of the framework or with any specific value chosen to represent a particular risk threshold or a particular species' vulnerability. NMFS does not agree that the MMC's recommendation to allow for an additional 30-day comment period for the public to review the risk assessment framework findings in advance of issuing the final rule is warranted and has not implemented the suggestion.

Comment: NRDC asserts that NMFS has erroneously used the relativistic assessment presented in the EWG report as the basis for the negligible impact determination, incorrectly applying it as though it evaluated absolute risk. A private citizen offers similar comments.

Response: NMFS disagrees with the comment. The EWG analysis is an important component of the negligible impact analysis, but is not the sole basis for our determination. While the EWG analysis comprehensively considered the spatial and temporal overlay of the activities and the marine mammals in the GOM, as well as the number of takes predicted by the described modeling, there are details about the nature of any ''take'' anticipated to result from these activities that were not considered directly in the EWG analysis and which warrant explicit consideration in the negligible impact analysis. Accordingly, NMFS' analysis considers the results of the EWG analysis, the effects of the required mitigation, and the nature and context of the takes that are predicted to occur. NMFS' analysis also explicitly considers the effects of predicted Level A harassment and impacts to marine mammal habitat, which were, respectively, not integrated into or included in the EWG risk ratings. These components of the full analysis, along with any germane species or stock-specific information, are integrated and summarized for each species or stock in the Species and Stock-specific Negligible Impact Analysis Summaries section of the negligible impact analysis.

In addition, while the EWG framework comprehensively considers the aggregate impacts to marine mammal populations from the activities addressed in this rule in the context of both the severity of the impacts and the vulnerability of the affected species, it does not fully consider the absence of survey activity in the eastern GOM (within the GOMESA moratorium area), following BOEM's update to the scope of activity. While this is to some degree reflected in the updated take estimates, and thereby incorporated into the EWG framework's risk ratings, the absence of survey activities within areas of increased biological importance for certain species benefits those species GOM-wide beyond what is simply reflected in the updated take numbers. The negligible impact analysis considers the reduction of both acute and chronic effects afforded through the revised scope of the rule.

Also, we note that while the EWG framework produces relativistic risk ratings, its components consist of absolute concepts, some of which are also absolutely quantified (*e.g.,* whether the specified activity area contains greater than 30 percent of total region-wide estimated population, between 30 and 15 percent, between 15 and 5 percent, or less than 5 percent). Further, NMFS provided substantive input into the scoring used in implementing the EWG framework for the GOM, to ensure that the categories associated with different scores, the scores themselves, and the weight of the scores within the overall risk rating all reflected meaningful biological, activity, or environmental distinctions that would appropriately inform the negligible impact analysis. Accordingly, and as intended, we used our understanding of the framework and best professional judgment to interpret the relativistic results of the EWG analysis appropriately into the larger negligible impact analysis, with the other factors discussed above, to make the necessary findings specific to the effects of the total taking on the affected species and stocks.

Comment: NRDC asserts that the vulnerability ratings used in the EWG framework fail to account for several factors appropriately, which undermine the framework's ability to contribute accurately to the overall evaluation of relative risk. NRDC cites the following as problematic factors: Application of vulnerability ratings on a zone-by-zone basis, which they state negatively biases the habitat use and temporal overlap factors; unaccountably low ratings for non-seismic stressors (specifically citing the DWH oil spill); relatedly, failure to account appropriately for all other stressors; and failure to fully account for stock structure and status.

Response: NMFS first notes that the application of the EWG framework, and specifically the development of appropriate vulnerability ratings, necessarily involves the use of professional judgment, here on the part of a group of experts in the fields of marine mammal biology, ocean acoustics, and the effects of noise on marine mammals, among other things (and in consultation with NMFS and BOEM). Reasonable people may disagree about the specific numerical values assigned to any one of the 11 different factors contributing to the overall species-specific vulnerability score generated for each of the seven zones (with seven factors that are static GOM-wide and four that vary spatially, scoring for 18 taxa and seven zones means that 630 individual numerical value selections underlie the vulnerability scores); but this does not imply that any of the specific values selected are unreasonable. All relevant factors were considered in generating the species- and zone-specific vulnerability scores.

NRDC misapprehends one of the fundamental values of the analytical framework, in that it is structured in a spatially explicit way that can be applied at multiple scales, based on the scope of the action and the information available to inform an assessment of the risk associated with the activity (or suite

of activities). This allows one to generate overall risk ratings while also evaluating risk on finer scales. In this case, severity ratings were generated on the basis of seven different GOM zones, allowing an understanding not only of the relative scenario-specific risk across the entire GOM, as is demanded for this analysis, but also to better understand the particular zones where risk may be high (depending on actual future survey effort) and what part of the stock's range may be subject to relatively high risk. The framework recognizes, fundamentally, that the spatial, temporal, and spectral overlaps between noise-generating activities and animal distribution are the primary factors that drive the type, magnitude, and overall evaluated risk of potential noise effects on marine mammals. These considerations are inherent and fundamental in both the severity and vulnerability ratings and are deliberately integrated into both the vulnerability and severity assessments; in fact, key features of the analytical framework include explicit recognition of the importance of species distribution relative to activity spatial distribution and temporal and contextual differences in exposure scenarios. If the spatially explicit nature of the framework were removed, as it seems NRDC is suggesting, there would be no value in generating a ''habitat use'' factor (*i.e.,* the spatial scale would be the GOM, and it would necessarily contain 100 percent of the estimated population). Spatial overlap is a central consideration for the extent of physical overlap between species and other environmental stressors, with consideration of species distribution across all zones, as well as the extent of population concentration and habitat specialization (as expressed through zone-specific vulnerability assessment). Regarding the temporal overlap factor referenced by NRDC, overall activity duration is a limited consideration within the vulnerability assessment rating but is expressed as a central consideration within magnitude-duration functions used to evaluate severity.

Despite the explanations provided in the EWG report, NRDC characterizes certain aspects of the vulnerability scoring as ''unaccountably low.'' However, NRDC does not provide specific recommendations for revisions to the assigned numerical values, or justification for their contention that scoring is too low. All relevant stressors were accounted for in the vulnerability scoring and specific scores were reasonably made on the basis of expert professional judgment. Contrary to NRDC's assertion, the effects of the DWH oil spill were considered in the vulnerability scoring (as well as in our development of mitigation in consideration of the MMPA's least practicable adverse impact standard). Overall, NRDC seems to provide a blanket suggestion, without adequate justification or evidence, that for all species, impacts should be considered to be higher than we have determined. We believe that we have satisfied the statutory standards after careful consideration of the available science.

Regarding stock structure, NRDC criticizes the treatment of bottlenose dolphins in the vulnerability scoring. Overall, species-level take and abundance estimates are used to support findings for bottlenose dolphins out of necessity. The best available information (Roberts *et al.,* 2016) was used to inform combined species values and did not support further quantitative apportionment of estimated take or abundances to stocks. However, NRDC's specific criticism of the ''population'' vulnerability scoring for bottlenose dolphins is unwarranted. The population score comprises three components: Status, *i.e.,* is the stock listed under the ESA and/or designated as depleted under the MMPA; trend, *i.e.,* does information over the available time series of abundance estimates indicate a trend; and size, *i.e.,* is the population defined as small (less than 2,500). None of the five designated stocks of bottlenose dolphin in Federal waters of the GOM are listed under the ESA or designated as depleted under the MMPA, and none would be classed as small. Regarding trend, multiple SAR abundance estimates are available for three of the five stocks (oceanic stock and northern and western coastal stocks); and available information does show an increasing trend for these stocks. We recognize that the effects of the DWH oil spill included likely population reductions for all GOM marine mammal stocks (other than the eastern coastal stock of bottlenose dolphins, which was not impacted by the spill); however, the best available information indicates that these reductions were likely modest for all bottlenose dolphin stocks other than the northern coastal stock (Table 5), and no more recent population abundance estimates that might reflect any potential reduction are yet available. While the likely decline in population abundance for northern coastal bottlenose dolphins is subsumed within the population score assigned for bottlenose dolphins at the species level, vulnerability scoring is necessarily performed at the species level such that it may appropriately be integrated with the take-based severity scoring and used to generate an overall risk rating. As mentioned above, the best available scientific information does not allow for stock-specific parsing of take for bottlenose dolphins. Moreover, the trend component of the population score is a relatively small contribution to the overall vulnerability scoring, accounting for a maximum of two out of 30 potential points. The likely decline in population abundance for northern coastal bottlenose dolphins, although not reflected in the existing vulnerability scoring, is insignificant as a contribution to the overall vulnerability score for bottlenose dolphins as a species. As noted above, the effects of the DWH oil spill are separately accounted for in the vulnerability scoring. Importantly, and also not accounted for in the EWG framework, we include significant mitigation (time-area restriction) intended to alleviate impacts to northern coastal bottlenose dolphins during periods of greatest importance for their reproductive behavior.

Comment: NRDC states that NMFS' use of daily exposure durations ''to justify its negligible impact determination'' is arbitrary and capricious. They state that we incorrectly used exposure times above the 160-dB threshold (rather than the lower threshold associated with the multi-step probabilistic risk function); assumed low severity for certain exposure durations; and disregarded repeated exposures. A private citizen offers similar comments.

Response: As an initial matter, while it is true that NMFS evaluated exposure durations for the negligible impact analysis, it is not the only factor that we considered ''to justify'' the determination, as described fully in the Negligible Impact Analysis and Determinations section. Moreover, the consideration of exposure duration is entirely appropriate in assessing the severity of a likely exposure, which is critical to understanding how the authorized takes are likely to impact individual marine mammals. This was not addressed in the EWG assessment but was incorporated into the negligible impact analysis.

NMFS appreciates NRDC's comments regarding use of exposure times above the 160-dB threshold, and we have re-evaluated the exposure duration information and better integrated discussion of this information into the negligible impact analysis (see Negligible Impact Analysis and Determinations and Table 16 for more

information). However, it is incorrect that ''NMFS' time-exposure analysis is predicated on its use of 160 dB as the operative threshold of harm'' and that our use of exposure information above the 160-dB threshold is a ''back-door return'' of the ''outdated 160 dB threshold.'' Inherent in the concept of a multi-step probabilistic risk function is the assumption that varying proportions of an exposed population will be harassed upon exposure at the different steps of the function. We presented the 160-dB exposure durations in the notice of proposed rulemaking because exposure above this step represents the 50 percent midpoint of the function (for all species other than beaked whales) and, therefore, was deemed an appropriate representation of durations where a significant proportion of exposed animals would be expected to experience harassment (versus 10 percent of the population exposed to received sound levels between 140 and 160 dB). In Table 16 of this final rule, we present these durations for both the 160-dB and 140-dB steps of the function. It is important to keep in mind that, of the animals exposed above the 160-dB threshold for the indicated species-specific durations, not all are considered harassed. The risk function assumes 50 percent of animals exposed between 160-dB and 180-dB will be harassed. For the longer exposure durations associated with the 140-dB threshold, only 10 percent are expected to be harassed.

As we indicate in the Negligible Impact Analysis and Determinations discussion of this final rule, to put the predicted amount of take into meaningful context, it is useful to understand the duration of exposure at or above a given level of received sound (as well as the likely number of repeated exposures across days). While a momentary exposure above the criteria for Level B harassment counts as an instance of take, that accounting does not make any distinction between fleeting exposures and more severe encounters in which an animal may be exposed to that received level of sound for a longer period of time. This information is meaningful to an understanding of the likely severity of the exposure, which is relevant to the negligible impact evaluation. For example, for bottlenose dolphin exposed to noise from 3D WAZ surveys in Zone 6, the modeling report shows that approximately 72 takes (Level B harassment) would be expected to occur in a 24-hr period. However, each animat modeled has a record or time history of received levels of sound over the course of the modeled 24-hr period. The 50th percentile of the cumulative distribution function indicates that the time spent exposed to levels of sound above 160 dB rms SPL (*i.e.,* the 50 percent midpoint for Level B harassment) would be only 1.8 minutes—a minimal amount of exposure carrying little potential for significant disruption of behavioral activity.

The Species and Stock-specific Negligible Impact Analysis Summaries discussion considers the relative impact ratings in conjunction with required mitigation and other relevant contextual information—including exposure durations at the various thresholds—to produce an assessment of impact to the stock or species, *i.e.,* the negligible impact determinations. For beaked whales, take is estimated on the basis of a risk function shifted down such that 90 percent of the animals exposed to received levels above 140 dB and 50 percent exposed to received levels above 120 dB are expected to be harassed. We used this approach based on the documented behavioral sensitivity of beaked whales. However, as NRDC acknowledges, context is important when assessing behavioral responses to sound. The exposures above 120 dB here occur at significant distance from the source (*i.e.,* greater than 50 km). It is generally accepted that an animal's distance from the sound source plays an important role in the animal's behavioral response to a received sound level (*e.g.,* Gomez *et al.,* 2016). NMFS believes that exposures to the relevant harassment thresholds at significant modeled distances from the actual sound source, although included in the take estimates based on the risk function, will not carry significant consequences for the potentially exposed animals. Rather, these exposures are likely to result in significantly less severe responses (if any). Examples provided by NRDC purporting to demonstrate greater severity of response than we have assumed include irrelevant examples—beaked whales are known to respond with greater severity to mid-frequency active military sonar than to other sources, as discussed in greater detail in a previous comment response—and examples of ''responses'' entailing changes to vocalization patterns over longer durations, but these responses do not necessarily rise to the level of a take, much less a take event of significant severity.

Regarding repeated exposures, despite the figures cited by NRDC concerning potential days of activity, it is unlikely that any given individual animal would in fact experience repeated take events of the magnitude suggested. Each of the seven GOM zones is an extremely large area (average zone size approximately 100,000 km^2), and the likely harassment ''footprint'' of any given survey would be relatively small. Modeled isopleth distances to the 160-dB threshold are approximately 12 km for low-frequency cetaceans (*i.e.,* the Bryde's whale), 7 km for mid-frequency cetaceans (*i.e.,* sperm whales, beaked whales, dolphins), and 6 km for high-frequency cetaceans (*i.e., Kogia* spp.). Distances to the 140-dB isopleths are substantially larger, but we again emphasize that only ten percent of the animals exposed at that level would be expected to incur harassment, while 50 percent of the animals exposed at the 160-dB level would be expected to incur harassment. It is clear that, in reality, there is a relatively low chance of any given individual marine mammal being repeatedly taken within relatively short timeframes, much less that such events would result in fitness consequences for those individuals. Additionally, NRDC suggests that NMFS fails to consider repeated takes at all, when in fact this likelihood is inherently addressed through the severity rating of the EWG assessment.

NRDC concludes their comment by claiming that NMFS failed to undertake sufficient analysis in support of the negligible impact determinations. We disagree with this assertion, and refer to the Negligible Impact Analysis and Determinations section in support of this final rule. NRDC focuses in particular on sperm whales, implying that they are likely to incur impacts to reproductive fitness and stating that NMFS cannot make a negligible impact finding for sperm whales without additional mitigation requirements. NMFS agrees that the bioenergetics simulations of Farmer *et al.* (2018a)—cited by NRDC in support of their argument—show that frequent disruptions in foraging can have potentially severe fitness consequences for individual sperm whales. However, a follow-up study (Farmer *et al.,* 2018b), which additionally accounted for the population-level effects of the DWH oil spill on GOM sperm whales, modeled the potential population level consequences of the specific disturbance events underlying this analysis (*i.e.,* the acoustic exposure modeling of Zeddies *et al.,* 2015, 2017a). This follow-up study found that, under realistic modeled scenarios, no sperm whales were projected to reach terminal starvation and no fetal abortions were predicted as a result of long-term disturbance effects (*i.e.,* over ten years of projected survey activity). Similarly,

predicted declines in relative body condition (expressed as the percentage of available reserves for a disturbed individual whale relative to an undisturbed whale with identical characteristics) as a result of long-term disturbance effects were not significant under realistic modeled scenarios. When evaluating the additional effects of modeled disturbance on the DWH oil spill-impacted trajectory, the modeling did not predict any significant additional stock declines (Farmer *et al.,* 2018b). We believe the administrative record for this final rule amply demonstrates that NMFS used the best available science during our administrative process to inform our analyses and satisfy the standards under section 101(a)(5)(A). Of note, and as indicated in Changes from the Proposed Rule, as a result of BOEM's updated scope of the activities and the associated revisions to the levels of effort, both the maximum allowable amount of take and the maximum annual take under the rule have decreased (significantly in some cases, including for Bryde's whales and sperm whales) for all except two species/stocks. For the two exceptions these figures increased only slightly, and the severity of many of the impacts has been lessened via the removal and/or reduction of take in areas of greater biological importance previously considered as mitigation areas.

Comment: Chevron comments that NMFS should make the final version of the EWG report available to the public for review and suggests expanding the description of the inputs of the analysis. Chevron states that the ''vulnerability'' assessment, in particular, would benefit from additional discussion to explain how professional judgments led to specific rankings for each species. Chevron also comments that NMFS should provide an additional plain language discussion of the risk analysis process, including background on the development of the risk analysis framework, including any relevant analogues in other ecosystems or regulatory contexts, the ways in which species may be considered ''vulnerable,'' and the meaning of the ''risk'' discussed.

Response: NMFS appreciates the comment. The final report is available to the public online at: *www.fisheries.noaa.gov/action/incidental-take-authorization-oil-and-gas-industry-geophysical-survey-activity-gulf-mexico.* The content of the final report was determined by NMFS and BOEM in conjunction with the EWG. We believe that we have provided sufficient plain language discussion of the EWG framework.

Comment: NRDC claims that NMFS' negligible impact analysis is inappropriately reliant upon the prescribed mitigation and, further, that the mitigation will be ineffective.

Response: First, NMFS did not rely solely on the mitigation in order to reach its findings under the negligible impact standard. As is stated in the analysis, consideration of the implementation of prescribed mitigation is one factor in the analysis but is not determinative in any case. In certain circumstances, mitigation is more important in reaching the negligible impact determination, *e.g.,* when mitigation helps to alleviate the likely significance of taking by avoiding or reducing impacts in important areas. Second, while NRDC dismisses the importance of the prescribed mitigation by stating (mistakenly) that it is ''unsupported by evidence,'' NRDC offers no support for their conclusions.

NRDC misunderstands the degree to which NMFS relies on shutdowns for sensitive or vulnerable species, including beaked whales, at extended distances. We agree that these measures in and of themselves will have limited benefit for cryptic species such as beaked whales that are unlikely to be observed. However, we believe that it makes sense to minimize the duration and intensity of disturbance for these species when they are observed, and because they are practicable we include them in the suite of prescribed measures and discuss them where appropriate. For more readily detected species, such as the sperm whale, which is easily detected when at the surface and which vocalizes frequently while underwater, the extended distance shutdowns (for both visual and acoustic detections) should appropriately be considered influential in our assessment of impacts to affected individuals and, therefore, ultimately on the stock. Despite NRDC's dismissal of these requirements, we presume they would agree that the duration and intensity of disturbance of sensitive species should be minimized where practicable.

In summary, we consider these measures appropriately as mitigating factors when considering context as part of our negligible impact analysis.

Comment: The Associations state that the Expert Working Group framework was applied without following all of the recommended steps, such as conducting expert elicitation to derive risk functions for species that do not have parameterized Population Consequences of Disturbance (PCOD) models. The Associations recommend that NMFS seek input and advice on the framework and its conclusions from independent experts.

Response: There is extensive scientific interest in forecasting how short-term behavioral responses by individual animals may aggregate and result in population-level consequences. The concept was introduced by the National Research Council (2005) as Population Consequences of Acoustic Disturbance. However, given the lack of data on acoustic responses, research studies have generalized the issue to look at environmental and anthropogenic stressors in general and renamed the concept Population Consequences of Disturbance. New *et al.* (2014) presented a modified conceptual framework to help forecast long-term impacts. Conceptually, a series of transfer functions connect increasingly broader impacts from the initial disturbance to effects on individual health, individual vital rates, and finally population dynamics. The concept has been demonstrated with a few species for which there are extensive data from tagged or photo-identified animals so that effects on individuals can be quantified. Northern elephant seals were the first study species for which the data from time-depth recorders were able to be linked to an individual animal's body fat condition (Aoki *et al.,* 2011; Adachi *et al.,* 2014), which provided insight into foraging success and ultimately individual health and vital rates (Robinson *et al.,* 2010). Rolland *et al.* (2016) used photographic data of North Atlantic right whales to evaluate individual health and link it to demographic groups and population status. Additional studies exploring population consequences are ongoing, but a common theme is that extensive data documenting individual health and population vital rates are necessary for such analyses. These are considered the gold standards for future studies, but, at present, studies within the GOM have not occurred in sufficient detail for such analyses.

For purposes of the analysis contained herein, the disturbance severity rating facet of the EWG framework involves a relativistic framework relating Level B harassment to the zone-specific population size and then evaluating this proportion to specified severity criteria common across species. In the idealized framework discussed by the EWG (Southall *et al.,* 2017), the severity rating involves consideration of the magnitude of population affected and the duration of disturbance, *i.e.,* by deriving magnitude-duration risk functions that describe the potential effects of

exposure to noise on affected populations. The EWG considered that a better approach would apply values obtained using software developed to implement the Interim PCOD approach (Harwood *et al.,* 2014; King *et al.,* 2015).

While various models have been developed implementing the PCOD approach (*e.g.,* New *et al.,* 2013), the approach is problematic for general application because it is very data-heavy, and sufficient data specific to a taxon and/or disturbance context is not typically available. Few marine mammal populations have been as intensively studied as the PCOD case study populations, and the lack of appropriate datasets that link exposure to disturbance with behavioral change, and behavioral change with health, currently limits the general applicability of the full PCOD model. This difficulty led to development of the Interim PCOD approach, which uses results from an expert elicitation process, rather than empirical data, to predict the effects that a specific amount of disturbance will have on the vital rates of an individual marine mammal. In evaluating potential use of the Interim PCOD approach for developing magnitude-duration curves suitable for use in assessing risk associated with the projected survey activity considered here, the EWG used the results of an expert elicitation process that considered potential effects of pile driving noise associated with the construction of offshore wind farms on bottlenose dolphins, harbor porpoises, and minke whales in the North Sea. While this evaluation provided proof-of-concept and highlighted areas for future improvement of the process, such evaluations are not appropriately extrapolated to a risk assessment involving dissimilar species, stressors, and locations. For example, demographic rates and population growth rates specific to those species in U.K. waters of the North Sea were used and, further, even in that expert elicitation the authors warned that the results for the minke whale were likely not reliable due to a lack of available data. The EWG recommended that the available elicitation results not be used towards the current analysis, and NMFS and BOEM concurred. Currently, results of these expert elicitation processes are additionally viewed as potentially unreliable because experts may misinterpret the questions they are asked (Booth *et al.,* 2016).

Overall, while we agree with the Associations that it would be ideal to evaluate the effects of the specified activity on the affected populations by incorporating a PCOD or Interim PCOD approach to the EWG framework, sufficient data are not available to conduct a PCOD approach, and sufficient resources were not available to NMFS to develop and implement an expert elicitation process specific to seismic and the affected GOM populations on a timeline amenable to this ITR. With regard to the Associations' suggestion that outside experts review the EWG framework, we note that the EWG comprises experts outside NMFS and BOEM who were contracted for the express purpose of developing the framework. We do not believe it necessary to engage outside experts to review the work of other experts outside NMFS and BOEM, which is itself subject to review by experts within both NMFS and BOEM.

Comment: The Associations object to the terminology used for the relative severity ratings in the EWG framework approach, stating their disagreement with the implications of rating descriptors such as ''severe,'' and reiterating their belief that the modeled exposure levels are incompatible with the available data. Relatedly, the Associations assert that there is ''little scientific support'' for the relative risk ratings for sperm and beaked whales.

Response: Respectfully, NMFS believes this comment involves a semantic issue. The Associations do not suggest alternative terminology for the relative risk ratings. Regarding the risk ratings for sperm whales and beaked whales, these ratings are a product of a relatively straightforward analysis of severity (*i.e.,* amount of predicted disturbance relative to population size) and vulnerability (*i.e.,* consideration of factors inherent to the population that make it more or less vulnerable to the disturbance considered via the severity rating). The Associations provide no specific critique of any of these aspects of the analysis. We have addressed the Associations' criticism of the acoustic exposure modeling elsewhere in these comment responses.

Comment: The Associations object to use of the potential biological removal (PBR) metric as the basis for evaluating severity of Level A harassment within the EWG framework, stating that its use in evaluating non-serious injury is inappropriate because the metric was developed for evaluation of the significance of serious injury and mortality.

Response: We acknowledge that the PBR metric defines a level of removals from a population (*i.e.,* mortality) that would allow that population to remain at its optimum sustainable population level or, if depleted, would not increase the population's time to recovery by more than 10 percent, and therefore that it is inappropriate to make comparisons between Level B harassment takes and the PBR value for any stock. However, as discussed in the EWG report and in the notice of proposed rulemaking, while NMFS does not expect PTS (Level A harassment) that might be accrued through noise exposure to result in mortality of marine mammals, PBR can serve as a good surrogate for population vulnerability/health. Accordingly, PBR or a related metric can be used appropriately as a value against which to evaluate the potential severity to the population of a permanent impact such as PTS on a given number of individuals, and it is only in this sense that we use the PBR value. The Associations do not provide an alternative recommendation.

Small Numbers

Comment: The Associations and other industry commenters express agreement with NMFS' interpretation of the small numbers requirement as allowing that the finding may be made at the individual LOA level.

Response: We thank the Associations for their comment in support of the small numbers approach. NMFS' analysis generally comports with many of the points they raise, as discussed in this preamble.

Comment: NRDC states that the interpretation of ''small numbers'' presented by NMFS in the notice of proposed rulemaking is contrary to the plain meaning and purpose of the MMPA, in part because NMFS allegedly did not provide a reasoned basis for the take limit proposed (*i.e.,* one-third of the best available species or stock abundance estimate). NRDC makes four specific claims. First, NRDC states that one-third cannot be considered a ''small number.'' Second, NRDC states that Congress intended that takes be limited to ''infrequent, unavoidable'' occurrences, and that NMFS has not explained why the taking would be infrequent or unavoidable. Third, NRDC contends that NMFS should define different small numbers thresholds on the basis of the conservation status of individual species. Finally, NRDC believes that NMFS must account for ''additive and adverse synergistic effects'' that may occur due to multiple concurrent surveys in conducting a small numbers analysis. Industry commenters suggest that additional detail is necessary regarding the basis for NMFS' small numbers threshold.

Response: NMFS disagrees with NRDC's arguments on this topic. Although there is limited legislative history available to guide NMFS and an apparent lack of biological

underpinning to the concept, we have worked to develop a reasoned approach to small numbers. As discussed in the section of the notice of proposed rulemaking entitled Small Numbers, NMFS explains the concept of ''small numbers'' in recognition that there could also be quantities of individuals taken that would correspond with ''medium'' and ''large'' numbers. As such, NMFS has established that one-third of the most appropriate population abundance number—as compared with the assumed number of individuals taken—is an appropriate limit with regard to ''small numbers.'' This relative approach is consistent with the statement from the legislative history that ''[small numbers] is not capable of being expressed in absolute numerical limits'' (H.R. Rep. No. 97–228, at 19 (September 16, 1981)), and relevant case law (*Center for Biological Diversity* v. *Salazar,* 695 F.3d 893, 907 (9th Cir. 2012) (holding that the U.S. Fish and Wildlife Service reasonably interpreted ''small numbers'' by analyzing take in relative or proportional terms)).

NRDC claims that a number may be considered small only if it is ''little or close to zero'' or ''limited in degree.'' We note that the comment selectively picks a definition in support of NRDC's favored position. For example, the definition of ''small'' in Webster's New Collegiate Dictionary (1981) included ''having little size, esp. as compared with other similar things.'' See also *www.merriam-webster.com/dictionary/small* (defining ''small'' as ''having comparatively little size''). These definitions comport with the small numbers interpretation developed by NMFS, which utilizes a proportionality approach. The comment also selectively quotes the relevant legislative history language, stating that Congress ''intended that the agency limit takes to 'infrequent, unavoidable' occurrences.'' The actual statement from the legislative history is that taking of marine mammals should be ''infrequent, unavoidable, *or* accidental.'' H.R. Rep. No. 97–228, at 19 (September 16, 1981) (emphasis added). This language suggests that taking that is unavoidable (or accidental) may qualify as small numbers, even if not infrequent.

The argument to establish a small numbers threshold on the basis of stock-specific context is unnecessarily duplicative of the required negligible impact finding, in which relevant biological and contextual factors are considered in conjunction with the amount of take. Similarly, NRDC's assertion that NMFS' proposed approach fails to account for ''additive and adverse synergistic effects'' from multiple surveys is not required by section 101(a)(5)(A) of the MMPA, and it is unclear how NRDC defines this concept or how it may be related to the ''small numbers'' concept. These suggestions are not founded in any relevant requirement of statute or regulation, discussed in relevant legislative history, or supported by relevant case law.

A private citizen echoed certain of NRDC's comments on this topic, adding that NMFS' approach is ''embarrassing and scientifically indefensible.'' However, the commenter does not provide a more scientifically defensible interpretation of small numbers, suggesting only that ''[o]ne could approach this in many ways.''

Regarding the comment that additional explanation is needed for NMFS' interpretation of the small numbers standard, we believe the proposed and final rule provide sufficient explanation for setting one-third as the upper limit for small numbers where reasonably reliable quantified take estimates are available. See the Small Numbers section later in this preamble.

Comment: Several commenters suggest that the small numbers finding need not be based on a quantitative threshold.

Response: NMFS agrees that a more qualitative small numbers finding may be permissible. See, *e.g., Center for Biological Diversity* v. *Salazar,* 695 F.3d at 906–908. However, in this case, where take estimates can be predicted with relative confidence, we have elected to set a quantitative threshold. Moreover, the commenters do not provide any specific recommendations for an appropriate qualitative approach in this case.

Comment: The MMC recommended that any ''formal interpretation'' of the small numbers standard by NMFS be issued in a stand-alone, generally applicable rulemaking (*e.g.,* in amendments to 50 CFR 216.103 or 216.105) or in a separate policy directive, rather than in the preambles to individual proposed rules.

Response: We appreciate the MMC's recommendation and may consider the recommended approaches in the future. We note, however, that providing relevant explanations in a proposed ITR is an effective and efficient way to provide information to the reader and solicit focused input from the public, and ultimately affords the same opportunities for public comment as a stand-alone rulemaking would.

Comment: NRDC asserts that NMFS' interpretation of the MMPA's small numbers requirement is contrary to law, stating their belief that NMFS must make a small numbers determination in the rule, rather than for issuance of individual LOAs; that NMFS must evaluate the same amount of take in order to separately determine that the total take will both meet the small numbers standard and have a negligible impact; and that NMFS' approach impermissibly cuts the public out of the agency's findings.

Response: Based on NMFS' analysis of the language and structure of section 101(a)(5)(A) and the implementing regulations for that provision, NMFS disagrees that the small numbers finding must be based on the total of all take over the five-year (or less) period from all potential survey activity. The MMPA does not define small numbers or explain how to apply the term in either section 101(a)(5)(A) or the similar provision for incidental harassment authorizations (IHAs) in section 101(a)(5)(D),[6] including how to apply the term in a way that allows for consistency across those two provisions that are similar but allow for potentially different time and activity scales. (See Small Numbers below.) Especially when taken together with NMFS' implementing regulations, our approach is consistent with the structure of section 101(a)(5)(A), which provides:

(i) Upon request therefor by citizens of the United States who engage in a specified activity (other than commercial fishing) within a specified geographical region, *the Secretary shall allow,* during periods of not more than five consecutive years each, *the incidental, but not intentional, taking* by citizens while engaging in that activity within that region *of small numbers of marine mammals of a species or population stock* if the Secretary, after notice (in the **Federal Register** and in newspapers of general circulation, and through appropriate electronic media, in the coastal areas that may be affected by such activity) and opportunity for public comment—

(I) *finds that the total of such taking during each five-year (or less) period*

[6] Section 101(a)(5)(D) states in relevant part:

(i) Upon request therefor by citizens of the United States who engage in a specified activity (other than commercial fishing) within a specific geographic region, the Secretary shall authorize, for periods of not more than 1 year, subject to such conditions as the Secretary may specify, the incidental, but not intentional, taking by harassment of small numbers of marine mammals of a species or population stock by such citizens while engaging in that activity within that region if the Secretary finds that such harassment during each period concerned—

(I) will have a negligible impact on such species or stock, and

(II) will not have an unmitigable adverse impact on the availability of such species or stock for taking for subsistence uses[.]

concerned will have a negligible impact on such species or stock and will not have an unmitigable adverse impact on the availability of such species or stock for taking for subsistence uses [. . .]. (emphasis added).

Section 101(a)(5)(A)(i)(I) is explicit that the ''negligible impact'' determination for a specified activity must take into account the ''total of such taking'' (*i.e.,* all of the taking that the Secretary may conceivably allow (or authorize) under individual LOAs during the five year (or less) period considered for the rule). In contrast, the ''small numbers'' language in 101(a)(5)(A) is not subject to the same time period requirement of five years (or less in cases where the period being considered for a rule is less than five years).

In our view, the statutory language for small numbers and the negligible impact finding indicates that the negligible impact finding is made based on consideration of an aggregation of potential authorizations (LOAs) for taking small numbers of marine mammals, and allows for different temporal periods in applying the two different standards. The statute contemplates that the Secretary shall allow taking during the five year (or less) period, which in our view also implies that there could be multiple allowances or authorizations (*i.e.,* LOAs), so long as the maximum allowable total taking from all of those authorizations combined is considered in the upfront assessment of whether the negligible impact standard is met.

As we have noted, the regulatory vehicle for authorizing (*i.e.,* allowing) the take of marine mammals is the LOA, a creature of NMFS' long-standing implementing regulations that is not in the statute. See 50 CFR 216.106. Those 1989 implementing regulations requiring an LOA to effectuate an authorization were in effect when Congress amended the MMPA in 1994 to add section 101(a)(5)(D) for issuance of one-year IHAs, and over the years when Congress amended section 101(a)(5)(A) for various reasons (including most recently in 2018, to extend the maximum authorization period to seven years for military readiness activities, Pub. L. 115–232 (John S. McCain National Defense Authorization Act for Fiscal Year 2019) (Aug. 13, 2018)). Presumably Congress was aware of these implementing regulations and the framework they created for authorizing take under section 101(a)(5)(A) and could have invalidated those regulations had it so desired.

Under NMFS' approach, the negligible impact analysis for the rulemaking is conducted for the time period covered by the rule (five years in this case, the maximum under the statute for a non-military readiness activity), but the small numbers analysis attaches to the instrument that actually ''allows'' or authorizes taking, *i.e.,* the LOA. The statute does not preclude NMFS from issuing an LOA that comports with the small numbers level set forth in the relevant rule for the specified activity. Consistent with the MMPA requirement, here the Secretary (through NMFS) has prescribed the necessary specified activity regulations after notice and comment. At that point, once the regulations are effective, NMFS thereafter may authorize incidental take through the issuance of LOAs, provided that they satisfy the requirements set forth in the rule and regulations, including the small numbers standard articulated in the rule.

NRDC cites *Conservation Council for Hawaii* v. *NMFS,* 97 F. Supp. 3d 1210 (D. Hawaii 2015), in stating that the MMPA ''plainly requires that the agency evaluate both whether there will be small numbers of take and whether there will be a negligible impact'' before issuing regulations, and that these determinations ''must be based on the same amount of take.'' We disagree. In NMFS' view, *Conservation Council for Hawaii* stands for the proposition that NMFS cannot authorize more take than it has analyzed under the negligible impact standard. 97 F. Supp. 3d at 1221. There the court found that there were substantial differences between the anticipated take numbers, which were the basis for the negligible impact finding, and the amount of take that NMFS was prepared to authorize incidental to U.S. Navy military readiness activities. That case did not even involve the small numbers provision, which does not apply in the case of military readiness activities. 16 U.S.C. 1371(a)(5)(F)(i). The court in *Conservation Council for Hawaii* did not consider or make any pronouncements about whether the small numbers provision must be applied to the total annual taking under the rule or whether it could be applied at the LOA stage.

NRDC repeatedly states that the negligible impact and small numbers provisions must have separate meaning. NMFS agrees that the two provisions do have separate meanings, and this rule satisfies that requirement. Each LOA must meet the small numbers requirement as NMFS has interpreted it in this rule. In other words, it is not sufficient for the survey activity described in an LOA application to fall within the scope of the activity analyzed for the rule and NMFS' negligible impact determination. The small numbers limitation also must be satisfied. For example, NMFS may receive an application for an LOA where the take estimates exceed the small numbers standard identified in the rule. In that case, the request would be denied, *even if* the amount of taking was considered in the negligible impact evaluation. Thus the negligible impact and small numbers inquiries are separate and have different meanings.

To summarize, the MMPA is silent on how to apply ''small numbers'' in either section 101(a)(5)(A) or (D), including in a way that allows for consistency across those two very similar provisions. Moreover, NMFS' implementing regulations for section 101(a)(5)(A) make it clear that LOAs are the instrument for authorizing take. Thus, the mere existence of regulations under 101(a)(5)(A) for a specified activity is not sufficient to authorize take under that provision. An LOA is required.

As we have previously stated, the small numbers standard has limited biological relevance (*i.e.,* there is a lack of a biological underpinning for the concept), but NMFS' application of the small numbers standard at the LOA stage does not rely on that view for the approach taken here (and moreover, NMFS did not receive any public comments offering an alternative definition that is rooted in biological concepts or is not conflated with negligible impact considerations). As the notice of proposed rulemaking explained, NMFS' interpretation and approach are based on analysis of the governing section 101(a)(5)(A) and limited legislative history, as well as consideration of section 101(a)(5)(D), and our long-standing approach to implementing section 101(a)(5)(A) through separate LOAs. NMFS has determined that the statute is ambiguous in terms of what small numbers means and how ''small numbers'' must be applied, which affords the agency reasonable discretion in how to do so. After weighing various policy considerations, NMFS exercised its discretion to define small numbers and apply small numbers determinations at the LOA level.

Importantly, the final rule, which was subject to notice and comment, sets the small numbers standard for future LOAs issued under the rule. Moreover, contrary to NRDC's assertions, NMFS has set the total taking allowable for all LOAs issued under the rule for this specified activity—*i.e.,* the taking that was analyzed for the negligible impact determination. If an LOA application for

a survey provides take estimates that are within the small numbers threshold set in this rule, then the LOA for that survey will be deemed to satisfy the small numbers requirement.

As NRDC correctly points out, NMFS' implementing regulations require issuance of LOAs to be consistent with the ''total taking allowable'' under the activity-specific regulations. The regulations for the specified activity also reflect this. The rulemaking for these regulations evaluated the level of activity projected in BOEM's update for its petition, and NMFS' negligible impact determination is based on consideration of that level (as are the corresponding take estimates). Any LOA must be within the amount analyzed for the scope of the rule, and the total amount of take under all issued LOAs combined cannot exceed the amount analyzed and ''allowable'' under the rule for this activity.

Regarding the differences between the processes under sections 101(a)(5)(A) and (D), we did not mean to suggest that section 101(a)(5)(A) is necessarily or always more protective than and preferable to 101(a)(5)(D). Rather, section 101(a)(5)(A), which can span a longer period of time and cover multiple applicants through issuance of LOAs, allows for a more comprehensive/holistic analysis by the agency (one negligible impact analysis for all activities over the five-year (or less) period and consideration of mitigation appropriate for the full suite of activities). Such an approach has the potential to be more protective because it allows for a more comprehensive understanding of impacts, as well as a mechanism to include holistic mitigation that can more effectively address both acute and chronic effects resulting from multiple activities covered under a rule. Section 101(a)(5)(A) also focuses public attention on one rulemaking (rather than—as would be the case for these survey activities—potentially dozens of IHA actions per year, each with separate notice and comment), and allows for other administrative efficiencies. We note that BOEM applied for the regulations in support of the oil and gas industry, and prepared an EIS in support of its own program related to the permitting of the survey activities that are the subject of this MMPA application and rulemaking.

NRDC claims that the approach ''is a novel interpretation of the MMPA.'' However, the rule cited in support of their argument (81 FR 47240; July 20, 2016) is consistent with one aspect of our approach here, in that the small numbers determinations in both contexts are based on annual take estimates, not total take over the five-year period of the regulations.[7] We acknowledge that we have not previously determined that small numbers could be applied at the individual LOA stage where more than one LOA applicant may apply under the activity-specific regulations. However, that is simply because the issue had not previously presented itself. In nearly all cases to date,[8] there has been a single operator who is the sole applicant for both the LOA (or LOAs if they cover less than the five-year period) and the governing specified activity regulations. As a result, in such a scenario, the small numbers determination by default corresponds to the maximum annual taking covered by the regulation (and the LOA). But even when there is only one applicant for LOAs under a regulation, NMFS does not tally take across the five-year period for purposes of assessing small numbers. Rather, NMFS assesses annual levels of take. (This also promotes consistency between 101(a)(5)(A) and 101(a)(5)(D) to avoid incentivizing IHAs at the expense of LOAs issued under more comprehensive rules.)

Finally, NRDC's statement that the public is impermissibly cut out of the agency's findings is incorrect. The proposed rule set forth the maximum total taking and annual taking that would be allowable (via the issuance of LOAs) for the five-year period that the regulations will be effective, which was based on information contained in BOEM's publicly available application and PEIS. Those figures decreased for all but two species. For the two species where the figures increased, we evaluated those changes and determined they do not represent a meaningful change for our analyses. See Changes From the Proposed Rule.

The proposed rule included a 60-day public comment period. We also believe that our rulemaking afforded a full and focused opportunity for public review of and comment on the full scope of survey activities and proposed mitigation, rather than through dozens of individual IHAs, each with 30-day public comment periods and shorter timeframes for NMFS to consider the public comments. Thus the public had a meaningful opportunity to comment.

Comment: Citing their interpretation of the statute and multiple judicial decisions, the MMC suggests that NMFS' interpretation and implementation of the small numbers standard is contrary to law and further recommends that NMFS adopt a policy interpreting the small numbers requirement of section 101(a)(5)(A) such that it:

- Requires determinations be made when issuing incidental take regulations (as opposed to when LOAs are issued);
- makes such determinations based on the total take authorized incidental to the specified activity and for the full duration covered by those regulations (as opposed to for each LOA and on an annual basis); and
- provides an opportunity for public notice and comment on all small numbers determinations.

Response: As explained in the responses above and discussion under the Small Numbers section of this preamble, NMFS disagrees, based on our analysis of the statute, the legislative history, the implementing regulations, and relevant case law.

NMFS issues incidental take authorizations under section 101(a)(5)(A) through LOAs, provided that we satisfy the relevant statutory standards. Analysis of that statutory provision and relevant legislative history, including when read in conjunction with section 101(a)(5)(D), leads NMFS to conclude that the small numbers limitation may be applied at the LOA stage, provided that we make the negligible impact finding for the total taking allowable under the regulations for the specified activity and

[7] We further note that population biology often focuses on annual cycles. See, *e.g.,* 50 CFR 216.103 (negligible impact defined in terms of impacts on annual rates of recruitment or survival); 16 U.S.C. 1386(a), (c) (requiring stock assessment reports to estimate the annual human-caused mortality and serious injury of the stock, and annual review of stock assessments when significant new information is available that may indicate the stock assessment should be revised); 16 U.S.C. 1362(26) (defining ''net productivity rate'' as the annual per capita rate of increase in a stock resulting from additions due to reproduction, less losses due to mortality); 16 U.S.C. 1383a(l)(ii) (requiring MMC's recommended guidelines to govern the incidental taking of marine mammals in the course of commercial fishing operations, to the maximum extent practicable, to include as a factor to be considered and utilized in determining permissible levels of taking ''the abundance and annual net recruitment of such stocks'').

[8] The one exception to date is NMFS' regulation governing the incidental take from explosive removal of offshore structures in the GOM (EROS), promulgated at the request of the Minerals Management Service on behalf of multiple private removal companies that individually submitted LOA requests. NMFS' rulemaking for the EROS regulations evaluated the estimated annual take based on MMS' projections for the specified activity as a whole, *i.e.,* for all operators combined. Our rule here is consistent with the EROS rulemaking as it relates to the approach for the negligible impact evaluation. However, the EROS rule also concluded the total annual taking (by species) for all operators combined met the small numbers requirement. Thus NMFS did not have occasion before now to consider whether it could apply the small numbers provision at an individual LOA level where there are multiple concurrent LOA holders. Having now considered the question, NMFS believes the MMPA affords the discretion to do so.

set the small numbers standard for future LOAs in the notice and comment rulemaking.

As noted above, the term ''small numbers'' is not defined in the statute. Over the years NMFS has grappled with how to define the term, particularly given the limited legislative history (*i.e.,* ''accidental, infrequent, or unavoidable''; ''not capable of being expressed in absolute numerical terms''). Recent court decisions lend support for NMFS' proportional approach to the concept. See *Center for Biological Diversity* v. *Salazar,* 695 F.3d 893 (9th Cir. 2012). In terms of what proportion may constitute ''small numbers'' for purposes of what the Secretary may authorize, NMFS has determined that small numbers means up to one-third of a species or stock. NMFS has further determined that this limit can be applied at the LOA level, subject to a finding that the total taking allowable (through any and all LOAs issued under the activity-specific rule and corresponding regulations) satisfies the negligible impact standard.

The MMC inaccurately states that the ''interpretation of the small numbers requirement proposed by NMFS in many ways seeks to maximize the numbers of takes of marine mammals that may be authorized under a single rulemaking.'' With one exception, the points raised by the MMC reflect NMFS' existing practice. The decision to make small numbers findings on an LOA-specific basis is the only new development and, as explained in the response to the previous comment, came about only when the issue arose for the first time in the context of this rulemaking. NMFS considered the specific issue, determined that section 101(a)(5)(A) does not unambiguously speak to it, and reasonably exercised its discretion in determining that small numbers findings could apply at the LOA stage, provided that the standard is set forth in the rule itself, which it is.

We acknowledge that section 101(a)(5)(A) does not expressly contemplate the issuance of LOAs, which are a creature of NMFS and U.S. Fish and Wildlife Service (FWS) joint implementing regulations for section 101(a)(5)(A). (See 50 CFR 216 subpart I (NMFS regulations); 50 CFR 18.27 (FWS regulations)). Those implementing regulations, in effect since 1989, established LOAs as the regulatory instrument to authorize lawful incidental take under section 101(a)(5)(A), after the promulgation of activity-specific regulations that undergo notice and comment rulemaking.

Although not the typical scenario, NMFS' implementing regulations allow for the issuance of LOAs to more than one ''U.S. citizen'' taking marine mammals under a specified activity regulation, see, *e.g.,* 50 CFR 216.105(a); 216.106(e); (54 FR 40338 (September 29, 1989)), provided that the negligible impact finding is made for the total taking for the specified activity as a whole, by all entities conducting that activity.

NMFS also administers section 101(a)(5)(D), a very similar provision enacted in 1994 that established an expedited process for the issuance of one-year incidental take authorizations for the taking of small numbers of marine mammals by harassment only when the taking from the specified activity is found to have a negligible impact on the affected species or stocks of marine mammals (referred to as incidental harassment authorizations, or ''IHAs''). See the Small Numbers section later in this Notice. The small numbers standard in section 101(a)(5)(D) applies to each individual one-year IHA, yet the same small numbers language also appears in section 101(a)(5)(A). In NMFS' view, the statute is silent on how to apply the same small numbers limitation in these two provisions across potentially different scales and timeframes. In the case such as here, where serious injury or mortality is not expected from the activity (and would not be authorized in any LOA), each prospective LOA applicant could instead opt to apply for an IHA under section 101(a)(5)(D). It would be an absurd result to deny an LOA for a single geophysical survey on the sole basis that small numbers is not satisfied because the take numbers from that survey must be aggregated with the takes from other surveys occurring under the same regulations, only to turn around and issue an IHA for the same survey, simply because the applicant has decided to avail itself of section 101(a)(5)(D) instead. But that would be the result under the MMC's approach. Given NMFS' implementing regulations for section 101(a)(5)(A), which are authorized under 16 U.S.C. 1382(a), and when viewed in light of section 101(a)(5)(D) and applying our administrative experience, NMFS has determined our approach is a reasonable interpretation of how to carry out section 101(a)(5)(A) and the implementing regulations in the context of these two statutory provisions. This is a reasoned approach that draws on NMFS' expertise.

Further, authorization of take incidental to geophysical survey activity within the covered regions of the GOM under this ITR allows for the more comprehensive evaluation and management of take of marine mammals than if NMFS were to authorize take for those same activities under IHAs. NMFS worked with BOEM and its predecessor agency over many years to ensure a process that holistically analyzed the impacts from expected geophysical surveys in the GOM. This is preferable first and foremost for its greater likelihood of achieving the best substantive impact analysis and comprehensive management (including mitigation and monitoring) scheme, but the process is also efficient for stakeholders (regulated industry and interested members of the public) and results in more efficient use of administrative agency resources.

The MMC argues that NMFS' implementing regulations support the MMC's view of the application of small numbers, because ''whereas the regulatory section governing the issuance of incidental take regulations (50 CFR 216.105) includes a reference to the small numbers requirement, the section governing LOAs (50 CFR 216.106) omits any reference to that requirement.'' However, the implementing regulations originally defined small numbers as synonymous with negligible impact. NMFS no longer interprets small numbers in that way, but as a result of that original approach, the MMC's particular citations do not shed light on the permissible approach for making a small numbers determination as that term is now interpreted.

NMFS agrees with the MMC that workload alone would not be a sufficient basis for our interpretation, and it is not what we rely on. Rather, the analysis we presented leads us to conclude that NMFS has discretion to apply small numbers at the LOA level and, in this case, policy considerations supported that approach.

Comment: NRDC states that NMFS' interpretation of small numbers ''leads to absurd results and permits excessive take.''

Response: NMFS' negligible impact assessment evaluated the risk to the affected species and stocks of marine mammals, taking into account the amount and severity of anticipated take (and take the agency is prepared to authorize) as well as the status of the species and mitigation/monitoring. Of note, and as indicated in Changes from the Proposed Rule, as a result of BOEM's updated scope of the activities and the associated revisions to the levels of effort, both the maximum allowable amount of take under the rule, as well as the maximum annual take,

has decreased (significantly in some cases) for all species and stocks except two, for which maximum allowable take and/or maximum annual take increased slightly, and the severity of many of the impacts has been lessened via the elimination and/or reduction of take in areas of greater biological importance previously considered as mitigation areas.

The numbers of potential incidents of take or animals taken are only part of an assessment and are not, alone, decisively indicative of the degree of impact. In order to adequately evaluate the effects of noise exposure at the population level, the total number of take incidents must be further interpreted in context of relevant biological and population parameters and other biological, environmental, and anthropogenic factors and in a spatially and temporally explicit manner. The effects to individuals of a ''take'' are not necessarily equal. Some take events represent exposures that only just exceed a Level B harassment threshold, which would be expected to result in lower-level impacts, while other exposures (fewer, as the exposure modeling effort illustrates) occur at higher received levels and would typically be expected to have comparatively greater potential impacts on an individual. Further, responses to similar received levels may result in significantly different impacts on an individual dependent upon the context of the exposure or the status of the individuals (*e.g.,* if it occurred in an area and time where concentrated feeding was occurring, or to individuals weakened by other effects). Last, impacts of a similar degree on a proportion of the individuals in a stock may have differing impacts to the stock based on its status, *i.e.,* smaller stocks may be less able to absorb deaths or reproductive suppression and maintain similar growth rates as larger stocks.

Comment: The MMC recommended that if such determinations are made based on a proportion of a species' or stock's abundance, NMFS adopt a policy interpreting the small numbers requirement of section 101(a)(5)(A) such that it: (1) Include a sliding scale, such that a lower proportion is allowed as stock size increases, and (2) include an evaluation of the relative risk that the established threshold would be exceeded if the best available population estimate or some other metric, such as a minimum or intermediate population, is used.

Response: NMFS disagrees with these recommendations. Under the ''one-third'' interpretation offered here, and on which we will base our small numbers analyses when evaluating LOA applications under this rule, take equating to greater than one-third of the predicted individuals in the population would generally not be considered small numbers. The MMC presents an example from a very large population, asserting that an amount of take that would meet NMFS' proportional small numbers standard would not appropriately be considered ''small'' because it is large in terms of absolute magnitude. The MMC does not present a rationale for why its proposed sliding scale approach is more appropriate, nor does it provide an explanation of what the drawbacks are (biological or otherwise) of authorizing takes of large numbers of marine mammals (in the absolute sense) from a significantly large (and arguably healthier and more robust) population (even where still less than one-third of the population under NMFS' proportional approach). We have determined that a proportional approach is the appropriate way to interpret small numbers, not an absolute ''on its face'' numeric standard. Accordingly, absolute numbers would not be relevant to our small numbers determinations. There is no meaningful way to define what should be considered as a ''small'' number on the basis of absolute magnitude, and the MMC offers no such recommendation.

Mitigation, Monitoring, and Reporting

Comment: NRDC states that NMFS should include a year-round area closure for Bryde's whales. Specifically, NRDC states that this should include the following: (1) Excluding airgun surveys year-round from the whales' occupied habitat; (2) excluding airgun surveys from areas identified, through modeling, as most likely to propagate low-frequency sound into the Bryde's whales' habitat; and (3) establishing mitigation to reduce noise in the whales' unoccupied habitat, *i.e.,* areas they are likely to have inhabited according to the whaling records and have habitat characteristics similar to those of the De Soto canyon. The MMC also recommends that NMFS include a year-round area closure for Bryde's whales, while agreeing that the area defined by NMFS in the proposed rule is appropriate. In addition, a private citizen commented that a year-round closure is more appropriate than a seasonal closure, because Bryde's whales use the area year-round. The Associations and other industry commenters argue to the contrary, stating that there should be no restriction within the Bryde's whale area and that, if a restriction is required, it should be seasonal rather than year-round. The Associations also state that if implemented, the restriction area should be smaller. With regard to the other alternative offered by NMFS for comment—no restriction but a requirement to conduct real-time whale detection through use of a moored listening array—the Associations state, ''the final ITR should not impose a moored array requirement because the limits inherent in such data are outweighed by the impracticability of such arrays.'' The CRE also comments, with no supporting information, that there should be no restriction on survey effort in the Bryde's whale core habitat area.

Response: As described in the proposed rule, NMFS agrees with NRDC and the MMC that the status (*e.g.,* small population size, restricted distribution, anthropogenic effects, small population effects) of the recently ESA-listed GOM Bryde's whale warranted the consideration of a year-round closure to airgun surveys within the area described as core habitat for the whale (Area #3). We disagree with the Associations' arguments that no requirement is warranted. However, the comments specifically relating to the need (or lack thereof) to impose a restriction on survey effort in Bryde's whale core habitat, the duration of any such restriction, or any additional requirements in the core habitat area, are no longer relevant following BOEM's updated scope of activity. This update means that no survey effort within Bryde's whale core habitat is considered through this rulemaking and the vast majority of any anticipated or authorized impacts to this species have been eliminated. Please see Table 1 and Figure 2, earlier in this notice.

Regarding NRDC's recommendations for establishing Bryde's whale mitigation measures beyond the core habitat area identified in the notice of proposed rulemaking, NMFS does not believe these are warranted. We initially note that the comment uses the terms ''occupied and ''unoccupied'' to describe habitat. These are terms of art in the Endangered Species Act and implementing regulations for designation of ''critical habitat.'' For this MMPA rulemaking, the correct standard is measures to effect the ''least practicable adverse impact'' on the affected species or stocks and their habitat. NMFS has now determined that additional geographic-based mitigation for Bryde's whales is not warranted. Following BOEM's update to the scope of their specified activity, expected takes of Bryde's whales are significantly reduced in the remaining area where the specified activity will occur under this

rule (*i.e.,* there are now no more than 10 anticipated instances of take annually; see Table 9).

Regarding NRDC's comments that additional protections are needed in areas that are ''unoccupied'' by the Bryde's whale, we disagree. NMFS' objective in requiring a closure would be to minimize the effects of airgun surveys on Bryde's whales while in important habitat. In areas where modeling and/or observational data show a species or stock is unlikely to occur during the period of the rule, it is generally unlikely that a geographic or other mitigative restriction would reduce impacts from the specified activities on the species or stock and its habitat, and therefore is not justifiable absent some other compelling basis. Finally, we are unsure of what NRDC might mean in recommending exclusion of surveys from areas identified as most likely to propagate low-frequency sound into Bryde's whale habitat, or whether such areas are still covered by the rule given BOEM's updated scope, and NRDC provides no meaningful justification for the recommendation, nor any useful recommendations for how such areas could be identified.

Comment: In reference to NMFS' statement that the agency does not consider towed passive acoustic monitoring (PAM) to be a useful tool with regard to detection of Bryde's whales, the Associations state that they do believe more typical real-time detection-based mitigation, such as use of towed PAM, should provide sufficient protection for Bryde's whales, and assert that we did not provide sufficient information to meaningfully comment on the conclusion.

Response: It is generally well-accepted fact that, even in the absence of a firing airgun, using a towed passive acoustic sensor to detect baleen whales (including Bryde's whales) is not typically effective because the noise from the vessel, the flow noise, and the cable noise are in the same frequency band and will mask the vast majority of baleen whale calls. Further, Bryde's whales have relatively short calls, further exacerbating the problem. As background, airguns produce loud, broadband, impulsive signals at low frequencies (*e.g.,* Hildebrand, 2004). Source characteristics are variable but typically peak pressures are in the 5–300 Hz frequency range, with source levels as high as 260 dB peak re 1 µPa at 1 m output pressure (Hildebrand, 2009). Pulse rates are typically one per 10–20 s (Hildebrand, 2009). Seismic survey noise can raise background noise levels by 20 dB or more over large areas while present. Because the seismic pulse and the whale's call are within the same frequency range, and the seismic pulse is much louder than the whale's call (see below), it is extremely unlikely that a baleen whale can be detected during the pulse. In addition to the actual seismic pulse (approximately every 10–20 s), the background noise level is expected to be significantly increased as a result of the reverberant field generated from seismic pulses (Guerra *et al.,* 2011; Guan *et al.,* 2015), *i.e.,* during the inter-pulse interval. The level of elevated inter-pulse noise levels can be as high as 30–45 dB within 1 km of an active 3,147 in^3 airgun array (Guerra *et al.,* 2011). Given that towing hydrophones for PAM used for marine mammal monitoring would be within 1 km from the airgun source, the received noise spectral density during the inter-pulse interval is expected to be very high.

Vessels also produce low-frequency noise, primarily through propeller cavitation, with main energy also in the 5–300 Hz frequency range. Source levels range from about 140 to 195 dB re 1 µPa at 1 m (NRC, 2003; Hildebrand, 2009), depending on factors such as ship type, load, and speed, and ship hull and propeller design. Studies of vessel noise show that it appears to increase background noise levels in the 71–224 Hz range by 10–13 dB (Hatch *et al.,* 2012; McKenna *et al.,* 2012; Rolland *et al.,* 2012). PAM systems employ hydrophones towed in streamer cables approximately 500 m behind a vessel. Noise from water flow around the cables and from strumming of the cables themselves is also low-frequency and typically masks signals in the same range.

GOM Bryde's whale calls have relatively low source levels (155 dB re 1µPa) and frequency ranges (78–110 Hz; Širović *et al.,* 2014) that overlap the sounds described above. In addition, GOM Bryde's whales call only infrequently (*i.e.,* a 3.5 hour research encounter with 4 whales resulted in detections of 14 calls). The chances of acoustically detecting these whales is low under ideal research circumstances, is much lower with elevated background noise from the ship and towing cable, and essentially impossible with an airgun array shooting. Whales are routinely detected acoustically using moored systems and sonobuoys, or using autonomous gliders. However, these platforms are all quiet. A leading provider of observer services for the seismic industry, including PAM, reports that they have never detected a baleen whale (other than rare detections of humpback whales, which have significantly higher frequency content in their call) using PAM aboard a working seismic vessel (S. Milne, RPS Group, pers. comm.). Experienced PAM operators participating in a recent workshop (Thode *et al.,* 2017) emphasized that a PAM operation could easily report no acoustic encounters, depending on species present, simply because background noise levels rendered any acoustic detection impossible. The same workshop report stated that a typical eight-element array towed 500 m behind a seismic vessel could be expected to detect delphinids, sperm whales, and beaked whales at the required range, but not baleen whales, due to expected background noise levels (including seismic noise, vessel noise, and flow noise).

Comment: The Associations provided comments regarding NMFS' proposed power-down exception to the general shutdown requirements for certain species of dolphin, as well as the related alternative of no shutdown or power-down requirement. The Associations stated that no shutdowns for dolphins are warranted, and added that an exception should not be limited to small dolphins but rather should be expanded to all delphinid species. The MMC recommended that NMFS not require a shutdown or power-down when small delphinids enter the exclusion zone, and relatedly suggested that NMFS should provide clarification as to the basis for exempting only small delphinids from shutdowns. The MMC stated their agreement with NMFS that shutting down when small delphinids enter the exclusion zone is not warranted and may result in additional survey activity. Furthermore, as indicated in the MMC comments, power-down may not be effective. The MMC stated that, given the variation in array characteristics and configuration, a requirement to ''power-down'' does not provide sufficient assurance that the resulting received levels would be below the Level B harassment threshold. CGG provided a detailed analysis of the potential operational costs associated with dolphin shutdowns or power-downs, supporting their comment that these costs would be substantial and that shutdown or power-down should not be required. NRDC provided multiple objections to NMFS' proposals, stating that of the two proposals they favor power-down.

Response: Following review of the available information and public comments, NMFS agrees that a general exception to the standard shutdown requirement is warranted for small delphinids, and that the alternative power-down requirement may not be effective and yet could impose costs on

operators. (Here we refer to ''large delphinids'' and ''small delphinids'' as shorthand for generally deep-diving versus surface-dwelling/bow-riding groups, respectively, as the important distinction is their dive behavior rather than their size.) As NMFS discussed in the notice of proposed rulemaking, mid- and high-frequency cetaceans are relatively insensitive to the frequencies where the most energy in an airgun signal is found. In order to demonstrate this quantitatively, a ''spectral ratio'' may be calculated for each hearing group. This ratio essentially compares the energy in a group-specific weighted airgun source spectrum with the energy in an unweighted airgun source spectrum, providing a representation of the proportion of total energy from the unweighted airgun spectrum that is available for animals to hear based on their group-specific general auditory filter shapes, which presumably influences the probability of behavioral response. Using M-weighting (*i.e.,* Type I filters), spectral ratios for the three hearing groups are as follows: LF, 0.71; MF, 0.03; HF, 0.02.

However, NMFS does not agree that the available evidence supports certain commenters' assertions that seismic surveys do not have any adverse effects on dolphin species. As discussed in Mitigation, auditory injury is not expected for dolphins, but the reason for dolphin behavior around vessels (when they are attracted) is not understood and cannot be assumed to be harmless. In fact, the analyses of Barkaszi *et al.* (2012), Stone (2015a), Stone *et al.* (2017), and Barkaszi and Kelly (2018) show that dolphins do avoid working vessels. That said, the available information does not suggest that such reactions are likely to have meaningful energetic effects to individuals such that the effectiveness of such measures outweighs the practicability concerns raised by commenters, in terms of the operational costs as well as the difficulty of implementation.

As noted above, the proposed rule included an alternative in which a power-down requirement would be required. However, following review of public comments, NMFS believes that a power-down requirement would potentially lead to the need for termination of survey lines and infill of the line where data were not acquired if a power-down was performed according to accepted practice, in which the power-down condition would last until the dolphin(s) are no longer observed within the exclusion zone. The need to revisit missed track line to reacquire data is likely to result in an overall increase in the total sound energy input to the marine environment and an increase in the total duration over which the survey is active in a given area.

NMFS disagrees with comments that no shutdown requirements should apply to any delphinid species regardless of behavior. As noted above, industry commenters have asserted that no shutdown requirements are warranted for any delphinid species, stating that the best available science does not support imposing such requirements. The industry comments acknowledge that small delphinids are more likely to approach survey vessels than large delphinids, but claim without supporting data that there is no evidence that large delphinids will benefit from a shutdown requirement. In contrast to the typical behaviors of (and observed effects on) the small delphinid species group, the typical deep diving behavior of the relatively rarely occurring large delphinid group of species makes these animals potentially susceptible to interrupted/delayed feeding dives, which can cause energetic losses that can accrue to affect fitness. As described in greater detail in the notice of proposed rulemaking, there are ample data illustrating the responses of deeper diving odontocetes (including large delphinids) to loud sound sources (including seismic) to include interrupted foraging dives, as well as avoidance with increased speed and stroke rate, both of which may contribute to energetic costs through lost feeding opportunities and/or increased energy demands. Significant advances in study of the population consequences of disturbance are informing our understanding of how disturbances accrue to effects on individual fitness (reproduction and survival) and ultimately to populations via the use of energetic models, where data are available for a species, and expert elicitation when data are still limited. The link between behavioral disturbance, reduced energy budgets, and impacts on reproduction and survival is clear, as is the value in reducing the probability or severity of these behavioral disturbances where possible. Therefore, NMFS finds that there is support for the effectiveness of the standard shutdown requirement as applied to the large delphinid species group.

Further, the claim that shutdowns for these deep-diving species would be impracticable was not accompanied by supporting data. The data available to NMFS demonstrates that this requirement is practicable. For example, recent synthesis of observer data in the GOM shows that large delphinids were sighted only rarely, and that of these sightings, almost half were not within the 500-meter exclusion zone. We note that the Associations provided a quantitative analysis of ''historical PSO and PAM data from over 32,000 survey activity hours conducted in the GOM between 2007 and 2017,'' but provide no citation for these data (nor the data itself). Therefore, we cannot verify or meaningfully evaluate the industry-supplied analysis. Nevertheless, as detailed herein, NMFS agrees in substantial part with the comments received and accordingly do not require shutdown or power-down for small delphinids detected within the exclusion zone.

Comment: Several commenters criticized our proposal to require shutdowns upon detection of certain species or circumstances (*e.g.,* beaked whales, Bryde's whales) at any distance. The Associations suggest that such requirements are ''arbitrary and unlawful'' because they require shutdowns in ''circumstances in which no disturbance or harassment will occur.'' The Associations contend that PSOs are likely to make frequent ''precautionary'' shutdown calls for uncertain observations ''at any distance,'' and that these measures will have negative impacts on the effectiveness of visual PSOs. CGG makes similar claims, stating that ''there is no proven or likely efficacy to initiate a shutdown for cetaceans that are well outside of incidental take range'' and concluding that the standard 500-m exclusion zone should be applied in these circumstances. The MMC commented that, in reference to the two proposals of ''at any distance'' or ''within 1 km,'' they support the implementation of shutdowns for detections at any distance (rather than within 1 km of the airgun array), based on the status of the applicable species, their small population sizes, and their sensitivity to seismic sound.

Response: As discussed below and in Mitigation, an extended shutdown distance of 1.5 km is included in the final rule, in lieu of the ''at any distance'' shutdown included in the proposed rule. We first note that the industry comments against proposed shutdowns for certain species, in their view beyond the range at which harassment may occur, appears to reflect an assumption that the single-step 160-dB threshold is the relevant metric for harassment. Even if this were the case, the minimum distance to the 160-dB isopleth, based on 60 different propagation modeling scenarios, would be beyond the likely detection distance for visual observers. The smallest

threshold radius to the 160-dB isopleth is more than 7 km. However, the multi-step probabilistic risk function used here assumes that 10 percent of the population exposed above 140 dB would experience harassment; isopleth distances to 140 dB, based on the same modeling exercise, are typically greater than 50 km (minimum of approximately 29 km). Even the 90 percent harassment isopleth (*i.e.,* 180 dB) has a mean distance of 1.6 km. Therefore, the claims that shutdowns upon detection ''at any distance'' would occur in circumstances where there is no harassment are incorrect. The Associations' comments are also inconsistent in that they imply both that marine mammals are likely to be detected at ranges significantly distant from the vessel, where shutdowns would be effected on detection of animals not subject to harassment, and that marine mammals cannot be adequately identified beyond close distances, resulting in unnecessary ''precautionary'' shutdowns. NMFS agrees that visual monitoring under typical circumstances is unlikely to be effective at ranges much beyond the extended distance shutdown of 1.5 km, while under ideal circumstances acoustic detectability will also be limited to within the exclusion zone distance. (NMFS presented a detailed analysis in the notice of proposed rulemaking demonstrating that acoustic detections of sperm whales during active firing of an airgun array are not likely beyond approximately 500 m). Moreover, we specify in these regulations that shutdowns are required on positive identification of relevant species (as determined through professional judgment), meaning that there is no real likelihood that there would be numerous shutdowns based on false positive detections. Overall, it is unlikely that there will be ''unnecessary'' shutdowns to any significant degree.

The MMC provided the following supporting rationale to their comment: ''Bryde's whales are LF cetaceans with particular sensitivity to the predominantly low-frequency energy output of airguns. Beaked whales are well-documented to react behaviorally to sound levels well below those thought to cause injury, and larger exclusion zones have been recommended for beaked whales and other deep-diving whales (such as *Kogia* spp. and sperm whales) as they are more likely to exhibit a stress response when disturbed (Wright *et al.,* 2011).'' NMFS agrees with these comments. In these cases, we have identified species or circumstances with particular sensitivities for which we determined it appropriate to minimize the duration and intensity of the behavioral disruption, as well as to minimize the potential for auditory injury (for low- and high-frequency cetaceans).

NMFS disagrees with industry comments regarding the likelihood that trained, experienced professional PSOs would misunderstand the intent of a requirement to shut down upon detection ''at any distance'' and would therefore spend undue time focusing observational effort at distances beyond approximately 1,000 m from the acoustic source (*i.e.,* the zone within which we assume that monitoring is typically focused, though not necessarily exclusively). Nevertheless, in order to ensure that this potential is minimized, and to address commenters' concerns regarding the potential costs associated with shutdowns at any distance, especially in light of the diminished benefits of the measure beyond 1.5 km, we limit these shutdowns to within 1.5 km (versus at any distance). The rationale for this distance is explained later in this document in Mitigation.

Comment: NRDC states that NMFS should require that ramp-up occur over several stages in order to minimize exposure.

Response: NMFS agrees with NRDC on this point, which appears to restate the ramp-up procedures described by NMFS in the notice of proposed rulemaking. NMFS believes this approach is consistent with the Australian study referenced by NRDC.

Comment: NRDC states that the standard 500-m exclusion zone is ''not conservative,'' asserting that NMFS did not explain why the proposed zone achieves the least practicable adverse impact and stating that NMFS must consider other exclusion zone distances.

Response: NMFS has acknowledged that some limited occurrence of auditory injury is likely, for low- and high-frequency cetaceans. However, we disagree that a larger standard exclusion zone is warranted. As explained in the notice of proposed rulemaking, NMFS' intent in prescribing a standard exclusion zone distance is to (1) encompass zones for most species within which auditory injury could occur on the basis of instantaneous exposure; (2) provide additional protection from the potential for more severe behavioral reactions (*e.g.,* panic, antipredator response) for marine mammals at relatively close range to the acoustic source; (3) provide consistency and ease of implementation for PSOs, who need to monitor and implement the exclusion zone; and (4) to define a distance within which detection probabilities are reasonably high for most species under typical conditions. The use of 500 m as the zone is not based directly on any quantitative understanding of the range at which auditory injury would be entirely precluded or any range specifically related to disruption of behavioral patterns. Rather, NMFS believes it is based on a reasonable combination of factors. In summary, a practicable criterion such as this has the advantage of familiarity and simplicity while still providing in most cases a zone larger than relevant auditory injury zones, given realistic movement of source and receiver. Increased shutdowns, without a firm idea of the outcome the measure seeks to avoid, simply displace survey activity in time and increase the total duration of acoustic influence as well as total sound energy in the water, which NMFS seeks to avoid.

NMFS agrees that, when practicable, the exclusion zone should encompass distances within which auditory injury is expected to occur on the basis of instantaneous exposure. For high-frequency cetaceans, this distance was modeled as 457 m (though we acknowledged that the actual distance would be dependent on the specific airgun array and could be larger). However, we require an extended exclusion zone of 1.5 km for certain sensitive species, including *Kogia* spp. Potential auditory injury for low-frequency cetaceans is based on the accumulation of energy, and is therefore not a straightforward consideration. However, the extended exclusion zone is required for the only low-frequency cetacean in the GOM (Bryde's whale). In keeping with the four broad goals outlined above, and in context of the information given here, the standard 500-m exclusion zone is appropriate. NRDC does not provide any substantive reasoning for a larger zone.

Comment: Several industry commenters criticized the requirement for use of buffer zones in addition to the standard exclusion zones, claiming in part that there is no scientific basis for monitoring a zone larger than the exclusion zones.

Response: NMFS disagrees with the suggestion that there is no scientific basis for this requirement. It is important to implement a larger zone during pre-clearance, when naïve animals may be present and potentially subject to severe behavioral reactions if airguns begin firing at close range. While the delineation of zones is typically associated with shutdown, the period during which use of the acoustic source is being initiated is critical, and

in order to avoid more severe behavioral reactions it is important to be cautionary regarding marine mammal presence in the vicinity when the source is turned on. This requirement has broad acceptance in other required protocols: The Brazilian Institute of the Environment and Natural Resources previously required a 1,000-m pre-clearance zone before recently extending the exclusion zone to encompass the entire 1,000-m zone (IBAMA, 2005, 2018), the New Zealand Department of Conservation requires that a 1,000-m zone be monitored as both a pre-clearance and a shutdown zone for most species (DOC, 2013), and the Australian Department of the Environment, Water, Heritage and the Arts requires an even more protective scheme, in which a 2,000-m ''power down'' zone is maintained for higher-power surveys (DEWHA, 2008). Broker *et al.* (2015) describe the use of a precautionary 2-km exclusion zone in the absence of sound source verification (SSV), with a minimum zone radius of 1 km (regardless of SSV results). We believe that the simple doubling of the exclusion zone required here is appropriate for use as a pre-clearance zone.

Comment: CGG comments that shutdowns based on acoustic detections should be required only when the acoustic PSO is confident that the vocalization is from a non-delphinid species within the exclusion zone, as opposed to when the PSO is confident that the animal is outside of the exclusion zone.

Response: We are unclear as to the practical impact of what appears to be a fairly nuanced difference, but clarify that shutdown upon acoustic detection of non-delphinids within the exclusion zone is required when the animal is detected acoustically and localized within the exclusion zone. However, we also note that PSO decision-making regarding shutdown implementation shall be informed to a reasonable extent by professional judgment.

Comment: NRDC suggests that NMFS is remiss in not limiting the amount of activity that can occur overall (to a lesser amount than analyzed in the rule). Relatedly, NRDC suggests that NMFS must consider ''placing a cap on the amount of allowable seismic activity.''

Response: Such a requirement is not within NMFS' authority under the MMPA, assuming that the requisite findings are made. NMFS' responsibility is to evaluate the potential effects of the specified activity as presented by the applicant (BOEM in this case, acting on behalf of future industry applicants) and to determine whether the total taking will have a negligible impact on the affected species or stocks (among other things). If NMFS is unable to make the necessary finding, the applicant may then consider a revision to the specified activity that could lead to NMFS being able to make the necessary finding of negligible impact (or in some cases additional mitigation may enable a negligible impact finding). However, in this case, NMFS has made a finding of negligible impact, and it is not within NMFS' authority to unilaterally impose a reduction in activity levels to some degree (NRDC does not specify the degree or distribution of reduction in time or space that they would find acceptable).

Comment: NRDC expressed concern regarding the efficacy of the prescribed visual and acoustic monitoring methods, stating that species could go undetected.

Response: While NMFS disagrees with some specific comments regarding efficacy, we generally agree with the overall point that there are limitations on what may reasonably be expected of either visual or acoustic monitoring. While visual and acoustic monitoring effectively complement each other, and acoustic monitoring is the more effective monitoring method (for certain species) during periods of impaired visibility, there is no expectation that these methods will detect all marine mammals present. In general, NRDC appears to misunderstand what NMFS claims with regard to what such monitoring may reasonably be expected to accomplish and/or the extent to which we rely on assumptions regarding the efficacy of monitoring in reaching the necessary findings. We acknowledge these limitations in prescribing these monitoring requirements, while stating why NMFS believes that visual and acoustic monitoring, and the related protocols we have prescribed, are an appropriate part of the suite of mitigation measures here that satisfy the MMPA's least practicable adverse impact standard. However, the negligible impact finding is not conditioned on the presumption of a specific degree of monitoring efficacy.

Comment: The MMC recommends that NMFS expand its shutdown requirement for sperm whales to include both visual and acoustic detections at extended distance, stating that vital functions of sperm whales, including both foraging and resting, should be afforded the additional protection of the extended shutdown zone. NRDC asserts that acoustic shutdowns for sperm whales, which they believe are not required under the ITR, would not be effective. The CRE comments that they ''agree with [NMFS] that sperm whale shutdowns are not warranted.''

Response: NMFS agrees with the MMC's recommendation and has made the recommended change (albeit within a revised extended distance shutdown zone of 1.5 km; see Mitigation). However, we note the MMC's statement that ''[t]he requirement for implementing shut-down procedures upon acoustic detection of a sperm whale was inadvertently omitted from the proposed regulatory text.'' NMFS disagrees with this statement. The proper interpretation of the proposed regulatory text was that such shutdowns would be required. Nevertheless, the revised, final regulatory text makes this requirement clearer, in addition to making the change to be inclusive of visual detections at the greater distance. Regarding the CRE's comment, NMFS did not determine that ''sperm whale shutdowns are not warranted.'' Shutdowns for sperm whales have been required in the GOM for over a decade, and NMFS does not make any findings that this should change.

With regard to NRDC, we reference this comment only to provide necessary clarification. Because NRDC mistakenly claims that ''NMFS hasn't included an acoustic shutdown requirement for sperm whales in its proposed regulation,'' we refer the reader to the notice of proposed rulemaking, in which we state that shutdown of the acoustic source is required upon acoustic detection of a sperm whale (29274–29275). (''We are proposing that shutdown of the acoustic source should also be required in the event of certain other observations [. . .]. Circumstances [. . .] include [. . .] acoustic detection of a sperm whale.'') This requirement is carried forward in this final ITR, as modified (see Mitigation).

With regard to the efficacy of the measure, we are confused as to NRDC's comments. NRDC first asserts that sperm whales are the only species for which acoustic detection may reasonably be assumed, but then seemingly states that implementation of the measure is not sufficiently effective as to be considered in context of reducing impacts to sperm whales. As discussed in greater detail elsewhere, NMFS believes that shutdowns for sperm whales at an extended distance, on the basis of both acoustic and visual detections (the latter added in this final ITR), will meaningfully reduce impacts to the species.

Comment: NRDC asserts that NMFS does not fulfill the MMPA's requirement to prescribe mitigation achieving the

''least practicable adverse impact'' to marine mammal habitat, and specifically notes that NMFS does not separately consider mitigation aimed at reducing impacts to marine mammal habitat, as the MMPA requires.

Response: NMFS disagrees with this comment. Our discussion of least practicable adverse impact points out that because habitat value is informed by marine mammal presence and use, in some cases there may be overlap in measures for the species or stock and for use of habitat. In the notice of proposed rulemaking, NMFS identified time-area restrictions based on a combination of factors that include higher densities and observations of specific important behaviors of the animals themselves, but also clearly reflect preferred habitat. In addition to being delineated based on physical features that drive habitat function (*e.g.,* bathymetric features, among others), the high densities and concentration of certain important behaviors (*e.g.,* feeding) in these particular areas clearly indicates the presence of preferred habitat. Also, NRDC asserts that NMFS must ''separately'' consider measures aimed at marine mammal habitat. The MMPA does not specify that effects to habitat must be mitigated in separate measures, and the notice of proposed rulemaking clearly identified measures that provide significant reduction of impacts to both ''marine mammal species and stocks and their habitat,'' as required by the statute. Last, we note that NRDC acknowledges that the measures identified in the notice of proposed rulemaking measures would reduce impacts on ''acoustic habitat.'' Following BOEM's update to the scope of activity, two of the three time-area restrictions identified and proposed by NMFS now fall outside the area in which survey activity may be considered under this rule.

Comment: NRDC recommends that NMFS should consider a year-round restriction on geophysical survey activity within coastal waters in the footprint of the DWH oil spill, and that NMFS must expand its proposed GOM-wide coastal restriction temporally to include the month of January. Conversely, the Associations state that no coastal restriction should be required. The MMC recommends that the proposed coastal closure be expanded temporally such that the timeframe is from January through August.

Response: NMFS finds aspects of both NRDC's and the Associations' statements with which we agree and disagree and, as discussed in Mitigation, have revised the time-area restriction. This restriction on airgun survey activity (''Area 1'') was proposed as including all GOM waters inside the 20-m isobath, from February through May. The revised restriction is limited to those waters inside the 20-m isobath from 90 ° to 84 ° W. Temporally, the restriction is expanded to be in effect from January through May.

The Associations provide extensive comments relating to the impacts on practicability presented by the proposed restriction. The potential economic consequences of the measure are addressed in greater detail in the regulatory impact analysis (RIA), which analysis we adopt as a portion of our practicability assessment for the revised measure. NMFS agrees that there will likely be negative economic and operational consequences of the restriction, though these consequences are difficult to assess (and cannot reasonably be assessed quantitatively) (see the RIA for full analysis). While the Associations express concerns regarding the practicability analysis as being too vague, they fail to provide additional specific information that would help to improve the analysis. For example, the Associations state that data from the area contained within the restriction are outdated and that the restriction will impede industry's ability to identify prospects in coastal areas, but provide no specific information to support these claims, such as information about the data that do exist or the areas where industry anticipates having interest in identifying prospects. Despite the lack of information provided in support of the practicability concerns, NMFS takes seriously the Associations' concerns, and therefore did consider eliminating the restriction.

The Associations also assert that the restriction would not result in any meaningful benefit to coastal bottlenose dolphin populations. NMFS disagrees that this is the case. Although dolphins are less sensitive to the frequencies at which the greatest energy in an airgun signal is found, we have described the large body of evidence of adverse or aversive behavior by various dolphin species during airgun firing (*e.g.,* Goold and Fish, 1998; Stone and Tasker, 2006; Barkaszi *et al.,* 2012; Stone, 2015a; Barkaszi and Kelly, 2018). Considered in context of a generic dolphin population with no notable issues affecting the population as part of the environmental baseline, it may be reasonable to assume that such effects are not indicative of any response of a severity such that the need to avoid it outweighs the impact on practicability for the industry and operators. However, as was described in the notice of proposed rulemaking, and as discussed in NRDC's comment, coastal bottlenose dolphins in the GOM—particularly the northern coastal stock of bottlenose dolphins—were severely impacted by the DWH oil spill.

As explained in the notice of proposed rulemaking, while none of the dolphin strandings or deaths have been attributed to airgun survey activities, stocks in the area are stressed and the northern coastal stock in particular is in extremely poor health. The Associations' discussion of NMFS' analysis—claiming that our justification for the restriction was premised merely on ''the broad understanding that 'marine mammals react to underwater noise' ''—is factually mistaken. As we stated, behavioral disturbance or stress may reduce fitness for individual animals and/or may exacerbate existing declines in reproductive health and survivorship. For example, stressors such as noise and pollutants may be expected to induce responses involving the neuroendocrine system, which controls reactions to stress and regulates many body processes (NAS, 2017), and there is strong evidence that petroleum-associated chemicals can adversely affect the endocrine system, providing a potential pathway for interactions with other stressors (Mohr *et al.,* 2008, 2010). Romano *et al.* (2004) found that upon exposure to noise from a seismic watergun, bottlenose dolphins had significantly elevated levels of a stress-related hormone and, correspondingly, a decrease in immune cells. As we stated, the restriction is intended specifically to avoid additional stressors to these coastal bottlenose dolphin populations during the time period believed to be of greatest importance as a reproductive period. The Associations do not contradict this information, instead weakly relating the concern to the potential for dolphins to experience damage to auditory structures (which NMFS agrees is unlikely) or to the idea that ''reactions'' to noise are innocuous.[9]

Population-level impacts related to energetic effects or other impacts of noise are difficult to determine, but the addition of other stressors can add

[9] The Associations also apparently misunderstand some discussion of stranding events (which have occurred primarily as a result of military use of mid-frequency active sonar) provided in the notice of proposed rulemaking, interpreting this discussion as NMFS' ''suggestion that seismic surveys are similar to mid-frequency sonar (which has been implicated in strandings) simply because seismic signatures include a mid-frequency component.'' We suggested no such thing and agree with the Associations that airguns and sonar are very different sound sources with very different potential to cause strandings.

considerable complexity due to the potential for interaction between the stressors or their effects (NAS, 2017). When a population is at risk, NAS (2017) recommends identifying those stressors that may feasibly be mitigated. We cannot undo the effects of the DWH oil spill, but the potentially synergistic effects of noise due to the activities that are the subject of this rule may be mitigated. However, NMFS does acknowledge that the two populations of greatest concern—the western and northern coastal stocks of bottlenose dolphin—do not have the same status. As identified in the notice of proposed rulemaking, while both stocks were impacted by the DWH oil spill, the northern coastal stock in particular was perhaps the single most heavily impacted stock, with 82 percent of animals belonging to the stock expected to have been exposed to oil, resulting in a possible population reduction of 50 percent (this latter figure was only five percent for the western stock). The northern coastal stock was also subject to a recent Unusual Mortality Event (UME), described later in this notice (see Description of Marine Mammals in the Area of the Specified Activity). NMFS acknowledges the uncertainty associated with predicting the ways in which different stressors may interact, or how the effects of a stressor might be exacerbated in an unhealthy population. However, as an example, Schwacke *et al.* (2014a) described findings indicating that a significant proportion of the population is expected to exhibit adrenal insufficiency as a result of oil exposure. Adrenal insufficiency can lead to adrenal crisis and death in animals that are challenged with other stressors (Venn-Watson *et al.,* 2015b). NMFS agrees that the potential practicability concerns warrant consideration and, in light of the differential baselines for the potentially affected coastal stocks, has determined it appropriate to contract the restriction. However, the post-DWH oil spill baseline condition of the northern coastal stock, as exacerbated by the recent UME, requires caution. This restriction may reasonably be anticipated to provide additional protection to these populations during their peak reproductive activity. We note that NRDC's proposed focus area for heightened restriction aligns generally with this area of concern, but that in aligning with the footprint of the spill rather than with the stock boundaries, this recommendation would not necessarily encompass the animals of greatest concern and which we assume are the population targeted by the proposal.

With regard to the timing of the closure, there is no definitive definition of the ''peak reproductive activity'' associated with the stock and, additionally, there is some uncertainty as to whether the more important focus is on effects to pregnant mothers or on the post-partum period when energetic or stress effects would lead to greater risk for lactating mothers and/or disruption of mother-calf bonding and ultimate effects on rates of neonate and/or calf survivorship. We acknowledged this uncertainty in discussing the recommendations of NMFS' subject matter experts and describing the proposed temporal extent of February through May in the notice of proposed rulemaking. Upon review of the information presented in the comments of NRDC (*e.g.,* reference to the data presented by, *e.g.,* Carmichael *et al.,* 2012; Mattson *et al.,* 2006; Urian *et al.,* 1996), which supported NRDC's assertion that, in summary, inclusion of January would cover the remainder of the dolphins' peak calving and late gestation periods as well as the beginning of the period of highest reproductive failure, NMFS agrees that this temporal expansion is appropriate (within the contracted region of our revised restriction area). In contrast, the MMC does not provide compelling information in support of the recommendation to expand the restriction by an additional three months (through August), stating only that ''calves can be born at any time of the year'' and referencing a bimodal peak in neonate strandings from the Sarasota Bay area. Given the exacerbation of practicability concerns that this expansion would entail and the lack of information to support it, NMFS does not believe it appropriate to expand the restriction through August.

We do note that one concern of the Associations, which is that the restriction may result in an inability to complete surveys within one year, may be alleviated to some degree by the ability under this ITR to issue LOAs for any term up to five years. The Associations recommend that, if the restriction is included in the ITR, NMFS allow for multi-year LOAs, which we have done.

Comment: The Associations state that the proposed time-area restriction in the Dry Tortugas region of the eastern GOM should not be required. However, the MMC concurs with NMFS' proposal, stating that the imposition of this restriction is appropriate.

Response: NMFS appreciates the comments. The proposed time-area restriction referenced here is no longer relevant following BOEM's update to the geographic scope of activity, as no survey activity within this area can be considered through this rule.

Comment: NRDC comments that NMFS must consider restrictions and limitations on survey activity in the Central Planning Area (CPA) restriction area analyzed in the proposed rule. NRDC states that NMFS' practicability analysis must focus on (1) how much oil and gas development is projected to occur within the proposed areas over the next five years; (2) what effect the proposed mitigation area would have on that projected development; and (3) whether that projected development would be offset by exploration in other parts of the GOM.

Response: NRDC accurately characterizes the area as being important for sperm whales [10] and beaked whales, as was described by NMFS in the notice of proposed rulemaking, and accurately describes that this area is projected to be subject to significant survey effort. NMFS acknowledges these issues. However, NRDC provides no serious rebuttal of NMFS' practicability analysis, which includes incorporation by reference of the findings of the RIA for this rule, instead providing only a cursory rejection of the analysis as inadequate. We also note that the third prong of NRDC's suggested analysis is not reasonable: Development foregone due to a lack of survey data in the closure areas cannot be ''offset by exploration'' elsewhere.

As discussed in detail in the RIA, there are significant uncertainties associated with assessing the indirect costs of restricting survey effort within the described area. Notable areas of uncertainty include the demand for and timing of oil and gas production in the GOM over the next five years, the suitability of existing data to direct oil and gas production in the closure areas, and the most likely substitute sites for oil and gas production. These uncertainties foreclose the possibility of the analysis demanded by NRDC. However, what information is available strongly suggests that the economic impacts of the evaluated CPA restrictions would be significant. A mitigation requirement that could lead

[10] However, we note that NRDC mischaracterizes sperm whale buzz rates as ''a measure of foraging success,'' as opposed to a measure of foraging effort. The study referenced by NRDC did not find that sperm whale foraging success ''declined substantially'' on exposure to airgun noise. Moreover, the measured decline in foraging effort was not a statistically significant result and, therefore, cannot appropriately be referred to as a substantial decline. See Miller *et al.* (2009).

to regional- to national-scale economic impacts is not practicable.

The impacts of year-round area closures are highly dependent on volatile oil and gas market conditions over the next five years, which dictate the demand for activities in the GOM. The greater the demand for oil and gas, the greater the expected impacts of the restrictions. The extent to which oil and gas production is delayed because of the need for newer, better data is a key source of uncertainty. Some sites may be able to employ existing data from recent surveys. However, even for relatively recent data, the inability to collect new seismic data could affect oil and gas development given that oil companies typically use targeted seismic data to refine their geologic analysis before drilling a well.

It is possible that some fraction of reductions in production from the closure areas may be made up for with production in other areas in the GOM, mitigating potential regional economic impacts. However, uncertainty with regard to the location of ''substitute'' production has potentially critical impacts on the ultimate economic impacts of the closure. If a closure requirement reduces exploration and development activity in the GOM, the displaced capital expenditures would likely shift to the next-lowest-cost opportunities promising the greatest development potential. Given that oil is produced and sold in a global market, the next-lowest-cost areas may be elsewhere within the GOM, but also may be international locations. To the extent that substitute areas are outside of the GOM but within the United States, national-level impacts of the closure areas would likely be limited. However, to the extent that industry moves displaced activities outside of the United States, national-level impacts associated with industry income and employment could be substantial. Recent levels of leasing and drilling activity in the CPA indicate that the closure areas considered are among the most productive in the entire GOM.[11] Given this, it is less likely that other GOM areas will offer equivalent alternative opportunities. As a result, the analyzed area closures have greater potential to reduce domestic oil and gas production, industry income, and related regional employment opportunities.

NRDC asks NMFS to conduct analyses that cannot be supported by existing data. Further, NRDC asks NMFS to speculate as to the impacts of restricting exploration activity outside the development of existing leases. However, such a restriction, while less impactful than a complete area-wide restriction, would necessarily foreclose the ability of both the government and industry to assess fair market value of leases already planned for sale. While NMFS believes that the evaluated restriction area would be beneficial for sperm whales and beaked whales, such restrictions are at this time not practicable. NRDC does not provide any information contradicting this conclusion, and provides no specific, viable alternatives for NMFS' evaluation.

Comment: NRDC states that NMFS should consider time-area closures for additional species.

Response: NMFS did consider habitat-based protections for species additional to those discussed in the time-area restrictions section of Mitigation. For all affected species, NMFS evaluated the environmental baseline (*i.e.,* other population-level stressors), the nature and degree of effects likely to be the result of the specified activities, and the information available to support the development of appropriate time-area restrictions. NMFS determined that the available information supported development of the measures described in the notice of proposed rulemaking for the Bryde's whale, sperm whales, and beaked whales. For other species, context does not justify additional protections and/or the available information does not support the designation of any specific area for protection, when considered in combination with practicability concerns.

NRDC asserts that ''marine mammal populations in the northern Gulf of Mexico can no longer be considered by the agency to be too 'data poor' or broadly distributed to justify specific mitigation measures for their protection, including time-area closures.'' This is not a representation NMFS made in the notice of proposed rulemaking. NRDC then erroneously claims that NMFS ''limits its analysis to two deep-diving species, sperm whales and beaked whales [. . .]. In doing so, however, it omitted other populations whose conservation status or modeled impacts pose particular concern.'' First, NMFS did conduct core abundance analyses for all GOM stocks. Second, NRDC declines to elaborate on which stocks they believe ''pose particular concern,'' other than noting that *Kogia* spp. may be subject to Level A harassment. However, despite NRDC's statement that species can no longer be considered to be too broadly distributed to justify specific time-area mitigation measures, our core abundance analysis for *Kogia* spp. shows exactly that. Based on the Roberts *et al.* (2016) models, the two species are broadly distributed in shelf-break waters essentially throughout the GOM, and there is no identified biologically important area or specific bathymetric feature that would allow us a more refined understanding of an area suitable for protection (if it were warranted). NRDC does not suggest any specific area for protection of *Kogia* spp.

NRDC also suggests that NMFS should prohibit seismic activity in the Flower Garden Banks National Marine Sanctuary (FGBNMS) but offers no strong justification other than stating that marine mammals occur there. In addition, BOEM and/or BSEE will consult with NOAA's Office of National Marine Sanctuaries when they receive an application that indicates that survey activity may occur within or near the FGBNMS.

Overall, NRDC offers no useful recommendation as to the designation of protections for additional species. NMFS' consideration of habitat-based protections was conducted appropriately in light of relevant information regarding the environmental baseline, expected effects of the specified activities, and information regarding species use of the GOM.

Comment: Several commenters recommended establishing wider buffer zones around the proposed time-area closures. The Associations state that no buffers should be required around any time-area restriction (if required; the Associations also disagree that any restrictions should be required, as discussed previously).

Response: NRDC indicates that NMFS' stated objective in establishing the proposed buffer zones around time-area restrictions was unclear in terms of evaluating the proposed buffer zone relative to the objective. The stated objective was to exclude noise that is likely to result in harassment, which NMFS interpreted to mean site-specific modeled distances to the 160-dB isopleth (*i.e.,* 50 percent midpoint of the Level B harassment risk probability function). Following review of public comments, NMFS provides further context here regarding the multi-step Level B harassment risk function employed for purposes of evaluating modeled noise exposures.

[11] Leases within the closure areas considered within the Central Planning Area accounted for approximately 50 percent of total oil production in the GOM between 2012 and 2016 and 24 percent of total gas production. Existing reserves within the closure areas represent 57 percent of estimated oil reserves and 37 percent of estimated gas reserves in the GOM.

With regard to the establishment of a buffer zone, NMFS agrees with certain commenters that it is generally appropriate to buffer an area to be avoided by some degree, as discussed in the notice of proposed rulemaking. However, we disagree that a buffer must be developed to fully eliminate the potential for Level B harassment, as some commenters may have inferred from our use of the distance to the 160-dB isopleth (*i.e.,* historically used as a 100 percent single-step function for evaluation of Level B harassment; here the 50 percent midpoint of the Level B harassment risk function). Rather, the buffer concept, as described in the notice of proposed rulemaking, serves to reasonably minimize the extent and severity of what limited harassment may occur as a result of acoustic exposure to relatively low received levels of noise.

The Associations asserted that NMFS did not consider the use of buffer areas in the practicability analyses and provides no biological basis for including buffers. We disagree. As noted earlier, the RIA analysis (which forms a substantial part of the practicability analysis for these measures) includes analysis of the economic impacts of the time-area restrictions *inclusive of the buffer.* As noted above, the logical biological rationale is to provide a buffer around an area determined to be of particular biological importance such that the effects of noise from outside the restriction area intruding within the area is minimized.

However, BOEM's update of the geographic scope for this rule eliminates the need for proposed time-area restrictions #3 and 4 (*i.e.,* the Bryde's whale core habitat area and the ''Dry Tortugas area'' designed for protection of beaked whales and sperm whales). Therefore, comments addressing the proposed buffers for those areas are no longer relevant. Regarding the coastal bottlenose dolphin restriction (Area #1), NMFS has determined that the addition of a buffer to this area is not warranted, based on the objectives of the restriction (described in detail in a previous response to comment) and on the manner in which the area was delineated. Areas #3 and 4 were delineated based on NMFS' review of the available scientific information and expert opinion and in order to denote areas expected to be of particular biological importance for particular species. In contrast, the coastal dolphin restriction area was based simply on the stock boundaries for coastal bottlenose dolphins (*i.e.,* the seaward extent of the area is set at the 20-m isobath). As this boundary does not mark an area of specific biological importance or high density for the stock, but is rather an approximation of stock presence, NMFS has determined following review of public comments, in which valid practicability concerns were raised, that the inclusion of a buffer to this area is not warranted.

Comment: Noting that the proposed ITR included requirements to conduct visual monitoring following conclusion of active shooting, the MMC recommends that NMFS require operators to also continue conducting acoustic monitoring following conclusion of active shooting.

Response: The proposed ITR stated that acoustic monitoring must occur for 30 minutes prior to and during all active firing of airguns for deep penetration surveys, but was silent on the issue of acoustic monitoring following the survey. However, visual monitoring is required to continue for 60 minutes following cessation of survey activity during good visibility. NMFS agrees with the MMC that ''both visual and acoustic monitoring should occur concurrently, as acoustic detections can provide additional information not readily available via visual detections alone regarding changes in foraging and social behavior during survey activities and after activities cease.'' Accordingly, acoustic monitoring is also required to continue following cessation of survey activity for a period of 60 minutes.

Comment: BP comments that they welcome use of industry standard PAM/operator software such as PAMGuard. Noting the operational challenges associated with accommodating increased numbers of PSOs on survey vessels, BP also comments that they would welcome the inclusion of an option to implement PAM during survey activities using remote shore-based operators.

Response: NMFS agrees that this may be appropriate, depending on various factors. While we are not currently aware of the state of existing technology towards achieving this end, NMFS would consider the use of remote PAM monitoring, assuming reliability and the ability to achieve the same performance as shipboard PAM monitoring. NMFS believes the adaptive management process will be an appropriate venue for further consideration of this approach.

Comment: BP comments that, while they recognize the value of prospective formal standards for PAM operations (*e.g.,* hardware, software, training), the standards have not yet been finalized. BP requests that the standards be considered for use only after an initial draft has been circulated via relevant standards development and issuance processes.

Response: NMFS may adopt elements of the prospective standards, as it deems appropriate (as discussed in Monitoring and Reporting). However, we agree that wholesale adoption of the standards would not be appropriate until appropriate review and other necessary processes are complete.

Comment: Industry commenters state that non-airgun high-resolution geophysical (HRG) surveys should not be subject to pre-clearance and shutdown requirements. Relatedly, BP and Chevron comment that exclusion zones should not be required for HRG surveys, as these surveys typically operate using acoustic sources deployed on an automated underwater vehicle (AUV) running 40 m above the seafloor. Therefore, they state that there is no environmental benefit to a requirement for a surface exclusion zone.

Response: The Associations note that the acoustic footprint of sources typically used in non-airgun HRG surveys are too small to warrant the proposed exclusion and buffer zone distances and that, more importantly, due to the typically highly directional nature of these acoustic sources, animals observed at the surface will generally not be exposed to the signal. NMFS agrees with these comments, and notes that the proposed shutdown and exclusion zone requirements were offered in accordance with BOEM's HRG survey protocols (Appendix B of BOEM, 2017). Following review of these comments, as well as the available scientific information regarding the typical interaction of these signals with the environment and likely lack of efficacy of typical standard operational protocols developed for omnidirectional sources, NMFS has eliminated these requirements. However, we also clarify that certain electromechanical sources may be subject to the pre-clearance and shutdown requirements associated with shallow penetration surveys. In addition, the exclusion and buffer zone distances for shallow penetration surveys have been reduced (while adding an extended distance shutdown zone for certain circumstances) in recognition of the typically smaller harassment zones associated with use of the acoustic sources considered here to be used in shallow penetration surveys.

As noted here, NMFS has eliminated the requirement for implementation of an exclusion zone during HRG surveys. We also agree with BP's comment that exclusion zones should not be required for surveys using an AUV-deployed acoustic source running at short distances above the seafloor.

Comment: NRDC states that NMFS fails to prescribe adequate mitigation for

HRG surveys and, relatedly, that NMFS must not issue LOAs for use of lower-frequency multibeam echosounders (MBES).

Response: As evidenced by the previous comment response, in which describing elimination of certain mitigation measures that were proposed for HRG surveys, NMFS disagrees with NRDC. NRDC provides no reasonable justification for the recommendation to consider additional mitigation requirements. They reference the 2008 Madagascar stranding of melon-headed whales, implying that a similar occurrence may be a reasonably anticipated outcome of HRG survey work in the GOM. Although it is correct that an investigation of the event indicated that use of a high-frequency mapping system (12-kHz MBES) was the most plausible and likely initial behavioral trigger of the event (with the caveat that there was no unequivocal and easily identifiable single cause), the panel also noted several site- and situation-specific secondary factors that may have contributed to the avoidance responses that led to the eventual entrapment and mortality of the whales (Southall *et al.,* 2013). Specifically, regarding survey patterns prior to the event and in relation to bathymetry, the vessel transited in a north-south direction on the shelf break parallel to the shore, ensonifying deep-water habitat prior to operating intermittently in a concentrated area offshore from the stranding site. This may have trapped the animals between the sound source and the shore, thus driving them towards the lagoon system. Shoreward-directed surface currents and elevated chlorophyll levels in the area preceding the event may also have played a role.

The relatively lower output frequency, higher output power, and complex nature of the system implicated in this event, in context of the other factors noted here, likely produced a fairly unusual set of circumstances that indicate that such events would likely remain rare and are not necessarily relevant to use of more commonly used lower-power, higher-frequency systems such as those evaluated for this analysis. The risk of similar events recurring is expected to be very low, given the extensive use of active acoustic systems used for scientific and navigational purposes worldwide on a daily basis and the lack of direct evidence of such responses previously reported. The only report of a stranding that may be associated with this type of sound source is the one reported in Madagascar.

NRDC also references Cholewiak *et al.* (2017), stating that virtually no beaked whale vocalizations were detected acoustically during the time that the shipboard echosounder was operational. NRDC mischaracterizes the literature, including a speculative description of what they imagine the beaked whales were doing while not vocalizing (''suggesting that the whales broke off their foraging behavior and engaged in [. . .] silent flight''). Cholewiak *et al.* (2017) do describe finding that beaked whales were significantly less likely to be detected acoustically while echosounders were active. However, it is not clear that this response should be considered as Level B harassment when considered in the context of what is likely a brief, transient effect, given the mobile nature of the surveys and the fact that some beaked whale populations are known to have high site fidelity. In support of this conclusion, Quick *et al.* (2017) describe an experimental approach to assess potential changes in short-finned pilot whale behavior during exposure to an echosounder. Tags attached to the animals recorded both received levels of noise as well as orientation of the animal. Results did not show an overt response to the echosounder or a change to foraging behavior of tagged whales, but the whales did increase heading variance during exposure. The authors suggest that this response was not a directed avoidance response but was more likely a vigilance response, with animals maintaining awareness of the location of the echosounder through increased changes in heading variance (Quick *et al.,* 2017). Visual observations of behavior did not indicate any dramatic response, unusual behaviors, or changes in heading, and cessation of biologically important behavior such as feeding was not observed. More recently, Varghese *et al.* (2020) reported the results of an investigation of the effects of a 12-kHz MBES system on beaked whale foraging behavior off of California. Echolocation clicks from Cuvier's beaked whales were detected and classified into foraging events called group vocal periods (GVP), and compared across exposure periods before, during, and after MBES activity. Of the metrics used to assess beaked whale foraging behavior, only the number of GVPs per hour was statistically different during MBES activity versus a non-MBES period. GVPs per hour increased during MBES activity compared with before MBES activity, demonstrating that beaked whales did not stop foraging and were not displaced by the activity. These results suggest that there was not a negative impact of MBES activity on foraging behavior of this sensitive species (Varghese *et al.,* 2020).

Finally, NRDC references the work of Deng *et al.* (2014) and Hastie *et al.* (2014) in describing ''leakage'' of ''substantial noise'' at frequencies within marine mammal hearing range during use of active acoustic systems that are operated at higher frequencies. The referenced studies reported some behavioral reaction by marine mammals to acoustic systems operating at user-selected frequencies above 200 kHz. This work was discussed in the notice of proposed rulemaking. In general, the referenced literature indicates only that sub-harmonics could be detectable by certain species at distances up to several hundred meters. As NMFS has noted elsewhere, behavioral response to a stimulus does not necessarily indicate that Level B harassment, as defined by the MMPA, has occurred. Source levels of the secondary peaks considered in these studies—those within the hearing range of some marine mammals—mean that these sub-harmonics would either be below the threshold for Level B harassment or would attenuate to such a level within a few meters. The work cited by the commenters is consistent with previously observed occurrences of sub-harmonics. Essentially, the first sub-harmonic's source level (*e.g.,* if the primary frequency is 200 kHz, the first sub-harmonic is 200/2 or 100 kHz, the second is 200/3 or 66.7 kHz) is at least 20–30 dB less than the primary frequency's source level, with each subsequent sub-harmonic's source level decreasing rapidly from there. These sub-harmonics are typically so reduced in source level that, for most side-scan and multi-beam sonar systems, they are not strong enough to produce impacts beyond tens of meters from the source (distances at which reactions to the vessel itself are likely to supersede reactions to an acoustic signal). Additionally, for any potential impacts to occur, an animal must be within this range and within the very narrow beams produced by the systems (for these sub-harmonic frequencies).

In addition, recent sound source verification testing of these and other similar systems did not observe any sub-harmonics in any of the systems tested under controlled conditions (Crocker and Fratantonio, 2016). While this can occur during actual operations, the phenomenon may be the result of issues with the system or its installation on a vessel rather than an issue that is inherent to the output of the system. As concluded in the notice of proposed rulemaking, there is no evidence to suggest that Level B harassment of marine mammals should be expected in

relation to use of active acoustic sources at frequencies exceeding 180 kHz. NRDC's comments did not address NMFS' prior statements regarding this topic.

NRDC fails to adequately support the claims of harm to marine mammals that are reasonably likely to occur as a result of HRG surveys and, thus, fails to justify their recommendation for enhanced mitigation. The recommended measures include ''extended safety zone and monitoring requirements'' and a ''bar on nighttime operations.'' Even when animals are receiving echosounder signals, they may not be harassed, as described above. However, given the directional nature of these sources, animals observed at the surface will almost certainly not be within the acoustic beam, thus negating the benefit of detection-based measures such as shutdowns. Any exposure to the echosounder would likely be only in the ensonified cone below the vessel, and responses to the vessel itself at such close ranges would influence likelihood of acoustic exposure. The package of active acoustic systems modeled as representative of a typical HRG survey included a 200-kHz echosounder. Regarding the suggestion that this bars use of any system with a lower frequency output, NMFS disagrees. NMFS' analysis also includes use of different lower-frequency sources (*i.e.,* single airguns and boomers). Moreover, the specific sources selected for analysis do not limit the actual sources that may be used, assuming the actual sources are reasonably similar to the full suite of analyzed sources, as is the case here.

Comment: The Associations and other industry commenters claim that the proposed PSO staffing requirements compromise personnel safety, cannot be effectively implemented, and are unnecessary and unsupported.

Response: In the notice of proposed rulemaking, NMFS described in detail the importance of detection-based mitigation as a component of standard operational mitigation protocols. Detection-based mitigation cannot occur effectively without both visual and acoustic monitoring, with the latter being the only effective method of detection during periods of poor visibility or at any time for cryptic species (*e.g.,* beaked whales) or species with high availability bias (*e.g.,* sperm whales). Therefore, visual monitoring is required during daylight hours and acoustic monitoring is required throughout the period of survey operations. When these monitoring techniques are required, two visual PSOs must be on duty in order to effectively monitor 360 degrees around the vessel, communicate with the operator as necessary, and record data, and an acoustic PSO must be on duty to monitor the PAM system. In order to effectively carry out monitoring duties, PSOs must have sufficient periods of rest to minimize fatigue that would compromise their performance. Based on these considerations, and in consideration of the literature relating to mitigation and monitoring requirements and standard practice for scientific surveys, NMFS proposed minimum duty requirements.

While NMFS agrees that there is likely to be some increased logistical burden associated with these requirements, which are expanded to some degree from current practice in the GOM in the absence of compliance with the MMPA, the Associations do not demonstrate that this burden is so large as to be impracticable. Similarly, they do not provide information supporting claims that these requirements would compromise personnel safety (and certainly do not support the claim that the requirements are ''unnecessary and unsupported''). The Associations' comment states that survey vessels are typically at maximum capacity. NMFS acknowledges that in some cases, increased PSO staffing may result in a need for operators to balance staffing in other areas, such as in the seismic crew (25 to 30) or the three to seven client representatives that the Associations state are typically aboard a survey vessel, in order to accommodate necessary PSO staffing while not exceeding a vessel's maximum capacity. However, assuming that a vessel's maximum capacity is not exceeded, the claim that increasing the number of people aboard necessarily increases ''the risk of injuries, illnesses, and evacuation for medical reasons'' is unsupported. The comment is inconsistent regarding the number of PSO staff that the requirements would add, at various places stating that the requirements would result in the addition of six to eight or three to five PSO staff. Overall, the Associations state that only three (and possibly up to four) PSOs should be allowed, without explaining how this may achieve the objective of the proposed detection-based mitigation requirements.

However, in recognition of the likely increase in logistical burden and the possibility that individual LOA applicants may be able to demonstrate legitimate practicability issues, NMFS allows for the potential that an exception may be obtained specifically for the requirement that PSOs may be on duty for a maximum period of two hours, followed by a minimum period of one hour off. If an exception is granted based on practicability, the historical practice of a maximum on-duty period of four hours, followed by a minimum period of two hours off, would be substituted.

Comment: The Associations and other industry commenters comment that the proposed requirement for visual observation before and during nighttime ramp-ups would be ineffective and potentially present safety concerns.

Response: NMFS agrees that reduced efficacy should be expected for visual monitoring at night and, in consideration of comments asserting that this may present a safety concern, we have eliminated this requirement (noting that passive acoustic monitoring is still required for all nighttime operations of large airgun arrays). NMFS also agrees with the Associations' comment that employment of a PSO for the dedicated purpose of documenting entanglements with ocean-bottom node (OBN) cables is unnecessary and has eliminated this requirement. Elimination of these requirements is expected to help somewhat in alleviating the logistical concerns expressed by the Associations.

Comment: The Associations suggest that entanglement avoidance requirements should be removed from the ITR. The MMC comments that they support these requirements, and that the requirements are consistent with best management practices developed for avoiding entanglements.

Response: The Associations' comment, offered only in a footnote, is unclear as to whether the Associations' suggestion is to remove all entanglement avoidance requirements or only the requirement to use negatively buoyant coated wire-core tether cable. (Note that NMFS does agree with the suggested elimination of a requirement for use of a dedicated PSO for purposes of documenting entanglement.) Regardless, the Associations' suggestion that this requirement should be removed is keyed only to concern regarding practicability. NMFS disagrees that this requirement is impracticable, and the Associations offer no information to the contrary. Moreover, this measure is designed to prevent serious injury or mortality, which cannot be authorized under this rule.

Here, no mortality was requested or proposed for authorization and, therefore, potential for death by entanglement must be avoided. There is demonstrated potential for entanglement of protected species in association with OBN survey operations. As described in the notice of proposed rulemaking, a GOM OBN

operator remarkably entangled three different protected species within a year—including an Atlantic spotted dolphin, as well as an ESA-listed turtle and a manta ray. BSEE subsequently issued two enforcement actions against the operator for incidents of non-compliance, indicating that it is appropriate to be stringent regarding requirements relating to entanglement avoidance. Specific appropriate measures were determined in consultation between NMFS, BOEM, and BSEE, including consultation with NMFS' gear engineering experts, and were subsequently included in permits issued by BOEM (*e.g.,* OCS Permit L17–009, issued July 11, 2017). NMFS proposed these specific measures for this ITR and no comments offering useful suggestions regarding potential modifications to the measures were received. A generic suggestion that no entanglement avoidance requirements are necessary is not credible.

Comment: NRDC claims that NMFS fails to consider mitigation to reduce ship strike, particularly within Bryde's whale habitat. Separately, NRDC states that NMFS should consider extending ship-speed requirements to all project vessels. The Associations state that vessel strike avoidance measures should not be required, or that there should be modifications and/or exemptions to the measures.

Response: NMFS disagrees with NRDC's contention. NMFS' required vessel strike avoidance protocol is expected to further minimize any potential interactions between marine mammals and survey vessels, relative to the already low likelihood of vessel strike in relation to the activities considered herein. Please see ''Vessel Strike Avoidance'' for a full description of requirements, which include: Vessel operators and crews must maintain a vigilant watch for all marine mammals and must take necessary actions to avoid striking a marine mammal; vessels must reduce speeds to 10 kn or less when mother/calf pairs, pods, or large assemblages of cetaceans are observed near a vessel; and vessels must maintain minimum separation distances.

We also note that NRDC's comment that ''vessels supporting the seismic operation are not similarly constrained'' is in error. All project vessels are required to adhere to vessel strike avoidance requirements, including speed requirements in certain circumstances. As stated clearly in the proposed and final regulatory text, ''[v]essel operators and crews must maintain a vigilant watch for all marine mammals and slow down or stop their vessel or alter course, as appropriate and regardless of vessel size, to avoid striking any marine mammal [. . .].'' Regarding whether ship speed requirements are warranted for all project vessels in the Bryde's whale core habitat area to minimize risk of strike for Bryde's whales, the consideration is no longer relevant to this rule, as activity within the Bryde's whale core habitat area referenced by NRDC can no longer be considered through this rule following BOEM's update to the scope of action. Further, we disagree that similar risk exists for sperm whales and beaked whales, as would be necessary to warrant vessel speed restrictions in the Mississippi Canyon area. There are very few records of vessel strikes for sperm whales, as compared with mysticete whales in general, and Bryde's whales' dive behavior in particular makes them potentially more susceptible to vessel strike.

The Associations' comments state that they are not aware of any incidence of ship strike associated with a geophysical survey, implying that no strike avoidance measures are necessary. The lack of recorded incidents of strike does not mean that none have occurred and, more importantly, does not mean that none will occur. Therefore, it is NMFS' responsibility to prescribe measures that will achieve the least practicable adverse impact via avoidance of vessel strike. The comments go on to assert that there is ''no evidence'' that strike avoidance measures benefit marine mammals, despite the wealth of scientific evidence described in the notice of proposed rulemaking that slower vessel speeds result in fewer strikes and, if a strike does occur, a significantly lower likelihood of mortality. Separation requirements are common sense—a moving vessel should maintain some minimum distance from a whale to avoid striking it—and are similar to generic strike avoidance guidelines found elsewhere. The comments implying that these requirements are unwarranted and burdensome are unpersuasive, particularly given that BOEM has required essentially identical strike avoidance measures in the GOM via notices to lessees for many years (currently, via BOEM NTL No. 2016–G01).

Nevertheless, NMFS recognizes that there are legitimate concerns regarding vessels towing gear and human safety issues. We have clarified in the strike avoidance measures that vessel strike avoidance requirements do not apply in any case where compliance would create an imminent and serious threat to a person or vessel or to the extent that a vessel is restricted in its ability to maneuver and, because of the restriction, cannot comply.

Comment: The Associations and other industry commenters raise concerns regarding the PSO requirements, including that NMFS' requirements for PSOs will result in labor shortages, and make an accompanying recommendation that these be ''preferred'' training requirements that LOA-holders would not have to meet.

Response: NMFS disagrees with the comments. The Associations' statement that requirements for PSOs to have bachelor's degrees or to satisfy a positive experience requirement are ''difficult, if not impossible, to achieve'' is not persuasive. As explained in the notice of proposed rulemaking, NMFS discussed these PSO requirements with BSEE and with third-party observer providers. Both parties indicated that the requirements should not be expected to result in any labor shortage. We pointed out that during a period when a significantly greater amount of survey activity was occurring in the GOM than at present (*i.e.,* with as many as 30 source vessels), requirements similar to those proposed did not result in any labor shortage. Moreover, NMFS specifically requested comment on the assumption that the requirements would not result in any labor shortage. The Associations' expressed concern regarding the potential for a labor shortage, but do not provide any specific information to support the claims. We also clarify that not all PSOs must have a minimum of 90 days at-sea experience, with no more than 18 months elapsed since the conclusion of the most recent relevant experience. As described in the notice of proposed rulemaking and herein, a minimum of one visual PSO and two acoustic PSOs must have such experience (rather than all PSOs).

Comment: The Associations provide a list of specific proposed monitoring and reporting requirements that they assert are unreasonable or otherwise problematic. Some of these comments are echoed by other industry commenters.

Response: We address the specific issues raised by the Associations in turn.

1. The Associations state that bigeye binoculars should not be required, because they are expensive, require installation on the vessel, and are not appropriate for monitoring of the exclusion zone.

NMFS disagrees with this comment. While it is correct that procurement of bigeye binoculars will incur costs, these costs were analyzed in NMFS' RIA.

While bigeye binoculars may not be an individual PSO's tool of choice for observing marine mammals at close range to the vessel, they are an indispensable tool for observing marine mammals at greater distance upon initial detection, are a standard component of marine mammal observation (for scientific purposes, but also as a part of standard mitigation monitoring conducted aboard surveys for which incidental take authorizations are issued), and will be helpful in more accurately identifying animals at greater distances, such that the precautionary shutdowns of concern to the Associations are avoided.

2. The Associations state that PSOs should not report on factors that may be contributing to impaired observations, as such reporting may be speculative, unverifiable, and/or incorrect.

NMFS disagrees with this comment. Reporting on such conditions is not connected to any requirement for action, but it is important to understand whether visual observation is able to be conducted in an effective fashion, whether it be due to weather conditions or to conditions on the vessel.

3. The Associations suggest that the reporting requirement to estimate numbers of animals observed by cohort is overly complicated, and that the rule should require only recording of juveniles and adults.

NMFS agrees with this comment and has made corresponding edits to the regulatory text.

4. The Associations express some confusion regarding language addressing the information that visual PSOs should be compiling on a daily basis and whether these daily ''reports'' include estimates of actual animals taken.

NMFS clarifies that the language cited by the Associations was not intended to mean that PSOs should be estimating ''takes'' on a daily basis, and confirm that the Associations' statement that such information should be included only in annual reporting is correct.

5. Regarding NMFS' consideration of an approach recommended by the MMC to produce estimates of actual take from observations of animals during survey effort, the Associations express concern about the appropriate application of this process, and suggest that the protocol be applied at the end of a period long enough to accumulate sufficient data to adequately evaluate the appropriateness and proper application of the process as part of the adaptive management process.

NMFS shares many of the Associations' concerns on this subject and regarding the specific methodology proposed by the MMC. NMFS looks forward to working with the Associations (as well as BOEM and BSEE) towards the development of appropriate methods through the adaptive management process.

6. In reference to the requirement for the lead PSO to submit to NMFS a statement concerning mitigation and monitoring implementation and effectiveness, CGG adds that, because there is a lead PSO on each offshore rotation, the LOA-holder should submit collated statements.

NMFS agrees that this may be a more practical approach.

Comment: The MMC recommends that NMFS require LOA-holders to implement electronic reporting systems for field-based PSO data entry and expedited reporting.

Response: NMFS agrees that this would be appropriate and would better ensure expedited field entry and quality control checking of PSO data, as well as facilitate data transfer, quality control, data analysis, and automated report generation. Overall, such a requirement is helpful to ensure the efficient synthesis of data, as required by the comprehensive reporting process.

Comment: The Associations express support for NMFS' proposed approach to comprehensive monitoring and development of a structured adaptive management process, and highlight their support for efforts that improve the quantity and quality of information related to determining the nature and magnitude of the potential effects of offshore geophysical activities on marine mammals, including industry-supported independent third-party research.

Response: NMFS appreciates the comments and looks forward to continued engagement with the regulated community, as well as BOEM and BSEE, to improve the collection and use of the best available science consistent with the requirements and limits of the MMPA.

Comment: The MMC comments that they support an annual adaptive management process for the issuance of LOAs in the GOM and recommend that they be included in the process along with representatives from BOEM, BSEE, and industry.

Response: NMFS appreciates the comments and will ensure that the adaptive management process includes participation of the parties noted, where appropriate.

Comment: NRDC asserts that NMFS fails to prescribe requirements sufficient to monitor and report takings of marine mammals. The MMC recommends that NMFS and BOEM work together to develop a coordinated long-term monitoring and research plan, and further recommends that, to facilitate the completion of the plan, NMFS and BOEM establish a GOM scientific advisory group, composed of agency and industry representatives and independent scientists, to assist in the identification and prioritization of monitoring needs and hypothesis-driven research projects to better understand the short- and long-term effects of geophysical surveys on marine mammals in the GOM. Commenters also noted that there are many research gaps that need to be filled and suggested that NMFS should include monitoring requirements that fill those gaps.

Response: Section 101(a)(5)(A) of the MMPA indicates that any regulations NMFS issues shall include ''requirements pertaining to the monitoring and reporting of such taking.'' This broad requirement allows for a high degree of flexibility in what NMFS may accept or include as a monitoring requirement, but is not specific in identifying a threshold of what should be considered adequate monitoring. Contrary to NRDC's comments, except for IHAs in Arctic waters, NMFS' implementing regulations do not provide a specific standard regarding what required monitoring and reporting measures ''must'' accomplish. However, NMFS' implementing regulations require incidental take applications to include suggested means of accomplishing the necessary monitoring and reporting that will result in increased knowledge of the species, the level of taking, or impacts on populations of marine mammals that are expected to be present while conducting activities, as well as suggested means of minimizing burdens by coordinating such reporting requirements with other schemes already applicable to persons conducting such activity. 50 CFR 216.104(a)(13). The comment extracts pieces of this language to suggest that future LOA applicants are required to coordinate with each other's monitoring efforts, ignoring the fact that the relevant regulation points to this coordination only in support of minimizing the burden on the applicant and that it refers to coordination with ''schemes already applicable to persons conducting such activity.'' 50 CFR 216.104(a)(13). NRDC attempts to further the argument that coordination across projects is required by statute by referencing a monitoring plan that they state is in development by BOEM. The MMC also references development of a ''long-term monitoring plan'' that they

attribute to BOEM. NMFS is not aware that any such monitoring plan has been developed and, therefore, such a plan is not ''already applicable to persons conducting such activity.''

NRDC discusses a litigation settlement agreement related to the activities that are the subject of this rule, stating that ''BOEM must analyze 'the development of a long-term adaptive monitoring plan that addresse[s] cumulative and chronic impacts from seismic surveys on marine mammal populations in the Gulf of Mexico.' '' *NRDC et al.* v. *Bernhardt et al.,* 2:10–cv–1882, ECF No. 118 (E.D. La. June 18, 2013). NRDC also cites BOEM's PEIS in discussing this plan. That requirement in the settlement agreement does not pertain to NMFS' statutory authority under the MMPA, which does not provide authority for NMFS to require the development of a ''long-term monitoring plan'' via the promulgation of ITRs or as a condition of an incidental take authorization. As noted above, NMFS' statutory authority is to prescribe ''requirements pertaining to the monitoring and reporting of such taking.'' Although applicants that anticipate the need for consecutive periods of five-year regulations to cover ongoing activities may develop monitoring and reporting plans that extend past the five-year effectiveness period of a rule, section 101(a)(5)(A) requires only monitoring and reporting to cover the specified activities undertaken during the period of the rule. Were a long-term monitoring plan to be developed by BOEM, it would therefore be a voluntary undertaking on the part of participants, rather than a requirement under the MMPA. While certainly an exemplar of what a strong comprehensive monitoring plan can look like, the U.S. Navy's Integrated Comprehensive Monitoring Program (ICMP), which NRDC references as a relevant analogue to the monitoring plan that they assert is required in the GOM to satisfy the requirements of the MMPA, should not be hailed as a model that should always be copied or a standard that must be achieved for all MMPA ITRs. The Navy's ICMP was developed in close coordination with NMFS and reflects several factors that are not present for all ITRs (including these regulations) and that lay the groundwork for what is an exceptionally comprehensive program. Specifically, as the single entity for which take is authorized and that has the responsibility for implementing a monitoring program, the Navy has an existing organizational and funding structure that can support a truly integrated and comprehensive plan that would be far more difficult under a rule allowing for authorization of take by disparate applicants with varying activity levels, resource availability, and familiarity with regulatory requirements and marine mammal issues. Also, the Navy has an independent environmental stewardship mandate that influences their monitoring approach and supports a robust program intended to work in concert with the work funded through their Office of Naval Research and Living Marine Resources programs to create essentially full coverage of the science necessary to support vigorous environmental assessment and compliance across all Navy actions. Last, Navy training and testing utilize a large variety and number of platforms and sound sources, many of which can result in the take of marine mammals but cannot be monitored at the source. Accordingly, the Navy employs the robust, problem-based, often off-site monitoring program currently in place in order to answer targeted questions with controlled studies.

Although NMFS' authority with regard to the prescription of monitoring requirements does not include mandating long term monitoring, the MMPA does require an assessment of impacts from the total taking by all persons conducting the activity. Thus, meaningful monitoring and reporting for a specified activity under section 101(a)(5)(A) should be designed to help us better understand the total taking that is considered for authorization under the regulations for all persons conducting the specified activities under the five-year regulations. This necessitates coordination across applicants with regard to comprehensive analysis and reporting of information collected in relation to ''the level of taking or impacts on populations of marine mammals that are expected to be present while conducting activities.'' 50 CFR 216.104(a)(13). We discuss these comprehensive reporting requirements in greater detail in Monitoring and Reporting. These requirements are appropriate to the necessary function of informing the assessment of the overall impact of the incidental take allowable under the regulations and acknowledge the need to conduct aggregation and analysis of the data in a manner that directly informs the question of whether and the degree to which marine mammal populations addressed may be affected by the incidental take authorized by LOAs.

We appreciate the MMC's acknowledgement of the investments made by BOEM and industry (via the E&P Sound and Marine Life Joint Industry Program) towards better understanding of marine mammal abundance and distribution, the characterization of anthropogenic sound sources in the GOM, and the effects of sound on marine mammal hearing and behavior, among other initiatives. We also note that much of the research recommended by NRDC has been conducted via the BOEM-sponsored Gulf of Mexico Marine Assessment Program for Protected Species initiative. However, while these voluntary efforts are commendable, section 101(a)(5)(A) does not require hypothesis-driven, focused research pertaining to the impact and mitigation of chronic noise exposure on populations of special concern, nor does it require a ''coordinated long-term monitoring and research plan,'' as expressed by the commenters.

Regarding the MMC's recommendation that NMFS establish a GOM ''scientific advisory group, composed of agency and industry representatives and independent scientists, to assist in the identification and prioritization of monitoring needs and hypothesis-driven research projects,'' NMFS would be willing to explore with the MMC the appropriate mechanisms for convening such a group, including consideration of the MMC's authorities under the MMPA.

The monitoring approach described in this preamble includes LOA-specific monitoring and reporting set forth in the regulations and, separately, outlines a framework for potential data collection, analysis, research, or collaborative efforts that are not specified in these regulations but which work towards satisfying the information elements identified in our implementing regulations. NMFS is committed to working with industry and BOEM through the adaptive management process to ensure that LOA-specific monitoring and reporting will be used appropriately to help better understand the impacts of the total taking from the specified activity contemplated in this ITR on the affected populations, as well as how the more overarching voluntary efforts will be identified and carried out.

Comment: The Associations reiterate their belief that NMFS, as the regulating agency, has the responsibility to collect, organize, and assess all of the data reported to NMFS under the terms of issued LOAs.

Response: NMFS disagrees with this comment. The MMPA requires NMFS to prescribe regulations setting forth requirements pertaining to the monitoring and reporting of ''such

taking.'' 16 U.S.C. 1371(a)(5)(A)(i)(II)(bb). (In contrast, the other required component of activity-specific regulations, relating to mitigation requirements, refers to ''taking pursuant to such activity.'' 16 U.S.C. 1371(a)(5)(A)(i)(II)(aa). In NMFS' view, these monitoring and reporting requirements in our activity-specific regulations refer to the total taking from the specified activity as a whole, and they are requirements that can be imposed on those entities availing themselves of LOAs issued under the activity specific regulations. Therefore, it is incumbent upon LOA-holders, collectively, to provide this information to NMFS in a reasonably synthesized form such that NMFS may adequately assess the effects of the specified activity on an ongoing basis. This information may in some cases be essential to NMFS' ability to carry out 50 CFR 216.105(e) (''Letters of Authorization shall be withdrawn or suspended, *either on an individual or class basis,* as appropriate, if, after notice and opportunity for public comment, the Assistant Administrator determines that: (1) The regulations prescribed are not being substantially complied with; or (2) The taking allowed is having, or may have, more than a negligible impact on the species or stock or, where relevant, an unmitigable adverse impact on the availability of the species or stock for subsistence uses'' (emphasis added).) While NMFS recognizes that the Associations are not subject to the ITR (including any reporting requirements in the ITR or related LOAs), LOA-holders (many of which are likely to be Association members) will collectively be responsible for the comprehensive reporting requirements described herein. The Associations in their comment commit to participate in the annual assessment process, and NMFS welcomes that participation.

Comment: The MMC recommends that NMFS require industry operators to measure and report the horizontal leakage of their various airgun arrays and investigate options to minimize horizontal sound leakage from those array configurations.

Response: As stated in the notice of proposed rulemaking, NMFS encourages the minimization of unnecessary horizontal propagation. However, while the MMC's recommendation would likely lead to a better understanding of actual horizontal propagation (or ''leakage'') that does occur, it is not clear that the product of such measurements (termed ''waste ratios'' by the MMC) would necessarily lead to a viable path to reducing such leakage. In addition, the MMC does not specify what it recommends as a sufficient amount of data concerning waste ratios to allow consideration of a potential threshold. Thus, the comment implies that all operators would be required to conduct field measurements of the acoustic output of airgun arrays under this recommendation, which NMFS believes would not be practicable. NMFS appreciates the comment and will further consider the utility of the recommendation, and methods of implementation, through the adaptive management process.

We do note that BOEM currently requires operators to confirm through the permitting process that the airgun arrays used have been calibrated or tuned to maximize subsurface illumination and to minimize, to the extent practicable, horizontal propagation of noise.

Comment: NRDC suggests that NMFS should consider requiring use of thermal detection as a supplement to visual monitoring.

Response: NMFS appreciates the suggestion and agrees that relatively new thermal detection platforms have shown promising results. Following review of NRDC's letter, we considered these and other supplemental platforms as suggested. However, to our knowledge, there is no clear guidance available for operators regarding characteristics of effective systems, and the detection systems cited by NRDC are typically extremely expensive, and are therefore considered impracticable for use in most surveys. For example, one system cited by NRDC (Zitterbart *et al.,* 2013)—a spinning infrared camera and an algorithm that detects whale blows on the basis of their thermal signature—was tested through funding provided by the German government and, according to the author at a 2015 workshop concerning mitigation and monitoring for seismic surveys, the system costs hundreds of thousands of dollars. We are not aware of its use in any commercial application. Further, these systems have limitations, as performance may be limited by conditions such as fog, precipitation, sea state, glare, water- and air-temperatures and ambient brightness, and the successful results obtained to date reflect a limited range of environmental conditions and species. NRDC acknowledges certain of these limitations in their comment, including that the systems have lesser utility in warmer temperatures. The GOM, however, is a warm environment. NRDC does not provide specific suggestions with regard to recommended systems or characteristics of systems. NMFS does not consider requirements to use systems such as those recommended by NRDC to currently be practicable.

Comment: NRDC states that NMFS should prescribe requirements for use of ''noise-quieting'' technology. NRDC elaborates that in addition to requiring noise-quieting technology (or setting a standard for ''noise output''), NMFS should ''prescribe targets to drive research, development, and adoption of alternatives to conventional airguns.''

Response: NMFS agrees with NRDC that development and use of quieting technologies, or technologies that otherwise reduce the environmental impact of geophysical surveys, is a laudable objective and may be warranted in some cases. However, here the recommended requirements either are not practicable or are not within NMFS' authority to require. To some degree, NRDC misunderstands the discussion of this issue as presented in the notice of proposed rulemaking. NMFS recognizes, for example, that certain technologies, including the Bolt eSource airgun, are commercially available, and that certain techniques such as operation of the array in ''popcorn'' mode may reduce impacts when viable, depending on survey design and objectives. However, a requirement to use different technology from that planned or specified by an applicant—for example, a requirement to use the Bolt eSource airgun—would require an impracticable expenditure to replace the airguns planned for use. NRDC offers no explanation for why such a large cost imposition (in the millions of dollars) should be considered practicable.

Separately, NRDC appears to suggest that NMFS must require or otherwise incentivize the development of wholly new or currently experimental technologies. We note that BOEM's PEIS concluded that alternative technologies are in various stages of development, and that none of the systems with the potential to replace airguns as a seismic source are currently commercially available for use on a scale of activity such as that considered herein. Although some alternative technologies are available now, or will be in the next several years, for select uses, none are, or will likely be in the next five years, at a stage where they can replace airgun arrays outright. However, some may be used in select environments when commercially available. According to BOEM, the suggestion in this comment would not provide the oil and gas industry or the government with sufficiently accurate data on the location, extent, and properties of hydrocarbon resources or the character

of formation fluids or gases, or information on shallow geologic hazards and seafloor geotechnical properties, in order to explore, develop, produce, and transport hydrocarbons safely and economically. Such technologies may be evaluated in the future as they become commercially available and on a scale commensurate to the need. In summary, while NMFS agrees that noise quieting technology is beneficial, the suggestions put forward by NRDC are either impracticable or outside the authority provided to NMFS by the MMPA. However, NMFS would consider participating in or learning about related efforts by parties interested in investigating these technologies. We note that NMFS has described a process by which new and unusual technologies may be considered for use under this rule (see Letters of Authorization).

Comment: NRDC recommended that NMFS consider compensatory mitigation for the adverse impacts of the specified activity on marine mammals and their habitat that cannot be prevented or mitigated.

Response: NMFS has prescribed a robust comprehensive suite of measures that are expected to reduce the amount of Level A and Level B harassment take, as well as the severity of any incurred impacts on the species or stock and their habitat. Compensatory mitigation is not required under the MMPA. Importantly, NRDC did not recommend any specific measure(s), rendering it impossible to evaluate their recommendation. In addition, many of the methods of compensatory mitigation that have proven successful in terrestrial settings (*e.g.,* purchasing or preserving land with important habitat, improving habitat through plantings) are not applicable in a marine setting with such far-ranging species. NMFS concludes that the concept is too speculative at this time to warrant specific action.

Letters of Authorization

Comment: The Associations assert that it is ''arbitrary and inappropriate'' for NMFS to provide an opportunity for public notice and comment in the event that an LOA applicant wishes to deviate from the modeling approach used herein (which was subject to public review and comment). The Associations state that such a requirement is contrary to the legal requirement to base the authorization of incidental take under the MMPA on the best available science, as better information may become available during the period of effectiveness for the ITR.

Response: LOAs issued under the authority of section 101(a)(5)(A) and NMFS' implementing regulations must be preceded by both substantive findings (including a negligible impact finding) and a process that includes rulemaking after notice and comment. In the case of LOA applications whose take estimates are not based on the modeling used for the rulemaking, NMFS has determined that it may be appropriate to subject those to notice and comment in certain circumstances. Such a process requirement does not impede or contradict the requirement to use the best available information.

Comment: The Associations and other industry commenters assert that there is no legal justification for NMFS to use the ITR as a mechanism to limit the number of activities that may occur in the GOM, stating that authorization of the activities themselves are subject to BOEM's jurisdiction.

Response: NMFS clarifies that we do not intend to use the ITR in the manner suggested by the Associations, and that the language cited in the Associations' comment (''cap on the number of authorizations that could be issued'') was inartful. We also acknowledge BOEM's jurisdiction regarding the authorization of the subject activities themselves. However, the total taking analyzed in the negligible impact analysis necessarily bounds the taking that may be authorized under these activity-specific regulations, as described in the Estimated Take section.

Comment: Referencing a cap on the number of authorizations that could be issued, the MMC recommends that NMFS (1) provide details to the public on how NMFS plans to implement the proposed cap and the basis for it; and (2) allow for an additional 30-day comment period to review such details sufficiently in advance of issuing the final rule.

Response: As discussed in the preceding comment response, the language referenced by the MMC was meant only to affirm what is inherent in the regulations, *i.e.,* that the amount of take analyzed for making a finding of negligible impact necessarily bounds the amount of take that may be authorized through LOAs issued under this rule (provided they also satisfy the small numbers requirement). The MMC places undue emphasis on this aspect of rule implementation. In claiming a ''lack of transparency,'' the MMC assigns complexity that does not exist, and no additional details exist to give. Therefore, we do not implement the MMC's recommendation for additional public comment.

Comment: The Associations and other industry commenters express concern regarding the implementation of the ITR, including the evaluation and processing of LOA requests. The Associations recommend that the final ITR clearly address how NMFS plans to process LOA applications in a timely and efficient manner, and encourage NMFS to retain flexibility in the final ITR for the development of efficient and effective LOA processes through workshops or other engagement with BOEM and the regulated community.

Response: NMFS appreciates the concerns expressed by the commenters. We believe we have addressed these issues in the updated preamble to this ITR (see Letters of Authorization) and are committed to ongoing, proactive engagement with BOEM, BSEE, and the regulated community towards efficient implementation of the ITR.

Comment: BP comments that a low-frequency geophysical survey source they refer to as ''Wolfspar'' should be considered to be within the range of potential impacts modeled in the ITR and, therefore, able to be used under an LOA issued pursuant to the ITR.

Response: NMFS will look forward to evaluating the Wolfspar source according to the ''New and Unusual Technology'' review process detailed in the Letters of Authorization section of this preamble. Only upon review of additional information regarding the source can NMFS make a determination in this regard.

Regulatory Impact Analysis

Comment: The Associations provide a bulleted list of criticisms of the RIA. We summarize these here and provide brief responses below. For full detail, we refer the reader to the final RIA, available online at: *www.fisheries.noaa.gov/action/incidental-take-authorization-oil-and-gas-industry-geophysical-survey-activity-gulf-mexico.* The Associations' critiques of the RIA are not accompanied by any specific recommendations regarding potential changes to the analysis or additional data.

- The Associations assert that the RIA assumes that the only indirect costs of closures are delays, and state that such measures ''may render some survey proposals economically unattractive to the point at which prospects will not be explored.'' The Associations also state that closures may be assumed to be permanent, thereby having an additional dampening impact on exploration activity.

Response: The RIA accompanying the proposed rule did not assume that the costs of closures are simply delays. The RIA stated that the ''closures have the potential to affect the overall levels of G&G [geological and geophysical]

activities that occur in the GOM over the five-year timeframe of the analysis. In the case that the closures delay or reduce the ability of industry to collect the necessary data to identify and recover oil and gas resources, the overall level of oil and gas production in the GOM may in turn be delayed or reduced.'' The RIA for the proposed rule discussed the possibility of both delays *and* reductions in activity due to the uncertainty surrounding rule impacts. In addition, NMFS reiterates that closures and any other measures are in effect only during the five-year period of effectiveness of the ITR. It is unclear why closures may be ''assumed to be permanent'' if the regulations requiring them are effective only for five years. We note here that two of the closure areas included in the proposed rule and evaluated in the RIA are no longer in the final rule because they fall outside the area considered for this rule, following BOEM's update of the rule's scope.

- The Associations assert that the RIA ''incorrectly assumes that the costs of closures are highly uncertain or even low because geologic potential of some areas is low,'' stating that geophysical surveys are essential to understanding the geologic potential of the areas.

Response: There is significant uncertainty regarding the development potential of the areas considered for closure, and the RIA did not simply assume that it is ''low.'' The RIA accompanying the proposed rule provided the best available information regarding lease activity and reserves in the proposed closure areas and characterized the associated uncertainty.

- The Associations assert that the RIA ''wrongly assumes that the GOMESA moratorium prevents exploration of the Eastern GOM,'' when in fact the moratorium is currently set to expire in 2022. The Associations go on to state that ''the RIA seriously misleads readers about the costs of closure and increased restrictions in the Eastern GOM,'' and that the potential cost of the closure should be considered equivalent to that of the closure considered for the Central GOM because ''high-potential resources may underlie'' the Eastern GOM closure.

Response: The RIA made no such assumption, and in fact acknowledged that the moratorium does not restrict exploration per se. However, the Eastern GOM closure referenced by the commenter is no longer part of the rule, as BOEM's update to the scope of the rule has removed the area from consideration.

- The Associations state that the RIA fails to account for the environmental benefit associated with avoiding unnecessary drilling via use of geophysical surveys. Chevron echoes this comment. Neither commenter provides any specific recommendation as to how they believe it should be considered.

Response: The RIA does acknowledge the benefit of geophysical technology. However, we note that the magnitude of this benefit depends on the extent to which exploration and development companies move forward with drilling in cases where they have less seismic data than they otherwise would because of the requirements of the ITR.

- The Associations assert that the RIA for the proposed rule incorrectly assumes current geophysical data in the Eastern GOM is suitable, stating that ''there is high demand for state-of-the-art new data for Eastern GOM frontier areas where older data is considered unsuitable to support new investment.''

Response: The RIA did not state that current geophysical data for the Eastern GOM is ''suitable.'' Rather, the RIA stated that ''the suitability of existing G&G data to direct oil and gas production in the closure areas is unknown.'' As noted herein, the area of concern to the commenter is no longer considered through this rule.

- The Associations assert that the RIA ''fails to account for possible increased industry interest in Eastern GOM geophysical surveys'' and, therefore, that the RIA inappropriately relies on old statistics on survey interest for estimating costs.

Response: The RIA acknowledged that industry interest in Eastern GOM geophysical surveys is likely to increase leading up to the expiration of the moratorium. As noted herein, the area of concern to the commenter is no longer considered through this rule.

Comment: Chevron comments that NMFS should ensure in the final ITRs that all costs are evaluated, including the cost of reduced environmental benefits from effective geophysical surveys. The Associations echo these concerns.

Response: NMFS has appropriately evaluated the regulatory impacts of the ITR according to the requirements of E.O. 12866. See section 5.3 of the Final RIA, which describes this benefit of geophysical technology. The magnitude of this benefit depends on the extent to which exploration and development companies move forward with drilling in cases where they have less seismic data than they otherwise would because of the rule.

National Environmental Policy Act

Comment: NRDC reiterates (and resubmitted) comments that it submitted on BOEM's draft PEIS, stating that as it relates to marine mammals, the PEIS is deficient on its face due to the range of alternatives and mitigation considered, significance criteria, take and impact estimates, and cumulative impacts analysis.

Response: As a cooperating agency, NMFS reviewed all responses to comments on the draft PEIS that were relevant to its management authorities and provided input where we deemed it appropriate. See Appendix M of the Final PEIS.

Comment: NRDC also states that NMFS cannot rely on the PEIS because it ''does not adequately address NMFS' own actions and responsibilities under the MMPA,'' given that BOEM's PEIS is ''framed around a fundamentally different purpose and need'' relating to its mandates under the Outer Continental Shelf Lands Act (OCSLA) that is ''incongruent with NMFS obligations under the MMPA.''

Response: The proposed action at issue is BOEM's issuance of permits or authorizations for G&G activities in the GOM. PEIS Chapter 1.1.1. The PEIS also recognizes that NMFS' proposed action is a decision on whether to approve BOEM's petition for incidental take regulations. NOAA is a cooperating agency on BOEM's PEIS, as NOAA has jurisdiction by law and special expertise over marine resources impacted by the proposed action, including marine mammals and federally listed threatened and endangered species. The PEIS explicitly recognizes that the PEIS would be used in support of NMFS' decision on BOEM's petition for incidental take regulations. See PEIS Appendix B.

Consistent with the Council on Environmental Quality's (CEQ's) regulations, it is accepted NEPA practice for NOAA to adopt a lead agency's NEPA analysis when, after independent review, NOAA determines the document to be sufficient in accordance with 40 CFR 1506.3. Specifically here, NOAA is satisfied that BOEM's PEIS adequately addresses the impacts of issuing the MMPA incidental take authorization and that NOAA's comments and concerns have been adequately addressed. There is no requirement in CEQ regulations that NMFS, as a cooperating agency, issue a separate purpose and need statement in order to ensure adequacy and sufficiency for adoption. Nevertheless, the statement of Purpose and Need in the PEIS explicitly acknowledges NMFS' own separate action of issuing an MMPA incidental take authorization, and the PEIS is replete with discussion of issues relating to the issuance of an MMPA authorization, including discussion of marine mammal impacts, mitigation, and take estimates. NMFS' early participation in the NEPA process and the agency's continuing role in shaping and informing analyses using its special expertise ensured that the analysis in the PEIS is sufficient for purposes of NMFS' own NEPA obligations related to its issuance of an incidental take authorization under the MMPA.

Regarding the alternatives, NMFS' early involvement in the development of the PEIS and role in evaluating the effects of incidental take under the MMPA ensured that the PEIS would include adequate analysis of a reasonable range of alternatives. The PEIS includes a no action alternative specifically to address what could happen if NMFS did not issue an MMPA authorization. Some of the alternatives explicitly reference marine mammals or mitigation designed for marine mammals in their title. More importantly, these alternatives fully analyze a comprehensive variety of mitigation measures for marine mammals. This mitigation analysis supported NMFS' evaluation of our options in potentially issuing an MMPA authorization. This approach to evaluating a reasonable range of alternatives is consistent with NMFS' policy and practice for issuing MMPA incidental take authorizations. NOAA independently reviewed and evaluated the PEIS, including the purpose and need statement and range of alternatives, and determined that the PEIS fully satisfies NMFS' NEPA obligations related to its decision to issue the MMPA final rule and associated Letters of Authorization. Accordingly, NMFS has adopted the PEIS.

Finally, we disagree with the notion that the district court's decision in *Conservation Council for Hawaii* v. *NMFS* somehow would preclude NMFS from adopting the PEIS here. In *Conservation Council,* the court concluded that the FEIS NMFS adopted was deficient because it did not consider a true ''no action'' alternative from NMFS' perspective, in that the ''no action'' alternative assumed continuation of Navy's baseline activities, and therefore avoided the task facing NMFS, *i.e.,* whether to authorize the requested take. 97 F. Supp. 3d at 1236. In contrast, the PEIS here for NMFS' rule for GOM geophysical surveys includes a ''no action'' alternative from the perspectives of both NMFS and BOEM. See PEIS, Chapter 2.9.1, pp. 2–20 to 2–22.

Information Quality Act

Comment: The CRE states that NMFS' Technical Guidance violates Information Quality Act (IQA) requirements, because it (1) does not include an IQA Pre-dissemination Review Certification; (2) relies heavily on models that have not been peer reviewed to determine whether they are validated and comply with the Environmental Protection Agency's Council for Regulatory Environmental Modeling (CREM) guidance; and (3) relies heavily on models that were not peer reviewed in compliance with the Office of Management and Budget's (OMB) Final Information Quality Bulletin for Peer Review (70 FR 2664; January 14, 2005).

Response: The CRE is incorrect. NMFS performed appropriate pre-dissemination review and documentation according to relevant agency guidance (NMFS Policy Directive PD 04–108, Policy on the Data Quality Act; NMFS Instruction 04–108–03, Section 515 Pre-Dissemination Review and Documentation Guidelines). All aspects of development of the 2016 Technical Guidance were peer reviewed (*www.cio.noaa.gov/services_programs/prplans/ID43.html*). Also of note, the same information and methodology that supported development of NMFS' Technical Guidance (NMFS, 2016, 2018) were more recently published in a peer-reviewed journal (Southall *et al.,* 2019a).

Comment: CRE states that NMFS' use of models in the acoustic exposure modeling process for this rule violates the IQA because ''they are incomplete, unfinished, inaccurate, unreliable, have never been validated, and have never been peer reviewed.'' CRE also asserts that NMFS has not conducted pre-dissemination review and documentation as required by the IQA and implies that, because NMFS did not address the IQA in the notice of proposed rulemaking, we must be in violation of it.

Response: CRE is incorrect; NMFS is in compliance with the requirements of the IQA. NMFS conducted the required pre-dissemination review at both the proposed and final stages of this rulemaking and appropriate documentation is included in the administrative record for this action.

CRE asserts that the models used in NMFS' rulemaking process are not properly evaluated or validated. CRE asserts that as a result, NMFS ''grossly overestimate[s] exposures and takes.'' According to the CRE, the supposed failings of the modeling necessarily lead to the overestimation of takes, as opposed to error in potentially different directions and of different magnitude in association with the various components of the modeling process. CRE comments at length that NMFS should use only the relatively simple approach of ''Line Transect,'' which they believe will result in lower numbers of estimated takes (see more detailed response to these suggestions earlier in Comments and Responses).

In asserting that the models used in support of this rule have not been adequately validated or peer reviewed, CRE refers to a similarly sophisticated, proprietary modeling package (Marine Acoustics, Inc.'s Acoustic Integration Model (''AIM'')) that underwent a dedicated external peer review, stating that AIM is ''therefore properly validated and acceptable for regulatory use.'' However, the AIM package functions virtually the same as the models used for this analysis, and was used for an essentially identical modeling process developed in support of BOEM's 2014 PEIS for geological and geophysical survey activities on the Mid- and South Atlantic Outer Continental Shelf.

The IQA concerns expressed in the comment are unfounded. As stated in the NOAA Information Quality Guidelines, information quality is composed of three elements: Utility, integrity, and objectivity.

Utility means that disseminated information is useful to its intended users. The disseminated information at issue here—modeled exposures of marine mammals to underwater noise—is useful to NMFS in that it forms the basis for subsequent analysis allowing NMFS to make determinations

necessary under the MMPA. It is useful to the public in that it enables appropriate review of NMFS' action and supporting determinations. It is useful to the regulated entities in that it will allow for an efficient regulatory regime, in which potential LOA applicants may make use of the existing modeling effort (while being afforded the opportunity to engage in different modeling if desired) in service of a streamlined LOA application process.

Integrity refers to security, *i.e.,* the protection of information from unauthorized access or revision, to ensure that the information is not compromised through corruption or falsification. The integrity of the information disseminated herein was not questioned, but it meets all relevant standards for integrity (as demonstrated in the administrative record for this action).

Finally, objectivity ensures that information is accurate, reliable, and unbiased, and that information products are presented in an accurate, clear, complete, and unbiased manner. Objectivity consists of two distinct elements: Presentation and substance. The presentation element includes whether disseminated information is presented in an accurate, clear, complete, and unbiased manner and in a proper context. NMFS has appropriately presented the disseminated information, and CRE does not assert otherwise. The substance element involves a focus on ensuring accurate, reliable, and unbiased information. Disseminated information reflects the inherent uncertainty of the scientific process, which is inseparable from the concept of statistical variation. In assessing information for accuracy, the information is considered accurate if it is within an acceptable degree of imprecision or error appropriate to the particular kind of information at issue and otherwise meets commonly accepted scientific and statistical standards, as applicable. This concept is inherent in the definition of ''reproducibility,'' as used in the OMB IQA Guidelines and adopted by NOAA. Therefore, original and supporting data that are within an acceptable degree of imprecision, or an analytic result that is within an acceptable degree of imprecision or error, are by definition within the agency standard and are therefore considered correct. CRE does not assert that the modeling results disseminated by NMFS are outside the bounds of an acceptable degree of imprecision or error.

The modeling report goes into great detail regarding potential error associated with different facets of the modeling process, and provides specific analysis of uncertainty in both the acoustic and animal phases of the modeling process (discussed in detail in the notice of proposed rulemaking and in the modeling report). Uncertainty associated with all aspects of the modeling was clearly identified and evaluated as to the effect on the overall modeling results. In order to best represent the overall uncertainty associated with the modeling, the report presents the exposure estimates as a distribution. The exposure estimate distribution provides the public with an understanding of the probability of certain events occurring, including the probability that an operation would not result in any animals being exposed above a defined threshold.

Regarding reproducibility and transparency, the NOAA Information Quality guidelines state that ''reproducibility means that the information is capable of being substantially reproduced, subject to an acceptable degree of imprecision [. . .] With respect to analytic results, 'capable of being substantially reproduced' means that independent analysis of the original or supporting data using identical methods would generate similar analytic results, subject to an acceptable degree of imprecision or error.'' We have no reason to believe that similar modeling (for example, using the AIM modeling package) using the same data inputs would not return similar analytic results, and CRE provides none. Transparency is not defined in the OMB Guidelines, but is at the heart of the reproducibility standard. At its most basic, transparency—and ultimately reproducibility—is a matter of showing how you got the results you got. NMFS has produced a painstakingly detailed accounting of the modeling process and decisions made, such that an independent party using a different set of models would be able to perform a similar modeling effort in order to evaluate the similarity of the results. The modeling report includes a full description of all assumptions and reference material used for both sound sources and species of interest. CRE provides no meaningful argument to the contrary.

The NOAA Information Quality guidelines expressly address and allow for the use of proprietary models and other supporting information which cannot be disclosed. In such cases, the guidelines call for ''especially rigorous robustness checks.'' As summarized below and described in detail in the notice of proposed rulemaking and modeling report, NMFS has conducted rigorous robustness checks of the proprietary models used in support of this rule.

The models used in estimating the acoustic exposures described herein have been appropriately validated and reviewed. As described in detail in the notice of proposed rulemaking and in the modeling report, the acoustic exposure modeling effort requires the use of a package of models. Acoustic exposure modeling in general is not novel, controversial, or precedent-setting, and similar modeling has been performed for various applications for over 15 years. This type of modeling requires modeling of the acoustic output of a source, in this case a specified airgun array (as well as a single airgun and certain electromechanical sources that were modeled separately). The output of the source model is an input to a model or models used to model underwater sound propagation as a function of range from the source. The output of this process is a 3D sound field. Subsequently, an animal movement model is used to simulate the behavior of virtual animats in relation to the modeled sound field. Each animat acts as a virtual dosimeter, producing individual records of exposure history. There were many animats in the simulations, and together their received levels represent the probability, or risk, of exposure for each survey.

In this case, the source model used was JASCO Applied Sciences' proprietary Airgun Array Source Model (AASM). The AASM accepts airgun volume, pressure, and depth and has internal parameters that must be fit to real signature data. The model was originally fit to a large library of empirical airgun data spanning a range of airgun volumes and operating depths. Subsequently, the model was improved to better predict airgun radiation at frequencies above 1 kHz. Development and validation of this improved version were made possible by high quality airgun source signature data from field studies conducted under the industry-sponsored Joint Industry Program on Sound and Marine Life. Desktop evaluation and validation of AASM have been conducted against commercial geophysical source models such as Gundalf and Nucleus.

JASCO's proprietary Marine Operations Noise Model (MONM) was used to generate the 3D sound fields necessary for sound exposure estimates. MONM is based on standard and proven acoustic propagation models. In this case, propagation at frequencies less than 2 kHz was computed using a version of the U.S. Naval Research Laboratory's Range-dependent Acoustic

Model (RAM), which is based on a parabolic equation (PE) solution to the wave equation and extensively verified and validated under the Navy Ocean and Atmospheric Master Library process. The PE method has been extensively benchmarked and is widely employed in the underwater acoustics community (Collins *et al.,* 1996), and RAM's predictions (as generated within the MONM infrastructure) have been validated against experimental data in several underwater acoustic measurement programs conducted by JASCO (*e.g.,* Aerts *et al.,* 2008; Funk *et al.,* 2008; Ireland *et al.,* 2009; Blees *et al.,* 2010; Warner *et al.,* 2010). At frequencies greater than 2 kHz, increased sound attenuation due to volume absorption at higher frequencies is accounted for with the widely-used BELLHOP Gaussian beam ray-trace propagation model (Porter and Liu, 1994). Both of these complementary, non-proprietary propagation models (RAM and BELLHOP) have been extensively tested over many years and are accepted by the acoustics community. Implementation of these codes within the MONM infrastructure has been evaluated and validated against other PE codes including RAMS, RAM-Geo and original RAM, and against normal mode or wavenumber integration (fast field) methods in standard codes. Finally, JASCO has conducted end-to-end validation of source and propagation modeling against field data collected in sound source verification experiments, demonstrating that the results of the acoustic field modeling are in agreement with field data. The comparison of model results and measurements show that MONM can produce reliable results in challenging acoustic propagation conditions (Hannay and Racca, 2005).

The non-proprietary, peer-reviewed Marine Mammal Movement and Behavior (3MB) model (Houser, 2006) was used to generate realistic paths of simulated animals (animats) in the modeled area. JASCO's Exposure Modeling System (JEMS) was used to combine animal movement data (*i.e.,* the output from 3MB), with pre-computed acoustic fields (*i.e.,* the output from MONM described above). The JEMS is a relatively simple piece of software that acts as an indexer that finds the sound level from the computed fields for the location of each animat through time. The numerous, rigorous robustness checks described for the multiple modeling components are sufficient to comply with the IQA requirements, and no additional peer review is required.

While certain components of the modeling process (AASM, MONM, and JEMS) are proprietary in the sense that JASCO does not make the code publicly available, they are all based on standard physics or mathematical models generally accepted in the field and based on peer-reviewed models (*e.g.,* 3MB). In addition, ample opportunity has been provided for public input and review of the underlying scientific information and modeling efforts contained herein (including by scientists, peer experts at other agencies, and non-governmental organizations). Relevant data is provided such that an entity using similar models could reproduce or challenge the results. While the modeling results disseminated here may reasonably be considered to be influential for purposes of the OMB Peer Review Bulletin—meaning that the information may reasonably be considered to have a clear and substantial impact on important public policies, such as this ITR—the modeling is not a ''highly influential scientific assessment,'' (HISA) which is defined as a scientific assessment that: (i) Could have a potential impact of more than $500 million in any year, or (ii) is novel, controversial, or precedent-setting or has significant interagency interest. As described above, similar approaches to acoustic exposure modeling have been performed by numerous disparate entities for multiple applications. In 2014, during the aforementioned modeling workshop co-sponsored by the American Petroleum Institute and International Association of Geophysical Contractors, at least a half-dozen expert presenters (representing private and governmental entities from both the United States and Europe) discussed various available packages that function much the same way as what is described here. There is nothing novel, controversial, or precedent-setting about the modeling described here, and the additional peer review requirements associated with HISAs are not applicable.

Miscellaneous

Comment: NRDC contends that NMFS must consider a standard requiring analysis and selection of minimum source levels. In furtherance of this overall quieting goal, NRDC also states that NMFS should consider requiring that all vessels employed in the survey activities undergo regular maintenance to minimize propeller cavitation and be required to employ the best ship-quieting designs and technologies available for their class of ship, and that NMFS should require these vessels to undergo measurement for their underwater noise output.

Response: An expert panel, convened by BOEM to determine whether it would be feasible to develop standards to determine a lowest practicable source level, determined that it would not be reasonable or practicable to develop such metrics (see Appendix L in BOEM, 2017). NMFS does not believe it appropriate to address disagreements with these conclusions to us. NRDC further claims that NMFS' deference to the findings of an expert panel convened specifically to consider this issue is ''arbitrary under the MMPA.'' The bulk of NRDC's comment appears to be addressed to BOEM, and NMFS encourages NRDC to engage with BOEM regarding these alleged shortcomings of the panel's findings. The subject matter is outside NMFS' expertise, and we have no basis upon which to doubt the panel's published findings.

With regard to the recommended requirements to measure or control vessel noise, or to make some minimum requirements regarding the design of vessels used in the surveys, NMFS disagrees that these requirements would be practicable. While NMFS agrees that vessel noise is of concern in a cumulative and chronic sense, it is not of substantial concern in relation to the MMPA's least practicable adverse impact standard for this specified activity, given the few vessels used in any given survey and relative to commercial shipping. NMFS looks forward to continued collaboration with NRDC and others towards ship quieting.

Comment: NRDC states that NMFS must consider mitigation that limits and reduces the amount of survey activity, including ''prohibit[ing]'' duplicative surveys, and should consider ''consolidating'' surveys. Similarly, the MMC recommends that NMFS ''work with BOEM'' to require industry operators to increase collaboration on seismic surveys whenever possible.

Response: NRDC states that NMFS should ''require and enforce a cap'' on surveys, without explaining how they believe this is within NMFS' statutory authority or suggesting ways to appropriately apportion the amount of effort that might be allowed. NMFS cannot arbitrarily limit planned effort and has no legitimate means of changing the specified activity absent a conclusion that the activity would have more than a negligible impact. However, NMFS has made the necessary findings under the MMPA for issuance of this rule. NRDC goes on to state that NMFS should ''require BOEM to eliminate unnecessary duplication of survey effort'' but does not explain how they

believe that this suggestion is within NMFS' statutory authority. As the permitting agency, BOEM has the authority to require permit applicants to submit statements indicating that existing data are not available to meet the data needs identified for the applicant's survey (*i.e.,* non-duplicative survey statement), but such requirements are not within NMFS' purview. NMFS may not demand that BOEM discharge its authority under OCSLA in any particular manner. As stated previously, NMFS considers the specified activity described by an applicant in reviewing a request for an incidental take authorization. Nothing in the statute provides authority to direct consolidation or removal of activities based on some presumption of duplication that NMFS is not qualified to judge. NRDC claims erroneously that NMFS ''has authority under the mitigation provision of the MMPA to consider directing the companies to consolidate their surveys,'' placing such a requirement under the auspices of practicability. Leaving aside that directing any given applicant to abandon their survey plans would not in fact be practicable, it is inappropriate to consider this suggested requirement through that lens.

The MMC specifically cites a number of collaborative surveys conducted in foreign waters and recommends that NMFS ''work with BOEM'' to require such collaboration. However, the MMC provides no useful recommendations as to how such collaboration might be achieved. Given the absence of appropriate statutory authority, NMFS is willing to explore with the MMC possible mechanisms for fostering such collaboration between geophysical data acquisition companies and relevant Federal agencies, within the context of our respective authorities.

NMFS also notes that, although surveys may be perceived as ''duplicative'' simply because other surveys have also occurred in the same location, they are in fact designed specifically to produce proprietary data that satisfies the needs of survey funders. As noted by NRDC, BOEM convened an expert panel to study the issue of duplicative surveys (see Appendix L in BOEM, 2017) and developed standards for consideration of what surveys are duplicative. NRDC provides extensive discussion of their thoughts regarding the insufficiency of BOEM's duplicative survey standard and its implementation. We respectfully suggest that these comments are more appropriately directed at BOEM.

Comment: Chevron states that NMFS ''must be mindful of the mandates under OCSLA to assess and then balance the costs and benefits of alternative restrictions on geophysical activities against a requirement for 'expeditious and orderly development' of GOM resources.''

Response: NMFS' statutory obligations arise under the Marine Mammal Protection Act (with associated requirements under the Endangered Species Act, National Environmental Policy Act, and Administrative Procedure Act, among others). NMFS has no statutory obligation relative to OCSLA.

Comment: CRE provides several comments relating to E.O. 12866. CRE reiterates their view that there is ''no harm from seismic,'' and therefore, that it is not surprising that NMFS has not produced a quantitative statement of benefits. They also conclude that ''[s]ince the benefits of the proposed rule are minimal at best, the resultant benefit-cost ratio is less than one, making the proposed rule non-compliant'' with E.O. 12866.

Response: NMFS disagrees with the commenter's premise that there is no potential for harm, and accordingly evaluated the impacts of the specified activity and prescribed appropriate mitigation in the ITR, as required under the MMPA. With respect to E.O. 12866, the RIA provides a qualitative description of potential ecological benefits and their economic implications due to uncertainty preventing quantification. Similar to the qualitative evaluation of costs associated with the proposed area closures, the qualitative treatment of benefits does not indicate a lesser magnitude, but rather more data limitations or uncertainty.

Comment: Regarding E.O. 13211, Chevron comments that NMFS has provided inconsistent statements that should be resolved.

Response: NMFS has clarified its discussion regarding E.O. 13211. Overall, within the five-year timeframe of the analysis, the ITR is not expected to constitute a significant adverse effect on energy supply, distribution or use, according to the thresholds described by E.O. 13211, given that the direct compliance costs represent a small fraction (on the order of less than one percent) of the total costs of exploration and development in the GOM.

Comment: Chevron notes that E.O. 13795 required evaluation of NMFS' 2016 Technical Guidance (review of which was ongoing at the time of publication of the notice of proposed rulemaking). Chevron also asserts that assumptions of the 2016 Technical Guidance ''are multiplied with those in other elements of the modeling to reach 'unrealistic' conclusions.'' Because the 2016 Technical Guidance was used in the modeling, Chevron asserts that the modeling is inconsistent with the requirements of E.O. 13795. The CRE also claims that use of the 2016 Technical Guidance is in violation of E.O. 13795 and that the guidance should be rescinded or substantially revised. CRE also states that NMFS must emphasize that use of the Technical Guidance is not required.

Response: Review of the Technical Guidance under E.O. 13795 was completed in 2018. In response to the feedback received during the public comment period and the Interagency Consultation meeting, the Secretary of Commerce approved NMFS to issue a 2018 Revised Technical Guidance for Assessing the Effects of Anthropogenic Sound on Marine Mammal Hearing: Acoustic Thresholds for Onset of Permanent and Temporary Threshold Shifts (2018 Revised Technical Guidance) (NOAA Technical Memorandum NMFS–OPR–59) (June 21, 2018). NMFS' use of the guidance is, therefore, in compliance with E.O. 13795.

The 2018 Revised Technical Guidance retains the thresholds and weighting functions presented in the original 2016 Technical Guidance. Chevron's comment that the Technical Guidance somehow contributes to what they characterize as ''unrealistic'' conclusions is, in context of industry's overall comments on the modeling effort, unpersuasive. The industry-funded supplementary modeling variable analysis (Zeddies *et al.,* 2017b) found that use of the Technical Guidance was the single most influential factor in reducing the modeled exposures (for Level A harassment).

We acknowledge that the Technical Guidance is indeed guidance, and its use is voluntary (as stated in the Executive Summary of the Technical Guidance). The Technical Guidance provides more detail on if/when an alternative approach may be used.

Description of Marine Mammals in the Area of the Specified Activities

Sections 3 and 4 of the petition summarize available information regarding status and trends, distribution and habitat preferences, and behavior and life history of the potentially affected species. NMFS refers the reader to those descriptions, descriptions of the affected environment in Appendix E of BOEM's PEIS, as well as NMFS' Stock Assessment Reports (SAR; *www.fisheries.noaa.gov/national/*

marine-mammal-protection/marine-mammal-stock-assessments), incorporated here by reference, instead of reprinting the information. Additional general information about these species (*e.g.,* physical and behavioral descriptions) may be found on NMFS' website (*www.fisheries.noaa.gov/find-species*).

Table 4 lists all species with expected potential for occurrence in the GOM and summarizes information related to the population or stock, including potential biological removal (PBR). For taxonomy, we follow Committee on Taxonomy (2020). PBR, defined by the MMPA as the maximum number of animals, not including natural mortalities, that may be removed from a marine mammal stock while allowing that stock to reach or maintain its optimum sustainable population, is considered in concert with known sources of ongoing anthropogenic mortality (as described in NMFS' SARs). For status of species, we provide information regarding U.S. regulatory status under the MMPA and ESA.

Marine mammal abundance estimates presented in this document represent the total number of individuals that make up a given stock or the total number estimated within a particular study area. NMFS' stock abundance estimates for most species represent the total estimate of individuals within the geographic area, if known, that comprises that stock. For some species, this geographic area may extend beyond U.S. waters. Survey abundance (as compared to stock or species abundance) is the total number of individuals estimated within the survey area, which may or may not align completely with a stock's geographic range as defined in the SARs. These surveys may also extend beyond U.S. waters. For many GOM stocks, information regarding distribution and range-wide abundance is limited, as available data are generally limited to U.S. waters of the northern GOM. Abundance and distribution for GOM stocks occurring in the Mexican EEZ or the high seas are poorly understood. As discussed in additional detail below, U.S. waters only comprise about 40 percent of the entire GOM, and 65 percent of GOM oceanic waters are south of the U.S. EEZ. Studies based on abundance and distribution surveys restricted to U.S. waters are unable to detect temporal shifts in distribution beyond U.S. waters that might account for any changes in abundance within U.S. waters.

In some cases, species are treated as guilds. In general ecological terms, a guild is a group of species that have similar requirements and play a similar role within a community. However, for purposes of stock assessment or abundance prediction, certain species may be treated together as a guild because they are difficult to distinguish visually and many observations are ambiguous. For example, NMFS' GOM SARs assess stocks of *Mesoplodon* spp. and *Kogia* spp. as guilds. Here, we consider beaked whales and *Kogia* spp. as guilds. In the following discussion, reference to ''beaked whales'' includes the Cuvier's, Blainville's, and Gervais beaked whales, and reference to ''*Kogia* spp.'' includes both the dwarf and pygmy sperm whale.

Twenty-one species (with 24 managed stocks) have the potential to co-occur with the prospective survey activities. Extralimital species or stocks unlikely to co-occur with survey activity include 31 estuarine bottlenose dolphin stocks, the blue whale (*Balaenoptera musculus*), fin whale (*B. physalus*), sei whale (*B. borealis*), minke whale (*B. acutorostrata*), humpback whale (*Megaptera novaeangliae*), North Atlantic right whale (*Eubalaena glacialis*), and the Sowerby's beaked whale (*Mesoplodon bidens*). All mysticete species listed here (as well as Sowerby's beaked whale) are considered only of accidental occurrence in GOM and are generally historically known only from a very small number of strandings and/or sightings (Würsig *et al.,* 2000; Würsig, 2017). In addition, following BOEM's update to the scope of activity considered through this rule, the eastern coastal stock of bottlenose dolphin, which was considered in the notice of proposed rulemaking, would no longer be potentially impacted by activities that may be authorized under this rule. For detailed discussion of these species, please see the notice of proposed rulemaking (83 FR 29212; June 22, 2018). In addition, the West Indian manatee (*Trichechus manatus latirostris*) may be found in coastal waters of the GOM. However, manatees are managed by the U.S. Fish and Wildlife Service and are not considered further in this document. All managed stocks in this region are assessed in NMFS' U.S. Atlantic SARs.

All values presented in Table 4, which are available in the most recent final SARs (Hayes *et al.,* 2020) and have not changed since the proposed rule was published, are the most recent available at the time the analyses for this final rule were completed. We also reviewed new information for many GOM stocks in unpublished draft 2020 SARs. The unpublished draft SARs include updates to most GOM stocks, including to abundance estimates, PBR values, and annual mortality and serious injury (M/SI) estimates. The most notable change is that, through the introduction of M/SI estimates related to the Deepwater Horizon (DWH) oil spill, M/SI values are generally larger than in past SARs and in some cases are larger than the PBR values. NMFS has considered this information and determined that it is previously accounted for as part of the baseline, through our existing analysis of the effects of the DWH oil spill. We have fully considered the underlying information in our analysis and have determined that the unpublished draft SAR updates do not impact our conclusions.

TABLE 4—MARINE MAMMALS POTENTIALLY PRESENT IN THE SPECIFIED GEOGRAPHICAL REGION

Common name	Scientific name	Stock	ESA/ MMPA status; Strategic (Y/N) [1]	NMFS stock abundance (CV, N_{min}, most recent abundance survey) [2,7]	Predicted mean (CV)/ maximum abundance [3]	PBR	Annual M/SI (CV) [4]
Order Cetartiodactyla—Cetacea—Superfamily Mysticeti (baleen whales)

[1] ESA status: Endangered (E)/MMPA status: Depleted (D). A dash (-) indicates that the species is not listed under the ESA or designated as depleted under the MMPA. Under the MMPA, a strategic stock is one for which the level of direct human-caused mortality exceeds PBR or which is determined to be declining and likely to be listed under the ESA within the foreseeable future. Any species or stock listed under the ESA is automatically designated under the MMPA as depleted and as a strategic stock.

[2] NMFS marine mammal stock assessment reports online at: *www.fisheries.noaa.gov/national/marine-mammal-protection/marine-mammal-stock-assessments.* CV is coefficient of variation; N_{min} is the minimum estimate of stock abundance.

[3] This information represents species- or guild-specific abundance predicted by habitat-based cetacean density models (Roberts *et al.,* 2016). These models provide the best available scientific information regarding predicted density patterns of cetaceans in the U.S. Gulf of Mexico, and we provide the corresponding abundance predictions as a point of reference. Total abundance estimates were produced by computing the mean density of all pixels in the modeled area and multiplying by its area.

[4] These values, found in NMFS' SARs, represent annual levels of human-caused mortality plus serious injury from all sources combined (*e.g.,* commercial fisheries, ship strike). A CV associated with estimated mortality due to commercial fisheries is presented in some cases.

[5] Abundance estimates are in some cases reported for a guild or group of species when those species are difficult to differentiate at sea. Similarly, the habitat-based cetacean density models produced by Roberts *et al.* (2016) are based in part on available observational data which, in some cases, is limited to genus or guild in terms of taxonomic definition. NMFS' SARs present pooled abundance estimates for *Kogia* spp. and *Mesoplodon* spp., while Roberts *et al.* (2016) produced density models to genus level for *Kogia* spp. and as a guild for beaked whales (*Ziphius cavirostris* and *Mesoplodon* spp.). Finally, Roberts *et al.* (2016) produced a density model for bottlenose dolphins that does not differentiate between oceanic, shelf, and coastal stocks. The modeled abundance estimate provided here for all bottlenose dolphins includes abundance that may be attributed to the eastern coastal stock.

[6] NMFS' abundance estimates for these species are not considered current. PBR is therefore considered undetermined, as there is no current minimum abundance estimate for use in calculation. We nevertheless present the most recent abundance estimate.

[7] We note that Dias and Garrison (2016) present abundance estimates for oceanic stocks that were calculated for use in DWH oil spill injury quantification. For most stocks, these estimates are based on pooled observations from shipboard surveys conducted in 2003, 2004, and 2009 and corrected for detection bias. Estimates for beaked whales and *Kogia* spp. were based on density estimates derived from passive acoustic data collection (Hildebrand *et al.,* 2012). The abundance estimate for Bryde's whales incorporated the results of additional shipboard surveys conducted in 2007, 2010, and 2012. Here we retain NMFS' official SAR information for comparison with model-predicted abundance (Roberts *et al.,* 2016).

For the majority of species potentially present in the specified geographical region, NMFS has designated only a single generic stock (*i.e.,* ''Gulf of Mexico'') for management purposes, although there is currently no information to differentiate the stock from the Atlantic Ocean stock of the same species, nor information on whether more than one stock may exist in the GOM (Hayes *et al.,* 2020).

For the bottlenose dolphin, NMFS defines an oceanic stock, a continental shelf stock, and three coastal stocks. As in the northwestern Atlantic Ocean, there are two general bottlenose dolphin ecotypes: ''coastal'' and ''offshore.''

These ecotypes are genetically and morphologically distinct (Hoelzel *et al.,* 1998; Waring *et al.,* 2016), though ecotype distribution is not clearly defined and the stocks are delineated primarily on the basis of management rather than ecological boundaries. The offshore ecotype is assumed to correspond to the oceanic stock, with the stock boundary (and thus the de facto delineation of offshore and coastal ecotypes) defined as the 200-m isobath. The continental shelf stock is defined as between two typical survey strata: The 20- and 200-m isobaths. While the shelf stock is assumed to consist primarily of coastal ecotype dolphins, offshore ecotype dolphins may also be present. There is expected to be some overlap with the three coastal stocks as well, though the degree is unknown and it is not thought that significant mixing or interbreeding occurs between them (Waring *et al.,* 2016). The coastal stocks are defined as being in waters between the shore, barrier islands, or presumed outer bay boundaries out to the 20-m isobath and, as a working hypothesis, NMFS has assumed that dolphins occupying habitats with dissimilar climatic, coastal, and oceanographic characteristics might be restricted in their movements between habitats, thus constituting separate stocks (Waring *et al.,* 2016). Shoreward of the 20-m isobath, the eastern coastal stock extends from Key West, FL to 84° W longitude; the northern coastal stock from 84° W longitude to the Mississippi River delta; and the western coastal stock from the Mississippi River delta to the Mexican border. The latter is assumed to be a trans-boundary stock, though no information is available regarding abundance in Mexican waters. As noted above, the eastern coastal stock will not be affected by activities considered through this rule.

At the time of publication of the notice of proposed rulemaking, the GOM Bryde's whale was proposed for listing as an endangered species under the ESA (81 FR 88639; December 8, 2016). Since that time, NMFS has listed the GOM Bryde's whale as endangered under the ESA, effective on May 15, 2019 (84 FR 15446; April 15, 2019). The proposed listing was based largely on NMFS' status review of Bryde's whales in the GOM (Rosel *et al.,* 2016), and no significant new information has become available since that time. No critical habitat has yet been designated for the species, and no recovery plan has yet been developed. NMFS' analysis related to the GOM Bryde's whale in the notice of proposed rulemaking was conducted in context of the same information that informed the proposal to list the GOM Bryde's whale and, therefore, the final listing decision itself does not introduce new information for consideration in the analysis for this final rulemaking.

In Table 4 above, NMFS reports two sets of abundance estimates: Those from NMFS' SARs and those predicted by Roberts *et al.* (2016)—for the latter, we provide both the annual mean and the monthly maximum (where applicable). Please see footnotes 2–3 of Table 4 for more detail. NMFS' SAR estimates are typically generated from the most recent shipboard and/or aerial surveys conducted. GOM oceanography is dynamic, and the spatial scale of the GOM is small relative to the ability of most cetacean species to travel. As an example, no groups of Fraser's dolphins were observed during dedicated cetacean abundance surveys during 2003–2004 or 2009, yet the SAR states that it is probable that Fraser's dolphins were present in the northern GOM but simply not encountered, and therefore declines to present an abundance estimate of zero (Waring *et al.,* 2013). U.S. waters only comprise about 40 percent of the entire GOM, and 65 percent of GOM oceanic waters are south of the U.S. EEZ. Studies based on abundance and distribution surveys restricted to U.S. waters are unable to detect temporal shifts in distribution beyond U.S. waters that might account for any changes in abundance within U.S. waters. NMFS' SAR estimates also typically do not incorporate correction for detection bias. Therefore, they should generally be considered underestimates, especially for cryptic or long-diving species (*e.g.,* beaked whales, *Kogia* spp., sperm whales). Dias and Garrison (2016) state, for example, that current abundance estimates for *Kogia* spp. may be considerably underestimated due to the cryptic behavior of these species and difficulty of detection in Beaufort sea state greater than one, and density estimates for certain species derived from long-term passive acoustic monitoring are much higher than are estimates derived from visual observations (Mullin and Fulling, 2004; Mullin, 2007; Hildebrand *et al.,* 2012).

The Roberts *et al.* (2016) abundance estimates represent the output of predictive models derived from multi-year observations and associated environmental parameters and which incorporate corrections for detection bias. Incorporating more data over multiple years of observation can yield different results in either direction, as the result is not as readily influenced by fine-scale shifts in species habitat preferences or by the absence of a species in the study area during a given year. NMFS' abundance estimates show substantial year-to-year variability in some cases. For example, NMFS-reported estimates for the Clymene dolphin vary by a maximum factor of more than 100 (2009 estimate of 129 versus 1996–2001 estimate of 17,355), indicating that it may be more appropriate to use the model prediction versus a point estimate, as the model incorporates all available data (from 1992–2009). The latter factor—incorporation of correction for detection bias—should systematically result in greater abundance predictions. For these reasons, the Roberts *et al.* (2016) estimates are generally more realistic and, for these purposes, represent the best available information. For purposes of assessing estimated exposures relative to abundance—used in this case to understand the scale of the predicted takes compared to the population—NMFS generally believes that the Roberts *et al.* (2016) abundance predictions are most appropriate because they were used to generate the exposure estimates and therefore provide the most relevant comparison. Roberts *et al.* (2016) represents the best available scientific information regarding marine mammal occurrence and distribution in the Gulf of Mexico.

As a further illustration of the distinction between the SARs and model-predicted abundance estimates, the current NMFS stock abundance estimates for most GOM species are based on direct observations from shipboard surveys conducted in 2009 (from the 200-m isobath to the edge of the U.S. EEZ) and not corrected for detection bias, whereas the exposure estimates presented herein for those species are based on the abundance predicted by a density surface model informed by observations from surveys conducted over approximately 20 years and covariates associated at the observation level. To directly compare the estimated exposures predicted by the outputs of the Roberts *et al.* (2016) model to NMFS' SAR abundance would therefore not be meaningful.

Biologically Important Areas (BIA)—As part of our description of the environmental baseline, we discuss any known areas of importance as marine mammal habitat. These areas may include designated critical habitat for ESA-listed species (as defined by section 3 of the ESA) or other known areas not formally designated pursuant to any statute or other law. Important areas may include areas of known importance for reproduction, feeding, or migration, or areas where small and

resident populations are known to occur.

Although there is no designated critical habitat for marine mammal species in the specified geographical region, BIAs for marine mammals are recognized. For example, the GOM Bryde's whale is a very small population that is genetically distinct from other Bryde's whales and not genetically diverse within the GOM (Rosel and Wilcox, 2014). Further, the species is typically observed only within a narrowly circumscribed area within the eastern GOM. Therefore, this area is described as a year-round BIA by LaBrecque *et al.* (2015). Although survey effort has covered all oceanic waters of the U.S. GOM, whales were observed only between approximately the 100- and 300-m isobaths in the eastern GOM from the head of the De Soto Canyon (south of Pensacola, Florida) to northwest of Tampa Bay, Florida (Maze-Foley and Mullin, 2006; Waring *et al.,* 2016; Rosel and Wilcox, 2014; Rosel *et al.,* 2016). NOAA subsequently conducted a status review of the GOM Bryde's whale (Rosel *et al.,* 2016). The review expanded this description by stating that, due to the depth of some sightings, the area is more appropriately defined to the 400-m isobath and westward to Mobile Bay, Alabama, in order to provide some buffer around the deeper sightings and to include all sightings in the northeastern GOM. However, the recorded Bryde's whale shipboard and aerial survey sightings between 1989 and 2015 have mainly fallen within the BIA described by LaBreque *et al.* (2015). The entirety of this area is now excluded from the scope of this rule following BOEM's update to that scope.

LaBrecque *et al.* (2015) also described eleven year-round BIAs for small and resident BSE bottlenose dolphin populations in the GOM. Additional study would likely allow for identification of additional BIAs associated with other GOM BSE dolphin stocks.

Deepwater Horizon Oil Spill—In 2010 the *Macondo* well blowout and explosion aboard the *Deepwater Horizon* drilling rig (also known as the *Deepwater Horizon* explosion, oil spill, and response; hereafter referred to as the DWH oil spill) caused oil, natural gas, and other substances to flow into the GOM for 87 days before the well was sealed. Total oil discharge was estimated at 3.19 million barrels (134 million gallons), resulting in the largest marine oil spill in history (DWH NRDA Trustees, 2016). In addition, the response effort involved extensive application of dispersants at the seafloor and at the surface, and controlled burning of oil at the surface was also used extensively as a response technique. The oil, dispersant, and burn residue compounds present ecological challenges in the region. NMFS discussed the impacts of the DWH oil spill on marine mammals in detail in the notice of proposed rulemaking (83 FR 29212; June 22, 2018) and we refer the reader to that document for additional detail.

At its maximum extent, oil covered over 40,000 km^2 of ocean. Cumulatively, over the course of the spill, oil was detected on over 112,000 km^2 of ocean. Currents, winds, and tides carried these surface oil slicks to shore, fouling more than 2,100 km of shoreline, including beaches, bays, estuaries, and marshes from eastern Texas to the Florida Panhandle. In addition, some lighter oil compounds evaporated from the slicks, exposing air-breathing organisms like marine mammals to noxious fumes at the sea surface.

The Oil Pollution Act requires that a natural resource damage assessment (NRDA) be conducted following oil pollution incidents. An injury assessment undertaken as part of the NRDA first requires a determination of whether an incident injured natural resources. Trustees assessing natural resource injuries must establish that a pathway existed from the oil discharge to the resource, confirm that resources were exposed to the discharge, and evaluate the adverse effects that occurred as a result of the exposure (or response activities). Subsequently, the assessment requires injury quantification (including degree and spatiotemporal extent), essentially by comparing the post-event conditions with the pre-event baseline. For a fuller overview of the injury assessment process in this case, please see Takeshita *et al.* (2017). Critical pathways of exposure for marine mammals included the contaminated water column, where they swim and capture prey; the surface slick at the air to water interface, where they breathe, rest, and swim; and contaminated sediment, where they forage and capture prey.

DWH oil was found to cause problems with the regulation of stress hormone secretion from adrenal cells and kidney cells, which will affect an animal's ability to regulate body functions and respond appropriately to stressful situations, thus leading to reduced fitness. Bottlenose dolphins living in habitats contaminated with DWH oil showed signs of adrenal dysfunction, and dead, stranded dolphins from areas contaminated with DWH oil had smaller adrenal glands (Schwacke *et al.,* 2014a; Venn-Watson *et al.,* 2015b). Other factors were ruled out as a primary cause for the high prevalence of adverse health effects, reproductive failures, and disease in stranded animals. When all of the data were considered together, the DWH oil spill was determined to be the only reasonable cause for the full suite of observed adverse health effects.

Due to the difficulty of investigating marine mammals in pelagic environments and across the entire region impacted by the event, the injury assessment focused on health assessments conducted on bottlenose dolphins in nearshore habitats and used these populations as case studies for extrapolating to coastal and oceanic populations that received similar or worse exposure to DWH oil, with appropriate adjustments made for differences in behavior, anatomy, physiology, life histories, and population dynamics among species. Investigators then used a population modeling approach to capture the overlapping and synergistic relationships among the metrics for injury, and to quantify the entire scope of DWH marine mammal injury to populations into the future, expressed as ''lost cetacean years'' due to the DWH oil spill (which represents years lost due to premature mortality as well as the resultant loss of reproductive output). This approach allowed for consideration of long-term impacts resulting from immediate losses and reproductive failures in the few years following the spill, as well as expected persistent impacts on survival and reproduction for exposed animals well into the future (Takeshita *et al.,* 2017). For a more detailed overview of the injury quantification for these stocks and their post-DWH population trajectory, please see Schwacke *et al.* (2017), and for full details of the overall injury quantification, see DWH MMIQT (2015).

The results of the quantification exercise for each affected shelf and oceanic stock, and for northern and western coastal stocks of bottlenose dolphin, are presented in Table 5. This is likely a conservative estimate of impacts, because: (1) Shelf and oceanic species experienced long exposures (up to 90 days) to very high concentrations of fresh oil and a diverse suite of response activities, while estuarine dolphins were not exposed until later in the spill period and to weathered oil products at lower water concentrations; (2) oceanic cetaceans dive longer and to deeper depths, and it is possible that the types of lung injuries observed in estuarine dolphins may be more severe for oceanic cetaceans; and (3) cetaceans

in deeper waters were exposed to very high concentrations of volatile gas compounds at the water's surface near the wellhead. No analysis was performed for Fraser's dolphins or killer whales; although they are present in the GOM, sightings are rare and there were no historical sightings in the oil spill footprint during the surveys used in the quantification process. These stocks were likely injured, but no information is available on which to base a quantification effort.

TABLE 5—SUMMARY OF MODELED EFFECTS OF DWH OIL SPILL

Common name	% Population exposed to oil (95% CI)	% Population killed (95% CI)	% Females with reproductive failure (95% CI)	% Population with adverse health effects (95% CI)	% Maximum population reduction (95% CI)	Years to recovery (95% CI) [b]
Bryde's whale	48 (23–100)	17 (7–24)	22 (10–31)	18 (7–28)	−22	69
Sperm whale	16 (11–23)	6 (2–8)	7 (3–10)	6 (2–9)	−7	21
Kogia spp.	15 (8–29)	5 (2–7)	7 (3–10)	6 (2–9)	−6	11
Beaked whales	12 (7–22)	4 (2–6)	5 (3–8)	4 (2–7)	−6	10
Rough-toothed dolphin	41 (16–100)	14 (6–20)	19 (9–26)	15 (6–23)	−17	54
Bottlenose dolphin, oceanic	10 (5–10)	3 (1–5)	5 (2–6)	4 (1–6)	−4	n/a
Bottlenose dolphin, northern coastal	82 (55–100)	38 (26–58)	37 (17–53)	30 (11–47)	−50 (32–73)	39 (23–76)
Bottlenose dolphin, western coastal	23 (16–32)	1 (1–2)	10 (5–15)	8 (3–13)	−5 (3–9)	n/a
Shelf dolphins [a]	13 (9–19)	4 (2–6)	6 (3–8)	5 (2–7)	−3	n/a
Clymene dolphin	7 (3–15)	2 (1–4)	3 (2–5)	3 (1–4)	−3	n/a
Pantropical spotted dolphin	20 (15–26)	7 (3–10)	9 (4–13)	7 (3–11)	−9	39
Spinner dolphin	47 (24–91)	16 (7–23)	21 (10–30)	17 (6–27)	−23	105
Striped dolphin	13 (8–22)	5 (2–7)	6 (3–9)	5 (2–8)	−6	14
Risso's dolphin	8 (5–13)	3 (1–4)	3 (2–5)	3 (1–4)	−3	n/a
Melon-headed whale	15 (6–36)	5 (2–7)	7 (3–10)	6 (2–9)	−7	29
Pygmy killer whale	15 (7–33)	5 (2–8)	7 (3–10)	6 (2–9)	−7	29
False killer whale	18 (7–48)	6 (3–9)	8 (4–12)	7 (3–11)	−9	42
Short-finned pilot whale	6 (4–9)	2 (1–3)	3 (1–4)	2 (1–3)	−3	n/a

Modified from DWH NRDA Trustees (2016).
CI = confidence interval. No CI was calculated for population reduction or years to recovery for shelf or oceanic stocks.
[a] "Shelf dolphins" includes Atlantic spotted dolphins and the shelf stock of bottlenose dolphins (20–200 m water depth). These two species were combined because the abundance estimate used in population modeling was derived from aerial surveys and the species could not generally be distinguished from the air.
[b] It is not possible to calculate YTR for stocks with maximum population reductions of less than or equal to 5 percent.

Coastal and oceanic marine mammals were injured by exposure to oil from the DWH spill. Nearly all of the stocks that overlap with the oil spill footprint have demonstrable, quantifiable injuries, and the remaining stocks (for which there is no quantifiable injury) were also likely injured, though there is not currently enough information to make a determination. Injuries included elevated mortality rates, reduced reproduction, and disease. Due to these effects, affected populations may require decades to recover absent successful efforts at restoration (*e.g.,* DWH NRDA Trustees, 2017). The ability of the stocks to recover and the length of time required for that recovery are tied to the carrying capacity of the habitat, and to the degree of other population pressures. NMFS treats the effects of the DWH oil spill as part of the baseline in considering the likely resilience of these populations to the effects of the activities considered in this regulatory framework.

Unusual Mortality Events (UME)—A UME is defined under Section 410(6) of the MMPA as ''a stranding that is unexpected; involves a significant die-off of any marine mammal population; and demands immediate response.'' From 1991 to the present, there have been fourteen formally recognized UMEs affecting marine mammals in the region and involving species under NMFS' jurisdiction. These have primarily impacted coastal bottlenose dolphins, with multiple UMEs determined to have resulted from biotoxins and one from infectious disease. One relevant UME was declared since publication of the notice of proposed rulemaking and is discussed below.

Most significantly, a UME affecting multiple cetacean species in the northern GOM occurred from 2010–2014. NMFS discussed this UME in the notice of proposed rulemaking (83 FR 29212; June 22, 2018). Please see that document for additional information regarding the 2010–2014 UME. Additional information on the UME is also available online at: *www.fisheries.noaa.gov/national/marine-life-distress/2010-2014-cetacean-unusual-mortality-event-northern-gulf-mexico.* In summary, the event included all cetaceans stranded during this time in Alabama, Mississippi, and Louisiana and all cetaceans other than bottlenose dolphins stranded in the Florida Panhandle (Franklin County through Escambia County), with a total of 1,141 cetaceans stranded or reported dead offshore. For reference, the same area experienced a normal average of 75 strandings per year from 2002–09 (Litz *et al.,* 2014). The majority of stranded animals were bottlenose dolphins, though at least ten additional species were reported as well. Since not all cetaceans that die wash ashore where they may be found, the number reported stranded is likely a fraction of the total number of cetaceans that died during the UME. There was also an increase in strandings of stillborn and newborn dolphins (Colegrove *et al.,* 2016). The UME investigation and the *Deepwater Horizon* Natural Resource Damage Assessment determined that the DWH oil spill (discussed above) is the most likely explanation of the persistent, elevated stranding numbers in the northern GOM after the 2010 spill. The evidence to date supports that exposure to hydrocarbons released during the DWH oil spill was the most likely explanation of adrenal and lung disease in dolphins, which has contributed to increased deaths of dolphins living within the oil spill footprint and increased fetal loss. The longest and

most prolonged stranding cluster was in Barataria Bay, Louisiana in 2010–11, followed by Mississippi and Alabama in 2011, consistent with timing and spatial distribution of oil, while the number of deaths was not elevated for areas that were not as heavily oiled. Subsequent health assessments of live dolphins from Barataria Bay and comparison to a reference population found significantly increased adrenal disease, lung disease, and poor health, while histological evaluations of samples from dead stranded animals from within and outside the UME area found that UME animals were more likely to have lung and adrenal lesions and to have primary bacterial pneumonia, which caused or contributed significantly to death (Schwacke *et al.,* 2014a, 2014b; Venn-Watson *et al.,* 2015b). The chronic adrenal gland and lung diseases identified in stranded UME dolphins are consistent with exposure to petroleum compounds (Venn-Watson *et al.,* 2015b). Colegrove *et al.* (2016) found that the increase in perinatal strandings resulted from late-term pregnancy failures and development of *in utero* infections likely caused by chronic illnesses in mothers who were exposed to oil.

While the number of dolphin mortalities in the area decreased after the peak from March 2010-July 2014, it does not indicate that the effects of the oil spill on these populations have ended. Researchers still saw evidence of chronic lung disease and adrenal impairment four years after the spill (in July 2014) and saw evidence of failed pregnancies in 2015 (Smith *et al.,* 2017). These follow-up studies found a yearly mortality rate for Barataria Bay dolphins of roughly 13 percent (as compared to annual mortality rates of 5 percent or less that have been previously reported for other dolphin populations) and found that only 20 percent of pregnant dolphins produced viable calves (compared with 83 percent in a reference population) (Lane *et al.,* 2015; McDonald *et al.,* 2017). In addition, compromised health may make dolphins more susceptible to additional environmental stressors.

Since the publication of the proposed rule, another UME involving bottlenose dolphins in the northern GOM was declared. Elevated bottlenose dolphin strandings occurred in Louisiana, Mississippi, Alabama, and the panhandle of Florida (Alabama border through Taylor County) from February 1, 2019, through November 30, 2019. A total of 337 confirmed strandings were documented, with a majority occurring from February through May. Excluding prior UMEs, the annual average for February through May in the affected area is 57 dolphins; at least 260 standings were documented during this period in 2019. The cause of the UME was determined to be environmentally driven by exposure to low salinity waters resulting from extreme freshwater discharge from watersheds that drain into the GOM, including rivers in Florida, Alabama, Mississippi and Louisiana. This unprecedented amount of freshwater discharge during the winter, spring, and summer months of 2019 resulted in a drop in salinity levels across the coastally associated waters in the region. Prolonged exposure to low salinity water has been documented to have harmful health impacts on bottlenose dolphins, ranging from skin lesions and serum electrolyte abnormalities to acute mortality. The location of the UME and the dolphin stocks affected, including the western and northern coastal stocks of bottlenose dolphin, are the same as those impacted by the 2010–2014 UME. For additional information, please visit *www.fisheries.noaa.gov/national/marine-life-distress/2019-bottlenose-dolphin-unusual-mortality-event-along-northern-gulf.*

Marine Mammal Hearing

Hearing is the most important sensory modality for marine mammals underwater, and exposure to anthropogenic sound can have deleterious effects. To appropriately assess the potential effects of exposure to sound, it is necessary to understand the frequency ranges that marine mammals are able to hear. Current data indicate that not all marine mammal species have equal hearing capabilities (*e.g.,* Richardson *et al.,* 1995; Wartzok and Ketten, 1999; Au and Hastings, 2008). To reflect this, Southall *et al.* (2007) recommended that marine mammals be divided into functional hearing groups based on directly measured or estimated hearing ranges on the basis of available behavioral response data, audiograms derived using auditory evoked potential techniques, anatomical modeling, and other data. Note that no direct measurements of hearing ability have been successfully completed for mysticetes (*i.e.,* low-frequency cetaceans). NMFS (2018) describes generalized hearing ranges for these marine mammal hearing groups. Generalized hearing ranges were chosen based on the approximately 65 dB threshold from the normalized composite audiograms, with the exception for lower limits for low-frequency cetaceans where the lower bound was deemed to be biologically implausible and the lower bound from Southall *et al.* (2007) retained. The functional groups and the associated frequencies are indicated below (note that these frequency ranges correspond to the range for the composite group, with the entire range not necessarily reflecting the capabilities of every species within that group):

- Low-frequency cetaceans (mysticetes): Generalized hearing is estimated to occur between approximately 7 Hz and 35 kHz;
- Mid-frequency cetaceans (larger toothed whales, beaked whales, and most delphinids): Generalized hearing is estimated to occur between approximately 150 Hz and 160 kHz;
- High-frequency cetaceans (porpoises, river dolphins, and members of the genera *Kogia* and *Cephalorhynchus;* including two members of the genus *Lagenorhynchus,* on the basis of recent echolocation data and genetic data): Generalized hearing is estimated to occur between approximately 275 Hz and 160 kHz.

For more detail concerning these groups and associated frequency ranges, please see NMFS (2018) for a review of available information. Twenty-one species of cetacean have the reasonable potential to co-occur with the proposed survey activities. Please refer to Table 4. Of the cetacean species that may be present, one is classified as a low-frequency cetacean (*i.e.,* the Bryde's whale), 18 are classified as mid-frequency cetaceans (*i.e.,* all delphinid and ziphiid species and the sperm whale), and two are classified as high-frequency cetaceans (*i.e., Kogia* spp.).

Potential Effects of the Specified Activities on Marine Mammals and Their Habitat

In NMFS' notice of proposed rulemaking (83 FR 29212; June 22, 2018), this section included a comprehensive summary and discussion of the ways that components of the specified activity may impact marine mammals and their habitat, including general background information on sound and specific discussion of potential effects to marine mammals from noise produced through use of airgun arrays. We incorporate by reference that information and do not repeat that discussion here, instead referring the reader to the notice of proposed rulemaking.

The Estimated Take section later in this document includes a quantitative analysis of the number of individuals that are expected to be taken by the specified activity. The Negligible Impact Analysis and Determinations section includes an analysis of how these

activities will impact marine mammals and considers the content of this section, the Estimated Take section, and the Mitigation section, to draw conclusions regarding the likely impacts of these activities on the reproductive success or survivorship of individuals and from that on the affected marine mammal populations.

Description of Active Acoustic Sound Sources

In the notice of proposed rulemaking, this section contained a brief technical background on sound, the characteristics of certain sound types, and on metrics used in the proposal inasmuch as the information is relevant to the specified activity and to a discussion of the potential effects of the specified activity on marine mammals found later in this document. Here, we summarize key information relating to terminology used in this notice.

Amplitude (or ''loudness'') of sound is typically described using the relative unit of the decibel (dB). A sound pressure level (SPL) in dB is described as the ratio between a measured pressure and a reference pressure (for underwater sound, this is 1 microPascal (μPa)). The source level (SL) represents the SPL referenced at a distance of 1 m from the source (referenced to 1 μPa), while the received level is the SPL at the listener's position (referenced to 1 μPa).

Root mean square (rms) is the quadratic mean sound pressure over the duration of an impulse. This measurement is often used in the context of discussing behavioral effects, in part because behavioral effects, which often result from auditory cues, may be better expressed through averaged units than by peak pressures. Sound exposure level (SEL; represented as dB re 1 $\mu Pa^2 - s$) represents the total energy contained within a pulse, and considers both intensity and duration of exposure. Peak sound pressure (also referred to as zero-to-peak sound pressure or 0–p) is the maximum instantaneous sound pressure measurable in the water at a specified distance from the source, and is represented in the same units as the rms sound pressure. Another common metric is peak-to-peak sound pressure (pk-pk), which is the algebraic difference between the peak positive and peak negative sound pressures. Peak-to-peak pressure is typically approximately 6 dB higher than peak pressure (Southall *et al.,* 2007).

As described in more detail in the notice of proposed rulemaking, airgun arrays are in a general sense considered to be omnidirectional sources of pulsed noise. Pulsed sound sources (as compared with non-pulsed sources) produce signals that are brief (typically considered to be less than one second), broadband, atonal transients (ANSI, 1986, 2005; Harris, 1998; NIOSH, 1998; ISO, 2003) and occur either as isolated events or repeated in some succession. Pulsed sounds are all characterized by a relatively rapid rise from ambient pressure to a maximal pressure value followed by a rapid decay period that may include a period of diminishing, oscillating maximal and minimal pressures, and generally have an increased capacity to induce physical injury as compared with sounds that lack these features. Airguns produce sound with energy in a frequency range from about 10–2,000 Hz, with most energy radiated at frequencies below 200 Hz. Although the amplitude of the acoustic wave emitted from the source is equal in all directions (*i.e.,* omnidirectional), airgun arrays do possess some directionality due to different phase delays between guns in different directions. Airgun arrays are typically tuned to maximize functionality for data acquisition purposes, meaning that sound transmitted in horizontal directions and at higher frequencies is minimized to the extent possible.

Acoustic sources used for high-resolution geophysical (HRG) surveys generally produce higher frequency signals with highly directional beam patterns. These sources are generally considered to be intermittent, with typically brief signal durations. Boomers, considered to be impulsive sources, generate a high-amplitude broadband (100 Hz-10 kHz) acoustic pulse with high downward directivity, though may be considered omnidirectional at frequencies below 1 kHz. Other typical HRG sources are considered non-impulsive. Sub-bottom profiler systems generally project a chirp pulse spanning an operator-selectable frequency band, usually between 1 to 20 kHz, with a single beam directed vertically down. Multibeam echosounders use an array of transducers that project a high-frequency, fan-shaped beam under the hull of a survey ship and perpendicular to the direction of motion. Side-scan sonars use two transducers to project high-frequency beams that are usually wide in the vertical plane (50°–70°) and very narrow in the horizontal plane (less than a few degrees). Other, similar impulsive or non-impulsive sources may be used in conducting shallow penetration or HRG surveys.

Acoustic Habitat

NMFS also included a detailed discussion and analysis of potential impacts to acoustic habitat. Acoustic habitat is the soundscape—which encompasses all of the sound present in a particular location and time, as a whole—when considered from the perspective of the animals experiencing it. Animals listen for sounds produced by conspecifics (communication during feeding, mating, and other social activities), other animals (finding prey or avoiding predators), and the physical environment (finding suitable habitats, navigating). Together, sounds made by animals and the geophysical environment (*e.g.,* produced by earthquakes, lightning, wind, rain, waves) make up the natural contributions to the total acoustics of a place. These acoustic conditions, termed acoustic habitat, are one attribute of an animal's total habitat.

That discussion summarized a report titled ''*Cumulative and Chronic Effects in the Gulf of Mexico: Estimating Reduction of Listening Area and Communication Space due to Seismic Activities*,'' (''Cumulative and Chronic Effects report'') as well as a subsequent addendum to the report presenting additional analysis relating to sperm whales. The initial report (originally presented as Appendix K in BOEM (2017)) as well as the addendum ((hereafter, ''the CCE report''), are available online at *www.fisheries.noaa.gov/action/incidental-take-authorization-oil-and-gas-industry-geophysical-survey-activity-gulf-mexico.* The CCE report presented a first-order cumulative and chronic effects assessment for noise produced by oil and gas exploration activities in the U.S. GOM.

The term ''listening area'' refers to the region of ocean over which sources of sound can be detected by an animal at the center of the space. Loss of communication space concerns the area over which a specific animal signal, used to communicate with conspecifics in biologically-important contexts (*e.g.,* foraging, mating), can be heard, in noisier relative to quieter conditions (Clark *et al.,* 2009). Lost listening area concerns the more generalized contraction of the range over which animals would be able to detect a variety of signals of biological importance, including eavesdropping on predators and prey (Barber *et al.,* 2009). Implications for acoustic masking (*i.e.,* when a sound interferes with or masks the ability of an animal to detect a signal of interest that is above the absolute hearing threshold; see notice of

proposed rulemaking at 29239 for explanation of masking) and reduced communication space resulting from noise produced by airgun surveys in the GOM are expected to be particularly heightened for animals that actively produce low-frequency sounds or whose hearing is attuned to lower frequencies (*i.e.,* Bryde's whales).

Acoustic modeling was conducted for ten locations (''receiver sites'') within the study area to examine aggregate noise produced over a full, generic year. The locations of the receiver sites were chosen to reflect areas of biological importance to cetaceans, areas of high densities of cetaceans, and areas of key biological diversity. The CCE report analyzed multiple scenarios, including a baseline scenario in which no geophysical surveys are conducted and noise consists of natural sounds and a minimum estimate of commercial vessel noise; a survey activity scenario in which projected activities were uniformly distributed throughout the study area, with the exception of coastal waters from February to May; and a closure scenario in which no activities are conducted in certain restriction areas, 25 percent of the activity that would have occurred in the restriction areas is redistributed into non-restriction areas of the same activity zone, and 75 percent of the activities that would have occurred in the restriction areas are not conducted at all. For additional methodological details, see discussion in the notice of proposed rulemaking or the CCE report.

Regarding sperm whales, the analysis shows that the survey activities do not significantly contribute to the soundscape in the frequency band relevant for their lower-frequency slow-clicks, and that there will be no significant change in communication space for sperm whales. Because other sperm whale calls are higher-frequency, they would not be expected to be affected. Please see the CCE report for further discussion of the findings for sperm whales. The remaining discussion that follows is in reference to the findings for Bryde's whales and to general findings for other hearing groups.

The methods used in the CCE report were meant to average the conditions generated by low-frequency dominant noise sources throughout a full year, during which animals of key management interest rely on habitats within the study area. Considered as a complement to assessments of the acute effects of the same types of noise sources in the same region (discussed below in the *Estimated Take* section), the CCE assessment estimates noise produced by the same sources over much larger spatial scales, and considers how the summation of noise from these sources relates to levels without the proposed activity (ambient). The lost listening area method calculates a fractional reduction in listening area due to the addition of anthropogenic noise to ambient noise. Results are presented as a percentage of the original listening area remaining due to the increase in noise levels relative to no activity and between activity scenarios. The communication space assessment provides relative losses of communication space (in both areas and percentages) between the activity scenarios.

At most sites, lost listening area was greater for deeper waters than for shallower waters, which is attributed to the downward-refracting sound speed profile near the surface, caused by the thermocline, which steers sound to deeper depths. Shallow water noise levels were reduced due to surface interactions that increase transmission loss, particularly for low frequencies. Listening area reductions were also generally most severe when weighted for low-frequency hearing cetaceans. Both low- and mid-frequency weighted losses were high in the Mississippi Canyon, while only low-frequency weighted values were high for the De Soto Canyon. Both of these sites are considered important to sperm whales as well as other deep-diving odontocetes. These modeling results suggest that accumulations of noise from survey activities below 5 kHz and often heightened at depth could be degrading the ability of animals that forage at great depths in the GOM to use acoustic cues to find prey as well as to maintain conspecific contact.

Comparison between results provided for the two metrics applied in the CCE report highlights important interpretive differences for evaluating the biological implications of background noise. The strength of the communication space approach is that it evaluates potential contractions in the availability of a signal of documented importance to a population of animals of key management interest in the region. In this case, losses of communication space for Bryde's whales were estimated to be higher in eastern and central GOM canyons and shelf break areas. In contrast, relative maintenance of listening area and communication space was seen within the Bryde's whale core habitat area in the eastern GOM (an area that has since been removed from consideration through this rule). In areas where larger amounts of survey activity were projected, significant loss of low-frequency listening area and communication space for Bryde's whale calls was estimated, though we emphasize that these are not areas where Bryde's whales are expected to occur.

The CCE report is described here in order to summarize information presented in the proposed rule regarding potential longer-term and wider-range noise effects from sources such as airguns. Please see the notice of proposed rulemaking, as well as the CCE report and addendum, for additional information.

Estimated Take

This section provides an estimate of the number and type of incidental takes that may be expected to occur under the specified activity (as it has been revised in scope), which informed NMFS' negligible impact determination. Realized incidental takes would be determined by the actual levels of activity at specific times and places that occur under any issued LOAs.

Except with respect to certain activities not pertinent here, section 3(18) of the MMPA defines ''harassment'' as: Any act of pursuit, torment, or annoyance which (i) has the potential to injure a marine mammal or marine mammal stock in the wild (Level A harassment); or (ii) has the potential to disturb a marine mammal or marine mammal stock in the wild by causing disruption of behavioral patterns, including, but not limited to, migration, breathing, nursing, breeding, feeding, or sheltering (Level B harassment). Harassment is the only type of take expected to result from these activities.

Anticipated takes would primarily be by Level B harassment, as use of the described acoustic sources, particularly airgun arrays, is likely to disrupt behavioral patterns of marine mammals. There is also some potential for auditory injury (Level A harassment) to result for low- and high-frequency species due to the size of the predicted auditory injury zones for those species. NMFS does not expect auditory injury to occur for mid-frequency species, as discussed in greater detail on the notice of proposed rulemaking (83 FR 29212; June 22, 2018) and in responses to public comments. The required mitigation and monitoring measures are expected to minimize the severity of such taking to the extent practicable. It is unlikely that lethal takes would occur even in the absence of the mitigation and monitoring measures, and no such takes are anticipated or will be authorized. Below we summarize how the take that may be authorized was estimated using acoustic thresholds, sound field modeling, and

marine mammal density data. Detailed discussion of all facets of the take estimation process was provided in the notice of proposed rulemaking (83 FR 29212; June 22, 2018), and nothing has changed since that time. Therefore, that full discussion is not repeated. Please see that notice, and associated companion documents available online, for additional detail.

Acoustic Thresholds

NMFS uses acoustic thresholds that identify the received level of underwater sound above which exposed marine mammals generally would be reasonably expected to exhibit disruption of behavioral patterns (Level B harassment) or to incur permanent threshold shift (PTS) of some degree (Level A harassment).

Level B Harassment—Although available data are consistent with the basic concept that louder sounds evoke more significant behavioral responses than softer sounds, defining precise sound levels that will potentially disrupt behavioral patterns is difficult because responses depend on the context in which the animal receives the sound, including an animal's behavioral mode when it hears sounds (*e.g.,* feeding, resting, or migrating), prior experience, and biological factors (*e.g.,* age and sex). Some species, such as beaked whales, are known to be more highly sensitive to certain anthropogenic sounds than other species. Other contextual factors, such as signal characteristics, distance from the source, duration of exposure, and signal to noise ratio, may also help determine response to a given received level of sound. Therefore, levels at which responses occur are not necessarily consistent and can be difficult to predict (Southall *et al.,* 2007; Ellison *et al.,* 2012; Bain and Williams, 2006). Typically, and especially in cases where PTS is predicted, NMFS anticipates that some number of individuals may incur temporary threshold shift (TTS) (considered Level B harassment). However, it is not necessary to separately quantify those takes, as it is unlikely that an individual marine mammal would be exposed at the levels and duration necessary to incur TTS without also being exposed to the levels associated with behavioral harassment and, therefore, NMFS expects any potential TTS takes to be captured by the estimated takes by behavioral harassment.

Based on the practical need to use a relatively simple threshold based on available information that is both predictable and measurable for most activities, NMFS has historically used a generalized acoustic threshold based on received level to estimate the onset of Level B harassment. These thresholds are 160 dB rms (intermittent sources, which include impulsive sources) and 120 dB rms (continuous sources). Airguns are impulsive sound sources and electromechanical sources used for HRG surveys are intermittent sources. Therefore, the 160 dB rms threshold has typically been used in evaluating effects from the sources planned for use in the specified activities. However, in the notice of proposed rulemaking, NMFS identified a more complex probabilistic risk function for use in evaluating the potential effects of the specified activity considered herein. That function, described in Wood *et al.* (2012), is better reflective of available scientific information (as discussed in detail in the notice of proposed rulemaking, as well as in comment responses provided earlier in this preamble). Such an approach takes the fundamental step of acknowledging the potential for Level B harassment at exposures to received levels below 160 dB rms (as well as the potential that animals exposed to received levels above 160 dB rms will not respond in ways constituting Level B harassment). The approach described by Wood *et al.* (2012) also accounts for differential hearing sensitivity by incorporating frequency-weighting functions. The analysis of Gomez *et al.* (2016) indicates that behavioral responses in cetaceans are best explained by the interaction between sound source type and functional hearing group. Southall *et al.* (2007) proposed auditory weighting functions for species groups based on known and assumed hearing ranges (Type I). Although newer filters are better designed to predict the onset of auditory injury (as discussed below and used for evaluation of potential Level A harassment), the broader Type I filters were retained for use in evaluating potential behavioral disturbance in conjunction with the Wood *et al.* (2012) probabilistic response function.

NMFS received public comments on this topic, including some criticizing the proposed use of the Wood *et al.* (2012) risk function. We responded to all comments received on this topic and, in addition to the more detailed discussion provided in the Estimated Take section of the notice of proposed rulemaking, we provide detailed discussion of these concerns in the responses to comments, provided earlier in this preamble. NMFS retains use of the Wood *et al.* (2012) approach as the basis for estimating take and considering the effects of the specified activity on marine mammal behavior. The Level B harassment criteria upon which the analysis presented herein is based are presented in Table 6.

TABLE 6—BEHAVIORAL EXPOSURE CRITERIA

Group	Probability of response to frequency-weighted rms SPL			
	120 (%)	140 (%)	160 (%)	180 (%)
Beaked whales	50	90	n/a	n/a
All other species	n/a	10	50	90

Level A Harassment—NMFS' *Technical Guidance for Assessing the Effects of Anthropogenic Sound on Marine Mammal Hearing* (NMFS, 2018) (2018 Revised Technical Guidance) identifies dual criteria to assess the potential for auditory injury (Level A harassment) to occur for different marine mammal groups (based on hearing sensitivity) as a result of exposure to noise. The 2018 Revised Technical Guidance identifies the received levels, or thresholds, above which individual marine mammals are predicted to experience changes in their hearing sensitivity for all underwater anthropogenic sound sources and reflects the best available science on the potential for noise to affect auditory sensitivity by:

- Dividing sound sources into two groups (*i.e.,* impulsive and non-impulsive) based on their potential to affect hearing sensitivity;
- Choosing metrics that best address the impacts of noise on hearing sensitivity, *i.e.,* peak sound pressure level (peak SPL) (reflects the physical properties of impulsive sound sources to affect hearing sensitivity) and

cumulative sound exposure level (cSEL) (accounts for not only level of exposure but also duration of exposure); and

• Dividing marine mammals into hearing groups and developing auditory weighting functions based on the science that indicates that not all marine mammals hear and use sound in the same manner.

The premise of the dual criteria approach is that, while there is no definitive answer to the question of which acoustic metric is most appropriate for assessing the potential for injury, both the received level and duration of received signals are important to an understanding of the potential for auditory injury. Therefore, peak SPL is used to define a pressure criterion above which auditory injury is predicted to occur, regardless of exposure duration (*i.e.,* any single exposure at or above this level is considered to cause auditory injury), and cSEL is used to account for the total energy received over the duration of sound exposure (*i.e.,* both received level and duration of exposure) (Southall *et al.,* 2007, 2019a; NMFS, 2018). As a general principle, whichever criterion is exceeded first (*i.e.,* results in the largest isopleth) would be used as the effective injury criterion (*i.e.,* the more precautionary of the criteria). Note that cSEL acoustic threshold levels incorporate marine mammal auditory weighting functions, while peak pressure thresholds do not (*i.e.,* flat or unweighted). Weighting functions for each hearing group (*e.g.,* low-, mid-, and high-frequency cetaceans) are described in NMFS (2018).

The 2018 Revised Technical Guidance recommends 24 hours as a maximum accumulation period relative to cSEL thresholds. These thresholds were developed by compiling and synthesizing the best available science, and are provided in Table 7 below. The references, analysis, and methodology used in the development of the thresholds are described in NMFS (2018), and more information is available online at: *www.fisheries.noaa.gov/national/marine-mammal-protection/marine-mammal-acoustic-technical-guidance.*

TABLE 7—EXPOSURE CRITERIA FOR AUDITORY INJURY

Hearing group	Peak pressure [1] (dB)	Cumulative sound exposure level [2]	
		Impulsive (dB)	Non-impulsive (dB)
Low-frequency cetaceans	219	183	199
Mid-frequency cetaceans	230	185	198
High-frequency cetaceans	202	155	173

[1] Referenced to 1 μPa; unweighted within generalized hearing range.
[2] Referenced to 1 μPa^2-s; weighted according to appropriate auditory weighting function. Airguns and the boomer are treated as impulsive sources; other HRG sources are treated as non-impulsive.

NMFS considers these updated thresholds and associated weighting functions to be the best available information for assessing whether exposure to specific activities is likely to result in changes in marine mammal hearing sensitivity.

Modeling Overview

Zeddies *et al.* (2015, 2017a) (*i.e.,* ''the modeling report'') provides estimates of the annual marine mammal acoustic exposure caused by sounds from geophysical survey activity in the GOM for ten years of notional activity levels. Here we provide a brief overview of key modeling elements, with more detail provided in the notice of proposed rulemaking (83 FR 29212; June 22, 2018). For full details of the modeling effort, the interested reader should see the report (available online at: *www.fisheries.noaa.gov/action/incidental-take-authorization-oil-and-gas-industry-geophysical-survey-activity-gulf-mexico*).

Initial phases of the modeling effort involved preliminary modeling of a typical 3D WAZ survey, which was simulated at two locations in order to establish the basic methodological approach and to provide results used to evaluate test scenarios that could influence exposure estimates. We discussed each of the six evaluated test scenarios in the notice of proposed rulemaking. Please see that discussion and the modeling report for full details.

The modeling effort produced exposure estimates computed from modeled sound levels as received by simulated animals (animats) in a specific modeling area. The GOM was divided into seven modeling zones with six survey types simulated within each zone to estimate the potential effects of each survey. The zones were designed as described previously (Description of the Specified Activity; Figure 3)—shelf and slope waters were divided into eastern, central, and western zones, plus a single deep-water zone—to account for both the geospatial dependence of acoustic fields and the geographic variations of animal distributions. The selected boundaries considered sound propagation conditions and species distribution to create regions of optimized uniformity in both acoustic environment and animal density. Survey types included deep penetration surveys using a large airgun array (2D, 3D NAZ, 3D WAZ, and coil survey types), shallow penetration surveys using a single airgun (which were assumed to be a reasonable proxy for surveys conducted using a boomer), and high resolution surveys concurrently using a CHIRP sub-bottom profiler, side-scan sonar, and multibeam echosounder. The results from each zone were summed to provide GOM-wide estimates of take for each marine mammal species for each survey type for each notional year. To get these annual aggregate exposure estimates, 24-hr average exposure estimates from each survey type were multiplied by the number of expected survey days from BOEM's effort projections. Because these projections are not season-specific, surveys were assumed to be equally likely to occur at any time of the year and at any location within a given zone.

Acoustic source emission levels and directivity of a single airgun and an airgun array were modeled using JASCO Applied Sciences' Airgun Array Source Model (AASM). AASM is capable of predicting airgun source levels at frequencies up to 25 kHz, and produces a set of notional signatures for each array element based on array layout; volume, tow depth, and firing pressure for each element; and interactions between different elements in the array. The signatures are summed to obtain the far-field source signature of the entire array in the horizontal plane, which is then filtered into one third-octave frequency bands to compute the source

levels of the array as a function of frequency band and azimuthal angle in the horizontal plane (at the source depth), after which it is considered to be an azimuth-dependent directional point source in the far field. Source levels for high-resolution sources were obtained from manufacturer's specifications for representative sources. Electromechanical sources were modeled on the basis of transducer beam theory, which is often used to estimate beam pattern of the source in the absence of field measurements, and which is described in detail in the modeling report.

Underwater sound propagation (*i.e.,* transmission loss) as a function of range from each source was modeled using JASCO's Marine Operations Noise Model (MONM) for multiple propagation radials centered at the source to yield 3D transmission loss fields in the surrounding area. The MONM computes received per-pulse SEL for directional sources at specified depths. MONM uses two separate models to estimate transmission loss. At frequencies less than 2 kHz, MONM computes acoustic propagation via a wide-angle parabolic equation (PE) solution to the acoustic wave equation (Collins, 1993), based on a version of the U.S. Naval Research Laboratory's Range-dependent Acoustic Model (RAM) modified to account for an elastic seabed (Zhang and Tindle, 1995). MONM–RAM incorporates bathymetry, underwater sound speed as a function of depth, and a geoacoustic profile based on seafloor composition, and accounts for source horizontal directivity. At frequencies greater than 2 kHz, MONM accounts for increased sound attenuation due to volume absorption at higher frequencies (Fisher and Simmons, 1977) with the widely-used BELLHOP Gaussian beam ray-trace propagation model (Porter and Liu, 1994). This component incorporates bathymetry and underwater sound speed as a function of depth with a simplified representation of the sea bottom, as sub-bottom layers have a negligible influence on the propagation of acoustic waves with frequencies above 1 kHz. MONM–BELLHOP accounts for horizontal directivity of the source and vertical variation of the source beam pattern. Both propagation models account for full exposure from a direct acoustic wave, as well as exposure from acoustic wave reflections and refractions (*i.e.,* multi-path arrivals at the receiver).

In order to accurately estimate exposure, a simulation must adequately cover the various location- and season-specific environments. The surveys may be conducted at any location within the planning area and occur at any time of the year, so simulations must adequately cover each area and time period. The seven zones within which potential exposures were modeled, corresponding with shelf and slope environments subdivided into western, central, and eastern areas, as well as a single deep zone, were previously introduced (Figure 3). The subdivision depth definitions are: Shelf, 0–200 m; slope, 200–2,000 m; and deep, greater than 2,000 m. Within each of the seven zones, a set of representative survey-simulation rectangles for each of the survey types was defined, with larger areas for the ''large-area'' surveys (*i.e.,* deep penetration airgun) and smaller areas for the ''small-area'' surveys (*i.e.,* shallow penetration airgun and HRG). In Figure 3, the smaller numbered boxes represent the survey area extents for the different survey types. The stars represent acoustic modeling sites along western, central, and eastern transects (Figure 3).

A set of 30 sites was selected to calculate acoustic propagation loss grids as functions of source, range from the source, azimuth from the source, and receiver depth. These were then used as inputs to the acoustic exposure model. The environmental parameters and acoustic propagation conditions represented by these 30 modeling sites were chosen to be representative of the prevalent acoustic propagation conditions within the survey extents. To account for seasonal variation in propagation, winter (most conservative) and summer (least conservative) were both used to calculate exposure estimates. Propagation during spring and fall was found to be almost identical to the results for summer, so those seasons were represented with the summer results. The primary seasonal influence on transmission loss is the presence of a sound channel, or duct, near the surface in winter.

Marine Mammal Density Information

The best available scientific information was considered in conducting marine mammal exposure estimates (the basis for estimating take). Roberts *et al.* (2016) provided several key improvements over information previously available for the GOM, by incorporating NMFS aerial and shipboard survey data collected over the period 1992–2009; controlling for the influence of sea state, group size, availability bias, and perception bias on the probability of making a sighting; and modeling density from an expanded set of eight physiographic and 16 dynamic oceanographic and biological covariates. There are multiple reasons why marine mammals may be undetected by observers. Animals are missed because they are underwater (availability bias) or because they are available to be seen, but are missed by observers (perception and detection biases) (*e.g.,* Marsh and Sinclair, 1989). Negative bias on perception or detection of an available animal may result from environmental conditions, limitations inherent to the observation platform, or observer ability. Therefore, failure to correct for these biases may lead to underestimates of cetacean abundance (as is the case for NMFS' SAR abundance estimates for the GOM). Additional data was used to improve detection functions for taxa that were rarely sighted in specific survey platform configurations. The degree of underestimation would likely be particularly high for species that exhibit long dive times or are cryptic, such as sperm whales, beaked whales, or *Kogia* spp. In summary, consideration of additional survey data and an improved modeling strategy allowed for an increased number of taxa modeled and better spatiotemporal resolutions of the resulting predictions. More information concerning the Roberts *et al.* (2016) models, including the model results and supplementary information for each model, is available online at *seamap.env.duke.edu/models/Duke-EC-GOM-2015/.*

Description of Exposure Estimates

The sound received by an animal when near a sound source is a function of the animal's position relative to the source, and both source and animals may be moving. To a reasonable approximation, we know, predict, or specify the location of the sound source, a 3D sound field around the source, and the expected occurrence of animals within 100 km^2 grid cells (Roberts *et al.,* 2016). However, because the specific location of animals within the modeled sound field is unknown, agent-based animal movement modeling is necessary to complete the assessment of potential acoustic exposure. Realistic animal movement within the sound field can be simulated, and repeated random sampling (Monte Carlo)—achieved by simulating many animals within the operations area—used to estimate the sound exposure history of animals during the operation. Animats are randomly placed, or seeded, within the simulation boundary at a specified density, and the probability of an event's occurrence is determined by the frequency with which it occurs in the simulation. Higher densities provide a finer resolution for an estimate of the probability distribution function (PDF),

but require greater computational resources. To ensure good representation of the PDF, the animat density is set as high as is practical, with the resulting PDF then scaled using the real-world animal density (Roberts *et al.,* 2016) to obtain the real-world number of modeled acoustic exposures.

Several models for marine mammal movement have been developed (*e.g.,* Frankel *et al.,* 2002, Gisiner *et al.,* 2006; Donovan *et al.,* 2013). Animats transition from one state to another, with user-specified parameters representing simple states, such as the speed or heading of the animal, or complex states, such as likelihood of an animal foraging, playing, resting, or traveling. This analysis uses the Marine Mammal Movement and Behavior (3MB) model (Houser, 2006). Parameter values to control animat movement are typically determined using available species-specific behavioral studies, but the amount and quality of available data varies by species. While available data often provides a detailed description of the proximate behavior expected for real individual animals, species with more available information must be used as surrogates for those without sufficient available information. In this study, pantropical spotted dolphins are used as a surrogate for Clymene, spinner, and striped dolphins; short-finned pilot whales are surrogates for Fraser's dolphins, *Kogia* spp., and melon-headed whales; and rough-toothed dolphins are surrogates for false killer whales and pygmy killer whales. Observational data for all remaining species in the study were sufficient to determine animat movement.

Species-specific animats were created with programmed behavioral parameters describing dive depth, surfacing and dive durations, swimming speed, course change, and behavioral aversions (*e.g.,* water too shallow). The programmed animats were then randomly distributed over a given bounded simulation area. Because the exact positions of sound sources and animals are not known in advance for proposed activities, multiple runs of realistic predictions are used to provide statistical validity to the simulated scenarios. Each species-specific simulation was seeded with approximately 0.1 animats/km^2 which, in most cases, represents a higher density of animats in the simulation than occurs in the real environment. A separate simulation was created and run for each combination of location, survey movement pattern, and marine mammal species. Animats were only allowed to be 'taken' once during a 24-hour evaluation period. That is, an animat whose received level exceeds the peak SPL threshold more than once during an evaluation period was only counted once. Energy accumulation for SEL occurred throughout the 24-hour integration period and was reset at the beginning of each period. Similarly, the maximum received rms SPL was determined for the entirety of the evaluation period and reset at the beginning of each period.

The JASCO Exposure Modeling System (JEMS) combined animal movement data (*i.e.,* the output from 3MB), with pre-computed acoustic fields. The JEMS output was the time-history of received levels and slant ranges (the three-dimensional distance between the animat and the source) for all animats of the 3MB simulation. Animat received levels and slant ranges are used to determine the risk of acoustic exposure. There were many animats in the simulations and together their received levels represent the probability, or risk, of exposure for each survey.

All survey simulations were for 7 days and a sliding 4-hr window approach was used to get the average 24-hr exposure. In this sliding-window approach, 42 exposure estimate samples are obtained for each seven-day simulation, with the mean value then used as the 24-hr exposure estimate for that survey. The 24-hr exposure levels were then scaled by the projected level of effort for each survey type (*i.e.,* multiplied by the number of days) to calculate associated annual exposure levels. The number of individual animals expected to exceed threshold during the 24-hr window is the number of animats exposed to levels exceeding threshold multiplied by the ratio of real-world animal density to model animat density.

Injury—To evaluate the likelihood an animal might experience auditory injury as a result of accumulated sound energy, the cSEL for each animat in the simulation was calculated. To obtain that animat's cSEL, the SEL an animat received from each source over the 24-hr integration window was summed, and the number of animats whose cSEL exceeded the specified thresholds (Table 7) during the integration window was counted. To evaluate the likelihood an animal might be injured via exposure to peak SPL, the range at which the specific peak SPL threshold (Table 7) occurs for each source based on the broadband peak SPL source level was estimated. For each 24-hr integration window, the number of animats that came within this range of the source was counted.

Behavior—To evaluate the likelihood an animal might experience disruption of behavioral patterns (*i.e.,* a ''take''), the number of animats that received a maximum rms SPL exposure within the specified step ranges (Table 6) was calculated. The number of animats with a maximum rms SPL received level categorized into each bin of the step function was multiplied by the probability of the behavioral response specific to that range (Table 6). Specifically, 10 percent of animals exposed to received levels from 140–159 dB rms would be assumed as ''takes,'' while 50 percent exposed to levels between 160–179 dB rms and 90 percent exposed to levels of 180 dB rms and above would be. The totals within each bin were then summed as the total estimated number of exposures above Level B harassment thresholds. This process was repeated for each 24-hr integration window. For beaked whales, for which lower behavioral harassment thresholds are designated, 50 percent of animals exposed to received levels from 120–149 dB rms would be assumed as ''takes,'' while 90 percent exposed to levels of 140 dB rms and above would be.

Take Estimates

In summary, BOEM provided estimated levels of effort for geophysical survey activity in the GOM for a notional ten-year period. Exposure estimates were then computed from modeled sound levels received by animats for several representative types of geophysical surveying. Because animals and acoustic sources move relative to the environment and each other, and the sound fields generated by the sources are shaped by various physical parameters, the sound levels received by an animal are a complex function of location and time. The basic modeling approach was to use acoustic models to compute the 3D sound fields and their variations in time. Animats were modeled moving through these fields to sample the sound levels in a manner similar to how real animals would experience these sounds. From the time histories of the received sound levels of all animats, the numbers of animals exposed to levels exceeding effects threshold criteria were determined and then adjusted by the number of animals expected in the area, based on density information, to estimate the potential number of real-world marine mammal exposures to levels above the defined criteria. The acoustic exposure history of many simulated animals (animats) allows for the estimation of potential exposures due to operations. These modeled exposures are summed and represent the aggregate exposures that may result

from future surveys given the specified levels of effort for each survey type in each year and may vary according to the statistical distribution associated with these mean annual exposures.

Exposure estimates above Level A and Level B harassment criteria, developed by Zeddies *et al.* (2015, 2017a) in association with the activity projections for the various annual effort scenarios, were generated based on the specific modeling scenarios (including source and survey geometry), *i.e.,* 2D survey (1 × 8,000 in^3 array), 3D NAZ survey (2 × 8,000 in^3 array), 3D WAZ survey (4 × 8,000 in^3 array), coil survey (4 × 8,000 in^3 array), shallow penetration survey (either single 90 in^3 airgun or boomer), and HRG surveys (side-scan sonar, multibeam echosounder, and sub-bottom profiler). Annual effort scenario-based pooled exposure estimates are therefore available by species.

NMFS presented BOEM's original 10-year activity projections in Table 1 of the notice of proposed rulemaking under ''Detailed Description of Activities.'' For purposes of analysis in the notice of proposed rulemaking, NMFS identified representative ''high,'' ''moderate,'' and ''low'' effort years. Because the duration of these regulations are limited to five years, NMFS needed to determine a reasonable basis for evaluating acoustic exposures that might occur during that timeframe (rather than ten years). Therefore, for the proposed rule, in recognition of relatively low recent levels of geophysical survey activity, from the ten notional years of projected survey effort provided by BOEM, NMFS selected five representative years representing three different potential levels of survey effort as the basis for the assessment. These included one ''high-activity'' year, two separate ''moderate-activity'' years, and two separate ''low-activity'' years. Because the first 5 years of BOEM's original effort projections were relatively high-effort years, NMFS' level-of-effort selections for the proposed rule corresponded with the detailed per-survey type effort projections given for Years 1, 4, 5, 8, and 9, respectively. Exposure estimates resulting from the process summarized here and corresponding with those activity scenarios were shown in Table 8 of the notice of proposed rulemaking. These exposure estimates were then further evaluated to provide an estimate of takes of marine mammals that could occur as a result of a reasonably expected level of geophysical survey activity in the GOM over the course of five years. Take estimates associated with those scenarios, which informed the analysis in the proposed rule, are shown in Table 8 of this document for reference. These values have been updated from those shown in Table 8 of the notice of proposed rulemaking by correctly incorporating discounted estimates of Level A harassment into the estimates of Level B harassment (as pointed out by public commenters).

Level A Harassment

As we explain here, the modeled exposure estimates for onset of permanent threshold shift (*i.e.,* Level A harassment), are not expected to represent realistic results for any species. Overall, there is a low likelihood of take by Level A harassment for any species, though the degree of this low likelihood is primarily influenced by the specific hearing group. For mid- and high-frequency cetaceans, potential auditory injury would be expected to occur on the basis of instantaneous exposure to peak pressure output from an airgun array while, for low-frequency cetaceans, potential auditory injury would occur on the basis of the accumulation of energy output over time by an airgun array. Importantly, the modeled exposure estimates do not account for either aversion or the beneficial impacts of the required mitigation measures.

Of even greater import for mid-frequency cetaceans is that the small calculated Level A harassment zone size in conjunction with the properties of sound fields produced by arrays in the near field versus far field leads to a logical conclusion that Level A harassment is so unlikely for species in this hearing group as to be discountable. As stated in the notice of proposed rulemaking, for all mid-frequency cetaceans, following evaluation of the available scientific literature regarding the auditory sensitivity of mid-frequency cetaceans and the properties of airgun array sound fields, NMFS does not expect any reasonable potential for Level A harassment to occur. We discussed this issue in detail earlier in the response to public comments. NMFS expects the potential for Level A harassment of mid-frequency cetaceans to be discountable, even before the likely moderating effects of aversion are considered. When considering potential for aversion, NMFS does not believe that Level A harassment is a likely outcome for any mid-frequency cetacean (as reflected in Table 9).

As discussed in greater detail in the notice of proposed rulemaking, NMFS and BOEM considered the possibility of incorporating quantitative adjustments within the modeling process to account for the effects of mitigation and/or aversion, as both of these factors would lead to a reduction in likely injurious exposure. However, these factors were ultimately not quantified in the modeling because, in summary, there is too much inherent uncertainty regarding the effectiveness of detection-based mitigation to support any reasonable quantification of its effect in reducing injurious exposure and there is too little information regarding the likely level of onset and degree of aversion to quantify this behavior in the modeling process. This does not mean that mitigation is not effective (to some degree) in avoiding incidents of Level A harassment, nor does it mean that aversion is not a meaningful real-world effect of noise exposure that should be expected to reduce the number of incidents of Level A harassment. However, certain public commenters misconstrued statements in the notice of proposed rulemaking regarding the strictly modeling-related investigations of aversion (*i.e.,* that there is not sufficient quantitative data to inform decisions regarding the programming of animats as far as received levels of noise that provoke aversive response, and the degree of response, for relevant species) as meaning that there is not sufficient information to support that aversion happens at all. To the contrary, there is ample evidence in the literature that aversion is one of the most common responses to noise exposure across varied species, though the onset and degree may be expected to vary across individuals and in different contexts. Therefore, NMFS proposed to incorporate a reasonable adjustment to modeled Level A harassment exposure estimates to account for aversion for low- and high-frequency species. That adjustment is retained here, as discussed in greater detail in the responses to public comments. Specifically, NMFS assumes here that an eighty percent reduction in modeled exposure estimates for Level A harassment for low- and high-frequency cetaceans is reasonable and likely conservative in terms of the overall numbers of actual incidents of Level A harassment for these species, as the adjustment does not explicitly account for the effects of mitigation.

As discussed previously, BOEM provided an update to the scope of their proposed action through removal of the area subject to leasing moratorium under GOMESA from consideration in the rule. In support of this revision, BOEM provided revised 5-year level of effort predictions and associated acoustic exposure estimates. BOEM's process for developing this information,

described in detail in ''Revised Modeled Exposure Estimates,'' available online, was straightforward. Rather than using the PEIS's 10-year period, BOEM provided revised levels of effort for a 5-year period, using Years 1–5 of the original level of effort projections. BOEM stated that the first five years were selected to be carried forward ''because they were contiguous, they included the three years with the most activity, and they were the best understood in relation to the historical data upon which they are based.'' NMFS concurs with this choice. Levels of effort were revised based on the basic assumption that if portions of areas are removed from consideration, then the corresponding effort previously presumed to occur in those areas also is removed from consideration. The revised levels of effort are shown in Table 2. Associated revised take estimates, which were generated utilizing the methods described above and in the proposed rule and inform the analysis in this final rule, are shown in Table 9. These estimates have been modified from the values provided by BOEM (available online; ''Revised Modeled Exposure Estimates'') in that we have correctly accounted for the type of taking expected, *i.e.,* for mid-frequency cetaceans, Level A harassment is not expected to occur and the calculated takes have been shifted into the totals for Level B harassment. No incidents of Level A harassment for Bryde's whales were predicted under the revised effort scenarios, which exclude the area where most Bryde's whales would be expected to be found. For *Kogia* spp., estimates of Level A harassment were adjusted as discussed previously to account for likely aversion, and the portion of estimated Level A harassment events not expected to occur were shifted into the totals for Level B harassment for these species.

Estimated instances of take, *i.e.,* scenario-specific acoustic exposure estimates incorporating the adjustments to Level A harassment exposure estimates discussed here, are shown in Table 9. This information regarding total number of takes (with Level A harassment takes based on assumptions relating to mid-frequency cetaceans in general as well as aversion), on an annual basis for five years, provides the bounds within which incidental take authorizations may be issued in association with this regulatory framework.

Typically, and especially in cases where PTS is predicted, NMFS anticipates that some number of individuals may incur TTS. However, it is not necessary to separately quantify those takes, as it is unlikely that an individual marine mammal would be exposed at the levels and duration necessary to incur TTS without also being exposed to the levels associated with behavioral disruption and, therefore, NMFS expects any potential TTS takes to be captured by the estimated takes by behavioral disruption (discussed below).

TABLE 8—SCENARIO-SPECIFIC INSTANCES OF TAKE (BY LEVEL A AND LEVEL B HARASSMENT) AND MEAN ANNUAL TAKE LEVELS EVALUATED IN THE PROPOSED RULE [1]

Species	Survey effort scenario [2]											
	High		Moderate #1		Moderate #2		Low #1		Low #2		Mean annual take	
	A	B	A	B	A	B	A	B	A	B	A	B

[1] A and B refer to expected scenario-based instances of take by Level A and Level B harassment, respectively. For the Bryde's whale and *Kogia* spp., expected takes by Level A harassment represent modeled exposures adjusted to account for aversion. For *Kogia* spp., exposures above Level A harassment criteria were predicted by the peak SPL metric. For the Bryde's whale, exposures above Level A harassment criteria were predicted by the cSEL metric.

[2] High survey effort scenario corresponds with level of effort projections given previously for Year 1 (see Table 1 of the notice of proposed rulemaking). Moderate #1 and #2 and Low #1 and #2 correspond with Years 4, 5, 8, and 9, respectively.

TABLE 9—REVISED INSTANCES OF TAKE (BY LEVEL A AND LEVEL B HARASSMENT) (YEARS 1–5) AND MEAN ANNUAL TAKE LEVELS [1]

Species	Year 1		Year 2		Year 3		Year 4		Year 5		Mean annual take

[1] A and B refer to expected instances of take by Level A and Level B harassment, respectively, for Years 1–5. For *Kogia* spp., expected takes by Level A harassment represent modeled exposures adjusted to account for aversion. For the Bryde's whale, no takes by Level A harassment are predicted to occur. Therefore, no adjustment to modeled exposures to account for aversion was necessary. For *Kogia* spp., exposures above Level A harassment criteria were predicted by the peak SPL metric. For the Bryde's whale, the cSEL metric is used to evaluate the potential for Level A harassment.

Level B Harassment

NMFS has determined the estimated values shown in Table 9 are a reasonable representation of the potential instances of take that may occur (more specifically, each of these ''takes'' representing a day in which one individual is exposed above the Level B harassment criteria, even if only for seconds). However, these take numbers do not represent the number of individuals expected to be taken, given they are higher than the estimated abundance for all species. Accordingly, as described in the notice of proposed rulemaking, NMFS references Test Scenario 1 in the modeling report (''*Long-Duration Surveys and Scaling Methods*'') to inform two important parts of the analyses. Comparing the results of modeling simulations that more closely match longer survey durations (30 days) to the results of 24-hour take estimates scaled up to 30 days (as the instances of take in Table 9 were calculated) provides the comparative ratios of number of individuals taken/calculated (within a 30-day survey) and instances of take, in order to better understand the comparative distribution of exposures across individuals of different species. First, in NMFS' analyses in this rule, the ratio and its inverse are used to inform a better understanding of the nature in which individuals are taken across the multiple days of a longer duration survey given the different behaviors that are represented in the animat modeling, *i.e.,* looking at the ratio of (number of individuals taken in 30-day modeling scenario)/(number of instances of take when 1-day average multiplied by 30 days), if all else is equal within one survey, for the species with a smaller ratio (larger inverse), fewer individuals will be taken but each will be exposed above the threshold on a higher number of days (see Table 16). Second, this ratio may be appropriately be used in combination with the calculated instances of take to predict the number of individuals taken for surveys of similar duration (noting that for surveys of notably longer than 30-day duration, it will still likely result in some degree of overestimate of individuals), in order to support evaluation of take estimates in requests for Letters of Authorization, given the need to meet the ''small numbers of marine mammals'' standard, which is based on the number of individuals taken. A summary of this, which was included in the notice of proposed rulemaking along with a description of the other Test Scenarios and how they inform this analysis, is included below.

Although some survey operations may continue for months, survey simulations were conducted for seven days in order to derive mean 24-hr exposure averages, with these averages then used to scale according to the total number of survey days projected by BOEM. This approach was necessary due to the more computationally-intensive modeling required to model more realistic durations (*i.e.,* 30 days). As summarized above and discussed in detail in the notice of proposed rulemaking, a test scenario was used to evaluate methods for scaling results from shorter-duration simulations to longer duration operations. Results from test modeling conducted for a suite of six representative species over 30-day simulations of a hypothetical 3D WAZ survey were compared to the results of a shorter 5-day simulation, *i.e.,* the number of animats exposed to levels exceeding threshold for 24-hr time periods multiplied by the number of days in the simulations was compared to the number of animats exposed to levels exceeding threshold for the entire duration of the simulations. The results of the test scenario indicated that undesired systematic biases in the modeling procedure, if present, were small relative to the survey design and would not affect scaling up the results in time (*i.e.,* the shorter 7-day simulations ultimately used in the modeling would provide unbiased results). However, the results also indicated that scaling up the 24-hr average SPL exposure estimates to 30 days greatly overestimates the number of notional marine mammals (*i.e.,* animats) exposed to levels exceeding threshold when determined over the entire simulation (although the estimated instances of exposure are reasonably accurate). This occurs because animats were commonly exposed to levels exceeding these thresholds, and the relatively short reset period of 24 hours means that individual animats were, in effect, counted several times during the scale-up (*i.e.,* on multiple days) whereas they would only have been counted once when evaluating over the entire simulation. When a real-world survey extends over longer durations within the same region, it is most likely that the same individuals are repeatedly exposed to survey noise. However, the modeling assumption that populations of animals were reset for each 24-hr period is equivalent to an assumption that each survey day is a completely independent event, *i.e.,* that new individuals are impacted on each subsequent day.

In order to determine more realistic exposure probabilities for individuals across multiple days, modeled results were compared for a 30-day period versus the aggregation of 24-hr population reset intervals (the investigation described above) to determine a species-typical offset of modeled daily exposures. When conducting computationally-intensive modeling over the full assumed 30-day survey period (versus aggregating the smaller 24-hr periods for 30 days), results showed about 10–45 percent of the total number of takes calculated using a 24-hr reset of the population, with differences relating to species-typical movement and residency patterns. Given that many of the evaluated survey activities occur for 30-day or longer periods, particularly some of the larger surveys for which the majority of the modeled exposures occur, using such a scaling process is appropriate in order to evaluate the likely severity of the predicted exposures. This approach is also discussed in more detail in the EWG report (Southall *et al.,* 2017), available online at: *www.fisheries.noaa.gov/action/incidental-take-authorization-oil-and-gas-industry-geophysical-survey-activity-gulf-mexico.*

The test scenario modeled six representative GOM species/guilds: Bryde's whale, sperm whale, beaked whales, bottlenose dolphin, *Kogia* spp., and short-finned pilot whale. For purposes of this analysis, bottlenose dolphin was used as a proxy for other small dolphin species, and short-finned pilot whale was used as a proxy for other large delphinids. Tables 22–23 in the modeling report provide information regarding the number of modeled animals receiving exposure above criteria for average 24-hr sliding windows scaled to the full 30-day duration and percent change in comparison to the same number evaluated when modeling the full 30-day duration. This information was used to derive 30-day scalar ratios which, when applied to the total instances of take given in Table 9, captures repeated takes of individuals at a 30-day sampling level. Scalar ratios are as follows: Bryde's whale, 0.189; sperm whale, 0.423; beaked whales, 0.101; bottlenose dolphin, 0.287; *Kogia* spp., 0.321; and short-finned pilot whale, 0.295. Application of the re-scaling method reduced the overall magnitude of modeled takes for all species by slightly more than double to up to ten-fold (Table 10).

These adjusted take numbers (shown in Table 10) provide a more realistic basis upon which to evaluate severity of

the expected taking. Please see the Negligible Impact Analysis and Determinations section, later in this document, for additional detail. It is important to recognize that while these scaled numbers better reflect the number of individuals likely to be taken within a single 30-day survey than the number of instances in Table 9, they will still overestimate the number of individuals taken across the aggregated GOM activities, because they do not correct for (*i.e.,* further reduce take to account for) individuals exposed to multiple surveys or fully correct for individuals exposed to surveys significantly longer than 30 days.

As noted in the beginning of this section and in the Small Numbers section, using modeled instances of take (Table 9) and the method described here to scale those numbers (based on Test Scenario 1) allows one to more accurately predict the number of individuals that will be taken as a result of exposure to one survey and, therefore, these scaled predictions should be considered in requests for LOAs to assess whether a resulting LOA would meet the small numbers standard. However, for the purposes of ensuring that the take authorized pursuant to all issued LOAs is within the scope of the analysis conducted to support the negligible impact finding in this rule, authorized instances of take (which are the building blocks of the analysis) also must be assessed. Specifically, reflecting Table 9 and what has been analyzed, the total take authorized for any given species or stock over the course of the five years covered under these regulations should not exceed the sum of the five years of take indicated for the five scenarios in that table, and in any given year, the take of any species should not exceed the highest annual take listed for any of the five scenarios.

TABLE 10—EXPECTED TOTAL TAKE NUMBERS, SCALED [1]

Species	Year 1	Year 2	Year 3	Year 4	Year 5
Bryde's whale	2	2	2	1	1
Sperm whale	6,939	6,009	5,754	4,017	5,240
Kogia spp.	3,452	3,098	2,841	2,069	2,771
Beaked whale	19,348	16,392	15,991	11,253	14,436

False killer whale	4,769	4,044	4,013	2,851	3,619
Killer whale	18	17	15	12	15
Short-finned pilot whale	4,438	2,898	4,025	2,200	2,643

[1] Scalar ratios were applied to values in Table 9 as described in preceding text to derive scaled take numbers shown here.

Mitigation

''*Least Practicable Adverse Impact*'' *Standard*

Under section 101(a)(5)(A) of the MMPA, NMFS must set forth the permissible methods of taking pursuant to such activity, and other means of effecting the least practicable adverse impact on such species or stock and its habitat, paying particular attention to rookeries, mating grounds, and areas of similar significance, and on the availability of such species or stock for subsistence uses (hereinafter referred to as ''LPAI'' or ''least practicable adverse impact''). NMFS does not have a regulatory definition for least practicable adverse impact. However, NMFS' implementing regulations require applicants for incidental take authorizations to include information about the availability and feasibility (economic and technological) of equipment, methods, and manner of conducting such activity or other means of effecting the least practicable adverse impact upon the affected species or stocks and their habitat (50 CFR 216.104(a)(11)). We note that in some cases, certain mitigation may be necessary in order to make a ''negligible impact'' finding for an affected species or stock, which is a fundamental requirement of issuing an authorization—in these cases, consideration of practicability may be a lower priority for decision-making if impacts to marine mammal species or stocks would not be negligible in the measure's absence.

In *Conservation Council for Hawaii* v. *NMFS,* 97 F. Supp. 3d 1210, 1229 (D. Haw. 2015), the district court stated that NMFS ''appear[s] to think [it satisfies] the statutory 'least practicable adverse impact' requirement with a 'negligible impact' finding.'' Later, expressing similar concerns in a challenge to an incidental take rule for U.S. Navy Operation of Surveillance Towed Array Sensor System Low Frequency Active (SURTASS LFA) Sonar (77 FR 50290, August 20, 2012), the Ninth Circuit in *Natural Resources Defense Council (NRDC)* v. *Pritzker,* 828 F.3d 1125, 1134 (9th Cir. 2016), stated, ''[c]ompliance with the 'negligible impact' requirement does not mean there [is] compliance with the 'least practicable adverse impact' standard.'' NMFS is in full agreement that the ''negligible impact'' and ''least practicable adverse impact'' requirements are distinct, even though both statutory standards refer to species and stocks. With that in mind, we provide further explanation of NMFS' interpretation of least practicable adverse impact and explain what distinguishes it from the negligible impact standard. This discussion is consistent with, and expands upon, previous rules issued by NMFS, such as the Navy Gulf of Alaska rule (82 FR 19530; April 27, 2017); the Navy Atlantic Fleet Testing and Training rule (83 FR 57076; November 14, 2018); the Navy Hawaii-Southern California Training and Testing rule (83 FR 66846; December 27, 2018); and the SURTASS

LFA sonar rule (84 FR 40132; August 13, 2019).

Before NMFS can issue incidental take regulations under section 101(a)(5)(A) of the MMPA, it must make a finding that the total taking will have a ''negligible impact'' on the affected ''species or stocks'' of marine mammals. NMFS' and the U.S. Fish and Wildlife Service's implementing regulations for section 101(a)(5) both define ''negligible impact'' as an impact resulting from the specified activity that cannot be reasonably expected to, and is not reasonably likely to, adversely affect the species or stock through effects on annual rates of recruitment or survival (50 CFR 216.103 and 50 CFR 18.27(c)). Recruitment (*i.e.,* reproduction) and survival rates are used to determine population growth rates [12] and, therefore, are considered in evaluating population level impacts.

As NMFS stated in the preamble to the final rule for the incidental take implementing regulations, not every population-level impact violates the negligible impact requirement. The negligible impact standard does not require a finding that the anticipated take will have ''no effect'' on population numbers or growth rates: ''The statutory standard does not require that the same recovery rate be maintained, rather that no significant effect on annual rates of recruitment or survival occurs. [T]he key factor is the significance of the level of impact on rates of recruitment or survival.'' (54 FR 40338, 40341–42; September 29, 1989).

While some level of impact on population numbers or growth rates of a species or stock may occur and may still satisfy the negligible impact requirement—even without consideration of mitigation—the least practicable adverse impact provision separately requires NMFS to prescribe means of effecting the least practicable adverse impact on such species or stock and its habitat, paying particular attention to rookeries, mating grounds, and areas of similar significance, 50 CFR 216.102(b), which are typically identified as mitigation measures.[13]

The negligible impact and least practicable adverse impact standards in the MMPA both call for evaluation at the level of the ''species or stock.'' The MMPA does not define the term ''species.'' However, Webster's New Collegiate Dictionary (1981) defines ''species'' to include ''a group of intimately related and physically similar organisms that actually or potentially interbreed [. . .], that ordinarily comprise differentiated *populations* limited geographically [. . .] or ecologically [. . .]'' (emphasis added). See also Merriam-Webster Dictionary, which defines ''species'' to include ''related organisms or *populations* potentially capable of interbreeding.'' *www.merriam-webster.com/dictionary/species* (emphasis added). The MMPA defines ''stock'' as a group of marine mammals of the same species or smaller taxa in a common spatial arrangement that interbreed when mature (16 U.S.C. 1362(11)). The definition of ''population'' includes ''a group of interbreeding biotypes that represents the level of organization at which speciation begins.'' Webster's New Collegiate Dictionary (1981). See also *www.merriam-webster.com/dictionary/population,* which defines population as ''a group of interbreeding organisms that represents the level of organization at which speciation begins.'' The definition of ''population'' is strikingly similar to the MMPA's definition of ''stock,'' with both involving groups of individuals that belong to the same species and are located in a manner that allows for interbreeding. In fact, the term ''stock'' in the MMPA is interchangeable with the statutory term ''population stock.'' (16 U.S.C. 1362(11)). Both the negligible impact standard and the least practicable adverse impact standard call for evaluation at the level of the species or stock, and the terms ''species'' and ''stock'' both relate to populations. Therefore, it is appropriate to view both the negligible impact standard and the least practicable adverse impact standard as having a population-level focus.

This interpretation is consistent with Congress's statutory findings for enacting the MMPA, nearly all of which are most applicable at the species or stock (*i.e.,* population) level. See 16 U.S.C. 1361 (finding that it is species and population stocks that are or may be in danger of extinction or depletion; that it is species and population stocks that should not diminish beyond being significant functioning elements of their ecosystems; and that it is species and population stocks that should not be permitted to diminish below their optimum sustainable population level). Annual rates of recruitment (*i.e.,* reproduction) and survival are the key biological metrics used in the evaluation of population-level impacts, and accordingly these same metrics are also used in the evaluation of population-level impacts for the least practicable adverse impact standard.

Recognizing this common focus of the least practicable adverse impact and negligible impact provisions on the ''species or stock'' does not mean that NMFS conflates the two standards; despite some common statutory language, we recognize the two provisions are different and have different functions.

First, a negligible impact finding is required before NMFS can issue an incidental take authorization. Although it is acceptable to use mitigation measures to reach a negligible impact finding (see 50 CFR 216.104(c)), no amount of mitigation can enable NMFS to issue an incidental take authorization for an activity that would not meet the negligible impact standard.

Second, even where NMFS can reach a negligible impact finding—which we emphasize does allow for the possibility of some ''negligible'' population-level impact—the agency must still prescribe measures that will effect the least practicable amount of adverse impact upon the affected species or stock.

Section 101(a)(5)(A)(i)(II) requires NMFS to issue, in conjunction with its authorization, binding—and enforceable—restrictions (in the form of regulations) setting forth how the activity must be conducted, thus ensuring the activity has the ''least practicable adverse impact'' on the affected species or stocks and their habitat. In situations where mitigation is specifically needed to reach a negligible impact determination, section 101(a)(5)(A)(i)(II) also provides a mechanism for ensuring compliance with the ''negligible impact'' requirement.

Finally, as noted above, the least practicable adverse impact standard requires consideration of measures for marine mammal habitat, with particular attention to rookeries; mating grounds; and other areas of similar significance, and for subsistence impacts. By contrast, the negligible impact standard is concerned solely with conclusions about the impact of an activity on annual rates of recruitment and survival.[14]

In *NRDC* v. *Pritzker,* the Ninth Circuit stated, ''[t]he statute is properly read to mean that even if population levels are not threatened *significantly,* still the agency must adopt mitigation measures aimed at protecting *marine mammals* to

[12] A growth rate can be positive, negative, or flat.

[13] For purposes of this discussion, we omit reference to the language in the standard for least practicable adverse impact that says that NMFS also must mitigate for subsistence impacts, because subsistence impacts are not at issue in this action.

[14] Mitigation may also be appropriate to ensure separate compliance with the ''small numbers'' language and negligible impact standard in MMPA sections 101(a)(5)(A) and (D).

the greatest extent practicable in light of military readiness needs.'' *Pritzker,* 828 F.3d at 1134 (emphases added). This statement is consistent with our understanding stated above that even when the effects of an action satisfy the negligible impact standard (*i.e.,* in the court's words, ''population levels are not threatened significantly''), still the agency must prescribe mitigation under the least practicable adverse impact standard. However, as the statute indicates, the focus of both standards is ultimately the impact on the affected ''species or stock''; the standards are not solely focused on or directed at the impact on individual marine mammals.

NMFS has carefully considered the Ninth Circuit's opinion in *NRDC* v. *Pritzker* in its entirety. While the court's reference to ''marine mammals'' rather than ''marine mammal species or stocks'' in the italicized language above might be construed as a holding that the least practicable adverse impact standard applies at the individual ''marine mammal'' level, *i.e.,* that NMFS must require mitigation to minimize impacts to each individual marine mammal unless impracticable, we believe that such an interpretation reflects an incomplete appreciation of the court's decision. In NMFS' view, the decision as a whole turned on the court's determination that the agency had not given separate and independent meaning to the least practicable adverse impact standard apart from the negligible impact standard. NMFS further believes that the court's use of the term ''marine mammals'' was not addressing the question of whether the standard applies to individual animals as opposed to the species or stock as a whole. We recognize that while consideration of mitigation can play a role in a negligible impact determination, consideration of mitigation measures extends beyond that analysis. In evaluating what mitigation measures are appropriate, NMFS considers the potential impacts of the specified activity, the availability of measures to minimize those potential impacts, and the practicability of implementing those measures, as described below.

Implementation of Least Practicable Adverse Impact Standard

In light of the *NRDC* v. *Pritzker* decision, we discuss here how NMFS determines whether a measure or set of measures meets the ''least practicable adverse impact'' standard. Our separate analysis of whether the take anticipated to result from the specified activities meets the ''negligible impact'' standard appears in the Negligible Impact Analysis and Determinations section below.

NMFS' evaluation of potential mitigation measures includes consideration of two primary factors:

(1) The manner in which, and the degree to which, implementation of the potential measure(s) is expected to reduce adverse impacts to marine mammal species or stocks, their habitat, and their availability for subsistence uses (where relevant). This analysis considers such things as the nature of the potential adverse impact (such as likelihood, scope, and range), the likelihood that the measure will be effective if implemented, and the likelihood of successful implementation.

(2) The practicability of the measures for applicant implementation. Practicability of implementation may consider such things as cost, impact on activities, personnel safety, and practicality of implementation.

While the language of the least practicable adverse impact standard calls for minimizing impacts to affected species or stocks and their habitat, NMFS recognizes that the reduction of impacts to those species or stocks accrues through the application of mitigation measures that limit impacts to individual animals. Accordingly, NMFS' analysis focuses on measures that are designed to avoid or minimize impacts on individual marine mammals that are likely to increase the probability or severity of population-level effects.

While direct evidence of impacts to species or stocks from a specified activity is rarely available, and additional study is still needed to understand how specific disturbance events affect the fitness of individuals of certain species, there have been improvements in understanding the process by which disturbance effects are translated to the population. With recent scientific advancements (both marine mammal energetic research and the development of energetic frameworks), the relative likelihood or degree of impacts on species or stocks may often be inferred given a detailed understanding of the activity, the environment, and the affected species or stocks. This same information is used in the development of mitigation measures and helps us understand how mitigation measures contribute to lessening effects (or the risk thereof) to species or stocks. NMFS also acknowledges that there is always the potential that new information, or a new recommendation that had not previously been considered, becomes available and necessitates re-evaluation of mitigation measures (which may be addressed through adaptive management) to see if further reductions of population impacts are possible and practicable.

In the evaluation of specific measures, the details of the specified activity will necessarily inform each of the two primary factors discussed above (expected reduction of impacts and practicability) and are carefully considered to determine the types of mitigation that are appropriate under the least practicable adverse impact standard. Analysis of how a potential mitigation measure may reduce adverse impacts on a marine mammal stock or species and practicability of implementation are not issues that can be meaningfully evaluated through a yes/no lens. The manner in which, and the degree to which, implementation of a measure is expected to reduce impacts, as well as its practicability, can vary widely. For example, a time-area restriction could be of very high value for reducing the potential for, or severity of, population-level impacts (*e.g.,* avoiding disturbance of feeding females in an area of established biological importance) or it could be of lower value (*e.g.,* decreased disturbance in an area of high productivity but of less firmly established biological importance). Regarding practicability, a measure might involve restrictions in an area or time that impede the operator's ability to acquire necessary data (higher impact), or it could mean incremental delays that increase operational costs but still allow the activity to be conducted (lower impact). A responsible evaluation of ''least practicable adverse impact'' will consider the factors along these realistic scales. Expected effects of the activity and of the mitigation as well as status of the stock all weigh into these considerations. Accordingly, the greater the likelihood that a measure will contribute to reducing the probability or severity of adverse impacts to the species or stock or their habitat, the greater the weight that measure is given when considered in combination with practicability to determine the appropriateness of the mitigation measure, and vice versa. Consideration of these factors is discussed in greater detail below.

1. *Reduction of adverse impacts to marine mammal species or stocks and their habitat.*[15]

[15] NMFS recognizes the least practicable adverse impact standard requires consideration of measures that will address minimizing impacts on the availability of the species or stocks for subsistence uses where relevant. Because subsistence uses are not implicated for this action, we do not discuss them. However, a similar framework would apply

Continued

The emphasis given to a measure's ability to reduce the impacts on a species or stock considers the degree, likelihood, and context of the anticipated reduction of impacts to individuals (and how many individuals) as well as the status of the species or stock.

The ultimate impact on any individual from a disturbance event (which informs the likelihood of adverse species- or stock-level effects) is dependent on the circumstances and associated contextual factors, such as duration of exposure to stressors. Though any proposed mitigation needs to be evaluated in the context of the specific activity and the species or stocks affected, measures with the following types of effects have greater value in reducing the likelihood or severity of adverse species- or stock-level impacts: Avoiding or minimizing injury or mortality; limiting interruption of known feeding, breeding, mother/young, or resting behaviors; minimizing the abandonment of important habitat (temporally and spatially); minimizing the number of individuals subjected to these types of disruptions; and limiting degradation of habitat. Mitigating these types of effects is intended to reduce the likelihood that the activity will result in energetic or other types of impacts that are more likely to result in reduced reproductive success or survivorship. It is also important to consider the degree of impacts that are expected in the absence of mitigation in order to assess the added value of any potential measures. Finally, because the least practicable adverse impact standard gives NMFS discretion to weigh a variety of factors when determining appropriate mitigation measures and because the focus of the standard is on reducing impacts at the species or stock level, the least practicable adverse impact standard does not compel mitigation for every kind of take, or every individual taken, if that mitigation is unlikely to meaningfully contribute to the reduction of adverse impacts on the species or stock and its habitat, even when practicable for implementation by the applicant.

The status of the species or stock is also relevant in evaluating the appropriateness of potential mitigation measures in the context of least practicable adverse impact. The following are examples of factors that may (either alone, or in combination) result in greater emphasis on the importance of a mitigation measure in reducing impacts on a species or stock: the stock is known to be decreasing or status is unknown, but believed to be declining; the known annual mortality (from any source) is approaching or exceeding the PBR level; the affected species or stock is a small, resident population; or the stock is involved in a UME or has other known vulnerabilities, such as recovering from an oil spill.

Habitat mitigation, particularly as it relates to rookeries, mating grounds, and areas of similar significance, is also relevant to achieving the standard and can include measures such as reducing impacts of the activity on known prey utilized in the activity area or reducing impacts on physical habitat. As with species- or stock-related mitigation, the emphasis given to a measure's ability to reduce impacts on a species or stock's habitat considers the degree, likelihood, and context of the anticipated reduction of impacts to habitat. Because habitat value is informed by marine mammal presence and use, in some cases there may be overlap in measures for the species or stock and for use of habitat.

NMFS considers available information indicating the likelihood of any measure to accomplish its objective. If evidence shows that a measure has not typically been effective nor successful, then either that measure should be modified or the potential value of the measure to reduce effects should be lowered.

2. *Practicability.*

Factors considered may include those costs, impact on activities, personnel safety, and practicality of implementation.

In carrying out the MMPA's mandate for this action, NMFS applies the previously described context-specific balance between the manner in which and the degree to which measures are expected to reduce impacts to the affected species or stocks and their habitat and practicability for operators. The effects of concern (*i.e.,* those with the potential to adversely impact species or stocks and their habitat), addressed previously in the Potential Effects of the Specified Activity on Marine Mammals and Their Habitat section of the notice of proposed rulemaking, include auditory injury, severe behavioral reactions, disruptions of critical behaviors, and to a lesser degree, masking and impacts on acoustic habitat (see discussion of this concept in the ''Anticipated Effects on Marine Mammal Habitat'' section in the notice of proposed rulemaking). Here, we focus on measures with proven or reasonably presumed ability to avoid or reduce the intensity of acute exposures that have potential to result in these anticipated effects with an understanding of the drawbacks or costs of these requirements, as well as time-area restrictions that would avoid or reduce both acute and chronic impacts. To the extent of the information available to NMFS, we considered practicability concerns, as well as potential undesired consequences of the measures, *e.g.,* extended periods using the acoustic source due to the need to reshoot lines. NMFS also recognizes that instantaneous protocols, such as shutdown requirements, are not capable of avoiding all acute effects, and are not suitable for avoiding many cumulative or chronic effects and do not provide targeted protection in areas of greatest importance for marine mammals. Therefore, in addition to a basic suite of seismic mitigation protocols, we also consider measures that may or may not be appropriate for other activities (*e.g.,* time-area restrictions specific to the surveys discussed herein), but that are warranted here given the spatial scope of these specified activities, potential for population-level effects and/or high magnitude of take for certain species in the absence of such mitigation (see Negligible Impact Analysis and Determinations), and the information we have regarding habitat for certain species.

In order to satisfy the MMPA's least practicable adverse impact standard, NMFS evaluated a suite of basic mitigation protocols that are required regardless of the status of a stock. Additional or enhanced protections are required for species whose stocks are in particularly poor health and/or are subject to some significant additional stressor that lessens that stock's ability to weather the effects of the specified activities without worsening its status. NMFS reviewed the mitigation measures proposed in the petition, the requirements specified in BOEM's PEIS, seismic mitigation protocols required or recommended elsewhere (*e.g.,* HESS, 1999; DOC, 2013; IBAMA, 2018; Kyhn *et al.,* 2011; JNCC, 2017; DEWHA, 2008; BOEM, 2016; DFO, 2008; GHFS, 2015; MMOA, 2016; Nowacek *et al.,* 2013; Nowacek and Southall, 2016), recommendations received during the public comment period, and the available scientific literature. NMFS also considered recommendations given in a number of review articles (*e.g.,* Weir and Dolman, 2007; Compton *et al.,* 2008; Parsons *et al.,* 2009; Wright and Cosentino, 2015; Stone, 2015b). Certain changes from the mitigation measures described in the notice of proposed

for evaluating those measures, taking into account both the MMPA's directive that we make a finding of no unmitigable adverse impact on the availability of the species or stocks for taking for subsistence, and the relevant implementing regulations.

rulemaking were made on the basis of additional information and following review of public comments. The required suite of mitigation measures differs in some cases from the measures proposed in the petition and/or those specified by BOEM in the preferred alternative identified in their PEIS in order to reflect what NMFS believes to be the most appropriate suite of measures to satisfy the requirements of the MMPA. Additionally, two geographic mitigation measures discussed in the proposed rule are no longer applicable because of the change in the scope of the rule.

For purposes of defining mitigation requirements, we differentiate here between requirements for two classes of airgun survey activity: Deep penetration and shallow penetration, with surveys using arrays greater than 1,500 in^3 total airgun volume considered deep penetration. This delineation is discussed further below, under ''Changes from the Proposed Regulations.'' Shallow penetration surveys also include those using single airguns, boomers, or equivalent sources. A third general class of surveys is also considered, referred to here as high-resolution geophysical (HRG) surveys and including those surveys using the other electromechanical sources described previously. HRG surveys are treated differentially on the basis of water depth, with 200 m as the divider between shallow and deep HRG. Water depth is used as an indicator for surveys (shallow) that should be expected to have less potential for impacts to marine mammals, because HRG sources used in shallow waters are typically higher-frequency, lower power, and/or having some significant directionality to the beam pattern. Finally, HRG surveys using only sources operating at frequencies greater than or equal to 180 kHz are exempt from the mitigation requirements described herein, with the exception of adherence to vessel strike avoidance protocols. (Note that this has been changed from 200 kHz to reflect the best available scientific information regarding generalized hearing ranges for affected marine mammal hearing groups (NMFS, 2018).) No distinction in standard required mitigations is made on the basis of BOEM's planning areas (*i.e.,* Western Planning Area (WPA), Central Planning Area (CPA), Eastern Planning Area (EPA)).

First, we summarize notable changes made to the mitigation requirements as a result of review of public comments and/or new information and then describe mitigation prescribed in the regulations. For additional detail regarding mitigation considerations, including expected efficacy and/or practicability, or descriptions of mitigation considered but not required, please see the notice of proposed rulemaking. Where the practicability analysis was described in the notice of proposed rulemaking and nothing has changed, we do not repeat the description.

Changes to Mitigation From the Proposed Regulations

Here we summarize substantive changes to mitigation requirements from the proposed regulations. All changes were made on the basis of review of public comments received and/or review of new information.

Delineation of Airgun Activity Tiers

In the notice of proposed rulemaking, for purposes of prescribing mitigation, NMFS proposed to define ''deep penetration'' surveys as those using arrays greater than 400 in^3 total volume. As stated in that notice, NMFS had little information upon which to base such a delineation for purposes of defining appropriate mitigation, but considered 400 in^3 as a reasonable cutoff based on descriptions of airgun surveys provided in BOEM's petition. We also noted that the Associations stated in their comments on the petition that deep penetration array volumes used in the GOM range from approximately 2,000 to 8,400 in^3. BOEM has subsequently provided information to NMFS supporting a cutoff at 1,500 in^3. In support of section 3(c) of E.O. 13795, BOEM analyzed available data for single airguns and airgun arrays, including arrays with known characteristics used by the National Science Foundation and U.S. Geological Survey and arrays evaluated through BOEM NEPA analyses. See *e.g.,* Richardson *et al.* (1995); NSF and USGS (2011). These data suggest that the output of an array, in terms of peak source level, increases at a greater rate at volumes above approximately 1,500 in^3. No public comments addressing this issue were received. Therefore, NMFS has elected to redefine the transition from ''shallow penetration'' to ''deep penetration'' from 400 to 1,500 in^3 total volume of the array.

Time-Area Restrictions

Bryde's Whale Core Habitat Area: The proposed regulatory text included a seasonal restriction within an area we termed Bryde's whale core habitat, and the preamble for the proposed rule presented several alternatives to the seasonal restriction for consideration by the public (83 FR 29281; 29302) including a year-round closure for this area, which was considered in the analysis for the preliminary determination of negligible impact. See 83 FR 29280–29281; 83 FR 29297.

However, the entirety of this area is now excluded from consideration through this rule following BOEM's update to the scope of activity (*i.e.,* removal of the GOMESA moratorium area from the geographic scope of the rulemaking). Therefore, consideration of a time-area restriction for the Bryde's whale core habitat area (including the alternatives described above) is moot, and no restriction is included in this final rule.

Dry Tortugas Area: As with the Bryde's whale core habitat area, the entirety of the Dry Tortugas area is now excluded from consideration through this rule following BOEM's update to the scope of activity (*i.e.,* removal of the GOMESA moratorium area from the geographic scope of the rulemaking). Therefore, consideration of a time-area restriction for the biologically important area for sperm whales and beaked whales in the EPA is moot, and no restriction is included in this final rule.

Coastal Restriction: NMFS proposed a GOM-wide restriction within coastal waters inside the 20-m isobath, to be in effect from February through May. For this final rule, NMFS contracted the proposed coastal time-area restriction spatially and expanded it temporally. The restriction has been reduced to cover the same coastal waters (20-m isobath) but between 90° W and the eastern extent of the coastal waters portion of BOEM's updated specified geographic region, while expanding temporally to include the month of January. NMFS received informative public comment on both sides of this issue. Some commenters provided information indicating practicability concerns regarding the proposed restriction, while other commenters supported the importance of the restriction and provided information supporting the temporal expansion of the restriction to include January. As described in the notice of proposed rulemaking, the stock most heavily impacted by the DWH oil spill (of those that may be affected by the specified activities) was the northern coastal stock of bottlenose dolphin. Since publication of the proposed regulations, an additional UME occurred in the area largely overlapping the range of this stock. Therefore, while NMFS appreciates the practicability concerns raised by commenters, we contracted the restriction spatially but did not eliminate the restriction, while expanding it temporally to encompass January through May. The change is

described in more detail under Comments and Responses as well as later in this section where the details of the specific closure area is discussed.

Restriction Area Buffer Zones: The proposed regulations included buffer zones specific to each time-area restriction that corresponded with modeled distances to the 160-dB isopleth (*i.e.,* the midpoint of the Level B harassment risk function). These distances were 6 km around the EPA Bryde's whale core habitat area (Area #2), 13 km around the coastal waters restriction (Area #1), and 9 km around the southern EPA area (Area #3). Following BOEM's update to the geographic scope of activity considered through this rule, Areas 2 and 3 are excluded from consideration. Therefore, consideration of buffer zone size around these areas is not relevant. Upon review of public comment, in which commenters raised concerns about practicability among others, and re-evaluation of the nature and extent of mitigation Area #1 as it relates to the necessity of an additional buffer area, NMFS determined it appropriate to not include a buffer for this area. The rationale for the change is described in more detail under Comments and Responses.

Shutdown Requirements

Delphinid Exception: NMFS does not require shutdown or power-down for certain delphinid species. In the notice of proposed rulemaking, we proposed an exception to the general shutdown requirements for certain species of dolphins in relation to airgun surveys, in which the acoustic source would be powered down to the smallest single element of the array. Power-down conditions would be maintained until the animal(s) is observed exiting the exclusion zone or for 15 minutes beyond the last observation of the animal, following which full-power operations may be resumed without ramp-up. NMFS also provided an alternative proposal for consideration by the public, in which no shutdown or power-down would be required upon observation of the same species of dolphins. While we are careful to note that the reasons for and potential effects of dolphin interaction with vessels, including working survey vessels, are not fully understood, we also understand that dolphins are unlikely to incur any degree of threshold shift due to their relative lack of sensitivity to the frequency content in an airgun signal (as well as because of potential coping mechanisms). NMFS also recognizes that, although dolphins do in fact react to airgun noise in ways that may be considered take (Barkaszi *et al.,* 2012; Barkaszi and Kelly, 2018), there is a lack of notable adverse dolphin reactions to airgun noise despite a large body of observational data. Therefore, the removal of the power-down measure for small delphinids, in favor of the no-shutdown or power-down alternative, is warranted in consideration of the available information regarding the effectiveness of such measures in mitigating impacts to small delphinids and the practicability of such measures. No shutdown or power-down is required for these species.

Distance of Extended Shutdowns: NMFS limits extended distance shutdowns to within 1,500 m. We proposed a number of shutdown requirements on the basis of detections of certain species deemed particularly sensitive (*e.g.,* beaked whales) or of particular circumstances deemed to warrant particular caution (*e.g.,* whales with calves). These were all conditioned upon observation or detection of these species or circumstances at any distance from the vessel. However, NMFS also included as an alternative proposal for public consideration a distance limit of 1,000 m for these extended distance shutdown requirements. We received several comments challenging the value of extended distance shutdown requirements at all and, while NMFS disagrees with these comments, we agree that some reasonable distance limit should be placed on these requirements in order to better focus the observational effort of protected species observers (PSO) and to avoid the potential for numerous shutdowns based on uncertain detections at great distance. Therefore, as described in greater detail later in this section, NMFS determined that a limit on such extended distance shutdown zones for relevant species or circumstances was appropriate. However, upon consideration of additional information (discussed later in this section), NMFS determined it appropriate to limit extended distance shutdown zones to 1,500 m, rather than 1,000 m.

Sperm Whale Shutdowns: The proposed regulatory text included an extended distance shutdown upon acoustic detection of sperm whales, and this final ITR explicitly expands that requirement to include any detection of sperm whales (*i.e.,* including visual detection) at extended distance (*i.e.,* within 1,500 m). As discussed in Comments and Responses, NMFS received some comments showing that there was a lack of clarity regarding the extended distance shutdowns for acoustic detections of sperm whales. NMFS also received comments indicating that the proposed division (*i.e.,* extended distance shutdown upon acoustic detection of sperm whales but not visual detection) did not make sense given the available information regarding both the status of the GOM sperm whale population and the potential impacts of airgun noise on sperm whale foraging activity. While this measure does not avoid such impacts—the observed impacts on foraging behavior were at even greater distances (Miller *et al.,* 2009)—it may be expected to practicably reduce the occurrence and severity of impacts on foraging behavior.

Shallow Penetration Surveys: NMFS has reduced the standard exclusion zone from 200 m to 100 m, and included an extended distance shutdown requirement that mirrors the requirements for deep penetration surveys but out to a distance of 500 m. The 200-m shutdown distance was proposed on the basis of BOEM's HRG survey protocol (Appendix B of BOEM, 2017). However, practicability concerns were raised by public commenters and 100-m shutdown zones have been effectively applied in the past to afford protection from potential Level A harassment and more severe behavioral responses from these types of activities. Therefore, rather than defer to BOEM's HRG survey protocol, NMFS re-evaluated the same information informing development of the proposed rule, as well as public comment, and determined that the 200-m shutdown distance is not warranted and we reduce the distance accordingly. Regarding the extended distance shutdown in special circumstances, NMFS proposed this mitigation concept in context of deep penetration surveys in the notice of proposed rulemaking. Airgun (and equivalent) surveys are considered to have similar effects on exposed marine mammals, and the sensitive species for which the extended distance shutdown measure was proposed are similarly susceptible to disturbance from shallow penetration surveys, if exposed. Therefore, NMFS expands the extended distance shutdown measure to shallow penetration surveys in addition to deep penetration surveys.

HRG Surveys: NMFS eliminates shutdown requirements for HRG surveys (defined here as surveys using electromechanical sources such as multi-beam echosounders, side-scan sonars, and chirp sub-bottom profilers). The proposed regulations required shutdown for marine mammals within the proposed exclusion zone for surveys operating in water depths greater than 200 m. As discussed above for shallow penetration surveys, this proposal was

modeled after BOEM's HRG survey protocol. However, NMFS re-evaluated the available information, as well as public comment, and has determined the requirement to not be warranted. These sources are typically higher-frequency and lower-power, and have highly directional beam patterns. Effects to marine mammals due to use of these sources, if any, are expected to be of very low severity and, therefore, the benefits of the proposed shutdown requirement would be minimal (especially given that animals observed at the surface are necessarily not ensonified by the downward-directed beams from the source at the time they are observed).

Monitoring

Nighttime Ramp-Up: NMFS eliminates the requirement for visual observation during nighttime ramp-up and pre-clearance. Public commenters indicated that this measure is not likely to be effective, and that there are safety concerns associated with PSOs working on deck at night. NMFS concurs with this assessment, as described in detail in Comments and Responses.

PSOs for Node Retrieval: The proposed requirement for third-party PSOs aboard node retrieval vessels is eliminated due to practicability concerns expressed through public comment. NMFS concurs with this assessment, as described in detail in Comments and Responses.

Below, mitigation requirements are described in detail.

Mitigation-Related Monitoring

Monitoring by dedicated, trained marine mammal observers is required in all water depths and, for certain surveys, observers must be independent. Additionally, for some surveys, NMFS requires that some PSOs [16] have prior experience in the role. Independent observers are employed by a third-party observer provider; vessel crew may not serve as PSOs when independent observers are required. Dedicated observers are those who have no tasks other than to conduct observational effort, record observational data, and communicate with and instruct the survey operator (*i.e.,* vessel captain and crew) with regard to the presence of marine mammals and mitigation requirements. Communication with the operator may include brief alerts regarding maritime hazards. Trained PSOs have successfully completed an approved PSO training course (see Monitoring and Reporting), and experienced PSOs have additionally gained a minimum of 90 days at-sea experience working as a PSO during a deep penetration seismic survey, with no more than 18 months having elapsed since the conclusion of the relevant at-sea experience. Training and experience is specific to either visual or acoustic PSO duties (where required). An experienced visual PSO must have completed approved, relevant training and must have gained the requisite experience working as a visual PSO. An experienced acoustic PSO must have completed a passive acoustic monitoring (PAM) operator training course and must have gained the requisite experience working as an acoustic PSO. Hereafter, we also refer to acoustic PSOs as PAM operators, whereas when we use ''PSO'' without a qualifier, the term refers to either visual PSOs or PAM operators (acoustic PSOs).

NMFS does not formally administer any PSO training program or endorse specific providers but will approve PSOs that have successfully completed courses that meet the curriculum and trainer requirements specified herein (see Monitoring and Reporting). NMFS will provide PSO approvals in the context of the need to ensure that PSOs have the necessary training to carry out their duties competently while also approving applicant staffing plans quickly. In order for PSOs to be approved, NMFS must review and approve PSO resumes indicating successful completion of an acceptable training course. Although PSOs must be approved by NMFS, third-party observer providers and/or companies seeking PSO staffing should expect that observers having satisfactorily completed acceptable training and with the requisite experience (if required) will be quickly approved and, if NMFS does not respond within one week of having received the required information, such PSOs shall be considered to have received de facto approval. A PSO may be trained and/or experienced as both a visual PSO and PAM operator and may perform either duty, pursuant to scheduling requirements. Where multiple PSOs are required and/or PAM operators are required, PSO watch schedules shall be devised in consideration of the following restrictions: (1) A maximum of two consecutive hours on watch followed by a break of at least one hour between watches for visual PSOs (periods typical of observation for research purposes and as used for airgun surveys in certain circumstances (Broker *et al.,* 2015)); (2) a maximum of four consecutive hours on watch followed by a break of at least two consecutive hours between watches for PAM operators; and (3) a maximum of 12 hours observation per 24-hour period. NMFS may grant an exception for the requirement that visual PSOs be limited to a maximum of two consecutive hours on watch followed by a break of at least one hour between watches if requested on the basis of practicability concerns by LOA applicants. If an exception is granted, visual PSOs would instead be limited to a maximum of four consecutive hours on watch followed by a break of at least two hours between watches. Further information regarding PSO requirements may be found in the Monitoring and Reporting section, later in this document.

Deep Penetration Surveys—During deep penetration survey [17] operations (*e.g.,* any day on which use of the acoustic source is planned to occur; whenever the acoustic source is in the water, whether activated or not), a minimum of two independent PSOs must be on duty and conducting visual observations at all times during daylight hours (*i.e.,* from 30 minutes prior to sunrise through 30 minutes following sunset). PSOs should use NOAA's solar calculator (*www.esrl.noaa.gov/gmd/grad/solcalc/*) to determine sunrise and sunset times at their specific location. NMFS recognizes that certain daytime conditions (*e.g.,* fog, heavy rain) may reduce or eliminate effectiveness of visual observations. However, on-duty PSOs shall remain alert for marine mammal observational cues and/or a change in conditions.

All source vessels must carry a minimum of one experienced visual PSO, who shall be designated as the lead PSO, coordinate duty schedules and roles,[18] and serve as the primary point of contact for the operator. However, while it is desirable for all PSOs to be qualified through experience, NMFS is also mindful of the need to expand the workforce by allowing opportunity for newly trained PSOs to gain experience. Therefore, the lead PSO shall devise the duty schedule such that experienced PSOs are on duty with trained PSOs (*i.e.,* those PSOs with appropriate training but who have not yet gained relevant experience) to the maximum extent practicable in order to provide necessary mentorship.

[16] Note that, although we discuss requirements related only to observation of marine mammals, we use the generic term ''protected species observer.''

[17] Deep penetration surveys are defined as those surveys using airgun arrays with total volume greater than 1,500 in^3.

[18] The coordination of PSO duty schedules and roles may alternatively be performed by a third-party, shore-based Monitoring Coordinator.

With regard to specific observational protocols, NMFS largely follows those described in Appendix B of BOEM's PEIS (BOEM, 2017). The lead PSO shall determine the most appropriate observation posts that will not interfere with navigation or operation of the vessel while affording an optimal, elevated view of the sea surface. These should be the highest elevation available on each vessel, with the maximum viewable range from the bow to 90 degrees to port or starboard of the vessel. PSOs shall coordinate to ensure 360° visual coverage around the vessel, and shall conduct visual observations using binoculars and the naked eye while free from distractions and in a consistent, systematic, and diligent manner. All source vessels must be equipped with pedestal-mounted ''bigeye'' binoculars that will be available for PSO use. Within these broad outlines, the lead PSO and PSO team will have discretion to determine the most appropriate vessel- and survey-specific system for implementing effective marine mammal observational effort. Any observations of marine mammals by crew members aboard any vessel associated with the survey, including receiver or chase vessels, should be relayed to the source vessel(s) and to the PSO team.

All source vessels must use a towed PAM system for potential detection of marine mammals at all times when operating the sound source in waters deeper than 100 m. The term ''towed PAM system'' refers to any combination of hardware and software that uses a towed array for operations. The array can be physically separate from other in-water hardware, or embedded into other equipment, such as seismic streamers. The system must be monitored at all times during use of the acoustic source, and acoustic monitoring must begin at least 30 minutes prior to ramp-up. PAM operators must be independent, and all source vessels shall carry a minimum of two experienced PAM operators. PAM operators shall communicate all detections to visual PSOs, when visual PSOs are on duty, including any determination by the PSO regarding species identification, distance and bearing, and the degree of confidence in the determination. Further detail regarding PAM system requirements may be found in the Monitoring and Reporting section, later in this document. The effectiveness of PAM depends to a certain extent on the equipment and methods used and competency of the PAM operator, but no formal standards are currently in place regarding PAM system hardware/software requirements, or regarding PAM operator training.

Visual monitoring must begin at least 30 minutes prior to ramp-up (described below) and must continue until one hour after use of the acoustic source ceases or until 30 minutes past sunset. If any marine mammal is observed at any distance from the vessel, a PSO would record the observation and monitor the animal's position (including latitude/longitude of the vessel and relative bearing and estimated distance to the animal) until the animal dives or moves out of visual range of the observer. A PSO would continue to observe the area to watch for the animal to resurface or for additional animals that may surface in the area. Visual PSOs shall communicate all observations to PAM operators, including any determination by the PSO regarding species identification, distance, and bearing and the degree of confidence in the determination.

As noted previously, all source vessels must carry a minimum of one experienced visual PSO and two experienced PAM operators. The observer designated as lead PSO (including the full team of visual PSOs and PAM operators) must have experience as a visual PSO. The applicant may determine how many additional PSOs are required to adequately fulfill the requirements specified here. To summarize, these requirements are: (1) 24-hour acoustic monitoring during use of the acoustic source in waters deeper than 100 m; (2) visual monitoring during use of the acoustic source by two PSOs during all daylight hours; (3) maximum of two consecutive hours on watch followed by a minimum of one hour off watch for visual PSOs and a maximum of four consecutive hours on watch followed by a minimum of two consecutive hours off watch for PAM operators; and (4) maximum of 12 hours of observational effort per 24-hour period for any PSO, regardless of duties.

Shallow Penetration Surveys—During shallow penetration surveys,[19] operators must follow the same requirements described above for deep penetration surveys, with one notable exception. The use of PAM is not required.

HRG Surveys—HRG survey protocols differ from the previously described protocols for deep and shallow penetration surveys, and we differentiate between deep-water (greater than 100 m) and shallow-water HRG surveys. Water depth in the GOM provides a reliable indicator of the marine mammal fauna that may be encountered and, therefore, the complexity of likely observations and concern related to potential effects on deep-diving and/or sensitive species.

Deep-water HRG surveys are required to employ a minimum of one independent visual PSO during all daylight operations, in the same manner as was described for deep and shallow penetration surveys. Shallow-water HRG surveys are required to employ a minimum of one visual PSO, which may be a crew member. PSOs employed during shallow-water HRG surveys are only required during a pre-clearance period. PAM is not required for any HRG survey.

PAM Malfunction—Emulating sensible protocols described by the New Zealand Department of Conservation for airgun surveys conducted in New Zealand waters (DOC, 2013), survey activity may continue for brief periods of time when the PAM system malfunctions or is damaged. Activity may continue for 30 minutes without PAM while the PAM operator diagnoses the issue. If the diagnosis indicates that the PAM system must be repaired to solve the problem, operations may continue for an additional two hours without acoustic monitoring under the following conditions:

- Daylight hours and sea state is less than or equal to Beaufort sea state (BSS) 4;
- No marine mammals (excluding delphinids; see below) detected solely by PAM in the exclusion zone (see below) in the previous two hours;
- NMFS is notified via email as soon as practicable with the time and location in which operations began without an active PAM system; and
- Operations with an active acoustic source, but without an operating PAM system, do not exceed a cumulative total of four hours in any 24-hour period.

Exclusion Zone and Buffer Zone

An exclusion zone is a defined area within which occurrence of a marine mammal triggers mitigation action intended to reduce the potential for certain outcomes such as auditory injury or more severe disruption of behavioral patterns. For deep penetration surveys, the PSOs shall establish and monitor a 500-m exclusion zone and additional 500-m buffer zone (total 1,000 m) during the pre-clearance period (see below) and a 500-m exclusion zone during the ramp-up and operational periods (see below for description of extended 1,500-m zone in

[19] Shallow penetration surveys are defined as those using airgun arrays with total volume less than or equal to 1,500 in^3, single airguns, boomers, or equivalent sources.

special circumstances). PSOs should generally focus their observational effort within a 1.5-km zone, to the extent possible, with animals observed at greater distances recorded and mitigation action taken as necessary (see below). For shallow penetration surveys, the PSOs shall establish and monitor a 100-m exclusion zone with additional 100-m buffer (total 200-m zone) during the pre-clearance period and a 100-m exclusion zone during the ramp-up (for small arrays only, versus single airguns) and operational periods (see below for description of extended 500-m zone in special circumstances). PSOs should generally focus their observational effort within a 500-m zone, to the extent possible, with animals observed at greater distances recorded and mitigation action taken as necessary (see below). These zones shall be based upon radial distance from any element of the airgun array (rather than being based on the center of the array or around the vessel itself). During use of the acoustic source, occurrence of marine mammals within the buffer zone (but outside the exclusion zone) should be communicated to the operator to prepare for the potential shutdown of the acoustic source. Use of the buffer zone in relation to ramp-up is discussed below under ''Ramp-up.'' Further detail regarding the exclusion zone and shutdown requirements is given under ''Exclusion Zone and Shutdown Requirements.''

Ramp-Up

Ramp-up of an acoustic source is intended to provide a gradual increase in sound levels, enabling animals to move away from the source if the signal is sufficiently aversive prior to its reaching full intensity. We infer on the basis of behavioral avoidance studies and observations that this measure results in some reduced potential for auditory injury and/or more severe behavioral reactions. Although this measure is not proven and some arguments have been made that use of ramp-up may not have the desired effect of aversion (which is itself a potentially negative impact but assumed to be better than the alternative), ramp-up remains a relatively low-cost, common-sense component of standard mitigation for surveys using airgun arrays. Ramp-up is most likely to be effective for more sensitive species (*e.g.,* beaked whales) with known behavioral responses at greater distances from an acoustic source (*e.g.,* Tyack *et al.,* 2011; DeRuiter *et al.,* 2013; Miller *et al.,* 2015). Ramp-up is required for all surveys using airgun arrays. While non-airgun acoustic sources are not typically amenable to ''ramping up'' the acoustic output in the way that multi-element airgun arrays are, power to these sources should be increased as feasible in order to effect a ramp-up.

The ramp-up procedure involves a step-wise increase in the number of airguns firing and total array volume until all operational airguns are activated and the full volume is achieved. Ramp-up is required at all times as part of the activation of the acoustic source (including source tests; see ''Miscellaneous Protocols'' for more detail) and may occur at times of poor visibility, assuming appropriate acoustic monitoring with no detections in the 30 minutes prior to beginning ramp-up. Acoustic source activation may only occur at night where operational planning cannot reasonably avoid such circumstances. For example, a nighttime initial ramp-up following port departure is reasonably avoidable and may not occur. Ramp-up must occur at night following acoustic source deactivation due to line turn or mechanical difficulty. The operator must notify a designated PSO of the planned start of ramp-up as agreed-upon with the lead PSO; the notification time should be at least 60 minutes prior to the planned ramp-up. A designated PSO must be notified again immediately prior to initiating ramp-up procedures and the operator must receive confirmation from the PSO to proceed.

Ramp-up procedures follow the recommendations of IAGC (2015). Ramp-up begins by activating a single airgun (*i.e.,* array element) of the smallest volume in the array. Ramp-up continues in stages by doubling the number of active elements at the commencement of each stage, with each stage of approximately the same duration. Total duration should not be less than approximately 20 minutes but maximum duration is not prescribed and will vary depending on the total number of stages. Von Benda-Beckmann *et al.* (2013), in a study of the effectiveness of ramp-up for sonar, found that extending the duration of ramp-up did not have a corresponding effect on mitigation benefit. There will generally be one stage in which doubling the number of elements is not possible because the total number is not even. This should be the last stage of the ramp-up sequence. The operator must provide information to the PSO documenting that appropriate procedures were followed. Ramp-ups should be scheduled so as to minimize the time spent with the source activated prior to reaching the designated run-in. This approach is intended to ensure a perceptible increase in sound output per increment while employing increments that produce similar degrees of increase at each step.

For deep penetration surveys, PSOs must monitor a 1,000-m zone (or to the distance visible if less than 1,000 m) for a minimum of 30 minutes prior to ramp-up (*i.e.,* pre-clearance). For shallow penetration surveys, PSOs must monitor a 200-m zone (or to the distance visible if less than 200 m) for a minimum of 30 minutes prior to ramp-up or start-up (for single airgun or non-airgun surveys). (Note that extended distance shutdowns, discussed below, may be required if certain species or circumstances are detected within greater distances: 1.5 km for deep penetration surveys and 500 m for shallow penetration surveys). The pre-clearance period may occur during any vessel activity (*i.e.,* transit, line turn). Ramp-up must be planned to occur during periods of good visibility when possible; operators may not target the period just after visual PSOs have gone off duty. Following deactivation of the source for reasons other than mitigation, the operator must communicate the near-term operational plan to the lead PSO with justification for any planned nighttime ramp-up. Any suspected patterns of abuse by the operator must be reported by the lead PSO to be investigated by NMFS. Ramp-up may not be initiated if any marine mammal is within the designated zone. If a marine mammal is observed within the zone during the pre-clearance period, ramp-up may not begin until the animal(s) has been observed exiting the zone or until an additional time period has elapsed with no further sightings (*i.e.,* 15 minutes for small delphinids and 30 minutes for all other species). PSOs will monitor the exclusion zone during ramp-up, and ramp-up must cease and the source shut down upon observation of marine mammals within or approaching the zone.

Exclusion Zone and Shutdown Requirements

Deep Penetration Surveys—The PSOs must establish a minimum exclusion zone with a 500-m radius as a perimeter around the outer extent of the airgun array (rather than being delineated around the center of the array or the vessel itself). If a marine mammal (other than the small delphinid species discussed below) appears within or enters this zone, the acoustic source must be shut down (*i.e.,* power to the acoustic source must be immediately turned off). If a marine mammal is detected acoustically, the acoustic source must be shut down, unless the PAM operator is confident that the

animal detected is outside the exclusion zone or that the detected species is not subject to the shutdown requirement (see below).

The 500-m radial distance of the standard exclusion zone is expected to contain sound levels exceeding peak pressure injury criteria for all hearing groups other than, potentially, high-frequency cetaceans, while also providing a consistent, reasonably observable zone within which PSOs would typically be able to conduct effective observational effort. Although significantly greater distances may be observed from an elevated platform under good conditions, NMFS believes that 500 m is likely regularly attainable for PSOs using the naked eye during typical conditions. In addition, an exclusion zone is expected to be helpful in avoiding more severe behavioral responses. Behavioral response to an acoustic stimulus is determined not only by received level but by context (*e.g.,* activity state) including, importantly, proximity to the source (*e.g.,* Southall *et al.,* 2007; Ellison *et al.,* 2012; DeRuiter *et al.,* 2013). In prescribing an exclusion zone, NMFS seeks not only to avoid most potential auditory injury but also to reduce the likely severity of the behavioral response at a given received level of sound.

As discussed in the notice of proposed rulemaking, use of monitoring and shutdown measures within defined exclusion zone distances is inherently an essentially instantaneous proposition—a rule or set of rules that requires mitigation action upon detection of an animal. This indicates that defining an exclusion zone on the basis of thresholds related to the accumulation of energy (*i.e.,* cumulative SEL), which require that an animal accumulate some level of sound energy exposure over some period of time (*e.g.,* 24 hours), has questionable relevance as a standard protocol for mobile sources, given the relative motion of the source and the animals. A PSO aboard a mobile source will typically have no ability to monitor an animal's position relative to the acoustic source over relevant time periods for purposes of understanding whether auditory injury is likely to occur on the basis of cumulative sound exposure and, therefore, whether action should be taken to avoid such potential.

Cumulative SEL (cSEL) thresholds are more relevant for purposes of modeling the potential for auditory injury than they are for dictating real-time mitigation, though they can be informative (especially in a relative sense). NMFS recognizes the importance of the accumulation of sound energy to an understanding of the potential for auditory injury and that it is likely that, at least for low-frequency cetaceans, some potential auditory injury may be impossible to fully avoid, depending on survey location in relation to the areas where these species occur, and should be considered for authorization.

Considering both the dual-metric thresholds described previously (and shown in Table 7) and hearing group-specific marine mammal auditory weighting functions in the context of airgun sources, auditory injury zones indicated by the peak pressure metric are expected to be predominant for both mid- and high-frequency cetaceans, while zones indicated by cSEL criteria are expected to be predominant for low-frequency cetaceans. Assuming a source level of 255.2 dB 0-pk SPL for the notional 8,000 in^3 array and spherical spreading propagation, distances for exceedance of group-specific peak injury thresholds are as follows: 65 m (LF), 18 m (MF), and 457 m (HF) (for high-frequency cetaceans, although the notional source parameters indicate a zone less than 500 m, we recognize that actual isopleth distances will vary based on specific array characteristics and site-specific propagation characteristics, and that it is therefore possible that a real-world distance to the injury threshold could exceed 500 m). Assuming a source level of 227.7 dB 0-pk SPL for the notional 90 in^3 single airgun and spherical spreading propagation, these distances would be 3 m (LF) and 19 m (HF) (the source level is lower than the threshold criterion value for mid-frequency cetaceans). These specific modeled source level values were discussed in the notice of proposed rulemaking, and additional information may be found in the modeling report.

Consideration of auditory injury zones based on cSEL criteria is dependent on the animal's generalized hearing range and how it overlaps with the frequencies produced by the sound source of interest in relation to marine mammal auditory weighting functions (NMFS, 2018). As noted above, zones based on the cSEL threshold are expected to be predominant for low-frequency cetaceans because their most susceptible hearing range overlaps the low frequencies produced by airguns, while the modeling indicates that zones based on peak pressure criteria dominate for mid- and high-frequency cetaceans. As described in detail in the notice of proposed rulemaking, NMFS obtained unweighted spectrum data (modeled in 1 Hz bands) for a reasonably equivalent acoustic source (*i.e.,* a 36-airgun array with total volume of 6,600 in^3) in order to evaluate notional zone sizes and to incorporate NMFS' Technical Guidance weighting functions over an airgun array's full acoustic band. Using NMFS' associated User Spreadsheet with hearing group-specific weighted source levels, and inputs assuming a 231.8 dB SEL source level for the notional 8,000 in^3 array, spherical spreading propagation, a source velocity of 4.5 kn, pulse duration of 100 ms, and a 25-m shot interval (shot intervals may vary, with longer shot intervals resulting in smaller calculated zones), distances for group-specific threshold criteria are as follows: 574 m (LF), 0 m (MF), and 1 m (HF). NMFS also assessed the potential for injury based on the accumulation of energy resulting from use of the single airgun and, assuming a source level of 207.8 dB SEL, there would be no realistic zone within which injury would occur.

Therefore, the 500-m exclusion zone contains the entirety of any potential injury zone for mid-frequency cetaceans (realistically, there is no such zone, as discussed above in Estimated Take and in Comments and Responses), while the zones within which injury could occur may be larger for high-frequency cetaceans (on the basis of peak pressure and depending on the specific array) and for low-frequency cetaceans (on the basis of cumulative sound exposure).

In summary, NMFS' goal in prescribing a standard exclusion zone distance is to (1) encompass zones for most species within which auditory injury could occur on the basis of instantaneous exposure; (2) provide protection from the potential for more severe behavioral reactions (*e.g.,* panic, antipredator response) for marine mammals at relatively close range to the acoustic source; (3) enable more effective implementation of required mitigation by providing consistency and ease of implementation for PSOs, who need to monitor and implement the exclusion zone; and (4) define a distance within which detection probabilities are reasonably high for most species under typical conditions. NMFS' use of 500 m as the zone is not based directly on any quantitative understanding of the range at which auditory injury would be entirely precluded or any range specifically related to disruption of behavioral patterns. Rather, we believe it is a reasonable combination of factors. This zone has been proven as a feasible measure through past implementation by operators in the GOM. In summary, a practicable criterion such as this has the advantage of familiarity and simplicity while still providing in most

cases a zone larger than relevant auditory injury zones, given realistic movement of source and receiver. Increased shutdowns, without a firm idea of the outcome the measure seeks to avoid, simply displace survey activity in time and increase the total duration of acoustic influence as well as total sound energy in the water (due to additional ramp-up and overlap where data acquisition was interrupted). The shutdown requirement described here would be required for most marine mammals, with certain differences. Small delphinids are excepted from the shutdown requirement, as described in the following section. Certain species are subject to an extended distance shutdown zone, as described in the subsequent section entitled ''Other Shutdown Requirements.''

Dolphin Exception—The shutdown requirement described above is in place for all marine mammals, with the exception of small delphinids. As defined here, the small delphinid group is intended to encompass those members of the Family Delphinidae most likely to voluntarily approach the source vessel for purposes of interacting with the vessel and/or airgun array (*e.g.,* bow-riding). (Here we refer to ''large delphinids'' and ''small delphinids'' as shorthand for generally deep-diving versus surface-dwelling/bow-riding groups, respectively, as the important distinction is their dive behavior rather than their size.) This exception to the shutdown requirement applies solely to specific genera of dolphins—*Steno, Tursiops, Stenella,* and *Lagenodelphis* (see Table 4)—and applies under all circumstances, regardless of what the perception of the animal(s) behavior or intent may be. The proposed regulations included a requirement to conduct a power-down upon detection of these species within the exclusion zone. However, in the preamble to the proposed regulations, NMFS also included an alternative proposal for public review and comment in which no shutdown or power-down would be required. We requested comment on both proposals and other variations of those proposals, including NMFS' interpretation of the data and any other data that support the necessary findings regarding dolphins for no shutdown and no power-down or no shutdown but a power-down. Upon review of the public comments received, as well as the scientific information summarized below, NMFS has determined that the alternative proposal of no shutdown or power-down is appropriate, and satisfies the least practicable adverse impact requirement.

Variations of this measure that include exceptions based on animal behavior—*e.g.,* ''bow-riding'' dolphins, or only ''traveling'' dolphins, meaning that the intersection of the animal and exclusion zone may be due to the animal rather than the vessel—have been proposed by both NMFS and BOEM and have been criticized, in part due to the subjective on-the-spot decision-making this scheme would require of PSOs. If the mitigation requirements are not sufficiently clear and objective, the outcome may be differential implementation across surveys as informed by individual PSOs' experience, background, and/or training. The exception described here is based on several factors: The lack of evidence of or presumed potential for the types of effects to these species of small delphinid that our shutdown requirement for other species seeks to avoid, the uncertainty and subjectivity introduced by such a decision framework, and the practicability concern presented by the operational impacts. Despite a large volume of observational effort during airgun surveys, including in locations where dolphin shutdowns have not previously been required (*i.e.,* the U.S. GOM and United Kingdom (UK) waters), we are not aware of accounts of notable adverse dolphin reactions to airgun noise (Stone, 2015a; Barkaszi *et al.,* 2012; Barkaszi and Kelly, 2018) other than one isolated incident (Gray and Van Waerebeek, 2011). Dolphins have a relatively high threshold for the onset of auditory injury (*i.e.,* PTS) and more severe adverse behavioral responses seem less likely given the evidence of purposeful approach and/or maintenance of proximity to vessels with operating airguns.

The best available scientific evidence indicates that auditory injury as a result of airgun sources is extremely unlikely for mid-frequency cetaceans, primarily due to a relative lack of sensitivity and susceptibility to noise-induced hearing loss at the frequency range output by airguns (*i.e.,* most sound below 500 Hz) as shown by the mid-frequency cetacean auditory weighting function (NMFS, 2018). Criteria for TTS in mid-frequency cetaceans for impulsive sounds were derived by experimental measurement of TTS in beluga whales exposed to pulses from a seismic watergun. Dolphins exposed to the same stimuli in this study did not display TTS (Finneran *et al.,* 2002). Moreover, when the experimental watergun signal was weighted appropriately for mid-frequency cetaceans, less energy was filtered than would be the case for an airgun signal. More recently, Finneran *et al.* (2015) exposed bottlenose dolphins to repeated pulses from an airgun and measured no TTS.

NMFS cautions that, while dolphins are observed voluntarily approaching source vessels (*e.g.,* bow-riding or interacting with towed gear), the reasons for the behavior are unknown. In context of an active airgun array, the behavior cannot be assumed to be harmless. Although bow-riding comprises approximately 30 percent of behavioral observations in the GOM, there is a much lower incidence of the behavior when the acoustic source is active (Barkaszi *et al.,* 2012), and this finding was replicated by Stone (2015a) for surveys occurring in UK waters. Some studies have found evidence of aversive behavior by dolphins during firing of airguns. Barkaszi *et al.* (2012) found that the median closest distance of approach to the acoustic source was at significantly greater distances during times of full-power source operation when compared to silence, while Stone (2015a) and Stone and Tasker (2006) reported that behavioral responses, including avoidance and changes in swimming or surfacing behavior, were evident for dolphins during firing of large arrays. Goold and Fish (1998) described a ''general pattern of localized disturbance'' for dolphins in the vicinity of an airgun survey. However, while these general findings—typically, dolphins will display increased distance from the acoustic source, decreased prevalence of ''bow-riding'' activities, and increases in surface-active behaviors—are indicative of adverse or aversive responses that may rise to the level of ''take'' (as defined by the MMPA), they are not indicative of any response of a severity such that the need to avoid it outweighs the impact on practicability for the industry and operators.

Additionally, increased shutdowns resulting from such a measure would require source vessels to revisit the missed track line to reacquire data, resulting in an overall increase in the total sound energy input to the marine environment and an increase in the total duration over which the survey is active in a given area. Therefore, the removal of such measures for small delphinids is warranted in consideration of the available information regarding the effectiveness of such measures in mitigating impacts to small delphinids and the practicability of such measures.

Although other mid-frequency hearing specialists (*e.g.,* large delphinids) are considered no more likely to incur auditory injury than are small delphinids, they are more

typically deep divers, meaning that there is some increased potential for more severe effects from a behavioral reaction, as discussed in greater detail in Comments and Responses. Therefore, NMFS anticipates benefit from a shutdown requirement for large delphinids, in that it is likely to preclude more severe behavioral reactions for any such animals in close proximity to the source vessel as well as any potential for physiological effects.

At the same time, large delphinids are much less likely to approach vessels. Therefore, a shutdown requirement for large delphinids would not have similar impacts as a small delphinid shutdown in terms of either practicability for the applicant or corollary increase in sound energy output and time on the water.

Other Surveys—Shutdown protocols for shallow penetration surveys are similar to those described for deep penetration surveys, except that the exclusion zone is defined as a 100-m radial distance around the perimeter of the acoustic source. The dolphin exception described above for deep penetration surveys would apply. As described previously, no shutdowns would be required for HRG surveys.

Extended Shutdown Requirements for Special Circumstances—Shutdown of the acoustic source is also required in the event of certain other detections beyond the standard exclusion zones. In the proposed regulatory text, NMFS conditioned these shutdowns upon detection of the relevant species or circumstances at any distance. However, in the preamble to the proposed regulations, we also included an alternative proposal for public review and comment in which shutdown of the acoustic source would occur in the circumstances listed below, but only within 1 km of the source (for deep penetration surveys). We requested comment on both proposals and other variations of those proposals, including NMFS' interpretation of the data and any other data that support the necessary findings regarding initiating shutdown for certain circumstances at any distance or within 1 km. Following review of public comments and the relevant scientific information, NMFS determined that it is appropriate to limit such shutdown requirements. However, as discussed in the next paragraph, we also determined that the relevant scientific information better supports 1.5 km as a reasonable detection radius (versus 1 km). Placement of a distance limit on these requirements maintains the intent of the measures as originally proposed, *i.e.,* to provide for additional real-time protection by limiting the intensity and duration of acoustic exposures for certain species or in certain circumstances, while reducing the area over which PSOs must maintain observational effort. As for normal shutdowns within the standard exclusion zone, shutdowns at extended distance should be made on the basis of confirmed detections (visual or acoustic) within the zone.

For deep penetration surveys, NMFS determined an appropriate distance on the basis of available information regarding detection functions for relevant species, but notes that, while based on quantitative data, the distance is an approximate limit that is merely intended to encompass the region within which we would expect a relatively high degree of success in sighting certain species while also improving PSO efficacy by removing the potential that a PSO might interpret these requirements as demanding a focus on areas further from the vessel. The appropriate distance limit may vary for different regions, depending on the species to which it may apply. For each modeled taxon, Roberts *et al.* (2016) fitted detection functions that modeled the detectability of the taxon according to distance from the trackline and other covariates (*i.e.,* the probability of detecting an animal given its distance from the transect). These functions were based on nearly 1.1 million linear km of line-transect survey effort conducted from 1992–2014, with surveys arranged in aerial and shipboard hierarchies and further grouped according to similarity of observation protocol and platform. Where a taxon was sighted infrequently, a detection function was fit to pooled sightings of suitable proxy species. For example, for the Bryde's whale and shipboard binocular surveys (*i.e.,* the relevant combination of platform and protocol), a detection function was fit using pooled sightings of Bryde's whales and other mysticete species (Roberts *et al.,* 2015c). The resulting detection function shows a slightly more than 20 percent probability of detecting whales at 2 km, with a mean effective strip half-width (ESHW) (which provides a measure of how far animals are seen from the transect line; Buckland *et al.,* 2001) of 1,309 m (Roberts *et al.,* 2015c). Similarly, Barlow *et al.* (2011) reported mean ESHWs for various mysticete species ranging from approximately 1.5–2 km. The detection function used in modeling density for beaked whales provided mean ESHWs of 1,462 m and 2,258 m for two NOAA vessels on which visual surveys have historically been conducted (Roberts *et al.,* 2015b). Therefore, NMFS set the shutdown radius for special circumstances (described below) at 1.5 km for deep penetration surveys. The shutdown radius for special circumstances is set at 500 m for shallow penetration surveys.

Comments disagreeing with the proposal to require shutdowns upon certain detections at any distance also suggested that the measures did not have commensurate benefit for the relevant species. However, it must be noted that any such observations would still be within range of where behavioral disturbance of some form and degree would be likely to occur. While visual PSOs should focus observational effort within the vicinity of the acoustic source and vessel, this does not preclude them from periodic scanning of the remainder of the visible area or from noting observations at greater distances, and there is no reason to believe that such periodic scans by professional PSOs would hamper the ability to maintain observation of areas closer to the source and vessel. Circumstances justifying shutdown at extended distance (*e.g.,* within 1.5 km) include:

- *Upon detection of a Bryde's whale.* On the basis of the findings of NMFS' status review (Rosel *et al.,* 2016), NMFS has listed the GOM Bryde's whale as an endangered species pursuant to the ESA (April 15, 2019; 84 FR 15446). These whales form a small and resident population in the northeastern GOM, with a highly restricted geographic range and a very small population abundance (fewer than 100)—recently determined by a status review team to be ''at or below the near-extinction population level'' (Rosel *et al.,* 2016). The review team stated that, aside from the restricted distribution and small population, the whales face a significant suite of anthropogenic threats, one of which is noise produced by geophysical surveys. NMFS believes it appropriate to eliminate potential effects to individual Bryde's whales to the extent practicable. There may be rare sightings of vagrant baleen whales of other species in the GOM, and the PSO may order a shutdown when observed in the applicable exclusion zone.
- *Upon detection of a sperm whale.* NMFS provided an expanded discussion of the available evidence that supports this measure in the notice of proposed rulemaking. In summary, the sperm whale's primary means of locating prey is echolocation (Miller *et al.,* 2004), and multiple studies have shown that noise can disrupt feeding behavior and/or significantly reduce foraging success for sperm whales at relatively low levels of exposure (*e.g.,* Miller *et al.,* 2009, 2012; Isojunno *et al.,*

2016; Sivle *et al.,* 2012; Cure *et al.,* 2016). Effects on energy intake with no immediate compensation, as is suggested by disruption of foraging behavior without corollary movements to new locations, would be expected to result in bioenergetics consequences to individual whales. Farmer *et al.* (2018a) developed a stochastic life-stage structured bioenergetic model to evaluate the consequences of reduced foraging efficiency in sperm whales, finding that individual resilience to foraging disruptions is primarily a function of size (*i.e.,* reserve capacity) and daily energetic demands, and that the ultimate effects on reproductive success and individual fitness are largely dependent on the duration and frequency of disturbance. The bioenergetic simulations of Farmer *et al.* (2018a) show that frequent disruptions in foraging, as might be expected when large amounts of survey activity overlap with areas of importance for sperm whales, can have potentially severe fitness consequences. In addition, the GOM sperm whale population was heavily impacted by the DWH oil spill. Therefore, in consideration of the potential energetic impacts of survey activity on individual sperm whales and the environmental baseline for the GOM sperm whale population, NMFS determined that meaningful measures must be taken to minimize disruption of foraging behavior. As described earlier in this section, the proposed regulations limited this extended distance shutdown requirement to acoustic detections of sperm whales. However, while stating that NMFS preliminarily did not believe the addition of shutdowns for sperm whales based on visual detections at any distance were warranted, we also requested any information from the public that would be relevant to that determination. NMFS' review of the comments and information provided by the public indicates that expansion of this requirement to include all sperm whale detections, rather than only acoustic detections (as was proposed), is warranted. Please see Comments and Responses for further discussion.

• *Upon detection of a beaked whale or Kogia spp.* These species are behaviorally sensitive deep divers and it is possible that disturbance could provoke a severe behavioral response leading to fitness consequences (*e.g.,* Wursig *et al.,* 1998; Cox *et al.,* 2006). NMFS recognizes that there are generally low detection probabilities for beaked whales and *Kogia* spp., meaning that many animals of these species may go undetected. Barlow (1999) estimates such probabilities at 0.23 to 0.45 for Cuvier's and Mesoplodont beaked whales, respectively. However, Barlow and Gisiner (2006) predict a roughly 24–48 percent reduction in the probability of detecting beaked whales during seismic mitigation monitoring efforts as compared with typical research survey efforts, and Moore and Barlow (2013) noted a decrease in $g(0)$ for Cuvier's beaked whales from 0.23 at BSS 0 (calm) to 0.024 at BSS 5. Similar detection probabilities have been noted for *Kogia* spp., though they typically travel in smaller groups and are less vocal, thus making detection more difficult (Barlow and Forney, 2007). As discussed previously in this document (see the Estimated Take section), there are high levels of predicted exposures for beaked whales in particular. Because it is likely that only a small proportion of beaked whales and *Kogia* spp. potentially affected by the proposed surveys would actually be detected, it is important to avoid potential impacts when practicable. Additionally for *Kogia* spp.—the one species of high-frequency cetacean likely to be encountered—auditory injury zones relative to peak pressure thresholds are significantly greater than for other cetaceans—approximately 500 m from the acoustic source, depending on the specific real world array characteristics (NMFS, 2018).

Shutdown Implementation Protocols—Any PSO on duty has the authority to delay the start of survey operations or to call for shutdown of the acoustic source. When shutdown is called for by a PSO, the acoustic source must be immediately deactivated and any dispute resolved only following deactivation. The operator must establish and maintain clear lines of communication directly between PSOs on duty and crew controlling the acoustic source to ensure that shutdown commands are conveyed swiftly while allowing PSOs to maintain watch; hand-held UHF radios are recommended. When both visual PSOs and PAM operators are on duty, all detections must be immediately communicated to the remainder of the on-duty team for potential verification of visual observations by the PAM operator or of acoustic detections by visual PSOs and initiation of dialogue as necessary. When there is certainty regarding the need for mitigation action on the basis of either visual or acoustic detection alone, the relevant PSO(s) must call for such action immediately.

Upon implementation of shutdown, the source may be reactivated after the animal(s) has been observed exiting the exclusion zone or following a 30-minute clearance period with no further detection of the animal(s).

If the acoustic source is shut down for reasons other than mitigation (*e.g.,* mechanical difficulty) for brief periods (*i.e.,* less than 30 minutes), it may be activated again without ramp-up if PSOs have maintained constant observation (including acoustic observation, where required) and no visual detections of any marine mammal have occurred within the exclusion zone and no acoustic detections have occurred (when required). NMFS defines ''brief periods'' in keeping with other clearance watch periods and to avoid unnecessary complexity in protocols for PSOs. For any longer shutdown (*e.g.,* during line turns), pre-clearance watch and ramp-up are required. For any shutdown at night or in periods of poor visibility (*e.g.,* BSS 4 or greater), ramp-up is required but if the shutdown period was brief and constant observation maintained, pre-clearance watch is not required.

Miscellaneous Protocols

The acoustic source must be deactivated when not acquiring data or preparing to acquire data, except as necessary for testing. Unnecessary use of the acoustic source should be avoided. Firing of the acoustic source at any volume above the stated production volume would not be authorized. The operator must provide information to the lead PSO at regular intervals confirming the firing volume. Notified operational capacity (not including redundant backup airguns) must not be exceeded during the survey, except where unavoidable for source testing and calibration purposes. All occasions where activated source volume exceeds notified operational capacity must be noticed to the PSO(s) on duty and fully documented for reporting. The lead PSO must be granted access to relevant instrumentation documenting acoustic source power and/or operational volume.

Testing of the acoustic source involving all elements requires normal mitigation protocols (*e.g.,* ramp-up). Testing limited to individual source elements or strings does not require ramp-up but does require pre-clearance.

Restriction Areas

Discussion of various time-area restrictions was provided in the notice of proposed rulemaking. NMFS proposed two time-area restrictions located within the area covered by the current GOMESA moratorium. As discussed previously, BOEM subsequently updated the scope of the specified activity that was the subject of

the petition for the ITR, removing the area subject to the current GOMESA moratorium from consideration through this rule. Therefore, consideration of those two proposed restrictions (Areas 2–3 in Figure 4 below), and any alternatives, is no longer relevant. Figure 4 depicts the time-area restrictions, absent consideration of BOEM's removal of the GOMESA moratorium area. Areas 2 and 3 are entirely within that area, and the eastern extent of Area 1 is functionally reduced through the removal of the GOMESA moratorium area.

BILLING CODE 3510–22–P

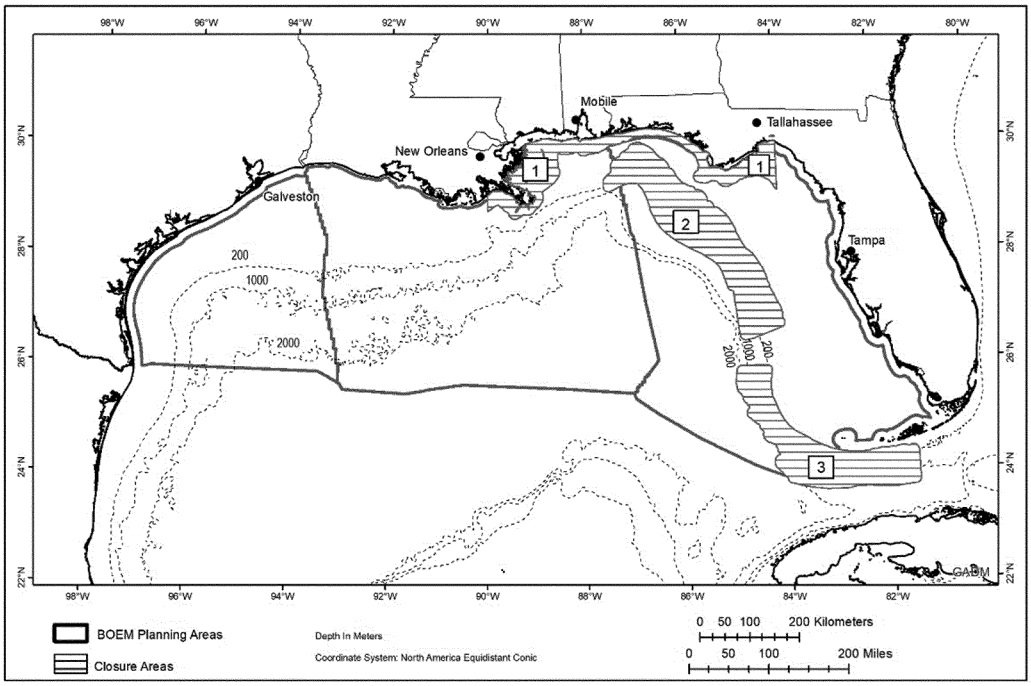

Figure 4. Time-area Restrictions as Originally Proposed. Areas 2 and 3 are not within the area covered by the final rule, which was updated and reduced.

BILLING CODE 3510–22–C

Coastal Restriction—No airgun surveys may occur from 90–84° W (as truncated through removal of the GOMESA moratorium area) and shoreward of a line indicated by the 20-m isobath, during the months of January through May (Area 1; Figure 4). Waters shoreward of the 20-m isobath, where coastal dolphin stocks occur, represent the areas of greatest abundance for bottlenose dolphins (Roberts *et al.,* 2016). As discussed above, and in greater detail in Comments and Responses, this requirement was modified from the proposed regulations by contracting the area spatially while expanding the restriction temporally by one month, in order to more practicably minimize potential impacts on the potentially affected stock most heavily impacted by the DWH oil spill (*i.e.,* the northern coastal stock of bottlenose dolphins).

The restriction is intended specifically to avoid additional stressors to the northern coastal stock of bottlenose dolphins during the time period believed to be of greatest importance as a reproductive period. As described previously, NOAA estimates that potentially 82 percent of northern coastal dolphins were exposed to DWH oil, resulting in an array of long-term health impacts (including reproductive failure) and possible population reductions of 50 percent for the stock (DWH MMIQT, 2015). The same analysis estimated that these population-level impacts could require 39 years to recovery, in the absence of other additional stressors. More recently, the stock has been subject to another declared UME; further discussion of this UME is provided under Description of Marine Mammals in the Area of the Specified Activity.

The January–May timeframe is intended to best encompass the most important reproductive period for bottlenose dolphins in these coastal waters, when additional stress is most likely to have serious impacts on pregnancy and/or survival of neonates. Expert interpretation of the long-term data for neonate strandings is that February–April are the primary months that animals are born in the northern GOM, and that fewer but similar numbers are born in January and May. This refers to long-term averages and in any particular year the peak reproductive period can shift earlier or later.

Bryde's Whale—The ''Bryde's whale core habitat area'' considered in the notice of proposed rulemaking was designated as between the 100- and 400-m isobaths, from 87.5° W to 27.5° N (Area 2; Figure 4). As summarized at the beginning of this section, and discussed in greater detail in Comments and Responses, the proposed regulatory text included a seasonal restriction within the same area. The preamble to the proposed regulations also included alternative proposals for public review and comment. This area is entirely

located in the GOMESA moratorium area, which is now removed from consideration through this rule.

As described previously, NOAA's status review team determined the status of the GOM Bryde's whale to be precarious (Rosel *et al.,* 2016). These findings formed, in part, the basis for the analysis presented in the preamble to the proposed regulations and subsequently supported NMFS' listing of the GOM Bryde's whale as an endangered species pursuant to the ESA (84 FR 15446; April 15, 2019). These whales form a small and resident population in the northeastern GOM, with a highly restricted geographic range and a very small population abundance—determined by the status review team to be ''at or below the near-extinction population level'' (Rosel *et al.,* 2016). Aside from the restricted distribution and small population, the whales face a significant suite of anthropogenic threats, one of which is noise produced by airgun surveys.

While various population abundance estimates are available (*e.g.,* Waring *et al.,* 2016; Roberts *et al.,* 2016; Dias and Garrison, 2016), the population abundance was almost certainly less than 100 prior to the DWH oil spill. NOAA estimated that, as a result of that event, 48 percent of the population may have been exposed to DWH oil, with 17 percent killed and 22 percent of females experiencing reproductive failure. The best estimate for maximum population reduction was 22 percent, with an estimated 69 years to recovery (to the precarious status prior to the DWH oil spill) (DWH MMIQT, 2015). It is considered likely that Bryde's whale habitat previously extended to shelf and slope areas of the western and central GOM similar to where they are found now in the eastern GOM, and that anthropogenic activity—largely energy exploration and production—concentrated in those areas could have resulted in habitat abandonment (Reeves *et al.,* 2011; Rosel and Wilcox, 2014). Further, the population exhibits very low levels of genetic diversity and significant genetic mitochondrial DNA divergence from other Bryde's whales worldwide (Rosel and Wilcox, 2014).

The small population size, restricted range, and low genetic diversity alone place these whales at significant risk of extinction (IWC, 2017), which has been exacerbated by the effects of the DWH oil spill. Additionally, Bryde's whale dive and foraging behavior places them at heightened risk of being struck by vessels and/or entangled in fishing gear (Soldevilla *et al.,* 2017). NMFS considered a restriction in this core habitat area to protect Bryde's whales because of their hearing sensitivity in the lower frequency range (which makes them generally more susceptible to incurring effects from airgun noise than other taxa in the GOM); the potential impacts to important behavioral functions such as feeding, breeding, and raising young; their dangerously low population size; and other issues discussed previously. The absence of survey activity in the area would be expected to protect Bryde's whales and their habitat through the alleviation or minimization of a range of airgun effects, both acute and chronic, that could otherwise accrue to impact the reproduction or survival of individuals in the core habitat area. The absence of survey activity in the area would not only largely avoid Level B harassment of Bryde's whales, but also very importantly minimize other acoustic effects such as masking and loss of communication space. Based on Roberts *et al.,* 2016, this core habitat area is expected to encompass approximately 92 percent of Bryde's whales in the Gulf of Mexico. The update of the scope of the rule eliminates this core area and the corresponding impacts of concern from consideration in the analysis.

Although this area is no longer relevant under the updated geographic scope of the specified activity and this rule, the discussion above is still important to provide a picture of the species' distribution in the GOM and NMFS' work to identify appropriate mitigation in this rulemaking. Because NMFS acknowledges that some whales may be present at locations other than within this core habitat area, we considered additional information in order to evaluate whether a different closure area may be warranted. For example, a NOAA survey reported observation of a Bryde's whale in the western GOM in 2017 (NMFS, 2018). There had not previously been a verified sighting of a Bryde's whale in the western GOM and, given the importance of this observation, additional survey effort was conducted in an attempt to increase effort in the area. However, no additional sightings were recorded. Overall, Bryde's whales observations have been consistently located within the eastern GOM core habitat area, with few whales sighted elsewhere despite a large amount of dedicated cetacean survey effort that covered both continental shelf and oceanic waters. Whales have been sighted in the core habitat area in all seasons, and all indications are that the whales inhabit this area year-round as a resident population. A tagged whale remained within the area for 38 days, the entire time the tag was active. Therefore, while it is possible that Bryde's whales occur outside the core habitat area, or that whales from the eastern GOM occasionally travel outside the area, the few existing observations outside the eastern GOM do not affect NMFS' determination that the area considered in the proposed rule represents core habitat, or identify any additional important habitat that may appropriately be subject to a restriction on survey activity.

Entanglement Avoidance

The use of ocean-bottom nodes (OBN) or similar equipment requiring the use of tethers or connecting lines poses an entanglement risk. In order to avoid incidents of entanglement, NMFS requires the same measures included for the same purpose in permits issued by BOEM. These measures apply to operators conducting OBN surveys (or surveys using similar equipment), and include: (1) Use negatively buoyant coated wire-core tether cable (*e.g.,* ¾'' polyurethane-coated cable with ½'' wire core); (2) retrieve all lines immediately following completion of the survey; and (3) attach acoustic pingers directly to the coated tether cable. Acoustic releases should not be used. No unnecessary release lines or lanyards may be used and nylon rope may not be used for any component of the system. Pingers must be attached directly to the nodal tether cable via shackle, with cables retrieved via grapnel. If a lanyard is required it must be as short as possible and made as stiff as possible, *e.g.,* by placing inside a hose sleeve. The notice of proposed rulemaking also included a proposed requirement to require operators to employ a third-party PSO aboard the node retrieval vessel in order to document any unexpected marine mammal entanglement. In consideration of the information provided by public commenters, NMFS has determined that this measure is unnecessary and eliminates it from the final ITR. Use of a third-party PSO in this capacity would not help to avoid entanglement events, and operators would be required to report any such events to BSEE. Therefore, the requirement provides little benefit while imposing costs on operators.

Vessel Strike Avoidance

These measures apply to all vessels associated with any survey activity (*e.g.,* source vessels, streamer vessels, chase vessels, supply vessels). However, NMFS notes that these requirements do not apply in any case where compliance would create an imminent and serious

threat to a person or vessel or to the extent that a vessel is restricted in its ability to maneuver and, because of the restriction, cannot comply. These measures include the following:

1. Vessel operators and crews must maintain a vigilant watch for all marine mammals and must slow down, stop their vessel, or alter course, as appropriate and regardless of vessel size, to avoid striking any marine mammal. A visual observer aboard the vessel must monitor a vessel strike avoidance zone around the vessel (distances stated below). Visual observers monitoring the vessel strike avoidance zone may be third-party observers (*i.e.,* PSOs) or crew members, but crew members responsible for these duties must be provided sufficient training to (1) distinguish protected species from other phenomena and (2) broadly to identify a marine mammal as a baleen whale, sperm whale, or other marine mammal;

2. Vessel speeds must be reduced to 10 kn or less when mother/calf pairs, pods, or large assemblages of any marine mammal are observed near a vessel;

3. All vessels must maintain a minimum separation distance of 500 m from baleen whales;

4. All vessels must maintain a minimum separation distance of 100 m from sperm whales;

5. All vessels must, to the maximum extent practicable, attempt to maintain a minimum separation distance of 50 m from all other marine mammals, with an understanding that at times this may not be possible (*e.g.,* for animals that approach the vessel); and

6. When marine mammals are sighted while a vessel is underway, the vessel shall take action as necessary to avoid violating the relevant separation distance (*e.g.,* attempt to remain parallel to the animal's course, avoid excessive speed or abrupt changes in direction until the animal has left the area). If marine mammals are sighted within the relevant separation distance, the vessel must reduce speed and shift the engine to neutral, not engaging the engines until animals are clear of the area. This does not apply to any vessel towing gear or any vessel that is navigationally constrained.

NMFS has carefully evaluated the suite of mitigation measures described here and considered a range of other measures in the context of ensuring that we prescribe the means of effecting the least practicable adverse impact on the affected marine mammal species and stocks and their habitat. Based on our evaluation of these measures, we have determined that the required mitigation measures provide the means of effecting the least practicable adverse impact on marine mammal species or stocks and their habitat, paying particular attention to rookeries, mating grounds, and areas of similar significance.

Monitoring and Reporting

In order to issue an LOA for an activity, Section 101(a)(5)(A) of the MMPA states that NMFS must set forth requirements pertaining to the monitoring and reporting of the authorized taking. NMFS' MMPA implementing regulations further describe the information that an applicant should provide when requesting an authorization (50 CFR 216.104(a)(13)), including the means of accomplishing the necessary monitoring and reporting that will result in increased knowledge of the species and the level of taking or impacts on populations of marine mammals. Effective reporting is critical both to compliance as well as ensuring that the most value is obtained from the required monitoring.

Section 101(a)(5)(A) allows that incidental taking may be authorized only if the total of such taking contemplated over the course of five years will have a negligible impact on affected species or stocks (a finding based on impacts to annual rates of recruitment and survival) and, further, section 101(a)(5)(B) requires that authorizations issued pursuant to 101(a)(5)(A) be withdrawn or suspended if the total taking is having, or may have, more than a negligible impact (or such information may inform decisions on requests for LOAs under the specific regulations). Therefore, the necessary requirements pertaining to monitoring and reporting must address the total annual impacts to marine mammal species or stocks. Effective reporting is critical both to compliance as well as ensuring that the most value is obtained from the required monitoring.

These requirements are described below under ''Data Collection'' and ''LOA Reporting.'' Additional comprehensive reporting, across LOA-holders on an annual basis, is also required and is described below under ''Comprehensive Reporting.''

More specifically, monitoring and reporting requirements prescribed by NMFS should contribute to improved understanding of one or more of the following:

- Occurrence of marine mammal species in action area (*e.g.,* presence, abundance, distribution, density);
- Nature, scope, or context of likely marine mammal exposure to potential stressors/impacts (individual or cumulative, acute or chronic), through better understanding of: (1) Action or environment (*e.g.,* source characterization, propagation, ambient noise); (2) affected species (*e.g.,* life history, dive patterns); (3) co-occurrence of marine mammal species with the action; or (4) biological or behavioral context of exposure (*e.g.,* age, calving or feeding areas);
- Individual marine mammal responses (behavioral or physiological) to acoustic stressors (acute, chronic, or cumulative), other stressors, or cumulative impacts from multiple stressors;
- How anticipated responses to stressors impact either: (1) Long-term fitness and survival of individual marine mammals; or (2) populations, species, or stocks;
- Effects on marine mammal habitat (*e.g.,* marine mammal prey species, acoustic habitat, or important physical components of marine mammal habitat); and
- Mitigation and monitoring effectiveness.

Changes To Monitoring and Reporting From the Notice of Proposed Rulemaking

Here we summarize substantive changes to monitoring and reporting requirements from the notice of proposed rulemaking. All changes were made on the basis of review of public comments received and/or review of new information.

- Although NMFS recognizes the importance of producing the most accurate estimates of actual take possible, we agree that the specific approach described in the proposed rule for correcting observations to produce estimates of actual takes is novel in that it has not been previously required of applicants conducting similar activities and, therefore, its appropriateness for application to observations conducted from working source vessels (versus research vessels) is unknown. As suggested through public comment, NMFS will continue to evaluate the best method for producing accurate estimates of actual take, based on marine mammal detections, through the adaptive management process, including consideration of the Marine Mammal Commission-recommended method included in the proposed regulations.
- NMFS has revised requirements relating to reporting of injured or dead marine mammals and has added newly crafted requirements relating to actions that should be taken in response to notification of live stranding events in

certain circumstances, in order to reflect current best practice.

PSO Eligibility and Qualifications

All PSO resumes must be submitted to NMFS and PSOs must be approved by NMFS after a review of their qualifications. These qualifications include whether the individual has successfully completed the necessary training (see ''Training,'' below) and, if relevant, whether the individual has the requisite experience (and is in good standing). PSOs should provide a current resume and information indicating successful completion of an acceptable PSO training course; submitted resumes should not include superfluous information. In order for a PSO training course to be deemed acceptable by NMFS (in consultation with BOEM/BSEE), the agencies must, at minimum, review a course information packet that includes the name and qualifications (*e.g.,* experience, training, or education) of the instructor(s), the course outline or syllabus, and course reference material. Absent a waiver (discussed below), PSOs must be trained biologists, with the following minimum qualifications:

- A bachelor's degree from an accredited college or university with a major in one of the natural sciences and a minimum of 30 semester hours or equivalent in the biological sciences and at least one undergraduate course in math or statistics; and
- Successful completion of relevant training (described below), including completion of all required coursework and passing (80 percent or greater) a written and/or oral examination developed for the training program.

In addition, it is recommended that PSOs meet the following requirements:

- Experience and ability to conduct field observations and collect data according to assigned protocols (may include academic experience) and experience with data entry on computers;
- Visual acuity in both eyes (vision correction is permissible) sufficient for discernment of moving targets at the water's surface with ability to estimate target size and distance; use of binoculars may be necessary to correctly identify the target (required for visual PSOs only);
- Experience or training in the field identification of marine mammals, including the identification of behaviors (required for visual PSOs only);
- Sufficient training, orientation, or experience with the survey operation to ensure personal safety during observations;
- Writing skills sufficient to prepare a report of observations (*e.g.,* description, summary, interpretation, analysis) including but not limited to the number and species of marine mammals observed; marine mammal behavior; and descriptions of activity conducted and implementation of mitigation; and
- Ability to communicate orally, by radio or in person, with survey personnel to provide real-time information on marine mammals detected in the area as necessary.

The educational requirements may be waived if the PSO has acquired the relevant skills through alternate experience. Requests for such a waiver must include written justification, and prospective PSOs granted waivers must satisfy training requirements described below. Alternate experience that may be considered includes, but is not limited to, the following:

- Secondary education and/or experience comparable to PSO duties;
- Previous work experience conducting academic, commercial, or government-sponsored marine mammal surveys; and
- Previous work experience as a PSO; the PSO should demonstrate good standing and consistently good performance of PSO duties.

Training—NMFS does not formally administer any PSO training program or endorse specific providers but will approve PSOs that have successfully completed courses that meet the curriculum and trainer requirements specified herein and, therefore, are deemed acceptable. To be deemed acceptable, training should adhere generally to the recommendations provided by ''*National Standards for a Protected Species Observer and Data Management Program: A Model Using Geological and Geophysical Surveys*'' (Baker *et al.,* 2013). Those recommendations include the following topics for training programs:

- Life at sea, duties, and authorities;
- Ethics, conflicts of interest, standards of conduct, and data confidentiality;
- Offshore survival and safety training;
- Overview of oil and gas activities (including geophysical data acquisition operations, theory, and principles) and types of relevant sound source technology and equipment;
- Overview of the MMPA and ESA as they relate to protection of marine mammals;
- Mitigation, monitoring, and reporting requirements as they pertain to geophysical surveys;
- Marine mammal identification, biology and behavior;
- Background on underwater sound;
- Visual surveying protocols, distance calculations and determination, cues, and search methods for locating and tracking different marine mammal species (visual PSOs only);
- Optimized deployment and configuration of PAM equipment to ensure effective detections of cetaceans for mitigation purposes (PAM operators only);
- Detection and identification of vocalizing species or cetacean groups (PAM operators only);
- Measuring distance and bearing of vocalizing cetaceans while accounting for vessel movement (PAM operators only);
- Data recording and protocols, including standard forms and reports, determining range, distance, direction, and bearing of marine mammals and vessels; recording GPS location coordinates, weather conditions, Beaufort wind force and sea state, etc.;
- Proficiency with relevant software tools;
- Field communication/support with appropriate personnel, and using communication devices (*e.g.,* two-way radios, satellite phones, internet, email, facsimile);
- Reporting of violations, noncompliance, and coercion; and
- Conflict resolution.

PAM operators should regularly refresh their detection skills through practice with simulation-modeling software and should keep up to date with training on the latest software/hardware advances.

Visual Monitoring

The lead PSO is responsible for establishing and maintaining clear lines of communication with vessel crew. The vessel operator shall work with the lead PSO to accomplish this and shall ensure any necessary briefings are provided for vessel crew to understand mitigation requirements and protocols. While on duty, PSOs will continually scan the water surface in all directions around the acoustic source and vessel for presence of marine mammals, using a combination of the naked eye and high-quality binoculars, from optimum vantage points for unimpaired visual observations with minimum distractions. PSOs will collect observational data for all marine mammals observed, regardless of distance from the vessel, including species, group size, presence of calves, distance from vessel and direction of travel, and any observed behavior (including an assessment of behavioral responses to survey activity). Upon observation of marine mammal(s), a

PSO will record the observation and monitor the animal's position (including latitude/longitude of the vessel and relative bearing and estimated distance to the animal) until the animal dives or moves out of visual range of the observer, and a PSO will continue to observe the area to watch for the animal to resurface or for additional animals that may surface in the area. PSOs will also record environmental conditions at the beginning and end of the observation period and at the time of any observations, as well as whenever conditions change significantly in the judgment of the PSO on duty.

For all deep penetration surveys, the vessel operator must provide bigeye binoculars of appropriate quality (*e.g.,* 25 x 150; 2.7 view angle; individual ocular focus; height control) solely for PSO use. These should be pedestal-mounted on the deck at the most appropriate vantage point that provides for optimal sea surface observation, PSO safety, and safe operation of the vessel. Other required equipment, which should be made available to PSOs by the third-party observer provider, includes reticle binoculars of appropriate quality (*e.g.,* 7 x 50), GPS, digital camera with a telephoto lens (the camera or lens should also have an image stabilization system) that is at least 300 mm or equivalent on a full-frame single-lens reflex, compass, and any other tools necessary to adequately perform the tasks described above, including accurate determination of distance and bearing to observed marine mammals.

Individuals implementing the monitoring protocol will assess its effectiveness using an adaptive approach. Monitoring biologists will use their best professional judgment throughout implementation and seek improvements to these methods when deemed appropriate. Specifically, implementation of shutdown requirements will be made on the basis of the PSO's best professional judgment. While PSOs should not insert undue precaution into decision-making, it is expected that PSOs may call for mitigation action on the basis of reasonable certainty regarding the need for such action, as informed by professional judgment. Any modifications to protocol will be coordinated between NMFS and the applicant.

Acoustic Monitoring

Use of towed PAM is required for deep penetration surveys. Monitoring of a towed PAM system is required at all times for these surveys, from 30 minutes prior to ramp-up, throughout all use of the acoustic source, and for 60 minutes following cessation of survey activity. Towed PAM systems should consist of hardware (*e.g.,* hydrophone array, recorder, cables) and software (*e.g.,* data processing program and algorithm). Some type of automated detection software must be used. Acoustic signals are processed for output to the PAM operator with software designed to detect marine mammal vocalizations. Current PAM technology has some limitations (*e.g.,* limited directional capabilities and detection range, detection of signals due to vessel and flow noise, low accuracy in localization) and there are no formal guidelines currently in place regarding specifications for hardware, software, or operator training requirements.

NMFS' requirement to use PAM refers to the use of calibrated hydrophone arrays with full system redundancy to detect, identify, and estimate distance and bearing to vocalizing cetaceans, to the extent possible. With regard to calibration, the PAM system should have at least one calibrated hydrophone, sufficient for determining whether background noise levels on the towed PAM system are sufficiently low to meet performance expectations. Additionally, if multiple hydrophone types occur in a system (*i.e.,* monitor different bandwidths), then one hydrophone from each such type shall be calibrated, and whenever sets of hydrophones (of the same type) are sufficiently spatially separated such that they would be expected to experience ambient noise environments that differ by 6 dB or more across any integrated species cluster bandwidth, then at least one hydrophone from each set should be calibrated. In terms of calibrating the rest of the system, the signal route to the data recorder and monitoring software shall be calibrated so that the binary amplitude data written to hard disk can be converted into units of acoustic pressure. The configuration of hardware should be coupled with appropriate software to aid monitoring and listening by a PAM operator skilled in bioacoustics analysis and computer system specifications capable of running appropriate software. GPS data acquisition is recommended for all PAM operations. If the PAM plan (see below) claims an ability to localize, every localization estimate obtained from a PAM system must be accompanied by some estimate of uncertainty and ambiguity.

In the absence of formal standards addressing any of these three facets of PAM technology, all applicants must provide a PAM plan including description of the hardware and software proposed for use prior to proceeding with any survey where PAM is required. Following the survey, a validation document must be submitted as part of required reporting (see below). The purpose of the PAM plan is to demonstrate that the PAM system being proposed for use is adequate for addressing the mitigation goals. The plan shall include methodology and documentation requirements for all stages of the project. As recommended by Thode *et al.* (2017), PAM plans should, at minimum, adequately address and describe (1) the hardware and software planned for use, including a hardware performance diagram demonstrating that the sensitivity and dynamic range of the hardware is appropriate for the operation; (2) deployment methodology, including target depth/tow distance; (3) definitions of expected operational conditions, used to summarize background noise statistics; (4) proposed detection-classification-localization methodology, including anticipated species clusters (using a cluster definition table), target minimum detection range for each cluster, and the proposed localization method for each cluster; (5) operation plans, including the background noise sampling schedule; (6) array design considerations for noise abatement; and (7) cluster-specific details regarding which real-time displays and automated detectors the operator would monitor. Where relevant, the plan should address the potential for PAM deployment on a receiver vessel or other associated vessel separate from the acoustic source.

Species clusters—The plan shall list the species of concern during the upcoming operation. While some species may be listed individually for special attention, in many circumstances it is expected that for the purposes of a PAM operation multiple species can be grouped together in a ''cluster'' that shares similar acoustic and behavioral characteristics (*e.g.,* sperm whale, beaked whales). The plan must specify a target minimum detection (and possibly localization) range for each species cluster used in the document. Different ranges can be defined for different operational conditions. The PAM system may exceed this detection range, but shall always be capable of achieving this minimum detection range.

Hardware and software specifications—The plan shall have a section dedicated to demonstrating that the PAM hardware is sensitive enough to detect signals from the species clusters of concern at the target minimum detection ranges specified. The plan should include a hardware

specification table and hardware performance diagram. The diagram will show the sensitivity and bandwidth of the combined array hardware and recording system, as well as the received levels required for a given species cluster to be detectable at the target minimum detection range. The overall goal of the diagram is to visually demonstrate that the planned PAM array/recording system would have the capability of detecting various species clusters at required target ranges, provided that background noise levels are not an issue.

Operational conditions—The validation document should demonstrate whether the PAM system has been compromised by excessive background noise, whether that noise is electronic interference, flow, platform, or environmental noise. Therefore, the plan shall define a set of ''operational conditions'' under which detection statistics (background noise profiles) will be categorized during the project. Operational conditions consist of three categories: Platform activity and status, mitigation (activity) status, and environmental status.

Operating procedures—The plan shall describe the level of effort that is reasonably expected to occur for the monitoring requirements. For every species cluster, the plan should detail which part of the PAM display would be used for detecting that cluster. For example, if a scrolling spectrogram display is being used for a species cluster, then the spectrogram's fast Fourier transform sample size, frequency bandwidth, and their refresh rate shall be specified. Similar details would be provided for other software tools, such as click detectors and other automated detectors and classifiers. The plan shall also provide a screenshot of the expected monitor display.

In coordination with vessel crew, the lead PAM operator will be responsible for deployment, retrieval, and testing and optimization of the hydrophone array. While on duty, the PAM operator must diligently listen to received signals and/or monitoring display screens in order to detect vocalizing cetaceans, except as required to attend to PAM equipment. The PAM operator must use appropriate sample analysis and filtering techniques and must report all cetacean detections. While not required prior to development of formal standards for PAM use, NMFS recommends that vessel self-noise assessments be undertaken during mobilization in order to optimize PAM array configuration according to the specific noise characteristics of the vessel and equipment involved, and to refine expectations for distance/bearing estimations for cetacean species during the survey. Copies of any vessel self-noise assessment reports must be included with the summary trip report.

Data Collection

PSOs must use standardized electronic data forms. PSOs will record detailed information about any implementation of mitigation requirements, including the distance of animals to the acoustic source and description of specific actions that ensued, the behavior of the animal(s), any observed changes in behavior before and after implementation of mitigation, and if shutdown was implemented, the length of time before any subsequent ramp-up of the acoustic source to resume survey. If required mitigation was not implemented, PSOs should submit a description of the circumstances. NMFS requires that, at a minimum, the following information be reported:

- Vessel names (source vessel and other vessels associated with survey), vessel size and type, maximum speed capability of vessel, port of origin, and call signs;
- PSO names and affiliations;
- Dates of departures and returns to port with port name;
- Dates and participants of PSO briefings;
- Dates and times (Greenwich Mean Time) of survey effort and times corresponding with PSO effort;
- Vessel location (latitude/longitude) when survey effort begins and ends and vessel location at beginning and end of visual PSO duty shifts;
- Vessel location at 30 second intervals (if software capability allows) or 5 minute intervals (if location must be manually recorded);
- Vessel heading and speed at beginning and end of visual PSO duty shifts and upon any line change;
- Environmental conditions while on visual survey (at beginning and end of PSO shift and whenever conditions change significantly), including Beaufort scale and any other relevant weather conditions including cloud cover, fog, sun glare, night, and overall visibility to the horizon;
- Vessel location when environmental conditions change significantly;
- Factors that may have contributed to impaired observations during each PSO shift change or as needed as environmental conditions change (*e.g.,* vessel traffic, equipment malfunctions);
- Survey activity information, such as acoustic source power output while in operation, number and volume of airguns operating in an array, tow depth of an acoustic source, and any other notes of significance (*i.e.,* pre-clearance, ramp-up, shutdown, testing, shooting, ramp-up completion, end of operations, streamers, etc.);
- If a marine mammal is sighted, the following information should be recorded:
  - Watch status (sighting made by PSO on/off effort, opportunistic, crew, alternate vessel/platform);
  - PSO who sighted the animal and PSO location (including height above water) at time of sighting;
  - Time of sighting;
  - Vessel location at time of sighting;
  - Water depth;
  - Direction of vessel's travel (compass direction);
  - Direction of animal's travel relative to the vessel;
  - Pace of the animal;
  - Estimated distance to the animal (and method of estimating distance) and its heading relative to vessel at initial sighting;
  - Identification of the animal (*e.g.,* genus/species, lowest possible taxonomic level, or unidentified) and PSO confidence in identification; also note the composition of the group if there is a mix of species;
  - Estimated number of animals (high/low/best);
  - Estimated number of animals by cohort (adults, yearlings, juveniles, calves, group composition, etc.);
  - Description (as many distinguishing features as possible of each individual seen, including length, shape, color, pattern, scars or markings, shape and size of dorsal fin, shape of head, and blow characteristics);
  - Detailed behavior observations (*e.g.,* number of blows, number of surfaces, breaching, spyhopping, diving, feeding, traveling; as explicit and detailed as possible; note any observed changes in behavior);
  - Animal's closest point of approach (CPA) and/or closest distance from the acoustic source;
  - Platform activity at time of sighting (*e.g.,* deploying, recovering, testing, shooting, data acquisition, other); and
  - Description of any actions implemented in response to the sighting (*e.g.,* delays, shutdown, ramp-up); time and location of the action should also be recorded;
- If a marine mammal is detected while using the PAM system, the following information should be recorded:
  - An acoustic encounter identification number, and whether the detection was linked with a visual sighting;

- Time when first and last heard;
- Types and nature of sounds heard (*e.g.,* clicks, whistles, creaks, burst pulses, continuous, sporadic, strength of signal, etc.); and
- Any additional information recorded such as water depth of the hydrophone array, bearing of the animal to the vessel (if determinable), species or taxonomic group (if determinable), spectrogram screenshot, and any other notable information.

LOA Reporting

PSO effort, survey details, and sightings data should be recorded continuously during surveys. Reports must include all information described above under ''Data Collection,'' including amount and location of line-kms surveyed and all marine mammal observations with closest approach distance. Reports must be submitted to NMFS within 90 days of survey completion or following expiration of an issued LOA. In the event that an LOA is issued for a period exceeding one year, annual reports must be submitted during the period of validity. The draft report must be accompanied by a certification from lead PSOs as to the accuracy of the report. A final report must be submitted within 30 days following resolution of any comments on the draft report.

The report must describe the operations conducted and sightings of marine mammals near the operations; provide full documentation of methods, results, and interpretation pertaining to all monitoring; summarize the dates and locations of survey operations, and all marine mammal sightings (dates, times, locations, activities, associated survey activities); and provide information regarding locations where the acoustic source was used. The LOA-holder shall provide geo-referenced time-stamped vessel tracklines for all time periods in which airguns (full array or single) were operating. Tracklines should include points recording any change in airgun status (*e.g.,* when the airguns began operating, when they were turned off). GIS files shall be provided in ESRI shapefile format and include the UTC date and time, latitude in decimal degrees, and longitude in decimal degrees. All coordinates should be referenced to the WGS84 geographic coordinate system. In addition to the report, all raw observational data shall be made available to NMFS.

This report must also include a validation document concerning the use of PAM (if PAM was required), which should include necessary noise validation diagrams (NVD) and demonstrate whether background noise levels on the PAM deployment limited achievement of the planned detection goals. A separate diagram shall be produced for every background noise percentile chosen for analysis. Background noise percentiles, rather than a simple average of the data, are required because the highly non-stationary characteristics of many background noise profiles cannot be described by a simple mean. For example, data collected during a seismic survey will have short periods of time containing high-intensity pulses and longer periods of time dominated by lower levels of reverberation. Taking a simple mean of these noise data would imply background noise levels substantially higher than what may actually have been present between seismic pulses. A validation report would typically contain between three to five diagrams, depending on the number of percentiles analyzed. At a minimum, the validation report should contain three diagrams that include the 50th percentile (median), 5th percentile, and 95th percentile. The 25th percentile and 75th percentile may also be included. In each percentile diagram, a separate background noise curve shall be drawn for each defined operational condition. In general, the NVD should be generated from the data stream that is used for detecting the presence of marine mammal signals. For example, if beamforming or some other form of array gain has been applied before invoking signal detection, then the NVD should be generated using the beamformed data, and not omnidirectional data. The complete set of NVDs, one for each percentile of interest, combined with a table that lists the fraction of time the activity was in each operational state, provides a means of reviewing the background noise-limitations encountered by the PAM system during various operational conditions. Actual marine mammal detections should be plotted on this diagram for a reasonableness check on the expected received levels. Overall, the validation document should reiterate all the goals and parameters stated in the planning document and verify that goals were/were not met, why, changes, etc. Also, the validation document should state whether the planning was suited to the needs of the survey and met the required mitigation standards.

There are multiple reasons why marine mammals may be present and yet be undetected by observers. Animals are missed because they are underwater (availability bias) or because they are available to be seen, but are missed by observers (perception and detection biases) (*e.g.,* Marsh and Sinclair, 1989). Negative bias on perception or detection of an available animal may result from environmental conditions, limitations inherent to the observation platform, or observer ability. In this case, we do not have prior knowledge of any potential negative bias on detection probability due to observation platform or observer ability. Therefore, it may be appropriate to make observational data corrections with respect to assumed species-specific detection probability as evaluated through consideration of environmental factors (*e.g., f*(0)). Appropriate methods will be considered through the adaptive management process.

The report must include a post-survey estimate of the instances of take of each species utilizing the line miles of survey actually conducted and the same methods used to initially predict the estimated take in the LOA application. Depending on the length and dates of the survey, LOA-holders may be required to segment take estimates into specific years to support the administration of the rule.

Comprehensive Reporting

Individual LOA-holders will be responsible for collecting and submitting monitoring data to NMFS, as described above. In addition, on an annual basis, LOA-holders will also collectively be responsible for compilation and analysis of those data for inclusion in subsequent annual synthesis reports. Individual LOA-holders may collaborate to produce this report or may elect to have their trade associations support the production of such a report. These reports would summarize the data presented in the individual LOA-holder reports, provide analysis of these synthesized results, discuss the implementation of required mitigation, and present any recommendations. This comprehensive annual report would be the basis of an annual adaptive management process (described below in Adaptive Management). The following topics will be described in comprehensive reporting:

- Summary of geophysical survey activity by survey type, geographic zone (*i.e.,* the seven zones described in the modeling report), month, and acoustic source status (*e.g.,* inactive, ramp-up, full-power, power-down);
- Summary of monitoring effort (on-effort hours and/or distance) by acoustic source status, location, and visibility conditions (for both visual and acoustic monitoring);
- Summary of mitigation measures implemented (*e.g.,* delayed ramp-ups,

shutdowns, course alterations for vessel strike avoidance) by survey type and location;

- Sighting rates of marine mammals during periods with and without acoustic source activities and other variables that could affect detectability of marine mammals, such as:
  - Initial sighting distances of marine mammals relative to source status;
  - Closest point of approach of marine mammals relative to source status;
  - Observed behaviors and types of movements of marine mammals relative to source status;
  - Distribution/presence of marine mammals around the survey vessel relative to source status; and
  - Analysis of the effects of various factors influencing the detectability of marine mammals (*e.g.,* wind speed, sea state, swell height, presence of glare or fog).
- Estimates of total take across all activities for which take is authorized based on actual survey effort and original estimation method;
- Summary and conclusions from monitoring in previous year; and
- Recommendations for adaptive management.

Each annual comprehensive report should cover one full year of monitoring effort and must be submitted for review each year. Each report should analyze survey and monitoring effort described in reports submitted by individual LOA-holders during a given one-year period, beginning from the date of effectiveness of these regulations. Each annual comprehensive report must be submitted for review 90 days following conclusion of the annual reporting period.

Reporting Injured or Dead Marine Mammals

Discovery of Injured or Dead Marine Mammal—In the event that personnel involved in the survey activities covered by the authorization discover an injured or dead marine mammal, the LOA-holder shall report the incident to the Office of Protected Resources (OPR), NMFS and to the regional stranding network as soon as feasible. The report must include the following information:

- Time, date, and location (latitude/longitude) of the first discovery (and updated location information if known and applicable);
- Species identification (if known) or description of the animal(s) involved;
- Condition of the animal(s) (including carcass condition if the animal is dead);
- Observed behaviors of the animal(s), if alive;
- If available, photographs or video footage of the animal(s); and
- General circumstances under which the animal was discovered.

Vessel Strike—In the event of a ship strike of a marine mammal by any vessel involved in the activities covered by the authorization, the LOA-holder shall report the incident to OPR, NMFS and to the regional stranding network as soon as feasible. The report must include the following information:

- Time, date, and location (latitude/longitude) of the incident;
- Species identification (if known) or description of the animal(s) involved;
- Vessel's speed during and leading up to the incident;
- Vessel's course/heading and what operations were being conducted (if applicable);
- Status of all sound sources in use;
- Description of avoidance measures/requirements that were in place at the time of the strike and what additional measures were taken, if any, to avoid strike;
- Environmental conditions (*e.g.,* wind speed and direction, Beaufort sea state, cloud cover, visibility) immediately preceding the strike;
- Estimated size and length of animal that was struck;
- Description of the behavior of the marine mammal immediately preceding and following the strike;
- If available, description of the presence and behavior of any other marine mammals immediately preceding the strike;
- Estimated fate of the animal (*e.g.,* dead, injured but alive, injured and moving, blood or tissue observed in the water, status unknown, disappeared); and
- To the extent practicable, photographs or video footage of the animal(s).

Actions To Minimize Additional Harm to Live-Stranded (or Milling) Marine Mammals

For deep penetration surveys, in the event of a live stranding (or near-shore atypical milling) event within 50 km of the survey operations, where the NMFS stranding network is engaged in herding or other interventions to return animals to the water, the Director of OPR, NMFS (or designee) will advise the LOA-holder of the need to implement shutdown procedures for all active acoustic sources operating within 50 km of the stranding. Shutdown procedures for live stranding or milling marine mammals include the following:

- If at any time, the marine mammals die or are euthanized, or if herding/intervention efforts are stopped, the Director of OPR, NMFS (or designee) will advise the LOA-holder that the shutdown around the animals' location is no longer needed.
- Otherwise, shutdown procedures will remain in effect until the Director of OPR, NMFS (or designee) determines and advises the LOA-holder that all live animals involved have left the area (either of their own volition or following an intervention).
- If further observations of the marine mammals indicate the potential for re-stranding, additional coordination with the LOA-holder will be required to determine what measures are necessary to minimize that likelihood (*e.g.,* extending the shutdown or moving operations farther away) and to implement those measures as appropriate.

Shutdown procedures are not related to the investigation of the cause of the stranding and their implementation is not intended to imply that the specified activity is the cause of the stranding. Rather, shutdown procedures are intended to protect marine mammals exhibiting indicators of distress by minimizing their exposure to possible additional stressors, regardless of the factors that contributed to the stranding.

Additional Information Requests—If NMFS determines that the circumstances of any marine mammal stranding found in the vicinity of the activity suggest investigation of the association with survey activities is warranted (example circumstances noted below), and an investigation into the stranding is being pursued, NMFS will submit a written request to the LOA-holder indicating that the following initial available information must be provided as soon as possible, but no later than 7 business days after the request for information.

- Status of all sound source use in the 48 hours preceding the estimated time of stranding and within 50 km of the discovery/notification of the stranding by NMFS; and
- If available, description of the behavior of any marine mammal(s) observed preceding (*i.e.,* within 48 hours and 50 km) and immediately after the discovery of the stranding.

Examples of circumstances that could trigger the additional information request include, but are not limited to, the following:

- Atypical nearshore milling events of live cetaceans;
- Mass strandings of cetaceans (two or more individuals, not including cow/calf pairs);
- Beaked whale strandings; or,
- Necropsies with findings of pathologies that are unusual for the species or area.

In the event that the investigation is still inconclusive, the investigation of the association of the survey activities is still warranted, and the investigation is still being pursued, NMFS may provide additional information requests, in writing, regarding the nature and location of survey operations prior to the time period above.

Negligible Impact Analysis and Determinations

NMFS has defined negligible impact as an impact resulting from the specified activity that cannot be reasonably expected to, and is not reasonably likely to, adversely affect the species or stock through effects on annual rates of recruitment or survival (50 CFR 216.103). A negligible impact finding is based on the lack of likely adverse effects on annual rates of recruitment or survival (*i.e.,* population-level effects). An estimate of the number of takes alone is not enough information on which to base a negligible impact determination. In addition to considering estimates of the number of marine mammals that might be ''taken'' by mortality, serious injury, and Level A or Level B harassment, we consider other factors, such as the type of take, the likely nature of any behavioral responses (*e.g.,* intensity, duration), the context of any such responses (*e.g.,* critical reproductive time or location, migration), as well as effects on habitat, and the likely effectiveness of mitigation. We also assess the number, intensity, and context of estimated takes by evaluating this information relative to population status. Consistent with the 1989 preamble for NMFS' implementing regulations (54 FR 40338; September 29, 1989), the impacts from other past and ongoing anthropogenic activities are incorporated into these analyses via their impacts on the baseline (*e.g.,* as reflected in the regulatory status of the species, population size and growth rate where known, ongoing sources of human-caused mortality).

For each potential activity-related stressor, NMFS considers the potential effects to marine mammals and the likely significance of those effects to the species or stock as a whole. Potential risk due to vessel collision and related mitigation measures, as well as potential risk due to entanglement and contaminant spills, was addressed under Mitigation and in the Potential Effects of the Specified Activity on Marine Mammals section of this notice and the notice of proposed rulemaking and are not discussed further, as there are minimal risks expected from these potential stressors.

The ''specified activity'' for these regulations is a broad program of geophysical survey activity that could occur at any time of year in U.S. waters of the GOM, within the specified geographical region as updated by BOEM (*i.e.,* excluding the GOMESA leasing moratorium area). In recognition of the broad scale of this activity in terms of geographic and temporal scales, we use a new analytical methodology—first described by Ellison *et al.* (2015) and proposed for use and discussed in detail in the notice of proposed rulemaking—through which an explicit, systematic risk assessment framework is applied to evaluate potential effects of aggregated discrete acoustic exposure events (*i.e.,* proposed geophysical survey activities) on marine mammals. This risk assessment framework is one component of the overall negligible impact analysis. Development of the approach was supported collaboratively by BOEM and NMFS, which together provided guidance to an expert working group (EWG) in terms of application to relevant regulatory processes. The risk assessment framework (or EWG framework) is described by Southall *et al.* (2017), which is available online at: *www.fisheries.noaa.gov/national/marine-mammal-protection/incidental-take-authorizations-oil-and-gas.* That document is a companion to this analysis, and is referred to hereafter as the ''EWG report.'' The risk assessment framework is also described below. It was developed and implemented by the EWG in relation to the specified activity described in the proposed rule, provided for public review in association with the notice of proposed rulemaking (Southall *et al.,* 2017), and subsequently refined in response to public comment and in consideration of the updated scope of the activity. We incorporate the framework and its results into this analysis.

The EWG framework described below comprehensively considers the aggregate impacts to marine mammal populations from the activities addressed in this rule in the context of both (1) the severity of the impacts and (2) the vulnerability of the affected species. However, it does not consider the effects of the mitigation required through these regulations in identifying risk ratings for the affected species. In addition, while the EWG framework comprehensively considers the spatial and temporal overlay of the activities and the marine mammals in the GOM, as well as the number of takes predicted by the described modeling (both in the proposed rule, and as updated in this final rule), there are details about the nature of any ''take'' anticipated to result from these activities that were not considered directly in the EWG framework analysis that warrant explicit consideration in the negligible impact determination. Last, the EWG framework analysis addresses impacts to guilds in some cases where there is not specific information to further support species-specific findings. Accordingly, following the description of the EWG framework below, NMFS highlights a few factors regarding the nature of the predicted ''takes'' and then brings together the results of implementation of the EWG framework, these additional factors, and the anticipated effects of the mitigation to summarize the negligible impact analysis for each of the affected species or stocks.

EWG Risk Assessment

The acoustic exposure modeling (Zeddies *et al.,* 2015, 2017a) provided marine mammal noise exposure estimates based on BOEM-provided projections of future survey effort and best available modeling of sound propagation, animal distribution, and animal movement. This provided a conservative but reasonable best estimate of potential acute noise exposure events that may result from the described suite of activities, and formed the basis for the analysis in the proposed rule. BOEM subsequently updated the scope of its activity, which reduced the amount of activity overall through removal of projected activity in the eastern GOM (see Table 1 and Figure 2). Acoustic exposure estimates were updated by BOEM accordingly (based on the same modeling presented in the proposed rule) and these revised estimates form the basis for this updated analysis.

The primary goal of this new analytical effort was to develop a systematic risk assessment framework that would use the modeling results to put into biologically-relevant context the level of potential risk of injury and/or disturbance to marine mammals. The risk assessment framework considers both the aggregation of acute effects and the broad temporal and spatial scales over which chronic effects may occur. Previously, Wood *et al.* (2012) conducted an analysis of a proposed airgun survey, in which the authors derived a qualitative risk assessment method of considering the biological significance of exposures predicted to be consistent with the onset of physical injury and behavioral disturbance. Subsequently, Ellison *et al.* (2015) described development of a more systematic and (in some cases)

quantitative basis for a risk assessment approach to assess the biological significance and potential population consequences of predicted noise exposures. The approach for this final rule, which incorporates the revised acoustic exposure modeling results as an input, includes certain modifications to and departures from the conceptual approach described by Ellison *et al.* (2015). These are described in greater detail in the EWG report.

Generally, this approach is a relativistic risk assessment that provides an interpretation of the exposure estimates within the context of key biological and population parameters (*e.g.,* population size, life history factors, compensatory ability of the species, animal behavioral state, aversion), as well as other biological, environmental, and anthropogenic factors. This analysis as updated since BOEM revised the scope of its action was performed on a species-specific basis within each modeling zone (Figure 3) for a high-effort scenario (represented by Year 1 of BOEM's revised effort projections) and a moderate-effort scenario (represented by Year 4 of BOEM's revised effort projections). (For most species, the maximum annual take occurs under the Year 1 scenario. The two exceptions are the bottlenose dolphin and Atlantic spotted dolphin, for which the maximum annual take occurs under the Year 4 scenario.) The end result provides an indication of the biological significance of these exposure numbers for each affected marine mammal stock (*i.e.,* yielding the severity of impact and vulnerability of stock/population information), and forecasts the likelihood of any such impact. This result is expressed as relative impact ratings of overall risk that couple potential severity of effect on a stock and likely vulnerability of the population to the consequences of those effects, given biologically relevant information (*e.g.,* compensatory ability).

Spectral, temporal, and spatial overlaps between survey activities and animal distribution are the primary factors that drive the type, magnitude, and severity of potential effects on marine mammals, and these considerations are integrated into both the severity and vulnerability assessments. In discussion with BOEM and NMFS, the EWG developed a strategic approach to balance the weight of these considerations between the two assessments, specifying and clarifying where and how the interactions between potential disturbance and species within these dimensions are evaluated. Overall ratings are then considered in conjunction with the required mitigation (and any additional relevant contextual information) to ultimately inform our determinations. Elements of this approach are subjective and relative within the context of this program of projected actions and, overall, the analysis necessarily requires the application of professional judgment.

Severity of Effect

Level A Harassment—In order to evaluate the potential severity of the expected potential takes by Level A harassment (accounting for aversion) (Table 9) on the species or stock, the EWG framework uses a potential biological removal (PBR)-equivalent metric. As described previously, PBR is defined by the MMPA as the maximum number of animals, not including natural mortalities, that may be removed from a marine mammal stock while allowing that stock to reach or maintain its optimum sustainable population. To be clear, NMFS does not expect any of the potential occurrences of injury (*i.e.,* permanent threshold shift (PTS)) that may be authorized under this rule to result in mortality of marine mammals, nor should Level A harassment be considered a ''removal'' in the context of PBR when used to inform a negligible impact determination. PTS is not appropriately considered equivalent to serious injury. However, PBR can serve as a gross indicator of the status of the species and a good surrogate for population vulnerability/health and, accordingly, PBR or a related metric can be used appropriately to inform a separate analysis to evaluate the potential relative severity to the population of a permanent impact such as PTS on a given number of individuals. This analysis is used to assess relative risks to populations as a result of PTS; NMFS does not expect that Level A harassment could directly result in mortality and our use of the PBR metric in this context should not be interpreted as such.

However, exposure estimates generated using habitat-based density models (Roberts *et al.,* 2016) cannot appropriately be directly related to the PBR values found in NMFS' SARs. Therefore, a modified PBR value was derived on the basis of the typical pattern for NMFS' PBR values, where the value varies between approximately 0.6–0.9 percent of the minimum population abundance depending upon population confidence limits (higher with increasing confidence). For endangered species, PBR values are typically ⅕ of the values for non-endangered species due to assumption of a lower recovery factor—endangered species are typically assigned recovery factors of 0.1, while species of unknown status relative to the optimum sustainable population level (*i.e.,* most species) are typically assigned factors of 0.5. This basic relationship of population size relative to PBR was used to define the following relative risk levels due to Level A harassment.

- Very high—Level A harassment greater than 1.5 or 0.3 percent (the latter figure is used for endangered species) of zone-specific estimated population abundance.
- High—0.75–1.5 or 0.15–0.3 percent of zone-specific population.
- Moderate—0.375–0.75 or 0.075–0.15 percent of zone-specific population.
- Low—0.075–0.375 or 0.015–0.075 percent of zone-specific population.
- Very low—less than 0.075 or less than 0.015 percent of zone-specific population.

Relative severity scores by zone (Figure 3) and species were determined for high and moderate annual effort scenarios. As described previously, we do not believe that Level A harassment is likely to actually occur for mid-frequency cetaceans and therefore do not predict (nor will we authorize) any take by Level A harassment for these species (*i.e.,* most species in the GOM).

Bryde's whales (a low-frequency cetacean species) are expected to be present primarily in Zones 1 and 4 (though may be present to a lesser extent in Zones 2 and 5). BOEM's update to the geographic scope of its action removed the entirety of Zone 1 and the majority of Zone 4 from consideration in this rule. Altogether, no incidents of Level A harassment are predicted for Bryde's whales.

Kogia spp. (high-frequency cetacean species) are primarily present in Zones 4–7. We assess the relative severity resulting from injury for *Kogia* spp. to be ''very high'' in Zones 5–7 under both evaluated activity scenarios. In Zone 4, relative severity is ''high'' under the moderate effort scenario, and no activity is projected in Zone 4 under the high effort scenario.

In summary, we assess that there is no risk of Level A harassment for any mid-frequency cetacean species. Overall severity associated with take by Level A harassment is expected to be very high for *Kogia* spp. and very low for Bryde's whales, as no incidents of Level A harassment are predicted for the stock.

We note that regardless of the relative risk assessed in this framework, because of the anticipated received levels and duration of sound exposure expected for any marine mammals exposed above Level A harassment criteria, no individuals of any species or stock are

expected to receive more than a relatively minor degree of PTS, which would not be expected to meaningfully increase the likelihood or severity of any potential population-level effects. See ''Loss of Hearing Sensitivity,'' below, for additional discussion.

Level B Harassment—As described above in Estimated Take, a significant model assumption was that populations of animals were reset for each 24-hr period. Exposure estimates for the 24-hr period were then aggregated across all assumed survey days as completely independent events, assuming populations turn over completely within each large zone on a daily basis. In order to evaluate modeled daily exposures and determine more realistic exposure probabilities for individuals across multiple days, we used information on species-typical movement behavior to determine a species-typical offset of modeled daily exposures, using the exploratory analysis discussed under Estimated Take (*i.e.,* Test Scenario 1). In this test scenario, modeled results were compared for a 30-day period versus the aggregation of 24-hr population reset intervals. When conducting computationally-intensive modeling over the full assumed 30-day survey period (versus aggregating the smaller 24-hr periods for 30 days), results showed about 10–45 percent of the total number of takes calculated using a 24-hr reset of the population, with differences relating to species-typical movement and residency patterns. Given that many of the evaluated survey activities occur for 30-day or longer periods, particularly some of the larger surveys for which the majority of the modeled exposures occur, using such a scaling process is appropriate in order to evaluate the likely severity of the predicted exposures and to estimate take for the purposes of LOA applications and predicting the number of individual marine mammals taken during the course of a single survey (although, as noted previously, for surveys significantly longer than 30 days, the take numbers with this scaling applied would still be expected to overestimate the number of individuals, given the greater degree of repeat exposures that would be expected the longer the survey goes on). This output was used in a severity assessment. This approach is also discussed in more detail in the EWG report.

Similar to the evaluation of severity for Level A harassment, the scaled Level B harassment takes were rated through a population-dependent binning system. For each species, scaled takes were divided by the zone-specific predicted abundance, and these proportions were used to evaluate the relative severity of modeled exposures based on the distribution of values across species to evaluate risk associated with behavioral disruption across species—a simple, logical means of evaluating relative risk across species and areas. Relative risk ratings using percent of area population size were defined as follows:

- Very high—Adjusted Level B harassment takes greater than 800 percent of zone-specific population;
- High—Adjusted Level B harassment takes 401–800 percent of zone-specific population;
- Moderate—Adjusted Level B harassment takes 201–400 percent of zone-specific population;
- Low—Adjusted Level B harassment takes 100–200 percent of zone-specific population; and
- Very low—Adjusted Level B harassment takes less than 100 percent of zone-specific population.

Vulnerability of Affected Population

Vulnerability rating seeks to evaluate the relative risk of a predicted effect given species-typical and population-specific parameters (*e.g.,* species-specific life history, population factors) and other relevant interacting factors (*e.g.,* human or other environmental stressors). The assessment includes consideration of four categories within two overarching risk factors (species-specific biological and environmental risk factors). These values were selected to capture key aspects of the importance of spatial (geographic), spectral (frequency content of noise in relation to species-typical hearing and sound communications), and temporal relationships between sound and receivers. Explicit numerical criteria for identifying scores were specified where possible, but in some cases qualitative judgments based on a reasonable interpretation of given aspects of the proposed activity and how it relates to the species in question and the environment within the specified area were required. Factors considered in the vulnerability assessment were detailed in Southall *et al.* (2017) and are reproduced here (Table 11). Note that the effects of the Deepwater Horizon oil spill are accounted for through the non-noise chronic anthropogenic risk factor identified below, while the effects to acoustic habitat and on individual animal behavior via masking (summarized in Potential Effects of the Specified Activity on Marine Mammals and Their Habitat and described in detail in that section of the notice of proposed rulemaking) are accounted for through the masking and chronic anthropogenic noise risk factors. Species-specific vulnerability scoring according to this scheme is shown in Table 12. Zone-specific vulnerability ratings corresponding with the scores given in Table 12 below are provided in Tables 8–10 of the EWG report.

TABLE 11—VULNERABILITY ASSESSMENT FACTORS

	Score
Masking: Degree of spectral overlap between biologically important acoustic signals and predominant noise source of proposed activity (max: 7 out of 30):	
Communication masking: Predominant noise energy directly/partially overlaps [1] species-specific signals utilized for communication.	+3/+1
Foraging masking: Predominant noise energy directly/partially overlaps[1] species-specific signals utilized in foraging (including echolocation and other foraging coordination signals).	+2/+1
Navigation/Orientation signal masking: Predominant noise energy directly/partially overlaps[1] signals likely utilized in spatial orientation to which species is well capable of hearing.	+2/+1
Species population: Stock status, trend, and size (max: 7 out of 30):	
Population status: Endangered (ESA) and/or depleted (MMPA) (Y/N)	+3/0
Trend rating: Decreasing/unknown or data deficient/stable (*i.e.,* within 5 percent)/increasing (last three SARs for which new population estimates were updated).	+2/+1/0/−1
Population size: Small (less than 2,500)	+2
Species habitat use and compensatory abilities: Degree to which activity within a specified area [2] overlaps with species habitat and distribution (max: 7 out of 30):	
Habitat use: Survey area contains greater than 30/15–30/5–15/less than 5 percent of total region-wide estimated population (during defined survey period).	+4/+2/+1/0

TABLE 11—VULNERABILITY ASSESSMENT FACTORS—Continued

	Score
Temporal sensitivity: Survey overlaps temporally with well-defined species-specific biologically-important period (*e.g.,* calving).	Up to +3
Other (chronic) noise and non-noise stressors: Magnitude of other potential sources of disturbance or other stressors that may influence a species response to additional noise and disturbance of the proposed activity (max: 9 out of 30):	
Chronic anthropogenic noise: Species subject to high/moderate degree of current or known future (overlapping activity) chronic anthropogenic noise.	+2/+1
Chronic anthropogenic risk factors (non-noise): Species subject to high/moderate degree of current or known future risk from other chronic, non-noise anthropogenic activities (*e.g.,* fisheries interactions, ship strike).	Up to +4/+2
Chronic biological risk factors (non-noise): Known presence of disease, parasites, prey limitation, or high predation pressure.	Up to +3

[1] Direct or partial overlap means that the predominant spectral content of received noise exposure from activity specific sources is expected to occur at identical frequencies as signals of interest, or that secondary (lower-level) spectral content of received noise exposure from activity specific sources is expected to occur at identical frequencies as signals of interest.
[2] This is the area over which an activity is evaluated and a local population is determined, in this case the seven modeling zones.

TABLE 12—VULNERABILITY ASSESSMENT SCORING [1]

Species	Communication	Foraging	Navigation	Status	Trend	Size	Habitat	Time	Chronic noise	Chronic other	Biological risk	Total score range
Bryde's whale	3	2	2	3	2	2	0–4	0–1	1–2	0–3	0	16–23
Sperm whale	1	1	2	3	2	2	0–4	0–1	1–2	0–3	0	14–18
Kogia spp.	0	0	1	0	2	2	0–4	0–1	1–2	0–3	0	8–13
Beaked whale	0	0	1	0	1	0	0–4	0–1	1–2	0–3	1	6–13
Rough-toothed dolphin	0	0	1	0	2	0	1–4	0–1	1–2	0–3	0	6–10
Bottlenose dolphin	1	0	1	0	−1	0	0–4	0–1	1–2	0–3	0	2–10
Clymene dolphin	0	0	1	0	2	0	0–4	0–1	1–2	0–3	0	6–10
Atlantic spotted dolphin	1	0	1	0	1	0	0–4	0–1	1–2	0–3	2	6–14
Pantropical spotted dolphin	0	0	1	0	2	0	0–4	0–1	1–2	0–3	0	6–10
Spinner dolphin	0	0	1	0	0	0	0–4	0–1	1–2	0–3	0	3–9
Striped dolphin	0	0	1	0	2	0	0–4	0–1	1–2	0–3	0	6–10
Fraser's dolphin	0	0	1	0	1	2	0–4	0–1	1–2	0–3	0	7–11
Risso's dolphin	0	0	1	0	−1	0	0–4	0–1	1–2	0–3	1	4–9
Melon-headed whale	0	0	1	0	2	0	0–4	0–1	1–2	0–3	0	6–10
Pygmy killer whale	0	0	1	0	2	2	0–4	0–1	1–2	0–3	0	8–12
False killer whale	0	0	1	0	−1	0	0–4	0–1	1–2	0–3	0	3–7
Killer whale	1	0	1	0	2	2	0–4	0–1	1–2	0–3	0	9–12
Short-finned pilot whale	1	0	1	0	0	2	0–4	0–1	1–2	0–3	1	7–13

[1] Factors with a single value presented are those that remain constant across zones; other factors vary based on zone and a range of values is presented.

TABLE 13—VULNERABILITY RATING SCHEME

Total score	Risk probability (% of total)	Vulnerability rating
24–30	80–100	Very high.
18–23	60–79	High.
12–17	40–59	Moderate.
6–11	20–39	Low.
0–5	0–19	Very low.

Risk

In the final step of the framework, severity and vulnerability ratings are integrated to provide relative impact ratings of overall risk. Severity and vulnerability assessments each produce a numerical rating (1–5) corresponding with the qualitative rating (*i.e.,* very low, low, moderate, high, very high). A matrix is then used to integrate these two scores to provide an overall risk assessment. The matrix is shown in Table 2 of Southall *et al.* (2017).

The likely severity of effect was assessed as the percentage of total population affected based on scaled modeled Level B harassment takes relative to zone population size. There is no risk due to the effects of survey activity when there is no survey activity in a given zone for a given effort scenario. However, a stock's inherent zone-specific vulnerability score drives the risk rating in those zones (Zone 1 under any activity scenario and Zone 4 under the high effort scenario), and risk ratings for all zones are considered

together in generating scenario-specific GOM-wide risk ratings for each species. Also, zones predicted to contain abundance of less than 0.05 percent of the GOM-wide population for a species were considered to have *de minimis* risk and are not included in derivation of the stock-specific GOM-wide rating.

Table 14 provides relative impact ratings by zone, and Table 15 provides GOM-wide relative impact ratings, for overall risk associated with predicted takes by Level B harassment, for representative high and moderate effort scenarios.

TABLE 14—OVERALL EVALUATED RISK BY ZONE AND ACTIVITY SCENARIO

Species	Zone 1 [1]		Zone 2		Zone 3		Zone 4 [1]		Zone 5		Zone 6		Zone 7	
	H	M	H	M	H	M	H	M	H	M	H	M	H	M

Bottlenose dolphin (oceanic)	Very low	Very low.
Clymene dolphin	Low	Low.[1]
Atlantic spotted dolphin	Low	Low.
Pantropical spotted dolphin	Low	Very low.
Spinner dolphin	Very low	Very low.
Striped dolphin	Low	Very low.
Fraser's dolphin	Very low	Very low.
Risso's dolphin	Very low	Very low.
Melon-headed whale	Very low	Very low.
Pygmy killer whale	Very low	Very low.
False killer whale	Very low	Very low.
Killer whale	Very low	Very low.
Short-finned pilot whale	Low	Low.[1]

[1] For these ratings, the median value across zones for the scenario fell between two ratings, and the higher rating is presented.

In order to characterize the relative risk for each species across their entire range in the GOM, the EWG analysis used the median of the seven zone-specific risk ratings for each activity scenario (high and moderate effort), not counting those in which less than 0.05 percent of the GOM-wide abundance occurred, to describe a GOM-wide risk rating for each of the representative activity scenarios (Table 15).

Overall, the results of the risk assessment show that (as expected), risk is highly correlated with effort and density. Areas where little or no survey activity is predicted to occur or areas within which few or no animals of a particular species are believed to occur have very low or no potential risk of negatively affecting marine mammals, as seen across activity scenarios in Zones 1, 3, and 4. Areas with consistently high levels of effort (Zones 2, 5, 6, and 7) are generally predicted to have higher overall evaluated risk across all species. However, fewer species of animals are expected to be present in Zone 2, where we primarily expect shelf species such as bottlenose and Atlantic spotted dolphins. In Zone 7, animals are expected to be subject to less other chronic noise and non-noise stressors, which is reflected in the vulnerability scoring for that zone. Therefore, despite consistently high levels of projected effort, overall rankings for that zone are lower than for Zones 5 and 6.

Zones 2 and 5 were the only zones with ''very high'' levels of risk due to behavioral disturbance, identified for two species of particular concern in Zone 5 (beaked and sperm whales) and for Atlantic spotted dolphins in Zone 2 (moderate effort scenario only). As particularly sensitive species, beaked whales and sperm whales consistently receive relatively high severity scores. For sperm whales, this sensitivity is manifest through typically higher vulnerability scoring, whereas the assumed sensitivity of beaked whales to

noise exposure is expressed through the application of behavioral harassment criteria (Table 6) and, therefore, relatively high assumed take numbers. Bottlenose dolphins and Atlantic spotted dolphin are generally the only species expected to commonly occur in relatively shallow waters of the continental shelf (Zones 1–3) and relatively high risk is assessed for these species in Zone 2, across activity scenarios. Relatively moderate levels of risk were also identified for other species in some contexts, and these are generally explained by the interaction of specific factors related to survey effort concentration and areas of heightened geographic distribution or specific factors related to population trends or zone-related differences in vulnerability. Overall, following BOEM's update to the geographic scope of activity (with the entirety of Zone 1, most of Zone 4, and one-third of Zone 7 removed from consideration here; see Table 1) the greatest relative risk across species is generally seen in Zones 5 and 6.

When considered across both representative activity scenarios (Table 15), only beaked whales are considered to have relatively high risk (under the high effort scenario only). Relatively moderate risk is assessed for beaked whales under the moderate effort scenario. Relatively moderate risk is also assessed for sperm whales under the high effort scenario. The rest of the species have no more than low to very low risk under either scenario. Shelf/coastal and oceanic bottlenose dolphin stocks, rough-toothed dolphins, spinner dolphins, Fraser's dolphins, Risso's dolphins, melon-headed whales, pygmy killer whales, false killer whales, and killer whales are assessed as having no greater than very low relative risk under any scenario.

Although the scores generated by the EWG framework and further aggregated across zones (as described above) are species-specific, additional stock-specific information can be gleaned through the zone-specific nature of the analysis. For example, with some bottlenose dolphin stocks, the zones align with stock range edges. The oceanic stock of bottlenose dolphins occurs within Zones 4–7, while coastal and shelf stocks occur within Zones 1–3 (sufficient information is not available to attribute takes on a stock-specific basis in Zones 1–3). These species-specific risk ratings are broadly applied in NMFS' negligible impact analysis to all of the multiple stocks that are analyzed in this rule (Table 4). However, NMFS is also considering additional stock-specific information in our analysis, where appropriate, as indicated in our Description of Marine Mammals in the Area of the Specified Activity, Potential Effects of the Specified Activity on Marine Mammals and Their Habitat, and Mitigation sections (*e.g.,* coastal bottlenose dolphins were heavily impacted by the DWH oil spill, and we have therefore required a time/area restriction to reduce impacts).

Duration of Level B Harassment Exposures

In order to more fully place the predicted amount of take into meaningful context, it is useful to understand the duration of exposure at or above a given level of received sound, as well as the likely number of repeated exposures across days. While a momentary exposure above the criteria for Level B harassment counts as an instance of take, that accounting does not make any distinction between fleeting exposures and more severe encounters in which an animal may be exposed to that received level of sound for a longer period of time. Yet this information is meaningful to an understanding of the likely severity of the exposure, which is relevant to the negligible impact evaluation and not directly incorporated into the risk assessment framework described above. For example, for bottlenose dolphins exposed to noise from 3D WAZ surveys in Zone 6, the modeling report shows that approximately 72 takes (Level B harassment) would be expected to occur in a 24-hr period. However, each animat modeled has a record or time history of received levels of sound over the course of the modeled 24-hr period. The 50th percentile of the cumulative distribution function indicates that the time spent exposed to levels of sound above 160 dB rms SPL (*i.e.,* the 50 percent midpoint for Level B harassment) would be only 1.8 minutes—a minimal amount of exposure carrying little potential for significant disruption of behavioral activity. We provide summary information regarding the total average time in a 24-hr period that an animal would spend with received levels above 160 dB and between 140 and 160 dB in Table 16.

Additionally, as we discussed in the Estimated Take section of the notice of proposed rulemaking for Test Scenario 1 (and summarized above), by comparing exposure estimates generated by multiplying 24-hr exposure estimates by the total number of survey days versus modeling for a full 30-day survey duration for six representative species, we were able to refine the exposure estimates to better reflect the number of individuals exposed above threshold within a single survey. Using this same comparison and scalar ratios described above, we are able to predict an average number of days each of the representative species modeled in the test scenario were exposed above the Level B harassment thresholds within a single survey. As with the duration of exposures discussed above, the number of repeated exposures is important to an understanding of the severity of effects. For example, the ratio for beaked whales indicates that the 30-day modeling showed that approximately 10 percent as many individual beaked whales (compared to the results produced by multiplying average 24-hr exposure results by the 30-day survey duration) could be expected to be exposed above harassment thresholds. However, the approach of scaling up the 24-hour exposure estimates appropriately reflects the instances of exposure above threshold (which cannot be more than 1 in 24 hours), so the inverse of the scalar ratio suggests the average number of days in the 30-day modeling period that beaked whales are exposed above threshold is approximately ten. It is important to remember that this is an average and that it is likely some individuals would be exposed on fewer days and some on more. Table 16 reflects the average days exposed above threshold for the indicated species having applied the scalar ratios described previously.

TABLE 16—TIME IN MINUTES (PER DAY) SPENT ABOVE THRESHOLDS (50TH PERCENTILE) AND AVERAGE NUMBER OF DAYS INDIVIDUALS TAKEN DURING 30-DAY SURVEY

Species	Survey type and time (min/day) above 160 dB rms (50% take)				Survey type and time (min/day) above 140 dB rms (10% take)				Average number of days "taken" during 30-day survey

Killer whale	2.7	6.1	3.3	12.0	16.8	46.1	14.9	73.6	3.4
Short-finned pilot whale	3.3	8.1	2.9	17.5	10.9	27.4	9.8	20.8	3.4

[1] Beaked whales are evaluated according to a different scale where 90% of the population exposed above 140 dB rms is considered taken and 50% of the population exposed above 120 dB rms is considered taken.

Loss of Hearing Sensitivity

In general, NMFS expects that noise-induced hearing loss, whether temporary (temporary threshold shift, equivalent to Level B harassment) or permanent (PTS, the only form of Level A harassment that may result from this action), is only possible as a result of airgun survey activity for low-frequency and high-frequency cetaceans. The best available scientific information indicates that low-frequency cetacean species (*i.e.,* mysticete whales, including the Bryde's whale) have heightened sensitivity to frequencies in the range output by airguns, as shown by their auditory weighting function, whereas high-frequency cetacean species (including *Kogia* spp.) have heightened sensitivity to noise in general (as shown by their lower threshold for the onset of PTS) (NMFS, 2018). However, no instances of Level A harassment are predicted to occur for Bryde's whales, and Level A harassment of Bryde's whales will not be authorized under this rule.

Level A harassment is predicted to occur for *Kogia* spp. (as indicated in Table 9 and evaluated in the ''Level A harassment'' subsection above). However, the degree of injury (hearing impairment) is expected to be mild. If permanent hearing impairment occurs, it is most likely that the affected animal would lose a few dB in its hearing sensitivity, which in most cases would not be expected to affect its ability to survive and reproduce. Hearing impairment that occurs for these individual animals would be limited to at or slightly above the dominant frequency of the noise sources. In particular, the predicted PTS resulting from airgun exposure is not likely to affect their echolocation performance or communication, as *Kogia* spp. likely produce acoustic signals at frequencies above 100 kHz (Merkens *et al.,* 2018), well above the frequency range of airgun noise. Further, modeled exceedance of Level A harassment criteria typically resulted from being near an individual source once, rather than accumulating energy from multiple sources. Overall, the modeling indicated that exceeding the SEL threshold is a rare event, and having four vessels close to each other (350 m between tracks) did not cause appreciable accumulation of energy at the ranges relevant for injury exposures. Accumulation of energy from independent surveys is expected to be negligible. This is relevant for *Kogia* spp. because based on their expected sensitivity, we expect that aversion may play a stronger role in avoiding exposures above the peak pressure PTS threshold than we have accounted for.

For both Bryde's whales and *Kogia* spp., some subset of the individual marine mammals predicted to be taken by Level B harassment may incur some TTS in addition to being behaviorally harassed. For Bryde's whales, TTS is more likely to occur at frequencies important for communication. However, any TTS incurred would be expected to be of a relatively small degree and short duration. This is due to the low likelihood of sound source approaches of the proximity or duration necessary to cause more severe TTS, given the fact that both sound source and marine mammals are continuously moving, the anticipated effectiveness of shutdowns, and general avoidance by marine mammals of louder sources.

For these reasons, and in conjunction with the required mitigation, NMFS does not believe that Level A harassment (here, PTS) or Level B harassment in the form of TTS will play a meaningful role in the overall degree of impact experienced by marine mammal populations as a result of the projected survey activity. Further, the impacts of any TTS incurred are addressed along with behavioral disruption through the broader analysis of Level B harassment.

Impacts to Habitat

Potential impacts to marine mammal habitat, including to marine mammal prey, were discussed in detail in the notice of proposed rulemaking and summarized herein (see Potential Effects of the Specified Activities on Marine Mammals and Their Habitat as well as responses to comments concerning these issues).

Regarding impacts to prey species such as fish and invertebrates, NMFS' review of the available information leads to a conclusion that the most likely impact of survey activity would be temporary avoidance of an area, with a rapid return to pre-survey distribution and behavior, and minimal impacts to recruitment or survival anticipated. Therefore, the specified activities are not likely to have more than short-term adverse effects on any prey habitat or populations of prey species. Further, any impacts to prey species are not expected to result in significant or long-term consequences for individual marine mammals, or to contribute to adverse impacts on their populations.

Regarding potential impacts to acoustic habitat, NMFS previously summarized a detailed analysis of

potential cumulative and chronic effects to marine mammals (found in the CCE report available online at *www.fisheries.noaa.gov/action/incidental-take-authorization-oil-and-gas-industry-geophysical-survey-activity-gulf-mexico*). That analysis focused on potential effects to sperm whales (which also provides a conservative proxy regarding potential effects to other mid- and high-frequency cetacean species) and to Bryde's whales. Regarding sperm whales, the analysis shows that the survey activities do not significantly contribute to the soundscape in the frequency band relevant for their lower-frequency slow-clicks, and that there will be no significant change in communication space for sperm whales. Similar conclusions may be assumed for other mid- and high-frequency cetacean species.

Implications for acoustic masking and reduced communication space resulting from noise produced by airgun surveys in the GOM are expected to be particularly heightened for animals that actively produce low-frequency sounds or whose hearing is attuned to lower frequencies (*i.e.,* Bryde's whales). The strength of the communication space approach used here is that it evaluates potential contractions in the availability of a signal of documented importance to a population of animals of key management interest in the region. In this case, losses of communication space for Bryde's whales were estimated to be higher in eastern and central GOM canyons and shelf break areas. In contrast, relative maintenance of listening area and communication space was seen within the Bryde's whale core habitat area in the eastern GOM. The result was heavily influenced by the projected lack of survey activity in that region, which underscores the importance of maintaining this important habitat for the Bryde's whale. Following BOEM's update to the scope of activity considered herein, no survey activity will occur under this rule within Bryde's whale core habitat, or within the broader eastern GOM. In areas where larger amounts of survey activity were projected, significant loss of low-frequency listening area and communication space for Bryde's whale calls was estimated. However, these are areas where Bryde's whales are unlikely to occur (*i.e.,* deeper waters of the central and western GOM).

Species and Stock-Specific Negligible Impact Analysis Summaries

In this section, we consider the relative impact ratings described above in conjunction with the required mitigation and other relevant contextual information in order to produce a final assessment of impact to the stock or species, *i.e.,* the negligible impact determinations. The effects of the DWH oil spill are accounted for through the vulnerability scoring (Table 12). NMFS developed mitigation requirements for consideration in the proposed rule, including time-area restrictions, designed specifically to provide benefit to certain populations for which a relatively high amount of risk is predicted in relation to exposure to survey noise. The required time-area restrictions, described in detail in Proposed Mitigation in the notice of proposed rulemaking and depicted in Figure 4, were designed specifically to provide benefit to the bottlenose dolphin, Bryde's whale, and beaked and sperm whales, with additional benefits to *Kogia* spp., which are often found in higher densities in the same locations of greater abundance for beaked and sperm whales. Two of the three time-area restrictions in the proposed rule—the Bryde's whale core habitat area and the Dry Tortugas area (Areas #2 and 3; Figure 4)—are eliminated from consideration as a result of BOEM's update to the geographic scope of action, as these two areas are entirely within the portion of the GOM removed from consideration. The bottlenose dolphin area, as revised herein (see Mitigation), is included in this final rule.

Although the Bryde's whale core habitat and Dry Tortugas areas are not the subject of restrictions on survey activity, as the updated scope of activity considered here does not include those two areas, the beneficial effect for animals in those areas, and the stocks of which they are a part, remains the same. No survey activity in those areas can be considered for LOAs issued under this rule. In addition, we expect the lack of survey activity in those areas to provide some subsidiary benefit to additional species that may be present, as indicated in the sections below and reflected in the updated take estimates.

The absence of survey activity in those two areas benefits both the primary species for which they were designed and species that may benefit secondarily by likely reducing the portion of a stock likely exposed to survey noise and avoiding impacts to certain species in areas of importance for them. These areas are discussed more specifically in the context of the species and stocks they were designed to protect in the Proposed Mitigation section of the notice of proposed rulemaking, and are summarized in the sections below.

Bryde's Whale

First, we note that the estimated (and allowable) take of Bryde's whales has been reduced as compared to the proposed rule as a result of the change in scope. Specifically, both the maximum annual take and the average annual take decreased by approximately 98 percent. The EWG analysis, which evaluated the relative significance of the aggregated impacts of the survey activities across seven GOM zones in the context of the vulnerability of each species, concluded that the GOM-wide risk ratings for Bryde's whales are low, regardless of activity scenario. We note that, although the evaluated severity of take for Bryde's whales is very low in all zones where take could occur, vulnerability for the species is assessed as high in all zones where the species occurs. When integrated through the risk framework as described above, overall risk for the species is therefore assessed as low for both the high and moderate effort scenarios. Evaluated risk is lower than what was considered in the proposed rule, where analysis of the prior take estimates resulted in a risk rating of moderate for both scenarios.

We further consider the likely severity of any predicted behavioral disruption of Bryde's whales in the context of the likely duration of exposure above Level B harassment thresholds. Specifically, the average modeled time per day spent at received levels above 160 dB rms (where 50 percent of the exposed population is considered taken) ranges from 6.8–21.4 minutes for deep penetration survey types. The average time spent exposed to received levels between 140 and 160 dB rms (where 10 percent of the exposed population is considered taken) ranges from 55–164 minutes for 2D, 3D NAZ, and 3D WAZ surveys, and 401 minutes for coil surveys (which comprise approximately 10 percent of the total activity days).

Importantly, no survey activity will occur within the Bryde's whale core habitat area pursuant to this rule. The absence of survey activity in the area is expected to benefit Bryde's whales and their habitat by minimizing a range of potential effects of airgun noise, both acute and chronic, that could otherwise accrue to impact the reproduction or survival of individuals in this area. Absence of survey activity in this area will minimize disturbance of the species in the place most important to them for critical behaviors such as foraging and socialization. Based on Roberts *et al.* (2016), the area encompasses approximately 92 percent of the predicted abundance of Bryde's whales in the GOM. Intensive survey effort in

the region has not resulted in any confirmed Bryde's whale sightings outside this core habitat area (aside from a single anomalous sighting in the western GOM). Although some sound from airguns may still propagate into the Bryde's whale core habitat area from surveys that may occur outside of the area (in certain locations where separation distance between the core habitat area and the area considered for survey activity through this rule is less; see Figure 2), exposure of Bryde's whales to sound levels that may be expected to result in Level B harassment will be eliminated or reduced for animals within the Bryde's whale core area. The absence of survey activity in this area and significant reduction in associated exposure of Bryde's whales to seismic airgun noise is expected to eliminate the likelihood of auditory injury of Bryde's whales. Finally, the absence of survey activity in the eastern GOM will reduce chronic exposure of Bryde's whales to higher levels of anthropogenic sound and the associated effects including masking, disruption of acoustic habitat, long-term changes in behavior such as vocalization, and stress.

As described in the preceding ''Loss of Hearing Sensitivity'' section, we have analyzed the likely impacts of potential temporary hearing impairment and do not expect that they would result in impacts on reproduction or survival of any individuals. The extended shutdown zone for Bryde's whales (1,500 m)—to be implemented in the unlikely event that a Bryde's whale is encountered outside of the core habitat area—is expected to further minimize the severity of any hearing impairment incurred as well as reducing the likelihood of more severe behavioral responses. Similarly, application of this extended distance shutdown requirement when calves are present will minimize the potential for and degree of disturbance during this sensitive life stage.

No mortality of Bryde's whales is anticipated or authorized. It is possible that Bryde's whale individuals in this stock, if encountered in areas not typically considered to be Bryde's whale habitat, will be impacted briefly on one or more days during a year of activity by one type of survey or another and some subset of those exposures above thresholds may be of comparatively long duration within a day. However, the significant and critical protection afforded through the absence of survey activity in the core habitat area and the associated reduction in estimated take ensures that the impacts of the expected takes from these activities are not likely to adversely affect the GOM stock of Bryde's whales through impacts on annual rates of recruitment or survival.

Sperm Whale

First, we note that the estimated (and allowable) take of sperm whales has been reduced as compared to the proposed rule as a result of the change in scope. Specifically, the maximum annual take decreased by approximately 62 percent and the average annual take decreased by approximately 58 percent. The EWG analysis, which evaluated the relative significance of the aggregated impacts of the survey activities across seven GOM zones in the context of the vulnerability of each species, concluded that the GOM-wide risk ratings for sperm whales were between moderate and low (equivalent to a 2.5 on a 5-point scale, with a 3 equating to ''moderate'') (for the high effort scenario) or low (for the moderate effort scenario). Evaluated risk is reduced from the proposed rule, where the high effort scenario resulted in a very high risk rating and the moderate effort scenario resulted in a high risk rating. We further consider the likely severity of any predicted behavioral disruption of sperm whales in the context of the likely duration of exposure above Level B harassment thresholds. Specifically, the average modeled time per day spent at received levels above 160 dB rms (where 50 percent of the exposed population is considered taken) ranges from 4–10.3 minutes for 2D, 3D NAZ, and 3D WAZ surveys and up to 20.7 minutes for coil surveys (which comprise less than 10 percent of the total projected activity days) and the average time spent between 140 and 160 dB rms (where 10 percent of the exposed population is considered taken) is 12–31.8 minutes.

Odontocetes echolocate to find prey, and while there are many different strategies for hunting, one common pattern, especially for deeper-diving species, is to conduct multiple repeated deep dives within a feeding bout, and multiple bouts within a day, to find and catch prey. While exposures of the short durations noted above could potentially interrupt a dive or cause an individual to relocate to feed, such a short-duration interruption would typically be unlikely to have significant impacts on an individual's energy budget. However, the moderate risk rating for the high effort scenario reflects the higher number of total days across which these singularly more minor impacts may occur, as well as other factors, and points to the need for the consideration of additional reduction of impacts where possible. In years when less effort occurs, as represented by the moderate effort scenario, risk will be less.

Importantly, no survey activity is expected within the Dry Tortugas Mitigation Area, which was analyzed and proposed for implementation in the proposed rule. The area provides preferred habitat for comparatively high densities of sperm whales and is thought to be used as a calving area. The absence of survey activity in the area is expected to alleviate some of the previous impacts of concern to sperm whales (as well as beaked whales and *Kogia* spp.) and their habitat by minimizing a range of potential effects of airgun noise, both acute and chronic, that could otherwise accrue to impact the reproduction or survival of individuals in this area. Absence of survey activity in this area will minimize disturbance of the species in a place of importance for critical behaviors such as foraging and socialization and, overall, helps to reduce evaluated risk to the stock as a whole.

Additionally, we note that the extended distance shutdown zone for sperm whales (1,500 m) is expected to further reduce the likelihood and minimize the severity of more severe behavioral responses. Similarly, application of this extended distance shutdown requirement when calves are present will minimize the potential for and degree of disturbance during this sensitive life stage.

No mortality or Level A harassment of sperm whales is anticipated or authorized. While it is likely that the majority of the individual sperm whales will be impacted briefly on one or more days during a year of activity by one type of survey or another, based on the nature of the individual exposures (shorter duration) and takes, as well as the aggregated scale of the impacts across the GOM in consideration of the mitigation discussed here, the impacts of the expected takes from these activities are not likely to adversely affect the GOM stock of sperm whales through adverse impacts on annual rates of recruitment or survival.

Beaked Whales

In consideration of the similarities in the nature and scale of impacts, we consider the GOM stocks of Cuvier's, Gervais', and Blainville's beaked whales together in this section. First, we note that the estimated (and allowable) take of beaked whales has been reduced as compared to the proposed rule as a result of the change in scope. Specifically, the maximum annual take decreased by approximately 19 percent and the average annual take decreased

by approximately 15 percent. The EWG analysis, which evaluated the relative significance of the aggregated impacts of the survey activities across seven GOM zones in the context of the vulnerability of each species, concluded that the GOM-wide risk ratings for beaked whales were between high and moderate (equivalent to a 3.5 on a 5-point scale, with a 4 equating to ''high'') for the high effort scenario and between moderate and low (equivalent to a 2.5 on a 5-point scale, with a 3 equating to ''moderate'') for the moderate effort scenario. Evaluated risk is reduced from the proposed rule, where the high effort scenario resulted in a very high risk rating and the moderate effort scenario resulted in a high risk rating. We further consider the likely severity of any predicted behavioral disruption of beaked whales in the context of the likely duration of exposure above Level B harassment thresholds. Beaked whales are considered more behaviorally sensitive to sound than most other species, and therefore we utilize different thresholds to predict behavioral disturbance. However, this means that beaked whales are evaluated as ''taken'' upon exposure to received sound levels as low as 120 dB (where 50 percent of the exposed beaked whale population is considered taken). These received levels are typically reached at extreme distance from the acoustic source (*i.e.,* greater than 50 km from the source). Behavioral responses to noise are significantly correlated with distance from the source (*e.g.,* Gomez *et al.,* 2016); and potential responses to these relatively low received levels at such great distances, while conservatively evaluated here as take under the MMPA, are unlikely to result in any response of such a severity as to carry any cost to the animal. (Additionally, in certain circumstances, noise from the surveys at these distances may be indistinguishable from other low-frequency background noise). Therefore, as for other species, we consider only the average modeled time per day spent at received levels above 140 dB rms (where 90 percent of the exposed beaked whale populations are considered taken) and 160 dB rms (where, potentially, all exposed beaked whales are taken). The average time spent in a state of exposure above 160 dB rms is only 6–12.4 minutes for 2D, 3D NAZ, and 3D WAZ surveys and 24 minutes for coil surveys. The average time spent in a state of exposure above 140 dB rms is 14.1 minutes for 3D WAZ surveys, 16.2 minutes for 2D surveys, 31.1 minutes for coil surveys, and 39.7 minutes for 3D NAZ surveys.

Odontocetes echolocate to find prey, and while there are many different strategies for hunting, one common pattern, especially for deeper-diving species, is to conduct multiple repeated deep dives within a feeding bout, and multiple bouts within a day, to find and catch prey. As we noted, while some of the exposures of the durations noted above could interrupt a dive or cause an individual to relocate to feed because of the lower thresholds combined with the way exposures are distributed across received levels, a higher proportion of the total takes (as compared to other taxa) are at the lower end of the received levels at which take would be expected to occur and at great distance from the acoustic source, where responses (if any) should be assumed to be minor. All else being equal, exposures to lower received levels and, separately, at greater distances might be expected to result in less severe responses, even given longer durations (*e.g.,* DeRuiter *et al.,* 2013). Considered individually or infrequently, these sorts of feeding interruptions would be unlikely to have significant impacts on an individual's energy budget, especially given the likely availability of adequate alternate feeding areas relatively nearby. However, the high risk rating for the high effort scenario reflects the higher number of total days across which these singularly more minor impacts may occur, as well as other factors, and points to the need for the consideration of additional reduction of impacts where possible. In years when less effort occurs, as represented by the moderate effort scenario, risk will be less.

Importantly, no survey activity is expected within the Dry Tortugas Mitigation Area, which was analyzed and proposed for implementation in the proposed rule. The area provides preferred habitat for comparatively high densities of beaked whales. The absence of survey activity in this important area is expected to alleviate some of the previous impacts of concern to beaked whales (as well as sperm whales and *Kogia* spp.) and their habitat by minimizing a range of potential effects of airgun noise, both acute and chronic, that could otherwise accrue to impact the reproduction or survival of individuals in this area. Absence of survey activity in this area will minimize disturbance of the species in a place of importance for critical behaviors such as foraging and socialization and, overall, helps to reduce evaluated risk to the stocks as a whole.

Additionally, we note that the extended distance shutdown zone for beaked whales (1,500 m) is expected to further reduce the likelihood of, and minimize the severity of, more severe behavioral responses.

Despite the nature and duration of the exposures anticipated, which at a smaller scale might not be expected to meaningfully impact individual fitness, given the high to moderate EWG risk rating and the relatively high number of predicted beaked whale takes (increasing the likelihood of some subset of individuals accruing a fair number of repeated takes over sequential days—albeit assuming takes at low received levels and at distances from the source where responses, if any, should be expected to be minor), it is more likely that a small number of individuals could be interrupted during foraging in a manner and amount such that impacts to the energy budgets of females (from either losing feeding opportunities or expending energy to find alternative feeding options) could cause them to forego reproduction for a year. Energetic impacts to males are generally meaningless to population rates unless they cause death, and extreme energy deficits (beyond what could be considered reasonably likely to result from these activities) are required to cause the death of an adult marine mammal. As noted previously, however, foregone reproduction (especially for one year, which is the maximum predicted because the relatively small number anticipated in any one year makes the probability that any individual would be impacted in this way twice in five years very low) has far less of an impact on population rates than mortality. And a small number of instances of foregone reproduction would not be expected to adversely affect these stocks through effects on annual rates of recruitment or survival.

It is worth noting that in similar situations, *i.e.,* where individual beaked whales may be exposed to noise above harassment thresholds regularly, populations appear to be stable based on multiple studies and lines of evidence (*e.g.,* Falcone and Schorr, 2014; DiMarzio *et al.,* 2018). In research done at the Navy's fixed tracking range in the Bahamas, animals were observed to leave the immediate area of an anti-submarine warfare training exercise but return within a few days after the event ended (Claridge and Durban, 2009; McCarthy *et al.,* 2011; Moretti *et al.,* 2009, 2010; Tyack *et al.,* 2010, 2011). It is important to note that in these contexts, beaked whales were exposed to noise stimuli to which they are significantly more acoustically sensitive (*i.e.,* mid-frequency active sonar versus low-frequency airgun noise).

Of note, due to their pelagic distribution, typical high availability bias due to deep-diving behavior and cryptic nature when at the surface, beaked whales are rarely sighted during at-sea surveys and difficult to distinguish between species when visually observed in the field. Accordingly, abundance estimates in NMFS SARs are recorded for *Mesoplodon* spp. Available sightings data, including often unresolved sightings of beaked whales, must be combined in order to develop habitat-based density models for beaked whales, as were used to inform our acoustic exposure modeling effort. Therefore, density and take estimates in this rule are similarly lumped for the three species of beaked whales, and there is no additional information by which NMFS could appropriately apportion impacts other than equally/proportionally across the three species.

No mortality or Level A harassment of any of these three species of beaked whales is anticipated or authorized. It is likely that the majority of the individual beaked whales will be impacted on one or more days during a year of activity by one type of survey or another. It is possible that some small number of female beaked whales may experience a year of foregone reproduction. However, based on the nature of the majority of the individual exposures and the overall scale of the aggregate impacts and risk rating in consideration of the mitigation discussed here, and noting the continued presence of beaked whales in the GOM given the many years of high activity levels and the evidence that beaked whales maintain stable or increasing populations in other areas with high levels of acoustic activity, the impacts of the expected takes from these activities are not likely to adversely affect the GOM stocks of Cuvier's, Gervais', or Blainville's beaked whales through adverse impacts on annual rates of recruitment or survival.

Kogia spp.

First, we note that the estimated (and allowable) take of *Kogia* spp. has been reduced as compared to the proposed rule as a result of the change in scope. Specifically, the maximum annual take by Level B harassment decreased by approximately 46 percent and the average annual take decreased by approximately 43 percent. (These reductions are 49 and 46 percent, respectively, for Level A harassment.) The EWG analysis, which evaluated the relative significance of the aggregated impacts of the survey activities across seven GOM zones in the context of the vulnerability of each species, concluded that the GOM-wide risk ratings for *Kogia* spp. were low (for the high effort scenario) and very low (for the moderate effort scenario). Evaluated risk is reduced from the proposed rule, where the high effort scenario resulted in a moderate risk rating and the moderate effort scenario resulted in a low risk rating. We further consider the likely severity of any predicted behavioral disruption of *Kogia* spp. in the context of the likely duration of exposure above Level B harassment thresholds. Specifically, the average modeled time per day spent at received levels above 160 dB rms (where 50 percent of the exposed population is considered taken) ranges from 2.8–7.9 minutes for 2D, 3D NAZ, and 3D WAZ surveys and up to 15.3 minutes for coil surveys (which comprise less than 10 percent of the total projected activity days), and the average time spent between 140 and 160 dB rms (where 10 percent of the exposed population is considered taken) is 6.7–19 minutes.

Odontocetes echolocate to find prey, and while there are many different strategies for hunting, one common pattern, especially for deeper diving species, is to conduct multiple repeated deep dives within a feeding bout, and multiple bouts within a day, to find and catch prey. While exposures of the short durations noted above could potentially interrupt a dive or cause an individual to relocate to feed, such a short-duration interruption would be unlikely to have significant impacts on an individual's energy budget and, further, for these species and this open-ocean area, there are no specific known reasons (*i.e.,* these species range GOM-wide beyond the continental slope and there are no known biologically important areas) to expect that there would not be adequate alternate feeding areas relatively nearby, especially considering the anticipated absence of survey activity in the eastern GOM.

As described above, no survey activity is expected within the Dry Tortugas Mitigation Area, which was analyzed and proposed for implementation in the proposed rule. The absence of survey activity in the area is expected to afford additional reduction of impacts to *Kogia* spp., in addition to sperm and beaked whales, given their relatively high density in that area. Importantly, the absence of survey activity in the area will reduce disturbance of these species in places of importance to them for critical behaviors such as foraging and socialization and, overall, help to reduce evaluated risk to the stocks as a whole.

NMFS has analyzed the likely impacts of potential hearing impairment, including the estimated upper bounds of permanent threshold shift (Level A harassment) that could be authorized under the rule, and do not expect that they would result in impacts on reproduction or survival of any individuals. As described in the previous section, the degree of injury for individuals would be expected to be mild, and the predicted PTS resulting from airgun exposure is not likely to affect echolocation performance or communication for *Kogia* spp. Additionally, the extended distance shutdown zone for *Kogia* spp. (1,500 m) is expected to further minimize the severity of any hearing impairment incurred and also to further reduce the likelihood of, and minimize the severity of, more severe behavioral responses.

Of note, due to their pelagic distribution, small size, and cryptic behavior, pygmy sperm whales and dwarf sperm whales are rarely sighted during at-sea surveys and difficult to distinguish between when visually observed in the field. Accordingly, abundance estimates in NMFS SARs are recorded for *Kogia* spp. only, density and take estimates in this rule are similarly lumped for the two species, and there is no additional information by which NMFS could appropriately apportion impacts other than equally/proportionally across the two species.

No mortality of *Kogia* spp. is anticipated or authorized. While it is likely that the majority of the individuals of these two species will be impacted briefly on one or more days during a year of activity by one type of survey or another, based on the nature of the individual exposures and takes, as well as the aggregated scale of the impacts across the GOM, and in consideration of the mitigation discussed here, the impacts of the expected takes from these activities are not likely to adversely impact the GOM stocks of dwarf or pygmy sperm whales through adverse impacts on annual rates of recruitment or survival.

Bottlenose Dolphins

The change in scope did not result in any appreciable change to estimated (and allowable) take of bottlenose dolphins compared to the proposed rule. Specifically, the maximum annual take increased slightly (by approximately 2 percent), while the average annual take decreased slightly (by approximately 1 percent). The EWG analysis, which evaluated the relative significance of the aggregated impacts of the survey activities across seven GOM zones in the context of the vulnerability of each species, concluded that the GOM-wide risk ratings for both oceanic

bottlenose dolphins and coastal/shelf bottlenose dolphins are very low for both scenarios. In the proposed rule, risk was evaluated for bottlenose dolphins GOM-wide (here we have refined the risk evaluation to differentiate between oceanic and coastal/shelf stocks). Evaluated risk is reduced from the proposed rule, where the high effort scenario resulted in a low risk rating and the moderate effort scenario resulted in a moderate risk rating. We further considered the likely severity of any predicted behavioral disruption of bottlenose dolphins in the context of the likely duration of exposure above Level B harassment thresholds. Specifically, the average modeled time per day spent at received levels above 160 dB rms (where 50 percent of the exposed population is considered taken) ranges from 4–11.7 minutes for 2D, 3D NAZ, and 3D WAZ surveys and up to 16.8 minutes for coil surveys (which comprise less than 10 percent of the total projected activity days) and the average time spent between 140 and 160 dB rms is 19.7–54.6 minutes. While exposures of the short durations noted above could potentially interrupt a dive or cause an individual to relocate to feed, among other impacts, such a short-duration interruption would be unlikely to have significant impacts on an individual's energy budget or otherwise impact reproduction or survival.

As described earlier in this preamble, the northern coastal stock of bottlenose dolphin was particularly severely impacted by the DWH oil spill, and was additionally affected by a recent UME. Importantly, as described in Mitigation, NMFS is requiring a seasonal time-area restriction on airgun survey activity within the coastal waters where this stock is likely to be found. The closure area is expected to protect coastal bottlenose dolphins and their habitat through the alleviation or minimization of a range of potential effects of airgun noise, both acute and chronic, that could otherwise accrue to impact the reproduction or survival of individuals in this area. The timing of the restriction provides protection during the times of year thought to be most important for bottlenose dolphin calving and nursing of young. Although some sound from airguns may still propagate into the area from surveys that may occur outside of the area, exposure of bottlenose dolphins to sound levels that would result in Level B harassment will be alleviated or reduced for animals within the closure area. Any exposure to noise that may increase stress levels and exacerbate health problems in bottlenose dolphins still recovering from the effects of the DWH spill will be minimized during this important reproductive period. This important mitigation results in a reduction in the scale of aggregate effects (which, among other things, suggests the comparative number of days across which individual bottlenose dolphins might be taken within a year) and associated risk assessment.

Of note, bottlenose dolphins cannot be identified to stock when visually observed in the field. Abundance estimates in NMFS SARs are based strictly on the location where animals are observed, and available sightings data must be combined in order to develop habitat-based density models for bottlenose dolphins, as were used to inform our acoustic exposure modeling effort. Therefore, density and take estimates in this rule are provided for bottlenose dolphins as a GOM-wide species. However, based on NMFS' stock delineations, we can reasonably assume that dolphins occurring within Zones 4–7 would be from the oceanic stock, while dolphins occurring within Zones 1–3 would be from the shelf stock and/or coastal stocks. Therefore, for the oceanic stock, we are able to draw stock-specific conclusions in this analysis. For coastal/shelf stocks, there is no additional information by which NMFS could appropriately apportion impacts other than equally/proportionally across the stocks, with the exception of predicting reduced impacts to the northern coastal stock as described above. We note that, as a result of BOEM's update to the scope of activity, the eastern coastal stock will not experience any impacts and is accordingly no longer considered in this rule.

No mortality or Level A harassment of bottlenose dolphins is anticipated or authorized. While it is likely that the majority of individual dolphins may be impacted briefly on one or more days during a year of activity by one type of survey or another, based on the nature of the individual exposures (shorter duration) and takes, as well as the aggregated scale of the impacts across the GOM in consideration of the mitigation discussed here, the impacts of the expected takes from these activities are not likely to adversely affect any affected GOM stock of bottlenose dolphins through adverse impacts on annual rates of recruitment or survival.

All Other Stocks

In consideration of the similarities in the nature and scale of impacts, we consider the GOM stocks of the following species together in this section: Rough-toothed dolphin, Clymene dolphin, Atlantic spotted dolphin, pantropical spotted dolphin, striped dolphin, spinner dolphin, Fraser's dolphin, Risso's dolphin, melon-headed whale, pygmy killer whale, false killer whale, killer whale, and short-finned pilot whale. Estimated (and allowable) take of these stocks (including both the maximum annual take and the average annual take) has been reduced as compared to the proposed rule as a result of the change in scope (with the exception of the Atlantic spotted dolphin). For the Atlantic spotted dolphin, the change in scope resulted in increases compared to the proposed rule. Specifically, the maximum annual take increased by approximately 9 percent, while the average annual take increased by approximately 4 percent. These slight increases do not impact our analysis for the stock.

The EWG analysis, which evaluated the relative significance of the aggregated impacts of the survey activities across seven GOM zones in the context of the vulnerability of each species, concluded that the GOM-wide risk ratings for high and moderate effort scenarios ranged from very low to low for these species. For all stocks, there was a trend of decreased or static risk ratings compared to the proposed rule, where the GOM-wide risk ratings for high and moderate effort scenarios ranged from low to moderate.

We further considered the likely severity of any predicted behavioral disruption of the individuals of these species in the context of the likely duration of exposure above Level B harassment thresholds. Specifically, the average modeled time per day spent at received levels above 160 dB rms (where 50 percent of the exposed population is considered taken) ranges from 1.4–11.7 minutes for 2D, 3D NAZ, and 3D WAZ surveys and up to 25.7 minutes for coil surveys (which comprise less than 10 percent of the total projected activity days). The average time per day spent between 140 and 160 dB rms for individuals that are taken is from 8–58.1 minutes, with the one exception of killer whales exposed to noise from coil surveys, which average 73.6 minutes (though we note that the overall risk rating for the species is very low).

Odontocetes echolocate to find prey, and there are many different strategies for hunting. One common pattern for deeper-diving species is to conduct multiple repeated deep dives within a feeding bout, and multiple bouts within a day, to find and catch prey. While

exposures of the shorter durations noted above could potentially interrupt a dive or cause an individual to relocate to feed, such a short-duration interruption would be unlikely to have significant impacts on an individual's energy budget and, further, for these species and this open-ocean area, there are no specific known reasons (*i.e.,* these species range GOM-wide beyond the continental slope and there are no known biologically important areas) to expect that there would not be adequate alternate feeding areas relatively nearby, especially considering the anticipated absence of survey activity in the eastern GOM. For those species that are more shallow feeding species, it is unlikely that the noise exposure considered herein would result in minimal significant disruption of foraging behavior and, therefore, the concomitant energetic effects would similarly be minimal.

Of note, the Atlantic spotted dolphin would benefit (via lessening of both number and severity of takes) from the coastal waters time-area restriction developed to benefit bottlenose dolphins and several additional species experience notably reduced effects from the absence of survey activity in important eastern GOM habitat. Specifically, multiple shelf-break associated and pelagic species (such as Risso's dolphin, melon-headed whales, and rough-toothed dolphins) experience a reduction estimated take from the absence of survey activity in both the Bryde's whale core habitat and Dry Tortugas Areas. Maximum annual and average annual take decreased for these species compared with the proposed rule by 20 and 14 percent, 19 and 15 percent, and 19 and 18 percent, respectively. Numerous other species would be expected to be present in varying numbers at various times.

No mortality or Level A harassment of these species is anticipated or authorized. It is likely that the majority of the individuals of these 13 species will be impacted briefly on one or more days during a year of activity by one type of survey or another. Based on the nature of the individual exposures and takes, as well as the very low to low aggregated scale of the impacts across the GOM and considering the mitigation discussed here, the impacts of the expected takes from these activities are not likely to adversely impact the GOM stocks of any of these 13 GOM stocks of these species through adverse impacts on annual rates of recruitment or survival.

Determination

Based on the analysis contained herein of the likely effects of the specified activities on marine mammals and their habitat, and taking into consideration the implementation of the monitoring and mitigation measures, NMFS finds that the total marine mammal take from the specified activities will have a negligible impact on all affected marine mammal species and stocks.

Small Numbers

The sections below provide an explanation of how NMFS interprets and applies the small numbers standard and remain substantively unchanged from the discussion provided in the notice of proposed rulemaking. Additional discussion appears in Comments and Responses to address specific comments, questions, or recommendations received from the public.

What are small numbers?

The term ''small numbers'' appears in section 101(a)(5)(A) of the MMPA as follows:

(5)(A)(i) Upon request therefor by citizens of the United States who engage in a specified activity (other than commercial fishing) within a specified geographical region, the Secretary shall allow, during periods of not more than five consecutive years each, the incidental, but not intentional, taking by citizens while engaging in that activity within that region of *small numbers* of marine mammals of a species or population stock if the Secretary, after notice (in the **Federal Register** and in newspapers of general circulation, and through appropriate electronic media, in the coastal areas that may be affected by such activity) and opportunity for public comment—

(I) finds that the total of such taking during each five-year (or less) period concerned will have a negligible impact on such species or stock and will not have an unmitigable adverse impact on the availability of such species or stock for taking for subsistence uses [. . .] and

(II) prescribes regulations setting forth—

(aa) permissible methods of taking pursuant to such activity, and other means of effecting the least practicable adverse impact on such species or stock and its habitat, paying particular attention to rookeries, mating grounds, and areas of similar significance, and on the availability of such species or stock for subsistence uses; and

(bb) requirements pertaining to the monitoring and reporting of such taking.

(Emphasis added.)

In addition to section 101(a)(5)(A), the MMPA as amended in 1994 includes a similar provision in section 101(a)(5)(D), which provides for the issuance of incidental take authorizations for small numbers of marine mammals without the need for regulations, effective for up to one year, where the taking is limited to harassment:

(5)(D)(i) Upon request therefor by citizens of the United States who engage in a specified activity (other than commercial fishing) within a specific geographic region, the Secretary shall authorize, for periods of not more than 1 year, subject to such conditions as the Secretary may specify, the incidental, but not intentional, taking by harassment of *small numbers* of marine mammals of a species or population stock by such citizens while engaging in that activity within that region if the Secretary finds that such harassment during each period concerned—

(I) will have a negligible impact on such species or stock, and

(II) will not have an unmitigable adverse impact on the availability of such species or stock for taking for subsistence uses[.]

(Emphasis added.)

The MMPA does not define ''small numbers.'' NMFS' and the U.S. Fish and Wildlife Service's 1989 implementing regulations defined small numbers as a portion of a marine mammal species or stock whose taking would have a negligible impact on that species or stock. This definition was invalidated in *Natural Resources Defense Council* v. *Evans,* 279 F.Supp.2d 1129 (2003) (N.D. Cal. 2003), based on the court's determination that the regulatory definition of small numbers was improperly conflated with the regulatory definition of ''negligible impact,'' which rendered the small numbers standard superfluous. As the court observed, ''the plain language indicates that small numbers is a separate requirement from negligible impact.'' Since that time, NMFS has not applied the definition found in its regulations. Rather, consistent with Congress' pronouncement that small numbers is not a concept that can be expressed in absolute terms (House Committee on Merchant Marine and Fisheries Report No. 97–228 (September 16, 1981)), NMFS makes its small numbers findings based on an analysis of whether the number of individuals authorized to be taken annually from a specified activity is small relative to the stock or population size. The Ninth Circuit has upheld a similar approach. See *Center for Biological Diversity* v. *Salazar,* 695 F.3d 893 (9th Cir. 2012).

However, NMFS has not historically indicated what the agency believes to be the upper limit of small numbers.

To maintain an interpretation of small numbers as a proportion of a species or stock that does not conflate with negligible impact, NMFS uses a simple approach that establishes equal bins corresponding to small, medium, and large proportions of the population abundance. NMFS then compares the number of individuals estimated and authorized to be taken against the best available abundance estimate for that species or stock.

It can be challenging to predict the numbers of individual marine mammals that will be taken by an activity. Many models calculate instances of take but are unable to account for repeated exposures of individual marine mammals, though the instances of take necessarily represent the upper bound of the number of individuals. In some of those cases, such as for this rule (see Estimated Take), we are able to generate a more refined estimate of the numbers of individuals predicted to be taken utilizing a combination of quantitative tools and qualitative information. When an acceptable estimate of the individual marine mammals taken is available,[20] the small numbers determination is based directly upon whether these estimates exceed one-third of the stock abundance. In other words, consistent with past practice, when the estimated number of individual animals taken (which may or may not be assumed as equal to the total number of takes, depending on the available information) is up to, but not greater than, one-third of the most appropriate species or stock abundance, NMFS will determine that the numbers of marine mammals taken of a species or stock are small.

Another circumstance in which NMFS considers it appropriate to make a small numbers finding is in the case of a species or stock that may potentially be taken but is either rarely encountered or only expected to be taken on rare occasions. In that circumstance, one or two assumed encounters with a group of animals (meaning a group that is traveling together or aggregated, and thus exposed to a stressor at the same approximate time) should reasonably be considered small numbers, regardless of consideration of the proportion of the stock, as infrequent or rare encounters resulting in take of one or two groups should be considered small relative to the range and distribution of any stock.

In summary, when quantitative take estimates of individual marine mammals are available or inferable through consideration of additional factors, and the number of animals taken is one-third or less of the best available abundance estimate for the species or stock, NMFS considers it to be of small numbers. NMFS may also appropriately find that one or two predicted group encounters will result in small numbers of take relative to the range and distribution of a species, regardless of the estimated proportion of the abundance.

Is the small numbers standard evaluated based on total take under incidental take regulations or within the context of an individual letter of authorization?

Neither the MMPA nor NMFS' implementing regulations address whether the small numbers determination should be based upon the total annual taking for (1) all activities occurring under specific incidental take regulation or (2) to individual LOAs issued thereunder. The MMPA does not define small numbers or explain how to apply the term in either paragraph (A) or (D) of section 101(a)(5), including how to apply the term in a way that allows for consistency between those two very similar provisions in the statute. Whether to apply the small numbers finding to each individual LOA under regulations that cover multiple concurrent LOA holders is a matter of first impression for NMFS.

Specifically, section 101(a)(5)(A)(i)(I) explicitly states that the negligible impact determination for a specified activity must take into account the total taking over the five-year period, but the small numbers language is not tied explicitly to the same language. Rather, the small numbers provision appears in section 101(a)(5)(A)(i) as a limitation on what the Secretary may allow. The regulatory vehicle for authorizing (*i.e.,* ''allowing'') the take of marine mammals is the LOA.

Given NMFS' discretion in light of the ambiguities in the statute regarding how to apply the small numbers standard, we have determined that the small numbers finding should be applied to the annual take authorized per individual LOA, rather than to the total annual taking for all activities potentially occurring under the incidental take regulations. This per-LOA approach harmonizes section 101(a)(5)(A) with the per-IHA application in section 101(a)(5)(D) of the MMPA.[21] This per-LOA approach is not only permissible but also preferable to the total annual taking approach because NMFS' per-LOA approach to small numbers in section 101(a)(5)(A) affords greater regulatory flexibility to utilize section 101(a)(5)(A) when there are benefits to doing so for the resource (marine mammals), the public, prospective applicants, and administrative efficiency:

- From a resource protection standpoint, it is better to conduct a comprehensive negligible impact analysis that considers all of the activities covered under the rule (versus considering them independently pursuant to individual IHAs) and ensures that the total combined taking from those activities will have a negligible impact on the affected marine mammal species or stocks and no unmitigable adverse impact on subsistence uses. Furthermore, mitigation and monitoring are more effective when considered across all activity and years covered under regulations.
- From an agency resource standpoint, it ultimately will save significant time and effort to cover multi-year activities under a rule instead of multiple incidental harassment authorizations (IHAs). While regulations require more analysis up front, additional public comment and internal review, and additional time to promulgate compared to a single IHA, they are effective for up to five years (for non-military readiness activities) and can cover multiple actors within a year. The process of issuing individual LOAs under incidental take regulations utilizes the analysis, public comment, and review that was conducted for the regulations, and takes significantly less time than it takes to issue independent IHAs.
- From an applicant standpoint, incidental take regulations offer more regulatory certainty than IHAs (five years versus one year) and significant cost savings, both in time and environmental compliance analysis and documentation. This is especially true for situations like here, where multiple applicants will be applying for individual LOAs under regulations. In the case of this rule, the certainty afforded by the promulgation of a regulatory framework (*e.g.,* by using previously established take estimates, mitigation and monitoring

[20] We note that although NMFS' implementing regulations require applications for incidental take to include an estimate of the marine mammals to be taken, there is nothing in section 101(a)(5)(A) (or (D)) that requires NMFS to quantify or estimate numbers of marine mammals to be taken for purposes of evaluating whether the number is small. (See *CBD* v. *Salazar.*)

[21] As the court observed in *Native Village of Chickaloon* v. *NMFS,* 947 F. Supp. 2d 1031, 1049 n.123 (D. Alaska 2013) ''the same statutory standards apply'' to incidental take authorization under both provisions.

requirements, and procedures for requesting and obtaining an LOA) is a significant benefit for prospective applicants.

NMFS' evaluation of past IHAs suggests that bundling together the activities covered by two or three IHAs that might be ideal subjects for a combined incidental take regulation (*e.g.,* for ongoing maintenance construction activities, or seismic surveys in the Arctic by different entities) may exceed the taking of small numbers of a species if NMFS were to apply the small numbers standard across all taking contemplated by the regulation in a year. In other words, if the small numbers standard is applied to the total annual taking under a rule, NMFS may not be able to make the necessary small numbers finding, which would preclude the use of section 101(a)(5)(A) for multiple activities, thereby eliminating the opportunity to derive the resource and streamlining benefits outlined above. Also, application of the small numbers standard across the total annual taking covered by an incidental take regulation, inasmuch as prospective applicants can see that the total annual take may exceed one-third of species or stock abundance, would create an incentive for applicants to pursue individual IHAs (again, precluding the ability to gain the benefits outlined above).

Our conclusion is that NMFS can appropriately elect to make a ''small numbers'' finding based on the estimated annual take in individual LOAs issued under the rule. This approach does not affect the negligible impact analysis for a rule, which is the biologically relevant inquiry and based on the total annual estimated taking for all activities the regulations will govern. Making the small numbers finding based on the estimated annual take in individual LOAs allows NMFS to take advantage of the associated administrative and environmental benefits of utilizing section 101(a)(5)(A) that would be precluded in many cases if small numbers were required to be applied to the total annual taking under the regulations. NMFS finds this method of making a small numbers determination to be a permissible interpretation of the relevant MMPA provisions.

Although this application of small numbers may be argued as being less protective of marine mammals, NMFS disagrees. As noted previously, the small numbers standard has less biological significance as compared to the substantive and contextually-specific analysis necessary to support the negligible impact determination. The negligible impact determination is still controlling, and the maximum total annual taking that may be authorized across all LOAs under an incidental take regulation still could not exceed the overall amount analyzed for the negligible impact determination. Thus, under this option, the negligible impact analysis for the rulemaking still would have to be conducted for the time period explicitly specified in the statute (*i.e.,* up to five years), but the small numbers analysis would attach to the instrument itself that authorizes the taking, *i.e.,* the LOA.

How will small numbers be evaluated under this GOM rule?

In this rule, up-to-date species information is available, and sophisticated models have been used to estimate take in a manner that will allow for quantitative comparison of the take of individuals versus the best available abundance estimates for the species or stocks. Specifically, while the modeling effort utilized in the rule enumerates the estimated instances of takes that will occur across days as the result of the operation of certain survey types in certain areas, the modeling report also includes the evaluation of a test scenario that allows for a reasonable modification of those generalized take estimates to better estimate the number of individuals that will be taken within one survey. LOA applicants using modeling results from the rule to inform their applications will be able to reasonably estimate the number of marine mammal individuals taken by their activities. LOA applications that do not use the modeling provided in the rule to estimate take for their activities will need to be reviewed, and applicants will be required to ensure that their estimates adequately inform the small numbers finding. If applicants use the modeling provided by this rule to estimate take, additional review will not be deemed necessary (unless other conditions necessitating review exist, as described in the Letters of Authorization section). If applicants do not use the modeling provided by the rule, however, NMFS may publish a notice in the **Federal Register** soliciting public comment, if the model or inputs differ substantively from those that have been reviewed by NMFS and the public previously, if the model or inputs differ substantively from those that have been reviewed by NMFS and the public previously. The estimated take of marine mammals for each species will then be compared against the best available scientific information on species or stock abundance estimate as determined by NMFS, and estimates that do not exceed one-third of that estimate will be considered small numbers.

Adaptive Management

The regulations governing the take of marine mammals incidental to geophysical survey activities contain an adaptive management component. The comprehensive reporting requirements associated with this rule (see the Monitoring and Reporting section) are designed to provide NMFS with monitoring data from the previous year to allow consideration of whether any changes are appropriate. The use of adaptive management allows NMFS to consider new information from different sources to determine (with input from the LOA-holders regarding practicability) on a regular (*e.g.,* annual or biennial) basis if mitigation or monitoring measures should be modified (including additions or deletions). Mitigation measures could be modified if new data suggests that such modifications would have a reasonable likelihood of reducing adverse effects to marine mammal species or stocks or their habitat and if the measures are practicable. The adaptive management process and associated reporting requirements would serve as the basis for evaluating performance and compliance.

The following are some of the possible sources of applicable data to be considered through the adaptive management process: (1) Results from monitoring reports, as required by MMPA authorizations; (2) results from general marine mammal and sound research; and (3) any information which reveals that marine mammals may have been taken in a manner, extent, or number not authorized through these regulations and subsequent LOAs or that the specified activity may be having more than a negligible impact on affected stocks.

Under this rule, NMFS plans to implement an annual adaptive management process including BOEM, BSEE, industry operators (including geophysical companies as well as exploration and production companies), and others as appropriate. Industry operators may elect to be represented in this process by their respective trade associations. NMFS, BOEM, and BSEE (*i.e.,* the regulatory agencies) and industry operators who have conducted or contracted for survey operations in the GOM in the prior year (or their representatives) will provide an agreed-upon description of roles and responsibilities, as well as points of contact, in advance of each year's

adaptive management process. The foundation of the adaptive management process will be the annual comprehensive reports produced by LOA-holders (or their representatives), as well as the results of any relevant research activities, including research supported voluntarily by the oil and gas industry and research supported by the Federal government. Please see the Monitoring Contribution Through Other Research section in the notice of proposed rulemaking for a description of representative past research efforts. The outcome of the annual adaptive management process would be an assessment of effects to marine mammal populations in the GOM relative to NMFS' determinations under the MMPA and ESA, recommendations related to mitigation, monitoring, and reporting, and recommendations for future research (whether supported by industry or the regulatory agencies).

Data collection and reporting by individual LOA-holders will occur on an ongoing basis, per the terms of issued LOAs. In a given annual cycle, the comprehensive annual report will summarize and synthesize all LOA-specific reports received, with report development (supported through collaboration of individual LOA-holders or by their representatives) occurring for 90 days following the end of a given one-year period. Review and revision of the report, followed by a joint meeting of the parties, will occur within 90 days following receipt of the annual report. Any agreed-upon modifications will occur through the process for modifications and/or adaptive management described in the regulatory text following this preamble.

Monitoring Contribution Through Other Research

NMFS' MMPA implementing regulations require that applicants for incidental take authorizations describe the suggested means of coordinating research opportunities, plans, and activities relating to reducing incidental taking and evaluating its effects (50 CFR 216.104(a)(14)). Such coordination can serve as an effective supplement to the monitoring and reporting required pursuant to issued LOAs and/or incidental take regulations. NMFS expects that relevant research efforts will inform the annual adaptive management process described above, and that levels and types of research efforts will change from year to year in response to identified needs and evolutions in knowledge, emerging trends in the economy and available funding, and available scientific and technological resources. In the notice of proposed rulemaking, NMFS described examples of relevant research efforts (83 FR 29300–29301). We do not repeat that information here, but refer the reader to that notice for more information. The described efforts may not be predictive of any future levels and types of research efforts. Research occurring in locations other than the GOM may be relevant to understanding the effects of geophysical surveys on marine mammals or marine mammal populations or the effectiveness of mitigation. NMFS also refers the reader to the industry Joint Industry Program (JIP) website (*www.soundandmarinelife.org*), which hosts a database of available products funded partially or fully through the JIP, and to BOEM's Environmental Studies Program (ESP), which develops, funds, and manages scientific research to inform policy decisions regarding outer continental shelf resource development (*www.boem.gov/studies).*

Impact on Availability of Affected Species for Taking for Subsistence Uses

There are no relevant subsistence uses of marine mammals implicated by these actions. Therefore, NMFS has determined that the total taking of affected species or stocks will not have an unmitigable adverse impact on the availability of such species or stocks for taking for subsistence purposes.

Endangered Species Act (ESA)

Section 7 of the ESA requires Federal agencies to insure that their actions are not likely to jeopardize the continued existence of endangered or threatened species or adversely modify or destroy their designated critical habitat. Federal agencies must consult with NMFS for actions that may affect such species under NMFS' jurisdiction or critical habitat designated for such species.

At the conclusion of consultation, the consulting agency provides an opinion stating whether the Federal agency's action is likely to jeopardize the continued existence of ESA-listed species or destroy or adversely modify designated critical habitat.

NMFS's issuance of this final rule, and any subsequent LOAs, is subject to the requirements of Section 7 of the ESA. Therefore, NMFS' Office of Protected Resources (OPR), Permits and Conservation Division requested initiation of a formal consultation with the NMFS OPR, ESA Interagency Cooperation Division on the proposed issuance of the rule and subsequent LOAs on July 19, 2018. The formal consultation concluded and a final Biological Opinion (BiOp) was issued on March 13, 2020. The BiOp concluded that the Permits and Conservation Division's proposed action is not likely to jeopardize the continued existence of sperm whales or the GOM Bryde's whale.

National Environmental Policy Act

In 2017, BOEM produced a final Programmatic Environmental Impact Statement (PEIS) to evaluate the direct, indirect, and cumulative impacts of geological and geophysical survey activities on the GOM OCS, pursuant to requirements of NEPA. These activities include geophysical surveys in support of hydrocarbon exploration, as are described in the MMPA petition before NMFS. The PEIS is available online at: *www.boem.gov/Gulf-of-Mexico-Geological-and-Geophysical-Activities-Programmatic-EIS/*. NOAA, through NMFS, participated in preparation of the PEIS as a cooperating agency due to its legal jurisdiction and special expertise in conservation and management of marine mammals, including its responsibility to authorize incidental take of marine mammals under the MMPA.

NEPA, Council on Environmental Quality (CEQ) regulations, and NOAA's NEPA implementing procedures (NOAA Administrative Order (NAO) 216–6A) encourage the use of programmatic NEPA documents to streamline decision-making. NMFS reviewed the Final PEIS and determined that it meets the requirements of the CEQ regulations (40 CFR part 1500–1508) and NAO 216–6A. NMFS further determined, after independent review, that the Final PEIS satisfied NMFS' comments and suggestions in the NEPA process. In the notice of proposed rulemaking, NMFS stated its intention to adopt BOEM's analysis in order to assess the impacts to the human environment of issuance of the subject ITR, and that we would review all comments submitted in response to the notice as we completed the NEPA process, including a final decision of whether to adopt BOEM's PEIS and sign a Record of Decision related to issuance of the ITR and subsequent LOAs. Following review of public comments received, NMFS confirmed that it would be appropriate to adopt BOEM's analysis in order to support assessment of the impacts to the human environment of issuance of the subject ITR and subsequent LOAs. Therefore NMFS prepared a Record of Decision for the following purposes: (1) To adopt the Final PEIS to support NMFS' analysis associated with issuance of incidental take authorizations pursuant to section 101(a)(5)(A) or (D) of the MMPA and the regulations governing the taking and

importing of marine mammals (50 CFR part 216); and (2) in accordance with 40 CFR 1505.2, to announce and explain the basis for NMFS' decision to review and potentially issue incidental take authorizations under the MMPA on a case-by-case basis, if appropriate.

Letters of Authorization

Under these incidental take regulations, industry operators may apply for and obtain LOAs, as described in NMFS' MMPA implementing regulations (50 CFR 216.106). LOAs may be issued for any time period that does not exceed the effective duration of the final rule, provided the description of the activity in the request includes a sufficient degree of specificity with which to evaluate whether the activity falls within the scope of the rule. Because the specified activity described herein does not provide actual specifics of the timing, location, and survey design for activities that would be the subject of issued LOAs, such requests must include, at minimum, the information described at 50 CFR 216.104(a)(1) and (2), and should include an affirmation of intent to adhere to the mitigation, monitoring, and reporting requirements described in the regulations. The level of effort proposed by an operator would be used to develop an LOA-specific take estimate based on the results of Zeddies *et al.* (2015, 2017a).

The proposed rule indicated that LOA applications with take estimates based on modeling other than that specifically included in the modeling report used to support the EIS and the proposed rule (Zeddies *et al.,* 2015, 2017a) would be published for public comment prior to the issuance of an LOA. However, upon further consideration of the ''*Gulf of Mexico Acoustic Exposure Model Variable Analysis*'' (Zeddies *et al.,* 2017b; ''Acoustic Exposure Model Variable Analysis'') provided by IAGC and API to NMFS prior to the publication of the proposed rule and made available to the public with the proposed rule and the Associations' public comments, which extensively referenced the Acoustic Exposure Model Variable Analysis, the final rule more flexibly provides that if applicants do not use the modeling provided by the rule, NMFS may publish a notice in the **Federal Register** soliciting public comment, if the model or inputs differ substantively from those that have been reviewed by NMFS and the public previously. Specifically, the Acoustic Exposure Model Variable Analysis includes the results (*i.e.,* take estimates) of a supplemental analysis of the same modeling effort used in Zeddies *et al.* (2015, 2017a) to support the proposed rule, but evaluating the effects on the modeling results of different variables. One analyzed variable of particular utility was the use of a smaller airgun array that could serve as a reasonable representative for some of the smaller arrays that are commonly used in the GOM. This specific applicable example, in which the model and inputs of this Acoustic Exposure Model Variable Analysis have been reviewed by NMFS and the public previously (both in that they mirror Zeddies *et al.* (2015, 2017a) and in that NMFS also explicitly made the Acoustic Exposure Model Variable Analysis available to the public during the comment period), illustrates the need to provide flexibility and make efficient use of previous public and agency review. NMFS has, therefore, determined it appropriate to allow that additional public review is not needed unless the model or inputs differ substantively from those that have been reviewed by NMFS and the public previously. Further, we explicitly note the utility of the modeling and results presented in the Acoustic Exposure Model Variable Analysis report for representing smaller airgun arrays that are commonly used in the GOM and affirm that further public comment on that report should not be necessary prior to the use of its results to support the issuance of LOAs.

Technologies continue to evolve to meet the technical, environmental, and economic challenges of oil and gas development. The use of ''new and unusual technologies'' (NUT), *i.e.,* technologies other than those described herein, will be evaluated on a case-by-case basis and may require public review. Some seemingly new technologies proposed for use by operators are often extended applications of existing technologies and interface with the environment in essentially the same way as well-known or conventional technologies. For such evaluations, NMFS will follow the existing process used by BOEM, by using the following considerations:

- Has the technology or hardware been used previously or extensively in the U.S. GOM under operating conditions similar to those anticipated for the activities proposed by the operator? If so, the technology would not be considered a NUT;
- Does the technology function in a manner that potentially causes different impacts to the environment than similar equipment or procedures did in the past? If so, the technology would be considered a NUT;
- Does the technology have a significantly different interface with the environment than similar equipment or procedures did in the past? If so, the technology would be considered a NUT; and
- Does the technology include operating characteristics that are outside established performance parameters? If so, the technology would be considered a NUT.

NMFS will consult with BOEM as well as with NMFS' ESA Interagency Cooperation Division regarding the level of review necessary for issuance of an LOA in which a NUT is proposed for use.

Classification

Pursuant to the procedures established to implement Executive Order 12866, the Office of Management and Budget (OMB) has determined that this rule is economically significant. Accordingly, a regulatory impact analysis (RIA) was prepared and made available for review by the public. Following review of public comments, a final RIA has been prepared and is available online at: *www.fisheries.noaa.gov/action/incidental-take-authorization-oil-and-gas-industry-geophysical-survey-activity-gulf-mexico.* Appendix B of the RIA provides a final regulatory flexibility analysis (FRFA, discussed below), while Appendix C addresses other compliance requirements.

The RIA evaluates the potential costs and benefits of these incidental take regulations against two baselines, a baseline corresponding with regulatory conditions in place since 2013 pursuant to a settlement agreement, as amended through stipulated agreement, involving a stay of litigation (*NRDC et al.* v. *Bernhardt et al.,* Civil Action No. 2:10 cv–01882 (E.D. La.)), and a baseline corresponding to conditions prior to the 2013 settlement agreement. Under the settlement agreement that is in effect, industry trade groups representing operators agreed to include certain mitigation requirements for geophysical surveys in the GOM.

OMB Circular A–4 provides that agencies may present multiple baselines where this would provide additional useful information to the public on the projected effects of the regulation. NMFS presented both baselines for public information and comment, consistent with the Circular A–4 provision allowing agencies to present multiple baselines. No information or comments regarding the economic baselines were received.

These regulations require new mitigation measures relative to the settlement baseline and, thus, new costs for survey operators. However, the rule

also alleviates the burden of implementing minimum separation distance requirements for deep penetration airgun surveys, as required under the settlement agreement. The rule also results in certain indirect (but non-monetized) costs. However, the RIA analysis demonstrates that these costs are not likely to be significant. Moreover, as described in the RIA, total costs related to compliance for survey activities are small compared with expenditures on other aspects of oil and gas industry operations, and direct compliance costs of the regulatory requirements are unlikely to result in materially reduced oil and gas activities in the GOM.

The rule also results in certain non-monetized benefits. The protection of marine mammals afforded by this rule (pursuant to the requirements of the MMPA) benefits the regional economic value of marine mammals via tourism and recreation to some extent, as mitigation measures applied to geophysical survey activities in the GOM region are expected to benefit the marine mammal populations that support this economic activity in the GOM. In addition, some degree of benefits can be expected to accrue solely via ecological benefits to marine mammals and other wildlife as a result of the regulatory requirements. The published literature (described in the RIA) is clear that healthy populations of marine mammals and other co-existing species benefit regional economies and provide social welfare benefits to people. However, the literature does not provide a basis for quantitatively valuing the cost of anticipated incremental changes in environmental disturbance and marine mammal harassment associated with the rule.

Notably, the rule also affords significant benefit to the regulated industry by providing regulatory certainty through an efficient framework within which to achieve compliance with the MMPA. In particular, cost savings may be generated by the reduced administrative effort required to obtain an LOA under the framework established by a rule compared to what would be required to obtain an incidental harassment authorization (IHA) under section 101(a)(5)(D). Absent the rule, to attain equivalent compliance with the MMPA, survey operators in the GOM would need to apply for an IHA. Although not monetized in the RIA, NMFS' analysis indicates that the upfront work associated with the rule (*e.g.,* analyses, modeling, process for obtaining LOA) likely saves significant time and money for operators. A conservative cost savings calculation, based on estimates of the costs for IHA applications relative to LOA application costs and an assumption of the number of likely authorizations based on total annual survey days and survey estimates included in the RIA, ranges from $500,000 to $1.5 million annually. In terms of timing, NMFS recommends that IHA applicants contact the agency six to nine months in advance of the planned activity, whereas NMFS anticipates a timeframe of three months or less (depending upon the content of the request and the activities covered) for LOA applications under this rule.

Details regarding cost estimation are available in the RIA. A qualitative evaluation of indirect costs related to the regulations is also provided in the RIA. Note that these costs would be diffused across all operators receiving LOAs.

NMFS prepared a FRFA, as required by Section 603 of the Regulatory Flexibility Act (RFA), for this rule. The FRFA describes the economic effects this rule will have on small entities. A description of this action, why it is being considered, the objectives of the action, and the legal basis for the action are contained in the preamble of this rule. A copy of the full analysis is available as an appendix to the RIA. The MMPA provides the statutory basis for this rule. No duplicative, overlapping, or conflicting Federal rules have been identified. A detailed summary of the initial regulatory flexibility analysis was provided at the proposed rule stage. No comments or information regarding this analysis were received.

This final rule is expected to directly regulate businesses that conduct geophysical surveys in the GOM with the potential to incidentally take marine mammals. Some of these businesses may be defined as small entities. The FRFA is summarized below.

The FRFA focuses on identifying small businesses that would bear the incremental survey costs associated with the rule. These may include entities undertaking, commissioning, or purchasing surveys. In order to estimate the number of small entities to which the rule will apply, permit applications between 2006 and 2015 were analyzed to understand what industries were involved in permit applications for geophysical surveys in the Gulf of Mexico and to identify U.S.-based permit applicants that would be classified as small according to Small Business Administration definitions and the most recent revenue or employment data available. In total, 34 U.S.-based small businesses applied for geophysical survey permits in the Gulf of Mexico between 2006 and 2015. By assuming that the same proportion of international, large, and small companies will undertake the surveys over the next five years as occurred during 2006 to 2015, the likely number of future surveys that will include small entity applicants may be estimated. Accordingly, NMFS estimates that small entities would apply for approximately 32 to 53 surveys over the next five years, or approximately six to 11 surveys annually. Historically, there was a ratio of approximately 2.2 surveys applied for per small entity. Using this ratio, NMFS estimates that approximately 15 to 24 small companies will likely apply for permits over the next five years, or approximately 3 to 5 small companies each year. The future distribution of small survey companies by industry is not known, but the historical pattern of surveys suggests that companies involved in oil and gas extraction (NAICS 2111) and support activities for oil and gas (213112) will account for the majority of the survey applications by small companies.

A review of the reported annual revenues for the 34 small entities that applied for survey permits between 2006 and 2015 reveals a wide range, with the lowest revenues reported to be $0.04 million and the highest revenues reported to be $1.9 billion. Average revenues for the small entities who applied for permits were $232 million, with median revenues of $12.26 million. We note, however, that the revenues and numbers of employees reported for many of these small companies appeared to be erroneous, in multiple instances reporting annual revenues significantly less than the costs of conducting even the lowest cost surveys. As a result, these revenue estimates are likely to be inaccurate or, alternatively, permit applicants must pass survey costs on to the companies that purchase or commission the seismic data. Given that the oil and gas extraction companies are generally the entities purchasing the survey data, we expect that it is most likely that survey costs are ultimately borne by NAICS 2111 (oil and gas extraction), either as the permittees for the survey permit or because the other, smaller businesses pass these costs along in the data purchase price.

In summary, the FRFA finds the following: First, in the majority of cases (88 percent), survey permit applicants are large businesses. Second, when the permit applicants are small businesses, the majority of the time (63 percent) they are oil and gas extractors (NAICS 2111). Third, together, these permits (for large businesses and small businesses with high annual revenues for which

rule costs are a small fraction) account for 96 percent of the survey permits. Fourth, while small entities in other industries occasionally apply for permits (four percent historically), these businesses are quite small, with average annual revenues in the millions or even less. Given their size, it is unlikely that these permit applicants bear survey costs; otherwise it would be reflected in their annual revenues (*i.e.,* their revenues on average would reflect that they recover their costs). Accordingly, NMFS expects it is most likely that survey costs are passed on to oil and gas extraction companies who commission the surveys or purchase the data. And fifth, overall, up to five small businesses (NAICS 2111) per year may experience increased costs of between 0.1 and 0.7 percent of average annual revenues.

The draft version of the RIA and the Initial Regulatory Flexibility Analysis considered effects of a more stringent alternative than the proposed rule. The more stringent alternative included additional shutdown requirements and area closures for surveys, generating costs up to 20 percent greater than the proposed rule. NMFS did not elect to proceed with these elements of the more stringent alternative in the final rule, which reduces the potential for impacts to small businesses. NMFS determined that the final rule achieves the statutory objectives with a lower regulatory burden. As described above, a relatively small portion of total survey activities are undertaken by small entities and the FRFA determines that it is unlikely that small entities will bear the compliance costs described in the RIA.

This final rule revises the information collection request (ICR) requirement associated with OMB Control Number 0648–0151 to allow for the expected increase in applicants/respondents due to this final action. This revision is subject to review and approval by OMB under the Paperwork Reduction Act (PRA) and has been submitted to OMB. NMFS published a 30-day **Federal Register** notice (85 FR 60765; September 28, 2020) that provided for an additional comment period. Details on the new information collection requirements can be found in the RIA Appendix C.2. NMFS anticipates that 95 to 151 geophysical surveys will take place annually on average over the five years of the regulations in the GOM that would be subject to potential information collection requirements. Due to this final rule, NMFS estimates at least 95 new LOA applications annually. Because the existing OMB Control Number 0648–0151 expires less than a year (June 30, 2021) after this final rule publishes, there will be less than a year for respondents to carry out work under these regulations before this OMB Control Number expires. Thus, NMFS estimates no more than one-quarter of respondents (24) will complete work to the point of developing an annual report prior to when 0648–0151 must be renewed.

We invite the general public and other Federal agencies to comment on proposed and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public's reporting burden. Written comments and recommendations for this information collection should be submitted at the following website: *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by using the search function and entering either the title of the collection or the OMB Control Number 0648–0151.

Notwithstanding any other provision of the law, no person is required to respond to, nor shall any person be subject to a penalty for failure to comply with, a collection of information subject to the requirements of the PRA, unless that collection of information displays a currently valid OMB Control Number.

List of Subjects in 50 CFR Part 217

Exports, Fish, Imports, Indians, Labeling, Marine mammals, Penalties, Reporting and recordkeeping requirements, Seafood, Transportation.

Dated: December 7, 2020.

Samuel D. Rauch III,

Deputy Assistant Administrator for Regulatory Programs, National Marine Fisheries Service.

For reasons set forth in the preamble, 50 CFR part 217 is amended as follows:

PART 217—REGULATIONS GOVERNING THE TAKING AND IMPORTING OF MARINE MAMMALS

■ 1. The authority citation for part 217 continues to read as follows:

Authority: 16 U.S.C. 1361 *et seq.*

■ 2. Add Subpart S, consisting of §§ 217.180 through 217.189, to read as follows:

Subpart S—Taking Marine Mammals Incidental to Geophysical Survey Activities in the Gulf of Mexico

Sec.

Subpart S—Taking Marine Mammals Incidental to Geophysical Survey Activities in the Gulf of Mexico

§ 217.180 Specified activity and specified geographical region.

(a) Regulations in this subpart apply only to oil and gas industry operators (LOA-holders), and those persons authorized to conduct activities on their behalf, for the taking of marine mammals that occurs in the area outlined in paragraph (b) of this section and that occurs incidental to geophysical survey activities.

(b) The taking of marine mammals by oil and gas industry operators may be authorized in a Letter of Authorization (LOA) only if it occurs within U.S. waters in the Gulf of Mexico, outside the area subject to a Congressional leasing moratorium under the Gulf of Mexico Energy Security Act (GOMESA) (Pub L. 109–432, § 104) as of the effective date of these regulations.

§ 217.181 Effective dates.

Regulations in this subpart are effective from April 19, 2021 through April 19, 2026.

§ 217.182 Permissible methods of taking.

Under LOAs issued pursuant to §§ 216.106 of this chapter and 217.186, LOA-holders may incidentally, but not intentionally, take marine mammals within the area described in § 217.180(b) by Level A and Level B harassment associated with geophysical survey activities, provided the activity is in compliance with all terms, conditions, and requirements of the regulations in this subpart and the appropriate LOA.

§ 217.183 Prohibitions.

Notwithstanding takings contemplated in §§ 217.180 and 217.182, and authorized by a LOA issued under §§ 216.106 of this chapter and 217.186, no person in connection with the activities described in § 217.180 may:

(a) Violate, or fail to comply with, the terms, conditions, and requirements of this subpart or a LOA issued under §§ 216.106 of this chapter and 217.186;

(b) Take any marine mammal not specified in such LOAs;

(c) Take any marine mammal specified in such LOAs in any manner other than as specified; or

(d) Take a marine mammal specified in such LOAs if NMFS determines such

taking results in more than a negligible impact on the species or stocks of such marine mammal.

§ 217.184 Mitigation requirements.

When conducting the activities identified in § 217.180, the mitigation measures contained in any LOA issued under §§ 216.106 of this chapter and 217.186 must be implemented. These mitigation measures shall include but are not limited to:

(a) *General conditions.* (1) A copy of any issued LOA must be in the possession of the LOA-holder, vessel operator, other relevant personnel, the lead protected species observer (PSO), and any other relevant designees operating under the authority of the LOA.

(2) The LOA-holder must instruct relevant vessel personnel with regard to the authority of the protected species monitoring team (PSO team), and must ensure that relevant vessel personnel and PSO team participate in a joint onboard briefing, led by the vessel operator and lead PSO, prior to beginning work to ensure that responsibilities, communication procedures, protected species monitoring protocols, operational procedures, and LOA requirements are clearly understood. This briefing must be repeated when relevant new personnel join the survey operations before work involving those personnel commences.

(3) The acoustic source must be deactivated when not acquiring data or preparing to acquire data, except as necessary for testing. Unnecessary use of the acoustic source must be avoided. For surveys using airgun arrays as the acoustic source, notified operational capacity (*i.e.,* total array volume) (not including redundant backup airguns) must not be exceeded during the survey, except where unavoidable for source testing and calibration purposes. All occasions where activated source volume exceeds notified operational capacity must be communicated to the PSO(s) on duty and fully documented. The lead PSO must be granted access to relevant instrumentation documenting acoustic source power and/or operational volume.

(4) PSOs must be used as specified in this paragraph (a)(4).

(i) LOA-holders must use independent, dedicated, qualified PSOs, meaning that the PSOs must be employed by a third-party observer provider, must have no tasks other than to conduct observational effort, collect data, and communicate with and instruct relevant vessel crew with regard to the presence of protected species and mitigation requirements (including brief alerts regarding maritime hazards), and must be qualified pursuant to § 217.185(a) (except as specified at § 217.184(d)(2)(iii–iv)). Acoustic PSOs are required to complete specialized training for operating passive acoustic monitoring (PAM) systems and are encouraged to have familiarity with the vessel on which they will be working. PSOs may act as both acoustic and visual observers (but not simultaneously), so long as they demonstrate that their training and experience are sufficient to perform each task.

(ii) The LOA-holder must submit PSO resumes for NMFS review and approval prior to commencement of the survey (except as specified at § 217.184(d)(2)(iii)). Resumes should include dates of training and any prior NMFS approval, as well as dates and description of last experience, and must be accompanied by information documenting successful completion of an acceptable training course. NMFS is allowed one week to approve PSOs from the time that the necessary information is received by NMFS, after which PSOs meeting the minimum requirements will automatically be considered approved.

(iii) At least one visual PSO and two acoustic PSOs (when required) aboard each acoustic source vessel must have a minimum of 90 days at-sea experience working in those roles, respectively, with no more than eighteen months elapsed since the conclusion of the at-sea experience (except as specified at § 217.184(d)(2)(iii)). One visual PSO with such experience must be designated as the lead for the entire PSO team. The lead must coordinate duty schedules and roles for the PSO team and serve as the primary point of contact for the vessel operator. (Note that the responsibility of coordinating duty schedules and roles may instead be assigned to a shore-based, third-party monitoring coordinator.) To the maximum extent practicable, the lead PSO must devise the duty schedule such that experienced PSOs are on duty with those PSOs with appropriate training but who have not yet gained relevant experience.

(b) *Deep penetration surveys.* (1) Deep penetration surveys are defined as surveys using airgun arrays with total volume greater than 1,500 in^3.

(2) Visual monitoring must be conducted as specified in this paragraph (b)(2).

(i) During survey operations (*i.e.,* any day on which use of the acoustic source is planned to occur, and whenever the acoustic source is in the water, whether activated or not), a minimum of two PSOs must be on duty and conducting visual observations at all times during daylight hours (*i.e.,* from 30 minutes prior to sunrise through 30 minutes following sunset).

(ii) Visual monitoring must begin not less than 30 minutes prior to ramp-up and must continue until one hour after use of the acoustic source ceases or until 30 minutes past sunset.

(iii) Visual PSOs must coordinate to ensure 360° visual coverage around the vessel from the most appropriate observation posts, and must conduct visual observations using binoculars and the naked eye while free from distractions and in a consistent, systematic, and diligent manner.

(iv) Visual PSOs must immediately communicate all observations of marine mammals to the on-duty acoustic PSO, including any determination by the PSO regarding species identification, distance, and bearing and the degree of confidence in the determination.

(v) Any observations of marine mammals by crew members aboard any vessel associated with the survey must be relayed to the PSO team.

(vi) During good conditions (*e.g.,* daylight hours; Beaufort sea state (BSS) 3 or less), visual PSOs must conduct observations when the acoustic source is not operating for comparison of sighting rates and behavior with and without use of the acoustic source and between acquisition periods, to the maximum extent practicable.

(vii) Visual PSOs may be on watch for a maximum of two consecutive hours followed by a break of at least one hour between watches and may conduct a maximum of 12 hours of observation per 24-hour period. NMFS may grant an exception for LOA applications that demonstrate such a ''two hours on/one hour off'' duty cycle is not practicable, in which case visual PSOs will be subject to a maximum of four consecutive hours on watch followed by a break of at least two hours between watches. Combined observational duties (visual and acoustic but not at the same time) must not exceed 12 hours per 24-hour period for any individual PSO.

(3) Acoustic monitoring must be conducted as specified in this paragraph (b)(3).

(i) All source vessels must use a towed PAM system at all times when operating in waters deeper than 100 m, which must be monitored by a minimum of one acoustic PSO beginning at least 30 minutes prior to ramp-up, at all times during use of the acoustic source, and until one hour after use of the acoustic source ceases. ''PAM system'' refers to calibrated hydrophone arrays with full system redundancy to

detect, identify, and estimate distance and bearing to vocalizing cetaceans, coupled with appropriate software to aid monitoring and listening by a PAM operator skilled in bioacoustics analysis and computer system specifications capable of running appropriate software. The PAM system must have at least one calibrated hydrophone (per each deployed hydrophone type and/or set) sufficient for determining whether background noise levels on the towed PAM system are sufficiently low to meet performance expectations. Applicants must provide a PAM plan including description of the hardware and software proposed for use prior to proceeding with any survey where PAM is required.

(ii) Acoustic PSOs must immediately communicate all detections of marine mammals to visual PSOs (when visual PSOs are on duty), including any determination by the PSO regarding species identification, distance, and bearing, and the degree of confidence in the determination.

(iii) Acoustic PSOs may be on watch for a maximum of four consecutive hours followed by a break of at least two hours between watches, and may conduct a maximum of 12 hours of observation per 24-hour period. Combined observational duties (visual and acoustic but not at the same time) must not exceed 12 hours per 24-hour period for any individual PSO.

(iv) Survey activity may continue for 30 minutes when the PAM system malfunctions or is damaged, while the PAM operator diagnoses the issue. If the diagnosis indicates that the PAM system must be repaired to solve the problem, operations may continue for an additional two hours without acoustic monitoring during daylight hours only under the following conditions:

(A) Sea state is less than or equal to BSS 4;

(B) No marine mammals (excluding delphinids) detected solely by PAM in the applicable exclusion zone in the previous two hours;

(C) NMFS is notified via email as soon as practicable with the time and location in which operations began occurring without an active PAM system; and

(D) Operations with an active acoustic source, but without an operating PAM system, do not exceed a cumulative total of four hours in any 24-hour period.

(4) PSOs must establish and monitor applicable exclusion and buffer zones. These zones must be based upon the radial distance from the edges of the airgun array (rather than being based on the center of the array or around the vessel itself). During use of the acoustic source (*i.e.,* anytime the acoustic source is active, including ramp-up), occurrence of marine mammals within the relevant buffer zone (but outside the exclusion zone) should be communicated to the operator to prepare for the potential shutdown of the acoustic source.

(i) Two exclusion zones are defined, depending on the species and context. A standard exclusion zone encompassing the area at and below the sea surface out to a radius of 500 meters from the edges of the airgun array (0–500 m) is defined. For special circumstances (defined at § 217.184(b)(9)(v)), the exclusion zone encompasses an extended distance of 1,500 meters (0–1,500 m).

(ii) During pre-start clearance monitoring (*i.e.,* before ramp-up begins), the buffer zone acts as an extension of the exclusion zone in that observations of marine mammals within the buffer zone would also preclude airgun operations from beginning (*i.e.,* ramp-up). For all marine mammals (except where superseded by the extended 1,500-m exclusion zone), the buffer zone encompasses the area at and below the sea surface from the edge of the 0–500 meter exclusion zone out to a radius of 1,000 meters from the edges of the airgun array (500–1,000 m). The buffer zone is not applicable when the exclusion zone is greater than 500 meters, *i.e.,* the observational focal zone is not increased beyond 1,500 meters.

(5) A ramp-up procedure, involving a step-wise increase in the number of airguns firing and total active array volume until all operational airguns are activated and the full volume is achieved, is required at all times as part of the activation of the acoustic source. A 30-minute pre-start clearance observation period must occur prior to the start of ramp-up. The LOA-holder must adhere to the following pre-start clearance and ramp-up requirements:

(i) The operator must notify a designated PSO of the planned start of ramp-up as agreed upon with the lead PSO; the notification time should not be less than 60 minutes prior to the planned ramp-up.

(ii) Ramp-ups must be scheduled so as to minimize the time spent with source activated prior to reaching the designated run-in.

(iii) A designated PSO must be notified again immediately prior to initiating ramp-up procedures and the operator must receive confirmation from the PSO to proceed.

(iv) Ramp-up must not be initiated if any marine mammal is within the applicable exclusion or buffer zone. If a marine mammal is observed within the exclusion zone or the buffer zone during the 30-minute pre-start clearance period, ramp-up must not begin until the animal(s) has been observed exiting the zones or until an additional time period has elapsed with no further sightings (15 minutes for small delphinids and 30 minutes for all other species).

(v) Ramp-up must begin by activating a single airgun of the smallest volume in the array and shall continue in stages by doubling the number of active elements at the commencement of each stage, with each stage of approximately the same duration. Total duration must not be less than 20 minutes. The operator must provide information to the PSO documenting that appropriate procedures were followed.

(vi) Ramp-up must cease and the source shut down upon observation of marine mammals within the applicable exclusion zone. Once ramp-up has begun, observations of marine mammals within the buffer zone do not require shutdown.

(vii) Ramp-up may occur at times of poor visibility, including nighttime, if appropriate acoustic monitoring has occurred with no detections of a marine mammal other than delphinids in the 30 minutes prior to beginning ramp-up. Acoustic source activation may only occur at night where operational planning cannot reasonably avoid such circumstances.

(viii) If the acoustic source is shut down for brief periods (*i.e.,* less than 30 minutes) for reasons other than implementation of prescribed mitigation (*e.g.,* mechanical difficulty), it may be activated again without ramp-up if PSOs have maintained constant visual and/or acoustic observation and no visual or acoustic detections of any marine mammal have occurred within the applicable exclusion zone. For any longer shutdown, pre-start clearance observation and ramp-up are required. For any shutdown at night or in periods of poor visibility (*e.g.,* BSS 4 or greater), ramp-up is required, but if the shutdown period was brief and constant observation maintained, pre-start clearance watch is not required.

(ix) Testing of the acoustic source involving all elements requires ramp-up. Testing limited to individual source elements or strings does not require ramp-up but does require the pre-start clearance observation period.

(6) Shutdowns must be implemented as specified in this paragraph (b)(6).

(i) Any PSO on duty has the authority to delay the start of survey operations or to call for shutdown of the acoustic source pursuant to the requirements of this subpart.

(ii) The operator must establish and maintain clear lines of communication directly between PSOs on duty and crew controlling the acoustic source to ensure that shutdown commands are conveyed swiftly while allowing PSOs to maintain watch.

(iii) When both visual and acoustic PSOs are on duty, all detections must be immediately communicated to the remainder of the on-duty PSO team for potential verification of visual observations by the acoustic PSO or of acoustic detections by visual PSOs.

(iv) When the airgun array is active (*i.e.,* anytime one or more airguns is active, including during ramp-up) and (1) a marine mammal appears within or enters the applicable exclusion zone and/or (2) a marine mammal (excluding delphinids) is detected acoustically and localized within the applicable exclusion zone, the acoustic source must be shut down. When shutdown is called for by a PSO, the acoustic source must be immediately deactivated and any dispute resolved only following deactivation.

(v) The extended 1,500-m exclusion zone must be applied upon detection (visual or acoustic) of a baleen whale, sperm whale, beaked whale, or *Kogia* spp. within the zone.

(vi) Shutdown requirements are waived for dolphins of the following genera: *Tursiops, Stenella, Steno,* and *Lagenodelphis.* If a delphinid is visually detected within the exclusion zone, no shutdown is required unless the PSO confirms the individual to be of a genus other than those listed above, in which case a shutdown is required. Acoustic detection of delphinids does not require shutdown.

(vii) If there is uncertainty regarding identification or localization, PSOs may use best professional judgment in making the decision to call for a shutdown.

(viii) Upon implementation of shutdown, the source may be reactivated after the marine mammal(s) has been observed exiting the applicable exclusion zone or following a 30-minute clearance period with no further detection of the marine mammal(s).

(c) *Shallow penetration surveys.* (1) Shallow penetration surveys are defined as surveys using airgun arrays with total volume equal to or less than 1,500 in^3, single airguns, boomers, or equivalent sources.

(2) LOA-holders conducting shallow penetration surveys must follow the requirements defined for deep penetration surveys at § 217.184(b), with the following exceptions:

(i) Acoustic monitoring is not required for shallow penetration surveys.

(ii) Ramp-up for small airgun arrays must follow the procedure described above for large airgun arrays, but may occur over an abbreviated period of time. Ramp-up is not required for surveys using only a single airgun. For non-airgun sources, power should be increased as feasible to effect a ramp-up.

(iii) Two exclusion zones are defined, depending on the species and context. A standard exclusion zone encompassing the area at and below the sea surface out to a radius of 100 meters from the edges of the airgun array (if used) or from the acoustic source (0–100 m) is defined. For special circumstances (§ 217.184(b)(6)(v)), the exclusion zone encompasses an extended distance of 500 meters (0–500 m).

(iv) The buffer zone encompasses the area at and below the sea surface from the edge of the 0–100 meter exclusion zone out to a radius of 200 meters from the edges of the airgun array (if used) or from the acoustic source (100–200 meters). The buffer zone is not applicable when the exclusion zone is greater than 100 meters.

(d) *High-resolution geophysical (HRG) surveys.* (1) HRG surveys are defined as surveys using an electromechanical source that operates at frequencies less than 180 kHz, other than those defined at § 217.184(c)(1) (*e.g.,* side-scan sonar, multibeam echosounder, or chirp sub-bottom profiler).

(2) LOA-holders conducting HRG surveys must follow the requirements defined for shallow penetration surveys at § 217.184(c), with the following exceptions:

(i) No shutdowns are required for HRG surveys. Pre-start clearance watch is required as defined at § 217.184(c), *i.e.,* for a period of 30 minutes and over a 200-m radius from the acoustic source.

(ii) During survey operations (*e.g.,* any day on which use of the acoustic source is planned to occur, and whenever the acoustic source is in the water, whether activated or not), a minimum of one trained and experienced independent PSO must be on duty and conducting visual observations at all times during daylight hours (*i.e.,* from 30 minutes prior to sunrise through 30 minutes following sunset) when operating in waters deeper than 100 m.

(iii) When operating in waters shallower than 100 m, LOA-holders must employ one trained visual PSO, who may be a crew member, only for purposes of conducting pre-start clearance monitoring. If PSOs are crew members, *i.e.,* are not independent PSOs, the PSOs are not subject to NMFS' approval. In these circumstances, LOA requests must describe the training that will be provided to crew members filling the role of PSO.

(iv) PSOs are not required during survey operations in which the active acoustic source(s) are deployed on an autonomous underwater vehicle.

(e) *Time-area closure.* From January 1 through May 31, no use of airguns may occur shoreward of the 20-m isobath and between 90–84° W.

(f) *Entanglement avoidance.* To avoid the risk of entanglement, LOA-holders conducting surveys using ocean-bottom nodes or similar gear must:

(1) Use negatively buoyant coated wire-core tether cable;

(2) Retrieve all lines immediately following completion of the survey; and

(3) Attach acoustic pingers directly to the coated tether cable; acoustic releases should not be used.

(g) *Vessel strike avoidance.* LOA-holders must adhere to the following requirements:

(1) Vessel operators and crews must maintain a vigilant watch for all marine mammals and must slow down, stop their vessel, or alter course, as appropriate and regardless of vessel size, to avoid striking any marine mammal. A visual observer aboard the vessel must monitor a vessel strike avoidance zone around the vessel, which shall be defined according to the parameters stated in this subsection. Visual observers monitoring the vessel strike avoidance zone may be third-party observers (*i.e.,* PSOs) or crew members, but crew members responsible for these duties must be provided sufficient training to distinguish marine mammals from other phenomena and broadly to identify a marine mammal as a baleen whale, sperm whale, or other marine mammal;

(2) Vessel speeds must be reduced to 10 kn or less when mother/calf pairs, pods, or large assemblages of marine mammals are observed near a vessel;

(3) All vessels must maintain a minimum separation distance of 500 m from baleen whales;

(4) All vessels must maintain a minimum separation distance of 100 m from sperm whales;

(5) All vessels must, to the maximum extent practicable, attempt to maintain a minimum separation distance of 50 m from all other marine mammals, with an exception made for those animals that approach the vessel; and

(6) When marine mammals are sighted while a vessel is underway, the vessel must take action as necessary to avoid violating the relevant separation distance, *e.g.,* attempt to remain parallel

to the animal's course, avoid excessive speed or abrupt changes in direction until the animal has left the area. If marine mammals are sighted within the relevant separation distance, the vessel must reduce speed and shift the engine to neutral, not engaging the engines until animals are clear of the area. This does not apply to any vessel towing gear or any vessel that is navigationally constrained.

(7) These requirements do not apply in any case where compliance would create an imminent and serious threat to a person or vessel or to the extent that a vessel is restricted in its ability to maneuver and, because of the restriction, cannot comply.

§ 217.185 Requirements for monitoring and reporting.

(a) *PSO qualifications.* (1) PSOs must successfully complete relevant, acceptable training, including completion of all required coursework and passing (80 percent or greater) a written and/or oral examination developed for the training program.

(2) PSOs must have successfully attained a bachelor's degree from an accredited college or university with a major in one of the natural sciences, a minimum of 30 semester hours or equivalent in the biological sciences, and at least one undergraduate course in math or statistics. The educational requirements may be waived if the PSO has acquired the relevant skills through alternate experience. Requests for such a waiver must be submitted to NMFS and shall include written justification. Requests will be granted or denied (with justification) by NMFS within one week of receipt of submitted information. Alternate experience that may be considered includes, but is not limited to:

(i) Secondary education and/or experience comparable to PSO duties;

(ii) Previous work experience conducting academic, commercial, or government-sponsored marine mammal surveys; or

(iii) Previous work experience as a PSO; the PSO should demonstrate good standing and consistently good performance of PSO duties.

(b) *Equipment.* LOA-holders are required to:

(i) Provide PSOs with bigeye binoculars (*e.g.,* 25 x 150; 2.7 view angle; individual ocular focus; height control) of appropriate quality solely for PSO use. These must be pedestal-mounted on the deck at the most appropriate vantage point that provides for optimal sea surface observation, PSO safety, and safe operation of the vessel.

(ii) For each vessel required to use a PAM system, provide a PAM system that has been verified and tested by an experienced acoustic PSO who will be using it during the trip for which monitoring is required;

(iii) Work with the selected third-party observer provider to ensure PSOs have all equipment (including backup equipment) needed to adequately perform necessary tasks, including accurate determination of distance and bearing to observed marine mammals. (Equipment specified in A. through G. below may be provided by an individual PSO, the third-party observer provider, or the LOA-holder, but the LOA-holder is responsible for ensuring PSOs have the proper equipment required to perform the duties specified herein.) Such equipment, at a minimum, must include:

(A) Reticle binoculars (*e.g.,* 7 x 50) of appropriate quality (at least one per PSO, plus backups);

(B) Global Positioning Unit (GPS) (plus backup);

(C) Digital camera with a telephoto lens (the camera or lens should also have an image stabilization system) that is at least 300 mm or equivalent on a full-frame single lens reflex (SLR) (plus backup);

(D) Compass (plus backup);

(E) Radios for communication among vessel crew and PSOs (at least one per PSO, plus backups); and

(F) Any other tools necessary to adequately perform necessary PSO tasks.

(c) *Data collection.* PSOs must use standardized electronic data forms. PSOs must record detailed information about any implementation of mitigation requirements, including the distance of marine mammals to the acoustic source and description of specific actions that ensued, the behavior of the animal(s), any observed changes in behavior before and after implementation of mitigation, and if shutdown was implemented, the length of time before any subsequent ramp-up or activation of the acoustic source. If required mitigation was not implemented, PSOs must record a description of the circumstances. At a minimum, the following information should be recorded:

(1) Vessel names (source vessel and other vessels associated with survey), vessel size and type, maximum speed capability of vessel, port of origin, and call signs;

(2) PSO names and affiliations;

(3) Dates of departures and returns to port with port name;

(4) Dates of and participants in PSO briefings;

(5) Dates and times (Greenwich Mean Time) of survey effort and times corresponding with PSO effort;

(6) Vessel location (latitude/longitude) when survey effort began and ended and vessel location at beginning and end of visual PSO duty shifts;

(7) Vessel location at 30-second intervals (if software capability allows) or 5-minute intervals (if location must be manually recorded);

(8) Vessel heading and speed at beginning and end of visual PSO duty shifts and upon any line change;

(9) Environmental conditions while on visual survey (at beginning and end of PSO shift and whenever conditions changed significantly), including Beaufort sea state and any other relevant weather conditions including cloud cover, fog, sun glare, and overall visibility to the horizon;

(10) Vessel location when environmental conditions change significantly;

(11) Factors that may have contributed to impaired observations during each PSO shift change or as needed as environmental conditions change (*e.g.,* vessel traffic, equipment malfunctions);

(12) Survey activity information, such as acoustic source power output while in operation, number and volume of airguns operating in an array, tow depth of an acoustic source, and any other notes of significance (*i.e.,* pre-start clearance, ramp-up, shutdown, testing, shooting, ramp-up completion, end of operations, streamers, etc.); and

(13) Upon visual observation of a marine mammal, the following information:

(i) Watch status (sighting made by PSO on/off effort, opportunistic, crew, alternate vessel/platform);

(ii) PSO who sighted the animal and PSO location (including height above water) at time of sighting;

(iii) Time of sighting;

(iv) Vessel coordinates at time of sighting;

(v) Water depth;

(vi) Direction of vessel's travel (compass direction);

(vii) Speed of the vessel(s) from which the observation was made;

(viii) Direction of animal's travel relative to the vessel;

(ix) Pace of the animal;

(x) Estimated distance to the animal (and method of estimating distance) and its heading relative to vessel at initial sighting;

(xi) Identification of the animal (*e.g.,* genus/species, lowest possible taxonomic level, or unidentified), PSO confidence in identification, and the composition of the group if there is a mix of species;

(xii) Estimated number of animals (high/low/best);

(xiii) Estimated number of animals by cohort (adults, juveniles, group composition, etc.);

(xiv) Description (as many distinguishing features as possible of each individual seen, including length, shape, color, pattern, scars or markings, shape and size of dorsal fin, shape of head, and blow characteristics);

(xv) Detailed behavior observations (*e.g.,* number of blows/breaths, number of surfaces, breaching, spyhopping, diving, feeding, traveling; as explicit and detailed as possible; note any observed changes in behavior), including an assessment of behavioral responses to survey activity;

(xvi) Animal's closest point of approach (CPA) and/or closest distance from any element of the acoustic source;

(xvii) Platform activity at time of sighting (*e.g.,* deploying, recovering, testing, shooting, data acquisition, other); and

(xviii) Description of any actions implemented in response to the sighting (*e.g.,* delays, shutdown, ramp-up) and time and location of the action.

(12) Upon acoustic detection of a marine mammal using a PAM system, the following information:

(i) An acoustic encounter identification number, and whether the detection was linked with a visual sighting;

(ii) Date and time when first and last heard;

(iii) Types and nature of sounds heard (*e.g.,* clicks, whistles, creaks, burst pulses, continuous, sporadic, strength of signal); and

(iv) Any additional information recorded such as water depth of the hydrophone array, bearing of the animal to the vessel (if determinable), species or taxonomic group (if determinable), spectrogram screenshot, and any other notable information.

(d) *Reporting.* (1) Annual reporting must be submitted as specified in this paragraph.

(i) LOA-holders must submit a summary report to NMFS on all activities and monitoring results within 90 days of the completion of the survey or expiration of the LOA, whichever comes sooner, and must include all information described above under § 217.185(c). If an issued LOA is valid for greater than one year, the summary report must be submitted on an annual basis.

(ii) The report must describe activities conducted and sightings of marine mammals, must provide full documentation of methods, results, and interpretation pertaining to all monitoring, and must summarize the dates and locations of survey operations and all marine mammal sightings (dates, times, locations, activities, associated survey activities, and information regarding locations where the acoustic source was used). In addition to the report, all raw observational data must be made available to NMFS.

(iii) For operations requiring the use of PAM, the report must include a validation document concerning the use of PAM, which should include necessary noise validation diagrams and demonstrate whether background noise levels on the PAM deployment limited achievement of the planned detection goals. Copies of any vessel self-noise assessment reports must be included with the report.

(iv) The LOA-holder must provide geo-referenced time-stamped vessel tracklines for all time periods in which airguns (full array or single) were operating. Tracklines must include points recording any change in airgun status (*e.g.,* when the airguns began operating, when they were turned off). GIS files must be provided in ESRI shapefile format and include the UTC date and time, latitude in decimal degrees, and longitude in decimal degrees. All coordinates must be referenced to the WGS84 geographic coordinate system.

(v) The draft report must be accompanied by a certification from the lead PSO as to the accuracy of the report, and the lead PSO may submit directly to NMFS a statement concerning implementation and effectiveness of the required mitigation and monitoring.

(vi) A final report must be submitted within 30 days following resolution of any comments on the draft report.

(2) Comprehensive reporting must be submitted as specified in this paragraph. LOA-holders must contribute to the compilation and analysis of data for inclusion in an annual synthesis report addressing all data collected and reported through annual reporting in each calendar year. The synthesis period shall include all annual reports deemed to be final by NMFS in a given one-year reporting period. The report must be submitted to NMFS within 90 days following the end of a given one-year reporting period.

(e) *Reporting of injured or dead marine mammals.* (1) In the event that personnel involved in the survey activities discover an injured or dead marine mammal, the LOA-holder must report the incident to the Office of Protected Resources (OPR), NMFS and to the Southeast Regional Stranding Network as soon as feasible. The report must include the following information:

(i) Time, date, and location (latitude/longitude) of the first discovery (and updated location information if known and applicable);

(ii) Species identification (if known) or description of the animal(s) involved;

(iii) Condition of the animal(s) (including carcass condition if the animal is dead);

(iv) Observed behaviors of the animal(s), if alive;

(v) If available, photographs or video footage of the animal(s); and

(vi) General circumstances under which the animal was discovered.

(2) In the event of a ship strike of a marine mammal by any vessel involved in the survey activities, the LOA-holder must report the incident to OPR, NMFS and to the Southeast Regional Stranding Network as soon as feasible. The report must include the following information:

(i) Time, date, and location (latitude/longitude) of the incident;

(ii) Species identification (if known) or description of the animal(s) involved;

(iii) Vessel's speed during and leading up to the incident;

(iv) Vessel's course/heading and what operations were being conducted (if applicable);

(v) Status of all sound sources in use;

(vi) Description of avoidance measures/requirements that were in place at the time of the strike and what additional measures were taken, if any, to avoid strike;

(vii) Environmental conditions (*e.g.,* wind speed and direction, Beaufort sea state, cloud cover, visibility) immediately preceding the strike;

(viii) Estimated size and length of animal that was struck;

(ix) Description of the behavior of the marine mammal immediately preceding and following the strike;

(x) If available, description of the presence and behavior of any other marine mammals immediately preceding the strike;

(xi) Estimated fate of the animal (*e.g.,* dead, injured but alive, injured and moving, blood or tissue observed in the water, status unknown, disappeared); and

(xii) To the extent practicable, photographs or video footage of the animal(s).

(3) For deep penetration surveys, in the event of a live stranding (or near-shore atypical milling) event within 50 km of the survey operations, where the NMFS stranding network is engaged in herding or other interventions to return animals to the water, the Director of OPR, NMFS (or designee) will advise the LOA-holder of the need to

implement shutdown procedures for all active acoustic sources operating within 50 km of the stranding. Shutdown procedures for live stranding or milling marine mammals include the following:

(i) If at any time, the marine mammal(s) die or are euthanized, or if herding/intervention efforts are stopped, the Director of OPR, NMFS (or designee) will advise the LOA-holder that the shutdown around the animals' location is no longer needed.

(ii) Otherwise, shutdown procedures will remain in effect until the Director of OPR, NMFS (or designee) determines and advises the LOA-holder that all live animals involved have left the area (either of their own volition or following an intervention).

(iii) If further observations of the marine mammals indicate the potential for re-stranding, additional coordination with the LOA-holder will be required to determine what measures are necessary to minimize that likelihood (*e.g.,* extending the shutdown or moving operations farther away) and to implement those measures as appropriate.

(4) If NMFS determines that the circumstances of any marine mammal stranding found in the vicinity of the activity suggest investigation of the association with survey activities is warranted, and an investigation into the stranding is being pursued, NMFS will submit a written request to the LOA-holder indicating that the following initial available information must be provided as soon as possible, but no later than 7 business days after the request for information. In the event that the investigation is still inconclusive, the investigation of the association of the survey activities is still warranted, and the investigation is still being pursued, NMFS may provide additional information requests, in writing, regarding the nature and location of survey operations prior to the time period above.

(i) Status of all sound source use in the 48 hours preceding the estimated time of stranding and within 50 km of the discovery/notification of the stranding by NMFS; and

(ii) If available, description of the behavior of any marine mammal(s) observed preceding (*i.e.,* within 48 hours and 50 km) and immediately after the discovery of the stranding.

§ 217.186 Letters of Authorization.

(a) To incidentally take marine mammals pursuant to these regulations, prospective LOA-holders must apply for and obtain an LOA.

(b) An LOA, unless suspended or revoked, may be effective for a period not to exceed the expiration date of these regulations.

(c) In the event of projected changes to the activity or to mitigation and monitoring measures required by an LOA, the LOA-holder must apply for and obtain a modification of the LOA as described in § 217.187.

(d) The LOA shall set forth:

(1) Permissible methods of incidental taking;

(2) Means of effecting the least practicable adverse impact (*i.e.,* mitigation) on the species or stock and its habitat; and

(3) Requirements for monitoring and reporting.

(e) Issuance of the LOA shall be based on a determination that the level of taking will be consistent with the findings made for the total taking allowable under these regulations and a determination that the amount of take authorized under the LOA is of no more than small numbers.

(f) For LOA issuance, where either (1) the conclusions put forth in an application (*e.g.,* take estimates) are based on analytical methods that differ substantively from those used in the development of the rule, or (2) the proposed activity or anticipated impacts vary substantively in scope or nature from those analyzed for the rule, NMFS may publish a notice of proposed LOA in the **Federal Register**, including the associated analysis of the differences, and solicit public comment before making a decision regarding issuance of the LOA.

(g) Notice of issuance or denial of an LOA shall be published in the **Federal Register** within thirty days of a determination.

§ 217.187 Renewals and modifications of Letters of Authorization (LOA).

(a) An LOA issued under § 216.106 of this chapter and § 217.186 for the activity identified in § 217.180 shall be modified upon request by the applicant, provided that:

(1) The proposed specified activity and mitigation, monitoring, and reporting measures, as well as the anticipated impacts, are the same as those described and analyzed for these regulations (excluding changes made pursuant to the adaptive management provision in paragraph (c)(1) of this section); and

(2) NMFS determines that the mitigation, monitoring, and reporting measures required by the previous LOA under these regulations were implemented.

(b) For LOA modification requests by the applicant that include changes to the activity or the mitigation, monitoring, or reporting (excluding changes made pursuant to the adaptive management provision in paragraph (c)(1) of this section) that result in more than a minor change in the total estimated number of takes (or distribution by species or years), NMFS may publish a notice of proposed LOA in the **Federal Register**, including the associated analysis of the change, and solicit public comment before issuing the LOA.

(c) An LOA issued under § 216.106 of this chapter and § 217.186 for the activity identified in § 217.180 may be modified by NMFS under the following circumstances:

(1) NMFS may modify (including adding or removing measures) the existing mitigation, monitoring, or reporting measures (after consulting with the LOA-holder regarding the practicability of the modifications) if doing so is practicable and creates a reasonable likelihood of more effectively accomplishing the goals of the mitigation and monitoring set forth in the preamble for these regulations;

(i) Possible sources of data that could contribute to the decision to modify the mitigation, monitoring, or reporting measures in an LOA:

(A) Results from monitoring from previous years;

(B) Results from other marine mammal and/or sound research or studies; and

(C) Any information that reveals marine mammals may have been taken in a manner, extent or number not authorized by these regulations or subsequent LOAs.

(ii) If, through adaptive management, the modifications to the mitigation, monitoring, or reporting measures are substantial, NMFS will publish a notice of proposed LOA in the **Federal Register** and solicit public comment.

(2) If NMFS determines that an emergency exists that poses a significant risk to the well-being of the species or stocks of marine mammals specified in an LOA issued pursuant to § 216.106 of this chapter and § 217.186, an LOA may be modified without prior notice or opportunity for public comment. Notice would be published in the **Federal Register** within thirty days of the action.

RIN 1545–BO81

Guidance Under Section 1061

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Final regulations.

SUMMARY: This document contains final regulations that provide guidance under section 1061 of the Internal Revenue Code (Code). Section 1061 recharacterizes certain net long-term capital gains of a partner that holds one or more applicable partnership interests as short-term capital gains. An applicable partnership interest is an interest in a partnership that is transferred to or held by a taxpayer, directly or indirectly, in connection with the performance of substantial services by the taxpayer, or any other related person, in any applicable trade or business. These final regulations also amend existing regulations on holding periods to clarify the holding period of a partner's interest in a partnership that includes in whole or in part an applicable partnership interest and/or a profits interest. These regulations affect taxpayers who directly or indirectly hold applicable partnership interests in partnerships and the passthrough entities through which the applicable partnership interest is held.

DATES:

Effective date: These regulations are effective on January 13, 2021.

Applicability date: For dates of applicability, see §§ 1.702–1(g), 1.704–3(f), 1.1061–1(b), 1.1061–2(c), 1.1061–3(f), 1.1061–4(d), 1.1061–5(g), 1.1061–6(e), and 1.1223–3(g).

FOR FURTHER INFORMATION CONTACT: Kara K. Altman or Sonia K. Kothari at (202) 317–6850 or Wendy L. Kribell at (202) 317–5279 (not toll-free numbers).

SUPPLEMENTARY INFORMATION:

Background

This document contains final regulations under section 1061 of the Code to amend the Income Tax Regulations (26 CFR part 1). Section 1061 was added to the Code on December 22, 2017, by section 13309 of Public Law 115–97, 131 Stat. 2054 (2017), commonly referred to as the Tax Cuts and Jobs Act (TCJA). Section 1061 applies to taxable years beginning after December 31, 2017. Section 1061 recharacterizes certain net long-term capital gain with respect to applicable partnership interests (*APIs*) as short-term capital gain.

On August 14, 2020, the Department of the Treasury (Treasury Department) and the IRS published a notice of proposed rulemaking (REG–107213–18) in the **Federal Register** (85 FR 49754) containing proposed regulations under sections 702, 704, 1061, and 1223 of the Code (proposed regulations). The Treasury Department and the IRS received written and electronic comments responding to the proposed regulations. No public hearing was requested or held. All comments are available at *www.regulations.gov* or upon request. After full consideration of all comments timely received, this Treasury decision adopts the proposed regulations with modifications in response to the comments as described in the Summary of Comments and Explanation of Revisions section of this preamble.

Summary of Comments and Explanation of Revisions

Most of the comments addressing the proposed regulations are summarized in this Summary of Comments and Explanation of Revisions. However, non-substantive comments or comments merely summarizing or interpreting the proposed regulations, recommending statutory revisions, or addressing provisions outside the scope of these final regulations are not discussed in this preamble.

The final regulations retain the structure of the proposed regulations, with certain revisions. Section 1.1061–1 provides definitions of the terms used in §§ 1.1061–1 through 1.1061–6 of these final regulations (*Section 1061 Regulations* or final regulations). Section 1.1061–2 provides rules and examples regarding APIs and applicable trades or businesses (*ATBs*). Section 1.1061–3 provides guidance on the exceptions to the definition of an API, including the capital interest exception. Section 1.1061–4 provides guidance on the computation of the *Recharacterization Amount* and gives computation examples. Section 1.1061–5 provides guidance regarding the application of section 1061(d) to transfers to certain related parties. Section 1.1061–6 provides reporting rules. Because the application of section 1061 requires a clear determination of the holding period of a partnership interest that is, in whole or in part, an API, the final regulations also provide clarifying amendments to § 1.1223–3. Additional clarifying amendments to §§ 1.702–1(a)(2) and 1.704–3(e) are also provided.

Part I of this Summary of Comments and Explanation of Revisions provides an overview of the statutory provisions and defined terms used in the proposed and final regulations. Part II describes the comments received and revisions made in response to those comments with respect to the following four areas of the proposed regulations: (1) The capital interest exception; (2) the treatment of capital interests acquired with loan proceeds; (3) the *Lookthrough Rule* for certain API dispositions; and (4) transfers of APIs to *Section 1061(d) Related Persons.* Part III discusses additional comments received and revisions made in other areas of the proposed regulations. Part IV summarizes comments received on issues related to section 1061 that are beyond the scope of the regulations and are under study. Part V discusses applicability dates for the final regulations. In addition to the revisions made in response to comments, clarifying changes have been made throughout the final regulations.

I. Overview and Defined Terms

A. Section 1061(a): Recharacterization Amount, Owner Taxpayer, and Related Concepts

1. Recharacterization Amount

Section 1061(a) recharacterizes as short-term capital gain the difference between a taxpayer's net long-term capital gain with respect to one or more APIs and the taxpayer's net long-term capital gain with respect to these APIs if paragraphs (3) and (4) of section 1222, which define the terms long-term capital gain and long-term capital loss, respectively, for purposes of subtitle A of the Code, are applied using a three-year holding period instead of a one-year holding period. The regulations refer to this difference as the Recharacterization Amount. This recharacterization is made regardless of any election in effect under section 83(b).

2. Owner Taxpayers and Passthrough Entities

The regulations provide that the person who is subject to Federal income tax on the Recharacterization Amount is required to calculate such amounts and refer to this person as the *Owner Taxpayer.* Although an API can be held directly by an Owner Taxpayer, it also may be held indirectly through one or more passthrough entities (*Passthrough Entities*). A Passthrough Entity may be a partnership, trust, estate, S corporation, or a passive foreign investment company (PFIC) with respect to which the shareholder has a

qualified electing fund (QEF) election in effect. An *API Holder* is any person who holds an API. The regulations provide a framework for determining the Recharacterization Amount when an API is held through one or more tiers of Passthrough Entities (tiered structure).

3. Gains and Losses Subject to Section 1061

Section 1061(a) applies to a taxpayer's net long-term capital gain with respect to one or more APIs held during the taxable year. The regulations provide that the determination of a taxpayer's net long-term capital gain with respect to the taxpayer's APIs held during the taxable year includes the taxpayer's combined net distributive share of long-term capital gain or loss from all APIs held during the taxable year and the Owner Taxpayer's long-term capital gain and loss from the disposition of any APIs during the taxable year. The regulations generally refer to long-term capital gains and losses recognized with respect to an API as *API Gains and Losses.* However, API Gains and Losses do not include long-term capital gain determined under sections 1231 and 1256, qualified dividends described in section 1(h)(11)(B), and any other capital gain that is characterized as long-term or short-term without regard to the holding period rules in section 1222, such as capital gain characterized under the identified mixed straddle rules described in section 1092(b).

Unrealized API Gains and Losses means, with respect to a Passthrough Entity's assets, all unrealized capital gains and losses that would be realized if those assets were disposed of for fair market value in a taxable transaction and allocated to an API Holder with respect to its API, taking into account the principles of section 704(c). In a tiered structure, API Gains and Losses and Unrealized API Gains and Losses retain their character as API Gains and Losses as they are allocated through the tiers.

B. Section 1061(c)(1): Definition of an Applicable Partnership Interest

Section 1061(c)(1) provides that an API is a partnership interest held by, or transferred to, a taxpayer, directly or indirectly, in connection with the performance of substantial services by the taxpayer, or by any other related person, in any ATB. For this purpose, the regulations define a *Related Person* as a person or entity who is treated as related to another person or entity under section 707(b) or 267(b). Both section 1061(c)(1) and the regulations provide that an API does not include certain partnership interests held by employees of entities that are not engaged in an ATB.

The regulations provide that an API means any interest in a partnership which, directly or indirectly, is transferred to (or is held by) an Owner Taxpayer or Passthrough Taxpayer in connection with the performance of substantial services by the Owner Taxpayer or by a Passthrough Taxpayer, or by a Related Person, including services performed as an employee, in any ATB unless an exception applies. There may be one or more Passthrough Entities between the partnership that originally issued the API and the Passthrough Entity in which the Owner Taxpayer holds its indirect interest in the API. Each Passthrough Entity in the tiered structure is treated as holding an API under the regulations, that is, each Passthrough Entity is an API Holder as is the Owner Taxpayer. An API Holder may be an individual, partnership, trust, estate, S corporation (as defined in section 1361(a)(1)), or a PFIC with respect to which the shareholder has a QEF election in effect under section 1295.

Section 1061(c)(1), similar to section 1061(a), uses the term ''taxpayer.'' The proposed regulations provide that an Owner Taxpayer is the taxpayer for purposes of section 1061(a). The regulations further provide that the reference to ''taxpayer'' in section 1061(c)(1) also includes a *Passthrough Taxpayer.* A Passthrough Taxpayer is a Passthrough Entity that is treated as a taxpayer for the purpose of determining the existence of an API, regardless of whether such Passthrough Taxpayer itself is subject to Federal income tax. Generally, if an interest in a partnership is transferred to a Passthrough Taxpayer in connection with the performance of its own services, the services of its owners, or the services of persons related to either such Passthrough Taxpayer or its owners, the interest is an API as to the Passthrough Taxpayer. The Passthrough Taxpayer's ultimate owners will be treated as Owner Taxpayers, unless otherwise excepted.

A partnership interest is an API if it was transferred in connection with the performance of substantial services. The regulations presume that services are substantial with respect to a partnership interest transferred in connection with services. This presumption is based on the assumption, for purposes of section 1061, that the parties have economically equated the services performed or to be performed with the potential value of the partnership interest transferred. The regulations provide that, subject to certain exceptions, once a partnership interest is an API, it remains an API and never loses its API character.

C. Section 1061(c)(2): Definition of an Applicable Trade or Business

Under section 1061, for an interest in a partnership to be an API, the interest must be held or transferred in connection with the performance of substantial services in an ATB. An ATB is defined in section 1061(c)(2) as any activity conducted on a regular, continuous, and substantial basis consisting, in whole or in part, of raising or returning capital, and either (i) investing in (or disposing of) specified assets (or identifying specified assets for such investing or disposition), or (ii) developing specified assets. The regulations refer to these actions, respectively, as *Raising or Returning Capital Actions* and *Investing or Developing Actions* (collectively, *Specified Actions*). The regulations provide that an activity is conducted on a regular, continuous, and substantial basis if it meets the *ATB Activity Test.* The ATB Activity Test is met if the total level of activity (conducted in one or more entities) meets the level of activity required to establish a trade or business for purposes of section 162.

In applying the ATB Activity Test, the regulations provide that it is not necessary for both Raising or Returning Capital Actions and Investing or Developing Actions to occur in a single taxable year. In that regard, the combined Specified Actions are considered together to determine if the ATB Activity Test is met.

Section 1061(c)(3) provides that specified assets (*Specified Assets*) are securities, as defined in section 475(c)(2) (without regard to the last sentence thereof), commodities, as defined in section 475(e)(2), real estate held for rental or investment, cash or cash equivalents, options or derivative contracts with respect to any of the foregoing, and an interest in a partnership to the extent of the partnership's proportionate interest in any of the foregoing. The definition of Specified Assets in the regulations generally tracks the statutory language. It also includes an option or derivative contract on a partnership interest to the extent that the partnership interest represents an interest in other Specified Assets.

D. Section 1061(c)(4) and Other Exceptions to API Treatment

Section 1061 includes four exceptions to the treatment of a profits interest as an API and the regulations add an additional exception.

First, the statutory definition of an API in section 1061(c)(1) excludes an interest held by a person who is employed by another entity that is conducting a trade or business (other than an ATB) and provides services only to such other entity.

Second, section 1061(c)(4)(A) provides that an API does not include any interest in a partnership directly or indirectly held by a corporation. The regulations provide that the term ''corporation'' for purposes of section 1061(c)(4)(A) does not include an S corporation for which an election under section 1362(a) is in effect or a PFIC with respect to which the shareholder has a QEF election under section 1295 in effect.

Third, section 1061(c)(4)(B) provides that an API does not include a capital interest which provides a right to share in partnership capital commensurate with (i) the amount of capital contributed (determined at the time of receipt of such partnership interest), or (ii) the value of such interest subject to tax under section 83 upon the receipt or vesting of such interest (the capital interest exception). The regulations provide that long-term capital gains and losses with respect to an API Holder's capital investment in a Passthrough Entity, referred to as *Capital Interest Gains and Losses* (which can include allocations and disposition amounts meeting the requirements), are not subject to recharacterization under section 1061. As explained in more detail in Part II.A. of this Summary of Comments and Explanation of Revisions, to meet this exception to API treatment, the proposed regulations require allocations to API Holders (or Passthrough Entities that hold an API in a lower-tier Passthrough Entity) to be made in the same manner as to certain other partners. The final regulations provide a revised and simplified rule that looks to whether allocations are commensurate with capital contributed.

Fourth, section 1061(b) provides that to the extent provided by the Secretary, section 1061 will not apply to income or gain attributable to any asset not held for portfolio investment on behalf of third party investors.

Finally, the regulations provide that an interest in a partnership that was an API in the hands of the seller will not be treated as an API in the hands of the purchaser if the interest is acquired by a bona fide purchaser who (i) does not provide services in the Relevant ATB to which the acquired interest relates, (ii) is unrelated to any service provider, and (iii) acquired the interest for fair market value.

E. Section 1061(d): Transfer of API to a Section 1061(d) Related Person

Section 1061(d)(1) provides that if a taxpayer transfers an API, directly or indirectly, to a related person described in section 1061(d)(2), the taxpayer must include in gross income (as short term capital gain) the excess of so much of the taxpayer's long term capital gains with respect to such interest for the taxable year attributable to the sale or exchange of any asset held for not more than 3 years as is allocable to such interest over any amount treated as short term capital gain under section 1061(a).

A related person for purposes of section 1061(d)(2) (a *Section 1061(d) Related Person*) is defined more narrowly than a related person for purposes of section 1061(c)(1) and includes only members of the taxpayer's family within the meaning of section 318(a)(1), the taxpayer's colleagues (those who provided services in the ATB during certain time periods) and, under the regulations, a Passthrough Entity to the extent that a member of the taxpayer's family or a colleague is an owner.

F. Section 1061(e): Reporting

Section 1061(e) provides that the Secretary ''shall require such reporting (at the time and in the manner prescribed by the Secretary) as is necessary to carry out the purposes of [section 1061].'' The regulations set forth the reporting requirements and include rules for providing information required to compute the Recharacterization Amount when there is a tiered structure.

G. Regulatory Authority

Section 1061(f) provides that the Secretary ''shall issue such regulations or other guidance as is necessary or appropriate to carry out the purposes of [section 1061].'' The legislative history indicates that such guidance is to address the prevention of abuse of the purposes of the provision. *See* H.R. Conf. Rep. No. 115–466 at 422 (2017) (Conference Report); *see also* Joint Committee on Taxation, General Explanation of Public Law 115–97, JCS–1–18, at 203 (2017) (Blue Book). The Conference Report and the Blue Book also state that the guidance is to address the application of the provision to tiered structures of entities. *See id.*

II. Primary Changes to the Proposed Regulations

The majority of comments received on the proposed regulations relate to four areas: (1) The capital interest exception; (2) the treatment of capital interests acquired with loan proceeds; (3) the Lookthrough Rule for certain API dispositions; and (4) transfers of APIs to Section 1061(d) Related Persons. After considering these comments, the Treasury Department and the IRS have determined that changes in approach are required for each of these sections of the final regulations. The remainder of this section generally describes the comments received in these areas and the changes made in response. While all comments timely received were considered, comments are not described in detail to the extent that the ancillary concerns raised by the commenter were resolved by the changes made to the final regulations.

A. Capital Interest Exception

Section 1061(c)(4)(B) provides that an API does not include certain capital interests. The proposed regulations implement the capital interest exception by excepting from recharacterization long-term capital gains and losses that represent a return on an API Holder's capital invested in a Passthrough Entity. The proposed regulations refer to these amounts as Capital Interest Gains and Losses, and include in that definition *Capital Interest Allocations, Passthrough Interest Capital Allocations,* and *Capital Interest Disposition Amounts* that meet the requirements of proposed § 1.1061–3(c)(3) through (6).

The majority of comments received regarding the capital interest exception suggested that the rules in the proposed regulations are too rigid and do not reflect many common business arrangements, resulting in many capital interest holders being denied eligibility for the exception. Commenters described a variety of concerns, detailed in this Part II.A.

The final regulations provide a revised and simplified rule that looks to whether allocations are commensurate with capital contributed. An allocation will be considered a Capital Interest Allocation if the allocation to the API Holder with respect to its capital interest is determined and calculated in a similar manner to the allocations with respect to capital interests held by similarly situated *Unrelated Non-Service Partners* who have made significant aggregate capital contributions.

1. Capital Interest Allocations, in General

Proposed § 1.1061–3(c)(3) provides that for an allocation to be treated as a Capital Interest Allocation or a Passthrough Interest Capital Allocation, the allocation must be one made in the

same manner to all partners. As described further in part II.A.2. of this Summary of Comments and Explanation of Provisions, proposed § 1.1061–3(c)(4) further provides, in part, that Capital Interest Allocations are allocations of long-term capital gain or loss make to an API Holder and to Unrelated Non-Service Partners based on their respective capital account balances where the Unrelated Non-Service Partners have a significant aggregate capital account balance equal to five percent or more of the aggregate capital account balance of the partnership are the time the allocations are made. The proposed regulations also indicate that in general, an allocation will be deemed to satisfy the ''same manner'' requirement if, under the partnership agreement, the allocation is based on the relative capital accounts of the partners (or Passthrough Entity owners) who are receiving the allocation in question and the terms, priority, type and level of risk, rate of return, and rights to cash or property distributions during the partnership's operations and on liquidation are the same. Allocations to an API Holder may be subordinated to allocations to Unrelated Non-Service Partners or reduced by the cost of services provided by such API Holder or a Related Person. Under proposed § 1.1061–3(c)(3)(ii), in the case of a partnership that maintains capital accounts under § 1.704–1(b)(2)(iv), the allocation must be tested based on that partner's capital account. In the case of a Passthrough Entity that is not a partnership (or a partnership that does not maintain capital accounts under § 1.704–1(b)(2)(iv)), if the Passthrough Entity maintains and determines accounts for its owners using principles similar to those provided under § 1.704–1(b)(2)(iv), those accounts will be treated as a capital account for purposes of the proposed regulations.

Several commenters noted that requiring allocations be made in accordance with partners' overall section 704(b) capital accounts in a fund does not comport with the commercial reality of how most venture capital, private equity funds, and hedge funds make their allocations, and would preclude API Holders from ever utilizing the capital interest exception. One commenter noted that many bona fide partnerships use targeted allocations and questioned whether it is fair to exclude partnerships that do not maintain section 704(b) capital or similar accounts from the capital interest exception when those capital accounts lack economic significance in the business arrangement. The commenter asked the same question about partnerships that maintain capital accounts using generally accepted accounting principles (GAAP).

Several commenters objected to the ''same manner'' requirement on the grounds that it did not properly implement section 1061(c)(4)(B), which provides, in part, that an API ''shall not include any capital interest in the partnership which provides the taxpayer with a right to share in partnership capital commensurate with . . . the amount of capital contributed'' by such partner. Commenters explained that while fund managers may earn an economic return on both their capital investment and their APIs, they generally do not have the same economic rights with respect to their capital investment that the limited partners in the fund have with respect to their capital investment. For example, commenters indicated that an API Holder may be entitled to tax distributions, may have different allocations of expenses, may be subject to regulatory allocations (for example, minimum gain chargeback, as described in § 1.704–2), and may have different withdrawal or liquidity rights, which might be more or less favorable than those provided to Unrelated Non-Service Partners. Commenters indicated there could be varying liquidity rights between Unrelated Non-Service Partners and noted that API Holders' capital may be subject to more risk than Unrelated Non-Service Partners' capital in that API Holders may bear the first risk of loss. In the case of hedge funds, commenters noted that limited partners may invest at different times and, as such, earn a return that may not be comparable to other limited partners' returns.

In addition, several commenters explained that economic rights and allocations in private equity and venture capital funds are frequently determined and made on a deal-by-deal basis, including allocations made in a tiered structure by an API Holder that is a Passthrough Entity, and that funds may have multiple classes of interests with different rights and obligations, meaning that economic rights and allocations are rarely, if ever, aligned with respect to all partners based on the partners' section 704(b) capital accounts.

For the aforementioned reasons, several commenters recommended that the ''same manner'' requirement be eliminated and replaced with a rule that permits distributions and allocations to an API Holder, who contributes capital to a fund, to be ''commensurate'' with capital contributed by Unrelated Non-Service partners. Similarly, one commenter suggested that the only requirement be that an allocation to an API Holder be calculated and determined in a similar manner as the allocations to similarly situated Unrelated Non-Service Partners. Several commenters suggested that funds should be able to establish that they satisfied the ''commensurate'' standard using any reasonable method.

Commenters also recommended that the scope of the term ''cost of services'' as used in the proposed regulations be further explained, noting that situations where API Holders' capital investments are not subject to management fees, while other investors' interests are subject to management fees, should not prevent the API Holders' capital interests from qualifying for the capital interest exception. Commenters recommended that the final regulations clarify the meaning of the term ''cost of services'' and specify that an API Holder's capital investment that is not subject to incentive payments or to management fees may still be eligible for the capital interest exception.

Because private equity and hedge funds operate differently, commenters suggested that there should be separate rules, tailored to each structure, with respect to the capital interest exception. The commenters alluded to the notion that, although private equity and hedge funds each operate within a certain blueprint, there are many variations.

The Treasury Department and the IRS generally agree with commenters that under the test in the proposed regulations, it might be difficult for some common business arrangements to meet the capital interest exception and that a partner comparison, based on capital contributed rather than the partners' section 704(b) capital accounts, would be more accurate in determining whether an interest qualifies for the capital interest exception. Accordingly, the final regulations provide that Capital Interest Allocations must be commensurate with capital contributed in order to qualify for the capital interest exception. The final regulations replace the requirement that allocations be made to all partners in the same manner with a requirement that an allocation to an API Holder with respect to its capital interest must be determined and calculated in a similar manner as the allocations with respect to capital interests held by similarly situated Unrelated Non-Service Partners who have made significant aggregate capital contributions. In this regard, the allocations and distribution rights with respect to API Holders' capital interests and the capital interests of Unrelated Non-Service Partners who have made

significant aggregate capital contributions must be reasonably consistent. The similar manner test may be applied on an investment-by-investment basis or on the basis of allocations made to a particular class of interests. The final regulations retain the factors used in the proposed regulations to determine whether allocations and distribution rights are made in a similar manner among partners: The amount and timing of capital contributed, the rate of return on capital contributed, the terms, priority, the type and level of risk associated with capital contributed, and the rights to cash or property distributions during the partnership's operations and on liquidation. The final regulations maintain the rule that an allocation to an API Holder will not fail to qualify solely because the allocation is subordinated to allocations made to Unrelated Non-Service Partners or because an allocation to an API Holder is not reduced by the cost of services provided by the API Holder or a Related Person to the partnership. The final regulations also clarify the meaning of cost of services for this purpose. The fact that API Holders are not charged management fees on their capital or that their capital is not subject to allocations of API items will not prevent the API Holder's capital interest from being eligible for the capital interest exception. Similarly, an allocation to an API Holder will not fail if an API Holder has a right to receive tax distributions while Unrelated Non-Service Partners do not have such a right, where such distributions are treated as advances against future distributions.

The final regulations extend these concepts to allocations made through tiered structures. The final regulations remove the terms Passthrough Capital Allocation, Passthrough Interest Capital Allocation, and Passthrough Interest Direct Investment Allocation, and instead provide that an allocation made to a Passthrough Entity that holds an API in a lower-tier Passthrough Entity will be considered a Capital Interest Allocation if made in accordance with the principles applicable in determining Capital Interest Allocations. Under the final regulations, Capital Interest Allocations retain their character when allocated to an upper-tier partnership so long as they are allocated among the partners in the upper-tier partnership with respect to such partners' capital interests in a manner that is respected under section 704(b) (taking the principles of section 704(c) into account).

Because the revised rules provide sufficient flexibility for all structures, the final regulations do not adopt the suggestion to provide a separate set of rules for private equity and hedge funds. The Treasury Department and the IRS continue to study other issues raised by the commenters, including the application of the similar manner requirement to S corporations and the application of the capital interest exception to co-invest vehicles.

The Treasury Department and the IRS request any additional comments on the application of the capital interest exception in the final regulations.

2. Unrelated Non-Service Partner Requirement

As discussed in the prior section, proposed § 1.1061–3(c)(4) provides additional guidance on Capital Interest Allocations. Under the proposed regulations, Capital Interest Allocations are allocations of long-term capital gain or loss made under the partnership agreement to an API Holder and to Unrelated Non-Service Partners based on their respective capital accounts and which meet other requirements. Unrelated Non-Service Partners are defined in proposed § 1.1061–1(a) as partners who have not provided services to the Relevant ATB and who are not, and have never been, related to any API Holder in the partnership or any person who provides, or has provided, services in the Relevant ATB. Proposed § 1.1061–3(c)(4) specifies that Capital Interest Allocations must be made in the same manner to API Holders and to Unrelated Non-Service Partners with a significant aggregate capital account balance (defined as five percent or more of the aggregate capital account balance of the partnership at the time the allocations are made). Proposed § 1.1061–3(c)(4)(iii) provides that the allocations to the API Holder and the Unrelated Non-Service Partners must be clearly identified both under the partnership agreement and on the partnership's books and records as separate and apart from allocations made to the API Holder with respect to its API. The partnership agreement and the partnership books and records must also clearly demonstrate that the requirements for an allocation to be considered a Capital Interest Allocation have been met.

For allocations made on a deal-by-deal or class-by-class basis, commenters noted that it is unclear if the requirement that allocations be made in the same manner to API Holders and Unrelated Non-Service Partners with a significant aggregate capital account balance applies to each deal or class, or if it applies only to a fund generally. One commenter suggested that as an alternative to a strict percentage test, funds should also be able to satisfy the test by establishing that the return on a class of equity was determined at arm's length. Another commenter noted that a specific number or percentage of Unrelated Non-Service Partners must comprise the test group to prevent easy avoidance of the statute but questioned whether the five percent threshold for the test group is the appropriate threshold. The commenter also asked for clarification on the effect of the rule in proposed § 1.1061–3(c)(3)(ii)(C) that a capital account, for these purposes, does not include the contribution of amounts attributable to loans made by other partners or the partnership when comparing the allocations made to API Holders and Unrelated Non-Service Partners.

One commenter stated that many funds would be unable to meet the requirement that allocations to the API Holder and the Unrelated Non-Service Partners be clearly identified in the partnership agreement because their agreements use liquidating distributions to govern an API Holder's rights with respect to its API rather than allocations. The commenter recommended that the requirement be considered satisfied if the distribution provision clearly identified capital interest distributions separate and apart from distributions with respect to APIs. Several other commenters suggested that the rule requiring the allocations to be clearly identified both under the partnership agreement and on the partnership's books and records be disjunctive, that is, that the allocations be clearly demarcated in either the partnership agreement or on the partnership's books and records. Commenters noted that in order to meet the partnership agreement reporting requirement, a fund would have to update its partnership agreements, which could be done only by negotiating with the Unrelated Non-Service Partners. Initiating those negotiations could cause partners to want to negotiate other partnership items, which could take time and alter the agreements. These commenters thus suggested grandfathering existing partnership agreements or providing a transition period for funds to update their agreements to comply with this requirement.

The final regulations retain the requirement that Capital Interest Allocations to an API Holder be compared to Capital Interest Allocations made to Unrelated Non-Service Partners, as well as the requirement that Capital Interest Allocations be made to Unrelated Non-Service Partners with a significant capital account balance,

including the five percent threshold. The Treasury Department and the IRS considered a number of alternatives and determined that the five percent threshold adequately insures that there is a significant comparison to meet the statutory exception that an API does not include a capital interest which provides the API Holder with a right to share in partnership capital commensurate with the amount of capital contributed. In accordance with the provision that the similar manner test in the final regulations may be applied on an investment-by-investment or class-by-class basis, the final regulations specify that the Unrelated Non-Service Partner requirement can also be applied on an investment-by-investment basis, or on a class-by-class basis. The final regulations move the definition of Capital Interest Allocations to the definition section of the final regulations but retain the requirement that allocations with respect to, and corresponding to, contributed capital be clearly identified under both the partnership agreement and in the partnership's books and records as separate and apart from allocations made to the API Holder with respect to its API, and specify that the books and records must be contemporaneous. Documenting the allocations in the partnership agreement and in contemporaneous books and records is a necessary corollary to the rule requiring Capital Interest Allocations to be made in a similar manner between API Holders and Unrelated Non-Service Partners with a significant interest, because it shows that the partnership's Unrelated Non-Service Partners considered these allocations a valid return on their contributed capital.

The final regulations do not include a rule that would grandfather existing partnership agreements or provide a transition period for partnerships to update their agreements. Because the final regulations more closely align the capital interest exception to standard industry practice, the number of partnership agreements that will need to be amended is reduced. Allocations made to an API Holder that do not meet the requirements of these final regulations will not be considered Capital Interest Allocations. Finally, due to the revisions made to the capital interest exception in these final regulations, the Treasury and the IRS have determined that it is not necessary to clarify the effect that the rule disregarding contributions made with the proceeds of loans by other partners or by the partnership has on the comparison of the allocation made to API Holders and Unrelated Non-Service Partners.

3. Capital Interest Disposition Amounts

If an owner disposes of an interest in a Passthrough Entity that is composed of a capital interest and an API, proposed § 1.1061–3(c)(6) provides a mechanism for the owner to determine the portion of long-term capital gain or loss recognized on the disposition that is treated as a Capital Interest Disposition Amount and thus, a Capital Interest Gain or Loss.

The final regulations clarify the determination of an API Holder's Capital Interest Disposition Amount when the API Holder transfers a Passthrough Entity interest that is comprised of both an API and a capital interest at a gain and would be allocated only capital loss as a Capital Interest Allocation if all of the assets of the Passthrough Entity had been sold for their fair market value in a fully taxable transaction immediately before the interest transfer. In such an instance, the final regulations provide that all of the long-term capital gain attributable to the interest transfer is API Gain. Conversely, if such API Holder recognizes long-term capital loss on the transfer of a Passthrough Entity interest and would be allocated only capital gain as a Capital Interest Allocation if all of the assets of the Passthrough Entity had been sold for their fair market value in a fully taxable transaction immediately before the interest transfer, the final regulations provide that all of the long-term capital loss attributable to the interest transfer is API Loss. The final regulations provide additional rules where a transferred Passthrough Entity interest results in a gain and the transferor would have been allocated both Capital Interest Gain and API Gain as well as where a transferred Passthrough Entity interest results in a loss and the transferor would have been allocated both Capital Interest Loss and API Loss. In such instances, a fraction is used to determine the portion of the transferred interest gain or loss characterized as a Capital Interest Disposition Amount.

Commenters noted a concern that Example 5 in proposed regulation § 1.1061–3(c)(7)(v), did not adequately address basis proration upon a partial interest sale where a partner holds a partnership interest comprised of both an API and a capital interest. Specifically, one commenter noted that Example 5's reliance on the equitable apportionment approach of § 1.61–6(a) could lead to a situation where the characterization of the gain or loss attributable to the sale of a portion of the partner's partnership interest differs from the characterization of that partner's distributive share of asset gain or loss if all of the assets of the Passthrough Entity were sold for their fair market value in a fully taxable transaction. Another commenter suggested applying the specific identification rules in § 1.1223–3 applicable to publicly traded partnership units to transfers of private interests. These commenters noted that because the issue illustrated in Example 5 has ramifications beyond section 1061, further study should occur before proceeding with the position stated in Example 5.

The Treasury Department and the IRS continue to study the issue noted with respect to Example 5 and have removed the example in the interim as many of the concerns raised on the sale of a partial partnership interest extend beyond section 1061.

4. Unrealized API Gains and Losses

Proposed § 1.1061–1(a) defines Unrealized API Gains and Losses as all unrealized capital gains and losses, including both short-term and long-term, that would be allocated to an API Holder with respect to its API if all relevant assets were disposed of for fair market value in a taxable transaction on the relevant date. Proposed § 1.1061–2(a)(1)(ii) provides rules for the treatment of Unrealized API Gains and Losses, including the requirement to determine Unrealized API Gains and Losses in tiered structures. Proposed § 1.1061–3(c)(3)(iii) provides that Capital Interest Allocations and Passthrough Interest Capital Allocations do not include amounts treated as API Gains and Losses or Unrealized API Gains and Losses.

A commenter stated that the requirement to determine Unrealized API Gains and Losses in tiered structures is not reasonable because an upper-tier Passthrough Entity would not be able to require every uncontrolled lower-tier Passthrough Entity in the chain to revalue its assets under the principles of § 1.704–1(b)(2)(iv)(*f*). The commenter recommended that the mandatory section 1061 revaluation rules be eliminated. The commenter requested instead that the existing rules for revaluations under the section 704(b) and 704(c) regulations govern Unrealized API Gains and Losses. Alternatively, the commenter suggested that anti-abuse regulations be written to address revaluations in chains of controlled tiered partnerships.

The final regulations remove the mandatory revaluation rules and adopt the commenter's suggestion that

Unrealized API Gains and Losses be determined according to the existing rules governing unrealized gains and losses, including section 704(c) principles. Accordingly, the final regulations provide that the term Unrealized API Gains and Losses means, with respect to a Passthrough Entity's assets, all unrealized capital gains and losses that would be (i) realized if those assets were disposed of for fair market value in a taxable transaction on the relevant date, and (ii) allocated to an API Holder with respect to its API, taking into account the principles of section 704(c).

Because the proposed regulations provide that Capital Interest Allocations are made based on partners' relative section 704(b) capital accounts, several commenters questioned whether Unrealized API Gains and Losses that are reflected in an API Holder's capital account could generate Capital Interest Allocations, including book Capital Interest Allocations, before these amounts are recognized. Commenters explained that these issues are particularly relevant for hedge funds and described their operations and incentive structure. When an API Holder in a hedge fund receives incentive allocations with respect to the API, its capital account is increased by the amount of the incentive allocation, and Unrelated Non-Service Partners' capital accounts are decreased. This increase is coupled with allocations of taxable income and gain and also allocations of unrealized gain (reverse section 704(c) allocations). Commenters also requested additional guidance on the treatment of realized and unrealized gains from an API which are contributed to, or reinvested in, a partnership.

The final regulations continue to provide that Unrealized API Gains and Losses are not included in Capital Interest Gains and Losses. In response to comments, the final regulations clarify that if an API Holder is allocated API Gain by a Passthrough Entity, to the extent that an amount equal to the API Gain is reinvested in Passthrough Entity by the API Holder (either as the result of an actual distribution and recontribution of the API Gain amount or the retention of the API Gain amount by the Passthrough Entity), the amount will be treated as a contribution to the Passthrough Entity for a capital interest that may produce Capital Interest Allocations for the API Holder, provided such allocations otherwise meet the requirements to be a Capital Interest Allocation.

B. Capital Contributions Made With the Proceeds of Partnership or Partner Loans

Proposed § 1.1061–3(c)(3)(ii)(C) provides that for purposes of proposed §§ 1.1061–1 through 1.1061–6, a capital account does not include the contribution of amounts directly or indirectly attributable to any loan or other advance made or guaranteed, directly or indirectly, by any other partner, the partnership, or a Related Person with respect to any other partner or the partnership. Repayments on the loan are included in capital accounts as those amounts are paid by the partner, provided that the loan is not repaid with the proceeds of another similarly sourced loan. *Id.*

Several commenters criticized this treatment, suggesting that the exclusion of these amounts from the partner's capital account inhibits common and reasonable business practices, and creates barriers to entry for service partners, particularly those who are less represented based on age, gender, or race or do not have ready access to capital. One commenter noted that it is typical for fund managers to either extend loans to their employees, or to guarantee loans issued to such employees by third parties, so that employees may invest in the manager's own investment funds. Similarly, another commenter stated that the proposed regulations would introduce a substantial impediment to raising capital for commercial real estate investment by creating a disincentive for general partners to finance or support the financing of the participation of its employees in its commercial real estate investments. The commenter claimed that contributions made in this manner are a significant source of capital available for real estate investment and also an important factor in attracting third party capital because they create an alignment of interest between the limited partners and the general partner and its employees.

Commenters noted that neither the statute nor the legislative history indicates that the use of loan proceeds to make a capital contribution precludes the interest from being included in a partner's capital account and contended that adding such a rule is not justified by the commensurate with capital statutory language of the capital interest exception. To the contrary, commenters argued that the authors of the TCJA were familiar with prior proposals regarding profits interests that contained exceptions for loaned capital and their decision not to include such an exception in section 1061 is an indication that the choice was intentional. Instead, one commenter maintained that Congress addressed any concerns through the rule that a service provider's rights with respect to its contributed capital must match the rights of other non-service partners with respect to their shares of contributed capital.

Some commenters recognized that the exclusion from capital accounts of contributions attributable to partner or partnership loans is an attempt to control the perceived abuse of limited partners loaning the general partner of the partnership an amount of capital that entitles the general partner to a portion of the partnership's profits in order to avoid the application of section 1061 and fit within the capital interest exception. Commenters noted that section 1061(f) provides the Secretary with authority to issue guidance as is necessary or appropriate to carry out the purposes of section 1061 and that the legislative history indicates that such guidance is to address the prevention of abuse of the purposes of the provision.

Other commenters, suggesting that the policy behind the capital interest exception is to ensure a partner has capital at risk to qualify for the exception, acknowledged that there are fact patterns in which a partner might be considered less at risk. One commenter pointed to the at-risk limitation on losses under section 465, noting that a service provider would not be considered at-risk with respect to contributed capital that is financed through a loan from another partner, even if the loan were fully recourse to the service provider. By contrast, a partner is considered at-risk when an investment is funded by a third-party loan for which the partner has personal liability. Another commenter noted that the proposed regulations' treatment of a capital interest funded through a loan from the issuing partnership is consistent with the treatment of partnership loans under other areas of Subchapter K. The commenter pointed out that the contribution of a partner's own promissory note generally does not increase the partner's basis in its partnership interest under section 722. Similarly, pursuant to § 1.704–1(b)(2)(iv)(*d*)(*2*), the partner's capital account will be increased with respect to the promissory note only when there is a taxable disposition of the note by the partnership or when the partner makes principal payments on such note, provided that the note is not readily tradable on an established securities market.

Despite recognizing these concerns regarding abuse, commenters

maintained that the loan proceeds exclusion should be eliminated because general income tax principles, such as those in sections 83 and 7872, are sufficient to determine whether a loan-financed arrangement should not qualify for the capital interest exception. Other commenters suggested that if limitations must be imposed, the rule should be narrowly tailored, recommending that only loans that are nonrecourse or lack substantial security be excluded from the capital interest exception. Commenters also suggested that guarantees should not be treated in the same manner as a loan, particularly in the context of a recourse loan or a loan from a third-party bank. Another commenter suggested that if the loan or guarantee operates under normal arms-length standards, it should be eligible to support a capital contribution. Another commenter noted that the proposed regulations are silent on loans that are fully secured with partnership assets.

The Treasury Department and the IRS remain concerned that capital contributions made with the proceeds of loans made or guaranteed by another partner, the partnership, or a Related Person with respect to such partner or partnership could lead to abuse of the capital interest exception. Therefore, the final regulations do not adopt the suggestions to remove the rule. However, the Treasury Department and the IRS agree with commenters that the potential for abuse is reduced when a loan or advance is made by another partner (or Related Person with respect to such other partner, other than the partnership) to an individual service provider if the individual service provider is personally liable for the repayment of such loan or advance. Accordingly, the final regulations provide that an allocation will be treated as a Capital Interest Allocation if the allocation is attributable to a contribution made by an individual service provider that, directly or indirectly, results from, or is attributable to, a loan or advance from another partner in the partnership (or any Related Person with respect to such lending or advancing partner, other than the partnership) to such individual service provider if the individual service provider is personally liable for the repayment of such loan or advance as described in the final regulations. The final regulations apply a similar approach with respect to loans or advances made by a partner in the partnership (or a Related Person to such partner, other than the partnership) to a wholly owned entity that is disregarded as separate from an individual service provider where the individual service provider that owns such disregarded entity is personally liable for the repayment of any borrowed amounts that are not repaid by the disregarded entity. The final regulations provide that an individual service provider is personally liable for the repayment of a loan or advance made by a partner (or any Related Person, other than the partnership) if (i) the loan or advance is fully recourse to the individual service provider; (ii) the individual service provider has no right to reimbursement from any other person; and (iii) the loan or advance is not guaranteed by any other person. The Treasury Department and the IRS continue to study the treatment of guarantees generally in light of questions about who the borrower is for Federal tax purposes.

A commenter noted that the proposed regulations' treatment of loans, together with the section 704(b) capital account approach being taken with respect to the capital interest exception, could mean that a partner who borrows from a related person to make even a small portion of his or her capital contribution might be denied the capital interest exception with respect to his or her entire capital interest. A few commenters recommended that if the treatment of related party loans is retained in the final regulations, adjustments should be made to ensure that partners are able to receive appropriate credit for capital contributions they make that are not attributable to loans. Another commenter stated that the proposed regulations did not provide a tracing regime to connect loan proceeds with capital contributions. One commenter suggested that final regulations clarify how to treat a partner that fully funded a capital contribution with loan proceeds but repaid such amounts before there was a capital interest allocation, including whether a revaluation would change the answer. The commenter recommended that it would be appropriate to treat the partner's capital account as funded at the time of actual contribution. Finally, the commenter recommended that final regulations include a transition rule related to related party loans made, advanced, guaranteed, or repaid before final regulations are issued. The Treasury Department and the IRS considered these comments and believe that the concerns raised in them are resolved by the commensurate with capital approach to the capital interest exception taken in the final regulations because this approach does not rely on a comparison of allocations based on the partners' overall section 704(b) capital accounts.

C. Lookthrough Rule for Certain API Dispositions

Proposed § 1.1061–4(b)(9) provides a limited Lookthrough Rule that may apply to the sale of an API where capital gain is recognized and the holding period of the API is more than three years. In the case of a disposition of a directly held API with a holding period of more than three years, the proposed Lookthrough Rule applies if the assets of the partnership in which the API is held meet the Substantially All Test. The Substantially All Test is met if 80 percent or more of the assets of the partnership in which the API is held, based on fair market value, are assets that would produce capital gain or loss that is not described in proposed § 1.1061–4(b)(6) if disposed of by the partnership, and that have a holding period of three years or less. In the case of a tiered structure in which an API Holder holds its API through one or more Passthrough Entities, the Lookthrough Rule applies if the API Holder disposes of a Passthrough Interest held for more than three years and recognizes capital gain, and either: (i) The Passthrough Entity through which the API is directly or indirectly held has a holding period in the API that is three years or less, or (ii) the Passthrough Entity through which the API is held has a holding period in the API of more than three years and the assets of the partnership in which the API is held meet the Substantially All Test.

The Treasury Department and the IRS received several comments stating that, although the application of the Lookthrough Rule for directly-held APIs is reasonable, the application of the Lookthrough Rule for indirectly-held APIs is punitive and imposes an unreasonable and significant administrative burden. The commenters recommended that the scope of the Lookthrough Rule for indirectly-held APIs be limited, particularly in the case of indirectly-held APIs where the relevant taxpayer does not control a partnership that issued the API. Another commenter questioned the authority for the Lookthrough Rule but noted that it is consistent with partnership tax principles and that the proposed regulation would be easily manipulated without the rule.

Commenters suggested that the proposed regulations be amended in one or more of the following ways: (i) Limit the Lookthrough Rule to situations in which a Passthrough Entity controls all of the relevant lower-tier Passthrough

Entities (or only applying it to lower-tier Passthrough Entities that it controls); (ii) limit the Lookthrough Rule for indirectly held APIs to situations in which the API is held by a lower-tier Passthrough Entity for three years or less; (iii) limit the application of the Lookthrough Rule to situations in which assets that produce capital gain or loss of a type taken into account under section 1061 are a material amount (greater than 50 percent) of the value of the underlying assets of the partnership; (iv) eliminate the Substantially All Test in the context of tiered structures (that is, determine the applicability of the Substantially All Test with respect to the assets held by the partnership whose interest was sold); (v) amend the Substantially All Test so that a transferring taxpayer who has held its interest for more than three years will be required to look through to the underlying assets' character only if 80 percent or more of the assets held directly or indirectly by the Passthrough Entity have a holding period of three years or less; (vi) make information reporting related to the Lookthrough Rule mandatory for partnerships and S corporations and for required PFIC annual information statements regardless of whether a Passthrough Entity has issued or holds an API; (vii) provide a de minimis rule by which an upper-tier partnership holding a five percent or less interest in the lower-tier partnership would be allowed to use its holding period in the lower-tier partnership; and (viii) as a part of the de minimis rule, not require revaluations of lower-tier partnerships when an Owner Taxpayer disposes of an upper-tier interest that holds five percent or less of a lower-tier partnership. A commenter recommended that the Lookthrough Rule approach calculations in tiered structures from the lower-tier entities up, aligning with the approach to tiered structures elsewhere in the proposed regulations, and allowing the rule to appropriately accommodate lower-tier gains from assets whose sale proceeds are treated as capital gains without regard to section 1222(3) and (4).

After considering the comments, the Treasury Department and the IRS agree that the Lookthrough Rule as proposed could be difficult for Owner Taxpayers and Passthrough Entities to apply, particularly in the context of tiered structures. However, the Treasury Department and the IRS remain concerned that taxpayers could avoid section 1061 by transferring assets to, and issuing APIs from, existing partnerships. Accordingly, the final regulations retain the Lookthrough Rule, but instead of applying the Lookthrough Rule to the disposition of an API held for more than three years and where the Substantially All Test is met, the final regulations limit the application of the Lookthrough Rule to situations where, at the time of disposition of an API held for more than three years, (1) the API would have a holding period of three years or less if the holding period of such API were determined by not including any period prior to the date that an Unrelated Non-Service Partner is legally obligated to contribute substantial money or property directly or indirectly to the Passthrough Entity to which the API relates (this rule does not apply to the disposition of an API to the extent that the gain recognized upon the disposition of the API is attributable to any asset not held for portfolio investment on behalf of third party investors); or (2) a transaction or series of transactions has taken place with a principal purpose of avoiding potential gain recharacterization under section 1061(a). The Lookthrough Rule similarly applies with respect to a Passthrough Interest issued by an S corporation or a PFIC to the extent the Passthrough Interest is treated as an API. The final regulations also simplify the method for applying the Lookthrough Rule.

Commenters also stated that the Lookthrough Rule raises a concern that going concern value in a lower-tier entity might be subject to ordinary income rates if an upper-tier partnership interest is sold, the Lookthrough Rule applies, and the upper-tier partnership owns a lower-tier partnership interest. These commenters recommended that gain associated with goodwill or enterprise value retain the holding period of the partnership interest itself, as opposed to the underlying assets, and that the Lookthrough Rule apply only to the gain associated with the hypothetical liquidation of the underlying assets. The Treasury Department and the IRS continue to study this issue and may address it in future guidance.

One commenter requested clarification that the phrase ''total net capital gain'' in proposed § 1.1061–4(b)(9)(ii)(C)(*1*) refers to ''net long-term capital gain'' and that short- and long-term capital gains and losses cannot be netted against each other. The final regulations do not include this language. The Treasury Department and the IRS believe that the concerns raised by the commenter are alleviated by the simplified Lookthrough Rule adjustment in the final regulations.

D. Section 1.1061–5: Transfers to Related Parties

Proposed § 1.1061–5(a) provides that if an Owner Taxpayer transfers any API, or any Distributed API Property, directly or indirectly, to a Section 1061(d) Related Person, or if a Passthrough Entity in which an Owner Taxpayer holds an interest, directly or indirectly, transfers an API to a Section 1061(d) Related Person, regardless of whether gain is otherwise recognized on the transfer under the Code, the Owner Taxpayer must include in gross income as short-term capital gain, the excess of: (1) The Owner Taxpayer's net long-term capital gain with respect to such interest for such taxable year determined as provided in proposed § 1.1061–5(c), over (2) any amount treated as short-term capital gain under proposed § 1.1061–4 with respect to the transfer of such interest (that is, any amount included in the Owner Taxpayer's API One Year Disposition Gain Amount and not in the Owner Taxpayer's Three Year Disposition Gain Amount with respect to the transferred interest). Proposed § 1.1061–5(b) provides that for purposes of section 1061(d), the term transfer includes contributions, distributions, sales and exchanges, and gifts.

Several commenters addressed whether section 1061(d) should be interpreted as an acceleration provision or merely a recharacterization provision. With certain exceptions, the proposed regulations require that gain be accelerated on the transfer of an API to a Section 1061(d) Related Person, regardless of whether the transfer is otherwise a taxable transaction for Federal income taxes or whether gain is otherwise realized or recognized under the Code on the transfer. One commenter supported this treatment, noting that section 1061(d)(1) is literally worded as an income acceleration provision while acknowledging that others have viewed the language as a recharacterization provision, such as section 751(a). Another commenter noted that neither the text nor the legislative history shed any light on its purpose and stated that the provision's language is susceptible to numerous different readings. The commenter noted that section 1061(d) could be read as a narrow recharacterization lookthrough provision similar to section 751, a recharacterization and assignment of income provision that provides for nonrecognition transfers and requires the transferor rather than the transferee to include API Gain when ultimately realized, a recharacterization and acceleration provision, or a proration provision. The commenter did

not provide a recommendation, but noted that the proposed regulations create many traps for the unwary. The commenter stated that the broad definition of transfer in the proposed regulations combined with the overriding of nonrecognition treatment could lead to significant, adverse tax impacts on transferors as well as otherwise uninvolved, passive interest holders in a variety of transactions. The commenter suggested that the Treasury Department and the IRS carefully consider whether the effect of the proposed regulations is appropriate and aligns with section 1061(d)'s language, function, and origins.

Other commenters argued that applying section 1061(d) to transactions where gain is not otherwise recognized is inconsistent with the statutory language. One commenter stated that section 1061(d) itself does not refer to any nonrecognition provisions, nor does it contain any express statement of intent to override nonrecognition treatment. This commenter and others noted that section 1061(d) operates by reference to the taxpayer's long-term capital gains, which as defined in section 1223(3) include only gains that are recognized for U.S. Federal income tax purposes. Consequently, these commenters argued that the statute by its terms does not apply to situations in which the taxpayer has no actual long-term capital gain with respect to such interest. Commenters also noted that the legislative history does not provide support for treating section 1061(d) as an acceleration provision. Previous carried interest provisions included language that explicitly overrode non-recognition; section 1061 as enacted contains no such language.

One commenter stated that it is not necessary to accelerate gain on the transfer of an API to a Section 1061(d) Related Person, noting that the API in the hands of the transferee is still subject to section 1061(a) because an API includes interests held by or transferred to the taxpayer in connection with the performance of a substantial service by the taxpayer or a related person.

Commenters also raised a variety of concerns about the proposed regulation's definition of transfer. Commenters recommended that the term transfer be further defined to address potential cases involving indirect transfers of an API, such as the admission of new partners into the partnership, the withdrawal of old partners from the partnership, the transfer of an employee between teams, or an award to a high performer. One commenter explained that, in these circumstances, because there is no change in the relative economic position between fund managers and third-party investors, there should be no requirement for the fund manager or employees of the fund manager to recognize unrealized built-in gain. Commenters also recommended that the final regulations consider whether a forfeiture of an API is a transfer for purposes of section 1061(d) but stated that such an interpretation would be overbroad. One commenter noted that forfeiture and reallocations involve circumstances in which the partners' legal and economic interests in the partnership's Unrealized API Gains are contingent rather than fixed. Where a partner's interest in Unrealized API Gains is contingent, the commenter argued that it is not appropriate to tax a partner on a reduction in that interest under section 1061(d).

Another commenter asked for clarification that the distribution of an API by a direct API Holder to an Owner Taxpayer (indirect API Holder) would be exempt from the application of section 1061(d). The commenter noted that section 1061(a) would continue to apply to the distributed API and that this treatment would be consistent with the rules related to Distributed API Property in § 1.1061–4. Under those rules, a distribution of property by a Passthrough Entity to an API Holder is not subject to recharacterization under section 1061 but the Distributed API Property continues to be subject to section 1061. The commenter argued that this rule would also treat similarly situated taxpayers the same, rather than treating distributees of Distributed API Property differently from Owner Taxpayers who receive a distribution of an API from a partnership.

Another commenter asked for clarification that the definition of gift refers to transfers which are gifts for income tax purposes (rather than for gift tax purposes). The commenter noted that many common estate planning techniques involve transfers of assets to grantor trusts with the transferor as the grantor and the grantor's family members as beneficiaries of the trust, and that these types of transfers often result in a completed gift for gift tax purposes but do not constitute a transfer of ownership for income tax purposes.

Commenters also recommended that the final regulations exclude specific nonrecognition transactions, including (i) transfers resulting from the death of an Owner Taxpayer; (ii) gifts to a non-grantor trust by an Owner Taxpayer; and (iii) transfers resulting from a change in tax status of a grantor trust. One commenter noted that, in light of section 1061(d)'s specific reference to section 318(a)(1), and not to section 318(a)(2), a gift to a non-grantor trust for the benefit of a taxpayer's spouse, children, grandchildren or parents should not be considered an ''indirect transfer'' that would trigger the application of section 1061(d). The commenter noted that Congress's use of the phrase ''directly or indirectly'' does not warrant disturbing the conclusion that a transfer to a non-grantor trust does not constitute an acceleration event for purposes of section 1061(d). This commenter suggested in the alternative that if a transfer to a non-grantor trust is an acceleration event for purposes of section 1061(d), only upon a subsequent distribution of the API out of the non-grantor trust should the acceleration event occur.

After considering the comments, the Treasury Department and the IRS have determined that while section 1061(d) can reasonably be interpreted as an acceleration provision, in the absence of clear language to the contrary, it is more appropriate to apply section 1061(d) only to transfers in which long-term capital gain is recognized under chapter 1 of the Code. Interpreting section 1061(d) as only a recharacterization provision is consistent with the statutory language that looks to so much of the taxpayer's long-term capital gain with respect to such interest for such taxable year as is attributable to the sale or exchange of any asset held. This treatment also prevents the acceleration of gain in the many non-abusive nonrecognition transactions described by commenters. Furthermore, it is not necessary to accelerate gain on the transfers of an API to a Section 1061(d) Related Person in a non-taxable transaction because the API will remain an API in the hands of the transferee under § 1.1061–2(a). Accordingly, the final regulations provide that the Section 1061(d) Recharacterization Amount includes only long-term capital gain that the Owner Taxpayer recognizes under chapter 1 of the Code upon a transfer through a sale or exchange of an API to a Section 1061(d) Related Person.

Proposed § 1.1061–5(c) provides a formula for calculating the Owner Taxpayer's short-term capital gain upon a transfer of an API to a Section 1061(d) Related Person based upon a hypothetical sale of all of the partnership's property in a fully taxable transaction. A commenter noted that because the calculation is not based on the Recharacterization Amount under a hypothetical liquidation, it includes amounts excluded from the Recharacterization Amount, such as

capital interest gains and losses. The commenter recommended that the formula be amended so that it is based upon the Recharacterization Amount in a hypothetical partnership liquidation, and that the final regulations contain an exception from taxation for transactions in which the Owner Taxpayer's deemed distributions with respect to the Owner Taxpayer's API on a hypothetical liquidation basis are the same immediately before and after the transaction (not including any deemed distributions due to changes in debt allocations). Another commenter suggested that, in order to avoid double-counting in a tiered structure, there should be a cap on the amount that would be taxed equal to the gain that would be realized if the directly transferred API were sold for its fair market value by the Owner Taxpayer.

Another commenter noted that the proposed regulations provide that section 1061(d) applies to transfers of APIs by Passthrough Entities and to transfers of Distributed API Property by Owner Taxpayers, but that the rules do not provide guidance on how to calculate the amount to be included. The commenter suggested that, in the case of a transfer of an API by a Passthrough Entity, the inclusion amount should be the amount that would be allocated to each of the Passthrough Entity's direct or indirect Owner Taxpayers in a deemed taxable sale of assets by the lower-tier entity in which the Passthrough Entity holds its API, and that the amounts that such Passthrough Entity includes in the API One Year Distributive Share Amount, but not in the API Three Year Distributive Share Amount, for each Owner Taxpayer should be subtracted from the aforementioned amounts to calculate an Owner Taxpayer's recharacterization amount under section 1061(d). In the case of a transfer of Distributed API Property by an Owner Taxpayer, the commenter suggested that the inclusion amount should be the amount of long-term capital gain that the Owner Taxpayer would have recognized on a taxable sale for cash at the Distributed API Property's fair market value.

The Treasury Department and the IRS appreciate these thoughtful suggestions. The final regulations have revised and simplified the computation of the inclusion amount in § 1.1061–5(c) and have added the term Section 1061(d) Recharacterization Amount. The final regulations provide that, if section 1061(d) applies, an Owner Taxpayer's Section 1061(d) Recharacterization Amount is the Owner Taxpayer's share of the amount of net long-term capital gain from assets held for three years or less that would have been allocated to the Owner Taxpayer with respect to the transferred API if the partnership had sold all of its property in a fully taxable transaction for cash in an amount equal to the fair market value of such property immediately prior to the Owner Taxpayer's transfer of the API (or a portion of such gain if only a portion of the API is transferred).

A commenter requested clarification as to whether ''capital gain recognized'' on an otherwise taxable transfer in proposed § 1.1061–5(c)(2) means that the amount recharacterized under section 1061(d) includes only gain that would otherwise be treated as long-term gain or whether it sets the total amount of short-term gain on the transfer. The final regulations provide that the long-term gain that is recharacterized to short-term under section 1061(d) is the lesser of (i) the amount of net long-term capital gain recognized by the Owner Taxpayer upon the transfer of such interest, or (ii) the Section 1061(d) Recharacterization Amount as computed under § 1.1061–5(c). Thus, only gain that would otherwise be treated as long-term gain is recharacterized under section 1061(d).

Proposed § 1.1061–5(d) provides that the basis of a transferred API or transferred Passthrough Interest (in the case of a transferred Indirect API) is increased by the additional gain recognized. A commenter requested that the rule be revised to explicitly coordinate with section 743 so that the basis adjustments will be allocated to the assets that result in the gain recognition. The concerns raised in this comment are resolved because the final regulations limit the application of section 1061(d) to transactions in which gain is recognized.

Another commenter recommended that the final regulations explicitly exclude amounts that would be subject to the Capital Interest Exception. The final regulations do not adopt this comment because the Capital Interest Exception is an exception to the definition of an API. Therefore, such a rule is not needed. Commenters also recommended that the final regulations explicitly exclude amounts specified in proposed § 1.1061–4(b)(6) (designated as § 1.1061–4(b)(7) in the final regulations) from the calculation of the Section 1061(d) Recharacterization Amount. One commenter noted that the scope of section 1061(d)(1) is broader than the tax result that would occur if the partnership had actually sold all its property, noting that neither the statute nor the proposed regulations exclude section 1231 gains (and other excluded gains such as those under section 1256) from the Section 1061(d) Recharacterization Amount. Another commenter argued that section 1061(d) should not recharacterize section 1231 gain, stating that while the statutory language in section 1061(d) provides arguable authority for including section 1231 gains in the computation of the Section 1061(d) Recharacterization Amount, the approach is hard to justify from a policy perspective. The commenter argued that because section 1061(d) is aimed at preventing an API Holder from circumventing section 1061(a), the regulations should not impose on taxpayers a result under section 1061(d) that is worse than if section 1061(a) had applied to assets sold by the partnership. The commenter recommended that ''long-term capital gains'' should be interpreted consistently for purposes of section 1061(a) and section 1061(d), and that long-term capital gain recognized with respect to section 1231 assets should not be recharacterized under either paragraph.

The final regulations adopt these comments and provide that the Section 1061(d) Recharacterization Amount does not include amounts not taken into account for purposes of section 1061 under § 1.1061–4(b)(7).

Proposed § 1.1061–5(c)(1) provides that if an Owner Taxpayer transfers an Indirect API and is subject to section 1061(d), the computation of the Section 1061(d) Recharacterization Amount must be applied at the level of any lower-tier Passthrough Entities. One commenter recommended that this rule be aligned with the rules for tiered partnerships elsewhere in the proposed regulations, such as the Lookthrough Rule, which explicitly states that it applies only to the ''assets of the partnership in which the API is held.'' A commenter recommended that the final regulations clarify whether the transfer of a distributed asset held, or deemed to be held, by the partnership for three years or less is subject to section 1061(d). Another commenter noted that there is no principled reason for not applying section 1061(d) in tiered partnerships to transfers of Distributed API Property by Passthrough Entities to Section 1061(d) Related Persons of the ultimate Owner Taxpayer.

Under the final regulations, the Section 1061(d) Recharacterization Amount is computed by the Owner Taxpayer. The transfer of a distributed asset held, or deemed to be held, by a Passthrough Entity for three years or less is subject to section 1061(d). The final regulations clarify that for

purposes of section 1061(d), an Owner Taxpayer will be treated as transferring the Owner Taxpayer's share of any Indirect API or Distributed API Property if the Indirect API or Distributed API Property is transferred by the API Holder to a person that is a Section 1061(d) Related Person with respect to the Owner Taxpayer. The final regulations also provide that the rules for determining the Section 1061(d) Recharacterization Amount also apply to the transfer of a Passthrough Interest issued by an S corporation or PFIC to the extent the Passthrough Interest is treated as an API.

Proposed § 1.1061–5(e) defines a Section 1061(d) Related Person as: (i) A person that is a member of the taxpayer's family within the meaning of section 318(a)(1); (ii) a person that performed a service within the current calendar year or the preceding three calendar years in a Relevant ATB to the API transferred by taxpayer; or (iii) a Passthrough Entity to the extent that a person described in paragraph (e)(1)(i) or (ii) owns an interest, directly or indirectly. One commenter recommended that the definition of Section 1061(d) Related Person be amended to exclude a Passthrough Entity to the extent that a member of the taxpayer's family or colleague is an owner, noting that language is not in the statute and is not discussed in the legislative history. The final regulations do not adopt this comment. Section 1061(d)(1) provides that the inclusion required by section 1061(d) applies if a taxpayer transfers any API, directly or indirectly, to a person related to the taxpayer.

III. Additional Comments Received and Revisions Made

A. Sections 1.1061–1 and 1.1061–2: Definitions, Operational Rules, and Examples

1. Definitions, In General

A commenter expressed the view that the interrelated new terms and definitions make the proposed regulations difficult to read and comprehend in some places. The final regulations largely retain the terms and definitions provided in § 1.1061–1(a) but simplify many of the computational rules and concepts used to determine the Recharacterization Amount and the Section 1061(d) Recharacterization Amount. The terms and definitions provide a helpful roadmap to the regulations and are also needed to provide Owner Taxpayers, Passthrough Entities, and the IRS with a common vocabulary that can be used to describe the necessary computations and reporting requirements. The final regulations make clarifying changes throughout the definitions, including providing that a Passthrough Entity can also be a trust or estate. Terms have also been added and removed in accordance with the revisions discussed elsewhere in this Summary of Comments and Explanation of Revisions.

A commenter noted that the preamble to the proposed regulations provides that ''taxpayer'' means Owner Taxpayer in sections 1061(a) and (d), and both Owner Taxpayer and Passthrough Taxpayer in section 1061(c)(1). The commenter further noted that the proposed regulations use the definition of ''person'' as that term is generally used under section 7701(a)(1). The commenter requested that the final regulations provide explicit definitions of ''taxpayer'' and ''person'' in each relevant part because the terms have different meanings in different contexts.

The final regulations do not adopt this comment because defining taxpayer and person in different ways in each relevant section would introduce unnecessary complexity. However, the use of these terms has been modified in certain places in the final regulations to alleviate confusion.

2. Operational Rules

a. Definition of API; An API Remains an API

Proposed § 1.1061–1(a) provides that API means any interest in a partnership which, directly or indirectly, is transferred to (or is held by) an Owner Taxpayer or Passthrough Taxpayer in connection with the performance of substantial services by the Owner Taxpayer or by a Passthrough Taxpayer, or by any Related Person, including services performed as an employee, in any ATB unless an exception applies, and that for purposes of this definition, an interest in a partnership also includes any financial instrument or contract, the value of which is determined in whole or in part by reference to the partnership (including the amount of partnership distributions, the value of partnership assets, or the results of partnership operations.)

A commenter expressed concern that defining an interest in a partnership to include a financial instrument or contract, the value of which is determined in whole or in part by reference to the partnership, could include investment management contracts that provide for a fee based on the assets of a fund partnership and not a carried interest or other performance allocation, creating a risk that the sale of a management company or indirect sale of a management contract could be subject to section 1061. This in turn could cause the enterprise value of the management company to be taxed at ordinary income rates. The commenter recommended that the definition of API be modified to exclude financial instruments or contracts that merely reference the value of partnership assets or that provide for fee income that is subject to ordinary income tax treatment.

Because financial instruments can replicate the performance of a partnership interest, the inclusion of such items in the definition of an API is necessary for purposes of implementing section 1061. Accordingly, the final regulations do not adopt this comment. As stated in Part IV of this Summary of Comments and Explanation of Revisions, the Treasury Department and the IRS continue to study the impact of section 1061 on the taxation of enterprise value related to the transfer or exchange of partnership interests and management contracts.

Proposed § 1.1061–2(a)(1)(i) provides that once a partnership interest qualifies an API, the partnership interest remains an API unless and until the requirements of one of the exceptions to qualification of a partnership interest as an API are satisfied. A commenter questioned whether this provision is valid given that it is not explicit in the statute, but reasoned that the rule is implicit in the statutory scheme and is necessary to prevent avoidance of the statute.

The Treasury Department and the IRS agree with the commenter that this rule is implicit in the statutory scheme. Neither the statute nor the legislative history provide a time limit or other means of ending API treatment beyond the exceptions to qualification as an API. Consequently, no modifications have been made to § 1.1061–2(a)(1)(i).

b. Presumption That Services are Substantial

Proposed § 1.1061–2(a)(1)(iv) provides that if a partnership interest is transferred to or held by an Owner Taxpayer, Passthrough Taxpayer, or any Related Person in connection with the performance of services, the Owner Taxpayer, the Passthrough Taxpayer, or the Related Person is presumed to have provided substantial services for purposes of section 1061. Commenters suggested that presuming all services to be substantial is overbroad and recommended that the presumption be removed. In addition, one commenter recommended the inclusion of non-exclusive safe harbors that service partners could rely on to determine that

partnership interests they hold or that have been transferred to them are not in connection with the performance of substantial services. Another commenter recommended adding a means to rebut the presumption that the services are substantial.

The final regulations retain the proposed rule's presumption that all services provided for a partnership interest are substantial services for purposes of section 1061. However, the Treasury Department and the IRS will continue to study and consider possible circumstances under which the presumption might be rebutted as well as the possibility of providing safe harbors for circumstances under which the presumption will not apply. These considerations may be addressed in future guidance.

c. Application of the ATB Activity Test

i. In General, ATB

Proposed § 1.1061–1(a) provides that applicable trade or business (ATB) means any activity for which the ATB Activity Test with respect to Specified Actions is met, and includes all Specified Actions taken by Related Persons, including combining activities occurring in separate partnership tiers or entities as one ATB. Proposed § 1.1061–1(a) defines an Owner Taxpayer as the person subject to Federal income tax on net gain with respect to an API or an Indirect API during the taxable year, including an owner of a Passthrough Taxpayer unless the owner of the Passthrough Taxpayer is a Passthrough Entity itself or is excepted under proposed § 1.1061–3(a), (b), or (d).

ii. ATB Activity Test

Proposed § 1.1061–2(b)(1) provides that the ATB Activity Test is satisfied if Specified Actions are conducted by one or more Related Persons and the total level of activity, including the combined activities of all Related Persons, satisfies the level of activity that would be required to establish a trade or business under section 162. Proposed § 1.1061–1(a) provides that Specified Actions means Raising or Returning Capital Actions and Investing or Developing Actions. Raising or Returning Capital Actions means actions involving raising or returning capital but does not include Investing or Developing Actions. Investing or Developing Actions means actions involving either (i) investing in (or disposing of) Specified Assets (or identifying Specified Assets for such investing or disposition), or (ii) developing Specified Assets.

Commenters requested clarification that joint ventures of a real estate developer involving a single stand-alone project at a single location will not satisfy the ATB Activity Test. One of these commenters recommended that the definition of Raising or Returning Capital should be refined so that it includes only raising or returning capital activities in which the business earns compensation based on either capital committed, capital contributed, or capital invested. Another commenter noted that additional guidance may be needed to make the statute more administrable because real estate held for rental or investment is a Specified Asset but holding the property may not constitute a trade or business under section 162.

The final regulations do not adopt these comments. Whether a single project or raising of capital involves the level of activity needed to constitute a trade or business under section 162 is dependent on the facts and circumstances unique to the project or raising of capital. Furthermore, guidance under section 162 is beyond the scope of these regulations.

Example 6 of proposed § 1.1061–2(b)(2)(vi) describes a situation in which A manages a hardware store that Partnership owns. A is issued a profits interest in Partnership in connection with A's services. Partnership owns the building in which the hardware store operates. The example notes that the building is held by Partnership not for rental or investment, but to conduct Partnership's hardware business and, thus, the building is not a Specified Asset. The example provides that the partnership maintains and manages a certain amount of working capital for its business, but notes that working capital is not taken into account for the purpose of determining whether the ATB Activity Test is met. A commenter suggested that another example should be added to analyze how to apply the ATB Activity Test where the facts are changed so that the business is held in a C corporation, the partnership only holds the C corporation stock, and the holding partnership is held by an investment partnership. The commenter stated that the ATB Activity Test should not be met by the holding partnership and the manager should not be an API Holder.

The final regulations do not adopt this comment. Depending on the specific facts and circumstances of the situation, the Treasury and the IRS believe that the ATB Activity Test could be met by such a holding partnership and the manager might be an API Holder.

A commenter requested clarification regarding what activities occurring in separate partnership tiers or entities will be considered combined and treated as one ATB, and recommended that the regulations be amended to include an example illustrating how the ATB and API rules work in this situation. The commenter recommended that the application of section 1061 be limited to an Owner Taxpayer solely with respect to partnership interests that serve as compensation for services relating to Specified Assets. Another commenter requested simplifying safe harbors for activities conducted in multiple entities either in the same chain or in a brother-sister chain.

The Treasury Department and the IRS continue to study these issues and may consider providing future guidance on these matters. However, the Treasury Department and the IRS note the definition of ATB includes any and all activities, no matter how minimal, conducted by entities that are Related Persons to each other, for purposes of determining whether the ATB Activity Test is met, and if that test is met, then each such participating entity is considered to be engaged in an ATB.

Another commenter requested clarification that businesses that do not both raise or return capital and engage in either investment or development activities do not satisfy the ATB Activity Test, and that the regular, continuous, and substantial standard applies independently to each prong of the ATB Activity Test. The commenter suggested that because the proposed regulations aggregate activities of one or more entities and related parties, the final regulations should not include the statement that the fact that either Raising or Returning Capital Actions or Investing or Developing Actions are only infrequently taken does not preclude the test from being satisfied if the combined Specified Actions meet the test. The commenter expressed concern that this language combined with the rule that Raising or Returning Capital Actions and Investing or Developing Actions are not required to be taken in each taxable year could cause the activities of a fund sponsor's affiliates to satisfy the raising or returning capital prong with respect to any of the sponsored funds.

The final regulations do not adopt this comment. It is necessary for both the Raising or Returning Capital Actions and Investing or Developing Actions to be present for the ATB Activity Test to be satisfied. The aggregation rule and the language regarding infrequent actions are necessary to prevent abuse of section 1061. Without these rules,

activities could be spread among multiple related entities with the intent of not satisfying the ATB Activity Test.

iii. Definition of Specified Assets

Proposed § 1.1061–1(a) defines Specified Assets as: (i) Securities, including interests in partnerships qualifying as securities (as defined in section 475(c)(2) without regard to the last sentence thereof); (ii) commodities (as defined in section 475(e)(2)); (iii) real estate held for rental or investment; (iv) cash or cash equivalents; (v) an interest in a partnership to the extent that the partnership holds Specified Assets; and, (vi) options or derivative contracts with respect to any of the foregoing.

Commenters requested additional guidance on the treatment of partnerships that engage in the production, storage, transportation, processing, or marketing of physical commodities in the ordinary course of business (including hedges with respect to the commodities). The commenters requested that such partnerships not be treated as engaged in Investing and Developing Actions as a result of such activities, and that Specified Assets only include commodities that are themselves actually actively traded on an established financial market, not merely commodities of the same type as commodities that are or can be actively traded on an established financial market.

The final regulations do not adopt this comment; however, the Treasury Department and the IRS continue to study this issue and may address it in future guidance.

Another commenter noted that it is unclear whether the rule treating a derivative contract with respect to a partnership interest as a partnership interest for purposes of applying section 1061 is needed to appropriately administer section 1061. The commenter noted that the proposed regulation's position regarding such a derivative injects unnecessary complexity into the tax system, and stated that because payments made before termination of a swap are almost always ordinary income, it may not make economic or tax sense to use such a financial instrument in lieu of a partnership interest in an attempt to avoid section 1061.

The final regulations do not adopt this comment. While the use of a derivative contract in this circumstance may be rare, the Treasury and the IRS are concerned that the potential for abuse exists. Consequently, the treatment of a derivative contract as a partnership interest for purposes of applying section 1061 is necessary to prevent the circumvention of, and compliance with, section 1061.

B. Section 1.1061–3: Exceptions to the Definition of API

1. Corporate Exception

Section 1061(c)(4)(A) provides that an API ''shall not include any interest in a partnership directly or indirectly held by a corporation.'' In implementing this exception, proposed § 1.1061–3(b)(2) provides that a corporation does not include an entity for which an election was made to treat the entity as a Passthrough Entity, and that therefore, an S corporation for which an election under 1362(a) is in effect and a PFIC with respect to which the shareholder has a QEF election under section 1295 in effect (such entity is a QEF with respect to the shareholder), are not treated as corporations for purposes of section 1061. One commenter approved of this decision, noting that section 1061(f) provides ample authority for excluding S corporations and PFICs from the term corporation. The commenter noted that allowing such structures to benefit from the corporate exception would allow section 1061 to be entirely circumvented. Another commenter, discussing PFICs subject to QEF elections, noted that the exclusion of QEFs from the definition of corporation for purposes of section 1061 is consistent with section 1(h)(9) and (h)(10).

One commenter disagreed regarding authority, noting that the ability to treat QEFs and S corporations as subject to section 1061 is subject to substantial doubt and contrary to the plain text of the statute. The commenter also noted that Notice 2018–18, 2018–2 I.R.B. 443, and the provision's legislative history offer no reason why S corporations should, or should not, qualify for the exception. Another commenter said that a legislative clarification should be sought prior to including a rule in the final regulations providing that S corporations are subject to section 1061.

The Treasury Department and the IRS agree with commenters that the exclusion of S corporations and QEFs from the corporate exception is necessary to avoid circumvention of section 1061. Accordingly, no change has been made to this section of the final regulations. As explained in the preamble to the proposed regulations, section 1061(f) provides that the Secretary has authority to issue regulations or other guidance as is necessary or appropriate to carry out the purposes of section 1061. Both the Conference Report and the Blue Book further direct the Treasury Department and the IRS to issue regulations to address the prevention of abuse of the purposes of the provision. The grant of authority in section 1061(f) is sufficient to issue regulations providing that the exception in section 1061(c)(4)(A) does not include S corporations and PFICs with respect to which shareholders have QEF elections in effect. See also section 1(h)(9) and (10).

2. Unrelated Purchaser Exception

Proposed § 1.1061–3(d) provides that if a taxpayer acquires an interest in a partnership (target partnership) by taxable purchase for fair market value that, but for the exception in § 1.1061–3(d), would be an API, the taxpayer will not be treated as acquiring an API if, immediately before the purchase (1) the taxpayer is not related within the meaning of section 267(b) or 707(b) to any person who provides services in the Relevant ATB, or any service providers who provide services to or for the benefit of the target partnership or a lower-tier partnership in which the target partnership holds a direct or indirect interest; (2) section 1061(d) does not apply to the transaction (as provided in § 1.1061–5); and (3) the taxpayer has not provided in the past, does not then provide, and does not anticipate providing services in the future to, or for the benefit of, the target partnership, directly or indirectly, or any lower-tier partnership in which the target partnership holds a direct or indirect interest.

A few commenters stated that the proposed regulations are unclear as to whether the exception applies only to an API that is directly acquired or whether it also applies to an API in which the buyer acquired an indirect interest through an upper-tier partnership. One commenter recommended that final regulations provide that the exception applies to both APIs purchased directly as well as an APIs purchased indirectly, noting that the unrelated purchaser might not be able to rely on Rev. Rul. 87–115, 1987–2 C.B. 163, to adjust the basis of the underlying fund assets to prevent the recognition of built-in gain, as fund sponsors generally do not make section 754 elections at the fund level. Further, the commenter suggested that the final regulations provide that the exception applies regardless of whether the lower-tier partnership interest is acquired after the third-party purchases the interest in the upper-tier partnership or acquires the upper-tier partnership interest by contribution. Another commenter suggested that the exception be

extended to interests in other Passthrough Entities.

The final regulations do not adopt these comments because of the complexity of administering the unrelated purchaser exception through tiers of Passthrough Entities. The final regulations make non-substantive clarifying changes to the rule.

The preamble to the proposed regulations provides that the exception does not apply to an Unrelated Non-Service Partner who becomes a partner by making a contribution to a Passthrough Entity that holds an API and in exchange receives an interest in the Passthrough Entity's API, stating that, in this case, allocations to the Unrelated Non-Service Partner with respect to the API are API Gains and Losses and retain their character as API Gains and Losses. One commenter noted that this exception to the unrelated purchaser exception is not explained in the proposed regulations' preamble and suggested that the exception to the exception is most likely intended to refer to a situation in which an investor makes a contribution in form to an upper-tier partnership, which then distributes an API with respect to a lower-tier partnership to the contributing upper-tier partner. The commenter notes that these transfers might be a purchase of the API by the investor from the upper-tier partnership. The Treasury Department and the IRS intend that the third-party purchaser exception be limited to API purchases and not apply when a third party contributes cash or property to a Passthrough Entity holding an API in a transaction qualifying for nonrecognition under section 721(a), or any similar provision, resulting in the contributor receiving allocations attributable to the transferee Passthrough Entity's API.

C. Section 1.1061–4: Computing the Recharacterization Amount

1. Computation of the Recharacterization Amount

Proposed § 1.1061–4(a)(1) provides that the Recharacterization Amount equals the Owner Taxpayer's One Year Gain Amount less the Owner Taxpayer's Three Year Gain Amount. The Owner Taxpayer's One Year Gain Amount is the sum of the Owner Taxpayer's combined net API One Year Distributive Share Amount from all APIs held during the taxable year and the Owner Taxpayer's API One Year Disposition Amount. An Owner's Taxpayer's Three Year Gain Amount is equal to the Owner Taxpayer's combined net API Three Year Distributive Share Amount from all APIs held during the taxable year and the Owner Taxpayer's API Three Year Disposition Amount. The API One Year and Three Year Distributive Share Amounts exclude Capital Interest Gains and Losses. Capital Interest Disposition Amounts are not included in the computation of the API One Year and Three Year Disposition Amounts because they relate to the disposition of a Capital Interest rather than an API.

Proposed § 1.1061–4(a)(3)(i) provides that the API One Year Distributive Share Amount equals the API Holder's distributive share of net long-term capital gain from the partnership for the taxable year, including capital gain or loss on the disposition of all or a part of an API, with respect to the partnership interest held by the API Holder calculated without the application of section 1061 less, to the extent included in the amount determined under proposed § 1.1061–4(a)(3)(i)(A), the aggregate of amounts that are excluded from section 1061 under proposed § 1.1061–4(b)(6), the *API Holder's Transition Amount* for the taxable year; and Capital Interest Gains and Losses as determined under proposed § 1.1061–3(c)(2).

One commenter stated that the definition of API One Year Distributive Share Amount does not allow for this amount to be a loss. For example, if an Owner Taxpayer holds two APIs and one partnership allocates the taxpayer a loss and the other a gain, the loss does not offset the gain because the API One Year Distributive Share Amount for the partnership that allocated the taxpayer a loss will be zero. The commenter recommended allowing the API One Year Distributive Share Amount to be less than zero. The final regulations adopt this suggestion by revising the computation for the API One Year Distributive Share Amount to include both capital gain and loss. In addition, the commenter suggested that the final regulations provide that if each of the API One Year Distributive Share Amount and the API Three Year Distributive Share Amount is greater than zero but the API One Year Distributive Share Amount is less than the API Three Year Distributive Share Amount, no portion of the API One Year Distributive Share Amount is recharacterized as short-term capital gain. The final regulations adopt this suggestion by providing that if the One Year Gain Amount and the Three Year Gain Amount are both greater than zero but the One Year Gain Amount is less than the Three Year Gain Amount, none of the One Year Gain Amount is included in the Recharacterization Amount for the taxable year. In addition to adopting this comment, the final regulations make minor clarifying changes to the computation rules.

Commenters raised several additional concerns related to the computation rules. One commenter recommended that regulations provide guidance on how losses limited by section 1211 affect the Recharacterization Amount. Another commenter noted that the proposed regulations do not address how net capital gain is computed or the order of steps in doing so under section 1(h)(1). The commenter stated that because section 1061(a) recharacterizes what would have been long-term capital gain as short-term capital gain, it is apparent that section 1061(a) must be applied somewhere in the process before the application of section 1(h). Further, the proposed regulations do not address § 1.1(h)–1, which provides a look-through rule when a partnership interest is sold, to determine what portion of the gain on sale will be treated as collectibles gain or section 1250 capital gain. The commenter also noted that, although section 1231 and section 1256 gains are excluded from section 1061 by the proposed regulations, a sale of a partnership interest holding such assets is not excluded, and all the gain is subject to section 1061(a) unless section 751(a) applies. Finally, the commenter stated that there is no provision in the proposed regulations addressing suspension of the holding period of an API when an API owner seeks to obtain a more-than-three-year holding period without undertaking additional risk—that is, the hedging of the API. The commenter recommended that an express rule be provided, such as the rule provided in § 1.1400Z2(a)–1(b) for interests in partnerships self-certified as qualified opportunity funds.

The Treasury Department and the IRS continue to study the issues raised by these comments in regard to the computation rules and may address them in future guidance.

2. Distributed API Property

Proposed § 1.1061–1(a) provides that Distributed API Property means property distributed by a Passthrough Entity to an API Holder with respect to the API if the holding period, as determined under sections 735 and 1223, in the API Holder's hands is three years or less at the time of disposition of the property by the API Holder.

A commenter questioned whether the Treasury Department and the IRS have the authority to treat Distributed API Property as subject to section 1061(a). The commenter further stated that in

order for the rule to be a valid exercise of regulatory authority, distributed property for this purpose should exclude property that, if sold by the partnership, would be excluded from section 1061, such as property that would generate 1231 and 1256 gains.

The final regulations continue to treat Distributed API Property as subject to section 1061(a) under the authority of section 1061(f). However, the Treasury Department and the IRS agree with the commenter that long-term capital gain from the disposition of Distributed API Property that, if sold by the partnership, would be excluded from section 1061, such as 1231 and 1256 gain, qualified dividends described in section 1(h)(11)(B), and any other capital gain that is characterized as long-term or short-term without regard to the holding period rules in section 1222, should not be recharacterized under section 1061(a). The final regulations clarify this point by excluding these items from the calculation of the API One Year Disposition Amount. Additionally, because a Passthrough Entity does not calculate an API One Year Disposition Amount, the final regulations clarify that for purposes of calculating the API One Year Distributive Share Amount, an API Holder's distributive share of net long-term capital gain from the partnership includes capital gain or loss on the disposition of Distributed API Property or all or part of an API by an API Holder that is a Passthrough Entity.

Another commenter suggested that the final regulations explicitly provide rules for the treatment of Distributed API Property when the Distributed API Property is distributed from one Passthrough Entity to another and the upper-tier entity disposes of the Distributed API Property. The commenter also requested confirmation in the final regulations that partnerships should subtract capital gain or loss from property that had been Distributed API Property but no longer is at the time of disposition when calculating the API One Year Distributive Share Amount because such gain is excluded from the calculation of the Recharacterization Amount.

The final regulations partially adopt this comment by revising the computation of the One Year Distributive Share Amount to explicitly include dispositions of API Distributed Property by a partnership or other Passthrough Entity. The final regulations do not adopt the suggestion to explicitly provide that partnerships should subtract capital gain or loss from property that had been Distributed API Property but no longer is at the time of disposition when calculating the API One Year Distributive Share Amount. The definition of Distributed API Property provides that it only applies to property with a holding period of three years or less on the date of disposition by an API Holder. Any property with a greater than three-year holding period is therefore not Distributed API Property. A special rule for Distributed API Property distributed to an upper-tier entity by a lower-tier entity is unnecessary because the definition of API Holder includes a Passthrough Entity.

Commenters noted that the proposed regulations are unclear as to how the Distributed API Property rules apply where an API Holder owns both a profits interest and a capital interest in a partnership, and recommended that the final regulations clarify that a distribution to a partner is not Distributed API Property to the extent that it is distributed with respect to the portion of the partner's interest qualifying for the Capital Interest Exception. One commenter suggested that such guidance should also address how to apply the recommended rule in the context of tiered structures.

The Treasury Department and the IRS continue to study this issue and may address it in future guidance.

3. Special Rules for Capital Gain Dividends From Regulated Investment Companies (RICs) and Real Estate Investment Trusts (REITs)

The preamble to the proposed regulations recognizes that long-term capital gain treatment should be available for a capital gain dividend paid by a RIC or REIT to the extent that the capital gain dividend is attributable to assets held for more than three years or is attributable to assets that are not subject to section 1061. Proposed § 1.1061–4(b)(4) facilitates this treatment by allowing a RIC or REIT to disclose two additional amounts based on modified computations of the RIC's or REIT's net capital gain. First, the RIC or REIT may disclose the amount of the capital gain dividend that is attributable to the RIC's or REIT's net capital gain excluding any amounts not taken into account for purposes of section 1061 under proposed § 1.1061–4(b)(6) from the computation. Second, the RIC or REIT may disclose the amount of the capital gain dividend that is attributable to the RIC's or REIT's net capital gain both (1) excluding any amounts not taken into account for purposes of section 1061 under proposed § 1.1061–4(b)(6) from the computation, and (2) substituting three years for one year in applying section 1222. The proposed regulations allow a RIC or REIT to disclose these two additional amounts in writing to its shareholders with its section 852(b)(3)(C)(i) capital gain dividend statement or section 857(b)(3)(B) capital gain dividend notice.

One commenter suggested that it would be extremely rare for a RIC to have shareholders for whom this provision is relevant and stated that requiring this additional reporting would be unnecessarily burdensome as it creates a third type of capital gain that RICs would need to track and report. Consequently, the commenter requested that final regulations continue to permit, but not require, RICs to report this information if they have a shareholder for whom such amounts are relevant. In addition, the commenter noted that most funds will not calculate this information at the time capital gain dividends are reported on Forms 1099–DIV. The commenter requested that final regulations allow reporting on a written statement furnished to the applicable shareholder on request, without tying the reporting of such amounts to the reporting of capital gain dividends.

Another commenter suggested that RICs and REITs should be permitted to disclose these additional amounts, upon request by a shareholder, and report the One Year Amounts Disclosure and Three Year Amounts Disclosure (as those terms are defined in proposed § 1.1061–6(c)) until the extended due date of their returns.

The final regulations retain the rules as proposed but designate them as § 1.1061–4(b)(5). As suggested by these commenters, the final regulations retain the option to disclose to shareholders the two additional amounts (that is the final regulations do not make disclosure mandatory). The final regulations do not adopt the suggestion to allow RICs and REITs to disclose these additional amounts only upon the request of a shareholder because such treatment may allow a RIC or REIT to choose to provide information only to certain shareholders but not to other shareholders. The Treasury Department and the IRS continue to study comments suggesting that the disclosure of this information be separated from the reporting of capital gain dividends and may issue guidance in the future. In the interim, the final regulations retain the rule that the disclosures are to be provided with the section 852(b)(3)(C)(i) capital gain dividend statement or section 857(b)(3)(B) capital gain dividend notice.

4. Computation of the Recharacterization Amount for Owner Taxpayers With Interests in QEFs

The proposed regulations provide special rules for Owner Taxpayers that hold their APIs indirectly through PFICs for which they have made a QEF election. Specifically, under proposed § 1.1061–4(b)(5), the API One and Three Year Distributive Share Amounts include an Owner Taxpayer's section 1293(a)(1) inclusions from QEFs, reduced by amounts that are excluded from section 1061(a) if the QEF complies with the reporting rules under § 1.1061–6(d). These reporting rules provide that QEFs may provide information to allow Owner Taxpayers to compute their Recharacterization Amount. If a QEF fails to provide such information, an Owner Taxpayer includes its entire pro rata share of the QEF's net capital gain in its API One Year Distributive Share Amount and no portion of its pro rata share of the QEF's net capital gain is ultimately included in its API Three Year Distributive Share Amount. One commenter made several suggestions regarding the computation of an Owner Taxpayer's API One Year Distributive Share Amount and API Three Year Distributive Share Amount with respect to a QEF's net capital gain. Broadly, the commenter expressed a concern that the corporate-level capital gain netting rules applicable to QEFs are not consonant with the requirement that the Recharacterization Amount be computed at the Owner Taxpayer level. A QEF determines its net capital gain at the corporate level, and may do so in one of three ways: First, the QEF may calculate and report the amount of each category of long-term capital gain described in section 1(h) of the Code; second, the QEF may report its net capital gain for the year and state that it is subject it to the highest capital gain rate of tax applicable to the shareholder; or third, the QEF may determine its current earnings and profits (E&P) and report the entire amount as ordinary earnings. Section 1.1293–1(a)(2). A QEF's net capital gain is limited to its current E&P, regardless of how it computes such amount under § 1.1293–1(a)(2) (QEF E&P limitation). Section 1293(e)(2). The commenter had several suggestions on how to clarify or improve the rules under section 1061 applicable to QEFs.

First, the commenter suggested that the three year QEF net capital gain provision was not entirely clear, particularly in regard to the API Three Year Distributive Share Amount. The commenter recommended that the final regulations clarify that an Owner Taxpayer includes in its API Three Year Distributive Share Amount the same base amount as determined for the API One Year Distributive Share Amount (as adjusted to reflect only net long-term capital gains and losses calculated by substituting a greater-than-three-year holding period for a greater-than-one-year holding period).

The Treasury Department and the IRS confirm that an Owner Taxpayer's API Three Year Distributive Share Amount is based on the amount computed for its API One Year Distributive Share Amount and adjusted to include only items that would be treated as a long-term gain or loss if three years were substituted for one year in paragraphs (3) and (4) of section 1222 if the QEF satisfies certain reporting obligations. *See* § 1.1061–6(d). However, the final regulations revise proposed § 1.1061–4(b)(5) (designated as § 1.1061–4(b)(6) in the final regulations) to more precisely identify the inputs for computing an Owner Taxpayer's API One and Three Year Distributive Share Amounts and illustrate an Owner Taxpayer's API Three Year Distributive Share Amount computation with respect to a QEF. Specifically, § 1.1061–4(b)(6)(i) provides that an Owner Taxpayer's inclusion under section 1293(a)(1)(B) that is taken into account in determining the API One Year Distributive Share Amount with respect to a QEF is limited to the QEF's E&P by section 1293(e)(2) and that the section 1293(a)(1)(B) inclusion may be reduced by the Owner Taxpayer's share of the excess (if any) of the Capital Interest Gain over Capital Interest Loss with respect to the QEF as well as amounts not taken into account for purposes of section 1061 pursuant to § 1.1061–4(b)(7). In either case, however, § 1.1061–4(b)(6)(i) permits such reductions only if a QEF has provided an Owner Taxpayer with the relevant information necessary for the Owner Taxpayer to determine those amounts.

Additionally, § 1.1061–4(b)(6)(ii) of the final regulations provides that the minuend of an Owner Taxpayer's API Three Year Distributive Share Amount computation (under § 1.1061–4(a)(3)(ii)) includes its entire amount determined under § 1.1061–4(b)(6)(i) (one year QEF net capital gain). The final regulations further provide that if the QEF does not provide the Owner Taxpayer with information necessary under § 1.1061–6(d) to determine the amount of its section 1293(a)(1)(B) inclusion (less any allowed reductions) with respect to the QEF that would be included in its API One and Three Year Distributive Share Amounts, then the entire amount of the Owner Taxpayer's one year QEF net capital gain (less any allowed reductions) is also included in the subtrahend of its API Three Year Distributive Share Amount formula (under § 1.1061–4(a)(3)(ii)(A)). This results in an Owner Taxpayer's entire section 1293(a)(1)(B) inclusion (less any allowed reductions) being treated as short-term capital gain. However, if the QEF provides the Owner Taxpayer with the additional necessary information, then the Owner Taxpayer includes only the amount of its one year QEF net capital gain amount that would not be treated as long-term capital gain substituting a greater-than-three-year holding period in applying paragraphs (3) and (4) of section 1222 in the subtrahend of this formula (under § 1.1061–4(a)(3)(ii)(A)). This can result in a portion of an Owner Taxpayer's section 1293(a)(1)(B) inclusion being characterized as long-term capital gain with the balance being treated as short-term capital gain.

To illustrate, assume an Owner Taxpayer owns an interest in a QEF that holds an API; the Owner Taxpayer owns no other API directly or indirectly. The QEF generates both long- and short-term capital gain in its taxable year, none of which are amounts described in § 1.1061–4(b)(7) or Capital Interest Gains; the Owner Taxpayer's pro rata share of the QEF's long-term capital gain is $100, $70 of which would not be long-term capital gain if a greater-than-three-year holding period were used in applying paragraphs (3) and (4) of section 1222, and its share of the QEF's short-term capital gain (determined without regard to section 1061) is $15. Before applying section 1061, under § 1.1293–1(a)(2), the Owner Taxpayer's pro rata share of the QEF's net capital gain is $100. Under § 1.1061–4(b)(6)(i), with respect to the QEF, the Owner Taxpayer's one year QEF net capital gain amount, and thus its API One Year Distributive Share Amount, is $100. In its API Three Year Distributive Share Amount computation with respect to the QEF, this $100 is the minuend (under § 1.1061–4(a)(3)(ii)). If the QEF does not provide the Owner Taxpayer with information to determine how much of its pro rata share of the QEF's net capital gain would constitute long-term capital gain if a greater-than-three-year holding period were used in applying paragraphs (3) and (4) of section 1222, the Owner Taxpayer would include all $100 under § 1.1061–4(a)(3)(ii)(A) in the subtrahend of its computation. This results in an API Three Year Distributive Share Amount of $0 with respect to the QEF (that is: $100 under § 1.1061–4(a)(3)(ii)

introductory text, minus $100 under § 1.1061–4(a)(3)(ii)(A)) and a Recharacterization Amount of $100 (that is, $100 API One Year Distributive Share Amount minus $0 API Three Year Distributive Share Amount). However, if the QEF does provide the Owner Taxpayer with this information, the Owner Taxpayer includes $70 in the subtrahend of its API Three Year Distributive Share Amount computation with respect to the QEF under § 1.1061–4(a)(3)(ii)(A). This results in an API Three Year Distributive Share Amount of $30 (that is: $100 under § 1.1061–4(a)(3)(ii) introductory text, minus $70 under § 1.1061–4(a)(3)(ii)(A)) and a $70 Recharacterization Amount (that is: $100 API One Year Distributive Share Amount minus $30 API Three Year Distributive Share Amount).

Additionally, the commenter asked that the final regulations harmonize the QEF reporting rules with the reporting rules applicable to other Passthrough Entities. Specifically, the commenter requested that if a QEF does not report relevant information, then QEF shareholders that are Owner Taxpayers should be able to substantiate amounts included in the API One Year Distributive Share Amount and Three Year Distributive Share Amount, as well as items excluded from section 1061(a), through alternative means.

The Treasury Department and the IRS have concluded that, when coupled with § 1.1061–6(d), the QEF reporting rules in § 1.1295–1(g) provide a sufficiently comprehensive framework for information reporting and no additional rule for section 1061 is necessary. Under § 1.1295–1(g)(1), for a PFIC to be treated as a QEF by its shareholders it must provide either an annual statement including the shareholder's pro rata share of the QEF's net capital gain for the year or a statement that it has granted its shareholders access to its books and records (or other documents) for the purpose of determining those amounts; under § 1.1295–1(g)(3), the same information must be reported to indirect PFIC shareholders on an intermediary statement. Under § 1.1295–1(g)(2), in ''rare and unusual circumstances,'' a PFIC can provide alternative documentation if it obtains a private letter ruling from, and enters into a closing agreement with, the IRS. In addition to these reporting requirements, § 1.1061–6(d) permits (but does not require) a QEF to provide its shareholders that are Owner Taxpayers with additional information for the purpose of determining the Owner Taxpayer's API One Year Distributive Share Amount and Three Year Distributive Share Amount.

The Treasury Department and the IRS have determined that the reporting mechanisms under §§ 1.1295–1(g) and 1.1061–6(d) provide sufficient avenues for an Owner Taxpayer to obtain information from a QEF to determine its API One Year Distributive Share Amount and Three Year Distributive Share Amount. A special rule allowing Owner Taxpayers to substantiate QEF information through alternative means for purposes of section 1061 would also run counter to § 1.1295–1(g), which generally requires a QEF, and not its shareholders, to report information for purposes of section 1293. As a result, to reconcile the optional nature of QEF reporting as compared with reporting requirements of other Passthrough Entities, the final regulations revise § 1.1061–6(b)(2)(ii) to provide that a Passthrough Entity from which information is requested must provide such information, but only to the extent the information is necessary for the requesting Passthrough Entity to meet its reporting and filing requirements under § 1.1061–6. The final regulations also revise § 1.1061–6(d) to provide that Owner Taxpayers are not permitted to separately substantiate amounts with respect to a QEF under § 1.1061–6(a)(2). Accordingly, the comments suggesting changes to the QEF reporting rules under section 1061 are not adopted.

The commenter also suggested that the final regulations should provide guidance on how to apportion the QEF E&P limitation for purposes of section 1061. Specifically, the commenter suggested that the QEF E&P limitation should be apportioned according to the shareholder's relative share of the API One Year Distributive Share Amount and the API Three Year Distributive Share Amount with respect to the QEF. The commenter also suggested that consideration be given to bypassing netting at the PFIC level, with guidance to be provided on how to allocate the QEF E&P limitation at the Owner Taxpayer level.

The QEF E&P limitation is imposed by section 1293(e)(2) and is taken into account in determining a shareholder's pro rata share of the net capital gains of a QEF that is required to be included in a shareholder's income pursuant to section 1293(a)(1). Netting of losses must therefore be carried out before determining the net capital gain of a QEF that is required to be included by a shareholder. The Treasury Department and the IRS recognize the complexity regarding apportioning the QEF E&P limitation for purposes of section 1061. This issue is particularly acute in light of the different types of capital gain and loss relevant for purposes of section 1061 that may be included in a QEF's net capital gain, including one- and three-year capital gains and losses, and amounts excluded from section 1061 under § 1.1061–4(b)(7) or under the capital interest exception. Further complication arises from the fact that a loss may arise either from a QEF's ordinary business operations, or from one or more of the four categories listed in the prior sentence.

In this regard, the Treasury Department and the IRS considered several possible ways of apportioning the QEF E&P limitation. One possibility would be to adopt an approach that apportions the QEF E&P limitation between the relevant types of capital gains for purposes of section 1061 on a pro rata basis, which the Treasury Department and the IRS determined would be appropriate in many circumstances, though not all. For example, if a loss arises from a QEF's ordinary business operations while its capital gain income is derived from an API, there may be no direct link between the ordinary loss and the API-derived capital gain. In such a case a pro rata approach may be appropriate. Alternatively, for other circumstances, the Treasury Department and the IRS considered apportioning a QEF's E&P limitation based on more specific ordering rules. For example, if a loss were related to one or more categories of capital gain, allocation first to those categories might be appropriate. Another possible approach would be to allocate the loss giving rise to the E&P limitation in the manner that most closely approximates how an Owner Taxpayer would be permitted to allocate the loss if the QEF's gains and losses were derived directly by the Owner Taxpayer and the Owner Taxpayer's income was limited to otherwise-long-term capital gain income. In light of the complexity regarding the different scenarios under which a pro rata approach or an alternative approach would be more appropriate, the Treasury Department and the IRS have determined that this issue warrants further study and welcome comments in this regard. Until the Treasury Department and the IRS issue further guidance on this issue, taxpayers may adopt any reasonable method for apportioning the QEF E&P limitation for purposes of section 1061 taking into account these considerations.

Finally, the commenter requested that the Treasury Department and the IRS provide a rule that would identify an Owner Taxpayer's distributive share of a QEF's net capital gain from a

Passthrough Entity attributable to the Owner Taxpayer's qualifying capital interest and API. The Treasury Department and the IRS continue to study this issue and may address it in future guidance.

5. Items Not Taken Into Account for Purposes of Section 1061

Proposed § 1.1061–4(b)(6) provides that certain items of long-term capital gain and loss are excluded from the calculation of the API One Year Distributive Share Amount and the API Three Year Distributive Share Amount. Specifically, long-term capital gain and long-term capital loss determined under section 1231 or 1256, qualified dividends included in net capital gain for purposes of section 1(h)(11)(B), and capital gains or losses that are characterized as long-term or short-term without regard to the holding period rules in section 1222 are excluded from these calculations.

Two commenters questioned the exclusion of long-term capital gain determined under section 1231 from recharacterization under section 1061. Those commenters discussed the discrepancies in language between section 1061(a)(1) and 1061(a)(2), noting that only section 1061(a)(2) refers to section 1222. Both commenters suggested that the treatment of section 1231 gains in the proposed regulations is contrary to the statutory text of section 1061. The first commenter stated that section 1061(a)(1) applies to net long-term capital gain and noted that other portions of section 1061 indicate that it is supposed to apply to gains that are taxed at favorable rates for disposition of investment assets. This commenter argued that the reference to section 1222 in section 1061(a)(2) can be read as excluding certain section 1222 gains from the reach of section 1061(a), rather than limiting section 1061(a) to such gains by implication. The commenter noted that if a determination is made that section 1061(a) does apply to section 1231, then regulations need to address the holding periods of section 1231 and how the netting rules of section 1231 interact with section 1061.

The second commenter suggested that, under the proposed regulations, the portion of any net section 1231 gains attributable to APIs could arguably be included in the amount described in section 1061(a)(1). The commenter stated that this would lead to nonsensical results if net section 1231 gains are included in the amount described in section 1061(a)(1) but excluded from the amount described in section 1061(a)(2). Because of the conflicting statutory language in sections 1061(a)(1) and 1061(a)(2), the commenter recommended that the treatment of section 1231 gains be reconsidered, suggesting that one approach would be to include the net 1231 gain attributable to APIs in the section 1061(a) computation after recomputing this amount by substituting 3 years for 1 year.

In contrast, several commenters supported the proposed regulation's treatment of qualified dividends and long-term capital gains determined under section 1231 and 1256 as not subject to recharacterization under section 1061 and recommended these provisions be finalized as proposed. Commenters noted that this treatment aligns with the clear language of the statute and is consistent with Congressional intent. One commenter stated that section 1256 amounts should not be subject to section 1061(a) because they are not gains that are taxed at favorable rates that arise from the disposition of assets. Another commenter noted that the statutory references to section 1223(3) and (4) raise the question of section 1061's potential effect on other Code provisions without regard to section 1222. The commenter indicated that some provisions have their own holding period, such as section 1231, while others, such as section 1256, just mandate tax treatment. The commenter stated that this results in a haphazard inclusion or exclusion of items from section 1061 and noted that because the section 1061 legislative history is devoid of guidance on this issue, the approach taken in the proposed regulations is reasonable but a technical correction from Congress would be welcome.

The final regulations do not adopt suggestions that section 1231 gain should be subject to recharacterization under section 1061(a) and maintain the rules in proposed § 1.1061–4(b)(6), which is designated as 1.1061–4(b)(7) in the final regulations. As stated in the preamble to the proposed regulations, section 1231 gains and losses are treated as long-term based on the operation of section 1231, and not by reference to paragraphs (3) and (4) of section 1222. Similarly, section 1256 provides for specific character treatment and does not calculate gain by reference to section 1222. Accordingly, the Treasury Department and the IRS have determined that it is appropriate to exclude these amounts from both the One Year and Three Year Gain Amounts. In contrast, because section 1061(d)(1) looks to the excess of long-term capital gains with respect to the transferred interest to the sale or exchange of any asset held for not more than three years as is allocable to such interest over what is otherwise short-term capital gain under section 1061(a), and does not reference section 1222, these amounts are captured in transactions to which section 1061(d) applies. The final regulations do not adopt the suggestion to provide guidance on section 1231 holding periods or netting rules because such guidance would be beyond the scope of these final regulations.

One commenter suggested that proposed § 1.1061–4(b), which excludes certain items from the calculation of the API One Year and Three Year Distributive Share Amounts, should be modified to explicitly reference both One Year Disposition Gains and One Year Distributive Share Amounts in providing for an exclusion of section 1231 property from the scope of section 1061. The commenter suggested that the Treasury Department and the IRS should also determine whether a similar modification is appropriate for the exclusion for section 1256 property.

The final regulations do not adopt this comment. The API One Year Disposition Amount includes long-term capital gains and losses recognized by an Owner Taxpayer on the disposition of all or a portion of an API. Pursuant to section 741, the sale or exchange of a partnership interest, including an API, is the sale or exchange of a capital asset. Accordingly, the character of the gain is determined with reference to section 1222. The items listed in § 1.1061–4(b)(7), including section 1231 gain, are excluded from the calculation of the API One Year and Three Year Distributive Share Amounts because they are not determined without regard to section 1222. Furthermore, asymmetrical tax treatment occasionally is a result of the difference between the sale of a partnership interest and the sale of assets by a partnership.

One commenter noted that under section 197(f), acquired goodwill is treated as depreciable property, thereby causing gain recognized on the sale of acquired goodwill to be treated as section 1231 gain. By contrast, self-created goodwill does not qualify as an amortizable intangible under section 197; therefore, any gain recognized on the sale of the self-created goodwill is not section 1231 gain. Instead, it is treated as a capital asset giving rise to capital gain upon a sale or exchange. Consequently, under the proposed regulations, gain on the sale of acquired goodwill is excluded from the Recharacterization Amount while gain on the sale of self-created goodwill is not excluded. The commenter

recommended that in addition to the exclusion for section 1231 gain, the regulations should provide that any gain recognized on the sale of goodwill held in connection with the conduct of a trade or business (whether or not determined under section 1231) is also excluded from the Recharacterization Amount because there is no evidence Congress intended to subject self-created goodwill held in connection with a trade or business to section 1061.

The final regulations do not adopt this comment. The disparate treatment of purchased and self-created goodwill is prescribed by section 197 and nothing in section 1061 changes this treatment.

6. Holding Periods

Proposed § 1.1061–4(b)(8) clarifies that the relevant holding period of either an asset or an API is determined under all provisions of the Code or regulations that are relevant to determining whether the asset or the API has been held for the long-term capital gain holding period by applying those provisions as if the holding period were three years instead of one year. For this purpose, the relevant holding period is the direct owner's holding period in the asset sold.

The final regulations maintain this rule as proposed. One commenter requested clarification that the modification of a partnership agreement does not itself create a new holding period for the API. The final regulations do not adopt this comment as section 1061 does not generally change the holding period of an asset.

7. API Holder Transition Amounts and Partnership Transition Amounts

The proposed regulations provide that a partnership that was in existence as of January 1, 2018, could irrevocably elect to treat all long-term capital gains and losses recognized from the disposition of all assets held by the partnership for more than three years as of January 1, 2018, as Partnership Transition Amounts. An amount of long-term gain or loss treated as a Partnership Transition Amount and included in the allocation of long-term capital gains and losses under sections 702 and 704 to an API Holder with respect to its interest in a Passthrough Entity was treated as an API Holder Transition Amount. API Holder Transition Amounts were not taken into account for purposes of determining the Recharacterization Amount. The preamble to the proposed regulations also requests comments on whether a transition rule is needed and whether the Partnership Transition Amount rules are useful or whether another approach would be more helpful in easing transition difficulties.

Several commenters questioned the need for an elective transition rule. One commenter noted that while they appreciated the Treasury Department and the IRS seeking to minimize the burdens associated with the change in law, they did not believe the transition rules would measurably lessen the recordkeeping burden on funds. The commenter also noted that whether and for whom the transition rules would be beneficial is unpredictable. Another commenter recommended that final regulations include an example illustrating, or otherwise better explaining, the importance of the API Holder Transition Amount rules, that is, what benefits the API Holder Transition Amount rules are intended to confer on taxpayers. No commenter provided an example of the potential applicability of the API Holder Transition Amount rules. After considering the comments, the Treasury Department and the IRS have determined that the Partnership Transition Amount rules are unnecessary. Accordingly, the final regulations do not include these rules.

D. Section 1.1061–6: Reporting Requirements

Proposed § 1.1061–6(a) provides filing and reporting requirements for Owner Taxpayers and Passthrough Entities. Proposed § 1.1061–6(a)(1) provides that an Owner Taxpayer must file such information with the IRS as the Commissioner may require in forms, instructions, or other guidance as is necessary for the Commissioner to determine that the Owner Taxpayer is in compliance with section 1061 and the regulations. Proposed § 1.1061–6(b)(1) provides that a Passthrough Entity must file such information with the IRS as the Commissioner may require in forms, instructions, or other guidance as is necessary for the Commissioner to determine that the Passthrough Entity and its partners have complied with section 1061 and the regulations and that a Passthrough Entity that has issued an API must furnish to the API Holder, including an Owner Taxpayer, such information at such time and in such manner as is necessary to determine the One Year Gain Amount and the Three Year Gain Amount with respect to the Owner Taxpayer that directly or indirectly holds the API.

Proposed § 1.1061–6(a)(2) provides that if a Passthrough Entity does not furnish the information that an Owner Taxpayer needs to determine its Recharacterization Amount and meet its reporting requirements, and the Owner Taxpayer is not able to otherwise substantiate all or a part of those amounts to the satisfaction of the Secretary, then (i) the negative adjustments under proposed § 1.1061–4(a)(3)(i)(B) necessary to calculate the API One Year Distributive Share Amount will be deemed to equal zero, and (ii) the negative adjustment to the API One Year Distributive Share Amount for purposes of determining the API Three Year Distribution Amount under proposed § 1.1061–4(a)(3)(ii)(B) will be deemed to equal zero.

Proposed § 1.1061–6(b)(2) provides that a Passthrough Entity that holds an interest in a lower-tier entity and needs information from the lower-tier entity to meet its reporting obligations under the proposed regulations must request such information from that entity by the later of the 30th day after the close of the taxable year to which the information request relates or within 14 days after the date of a request for information from an upper-tier Passthrough Entity and the lower-tier entity must respond by the due date (including extensions) of the Schedule K–1 for the taxable year. Proposed § 1.1061–6(b)(2)(vii) provides that a Passthrough Entity that fails to comply with the reporting rules in the proposed regulations or as further required in forms, instructions, or other guidance will be subject to penalties.

One commenter stated that the reporting rules are based on the assumption that there will be a limited number of individuals who are in control and who have access to all relevant factual information. Consequently, the rules are extensive and smaller partnerships and non-controlled partnerships may have difficulty complying without significant cost and expense. The commenter suggested this argued in favor of exempting small partnerships from these rules.

A few commenters stated that lower-tier passthrough entities are not required to furnish information until the due date of their returns and that this deadline does not permit upper-tier entities sufficient time to incorporate lower-tier passthrough entity information into their reporting. Further, the commenter noted that the regulations appear to prevent Owner Taxpayers from excluding anything from the API One Year Distributive Share Amount even if only part of the information cannot be substantiated. The commenter recommended that for groups of non-controlled entities, the requestor should be allowed any reasonable approach to substantiate the information and suggested that issues from non-compliant tiers should be resolved by having the IRS impose

failure to furnish penalties on those tiers. Finally, the commenter recommended guidance on how to substantiate unreported amounts.

Several commenters suggested that the information reporting requirements are onerous and that denying exclusions from recharacterization for non-compliance is too harsh a penalty for Owner Taxpayers and upper-tier partnerships who are unable to secure the necessary information from lower-tier partnerships, particularly where an Owner Taxpayer or upper-tier partnership has no control over whether the reporting requirements are met by the lower-tier partnership. One commenter argued that there is no indication in the statute or legislative history that this is what Congress intended. The commenter noted that the TCJA conference report indicates that Congress intended section 6031(b) penalties to apply to a failure to report to partners and those penalties are sufficient to deter non-compliance while not acting to change the character of distributive share items.

A few commenters noted that the reporting requirements will require significant amendments to partnership agreements and reporting systems. These commenters requested that the effective date for the reporting requirements and associated penalties be delayed until at least 12 months after the year end in which the regulations are finalized to give funds and API Holders time to amend their operations and establish proper information reporting systems, particularly in light of the increased reporting requirements resulting from partner tax capital account reporting, Forms K–2 and K–3, the section 163(j) limitation, and other recent guidance.

One commenter suggested that the regulations should provide a de minimis exception to the reporting requirements, especially in tiered partnership arrangements. The commenter suggested that if a limited partner owns less than five percent of a fund, there should be limitations on reporting requirements to those partners, arguing that information reporting is costly in a tiered fund context and the lower-tiered funds may not want to dedicate the resources to provide the proper reporting for such small fund interests.

The final regulations do not adopt these comments. The reporting rules, including the zero presumptions, are necessary to effectively administer section 1061 and the regulations. The Treasury Department and the IRS note that the amounts required to be reported under the reporting rules may be substantiated by any reasonable means if a Passthrough Entity fails to report the necessary information to the Owner Taxpayer. Similarly, a de minimis rule or an exception for small partnerships would frustrate Owner Taxpayers' ability to correctly determine the Recharacterization Amount and the IRS's ability to administer the statute. For these reasons, the Treasury Department and the IRS also decline to provide a delay in the applicability date for the reporting rules.

The final regulations retain the reporting rules as proposed with minor clarifying changes, including the changes discussed in paragraph III.C.4 of this preamble with respect to QEF reporting. In addition, the final regulations provide that if an Owner Taxpayer requires information from a Passthrough Entity to determine the Section 1061(d) Recharacterization Amount, the Owner Taxpayer should request such information from that entity. The Passthrough Entity is required to provide the information to the extent requested by an API Holder and necessary to determine the Owner Taxpayer's Section 1061(d) Recharacterization Amount. Finally, the final regulations substitute ''Commissioner'' for ''Secretary of the Treasury'' in § 1.1061–6(a)(2) to avoid any misperception that any office or bureau within the Treasury Department other than the IRS is responsible for examining taxpayers' returns.

E. Securities Partnerships

The proposed regulations include an amendment to § 1.704–3(e), which provides that a method for aggregating gains and losses by a securities partnership will not be considered reasonable unless it takes into account the application of section 1061. Specifically, the proposed regulations require partnerships that use the partial or full netting approaches described in § 1.704–3(e) to establish accounts to track API Holders' Capital Interest Gains and Losses, Unrealized API Gains and Losses, and API Gains and Losses. A commenter questioned whether these rules were necessary, given the likelihood of hedge fund managers to leave a fund before the three-year holding period expires. Another commenter noted that funds would need to implement sophisticated tracking mechanisms to distinguish between Capital Interest Gains and Losses and API Gains and Losses. The commenter thought that such tracing conflicted with the principles of aggregation provided by § 1.704–3(e).

Another commenter recommended that the final regulations confirm that partnerships can change their section 704(c) aggregation method in order to address section 1061 in a manner consistent with the regulations and that any such change would not violate the requirement to use the same aggregation approach once an approach is adopted. The commenter requested that the final regulations provide examples illustrating the intended application of the creation of separate accounts for APIs and capital interests.

The final regulations provide a simplified rule in § 1.704–3(e) that states that section 1061 must be taken into account in applying the aggregation rule for securities partnerships, but does not provide a specific method for doing so. The Treasury Department and the IRS continue to study the comments received on this issue and may provide additional guidance in the future.

IV. Additional Areas Under Study

A. Section 1061(b) Exception

Section 1061(b) provides that ''[t]o the extent provided by the Secretary, [section 1061(a)] shall not apply to income or gain attributable to any asset not held for portfolio investment on behalf of third party investors.'' The proposed regulations reserve with respect to the application of section 1061(b). The preamble to the proposed regulations states that the Treasury Department and the IRS generally believe that the section 1061(b) exception is effectively implemented in the proposed regulations with the exception to section 1061 for Passthrough Interest Direct Investment Allocations. The preamble further requested comments on the application of section 1061(b) and whether the proposed regulations' exclusion for Passthrough Interest Direct Investment Allocations properly implements the exception.

One commenter suggested that the Passthrough Interest Direct Investment Allocations would exempt certain family offices from section 1061(a) but stated that the exception is too narrow to account for all types of family offices. The commenter noted that section 1061(b) is not intended to cover family offices managed by a professional investment manager who is not a family member and who receives an API because the family members are third-party investors with respect to the professional investment manager. Several commenters suggested that additional guidance under section 1061(b) is needed for family offices, management companies, and other partnerships that do not hold assets for portfolio investment on behalf of third-party investors. One commenter argued

that the Treasury Department and the IRS should not reserve on section 1061(b) because carried interests as used in asset management businesses were the particular focus of Congress as it contemplated carried interest proposals.

One commenter noted that it had recommended prior to the issuance of the proposed regulations that the authority under section 1061(b) should be exercised to confirm that section 1061(a) does not apply to recharacterize income or gain attributable to the value of intangibles, including goodwill, created or used in an ATB. The commenter recognized that the Passthrough Interest Direct Investment Allocation rules in the proposed regulations operate in part to implement an exception for enterprise value, but recommended that final regulations should provide specifically that section 1061(a) does not apply to recharacterize income or gain attributable to enterprise value. Furthermore, the commenter argued that the enterprise value exception should apply to allocations through tiers and should not require allocations in accordance with partner capital accounts if the intangible asset it not held for portfolio investment on behalf of third-party investors.

As discussed in Part II.A. of this Summary of Comments and Explanation of Revisions, the final regulations modify the rules related to the capital interest exception, including removing the Passthrough Interest Direct Investment Allocation rules. As discussed in Part II.C. of this Summary of Comments and Explanation of Revisions, the final regulations provide that the delayed holding period prong of the Lookthrough Rule does not apply to the disposition of an API to the extent that the gain recognized upon the disposition is attributable to any asset not held for portfolio investment on behalf of third party investors. The Treasury Department and the IRS continue to study the comments regarding section 1061(b) and may address the application of the provision in future guidance, including whether section 1061(a) applies to recharacterize income or gain attributable to enterprise value. The Treasury Department and the IRS request additional comments related to section 1061(b).

B. Small Partnerships

In the preamble to the proposed regulations, the Treasury Department and the IRS requested comments and suggestions on whether a simplified method for determining and calculating the API Gain or Loss should be provided for small partnerships and if so, the criteria that should be used to determine which partnerships should be eligible to use the simplified method. One commenter stated that a small partnership exception is critically important to the integrity of the entire section 1061 regulatory regime. The commenter also noted that given the burdensome nature of the reporting requirements that could apply to small business taxpayers, a modification of these requirements for either ''small partnerships'' or ''small partners'' would appear to be justified. As discussed in the section on reporting requirements, a commenter also recommended a *de minimis* exception to the reporting requirements for passthrough entities in which a limited partner owns five percent, or less, of a fund. The Treasury Department and the IRS continue to study this issue and may address this in future guidance. The Treasury Department and the IRS request additional comments and suggestions on whether a simplified method for determining and calculating the API Gain or Loss should be provided for small partnerships and if so, the criteria that should be used to determine which partnerships should be eligible to use the simplified method.

V. Applicability Dates

The final regulations retain the applicability dates as proposed. Accordingly, the final regulations generally apply to taxable years of Owner Taxpayers and Passthrough Entities beginning on or after January 19, 2021. Section 1.1061–3(b)(2)(i) applies to taxable years beginning after December 31, 2017. Section 1.1061–3(b)(2)(ii) applies to taxable years beginning after August 14, 2020. An Owner Taxpayer or Passthrough Entity may choose to apply the final regulations in their entirety to a taxable year beginning after December 31, 2017, provided that they consistently apply the final regulations in their entirety to that year and all subsequent years.

With respect to an API in a partnership with a fiscal year ending after December 31, 2017, section 706 determines the capital gains and losses the Owner Taxpayer includes in income with respect to an API after December 31, 2017. Section 706 provides that the taxable income of a partner for a taxable year includes amounts required by sections 702 and 707(c) with respect to a partnership based on the income, gain, loss, deduction, or credit of a partnership for any taxable year ending within or with the taxable year of the partner. Accordingly, if a calendar year Owner Taxpayer has an API in a fiscal year partnership whose taxable year ends after December 31, 2017, section 1061 applies to the Owner Taxpayer's distributive share of long-term capital gain or loss with respect to the API in calendar year 2018 regardless of whether the partnership disposed of the property giving rise to the gains and losses in the period prior to January 1, 2018. *See* § 1.706–1(a).

Special Analyses

I. Regulatory Planning and Review—Economic Analysis

Executive Orders 12866, 13563, and 13771 direct agencies to assess costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility.

These regulations have been designated as economically significant under Executive Order 12866 pursuant to the Memorandum of Agreement (April 11, 2018) between the Treasury Department and the Office of Management and Budget (OMB) regarding review of tax regulations.

A. Need for Final Regulations

These final regulations provide certainty and clarity to taxpayers affected by statutory changes introduced in section 1061 by TCJA. The Treasury Department and the IRS have received questions and comments regarding the meaning of various provisions in section 1061 and issues not explicitly addressed in the statute. The Treasury Department and the IRS have determined that such comments warrant the issuance of further guidance.

B. Background

Section 1061 of the Internal Revenue Code (Code), enacted by TCJA, characterizes certain long-term capital gains recognized with respect to an API as short-term capital gains. Short-term capital gains are generally taxed at a higher rate than long-term capital gains.

Section 1061 defines an API as an interest in a partnership transferred to or held by the taxpayer in connection with the performance of substantial services by the taxpayer, or any other related person, in any ''applicable trade or business'' (ATB). Under section 1061 the term ATB encompasses a range of financial service activities. Specifically, an ATB is any activity conducted on a regular, continuous, and substantial basis which consists, in whole or in

part, of raising or returning capital, and either (i) investing in (or disposing of) ''specified assets'' (or identifying specified assets for such investing or disposition), or (ii) developing specified assets. ''Specified assets'' are certain securities, certain commodities, real estate held for rental or investment, cash or cash equivalents, options or derivative contracts with respect to any of the foregoing, and an interest in a partnership to the extent of the partnership's proportionate interest in any of the foregoing.

Prior to the TCJA, the Internal Revenue Code made no distinction between capital gains allocated to APIs versus other partnership interests and partnership assets. Generally, the required holding period to obtain the lower long-term capital gains tax rate was one year for all partnership interests and partnership capital assets. Under the new provision, the required holding period for an API must be greater than three years to obtain long-term capital gains treatment.

The Treasury Department and the IRS previously published proposed regulations under section 1061 (''proposed regulations'').

C. Overview of the Final Regulations

The final regulations provide taxpayers with definitional and computational guidance regarding the application of section 1061. In particular, the final regulations provide a number of definitions, including the term 'taxpayer' for the purpose of determining the existence of an API. Additionally, the regulations clarify the rules for certain exceptions to section 1061, including the exception for capital interests, and provide for an additional exception for bona fide purchases of APIs by an unrelated party who is not a service provider. The final regulations also provide rules for calculating the recharacterized gain amount.

D. Economic Analysis

1. Baseline

In this analysis, the Treasury Department and the IRS assess the benefits and costs of the final regulations relative to a no-action baseline reflecting anticipated Federal income tax-related behavior in the absence of these final regulations.

2. Summary of Economic Effects

The final regulations provide certainty and consistency in the application of section 1061 by providing definitions and clarifications regarding the statute's terms and rules. An economically efficient tax system generally aims to treat income and expense derived from similar economic decisions consistently across taxpayers and activities in order to reduce incentives for individuals and businesses to make choices based on tax rather than market incentives. In the absence of the guidance provided in these final regulations, taxpayers would bear the burden of interpreting the statute and the chances that different taxpayers might interpret the statute differently would be exacerbated. For example, two similarly situated taxpayers might interpret the statutory provisions pertaining to the definition of taxpayer or the capital interest exception differently, causing one to enter into a partnership that another comparable taxpayer might decline because of a different interpretation of how the income will be treated under section 1061. If this opportunity did not go to the more productive taxpayer, this lack of clarity results in an economically inefficient pattern of activity. An economic loss may also arise if all taxpayers have identical interpretations of the tax treatment of particular income streams under the statute but which differ slightly from the interpretation that Congress intended for these income streams. In this case, guidance provides value by bringing economic decisions closer in line with the intent and purpose of the statute.

The final regulations include multiple substantive changes compared to the proposed regulations. The Treasury Department and the IRS view these changes as favorable to taxpayers, providing more flexibility and reducing burden and complexity. In particular, the final rules governing the capital interest exception are more flexible to better accommodate common business practices, which vary considerably across industries. Compared to the proposed regulations, the final regulations considerably narrow the range of related party transactions triggering 1061 recharacterization, and the associated compliance burden. Finally, compared to the proposed regulations, the Lookthrough Rule on the sale of APIs included in the final regulations is a more narrowly targeted anti-abuse rule, only imposing a compliance burden on taxpayers that appear to have engaged in abusive practices with the primary aim of avoiding section 1061(a) recharacterization.

The proposed regulations solicited comments on the economic analysis of the proposed regulations. No such comments were received.

3. Economic Analysis of Specific Provisions

a. Provisions Not Substantially Revised From the Proposed Regulations

i. Definition of Taxpayer

The statute requires taxpayers to make a number of determinations, including the determination of the existence of an API, and the calculation of the section 1061 amount, or amount of long-term gain recharacterized under section 1061. However, the term ''taxpayer'' is not defined in either section 1061 or in the Conference Report. Comments received by the Treasury Department and IRS highlight the importance of the definition of the term taxpayer for purposes of section 1061. Without guidance, taxpayers could use different approaches to define ''taxpayer,'' leading otherwise similar taxpayers to experience different degrees of complexity, and to report different recharacterized amounts.

The final regulations include two definitions of taxpayer to address the level at which the determination of the existence of an API is made and the level at which the calculation of the section 1061 amount is made. The final regulations define the Owner Taxpayer as the person generally required to pay tax on the gain or loss with respect to the API. Under the final regulations, the section 1061 calculation is only performed by the person (the Owner Taxpayer) who must pay tax on the gains and losses recognized with respect to the API. The final regulations also introduce the term Passthrough Taxpayer. A Passthrough Taxpayer is an entity that does not itself generally pay tax on capital gains but must determine when an API exists and allocate income, gain, deduction and loss to its owners. Both the Owner Taxpayer and the Passthrough Taxpayer are treated as taxpayers for the purpose of determining whether an API exists.

The Treasury Department and the IRS considered and rejected two alternative approaches to the definition of taxpayer outlined in received comments, the ''aggregate approach'' and the ''full entity approach''. Under the aggregate approach, a partnership is not treated as a taxpayer for purposes of section 1061. Instead, section 1061 is applied solely to the partners that are ultimately subject to tax on the partnership's items of capital gain and loss. A concern with using this approach for the purpose of determining whether an API exists is that it could incentivize partners to use tiered ownership structures to avoid section 1061 recharacterization. For example, an upper tier partnership may

receive an interest in a lower-tier fund in connection with the upper-tier partnership's performance of services in an ATB. Partners of the upper-tier partnership may contend that they did not receive their interest in the upper-tier partnership in connection with the services performed by the upper-tier partnership. Stopping such avoidance strategies would require complex rules and potentially burdensome reporting requirements when tiered ownership structures are involved.

Under the ''full entity approach'', the partnership is treated as a taxpayer for purposes of both determining the existence of an API and calculating the section 1061 recharacterization amount. Treating the partnership as a taxpayer for purposes of calculating the section 1061 recharacterization amount was found to be more burdensome than the approach taken in the final regulations for three reasons. First, using the full entity approach for determining the section 1061 recharacterization amount may lead to increased recharacterization of gains under section 1061 because individuals would not be able to net gains and losses across multiple APIs. Second, the administrative burden on both the taxpayer and the IRS would be increased in cases of tiered ownership. Under the full entity approach, a separate section 1061 calculation would be required at each level at which an API is held in a tiered partnership structure. Finally, the full entity approach may add complexity and burden in cases in which an exception to section 1061 applies, such as if a corporation is a direct or indirect partner. Because corporations are excluded from section 1061, any amount recharacterized at the partnership level would need to be tracked as it is allocated to partners to ensure that corporate or other excepted partners are not subject to the three-year holding period under section 1061.

The Treasury and the IRS have concluded that the chosen alternative, incorporating the concepts of Owner Taxpayer and Passthrough Taxpayer, is less burdensome than other alternatives and provides helpful certainty to taxpayers.

ii. Clarification of the Treatment of an API Purchased by an Unrelated Party

The statute states that capital gain or loss recognized by a taxpayer on the sale of an API held for more than one year is subject to section 1061. The statute also provides guidance for ongoing treatment under section 1061 when the API is purchased by, or transferred to, a related party or another service provider. However, the statute does not provide guidance for the taxpayer who purchases an API and is neither a service provider to the relevant ATB, nor related to the seller of the API. The final regulations add an exception to section 1061 and provide that the term API does not include an interest in a partnership that would be treated as an API but is held by a bona fide purchaser of the interest who does not currently and has never provided services in the relevant ATB and who is not related to a person who provides services currently or has provided services in the past. By clarifying the treatment of an API that is sold at arm's length, the final regulations reduce uncertainty and compliance burdens for taxpayers entering into these transactions. The Treasury Department and the IRS have determined that this exception is consistent with the purpose of section 1061, which applies to service providers and persons related to service providers and which is not meant to apply to bona fide purchasers of a partnership interest who do not provide services.

The Treasury Department and the IRS considered not providing this exception. However, it was determined that failure to provide this exception would treat unrelated purchasers of an API in an inequitable fashion, and that continued treatment of the partnership interest as an API would be inconsistent with the purpose of section 1061 because unrelated purchasers did not receive their interest in connection with the performance of substantial services.

b. Provisions Substantially Revised From the Proposed Regulations

i. Capital Interest Exception

Section 1061(c)(4)(B) provides that the definition of an API does not include ''any capital interest in the partnership which provides the taxpayer with a right to share in partnership capital commensurate with—(i) the amount of capital contributed (determined at the time of receipt of such partnership interest) or (ii) the value of the interest included in income under section 83 upon the receipt or vesting of such interest.'' However, the statute does not provide guidance on what it means for a right to share in partnership capital to be ''commensurate'' with the amount of capital contributed.

The final regulations clarify that allocations are deemed commensurate with capital contributed if, under the partnership agreement, the allocation to an API Holder is calculated in a similar manner as the allocations to similarly situated Unrelated Non-Service Partners. This may be determined on an investment-by-investment or class-by-class basis. To qualify as a benchmark for comparison, the Unrelated Non-Service Partners must hold a significant investment, defined as at least five percent of the partnership. In the absence of these regulations, taxpayers might face confusion, along with substantial compliance cost, in calculating their qualifying capital interest. Further, partners with realized gains would be incentivized to engage in a series of inefficient transactions in order to minimize tax.

The Treasury Department and the IRS considered alternative interpretations of ''commensurate with capital contributed.'' In particular, the proposed regulations provide that an allocation is ''commensurate with capital'' if the allocation is based on the relative section 704(b) capital accounts of the partners under the partnership agreement. The proposed regulations then provide multiple rules for calculating an API holder's capital account, including a rule disallowing unrealized API capital gains in calculating the API holder's capital account, and a rule for determining the capital account when an API is held through another partnership. In light of numerous comments, the Treasury Department and the IRS have determined that the proposed regulations were too rigid and were not well suited to the wide variety of common business practices regarding ownership structure, accounting conventions, and compensation arrangements. Specifically, many partnerships subject to section 1061 do not maintain section 704(b) capital accounts. For many other partnerships, the capital account of one partner may relate to economic rights associated with multiple separate investments held by a partnership, while the capital account of another partner may relate to economic rights associated with a separate set of investments held by a partnership. For these reasons, the Treasury Department and the IRS have determined that the section 704(b) capital accounts of partners provide a poor means of measuring commensurate economic capital interest rights.

The proposed regulations also prohibited use of the capital interest exception if a capital contribution was funded with related party loan proceeds. Commenters noted that it is a common business practice in industries subject to Section 1061 for employees to require new partners to make substantial capital contributions, which are often acquired through a loan. This arrangement, designed not to avoid tax but to align the incentives of general

partners and limited partners, would be unduly penalized under the proposed regulations, incentivizing firms to choose a less efficient ownership and governance structure. The final regulations amend the rule to allow an individual service provider's capital contributions to be funded with loan proceeds from partners and persons related to partners if the individual service provider is personally liable for the loan, meaning the loan is fully recourse to the individual service provider, the individual service provider has no right to be reimbursed by any person, and no person has guaranteed the individual service's provider's loan. The Treasury Department and the IRS believe the final rules address abusive avoidance strategies, while imposing less burden on taxpayers engaged in standard business practices relative to not allowing any contributions from proceeds from related part loans to be eligible for the capital interest exception.

ii. Lookthrough Rule on Sale of APIs

Section 1061(a) provides that if one or more APIs are held by a taxpayer at any time during the taxable year, the excess (if any) of (1) the taxpayer's net long-term capital gain with respect to such interests for such taxable year, over (2) the taxpayer's net long-term capital gain with respect to such interests for that taxable year computed by applying paragraphs (3) and (4) of sections 1222 by substituting ''3 years'' for ''1 year,'' must be treated as short-term capital gain, notwithstanding section 83 or any election in effect under section 83(b). The House Report explains that section 1061 ''imposes a three-year holding period (not the generally applicable one-year holding period) in the case of long-term capital gain from applicable partnership interests.'' Neither section 1061 nor the Reports, however, explicitly provides what the relevant holding period is for purposes of section 1061(a) for the sale of an API with assets of different holding periods.

The final regulations include a Lookthrough Rule that is triggered if a transaction or series of transactions has taken place with a principal purpose of avoiding potential gain recharacterization under section 1061(a). Under this Lookthrough Rule, all gain not attributable to assets held for more than three years is subject to recharacterization under section 1061(a). Additionally, the Lookthrough Rule applies if the API disposition would be subject to Section 1061(a) recharacterization using a holding period not beginning until the date that Unrelated Non-Service Partners legally commit to contribute substantial capital to the applicable partnership. Without this rule, fund managers might attempt to avoid the recharacterization of gains by establishing partnerships and leaving them inactive for three years before attracting investment from limited partners, thereby circumventing Section 1061.

The Treasury Department and the IRS considered and rejected alternative approaches, including applying a simple interest approach, an alternative lookthrough rule (as provided in the proposed regulations), and an underlying assets approach. The simple interest approach looks solely to the holding period in the API, regardless of the length of time the partnership has engaged in substantive investment. This approach might allow taxpayers to avoid section 1061 characterization for long-term capital gains on assets that are not held for the more than three years by the partnership. This result would encourage distortive behavior in investment funds, which might look to create partnerships for different investors solely for tax purposes, relative to the approach adopted in the final regulations. That is, the partners of that investment partnership would not be subject to section 1061 if they had owned their APIs for more than three years, irrespective of how long the investment partnership had been active and attracting capital from outside investors.

Alternatively, the underlying asset, or full lookthrough, approach looks solely to the holding period in the underlying asset (or assets) of the partnership, regardless of whether the underlying asset is sold by the partnership or the API is sold by its owner. The underlying asset approach would be more difficult (and burdensome) for taxpayers to apply (relative to the provision provided in the final regulations) as it would require a determination of the unrealized gain for each asset held by the partnership, even in cases in which a relatively small share of assets by value have a holding period of three years or less.

The proposed regulations included an alternative lookthrough rule applied to the sale of an API if 80% or more of the value of the assets held by the partnership at the time of the API disposition were assets held for three years or less that would produce capital gain or loss subject to section 1061 if disposed of by the partnership. If the lookthrough rule in the proposed regulations applied, a portion of the capital gain on the disposition of the API attributable partnership assets held for three or fewer years would be recharacterized as short-term capital gain. This alternative was rejected in the final regulations because the calculations required by the proposed lookthrough rule would impose unnecessary compliance burden on individual taxpayers selling an API without any accompanying general economic benefit. The rules requiring partnerships to furnish taxpayers with the relevant information to perform the calculations would also impose undue additional burden on the relevant partnerships. The lookthrough rule provided in the final regulations applies in more limited circumstances, narrowly targeting taxpayers that appear to be engaged in abusive practices to avoid section 1061(a) recharacterization. Therefore, the final regulations provide helpful guidance and certainty for taxpayers, while imposing minimal compliance burden relative to the no-action baseline or alternative regulatory approaches.

iii. Treatment of API Transfers to Related Parties

Section 1061(d) recharacterizes certain long-term capital gain as short-term capital gain when a taxpayer transfers an API to a related person. While the statute provides a definition of a related person and a general description of the recharacterization amount, numerous commenters expressed uncertainty regarding the scope of transfers subject to section 1061(d), pointing out that although the statutory language of section 1061(d) refers to the transfer of an API, it refers to income inclusion associated with an API transfer that is related to the sale or exchange of partnership assets held for three years of less. Based on the statutory language, commenters expressed the view that section 1061(d) transfers should be limited to taxable transfers.

Although one read of the text of section 1061(d) suggests that the provision can be broadly applied to capture all API transfers, including gifts and other nonrecognition transfer, the Treasury Department and the IRS considered and rejected applying section 1061(d) to nontaxable transfers. Applying section 1061(d) to nontaxable transfers would impose income recognition on gifts including an API, where no income recognition is imposed on otherwise similar gifts, creating a tax disadvantage for gifts including an API. Instead, the Treasury and the IRS have determined that the section 1061(d) statute is better read as a recharacterization provision that looks to how much of the taxpayer's long-term capital gain upon the sale of an API is

attributable to the sale or exchange of any asset held for three years or less and that the provision's use of the word ''transfer'' does not supersede application of the sale or exchange requirement in the statute.

II. Paperwork Reduction Act

A. Collection of Information in § 1.1061–6(a) on the Owner Taxpayer is on Existing Forms

The collection of information in § 1.1061–6(a) requires an Owner Taxpayer to file such information with the IRS as the Commissioner may require in forms, instructions and other published guidance as is necessary for the IRS to determine that the taxpayer has properly complied with section 1061 and the Section 1061 Regulations. This information is necessary for the IRS to determine that the Owner Taxpayer has properly complied with section 1061. In general, the Owner Taxpayer is an individual and the Owner Taxpayer's Recharacterization Amount and Section 1061(d) Recharacterization Amount will be required to be reported to the IRS as short-term capital gain on Schedule D, ''Capital Gains and Losses,'' of the Form 1040, ''U.S. Individual Income Tax Return.'' Less frequently, the Owner Taxpayer is a trust and the Owner Taxpayer's Recharacterization Amount and Section 1061(d) Recharacterization Amount will be required to be reported to the IRS as short-term capital gain on Schedule D, ''Capital Gains and Losses,'' of the Form 1041, ''U.S. Income Tax Return for Estates and Trusts.''

The current status of the Paperwork Reduction Action submission related to § 1.1061–6(a) is provided in the following table. The burdens associated with the collection of information from the Owner Taxpayer to comply with section 1061 are included in the aggregate burden estimates for Form 1040 under OMB control number 1545–0074 and Form 1041 under OMB control number 1545–0092. The overall burden estimates provided in OMB Control Number 1545–0074 represents a total estimated burden time, including all other related forms and schedules for individuals, of 1.784 billion hours and total estimated monetized costs of $31.74 billion (in 2017 dollars). The overall burden estimates provided in OMB Control Number 1545–0092 represents a total estimated burden time, including all other forms and schedules for trusts and estates of 307.8 million hours and total estimated monetized costs of $9.95 billion (in 2016 dollars). These amounts are aggregate amounts that relate to all information collections associated with the applicable OMB control numbers, and will in the future include, but not isolate, the estimated burden of Owner Taxpayers as a result of the information collections in the regulations. No burden estimates specific to the final regulations are currently available. The Treasury Department and IRS have not estimated the burden, including that of any new information collections, related to the requirements under the final regulations. Those estimates would capture both changes made by the TCJA and those that arise out of discretionary authority exercised in the regulations. The Treasury Department and the IRS request comments on all aspects of information collection burdens related to the collection of information applicable to the Owner Taxpayer in these regulations. In addition, when available, drafts of IRS forms are posted for comment at *www.irs.gov/draftforms.*

Form	Type of filer	OMB No.(s)	Status
Form 1040 (Including Schedule D).	Individual (NEW Model)	1545–0074	Published in the **Federal Register** on 9/30/19. Comment period closed on 11/29/19. 84 FR 51712. Thirty-day notice published on 12/18/19. 84 FR 69458. Approved by the Office of Information and Regulatory Affairs (OIRA) on 1/30/20.
Form 1041 (Including Schedule D).	Trusts and Estates (Legacy Model).	1545–0092	Published in the **Federal Register** on 4/4/2018. 83 FR 14552. Public comment period closed 6/4/2018. Thirty-day notice published on 9/27/18. 83 FR 48894. Approved by OIRA on 5/8/19.

B. Collection of Information on Passthrough Entities in § 1.1061–6(b) and (c) on Existing Forms

1. Passthrough Entities

The collection of information in § 1.1061–6(b) requires a Passthrough Entity that has issued an API to furnish to the API Holder, including the Owner Taxpayer, such information at such time and in such manner as the Commissioner may require in forms, instructions, and other published guidance as is necessary to determine the One Year Gain amount and the Three Year Gain Amount with respect to an Owner Taxpayer. This includes: (i) The API One Year Distributive Share Amount and the API Three Year Distributive Share Amount (as determined under § 1.1061–4); (ii) Capital gains and losses allocated to the API Holder that are excluded from section 1061 under § 1.1061–4(b)(7); (iii) Capital Interest Gains and Losses allocated to the API Holder (as determined under § 1.1061–3(c)); (iv) In the case of a disposition by the API Holder of an interest in the Passthrough Entity during the taxable year, any information required by the API Holder to properly take the disposition into account under section 1061, including information necessary to apply the Lookthrough Rule and to determine its Capital Interest Disposition Amount and any information necessary to determine an Owner Taxpayer's Section 1061(d) Recharacterization Amount. The regulations seek to minimize the information that a Passthrough Entity is required to automatically furnish annually. In some cases, an upper-tier Passthrough Entity may be an API Holder in a lower-tier Passthrough Entity, and the information furnished by the lower-tier Passthrough Entity to the upper-tier Passthrough Entity may not be sufficient for the upper-tier Passthrough Entity to meet its reporting obligations under the regulations. In this case, the regulations require the lower-tier Passthrough Entity to furnish information to the upper-tier Passthrough Entity if requested. Thus, if an upper-tier Passthrough Entity in a tiered entity structure holds an interest in a lower-tier Passthrough Entity and it needs information from the lower-tier Passthrough Entity to comply with its obligation to furnish information under the regulations, it must request information from the lower-tier entity and the lower-tier entity must furnish the requested information. This passing of information upon request between the tiers of entities is necessary to minimize the quantity of information required to be annually furnished by a Passthrough Entity and because each Passthrough Entity in a tiered entity arrangement is the only entity that has

access to the information that is required to be furnished. The collection of information in the regulations is necessary to ensure that the Owner Taxpayer receives information sufficient to correctly calculate its Recharacterization Amount under section 1061.

2. RICs and REITs

Section 1.1061–6(c) permits a RIC or a REIT that reports or designates all or a part of a dividend as a capital gain dividend, to disclose additional information to their shareholders for purposes of section 1061. The furnishing of this information may allow a Passthrough Entity to include a portion of the capital gain dividend in the API Three Year Distributive Share amount furnished to API Holders and may ultimately enable an Owner Taxpayer to reduce its Recharacterization Amount under the regulations.

3. Table for Collections of Information in § 1.1061–6(b) and (c)

The collection of information with respect to § 1.1061–6(b) and (c) is provided in the following table. In the case of a Passthrough Entity that is a partnership, the information will be required to be furnished as an attachment to the Schedule K–1, ''Partner's Share of Income, Deduction, Credit, Etc.'' of Form 1065, ''U.S. Return of Partnership Income.'' In the case of a Passthrough Entity that is an S corporation, the information will be required to be furnished as an attachment to the Schedule K–1, ''Shareholder's Share of Income, Deductions, Credit, Etc.,'' of Form 1120–S, ''U.S. Income Tax Return for an S Corporation.'' The burdens associated with the collection of information from the Passthrough Entities will be included in the aggregate burden estimates for the Form 1065 and the Form 1120S under OMB control number 1545–0123. The overall burden estimates provided in OMB Control Number 1545–0123 represents a total estimated burden time, including all others related forms and schedules, of 3.344 billion hours and total estimated monetized costs of $61.558 billion (in 2019 dollars). The burden estimates provided in OMB Control Number 1545–0123 are aggregate amounts that relate to all information collections associated with the applicable OMB control number, and will in the future include, but not isolate, the Passthrough Entities' estimated burden as a result of the information collections in the proposed regulations.

In the case of a Passthrough Entity that is a trust or estate, the information will be required to be furnished as an attachment to the Schedule K–1, ''Beneficiary's Share of Income, Deductions, Credit, Etc.,'' of Form 1041, ''U.S. Income Tax Return for Estates and Trusts.'' The burdens associated with the collection of information from a Passthrough Entity that is a trust or estate will be included in the aggregate burden estimates for the Form 1041 OMB control number 1545–0092. The overall burden estimates provided in OMB Control Number 1545–0092 represents a total estimated burden time, including all other forms and schedules for trusts and estates of 307.8 million hours and total estimated monetized costs of $9.95 billion (in 2016 dollars). The burden estimates provided in OMB Control Number 1545–0092 are aggregate amounts that relate to all information collections associated with the applicable OMB control number, and will in the future include, but not isolate, the Passthrough Entities' estimated burden as a result of the information collections in the regulations.

In the case of RICs and REITs the information will be furnished in connection with the Form 1099–DIV, ''Dividends and Distributions.'' The burden estimates associated with the collection of information from RICs and REITs will be included in the aggregate burden estimated for the Form 1099–DIV under OMB Control Number 1545–0110. The overall burden estimates provided in OMB Control Number 1545–0110 represents a total estimated burden time of 32,119,195 hours and total estimated monetized costs of $ 1.64 billion (in 2016 dollars). The burden estimates provided in OMB Control Number 1545–0110 relate to all information collections associated with the applicable OMB Control Number, and will in the future include, but not isolate, the RIC and REIT estimated burden as a result of the information collections in the regulations.

The Treasury Department and IRS have not estimated the burden, including that of any new information collections, related to the requirements under the regulations. Those estimates would capture both changes made by the TCJA and those that arise out of the discretionary authority exercised in the regulations. The Treasury Department and the IRS request comments on all aspects of information collection burdens related to the collection of information applicable to the Passthrough Entities in the regulations. In addition, when available, drafts of IRS Forms and the applicable instructions are posted for comment at *https://www.irs.gov/pub/irs-dft/.*

Form	Type of filer	OMB No.(s)	Status
Form 1041 (including Schedule K–1).	Trusts and Estates (Legacy Model).	1545–0092	Published in the **Federal Register** on 4/4/2018. 83 FR 14552. Public comment period closed 6/4/2018. Thirty-day notice published on 9/27/18. 83 FR 48894. Approved by OIRA on 5/8/19.
Form 1065 (including Schedule K–1).	Business (NEW Model)	1545–0123	Sixty-day notice published in the **Federal Register** on 9/30/19. Public Comment period closed on 11/29/19. 84 FR 51718. C. Chart Showing Number of Respondents Regarding Existing Forms

The following chart shows the estimated number of returns that are expected to have attachments providing additional information with respect to section 1061. As noted previously, Owner Taxpayers will be required to provide section 1061 information on an attachment to Schedules D for Forms 1040 and 1041. Passthrough Taxpayers will be required to report section 1061 on Forms 1041, 1065, and 1120S to the IRS and to furnish information to their API Holders on attachments to the respective K–1s. RICs and REITs may voluntarily report additional information at an attachment to Form 1099–DIV.

Schedule D Form 1040	20,475
Schedule D Form 1041	2,275
Schedule K Form 1065	28,500
Schedule K–1s Form 1065 ...	57,000
Schedule K Form 1120S	1,500
Schedule K–1s Form 1120 ...	1,000
Form 1099–DIV filed by REITs	836
Form 1099–DIV filed by RICs	3,880

D. Voluntary Collection of Information in § 1.1061–6(d) on PFIC Shareholder Will Be Added to Existing OMB Control Number for PFIC Information Retention

Section 1.1061–6(d) permits a PFIC with respect to which the shareholder is an API Holder who has a QEF election is in effect for the taxable year to provide additional information to the shareholder to determine the amount of the shareholder's inclusion that would be included in the API One Year Distributive Share Amount and the API Three Year Distributive Share Amount. If the PFIC furnishes this information to the shareholder, the shareholder must retain a copy of this information along with the other information required to be retained under § 1.1295–1(f)(2)(ii). The burden associated with retaining this additional information will be included in the aggregate burden estimates for § 1.1295–1(f) under OMB Control Number 1545–1555. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid control number assigned by the Office of Management and Budget.
