Books and records related to the collection of information must be retained as long as their contents may become material in the administration of any internal revenue law. Generally, tax returns and tax return information are confidential, as required by 26 U.S.C. 6103.

III. Regulatory Flexibility Act

Pursuant to the Regulatory Flexibility Act (5 U.S.C. chapter 6), it is hereby certified that these final regulations will not have a significant economic impact on a substantial number of small entities within the meaning of section 601(6) of the Regulatory Flexibility Act. These regulations generally only impact investment funds that have capital gains and losses that derive from the disposition of assets that have a holding period of more than one year but not more than three years. Investment funds are considered small business if they have annual average receipts of $41.5 million or less (13 CFR part 121). The rule may affect a substantial number of small entities, but data are not readily available to assess how many entities will be affected.

The Treasury Department and the IRS received no actionable comments on the impact that the proposed regulations would have on small entities. Although certain commenters requested that partnerships with an unspecified amount of limited assets be excepted from the application of the statutory rules of section 1061, these commenters did not provide any data to demonstrate that any burden would be significant. Similarly, a commenter requested an exception to the reporting requirements for passthrough entities in which a limited partner owns 5 percent or less of a fund but did not quantify the burden. In addition, the final regulations adopt other comments that limit the general burden of the regulations to all entities, including small entities.

Even if a substantial number of small entities are affected, the economic impact of these regulations on small entities is not significant. The regulations provide taxpayers with definitional and computational guidance regarding the application of section 1061. The impact of the regulations is to impose an additional reporting obligation that applies only with respect to the sale of assets held for more than one year but not more than three years. The Treasury Department and the IRS recognize that this reporting obligation may increase, at least to some extent, the tax preparation burden for affected taxpayers beyond that imposed by the statute. This reporting obligation generally will only apply to a minority of the asset dispositions by an entity. The entity will also have a reporting obligation in certain circumstances regarding the disposition of an API, but the extent of the reporting obligation depends on the number of assets disposed by the entity and their holding periods. The information reported is readily available to taxpayers and reported on forms already in use beginning with the 2019 taxable year such as Schedule D to IRS Form 1065. Finally, some taxpayers may find they need an initial investment of time to read and understand these regulations at an approximate cost of $95/hour and an estimated time of ten hours. Accordingly, the Secretary certifies that these regulations will not have a significant economic impact on a substantial number of small entities.

Pursuant to section 7805(f), the notice of proposed rulemaking preceding this regulation was submitted to the Chief Counsel for the Office of Advocacy of the Small Business Administration for comment on its impact on small businesses. No comments were received from the Chief Counsel for the Office of Advocacy of the Small Business Administration.

IV. Unfunded Mandates Reform Act

Section 202 of the Unfunded Mandates Reform Act of 1995 requires that agencies assess anticipated costs and benefits and take certain other actions before issuing a final rule that includes any Federal mandate that may result in expenditures in any one year by a state, local, or tribal government, in the aggregate, or by the private sector, of $100 million in 1995 dollars, updated annually for inflation. This rule does not include any Federal mandate that may result in expenditures by state, local, or tribal governments, or by the private sector in excess of that threshold.

V. Executive Order 13132: Federalism

Executive Order 13132 (entitled ''Federalism'') prohibits an agency from publishing any rule that has federalism implications if the rule either imposes substantial, direct compliance costs on

state and local governments, and is not required by statute, or preempts state law, unless the agency meets the consultation and funding requirements of section 6 of the Executive order. This rule does not have federalism implications and does not impose substantial direct compliance costs on state and local governments or preempt state law within the meaning of the Executive order.

VI. Congressional Review Act

The Administrator of the Office of Information and Regulatory Affairs of the Office of Management and Budget has determined that this Treasury decision is a major rule for purposes of the Congressional Review Act (5 U.S.C. 801 *et seq.*). Under 5 U.S.C. 801(a)(3), a major rule takes effect 60 days after the rule is published in the **Federal Register**.

Notwithstanding this requirement, 5 U.S.C. 808(2) allows agencies to dispense with the requirements of 5 U.S.C. 801 when the agency for good cause finds that such procedure would be impracticable, unnecessary, or contrary to the public interest and the rule shall take effect at such time as the agency promulgating the rule determines. Pursuant to 5 U.S.C. 808(2), the Treasury Department and the IRS find, for good cause, that a 60-day delay in the effective date is contrary to the public interest.

Following the enactment of section 1061 by the TCJA, the Treasury Department and the IRS published the proposed regulations to provide certainty to taxpayers. In particular, as demonstrated by the wide variety of public comments in response to the proposed regulations received, taxpayers continue to express uncertainty regarding the proper application of the statutory rules under section 1061. This is especially the case for taxpayers in the trade or business of operating investment funds, which may be unwilling to engage in certain commercial transactions without the additional clarity provided by these final regulations. Additionally, various rules contained within these regulations attempt to curb certain abusive transactions designed to avoid the application of section 1061 and an earlier effective date is necessary to address these abusive transactions. Accordingly, the Treasury Department and the IRS have determined that the rules in this Treasury decision will take effect on the date of filing for public inspection in the **Federal Register**.

Statement of Availability of IRS Documents

Notice 2018–18, 2018–2 I.R.B. 443 (in addition to any other revenue procedures or revenue rulings, etc. cited in this preamble) is published in the Internal Revenue Bulletin (or Cumulative Bulletin) and is available from the Superintendent of Documents, U.S. Government Publishing Office, Washington, DC 20402, or by visiting the IRS website at *http://www.irs.gov.*

Drafting Information

The principal authors of these regulations are Kara K. Altman, Sonia K. Kothari, and Wendy L. Kribell of the Office of Associate Chief Counsel (Passthroughs and Special Industries). However, other personnel from the Treasury Department and the IRS participated in their development.

List of Subjects in 26 CFR Part 1

Income taxes, Reporting and recordkeeping requirements.

Amendment to the Regulations

Accordingly, 26 CFR part 1 is amended as follows:

PART 1—INCOME TAXES

■ **Paragraph 1.** The authority citation for part 1 is amended by adding entries for §§ 1.1061–0, 1.1061–1, 1.1061–2, 1.1061–3, 1.1061–4, 1.1061–5, and 1.1061–6 in numerical order to read in part as follows:

Authority: 26 U.S.C. 7805 * * *

Section 1.1061–0 added under 26 U.S.C. 1061(f).

Section 1.1061–1 added under 26 U.S.C. 1061(f).

Section 1.1061–2 added under 26 U.S.C. 1061(f).

Section 1.1061–3 added under 26 U.S.C. 1(h)(9) and 1061(f).

Section 1.1061–4 added under 26 U.S.C. 1061(f).

Section 1.1061–5 added under 26 U.S.C. 1061(f).

Section 1.1061–6 added under 26 U.S.C. 1061(f).

* * * * *

■ **Par. 2.** Section 1.702–1 is amended by adding a sentence at the end of paragraph (a)(2) and adding paragraph (g) to read as follows.

§ 1.702–1 Income and credits of partner.

(a) * * *

(2) * * * Each partner subject to section 1061 must take into account gains and losses from sales of capital assets held for more than one year as provided in section 1061 and §§ 1.1061–1 through 1.1061–6.

* * * * *

(g) *Applicability date.* The last sentence of paragraph (a)(2) of this section applies for the taxable years beginning on or after January 19, 2021.

■ **Par. 3.** Section 1.704–3 is amended by:

■ 1. In paragraph (e)(3)(vi)(B), remove the word ''and'' at the end of the paragraph;

■ 2. Redesignating paragraph (e)(3)(vi)(C) as paragraph (e)(3)(vi)(D);

■ 3. Adding new paragraph (e)(3)(vi)(C); and

■ 4. Revising the heading and first sentence of paragraph (f) and adding a sentence to the end of paragraph (f).

The additions and revisions read as follows:

§ 1.704–3 Contributed property.

* * * * *

(e) * * *

(3) * * *

(vi) * * *

(C) With respect to any person who directly or indirectly holds an Applicable Partnership Interest, as defined in § 1.1061–1(a)(1), take into account the application of section 1061 with respect to such interest in an appropriate manner; and

* * * * *

(f) *Applicability dates.* With the exception of paragraphs (a)(1), (a)(8)(ii) and (iii), (a)(10) and (11), and (e)(3)(vi)(C) of this section, and of the last sentence of paragraph (d)(2) of this section, this section applies to properties contributed to a partnership and to revaluations pursuant to § 1.704–1(b)(2)(iv)(*f*) or (*s*) on or after December 21, 1993.

* * * Paragraph (e)(3)(vi)(C) of this section applies to taxable years beginning on or after January 19, 2021.

* * * * *

■ **Par. 4.** Sections 1.1061–0 through 1.1061–6 are added before the undesignated center heading ''Changes to Effectuate F.C.C. Policy'' to read as follows:

Sec.

* * * * *

* * * * *

§ 1.1061–0 Table of contents.

This section lists the captions that appear in §§ 1.1061–1 through 1.1061–6.

§ 1.1061–1 Section 1061 definitions.

(a) *Definitions.* The following definitions apply solely for purposes of this section and §§ 1.1061–2 through 1.1061–6.

API Gains and Losses are any long-term capital gains and capital losses with respect to an API and include:

(i) The *API One Year Distributive Share Amount* as defined in § 1.1061–4(a)(3)(i);

(ii) The *API Three Year Distributive Share Amount* as defined in § 1.1061–4(a)(3)(ii);

(iii) The *API One Year Disposition Amount* as defined in § 1.1061–4(a)(4)(i);

(iv) The *API Three Year Disposition Amount* as defined in § 1.1061–4(a)(4)(ii); and

(v) Capital gains or losses from the disposition of Distributed API Property.

API Holder is a person who holds an API.

Applicable Partnership Interest (API) means any interest in a partnership which, directly or indirectly, is transferred to (or is held by) an Owner Taxpayer or Passthrough Taxpayer in connection with the performance of substantial services by the Owner Taxpayer or by a Passthrough Taxpayer,

or by any Related Person, including services performed as an employee, in any ATB unless an exception in § 1.1061–3 applies. For purposes of defining an API under this section and section 1061 of the Internal Revenue Code (Code), an interest in a partnership also includes any financial instrument or contract, the value of which is determined in whole or in part by reference to the partnership (including the amount of partnership distributions, the value of partnership assets, or the results of partnership operations). An Owner Taxpayer and a Passthrough Taxpayer can hold an API directly or indirectly through one or more Passthrough Entities.

Applicable Trade or Business (ATB) means any activity for which the ATB Activity Test with respect to Specified Actions is met, and includes all Specified Actions taken by Related Persons, including combining activities occurring in separate partnership tiers or entities as one ATB.

ATB Activity Test has the meaning provided in § 1.1061–2(b)(1).

Capital account means a capital account maintained under § 1.704–1(b)(2)(iv) or similar principles.

Capital Interest Allocations means, with respect to a partnership, allocations of long-term capital gain or loss made under the partnership agreement to an API Holder and to Unrelated Non-Service Partners based on such partners' capital contributed with respect to the partnership to the extent such allocations otherwise meet the requirements of § 1.1061–3(c). With respect to other Passthrough Entities, the principles of this definition apply.

Capital Interest Disposition Amount has the meaning provided in § 1.1061–3(c)(4).

Capital Interest Gains and Losses has the meaning provided in § 1.1061–3(c)(2).

Distributed API Property means property distributed by a Passthrough Entity to an API Holder with respect to an API if the holding period, as determined under sections 735 and 1223, in the API Holder's hands is three years or less at the time of disposition of the property by the API Holder.

Indirect API means an API that is held through one or more Passthrough Entities.

Investing or Developing Actions means actions involving either—

(i) Investing in (or disposing of) Specified Assets (or identifying Specified Assets for such investing or disposition); or

(ii) Developing Specified Assets (see § 1.1061–2(b)(1)(ii)).

Lookthrough Rule means the recharacterization rule described in § 1.1061–4(b)(9).

One Year Gain Amount has the meaning provided in § 1.1061–4(a)(2)(i).

Owner Taxpayer means the person subject to Federal income tax on net gain with respect to an API or an Indirect API during the taxable year, including an owner of a Passthrough Taxpayer unless the owner of the Passthrough Taxpayer is a Passthrough Entity itself or is excepted under § 1.1061–3(a), (b), or (d).

Passthrough Entity means a partnership, trust, estate, S corporation described in § 1.1061–3(b)(2)(i), or passive foreign investment company described in § 1.1061–3(b)(2)(ii).

Passthrough Interest means an interest in a Passthrough Entity that represents in whole or in part an API.

Passthrough Taxpayer means a Passthrough Entity that is treated as a taxpayer for the purpose of determining the existence of an API.

Raising or Returning Capital Actions means actions involving raising or returning capital but does not include Investing or Developing Actions.

Recharacterization Amount has the meaning provided in § 1.1061–4(a)(1).

Related Person means a person or entity who is treated as related to another person or entity under sections 707(b) or 267(b).

Relevant ATB means the ATB in which services were provided and in connection with which an API is held or was transferred.

Section 1061(d) Recharacterization Amount has the meaning provided in § 1.1061–5(c).

Section 1061(d) Related Person has the meaning provided in § 1.1061–5(e).

Section 1061 Regulations means the provisions of this section and §§ 1.1061–2 through 1.1061–6.

Specified Actions means the combination of Raising or Returning Capital Actions and Investing or Developing Actions.

Specified Assets means—

(i) Securities, including interests in partnerships qualifying as securities (as defined in section 475(c)(2) without regard to the last sentence thereof);

(ii) Commodities (as defined in section 475(e)(2));

(iii) Real estate held for rental or investment;

(iv) Cash or cash equivalents; and

(v) An interest in a partnership to the extent that the partnership holds Specified Assets. See § 1.1061–2(b)(1)(iii).

(vi) Specified Assets include options or derivative contracts with respect to any of the items provided in paragraphs (i) through (v) of this definition.

Three Year Gain Amount has the meaning provided in § 1.1061–4(a)(2)(ii).

Unrealized API Gains and Losses means, with respect to a Passthrough Entity's assets, all unrealized capital gains and losses that would be:

(i) Realized if those assets were disposed of for fair market value in a taxable transaction on the relevant date; and

(ii) Allocated to an API Holder with respect to its API, taking into account the principles of section 704(c).

Unrelated Non-Service Partners means partners who do not (and did not) provide services in the Relevant ATB and who are not (and were not) Related Persons with respect to any API Holder in the partnership or any person who provides or has provided services in the Relevant ATB.

(b) *Applicability date.* The provisions of this section apply to taxable years of Owner Taxpayers and Passthrough Entities beginning on or after January 19, 2021. An Owner Taxpayer or Passthrough Entity may choose to apply this section to a taxable year beginning after December 31, 2017, provided that they consistently apply the Section 1061 Regulations in their entirety to that year and all subsequent years.

§ 1.1061–2 Applicable partnership interests and applicable trades or businesses.

(a) *API rules and examples*—(1) *Rules*—(i) *An API remains an API.* Once a partnership interest qualifies as an API, the partnership interest remains an API unless and until the requirements of one of the exceptions to qualification of a partnership interest as an API, set forth in § 1.1061–3, are satisfied.

(ii) *Application of section 1061 to Unrealized API Gains and Losses.* Unrealized API Gains and Losses are API Gains and Losses subject to section 1061 when the gains and losses are realized and recognized. Unrealized API Gains and Losses do not lose their character as such until they are recognized.

(iii) *API Gains and Losses retain their character.* API Gains and Losses retain their character as API Gains and Losses as they are allocated from one Passthrough Entity to another Passthrough Entity and then to the Owner Taxpayer.

(iv) *Substantial services by an Owner Taxpayer, Passthrough Taxpayer, or any Related Person.* If an interest in a partnership is transferred to or held by an Owner Taxpayer, Passthrough Taxpayer, or any Related Person in connection with the performance of services, the Owner Taxpayer, the

Passthrough Taxpayer, or the Related Person is presumed to have provided substantial services for purposes of section 1061.

(v) *Grantor trusts and entities disregarded as separate from their owners.* A trust wholly described in subpart E, part I, subchapter J, chapter 1 of the Internal Revenue Code (that is, a grantor trust), a qualified subchapter S subsidiary described in section 1361(b)(3), and an entity with a single owner that is treated as disregarded as an entity separate from its owner under any provision of the Internal Revenue Code or any part of 26 CFR (including § 301.7701–3 of this chapter) are disregarded for purposes of the Section 1061 Regulations.

(2) *Examples.* The following examples illustrate the provisions of this paragraph (a).

(i) *Example 1: API.* (A) A is the general partner of PRS, a partnership, and provides services to PRS. A is engaged in an ATB as defined in § 1.1061–1(a). PRS transfers a PRS profits interest to A in connection with A's performance of substantial services with respect to PRS's ATB. A's interest in PRS is an API.

(B) After 6 years, A retires and is no longer engaged in an ATB and does not perform any services with respect to its ATB and with respect to PRS. However, A retains the API in PRS. PRS continues to acquire new capital assets and to allocate gain to A from the disposition of those assets. Under paragraph (a)(1)(i) of this section, A's interest in PRS remains an API after A retires.

(ii) *Example 2: Contribution of an API to a partnership.* Individuals A, B, and C each directly hold APIs in PRS, a partnership. A and B form a new partnership, GP, and contribute their APIs in PRS to GP. Following the contribution, each of A and B holds an Indirect API because each of A and B now indirectly holds an API in PRS through GP, a Passthrough Entity. Each of A's and B's interests in GP is a Passthrough Interest because each of A's and B's interest in GP represents an Indirect API.

(iii) *Example 3: Passthrough Interest, Indirect API, Passthrough Taxpayer.* Each of A, B, and C provides services to, and is an equal partner in, GP. GP is engaged in an ATB as defined in § 1.1061–1(a), is the general partner of PRS, and provides substantial management services to PRS. In connection with GP's performance of substantial services in an ATB, PRS issues a profits interest to GP. Because GP's PRS interest was received in connection with GP's providing services in an ATB, GP is a Passthrough Taxpayer and GP's interest in PRS is an API. Because A, B, and C are partners in GP, they each hold a Passthrough Interest in GP and an Indirect API in PRS. Each of A, B, and C is treated as an Owner Taxpayer because each is a partner in GP and because each holds an Indirect API in PRS in connection with the performance of its services to GP's ATB.

(iv) *Example 4: S corporation, Passthrough Interest, Indirect API, and Passthrough Taxpayer.* A owns all of the stock of S Corp, an S corporation. S Corp is engaged in an ATB, as defined in § 1.1061–1(a). S Corp is the general partner of PRS, a partnership, and provides substantial management services to PRS. A provides substantial services in S Corp's ATB. In connection with S Corp providing substantial services to PRS, PRS issues a profits interest to S Corp. S Corp's interest in PRS is its only asset. Because S Corp's profits interest in PRS was issued to S Corp in connection with substantial services in an ATB, S Corp is a Passthrough Taxpayer and its interest in PRS is an API. Because A is a shareholder in S Corp, A holds a Passthrough Interest in S Corp and an Indirect API in PRS as a result of S Corp's API in PRS. A is treated as an Owner Taxpayer because A holds an interest in S Corp, a Passthrough Taxpayer, and also indirectly holds an API in PRS in connection with A's services in S Corp's ATB.

(v) *Example 5: Indirect API, Related Person, and Passthrough Taxpayer.* Each of A, B, and C is an equal partner in partnership GP, the general partner of PRS. GP's Specified Actions do not satisfy the ATB Activity Test under § 1.1061–1(a) and as a result, GP's actions do not establish an ATB. Management Company is a Related Person with respect to GP within the meaning of sections 267(b) and 707(b), is engaged in an ATB, and provides substantial management services to PRS that are sufficient to satisfy the ATB Activity Test. Management Company's actions are attributed to GP under paragraphs (a)(1)(iv) and (b)(1)(i)(C) of this section because Management Company is a Related Person to GP. In connection with Management Company's services to PRS, PRS issues a profits interest to GP. Because its PRS profits interest is issued to GP in connection with services provided by Management Company, a Related Person, GP is a Passthrough Taxpayer and its interest in PRS is an API. Unless an exception described in § 1.1061–3 applies, because A, B, and C are partners in GP, they each hold a Passthrough Interest in GP and an Indirect API in PRS. A, B, and C are treated as Owner Taxpayers because they hold an interest in GP, a Passthrough Taxpayer.

(b) *Application of the ATB Activity Test*—(1) *In general.* The ATB Activity Test is satisfied if both Raising and Returning Actions and Investing or Developing Actions are conducted by an Owner Taxpayer, Passthrough Taxpayer, or one or more Related Persons with respect to an Owner Taxpayer or Passthrough Taxpayer, and the total level of activity, including the combined activities of all Related Persons, satisfies the level of activity that would be required to establish a trade or business under section 162.

(i) *Rules for applying the ATB Activity Test*—(A) *Aggregate Specified Actions taken into account.* The determination of whether the ATB Activity Test is satisfied is based on the combined activities conducted that qualify as either Raising or Returning Capital Actions and Investing or Developing Actions. The fact that either Raising or Returning Capital Actions or Investing or Developing Actions are only infrequently taken does not preclude the test from being satisfied if the combined Specified Actions meet the test.

(B) *Raising or Returning Capital Actions and Investing or Developing Actions are not both required to be taken in each taxable year.* Raising or Returning Capital Actions and Investing or Developing Actions are not both required to be taken in each taxable year in order to satisfy the ATB Activity Test. For example, the ATB Activity Test will be satisfied if Investing or Developing Actions are not taken in the current taxable year, but sufficient Raising or Returning Capital Actions are taken in anticipation of future Investing or Developing Actions. Additionally, the ATB Activity Test will be satisfied if no Raising or Returning Capital Actions are taken in the current taxable year, but have been taken in a prior taxable year (regardless of whether the ATB Activity Test was met in the prior year), and sufficient Investing or Developing Actions are undertaken by the taxpayer in the current taxable year.

(C) *Combined conduct by multiple related entities taken into account*—(*1*) *Related Entities.* If a Related Person(s) (within the meaning of § 1.1061–1(a)) solely or primarily performs Raising or Returning Capital Actions and one or more other Related Person(s) solely or primarily performs Investing or Developing Actions, the combination of the activities performed by these Related Persons will be taken into account in determining whether the ATB Activity Test is satisfied.

(*2*) *Actions taken by an agent or delegate.* Specified Actions taken by an agent or a delegate in its capacity as an agent or a delegate of a principal will be taken into account by the principal in determining whether the ATB Activity Test is satisfied with respect to the principal. These Specified Actions are also taken into account in determining whether the ATB Activity test is satisfied with respect to the agent or the delegate.

(ii) *Developing Specified Assets.* Developing Specified Assets takes place if it is represented to investors, lenders, regulators, or other interested parties that the value, price, or yield of a portfolio business may be enhanced or increased in connection with choices or actions of a service provider. Merely exercising voting rights with respect to shares owned or similar activities do not amount to developing Specified Assets.

(iii) *Partnerships.* Investing or Developing Actions directly conducted with respect to Specified Assets held by a partnership are counted towards the ATB Activity Test. Additionally, a portion of the Investing or Developing Actions conducted with respect to the interests in a partnership that holds Specified Assets is counted towards the ATB Activity Test. This portion is the value of the partnership's Specified Assets over the value of all of the partnership's assets. Actions taken to manage a partnership's working capital will not be taken into account in determining the portion of Investing or Developing Actions conducted with respect to the interests in the partnership.

(2) *Examples.* The following examples illustrate the application of the ATB Activity Test described in paragraph (b)(1) of this section.

(i) *Example 1: Combined activities of Raising or Returning Capital Actions and Investing or Developing Actions.* During the taxable year, B takes a small number of actions to raise capital for new investments. B takes numerous actions to develop Specified Assets. B's actions with respect to raising capital and B's actions with respect to developing Specified Assets are combined for the purpose of determining whether the ATB Activity Test is satisfied. These actions cumulatively rise to the level required to establish a trade or business under section 162. Thus, B satisfies the ATB Activity Test.

(ii) *Example 2: Combining Specified Actions in multiple entities.* GP, a partnership, conducts Raising or Returning Capital Actions. Management Company, a partnership that is a Related Person to GP, conducts Investing or Developing Actions. When GP's and Management Company's activities are combined, the ATB Activity Test is satisfied. Accordingly, both GP and Management Company are engaged in an ATB, and services performed by either GP or Management Company are performed in an ATB under paragraph (b)(1) of this section.

(iii) *Example 3: Investing or Developing Actions taken after Raising or Returning Capital Actions that do not meet the ATB Activity Test.* In year 1, PRS engaged in Raising or Returning Capital Actions to fund PRS's investment in Specified Assets. However, PRS' Specified Actions during year 1 did not satisfy the ATB Activity Test because they did not satisfy the level of activity required to establish a trade or business under section 162. Therefore, PRS was not engaged in an ATB in year 1. In year 2, PRS engaged in significant Investing or Developing Actions but did not engage in any Raising or Returning Capital Actions. In year 2, PRS's Investing or Developing Actions rise to the level required to establish a trade or business under section 162. Because PRS has cumulatively engaged in both Investing or Developing Actions and Raising or Returning Capital Actions and because the Specified Actions rise to the level of activity required to establish a trade or business under section 162, PRS is engaged in an ATB in year 2.

(iv) *Example 4: Raising or Returning Capital Actions taken in anticipation of Investing or Developing Actions.* In year 1, A only conducted Raising or Returning Capital Actions. A's Raising or Returning Capital Actions were undertaken to raise capital to invest in Specified Assets with the goal of increasing their value through Investing or Developing Actions and rise to the level of activity required to establish a trade or business under section 162. A did not take Investing or Developing Actions during the taxable year. A's Raising or Returning Capital Actions satisfy the ATB Activity Test because they were undertaken in anticipation of also engaging in Investing or Developing Actions. Therefore, the ATB Activity Test is satisfied, and A is engaged in an ATB in year 1.

(v) *Example 5: Attribution of delegate's actions.* GP is the general partner of PRS. GP is responsible for providing management services to PRS. GP contracts with Management Company to provide management services on GP's behalf to PRS. GP and Management Company are not Related Persons. The Specified Actions taken by Management Company on behalf of GP are attributed to GP for purposes of the ATB Activity Test because the Management Company is operating as a delegate of GP. Additionally, those Specified Actions are taken into account by Management Company for purposes of the ATB Activity Test and whether it is engaged in an ATB.

(vi) *Example 6: ATB Activity Test not satisfied.* A is the manager of a hardware store. Partnership owns the hardware store, including the building in which the hardware business is conducted. In connection with A's services as the manager of the hardware store, a profits interest in Partnership is transferred to A. Partnership's business involves buying hardware from wholesale suppliers and selling it to customers. The hardware is not a Specified Asset. Although real estate is a Specified Asset if it is held for rental or investment purposes, Partnership holds the building for the purpose of conducting its hardware business and not for rental or investment purposes. Therefore, the building is not a Specified Asset as to Partnership. Partnership also maintains and manages a certain amount of working capital for its business, but actions with respect to working capital are not taken into account for the purpose of determining whether the ATB Activity Test is met. Partnership is not a Related Person with respect to any person who takes Specified Actions. Partnership is not engaged in an ATB because the ATB Activity Test is not satisfied. Although Partnership raises capital, its Raising or Returning Capital Actions alone do not satisfy the ATB Activity Test. Further, Partnership takes no Investing or Developing Actions because it holds no Specified Assets other than working capital. Partnership is not in an ATB and the profits interest transferred to A is not an API.

(c) *Applicability date.* The provisions of this section apply to taxable years of Owner Taxpayers and Passthrough Entities beginning on or after January 19, 2021. An Owner Taxpayer or Passthrough Entity may choose to apply this section to a taxable year beginning after December 31, 2017, provided that they apply the Section 1061 Regulations in their entirety to that year and all subsequent years.

§ 1.1061–3 Exceptions to the definition of an API.

(a) *A partnership interest held by an employee of another entity not conducting an ATB.* An API does not include any interest transferred to a person in connection with the performance of substantial services by that person as an employee of another entity that is conducting a trade or business (other than an ATB) and the

person provides services only to such other entity.

(b) *Partnership interest held by a corporation*—(1) *In general.* An API does not include any interest directly or indirectly held by a corporation.

(2) *Treatment of interests held by an S corporation or a qualified electing fund.* For purposes of this section, a corporation does not include an entity for which an election was made to treat the entity as a Passthrough Entity. Thus, the following entities are not treated as corporations for purposes of section 1061—

(i) An S corporation for which an election under section 1362(a) is in effect; and

(ii) A passive foreign investment company (PFIC) with respect to which the shareholder has a qualified electing fund (QEF) election under section 1295 in effect.

(c) *Capital Interest Gains and Losses*—(1) *In general.* Capital Interest Gains and Losses are not subject to section 1061 and, therefore, are not included in calculating an Owner Taxpayer's Recharacterization Amount.

(2) *Capital Interest Gains and Losses defined.* For purposes of paragraph (c)(1) of this section, Capital Interest Gains and Losses are Capital Interest Allocations that meet the requirements of paragraph (c)(3) of this section and Capital Interest Disposition Amounts that meet the requirements of paragraph (c)(4) of this section.

(3) *General rules for determining Capital Interest Allocations*—(i) *Commensurate with capital contributed.* An allocation will be considered a Capital Interest Allocation if the allocation to the API Holder with respect to its capital interest is determined and calculated in a similar manner as the allocations with respect to capital interests held by similarly situated Unrelated Non-Service Partners who have made significant aggregate capital contributions as described in paragraph (c)(3)(iv) of this section. For purposes of this paragraph (c)(3), a capital interest is an interest that would give the holder a share of the proceeds if the partnership's assets were sold at fair market value at the time the interest was received and the proceeds were then distributed in a complete liquidation of the partnership.

(ii) *In a similar manner.* For purposes of paragraph (c)(3)(i) of this section, a Capital Interest Allocation to an API Holder will be treated as made in a similar manner if allocations and distribution rights with respect to the capital contributed by an API Holder to which the API Holder's Capital Interest Allocation relates are reasonably consistent with allocation and distribution rights with respect to capital contributed by Unrelated Non-Service Partners where the Unrelated Non-Service Partner requirement is met. For purposes of this paragraph (c)(3)(ii), allocation and distribution rights for an API Holder that are limited to a particular class of partnership capital interests or that are determined with respect to capital contributions invested in a particular partnership investment will be considered as made in a similar manner to allocations and distribution rights of Unrelated Non-Service Partners where the Unrelated Non-Service Partner requirement is met for the applicable interest class or partnership investment.

(A) *Relevant factors.* For purposes of this paragraph (c)(3)(ii), the following factors are not exclusive, but are relevant factors in determining whether allocation and distribution rights with respect to capital contributed by an API Holder are reasonably consistent with allocation and distribution rights of persons meeting the Unrelated Non-Service Partner requirement: The amount and timing of capital contributed, the rate of return on capital contributed, the terms, priority, type and level of risk associated with capital contributed, and the rights to cash or property distributions during the partnership's operations and on liquidation. Accordingly, an allocation to an API Holder will not fail to qualify solely because the allocation is subordinated to allocations made to Unrelated Non-Service Partners, because an allocation to an API Holder is not reduced by the cost of services provided by the API Holder or a Related Person to the partnership, where the cost of services provided includes management fees or API allocations, or because an API Holder has a right to receive tax distributions while Unrelated Non-Service Partners do not, where such distributions are treated as advances against future distributions.

(B) *Clear identification requirement.* For purposes of this paragraph (c)(3)(ii), allocations will be considered made in a similar manner only if the allocations to the API Holder and the Unrelated Non-Service Partners are allocations with respect to, and corresponding to, such partners' contributed capital that are separate and apart from allocations made to the API Holder with respect to its API and where both the partnership agreement and the partnership's contemporaneous books and records clearly demonstrate that the requirements of paragraph (c)(3) of this section have been met.

(iii) *Reinvestment of API Gain.* If an API Holder is allocated API Gain by a Passthrough Entity, to the extent that an amount equal to the API Gain is reinvested in the Passthrough Entity by the API Holder (either as the result of an actual distribution and recontribution of the API Gain amount or the retention of the API Gain amount by the Passthrough Entity), the amount will be treated as a contribution to the Passthrough Entity for a capital interest that may produce Capital Interest Allocations for the API Holder, provided such allocations meet the requirements of this paragraph (c)(3).

(iv) *Unrelated Non-Service Partner requirement.* For purposes of paragraph (c)(3) of this section, the Unrelated Non-Service Partner requirement means that Unrelated Non-Service Partners must have made significant aggregate capital contributions in relation to total capital contributions of all partners. Unrelated Non-Service Partners will be treated as having made significant aggregate capital contributions provided such partners possess five percent or more of the aggregate capital contributed to the partnership at the time the allocations are made. With respect to an API Holder with allocation and distribution rights that are attributable to a particular interest class or partnership investment, the Unrelated Non-Service requirement must be met with respect to that particular interest class or partnership investment.

(v) *Proceeds of certain loans not taken into account for Capital Interest Allocation purposes*—(A) *General rule.* For purposes of the Section 1061 Regulations, an allocation is not a Capital Interest Allocation to the extent the allocation is attributable to the contribution of an amount of capital to a partnership that, directly or indirectly, results from, or is attributable to, any loan or other advance made or guaranteed, directly or indirectly, by the partnership, a partner in the partnership, or any Related Person with respect to such persons, except to the extent a loan or advance is described in paragraph (c)(3)(v)(B) of this section. However, the repayments on a loan described in the preceding sentence are taken into account as capital contributed (and may therefore generate Capital Interest Allocations) as those amounts are paid by the partner, provided that the loan is not repaid with the proceeds of another loan described in the preceding sentence.

(B) *Recourse liability.* Paragraph (c)(3)(v)(A) of this section does not apply with respect to an allocation attributable to a contribution made by an individual service provider that,

directly or indirectly, results from, or is attributable to, a loan or advance from another partner in the partnership (or any Related Person with respect to such lending or advancing partner, other than the partnership) to such individual service provider if the individual service provider is personally liable for the repayment of such loan or advance. A contribution made by an individual service provider includes a contribution made by an entity that is wholly owned by, and disregarded as separate from, the individual service provider as described in § 1.1061–2(a)(1)(v), including a contribution attributable to a loan or advance made to the disregarded entity by another partner in the partnership (or any Related Person with respect to such lending or advancing partner, other that the partnership) if the individual service provider is personally liable for the repayment of any and all borrowed amounts that are not repaid by the disregarded entity. For purposes of this paragraph (c)(3)(v)(B), an individual service provider is personally liable for the repayment of a loan or advance made by a partner (or any Related Person, other than the partnership) if—

(*1*) The loan or advance is fully recourse to the individual service provider;

(*2*) The individual service provider has no right to reimbursement from any other person; and

(*3*) The loan or advance is not guaranteed by any other person.

(vi) *Items that are not included in Capital Interest Allocations.* Capital Interest Allocations do not include—

(A) Amounts that are treated as API Gains and Losses and Unrealized API Gains and Losses; or

(B) Items that are not taken into account for purposes of section 1061 under § 1.1061–4(b)(7).

(4) *Capital Interest Disposition Amounts*—(i) *In general.* The term *Capital Interest Disposition Amount* means the amount of long-term capital gain or loss recognized on the sale or disposition of all or a portion of a Passthrough Interest that is treated as Capital Interest Gain or Loss. In general, long-term capital gain or loss recognized on the sale or disposition of a Passthrough Interest is deemed to be API Gain or Loss unless it is determined under paragraph (c)(4)(ii) of this section to be a Capital Interest Disposition Amount.

(ii) *Determination of the Capital Interest Disposition Amount.* If a Passthrough Interest that includes a right to allocations of Capital Interest Gains and Losses is disposed of, the amount of long-term capital gain or loss that is treated as a Capital Interest Disposition Amount is determined under the rules provided in this paragraph (c)(4)(ii).

(A) First, determine the amount of long-term capital gain or loss that would be allocated to the Passthrough Interest (or the portion of the Passthrough Interest sold) if all the assets of the Passthrough Entity (including gain or loss with respect to assets described in § 1.1061–4(b)(7)) were sold for their fair market value in a fully taxable transaction immediately before the disposition of the Passthrough Interest (hypothetical asset sale). For purposes of this paragraph (c)(4)(ii), the assets of the Passthrough Entity include any assets held by a lower-tier Passthrough Entity in which the Passthrough Entity has a direct or indirect interest.

(B) Second, determine the amount from the hypothetical asset sale that would be allocated to the Passthrough Interest (or the portion of the Passthrough Interest sold) as Capital Interest Allocations under paragraph (c)(3) of this section.

(C) Third, if the transferor recognized long-term capital gain upon disposition of the Passthrough Interest and only net short-term capital losses, net long-term capital losses, or both, are allocated to the Passthrough Interest under paragraph (c)(4)(ii)(B) of this section from the hypothetical asset sale, all of the long-term capital gain is API Gain. If the transferor recognized long-term capital loss on the disposition of the Passthrough Interest and only net short-term capital gains, net long-term capital gains, or both, are allocated to the Passthrough Interest under paragraph (c)(4)(ii)(B) of this section, then all the long-term capital loss is API Loss.

(D) If paragraph (c)(4)(ii)(C) of this section does not apply and long-term capital gain is recognized on the disposition of the Passthrough Interest, the amount of long-term capital gain that the transferor of the Passthrough Interest recognizes that is treated as a Capital Interest Disposition Amount is determined by multiplying long-term capital gain recognized on the disposition of the Passthrough Interest by a fraction, the numerator of which is the amount of long-term capital gain determined under paragraph (c)(4)(ii)(B) of this section, and the denominator of which is the amount of long-term capital gain determined under paragraph (c)(4)(ii)(A) of this section, with the percentage represented by the fraction limited to 100 percent. Alternatively, if paragraph (c)(4)(ii)(C) of this section does not apply and long-term capital loss is recognized on the disposition of the Passthrough Interest, the amount of long-term capital loss treated as a Capital Interest Disposition Amount is determined by multiplying the transferor's capital loss by a fraction, the numerator of which is the amount of long-term capital loss determined under paragraph (c)(4)(ii)(B) of this section, and the denominator of which is the amount of long-term capital loss determined under paragraph (c)(4)(ii)(A) of this section, with the percentage represented by the fraction limited to 100 percent.

(E) In applying this paragraph (c)(4)(ii), allocations of amounts that are not included in determining the amount of long-term capital gain or loss recognized on the sale or disposition of the Passthrough Interest are not included. See, for example, section 751(a).

(5) *Capital Interest Allocations made by a Passthrough Entity that is an API Holder.* An allocation made to a Passthrough Entity that holds an API in a lower-tier Passthrough Entity will be considered a Capital Interest Allocation if it meets the principles set forth in paragraphs (c)(3) and (4) of this section (other than paragraph (c)(3)(iv) of this section). For purposes of applying the Capital Interest Allocation rules in this paragraph (c)(5) to a tiered partnership structure, to the extent that a Capital Interest Allocation that is made by a lower-tier partnership to an upper-tier partnership is properly allocated to the upper-tier partnership's partners with respect to their capital interests in the upper-tier partnership in a manner that is respected under 704(b) (taking into account the principles of section 704(c)), such allocation is a Capital Interest Allocation.

(6) *Examples.* The rules of this paragraph (c) are illustrated by the following examples.

(i) *Example 1: Capital Interest Allocations*—(A) *Facts.* Each of A, B, and C contributes $100 to GP and is an equal partner in GP, a partnership that is the general partner of PRS, a partnership. The contributions are not attributable to loans or advances described in paragraph (c)(3)(v)(A) of this section. PRS's other partners are Unrelated Non-Service Partners. Each of GP and PRS makes allocations to its partners in accordance with its partners' interests in that partnership, as described in § 1.704–1(b)(3). GP holds a 20% profits interest in PRS that is an API that GP received in exchange for providing substantial services to PRS in an ATB. GP's API is an Indirect API to each of A, B, and C. GP contributes the $300 of capital contributed by A, B and C to PRS. GP's $300 contribution equals 2% of the contributed capital made by

all of PRS's partners ($15,000). PRS's partnership agreement describes its partners' economic distribution rights with respect to its liquidating proceeds as follows: First, liquidating proceeds are proportionately distributed to each of GP and the Unrelated Non-Service Partners equal to the amount necessary to return each of those partners' unreturned capital; second, liquidating proceeds are distributed to GP with respect to its API in PRS; and, finally, any residual liquidating proceeds are distributed, proportionately, 98% to the Unrelated Non-Service Partners and 2% to GP. During its initial taxable year, PRS has $10,000 of net capital gain, causing an increase in PRS's distributable proceeds of $10,000. In accordance with the partners' economic rights as described in PRS's partnership agreement, PRS allocates $2,160 of net capital gain to GP (a $2,000 API allocation plus $160 ($8,000 ($10,000 − $2,000) × 2%), with respect to GP's contributed capital) and $7,840 of net capital gain to the Unrelated Non-Service Partners with respect to their contributed capital. GP allocates $720 ($2,160/3) of this net capital gain to each of A, B, and C in accordance with their interests in GP.

(B) *PRS's Capital Interest Allocation Analysis.* Because PRS's partnership agreement provides for no differences as to the amount and timing of capital contributed, the rate of return on capital contributed, the type and level of risk associated with capital contributed, or the rights to cash or property distributions during the PRS's operations and on liquidation, the allocations and distribution rights with respect the capital contributed by GP are reasonably consistent with the allocation and distribution rights with respect to capital contributed by Unrelated Non-Service Partners. Accordingly, GP's allocation of $160 is a Capital Interest Allocation that is treated as made in a similar manner as the allocations made to the Unrelated Non-Service Partners.

(C) *GP Capital Interest Allocation Analysis.* GP is allocated $2,160 from PRS, consisting of a $2,000 API allocation and a $160 Capital Interest Allocation. The $160 Capital Interest Allocation is allocated equally to A, B, and C based on their capital contributions to GP. Therefore, they qualify as Capital Interest Allocations by GP. See paragraph (c)(5) of this section. The $2,000 of gain allocated by PRS's to GP with respect to GP's API cannot be treated as a Capital Interest Allocation by GP and therefore is subject to section 1061. In summary, A, B, and C are each allocated $720 of capital gain from PRS ($2,160/3). Of this amount, $667 is API Gain ($2,000/3) and $53 is a Capital Interest Allocation ($160/3).

(ii) *Example 2: Sale of a Passthrough Interest*—(A) *Facts.* In Year 1, A, B, and C form GP, a partnership. Each of A, B, and C contributes $100 to GP and is an equal partner in GP. The contributions are not attributable to loans or advances described in paragraph (c)(3)(v)(A) of this section. GP invests the $300 in Asset X in Year 1. GP is also the general partner of PRS, a partnership. PRS's other partners are Unrelated Non-Service Partners. GP holds a 20% profits interest in PRS that is an API that GP received in exchange for providing substantial services to PRS in an ATB. GP's API is an Indirect API to each of A, B, and C. Each of GP and PRS makes allocations to its partners in accordance with its partners' interests in that partnership, as described in § 1.704–1(b)(3). In Year 3, A sells A's interest in GP to an unrelated third party for $800 and recognizes $700 of capital gain on the sale. If PRS had sold its assets in a hypothetical asset sale as required by paragraph (c)(4)(ii)(A) of this section and liquidated immediately before A sold its interest in GP, GP would have been allocated $1,800 of long-term capital gain with respect to GP's API in PRS, and GP would have allocated $600 of this $1,800 to A. If GP sold Asset X for its fair market value and liquidated immediately before A sold its interest in GP, A would have been allocated $100 of long-term capital gain.

(B) *Analysis.* GP does not have a capital interest in PRS. Therefore, its allocations from PRS are allocations with respect to its API which are subject to section 1061. The total gain allocable to A as a result of the hypothetical liquidations would be $700. Under paragraph (c)(4)(ii)(D) of this section, $100 of the $700 of A's interest sale gain is A's Capital Interest Disposition Amount, and is not subject to section 1061.

(iii) *Example 3: Reinvestment of Realized API Gain.* A, B, and C are partners in PRS, a partnership. At the beginning of Year 1, A is issued an API in PRS in exchange for providing substantial services to PRS in an ATB. A has no capital interest in PRS. During Year 1, PRS's assets appreciate by $100. At the end of Year 1, under the terms of its partnership agreement, if PRS were to sell all of its assets at their fair market value and distribute the proceeds in a complete liquidation, A would receive $20 with respect to its API. Thus, at the end of Year 1, A has $20 of Unrealized API Gain. In Year 2, PRS sells Asset X, an asset that PRS owned in Year 1, and allocates $8 of the long-term capital gain to A as API Gain. As a result, $8 of A's $20 of Unrealized API Gain becomes API Gain that is subject to section 1061. A reinvests A's share of the proceeds from the Asset X sale in PRS. As a result, under paragraph (c)(3)(iii) of this section, A has an $8 capital interest in PRS and, provided the requirements of paragraph (c)(3) of this section are met, A may receive future Capital Interest Allocations with respect to the capital interest.

(d) *Partnership interest acquired by purchase by an unrelated person.* If a person (acquirer) acquires an interest in a partnership (target partnership) by taxable purchase for fair market value that, but for the exception set forth in this paragraph (d), would be an API, the transferor of the interest will be treated as selling an API but the acquirer will not be treated as acquiring an API if—

(1) *Acquirer not a Related Person.* Immediately before the purchase, the acquirer is not a Related Person with respect to—

(i) Any person who provides services in the Relevant ATB; or

(ii) Any service providers who provide services to, or for the benefit of, the target partnership or a lower-tier partnership in which the target partnership holds an interest, directly or indirectly.

(2) *Section 1061(d) not applicable.* Section 1061(d) does not apply to the transaction (as provided in § 1.1061–5).

(3) *Acquirer not a service provider.* At the time of the purchase, the acquirer has not provided, does not provide, and does not anticipate providing, services in the future, to, or for the benefit of, the target partnership, directly or indirectly, or any lower-tier partnership in which the target partnership directly or indirectly holds an interest.

(e) [Reserved]

(f) *Applicability date*—(1) *General rule.* Except as provided in paragraphs (f)(2) and (3) of this section, the provisions of this section apply to taxable years of Owner Taxpayers and Passthrough Entities beginning on or after January 19, 2021. An Owner Taxpayer or Passthrough Entity may choose to apply this section to a taxable year beginning after December 31, 2017, provided that they apply the Section 1061 Regulations in their entirety to that year and all subsequent years.

(2) *Partnership interest held by an S corporation.* Paragraph (b)(2)(i) of this section, which provides that the exception under section 1061(c)(1) to the definition of an API does not apply to a partnership interest held by an S corporation with an election under section 1362(a) in effect, applies to

taxable years beginning after December 31, 2017.

(3) *Partnership interest held by a PFIC with respect to which the shareholder has a QEF election in effect.* Paragraph (b)(2)(ii) of this section, which provides that the exception under section 1061(c)(1) to the definition of an API does not apply to a partnership interest held by a PFIC with respect to which the shareholder has a QEF election in effect under section 1295, applies to taxable years of an Owner Taxpayer and Passthrough Entity beginning after August 14, 2020.

§ 1.1061–4 Section 1061 computations.

(a) *Computations*—(1) *Recharacterization Amount.* The Recharacterization Amount is the amount that an Owner Taxpayer must treat as short-term capital gain under section 1061(a). The Recharacterization Amount equals—

(i) The Owner Taxpayer's One Year Gain Amount; less

(ii) The Owner Taxpayer's Three Year Gain Amount.

(2) *One Year Gain Amount and Three Year Gain Amount*—(i) *One Year Gain Amount.* The Owner Taxpayer's One Year Gain Amount is the sum of—

(A) The Owner Taxpayer's combined net API One Year Distributive Share Amount from all APIs held during the taxable year; and

(B) The Owner Taxpayer's API One Year Disposition Amount.

(ii) *Three Year Gain Amount.* The Owner Taxpayer's Three Year Gain Amount is the sum of—

(A) The Owner Taxpayer's combined net API Three Year Distributive Share Amount from all APIs held during the taxable year; and

(B) The Owner Taxpayer's API Three Year Disposition Amount.

(3) *API One Year Distributive Share Amount and API Three Year Distributive Share Amount*—(i) *API One Year Distributive Share Amount.* The API One Year Distributive Share Amount equals—

(A) The API Holder's distributive share of net long-term capital gain or loss from the partnership for the taxable year (including capital gain or loss on the disposition of Distributed API Property by an API Holder that is a Passthrough Entity or the disposition of all or a part of an API by an API Holder that is a Passthrough Entity), with respect to the partnership interest held by the API Holder calculated without the application of section 1061; less

(B) To the extent included in the amount determined under paragraph (a)(3)(i)(A) of this section, the aggregate of—

(*1*) Amounts that are not taken into account for purposes of section 1061 under paragraph (b)(7) of this section; and

(*2*) Capital Interest Gains and Losses as determined under § 1.1061–3(c)(2).

(ii) *API Three Year Distributive Share Amount.* The API Three Year Distributive Share Amount equals the API One Year Distributive Share Amount, less—

(A) Items included in the API One Year Distributive Share Amount that would not be treated as a long-term gain or loss if three years is substituted for one year in paragraphs (3) and (4) of section 1222; and

(B) Any adjustments resulting from the application of the Lookthrough Rule under paragraph (b)(9)(ii) of this section when an API is disposed of by an API Holder that is a Passthrough Entity.

(4) *API One Year Disposition Amount and API Three Year Disposition Amount*—(i) *API One Year Disposition Amount.* The API One Year Disposition Amount is the combined net amount of—

(A) Long-term capital gains and losses recognized during the taxable year by an Owner Taxpayer, including long-term capital gain computed under the installment method that is taken into account for the taxable year, on the disposition of all or a portion of an API that has been held for more than one year, including a disposition to which the Lookthrough Rule applies;

(B) Long-term capital gain and loss recognized by an Owner Taxpayer due to a distribution with respect to an API during the taxable year that is treated under section 731(a) as gain or loss from the sale or exchange of a partnership interest held for more than one year; and,

(C) Long-term capital gains and losses recognized by an Owner Taxpayer on the disposition of Distributed API Property (taking into account deemed exchanges under section 751(b)) during the taxable year that has a holding period of more than one year but not more than three years to the distributee Owner Taxpayer on the date of disposition, excluding items described in paragraph (b)(7) of this section.

(ii) *API Three Year Disposition Amount.* The API Three Year Disposition Amount is the combined net amount of—

(A) Long-term capital gains and losses recognized during the taxable year by an Owner Taxpayer, including long-term capital gain computed under the installment method that is taken into account for the taxable year, on the disposition of all or a portion of an API that has been held for more than three years and to which the Lookthrough Rule does not apply;

(B) Long-term capital gains and losses recognized by an Owner Taxpayer on the disposition during the taxable year of all or a portion of an API that has been held for more than three years in a transaction to which the Lookthrough Rule in paragraph (b)(9) of this section applies, less any adjustments required under the Lookthrough Rule in paragraph (b)(9)(ii) of this section; and

(C) Long-term capital gains and losses recognized on a distribution with respect to an API during the taxable year that is treated under sections 731(a) as gain or loss from the sale or exchange of a partnership interest held for more than three years.

(b) *Special rules for calculating the One Year Gain Amount and the Three Year Gain Amount*—(1) *One Year Gain Amount equals zero or less.* If an Owner Taxpayer's One Year Gain Amount is zero or results in a loss, the Recharacterization Amount for the taxable year is zero and section 1061(a) does not apply.

(2) *Three Year Gain Amount equals zero or less.* If an Owner Taxpayer's Three Year Gain Amount is less than or equal to $0, the Three Year Gain Amount is zero for purposes of calculating the Recharacterization Amount.

(3) *One Year Gain Amount less than Three Year Gain Amount.* If the One Year Gain Amount and the Three Year Gain Amount are both greater than zero but the One Year Gain Amount is less than the Three Year Gain Amount, none of the One Year Gain Amount is included in the Recharacterization Amount for the taxable year.

(4) *Installment sale gain.* The One Year Gain Amount under paragraph (a)(2)(i) of this section and the Three Year Gain Amount, as determined under paragraph (a)(2)(ii) of this section include long-term capital gains from installment sales. This includes long-term capital gain or loss recognized with respect to an API after December 31, 2017, with respect to an installment sale that occurred on or before December 31, 2017. The holding period of the asset upon the date of disposition is used for purposes of determining whether capital gain is included in the taxpayer's One Year Gain Amount or the Three Year Gain Amount.

(5) *Special rules for capital gain dividends from regulated investment companies (RICs) and real estate investment trusts (REITs)*—(i) *API One Year Distributive Share Amount.* If a RIC or REIT reports or designates a dividend as a capital gain dividend and provides the One Year Amounts

Disclosure as defined in § 1.1061–6(c)(1)(i), the amount provided in the One Year Amounts Disclosure is included in the calculation of an API One Year Distributive Share Amount. If the RIC or REIT does not provide the One Year Amounts Disclosure, the full amount of the RIC's or REIT's capital gain dividend must be included in the calculation of an API One Year Distributive Share Amount.

(ii) *API Three Year Distributive Share Amount.* If a RIC or REIT reports or designates a dividend as a capital gain dividend and provides the Three Year Amounts Disclosure as defined in § 1.1061–6(c)(1)(ii), the amount provided in the Three Year Amounts Disclosure is used for the calculation of an API Three Year Distributive Share amount. If the RIC or REIT does not provide the Three Year Amounts Disclosure, no amount of the RIC's or REIT's capital gain dividend may be used for the calculation of an API Three Year Distributive Share Amount.

(iii) *Loss on sale or exchange of stock.* If a RIC or REIT provides the Three Year Amounts Disclosure as provided in paragraph (b)(5)(ii) of this section, any loss on the sale or exchange of shares of a RIC or REIT held for six months or less is treated as a capital loss on an asset held for more than three years, to the extent of the amount of the Three Year Amounts Disclosure from that RIC or REIT.

(6) *Pro rata share of qualified electing fund (QEF) net capital gain*—(i) *One year QEF net capital gain.* The calculation of an API One Year Distributive Share Amount includes an Owner Taxpayer's inclusion under section 1293(a)(1)(B) as limited by section 1293(e)(2) with respect to a passive foreign investment company (as defined in section 1297(a)) for which a QEF election (as described in section 1295(a)) is in effect for the taxable year. The amount of the inclusion may be reduced by the amount of long-term capital gain that is not taken into account for purposes of section 1061 as provided in paragraph (b)(7) of this section and may be reduced by the Owner Taxpayer's share of the excess, if any, of the Capital Interest Gain over Capital Interest Loss with respect to the QEF, provided in each case that the relevant information is provided by the QEF. See § 1.1061–6 for reporting rules.

(ii) *Three year QEF net capital gain adjustment.* For purposes of calculating an Owner Taxpayer's API Three Year Distributive Share Amount, the entire amount determined under paragraph (b)(6)(i) of this section, after any allowed reduction, is included as an item in paragraph (a)(3)(ii)(A) of this section unless the QEF provides information to determine the amount of the inclusion that would constitute net capital gain (as defined in § 1.1293–1(a)(2), as limited by section 1293(e)(2)) if the QEF's net capital gain for the taxable year were calculated under section 1222(11) applying paragraphs (3) and (4) of section 1222 by substituting three years for one year. If such information is provided, the amount included as an item in paragraph (a)(3)(ii)(A) of this section is the amount determined under paragraph (b)(6)(i) of this section that would not be treated as long-term gain if three years were substituted for one year in paragraphs (3) and (4) of section 1222. See § 1.1061–6 for reporting rules.

(7) *Items not taken into account for purposes of section 1061.* The following items of long-term capital gain and loss are excluded from the calculation of the API One Year Distributive Share Amount in paragraph (a)(3)(i) of this section and the API Three Year Distributive Share Amount in paragraph (a)(3)(ii) of this section—

(i) Long-term capital gain and long-term capital loss determined under section 1231;

(ii) Long-term capital gain and long-term capital loss determined under section 1256;

(iii) Qualified dividends included in net capital gain for purposes of section 1(h)(11)(B); and

(iv) Capital gains and losses that are characterized as long-term or short-term without regard to the holding period rules in section 1222, such as certain capital gains and losses characterized under the mixed straddle rules described in section 1092(b) and §§ 1.1092(b)–3T, 1.1092(b)–4T, and 1.1092(b)–6.

(8) *Holding period determination*—(i) *Determination of holding period for purposes of the Three Year Gain Amount.* For purposes of computing the Three Year Gain Amount, the relevant holding period of either an asset or an API is determined under all provisions of the Code or regulations that are relevant to determining whether the asset or the API has been held for the long-term capital gain holding period by applying those provisions as if the holding period were three years instead of one year.

(ii) *Relevant holding period.* The relevant holding period is the direct owner's holding period in the asset sold. Accordingly, for purposes of determining an API Holder's Taxpayer's API One Year Distributive Share Amount and API Three Year Distributive Share Amount for the taxable year under paragraph (a)(3) of this section, the partnership's holding period in the asset being sold or disposed of (whether a directly held asset or a partnership interest) is the relevant holding period for purposes of section 1061.

(9) *Lookthrough Rule for certain API dispositions*—(i) *Determination that the Lookthrough Rule applies*—(A) *In general.* The Lookthrough Rule will apply if, at the time of disposition of an API held for more than three years—

(*1*) The API would have a holding period of three years or less if the holding period of such API were determined by not including any period before the date that an Unrelated Non-Service Partner is legally obligated to contribute substantial money or property directly or indirectly to the Passthrough Entity to which the API relates. This paragraph (b)(9)(i)(A) does not apply to the disposition of an API to the extent that the gain recognized upon the disposition of the API is attributable to any asset not held for portfolio investment on behalf of third party investors (as defined in section 1061(c)(5)). Solely for the purpose of this paragraph (b)(9)(i)(A), a substantial legal obligation to contribute money or property is an obligation to contribute a value that is at least 5 percent of the partnership's total capital contributions as of the time of the API disposition; or

(*2*) A transaction or series of transactions has taken place with a principal purpose of avoiding potential gain recharacterization under section 1061(a).

(B) *Determination that the Lookthrough Rule applies to the disposition of a Passthrough Interest.* Paragraph (b)(9)(i)(A) of this section similarly applies with respect to a Passthrough Interest issued by an S corporation or a PFIC to the extent the Passthrough Interest is treated as an API.

(ii) *Application of the Lookthrough Rule.* If the Lookthrough Rule applies, for purposes of applying an Owner Taxpayer's Recharacterization Amount, as described in paragraph (a) of this section—

(A) The Owner Taxpayer must include the entire amount of capital gain recognized on the disposition of an API by the Owner Taxpayer in the Owner Taxpayer's API One Year Disposition Amount; and

(B) The Owner Taxpayer must include in its Three Year Disposition Amount an amount equal its One Year Disposition Amount (determined under paragraph (b)(9)(ii)(A) of this section) reduced by the Owner Taxpayer's share of the amount of any gain, directly or indirectly, from assets held for three years or less that would have been

allocated to the Owner Taxpayer (to the extent attributable to the transferred API) by the partnership if the partnership had sold all of its property in a fully taxable transaction for cash in an amount equal to the fair market value of such property (taking into account section 7701(g)) immediately prior to the Owner Taxpayer's transfer of the API.

(C) In the case of an API disposition by an API Holder that is a Passthrough Entity and not an Owner Taxpayer, the principles set forth in paragraph (b)(9)(ii)(A) of this section must be applied to determine the amount to include in the Owner Taxpayer's One Year Distributive Amount and in paragraph (b)(9)(ii)(B) of this section to determine the amounts included in the Owner Taxpayer's Three Year Distributive Share Amount.

(10) *Section 83.* Except with respect to any portion of the interest that is a capital interest under § 1.1061–3(c), this section applies regardless of whether an Owner Taxpayer or Passthrough Entity has made an election under section 83(b) or included amounts in gross income under section 83.

(c) *Examples*—(1) *Recharacterization rules.* The rules of paragraph (a) of this section are illustrated by the following examples. Unless otherwise stated, all gains and losses are long-term capital gains and losses, none of the long-term capital gain or loss in this section is capital gain or loss not taken into account for purposes of section 1061 under paragraph (b)(7) of this section, and neither the Lookthrough Rule nor section 751 is applicable.

(i) *Example 1: Determination of API One Year and Three Year Distributive Share Amounts*—(A) *Facts.* A holds an API in PRS but has no capital interest in PRS and is not entitled to a Capital Interest Allocation with respect to PRS. During the taxable year, PRS allocates to A $20 of long-term capital gain from the sale of capital asset X (which had been held by PRS for two years) and $40 of long-term capital gain from the sale of capital asset Y (which had held by PRS for five years). A has no other items of long-term capital gain or loss with respect to its interest in PRS during the taxable year. A has no other long-term capital gains or losses with respect to any other API during the taxable year.

(B) *Determination of A's API One Year Distributive Share Amount.* Under paragraph (a)(3)(i) of this section, A has an API One Year Distributive Share Amount of $60. This amount is the sum of the $20 of the long-term capital gain allocated to A from PRS's sale of capital asset X and the $40 of long-term capital gain allocated to A from PRS's sale of capital asset Y.

(C) *Determination of A's API Three Year Distributive Share Amount.* (*1*) Under paragraph (a)(3)(ii) of this section, A's API Three Year Distributive Share Amount is equal to A's API One Year Distributive Amount, $60, less the sum of:

(*i*) The items included in the API One Year Distributive Share Amount that would not be treated as a long-term gain or loss if three years is substituted for one year in paragraphs (3) and (4) of section 1222, $20; and

(*ii*) Adjustments resulting from the application of the Lookthrough Rule under paragraph (b)(9)(ii) of this section, which under the facts in paragraph (c)(1)(i)(A) of this section, is inapplicable.

(*2*) Thus, A's Three Year API Distributive Share Amount is $40.

(D) *Determination of A's Recharacterization Amount.* Under paragraph (a)(2)(i) of this section, A's One Year Gain amount is equal to A's API One Year Distributive Share Amount, $60. A's Three Year Gain Amount is equal to A's API Three Year Distributive Share Amount, $40. Under paragraph (a)(1) of this section, A's Recharacterization Amount is A's One Year Gain Amount, minus A's Three Year Gain Amount, or $20.

(ii) *Example 2: API One Year and Three Year Disposition Amounts*—(A) *Facts.* During the taxable year, A disposes of an API that A has held for four years for a $100 gain. Additionally, A sells Distributed API Property for a $300 gain at a time when A has a two-year holding period in such property. A has no other items of long-term capital gain or loss with respect to any API in the year.

(B) *Determination of A's API One Year and Three Year Disposition Amounts.* Under paragraph (a)(4)(i) of this section, A's API One Year Disposition Amount is $400. This amount is the sum of A's $300 of long-term capital gain on A's disposition of the Distributed API Property and A's $100 of long-term capital gain on the disposition of the API. Under paragraph (a)(4)(ii) of this section, A's Three Year Disposition Amount is $100, which is the amount of long-term capital gain that A recognized upon disposition of the API held for more than three years. Under paragraph (a)(2) of this section, A's One Year Gain Amount is $400 and A's Three Year Gain Amount is $100.

(C) *Determination of A's Recharacterization Amount.* Under paragraph (a)(1) of this section, A's Recharacterization Amount is $300, which is the difference between A's One Year Gain Amount and Three Year Gain Amount.

(iii) *Example 3: Determination of One Year Gain Amount, Three Year Gain Amount, and Recharacterization Amount*—(A) *Facts.* A holds an API in each of PRS1 and PRS2. With respect to PRS1, A's API One Year Distributive Share Amount is $100 and A's API Three Year Distributive Share Amount is ($200). With respect to PRS2, A's API One Year Distributive Share Amount is $600 and A's API Three Year Distributive Share Amount is $300. During the taxable year, A also has an API One Year Disposition Amount of $200 of gain. A has no other items of long-term capital gain or loss with respect to an API for the taxable year.

(B) *Determination of A's One Year Gain Amount.* Under paragraph (a)(2) of this section, A's One Year Gain Amount is $900, which is an amount equal to A's $100 API One Year Distributive Share Gain from PRS1 and A's $600 API One Year Distributive Share from PRS2 (a combined net API One Year Distributive Share Amount of $700) plus A's $200 API One Year Disposition Amount.

(C) *Determination of A's Three Year Gain Amount.* Under paragraph (a)(2) of this section, A's Three Year Gain Amount is $100, which is equal to A's combined net API Three Year Distributive Share Amount for the taxable year (A's $200 API Three Year Distributive Share Amount loss from PRS1 plus A's API Three Year Distributive Share Amount Gain of $300 from PRS2). A does not have an API Three Year Disposition Amount.

(D) *Determination of A's Recharacterization Amount.* Under paragraph (a)(1) of this section, A's Recharacterization Amount is $800. (A's One Year Gain Amount of $900 less A's Three Year Gain Amount of $100.)

(2) *Special rules examples.* The principles of paragraph (b) of this section are illustrated by the following examples.

(i) *Example 1: Lookthrough Rule.* On July 1, 2021, A and B form partnership PRS. At the time of PRS's formation, A agrees to provide substantial services to PRS in exchange for a 20% profits interest in PRS, and B, a partner that is an Unrelated Non-Service Partner, contributes $1 million in exchange for an interest in PRS and PRS immediately uses the capital to purchase marketable securities. On July 1, 2023, C, another Unrelated Non-Service Partner becomes legally obligated to contribute capital to PRS ($75 million) for the purposes of investing in and developing Specified Assets and is admitted into PRS. On July 3, 2023, and after C makes a contribution of $75 million, PRS uses

this capital to acquire stock in portfolio company Z. On July 1, 2025, when Z has a value of $500 million and the value of the marketable securities is $2 million, A sells its API in PRS for $85.2 million. As a result of this sale, the Lookthrough Rule applies because B's contribution was non-substantial under paragraph (b)(9)(i)(A)(*1*) of this section. Therefore, A includes $85.2 million in its API One Year Disposition Amount and under paragraph (b)(9)(ii)(B) of this section, $200,000 (20% share of $1 million gain in marketable securities) in its API Three Year Disposition Amount. Accordingly, under paragraph (a)(1) of this section, A's Recharacterization Amount is $85 million.

(ii) *Example 2: Installment sale gain.* On December 22, 2021, A disposed of A's API in an installment sale. At the time of the disposition, A had held its API for two years. A received a payment with respect to the installment sale during A's 2022 taxable year causing A to recognize $200 of long-term capital gain. The $200 long-term capital gain recognized in 2022 is subject to section 1061 because it is recognized after December 31, 2017. Accordingly, the $200 of long-term capital gain recognized by A in 2022 is included in A's API One Year Disposition Amount. The $200 of long-term capital gain is not in A's API Three Year Disposition Amount because the API was not held for more than three years at the time of its disposition.

(iii) *Example 3: REIT capital gain dividend.* During the taxable year, A holds an API in PRS. PRS holds an interest in REIT. During the taxable year, REIT distributes a $1,000 capital gain dividend to PRS of which 50% is allocable to A's API. Part of the capital gain dividend for the year results from section 1231 gain. In accordance with § 1.1061–6(c)(1)(i), REIT discloses to PRS the One Year Amounts Disclosure of $400, which is the $1000 capital gain dividend reduced by the $600 of section 1231 capital gain dividend included in that amount. Part of the One Year Amounts Disclosure for the year results from gain from property held for three years or less. In accordance with § 1.1061–6(c)(1)(ii), REIT also discloses the Three Year Amounts Disclosure of $150, which is the $400 One Year Amounts Disclosure reduced by the $250 of gain attributable to property held for three years or less. PRS includes a $200 gain in determining A's API One Year Distributive Share Amount and a $75 gain in determining A's API Three Year Distributive Share Amount. See paragraphs (b)(5)(i) and (ii) of this section.

(d) *Applicability date.* The provisions of this section apply to taxable years of Owner Taxpayers and Passthrough Entities beginning on or after January 19, 2021. An Owner Taxpayer or Passthrough Entity may choose to apply this section to a taxable year beginning after December 31, 2017, provided that they apply the Section 1061 Regulations in their entirety to that year and all subsequent years.

§ 1.1061–5 Section 1061(d) transfers to related persons.

(a) *In general.* If an Owner Taxpayer transfers any API or Distributed API Property, directly or indirectly, to a Section 1061(d) Related Person (as defined in paragraph (e) of this section), the Owner Taxpayer must include in gross income as short-term capital gain, an amount equal to—

(1) The short-term capital gain recognized upon the API transfer without regard to this paragraph (a); and

(2) The lesser of—

(i) The amount of net long-term capital gain recognized by the Owner Taxpayer upon the transfer of such interest; or

(ii) The amount treated as short-term capital gain under paragraph (c) of this section (Section 1061(d) Recharacterization Amount).

(b) *Transfer.* For purposes of this section, the term *transfer* means a sale or exchange in which gain is recognized by the Owner Taxpayer under chapter 1 of the Internal Revenue Code.

(c) *Section 1061(d) Recharacterization Amount.* To the extent an Owner Taxpayer recognizes long-term capital gain upon a transfer of an API to a Section 1061(d) Related Person, the Owner Taxpayer's Section 1061(d) Recharacterization Amount is the amount of net long-term capital gain (excluding amounts not taken into account for purposes of section 1061 under § 1.1061–4(b)(7)) from assets held for three years or less that would have been allocated to the Owner Taxpayer (to the extent attributable to the transferred API) by the partnership if the partnership had sold all of its property in a fully taxable transaction for cash in an amount equal to the fair market value of such property (taking into account section 7701(g)) immediately prior to the Owner Taxpayer's transfer of the API. If only a portion of an Owner Taxpayer's API is transferred, this paragraph (c) shall apply with respect to the portion of gain attributable to the transferred interest.

(d) *Special rules.* For purposes of this section, the following rules are applicable.

(1) An Owner Taxpayer will be treated as transferring the Owner Taxpayer's share of any Indirect API or Distributed API Property if the Indirect API or Distributed API Property is transferred by the API Holder to a person that is a Section 1061(d) Related Person with respect to the Owner Taxpayer.

(2) The rules set forth in paragraphs (a), (b), and (c) of this section apply upon the transfer of a Passthrough Interest issued by an S corporation or PFIC to the extent the Passthrough Interest is treated as an API.

(e) *Section 1061(d) Related Person.* For purposes of this section, the term Section 1061(d) Related Person means—

(1) A person that is a member of the taxpayer's family within the meaning of section 318(a)(1);

(2) A person that performed a service within the current calendar year or the preceding three calendar years in a Relevant ATB to the API transferred by taxpayer; or

(3) A Passthrough Entity to the extent that a person described in paragraph (e)(1) or (2) of this section owns an interest, directly or indirectly.

(f) *Examples.* The following examples illustrate the rules of this section.

(1) *Example 1: Transfer to child by gift.* A, an individual, performs services in an ATB and has held an API in connection with those services for 10 years. The API has a fair market value of $1,000 and a tax basis of $0, and no debt is associated with the API. A transfers all of the API to A's daughter as a gift. A's daughter is a section 1061(d) Related Person but A's gift is not a transfer as described in paragraph (b) of this section thus section 1061(d) does not apply to A's gift. However, the API remains an API in the hands of A's daughter under § 1.1061–2(a)(1)(i).

(2) *Example 2: Transfer of an API to a partnership owned by Section 1061(d) Related Persons*—(i) *Facts.* A, B, and C are equal partners in GP, a partnership. GP holds only one asset, an API in PRS1 which is an Indirect API as to each A, B, and C. A, B, and C each provides services in the ATB in connection with which GP was transferred its API in PRS1. A and B contribute their interests in GP to PRS2 in a Section 721(a) exchange for interests in PRS2.

(ii) *Application of section 1061(d).* Because the contribution by A and B of their interest in GP to PRS2 is an exchange in which no gain is recognized by either A or B, the contribution is not a transfer as described in paragraph (b) of this section thus section 1061(d) does not apply to A and B's contribution. However, the API remains an API in the hands of PRS2 under § 1.1061–2(a)(1)(i).

(3) *Example 3: Transfer of an API to a Section 1061(d) Related Person.* A holds an API in GP, a partnership which A has owned for four years. A transfers the API to a Section 1061(d) Related Person described in paragraph (e) of this section in exchange for $100 of cash, resulting in A recognizing long-term capital gain of $100. Because this is a transfer described in paragraph (b) of this section, section 1061(d) applies to the transfer of A's API and A must determine its Section 1061(d) Recharacterization Amount under paragraph (c) of this section. If, immediately prior to A's transfer of the API, the partnership had sold all of its assets in a fully taxable transaction for cash equal of the fair market value of the assets, A's share of the net long-term capital gain (excluding amounts not taken into account for purposes of section 1061 under § 1.1061–4(b)(7)) from assets held for three years or less would have been $120. Thus, A's Section 1061(d) Recharacterization Amount is $120. As a result, A's $100 long-term capital gain is recharacterized as short-term capital gain under paragraph (a) of this section. The API remains an API in the hands of the Section 1061(d) Related Person under § 1.1061–2(a)(1)(i).

(g) *Applicability date.* The provisions of this section apply to taxable years of Owner Taxpayers and Passthrough Entities beginning on or after January 19, 2021. An Owner Taxpayer or Passthrough Entity may choose to apply this section to a taxable year beginning after December 31, 2017, provided that they apply the Section 1061 Regulations in their entirety to that year and all subsequent years.

§ 1.1061–6 Reporting rules.

(a) *Owner Taxpayer filing requirements*–(1) *In general.* An Owner Taxpayer must file such information with the IRS as the Commissioner of Internal Revenue or the Commissioner's delegate (Commissioner) may require in forms, instructions, or other guidance as is necessary for the Commissioner to determine that the Owner Taxpayer has properly complied with section 1061 and the Section 1061 Regulations. If an Owner Taxpayer requires information from a Passthrough Entity to determine the Capital Interest Disposition Amount or the Section 1061(d) Recharacterization Amount, the Owner Taxpayer must request such information from that entity.

(2) *Failure to obtain information.* Paragraph (b)(1) of this section requires certain Passthrough Entities to furnish an Owner Taxpayer with certain amounts necessary to determine its Recharacterization Amount and meet its reporting requirements under paragraph (a)(1) of this section. To the extent that an Owner Taxpayer is not furnished the information required to be furnished under paragraph (b)(1) of this section in such time and in such manner as required by the Commissioner and the Owner Taxpayer is not otherwise able to substantiate all or a part of these amounts to the satisfaction of the Commissioner, then if the information with respect to the determination of the—

(i) API One Year Distributive Share Amount under § 1.1061–4(a)(3)(i) is not furnished, the API One Year Distributive Share Amount will not be reduced by—

(A) Amounts not taken into account for purposes of section 1061 under § 1.1061–4(b)(7); or

(B) Capital Interest Gains and Losses as determined under § 1.1061–3(c)(2).

(ii) API Three Year Distributive Share Amount determined under § 1.1061–4(a)(3)(ii) is not furnished, all items included in the API One Year Distributive Share Amount are treated as items that would not be treated as long-term capital gain or loss, if three years is substituted for one year in paragraphs (3) and (4) of section 1222.

(b) *Passthrough Entity filing requirements and reporting*—(1) *Requirement to file information with the IRS and to furnish information to API Holder.* A Passthrough Entity must file such information with the IRS as the Commissioner may require in forms, instructions, or other guidance as is necessary for the Commissioner to determine that it and its partners have complied with section 1061 and the Section 1061 Regulations. A Passthrough Entity that has issued an API must furnish to the API Holder, including an Owner Taxpayer, such information at such time and in such manner as the Commissioner may require in forms, instructions, or other guidance as is necessary to determine the One Year Gain Amount and the Three Year Gain Amount with respect to an Owner Taxpayer that directly or indirectly holds the API. A Passthrough Entity that has furnished information to the API Holder must file such information with the IRS, at such time and in such manner as the Commissioner may require in forms, instructions, or other guidance. This information includes:

(i) The API One Year Distributive Share Amount and the API Three Year Distributive Share Amount (as determined under § 1.1061–4);

(ii) Capital gains and losses allocated to the API Holder that are excluded from section 1061 under § 1.1061–4(b)(7);

(iii) Capital Interest Gains and Losses allocated to the API Holder (as determined under § 1.1061–3(c)); and

(iv) In the case of a disposition by an API Holder of an interest in the Passthrough Entity during the taxable year, upon the request of an API Holder, any information required by the API Holder to properly take the disposition into account under section 1061, including—

(A) Information necessary to apply the Lookthrough Rule and to determine the API Holder's Capital Interest Disposition Amount; and

(B) Information necessary to determine an Owner Taxpayer's Section 1061(d) Recharacterization Amount.

(2) *Requirement to request, furnish, and file information in tiered structures*—(i) *Requirement to request information.* If a Passthrough Entity requires information to meet its reporting and filing requirements under this section (in addition to any information required to be furnished to the Passthrough Entity under paragraph (b)(1) of this section) from a lower-tier entity in which it holds an interest, the Passthrough Entity must request such information from that entity.

(ii) *Requirement to furnish and file information.* If information is requested of a Passthrough Entity under paragraph (b)(2)(i) of this section, the Passthrough Entity must furnish the requested information to the person making the request but only to the extent the information is necessary for the requesting Passthrough Entity to meet its reporting and filing requirements under this section or is required by the Commissioner in forms, instructions, or other guidance. If the person requesting the information is an API Holder in the Passthrough Entity, the information is furnished under paragraph (b)(1) of this section. If the Passthrough Entity requesting the information is not an API Holder, the Passthrough Entity must furnish the information to the requesting Passthrough Entity as required by the Commissioner in forms, instructions, or other guidance.

(iii) *Timing of requesting and furnishing information*—(A) *Requesting information.* A Passthrough Entity described in paragraph (b)(2)(i) of this section must request information under paragraph (b)(2)(i) of this section by the later of the 30th day after the close of the taxable year to which the information request relates or 14 days after the date of a request for information from an upper-tier Passthrough Entity.

(B) *Furnishing information*—(*1*) *In general.* Except as provided in paragraph (b)(2)(iii)(B)(*2*) of this section, requested information must be furnished by the date on which the entity is required to furnish information under section 6031(b) or under section 6037(b), as applicable.

(*2*) *Late requests.* Information with respect to a taxable year that is requested by an upper-tier Passthrough Entity after the date that is 14 days prior to the due date for a lower-tier Passthrough Entity to furnish and file information under section 6031(b) or section 6037(b), as applicable, must be furnished and filed in the time and manner prescribed by forms, instructions and other guidance.

(iv) *Manner of requesting information.* Information may be requested electronically or in any manner that is agreed to by the parties.

(v) *Recordkeeping requirement.* Any Passthrough Entity receiving a request for information must retain a copy of the request and the date received in its books and records.

(vi) *Passthrough Entity is not furnished information to meet its reporting obligations under paragraph (b)(1) of this section.* If an upper-tier Passthrough Entity holds an interest in a lower-tier Passthrough Entity and it is not furnished the information described in paragraph (b)(1) of this section, or, alternatively, if it has not been furnished information after having properly requested the information under this paragraph (b)(2), the upper-tier Passthrough Entity must take actions to otherwise determine and substantiate the missing information. To the extent that the upper-tier Passthrough Entity is not able to otherwise substantiate and determine the missing information to the satisfaction of the Commissioner, the upper-tier Passthrough Entity must treat these amounts as provided under paragraph (a)(2) of this section. The upper-tier Passthrough Entity must provide notice to the API Holder and the IRS regarding the application of this paragraph (b)(2) to the information being reported as required in forms, instructions, and other guidance.

(vii) *Filing requirements.* Both the Passthrough Entity requesting the information and the Passthrough Entity furnishing the information must file all information with the IRS as the Commissioner may require in forms, instructions, or other guidance.

(viii) *Penalties.* In addition to the requirement in section 1061(e) that the Secretary shall require reporting (at the time and in the manner prescribed by the Secretary) as is necessary to carry out the purposes of this section, the information required to be furnished under this paragraph (b) is also required to be furnished under sections 6031(b) and 6037(b). Failure to report as required under this paragraph (b) will be subject to penalties under section 6722.

(c) *Regulated investment company (RIC) and real estate investment trust (REIT) reporting*—(1) *Section 1061 disclosures.* A RIC or REIT that reports or designates a dividend, or part thereof, as a capital gain dividend, may, in addition to the information otherwise required to be furnished to a shareholder, disclose two amounts for purposes of section 1061—

(i) *One Year Amounts Disclosure.* The *One Year Amounts Disclosure* of a RIC or REIT is a disclosure by the RIC or REIT of an amount that is attributable to a computation of the RIC's or REIT's net capital gain excluding capital gain and capital loss not taken into account for purposes of section 1061 under § 1.1061–4(b)(7). The aggregate amounts provided in the One Year Amounts Disclosures with respect to a taxable year of a RIC or REIT must equal the lesser of the RIC's or REIT's net capital gain, excluding any capital gains and capital losses not taken into account for purposes of section 1061 under § 1.1061–4(b)(7), for the taxable year or the RIC's or REIT's aggregate capital gain dividends for the taxable year.

(ii) *Three Year Amounts Disclosure.* The *Three Year Amounts Disclosure* of a RIC or REIT is a disclosure by the RIC or REIT of an amount that is attributable to a computation of the RIC's or REIT's One Year Amounts Disclosure substituting ''three years'' for ''one year'' in applying section 1222. The aggregate amounts provided in the Three Year Amounts Disclosures with respect to a taxable year of a RIC or REIT must equal the lesser of the aggregate amounts provided in the RIC's or REIT's One Year Amounts Disclosures substituting ''three years'' for ''one year'' in applying section 1222 for the taxable year or the RIC's or REIT's aggregate capital gain dividends for the taxable year.

(2) *Pro rata disclosures.* The One Year Amounts Disclosure and Three Year Amounts Disclosure made to each shareholder of a RIC or REIT must be proportionate to the share of capital gain dividends reported or designated to that shareholder for the taxable year.

(3) *Report to shareholders.* A RIC or REIT that provides the section 1061 disclosures described in paragraphs (c)(1)(i) and (ii) of this section must provide those section 1061 disclosures in writing to its shareholders with the statement described in section 852(b)(3)(C)(i) or the notice described in section 857(b)(3)(B) in which the capital gain dividend is reported or designated.

(d) *Qualified electing fund (QEF) reporting.* A passive foreign investment company with respect to which the shareholder has a QEF election (as described in section 1295(a)) in effect for the taxable year that determines net capital gain as provided in § 1.1293–1(a)(2)(i)(A), as limited by section 1293(e)(2), may provide some or all of the information listed in paragraph (b)(1) of this section (and any other relevant information) to its shareholders to enable API Holders to determine the amount of their inclusion under section 1293(a)(1) that would be included in the API One Year Distributive Share Amounts and API Three Year Distributive Share Amounts. To the extent that such information is not provided, paragraph (a)(2) of this section will apply except that Owner Taxpayers are not permitted to separately substantiate the information. An API Holder who receives the additional information described in this paragraph (d) must retain such information as required by § 1.1295–1(f)(2)(ii).

(e) *Applicability date.* The provisions of this section apply to taxable years of Owner Taxpayers and Passthrough Entities beginning on or after January 19, 2021. An Owner Taxpayer or Passthrough Entity may choose to apply this section to a taxable year beginning after December 31, 2017, provided that they apply the Section 1061 Regulations in their entirety to that year and all subsequent years.

■ **Par. 5.** Section 1.1223–3 is amended by:

■ 1. Redesignating paragraph (b)(5) as paragraph (b)(6);

■ 2. Adding a new paragraph (b)(5);

■ 3. Designating *Examples 1* through *8* of paragraph (f) as paragraphs (f)(1) through (8);

■ 4. Adding paragraphs (f)(9) and (10); and

■ 5. Revising the heading and adding a sentence at the end of paragraph (g).

The additions and revision read as follows:

§ 1.1223–3 Rules relating to the holding periods of partnership interests.

* * * * *

(b) * * *

(5) *Divided holding period if partnership interest comprises in whole or in part one or more profits interests*—(i) *In general.* If a partnership interest is comprised in whole or in part of one or more profits interests (as defined in paragraph (b)(5)(ii) of this section), then, for purposes of applying paragraph

(b)(1) of this section, the portion of the holding period to which a profits interest relates is determined based on the fair market value of the profits interest upon the disposition of all, or part, of the interest (and not at the time that the profits interest is acquired). Paragraph (b)(1) of this section continues to apply to the extent that a partner acquires portions of a partnership interest that are not comprised of a profits interest and the value of the profits interest is not included for purposes of determining the value of the entire partnership interest under paragraph (b)(1).

(ii) *Definition of capital interest and profits interest.* For purposes of this paragraph (b)(5), a profits interest is a partnership interest other than a capital interest. A capital interest is an interest that would give the holder a share of the proceeds if the partnership's assets were sold at fair market value at the time the interest was received and then the proceeds were distributed in a complete liquidation of the partnership. A profits interest, for purposes of this paragraph (b)(5), is received in connection with the performance of services to or for the benefit of a partnership in a partner capacity or in anticipation of being a partner, and the receipt of the interest is not treated as a taxable event for the partner or the partnership under applicable Federal income tax guidance.

* * * * *

(f) * * *

(9) *Example 9.* On June 1, 2020, GP contributes $10,000 to PRS for a partnership interest in PRS. On June 30, 2023, GP receives a 20% interest in the profits of PRS that is an Applicable Partnership Interest (API) as defined in § 1.1061–1(a). On June 30, 2025, GP sells its interest in PRS for $30,000. At the time of GP's sale of its interest, the API has a fair market value of $15,000. GP has a divided holding period in its interest in PRS; 50% of the partnership interest has a holding period beginning on June 1, 2020, and 50% has a holding period that begins on June 30, 2023.

(10) *Example 10.* Assume the same facts as in paragraph (f)(9) of this section (*Example 9*), except that on June 30, 2024, GP contributes an additional $5,000 cash to GP prior to GP's sale of its interest in 2025. Immediately after the contribution of the $5,000 on June 30, 2024, GP's interest in PRS has a value of $15,000, not taking into account the value of GP's profits interest in PRS. GP calculates its holding period in the portions not comprised by the profits interest and two-thirds of its holding period runs from June 30, 2020, and one-third runs from June 30, 2024. On June 30, 2025, GP sells its interest for $30,000 and the API has a fair market value of $15,000. Accordingly, on the date of disposition, one-third of GP's interest has a five year holding period from its interest received in 2020 for its $10,000 contribution, one-half of GP's interest has a two year holding period from the profits interest issued on June 30, 2023, and one-sixth of GP's interest has a one year holding period from the contribution of the $5,000.

(g) *Applicability date*s. * * * Paragraphs (b)(5) and (f)(9) and (10) of this section apply to taxable years beginning on or after January 19, 2021.

Sunita Lough,

Deputy Commissioner for Services and Enforcement.

Approved: January 5, 2021.

David J. Kautter,

Assistant Secretary of the Treasury (Tax Policy).

RIN 1545–BP73

Additional Guidance Regarding Limitation on Deduction for Business Interest Expense

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Final regulations.

SUMMARY: This document contains final regulations that provide additional guidance regarding the limitation on the deduction for business interest expense under section 163(j) of the Internal Revenue Code (Code) to reflect amendments made by the Tax Cuts and Jobs Act and the Coronavirus Aid, Relief, and Economic Security Act. Specifically, the regulations address the application of the limitation in contexts involving passthrough entities, regulated investment companies (RICs), and controlled foreign corporations. The regulations also provide guidance regarding the definitions of real property development, real property redevelopment, and syndicate. The regulations affect taxpayers that have business interest expense, particularly passthrough entities, their partners and shareholders, as well as foreign corporations and their United States shareholders. The regulations also affect RICs that have business interest income, RIC shareholders that have business interest expense, and corporations that are members of a consolidated group.

DATES:

Effective date: The regulations are effective on January 13, 2021.

Applicability dates: For dates of applicability, see §§ 1.163–15(b), 1.163(j)–1(c)(4), 1.163(j)–2(k), 1.163(j)–6, 1.163(j)–7(m), 1.163(j)–10(f), 1.469–11(a)(1) and (4), and 1.1256(e)–2(d).

FOR FURTHER INFORMATION CONTACT: Concerning § 1.163–15, or 1.163(j)–2(d)(3), Nathaniel Kupferman, (202) 317–4855, or James Williford, (202) 317–3225; concerning § 1.163(j)–1(b)(1)(iv), § 1.163(j)–2(b)(3)(iii) or (iv) or § 1.163(j)–10, John B. Lovelace, (202) 317–5357; concerning § 1.163(j)–1(b)(22) or (b)(35), Steven Harrison, (202) 317–6842, or Michael Chin, (202) 317–6842; concerning § 1.163(j)–6, § 1.469–4 or § 1.469–9, Vishal Amin, Brian Choi, or Jacob Moore, (202) 317–5279; concerning § 1.163(j)–7, Azeka J. Abramoff, (202) 317–3800, or Raphael J. Cohen, (202) 317–6938; concerning § 1.1256(e)–2, Pamela Lew, (202) 317–7053 (not toll-free numbers).

SUPPLEMENTARY INFORMATION:

Background

I. Statutory Background

This document contains amendments to the Income Tax Regulations (26 CFR part 1) under sections 163 (in particular, section 163(j)), 469, and 1256(e) of the Code. Section 163(j) was amended by Public Law 115–97, 131 Stat. 2054 (December 22, 2017), commonly referred to as the Tax Cuts and Jobs Act (TCJA), and the Coronavirus Aid, Relief, and Economic Security Act, Public Law 116–136, 134 Stat. 281 (March 27, 2020) (CARES Act). Section 13301(a) of the TCJA amended section 163(j) by removing prior section 163(j)(1) through (9) and adding section 163(j)(1) through (10). The provisions of section 163(j) as amended by section 13301 of the TCJA are effective for taxable years beginning after December 31, 2017. The CARES Act further amended section 163(j) by redesignating section 163(j)(10), as amended by the TCJA, as new section 163(j)(11), and adding a new section 163(j)(10) providing special rules for applying section 163(j) to taxable years beginning in 2019 or 2020.

Section 163(j) generally limits the amount of business interest expense (BIE) that can be deducted in the current taxable year (sometimes referred to in this preamble as the current year). Under section 163(j)(1), the amount allowed as a deduction for BIE is limited to the sum of (1) the taxpayer's business interest income (BII) for the taxable year; (2) 30 percent of the taxpayer's adjusted taxable income (ATI) for the taxable year (30 percent ATI limitation); and (3) the taxpayer's floor plan financing interest expense for the taxable year (in sum, the section 163(j) limitation). As further described later in this Background section, section 163(j)(10), as amended by the CARES Act, provides special rules relating to the 30 percent ATI limitation for taxable years beginning in 2019 or 2020. Under section 163(j)(2), the amount of any BIE that is not allowed as a deduction in a taxable year due to the section 163(j) limitation is treated as business interest paid in the succeeding taxable year.

The section 163(j) limitation applies to all taxpayers, except for certain small businesses that meet the gross receipts test in section 448(c) of the Code and certain trades or businesses listed in section 163(j)(7) (excepted trades or businesses). More specifically, section 163(j)(3) provides that the section 163(j) limitation does not apply to any taxpayer that meets the gross receipts test under section 448(c), other than a tax shelter prohibited from using the cash receipts and disbursements method of accounting under section 448(a)(3). Under section 163(j)(7), the excepted trades or businesses are the trade or business of providing services as an employee, electing real property businesses, electing farming businesses, and certain regulated utility businesses.

Section 163(j)(4) provides special rules for applying section 163(j) in the case of passthrough entities. Section 163(j)(4)(A) requires that the section 163(j) limitation be applied at the partnership level, and that a partner's ATI be increased by the partner's share of excess taxable income, as defined in section 163(j)(4)(C), but not by the partner's distributive share of income, gain, deduction, or loss. Section 163(j)(4)(B) provides that the amount of partnership BIE exceeding the section 163(j)(1) limitation is carried forward at the partner level as excess business interest expense (EBIE). Section 163(j)(4)(B)(ii) provides that EBIE allocated to a partner and carried forward is available to be deducted in a subsequent year only to the extent that the partnership allocates excess taxable income to the partner. As further described later in this Background section, section 163(j)(10), as amended by the CARES Act, provides a special rule for EBIE allocated to a partner in a taxable year beginning in 2019. Section 163(j)(4)(B)(iii) provides rules for the adjusted basis in a partnership of a partner that is allocated EBIE. Section 163(j)(4)(D) provides that rules similar to the rules of section 163(j)(4)(A) and (C) apply to S corporations and S corporation shareholders.

Section 163(j)(5) and (6) define ''business interest'' and ''business interest income,'' respectively, for purposes of section 163(j). Generally, these terms include interest expense and interest includible in gross income that is properly allocable to a trade or business (as defined in section 163(j)(7)) and do not include investment income or investment expense within the meaning of section 163(d). The legislative history states that ''a corporation has neither investment interest nor investment income within the meaning of section 163(d). Thus, interest income and interest expense of a corporation is properly allocable to a trade or business, unless such trade or business is otherwise explicitly excluded from the application of the provision.'' H. Rept. 115–466, at 386, fn. 688 (2017).

Section 163(j)(8) defines ATI as the taxable income of the taxpayer (1) computed without regard to items not

properly allocable to a trade or business; BIE and BII; net operating loss (NOL) deductions; deductions for qualified business income under section 199A; and deductions for depreciation, amortization, and depletion with respect to taxable years beginning before January 1, 2022, and (2) computed with such other adjustments as provided by the Secretary of the Treasury or his delegate (Secretary).

As noted previously, section 163(j)(1) includes floor plan financing interest in computing the amount of deductible business interest. Section 163(j)(9) defines ''floor plan financing interest'' and ''floor plan financing indebtedness.'' These provisions allow taxpayers incurring interest expense for the purpose of securing an inventory of motor vehicles held for sale or lease to deduct the full expense without regard to the section 163(j) limitation.

Under section 163(j)(10)(A)(i), the amount of BIE that is deductible under section 163(j)(1) for taxable years beginning in 2019 or 2020 is computed using 50 percent, rather than 30 percent, of the taxpayer's ATI for the taxable year (50 percent ATI limitation). A taxpayer may elect not to apply the 50 percent ATI limitation to any taxable year beginning in 2019 or 2020, and instead apply the 30 percent ATI limitation. This election must be made separately for each taxable year. Once the taxpayer makes the election, the election may not be revoked without the consent of the Secretary. See section 163(j)(10)(A)(iii).

Sections 163(j)(10)(A)(ii)(I) and 163(j)(10)(A)(iii) provide that, in the case of a partnership, the 50 percent ATI limitation does not apply to partnerships for taxable years beginning in 2019, and the election to not apply the 50 percent ATI limitation may be made only for taxable years beginning in 2020, and may be made only by the partnership. Under section 163(j)(10)(A)(ii)(II), however, a partner treats 50 percent of its allocable share of a partnership's EBIE for 2019 as BIE in the partner's first taxable year beginning in 2020 that is not subject to the section 163(j) limitation (50 percent EBIE rule). The remaining 50 percent of the partner's allocable share of the partnership's EBIE remains subject to the section 163(j) limitation applicable to EBIE carried forward at the partner level. A partner may elect out of the 50 percent EBIE rule.

Section 163(j)(10)(B)(i) allows a taxpayer to elect to substitute its ATI for the last taxable year beginning in 2019 (2019 ATI) for the taxpayer's ATI for a taxable year beginning in 2020 (2020 ATI) in determining the taxpayer's section 163(j) limitation for the taxable year beginning in 2020.

Section 163(j)(11) provides cross-references to provisions requiring that electing farming businesses and electing real property businesses excepted from the section 163(j) limitation use the alternative depreciation system (ADS), rather than the general depreciation system, for certain types of property. The required use of ADS results in the inability of these electing trades or businesses to use the additional first-year depreciation deduction under section 168(k) for those types of property.

II. Published Guidance

On April 16, 2018, the Department of the Treasury (Treasury Department) and the IRS published Notice 2018–28, 2018–16 I.R.B. 492, which described regulations intended to be issued under section 163(j). On December 28, 2018, the Treasury Department and the IRS (1) published proposed regulations under section 163(j), as amended by the TCJA, in a notice of proposed rulemaking (REG–106089–18) (2018 Proposed Regulations) in the **Federal Register** (83 FR 67490), and (2) withdrew the notice of proposed rulemaking (1991–2 C.B. 1040) published in the **Federal Register** on June 18, 1991 (56 FR 27907 as corrected by 56 FR 40285 (August 14, 1991)) to implement rules under section 163(j) before its amendment by the TCJA. On September 14, 2020, the Treasury Department and the IRS published final regulations under section 163(j) and other sections in the **Federal Register** (85 FR 56686) (T.D. 9905) to finalize most sections of the 2018 Proposed Regulations.

Concurrently with the publication of T.D. 9905, the Treasury Department and the IRS published additional proposed regulations under section 163(j) in a notice of proposed rulemaking (REG–107911–18) in the **Federal Register** (85 FR 56846) (2020 Proposed Regulations) to provide additional guidance regarding the section 163(j) limitation in response to certain comments received in response to the 2018 Proposed Regulations and to reflect the amendments made by the CARES Act. The 2020 Proposed Regulations provided proposed rules: For allocating interest expense associated with debt proceeds of a partnership or S corporation to supplement the rules in § 1.163–8T regarding the allocation of interest expense for purposes of section 163(d) and (h) and section 469 (proposed §§ 1.163–14 and 1.163–15); amending the definition of ATI and permitting certain RICs to pay section 163(j) interest dividends (proposed § 1.163(j)–1); amending the rules for applying section 163(j)(4) to partnerships and S corporations (proposed § 1.163(j)–6); re-proposing the proposed rules for applying the section 163(j) limitation to foreign corporations and United States shareholders (proposed § 1.163(j)–7) and to foreign persons with effectively connected income (proposed § 1.163(j)–8); amending the definition of real property trade or business (proposed § 1.469–9); amending the rules for determining tax shelter status and providing guidance on the election to use 2019 ATI to determine 2020 section 163(j) limitation (proposed §§ 1.163(j)–2 and 1.1256(e)–2); and amending the corporate look-through rules as applicable to tiered structures (proposed § 1.163(j)–10).

All written comments received in response to the 2020 Proposed Regulations are available at *www.regulations.gov* or upon request. After consideration of the comments received, this Treasury decision adopts most of the 2020 Proposed Regulations as revised in response to the comments, which are described in the Summary of Comments and Explanation of Revisions section. The Treasury Department and the IRS plan to finalize other portions of the 2020 Proposed Regulations separately, to allow additional time to consider the comments received.

On April 27, 2020, the Treasury Department and the IRS published Revenue Procedure 2020–22, 2020–18 I.R.B. 745, to provide the time and manner of making a late election, or withdrawing an election, under section 163(j)(7)(B) to be an electing real property trade or business or under section 163(j)(7)(C) to be an electing farming business for taxable years beginning in 2018, 2019, or 2020. Revenue Procedure 2020–22 also provides the time and manner of making or revoking elections provided by the CARES Act under section 163(j)(10) for taxable years beginning in 2019 or 2020. These elections are: (1) To not apply the 50 percent ATI limitation under section 163(j)(10)(A)(iii); (2) to use the taxpayer's 2019 ATI to calculate the taxpayer's section 163(j) limitation for any taxable year beginning in 2020 under section 163(j)(10)(B); and (3) for a partner to elect out of the 50 percent EBIE rule under section 163(j)(10)(A)(ii)(II).

Summary of Comments and Explanation of Revisions

I. Overview

The Treasury Department and the IRS received approximately 20 written comments in response to the 2020

Proposed Regulations. Most of the comments addressing the 2020 Proposed Regulations are summarized in this Summary of Comments and Explanation of Revisions section. However, comments merely summarizing or interpreting the 2020 Proposed Regulations generally are not discussed in this preamble. Additionally, comments outside the scope of this rulemaking are generally not addressed in this Summary of Comments and Explanation of Revisions section.

The Treasury Department and the IRS continue to study comments on certain issues related to section 163(j), including issues that are beyond the scope of the final regulations, and may discuss those comments if future guidance on those issues is published.

The final regulations retain the same basic structure as the 2020 Proposed Regulations, with the revisions described in this Summary of Comments and Explanation of Revisions section.

II. Notice 89–35 and Comments on and Changes to Proposed § 1.163–15: Debt Proceeds Distributed From Any Taxpayer Account or From Cash

Section 1.163–15 of the 2020 Proposed Regulations supplemented the rules in § 1.163–8T, temporary regulations issued prior to TCJA, regarding debt proceeds distributed from any taxpayer account or from cash proceeds. Consistent with section VI of Notice 89–35, 1989–1 C.B. 675, proposed § 1.163–15 provided that taxpayers may treat any expenditure made from an account of the taxpayer, or from cash, within 30 days before or after debt proceeds are deposited in any account of the taxpayer, or received in cash, as made from such proceeds. Section 1.163–14 of the 2020 Proposed Regulations related to sections I–V of Notice 89–35. The Treasury Department and the IRS received no comments with respect to proposed § 1.163–15. Accordingly, the final regulations adopt this section unchanged. Additional consideration is being given to § 1.163–14, which is not being finalized in these final regulations; thus Notice 89–35 remains in effect.

III. Comments on and Changes to § 1.163–1: Definitions

A. Adjustments to Tentative Taxable Income

Part III.A.1.a of this Summary of Comments and Explanation of Revisions section provides an overview of the negative adjustments to tentative taxable income in § 1.163(j)–1(b)(1)(ii)(C) through (E) and the alternative computations for those negative adjustments in proposed § 1.163(j)–1(b)(1)(iv)(B) and (E). Part III.A.1.b of this Summary of Comments and Explanation of Revisions section provides an overview of the special rules in § 1.163(j)–1(b)(1)(iv)(A), (C), and (D) for the application of § 1.163(j)–1(b)(1)(ii)(C) through (E). Part III.A.2 of this Summary of Comments and Explanation of Revisions section summarizes the comments received on § 1.163(j)–1(b)(1)(ii)(C) through (E) and the alternative computations in proposed § 1.163(j)–1(b)(1)(iv)(B) and (E). Part III.A.3 of this Summary of Comments and Explanation of Revisions section summarizes the comments received on the special rules in § 1.163(j)–1(b)(1)(iv)(A), (C), and (D).

In response to comments received, the final regulations provide a number of clarifications to the ATI computation and provide new examples demonstrating their application.

1. Overview

a. Section 1.163(j)–1(b)(1)(ii)(C) Through (E) and Proposed § 1.163(j)–1(b)(1)(iv)(B) and (E)

Section 1.163(j)–1(b)(43) provides that tentative taxable income is the amount to which adjustments are made in computing ATI. Section 1.163(j)–1(b)(1)(i) provides for certain additions to tentative taxable income in computing ATI. For example, § 1.163(j)–1(b)(1)(i)(D) provides that, subject to the rule in § 1.163(j)–1(b)(1)(iii), any depreciation under section 167, section 168, or former section 168 for taxable years beginning before January 1, 2022, is added back to tentative taxable income to compute ATI. Section 1.163(j)–1(b)(1)(i)(E) and (F) provide similar rules for amortization and depletion, respectively.

Section 1.163(j)–1(b)(1)(ii) provides for certain subtractions from (or negative adjustments to) tentative taxable income in computing ATI. For example, § 1.163(j)–1(b)(1)(ii)(C) provides that, if property is sold or otherwise disposed of, the greater of the allowed or allowable depreciation, amortization, or depletion of the property for the taxpayer (or, if the taxpayer is a member of a consolidated group, the consolidated group) for taxable years beginning after December 31, 2017, and before January 1, 2022 (such years, the EBITDA period), with respect to such property is subtracted from tentative taxable income. Section 1.163(j)–1(b)(1)(ii)(D) provides that, with respect to the sale or other disposition of stock of a member of a consolidated group by another member, the investment adjustments under § 1.1502–32 with respect to such stock that are attributable to deductions described in § 1.163(j)–1(b)(1)(ii)(C) are subtracted from tentative taxable income. Section 1.163(j)–1(b)(1)(ii)(E) provides that, with respect to the sale or other disposition of an interest in a partnership, the taxpayer's distributive share of deductions described in § 1.163(j)–1(b)(1)(ii)(C) with respect to property held by the partnership at the time of such sale or other disposition is subtracted from tentative taxable income to the extent such deductions were allowable under section 704(d). See the preamble to T.D. 9905 for a discussion of the rationale for these adjustments.

The preamble to T.D. 9905 noted that, in the 2018 Proposed Regulations, § 1.163(j)–1(b)(1)(ii)(C) incorporated a ''lesser of'' standard. In other words, the lesser of (i) the amount of gain on the sale or other disposition of property, or (ii) the amount of depreciation deductions with respect to such property for the EBITDA period, was required to be subtracted from tentative taxable income to determine ATI. As explained in the preamble to T.D. 9905, commenters raised several questions and concerns regarding this ''lesser of'' standard. T.D. 9905 removed the ''lesser of'' approach due in part to concerns that this approach would be more difficult to administer than the approach reflected in T.D. 9905.

However, the Treasury Department and the IRS recognize that, in certain cases, the ''lesser of'' approach might not create administrative difficulties for taxpayers. Thus, the 2020 Proposed Regulations permitted taxpayers to choose whether to compute the amount of their adjustment upon the disposition of property, member stock, or partnership interests using a ''lesser of'' standard. See proposed § 1.163(j)–1(b)(1)(iv)(B) and (E). The Treasury Department and the IRS requested comments on the ''lesser of'' approach, including how such an approach should apply to dispositions of member stock and partnership interests. The comments received on the ''lesser of'' approach are summarized in part III.A.2 of this Summary of Comments and Explanation of Revisions section.

b. Section 1.163(j)–1(b)(1)(iv)(A) Through (D)

Section 1.163(j)–1(b)(1)(iv) provides special rules for the application of § 1.163(j)–1(b)(1)(ii)(C) through (E). Section 1.163(b)(1)(iv)(A)(*1*) provides that, for purposes of § 1.163(j)–1(b)(1)(ii)(C) through (E), the term ''sale

or other disposition'' does not include a transfer of an asset to an acquiring corporation in a transaction to which section 381(a) of the Code applies, except as otherwise provided in § 1.163(j)–1(b)(1)(iv)(A). Section 1.163(j)–1(b)(1)(iv)(A)(*2*) provides that, for purposes of § 1.163(j)–1(b)(1)(ii)(C) and (D), the term ''sale or other disposition'' excludes all intercompany transactions, within the meaning of § 1.1502–13(b)(1)(i). This provision reflects the general treatment of a consolidated group as a single entity for purposes of section 163(j). Section 1.163(j)–1(b)(1)(iv)(A)(*3*) provides that, notwithstanding any other rule in § 1.163(j)–1(b)(1)(iv)(A) (including the rule regarding section 381(a) transactions), any transaction in which a member leaves a consolidated group is treated as a ''sale or other disposition'' for purposes of § 1.163(j)–1(b)(1)(ii)(C) and (D), unless the transaction is an acquisition described in § 1.1502–13(j)(5)(i)(A).

Section 1.163(j)–1(b)(1)(iv)(B) provides that, for purposes of § 1.163(j)–1(b)(1)(ii)(C) through (E), the amount of a consolidated group's adjustment under § 1.163(j)–1(b)(1)(ii)(C) is computed by reference to the depreciation, amortization, or depletion deductions of the group. The 2020 Proposed Regulations added § 1.163(j)–1(b)(1)(iv)(B)(*2*) to clarify the computation under proposed § 1.163(j)–1(b)(iv)(E)(*1*) for consolidated groups.

Section 1.163(j)–1(b)(1)(iv)(C) provides successor asset rules for certain intercompany transactions. More specifically, if deductions described in § 1.163(j)–1(b)(1)(ii)(C) are allowed or allowable to a consolidated group member (S), the depreciable property or S's stock is transferred to another member (S1), and the transferor's basis in the S1 stock received in the intercompany transaction is determined, in whole or in part, by reference to its basis in the transferred property or S stock, then the S1 stock is treated as a successor asset for purposes of the negative adjustments to tentative taxable income upon the disposition of member stock.

Section 1.163(j)–1(b)(1)(iv)(D) contains anti-duplication rules. For example, § 1.163(j)–1(b)(1)(iv)(D)(*2*) provides that depreciation, amortization, or depletion deductions allowed or allowable for a corporation for a consolidated return year of a group are disregarded in applying § 1.163(j)–1(b)(1)(iv)(D) to a separate return year of that corporation. Section 1.163(j)–1(b)(1)(iv)(D)(*2*) also provides an example in which S deconsolidates from a consolidated group (Group 1) (thereby triggering an adjustment under §§ 1.163(j)–1(b)(1)(ii)(D) and 1.163(j)–1(b)(1)(iv)(A)(*3*)) and then sells the depreciable property. The example states that no further adjustment is required under § 1.163(j)–1(b)(1)(ii)(C) upon the asset disposition with regard to the amounts included in Group 1.

2. Comments on § 1.163(j)–1(b)(1)(ii)(C) through (E) and Proposed § 1.163(j)–1(b)(1)(iv)(B) and (E)

a. Adoption of a ''Lesser of'' Standard

Several commenters contended that the final regulations should continue to allow taxpayers to choose whether to compute the amount of their adjustment upon the disposition of property, member stock, or partnership interests using a ''lesser of'' standard, as in proposed § 1.163(j)–1(b)(1)(iv)(B) and (E). Commenters asserted that such an approach would ameliorate the adverse impact of the subtractions from tentative taxable income in § 1.163(j)–1(b)(1)(ii)(C) through (E). One commenter further asserted that a ''lesser of'' option is preferable to the approach in T.D. 9905 because the latter could create an incentive for taxpayers to retain assets solely because the adverse tax consequences of disposing of the assets outweigh the cost of keeping the assets.

The Treasury Department and the IRS agree with these comments, and the final regulations retain a ''lesser of'' option for purposes of the negative adjustments to tentative taxable income in § 1.163(j)–1(b)(1)(ii)(C) through (E). The final regulations also update the special rules in § 1.163(j)–1(b)(1)(iv)(A), (C), and (D) to add cross–references to the ''lesser of'' computations in § 1.163(j)–1(b)(1)(iv)(B) and (E).

b. Modification of the ''Lesser of'' Standard

Several commenters also recommended modifications to the ''lesser of'' rules in proposed § 1.163(j)–1(b)(1)(iv)(B) and (E). For example, one commenter stated that the proposed ''lesser of'' approach is likely to be less accurate for dispositions of member stock or partnership interests than for asset dispositions because the gain prong of the ''lesser of'' computation in either case is based on the gain in the member stock or partnership interests, respectively, rather than on the gain that would be recognized on the sale of the underlying assets.

The Treasury Department and the IRS received recommendations regarding several alternative approaches. Under one alternative, the negative adjustment under the gain prong of the ''lesser of'' computation for dispositions of member stock or partnership interests would equal the amount of the negative adjustment if the assets of the subsidiary or partnership were sold. However, the commenter acknowledged that this ''deemed asset sale'' approach could create unnecessary administrative difficulties and lead to valuation disputes by requiring asset valuations upon dispositions of member stock or partnership interests.

Among other alternative approaches, a commenter recommended that the gain prong of the ''lesser of'' computation for dispositions of member stock should be based on the excess of tax depreciation over economic depreciation with respect to the underlying assets. The commenter based this approach on the theory that only stock gain that reflects non-economic depreciation should give rise to a negative basis adjustment. The commenter who recommended this approach suggested several different computational methods for this alternative approach, but acknowledged that this approach likely would not be appropriate for certain types of assets (for example, real estate or purchased goodwill) because metrics that might be used under this approach, such as earnings and profits basis or book value, would not be a good proxy for fair market value for such assets. Another commenter recommended revising the proposed ''lesser of'' computation for dispositions of partnership interests such that certain negative adjustments would be made at the partnership level and others would be made at the partner level.

After considering these comments, the Treasury Department and the IRS have determined that the proposed ''lesser of'' computations strike a proper balance between accuracy and administrability. In particular, as one commenter noted, there would be unnecessary administrative complexity under the first suggested alternative approach. This complexity includes the need for separate asset valuations that would be costly and may be subject to dispute, resulting in additional controversy between taxpayers and the IRS. The second proposed approach would require an accurate determination of economic depreciation. However, as the commenter acknowledged, there is no single, simple method for accurately determining economic depreciation. Additionally, with regard to economic depreciation, different types of assets depreciate at different rates, and some assets, such as land or certain improvements to land, may not

depreciate at all. As a result, basing the gain prong of the ''lesser of'' computation on non-economic depreciation would create less certainty, and would not clearly be a more accurate approach, than the proposed ''lesser of'' standard. Requiring certain adjustments at the partner level and other adjustments at the partnership level also would add further complexity to the ''lesser of'' computations.

Thus, the final regulations adopt the approach in proposed § 1.163(j)–1(b)(1)(iv)(B) and (E). However, the Treasury Department and the IRS acknowledge that gain on upper-tier member stock generally becomes further removed from asset gain at each additional tier within a consolidated group. Therefore, for purposes of the ''lesser of'' computation in § 1.163(j)–1(b)(1)(iv)(E)(*2*), the final regulations provide that the only stock gain that is relevant is the gain that is deemed recognized on the stock of the member holding the item of property (or the stock of a successor).

The Treasury Department and the IRS appreciate the comments received on the proposed ''lesser of'' rules and will continue to consider these comments for purposes of potential future guidance.

c. Limitation of Negative Adjustments to Tax Benefit From Adding Back Depreciation, Amortization, and Depletion Deductions to Tentative Taxable Income

The additions to tentative taxable income for depreciation, amortization, and depletion deductions during the EBITDA period (see § 1.163(j)–1(b)(1)(i)(D) through (F), respectively) do not necessarily increase a taxpayer's ability to deduct BIE. For example, the taxpayer's section 163(j) limitation already may be sufficiently high to permit a deduction of all of the taxpayer's BIE even without such additions to tentative taxable income.

Commenters have stated that, in such a situation, the adjustments in § 1.163(j)–1(b)(1)(ii)(C) through (E) and proposed § 1.163(j)–1(b)(1)(iv)(B) and (E) could inappropriately decrease the amount of the taxpayer's BIE deduction in the year the property, member stock, or partnership interest is sold because the taxpayer derived no benefit from the adjustment under § 1.163(j)–1(b)(1)(i)(D) through (F) in a prior taxable year. The commenters asserted that this detrimental outcome is inconsistent with both congressional intent and the statement in the preamble to T.D. 9905 that § 1.163(j)–1(b)(1)(ii)(C) through (E) and proposed § 1.163(j)–1(b)(1)(iv)(B) and (E) are intended to ensure that the positive adjustment to tentative taxable income for depreciation deductions results in a timing benefit. See part II.A.5 of the Summary of Comments and Explanation of Revisions in the preamble to T.D. 9905. Moreover, if a taxpayer that did not benefit from a positive adjustment under § 1.163(j)–1(b)(1)(i)(D) through (F) were required to reduce its tentative taxable income in the year of disposition, the negative adjustment could put the taxpayer in a worse position than if the depreciation, amortization, or depletion deductions were not added back to tentative taxable income in the first place. The commenters thus recommended providing that a negative adjustment under § 1.163(j)–1(b)(1)(ii)(C) through (E) and proposed § 1.163(j)–1(b)(1)(iv)(B) and (E) is required only to the extent the prior-year addback under § 1.163(j)–1(b)(1)(i)(D) through (F) resulted in an increase in deductible BIE.

The Treasury Department and the IRS agree with this recommendation. Thus, the final regulations provide that a negative adjustment to tentative taxable income under § 1.163(j)–1(b)(1)(ii)(C) through (E) or § 1.163(j)–1(b)(1)(iv)(B) or (E) is reduced to the extent the taxpayer establishes that the additions to tentative taxable income under § 1.163(j)–1(b)(1)(i)(D) through (F) in a prior taxable year did not result in an increase in the amount allowed as a deduction for BIE for such year. The final regulations also provide examples illustrating the application of this rule.

d. Capitalized Depreciation

T.D. 9905 provides that, for the additions to tentative taxable income in § 1.163(j)–1(b)(1)(i), amounts of depreciation, amortization, or depletion that are capitalized under section 263A of the Code (collectively, capitalized depreciation) during the taxable year are deemed to be included in the computation of the taxpayer's tentative taxable income for such year, regardless of when the capitalized amount is recovered. See § 1.163(j)–1(b)(1)(iii). Thus, a taxpayer makes a positive adjustment to tentative taxable income under § 1.163(j)–1(b)(1)(i)(D) through (F) when the taxpayer capitalizes the depreciation, amortization, or depletion, rather than later when the capitalized amount is recovered (for example, through cost of goods sold).

Commenters requested clarification regarding the application of §§ 1.163(j)–1(b)(1)(ii)(C) through (E) and 1.163(j)–1(b)(1)(iv) to capitalized depreciation. For example, commenters asked whether the adjustments in § 1.163(j)–1(b)(1)(ii)(C) and proposed § 1.163(j)–1(b)(iv)(B) and (E) occur upon the disposition of the depreciated property or upon the disposition of the property into which the depreciation was capitalized. A commenter asked the same question regarding the application of the successor asset rules in § 1.163(j)–1(b)(1)(iv)(C). A commenter also requested clarification as to how the negative adjustments in § 1.163(j)–1(b)(1)(ii)(D) and proposed § 1.163(j)–1(b)(1)(iv)(E)(*2*) apply to capitalized depreciation because there are no basis adjustments under § 1.1502–32 when depreciation is capitalized.

The Treasury Department and the IRS have determined that a negative adjustment under § 1.163(j)–1(b)(1)(ii)(C) or proposed § 1.163(j)–1(b)(1)(iv)(B) or (E) would be required upon the sale or other disposition of property with respect to which depreciation, amortization, or depletion was allowed or allowable during the EBITDA period, because it is the allowed or allowable depreciation, amortization, or depletion of that property that is added back to tentative taxable income. The final regulations have been modified accordingly. For the same reason, the final regulations also clarify that the successor asset rules in § 1.163(j)–1(b)(1)(iv)(C) would apply if such property subsequently were transferred to another member (S1) in an intercompany transaction in which the transferor receives S1 stock. The Treasury Department and the IRS are continuing to consider how the negative adjustments in § 1.163(j)–1(b)(1)(ii)(D) and proposed § 1.163(j)–1(b)(1)(iv)(E)(*2*) apply to capitalized depreciation.

A commenter also expressed concern that, if a taxpayer does not elect to apply T.D. 9905 retroactively, then capitalized depreciation arising in taxable years beginning before November 13, 2020, would not be added back to tentative taxable income, but negative adjustments under § 1.163(j)–1(b)(1)(ii)(C) through (E) still would be required for any ''allowable'' depreciation, including capitalized depreciation, if the relevant property, member stock, or partnership interest were disposed of in a year to which T.D. 9905 applies. The commenter thus recommended that negative adjustments under § 1.163(j)–1(b)(1)(ii)(C) through (E) and proposed § 1.163(j)–1(b)(1)(iv)(B) and (E) not apply to capitalized depreciation amounts that were incurred in a taxable year that began before November 13, 2020, unless the taxpayer included a positive adjustment reflecting such amounts in calculating its tentative taxable income.

As discussed in part III.A.2.c of this Summary of Comments and Explanation of Revisions section, the final

regulations adopt the recommendation that a negative adjustment to tentative taxable income under § 1.163(j)–1(b)(1)(ii)(C) through (E) and proposed § 1.163(j)–1(b)(1)(iv)(B) and (E) be reduced to the extent the taxpayer establishes that the additions to tentative taxable income under § 1.163(j)–1(b)(1)(i)(D) through (F) in a prior taxable year resulted in no increase in deductible BIE in that year. If a taxpayer does not elect to apply T.D. 9905 retroactively, the taxpayer will have no additions to tentative taxable income under § 1.163(j)–1(b)(1)(i)(D) through (F) in a prior taxable year (and, thus, no increase in deductible BIE in that year) with respect to capitalized depreciation. Because the final regulations already address the commenter's concern, the Treasury Department and the IRS have not incorporated the commenter's specific recommendation.

e. Dispositions by Consolidated Groups

The final regulations also revise §§ 1.163(j)–1(b)(1)(iv)(A)(*2*), 1.163(j)–1(b)(1)(iv)(B)(*2*), and 1.163(j)–1(b)(1)(iv)(E) to clarify that the amount of gain taken into account by a consolidated group upon a ''sale or other disposition'' includes the net gain the group would take into account, including as a result of intercompany transactions. One commenter contended that this clarification is needed to ensure that the amount of gain taken into account by a consolidated group for purposes of the negative adjustments in proposed §§ 1.163(j)–1(b)(1)(iv)(B)(*2*) and 1.163(j)–1(b)(1)(iv)(E) is the same regardless of whether the property, member stock, or partnership interest is sold in an intercompany transaction before leaving the group (that is, to achieve single-entity treatment of the group). For example, assume that S would recognize $100 of gain upon the sale of property to a nonmember. However, rather than sell the property directly to a nonmember, S first might sell the property to member B and recognize $60 of gain, and B then could sell the property to the nonmember and recognize an additional $40 of gain. In either case, the group would recognize a net gain of $100 in relation to the property, and that same $100 should be relevant in determining the amount of any negative adjustment to ATI.

3. Comments on § 1.163(j)–1(b)(1)(iv)(A), (C), and (D)

a. Section 1.163(j)–1(b)(1)(iv)(A)

Commenters questioned why, under the rules for deconsolidating transactions in § 1.163(j)–1(b)(1)(iv)(A)(*3*), the exception to ''sale or other disposition'' treatment is limited to whole-group acquisitions described in § 1.1502–13(j)(5)(i)(A) and does not also include whole-group acquisitions that take the form of reverse acquisitions, as described in § 1.1502–13(j)(5)(i)(B). The Treasury Department and the IRS did not intend this exception to exclude transactions described in § 1.1502–13(j)(5)(i)(B), and the final regulations revise § 1.163(j)–1(b)(1)(iv)(A)(*3*) to correct this typographical error.

The Treasury Department and the IRS received another comment regarding the exceptions to ''sale or other disposition'' treatment for whole-group acquisitions in § 1.163(j)–1(b)(1)(iv)(A)(*3*) and for section 381 transactions in § 1.163(j)–1(b)(1)(iv)(A)(*1*) (see the summary in part III.A.1.b of this Summary of Comments and Explanation of Revisions section). The commenter noted that the tax law generally treats the successor in a section 381 transaction (and the acquiring group in a whole-group acquisition) as stepping into the shoes of the acquired entity (or group). However, the commenter also noted that § 1.163(j)–1(b)(1)(iv)(A) does not expressly provide that the acquiring entity (or group) steps into the shoes of the acquired entity (or group) for purposes of the negative adjustments in §§ 1.163(j)–1(b)(1)(ii)(C) through (E) and 1.163(j)–1(b)(1)(iv)(B) and (E). The commenter recommended clarifying this point.

The Treasury Department and the IRS agree with the commenter. Thus, the final regulations clarify this point by expressly stating that the acquiring corporation in a section 381 transaction and the surviving group in a transaction described in § 1.1502–13(j)(5)(i) is treated as a successor to the distributor or transferor corporation or the terminating group, respectively, for purposes of §§ 1.163(j)–1(b)(1)(ii)(C) through (E) and 1.163(j)–1(b)(1)(iv)(B) and (E) of this section.

A commenter also noted that the ''lesser of'' computation for dispositions of member stock in proposed § 1.163(j)–1(b)(1)(iv)(E)(*2*) could be misconstrued as overriding the rules for negative adjustments to a group's tentative taxable income in the case of deconsolidating transactions subject to § 1.163(j)–1(b)(1)(iv)(A)(*3*). Under this erroneous interpretation, if a sale or other disposition resulted in a deconsolidation, the ''lesser of'' computation would apply solely with respect to the member stock that was sold, even though the deconsolidation rules in § 1.163(j)–1(b)(1)(iv)(A)(*3*) would treat the transaction as a disposition of all of the departing member's stock. Thus, the ''lesser of'' computation would not reflect the full amount of gain recognized upon the complete disposition of the departing member's stock.

The Treasury Department and the IRS did not intend the ''lesser of'' rule in proposed § 1.163(j)–1(b)(1)(iv)(E)(*2*) to override the rules for deconsolidating transactions. The regulations under section 163(j) generally treat a consolidated group as a single entity; thus, the rules for deconsolidations in § 1.163(j)–1(b)(1)(iv)(A)(*3*) treat the date of a member's deconsolidation as the appropriate time to make adjustments to tentative taxable income with regard to all of that member's stock. Thus, the final regulations clarify § 1.163(j)–1(b)(1)(iv)(A)(*3*) to provide that any transaction in which a member leaves a consolidated group is treated as a taxable disposition of all stock of the departing member held by any member of the consolidated group for purposes of § 1.163(j)–1(b)(1)(ii)(C) and (D) and § 1.163(j)–1(b)(1)(iv)(B), (E)(*1*), and (E)(*2*), unless the transaction is described in § 1.1502–13(j)(5)(i).

A commenter also suggested that nonrecognition transactions in which a member leaves a consolidated group should not be treated as a ''sale or other disposition'' for purposes of the negative adjustments in § 1.163(j)–1(b)(1)(ii)(C) and (D) and proposed § 1.163(j)–1(b)(1)(iv)(B) and (E). The final regulations do not accept this comment because, under the single–entity theory of consolidated groups in the section 163(j) regulations, such negative adjustments should be made when a member deconsolidates, regardless of the form of the deconsolidation transaction, other than in a whole-group acquisition described in § 1.1502–13(j)(5)(i). In other words, because the section 163(j) regulations generally treat a consolidated group as a unified taxpayer, any adjustments to ATI related to property should occur when the item of property leaves the group. This result should be consistent whether the property is disposed of directly by a group member or whether the property leaves the group upon the deconsolidation of a member.

The Treasury Department and the IRS also received a comment that the gain prong of the proposed ''lesser of'' computation could yield unintended results for certain nonrecognition transactions. Under T.D. 9905, dispositions are treated as ''sales or other dispositions'' for purposes of the negative adjustments under § 1.163(j)–1(b)(1)(ii)(C) through (E) unless an express exception applies. As

previously discussed in this part III.A.3.a of this Summary of Comments and Explanation of Revisions section, T.D. 9905 provides exceptions for section 381 transactions and whole-group acquisitions. However, T.D. 9905 does not provide an exception to ''sale or other disposition'' treatment for other nonrecognition transactions, such as transactions to which section 351 or section 721 applies.

The commenter noted that the ''lesser of'' computations in proposed § 1.163(j)–1(b)(1)(iv)(B) and (E) could be construed to suggest that a taxpayer would have no negative adjustment under these provisions if the taxpayer transferred an asset in a transaction to which section 351 or section 721 applies. The Treasury Department and the IRS did not intend the proposed ''lesser of'' computations to create additional exceptions to ''sale or other disposition'' treatment for purposes of the negative adjustments required under § 1.163(j)–1(b)(1)(ii)(C) through (E). Thus, the final regulations clarify that the disposition of property, member stock, or partnership interests in a transaction other than a deconsolidation (the treatment of which is addressed in § 1.163(j)–1(b)(1)(iv)(A)(*3*)) that is a nonrecognition transaction other than a section 381 transaction is treated as a taxable disposition for purposes of the gain prong of the ''lesser of'' computation.

b. Section 1.163(j)–1(b)(1)(iv)(C)

As noted in part III.A.1.b of this Summary of Comments and Explanation of Revisions section, the successor asset rules in § 1.163(j)–1(b)(1)(iv)(C) apply to certain intercompany transactions. For example, assume that S (a member of the P group) acquires a depreciable asset and fully depreciates the asset under section 168(k). P then contributes its S stock to S1 (another member of the P group) in exchange for S1 stock in a transaction to which section 351 applies. In this case, the S1 stock is a successor asset to the S stock. Moreover, if P sells its S1 stock to a third party in a transaction that causes both S1 and S to deconsolidate, the transaction is treated as a taxable disposition of both the S1 stock and the S stock for purposes of §§ 1.163(j)–1(b)(1)(ii)(C) and (D) and 1.163(j)–1(b)(1)(iv)(B) and (E). See § 1.163(j)–1(b)(1)(iv)(A)(*3*). In that case, both the actual sale of the S1 stock and the disposition of the S stock on its deconsolidation pursuant to § 1.163(j)–1(b)(1)(iv)(A)(*3*) could produce negative adjustments to ATI. Application of the anti-duplication rule in § 1.163(j)–1(b)(1)(iv)(D) effectively would mean that the total subtraction from ATI would equal the greater of the two stock gains (if any).

One commenter agreed with this reading of the regulations but suggested that an example would be helpful to clarify the interaction of these multiple rules. The Treasury Department and the IRS agree with this suggestion, and the final regulations include an example illustrating the operation of these rules.

c. Section 1.163(j)–1(b)(1)(iv)(D)

Commenters have stated that the anti-duplication rule in § 1.163(j)–1(b)(1)(iv)(D)(*2*) is unclear, does not properly support the example in that paragraph, and does not take into account the exception to the deconsolidation rule in § 1.163(j)–1(b)(1)(iv)(A)(*3*). For example, a commenter stated that it is unclear whether the operative rule, which does not reference § 1.163(j)–1(b)(1)(ii)(C), actually supports the conclusion in the example, which references § 1.163(j)–1(b)(1)(ii)(C). Another commenter requested clarification that the anti-duplication rule in § 1.163(j)–1(b)(1)(iv)(D)(*2*) does not apply to a whole-group acquisition, which is not treated as a ''sale or other disposition'' for purposes of § 1.163(j)–1(b)(1)(ii)(C) through (E). See § 1.163(j)–1(b)(1)(iv)(A)(*3*).

The Treasury Department and the IRS agree with these comments and have revised § 1.163(j)–1(b)(1)(iv)(D)(*2*) to clarify the application of this provision. The Treasury Department and the IRS also have clarified the application of § 1.163(j)–1(b)(1)(iv)(D)(*1*), including by clarifying that the paragraph contains two separate rules, rather than one rule and one example.

A commenter also requested examples illustrating the application of the anti-duplication rule in § 1.163(j)–1(b)(1)(iv)(D) when the taxpayer's negative adjustment under the ''lesser of'' computation is based on gain recognized rather than on depreciation deductions taken during the EBITDA period. The final regulations add an example to § 1.163(j)–1(b)(1)(viii) to illustrate the application of this rule.

B. Dividends From Regulated Investment Company (RIC) Shares

If a RIC has certain items of income or gain, part 1 of subchapter M and other Code provisions provide rules under which a RIC may pay dividends that a shareholder in the RIC may treat in the same manner (or a similar manner) as the shareholder would treat the underlying item of income or gain if the shareholder realized it directly. Like the preamble to the 2020 Proposed Regulations, this preamble refers to this treatment as ''conduit treatment.'' The 2020 Proposed Regulations provide rules under which a RIC that earns BII may pay section 163(j) interest dividends. The total amount of a RIC's section 163(j) interest dividends for a taxable year is limited to the excess of the RIC's BII for the taxable year over the sum of the RIC's BIE for the taxable year and the RIC's other deductions for the taxable year that are properly allocable to the RIC's BII. The 2020 Proposed Regulations provide that a RIC shareholder that receives a section 163(j) interest dividend may treat the dividend as interest income for purposes of section 163(j), subject to holding period requirements and other limitations. The Treasury Department and the IRS received one comment requesting that the proposed rules providing this treatment be finalized. These final regulations adopt those proposed rules.

A few commenters requested that conduit treatment be extended to funds other than RICs, such as foreign regulated investment funds and foreign money market funds, so that investors in those funds may treat earnings from those funds as interest income to the extent the earnings can be traced to interest income of the funds. These final regulations do not adopt these recommendations. The Treasury Department and the IRS received similar recommendations in response to the 2018 Proposed Regulations, and they were not adopted in T.D. 9905. As explained in the preamble to T.D. 9905, there are significant differences between the rules governing income inclusions in respect of passive foreign investment companies (PFICs), such as foreign money market funds, and RICs. These significant differences would require a different mechanical approach if conduit treatment were extended to PFICs and present additional policy considerations. The Treasury Department and the IRS continue to study this comment and these issues.

Another commenter requested that conduit treatment be extended to allow shareholders in real estate investment trusts (REITs) to treat REIT dividends as interest income, to the extent that the income earned by the REIT is interest income. The Treasury Department and the IRS continue to consider this comment.

IV. Comments on and Changes to Proposed § 1.163(j)–6: Application of the Business Interest Expense Deduction Limitations to Partnerships and Subchapter S Corporations

A. Overview

Section 1.163(j)–6 provides rules for applying section 163(j) to partnerships, S corporations and their owners. As described in this part IV of the Summary of Explanation of Revisions section, the Treasury Department and the IRS continue to study aspects of proposed § 1.163(j)–6. Accordingly, the final regulations reserve on §§ 1.163(j)–6(e)(6) (partnership deductions capitalized by a partner), (h)(4) (partner basis adjustments upon liquidating distributions), (h)(5) (partnership basis adjustments upon partner dispositions), (j) (tiered partnerships), and (l)(4)(iv) (S corporation deductions capitalized by an S corporation shareholder). These paragraphs of the 2020 Proposed Regulations are retained in proposed form and may be relied on to the extent provided in the Applicability Dates section of this preamble.

B. Trading Partnerships

The 2020 Proposed Regulations addressed the application of section 163(j) to partnerships engaged in a trade or business activity of trading personal property (including marketable securities) for the account of owners of interests in the activity, as described in § 1.469–1T(e)(6) (trading partnership). Specifically, the 2020 Proposed Regulations included a rule requiring a partnership engaged in a trading activity (*i.e.,* trade or business activities described in section 163(d)(5)(A)(ii) and illustrated in Revenue Ruling 2008–12, 2008–1 C.B. 520 (March 10, 2008)) to bifurcate its interest expense from the trading activity between partners that are passive investors (taxpayers that do not materially participate in the activity within the meaning of section 469) in the trading activity and all other partners, and subject only the portion of the interest expense that is allocable to the non-passive investors to limitation under section 163(j) at the partnership level. The portion of interest expense from the trading activity allocable to passive investors is subject to limitation under section 163(d) at the partner level, as provided in section 163(d)(5)(A)(ii). Accordingly, proposed § 1.163(j)–1(c)(1) and (2) include rules applicable to trading partnerships that modify the definitions of BII and BIE to effectuate this bifurcation.

In addition, proposed § 1.163(j)–6(d)(4) requires that a trading partnership bifurcate all of its other items of income, gain, loss and deduction from its trading activity between partners that are passive investors and all other partners. The portion of the partnership's other items of income, gain, loss or deduction from its trading activity properly allocable to the passive investors in the partnership will not be taken into account at the partnership level as items from a trade or business for purposes of applying section 163(j) at the partnership level. Instead, all such partnership items properly allocable to passive investors will be treated as items from an investment activity of the partnership, for purposes of sections 163(j) and 163(d).

As stated in the preamble to 2020 Proposed Regulations, this approach, in order to be effective, presumes that a trading partnership generally will possess knowledge regarding whether its individual partners are passive investors in its trading activity. Because no rules currently exist requiring a partner to inform the partnership whether the partner has grouped activities of the trading partnership with other activities of the partner outside of the partnership, the 2020 Proposed Regulations include a revision to the section 469 activity grouping rules to provide that any activity described in section 163(d)(5)(A)(ii) may not be grouped with any other activity of the partner, including any other activity described in section 163(d)(5)(A)(ii).

In response to the decision to bifurcate interest expenses from a trading activity, one commenter stated that the bifurcation approach was inconsistent with section 163(j)(5). According to the comment, the statute does not support the partnership having BIE for some partners and investment interest expense for others. Rather, once a partnership determines that it is investment interest expense that same interest expense cannot also be BIE of the partnership. The commenter read section 163(j) to mean that if a partnership is engaged in a trade or business that is not a passive activity and with respect to which certain owners do not materially participate, then the interest expense allocable to the partnership's trade or business is investment interest and section 163(j) does not apply to any of the interest expense.

Alternatively, the commenter recommended that, to the extent the Treasury Department and the IRS determine that materially participating partners should be subject to limitation under either section 163(d) or section 163(j), a rule similar to that for corporate partners should be adopted. Under such a rule, a trading partnership would treat all of its interest expense as investment interest expense at the partnership level with respect to all of its partners, and the interest expense allocable to a non-passive investor would be recharacterized as BIE by such non-passive investor. This approach, according to the commenter, would achieve a similar result as the proposed bifurcation approach while eliminating the administrative complexities associated with a partnership having to determine whether each of its partners is materially participating.

As stated in the preamble to the 2020 Proposed Regulations, the Treasury Department and the IRS considered treating all interest expense of a trading partnership as investment interest expense but concluded that it was inconsistent with the intent of section 163(j) to limit BIE of a partnership. The commenter's alternative approach also is inconsistent with the statute because it ignores the fact that the trading partnership is engaged in trade or business and, therefore, any BIE should be subject to section 163(j). Such an approach would further diverge from the application of section 163(j), particularly with respect to business interest carryforwards. Partnership BIE that is limited under section 163(j)(4) is carried forward by the partner as EBIE and is not treated as paid or accrued in succeeding taxable years until the partner receives ETI from the same partnership. Under the commenter's approach, the partner, if subject to section 163(j), would treat the interest expense as paid or accrued in the succeeding tax year under section 163(j)(2) without requiring an allocation of ETI or excess BII (EBII) from the partnership. The bifurcation approach in the 2020 Proposed Regulations, and in these final regulations, preserves the partnership-level application of section 163(j) for those partners who are non-passive investors in the trade or business of the partnership as well as the carryover rules applicable at the partner-level.

Another commenter suggested an alternative under which section 163(j) would be applied at the partnership level and any EBIE would be allocated to the partners. Any direct or indirect partner that is a non-passive investor in the partnership's trading activity would continue to apply the rules of section 163(j) to the EBIE received from the partnership. For partners who did not materially participate in the partnership's trading activity, any allocated EBIE from the partnership would be fully deductible subject to any partner-level section 163(d) limitation.

Under this approach, any EBIE received by a passive investor would be treated as paid or accrued in the current year and not subject to the carryover rules under section 163(j)(4)(B). The Treasury Department and the IRS do not adopt this comment as the approach is inconsistent with the statutory language and intent of section 163(j)(5) because the second sentence of section 163(j)(5) specifically states that BIE shall not include investment interest expense.

Several commenters opposed the revision of the grouping rule under section 469 to prohibit the grouping of trading activities. Proposed § 1.469–4(d)(6) provides that a trading activity described in section 163(d)(5)(A)(ii) may not be grouped with any other activity of the taxpayer, including another trading activity. One commenter observed that such a rule would discourage trading funds from using multiple partnerships because it may result in partners never being able to demonstrate material participation in the trading activity under the 500 hour test or any other material participation test (*i.e.,* § 1.469–5T(a)) for any one partnership, even though the partner would materially participate in a properly grouped activity. Another acknowledged the administrative burden associated with partnerships evaluating the activities of their passive partners but highlighted that partnerships were already required to collect details about partner's tax status in similar situations. A third suggested that the grouping rule could be modified to permit a partner to group activities provided the partner provides sufficient information to the partnership to enable it to identify the taxpayer as a materially participating partner.

The Treasury Department and the IRS do not adopt these recommendations because the rules under section 469 adequately address these concerns. Activity under section 469 is broadly defined to be a trade or business under section 162 and the rules further provide for grouping by a partnership or S corporation. As addressed previously, for the bifurcation method to be effective, modification of the section 469 grouping rules is necessary to avoid potential abuse and to allow the trading partnership to presume that an individual partner is a passive investor in the trading activity based solely on the partnership's understanding as to the lack of work performed in the trading activity. Additionally, if grouping were allowed, then passive partners could group their other trade or business activities, in which they materially participate, with their trading activity in order to become a material participant as to the trading activity, thus, avoiding the section 163(d) limit at the partner level. The final regulations clarify that this grouping rule applies only to individuals, estates, trusts, closely held C corporations, and personal service corporations that may directly or indirectly own interests in trading activities described in § 1.469–1T(e)(6) and subject to section 163(d)(5)(ii).

One commenter observed that the proposed regulations do not discuss a tiered partnership structure with respect to the material participation rules. The Treasury Department and the IRS determined that such a rule is not needed. The bifurcation approach in proposed § 1.163(j)–1(c)(1) and (2) applies where interest income or expense is allocable to one or more partners that do not materially participate (within the meaning of section 469), as described in section 163(d)(5)(A)(ii). Thus, in a tiered structure where interest is not allocable to one or more partners that do not materially participate, the rules in § 1.163(j)–6(c)(1) and (2) do not apply and the interest expense is subject to the rules under section 163(j)(4).

The same commenter recommended the final regulations provide that if a partner that has EBIE ceases to materially participate in a later taxable year, the EBIE would be allowed in a later year subject to any section 163(d) limitation; and conversely, if a passive investor partner has a section 163(d) investment carryover and then materially participates in a later taxable year, the 163(d) carryover would be allowed subject to any partner-level section 163(j) limitation. In light of concerns with partners shifting between participating and not participating in the trading activity in order to unsuspend EBIE, the Treasury Department and the IRS determined that such a rule is not warranted.

One commenter requested transition relief for trading partnerships that may have relied on the statement contained in the preamble to the 2018 Proposed Regulations that the BIE of the partnership allocable to trading activity will be subject to section 163(j) at the entity level, even if the interest expense is later subject to limitation under section 163(d) at the individual partner level. Partnerships that relied on the 2018 Proposed Regulations may have allocated EBIE to partners who do not materially participate in the trading activity of the partnership. Under the final regulations, partnerships carrying on trading activities do not allocate ETI or EBII from trading activities to their partners who do not materially participate in those activities. Rather, any interest expense and all other items from such activities allocable to these partners will be treated as items derived from an investment activity of the partnership. As a result, passive investors that were previously allocated EBIE from the trading partnership generally will not be allocated any ETI or EBII from that partnership in future years against which they can offset the EBIE.

The Treasury Department and the IRS agree that relief should be accorded to partners of trading partnerships that do not materially participate in the trading activity and that relied on the statement in the preamble to the 2018 Proposed Regulations. Accordingly, a transition rule is provided in the final regulations to permit passive investors in a partnership engaged in a trading activity to deduct EBIE allocated to them from the partnership in any taxable year ending prior to the effective date of the final regulations without regard to the amount of ETI or EBII that may be allocated by the partnership to the partner in the first taxable year ending on or after the effective date of these final regulations.

For purposes of this transition rule, any EBIE that is no longer subject to disallowance under section 163(j) solely as a result of this transition rule will not be subject to limitation or disallowance under section 163(d). In such case, the partnership treated the interest expense as business interest expense for purposes of calculating its limitation under section 163(j). The treatment of interest expense by the partnership as BIE in prior years is not affected by this transition rule. Accordingly, the rule in section 163(j)(5) that interest expense cannot be treated as both BIE and investment interest expense would still apply, and the BIE of the partnership cannot be treated as investment interest expense of the partner in future years.

The commenter also observed that a corporate partner is never subject to section 163(d) regardless of material participation and requested clarification whether section 163(j) applies to a trading partnership's corporate partner at the partner or partnership level. The Treasury Department and the IRS have determined that the regulations as proposed adequately addressed this situation. Generally, a corporate partner is not a passive investor subject to section 163(d)(5)(A)(ii); therefore, the rules under proposed § 1.163(j)–6(c) would not apply.

In the 2020 Proposed Regulations, the Treasury Department and the IRS requested comments regarding whether similar rules should be adopted with

respect to S corporations that also may be involved in trading activities, and whether such rules would be compatible with subchapter S. One commenter recommended that the final regulations provide that an S corporation engaged in a trading activity be required to bifurcate its interest expense between shareholders who materially participate in the trading activity and shareholders who do not materially participate and apply section 163(j) to the former and section 163(d) to the latter at the S corporation level.

The Treasury Department and the IRS appreciate this recommendation but, as acknowledged by the commenter, the implementation of such a rule would require different allocations of S corporation income and other items among shareholders of the S corporation. Unlike partnerships, S corporations must allocate items pro rata to the shareholders, in accordance with their respective percentages of stock ownership in the corporation. See generally section 1377(a)(1). Therefore, with regard to S corporations, the Treasury Department and the IRS have determined that (i) section 163(d) should continue to be applied at the shareholder level, and (ii) as provided by section 163(j)(4)(A) and (D), section 163(j) should continue to be applied at the S corporation level. Consequently, the final regulations do not incorporate the commenter's recommendation.

C. Treatment of Business Interest Income and Business Interest Expense With Respect to Lending Transactions Between a Partnership and a Partner (Self-Charged Lending Transactions)

The 2020 Proposed Regulations provide that, in the case of a self-charged lending transaction between a lending partner and a borrowing partnership in which the lending partner owns a direct interest, any BIE of the borrowing partnership attributable to a self-charged lending transaction is BIE of the borrowing partnership for purposes of proposed § 1.163(j)–6(n). However, to the extent the lending partner receives interest income attributable to the self-charged lending transaction and also is allocated EBIE from the borrowing partnership in the same taxable year, the lending partner may treat such interest income as an allocation of EBII from the borrowing partnership in that taxable year, but only to the extent of the lending partner's allocation of EBIE from the borrowing partnership in the same taxable year. To prevent the potential double counting of BII, the lending partner includes interest income re-characterized as EBII only once when calculating the lending partner's own section 163(j) limitation. In cases where the lending partner is not a C corporation, to the extent that any interest income exceeds the lending partner's allocation of EBIE from the borrowing partnership for the taxable year, and such interest income otherwise would be properly treated as investment income of the lending partner for purposes of section 163(d) for that year, such excess amount of interest income will continue to be treated as investment income of the lending partner for that year for purposes of section 163(d).

One commenter generally supported the approach for self-charged lending transactions provided in the 2020 Proposed Regulations and expected that many taxpayers may benefit from this rule. However, the commenter noted that the rule applies only to self-charged lending transactions where the lending partners directly own interests in the borrowing partnerships and stated that this rule is too narrow. The commenter recommended that the rule be broadened to include loans to a partnership by other members in the same consolidated group as a corporate partner. In addition, the commenter recommended that the rule for self-charged lending transactions should be expanded to include lending partners in upper-tier partnerships who make loans to lower-tier partnerships. The commenter stated that in both cases, the interest expense would ultimately flow up to the same taxpayer that recognizes the interest income.

The Treasury Department and the IRS have determined that the rule for self-charged lending transactions should be adopted in the final regulations without change. With respect to the recommendation that the self-charged lending rule should apply to indirect lenders in tiered-partnership situations, the Treasury Department and the IRS concluded that adopting a rule to allow interest income of a partner in an upper-tier partnership that lent money to a lower-tier partnership to offset EBIE that may be suspended in a lower-tier partnership would add undue complexity to these rules, and such rules would likely become more difficult to administer, particularly with respect to large and complex multi-tiered entity structures. With respect to the recommendation to extend the rule to apply to corporate partners where the lender is a member of the same consolidated group of corporations, the Treasury Department and the IRS continue to consider whether this would be appropriate for inclusion in future guidance. The Treasury Department and the IRS are also considering additional guidance that would limit the application of the self-charged interest rule to a lender that is subject to tax under section 511, due to the special rules that apply to the calculation of unrelated business taxable income under section 512. See § 1.512(a)–6.

The Treasury Department and the IRS solicited comments in the 2020 Proposed Regulations regarding whether the rule for self-charged lending transactions between partnerships and lending partners (or a similar rule) should apply to, lending transactions between S corporations and lending shareholders. No comments were received in response to this solicitation. The pro rata allocation requirements applicable to S corporations make adopting rules similar to those provided for partnership self-charged lending transactions difficult to apply and could potentially impact the eligibility requirements under subchapter S. Accordingly, the final regulations do not provide such a rule.

D. CARES Act Partnership Rules

The 2020 Proposed Regulations provide special rules for partners and partnerships for taxable years beginning in 2019 or 2020 under section 163(j)(10) as enacted by the CARES Act. Proposed § 1.163(j)–6(g)(4) provides that 50 percent of any EBIE allocated to a partner for any taxable year beginning in 2019 is treated as BIE paid or accrued by the partner in the partner's first taxable year beginning in 2020 (referred to in the 2020 Proposed Regulations as § 1.163(j)–6(g)(4) business interest expense). The amount that is treated as BIE paid or accrued by the partner in the partner's 2020 taxable year is not subject to a section 163(j) limitation at the partner level. The 2020 Proposed Regulations further provide that if a partner disposes of its interest in the partnership in the partnership's 2019 or 2020 taxable year, the amount treated as BIE paid or accrued by the partner under proposed § 1.163(j)–6(g)(4) is deductible by the partner and thus does not result in a basis increase under § 1.163(j)–6(h)(3). The 2020 Proposed Regulations state that a taxpayer may elect to not have § 1.163(j)–6(g)(4) apply, and provide two examples illustrating these rules in §§ 1.163(j)–6(o)(35) and (o)(36). The Treasury Department and the IRS specifically requested comments on these proposed rules and on whether further guidance was necessary.

One commenter agreed with the approach taken in the 2020 Proposed Regulations, but requested that the final regulations clarify that an election out of

the 50 percent EBIE rule is made by a partner with respect to each partnership in which the partner holds an interest. The commenter stated that partners may have different reasons to elect out of the 50 percent EBIE rule and that by allowing partners to make the election out with respect to each partnership, partners will have greater flexibility in managing their tax consequences.

The Treasury Department and the IRS agree with this comment. Thus, the final regulations clarify that partners may elect out of the 50 percent EBIE rule on a partnership by partnership basis.

Another commenter requested confirmation with respect to an aspect of the example in § 1.163(j)–6(o)(36). In the example, the partner is allocated EBIE in 2018 and 2019 and sells its partnership interest in 2019. The commenter requested confirmation that the partner would not deduct 50 percent of the EBIE since the sale of the partnership interest occurred in 2019, resulting in a gain/loss recognition event during the 2019 taxable year, and there would be no basis in the partnership for the partner to deduct 50 percent of the 2019 EBIE.

The Treasury Department and the IRS believe that the example, as drafted in the proposed regulations, represents a correct interpretation of the regulations and are therefore finalizing the example without change. However, these final regulations clarify that § 1.163(j)–6(g)(4) business interest expense can be deducted by the disposing partner except to the extent that the business interest expense is negative section 163(j) expense as defined in § 1.163(j)–6(h)(1) immediately before the disposition. Under the example in § 1.163(j)–6(o)(36), the partner treats 50 percent of 2019 EBIE ($10 x 50%) as § 1.163(j)–6(g)(4) business interest expense. Section 1.163(j)–6(g)(4) provides that if a partner disposes of a partnership interest in the partnership's 2019 or 2020 taxable year, the partner can deduct the § 1.163(j)–6(g)(4) business interest expense and there is no basis increase under § 1.163(j)–6(h)(3) for this amount. Thus, unless the partner elects out of the 50 percent EBIE rule, the partner would have a $25 loss (instead of a $30 loss) from the sale of its partnership interest in 2019 and $5 of deductible BIE that is not subject to a section 163(j) limitation at the partner level.

The Treasury Department and the IRS received one comment on proposed § 1.163(j)–6(d)(5). This commenter stated that the proposed regulations disregard the ''11–step approach'' in § 1.163(j)–6(f)(2), and instead point to different mechanics of a tiered partnership allocation rule under proposed § 1.163(j)–6(j)(9). The commenter recommended additional guidance and examples on the application of the proposed regulations to non-tiered partnerships and partnerships that historically allocate all items pro rata.

In light of this comment, and in light of the fact that the tiered partnership rules in the proposed regulations are not being finalized at this time, the Treasury Department and the IRS believe that a simpler method for a partnership to take into account 2019 ATI in 2020 is warranted. Therefore, these final regulations prescribe a simplified method that applies when a partnership uses its 2019 section 704 income, gain, loss, and deduction amounts in determining its 2020 allocable ATI and include an illustrative example.

V. Comments on and Changes to Proposed § 1.163(j)–7: Application of the Section 163(j) Limitation to Foreign Corporations and United States Shareholders

A. Overview

Section 1.163(j)–7 provides rules for applying section 163(j) to relevant foreign corporations and their United States shareholders (U.S. shareholders).

As described in this part V of the Summary of Comments and Explanation of Revisions section, the Treasury Department and the IRS continue to study aspects of proposed § 1.163(j)–7. Accordingly, the final regulations reserve on § 1.163(j)–7(c)(2)(iii) (treating a CFC group as single C corporation for purposes of allocations to an excepted trade or business) and (iv) (treating a CFC group as single taxpayer for purposes of treating amounts as interest), (f)(2) (ordering rule when a CFC group member has ECI), and (j) (computation of ATI of certain United States shareholders of applicable CFCs), and related definitions in § 1.163(j)–7(k). These paragraphs of the 2020 Proposed Regulations are retained in proposed form and may be relied on to the extent provided in the Applicability Dates section.

B. Negative Adjusted Taxable Income of CFC Group Members

Proposed § 1.163(j)–7(c) provided rules for applying section 163(j) to CFC group members. Proposed § 1.163(j)–7(c)(2)(i) provided that a single section 163(j) limitation is computed for a specified period of a CFC group based on the sum of the current–year business interest expense, disallowed BIE carryforwards, BII, floor plan financing interest expense, and ATI of each CFC group member. For this purpose, the ATI and other items of a CFC group member were generally computed on a separate–entity basis. Proposed § 1.163(j)–7(c)(2)(i).

Under the general rule of § 1.163(j)–1(b)(1)(vii), ATI of a taxpayer cannot be less than zero (no-negative ATI rule). Two comments were received regarding the application of the no-negative ATI rule with respect to CFC groups and CFC group members. One of the comments stated that it is unclear how the rule applies to CFC group members. Both comments asserted that the no-negative ATI rule should apply with respect to the CFC group, rather than each separate CFC group member. As a result, the ATI of a CFC group would generally be reduced by the negative ATI of CFC group members, if any. One comment noted that consolidated groups have a single ATI amount, which takes into account losses of consolidated group members. Another comment noted that, if negative ATI of CFC group members is not taken into account, CFC group members could be required to deduct BIE in a taxable year in which the sum of the CFC group members' tested losses exceed the sum of their tested income; the comment questioned whether this result is appropriate, noting that it would often be more beneficial to carry forward the disallowed BIE to the subsequent taxable year in light of the fact that tested losses cannot be carried forward to subsequent taxable years.

The Treasury Department and the IRS agree that the ATI of CFC group members should take into account amounts less than zero for purposes of determining the ATI of a CFC group. Accordingly, the final regulations provide that the no-negative ATI rule applies with respect to the ATI of a CFC group, rather than a CFC group member.

C. Transactions Between CFC Group Members

In general, intragroup transactions are taken into account for purposes of computing a CFC group's section 163(j) limitation. However, proposed § 1.163(j)–7(c)(2)(ii) provided an anti-abuse rule that disregarded an intragroup transaction between CFC group members if a principal purpose of entering into the transaction was to affect the CFC group's or a CFC group member's section 163(j) limitation by increasing or decreasing the CFC group or a CFC group member's ATI. Some comments requested a broader rule that would permit taxpayers to elect annually to disregard BII and BIE between CFC group members for purposes of applying section 163(j). The

comments asserted that this election would reduce the compliance burden on taxpayers.

The final regulations do not provide an election to disregard intragroup BII and BIE. The effect of the requested election would be to allow a deduction for all intragroup BIE and to cause the section 163(j) limitation applicable to other BIE (that is, BIE with respect to debt that is not between members of a CFC group) to be determined without regard to intragroup BII. Although the requested election would not affect the total amount of deductible BIE within the CFC group, it would change the location of the deduction within the CFC group (that is, the CFC group member for which a deduction is allowed). Moving a BIE deduction from one CFC group member to another may have significant Federal income tax consequences. For example, the location of a CFC group's interest deduction can affect the amount of a CFC group member's subpart F income and tested income (or tested loss) and, therefore, the amount of a U.S. shareholder's income inclusion under section 951(a) or 951A(a), respectively. Thus, the requested election could be used to inappropriately manipulate the impact of BIE deductions within a CFC group.

However, the final regulations expand the anti-abuse rule so that it may apply not only to certain intragroup transactions that affect ATI but also to intragroup transactions entered into with a principal purpose of affecting a CFC group or a CFC group member's section 163(j) limitation by increasing the CFC group or a CFC group member's BII. This rule is intended to prevent taxpayers from artificially increasing the total amount of BII and BIE within a CFC group for a specified period in order to shift disallowed BIE from one CFC group member to another or change the timing of deductions of BIE. For example, a payment of BIE by a payor CFC group member to a payee CFC group member will generally result in an equal increase in the CFC group's section 163(j) limitation (and therefore the amount of deductible BIE) as a result of the increase in the CFC group's BII. However, the increase in the CFC group's section 163(j) limitation is not necessarily allocated to the payor. Instead, under the ordering rules of § 1.163(j)–7(c)(3), the additional section 163(j) limitation would be allocated first to the payee to the extent it has BIE, and then may be allocated to other CFC group members. This type of transaction would be subject to the anti-abuse rule if it was entered into with a principal purpose of increasing the amount of BIE deductible by other CFC group members.

D. High-Tax Exceptions

1. Application of Section 163(j) to Controlled Foreign Corporations With High-Taxed Income

One comment suggested that the Treasury Department and the IRS consider a special rule for the application of section 163(j) to CFC group members that are subject to the subpart F high-tax exception under § 1.954–1(d) or the GILTI high-tax exclusion under § 1.951A–2(c)(7) (together, high-tax exceptions). For example, the comment suggested a multi-step approach under which section 163(j) would first be applied to CFC group members on a separate-entity basis for the purpose of applying the high-tax exceptions, and then ATI and BIE of CFC group members subject to the high-tax exceptions could be excluded in computing the CFC group's section 163(j) limitation.

The Treasury Department and the IRS have determined that applying section 163(j) first to each CFC group member on a separate-entity basis, then applying the high-tax exceptions, and then reapplying section 163(j) to a CFC group by excluding income eligible for the high-tax exceptions, would significantly increase the administrative and compliance burdens of section 163(j) and therefore reduce the benefits of making a CFC group election. Furthermore, such an approach would be inconsistent with the general concept and purpose of a consolidated approach to the CFC group election; for example, it would increase the relevance of the location of intragroup debt and ATI within a CFC group and could inappropriately enhance the effective foreign tax rate of such income. Accordingly, the final regulations do not adopt this recommendation.

2. Disallowed Business Interest Expense Carryforwards and the High-Tax Exceptions

Section 163(j) and the section 163(j) regulations generally apply to determine the deductibility of BIE of a relevant foreign corporation (which includes an applicable CFC) in the same manner as those provisions apply to determine the deductibility of BIE of a domestic C corporation. Section 1.163(j)–7(b). One comment requested that the Treasury Department and the IRS confirm that a CFC to which the high-tax exceptions apply can still have a disallowed BIE carryforward.

The high-tax exception does not modify the rules for determining the section 163(j) limitation or the amount of an applicable CFC's disallowed BIE carryforward. See part V.D.1 of this Summary of Comments and Explanation of Revisions section. Accordingly, an applicable CFC may have disallowed BIE carryforwards if the applicable CFC is subject to a high-tax exception in the taxable year(s) in which the disallowed BIE carryforwards arose.

E. Allocation of CFC Group Items to an Excepted Trade or Business

Proposed § 1.163(j)–7(c)(2)(iii) provided that, for purposes of allocating items to an excepted trade or business under § 1.163(j)–10, all CFC group members are treated as a single C corporation. Similarly, proposed § 1.163(j)–7(c)(2)(iv) provided that, for purposes of determining whether certain amounts are treated as interest within the meaning of § 1.163(j)–1(b)(22), all CFC group members are treated as a single taxpayer. Several comments addressed the method of allocating items of a CFC group member to an excepted trade or business under § 1.163(j)–10. The Treasury Department and the IRS continue to study the proper method for allocating CFC group members' items to an excepted trade or business and when it is appropriate to treat a CFC group as a single entity. The Treasury Department and the IRS may address these issues in future guidance and will consider the comments at that time. Accordingly, the final regulations reserve on § 1.163(j)–7(c)(2)(iii) and (iv).

F. Limitation on Pre-Group Disallowed Business Interest Expense Carryforwards

1. Pre-Group Disallowed Business Interest Expense Carryforwards Attributable to Specified Group Members

The 2020 Proposed Regulations provided special rules relating to disallowed BIE carryforwards of a CFC group member that arose in a taxable year before it joined the CFC group (pre-group disallowed BIE carryforwards). Under proposed § 1.163(j)–7(c)(3)(iv)(A)(*1*), a CFC group member cannot deduct pre-group disallowed BIE carryforwards in excess of the cumulative section 163(j) pre-group carryforward limitation. This limitation is determined in a manner similar to the limitation on the use of carryovers of a member of a consolidated group arising in a separate return limitation year (SRLY). See § 1.1502–21(c).

One comment requested that the limitation on pre-group disallowed BIE carryforwards be removed, because it increases the compliance burden on taxpayers and any potential for loss

trafficking could adequately be addressed by an anti-abuse rule. Alternatively, if this request is not adopted, the comment requested that the limitation on pre-group disallowed BIE carryforwards not apply to disallowed BIE carryforwards that arose in a taxable year in which a CFC group election was available but prior to the first taxable year for which the CFC group election was in effect. The comment asserted that applying the limitation to such carryforwards is inappropriate because there is no loss trafficking concern unless a CFC is acquired from outside the group.

The Treasury Department and the IRS have determined that it would be inappropriate for the limitation on deduction of pre-group disallowed BIE carryforwards to be replaced with an anti-abuse rule focused on loss trafficking. Loss trafficking concerns may arise anytime the ATI or BII of one CFC group member is used to allow a deduction for BIE of another CFC group member attributable to a taxable year before the other CFC group member joined the CFC group. As a result, the final regulations retain the limitation on the deduction of pre-group disallowed BIE carryforwards.

2. Application of Section 382 to CFCs Joining or Leaving a CFC Group

As a general matter, the SRLY limitations described in §§ 1.1502–21(c) and 1.163(j)–5(d) do not apply to a member of a consolidated group if their application would result in an overlap with the application of section 382 (SRLY overlap rule). See §§ 1.1502–21(g)(1) and 1.163(j)–5(f). One comment requested clarification as to whether section 382 applies to a CFC that does not have ECI. The comment generally supported the limitation on pre-group disallowed BIE carryforwards but suggested that, if section 382 applies to CFCs, a rule similar to the SRLY overlap rule should be adopted to prevent the limitation on pre-group disallowed BIE carryforwards from applying to a CFC group member if its application would result in an overlap with the application of section 382.

Section 382, by its terms, applies to the disallowed BIE carryforwards of foreign corporations regardless of whether they have ECI. However, the Treasury Department and the IRS continue to study certain aspects of the application of sections 163(j) and 382 to foreign corporations, including the possible application of a SRLY overlap rule to applicable CFCs joining or leaving a CFC group, as well as the computation of any relevant section 382(a) limitation. The Treasury Department and the IRS may address these issues in future guidance and will consider the comments at that time.

G. Specified Groups and Specified Group Members

1. The 80-Percent Ownership Threshold

Proposed § 1.163(j)–7(d) provided rules for determining a specified group and specified group members. A specified group includes one or more chains of applicable CFCs connected through stock ownership with a specified group parent, but only if the specified group parent owns stock meeting the requirements of section 1504(a)(2)(B) (which requires 80 percent ownership by value) in at least one applicable CFC, and stock meeting the requirements of section 1504(a)(2)(B) in each of the applicable CFCs (except the specified group parent) is owned by one or more of the other applicable CFCs or the specified group parent. Indirect ownership through a partnership or through a foreign estate or trust is taken into account for this purpose.

Some comments requested that the ownership threshold for applying this rule be reduced to 50 percent, or ''more than 50 percent,'' in order to make the rule consistent with the ownership rules in sections 957 and 954(d)(3). The comments asserted that a lower threshold would reduce the compliance burden of applying section 163(j) to CFCs on a separate-entity basis, would allow joint ventures to be included in the CFC group, and could prevent taxpayers from manipulating their ownership interests in order to break affiliation and exclude entities from the CFC group. One comment noted that local regulatory restrictions may prevent a U.S. shareholder from owning 80 percent of the stock in a CFC.

Another comment requested that the ownership threshold be reduced to 50 percent with respect to a CFC that has only one U.S. shareholder. The comment asserted that, if a CFC has only one U.S. shareholder, there is no concern of potentially inconsistent treatment by different shareholders and there would be no need for additional procedural requirements (for example, a requirement to provide notice to other shareholders). Alternatively, the comment suggested that a specified group parent that is a qualified U.S. person be permitted to elect to treat a CFC as a CFC group member if it meets the 50 percent (but not the 80 percent) ownership threshold, even if the specified group parent is not the sole U.S. shareholder.

The Treasury Department and the IRS have determined that it would be inappropriate to reduce the specified group ownership threshold below 80 percent. The application of section 163(j) to a CFC group is modeled on the rules for applying section 163(j) to a U.S. consolidated group under § 1.163(j)–5. Accordingly, the definition of a specified group is generally consistent with the definition of an affiliated group under section 1504. In certain respects, the rules of § 1.163(j)–7(c) have the effect of treating a CFC group as a single entity for purposes of section 163(j). Such treatment is not appropriate for CFCs that do not share at least 80 percent common ownership, that is, CFCs that are not highly related. Moreover, because one CFC group member's ATI and BII can be used by other CFC group members to deduct BIE, reducing the specified ownership threshold would increase the potential for one CFC group member to disproportionately benefit, or suffer a detriment, from the attributes of another CFC group member even though those CFCs are not highly related.

As an alternative, one comment requested that a U.S. shareholder be permitted to take into account its pro rata share of CFC attributes in computing the CFC group section 163(j) limitation without regard to the percentage of the U.S. shareholder's ownership interest. This approach is not adopted in the final regulations because it would require different U.S. shareholders to calculate the section 163(j) limitation differently and separately track disallowed BIE carryforwards with respect to the same CFC.

2. Clarifications to Rules for Determining a Specified Group and Specified Group Members

The final regulations make several clarifying changes to the rules for determining a specified group and specified group members. First, the definition of specified group in § 1.163(j)–7(d)(2)(i) is modified to clarify that a specified group may exist when a qualified U.S. person directly owns all of its applicable CFCs rather than owning one or more chains of applicable CFCs.

Second, the definition of specified group member in § 1.163(j)–7(d)(3) is modified to clarify that there must be at least two applicable CFCs in a specified group in order for any applicable CFC to be a specified group member and for a CFC group election to be available.

Finally, the rule in § 1.163(j)–7(d)(2)(vii) (concerning when a specified group ceases to exist) is modified to clarify that references to the common parent in § 1.1502–75(d)(1),

(d)(2)(i) through (d)(2)(ii), and (d)(3)(i) through (d)(3)(iv) are treated as references to the specified group parent. This is the case even if the specified group parent is a qualified U.S. person and therefore not included in the specified group.

H. CFC Group Election

1. Timing and Revocation of the CFC Group Election

Proposed § 1.163(j)–7(e) provided rules and procedures for treating specified group members as CFC group members and for determining a CFC group. Proposed § 1.163(j)–7(e)(5) provided rules for making and revoking a CFC group election. Under the 2020 Proposed Regulations, a CFC group election could not be revoked with respect to any specified period of the specified group that begins during the 60-month period following the last day of the first specified period for which the election was made. Similarly, once revoked, a CFC group election could not be made again with respect to any specified period of the specified group that begins during the 60-month period following the last day of the first specified period for which the election was revoked. The preamble to the proposed regulations requested comments as to whether a specified group that does not make a CFC group election when it first comes into existence (or for the first specified period following 60 days after the date of publication of the Treasury decision adopting the 2020 Proposed Regulations as final in the **Federal Register**) should be precluded from making the CFC group election for the following 60-month period.

Some comments requested that taxpayers be permitted to make or revoke the CFC group election on an annual basis, due to the difficulty of predicting the effect of the election five years in advance (including the potential for changes in fact or law that could interact adversely with the CFC group election). The comments noted that, although the election is favorable in most cases, it could have unfavorable consequences in some circumstances.

Some comments recommended against imposing a 60-month waiting period on specified groups for which a CFC group election is not made for the first specified period in which a specified group exists (or the specified period beginning 60 days after the regulations are finalized), because taxpayers may lack the resources or information to determine whether to make the election for the first taxable year in which it is available. Furthermore, some comments asked for clarification concerning when the 60-month period begins if a CFC group election is made or revoked with respect to a prior specified period. Finally, one comment recommended that the Treasury Department and the IRS consider providing an exception to the 60-month rule that would allow a CFC group election to be revoked when there is a ''change in control.'' The comment did not suggest a definition of change in control.

The Treasury Department and the IRS have determined that taxpayers should not be permitted to revoke the CFC group election for a specified period beginning within 60 months after the specified period for which it is made or to make the CFC group election for a specified period beginning within 60 months after the specified period for which it is revoked. The CFC group rules are based in part on the consolidated return rules, which do not allow affiliated groups that have elected to file a consolidated return to discontinue the filing of a consolidated return without the consent of the Commissioner (which generally requires a showing of good cause). See § 1.1502–75(c). In addition, if a corporation ceases to be a member of a consolidated group, that corporation generally is not permitted to rejoin the consolidated group before the 61st month beginning after its first taxable year in which it ceased to be a member of the group. Section 1504(a)(3)(A).

Moreover, an annual election would enable taxpayers to use section 163(j) to inappropriately control the timing of BIE deductions. In general, the CFC group election is intended, in large part, to reduce taxpayer burden, including compliance costs and costs that might otherwise be incurred to restructure the location of debt within a CFC group solely for purposes of section 163(j), and to permit allocation of a CFC group's section 163(j) limitation to CFC group members with BIE. The CFC group election is not intended to allow taxpayers to select the most favorable result in every taxable year.

The Treasury Department and the IRS agree that it is not necessary to impose the 60-month waiting period on specified groups that have neither made nor revoked a CFC group election. Accordingly, the final regulations do not impose a 60-month waiting period on a specified group for which a CFC group election is not made for the first specified period in which a specified group exists (or the specified period beginning 60 days after the regulations are finalized). The final regulations provide, consistent with the 2020 Proposed Regulations, that the 60-month period begins after the last day of the specified period for which the election was made or revoked. See § 1.163(j)–7(e)(5). Therefore, if an election is made or revoked with respect to a specified period, the 60-month period begins to run on the day after the end of that specified period. Finally, the Treasury Department and the IRS continue to study whether an exemption to the 60-month rule for revoking a CFC group election is appropriate when the ownership of the CFC group changes but the specified group continues and, therefore, the CFC group would also otherwise continue absent an exemption.

2. Disclosure Required for Taxable Years in Which a CFC Group Election is in Effect

Under the 2020 Proposed Regulations, a designated U.S. person makes a CFC group election by attaching a statement to its relevant Federal income tax or information return. Proposed § 1.163(j)–7(e)(5)(iv). However, the 2020 Proposed Regulations did not require a statement to be filed for taxable years following the taxable year for which an election is made. In order to facilitate ongoing disclosure of the computation of the CFC group 163(j) limitation in subsequent taxable years, the final regulations provide that (in accordance with publications, forms, instructions, or other guidance) each designated U.S. person must attach a statement to its relevant Federal income tax or information return for each of its taxable years that includes the last day of a specified period of a specified group for which a CFC group election is in effect. See § 1.163(j)–7(e)(6). The CFC group election remains in effect even if the required statement is not filed.

I. CFC Group Members With Effectively Connected Income

Proposed § 1.163(j)–7(f) provided that if a CFC group member has income that is effectively connected with the conduct of a U.S. trade or business (ECI), then ECI items and related attributes of the CFC group member are not included in the calculation of the section 163(j) limitation of the CFC group or in the allocation of the limitation among CFC group members, but are treated as items of a separate CFC (ECI deemed corporation) that is not treated as a CFC group member. A comment requested clarification concerning the proper method for allocating assets between the CFC group member and the ECI deemed corporation, which is relevant to the

allocation of BII and BIE to an excepted trade or business under § 1.163(j)–10.

As discussed in part VI of this Summary of Comments and Explanation of Revisions section, the Treasury Department and the IRS continue to study the application of section 163(j) to foreign corporations with ECI. The Treasury Department and the IRS may address these issues in future guidance and will consider the comment at that time. Before the issuance of such guidance, taxpayers should use a reasonable method for allocating assets between the CFC group member and the ECI deemed corporation. The method must be consistently applied to all CFC group members and each specified period of the CFC group after the first specified period in which it is applied.

In addition, because the Treasury Department and the IRS continue to study the application of section 163(j) to foreign corporations with ECI, the final regulations reserve on § 1.163(j)–7(f)(2) (ordering rule with § 1.163(j)–8 when a CFC group member has ECI).

J. ATI Computation of an Applicable CFC

1. Foreign Income Taxes

The 2020 Proposed Regulations provided that, for purposes of computing the ATI of a relevant foreign corporation for a taxable year, tentative taxable income takes into account a deduction for foreign income taxes. Proposed § 1.163(j)–7(g)(3). The preamble to the 2020 Proposed Regulations requested comments on whether, and the extent to which, the ATI of a relevant foreign corporation should be determined without regard to a deduction for foreign income taxes. Some comments asserted that all foreign income taxes, or foreign income taxes imposed by the country in which a CFC is organized or a tax resident, should not be taken into account as a deduction for purposes of computing a CFC's ATI. The comments asserted that not taking into account a deduction for such foreign income taxes would provide parity between CFCs and domestic corporations, which do not deduct Federal income taxes (but may deduct state and foreign taxes) in determining their ATI.

Other comments noted that, if a domestic corporation elects to claim a foreign tax credit, the deduction for foreign income taxes is disallowed under section 275(a)(4) and is not taken into account in determining the domestic corporation's ATI. Therefore, disregarding a CFC's deduction for foreign income taxes would conform the ATI of a CFC with that of a domestic corporation doing business through a foreign branch that elects to credit foreign income taxes. Another comment asserted that foreign income taxes should not be deducted to the extent a CFC's U.S. shareholders elect to credit foreign income taxes. Finally, several comments suggested that the proposed rule penalizes CFCs operating in high-tax jurisdictions.

The Treasury Department and the IRS agree that it is appropriate to determine the ATI of a relevant foreign corporation without regard to a deduction for foreign income taxes that are eligible to be claimed as a foreign tax credit. Accordingly, the final regulations provide that no deduction for foreign income taxes (within the meaning of § 1.960–1(b)) is taken into account for purposes of determining the ATI of a relevant foreign corporation. Thus, regardless of whether an election is made to claim a credit for these foreign income taxes, the foreign income taxes do not reduce ATI.

2. Anti-Abuse Rule

Proposed § 1.163(j)–7(g)(4) provided that, if certain conditions are met, when one specified group member or applicable partnership (specified borrower) pays interest to another specified group member or applicable partnership (specified lender), and the payment is BIE to the specified borrower and income to the specified lender, then the ATI of the specified borrower is increased by the amount necessary for the BIE of the specified borrower not to be limited under section 163(j). A partnership is an applicable partnership if at least 80 percent of the interests in capital or profits is owned, in the aggregate, directly or indirectly through one or more other partnerships, by specified group members of the same specified group.

The final regulations provide that, for purposes of determining whether a partnership is an applicable partnership, a partner's interests in the profits and capital of the partnership are determined in accordance with the rules and principles of § 1.706–1(b)(4)(ii) through (iii).

K. Safe Harbor

Proposed § 1.163(j)–7(h) provided a safe-harbor election for stand-alone applicable CFCs and CFC groups. If the safe-harbor election is in effect for a taxable year of a stand-alone applicable CFC or specified taxable year of a CFC group member, no portion of the BIE of the stand-alone applicable CFC or of each CFC group member, as applicable, is disallowed under section 163(j). The safe-harbor election is intended to reduce the compliance burden with respect to applicable CFCs that would not have disallowed BIE if they applied section 163(j) by allowing taxpayers in general to use subpart F income and GILTI items in lieu of ATI. In general, the safe-harbor election measures whether BIE is less than or equal to the sum of 30 percent of the applicable CFC's subpart F income and GILTI (not to exceed the applicable CFC's taxable income), taking into account only amounts attributable to a non-excepted trade or business.

The preamble to the 2020 Proposed Regulations requested comments on appropriate modifications, if any, to the safe-harbor election that would further the goal of reducing the compliance burden on stand-alone applicable CFCs and CFC groups that would not have disallowed BIE if they applied the section 163(j) limitation. In this regard, comments requested that the safe harbor be expanded to cover applicable CFCs and CFC groups that have BII that is greater than or equal to BIE. The comments noted that an application of section 163(j) would not disallow any BIE of an applicable CFC or CFC group that has net BII.

The Treasury Department and the IRS agree that it is appropriate for the safe-harbor to be expanded as requested because an application of section 163(j) in this case would not disallow any BIE. Accordingly, the final regulations provide that a safe-harbor election may be made with respect to a stand-alone applicable CFC or CFC group if its BIE does not exceed either (i) its BII, or (ii) 30 percent of the lesser of its eligible amount (in general, the sum of the applicable CFC's subpart F income and GILTI, taking into account only items properly allocable to a non-excepted trade or business) or its qualified tentative taxable income (that is, the applicable CFC's tentative taxable income determined by taking into account only items properly allocable to a non-excepted trade or business). Thus, under the final regulations, if either a stand-alone applicable CFC or a CFC group has BII that is greater than or equal to its BIE, it is not necessary to determine its qualified tentative taxable income or eligible amount in order to make the safe-harbor election. However, consistent with the 2020 Proposed Regulations, the election may not be made for a CFC group that has pre-group disallowed BIE carryforwards.

In addition, consistent with the changes described in part V.B of the Summary of Comments and Explanation of Revisions section (providing that negative ATI of a CFC group member is taken into account for purposes of

computing the CFC group's section 163(j) limitation), the determination of the eligible amount of a stand–alone applicable CFC or a CFC group has been modified to account for tested losses, if any, of an applicable CFC. See § 1.163(j)–7(h)(3). Rather than providing a formula for calculating each component of the eligible amount, the final regulations rely on existing rules under sections 951, 951A, 245A (to the extent provided in section 964(e)(4)), and 250 to determine the taxable income a domestic corporation would have had if it wholly owned the stand–alone applicable CFC or CFC group members and had no other assets or income. See § 1.163(j)–7(h)(3).

L. Increase in Adjusted Taxable Income of United States Shareholders

Proposed § 1.163(j)–7(j) provided rules that increase a U.S. shareholder's ATI by a portion of its specified deemed inclusions (as defined in § 1.163(j)–1(b)(1)(ii)(G)). Several comments were received on these rules. The Treasury Department and the IRS continue to study the method for determining the portion of the specified deemed inclusions of a U.S. shareholder that should increase its ATI. The Treasury Department and the IRS may address this issue in future guidance and will consider the comments at that time. Accordingly, the final regulations reserve on § 1.163(j)–7(j).

VI. Comments on and Changes to Proposed § 1.163(j)–8: Application of the Business Interest Deduction Limitation to Foreign Persons With Effectively Connected Income

Proposed § 1.163(j)–8 provides rules for applying section 163(j) to a nonresident alien individual or foreign corporation with ECI. The Treasury Department and the IRS continue to study methods of determining the amount of deductible BIE and disallowed business interest expense carryforwards that are allocable to ECI, such as the ATI ratio defined in proposed § 1.163(j)–8(c)(1)(ii) and the interaction of proposed § 1.163(j)–8 with the tiered partnership rules in proposed § 1.163(j)–6(j). The Treasury Department and the IRS anticipate addressing these issues in future guidance and will consider the comments at that time. Accordingly, the final regulations continue to reserve on § 1.163(j)–8.

VII. Comments on and Changes to Proposed § 1.469–9: Definition of Real Property Trade or Business

Section 469(c)(7)(C) defines real property trade or business by reference to eleven types of trades or businesses that are not defined in the statute. The 2020 Proposed Regulations, in response to questions about the application of section 469(c)(7)(C) to timberlands, provided definitions for two terms—real property development and real property redevelopment—to further clarify what constitutes a real property trade or business.

One commenter questioned why the preamble to the 2020 Proposed Regulations references the definition of ''farming'' in section 464(e), when the term ''farming business'' in section 163(j)(7)(C) is defined by reference to section 263A(e)(4) rather than to section 464(e). The commenter further noted that a section 263A(e)(4) ''farming business'' excludes not only timber but also any evergreen tree which is more than 6 years old at the time severed from the roots. The commenter posited that there is no reason why such trees should be treated differently from timber for section 163(j) purposes.

The Treasury Department and the IRS have concluded that no change is required to the definition of real property trade or business and that the definitions of ''real property development'' and ''real property redevelopment'' in proposed § 1.469–9(b)(2)(ii)(C) and (D) should be adopted in the final regulations without change. However, it should be noted that § 1.469–9(b)(2)(i)(B) references section 464(e) to exclude farming activities from the definition of real property trade or business for purposes of section 469(c)(7)(C). In promulgating § 1.469–9(b)(2)(i)(B), the Treasury Department and the IRS determined that the term ''farming'' as provided in section 464(e) is the most appropriate definition for purposes of section 469(c)(7). Section 464(e) generally excludes the cultivation and harvesting of trees (except those bearing fruit or nuts) from the definition of ''farming.'' Accordingly, the Treasury Department and the IRS note that the term ''timberland'' as used in § 1.469–9(b)(2)(ii)(C) and (D) includes evergreen trees (including those described in section 263A(e)(4)). Therefore, to the extent the evergreen trees may be located on parcels of land covered by forest, the Treasury Department and the IRS have concluded that the business activities of cultivating and harvesting such evergreen trees may be properly considered as a component of a ''real property development'' or ''real property redevelopment'' trade or business under the final regulations, and no additional clarification is needed in this regard. To the extent that any business activities of cultivating or harvesting evergreen trees do not explicitly fall within these two definitions, then such business activities may otherwise qualify under one or more of the other terms provided in section 469(c)(7)(C). Providing a definition for any of the remaining undefined terms in section 469(c)(7)(C) is beyond the scope of the final regulations.

VIII. Comments on and Changes to Proposed § 1.163(j)–10

A. Proposed Limitation on Corporate Look-Through Rules

For purposes of determining the extent to which a shareholder's basis in the stock of a domestic non-consolidated C corporation or CFC is allocable to an excepted or non-excepted trade or business under § 1.163(j)–10, § 1.163(j)–10(c)(5)(ii)(B) provides several look-through rules whereby the shareholder ''looks through'' to the corporation's basis in its assets.

The application of these look-through rules may produce distortive results in certain situations. For example, assume Corporation X's basis in its assets is split equally between X's excepted and non-excepted trades or businesses, and that (as a result) X has a 50 percent exempt percentage applied to its interest expense. However, rather than operate its excepted trade or business directly, X operates its excepted trade or business through a wholly owned, non-consolidated subsidiary (Corporation Y), and each of X and Y borrows funds from external lenders. Assuming for purposes of this example that neither the anti-avoidance rule in § 1.163(j)–2(h) nor the anti-abuse rule in § 1.163(j)–10(c)(8) applies, Y's interest expense would not be subject to the section 163(j) limitation because Y is engaged solely in an excepted trade or business. Moreover, a portion of X's interest expense also would be allocable to an excepted trade or business by virtue of the application of the look-through rule in § 1.163(j)–10(c)(5)(ii)(B)(2) to X's basis in Y's stock.

The anti-avoidance rule in § 1.163(j)–2(h) and the anti-abuse rule in § 1.163(j)–10(c)(8) would preclude the foregoing result in certain circumstances. However, proposed § 1.163(j)–10(c)(5)(ii)(D)(*2*) would modify the look-through rule for domestic non-consolidated C corporations and CFCs to limit the potentially distortive effect of this look-through rule on tiered structures in situations to which the anti-avoidance and anti-abuse rules do not apply. More specifically, proposed § 1.163(j)–10(c)(5)(ii)(D)(*2*) would modify the look-through rule for non-consolidated C

corporations to provide that, for purposes of determining a taxpayer's basis in its assets used in excepted and non-excepted trades or businesses, any such corporation whose stock is being looked through may not itself apply the look-through rule (Limited Look-Through Rule).

For example, P wholly and directly owns S1, which wholly and directly owns S2. Each of these entities is a non-consolidated C corporation to which the small business exemption does not apply. In determining the extent to which its interest expense is subject to the section 163(j) limitation, S1 may look through the stock of S2 for purposes of allocating S1's basis in its S2 stock between excepted and non-excepted trades or businesses. However, in determining the extent to which P's interest expense is subject to the section 163(j) limitation, S1 may not look through the stock of S2 for purposes of allocating P's basis in its S1 stock between excepted and non-excepted trades or businesses.

Several commenters objected to the Limited Look-Through Rule. One commenter stated that the Limited Look-Through Rule should not be finalized because it would penalize taxpayers that incur debt at the holding company level but hold excepted trade or business assets through tiers of non-consolidated subsidiaries (such as CFCs) for non-tax reasons. The commenter contended that this result is especially distortive in regulated industries, such as utilities, in which debt financing at the operating-entity level may be limited or prohibited by regulators. Another commenter noted that the Limited Look-Through Rule potentially conflicts with the single C corporation approach for CFCs under proposed § 1.163(j)–7(c)(2)(iii).

The Treasury Department and the IRS remain concerned that application of the look-through rules in § 1.163(j)–10 to non-consolidated C corporations may produce distortive results in certain situations. However, as stated in the preamble to the 2020 Proposed Regulations, the Treasury Department and the IRS are aware that taxpayers are organized into multi-tiered structures for legitimate, non-tax reasons and that it may be commercially difficult or impossible for taxpayers to limit or reduce the number of tiers in many cases. The Treasury Department and the IRS have therefore determined that such multi-tiered structures should be able to apply the look through rules in § 1.163(j)–10. However, the Treasury Department and the IRS have also determined that the application of the look through rules in § 1.163(j)–10 is inappropriate in cases where a principal purpose of a multi-tiered structure is to benefit from distortion under those rules.

Thus, the final regulations replace the Limited Look-Through Rule with an anti-abuse rule providing that, for purposes of applying the look-through rules in § 1.163(j)–10(c)(5)(ii)(B) and (C) to a non-consolidated C corporation (upper-tier entity), that upper-tier entity may not apply those look-through rules to a lower-tier non-consolidated C corporation if a principal purpose for borrowing funds at the upper-tier entity level or adding an upper-tier or lower-tier entity to the ownership structure is increasing the amount of the taxpayer's basis allocable to excepted trades or businesses.

For example, P wholly and directly owns S1 (the upper-tier entity), which wholly and directly owns S2. Each of S1 and S2 is a non-consolidated C corporation to which the small business exemption does not apply, and S2 is engaged in an excepted trade or business. With a principal purpose of increasing the amount of its basis allocable to excepted trades or businesses, P has S1 (rather than S2) borrow funds from a third party. S1 may not look through the stock of S2 (and may not apply the asset basis look-through rule described in § 1.163(j)–10(c)(5)(ii)(B)(*2*)(*iv*)) for purposes of P's allocation of its basis in its S1 stock between excepted and non-excepted trades or businesses; instead, S1 must treat its stock in S2 as an asset used in a non-excepted trade or business for that purpose. However, S1 may look through the stock of S2 for purposes of S1's allocation of its basis in its S2 stock between excepted and non-excepted trades or businesses.

B. 80-Percent Ownership Threshold in § 1.163(j)–10(c)(7)(i)

A commenter recommended eliminating the 80-percent ownership threshold in § 1.163(j)–10(c)(7)(i) for applying the look-through rules in § 1.163(j)–10(c)(5)(ii) to non-consolidated C corporations. More specifically, the commenter recommended providing that interest expense allocable to an equity interest in an entity engaged in an electing real property trade or business (RPTOB) be treated as allocated to an electing RPTOB to the extent the assets of that entity are attributable to an electing RPTOB, regardless of the level of the equity interest. The commenter stated that, because a less-than-80-percent interest in a subsidiary corporation is treated as allocable to a ''trade or business'' for purposes of the section 163(j) limitation, it is appropriate to treat the stock of that corporation as allocable to an electing RPTOB if the subsidiary corporation is an electing RPTOB, without regard to an ownership threshold.

As stated in the preamble to the 2018 Proposed Regulations, the Treasury Department and the IRS have determined that non-consolidated entities generally should not be aggregated for purposes of applying the section 163(j) limitation. Moreover, as stated in the preamble to T.D. 9905, the Treasury Department and the IRS have determined that an 80-percent ownership threshold is appropriate for domestic non-consolidated C corporations because, unlike a partnership, a corporation generally is respected as an entity separate from its owner(s) for tax purposes and, unlike a partnership or an S corporation, a C corporation is not taxed as a flow-through entity. Thus, the final regulations do not accept the commenter's recommendation.

C. Application of Look-Through Rules to Small Businesses

Section 1.163(j)–10(c)(5)(ii)(D) provides that a taxpayer may not apply the look-through rules in § 1.163(j)–10(c)(5)(ii) to a partnership, S corporation, or non-consolidated C corporation that is eligible for the small business exemption under section 163(j)(3) and § 1.163(j)–2(d)(1), unless that entity elects under § 1.163(j)–9 for a trade or business to be an electing RPTOB or an electing farming business. Under § 1.163(j)–9(b)(2)(i), an exempt small business entity that conducts a RPTOB may make a ''protective election'' for its RPTOB to be an excepted trade or business.

A commenter noted that, if a taxpayer indirectly holds an interest in an electing RPTOB through an exempt upper-tier partnership that does not conduct an excepted trade or business, the taxpayer would be ineligible to allocate the taxpayer's interest expense to the electing RPTOB under T.D. 9905. To ensure that the owners of an exempt small business entity are treated consistently regardless of the entity's overall capital structure, the commenter recommended either (i) allowing the owners of an exempt small business entity to apply the look-through rules without the need for a ''protective election'' to be an excepted trade or business, or (ii) allowing the small business entity to elect to opt into the look-through rules.

The Treasury Department and the IRS appreciate the comments received on the application of the look-through rules

to small businesses. These comments concern provisions in T.D. 9905 that were not revised in the 2020 Proposed Regulations, and the Treasury Department and the IRS have determined that addressing these comments would exceed the scope of the final regulations. However, the Treasury Department and the IRS will continue to consider these comments for purposes of potential future guidance.

D. Alternative to Asset Basis Allocation

A commenter recommended amending § 1.163(j)–10 to permit taxpayers to use a fair market value allocation method when determining allocations of BIE for purposes of section 163(j). To discourage taxpayers from shifting allocation methods, the commenter recommended that a fair market value allocation election be irrevocable absent consent from the IRS.

As explained in the preamble to T.D. 9905, disputes between taxpayers and the IRS over the fair market value of an asset are a common and costly occurrence. Moreover, in the TCJA, Congress repealed the use of fair market value in the apportionment of interest expense under section 864 of the Code (see section 14502(a) of the TCJA). As noted in the preamble to T.D. 9905, Congress stated that the ability to elect to allocate interest expense under section 864 on the basis of fair market value of assets has led to inappropriate results and needless complexity. For these and other reasons, the Treasury Department and the IRS continue to believe that allocating interest expense based on relative amounts of asset basis is more appropriate than a regime based on the relative fair market value of assets. Thus, the final regulations do not accept this comment.

Applicability Dates

These final regulations apply to taxable years beginning on or after March 22, 2021. See additional discussion in part VI of the Special Analyses addressing the Congressional Review Act.

Some provisions regarding the choice to apply the final regulations to taxable years beginning before the applicability date have changed from the 2020 Proposed Regulations. Commenters noted that these provisions in the 2020 Proposed Regulations were complicated. More specifically, in the 2020 Proposed Regulations, retroactive application of certain provisions requires application of all of the section 163(j) regulations contained in T.D. 9905, some or all of the provisions in these final regulations, and other specified provisions. Additionally, most provisions had to be applied to subsequent taxable years once applied for a taxable year (subsequent year application). As provided in this section, to simplify the applicability date provisions and provide certainty to taxpayers, these final regulations, except as otherwise described later in this Applicability Dates section, require taxpayers choosing to apply the final regulations to a taxable year beginning before the applicability date to apply the section 163(j) regulations contained in T.D. 9905 as modified by these final regulations, along with other specified provisions, and require subsequent year application.

Except for §§ 1.163–15 and 1.1256(e)–2, pursuant to section 7805(b)(7), taxpayers and their related parties, within the meaning of sections 267(b) (determined without regard to section 267(c)(3)) and 707(b)(1), may choose to apply the rules of these final regulations to a taxable year beginning after December 31, 2017,[1] and before March 22, 2021, provided that they consistently apply the section 163(j) regulations contained in T.D. 9905 as modified by these final regulations and, if applicable, §§ 1.263A–9, 1.263A–15, 1.381(c)(20)–1, 1.382–1, 1.382–2, 1.382–5, 1.382–6, 1.382–7, 1.383–0, 1.383–1,1.469–9, 1,469–11, 1.704–1, 1.882–5, 1.1362–3, 1.1368–1, 1.1377–1, 1.1502–13, 1.1502–21, 1.1502–36, 1.1502–79, 1.1502–90, 1.1502–91 through 1.1502–99 (to the extent they effectuate the rules of §§ 1.382–2, 1.382–5, 1.382–6, and 1.383–1), and 1.1504–4 contained in T.D. 9905 as modified by these final regulations to that taxable year and each subsequent taxable year.

Pursuant to section 7805(b)(7), taxpayers and their related parties, within the meaning of sections 267(b) (determined without regard to section 267(c)(3)) and 707(b)(1), may apply the provisions of § 1.163–15 or 1.1256(e)–2 of the final regulations for a taxable year beginning after December 31, 2017, and before March 22, 2021, provided that they consistently apply the rules in § 1.163–15 or 1.1256(e)–2, as applicable, to that taxable year and each subsequent taxable year.

Alternatively, taxpayers and their related parties, within the meaning of sections 267(b) (determined without regard to section 267(c)(3)) and 707(b)(1), may rely on the rules in the 2020 Proposed Regulations to the extent provided in the 2020 Proposed Regulations.

To the extent that a rule in the 2020 Proposed Regulations is not finalized in these final regulations, taxpayers and their related parties, within the meaning of sections 267(b) (determined without regard to section 267(c)(3)) and 707(b)(1), may rely on that rule for a taxable year beginning on or after March 22, 2021, provided that they consistently follow all of the rules in the 2020 Proposed Regulations that are not being finalized to that taxable year and each subsequent taxable year beginning on or before the date the Treasury decision adopting that rule as final is applicable or other guidance regarding continued reliance is issued.

Statement of Availability of IRS Documents

The IRS Notices, Revenue Rulings, and Revenue Procedures cited in this document are published in the Internal Revenue Bulletin (or Cumulative Bulletin) and are available from the Superintendent of Documents, U.S. Government Publishing Office, Washington, DC 20402, or by visiting the IRS website at *http://www.irs.gov.*

Special Analyses

I. Regulatory Planning and Review—Economic Analysis

Executive Orders 13771, 13563, and 12866 direct agencies to assess costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits, including potential economic, environmental, public health and safety effects, distributive impacts, and equity. Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, reducing costs, harmonizing rules, and promoting flexibility. For purposes of E.O. 13771 this rule is regulatory.

These final regulations have been designated by the Office of Information and Regulatory Affairs (OIRA) as subject to review under Executive Order 12866 pursuant to the Memorandum of Agreement (MOA, April 11, 2018) between the Treasury Department and the Office of Management and Budget (OMB) regarding review of tax regulations. OIRA has designated these

[1] Under the 2020 Proposed Regulations, for purposes of determining applicability dates, the term ''related party'' has the meaning provided in sections 267(b) and 707(b)(1). Section 267(c)(3) broadens the scope of related parties under section 267(b) by potentially treating individual partners in a partnership as related to a corporation owned by the partnership, even if the individual partners own only a small interest in the partnership. The Treasury Department and the IRS have determined that this broad scope is unnecessary in this context and may impede the ability of certain taxpayers to choose to apply the regulations to pre-applicability taxable years. Accordingly, under these final regulations, for purposes of determining applicability dates, the term ''related party'' is determined without regard to section 267(c)(3).

regulations as economically significant under section 1(c) of the MOA. Accordingly, the OMB has reviewed these regulations.

A. Need for the Final Regulations

The Tax Cuts and Jobs Act (TCJA) substantially modified the statutory rules of section 163(j) to limit the amount of net business interest expense that can be deducted in the current taxable year. Because this limitation on deduction for business interest expense is relatively new, taxpayers would benefit from regulations that explain key terms and calculations. The Treasury Department and the IRS published proposed regulations in December 2018 (2018 Proposed Regulations) and published final regulations in September 2020 (T.D. 9905) to finalize most sections of the 2018 Proposed Regulations. Concurrently with the publication of T.D. 9905, the Treasury Department and the IRS published proposed regulations (2020 Proposed Regulations) to provide additional section 163(j) limitation guidance to T.D. 9905 in response to certain comments to the 2018 Proposed Regulations. The final regulations are needed to bring clarity to instances where the meaning of the statute was unclear and to respond to comments received on the 2020 Proposed Regulations.

B. Background and Overview

Section 163(j), substantially revised by the TCJA, provides a set of statutory rules that impose a limitation on the amount of business interest expense that a taxpayer may deduct for Federal tax purposes. This limitation does not apply to businesses with gross receipts of $25 million or less (inflation adjusted). This provision has the general effect of putting debt-financed investment by businesses on a more equal footing with equity-financed investment, a treatment that Congress believed would lead to a more efficient capital structure for firms. See Senate Budget Explanation of the Bill as Passed by SFC (2017–11–20) at pp. 163–4. Subsequently, the Coronavirus Aid, Relief, and Economic Security Act (CARES Act) amended section 163(j) to provide special rules relating to the ATI limitation for taxable years beginning in 2019 or 2020.

C. Economic Analysis

1. Baseline

In this analysis, the Treasury Department and the IRS assess the economic effects of the final regulations relative to a no-action baseline reflecting anticipated Federal income tax-related behavior in the absence of the final regulations.

2. Summary of Economic Effects

The final regulations provide certainty and clarity to taxpayers regarding terms and calculations that are contained in section 163(j), which was substantially modified by TCJA. In the absence of this clarity, the likelihood that different taxpayers would interpret the rules regarding the deductibility of business interest expense (BIE) differently would be exacerbated. In general, overall economic performance is enhanced when businesses face more uniform signals about tax treatment. Certainty and clarity over tax treatment also reduce compliance costs for taxpayers.

For those situations where taxpayers would generally adopt similar interpretations of the statute even in the absence of guidance, the final regulations provide value by helping to ensure that those interpretations are consistent with the purpose of the statute. For example, the final regulations may specify a tax treatment that few or no taxpayers would adopt in the absence of specific guidance.

The Treasury Department and the IRS project that the final regulations will have an annual economic effect greater than $100 million ($2020) relative to the no-action baseline. This determination is based on the substantial volume of business interest payments in the economy [2] and the general responsiveness of business investment to effective tax rates,[3] one component of which is the deductibility of interest expense. Based on these two factors, even modest changes in the deductibility of interest payments (and in the certainty of that deductibility) provided by the final regulations, relative to the no-action baseline, can be expected to have annual effects greater than $100 million. This claim is particularly likely to hold for the first set of general section 163(j) guidance that is promulgated following major legislation, such as TCJA, and for other major guidance, which the Treasury Department and the IRS have determined includes the final regulations.

Regarding the nature of the economic effects, the Treasury Department and the IRS project that the final regulations will increase investment in the United States and increase the proportion that is debt-financed, relative to the no-action baseline. They have further determined that these effects are consistent with the intent and purpose of the statute. Because the final regulations are projected to lead to a decrease in Federal tax revenue relative to the no-action baseline, there may be an increase in the Federal deficit relative to the no-action baseline. This may lead to a decrease in investment by taxpayers not directly affected by these final regulations, relative to the no-action baseline. This effect should be weighed against the enhanced efficiency arising from the clarity and enhanced consistency with the intent and purpose of the statute provided by these regulations. The Treasury Department and the IRS have determined that the final regulations provide a net benefit to the U.S. economy relative to the no-action baseline.

The Treasury Department and the IRS have not undertaken more precise quantitative estimates of these effects because many of the definitions and calculations under section 163(j) are new and many of the economic decisions that are implicated by these final regulations involve highly specific taxpayer circumstances. The Treasury Department and the IRS do not have readily available data or models to estimate with reasonable precision the types and volume of different financing arrangements that taxpayers might undertake under the final regulations versus the no-action baseline.

In the absence of such quantitative estimates, the Treasury Department and the IRS have undertaken a qualitative analysis of the economic effects of the final regulations relative to the no-action baseline and relative to alternative regulatory approaches. This analysis is presented in Part I.C.3 of this Special Analyses.

No comments on the economic analysis of the 2020 Proposed Regulations were received.

3. Economic Effects of Specific Provisions

a. Definition of Interest

T.D. 9905 set forth several categories of amounts and transactions that generate interest for purposes of section 163(j). The final regulations provide further guidance on the definition of interest relevant to the calculation of interest expense and interest income. In particular, the final regulations provide rules under which the dividends paid by a regulated investment company (RIC) that earns net business interest income (BII) (referred to as section

[2] Interest deductions in tax year 2013 for corporations, partnerships, and sole proprietorships were approximately $800 billion.

[3] See E. Zwick and J. Mahon, ''Tax Policy and Heterogeneous Investment Behavior,'' at *American Economic Review* 2017, 107(1): 217–48 and articles cited therein.

163(j) interest dividends) are to be treated as interest income by the RIC's shareholders. That is, under the final regulations, certain interest income earned by the RIC and paid to a shareholder as a dividend is treated as if the shareholder earned the interest income directly for purposes of section 163(j).

These final regulations clarify that reported dividends paid by RICs can include designations of BII for the purposes of the section 163(j) limitation. This clarification makes clear that investment through RICs is treated, for purposes of the section 163(j) limitation, similarly to investment through other possible debt instruments. To the extent that taxpayers believed, in the absence of the final regulations, that dividends paid by RICs are not treated as BII for the purposes of the section 163(j) limitation, then taxpayers may respond to the final regulations by increasing investment in RICs. The Treasury Department and the IRS have determined that this treatment is consistent with the intent and purpose of the statute.

Affected Taxpayers. The Treasury Department and the IRS have determined that the rules regarding section 163(j) interest dividends will potentially affect approximately 10,000 RICs. The Treasury Department and the IRS do not have readily available data on the number of RIC shareholders that would receive section 163(j) interest dividends that the shareholder could treat as BII for purposes of the shareholder's section 163(j) limitation. They further do not have data on the volume of dividends that would be eligible for this treatment.

b. Provisions Related to Partnerships

i. Trading Partnerships

Section 163(j) limits the deductibility of interest expense at the partnership level. The final regulations address commenter concerns about the interaction between this section 163(j) limitation and the section 163(d) partner level limitation on interest expense that existed prior to TJCA. Under logic described in the preamble to the 2018 Proposed Regulations, section 163(j) limitations would apply at the partnership level while section 163(d) limitations would apply at the partner level and these tests would be applied independently. Commenters suggested and the Treasury Department and the IRS have agreed that the correct interpretation of the statute is to exempt interest expense that is limited at the partner level by section 163(d) from the partnership-level section 163(j) limitation in accordance with the language of section 163(j)(5).

The final regulations provide that interest expense at the partnership level that is allocated to non-materially participating partners subject to section 163(d) is not included in the section 163(j) limitation calculation of the partnership. Generally, the section 163(d) limitation is more generous than the section 163(j) limitation. Relative to the 2018 Proposed Regulations, this change may encourage these partners to incur additional interest expense because they will be less likely to be limited in their ability to use it to offset other income. Commenters argued that exempting from section 163(j) any interest expense allocated to non-materially participating partners subject to section 163(d) will treat this interest expense in the same way as the interest expense generated through separately managed accounts, which are not subject to section 163(j) limitations.

The Treasury Department and the IRS project that the final regulations will result in additional investment in trading partnerships and generally higher levels of debt in any given trading partnership relative to the 2018 Proposed Regulations. Because investments in trading partnerships may be viewed as economically similar to investments in separately managed accounts arrangements, they further project that the final regulations, by making the tax treatments of these two arrangements generally similar, will improve U.S. economic performance relative to the no-action baseline.

Number of Affected Taxpayers. The Treasury Department and the IRS have determined that the rules regarding trading partnerships will potentially affect approximately 275,000 partnerships, not including their partners. This number was reached by determining, using data for the 2017 taxable year, the number of Form 1065 and Form 1065–B filers that (1) completed Schedule B to Form 1065 and marked box b, c, or d in question 1 to denote limited partnership, limited liability company, or limited liability partnership status; and (2) have a North American Industry Classification System (NAICS) code starting with 5231 (securities and commodity contracts intermediation and brokerage), 5232 (securities and commodity exchanges), 5239 (other financial investment activities), or 5259 (other investment pools and funds). Additionally, the Treasury Department and the IRS have determined that the rules regarding publicly traded partnerships will potentially affect approximately 80 partnerships, not including their partners. This number was reached by determining, using data for the 2017 taxable year, the number of Form 1065 and 1065–B filers with gross receipts exceeding $25 million that answered ''yes'' to question 5 on Schedule B to Form 1065 denoting that the entity is a publicly traded partnership. The Treasury Department and the IRS do not have readily available data on the number of filers that are tax shelters that are potentially affected by these provisions.

ii. Self-Charged Lending

The 2018 Proposed Regulations requested comments on the treatment of lending transactions between a partnership and a partner (self-charged lending transactions). Suppose that a partnership receives a loan from a partner and allocates the resulting interest expense to that partner. Prior to TCJA, the interest income and interest expense from this loan would net precisely to zero on the lending partner's tax return. Under section 163(j) as revised by TCJA, however, the partnership's interest expense deduction may now be limited. Therefore, in absence of specific regulatory guidance, the lending partner may receive interest income from the partnership accompanied by less-than-fully-offsetting interest expense. Instead, the lending partner would receive excess business interest expense (EBIE), which would not be available to offset his personal interest income. This outcome has the effect of increasing the cost of lending transactions between partners and their partnerships relative to otherwise similar financing arrangements.

To avoid this outcome, the final regulations treat the lending partner's interest income from the loan as excess business interest income (EBII) from the partnership, but only to the extent of the partner's share of any EBIE from the partnership for the taxable year. This allows the interest income from the loan to be offset by the EBIE. The business interest expense (that is, BIE) of the partnership attributable to the lending transaction will thus be treated as BIE of the partnership for purposes of applying section 163(j) to the partnership.

The Treasury Department and the IRS expect that the final regulations will lead a higher proportion of self-charged lending transactions in partnership financing, relative to the no-action baseline. In a self-charged lending transaction, the lending partner is on both sides of the transaction. It is the lender and, through the partnership, the borrower. Because of this, debt from

self-charged lending transactions is generally viewed as less risky than traditional debt, as both the lender and the borrower are incentivized to repay the loan without default. Therefore, the Treasury Department and the IRS believe that the better policy choice is to not subject self-charged lending transactions to section 163(j). The Treasury Department and the IRS further project that the final regulations will increase the proportion of partnership financing that is debt-financed relative to the no-action baseline. The Treasury Department and the IRS have determined that these effects are consistent with the intent and purpose of the statute.

Number of Affected Taxpayers. The Treasury Department and the IRS do not have readily available data to determine the number of taxpayers affected by rules regarding self-charged interest because no reporting modules currently connect these payments by and from partnerships.

c. Provisions Related to Controlled Foreign Corporations (CFCs)

i. How To Apply Section 163(j) When CFCs Have Shared Ownership

T.D. 9905 clarified that section 163(j) and the section 163(j) regulations generally apply to determine the deductibility of a CFC's BIE for tax purposes in the same manner as these provisions apply to a domestic corporation. The final regulations provide additional rules and guidance as to how section 163(j) applies to CFCs, including when CFCs have shared ownership and are eligible to be members of CFC groups.

The Treasury Department and the IRS considered three options with respect to the application of section 163(j) to CFC groups. The first option was to apply the 163(j) limitation to CFCs on a stand-alone basis, regardless of whether CFCs have shared ownership. However, if section 163(j) were applied on a stand-alone basis, business interest deductions of individual CFCs might be limited by section 163(j) even when, if calculated on a group basis, business interest deductions would not be limited.

Taxpayers could restructure or ''self-help'' to mitigate the effects of the section 163(j) limitation. Such an option would lead to restructuring costs for the taxpayer (relative to the third option, described later) with no corresponding economically productive activity.

The second option, which was proposed in the 2018 Proposed Regulations, was to allow an election to treat related CFCs in a similar manner as partnerships with respect to their U.S. shareholders. Under this option, while the section 163(j) rules would still be computed at the individual CFC level, the business interest expense of each CFC group member that was subject to section 163(j) was limited to its share of the net business interest expense of the CFC group, and the ''excess taxable income'' of a CFC could be passed up from lower-tier CFCs to upper-tier CFCs and U.S. shareholders in the same group. Excess taxable income is the amount of income by which a CFC's ATI exceeds the threshold amount of ATI below which there would be disallowed BIE.

Comments to the 2018 Proposed Regulations suggested that computing a section 163(j) limitation for each CFC and rolling up CFC excess taxable income would be burdensome for taxpayers, especially since some multinational organizations have hundreds of CFCs. In addition, comments noted that the ability to pass up excess taxable income would encourage multinational organizations to restructure such that CFCs with low interest payments and high ATI are lower down the ownership chain and CFCs with high interest payments and low ATI are higher up in the chain of ownership. Similar to the first option, this restructuring would impose costs on taxpayers without any corresponding productive economic activity.

The third option, which is adopted by the Treasury Department and the IRS in the final regulations, was to allow taxpayers to elect to apply the section 163(j) rules to CFC groups on an aggregate basis, similar to the rules applicable to U.S. consolidated groups. This option was suggested by many comments and is the approach taken in the final regulations. Under this option, a single section 163(j) limitation is computed for a CFC group by summing the items necessary for this computation (for example, current-year BIE and ATI) across all CFC group members. The CFC group's limitation is then allocated to each CFC member using allocation rules similar to those that apply to U.S. consolidated groups.

The choice to use the consolidated approach versus the stand-alone entity approach may affect the amount of interest that can be deducted. The amount of interest that can be deducted may affect the amount of subpart F income and tested income for purposes of determining the amount of inclusions under sections 951 and 951A. However, the consolidated approach applies only for purposes of computing the section 163(j) limitation and not for purposes of applying any other Code provision, such as section 951 or 951A.

This option reduces the compliance burden on taxpayers in comparison to applying the section 163(j) rules on an individual CFC basis and calculating the excess taxable income to be passed up from lower-tier CFCs to higher-tier CFCs. In comparison to the first and second options, this option also removes the incentive for taxpayers to undertake costly restructuring, since the location of interest payments and ATI among CFC group members will not affect the interest disallowance for the group. The Treasury Department and the IRS have not estimated this difference in compliance costs because they do not have readily available data or models to do so.

The final regulations also set out a number of rules to govern membership in a CFC group. These rules specify which CFCs can be members of the same CFC group, how CFCs with U.S. effectively connected income (ECI) should be treated, and the timing for making or revoking a CFC group election. These rules provide clarity and certainty to taxpayers regarding the CFC group election for section 163(j). In the absence of these regulations, taxpayers may make financing decisions or undertake restructuring based on differential interpretations of the appropriate tax treatment, an outcome that is generally inefficient relative to decisions based on the more uniform interpretation provided by the final regulations.

Number of Affected Taxpayers. The set of taxpayers affected by this rule includes any taxpayer with ownership in a CFC that is a member of a CFC group that has average gross receipts over a three-year period in excess of $25 million. The Treasury Department and the IRS estimate that there are approximately 7,500 taxpayers with two or more CFCs based on counts of e-filed tax returns for tax years 2015–2017. This estimate includes C corporations, S corporations, partnerships, and individuals with CFC ownership.

ii. Foreign Income Taxes and ATI of a CFC

The 2020 Proposed Regulations provided that the ATI of a CFC is determined by taking into account a deduction for foreign income taxes. The preamble to the 2020 Proposed Regulations requested comments on whether, and the extent to which, the ATI of a CFC should be determined without regard to a deduction for foreign income taxes. The final regulations provide that the ATI of a CFC is determined without regard to a deduction for foreign income taxes that are eligible to be claimed as a foreign tax

credit. Thus, regardless of whether an election is made to claim a credit for these foreign income taxes, the foreign income taxes do not reduce ATI.

The Treasury Department and the IRS considered three options, based on comments received, in determining the extent to which foreign income taxes paid by a CFC should be taken into account in determining its ATI. The first option would not take into account a deduction for foreign income taxes imposed by the national government of the country in which a CFC is organized or a tax resident, but would take into account a deduction for taxes imposed by sub-national levels of government. This would result in treating a CFC in an analogous manner to a domestic corporation, which does not deduct Federal income taxes (but may deduct state and foreign taxes) in determining its ATI. However, this option would result in the ATI of a CFC being determined in a different manner than the ATI of a domestic corporation doing business through a foreign branch that elects to credit foreign income taxes (as discussed in the next option). Furthermore, this option would increase (relative to the next option) the administrative and compliance burdens of taxpayers required to determine which foreign income taxes paid by a CFC are imposed by a national government and which are imposed by sub-national levels of government.

The second option considered would not take into account foreign income taxes for which an election is made to claim a foreign tax credit. This option would conform the ATI of a CFC with that of a domestic corporation doing business through a foreign branch. If a domestic corporation doing business through a foreign branch elects to claim a foreign tax credit, the deduction for foreign income taxes is disallowed under section 275(a)(4) and is not taken into account in determining the domestic corporation's ATI. However, unlike a foreign branch that has a single owner, a CFC may have multiple shareholders. Because the election to credit foreign income taxes is made at the shareholder-level, this option would require a CFC to determine which of its shareholders elects to credit foreign income taxes, thereby increasing the administrative and compliance burdens. Furthermore, some shareholders of a CFC may elect to credit foreign income taxes, while other shareholders of the CFC may not elect or may not be eligible to elect a credit (for example, because the shareholder is a foreign corporation). Since the section 163(j) limitation is determined at the CFC-level, rather than on a shareholder-by-shareholder basis, this option could result in one shareholder being affected by the election of an unrelated shareholder of the same CFC, an outcome that would generally lead to economically inefficient decision-making.

The third option, which is adopted by the Treasury Department and the IRS in the final regulations, does not take into account a deduction for foreign income taxes that are eligible to be claimed as a foreign tax credit for purposes of calculating a CFC's ATI, regardless of whether the CFC's U.S. shareholders have made an election to claim a foreign tax credit. Relative to the first and second options, this option minimizes the administrative and compliance burden of determining ATI of a CFC, and also results in the greatest amount of ATI and section 163(j) limitation. In addition, this option does not treat CFCs located in high-tax countries differently than CFCs located in low-tax countries. Otherwise similar CFCs will have similar ATIs regardless of their foreign income taxes. In this way, the rule does not penalize U.S. shareholders of CFCs with high foreign taxes.

Number of Affected Taxpayers. The population of affected taxpayers includes any taxpayer that is a U.S. shareholder of a CFC. The Treasury Department and the IRS estimate that there are approximately 10,000 to 11,000 affected taxpayers based on a count of e-filed tax returns for tax years 2015–2017. These counts include C corporations, S corporations, partnerships, and individuals with CFC ownership that meet a $25 million three-year average gross receipts threshold. The Treasury Department and the IRS do not have readily available data on the number of filers that are tax shelters that are potentially affected by these provisions.

d. Election To Use 2019 ATI To Determine 2020 Section 163(j) Limitation for Consolidated Groups

The final regulations provide that if a taxpayer filing as a consolidated group elects to substitute its 2019 ATI for its 2020 ATI, that group can use the consolidated group ATI for the 2019 taxable year, even if membership of the consolidated group changed in the 2020 taxable year. For example, suppose consolidated group C has three members in the 2019 taxable year, P, the common parent of the consolidated group, and S1 and S2, which are both wholly owned by P. In the 2019 taxable year, each member of consolidated group C had $100 of ATI on a stand-alone basis, and that consolidated group C had $300 of ATI. In the 2020 taxable year, consolidated group C sells all of the stock of S2 and acquires all of the stock of a new member, S3. In the 2019 taxable year, S3 had $50 in ATI on a stand-alone basis. Under the final regulations, consolidated group C may elect to use $300 in ATI from 2019 as a substitute for its ATI in the 2020 taxable year.

The Treasury Department and the IRS considered as an alternative basing the 2019 ATI on the membership of the consolidated group in the 2020 taxable year. In the example in the previous paragraph, this approach would subtract out the $100 in ATI from S2 and add the $50 in ATI from S3, for a total of $250 in 2019 ATI that could potentially be substituted for 2020 ATI for consolidated group C. This approach would add burden to taxpayers relative to the final regulations by requiring additional calculations and tracking of ATI on a member-by-member basis to determine the amount of 2019 ATI that can be used in the 2020 taxable year without providing any general economic benefit.

In addition, the 2019 tax year will have closed for most taxpayers by the time the final regulations will be published. This implies that a final rule based on the consolidated group composition in the 2019 taxable year to calculate the amount of 2019 ATI that can be used in the 2020 taxable year will, relative to the alternative approach of using the composition in the 2020 taxable year, reduce the incentive for taxpayers to engage in costly mergers, acquisitions, or divestures to achieve a favorable tax result for those taxpayers for whom the 2020 taxable year has not closed by the time the final regulations are published.

Number of Affected Taxpayers. The Treasury Department and the IRS estimate that approximately 34,000 corporate taxpayers filed a consolidated group tax return for tax year 2017. This represents an upper-bound of the number of taxpayers affected by the final rule as not all consolidated groups would need to calculate the amount of section 163(j) interest limitation in tax years 2019 and 2020.

II. Paperwork Reduction Act

The collection of information in the final regulations has been submitted to the OMB for review in accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3507(d)) (PRA). An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid OMB control number.

Books or records relating to a collection of information must be

retained as long as their contents may become material in the administration of any internal revenue law. Generally, tax returns and return information are confidential, as required by section 6103 of the Code.

iv. Collections of Information

The collections of information subject to the PRA in the final regulations are in §§ 1.163(j)–6(d)(5), 1.163(j)–6(g)(4), 1.163(j)–7(e)(5)(iv), 1.163(j)–7(e)(6), and 1.163(j)–7(h)(5).

The collections of information in §§ 1.163(j)–6(d)(5) and 1.163(j)–6(g)(4) are required to make two elections relating to changes made to section 163(j) by the CARES Act. The election under § 1.163(j)–6(d)(5) is for a passthrough taxpayer to use the taxpayer's ATI for the last taxable year beginning in 2019 as its ATI for any taxable year beginning in 2020, in accordance with section 163(j)(10)(B). The election under § 1.163(j)–6(g)(4) relates to EBIE of a partnership for any taxable year beginning in 2019 that is allocated to a partner. Section 163(j)(10)(A)(ii)(II) provides that, unless the partner elects out, in 2020, the partner treats 50 percent of the EBIE as not subject to the section 163(j) limitation. If the partner elects out, the partner treats all EBIE as subject to the same limitations as other EBIE allocated to the partner.

Revenue Procedure 2020–22 describes the time and manner for making these elections. For both elections, taxpayers make the election by timely filing a Federal income tax return or Form 1065, including extensions, an amended Federal income tax return, amended Form 1065, or administrative adjustment request, as applicable. More specifically, taxpayers complete the Form 8990, ''Limitation on Business Interest Expense under Section 163(j),'' using the taxpayer's 2019 ATI and/or not applying the rule in section 163(j)(10)(ii)(II), as applicable. No formal statements are required to make these elections. Accordingly, the reporting burden associated with the collections of information in §§ 1.163(j)–6(d)(5) and 1.163(j)–6(g)(4) will be reflected in the IRS Form 8990 PRA Submissions (OMB control number 1545–0123).

The collections of information in § 1.163(j)–7 are required for taxpayers (1) to make or revoke an election under § 1.163(j)–7(e)(5)(iv) to apply section 163(j) to a CFC group (CFC group election) and to file an annual information statement to demonstrate how the CFC group calculated its section 163(j) limitation under § 1.163(j)–7(e)(6) (annual information statement), or (2) to make an annual election to exempt a CFC or CFC group from the section 163(j) limitation under § 1.163(j)–7(h)(5) (safe-harbor election). The CFC group election or revocation of the CFC group election are made by attaching a statement to the US shareholder's annual return. Similarly, the annual information statement must be attached to the US shareholder's annual return. The CFC group election remains in place until revoked and may not be revoked for any period beginning before 60 months following the period for which it is initially made. The safe-harbor election is made on an annual basis.

Under § 1.964–1(c)(3)(i), to make an election on behalf of a foreign corporation, the controlling domestic shareholder provides a statement with its return and notice of the election to the minority shareholders under § 1.964–1(c)(3)(ii) and (iii). See also § 1.952–2(b)–(c). These collections are necessary to ensure that the election is properly effectuated, and that taxpayers properly report the amount of interest that is potentially subject to the limitation.

B. Future Modifications to Forms To Collect Information

At this time, the Treasury Department and the IRS are considering modifications to the Form 8990, ''Limitation on Business Interest Expense IRC 163(j),'' with regard to the elections under section 163(j)(10) regarding the election under §§ 1.163(j)–6(d)(5) and 1.163(j)–6(g)(4), the CFC group election, annual information statement, and safe-harbor election. Any modifications to Form 8990 would not be effective until the form cycle for the 2021 taxable year. For the PRA, the reporting burden of Form 8990 is associated with OMB control number 1545–0123. In the 2018 Proposed Regulations, Form 8990 was estimated to be required by fewer than 92,500 taxpayers.

If an additional information collection requirement is imposed through these regulations in the future, for purposes of the PRA, any reporting burden associated with these regulations will be reflected in the aggregated burden estimates and the OMB control numbers for general income tax forms or the Form 8990, ''Limitation on Business Interest Expense Under Section 163(j)''.

The forms are available on the IRS website at:

In addition, when available, drafts of IRS forms are posted for comment at *https://apps.irs.gov/app/picklist/list/draftTaxForms.htm.* IRS forms are available at *https://www.irs.gov/forms-instructions.* Forms will not be finalized until after they have been approved by OMB under the PRA.

C. Burden Estimates

The following estimates for the collections of information in the final regulations are based on the most recently available Statistics of Income (SOI) tax data.

For the collection of income in § 1.163(j)–6(d)(5), where a passthrough taxpayer elects to use the taxpayer's ATI for the last taxable beginning in 2019 as the taxpayer's ATI for any taxable year beginning in 2020, the most recently available 2017 SOI tax data indicates that, on the high end, the estimated number of respondents is 49,202. This number was determined by examining, for the 2017 tax year, Form 1065 and Form 1120–S filers with greater than $26 million in gross receipts that have reported interest expense, and do not have an NAICS code that is associated with a trade or business that normally would be excepted from the section 163(j) limitation.

For the collection of information under § 1.163(j)–6(g)(4), in which a partner elects out of treating 50 percent of any EBIE allocated to the partner in 2019 as not subject to a limitation in 2020, the Treasury Department and the IRS estimate that only taxpayers that actively want to reduce their deductions will make this election. The application of the base erosion minimum tax under section 59A depends, in part, on the amount of a taxpayer's deductions. Accordingly, the Treasury Department and the IRS estimate that taxpayers that are subject to both the base erosion minimum tax under section 59A and section 163(j) are the potential filers of this election. Using the 2017 SOI tax data, the Treasury Department estimates that 1,182 firms will make the election. This estimate was determined by examining three criteria: First, the number of taxpayers subject to section 59A, namely, C corporations with at least $500,000,000 in gross receipts, second, the portion of those taxpayers that do not have an NAICS code associated with a trade or business that is generally not subject to the section 163(j) limitation (2211 (electric power generation, transmission and distribution), 2212 (natural gas distribution), 2213 (water, sewage and other systems), 111 or 112 (farming), 531 (real property)), and, third, the portion of taxpayers satisfying the first two criteria that received a Form K–1, ''Partner's Share of Income, Deductions, Credits, etc.''

The reporting burdens associated with the information collections in §§ 1.163(j)–6(d)(5) and 1.163(j)–6(g)(4) are included in the aggregated burden estimates for OMB control numbers 1545–0074 in the case of individual filers and 1545–0123 in the case of business filers. The overall burden estimates associated with those OMB control numbers are aggregate amounts that relate to the entire package of forms associated with the applicable OMB control number and will in the future include, but not isolate, the estimated burden of the tax forms that will be created or revised as a result of the information collections in these regulations. No burden estimates specific to §§ 1.163(j)–6(d)(5) and 1.163(j)–6(g)(4) of the final regulations are currently available.

The Treasury Department and the IRS request comments on all aspects of the forms that reflect the information collection burdens related to the final regulations, including estimates for how much time it would take to comply with the paperwork burdens related to the forms described and ways for the IRS to minimize the paperwork burden.

For the collections of information in § 1.163(j)–7, namely the CFC group election and annual statement, and the safe-harbor election, and the corresponding notice under § 1.964–1(c)(3)(iii), the most recently available 2017 SOI tax data indicates that, on the high end, the estimated number of respondents is 4,980 firms. This number was determined by examining, for the 2017 tax year, Form 1040, Form 1120, Form 1120–S, and Form 1065 filers with greater than $26 million in gross receipts that filed a Form 5471, Information Return of U.S. Persons With Respect to Certain Foreign Corporations, where an interest expense amount was reported on Schedule C of the Form 5471.

The estimated number of respondents that could be subject to the collection of information for the CFC group or safe-harbor election is 4,980. The estimated annual burden per respondent/recordkeeper varies from 0 to 30 minutes, depending on individual circumstances, with an estimated average of 15 minutes. The estimated total annual reporting and/or recordkeeping burden is 1,245 hours (4,980 respondents * 15 minutes). The estimated annual cost burden to respondents is $95 per hour. Accordingly, we expect the total annual cost burden for the CFC group election and safe-harbor election statements to be $118,275 (4,980 * .25 * $95).

III. Regulatory Flexibility Act

It is hereby certified that the final regulations will not have a significant economic impact on a substantial number of small entities.

This certification can be made because the Treasury Department and the IRS have determined that the number of small entities that are affected as a result of the regulations is not significant. These rules do not disincentivize taxpayers from their operations, and any burden imposed is not significant because the cost of implementing the rules, if any, is low.

As discussed in the 2018 Proposed Regulations, section 163(j) provides exceptions for which many small entities will qualify. First, under section 163(j)(3), the limitation does not apply to any taxpayer, other than a tax shelter under section 448(a)(3), which meets the gross receipts test under section 448(c) for any taxable year. A taxpayer meets the gross receipts test under section 448(c) if the taxpayer has average annual gross receipts for the 3-taxable year period ending with the taxable year that precedes the current taxable year that do not exceed $26,000,000. The gross receipts threshold is indexed annually for inflation. Because of this threshold, the Treasury Department and the IRS project that entities with 3-year average gross receipts below $26 million will not be affected by these regulations except in rare cases.

Section 163(j) provides that certain trades or businesses are not subject to the limitation, including the trade or business of performing services as an employee, electing real property trades or businesses, electing farming businesses, and certain utilities as defined in section 163(j)(7)(A)(iv). Under the 2018 Proposed Regulations, taxpayers that otherwise qualified as

real property trades or businesses or farming businesses that satisfied the small business exemption in section 448(c) were not eligible to make an election to be an electing real property trade or business or electing farming business. Under T.D. 9905, however, those taxpayers are eligible to make an election to be an electing real property trade or business or electing farming business. Additionally, T.D. 9905 provides that certain utilities not otherwise excepted from the limitation can elect for a portion of their non-excepted utility trade or business to be excepted from the limitation. Any economic impact on any small entities as a result of the requirements in the final regulations, not just the requirements that impose a PRA burden, is not expected to be significant because the cost of implementing the rules, if any, is low.

The Treasury Department and the IRS do not have readily available data on the number of filers that are tax shelters, as defined in section 448(a)(3), that are potentially affected by these provisions. As described in more detail earlier in this preamble, the final regulations cover several topics, including, but not limited to, self-charged interest, the treatment of section 163(j) in relation to trader funds, the impact of section 163(j) on publicly traded partnerships, and the application of section 163(j) to United States shareholders of controlled foreign corporations.

The Treasury Department and the IRS do not have readily available data to determine the number of taxpayers affected by rules regarding self-charged interest because no reporting modules currently connect these payments by and from partnerships. Additionally, the Treasury Department and the IRS do not have readily available data to determine the number of taxpayers affected by rules regarding debt proceeds distributed from a taxpayer account or from cash. However, the rules do not impose a significant paperwork or implementation cost burden on taxpayers. Under Notice 89–35, taxpayers have been required to maintain books and records to properly report the tax treatment of interest. The rules in § 1.163–15 are a finalization of the rules in section VI of Notice 89–35, which extends the period in § 1.163–8T(c)(4)(iii)(B) from 15 to 30 days to determine whether debt proceeds have been distributed from a particular account.

As shown in the following table, the Treasury Department and the IRS estimate that approximately 276 trading partnerships will be affected by these rules. The table was calculated using data for the 2018 taxable year, the number of Form 1065 and Form 1065–B filers, with more than $26 million in gross receipts but less than the amount considered to be a small entity for purposes of this Regulatory Flexibility Act analysis, that (1) completed Schedule B to Form 1065 and marked box b, c, or d in question 1 to denote limited partnership, limited liability company or limited liability partnership status; and (2) have a North American Industry Classification System (NAICS) code starting with 5231 (securities and commodity contracts intermediation and brokerage), 5232 (securities and commodity exchanges), 5239 (other financial investment activities) or 5259 (other investment pools and funds).

FORM 1065 AND 1065–B FILERS + NAICS CODES + GROSS RECEIPTS RANGE + SCHEDULE B, QUESTION 1 BOX b, c, OR d MARKED

NAICS code (description)	Gross receipts range	Schedule B, question 1 box b, c or d
5231 (securities and commodity contracts intermediation and brokerage)	>$26M but not more than $41.5M	22
5232 (securities and commodity exchanges)	>$26M but not more than $41.5M	0
6239 (other financial investment activities)	>$26M but not more than $41.5M	242
5259 (other investment pools and funds)	>$26M but not more than $35M	12
Total		276

Additionally, the Treasury Department and the IRS have determined that the rules regarding publicly traded partnerships might affect approximately 71 taxpayers. This number was reached by determining, using data for the 2018 taxable year, the number of Form 1065 and 1065–B filers with gross receipts exceeding $25 million that answered ''yes'' to question 5 on Schedule B to Form 1065 denoting that the entity is a publicly traded partnership.

As noted earlier, the final regulations do not impose any new collection of information on these entities. These final regulations actually assist small entities in meeting their filing obligations by providing definitive advice on which they can rely.

For the section 163(j)(10) elections for passthrough taxpayers under final §§ 1.163(j)–6(d)(5) and 1.163(j)–6(g)(4), most small taxpayers do not need to make the elections because, as discussed above, they are not subject to the section 163(j) limitation. For small taxpayers that are subject to the limitation, the cost to implement the election is low. Pursuant to Revenue Procedure 2020–22, these passthrough taxpayers simply complete the Form 8990 as if the election has been made. Accordingly, the burden of complying with the elections, if needed, is no different than for taxpayers who do not make the elections.

The persons potentially subject to final § 1.163(j)–7 are U.S. shareholders of one or more CFCs for which BIE is reported, and that (1) have average annual gross receipts for the 3-taxable year period ending with the taxable year that precedes the current taxable year exceeding $26,000,000, and (2) want to make the CFC group election or safe-harbor election. Section 1.163(j)–7 of the final regulations requires such taxpayers to attach a statement to their return providing basic information regarding the CFC group or standalone CFC.

As discussed in the PRA section of this preamble, the reporting burden for both statements is estimated at 0 to 30 minutes, depending on individual circumstances, with an estimated average of 15 minutes for all affected entities, regardless of size. The estimated monetized burden for compliance is $95 per hour.

Accordingly, the Secretary certifies that the rule will not have a significant economic impact on a substantial number of small entities.

Pursuant to section 7805(f), the notice of proposed rulemaking preceding this final rule was submitted to the Chief Counsel for the Office of Advocacy of the Small Business Administration for comment on its impact on small business. No comments on the notice

were received from the Chief Counsel for the Office of Advocacy of the Small Business Administration.

IV. Unfunded Mandates Reform Act

Section 202 of the Unfunded Mandates Reform Act of 1995 requires that agencies assess anticipated costs and benefits and take certain other actions before issuing a final rule that includes any Federal mandate that may result in expenditures in any one year by a state, local, or tribal government, in the aggregate, or by the private sector, of $100 million in 1995 dollars, updated annually for inflation. These final regulations do not include any Federal mandate that may result in expenditures by state, local, or tribal governments, or by the private sector in excess of that threshold.

V. Executive Order 13132: Federalism

Executive Order 13132 (entitled ''Federalism'') prohibits an agency from publishing any rule that has federalism implications if the rule either imposes substantial, direct compliance costs on state and local governments, and is not required by statute, or preempts state law, unless the agency meets the consultation and funding requirements of section 6 of the Executive Order. These final regulations do not have federalism implications and do not impose substantial direct compliance costs on state and local governments or preempt state law within the meaning of the Executive Order.

VI. Congressional Review Act

The Administrator of OIRA has determined that this is a major rule for purposes of the Congressional Review Act (5 U.S.C. 801 *et seq.*) (CRA). Under section 801(3) of the CRA, a major rule takes effect 60 days after the rule is published in the **Federal Register**.

Notwithstanding this requirement, section 808(2) of the CRA allows agencies to dispense with the requirements of section 801 when the agency for good cause finds that such procedure would be impracticable, unnecessary, or contrary to the public interest and the rule shall take effect at such time as the agency promulgating the rule determines. Pursuant to section 808(2) of the CRA, the Treasury Department and the IRS find, for good cause, that a 60-day delay in the effective date is unnecessary and contrary to the public interest.

These final regulations resolve ambiguity with respect to the statute and certain aspects of the 2020 Proposed Regulations, prevent abuse through the application of several anti-abuse rules, and grant taxpayer relief that would not be available based solely on the statute. Following the amendments to section 163(j) by the TCJA, the Treasury Department and the IRS published the proposed regulations to provide certainty to taxpayers. In particular, as demonstrated by the wide variety of public comments in response to the proposed regulations received after the publication of the final regulations, taxpayers continue to express uncertainty regarding the proper application of the statutory rules and the final regulations under section 163(j). This uncertainty extends to the application of a number of important temporary provisions in section 163(j) enacted as part of the CARES Act that were intended to provide relief for taxpayers impacted by COVID–19. The final regulations provide rules that are relevant to the application of these taxpayer-favorable provisions. Certainty with respect to these temporary provisions is essential so that taxpayers can accurately model the impact of these provisions on their liquidity in order to make timely informed business decisions during the limited periods in which these provisions are in place. Furthermore, in order to make informed business decisions, taxpayers will need to consider the potentially complex interaction of these temporary provisions, and section 163(j) more generally, with other Code provisions (for example, sections 59A, 172, and 250), which further heightens the need for prompt guidance. Consistent with Executive Order 13924 (May 19, 2020), the Treasury Department and the IRS have therefore determined that an expedited effective date of the final regulations would ''give businesses . . . the confidence they need to re-open by providing guidance on what the law requires.'' 85 FR 31353–4. Accordingly, the Treasury Department and the IRS have determined that the rules in this Treasury decision will take effect on the date it is filed with the Office of the Federal Register for public inspection.

Drafting Information

The principal authors of these regulations are Susie Bird, Charlie Gorham, Nathaniel Kupferman, Jaime Park, Sophia Wang, and James Williford (Income Tax & Accounting), Vishal Amin, Brian Choi, Jacob Moore, Adrienne M. Mikolashek, and William Kostak (Passthroughs and Special Industries), Azeka J. Abramoff and Raphael J. Cohen (International), Russell G. Jones and John B. Lovelace (Corporate), and William Blanchard, Michael Chin, Steven Harrison, and Pamela Lew (Financial Institutions & Products). Other personnel from the Treasury Department and the IRS participated in their development.

Statement of Availability of IRS Documents

IRS Revenue Procedures, Revenue Rulings notices, and other guidance cited in this document are published in the Internal Revenue Bulletin (or Cumulative Bulletin) and are available from the Superintendent of Documents, U.S. Government Publishing Office, Washington, DC 20402, or by visiting the IRS website at *https://www.irs.gov.*

List of Subjects in 26 CFR Part 1

Income taxes, Reporting and recordkeeping requirements.

Amendments to the Regulations

Accordingly, 26 CFR part 1 is amended as follows:

PART 1—INCOME TAXES

■ **Paragraph 1.** The authority citation for part 1 continues to read in part as follows:

Authority: 26 U.S.C. 7805 * * *

■ **Par. 2.** Section 1.163–15 is added to read as follows:

§ 1.163 –15 Debt Proceeds Distributed from Any Taxpayer Account or from Cash.

(a) *In general.* Regardless of paragraphs (c)(4) and (5) of § 1.163–8T, in the case of debt proceeds deposited in an account, a taxpayer that is applying § 1.163–8T or § 1.163–14 may treat any expenditure made from any account of the taxpayer, or from cash, within 30 days before or 30 days after debt proceeds are deposited in any account of the taxpayer as made from such proceeds to the extent thereof. Similarly, in the case of debt proceeds received in cash, a taxpayer that is applying § 1.163–8T or § 1.163–14 may treat any expenditure made from any account of the taxpayer, or from cash, within 30 days before or 30 days after debt proceeds are received in cash as made from such proceeds to the extent thereof. For purposes of this section, terms used have the same meaning as in § 1.163–8T(c)(4) and (5).

(b) *Applicability date.* This section applies to taxable years beginning on or after March 22, 2021. However, taxpayers and their related parties, within the meaning of sections 267(b) (determined without regard to section 267(c)(3)) and 707(b)(1), may choose to apply the rules in this section to a taxable year beginning after December 31, 2017, and before March 22, 2021, provided that those taxpayers and their related parties consistently apply all of

the rules in this section to that taxable year and each subsequent taxable year.

■ **Par. 3.** Section 1.163(j)–0 is amended by:

■ 1. Adding entries for §§ 1.163(j)–1(b)(1)(iv)(A)(*4*) and 1.163(j)–1(b)(1)(iv)(B)(*1*) and (*2*).

■ 2. Revising the entry for § 1.163(j)–1(b)(1)(iv)(C).

■ 3. Adding entries for § 1.163(j)–1(b)(1)(iv)(E) through (G).

■ 4. Revising the entries for § 1.163(j)–1(b)(22)(iii)(F) and (b)(35).

■ 5. Adding entries for §§ 1.163(j)–1(c)(4), 1.163(j)–2(b)(3)(i) through (iv), and 1.163(j)–2(d)(3).

■ 6. Revising the entries for §§ 1.163(j)–2(k) and 1.163(j)–6(c)(1) through (3).

■ 7. Adding entries for §§ 1.163(j)–6(c)(4), 1.163(j)–6(d)(3) through (5), 1.163(j)–6(e)(5) and (6), 1.163(j)–6(f)(1)(iii), 1.163(j)–6(g)(4), and 1.163(j)–6(l)(4)(iv).

■ 8. Revising the entries for §§ 1.163(j)–6(n) and (p), 1.163(j)–7(c) through (f) and (h) through (m).

■ 9. Adding entries for § 1.163(j)–7(g)(3) and (4).

■ 10. Revising the entries for §§ 1.163(j)–10(c)(5)(ii)(D) and 1.163(j)–10(f).

The revisions and additions read as follows:

§ 1.163 (j)–0 Table of Contents.

■ **Par. 4.** Section 1.163(j)–1 is amended by:
■ 1. In paragraph (b)(1)(iv)(A)(*1*), adding the text ''and paragraphs (b)(1)(iv)(B) and (E)'' after the text ''paragraphs (b)(1)(ii)(C), (D), and (E)''.
■ 2. Revising paragraphs (b)(1)(iv)(A)(*2*) and (*3*).
■ 3. Adding paragraph (b)(1)(iv)(A)(*4*).
■ 4. Revising paragraphs (b)(1)(iv)(B), (C), and (D).
■ 5. Adding paragraphs (b)(1)(iv)(E), (F), and (G).
■ 6. Revising paragraphs (b)(1)(viii)(A) through (D).
■ 7. Adding paragraph (b)(1)(viii)(E).
■ 8. Adding paragraphs (b)(22)(iii)(F) and (b)(35).
■ 9. In paragraph (c)(1), removing ''paragraphs (c)(2) and (3)'' from the first sentence and adding ''paragraphs (c)(2), (3), and (4)'' in its place.
■ 10. Adding paragraph (c)(4).

The revisions and additions read as follows:

§ 1.163(j)–1 Definitions.

* * * * *

(b) * * *
(1) * * *
(iv) * * *
(A) * * *

(*2*) *Intercompany transactions.* For purposes of paragraphs (b)(1)(ii)(C) and (D) and paragraphs (b)(1)(iv)(B) and (b)(1)(iv)(E)(*1*) and (*2*) of this section, the term *sale or other disposition* excludes all intercompany transactions, within the meaning of § 1.1502–13(b)(1)(i), to the extent necessary to achieve single-entity taxation of the consolidated group.

(*3*) *Deconsolidations.* Notwithstanding any other rule in this paragraph (b)(1)(iv)(A), any transaction in which a member (S) leaves a consolidated group (selling group), including a section 381(a) transaction described in paragraph (b)(1)(iv)(A)(*1*) of this section, is treated as a taxable disposition of all S stock held by any member of the selling group for purposes of paragraphs (b)(1)(ii)(C) and (D) and paragraphs (b)(1)(iv)(B) and (b)(1)(iv)(E)(*1*) and (*2*) of this section, unless the transaction is described in § 1.1502–13(j)(5)(i). Following S's deconsolidation, any subsequent sales or dispositions of S stock by the selling group do not trigger further adjustments under paragraphs (b)(1)(ii)(C) and (D) and paragraphs (b)(1)(iv)(B) and (b)(1)(iv)(E)(*1*) and (*2*) of this section. If a transaction is described in § 1.1502–13(j)(5)(i), the transaction is not treated as a sale or other disposition for purposes of paragraphs (b)(1)(ii)(C) and (D) and paragraphs (b)(1)(iv)(B) and (b)(1)(iv)(E)(*1*) and (*2*) of this section. See also the successor rules in paragraph (b)(1)(iv)(C) of this section.

(*4*) *Nonrecognition transactions.* The disposition of property, member stock (other than in a deconsolidation described in paragraph (b)(1)(iv)(A)(*3*) of this section), or partnership interests in a nonrecognition transaction, other than a section 381(a) transaction described in paragraph (b)(1)(iv)(A)(*1*) of this section, is treated as a taxable disposition of the property, member stock, or partnership interest disposed of for purposes of paragraph (b)(1)(iv)(E)(*1*)(*i*), (b)(1)(iv)(E)(*2*)(*i*), and (b)(1)(iv)(E)(*3*)(*i*) of this section, respectively. For example, if a taxpayer transfers property to a wholly owned, non-consolidated subsidiary, the transfer of the property is treated as a taxable disposition for purposes of paragraph (b)(1)(iv)(E)(*1*)(*i*) of this section notwithstanding the application of section 351.

(B) *Deductions by members of a consolidated group—*(*1*) *In general.* If paragraph (b)(1)(ii)(C), (D), or (E) of this section applies to adjust the tentative taxable income of a consolidated group, and if the consolidated group does not use the alternative computation method

in paragraph (b)(1)(iv)(E) of this section, the amount of the adjustment under paragraph (b)(1)(ii)(C) of this section equals the greater of the allowed or allowable depreciation, amortization, or depletion of the property, as provided under section 1016(a)(2), for the consolidated group for the taxable years beginning after December 31, 2017, and before January 1, 2022, with respect to such property.

(*2*) *Application of the alternative computation method.* If paragraph (b)(1)(ii)(C), paragraph (b)(1)(ii)(D), or paragraph (b)(1)(ii)(E) of this section applies to adjust the tentative taxable income of a consolidated group, and if the consolidated group uses the alternative computation method in paragraph (b)(1)(iv)(E) of this section, the amount of the adjustment computed under paragraph (b)(1)(iv)(E)(*1*)(*i*), paragraph (b)(1)(iv)(E)(*2*)(*i*), or paragraph (b)(1)(iv)(E)(*3*)(*i*) of this section must take into account the net gain that would be taken into account by the consolidated group, including from intercompany transactions, determined by treating the sale or other disposition as a taxable transaction (see paragraphs (b)(1)(iv)(A)(*3*) and (*4*) of this section regarding deconsolidations and certain nonrecognition transactions, respectively).

(C) *Successor rules*—(*1*) *Successor assets.* This paragraph (b)(1)(iv)(C)(*1*) applies if deductions described in paragraph (b)(1)(ii)(C) of this section are allowed or allowable to a consolidated group member (S) and either the depreciable property or S's stock is subsequently transferred to another member (S1) in an intercompany transaction in which the transferor receives S1 stock. If this paragraph (b)(1)(iv)(C)(*1*) applies, and if the transferor's basis in the S1 stock received in the intercompany transaction is determined, in whole or in part, by reference to its basis in the depreciable property or the S stock, the S1 stock received in the intercompany transaction is treated as a successor asset for purposes of paragraph (b)(1)(ii)(D) and (b)(1)(iv)(E)(*2*) of this section. Thus, except as otherwise provided in paragraph (b)(1)(iv)(D) of this section, the subsequent disposition of either the S1 stock or the S stock (or both) may require the application of the adjustment rules of paragraph (b)(1)(ii)(D) or paragraph (b)(1)(iv)(E)(*2*) of this section.

(*2*) *Successor entities.* The acquiring corporation in a section 381(a) transaction to which the exception in paragraph (b)(1)(iv)(A)(*1*) of this section applies is treated as a successor to the distributor or transferor corporation for purposes of paragraphs (b)(1)(ii)(C) through (E) and (b)(1)(iv)(B) and (E) of this section. Therefore, for example, in applying paragraphs (b)(1)(ii)(C) through (E) and (b)(1)(iv)(B) and (E) of this section, the acquiring corporation is treated as succeeding to the allowed or allowable items of the distributor or transferor corporation. Similarly, the surviving group in a transaction described in § 1.1502–13(j)(5)(i) to which the exception in paragraph (b)(1)(iv)(A)(*3*) of this section applies is treated as a successor to the terminating group for purposes of paragraphs (b)(1)(ii)(C) through (E) and (b)(1)(iv)(B) and (E) of this section.

(D) *Anti-duplication rule*—(*1*) *In general.* The aggregate of the subtractions from tentative taxable income of a consolidated group under paragraphs (b)(1)(ii)(C) through (E) or paragraphs (b)(1)(iv)(E)(*1*) through (*3*) of this section with respect to an item of property (including with regard to dispositions of successor assets described in paragraph (b)(1)(iv)(C)(*1*) of this section) cannot exceed the aggregate amount of the consolidated group members' deductions described in paragraph (b)(1)(ii)(C) of this section with respect to such item of property. In addition, once an item of property is no longer held by any member of a consolidated group (whether or not an adjustment to the tentative taxable income of the group is made under paragraph (b)(1)(ii)(C) of this section with respect to the direct or indirect disposition of that property), no further adjustment to the group's tentative taxable income is made under paragraph (b)(1)(ii)(D) or paragraph (b)(1)(iv)(E)(*2*) of this section in relation to the same property with respect to any subsequent stock disposition.

(2) *Adjustments following deconsolidation.* If a corporation (S) leaves a consolidated group (Group 1) in a transaction that requires an adjustment under paragraph (b)(1)(ii)(D) or paragraph (b)(1)(iv)(E)(*2*) of this section, no further adjustment is required under paragraph (b)(1)(ii)(C) or (E) or paragraph (b)(1)(iv)(E) of this section in a separate return year (as defined in § 1.1502–1(e)) of S with respect to depreciation, amortization, or depletion deductions allowed or allowable to Group 1. See paragraph (b)(1)(iv)(A) of this section for special rules regarding the meaning of the term ''sale or other disposition'' for purposes of the adjustments required under paragraphs (b)(1)(ii)(C) through (E) and paragraphs (b)(1)(iv)(B) and (E) of this section. For example, assume that S deconsolidates from Group 1 in a transaction not described in § 1.1502–13(j)(5)(i) after holding property for which depreciation, amortization, or depletion deductions were allowed or allowable in Group 1. On the deconsolidation, S and Group 1 would adjust tentative taxable income with regard to that property. See paragraphs (b)(1)(iv)(A)(*3*), (b)(1)(ii)(D), and (b)(1)(iv)(E)(*2*) of this section. If, following the deconsolidation, S sells the property referred to in the previous sentence, no subtraction from tentative taxable income is made under paragraph (b)(1)(ii)(C) or paragraph (b)(1)(iv)(E)(*1*) of this section during S's separate return year with regard to the amounts included in Group 1. See paragraphs (b)(1)(iv)(A)(*3*), (b)(1)(ii)(D), and (b)(1)(iv)(E)(*2*) of this section.

(E) *Alternative computation method.* If paragraph (b)(1)(ii)(C), (D), or (E) of this section applies to adjust the tentative taxable income of a taxpayer, the taxpayer may compute the amount of the adjustments required by such paragraph using the formulas in paragraph (b)(1)(iv)(E)(*1*), (*2*), and (*3*) of this section, respectively, provided that the taxpayer applies such formulas to all dispositions for which an adjustment is required under paragraph (b)(1)(ii)(C), (D), or (E) of this section. For special rules regarding the treatment of deconsolidating transactions and nonrecognition transactions, see paragraph (b)(1)(iv)(A)(*3*) and (*4*) of this section, respectively. For special rules regarding the application of the formulas in paragraph (b)(1)(iv)(E)(*1*), (*2*), and (*3*) of this section by consolidated groups, see paragraph (b)(1)(iv)(B)(*2*) of this section.

(*1*) *Alternative computation method for property dispositions.* With respect to the sale or other disposition of property, the lesser of:

(*i*) Any gain recognized on the sale or other disposition of such property by the taxpayer (or, if the taxpayer is a member of a consolidated group, the consolidated group); and

(*ii*) The greater of the allowed or allowable depreciation, amortization, or depletion of the property, as provided under section 1016(a)(2), for the taxpayer (or, if the taxpayer is a member of a consolidated group, the consolidated group) for the taxable years beginning after December 31, 2017, and before January 1, 2022, with respect to such property.

(*2*) *Alternative computation method for dispositions of member stock.* With respect to the sale or other disposition by a member of a consolidated group of stock of another member for whom depreciation, amortization, or depletion was allowed or allowable with regard to

an item of property (or stock of any successor to that member), the lesser of:

(*i*) Any gain recognized on the sale or other disposition of such stock; and

(*ii*) The investment adjustments under § 1.1502–32 with respect to such stock that are attributable to deductions described in paragraph (b)(1)(ii)(C) of this section. The investment adjustments referred to in this paragraph (b)(1)(iv)(E)(*2*)(*ii*) include investment adjustments replicated in stock of members that are successor entities.

(*3*) *Alternative computation method for dispositions of partnership interests.* With respect to the sale or other disposition of an interest in a partnership, the lesser of:

(*i*) Any gain recognized on the sale or other disposition of such interest; and

(*ii*) The taxpayer's (or, if the taxpayer is a consolidated group, the consolidated group's) distributive share of deductions described in paragraph (b)(1)(ii)(C) of this section with respect to property held by the partnership at the time of such sale or other disposition to the extent such deductions were allowable under section 704(d).

(F) *Cap on negative adjustments*—(*1*) *In general.* A subtraction from (or negative adjustment to) tentative taxable income that is required under paragraph (b)(1)(ii)(C), (D), or (E) or paragraph (b)(1)(iv)(B) or (E) of this section is reduced to the extent the taxpayer establishes that the positive adjustments to tentative taxable income under paragraphs (b)(1)(i)(D) through (F) of this section in a prior taxable year did not result in an increase in the amount allowed as a deduction for business interest expense for such year. The extent to which the positive adjustments under paragraphs (b)(1)(i)(D) through (F) of this section resulted in an increase in the amount allowed as a deduction for business interest expense in a prior taxable year (such amount of positive adjustments, the *negative adjustment cap*) is determined after taking into account all other adjustments to tentative taxable income under paragraph (b)(1)(i) and (ii) of this section for that year, as established through books and records. The amount of the negative adjustment cap for a prior taxable year is reduced in future taxable years to the extent of negative adjustments under paragraphs (b)(1)(ii)(C) through (E) and paragraphs (b)(1)(iv)(B) and (E) of this section with respect to the prior taxable year.

(*2*) *Example.* A is a calendar-year individual taxpayer engaged in a trade or business that is neither an excepted trade or business nor eligible for the small business exemption. A has no disallowed business interest expense carryforwards. In 2021, A has $100x of business interest expense, no business interest income or floor plan financing interest expense, and $400x of tentative taxable income. After taking into account the adjustments to tentative taxable income under paragraph (b)(1)(i) and (ii) of this section other than positive adjustments under paragraphs (b)(1)(i)(D) through (F) of this section, A has tentative taxable income of $450x. A increases its tentative taxable income by $30x (from $450x to $480x) under paragraph (b)(1)(i)(D) of this section to reflect $30x of depreciation deductions with respect to Asset Y in 2021. Thus, for 2021, A would have a section 163(j) limitation of $135x ($450x × 30 percent) without regard to adjustments under paragraphs (b)(1)(i)(D) through (F) of this section. After the application of paragraph (b)(1)(i)(D) of this section, A has a section 163(j) limitation of $144x ($480x × 30 percent). In 2022, A sells Asset Y at a gain of $50x. Under paragraph (b)(1)(iv)(F)(*1*) of this section, A is not required to reduce its tentative taxable income in 2022 under paragraph (b)(1)(ii)(C) through (E) or paragraph (b)(1)(iv)(E) of this section. As established by A, the $30x addition to tentative taxable income under paragraph (b)(1)(i)(D) of this section resulted in no increase in the amount allowed as a deduction for business interest expense in 2021.

(G) *Treatment of depreciation, amortization, or depletion capitalized under section 263A.* Paragraphs (b)(1)(ii)(C) through (E) of this section and this paragraph (b)(1)(iv) apply with respect to the sale or other disposition of property to which paragraph (b)(1)(iii) of this section applies. For example, if a taxpayer with depreciable machinery capitalizes the depreciation into inventory under section 263A, paragraph (b)(1)(ii)(C) or paragraph (b)(1)(iv)(E) of this section (and, if the taxpayer is a consolidated group, paragraph (b)(1)(iv)(B) of this section) applies upon the disposition of the machinery, subject to the cap in paragraph (b)(1)(iv)(F) of this section. Similarly, the successor asset rules in paragraph (b)(1)(iv)(C)(*1*) of this section would apply if the depreciable machinery subsequently were transferred to another member (S1) in an intercompany transaction in which the transferor received S1 stock.

* * * * *

(viii) * * *

(A) *Example 1*—(*1*) *Facts.* In 2021, A purchases a depreciable asset (Asset X) for $30x and fully depreciates Asset X under section 168(k). For the 2021 taxable year, A establishes that its ATI before adding back depreciation deductions with respect to Asset X under paragraph (b)(1)(i)(D) of this section is $130x, and that its ATI after adding back depreciation deductions with respect to Asset X under paragraph (b)(1)(i)(D) of this section is $160x. A incurs $45x of business interest expense in 2021. In 2024, A sells Asset X to an unrelated third party for $25x.

(*2*) *Analysis.* A's section 163(j) limitation for 2021 is $48x ($160x × 30 percent). Thus, all $45x of A's business interest expense incurred in 2021 is deductible in that year. Under paragraph (b)(1)(ii)(C) of this section, A must subtract $30x from its tentative taxable income in computing its ATI for its 2024 taxable year. Alternatively, under paragraph (b)(1)(iv)(E)(*1*) of this section, A must subtract $25x (the lesser of $30x or $25x ($25x − $0x)) from its tentative taxable income in computing its ATI for its 2024 taxable year. However, the negative adjustments under paragraphs (b)(1)(ii)(C) and (b)(1)(iv)(E)(*1*) of this section are both subject to the negative adjustment cap in paragraph (b)(1)(iv)(F) of this section. Under that paragraph, A's negative adjustment under either paragraph (b)(1)(ii)(C) or paragraph (b)(1)(iv)(E)(*1*) of this section is capped at $20x, or $150x (the amount of ATI that A needed in order to deduct all $45x of business interest expense in 2021) minus $130x (the amount of A's tentative taxable income in 2021 before adding back any amounts under paragraph (b)(1)(i)(D) through (F) of this section). As established by A, the additional $10x ($30x − $20x) of depreciation deductions that were added back to tentative taxable income in 2021 under paragraph (b)(1)(i)(D) of this section did not increase A's business interest expense deduction for that year.

(*3*) *Transfer of assets in a nonrecognition transaction to which section 381 applies.* The facts are the same as in paragraph (b)(1)(viii)(A)(*1*) of this section, except that, rather than sell Asset X to an unrelated third party in 2024, A merges with and into an unrelated third party in 2024 in a transaction described in section 368(a)(1)(A) in which no gain is recognized. As provided in paragraph (b)(1)(iv)(A)(*1*) of this section, the merger transaction is not treated as a ''sale or other disposition'' for purposes of paragraph (b)(1)(ii)(C) or paragraph (b)(1)(iv)(E)(*1*) of this section. Thus, no adjustment to tentative taxable income is required in 2024 under paragraph (b)(1)(ii)(C) or paragraph (b)(1)(iv)(E)(*1*) of this section.

(*4*) *Transfer of assets in a nonrecognition transaction to which section 351 applies.* The facts are the same as in paragraph (b)(1)(viii)(A)(*1*) of this section, except that, rather than sell Asset X to an unrelated third party in 2024, A transfers Asset X to B (A's wholly owned subsidiary) in 2024 in a transaction to which section 351 applies. The section 351 transaction is treated as a ''sale or other disposition'' for purposes of paragraphs (b)(1)(ii)(C) and (b)(1)(iv)(E)(*1*) of this section, and it is treated as a taxable disposition for purposes of paragraph (b)(1)(iv)(E)(*1*) of this section. See paragraph (b)(1)(iv)(A)(*1*) and (*4*) of this section. However, the negative adjustments under paragraphs (b)(1)(ii)(C) and (b)(1)(iv)(E)(*1*) of this section are both subject to the negative adjustment cap in paragraph (b)(1)(iv)(F) of this section. Thus, A must subtract $20x from its tentative taxable income in computing its ATI for its 2024 taxable year.

(B) *Example 2*—(*1*) *Facts.* In 2021, S purchases a depreciable asset (Asset Y) for $30x and fully depreciates Asset Y under section 168(k). P reduces its basis in its S stock by $30x under § 1.1502–32 to reflect S's depreciation deductions with respect to Asset Y. For the 2021 taxable year, the P group establishes that its ATI before adding back S's depreciation deductions with respect to Asset Y under paragraph (b)(1)(i)(D) of this section is $130x, and that its ATI after adding back S's depreciation deductions with respect to Asset Y under paragraph (b)(1)(i)(D) of this section is $160x. The P group incurs $45x of business interest expense in 2021. In 2024, P sells all of its S stock to an unrelated third party at a gain of $25x.

(*2*) *Analysis.* The P group's section 163(j) limitation for 2021 is $48x ($160x × 30 percent). Thus, all $45x of the P group's business interest expense incurred in 2021 is deductible in that year. Under paragraph (b)(1)(ii)(D) of this section, the P group must subtract $30x from its tentative taxable income in computing its ATI for its 2024 taxable year. Alternatively, under paragraph (b)(1)(iv)(E)(*2*) of this section, the P group must subtract $25x (the lesser of $30x or $25x) from its tentative taxable income in computing its ATI for its 2024 taxable year. However, the negative adjustments under paragraphs (b)(1)(ii)(D) and (b)(1)(iv)(E)(*2*) of this section are both subject to the negative adjustment cap in paragraph (b)(1)(iv)(F) of this section. Under that paragraph, the P group's negative adjustment under either paragraph (b)(1)(ii)(D) or paragraph (b)(1)(iv)(E)(*2*) of this section is capped at $20x, or $150x (the amount of ATI the P group needed in order to deduct all $45x of business interest expense in 2021) minus $130x (the amount of the P group's tentative taxable income in 2021 before adding back any amounts under paragraph (b)(1)(i)(D) through (F) of this section). As established by the P group, the additional $10x ($30x − $20x) of depreciation deductions that were added back to tentative taxable income in 2021 under paragraph (b)(1)(i)(D) of this section did not increase the P group's business interest expense deduction for that year.

(*3*) *Disposition of less than all member stock.* The facts are the same as in paragraph (b)(1)(viii)(B)(*1*) of this section, except that, in 2024, P sells half of its S stock to an unrelated third party. The results are the same as in paragraph (b)(1)(viii)(B)(*2*) of this section. See paragraph (b)(1)(iv)(A)(*3*) of this section. Thus, the P group must subtract $20x from its tentative taxable income in computing its ATI for its 2024 taxable year. No further adjustment under paragraphs (b)(1)(ii)(C) and (D) or paragraphs (b)(1)(iv)(E)(*1*) and (*2*) of this section is required if P subsequently sells its remaining S stock or if S subsequently disposes of Asset Y. See paragraphs (b)(1)(iv)(A)(*3*) and (b)(1)(iv)(D) of this section.

(*4*) *Intercompany transfer; disposition of successor assets*—(*i*) *Adjustments in 2024.* The facts are the same as in paragraph (b)(1)(viii)(B)(*1*) of this section, except that, rather than sell all of its S stock to an unrelated third party in 2024, P transfers all of its S stock to T in 2024 in a transaction to which section 351 applies and, in 2025, P sells all of its T stock to an unrelated third party at a gain of $40x. As provided in paragraph (b)(1)(iv)(A)(*2*) of this section, P's intercompany transfer of its S stock to T is not a ''sale or other disposition'' for purposes of paragraph (b)(1)(ii)(D) or paragraph (b)(1)(iv)(E)(*2*) of this section. Thus, no adjustment to tentative taxable income is required in 2024 under paragraph (b)(1)(ii)(D) or paragraph (b)(1)(iv)(E)(*2*) of this section.

(*ii*) *Adjustments in 2025.* Pursuant to paragraph (b)(1)(iv)(C)(*1*) of this section, P's stock in T is treated as a successor asset for purposes of paragraph (b)(1)(ii)(D) and (b)(1)(iv)(E)(*2*) of this section. Moreover, P's sale of its T stock causes both T and S to deconsolidate. Thus, under paragraph (b)(1)(iv)(A)(*3*) of this section, the transaction is treated as a taxable disposition of all of the T stock and all of the S stock held by all members of the P group. Under the anti-duplication rule in paragraph (b)(1)(iv)(D) of this section, the total amount of gain recognized for purposes of paragraph (b)(1)(iv)(E)(*2*)(*i*) of this section is $40x, the greater of the gain on the disposition of the T stock ($40x) or on the disposition of the S stock ($25x). However, the negative adjustments under paragraph (b)(1)(iv)(E)(*2*) of this section are subject to the negative adjustment cap in paragraph (b)(1)(iv)(F) of this section. Thus, the P group must subtract $20x from its tentative taxable income in computing its ATI for its 2025 taxable year.

(*5*) *Alternative computation and non-deconsolidating disposition of member stock.* The facts are the same as in paragraph (b)(1)(viii)(B)(*1*) of this section, except that, in 2024, P sells just ten percent of its S stock to an unrelated third party at a gain of $2.5x. Under paragraph (b)(1)(iv)(E)(*2*) of this section, the lesser of P's gain recognized on the sale of the S stock ($2.5x) and the investment adjustments under § 1.1502–32 with respect to the S stock P sold ($3x) is $2.5x, an amount less than the $20x limitation under paragraph (b)(1)(iv)(F) of this section. Thus, the P group must subtract $2.5x from its tentative taxable income in computing its ATI for its 2024 taxable year.

(*6*) *Non-deconsolidating disposition of member stock followed by asset disposition.* The facts are the same as in paragraph (b)(1)(viii)(B)(*5*) of this section, except that, in 2025, S sells Asset Y to an unrelated third party for a gain of $20x. Under paragraph (b)(1)(iv)(E)(*1*) of this section, the amount of the adjustment in 2025 is the lesser of two amounts. The first amount is the amount of S's gain recognized on the sale of Asset Y ($20x). See paragraph (b)(1)(iv)(E)(*1*)(*i*) of this section. The second amount is the amount of depreciation with respect to Asset Y (see paragraph (b)(1)(iv)(E)(*1*)(*ii*) of this section), reduced by the amount of depreciation previously taken into account in the computation under paragraph (b)(1)(iv)(E)(*2*)(*ii*) of this section ($30x − $3x, or $27x). See paragraph (b)(1)(iv)(D)(*1*) of this section. Thus, the amount of the adjustment under paragraphs (b)(1)(iv)(D) and (b)(1)(iv)(E)(*1*) of this section is $20x. In turn, this amount is subject to the negative adjustment cap under paragraph (b)(1)(iv)(F), which, after accounting for the negative adjustment on the earlier sale of S stock in 2024, is $17.5x ($20x − $2.5x). Accordingly, the P group must subtract $17.5x from its tentative taxable income in computing its ATI for its 2025 taxable year.

(C) *Example 3*—(*1*) *Facts.* The facts are the same as in paragraph (b)(1)(viii)(B)(*1*) of this section, except that, in 2024, S sells Asset Y to an

unrelated third party for $25x and, in 2025, P sells all of its S stock to an unrelated third party at a gain of $25x.

(2) *Analysis.* The results are the same as in paragraph (b)(1)(viii)(B)(*2*) of this section. Thus, the P group must subtract $20x from its tentative taxable income in computing its ATI for its 2024 taxable year. P's sale of all of its S stock in 2025 is a ''sale or other disposition'' for purposes of paragraph (b)(1)(ii)(D) and (b)(1)(iv)(E)(*2*) of this section. However, pursuant to paragraph (b)(1)(iv)(D)(*1*) of this section, no further adjustment to the P group's tentative taxable income is required in 2025 under paragraph (b)(1)(ii)(D) or paragraph (b)(1)(iv)(E)(*2*) of this section.

(*3*) *Disposition of S stock prior to S's asset disposition.* The facts are the same as in paragraph (b)(1)(viii)(C)(*1*) of this section, except that, in 2024, P sells all of its S stock to an unrelated third party at a gain of $25x and, in 2025, S sells Asset Y to an unrelated third party for $25x. The results are the same as in paragraph (b)(1)(viii)(B)(*2*) of this section. Thus, the P group must subtract $20x from its tentative taxable income in computing its ATI for its 2024 taxable year. Pursuant to paragraph (b)(1)(iv)(D)(*2*) of this section, no adjustment to the acquiring group's tentative taxable income is required in 2025 under paragraph (b)(1)(ii)(C) or paragraph (b)(1)(iv)(E)(*1*) of this section.

(*4*) *Deconsolidation of S in nonrecognition transaction.* The facts are the same as in paragraph (b)(1)(viii)(C)(*3*) of this section, except that, rather than sell all of its S stock to an unrelated third party, P causes S to merge with and into an unrelated third party in a transaction described in section 368(a)(1)(A). As provided in paragraph (b)(1)(iv)(A)(*3*) of this section, the merger transaction is treated as a taxable disposition of all of P's stock in S for purposes of paragraphs (b)(1)(ii)(D) and (b)(1)(iv)(E)(*2*) of this section because S leaves the P group. Thus, the results are the same as in paragraph (b)(1)(viii)(C)(*3*) of this section.

(D) *Example 4*—(*1*) *Facts.* P wholly owns T, which wholly owns S. In 2021, S purchases a depreciable asset (Asset Z) for $30x and fully depreciates Asset Z under section 168(k). T reduces its basis in its S stock, and P reduces its basis in its T stock, by $30x under § 1.1502–32 to reflect S's depreciation deductions with respect to Asset Z. For the 2021 taxable year, the P group establishes that its ATI before adding back S's depreciation deductions with respect to Asset Z under paragraph (b)(1)(i)(D) of this section is $130x, and that its ATI after adding back S's depreciation deductions with respect to Asset Z under paragraph (b)(1)(i)(D) of this section is $160x. The P group incurs $45x of business interest expense in 2021. In 2024, T sells all of its S stock to an unrelated third party at a gain of $25x. In 2025, P sells all of its T stock to an unrelated third party at a gain of $40x.

(*2*) *Analysis.* The results are the same as in paragraph (b)(1)(viii)(B)(*2*) of this section. Thus, the P group must subtract $20x from its tentative taxable income in computing its ATI for its 2024 taxable year. Pursuant to paragraph (b)(1)(iv)(D)(*1*) of this section, no negative adjustment to the P group's tentative taxable income is required in 2025 under paragraph (b)(1)(ii)(D) or paragraph (b)(1)(iv)(E)(*2*) of this section.

(*3*) *Disposition of T stock in 2024.* The facts are the same as in paragraph (b)(1)(viii)(D)(*1*) of this section, except that, in 2024, P sells all of its T stock to another consolidated group at a gain of $40x and, in 2025, T sells all of its S stock to an unrelated party at a gain of $25x. Whereas the transaction described in paragraph (b)(1)(viii)(B)(*4*) of this section is treated as a taxable disposition of both the T stock and the S stock, only the actual disposition of the T stock in the transaction described in this paragraph (b)(1)(viii)(D)(*3*) is treated as a taxable disposition for purposes of paragraphs (b)(1)(ii)(D) and (b)(1)(iv)(E)(*2*) of this section. See paragraph (b)(1)(iv)(A)(*3*) of this section. However, the results are the same as in paragraph (b)(1)(viii)(B)(*2*) and (b)(1)(viii)(B)(*4*) of this section because of the negative adjustment cap in paragraph (b)(1)(iv)(F) of this section. Thus, the P group must subtract $20x from its tentative taxable income in computing its ATI for its 2024 taxable year. Pursuant to paragraph (b)(1)(iv)(D) of this section, no negative adjustment to the acquiring group's tentative taxable income is required in 2025 under paragraph (b)(1)(ii)(D) or paragraph (b)(1)(iv)(E)(*2*) of this section.

(E) *Example 5*—(*1*) *Facts.* In 2021, A purchases Assets X and Y for $30x and $80x, respectively, and fully depreciates each asset under section 168(k). For the 2021 taxable year, A establishes that its ATI before adding back depreciation deductions with respect to Assets X and Y under paragraph (b)(1)(i)(D) of this section is $150x, and that its ATI after adding back depreciation deductions with respect to Assets X and Y under paragraph (b)(1)(i)(D) of this section is $260x. A incurs $75x of business interest expense in 2021. In 2024, A sells Assets X and Y to an unrelated third party for $40x and $90x, respectively.

(*2*) *Analysis.* A's section 163(j) limitation for 2021 is $78x ($260x × 30 percent). Thus, all $75x of A's business interest expense incurred in 2021 is deductible in that year. Under paragraph (b)(1)(ii)(C) of this section, A must subtract $110x ($30x + $80x) from its tentative taxable income in computing its ATI for its 2024 taxable year. Alternatively, under paragraph (b)(1)(iv)(E)(*1*) of this section, A must subtract $30x with respect to Asset X (the lesser of $30x or $40x ($40x − $0x)), and $80x with respect to Asset Y (the lesser of $80x or $90x ($90x − $0x)), from its tentative taxable income in computing its ATI for its 2024 taxable year. However, the negative adjustments under paragraphs (b)(1)(ii)(C) and (b)(1)(iv)(E)(*1*) of this section are both subject to the negative adjustment cap in paragraph (b)(1)(iv)(F) of this section. Under that paragraph, A's negative adjustment in 2024 under either paragraph (b)(1)(ii)(C) ($110x) or paragraph (b)(1)(iv)(E)(*1*) (also $110x) of this section is limited to $100x. This amount equals $250x (the amount of ATI that A needed in order to deduct all $75x of business interest expense in 2021) minus $150x (the amount of A's tentative taxable income in 2021 before adding back any amounts under paragraph (b)(1)(i)(D) through (F) of this section). As established by A, the additional $10x ($110x − $100x) of depreciation deductions that were added back to tentative taxable income in 2021 under paragraph (b)(1)(i)(D) of this section did not increase A's business interest expense deduction for that year.

(*3*) *Sale of assets in different taxable years.* The facts are the same as in paragraph (b)(1)(viii)(E)(*1*) of this section, except that A sells Asset Y to an unrelated third party for $90x in 2025. Under paragraph (b)(1)(ii)(C) of this section, A must subtract $30x from its tentative taxable income in computing its ATI for its 2024 taxable year. Alternatively, under paragraph (b)(1)(iv)(E)(*1*) of this section, A must subtract $30x (the lesser of $30x or $40x ($40x − $0x)) from its tentative taxable income in computing its ATI for its 2024 taxable year. Because A's negative adjustment cap for its 2021 taxable year is $100x (see paragraph (b)(1)(viii)(E)(*2*) of this section), A's negative adjustment in 2024 of $30x is not reduced under paragraph (b)(1)(iv)(F) of this section. In 2025, A must subtract $80x from its tentative taxable income under paragraph (b)(1)(ii)(C) of this section in computing its ATI. Alternatively, under paragraph (b)(1)(iv)(E)(*1*) of this section, A must subtract $80x (the lesser of $80x

or $90x ($90x − $0x)) from its tentative taxable income in computing its ATI for its 2025 taxable year. However, the negative adjustments under paragraphs (b)(1)(ii)(C) and (b)(1)(iv)(E)(*1*) of this section are both subject to the negative adjustment cap in paragraph (b)(1)(iv)(F) of this section. Moreover, A's negative adjustment cap for its 2021 taxable year is reduced from $100x to $70x to reflect A's $30x negative adjustment in 2024. See paragraph (b)(1)(iv)(F) of this section. Thus, A's negative adjustment for 2025 under either paragraph (b)(1)(ii)(C) or paragraph (b)(1)(iv)(E)(*1*) of this section is reduced from $80x to $70x. As established by A, the additional $10x ($110x − $100x) of depreciation deductions that were added back to tentative taxable income in 2021 under paragraph (b)(1)(i)(D) of this section did not increase A's business interest expense deduction for that year.

* * * * *

(22) * * *

(iii) * * *

(F) *Section 163(j) interest dividends*—(*1*) *In general.* Except as otherwise provided in this paragraph (b)(22)(iii)(F), a section 163(j) interest dividend is treated as interest income.

(*2*) *Limitation on amount treated as interest income.* A shareholder may not treat any part of a section 163(j) interest dividend as interest income to the extent the amount of the section 163(j) interest dividend exceeds the excess of the amount of the entire dividend that includes the section 163(j) interest dividend over the sum of the conduit amounts other than interest-related dividends under section 871(k)(1)(C) and section 163(j) interest dividends that affect the shareholder's treatment of that dividend.

(*3*) *Conduit amounts.* For purposes of paragraph (b)(22)(iii)(F)(*2*) of this section, the term *conduit amounts* means, with respect to any category of income (including tax-exempt interest) earned by a RIC for a taxable year, the amounts identified by the RIC (generally in a designation or written report) in connection with dividends of the RIC for that taxable year that are subject to a limit determined by reference to that category of income. For example, a RIC's conduit amount with respect to its net capital gain is the amount of the RIC's capital gain dividends under section 852(b)(3)(C).

(*4*) *Holding period.* Except as provided in paragraph (b)(22)(iii)(F)(*5*) of this section, no dividend is treated as interest income under paragraph (b)(22)(iii)(F)(*1*) of this section if the dividend is received with respect to a share of RIC stock—

(*i*) That is held by the shareholder for 180 days or less (taking into account the principles of section 246(c)(3) and (4)) during the 361-day period beginning on the date which is 180 days before the date on which the share becomes ex-dividend with respect to such dividend; or

(*ii*) To the extent that the shareholder is under an obligation (whether pursuant to a short sale or otherwise) to make related payments with respect to positions in substantially similar or related property.

(*5*) *Exception to holding period requirement for money market funds and certain regularly declared dividends.* Paragraph (b)(22)(iii)(F)(*4*)(*i*) of this section does not apply to dividends distributed by any RIC regulated as a money market fund under 17 CFR 270.2a–7 (Rule 2a–7 under the 1940 Act) or to regular dividends paid by a RIC that declares section 163(j) interest dividends on a daily basis in an amount equal to at least 90 percent of its excess section 163(j) interest income, as defined in paragraph (b)(35)(iv)(E) of this section, and distributes such dividends on a monthly or more frequent basis.

* * * * *

(35) *Section 163(j) interest dividend.* The term *section 163(j) interest dividend* means a dividend paid by a RIC for a taxable year for which section 852(b) applies to the RIC, to the extent described in paragraph (b)(35)(i) or (ii) of this section, as applicable.

(i) *In general.* Except as provided in paragraph (b)(35)(ii) of this section, a section 163(j) interest dividend is any dividend, or part of a dividend, that is reported by the RIC as a section 163(j) interest dividend in written statements furnished to its shareholders.

(ii) *Reduction in the case of excess reported amounts.* If the aggregate reported amount with respect to the RIC for the taxable year exceeds the excess section 163(j) interest income of the RIC for such taxable year, the section 163(j) interest dividend is—

(A) The reported section 163(j) interest dividend amount; reduced by

(B) The excess reported amount that is allocable to that reported section 163(j) interest dividend amount.

(iii) *Allocation of excess reported amount*—(A) *In general.* Except as provided in paragraph (b)(35)(iii)(B) of this section, the excess reported amount, if any, that is allocable to the reported section 163(j) interest dividend amount is that portion of the excess reported amount that bears the same ratio to the excess reported amount as the reported section 163(j) interest dividend amount bears to the aggregate reported amount.

(B) *Special rule for noncalendar year RICs.* In the case of any taxable year that does not begin and end in the same calendar year, if the post-December reported amount equals or exceeds the excess reported amount for that taxable year, paragraph (b)(35)(iii)(A) of this section is applied by substituting ''post-December reported amount'' for ''aggregate reported amount,'' and no excess reported amount is allocated to any dividend paid on or before December 31 of such taxable year.

(iv) *Definitions.* The following definitions apply for purposes of this paragraph (b)(35):

(A) *Reported section 163(j) interest dividend amount.* The term *reported section 163(j) interest dividend amount* means the amount of a dividend distribution reported to the RIC's shareholders under paragraph (b)(35)(i) of this section as a section 163(j) interest dividend.

(B) *Excess reported amount.* The term *excess reported amount* means the excess of the aggregate reported amount over the RIC's excess section 163(j) interest income for the taxable year.

(C) *Aggregate reported amount.* The term *aggregate reported amount* means the aggregate amount of dividends reported by the RIC under paragraph (b)(35)(i) of this section as section 163(j) interest dividends for the taxable year (including section 163(j) interest dividends paid after the close of the taxable year described in section 855).

(D) *Post-December reported amount.* The term *post-December reported amount* means the aggregate reported amount determined by taking into account only dividends paid after December 31 of the taxable year.

(E) *Excess section 163(j) interest income.* The term *excess section 163(j) interest income* means, with respect to a taxable year of a RIC, the excess of the RIC's business interest income for the taxable year over the sum of the RIC's business interest expense for the taxable year and the RIC's other deductions for the taxable year that are properly allocable to the RIC's business interest income.

(v) *Example*—(A) *Facts.* X is a domestic C corporation that has elected to be a RIC. For its taxable year ending December 31, 2021, X has $100x of business interest income (all of which is qualified interest income for purposes of section 871(k)(1)(E)) and $10x of dividend income (all of which is qualified dividend income within the meaning of section 1(h)(11) and would be eligible for the dividends received deduction under section 243,

determined as described in section 854(b)(3)). X has $10x of business interest expense and $20x of other deductions. X has no other items for the taxable year. On December 31, 2021, X pays a dividend of $80x to its shareholders, and reports, in written statements to its shareholders, $71.82x as a section 163(j) interest dividend; $10x as dividends that may be treated as qualified dividend income or as dividends eligible for the dividends received deduction; and $72.73x as interest-related dividends under section 871(k)(1)(C). Shareholder A, a domestic C corporation, meets the holding period requirements in paragraph (b)(22)(iii)(F)(*4*) of this section with respect to the stock of X, and receives a dividend of $8x from X on December 31, 2021.

(B) *Analysis.* X determines that $18.18x of other deductions are properly allocable to X's business interest income. X's excess section 163(j) interest income under paragraph (b)(35)(iv)(E) of this section is $71.82x ($100x business interest income—($10x business interest expense + $18.18x other deductions allocated) = $71.82x). Thus, X may report up to $71.82x of its dividends paid on December 31, 2021, as section 163(j) interest dividends to its shareholders. X may also report up to $10x of its dividends paid on December 31, 2021, as dividends that may be treated as qualified dividend income or as dividends that are eligible for the dividends received deduction. X determines that $9.09x of interest expense and $18.18x of other deductions are properly allocable to X's qualified interest income. Therefore, X may report up to $72.73x of its dividends paid on December 31, 2021, as interest-related dividends under section 871(k)(1)(C) ($100x qualified interest income—$27.27x deductions allocated = $72.73x). A treats $1x of its $8x dividend as a dividend eligible for the dividends received deduction and no part of the dividend as an interest-related dividend under section 871(k)(1)(C). Therefore, under paragraph (b)(22)(iii)(F)(*2*) of this section, A may treat $7x of the section 163(j) interest dividend as interest income for purposes of section 163(j) ($8x dividend—$1x conduit amount = $7x limitation).

* * * * *

(c) * * *

(4) *Paragraphs (b)(1)(iv)(A)(2) through (4), (B) through (G), (b)(22)(iii)(F), and (b)(35).* Paragraphs (b)(1)(iv)(A)(*2*) through (*4*), (b)(1)(iv)(B) through (G), (b)(22)(iii)(F), and (b)(35) of this section apply to taxable years beginning on or after March 22, 2021. Taxpayers and their related parties, within the meaning of sections 267(b) (determined without regard to section 267(c)(3)) and 707(b)(1), may choose to apply the rules in paragraphs (b)(1)(iv)(A)(*2*) through (*4*), (b)(1)(iv) (B) through (G), (b)(22)(iii)(F), and (b)(35) of this section to a taxable year beginning after December 31, 2017, and before March 22, 2021, provided that those taxpayers and their related parties consistently apply all of the rules in the section 163(j) regulations contained in T.D. 9905 (§§ 1.163(j)–0 through 1.163(j)–11, effective November 13, 2020) as modified by T.D. 9943 (effective January 13, 2021), and, if applicable, §§ 1.263A–9, 1.263A–15, 1.381(c)(20)–1, 1.382–1, 1.382–2, 1.382–5, 1.382–6, 1.382–7, 1.383–0, 1.383–1, 1.469–9, 1.469–11, 1.704–1, 1.882–5, 1.1362–3, 1.1368–1, 1.1377–1, 1.1502–13, 1.1502–21, 1.1502–36, 1.1502–79, 1.1502–91 through 1.1502–99 (to the extent they effectuate the rules of §§ 1.382–2, 1.382–5, 1.382–6, and 1.383–1), and 1.1504–4 contained in T.D. 9905, as modified by T.D. 9943, to that taxable year and all subsequent taxable years.

■ **Par. 5.** Section 1.163(j)–2 is amended by:

■ 1. Adding paragraphs (b)(3)(iii) and (iv) and (d)(3).

■ 2. Redesignating paragraph (k) as paragraph (k)(1).

■ 3. Adding a new subject heading for paragraph (k).

■ 4. Revising the subject heading of newly redesignated paragraph (k)(1).

■ 5. Adding paragraph (k)(2).

The revisions and additions read as follows:

§ 1.163 (j)–2 Deduction for business interest expense limited.

* * * * *

(b) * * *

(3) * * *

(iii) *Transactions to which section 381 applies.* For purposes of the election described in paragraph (b)(3)(i) of this section, and subject to the limitation in paragraph (b)(3)(ii) of this section, the 2019 ATI of the acquiring corporation in a transaction to which section 381 applies equals the amount of the acquiring corporation's ATI for its last taxable year beginning in 2019.

(iv) *Consolidated groups.* For purposes of the election described in paragraph (b)(3)(i) of this section, and subject to the limitation in paragraph (b)(3)(ii) of this section, the 2019 ATI of a consolidated group equals the amount of the consolidated group's ATI for its last taxable year beginning in 2019.

* * * * *

(d) * * *

(3) *Determining a syndicate's loss amount.* For purposes of section 163(j), losses allocated under section 1256(e)(3)(B) and § 1.448–1T(b)(3) are determined without regard to section 163(j). See also § 1.1256(e)–2(b).

* * * * *

(k) *Applicability dates.*

(1) *In general.* * * *

(2) *Paragraphs (b)(3)(iii), (b)(3)(iv), and (d)(3).* Paragraphs (b)(3)(iii) and (iv) and (d)(3) of this section apply to taxable years beginning on or after March 22, 2021. However, taxpayers and their related parties, within the meaning of sections 267(b) (determined without regard to section 267(c)(3)) and 707(b)(1), may choose to apply the rules in paragraphs (b)(3)(iii), (b)(3)(iv), and (d)(3) of this section to a taxable year beginning after December 31, 2017, and before March 22, 2021, provided that those taxpayers and their related parties consistently apply all of the rules in paragraphs (b)(3)(iii) and (iv) of this section and the rules in the section 163(j) regulations contained in T.D. 9905 (§§ 1.163(j)–0 through 1.163(j)–11, effective November 13, 2020) as modified by T.D. 9943 (effective January 13, 2021), and, if applicable, §§ 1.263A–9, 1.263A–15, 1.381(c)(20)–1, 1.382–1, 1.382–2, 1.382–5, 1.382–6, 1.382–7, 1.383–0, 1.383–1, 1.469–9, 1.469–11, 1.704–1, 1.882–5, 1.1362–3, 1.1368–1, 1.1377–1, 1.1502–13, 1.1502–21, 1.1502–36, 1.1502–79, 1.1502–91 through 1.1502–99 (to the extent they effectuate the rules of §§ 1.382–2, 1.382–5, 1.382–6, and 1.383–1), and 1.1504–4 contained in T.D. 9905 as modified by T.D. 9943, for that taxable year and for each subsequent taxable year.

■ **Par. 6.** Section 1.163(j)–6 is amended by:

■ 1. Adding paragraphs (c)(1) and (2).

■ 2. Redesignating paragraph (c)(3) as paragraph (c)(4).

■ 3. Adding new paragraph (c)(3) and paragraphs (d)(3) through (5) and (e)(5).

■ 4. Adding paragraphs (f)(1)(iii) and (g)(4).

■ 5. Adding paragraph (n).

■ 6. Adding paragraphs (o)(24) through (26), reserved paragraphs (o)(27). through (33), and paragraphs (o)(34) through (36).

■ 7. Redesignating paragraph (p) as paragraph (p)(1), revising the subject heading of paragraph (p), and adding a subject heading for newly designated paragraph (p)(1).

■ 8. Adding paragraph (p)(2).

The revisions and additions read as follows:

§ 1.163 (j)–6 Application of the section 163(j) limitation to partnerships and subchapter S corporations.

* * * * *

(c) * * *

(1) *Modification of business interest income for partnerships.* The business interest income of a partnership generally is determined in accordance with § 1.163(j)–1(b)(4). However, to the extent that interest income of a partnership that is properly allocable to trades or businesses that are per se non-passive activities is allocated to partners that do not materially participate (within the meaning of section 469), as described in § 1.469–1T(e)(6) and subject to section 163(d)(5)(A)(ii), such interest income shall not be considered business interest income for purposes of determining the section 163(j) limitation of a partnership pursuant to § 1.163(j)–2(b). A per se non-passive activity is an activity that is not treated as a passive activity for purposes of section 469 regardless of whether the owners of the activity materially participate in the activity.

(2) *Modification of business interest expense for partnerships.* The business interest expense of a partnership generally is determined in accordance with § 1.163(j)–1(b)(3). However, to the extent that interest expense of a partnership that is properly allocable to trades or businesses that are per se non-passive activities is allocated to partners that do not materially participate (within the meaning of section 469), as described in § 1.469–1T(e)(6) and subject to section 163(d)(5)(A)(ii), such interest expense shall not be considered business interest expense for purposes of determining the section 163(j) limitation of a partnership pursuant to § 1.163(j)–2(b).

(3) *Transition rule.* With respect to a partner in a partnership engaged in a trade or business described in § 1.469–1T(e)(6) and subject to section 163(d)(5)(A)(ii), if such partner had been allocated EBIE from the partnership with respect to the trade or business described in § 1.469–1T(e)(6) and subject to section 163(d)(5)(A)(ii) in any prior taxable year in which the partner did not materially participate, such partner may treat such excess business interest expense not previously treated as paid or accrued under § 1.163(j)–6(g)(2) as paid or accrued by the partner in the first taxable year ending on or after the effective date of the final regulations and not subject to further limitation under section 163(j) or 163(d).

* * * * *

(d) * * *

(3) *Section 743(b) adjustments and publicly traded partnerships.* Solely for purposes of § 1.163(j)–6, a publicly traded partnership, as defined in § 1.7704–1, shall treat the amount of any section 743(b) adjustment of a purchaser of a partnership unit that relates to a remedial item that the purchaser inherits from the seller as an offset to the related section 704(c) remedial item. For this purpose, § 1.163(j)–6(e)(2)(ii) applies. See *Example 25* in paragraph (o)(25) of this section.

(4) *Modification of adjusted taxable income for partnerships.* The adjusted taxable income of a partnership generally is determined in accordance with § 1.163(j)–1(b)(1). However, to the extent that the items comprising the adjusted taxable income of a partnership that are properly allocable to trades or businesses that are per se non-passive activities are allocated to partners that do not materially participate (within the meaning of section 469), as described in section 163(d)(5)(A)(ii), such partnership items shall not be considered adjusted taxable income for purposes of determining the section 163(j) limitation of a partnership pursuant to § 1.163(j)–2(b).

(5) *Election to use 2019 adjusted taxable income for taxable years beginning in 2020.* In the case of any taxable year beginning in 2020, a partnership may elect to apply this section by substituting its adjusted taxable income for the last taxable year beginning in 2019 for the adjusted taxable income for such taxable year (post-election ATI or 2019 ATI). See § 1.163(j)–2(b)(4) for the time and manner of making or revoking this election. An electing partnership determines each partner's allocable ATI (as defined in paragraph (f)(2)(ii) of this section) by using the partnership's 2019 section 704 income, gain, loss, and deduction as though such amounts were recognized by the partnership in 2020. See *Example 34* in paragraph (o)(34) of this section.

(e) * * *

(5) *Partner basis items, remedial items, and publicly traded partnerships.* Solely for purposes of § 1.163(j)–6, a publicly traded partnership, as defined in § 1.7704–1, shall either allocate gain that would otherwise be allocated under section 704(c) based on a partner's section 704(b) sharing ratios, or, for purposes of allocating cost recovery deductions under section 704(c), determine a partner's remedial items, as defined in § 1.163(j)–6(b)(3), based on an allocation of the partnership's asset basis (inside basis) items among its partners in proportion to their share of corresponding section 704(b) items (rather than applying the traditional method, described in § 1.704–3(b)). See *Example 24* in paragraph (o)(24) of this section.

(f) * * *

(1) * * *

(iii) *Exception applicable to publicly traded partnerships.* Publicly traded partnerships, as defined in § 1.7704–1, do not apply the rules in paragraph (f)(2) of this section to determine a partner's share of section 163(j) excess items. Rather, publicly traded partnerships determine a partner's share of section 163(j) excess items by applying the same percentage used to determine the partner's share of the corresponding section 704(b) items that comprise ATI.

* * * * *

(g) * * *

(4) *Special rule for taxable years beginning in 2019 and 2020.* In the case of any excess business interest expense of a partnership for any taxable year beginning in 2019 that is allocated to a partner under paragraph (f)(2) of this section, 50 percent of such excess business interest expense (§ 1.163(j)–6(g)(4) business interest expense) is treated as business interest expense that, notwithstanding paragraph (g)(2) of this section, is paid or accrued by the partner in the partner's first taxable year beginning in 2020. Additionally, § 1.163(j)–6(g)(4) business interest expense is not subject to the section 163(j) limitation at the level of the partner. For purposes of paragraph (h)(1) of this section, any § 1.163(j)–6(g)(4) business interest expense is, similar to deductible business interest expense, taken into account before any excess business interest expense. This paragraph applies after paragraph (n) of this section. If a partner disposes of a partnership interest in the partnership's 2019 or 2020 taxable year, § 1.163(j)–6(g)(4) business interest expense is deductible by the partner (except to the extent that the business interest expense is negative section 163(j) expense as defined in § 1.163(j)–6(h)(1) immediately prior to the disposition) and thus does not result in a basis increase under paragraph (h)(3) of this section. See *Example 35* and *Example 36* in paragraphs (o)(35) and (o)(36), respectively, of this section. A partner may elect to not have this provision apply with respect to each partnership interest held by the partner on an interest by interest basis. The rules and procedures regarding the time and manner of making, or revoking, such an election are provided in Revenue Procedure 2020–22, 2020–18 I.R.B. 745, and may be further modified through

other guidance (see §§ 601.601(d) and 601.602 of this chapter).

* * * * *

(n) *Treatment of self-charged lending transactions between partnerships and partners.* In the case of a lending transaction between a partner (lending partner) and partnership (borrowing partnership) in which the lending partner owns a direct interest (self-charged lending transaction), any business interest expense of the borrowing partnership attributable to the self-charged lending transaction is business interest expense of the borrowing partnership for purposes of this section. If in a given taxable year the lending partner is allocated excess business interest expense from the borrowing partnership and has interest income attributable to the self-charged lending transaction (interest income), the lending partner is deemed to receive an allocation of excess business interest income from the borrowing partnership in such taxable year. The amount of the lending partner's deemed allocation of excess business interest income is the lesser of such lending partner's allocation of excess business interest expense from the borrowing partnership in such taxable year or the interest income attributable to the self-charged lending transaction in such taxable year. To prevent the double counting of business interest income, the lending partner includes interest income that was treated as excess business interest income pursuant to this paragraph (n) only once when calculating its own section 163(j) limitation. To the extent an amount of interest income received by a lending partner is attributable to a self-charged lending transaction, and is deemed to be an allocation of excess business interest income from the borrowing partnership pursuant to this paragraph (n), such an amount of interest income will not be treated as investment income for purposes of section 163(d). In cases where the lending partner is not a C corporation, to the extent that any interest income exceeds the lending partner's allocation of excess business interest expense from the borrowing partnership for the taxable year, and such interest income otherwise would be properly treated as investment income of the lending partner for purposes of section 163(d) for that year, such excess amount of interest income will continue to be treated as investment income of the lending partner for that year for purposes of section 163(d). See *Example 26* in paragraph (o)(26) of this section.

(o) * * *

(24) *Example 24*—(i) *Facts.* On January 1, 2020, L and M form LM, a publicly traded partnership (as defined in § 1.7704–1), and agree that each will be allocated a 50 percent share of all LM items. The partnership agreement provides that LM will make allocations under section 704(c) using the remedial allocation method under § 1.704–3(d). L contributes depreciable property with an adjusted tax basis of $4,000 and a fair market value of $10,000. The property is depreciated using the straight-line method with a 10-year recovery period and has 4 years remaining on its recovery period. M contributes $10,000 in cash, which LM uses to purchase land. Except for the depreciation deductions, LM's expenses equal its income in each year of the 10 years commencing with the year LM is formed. LM has a valid section 754 election in effect.

(ii) *Section 163(j) remedial items and partner basis items.* LM sells the asset contributed by L in a fully taxable transaction at a time when the adjusted basis of the property is $4,000. Under § 1.163(j)–6(e)(2)(ii), solely for purposes of § 1.163(j)–6, the tax gain of $6,000 is allocated equally between L and M ($3,000 each). To avoid shifting built-in gain to the non-contributing partner (M) in a manner consistent with the rule in section 704(c), a remedial deduction of $3,000 is allocated to M (leaving M with no net tax gain), and remedial income of $3,000 is allocated to L (leaving L with total tax gain of $6,000).

(25) *Example 25*—(i) *Facts.* The facts are the same as *Example 24* in paragraph (o)(24) of this section except the property contributed by L had an adjusted tax basis of zero. For each of the 10 years following the contribution, there would be $500 of section 704(c) remedial income allocated to L and $500 of remedial deductions allocated to M with respect to the contributed asset. A buyer of M's units would step into M's shoes with respect to the $500 of annual remedial deductions. A buyer of L's units would step into L's shoes with respect to the $500 of annual remedial income and would have an annual section 743(b) deduction of $1,000 (net $500 of deductions).

(ii) *Analysis.* Pursuant to § 1.163(j)–6(d)(2)(ii), solely for purposes of § 1.163(j)–6, a buyer of L's units immediately after formation of LM would offset its $500 annual section 704(c) remedial income allocation with $500 of annual section 743(b) adjustment (leaving the buyer with net $500 of section 743(b) deduction). As a result, such buyer would be in the same position as a buyer of M's units. Each buyer would have net deductions of $500 per year, which would not affect ATI before 2022.

(26) *Example 26*—(i) *Facts.* X and Y are partners in partnership PRS. In Year 1, PRS had $200 of excess business interest expense. Pursuant to § 1.163(j)–6(f)(2), PRS allocated $100 of such excess business interest expense to each of its partners. In Year 2, X lends $10,000 to PRS and receives $1,000 of interest income for the taxable year (self-charged lending transaction). X is not in the trade or business of lending money. The $1,000 of interest expense resulting from this loan is allocable to PRS's trade or business assets. As a result, such $1,000 of interest expense is business interest expense of PRS. X and Y are each allocated $500 of such business interest expense as their distributive share of PRS's business interest expense for the taxable year. Additionally, in Year 2, PRS has $3,000 of ATI. PRS allocates the items comprising its $3,000 of ATI $0 to X and $3,000 to Y.

(ii) *Partnership-level.* In Year 2, PRS's section 163(j) limit is 30 percent of its ATI plus its business interest income, or $900 ($3,000 × 30 percent). Thus, PRS has $900 of deductible business interest expense, $100 of excess business interest expense, $0 of excess taxable income, and $0 of excess business interest income. Pursuant to § 1.163(j)–6(f)(2), $400 of X's allocation of business interest expense is treated as deductible business interest expense, $100 of X's allocation of business interest expense is treated as excess business interest expense, and $500 of Y's allocation of business interest expense is treated as deductible business interest expense.

(iii) *Lending partner.* Pursuant to § 1.163(j)–6(n), X treats $100 of its $1,000 of interest income as excess business interest income allocated from PRS in Year 2. Because X is deemed to have been allocated $100 of excess business interest income from PRS, and excess business interest expense from a partnership is treated as paid or accrued by a partner to the extent excess business interest income is allocated from such partnership to a partner, X treats its $100 allocation of excess business interest expense from PRS in Year 2 as business interest expense paid or accrued in Year 2. X, in computing its limit under section 163(j), has $100 of business interest income ($100 deemed allocation of excess business interest income from PRS in Year 2) and $100 of business interest expense ($100 allocation of excess business interest expense treated as paid or accrued in Year 2). Thus, X's $100 of business interest expense is deductible business interest expense. At the end of Year 2,

X has $100 of excess business interest expense from PRS ($100 from Year 1). X treats $900 of its $1,000 of interest income as investment income for purposes of section 163(d).

(27)–(33) [Reserved]

(34) *Example 34*—(i) *Facts.* X and Y are equal partners in partnership PRS. Further, X and Y share the profits of PRS equally. In 2019, PRS had ATI of $100. Additionally, in 2019, PRS had $100 of section 704(b) income which was allocated $50 to X and $50 to Y (PRS did not have any section 704(c) income in 2019). In 2020, PRS's only items of income, gain, loss or deduction was $1 of trade or business income, which it allocated to X pursuant to section 704(c).

(ii) *Partnership-level.* In 2020, PRS makes the election described in § 1.163(j)–6(d)(5) to use its 2019 ATI in 2020. As a result, PRS has $100 of ATI in 2020. PRS does not have any business interest expense. Therefore, PRS has $100 of excess taxable income in 2020.

(iii) *Partner-level allocations.* PRS allocates its $100 of excess taxable income to X and Y pursuant to § 1.163(j)–6(f)(2). To determine each partner's share of the $100 of excess taxable income, PRS must determine each partner's allocable ATI (as defined in § 1.163(j)–6(f)(2)(ii)). Because PRS made the election described in § 1.163(j)–6(d)(5), PRS must determine the allocable ATI of each of its partners pursuant to paragraph (d)(5). Specifically, PRS determines each partner's share of allocable ATI based on PRS's 2019 section 704 income, gain, loss, and deduction. PRS had $100 of section 704(b) income in 2019 which was allocated $50 to X and $50 to Y. Therefore, in 2020, X and Y are both allocated $50 of excess taxable income (50% × $100).

(35) *Example 35*—(i) *Facts.* X, a partner in partnership PRS, was allocated $20 of excess business interest expense from PRS in 2018 and $10 of excess business interest expense from PRS in 2019. In 2020, PRS allocated $16 of excess taxable income to X.

(ii) *Analysis.* X treats 50 percent of its $10 of excess business interest expense allocated from PRS in 2019 as § 1.163(j)–6(g)(4) business interest expense. Thus, $5 of § 1.163(j)–6(g)(4) business interest expense is treated as paid or accrued by X in 2020 and is not subject to the section 163(j) limitation at X's level. Because X was allocated $16 of excess taxable income from PRS in 2020, X treats $16 of its $25 of excess business interest expense as business interest expense paid or accrued pursuant to § 1.163(j)–6(g)(2). X, in computing its limit under section 163(j) in 2020, has $16 of ATI (as a result of its allocation of $16 of excess taxable income from PRS), $0 of business interest income, and $16 of business interest expense ($16 of excess business interest expense treated as paid or accrued in 2020). Pursuant to § 1.163(j)–2(b)(2)(i), X's section 163(j) limit in 2020 is $8 ($16 × 50 percent). Thus, X has $8 of business interest expense that is deductible under section 163(j). The $8 of X's business interest expense not allowed as a deduction ($16 business interest expense subject to section 163(j), less $8 section 163(j) limit) is treated as business interest expense paid or accrued by X in 2021. At the end of 2020, X has $9 of excess business interest expense from PRS ($20 from 2018, plus $10 from 2019, less $5 treated as paid or accrued pursuant to § 1.163(j)–6(g)(4), less $16 treated as paid or accrued pursuant to § 1.163(j)–6(g)(2)).

(36) *Example 36*—(i) *Facts.* X is a partner in partnership PRS. At the beginning of 2018, X's outside basis in PRS was $100. X was allocated $20 of excess business interest expense from PRS in 2018 and $10 of excess business interest expense from PRS in 2019. X sold its PRS interest in 2019 for $70.

(ii) *Analysis.* X treats 50 percent of its $10 of excess business interest expense allocated from PRS in 2019 as § 1.163(j)–6(g)(4) business interest expense. Thus, $5 of § 1.163(j)–6(g)(4) business interest expense is treated as paid or accrued by X in 2020 and is not subject to the section 163(j) limitation at X's level. Pursuant to paragraph (h)(3) of this section, immediately before the disposition, X increases the basis of its PRS interest from $70 to $95 (add back of $20 of EBIE from 2018 and $5 of remaining EBIE from 2019). Thus, X has a $25 section 741 loss recognized on the sale ($70 − $95).

(p) *Applicability dates.*

(1) *In general.** * *

(2) *Paragraphs (c)(1) and (2), (d)(3) through (5), (e)(5), (f)(1)(iii), (g)(4), (n), and (o)(24) through (29), and (34) through (36).* Paragraphs (c)(1) and (2), (d)(3) through (5), (e)(5), (f)(1)(iii), (g)(4), (n), and (o)(24) through (29), and (34) through (36) of this section apply to taxable years beginning on or after March 22, 2021. However, taxpayers and their related parties, within the meaning of sections 267(b) (determined without regard to section 267(c)(3)) and 707(b)(1), may choose to apply the rules in paragraphs (c)(1) and (2), (d)(3) through (5), (e)(5), (f)(1)(iii), (g)(4), (n), and (o)(24) through (29), and (34) through (36) to a taxable year beginning after December 31, 2017, and before March 22, 2021, provided that those taxpayers and their related parties consistently apply all of the rules in T.D. 9905 (§§ 1.163(j)–0 through 1.163(j)–11, effective November 13, 2020) as modified by T.D. 9943 (effective January 13, 2021), and, if applicable, §§ 1.263A–9, 1.263A–15, 1.381(c)(20)–1, 1.382–1, 1.382–2, 1.382–5, 1.382–6, 1.382–7, 1.383–0, 1.383–1, 1.469–9, 1.469–11, 1.704–1, 1.882–5, 1.1362–3, 1.1368–1, 1.1377–1, 1.1502–13, 1.1502–21, 1.1502–36, 1.1502–79, 1.1502–91 through 1.1502–99 (to the extent they effectuate the rules of §§ 1.382–2, 1.382–5, 1.382–6, and 1.383–1), and 1.1504–4 contained in T.D. 9905 as modified by T.D. 9943, for that taxable year and for each subsequent taxable year.

■ **Par. 7.** Section 1.163(j)–7 is amended by revising paragraph (a), adding paragraphs (c) through (f), (g)(3) and (4), (h), (k), and (l), and revising paragraph (m) to read as follows:

§ 1.163 (j)–7 Application of the section 163(j) limitation to foreign corporations and United States shareholders.

(a) *Overview.* This section provides rules for the application of section 163(j) to relevant foreign corporations and United States shareholders of relevant foreign corporations. Paragraph (b) of this section provides the general rule regarding the application of section 163(j) to a relevant foreign corporation. Paragraph (c) of this section provides rules for applying section 163(j) to CFC group members of a CFC group. Paragraph (d) of this section provides rules for determining a specified group and specified group members. Paragraph (e) of this section provides rules and procedures for treating a specified group member as a CFC group member and for determining a CFC group. Paragraph (f) of this section provides rules regarding the treatment of a CFC group member that has ECI. Paragraph (g) of this section provides rules concerning the computation of ATI of an applicable CFC. Paragraph (h) of this section provides a safe harbor that exempts certain stand-alone applicable CFCs and CFC groups from the application of section 163(j) for a taxable year. Paragraphs (i) and (j) of this section are reserved. Paragraph (k) of this section provides definitions that apply for purposes of this section (see also § 1.163(j)–1 for additional definitions). Paragraph (l) of this section provides examples illustrating the application of this section.

* * * * *

(c) *Application of section 163(j) to CFC group members of a CFC group*—(1) *Scope.* This paragraph (c) provides rules for applying section 163(j) to a

CFC group and a CFC group member. Paragraph (c)(2) of this section provides rules for computing a single section 163(j) limitation for a specified period of a CFC group. Paragraph (c)(3) of this section provides rules for allocating a CFC group's section 163(j) limitation to CFC group members for specified taxable years. Paragraph (c)(4) of this section provides currency translation rules. Paragraph (c)(5) of this section provides special rules for specified periods beginning in 2019 or 2020.

(2) *Calculation of section 163(j) limitation for a CFC group for a specified period*—(i) *In general.* A single section 163(j) limitation is computed for a specified period of a CFC group. For purposes of applying section 163(j) and the section 163(j) regulations, the current-year business interest expense, disallowed business interest expense carryforwards, business interest income, floor plan financing interest expense, and ATI of a CFC group for a specified period equal the sums of each CFC group member's respective amounts for its specified taxable year with respect to the specified period. A CFC group member's current-year business interest expense, business interest income, floor plan financing interest expense, and ATI for a specified taxable year are generally determined on a separate-company basis. For purposes of determining the ATI of a CFC group, § 1.163(j)–1(b)(1)(vii) (providing that ATI cannot be less than zero) applies with respect to the ATI of the CFC group but not the ATI of any CFC group member.

(ii) *Certain transactions between CFC group members disregarded.* Any transaction between CFC group members of a CFC group that is entered into with a principal purpose of affecting a CFC group or a CFC group member's section 163(j) limitation by increasing or decreasing a CFC group or a CFC group member's ATI or business interest income for a specified taxable year is disregarded for purposes of applying section 163(j) and the section 163(j) regulations.

(3) *Deduction of business interest expense*—(i) *CFC group business interest expense*—(A) *In general.* The extent to which a CFC group member's current-year business interest expense and disallowed business interest expense carryforwards for a specified taxable year that ends with or within a specified period may be deducted under section 163(j) is determined under the rules and principles of § 1.163(j)–5(a)(2) and (b)(3)(ii), subject to the modifications described in paragraph (c)(3)(i)(B) of this section.

(B) *Modifications to relevant terms.* For purposes of paragraph (c)(3)(i)(A) of this section, the rules and principles of § 1.163(j)–5(b)(3)(ii) are applied by—

(*1*) Replacing ''§ 1.163(j)–4(d)(2)'' in § 1.163(j)–5(a)(2)(ii) with ''§ 1.163(j)–7(c)(2)(i)'';

(*2*) Replacing the term ''allocable share of the consolidated group's remaining section 163(j) limitation'' with ''allocable share of the CFC group's remaining section 163(j) limitation'';

(*3*) Replacing the terms ''consolidated group'' and ''group'' with ''CFC group'';

(*4*) Replacing the term ''consolidated group's remaining section 163(j) limitation'' with ''CFC group's remaining section 163(j) limitation'';

(*5*) Replacing the term ''consolidated return year'' with ''specified period'';

(*6*) Replacing the term ''current year'' or ''current-year'' with ''current specified period'' or ''specified taxable year with respect to the current specified period,'' as the context requires;

(*7*) Replacing the term ''member'' with ''CFC group member''; and

(*8*) Replacing the term ''taxable year'' with ''specified taxable year with respect to a specified period.''

(ii) *Carryforwards treated as attributable to the same taxable year.* For purposes of applying the principles of § 1.163(j)–5(b)(3)(ii), as required under paragraph (c)(3)(i) of this section, CFC group members' disallowed business interest expense carryforwards that arose in specified taxable years with respect to the same specified period are treated as disallowed business interest expense carryforwards from taxable years ending on the same date and are deducted on a pro rata basis, under the principles of § 1.163(j)–5(b)(3)(ii)(C)(*3*), pursuant to paragraph (c)(3)(i) of this section.

(iii) *Multiple specified taxable years of a CFC group member with respect to a specified period.* If a CFC group member has more than one specified taxable year (each year, an *applicable specified taxable year*) with respect to a single specified period of a CFC group, then all the applicable specified taxable years are taken into account for purposes of applying the principles of § 1.163(j)–5(b)(3)(ii), as required under paragraph (c)(3)(i) of this section, with respect to the specified period. The portion of the section 163(j) limitation allocable to disallowed business interest expense carryforwards of the CFC group member that arose in taxable years before the first applicable specified taxable year is prorated among the applicable specified taxable years in proportion to the number of days in each applicable specified taxable year.

(iv) *Limitation on pre-group disallowed business interest expense carryforward*—(A) *General rule*—(*1*) *CFC group member pre-group disallowed business interest expense carryforward.* This paragraph (c)(3)(iv) applies to pre-group disallowed business interest expense carryforwards of a CFC group member. The amount of the pre-group disallowed business interest expense carryforwards described in the preceding sentence that may be included in any CFC group member's business interest expense deduction for any specified taxable year under this paragraph (c)(3) may not exceed the aggregate section 163(j) limitation for all specified periods of the CFC group, determined by reference only to the CFC group member's items of income, gain, deduction, and loss, and reduced (including below zero) by the CFC group member's business interest expense (including disallowed business interest expense carryforwards) taken into account as a deduction by the CFC group member in all specified taxable years in which the CFC group member has continuously been a CFC group member of the CFC group (*cumulative section 163(j) pre-group carryforward limitation*).

(*2*) *Subgrouping.* In the case of a pre-group disallowed business interest expense carryforward, a pre-group subgroup is composed of the CFC group member with the pre-group disallowed business interest expense carryforward (the *loss member*) and each other CFC group member of the loss member's CFC group (the *current group*) that was a member of the CFC group in which the pre-group disallowed business interest expense carryforward arose and joined the specified group of the current group at the same time as the loss member. A CFC group member that is a member of a pre-group subgroup remains a member of the pre-group subgroup until its first taxable year during which it ceases to be a member of the same specified group as the loss member. For purposes of this paragraph (c), the rules and principles of § 1.163(j)–5(d)(1)(B) apply to a pre-group subgroup as if the pre-group subgroup were a SRLY subgroup.

(*3*) *Transition rule.* Solely for purposes of paragraph (c)(3)(iv)(A)(*2*) of this section, a CFC group includes a group of applicable CFCs for which a CFC group election was made under guidance under section 163(j) published on December 28, 2018. Therefore, if the requirements of paragraph (c)(3)(iv)(A)(*2*) of this section are satisfied, a group of applicable CFCs described in the preceding sentence may be treated as a pre-group subgroup.

(B) *Deduction of pre-group disallowed business interest expense carryforwards.* Notwithstanding paragraph (c)(3)(iv)(A)(*1*) of this section, pre-group disallowed business interest expense carryforwards are available for deduction by a CFC group member in its specified taxable year only to the extent the CFC group has remaining section 163(j) limitation for the specified period after the deduction of current-year business interest expense and disallowed business interest expense carryforwards from earlier taxable years that are permitted to be deducted in specified taxable years of CFC group members with respect to the specified period. See paragraph (c)(3)(i) of this section and § 1.163(j)–5(b)(3)(ii)(A). Pre-group disallowed business interest expense carryforwards are deducted on a pro rata basis (under the principles of paragraph (c)(3)(i) of this section and § 1.163(j)–5(b)(3)(ii)(C)(*4*)) with other disallowed business interest expense carryforwards from taxable years ending on the same date.

(4) *Currency translation.* For purposes of applying this paragraph (c), items of a CFC group member are translated into a single currency for the CFC group and back to the functional currency of the CFC group member using the average exchange rate for the CFC group member's specified taxable year. The single currency for the CFC group may be the U.S. dollar or the functional currency of a plurality of the CFC group members.

(5) *Special rule for specified periods beginning in 2019 or 2020*—(i) *50 percent ATI limitation applies to a specified period of a CFC group.* In the case of a CFC group, § 1.163(j)–2(b)(2) (including the election under § 1.163(j)–2(b)(2)(ii)) applies to a specified period of the CFC group beginning in 2019 or 2020, rather than to a specified taxable year of a CFC group member. An election under § 1.163(j)–2(b)(2)(ii) for a specified period of a CFC group is not effective unless made by each designated U.S. person. Except as otherwise provided in this paragraph (c)(5)(i), the election is made in accordance with Revenue Procedure 2020–22, 2020–18 I.R.B. 745. For purposes of applying § 1.964–1(c), the election is treated as if made for each CFC group member.

(ii) *Election to use 2019 ATI applies to a specified period of a CFC group*—(A) *In general.* In the case of a CFC group, for purposes of applying paragraph (c)(2) of this section, an election under § 1.163(j)–2(b)(3)(i) is made for a specified period of a CFC group beginning in 2020 and applies to the specified taxable years of each CFC group member with respect to such specified period, taking into account the application of paragraph (c)(5)(ii)(B) of this section. The election under § 1.163(j)–2(b)(3)(i) does not apply to any specified taxable year of a CFC group member other than those described in the preceding sentence. An election under § 1.163(j)–2(b)(3)(i) for a specified period of a CFC group is not effective unless made by each designated U.S. person. Except as otherwise provided in this paragraph (c)(5)(ii)(A), the election is made in accordance with Revenue Procedure 2020–22, 2020–18 I.R.B. 745. For purposes of applying § 1.964–1(c), the election is treated as if made for each CFC group member.

(B) *Specified taxable years that do not begin in 2020.* If a specified taxable year of a CFC group member with respect to the specified period described in paragraph (c)(5)(ii)(A) of this section begins in 2019, then, for purposes of applying paragraph (c)(2) of this section, § 1.163(j)–2(b)(3) is applied to such specified taxable year by substituting ''2018'' for ''2019'' and ''2019'' for ''2020.'' If a specified taxable year of a CFC group member with respect to the specified period described in paragraph (c)(5)(ii)(A) of this section begins in 2021, then, for purposes of applying paragraph (c)(2) of this section, § 1.163(j)–2(b)(3) is applied to such specified taxable year by substituting ''2020'' for ''2019'' and ''2021'' for ''2020.''

(d) *Determination of a specified group and specified group members*—(1) *Scope.* This paragraph (d) provides rules for determining a specified group and specified group members. Paragraph (d)(2) of this section provides rules for determining a specified group. Paragraph (d)(3) of this section provides rules for determining specified group members.

(2) *Rules for determining a specified group*—(i) *Definition of a specified group.* Subject to paragraph (d)(2)(ii) of this section, the term *specified group* means one or more applicable CFCs or chains of applicable CFCs connected through stock ownership with a specified group parent (which is included in the specified group only if it is an applicable CFC), but only if—

(A) The specified group parent owns directly or indirectly stock meeting the requirements of section 1504(a)(2)(B) in at least one applicable CFC; and

(B) Stock meeting the requirements of section 1504(a)(2)(B) in each of the applicable CFCs (except the specified group parent) is owned directly or indirectly by one or more of the other applicable CFCs or the specified group parent.

(ii) *Indirect ownership.* For purposes of applying paragraph (d)(2)(i) of this section, stock is owned indirectly only if it is owned under section 318(a)(2)(A) through a partnership or under section 318(a)(2)(A) or (B) through an estate or trust not described in section 7701(a)(30).

(iii) *Specified group parent.* The term *specified group parent* means a qualified U.S. person or an applicable CFC.

(iv) *Qualified U.S. person.* The term *qualified U.S. person* means a United States person described in section 7701(a)(30)(A) or (C). For purposes of this paragraph (d), members of a consolidated group that file (or that are required to file) a consolidated U.S. Federal income tax return are treated as a single qualified U.S person and individuals described in section 7701(a)(30)(A) whose filing status is married filing jointly are treated as a single qualified U.S. person.

(v) *Stock.* For purposes of this paragraph (d)(2), the term *stock* has the same meaning as ''stock'' in section 1504 (without regard to § 1.1504–4, except as provided in paragraph (d)(2)(vi) of this section) and all shares of stock within a single class are considered to have the same value. Thus, control premiums and minority and blockage discounts within a single class are not taken into account.

(vi) *Options treated as exercised.* For purposes of this paragraph (d)(2), options that are reasonably certain to be exercised, as determined under § 1.1504–4(g), are treated as exercised. For purposes of this paragraph (d)(2)(vi), options include call options, warrants, convertible obligations, put options, and any other instrument treated as an option under § 1.1504–4(d), determined by replacing the term ''a principal purpose of avoiding the application of section 1504 and this section'' with ''a principal purpose of avoiding the application of section 163(j).''

(vii) *When a specified group ceases to exist.* The principles of § 1.1502–75(d)(1), (d)(2)(i) and (ii), and (d)(3)(i) through (iv) apply for purposes of determining when a specified group ceases to exist. Solely for purposes of applying these principles, references to the common parent are treated as references to the specified group parent and each applicable CFC that is treated as a specified group member for a taxable year with respect to a specified period is treated as affiliated with the specified group parent from the beginning to the end of the specified

period, without regard to the beginning or end of its taxable year.

(3) *Rules for determining a specified group member.* If two or more applicable CFCs are included in a specified group on the last day of a taxable year of each applicable CFC that ends with or within a specified period, then each applicable CFC is a *specified group member* with respect to the specified period for its entire taxable year ending with or within the specified period. If only one applicable CFC is included in a specified group on the last day of its taxable year that ends with or within the specified period, it is not a specified group member. If an applicable CFC has multiple taxable years that end with or within a specified period, this paragraph (d)(3) is applied separately to each taxable year to determine if the applicable CFC is a specified group member for such taxable year.

(e) *Rules and procedures for treating a specified group as a CFC group*—(1) *Scope.* This paragraph (e) provides rules and procedures for treating a specified group member as a CFC group member and for determining a CFC group for purposes of applying section 163(j) and the section 163(j) regulations.

(2) *CFC group and CFC group member*—(i) *CFC group.* The term *CFC group* means, with respect to a specified period, all CFC group members for their specified taxable years.

(ii) *CFC group member.* The term *CFC group member* means, with respect to a specified taxable year and a specified period, a specified group member of a specified group for which a CFC group election is in effect. However, notwithstanding the prior sentence, a specified group member is not treated as a CFC group member for a taxable year of the specified group member beginning before January 1, 2018.

(3) *Duration of a CFC group.* A CFC group continues until the CFC group election is revoked, or there is no longer a specified period with respect to the specified group. A failure to provide the information described in paragraph (e)(6) of this section does not terminate a CFC group election.

(4) *Joining or leaving a CFC group.* If an applicable CFC becomes a specified group member for a specified taxable year with respect to a specified period of a specified group for which a CFC group election is in effect, the CFC group election applies to the applicable CFC and the applicable CFC becomes a CFC group member. If an applicable CFC ceases to be a specified group member for a specified taxable year with respect to a specified period of a specified group for which a CFC group election is in effect, the CFC group election terminates solely with respect to the applicable CFC.

(5) *Manner of making or revoking a CFC group election*—(i) *In general.* An election is made or revoked under this paragraph (e)(5) (*CFC group election*) with respect to a specified period of a specified group. A CFC group election remains in effect for each specified period of the specified group until revoked. A CFC group election that is in effect with respect to a specified period of a specified group applies to each specified group member for its specified taxable year that ends with or within the specified period. The making or revoking of a CFC group election is not effective unless made or revoked by each designated U.S. person.

(ii) *Revocation by election.* A CFC group election cannot be revoked with respect to any specified period beginning before 60 months following the last day of the specified period for which the election was made. Once a CFC group election has been revoked, a new CFC group election cannot be made with respect to any specified period beginning before 60 months following the last day of the specified period for which the election was revoked.

(iii) *Timing.* A CFC group election must be made or revoked with respect to a specified period of a specified group no later than the due date (taking into account extensions, if any) of the original Federal income tax return for the taxable year of each designated U.S. person in which or with which the specified period ends.

(iv) *Election statement.* To make or revoke a CFC group election for a specified period of a specified group, each designated U.S. person must attach a statement to its relevant Federal income tax or information return in accordance with publications, forms, instructions, or other guidance. The statement must include the name and taxpayer identification number of all designated U.S. persons, a statement that the CFC group election is being made or revoked, as applicable, the specified period for which the CFC group election is being made or revoked, and the name of each CFC group member and its specified taxable year with respect to the specified period. The statement must be filed in the manner prescribed in publications, forms, instructions, or other guidance.

(v) *Effect of prior CFC group election.* A CFC group election is made solely pursuant to the provisions of this paragraph (e)(5), without regard to whether a CFC group election described in guidance under section 163(j) published on December 28, 2018, was in effect.

(6) *Annual information reporting.* Each designated U.S. person must attach a statement to its relevant Federal income tax or information return for each taxable year in which a CFC group election is in effect that contains information concerning the computation of the CFC group's section 163(j) limitation and the application of paragraph (c)(3) of this section to the CFC group in accordance with publications, forms, instructions, or other guidance.

(f) *Treatment of a CFC group member that has ECI*—(1) *In general.* If a CFC group member has ECI in its specified taxable year, then for purposes of section 163(j) and the section 163(j) regulations—

(i) The items, disallowed business interest expense carryforwards, and other attributes of the CFC group member that are ECI are treated as items, disallowed business interest expense carryforwards, and attributes of a separate applicable CFC (such deemed corporation, an *ECI deemed corporation*) that has the same taxable year and shareholders as the applicable CFC; and

(ii) The ECI deemed corporation is not treated as a specified group member for the specified taxable year.

(2) [Reserved].

(g) * * *

(3) *Treatment of certain foreign income taxes.* For purposes of computing the ATI of a relevant foreign corporation for a taxable year, no deduction is taken into account for any foreign income tax (as defined in § 1.960–1(b), but substituting the phrase ''relevant foreign corporation'' for the phrase ''controlled foreign corporation'').

(4) *Anti-abuse rule*—(i) *In general.* If a specified group member of a specified group or an applicable partnership (*specified lender*) includes an amount (*payment amount*) in income and such amount is attributable to business interest expense incurred by another specified group member or an applicable partnership of the specified group (*specified borrower*) during its taxable year, then the ATI of the specified borrower for the taxable year is increased by the ATI adjustment amount if—

(A) The business interest expense is incurred with a principal purpose of reducing the Federal income tax liability of any United States shareholder of a specified group member (including over other taxable years);

(B) Absent the application of this paragraph (g)(4), the effect of the specified borrower treating all or part of the payment amount as disallowed business interest expense would be to reduce the Federal income tax liability of any United States shareholder of a specified group member; and

(C) Either no CFC group election is in effect with respect to the specified group or the specified borrower is an applicable partnership.

(ii) *ATI adjustment amount*—(A) *In general.* For purposes of this paragraph (g)(4), the term *ATI adjustment amount* means, with respect to a specified borrower and a taxable year, the product of 3⅓ and the lesser of the payment amount or the disallowed business interest expense, computed without regard to this paragraph (g)(4).

(B) *Special rule for taxable years or specified periods beginning in 2019 or 2020.* For any taxable year of an applicable CFC or specified taxable year of a CFC group member with respect to a specified period for which the section 163(j) limitation is determined based, in part, on 50 percent of ATI, in accordance with § 1.163(j)–2(b)(2), paragraph (g)(4)(ii)(A) of this section is applied by substituting ''2'' for ''3⅓.''

(iii) *Applicable partnership.* For purposes of this paragraph (g)(4), the term *applicable partnership* means, with respect to a specified group, a partnership in which at least 80 percent of the interests in profits or capital is owned, directly or indirectly through one or more other partnerships, by specified group members of the specified group. For purposes of this paragraph (g)(4)(iii), a partner's interest in the profits of a partnership is determined in accordance with the rules and principles of § 1.706–1(b)(4)(ii) and a partner's interest in the capital of a partnership is determined in accordance with the rules and principles of § 1.706–1(b)(4)(iii).

(h) *Election to apply safe-harbor*—(1) *In general.* If an election to apply this paragraph (h)(1) (*safe-harbor election*) is in effect with respect to a taxable year of a stand-alone applicable CFC or a specified taxable year of a CFC group member, as applicable, then, for such year, no portion of the applicable CFC's business interest expense is disallowed under the section 163(j) limitation. This paragraph (h) does not apply to excess business interest expense, as described in § 1.163(j)–6(f)(2), until the taxable year in which it is treated as paid or accrued by an applicable CFC under § 1.163(j)–6(g)(2)(i). Furthermore, excess business interest expense is not taken into account for purposes of determining whether the safe-harbor election is available for a stand-alone applicable CFC or a CFC group until the taxable year in which it is treated as paid or accrued by an applicable CFC under § 1.163(j)–6(g)(2)(i).

(2) *Eligibility for safe-harbor election*—(i) *Stand-alone applicable CFC.* The safe-harbor election may be made for the taxable year of a stand-alone applicable CFC only if, for the taxable year, the business interest expense of the applicable CFC is less than or equal to either—

(A) The business interest income of the applicable CFC; or

(B) 30 percent of the lesser of the eligible amount or the qualified tentative taxable income of the applicable CFC.

(ii) *CFC group.* The safe-harbor election may be made for the specified period of a CFC group only if, for the specified period, no CFC group member has any pre-group disallowed business interest expense carryforward and the business interest expense of the CFC group for the specified period is less than or equal to either—

(A) The business interest income of the CFC group; or

(B) 30 percent of the lesser of the eligible amount or the qualified tentative taxable income of the CFC group.

(iii) *Currency translation.* For purposes of applying this paragraph (h), BII, BIE, and qualified tentative taxable income of a stand-alone applicable CFC or a CFC group must be determined using the U.S. dollar. If BII, BIE, or any items of income, gain, deduction, or loss that are taken into account in computing qualified tentative taxable income are maintained in a currency other than the U.S. dollar, then those items must be translated into the U.S. dollar using the average exchange rate for the taxable year or the specified taxable year, as applicable.

(3) *Eligible amount*—(i) *Stand-alone applicable CFC.* The *eligible amount* of a stand-alone applicable CFC for a taxable year is the sum of the amounts a domestic corporation would include in gross income under sections 951(a)(1)(A) and 951A(a), reduced by any deductions that would be allowed under section 245A (by reason of section 964(e)(4)) or section 250(a)(1)(B)(i), determined as if the domestic corporation has a taxable year that ends on the last date of the taxable year of the stand-alone applicable CFC, it wholly owns the stand-alone applicable CFC throughout the CFC's taxable year, it does not own any assets other than stock in the stand-alone applicable CFC, and it has no other items of income, gain, deduction, or loss.

(ii) *CFC group.* The *eligible amount* of a CFC group for a specified period is the sum of the amounts a domestic corporation would include in gross income under sections 951(a)(1)(A) and 951A(a), reduced by any deductions that would be allowed under section 245A (by reason of section 964(e)(4)) or section 250(a)(1)(B)(i), determined as if the domestic corporation has a taxable year that is the specified period, it wholly owns each CFC group member throughout the CFC group member's specified taxable year, it does not own any assets other than stock in the CFC group members, and it has no other items of income, gain, deduction, or loss.

(iii) *Additional rules for determining an eligible amount.* For purposes of paragraphs (h)(3)(i) and (ii) of this section, the amounts that would be included in gross income of a United States shareholder under sections 951(a)(1)(A) and 951A(a), and any corresponding deductions that would be allowed under section 245A (by reason of section 964(e)(4)) or section 250(a)(1)(B)(i), are determined by taking into account any elections that are made with respect to the applicable CFC(s), including under § 1.954–1(d)(5) (relating to the subpart F high-tax exception) and § 1.951A–2(c)(7)(viii) (relating to the GILTI high-tax exclusion). These amounts are also determined without regard to any section 163(j) limitation on business interest expense and without regard to any disallowed business interest expense carryovers. In addition, those amounts are determined by only taking in account items of the applicable CFC(s) that are properly allocable to a non-excepted trade or business under § 1.163(j)–10.

(4) *Qualified tentative taxable income.* The term *qualified tentative taxable income* means, with respect to a taxable year of a stand-alone applicable CFC, the applicable CFC's tentative taxable income, and with respect to a specified period of a CFC group, the sum of each CFC group member's tentative taxable income for the specified taxable year; provided that for purposes of this paragraph (h)(4), tentative taxable income is determined by taking into account only items properly allocable to a non-excepted trade or business under § 1.163(j)–10.

(5) *Manner of making a safe-harbor election*—(i) *In general.* A safe-harbor election is an annual election made under this paragraph (h)(5) with respect to a taxable year of a stand-alone applicable CFC or with respect to a specified period of a CFC group. A safe-

harbor election that is made with respect to a specified period of a CFC group is effective with respect to each CFC group member for its specified taxable year. A safe-harbor election is only effective if made by each designated U.S. person with respect to a stand-alone applicable CFC or a CFC group. A safe-harbor election is made with respect to a taxable year of a stand-alone applicable CFC, or a specified period of a CFC group, no later than the due date (taking into account extensions, if any) of the original Federal income tax return for the taxable year of each designated U.S. person, respectively, in which or with which the taxable year of the stand-alone applicable CFC ends or the specified period of the CFC group ends.

(ii) *Election statement.* To make a safe-harbor election, each designated U.S. person must attach to its relevant Federal income tax return or information return a statement that includes the name and taxpayer identification number of all designated U.S. persons, a statement that a safe-harbor election is being made pursuant to § 1.163(j)–7(h) and a calculation that substantiates that the requirements for making the election are satisfied, and the taxable year of the stand-alone applicable CFC or the specified period of the CFC group, as applicable, for which the safe-harbor election is being made in accordance with publications, forms, instructions, or other guidance. In the case of a CFC group, the statement must also include the name of each CFC group member and its specified taxable year that ends with or within the specified period for which the safe-harbor election is being made. The statement must be filed in the manner prescribed in publications, forms, instructions, or other guidance.

(6) *Special rule for taxable years or specified periods beginning in 2019 or 2020.* In the case of a stand-alone applicable CFC, for any taxable year beginning in 2019 or 2020, paragraph (h)(2)(i) of this section is applied by substituting ''50 percent'' for ''30 percent.'' In the case of a CFC group, for any specified period beginning in 2019 or 2020, paragraph (h)(2)(ii)(A) of this section is applied by substituting ''50 percent'' for ''30 percent.''

* * * * *

(k) *Definitions.* The following definitions apply for purposes of this section.

(1) *Applicable partnership.* The term *applicable partnership* has the meaning provided in paragraph (g)(4)(iii) of this section.

(2) *Applicable specified taxable year.* The term *applicable specified taxable year* has the meaning provided in paragraph (c)(3)(iii) of this section.

(3) *ATI adjustment amount.* The term *ATI adjustment amount* has the meaning provided in paragraph (g)(4)(ii) of this section.

(4)–(5) [Reserved].

(6) *CFC group.* The term *CFC group* has the meaning provided in paragraph (e)(2)(i) of this section.

(7) *CFC group election.* The term *CFC group election* means the election described in paragraph (e)(5) of this section.

(8) *CFC group member.* The term *CFC group member* has the meaning provided in paragraph (e)(2)(ii) of this section.

(9) [Reserved].

(10) *Cumulative section 163(j) pre-group carryforward limitation.* The term *cumulative section 163(j) pre-group carryforward limitation* has the meaning provided in paragraph (c)(3)(iv)(A)(*1*) of this section.

(11) *Current group.* The term *current group* has the meaning provided in paragraph (c)(3)(iv)(A)(*2*) of this section.

(12) *Designated U.S. person.* The term *designated U.S. person* means—

(i) With respect to a stand-alone applicable CFC, each controlling domestic shareholder, as defined in § 1.964–1(c)(5)(i) of the applicable CFC; or

(ii) With respect to a specified group, the specified group parent, if the specified group parent is a qualified U.S. person, or each controlling domestic shareholder, as defined in § 1.964–1(c)(5)(i), of the specified group parent, if the specified group parent is an applicable CFC.

(13) *ECI deemed corporation.* The term *ECI deemed corporation* has the meaning provided in paragraph (f)(1)(i) of this section.

(14) *Effectively connected income.* The term *effectively connected income* (or *ECI*) means income or gain that is ECI, as defined in § 1.884–1(d)(1)(iii), and deduction or loss that is allocable to, ECI, as defined in § 1.884–1(d)(1)(iii).

(15) *Eligible amount.* The term *eligible amount* has the meaning provided in paragraph (h)(3)(i) of this section.

(16) *Former group.* The term *former group* has the meaning provided in paragraph (c)(3)(iv)(A)(*2*) of this section.

(17) *Loss member.* The term *loss member* has the meaning provided in paragraph (c)(3)(iv)(A)(*2*) of this section.

(18) *Payment amount.* The term *payment amount* has the meaning provided in paragraph (g)(4)(i) of this section.

(19) *Pre-group disallowed business interest expense carryforward.* The term *pre-group disallowed business interest expense carryforward* means, with respect to a CFC group member and a specified taxable year, any disallowed business interest expense carryforward of the CFC group member that arose in a taxable year during which the CFC group member (or its predecessor) was not a CFC group member of the CFC group.

(20) *Qualified tentative taxable income.* The term *qualified tentative taxable income* has the meaning provided in paragraph (h)(4) of this section.

(21) *Qualified U.S. person.* The term *qualified U.S. person* has the meaning provided in paragraph (d)(2)(iv) of this section.

(22) *Relevant period.* The term *relevant period* has the meaning provided in paragraph (c)(3)(iv)(A)(*2*) of this section.

(23) *Safe-harbor election.* The term *safe-harbor election* has the meaning provided in paragraph (h)(1) of this section.

(24) *Specified borrower.* The term *specified borrower* has the meaning provided in paragraph (g)(4)(i) of this section.

(25) *Specified group.* The term *specified group* has the meaning provided in paragraph (d)(2)(i) of this section.

(26) *Specified group member.* The term *specified group member* has the meaning provided in paragraph (d)(3) of this section.

(27) *Specified group parent.* The term *specified group parent* has the meaning provided in paragraph (d)(2)(iii) of this section.

(28) *Specified lender.* The term *specified lender* has the meaning provided in paragraph (g)(4)(i) of this section.

(29) *Specified period*—(i) *In general.* Except as otherwise provided in paragraph (k)(29)(ii) of this section, the term *specified period* means, with respect to a specified group—

(A) If the specified group parent is a qualified U.S. person, the period ending on the last day of the taxable year of the specified group parent and beginning on the first day after the last day of the specified group's immediately preceding specified period; or

(B) If the specified group parent is an applicable CFC, the period ending on the last day of the specified group parent's required year described in section 898(c)(1), without regard to section 898(c)(2), and beginning on the first day after the last day of the specified group's immediately preceding specified period.

(ii) *Short specified period.* A specified period begins no earlier than the first

date on which a specified group exists. A specified period ends on the date a specified group ceases to exist under paragraph (d)(2)(vii) of this section. If the last day of a specified period, as determined under paragraph (k)(29)(i) of this section, changes, and, but for this paragraph (k)(29)(ii), the change in the last day of the specified period would result in the specified period being longer than 12 months, the specified period ends on the date on which the specified period would have ended had the change not occurred.

(30) *Specified taxable year.* The term *specified taxable year* means, with respect to an applicable CFC that is a specified group member of a specified group and a specified period, a taxable year of the applicable CFC that ends with or within the specified period.

(31) *Stand-alone applicable CFC.* The term *stand-alone applicable CFC* means any applicable CFC that is not a specified group member.

(32) *Stock.* The term *stock* has the meaning provided in paragraph (d)(2)(v) of this section.

(l) *Examples.* The following examples illustrate the application of this section. For each example, unless otherwise stated, no exemptions from the application of section 163(j) are available, no foreign corporation has ECI, and all relevant taxable years and specified periods begin after December 31, 2020.

(1) *Example 1. Specified taxable years included in specified period of a specified group*—(i) *Facts.* As of June 30, Year 1, USP, a domestic corporation, owns 60 percent of the common stock of FP, which owns all of the stock of FC1, FC2, and FC3. The remaining 40 percent of the common stock of FP is owned by an unrelated foreign corporation. FP has a single class of stock. FP acquired the stock of FC3 from an unrelated person on March 22, Year 1. The acquisition did not result in a change in FC3's taxable year or a close of its taxable year. USP's interest in FP and FP's interest in FC1 and FC2 has been the same for several years. USP has a taxable year ending June 30, Year 1, which is not a short taxable year. Each of FP, FC1, FC2, and FC3 are applicable CFCs. Pursuant to section 898(c)(2), FP and FC1 have taxable years ending May 31, Year 1. Pursuant to section 898(c)(1), FC2 and FC3 have taxable years ending June 30, Year 1.

(ii) *Analysis*—(A) *Determining a specified group and specified period of the specified group.* Pursuant to paragraph (d) of this section, FP, FC1, FC2, and FC3 are members of a specified group, and FP is the specified group parent. Because the specified group parent, FP, is an applicable CFC, the specified period of the specified group is the period ending on June 30, Year 1, which is the last day of FP's required year described in section 898(c)(1), without regard to section 898(c)(2), and beginning on July 1, Year 0, which is the first day following the last day of the specified group's immediately preceding specified period (June 30, Year 0). See paragraph (k)(29)(i)(B) of this section.

(B) *Determining the specified taxable years with respect to the specified period.* Pursuant to paragraph (d)(3) of this section, because each of FP and FC1 are included in the specified group on the last day of their taxable years ending May 31, Year 1, and such taxable years end with or within the specified period ending June 30, Year 1, FP and FC1 are specified group members with respect to the specified period ending June 30, Year 1, for their entire taxable years ending May 31, Year 1, and those taxable years are specified taxable years. Similarly, because each of FC2 and FC3 are included in the specified group on the last day of their taxable years ending June 30, Year 1, and such taxable years end with or within the specified period ending June 30, Year 1, FC2 and FC3 are specified group members with respect to the specified period ending June 30, Year 1, for their entire taxable years ending June 30, Year 1, and those taxable years are specified taxable years. The fact that FC3 was acquired on March 22, Year 1, does not prevent FC3 from being a specified group member with respect to the specified period for the portion of its specified taxable year before March 22, Year 1.

(2) *Example 2. CFC groups*—(i) *Facts.* The facts are the same as in *Example 1* in paragraph (l)(1)(i) of this section except that, in addition, a CFC group election is in place with respect to the specified period ending June 30, Year 1.

(ii) *Analysis.* Because a CFC group election is in place for the specified period ending June 30, Year 1, pursuant to paragraph (e)(2)(ii) of this section, each specified group member is a CFC group member with respect to its specified taxable year ending with or within the specified period. Accordingly, FP, FC1, FC2, and FC3 are CFC group members with respect to the specified period ending June 30, Year 1, for their specified taxable years ending May 31, Year 1, and June 30, Year 1, respectively. Pursuant to paragraph (e)(2)(i) of this section, the CFC group for the specified period ending June 30, Year 1, consists of FP, FC1, FC2, and FC3 for their specified taxable years ending May 31, Year 1, and June 30, Year 1, respectively. Pursuant to paragraph (c)(2) of this section, a single section 163(j) limitation is computed for the specified period ending June 30, Year 1. That section 163(j) calculation will include FP and FC1's specified taxable years ending May 31, Year 1, and FC2 and FC3's specified taxable years ending June 30, Year 1.

(3) *Example 3. Application of anti-abuse rule*—(i) *Facts.* USP, a domestic corporation, owns all of the stock of CFC1 and CFC2. Thus, USP is the specified group parent of a specified group, the specified group members of which are CFC1 and CFC2. USP has a calendar year taxable year. All specified group members also have a calendar year taxable year and a functional currency of the U.S. dollar. CFC1 is organized in, and a tax resident of, a jurisdiction that imposes no tax on certain types of income, including interest income. With respect to Year 1, USP expects to pay no residual U.S. tax on its income inclusion under section 951A(a) (GILTI inclusion amount) and expects to have unused foreign tax credits in the category described in section 904(d)(1)(A). A CFC group election is not in effect for Year 1. With a principal purpose of reducing USP's Federal income tax liability in subsequent taxable years, on January 1, Year 1, CFC1 loans $100x to CFC2. On December 31, Year 1, CFC2 pays interest of $10x to CFC1 and repays the principal of $100x. Absent the application of paragraph (g)(4)(i) of this section, all $10x of CFC2's interest expense would be disallowed business interest expense and, therefore, CFC2 would have $10x of disallowed business interest expense carryforward to Year 2. In Year 2, CFC2 disposes of one of its businesses at a substantial gain that gives rise to tested income (within the meaning of section 951A(c)(2)(A) and § 1.951A–2(b)(1)). As a result of the gain being included in the ATI of CFC2, absent the application of paragraph (g)(4)(i) of this section, CFC2 would be allowed to deduct the entire $10x of disallowed business interest expense carryforward and therefore reduce the amount of its tested income. Also, USP would pay residual U.S. tax on its GILTI inclusion amount in Year 2, without regard to the application of paragraph (g)(4)(i) of this section.

(ii) *Analysis.* The $10x of business interest expense paid in Year 1 is a payment amount described in paragraph (g)(4)(i) of this section because it is between specified group members, CFC1 and CFC2. Furthermore, the requirements of paragraphs (g)(4)(i)(A), (B), and (C) of this section are satisfied because the $10x of business interest expense is incurred with a principal

purpose of reducing USP's Federal income tax liability; absent the application of paragraph (g)(4)(i) of this section, the effect of CFC2 treating the $10x of business interest expense as disallowed business interest expense in Year 1 would be to reduce USP's Federal income tax liability in Year 2; and no CFC group election is in effect with respect to the specified group in Year 1. Because the requirements of paragraphs (g)(4)(i)(A), (B), and (C) of this section are satisfied, CFC2's ATI for Year 1 is increased by the ATI adjustment amount, or $33.33x, which is the amount equal to 3 ⅓ multiplied by $10x (the lesser of the payment amount of $10x and the disallowed business interest expense of $10x). As a result, the $10x of business interest expense is not disallowed business interest expense of CFC2 in Year 1, and therefore does not give rise to a disallowed business interest expense carryforward to Year 2.

(m) *Applicability dates*—(1) *General applicability date.* Except as provided in paragraph (m)(2) of this section, this section applies for a taxable year of a foreign corporation beginning on or after November 13, 2020.

(2) *Exception.* Paragraphs (a), (c)(1), (c)(2)(i) and (ii), and (c)(3) through (5), (d), (e), (f)(1), (g)(3) and (4), (h), and (k)(1) through (3), (6) through (8), and (10) through (32) of this section apply for a taxable year of a foreign corporation beginning on or after March 22, 2021.

(3) *Early application*—(i) *Rules for paragraphs (b) and (g)(1) and (2) of this section.* Taxpayers and their related parties, within the meaning of sections 267(b) (determined without regard to section 267(c)(3)) and 707(b)(1), may choose to apply the rules in paragraphs (b) and (g)(1) and (2) of this section for a taxable year beginning after December 31, 2017, and before November 13, 2020, provided that those taxpayers and their related parties consistently apply all of those rules and the rules described in paragraph (m)(4) of this section for that taxable year. If a taxpayer and its related parties apply the rules described in paragraph (m)(4) of this section, as contained in T.D. 9905 (§§ 1.163(j)–0 through 1.163(j)–11, effective November 13, 2020), they will be considered as applying the rules described in paragraph (m)(4) of this section for purposes of this paragraph (m)(3)(i).

(ii) *Rules for certain other paragraphs in this section.* Taxpayers and their related parties, within the meaning of sections 267(b) (determined without regard to section 267(c)(3)) and 707(b)(1), may choose to apply the rules in paragraphs (a), (c)(1), (c)(2)(i) and (ii), and (c)(3) through (5), (d), (e), (f)(1), (g)(3) and (4), (h), and (k)(1) through (3), (6) through (8), and (10) through (32) of this section for a taxable year beginning after December 31, 2017, and before March 22, 2021, provided that those taxpayers and their related parties consistently apply all of those rules and the rules described in paragraph (m)(4) of this section for that taxable year and for each subsequent taxable year. If a taxpayer and its related parties apply the rules described in paragraph (m)(4) of this section, as contained in T.D. 9905 (§§ 1.163(j)–0 through 1.163(j)–11, effective November 13, 2020) as modified by T.D. 9943 (effective January 13, 2021),they will be considered as applying the rules described in paragraph (m)(4) of this section for purposes of this paragraph (m)(3)(ii).

(4) *Additional rules that must be applied consistently.* The rules described in this paragraph (m)(4) are the section 163(j) regulations and, if applicable, §§ 1.263A–9, 1.263A–15, 1.381(c)(20)–1, 1.382–1, 1.382–2, 1.382–5, 1.382–6, 1.382–7, 1.383–0, 1.383–1, 1.469–9, 1.469–11, 1.704–1, 1.882–5, 1.1362–3, 1.1368–1, 1.1377–1, 1.1502–13, 1.1502–21, 1.1502–36, 1.1502–79, 1.1502–91 through 1.1502–99 (to the extent they effectuate the rules of §§ 1.382–2, 1.382–5, 1.382–6, and 1.383–1) and 1.1504–4.

(5) *Election for prior taxable years and specified periods.* Notwithstanding paragraph (e)(5)(iii) or (h)(5)(i) of this section, in the case of a specified period of a specified group or a taxable year of a stand-alone applicable CFC that ends with or within a taxable year of a designated U.S. person ending before November 13, 2020, a CFC group election or a safe-harbor election may be made on an amended Federal income tax return filed on or before the due date (taking into account extensions, if any) of the original Federal income tax return for the first taxable year of each designated U.S. person ending on or after November 13, 2020.

■ **Par. 8.** Section 1.163(j)–10 is amended by:

■ 1. Redesignating paragraph (c)(5)(ii)(D) as paragraph (c)(5)(ii)(D)(*1*).

■ 2. Adding a subject heading for paragraph (c)(5)(ii)(D).

■ 3. Adding paragraph (c)(5)(ii)(D)(*2*).

■ 4. Redesignating paragraph (f) as paragraph (f)(1).

■ 5. Adding a subject heading for paragraph (f).

■ 6. Revising the subject heading for redesignated paragraph (f)(1).

■ 7. Adding paragraph (f)(2).

The revisions and additions read as follows:

§ 1.163 (j)–10 Allocation of interest expense, interest income, and other items of expense and gross income to an excepted trade or business.

* * * * *

(c) * * *

(5) * * *

(ii) * * *

(D) *Limitations on application of look-through rules.* * * *

(*2*) *Limitation on application of look-through rule to C corporations.* Except as provided in § 1.163(j)–9(h)(4)(iii) and (iv) (for a REIT or a partnership making the election under § 1.163(j)–9(h)(1) or (7), respectively), for purposes of applying the look-through rules in paragraph (c)(5)(ii)(B) and (C) of this section to a non-consolidated C corporation (upper-tier entity), that upper-tier entity may not apply these look-through rules to a lower-tier non-consolidated C corporation if a principal purpose for borrowing funds at the upper-tier entity level or adding an upper-tier or lower-tier entity to the ownership structure is increasing the amount of the taxpayer's basis allocable to excepted trades or businesses. For example, P wholly and directly owns S1 (the upper-tier entity), which wholly and directly owns S2. Each of S1 and S2 is a non-consolidated C corporation to which the small business exemption does not apply, and S2 is engaged in an excepted trade or business. With a principal purpose of increasing the amount of basis allocable to its excepted trades or businesses, P has S1 (rather than S2) borrow funds from a third party. S1 may not look through the stock of S2 (and may not apply the asset basis look-through rule described in paragraph (c)(5)(ii)(B)(*2*)(*iv*) of this section) for purposes of P's allocation of its basis in its S1 stock between excepted and non-excepted trades or businesses; instead, S1 must treat its stock in S2 as an asset used in a non-excepted trade or business for that purpose. However, S1 may look through the stock of S2 for purposes of S1's allocation of its basis in its S2 stock between excepted and non-excepted trades or businesses.

* * * * *

(f) *Applicability dates.*

(1) *In general.* * * *

(2) *Paragraph (c)(5)(ii)(D)(2).* The rules contained in paragraph (c)(5)(ii)(D)(*2*) of this section apply for taxable years beginning on or after March 22, 2021. However, taxpayers may choose to apply the rules in paragraph (c)(5)(ii)(D)(*2*) of this section to a taxable year beginning after December 31, 2017, and before March 22, 2021, provided that those taxpayers and their related parties consistently

apply all of the rules in the section 163(j) regulations as contained in T.D. 9905 (§§ 1.163(j)–0 through 1.163(j)–11, effective November 13, 2020) as modified by T.D. 9943 (effective January 13, 2021), and, if applicable, §§ 1.263A–9, 1.263A–15, 1.381(c)(20)–1, 1.382–1, 1.382–2, 1.382–5, 1.382–6, 1.383–0, 1.383–1, 1.469–9, 1.704–1, 1.882–5, 1.1362–3, 1.1368–1, 1.1377–1, 1.1502–13, 1.1502–21, 1.1502–79, 1.1502–91 through 1.1502–99 (to the extent they effectuate the rules of §§ 1.382–2, 1.382–5, 1.382–6, and 1.383–1), and 1.1504–4 contained in T.D. 9905 as modified by T.D. 9943, to that taxable year and each subsequent taxable year.

■ **Par. 9.** Section 1.469–4 is amended by adding paragraph (d)(6) to read as follows:

§ 1.469–4 Definition of activity.

* * * * *

(d) * * *

(6) *Activities described in section 163(d)(5)(A)(ii).* With respect to any taxpayer that is an individual, trust, estate, closely held C corporation or personal service corporation, an activity described in § 1.469–1T(e)(6) and subject to section 163(d)(5)(A)(ii) that involves the conduct of a trade or business which is not a passive activity of the taxpayer and with respect to which the taxpayer does not materially participate may not be grouped with any other activity or activities of the taxpayer, including any other activity described in § 1.469–1T(e)(6) and subject to section 163(d)(5)(A)(ii).

* * * * *

■ **Par. 10.** Section 1.469–9 is amended by adding paragraphs (b)(2)(ii)(A) and (B) to read as follows:

§ 1.469–9 Rules for certain rental real estate activities.

* * * * *

(b) * * *

(2) * * *

(ii) * * *

(A) *Real property development.* The term *real property development* means the maintenance and improvement of raw land to make the land suitable for subdivision, further development, or construction of residential or commercial buildings, or to establish, cultivate, maintain or improve timberlands (that is, land covered by timber-producing forest). Improvement of land may include any clearing (such as through the mechanical separation and removal of boulders, rocks, brush, brushwood, and underbrush from the land); excavation and gradation work; diversion or redirection of creeks, streams, rivers, or other sources or bodies of water; and the installation of roads (including highways, streets, roads, public sidewalks, and bridges), utility lines, sewer and drainage systems, and any other infrastructure that may be necessary for subdivision, further development, or construction of residential or commercial buildings, or for the establishment, cultivation, maintenance or improvement of timberlands.

(B) *Real property redevelopment.* The term *real property redevelopment* means the demolition, deconstruction, separation, and removal of existing buildings, landscaping, and infrastructure on a parcel of land to return the land to a raw condition or otherwise prepare the land for new development or construction, or for the establishment and cultivation of new timberlands.

* * * * *

■ **Par. 11.** Section 1.469–11 is amended by revising paragraphs (a)(1) and (4) to read as follows:

§ 1.469–11 Applicability date and transition rules.

(a) * * *

(1) The rules contained in §§ 1.469–1, 1.469–1T, 1.469–2, 1.469–2T, 1.469–3, 1.469–3T, 1.469–4, but not § 1.469–4(d)(6), 1.469–5 and 1.469–5T, apply for taxable years ending after May 10, 1992. The rules contained in § 1.469–4(d)(6) apply for taxable years beginning on or after March 22, 2021. However, taxpayers and their related parties, within the meaning of sections 267(b) (determined without regard to section 267(c)(3)) and 707(b)(1), may choose to apply the rules in § 1.469–4(d)(6) to a taxable year beginning after December 31, 2017, and before March 22, 2021, provided that those taxpayers and their related parties consistently apply all of the rules in the section 163(j) regulations as contained in T.D. 9905 (§§ 1.163(j)–0 through 1.163(j)–11, effective November 13, 2020) as modified by T.D. 9943 (effective January 13, 2021), and, if applicable, §§ 1.263A–9, 1.263A–15, 1.381(c)(20)–1, 1.382–1, 1.382–2, 1.382–5, 1.382–6, 1.383–0, 1.383–1, 1.469–9, 1.704–1, 1.882–5, 1.1362–3, 1.1368–1, 1.1377–1, 1.1502–13, 1.1502–21, 1.1502–79, 1.1502–91 through 1.1502–99 (to the extent they effectuate the rules of §§ 1.382–2, 1.382–5, 1.382–6, and 1.383–1), and 1.1504–4 contained in T.D. 9905 as modified by T.D. 9943, to that taxable year and each subsequent taxable year.

* * * * *

(4) The rules contained in § 1.469–9(b)(2), other than paragraphs (b)(2)(ii)(A) and (B), apply to taxable years beginning on or after November 13, 2020. Section 1.469–9(b)(2)(ii)(A) and (B) applies to taxable years beginning on or after March 22, 2021. However, taxpayers and their related parties, within the meaning of sections 267(b) (determined without regard to section 267(c)(3)) and 707(b)(1), may choose to apply the rules in § 1.469–9(b)(2), other than paragraphs (b)(2)(ii)(A) and (B), to a taxable year beginning after December 31, 2017, and on or before November 13, 2020 and may choose to apply the rules in § 1.469–9(b)(2)(ii)(A) and (B) to taxable years beginning after December 31, 2017, and before March 22, 2021, provided that those taxpayers and their related parties consistently apply all of the rules in the section 163(j) regulations contained in T.D. 9905 (§§ 1.163(j)–0 through 1.163(j)–11, effective November 13, 2020) as modified by T.D. 9943 (effective January 13, 2021), and, if applicable, §§ 1.263A–9, 1.263A–15, 1.381(c)(20)–1, 1.382–1, 1.382–2, 1.382–5, 1.382–6, 1.383–0, 1.383–1, 1.469–9, 1.704–1, 1.882–5, 1.1362–3, 1.1368–1, 1.1377–1, 1.1502–13, 1.1502–21, 1.1502–79, 1.1502–91 through 1.1502–99 (to the extent they effectuate the rules of §§ 1.382–2, 1.382–5, 1.382–6, and 1.383–1), and 1.1504–4, contained in T.D. 9905 as modified by T.D. 9943, to that taxable year and each subsequent taxable year.

* * * * *

■ **Par. 12.** Section 1.1256(e)–2 is added to read as follows:

§ 1.1256 (e)–2 Special rules for syndicates.

(a) *Allocation of losses.* For purposes of section 1256(e)(3), *syndicate* means any partnership or other entity (other than a corporation that is not an S corporation) if more than 35 percent of the losses of such entity during the taxable year are allocated to limited partners or limited entrepreneurs (within the meaning of section 461(k)(4)).

(b) *Determination of loss amount.* For purposes of section 1256(e)(3), the amount of losses to be allocated under paragraph (a) of this section is calculated without regard to section 163(j).

(c) *Example.* The following example illustrates the rules in this section:

(1) *Facts.* Entity is an S corporation that is equally owned by individuals A and B. A provides all of the goods and services provided by Entity. B provided all of the capital for Entity but does not participate in Entity's business. For the current taxable year, Entity has gross receipts of $5,000,000, non-interest expenses of $4,500,000, and interest expense of $600,000.

(2) *Analysis.* Under paragraph (b) of this section, Entity has a net loss of $100,000 ($5,000,000 minus $5,100,000) for the current taxable year. One half (50 percent) of this loss is allocated to B, a limited owner. Therefore, for the current taxable year, Entity is a syndicate within the meaning of section 1256(e)(3)(B).

(d) *Applicability date.* This section applies to taxable years beginning on or after March 22, 2021. However, taxpayers and their related parties, within the meaning of sections 267(b) (determined without regard to section 267(c)(3)) and 707(b)(1), may choose to apply the rules in this section for a taxable year beginning after December 31, 2017, and before March 22, 2021, provided that those taxpayers and their related parties consistently apply all of the rules of this section to that taxable year and each subsequent taxable year.

Sunita Lough,

Deputy Commissioner for Services and Enforcement.

Approved: December 30, 2020.

David J. Kautter,

Assistant Secretary of the Treasury (Tax Policy).

RIN 1545–B090

Section 199A Rules for Cooperatives and Their Patrons

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Final regulations and removal of final and temporary regulations.

SUMMARY: This document contains final regulations that provide guidance to cooperatives to which sections 1381 through 1388 of the Internal Revenue Code (Code) apply (Cooperatives) and their patrons regarding the deduction provided by section 199A(a) of the Code for qualified business income (QBI), as well as guidance to specified agricultural or horticultural cooperatives (Specified Cooperatives) and their patrons regarding the deduction provided by section 199A(g) of the Code for eligible domestic production activities undertaken by Specified Cooperatives. The final regulations also provide guidance on section 199A(b)(7), the statutory rule requiring patrons of Specified Cooperatives to reduce their QBI deduction under section 199A(a). In addition, the final regulations include a definition of *patronage and nonpatronage sourced items* under section 1388 of the Code, and revise existing regulations under section 1382 of the Code to reference this definition. Finally, this document removes the final and temporary regulations under former section 199. These final regulations affect Cooperatives as well as patrons that are individuals, partnerships, S corporations, trusts, and estates engaged in domestic trades or businesses.

DATES:

Effective date: These regulations are effective on January 14, 2021.

Applicability dates: For dates of applicability, see §§ 1.199A–7(h), 1.199A–8(h), 1.199A–9(k), 1.199A–10(i), 1.199A–11(h), 1.199A–12(j), 1.1382–3(e), and 1.1388–1(g).

FOR FURTHER INFORMATION CONTACT: Jason Deirmenjian at (202) 317–4470 (not a toll-free number).

SUPPLEMENTARY INFORMATION:

Background

This document contains amendments to the Income Tax Regulations (26 CFR part 1) under sections 199A, 1382, and 1388 of the Code.

Section 199A was enacted on December 22, 2017, by section 11011 of Public Law 115–97, 131 Stat. 2054, 2063, commonly referred to as the Tax Cuts and Jobs Act (TCJA). Parts of section 199A were amended on March 23, 2018, effective as if included in the TCJA, by section 101 of Division T of the Consolidated Appropriations Act, 2018, Public Law 115–141, 132 Stat. 348, 1151 (2018 Act). Section 199A applies to taxable years beginning after 2017 and before 2026. Unless otherwise indicated, all references to section 199A are to section 199A as amended by the 2018 Act.

In addition, section 13305 of the TCJA repealed section 199 (former section 199), which provided a deduction for income attributable to domestic production activities (section 199 deduction). Public Law 115–97, 131 Stat. 2054, 2126. The repeal of former section 199 is effective for all taxable years beginning after 2017.

Section 199A(a) provides taxpayers a deduction of up to 20 percent of QBI from a domestic business operated as a sole proprietorship or through a partnership, S corporation, trust, or estate, and up to 20 percent of qualified real estate investment trust (REIT) dividends and publicly traded partnership (PTP) income (section 199A(a) deduction). Section 199A(b)(7) requires patrons of Specified Cooperatives to reduce their section 199A(a) deduction if those patrons receive certain payments from Specified Cooperatives.

Section 199A(g) provides a deduction for Specified Cooperatives and their patrons (section 199A(g) deduction) that is based on the former section 199 deduction. Section 199A(g)(4)(A) defines a Specified Cooperative, in part, as an organization to which part I of subchapter T of chapter 1 of the Code (subchapter T) applies. Under section 1381(a)(2), subchapter T applies to any corporation operating on a cooperative basis, with certain exceptions not relevant here. Section 1382 provides rules regarding the taxable income of Cooperatives and section 1388 provides definitions applicable for purposes of subchapter T.

The Department of the Treasury (Treasury Department) and the IRS published proposed regulations (REG–107892–18) providing guidance on the section 199A(a) deduction in the **Federal Register** (83 FR 40884) on August 16, 2018. A second notice of proposed rulemaking providing guidance (REG–134652–18) and final regulations implementing the section 199A(a) deduction (TD 9847) were published in the **Federal Register** (84 FR 3015 and 84 FR 2952, respectively) on February 8, 2019, with corrections to TD 9847 published in the **Federal Register** (84 FR 15954) on April 17, 2019. TD 9847, which promulgated §§ 1.199A–1 through 1.199A–6 to implement the section 199A(a) deduction, does not include all the rules needed for patrons of Cooperatives to calculate their particular section 199A(a) deductions. Specifically, the rules included in TD 9847 do not address patrons' treatment of payments received from Cooperatives for purposes of section 199A(a) or the section 199A(g) deduction for Specified Cooperatives, though § 1.199A–1(e)(7) restates the reduction to a patron's section 199A(a) deduction required under section 199A(b)(7).

To address these matters, on June 19, 2019, the Treasury Department and the IRS published a notice of proposed rulemaking (REG–118425–18) in the **Federal Register** (84 FR 28668) containing proposed regulations under sections 199A and 1388, with corrections published in the **Federal Register** (84 FR 38148) on August 6, 2019 (together, Proposed Regulations). The Proposed Regulations set forth rules to address patrons' treatment of payments received from Cooperatives for purposes of section 199A(a) and the section 199A(g) deduction for Specified Cooperatives in proposed §§ 1.199A–7 through 1.199A–12, as well as proposed rules under section 1388 regarding patronage and nonpatronage sources of income of Cooperatives. The Proposed Regulations also withdrew all proposed regulations issued under former section 199 that had not been finalized and proposed to remove the final and temporary regulations under former section 199.

The Summary of Comments and Explanation of Revisions of the final regulations summarizes the provisions of the Proposed Regulations, which are explained in greater detail in the preamble to the Proposed Regulations. After full consideration of the comments received on the Proposed Regulations, this Treasury decision adopts the Proposed Regulations with modifications in response to such comments as described in the Summary of Comments and Explanation of Revisions.

Summary of Comments and Explanation of Revisions

The purpose and scope of the final regulations is limited to providing guidance regarding the application of sections 199A(a), 199A(b)(7), 199A(g), 1382, and 1388. Section 199A(a) is generally applicable to patrons of all

Cooperatives, whereas sections 199A(b)(7) and 199A(g) apply only to Specified Cooperatives and their patrons. Section 1388 generally applies to all Cooperatives and their patrons.

The Treasury Department and the IRS received written comment submissions in response to the Proposed Regulations. All comments were considered and are available at *www.regulations.gov* or upon request. Most of the comments addressing the Proposed Regulations are summarized in this Summary of Comments and Explanation of Revisions. However, comments merely summarizing or interpreting the Proposed Regulations, recommending statutory revisions, or addressing issues which are outside the scope of the final regulations are not discussed in this Summary of Comments and Explanation of Revisions.

Commenters requested that the rules for section 199A as they apply to Cooperatives and patrons be simplified and clarified. Accordingly, while the final regulations adopt many of the rules described in the Proposed Regulations, they are revised in response to the comments received. Additionally, in response to the comments, the final regulations include clarifying language and additional examples.

Parts I through VII of this Summary of Comments and Explanation of Revisions discuss §§ 1.199A–7 through 1.199A–12, 1.1382–3, and 1.1388–1, respectively. Part VIII addresses the removal of all final and temporary regulations issued under former section 199. Part IX addresses comments on the proposed applicability date and the transition rule.

I. § 1.199A–7, Rules for Patrons of Cooperatives

A. In General

As noted in the Background, the section 199A(a) deduction allows taxpayers to deduct up to 20 percent of QBI from a domestic business operated as a sole proprietorship or through a partnership, S corporation, trust, or estate, and up to 20 percent of qualified REIT dividends and PTP income. Patrons that are individuals (as described in § 1.199A–1(a)(2)) are eligible for the section 199A(a) deduction. If patrons receive certain payments from Specified Cooperatives, then section 199A(b)(7) requires them to calculate a reduction to their section 199A(a) deduction. This part I.A provides a general outline of the rules of proposed § 1.199A–7, and the remainder of this part I addresses the specific comments received on proposed § 1.199A–7. Other than for modifications made in response to specific comments, the final regulations generally adopt the Proposed Regulations.

Proposed § 1.199A–7(a) provides special rules and definitions for patrons of cooperatives in applying §§ 1.199A–1 through –6, including definitions of patron, patronage and nonpatronage, qualified payment, and Specified Cooperative. Proposed § 1.199A–7(b) explains that patronage dividends or similar payments that a patron receives from a Cooperative are considered as generated from the trade or business the Cooperative conducts on behalf of the patron, and are therefore tested by the Cooperative at its trade or business level. Proposed § 1.199A–7(c) provides special rules for patrons and Cooperatives relating to the definition of QBI, the determination of QBI by patrons, and the determination and reporting by Cooperatives of the amount of qualified items of income, gain, deduction, and loss (collectively, qualified items) for qualified trades or businesses in distributions made to patrons. Proposed § 1.199A–7(d) provides special rules for patrons' determinations of specified service trades or businesses (SSTBs) and for Cooperatives' determination and reporting of SSTBs.

Under proposed § 1.199A–7(c)(3) and (d)(3), Cooperatives are required to report the amount of qualified items related to non-SSTBs and SSTBs in distributions made to patrons on an attachment to or on the Form 1099–PATR (or any successor form), unless the form instructions provide otherwise. Under proposed § 1.199A–7(c)(3), if a Cooperative fails to report the amount of qualified items from its non-SSTBs, then the amount of distributions from the Cooperative that may be included in the patron's QBI is presumed to be zero. Under proposed § 1.199A–7(d)(3), if a Cooperative fails to report the amount of qualified items from an SSTB (SSTB items), then only the amount of qualified items the Cooperative reports under proposed § 1.199A–7(c)(3) may be included in the patron's QBI, and the remaining amount of distributions from the Cooperative is presumed to not be included in the patron's QBI.

Proposed § 1.199A–7(e) provides special rules for patrons relating to the statutory limitations based on W–2 wages and unadjusted basis immediately after acquisition (UBIA) of qualified property. The Proposed Regulations provide that Cooperatives do not allocate their W–2 wages and UBIA of qualified property to patrons, and directs patrons to calculate the W–2 wage and UBIA of qualified property limitations at the patron level when calculating their section 199A(a) deduction.

Proposed § 1.199A–7(f) provides special rules for Specified Cooperatives and their patrons relating to calculating the section 199A(b)(7) reduction, including a requirement that Cooperatives report the amount of qualified payments (as defined in proposed § 1.199A–8(d)(2)(ii)) made to patrons on an attachment to or on the Form 1099–PATR (or any successor form). Proposed § 1.199A–7(g) provides examples that illustrate the rules in § 1.199A–7(a) through (f) for Specified Cooperatives and their patrons.

Lastly, proposed § 1.199A–7(h) generally provides that taxpayers may rely on the proposed rules in their entirety and as applied in a consistent manner until final regulations are published in the **Federal Register**. Proposed § 1.199A–7(h) also includes the transition rule relating to the repeal of the former section 199 deduction and the implementation of the new section 199A(a) deduction.

B. Comments Related to Proposed §§ 1.199A–7(c)(3) and (d)(3)

i. Requirements That Cooperative Determines Qualified Items From Non-SSTBs and Qualified Items From SSTBs

Under proposed §§ 1.199A–7(c)(3) and (d)(3), Cooperatives must separately determine the amounts of qualified items relating to non-SSTBs and qualified items relating to SSTBs in distributions made to patrons. Commenters asserted that whether income is a qualified item when earned at the Cooperative level should not be determinative of its treatment at the patron level, but that instead the determination of qualified items from non-SSTBs and SSTBs should be made by the patron based solely on whether a patronage dividend relates to a patron's trade or business. These commenters additionally asserted that the proposed rules burden Cooperatives by requiring additional information reporting and are not consistent with the provisions of subchapter T.

The final regulations do not adopt the commenters' suggestion for several reasons, including that the proposal does not comport with sections 199A(c)(3) and (d)(2). The rules of proposed §§ 1.199A–7(c)(3) and (d)(3) are consistent with the rules in TD 9847 implementing the section 199A(a) deduction generally. These rules arise from the statutory requirement that all items in the computation of the section 199A(a) deduction be qualified items as defined in section 199A(c)(3) and not

derived from an SSTB as defined in section 199A(d)(2). TD 9847 generally provides that an item of income, gain, deduction and loss is determined and reported for each trade or business by the entity or individual that directly conducts the trade or business. Patronage dividends and similar payments are considered to be directly generated from the trade or business that the Cooperative conducts on behalf of or with its patrons. For example, an individual patron must determine QBI for each trade or business it directly conducts. To the extent a patron receives patronage dividends or similar payments from a Cooperative, such patronage dividends or similar payments are considered generated from the trade or business the Cooperative conducts on behalf of or with its patron and are tested by the Cooperative at the level of its trade or business.

Failure to determine whether items of income, gain, deduction, and loss that are distributed to patrons are qualified items at the Cooperative level could result in patrons' circumvention of the statutory requirements for qualified items under section 199A(c)(3)(A) and (B), for example, that items be effectively connected with the conduct of a trade or business within the United States. Section 199A(c)(3)(B) lists items that are not treated as qualified items defined in section 199A(c)(3). All dividends, income equivalent to dividends, or payments in lieu of dividends described in section 954(c)(1)(G) are not qualified items. However, section 199A(c)(3)(B)(ii) also specifically provides that patronage dividends are not treated as dividends, income equivalent to dividends, or payments in lieu of dividends described in section 954(c)(1)(G), which means a patronage dividend can be taken into account as a qualified item to the extent otherwise qualified. The Joint Committee on Taxation report titled ''Technical Explanation of the Revenue Provisions of the House Amendment to the Senate Amendment to H.R. 1625 (Rules Committee Print 115–66)'' (JCX–6–18, released March 22, 2018) (Joint Committee Report) further clarified that other similar amounts received from Cooperatives can be included in QBI, provided those amounts are otherwise a qualified item. Joint Committee on Taxation, JCX–6–18, Technical Explanation of the Revenue Provisions of the House Amendment to the Senate Amendment to H.R. 1625 (Rules Committee Print 115–66) 25 (March 22, 2018). As a result, the Proposed Regulations define a qualified item as including a distribution for which a Cooperative is allowed a deduction under section 1382(b) or (c)(2) (including patronage dividends and other similar payments, such as money, property, qualified written notices of allocation, and qualified per-unit retain certificates, as well as money or property paid in redemption of a nonqualified written notice of allocation), provided the distribution is otherwise a qualified item. Therefore, to be a qualified item under section 199A(c)(3), patronage dividends and other similar payments must still be effectively connected (section 199A(c)(3)(A)(i)), included or allowed in income (section 199A(c)(3)(A)(ii)), and not represent amounts described in section 199A(c)(3)(B)(i) and (iii)–(vii). Additionally, items of income, gain, deduction, and loss from an SSTB are not includable in QBI with respect to individuals above the threshold amount and subject to the phase-in range under section 199A(d)(3). Any potential burden to the Cooperatives in making these determinations is outweighed by the patrons' need for this information to determine their section 199A(a) deduction.

Based upon these statutory requirements and because the Cooperative is better positioned than a patron to determine whether a patronage dividend or other similar payment is a qualified item as determined under the rules of § 199A(c)(3) and § 1.199A–3(b) and whether it is derived from an SSTB as defined in § 199A(d)(2) and § 1.199A–5, these determination rules are adopted in the final regulations without substantive change. The patron then determines if the qualified item is includible in the patron's QBI under § 1.199A–7(c)(2) and whether the qualified item from the SSTB is includible in the patron's QBI based on the threshold rules in § 199A(d)(3) and § 1.199A–5(a)(2)). There is no duplication in effort between the Cooperative and the patron with respect to these determinations. However, in response to commenters, the reporting requirements of Cooperatives have been modified to balance the burden on the Cooperatives and the patrons' need to receive information to determine their section 199A(a) deduction.

ii. Requirements That Cooperative Report Qualified Items From Non-SSTBs, Qualified Items From SSTBs, and Qualified Payments

Proposed §§ 1.199A–7(c)(3), (d)(3), and (f)(3) require Cooperatives to report qualified items from non-SSTBs, qualified items from SSTBs, and qualified payments (qualified payments are relevant only for Specified Cooperatives) to patrons. A commenter opposed these reporting requirements on the grounds that the requirements did not exist under former section 199 and do not exist under section 6044(b). In the commenter's view, Congress would have amended section 6044 to that effect if the reporting requirements were intended. The Treasury Department and the IRS agree that versions of Form 1099–PATR prior to the enactment of section 199A did not include a box for qualified payments and that section 6044(b) does not require reporting of these amounts. However, unlike former section 199, information concerning all of these amounts (qualified payments as applicable) are required for a patron to calculate its section 199A(a) deduction, including the reduction under section 199A(b)(7) for patrons of Specified Cooperatives, which did not exist under former section 199. Therefore, it is necessary for patrons to have this information, and it is most efficient for patrons to receive the information from Cooperatives on Form 1099–PATR (or any successor form). Additionally, section 199A(f)(4) authorizes the Treasury Department and the IRS to prescribe such regulations as are necessary to carry out the purposes of section 199A, including reporting requirements.

The commenter also requested removal of these reporting requirements on the grounds that Cooperatives should not be treated as relevant passthrough entities (RPEs). The Treasury Department and the IRS agree that Cooperatives are not RPEs. However, these reporting requirements emanate from the statutory requirements of section 199A and not the nature of the entities. These reporting requirements are imposed on Cooperatives because sections 199A(c) and (d) require that items of income, gain, deduction, and loss be of a certain character and from a qualified trade or business when determining the section 199A(a) deduction, and patrons need this information to determine their section 199A(a) deduction. Further, the reporting requirements applicable to Cooperatives are distinguishable from those imposed on RPEs because RPEs are required to engage in more detailed reporting, including reporting W–2 wages and UBIA of qualified property.

After consideration of the comments, the final regulations maintain a reporting requirement for Cooperatives, but the rules in proposed § 1.199A–7(c)(3) and (d)(3) are revised to simplify the Cooperative's reporting obligation with respect to qualified items from

non-SSTBs and qualified items from SSTBs. The proposed regulations required that the Cooperative report the amounts of qualified items with respect to each non-SSTB of the Cooperative, with a similar requirement for SSTBs. However, to reduce burden and clarify that Cooperatives do not make trade or business and corresponding aggregation determinations, the final regulations require the Cooperative to report the total net amount of qualified items from non-SSTBs in distributions to patrons without delineating these amounts business by business. A similar change was made to the reporting requirements for qualified items in distributions from SSTBs. Patrons then determine the extent that those payments are included in the QBI of the patrons' trade or business. For example, a patron will determine whether those payments are related to the patron's trade or business and whether any items in the SSTB distributions reported by the Cooperative are includible as qualified items of income, gain, deduction and loss at the patron's level after consideration of the threshold and phase-in amounts as applied to the patron's taxable income. In addition, the rules in proposed § 1.199A–7(b) are revised for consistency with the revision to proposed § 1.199A–7(c)(3) and (d)(3).

Commenter also suggested that the SSTB reporting requirements be revised to reflect that if a Cooperative provides services from SSTBs to patrons, the services are provided to patrons, not third parties. Therefore, any patronage dividends should be deemed a rebate, which would increase QBI of the patrons to its proper amount. Further, if the SSTBs conducted by the Cooperatives relate to personal expenses of a patron, then the SSTB patronage dividends should be excluded from the QBI calculation, but done so at the patron level, because only the patron would know whether the SSTB service is a personal expense.

Based on the commenter's suggestions, the Treasury Department and the IRS considered whether additional rules were needed and concluded that revisions are necessary to resolve certain questions raised by the commenter. Consider an example where a Cooperative provides a service to patrons as part of an SSTB of the Cooperative under section 199A(d)(2). Assume that a patron's use of that service is a deductible expense to its qualified trade or business. Patron pays the Cooperative $1,000 for the service. The Cooperative later pays the patron a patronage dividend of $50 related to the service. This patronage dividend is income under section 1385(a)(1) to the patron. Under the Proposed Regulations, assuming the patron's income is over the threshold amount (defined in section 199A(e)(2)), the patron would not be able to include the $50 in its calculation of QBI because it is SSTB income. Meanwhile, the patron would have a $1,000 expense that would reduce QBI. In substance, however, the patron would have only paid $950 for the service.

The Treasury Department and the IRS considered two approaches for resolving this asymmetry. One approach (suggested by a commenter) would permit a patron paying for services from an SSTB of the Cooperative for its trade or business to treat any patronage dividends related to those amounts as qualified items (or rebates that would reduce the expense), regardless of the threshold amounts, if the services were required or used in a qualified trade or business of the patron. A second approach would permit the allocation of part of the patron's expense to the non-qualified SSTB income. To reach the correct result, this second approach would limit the allocation of the expense to the amount of SSTB income of the Cooperative that relates to the patron's expense. Under the second approach, a patron could allocate expenses between its qualified trade or business income and the SSTB income up to the amount of the patronage dividend. Either approach reaches a similar end result with respect to the example—that is, the patron having a net $950 expense included within QBI. However, the first approach conflicts with section 199A(d)(2) in that SSTB income cannot be treated as QBI, unless the section 199A(d)(3) exception applies. The first approach also conflicts with section 1385(a)(1), which requires inclusion of patronage dividends in income, unless an exception is met under section 1385(b). In contrast, the second approach does not conflict with either the requirements of section 199A or section 1385(a)(1). Also, the commenter noted, the patron's exception to income from patronage dividends for personal, living, or family items is met under section 1385(b)(2). For clarification in that case, the patron will have to make that determination, and none of the expense or patronage dividend should be taken into account for purposes of QBI. Based on this analysis, the final regulations in § 1.199A–7(d)(3)(ii) adopt the second approach, and include an example illustrating the application of this approach.

iii. Relief From Zero-Presumption Rule

As discussed previously, if a Cooperative fails to timely report qualified items and SSTB items, proposed §§ 1.199A–7(c)(3) and (d)(3) provide that the amount of distributions from the Cooperative that may be included in the patron's QBI is presumed to be zero (zero-presumption rule). Commenters requested relief from the zero-presumption rule on the basis that Cooperatives may not be aware of the reporting requirements and may negligently fail to issue Forms 1099–PATR in a timely manner. For tax year 2019 filing, Cooperatives can report qualified payments on the Form 1099–PATR and can attach a supplemental schedule disclosing qualified items and SSTB items to patrons. For future filing years, the Form 1099–PATR will be updated to include boxes for qualified items and SSTB items. The final regulations do not provide relief from the zero-presumption rule, since the zero-presumption rule is a presumption that the patron may rebut with appropriate evidence or documentation. One example of appropriate evidence or documentation would be a corrected Form 1099–PATR received by the patron from the Cooperative.

C. Comments Related to Proposed § 1.199A–7(f), Special Rules for Patrons of Specified Cooperatives

i. Requirement for Patrons To Compute the Section 199A(b)(7) Reduction

The section 199A(b)(7) reduction is a statutory rule requiring, in the case of any qualified trade or business of a patron of a Specified Cooperative, that the amount determined under section 199A(b)(2) with respect to the trade or business be reduced by the lesser of (A) 9 percent of so much of the QBI with respect to the trade of business as is properly allocable to qualified payments (as defined in section 199A(g)(2)(E) and § 1.199A–8(d)(2)(ii)), or (B) 50 percent of so much of the W–2 wages with respect to the trade or business as are so allocable. Proposed § 1.199A–7(f)(1) provides that a patron of a Specified Cooperative that receives a qualified payment must reduce its section 199A(a) deduction as provided in § 1.199A–1(e)(7) (which follows the language of section 199A(b)(7)), and the reduction applies whether the Specified Cooperative passes through all, some, or none of the Specified Cooperative's section 199A(g) deduction to the patron in the taxable year.

Commenters requested an opt-out provision whereby patrons and Specified Cooperatives could elect out of the rules under sections 199A(b)(7)

and (g). The final regulations do not adopt this request. There is no statutory provision providing for an opt-out of these Code sections. In the parallel situation under former section 199, there also was no opt-out provision. Specifically, the no-double-counting rule under former § 1.199–6(l) precluded farmers from including qualified payments in their own former section 199 deduction. Further, permitting patrons and Specified Cooperatives to elect out of the rules under sections 199A(b)(7) and (g) would be difficult to administer and could result in patrons and Specified Cooperatives taking conflicting positions.

Some commenters have reasoned that turning off the section 199A(b)(7) reduction is justified based on the part of the qualified payment definition in section 199A(g)(2)(E)(iii), whereby the payment must be attributable to qualified production activities income (QPAI) with respect to which a deduction is allowed to the Specified Cooperative under section 199A(g)(1). However, section 199A(b)(7) applies when qualified payments are received by a patron in a qualified trade or business. The determination of whether a qualified payment was received is a different issue and is addressed in part II of this Summary of Comments and Explanation of Revisions.

ii. Comments on Interaction of Section 199A(b)(7) Reduction and § 1.199A–4

Commenters requested clarification on how the section 199A(b)(7) reduction operates with the aggregation rules in § 1.199A–4. In certain circumstances, an individual may aggregate two or more trades or businesses for purposes of the QBI component calculation in § 1.199A–1(d)(2)(iv), which includes application of the W–2 wage and UBIA of qualified property limitations under section 199A(b)(2). Aggregation is permitted but not required. Once an individual chooses to aggregate two or more trades or businesses, the individual must consistently report the aggregated trades or businesses in all subsequent taxable years. As commenters point out, aggregation of two or more trades or businesses may be favored by a taxpayer because it may provide better results when applying the W–2 wage and UBIA of qualified property limitations.

Commenters asked for clarification in two situations. First, commenters asked whether a patron who aggregates a rental real estate business and a farming business conducted with or through a Specified Cooperative may exclude the rental income from the section 199A(b)(7) reduction. This question relates to clarifying the rule in proposed § 1.199A–7(f)(2)(i), which provides that for purposes of calculating the section 199A(b)(7) reduction, a patron must use a reasonable method based on all the facts and circumstances to allocate between income that is from qualified payments and income that is not from qualified payments. As a clarification, income that is not related to qualified payments can be earned in transactions that do not involve Specified Cooperatives, for example, a grain sale to a noncooperative customer. This means that the rental income, which is not income related to qualified payments, should be excluded when calculating the section 199A(b)(7) reduction for the aggregated trade or business.

Second, commenters asked whether in that same situation a patron is permitted to allocate the rental expenses toward the income from the Specified Cooperative, thus possibly lowering the section 199A(b)(7) reduction. Proposed § 1.199A–7(f)(2)(i) provides that for purposes of calculating the section 199A(b)(7) reduction, a patron must use a reasonable method to allocate income items and related deductions. Thus, it would be reasonable to allocate that expense against qualified payments when calculating the section 199A(b)(7) reduction only to the extent the rental expense is related to the qualified payments from the Specified Cooperative. These aggregation principles are applied throughout the rules and examples of the final regulations and are consistent with the Proposed Regulations.

Commenters also inquired as to how negative QBI allocable to qualified payments affects the section 199A(b)(7) reduction. The Treasury Department and the IRS considered this comment and determined that there would be no section 199A(b)(7) reduction in such a case. An example illustrating this is a farmer conducting two types of agricultural businesses (A and B). Assume the farmer treats A and B as one trade or business for purposes of the section 199A(a) deduction. The farmer conducts A with non-Specified Cooperatives and B through a Specified Cooperative. The farmer generates $100 of qualifying income through A and receives $100 of qualifying income from a Specified Cooperative in B, all of which is also a qualified payment. The farmer has $180 of qualified expenses. For purposes of the section 199A(a) deduction, the farmer's QBI ($20) from the trade or business is used to calculate the deduction, resulting in a $4 deduction (assuming there is no limitation under section 199A(b)(2)(B)). The farmer then must determine if there is any section 199A(b)(7) reduction to this amount. The farmer reasonably allocates its qualified expenses under § 1.199A–7(f)(2)(i) for purposes of calculating the section 199A(b)(7) reduction, and determines $110 of the qualified expenses are allocable to B (and $70 to A). The farmer will use only QBI from B to calculate the section 199A(b)(7) reduction because that is the only QBI properly allocable to qualified payments. Farmer's QBI for purposes of section 199A(b)(7)(A) is negative $10, resulting in a $0 section 199A(b)(7) reduction (regardless of W–2 wages under section 199A(b)(7)(B)).

iii. Comments on Safe Harbor Allocation Method in Proposed § 1.199A–7(f)(2)(ii)

Proposed § 1.199A–7(f)(2)(ii) is a safe harbor providing a reasonable method for patrons with income under the threshold amount (set forth in section 199A(e)(2)) to allocate deductions and W–2 wages between income or gain related to qualified payments and income or gain that is not related to qualified payments when determining the section 199A(b)(7) reduction with respect to a patron's qualified trade or business. The method allows patrons to apportion deductions and W–2 wages ratably between income related to qualified payments and income not related to qualified payments. This means, for example, that the amount of deductions in QBI allocable to qualified payments is equal to the proportion of the total deductions that the amount of income or gain related to qualified payments bears to total income or gain used to determine QBI. The same proportion also applies when determining the amount of W–2 wages allocable to the portion of the trade or business that received qualified payments. In addition to considering the specific comments concerning proposed § 1.199A–7(f)(2)(ii) described in this preamble, revisions necessary to clarify the scope and application of the safe harbor were made in § 1.199A–7(f)(2)(ii) of the final regulations.

Commenters requested clarification on whether QBI under the safe harbor allocation method in proposed § 1.199A–7(f)(2)(ii) includes: Gross receipts from the sale of farm equipment, farm program payments (*i.e.,* Conservation Reserve Program, Market Facilitation Program, Dairy Program, etc.), section 1245 recapture, and commonly owned rental income. One commenter recommended that gross receipts from the sale of equipment and machinery should be included in the calculation and allocated based on past depreciation (in

the case of section 1245 recapture), and that gross receipts from farm programs be considered not related to qualified payments. Another commenter recommended that both gains from section 1245 recapture, crop insurance receipts, government subsidy payments, and income from aggregated rental income under § 1.199A–4 be not allocable to qualified payments received from Specified Cooperatives for purposes of section 199A(b)(7).

Section 199A(b)(7)(A) requires determining the QBI with respect to a trade or business that is properly allocable to qualified payments received from a Specified Cooperative, § 1.199A–7(f)(2)(i) requires a reasonable method be adopted for making this determination, and the safe harbor under § 1.199A–7(f)(2)(ii) allows patrons under the threshold amount to allocate the deductions and W–2 wages of a business between income related to qualified payments and income that is not related to qualified payments based on a ratio. The determination of whether the amounts mentioned by commenters are included in QBI of a trade or business, subject to the section 199A(b)(7) reduction, and how these amounts are allocated may change based on a patron's individual facts and circumstances and is not addressed in the final regulations.

One commenter also requested that the safe harbor method in proposed § 1.199A–7(f)(2)(ii) apply to patrons with a trade or business that has average annual total gross receipts equal to $25,000,000 or less. This amount is equal to the threshold for the small business simplified overall method under proposed § 1.199A–10(f)(1). Under the small business simplified overall method, a qualifying small Specified Cooperative may apportion total costs for the current taxable year between domestic production gross receipts (DPGR) and non-DPGR based on relative gross receipts for purposes of calculating the section 199A(g) deduction. The safe harbor in proposed § 1.199A–7(f)(2)(ii) is different from the safe harbor in proposed § 1.199A–10(f)(1). Proposed § 1.199A–7(f)(2)(ii) is applied as part of the patron's calculation of the section 199A(a) deduction. In calculating the section 199A(a) deduction, the threshold amount (described in section 199A(e)(2)) is used in other circumstances to determine when a taxpayer must engage in more complex calculations, specifically the W–2 wage and UBIA of qualified property limitations in section 199A(b)(2)(B). Thus, it is consistent with section 199A(e)(2) for the safe harbor in proposed § 1.199A–7(f)(2)(ii) to adopt the threshold amount. This contrasts with the small business simplified overall method in § 1.199A–10(f)(1), used to compute the section 199A(g) deduction by a Specified Cooperative, and for which the threshold amount in section 199A(e)(2) is not relevant. Therefore, the final regulations do not adopt this request.

The commenter also suggested cooperative and noncooperative farming expenses should be allocable based on sales. The commenter believes that if an allocation based on sales is not allowed, then it will be impossible for cash basis taxpayers to offset input expenses from the prior year to harvest revenues in the following year, because taxpayers would have already claimed the expenses in the prior year. Moreover, because farmers do not know if crops are sold to a Specified Cooperative or noncooperative until the crops are harvested, the potential exists for allocations to be understated/overstated as it relates to either Specified Cooperative/noncooperative revenues. The reasonable method approach in § 1.199A–7(f)(2)(i) of the Proposed Regulations, which is the approach adopted in the final regulations, accommodates these timing issues. A reasonable method is based on the facts and circumstances of the taxpayer and should provide the needed flexibility to accommodate this fact pattern.

D. Comments on Examples in Proposed § 1.199A–7(g)

Commenters requested corrections to proposed § 1.199A–7(g)(1), Example 1, because the allocation of W–2 wage expense is not proportional to the total expense allocation. This example illustrates that a reasonable method of allocation does not necessarily have to be proportional between W–2 wages and other expenses. This example is consistent with Example 1 in the Joint Committee Report. The Joint Committee Report in footnote 133 explains that example and the general rule by stating that ''[w]hich expenses are properly allocable in a given case will depend on all the facts and circumstances. The example assumes that the fraction of properly allocable W–2 wages differs from the fraction of other properly allocable expenses.'' Thus, a modification to the allocation in Example 1 of the proposed § 1.199A–7(g)(1) is not warranted.

II. § 1.199A–8, Deduction for Income Attributable to Domestic Production Activities of Specified Cooperatives

A. In General

Section 199A(g) provides a deduction for Specified Cooperatives and their patrons. This deduction is similar in many respects to the former section 199 deduction and, as provided in section 199A(g)(6), these regulations are based on the regulations applicable to Specified Cooperatives and their patrons under former section 199. The section 199A(g) deduction is calculated by the Specified Cooperative and is equal to 9 percent of the lesser of the Specified Cooperative's QPAI or taxable income (as modified by section 199A(g)(1)(C)) for the taxable year. There is a further limitation on the deduction equal to 50 percent of the Specified Cooperative's W–2 wages for the taxable year that are properly allocable to DPGR. Proposed § 1.199A–8 provides definitions relating to the section 199A(g) deduction, which includes establishing the criteria that a Specified Cooperative must satisfy to be eligible to claim the section 199A(g) deduction, and sets forth the necessary steps for a Specified Cooperative to calculate the section 199A(g) deduction. This part II.A provides a general outline of proposed § 1.199A–8, and the remainder of this part II addresses specific comments on proposed § 1.199A–8. Other than as described in response to the specific comments, the final regulations generally follow the Proposed Regulations.

Proposed § 1.199A–8(a), for purposes of section 199A(g), defines the terms patron (cross references proposed § 1.1388–1(e)), Specified Cooperative, and agricultural or horticultural products. The definition of Specified Cooperative is consistent with section 199A(g)(4) and the Joint Committee Report, and reflects the 2018 Act's amendment to the definition originally provided by section 11011(a) of the TCJA.; that is, a Specified Cooperative no longer includes a Cooperative solely engaged in the provision of supplies, equipment, or services to farmers or other Specified Cooperatives. The definition of agricultural or horticultural products in the Proposed Regulations is based upon the Cooperative Marketing Act of 1926, 44 Stat. 802 (1926).

Proposed § 1.199A–8(b) provides the four steps a Specified Cooperative that is not qualified as a farmer's cooperative organization under section 521 (nonexempt Specified Cooperative) performs to calculate its section 199A(g) deduction and includes definitions of relevant terms. Step 1, under proposed

§ 1.199A–8(b)(2)(i), requires a Specified Cooperative to identify its patronage and nonpatronage gross receipts, and related cost of goods sold (COGS), deductible expenses, W–2 wages, etc. (collectively, deductions) and allocate these deductions to the gross receipts from patronage and nonpatronage activity. Proposed § 1.199A–8(b)(2)(ii) directs a nonexempt Specified Cooperative to use only patronage gross receipts and related deductions when calculating the section 199A(g) deduction. Step 2, under proposed § 1.199A–8(b)(3), requires a nonexempt Specified Cooperative to determine the patronage gross receipts that qualify as DPGR. Proposed § 1.199A–9 provides rules for determining whether gross receipts are DPGR. Step 3, under proposed § 1.199A–8(b)(4), requires a Specified Cooperative to calculate QPAI (including oil-related QPAI) from only patronage DPGR and patronage deductions. Further rules for allocating COGS and other expenses, losses, or deductions to patronage DPGR are in proposed § 1.199A–10. A nonexempt Specified Cooperative calculates the section 199A(g) deduction using step 4, under proposed § 1.199A–8(b)(5). Proposed § 1.199A–8(b) also provides a definition of taxable income (including how to take net operating losses (NOLs) into account), rules on the use of the patronage section 199A(g) deduction, and special rules for nonexempt Specified Cooperatives that have oil-related QPAI.

Proposed § 1.199A–8(c) provides rules explaining the steps a Specified Cooperative that is qualified as a farmer's cooperative organization under section 521 (exempt Specified Cooperative) performs to calculate its section 199A(g) deduction. Generally, exempt Specified Cooperatives follow the same steps as nonexempt Specified Cooperatives, except that exempt Specified Cooperatives are not disallowed a section 199A(g) deduction based on nonpatronage gross receipts and related deductions. Instead, exempt Specified Cooperatives performs step 1 to identify patronage and nonpatronage gross receipts and related deductions, and then performs steps 2 through 4 in proposed § 1.199A–8(b) twice, to calculate a patronage section 199A(g) deduction and a nonpatronage section 199A(g) deduction. Proposed § 1.199A–8(c)(4)(ii) explains that the nonpatronage section 199A(g) deduction can be used only against nonpatronage income and cannot be passed through to patrons.

Proposed § 1.199A–8(d) provides rules for Specified Cooperatives passing through the section 199A(g) deduction to patrons. In general, under proposed § 1.199A–8(d)(1), a Specified Cooperative may pass through all, some, or none of the section 199A(g) deduction to patrons who are eligible taxpayers as defined in section 199A(g)(2)(D), that is, (i) a patron that is other than a corporation defined in section 1361(a)(2) (C corporation) or (ii) a patron that is a Specified Cooperative. Proposed § 1.199A–8(d)(2) limits the amount of the section 199A(g) deduction that a Specified Cooperative can pass through to the portion of the section 199A(g) deduction that is allowed with respect to the QPAI to which the qualified payments (defined in proposed § 1.199A–8(d)(2)(ii)) made to the eligible taxpayer are attributable. Proposed §§ 1.199A–8(d)(3) through (7) further outlines the written notice requirement to pass through the deduction to a patron, the patron's ability to deduct the section 199A(g) passed through (generally limited to the patron's taxable income), that a Specified Cooperative that is passed through a section 199A(g) deduction as an eligible taxpayer is limited to taking the deduction only against patronage gross income and related deductions, that the W–2 wage limitation is applied only at the Specified Cooperative level, and that a Specified Cooperative must reduce its section 1382 deduction by an amount equal to the section 199A(g) deduction passed through to its eligible patrons.

The remainder of proposed § 1.199A–8 covers a variety of issues. Proposed § 1.199A–8(e) provides examples that illustrate the rules in proposed § 1.199A–8(b) through (d). Proposed § 1.199A–8(f) provides guidance for Specified Cooperatives that are partners in a partnership. Proposed § 1.199A–8(g) provides guidance on the recapture of a claimed section 199A(g) deduction. Finally, proposed § 1.199A–8(h) generally provides that taxpayers may rely on the proposed rules in their entirety and as applied in a consistent manner until final regulations are published in the **Federal Register**.

B. Comments Related to Definition of ''Agricultural or Horticultural Products''

i. General Comments on Definition

Section 199A(g)(3)(D) defines DPGR as the gross receipts of a taxpayer that are derived from any lease, rental, license, sale, exchange, or other disposition (collectively, disposition) of any agricultural or horticultural product that was manufactured, produced, grown, or extracted (MPGE) by the taxpayer in whole or significant part within the United States. Proposed § 1.199A–8(a)(4) defines *agricultural or horticultural products* as agricultural, horticultural, viticultural, and dairy products, livestock and the products thereof, the products of poultry and bee raising, the edible products of forestry, and any and all products raised or produced on farms and processed or manufactured products thereof within the meaning of the Cooperative Marketing Act of 1926, 44 Stat. 802 (1926). Agricultural or horticultural products also include aquatic products that are farmed whether by an exempt or a nonexempt Specified Cooperative. In addition, agricultural or horticultural products include fertilizer, diesel fuel, and other supplies used in agricultural or horticultural production that are MPGE by a Specified Cooperative. Agricultural or horticultural products, however, do not include intangible property (other than as provided in the exception in § 1.199A–9(b)(2)); for example, an agricultural or horticultural product includes a seed that is grown, but does not include the intangible property right to reproduce a seed for sale. This exclusion of intangible property does not apply to intangible characteristics of any particular agricultural or horticultural product. For example, gross receipts from the sale of different varieties of oranges would all qualify as DPGR from the disposition of agricultural or horticultural products (assuming all other requirements of section 199A(g) are met). However, gross receipts from the license of the right to produce and sell a certain variety of an orange would be considered separate from the orange and not from an agricultural or horticultural product.

One commenter requested that the definition be omitted on the premise that the meaning of farming and agricultural or horticultural product is generally understood by the agricultural community and their advisors, and argued that there was no current, comprehensive definition of these terms in the Code or regulations. Because section 199A(g) is focused solely on dispositions of agricultural or horticultural products, as opposed to the broader scope of former section 199, the Treasury Department and the IRS have determined a definition is necessary to provide guidance on the limits of the section 199A(g) deduction. As an alternative to removing the definition, the commenter recommended against referencing non-tax legislation or regulations because the definitions were developed independent of tax law. The Treasury Department and the IRS have determined that using

the definition from the Proposed Regulations, based on a pre-existing definition from non-tax cooperative law specifically referencing the type of cooperative at issue here, is the best alternative, but have made some modifications based on the commenter's suggested definition. The definition in the final regulations includes parts of the commenter's suggested definition, by providing examples (without limitation) of products that are considered agricultural or horticultural products, including specific agricultural or horticultural products, livestock products, edible forestry products, and farmed aquatic products.

ii. Comments on Exclusion of Intangible Property

A commenter requested that the definition of agricultural or horticultural products include intangible property. The commenter reasoned that because a license is a disposition under section 199A(g)(3)(D) for purposes of determining if gross receipts qualify as DPGR, an exploitation of intangible property is implied. However, the inclusion of the term license under section 199A(g)(3)(D) does not impact the definition of agricultural or horticultural products. The term license also appeared in former section 199(c)(4)(A)(i), which was the equivalent of section 199A(g)(3)(D) under former section 199. Under former section 199, DPGR generally meant the gross receipts of the taxpayer derived from qualifying production property (QPP) which was MPGE by the taxpayer in whole or significant part within the US. Income from the disposition of intangible property (with the specific exception of computer software, sound recordings under section 168(f)(4), and qualified films under former section 199(c)(6)) were generally excluded from DPGR. This was because intangible property was not QPP (as defined in former section 199(c)(5), also see former § 1.199–3(j)(2)(iii)). The proposed definition and rules reach a similar result for purposes of section 199A(g).

Also related to intangible property, the commenter specifically requested that gross receipts qualify as DPGR from the disposition of an agricultural or horticultural product when a Specified Cooperative enters into a long-term arrangement with an unrelated third party, under which (1) the Specified Cooperative develops a finished retail product with the unrelated third party, (2) the finished retail product contains a patron's product as an ingredient, and (3) the Specified Cooperative receives a royalty or license fee based on the sale of the finished retail product irrespective of whether the Specified Cooperative's brand, label, and/or tradename is featured on the finished retail product. The situation described by the commenter is very fact specific and raises multiple possible issues for purposes of section 199A(g). Among the issues to consider are what property or properties the Specified Cooperative is deriving gross receipts from in the normal course of business, and which party is the producer of the property. Because of the fact specific nature of the comment, and multiple possible outcomes, there is no rule or example to address this specific situation in the final regulations.

After consideration of the comments, the final regulations maintain the approach in the Proposed Regulations that the definition of agricultural or horticultural products does not include intangible property, but also provide language further clarifying the exclusion. The clarifying language provides that intangible rights include the rights to MPGE and sell an agricultural or horticultural product with certain characteristics protected by a patent and the trademark of a brand. Further examples 9 and 10 have been added to § 1.199A–8(e) to illustrate concepts related to intangible property transactions and the disposition of agricultural or horticultural products.

iii. Comments on ''Other Supplies''

Included in the definition of agricultural or horticultural products are other supplies that are MPGE by the Specified Cooperative. A commenter suggested that the MPGE requirement be removed from ''other supplies'' on the basis that Joint Committee Report footnote 120 cites § 1.199–6(f), which made no mention of a MPGE requirement as it pertained to ''other supplies'' being agricultural or horticultural products. However, footnote 120 explicitly mentions a MPGE requirement as it pertains to other supplies. The Joint Committee Report also explains that after the amendments to section 199A(g) made by the 2018 Act, ''[t]he definition of [specified agricultural or horticultural cooperative] no longer includes a [C]ooperative solely engaged in the provision of supplies, equipment, or services to farmers or other specified agricultural or horticultural cooperatives.'' Joint Committee Report, 23. Based upon these considerations, subjecting ''other supplies'' to a MPGE requirement before being considered agricultural or horticultural products is appropriate.

Commenters also requested that ''other supplies'' be further illustrated with examples. The final regulations include more examples of ''other supplies'' such as seed, feed, herbicides, and pesticides.

Finally, one commenter requested that language be added to the definition of agricultural or horticultural products to include supplies used in activities under § 1.199A–9(f)(2) and (3). Under proposed § 1.199A–9(f)(2) and (3), if the Specified Cooperative performs packaging, repackaging, labeling, or installation with respect to an agricultural or horticultural product and engages in no other MPGE activity with respect to that agricultural or horticultural product, the Specified Cooperative's activity does not qualify as MPGE with respect to that agricultural or horticultural product. Based on this rule, to the extent a Specified Cooperative performs MPGE activities with respect to an agricultural or horticultural product, and in conjunction performs a packaging, repackaging, labeling, or installation activity, the activities are treated as part of the MPGE of the agricultural production. The packaging or labeling materials used may also be treated as part of the agricultural or horticultural product. For example, if a Specified Cooperative packages an agricultural or horticultural product that the Specified Cooperative had MPGE, then the packaging activity is treated as part of the MPGE of the agricultural or horticultural product, and gross receipts from the sale of the packaged agricultural or horticultural product all qualify as DPGR, assuming all other requirements for such treatment are met. However, property packaged or offered with an agricultural or horticultural product that is not an agricultural or horticultural product (or packaging) is not considered part of the agricultural or horticultural product.

C. Identifying Patronage Items and Exclusion of Nonpatronage Items for Nonexempt Specified Cooperatives

As previously described, proposed § 1.199A–8(b) outlines a four-step process for nonexempt Specified Cooperatives to use in calculating the section 199A(g) deduction. Step 1, in proposed § 1.199A–8(b)(2)(i) and (ii), requires a nonexempt Specified Cooperative to identify its gross receipts, COGS, deductions, W–2 wages, etc. as patronage or nonpatronage, and allows only the patronage activities to be included in the calculation of the section 199A(g) deduction. One commenter described step 1 as burdensome and unnecessary, and suggested removal of that step. Further, the commenter asserted that both

patronage and nonpatronage activities should be included in the section 199A(g) deduction calculation for nonexempt Specified Cooperatives. The commenter provided, as an alternative to removal of that step, that these rules be reserved until the conclusion of litigation under former section 199 relating to the calculation of the former section 199 deduction by Specified Cooperatives.

The Treasury Department and the IRS decline to adopt these comments in the final regulations for the reasons described in the following paragraphs. However, the final regulations make revisions to the proposed regulations to benefit and reduce complexity for Specified Cooperatives with de minimis gross receipts from nonpatronage activities.

Section 199A(g)(4)(A) defines a Specified Cooperative, in part, as an organization to which part I of subchapter T applies. Under section 1381(a)(2), subchapter T applies to any corporation operating on a cooperative basis, with certain exceptions not relevant here. In the commenter's view, this means that if subchapter T applies, it applies to the entire corporation, and the benefits of the section 199A(g) deduction should follow that determination. In support of this position, the commenter argues that the plain language of the statute and the Joint Committee Report do not limit the deduction to patronage activities. The commenter's view fails to properly take into account how subchapter T applies to nonexempt Cooperatives that have both cooperative and noncooperative operations. This is an especially important consideration because of the exclusion of C corporations from the definition of eligible taxpayers under section 199A(g)(2)(D)(i), and the fact that section 199A as a general matter is not intended to benefit C corporations.

When a nonexempt Cooperative does not act entirely on a cooperative basis under subchapter T, its activities are characterized as patronage or nonpatronage, and accordingly, the tax items from these distinct activities receive different treatment. *See Buckeye Countrymark, Inc.* v. *Comm'r,* 103 T.C. 547, at 559 (1994) (explaining that ''subchapter T requires nonexempt cooperatives to separate income and deductions into two categories or baskets, one for patronage income and deductions and one for nonpatronage income and deductions'') and *Farm Service Coop.* v. *Comm'r,* 619 F.2d 718 (8th Cir. 1980) (subchapter T prohibits the netting of patronage losses against nonpatronage income). Cooperative activities generate patronage income and deductions and are taxed on a cooperative basis, generally resulting in a single-level of tax to the Cooperative or the patrons after application of the rules under subchapter T. *See* Joint Committee Report, 20 (explaining that ''excluding patronage dividends and per-unit retain allocations paid by the cooperative from the cooperative's taxable income in effect allows the cooperative to be a conduit with respect to profits derived from transactions with its patrons''). In contrast, noncooperative activities of a Cooperative generate nonpatronage income and deductions and are taxed like a for-profit business of a C corporation, resulting in a double-level of tax, that is, at both the Cooperative and patron levels. *See, for example, Farm Service* at 723, and *Conway Cty. Farmers Ass'n* v. *United States,* 588 F.2d 592, 596 (8th Cir. 1978) (describing nonpatronage income as being taxed as a for-profit business in case where organization found to be operating on a cooperative basis with more than 50 percent of business done with nonmembers).

There is limited guidance as to how much of an organization's activities must be conducted on a cooperative basis for the organization to qualify as a Cooperative under subchapter T, but the available guidance suggests a low threshold in certain cases. To the extent this is true, it allows for the noncooperative activities to be of substantial value relative to the organization's cooperative activities. For example, in *Columbus Fruit and Vegetable Coop. Ass'n, Inc.* v. *United States,* 7 Cl. Ct. 561 (March 27, 1985), the court held that an agricultural organization whose sales of members' merchandise accounted for only about 24 percent of value of its total sales for the tax years in question was nevertheless a corporation operating on a cooperative basis within the meaning of the Code, and thus was entitled to deduct patronage dividends paid to its members.

The Treasury Department and IRS compared how application of the rules of subchapter T aligned with the commenter's proposal and with the Proposed Regulations and found the subchapter T rules align better with the Proposed Regulations. Among the scenarios considered were C corporations engaged in the following: (1) An agricultural business with no cooperative activities (scenario 1); (2) an agricultural business operating entirely on a cooperative basis considered a nonexempt Specified Cooperative (scenario 2); and, (3) an agricultural business with a mixed percentage of business from cooperative and noncooperative activities that qualifies as a nonexempt Specified Cooperative (scenario 3).

In the first and second scenarios, both the commenter's proposal and the Proposed Regulations reach the same conclusions. In the first scenario, because none of the organization's activities are conducted on a cooperative basis, subchapter T does not apply to the organization, and the organization receives no benefits from the section 199A(g) deduction. In the second scenario, because all the organization's activities are conducted on a cooperative basis, the benefits of subchapter T apply to all of the organization's activities, and the organization can calculate the section 199A(g) deduction based on all its activities.

It is the third scenario where the conclusions under the commenter's proposal and the Proposed Regulations differ. Under the commenter's proposal, subchapter T applies to the organization and so the organization should calculate a single section 199A(g) deduction by aggregating the patronage income, deductions, etc., resulting from cooperative activities and the nonpatronage income, deductions, etc., resulting from noncooperative activities. The commenter's proposal would permit a Specified Cooperative to calculate and take the section 199A(g) deduction on its business activities that are not operated on a cooperative basis (those activities that generate income that is taxed as that of a C corporation). This would be the case even where a substantial portion of the income of the Specified Cooperative is generated from business activities not operated on a cooperative basis. In contrast, the Proposed Regulations allow the organization to calculate the section 199A(g) deduction based only on the patronage income, deductions, etc., resulting from the organization's cooperative activities.

The Proposed Regulations, and not the commenter's proposal, align with subchapter T and the structure and intent of section 199A. Under subchapter T, a nonexempt Cooperative with both cooperative and noncooperative activities receives beneficial single-level tax treatment only on its patronage income, and its income from operating as a C corporation (that is, nonpatronage income) receives double-level tax treatment. *Farm Service* at 723. Generally, section 199A was structured to give businesses that are not operating as C corporations a deduction that corresponds to the TCJA's reduction of

the top corporate rate of tax from 35 percent to 21 percent under section 11. Indeed, Congress needed to specifically clarify that Specified Cooperatives could benefit from the section 199A deduction because Cooperatives are C Corporations. See section 1382(a)(2). That is, Congress, in including section 199A(g), was making sure that Specified Cooperatives received a benefit when operating as Cooperatives. This also makes sense when considering that patronage distributions deductible under section 1382 to a Specified Cooperative, which enable the Specified Cooperative to act as a conduit for its patrons, are taxed to the patrons eligible for the section 199A(a) deduction at individual rates. The Proposed Regulations align with this intent because only the activities resulting in patronage income receive beneficial treatment under section 199A(g), and income arising from nonpatronage activities continues to be taxed as income from a C corporation. Were the result as requested by commenter, a C corporation conducting a portion of its business on a cooperative basis would receive the benefits of both the reduced corporate income tax rate and the section 199A(g) deduction with respect to its nonpatronage activities, giving it a competitive advantage relative to a regular C corporation.

The commenter also referred to section 199A(g)(6), which provides that the Secretary shall prescribe regulations as are necessary to carry out the purposes of section 199A(g), and that the regulations shall be based on the regulations applicable to Cooperatives and their patrons under section 199 (as in effect before its repeal). The commenter noted that the former section 199 regulations did not exclude nonpatronage income from the calculation of the former section 199 deduction. However, because there are material differences between former section 199 and section 199A, section 199A(g)(6) does not require that the section 199A(g) regulations replicate or duplicate the former section 199 regulations in their entirety. The former section 199 regulations did not specifically address an organization with cooperative and noncooperative operations because former section 199 applied to all categories of businesses, including C corporations, whether operating on a cooperative basis, noncooperative basis, or both. In contrast to the former section 199 deduction, the section 199A(g) deduction, which must be read in the context of section 199A, does not apply to C corporations generally. Unlike for the former section 199 regulations, clarification of this distinction is necessary to carry out the purposes of section 199A(g), which include providing the section 199A(g) deduction for the patronage activities of Specified Cooperatives. Clarification of this distinction is also necessary to assist taxpayers in complying with the law, as well as to aid the proper administration of section 199A(g).

The Treasury Department and the IRS also considered the recent opinions in *Ag Processing, Inc.* v. *Comm'r,* 153 T.C. No. 3 (2019), and *Growmark, Inc. & Subsidiaries* v. *Comm'r,* T.C. Memo. 2019–161. These cases are the litigation referred to by the commenter. In *Ag Processing* and *Growmark,* the Tax Court determined that under former section 199, a nonexempt agricultural Cooperative should calculate the section 199 deduction in the aggregate by combining patronage and nonpatronage items and then allocating the total section 199 deduction between the Cooperative's patronage and nonpatronage businesses. These cases do not support, and in fact, conflict with the commenter's proposal in that they require an allocation of the former section 199 deduction between patronage and nonpatronage businesses. At the same time, the Tax Court's approach in these cases allows the proceeds of the cooperative and noncooperative businesses to be combined to calculate an aggregate deduction before allocation. The allowance of an aggregate calculation highlights the difference between section 199A(g), benefitting solely cooperative activities, and former section 199, benefitting both cooperative and noncooperative activities. Thus, the cases do not necessitate that final regulations adopt an approach different from that of the Proposed Regulations. Based on the commenter's proposal, the Treasury Department and IRS considered calculating the section 199A(g) deduction on an aggregate basis and then disallowing the nonpatronage portion, but this would require unnecessary calculations and likely prove less accurate than the straightforward calculation provided in the Proposed Regulations.

Finally, the Treasury Department and IRS considered how the commenter's proposal would align with the treatment of exempt Specified Cooperatives. The commenter's proposal would allow both exempt and nonexempt Specified Cooperatives to calculate their section 199A(g) deductions based on both cooperative and noncooperative activities. The Proposed Regulations permit only exempt Specified Cooperatives to calculate their section 199A(g) deductions based on both cooperative and noncooperative activities. Under subchapter T, exempt Cooperatives can receive the beneficial single-level tax treatment with respect to both types of business activities while nonexempt Cooperatives cannot. In effect, by meeting the requirements of section 521, the entirety of an exempt organization's operations can be treated as done on a cooperative basis. Exempt Specified Cooperatives, thus, are effectively equivalent to the described scenario 2 (a nonexempt Specified Cooperative operating entirely on a cooperative basis). The commenter's proposal would provide the same benefits of the section 199A(g) deduction to nonexempt Specified Cooperatives without requiring those Cooperatives to meet the requirements of section 521.

In summary, the Treasury Department and the IRS have determined that retaining step 1 in proposed § 1.199A–8(b)(2)(i) and (ii) is the approach for calculating the section 199A(g) deduction that best reflects the law and is most consistent with the scope of section 199A(g) and the application of subchapter T to nonexempt Cooperatives.

The final regulations, however, revise the rule for applicable gross receipts in § 1.199A–8(b)(2)(ii) to allow a Specified Cooperative to include all nonpatronage gross receipts in non-DPGR for purposes of the de minimis rules in § 1.199A–9(c)(3), while also increasing the de minimis percentage in the de minimis rules in § 1.199A–9(c)(3) from 5 percent to 10 percent. These revisions expand the type of gross receipts eligible for the de minimis rules and should increase the number of Specified Cooperatives that can apply the de minimis rules. Applying the de minimis rule in § 1.199A–9(c)(3)(i) after these revisions means that a Specified Cooperative when calculating its patronage section 199A(g) deduction can treat all of its gross receipts as DPGR when the Specified Cooperative derives less than 10 percent of its total gross receipts from non-DPGR (with non-DPGR now possibly including all gross receipts from nonpatronage as well as other patronage non-DPGR). While this provides the benefit of increased DPGR, application of the de minimis rule in § 1.199A–9(c)(3)(i) also reduces complexity by simplifying the allocations needed to calculate the section 199A(g) deduction. Under § 1.199A–9(c)(3)(ii), the revisions also make it possible for any Specified Cooperative deriving less than 10 percent of their gross receipts from

DPGR to treat all of their gross receipts as non-DPGR. The final regulations also update § 1.199A–8(b)(5)(ii)(C), § 1.199A–8(c)(2) and (4), and § 1.199A–12(b)(1) to take these revisions into account.

D. Exempt Specified Cooperative Calculation of Nonpatronage Section 199A(g) Deduction

Rules for exempt Specified Cooperatives to calculate the section 199A(g) deduction were included in proposed § 1.199A–8(c). Specifically, under proposed § 1.199A–8(c)(2), an exempt Specified Cooperative calculates separate patronage and nonpatronage section 199A(g) deductions, as is consistent with the administration of former section 199. One commenter disputed that separate calculations were required under former section 199 and further stated that separate calculations are unnecessary since exempt Specified Cooperatives are permitted the section 199A(g) deduction on both their patronage and nonpatronage income. Contrary to the commenter's assertion, the instruction to line 25 for Agricultural and Horticultural Cooperatives on the Form 8903, Domestic Production Activities Deduction, makes clear that the calculations are made separately. This step is necessary because allowing an aggregate calculation and allocation results in less accurate patronage and nonpatronage deductions because alignment of the appropriate W–2 wages, COGS, and other expenses from an activity with the income from that activity is lost on aggregation, and difficult to rectify on allocation. For these reasons, the final regulations maintain the requirement of separate calculations of the patronage section 199A(g) deductions and nonpatronage section 199A(g) deductions by exempt Specified Cooperatives. However, the revisions in the final regulations to § 1.199A–8(b)(2)(ii) and the increase in the de minimis percentage under § 1.199A–9(c)(3) will simplify the allocations needed to calculate the section 199A(g) deduction for an exempt Specified Cooperative with de minimis nonpatronage gross receipts.

E. Definition of Taxable Income

i. General Definition Comments

Proposed § 1.199A–8(b)(5)(ii)(C) provides that taxable income is defined in section 1382 and § 1.1382–1 and § 1.1382–2. For purposes of determining the amount of the deduction allowed under § 1.199A–8(b)(5)(ii), taxable income is limited to taxable income and related deductions from patronage sources. Patronage NOLs reduce taxable income. Taxable income is determined without taking into account the section 199A(g) deduction or any deduction allowable under section 1382(b). Further, taxable income is determined using the same method of accounting used to determine distributions under section 1382(b) and qualified payments to eligible taxpayers.

One commenter stated that the definition of taxable income should refer to section 63, and take into account both patronage and nonpatronage income (including NOLs) on an aggregate basis. The Treasury Department and the IRS agree that section 63 generally defines taxable income. In response, the definition of taxable income in the final regulations has been modified so that it also includes a reference to section 63. However, consistent with the exclusion of nonpatronage items from the calculation of the section 199A(g) deduction, the final regulations continue to limit the definition to patronage taxable items for purposes of the limitation.

The commenter also stated that the requirement that Specified Cooperatives use the same method of accounting to determine taxable income, distributions under section 1382(b), and qualified payments is in error. Specifically, commenter stated that patronage dividends or other similar payments to patrons can be calculated on a book basis because it is a more accurate economic measure of income over time. The commenter provided an example where accelerated depreciation and other book/tax items often cause timing differences that may disproportionately benefit longer-term patrons over shorter-term patrons. Commenter further maintained that Cooperatives have been allowed to determine payments to patrons pursuant to methods other than on tax basis. The commenter pointed to section 1388(a)(3), which in defining patronage dividends, references the net earnings of the organization. In the commenter's view, the use of net earnings rather than taxable income means that net earnings do not necessarily correlate to taxable income. Further, the commenter pointed to Example 2 of former § 1.199–6(m) that included language indicating patronage distributions could be paid based on book or Federal income tax net earnings, as well as the requirement on Form 1120–C (U.S. Income Tax Form for Cooperative Associations) that a cooperative disclose the method of accounting used to compute distributable patronage income, with the choices being ''Book,'' Tax,'' and ''Other.''

In reviewing this part of the definition, the Treasury Department and the IRS determined it is unnecessary for defining taxable income to include the requirement that taxable income is determined using the same method of accounting used to determine distributions under section 1382(b) and qualified payments to eligible taxpayers. Accordingly, the final regulations do not include this requirement in § 1.199A–8(b)(5)(ii)(C) and also do not include a similar requirement in § 1.199A–8(c)(4)(i). The commenter's example and reasoning, however, relate more to the deductibility under section 1382 of distributions to patrons calculated on a book basis when there are book/tax differences, which is outside of the scope of the final regulations. No inference as to the deductibility of distributions to patrons under section 1382 is intended by removing this language (regardless of the method used to determine the payments).

ii. Comments on Net Operating Loss (NOL) Ordering Rules

Proposed § 1.199A–8(b)(5)(ii)(C) provides that patronage NOLs reduce taxable income. However, taxable income does not take into account the section 199A(g) deduction or any deduction allowable under section 1382(b). A commenter requested clarification on ordering rules concerning the interplay of NOLs, section 1382(b), and section 199A(g) deductions. Specifically, the commenter requested that final regulations clarify that the amount of an NOL that is taken into account for purposes of calculating the section 199A(g) deduction is the amount that the Specified Cooperative actually used in computing taxable income on its tax return for the year. The commenter further suggested that NOLs should not be regarded as having been used against any patronage dividends or per-unit retain allocations that are disregarded in computing taxable income for purposes of the section 199A(g) deduction limitation. The commenter provided an example where a nonexempt Specified Cooperative generated $100 of QPAI and taxable income, without taking account any of its deductions under section 1382(b) or section 199A(g), or an NOL carryover of $500. In the commenter's example, the nonexempt Specified Cooperative was able to calculate and use a $9 section 199A(g) deduction, pay out a $91 patronage dividend, and avoid using any of the $500 NOL carryover.

In consideration of the commenter's example, the Treasury Department and

the IRS reviewed Examples 1 and 2 in former § 1.199–1(b)(2), which illustrated that when calculating and using the former section 199 deduction, taxable income is reduced by any available NOL or NOL carryovers, before being reduced by the section 199 deduction. This avoided having the former section 199 deduction create or increase an NOL, but did not illustrate how section 1382 deductions impacted the calculation or use of the former section 199 deduction. Consistent with former section 199, taxable income for purposes of calculating the section 199A(g) deduction should take into account an NOL or NOL carryover. After calculation, the section 199A(g) deduction should not create or increase an NOL or NOL carryover. The section 199A(g) deduction also should not be used as a substitute for an NOL carryover when a Specified Cooperative has taxable income remaining after its section 1382 deductions, but before the section 199A(g) deduction is taken.

Using the facts of the commenter's example, this means that for purposes of calculating the section 199A(g) deduction, the $500 NOL carryover should reduce taxable income by $9, which is the amount that remains after the section 1382(b) deduction. Taxpayer would calculate a section 199A(g) deduction based on $91 (the lesser of QPAI ($100) or taxable income ($91), without taking section 1382(b) deduction into account). As a result under these facts, taxpayer would have $0 of taxable income after taking a section 1382 deduction of $91 and using $9 of the $500 NOL carryover (leaving a $491 NOL carryover). The Specified Cooperative could pass through the section 199A(g) deduction to patrons and reduce its section 1382 deduction accordingly. However, if the Specified Cooperative did not pass through the section 199A(g) deduction it would be lost because the deduction cannot increase an NOL carryover. In accordance with this analysis, the definition of taxable income in § 1.199A–8(b)(5)(ii)(C) and the rules in § 1.199A–8(b)(6) related to a Specified Cooperative using the section 199A(g) deduction have been updated. To illustrate this ordering rule, example 5 has also been added under § 1.199A–8(e). Based on this ordering rule and its reasoning, the Treasury Department and the IRS decline to adopt the commenter's approach permitting Specified Cooperatives to reduce taxable income by taking the section 199A(g) deduction before using an NOL, but clarify that NOLs are not used against taxable income that is the result of not taking into account section 1382 deductions when calculating the section 199A(g) deduction.

The commenter also stated that the examples in the proposed regulation (Examples 6 and 7 of proposed § 1.199A–8(e)) do not consider the more realistic case where the Specified Cooperative made payments to patrons that were deductible under section 1382(b). The Treasury Department and the IRS agree with this statement, and the new example in § 1.199A–8(e) replaces those examples from the Proposed Regulations.

F. Pass Through of Section 199A(g) Deduction

Sections 1.199A–8(d)(1) and (2) of the Proposed Regulations allow a Specified Cooperative, at its discretion, to pass through all, some, or none of its patronage section 199A(g) deduction to an eligible taxpayer (*i.e.,* a patron other than a C Corporation or a patron that is a Specified Cooperative), but the amount passed through to any eligible taxpayer is limited to the allowable portion of the section 199A(g) deduction with respect to the QPAI to which the qualified payments made to the eligible taxpayer are attributable. The intent of the proposed rule was to allow the Specified Cooperative the benefit of retaining and using the amounts equal to the section 199A(g) deduction attributable to non-eligible taxpayers (who will not be able to use the deduction) at the Specified Cooperative level, even when the Specified Cooperative chooses to pass through all or some of the section 199A(g) deduction attributable to patrons that are eligible taxpayers. Consistent with section 199A(g)(2)(A)(ii), proposed § 1.199A–8(d)(3) provides that a Specified Cooperative must identify in a written notice the amount of the deduction passed through to an eligible taxpayer, and the notice must be mailed by the Specified Cooperative to the eligible taxpayer no later than the 15th day of the ninth month following the close of the taxable year of the Specified Cooperative. The 15th day of the ninth month coincides with the end of the payment period as described in section 1382(d).

Commenters asked that the final regulations clarify that a Specified Cooperative will not be penalized if it passes through information relating to a section 199A(g) deduction to a non-eligible taxpayer, and that the ultimate determination of whether the deduction that is passed through can be used is the responsibility of the patron. One of these commenters indicated that section 199A(g)(2)(A) does not require the Specified Cooperative to determine the eligibility of all of its patrons. The Treasury Department and the IRS recognize that it may be difficult for a Specified Cooperative to determine the eligibility status of all patrons, and agree that the ultimate determination of eligibility should be made at the patron level. Therefore, the final regulations provide that a Specified Cooperative may pass through all, some, or none of the section 199A(g) deduction to all patrons, with appropriate adjustments to the section 1382 deduction depending on the amount passed through, but that only eligible taxpayers may claim the section 199A(g) deduction that is passed through. In considering this comment, the Treasury Department and the IRS also considered proposed § 1.199A–8(d)(5), which provides special rules for eligible taxpayers that are Specified Cooperatives, and that provides a Specified Cooperative that receives a section 199A(g) deduction can take the deduction only against patronage gross income and related deductions. The final regulations clarify the rule to be consistent with the nonpatronage disallowance for nonexempt Specified Cooperatives and also provide that only an exempt Specified Cooperative can take a section 199A(g) deduction passed through from another Specified Cooperative if the deduction relates to the patron Specified Cooperative's nonpatronage gross income and related deductions.

In addition to requesting that Specified Cooperatives not be required to identify the eligibility of all patrons, commenters requested that if a Specified Cooperative does obtain the tax status of its patrons so as not to pass through the section 199A(g) deduction to an non-eligible taxpayer, then the Specified Cooperative should be allowed to retain and use the section 199A(g) deduction from patrons that are non-eligible taxpayers while passing through the section 199A(g) deduction to patrons that are eligible taxpayers, subject to the section 199A(g)(1)(A)(ii) limitation. The Treasury Department and the IRS intended this result in the Proposed Regulations and have revised § 1.199A–8(d)(1) to clarify that if a Specified Cooperative obtains the tax status of a patron that is an non-eligible taxpayer, the Specified Cooperative may retain the section 199A(g) deduction attributable to that patron, even when passing through the deduction to other patrons. Example 11 under § 1.199A–8(e) has also been added to illustrate allocation rules for situations in which a Specified Cooperative retains the

section 199A(g) deduction attributable to non-eligible taxpayers.

Another commenter also requested relief from the notice requirements in proposed § 1.199A–8(d)(3) in the event that a Specified Cooperative wishes to pass through the section 199A(g) deduction to patrons but does not send the notice before the payment period ends, or passes through an incorrect amount of the section 199A(g) deduction during the payment period. Specifically, the commenter asked if there is a way to issue a late notice or to void or otherwise reissue a notice after the payment period. The requirement of identifying the amount passed through during the payment period is from section 199A(g)(2)(A)(ii). Further, no administrative remedies of this type existed under former section 199. The former section 199 rules required the notice to be provided during the payment period, and this notice worked in conjunction with the recapture provision in former § 1.199–6(k) and the no-double counting rule in former § 1.199–6(l). Finally, the payment period is also used in determining whether a distribution is deductible under section 1382(b), so a consistent interpretation is appropriate. Thus, no changes were made with respect to this comment.

G. Comments on Definition of Qualified Payments

Section 199A(g)(2)(E) defines *qualified payment,* with respect to any eligible taxpayer, as any amount which is (i) described in section 1385(a)(1) or (3), (ii) received by the taxpayer from a Specified Cooperative, and (iii) is attributable to QPAI with respect to which a deduction is allowed to the Specified Cooperative under section 199A(g)(1). Proposed § 1.199A–8(d)(2)(ii) defines qualified payment as ''any amount of a patronage dividend or per-unit retain allocation, as described in section 1385(a)(1) or (3) received by a patron from a Specified Cooperative that is attributable to the portion of the Specified Cooperative's QPAI, for which the cooperative is allowed a section 199A(g) deduction. For this purpose, patronage dividends include any advances on patronage and per-unit retain allocations include per-unit retains paid in money during the taxable year. A Specified Cooperative calculates its qualified payment using the same method of accounting it uses to calculate its taxable income.'' The inclusion of advances on patronage and per-unit retains paid in money during the taxable year is consistent with the definition in former § 1.199–6(e).

The commenter asserted that when a Specified Cooperative's section 199A(g) deduction is W–2 wage-limited under section 199A(g)(1)(B), section 199A(g)(2)(E)(iii) requires qualified payments to reflect the limitation for purposes of the section 199A(b)(7) reduction. The commenter provided an example where the Cooperative's W–2 wage-limited section 199A(g) deduction is $50, but would have been $100 absent the W–2 wage limitation, and so the commenter proposed that only 50 percent of patronage dividends (or per-unit retain allocations) would be ''qualified payments'' under section 199A(g)(2)(E).

The definition of qualified payment in former section 199 and section 199A is almost identical. Under former section 199, the definition in section 199(d)(3)(E)(iii) provided that a qualified payment is an amount which is attributable to QPAI with respect to which a deduction is allowed to such cooperative under section 199(a). Section 199(A)(g)(2)(E)(iii) provides the same except that it refers to the deduction allowed to such cooperative under section 199A(g)(1). In former section 199, the amount allowed under former section 199(a) did not consider the W–2 wage limitation, which was in section 199(b). Section 199A(g)(1) is organized so that section 199A(g)(1)(A) is equivalent to former section 199(a) and section 199A(g)(1)(B) is equivalent to former section 199(b).

The Proposed Regulations interpreted the definition of qualified payment as referring to payments that relate to gross receipts that are allowable in the QPAI of a Specified Cooperative for which a deduction is allowed under section 199A(g)(1)(A). This is consistent with the language used in section 199A(g)(1)(A), which provides that there shall be allowed a deduction equal to 9 percent of the lesser of (i) QPAI of the taxpayer for the taxable year, or (ii) the taxable income of the taxpayer for the taxable year. As relevant, this language parallels former section 199(a). This interpretation is directly supported by Example 1 of the Joint Committee Report, which illustrates that payments to the patron are considered qualified payments for purposes of the section 199A(b)(7) reduction when the issuing Specified Cooperative's section 199A(g) deduction was W–2 wage-limited. This is also consistent with the regulations under former section 199, which did not have a proportionality rule for qualified payments. Therefore, the final regulations do not incorporate this comment.

Commenters also requested clarification that the definition of qualified payments does not include amounts paid to patrons by Specified Cooperatives with respect to activities that do not qualify as producing DPGR from the sale of agricultural or horticultural products. When gross receipts of a Specified Cooperative are non-DPGR, and thus, are not includable in QPAI, payments based on these amounts do not meet the definition of qualified payments. The Treasury Department and the IRS agree with this comment and view this as consistent with the interpretation of qualified payment described earlier, but do not consider additional regulatory language necessary to clarify this point.

Commenters also suggested that the last sentence of the definition, indicating that a Specified Cooperative calculates its qualified payment using the same method of accounting it uses to calculate its taxable income, was added in error and should be removed. This sentence was not in the definition of qualified payment in former § 1.199–6(e), and the Treasury Department and the IRS have removed the sentence for consistency with former § 1.199–6(e). Further, the definition of qualified payments already encompasses this concept with its references to patronage dividends and per-unit retain allocations, as a Specified Cooperative calculates patronage dividends and per-unit retain allocations when determining taxable income.

H. Comments on Examples in Proposed § 1.199A–8(e)

Commenters requested clarification on Examples 1 and 2 of proposed § 1.199A–8(e), asking how both examples are based on the same facts, but the payment in Example 1 is deemed a per-unit retain allocation, while the payment in Example 2 is deemed a purchase. Commenters indicated that without further explanation, the examples were confusing. Example 2 has been removed to eliminate any confusion as Example 1 is consistent with Example 1 from the Joint Committee Report. Example 1 has also been slightly modified for clarity and to more closely track Example 1 from the Joint Committee Report. In general, the determination of whether a payment is a per-unit retain allocation is made based on the definition in section 1388(f). Section 1388(f) defines per-unit retain allocations as any allocation, by an organization to which part I of subchapter T apples, to a patron with respect to products marketed for the patron, the amount of which is fixed without reference to the net earnings of the organization pursuant to an agreement between the organization and

the patron. Per-unit retain allocations are qualified payments (to the extent all other requirements are met) under the definition in § 1.199A–8(d)(2)(ii).

One commenter also requested clarification on whether it is possible for a Specified Cooperative and its patrons to contractually agree that a payment is not a qualified payment. The Treasury Department and the IRS believe that an agreement to treat a payment that otherwise meets the definition of qualified payment as something else would be inappropriate and ineffective. A payment meeting the definition of a qualified payment should be characterized as a qualified payment.

Commenters also asked that Examples 1–3 from former § 1.199–6(m) be included in the final regulations. Similar to Example 2 of proposed § 1.199A–8(e), the facts of Examples 1 and 2 from former § 1.199–6(m) both treat the Cooperative payments to patrons as purchases rather than per-unit retain allocations. In order to avoid confusion, the examples were modified to be consistent with Example 1 from the Joint Committee Report. The final regulations include Examples 1–3 from former § 1.199–6(m) as Examples 6, 7, and 8 under § 1.199A–8(e).

I. Comments on Rules for Specific Cooperative Partners in Proposed § 1.199A–8(f)

Under proposed § 1.199A–8(f), a Specified Cooperative that is a partner in a partnership must determine which Schedule K–1 allocations (*i.e.,* gross receipts and related deductions) qualify as DPGR and use the items to calculate its corresponding section 199A(g) deduction. A commenter noted that W–2 wages generated by the partnership should be passed on to the Specified Cooperative partner, relying on section 199A(f)(1)(A)(iii) and former § 1.199–5(b)(1)(i). The Treasury Department and the IRS agree and have amended § 1.199A–8(f) accordingly. Section 1.199A–8(f) of the final regulations also includes the share of COGS to maintain consistency with former § 1.199–5(b)(1)(i), which allowed for the allocation of COGS to partners.

A commenter also requested that if a partnership conducts MPGE activities that result in DPGR, then a Specified Cooperative partner in that partnership should be treated as if the activities were directly conducted by the Specified Cooperative. The Treasury Department and IRS agree with the comment and § 1.199A–8(f) now allows for two-way attribution, meaning: (1) A partnership's activities alone with respect to an agricultural or horticultural product can qualify the gross receipts for the Specified Cooperative partner, and (2) a partnership can be attributed the activities of the Specified Cooperative partner (including those activities that a specified partner is attributed from patrons) so that the gross receipts can be DPGR.

III. § 1.199A–9, Domestic Production Gross Receipts

A. In General

Section 199A(g)(3)(D) defines the term *DPGR* to mean gross receipts of a Specified Cooperative derived from any lease, rental, license, sale, exchange, or other disposition (collectively, a disposition) of any agricultural or horticultural product which was MPGE (determined after application of section 199A(g)(4)(B)) by the Specified Cooperative in whole or significant part within the United States. DPGR does not include gross receipts of the Specified Cooperative derived from a disposition of land or from services. Section 199A(g)(4)(B) treats marketing Specified Cooperatives as having MPGE any agricultural or horticultural product in whole or significant part within the United States if their patrons have done so. Proposed § 1.199A–9 provides rules for determining whether gross receipts are DPGR, and provides methods of allocating gross receipts between DPGR and non-DPGR. Proposed § 1.199A–9 was based on § 1.199–3 of the former section 199 regulations, but also incorporated rules from former § 1.199–1(d)(1) through (3) and § 1.199–1(e). Former § 1.199–1(d)(1) through (3) and § 1.199–1(e) relate to the allocation of gross receipts between DPGR and non-DPGR, determining whether an allocation method is reasonable, treating de minimis gross receipts as DPGR or non-DPGR, and the use of historical data to allocate gross receipts for certain multiple-year transactions. The Proposed Regulations were intended to be interpreted in a manner consistent with the interpretation under former section 199. Other than as described in response to the specific comments, the final regulations generally follow the Proposed Regulations.

B. Reasonable Method of Allocating Gross Receipts Between DPGR and Non-DPGR

Under proposed § 1.199A–9(c)(1), Specified Cooperatives must use a reasonable method when allocating gross receipts between DPGR and non-DPGR. This reasonable method must be consistently applied from one taxable year to another, and must clearly reflect the portion of gross receipts for the taxable year that is DPGR and the portion of gross receipts that is non-DPGR. Proposed § 1.199A–9(c)(2) provides that if a Specified Cooperative has the information readily available and can, without undue burden or expense, specifically identify whether the gross receipts are derived from an item as defined in proposed § 1.199A–9(e)(1)(i) (and thus, are DPGR), then the Specified Cooperative must use that specific identification method to determine DPGR. If the Specified Cooperative does not have information readily available to specifically identify whether gross receipts are derived from an item or cannot, without undue burden or expense, specifically identify whether the gross receipts are derived from an item, then the Specified Cooperative can use a reasonable method. Among the seven factors listed for determining whether a method is reasonable is whether the Specified Cooperative applies the method consistently from year to year.

A commenter observed that former § 1.199–8(a) did not prevent taxpayers from choosing a reasonable method on a year-to-year basis, and that former § 1.199–8(a) provided that a taxpayer's change in allocating or apportioning items did not constitute a change in method of accounting to which the provisions of sections 446 and 481 and the regulations under sections 446 and 481 apply. The Treasury Department and the IRS agree with the commenter that any change to an allocation or apportionment of items should not constitute a change in method of accounting to which the provisions of sections 446 and 481 and the regulations under sections 446 and 481 apply. However, the final regulations maintain the rule from the Proposed Regulations. The Treasury Department and the IRS incorporated the ''consistently applied'' requirement into proposed § 1.199A–9(c)(1) to be consistent with the section 199A(a) regulations, specifically § 1.199A–3(b)(5). Further, if a method is not reasonable because it no longer clearly reflects the gross receipts from DPGR and non-DPGR, the method cannot continue to be used. The Specified Cooperative must choose a new method that is reasonable under the facts and circumstances and apply it consistently going forward.

The same commenter also claimed that former section 199 did not subject the ''any reasonable method'' determination to the § 1.199A–9(c)(2) factors. This is incorrect, as the proposed § 1.199A–9(c)(2) factors follow former § 1.199–1(d)(2), including the factor of whether the taxpayer applies

the method consistently from year to year. Therefore, the use of consistency as a factor (§ 1.199A–9(c)(2)) follows former § 1.199–1(d)(2).

C. Interaction of MPGE Rules in Proposed § 1.199A–9(f)(1) With (f)(2) and (3)

MPGE is defined under proposed § 1.199A–9(f)(1) as manufacturing, producing, growing, extracting, installing, developing, improving, and creating agricultural or horticultural products; making agricultural or horticultural products out of material by processing, manipulating, refining, or changing the form of an article, or by combining or assembling two or more articles; and cultivating soil, raising livestock, and farming aquatic products. MPGE also includes storage, handling, or other processing activities (other than transportation activities) within the United States related to the sale, exchange, or other disposition of agricultural or horticultural products only if the products are consumed in connection with or incorporated into the MPGE of agricultural or horticultural products, whether or not by the Specified Cooperative. The Specified Cooperative (or the patron if § 1.199A–9(a)(2) applies) must have the benefits and burdens of ownership of the agricultural or horticultural products under Federal income tax principles during the period the MPGE activity occurs in order for the gross receipts derived from the MPGE of the agricultural or horticultural products to qualify as DPGR. Under proposed § 1.199A–9(f)(2) and (3), if a Specified Cooperative engages in packaging, repackaging, labeling, or installation of an agricultural or horticultural product, and engages in no other MPGE activity with respect to the agricultural or horticultural product, then the activities of packaging, repackaging, labeling, or installation do not qualify as MPGE with respect to the agricultural or horticultural product.

A commenter suggested the removal of § 1.199A–9(f)(2) and (3) on the grounds that ''packaging, repackaging, or labelling, [and] installing'' cannot be distinguished from ''storage, handling, and other processing activities'' mentioned in proposed § 1.199A–9(f)(1).

The Joint Committee Report, in footnote 118, citing § 1.199–3(e)(1), provides that gross receipts of a Specified Cooperative may qualify as DPGR so long as the Specified Cooperative performs storage, handling, or other processing activities (other than transportation activities) within the United States, provided the products are consumed in connection with, or incorporated into, the MPGE of agricultural or horticultural products (whether or not by the Specified Cooperative). Thus, the Proposed Regulations' definition of MPGE included that language. However, § 1.199A–9(f)(2) and (3) effectively serve as minimum thresholds for purposes of MPGE qualification under § 1.199A–9(f)(1). These requirements were also part of the former section 199 regulations at the time of repeal (see former § 1.199–3(e)(2) and (3)). A logical reading of these paragraphs is that the storage, handling, and other processing activities that are described in § 1.199A–9(f)(1) are activities that are more extensive than those described in § 1.199A–9(f)(2) and (3). Thus, the final regulations do not adopt this suggestion.

Commenters requested the inclusion of Examples 1 and 2 of former § 1.199–3(e)(5) to affirm that the storage of farm products qualifies as MPGE. These examples deal with relevant fact patterns, but required modification to apply to Specified Cooperatives as the examples in former § 1.199–3(e)(5) explicitly state that all taxpayers are not Cooperatives. Therefore, Examples 1 and 2, with appropriate modifications, have been added under § 1.199A–9(f)(5).

IV. § 1.199A–10, Costs Allocable to DPGR

Section 1.199A–10 provides guidance on the allocation of costs to DPGR. This section provides rules for allocating a taxpayer's COGS, as well as other expenses, losses, and deductions properly allocable to DPGR. The Proposed Regulations were based on and follow the former section 199 regulations in § 1.199–4. No comments were received on this part of the Proposed Regulations, and so § 1.199A–10 of the Proposed Regulations is adopted without change by the final regulations.

V. § 1.199A–11, Wage Limitation

Section 1.199A–11 provides guidance regarding the W–2 wage limitation on the section 199A(g) deduction. No comments were received on this part of the Proposed Regulations, and so § 1.199A–11 of the Proposed Regulations is adopted without change by the final regulations.

A notice of proposed revenue procedure, Notice 2019–27, 2019–31 IRB, which proposed a draft revenue procedure providing three proposed methods that Specified Cooperatives may use for calculating W–2 wages, was issued concurrently with the Proposed Regulations. A revenue procedure is a statement of procedure that affects the rights or duties of taxpayers under the Code. Consistent with the general purpose of publishing revenue procedures in the Internal Revenue Bulletin, the methods that taxpayers may use for calculating W–2 wages are set forth in a revenue procedure to promote a uniform application of the laws administered by the IRS. The revenue procedure may be modified independently from the regulations under section 199A if, for example, changes unrelated to section 199A or the regulations thereunder are made to the underlying Form W–2, Wage and Tax Statement. No comments were received on Notice 2019–27. A revenue procedure that conforms with the draft, with one modification related to short taxable years, is being issued concurrently with the final regulations.

VI. § 1.199A–12, Expanded Affiliated Group (EAG) Rules

Proposed § 1.199A–12 provides guidance on the application of section 199A(g) to an expanded affiliated group (EAG) that includes a Specified Cooperative. Section 199A(g)(5)(A)(iii) defines an EAG as an ''affiliated group as defined in section 1504(a),'' except that the ownership threshold is ''more than 50 percent'' as opposed to ''at least 80 percent.'' Section 1504(a)(1) defines an affiliated group as ''1 or more chains of includible corporations connected through stock ownership with a common parent corporation which is an includible corporation . . . .'' Section 1504(b)(1) further provides that the term ''includible corporation'' excludes ''[c]orporations exempt from taxation under section 501.'' Thus, the final regulations clarify that exempt Specified Cooperatives are not eligible to be members of an EAG. See § 1.1381–2(a)(1) (treating farmers' cooperatives that are exempt from tax under section 521 (such as Specified Cooperatives) as exempt organizations under section 501 ''[f]or the purpose of any law that refers to organizations exempt from income taxes''). As a result, for purposes of section 199A(g), an EAG may include nonexempt Specified Cooperatives as well as other includible corporations.

The Proposed Regulations provide that the section 199A(g) deduction for an EAG is determined by separating patronage and nonpatronage gross receipts and related deductions of Specified Cooperatives that are members of the EAG. The section 199A(g) deduction is then computed solely with respect to patronage gross receipts and related deductions (patronage items). As explained in part VII of this Summary of Comments and Explanation of Revisions, patronage items are items of income or deduction

produced by a transaction that actually facilitates the accomplishment of the Specified Cooperative's marketing, purchasing, or services activities. See *Farmland Industries, Inc.* v. *Comm'r,* 78 T.C.M. 846 (CCH) (1999); § 1.1388–1(f).

Thus, the Proposed Regulations effectively have two specific rules addressing the computation of the section 199A(g) deduction for an EAG that includes a Specified Cooperative. First, the section 199A(g) deduction is computed using only patronage items (the EAG patronage limitation). Second, only members of an EAG that are Specified Cooperatives are taken into account in computing the section 199A(g) deduction (the Specified Cooperative limitation).

A commenter recommended that the final regulations eliminate the EAG patronage limitation. Specifically, as discussed in part II of this Summary of Comments and Explanation of Revisions, the commenter argued that the general requirement to distinguish income, deductions, and W–2 wages from patronage and nonpatronage activities conflicts with the policy of section 199A, and that such a requirement is equally inappropriate for EAGs that include Specified Cooperatives.

The Treasury Department and the IRS do not agree with the commenter's argument. Under subchapter T, patronage income of a nonexempt cooperative with both patronage and nonpatronage activities effectively receives single-level tax treatment, whereas nonpatronage income of such a cooperative is taxed at both the corporate level and the shareholder level. *Farm Service Coop.* v. *Comm'r,* 619 F.2d 718, 723 (8th Cir. 1980). Because the commenter's proposal would extend the benefits of the section 199A(g) deduction to nonpatronage activities, with respect to which a nonexempt cooperative is taxed as a C corporation, it is inconsistent with the purposes and structure of section 199A. Moreover, eliminating the patronage limitation solely in the context of an EAG would disadvantage nonexempt Specified Cooperatives that are not members of an EAG because such entities, unlike their counterparts in an EAG, would be prohibited from taking a section 199A(g) deduction on nonpatronage sourced gross receipts.

Thus, the final regulations do not adopt the commenter's recommendation to compute the section 199A(g) deduction using both patronage and nonpatronage items in either the standalone context (see part II of this Summary of Comments and Explanation of Revisions) or for EAGs. Instead, activities resulting in nonpatronage income continue to be taxed as income from a noncooperative C corporation.

The same commenter also recommended eliminating the Specified Cooperative limitation, specifically arguing that, because C corporations that are not Specified Cooperatives can be members of an EAG, such corporations also should be taken into account in computing the section 199A(g) deduction for an EAG. The commenter also stressed that the approach in proposed § 1.199A–12 is different from the approach in the former section 199 EAG rules, which provide the basis for the rules in proposed § 1.199A–12.

The final regulations also do not adopt this recommendation. Unlike the former section 199 deduction, which was broader in scope, section 199A(g) specifically provides that only a ''taxpayer which is a specified agricultural or horticultural cooperative'' (that is, a Specified Cooperative) may claim the section 199A(g) deduction. Moreover, as noted in part II of this Summary of Comments and Explanation of Revisions, C corporations are expressly prohibited under section 199A(a) from claiming a section 199A(a) deduction, and C corporations other than Specified Cooperatives under section 199A(g)(2)(D)(i) from claiming a section 199A(g) deduction as a patron of a Specified Cooperative. Although the statute does not expressly prohibit C corporations that are not Specified Cooperatives from being taken into account in computing an EAG's section 199A(g) deduction, the fact that the statute expressly limits this deduction to Specified Cooperatives, and the statute's general prohibition against C corporations that are not Specified Cooperatives benefiting from the section 199A(g) deduction, indicate that the Specified Cooperative limitation is consistent with the structure and intent of section 199A.

Additionally, eliminating the Specified Cooperative limitation would have no practical effect unless the EAG patronage limitation also were eliminated. Nonexempt Specified Cooperatives receive single-level tax treatment only to the extent of patronage income generated and distributed to their patrons; their nonpatronage income continues to be taxed at both the corporate level and the shareholder level. Accordingly, the net effect of the Specified Cooperative limitation is to exclude what otherwise would be nonpatronage income, because a C corporation that is not a Specified Cooperative cannot generate patronage income. Because the final regulations retain the EAG patronage limitation, removing the Specified Cooperative limitation would have no practical effect with respect to nonexempt Specified Cooperatives. As previously noted, removing the Specified Cooperative limitation would not affect the treatment of exempt Specified Cooperatives because they are not eligible to be members of an EAG. See section 1504(b)(1); § 1.1381–2(a)(1).

Finally, revisions necessary to clarify the scope and application of section 199A(g) to an EAG that includes a Specified Cooperative were made in § 1.199A–12 of the final regulations.

VII. § 1.1382–3, Taxable Income of Cooperatives; Special Deductions for Exempt Farmers' Cooperatives; and § 1.1388–1, Definitions and Special Rules

A. Comments on Definition of ''Patronage and Nonpatronage''

Section 1.1388–1 provides definitions and special rules applicable to Cooperatives. The Proposed Regulations added a definition of *patronage and nonpatronage* in proposed § 1.1388–1(f). Proposed § 1.1388–1(f) provides ''[w]hether an item of income or deduction is patronage or nonpatronage sourced is determined by applying the directly related use test. The directly related use test provides that if the income or deduction is produced by a transaction that actually facilitates the accomplishment of the cooperative's marketing, purchasing, or services activities, the income or deduction is from patronage sources. However, if the transaction producing the income or deduction does not actually facilitate the accomplishment of these activities but merely enhances the overall profitability of the cooperative, being merely incidental to the association's cooperative operation, the income or deduction is from nonpatronage sources. Patronage and nonpatronage income or deductions cannot be netted unless otherwise permitted by the Internal Revenue Code or regulations issued under the relevant section of the Internal Revenue Code, or guidance published in the Internal Revenue Bulletin (*see* § 601.601(d)(2) of this chapter).''

Commenters questioned the need for adopting a definition in connection with guidance under section 199A(g), as the definition will impact all Cooperatives. However, a common determination for all Cooperatives is identifying activities as patronage or nonpatronage. Prior to the Proposed Regulations, there was no single definition of patronage and

nonpatronage. The definition of *income derived from sources other than patronage* in § 1.1382–3(c)(2), which was often cited as part of the determination, is outdated. As it relates to section 199A(g), the requirement to identify patronage and nonpatronage to calculate the section 199A(g) deduction places additional importance on the determination. To assist taxpayers in distinguishing between patronage and nonpatronage, proposed § 1.1388–1(f) was added. The intent in adding § 1.1388–1(f) was to incorporate the ''directly related'' test, which is the current legal standard for making the determination.

Commenters requested citations relevant to the proposed definition to ensure the language complies with the current legal standard. Other than the last sentence, the language adopted in the Proposed Regulations closely follows the language used in Rev. Rul. 69–576, 1969–2 C.B. 166, which provides ''[t]he classification of an item of income as from either patronage or nonpatronage sources is dependent on the relationship of the activity generating the income to the marketing, purchasing, or service activities of the cooperative. If the income is produced by a transaction which actually facilitates the accomplishment of the cooperative's marketing, purchasing, or service activities, the income is from patronage sources. However, if the transaction producing the income does not actually facilitate the accomplishment of these activities but merely enhances the overall profitability of the cooperative, being merely incidental to the association's cooperative operation, the income is from nonpatronage sources.''

The language from Rev. Rul. 69–576 has been cited in numerous opinions, including *Farmland Industries, Inc.* v. *Comm'r,* 78 T.C.M. 846 (CCH) (1999), which provides a summary of published guidance and many of the cases relevant to the current legal standard. In the *Farmland* opinion, the court states that ''the 'directly related test' applied by the courts is traceable to published rulings issued by the Commissioner, such as Rev. Rul. 69–576, 1969–2 C.B. 166, and Rev. Rul. 74–160, 1974–1 C.B. 245, that interpreted patronage income broadly.'' *Farmland* at 865.

Commenters also suggested removal of § 1.1388–1(f) on the basis that patronage/nonpatronage determinations necessitate a facts and circumstances analysis, and, therefore § 1.1388–1(f) is inappropriate. Section 1.1388–1(f) provides a definition, it does not eliminate the necessity for factual analysis. Therefore, the final regulations do not adopt this comment.

Alternatively, one commenter requested that the definition in § 1.1388–1(f) be modified to provide that income is from patronage sources if the underlying transaction is either directly related or actually facilitates the cooperative's purpose. The final regulations do not adopt this comment. The definitional language of § 1.1388–1(f) follows the language from Rev. Rul. 69–576 and is also consistent with language in *Farmland.* However, revisions have been made to clarify the distinction between patronage and nonpatronage sourced items.

The commenter also suggested the removal of the last sentence of the definition, which prohibited the netting of patronage and nonpatronage items. The Treasury Department and the IRS agree that the ''netting'' rule is not needed to define patronage and nonpatronage. Therefore, the last sentence of proposed § 1.1388–1(f) is removed from the definition in the final regulations.

B. Comments on Removing the Definition of ''Income From Sources Other Than Patronage''

The commenter also requested that if a definition was finalized, then the definition of *income from sources other than patronage* in § 1.1382–3(c)(2) be removed. The Treasury Department and the IRS agree that this section should be revised. The final regulations revise this section so that it now cross-references the definition of *patronage and nonpatronage* in § 1.1388–1(f).

VIII. Removal of Section 199 Regulations

In light of the TCJA, the Treasury Department and the IRS proposed to remove the former section 199 regulations (§§ 1.199–0 through 1.199–9) and withdrew the 2015 proposed regulations because the regulations interpret a provision of the Code that has been repealed for taxable years beginning after December 31, 2017. No comments were received, and the final regulations remove the former section 199 final regulations (§§ 1.199–0 through 1.199–9, including expired temporary regulations published in the **Federal Register** as TD 9731).

The removal of these regulations is unrelated to the substance of the rules in the regulations, and no negative inference regarding the stated rules should be made. The regulations are removed from the Code of Federal Regulations (CFR) solely because they have no future applicability. Removal of these regulations is not intended to alter any non-regulatory guidance that cites to or relies upon these regulations. These regulations as contained in 26 CFR part 1, revised April 1, 2019, remain applicable to determining eligibility for the former section 199 deduction for any taxable year that began before January 1, 2018. The beginning date of the taxable year of a partnership, S corporation, or a non-grantor trust or estate, rather than the taxable year of a partner, shareholder, or beneficiary is used to determine items that are taken into account for purposes of calculating a former section 199 deduction.

IX. Comments on Proposed Applicability Date and Transition Rule

A commenter requested that the final regulations be made applicable to taxable years beginning after the publication date. The final regulations adopt the commenter's request.

Regarding the transition rule, proposed § 1.199A–7(h)(2) provides that no deductions under section 199A are allowed to patrons for any qualified payments that are attributable to QPAI with respect to which a deduction is allowable to the Specified Cooperative under former section 199 as in effect on and before December 31, 2017, for a taxable year of the Cooperative beginning before January 1, 2018. Additionally proposed § 1.199A–7(h)(3) provides that if a patron of a Cooperative cannot claim a deduction under section 199A(a) for any qualified payments described in the transition rule of § 1.199A–7(h)(2), the Cooperative must report this information on an attachment to or on the Form 1099–PATR (or any successor form) issued by the Cooperative to the patron, unless otherwise provided by the instructions to the form.

The commenter also requested omission of references to the transition rule and confirmation that any reasonable application of the transition rule will be deemed appropriate. This request was based on the presumption that these regulations would not be finalized until after 2019, when the time period covered by the transition rule has passed, thus requiring the amendment of Forms 1099–PATR (and corresponding Forms 1040, U.S. Individual Income Tax Return). The commenter also suggested that Cooperatives have a common understanding of the transition rule to the extent that payments described under proposed § 1.199A–7(h)(2) would be properly identified and not included in patrons' section 199A(a) calculations. The commenter, however, did not identify a specific method that

Cooperatives primarily used. The final regulations amend the rule from proposed § 1.199A–7(h)(2) so that it now only cross-references section 101(c) of Division T of the 2018 Act. The final regulations also amend proposed § 1.199A–7(h)(3) to allow Cooperatives to use a reasonable method to identify the payments, and state that the method from the Proposed Regulations of reporting on an attachment to or on Form 1099–PATR (or successor form) is one reasonable method.

Applicability Dates

Section 7805(b)(1)(A) and (B) of the Code generally provide that no temporary, proposed, or final regulation relating to the internal revenue laws may apply to any taxable period ending before the earliest of (A) the date on which the regulation is filed with the **Federal Register**, or (B) in the case of a final regulation, the date on which a proposed or temporary regulation to which the final regulation relates was filed with the **Federal Register**.

Consistent with authority provided by section 7805(b)(1)(A), §§ 1.199A–7 through 1.199A–12, § 1.1382–3(c)(2) as revised, and § 1.1388–1(f) generally apply to taxable years beginning after January 19, 2021. However, taxpayers may choose to apply the rules set forth in §§ 1.199A–7 through 1.199A–12, § 1.1382–3(c)(2) as revised, and § 1.1388–1(f) for taxable years beginning on or before January 19, 2021, provided, in each case, the taxpayers follow the rules in their entirety and in a consistent manner. Alternatively, taxpayers may rely on the proposed regulations under §§ 1.199A–7 through 1.199A–12 issued on June 19, 2019 for taxable years beginning on or before January 19, 2021 and taxpayers may rely on the proposed regulations under § 1.1388–1(f) issued on June 19, 2019 for taxable years beginning on or before January 19, 2021, provided, in each case, taxpayers follow the proposed regulations in their entirety and in a consistent manner.

Special Analyses

I. Regulatory Planning and Review—Economic Analysis

Executive Orders 13771, 13563 and 12866 direct agencies to assess costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility.

These regulations have been designated by the Office of Management and Budget's Office of Information and Regulatory Affairs (OIRA) as subject to review under Executive Order 12866 pursuant to the Memorandum of Agreement (April 11, 2018) between the Treasury Department and the Office of Management and Budget regarding review of tax regulations. OIRA has determined that the final rulemaking is significant and subject to review under Executive Order 12866 and section 1(b) of the Memorandum of Agreement. Accordingly, the final regulations have been reviewed by the Office of Management and Budget.

A. Background and Overview

The TCJA repealed section 199 of the Code, which provided a deduction for income attributable to domestic production activities. In its place it created section 199A, which provides a deduction for qualified business income derived from passthrough businesses—such as sole proprietorships, partnerships, and S corporations—engaged in domestic trades or businesses. While the repealed section 199 deduction was generally available to all taxpayers, the section 199A(a) deduction is available only to taxpayers other than C corporations, including patrons of cooperatives to which sections 1381 through 1388 of the Code apply (Cooperatives). On March 23, 2018, section 101 of the 2018 Act amended section 199A(g) to provide deductions for Specified Cooperatives and their patrons that are substantially similar to the deductions allowed under the repealed section 199 deduction. Accordingly, these regulations generally formalize prior and current practices based on the rules under former section 199. The 2018 Act also added section 199A(b)(7), which requires patrons of Specified Cooperatives to reduce their section 199A(a) deduction if those patrons receive qualified payments from Specified Cooperatives.

The estimated number of Cooperatives affected by the 2018 Act and these final regulations is 9,200, including approximately 2,000 Specified Cooperatives, based on 2018 tax filings.

B. Need for Regulation

The final regulations provide guidance regarding the application of sections 199A(a), 199A(b)(7), and 199A(g) to Cooperatives, Specified Cooperatives, and their patrons. The final regulations are needed because the 2018 Act introduced a number of terms and calculations. Patrons, Cooperatives, and Specified Cooperatives would benefit from greater specificity regarding these and other items.

C. Economic Analysis

1. Baseline

The Treasury Department and the IRS have assessed the benefits and costs of the final regulations relative to a no-action baseline reflecting anticipated Federal income tax-related behavior in the absence of these regulations.

2. Economic Rationale for Issuing Guidance for the 2018 Act

The Treasury Department and the IRS anticipate that the issuance of guidance pertaining to sections 199A(a), 199A(b)(7), and 199A(g) of the 2018 Act to Cooperatives, Specified Cooperatives, and their patrons will provide a marginal net economic benefit to the overall U.S. economy.

The final regulations clarify a number of concepts for Cooperatives and their patrons, regarding the deduction provided by section 199A(a) for qualified business income, as well as for Specified Cooperatives and their patrons regarding the section 199A(g) deduction on income attributable to the domestic production activities of Specified Cooperatives. Specifically, the final regulations (i) clarify how Specified Cooperatives should determine their section 199A(g) deduction; (ii) define ''agricultural or horticultural products'' to clarify which Cooperatives qualify as Specified Cooperatives eligible for the section 199A(g) deduction; (iii) provide de minimis rules reducing compliance costs for certain Specified Cooperatives; (iv) require reporting from Cooperatives; (v) provide a safe harbor permitting certain patrons of Specified Cooperatives to use a simpler method to calculate the section 199A(b)(7) reduction to the section 199A(a) deduction; (vi) permit patrons to allocate their expenses to calculate the correct amount of qualified business income and their section 199A(a) deduction; (vii) permit, but do not require, Specified Cooperatives to identify the eligibility status of patrons to pass through the section 199A(g) deduction to them; and (viii) permit partnerships to pass through W–2 wages and cost of goods sold (COGS) to Specified Cooperative partners and permit attribution of a partnership's activities to a Specified Cooperative partner and a Specified Cooperative's partner's activities to a partnership. In the absence of guidance, affected

taxpayers would have to calculate their tax liability without the definitions and clarifications provided by the final regulations, a situation that is generally considered more burdensome and could lead to greater conflicts with tax administrators. Thus, the Treasury Department and the IRS project that the final regulations will marginally reduce taxpayer compliance burden and the costs of tax administration relative to not issuing any such guidance.

This guidance also ensures that section 199A deductions are calculated similarly across taxpayers, avoiding situations where one taxpayer receives preferential treatment over another for fundamentally similar economic activity. For example, in the absence of these final regulations, a Specified Cooperative may have uncertainty over what type of income is eligible for the section 199A(g) deduction. If a Specified Cooperative claimed the section 199A(g) deduction on income that is taxed similarly to a C corporation, this would confer an unintended economic benefit to the Specified Cooperative over other C corporations performing identical activities that only benefit from a lower corporate tax rate. As discussed further below, this guidance prevents the introduction of distortions of economic decisions in the agricultural or horticultural sector.

In the absence of these regulations, uncertainty over statutory interpretation could lead to economic losses to the extent that taxpayers interpret the statute in ways that are inconsistent with the statute's intents and purposes. For example, a Specified Cooperative may pursue a project involving a certain product that is only profitable if that product is deemed ''agricultural or horticultural'' and thus eligible for the section 199A(g) deduction. If, in fact, this product is ineligible for the deduction based on the intents and purposes of the statute, then the project should not have been pursued and this results in an economic loss. Alternatively, without a definition of ''agricultural or horticultural,'' a Specified Cooperative may incorrectly assume that a project is not eligible for the deduction and not pursue the project, which could also result in an economic loss. In such cases, guidance provides value by supporting decision-making that is economically efficient, contingent on the overall Code. While no guidance can fully curtail all inaccurate interpretations of the statute, the final regulations significantly mitigate the chance for such interpretations and thereby increase economic efficiency. Due to the lack of readily available data, the Treasury Department and the IRS have not estimated the increase in United States economic activity that would arise from the guidance.

The Treasury Department further projects that the issuance of guidance will reduce taxpayer compliance burden and the costs of tax administration relative to a no-action baseline. Due to the lack of readily available data, the Treasury Department has not estimated the decrease in taxpayer compliance burden nor tax administration costs arising from the issuance of guidance.

No comments were received on the economic analysis provided in the proposed regulations.

3. Economic Analysis of Specific Provisions

The final regulations embody certain regulatory decisions that reflect necessary regulatory discretion. These decisions specify more fully how the 2018 Act is to be implemented.

i. Determining Section 199A(g) Deduction for Specified Cooperatives

The final regulations outline the process by which Specified Cooperatives calculate their section 199A(g) deductions. The rules concern two types of Specified Cooperatives, those that are exempt (qualified as a Cooperative under section 521) and those that are nonexempt (qualified under subchapter T of the Code), and two sources of income, patronage and nonpatronage. The patronage and nonpatronage income of Specified Cooperatives is taxed differently depending on whether the Specified Cooperative is exempt or nonexempt. In the case of exempt Specified Cooperatives, patronage and nonpatronage source income is subject to a single level of tax at the patron level. Whereas, for nonexempt Specified Cooperatives only patronage source income is subject to a single level of tax at the patron level; nonpatronage source income is subject to a double level of tax, similar to other C corporation income.

Because the Code does not define *patronage and nonpatronage sourced items,* § 1.1388–1(f) of these final regulations sets forth a definition that is consistent with the current state of federal case law. Specifically, the definition adopts the directly related test, which is a fact specific test for determining whether income and deductions of a Cooperative are patronage or nonpatronage. The final regulations also make revisions to clarify patronage versus nonpatronage items. In response to a commenter, the final regulations remove the last sentence in the proposed definition, because the Treasury Department and the IRS agree that the sentence is not needed to define patronage and nonpatronage. Specifying a definition that is consistent with current case law will help to minimize the economic impacts of these regulations that may arise from lack of clarity.

The final regulations adopt the proposed rule requiring Specified Cooperatives to identify gross receipts, COGS, deductions, W–2 wages, etc. as patronage or nonpatronage, and only allows the patronage activities of nonexempt Specified Cooperatives to be included in the calculation of the section 199A(g) deduction, unless the Specified Cooperative falls under the expanded de minimis rules, which are discussed later. The TCJA reduced the corporate tax rate for C corporations under section 11 and provided the section 199A deduction for domestic businesses operating as sole proprietorships or through partnerships, S corporations, trusts, or estates. The TCJA also repealed section 199, which did not preclude deductions on income earned by C corporations. The 2018 Act amended section 199A to address concerns that the TCJA created an unintended incentive for farmers to sell their agricultural or horticultural products to Specified Cooperatives over independent buyers. Specifically, the 2018 Act amended section 199A(g) to allow Specified Cooperatives and their patrons a deduction similar to the former section 199 deduction. Because the section 199A(g) deduction is not intended to benefit C corporations and their shareholders, in general, the final regulations specify that the section 199A(g) deduction can be claimed only on income that can be subject to tax only at the patron level. Under the final regulations, a non-exempt Specified Cooperative may not claim the section 199A(g) deductions on income that cannot be paid to patrons and deducted under section 1382(b) and exempt Specified Cooperatives may not claim section 199A(g) deductions on income that cannot be paid to patrons and deducted under sections 1382(b) or 1382(c)(2).

In the absence of these regulations, a Specified Cooperative may have uncertainty as to whether nonpatronage source income, which would be taxed in the same manner as a C corporation, could receive both the lower corporate tax rate and be further offset by a section 199A(g) deduction. Other C corporations performing identical activities would only benefit from the lower corporate tax rate. This would

confer an unintended economic benefit to Specified Cooperatives over other C corporations and undermine the intent of the 2018 Act's amendments of section 199A to reduce competitive distortions between C corporations and Specified Cooperatives.

The Treasury Department and the IRS have determined that this potential uncertainty as to tax treatment could distort economic decisions in the agricultural or horticultural sector. The final regulations avoid this outcome, promoting a more efficient allocation of resources by providing more uniform incentives across taxpayers.

ii. Definition of Agricultural or Horticultural Products

The section 199A(g) deduction is focused solely on dispositions of agricultural or horticultural products. As a result, the Treasury Department and the IRS determined that it was necessary to provide a definition. Because there is no definition of *agricultural or horticultural products* in the Code or Income Tax Regulations, the Treasury Department and the IRS looked to the United States Department of Agriculture (USDA) for definitions because the USDA has expertise concerning Specified Cooperatives, and Specified Cooperatives are likely familiar with USDA law. The proposed regulations defined *agricultural or horticultural products* within the meaning of the Cooperative Marketing Act of 1926 as agricultural, horticultural, viticultural, and dairy products, livestock and the products thereof, the products of poultry and bee raising, the edible products of forestry, and any and all products raised or produced on farms and processed or manufactured products thereof. Agricultural or horticultural products also include aquatic products that are farmed as well as fertilizer, diesel fuel, and other supplies used in agricultural or horticultural production that are manufactured, produced, grown, or extracted by the Specified Cooperative. Agricultural or horticultural products, however, do not include intangible property, since agricultural or horticultural products were considered a subset of tangible property under former section 199. Intangible property (defined in § 1.199–3(j)(2)(iii)) was a separate category of property and gross receipts from intangible property did not qualify as domestic production gross receipts (DPGR).

The final regulations made clarifying changes to the definition of agricultural or horticultural products in response to commenters. The final regulations provide examples (without limitation) of products that are considered agricultural or horticultural products, including specific agricultural or horticultural products, livestock products, edible forestry products, and farmed aquatic products. The final regulations also provide language further clarifying that agricultural or horticultural products do not include intangible property. Finally, the final regulations include more examples of ''other supplies'' being agricultural or horticultural products.

The Treasury Department and the IRS considered a similar but alternative definition of *agricultural or horticultural* products within the meaning of the Agricultural Marketing Act of 1946 as agricultural, horticultural, viticultural, and dairy products, livestock and poultry, bees, forest products, fish and shellfish, and any products thereof, including processed and manufactured products, and any and all products raised or produced on farms and any processed or manufactured product thereof. While very similar to the definition in the rules adopted in these final regulations, the rules under the Agricultural Marketing Act of 1946 concern the marketing and distribution of agricultural products without reference to Cooperatives.

The Treasury Department and the IRS also considered an alternative definition of *agricultural or horticultural products* based on the definition of agricultural commodities within the meaning of general regulations under the Commodity Exchange Act. The Treasury Department and the IRS concluded that this definition was too narrow, because it is limited to products that can be commodities. The use of this narrow definition would have restricted the range of products for which the section 199A(g) deduction would be otherwise available.

The Treasury Department and the IRS did not attempt to provide quantitative estimates of the economic consequences of different designations of agricultural or horticultural products because suitable data are not readily available at this level of detail.

iii. De Minimis Threshold for Domestic Production Gross Receipts of Specified Cooperatives

In general, § 1.199A–9 of the final regulations requires that Specified Cooperatives allocate gross receipts between DPGR and non-DPGR. However, § 1.199A–9(c)(3) of the proposed regulations includes a de minimis provision that allows Specified Cooperatives to allocate total gross receipts to DPGR if less than 5 percent of total gross receipts are non-DPGR or to allocate total gross receipts to non-DPGR if less than 5 percent of total gross receipts are DPGR. The thresholds provided in the proposed regulations are based on the thresholds set forth in § 1.199–1(d)(3) under former section 199. The Treasury Department and the IRS chose to include a de minimis rule to reduce compliance costs and simplify tax filing relative to an alternative of no de minimis rule.

The Treasury Department and the IRS considered changes to the de minimis provisions in the proposed regulations, but determined that materially changing these rules from provisions that were previously available would lead to taxpayer confusion. The final regulations generally maintain the rules of the proposed regulations, but increase the threshold. Thus, under § 1.199A–9(c)(3) of the final regulations, Specified Cooperatives when calculating the patronage section 199A(g) deduction may allocate total gross receipts to DPGR if less than 10 percent of total gross receipts are non-DPGR (which now can include nonpatronage gross receipts as well as patronage non-DPGR pursuant to § 1.199A–8(b)(2)(ii)), or alternatively, may allocate total gross receipts to non-DPGR if less than 10 percent of total gross receipts are DPGR. The de minimis threshold modestly reduces compliance costs for businesses with relatively small amounts of non-DPGR or DPGR by allowing them to avoid allocating receipts between DPGR and non-DPGR activities. The de minimis threshold is unlikely to create any substantial effects on market activity because any change in the ratio of DPGR to non-DPGR will be localized around the threshold, meaning that the movement will be a small fraction of receipts to get below the de minimis threshold. Because the de minimis provision exempts taxpayers from having to perform certain allocations and therefore reporting these allocations, the Treasury Department and the IRS do not have information on taxpayers' use of this exemption under former section 199 to perform a quantitative analysis of the impacts of the de minimis provision.

iv. Reporting Requirements for Cooperatives

Final regulations § 1.199A–7(c) and (d) provide that, when a patron conducts a trade or business that receives distributions from a Cooperative, the Cooperative is required to provide the patron with qualified items of income, gain, deduction, and loss and specified service trade or business (SSTB) determinations with

respect to those distributions. This increases the compliance burden on such Cooperatives. However, in the absence of these regulations, the burden for determining of the amount of distributions from a Cooperative that constitute qualified items of income, gain, deduction, and loss from a non-SSTB and an SSTB would lie with the patron. Because patrons are less well positioned to acquire the relevant information to determine whether distributions from a Cooperative are qualified items of income, gain, deduction, and loss and whether items that would otherwise qualify are from an SSTB, the Treasury Department and the IRS expect that these regulations will reduce overall compliance costs relative to an alternative approach of not introducing a reporting requirement. After consideration of comments, the reporting requirements of Cooperatives have been modified to simplify the Cooperatives' reporting obligations in order to balance the burden on the Cooperatives and the patrons' need to receive information to determine their section 199A(a) deduction.

v. Allocation Safe Harbor

If a patron receives both income or gain related to qualified payments and income or gain that is not related to qualified payments in a qualified trade or business, the patron must allocate those items and related deductions, losses, and W–2 wages using a reasonable method based on all of the facts and circumstances. The final regulations provide a safe harbor that allows patrons who receive income or gain related to qualified payments in addition to income or gain that is not related to qualified payments to use a simpler method to allocate deductions, losses, and W–2 wages between income or gain related to qualified payments and income or gain that is not related to qualified payments to calculate the section 199A(b)(7) reduction to the section 199A(a) deduction. The safe harbor allocation method allows patrons to allocate by ratably apportioning deductions, losses, and W–2 wages based on the proportion that the amount of income or gain related to qualified payments bears to the total income or gain used to determine QBI. This safe harbor is available to patrons with taxable incomes below the threshold amounts set forth in section 199A(e)(2).

The Treasury Department and the IRS considered an alternative of not allowing a safe harbor but determined that a safe harbor could reduce compliance costs and simplify tax filing. The threshold was set at amounts set forth in section 199A(e)(2) to avoid a proliferation of thresholds applicable to taxpayers claiming a section 199A(a) deduction. Because the threshold amounts are relatively low, the Treasury Department and the IRS expect that the safe harbor would not distort business decisions or reduce revenue to any meaningful extent.

i. Patrons May Allocate Expenses to Specified Service Trade or Business Items of Income Reported by Cooperative

A commenter asked the Treasury Department and the IRS to revise proposed reporting requirements in circumstances where a Cooperative engages in a specified service trade or business (SSTB) business with patrons. In response to the commenter's request, the final regulations allow patrons to allocate expenses between qualified trade or business income and any SSTB income received from the Cooperative up to the amount of the income from the SSTB. The final regulations more accurately track the substance of the transaction. In the absence of these regulations, the patron may calculate lower qualified business income, resulting in a lower section 199A(a) deduction.

ii. Specified Cooperatives May Pass Through All, Some, or None of the Section 199A(g) Deduction

Section 199A(g) permits Specified Cooperatives to pass through their section 199A(g) deduction, and allows eligible taxpayers to claim the deduction passed through. The proposed regulations required Specified Cooperatives to identify whether the patrons are eligible taxpayers and only pass through the deduction to those patrons. Commenters requested that the rule be modified so that patrons, and not Specified Cooperatives, have to identify whether the patrons are eligible taxpayers for purposes of using the section 199A(g) deduction. The rules have been modified in the final regulations to provide Specified Cooperatives with maximum flexibility. If a Specified Cooperative does not identify the eligibility status of all of its patrons, it may pass through all, some, or none of the section 199A(g) deduction. Only patrons that are eligible taxpayers may use the section 199A(g) deduction passed through to them. If a Specified Cooperative does determine the eligibility status of its patrons, it has the discretion to retain the section 199A(g) deduction attributable to any ineligible taxpayer, and pass out the remainder to eligible taxpayers.

In the absence of these regulations, a Specified Cooperative may have uncertainty as to whether to distribute the section 199A(g) deduction to eligible taxpayers. The final regulations provide Specified Cooperatives with the option of retaining and using the amounts equal to the section 199A(g) deduction attributable to ineligible taxpayers, or passing out the deduction, which only eligible taxpayers may claim. This allows Specified Cooperatives to choose whether to engage in information gathering regarding patrons' eligibility to use the deduction. The Treasury Department and the IRS have determined that this increased flexibility promotes a more efficient allocation of resources by allowing Specified Cooperatives to choose the extent to which they engage in information gathering in relation to the use of the section 199A(g) deduction at the Specified Cooperative level or the patron level.

iii. Special Rule for Specified Cooperative Partners

The final regulations provide special rules for Specified Cooperatives that are partners in a partnership. A commenter recommended that the proposed regulations be modified to permit partnerships to pass through W–2 wages to Specified Cooperative partners, thereby increasing the Specified Cooperatives' section 199A(g) deduction. A commenter also recommended that, to the extent a partnership conducts activities that result in gross receipts, a Specified Cooperative partner in that partnership should be permitted to treat those activities as conducted directed by the Specified Cooperative. The Treasury Department and the IRS agree with these comments. The final regulations permit the partnerships to pass through W–2 wages and COGS to Specified Cooperative partners. Additionally, the final regulations allow for two-way attribution, meaning: (1) A partnership's activities alone with respect to an agricultural or horticultural product can qualify as gross receipts for the Specified Cooperative partner and (2) a partnership can be attributed the activities of the Specified Cooperative partner. These rules permit additional activities and the resulting income, as well as additional W–2 wages and COGS, to be considered in the calculation of the section 199A(g) deduction.

This stipulation allows for greater flexibility in determining deductions when Specified Cooperatives are partners. Flexibility will increase economic efficiency by making it more likely that Specified Cooperatives

comply with regulations by lowering the compliance burden.

The Treasury Department and the IRS anticipate that these regulations in aggregate will have a marginal impact on economic activity. Compared to the economic impacts resulting from the 2018 Act, the final regulations' primary impact will be through increasing comprehension of the tax code. Increased understanding will reduce the risk that firms and the IRS will disagree on tax reporting and allocation and therefore engage in costly legal transactions. Increased comprehension will also reduce the possibility that firms will engage in activities that would yield negative economic impacts if clarity were stronger. These final regulations also respond to commenters by adding additional examples to further increase comprehension.

II. Paperwork Reduction Act

The collection of information contained in these regulations has been revised and approved by the Office of Management and Budget for review in accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3507) under control numbers 1545–0118 and 1545–0123.

Regulations in § 1.199A–7(c)(3), (d)(3), (f)(3), and (h)(3), as well as § 1.199A–8(d)(3) and (f), require the collection of information. The collections of information in § 1.199A–7(c)(3), (d)(3), (f)(3), and (h)(3), as well as § 1.199A–8(d)(3) will be conducted through Form 1099–PATR, Taxable Distributions Received From Cooperatives, while the collection of information in § 1.199A–8(f) will be conducted through Schedule K–1 to Form 1065, U.S. Return of Partnership Income.

A. Collections of Information Conducted Through Form 1099–PATR

Section 1.199A–7(c)(3) requires the Cooperative to inform its patron of the amount of any distribution to the patron that constitutes qualified items of income, gain, deduction, and loss from a non-specified service trade or business (SSTB) conducted directly by the Cooperative. Not all distributions to patrons are qualified items of income, gain, deduction, and loss because the source of the distribution may not be effectively connected with the conduct of a trade or business within the United States or may include interest income that is not properly allocable to the patron's trade or business. The Cooperative directly conducting the trade or business from which the distribution to the patron originates is in the best position to know how much of the distribution is qualified items of income, gain, deduction, and loss. The Cooperative is also in the best position to know if it is generating income from an SSTB. Accordingly, the collection of information is necessary for the patron to calculate correctly the patron's section 199A(a) deduction for the patron's trade or business.

Section 1.199A–7(d)(3) requires the Cooperative to inform its patron of the amount of any distributions to the patron that constitutes qualified items of income, gain, deduction, and loss from an SSTB conducted directly by the Cooperative. Accordingly, the collection of information is necessary for the patron to correctly calculate the patron's section 199A(a) deduction for the patron's qualified trade or business.

The collection of information in § 1.199A–7(f)(3) is essential for the eligible taxpayer's calculation of the reduction in the eligible taxpayer's section 199A(a) deduction for the eligible taxpayer's trade or business that is required by section 199A(b)(7). Section 199A(g)(2)(A) requires the Specified Cooperative to identify the amount of qualified payments being distributed to an eligible taxpayer and identify the portion of the section 199A(g) deduction allowed in a notice mailed to the eligible taxpayer during the payment period described in section 1382(d). Section 199A(b)(7) provides that an eligible taxpayer who receives qualified payments from a Specified Cooperative must reduce the eligible taxpayer's section 199A(a) deduction by an amount set forth in this section. Without the notice described in § 1.199A–7(f)(3), the eligible taxpayer cannot calculate the reduction required by section 199A(b)(7).

The collection of information in § 1.199A–8(d)(3) is necessitated by section 199A(g)(2)(A). Section 199A(g)(2)(A) permits a Specified Cooperative to pass through an amount of its section 199A(g) deduction to an eligible taxpayer. The amount of the section 199A(g) deduction that the Specified Cooperative is permitted to pass through is an amount that is allocable to the qualified production activities income (QPAI) generated from qualified payments distributed to the eligible taxpayer and identified by such cooperative in a written notice mailed to such taxpayer during the payment period described in section 1382(d). Without the notice required in § 1.199A–8(d)(3) the eligible taxpayer would not know that the Specified Cooperative is passing a portion of its section 199A(g) deduction to the eligible taxpayer.

The collections of information in § 1.199A–7(h)(3) are necessitated by a special transition rule in section 101 of the 2018 Act. Under this transition rule, the repeal of former section 199 for taxable years beginning after December 31, 2017, does not apply to a qualified payment received by a patron from a Specified Cooperative in a taxable year beginning after December 31, 2017, to the extent such qualified payment is attributable to QPAI with respect to which a deduction is allowable to the Specified Cooperative under former section 199 for a taxable year of the Specified Cooperative beginning before January 1, 2018. Such qualified payment remains subject to former section 199 and no deduction is allowed under section 199A(a) or (g) with respect to such qualified payment. Without these collections of information by the Specified Cooperative, the patron has no way of knowing that the patron is barred by the transition rule from using a qualified payment received that is QBI for the patron's trade or business to claim a section 199A(a) deduction for the patron's trade or business.

The collections of information in § 1.199A–7(c)(3), (d)(3), (f)(3), and (h)(3) as well as § 1.199A–8(d)(3) are satisfied by providing information about qualified items of income, SSTB determinations, qualified payments, the section 199A(g) deduction, and the use of qualified payments tied to the former section 199 deduction, as applicable, on an attachment to or on the Form 1099–PATR (or any successor form) issued by the Cooperative to the patron, unless otherwise provided by the instructions to the Form.

For purposes of the Paperwork Reduction Act of 1995, (44 U.S.C. 3507(d)) (PRA), the reporting burden associated with proposed § 1.199A–7(c)(3), (d)(3), (f)(3), and (h)(3) as well as proposed § 1.199A–8(d)(3) will be reflected in the PRA Submission associated with Form 1099–PATR (OMB control number 1545–0118). As further discussed in this section, the estimated number of respondents for the reporting burden associated with these information collections is 9,200 based on 2018 tax filings.

B. Collections of Information Conducted Through Schedule K–1, Form 1065

The collection of information in § 1.199A–8(f) is required by section 199A(g)(5)(B). This section allows a Specified Cooperative that is a partner in a partnership to use its allocable share of gross receipts and related deductions, W–2 wages, and cost of goods sold to calculate its section 199A(g) deduction. Under these

regulations, the partnership must separately identify and report the allocable share of gross receipts and related deductions, W–2 wages, and cost of goods sold on or attached to the Schedule K–1 to the Form 1065 (or any successor form) issued to a Specified Cooperative partner, unless otherwise provided by the instructions to the Form. Without this reporting, the Specified Cooperative partner would not have the information necessary to calculate its section 199A(g) deduction from its activities with the partnership.

The Schedule K–1 to the Form 1065 will be modified to include a mechanism to report the Specified Cooperative partner's allocable share of gross receipts and related deductions. The collection of information in § 1.199A–8(f) is satisfied when the partnership provides the required information to its Specified Cooperative partners on or attached to the Schedule K–1 of Form 1065 (or any successor form), unless otherwise provided by the instructions to the Form. For purposes of the PRA, the reporting burden associated with proposed § 1.199A–8(f) will be reflected in the PRA Submission associated with Form 1065 (OMB control number 1545–0123). As provided in this section, the estimated number of respondents for the reporting burden associated with these information collections is 750 based on 2018 tax filings.

C. Revised Tax Forms

The revised tax forms are as follows:

	OMB No.	New	Revision of existing form	Number of respondents
Form 1099–PATR	1545–0118		✓	9,200
Schedule K–1 (Form 1065)	1545–0123		✓	750

The current status of the PRA submissions related to the tax forms that will be revised as a result of the information collections in the final regulations is provided in the accompanying table. As described previously, the burdens associated with § 1.199A–7(c)(3), (d)(3), (f)(3), and (h)(3) as well as § 1.199A–8(d)(3) will be included in the aggregated burden estimates for OMB control number 1545–0118, which represents a new total estimated burden time of 564,200 hours and total estimated monetized costs of $49.497 million ($2018). The burdens associated with the information collection in § 1.199A–8(f) will be included in the aggregated burden estimates for OMB control number 1545–0123, which represents a total estimated burden time for all forms and schedules of 3.344 billion hours and total estimated monetized costs of $61.558 billion ($2018). The overall burden estimates provided for 1545–0118 and 1545–0123 are aggregate amounts that relate to all information collections associated with the applicable OMB control number. These estimates are therefore unrelated to the future calculations needed to assess the burden imposed by these regulations. To guard against over-counting the burden imposed, the Treasury Department and the IRS urge readers to recognize that these burden estimates are aggregates for the applicable types of filers. With respect to the final regulations, the only relevant burden estimates are those associated with OMB control number 1545–0118. Future estimates under OMB control number 1545–0123 would capture both changes made by the 2018 Act and those that arise out of discretionary authority exercised in the regulations. In addition, when available, drafts of IRS forms are posted for comment at *www.irs.gov/draftforms.*

One comment on the burden related to the Form 1099–PATR reporting requirements suggested the Proposed Regulations may have understated the regulatory burden, but provided no specific estimates. Without an alternative estimate to evaluate, the final regulations will rely on the new aggregated burden estimates for OMB control number 1545–0118. The Treasury Department and the IRS request comments on all aspects of information collection burdens related to the final regulations, including estimates for how much time it would take to comply with the paperwork burdens described above for each relevant form and ways for the IRS to minimize the paperwork burden.

Form	Type of filer	OMB No.(s)	Status
Form 1099–PATR	[Business (Legacy Model)]	1545–0118	Approved by OIRA through 6/30/2023.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid control number assigned by the Office of Management and Budget.

Books or records relating to a collection of information must be retained as long as their contents may become material in the administration of any internal revenue law. Generally, tax returns and tax return information are confidential, as required by section 6103.

III. Regulatory Flexibility Act

As described in more detail in this section, pursuant to the Regulatory Flexibility Act (RFA), 5 U.S.C. chapter 6, the Treasury Department and the IRS hereby certify that these regulations will not have a significant economic impact on a substantial number of small entities. In addition to the economic impact described, affected taxpayers, regardless of size will also need to spend time and resources to read and understand these regulations.

A. § 1.199A–7(c)(3) and (d)(3)

Although § 1.199A–7(c)(3) and (d)(3) will have an impact on a substantial number of small entities, the economic impact will not be significant. The IRS creates the Business Master File which

contains data from Form 1120–C, U.S. Income Tax Return for Cooperative Associations. According to the Business Master File data, in 2018, the IRS received approximately 9,200 Forms 1120–C from Cooperatives. The small business size standards of the U.S. Small Business Association (SBA) under 13 CFR 121.201 matched to the North American Industry Classification System (NAICS) were used in estimating the number of Cooperatives that are considered small businesses. Approximately 8,200 (90 percent) of the 9,200 filers of Forms 1120–C were estimated to be small businesses. Therefore, a substantial number of small entities are affected by the requirements in § 1.199A–7(c)(3) and (d)(3).

Section 1.199A–7 provides rules similar to those provided in § 1.199A–6. In § 1.199A–6, relevant passthrough entities (RPEs) are not permitted to take the section 199A deduction but are required to determine and report the information necessary for their direct and indirect owners to determine their individual section 199A(a) deductions. Section 1.199A–6 requires RPEs to determine and report on or attach to the RPEs' Schedule K–1s to the Form 1065 for each trade or business in which the RPE was directly engaged four items: (1) The amount of QBI, (2) W–2 wages, (3) UBIA of qualified property, and (4) SSTBs.

Although Cooperatives are not RPEs, Cooperatives make distributions to patrons that such patrons are permitted to include in calculating their individual section 199A(a) deductions. Section 1.199A–7(c) and (d) require the Cooperatives to determine and report to their patrons whether the distributions for which the Cooperatives take deductions under section 1382(b) and/or (c)(2), as applicable, constitute qualified items of income, gain, deduction, and loss and whether they are from an SSTB in which the Cooperative was directly engaged.

In TD 9847 the Treasury Department and the IRS determined that the reporting burden in § 1.199A–6 was estimated at 30 minutes to 20 hours, depending on individual circumstances, with an estimated average of 2.5 hours for all affected entities, regardless of size. The burden on entities with business receipts below $10 million was expected to be at the lower end of the range (30 minutes to 2.5 hours). The estimated compliance burden for passthrough entities that issue Schedules K–1 is $53 per hour. This estimate was derived from the Business Taxpayer Burden model developed by the IRS's Office of Research, Applied Analytics, and Statistics (RAAS), which relates time and out-of-pocket costs of business tax preparation, derived from survey data, to assets and receipts of affected taxpayers along with other relevant variables. *See* Tax Compliance Burden (John Guyton, et al., July 2018) at *https://www.irs.gov/pub/irs-soi/d13315.pdf*. Thus, the annual aggregate burden on businesses with gross receipts below $10 million was estimated to be between $19.50 and $132.50 per business. The Treasury Department and the IRS determined in TD 9847 that the requirements in § 1.199A–6 imposed no significant economic impact on affected entities.

The reporting requirements under § 1.199A–7(c)(3) and (d)(3) require Specified Cooperatives to report only two of the four pieces of information RPEs are required to report under § 1.199A–6: the amount of qualified items of income, gain, deduction, and loss and whether the distributions are from an SSTB in which the Cooperative was directly engaged. In addition, these final regulations, in response to comments, revise the proposed reporting requirements under § 1.199A–7(c)(3) and (d)(3) to reduce the Specified Cooperative's burden by requiring the Cooperative to report the total net amount of qualified items from non-SSTBs and SSTBs in distributions to patrons without delineating these amounts business by business.

Furthermore, the burden imposed by § 1.199A–7(c)(3) and (d)(3) only occurs when a Cooperative has net income that it may distribute to its patrons such that the income will qualify for the income tax deductions under section 1382(b) and/or (c), as applicable. With respect to this net income, Cooperatives already know the source of their income and deductions without which information they would not be able to determine the correct distributions to their patrons and to claim the income tax deduction for these distributions under section 1382(b) and/or (c)(2), as applicable. Finally, assuming that the approximately 8,200 filers of Forms 1120–C were estimated to be small businesses in 2018 and that each business incurred half of the higher figure of $132.50 ($66.25) determined for the § 1.199A–6 regulations to satisfy the reporting requirements under § 1.199A–7(c)(3) and (d)(3), the annual burden imposed by the reporting requirements would not exceed $66.25 per business. Accordingly, the Treasury Department and the IRS conclude that the requirements in § 1.199A–7(c)(3) and (d)(3) will not impose a significant economic impact on small entities.

B. § 1.199A–7(h)(3)

Although § 1.199A–7(h)(3) will have an impact on a substantial number of small entities, this economic impact will not be significant. As previously noted, in 2018, approximately 90 percent of Cooperatives filing Form 1120–C were estimated to be small businesses. Therefore, a substantial number of small entities are affected by § 1.199A–7(h)(3).

Section 1.199A–7(h)(3) requires Cooperatives to notify patrons if, pursuant to the transition rule in section 101 of the 2018 Act, the patron is barred from using certain qualified payments from a Cooperative to claim a section 199A(a) deduction in a taxable year because these qualified payments are attributable to QPAI with respect to which a deduction is allowable to the Cooperative under former section 199 in a taxable year beginning before January 1, 2018. The Cooperative knows which patrons are impacted since, in order to claim its deduction under former section 199, the Cooperative must identify which qualified payments to use. The Treasury Department and the IRS estimate that the annual burden imposed by the requirement in § 1.199A–7(h)(3) will be far less than the $66.25 per business estimated for the requirements in § 1.199A–7(c)(3) and (d)(3) discussed above, since the Cooperatives know which patrons are impacted and the reporting is limited to informing these patrons that they cannot use such qualified payments to calculate their section 199A(a) deduction. Further, the requirements under § 1.199A–7(h)(3), in response to a comment, have been revised to allow more flexibility by allowing the reporting to be made using any reasonable method.

In addition, absent notice from the Cooperatives, patrons would have no way of determining whether they were barred from claiming the section 199A(a) deduction using such qualified payments. Finally, Cooperatives are not able to claim a deduction under former section 199 for taxable years beginning after December 31, 2017. Therefore, the reporting required by § 1.199A–7(h)(3) will be for a short duration and have a limited impact on Cooperatives. Accordingly, for all these reasons, the requirements in § 1.199A–7(h)(3) will not impose a significant economic impact on small entities.

C. §§ 1.199A–7(f)(3) and 1.199A–8(d)(3)

Sections 1.199A–7(f)(3) and 1.199A–8(d)(3) will not have a significant economic impact on a substantial number of small entities. According to

the Business Master File filing data from the transcribed fields from the Forms 1120–C for 2018, of the approximately 9,200 Forms 1120–C filed by Cooperatives, approximately 2,000 filers identified their Cooperatives as involving agriculture or horticulture using the NAICS codes. Of the 2,000 filers of Forms 1120–C identifying as Specified Cooperatives, approximately 1,600 filers (80 percent) would qualify as small business under the SBA thresholds. However, the requirement under § 1.199A–7(f)(3) involving reporting of qualified payments should not impose a significant burden because qualified payments overlap with the section 1382 distributions a Cooperative uses to calculate the section 199A(g) deduction. Further, the notice requirement in § 1.199A–8(d)(3), which is imposed under section 199A(g)(2)(A)(ii), follows the same procedures that Cooperatives used under former section 199 so Cooperatives should already have a process in place. Accordingly, §§ 1.199A–7(f)(3) and 1.199A–8(d)(3) will not impose a significant economic impact on a substantial number of small entities.

D. § 1.199A–8(f)

Although § 1.199A–8(f) will have an impact on a substantial number of small entities, this impact will not be economically significant. According to the Business Master File filing data from the transcribed fields from the Forms 1065 for 2018, the IRS estimates that there were 4,100,000 partnerships reporting their partners' share of partnership items on Schedules K–1 (Form 1065). The IRS also identified 763 different partnerships that issued a Schedule K–1 to 654 different Cooperatives in 2018. The IRS does not have information as to whether the 654 Cooperatives all qualified as Specified Cooperatives.

Of the 763 different partnerships, the IRS estimated that 215 of the partnerships conducted activities in 2018 that would have required the partnerships to file under § 1.199A–8(f). The IRS does not have sufficient data to determine the type of business activities of the remaining partnerships. To be as comprehensive and transparent as possible in analyzing the potential impact of the final regulations, it is assumed that all of these partnerships would be required to file under § 1.199A–8(f) and would be considered small entities.

Of the 215 partnerships identified as having both issued a Schedule K–1 to a Cooperative and conducting eligible activities in 2018, the IRS determined that 158 of these partnerships conducted activities for which the SBA uses the number of employees to determine if an entity is a small entity using the NAICS. The IRS determined that 95 of these 97 partnerships would be small entities, while two would not be small entities based on the reported number of Forms W–2 filed in connection with the Forms 1065 the partnerships filed in 2018.

The SBA uses income to determine if an entity is a small entity for the reported business activities of the remaining 118 partnerships using the NAICS. Based upon the reported income for 2018, 84 of the remaining 118 partnerships are small entities, while 34 partnerships are not small entities. Therefore, a substantial number of small entities are affected by requirements in § 1.199A–8(f).

The economic impact of § 1.199A–8(f), however, will not be significant because the information required to be reported is gross receipts and related deductions. This information is readily available to each partnership and already known for the purpose of determining Federal income and other tax obligations. A commenter also requested that the partnerships be allowed to report further information, and the rules in § 1.199A–8(f) were broadened consistent with the request. Because the information required to be reported is already available and familiar to each partnership, the reporting required by § 1.199A–8(f) will not impose a significant economic impact on small entities.

Accordingly, the Treasury Department and the IRS hereby certify that these regulations will not have a significant economic impact on a substantial number of small entities.

Pursuant to section 7805(f) of the Code, the Proposed Regulation preceding this regulation was submitted to the Chief Counsel for Advocacy of the Small Business Administration for comment on its impact on small business and no comments were received.

IV. Unfunded Mandates Reform Act

Section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA) requires that agencies assess anticipated costs and benefits and take certain other actions before issuing a final rule that includes any Federal mandate that may result in expenditures in any one year by a state, local, or tribal government, in the aggregate, or by the private sector, of $100 million in 1995 dollars, updated annually for inflation. In 2019, that threshold is approximately $154 million. This rule does not include any Federal mandate that may result in expenditures by state, local, or tribal governments, or by the private sector in excess of that threshold.

V. Executive Order 13132: Federalism

Executive Order 13132 (titled *Federalism*) prohibits an agency from publishing any rule that has federalism implications if the rule either imposes substantial, direct compliance costs on state and local governments, and is not required by statute, or preempts state law, unless the agency meets the consultation and funding requirements of section 6 of the Executive Order. These rules do not have federalism implications, and do not impose substantial direct compliance costs on state and local governments or preempt state law, within the meaning of the Executive Order.

VI. Congressional Review Act

Pursuant to the Congressional Review Act (5 U.S.C. 801 *et seq.*), the Office of lnformation and Regulatory Affairs designated this rule as not a 'major rule', as defined by 5 U.S.C. 804(2).

Statement of Availability of IRS Documents

IRS Revenue Procedures, Revenue Rulings, Notices and other guidance cited in this document are published in the Internal Revenue Bulletin and are available from the Superintendent of Documents, U.S. Government Publishing Office, Washington, DC 20402, or by visiting the IRS website at *http://www.irs.gov*.

Drafting Information

The principal author of these regulations is Jason Deirmenjian, Office of Associate Chief Counsel (Passthroughs and Special Industries). Other personnel from the Treasury Department and the IRS participated in their development.

List of Subjects in 26 CFR Part 1

Income taxes, Reporting and recordkeeping requirements.

Amendments to the Regulations

Accordingly, 26 CFR parts 1 is amended as follows:

PART 1—INCOME TAXES

■ **Paragraph 1.** The authority citation for part 1 is amended by:

■ 1. Removing the entries for §§ 1.199–0 through 1.199–9.

■ 2. Adding entries in numerical order to read in part as follows:

Authority: 26 U.S.C. 7805.

* * * * *

Section 1.199A–7 also issued under 26 U.S.C. 199A(f)(4) and (g)(6).

Section 1.199A–8 also issued under 26 U.S.C. 199A(g)(6).

Section 1.199A–9 also issued under 26 U.S.C. 199A(g)(6).

Section 1.199A–10 also issued under 26 U.S.C. 199A(g)(6).

Section 1.199A–11 also issued under 26 U.S.C. 199A(g)(6).

Section 1.199A–12 also issued under 26 U.S.C. 199A(g)(6).

* * * * *

§§ 1.199–0 through 1.199–9 [Removed]

■ **Par. 2.** Sections 1.199–0 through 1.199–9 are removed.

■ **Par. 3.** Sections 1.199A–7 through 1.199A–12 are added to read as follows:

* * * * *

§ 1.199A–7 Section 199A(a) Rules for Cooperatives and their Patrons.

(a) *Overview*—(1) *In general.* This section provides guidance and special rules on the application of the rules of §§ 1.199A–1 through 1.199A–6 regarding the deduction for qualified business income (QBI) under section 199A(a) (section 199A(a) deduction) of the Internal Revenue Code (Code) by patrons (patrons) of cooperatives to which Part I of subchapter T of chapter 1 of the Code (subchapter T) applies (Cooperatives). Unless otherwise provided in this section, all the rules in §§ 1.199A–1 through 1.199A–6 relating to calculating the section 199A(a) deduction apply to patrons and Cooperatives. Paragraph (b) of this section provides special rules for patrons relating to trades or businesses. Paragraph (c) of this section provides special rules for patrons and Cooperatives relating to the definition of QBI. Paragraph (d) of this section provides special rules for patrons and Cooperatives relating to specified service trades or businesses (SSTBs). Paragraph (e) of this section provides special rules for patrons relating to the statutory limitations based on W–2 wages and unadjusted basis immediately after acquisition (UBIA) of qualified property. Paragraph (f) of this section provides special rules for specified agricultural or horticultural cooperatives (Specified Cooperatives) and paragraph (g) of this section provides examples for Specified Cooperatives and their patrons. Paragraph (h) of this section sets forth the applicability date of this section and a special transition rule relating to Specified Cooperatives and their patrons.

(2) *At patron level.* The section 199A(a) deduction is applied at the patron level, and patrons who are individuals (as defined in § 1.199A–1(a)(2)) may take the section 199A(a) deduction.

(3) *Definitions.* For purposes of section 199A and § 1.199A–7, the following definitions apply—

(i) *Individual* is defined in § 1.199A–1(a)(2).

(ii) *Patron* is defined in § 1.1388–1(e).

(iii) *Patronage and nonpatronage* is defined in § 1.1388–1(f).

(iv) *Relevant Passthrough Entity (RPE)* is defined in § 1.199A–1(a)(9).

(v) *Qualified payment* is defined in § 1.199A–8(d)(2)(ii).

(vi) *Specified Cooperative* is defined in § 1.199A–8(a)(2) and is a subset of Cooperatives defined in § 1.199A–7(a)(1).

(b) *Trade or business.* A patron (whether the patron is an RPE or an individual), and not a Cooperative, must determine whether it has one or more trades or businesses that it directly conducts as defined in § 1.199A–1(b)(14). To the extent a patron operating a trade or business has income directly from that business, the patron must follow the rules of §§ 1.199A–1 through 1.199A–6 to calculate the section 199A(a) deduction. Patronage dividends or similar payments are considered to be generated from the trade or business the Cooperative conducts on behalf of or with the patron. A Cooperative that distributes patronage dividends or similar payments, as described in paragraph (c)(1) of this section, must determine and report information to its patrons relating to qualified items of income, gain, deduction, and loss in accordance with paragraphs (c)(3) and (d)(3) of this section. A patron that receives patronage dividends or similar payments, as described in paragraph (c)(1) of this section, from a Cooperative must follow the rules of paragraphs (c) through (e) of this section to calculate the section 199A(a) deduction.

(c) *Qualified Business Income*—(1) *In general.* QBI means the net amount of qualified items of income, gain, deduction, and loss with respect to any trade or business as determined under the rules of § 199A(c)(3) and § 1.199A–3(b). A qualified item of income includes distributions for which the Cooperative is allowed a deduction under section 1382(b) and (c)(2) (including patronage dividends or similar payments, such as money, property, qualified written notices of allocations, and qualified per-unit retain certificates, as well as money or property paid in redemption of a nonqualified written notice of allocation (collectively patronage dividends or similar payments)), provided such distribution is otherwise a qualified item of income, gain, deduction, or loss. *See* special rule in paragraph (d)(3) of this section relating to SSTBs that may affect QBI.

(2) *QBI determinations made by patron.* A patron must determine QBI for each trade or business it directly conducts. In situations where the patron receives distributions described in paragraph (c)(1) of this section, the Cooperative must determine whether those distributions include qualified items of income, gain, deduction, and loss as determined under rules of § 199A(c)(3) and § 1.199A–3(b). These distributions may be included in the QBI of the patron's trade or business to the extent that:

(i) The distributions are related to the patron's trade or business as defined in § 1.199A–1(b)(14);

(ii) The distributions are qualified items of income, gain, deduction, and loss as determined under rules of § 199A(c)(3) and § 1.199A–3(b) at the Cooperative's trade or business level;

(iii) The distributions are not items from an SSTB as defined in § 199A(d)(2) at the Cooperative's trade or business level (except as permitted by the threshold rules in § 199A(d)(3) and § 1.199A–5(a)(2)); and

(iv) Certain information is reported by the Cooperative about these payments as provided in paragraphs (c)(3) and (d)(3) of this section.

(3) *Qualified items of income, gain, deduction, and loss determinations made and reported by Cooperatives.* In the case of a Cooperative that makes distributions described in paragraph (c)(1) of this section to a patron, the Cooperative must determine the amount of qualified items of income, gain, deduction, and loss as determined under the rules of § 199A(c)(3) and § 1.199A–3(b) in those distributions. A patron must determine whether these qualified items relate to one or more trades or businesses that it directly conducts as defined in § 1.199A–1(b)(14). Pursuant to this paragraph (c)(3), the Cooperative must report the net amount of qualified items with respect to non-SSTBs of the Cooperative in the distributions made to the patron on an attachment to or on the Form 1099–PATR, Taxable Distributions Received From Cooperatives, (or any successor form) issued by the Cooperative to the patron, unless otherwise provided by the instructions to the Form. If the Cooperative does not report on or before the due date of the Form 1099–PATR the amount of such qualified items of income, gain, deduction, and loss in the distributions to the patron, the amount of distributions from the Cooperative that

may be included in the patron's QBI is presumed to be zero. *See* special rule in paragraph (d)(3) of this section relating to reporting of qualified items of income, gain, deduction, and loss with respect to SSTBs of the Cooperative.

(d) *Specified Service Trades or Businesses*—(1) *In general.* This section provides guidance on the determination of SSTBs as defined in § 199A(d)(2) and § 1.199A–5. Unless otherwise provided in this section, all of the rules in § 1.199A–5 relating to SSTBs apply to patrons of Cooperatives.

(2) *SSTB determinations made by patron.* A patron (whether an RPE or an individual) must determine whether each trade or business it directly conducts is an SSTB.

(3) *SSTB determinations made and reported by Cooperatives*—(i) *In general.* In the case of a Cooperative that makes distributions described in paragraph (c)(1) of this section to a patron, the Cooperative must determine the amount of qualified items of income, gain, deduction, and loss as determined under the rules of § 199A(c)(3) and § 1.199A–3(b) with respect to SSTBs directly conducted by the Cooperative. A patron must determine whether these qualified items relate to one or more trades or businesses that it directly conducts as defined in § 1.199A–1(b)(14). The Cooperative must report the net amount of qualified items with respect to the SSTBs of the Cooperative in the distributions made to the patron on an attachment to or on the Form 1099–PATR, Taxable Distributions Received from Cooperatives, (or any successor form) issued by the Cooperative to the patron, unless otherwise provided by the instructions to the Form. If the Cooperative does not report the amount on or before the due date of the Form 1099–PATR, then only the amount that a Cooperative reports as qualified items of income, gain, deduction, and loss under § 1.199A–7(c)(3) may be included in the patron's QBI, and the remaining amount of distributions from the Cooperative that may be included in the patron's QBI is presumed to be zero.

(ii) *Patron allocation of expenses paid to Cooperative for SSTB items of income reported by Cooperative*—(A) *In general.* When a Cooperative reports SSTB items to a patron, a patron may allocate a deductible expense that was paid to the Cooperative in connection with the patron's qualified trade or business between a patron's qualified trade or business income and the SSTB income reported to it by the Cooperative only if the SSTB income directly relates to the deductible expense. A patron can allocate the deductible expense paid by the patron to the Cooperative only up to the amount of SSTB income reported by the Cooperative.

(B) *Example. Patron allocating expenses between qualified trade or business and SSTB income from a Cooperative.* (*1*) Cooperative provides to its patrons a service that is an SSTB under section 199A(d)(2). P, a patron, runs a qualified trade or business under section 199A(d)(1) and incurs expenses for the service from the Cooperative in P's qualified trade or business. P pays the Cooperative $1,000 for the service. Cooperative later pays P a patronage dividend of $50 related to the service.

(i*2*) Cooperative reports the $50 as SSTB income on the Form 1099–PATR issued to P.

(*3*) Since P's deductible expense for services from the Cooperative was in connection with a qualified trade or business and the SSTB income directly relates to that expense, P may allocate the expense under paragraph (d)(3)(ii) of this section. Accordingly, $50 of the $1,000 expense is allocated to P's SSTB income, and $950 of the expense is allocated to P's qualified trade or business and is included in P's QBI calculation.

(e) *W–2 wages and unadjusted basis immediately after acquisition of qualified property*—(1) *In general.* This section provides guidance on calculating a trade or business's W–2 wages and the UBIA of qualified property properly allocable to QBI.

(2) *Determinations made by patron.* The determination of W–2 wages and UBIA of qualified property must be made for each trade or business by the patron (whether an RPE or individual) that directly conducts the trade or business before applying the aggregation rules of § 1.199A–4. Unlike RPEs, Cooperatives do not compute and allocate their W–2 wages and UBIA of qualified property to patrons.

(f) *Special rules for patrons of Specified Cooperatives*—(1) *Section 199A(b)(7) reduction.* A patron of a Specified Cooperative that receives a qualified payment must reduce its section 199A(a) deduction as provided in § 1.199A–1(e)(7). This reduction applies whether the Specified Cooperative passes through all, some, or none of the Specified Cooperative's section 199A(g) deduction to the patron in that taxable year. The rules relating to the section 199A(g) deduction can be found in §§ 1.199A–8 through 1.199A–12.

(2) *Reduction calculation*—(i) *Allocation method.* If in any taxable year, a patron receives income or gain related to qualified payments and income or gain that is not related to qualified payments in a trade or business, the patron must allocate the income or gain and related deductions, losses and W–2 wages using a reasonable method based on all the facts and circumstances for purposes of calculating the reduction in § 1.199A–1(e)(7). Different reasonable methods may be used for different items and related deductions of income, gain, deduction, and loss. The chosen reasonable method for each item must be consistently applied from one taxable year of the patron to another, and must clearly reflect the income and expenses of each trade or business. The overall combination of methods must also be reasonable based on all the facts and circumstances. The books and records maintained for a trade or business must be consistent with any allocations under this paragraph (f)(2)(i).

(ii) *Safe harbor.* A patron with taxable income under the threshold amount set forth in section 199A(e)(2) is eligible to use the safe harbor set forth in this paragraph (f)(2)(ii) to apportion its deductions, losses and W–2 wages instead of the allocation method set forth in paragraph (f)(2)(i) of this section for any taxable year in which the patron receives income or gain related to qualified payments and income or gain not related to qualified payments in a trade or business. Under the safe harbor the patron may apportion its deductions, losses and W–2 wages ratably between income or gain related to qualified payments and income or gain that is not related to qualified payments for purposes of calculating the reduction in paragraph (f)(1) of this section. Accordingly, the amount of deductions and losses apportioned to determine QBI allocable to qualified payments is equal to the proportion of the total deductions and losses that the amount of income or gain related to qualified payments bears to total income or gain used to determine QBI. The same proportion applies to determine the amount of W–2 wages allocable to the portion of the trade or business that received qualified payments.

(3) *Qualified payments notice requirement.* A Specified Cooperative must report the amount of the qualified payments made to the eligible taxpayer, as defined in section 199A(g)(2)(D), on an attachment to or on the Form 1099–PATR (or any successor form) issued by the Cooperative to the patron, unless otherwise provided by the instructions to the Form.

(g) *Examples.* The following examples illustrate the provisions of paragraph (f) of this section. For purposes of these examples, assume that the Specified Cooperative has satisfied the applicable

written notice requirements in paragraphs (c)(3), (d)(3) and (f)(3) of this section.

(1) *Example 1. Patron of Specified Cooperative with W–2 wages.* (i) P, a grain farmer and patron of nonexempt Specified Cooperative C, delivered to C during 2020 2% of all grain marketed through C during such year. During 2021, P receives $20,000 in patronage dividends and $1,000 of allocated section 199A(g) deduction from C related to the grain delivered to C during 2020.

(ii) P has taxable income of $75,000 for 2021 (determined without regard to section 199A) and has a filing status of married filing jointly. P's QBI related to its grain trade or business for 2021 is $50,000, which consists of gross receipts of $150,000 from sales to an independent grain elevator, per-unit retain allocations received from C during 2021 of $80,000, patronage dividends received from C during 2021 related to C's 2020 net earnings of $20,000, and expenses of $200,000 (including $50,000 of W–2 wages).

(iii) The portion of QBI from P's grain trade or business related to qualified payments received from C during 2021 is $10,000, which consists of per-unit retain allocations received from C during 2021 of $80,000, patronage dividends received from C during 2021 related to C's 2020 net earnings of $20,000, and properly allocable expenses of $90,000 (including $25,000 of W–2 wages).

(iv) P's deductible amount related to the grain trade or business is 20% of QBI ($10,000) reduced by the lesser of 9% of QBI related to qualified payments received from C ($900) or 50% of W–2 wages related to qualified payments received from C ($12,500), or $9,100. As P does not have any other trades or businesses, the combined QBI amount is also $9,100.

(v) P's deduction under section 199A for 2021 is $10,100, which consists of the combined QBI amount of $9,100, plus P's deduction passed through from C of $1,000.

(2) *Example 2. Patron of Specified Cooperative without W–2 wages.* (i) C and P have the same facts for 2020 and 2021 as *Example 1,* except that P has expenses of $200,000 that include zero W–2 wages during 2021.

(ii) P's deductible amount related to the grain trade or business is 20% of QBI ($10,000) reduced by the lesser of 9% of QBI related to qualified payments received from C ($900) or 50% of W–2 wages related to qualified payments received from C ($0), or $10,000.

(iii) P's deduction under section 199A for 2021 is $11,000, which consists of the combined QBI amount of $10,000, plus P's deduction passed through from C of $1,000.

(3) *Example 3. Patron of Specified Cooperative—Qualified Payments do not equal QBI and no section 199A(g) passthrough.* (i) P, a grain farmer and a patron of a nonexempt Specified Cooperative C, during 2020, receives $60,000 in patronage dividends, $100,000 in per-unit retain allocations, and $0 of allocated section 199A(g) deduction from C related to the grain delivered to C. C notifies P that only $150,000 of the patronage dividends and per-unit retain allocations are qualified payments because $10,000 of the payments are not attributable to C's QPAI.

(ii) P has taxable income of $90,000 (determined without regard to section 199A) and has a filing status of married filing jointly. P's QBI related to its grain trade or business is $45,000, which consists of gross receipts of $95,000 from sales to an independent grain elevator, plus $160,000 from C (all payments from C qualify as qualified items of income, gain, deduction, and loss), less expenses of $210,000 (including $30,000 of W–2 wages).

(iii) The portion of QBI from P's grain trade or business related to qualified payments received from C is $25,000, which consists of the qualified payments received from C of $150,000, less the properly allocable expenses of $125,000 (including $18,000 of W–2 wages), which were determined using a reasonable method under paragraph (f)(2)(ii) of this section.

(iv) P's patron reduction is $2,250, which is the lesser of 9% of QBI related to qualified payments received from C, $2,250 (9% × $25,000), or 50% of W–2 wages related to qualified payments received from C, $9,000 (50% × $18,000). As P does not have any other trades or businesses, the combined QBI amount is $6,750 (20% of P's total QBI, $9,000 (20% × $45,000), reduced by the patron reduction of $2,250).

(v) P's deduction under section 199A is $6,750, which consists of the combined QBI amount of $6,750.

(4) *Example 4. Patron of Specified Cooperative—Reasonable Method under paragraph (f)(2)(i) of this section.* P is a grain farmer that has $45,000 of QBI related to P's grain trade or business in 2020. P's QBI consists of $105,000 of sales to an independent grain elevator, $100,000 of per-unit retain allocations, and $50,000 of patronage dividends from a nonexempt Specified Cooperative C, for which C reports $150,000 of qualified payments to P as required by paragraph (f)(3) of this section. P's grain trade or business has $210,000 of expenses (including $30,000 of W–2 wages). P delivered 65x bushels of grain to C and sold 35x bushels of comparable grain to the independent grain elevator. To allocate the expenses between qualified payments ($150,000) and other income ($105,000), P compares the bushels of grain delivered to C (65x) to the total bushels of grain delivered to C and sold to the independent grain elevator (100x). P determines $136,500 (65% × $210,000) of expenses (including $19,500 of W–2 wages) are properly allocable to the qualified payments. The portion of QBI from P's grain trade or business related to qualified payments received from C is $13,500, which consists of qualified payments of $150,000 less the properly allocable expenses of $136,500 (including $19,500 of W–2 wages). P's method of allocating expenses is a reasonable method under paragraph (f)(2)(i) of this section.

(5) *Example 5. Patron of Specified Cooperative using safe harbor to allocate.* (i) P is a grain farmer with taxable income of $100,000 for 2021 (determined without regard to section 199A) and has a filing status of married filing jointly. P's QBI related to P's grain trade or business for 2021 is $50,000, which consists of gross receipts of $180,000 from sales to an independent grain elevator, per-unit retain allocations received from a Specified Cooperative C during 2021 of $15,000, patronage dividends received from C during 2021 related to C's 2020 net earnings of $5,000, and expenses of $150,000 (including $50,000 of W–2 wages). C also passed through $1,800 of the section 199A(g) deduction to P, which related to the grain delivered by P to the Specified Cooperative during 2020. P uses the safe harbor in paragraph (f)(2)(ii) of this section to determine the expenses (including W–2 wages) allocable to the qualified payments.

(ii) Using the safe harbor to allocate P's $150,000 of expenses, P allocates $15,000 of the expenses to the qualified payments ($150,000 of expenses multiplied by the ratio (0.10) of qualified payments ($20,000) to total gross receipts ($200,000)). Using the same ratio, P also determines there are $5,000 of W–2 wages allocable ($50,000 multiplied by 0.10) to the qualified payments.

(iii) The portion of QBI from P's grain trade or business related to qualified payments received from C during 2021 is $5,000, which consists of per-unit retain allocations received from C during 2021 of $15,000, patronage dividends of $5,000, and properly

allocable expenses of $15,000 (including $5,000 of W–2 wages).

(iv) P's QBI related to the grain trade or business is 20% of QBI ($10,000) reduced by the lesser of 9% of QBI related to qualified payments received from C ($450) or 50% of W–2 wages related to qualified payments received from C ($2,500), or $9,550. As P does not have any other trades or businesses, the combined QBI amount is also $9,550.

(v) P's deduction under section 199A for 2021 is $11,350, which consists of the combined QBI amount of $9,550, plus P's deduction passed through from C of $1,800.

(h) *Applicability date*—(1) *General rule.* Except as provided in paragraph (h)(2) of this section, the provisions of this section apply to taxable years beginning after January 19, 2021. Taxpayers, however, may choose to apply the rules of §§ 1.199A–7 through 1.199A–12 for taxable years beginning on or before that date, provided taxpayers apply the rules in their entirety and in a consistent manner.

(2) *Transition rule for qualified payments of patrons of Cooperatives.* See the transition rule for qualified payments of patrons of Cooperatives for a taxable year of a Cooperative beginning before January 1, 2018 in the Consolidated Appropriations Act, 2018 (Pub. L. 115–141, 132 Stat. 348) Division T, section 101(c).

(3) *Notice from the Cooperative.* If a patron of a Cooperative cannot claim a deduction under section 199A for any qualified payments described in the transition rule set forth in paragraph (h)(2) of this section, the Cooperative must use a reasonable method to identify the qualified payments to its patrons. A reasonable method includes reporting this information on an attachment to or on the Form 1099–PATR (or any successor form) issued by the Cooperative to the patron, unless otherwise provided by the instructions to the Form.

§ 1.199A–8 Deduction for income attributable to domestic production activities of specified agricultural or horticultural cooperatives

(a) *Overview*—(1) *In general.* This section provides rules relating to the deduction for income attributable to domestic production activities of a specified agricultural or horticultural cooperative (Specified Cooperative). This paragraph (a) provides an overview and definitions of certain terms. Paragraph (b) of this section provides rules explaining the steps a nonexempt Specified Cooperative performs to calculate its section 199A(g) deduction and includes definitions of relevant terms. Paragraph (c) of this section provides rules explaining the steps an exempt Specified Cooperative performs to calculate its section 199A(g) deduction. Paragraph (d) of this section provides rules for Specified Cooperatives passing through the section 199A(g) deduction to patrons. Paragraph (e) of this section provides examples that illustrate the provisions of paragraphs (b), (c), and (d) of this section. Paragraph (f) of this section provides guidance for Specified Cooperatives that are partners in a partnership. Paragraph (g) of this section provides guidance on the recapture of a claimed section 199A(g) deduction. Paragraph (h) of this section provides effective dates. For additional rules addressing an expanded affiliated group (EAG), to which the principles of this section apply, *see* § 1.199A–12. The provisions of this section apply solely for purposes of section 199A of the Internal Revenue Code (Code).

(2) *Specified Cooperative*—(i) *In general.* Specified Cooperative means a cooperative to which Part I of subchapter T of chapter 1 of the Code applies and which—

(A) Manufactures, produces, grows, or extracts (MPGE) in whole or significant part within the United States any agricultural or horticultural product, or

(B) Is engaged in the marketing of agricultural or horticultural products that have been MPGE in whole or significant part within the United States by the patrons of the cooperative.

(C) See § 1.199A–9 for rules to determine if a Specified Cooperative has MPGE an agricultural or horticultural product in whole or significant part within the United States.

(ii) *Types of Specified Cooperatives.* A Specified Cooperative that is qualified as a farmer's cooperative organization under section 521 is an *exempt Specified Cooperative,* while a Specified Cooperative not so qualified is a *nonexempt Specified Cooperative.*

(3) *Patron* is defined in § 1.1388–1(e).

(4) *Agricultural or horticultural products* are agricultural, horticultural, viticultural, and dairy products, livestock and the products thereof, the products of poultry and bee raising, the edible products of forestry, and any and all products raised or produced on farms and processed or manufactured products thereof within the meaning of the Cooperative Marketing Act of 1926, 44 Stat. 802 (1926). Agricultural or horticultural products also include aquatic products that are farmed. Some examples of agricultural or horticultural products include, but are not limited to, fruits, grains, oilseeds, rice, vegetables, legumes, grasses (including hay), plants of all kinds, flowers (including hops), seeds, tobacco, cotton, sugar cane and sugar beets. Some examples of livestock products include, but are not limited to, wool, fur, hides, eggs, down, honey, and silk. Some examples of edible forestry products include, but are not limited to, fruits, nuts, berries and mushrooms. Some examples of aquatic products include, but are not limited to, fish, crustaceans, shellfish and seaweed. In addition, agricultural or horticultural products include fertilizer, diesel fuel, and other supplies (for example, seed, feed, herbicides, and pesticides) used in agricultural or horticultural production that are MPGE by a Specified Cooperative. Agricultural or horticultural products, however, do not include intangible property other than when incorporated into a tangible agricultural or horticultural product (other than as provided in the exception in § 1.199A–9(b)(2)). Intangible property for this purpose includes, for example, the rights to MPGE and sell an agricultural or horticultural product with certain characteristics protected by a patent, or the rights to a trademark or tradename. This exclusion of intangible property does not apply to intangible characteristics of any particular agricultural or horticultural product. For example, gross receipts from the sale of different varieties of oranges would be considered from the disposition of agricultural or horticultural products. However, gross receipts from the license of the right to produce and sell a certain variety of an orange would be considered separate from the orange and not from an agricultural or horticultural product.

(b) *Steps for a nonexempt Specified Cooperative in calculating deduction*—(1) *In general.* Except as provided in paragraph (c)(3) of this section, this paragraph (b) applies only to nonexempt Specified Cooperatives.

(2) *Step 1—Gross receipts and related deductions*—(i) *Identify.* To determine the section 199A(g) deduction, a Specified Cooperative first identifies its patronage and nonpatronage gross receipts and related cost of goods sold (COGS), deductible expenses, W–2 wages, etc. (deductions) and allocates them between patronage and nonpatronage. A single definition for the term *patronage and nonpatronage* is found in § 1.1388–1(f).

(ii) *Applicable gross receipts and deductions.* Except as described in this paragraph (b)(ii), for all purposes of the section 199A(g) deduction, a Specified Cooperative can use only patronage gross receipts and related deductions to calculate qualified production activities

income (QPAI) as defined in paragraph (b)(4)(ii) of this section, oil-related QPAI as defined in paragraph (b)(7)(ii) of this section, the W–2 wage limitation in paragraph (b)(5)(ii)(B) of this section, or taxable income as defined in paragraph (b)(5)(ii)(C) of this section. A Specified Cooperative cannot use its nonpatronage gross receipts and related deductions to calculate its section 199A(g) deduction, other than treating all of its nonpatronage gross receipts as patronage non-DPGR for purposes of applying the de minimis rules in § 1.199A–9(c)(3). If a Specified Cooperative treats all nonpatronage gross receipts as DPGR under § 1.199A–9(c)(3)(i), then a Specified Cooperative shall also treat its deductions related to the nonpatronage gross receipts as patronage in calculating QPAI, oil-related QPAI, the W–2 wage limitation, or taxable income for purposes of the section 199A(g) deduction.

(iii) *Gross receipts* are the Specified Cooperative's receipts for the taxable year that are recognized under the Specified Cooperative's methods of accounting used for Federal income tax purposes for the taxable year. See § 1.199A–12 if the gross receipts are recognized in an intercompany transaction within the meaning of § 1.1502–13. Gross receipts include total sales (net of returns and allowances) and all amounts received for services. In addition, gross receipts include any income from investments and from incidental or outside sources. For example, gross receipts include interest (except interest under section 103 but including original issue discount), dividends, rents, royalties, and annuities, regardless of whether the amounts are derived in the ordinary course of the Specified Cooperative's trade or business. Gross receipts are not reduced by COGS or by the cost of property sold if such property is described in section 1221(a)(1), (2), (3), (4), or (5). Finally, gross receipts do not include amounts received by the Specified Cooperative with respect to sales tax or other similar state or local taxes if, under the applicable state or local law, the tax is legally imposed on the purchaser of the good or service and the Specified Cooperative merely collects and remits the tax to the taxing authority. If, in contrast, the tax is imposed on the Specified Cooperative under the applicable law, then gross receipts include the amounts received that are allocable to the payment of such tax.

(3) *Step 2—Determine gross receipts that are DPGR*—(i) *In general.* A Specified Cooperative examines its patronage gross receipts to determine which of these are DPGR. A Specified Cooperative does not use nonpatronage gross receipts to determine DPGR.

(ii) *DPGR* are the gross receipts of the Specified Cooperative that are derived from any lease, rental, license, sale, exchange, or other disposition of an agricultural or horticultural product that is MPGE by the Specified Cooperative or its patrons in whole or significant part within the United States. DPGR does not include gross receipts derived from services or the lease, rental, license, sale, exchange, or other disposition of land unless a de minimis or other exception applies. See § 1.199A–9 for additional rules on determining if gross receipts are DPGR.

(4) *Step 3—Determine QPAI*—(i) *In general.* A Specified Cooperative determines QPAI from patronage DPGR and patronage deductions identified in paragraphs (b)(3)(ii) and (b)(2)(i) of this section, respectively. A Specified Cooperative does not use nonpatronage gross receipts or deductions to determine QPAI.

(ii) *QPAI* for the taxable year means an amount equal to the excess (if any) of—

(A) DPGR for the taxable year, over

(B) The sum of—

(*1*) COGS that are allocable to DPGR, and

(*2*) Other expenses, losses, or deductions (other than the section 199A(g) deduction) that are properly allocable to DPGR.

(C) *QPAI computational rules.* QPAI is computed without taking into account the section 199A(g) deduction or any deduction allowed under section 1382(b). *See* § 1.199A–10 for additional rules on calculating QPAI.

(5) *Step 4—Calculate deduction*—(i) *In general.* From QPAI and taxable income, a Specified Cooperative calculates its section 199A(g) deduction as provided in paragraph (b)(5)(ii) of this section.

(ii) *Deduction*—(A) *In general.* A Specified Cooperative is allowed a deduction equal to 9 percent of the lesser of—

(*1*) QPAI of the Specified Cooperative for the taxable year, or

(*2*) Taxable income of the Specified Cooperative for the taxable year.

(B) *W–2 wage limitation.* The deduction allowed under paragraph (b)(5)(ii)(A) of this section for any taxable year cannot exceed 50 percent of the patronage W–2 wages attributable to DPGR for the taxable year. *See* § 1.199A–11 for additional rules on calculating the patronage W–2 wage limitation.

(C) *Taxable income.* Taxable income is defined in section 63, and adjusted under section 1382 and § 1.1382–1 and § 1.1382–2. For purposes of determining the amount of the deduction allowed under paragraph (b)(5)(ii) of this section, taxable income is limited to taxable income and related deductions from patronage sources, other than as allowed under paragraph (b)(2)(ii) of this section. Taxable income is computed without taking into account the section 199A(g) deduction or any deduction allowable under section 1382(b). Patronage net operating losses (NOLs) reduce taxable income in the amount that the Specified Cooperative would use to reduce taxable income (no lower than zero) before using the section 199A(g) deduction, but do not reduce taxable income that is the result of not taking into account any deduction allowable under section 1382(b).

(6) *Use of patronage section 199A(g) deduction.* Except as provided in § 1.199A–12(c)(2) related to the rules for EAGs, the patronage section 199A(g) deduction cannot create or increase a patronage or nonpatronage NOL or the amount of a patronage or nonpatronage NOL carryover or carryback, if applicable, in accordance with section 172. A patronage section 199A(g) deduction can be applied only against patronage income and deductions. A patronage section 199A(g) deduction that is not used in the appropriate taxable year is lost. To the extent that a Specified Cooperative passes through the section 199A(g) deduction to patrons and appropriately adjusts the section 1382 deduction under § 1.199A–8(d), the amount passed through is not considered to create or increase a patronage or nonpatronage NOL or the amount of a patronage or nonpatronage NOL carryover or carryback, if applicable, in accordance with section 172.

(7) *Special rules for nonexempt Specified Cooperatives that have oil-related QPAI*—(i) *Reduction of section 199A(g) deduction.* If a Specified Cooperative has oil-related QPAI for any taxable year, the amount otherwise allowable as a deduction under paragraph (b)(5)(ii) of this section must be reduced by 3 percent of the least of—

(A) Oil-related QPAI of the Specified Cooperative for the taxable year,

(B) QPAI of the Specified Cooperative for the taxable year, or

(C) Taxable income of the Specified Cooperative for the taxable year.

(ii) *Oil-related QPAI* means, for any taxable year, the patronage QPAI that is attributable to the production, refining, processing, transportation, or distribution of oil, gas, or any primary product thereof (within the meaning of section 927(a)(2)(C), as in effect before

its repeal) during such taxable year. Oil-related QPAI for any taxable year is an amount equal to the excess (if any) of patronage DPGR derived from the production, refining or processing of oil, gas, or any primary product thereof (oil-related DPGR) over the sum of—

(A) COGS of the Specified Cooperative that is allocable to such receipts; and

(B) Other expenses, losses, or deductions (other than the section 199A(g) deduction) that are properly allocable to such receipts.

(iii) *Special rule for patronage oil-related DPGR.* Oil-related DPGR does not include gross receipts derived from the transportation or distribution of oil, gas, or any primary product thereof. However, to the extent that the nonexempt Specified Cooperative treats gross receipts derived from transportation or distribution of oil, gas, or any primary product thereof as part of DPGR under § 1.199A–9(c)(3)(i), or under § 1.199A–9(j)(3)(i)(B), then the Specified Cooperative must treat those patronage gross receipts as oil-related DGPR.

(iv) *Oil* includes oil recovered from both conventional and non-conventional recovery methods, including crude oil, shale oil, and oil recovered from tar/oil sands. The *primary product from oil* includes all products derived from the destructive distillation of oil, including volatile products, light oils such as motor fuel and kerosene, distillates such as naphtha, lubricating oils, greases and waxes, and residues such as fuel oil. The *primary product from gas* means all gas and associated hydrocarbon components from gas wells or oil wells, whether recovered at the lease or upon further processing, including natural gas, condensates, liquefied petroleum gases such as ethane, propane, and butane, and liquid products such as natural gasoline. The primary products from oil and gas provided in this paragraph (b)(7)(iv) are not intended to represent either the only primary products from oil or gas, or the only processes from which primary products may be derived under existing and future technologies. Examples of non-primary products include, but are not limited to, petrochemicals, medicinal products, insecticides, and alcohols.

(c) *Exempt Specified Cooperatives*—(1) *In general.* This paragraph (c) applies only to exempt Specified Cooperatives.

(2) *Two section 199A(g) deductions.* The Specified Cooperative must calculate two separate section 199A(g) deductions, one patronage sourced and the other nonpatronage sourced, unless a Specified Cooperative treats all of its nonpatronage gross receipts and related deductions as patronage as described in paragraph (b)(2)(ii) of this section. Patronage and nonpatronage gross receipts, related COGS that are allocable to DPGR, and other expenses, losses, or deductions (other than the section 199A(g) deduction) that are properly allocable to DPGR (deductions), DPGR, QPAI, NOLs, W–2 wages, etc. are not netted to calculate these two separate section 199A(g) deductions.

(3) *Exempt Specified Cooperative patronage section 199A(g) deduction.* The Specified Cooperative calculates its patronage section 199A(g) deduction following steps 1 through 4 in paragraphs (b)(2) through (5) of this section as if it were a nonexempt Specified Cooperative.

(4) *Exempt Specified Cooperative nonpatronage section 199A(g) deduction*—(i) *In general.* The Specified Cooperative calculates its nonpatronage section 199A(g) deduction following steps 2 through 4 in paragraphs (b)(2) through (5) of this section using only nonpatronage gross receipts and related nonpatronage deductions, unless a Specified Cooperative treats all of its nonpatronage gross receipts and related deductions as patronage as described in paragraph (b)(2)(ii) of this section. For purposes of determining the amount of the nonpatronage section 199A(g) deduction allowed under paragraph (b)(5)(ii) of this section, taxable income is limited to taxable income and related deductions from nonpatronage sources. Nonpatronage NOLs reduce taxable income. Taxable income is computed without taking into account the section 199A(g) deduction or any deduction allowable under section 1382(c).

(ii) *Use of nonpatronage section 199A(g) deduction.* Except as provided in § 1.199A–12(c)(2) related to the rules for EAGs, the nonpatronage section 199A(g) deduction cannot create or increase a nonpatronage NOL or the amount of nonpatronage NOL carryover or carryback, if applicable, in accordance with section 172. A Specified Cooperative cannot pass through its nonpatronage section 199A(g) deduction under paragraph (d) of this section and can apply the nonpatronage section 199A(g) deduction only against its nonpatronage income and deductions. As is the case for the patronage section 199A(g) deduction, the nonpatronage section 199A(g) deduction that a Specified Cooperative does not use in the appropriate taxable year is lost.

(d) *Discretion to pass through deduction*—(1)(i) *In general.* A Specified Cooperative may, at its discretion, pass through all, some, or none of its patronage section 199A(g) deduction to all patrons. Only eligible taxpayers as defined in section 199A(g)(2)(D) may claim the section 199A(g) deduction that is passed through. A Specified Cooperative member of a federated cooperative may pass through the patronage section 199A(g) deduction it receives from the federated cooperative to its member patrons.

(ii) *Specified Cooperative identifies eligibility of patron.* If a Specified Cooperative determines that a patron is not an eligible taxpayer, then the Specified Cooperative may, at its discretion, retain any of the patronage section 199A(g) deduction attributable to the patron that would otherwise be passed through and lost under the general rule in paragraph (d)(1)(i) of this section.

(2) *Amount of deduction being passed through*—(i) *In general.* A Specified Cooperative is permitted to pass through an amount equal to the portion of the Specified Cooperative's section 199A(g) deduction that is allowed with respect to the portion of the cooperative's QPAI that is attributable to the qualified payments the Specified Cooperative distributed to the patron during the taxable year and identified on the notice required in § 1.199A–7(f)(3) on an attachment to or on the Form 1099–PATR, Taxable Distributions Received From Cooperatives (Form 1099–PATR), (or any successor form) issued by the Specified Cooperative to the patron, unless otherwise provided by the instructions to the Form. The notice requirement to pass through the section 199A(g) deduction is in paragraph (d)(3) of this section.

(ii) *Qualified payment* means any amount of a patronage dividend or per-unit retain allocation, as described in section 1385(a)(1) or (3) received by a patron from a Specified Cooperative that is attributable to the portion of the Specified Cooperative's QPAI, for which the cooperative is allowed a section 199A(g) deduction. For this purpose, patronage dividends include any advances on patronage and per-unit retain allocations include per-unit retains paid in money during the taxable year.

(3) *Notice requirement to pass through deduction.* A Specified Cooperative must identify in a written notice the amount of the section 199A(g) deduction being passed through to its patrons. This written notice must be mailed by the Specified Cooperative to the patron no later than the 15th day of the ninth month following the close of the taxable year of the Specified Cooperative. The Specified Cooperative may use the same written notice, if any,

that it uses to notify the patron of the patron's respective allocations of patronage distributions, or may use a separate timely written notice(s) to comply with this section. The Specified Cooperative must report the amount of section 199A(g) deduction passed through to the patron on an attachment to or on the Form 1099–PATR (or any successor form) issued by the Specified Cooperative to the patron, unless otherwise provided by the instructions to the Form.

(4) *Section 199A(g) deduction allocated to eligible taxpayer.* An eligible taxpayer may deduct the lesser of the section 199A(g) deduction identified on the notice described in paragraph (d)(3) of this section or the eligible taxpayer's taxable income in the taxable year in which the eligible taxpayer receives the timely written notice described in paragraph (d)(3) of this section. For this purpose, the eligible taxpayer's taxable income is determined without taking into account the section 199A(g) deduction being passed through to the eligible taxpayer and after taking into account any section 199A(a) deduction allowed to the eligible taxpayer. Any section 199A(g) deduction the eligible taxpayer does not use in the taxable year in which the eligible taxpayer receives the notice (received on or before the due date of the Form 1099–PATR) is lost and cannot be carried forward or back to other taxable years. The taxable income limitation for the section 199A(a) deduction set forth in section 199A(b)(3) and § 1.199A–1(a) and (b) does not apply to limit the deductibility of the section 199A(g) deduction passed through to the eligible taxpayer.

(5) *Special rules for eligible taxpayers that are Specified Cooperatives.* Any Specified Cooperative that receives a section 199A(g) deduction as an eligible taxpayer can take the deduction against patronage gross income and related deductions to the extent it relates to its patronage gross income and related deductions. Only a patron that is an exempt Specified Cooperative may take a section 199A(g) deduction passed through from another Specified Cooperative if the deduction relates to the patron Specified Cooperative's nonpatronage gross income and related deductions.

(6) *W–2 wage limitation.* The W–2 wage limitation described in paragraph (b)(5)(ii)(B) of this section is applied at the cooperative level whether or not the Specified Cooperative chooses to pass through some or all of the section 199A(g) deduction. Any section 199A(g) deduction that has been passed through by a Specified Cooperative to an eligible taxpayer is not subject to the W–2 wage limitation a second time at the eligible taxpayer's level.

(7) *Specified Cooperative denied section 1382 deduction for portion of qualified payments.* A Specified Cooperative must reduce its section 1382 deduction by an amount equal to the portion of any qualified payment that is attributable to the Specified Cooperative's section 199A(g) deduction passed through. This means the Specified Cooperative must reduce its section 1382 deduction in an amount equal to the section 199A(g) deduction passed through.

(8) *No double counting.* A qualified payment received by a Specified Cooperative that is a patron of a Specified Cooperative is not taken into account by the patron for purposes of section 199A(g).

(e) *Examples.* The following examples illustrate the application of paragraphs (a), (b), (c), and (d) of this section. The examples of this section apply solely for purposes of section 199A of the Code. Assume for each example that the Specified Cooperative sent all required notices to patrons on or before the due date of the Form 1099–PATR.

(1) *Example 1. Nonexempt Specified Cooperative calculating section 199A(g) deduction.* (i) C is a grain marketing nonexempt Specified Cooperative, with $5,250,000 in gross receipts during 2020 from the sale of grain grown by its patrons. C paid $4,000,000 to its patrons at the time the grain was delivered in the form of per-unit retain allocations and another $1,000,000 in patronage dividends after the close of the 2020 taxable year. C has other expenses of $250,000 during 2020, including $100,000 of W–2 wages.

(ii) C has DPGR of $5,250,000 and QPAI as defined in § 1.199A–8(b)(4)(ii) of $5,000,000 for 2020. C's section 199A(g) deduction is equal to the least of 9% of QPAI ($450,000), 9% of taxable income ($450,000), or 50% of W–2 wages ($50,000). C passes through the entire section 199A(g) deduction to its patrons. Accordingly, C reduces its $5,000,000 deduction allowable under section 1382(b) (relating to the $1,000,000 patronage dividends and $4,000,000 per-unit retain allocations) by $50,000.

(2) *Example 2. Nonexempt Specified Cooperative determines amounts included in QPAI and taxable income.* (i) C, a nonexempt Specified Cooperative, offers harvesting services and markets the grain of patrons and nonpatrons. C had gross receipts from harvesting services and grain sales, and expenses related to both. All of C's harvesting services were performed for their patrons, and 75% of the grain sales were for patrons.

(ii) C identifies 75% of the gross receipts and related expenses from grain sales and 100% of the gross receipts and related expenses from the harvesting services as patronage sourced. C identifies 25% of the gross receipts and related expenses from grain sales as nonpatronage sourced.

(iii) C does not include any nonpatronage gross receipts or related expenses from grain sales in either QPAI or taxable income when calculating the section 199A(g) deduction. C's QPAI includes the patronage DPGR, less related expenses (allocable COGS, wages and other expenses). C's taxable income includes the patronage gross receipts, whether such gross receipts are DPGR or non-DPGR.

(iv) C allocates and reports patronage dividends to its harvesting patrons and grain marketing patrons. C also notifies its grain marketing patrons (in accordance with the requirements of § 1.199A–7(f)(3)) that their patronage dividends are qualified payments used in C's section 199A(g) computation. The patrons must use this information for purposes of computing their section 199A(b)(7) reduction to their section 199A(a) deduction (*see* § 1.199A–7(f)).

(3) *Example 3. Nonexempt Specified Cooperative with patronage and nonpatronage gross receipts and related deductions.* (i) C, a nonexempt Specified Cooperative, markets corn grown by its patrons in the United States. For the calendar year ending December 31, 2020, C derives gross receipts from the marketing activity of $1,800. Such gross receipts qualify as DPGR. Assume C has $800 of expenses (including COGS, other expenses, and $400 of W–2 wages) properly allocable to DPGR, and a $1,000 deduction allowed under section 1382(b). C also derives gross receipts from nonpatronage sources in the amount of $500, and has nonpatronage deductions in the amount of $400 (including COGS, other expenses, and $100 of W–2 wages).

(ii) C does not include any gross receipts or deductions from nonpatronage sources when calculating the deduction under paragraph (b)(5)(ii) of this section. C's QPAI and taxable income both equal $1,000 ($1,800 − 800). C's deduction under paragraph (b)(5)(ii) of this section for the taxable year is equal to $90 (9% of $1,000), which does not exceed $200 (50% of C's W–2 wages properly allocable to DPGR). C passes through $90 of the deduction to patrons and C reduces its section 1382(b) deduction by $90.

(4) *Example 4. Exempt Specified Cooperative with patronage and nonpatronage income and deductions.* (i) C, an exempt Specified Cooperative, markets corn MPGE by its patrons in the United States. For the calendar year ending December 31, 2020, C derives gross receipts from the marketing activity of $1,800. For this activity assume C has $800 of expenses (including COGS, other expenses, and $400 of W–2 wages) properly allocable to DPGR, and a $1,000 deduction under section 1382(b). C also derives gross receipts from nonpatronage sources in the amount of $500. Assume the gross receipts qualify as DPGR. For this activity assume C has $400 of expenses (including COGS, other expenses, and $20 of W–2 wages) properly allocable to DPGR and no deduction under section 1382(c).

(ii) C calculates two separate section 199A(g) deduction amounts. C's section 199A(g) deduction attributable to patronage sources is the same as the deduction calculated by the nonexempt Specified Cooperative in *Example 1* in paragraph (e)(1) of this section.

(iii) C's nonpatronage QPAI and taxable income is equal to $100 ($500 − $400). C's deduction under paragraph (c)(4) of this section that directs C to use paragraph (b)(5)(ii) of this section attributable to nonpatronage sources is equal to $9 (9% of $100), which does not exceed $10 (50% of C's W–2 wages properly allocable to DPGR). C cannot pass through any of the nonpatronage section 199A(g) deduction amount to its patrons.

(5) *Example 5. NOL.* (i) In 2021, E, a nonexempt Specified Cooperative that is not part of an EAG, generates QPAI and taxable income of $100 (without taking into account any section 1382(b) deductions, NOLs, or the section 199A(g) deduction). E pays out patronage dividends of $91 that are deductible under section 1382(b). E has an NOL carryover of $500 attributable to losses incurred prior to 2018. While taxable income and QPAI do not take into account the section 1382(b) deduction, taxable income does take into account NOLs. When calculating its section 199A(g) deduction, E must take into account the NOL carryover when calculating taxable income, unless the taxable income is the result of not taking into account any deduction allowable under section 1382(b). In this case $91 of taxable income is the result of not taking into account the deduction allowed under section 1382(b) and the remaining $9 should be reduced by the NOL carryover so that taxable income equals $91. E calculates a section 199A(g) deduction of $8.19 (.09 × $91 (which is the lesser of $100 QPAI or $91 taxable income)).

(ii) E may pass through the entire $8.19 of section 199A(g) deduction to patrons (which will reduce its section 1382(b) deduction from $91 to $82.81). However, if E does not pass the deduction through, paragraph (b)(6) of this section prohibits E from claiming any of the section 199A(g) deduction in 2021.

(iii) If E passes through the deduction to patrons, E's taxable income under section 172(b)(2) for NOL absorption purposes is $9 ($100 − $82.81 − $9 NOL − $8.19 section 199A(g) deduction). If E does not pass through the deduction, then E's taxable income under section 172(b)(2) for NOL absorption purposes is $9 ($100 − $91 − $9 NOL).

(iv) Assuming E passes through the deduction to patrons, E would use $9 of the NOL carryover and have a $491 NOL carryover remaining. To the extent E does not pass through the deduction, E would still use $9 of the NOL carryover and have a $491 NOL carryover remaining.

(6) *Example 6. Nonexempt Specified Cooperative not passing through the section 199A(g) deduction to patrons.* (i) D, a nonexempt Specified Cooperative, markets corn grown by its patrons within the United States. For its calendar year ended December 31, 2020, D has gross receipts of $1,500,000, all derived from the sale of corn grown by its patrons within the United States. D pays $300,000 for its patrons' corn at the time the grain was delivered in the form of per-unit retain allocations and its W–2 wages (as defined in § 1.199A–11)) for 2020 total $200,000. D has no other costs. Patron A is a patron of D. Patron A is a cash basis taxpayer and files Federal income tax returns on a calendar year basis. All corn grown by Patron A in 2020 is sold through D and Patron A is eligible to share in patronage dividends paid by D for that year.

(ii) All of D's gross receipts from the sale of its patrons' corn qualify as DPGR (as defined paragraph (8)(b)(3)(ii) of this section). D's QPAI and taxable income is $1,300,000. D's section 199A(g) deduction for its taxable year 2020 is $117,000 (.09 × $1,300,000). Because this amount is less than 50% of Cooperative X's W–2 wages, the entire amount is allowed as a section 199A(g) deduction. D decides not to pass any of its section 199A(g) deduction to its patrons. The section 199A(g) deduction of $117,000 is applied to, and reduces, D's taxable income.

(7) *Example 7. Nonexempt Specified Cooperative passing through the section 199A(g) deduction to patrons paid a patronage dividend.* (i) The facts are the same as in Example 6 except that D decides to pass its entire section 199A(g) deduction through to its patrons. D declares a patronage dividend for its 2020 taxable year of $1,000,000, which it pays on March 15, 2021. Pursuant to paragraph (d)(3) of this section, D notifies patrons in written notices that accompany the patronage dividend notification that D is allocating to them the section 199A(g) deduction D is entitled to claim in the calendar year 2020. On March 15, 2021, Patron A receives a $10,000 patronage dividend that is a qualified payment under paragraph (d)(2)(ii) of this section from D. In the notice that accompanies the patronage dividend, Patron A is designated a $1,170 section 199A(g) deduction. Under paragraph (a) of this section, Patron A may claim a $1,170 section 199A(g) deduction for the taxable year ending December 31, 2021, subject to the limitations set forth under paragraph (d)(4) of this section. D must report the allowable amount of Patron A's section 199A(g) deduction on Form 1099–PATR, ''Taxable Distributions Received From Cooperatives,'' issued to Patron A for the calendar year 2021.

(ii) Under paragraph (d)(7) of this section, D is required to reduce its section 1382 deduction of $1,300,000 by the $117,000 section 199A(g) deduction passed through to patrons (whether D pays patronage dividends on book or Federal income tax net earnings). As a consequence, D is entitled to a section 1382 deduction for the taxable year ending December 31, 2020, in the amount of $1,183,000 ($1,300,000 − $117,000) and to a section 199A(g) deduction in the amount of $117,000 ($1,300,000 × .09). Its taxable income for 2020 is $0.

(8) *Example 8. Nonexempt Specified Cooperative passing through the section 199A(g) deduction to patrons paid a patronage dividend and advances on expected patronage net earnings.* (i) The facts are the same as in Example 6 except that D paid out $500,000 to its patrons as advances on expected patronage net earnings. In 2020, D pays its patrons a $500,000 ($1,000,000 − $500,000 already paid) patronage dividend in cash or a combination of cash and qualified written notices of allocation. Under paragraph (d)(7) of this section and section 1382, D is allowed a deduction of $1,183,000 ($1,300,000 − $117,000 section 199A(g) deduction), whether patronage net earnings are distributed on book or Federal income tax net earnings.

(ii) The patrons will have received a gross amount of $1,300,000 in qualified

payments under paragraph (d)(2)(ii) of this section from Cooperative D ($300,000 paid as per-unit retain allocations, $500,000 paid during the taxable year as advances, and the additional $800,000 paid as patronage dividends). If D passes through its entire section 199A(g) deduction to its patrons by providing the notice required by paragraph (d)(3) of this section, then the patrons will be allowed a $117,000 section 199A(g) deduction, resulting in a net $1,183,000 taxable distribution from D. Pursuant to paragraph (d)(8) of this section, any of the $1,300,000 received by patrons that are Specified Cooperatives from D is not taken into account for purposes of calculating the patrons' section 199A(g) deduction. Patrons that are not Specified Cooperatives must include those payments in the section 199A(b)(7) reduction when calculating a section 199A(a) deduction as applicable.

(9) *Example 9. Intangible property transaction as part of disposition of agricultural or horticultural products.* F, a Specified Cooperative, markets patrons' oranges by processing the oranges into orange juice, and then bottling and selling the orange juice to customers. F markets the orange juice under its own brand name, but F also licenses from G, an unrelated third party, the rights to use G's brand name on the bottled orange juice. F's gross receipts from the sale of both brands of orange juice qualify as DPGR, assuming all other requirements of this section are met.

(10) *Example 10. Intangible property transaction that is not a disposition of an agricultural or horticultural product.* H, a Specified Cooperative, licenses H's brand name to J, an unrelated third party. J purchases oranges, produces orange juice, and then bottles and sells the orange juice to customers. Gross receipts that H derives from the license of the brand name to J are not DPGR from the disposition of an agricultural or horticultural product.

(11) *Example 11. Allocation rules when Specified Cooperative retains the section 199A(g) deduction attributable to non-eligible taxpayers.* K, a Specified Cooperative, for the taxable year has $200 of taxable income and QPAI ($100 is attributable to business done for patrons that are C corporation patrons and $100 is attributable to business done for patrons that are eligible taxpayers). K calculates an $18 section 199A(g) deduction. K passes through $9 to its patrons that are eligible taxpayers, distributes $191 to patrons in distributions that are deductible under section 1382(b) (including patronage dividends that were paid out in the same amounts to C corporation patrons and eligible taxpayer patrons because the value of their business,$100 each, was the same), and adjusts its deduction under section 1382 by $9 (the amount of the section 199A(g) deduction passed through). K's taxable income after the section 199A deduction and distributions is $0.

(f) *Special rule for Specified Cooperative partners.* In the case described in section 199A(g)(5)(B), where a Specified Cooperative is a partner in a partnership, the partnership must separately identify and report on the Schedule K–1 of the Form 1065, U.S. Return of Partnership Income (or any successor form) issued to the Specified Cooperative partner the cooperative's share of gross receipts and related deductions, unless otherwise provided by the instructions to the Form. The Specified Cooperative partner determines what gross receipts reported by the partnership qualify as DPGR and includes these gross receipts and related deductions, W–2 wages, and COGS to calculate one section 199A(g) deduction (in the case of a nonexempt Specified Cooperative) or two section 199A(g) deductions (in the case of an exempt Specified Cooperative) using the steps set forth in paragraphs (b) and (c) of this section. For purposes of determining whether gross receipts are DPGR, the MPGE activities of the Specified Cooperative partner may be attributed to the partnership, and the partnership's MPGE activities may be attributed to the Specified Cooperative partner.

(g) *Recapture of section 199A(g) deduction.* If the amount of the section 199A(g) deduction that was passed through to eligible taxpayers exceeds the amount allowable as a section 199A(g) deduction as determined on examination or reported on an amended return, then recapture of the excess will occur at the Specified Cooperative level in the taxable year the Specified Cooperative took the excess section 199A(g) deduction.

(h) *Applicability date.* Except as provided in paragraph (h)(2) of § 1.199A–7, the provisions of this section apply to taxable years beginning after January 19, 2021. Taxpayers, however, may choose to apply the rules of §§ 1.199A–7 through 1.199A–12 for taxable years beginning on or before that date, provided the taxpayers apply the rules in their entirety and in a consistent manner.

§ 1.199A–9 Domestic production gross receipts.

(a) *Domestic production gross receipts*—(1) *In general.* The provisions of this section apply solely for purposes of section 199A(g) of the Internal Revenue Code (Code). The provisions of this section provide guidance to determine what gross receipts (defined in § 1.199A–8(b)(2)(iii)) are domestic production gross receipts (DPGR) (defined in § 1.199A–8(b)(3)(ii)). DPGR does not include gross receipts derived from services or the lease, rental, license, sale, exchange, or other disposition of land unless a de minimis or other exception applies. Partners, including partners in an EAG partnership described in § 1.199A–12(i)(1), may not treat guaranteed payments under section 707(c) as DPGR.

(2) *Application to marketing cooperatives.* For purposes of determining DPGR, a Specified Cooperative (defined in § 1.199A–8(a)(2)) will be treated as having manufactured, produced, grown, or extracted (MPGE) (defined in paragraph (f) of this section) in whole or significant part (defined in paragraph (h) of this section) any agricultural or horticultural product (defined in § 1.199A–8(a)(4)) within the United States (defined in paragraph (i) of this section) marketed by the Specified Cooperative which its patrons (defined in § 1.1388–1(e)) have so MPGE.

(b) *Related persons*—(1) *In general.* Pursuant to section 199A(g)(3)(D)(ii), DPGR does not include any gross receipts derived from agricultural or horticultural products leased, licensed, or rented by the Specified Cooperative for use by any related person. A person is treated as related to another person if both persons are treated as a single employer under either section 52(a) or (b) (without regard to section 1563(b)), or section 414(m) or (o). Any other person is an unrelated person for purposes of the section 199A(g) deduction.

(2) *Exceptions.* Notwithstanding paragraph (b)(1) of this section, gross receipts derived from any agricultural or horticultural product leased or rented by the Specified Cooperative to a related person may qualify as DPGR if the agricultural or horticultural product is held for sublease or rent, or is subleased or rented, by the related person to an unrelated person for the ultimate use of the unrelated person. Similarly, notwithstanding paragraph (b)(1) of this section, gross receipts derived from a license of the right to reproduce an agricultural or horticultural product to a related person for reproduction and sale, exchange, lease, or rental to an unrelated person for the ultimate use of the unrelated person are treated as gross receipts from a disposition of an

agricultural or horticultural product and may qualify as DPGR.

(c) *Allocating gross receipts*—(1) *In general.* A Specified Cooperative must determine the portion of its gross receipts for the taxable year that is DPGR and the portion of its gross receipts that is non-DPGR using a reasonable method based on all the facts and circumstances. Applicable Federal income tax principles apply to determine whether a transaction is, in substance, a lease, rental, license, sale, exchange, or other disposition the gross receipts of which may constitute DPGR, whether it is a service the gross receipts of which may constitute non-DPGR, or some combination thereof. For example, if a Specified Cooperative sells an agricultural or horticultural product and, in connection with that sale, also provides services, the Specified Cooperative must allocate its gross receipts from the transaction using a reasonable method based on all the facts and circumstances that accurately identifies the gross receipts that constitute DPGR and non-DPGR in accordance with the requirements of § 1.199A–8(b) and/or (c). The chosen reasonable method must be consistently applied from one taxable year to another and must clearly reflect the portion of gross receipts for the taxable year that is DPGR and the portion of gross receipts that is non-DPGR. The books and records maintained for gross receipts must be consistent with any allocations under this paragraph (c)(1).

(2) *Reasonable method of allocation.* If a Specified Cooperative has the information readily available and can, without undue burden or expense, specifically identify whether the gross receipts are derived from an item (and thus, are DPGR), then the Specified Cooperative must use that specific identification to determine DPGR. If the Specified Cooperative does not have information readily available to specifically identify whether gross receipts are derived from an item or cannot, without undue burden or expense, specifically identify whether gross receipts are derived from an item, then the Specified Cooperative is not required to use a method that specifically identifies whether the gross receipts are derived from an item but can use a reasonable allocation method. Factors taken into consideration in determining whether the Specified Cooperative's method of allocating gross receipts between DPGR and non-DPGR is reasonable include whether the Specified Cooperative uses the most accurate information available; the relationship between the gross receipts and the method used; the accuracy of the method chosen as compared with other possible methods; whether the method is used by the Specified Cooperative for internal management or other business purposes; whether the method is used for other Federal or state income tax purposes; the time, burden, and cost of using alternative methods; and whether the Specified Cooperative applies the method consistently from year to year.

(3) *De minimis rules*—(i) *DPGR.* A Specified Cooperative's applicable gross receipts as provided in § 1.199A–8(b) and/or (c) may be treated as DPGR if less than 10 percent of the Specified Cooperative's total gross receipts are non-DPGR (after application of the exceptions provided in § 1.199A–9(j)(3)). If the amount of the Specified Cooperative's gross receipts that are non-DPGR equals or exceeds 10 percent of the Specified Cooperative's total gross receipts, then, except as provided in paragraph (c)(3)(ii) of this section, the Specified Cooperative is required to allocate all gross receipts between DPGR and non-DPGR in accordance with paragraph (c)(1) of this section. If a Specified Cooperative is a member of an expanded affiliated group (EAG) (defined in § 1.199A–12), but is not a member of a consolidated group, then the determination of whether less than 10 percent of the Specified Cooperative's total gross receipts are non-DPGR is made at the Specified Cooperative level. If a Specified Cooperative is a member of a consolidated group, then the determination of whether less than 10 percent of the Specified Cooperative's total gross receipts are non-DPGR is made at the consolidated group level. *See* § 1.199A–12(d).

(ii) *Non-DPGR.* A Specified Cooperative's applicable gross receipts as provided in §§ 1.199A–8(b) and/or (c) may be treated as non-DPGR if less than 10 percent of the Specified Cooperative's total gross receipts are DPGR. If a Specified Cooperative is a member of an EAG, but is not a member of a consolidated group, then the determination of whether less than 10 percent of the Specified Cooperative's total gross receipts are DPGR is made at the Specified Cooperative level. If a Specified Cooperative is a member of a consolidated group, then the determination of whether less than 10 percent of the Specified Cooperative's total gross receipts are DPGR is made at the consolidated group level.

(d) *Use of historical data for multiple-year transactions.* If a Specified Cooperative recognizes and reports gross receipts from upfront payments or other similar payments on a Federal income tax return for a taxable year, then the Specified Cooperative's use of historical data in making an allocation of gross receipts from the transaction between DPGR and non-DPGR may constitute a reasonable method. If a Specified Cooperative makes allocations using historical data, and subsequently updates the data, then the Specified Cooperative must use the more recent or updated data, starting in the taxable year in which the update is made.

(e) *Determining DPGR item-by-item*—(1) *In general.* For purposes of the section 199A(g) deduction, a Specified Cooperative determines, using a reasonable method based on all the facts and circumstances, whether gross receipts qualify as DPGR on an item-by-item basis (and not, for example, on a division-by-division, product line-by-product line, or transaction-by-transaction basis). The chosen reasonable method must be consistently applied from one taxable year to another and must clearly reflect the portion of gross receipts that is DPGR. The books and records maintained for gross receipts must be consistent with any allocations under this paragraph (e)(1).

(i) The term *item* means the agricultural or horticultural product offered by the Specified Cooperative in the normal course of its trade or business for lease, rental, license, sale, exchange, or other disposition (for purposes of this paragraph (e), collectively referred to as disposition) to customers, if the gross receipts from the disposition of such product qualify as DPGR; or

(ii) If paragraph (e)(1)(i) of this section does not apply to the product, then any component of the product described in paragraph (e)(1)(i) of this section is treated as the item, provided that the gross receipts from the disposition of the product described in paragraph (e)(1)(i) of this section that are attributable to such component qualify as DPGR. Each component that meets the requirements under this paragraph (e)(1)(ii) must be treated as a separate item and a component that meets the requirements under this paragraph (e)(1)(ii) may not be combined with a component that does not meet these requirements.

(2) *Special rules.* (i) For purposes of paragraph (e)(1)(i) of this section, in no event may a single item consist of two or more products unless those products are offered for disposition, in the normal course of the Specified Cooperative's trade or business, as a single item (regardless of how the products are packaged).

(ii) In the case of agricultural or horticultural products customarily sold

by weight or by volume, the item is determined using the most common custom of the industry (for example, barrels of oil).

(3) *Exception.* If the Specified Cooperative MPGE agricultural or horticultural products within the United States that it disposes of, and the Specified Cooperative leases, rents, licenses, purchases, or otherwise acquires property that contains or may contain the agricultural or horticultural products (or a portion thereof), and the Specified Cooperative cannot reasonably determine, without undue burden and expense, whether the acquired property contains any of the original agricultural or horticultural products MPGE by the Specified Cooperative, then the Specified Cooperative is not required to determine whether any portion of the acquired property qualifies as an item for purposes of paragraph (e)(1) of this section. Therefore, the gross receipts derived from the disposition of the acquired property may be treated as non-DPGR. Similarly, the preceding sentences apply if the Specified Cooperative can reasonably determine that the acquired property contains agricultural or horticultural products (or a portion thereof) MPGE by the Specified Cooperative, but cannot reasonably determine, without undue burden or expense, how much, or what type, grade, etc., of the agricultural or horticultural MPGE by the Specified Cooperative the acquired property contains.

(f) *Definition of manufactured, produced, grown, or extracted (MPGE)*—(1) *In general.* Except as provided in paragraphs (f)(2) and (3) of this section, the term *MPGE* includes manufacturing, producing, growing, extracting, installing, developing, improving, and creating agricultural or horticultural products; making agricultural or horticultural products out of material by processing, manipulating, refining, or changing the form of an article, or by combining or assembling two or more articles; cultivating soil, raising livestock, and farming aquatic products. The term MPGE also includes storage, handling, or other processing activities (other than transportation activities) within the United States related to the sale, exchange, or other disposition of agricultural or horticultural products only if the products are consumed in connection with or incorporated into the MPGE of agricultural or horticultural products, whether or not by the Specified Cooperative. The Specified Cooperative (or the patron if § 1.199A–9(a)(2) applies) must have the benefits and burdens of ownership of the agricultural or horticultural products under Federal income tax principles during the period the MPGE activity occurs for the gross receipts derived from the MPGE of the agricultural or horticultural products to qualify as DPGR.

(2) *Packaging, repackaging, or labeling.* If the Specified Cooperative packages, repackages, or labels agricultural or horticultural products and engages in no other MPGE activity with respect to those agricultural or horticultural products, the packaging, repackaging, or labeling does not qualify as MPGE with respect to those agricultural or horticultural products.

(3) *Installing.* If a Specified Cooperative installs agricultural or horticultural products and engages in no other MPGE activity with respect to the agricultural or horticultural products, the Specified Cooperative's installing activity does not qualify as an MPGE activity. Notwithstanding paragraph (j)(3)(i)(A) of this section, if the Specified Cooperative installs agricultural or horticultural products MPGE by the Specified Cooperative and the Specified Cooperative has the benefits and burdens of ownership of the agricultural or horticultural products under Federal income tax principles during the period the installing activity occurs, then the portion of the installing activity that relates to the agricultural or horticultural products is an MPGE activity.

(4) *Consistency with section 263A.* A Specified Cooperative that has MPGE agricultural or horticultural products for the taxable year must treat itself as a producer under section 263A with respect to the agricultural or horticultural products unless the Specified Cooperative is not subject to section 263A. A Specified Cooperative that currently is not properly accounting for its production activities under section 263A, and wishes to change its method of accounting to comply with the producer requirements of section 263A, must follow the applicable administrative procedures issued under § 1.446–1(e)(3)(ii) for obtaining the Commissioner's consent to a change in accounting method (for further guidance, for example, *see* Rev. Proc. 2015–13, 2015–5 IRB 419, or any applicable subsequent guidance (*see* § 601.601(d)(2) of this chapter)).

(5) *Examples.* The following examples illustrate the application of paragraphs (f)(1), (2), and (3) of this section.

(i) *Example 1. MPGE activities conducted within United States.* A, B, and C are unrelated persons. A is a Specified Cooperative, B is an individual patron of A, and C is a C corporation. B grows agricultural products outside of the United States and A markets those agricultural products for B. A stores the agricultural products in agricultural storage bins in the United States and has the benefits and burdens of ownership under Federal income tax principles of the agricultural products while they are being stored. A sells the agricultural products to C, who processes them into refined agricultural products in the United States. The gross receipts from A's activities are DPGR from the MPGE of agricultural products.

(ii) *Example 2. MPGE activities conducted within and outside United States.* The facts are the same as in Example 1 except that B grows the agricultural products outside the United States and C processes them into refined agricultural products outside the United States. Pursuant to paragraph (f)(1) of this section, the gross receipts derived by A from its sale of the agricultural products to C are DPGR from the MPGE of agricultural products within the United States.

(g) *By the taxpayer.* With respect to the exception of the rules applicable to an EAG and EAG partnerships under § 1.199A–12, only one Specified Cooperative may claim the section 199A(g) deduction with respect to any qualifying activity under paragraph (f) of this section performed in connection with the same agricultural or horticultural product. If an unrelated party performs a qualifying activity under paragraph (f) of this section pursuant to a contract with a Specified Cooperative (or its patron as relevant under paragraph (a)(2) of this section), then only if the Specified Cooperative (or its patron) has the benefits and burdens of ownership of the agricultural or horticultural product under Federal income tax principles during the period in which the qualifying activity occurs is the Specified Cooperative (or its patron) treated as engaging in the qualifying activity.

(h) *In whole or significant part defined*—(1) *In general.* Agricultural or horticultural products must be MPGE in whole or significant part by the Specified Cooperative (or its patrons in the case described in paragraph (a)(2) of this section) and in whole or significant part within the United States to qualify under section 199A(g)(3)(D)(i). If a Specified Cooperative enters into a contract with an unrelated person for the unrelated person to MPGE agricultural or horticultural products for the Specified Cooperative and the Specified Cooperative has the benefits and burdens of ownership of the

agricultural or horticultural products under applicable Federal income tax principles during the period the MPGE activity occurs, then, pursuant to paragraph (g) of this section, the Specified Cooperative is considered to MPGE the agricultural or horticultural products under this section. The unrelated person must perform the MPGE activity on behalf of the Specified Cooperative in whole or significant part within the United States in order for the Specified Cooperative to satisfy the requirements of this paragraph (h)(1).

(2) *Substantial in nature.* Agricultural or horticultural products will be treated as MPGE in whole or in significant part by the Specified Cooperative (or its patrons in the case described in paragraph (a)(2) of this section) within the United States for purposes of paragraph (h)(1) of this section. However, MPGE of the agricultural or horticultural products by the Specified Cooperative within the United States must be substantial in nature taking into account all the facts and circumstances, including the relative value added by, and relative cost of, the Specified Cooperative's MPGE within the United States, the nature of the agricultural or horticultural products, and the nature of the MPGE activity that the Specified Cooperative performs within the United States. The MPGE of a key component of an agricultural or horticultural product does not, in itself, meet the substantial-in-nature requirement with respect to an agricultural or horticultural product under this paragraph (h)(2). In the case of an agricultural or horticultural product, research and experimental activities under section 174 and the creation of intangible assets are not taken into account in determining whether the MPGE of the agricultural or horticultural product is substantial in nature.

(3) *Safe harbor*—(i) *In general.* A Specified Cooperative (or its patrons in the case described in paragraph (a)(2) of this section) will be treated as having MPGE an agricultural or horticultural product in whole or in significant part within the United States for purposes of paragraph (h)(1) of this section if the direct labor and overhead of such Specified Cooperative to MPGE the agricultural or horticultural product within the United States account for 20 percent or more of the Specified Cooperative's COGS of the agricultural or horticultural product, or in a transaction without COGS (for example, a lease, rental, or license), account for 20 percent or more of the Specified Cooperative's unadjusted depreciable basis (as defined in paragraph (h)(3)(ii) of this section) in property included in the definition of agricultural or horticultural products. For Specified Cooperatives subject to section 263A, overhead is all costs required to be capitalized under section 263A except direct materials and direct labor. For Specified Cooperatives not subject to section 263A, overhead may be computed using a reasonable method based on all the facts and circumstances, but may not include any cost, or amount of any cost, that would not be required to be capitalized under section 263A if the Specified Cooperative were subject to section 263A. Research and experimental expenditures under section 174 and the costs of creating intangible assets are not taken into account in determining direct labor or overhead for any agricultural or horticultural product. In the case of agricultural or horticultural products, research and experimental expenditures under section 174 and any other costs incurred in the creation of intangible assets may be excluded from COGS or unadjusted depreciable basis for purposes of determining whether the Specified Cooperative meets the safe harbor under this paragraph (h)(3). For Specified Cooperatives not subject to section 263A, the chosen reasonable method to compute overhead must be consistently applied from one taxable year to another and must clearly reflect the Specified Cooperative's portion of overhead not subject to section 263A. The method must also be reasonable based on all the facts and circumstances. The books and records maintained for overhead must be consistent with any allocations under this paragraph (h)(3)(i).

(ii) *Unadjusted depreciable basis.* The term unadjusted depreciable basis means the basis of property for purposes of section 1011 without regard to any adjustments described in section 1016(a)(2) and (3). This basis does not reflect the reduction in basis for—

(A) Any portion of the basis the Specified Cooperative properly elects to treat as an expense under sections 179 or 179C; or

(B) Any adjustments to basis provided by other provisions of the Code and the regulations under the Code (for example, a reduction in basis by the amount of the disabled access credit pursuant to section 44(d)(7)).

(4) *Special rules*—(i) *Contract with an unrelated person.* If a Specified Cooperative enters into a contract with an unrelated person for the unrelated person to MPGE an agricultural or horticultural product within the United States for the Specified Cooperative, and the Specified Cooperative is considered to MPGE the agricultural or horticultural product pursuant to paragraph (f)(1) of this section, then, for purposes of the substantial-in-nature requirement under paragraph (h)(2) of this section and the safe harbor under paragraph (h)(3)(i) of this section, the Specified Cooperative's MPGE activities or direct labor and overhead must include both the Specified Cooperative's MPGE activities or direct labor and overhead to MPGE the agricultural or horticultural product within the United States as well as the MPGE activities or direct labor and overhead of the unrelated person to MPGE the agricultural or horticultural product within the United States under the contract.

(ii) *Aggregation.* In determining whether the substantial-in-nature requirement under paragraph (h)(2) of this section or the safe harbor under paragraph (h)(3)(i) of this section is met at the time the Specified Cooperative disposes of an agricultural or horticultural product—

(A) An EAG member must take into account all the previous MPGE activities or direct labor and overhead of the other members of the EAG;

(B) An EAG partnership as defined in § 1.199A–12(i)(1) must take into account all of the previous MPGE activities or direct labor and overhead of all members of the EAG in which the partners of the EAG partnership are members (as well as the previous MPGE activities of any other EAG partnerships owned by members of the same EAG); and

(C) A member of an EAG in which the partners of an EAG partnership are members must take into account all of the previous MPGE activities or direct labor and overhead of the EAG partnership (as well as those of any other members of the EAG and any previous MPGE activities of any other EAG partnerships owned by members of the same EAG).

(i) *United States defined.* For purposes of section 199A(g), the term *United States* includes the 50 states, the District of Columbia, the territorial waters of the United States, and the seabed and subsoil of those submarine areas that are adjacent to the territorial waters of the United States and over which the United States has exclusive rights, in accordance with international law, with respect to the exploration and exploitation of natural resources. Consistent with its definition in section 7701(a)(9), the term *United States* does not include possessions and territories of the United States or the airspace or space over the United States and these areas.

(j) *Derived from the lease, rental, license, sale, exchange, or other disposition*—(1) *In general*—(i) *Definition.* The term *derived from the lease, rental, license, sale, exchange, or other disposition* is defined as, and limited to, the gross receipts directly derived from the lease, rental, license, sale, exchange, or other disposition of agricultural or horticultural products even if the Specified Cooperative has already recognized receipts from a previous lease, rental, license, sale, exchange, or other disposition of the same agricultural or horticultural products. Applicable Federal income tax principles apply to determine whether a transaction is, in substance, a lease, rental, license, sale, exchange, or other disposition, whether it is a service, or whether it is some combination thereof.

(ii) *Lease income.* The financing and interest components of a lease of agricultural or horticultural products are considered to be derived from the lease of such agricultural or horticultural products. However, any portion of the lease income that is attributable to services or non-qualified property as defined in paragraph (j)(3) of this section is not derived from the lease of agricultural or horticultural products.

(iii) *Income substitutes.* The proceeds from business interruption insurance, governmental subsidies, and governmental payments not to produce are treated as gross receipts derived from the lease, rental, license, sale, exchange, or other disposition to the extent they are substitutes for gross receipts that would qualify as DPGR.

(iv) *Exchange of property*—(A) *Taxable exchanges.* The value of property received by the Specified Cooperative in a taxable exchange of agricultural or horticultural products MPGE in whole or in significant part by the Specified Cooperative within the United States is DPGR for the Specified Cooperative (assuming all the other requirements of this section are met). However, unless the Specified Cooperative meets all of the requirements under this section with respect to any additional MPGE by the Specified Cooperative of the agricultural or horticultural products received in the taxable exchange, any gross receipts derived from the sale by the Specified Cooperative of the property received in the taxable exchange are non-DPGR, because the Specified Cooperative did not MPGE such property, even if the property was an agricultural or horticultural product in the hands of the other party to the transaction.

(B) *Safe harbor.* For purposes of paragraph (j)(1)(iv)(A) of this section, the gross receipts derived by the Specified Cooperative from the sale of eligible property (as defined in paragraph (j)(1)(iv)(C) of this section) received in a taxable exchange, net of any adjustments between the parties involved in the taxable exchange to account for differences in the eligible property exchanged (for example, location differentials and product differentials), may be treated as the value of the eligible property received by the Specified Cooperative in the taxable exchange. For purposes of the preceding sentence, the taxable exchange is deemed to occur on the date of the sale of the eligible property received in the taxable exchange by the Specified Cooperative, to the extent the sale occurs no later than the last day of the month following the month in which the exchanged eligible property is received by the Specified Cooperative. In addition, if the Specified Cooperative engages in any further MPGE activity with respect to the eligible property received in the taxable exchange, then, unless the Specified Cooperative meets the in-whole-or-in-significant-part requirement under paragraph (h)(1) of this section with respect to the property sold, for purposes of this paragraph (j)(1)(iv)(B), the Specified Cooperative must also value the property sold without taking into account the gross receipts attributable to the further MPGE activity.

(C) *Eligible property.* For purposes of paragraph (j)(1)(iv)(B) of this section, eligible property is—

(*1*) Oil, natural gas, or petrochemicals, or products derived from oil, natural gas, or petrochemicals; or

(*2*) Any other property or product designated by publication in the Internal Revenue Bulletin (*see* § 601.601(d)(2)(ii)(b) of this chapter).

(*3*) For this purpose, the term *natural gas* includes only natural gas extracted from a natural deposit and does not include, for example, methane gas extracted from a landfill. In the case of natural gas, production activities include all activities involved in extracting natural gas from the ground and processing the gas into pipeline quality gas.

(2) *Hedging transactions*—(i) *In general.* For purposes of this section, if a transaction is a hedging transaction within the meaning of section 1221(b)(2)(A) and § 1.1221–2(b), is properly identified as a hedging transaction in accordance with § 1.1221–2(f), and the risk being hedged relates to property described in section 1221(a)(1) that gives rise to DPGR or to property described in section 1221(a)(8) that is consumed in an activity that gives rise to DPGR, then—

(A) In the case of a hedge of purchases of property described in section 1221(a)(1), income, deduction, gain, or loss on the hedging transaction must be taken into account in determining COGS;

(B) In the case of a hedge of sales of property described in section 1221(a)(1), income, deduction, gain, or loss on the hedging transaction must be taken into account in determining DPGR; and

(C) In the case of a hedge of purchases of property described in section 1221(a)(8), income, deduction, gain, or loss on the hedging transaction must be taken into account in determining DPGR.

(ii) *Allocation.* The income, deduction, gain and loss from hedging transactions described in paragraph (j)(2) of this section must be allocated between the patronage and nonpatronage (defined in § 1.1388–1(f)) sourced income and related deductions of the Specified Cooperatives consistent with the cooperative's method for determining patronage and nonpatronage income and deductions.

(iii) *Effect of identification and nonidentification.* The principles of § 1.1221–2(g) apply to a Specified Cooperative that identifies or fails to identify a transaction as a hedging transaction, except that the consequence of identifying as a hedging transaction a transaction that is not in fact a hedging transaction described in paragraph (j)(2) of this section, or of failing to identify a transaction that the Specified Cooperative has no reasonable grounds for treating as other than a hedging transaction described in paragraph (j)(2) of this section, is that deduction or loss (but not income or gain) from the transaction is taken into account under paragraph (j)(2) of this section.

(iv) *Other rules.* See § 1.1221–2(e) for rules applicable to hedging by members of a consolidated group and § 1.446–4 for rules regarding the timing of income, deductions, gains or losses with respect to hedging transactions.

(3) *Allocation of gross receipts to embedded services and non-qualified property*—(i) *Embedded services and non-qualified property*—(A) *In general.* Except as otherwise provided in paragraph (j)(3)(i)(B) of this section, gross receipts derived from the performance of services do not qualify as DPGR. In the case of an embedded service, that is, a service the price of which, in the normal course of the business, is not separately stated from the amount charged for the lease, rental, license, sale, exchange, or other disposition of agricultural or

horticultural products, DPGR includes only the gross receipts derived from the lease, rental, license, sale, exchange, or other disposition of agricultural or horticultural products (assuming all the other requirements of this section are met) and not any receipts attributable to the embedded service. In addition, DPGR does not include gross receipts derived from the lease, rental, license, sale, exchange, or other disposition of property that does not meet all of the requirements under this section (non-qualified property). The allocation of the gross receipts attributable to the embedded services or non-qualified property will be deemed to be reasonable if the allocation reflects the fair market value of the embedded services or non-qualified property.

(B) *Exceptions.* There are five exceptions to the rules under paragraph (j)(3)(i)(A) of this section regarding embedded services and non-qualified property. A Specified Cooperative may include in DPGR, if all the other requirements of this section are met with respect to the underlying item of agricultural or horticultural products to which the embedded services or non-qualified property relate, the gross receipts derived from—

(1) A qualified warranty, that is, a warranty that is provided in connection with the lease, rental, license, sale, exchange, or other disposition of agricultural or horticultural products if, in the normal course of the Specified Cooperative's business—

(i) The price for the warranty is not separately stated from the amount charged for the lease, rental, license, sale, exchange, or other disposition of the agricultural or horticultural products; and

(ii) The warranty is neither separately offered by the Specified Cooperative nor separately bargained for with customers (that is, a customer cannot purchase the agricultural or horticultural products without the warranty);

(2) A qualified delivery, that is, a delivery or distribution service that is provided in connection with the lease, rental, license, sale, exchange, or other disposition of agricultural or horticultural products if, in the normal course of the Specified Cooperative's business—

(i) The price for the delivery or distribution service is not separately stated from the amount charged for the lease, rental, license, sale, exchange, or other disposition of the agricultural or horticultural products; and

(ii) The delivery or distribution service is neither separately offered by the Specified Cooperative nor separately bargained for with customers (that is, a customer cannot purchase the agricultural or horticultural products without the delivery or distribution service).

(3) A qualified operating manual, that is, a manual of instructions that is provided in connection with the lease, rental, license, sale, exchange, or other disposition of the agricultural or horticultural products if, in the normal course of the Specified Cooperative's business—

(i) The price for the manual is not separately stated from the amount charged for the lease, rental, license, sale, exchange, or other disposition of the agricultural or horticultural products;

(ii) The manual is neither separately offered by the Specified Cooperative nor separately bargained for with customers (that is, a customer cannot purchase the agricultural or horticultural products without the manual); and

(iii) The manual is not provided in connection with a training course for customers.

(4) A qualified installation, that is, an installation service for agricultural or horticultural products that is provided in connection with the lease, rental, license, sale, exchange, or other disposition of the agricultural or horticultural products if, in the normal course of the Specified Cooperative's business—

(i) The price for the installation service is not separately stated from the amount charged for the lease, rental, license, sale, exchange, or other disposition of the agricultural or horticultural products; and

(ii) The installation is neither separately offered by the Specified Cooperative nor separately bargained for with customers (that is, a customer cannot purchase the agricultural or horticultural products without the installation service).

(5) A *de minimis* amount of gross receipts from embedded services and non-qualified property for each item of agricultural or horticultural products may qualify. For purposes of this exception, a *de minimis* amount of gross receipts from embedded services and non-qualified property is less than 5 percent of the total gross receipts derived from the lease, rental, license, sale, exchange, or other disposition of each item of agricultural or horticultural products. In the case of gross receipts derived from the lease, rental, license, sale, exchange, or other disposition of agricultural or horticultural products that are received over a period of time (for example, a multi-year lease or installment sale), this *de minimis* exception is applied by taking into account the total gross receipts for the entire period derived (and to be derived) from the lease, rental, license, sale, exchange, or other disposition of the item of agricultural or horticultural products. For purposes of the preceding sentence, if a Specified Cooperative treats gross receipts as DPGR under this *de minimis* exception, then the Specified Cooperative must treat the gross receipts recognized in each taxable year consistently as DPGR. The gross receipts that the Specified Cooperative treats as DPGR under paragraphs (j)(3)(i)(B)(1) through (4) of this section are treated as DPGR for purposes of applying this *de minimis* exception. This *de minimis* exception does not apply if the price of a service or non-qualified property is separately stated by the Specified Cooperative, or if the service or non-qualified property is separately offered or separately bargained for with the customer (that is, the customer can purchase the agricultural or horticultural products without the service or non-qualified property).

(ii) *Non-DPGR.* Applicable gross receipts as provided in §§ 1.199A–8(b) and/or (c) derived from the lease, rental, license, sale, exchange or other disposition of an item of agricultural or horticultural products may be treated as non-DPGR if less than 5 percent of the Specified Cooperative's total gross receipts derived from the lease, rental, license, sale, exchange or other disposition of that item are DPGR (taking into account embedded services and non-qualified property included in such disposition, but not part of the item). In the case of gross receipts derived from the lease, rental, license, sale, exchange, or other disposition of agricultural or horticultural products that are received over a period of time (for example, a multi-year lease or installment sale), this paragraph (j)(5)(ii) is applied by taking into account the total gross receipts for the entire period derived (and to be derived) from the lease, rental, license, sale, exchange, or other disposition of the item of agricultural or horticultural products. For purposes of the preceding sentence, if the Specified Cooperative treats gross receipts as non-DPGR under this *de minimis* exception, then the Specified Cooperative must treat the gross receipts recognized in each taxable year consistently as non-DPGR.

(k) *Applicability date.* The provisions of this section apply to taxable years beginning after January 19, 2021. Taxpayers, however, may choose to apply the rules of §§ 1.199A–7 through 1.199A–12 for taxable years beginning on or before that date, provided the

taxpayers apply the rules in their entirety and in a consistent manner.

§ 1.199A–10 Allocation of cost of goods sold (COGS) and other deductions to domestic production gross receipts (DPGR), and other rules.

(a) *In general.* The provisions of this section apply solely for purposes of section 199A(g) of the Internal Revenue Code (Code). The provisions of this section provide additional guidance on determining qualified production activities income (QPAI) as described and defined in § 1.199A–8(b)(4)(ii).

(b) *COGS allocable to DPGR*—(1) *In general.* When determining its QPAI, the Specified Cooperative (defined in § 1.199A–8(a)(2)) must subtract from its DPGR (defined in § 1.199A–8(b)(3)(ii)) the COGS allocable to its DPGR. The Specified Cooperative determines its COGS allocable to DPGR in accordance with this paragraph (b)(1) or, if applicable, paragraph (f) of this section. In the case of a sale, exchange, or other disposition of inventory, COGS is equal to beginning inventory of the Specified Cooperative plus purchases and production costs incurred during the taxable year and included in inventory costs by the Specified Cooperative, less ending inventory of the Specified Cooperative. In determining its QPAI, the Specified Cooperative does not include in COGS any payment made, whether during the taxable year, or included in beginning inventory, for which a deduction is allowed under section 1382(b) and/or (c), as applicable. *See* § 1.199A–8(b)(4)(ii)(C). COGS is determined under the methods of accounting that the Specified Cooperative uses to compute taxable income. *See* sections 263A, 471, and 472. If section 263A requires the Specified Cooperative to include additional section 263A costs (as defined in § 1.263A–1(d)(3)) in inventory, additional section 263A costs must be included in determining COGS. COGS also include the Specified Cooperative's inventory valuation adjustments such as write-downs under the lower of cost or market method. In the case of a sale, exchange, or other disposition (including, for example, theft, casualty, or abandonment) by the Specified Cooperative of non-inventory property, COGS for purposes of this section includes the adjusted basis of the property.

(2) *Allocating COGS*—(i) *In general.* A Specified Cooperative must use a reasonable method based on all the facts and circumstances to allocate COGS between DPGR and non-DPGR. Whether an allocation method is reasonable is based on all the facts and circumstances, including whether the Specified Cooperative uses the most accurate information available; the relationship between COGS and the method used; the accuracy of the method chosen as compared with other possible methods; whether the method is used by the Specified Cooperative for internal management or other business purposes; whether the method is used for other Federal or state income tax purposes; the availability of costing information; the time, burden, and cost of using alternative methods; and whether the Specified Cooperative applies the method consistently from year to year. Depending on the facts and circumstances, reasonable methods may include methods based on gross receipts (defined in § 1.199A–8(b)(2)(iii)), number of units sold, number of units produced, or total production costs. Ordinarily, if a Specified Cooperative uses a method to allocate gross receipts between DPGR and non-DPGR, then the use of a different method to allocate COGS that is not demonstrably more accurate than the method used to allocate gross receipts will not be considered reasonable. However, if a Specified Cooperative has information readily available to specifically identify COGS allocable to DPGR and can specifically identify that amount without undue burden or expense, COGS allocable to DPGR is that amount irrespective of whether the Specified Cooperative uses another allocation method to allocate gross receipts between DPGR and non-DPGR. A Specified Cooperative that does not have information readily available to specifically identify COGS allocable to DPGR and that cannot, without undue burden or expense, specifically identify that amount is not required to use a method that specifically identifies COGS allocable to DPGR. The chosen reasonable method must be consistently applied from one taxable year to another and must clearly reflect the portion of COGS between DPGR and non-DPGR. The method must also be reasonable based on all the facts and circumstances. The books and records maintained for COGS must be consistent with any allocations under this paragraph (b)(2).

(ii) *Gross receipts recognized in an earlier taxable year.* If the Specified Cooperative (other than a Specified Cooperative that uses the small business simplified overall method of paragraph (f) of this section) recognizes and reports gross receipts on a Federal income tax return for a taxable year, and incurs COGS related to such gross receipts in a subsequent taxable year, then regardless of whether the gross receipts ultimately qualify as DPGR, the Specified Cooperative must allocate the COGS to—

(A) DPGR if the Specified Cooperative identified the related gross receipts as DPGR in the prior taxable year; or

(B) Non-DPGR if the Specified Cooperative identified the related gross receipts as non-DPGR in the prior taxable year or if the Specified Cooperative recognized under the Specified Cooperative's methods of accounting those gross receipts in a taxable year to which section 199A(g) does not apply.

(iii) *COGS associated with activities undertaken in an earlier taxable year*—(A) *In general.* A Specified Cooperative must allocate its COGS between DPGR and non-DPGR under the rules provided in paragraphs (b)(2)(i) and (iii) of this section, regardless of whether certain costs included in its COGS can be associated with activities undertaken in an earlier taxable year (including a year prior to the effective date of section 199A(g)). A Specified Cooperative may not segregate its COGS into component costs and allocate those component costs between DPGR and non-DPGR.

(B) *Example.* The following example illustrates an application of paragraph (b)(2)(iii)(A) of this section.

(*1*) *Example 1.* During the 2020 taxable year, nonexempt Specified Cooperative X grew and sold Horticultural Product A. All of the patronage gross receipts from sales recognized by X in 2020 were from the sale of Horticultural Product A and qualified as DPGR. Employee 1 of X was involved in X's production process until he retired in 2013. In 2020, X paid $30 directly from its general assets for Employee 1's medical expenses pursuant to an unfunded, self-insured plan for retired X employees. For purposes of computing X's 2020 taxable income, X capitalized those medical costs to inventory under section 263A. In 2020, the COGS for a unit of Horticultural Product A was $100 (including the applicable portion of the $30 paid for Employee 1's medical costs that was allocated to COGS under X's allocation method for additional section 263A costs). X has information readily available to specifically identify COGS allocable to DPGR and can identify that amount without undue burden and expense because all of X's gross receipts from sales in 2020 are attributable to the sale of Horticultural Product A and qualify as DPGR. The inventory cost of each unit of Horticultural Product A sold in 2020, including the applicable portion of retiree medical costs, is related to X's gross receipts from the

sale of Horticultural Product A in 2020. X may not segregate the 2020 COGS by separately allocating the retiree medical costs, which are components of COGS, to DPGR and non-DPGR. Thus, even though the retiree medical costs can be associated with activities undertaken in prior years, $100 of inventory cost of each unit of Horticultural Product A sold in 2020, including the applicable portion of the retiree medical expense cost component, is allocable to DPGR in 2020.

(3) *Special allocation rules.* Section 199A(g)(3)(C) provides the following two special rules—

(i) For purposes of determining the COGS that are allocable to DPGR, any item or service brought into the United States (defined in § 1.199A–9(i)) is treated as acquired by purchase, and its cost is treated as not less than its value immediately after it entered the United States. A similar rule applies in determining the adjusted basis of leased or rented property where the lease or rental gives rise to DPGR.

(ii) In the case of any property described in paragraph (b)(3)(i) of this section that has been exported by the Specified Cooperative for further manufacture, the increase in cost or adjusted basis under paragraph (b)(3)(i) of this section cannot exceed the difference between the value of the property when exported and the value of the property when brought back into the United States after the further manufacture. For the purposes of this paragraph (b)(3), the value of property is its customs value as defined in section 1059A(b)(1).

(4) *Rules for inventories valued at market or bona fide selling prices.* If part of COGS is attributable to the Specified Cooperative's inventory valuation adjustments, then COGS allocable to DPGR includes inventory adjustments to agricultural or horticultural products that are MPGE in whole or significant part within the United States. Accordingly, a Specified Cooperative that values its inventory under § 1.471–4 (inventories at cost or market, whichever is lower) or § 1.471–2(c) (subnormal goods at bona fide selling prices) must allocate a proper share of such adjustments (for example, write-downs) to DPGR based on a reasonable method based on all the facts and circumstances. Factors taken into account in determining whether the method is reasonable include whether the Specified Cooperative uses the most accurate information available; the relationship between the adjustment and the allocation base chosen; the accuracy of the method chosen as compared with other possible methods; whether the method is used by the Specified Cooperative for internal management or other business purposes; whether the method is used for other Federal or state income tax purposes; the time, burden, and cost of using alternative methods; and whether the Specified Cooperative applies the method consistently from year to year. If the Specified Cooperative has information readily available to specifically identify the proper amount of inventory valuation adjustments allocable to DPGR, then the Specified Cooperative must allocate that amount to DPGR. The Specified Cooperative that does not have information readily available to specifically identify the proper amount of its inventory valuation adjustments allocable to DPGR and that cannot, without undue burden or expense, specifically identify the proper amount of its inventory valuation adjustments allocable to DPGR, is not required to use a method that specifically identifies inventory valuation adjustments to DPGR. The chosen reasonable method must be consistently applied from one taxable year to another and must clearly reflect inventory adjustments. The method must also be reasonable based on all the facts and circumstances. The books and records maintained for inventory adjustments must be consistent with any allocations under this paragraph (b)(4).

(5) *Rules applicable to inventories accounted for under the last-in, first-out inventory method*—(i) *In general.* This paragraph (b)(5) applies to inventories accounted for using the specific goods last-in, first-out (LIFO) method or the dollar-value LIFO method. Whenever a specific goods grouping or a dollar-value pool contains agricultural or horticultural products that produce DPGR and goods that do not, the Specified Cooperative must allocate COGS attributable to that grouping or pool between DPGR and non-DPGR using a reasonable method based on all the facts and circumstances. Whether a method of allocating COGS between DPGR and non-DPGR is reasonable must be determined in accordance with paragraph (b)(2) of this section. In addition, this paragraph (b)(5) provides methods that a Specified Cooperative may use to allocate COGS for a Specified Cooperative's inventories accounted for using the LIFO method. If the Specified Cooperative uses the LIFO/FIFO ratio method provided in paragraph (b)(5)(ii) of this section or the change in relative base-year cost method provided in paragraph (b)(5)(iii) of this section, then the Specified Cooperative must use that method for all of the Specified Cooperative's inventory accounted for under the LIFO method. The chosen reasonable method must be consistently applied from one taxable year to another and must clearly reflect the inventory method. The method must also be reasonable based on all the facts and circumstances. The books and records maintained for the inventory method must be consistent with any allocations under this paragraph (b)(5).

(ii) *LIFO/FIFO ratio method.* The LIFO/FIFO ratio method is applied with respect to the LIFO inventory on a grouping-by-grouping or pool-by-pool basis. Under the LIFO/FIFO ratio method, a Specified Cooperative computes the COGS of a grouping or pool allocable to DPGR by multiplying the COGS of agricultural or horticultural products (defined in § 1.199A–8(a)(4)) in the grouping or pool that produced DPGR computed using the FIFO method by the LIFO/FIFO ratio of the grouping or pool. The LIFO/FIFO ratio of a grouping or pool is equal to the total COGS of the grouping or pool computed using the LIFO method over the total COGS of the grouping or pool computed using the FIFO method.

(iii) *Change in relative base-year cost method.* A Specified Cooperative using the dollar-value LIFO method may use the change in relative base-year cost method. The change in relative base-year cost method for a Specified Cooperative using the dollar-value LIFO method is applied to all LIFO inventory on a pool-by-pool basis. The change in relative base-year cost method determines the COGS allocable to DPGR by increasing or decreasing the total production costs (section 471 costs and additional section 263A costs) of agricultural or horticultural products that generate DPGR by a portion of any increment or liquidation of the dollar-value pool. The portion of an increment or liquidation allocable to DPGR is determined by multiplying the LIFO value of the increment or liquidation (expressed as a positive number) by the ratio of the change in total base-year cost (expressed as a positive number) of agricultural or horticultural products that will generate DPGR in ending inventory to the change in total base-year cost (expressed as a positive number) of all goods in ending inventory. The portion of an increment or liquidation allocable to DPGR may be zero but cannot exceed the amount of the increment or liquidation. Thus, a ratio in excess of 1.0 must be treated as 1.0.

(6) *Specified Cooperative using a simplified method for additional section 263A costs to ending inventory.* A

Specified Cooperative that uses a simplified method specifically described in the section 263A regulations to allocate additional section 263A costs to ending inventory must follow the rules in paragraph (b)(2) of this section to determine the amount of additional section 263A costs allocable to DPGR. Allocable additional section 263A costs include additional section 263A costs included in the Specified Cooperative's beginning inventory as well as additional section 263A costs incurred during the taxable year by the Specified Cooperative. Ordinarily, if the Specified Cooperative uses a simplified method specifically described in the section 263A regulations to allocate its additional section 263A costs to its ending inventory, the additional section 263A costs must be allocated in the same proportion as section 471 costs are allocated.

(c) *Other deductions properly allocable to DPGR or gross income attributable to DPGR*—(1) *In general.* In determining its QPAI, the Specified Cooperative must subtract from its DPGR (in addition to the COGS), the deductions that are properly allocable and apportioned to DPGR. A Specified Cooperative generally must allocate and apportion these deductions using the rules of the section 861 method provided in paragraph (d) of this section. In lieu of the section 861 method, an eligible Specified Cooperative may apportion these deductions using the simplified deduction method provided in paragraph (e) of this section. Paragraph (f) of this section provides a small business simplified overall method that may be used by a qualifying small Specified Cooperative. A Specified Cooperative using the simplified deduction method or the small business simplified overall method must use that method for all deductions. A Specified Cooperative eligible to use the small business simplified overall method may choose at any time for any taxable year to use the small business simplified overall method or the simplified deduction method for a taxable year.

(2) *Treatment of net operating losses.* A deduction under section 172 for a net operating loss (NOL) is not allocated or apportioned to DPGR or gross income attributable to DPGR.

(3) *W–2 wages.* Although only W–2 wages as described in § 1.199A–11 are taken into account in computing the W–2 wage limitation, all wages paid (or incurred in the case of an accrual method taxpayer) in the taxable year are taken into account in computing QPAI for that taxable year.

(d) *Section 861 method.* Under the section 861 method, the Specified Cooperative must allocate and apportion its deductions using the allocation and apportionment rules provided under the section 861 regulations under which section 199A(g) is treated as an operative section described in § 1.861–8(f). Accordingly, the Specified Cooperative applies the rules of the section 861 regulations to allocate and apportion deductions (including, if applicable, its distributive share of deductions from passthrough entities) to gross income attributable to DPGR. If the Specified Cooperative applies the allocation and apportionment rules of the section 861 regulations for section 199A(g) and another operative section, then the Specified Cooperative must use the same method of allocation and the same principles of apportionment for purposes of all operative sections. Research and experimental expenditures must be allocated and apportioned in accordance with § 1.861–17 without taking into account the exclusive apportionment rule of § 1.861–17(b). Deductions for charitable contributions (as allowed under section 170 and section 873(b)(2) or 882(c)(1)(B)) must be ratably apportioned between gross income attributable to DPGR and gross income attributable to non-DPGR based on the relative amounts of gross income.

(e) *Simplified deduction method*—(1) *In general.* An eligible Specified Cooperative (defined in paragraph (e)(2) of this section) may use the simplified deduction method to apportion business deductions between DPGR and non-DPGR. The simplified deduction method does not apply to COGS. Under the simplified deduction method, the business deductions (except the NOL deduction) are ratably apportioned between DPGR and non-DPGR based on relative gross receipts. Accordingly, the amount of deductions for the current taxable year apportioned to DPGR is equal to the proportion of the total business deductions for the current taxable year that the amount of DPGR bears to total gross receipts.

(2) *Eligible Specified Cooperative.* For purposes of this paragraph (e), an eligible Specified Cooperative is—

(i) A Specified Cooperative that has average annual total gross receipts (as defined in paragraph (g) of this section) of $100,000,000 or less; or

(ii) A Specified Cooperative that has total assets (as defined in paragraph (e)(3) of this section) of $10,000,000 or less.

(3) *Total assets.*—(i) *In general.* For purposes of the simplified deduction method, total assets mean the total assets the Specified Cooperative has at the end of the taxable year.

(ii) *Members of an expanded affiliated group.* To compute the total assets of an *expanded affiliated group* (EAG) at the end of the taxable year, the total assets at the end of the taxable year of each member of the EAG at the end of the taxable year that ends with or within the taxable year of the computing member (as described in § 1.199A–12(g)) are aggregated.

(4) *Members of an expanded affiliated group*—(i) *In general.* Whether the members of an EAG may use the simplified deduction method is determined by reference to all the members of the EAG. If the average annual gross receipts of the EAG are less than or equal to $100,000,000 or the total assets of the EAG are less than or equal to $10,000,000, then each member of the EAG may individually determine whether to use the simplified deduction method, regardless of the cost allocation method used by the other members.

(ii) *Exception.* Notwithstanding paragraph (e)(4)(i) of this section, all members of the same consolidated group must use the same cost allocation method.

(f) *Small business simplified overall method*—(1) *In general.* A qualifying small Specified Cooperative may use the small business simplified overall method to apportion COGS and deductions between DPGR and non-DPGR. Under the small business simplified overall method, a Specified Cooperative's total costs for the current taxable year (as defined in paragraph (f)(3) of this section) are apportioned between DPGR and non-DPGR based on relative gross receipts. Accordingly, the amount of total costs for the current taxable year apportioned to DPGR is equal to the proportion of total costs for the current taxable year that the amount of DPGR bears to total gross receipts.

(2) *Qualifying small Specified Cooperative.* For purposes of this paragraph (f), a qualifying small Specified Cooperative is a Specified Cooperative that has average annual total gross receipts (as defined in paragraph (g) of this section) of $25,000,000 or less.

(3) *Total costs for the current taxable year.* For purposes of the small business simplified overall method, total costs for the current taxable year means the total COGS and deductions for the current taxable year. Total costs for the current taxable year are determined under the methods of accounting that the Specified Cooperative uses to compute taxable income.

(4) *Members of an expanded affiliated group*—(i) *In general.* Whether the

members of an EAG may use the small business simplified overall method is determined by reference to all the members of the EAG. If the average annual gross receipts of the EAG are less than or equal to $25,000,000 then each member of the EAG may individually determine whether to use the small business simplified overall method, regardless of the cost allocation method used by the other members.

(ii) *Exception.* Notwithstanding paragraph (f)(4)(i) of this section, all members of the same consolidated group must use the same cost allocation method.

(g) *Average annual gross receipts*—(1) *In general.* For purposes of the simplified deduction method and the small business simplified overall method, average annual gross receipts means the average annual gross receipts of the Specified Cooperative for the 3 taxable years (or, if fewer, the taxable years during which the taxpayer was in existence) preceding the current taxable year, even if one or more of such taxable years began before the effective date of section 199A(g). In the case of any taxable year of less than 12 months (a short taxable year), the gross receipts of the Specified Cooperative are annualized by multiplying the gross receipts for the short period by 12 and dividing the result by the number of months in the short period.

(2) *Members of an expanded affiliated group*—(i) *In general.* To compute the average annual gross receipts of an EAG, the gross receipts for the entire taxable year of each member that is a member of the EAG at the end of its taxable year that ends with or within the taxable year are aggregated. For purposes of this paragraph (g)(2), a consolidated group is treated as one member of an EAG.

(ii) *Exception.* Notwithstanding paragraph (g)(1)(i) of this section, all members of the same consolidated group must use the same cost allocation method.

(h) *Cost allocation methods for determining oil-related QPAI*—(1) *Section 861 method.* A Specified Cooperative that uses the section 861 method to determine deductions that are allocated and apportioned to gross income attributable to DPGR must use the section 861 method to determine deductions that are allocated and apportioned to gross income attributable to oil-related DPGR.

(2) *Simplified deduction method.* A Specified Cooperative that uses the simplified deduction method to apportion deductions between DPGR and non-DPGR must determine the portion of deductions allocable to oil-related DPGR by multiplying the deductions allocable to DPGR by the ratio of oil-related DPGR to DPGR from all activities.

(3) *Small business simplified overall method.* A Specified Cooperative that uses the small business simplified overall method to apportion total costs (COGS and deductions) between DPGR and non-DPGR must determine the portion of total costs allocable to oil-related DPGR by multiplying the total costs allocable to DPGR by the ratio of oil-related DPGR to DPGR from all activities.

(i) *Applicability date.* The provisions of this section apply to taxable years beginning after January 19, 2021. Taxpayers, however, may choose to apply the rules of §§ 1.199A–7 through 1.199A–12 for taxable years beginning on or before that date, provided the taxpayers apply the rules in their entirety and in a consistent manner.

§ 1.199A–11 Wage limitation for the section 199A(g) deduction.

(a) *Rules of application*—(1) *In general.* The provisions of this section apply solely for purposes of section 199A(g) of the Internal Revenue Code (Code). The provisions of this section provide guidance on determining the W–2 wage limitation as defined in § 1.199A–8(b)(5)(ii)(B). Except as provided in paragraph (d)(2) of this section, the Form W–2, Wage and Tax Statement, or any subsequent form or document used in determining the amount of W–2 wages, are those issued for the calendar year ending during the taxable year of the Specified Cooperative (defined in § 1.199A–8(a)(2)) for wages paid to employees (or former employees) of the Specified Cooperative for employment by the Specified Cooperative. Employees are limited to employees defined in section 3121(d)(1) and (2) (that is, officers of a corporate taxpayer and employees of the taxpayer under the common law rules). See paragraph (a)(5) of this section for the requirement that W–2 wages must have been included in a return filed with the Social Security Administration (SSA) within 60 days after the due date (including extensions) of the return. *See also* section 199A(a)(4)(C).

(2) *Wage limitation for section 199A(g) deduction.* The amount of the deduction allowable under section 199A(g) to the Specified Cooperative for any taxable year cannot exceed 50 percent of the W–2 wages (as defined in section 199A(g)(1)(B)(ii) and paragraph (b) of this section) for the taxable year that are attributable to domestic production gross receipts (DPGR), defined in § 1.199A–8(b)(3)(ii), of agricultural or horticultural products defined in § 1.199A–8(a)(4).

(3) *Wages paid by entity other than common law employer.* In determining W–2 wages, the Specified Cooperative may take into account any W–2 wages paid by another entity and reported by the other entity on Forms W–2 with the other entity as the employer listed in Box c of the Forms W–2, provided that the W–2 wages were paid to common law employees or officers of the Specified Cooperative for employment by the Specified Cooperative. In such cases, the entity paying the W–2 wages and reporting the W–2 wages on Forms W–2 is precluded from taking into account such wages for purposes of determining W–2 wages with respect to that entity. For purposes of this paragraph (a)(4), entities that pay and report W–2 wages on behalf of or with respect to other taxpayers can include, but are not limited to, certified professional employer organizations under section 7705, statutory employers under section 3401(d)(1), and agents under section 3504.

(4) *Requirement that wages must be reported on return filed with the Social Security Administration*—(i) *In general.* Pursuant to section 199A(g)(1)(B)(ii) and section 199A(b)(4)(C), the term W–2 wages does not include any amount that is not properly included in a return filed with SSA on or before the 60th day after the due date (including extensions) for such return. Under § 31.6051–2 of this chapter, each Form W–2 and the transmittal Form W–3, Transmittal of Wage and Tax Statements, together constitute an information return to be filed with SSA. Similarly, each Form W–2c, Corrected Wage and Tax Statement, and the transmittal Form W–3 or W–3c, Transmittal of Corrected Wage and Tax Statements, together constitute an information return to be filed with SSA. In determining whether any amount has been properly included in a return filed with SSA on or before the 60th day after the due date (including extensions) for such return, each Form W–2 together with its accompanying Form W–3 is considered a separate information return and each Form W–2c together with its accompanying Form W–3 or Form W–3c is considered a separate information return. Section 6071(c) provides that Forms W–2 and W–3 must be filed on or before January 31 of the year following the calendar year to which such returns relate (but see the special rule in § 31.6071(a)–1T(a)(3)(1) of this chapter for monthly returns filed under § 31.6011(a)–5(a) of this chapter). Corrected Forms W–2 are required to be filed with SSA on or before January 31

of the year following the year in which the correction is made.

(ii) *Corrected return filed to correct a return that was filed within 60 days of the due date.* If a corrected information return (Return B) is filed with SSA on or before the 60th day after the due date (including extensions) of Return B to correct an information return (Return A) that was filed with SSA on or before the 60th day after the due date (including extensions) of the information return (Return A) and paragraph (a)(5)(iii) of this section does not apply, then the wage information on Return B must be included in determining W–2 wages. If a corrected information return (Return D) is filed with SSA later than the 60th day after the due date (including extensions) of Return D to correct an information return (Return C) that was filed with SSA on or before the 60th day after the due date (including extensions) of the information return (Return C), then if Return D reports an increase (or increases) in wages included in determining W–2 wages from the wage amounts reported on Return C, such increase (or increases) on Return D is disregarded in determining W–2 wages (and only the wage amounts on Return C may be included in determining W–2 wages). If Return D reports a decrease (or decreases) in wages included in determining W–2 wages from the amounts reported on Return C, then, in determining W–2 wages, the wages reported on Return C must be reduced by the decrease (or decreases) reflected on Return D.

(iii) *Corrected return filed to correct a return that was filed later than 60 days after the due date.* If an information return (Return F) is filed to correct an information return (Return E) that was not filed with SSA on or before the 60th day after the due date (including extensions) of Return E, then Return F (and any subsequent information returns filed with respect to Return E) will not be considered filed on or before the 60th day after the due date (including extensions) of Return F (or the subsequent corrected information return). Thus, if a Form W–2c is filed to correct a Form W–2 that was not filed with SSA on or before the 60th day after the due date (including extensions) of the Form W–2 (or to correct a Form W–2c relating to a Form W–2 that had not been filed with SSA on or before the 60th day after the due date (including extensions) of the Form W–2), then this Form W–2c is not to be considered to have been filed with SSA on or before the 60th day after the due date (including extensions) for this Form W–2c, regardless of when the Form W–2c is filed.

(b) *Definition of W–2 wages*—(1) *In general.* Section 199A(g)(1)(B)(ii) provides that the W–2 wages of the Specified Cooperative must be determined in the same manner as under section 199A(b)(4) (without regard to section 199A(b)(4)(B) and after application of section 199A(b)(5)). Section 199A(b)(4)(A) provides that the term W–2 wages means with respect to any person for any taxable year of such person, the amounts described in paragraphs (3) and (8) of section 6051(a) paid by such person with respect to employment of employees by such person during the calendar year ending during such taxable year. Thus, the term W–2 wages includes the total amount of wages as defined in section 3401(a); the total amount of elective deferrals (within the meaning of section 402(g)(3)); the compensation deferred under section 457; and the amount of designated Roth contributions (as defined in section 402A).

(2) *Section 199A(g) deduction.* Pursuant to section 199A(g)(3)(A), W–2 wages do not include any amount which is not properly allocable to DPGR for purposes of calculating qualified production activities income (QPAI) as defined in § 1.199A–8(b)(4)(ii). The Specified Cooperative may determine the amount of wages that is properly allocable to DPGR using a reasonable method based on all the facts and circumstances. The chosen reasonable method must be consistently applied from one taxable year to another and must clearly reflect the wages allocable to DPGR for purposes of QPAI. The books and records maintained for wages allocable to DPGR for purposes of QPAI must be consistent with any allocations under this paragraph (b)(2).

(c) *Methods for calculating W–2 wages.* The Secretary may provide for methods that may be used in calculating W–2 wages, including W–2 wages for short taxable years by publication in the Internal Revenue Bulletin (*see* § 601.601(d)(2)(ii)(b) of this chapter).

(d) *Wage limitation—acquisitions, dispositions, and short taxable years*—(1) *In general.* For purposes of computing the deduction under section 199A(g) of the Specified Cooperative, in the case of an acquisition or disposition (as defined in section 199A(b)(5) and paragraph (d)(3) of this section) that causes more than one Specified Cooperative to be an employer of the employees of the acquired or disposed of Specified Cooperative during the calendar year, the W–2 wages of the Specified Cooperative for the calendar year of the acquisition or disposition are allocated between or among each Specified Cooperative based on the period during which the employees of the acquired or disposed of Specified Cooperatives were employed by the Specified Cooperative, regardless of which permissible method is used for reporting predecessor and successor wages on Form W–2, Wage and Tax Statement.

(2) *Short taxable year that does not include December 31.* If the Specified Cooperative has a short taxable year that does not contain a calendar year ending during such short taxable year, wages paid to employees for employment by the Specified Cooperative during the short taxable year are treated as W–2 wages for such short taxable year for purposes of paragraph (a) of this section (if the wages would otherwise meet the requirements to be W–2 wages under this section but for the requirement that a calendar year must end during the short taxable year).

(3) *Acquisition or disposition.* For purposes of paragraph (d)(1) and (2) of this section, the terms *acquisition* and *disposition* include an incorporation, a liquidation, a reorganization, or a purchase or sale of assets.

(e) *Application in the case of a Specified Cooperative with a short taxable year.* In the case of a Specified Cooperative with a short taxable year, subject to the rules of paragraph (a) of this section, the W–2 wages of the Specified Cooperative for the short taxable year can include only those wages paid during the short taxable year to employees of the Specified Cooperative, only those elective deferrals (within the meaning of section 402(g)(3)) made during the short taxable year by employees of the Specified Cooperative, and only compensation actually deferred under section 457 during the short taxable year with respect to employees of the Specified Cooperative.

(f) *Non-duplication rule.* Amounts that are treated as W–2 wages for a taxable year under any method cannot be treated as W–2 wages of any other taxable year. Also, an amount cannot be treated as W–2 wages by more than one taxpayer. Finally, an amount cannot be treated as W–2 wages by the Specified Cooperative both in determining patronage and nonpatronage W–2 wages.

(g) *Wage expense safe harbor*—(1) *In general.* A Specified Cooperative using either the section 861 method of cost allocation under § 1.199A–10(d) or the simplified deduction method under § 1.199A–10(e) may determine the amount of W–2 wages that are properly allocable to DPGR for a taxable year by multiplying the amount of W–2 wages determined under paragraph (b)(1) of

this section for the taxable year by the ratio of the Specified Cooperative's wage expense included in calculating QPAI for the taxable year to the Specified Cooperative's total wage expense used in calculating the Specified Cooperative's taxable income for the taxable year, without regard to any wage expense disallowed by section 465, 469, 704(d), or 1366(d). A Specified Cooperative that uses either the section 861 method of cost allocation or the simplified deduction method to determine QPAI must use the same expense allocation and apportionment methods that it uses to determine QPAI to allocate and apportion wage expense for purposes of this safe harbor. For purposes of this paragraph (g)(1), the term wage expense means wages (that is, compensation paid by the employer in the active conduct of a trade or business to its employees) that are properly taken into account under the Specified Cooperative's method of accounting.

(2) *Wage expense included in cost of goods sold.* For purposes of paragraph (g)(1) of this section, a Specified Cooperative may determine its wage expense included in cost of goods sold (COGS) using a reasonable method based on all the facts and circumstances, such as using the amount of direct labor included in COGS or using section 263A labor costs (as defined in § 1.263A–1(h)(4)(ii)) included in COGS. The chosen reasonable method must be consistently applied from one taxable year to another and must clearly reflect the portion of wage expense included in COGS. The method must also be reasonable based on all the facts and circumstances. The books and records maintained for wage expense included in COGS must be consistent with any allocations under this paragraph (g)(2).

(3) *Small business simplified overall method safe harbor.* The Specified Cooperative that uses the small business simplified overall method under § 1.199A–10(f) may use the small business simplified overall method safe harbor for determining the amount of W–2 wages determined under paragraph (b)(1) of this section that is properly allocable to DPGR. Under this safe harbor, the amount of W–2 wages determined under paragraph (b)(1) of this section that is properly allocable to DPGR is equal to the same proportion of W–2 wages determined under paragraph (b)(1) of this section that the amount of DPGR bears to the Specified Cooperative's total gross receipts.

(h) *Applicability date.* The provisions of this section apply to taxable years beginning after January 19, 2021. Taxpayers, however, may choose to apply the rules of §§ 1.199A–7 through 1.199A–12 for taxable years beginning on or before that date, provided the taxpayers apply the rules in their entirety and in a consistent manner.

§ 1.199A–12 Expanded affiliated groups.

(a) *In general.* The provisions of this section apply solely for purposes of section 199A(g) of the Internal Revenue Code (Code). Except as otherwise provided in the Code or regulations issued under the relevant section of the Code (for example, sections 199A(g)(3)(D)(ii) and 267, § 1.199A–8(c), paragraph (a)(3) of this section, and the consolidated return regulations under section 1502), each nonexempt Specified Cooperative (defined in § 1.199A–8(a)(2)(ii)) that is a member of an expanded affiliated group (EAG) (defined in paragraph (a)(1) of this section) computes its own taxable income or loss, qualified production activities income (QPAI) (defined in § 1.199A–8(b)(4)(ii)), and W–2 wages (defined in § 1.199A–11(b)). For purposes of this section unless otherwise specified, the term *Specified Cooperative* means a nonexempt Specified Cooperative. If a Specified Cooperative is also a member of a consolidated group, see paragraph (d) of this section.

(1) *Definition of an expanded affiliated group.* An EAG is an affiliated group as defined in section 1504(a), determined by substituting ''more than 50 percent'' for ''at least 80 percent'' in each place it appears and without regard to section 1504(b)(2) and (4).

(2) *Identification of members of an expanded affiliated group*—(i) *In general.* Each Specified Cooperative must determine if it is a member of an EAG on a daily basis.

(ii) *Becoming or ceasing to be a member of an expanded affiliated group.* If a Specified Cooperative becomes or ceases to be a member of an EAG, the Specified Cooperative is treated as becoming or ceasing to be a member of the EAG at the end of the day on which its status as a member changes.

(3) *Attribution of activities*—(i) *In general.* Except as provided in paragraph (a)(3)(iv) of this section, if a Specified Cooperative that is a member of an EAG (disposing member) derives gross receipts (defined in § 1.199A–8(b)(2)(iii)) from the lease, rental, license, sale, exchange, or other disposition (defined in § 1.199A–9(j)) of agricultural or horticultural products (defined in § 1.199A–8(a)(4)) that were manufactured, produced, grown or extracted (MPGE) (defined in § 1.199A–9(f)), in whole or significant part (defined in § 1.199A–9(h)), in the United States (defined in § 1.199A–9(i)) by another Specified Cooperative, then the disposing member is treated as conducting the previous activities conducted by such other Specified Cooperative with respect to the agricultural or horticultural products in determining whether its gross receipts are domestic production gross receipts (DPGR) (defined in § 1.199A–8(b)(3)(ii)) if—

(A) Such property was MPGE by such other Specified Cooperative, and

(B) The disposing member is a member of the same EAG as such other Specified Cooperative at the time that the disposing member disposes of the agricultural or horticultural products.

(ii) *Date of disposition for leases, rentals, or licenses.* Except as provided in paragraph (a)(3)(iv) of this section, with respect to a lease, rental, or license, the disposing member described in paragraph (a)(3)(i) of this section is treated as having disposed of the agricultural or horticultural products on the date or dates on which it takes into account the gross receipts derived from the lease, rental, or license under its methods of accounting.

(iii) *Date of disposition for sales, exchanges, or other dispositions.* Except as provided in paragraph (a)(3)(iv) of this section, with respect to a sale, exchange, or other disposition, the disposing member is treated as having disposed of the agricultural or horticultural products on the date on which it ceases to own the agricultural or horticultural products for Federal income tax purposes, even if no gain or loss is taken into account.

(iv) *Exception.* A Specified Cooperative is not attributed nonpatronage activities conducted by another Specified Cooperative. *See* § 1.199A–8(b)(2)(ii).

(4) *Marketing Specified Cooperatives.* A Specified Cooperative is treated as having MPGE in whole or significant part any agricultural or horticultural product within the United States marketed by the Specified Cooperative which its patrons have so MPGE. Patrons are defined in § 1.1388–1(e).

(5) *Anti-avoidance rule.* If a transaction between members of an EAG is engaged in or structured with a principal purpose of qualifying for, or increasing the amount of, the section 199A(g) deduction of the EAG or the portion of the section 199A(g) deduction allocated to one or more members of the EAG, the Secretary may make adjustments to eliminate the effect of the transaction on the computation of the section 199A(g) deduction.

(b) *Computation of EAG's section 199A(g) deduction.*—(1) *In general.* The section 199A(g) deduction for an EAG is determined by separately computing the section 199A(g) deduction from the patronage sources of Specified Cooperatives that are members of the EAG. The section 199A(g) deduction from patronage sources of Specified Cooperatives is determined by aggregating the income or loss, QPAI, and W–2 wages, if any, of each patronage source of a Specified Cooperative that is a member of the EAG. For purposes of this determination, a member's QPAI may be positive or negative. A Specified Cooperative's taxable income or loss and QPAI is determined by reference to the Specified Cooperative's method of accounting. For purposes of determining the section 199A(g) deduction for an EAG, taxable income or loss, QPAI, and W–2 wages of a Specified Cooperative from nonpatronage sources are considered to be zero, other than as allowed under § 1.199A–8(b)(2)(ii).

(2) *Example.* The following example illustrates the application of paragraph (b)(1) of this section.

(i) *Facts.* Nonexempt Specified Cooperatives X, Y, and Z, calendar year taxpayers, are the only members of an EAG and are not members of a consolidated group. X has patronage source taxable income of $50,000, QPAI of $15,000, and W–2 wages of $0. Y has patronage source taxable income of ($20,000), QPAI of ($1,000), and W–2 wages of $750. Z has patronage source taxable income of $0, QPAI of $0, and W–2 wages of $3,000.

(ii) *Analysis.* In determining the EAG's section 199A(g) deduction, the EAG aggregates each member's patronage source taxable income or loss, QPAI, and W–2 wages. Thus, the EAG has patronage source taxable income of $30,000, the sum of X's patronage source taxable income of $50,000, Y's patronage source taxable income of ($20,000), and Z's patronage source taxable income of $0. The EAG has QPAI of $14,000, the sum of X's QPAI of $15,000, Y's QPAI of ($1,000), and Z's QPAI of $0. The EAG has W–2 wages of $3,750, the sum of X's W–2 wages of $0, Y's W–2 wages of $750, and Z's W–2 wages of $3,000. Accordingly, the EAG's section 199A(g) deduction equals $1,260, 9% of $14,000, the lesser of the QPAI and patronage source taxable income, but not greater than $1,875, 50% of its W–2 wages of $3,750. This result would be the same if X had a nonpatronage source income or loss, because nonpatronage source income of a nonexempt Specified Cooperative is not taken into account in determining the section 199A(g) deduction.

(3) *Net operating loss carryovers/carrybacks.* In determining the taxable income of an EAG, if a Specified Cooperative has a net operating loss (NOL) from its patronage sources that may be carried over or carried back (in accordance with section 172) to the taxable year, then for purposes of determining the taxable income of the Specified Cooperative, the amount of the NOL used to offset taxable income cannot exceed the taxable income of the patronage source of that Specified Cooperative.

(4) *Losses used to reduce taxable income of an expanded affiliated group.* The amount of an NOL sustained by a Specified Cooperative member of an EAG that is used in the year sustained in determining an EAG's taxable income limitation under § 1.199A–8(b)(5)(ii)(C) is not treated as an NOL carryover to any taxable year in determining the taxable income limitation under § 1.199A–8(b)(5)(ii)(C). For purposes of this paragraph (b)(4), an NOL is considered to be used if it reduces an EAG's aggregate taxable income from patronage sources or nonpatronage sources, as the case may be, regardless of whether the use of the NOL actually reduces the amount of the section 199A(g) deduction that the EAG would otherwise derive. An NOL is not considered to be used to the extent that it reduces an EAG's aggregate taxable income from patronage sources to an amount less than zero. If more than one Specified Cooperative has an NOL used in the same taxable year to reduce the EAG's taxable income from patronage sources, the respective NOLs are deemed used in proportion to the amount of each Specified Cooperative's NOL.

(5) *Example.* The following example illustrates the application of paragraph (b)(4) of this section.

(i) *Facts.* Nonexempt Specified Cooperatives A and B are the only two members of an EAG. A and B are both calendar year taxpayers and they do not join in the filing of a consolidated Federal income tax return. Neither A nor B had taxable income or loss prior to 2020. In 2020, A has patronage QPAI and patronage taxable income of $1,000 and B has patronage QPAI of $1,000 and a patronage NOL of $1,500. A also has nonpatronage income of $3,000. B has no activities other than from its patronage activities. In 2021, A has patronage QPAI of $2,000 and patronage taxable income of $1,000 and B has patronage QPAI of $2,000 and patronage taxable income prior to the NOL deduction allowed under section 172 of $2,000. Neither A nor B has nonpatronage activities in 2021. A's and B's patronage activities have aggregate W–2 wages in excess of the section 199A(g)(1)(B) wage limitation in both 2020 and 2021.

(ii) *Section 199A(g) deduction for 2020.* In determining the EAG's section 199A(g) deduction for 2020, A's $1,000 of QPAI and B's $1,000 of QPAI are aggregated, as are A's $1,000 of taxable income from its patronage activities and B's $1,500 NOL from its patronage activities. A's nonpatronage income is not included. Thus, for 2020, the EAG has patronage QPAI of $2,000 and patronage taxable income of ($500). The EAG's section 199A(g) deduction for 2020 is 9% of the lesser of its patronage QPAI or its patronage taxable income. Because the EAG has a taxable loss from patronage sources in 2020, the EAG's section 199A(g) deduction is $0.

(iii) *Section 199A(a) deduction for 2021.* In determining the EAG's section 199A deduction for 2021, A's patronage QPAI of $2,000 and B's patronage QPAI of $2,000 are aggregated, resulting in the EAG having patronage QPAI of $4,000. Also, $1,000 of B's patronage NOL from 2020 was used in 2020 to reduce the EAG's taxable income from patronage sources to $0. The remaining $500 of B's patronage NOL from 2020 is not considered to have been used in 2020 because it reduced the EAG's patronage taxable income to less than $0. Accordingly, for purposes of determining the EAG's taxable income limitation under § 1.199A–8(b)(5) in 2021, B is deemed to have only a $500 NOL carryover from its patronage sources from 2020 to offset a portion of its 2021 taxable income from its patronage sources. Thus, B's taxable income from its patronage sources in 2021 is $1,500, which is aggregated with A's $1,000 of taxable income from its patronage sources. The EAG's taxable income limitation in 2021 is $2,500. The EAG's section 199A(g) deduction is 9% of the lesser of its patronage sourced QPAI of $4,000 and its taxable income from patronage sources of $2,500. Thus, the EAG's section 199A(g) deduction in 2021 is 9% of $2,500, or $225. The results for 2021 would be the same if neither A nor B had patronage sourced QPAI in 2020.

(c) *Allocation of an expanded affiliated group's section 199A(g) deduction among members of the expanded affiliated group*—(1) *In general.* An EAG's section 199A(g) deduction from its patronage sources, as determined in paragraph (b) of this section, is allocated among the Specified Cooperatives that are members of the EAG in proportion to

each Specified Cooperative's patronage QPAI, regardless of whether the Specified Cooperative has patronage taxable income or W–2 wages for the taxable year. For these purposes, if a Specified Cooperative has negative patronage QPAI, such QPAI is treated as zero. Pursuant to § 1.199A–8(b)(6), a patronage section 199A(g) deduction can be applied only against patronage income and deductions.

(2) *Use of section 199A(g) deduction to create or increase a net operating loss.* If a Specified Cooperative that is a member of an EAG has some or all of the EAG's section 199A(g) deduction allocated to it under paragraph (c)(1) of this section and the amount allocated exceeds patronage taxable income, determined as described in this section and prior to allocation of the section 199A(g) deduction, the section 199A(g) deduction will create an NOL for the patronage source. Similarly, if a Specified Cooperative that is a member of an EAG, prior to the allocation of some or all of the EAG's section 199A(g) deduction to the member, has a patronage NOL for the taxable year, the portion of the EAG's section 199A(g) deduction allocated to the member will increase such NOL.

(d) *Special rules for members of the same consolidated group*—(1) *Intercompany transactions.* In the case of an intercompany transaction between consolidated group members S and B (as the terms intercompany transaction, S, and B are defined in § 1.1502–13(b)(1)), S takes the intercompany transaction into account in computing the section 199A(g) deduction at the same time and in the same proportion as S takes into account the income, gain, deduction, or loss from the intercompany transaction under § 1.1502–13.

(2) *Application of the simplified deduction method and the small business simplified overall method.* For purposes of applying the simplified deduction method under § 1.199A–10(e) and the small business simplified overall method under § 1.199A–10(f), a Specified Cooperative that is part of a consolidated group determines its QPAI using its members' DPGR, non-DPGR, cost of goods sold (COGS), and all other deductions, expenses, or losses (hereinafter deductions), determined after the application of § 1.1502–13.

(3) *Determining the section 199A(g) deduction*—(i) *Expanded affiliated group consists of consolidated group and non-consolidated group members.* In determining the section 199A(g) deduction, if an EAG includes Specified Cooperatives that are members of the same consolidated group and Specified Cooperatives that are not members of the same consolidated group, the consolidated taxable income or loss, QPAI, and W–2 wages, from patronage sources, if any, of the consolidated group (and not the separate taxable income or loss, QPAI, and W–2 wages from patronage sources of the members of the consolidated group), are aggregated with the taxable income or loss, QPAI, and W–2 wages, from patronage sources, if any, of the non-consolidated group members. For example, if A, B, C, S1, and S2 are Specified Cooperatives that are members of the same EAG, and A, S1, and S2 are members of the same consolidated group (the A consolidated group), then the A consolidated group is treated as one member of the EAG. Accordingly, the EAG is considered to have three members—the A consolidated group, B, and C. The consolidated taxable income or loss, QPAI, and W–2 wages from patronage sources, if any, of the A consolidated group are aggregated with the taxable income or loss from patronage sources, QPAI, and W–2 wages, if any, of B and C in determining the EAG's section 199A(g) deduction from patronage sources. Pursuant to § 1.199A–8(b)(6), a patronage section 199A(g) deduction can be applied only against patronage income and deductions.

(ii) *Expanded affiliated group consists only of members of a single consolidated group.* If all of the Specified Cooperatives that are members of an EAG are also members of the same consolidated group, the consolidated group's section 199A(g) deduction is determined using the consolidated group's consolidated taxable income or loss, QPAI, and W–2 wages, from patronage sources rather than the separate taxable income or loss, QPAI, and W–2 wages from patronage sources of its members.

(4) *Allocation of the section 199A(g) deduction of a consolidated group among its members.* The section 199A(g) deduction from patronage sources of a consolidated group (or the section 199A(g) deduction allocated to a consolidated group that is a member of an EAG) is allocated among the patronage sources of Specified Cooperatives in proportion to each Specified Cooperative's patronage QPAI, regardless of whether the Specified Cooperative has patronage separate taxable income or W–2 wages for the taxable year. In allocating the section 199A(g) deduction of a patronage source of a Specified Cooperative that is part of a consolidated group among patronage sources of other members of the same group, any redetermination of a member's patronage receipts, COGS, or other deductions from an intercompany transaction under § 1.1502–13(c)(1)(i) or (c)(4) is not taken into account for purposes of section 199A(g). Also, for purposes of this allocation, if a patronage source of a Specified Cooperative that is a member of a consolidated group has negative QPAI, the QPAI of the patronage source is treated as zero.

(e) *Examples.* The following examples illustrate the application of paragraphs (a) through (d) of this section.

(i) *Example 1.* Specified Cooperatives X, Y, and Z are members of the same EAG but are not members of a consolidated group. X, Y, and Z each files Federal income tax returns on a calendar year basis. None of X, Y, or Z have activities other than from its patronage sources. Prior to 2020, X had no taxable income or loss. In 2020, X has taxable income of $0, QPAI of $2,000, and W–2 wages of $0, Y has taxable income of $4,000, QPAI of $3,000, and W–2 wages of $500, and Z has taxable income of $4,000, QPAI of $5,000, and W–2 wages of $2,500. Accordingly, the EAG's patronage source taxable income is $8,000, the sum of X's taxable income of $0, Y's taxable income of $4,000, and Z's taxable income of $4,000. The EAG has QPAI of $10,000, the sum of X's QPAI of $2,000, Y's QPAI of $3,000, and Z's QPAI of $5,000. The EAG's W–2 wages are $3,000, the sum of X's W–2 wages of $0, Y's W–2 wages of $500, and Z's W–2 wages of $2,500. Thus, the EAG's section 199A(g) deduction for 2020 is $720 (9% of the lesser of the EAG's patronage source taxable income of $8,000 and the EAG's QPAI of $10,000, but no greater than 50% of its W–2 wages of $3,000, that is $1,500). Pursuant to paragraph (c)(1) of this section, the $720 section 199A(g) deduction is allocated to X, Y, and Z in proportion to their respective amounts of QPAI, that is $144 to X ($720 × $2,000/$10,000), $216 to Y ($720 × $3,000/$10,000), and $360 to Z ($720 × $5,000/$10,000). Although X's patronage source taxable income for 2020 determined prior to allocation of a portion of the EAG's section 199A(g) deduction to it was $0, pursuant to paragraph (c)(2) of this section, X will have an NOL from its patronage source for 2020 equal to $144, which will be a carryover to 2021.

(ii) *Example 2.* (A) *Facts.* Corporation X is the common parent of a consolidated group, consisting of X and Y, which has filed a consolidated Federal income tax return for many years. Corporation P is the common parent of a consolidated group, consisting of P and S, which has filed

a consolidated Federal income tax return for many years. The X and P consolidated groups each file their consolidated Federal income tax returns on a calendar year basis. X, Y, P, and S are each Specified Cooperatives, and none of X, Y, P, or S has ever had activities other than from its patronage sources. The X consolidated group and the P consolidated group are members of the same EAG in 2021. In 2020, the X consolidated group incurred a consolidated net operating loss (CNOL) of $25,000. Neither P nor S (nor the P consolidated group) has ever incurred an NOL. In 2021, the X consolidated group has (prior to the deduction under section 172) taxable income of $8,000 and the P consolidated group has taxable income of $20,000. X's QPAI is $8,000, Y's QPAI is ($13,000), P's QPAI is $16,000 and S's QPAI is $4,000. There are sufficient W–2 wages to exceed the section 199A(g)(1)(B) limitation.

(B) *Analysis.* The X consolidated group uses $8,000 of its CNOL from 2020 to offset the X consolidated group's taxable income in 2021. None of the X consolidated group's remaining CNOL may be used to offset taxable income of the P consolidated group under paragraph (b)(3) of this section. Accordingly, for purposes of determining the EAG's section 199A(g) deduction for 2021, the EAG has taxable income of $20,000 (the X consolidated group's taxable income, after the deduction under section 172, of $0 plus the P consolidated group's taxable income of $20,000). The EAG has QPAI of $15,000 (the X consolidated group's QPAI of ($5,000) (X's $8,000 + Y's ($13,000)), and the P consolidated group's QPAI of $20,000 (P's $16,000 + S's $4,000)). The EAG's section 199A(g) deduction equals $1,350, 9% of the lesser of its taxable income of $20,000 and its QPAI of $15,000. The section 199A(g) deduction is allocated between the X and P consolidated groups in proportion to their respective QPAI. Because the X consolidated group has negative QPAI, all of the section 199A(g) deduction of $1,350 is allocated to the P consolidated group. This $1,350 is allocated between P and S, the members of the P consolidated group, in proportion to their QPAI. Accordingly, P is allocated $1,080 ($1,350 × ($16,000/$20,000) and S is allocated $270 ($1,350 × $4,000/$20,000)).

(f) *Allocation of patronage income and loss by a Specified Cooperative that is a member of the expanded affiliated group for only a portion of the year*—(1) *In general.* A Specified Cooperative that becomes or ceases to be a member of an EAG during its taxable year must allocate its taxable income or loss, QPAI, and W–2 wages between the portion of the taxable year that the Specified Cooperative is a member of the EAG and the portion of the taxable year that the Specified Cooperative is not a member of the EAG. This allocation of items is made by using the pro rata allocation method described in this paragraph (f)(1). Under the pro rata allocation method, an equal portion of patronage taxable income or loss, QPAI, and W–2 wages is assigned to each day of the Specified Cooperative's taxable year. Those items assigned to those days that the Specified Cooperative was a member of the EAG are then aggregated.

(2) *Coordination with rules relating to the allocation of income under § 1.1502–76(b).* If § 1.1502–76(b) (relating to items included in a consolidated return) applies to a Specified Cooperative that is a member of an EAG, then any allocation of items required under this paragraph (f) is made only after the allocation of the items pursuant to § 1.1502–76(b).

(g) *Total section 199A(g) deduction for a Specified Cooperative that is a member of an expanded affiliated group for some or all of its taxable year*—(1) *Member of the same EAG for the entire taxable year.* If a Specified Cooperative is a member of the same EAG for its entire taxable year, the Specified Cooperative's section 199A(g) deduction for the taxable year is the amount of the section 199A(g) deduction allocated to it by the EAG under paragraph (c)(1) of this section.

(2) *Member of the expanded affiliated group for a portion of the taxable year.* If a Specified Cooperative is a member of an EAG for only a portion of its taxable year and is either not a member of any EAG or is a member of another EAG, or both, for another portion of the taxable year, the Specified Cooperative's section 199A(g) deduction for the taxable year is the sum of its section 199A(g) deductions for each portion of the taxable year.

(3) *Example.* The following example illustrates the application of paragraphs (f) and (g) of this section.

(i) *Facts.* Specified Cooperatives X and Y, calendar year taxpayers, are members of the same EAG for the entire 2020 taxable year. Specified Cooperative Z, also a calendar year taxpayer, is a member of the EAG of which X and Y are members for the first half of 2020 and not a member of any EAG for the second half of 2020. None of X, Y, or Z have activities other than from its patronage sources. Assume that X, Y, and Z each has W–2 wages in excess of the section 199A(g)(1)(B) wage limitation for all relevant periods. In 2020, X has taxable income of $2,000 and QPAI of $600, Y has taxable loss of $400 and QPAI of ($200), and Z has taxable income of $1,400 and QPAI of $2,400.

(ii) *Analysis.* Pursuant to the pro rata allocation method, $700 of Z's 2020 taxable income and $1,200 of its QPAI are allocated to the first half of the 2020 taxable year (the period in which Z is a member of the EAG) and $700 of Z's 2020 taxable income and $1,200 of its QPAI are allocated to the second half of the 2020 taxable year (the period in which Z is not a member of any EAG). Accordingly, in 2020, the EAG has taxable income from patronage sources of $2,300 ($2,000 + ($400) + $700) and QPAI of $1,600 ($600 + ($200) + $1,200). The EAG's section 199A(g) deduction for 2020 is $144 (9% of the lesser of the EAG's taxable income of $2,300 or QPAI of $1,600). Pursuant to § 1.199A–12(c)(1), this $144 deduction is allocated to X, Y, and Z in proportion to their respective QPAI. Accordingly, X is allocated $48 of the EAG's section 199A(g) deduction ($144 × ($600/($600 + $0 + $1,200))), Y is allocated $0 of the EAG's section 199A(g) deduction ($144 × ($0/($600 + $0 + $1,200))), and Z is allocated $96 of the EAG's section 199A(g) deduction ($144 × ($1,200/($600 + $0 + $1,200))). For the second half of 2020, Z has taxable income of $700 and QPAI of $1,200. Therefore, for the second half of 2020, Z has a section 199A(g) deduction of $63 (9% of the lesser of its taxable income of $700 or its QPAI of $1,200). Accordingly, X's 2020 section 199A(g) deduction is $48 and Y's 2020 section 199A(g) deduction is $0. Z's 2020 section 199A(g) deduction is $159, the sum of $96, the portion of the EAG's section 199A(g) deduction allocated to Z for the first half of 2020 and Z's $63 section 199A(g) deduction for the second half of 2020.

(h) *Computation of section 199A(g) deduction for members of an expanded affiliated group with different taxable years*—(1) *In general.* If Specified Cooperatives that are members of an EAG have different taxable years, in determining the section 199A(g) deduction of a member (the computing member), the computing member is required to take into account the taxable income or loss, determined without regard to the section 199A(g) deduction, QPAI, and W–2 wages of each other group member that are both—

(i) Attributable to the period that each other member of the EAG and the computing member are members of the EAG; and

(ii) Taken into account in a taxable year that begins after the effective date of section 199A(g) and ends with or within the taxable year of the computing

member with respect to which the section 199A(g) deduction is computed.

(2) *Example.* The following example illustrates the application of this paragraph (h).

(i) *Facts.* Specified Cooperatives X, Y, and Z are members of the same EAG. Neither X, Y, nor Z is a member of a consolidated group. X and Y are calendar year taxpayers and Z is a June 30 fiscal year taxpayer. Z came into existence on July 1, 2020. None of X, Y, or Z have activities other than from its patronage sources. Each Specified Cooperative has taxable income that exceeds its QPAI and W–2 wages in excess of the section 199A(g)(1)(B) wage limitation. For the taxable year ending December 31, 2020, X's QPAI is $8,000 and Y's QPAI is ($6,000). For its taxable year ending June 30, 2021, Z's QPAI is $2,000.

(ii) *2020 Computation.* In computing X's and Y's respective section 199A(g) deductions for their taxable years ending December 31, 2020, X's taxable income or loss, QPAI and W–2 wages and Y's taxable income or loss, QPAI, and W–2 wages from their respective taxable years ending December 31, 2020, are aggregated. The EAG's QPAI for this purpose is $2,000 (X's QPAI of $8,000 + Y's QPAI of ($6,000)). Accordingly, the EAG's section 199A(g) deduction is $180 (9% × $2,000). The $180 deduction is allocated to each of X and Y in proportion to their respective QPAI as a percentage of the QPAI of each member of the EAG that was taken into account in computing the EAG's section 199A(g) deduction. Pursuant to paragraph (c)(1) of this section, in allocating the section 199A(g) deduction between X and Y, because Y's QPAI is negative, Y's QPAI is treated as being $0. Accordingly, X's section 199A(g) deduction for its taxable year ending December 31, 2020, is $180 ($180 × $8,000/($8,000 + $0)). Y's section 199A(g) deduction for its taxable year ending December 31, 2020, is $0 ($180 × $0/($8,000 + $0)).

(iii) *2021 Computation.* In computing Z's section 199A(g) deduction for its taxable year ending June 30, 2021, X's and Y's items from their respective taxable years ending December 31, 2020, are taken into account. Therefore, X's taxable income or loss and Y's taxable income or loss, determined without regard to the section 199A(g) deduction, QPAI, and W–2 wages from their taxable years ending December 31, 2020, are aggregated with Z's taxable income or loss, QPAI, and W–2 wages from its taxable year ending June 30, 2021. The EAG's QPAI is $4,000 (X's QPAI of $8,000 + Y's QPAI of ($6,000) + Z's QPAI of $2,000). The EAG's section 199A(g) deduction is $360 (9% × $4,000). A portion of the $360 deduction is allocated to Z in proportion to its QPAI as a percentage of the QPAI of each member of the EAG that was taken into account in computing the EAG's section 199A(g) deduction. Pursuant to paragraph (c)(1) of this section, in allocating a portion of the $360 deduction to Z, Y's QPAI is treated as being $0 because Y's QPAI is negative. Z's section 199A(g) deduction for its taxable year ending June 30, 2021, is $72 ($360 × ($2,000/($8,000 + $0 + $2,000))).

(i) *Partnership owned by expanded affiliated group*—(1) *In general.* For purposes of section 199A(g)(3)(D) relating to DPGR, if all of the interests in the capital and profits of a partnership are owned by members of a single EAG at all times during the taxable year of such partnership (EAG partnership), then the EAG partnership and all members of that EAG are treated as a single taxpayer during such period.

(2) *Attribution of activities*—(*i*) *In general.* If a Specified Cooperative which is a member of an EAG (disposing member) derives gross receipts from the lease, rental, license, sale, exchange, or other disposition of property that was MPGE by an EAG partnership, all the partners of which are members of the same EAG to which the disposing member belongs at the time that the disposing member disposes of such property, then the disposing member is treated as conducting the MPGE activities previously conducted by the EAG partnership with respect to that property. The previous sentence applies only for those taxable years in which the disposing member is a member of the EAG of which all the partners of the EAG partnership are members for the entire taxable year of the EAG partnership. With respect to a lease, rental, or license, the disposing member is treated as having disposed of the property on the date or dates on which it takes into account its gross receipts from the lease, rental, or license under its method of accounting. With respect to a sale, exchange, or other disposition, the disposing member is treated as having disposed of the property on the date it ceases to own the property for Federal income tax purposes, even if no gain or loss is taken into account. Likewise, if an EAG partnership derives gross receipts from the lease, rental, license, sale, exchange, or other disposition of property that was MPGE by a member (or members) of the same EAG (the producing member) to which all the partners of the EAG partnership belong at the time that the EAG partnership disposes of such property, then the EAG partnership is treated as conducting the MPGE activities previously conducted by the producing member with respect to that property. The previous sentence applies only for those taxable years in which the producing member is a member of the EAG of which all the partners of the EAG partnership are members for the entire taxable year of the EAG partnership. With respect to a lease, rental, or license, the EAG partnership is treated as having disposed of the property on the date or dates on which it takes into account its gross receipts derived from the lease, rental, or license under its method of accounting. With respect to a sale, exchange, or other disposition, the EAG partnership is treated as having disposed of the property on the date it ceases to own the property for Federal income tax purposes, even if no gain or loss is taken into account.

(*ii*) *Attribution between expanded affiliated group partnerships.* If an EAG partnership (disposing partnership) derives gross receipts from the lease, rental, license, sale, exchange, or other disposition of property that was MPGE by another EAG partnership (producing partnership), then the disposing partnership is treated as conducting the MPGE activities previously conducted by the producing partnership with respect to that property, provided that each of these partnerships (the producing partnership and the disposing partnership) is owned for its entire taxable year in which the disposing partnership disposes of such property by members of the same EAG. With respect to a lease, rental, or license, the disposing partnership is treated as having disposed of the property on the date or dates on which it takes into account its gross receipts from the lease, rental, or license under its method of accounting. With respect to a sale, exchange, or other disposition, the disposing partnership is treated as having disposed of the property on the date it ceases to own the property for Federal income tax purposes, even if no gain or loss is taken into account.

(j) *Applicability date.* The provisions of this section apply to taxable years beginning after January 19, 2021. Taxpayers, however, may choose to apply the rules of §§ 1.199A–7 through 1.199A–12 for taxable years beginning on or before that date, provided the taxpayers apply the rules in their entirety and in a consistent manner.

■ **Par. 5.** Section 1.1382–3 is amended by

■ 1. Revising paragraph (c)(2).

■ 2. Adding paragraph (e).

The revisions and additions read as follows:

§ 1.1382–3 Taxable income of cooperatives; special deductions for exempt farmers' cooperatives.

* * * * *

(c) * * *

(2) *Definition.* The term *income derived from sources other than patronage* used in this paragraph (c) means income from nonpatronage sources within the meaning of § 1.1388–1(f)(3).

* * * * *

(e) *Applicability date.* Paragraph (c)(2) of this section applies to taxable years beginning after January 19, 2021. For taxable years beginning on or before January 19, 2021, taxpayers, however, may choose to apply the rules of paragraph (c)(2) of this section, provided the taxpayers apply the rules in their entirety and in a consistent manner.

■ **Par. 6.** Section 1.1388–1 is amended by adding paragraphs (f) and (g).

The additions read as follows:

§ 1.1388–1 Definitions and special rules.

* * * * *

(f) *Patronage and nonpatronage sourced items*—(1) *Directly related use test.* Whether an item of income or deduction is patronage or nonpatronage sourced is determined by applying the directly related use test.

(2) *Patronage sourced income or deductions.* If the income or deduction is produced by a transaction that actually facilitates the accomplishment of the cooperative's marketing, purchasing, or services activities, the income or deduction is from patronage sources.

(3) *Nonpatronage sourced income or deductions.* If the transaction producing the income or deduction does not actually facilitate the accomplishment of the cooperative's marketing, purchasing, or services activities but merely enhances the overall profitability of the cooperative, being merely incidental to the association's cooperative operation, the income or deduction is from nonpatronage sources.

(g) *Applicability date.* Paragraph (f) of this section applies to taxable years beginning after January 19, 2021. Taxpayers, however, may choose to apply the rules of paragraph (f) of this section for taxable years beginning on or before that date, provided the taxpayers apply the rules in their entirety and in a consistent manner.

Sunita Lough,

Deputy Commissioner for Services and Enforcement.

Approved: January 8, 2021.

David J. Kautter,

Assistant Secretary of the Treasury (Tax Policy).

Vol. 86 Tuesday,
No. 11 January 19, 2021

Part VI

Department of Agriculture

Agricultural Marketing Service

7 CFR Part 990

Establishment of a Domestic Hemp Production Program; Final Rule

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

7 CFR Part 990

[Doc. No. AMS–SC–19–0042; SC19–990–2 FR]

Establishment of a Domestic Hemp Production Program

AGENCY: Agricultural Marketing Service, Department of Agriculture (USDA).

ACTION: Final rule.

SUMMARY: This final rule supersedes the interim final rule that established the Domestic Hemp Production Program, as mandated by the Agriculture Improvement Act of 2018 (2018 Farm Bill). This rule includes regulations used by the Department of Agriculture (USDA) to approve plans submitted by States and Indian Tribes for the domestic production of hemp. This rule also includes regulations on the Federal hemp production plan for producers in States or territories of Indian Tribes that do not have their own USDA-approved plans. The program provides requirements for maintaining records about the land where hemp is produced, testing the levels of total delta-9 tetrahydrocannabinol, disposing of non-compliant plants, licensing hemp producers, and ensuring compliance under the new program.

DATES: This rule is effective March 22, 2021.

FOR FURTHER INFORMATION CONTACT: Bill Richmond, Branch Chief, U.S. Domestic Hemp Production Program, Specialty Crops Program, AMS, USDA; 1400 Independence Ave. SW, Stop 0237, Washington, DC, 20250–0237; Telephone: (202) 720–2491, Fax: (202) 720–8938, or Email: *William.Richmond@usda.gov.*

SUPPLEMENTARY INFORMATION: This rule is issued under the authority of section 10113 of the 2018 Farm Bill (Pub. L. 115–334; December 20, 2018), which amended the Agricultural Marketing Act of 1946, as previously amended (7 U.S.C. 1621 *et seq.*) (AMA), by adding Subtitle G (sections 297A through 297E). Section 297B of the AMA requires the Secretary of Agriculture (Secretary) to evaluate and approve or disapprove State or Tribal plans regulating the production of hemp. Section 297C of the AMA requires the Secretary to establish a Federal plan for producers in States and territories of Indian Tribes not covered by plans approved under section 297B. Section 297D of the AMA requires the Secretary to promulgate regulations and guidelines relating to the production of hemp under sections 297B and 297C in consultation with the U.S. Attorney General.

AMS issued an interim final rule (IFR) on October 31, 2019 (84 FR 58522), and began its initial implementation of the program. To date, USDA has approved approximately 45 State and Tribal hemp plans. However, not all of the States and Tribes have implemented their plans for various reasons, including the need to take additional steps to complete State legislative or rulemaking processes or to establish the regulatory scheme as well as the extension of the 2014 Farm Bill Program. Thus, as of November 2020, twenty States and nine Tribes have submitted reports on their respective programs. Based on the reports submitted by States and Tribes in 2020, producers have planted 6,166 acres under the 2018 Farm Bill hemp plans, of which approximately 730 acres were subject to disposal.

As of the effective date of this final rule, the interim final rule is superseded. This final rule replaces the IFR at 7 CFR part 990, effective March 22, 2021. The Agricultural Marketing Service (AMS), which has been delegated authority to administer the U.S. Domestic Hemp Production Program, provided multiple opportunities for public comment. AMS accepted comments during an initial comment period from October 31, 2019, through December 31, 2019. This initial comment period was extended for an additional 30 days on December 18, 2019 (84 FR 69295), ending January 29, 2020. AMS reopened the comment period for 30 additional days on September 8, 2020 (85 FR 55363), ending October 8, 2020. A total of approximately 5,900 comments were received during all comment periods from States; Indian Tribes; industry and agricultural organizations; private citizens; members of Congress, the scientific community; agencies; and individuals involved in the growing, processing, transporting and marketing of hemp. A summary of the public comments received and AMS's responses appear under ''Comment Analysis'' in section IX of this document.

I. Introduction

Hemp is a commodity with numerous industrial and horticultural uses including fabric, paper, construction materials, food products, cosmetics, production of cannabinoids (such as cannabidiol or CBD), and other products.[1] While hemp was produced previously in the United States (U.S.) for hundreds of years, its use diminished in favor of alternatives. Hemp fiber, for instance, which had been used to make rope and clothing, was replaced by less expensive jute and abaca imported from Asia. Rope made from these materials was lighter, more buoyant, and more resistant to saltwater than hemp rope, which required tarring. Improvements in technology further contributed to the decline in hemp use. The cotton gin, for example, simplified the processing of cotton, which replaced hemp in the manufacture of textiles.

The hemp industry continued in the U.S. until the Marihuana Tax Act of 1938. This Act ended the legal production of hemp in the United States, and hemp was added to Schedule I of the Controlled Substances Act (CSA), 21 U.S.C. 801 *et seq.* Prior to the 2018 Farm Bill, all *Cannabis sativa* L., regardless of delta-9 tetrahydrocannabinol (THC) concentration level, fell within the CSA definition of ''marihuana'' unless the product fell under a narrow range of exceptions (*e.g.,* the ''mature stalks'' of the plant).[2] As a result, many aspects of domestic production of what is now defined as hemp was limited to persons registered under the CSA to do so.

Under the Agricultural Act of 2014 (2014 Farm Bill), Public Law 113–79, State departments of agriculture and institutions of higher education were permitted to produce hemp as part of a pilot program for research purposes. The authority for hemp production provided in the 2014 Farm Bill was extended until January 1, 2022, by the Continuing Appropriations Act, 2021, and Other Extensions Act (Pub. L. 116–260) (2021 Continuing Appropriations Act).

Hemp production in the U.S. has seen a resurgence in the last several years.

Since importation of seed is covered under USDA's Animal and Plant Health Inspection Service (APHIS) regulations, this final rule does not regulate hemp

[1] Section 297D(c) of the AMA explicitly preserved the authority of the U.S. Food and Drug Administration (FDA) to promulgate regulations and guidance related to the production of hemp under the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 301 *et seq.*) (FD&C Act) and section 351 of the Public Health Service Act (42 U.S.C. 262) (PHS Act). *See* section 297D(c)(1) (''Nothing in this subchapter shall affect or modify . . . the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 301 *et seq.*); section 351 of the Public Health Service Act (42 U.S.C. 262); or the authority of the Commissioner of Food and Drugs and the Secretary of Health and Human Services . . . '' under those Acts).

[2] Although the statutory spelling is ''marihuana'' in the Controlled Substances Act, this rule uses the more commonly used spelling of marijuana.

seed imports. APHIS regulates the importation of all seeds for planting to ensure safe agricultural trade. Hemp seeds can be imported into the U.S. from Canada if accompanied by either: (1) A phytosanitary certification from Canada's national plant protection organization to verify the origin of the seed and confirm that no plant pests are detected; or (2) a Federal Seed Analysis Certificate (SAC, PPQ Form 925) for hemp seeds grown in Canada. Hemp seeds imported into the U.S. from countries other than Canada may be accompanied by a phytosanitary certificate from the exporting country's national plant protection organization to verify the origin of the seed and confirm that no plant pests are detected.

This final rule does not address the exportation of hemp. Should there be sufficient public interest in exporting hemp in the future, USDA will work with industry and other Federal agencies to help facilitate this process.

The 2018 Farm Bill requires USDA to promulgate regulations and guidelines to establish and administer a program for the production of hemp in the United States. Under this new authority, a State or Indian Tribe that wants to have primary regulatory authority over the production of hemp in that State or territory of that Indian Tribe may submit, for the approval of the Secretary, a plan concerning the monitoring and regulation of such hemp production. For States or Indian Tribes without an approved plan, the Secretary is directed to establish a Departmental plan to monitor and regulate hemp production in those areas.

The 2018 Farm Bill specifies requirements that all hemp producers must meet. These include licensing requirements; recordkeeping requirements for maintaining information about the land where hemp is produced; procedures for testing the THC concentration levels for hemp; procedures for disposing of non-compliant plants; compliance provisions; and procedures for handling violations.

For the purposes of 7 CFR part 990, and as defined in the 2018 Farm Bill, the term ''hemp'' means the plant species *Cannabis sativa* L. and any part of that plant, including the seeds thereof and all derivatives, extracts, cannabinoids, isomers, acids, salts, and salts of isomers, whether growing or not, with a delta-9 tetrahydrocannabinol concentration of not more than 0.3 percent on a dry weight basis. Delta-9 tetrahydrocannabinol, or THC, is the primary intoxicating component of cannabis. Cannabis with a THC level exceeding 0.3 percent is considered marijuana, which remains classified as a Schedule I controlled substance regulated by the Drug Enforcement Administration (DEA) under the CSA.

The term ''State'' means any of one of the fifty States of the United States of America, the District of Columbia, the Commonwealth of Puerto Rico, and any other territory or possession of the United States. The term ''Indian Tribe'' or ''Tribe'' has the same definition as in section 4 of the Indian Self-Determination and Education Assistance Act (25 U.S.C. 5304). This final rule also includes the definition of ''territory of an Indian Tribe'' to provide clarity to the term because the AMA does not define it. The final rule defines ''territory of the Indian Tribe'' as (a) all land within the limits of any Indian reservation under the jurisdiction of the United States Government, notwithstanding the issuance of any patent, including rights-of-way running through the reservation; (b) all dependent Indian communities within the borders of the United States whether within the original or subsequently acquired territory thereof, and whether within or without the limits of a state; (c) all Indian allotments, the Indian titles to which have not been extinguished, including rights-of-way running through the same; and (d) any lands title to which is either held in trust by the United States for the benefit of any Indian Tribe or individual or held by any Indian Tribe or individual subject to restriction by the United States against alienation and over which an Indian Tribe exercises jurisdiction. Under an approved Tribal plan, the Indian Tribe will have regulatory authority over hemp production within its Territory.[3] A full list of terms and definitions relating to part 990 can be found under ''Definitions'' in section IV.

This rule is divided into several sections. The first section provides a general introduction to the rule. This section does not go into a detailed description of all parts of the rule or about the provisions of the rule that are discussed later on in other sections. Sections for State and Tribal plans as well as the USDA plan contain general information on land use, tribal jurisdiction authority, sampling, testing, disposal and remediation, compliance provisions, information sharing, certification of resources, and State and Tribal plan approvals. The USDA section also includes USDA hemp license provisions and suspension. These two sections provide general provisions that are discussed in more detail in the comment analysis section. Sections containing definitions, severability and the regulatory analysis are included before the regulatory language. The reader may be best served by reading the comment section to determine the changes made to this rule.

[3] We note that if an Alaskan Native Corporation wants to produce hemp on land it owns in fee simple, it would need to have a State or USDA license, whichever is applicable, because that land does not qualify as Indian Country and the Corporation does not have jurisdiction over that land.

II. State and Tribal Plans

Section 297B (7 U.S.C. 1639p) of the AMA requires that States or Indian Tribes seeking primary regulatory authority over the production of hemp in that State or territory of that Indian Tribe, submit, for the approval of the Secretary, a plan concerning the monitoring and regulation of such hemp production. State or Tribal plans must be submitted to USDA and approved prior to their implementation. Nothing preempts or limits any law of a State or Tribe that regulates the production of hemp and is more stringent than the provisions in Subtitle G of the AMA.

AMS received extensive public input on the regulatory requirements for State and Tribal hemp plans. Incorporating the input received, the following sections explain the changes to the regulatory requirements for State and Tribal hemp plans.

A. Land Used for Production

The 2018 Farm Bill and the IFR required that plans include a process by which relevant information regarding the land used for hemp production in their jurisdiction is collected and maintained. Certain information on mailing addresses and hemp production sites must be collected for each licensee covered by the State or Tribal plan.

The information required to be collected includes a legal description of the land and geospatial location for each field, greenhouse, or other site where hemp is produced. Geospatial location is necessary because many rural locations do not have specific addresses, and these coordinates will assist with the proper identification of hemp production locations.

In addition to the land information required to be collected by the appropriate State or Indian Tribe, AMS chose to require licensed producers, including those under the USDA plan, to report their hemp crop acreage to the Farm Service Agency (FSA). Although many commenters opposed this requirement based on costs around the time and travel expense necessary to physically visit the appropriate FSA County Office, AMS has determined that maintaining the FSA reporting

requirement is essential for several reasons. AMS recognizes that in some cases producers may travel to FSA offices miles away incurring additional time and cost. These costs are incorporated in the expected burden of this program.

First, USDA is statutorily required to provide law enforcement with certain ''real-time'' information about who is growing hemp, whether their license is in good standing with the regulatory body issuing the license, and the location(s) where hemp is being grown. Having FSA collect the necessary information enables USDA to provide the most accurate and ''real-time'' information to law enforcement, as required by Subtitle G of the AMA. Second, FSA offices serve as useful resources to all farmers and, in collaboration with other USDA agencies, can provide a wide range of insurance, risk management, and conservation program guidance and information. These offices currently serve the agricultural industry within their communities, where producers can establish farm and producer records, record their licensing information, and report crop acreage. The producer may also, with supporting documentation, update their FSA farm records for leases, sub-leases, or land ownership. Requiring farmers to visit the FSA office ensures that they receive information on the availability of these helpful tools and programs. This is particularly important for new farmers, who may not be aware of the wide range of programs and services offered by USDA.

Further, FSA maintains the technology necessary for data collection and geographical land identification. These tools will provide easy access to information needed for law enforcement and for other agricultural programs. AMS has determined, for these reasons, to continue to require the reporting of hemp crop acreage to FSA.

Based on input from commenters, USDA is also clarifying the distinction between the term ''lot'' as defined in the IFR, and the term ''subfield'' as it relates to FSA reporting. Although this final rule uses the term ''lot'' to discuss the land where hemp is grown, when a producer visits the FSA office to report hemp crop acreage, FSA staff will help producers determine the applicable FSA-specific term for designating the location(s) where hemp is being grown. The terminology used by FSA to denote land areas include terms like ''farm,'' ''tract,'' ''field,'' and ''subfield,'' which are equivalent to AMS's term ''lot.'' FSA staff will not provide a ''lot number'' to producers as described in the IFR. FSA will use designations that they currently use such as track, field, or subfield, depending on the specific area. This designation does not change the requirements or the information submitted for law enforcement. AMS will amend the form to reflect these terms. When reporting to FSA, producers must provide their State or Tribe-issued license or authorization number. A link to FSA information on how to report hemp crop acreage to FSA is available at *https://www.fsa.usda.gov/Assets/USDA-FSA-Public/usdafiles/FactSheets/2019/crop-acreage-reporting-19.pdf* and is available on the USDA hemp production program website.

As described in the IFR, certain State hemp pilot programs operating under the 2014 Farm Bill authority developed ''seed certification'' programs to help producers identify hemp strains with potentially lower THC concentrations. The term ''certification'' in this context means tested or verified, but it does not necessarily mean certified for varietal purity. USDA acknowledges that this remains a significant hurdle to the hemp industry and is committed to assisting with the research and development of compliant hemp varietals. Although AMS encourages States and Tribes to develop seed-certification programs if sufficient data is available, AMS has determined, at this time, that requiring the use of certain ''compliant'' varietals or establishing National rules for State-level certification programs is inappropriate. AMS will look at best practices from States and Tribes to evaluate if a program would be applicable to a USDA plan. If applicable, USDA may develop a performance-based sampling program. Such a program will require USDA to conduct rulemaking and comment procedures.

The term ''seed certification,'' as found in the Federal Seed Act and its Regulations, refers to a third-party verification process that assures seed customers that they are receiving pure varieties and high-quality seed for planting purposes. The Federal Seed Act grants authority to seed certifying agencies in each State to administer varietal seed certification standards for all major agricultural crops, including hemp. Recognized seed certifying agencies are members of the Association of Official Seed Certifying Agencies (AOSCA), and they administer uniform AOSCA standards and inspect crops being grown for seed throughout the production process to maintain varietal purity. These activities protect seed customers in both domestic and export markets. Seed produced under these types of certification programs ensure a distinct, recognized variety that is properly tested and legally labeled. Seed certification under the Federal Seed Act is concerned with many varietal characteristics, not solely THC concentration. This enables farmers to confidently purchase seed of a suitable variety, by purchasing seed certified as to variety. Using certified seed, as described in the Federal Seed Act regulations and AOSCA standards, is an option for states and tribes if they have the data to support that the seed would work in their environment. While varietal certification does not absolutely ensure a specific THC content, the fact is that THC content (or at least a range) is a reliable varietal characteristic. Therefore, if the farmer is able to confidently purchase seed of a suitable variety by purchasing seed certified to variety, they at least know what to expect from the variety in their area.

For this reason, AMS recommends the use of hemp seed from varieties that have undergone varietal certification, following the process outlined in the Federal Seed Act Regulations, and produced following AOSCA standards. This recommendation will assist hemp farmers to purchase recognized hemp varieties that have been tested for purity and are properly labeled.

Additionally, AMS administers the Plant Variety Protection Office (PVPO) that is actively accepting applications of seed-propagated hemp for plant variety protection. The PVPO provides intellectual property protection to breeders of new varieties of seeds, tubers, and asexually reproduced plants. Under the U.S. Plant Variety Protection Act, PVPO examines new applications and grants certificates that protect varieties for 20 years (25 years for vines and trees). Certificate owners have rights to exclude others from marketing and selling their varieties, manage the use of their varieties by other breeders, and enjoy legal protection of their work. This work, however, does not certify seeds for THC content.

B. Tribal Jurisdictional Authority

The final rule clarifies the extent of a Tribe's regulatory authority over hemp production within its Territory. Several commenters stated that language in the IFR raised uncertainty as to whether Indian Tribes could regulate hemp production by non-Indians operating on fee lands within a Tribe's Territory. To address this uncertainty, § 990.4(b)(4) of the final rule now provides that ''[u]pon USDA approval of a Tribal plan, a Tribe may exercise jurisdiction and therefore primary regulatory authority over all production of hemp in its Territory regardless of the extent of its inherent

regulatory authority.'' Thus, as long as the land at issue qualifies as land within the territory of an Indian Tribe under § 990.1 of the final rule, an Indian Tribe with a USDA-approved plan may regulate all hemp production on that land. USDA determined that this additional language is consistent with Congressional intent in the 2018 Farm Bill and best ensures that hemp production is managed consistently throughout the Territory of an Indian Tribe.

If an Indian Tribe desires to have primary regulatory authority over the production of hemp in its Territory, under the 2018 Farm Bill, the Tribe may submit a plan to USDA. Section 297C of the AMA provides that ''In the case of a State or Indian Tribe for which a State or Tribal plan is not approved under section 297B, the production of hemp in that State or the territory of that Indian Tribe shall be subject to a plan established by the Secretary to monitor and regulate that production.'' Hence if a Tribe does not regulate hemp production within its Tribal Territory, USDA, not a State with an approved plan, will regulate hemp production program within that Territory.

Sections 297B and C plainly show that Congress chose to take a territorial approach to the Tribal regulation of hemp production under the AMA. If Congress only wanted Indian Tribes to assume primary regulatory authority over hemp production in areas within their inherent jurisdictional authority it could have stated this. Instead, Congress opted for a land-based approach and delegated to Tribes the authority to assume hemp production regulatory authority throughout their territories. In consideration of the statutory language and the overall statutory scheme of the 2018 Farm Bill, USDA has determined that an Indian Tribe with an approved plan may regulate hemp production throughout its territory without regard to the Indian Tribe's ability to demonstrate inherent regulatory authority under the factors set forth in *Montana* v. *United States,* 450 U.S. 544 (1981). Because Congress did not define Territory of the Indian Tribe in the AMA and did not include discussion in the legislative history of the meaning of this term, USDA is exercising its authority to issue regulations to implement the provisions in the 2018 Farm Bill to define this term in this manner.

USDA's decision is in-line with agency determinations where the agency determined that Congress delegated a Tribe with authority to exercise regulatory authority over non-Tribal fee land within reservations. EPA Interpretive Rule: Revised Interpretation of Clean Water Act Tribal Provision, 81 FR 30183 (May 16, 2016); EPA Final Rule: Indian Tribes—Air Quality Planning and Management, 63 FR 7254 (Feb. 12, 1998); *Arizona Public Serv. Co.* v. *EPA,* 211 F.3d 1280 (D.C. Cir. 2000).

Moreover, USDA's decision is practicable and prevents piecemeal licensing by Tribes and USDA within a single Tribal Territory. If a Tribe was only able to exercise primary regulatory authority over hemp production within its Territory when it could demonstrate the inherent authority to do so, USDA could be required to regulate some hemp production within the Territory—for example, it could foreseeably be required to regulate hemp production by non-Indians operating on fee lands in certain cases. Such a system would be confusing for producers and regulators alike.

For the foregoing reasons, the final rule now clearly explains that upon USDA approval of a Tribal plan, a Tribe may exercise primary regulatory authority over all production of hemp in its Territory regardless of the extent of its inherent regulatory authority, as reflected in §§ 990.2 and 990.4 of the final rule.

C. Sampling for Total THC

AMS is changing certain aspects of the sampling requirements. This section addresses performance-based sampling, how to sample hemp plants, sampling agents, and the harvest window after sampling takes place.

Sampling Requirements

AMS received significant input from commenters on how hemp sampling procedures and requirements should be changed. When referring to ''sampling,'' we mean the process of collecting cuttings from hemp plants for purposes of compliance testing.

Performance Based Sampling

The IFR required State and Tribal hemp programs to collect samples from the flower material of the cannabis plant. The IFR also required State and Tribal hemp programs to collect enough samples to ensure at a confidence level of 95 percent that no more than one percent (1%) of the plants in the lot would exceed the acceptable hemp THC level. Guidance issued concurrently with the IFR explained these requirements in greater detail. The sampling requirements in the IFR did not consider geography, environmental factors, State or Tribal level seed certification programs, or other factors faced by States and Tribes when developing sampling requirements for their hemp programs. AMS is modifying the sampling provisions as presented in the IFR to allow States and Tribes to develop performance-based sampling requirements. Performance-based sampling achieves defined objectives and focuses on results. It differs significantly from a prescriptive action in which licensees are provided detailed direction on how those results are to be obtained. A performance-based approach would simply set a performance objective (*e.g.,* reliability of 95 percent) and allow the States and Tribes considerable freedom in how to achieve that reliability objective with their sampling methodology.

Some State hemp regulators have successfully developed sampling requirements that ensure adherence to State and Federal regulations, while allowing for flexibilities due to limited State resources and State and Tribal differences. States expressed extensive concerns about the requirements in the IFR that all lots must be sampled and tested, due to significant logistical and fiscal impacts. They explained that, since most hemp in a given region is harvested at the same time, sampling must be completed within a very short time frame by only a few individuals. Several States also explained how sampling occurs under established State programs and described the different ways that perceived risk determines State requirements. Some States utilize different sampling requirements for broad end-use categories like ''fiber/grain'' hemp versus ''cannabinoid'' hemp, while others base their requirements on historical THC concentrations of certain varietals or on the characteristics and growing history of a certain farm or producer. While these States' plans have not been approved under the 2018 Farm Bill regulations, we believe that providing States and Tribes the flexibility to develop sampling plans based on data they gather during an extended period of time may be an effective method at ensuring the overall acceptable hemp THC level of hemp grown in the State or Tribe. AMS agrees that sampling requirements should allow States and Indian Tribes more flexibility in the management of their hemp regulatory programs.

AMS agrees that requiring sampling from every lot may be burdensome and expensive for State and Tribal regulatory entities and producers. AMS also finds compelling the arguments presented by States' regulatory agencies and other commenters that there are different risk factors for hemp used for fiber and grain versus hemp used for cannabinoids. Data submitted with

comments show that the THC levels of hemp used for cannabinoids are frequently higher than those of hemp for fiber and grain. The FDA authorizes the marketing of few types of cannabinoid products. This final rule does not cover cannabinoid products.

AMS also acknowledges that research institutions face special circumstances when conducting hemp research. Accordingly, this rule provides sampling and testing flexibility to these institutions and producers working with them to conduct hemp research. Producers that produce hemp for research, along with the research institution itself, must obtain a license from a State, Tribal Government, or USDA. However, the hemp that is produced for research is not subject to the same sampling requirements provided that the producer adopts and carries out an alternative sampling method that has the potential to ensure, at a confidence level of 95 percent, that the cannabis plant species *Cannabis sativa* L. that will be subject to this alternative method will not test above the acceptable hemp THC level. Research institutions and producers growing hemp for research purposes shall ensure the disposal of all non-compliant plants. Research institutions and producers growing hemp for research purposes shall also comply with the reporting requirements including reporting disposal of non-compliant plants. Research institutions that handle ''hot'' hemp must follow CSA requirements for handling marijuana.

States and Indian Tribes are allowed to develop performance-based requirements for these institutions. However, the alternative method must have the potential to ensure, at a confidence level of 95 percent, that the cannabis plant species *Cannabis sativa* L. that will be subject to the alternative method will not test above the acceptable hemp THC level.

AMS views this flexibility as necessary to help support research and development as it relates to hemp production. This decision allows these types of research facilities and institutions to confidently oversee the study of hemp through trialing and genetics research, which AMS believes to be critical to the growth of industry, particularly in its infancy. Over time, the flexibility provided by this final rule will help to stabilize industry by providing greater understanding of hemp genetics and how certain varietals respond differently to growing conditions in various geographic locations. All producers are expected to benefit from such knowledge as they will be made aware of the more stable and consistently reliable hemp varietals. Any non-compliant plants produced by research institutions as a result of research and development will still need to be disposed and verified through documentation. Research and development facilities are still required to be licensed by States and Tribes. Research institutions must follow licensing and reporting requirements.

In performance-based approaches, measurable or calculable parameters are available to determine whether the performance standard is met. These performance parameters are identified to provide measures of performance and the opportunity to take corrective action if performance is lacking. In the case of hemp, the performance parameter is the 0.3 percent THC level and other measures are included in this final rule if the parameter is not achieved such as disposal and remediation.

USDA finds that in order to increase regulatory effectiveness, it makes sense to allow States and Indian Tribes to consider performance-based alternatives when developing sampling plans. If the objective or intended result can be achieved by setting a readily measurable standard that is enforceable, the proposed requirement should merely specify the objective or result to be obtained rather than prescribe to the licensee how the objective or result is to be attained. In other words, requirements should be performance-based, and highly prescriptive rules and requirements should be avoided absent good cause to the contrary.

The sampling requirements for State and Tribal plans allow for States and Indian Tribes to develop unique sampling protocols for hemp growing facilities under their jurisdiction. Sampling protocols must be sufficient at a confidence level of 95 percent that no more than one percent of the plants in each lot would exceed the acceptable hemp THC level and ensure that a representative sample is collected that represents a homogeneous composition of the lot. Alternatively, the final rule allows States and Indian Tribes to adopt a performance-based sampling protocol. A performance-based protocol must have the potential to ensure, at a confidence level of 95 percent, that the cannabis plants will not test above the acceptable hemp THC level. USDA encourages the alternative protocol to consider seed certification processes or process that identifies varieties that have consistently demonstrated to result in compliant hemp plants in that State or territory of the Indian Tribe, whether the producer is conducting research on hemp at an institution of higher learning, whether a producer has consistently produced compliant hemp plants over an extended period of time, and other similar factors. AMS believes this will provide needed flexibility to States and Indian Tribes to develop logical and enforceable sampling requirements that take into consideration their unique circumstances. AMS will still require States and Indian Tribes to submit their individual sampling requirements for review as a component of the plan approval process. Sampling protocols submitted by States and Indian Tribes must comply with the thresholds established by the 2018 Farm Bill and this final rule. If performance-based sampling requirements are not included in a State or Tribal plan, the method used for sampling must be sufficient at a confidence level of 95 percent that no more than one percent of the plants in each lot would exceed the acceptable hemp THC level and ensure that a representative sample is collected from every lot, and thereby every producer must be sampled and tested. When evaluating sampling protocols submitted by States and Indian Tribes, USDA will evaluate the risk of producing non-compliant material to determine approval or disapproval. In evaluating the risk, USDA will take into consideration whether the performance-based factors the State or Indian Tribe used have the potential to assure compliance at a 95 percent confidence level.

Since USDA cannot develop performance metrics that would be applicable independently from where the producer is located, producers licensed under the USDA plan are subject to the sampling requirements in the rule. USDA guidelines provided on the USDA website at *https://www.ams.usda.gov/rules-regulations/hemp/information-sampling* describe best practices for complying with those requirements.

USDA recognizes that several States and Tribes may include performance-based sampling in their plans and that their experience could demonstrate that their sampling procedures may be adaptable to the USDA plan. If USDA finds this to be the case, USDA will explore a performance-based sampling scheme for producers under the USDA plan in the future through notice and comment rulemaking.

Where To Take Samples on the Hemp Plant

AMS will retain the requirement that pre-harvest samples be taken from the flower material of hemp plants. However, this rule clarifies the number

of inches of plant material needed for the sample and provides greater detail as to where exactly on the plant to make a cutting. The IFR required that samples be taken from the ''flower material'' of hemp plants. Further, in guidance material issued concurrently with the IFR, AMS explained in greater detail where exactly on the plant to make a cutting by recommending samples be taken from the top third of the plant, ''just underneath a flowering material.'' Many commenters argued that samples should be taken from the ''whole plant'' or that a ''homogenized'' sample should be taken to include the stem, stalk, leaves, and seeds along with flower material. Alternatively, some commenters proposed that samples be taken post-harvest from shredded whole plant material, otherwise known as ''biomass.'' Advocates of these positions asserted that THC levels of the whole hemp plant are better represented by samples collected from the entire plant, and not just from floral material. Other commenters advocated for sampling of a certain size or length of cutting. Such commenters advocated adoption of the sampling methods they or others had used under pilot programs. Many State agriculture departments suggested AMS continue to require samples taken from flower material.

Even though many commenters felt that whole plant sampling should be allowed, AMS is of the opinion that since THC is concentrated in the flower material of the plant, the flower material is more appropriate to test than the entire plant. AMS will modify the sampling requirement to state that the sample shall be approximately five to eight inches from the ''main stem'' (that includes the leaves and flowers), ''terminal bud'' (that occurs at the end of a stem), or ''central cola'' (cut stem that could develop into a bud) of the flowering top of the plant. This change is consistent with the sampling practices in several States that established hemp programs pursuant to the 2014 Farm Bill authority. AMS determined that this standard strikes an appropriate balance between the need to collect a sufficiently large portion of the plant's flower (where THC and other cannabinoids are at their most concentrated), and the need to avoid cutting a portion that is so large that it would be logistically difficult to transport, dry, and prepare for lab testing. Based on the information discussed above and the experience and expertise of States and other commenters already engaged in hemp production pursuant to the 2014 Farm Bill authority, AMS is including new requirements herein.

AMS is publishing updated sampling guidance concurrently with this final rule. This guidance describes how to comply with this requirement regarding where to take the sample from the plant as well as other sampling requirements in the final rule. While the sampling guidance provides best practices for meeting the requirements, States, Indian Tribes, and USDA licensees may adopt sampling procedures that differ from the guidance so long as those procedures meet the standards in this final rule.

Sampling Agents

The IFR required a Federal, State, local, or Tribal law enforcement agency or other Federal, State, or Tribal designated person to collect hemp samples for the purposes of testing THC levels in hemp. Comments in response to the IFR presented several concepts concerning how sampling agents should be designated and/or trained. Comments mostly suggested the need for enhanced training requirements for sampling agents to promote consistency in the ways that samples are collected nationwide. Based on comments received regarding sampling agents, AMS will provide additional training resources for sampling agents. These training documents will explain how sampling agents can meet the sampling requirements of this regulation. States and Indian Tribes with an approved plan may require the sampling agents used in their jurisdiction to take the USDA training, or they may develop their own custom training incorporating USDA requirements with additional State or Tribal requirements. States and Tribes must maintain information, available to producers, about trained sampling agents.

Other comments on the topic of sampling agents spoke to the strain on State and Tribal resources of requiring agents to take samples instead of producers. Commenters presented two proposals to alleviate this strain—allowing producers to collect their own samples and reducing the volume of farms and plants from which samples are collected. AMS is retaining the requirement that only designated agents can collect samples. This ensures that there is consistency in sampling throughout the industry. The flexibilities provided to States and Indian Tribes with primary regulatory authority over hemp in their jurisdiction will likely reduce the number of samples required to be collected and thus reduce the burden on designated sampling agents.

Harvest Window

The IFR required harvest within 15 days of sampling. AMS received comments regarding the challenges presented by the 15-day harvest requirement, including the logistical challenges to State and Tribal agencies charged with overseeing the collection of samples in this short timeframe, the logistical challenges to producers in harvesting hemp crops in this short timeframe, and testing challenges faced by laboratories in having to conduct compliance analyses in this short timeframe. Commenters suggested lengthening the 15-day harvest requirement to a longer period of time—with some asking for up to 60 days.

AMS agrees with the arguments presented by commenters and recognizes the challenges imposed on the industry by the 15-day harvest requirement. AMS must also balance the logistical challenges of a harvest window requirement with the fact that THC concentration in hemp generally increases the longer the plant is in the ground. AMS now understands from data provided in comments that THC concentration does not increase linearly and is impacted by a myriad of environmental factors including moisture, wind, temperature, disease, sunlight, and soil, as discussed in the Comment Analysis section of this rule. The regulatory objective is to ensure, as best as possible, harmonization of the THC levels in the pre-harvest sample and that of the harvested material. Requiring that samples be taken prior to harvest is the best way to judge the THC concentration of the plant and the lot the sample represents. AMS recognizes that the most accurate measurement would be at time of harvest, but also understands the logistical practicalities discussed above and therefore has determined the most balanced approach is 30 days. For these reasons, AMS is expanding the window within hemp must be harvested after sampling to 30 days.

Under this final rule, no more than 30 days prior to the anticipated harvest of cannabis plants, a ''sampling agent'' must collect samples for compliance testing. If producers do not harvest within 30 days of sampling, the plant will likely have a higher THC level at harvest than the sample that is being tested. This requirement balances the need for accuracy with the logistical realities faced in the sampling and testing processes and will yield the most accurate measurement of the THC level at the point of harvest. Increasing the window within hemp must be harvested after sampling from 15 to 30 days will

better allow for variables such as testing, weather, agricultural practices, and equipment delays.

D. Testing Laboratories

The IFR introduced regulatory requirements for laboratories testing hemp for compliance purposes. AMS also issued guidance with the IFR to explain best practices for hemp testing laboratories (*www.ams.usda.gov/rules-regulations/hemp*). Based on comments to the IFR, AMS is changing certain parts of these regulations and updating the accompanying testing guideline. While the testing guidance provides best practices for meeting the regulatory requirements, States, Indian Tribes, and USDA licensees may use test procedures that differ from the guidance so long as those procedures meet the standards in the final rule.

Registration With DEA

The IFR required all hemp testing laboratories to be registered with the DEA in accordance with the CSA (21 U.S.C. 823(f)). On February 27, 2020, AMS announced a delay in enforcement of this requirement until October 31, 2020, or the publication of a final rule, whichever came first (USDA, DEA Provide Options for Labs, Disposal of Non-Compliant Hemp Plants. Thursday, Feb. 27, 2020) [4] AMS announced this enforcement delay to allow additional time to increase DEA registered analytical lab capacity and avoid potential delays to producers in receiving test results. Although AMS received comments in opposition to this requirement, AMS is retaining the requirement in this final rule that any laboratory testing hemp for purposes of regulatory compliance must be registered with DEA to conduct chemical analysis of controlled substances in accordance with 21 CFR 1301.13. This requirement also applies to any laboratory testing hemp throughout the growing season to informally monitor THC concentration. Registration is necessary because laboratories could potentially handle cannabis that tests above 0.3 percent THC on a dry weight basis, which is, by definition, marijuana and a Schedule 1 controlled substance. Instructions for laboratories to obtain DEA registration, along with a list of approved laboratories, are available on the USDA Domestic Hemp Production Program website. AMS is aware that there are still not enough DEA-registered hemp testing facilities in some States or territories of Indian Tribes. However, since the IFR was published, numerous laboratories have applied for registration and DEA is working diligently to process these requests. Given the limited number of DEA-registered labs available to hemp producers, delay in enforcement of this requirement is continued until December 31, 2022. AMS anticipates this delay will provide adequate time for testing facilities to obtain DEA registration.

Laboratory Testing Requirements

Section 297B(a)(2)(A)(ii) of the AMA requires that State and Tribal plans for primary regulatory jurisdiction include a ''procedure for testing, using post-decarboxylation or other similarly reliable methods, delta-9 tetrahydrocannabinol concentration levels of hemp produced in the State or territory of the Indian Tribe.'' Since not all testing methods include decarboxylation, AMS is requiring that the total THC, which includes the potential conversion of tetrahydrocannabinolic acid (THCA) into THC, be reported and used for purposes of determining the THC content of a hemp sample.

The IFR included requirements on how laboratories conduct hemp testing for the purposes of regulatory compliance to assure that total THC levels were measured. Commenters provided extensive input on testing requirements, particularly the requirement to test for ''total'' THC instead of only ''delta-9'' THC. AMS is retaining this requirement.

AMS looked at current testing methodologies that would meet the decarboxylation requirement set in the 2018 Farm Bill. In gas chromatography (GC) testing, heat is applied to the sample, which decarboxylates THCA, producing delta-9 THC, so that the final delta-9 THC result is actually a total THC result. GC is the more traditional technique used for THC testing and was the technique used by Dr. Small [5] in his research that derived the 0.3 percent threshold that was used as a basis for the 2018 Farm Bill requirement and is used by law enforcement as the threshold to differentiate hemp from marijuana. In his research papers, the 0.3 percent threshold is based on *total available* delta-9 THC, which is the sum of THCA and delta-9 THC in the plant material.

Liquid chromatography (LC) testing does not involve the use of significant heat, so that the THCA in a sample does not generally decarboxylate. Results can be reported for THCA and delta-9 THC separately. When LC is used, the total THC needs to be calculated post-testing in order to report results as a ''post-decarboxylation'' delta-9 THC value. The requirement to report the total THC value as the THC content regardless of testing methodology used ensures testing consistency across the program.

Samples must be tested using post-decarboxylation or other similarly reliable analytical methods by which the total THC concentration level reported accounts for the conversion of THCA into THC. Acceptable testing methodologies currently include gas or liquid chromatography with detection.

The total THC, derived from the sum of the THC and THCA content, shall be determined and reported on a dry weight basis. In order to provide flexibility to States and Tribes in administering their own hemp production programs, alternative testing protocols will be considered if they are comparable to and similarly reliable as the baseline mandated by section 297B(a)(2)(A)(ii) of the AMA and established under USDA regulations and procedures. Updated USDA procedures for sampling and testing will be issued concurrently with this rule and will be provided on the USDA website.

Reporting requirements for laboratories are discussed later in Section X (Regulatory Analysis) of this final rule. To clarify these requirements, laboratories conducting testing for purposes of monitoring THC concentration throughout the growing season are not subject to these reporting requirements. These tests are for the producer to monitor his or her production as it grows and not to comply with pre-harvest testing requirements in this rule. Only laboratories conducting the ''final'' test that will be used to determine whether a sample is compliant are subject to reporting requirements.

Measurement of Uncertainty

This final rule requires that laboratories calculate and include the Measurement of Uncertainty (MU) when they report THC test results. ''Measurement of uncertainty'' is defined as ''the parameter, associated with the result of a measurement, that characterizes the dispersion of the values that could reasonably be attributed to the particular quantity subject to measurement.'' This definition is based on the definition of ''uncertainty (of measurement)'' in section 2.2.3 of the Joint Committee for

[4] *www.ams.usda.gov/press-release/usda-dea-provide-options-labs-disposal-non-compliant-hemp-plants.*

[5] Small, E.; Beckstead, H.D.; Chan, A. The Evolution of Cannabinoid Phenotypes in Cannabis. *Economic Botany, 29,* 219–232, 1975.

Guides in Metrology [6] 100:800, Evaluation of measurement data—''Guide to the Expression of Uncertainty in Measurement'' (JCGM Guide). The National Institute of Standards and Technology (NIST) Technical Note 1297, ''Guidelines for Evaluating and Expressing the Uncertainty of NIST Measurement Results'' (TN 1297), is based on the JCGM Guide. AMS also relied on the Eurachem/Co-Operation on International Traceability in Analytical Chemistry's ''Guide on Use of Uncertainty Information in Compliance Assessment, First Edition 2007''. Colloquially, the measurement of uncertainty is similar to a margin of error. When the measurement of uncertainty, normally expressed as a +/− with a number (*e.g.* +/- 0.05), is combined with the reported measurement, it produces a range, and the actual measurement has a known probability of falling within that range (typically 95%). Laboratories should meet the AOAC International [7] standard method performance requirements for selecting an appropriate method to determine the MU.

This final rule requires that laboratories report the MU as part of any hemp test results. The rule also includes a definition of ''acceptable hemp THC level'' to account for the uncertainty in the test results. The reported THC concentration of a sample may not be the actual concentration level in the sample. However, the actual THC concentration is expected to be within the distribution or range calculated when the reported THC concentration is combined with the measurement of uncertainty.

The use of MU for purposes of determining the acceptable hemp THC level does not alter Federal law with regard to the definition of hemp or marijuana. As stated above, the 2018 Farm Bill defines hemp as the plant species *Cannabis sativa* L. and any part of that plant, including the seeds thereof and all derivatives, extracts, cannabinoids, isomers, acids, salts, and salts of isomers, whether growing or not, with a delta-9 THC of not more than 0.3 percent on a dry weight basis. Likewise, the Federal (CSA) definition of marijuana continues to include those parts of the cannabis plant as specified in 21 U.S.C. 802(16) (and derivatives thereof) that contain more than 0.3 percent THC on a dry weight basis. The foregoing provisions of Federal law remain in effect for purposes of Federal criminal prosecutions, as well as Federal, civil, and administrative proceedings arising under the CSA.

The definition of ''acceptable hemp THC level'' is also retained in this final rule. States and Indian Tribes shall adopt this concept in their plans. This definition explains how to interpret test results that include the MU with an example. The application of the MU to the reported delta-9 tetrahydrocannabinol concentration on a dry weight basis produces a distribution, or range. If 0.3 percent or less is within the distribution or range, then the sample will be considered to be hemp for the purpose of compliance with the requirements of State, Tribal, or USDA hemp plans. For example, if a laboratory reports a result as 0.35 percent with a measurement of uncertainty of +/−0.06, the distribution or range is 0.29 percent to 0.41percent. Because 0.3 percent is within that distribution or range, the sample, and the lot it represents, is considered hemp for the purpose of compliance with the requirements of State, Tribal, or USDA hemp plans. However, if the MU for that sample was 0.02 percent, the distribution or range is 0.33 percent to 0.37 percent. Because 0.3 percent or less is not within that distribution or range, the sample is not considered hemp for the purpose of plan compliance, and the lot it represents will be subject to disposal. Thus the ''acceptable hemp THC level'' is the application of the MU to the reported delta-9 tetrahydrocannabinol content on a dry weight basis producing a distribution or range that includes 0.3 percent or less. As such, the regulatory definition of ''acceptable hemp THC level'' describes how State, Tribal, and USDA plans must account for uncertainty in test results in their treatment of cannabis. This definition affects neither the statutory definition of hemp, 7 U.S.C. 1639o(1), in the 2018 Farm Bill nor the definition of ''marihuana,'' 21 U.S.C. 802(16), in the CSA.

Sections 297B(a)(2)(A)(iii) and 297C(a)(2)(C) of the AMA require that cannabis plants that have a THC concentration level of greater than 0.3 percent on a dry weight basis be disposed of in accordance with the applicable State, Tribal, or USDA plan. Because of this requirement, producers whose cannabis crop is not hemp will likely lose most of the economic value of their investment. Thus, AMS believes that there must be a high degree of certainty that the THC concentration level is accurately measured and is in fact above 0.3 percent on a dry weight basis before requiring disposal of the crop.

The NIST Reference on Constants, Units, and Uncertainty states that ''measurement result is complete only when accompanied by a quantitative statement of its uncertainty. The uncertainty is required in order to decide if the result is adequate for its intended purpose and to ascertain if it is consistent with other similar results.'' [8] Simply stated, knowing the measurement of uncertainty is necessary to evaluate the accuracy of test results.

Comments to the IFR generally expressed support for requiring that the measurement of uncertainty (MU) be accounted for when testing the THC concentration of hemp, due to the variability in laboratory testing equipment and complex mathematical principles involved. Comments also provided several suggestions on ways to improve the calculation of MU. Many comments advocated specifying an MU to create uniformity in testing across the nation.

USDA does not recommend establishing an MU upper limit (maximum) because (1) MU is typically not standardized, but is controlled using standard test methods, and (2) USDA does not have the data to set an upper limit so setting it would be arbitrary, not scientific. The hemp and scientific industries are just beginning to discuss standard test methods and the final rule does not establish an explicit test method. Setting an upper limit or maximum MU does not resolve the core issue and would not encourage or drive labs to improve accuracy and precision.

Setting an upper limit would in effect be setting a maximum or absolute MU. This may encourage labs to adopt the maximum MU as their MU, rather than drive for a smaller uncertainty. USDA may allow for establishing limits in the future, if needed, once methods are established and USDA has access to Proficiency Testing results and the reported MUs. We encourage States and Tribes to monitor, review and evaluate MU to evaluate trends and outliers, which may indicate ''lab shopping'' for higher MUs. The requirement for hemp

[6] The Joint Committee for Guides in Metrology is composed of international organizations working in the field of metrology. Its membership includes the Bureau International des Poids et Mesures, the Organisation Internationale de Métrologie Légale, the International Organization for Standardization, the International Electrotechnical Commission, the International Union of Pure and Applied Chemistry, the International Union of Pure and Applied Physics, the International Federation of Clinical Chemistry and Laboratory Medicine, and the International Laboratory Accreditation Cooperation.

[7] USDA established the Association of Official Agricultural Chemists in 1884. In 1965, it changed its name to the Association of Official Analytical Chemists and became an independent organization in 1979. In 1991, it adopted its current, legal name as AOAC International.

[8] *https://physics.nist.gov/cuu/Uncertainty/international1.html.*

testing laboratories to incorporate a MU is being retained in this regulation.

Laboratory Accreditation

In the IFR, AMS requested input on establishing a fee-for-service hemp laboratory approval process or a requirement for laboratories to obtain ISO 17025 accreditation for labs that wish to offer THC testing services. Comments reflected a range of views across the industry, both in support of and in opposition to additional laboratory certification requirements. In general, commenters preferred more regulatory flexibility to address the widespread concern of insufficient laboratory capacity as a result of laboratory certification/registration/accreditation requirements. Other commenters were opposed to accreditation requirements due to the cost. While AMS strongly encourages laboratories to be accredited to ISO/IEC 17025 (by an International Laboratory Accreditation Cooperation Mutual Recognition Agreement (ILAC MRA) signatory accreditation body), we also acknowledge that ISO 17025 accreditation requires significant time and financial commitment to pursue and maintain. The time and cost involved is most challenging for smaller and start-up labs. The initial accreditation can cost $5,000–$10,000 (and in some case more) and yearly ongoing costs are $3,000–$8,000. Smaller labs may not have the resources to pursue accreditation in a timely manner or they may have to spend additional time and money for consultants to assist them in setting up a quality management system and to navigate the application and audit processes.

Based on insufficient laboratory capacity at this time and the cost involved in adding this requirement, AMS will not provide an AMS administered lab approval program or require ISO 17025 accreditation. However, AMS remains committed to assisting the hemp laboratory testing community and is available to assist in the development of a laboratory approval program in the future. As explained in the IFR, if such hemp laboratory approval program is developed by AMS, such process will be conducted by USDA, AMS Laboratory Approval Service, which administers the Laboratory Approval Program (LAP). State and Tribal plans are free to include certain additional requirements for hemp testing laboratories, including ISO accreditation or other proficiency schemes.

E. Disposal and Remediation of Non-Compliant Plants

State and Tribal plans are currently required to include procedures for ensuring effective disposal or remediation of plants produced in violation of part 990. Plants that are removed as a result of poor plant health, pests, disease, or weather events, along with removal of male or hermaphrodite plants as part of a cross-pollination prevention plan, are not subject to the disposal requirements herein. This final rule retains the disposal requirements explained in the IFR but clarifies what ''disposal'' means and explains how the process must be conducted. This final rule also includes remediation as an option to remove non-compliant plants.

As explained in the IFR, if a producer grows cannabis exceeding the legal 0.3 percent THC level, the material must be disposed of in accordance with the CSA and DEA regulations because such material constitutes marijuana, a Schedule I controlled substance under the CSA. The material must be collected for disposal by a person authorized under the CSA to handle marijuana, such as a DEA-registered reverse distributor, or a duly authorized Federal, State, Tribal, or local law enforcement officer. In the final rule, AMS is incorporating flexibilities for disposal that were announced on February 27, 2020 (*https://www.ams.usda.gov/rules-regulations/hemp/enforcement*). Some of these new options include, but are not limited to, plowing under non-compliant plants, composting into ''green manure'' for use on the same land, tilling, disking, burial, or burning. These methods are intended to allow producers to apply common on-farm practices for the disposal of non-compliant plants. One of the top considerations in making this change was to minimize, to the extent possible, the resource impact to State, Tribal, and local law enforcement in handling hemp that is out of compliance. In addition, we are confident that any disposal options make the product unusable and therefore is not at risk for entering any streams of commerce. Based on comments received, AMS is permanently retaining these on-farm disposal flexibilities.

AMS received comments on this requirement describing the expense associated with destroying cannabis in accordance with the CSA, primarily the requirement that disposal be conducted offsite by a reverse distributor or other law enforcement officer. Based on this input, AMS, in coordination with DEA partners, delayed enforcement of the disposal requirements in the IFR. In the final rule, producers have several options on how to handle non-compliant plants. Producers do not need to use a DEA-registered reverse distributor or law enforcement to dispose of non-compliant plants. Producers may dispose of the plants using one or more of the means described by AMS at *https://www.ams.usda.gov/rules-regulations/hemp/disposal-activities.* It is the Agency's intent that these methods allow producers to apply common on-farm practices as a means of disposal while rendering the controlled substance non-retrievable or non-ingestible. Under this final rule, State and Tribal plans must still include procedures to verify disposal. This may come in the form of in-person verification by State or Tribal representatives, or alternative requirements the direct growers to provide pictures, videos, or other proof that disposal occurred successfully. Producers under the USDA plan must document the disposal of all non-compliant plants. States and Indian Tribes operating under approved hemp production plans and producers under the USDA plan must notify USDA of any occurrence of non-conforming plants or plant material and provide the disposal record of those plants and materials monthly.

State and Tribal plans must include procedures to verify disposal, whether through the use of in-person verification by State or Tribal representatives, or requirements for producers to provide pictures, videos, or other proof that disposal did in fact occur. State and Tribal plans must also include requirements to submit to AMS the monthly disposal and remediation report documenting any on-farm disposals or remediations that occurred during the prior month. As of November 2020, twenty States and nine Tribes operating under the 2018 Farm Bill reported 4,192 licensed producers representing 6,166 acres planted. Of these acres planted, there were 231 disposals representing 730 acres disposed due to not meeting the 0.3 percent acceptable hemp THC level.

AMS did not provide additional remediation options in the IFR. The only remediation alternative was to completely dispose of the non-compliant material. AMS is adding remediation to this final rule based on comment. AMS received many comments suggesting the inclusion of procedures to allow for non-compliant cannabis to be ''remediated.'' AMS agrees with this suggestion and is publishing remediation techniques concurrently with this rule that can be

followed to remediate non-compliant plant material into compliant form. As described in the IFR, hemp exceeding the acceptable THC level may not be further handled, processed, or enter the stream of commerce. AMS believes that hemp producers should have the opportunity to remediate non-compliant crops in order to minimize financial risk associated with the loss of investment in their hemp crop. For this reason, this final rule allows remediation activities, either disposing of flower materials and salvaging the remainder of the plant or blending the entire plant into biomass plant material. Through both forms of remediation, producers may be able to minimize losses, and in some cases produce a return on investment while ensuring that non-compliant material does not enter commerce.

If a producer elects to perform remediation activities as allowable under this final rule's provisions (referenced above), an additional sampling and testing of the post-remediated crop must occur to determine THC concentration levels. Only those successfully remediated crops will be allowed to enter the stream of commerce, and all other remaining non-compliant crops must then be disposed.

AMS believes the inclusion of remediation and post-harvest sampling into the final rule provides the additional flexibility requested by commenters that expressed the need for producers to have greater opportunity for success as established and beginning farmers entering hemp production.

F. Compliance With Enforcement Procedures, Including Determination of Negligence and Annual Inspection of Hemp Producers

The IFR required State and Tribal plans to include compliance procedures to ensure hemp was being produced in accordance with the requirements of this part. Comments to the IFR were generally opposed to the compliance requirements, particularly as they relate to the definition of negligence. Producers, along with State and Tribal regulatory agencies, found the negligence requirements in the IFR overly harsh and strict. This final rule changes these compliance procedures, particularly how ''negligence'' is determined. In the context of this regulation, negligence is defined as a failure to exercise the level of care that a reasonably prudent person would exercise in complying with the regulation. The definition employed in this rule is derived from the definition of negligence in Black's Law Dictionary. *See* BLACK'S LAW DICTIONARY (10th ed. 2014) (defining *negligence* as ''[t]he failure to exercise the standard of care that a reasonably prudent person would have exercised in a similar situation'').

This final rule increases the negligence threshold from 0.5 to 1.0 percent THC and clarifies how States and Indian Tribes determine when to suspend or revoke a producer's license. AMS believes that raising the negligence threshold from 0.5 percent to 1.0 percent THC will increase flexibility to farmers as they learn more about how to grow compliant hemp and as the availability of stable hemp genetics improves. In developing the compliance requirements for State and Tribal plans, AMS recognizes that there may be significant differences across States and Indian Tribes in how they will administer their respective hemp programs. This final rule provides that a producer shall not be subject to more than one negligent violation per calendar year.

State and Tribal hemp plans must still include requirements to conduct annual inspections of, at a minimum, a random sample of hemp producers to verify hemp is not being produced in violation of this rule, along with a procedure for handling violations.

In accordance with the 2018 Farm Bill, States and Indian Tribes with their own hemp production plans have certain flexibilities in determining whether hemp producers have violated their approved plans. However, there are certain compliance requirements that all State and Tribal plans must contain. This includes procedures to identify and attempt to correct certain negligent acts, such as failing to provide a legal description of the land on which the hemp is produced, not obtaining a license or other required authorizations from the State or Tribal government, or producing plants exceeding 0.3 percent total THC. States and Indian Tribes may include additional requirements in their plans.

This final rule specifies that hemp producers do not commit a negligent violation if they produce plants that exceed the acceptable hemp THC level and use reasonable efforts to grow hemp and the plant does not have a THC concentration of more than 1.0 percent on a dry weight basis. AMS recognizes that hemp producers may take the necessary steps and precautions to produce hemp, such as using certified seed, using other seed that has reliably grown compliant plants in other parts of the country, or engaging in other best practices, yet still produce plants that exceed the acceptable hemp THC level. AMS believes that a hemp producer in that scenario has exercised a level of care that a reasonably prudent person would exercise if the plant does not have a THC concentration of more than 1.0 percent on a dry weight basis. AMS arrived at this increased tolerance based on input from commenters, particularly State agriculture departments that operated hemp research programs under the 2014 Farm Bill, along with data provided by laboratories testing hemp subject to 2018 Farm Bill requirements. The 0.5 percent was based on data from three states participating in the 2014 Farm Bill pilot program. AMS believes raising the negligent violation threshold from 0.5 percent to 1.0 percent in the final rule provides a greater buffer and reduces farmers' exposure to risk of violation accrual and license suspension.

AMS recognizes the violation threshold may incentivize (or disincentivize) innovation by research institutions and producers. AMS acknowledges more innovation and research across industry will bring more stability to stakeholders. AMS believes the 1.0 percent threshold incentivizes innovation across industry more so than a 0.5 percent violation threshold. Further, comments addressed the negative impact of the accrual of negligent violations on the financial stability of the individual business. They described how a hemp grower's access to credit and insurance is jeopardized when negligent violations accumulate and lead to a determination of culpable negligence. Comments explained that lending institutions and insurance providers look for risk factors. They also raised questions about how the accrual of negligent violations may be interpreted by lender or providers. Comments said that many insurers will not cover crop losses if losses are due to the growers' negligence.

AMS acknowledges institutional lenders view violations as risk factors in decision making. AMS also notes that not all culpable violations are derived from the accrual of negligent violations. Culpable violations may be the result of producers violating other parts of the 2018 Farm Bill. However, the 2018 Farm Bill explicitly considers certain actions as constituting negligent violations. AMS's intention is to provide a threshold between 0.3 percent THC level and what would be considered a negligent violation so not all hemp that tests over the 0.3 percent be considered a negligent violation. Because a producer will not have committed a negligent violation every time he or she grows hemp with a concentration of hemp above the 0.3 percent level, this will assist producers when requesting loans or other financial assistance.

Several comments suggested that a 0.5 percent negligence threshold threatens the survival of farmers in an emerging industry. Comments suggested that the low threshold is a barrier to entry for new farmers or farmers with no experience growing hemp, who risk high initial capital investments to establish operations. Comments argued that the low threshold favors larger farms using industrialized hemp varieties and production practices, and that the low negligence threshold in the IFR would unnecessarily criminalize farmers working with a legal agricultural commodity. Increasing this threshold to 1.0 percent benefits producers, including small and new farmers, that intended to grow hemp but whose crops tested ''hot'' even though they made reasonable efforts to grow hemp.

In cases where a State or Indian Tribe determines a negligent violation has occurred, a corrective action plan shall be established. The corrective action plan must include a reasonable date by which the producer will correct the negligent violation. Producers operating under a corrective action plan must also periodically report to the State or Tribal government, as applicable, on their compliance with the plan for a period of not less than two calendar years following the violation. A producer who negligently violates a State or Tribal plan three times in a five-year period will be ineligible to produce hemp for a period of five years from the date of the third violation.

Several comments explained how these requirements as written in the IFR were confusing and difficult to administer. Particularly, commenters explained how a producer could easily receive three negligent violations during one growing season, which would lead to an automatic licensing revocation for the following five years. For example, a producer may grow hemp in three different locations. If the hemp becomes non-compliant cannabis, all in one season, the producer would lose the license in one season. Commenters described this as too strict and too severe a penalty for honest mistakes that many first-year hemp producers will certainly make. AMS agrees and wishes to clarify that this is not the intent of the regulation. AMS acknowledges that producers may have more than one production area and that they may harvest at different times. Tests results may be over the allowable limit on those production areas but the planting was performed at the same time using the same seeds. Allowing for only one violation per season would help minimize duplication of enforcement. This final rule provides that a producer shall not be subject to more than one negligent violation per calendar year. As it is customary in agriculture, practices vary due to many factors such as weather, availability of labor, transportation and storage capacity and more. Due to many factors, producers make determinations about planting and harvest cycles. In certain circumstances, producers may plant before the first cycle has been harvested specially when they plant in multiple locations. Calendar year is easier to administer and will allow for various growing seasons.

Each geographical area has a growing season based on specific temperature, weather, soil or other factors in that region, therefore this rule is defining growing season as a calendar year. This will allow flexibility, including a year-round season if States and Indian Tribes have a warmer climate or greenhouse growing.

Negligent violations are still not subject to criminal enforcement action by local, Tribal, State, or Federal government authorities under this regulation.

State and Tribal plans also must contain provisions relating to producer violations made with a culpable mental state greater than negligence, meaning acts made intentionally, knowingly, or with recklessness. This definition is derived from the definition of negligence in Black's Law Dictionary. See BLACK'S LAW DICTIONARY (10th ed. 2014) (giving as a definition of *negligence* ''[t]he failure to exercise the standard of care that a reasonably prudent person would have exercised in a similar situation''). If it is determined a violation was committed with a culpable mental state greater than negligence, the State agriculture department or Tribal government, as applicable, shall immediately report the producer to the Attorney General, USDA, and the chief law enforcement officer of the State or Indian Tribe.

State and Tribal plans also must prohibit any person convicted of a felony related to a controlled substance under State or Federal law from participating in the State or Tribal plan and from producing hemp for 10-years following the date of conviction. An exception applies to a person who was lawfully growing hemp under the 2014 Farm Bill before December 20, 2018, and whose conviction also occurred before that date. This exemption language must be included in all State and Tribal hemp plans, whether they administered a 2014 Farm Bill research pilot program or not.

The 2018 Farm Bill does not define what it means to ''participate in the [State or Tribal] program.'' AMS is not requiring States and Indian Tribes to adopt a specific definition. Instead, they must define who those persons are in their plan. The definition must include one individual for whom a criminal history records check can be conducted for each license or authorization that the State or Indian Tribe issues. The final rule identifies and defines ''key participants'' as those participating in the USDA plan. State and Tribes may, but are not required, to adopt this definition for their plans.

The State or Indian Tribe will need to review criminal history reports for each individual identified as participating in its program. The final rules defines ''criminal history report'' as the Federal Bureau of Investigation's Identity History Summary. The State or Indian Tribe may review additional reports or checks to determine whether an individual may participate in its plan. Finally, any person found by the USDA, State, or Tribal government to have materially falsified any information submitted to the program will be ineligible to participate.

G. Information Sharing

The IFR included requirements for State and Tribal plans to contain procedures for reporting specific information to USDA. Limited comments were received on these requirements. This information has been transmitted already by many States and Tribes to USDA. This information meets the requirements set in the 2018 Farm Bill. Therefore, the following requirements are the same as required under the IFR and are in subpart F of this final rule. This is separate from the requirement to report hemp crop acreage with FSA as discussed above.

The information required includes contact information for each hemp producer covered under the plan, including name, address, telephone number, and email address (if available). If the producer is a business entity, the information must include the full name of the business, address of the principal business location, full name and title of each employee for whom the entity is required to submit a criminal history report, and an email address if available, and Employee Identification Number (''EIN'') of the business entity. Producers must report the legal description and geospatial location for each hemp production area, including each field, greenhouse, or other site used by them, as stated in section A of this preamble. The report also shall include the status of the license or other

required authorization from the State or Tribal government, as applicable, for each producer under a hemp production plan. States and Indian Tribes will submit this information to USDA not later than 30 days after the date it is received using the appropriate reporting requirements as determined by USDA.

These reporting requirements are found at § 990.70 in this final rule. Further explanation of the specific information to be submitted, the appropriate format, and the specific due dates for the information is discussed in Section X (Regulatory Analysis) of this final rule. This information submitted from each State and Tribal plan, along with the equivalent information collected from individuals participating under the USDA plan, will be assembled and maintained by USDA and made available in real time to Federal, State, Tribal, and local law enforcement, as required by the 2018 Farm Bill. All information supporting, verifying, or documenting the information submitted to USDA must be maintained by the States and Indian Tribes for at least three years.

Under § 990.70(c), States and Indian Tribes must also submit annual reports regarding the total planted, harvested, and disposed acreage. Additionally, because the final rule provides for remediation of plants, the final rule requires all remediated acreage to be reported as well. Similarly, under § 990.71(c), all USDA hemp plan producers must submit annual reports to USDA detailing total planted acreage, total acreage disposed and remediated, and total harvested acreage.

H. Certification of Resources

All State and Tribal plans submitted for USDA approval must also have a certification stating the State or Indian Tribe has the resources and personnel necessary to carry out the practices and procedures described in their plan. Section 297B of the AMA requires this certification, and the information is important to USDA's approval of State and Tribal plans, in that all such plans must be supported by adequate resources to effectively administer them. This section has not changed from the IFR.

I. State and Tribal Plan Approval, Technical Assistance and USDA Oversight

Since the publication of the IFR, AMS has worked extensively with States and Indian Tribes in developing hemp production plans. As States and Indian Tribes begin the work of modifying their plans to incorporate the changes herein, we encourage States and Indian Tribes to continue working with and sharing information with AMS. States and Tribes may need to change plans based on changes in this final rule because their State or Tribal laws may no longer match the requirements in this final rule. Even though some of the changes in this final rule are less burdensome, State and Tribal plans must follow their own legislations. Accordingly. They must amend their plans. During the plan development and/or revision process, States and Indian Tribes are encouraged to contact USDA so we may provide technical assistance in developing plan specifics. Since the publication of the IFR, USDA approved over 60 State and Tribal plans within the 60-day requirement. USDA approved plans that comply with the 2018 Farm Bill and with the provisions of the IFR. For the 2021 planting season, the 2018 Farm Bill, amended by the Continuing Resolution (CR) (Agriculture Improvement Act of 2018 (7 U.S.C. 5940 note; Pub. L. 116–260)), provided that States and institutions of higher education can continue operating under the authorities of the 2014 Farm Bill until January 1, 2022. AMS clarified the avenues for Tribal participation under authorities in the 2014 Farm Bill to grow industrial hemp for research purposes. This clarification is available on the AMS website: *https://www.ams.usda.gov/content/usda-clarifies-industrial-hemp-production-indian-Tribes.*

Due to this extension, many States decided to remain under the 2014 Farm Bill provisions and rescinded their previously approved plans. All States are eligible to remain or start programs under the 2014 Farm Bill provisions. As a result, USDA will oversee 20 State and 20 Tribal plans under the 2018 Farm Bill until new States and Tribes submit more plans under the 2018 Farm Bill provisions.

As of November 2020, States and Tribes operating under the 2018 Farm Bill reported 4,192 licensed producers representing 6,166 acres planted. Of these acres planted, there were 231 disposals representing 730 acres disposed due to not meeting the 0.3 percent acceptable hemp THC level. This data is limited because even though many States and Tribes have approved plans, they have not all been fully implemented. USDA expects more data will be available as the 2021 season begins and States and Tribes implement their programs.

USDA will use the procedures in this rule, which are substantively similar to those in the IFR, to review and approve State and Tribal plans. If a plan does not comply with the requirements of the Act and this regulation, it will not be approved. However, USDA has worked with many States and Tribes submitting plans to assist them in meeting the requirements and obtaining approval for their plans.

If a plan is not approved, USDA provides a letter of notification outlining the deficiencies identified. The State or Tribal government may then submit an amended plan for review. If the State or Tribe disagrees with the determination made by USDA regarding the plan, a request for reconsideration can be submitted to USDA using the appeal process as outlined in section V of this document. Plans submitted by States and Indian Tribes must be approved by USDA before they can be implemented.

States and Indian Tribes can submit their plans to USDA through electronic mail at *farmbill.hemp@usda.gov* or by postal carrier to USDA. The specific mailing address is provided on the USDA Domestic Hemp Production Program website.

If the State or Tribal plan application is complete and meets the criteria of this part, USDA issues an approval letter. Approved State and Tribal plans, including their respective rules, regulations, and procedures, are posted on USDA's hemp program website.

A USDA-approved State or Tribal plan will remain in effect, unless approval is revoked by USDA pursuant to the revocation procedures discussed in this section or unless the State or Tribe makes substantive revisions to their plan or their laws that alter the way the plan meets the requirements of this regulation. Additionally, changes to the provisions or procedures under this rule or to the language in the 2018 Farm Bill may require plan revision and resubmission to USDA for approval. Changes to applicable Federal and State or Tribal statutes may also require plan revision and resubmission to USDA for approval and may lead to plan revocation if the plan is not amended. Should States or Indian Tribes have questions regarding the need to resubmit their plans, they should contact USDA for guidance.

A State or Tribal government may submit an amended plan to USDA for approval if: (1) The Secretary disapproves a State or Tribal plan; or (2) the State or Tribe makes substantive revisions to their plan or to their laws that alter the way the plan meets the requirements of this regulation, or as necessary to bring the plan into compliance with changes in other applicable law or regulations.

If the plan previously approved by USDA needs to be amended because of

changes to the State's or Tribe's laws or regulations, such resubmissions should be provided to USDA within 60 days from when the new State or Tribal law or regulations are effective. Producers will be held to the requirements of the previous plan until such modifications are approved by USDA. If State or Tribal government regulations in effect under the USDA-approved plan change, but the State or Tribal government does not resubmit a modified plan within 60 days of the effective date of the change, USDA will issue a notification to the State or Tribal government that approval of its plan will be revoked. The revocation will be effective no earlier than the beginning of the next calendar year. If a plan is revoked, producers previously subject to an approved plan would be eligible to apply to USDA for a license. This is a change from the IFR that allowed for resubmission because of a change in State or Tribal law or regulations within a calendar year. This modification is due to USDA's need to know in a timelier manner, since such laws and regulations are the foundations of the hemp plans. The words of the plans do not have meaning if they are not aligned with current authorities.

USDA has the authority to audit States and Tribes to determine if they are in compliance with the terms and conditions of their approved plans. If a State or Indian Tribe is noncompliant with their plan, USDA will work with that State or Indian Tribe to develop a corrective action plan. However, if additional instances of noncompliance occur, USDA has the authority to revoke the approval of the State or Tribal plan for one year or until the State or Tribe become compliant. AMS still believes that one year is sufficient time for a noncompliant State or Indian Tribe to evaluate problems with their plan and make the necessary adjustments. Should USDA determine the approval of a State or Tribal plan should be revoked, such a revocation would begin after the end of the current calendar year, so producers will have the opportunity to adjust their operations as necessary. This will allow producers to apply for a license under the USDA plan so that their operations do not become disrupted due to the revocation of the State or Tribal plan.

III. Department of Agriculture Plan

The 2018 Farm Bill requires USDA to administer a hemp production plan for producers in jurisdictions where hemp production is legal but is not covered by an approved State or Tribal plan. The USDA licensing remains available to producers in States and Tribal territories without a USDA-approved hemp plan. All hemp produced in a jurisdiction without an approved State or Tribal plan must meet the requirements of the USDA plan. The requirements for producers operating under the USDA plan are similar to those operating under approved State and Tribal plans.

Regulatory requirements for producers licensed under the USDA plan in this final rule differ in some cases from corresponding requirements in the IFR and are explained in the following section. Comments submitted to the IFR generally did not address these requirements specifically; rather they focused on the broader requirements around sampling, testing, and disposal, to which all hemp producers are subject, whether licensed by a State, a Tribe, or USDA.

A. USDA Hemp Producer License and Criminal History Report

To produce hemp under the USDA plan, producers must apply for and be issued a license from USDA. USDA has been accepting applications from producers since October 2019. Any license issued by USDA prior to publication of this final rule will remain in effect and subject to the original expiration date. As of the issuance of this final rule, USDA has issued 380 licenses under the USDA plan.

While a State or Tribal government has a draft hemp production plan pending for USDA approval, USDA will not issue USDA hemp production licenses to individual producers located within that State or Tribal territory. Once USDA approves a hemp production plan from a State or Tribe, it will deny any license applications from individuals located in the applicable State or Tribal territory. If USDA disapproves a State or Tribal hemp production plan, individual producers located in the State or Tribal territory may apply for a USDA hemp production license, unless hemp production is illegal in the State or Tribal territory where they intend to produce hemp.

Comments to the IFR described confusion around the application window for when USDA would receive and process applications as described in the IFR. The IFR said that for the first year after USDA began to accept applications, applications could be submitted any time. For all subsequent years, license applications and license renewal applications would have to be submitted between August 1 and October 31. AMS requested input on this application window, and commenters were generally opposed. Under this final rule, USDA will accept applications for USDA hemp production licenses on a rolling basis to better accommodate the needs of producers. AMS continues to encourage the submission of applications well before the planting season so AMS has adequate time to process the applications. All applications must comply with the requirements as described below. The license application is available online at the USDA Domestic Hemp Production Program website at *https://www.ams.usda.gov/rules-regulations/hemp/information-producers.* Applications may be submitted electronically or by mail.

The producer license application requires contact information such as name, address, telephone number, and email address (if available). If the applicant represents a business entity, and that entity will be the producer, the application will require the full name of the business, address of the principal business location, full name and title of the key participants on behalf of the entity, an email address if available, and EIN of the business entity. All applications must be accompanied by a completed criminal history report. Several comments to the IFR expressed opposition to this requirement. AMS is retaining this requirement since verification of compliance with the felony restriction is a statutory requirement. If the application is for a business entity, a completed criminal history report must be provided for each key participant.

Some commenters expressed concern with the requirements pertaining to ''key participants,'' particularly with the requirement that all key participants undergo a background check. To the extent the commenters equated a criminal history check with a background check, AMS is retaining this requirement, since key participants are those individuals responsible for ensuring compliance with the regulatory requirements contained herein. If key participants are not subject to criminal history checks, AMS cannot ensure statutory restrictions on individuals with felony convictions related to controlled substances are met per Section 297B(e)(3)(B)(i) of the AMA. AMS notes that it will not conduct any other checks into the background of key participants.

Key participants are a person or persons who have a direct or indirect financial interest in the entity producing hemp, such as an owner or partner in a partnership. A key participant also includes a person in a corporate entity at executive levels including the chief executive officer, chief operating officer, and chief financial officer. This does not

include other management positions like farm, field, or shift managers. The final rule also specifies that the definition of key participant does not include a member of the leadership of a Tribal government who is acting in their capacity as a Tribal leader, except when that member exercises executive managerial control over hemp production. AMS added this specification to address concerns raised by Indian Tribes regarding issues that can arise when a Tribal leader is also involved in the production of hemp in their capacity as a Tribal leader. While AMS understands the issues that can arise when a Tribal leader is subject to the felony conviction restriction, AMS must also ensure that all required entities operating under a USDA plan comply with Section 297B(e)(3)(B) of the AMA. Therefore, the definition of key participants still encompasses Tribal leaders who exercise executive managerial control over hemp production.

USDA will not accept criminal history reports completed more than 60 days before the submission of an application, because the 60-day window provides USDA with an expectation that the findings of the report are reasonably current and accurate.

The criminal history report must indicate the applicant has not been convicted of a State or Federal felony related to a controlled substance for the 10 years prior to the date of when the report was completed. An exception applies to a person who was lawfully growing hemp under the 2014 Farm Bill before December 20, 2018, and whose conviction also occurred before that date.

In addition to providing the information specified, the application will also require license applicants to certify they will adhere to the provisions of the plan.

Once all the necessary information has been provided, applications will be reviewed by USDA for completeness and to determine an applicant's eligibility. USDA will approve or deny license applications unless the applicant is intending to produce hemp in a jurisdiction that has submitted a plan to USDA or has a plan approved by USDA, in which case the application for a USDA license will be denied. Applicants will be notified if they have been granted or denied a license either by mail or email.

If an application is denied, the applicant will receive a notification letter or email specifying why the application was denied. If an application is denied because it is incomplete, the applicant will have the option of resubmitting a revised application. If the application was denied for other reasons, the applicant will have the opportunity to appeal USDA's decision in accordance with the appeals process outlined in the regulation in subpart D.

Once a license application has been approved, USDA will issue the producer license. Licenses are not transferrable in any manner. An applicant whose application has been approved will not be considered a licensed producer under the USDA plan until the applicant receives their producer license. Licenses do not renew automatically and must be renewed every three years.

Applications for renewal will be subject to the same terms and approved under the same criteria as initial applications unless there has been an intervening change in the applicable law or regulations since approval of the initial or last application. In such a case, the subsequently enacted law or regulation shall govern renewal of the license. Licenses will be valid until December 31 of the year that is at least three years after the license is issued. This date is not tied to the harvest and planting season. For example, if a producer applies for a license on August 1, 2021, and is granted a license on September 15, 2021, the license would expire December 31, 2024. A December 31 expiration date will allow licensed producers time to apply for a license renewal prior to their prior license's expiration and prevent a gap in licensing.

A producer licensed by USDA must report their hemp crop acreage to FSA. Producers must provide specific information to FSA, including, but not limited to, USDA license number, the specific location where hemp is produced and the acreage, greenhouse, building, or site where hemp is produced. The specific location where hemp is produced must be identified, to the extent practicable, by the geospatial location. FSA will provide assistance in identifying the hemp growing location. Please refer to the Section II of this document on State and Tribal hemp production program requirements for further discussion on FSA reporting requirements.

If at any time there is a change to the information submitted in the license application, a license modification is required. A license modification is required if, for example, the licensed business is sold to a new owner or hemp will be produced in a new location not described on the original application. Producers must notify USDA immediately should there be any change in the information provided on the license application.

B. Sampling for THC

The IFR stated that all hemp production must be sampled and tested for THC concentration levels. It is the responsibility of the licensed producer to pay any fees associated with sampling. AMS issued guidance on sampling procedures that meet the sampling requirements to coincide with publication of the IFR and will update the guidance with this final rule. AMS is requiring that all samples tested for THC concentration levels be conducted in DEA-registered laboratories. However, this requirement will not be applicable until December 31, 2022.

Significant input was received on the IFR sampling requirements. Please refer to section B under State and Tribal plans above and the discussion of comments below for a summary of findings. Producers under the USDA plan are subject to the sampling and testing requirements as outlined in the USDA guidelines for sampling and testing. Since USDA cannot develop a one size fits all performance-based sampling program, all producers licensed under the USDA plan must comply with the USDA sampling guidelines. USDA licensed producers are responsible for obtaining the services of sampling agents and hemp testing laboratories themselves. USDA is updating guidance on sampling procedures and training for sampling agents with this rule. USDA does not provide sampling or testing services and will not pay for those services.

State and Tribal hemp regulators have successfully developed sampling requirements that ensure adherence to State and Federal regulations, while allowing for flexibilities due to limited State resources and State and Tribal differences. They explained that, since most hemp in a given region is harvested at the same time, sampling must be completed within a very short time frame by only a few individuals. Several States also explained that perceived risk determines State requirements. Some States utilize different sampling requirements for broad end-use categories like ''fiber/grain'' hemp versus ''cannabinoid'' hemp, while others base their requirements on historical THC concentrations of certain varietals or on the characteristics and growing history of a certain farm or producer. AMS agrees that sampling requirements should allow States and Indian Tribes more flexibility in the management of their hemp regulatory programs.

AMS agrees that requiring sampling from every lot may be burdensome and expensive for State and Tribal regulatory entities and producers.

AMS finds that it makes sense to allow States and Indian Tribes to consider performance-based alternatives when developing sampling plans that take into account unique sampling protocols for hemp growing facilities under their jurisdiction. The sampling requirements for State and Tribal plans allow for States and Indian Tribes to develop unique sampling protocols for hemp growing facilities under their jurisdiction. Sampling protocols must be sufficient at a confidence level of 95 percent that no more than one percent of the plants in each lot would exceed the acceptable hemp THC level and ensure that a representative sample is collected that represents a homogeneous composition of the lot. Alternatively, States and Indian Tribes may adopt a performance-based sampling protocol. A performance-based protocol must have the potential to ensure, at a confidence level of 95 percent, that the cannabis plants will not test above the acceptable hemp THC level. USDA encourages that the alternative protocol consider seed certification processes or process that identifies varieties that have consistently demonstrated to result in compliant hemp plants in that State or territory of the Indian Tribe, whether the producer is conducting research on hemp at an institution of higher learning or that is funded by a Federal, State, or Tribal government, whether a producer has consistently produced compliant hemp plants over an extended period of time, and other similar factors. AMS believes this will provide needed flexibility to States and Indian Tribes to develop logical and enforceable sampling requirements that take into consideration their unique circumstances. AMS will still require States and Indian Tribes to submit their individual sampling requirements for review as a component of the plan approval process. If a State or Tribal plan lacks a sampling protocol, every lot, and thereby every producer must be sampled and tested.

When evaluating sampling protocols submitted by States and Indian Tribes, USDA will evaluate the risk of producing non-compliant material to determine approval or disapproval. In evaluating the risk, USDA will take into consideration whether the performance-based factors the State or Tribe used have the potential to ensure compliance at a 95 percent confidence level.

Since USDA cannot develop performance metrics that would be applicable independently from where the producer is located, producers licensed under the USDA plan are subject to the sampling requirements in the rule. USDA guidelines provided on the USDA website at *https://www.ams.usda.gov/rules-regulations/hemp/information-sampling* describe best practices for complying with those requirements. However, USDA would consider a performance-based sampling scheme for producers under the USDA plan, and amend the sampling requirements accordingly, if information collected by USDA in the future is sufficient to make this determination. Data must be reliable and able to be applicable across the production areas in the U.S.

Samples must be collected by a USDA-approved sampling agent, or a Federal, State, Tribal, or local law enforcement agent authorized by USDA to collect samples. As explained above, USDA is expanding the training requirements for sampling agents and will provide a list of authorized sampling agents on the USDA website. It is the responsibility of the licensed producer to pay any fees associated with sampling and testing. Sampling and testing guideline documents are being updated as part of this proceeding and are available on the USDA website.

The sampling procedures are designed to produce a representative sample for testing. They describe procedures for entering a growing area and collecting the minimum number of plant specimens necessary to accurately represent the THC content, through laboratory testing, of the sample to be tested.

C. Testing Laboratories

The THC level in representative samples must be at or below the acceptable hemp THC level. Testing must be conducted using post-decarboxylation or other similarly reliable methods where the total THC concentration level measured includes the potential to convert THCA into THC. Further, test results should be determined and reported on a dry weight basis, meaning the percentage of THC, by weight, in a cannabis sample, after excluding moisture from the sample. The moisture content is expressed as the ratio of the amount of moisture in the sample to the amount of dry solid in the sample.

Based on AMS's review of scientific studies, internal research and information gathered from the *United Nations Office on Drugs and Crime:* ''*Recommended Methods for the Identification and Analysis of Cannabis and Cannabis Products*'' (ISBN 978–92–1–148242–3), AMS has determined that testing methodologies meeting these requirements include gas or liquid chromatography with detection. As discussed earlier and stated in § 990.25(g), if a testing laboratory utilizes alternative testing methods, they must be reviewed and approved by USDA to assess their reliability, accuracy, and compliance with the requirements.

As explained earlier in this document, AMS is requiring that all testing of samples for THC concentration levels be conducted in DEA-registered laboratories. Enforcement of this requirement has been delayed until December 31, 2022. Non-DEA-registered labs can continue testing hemp for THC concentration until that time. Labs testing hemp for THC must meet standards of performance described in this regulation. Standards of performance ensure the validity and reliability of test results; that analytical method selection, validation, and verification are appropriate (fit for purpose); and that the laboratory can successfully perform the testing. Furthermore, the standards ensure consistent, accurate, analytical performance and that the analytical tests performed are sufficiently sensitive for the purposes of the detectability requirements under this final rule.

Laboratories conducting THC testing must also be registered with DEA to handle controlled substances under the CSA (21 U.S.C. 822 and 21 U.S.C. 844) and DEA regulations (21 CFR part 1301). USDA is adopting this requirement because of the potential for these laboratories to handle cannabis products testing above 0.3 percent THC. Such products are, by definition, marijuana, and a controlled substance. DEA registration requirements verify a laboratory's ability to properly handle controlled substances.

As previously explained in the requirements for State and Tribal plans, AMS is not adopting requirements that hemp testing laboratories be approved under a USDA Laboratory Approval Program or undergo ISO accreditation.

It is the responsibility of the licensed producer to select the DEA-registered laboratory that will conduct the testing and to pay any fees associated with testing. Laboratories performing THC testing for hemp produced under this program are required to share test results with the licensed producer and USDA. USDA will provide instructions to all approved labs on how to electronically submit test results to USDA. Laboratories may provide test results to licensed producers in whatever manner best aligns with their business practices, but producers must

be able to produce a copy of test results. For this reason, providing test results to producers through a web portal or through electronic mail, so the producer will have ready access to print the results when needed, is preferred.

Samples exceeding the acceptable hemp THC level are marijuana and will be handled in accordance with the procedures discussed in section C below.

Any licensee may request that the laboratory retest pre-harvest samples, if it is believed the original THC concentration level test results were in error. The licensee requesting the retest of the second sample would pay the cost of the test. The retest results would be issued to the licensee requesting the retest, and a copy would be provided to USDA or its agent.

Research Institutions Sampling and Testing

AMS also acknowledges that research institutions face special circumstances when conducting hemp research. Under the IFR, researchers and research institutions were required to comply with the same production requirements as commercial producers. Under this final rule, and as described in detail below, research institutions and the producers working with them are afforded greater sampling and testing flexibility to facilitate continued hemp research. Producers that produce hemp for research must obtain a USDA license. However, the hemp that is produced for research is not subject to the same sampling requirements provided that the producer adopts and carries out an alternative sampling method that has the potential to ensure, at a confidence level of 95 percent, that the cannabis plant species *Cannabis sativa* L. that will be subject to this alternative method will not test above the acceptable hemp THC level. The rule includes a performance-based standard for sampling for all licensed producers in section 990.24: ''at a confidence level of 95 percent that no more than one percent (1%) of the plants in the lot would exceed the acceptable hemp THC level.'' The performance-based standard for research is a modification of that standard: ''the potential to ensure, at a confidence level of 95 percent, that the cannabis plant species *Cannabis sativa* L. that will be subject to this alternative method will not test above the acceptable hemp THC level.'' We are comfortable with this modification to recognize that researchers may need flexibility to conduct their research and because the research hemp cannot enter the stream of commerce. USDA will monitor researchers' compliance with this standard as part of its normal oversight and compliance program.

USDA licensees shall ensure the disposal of all non-compliant plants. USDA licensees shall also comply with the reporting requirements including reporting disposal of non-compliant plants. Research institutions that handle ''hot'' hemp must follow CSA requirements for handling marijuana.

Performance based plans from research institutions where a State or Tribal plan is not in place will be reviewed by USDA. Notice and comment requirements under the PRA process will be followed before a final determination is made by USDA to move forward with approving performance-based plans for those producers under the USDA plan.

States and Indian Tribes are allowed to develop performance-based requirements for these institutions. However, the alternative method must have the potential to ensure, at a confidence level of 95 percent, that the cannabis plant species *Cannabis sativa* L. that will be subject to the alternative method will not test above the acceptable hemp THC level.

The research institutions must follow reporting requirements. AMS believes this exception is necessary to help support research and development as it relates to hemp production. This decision allows these types of research facilities and institutions to confidently oversee the study of hemp plants through trialing and genetics research. AMS believes this exception to be critical to the growth of industry, particularly in its infancy. Over time, the exception provided by this final rule will help to stabilize the industry by providing greater understanding of hemp genetics and how certain varietals respond differently to growing conditions in various geographic locations. All producers are expected to benefit from such knowledge as they will be made aware of the more stable and consistently reliable hemp varietals. Any non-compliant plants produced by research institutions as a result of research and development will still need to be disposed and verified through documentation. Research institutions must follow licensing and reporting requirements.

D. Disposal of Non-Compliant Product

Under the IFR, non-compliant product was required to be disposed of by persons authorized to do so under the CSA and had to be destroyed. As explained below, under this final rule, producers may handle non-compliant product disposal on the farm, and they have greater flexibility in remediating that product. USDA producers are required to follow procedures for ensuring effective disposal of cannabis plants produced in violation of this rule. Plants that are removed as a result of poor plant health, pests, disease, weather events, along with removal of male or hermaphrodite plants as part of a cross-pollination prevention plans, are not subject to the disposal requirements herein. This final rule retains the disposal requirements explained in the IFR, but clarifies what ''disposal'' means and explains how the process must be conducted. If a producer grew cannabis exceeding the acceptable hemp THC level, the IFR required that the material be disposed of in accordance with the CSA and DEA regulations because such material is marijuana, a Schedule I controlled substance under the CSA. The IFR required that material be collected for disposal by a person authorized under the CSA to handle marijuana, such as a DEA-registered reverse distributor, or a duly authorized Federal, State, Tribal, or local law enforcement officer.

As explained earlier, AMS is now allowing the flexibility to conduct on-farm disposals and also allowing for remediation options.

If the results of a test conclude that the THC levels exceed the acceptable hemp THC level, the laboratory will promptly notify the producer and USDA or its authorized agent. If a licensed producer is notified that they have produced cannabis exceeding the acceptable hemp THC level, the cannabis must be disposed of in accordance with the on-farm disposal options described herein.

Licensed producers notified they have produced cannabis plants exceeding the acceptable hemp THC level must arrange for disposal or remediation of the lot represented by the sample in accordance with the procedures as specified above and described on the USDA website at *https://www.ams.usda.gov/rules-regulations/hemp/disposal-activities.*

Producers must document the disposal or remediation of all non-compliant cannabis. This can be accomplished by providing USDA with a copy of the documentation of disposal or remediation using the reporting requirements established by USDA. These reports must be submitted to USDA following the completion of the disposal or remediation process.

E. Compliance

As described below, this final rule changes the THC threshold for a negligent violation from 0.5 percent

under the IFR to 1.0 percent. Further, rather than being liable for multiple negligent violations in each growing season as under the IFR, this final rule provides that producers can only incur one negligent violation in each growing season, which prevents producers from accumulating multiple negligent violations and losing program eligibility after a single growing season.

USDA will maintain oversight of USDA-licensed hemp producers by conducting audits of USDA licensees and working with licensees with negligent violations to establish corrective action plans. Negligent violations by a producer may lead to suspension or revocation of a producer's license.

While USDA has not yet conducted any random audits, the department may conduct random audits of licensees to verify hemp is being produced in accordance with Subtitle G of the AMA no more frequently than every three years, based on available resources. The format of the audit will vary and may include a ''desk-audit'' where USDA requests records from a licensee, or the audit may be a physical visit to a licensee's facility. When USDA visits a licensee's facility, the licensee must provide access to any fields, greenhouses, storage facilities, or other locations where the licensee produces hemp. USDA may also request records from the licensee, to include production and planting data, testing results, and other information as determined by USDA.

USDA will issue a summary of the audit to the licensee after the completed audit. Licensees who are found to have a negligent violation will be subject to a corrective action plan. Negligent violations include: (1) Failure to provide a legal description of the land on which the hemp is produced; (2) not obtaining a license before engaging in production; or (3) producing plants exceeding the acceptable hemp THC level. Similar to the requirements for State and Tribal plans, USDA will not consider hemp producers as committing a negligent violation if they produce plants exceeding the acceptable hemp THC level if they use reasonable efforts to grow hemp and the cannabis plant does not have a THC concentration of more than 1.0 percent on a dry weight basis. AMS believes that increasing the negligence threshold from 0.5 percent to 1.0 percent will increase flexibility to farmers as they learn more about how to grow compliant hemp and as the availability of stable hemp genetics improves. Further, producers may only receive one negligent violation per growing season, as determined by USDA based on a review of producer records. USDA will use a calendar year as a growing season.

When USDA determines that a negligent violation has occurred, USDA will issue a Notice of Violation. This Notice of Violation will include a corrective action plan. The corrective action plan will include a reasonable date by which the producer will correct the negligent violation or violations and will require the producer to periodically report to USDA on its compliance with the plan for a period of not less than the next two calendar years. A producer who has negligently violated the provisions of this rule three times in a five-year period is ineligible to produce hemp for a period of five years from the date of the third violation. Negligent violations are not subject to criminal enforcement.

Hemp found to be produced in violation of this regulation, such as hemp produced on a property not disclosed by the licensed producer or without a license, would be subject to the same disposal provisions as for cannabis testing above the acceptable hemp THC level. Further, if it is determined a violation was committed with a culpable mental state greater than negligence, USDA will report the violation to law enforcement.

The 2018 Farm Bill limited the participation of certain convicted felons in hemp production. A person with a State or Federal felony conviction relating to a controlled substance is subject to a 10-year ineligibility restriction on producing hemp under the Act. An exception applies to a person who was lawfully growing hemp under the 2014 Farm Bill before December 20, 2018, and whose conviction also occurred before that date.

F. Suspension of a USDA License

There are no changes to the IFR provisions related to suspension of USDA licenses in this final rule.

A USDA license may be suspended if USDA receives credible information that a USDA licensee has either: (1) Engaged in conduct violating a provision of this regulation; or (2) failed to comply with a written order from the AMS Administrator related to a negligent violation of this regulation. Examples of credible information are information from local authorities of harvested plants without testing or planting of hemp in non-licensed locations.

Any person whose license has been suspended shall not produce hemp during the period of suspension. A suspended license may be restored after a waiting period of one year. A producer whose license has been suspended may be required to comply with a corrective action plan to fully restore their license.

A USDA license shall be immediately revoked if the USDA licensee: (1) Pleads guilty to, or is convicted of, any felony related to a controlled substance; [9] (2) made any materially false statement with regard to this regulation to USDA or its representatives with a culpable mental state greater than negligence; or (3) was found to be growing cannabis exceeding the acceptable hemp THC level with a culpable mental state greater than negligence or negligently violated the provisions of this regulation three times in five years.

If the licensed producer wants to appeal any suspension or revocation decision made by USDA as described in this section, they can do so using the appeal process explained in section V of this document.

G. Reporting and Recordkeeping

The 2018 Farm Bill requires USDA to develop a process to maintain relevant information regarding the land where hemp is produced. Reporting requirements under this final rule, particularly the requirement to report hemp crop acreage to FSA, are discussed extensively in Section B of the State and Tribal plan requirements and the same requirements are applicable to USDA licensed producers.

In general, changes from the IFR allow producers more flexibility in defining for FSA the areas (instead of ''lots'') they use for hemp production. USDA hemp production licensees can apply for licenses on a rolling basis under this final rule, in contrast to the limited period provided under the IFR. Reporting requirements under this final rule are revised slightly to allow producers to account for on-farm disposal of non-compliant product.

USDA's FSA is well suited to collect this information for the domestic hemp production program. FSA has staff throughout the United States who are trained to work with farmers to verify land uses. Many hemp producers are likely to be familiar with the FSA since they already operate traditional farms, and therefore already provide data to FSA on acres and crops planted. Producers may benefit from information to participate in other USDA programs through FSA offices. Licensed producers will be required to report their hemp crop acreage with FSA, and to provide FSA with specific

[9] For a corporation, if a key participant has a disqualifying felony conviction, the corporation may remove that person from a key participant position. Failure to remove that person will result in a license revocation.

information regarding field acreage, greenhouse, or indoor square footage of hemp planted. This information must include street address, geospatial location or other comparable identification method specifying where the hemp will be produced, and the legal description of the land. Geospatial location or other methods of identifying the production locations are necessary, as not all rural locations have specific addresses. This information is required for each field, greenhouse, building, or site where hemp will be grown. USDA will use this information to assemble and maintain the data USDA must make available in real time to Federal, State, Tribal and local law enforcement as required by the 2018 Farm Bill and as described in section G below.

Specific procedures for reporting hemp acreage to FSA will be posted on the USDA Domestic Hemp Production Program website. All information will be maintained by USDA for at least three calendar years. FSA will assist producers in identifying the hemp growing locations since they have maps that allow for better identification. This is a procedure that FSA employees are very familiar with since it is used for other USDA programs. This rule also revises the definition of ''lot'' to include other terms used by FSA with the same meaning. FSA uses terms like ''farm,'' ''tract,'' ''field,'' and ''subfield.'' FSA staff will not provide a ''lot number'' to producers as described in the IFR. Instead, FSA will assist producers to identify the area where hemp is grown. More details are provided under the States and Tribal plan Section B earlier in this final rule.

Licensed producers are required to maintain copies of all records and reports necessary to demonstrate compliance with the program. These records include those that support, document, or verify the information provided in the forms submitted to USDA. Records and reports must be kept for a minimum of three years. Because the final rule allows producers to remediate plants, the final rule also requires producers to maintain records on all remediated cannabis plants.

Under the USDA plan, there will be additional reporting requirements for licensed producers. These include information requested in the application for a license and the record and reporting requirements needed to document disposal or remediation of cannabis produced in violation of the provisions of this rule. Specific reporting requirements are detailed in § 990.71.

H. Information Sharing With Law Enforcement

USDA is working to develop and maintain a database of all relevant and required information regarding hemp as specified by the 2018 Farm Bill. This database will be accessible in real time to Federal, State, local, and Tribal law enforcement officers through a Federal government law enforcement system. USDA AMS will administer and populate this database, which will include information submitted by States, Tribes, laboratories, and USDA licensed producers and information submitted to FSA. States and Tribes must provide information to USDA in a format that is compatible with USDA's information sharing system. USDA will work with States and Indian Tribes on system format and other information necessary to share information.

USDA will use this information to create a comprehensive list of all domestic hemp producers. USDA will also gather the information related to the land used to produce domestic hemp. This information will be comprehensive and include data from both State and Tribal plans and will include a legal description of the land on which hemp is grown by each hemp producer and the corresponding geospatial location or other identifiable location. Finally, USDA will also gather information regarding the status of all licenses issued under State and Tribal government plans and under the USDA plan.

This information will be made available in real time to Federal, State, local and Tribal law enforcement as required by the 2018 Farm Bill.

IV. Definitions

The following terms are integral to implementing Subtitle G of the AMA and establish the scope and applicability of the regulations of this final rule.

The term ''Act'' refers to the Agricultural Marketing Act of 1946. The 2018 Farm Bill amended the Agricultural Marketing Act of 1946 by adding Subtitle G, which is a new authority for the Secretary of Agriculture to administer a national hemp production program. Section 297D of Subtitle G authorizes and directs USDA to promulgate regulations to implement this program.

The ''Agricultural Marketing Service'' or ''AMS'' is the Agricultural Marketing Service of the U.S. Department of Agriculture is the agency the Secretary of Agriculture has been charged with the responsibility to oversee the administration of this new program.

The term ''applicant'' means any State or Indian Tribe that has applied for USDA approval of a State or Tribal hemp production plan for the State or Indian Tribe they represent. This term also applies to any person or business in a State or territory of an Indian Tribe not subject to a State or Tribal plan, who applies for a hemp production license under the USDA plan established under this part.

The term ''cannabis'' is the Latin name of the plant that, depending on its THC concentration level, is further defined as either ''hemp'' or ''marijuana.'' *Cannabis* is a genus of flowering plants in the family Cannabaceae, of which *Cannabis sativa* is a species, and *Cannabis indica* and *Cannabis ruderalis* are subspecies thereof. For the purposes of this part, cannabis refers to any form of the plant where the delta-9 tetrahydrocannabinol concentration on a dry weight basis has not yet been determined. This term is important in describing regulations that apply to plant production, sampling, or handling prior to determining its THC content.

The ''Controlled Substances Act'' is the statute, codified in 21 U.S.C. 801–971, establishing Federal U.S. drug policy under which the manufacture, importation, exportation, possession, use, and distribution of certain substances are regulated. Because cannabis with THC content concentration levels of higher than 0.3 percent is deemed to be marijuana, a Schedule I controlled substance, its regulation falls under the CSA. Therefore, for compliance purposes, the requirements of the CSA are relied upon for the disposal of cannabis that contains THC concentrations above the stated limit of this final rule.

The rule includes a definition of ''conviction'' to explain what is considered a conviction and what is not. Specifically, a plea of guilty or nolo contendere or any finding of guilt is a conviction. However, if the finding of guilt is subsequently overturned on appeal, pardoned, or expunged, then it is not considered a conviction for purposes of part 990. This definition of ''conviction'' is consistent with how some other agencies conducting criminal history record searches determine disqualifying crimes.

A ''corrective action plan'' is a plan agreed to by a State, Tribal government, or USDA for a licensed hemp producer, to correct a negligent violation or non-compliance with a hemp production plan, its terms, the applicable law(s) or this regulation. Corrective action plans may also be a plan set forth by a State or Tribal government with an approved

hemp production plan to correct a non-compliance of their program with their USDA-approved plan. This term is defined in accordance with the 2018 Farm Bill, which mandates certain non-compliant actions to be addressed through corrective action plans.

''Culpable mental state greater than negligence'' is a term used in the 2018 Farm Bill to determine when certain actions would be subject to specific consequences. This term means to act intentionally, knowingly, willfully, recklessly, or with criminal negligence.

The term ''decarboxylated'' refers to the completion of the chemical reaction that converts THCA into delta-9 THC, the intoxicating component of cannabis. The decarboxylated value is also calculated using a molecular mass conversion ratio that sums delta-9 THC and eighty-seven and seven tenths (87.7) percent of THC-acid ((delta-9 THC) + (0.877*THCA)).

''Delta-9 tetrahydrocannabinol,'' also referred to as ''Delta-9 THC'' or ''THC'' is the primary psychoactive component of cannabis, and its regulation forms the basis for the regulatory action of this part. As mandated by the Act, legal hemp production must be verified as having THC concentration levels of 0.3 percent on a dry weight basis or below. For the purposes of this part, delta-9 THC and THC are interchangeable.

The term ''disposal'' means the action or process of getting rid of cannabis that is non-compliant.

''DEA'' is an acronym for the ''Drug Enforcement Administration,'' a United States Federal law enforcement agency under the United States Department of Justice. The DEA is the lead agency for domestic enforcement of the Controlled Substances Act. The DEA plays an important role in the oversight of the disposal of marijuana, a Schedule I controlled substance, under the regulations of this part. The DEA is also instrumental in registering laboratories to legally handle controlled substances, including cannabis samples that test above the 0.3 THC concentration level.

''Dry weight basis'' refers to a method of determining the percentage of a chemical in a substance after removing the moisture from the substance. Percentage of THC on a dry weight basis means the percentage of THC, by weight, in a cannabis item (plant, extract, or other derivative), after excluding moisture from the item.

The ''Farm Service Agency (FSA)'' is an agency of the U.S. Department of Agriculture that provides services to farm operations including loans, commodity price supports, conservation payments, and disaster assistance. For the purposes of this program, FSA will assist in information collection of land being used for hemp production.

''Gas chromatography'' or GC, is a scientific method (specifically, a type of chromatography technique) used in analytical chemistry to separate, detect, and quantify each component in a mixture. It relies on the use of heat for separating and analyzing compounds that can be vaporized without decomposition. Under the terms of this part, GC is one of the valid methods by which laboratories may test for THC concentration levels.

For the purposes of this part, the term ''geospatial location'' means a location designated through a global system of navigational satellites used to determine the precise ground position of a place or object.

The term ''handle'' is commonly understood by AMS and used across many of its administered programs. For the purposes of this part, ''handle'' refers to the actions of cultivating or storing hemp plants or hemp plant parts prior to the delivery of such plant or plant part for further processing. In cases where cannabis plants exceed the acceptable hemp THC level, handle may also refer to the disposal of those plants.

''Hemp'' is defined by the 2018 Farm Bill as ''the plant species *Cannabis sativa* L. and any part of that plant, including the seeds thereof and all derivatives, extracts, cannabinoids, isomers, acids, salts, and salts of isomers, whether growing or not, with a delta-9 tetrahydrocannabinol concentration of not more than 0.3 percent on a dry weight basis.'' The statutory definition is self-explanatory, and USDA is adopting the same definition without change for part 990.

''Liquid chromatography (LC)'' is a scientific method (specifically, a type of chromatography) used in analytical chemistry used to separate, identify, and quantify each component in a mixture. It relies on pumps to pass a pressurized liquid solvent containing the sample mixture through a column filled with a solid adsorbent material to separate and analyze compounds. Under the terms of this part, LC is one of the valid methods by which laboratories may test for THC concentration levels. Ultra-Performance Liquid Chromatography (UPLC) is an additional method that may also be used as well as other liquid or gas chromatography with detection.

''Indian Tribe or Tribe'' is defined in the 2018 Farm Bill by reference to section 4 of the Indian Self-Determination and Education Assistance Act (25 U.S.C. 5304). The statutory definition is self-explanatory, and USDA is adopting the same definition without change for part 990.

A ''key participant'' is a person or persons who have a direct or indirect financial interest in the entity producing hemp, such as an owner or partner in a partnership. A key participant also includes persons in a corporate entity, including tribally-owned corporation individuals, at executive levels, including chief executive officer, chief operating officer, and chief financial officer. This does not include such management personnel as farm, field, or shift managers. This definition also does not include a member of the leadership of a Tribal government who is acting in their capacity as a Tribal leader except when that member exercises executive managerial control over hemp production.

''Law enforcement agency'' refers to all Federal, State, Tribal, or local law enforcement agencies. Under the 2018 Farm Bill, State and Tribal submissions of proposed hemp production plans to USDA must be made in consultation with their respective Governors and chief law enforcement officers. Moreover, the 2018 Farm Bill contemplates the involvement of law enforcement in compliance actions related to offenses identified as being made under a ''culpable mental state greater than negligence.'' To assist law enforcement in the fulfillment of these duties, the 2018 Farm Bill also mandates information sharing that provides law enforcement with real-time data.

The term ''lot'' refers to a contiguous area in a field, greenhouse, or indoor growing structure containing the same variety or strain of cannabis throughout. In addition, ''lot'' is a common term in agriculture that refers to the batch or contiguous, homogeneous whole of a product being sold to a single buyer at a single time. Under the terms of this part, ''lot'' is to be defined by the producer in terms of farm location, field acreage, and variety (*i.e.,* cultivar) and to be reported as such to FSA. For FSA reporting purposes, FSA staff will determine the appropriate designation for the specific location(s) where hemp is being grown using FSA terminology such as ''farm,'' ''tract,'' ''field,'' and ''subfield'' to mean ''lot'' for the purpose of this rule.

''Marijuana,'' or, as defined in the CSA, ''marihuana,'' means all parts of the plant *Cannabis sativa* L., whether growing or not; the seeds thereof; the resin extracted from any part of such plant; and every compound, manufacture, salt, derivative, mixture, or preparation of such plant, its seeds, or resin. The term ''marihuana'' does not include hemp, as defined in section 297A of the Agricultural Marketing Act

of 1946, and does not include the mature stalks of such plant; fiber produced from such stalks; oil or cake made from the seeds of such plant; any other compound, manufacture, salt, derivative, mixture, or preparation of such mature stalks (except the resin extracted therefrom), fiber, oil, or cake; or the sterilized seed of such plant which is incapable of germination (7 U.S.C. 1639o(1)). ''Marihuana'' also means all cannabis that tests as having a THC concentration level on a dry weight basis of higher than 0.3 percent.

''Negligence'' is a term used in the 2018 Farm Bill to describe when certain actions are subject to specific compliance actions. For the purposes of this rule, the term means failure to exercise the level of care that a reasonably prudent person would exercise in complying with the regulations set forth under this final rule.

Used in relation to the other terms and regulations in this part, ''phytocannabinoids'' are cannabinoid chemical compounds found in the cannabis plant, two of which are Delta-9 tetrahydrocannabinol (delta-9 THC) and cannabidiol (CBD). Testing methodologies under this part will refer to the presence of ''phytocannabinoids'' as either THC or CBD.

Under the terms of this program, ''plan'' refers to a set of criteria or regulations under which a State or Tribal government, or USDA, monitors and regulates the production of hemp. ''Plan'' may refer to a State or Tribal plan, whether approved by USDA or not, or the USDA hemp production plan.

The 2018 Farm Bill mandates that all cannabis be tested for THC concentration levels using ''post-decarboxylation'' or similar methods. In the context of this part, ''post-decarboxylation'' means testing methodologies for THC concentration levels in hemp, where the total potential delta-9-tetrahydrocannabinol content, derived from the sum of the THC and THCA content, is determined and reported on a dry weight basis. The post-decarboxylation value of THC can be calculated by using a chromatograph technique using heat, known as gas chromatography, through which THCA is converted from its acid form to its neutral form, THC. The result of this test calculates total potential THC. The post-decarboxylation value of THC, or total THC, can also be calculated by using a liquid chromatograph technique, which keeps the THCA intact, and requires a conversion calculation of that THCA to calculate total potential THC. See also the definitions for decarboxylation and total THC.

The term ''produce,'' when used as a verb, is a common agricultural term that is often used synonymously with ''grow,'' and means to propagate plants for market, or for cultivation for market, in the United States. In the context of this part, ''produce'' refers to the propagation of cannabis to produce hemp.

''Producer'' means a producer as defined in 7 CFR 718.2 specifically of hemp. The 2018 Farm Bill mandates that USDA maintain a real-time informational database that identifies registered hemp production sites, whether under a State, Tribal, or USDA plan, for the purposes of compliance and tracking with law enforcement. AMS will maintain this system with the information collection assistance of FSA. In order to maintain consistency and uniformity of hemp production locations, USDA is using FSA to collect this information through their crop acreage reporting system. In this context, a common use of the term ''producer'' is essential to maintaining a substantive database. For this reason, the definition of ''producer'' incorporates the FSA definition of ''producer'' with the additional qualifier that they are a producer specifically of hemp. All producers are required to be licensed or authorized to produce hemp under the USDA Domestic Hemp Production Program.

''Remediation'' refers to techniques utilized to transform non-compliant cannabis into something useful and compliant while disposing of non-compliant parts. Remediation can occur by removing and destroying flower material, while retaining stalk, stems, leaf material, and seeds. Remediation can also occur by shredding the entire plant into a bio-mass like material, then re-testing the shredded biomass material for compliance.

''Secretary'' means the Secretary of Agriculture of the United States Department of Agriculture.

Section 297A of the Act defines ''State'' as any of one of the fifty States of the United States of America, the District of Columbia, the Commonwealth of Puerto Rico, and any other territory or possession of the United States. The statutory definition is self-explanatory, and USDA is adopting the same definition without change for part 990.

The term ''State department of agriculture'' is defined by the 2018 Farm Bill as the agency, commission, or department of a State government responsible for agriculture in the State. The statutory definition is self-explanatory, and USDA is adopting the same definition without change for part 990.

The term ''store'' is related to the term ''handle'' under this part and means to deposit hemp plants or hemp plant product in a storehouse, warehouse, or other identified location by a producer for safekeeping prior to delivery to a recipient for further processing.

The term ''Territory of the Indian Tribe'' means (a) all land within the limits of any Indian reservation under the jurisdiction of the United States Government, notwithstanding the issuance of any patent, including rights-of-way running through the reservation, (b) all dependent Indian communities within the borders of the United States whether within the original or subsequently acquired territory thereof, and whether within or without the limits of a State; (c) all Indian allotments, the Indian titles to which have not been extinguished, including rights-of-way running through the same; and (d) any lands title to which is either held in trust by the United States for the benefit of any Indian Tribe or individual or held by any Indian Tribe or individual subject to restriction by the United States against alienation and over which an Indian Tribe exercises jurisdiction.

The IFR defined the Territory of the Indian Tribe as ''Indian Country'' in 18 U.S.C. 1151 because section 1151 is a commonly acceptable approach to determine a Tribal government's jurisdiction. The final rule retains the language of section 1151, but adds item (d) to the definition of ''Territory of the Indian Tribe.'' This addition does not significantly expand the definition because many of the lands encompassed by item (d) were already considered as ''Territory of the Indian Tribe'' under the IFR. For example, off-reservation trust land, if not considered part of a reservation under section 1151(a), is generally considered within a dependent Indian community under section 1151(b). *See Club One Casino, Inc.* v. *Bernhardt,* 959 F.3d 1142, 1149–50 (9th Cir. 2020); Felix Cohen, Cohen's Handbook of Federal Indian Law, section 3.04 (Nell Jessup Newton ed. 2012). Also, restricted fee lands outside of a reservation are often considered part of a dependent Indian community, provided the lands satisfy the two requirements of a dependent Indian community—lands that are (1) set aside by the Federal Government for the use of the Indians and (2) under federal superintendence. *Citizens Against Casino Gambling in Erie Cty.* v. *Chaudhuri,* 802 F.3d 267, 281 (2d Cir. 2015).

However, because ''dependent Indian communities'' is an oft-litigated term that is interpreted varyingly amongst the courts, USDA decided to add item (d) to the definition of ''Territory of the Indian Tribe'' to add clarity and ensure nationwide consistency regarding the jurisdictional boundaries of regulatory authority over the production of hemp.

''Total THC'' is the post-decarboxylation value of THC, either after testing with gas chromatography or LC after using a conversion factor. LC does not use decarboxylation as part of the process and this addition is to account for the conversion of THCA into THC if decarboxylation was part of the process. The addition of 87.7 percent of THCA is applicable if the testing laboratory uses LC with detection to measure the THC. Total THC is the measured THC plus 87.7 percent of THCA.

As defined by the 2018 Farm Bill, the term ''Tribal government'' means the governing body of an Indian Tribe. The statutory definition is self-explanatory, and USDA is adopting the same definition without change for part 990.

The ''U.S. Attorney General'' is the Attorney General of the United States.

''USDA'' is an acronym that stands for the ''United States Department of Agriculture.''

V. Appeals

The following paragraphs explain when and how to appeal a USDA decision. State or Tribal plans may include similar appeal procedures. No changes were made to this section based on comments.

An applicant for a USDA hemp production program license may appeal a license denial to the AMS Administrator. USDA licensees can appeal denials of license renewals, license suspensions, or license revocations to the AMS Administrator. All appeals must be submitted in writing and received within 30 days of the denial. Appeals may be submitted by mail or electronic form. This submission deadline should provide adequate time to prepare the necessary information required for the appeal. The Administrator will take into account the applicant or USDA licensee's justification for why the license should not be denied, suspended, or revoked, and then issue a final determination. Determinations made by the Administrator under the appeals process will be final unless the applicant or USDA licensee requests a formal adjudicatory proceeding to review the decision, which will be conducted pursuant to the U.S. Department of Agriculture's Rules of Practice Governing Formal Adjudicatory Proceedings, 7 CFR part 1, subpart H, which USDA will amend to add the Domestic Hemp Production Program. If the applicant or USDA licensee does not request that the Administrator initiate a formal adjudicatory proceeding within 30 days of the Administrator's adverse ruling, such ruling becomes final.

Appeals Under a State or Tribal Hemp Production Plan

A State or Tribe can appeal the denial of a proposed hemp production plan, or the proposed suspension or revocation of a plan by USDA. USDA will consult with States and Tribes to help ensure their draft plans meet statutory requirements, and that existing plan requirements are monitored and enforced by States and Indian Tribes. If, however, a proposed State or Tribal plan is not approved, or an existing plan is suspended or revoked the decision may be appealed.

If the AMS Administrator grants a State or Indian Tribe's appeal of a disapproval of its hemp plan, the proposed State or Tribal hemp production plan shall be approved as proposed. If the AMS Administrator denies an appeal, prospective producers located in the State or Tribal Territory can apply directly to USDA for a hemp license. Similarly, if an appeal of a denied proposed State or Tribal plan is denied, producers located in the impacted State or Tribal territory may apply for licenses under the USDA plan.

A State or Tribe appealing the suspension or revocation of their hemp production plan must explain the reasoning for the appeal and the appeal must be filed within the time-period provided in the letter of notification or within 30 business days from receipt of the notification, whichever occurs later. This timeframe should be adequate for the assembly of the information required to be submitted as part of the appeal.

VI. Interstate Commerce

Nothing in this rule prohibits the interstate commerce of hemp. No State or Indian Tribe may prohibit the transportation or shipment of hemp produced in accordance with this part and with section 7606 of the 2014 Farm Bill (expires January 1, 2022) through the State or the territory of the Indian Tribe, as applicable.[10]

[10] *See* section 10114 of the 2018 Farm Bill and the USDA General Counsel's Legal Opinion on the Authorities for Hemp Production at *https://www.ams.usda.gov/content/legal-opinion-authorities-hemp-production.*

VII. Outreach

As part of this rulemaking process, AMS held numerous meetings with State and Tribal governments and their representatives, industry organizations, groups and individuals with experience in the hemp industry, and representatives of law enforcement, as well as other Federal agencies.

In addition, USDA also conducted a listening session on March 13, 2019, that had more than 2,100 participants, and included comments from 46 separate speakers representing States, Tribes, producers, end-users, hemp organizations, and others. The recording of the listening session is available on the USDA website at *https://www.ams.usda.gov/rules-regulations/hemp.* On May 1 and 2, 2019, USDA also participated in Tribal consultation meetings for a total of 52 and 38 participants, respectively. On September 24, 2020, AMS conducted another Tribal Consultation with approximately 90 participants.

AMS published an interim final rule on October 31, 2019 (84 FR 58522), that established a temporary hemp production program and invited public comments on the program's provisions. The initial 60-day comment period was extended by 30 days on December 18, 2019 (84 FR 69295). The comment period was reopened for another 30 days on September 8, 2020 (85 FR 55363). A total of approximately 5,900 comments were submitted by States, Tribes, farmers, industry associations, and other interested groups and individuals during the combined comment periods expressing their views on the provisions of the IFR and suggesting modifications, many of which have been incorporated into this final rule.

Finally, in November 2019, AMS posted an informational webinar about the domestic hemp production program on its website (in English and Spanish) at *https://www.ams.usda.gov/rules-regulations/hemp.* AMS has also posted additional useful information for regulated entities and other interested persons on its website at *https://www.ams.usda.gov/rules-regulations/hemp.*

As required by the Farm Bill, the Secretary developed this final rule and related guidelines in consultation with the U.S. Attorney General. In addition, USDA has submitted information to, and consulted with, the Committee on Agriculture of the House of Representatives and the Committee on Agriculture, Nutrition, and Forestry of the Senate regarding updates on the

implementation of the hemp requirements in the Farm Bill.

VIII. Severability

This final rule includes a severability provision. This provision helps address the status of the regulations should a court vacate a particular provision. This section provides that if any provision of part 990 is found to be invalid, the remainder of the part shall not be affected.

IX. Comment Analysis

AMS accepted comments during an initial comment period from October 31, 2019 through December 31, 2019. On December 18, 2019 (84 FR 69295), this initial comment period was extended for an additional 30 days, ending January 29, 2020. AMS reopened the comment period for 30 additional days on September 8, 2020 (85 FR 55363), ending October 8, 2020. Comments may be accessed through *Regulations.gov*.[11] Reopening the comment period gave interested persons an additional opportunity to comment on the IFR. Comments were solicited from all stakeholders, notably those who were subject to the regulatory requirements of the IFR during the 2020 production cycle.

AMS specifically requested comments on the 15-day sampling and harvest timeline; the possibility of establishing a fee-for-service hemp laboratory approval process for labs that wish to offer THC testing services; the possibility of requiring all laboratories testing hemp to have ISO 17025 accreditation; the number of labs already ISO 17025 accredited; additional examples of reasonable efforts to illustrate actions hemp producers can take in order to avoid committing a negligent violation under the program; the sufficiency of the hemp license application period; whether the information collection for the program is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; the ways to enhance the quality, utility, and clarity of the information to be collected; the ways to minimize the burden of the collection of information on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology; whether there is information or data that may inform whether or not the market will experience a significant shift, either positive or negative, in the developing hemp market and on consumers; any data or information on what impacts the regulation may have on current and future innovation in the areas of industrial hemp usages and how much such impacts on innovation may affect rural communities; the potential for innovation and the uncertainty and its impact on the hemp market vis a vis steady State; and additional reliable data sources on the annual receipts of industrial hemp producers.

AMS received approximately 5,900 comments. Comments represented the views of States, Indian Tribes, hemp farmers and processors, universities, laboratories, trade associations, carriers, non-profit associations, other Federal government agencies, consumers, and other interested individuals. A summary of the comments and AMS's analysis and response follows.

Extention of Comment Period

Several commenters urged AMS to extend the public comment period to allow for small businesses to meaningfully participate in this rulemaking process. One reason given was that the comment period fell in the middle of the harvest season for much of the mid-Atlantic and southern hemp growers, excluding those who grow indoors, and therefore were too busy to comment. Other reasons given were the ongoing global pandemic as well as many other ongoing natural disasters nation-wide that have presented additional strains and unique challenges to agricultural operations.

AMS Response: AMS provided an initial 60-day comment period and a 30-day extension and then reopened the comment period for 30 additional days in order to receive feedback from stakeholders thus giving ample time to interested parties to submit comments. In order to finalize the Domestic Hemp Promotion Program before the 2021 production cycle begins, AMS decided not to extend the comment period and to finalize this rule.

Extension of 2014 Pilot Program

Under the 2014 Farm Bill, State departments of agriculture and institutions of higher education were permitted to produce hemp as part of a pilot program for research purposes. Congress extended this authority under the 2021 Continuing Appropriations Act until January 1, 2022. After January 1, 2022, domestic hemp production must comply with Subtitle G of the AMA and this final rule.

Comments: Numerous comments praised the hemp production regulatory schemes established by States and Universities under the 2014 Farm Bill authority. Many comments reflected on the perceived increase in regulatory burden under the IFR, as opposed to the regulatory scheme that has been applied to domestic hemp production until now. Many comments, while making recommendations with regards to specific aspects of the IFR provisions, also encouraged USDA to continue to regulate domestic hemp production under the 2014 Farm Bill until satisfactory resolution of industry concerns can be achieved. Further, several comments stated that the extension of the pilot programs under the 2014 Farm Bill for another two to three years would give the industry time to adjust to the new requirements and to develop hemp genetics to more easily comply with the regulations.

A few comments opposed extension of the 2014 Farm Bill pilot program, asserting that States now operating under the more restrictive 2018 Farm Bill provisions are placed at a disadvantage.

AMS response: The extension of the 2014 Farm Bill authority is not within the authority of USDA. Congress only extended this authority under the 2021 Continuing Appropriations Act (Pub. L. 116–260), until January 1, 2022.

THC Limit

The IFR adopts the 2018 Farm Bill definition of hemp as the plant species *Cannabis sativa* L. and any part of that plant with a delta-9 tetrahydrocannabinol concentration of not more than 0.3 percent on a dry weight basis. Further, the IFR requires that THC levels in representative samples test at or below the acceptable hemp THC level. Testing must be conducted using post-decarboxylation or other similarly reliable methods, where the total THC concentration level measured includes the potential to convert THCA into THC. Finally, the IFR provides that hemp testing higher than the acceptable hemp THC level is considered a controlled substance and requires disposal.

Comments: Some comments supported the 2018 Farm Bill's hemp THC level of 0.3 percent, and some explained that States had successfully incorporated that limit into programs authorized under the 2014 Farm Bill. Some comments thanked USDA for clearly defining the delta-9 THC standard in the IFR, which commenters

[11] *https://www.regulations.gov/searchResults?rpp=25&po=0&s=AMS-SC-19-0042&fp=true&ns=true.*.

said would foster uniformity across hemp production in all States.

However, a greater number of comments from various stakeholder groups, including producers, States, Indian Tribes, and hemp organizations, asserted that the 0.3 percent threshold is too low and impractical in a program intended for multiple end uses of hemp. Comments argued that individuals interested in obtaining cannabis for intoxication purposes are unlikely to be interested in material containing 1.0 percent THC—or perhaps higher, and that setting the threshold at even 1.0 percent THC would give farmers, breeders, and researchers a lot more flexibility and confidence in producing compliant crops. One commenter reported that their State recognizes hemp with THC concentrations of up to 0.39 percent, with most crops testing between 0.31 and 0.39 percent THC, and no end products testing higher than 0.3 percent THC. The comment suggested USDA should raise the THC limit to at least 0.39, if not up to 0.5 percent. Other comments recommended revising the threshold to a higher level, asserting that there is no scientific evidence that supports use of the 0.3 percent level. Some comments recommended increasing the threshold to 0.8 or 1.0 percent, while some suggested 2.0 percent and others as much as 5.0 percent. Comments explained that a THC concentration of 5 percent is not viable for recreational marijuana markets and that USDA should consider the end-use potential when determining a threshold. One comment recommending a THC threshold of at least 2.0 percent included a news story reporting that marijuana plants confiscated by law enforcement routinely have THC concentrations of 12 percent or higher.[12]

Several comments suggested that the IFR's level of 0.3 percent delta-9 THC on a dry-weight basis is ''more aspirational than practical.'' Comments explained that THC levels vary with plant maturity and other factors. Comments urged USDA to build greater flexibility into the rule so producers don't unwittingly become illegal marijuana farmers as a result of factors beyond their control. One comment suggested USDA establish a wider gap between the THC levels that define controlled substances and agricultural commodities such as hemp to create an environment where hemp producers are presumed innocent until proven guilty of intentionally producing a controlled substance. Several comments recommended that university and other research programs be given more leeway as they work toward developing more compliant, regionally appropriate varieties through breeding.

Some comments noted that hemp containing more than 0.3 percent THC is not eligible for crop loss or replant payments under USDA Risk Management Agency regulations. Comments said further that if USDA is not certifying seed because of the regional effects of growing conditions on genetics, farmers are at risk and should be able to obtain comprehensive insurance coverage for crops with negligible overage above the acceptable THC level.

Comments explained that while the genetics of most U.S. crops have been developed over many years, hemp has not enjoyed that history, and it will take time to develop compliant but commercially viable crops with marketable CBD content for different regions. Comments asserted farmers will have fewer planting options because of the lack of a national hemp seed certification protocol and limited agronomic research on hemp varietals and production practices. Comments inferred that the 0.3 percent THC threshold would effectively demand that farmers plant a nationwide monoculture with little genetic diversity, which they said would leave U.S. hemp crops vulnerable to pests and diseases.

Many comments questioned the selection by Congress of the 0.3 percent THC threshold to legally distinguish hemp from marijuana.[13] Comments frequently referenced a 1976 publication, *A Practical and Natural Taxonomy for Cannabis,* in which horticulturalists Dr. Ernest Small and Arthur Cronquist used 0.3 percent THC as a threshold to distinguish hemp from marijuana in their scientific study on cannabis.[14] Comments highlighted statements made by Small and Cronquist, saying the researchers openly acknowledged that they ''arbitrarily adopt a concentration of 0.3 percent delta-9 THC (dry weight basis) in young, vigorous leaves of relatively mature plants as a guide to discriminating two classes of plants,'' and that the number was never intended to define hemp from a legal perspective. According to the comment, Small and Cronquist made no conclusionary statement on the use of the 0.3 percent THC threshold.

Several comments reported that countries determined to compete in the global marketplace, including Switzerland, Australia, Thailand, Uruguay, and Ecuador, recognize an acceptable hemp THC limit of 1.0 percent. According to comments, the international market settled on the 1.0 percent THC limit after numerous countries tested hemp over many years. Comments recommended the IFR incorporate the same standard.

Comments asserted that the rights of Indian Tribes and small Tribal farmers should be protected by allowing greater flexibility in the hemp production regulations overall, consistent with Tribal self-government. For example, comments said that Indian nations should be recognized to have authority to grow hemp with up to 1.5 percent THC and should not be restricted to 0.3 percent.

One comment explained that their company has focused on breeding efforts to develop genetics that produce CBD-rich hemp with the lowest possible THC concentrations. The commenter claimed their company has harvested millions of pounds of hemp compliant with the 0.3 percent total THC standard since 2017. The comment said they produced 25 million rooted cuttings this spring—enough, according to the comment, to produce biomass for the entire country, and the commenter assumed they were not the only ones who had done so. The comment asserted further that the global standard for THC concentration is 0.2 percent and that to be competitive, U.S. production must adhere to a similarly strict standard.

Although asserting that the IFR hemp THC level of 0.3 percent is not commercially reasonable, some comments acknowledged that only Congress could change the statute to allow a higher limit, and some commenters offered to serve as resources in that effort. Other comments urged USDA to work with Congress to raise the THC threshold.

AMS response: Congress defined hemp in the 2018 Farm Bill as *Cannabis sativa* L. with a delta-9 tetrahydrocannabinol concentration of not more than 0.3 percent on a dry weight basis. Any change to the statutorily established threshold of THC concentration requires an amendment to the statute. The CSA defines marijuana as cannabis that is over the 0.3 percent THC level. AMS has no discretion to change the THC level or to treat States and Tribes differently as the 2018 Farm Bill applies to all production of hemp in

[12] McCullough, Jolie. ''Marijuana Prosecutions in Texas Have Dropped by More than Half Since Lawmakers Legalized Hemp.'' *The Texas Tribune,* 3 January 2020; *www.texastribune.org/2020/01/03/texas-marijuana-prosecution-drop-testinghemp/.*

[13] Johnson, Renee. ''Hemp as an agricultural commodity.'' Congressional Research Service (2014).

the U.S. Tribes do not have the authority to grow hemp with up to 1.5 percent THC as this would violate the 2018 Farm Bill and the CSA. Tribes' powers of self-government may be constrained by acts of Congress in accordance with Congress' constitutional authority to regulate commerce with Indian Tribes.

AMS notes that there seems to be confusion amongst some commenters on the THC level stated in the 2018 Farm Bill and the IFR's definition of acceptable hemp THC level. The acceptable hemp THC level in this final rule includes the 0.3 percent established in the Farm Bill plus any measure of uncertainty due to laboratory testing.

Regarding the comment citing the news story, AMS believes the commenter misconstrued the article's meaning. The article cited by the commenter explained that following passage of Texas's law that legalized hemp in early 2019, the number of marijuana prosecutions in the State plummeted, due in part to the lack of adequate and affordable criminal laboratory resources. According to the article, prosecutors were less likely to expend resources on low-level marijuana charges where the likelihood of conviction is low. The article described anticipated release of a new lab testing method that only determines whether THC concentration is above or below 2 percent for criminal testing purposes. According to the article, even though 2 percent is higher than the State's legal hemp limit of 0.3 percent, such testing would nevertheless be adequate for Texas law enforcement purposes, since nearly all marijuana plant prosecutions in the State involve THC concentrations of 12 percent or more. AMS believes neither the article nor the State are advocating legalization of hemp THC concentrations of up to 2 percent, but that Texas law enforcement is merely using that limit as a convenient way to determine whether to pursue criminal prosecution.

In response to concerns that producers could unwittingly become illegal marijuana farmers without greater flexibility in the rule, AMS has modified the negligent violation threshold as explained in the section responding to comments on the negligent violation threshold. AMS also notes, however, that it does not have any authority over how the DEA chooses to enforce compliance with the CSA.

In the final rule, AMS is implementing a nation-wide domestic hemp production program as contemplated by the 2018 Farm Bill. It is not amending Risk Management Agency's regulations regarding crop loss or repayment payments. Thus, comments regarding those regulations are outside the scope of this rule.

Testing for Total THC

The IFR requires that when hemp THC levels are measured using post-decarboxylation or other similarly reliable methods, the total THC concentration level measured must include the potential to convert THCA into THC.

Comments: Some comments agreed that the measurement of delta-9 THCA should be added to the measurement of delta-9 THC and reported as total THC used for determining compliance with the hemp program requirements, as this is what many hemp producing States are already doing under State programs. A comment from an association of Departments of Agriculture reported that many States responding to their survey supported testing for total THC in this manner.

Other commenters disagreed. According to one comment, only 22 of 47 States with State-level hemp programs test for total THC. The comment said that 18 States do not currently test for total THC, and that 7 States' rules are ambiguous on this point. Other comments reported that State programs currently testing for only delta-9 THC are confident that producers are not selling ''hot'' crops.

One comment said it is irrational to subject hemp biomass to decarboxylation when most biomass harvested for processing into increasingly popular consumer goods or industrial products will never even be decarboxylated.

Another comment explained how USDA cannot alter the definition of hemp as set forth in the 2018 Farm Bill. The comment said that there should not be a ''total'' THC mandate and, rather, the plain reading of the 2018 Farm Bill establishes that delta-9 THC is actually the determinative factor. The comment went on to explain how other State and Federal agencies also rely only on delta-9 THC when making critical distinctions with respect to hemp, such as the DEA and the FDA, to determine whether a substance is controlled and subject to criminal penalties. The comment presented an alternative testing methodology where testing methods must be able to determine the potential for THCA to convert into delta-9 THC, and the test result must reflect that ability as well as the aggregate computation, but the controlling factor whether a crop meets the definition of hemp and is within the ''acceptable hemp THC level'' relies only upon the delta-9 THC element. Thus, for compliance purposes, delta-9 THC is the standard, and the lab report must at least reflect THCA, delta-9 THC, and the Total THC results, but Total THC should not be determinative in whether a farmer has to destroy his crop.

Industry impacts. Commenters asserted that testing for THCA concentration, a component they argued which is not psychoactive, would vastly undermine the efficient production of hemp and the growth of the industry. Some comments supported the 0.3 percent THC standard, but said requiring testing for total THC goes beyond what is statutorily required, to the detriment of producers. Commenters argued that the difference between levels of delta-9 THC and total THC in hemp is significant, and that crops that would otherwise be compliant measuring only for delta-9 THC would not be compliant when measuring for Total THC. Comments asserted that testing for total THC with a threshold of 0.3 percent effectively lowers the allowable hemp THC level to an even lower limit.

Comments also described the correlation between total CBD and total THC production and explained that producers trying to maximize CBD production will not be able to do so successfully if total THC levels are restricted to 0.3 percent. One comment claimed that a farmer can produce hemp plants with up to 25 percent cannabinoid content while staying under 0.3 percent delta-9 THC limit, but that the farmer would have to plant twice as many acres of a less potent hemp variety to produce the same amount of CBD end product and stay compliant under the IFR's Total THC limit.

Several comments reported that some CBD hemp processors reject product with CBD amounts of less than 8 percent. According to comments, breeders have worked years to develop cultivars that meet the 0.3 percent delta-9 THC threshold, but many cultivars would not be compliant under the total THC limit. Comments predicted that with a standard of 0.3 percent total THC, growers will stop growing hemp for CBD because the risk is too high that their hemp crops will exceed the limit and be destroyed, defeating the purpose for growing crops for the potential high returns related to CBD production. Comments further lamented that the industry would lose investments they've already made.

According to comments, many States that have only been measuring delta-9 THC under 2014 Farm Bill pilot programs have developed companion

marketing programs that have been tailored to complement State hemp production programs. Comments asserted the total THC limit in the IFR would significantly impact these new and emerging markets and cripple the industry in those States, preventing them from selling their product.

Some comments claimed that common industry practice is to measure THC and THCA independently. Comments recommended USDA treat THC and THCA as two separate molecules and only be concerned with the amount of THC in a sample, rather than total available THC.

One comment recommended that if USDA wants to test for total THC, the limit should be raised to 0.694 percent, with negligence set at 1.094 percent, and that growers whose samples measure between the two limits should be allowed to retest samples with up to two certified labs of their choice at a cost of $500 each. Another comment recommended that samples be tested for THC and THCA separately, with limits of 0.3 and 1.0 percent, respectively.

AMS response: The 2018 Farm Bill requires that State and Tribal plans provide a procedure for testing, using post-decarboxylation or other similarly reliable methods, delta-9 tetrahydrocannabinol concentration levels of hemp. In order to use post-decarboxylation, the sample must be heated or a conversion made to account for the lack of heating process. This means that the total THC must account for THCA and delta-9 THC.

Currently, some States and Indian Tribes use gas chromatography (GC) to test hemp. In GC testing, heat is applied to the sample which THCA, producing delta-9 THC (a psychoactive compound), so that the final delta-9 THC result is actually a total THC result. GC is the more traditional technique used for THC testing and GC results are typically reported as ''delta-9 THC'' without distinguishing that the reported delta-9 THC is actually total THC.

Liquid chromatography (LC) testing typically does not involve the use of heat, so the THCA in a sample does not decarboxylate. In LC, results for THCA and delta-9 THC are obtained separately and can be reported separately. Cannabis naturally contains more THCA than delta-9 THC; if the THCA concentration is ignored while testing by LC, it is improbable to correctly distinguish hemp varietals from drug varietals. A total THC needs to be calculated post-testing in order to determine the ''post-decarboxylation'' delta-9 THC value as required by the 2018 Farm Bill. In this way, all testing methodologies report the same information.

AMS acknowledges that some States do not currently test for total THC and that switching to testing for total THC may have a negative impact on those State programs. Most laboratories that use LC obtain THCA results and delta-9 THC results in the same analysis, so the information should be readily available to incorporate a calculation for Total THC. The opposite is also true. If USDA was to ignore the statutory requirement of using post-decarboxylation or other similarly reliable methods and allow for THC levels that do not account for decarboxylation, States and Tribes that currently require testing for total THC could experience a negative impact. When States or Tribes use different methods to measure THC, it impacts commerce because producers are not all on the same playing field. Also, since total THC at 0.3 percent is harder to obtain, those States and Tribes currently using total THC have been potentially selling less or destroying more hemp. Further, many in the industry have already made the switch to total THC since the IFR was published, diminishing the impact.

AMS consulted with the Departments of Justice and Health and Human Services to develop the IFR. The Drug Enforcement Administration's Analysis of Drugs Manual cites GC methodology, initially labeling results as delta-9 THC and then defining total THC and instructing how to determine compliance using total THC.

In order to provide flexibility to States and Indian Tribes administering their own hemp production programs, alternative testing protocols will be considered by AMS if they are comparable and similarly reliable to the baseline mandated by section 297B(a)(2)(ii) of the AMA and established under the USDA plan and procedures. Updated USDA procedures for sampling and testing will be issued concurrently with this rule and will be provided on the USDA website.

This final rule covers hemp production. Hemp products are regulated under the Food and Drug Administration and its various statutes.[15]

Statutory Compliance and Congressional Intent: Several comments expressed concern about regulatory inconsistency between the 2018 Farm Bill language testing methods and the IFR requirements. Commenters urged USDA to reconsider the legislative record and Congress's intent in passing the 2014 and 2018 Farm Bills. According to numerous comments, the plain language of the 2018 Farm Bill statute does not support the IFR's requirement to test for total THC. Commenters asserted that if Congress had intended samples to be tested for total THC, they would have so specified, rather than making the specific reference to delta-9 THC in the statute. Comments concluded that concentrations of THCA in hemp should be irrelevant to its legal status under the regulations. One comment characterized ''decarboxylated value'' as a new legal term and questioned USDA's authority under the 2018 Farm Bill to create such a term. One comment went on to say that the term ''potential conversion'' as appearing in the IFR is offensive because Federal criminal law does not convert a legal substance into an illegal one simply because the substance has the ''potential'' to be converted.

Several comments cited a letter from Senators Merkley and Wyden,[16] authors of the Hemp Farming Act of 2018 that was included in the 2018 Farm Bill, as evidence that the IFR wrongly requires testing of Total THC. In that letter, Senators Merkley and Wyden asserted that requiring hemp samples to be tested using methods by which the reported THC concentration accounts for the conversion of THCA to THC ''is a complete reversal of the Congressional intent expressed in that law and requires testing that Congress specifically did not include.'' Comments also asserted that the Farm Bill definition of hemp is clear in that ''all derivatives, extracts, cannabinoids, isomers, acids, salts, and salts of isomers, whether growing or not'' of the hemp plant are expressly lawful so long as the pant does not contain a delta-9 THC concentration of above 0.3 percent. Thus, according to these comments, the IFR required measurement of a lawful plant-based acid when distinguishing between hemp and marijuana under the Controlled Substances Act, and such a requirement contradicts the plain language of the Farm Bill and the spirit of the law.

[15] The 2018 Farm Bill explicitly preserved the authority of the U.S. Food and Drug Administration (FDA) to regulate hemp products under the Federal Food, Drug, and Cosmetic Act (FD&C Act) and section 351 of the Public Health Service Act (PHS Act).

[16] *https://www.merkley.senate.gov/news/press-releases/wyden-merkley-to-dea-interim-rule-on-hemp-contradicts-congressional-intent-by-criminalizing-intermediate-steps-in-hemp-processing-2020#:~:text=Authors%20of%20the%20provision%20in,by%20seriously%20misunderstanding%20hemp%20processing.* See *https://beta.regulations.gov/comment/AMS-SC-19-0042-0884.*

One comment asserted that requiring test reports of THC concentration to account for conversion of THCA into THC effectively mandates that only test methods relying on post-decarboxylation be used, nullifying Congressional intent that other similarly reliable methods that don't require conversion of THCA to THC should be authorized. The comment recommended revising the rule to comply with the Congressional mandate to allow testing through other similarly reliable methods.

AMS response: AMS is not making a determination of Congressional intent when passing the 2018 Farm Bill provision for hemp. Instead, AMS is following the plain statutory language that states that a State or Tribal plan shall be required to include ''a procedure for testing, using post-decarboxylation or other similarly reliable methods, delta-9 tetrahydrocannabinol concentration levels of hemp produced in the State or territory of the Indian Tribe''.

International Impact: Some comments asserted that the average global delta-9 THC limit is 1.0 percent. Others claimed that Europe has adopted a 0.3 percent THC limit, but that it applies only to delta-9 THC and not total THC. Comments contend that American hemp production required to comply with at 0.3 percent total THC limit will be disadvantaged in the international marketplace. Comments proposed that matching a global standard by establishing a higher delta-9 THC threshold or total THC limit would strengthen U.S. producers' market competitiveness. Other comments warned that reducing the domestic hemp supply by imposing the IFR's 0.3 percent total THC limit will incentivize importation of hemp biomass and hemp derivatives produced in countries with lower labor costs and less restrictive regulatory regimes, and that domestic hemp and hemp derivatives will be priced out of the market.

AMS response: The 2018 Farm Bill authorizes USDA to issue regulations to regulate the production of hemp and defines hemp in terms of the concentration of THC in a Cannabis sativa L. plant. A Cannabis sativa L. plant is considered hemp, and therefore not a controlled substance, if the THC concentration is not more than 0.3 percent on a dry weight basis. AMS does not have the discretion to change this threshold in the definition of hemp even if this threshold could impact the global competitiveness of U.S.-produced hemp.

Calculating Total THC

The 2018 Farm Bill and IFR identified and described the procedure for testing THC concentration using post-decarboxylation or other similarly reliable methods. The term decarboxylated was defined in the IFR as the completion of the chemical reaction that converts THC-acid (THCA) into delta-9 THC, the intoxicating component of cannabis. The decarboxylated value is also calculated using a conversion formula that sums delta-9 THC and eighty-seven and seven tenths (87.7) percent of THC-acid. The term decarboxylated is also commonly used in science and is the precursor to the term ''post-decarboxylation,'' which appears in the 2018 Farm Bill's mandate on the acceptable cannabis testing methodologies for identifying THC concentration levels. AMS adopted this definition in this final rule.

Conversion Efficiency: Many stakeholders opposed USDA's conversion formula described in the IFR. Comments claimed the IFR was based on 100 percent conversion efficiency, which is only achievable under controlled laboratory testing conditions and is not possible outside of a laboratory environment. One comment stated the IFR failed to account for the inefficiency of the decarboxylation process. Numerous other comments characterized the USDA formula as theoretical and explained that the realistic conversion efficiency is between 30 and 75 percent. For example, several commenters cited a peer reviewed study which found 72 percent to be a viable efficiency factor and provided the calculation formula: Total Potential THC = (0.72) × [(0.877 × THCA) × delta-9THC)]. Additionally, a commenter suggested USDA utilize three different conversion factor tiers (0, 30, or 70 percent) depending on the end-use varietal because the THC concentration varies by varietal. The commenter argued that the conversion factors should reflect the different end-uses.

One comment said the calculation for ''Total Potential THC'' should be defined and incorporated into the final rule because the decarboxylation percentage definition is critical for standardization and uniformity in the industry. Otherwise, according to the comment, States could adopt different decarboxylation percentages in their equations, causing confusion for growers. The comment gave the following formulas as examples: (Total potential THC = 0.877 × percent THCA + percent delta-9 THC) as compared to (Total Potential THC = 0.877 × 0.70 × percent THCA + percent delta-9 THC), assuming a 70 percent THCA decarboxylation to delta-9 THC rate.

Another comment explained the need to include delta-8 THC into any calculation for the future state delta-9 THC.

AMS response: Delta-8 THC only exists in a trace amount in marijuana which has a high Delta-9 THC concentration. The Delta-9 THC amount is already low in hemp, so the concentration of Delta-8 THC would be basically undetectable in hemp. A quote from the ''WHO Expert Committee on Drug Dependence Critical Review—Isomers of THC'' regarding the relative amount of Delta-8 THC to Delta-9 THC that can be found at *https://www.who.int/medicines/access/controlled-substances/IsomersTHC.pdf?ua=1.*

The above range means that Delta-8 THC occurs at a level that is roughly 1000 times less than Delta-9 THC. So, if Delta-9 THC was observed at 0.3 percent in hemp, then the Delta-8 THC concentration would be roughly around 0.0003 percent. This contribution is completely negligible and contributes nothing significant to the total THC content. The trace amount of Delta-8 THC is about 100 times less than the uncertainty (MU) of the test method, further demonstrating that it is insignificant and not worthy of consideration in the final assessment of THC for hemp compliance.

AMS is adopting the calculation provided in the IFR for determining total THC. However, the calculation has been clarified to explain the use of the molar conversion ratio to mathematically convert THCA to delta-9 THC. As written in the IFR, the calculation may have been misunderstood as containing a conversion efficiency factor, which is not the case. THCA cannot be added to delta-9 THC without accounting for the difference in molecular mass. Using stoichiometry, a molar conversion ratio (0.877) is used to mathematically convert THCA in terms of delta-9 THC. The molar mass of THCA is 358.47 g/mol and the molar mass of delta-9 THC is 314.45 g/mol. In other words, the mass of THCA has to be adjusted or multiplied by 0.877 to be comparable to the mass of delta-9 THC.

The 2018 Farm Bill requires that the THC content be expressed post-decarboxylation, which means that the conversion of THCA into delta-9 THC to account for the potential total THC in a sample must be taken into account. The term ''potential'' is used because it is not possible to readily, consistently, and reliably calculate the precise extent of

the conversion of THCA to THC under *any and all* circumstances. Therefore, the calculation for total THC assumes 100 percent conversion efficiency and is hereby retained in this regulation. The calculation for total THC [total THC = (0.877 × THCA) + (delta-9 THC)] assumes that 100 percent of the THCA is decarboxylated, producing to delta-9 THC, meaning that it gives the maximum (or potential, or theoretical) total THC. The final rule includes a definition for total THC to provide more specificity on this issue. This is standard procedure for how theoretical yield is calculated in chemistry. The issue is that theoretical yield does not always equal actual yield. Just because a maximum total THC can be calculated does not mean that the maximum is always obtained; however, there is potential for this maximum to be obtained. The amount of THCA that actually decarboxylates, producing delta-9 THC, is dependent on multiple variables; primarily, the amount of heat it is exposed to and the amount of time it is exposed to that heat. These variables, in turn, depend on what is being done to a cannabis sample (tested via LC, tested via GC, used for smoking, used for extraction, etc.).

Incorporating the use of a conversion efficiency factor into the calculation is problematic due to these variables. Designating different conversion efficiency factors based on intended end use is not practical as the factors can still vary. For example, if an end-use of extraction is intended, there are many different types of extraction processes and even within one specific process there are still many different variables that will affect the conversion efficiency. Ultimately, there is no way to standardize a conversion efficiency factor based on end-use, methodology, or processing. The infrastructure does not currently exist to measure and monitor conversion efficiency.

In terms of conversion during instrumental analysis, many commenters referenced a study conducted by Dussy [17] that determined a conversion efficiency factor for a specific GC setup. The author of the study recommends determining THCA and delta-9 THC separately and calculating total THC (using the equation the IFR stated to use). The author says that ''every total Δ9 THC value determined after decarboxylation [by using GC] gives a minimal content rather than an exact value''. Therefore, the author proposes that labs using GC should calculate their own method's conversion efficiency and then apply their efficiency to their result to increase their total THC value to make it comparable to LC. This is the opposite of what many commenters are proposing in that they wanted LC methods to incorporate conversion efficiency into their LC results to make total THC lower. The further complication of this ''opposite'' approach is that it is impossible without having a single conversion efficiency which, as stated previously, cannot be agreed upon and can vary widely. Furthermore, no matter how the conversion efficiency was to be applied, requiring each lab to determine their own method's efficiency would require significant effort.

Delta-8 THC is a cannabinoid that can be formed from delta-9 THC. It is typically only found in very small quantities in plants, if it is found at all, and is more often obtained by growing a plant with high delta-9 THC and then converting the delta-9 THC into delta-8 THC through an extraction and conversion process in a lab to make a distillate product. It is rarely included in total THC calculations and many labs do not test for it. Delta-8 THC is unrelated to the 0.3 percent delta-9 THC limit or the ''post-decarboxylation delta-9 THC'' that are defined and required in this final rule.

Similarly Reliable Testing Methods

The 2018 Farm Bill states that State, Tribal, or USDA plans shall include ''a procedure for testing, using post-decarboxylation or other similarly reliable methods, delta-9 tetrahydrocannabinol concentration levels of hemp.''

The IFR included two examples of standard industry post-decarboxylation testing methods that meet 2018 Farm Bill requirements: Gas and liquid chromatography with detection. AMS selected these standard methods of chromatography as the best options for testing but also provided flexibility for alternative sampling and testing protocols if they are comparable and similarly reliable to the baseline mandated by the 2018 Farm Bill and established under the USDA plan and procedures.

Comments: Some comments expressed support for the use of post-decarboxylation. One comment described liquid chromatography as a preferable testing method over gas chromatography because there are no published methods for gas chromatography that show 100 percent conversion of THCA to THC. Comments suggested liquid chromatography is more accurate and representative than gas chromatography. USDA received a comment that because Tribes often do not have ready access to gas chromatography and may only be able to access liquid chromatography, the rules need to allow for a more lenient formula.

Many more comments opposed the IFR requirement to use post-decarboxylation testing methods on the grounds that the IFR too strictly interpreted or unnecessarily developed regulatory requirements that are not consistent with the statutory language of the 2018 Farm Bill. Comments stated that USDA should be flexible and allow for measuring THC levels with ''similarly reliable methods,'' as provided in the statute. Comments claimed that the IFR's exclusive endorsement of gas or liquid chromatography methods ignores this statutory flexibility. Comments further asserted that these two methods may overstate THC levels in hemp samples and that USDA should approve alternative reliable methods that may produce more accurate results.

According to some comments, reliable testing methods have emerged that do not necessitate decarboxylation to accurately measure THC concentrations. For example, comments claimed that some States recognize genetic testing that measures the ratio of cannabidiol to THC in a sample or that confirms a stable cultivar's taxonomic determination in lieu of post-decarboxylation testing to verify compliance with THC limits. Comments explained that genetic testing could include testing seed or testing during early plant growth stages, instead of depending on chemical analyses to measure THC levels in mature plants, which may be inconsistent under unpredictable growing conditions or dependent upon the time of sampling or the specific part of the plant that is sampled.

Comments advocated removing the Total THC testing requirement and recommended USDA work with scientific and agricultural communities to ensure testing standards are established and similarly reliable methods are developed that will accurately identify and measure THC without the forced conversion of other cannabinoids, isomers, and/or acids.

States Operating under 2014 Farm Bill Authority: Comments said that USDA should recognize that States have been effectively regulating hemp production using approved testing methods under 2014 Farm Bill pilot

[17] Dussy F.E.; Hamberg, C.; Luginbühl, M.; Schwerzmann, T.; Briellmann, T.A. Isolation of Δ9 THCA–A from hemp and analytical aspects concerning the determination of Δ9 THC in cannabis products. *Forensic Science International, 149,* 3–10, 2005.

programs. Comments argued that by applying the IFR's new testing standard, certain hemp plants that are legally grown under one or more of the existing pilot programs are converted into plants that violate the 2018 Farm Bill. Comments contended that while USDA will argue that States and Tribes can propose a testing method other than post decarboxylation, the alternative method still has to measure potential conversion of THCA into THC.

Comments said further that the IFR must consider that hemp testing is an evolving science and that THC testing methods are likely to change over time. They stated that imposing new testing requirements is adding costs for growers, marketers, and regulators, and is limiting the number of labs that can perform these tests, for unnecessary and possibly impermissible reasons. Finally, comments questioned whether USDA has the authority to impose new testing requirements when the statute spells out the testing standards to be applied in granting approval to State and Tribal plans.

A comment cited case law that held that under the Administrative Procedure Act (APA), agency decisions must be reasonable and based on factors and evidence that support the decision, divergent views notwithstanding. It suggested the IFR is arbitrary and capricious under the APA because USDA (1) ''has relied on factors which Congress has not intended it to consider, '' (2) ''entirely failed to consider an important aspect of the problem,'' (3) ''offered an explanation for its decision that runs counter to the evidence before the agency,'' and (4) has made a decision that ''is so implausible that it could not be ascribed to a difference in view or the product of agency expertise.'' It further claimed that a court must sustain an agency's action unless it determines that the agency committed a ''clear error in judgment.'' The commenter asked that their comment be considered within the context of these legal standards, and argued that THCA is not psychoactive; but can be converted into delta-9 THC through a chemical reaction, and that such a reaction may cause otherwise lawful hemp plants to test ''hot.'' The comment projected further that such ''hot'' plants will require disposal, causing a significant and unnecessary loss of hemp production, which will in turn reduce economic development and job growth in many rural communities.

The comment said post-decarboxylation testing was not required under the 2014 Farm Bill pilot program and the same plants that are legal under 2014 Farm Bill could be illegal under the IFR. The comment recognized that the pilot program will not be authorized after 2021 but said current disparate treatment under the two laws is problematic.

AMS response: The 2014 Farm Bill included a 0.3 percent THC level but did not include the requirement for this measurement to account for decarboxylation. Thus States have the flexibility to determine testing methodologies. The 2018 Farm Bill states that procedures for testing use post-decarboxylation or other similarly reliable methods to determine delta-9 tetrahydrocannabinol concentration levels in hemp. AMS stated in the IFR and further adopts the language in this final rule that at this time two methods meet this requirement for decarboxylation. The current acceptable testing methods include gas and liquid chromatography, including LC with UV detection. As other testing methods and alternatives are developed by industry, AMS will review and evaluate their compliance with the 2018 Farm Bill. At this time, genetic testing has not been determined to be a similarly reliable testing methodology.

This final rule provides States and Indian Tribes the option to develop different sampling methodologies based on end use, including grain and fiber, to better account for differences in these plants. Biomass only needs to be tested after remediation to ensure that the sample that represented the plant that once tested above the acceptable THC level did not result in the plant being a controlled substance. This final rule does not set requirements for testing final products—but hemp plants, regardless of their end use, must still use the same testing procedures.

Although the USDA plan does not allow for sampling based on end use, AMS will study the experience of States and Tribes that adopt methodologies based on end use. If it appears that the data and experience of those States and Tribe suggest that their methodologies may be adaptable to the USDA plan, AMS may explore a sampling scheme based on end use for producers under the USDA plan in the future through notice and comment rulemaking.

License Application Period

AMS received comments on the timeframe established in the IFR for submitting applications for a USDA license. The application period extends between August 1 and October 31.

Comments: Several comments opposed the August-through-October window for USDA license applications and renewals. They explained that many outdoor hemp crops are harvested in September and October and that farmers are busy with harvest activities related to other crops as well during that time of year. Comments noted that farmers typically finalize decisions about the coming crop year during the winter, after having time to attend industry and trade conferences, enter into production contracts, and obtain crop loans and insurance. Thus, according to comments, a longer application window or a later application window would give farmers time to plan for the coming year and submit hemp production license applications as appropriate. Comments also noted that a longer application period would give producers time to complete the mandatory background check. Some comments recommended the application period be extended to December 31. Others recommended a winter application period of January 1 to March 15.

Other comments recommended even greater flexibility in application periods. Comments explained that harvest cycles for hemp growers may vary regionally and by operation type. They said a significant number of hemp operations involve year-round cultivation, maintenance of mother clones, clone propagation, indoor cultivation, and/or tissue culture. Time and resources to gather and submit paperwork would not coincide with the down-cycles in productivity and would strain these types of operations. Some recommended USDA adopt a year-round, rolling application period with different deadlines for different operation types or sizes. One comment said it was unclear in the IFR whether State and Tribal plans were required to adhere to the same window provided for under USDA's plan. Several comments urged USDA to provide greater regulatory flexibility at the State and Tribal levels to determine the appropriate application and renewal timeframes for their jurisdictions. An example was given of a State's agriculture department transitioned enrollment from a restricted to an unrestricted timeframe to better manage the logistical challenges related to the enrollment period.

AMS response: AMS agrees with the commenters opposed to a limited USDA license application window and will allow for applications to be submitted for a USDA license year-round. This will provide greater flexibility to hemp producers to determine when to apply for a license or renew their license. This decision recognizes the different regional harvest timetables and production types used by hemp producers, and how flexible timetables

may allow producers to prepare applications during lower level periods of production activity thereby reducing some of producers' burden on time and resources when the producer is planning the next planting cycle(s). States and Tribes can determine their license application window as it best meets their programs.

FSA Reporting and Information Sharing

AMS received comments on the IFR requirement that hemp producers report acreage and provide licensing information to USDA's Farm Service Agency (FSA). Hemp producers must provide FSA information about their hemp crop acreage, such as its location and size, and must provide the producer license or authorization number issued under the hemp production plan under which they operate. States, Indian Tribes, and USDA must collect the same information, as well as other producer information, under their respective plans. USDA then assembles and maintains FSA and plan information and makes it available to law enforcement agencies, as required under the 2018 Farm Bill.

Comments: Several comments expressed strong support for FSA programs generally, acknowledging that FSA programs provide farmers valuable access to Federal programs and funding, and that registering crop acreage with FSA would help mainstream hemp production within agricultural communities. Comments noted that requiring hemp growers to register with FSA is similar to registration requirements for growers of other commodities and that FSA already compiles reports about other crops. However, many commenters opposed the requirement to register with FSA when they are already required to provide the same information to their licensing authority. Comments argued that the duplicative reporting requirement is unnecessarily burdensome to farmers, could be confusing, and could discourage farmers from seeking hemp production licenses or from growing hemp. One comment speculated that confusion about the duplicative requirement could lead to unintended violations by growers who don't comply. Other comments speculated that lower program participation would inhibit industry growth and deprive States and Indian Tribes of licensing fees that enable them to fund their respective production plans.

Comments noted that the statute does not specify dual reporting of crop acreage to both FSA and the plan authorities under which they operate.

Several comments took exception with the IFR's assumption that most hemp farmers are already registered and familiar with FSA and its programs. Comments from some State agriculture departments asserted that within their jurisdictions most farmers in general do not already work with FSA.

One comment asserted that participation in FSA programs is voluntary and that hemp growers should not be precluded from participating in the commenter's State program because they forego FSA registration. Other comments suggested that farmers growing hemp for personal use and hemp farmers also growing medical marijuana may be hesitant to register crop acreage with Federal agencies.

One comment expressed concern about FSA staffing in rural areas and asked USDA to increase funding to support additional reporting obligations. Another comment suggested USDA develop and fund one standardized reporting program for all plans and growers that would decrease program reporting burdens for all entities. Some comments encouraged streamlining collection of crop acreage information by allowing the use of open-source GIS mapping instead of FSA data and reporting tools. Comments also suggested USDA could rely on States and Tribes to provide grower crop acreage and registration information since they already collect it. Several comments recommended eliminating the FSA registration requirement altogether.

AMS response: AMS acknowledges the FSA reporting requirement may present a hurdle for certain hemp producers, particularly new and beginning farmers, farmers in rural locations, and farmers located in Tribal territories. However, AMS determined that the FSA reporting requirement is essential for two key reasons: Real-time data collection and field-based resources.

First, USDA is required under the 2018 Farm Bill to provide law enforcement with certain ''real-time'' information about who is growing hemp, whether their license is in good standing with the regulatory body issuing the license, and the location(s) of where hemp is being grown. The daily collection of this information through FSA county offices enables USDA to easily transmit the required information to law enforcement. FSA maintains the technology necessary for data collection and geographical land identification. These tools will provide easy access to information needed for law enforcement and for other agricultural programs. This information is compiled in one system, using an information sharing mechanisms currently used by law enforcement and which they are familiar with, and transmitted to law enforcement in a safe manner, which otherwise would not be as readily available through State and Tribal reporting. States and Tribes must provide information to USDA in a format that is compatible with USDA's information sharing system. USDA will work with States and Tribes on system format and other information necessary to share information.

Secondly, FSA's county network is expansive with over 2,000 field office locations. FSA offices provide services both in person and virtually to accommodate the needs of producers.

Its mission runs parallel to other USDA agencies including Risk Management Agency, Natural Resources and Conservation Service, and Rural Development, each of which provide a wide range of benefits and services to local communities. AMS noted that in many cases, FSA is co-located with other Federal, State and county-level government offices which means a variety of services are provided through one central location. These services frequently include information on insurance and risk management programs, conservation and irrigation technical expertise, agricultural credit for operating or marketing, and rural housing loans. As such, the requirement is considered by AMS to be particularly important to new and beginning farmers who traditionally are not familiar with the wide range of programs and services offered by Farm Service Agency and the other USDA agencies.

Definition of ''Lot''

AMS received comments on the definition of ''lot'' for providing geographical determination of hemp production and for sampling purposes. One comment explained that nursery operators and their field operating counterparts may need to file hundreds of permits for a single greenhouse under the IFR. The comment described as an example one greenhouse at a nursery, which may have upwards of 36 benches, in which each bench could have 20 different hemp varieties growing at any one time. The comment said that the IFR would require that single greenhouse to have 720 ''lots,'' and based on most States' current rules, 720 containment plans, destruction plans, and transportation notices when any plants are moved—all possibly requiring agency approval prior to any action

being taken. It further explained that the growing cycle for nursery stock could be as short as five to six weeks, and different varieties could take their place. The comment said a nursery with five or six greenhouses on a relatively small acreage may have to register thousands of lots and submit thousands of associated plans. It recommended that such a nursery should only be required to designate the actual greenhouse or indoor growing structure itself as used for the cultivation of hemp generally, and the term ''lot'' should not be defined to include any restriction or limitation to the same hemp varietal. The comment proposed revising the definition of ''lot'' to mean a contiguous area in a field, greenhouse, or indoor growing structure used for the cultivation of hemp.

AMS response: In this final rule, AMS is clarifying that the term ''lot'' has the same meaning as other terms used by FSA, as found in 7 CFR 718.2, to mean the same production area, such as ''farm,'' ''tract,'' ''field,'' and ''subfield.'' AMS uses the term ''lot'' to help growers and oversight officials identify farm locations, field acreage, and variety (*i.e.,* cultivar). Although a hemp producer must report their ''lot'' information to FSA, when a producer visits the FSA office to report hemp crop acreage, FSA staff will determine the appropriate designation for the specific location(s) where hemp is being grown. FSA staff will not provide a ''lot number'' to producers as described in the IFR, but instead designate either a ''field'' or ''subfield'' as the unique identifying number. This number is considered equivalent to a ''lot number.''

A lot must always contain the same variety or strain of cannabis throughout the area because the final rule requires lot-based testing.

Certified Seed

The IFR explains that under the 2014 Farm Bill, various States developed seed certification programs to help producers identify hemp seed that would work well in their specific geographic areas.

Comments: Some comments concurred with USDA's decision not to introduce a hemp seed certification program with the IFR. Numerous commenters said that such a program would not be appropriate, that it would be too difficult to regulate, or that it would be premature now. Other comments said a federal hemp seed certification program is not necessary because some States and Indian Tribes had already developed such programs for their jurisdictions or are capable of doing so. Numerous comments said they recognized the difficulty of developing a hemp seed certification program but nonetheless urged USDA to pursue what they characterized as an important effort to allow for consistency among hemp producers when resources permit.

One comment asserted that seed certification is key to a regulated hemp industry and explained that certification is a common practice in the international seed industry. Several comments contended that USDA must develop a seed certification program to prevent hemp growers from purchasing and planting seed of unproven quality—or of the wrong varieties for their purposes—and risking unnecessary financial loss and regulatory violations. Comments claimed that hemp farmers already have difficulty verifying the origin, genetics, and reliability of hemp varieties currently on the market, and that a seed certification program would help farmers know whether seed they purchase is appropriate for their growing conditions or intended hemp product end-use. Numerous comments inferred that a seed certification program would identify hemp varieties that had been tested and proven to reliably produce compliant hemp plants in specific geographic areas.

Some comments argued USDA should not engage in hemp seed certification because plant genetic expression is influenced by environmental conditions and seed certifiers cannot guarantee plants will have THC concentrations within the acceptable range. Other comments countered that assertion and referenced a comment that reported on the analysis of cannabis genome trials and concluded that cannabinoid concentration is 80 percent or more controlled by genetics rather than environmental conditions.

Comments claimed that hemp varieties developed under proper breeding programs and certified in the European Union and Canada had been proven to have stable cannabinoid profiles across multiple regions. They suggest that comparable results could be achieved under a USDA seed certification program.

A comment claimed that the lists of acceptable/approved varieties provided by the processor and/or the governing authority in the State in which the hemp is grown needs to be updated soon and regularly. The policy language may be acceptable, but these lists need attention quickly so that ill-suited varieties are not planted and insured when planted outside of the area and not likely to perform as well.

Some comments asserted it is not necessary for USDA to develop a seed certification program now because the Association of Official Seed Certifying Agencies (AOSCA) has already established national standards for hemp field crop cultivars and is reviewing issues related to the development of certification standards for feminized seed and clones of CBD hemp. Other comments recommended USDA adopt AOSCA standards in the development of a Federal seed certification system, and several comments said that some States have already adopted AOSCA protocols for production of certified seed for commercial sale to farmers. For example, a comment stated that a state currently recognizes 17 hemp seed varieties that have been certified for use in that state in accordance with AOSCA standards. The comment said the state encourages farmers to use certified seed when possible and the state intends to rely on certified seed to streamline the hemp testing program in the future.

A comment clarified that there is a difference between seed that has been certified according to AOSCA standards (or an international equivalent standard) for varietal purity, and seed that has been tested for THC or other compounds. It asserted that some State programs have confused the terminology and urged USDA to clarify the difference and promote use of certified seed for varietal purity. The comment said the hemp industry has access to numerous proven varieties and that plant breeders are making strides to develop more varieties with specific characteristics.

Numerous other comments reinforced the need for seed certification programs that ensure hemp seed meets high standards for proper labeling, reliable germination rates, purity, and the ability to produce healthy plants. Some comments supported seed certification under State or Tribal programs, claiming such localized programs have proven successful in areas where they've been developed and used, and saying that such programs promote crop predictability and reduce uncertainty for farmers. One comment asserted that not only seed, but clone certification is a must, to ensure that growers are getting what they think they are when they purchase clones from nurseries. Some comments asserted confidence in certified seed could be extended to crop insurers, who could provide coverage at prices that reflect reduced risk. Some comments suggested growers using seed certified under a Federal certification program should be indemnified against legal liability or financial losses related to production of hemp that tests higher than the acceptable THC level. Some comments suggested States and Tribes that adopt seed certification programs

for cultivars reliably producing compliant plants should be authorized to exempt such cultivars from hemp sampling and testing requirements or to employ random, risk-based sampling schemes supported by data about those cultivars.

AMS Responses: AMS is not establishing a seed certification program for hemp. The IFR explained USDA's decision to not establish a seed certification program was due to a lack of accurate data and the advanced technology necessary to develop such a program. The term ''certification,'' as used here, means tested or verified and does not necessarily mean certified for seed varietal purity or genetics. AMS understands that some seed certification-related studies are already under way in different locations and that results of these studies are helpful in production risk mitigation. AMS recommends the use of hemp seed from varieties that have undergone a variety review, following the process outlined in the Federal Seed Act and associated regulations, (7 U.S.C. 1551–1611 and 7 CFR part 201), and produced according to AOSCA standards. These types of seed have been screened and tested for purity and are properly labeled. This final rule maintains flexibility for stakeholders to continue with trials of seed varietals and does not prohibit the use of any hemp varietals by industry. Updating the varieties list is a State and Tribal issue, as they developed them. This final rule does not address seed certification. However, USDA will consider such a program in the future if enough information is available. If there is sufficient data to support a program, USDA will explore adopting one through rulemaking under the APA.

Separately from this hemp production regulation, AMS administers the Plant Variety Protection Office (PVPO). This office actively accepts applications of seed-propagated hemp for plant variety protection. Under the U.S. Plant Variety Protection Act, PVPO examines new applications and grants certificates that protect varieties for 20 years (25 years for vines and trees). PVPO provides intellectual property protection to breeders of new varieties of seeds and tubers. Certificate owners have rights to exclude others from marketing and selling their varieties, manage the use of their varieties by other breeders, and enjoy legal protection of their work.

Regulations for Different Operations

The 2018 Farm Bill requires any producer growing hemp to be licensed either by their applicable State or Tribal authority or USDA. The IFR further required that an authorized sampling agent collect samples from floral material for THC concentration testing in order to determine compliance with the Federally established THC threshold. Some operations growing hemp do not grow to the stage where flower material is present and as such cannot test the floral material.

Clones and Cloning: Comments noted there are a significant number of grower operations that cultivate and produce hemp plants year-round. Some of these operations grow hemp varietals and maintain mother clones and/or grow plants for clonal propagation or tissue culture propagation purposes. Comments explained that hemp varietals grown in these types of production systems do not usually reach full maturity. According to comments, before achieving the floral stage of development, many of these hemp varietals are sold and enter the stream of commerce as starter plants that other licensed hemp growers may transplant to a field or greenhouse to be raised to full maturity and harvest. Comments questioned how immature or juvenile hemp plants with no floral material to test can demonstrate regulatory compliance under the IFR.

Microgreens: Comments raised similar concerns about hemp raised and marketed as microgreens or other types of immature plants intended for human consumption, noting that these plants cannot be tested for regulatory compliance because they have no floral material to test. Comments encouraged USDA to develop a regulatory process in which THC concentration testing may occur for immature, non-flowering hemp varietals so that operations like those producing clones or microgreens can support the development of the hemp industry.

One comment representing a hemp cultivation and distribution corporation in several states provided a pre harvest test on a microgreen variety grown in two different States. One State test reported 0.17 percent total cannabinoids and the other test reported 0.0193 percent total cannabinoids. Based on these tests, commenter indicated that hemp leaf greens/microgreens and related crops are not in danger of excess THC.

Hemp Research: Numerous comments stated the need for a separate regulatory scheme to support hemp research. Comments explained that the plant breeding process by its nature requires breeders to bring multiple varieties of plants to maturity in order to evaluate their characteristics and potential use in ongoing hybridization projects. They said, for example, that plants with desirable characteristics such as frost and drought tolerance or pest resistance must be identified and preserved, while plants with unwanted genetic traits or diseases must be separated and destroyed in order to stabilize the genetics for THC expression and other desirable traits and understand how environmental factors, disease, and insect pressure affect the expression of those traits. According to comments, the THC concentration in such plants could exceed the acceptable THC level in the IFR and plant breeders could find themselves in violation of the law. As well, they explained that the IFR's disposal requirement could force breeders to destroy valuable plant material and waste years of work, as well as funding.

Other comments asked USDA to support research into hemp pollination and drift. Comments reported industry concern that cross pollination could reduce the value of neighboring CBD flower crops. They asked USDA to focus on grain producing geographic areas and varieties to provide the science to support large acreage growers.

Comments explained that the IFR's THC threshold of 0.3 percent reduces the incentive to conduct hemp variety research because of the likelihood that many plants will exceed that threshold. For example, comments suggested the THC limit for hemp plants in licensed breeding programs could be raised to 0.6 percent or 1.0 percent or higher. They suggested breeders be allowed to raise plants to maturity, collect data and save seed for further research, and be required to destroy noncompliant plant material at the end of the growing season. Other comments suggested that breeders and researchers should not have to wait for hemp plants to flower and undergo testing before they can remove and destroy those plants with undesirable traits.

Comments asserted that hemp strains used in genetic studies authorized by the 2014 Farm Bill and compliant with other program regulations may now be in jeopardy due to the uniform application of the IFR's 0.3 percent THC threshold and plant disposal requirements. They noted how a regulation that requires the disposal of what was previously compliant hemp will undermine the efforts and millions of dollars invested by farmers and researchers. Other comments indicated that not having the ability to replicate certain genetic traits from a plant that is noncompliant can slow the development of industry.

Comments from and about university research programs suggested that USDA make land grant universities eligible for special research carve-outs or regulatory

exemptions to allow them to continue research efforts. Other comments suggested USDA define criteria under which researchers and other plant breeders could be eligible for special research program exemptions. They suggested USDA develop criteria for certification or qualification of hemp researches and breeders, and some suggested those meeting specified criteria could be exempt from the IFR's crop destruction and reporting requirements, provided they adhere to other restrictions, such as prohibiting research material from entering the chain of commerce, disposing of non-compliant plant material, and limiting plot size. Some commenters noted that without such allowances their university administrators would not allow them to continue research with any form of cannabis, including hemp, due to concerns about Federal grant disqualification.

One commenter requested an exemption for Tribal research facilities so that they will not have to destroy all non-compliant plants.

Comments noted that USDA's National Institute of Food and Agriculture had not issued requests for applications on hemp research and that hemp was not listed for funding under the Specialty Crop Research Initiative. Comments suggested more agronomic research is needed to address current gaps in knowledge related to hemp production and management and to standardize seed.

AMS response: Due to the variability in immature plants across producers, States, and Tribes, and the lack of consistency across varietals, USDA is unable to establish or standardize an approach to dealing with immature plants for USDA licensees. However, AMS acknowledges operations that grow hemp for certain purposes that do not bring plants to their flowering stage like clones and microgreens, may not need to meet the same sampling and testing requirements as operations that grow flowering hemp. The final rule provides States and Tribes the flexibility to consider performance-based sampling protocols to address these concerns. As allowed under the AMA, States and Indian Tribes can be more restrictive and may impose sampling and testing requirements on these producers.

USDA also acknowledges that research institutions face special circumstances when conducting hemp research. Accordingly, this rule provides sampling and testing flexibility to these institutions and producers working with them to conduct hemp research under the USDA plan. Producers that produce hemp for research must obtain a USDA license or a State or Tribal license. However, the hemp that is produced for research is not subject to the same sampling requirements or the requirements pertaining to non-compliant plants, provided that the producer adopts and carries out an alternative sampling method that has the potential to ensure, at a confidence level of 95 percent, that the cannabis plant species *Cannabis sativa* L. that will be subject to this alternative method will not test above the acceptable hemp THC level. USDA licensees will need to submit an alternative sampling method to USDA for approval and shall ensure the disposal of all non-compliant plants. USDA licensees shall also comply with the reporting requirements including reporting disposal of non-compliant plants.

AMS views this flexibility as necessary to help support research and development as it relates to hemp production by industry, particularly in its infancy. This decision allows these types of research facilities and institutions to oversee the study of hemp plants through trialing and genetics research. Over time, the flexibility provided by this final rule will help to stabilize industry by providing greater understanding of hemp genetics and how certain varietals respond differently to growing conditions in various geographic locations. All producers are expected to benefit from such knowledge as information about more stable and consistently reliable hemp varietals becomes available. Any non-compliant plants produced by research institutions as a result of research and development will still need to be disposed and disposal will need to be verified with documentation. Research institutions that handle ''hot'' hemp must follow CSA requirements for handling marijuana.

Sampling Agents

This final rule reiterates that samples of hemp collected for purposes of testing THC must be collected by sampling agents, or by Federal, State, Tribal or local law enforcement agents authorized by USDA to collect samples. Requirements and training materials for sampling agents are provided on USDA's website.

Third-party Sampling Agents: Some comments supported the use of third-party sampling agents to help offset the cyclical demand for hemp sample collection and to ensure integrity in the sampling process. Comments noted that some State agriculture departments have relied on in-house personnel to perform sampling activities and that these States did not use or require third-party sampling agents during piloting.

One comment reported use of third-party certified samplers for the 2020 season, and as of the date of their comment, had employed 74 certified sampling agents. The commenter said the State recommends producers make appointments with sampling agents 30 days in advance prior to intended harvests, and that they had not received any feedback regarding unavailability of sampling agents based on the 15-day window. The comment went on to report that the State had received numerous anecdotes of next-day availability for sampling, which the comment suggested would not be possible without the use of third-party sampling agents.

Resources: Several commenters worried that there would be insufficient numbers of appropriately trained, USDA-approved sampling agents available during harvest periods to ensure that all crops could be sampled, tested, and harvested within the 15-day window specified in the IFR. They asserted that sampling backlogs and delayed testing and harvesting would cause crops to mature beyond the acceptable hemp THC content concentration, resulting in crop disposals and financial losses for farmers. Several comments said producers in rural and remote mountainous areas would be particularly impacted, since sampling agent travel into those areas would require extra time and expense.

Comments described how some States developed sustainable hemp oversight programs using risk-based sampling methodology to support regulatory monitoring of hemp growers. They asserted these same States would find it difficult to meet the IFR's sampling requirement because of a limited budget to hire and train additional personnel for sampling all hemp production. Comments reported having to make appointments for sample collection a week in advance under risk-based sampling plans and predicted it would be even harder to arrange for sample collection on a timely basis under the IFR's requirement that all hemp lots be sampled and tested.

Commenters presented two proposals to alleviate this strain—allowing producers to collect their own samples and reducing the volume of farms and plants from which samples are collected.

Some commenters requested that USDA compile a publicly available national list of sampling agents.

Sampling Agent Training: Comments highlighted the importance of providing robust training for sampling agents and recommended subsequent annual, documented refresher training be required. Some comments recommended USDA develop and implement a sampling agent certification scheme, while others suggested States and Tribes retain the authority to develop sampling agent training. Other comments suggested including a sampling agent training application on the USDA website.

Other Comments on Sampling Agents: Other comments objected to the IFR's provision that sampling agents be given unlimited access to all areas listed in the producer's license. Comments claimed that this provision, in addition to the fact that default sampling agents may also be law enforcement representatives, seems to associate the now legal hemp industry with potential illegal activity. Comments stated further that while State, Tribal, and USDA personnel may require such access for audits or other purposes, broad access is not necessary for sampling hemp, and that sampling access should be limited to cannabis plant material being cultivated as hemp.

Other commenters suggested that sampling agents should be agricultural specialists rather than law enforcement specialists in order to alleviate possible tension between Indian Tribes and law enforcement, and would ensure that the sampling agents have an understanding of the agricultural product they are working with.

AMS response: AMS agrees with the many commenters that sampling agent training should be enhanced. Standardized training for sampling agents will help achieve regulatory consistency. As such, AMS will provide training documents for sampling concurrently with publication of this final rule. The revised sampling agent training will establish uniform and standardized criteria, including sampling processes and procedures, to ensure the sampling agents understand regulatory provisions of this final rule and the appropriate processes associated with sampling activities. This will help ensure that sampling done by different agents will be conducted similarly. AMS anticipates this will minimize variances in sampling practices that may affect the samples and ultimately the test results.

Training documents will explain how sampling agents can meet the sampling requirements of this final rule. States and Indian Tribes with an approved plan may require the sampling agents used by their licensed producers to take the USDA training, or they may develop their own custom training. This decision does not change the requirement that designated agents collect samples. We are retaining the requirement from the IFR that the use of third-party agents is acceptable. Requiring sample collection by trained agents ensures that samples are collected consistently throughout the industry and no conflict of interest exists between the sampler and grower.

Further, AMS has addressed commenters' concerns about adequate resources by allowing for States and Indian Tribes to design a sampling plan in accordance with the AMA and this final rule that suits their needs and resources. Additional discussion of sampling methodologies and flexibilities is included elsewhere in this final rule.

AMS agrees with the concerns that sampling agents be given unlimited access to all areas listed in the producer's license and is clarifying that sampling agents need access only to areas where the hemp is grown and stored so they can perform their sampling work.

AMS agrees with comments that allowing third-party individuals to become certified hemp sampling agents creates jobs, gives producers greater flexibility during the harvest season, and allows the States and Tribes to reallocate resources. The final rule does not limit sampling agents to law enforcement officers and does not prevent agricultural specialists operating as sampling agents. Because States and Indian Tribes with approved plans may approve their own sampling agents, USDA encourages States and Tribes to maintain their own lists of sampling agents.

Sampling Methodology

AMS posted supplemental Sampling Guidelines for Hemp Growing Facilities on its website. The guidelines describe sampling procedures, including the number of cuttings to take for sampling each lot and how to pace a hemp field when sampling. A few comments addressed the Sampling Guidelines and recommended alternative sample volumes and field sampling patterns.

End-use/risk-based sampling: Comments asserted that hemp sampling requirements should differ based on the crop's end-use, primarily whether the crop is used for grain and fiber production or for cannabinoid extraction. They contended that the IFR requirement to sample every hemp lot, regardless of the crop's end-use, is expensive and burdensome for States, Indian Tribes, and individual growers. Comments generally discouraged requiring sampling and testing every lot for THC since THC concentration is significantly lower in male plants and grain/fiber varietals. Comments from State agriculture departments that administer pilot programs under the 2014 Farm Bill also explained how risk-based sampling requirements under their programs function. Comments emphasized that a ''one-size-fits-all'' regulation is inappropriate and discourages innovation as there are different risk-profiles for hemp based on its end-use.

Comments maintained that grain and fiber varietals are less likely than cannabinoid crops to exceed the THC threshold and argued that assessing all hemp by the same standard may result in strained oversight resources and inefficiencies. One comment asserted that THC concentration in varietals grown for grain is reduced dramatically by the production of seeds in the flower and, therefore, hemp grown for grain is at lower risk of exceeding the THC limit. Comments also noted that the flower parts, where a majority of the THC is concentrated, do not fairly represent the THC content of the entire plant, which is used in biomass and fiber production.

One State agriculture department noted that many of the seed and fiber varietals being grown in their State were originally bred in Canada and have been selected for low THC content as part of Canada's hemp program for many years. Several trade association comments noted that hemp grain/seed is not a source of cannabinoids, and that grain and fiber varietals are largely developed from certified, pedigreed seed that meets all THC testing standards. Commenters contrasted that with hemp crops grown for cannabinoids, and that the latter show higher phenotypic variability and lack of uniformity in the field because they have received less focus in breeding programs. One comment stated that hemp varietals grown for cannabinoid production often have questionable origins and are at a greater risk of producing higher THC than varieties grown for grain or fiber. Another comment claimed there are currently no certified varieties of hemp for CBD production.

Many comments agreed that hemp grown for cannabinoid production is more likely to exceed acceptable THC limits. Data from 2019 submitted with a comment showed that 13 percent of hemp samples tested exceeded 0.3 percent THC, and all were CBD varietals. The comment further recommends that certified seed varieties should be sampled and tested from a random selection of hemp grain and

fiber fields 30 days prior to harvest. For uncertified varieties, it recommends requiring a post-harvest test, as well as a pre-harvest test of a random selection of fields within 30 days of harvest. According to comments, those hemp crops being grown for cannabinoids should be subject to higher scrutiny and more frequent testing.

Another commenter cited data from the Midwestern Hemp Database [18] showing that many publicly available varieties are exhibiting a linear (or curvilinear) relationship between Total CBD (%) and Total THC (%). Given this presumed relationship, Total CBD percentages are often not able to exceed 8 percent without exceeding the regulatory threshold of 0.3 percent THC. The commenter said these moderate levels of CBD production can have significant impacts on profitability as growers and therefore a whole plant testing methodology would help to mitigate this linear relationship.

Comments identified States and other institutions where they think risk-based oversight modeling works to ensure hemp is at 0.3% acceptable hemp THC level. For example, the Kentucky Department of Agriculture publishes a ''Varieties List'' to track THC content across hemp varieties. Comments characterized this as a useful tool for hemp farmers when planning production cycles and selecting hemp varietals. Several comments also described how, at the State level, other measures support risk-based oversight, like randomized sampling crops of a percentage of the total grower population or the use of risk criteria to identify ''high risk'' growers. Commenters credited these types of practices and activities with allowing states to efficiently oversee hemp production under pilot programs. Other comments described how financial institutions routinely incorporate risk-based modeling into the risk assessment of lending decisions, and that similar modeling should be adopted by USDA for sampling and testing.

Comments argued that subjecting all varietals to the same regulatory requirements under the final rule will compound logistical challenges to oversight bodies, strain resources, and increase costs for low-risk farmers. They said testing based on hemp's end-use created a more flexible approach to oversight while benefiting the farmer.

Two state department of agriculture comments supported end use or risk-based sampling methods in order to account for producers using certified seed, producing hemp for industrial use purposes, fiber, grain, seed, extraction of biomass, and indoor producers growing plants only in vegetative state for research or resale that pose a low risk for detectable THC content.

Several other comments suggested ways USDA could incorporate risk-based sampling into the domestic hemp production program. Comments recommended USDA evaluate and consider allowing greater regulatory flexibility for States and Tribes to develop and use risk-based modeling to guide their sampling and testing activities. According to comments, this approach would help offset the anticipated strain on resources during peak sampling that would otherwise result under the IFR requirements.

Two State agriculture departments recommended that crops produced from AOSCA-certified seed, which they said currently only include grain and fiber varietals, be considered low-risk for testing and compliance purposes. Comments said that as more CBD hemp varietals are developed and certified, they could also be subject to less stringent testing protocols.

A few comments suggested the adoption of a random risk-based sampling and testing scheme to reduce grower costs and relieve pressure on approved labs by reducing the number and volume of required tests. One comment indicated State hemp regulators have successfully developed sampling requirements for end-use that ensure adherence to State and Federal regulations, while allowing for flexibilities around State resources. Other comments sought requirements establishing a minimum number of cuttings per lot (*e.g.,* ''5'' cuttings per lot regardless of size.) For example, one comment suggested that when sampling lots of less than 1 acre, taking cuttings of one plant will not allow for a representative sample, so a minimum of 5 plants be identified for cuttings. Another comment said that the sampling requirements in the IFR, as applied to a 170-acre field, could require the sampling of as many as 110 plants from that field which would be impossible for a state department of agriculture to meet. As an alternative, USDA might provide a fixed sliding scale (for example, a lot of less than 10 acres requires 5 plants; a lot between 10 acres and 20 acres requires 6 plants; and so on) rather than leaving those calculations to each state. Alternatively, another comment explained how their state sampling protocol currently utilizes the parameters of a minimum of 6 cuttings per lot or acre, whichever is smaller, with the option for producers to increase the quantity of cuttings collected as they see fit (up to 150 cuttings per lot). Another comment described how contracted labs for their state have requested at least 40 grams of wet material and up to 60 grams if the licensee is also needing additional testing such as heavy metals, pesticides and mycotoxins.

One comment reported the results of a 2019 controlled study where the top 12 inches of the plant and the top 2 inches of flowering material were collected from each of 83 plants, for a total of 166 samples. The samples were tested using gas chromatography with flame ionization detection. Test results showing total delta-9 THC of the 2-inch cuttings were, on average, 0.0273 percent higher than results for the 12-inch cuttings. The comment interpreted the results to suggest that including vegetation from the entire plant yields lower THC results, and that all parts of hemp plants should be sampled because producers generally harvest the entire plant.

One comment reported that their State requires samples for any size lot to include 30 buds (subsamples) to insure there is large enough volume of material to provide for adequate sample testing. Another comment reported that State staff are directed to look at a cultivar and evaluate it for uniformity with respect to maturation, height, color, and basic plant architecture. According to the comment, uniformity within a cultivar results in fewer plants sampled than a cultivar exhibiting greater phenotypic diversity for the same acreage. The comment supported providing States with authority to establish sampling protocols, given the significant variation in plant counts between fields (on a per acre basis) and phenotypic diversity within and between cultivars. The comment also recommended that AMS provide guidance on a recommended number of plants to be sampled per unit area, including the plant density for each sample number recommendation.

One comment advocated revisions to USDA's sampling guidelines. The commenter said the State has had to deviate from USDA's sampling table, specifically for smaller lots. According to the comment, taking a sample from one plant does not provide enough material for lab testing, and the State has had to bear the cost of taking a second sample. The comment mentioned that some of the State-contracted labs have requested at least 40 grams of wet material and up to 60 grams, if the licensee is also requesting additional testing, such as for heavy

[18] *https://farmdoc.illinois.edu/field-crop-production/hemp/midwestern-hemp-database-a-new-tool-for-hemp-growers.html.*

metals, pesticides, and mycotoxins. The comment also explained that to keep from delivering excess material from large lots to labs, inspectors take the required number of cuttings, then homogenize the sample, keep the required 40 to 60 grams, and leave the remaining sample material in the field. The comment supported a sampling protocol that would provide adequate testing material without unnecessarily overcutting plants material.

One comment reported results of a poll they conducted among States after the end of the 2018 growing season. According to the comment, three States—New York, Pennsylvania, and Minnesota—reported they had analyzed the THC content in microgreens, and none were found to be above 0.3 percent total THC.

One comment reported that their State has tested every hemp lot produced in Minnesota in the past five years, and that hemp grown for grain and fiber has never tested above the 0.3 percent total THC limit. According to the comment, varieties grown in Minnesota are certified varieties found either on the Health Canada List of Approved Cultivars or the European Union's Organization for Economic Co-operation and Development List of Varieties Eligible for Seed Certification.

One comment reported their State has implemented a risk-based sampling frequency schedule, under authorities provided for in the 2014 Farm Bill, using end-use and certified seed as guidance. According to the comment, official total THC results collected from regulatory samples and formal research samples showed that hemp grown from certified seed have a low risk of testing above 0.3 percent. Additionally, the grain or stalk components of hemp have zero to negligible levels of total THC. The comment recognizes that more research is needed in this area but is confident that the utilization of hemp variety categories to determine the department's sampling frequency has been successful to date.

AMS response: AMS agrees that States and Indian Tribes need more flexibility in developing sampling methodologies. For States and Indian Tribes with primary regulatory authority, USDA is altering the sampling requirements in this final rule to allow performance-based sampling methodologies. Information submitted by States that participated in the 2014 pilot program show various ways these States are already using performance-based sampling. Some States are using a list of varieties that work in their geographical area while others rely on evaluation on what they consider high risk producers. USDA finds the data submitted by commenters to be reliable because these States have been growing hemp since the 2014 pilot program started and they have sufficient data to develop their sampling plans. AMS agrees with commenters that the performance-based concept is the same method that financial institutions use. Further, performance-based programs are also used by other scientific and Federal agencies such as USDA's Food Safety and Inspection Service and FDA.

AMS finds that it makes sense to encourage States and Indian Tribes to consider performance-based alternatives when developing sampling plans. The final rule provides the standard; however, States and Indian Tribes have the flexibility to determine how to achieve that standard tailored to their specific needs.

The sampling requirements for State and Tribal plans allow for States and Indian Tribes to develop unique sampling protocols for hemp licensees under their jurisdiction. State and Tribal plans must include a procedure for accurate and effective sampling of hemp that meets the requirements of the final rule. The method used for sampling must be sufficient at a confidence level of 95 percent that no more than one percent of the plants in each lot would exceed the acceptable hemp THC level. Alternatively, States and Indian Tribes may design a sampling method that is performance-based that ensures, at a confidence level of 95 percent, that plants will not test above the acceptable hemp THC level. This plan must be part of the State or Tribal plan. A performance-based method may consider: (1) A seed certification process or process that identifies varieties that have consistently demonstrated to result in compliant hemp plants in that State or territory of the Indian Tribe; (*2*) whether a producer is conducting research at an institution of higher learning or that is funded by a Federal, State, or Tribal government; (*3*) whether a producer has consistently produced compliant hemp plants over several years or several seasons; and other similar factors. USDA believes this will provide needed flexibility to States and Indian Tribes to develop logical and enforceable sampling requirements that take into consideration their unique circumstances. AMS will still require States and Indian Tribes to submit their individual sampling requirements for review as a component of the plan approval process. Sampling protocols submitted by States and Indian Tribes must comply with the thresholds established by the 2018 Farm Bill and this final rule. If performance-based sampling requirements are not included in a State or Tribal plan, every lot, and thereby every producer must be sampled and tested.

When evaluating sampling protocols submitted by States and Indian Tribes, USDA will take into consideration whether the performance-based factors the State or Indian Tribe used have the potential to ensure compliance at a 95 percent confidence level. USDA licensed producers are required to comply with the sampling requirements in this final rule. Additional guidance on sampling for USDA licensees or States and Indian Tribes that decide to use these guidelines is available on the USDA website at *https://www.ams.usda.gov/rules-regulations/hemp/information-sampling.* USDA may develop a performance-based sampling in the future if data is available and if it deems appropriate. Separate rulemaking and comment process will be necessary to establish a performance-based sampling plan by USDA.

USDA plans to audit State and Tribal activities to assess program compliance with all Federal requirements, which includes review of the performance-based sampling implemented by States and Indian Tribes.

Sampling Guidance: A comment noted that although the sampling protocol was issued as a guideline, it appears to be binding with regard to how hemp must be sampled. The comment said AMS should clarify that there may be other acceptable sampling procedures that would meet the IFR's sampling requirement. The comment explained further that some States operating hemp programs under the 2014 Farm Bill have established detailed hemp sampling protocols that producers are used to and should be allowed to continue.

Another comment appreciated the IFR's provision that the AMS Sampling Guidelines may need continual updating and refinement as industry, academia, and government discover new evidence, science, products, and innovations.

A comment described the hemp field sampling plan they adopted from Florida's nematode sampling plan. The plan recognizes that nematodes are unlikely to be evenly distributed throughout an orchard or field, which would also allow for accurate detection of THC fluctuation within a hemp field. The comment said Florida's sampling plan is accepted by every State and country to whom they send citrus plant material that has been screened for nematodes and recommended AMS

revise the hemp Sampling Guidelines to incorporate Florida's sampling plan.

A comment said Kentucky requires cuttings from five plants per lot, believing this standard provides a reasonably representative sampling of the plants in each lot. It opposed the sliding scale in AMS's Sampling Guidelines, saying the sliding-scale calculation relies upon a decades-old pesticide residue sampling regime that may or may not be appropriate for calculating confidence levels in a hemp plant's THC levels. The comment asserted the sliding scale formula, which depends on a variable factor based on historical data, is likely to create state-to-state variations in the number of samples that must be collected, and would require States with historically lower rates of non-compliant THC test results to take more samples per lot than those States with historically higher rates of non-compliance, which the comment found to be illogical. The comment explained that applying the Sampling Guidelines' sliding scale calculation to a 170-acre field could require the sampling of as many as 110 plants from that field. It went on to say that sampling a single field under that scenario would overburden available sampling and laboratory staff, make transporting sample material difficult, and make grinding sample material an impossible workload. The comment recommended AMS specify a single number of plants to be sampled from every lot, regardless of the lot's size, or publish a fixed sliding scale for industry-wide use, rather than leaving those calculations to each State. This comment was supported by several state departments of agriculture.

A comment noted the importance of moisture content consistency in compliance sampling and recommends 8–12 percent moisture content standardization. They also noted the need for best practices to be identified for drying sample material.

Several comments said USDA's sliding scale sampling protocol results in too little a sample for small acreages and too large a sample for large acreages. Comments asserted, for example, that one cutting for four acres or less would not be suitable to collect a representative sample and could put small acreage farmers at a higher risk of being violative or not might be sufficient to capture uncertainty related to population variability in a newly established crop. Another comment said that a true representative sample needs to entail multiple subsamples collected spatially across a field and pooled into an average sample. Further, according to the comment, since cannabinoids tend to increase along the height of the plant, floral material should be sampled at random heights from plants rather than all from the tops of plants to be representative.

Another comment recommended revisions to the Sampling Guidelines to provide that sampling agents should sample fields in a zig-zag pattern. The comment further recommended that AMS revise the Sampling Guidelines to provide that three cuttings should be taken from every plant sampled, and that the three cuttings should be taken of floral, stem, leaf and stalk material at three different points on the plant. It argued that floral material makes up only 25 to 30 percent of hemp plants and that, to be truly representative of the sampled plant, the sample should consist of cuttings of all plant materials from throughout the plant.

One comment recommended requiring that samples consist of a minimum of 4 ounces of material to provide an adequate amount for testing. Another comment suggested USDA research and review multiple sampling protocols and select the best among them.

AMS response: AMS agrees that establishing clear and standardized Sampling Guidelines is important for all hemp producers and States and Indian Tribes with primary regulatory authority over hemp. AMS issued Sampling Guidelines and is updating that guidance to reflect the changes from the IFR to this final rule. States and Indian Tribes with USDA-approved hemp production plans may develop their own sampling procedures that take into account regional and other differences and are performance-based, so long as those procedures meet the requirements in the regulations at § 990.3. The entirety of the State or Tribal sampling plan, including any guidelines, must be included in the State or Tribal plan submitted to USDA for approval. When developing such plans the State or Indian Tribe must follow the requirements of this final rule that relate to where the cutting takes place including only flower material, and the number of inches necessary for sampling. Specific to sample size or weight of a cutting, AMS does not agree that establishing a specific volume is prudent given the variances in flower size and densities, and different scales of hemp production. It would be difficult to consistently sample at an exact weight of plant material across the spectrum of producers and therefore is not included in this final rule. Rather, AMS specifies a length (approximately five to eight inches) from the ''main stem'' (that includes the leaves and flowers), ''terminal bud'' (that occurs at the end of a stem), or ''central cola'' (cut stem that could develop into a bud) of the flowering top of the plant.

This is considered appropriate and fair to balance the collection of sufficient plant material necessary for compliance laboratory testing while avoiding the need to cut excessive and unreasonable amounts of plant material.

Further, AMS determined this final rule must provide some additional degree of flexibility for States and Indian Tribes in the development of their sampling plans, which is why as an alternative, this final rule allows for performance-based sampling methodologies in State and Tribal plans.

Flexibilities afforded to States and Indian Tribes developing their own hemp production plans will allow them to incorporate best practices, as those change and develop over time. For example, States and Indian Tribes can adapt field-walking patterns to various sized and shaped hemp grower operations. AMS believes that a national standard would be difficult to consistently apply given the various grower operations and that standard ''zig-zag,'' or letters ''M'' or ''Z'' walk patterns may not be feasible for sample collection of micro-acreage producers, very large scale producers or those with polygonal hemp lots.

As an alternative option, AMS has updated the Sampling Guidelines and Protocols in conjunction with the publication of this final rule. This resource document is available online and offers guidance States or Indian Tribes can adopt and incorporate into their own USDA-approved sampling procedures.

Flower Versus Whole Plant Sampling

The IFR requires the collection of samples from the flower material of hemp plants for laboratory testing.

Comments: Several comments expressed support for sampling only hemp flowers, as provided in the IFR, although many recommended changes to the overall flower material sampling requirements. Those recommendations and commenters' explanations for them are addressed in another section of the comment analysis. Numerous comments opposed the IFR's floral material sampling requirement, preferring instead composite sampling of the flowers, stems, stalks, and seeds, and asserting such samples would be more truly representative of the entire plant and lot. Numerous comments agreed that cannabinoid concentrations are higher in the flower than in other parts of the plant, and many comments

argued that sampling only floral material would cause more samples to inappropriately and unfairly test ''hot'' and lead to unwarranted and costly crop disposals.

Several comments said that sampling only the flowering material of the hemp plant is inconsistent with the definition of industrial hemp, as amended by the 2018 Farm Bill, which refers to the whole hemp plant. Comments asserted that the statute did not limit sampling to floral material and challenged USDA's interpretation of the statutory sampling requirement. As well, comments argued that requiring sampling of only flowering material could lead to legal challenges from producers who would be forced to destroy hemp that may be statutorily compliant, but not compliant with the IFR. They recommended that the regulations provide for sampling the whole plant and that USDA define the term ''whole plant'' to include the flower, stalk, and leaves.

Some comments stated that sampling only flower material ignores the hemp grown for seed and stalk end-uses, and not for cannabinoids. Comments claimed that sampling and testing only flowering material would limit industry diversification in terms of producing hemp for biomass intended for uses other than THC production. To address this, several recommendations for revisions to the IFR's sampling requirements were offered. Some comments recommended taking larger samples from prescribed parts of hemp plants that would include other than flowering material. For example, both State departments of agriculture and Indian Tribes recommended taking branch samples from two or more specified parts of plants that would include flowers, stems, stalks, and seeds, and proposed a range of sample lengths they considered appropriate, from 4 to 18 inches. Some recommended taking samples of the lower part of branches as well as flowering tips from the same plant. Several comments urged USDA to adopt risk-based sampling requirements that would better align with the intended end-use of hemp crops, like grain and fiber. Other comments recommended revising the IFR to allow States and Indian Tribes to design sampling requirements to meet the particular needs of producers in their jurisdictions, like producers who are well experienced with growing hemp and understand the potential to grow a non-compliant crop.

Commenters expressed the widely shared view that cuttings for hemp samples must come from various locations on the plant, not just the top third as indicated by the Sampling Guidelines. They explained that marketable hemp product comes from a composite of the entire plant, not just the top, and asserted that flower material samples should likewise come from the entire plant to ensure the sample accurately reflects the lot from which it is taken. Comments also voiced the need for greater regulatory clarity on the size of the floral cuttings due to concerns that no regulatory requirements address floral collection by authorized sampling agents, and variances in types of materials collected may affect test results.

Cannabinoid Concentrations: Comments described phytochemical characteristics of *Cannabis sativa* L and argued that samples taken from only one part of the plant are not representative of the whole plant. Some comments contended that flowers at the top of the plant have higher concentrations of THC and other cannabinoids—by as much as 30 percent, according to some—than flowers elsewhere on the plant. One comment cited a study [19] that found that top-only sampling, as prescribed in many State testing programs, leads to an overestimation of THC content by nearly 37 percent. The study stated that to better represent total crop THC levels, samples should be taken from the top, middle, and bottom of plants in equal quantities. Commenters asserted that sampling flowers from only the top of the plant could lead to incorrect conclusions about the lot's compliance and lead to inappropriate and costly lot disposals.

Other comments contended that THC concentrations are not necessarily higher at the top of the hemp plant. One comment used data to show that the distribution of THC concentrations throughout hemp plants is not consistent between varieties. It cited a 2019 comparison study in which 4-inch cuttings of floral material from two hemp varieties were taken from the top, middle, and bottom sections of plants. In one variety, total THC was highest in samples taken at the top, and lowest in samples taken from the bottom of plants. In the other variety, total THC varied little between samples from plant top, middle, and bottom positions. The comment said the data refutes the belief that THC levels are highest at the top of the plant and supports sampling from all parts of the plant to obtain an accurate representation of each lot's composite marketable hemp product.

Sampling technique: Some comments cautioned that inconsistent potency measurements may be the result of divergent sampling approaches and recommended that USDA provide regulatory clarity as to the proper sampling process.

A comment encouraged USDA to establish clear numeric designations of how much floral material is taken from each plant. Comments varied in their suggestions on sample cut including: 12 inches per plant; cuts from the top and bottom 18 inches of a terminal branch of the plant to achieve a more representative sample; cutting from the top twenty centimeters from the main stem of the female plant; eight to ten inches of the plant's primary stem; whole plant sampling whereby the top 1/3rd, middle 1/3rd and bottom 1/3rd are each sampled; and to ground the whole plant—not only the top 1/3rd—as that is not representative of the delta-9 THC level of the plant.

AMS response: The IFR required the collection of samples from the flower material of hemp plants for laboratory testing. Following the publication of the IFR, AMS made available at *www.ams.usda.gov/rules-regulations/hemp* a supplemental document addressing Sample Guidelines as a reference resource to industry. This resource document indicates that hemp samples are comprised of cuttings from just underneath a flower material located at the top one-third of the plant. Following review of public comment from various stakeholders, AMS determined this final rule will allow for additional sampling methodologies for determining the sample size from the lot as described previously under the ''Sample Size'' discussion. However, since THC is concentrated in the flower material of the plant, the flower material is more appropriate to test than the entire plant. The final rule specified pre-harvest samples shall be approximately five to eight inches from the ''main stem'' (that includes the leaves and flowers), ''terminal bud'' (that occurs at the end of a stem), or ''central cola'' (cut stem that could develop into a bud) of the flowering top of the plant. This aligns provisions of this final rule with the common practices of several States that significantly participated in the 2014 Farm Bill hemp pilot programs. This decision further balances the need to collect a sufficiently large portion of the plant's flower, where THC and other cannabinoids are at their most concentrated, and the need to avoid cutting a portion of the hemp plant that

[19] ''THC Distribution in Field Grown Hemp Prior to Harvest,'' J. Scott Lowman, Jack He, Mike Clark, and Mark Gignac; The Institute for Advanced Learning and Research (IALR), Danville, Virginia.

poses logistical challenges to shipment, drying and preparing for laboratory tests. AMS believes this provision will help standardize sampling across the nation.

AMS considered the differences of pre-harvest vs. post-harvest sampling and determined the most practicable way to identify THC concentrations of the plant is through pre-harvest sampling since the floral material is still intact. Floral material must be intact to assure the material submitted for testing is in fact the flower part of a hemp plant and it has not been compromised or mixed with other plant parts. AMS also considered the many commenters who endorsed ''whole plant'' sampling. AMS concluded that measuring THC concentration through floral material testing is more appropriate and practicable than testing the entire plant because testing the entire plant will dilute the THC concentration in the sample, except as allowable under remediation, as discussed elsewhere in this final rule. Further, the study cited by a commenter that shows THC concentrations throughout hemp plants are not consistent between varieties does not support the use of whole plant sampling because it compares different plant varieties, not the THC level on different parts of the same plant variety where the sample is taken. Accordingly, sampling the top part of the plant will provide the most accurate results.

Since THC is concentrated in the flower material of the plant, the flower material is more appropriate to test than the entire plant. AMS will modify the sampling requirement to state that the sample shall be approximately five to eight inches from the ''main stem'' that includes the leaves and flowers, ''terminal bud'' that occurs at the end of a stem, ''or ''central cola'' (cut stem that could develop into a bud) of the flowering top of the plant. AMS believes this consistency will help establish a level playing field for all U.S. hemp producers. The Sampling Guidelines issued concurrently with this rule includes additional details.

AMS also includes additional flexibilities for disposal and remediation of ''hot'' hemp that would reduce the costs to producers. These are discussed later in this final rule and in separate guidelines published concurrently.

Measurement of Uncertainty (MU)—Field Sampling

The IFR did not address the subject of uncertainty when conducting field samples and only speaks to the measurement of uncertainty in performing laboratory tests for regulatory compliance.

Comments: Several comments noted that not accounting for MU in sampling is a potential oversight that should be addressed in the final rule. Several comments note that field sampling is the largest source of variability in any testing process, due to the choices individual sampling agents make and field condition variability. Comments argued that there is a wide degree of variability among individual plants in a hemp crop and that this contributes to further uncertainty in field sampling. Due to this uncertainty in the field during sample collection, commenters suggested that an MU for field sampling be included in the final rule.

Several State agriculture departments argued that the MU value should account for variability in the steps that occur before a sample reaches the laboratory. Comments noted the various steps in the field sampling process, such as cutting, bagging, sealing, transporting, and handling, and explained that each increases uncertainty in the THC testing results before the sample even arrives at the laboratory for compliance testing. Commenters asserted that uncertainty related to each step in the field sampling collection process should be accounted for in the MU.

Several comments argued that, without a standardized MU for field sampling, some hemp crops with specific end-uses would be disproportionately impacted. According to comments, hemp crops grown for cannabinoids show the most phenotypic variability and lack of uniformity in the field. Comments said this variability should be accounted for before the sample reaches the laboratory.

One comment suggested following the ISO 15189 standards that take into account uncertainty sources during the analytical phase where the measurement actually occurs. Several comments requested that USDA establish a standardized method of calculating uncertainty resulting from sample collection procedures and for uncertainty in laboratory testing methods. One comment noted that USDA's Sampling Guidelines do not require the USDA-approved sampling agent to communicate to the laboratory anything related to crop variations or the agent's sampling methodologies that may contribute to uncertainty in testing the hemp crop for compliance.

A comment suggested a method for calculating MU that would include pre- and post-laboratory activities: MU would be calculated as the square root of the sum of squared values for pre- and post-laboratory activities, or, (a) squared plus (b) squared = (c) squared, where (a) is field sampling activities and (b) is laboratory MU. The comment offered this example: *If the in-laboratory measurement of uncertainty (b) is calculated as 0.0300 percent, and the field sampling measurement of uncertainty (a) is estimated to be 0.0400 percent, then the total measurement of uncertainty (c) would be 0.0500 percent.*

An institute that commented discussed research which found that sampling from the whole plant more accurately reflected what was observed in a field. The comment explained how the current USDA method, which analyzes only the top ⅓ of the plant, generates data that is error-prone and results that likely do not represent the actual THC levels that are present in the hemp plants in the field as a whole. It said, for example, in one research field, THC levels ranged from 0.06 percent to 2.46 percent in the top ⅓ plant samples when individual plants were evaluated separately.

The research also found significant variation in THC concentration across plants, which the commenter attributed to the lack of ability of the sampling procedure to generate a consistent, reproducible sample from any given hemp field. The research found if the field contains plants that are not completely uniform in their THC levels relative to each other, it is possible that this small subsample in any given analysis could over-represent plants that have higher levels of THC, thereby leading to failure of the field. On the other hand, equally possible, that analysis could over-represent plants that have lower levels of THC, leading to passing the field. The research stated that the most likely result of a sampling test is an inaccurate assessment of the total THC levels based on the method used to sample the plants in the field and then prepare them for extraction.

A comment from a private laboratory noted that when field sampling and pre-analysis handling and processing is done properly and uniformly, the pre-analysis measurement uncertainty can be reduced to 5–10 percent. The comment suggested that test results might be more consistent and uniform when collecting samples in a ''W'' pattern with a minimum of 10–15 individual cuttings taken from the top and middle third of the plant.

Some comments recommended USDA conduct or fund a study to determine appropriate requirements for calculating sampling uncertainty.

AMS response: AMS appreciates the different suggestions submitted by commenters on ways to handle potential

variability and uncertainty associated with sampling. AMS recognizes that a variability in sampling may contribute to the overall uncertainty of the final result. For reasons explained below, AMS in unable to adopt a national standard for calculating the MU for sampling. However, States and Indian Tribes, may include one in their State or Tribal plan as part of their performance-based alternative method for sampling under § 990.3(a)(2)(iii).

In order to develop a standardized approach to sampling MU, a sampling plan must first be well-established, standardized, and studied to accurately account for uncertainty differences in sampling methodologies. To measure uncertainty of the complete process, from primary sampling through analytical determination, all steps in the process must be included. There are many intermediary steps that must be measured, such as sampling conditions, sample preparation, sample preservation, and transportation, all of which are not always present and/or completed the same each time sampling occurs. States producing hemp under the 2014 Farm Bill have developed sampling plans that vary widely; sampling MU is not something that can be easily studied, calculated, or broadly standardized. Due to the variability in sampling across producers, States, and Indian Tribes, and the lack of available data, USDA is unable to establish or standardize a specific MU value or boundaries (upper or lower) for general use.

In the future, standards organizations, such as ASTM International through their Committee (D37) on Cannabis, will be establishing sampling standards that States, Indian Tribes, and producers could use to improve or help control sampling uncertainty. USDA also recognizes that States and Indian Tribes may have or will conduct their own study of the sampling uncertainty within their States or territories taking into account the conditions that may affect sampling. Those States and Indian Tribes may be able to calculate or standardize the MU for sampling within their States and territories. For those reasons, States and Indian Tribes may incorporate a sampling MU as part of an alternative method for sampling under § 990.3(a)(2)(iii).

Post-Sample Harvest Window

The IFR required testing for total delta-9 tetrahydrocannabinol concentration levels and sampling for such testing was required to occur within 15 days prior to the anticipated harvest of cannabis plants. The IFR required sampling to be conducted by a Federal, State, local, or Tribal law enforcement agency or their designee.

Comments: Numerous comments expressed opposition to the 15-day post-sample harvest window. Comments argued that a 15-day window is too short and urged AMS to make it longer, providing several examples of anticipated difficulties with the 15-day window.

According to comments, the 15-day sampling window in the IFR did not allow enough flexibility to reckon with adverse weather conditions that could delay or preempt field sampling and harvest activities. Comments said that isolated producers and others with limited access to harvest machinery might not be able to complete harvests within 15 days of sampling if weather prevents them from getting into the fields. Comments also noted that in some hemp production areas, climate changes are trending toward wetter harvest seasons, with frequent and catastrophic flooding in recent years. Other comments provided examples of climate variations across the U.S. and explained that the 15-day window is not uniformly suitable for all regions, some of which may be more prone to early freezes and other conditions that could forestall a timely harvest or force producers to harvest before receiving test results in order to save their crops.

Comments also pointed out that a 15-day window does not adequately accommodate a commonly employed two-phase harvest technique, wherein farmers first harvest the seeds and flowers and then the plant's stalks.

Comments additionally stated logistical challenges related to sampling on larger hemp farms or farms with several varietals. They asserted that the number of required samples greatly increased under the IFR from what was required under most State administered pilot programs, and that collecting, drying, and submitting samples for those additional lots will be very difficult within the 15-day window. A commenter stated that, in 2019, Colorado sampled only 23 percent of all registered hemp lots within a 30-day sampling window under the pilot program, while under the IFR requirements, they would need to collect more than four times as many samples in half the time.

Many commenters—from producers, state departments of agriculture, and Tribal governments—anticipated bottlenecking delays at laboratory testing facilities due to the limited number of DEA-registered laboratories available to provide testing. Comments from laboratories agreed that the increased demand for hemp testing would strain existing resources and make it difficult to return results to farmers in time to complete harvesting within the 15-day window. One commenter from a private laboratory also noted the strain on human resources this would create to oversight activities because laboratory employees are required to accompany sampling agents through the sampling process within the window. Other comments noted a possible shortage of available farm workers during a tight harvest window.

Comments from Indian Tribes stated that the requirement to test within 15 days prior to harvest by DEA registered laboratories is not practical for Indian Tribes, explaining that many Indian Tribes were moved to desolate lands where growing crops is hampered by location, quality of the land, available water and infrastructure, and access to ready transportation. Further, Indian Tribes said growers are hampered by the economies of size. Comments suggested that in much of the Indian Tribe territories, Tribes will not be able to develop large farms that reduce risk.

Many comments recommended increasing the sampling window to 30 days. Some suggested that producers be allowed to harvest before the return of laboratory results, but not be allowed to release product until test results are obtained. One comment added that allowing post-harvest testing would incentivize farmers to monitor their crops prior to harvest in order to minimize the need to destroy crops. Another comment recommended that all hemp testing labs be required to return results to growers within 15 days of receiving samples. Other comments proposed revising the regulations to require only that harvest commence, rather than be completed, within the specified period following sampling.

Data on compliance testing from North Carolina [20] cited a recent study showed an average of 12.65 days taken to receive test results, with a range of between 2 days and 41 days. It estimates that 50 percent of growers would begin to harvest before receiving the results of their THC compliance test and 22.5 percent would complete their harvest without receiving their results.

Another State department of agriculture said it has been operating their pilot program utilizing a 25-day harvest window but noted that 25 days has proved an insufficient amount of time in their experience managing their pilot program. They recommend the

[20] *https://beta.regulations.gov/comment/AMS-SC-19-0042-5294.*

final rule utilize, at minimum, a 30-day sampling window.

A State extension service cited data from the Midwestern Hemp Database and reports from Rock River Laboratory which shows that 68 percent of the requests for THC compliance testing were submitted during the period of September 8th–October 1st and note this will create a tight peak window during which samples will be submitted. Due to this peak timeframe of compliance testing needs, several State departments of agriculture note that during these peak times there will be staffing shortages, delays in sampling, delays in analyzing material, delays in the reporting of results and delays due to unsuitable harvest conditions.

Another State department of agriculture recommends that certified seed varieties should be sampled and tested from a random selection of hemp grain and fiber fields 30 days prior to harvest. For uncertified varieties, it recommends requiring a post-harvest test, as well as a pre-harvest test of a random selection of fields within 30 days of harvest.

One commenter discussed data showing that different cultivars accumulate cannabinoids at different rates and at different times. Given the rapid changes in cannabinoid levels, the comment said its data highlights the challenges of scheduling pre-harvest regulatory samples and harvest dates.

Finally, a few comments asked for clarification about the 15-day window. Some said it was unclear whether harvest must commence or be completed within the window. Others asked whether a producer is prohibited from harvesting before testing is completed. One comment stated that the 2018 Farm Bill does not contain a timing requirement.

One comment reported that their current sample-to-harvest window is 25 days, and that it does not appear to be long enough to sample all the State's outdoor hemp crops maturing concurrently.

One comment reported that the IFR's 15-day harvest window is not feasible to implement and puts incredible stress on the developing State's hemp industry. According to the comment, the State applied a 30-day sample-to-harvest window during the four years it participated under the 2014 pilot program. During the 2020 growing season, the State reported it has struggled to sample and test the 5,809 acres and 1.46 million indoor square feet that comprise the fields and facilities of the State's 700 licensed growers within 20 days. The comment claims that the State does not have the financial capability or staff resources to ensure sampling can be achieved at every field within the optimal and correct time.

Data analysis provided by North Carolina State University [21] evaluated the 2018–2020 turnaround times for labs reporting THC test results to growers on 3,317 lots. The analysis found that in 22.5 percent of cases, growers would have had to commence harvest with no knowledge of their test results to meet the 15-day harvest window requirement in the IFR. The comment asserted that in reality, growers would need lab results in 10 days or less in order to make informed harvest decisions, in which case they assumed approximately 50 percent of the state growers would have had to start harvesting without knowing their test results. The comment referenced NCSU farm cost studies that showed farmers with some equipment at their disposal will spend approximately $14,000 per acre on hemp cultivation. Noting that of those costs, seed/plant acquisition and labor are the greatest expenses, the comment asserted that harvest is the most labor-intensive activity, and that requiring farmers to harvest without knowing whether their hemp crop is compliant or marketable puts them at great financial risk. The comment recommended extending the post sampling harvest window to 30 days to reduce financial risk for farmers.

A comment from another state noted that given the State's size and geography, distances between hemp production sites could be greater than 2000 miles, making the 15-day sample-to-harvest window impractical for them. The comment recommended allowing States and Tribes, who are better aware of their geographies and resources, to determine their own windows, up to 30 days.

One comment reported the State has three inspectors geographically dispersed throughout the State, servicing approximately 200 farms harvesting within the same 8-week time period. The comment advocated extending the harvest window to 30 days to cope with unforeseen weather events, extended travel, lab turnaround, resampling and testing, and other delays.

One comment contained preliminary findings from an ongoing 2020 study [22] conducted by a state and a state university that showed different cultivars of hemp accumulate cannabinoids at different rates and at different times in plant maturity. Study data showed that some cultivars can rapidly accumulate THC and CBD, with weekly changes of as much as 0.1 percent THC and 1.5 percent CBD in some cases. The study found that the rates of THC and CBD accumulation were parallel in the four cultivars studied, with the CBD:THC ratio staying consistent around 24:1. The study concluded that given the rapid rate of change in cannabinoid levels, samples taken 2, 3, or 4 weeks prior to harvest may not accurately reflect the cannabinoid profile of the harvested material. The study further concluded that a larger harvest window increases the likelihood that non-compliant plant material will be harvested and potentially rejected at market, costing the grower the additional expense of harvesting.

AMS response: AMS recognizes weather and climate-related factors affect all cycles of agricultural production including pre-planting, planting, management, and harvest. AMS also understands these factors may vary by region from year to year, and that certain conditions might cause some farmers to alter their normal harvest timeframe as a result of factors beyond their control as mentioned in several comments. It is common agricultural practice to harvest crops taking into consideration weather patterns such as rain, wind or freezes. Producers also harvest crops based on the availability of labor and transportation, crop rotation and market demand among many factors. A 15-day harvest window may not allow producers the flexibility needed to take all these factors into consideration.

AMS considered the impact of the 15-day window on resources needed for sampling and testing activities. We acknowledge that sample collection may require an authorized sampling agent to visit multiple farms of varying sizes over a very short period of time. AMS further understands that in some places, the sampling agent may visit a farm on multiple occasions due to the size and harvest cycle of the farm. AMS also considered the turnround time for producers to receive results from laboratory testing.

This final rule allows farmers to commence harvests before receiving test results, as did the IFR. However, crops may not be released in commerce or further processed until tests confirm that the lots in question are compliant with the regulations. Harvests must be completed within the 30-day timeframe

[21] Ibid.

[22] Pearce, Bob et al. Sequential Sampling of Four Hemp Cultivars for Cannabinoids—2020; University of Kentucky, College of Agriculture, Food, and Environment and Kentucky Department of Agriculture. *https://beta.regulations.gov/comment/AMS-SC-19-0042-5762.*

provided by the final rule. AMS does not believe harvests should occur after that time because, generally, total THC levels continue to increase with time and there is too great a risk that the levels would increase after 30 days and thus the sample that was tested would not be an accurate reflection of the total THC of the harvested crop.

Regarding comments on laboratory resources, AMS considered input from our Science and Technology Program, which conducts laboratory testing for numerous agricultural commodities and oversees our third-party laboratory approval program. AMS assessed testing activities, which include the receiving, selection, drying, processing (through liquid or gas chromatography), analysis, storage, and reporting of hemp test results. AMS considered the time necessary to ship samples to the laboratory and to issue test results back to the grower, recognizing that not all farms have readily available internet to expedite receipt of electronic laboratory notifications. Standard mail may be the primary means of communication for rural populations in certain regions and Tribal lands. AMS also considered the level of routine work at testing facilities across the nation and their capacity to efficiently process hemp samples while continuing unrelated, non-hemp laboratory activities. AMS agrees that it may be difficult at the peak of the season for high-volume laboratories to consistently issue timely results to growers, as producers experienced and DEA acknowledged, impacting growers' ability to make harvest decisions.

Based on comments received and knowledge of agricultural practices, AMS determined that the post-sampling harvest window should be extended to allow hemp harvests to be completed within 30 days after sampling. AMS believes allowing the additional time will provide flexibility for dealing with unforeseen weather events and other agricultural factors, and better accommodate complicated harvest processes. AMS also believes this will reduce strain on testing resources and ensure test results can be returned to growers on a timely basis.

Laboratory Accreditation—Laboratory Approval Program (LAP) and International Standards Organization (ISO)

The IFR required hemp growers to obtain testing from DEA-registered laboratories to ensure proper handling, disposal, and reporting of samples that exceed allowable THC limits for hemp and may therefore be controlled substances. As part of the IFR, AMS asked stakeholders whether laboratory accreditation should also be required for hemp testing labs. Specifically, AMS asked about accreditation through AMS's LAP, through the ISO standards (ISO 17025), or through both, and if so, which would be preferable.

Comment: Comments reflected a range of views across the industry, both in support of and opposition to additional laboratory certification requirements. In general, commenters preferred more regulatory flexibility to address the widespread concern of insufficient laboratory capacity as a result of laboratory certification/registration/accreditation requirements imposed by USDA regulation.

Supportive of LAP and ISO: Some comments supported requiring additional accreditation through both LAP and ISO. Comments explained that LAP accreditation imposes analytical standards and limits that ensure reliable and consistent results across hemp labs, while ISO 17025 accreditation ensures that labs adhere to their own established protocols. Comments asserted that additional accreditation is essential to ensure that laboratories, government entities, and farmers comply with regulations. One comment that supported requiring both accreditations said the scope of the ISO 17025 standards should include hemp testing methods.

One comment said requiring LAP and/or ISO accreditation in conjunction with DEA registration is a step in the right direction because current standards are subpar and do the industry a disservice, while adding LAP and/or ISO accreditation would provide a baseline standard that benefits all stakeholders, including consumers.

Either LAP or ISO: Other comments advocated requiring additional accreditation through either LAP or ISO, but not both. Comments said that requiring one or the other would be adequate to provide testing integrity, but that requiring both would unnecessarily overburden labs and create a testing bottleneck as labs worked toward accreditation. One comment said that since hemp products are consumable, public health and safety should be of paramount concern when choosing a lab accreditation program.

Comments supporting LAP accreditation specifically said such accreditation would improve grower access to qualified labs and would improve the efficiencies and protect the competitive interests of non-DEA labs. Comments favoring LAP accreditation pointed out that LAP already incorporates ISO 17025 standards and includes regular audits and records management requirements. Comments added that incorporating ISO standards into LAP accreditation lends confidence in testing procedures and results, which in turn creates a fair marketplace for hemp. They asserted that the benefits of LAP accreditation outweigh the costs because they emphasize quality controls and accurate analytical performance by knowledgeable and trained staff. One comment suggested that using LAP-approved labs would facilitate USDA's hemp program oversight and the development of an evidence-based data tracking system. Another comment pointed out that LAP offers growers a complete online listing of qualified labs from which to choose.

Some comments argued against adopting LAP accreditation, saying the accreditation process is expensive and burdensome for laboratories, and that the user-fee program benefits only USDA. One comment said that it is unclear from the IFR how LAP differs from ISO and whether LAP accreditation offers more confidence in test results than ISO accreditation. Another comment said that LAP accreditation would be redundant to ISO accreditation and is not necessary.

Some comments favored the use of laboratories with ISO 17025 accreditation in addition to or instead of DEA-registration. Comments noted that hemp laboratories in many States already have ISO accreditation, although some are not DEA-registered. They suggested use of those labs should be grandfathered into approved hemp production plans. Some comments asserted that between LAP- and ISO-accreditation, ISO is the best alternative for the hemp industry because it meets the needs of the hemp industry, and at a reported cost of $25,000, it reduces unnecessary expense and regulatory burden for labs and growers. One comment recommended that USDA specify that the most current ISO 17025 standard be required for accreditation—the 2017 version.

Neither LAP nor ISO: Several comments opposed requiring additional laboratory accreditation on top of DEA-registration. Some comments called it ''overkill,'' and said requiring additional accreditation would put an undue strain on laboratories and delay testing and reporting results for growers.

None of the Above: Several comments opposed specifying any particular laboratory registration or accreditation and recommended instead that States and Indian Tribes be authorized to determine appropriate standards for hemp testing laboratories under their respective production plans. Comments said that allowing States and Indian Tribes to determine their own lab

certification schemes would allow them to maintain appropriate testing capability while finding the best fit for the economic profile of their regulated jurisdictions. One comment suggested USDA encourage laboratories to participate in the Hemp Proficiency Testing Program established by the University of Kentucky, rather than building an accreditation program from scratch through LAP.

Other Alternatives: One comment asked USDA to clarify why any additional accreditation should be required. Another comment suggested that if laboratory accreditation is necessary, AMS should explore the most cost-effective choice from among LAP, ISO, or other commercial accreditations to minimize costs for growers. A comment suggested that DEA-registered labs not be required by the rule but be allowed as backups for labs with other accreditations. Another comment speculated that if only LAP or ISO accreditation were required, and DEA registration was not, growers would test their crops more frequently. Some comments recommended that no specific accreditation be required because the process is too costly and time consuming and would discourage labs from participating in the program. One comment suggested that USDA encourage labs to adhere to ISO 17025 standards, but not require accreditation.

Some comments suggested that LAP accreditation would be beneficial to the industry, but that such a program should be developed incorporating the expertise of former DEA or other chemists with experience testing cannabis. Other comments supported using ISO-accredited labs until LAP accreditation can be fully developed and used on a trial basis to gather adequate experience and data. One comment suggested allowing States, Tribes, and USDA to contract with commercial labs or use private labs that adhere to ISO standards.

AMS response: AMS noted that commenters generally preferred more regulatory flexibility to address the widespread concern of insufficient laboratory capacity as a result of laboratory registration requirements outlined in DEA regulations. Adding ISO 17025 or other accreditation requirement to laboratories would decrease the number of laboratories available to perform hemp tests. AMS also noted some commenters opposed accreditation requirements due to cost implications and additional burden. While we strongly encourage laboratories to be accredited to ISO/IEC 17025 (by an International Laboratory Accreditation Cooperation Mutual Recognition Agreement (ILAC MRA) signatory accreditation body), because it will help ensure lab results are more accurate, ISO 17025 accreditation requires significant time and financial commitment to pursue and maintain. This it is most challenging for smaller and start-up labs. The initial accreditation can cost $5,000–$10,000 (and in some case more) and yearly ongoing costs are $3,000–$8,000. Smaller labs may not have the resources to pursue accreditation in a timely manner or they may have to spend more time and money for consultants to assist them in setting up a quality management system and to navigate the application and audit processes.

Based on this input, AMS will not require USDA administered lab approval program or require ISO 17025 accreditation because doing so would increase the financial burden on producers and reduce the availability of laboratories that can test for THC level in hemp. AMS is committed to continue looking into this option.

DEA Laboratory Registration Requirement

The IFR required that laboratory testing of hemp for the purpose of determining compliance under the program be conducted by laboratories appropriately registered with DEA. However, on February 27, 2020, USDA announced guidance delaying the requirement to use laboratories registered with DEA for testing. Under this guidance, testing can be conducted by labs that are not yet DEA-registered until the final rule is published, or Oct. 31, 2021, whichever comes first. This deadline was later extended to December 31, 2022. This change was intended to allow additional time to increase DEA-registered analytical lab capacity.

Comments: A few comments supported the DEA-registration requirement. Some comments favored dual laboratory accreditation (*e.g.,* DEA and ISO 17025 accreditation or DEA and AMS LAP accreditation) saying that such combinations would assure technically competent, unbiased testing and results reporting. One comment agreed with DEA lab registration but said that labs that have applied for DEA registration by Nov 1, 2020, should be allowed to continue testing (as under pilot programs) as the certification process takes so long. It further observed that while the IFR seemed settled on HPCL as the testing method, the rule does not specify the detection method as it should. The comment recommended mass spectrometry as the most accurate.

Another comment agreed with DEA lab registration, saying that otherwise, any lab could be handling controlled substances without observing stringent DEA requirements. The comment argued that allowing any lab to test hemp creates an unfair business advantage for non-DEA labs that do not have to pay high costs of maintaining DEA registrations. Further, those non-DEA labs would be handling controlled substances inconsistent with Federal law.

More commonly, comments opposed the DEA-registration requirement for hemp testing laboratories. Commenter concerns were as follows:

Logistics: Numerous comments stated there are not enough DEA-registered labs to handle the volume of samples required under the IFR's sampling and testing regulations. Comments predicted that such limited capacity would exacerbate existing bottlenecks, greatly increasing the likelihood that THC levels in sampled crops would continue to rise while farmers wait for test results. Several comments noted that the IFR allowed farmers to harvest sampled crops before receiving test results, however many prefer not to expend time and money harvesting a crop that might not be marketable. Comments also anticipated growers' testing fees would increase to cover the addition of testing resources at existing DEA-registered labs.

Some comments noted that not all States or Tribal lands have DEA-registered labs within or near their boundaries. According to comments, where DEA labs do exist, they are generally located in urban areas at some distance from rural farms. They explained that the scarcity of DEA-registered labs in reasonable proximity to farms will increase costs for transporting samples and increase the turnaround time for obtaining test results. Some comments submitted by Indian Tribes also asserted that the DEA had failed to consult with Tribes about its accreditation process and that it failed to timely respond to Tribes' requests for lab results.

Accreditation: Comments said that DEA-registration is costly and time consuming for laboratories and that such expenses would discourage existing labs from seeking DEA registration. One comment said that DEA accreditation is too expensive to be required for ''low-level THC testing.'' Comments suggested alternatives, including:

- Allow testing by labs accredited under ISO 17025
- Allow testing by labs approved under AMS's LAP

- Allow testing by labs accredited by States or Tribes
- Allow testing by labs accredited under other accreditation programs
- Allow testing by labs with dual accreditation (*e.g.* DEA and ISO, or DEA and LAP)
- Allow continued testing by labs approved to do so under the 2014 Farm Bill
- Allow for a transition period to allow labs time to work toward registration

One comment suggested that allowing for alternative laboratory accreditation would increase competition between labs, reduce costs for growers, and reduce the potential bottleneck created by allowing for only DEA-registered lab testing.

Another comment argued that although accreditation is costly, relying on it could help enforce strict standards and ensure less variability between testing labs. Some comments suggested USDA fund accreditation of private labs to help offset the cost of expensive accreditations and encourage more labs to seek necessary accreditation.

Other comments suggested DEA expedite its lab approval process and make it easier for existing labs to obtain DEA registration.

Other commenters stated that the DEA lab accreditation process requires State approval and not Tribe approval and that this is unworkable because of occasionally difficult relationships between some Tribes and States and because hemp is prohibited in a couple of States.

Finally, several comments recommended AMS provide a phase-in period of as much as two years to allow existing labs to continue hemp testing while they work toward DEA registration so the industry will have access to adequate testing options during its development.

DEA and Controlled Substances: Comments expressed concern about many aspects of DEA's involvement with the hemp program. Comments argued that hemp is a legal agricultural commodity under the 2018 Farm Bill and requiring testing by DEA labs insinuates hemp is a controlled substance regulated under the Controlled Substance Act. Commenters asserted that treating hemp as a controlled substance exceeds the intent of the 2018 Farm Bill. Comments also suggested USDA's IFR impeded Congressional intent to foster the development of a new agricultural sector.

One commenter representing a processor of hemp, specifically for CBD products, said they were concerned about an IFR published by DEA and that the rule by DEA could inadvertently criminalize hemp at various stages of its production process. They encouraged USDA to eliminate DEA's involvement.

Comments also said DEA involvement in USDA's program discourages participation by laboratories and by growers, neither of whom may care to risk prosecution for inadvertent criminal acts if a test result indicates they raised or possess a controlled substance. Some comments said private labs with ISO or other accreditation don't want to obtain DEA accreditation, fearing the tension it will cause between themselves and their grower customers because of the requirement to report potential criminal activity. Other comments said growers fear repercussions related to possible felony prosecution for growing crops considered illegal, including loss of chemical application permits that allow them to manage other crops. One comment argued that it isn't necessary to involve DEA in hemp testing, that it distracts that agency from other vital Federal work.

According to some comments, most DEA-registered laboratories are crime labs that do not offer commercial testing services. As reported by a State, the DEA may be reluctant to even visit—let alone approve—certain laboratories because of the handling and testing of marijuana, although considered legal by the State. Other States with legal medical and/or recreational marijuana provisions commented that their labs may not want to seek DEA registration because they choose to focus on marijuana testing. Some comments said labs that handle marijuana may not in fact obtain DEA registration, thus laboratory capacity to process hemp samples at the volume and speed required by the IFR may not materialize.

One comment assumed DEA-registered labs might test only for cannabinoids, while other commercial labs would be able to perform additional testing, for instance for microbes, heavy metals, and pesticide residues, saving growers the additional expense of multiple tests.

Some comments recommended USDA waive the requirement to use DEA-registered labs in States where recreational marijuana is legal, thus increasing the number of labs available for hemp testing. Other comments recommended DEA change its standards to allow labs that handle legal marijuana to also handle hemp.

Cost Management: A few comments suggested that restricting hemp testing to DEA-registered labs creates a monopoly among labs that already have such accreditation or have the financial backing of large, vertically integrated companies to enable them to do so. Comments recommended that existing State, Indian Tribe, university, or other Federal labs with demonstrated ability to perform testing according to USDA standards be allowed to do so, thus providing opportunities for more interested participants and keeping testing costs down for growers. Some comments suggested USDA contract with State, Tribe, or Federal labs to provide required testing. Other comments recommended capping costs for DEA-registered lab testing at $25–$50 per test.

Alternatives: One comment asked USDA to clarify whether all independent labs must be DEA-registered to test hemp or whether only State labs needed to obtain that accreditation.

AMS response: In consultation with the Department of Justice, AMS determined it must retain the provisional requirement that laboratories testing hemp for the purposes of regulatory compliance be registered with DEA. This requirement further extends to any laboratory testing hemp throughout the growing season to informally monitor THC concentration. The basis for this determination is rooted to the statutory requirements of the Controlled Substances Act (CSA), which requires any laboratory that might potentially handle a controlled substance to undergo the DEA registration process. The CSA states that it is unlawful to possess a controlled substance (21 U.S.C 844) and requires any laboratory that might potentially handle a controlled substance to undergo the DEA registration process (21 U.S.C. 822) with a few specific exemptions. Further, 21 CFR 1301.13 includes categories that require registration with DEA, including chemical analysis where laboratories fall.

AMS is aware through stakeholder comment that many stakeholders oppose the DEA registration requirement. AMS is also aware of widely held concern among stakeholders, especially Indian Tribes, that an insufficient number of DEA-registered laboratories exist and have limited accessibility to those in rural or regional locations away from metropolitan areas. AMS understands how this combination of variables leads to delays in sample processing by DEA-registered laboratories and how this affects producers' harvest timetables. AMS also knows that since the IFR was published, numerous laboratories have applied for registration and DEA is

working diligently to process these requests. For this reason, DEA is delaying enforcement of this requirement until December 31, 2022. AMS anticipates this delay will provide adequate time for testing facilities to obtain DEA registration.

While we understand the commenters' concern about DEA involvement, the 2018 Farm Bill distinguishes hemp from marijuana, a controlled substance under DEA's regulatory authority, based on the THC concentration level in the cannabis plant. Although a producer may have intended to cultivate hemp, it is possible that the plant is marijuana because of the THC concentration level. If that is the case, the producer would then be subject to DEA regulations and jurisdiction. USDA coordinated with DEA so that producers that inadvertently produce marijuana may be able to take remediation steps consistent with DEA's regulations to avoid potential criminal liability. Additionally, the 2018 Farm Bill makes clear that negligent production of hemp will not subject the producer to criminal enforcement activity. *See* 7 U.S.C. 1639p(e)(2)(C).

AMS also acknowledges that some laboratories believe the DEA-registered laboratories are crime labs that do not offer commercial testing services and DEA may be reluctant to approve laboratories because of the handling and testing of marijuana, although considered legal by the State. However, AMS does not have any information that would support this belief. AMS is aware that DEA continues to add laboratories to their approved list.

Accordingly, any laboratory testing hemp for purposes of regulatory compliance must be registered by DEA to conduct chemical analysis of controlled substances (in accordance with 21 CFR 1301.13). Registration is necessary because laboratories could potentially handle cannabis that tests above the 0.3 percent concentration of THC on a dry weight basis, which is, by definition, marijuana and a Schedule 1 controlled substance. Instructions for laboratories to obtain DEA registration, along with a list of approved laboratories, are available on the USDA Domestic Hemp Production Program website.

Laboratory accreditation options are discussed earlier in this rule. USDA does not have any authority over the DEA's laboratory accreditation process.

DEA's IFR published August 21, 2020, (85 FR 51639) is out of the scope of this final rule.

Measurement of Uncertainty (MU)—Laboratory Testing

The IFR required that laboratories calculate and include the measurement of uncertainty (MU) when they report THC test results.

Comments: Several comments expressed support for requiring that the MU be accounted for when testing the THC concentration of hemp due to the variability in laboratory testing equipment and complex mathematical principles involved. Comments generally emphasized that the inclusion of a standardized MU was needed for the industry to develop, as hemp farmers should not be exposed to risks of economic loss that are created by mathematical inconsistencies within an individual laboratory's computations. Several comments emphasized the importance of USDA clarifying the method for MU calculation in the rule because it is part of what determines whether hemp must be disposed.

One commenter cited a study [23] that found that test results on samples from each field sent to five different labs deviated significantly, ranging from a low of 22 percent deviation to a high of 41 percent depending on the field.

Some comments expressed the need for a standard, specific MU in the final rule to prevent licensees from ''shopping around'' for laboratories with the most lenient testing. Comments noted there is no universally accepted way to calculate MU, so differences in MU values used by various laboratories are just as likely to result from differences in calculation method as they are from differences in instrument quality or use. Several comments explained that the lack of a standardized MU in the rule incentivizes inaccuracy by potentially driving customers to laboratories willing to use MUs with greater ranges.

Many comments advocated specifying an MU to create uniformity in testing across the nation. One comment noted that variation in MU values could be problematic for interstate commerce and result in a hemp crop that is compliant in one state being shipped to another state where it would be considered noncompliant. Other comments argued that it may be too soon in the scientific process for USDA to include a standard MU because laboratories, particularly in States that didn't previously have cannabis programs, haven't had time to do the research necessary to determine an appropriate MU.

[23] Evaluation of methods used to sample hemp for regulatory compliance testing;'' Gang, David R. and Anna Berim; Washington State University, Pullman, WA; 2020.

Comments from States that administered pilot programs under the 2014 Farm Bill offered several suggestions on approaches to MU calculations. A comment recommended using laboratories participating in the University of Kentucky—Division of Regulatory Services' Hemp Proficiency Testing Program to establish an MU through a set of guidelines rather than in the rule. The commenter concluded that the Hemp Proficiency Testing Program could be tasked with calculating and announcing an MU that would be used for compliance testing purposes on a nationwide basis. The comment added that including the MU in the guidelines rather in the rule would allow it to be refined over time as instrumentation and calculations develop, rather than having to modify the hemp regulation.

Some comments advocated having multiple testing methodologies to choose from and including requirements for calculating MU for each method. Other comments recommended that instead of requiring a specific MU, USDA should determine a maximum threshold for allowable MU value. Comments argued that a maximum threshold would prevent forum shopping by consumers looking for laboratories with the most lenient MU ranges, but still allow laboratories to use their own calculations. One comment recommended revising the MU provision of the IFR to include a maximum uncertainty level that laboratories cannot exceed and suggested the maximum uncertainty value should be one-third or less of the target uncertainty. Another comment suggested USDA use guidelines from the United States Pharmacopeia for determining THC concentration, which include calculations for significant figures such as MU.

A comment asked USDA to clarify the role of significant figures in using MU to determine total THC concentration because, they argued, in both of the IFR's examples for determining compliance, the lower end of the range can be written as 0.3 percent, if rounding to match significant figures. It suggested requiring the lower value of the THC calculation distribution range, which accounts for uncertainty, to be less than or equal to 0.30 percent rather than 0.3 percent.

One commenter stated that for the cannabis plants exceeding the acceptable THC levels, USDA should incorporate a MU for laboratory deviation of .0500 percent for the many different variable ways that a sample arriving at a laboratory could result in an inaccurate test. This includes cutting,

bagging, sealings, transporting, handling, and other pre-laboratory activities.

One comment cited guidance from the National Institute of Standards and Technology providing that assigned uncertainty should be small relative to the total uncertainty targeted for test samples. The comment asserted that, as a rule of thumb, assigned uncertainties should be about one-third or less of the target uncertainty to ensure that uncertainty in the certified value will have negligible influence on the results of measurements. According to the comment, laboratories with well-developed processes will provide the most accurate and precise results and their uncertainty will be very small. The comment advocated that USDA provide an uncertainty range that cannot be exceeded by participating laboratories, thereby reducing the risk that producers will shop for laboratories with the widest uncertainty. The comment asserted that such a provision would also improve data comparability across the hemp industry.

AMS response: AMS appreciates the different suggestions submitted by commenters on ways to improve the calculation of MU and also acknowledges the variability in laboratory testing equipment that may exist. However, based on the input received and limited data available at the time of its review, AMS will only require that hemp testing laboratories complete a MU calculation as part of the mathematical test result for THC concentration. This final rule does not establish or standardize an upper or lower boundary for general use by laboratories to calculate a measurement of uncertainty. MU is typically not standardized, but rather is controlled using test methods controlled by performance standards (*e.g.,* AOAC Standard Method Performance Requirements 2019.003 that can be found at *https://www.aoac.org/resources/smpr-2019003/*).

USDA does not recommend establishing a MU upper limit (maximum) because (1) MU is typically not standardized, but is controlled using standard test methods, and (2) USDA does not have the data to set an upper limit, so setting it would be arbitrary, not scientific. The hemp and scientific industries are just beginning to discuss standard test methods, and the final rule does not establish an explicit test method. Setting an upper limit or maximum MU does not resolve the core issue and would not encourage or drive labs to improve accuracy and precision.

Setting an upper limit would in effect be setting a maximum or absolute MU. This may encourage labs to adopt the maximum MU as their MU, rather than drive for a smaller uncertainty. USDA may allow for establishing limits in the future, if needed, once methods are established and USDA has access to Proficiency Testing results and the reported MUs.

Additionally, this rule retains the flexibility for State and Tribal Departments of Agriculture to include specific requirements regarding MU for laboratories conducting hemp regulatory testing under their specific state or Tribal hemp programs if they meet the minimum standard set in this final rule. AMS encourages State and Tribal regulatory agencies to coordinate in developing proficiency and testing methods, similar to the program administered by the University of Kentucky, but participation in these types of programs is not required by this regulation.

Disposal

The IFR stipulated that cannabis exceeding an acceptable THC level must be disposed of in accordance with the CSA and DEA regulations because such material constitutes marijuana, a Schedule I controlled substance under the CSA, rather than hemp.

Destruction vs. *Disposal:* Several comments noted that the 2018 Farm Bill specifies only ''disposal,'' of hemp testing above the acceptable THC level, yet the IFR required ''destruction'' of such material. Comments argued that the IFR's destruction requirement is an overreach. Comments asked USDA to revise the regulations to require only disposal of non-compliant plants or plant parts, and to provide either general parameters or specific provisions regarding acceptable methods of disposal. Several comments asked AMS to provide or expand the requirements for disposal of non-compliant material.

Although a few comments supported destroying non-compliant hemp crops, most comments that addressed the topic argued against total crop destruction if alternative disposal methods are available and practical. Comments explained that crop loss is financially devastating to growers—and doubly punitive if the grower must pay to destroy the crop—as well as a waste of valuable resources that could be repurposed and provide at least some return to growers. Comments explained that crop destruction can be a drain on limited official resources, depending on the availability of law enforcement personnel and equipment for the potential need to collect, transport, and oversee the destruction of non-compliant plant material. Further, a comment from an Indian Tribe noted that requiring crop destruction is culturally offensive to indigenous people that traditionally use every part of every animal and plant that can be utilized.

Disposal Methods: Several comments asserted that the only disposal methods available under DEA regulations are incineration or chemical digestion and argued that the current rules under the CSA are designed for disposal of pharmaceuticals and chemical-based illegal drugs, not for the disposal of agricultural crops. Comments asserted that incineration by DEA is not efficient or environmentally sound, and in some places may not be allowed. They noted that burning crops releases harmful carbon dioxide and other pollutants into the air, contributes to the risk of wildfires, and wastes valuable plant nutrients that could be used elsewhere.

Numerous comments stated that the rule should provide alternative methods of disposal for non-complaint hemp plants to protect growers against total crop loss and preserve valuable resources. Several comments recommended USDA adopt disposal rules established under their various State and Tribal regulations. Comments suggested growers be allowed to mulch or disc the non-compliant crop into the soil at the farm, which would build up soil nutrients, improve soil water holding capacity, and improve soil tilth. Other comments suggested growers could recuperate some of their investment by marketing non-compliant crops for other non-ingestible or non-consumable products like fiber, building materials, biofuel, biochar, bioplastics, and animal bedding. A few comments suggested growers should be permitted to export or ship non-compliant hemp to countries or States that have legalized recreational or medical marijuana. Numerous comments recommended a surgical approach to disposing of non-compliant plants by allowing for the removal and disposal of only the plant parts testing over the acceptable THC level, while allowing growers to market the remaining parts. One comment suggested the Federal Government could buy non-compliant crops for no less than 50 percent of the market value and use them to manufacture paper, plastics, and fuel for government and military uses. Other comments proposed remediation as an alternative to crop destruction; comments on remediation are discussed in another section of this comment analysis. One comment suggested further research be conducted to identify appropriate alternatives for crop disposal, and one comment

suggested that industry stakeholders, governments, regulators, and law enforcement officials work together to develop disposal options under the program.

Disposal Oversight: Several comments recommended that States, Indian Tribes, or local authorities be allowed to determine appropriate crop disposal methods for their jurisdictions. Comments further recommended that State, Tribal, or local regulatory officials be authorized to oversee disposal of non-compliant hemp, as several have done prior to the establishment of the Domestic Hemp Production Program. One comment recommended further that hemp disposals handled by the State should not imply criminal intent on the part of growers. Comments said that allowing for local oversight would reduce strain on DEA and other law enforcement resources and ensure disposals can be handled on a timely basis. One comment from a State agriculture department said that when law enforcement officers have been invited to attend crop disposals in their jurisdiction, officers are typically unavailable. Other comments argued that growers should automatically become DEA-registered reverse distributors if their test results exceed acceptable hemp THC levels so they can dispose of the non-compliant crops themselves and provide acceptable evidence (*e.g.,* photo or video) that they have done so, or so they can do so in the presence of regulatory officials. Some said USDA should pay for official oversight of crop disposal or there should be no charge for that service.

Comments noted that AMS had not yet posted disposal guidelines on its website at the time those comments were submitted, although the IFR had committed AMS to doing so. Some comments said interested entities were unable to complete applications for program participation because AMS had not yet provided disposal requirements.

Several comments asserted that DEA regulations do not mandate specific disposal methods, so long as the ''desired result'' is achieved. Comments asked for more specifics on DEA disposal procedures, including what disposal methods or processes were allowed under the IFR, what the timeline is for disposal, and what results are desired.

One comment asked whether all of a grower's crops would be disposed if one of the lots tested above the acceptable hemp THC level. Others asked whether marketing non-compliant crops for non-ingestible and non-consumable products would be considered a form of disposal. One comment asked whether USDA would consider providing crop insurance for losses due to disposal of ''hot'' crops. One comment asked whether stored hemp product produced under previous programs that allowed for higher THC levels would be disposed under the new program, or could be ''grandfathered'' in.

One comment contended that certain language in the IFR was inconsistent, and as a result, the IFR could be interpreted to require disposal of hemp that does not meet the IFR's definition of hemp, rather than the disposal of hemp that does not meet the acceptable hemp THC level.

AMS response: AMS received significant comments on this requirement from State and Tribal regulatory agencies, producers, and other hemp industry stakeholders and based on this input, AMS determined it necessary to include specific on-farm hemp disposal activities and to provide oversight flexibilities.

As explained in the IFR, State and Tribal plans are required to include procedures for ensuring effective disposal of plants produced in violation of this Part. As part of its review, AMS noted the cultural implication of the use of the term 'destruction' and accordingly amended the regulatory provision to clarify the disposal activities required of growers in cases when a sample tests above the acceptable total THC level.

AMS also determined that producers benefit from greater regulatory flexibility to control on-farm disposal activities according to production schedules that are not dictated by the availability of reverse distributors to physically witness disposal activity. State and Tribal plans must still include procedures to verify disposal. This may come in the form of in-person verification by State or Tribal representatives, or alternative requirements the direct growers to provide pictures, videos, or other proof that disposal occurred successfully. State and Tribal plans must also include requirements to submit to AMS the monthly disposal report documenting any on-farm disposals that occurred during the prior month. Additional information on specific disposal methods is available to producers, State, and Tribal oversight agencies is available on the AMS website.

Disposal through the agricultural practices appearing in this final rule reflected those allowable under the IFR, and previously published to the AMS web page in February 2020. These included plowing under, mulching/composting, disking, bush mower/chopper, deep burial, and burning. These activities align with normal and routine production actions by farmers. AMS believes specifying these activities help hemp growers determine which activity best supports their operation to transition non-compliant crop into a non-retrievable or non-ingestible form. These methods also allow recycling non-compliant plant materials back into the earth, a viewpoint AMS learned through public comment to be especially relevant for producers practicing cultural conservation practices. AMS recognized that controlled burning is the closest farm practice to incineration but controlled burns may not be a viable option for producers in some places due to wildfire risk or state prohibition against using controlled burns.

Remediation

The IFR stipulated that cannabis exceeding the acceptable THC level must be disposed of in accordance with the CSA and DEA regulations because such material constitutes marijuana, a Schedule I controlled substance under CSA, rather than hemp. In addition, the IFR stated that noncompliant plants may not be further handled, processed, or enter the stream of commerce, and that the licensee shall ensure the lot is disposed. The IFR did not stipulate any provisions to allow for remediation activities that reduce the THC concentration to levels within the acceptable limit.

Remediation of non-compliant crops into compliant plant biomass: Numerous comments expressed support for remediation of non-compliant plants to help farmers mitigate against financial loss. Comments claimed that not having remediation options would be a barrier to industry growth because farmers would be unable to bear the financial risk of losing crops. One commenter used 2019 production and economic data to project that applying the IFR to 2019 statewide non-compliant test rates (17 percent), farmgate losses due to crop destruction could have totaled $842.6 million in Colorado.[24] According to the comment, adding losses related to lost processing and manufacturing due to the same crop destruction could have brought the economic cost to approximately $1.2 billion. It suggested that allowing for remediation of non-compliant crops testing between 0.3 and 1.0 percent THC in the same scenario would preserve

[24] Polis, Jared; Phillip J. Weiser; and Kate Greenwood: State of Colorado Comments in Response to USDA Establishment of a Domestic Hemp Production Program; *https://beta.regulations.gov/comment/AMS-SC-19-0042-3358.*

about $798 million in direct farmgate value, or $1.1 billion of total economic value for the State.

Numerous comments explained that non-compliant plants can be remediated by chemical processes that either remove and destroy THC or dilute THC concentrations, thereby transitioning the remaining material into biomass blends which then test at or below the Federally allowable THC threshold of 0.3 percent. Thus, according to comments, crop remediation through one of these processes is a viable alternative to total crop loss. Some comments suggested processors could be registered with DEA to handle such remediation processes to ensure THC is extracted, handled, and disposed or marketed legally. Other comments suggested that USDA could issue processor permits to allow them to handle hot crops to bridge the perceived legal gap between farmer and consumer. Some comments further suggested growers could bear processing costs then retake possession of the remaining biomass for use or sale elsewhere. Several comments suggested growers themselves could be allowed to merge ''hot'' lots with lots testing below allowable hemp THC limits to create a compliant, homogenized blend.

Some comments suggested non-compliant crops could be remediated by removing the only flowers and retaining the seeds and stalks for other use. Other comments argued that the IFR testing provisions conflict with CSA provisions that exempt seeds and stalks of plant material from the definition of marijuana, and several comments urged USDA to modify the IFR to require only that the parts of the plant exceeding the THC limit be destroyed.

One comment advocated that States be allowed to remediate non-compliant crops through milling and blending the harvest lot to include the entire plant to a homogenized state, then retesting the lot. The comment included the results of a comparative analysis based on crops that initially tested over the legal threshold of 0.3 percent total THC during Arizona's 2019–2020 growing season.[25] According to the comment, producers opted to attempt remediation as described for a total of 25 lots representing 568.6 acres of hemp. Of the 25, 19 lots representing 507 acres successfully reduced the total THC amount to be compliant, for an 89.71 percent recovery of acres that would otherwise have required disposal. The comment reported that the average amount of THC was reduced by 31.61 percent, and suggested that while this remediation process might not be successful for crops that are significantly over the legal threshold, and while the market value of the resulting biomass may be reduced, the process may allow growers to recover some of their losses.

One comment[26] reported on a survey of all Minnesota hemp growers who had experienced lot failures since the beginning of their pilot program in 2016. According to the comment, reported losses varied greatly, ranging between $22,000 and $70,000 per year. The comment further described the State's analysis of 1,492 hemp lot samples from 2016 through September 2020, which showed that 10.3 percent tested at or above 4.0 percent total delta-9 THC, although there was no indication of non-compliance with program rules or of illegal drug activity on the part of growers. The comment recommended that States and Tribes be allowed to develop remediation plans to salvage non-compliant crops.

Post-harvest sampling and retesting: Several comments suggested retesting post-harvest samples to confirm THC levels. Comments provided examples of some State agriculture departments that implemented post-harvest sampling and testing processes under the 2014 Pilot Programs. For instance, one comment cited results from the 2018 season in which they allowed post-harvest retesting of hemp plots that originally tested between 0.4 and 1.0 percent THC. The comment said under Kentucky rules, farmers were allowed to choose between immediate destruction of the leaf and floral material of the crop, without additional testing, or paying the $250 fee for a post-harvest retest of harvested and ground up hemp material, in which the THC concentration was diluted. It stated that of 29 growers whose lots tested between 0.4 and 1.0 percent THC, 22 chose retesting and none of those returned a second measurement above 0.3999 percent THC. Thus, those growers were able to realize a return on their investment. The remaining seven cases did not elect to retest—five elected to destroy the entire plant and 2 destroyed only floral and leaf materials, salvaging the stalks. The data showed the acreage destroyed represented approximately one percent of total acreage. The comment concluded that post-harvest grinding and retesting offers a viable economic solution for farmers seeking to recuperate their investment on crops that initially test non-compliant. Other comments urged USDA to provide for retesting provisions, including remediation activities, that more favorably support farmers who seek to salvage crop value. Some of these comments requested that USDA clarify retesting procedures if a harvest has already occurred.

Statutory implications: Comments from Tribes and other stakeholders expressed concern that the 2018 Farm Bill only requires ''procedure for effective disposal,'' and urged USDA to allow producers greater regulatory leniency as they become familiar with growing a new crop by permitting alternative remediation methods that do not require crop destruction.

AMS Response: This final rule covers testing of the hemp plant to determine acceptable THC levels as required by the 2018 Farm Bill. This final rule does not cover testing for seeds and stalks individually nor does it cover processing or the licensing of processors.

As described in the IFR, hemp exceeding the acceptable THC level may not be further handled, processed, or enter the stream of commerce. The licensee shall ensure the disposal of the noncompliant crop. Before such disposal occurs, AMS believes it important and necessary that hemp growers be provided the opportunity to remediate THC from non-compliant crops in order to stave off financial risk associated with the loss of investment in their hemp crop.

AMS agrees with comments that consider remediation as a viable activity for farmers to minimize crop loss and to salvage the value of remaining compliant plant material. For this reason, the final rule provides regulatory flexibility that allows remediation activities—either disposing of flower materials and salvaging the remainder of the plant or blending the entire plant into biomass plant material. Through both forms of remediation, the farmer may be able to minimize losses and, in some case, produce a return on investment. A guidance document will be published with this rule to illustrate approved remediation techniques. USDA will also finalize the guidance document on disposal techniques.

Additionally, AMS determined that pre-harvest sampling and testing yield the truest measurement of THC concentration at the point of harvest. AMS further maintains this position in this final rule. AMS notes that if the test results show the original THC

[25] Caravetta, John: Arizona Department of Agriculture Additional Comments on USDA Interim Final Rules on Domestic Hemp Production; *https://beta.regulations.gov/comment/AMS-SC-19-0042-5645.*

[26] Petersen, Thom: Minnesota Department of Agriculture Comments on USDA Interim Rule: Establishment of a Domestic Hemp Production Program; *https://beta.regulations.gov/comment/AMS-SC-19-0042-5548.*

concentration exceeded the Federally allowable limit, the licensee may request the laboratory retest the pre-harvest sample. This retest would not entail the use of post-harvest plant material. However, if the farmer elects to perform remediation activities under a USDA, State or Tribal plan, an additional sampling and testing of the remediated crop must occur to determine THC concentration levels. Only those crops testing below the acceptable hemp THC level limit will be considered successfully remediated and thus allowed to enter the stream of commerce. All other remaining non-compliant crops must then be properly disposed.

AMS believes the inclusion in the final rule of remediation and post-harvest sampling after remediation provides the additional flexibility requested by commenters that expressed the need for farmers to have greater opportunity of success entering the hemp production industry.

Reverse Distributors

The IFR requires the collection and destruction of noncompliant material by a person authorized under the CSA to handle marijuana, such as a DEA-registered reverse distributor, or a duly authorized Federal, State, or local law enforcement officer or their designee.

Comments: Comments largely opposed the use of DEA-registered reverse distributors to dispose of noncompliant material. Comments asserted that many States and producers operating under the 2014 Farm Bill have implemented policies related to disposal of non-compliant material that do not require DEA involvement. Comments argued there are relatively few registered reverse distributors on DEA's 2019 list and pointed out that some of the major hemp production States have very few or no registered reverse distributors. Comments claimed existing DEA-registered reverse distributors haven't the resources or training to oversee destruction of large plots of agricultural crops in remote areas, and that such limitations would create a compliance bottleneck. Comments asked USDA to clarify who would be responsible for paying DEA reverse distributors for crop disposal services.

One comment asserted that DEA regulations prohibit reverse distributors from accepting controlled substances from other than DEA registrants, making it impossible for hemp farmers to release non-compliant hemp directly to DEA reverse distributors. One comment suggested that hemp growers could automatically become reverse distributors if their hemp samples test above acceptable THC levels so growers could legally manage crop destruction on their own. Another comment asked whether DEA would allow for a waiver from the current limitation on reverse distributors to allow reverse distributors to accept cannabis material for disposal from individuals or entities who cultivate hemp in accordance with their state's approved plan, but who do not hold a Schedule I DEA registration.

Numerous other comments expressed concern that alternative law enforcement agencies (non-DEA) will face the same resource constraints as the DEA. Comments described how State law enforcement officials are typically unwilling or unavailable to participate in the disposal of noncompliant crops and suggested this is due to the lower prioritization of hemp compliance oversight in light of more pressing public safety and crime intervention responsibilities. For example, a comment representing rural counties said this conflict in priorities is particularly acute in rural areas where resources are already stretched too thin. The comment asserted that while preventing serious violations of controlled substances laws is a priority for law enforcement agencies, hemp with slightly elevated THC levels is unlikely to be sold as marijuana. The comment advocated formulating hemp disposal procedures entirely outside the scope of law enforcement. One comment worried about the stress and stigma on growers having law enforcement personnel descend upon their farms in connection with hemp disposals. Other comments supported allowing State regulatory authorities to oversee or authorize disposal of non-compliant material, asserting that States can safely and efficiently complete the process at a much lower cost to producers and States.

Some comments supported disposal of non-compliant material by law enforcement. Some suggested that States, rather than Federal agencies, work with State and local law enforcement to handle disposals. One comment suggested that the definition of ''duly authorized Federal, State, or local law enforcement officer'' be modified to include disposal under the authority of State or local law enforcement in order to address the anticipated increase in required disposals. Finally, comments from Indian Tribes urged USDA to expand the definition of law enforcement in the final rule to include Tribal law enforcement.

AMS response: AMS acknowledges the many stakeholders who expressed through comment concerns about the collection of non-compliant plants by DEA-registered reverse distributors, or duly authorized Federal, State, or local law enforcement. AMS notes that law enforcement policies and priorities are not set by USDA and the 2018 Farm Bill does not provide this authority. To address public comment, this final rule will retain disposal requirements stated in the IFR but will further clarify what ''disposal'' means relative to the role of reverse distributors.

AMS relaxed the disposal requirements enacted under the IFR in February 2020. This decision followed consultation with DEA. This provided growers the added flexibility to conduct on-farm disposal activities themselves, without required onsite law-enforcement supervision. Based on positive feedback received from State and Tribal oversight agencies and producers following the relaxation of disposal requirements, AMS is permanently allowing for on-farm disposal flexibility in the final rule.

Under this final rule producers do not need to use a DEA-registered reverse distributor or law enforcement to dispose of non-compliant plants (7 CFR 990.3(a)(3)(iii)(E) and 990.27) if the producer disposes of the plants using one or more of the means described by USDA at *https://www.ams.usda.gov/rules-regulations/hemp/disposal-activities.* It is the agency's intent that these methods allow producers to apply common on-farm practices as a means of disposal while rendering the controlled substance non-retrievable or non-ingestible. Producers must document the disposal of all non-compliant plants in accordance with § 990.27. Reporting can be accomplished by providing USDA with a completed: ''USDA Hemp Plan Producer Disposal Form.''

Cannabis with a THC level of over 0.3 percent on a dry weight basis is a controlled substance, that must be disposed of onsite according to the disposal methods approved by USDA. The State, Indian Tribe or the state's department of agriculture wishing to have primary regulatory responsibility have the responsibility for establishing protocols and procedures to ensure non-compliant plants are appropriately disposed of in compliance with applicable State, Tribal, and Federal law. States and Indian Tribes operating under approved hemp production plans must notify USDA of any occurrence of non-conforming plants or plant material and provide the disposal record of those plants and materials monthly. There is a similar requirement for producers operating under the USDA plan. Additionally, USDA will conduct

random audits of licensees to verify hemp is being produced in accordance with the provisions of the rule.

State and Tribal plans must still include procedures to verify disposal but would have the additional flexibility to use in-person verification where deemed necessary or, when practicable, require producers provide pictures, videos, or other proof of disposal. AMS believes this decision will further alleviate the strain to oversight resources and allow State and Tribal authorities to more efficiently and autonomously monitor hemp production in their jurisdictions.

Additionally, the final rule expands the definition of ''law enforcement'' to include Tribal law enforcement.

Negligent Violation Threshold

The IFR specified that a producer commits a negligent violation when a reasonable effort to grow hemp is made and the total THC dry weight concentration exceeds 0.5 percent.

Supporting an increase of negligent violation threshold: Most comments that addressed negligent violations opposed the 0.5 percent total THC threshold in the IFR, and many advocated raising the threshold to 1.0 percent or higher, offering suggestions ranging between 0.99 and 5.0 percent total THC. Comments said the 0.5 percent threshold can be too easily breached by prudent farmers for any number of environmental or genetic factors that are beyond grower control. One comment supported the 0.5 percent negligence threshold, and others noted it but signaled neither support for nor opposition to the threshold particularly.

Some comments suggested that a 1.0 percent threshold would provide a safe environment in which both new and veteran farmers can operate comfortably. Comments in favor of a 1.0 percent negligence threshold noted that several States and other countries have established a 1.0 percent threshold for their jurisdictions that seems reasonable and achievable in most situations. A few comments pointed out that a 1.0 percent threshold is relatively low compared to the THC levels in marijuana, which commenters said typically range from 10 to 15 percent. Other comments advocated higher thresholds that they claim would give farmers the peace of mind to continue building an industry that is just taking off. Finally, one comment asked whether an MU was figured into the IFR's negligent violation threshold and advocated setting the threshold at 1.5 percent THC and specifying that that threshold includes the MU.

A state department of agriculture estimates that 42 licenses would need to be revoked at 0.5 percent stated in the IFR. They further estimate that this number would shrink to only about 12 licenses were the threshold increased to 1.0 percent under the final rule.

A state hemp steering committee commented that a 0.5 percent threshold will deter the experimentation of different varietals and that this research is essential to discovering which varietals work best in different climate zones and soil types as well as for the development of better genetics.

Another state department of agriculture explained that 13 percent of the hemp samples taken in 2019 tested over the THC limit. The average THC level in those failures was 1.07 percent Delta-9 THC post-decarboxylation. A hemp association within the state agreed with the commenter's recommendation that the level defined for negligence should be increased to 1 percent THC.

One comment reported that more than 5.5 percent of the pre-harvest samples collected under the State's plan in 2019 were found to have a THC concentration of greater than 0.5 percent. Another comment reported that 13 percent of hemp samples taken in 2019 tested over the THC limit. According to the comment, data for all years through September 2020 show that most hemp lot failures occur between 0.4 percent and 1.0 percent THC.

Data submitted with a comment from a State University researcher showed that 8.5 percent of 3,508 samples tested during 2018–2020 exceeded the IFR's negligent violation threshold of 0.5 percent THC. The comment said that 65 percent of those would not be considered negligent violations if the threshold were raised to 1.0 percent. Framing study results another way, the comment explained that at a negligence threshold of 0.5 percent, the State would have revoked 42 producer licenses, whereas at a 1.0 percent threshold, the State would have revoked only 12 licenses, given three negligent violations in a five-year period, a reduction of 72 percent in revocations by changing the threshold to 1.0 percent.

One comment reported that based on test results they'd seen this year, 1.0 or 1.5 percent would be a more appropriate threshold for negligence, due to the heterogeneity of the plant and the awareness of the industry.

Implementation timeframe: Some comments suggested that it is too early in the industry's development to determine a realistic numeric threshold, and they recommended USDA delay fixing a uniform standard until the industry has more experience and better understanding of the relationship between all the hemp production factors. Still other comments asserted that negligence should not be determined numerically at all, but by a determination about the farmer's intent. Several comments said that ''negligence is a state of mind, not a number.''

General comments on 0.5 percent threshold: Several comments argued USDA arbitrarily determined the 0.5 percent negligence threshold. One comment asked USDA to provide the research reports used to inform the selection of the 0.5 percent negligence threshold. Another questioned whether USDA used test results based on the total THC standard established in the IFR to set the negligence threshold, since it was the commenter's experience that producers routinely report difficulty meeting that standard. One comment reported anecdotally that its farm sends three samples from the same composite lot sample to three testing laboratories and gets three different results, which the comment ascribes to the variation in lab procedures. Another comment said that there are no established uniform standards for cannabinoid testing, such that even from reputable labs it will not be entirely clear what the results mean.

The impact of the 0.5 percent threshold on production: Several comments said the 0.5 percent negligence threshold in the IFR provided very little buffer (at 0.2 percent) between the 0.3 percent THC allowed under the program and the 0.5 percent threshold for determining a negligible violation. What several comments called a ''safe harbor'' for growers was nevertheless considered too narrow by many, saying that it left virtually no room for error. Comments argued that requiring growers to both exercise reasonable care *and* produce crops with only 0.5 percent THC or less is too stringent a standard and does not really offer the ''safe harbor'' intended. One comment argued that USDA cannot provide a ''safe harbor'' for violations of the 0.3 percent THC cap because that cap is enforced by other Federal and State agencies. A few comments said that the THC levels in 2014 DEA confiscations averaged 11.84 percent THC and argued that the negligence level under USDA hemp program rules should be closer to the average DEA culpability level.

A comment from a state department of agriculture used 2019 production and testing data to demonstrate that raising the IFR's threshold from 0.5 percent to 1.0 percent could theoretically reduce

the number of its farmers exceeding the negligent violation threshold by more than 75 percent. Several comments advocated a 2.0 percent threshold, while others suggested the elimination of the negligence threshold altogether.

Comments highlighted uncertainty in the genetic variation of hemp varietals and other factors like weather conditions, soil type, plant disease, and pest pressures that may further exacerbate the risk of exceeding the 0.5 percent threshold. As well, comments explained that hemp plants mature rapidly just before harvest. One commenter described seeing plants go from 0.18 to 0.62 percent total THC in one week. Comments suggested that enforcing the 0.5 percent negligence threshold on growers who truly do not intend to grow marijuana is excessive penalization when THC levels can change that rapidly. Comments argued that it is not appropriate to add further penalties to hot crop destruction. Other comments suggested that administrative and logistical factors beyond the grower's control, such as bottlenecks in sampling and testing, can likewise create compliance risks for growers under the 0.5 percent threshold.

AMS response: Based on these comments, AMS is increasing the negligent violation to a 1.0 percent threshold. AMS acknowledges that a lower total THC threshold will result in a higher number of negligent violations. AMS also understands that factors beyond the control of farmers may cause an increase in total THC-levels, such as seed genetic, weather and climate, and may contribute to crops exceeding the negligent violation threshold. AMS believes that the data provided in the comments clearly showed that increasing the negligent violation threshold to 1.0 percent would diminish the risk that producers would incur negligent violations without adding a greater risk of non-compliant material reaching channels of commerce.

AMS also reviewed the test results of certified hemp varieties planted in Kentucky in 2017 and 2018 under its 2014 Farm Bill program. Kentucky has a certified seed program that it believes will yield hemp. The plants from the certified varieties tested below 0.8 percent THC concentration level. Additionally, AMS reviewed the test results of varieties that were eligible to be cultivated under the Nevada 2014 Farm Bill program in 2018. The plants from those varieties tested below 0.9 percent THC concentration level. Given those test results based on varieties that those two states believed would yield hemp, AMS determined that a 1 percent THC concentration level for negligence would account for the fact that a reasonable reliance on certified or eligible varieties may still yield a plant that tests above the acceptable hemp THC level.

The impact of the 0.5 percent threshold on crop research: Comments described the IFR's 0.5 percent negligent violation threshold as a rate limiting factor to industry innovation and hemp research. One comment said that hemp farmers, growing under pilot authorization of the 2014 Farm Bill, routinely planted multiple varieties of hemp to see which performed best. According to the comment, the low negligence threshold in the IFR discourages such hemp trialing and innovation because farmers face greater risk of receiving three negligent violations in one or two seasons and losing eligibility to grow hemp for another five years. Comments from research universities found the IFR's negligent violation provisions unworkable for institutions testing numerous varieties and production variables each season for the same reason. Comments suggested a higher threshold for negligent violation would give industry the regulatory flexibility to conduct research with reduced risk of violating regulatory requirements.

AMS response: AMS recognizes the violation threshold may incentivize (or disincentivize) innovation by research institutions and producers. AMS acknowledges more innovation and research across industry will bring more stability to stakeholders. The 1.0 percent negligent violation threshold provides new and existing producers across States and Indian Tribes additional flexibility to innovate and research with reduced risk for noncompliance. AMS believes the 1.0 percent threshold incentivizes innovation across industry more so than a 0.5 percent violation threshold.

Statutory implications: Some comments argued that establishment of the 0.5 percent negligence threshold in the IFR was arbitrary and capricious under the APA and asked USDA to provide more information about how the threshold for negligence was determined. Some comments asserted that *negligence* is a well-established legal doctrine, and they argued that USDA cannot artificially and arbitrarily declare a threshold for negligence. A couple of comments suggested that putting farmers on probation, suspending them from program participation, and requiring them to destroy their crops based on an arbitrary number rather than on court findings is a violation of due process under the U.S. Constitution's Fifth Amendment.

AMS response: Congress established the definition of hemp and defined the threshold of THC concentration at 0.3 percent dry weight. The statute did not define negligent violation. USDA derived the definition of negligence from the definition of negligence in Black's Law Dictionary (10th ed. 2014). USDA set the level of total THC concentration at 0.5 percent for a negligent violation to establish a clear buffer so that any crop testing out of compliance would not automatically trigger a violation. The 0.5 percent was based on data from three states participating in the 2014 Farm Bill pilot program. AMS believes raising the negligent violation threshold from 0.5 percent to 1.0 percent in the final rule provides a greater buffer and reduces farmers' exposure to risk of violation accrual and license suspension.

Oversight Authority: Several comments suggested the government should have the ability to determine negligence and culpability based on facts and circumstances surrounding violations and not solely on a numeric threshold. Other comments asserted that the 2018 Farm Bill's language leaves room for an Indian Tribe to apply its own negligence standard. Similarly, other comments from the industry said that States should be allowed to evaluate potentially negligent violations of State plans.

AMS response: With regard to violations and culpability determination, AMS seeks to establish a regulatory framework that ensures consistency in oversight activities of hemp production. Variations of criteria or the use of subjectivity in oversight could result in bias against or leniency to some hemp farmers simply based on location. Leaving the decision of what constitutes a negligent violation to abstract factors rather than objective metrics may result in differences between States and Indian Tribes. Because farmers may grow hemp in different locations, and in some cases are subject to multiple oversight authorities, it is important the thresholds for violations are consistent across oversight authority jurisdictions to which the grower is responsible. Having a threshold that is well established and transparent provides a minimum framework to producers.

In developing the compliance requirements for State and Tribal plans, USDA recognizes that there may be significant differences across States and Indian Tribes in how they will administer their respective hemp programs. Accordingly, if, at a minimum, the requirements of the 2018 Farm Bill and applicable parts of this

regulation are met, States and Indian Tribes are free to determine whether or not a licensee under their applicable plan has taken reasonable steps to comply with plan requirements. As previously stated, this final rule provides that a producer shall not be subject to more than one negligent violation per calendar year. State and Tribal plans may tailor the timing around this requirement to align with their growing season or other applicable dates.

Financial and business risk: Several comments linked the 0.5 percent THC threshold with a greater likelihood of producers committing negligent violations, receiving corrective action plans, and even committing culpable negligent violations. Comments stressed that a low negligence threshold puts farmers at higher risk of accumulating negligent violations, even when growers take reasonably prudent steps to mitigate against the production of noncompliant plants. According to comments, this, in addition to the loss of the crop, jeopardizes farmers' access to crop insurance and business loans.

Comments addressed the negative impact of the accrual of negligent violations on the financial stability of the individual business. They described how a hemp grower's access to credit and insurance is jeopardized when negligent violations accumulate and lead to a determination of culpable negligence. Comments explained that lending institutions and insurance providers look for risk factors. They also raised questions about how the accrual of negligent violations may be interpreted by lender or providers. Comments said that many insurers will not cover crop losses if losses are due to the growers' negligence. Commenters implored USDA to explain how violations can lead to determinations of culpable negligence and to provide guidance about how a reasonable farmer can avoid growing noncompliant hemp.

AMS response: AMS acknowledges institutional lenders view violations as risk factors in decision making. AMS also notes that not all culpable violations are derived from the accrual of negligent violations. Culpable violations may be the result of producers violating other parts of the 2018 Farm Bill. However, the 2018 Farm Bill explicitly considers certain actions as constituting negligent violations. AMS's intention is to provide a threshold between 0.3 percent THC level and what would be considered a negligent violation so not all hemp that tests over the 0.3 percent be considered a negligent violation. Because a producer will not have committed a negligent violation every time he or she grows hemp with a concentration of hemp above the 0.3 percent level, this will assist producers when requesting loans or other financial assistance. AMS will provide risk mitigation activities such as remediation and disposal provisions as well as increasing the negligent violation threshold to 1.0 percent to diminish the number of violations that are considered negligent.

Some producers have more than one field or farm in a state or across state boundaries. Assigning more than one negligent violation might be detrimental to these producers. For example, if a producer uses the same seed in multiple locations, and that seed results in a THC level over 0.3 percent, all of that production must be disposed or remediated. All of these locations could be determined a separate violation. However, AMS wants to clarify that a producer may not be found to have committed more than one negligent violation per year.

Barriers to entry: Several comments suggested that a 0.5 percent negligence threshold threatens the survival of farmers in an emerging industry. Comments suggested that the low threshold is a barrier to entry for new farmers or farmers with no experience growing hemp, who risk high initial capital investments to establish operations. Comments argued that the low threshold favors larger farms using industrialized hemp varieties and production practices, and that the low negligence threshold in the IFR would unnecessarily criminalize farmers working with a legal agricultural commodity.

AMS response: All persons interested in growing hemp must meet the eligibility criteria established in the 2018 Farm Bill and this final rule. Negligent violations document instances when the statue or rule are violated such as when a grower fails to report a legal description of land on which hemp is grown or fails to dispose of a noncompliant crop. All farmers, regardless of the size of their operations, face the same set of requirements. Even though the 2018 Farm Bill sets the THC concentration level at 0.3 percent, it does not define what THC level in cannabis will give rise to a negligent violation. Left undefined, this lack of definition is troublesome as it could make enforcement uneven among States and Indian Tribes. The IFR provided that hemp producers do not commit a negligent violation if they make reasonable efforts to grow hemp and the marijuana does not have a THC concentration of more than 0.5 percent. Increasing this threshold to 1.0 percent benefits producers, including small and new farmers, that intended to grow hemp but whose crops tested ''hot'' even though they made reasonable efforts to grow hemp.

Resources and enforcement: One State commented that it currently enforces a 1.0 percent negligence threshold. According to the comment, lowering the threshold to 0.5 percent would significantly increase the rate of negligent violations in that State, require more State and Federal resources to enforce the regulation, and be financially burdensome to novice farmers. It stated that the 0.5 percent negligence threshold is lower than the threshold DEA designates as the upper THC limit for ''inconclusive marijuana/hemp.'' The comment found the IFR's 0.5 percent threshold inconsistent with some laboratories' testing capabilities and suggests raising the rule's threshold to 1.0 percent.

AMS response: AMS anticipates that the closer the negligent violation threshold is to 0.3 percent total THC, the greater the likelihood that oversight authorities issue more negligent violations. Moreover, whenever a producer commits a negligent violation, the oversight authorities must also establish a corrective action plan as required by regulation. AMS believes that increasing the negligent violation threshold to 1.0 percent would therefore reduce some burden to oversight authorities by reducing the number of negligent violations and corrective action plans that oversight authorities must issue and administer. AMS notes that regardless of the negligent violation threshold, any crop exceeding the Federal allowable total THC concentration must be disposed of according to regulatory requirements. AMS disagrees that the DEA's enforcement program for marijuana should affect how AMS manages its compliance program for hemp.

State and Tribal Resources

The IFR required States and Tribal governments to certify they have the resources and personnel to carry out the practices and procedures of their respective plans. Further, the IFR provided for audits of State and Tribal plans to include review of the resources and personnel employed to administer and oversee its approved plan. Finally, the IFR specified audit reporting requirements and remediation steps for States and Tribal governments found to be non-compliant with USDA requirements.

Comments: Comments from many States expressed enthusiasm for partnering with USDA in the regulation

of domestic hemp production. The comments were supportive of establishing a national regulatory framework that would bring clarity and consistency to the regulation of hemp production across the U.S. They emphasized that many States have enacted legislation to facilitate the regulation of hemp production. No comments received from the States demonstrated a reluctance to work with USDA in establishing regulations.

The requirement for States and Indian Tribes to certify to USDA that they have the capacity to administer a domestic hemp program was not addressed explicitly in any of States' comments. However, many of the comments from the States and Indian Tribes registered concerns with some aspects of the IFR. Most of the comments from States and Indian Tribes delineated areas where the burden of regulatory oversight might be reduced, or efficiencies realized, by revisions to the regulations.

Several comments expressed concern that State and Tribal governments would not be able to perform their responsibilities under the program as currently established. One comment said the lack of appropriate personnel, training, and protocol would lead to an untenable backlog in the collection and testing of samples. Many comments focused on the sheer number of samples that must be collected, processed, and tested under the program. The shortage of DEA-registered labs in the States and the new sample collection protocols were also areas of concern, although that was addressed shortly after the IFR went into effect with the announcement of enforcement discretion.[27] Points of potential weakness in the States' and Tribal governments' implementation of the IFR were raised by many commenters, both explicitly and in implied remarks. Many of the comments referenced State and Tribal government infrastructures being strained under the new regulatory requirements, especially during peak harvest intervals, and that those factors could contribute to the failure of the States and Indian Tribes to fulfill their oversight obligations. A number of comments alluded to the burden of any breakdown in the regulatory scheme being borne by hemp producers directly, as with samples that are not timely collected by State inspectors and the samples then testing ''hot'' without any remediation options, or labs that are not able to process samples due to capacity issues.

Numerous comments made recommendations to address the increased regulatory burden on States and Tribal governments. Many recommended changing the 15-day post-sample harvest period to 30 days to allow more time for States and Tribal governments to collect and process samples, balance workloads, and alleviate potential backlogs. In addition, several comments contended that the increased sampling requirements in the proposal (*i.e.* requiring sampling of every lot) would burden the process and contribute to delays in growers receiving results. Those comments recommended revising the sampling protocol (reducing number of samples required per producer) to help relieve the strain on government resources. Lastly, comments suggested that allowing labs that are ISO 17025 accredited to process samples, as opposed to only allowing labs with DEA registration, would enhance the State's ability to provide validated, accurate, and timely testing.

One commenter said they had talked with a number of States that expressed strong concerns over the additional burdens as a result of the IFR. The commenter further stated that some states they are considering whether to ''opt-out'' of administering a hemp production plan themselves in favor of USDA administering a plan.

Lastly, one comment stated that if there was a bureaucratic slow down or insufficient resources on the part of USDA, a farm should be allowed to have some recourse to be able to harvest. That comment, and others that were similar in spirit, effectively questioned what mitigation efforts would be undertaken for producers in the short run if a State or Indian Tribe ultimately lacks the necessary resources and personnel to administer its plan and fails to perform the obligations it certified it could undertake.

AMS Response: The issues raised in these comments are mostly addressed under other sections in this rule (*e.g.,* 15-day harvest window, laboratory accreditation). AMS agrees that there are regulatory burdens of this program, which are discussed in this rule. States and Indian Tribes have multiple options that would allow producers in their States or territories to grow hemp. States and Indian Tribes can develop their own plan, send their producers to grow under the USDA plan, or States can continue under the 2014 Farm Bill pilot program. Many States and Indian Tribes assess fees on producers to cover their expenses for sampling, oversight and other costs of this program. These options provide producers different alternatives to grow hemp under different regulatory schemes. Additionally, USDA has decreased the risk of the regulatory burden on States and Indian Tribes being borne by hemp producers by addressing various issues commenters identified that could cause States and Indian Tribes to be unable to timely fulfill their responsibilities such as by modifying the sampling protocol and changing the 15-day post-sample harvest period to 30 days. Other burdens associated with this final rule that the producer must cover should be considered by producers, as in any agricultural business, before a decision to grow hemp is made.

Appeals—Denial of Application and Appeal of Test Results

The IFR addressed the denial of applications to grow hemp in Part V. APPEALS. The IFR also provided an option to appeal test results in which producers can request that a second test be performed if they disagree with the first test results.

Comments: A comment recommended that USDA establish a clear deadline for applicants who wish to appeal the denial of their grower applications. The comment noted that the IFR already required a State or Indian Tribe appealing the suspension or revocation of a hemp production plan to file an appeal ''within the time-period provided in the letter of notification or within 30 business days from receipt of the notification, whichever occurs later.'' The commenter noted that no such similar deadline is identified for applicants who have been denied USDA hemp grower licenses.

One comment asserted that denials of ''licensure'' may occur for ''whatever reason.'' Two other commenters submitted examples of State regulatory language from California and Ohio, each of which include provisions for the denial of applications for license.

Several comments suggested USDA establish an appeals process through which someone with a felony conviction may demonstrate completion of appropriate steps to become eligible hemp producers.

AMS response: This rule retains the IFR provision that an applicant for a USDA hemp production program license may appeal a license denial to the AMS Administrator. USDA licensees may appeal denials of a license, renewals, license suspensions, or license revocations to the AMS Administrator must be submitted in writing and received within 30 days of the receipt of notification of the denial or within the time-period provided in the letter of notification, whichever occurs later. State and Tribal plans reviewed and approved by USDA are

[27] *https://www.ams.usda.gov/rules-regulations/hemp/enforcement.*

required to include an appeal process for producers to appeal licensure decisions. In response to the comment that USDA should establish an appeals process through which someone with a relevant felony conviction may demonstrate completion of appropriate steps to become eligible hemp producers, it is important to note that limitations as a result of relevant felonies are set in the 2018 Farm Bill.

Appeals—Technical

The IFR stated that producers can request a second test be performed if they disagree or have doubts about the original test results.

Comments: One comment indicated that if there is a discrepancy between compliance testing for THC concentration, there needs to be a process for farmers to appeal. Another comment noted that no administrative appeal process exists for producers who wish to challenge a decision they believe adversely affects them, such as test result. Another commenter cited personal experience with one State agriculture department and described as ''unfair'' a regulatory system that does not allow for an appeal process through which a farmer may contest test results.

AMS response: USDA is maintaining its position that producers *under a USDA plan* are able to request a second test be conducted when they do not agree or have questions about a test result. This rule provides flexibility to allow States and Indian Tribes to provide for retesting if the State or Indian Tribe chooses to do so.

Transportation and Shipping Documents

Under the 2018 Farm Bill and the IFR, neither States nor Indian Tribes may interfere with the transportation of lawfully produced hemp through States or Tribal territories, even if hemp production is prohibited within a particular State or Tribal territory. Public comments related to transporting hemp focused primarily on facilitating the interstate transportation of hemp.

Interstate commerce: Many comments applauded the IFR's reiteration of the statutory provision that allows for interstate shipments of lawfully produced hemp and hemp products without interference by State or Tribal law enforcement. Some asked USDA to clarify that prohibited interference includes that from State, Tribal, or Federal law enforcement, including DEA. Other comments wanted confirmation that interstate commerce includes entry into and egress from Tribal territories and that Tribal hemp production licenses be honored for purposes of interstate commerce transport and commerce.

Commenters stated they had already encountered situations where States passed temporary regulations conflicting with the 2018 Farm Bill and impeding interstate commerce. For example, comments noted an Idaho Executive Order—Transportation of Hemp—issued in 2019, that they claimed would ''excessively frustrate interstate hemp transportation and growth of the hemp industry.'' One airline carrier comment explained that under this Order, ''transporters may have to stop, get inspected, and be subject to detention each time they cross jurisdictional boundaries'' and that airlines would avoid carrying hemp if this issue is not remedied.

Comments from Indian Tribes expressed concern that despite the 2018 Farm Bill, Tribes transporting hemp through States have a bias against Tribal hemp production. There were suggestions of the use of a USDA form or stamp authorizing transportation to address these obstacles. One commenter also requested that USDA provide for recourse for Indian Tribes that are prohibited from moving hemp through neighboring States.

AMS Response: At this time, USDA recommends that transporters carry a copy of the producer's license or authorization, as well as any other information the governing State or Indian Tribe recommends or requires that will validate that the transporter is transporting legally-grown hemp. As allowed under the 2018 Farm Bill, States and Indian Tribes can be more restrictive, which includes possible transportation paperwork requirements by States or Indian Tribes. USDA is not adding transportation paperwork requirements to this rule because it does not have jurisdiction over common carriers or other types of transporters.

Comment: A comment asserted that intrastate commerce of hemp that does not meet all the requirements of the IFR should remain under the State's authority, and farmers producing hemp compliant with the 2018 Farm Bill but not the IFR should be allowed to do so, as long as that hemp is not transported across State lines. The comment advocated for no Federal preemption, citing to section 297B(a) of the 2018 Farm Bill, which provides that ''nothing in this subsection preempts or limits any law of a State or Indian Tribe that (i) regulates the production of hemp; and (ii) is more stringent than this subtitle.''

AMS Response: The 2018 Farm Bill does not preempt State law provided that the State adopts a plan that is approved by USDA and the plan may provide for more stringent requirements. A State has the responsibility for enforcing the requirements of its plan. Thus, hemp that is produced under a State's plan should meet the requirements of the final rule.

Shipping Documentation: Several comments encouraged USDA to facilitate the unimpeded flow of hemp in interstate commerce by implementing identity preservation or tracking systems or requiring the use of standardized shipping labels, packaging, or other documentation to certify to stakeholders and law enforcement authorities that the cargo in transport is Federally legal hemp. Comments suggested the use of USDA-issued stamps or forms that are recognizable, understood, and accepted by all law enforcement authorities. Several Indian Tribes made this suggestion because they are concerned about law enforcement transportation issues, particularly in Idaho, South Dakota, Maine, New York and Wisconsin. According to comments, such forms could verify that cargo hemp is compliant with USDA-approved production plans. Other comments suggested the use of a standardized bill of lading across the industry that sets out essential information about the shipment for easy reference by transporters, regulators, processors, and law enforcement officials to ensure all loads have been lawfully produced in accordance with Federal, State, or Tribal law. A comment from an association of county agriculture commissioners and sealers suggested USDA require the officially certified lab report to accompany shipments of hemp product during interstate shipment.

Comments suggested various commercial systems for recognizing legally produced hemp in transport. Other comments asked USDA to devise a standard documentation system for hemp carriers that would more easily absolve them of legal liability related to transporting hemp. Comments recommended that USDA coordinate with the hemp industry; Federal agencies such as DEA, the Department of Transportation, and the Department of Justice; and State agencies, including law enforcement and transportation departments, to develop such documentation.

Some comments additionally recommended adopting specific hemp packaging and labeling requirements on the basis that they would support compliance and enforcement tasks. Some comments advised USDA to provide specific regulations for testing hemp in transit so that such testing, if

necessary, be conducted in a standard manner, consistent with the requirement that all pre-harvest Total THC testing be conducted by DEA-registered laboratories. Other comments recommended that hemp loads be sealed to ensure their integrity and mitigate the interference of illicit products.

Comments advocated that USDA host a central hemp database for reporting data applicable to all phases of hemp production that would be ''read only'' to law enforcement, saying such a system would be particularly beneficial in resolving questions related to interstate commerce. One comment advocated for the use of a centralized hemp clearinghouse to capture hemp flower transfer to processors or manufacturers for CBD extraction, including information on the licensed producers and receivers of raw materials, the total weight of materials being transferred, testing certificates indicating THC levels of the materials being transferred, and other State-mandated criteria, as well as information on the vehicles being used to transport the materials. It further recommended USDA evaluate methods to physically identify and segregate products containing hemp-derived CBD to differentiate legitimate from potentially illicit products.

AMS response: AMS understands the importance of ensuring safe passage of hemp across states and Tribal jurisdictions. Section 10114 of the 2018 Farm Bill specifically states that ''Nothing in this title or an amendment made by this title prohibits the interstate commerce of hemp.'' USDA issued a memorandum addressing this issue.[28] Several States already identified documents to facilitate transportation of hemp across states. AMS strongly encourages producers of hemp and carriers providing transportation services to provide the following documentation accompanying the hemp cargo: Copies of the laboratory testing report(s), hemp grower license, invoice/bill of lading, and contact information of buyer and seller. The 2018 Farm Bill does not provide specific authority to USDA to This final rule does not adopt any requirement for interstate transportation of hemp. As required by the 2018 Farm Bill, USDA is developing a database that will share information about hemp production with law enforcement. The database will identify the contact information for the producer, a legal description of the land on which hemp is produced, and status of the producer's license or other required authorization from the State or Indian Tribe.

''In-Process'' Material

Comments: Several comments mentioned ''in-process material,'' described as material made from otherwise qualifying hemp plant material, such as crude CBD oil and distillate, or as any hemp material that is compounded, blended, ground, extracted, sifted, sterilized, derived by chemical reaction, or processed in any way for use in the manufacture of hemp products. Commenters asked USDA to clarify that once hemp has been tested and allowed to enter commerce, it should be considered legal material thereafter. One comment suggested the establishment of specifications or guidance for any part in the ''in-process material'' manufacturing record where control is necessary to help ensure that specifications are met for the identity, purity, strength, and composition of the hemp products and, as necessary, for limits on those types of contamination that may adulterate or may lead to adulteration of the finished batch of the hemp product.

One comment explained the perception that in-process materials are not allowed to transfer freely between processors, causing bottlenecks in product processing. According to the comment, some hemp processors may be limited to performing only one step of a multi-step process to derive hemp products, such as distilling CBD oil and isolating the CBD molecule. It said processor-to-processor transfers of in-process hemp materials should be authorized between U.S. States with valid hemp programs, which would open a processing bottleneck and allow both hemp materials and cash to flow more freely. The comment asserted such authorization would improve prices for CBD end-products, which would trickle down to hemp growers.

Some commenters stated that it is commonly known that THC levels in initially compliant hemp may rise above the 0.3 percent delta-9 THC limit during subsequent processing. Commenters expressed concern that some jurisdictions believe the ''in-process material'' should be diluted to always maintain the level below 0.3 percent delta-9 THC, even during transportation to another processor. However, several comments argued that ''in-process material'' is neither consumer ready nor a ''finished'' product and that dry-weight measurements related to hemp THC levels are calculated on the initial plant material and not the finished product to ensure compliance with the threshold.

AMS response: The 2018 Farm Bill directed USDA to establish a national regulatory framework for hemp production in the U.S., and the final rule outlines provisions for this mandate. The IFR and this final rule do not cover hemp or its products beyond production. Further, DEA has issued regulations covering some of these products or ''in-process materials''.[29] Accordingly, this final rule does not address ''in-process materials,'' processors, end-products, processing of CBD or other cannabinoids or anything that may contain hemp or hemp byproducts.

Equal Treatment for Tribes

Comments: Some commenters said that final rule should provide Indian Tribes at least as many opportunities regarding hemp production and regulation as those granted to States and that the final rule should allow Indian Tribes to catch up quickly with States that have been allowed to develop production methods and markets under the 2014 Farm Bill provisions.

AMS Response: This final rule does not distinguish between States and Indian Tribes. USDA recognizes that both State and Tribal governments have the ability to authorize and to regulate the production of hemp within their States or territories consistent with the 2018 Farm Bill and the final rule.

Psychoactive Effects of Cannabinoids

Delta 9 THC or THC is the primary psychoactive component of cannabis. As mandated by the 2018 Farm Bill, hemp must be verified as having THC concentration levels of 0.3 percent or below on a dry weight basis.

Comments: Several comments referenced different studies to support conflicting positions regarding the psychoactive effects of THC and used study findings to argue that the IFR's THC limit should be revised. Many comments cited the ''Defining Hemp: A Fact Sheet'' from the Congressional Research Service, updated March 22, 2019, that said a level of about 1 percent THC is considered the threshold for cannabis to have a psychotropic effect or an intoxicating potential. Other commenters argued THC levels of 5 percent or more are necessary for marijuana to have a psychoactive impact or commercial value. Comments noted that hemp is generally characterized as plants that are low in delta-9 THC and high in levels of CBD,

[28] Memorandum from Stephen Vaden, Office of General Counsel to Sonny Perdue, Secretary of Agriculture, Legal Opinion on Certain Provisions of the Agriculture Improvement Act of 2018 Relating to Hemp (May 29, 2019).

[29] *https://www.govinfo.gov/content/pkg/FR-2020-08-21/pdf/2020-17356.pdf.*

the primary non-psychotropic compound. Many comments stated that research shows that CBD affects the ability of THC to bind to CB1 receptor in cells, thus blocking the psychoactive effects of THC.

Other comments representing health organizations stated that research is challenging the widely accepted premise that CBD is not intoxicating. They further stated that the THC found in CBD products can be intoxicating and has caused significant and serious consequences in terms of job loss, health, and exposure to pediatric populations. Some comments provided personal testimony that while using CBD for health benefits they had not experienced psychoactive or intoxicating effects.

Other comments reported that the United Nations standard STR/NAR/40 uses a ratio of ([THC] + [CBN])/[CBD] to determine whether a plant is likely to have a psychoactive effect.

AMS response: AMS appreciates understanding different views on the psychoactive effects of THC. However, this topic is outside the scope of the final rule, and AMS made no revisions to the program based on these comments. The 2018 Farm Bill defined hemp as having a THC concentration of 0.3 percent or less. Medicinal use of hemp or CBD is covered under the Federal Food, Drug, and Cosmetic Act, 21 U.S.C. ch. 9, sec. 301, *et seq.* and under the FDA's jurisdiction.

Miscellaneous Comments

Comments: One comment pointed out that the IFR's hemp definition did not include the application of an MU, but that the definition of acceptable hemp THC level does. The comment said references to the definition of hemp should be changed to refer to acceptable hemp THC level so there is uniformity across the final rule.

AMS Response: USDA has made references to acceptable hemp levels when appropriate. The acceptable hemp levels include the MU to account for differences in laboratory conditions or environments. There is no intention to change the definition of hemp that is stated by the 2018 Farm Bill.

Comments: Another comment recommended improving the clarity of the final rule by deleting the words ''or THC'' from the definition of delta-9 THC, as well as deleting the sentence ''For the purposes of this part, delta-9 THC and THC are interchangeable.'' The comment further recommended that the definition of Total delta-9 THC be expanded to clarify that it includes delta-9 THC combined with delta-9 THCA to account for the conversion of delta-9 THCA into delta-9 THC when the plant material is dried. Finally, the comment recommended that in all cases where ''THC'' is referenced throughout the final rule document with no further clarification, ''THC'' should be changed to ''delta-9 THC.'' The comment said these clarifications will be helpful in administration of the rule.

AMS Response: AMS is adding a definition of ''Total THC'' to clarify the use of the term in this rule. Total THC accounts for the conversion of THCA into THC. We believe using THC and delta-9 THC interchangeably is appropriate.

Comment: One comment claimed that making the IFR effective immediately gave farmers preparing for imminent harvest no time to comply with the new testing and threshold requirements, increasing their risk of producing plants that were legal under the 2014 and 2018 Farm Bill statutes but potentially illegal under the IFR.

AMS response: USDA's decision to make the IFR effective immediately was to provide a framework for the 2020 growing season. However, States had the option to continue operating under the 2014 Farm Bill. States and Indian Tribes were provided time to develop plans on time for their planting and harvest season.

Comment: USDA should work with other agencies, including DEA and DOJ, to develop cohesive information and guidance regarding enforcement related to hemp.

AMS response: AMS has worked with DEA and other agencies in developing these regulations to assure that the intent of the 2018 Farm Bill provisions for hemp are met. USDA is responsible for the regulatory oversight of hemp production and DEA and other law enforcement agencies are responsible for enforcing the law regarding marijuana.

Miscellaneous Comments—Out of Scope

In addition to addressing specific provisions of the IFR, comments also addressed other topics related to the hemp industry.

Comments: One comment advocated the creation of a USDA commodity checkoff program for one or more categories of hemp (*e.g.* grain, fiber, CBD) and recommended that USDA work with hemp industry trade organizations and stakeholders to administer checkoff funds to support hemp agronomic and market development. Another comment included a newsletter item quoting USDA as saying that such a program could be developed.

One comment asked USDA to support the hemp industry by adding hemp seed foods to those offered through school lunch and other government feeding programs.

One comment said that hemp extracts and concentrates and byproducts from hemp should be afforded the same legal status and protections as the hemp from which they originated.

One comment suggested that the IFR did not consider compliant hemp topical products that make up a large portion of the market or other applications that cannot be inhaled or ingested.

One comment advocated that hemp and CBD should be covered and protected under the Perishable Agricultural Commodities Act (7 U.S.C. 499 *et seq.*).

Some comments said farmers should only be allowed to sell hemp to licensed brokers, handlers, and processors, and not directly to the public. They further advocated requiring license information to be part of the documentation that accompanies hemp shipments.

A couple of comments urged USDA to establish good manufacturing practices for CBD manufacture.

One comment claimed that chemical and seed providers have developed aggressive tactics which may be used to hamper hemp producers.

One comment requested updating banking regulations to allow banks to do business with entities whose income is derived from hemp and/or legal cannabis. Another comment requested an examination on how bonding could protect hemp farmers against companies and contracts that have not been honored, causing financial harm to the grower.

One commenter suggested to discontinue the program totally or at least discontinue the CBD portion because there is too much potential for abuse and waste of taxpayer dollars. The commenter stated that it could be okay to continue the coverage for the seed and fiber. They also stated that USDA should not be in the marijuana business.

AMS received comments on the impact of the current statutory and regulatory structure on banking and insurance related to hemp production. Commenters expressed concern that the 0.3 percent THC ceiling and the required disposal of cannabis testing above 0.3 percent THC would hinder the ability of hemp producers to obtain insurance, loans, or other financial services. One commenter also urged AMS to clarify if the preemption language in section 10114(a) of the 2018 Farm Bill encompasses interstate banking, financial services, and

insurance transactions and if USDA intends to supersede, coordinate, or adopt guidance issued by other Federal agencies related to hemp production.

A comment suggested banks could offer insurance for crop losses if the hemp had a THC concentration that was greater than 0.3 percent but less than or equal to 0.5 percent, similar to offering coverage for losses due to factors beyond the grower's control, depending on various USDA culpability findings. Another comment advocated that crop insurance be available for hot hemp.

A comment stated that Non-Irrigated (NI) acreage should be uninsurable because good producers who are serious about growing the crop would not bother with NI acreage. Another comment discussed establishment of ''Earliest Plant Dates'' (EPD), Late Plant Period (LPP), and Final Plant Date (FPD), and references sections of what may be a State or Tribe plan and the difficulty of finding farmers growing hemp in comparable environments for determining such dates and insurance coverage. It also recommended developing a Replant Endorsement (with premium associated) to insure 50 to 75 percent of seed costs for replant. Finally, a commenter stated that germination tests should be required before the crop is planted and set a minimum standard of 85 percent germination—and those under that standard would be uninsurable. Several commenters argued that USDA should (1) ban hemp and hemp related products imported into the United States; (2) establish import limits on the number of clone material; (3) eliminate all imported hemp and concentrates into the U.S. for the next 2 years, except for trades to the Canadian marketplace, but exportation must still be open for our country and product markets outside the United States; and (4) establish clear rules on how imported hemp and hemp products will be regulated.

One commenter expressed concern about the current regulation of CBD as a prescription drug arguing that the prescription-only status for CBD is unwarranted and will facilitate the illegal market that continues to exist for these products. One commenter noted that the regulatory ambiguity resulting from the FDA's lack of guidance on CBD negatively impacts hemp producers and requires greater clarity.

One commenter raised concerns about the ability of farm workers seeing U.S. naturalization to be able to participate in hemp production based on a fear that U.S. Immigration and Customs Enforcement will view work in hemp production as an ''exclusionary activity'' that would be a barrier to naturalization.

Several commenters expressed concern regarding hemp production in close proximity to other agricultural crops. Commenters also expressed concern regarding drying and processing of hemp near other crops and residential areas. One commenter suggested that AMS support research on pollination and drift related to hemp production.

One comment asked USDA to clarify whether section 10114(a) of the 2018 Farm Bill extends to interstate banking, insurance, or financial services involving hemp and hemp products. According to the comment, it is not clear whether interstate commerce in hemp and hemp products necessarily includes the payment for any hemp and hemp products through various methods, such as wires, checks, automated clearinghouse transactions, credit card or other financial transactions, including loan proceeds.

One comment advocated the use of their company's blockchain technology to address industry and law enforcement concerns about chain-of-custody in sampling, transporting, and testing hemp.

One comment requested that a clear statement be included in the final rule that USDA concurs that the exportation of hemp and hemp products is legal. It noted that the 2018 Farm Bill does not prohibit exports, and stated, without providing any empirical evidence, that there is sufficient interest in exporting hemp and hemp products from the U.S. It also suggested that a dedicated tariff code for hemp and hemp-derived products be established to facilitate export trade.

AMS Response: These comments all address issues that are beyond the scope of the rule. This rule only covers the production of hemp. Issues such as promotion of hemp under a research and promotion program; adding this product to other programs including feeding programs or PACA; importing or exporting of hemp; who can produce hemp in the U.S.; processing the commodity; insurance and banking; research or setting production boundaries; requirements on further products such as CBD; or other subjects mentioned above, are not the subject of this rulemaking or within other USDA or federal, State, Tribal, or private industry responsibilities and authorities.

Comments on the IFR's Regulatory Analyses

Civil Rights Review

The IFR included a Civil Rights review that found the rule would not have adverse effects on protected persons or groups, deny them program benefits, or subject them to discrimination.

Comments: One comment indicated that small farmers face challenges related to costs of seed. Another commenter associated the destruction of non-compliant hemp as posing a great risk of economic hardship on hemp farmers, especially the small minority farmers.

Several comments from Indian Tribes explained that certain provisions of the IFR, for example laboratory DEA-registration requirements, the definition of key participants, and Tribal law enforcement availability, did not sufficiently account for the specific circumstances and challenges facing Indian Tribes across the nation such as the remote location of many Indian Tribes, the limited economic resources of Indian Tribes, and Tribal decision-making structures. Comments pointed out that this final rule must ensure Tribal civil regulatory authority to help Tribal nations build and implement successful plans. Other Tribal comments identified the requirements for the complete destruction of the plant as, ''disproportionately economically disastrous for our small Native American farmers,'' explaining that Native American farmers tend to be significantly smaller and operate on very small margins.

One commenter suggested that AMS reconsider the potential civil rights implications of this rule on the convicted felons because the IFR, if unchanged, will have a disproportionate negative impact on both Black and Latino Americans, who according to DOJ data, represent 38.8 percent and 37.2 percent (respectively) of the total population of Federally sentenced drug offenders. The commenter compares this data to the data from U.S. Department of Health and Human Services' rates of illicit drug use among White Americans (9.5%), Black Americans (10.5%,) and Latino American (8.8%).

Another commenter claimed that using ''flawed/inaccurate science with lower standards is a direct example of failing to preserve the protection of the public at large,'' and ''USDA cannot legally implement their proposed rules without violating the mission statement of the agency.''

AMS response: AMS considered the potential civil rights implications of this rule on minorities, women, and persons with disabilities to ensure that no person or group shall be discriminated against on the basis of race, color, national origin, gender, religion, age, disability, sexual orientation, marital or family status, political beliefs, parental status, or protected genetic information. Additionally, this rule would not deny any persons or groups the benefits of the program or subject any persons or groups to discrimination. This rule is neutral and of general applicability.

We also note that some of the burdens or hardship described in the comments are required by the 2018 Farm Bill. First, the 10-year ineligibility restriction applicable to persons convicted of a State or Federal felony is a requirement of the 2018 Farm Bill. Also, as stated previously the basis for the DEA lab registration is rooted to the statutory requirements of the Controlled Substances Act, that requires any laboratory that might potentially handle a controlled substance to undergo the DEA registration process and thus cannot be eliminated. Additionally, the 2018 Farm requires effective disposal of non-compliant plants.

Moreover, AMS conducted a Civil Rights Impact Analysis in accordance with USDA's Departmental Regulation 4300–004: Civil Rights Impact Analysis.[30] AMS's analysis did not find any evidence that the final rule would adversely or disproportionality impact hemp producers in protected groups, regions or Tribes as compared to the general population of hemp producers or State Departments of Agriculture.

Regulatory Impact Analysis

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives when an action is deemed to have significant impacts. If regulation is necessary, then agencies must select the action that maximizes net benefits, including potential economic, environmental, public health and safety effects, and equity. Executive Order 13771 mandates that agencies provide the best approximation of total costs associated with a new or repealed regulation. AMS prepared a Regulatory Impact Analysis (RIA) with the purpose of accomplishing these objectives.

Comments: Very few comments addressed the RIA specifically, but we received many comments with information related to assumptions that fed into the RIA such as percent of hot hemp, testing burdens, lab registration burdens. AMS addressed these comments in the general comment section and took into consideration information provided for the RIA.

One comment acknowledged that USDA's economic analysis was based on sound and reasonable methodology but said that its expectations were not confirmed by actual market events in 2019. The commenter compiled production data provided in other comments in an effort to present a more current analysis of the hemp market. The comment pointed out that the RIA underestimated the number of hemp production licenses that would be issued and hemp acres that would be planted in the 2019 growing season. According to the comment, while the RIA called only for a doubling of licenses beyond the 2018 benchmark, the actual rate of licenses increased by 476 percent in 2019. Similarly, the comment reported actual planted hemp acreage in 2019 to be close to 230,000 acres, well over the 155,000 acres assumed by the RIA. The comment went on to say that the rate of growth for new licenses outpaced the rate of growth for consumer sales by 3:1, while the RIA had assumed a 1:1 rate over the next four years. The comment explained that supply growth has outstripped demand and created significant market imbalance and, as a result, market prices have dropped and driven down revenues to hemp producers.

The comment cited the gross revenue for floral material estimated in Table 1 of the RIA, which ranges from $2,333 to $24,000 per acre under the assumption that two-thirds of an acre is planted for floral material. Based on market data published in November 2019, after the IFR's publication, the comment suggested that the actual range of gross revenue for floral material per two-thirds of an acre was $2,728 to $17,261. The comment then applied the variable cost of planting one full acre of floral material estimated in the RIA, $28,638 per acre, to this range of gross revenue. This calculation resulted in a loss of $11,377 to $25,910 per acre, which the comment said is incorrect given that the variable cost per acre of floral material was deducted from the gross revenue per two-thirds of an acre. For an accurate estimate of net revenue, it stated that gross revenue and costs must be represented in terms of the same unit of measurement.

The comment suggested that the downstream effects of an unbalanced economic supply equation would further disrupt the profitability of sectors that are intended to support the transportation, processing, and retail sales of the product. It cited sales data reporting a 50 percent decline in the price of CBD extracts and concentrates from April 2019, stating that the oversupply of hemp has affected the entire commercial supply chain.

The commenter disagreed with the methodology used to project the net social benefit of hemp per acre in the IFR, saying that methodology assumed social benefit is a static figure. The commenter asserted instead that social benefit is ''a fluid figure that is heavily influenced by time and supply and demand economics'' and that it will likely fall over time.[31]

Further, it argued that the estimated 2019 societal willingness to pay of $2,650 per acre, which was calculated in the RIA using Kentucky grower sales and planted acreage, is not representative of the rest of the United States. Based on the hemp product sales in Chart 1 of the RIA, the estimated return to producers of processor sales of 31 percent, which was calculated in the RIA by comparing Kentucky grower and processor sales, and total U.S. planted acres estimated in Table 3 of the RIA, the comment calculates a 2019 national societal willingness to pay of $2,325 per acre. This result indicates that the societal willingness to pay based on Kentucky data is 14 percent higher than the estimate for the United States as a whole. The comment also calculates a national societal willingness to pay for 2018 of $4,047, which illustrates that a decline in societal willingness to pay of 42.5 percent occurred in 2019.

The comment cautioned that the net social benefit calculated in the IFR was over inflated because it represents a point in time during the industry's infancy. The comment argued that the industry faces a market depression and recommended a quota system for licensing classified by intended use. In this recommendation, the comment offered a detailed approach to estimating acreage required to meet demand for hemp grown for use in the CBD market. The analysis resulted in an estimated 44,509 acres required to meet demand in 2020, 83,336 acres for 2021, 188,558 acres for 2022, 255,899 acres for 2023, and 309,773 acres for 2024. The comment expanded upon its recommendation of a quota licensing system, suggesting that a number of licenses be granted by range of acreage, thereby ensuring that a share of licenses is reserved for small farmers.

Another comment asserted that unless the IFR definition of hemp is revised to include cannabis with a total THC level

[30] *https://www.ocio.usda.gov/sites/default/files/docs/2012/CRIA%20DR%204300-004-final.pdf.*

[31] *https://beta.regulations.gov/comment/AMS-SC-19-0042-1490.*

of not more than 1.0 percent on a dry weight basis, it will not be economically viable to grow hemp for flower in the U.S. According to the comment, if the THC limits of the IFR are maintained in the final rule, the RIA should be revised to reflect the impact of the rule on total yield and CBD concentration of harvestable flowers, reduced value of CBD hemp seed, and the unknowable market value of CBD. The comment predicted that although the value of hemp seed for flower might be reduced marginally, other input costs would remain very high.

One comment recommended differentiation between hemp biomass and hemp flowers in the IFR's analysis of market prices for floral material. The comment said that hemp biomass refers to full plant material, including stems, leaves, and flowers, while hemp flower refers to the part of the plant that contains trichomes which houses richly and densely populated cannabinoid content. The comment said the prices in the RIA are consistent with prices for hemp biomass, and suggested prices for hemp flowers ranging from $25 to $800 per pound, depending on the percentage of CBD present.

Two comments asserted that USDA grossly underestimated the sampling time and cost in the IFR. Comments were concerned that readers might assume hemp sampling and testing costs fees are preset. The comments suggested that hemp sampling is a more complex logistical problem than contemplated in the IFR because of the geography and scope of sampling on farms. The comments encouraged USDA to calculate anticipated sampling costs to include a minimum number of hours for each step in the sampling process, and to consider factors such as travel time and coordination of supplies and personnel for the sampling effort.

One comment disagreed with the IFR statement that the new hemp production program would expand production and sales of domestic hemp, benefitting U.S. growers and consumers. The commenter said that production costs for his CBD hemp farm were approximately $16,000 per acre, but because of the IFR's restrictiveness and his resulting inability to bring the crop to full maturity, the crop would likely only return $9,000 per acre. The commenter said they were unwilling to make that kind of risky investment and was unwilling to decide whether to plan for future crops until USDA finalizes its rule.

AMS response: AMS is aware that the number of licenses and amount of acreage that were estimated in the RIA of the IFR were underestimated. Entrance of producers into the market spiked at an unexpected rate in 2019, driving up acreage along with licenses. AMS utilized the most current data available to it in its analysis of the hemp market in the IFR and the final rule.

Regarding the estimate in one comment of net loss ranging from $11,377 to $25,910 per acre, it is important for gross revenue and costs to be represented in the same unit of measure for an accurate net revenue calculation, which, in this case, they are not. The variable cost per one acre of floral material was deducted from the gross revenue per two-thirds of one acre of floral material, resulting in a larger loss than if calculated using the same unit of measurement. AMS has adjusted the calculation of net revenue in the table below using the market price data cited by the comment. AMS appreciates the comment's citation of its sources and utilized similar sources in the RIA of this final rule.

Planted acres	Yield	Price	Gross revenue	Variable cost	Net revenue
Low estimate					
2/3	1,000	$4.09	$2,727	$19,092	$(16,365)
1	1,000	4.09	4,090	28,638	(24,548)
High estimate					
2/3	1,200	21.58	17,264	19,092	(1,828)
1	1,200	21.58	25,896	28,638	(2,742)

Furthermore, AMS understands and appreciates the commenter's argument that net social benefit andsocietal willingness to pay are over inflated in the IFR. Due to the relative scarcity of industry data, AMS made many assumptions in its analysis in the IFR, some of which were not realized. In order to caution industry stakeholders of the volatility of the hemp market, however, AMS used variable cost estimates to calculate net returns to producers, which ranged from a loss of nearly $17,000 to a gain of $6,240. In the single year since publication of the IFR, a greater amount of data has become available to AMS, which allows the analysis in the final rule to rely less on assumptions that may not be actualized.

AMS only has the authority regarding hemp regulation granted to it by the 2018 Farm Bill. The recommendations to establish a quota system for issuing licenses based on intended use and to revise the definition of hemp such that it includes cannabis with up to 1.0 percent total THC on a dry weight basis are outside of the authority of USDA. The 2018 Farm Bill provided USDA no authority to regulate production volume. Additionally, USDA cannot adjust the statutory definition of hemp.

AMS has also reviewed the sampling procedures and costs characterized in approved state and Tribal plans to better estimate the time and resultant fees that will be charged to producers for sampling in the hemp program.

Small Business Impacts

AMS performed a Regulatory Flexibility Analysis (RFA) in conjunction with the IFR that considered the effects of the rule on small businesses particularly.

Comments: One organization that represents the views of small entities stated that small hemp producers have significant startup costs that affect their ability to be competitive in the hemp industry. The comment notes that hemp production is labor-intensive and has licensing and regulatory costs that are not typically incurred by producers of other agricultural crops. Small entities indicated that only those businesses with adequate capital and large-scale operations would be able to survive and comply with the requirements of this rule. Further, comments conveyed that this rule will raise real barriers to entry for small and disadvantaged producers and could prevent these critically important producer groups from even entering the hemp industry.

Other comments stated that the negative effects of the regulatory incongruence in the IFR

disproportionately affect farmers, in particular new and small farmers—and small or already disadvantaged hemp farmers will face additional risks if the IFR is not changed.

One comment claimed the 2014 and 2018 Farm Bills presented an innate prejudice for institutional research, including State departments of agriculture and institutions of higher education and this prejudice continued in the IFR. The commenter says this is similar to the bias of California's draft State plan, where individuals permitted to be grower or breeders, but the program's compliance burdens are effectively beyond the reach of most individuals.

Commenters stated that this rule will disrupt small producers who were successfully producing hemp under prior pilot programs. One organization reported that hemp producers have stopped growing hemp altogether until they can be certain about what the requirements for producing hemp. Comments also reported that some hemp buyers have not renewed their contracts. Comments stated that several of the provisions of this rule impose unnecessary burdens on small entities. Comments suggested that many of the sampling and testing requirements should be revisited and alternatives should be considered and analyzed to minimize the burden to small producers. In addition, comments said that small business are very concerned about the risk of losing their economic investment due to mandatory disposal, the lack of control over growing conditions, genetics of neighboring crops, and timing and precision of the testing.

Comments from State departments of agriculture expressed strong concern as to the additional burdens they would incur as a result of the rule. These burdens may be directly passed to small producers in the form of delayed responses to license applications, renewals, and appeals; testing backlogs; duplicative reporting requirements; new license fees; and other programmatic issues.

One comment claimed that, based on six years of administering their hemp program, many of the most rigid requirements of the IFR are not only unnecessary, but also likely to have a disproportionately adverse impact on new farmers and farmers with smaller operations. According to the comment, these farmers already face great risk in the current marketplace, and need regulatory help, rather than impediments, in order to grow and thrive. The comment urged AMS to provide a more sensible, flexible, and practical regulatory scheme to encourage industry growth.

*AMS response: A*MS understands that there is a great deal of uncertainty in the hemp industry currently and has made efforts to minimize any burden which may befall producers as a result of this rule. To that end, USDA is not charging producers any fees for licensing or collecting any fees from producers to support AMS' administration of the hemp program. The fee structure developed by States and Indian Tribes to administer their hemp programs lies outside of the purview of USDA. On average, AMS anticipates total fees paid by producers under a State or Tribal Plan to amount to $800 per grower. This amount includes licensing and other fees intended to generally fund the operations of States or Tribal Programs. Fees for sampling and testing, on average, amount to about $300 per lot. The cost for an annual background check for three key participants is $54. AMS estimates an annual reporting and recordkeeping burden of $129 per grower. Altogether, these costs total $1,283 per grower, assuming one lot requires sampling and testing. This total cost is 0.1 percent of $1 million, which is the largest amount in annual receipts that a grower may receive to be considered to be a ''small business'' under the Small Business Size Standards of the U.S. Small Business Administration (SBA).

In response to comments, AMS has revised its sampling and testing methodology to allow for performance-based sampling, which should reduce the burden on all producers, large and small. Section 990.3 details this revised methodology. In addition, AMS has modified its disposal requirements, and allows for remediation of noncompliant crops. These remediation options are described in § 990.27.

AMS understands the concerns raised by state departments of agriculture regarding the requirements of administering a commercial hemp program. For this reason, AMS has made every effort to provide States and Indian Tribes flexibility to administer their hemp programs, including whether they charge for fees or other costs or cover those expenses from other State or Tribal resources. If the burden for a State or Indian Tribe to administer its own hemp program remains too great, however, the State or Indian Tribe may elect to participate in the Federal plan and allow AMS to administer the program. By providing this flexibility, USDA believes it is less likely that the burdens on State and Tribal resources will be passed on to small businesses.

Tribal Matters

The IFR provided that States and Indian Tribes may submit hemp production plans to USDA for approval. Individual producers from States or Tribal territories that do not have USDA-approved plans may file separate applications for hemp production licenses under the general USDA hemp production plan. Below are several comments and AMS's responses regarding matters of particular concern to Indian Tribes and Tribal members.

Comments: Comments said the regulations fail to treat Indian Tribes on an equal basis with States by repeatedly failing to include the term ''Tribe'' when referring to the State and local jurisdictions. According to comments, by doing so, the regulations fail to respect Tribal sovereignty and self-government.

AMS response: USDA agrees that Indian Tribes must be treated the same as States under the regulations. There were a few occasions where USDA mistakenly left out ''Tribe'' from the language in the regulation. USDA is correcting these mistakes in the IFR by revising the language of the final rule to insert ''Tribe'' after ''State'' in the definition of *Law Enforcement Agency* in § 990.1; insert ''Tribe'' after ''State'' in § 990.24(a); and revise § 990.40(d), which incorrectly referred to ''States and territories of Indian Tribes,'' to refer to ''States and Indian Tribes''.

Comments: Several comments asserted that USDA should not define ''territory of an Indian Tribe'' and claimed that by doing so, USDA violates Tribal treaty rights to farm on Tribal territories. Comments argued that such a definition should be left up to each Indian Tribe. Further, comments contended that the definition of ''territory of an Indian Tribe'' at § 990.1 inappropriately refers to a criminal statute, 18 U.S.C. 1151, to define an Indian Tribe's territory and regulatory jurisdiction. Other comments supported the use of the Indian country definition, but asked for the removal of the requirement that the lands must be within the Indian Tribe's jurisdiction, primarily because it causes uncertainty as to whether Indian Tribes may regulate hemp production on non-Indian owned fee lands within a Tribe's territorial boundaries. Comments also asked that AMS clarify that States cannot interfere with hemp production within the territory of an Indian Tribe.

AMS Response: If an Indian Tribe does not assume primary jurisdiction over the Tribe's Indian territory, USDA has jurisdiction over the hemp production on an Indian Tribe's

territory pursuant to the 2018 Farm Bill. USDA, therefore, must know the limits of its jurisdiction over such Indian territory, just as it must know its jurisdiction over lands ordinarily within State jurisdiction.

The IFR defined ''territory of the Indian Tribe'' at 7 CFR 990.1 as having the same meaning as ''Indian Country'' in 18 U.S.C. 1151. Upon consideration of comments submitted by Indian Tribes, USDA concurs that reference to the criminal law definition of Indian country could be confusing.

Therefore, in the final rule USDA revised the definition of ''territory of the Indian Tribe'' to incorporate language from other Federal statutes, but without explicitly cross-referencing such statutes. Specifically, the final rule defines ''territory of the Indian Tribe'' to mean (a) all land within the limits of any Indian reservation under the jurisdiction of the United States Government, notwithstanding the issuance of any patent, including rights-of-way running through the reservation; (b) all dependent Indian communities within the borders of the United States whether within the original or subsequently acquired territory thereof, and whether within or without the limits of a state; (c) all Indian allotments, the Indian titles to which have not been extinguished, including rights-of-way running through the same; and (d) any lands title to which is either held in trust by the United States for the benefit of any Indian Tribe or individual or held by any Indian Tribe or individual subject to restriction by the United States against alienation and over which an Indian Tribe exercises jurisdiction.

In the 2018 Farm Bill, Congress provided authority for any Indian Tribe to seek USDA approval to become the primary regulator of hemp production within the ''territory of the Indian Tribe.'' The 2018 Farm Bill did not provide a definition of the term territory of the Indian Tribe, and there is no universally accepted definition of that term, or similar terms, within the field of Federal Indian law. In describing jurisdictional boundaries associated with Indian Tribes, various Federal statutes use several terms, including Indian country, Indian lands, Federal Indian reservations, and areas within the Indian Tribe's jurisdiction, among others.

Thus, by its very nature and history, the statutory term ''territory of the Indian Tribe'' is ambiguous. According to the Indian canon of construction, ''statutes are to be construed liberally in favor of the Indians, with ambiguous provisions interpreted to their benefit. . . .'' *Montana* v. *Blackfeet Tribe of Indians,* 471 U.S. 759, 766 (1985) (citations omitted). In addition, USDA may address ambiguities in a statute that it administers, with any reasonable interpretation of the ambiguous term entitled to judicial deference. *Chevron U.S.A. Inc.* v. *Nat. Res. Defense Council, Inc.,* 467 U.S. 837, 842–43 (1984). In this case, Congress provided no indication that the term ''territory of the Indian Tribe'' should apply more narrowly than similar terms that have been defined and interpreted in other Federal statutes and programs. Moreover, a narrow interpretation that excluded nontribal fee lands within reservations would perpetuate the problem of checkerboard jurisdiction over lands within Indian reservations, adding unnecessary confusion and uncertainty to the challenges of implementing the hemp program in Indian country. Therefore, the USDA includes a regulatory definition of the term ''territory of the Indian Tribe'' that is based on the definition of Indian country in 18 U.S.C. 1151 and the definition of Indian lands in the Indian Gaming Regulatory Act, 25 U.S.C. 2703(4).

The definition includes all lands within the limits of any Indian reservation under the jurisdiction of the United States Government, notwithstanding the issuance of any patent, which encompasses on-reservation parcels held in fee simple by non-members of the Indian Tribe. Similar provisions are found in the criminal jurisdiction definition of Indian country, 18 U.S.C. 1151; in the Clean Water Act, 33 U.S.C. 1377(h); the Clean Air Act, 42 U.S.C. 7601(d)(2)(B).

The U.S. Environmental Protection Agency (''EPA'') interpreted the statutes that it administers as providing authority to Indian Tribes over non-Tribal fee lands within Indian reservations. EPA Final Rule: Indian Tribes—Air Quality Planning and Management, 63 FR 7254 (Feb. 12, 1998); EPA Interpretive Rule: Revised Interpretation of Clean Water Act Tribal Provision, 81 FR 30,183 (May 16, 2016). EPA found that the Clean Water Act and Clean Air Act provided a delegation of authority to Indian Tribes over non-Tribal fee land within reservations. *See Arizona Public Serv. Co.* v. *EPA,* 211 F.3d 1280 (D.C. Cir. 2000). The agency found legislative intent and a common-sense reasoning to treat Indian reservations holistically for purposes of environmental regulation.

Similarly, USDA interprets the 2018 Farm Bill as authorizing Indian Tribes to become—with USDA's approval of a hemp plan—the primary regulators of hemp production within their territories, including on nontribal fee lands within reservations. This authority applies without regard to the Indian Tribe's ability to demonstrate inherent regulatory authority over non-Indians under the factors set forth in *Montana* v. *United States,* 450 U.S. 544 (1981). Additionally, this definition will make clear the area over which USDA will have regulatory authority including licensing if the Indian Tribe does not have an approved plan or a plan submitted to USDA for approval.

Comment: Some comments said Indian Tribes did not have the benefit of operating under the 2014 Farm Bill and, consequently, have not developed the farming techniques and regulatory systems that States have. Therefore, according to comments, Indian Tribes should be given a grace period while they develop best practices.

AMS response: Not all States operated under the 2014 Farm Bill, and some Indian Tribes did enter into Tribal—State agreements under the 2014 Farm Bill. Therefore, establishing a regulatory grace period for Indian Tribes only is not workable. Indian Tribes may take advantage of training and technical assistance offered by the USDA and other entities to ensure that they implement the best systems possible.

Comments: Some comments claimed that negligent violations by Indian Tribes under § 990.6 may cause Indian Tribes to be ineligible for other programs.

AMS response: The 2018 Farm Bill describes three types of negligent violations under State and Tribal plans. The negligent violations detailed in § 990.6 are required to be included in State and Tribal plans pursuant to the 2018 Farm Bill.

Comment: A comment contended that the requirement for a geospatial site identification at § 990.3(a)(1)(ii) is too expensive for Indian Tribes, unnecessary, and not readily available. Comments said the Department of the Interior has land records that could be used to obtain necessary information.

AMS response: A legal description of the land where hemp is grown is required by the 2018 Farm Bill. Geospatial location is one form of meeting such requirement. Producers are required to provide information to FSA on the geographical location of hemp production. FSA offices will provide assistance in identifying such location at no cost to producers.

Comments: Some comments said USDA should conduct more Tribal consultations and provide USDA and DEA training for hemp producers. One Indian Tribe requested more time to

allow Indian Tribes to organize a Tribal Advisory Council of Tribal Leaders to continue with the development and implementation of federal hemp policy.

AMS Response: In addition to previous Tribal consultations and extending and reopening the IFR's comment period, USDA added a September 2020 Tribal consultation to receive additional information, particularly from 2020 growing season producers. See the section on *E.O. 13175 Consultation and Coordination with Indian Tribal Governments* in this document for further discussion about the consultations. If Indian Tribes organize a Tribal Advisory Council of Tribal Leaders, USDA would appreciate any future feedback. Additionally, USDA is available to provide technical assistance when requested, including training. USDA is adding training for sampling to its website.

Comments: Comments said that Indian Tribes and individuals within the territory of the Indian Tribe should not have to be regulated by States, but should be able to go directly to USDA for licensing if the Indian Tribe opts out of developing its own Tribal plan and the Indian Tribe does not otherwise prohibit hemp production.

AMS Response: Subpart C, the USDA Hemp Production Plan, governs hemp producers in the absence of a Tribal plan. Therefore, any Indian Tribes or individuals wishing to produce hemp must comply with those regulations if not covered under a State or Tribal plan. If an Indian Tribe decides not to develop its own hemp plan, a producer may directly apply for a USDA license. States were not delegated authority under the 2018 Farm Bill to regulate hemp production within the territory of an Indian Tribe.

Comment: Indian Tribes should be allowed to implement their Tribal preference laws.

AMS Response: Nothing in the IFR or the final rule prevents Indian Tribes from implementing their Tribal preference laws.

Comment: A comment said that Tribal ordinances and interstate commerce regulations need to address price gouging in seeds and input.

AMS Response: This comment is outside the scope of this rule.

Comment: A comment said the Bureau of Indian Affairs and USDA should review 25 CFR part 162 governing agriculture and business leases to ensure that the hemp regulations here do not conflict with that part or cause additional regulatory hurdles.

AMS response: 25 CFR part 162 establishes certain requirements for leasing trust or restricted Indian lands. USDA conferred with the Department of the Interior, the agency regulating Indian land, and did not identify any conflicts between the two sets of regulations.

Comment: A comment suggested USDA hire an Indian law expert to assist with development of the final rule.

AMS response: USDA agreed and hired a consultant with 40 years-experience as an Indian law attorney to assist with the development of the final regulations and the review of Tribal plans.

Comment: Comments said the criminal history checks required by the IFR should be expanded to include the Department of Justice Tribal Access Program (TAP). According to comments, those using TAP would then be able to directly access criminal history checks. Comments also said the regulations need to clarify whether the criminal history check can be a name check or a finger-print check.

AMS Response: USDA conferred with the DOJ Office of Tribal Justice and was informed that Indian Tribes can use the TAP program to access the FBI Identity History Summaries. The FBI Identity History Summaries may be based on name check or a finger-print check.

Comment: Comments noted that the term ''key participant'' is defined at § 990.1 in a manner that is not necessarily consistent with an Indian Tribe's unique organization and methods of doing business. Comments explained, for example, that an Indian Tribe may be the owner of a hemp farm. Comments asserted that although the Indian Tribe's governing council may be the ultimate decision-maker as the owner, it would not be appropriate to include them in the felony and background investigations. Therefore, comments said Indian Tribes should be permitted to identify their own ''key participants'' if they are operating under a USDA plan and the requirements of § 990.22.

AMS Response: USDA understands the concerns raised by Indian Tribes regarding the application of the criminal history report requirement and the felony conviction restriction on Tribal leaders. However, USDA must ensure that entities operating under a USDA plan comply with the felony conviction restriction in the AMA. For reasons explained in the IFR, USDA believes that the appropriate approach in determining who participates in the program, and therefore subject to the felony conviction restriction, is to focus on those who exercise executive managerial control over hemp production. USDA also believes that this focus should be consistent across the USDA plan regardless of the person who is applying for a license. For the foregoing reasons, USDA has clarified the definition of key participants in the final rule to provide that the definition ''does not include a member of the leadership of a Tribal government who is acting in their capacity as a Tribal leader except when that member exercises executive managerial control over hemp production.'' AMS notes that an Indian Tribe may adopt its own hemp plans subject to USDA approval. When adopting a hemp plan, the Indian Tribe can determine who participates in its plan and will be subject to a criminal history check.

Comment: USDA received a comment that it should affirm Tribal sovereignty by not allowing other federal agencies, such as the DEA, to interfere with Tribal hemp remediation.

AMS Response: USDA does not have the authority to control the actions of other federal agencies acting properly within their authority.

Comment: USDA received comments that USDA owes a trust responsibility to Indian Tribes. According to commenters, that trust responsibility requires acknowledging the unique challenges that Indian Tribes face including that (1) most tillable land was taken from Indian Tribes during homesteading; (2) Tribes' participation in the farm program results in only a 60 percent yield of their non-Indian counterparts; (3) the finance system is usurious as financiers discount the value of Tribal assets or refuse to consider them at all; and (4) American Indian producers will be disproportionately disadvantaged because their farms are significantly smaller and are generally run with only one crop by families with small margins.

AMS Response: USDA acknowledges that it has a special government-to-government relationship with Indian Tribes, and believes that, in preparing and issuing this final rule it has acted in accordance with that relationship. In response to concerns regarding the unique challenges Indian Tribes face, as explained in the Civil Rights Review of this final rule, AMS conducted a ''Civil Rights Impact Analysis'' and did not find any evidence that the final rule would adversely or disproportionality impact Indian Tribes or Tribal members producing hemp as compared to the general population of hemp producers or State Departments of Agriculture. Indian Tribes may take advantage of training and technical assistance offered by the USDA to ensure that they

implement the best systems possible. Additionally, USDA is available to provide technical assistance when requested.

State and Tribal vs. Federal Regulation

The preamble of the IFR stated that ''[n]othing preempts or limits any law of a State or Indian Tribe that regulates the production of hemp and is more stringent than the provisions in the 2018 Farm Bill.'' Further, Section 297B of the AMA expressly states that it does not preempt a State or Indian Tribe's ability to adopt more stringent requirements or to prohibit the production of hemp. This was codified in the IFR in § 990.3(b)(1), which provides that nothing in the part preempts or limits any law of a State or Indian Tribe that regulates the production of hemp and is more stringent than this part or Subtitle G of the Act.

Comments: Many of the comments received stated that the provisions of the IFR were more stringent than the regulations of pilot programs established by States under the authority of the 2014 Farm Bill. In fact, the majority of all comments received either took exception to the perceived increase in regulatory requirements for hemp production under the IFR, or presented recommendations for alternative requirements under the final rule that would not be as restrictive or burdensome as the provisions in the IFR.

No comments were received that either affirmed or opposed the rights of States and Indian Tribes to promulgate more stringent regulations for their jurisdictions. However, one comment said rather than using the flexibility allowed in the law to let states develop sensitive state plans, the IFR had rigid controls not required by law or correlated to the relatively low-level risk of non-compliant hemp. The comment further said USDA should establish baseline requirements but provide States flexibility to consider the dynamics of agricultural production that depend on farm and field conditions, weather, and the timing appropriate for planting, harvesting, the varieties being cultivated and the marketing of crops. Other comments agreed with recommendations to allow States and Indian Tribes to determine certain provisions that are not central to the minimum regulatory requirements of the IFR, such as application windows and reporting.

AMS response: The 2018 Farm Bill expressly preserved the ability for State and Tribal hemp production plans to establish additional provisions stricter than the baseline regulations required by the 2018 Farm Bill. These baseline regulations require all State and Tribal plans to include certain minimum requirements for licensing, sampling, testing, disposal, and information collection. These requirements could certainly be considered ''more burdensome'' than certain State hemp production plans operated under 2014 Farm Bill pilot program provisions, but they are intended to provide consistency and transparency among the U.S. hemp industry as it matures. Prior to the passage of the 2018 Farm Bill, States operating hemp pilot programs could administer these programs with minimal Federal oversight, and without baseline requirements around sampling, testing, and other program requirements because the 2014 Farm Bill programs are for research. The 2018 Farm Bill established baseline requirements for hemp production for hemp production across the U.S. regardless of the purpose of the production.

Preemption

Comment: AMS received comments asserting that the IFR did not abide by the mandate of the 2018 Farm Bill that there be no preemption of state or Tribal laws that regulate the production of hemp and are more stringent than the hemp provisions in the federal statute.

AMS response: Section 297B(a)(3) of the AMA provides that for States and Indian Tribes with primary regulatory jurisdiction over the production of hemp, there is no preemption if that State or Indian Tribe both regulates the production of hemp and that regulation is more stringent than the 2018 Farm Bill or the implementing regulations. Thus, the no preemption provision of the 2018 Farm Bill is to make clear that more stringent requirements are not preempted. AMS finds that the 2018 Farm Bill requires the implementation of federally mandated minimum standards, which all jurisdictions must follow, allowing for certain further restrictions by States and Indian Tribes.

Recordkeeping Requirement

Comment: One commenter argued that the recordkeeping requirements of the IFR violated the 4th Amendment's prohibition against unreasonable search and seizure and was ''arbitrary and capricious'' and a violation of the APA.

AMS Response: The 2018 Farm Bill established a hemp production program in the U.S. subject to oversight from the Secretary of Agriculture. Part of that congressional mandate is for the Department of Agriculture to establish a plan by which it collects information from producers to ensure compliance. While hemp is no longer a Schedule 1 drug, USDA can only make the determination of whether the crop is legal hemp (which it regulates) or illegal marihuana (which it does not regulate) through the mechanisms Congress has authorized. Recordkeeping requirements are paramount to that determination, which is required by Congress. AMS is retaining the recordkeeping requirements of the IFR.

APA Notice and Comment Concerns

Comment: Some commenters claimed that in issuing an IFR, AMS acted arbitrarily and capriciously in violation of the APA. Commenters argued that the good cause statement included in the IFR was not adequate to support its issuance rather than going through notice and comment rulemaking.

AMS Response: AMS does not agree with these comments and believes that there was good cause to issue the IFR. AMS has encouraged public input on the IFR since its issuance and has provided many opportunities for public comment.

Criminal Background Checks and Definition of Key Participants

Comment: Several commenters argued that the restrictions on participation in hemp production for people with criminal convictions related to a violation of a state or Federal controlled substance law are not necessary and that hemp should be treated the same as all other commodities, which do not have similar restrictions. Commenters argued that there should be an exception for people with disqualifying criminal convictions who could demonstrate rehabilitation and that this restriction conflicts with state statutory requirements in some states. One commenter argued that USDA should conduct all criminal background checks rather than States or Indian Tribes.

AMS Response: AMS acknowledges various stakeholders' advocacy for reduced restrictions to entry in hemp production. However, the restriction on participation-based on a criminal conviction for violation of a state or Federal law related to controlled substances is a requirement established by statute and AMS does not have the authority to change to waive this restriction.

Definition of Key Participants

Comment: Some commenters requested that AMS change the definition of key participants to more clearly state which individuals within a business entity would be required to submit a criminal history report. One commenter requested that AMS align the definition of key participant with

the definitions of ''legal entities'' and ''beneficial owners'' in Department of Treasury regulations. Another commenter suggested that AMS define who must submit a criminal history report in States and Indian Tribes that have an approved plan for primary regulatory authority over hemp in their jurisdiction.

AMS Response: AMS acknowledges various stakeholders' advocacy for a single definition of ''key participants'' for all hemp producers. However, AMS will not require that States or Indian Tribes with an approved plan for primary regulatory authority over the production of hemp in their jurisdiction adopt the USDA definition of ''key participants.'' States and Indian Tribes are free to incorporate the AMS definition of key participants into their plan but they are not required to do so. They must, however, define who participates in their plan and, for each license or authorization they issue, must identify at least one individual who will be subject to a criminal history check. The Department of Treasury definitions of ''legal entities'' and ''beneficial owners,'' while similar to the definition of ''key participants'' adopted herein apply broadly to the corporate structure of a business entity. USDA finds the ''key participant'' definition to best describe those individuals responsible for compliance with this program or ''leadership structure of a business entity.''

X. Regulatory Analyses

Paperwork Reduction Act

In accordance with section 3507(d) of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*), the Domestic Hemp Production Program's information collection requirements have been previously approved by Office of Management and Budget (OMB) and assigned OMB No. 0581–0318. The 60-day public comment period was imbedded in the interim final rule (IFR) which was published on October 31, 2019, and ended on December 30, 2019. Because of the very tight timeline for publishing the IFR, OMB granted conditional emergency approval of these seven forms on December 3, 2019. The USDA Office of Chief Information Officer (OCIO) published the 30-day Notice for the three-year renewal at 85 FR 36828 on Thursday, June 18, 2020.

While writing the IFR there was very limited data available to make the initial burden calculations under the Paperwork Reduction Act (PRA). Since the IFR was published, USDA has been able to gather much more accurate data on the number of producers, disposal rates, and time burdens for completing the forms. Because of this new information, AMS is updating the burden calculations currently approved by OMB. AMS will submit an updated Information Collection to align the new calculations in the FR with the 0581–0318 package.

AMS received over 4,600 comments in the first public comment period and 1,100 during the second comment period on the overall regulation. A specific analysis of each topic area in the comment analysis section of the final rule. AMS did not receive public comments specifically on the PRA nor on the time burden hour calculations to complete any of the forms. One comment from the Alabama Department of Agriculture wrote that 10 minutes for a State or Tribal producer license application was too low, so that has been increased to 20 minutes.

AMS used an initial estimate of 9,000 total producers for the IFR. This was based on the limited data from State Departments of Agriculture and the hemp advocacy group, Vote Hemp. Based on a review of hemp production data from State Departments of Agriculture, and the data reporting services from Hemp Benchmarks and Vote Hemp, AMS now estimates 20,000 producers as a yearly average to use for the purposes of reporting calculations. These numbers will be updated every three years. While the current percent of hemp growers licensed under USDA is drastically smaller than this, AMS assumes approximately 20 percent or 4,000 producers will be licensed under the USDA plan, and the other 80 percent or 16,000 producers licensed under State and Tribal USDA-approved programs.

The description and function of the seven reporting forms remains the same from the IFR and initial OMB approval. These forms require specific information be submitted by States and Tribes operating their own domestic hemp plans, from producers participating in the USDA Plan, and from laboratories testing for THC content. Reporting and recordkeeping burdens reflecting revised reporting hours and the projected additional producers are described in the following sections. All time and cost figures have been approximated to the nearest whole number. The table below explains these changes numerically.

Costs of Reporting and Recordkeeping

The initial estimate of 100 State and Tribal plans remains accurate since the majority of States and Indian Tribes will have their own programs. As of the Fall of 2020, USDA has already approved 65 individual State and Tribal programs, with more to come. The amount of State approved programs will also increase once the 2014 Farm Bill pilot authority expires and those additional States submit plans. States and Indian Tribes with approved plans are required to report certain information to USDA through three Forms: The ''State and Tribal Hemp Producer Report'', the ''State and Tribal Hemp Disposal Report'', and the ''State and Tribal Hemp Annual Report''. USDA collects information from all hemp producers under a State, Tribal or USDA program through the FSA report form ''Report of Acreage''. USDA collects information from USDA producers through the ''USDA Producer Application'', the ''USDA Annual Report'' and the ''USDA Disposal Report''. Laboratories provide information on the ''Laboratory Test Report''.

AMS has updated PRA calculations using the Occupational Employment Statistics Survey of the Bureau of Labor and Statistics [32] using the 2019 data. The mean hourly wage of a compliance officer, as reported in May 2019, was $35 per hour. This is the same numerical value as the May 2018 report. Assuming 39 percent of total compensation accounts for benefits, the total compensation of a compliance officer is $57 per hour. This $57 per hour will be used throughout the PRA section.

Respondents: States or Tribes With Approved Plans

AMS initially estimated that the time required for States and Indian Tribes to fill in the information for each of these forms will be 20 minutes or 0.33 hours with a 5 minute or 0.08 hours record keeping burden. This estimate has been updated from 20 minutes to 60 minutes or one hour. The ''State and Tribal Hemp Producer Report'' and the ''State and Tribal Hemp Disposal Report'' are due to USDA every month. The ''State and Tribal Hemp Annual Report'' form must be submitted to USDA once per year. Similar to the other two State and Tribal forms, the annual time burden was initially 20 minutes but has been updated to 60 minutes. The time burden for each State and Indian Tribe to complete and maintain these three forms is now 12 hours for each monthly form and 1 hour for the annual report, for a total of 25 hours per State and Tribe with an approved plan. Given the estimated number of approved State and Tribal plans is 100, the total cost is 250 hours and $14,250.

[32] *https://www.bls.gov/oes/home.htm.*

Respondents: Producers Under State or Tribal Plans (Information Only, Not Completing the Forms)

The time required of producers to supply the information for the ''State and Tribal Hemp Disposal Report'' and the ''State and Tribal Hemp Annual Report'' will stay the same at 10 minutes for reporting and 5 minutes for recordkeeping burden for each producer for these two forms. The ''State and Tribal Hemp Producer Report'' time estimate is now increased to 20 minutes with a 5 minute record keeping burden for each producer, per the suggestion from the Alabama Department of Agriculture.

In the IFR, AMS originally estimated that the majority of States and Indian Tribes would have three-year producer licenses, and producers would only submit this information once every three years. Since approving 60 State and Tribal plans, the majority of State and Tribal licenses are issued on a yearly basis instead. AMS estimates that the 16,000 State and Tribal producers will submit license information each year for State and Tribal programs. In addition to obtaining a license, all hemp producers are required to prove that they do not have prior drug related convictions that would disqualify them from participation in the program. States have some flexibility in what they require of applicants to make this demonstration. However, for purposes of this analysis, AMS will use the cost of the FBI Identify Summary, $18, as a proxy cost for all background reports, and 3 key participants for each license each year, although if we were to take into account comments, it is likely there will be more than 3 key participants each year. In the chart below is a cost breakdown of the application and background check for producers under a State or Tribal program.

FBI Identity Summary	Number of respondents	Number of responses	Total annual resposes	*3 Key participants	Cost of background check ($18)	Plus burden cost of application	Total cost
Cost for State and Tribal producers (3 key participants every year)	16,000	1.0000	16,000.00	48,000.00	$864,000.00	$379,666.00	$1,243,666.00

In the IFR, AMS estimated that 20 percent of lots will need to be disposed even though the current rate of disposal is closer to 12%. This assumption is based on the increased number of new entrants to the market who may not be successful in their first year or two. AMS is introducing a new performance-based method to sampling, which will decrease the amount of testing and noncompliant tests. Therefore, AMS estimates that 1,600 lots will be disposed under State and Tribal programs. The producers under a State or Tribal program will provide their disposal information to their individual regulatory body. The States and Indian Tribes will then use that information to complete the monthly ''State and Tribal Hemp Disposal Report''.

These are just the costs and burden of collecting and maintain the information associated with the disposal, not the actual disposal. The actual cost of disposing of the non-compliant ''hot'' hemp is discussed in the RIA.

In total, producers under a State or Tribal program provide information and hold records for three forms. The total time burden for these producers providing and maintaining this information is estimated at 11,061 total hours and $630,466.

Respondents: Producers Participating in the USDA Plan

To produce hemp under the USDA Plan, a producer, which may be an individual producer or a business, completes the ''USDA Hemp Plan Producer Licensing Application'' and an FBI Identity Summary. If all parts of the application and summary are valid, AMS issues a license. The total burden per respondent of this form will maintain the same as in the IFR; 10 minutes for the time and 5 minutes for record keeping for a total of 15 minutes, or .25 hours. Licenses under the USDA Plan must be renewed every three years, so each producer only submits this information once every three years. In the IFR, AMS initially estimated that there will be 1,000 participants in the USDA Plan. AMS has now updated this estimate to be 20 percent of the total hemp producers, or 4,000 producers each year. Because the USDA license is valid for three years, approximately 1,332 producers will complete this form each year. The total annual burden for this form is 544 hours and $31,603.

In addition to the ''USDA Hemp Plan Producer Licensing Application'' submitted once every three years, producers must submit criminal history reports for each of their key participants. AMS estimates each producer to have three key participants submit criminal history reports to USDA. The cost of a criminal history report is $18 apiece, so three key participates would cost $54 per participant. As stated previously, AMS estimates that it will receive 1,332 license renewals in each year. Each of these 1,332 renewals will include a background summary for three key participates. Adding the cost of 1,332 renewals at $71,928 with the cost of the background check is $31,603 for the renewals and means there is an annual cost of $103,531.

FBI Identity Summary	Number of respondents	Number of responses per respondents	Total annual resposes	*3 Key participants	Cost of background check ($18)	Plus burden cost of application	Total cost
Cost for USDA producers (3 key participants every three years)	4,000	0.3330	1,332.00	3,996.00	$71,928.00	$31,603.00	$103,531.00

Similar to the required annual report submitted by States and Indian Tribes to USDA, producers operating under the USDA Plan must submit the ''USDA Hemp Plan Producer Annual Report'' to USDA each year. AMS estimates the time burden of submitting this form will maintain the same, at 25 minutes, or 0.42 hours, per respondent. AMS has updated the initial estimate of 1,000 participants in the USDA Plan, to 4,000 producers. Therefore, the total burden of this form has increased from 416 hours to 1,665 hours, costing $94,916 annually.

When a hemp sample tests above the acceptable hemp THC level, the material from the specific lot must be disposed. The producer and disposal agent must complete the ''USDA Hemp Plan Producer Disposal Form''. The burden for this form will stay at 25 minutes, or 0.42 hours, per respondent.

Using the same assumptions regarding the prevalence of non-compliant crops and the costs of disposal that were used in generating the estimates of hemp disposal reporting (and disposal) for State and Tribal programs, the 4,000 producers that will participate in the USDA Plan will generate 400 samples that test high for THC content. The total reporting burden of this form will amount to 167 hours and cost $9,492 annually.

Altogether, the annual burden for the USDA producers completing and maintain the three USDA forms ''USDA Hemp Plan Producer Licensing Application'', the ''USDA Hemp Plan Producer Disposal Form'', and the ''USDA Hemp Plan Producer Annual Report'' amounts to an annual total of 2,386 hours and a cost of $136,011.

Respondents: Laboratories

The 2018 Farm Bill requires that all domestically produced hemp be tested for total THC content on a dry-weight basis, whether produced under a State or Tribal Plan or the USDA Plan. Using data from FSA the initial estimate of two lots of hemp per producer remains accurate. However, the new performance-based sampling process will decrease the number of total samples that are collected and tested.

AMS requires all laboratories testing hemp for THC to submit all test results, whether passing or failing, via the ''Laboratory Test Results Report''. AMS maintains the estimated reporting and recordkeeping burden for this form at 35 minutes, or .58 hours. AMS originally estimated that 7,700 total hemp producers would submit 15,400 samples to test. AMS has updated this estimate to 8,000 total tests annually. Therefore, the total annual burden of these tests and the accompanying ''Laboratory Test Results Report'' form decreased from 8,399 hours to 4,664 hours, and costs $265,848.

Respondents: All Producers

The FSA collects information on crop acreage through the ''Report of Acreage'' form. Hemp producers under all plans are required to fill in the information for this form once they receive their license or authorization from USDA, a State, or Indian Tribe and have planted the crop. AMS will keep the initial reporting burden and record keeping burden at 35 minutes, or 0.58 hours. AMS has added 60 minutes or one hour for the travel time to and from the FSA office, for a total of 90 minutes. With the increased number of producers and the addition of travel time, AMS estimates the burden for the 20,000 producers will be 31,660 hours and cost $1,804,620.

Total Reporting and Recordkeeping Costs for All Respondents

Altogether, the annual burden for reporting and recordkeeping for all respondents is 52,296 hours, costing a total of $2,980,864 per year. This is the sum of the annual burden of reporting and recordkeeping to States and Indian Tribes operating their own plans, to producers participating in the State and Tribal Plans, to producers participating in the USDA Plan, including the cost of a criminal history report for three key participants, and to laboratories testing samples for THC content.

E-Government Act

AMS is committed to complying with the E-Government Act, to promote the use of the internet and other information technologies to provide increased opportunities for citizen access to Government information and services, and for other purposes. We recognize using an electronic system will promote efficiencies in developing and implementing the new USDA Domestic Hemp Production Program. Since this is a new program, AMS is working to make this process as effective and user-friendly as possible.

Civil Rights Review

AMS has considered the potential civil rights implications of this rule on minorities, women, and persons with disabilities to ensure that no person or group shall be discriminated against on the basis of race, color, national origin, gender, religion, age, disability, sexual orientation, marital or family status, political beliefs, parental status, or protected genetic information. This review included persons that are employees of the entities who are subject to these regulations. This final rule does not require affected entities to relocate or alter their operations in ways that could adversely affect such persons or groups. Further, this rule does not deny any persons or groups the benefits of the program or subject any persons or groups to discrimination.

This final rule reflects AMS's response to public comment and input provided by stakeholders. The final rule provides States and Indian Tribes the regulatory authority over hemp production in their jurisdictions. It also establishes a Federal plan for hemp producers located in States or territories of Indian Tribes that do not have their own USDA-approved hemp oversight plan. There is no evidence that the final rule will potentially adversely or disproportionality impact hemp producers in protected groups, regions or Indian Tribes differently than the general population of hemp producers or State Departments of Agriculture.

Executive Order 13132—Federalism

AMS has examined the effects of provisions in this final rule on the relationship between the Federal Government and the States, as required by Executive Order 13132 on ''Federalism.'' Our conclusion is that this rule does have federalism implications because the rule has substantial and direct effects on States, on the relationship between the National Government and States, and on the distribution of power and responsibilities among the various levels of government. The federalism implications of the rule, however, flow from and are consistent with the underlying statute. Section 297B of the AMA, 7 U.S.C. 1639p, directs USDA to review and approve State plans that meet statutory requirements and to audit a State's compliance with its State plans. Overall, the final rule attempts to balance both the autonomy of the States with the necessity to create a Federal framework for the regulation of hemp production.

Section 3(b) of E.O. 13132 recognizes that national action limiting the policymaking discretion of States will be imposed ''. . . only where there is constitutional and statutory authority for the action and the national activity is appropriate in light of the presence of a problem of national significance.'' Section 297B of the AMA is the statutory authority underlying the rules for USDA to review, approve, disapprove, or revoke State plans for hemp production. Until the passage of the 2018 Farm Bill, hemp was a Schedule I controlled substance as it fell within the CSA definition of marijuana. When hemp was exempted from the definition of marijuana as part of the 2018 Farm Bill, in connection with removing it from that list, Congress established a national regulatory framework for the production of hemp. Because cannabis plants with a THC level higher than 0.3 are marijuana and on the Federal controlled substances list, ensuring that hemp produced under this program is not marijuana is of national significance.

In addition to establishing a national regulatory framework for hemp production, Congress expressly preempted State law with regard to the interstate transportation of hemp. Section 10114 of the 2018 Farm Bill States that ''[n]o State or Indian Tribe shall prohibit the transportation or shipment of hemp or hemp products produced in accordance with subtitle G of the Agricultural Marketing Act of 1946 (as added by section 10113) through the State or the territory of the Indian Tribe, as applicable.'' Thus, States and Indian Tribes may not prevent the movement of hemp through their States or territories even if they prohibit its production. Congress also expressly preempted a State's ability to prosecute negligent violations of its plan as a criminal act in section 297B(e)(2)(c). That preemption is incorporated into this rule.

Section 3(d)(2) of the E.O. 13132 requires the Federal Government to defer to the States to establish standards where possible. Section 4(a), however, expressly contemplates preemption when there is a conflict between exercising State and Federal authority under Federal statute. Section 297B of the AMA requires State plans to include six practice and procedures and a certification. It also expressly states that it does not preempt a State's ability to adopt more stringent requirements or to prohibit the production of hemp. Section 297D of the AMA requires USDA to promulgate regulations to implement subtitle G of the AMA, which includes section 297B. Subpart B of the final rule repeats those requirements, providing more detail where necessary. States have wide latitude to develop the required practice and procedures. Subpart B includes more details on the testing and sampling of hemp plants to establish a national standard to determine whether the plants meet the statutory definition of hemp. Likewise, the final rule requires States to follow DEA requirements for disposal of marijuana for cannabis plants exceeding the acceptable hemp THC level. Finally, the final rule also reaffirms that States may adopt more stringent standards and prohibit hemp production within their jurisdiction.

Section 6 of E.O. 13132 requires consultation with State officials in development of the regulations. AMS conducted significant outreach with State officials including individual meetings, participation in conferences with State officials, and listening sessions where State officials from all States were invited. During our consultation with the States, representatives from various State agencies and offices expressed the following concerns about sampling and testing procedures. Most requested that USDA adopt uniform, national requirements to facilitate the marketing of hemp. Some States advocated that USDA defer to each State to determine the appropriate procedures for its plan. USDA recognizes the value of a national standard to promote consistency while allowing States the flexibility to adopt procedures that fit their circumstances. As explained above, USDA is adopting performance standards for sampling and testing. As long as the procedures in the State plans meet those standards, AMS will find those procedures acceptable.

As AMS implements this new program, we will continue to consult with State officials to obtain their feedback on implementation.

Finally, we have considered the cost burden that this rule would impose on States as discussed in the Regulatory Impact Analysis of this document.

AMS has assessed this final rule in light of the principles, criteria, and

requirements in Executive Order 13132. We conclude that this final rule: Is not inconsistent with that E.O.; will not impose significant additional costs and burdens on the States; and will not affect the ability of the States to discharge traditional State governmental functions.

Executive Order 13175 Consultation and Coordination With Indian Tribal Governments

AMS examined the effects of provisions in the final rule on the relationship between the Federal Government and Tribal governments, as required by E.O. 13175 on ''Consultation and Coordination with Indian Tribal Governments.'' We concluded that the final rule does have substantial direct effects on Tribal governments, on the relationship between the National Government and Tribal governments, and on the distribution of power and responsibilities among the various levels of government. The effects of the rule, however, flow from and are consistent with the underlying statute. Section 297B of the AMA, 7 U.S.C. 1639p, directs USDA to review and approve Tribal plans that meet statutory requirements and to audit a Tribal government's compliance with its Tribal plans. Overall, the final rule attempts to balance both the autonomy of the Tribal governments with the necessity to create a Federal framework for the regulation of hemp production.

As with States, Tribal governments will have wide latitude in adopting procedures including adopting requirements that are more stringent than the statutory ones. For reasons stated in the federalism analysis, AMS is adopting national standards for sampling, testing, and disposal of non-compliant plants that Tribal plans must also incorporate.

AMS conducted extensive outreach to Tribal governments through individual discussions with Tribal representatives, by extending the regulatory comment periods and through the following more formal consultations.

Tribal Consultation May 2019: On May 1 and 2, 2019, USDA held a formal Tribal consultation on the 2018 Farm Bill including a session on hemp production. This consultation occurred at the National Museum of the American Indian located in Washington DC. In addition to listening sessions for the general public, USDA hosted a listening session for Tribal governments following the formal Tribal consultation on May 2, 2019. USDA officials attended meetings with representatives of Tribal governments. On December 11, 2019, roughly 41 days after the publication of the domestic hemp production program interim final rule, USDA held a second formal Tribal consultation. This consultation provided information on the interim final rule. This consultation occurred in Las Vegas, Nevada, and attendees included USDA officials, Tribal leaders, Tribal proxies, non-consulting Tribal members, non-profit representatives, businesses, law firms, private individuals, and other government employees. On September 24, 2020, USDA held a third formal Tribal consultation and provided information on the interim final rule. This consultation occurred virtually and attendees included USDA officials, Tribal leaders, Tribal proxies, non-consulting Tribal members, non-profits representatives, Businesses, law firms, private individuals, and other government employees.

During the May 2019 consultation, Tribal representatives from several Tribal Governments expressed their opinions that the 2018 Farm Bill permitted the USDA Secretary to allow AMS to approve Tribal plans ahead of issuing regulations of the USDA plan. Indian Tribes stated that approving hemp plans immediately would allow those Indian Tribes (and States) with a plan to begin planting for the commercial production of hemp in 2019. The USDA Secretary released a Notice to Trade (NTT) on February 27, 2019, to explain that Tribal and State plans would not be reviewed or approved until AMS finalized regulations ahead of the 2020 planting season. Additionally, the NTT stated that until regulations were in place, States, Indian Tribes, and institutions of higher education could continue operating under authorities of the 2014 Farm Bill. The 2018 Farm Bill extension of the 2014 authority expired 12 months after USDA had established the plan and regulations required under the 2018 Farm Bill. Congress extended this expiration until January 1, 2022. After the May Tribal consultation, USDA issued a second NTT on May 27, 2019, to clarify that Tribal governments through the authorities in the 2014 Farm Bill are permitted to grow industrial hemp for research purposes during the 2019 growing season. USDA appreciates the urgency in which the Indian Tribes wish to engage in this new economic opportunity. We worked expeditiously to develop and promulgate the IFR so that States and Indian Tribes could submit their plans in time for the 2020 season.

Tribal Consultation December 2019: During this consultation Indian Tribes expressed how some provisions of the interim final rule are too rigid and that USDA did not consider practical problems and potential economic harm faced by Indian Tribes under the program.

Indian Tribes requested more extensive Tribal consultation and the inclusion of other agencies involved in hemp production and enforcement. In response, USDA extended the public comment date by thirty additional days to January 29, 2020 and agreed to conduct an additional consultation after the first growing season. AMS also reopened the public comment period for thirty days in the Fall of 2020.

Tribal Consultation September 2020: Consultation also occurred on September 24, 2020.

Based on the comments and consultations received, we made changes to the final regulations. Although Indian Tribes will still incur costs in complying with final rule, those costs should be outweighed by the benefits that the Indian Tribes realize in commercial hemp production occurring within their territories.

Executive Order 13175

This rule has been reviewed in accordance with the requirements of Executive Order 13175, Consultation and Coordination with Indian Tribal Governments. Executive Order 13175 requires Federal agencies to consult and coordinate with tribes on a government-to-government basis on policies that have tribal implications, including regulations, legislative comments or proposed legislation, and other policy statements or actions that have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

The USDA's Office of Tribal Relations (OTR) has assessed the impact of this rule on Indian tribes and determined, in agreement with AMS, that this rule has substantial direct tribal implications that require continued outreach efforts to determine if tribal consultation under E.O. 13175 is required. Based on AMS outreach efforts to date, OTR does not believe that tribal consultation is necessary at this time. If a tribe requests consultation AMS will work with the OTR to ensure meaningful consultation is provided where changes, additions, and modifications identified herein are not expressly mandated by Congress.

Executive Orders 12866, 13563, and 13771

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives when an action is deemed to have significant impacts. If regulation is necessary, then agencies must select the action that maximizes net benefits, including potential economic, environmental, public health and safety effects, and equity. This rule meets the definition of an economically significant regulatory action under Executive Order 12866, as it is likely to result in an annual effect on the economy of $100 million or more. USDA considers this to be a deregulatory action as it allows the development of a niche market that cannot exist under the state pilot programs authorized under the Agricultural Act of 2014 (2014 Farm Bill). This action finalizes the interim final rule published on October 31, 2019, that expanded production options and enabled interested farmers to grow hemp.

Executive Order 13771 mandates that agencies provide the best approximation of total costs associated with a new or repealed regulation. AMS has prepared this Regulatory Impact Analysis with the purpose of accomplishing these objectives. USDA considers this to be a deregulatory action under Executive Order 13771 as it allows for the development of a niche market that cannot exist under current regulation. This rule removes barriers to entry and enables domestic farmers to grow hemp.

Regulatory Impact Analysis

Regulations must be designed in the most cost-effective manner possible to obtain the regulatory objective while imposing the least burden on society. This rule finalizes and updates the interim final rule that established a national regulatory oversight program for the production of hemp. This program is necessary to effectuate the mandate in the Agriculture Improvement Act of 2018, known as the 2018 Farm Bill, to coordinate State and Tribal government hemp production regulations with the newly established federal regulations for hemp production in States and Indian Tribes not regulated by State or Tribal plans. This program is intended to provide consistency in production, sampling and testing of hemp product to ensure compliance with the acceptable hemp THC level.

This rule has been reviewed under Executive Order 12988, Civil Justice Reform, and is not intended to have retroactive effect. The discussions on Executive Orders 13132 (Federalism) and 13179 (Consultation and Coordination with Tribal Governments), above, address the extent to which the rule preempts State law, and the impacts of the rule to Tribal governments. The discussion above regarding appeals under new part 990, subpart D, describes the administrative procedures that must be exhausted prior to a judicial challenge.

Introduction

On October 31, 2019, USDA promulgated an interim final rule establishing a national program for the production of industrial hemp. A regulatory analysis was performed in support of that regulation and published as part of the preamble to that rule. This analysis is intended to update the previous analysis to reflect additional information gained through the first year of operation of that program and to assess whether any of the modifications to the program made in response to public comment have significant impacts on the estimated costs or benefits of the final program.

In the IFR, AMS estimated lower and upper bounds to calculate the total net benefits of the rule to society at large. These net benefits were calculated for 2020 through 2022 only due to lack of data for future years. In the IFR, 2020 estimated net benefits ranged from a loss of nearly $4 million to a gain of $17.6 million; for 2021, a net benefit of $23 million to $46 million; and, for 2022, a net benefit of nearly $49 million to $74 million. In this final rule, the estimated net benefits, as shown in Table 12, are $46 million in 2020; $87 million in 2021; $135 million in 2022; $190 million in 2023; $226 million in 2024; and, $351 million in 2025.

The estimates of net benefits resulting from this final rule differ from those in the IFR due to a variety of factors. First of these is the large increase in planted acreage and market entrants in 2019, the scale of which was unexpected. (There may be other unexpected changes due to the pandemic, but we cannot estimate those at this time.) Changes in other variables, as well, contributed to the increase in net benefits in the final rule over the IFR. A comparison of the variables that are assumed constant (across years 2020 through 2025) in the IFR and the final rule is shown in Table 1 below. In the year between publication of the IFR and this final rule, additional information regarding the hemp industry has emerged to the benefit of this analysis. AMS believes that the modifications to the analysis from the IFR to the final rule represent the state of the hemp industry to the greatest extent practicable. The modifications in this final rule are intended to further support the hemp marketplace and provide the greatest flexibility possible while still ensuring the program complies with the 2018 Farm Bill.

AMS suspects that this rule, compared to the IFR, will incentivize participation in the market and allow for more farmers to be successful. In particular, AMS attributes this to two policies. First, AMS anticipates that the flexibilities in disposal and remediation of non-compliant hemp will help minimize the risk to farmers, therefore increasing participation in the industry. Second, AMS anticipates that the increased threshold for negligent hemp (from 0.5 percent to 1.0 percent) will also reduce risk to farmers and allow for more innovation.

AMS received numerous comments providing data on the different aspects of the hemp industry, that while informative, could not be incorporated in the RIA due to such factors as they were too regionally focused, small in sample size, or lacked the depth of data points to be representative of the national hemp market. An example of this is the portion of retests performed on hemp samples that initially tested higher than 0.3 percent THC.

Table 1. Comparison of variables assumed constant in IFR and Final Rule					
Variables	Intended Use	IFR		Final Rule	Final Rule Data Sources
		Low	High		
Price per lb	Cannabinoids	$ 3.50	$ 30.00	$ 3.90	The Jacobsen. Estimates based on 2019 and 2020 prices.
	Fiber	$ 0.07	$ 0.67	$ 0.09	
	Grain	$ 0.65	$ 1.70	$ 0.53	
Yield per acre	Cannabinoids	1,000	1,200	1,500	Hemp enterprise budgets from seven universities.
	Fiber	2,000	11,000	8,000	
	Grain	800	1,600	1,200	
Portions of planted acreage by intended use	Cannabinoids	67%		80%	The Jacobsen. Hemp Daily Bulletin, September 8, 2020.
	Fiber	17%		3%	
	Grain	17%		17%	
Variables	Plans	IFR		Final Rule	Final Rule Data Sources
		Low	High		
Portions of lots sampled & tested	USDA	100%		Based on 95% CI and 1% margin of error	Standard statistical performance objective.
	State/Tribal	100%			
Sampling & testing cost	USDA (per lot)	$ 599	$ 830	$ 565	State departments of agriculture.
	State/Tribal (per license)	Included in program administration cost			
Variables		IFR		Final Rule	Final Rule Data Sources
Portion of sales attributable to the rule		50% of growth		20% of total	State depts. of ag.
Opportunity cost per acre		$ 591		$ 630	NASS.
Program administration cost		$ 1,000		$ 800	State depts. of ag.
Portion of lots testing > 0.3% THC		40%		25%	National Industrial Hemp Regulators.
Disposal cost per acre		$ 200		$ 14.25	State depts. of ag.

The 2014 Farm Bill defined hemp as the plant *Cannabis sativa* L. and any part of that plant with concentrations of THC no greater than 0.3 percent on a dry weight basis. While belonging to the same species as the plant that produces marijuana, hemp is distinctive from marijuana in its chemical makeup. The marijuana plant contains high levels of the cannabinoid delta-9 tetrahydrocannabinol (THC), which is the chemical that produces psychoactive effects. Hemp may contain no greater than 0.3 percent THC on a dry weight basis.

Prior to the 2014 Farm Bill, hemp had never been designated in a Federal law as different from cannabis generally. The first regulation of hemp occurred in 1937 with the Marihuana Tax Act, which required all producers of the species *Cannabis sativa* to register with and apply for a license from the Federal government. The ''Hemp for Victory'' Campaign during World War II promoted production of hemp for rope to be used by U.S. military forces. At the end of the war, however, the requirements in the Marihuana Tax Act resumed. In 1970, Congress passed the Controlled Substances Act, granting the Attorney General the authority to regulate production of cannabis, including hemp.

The 2014 Farm Bill authorized pilot programs, as permitted by State law, for hemp cultivation for research purposes to be administered by academic institutions and State departments of agriculture. By 2019 approximately half of the states had developed such a pilot program. The research under these pilot programs included market research, which allowed cultivated hemp to enter the stream of commerce as inputs into various consumer products. For example, in Kentucky, one of the first states to enact a pilot program, producer sales to processors totaled $1.6 million in 2016, $7.5 million in 2017, $17.7 million in 2018, and $51.3 million in 2019.[33] Hemp biomass contains concentrations of the cannabinoid cannabidiol, known as CBD. High prices for hemp harvested for cannabinoids, relative to those of other agricultural commodities, have fueled producer interest in hemp production since 2014.

2018 Farm Bill

The 2018 Farm Bill allowed the production and sale of industrial hemp either under a State or Tribal program approved by the USDA or under a Federal license for producers in areas with no approved plan and no explicit State or Tribal statute prohibiting the production of hemp. The 2018 Farm Bill explicitly preserved the authority of the U.S. Food and Drug Administration (FDA) to regulate hemp products under the Federal Food, Drug, and Cosmetic Act (FD&C Act) and section 351 of the Public Health Service Act (PHS Act). Accordingly, products containing cannabis and cannabis-derived compounds are subject to the same authorities and requirements as FDA-regulated products containing any other substance. The 2018 Farm Bill removed hemp from the list of controlled substances, decontrolling hemp production in all U.S. States, territories, and lands belonging to Indian Tribes, unless prohibited by State or Tribal

[33] Kentucky Department of Agriculture.

Law. This action eliminates the uncertain legal status at the Federal level of hemp production and allows the U.S. Department of Agriculture (USDA) to provide hemp producers with crop insurance programs, potentially reducing risk to producers and providing easier access to capital. The statute also prohibits interference in the interstate transport of hemp by States, including those States that prohibit hemp production and sales. As a result, hemp producers will have access to nationwide markets.

Need for Regulation

The rule is necessary to facilitate the domestic cultivation of hemp for sale into the market for hemp products by creating a set of minimum standards to ensure that hemp being produced under this program meets all statutory requirements. The rule establishes minimum requirements for States and Indian Tribes to obtain program approval and, for producers operating under the Federal program to obtain a license and meet operating requirements under that license. Without these provisions, it would not be possible to grow hemp legally.

Both the declassification of hemp, and the prohibition on interference with interstate transportation apply to hemp that is grown under an approved State or Tribal plan, or under a Federal license. As a result, this regulation facilitates provisions of the 2018 Farm Bill that would otherwise be self-implementing.

Overview of the Action

The 2018 Farm Bill granted regulatory authority of domestic hemp production to the State departments of agriculture, Tribal governments, and USDA. States and Indian Tribes wishing to operate their own programs must submit to USDA plans that include provisions for maintaining information regarding the land on which hemp is produced, for testing the levels of THC, for disposal of plants that do not meet necessary requirements, and for procedures to ensure compliance with the requirements of the new part, including background checks of all key participants. State and Tribal Plans must be approved by USDA. This rule outlines requirements by which the USDA would approve plans submitted by States and Tribal governments for oversight of hemp production. The 2018 Farm Bill also directs USDA to develop a plan for use by hemp producers in States or Indian Tribes where no State or Tribal Plan has been approved and that do not prohibit the cultivation of hemp. These actions will promote consistency in regulations governing the legal production of hemp across the country.

Baseline Definition

The 2014 Farm Bill authorized hemp research pilot programs to be administered by states and universities. The 2018 Farm Bill repealed these pilot programs beginning one year from the publication of a USDA rule; however, the 2021 Continuing Appropriations Act extended the authorization of the 2014 pilot programs until January 1, 2022. From 2014 to 2018, planted acreage tripled in every year, reaching nearly 63,500 acres in 2018. In the year following the signing of the 2018 Farm Bill, planted acreage increased by more than 400 percent to 327,600 acres in 2019.[34] The surge of entrants into the hemp market in 2019 left many producers with unsold inventory. In Kentucky alone, more than $100 million of hemp material went unsold due to lack of buyers in 2019. The large number of entrants into the market in 2019 caused a surplus of hemp production, which in turn caused prices to fall and revenue losses to producers.

Despite the producer excitement that ensued in 2019 following the signing of the 2018 Farm Bill, only 17 states opted to participate in the new hemp programs in time for the 2020 growing season. These 17 states accounted for about 20 percent of the total estimated planted acreage in 2020. Given the apparent affinity by states for the 2014 pilot programs, AMS assumes that in the absence of the 2018 Farm Bill, the 2014 Farm Bill pilot programs would have continued indefinitely. Indeed, the 2014 Farm Bill offered no sunset date for these programs. In order to capture the impacts of this rule on affected entities, AMS attributes 20 percent of the estimated planted acreage from 2020 through 2025 to the 2018 Farm Bill and this rule which enables its prescriptions. This 20 percent reflects the amount of planted acreage in the 17 states that opted to participate in the 2018 Farm Bill hemp programs for the 2020 growing season. The 2020 growing season was the final opportunity for producers to cultivate hemp under the 2014 pilot programs until the 2021 Continuing Appropriations Act extended the authorization of the 2014 pilot programs to January 1, 2022. By enrolling in the new hemp programs, these 17 states expressed a preference for the hemp programs authorized by the 2018 Farm Bill over the 2014 Farm Bill pilot programs. The remaining 80 percent of planted acreage estimated from 2020 through 2025 will be treated as attributable to the 2014 pilot programs under the assumption that they would have continued in the absence of the 2018 Farm Bill which terminated them.

In the interim final rule (IFR), AMS attributed 50 percent of the growth in producer sales from 2020 through 2022 to the 2018 Farm Bill and this enabling rule. In deriving this assumption, AMS considered the rate at which hemp acreage had increased in recent years, the number of States whose hemp pilot programs produced a crop in recent years, and the number of States that passed legislation following the signing of the 2018 Farm Bill in anticipation of this rule's enactment in time for the 2020 growing season. In the time between publication of the IFR on October 31, 2019, and the beginning of the 2020 growing season, 17 states representing 20 percent of planted acreage opted to participate in the hemp programs mandated by the 2018 Farm Bill. This portion of enrollment is less than AMS anticipated in the IFR.

Affected Entities

As of July 2020, States, Indian Tribes, and USDA had issued 19,121 producer licenses. This figure represents licenses issued in 44 States and one Tribe. About 70 percent of states reported at the time that they were still accepting applications, which indicates that the number of 2020 producer licenses issued is likely to grow. For this reason, AMS estimates that up to 20,000 producer licenses will be issued in 2020. Based on the slowed pace in growth of producer licenses from 2019 to 2020, AMS assumes an annual growth rate in producer licenses of 10 percent from 2020 through 2025, for the purposes of this analysis. The result is shown in Table 2. AMS is unaware of any estimates that exist regarding the number of producer licenses that will be issued in the coming years; however, the novelty of hemp as a commercial agricultural commodity, the resolutions of uncertainty surrounding regulations, the expected growth in demand for existing and new hemp products, and the effective establishments of State, Tribal, and Federal hemp programs may

continue to draw producers into the market.

TABLE 2—ESTIMATED PROJECTION OF NUMBER OF PRODUCER LICENSES ISSUED

Year	2020	2021	2022	2023	2024	2025
Growers	20,000	22,000	24,200	26,620	29,282	32,210

Sources and notes:
2020 figure based on July 2020 National Industrial Hemp Regulators conference call.
2021–2025 figures based on assumed annual growth rate of 10% in producer licenses.

As of the writing of this analysis, three states had opted to participate in the USDA Federal Plan authorizing producers to cultivate hemp. These states are Hawaii, Mississippi, and New Hampshire. Together, they represent more than 300 producers in 2020. The number of licensed producers participating in the Federal Plan is likely to grow over time due to both greater entrance of producers into the market in these three states and additional states, Indian Tribes, and territories opting to participate in the USDA Plan. At the end of 2020, less than 2 percent of the total number of producers were licensed by USDA. The extension of the 2014 pilot programs to 2022, which was included in the 2021 Continuing Appropriations Act published October 1, 2020, resulted in fewer producers participating in the USDA Plan. Prior to the extension of the 2014 pilot programs, the portion of participants under the USDA Plan was about 10 percent of the total number of 2020 producers, with the expectation for further enrollment. For the purposes of this analysis, therefore, AMS assumes that 20 percent of the total number of licensed producers will be participants of the USDA Plan, and the remaining 80 percent will be participants of a State or Tribal Plan.

In addition to hemp producers, this rule will impact state departments of agriculture, Tribal governments, and USDA as these entities will bear the responsibility to ensure that hemp producers abide by the State and Tribal Plans and the USDA Plan for regulating hemp. At the time this document was written, more than 40 Indian Tribes, at least 40 states, and two U.S. territories had plans approved by USDA or were in the process of submitting plans for USDA approval. At least three states have opted to participate in the USDA plan, and one state and one territory await legislation authorizing hemp production. AMS anticipates receiving further interest in both the Federal Plan and the plans administered by states, Indian Tribes, and territories in the coming months when the provisions of the 2014 Farm Bill expire and States and Tribes start implementing their programs. For the purposes of this analysis, AMS assumes that 100 states, Indian Tribes, and territories will administer their own plans in every year from 2020 through 2025. AMS acknowledges that this number is likely to change from year to year, depending on market conditions, which affect the ability of a state, tribe, or territory to manage its own hemp program. Because AMS has no way to predict future market or state political conditions, for simplicity, it assumes a constant of 100 states, Indian Tribes, and territories administering their own plans from 2020 through 2025.

Finally, this rule will impact laboratories that will provide testing services to producers and program administrators. As of the writing of this analysis, there were 67 laboratories that test hemp that are registered with the DEA. USDA is requiring that all samples tested for THC concentration levels be conducted in DEA-registered laboratories; however, enforcement of this requirement has been delayed until December 31, 2022.

Expected Costs and Benefits of the Rule

The 2018 Farm Bill grants authorization for production of hemp to all states and Indian Tribes, unless prohibited by State or Tribal Law. This rule enables states, Indian Tribes, and USDA to regulate this authorization. This rule is expected to generate benefits and costs to hemp producers, state departments of agriculture, Tribal governments, USDA, and laboratories. The benefits of this rule are expected to outweigh the costs, however, and the burden on the impacted entities is anticipated to be minimal.

Producers

Using figures from Hemp Industry Daily and the Brightfield Group, AMS estimates retailer sales of hemp products to range from $2.5 billion in 2020 to nearly $17 billion in 2025. Based on price spreads from farm to consumer, published by the Economic Research Service (ERS), AMS assumes a pass-through rate of 20 percent from retailer to producer.[35] AMS also assumes that import values account for 15 percent of the producer share of retail sales. This estimate was derived using 2019 and 2020 import data from the Foreign Agricultural Service (FAS) of USDA. At the time of this analysis, import data for 2020 was only available for the months of January through August. In order to gauge what total 2020 imports might be, AMS applied to the figure of total imports for January through August 2020 ($55 million) the average percentage change that occurred in the four months from August through December of recent years (40 percent). Applying the assumptions of 20 percent price pass-through from retailer to producer and import values of 15 percent of the producer share of retail sales to the estimates of retailer sales results in estimated total producer sales of $432 million in 2020 to $2.9 billion in 2025, shown in Table 3.

TABLE 3—ESTIMATED RETAILER AND PRODUCER HEMP PRODUCT SALES

[Millions]

Year	2020	2021	2022	2023	2024	2025
Total retailer sales [1]	$2,540	$4,485	$6,740	$9,310	$10,995	$16,800

[3] Assumes imports account for 15% sales at the producer level; source for assumption is FAS 2015–2019 import data, HTS codes 1207990320 and 5302100000.

[4] Difference of producer share of retail sales and imports.

The estimates in Table 3 reflect total producer sales in aggregate. AMS is unaware of any data that currently exists that would indicate sales by individual producer. Given the varied nature of the hemp industry, producer sizes are anything but uniform; therefore, AMS has not attempted to project sales by individual producer as it would likely result in false conclusions and misleading information. Similarly, data comparing sales by producers under the 2018 Farm Bill and what sales under the 2014 Farm Bill may have been in the absence of the 2018 Farm Bill does not currently exist. Further, AMS believes that this estimate would not differ greatly given the greater access to nationwide markets and flexibilities provided to producers under the 2018 Farm Bill.

In addition, AMS acknowledges that raw harvested hemp product may take years to enter the retail market after it passes through the supply chain. For instance, product sold at the retail level in 2021 may include hemp that was harvested in 2019. In acknowledging this, AMS understands that the estimated producer sales for a given year in Table 3 may not represent actual producer sales for that year, but rather, sales from prior years. AMS is unaware of any data that exists that would identify when a harvested hemp crop is sold into the retail market. For the purposes of this analysis, therefore, and for simplicity, AMS assumes that the producer sales estimated in Table 2 represent sales at the producer level for the same year as the retail sales from which they are derived.

As discussed in the ''Baseline Definition'' section of this analysis, AMS estimates that 20 percent of the producer planted acreage from 2020 through 2025 will be attributable to the 2018 Farm Bill and this rule which enables its prescriptions. This 20 percent reflects the amount of planted acreage in the 17 states that opted to participate in the 2018 Farm Bill hemp programs in time for the 2020 growing season. The 2020 growing season was the final opportunity for producers to cultivate hemp under the 2014 pilot programs. By enrolling in the new hemp programs, these 17 states expressed a preference for the hemp programs authorized by the 2018 Farm Bill over the 2014 Farm Bill pilot programs. The remaining 80 percent of producer planted acreage estimated from 2020 through 2025 will be treated as attributable to the 2014 pilot programs under the assumption that they would have continued in the absence of the 2018 Farm Bill which terminated them. In Table 4, AMS has calculated total planted acreage inclusive of all domestic producers, using the estimates of total producer sales in Table 3 and assumptions that are stated and cited in the table. From the estimates of total planted acreage in Table 4, AMS calculated the planted acreage due to the rule in Table 5, along with the estimate of sales attributable to the rule. These estimates of sales due to the rule will be referenced as the benefits of the rule to producers in the calculation of net benefits in Table 10.

BILLING CODE P

Table 4. Calculation of planted acreage required to meet estimated total producer sales

Assumed constant in each year

BILLING CODE C

To calculate total planted acreage nationwide in Table 4, from which planted acreage due to this rule will be estimated in Table 5, AMS assumed the following to remain constant in each year from 2020 through 2025: Portion of total sales by intended use; yields by intended use; prices per pound by intended use; portions of harvested volume sold by intended use; and the portion of planted acreage that is typically harvested. Using 2019 producer data from the Kentucky Department of Agriculture, AMS estimates that of total sales of hemp products, cannabinoids accounts for 99 percent, and fiber and grain each account for 0.5 percent. Also based on data from the Kentucky Department of Agriculture, AMS estimates that 65 percent of the harvested volume of hemp for cannabinoids is sold, 90 percent of hemp harvested for fiber is sold, and 95 percent of hemp harvested for grain is sold.[36] This assumption is also referenced in Table 5. AMS compared the hemp enterprise budgets published by seven different academic institutions for yield estimates which

[36] The Kentucky Department of Agriculture is widely recognized as a reliable source for hemp market data as it has collected data from its producers since the inception of its hemp program in 2014. Much of this data is publicly available and was cited by many commenters.

represent the growing conditions across the country. Aside from these seven, AMS is unaware of any other hemp enterprise budgets published by an academic institution.

Based on 2019 and 2020 prices published by the Jacobsen, AMS assumes constant per-pound prices for cannabinoids, fiber, and grain of $3.90, $0.09, and $0.53, respectively.[37] AMS acknowledges that prices are unlikely to remain constant from year to year, particularly for cannabinoids; however, AMS has considered 68 weeks of cannabinoids prices in determining its estimate of $3.90 per pound. This price assumes 6 percent CBD at $0.65 per CBD percentage per pound. Using these prices and yield estimates, AMS calculated a price per acre for each intended use of hemp. Finally, the assumption that 75 percent of planted acreage is harvested was estimated using data from multiple state departments of agriculture. The assumed constants of the portion of planted acreage that is harvested, yield by intended use, portion of harvested volume that is sold, and prices by intended use are also utilized in Table 5.

Table 5. Calculation of producer sales attributable to the rule

Assumed constant in each year

Intended use	Portion of planted acreage due to the rule[1]	Portion of planted acreage[2]	Portion of planted acreage harvested[3]	Yield (lbs/acre)[4]	Portion of harvested volume sold[5]	Price per lb[6]
Cannabinoids	20%	80%	75%	1,500	65%	$ 3.90

In addition to the assumptions already identified in reference to Table 4, AMS assumes constant the portion of planted acreage due to the rule and portions of planted acreage by intended use. As described in the ''Baseline Definition'' section, AMS assumes that 20 percent of total planted acreage can be considered as attributable to the rule. This proportion represents the amount of planted acreage of the states that had plans approved by USDA for a hemp production program, as authorized by the 2018 Farm Bill, in time for the 2020 growing season. The 2020 growing season was the final opportunity for producers to cultivate hemp under the 2014 pilot programs. By enrolling in the new hemp programs, these states expressed a preference for the hemp programs authorized by the 2018 Farm Bill over the 2014 Farm Bill pilot programs.

The Jacobsen estimated that of total planted acreage in 2020, 80 percent was for cannabinoids, 3 percent was for fiber, and 17 percent was for grain. AMS acknowledges that planted acreage by intended use is likely to change from year to year as a result of market conditions. The portion of acreage intended for cannabinoids has, indeed, decreased from its levels in 2019, with grain and fiber gaining greater consumer attention. AMS is unaware of any data that forecasts planted acreage by intended use in years beyond 2020. For the purposes of this analysis, and for simplicity, therefore, AMS assumes constant the portions of planted acreage by intended use as reported for 2020.

To reiterate, AMS is aware that raw hemp product at the producer level may take years to enter the retail market. The analysis in Tables 4 and 5 is meant to show potential consumer demand for hemp products at the producer level in years 2020 through 2025, and not necessarily the producer sales of hemp cultivated in these specific years. These estimates are sensitive to changes in price. Because planted acreage is derived from total sales, a change in price causes an inverse change in the estimate of planted acreage; however, the relationship between price and sales is, of course, positive.

Many states reported to AMS that the land on which hemp is currently grown was previously utilized for cultivation of corn. Using data from the National Agricultural Statistics Service (NASS) on the production value of corn for grain and acres harvested, AMS determines a value per harvested acre of corn of $630. This value is a national average of the three-year period of 2017 through 2019, which are the most recent years for which data is available.[38] For the purposes of this analysis, this value of $630 per acre will serve as the opportunity cost to hemp producers. The opportunity cost is the potential returns that are foregone in pursuit of an alternative. The potential foregone returns, in this case, are $630 per acre for corn cultivation; and, the alternative is hemp cultivation. Applying this value to the estimates of acreage required to meet estimated producer sales as calculated in Table 5 results in the total opportunity cost to producers in years 2020 through 2025 as shown in Table 6.

TABLE 6—CALCULATION OF OPPORTUNITY COST OF HEMP CULTIVATION UNDER RULE

2017–2019 average returns per acre of corn for grain [1]						$630
Year	2020	2021	2022	2023	2024	2025
Planted acres due to rule [2]	31,820	56,187	84,437	116,633	137,742	210,465
Opportunity cost (millions) [3]	$20	$35	$53	$73	$87	$133

Sources and notes:
[1] National Agriculural Statistics Service (NASS).
[2] See Table 5 estimate calculation.
[3] Product of 2017–2019 average retunns per acre of corn for grain and acres worth of hemp sold.

In the IFR, AMS calculated an opportunity cost of $591 per acre, using an average of returns per acre for all cropland, weighted by area planted or bearing. This estimate utilized NASS crop totals for fruits, vegetables, and traditional field crops. At the time of the writing of the IFR, AMS had little information as to the prior uses of land currently being cultivated for hemp. To address this in the final rule, AMS sought input from state departments of agriculture, most of which reported that the land on which hemp is currently grown was previously utilized for cultivation of corn.

AMS has modified its sampling and testing requirements, which are described in the section in this rule titled ''Sampling for total THC'', to allow for ''performance-based sampling''. A performance-based protocol must have the potential to ensure at a confidence level of 95 percent that no more than one percent of the plants in each lot would exceed the acceptable hemp THC level. Performance-based sampling achieves defined objectives and focuses on results. It differs significantly from a prescriptive action in which licensees are provided detailed direction on how those results are to be obtained. A performance-based approach would simply set a performance objective (*e.g.,* reliability of 95 percent) and allow the States and Indian Tribes considerable freedom in how to achieve that reliability objective with their sampling methodology.

To estimate the number of lots to be sampled in each year, AMS employs the Cochran Formula:

$$n_0 = \frac{Z^2 p(1-p)}{e^2},$$

where n_0 is the sample size, Z is the z-value associated with a confidence interval, p is the estimated proportion of the population that has the attribute in question, and e is the margin of error or the desired level of precision.

Inserting the z-value that corresponds to a 95 percent confidence interval, assuming maximum variability for p at 50 percent, and applying the margin of error of one percent results in the following sample size:

[38] NASS. Quick Stats. Variable ''Corn, grain—production, measured in $'' divided by variable ''Corn, grain—acres harvested''.

$$n_0 = \frac{1.96^2(0.5(1-0.5))}{0.01^2} = 9{,}604\ samples.$$

The Cochran Formula assumes an unlimited population size; however, the formula can be modified to return a smaller sample size for a finite population:

$$n = \frac{n_0}{1+\frac{(n_0-1)}{N}},$$

where n is the modified sample size, n_0 is the Cochran Formula sample size, and N is the population size.

Table 7 shows the number of sampled lots, *n,* required for a 95 percent confidence interval and one percent margin of error for each year's total number of lots, *N.* The total annual cost of sampling and testing borne by producers is calculated using a cost per lot of $565, which was estimated using hourly rates for inspectors and for laboratory services of $75 and $98, respectively; two hours, apiece, spent sampling, driving, and testing; 120 miles driven; and, $0.58 per mile compensation. In its calculation of total number of lots from total planted acreage, AMS utilized the portions of planted acreage by intended use, introduced in Table 5, and data from the Farm Service Agency (FSA) from which average lot sizes for hemp by intended use were derived.

Table 7. Calculation of sampling and testing costs to producers

Assumed constant in each year

Intended use	Portions of planted acreage by use[1]	Average number of acres per lot[2]	Cochran Formula[3]	Modification for small sample size[4]	Sampling & testing cost per lot[5]

[7] Product of total planted acreage and portions of planted acreage by use.

[8] Quotient of total planted acreage and average number of acres per lot.

[9] Product of sample size n and sampling & testing cost per lot.

Some portion of tested lots are likely to return results with THC concentrations greater than 0.3 percent. To estimate this percentage, AMS utilized data, specific to this very question, collected by the National Industrial Hemp Regulators during a November 2019 meeting. The average portion of tests that would return results of THC concentrations greater than 0.3 percent, weighted by the number of tests administered in each state, was 25 percent. In Table 8, AMS applies this percentage to estimate total noncompliant lots in each year and the cost to dispose of noncompliant acreage. AMS is aware of other estimates of THC concentration failure rates. As of November 2020, States and Tribes operating under the 2018 Farm Bill reported 4,192 licensed producers representing 6,166 acres planted. Of these acres planted, approximately 12 percent were destroyed due to THC levels exceeding 0.3 percent. This data, however, is limited because many approved plans have not all been fully

implemented. USDA expects more data will be available as the 2021 season begins and States and Tribes implement their programs.

Table 8. Calculation of disposal costs to producers

Assumed constant in each year

Intended use	Portion of tests with results of noncompliant THC levels[1]	Portions of planted acreage by use[2]	Average number of acres per lot[3]	Disposal time per acre of hemp (hours)[4]	Compliance officer hourly salary[5]	Cost per acre of noncompliant hemp disposal[6]

[8] Product of sampled & tested lots and portion of tests with results of noncompliant THC levels.

[9] Product of noncompliant lots, portions of planted acreage by use, and average number of acres per lot.

[10] Product of the sum of noncompliant acres and cost per acre of noncompliant hemp disposal.

AMS has issued guidance on approved methods for disposal of noncompliant hemp material, including plowing under, mulching or composting, disking, bush mowing or chopping, deep burial, and burning. AMS requires disposal of noncompliant hemp using one of these methods. Discussion with state departments of agriculture and producers led AMS to estimate an average of 15 minutes per acre required to dispose of noncompliant material. This 15-minute estimate is an average across all disposal methods. According to the May 2019 Occupational Employment Statistics Survey of the Bureau of Labor and Statistics, the mean hourly wage of a compliance officer is $35. Assuming 39 percent of total compensation accounts for benefits, then total compensation of a compliance officer is $57 per hour. This is described in the Paperwork Reduction Act (PRA) section of this

rule. Applying the total hourly salary of a compliance officer to the disposal time per acre of hemp results in a per acre cost of $14.25 for disposal of noncompliant hemp acreage.

The PRA section details the burdens of reporting and recordkeeping and their associated costs. Table 9 shows the calculations of the reporting and recordkeeping costs to producers that will be imposed by this rule. All assumptions in this table have been previously introduced. The PRA section describes how each estimate of time was calculated per required form.

Table 9. Calculation of total reporting and recordkeeping costs to producers

Assumed constant in each year

Portions of producer licenses issued by Plan[1]		Portion of total planted acreage or lots under USDA Plan[2]	Reporting & recordkeeping hours per producer (required of all)[3]		Reporting & recordkeeping hours per disposed lot[4]		Hourly salary of a compliance officer[5]

In order to obtain a producer license, AMS requires that each producer, or key participant of a business entity, submit to a background check, or criminal history report, at least every three years. A key participant is a person with a direct or indirect financial interest in the hemp-producing entity, including a chief executive officer, a chief operating officer, and a chief financial officer. The cost of a criminal history report conducted by the Federal Bureau of Investigation (FBI) is $18 per record. For the purposes of this analysis, AMS assumes each producer license to represent three key participants. The total annual cost of a background check for three key participants every three years at minimum is $18 per producer.

The producer net benefits of this rule to society are shown in Table 10. Subtracted from producer sales due to the rule are the opportunity costs of the land on which hemp is currently grown; sampling and testing costs; disposal of noncompliant acreage; reporting and recordkeeping burdens; and, annual background checks. The producer net benefits of this rule to society range from $49 million in 2020 to $357 million in 2025.

TABLE 10—PRODUCER NET BENEFITS TO SOCIETY

[Millions]

	2020	2021	2022	2023	2024	2025
Grower sales due to rule	$75.51	$133.34	$200.38	$276.78	$326.88	$499.46

Net benefits	49.05	90.47	138.95	194.43	230.72	356.80

States, Indian Tribes, and USDA

States and Indian Tribes have the authority to establish fee structures to fund their hemp programs. As of the writing of this analysis, about half of the states with plans approved by USDA reported their programs as being full funded through user-fees. To estimate the cost of administering a hemp program, AMS calculated an average of the total fees charged to producers by these states, which reported as fully user-fee funded, to use as a proxy for the per producer cost of hemp program administration. The fees used to calculate this average included those with such designations as application fee, site registration fee, licensing fee, and others. The average did not include fees associated with sampling and testing as these were calculated separately in Table 7. AMS estimates an average cost per producer of hemp program administration of $800 annually. AMS has no reason to believe that Indian Tribes or USDA will be any more or any less efficient than states in program administration. AMS believes, therefore, that this figure is a suitable proxy for the cost of program administration to states, Indian Tribes, and USDA per producer who cultivates hemp as a result of this rule.

As discussed in the ''Baseline Definition'' section, 17 states opted to participate in the new hemp programs authorized by the 2018 Farm Bill in time for the 2020 growing season. These states represented 20 percent of both planted acreage nationwide and the number of producers nationwide. By applying this percentage to the total number of producers in each year, as shown in Table 2, AMS estimates the number of producers that will cultivate hemp due to this rule. The product of the number of producers due to this rule and the $800 per grower proxy for administration costs results in program administration costs to States, Indian Tribes, and USDA of $3 million in 2020 to $5 million in 2025.

This rule places a reporting and recordkeeping burden on states and Indian Tribes as detailed in the PRA section of this rule. The total time required per state or tribe for reporting and recordkeeping is 25.25 hours annually. AMS assumes constant the number of states and Indian Tribes that will operate their own hemp programs at 100 in total from 2020 through 2025. In total, the time required of 100 states and Indian Tribes for 25.25 hours of reporting and recordkeeping is 2,525 hours. Applying the hourly salary of a compliance officer of $57 to this total results in an annual cost to all states and Indian Tribes of reporting and recordkeeping of $143,919, or $1,439 per state or tribe.

The total administration costs to states, Indian Tribes, and USDA are calculated in Table 11. They include the costs to all three entities of program administration, and the costs of reporting and recordkeeping to states and Indian Tribes. Total administration costs to states, Indian Tribes, and USDA range from $3 million in 2020 to $5 million in 2025.

TABLE 11—TOTAL COSTS TO STATES, INDIAN TRIBES, AND USDA

[Millions]

	2020	2021	2022	2023	2024	2025
Program administration	$(3.20)	$(3.52)	$(3.87)	$(4.26)	$(4.69)	$(5.15)
Reporting & recordkeeping	(0.14)	(0.14)	(0.14)	(0.14)	(0.14)	(0.14)
Total costs	(3.34)	(3.66)	(4.02)	(4.40)	(4.83)	(5.30)

Laboratories

This rule also places a reporting and recordkeeping burden on laboratories as they will be required to report on the results of samples tested for THC content to the entities administering the hemp programs. The PRA section of this rule estimates an annual reporting and recordkeeping requirement for laboratories of 0.58 hours per sampled and tested lot. As calculated in Table 7, the total number of lots to be sampled and tested in each year is 5,659 in 2020; 6,886 in 2021; 7,606 in 2022; 8,069 in 2023; 8,272 in 2024; and, 8,688 in 2025. Multiplying the total number of lots to be sampled and tested in each year by the annual reporting and recordkeeping requirement of 0.58 hours per sampled and tested lot and by the hourly salary of a compliance officer of $57 results in the total annual costs to laboratories as shown in Table 12.

TABLE 12—TOTAL COSTS TO LABORATORIES

[Millions]

	2020	2021	2022	2023	2024	2025
Reporting & recordkeeping	$(0.19)	$(0.23)	$(0.25)	$(0.27)	$0.27)	$(0.29)

Total Net Benefit

Producers, states, Indian Tribes, and USDA, and laboratories are the entities most likely to be impacted by this rule. For this reason, the net benefits or costs of this rule to these entities have been evaluated in this analysis. The total net benefits to society as a whole and their present values by year are shown in Table 13. The rule has a positive net benefit in every year, ranging from $46 million in 2020 to $351 million in 2025.

TABLE 13—TOTAL NET BENEFITS TO SOCIETY

[Millions]

Entity	2020	2021	2022	2023	2024	2025
Producers	$49.05	$90.47	$138.95	$194.43	$230.72	$356.80
States, Tribes & USDA	(3.34)	(3.66)	(4.02)	(4.40)	(4.83)	(5.30)

3%	$45.52	$84.06	$126.95	$173.66	$200.45	$302.96
7%	45.52	80.92	117.63	154.90	172.12	250.41

Alternatives

In developing this final rule, AMS considered several alternatives to the policies that were adopted. The first of these was related to methodologies for sampling. The methodologies considered include sampling and testing of all lots, as mandated in the IFR, sampling and testing based on risk, and sampling and testing based on performance. The latter of these was the sampling methodology that was chosen for the final rule as it results in the lowest total cost to producers.

Performance-based sampling also grants flexibility to States and Indian Tribes in the development of sampling methodologies. In the IFR, AMS required sampling of every hemp lot, regardless of intended use; however, AMS has determined that compliance to this method would too greatly burden producers as well as program administrators, whose responsibility it would be to enforce it. AMS also considered requiring risk-based sampling, which would mandate minimum portions of sampling of lots by intended use. The portions of lots to be sampled by intended use that were considered were 50 percent of lots for cannabinoids, 10 percent of lots for fiber, and 10 percent of lots for grain. AMS currently lacks sufficient data to successfully carry out a risk-based sampling methodology that would be applicable to the varying growing regions nationwide; therefore, the risk-based sampling methodology was not chosen for this final rule. An analysis of these sampling methodologies is illustrated in Table 14.

Table 14. Analysis of alternative sampling methodologies

Intended use	Portions to be sampled & tested based on methodology			Cost per lot of sampling & testing
	All lots (IFR)	Risk-based	Performance-based (FR)	
Cannabinoids	100%	50%	USDA Plan acreage only	$ 565
Fiber		10%		
Grain		10%		

Year	Intended use	Total number of lots	Lots sampled & tested			Total cost of sampling & testing		
			IFR	Risk-based	Performance-based	IFR	Risk-based	Performance-based
2020	Cannabinoids	12,728	13,777	6,469	5,659	$ 7,784,210	$ 3,654,983	$ 3,197,536
	Fiber	318						
	Grain	731						
2021	Cannabinoids	22,475	24,327	11,423	6,886	$ 13,744,954	$ 6,453,779	$ 3,890,515
	Fiber	562						
	Grain	1,291						
2022	Cannabinoids	33,775	36,559	17,166	7,606	$ 20,655,739	$ 9,698,656	$ 4,297,440
	Fiber	844						
	Grain	1,940						
2023	Cannabinoids	46,653	50,499	23,711	8,069	$ 28,531,888	$ 13,396,808	$ 4,559,260
	Fiber	1,166						
	Grain	2,679						
2024	Cannabinoids	55,097	59,639	28,003	8,272	$ 33,695,823	$ 15,821,472	$ 4,673,701
	Fiber	1,377						
	Grain	3,164						
2025	Cannabinoids	84,186	91,126	42,787	8,688	$ 51,486,114	$ 24,174,691	$ 4,908,947
	Fiber	2,105						
	Grain	4,835						

Sources and notes:

See Table 7 for calculations and references.

Secondly, AMS considered retaining at 0.5 percent the limit for total THC content that would result in a negligent violation, as required in the IFR. Based on comments, however, AMS has determined this requirement to too greatly burden producers as factors beyond the control of the producer, such as seed genetics, weather and climate, may cause an increase in total THC-levels. By increasing the negligent violation threshold to 1.0 percent, AMS diminishes the risk to producers of incurring a negligent violation, which results in time and cost savings to producers and to program-administering entities.

Finally, AMS considered mandating a post-sample harvest window of 15 days, as required in the IFR. Based on comments and in consideration of the time required to complete sampling and testing activities, AMS has determined that requiring a 15-day post-sample harvest window would place undue strain on resources. AMS believes that the extension of the post-sample harvest window to 30 days will provide producers with a beneficial flexibility to adjust to unforeseen weather events and will accommodate complicated harvest processes.

Regulatory Flexibility Analysis

Pursuant to the requirements set forth in the Regulatory Flexibility Act (5 U.S.C. 601–612), AMS has considered the economic impact of this action on small entities. AMS prepared an initial regulatory flexibility act analysis presented with the interim final rule, and has now prepared this Final Regulatory Flexibility Act Analysis. AMS has determined that this rule will have a significant economic impact on a substantial number of small businesses because many small businesses will not be able to participate in the hemp market without this rule.

Need for Regulation

The rule is necessary to facilitate the domestic cultivation of hemp for sale into the market for hemp products by creating a set of minimum standards to ensure that hemp being produced under this program meets all statutory requirements. The rule establishes minimum requirements for States and Indian Tribes to obtain program approval and, for producers operating under the Federal program to obtain a license and meet operating requirements under that license. Without these provisions, it would not be possible to grow hemp legally.

Both the declassification of hemp, and the prohibition on interference with interstate transportation apply to hemp that is grown under an approved State or Tribal plan, or under a Federal license. As a result, this regulation facilitates provisions of the 2018 Farm Bill that would otherwise be self-implementing.

Overview of the Action

The 2018 Farm Bill granted regulatory authority of domestic hemp production to the State departments of agriculture, Tribal governments, and USDA. States and Indian Tribes wishing to operate their own programs must submit to USDA plans that include provisions for maintaining information regarding the land on which hemp is produced, for testing the levels of THC, for disposal of plants that do not meet necessary requirements, and for procedures to ensure compliance with the requirements of the new part, including background checks of all key participants. State and Tribal Plans must be approved by USDA. This rule outlines requirements by which the USDA would approve plans submitted by States and Tribal governments for oversight of hemp production. The 2018 Farm Bill also directs USDA to develop a plan for use by hemp producers in States or Indian Tribes where no State or Tribal Plan has been approved and that do not prohibit the cultivation of hemp. These actions will promote consistency in regulations governing the legal production of hemp across the country.

Potentially Affected Small Entities

The Small Business Administration (SBA) defines, in 13 CFR part 121, small agricultural producers as those having annual receipts of no more than $1 million. Unfortunately, very little data exists on hemp grower sales receipts. To conduct this analysis, however, AMS estimated prices per acre by intended use of hemp to find the acreage equivalent of $1 million per intended use. AMS encountered data limitations due to the lack of reporting by States and Tribes that have not started implementing the 2018 Farm Bill provisions and the extension of the 2014 Farm Bill provisions which do not require reporting from States.

To this end, AMS utilized data on acreage by intended use from the Kentucky Department of Agriculture and the Montana Department of Agriculture. Together, Kentucky and Montana make up a large amount of domestic acreage and represent diversity in hemp planted by intended use. For the purpose of this analysis, therefore, AMS assumes that the combined planted acreage by intended use in Kentucky and Montana adequately represent the planted acreage by intended use across the United States.

For yield estimates, AMS compared the hemp enterprise budgets published by seven different academic institutions that represent the growing conditions across the country. Aside from these seven, AMS is unaware of any other hemp enterprise budgets published by an academic institution. AMS sourced 2019 and 2020 prices from the Jacobsen to estimate per-pound prices for cannabinoids, fiber, and grain of $3.90, $0.09, and $0.53, respectively. The price for cannabinoids assumes 6 percent CBD content at $0.65 per CBD percentage per pound.

Using these prices and yield estimates, AMS calculated a price per acre for each intended use of hemp, as shown in Table 15. From the estimates of price per acre by intended use, AMS calculated the equivalent of $1 million in acres of hemp product per intended use. Of the 922 unique producers in the combined data from the Kentucky and Montana Departments of Agriculture, 97 percent reported acreage no greater than the amounts necessary to reach $1 million, based on the estimated prices per acre. Assuming that these data are representative of the U.S. as a whole, then 97 percent of domestic producers of hemp would meet the SBA size standard of a small business of annual receipts of no greater than $1 million.

Table 15. Calculation of the portion of producers considered to be small per SBA standards			
Intended use	Yield (lbs/acre)[1]	Price per lb[2]	Price per acre[3]
Cannabinoids	1,500	$ 3.90	$ 5,850
Fiber	8,000	$ 0.09	$ 720
Grain	1,200	$ 0.53	$ 636

Intended use	Acreage equivalent of $1 million[4]	Small producers
Cannabinoids	171	97%
Fiber	1,389	
Grain	1,572

Alternatives Considered To Minimize Impacts of the Rule

In developing this final rule, due to comments received and experiences from the 2020 season, AMS considered several alternatives to the policies that were adopted. The first of these was related to methodologies for sampling. The methodologies considered include sampling and testing of all lots, as mandated in the IFR, sampling and testing based on risk, and sampling and testing based on performance. The latter of these was the sampling methodology that was chosen for the final rule as it results in the lowest total cost to producers. Performance-based sampling also grants flexibility to States and Indian Tribes in the development of sampling methodologies. Some States currently have considered performance-based sampling under the 2014 Farm Bill. However, this information is not available and will need to be evaluated and approved by USDA as part of State and Tribal plans before it can be implemented under the 2018 Farm Bill program if States and Tribes decide to utilize this option. In the IFR, AMS required sampling of every hemp lot, regardless of intended use; however, AMS has determined that compliance to this method would too greatly burden producers as well as program administrators, whose responsibility it would be to enforce it. AMS also considered requiring risk-based sampling, which would mandate minimum portions of sampling of lots by intended use. The portions of lots to be sampled by intended use that were considered were 50 percent of lots for cannabinoids, 10 percent of lots for fiber, and 10 percent of lots for grain. AMS currently lacks sufficient data to successfully carry out a risk-based sampling methodology that would be applicable to the varying growing regions nationwide; therefore, the risk-based sampling methodology was not chosen for this final rule.

Secondly, AMS considered retaining at 0.5 percent the limit for total THC content that would result in a negligent violation, as required in the IFR. Based on comments, however, AMS has determined this requirement to too greatly burden producers as factors beyond the control of the producer, such as seed genetics, weather and climate, may cause an increase in total THC-levels. By increasing the negligent violation threshold to 1.0 percent, AMS diminishes the risk to producers of incurring a negligent violation, which results in time and cost savings to producers and to program-administering entities.

Finally, AMS considered mandating a post-sample harvest window of 15 days, as required in the IFR. Based on comments and in consideration of the time required to complete sampling and testing activities, AMS has determined that requiring a 15-day post-sample harvest window would place undue strain on resources. AMS believes that the extension of the post-sample harvest window to 30 days will provide producers with a beneficial flexibility to adjust to unforeseen weather events and will accommodate complicated harvest processes.

Pursuant to the Congressional Review Act (5 U.S.C. 801 *et seq.*), the Office of Information and Regulatory Affairs designated this rule as ''major,'' as defined by 5 U.S.C. 804(2).

List of Subjects in 7 CFR Part 990

Acceptable hemp THC level, Agricultural commodities, Cannabis, Corrective action plan, Delta-9 tetrahydrocannabinol, Drugs, Dry weight basis, Hemp, Liquid chromatography, Laboratories, Marijuana.

■ For the reasons stated in the preamble, AMS revises 7 CFR part 990 to read as follows:

PART 990—DOMESTIC HEMP PRODUCTION PROGRAM

Subpart A—Definitions

Authority: 7 U.S.C. 1639o note, 1639p, 1639q, 1639r.

Subpart A—Definitions

§ 990.1 Meaning of terms.

Words used in this subpart in the singular form shall be deemed to impart the plural, and vice versa, as the case may demand. For the purposes of provisions and regulations of this part, unless the context otherwise requires, the following terms shall be construed, respectively, to mean:

Acceptable hemp THC level. When a laboratory tests a sample, it must report the total delta-9 tetrahydrocannabinol content concentration level on a dry weight basis and the measurement of uncertainty. The acceptable hemp THC level for the purpose of compliance with the requirements of State or Tribal hemp plans or the USDA hemp plan is when the application of the measurement of uncertainty to the reported total delta-9 tetrahydrocannabinol content concentration level on a dry weight basis produces a distribution or range that includes 0.3 percent or less. For example, if the reported total delta-9 tetrahydrocannabinol content concentration level on a dry weight basis is 0.35 percent and the measurement of uncertainty is ±0.06 percent, the measured total delta-9 tetrahydrocannabinol content concentration level on a dry weight basis for this sample ranges from 0.29 percent to 0.41 percent. Because 0.3 percent is within the distribution or range, the sample is within the acceptable hemp THC level for the purpose of plan compliance. This definition of ''acceptable hemp THC level'' affects neither the statutory definition of hemp, 7 U.S.C. 1639o(1), in the 2018 Farm Bill nor the definition of ''marihuana,'' 21 U.S.C. 802(16), in the CSA.

Act. Agricultural Marketing Act of 1946.

Agricultural Marketing Service or *AMS.* The Agricultural Marketing Service of the U.S. Department of Agriculture.

Applicant. (1) A State or Indian Tribe that has submitted a State or Tribal hemp production plan to USDA for approval under this part; or

(2) A producer in a State or territory of an Indian Tribe that is not subject to a State or Tribal hemp production plan and who has submitted an application to USDA for a license under the USDA hemp production plan under this part.

Audit. An official inspection of an individual's or organization's accounts and paperwork or documentation by an independent body. An audit also refers to a compliance audit of States and Indian Tribes with approved hemp production plans by USDA to determine compliance with their approved plan, the regulations in this part, and the Act. For this part, audit relates to documentation related to authorities under the 2018 Farm Bill to produce hemp.

Cannabis. A genus of flowering plants in the family Cannabaceae of which *Cannabis sativa* is a species, and *Cannabis indica* and *Cannabis ruderalis* are subspecies thereof. Cannabis refers to any form of the plant in which the total delta-9 tetrahydrocannabinol concentration on a dry weight basis has not yet been determined.

Controlled Substances Act (CSA). The Controlled Substances Act as codified in 21 U.S.C. 801 *et seq.*

Conviction. Means any plea of guilty or nolo contendere, or any finding of guilt, except when the finding of guilt is subsequently overturned on appeal, pardoned, or expunged. For purposes of this part, a conviction is expunged when the conviction is removed from the individual's criminal history record and there are no legal disabilities or restrictions associated with the expunged conviction, other than the fact that the conviction may be used for sentencing purposes for subsequent convictions. In addition, where an individual is allowed to withdraw an original plea of guilty or nolo contendere and enter a plea of not guilty and the case is subsequently dismissed, the individual is no longer considered to have a conviction for purposes of this part.

Corrective action plan. A plan proposed by a licensed hemp producer and approved by the governing entity for correcting a negligent violation or non-compliance with the applicable State, Tribal, or USDA hemp production plan, its terms, the applicable law(s), and/or this part. Also, a plan proposed by a State or Tribal government for correcting violations or non-compliances with USDA-approved State or Tribal hemp programs.

Criminal history report. The Federal Bureau of Investigation's Identity History Summary.

Culpable mental state greater than negligence. To act intentionally, knowingly, willfully, or recklessly.

Decarboxylated. The completion of the chemical reaction that converts THC-acid (THCA) into delta-9 THC, the intoxicating component of cannabis. The decarboxylated value is also calculated using a molecular mass conversion ratio that sums delta-9 THC and eighty-seven and seven tenths (87.7) percent of THC-acid ((delta-9 THC) + (0.877 * THCA)).

Decarboxylation. The removal or elimination of carboxyl group from a molecule or organic compound.

Disposal. An activity that transitions the non-compliant product into a non-retrievable or non-ingestible form. Such activities include plowing, tilling, or disking plant material into the soil; mulching, composting, chopping, or bush mowing plant material into green

manure; burning plant material; burying plant material into the earth and covering with soil.

Delta-9 tetrahydrocannabinol or *THC.* Delta-9 THC is the primary psychoactive component of cannabis. For the purposes of this part, delta-9 THC and THC are interchangeable.

Drug Enforcement Administration or DEA. The United States Drug Enforcement Administration.

Dry weight basis. The ratio of the amount of moisture in a sample to the amount of dry solid in a sample. A basis for expressing the percentage of a chemical in a substance after removing the moisture from the substance. Percentage of THC on a dry weight basis means the percentage of THC, by weight, in a cannabis item (plant, extract, or other derivative), after excluding moisture from the item.

Entity. A corporation, joint stock company, association, limited partnership, limited liability partnership, limited liability company, irrevocable trust, estate, charitable organization, or other similar organization, including any such organization participating in the hemp production as a partner in a general partnership, a participant in a joint venture, or a participant in a similar organization.

Farm Service Agency or *FSA.* An agency of the United States Department of Agriculture.

Gas chromatography or *GC.* A type of chromatography in analytical chemistry used to separate, identify, and quantify each component in a mixture. GC relies on heat for separating and analyzing compounds that can be vaporized without decomposition.

Geospatial location. A location designated through a global system of navigational satellites used to determine the precise ground position of a place or object.

Handle. To harvest or store hemp plants or hemp plant parts prior to the delivery of such plants or plant parts for further processing. ''Handle'' also includes the disposal of cannabis plants that are not hemp for purposes of chemical analysis and disposal of such plants.

Hemp. The plant species *Cannabis sativa* L. and any part of that plant, including the seeds thereof and all derivatives, extracts, cannabinoids, isomers, acids, salts, and salts of isomers, whether growing or not, with a total delta-9 tetrahydrocannabinol concentration of not more than 0.3 percent on a dry weight basis.

Immature plants. A cannabis plant that is not flowering.

Indian Tribe or *Tribe.* As defined in section 4 of the Indian Self-Determination and Education Assistance Act (25 U.S.C. 5304).

Information sharing system. The database that allows USDA to share information collected under State, Tribal, and USDA plans with Federal, State, Tribal, and local law enforcement.

Key participants. A sole proprietor, a partner in partnership, or a person with executive managerial control in a corporation. A person with executive managerial control includes persons such as a chief executive officer, chief operating officer, and chief financial officer. This definition does not include non-executive managers such as farm, field, or shift managers. This definition also does not include a member of the leadership of a Tribal government who is acting in their capacity as a Tribal leader except when that member exercises executive managerial control over hemp production.

Law enforcement agency. Any Federal, State, Tribal, or local law enforcement agency.

Liquid chromatography or *LC.* A type of chromatography technique in analytical chemistry used to separate, identify, and quantify each component in a mixture. LC relies on pumps to pass a pressurized liquid solvent containing the sample mixture through a column filled with a solid absorbent material to separate and analyze compounds.

Lot. A contiguous area in a field, greenhouse, or indoor growing structure containing the same variety or strain of cannabis throughout the area. The term lot also means the terms ''farm,'' ''tract,'' ''field,'' and ''subfield'' as these are terms used by FSA in 7 CFR 718.2 to define lot.

Marijuana. Or ''marihuana'', as defined in the CSA, means all parts of the plant *Cannabis sativa* L., whether growing or not; the seeds thereof; the resin extracted from any part of such plant; and every compound, manufacture, salt, derivative, mixture, or preparation of such plant, its seeds or resin. The term ''marihuana'' does not include hemp, as defined in section 297A of the Agricultural Marketing Act of 1946, and does not include the mature stalks of such plant, fiber produced from such stalks, oil or cake made from the seeds of such plant, any other compound, manufacture, salt, derivative, mixture, or preparation of such mature stalks (except the resin extracted therefrom), fiber, oil, or cake, or the sterilized seed of such plant which is incapable of germination (7 U.S.C. 1639o). ''Marihuana'' means all cannabis that tests as having a THC concentration level of higher than 0.3 percent on a dry weight basis.

Measurement of Uncertainty (MU). The parameter, associated with the result of a measurement, that characterizes the dispersion of the values that could reasonably be attributed to the particular quantity subject to measurement.

Negligence. Failure to exercise the level of care that a reasonably prudent person would exercise in complying with the regulations set forth under this part.

Phytocannabinoid. Cannabinoid chemical compounds found in the cannabis plant, two of which are delta-9 tetrahydrocannabinol (delta-9 THC) and cannabidiol (CBD).

Plan. A set of criteria or regulations under which a State or Tribal government, or USDA, monitors and regulates the production of hemp.

Post-decarboxylation. In the context of testing methodologies for THC concentration levels in hemp, means a value determined after the process of decarboxylation that determines the potential total delta-9 tetrahydrocannabinol content derived from the sum of the THC and THCA content and reported on a dry weight basis. The post-decarboxylation value of THC can be calculated by using a chromatograph technique using heat, gas chromatography, through which THCA is converted from its acid form to its neutral form, THC. Thus, this test calculates the total potential THC in a given sample. The post-decarboxylation value of THC can also be calculated by using a liquid chromatograph technique, which keeps the THCA intact. This technique requires the use of the following conversion: [Total THC = (0.877 x THCA) + THC] which calculates the potential total THC in a given sample. See the definition for decarboxylation.

Produce. To grow hemp plants for market, or for cultivation for market, in the United States.

Producer. A producer as defined in 7 CFR 718.2 specifically of hemp.

Remediation. Remediation refers to the process of rendering non-compliant cannabis, compliant. Remediation can occur by removing and destroying flower material, while retaining stalk, stems, leaf material, and seeds. Remediation can also occur by shredding the entire plant into a biomass like material, then re-testing the shredded biomass material for compliance.

Reverse distributor. A person who is registered with the DEA in accordance with 21 CFR 1317.15 to dispose of

marijuana under the Controlled Substances Act.

Secretary. The Secretary of Agriculture of the United States Department of Agriculture.

State. Any one of the fifty States of the United States of America, the District of Columbia, the Commonwealth of Puerto Rico, and any other territory or possession of the United States.

State department of agriculture. The agency, commission, or department of a State government responsible for agriculture in the State.

Territory of the Indian Tribe. (1) All land within the limits of any Indian reservation under the jurisdiction of the United States Government, notwithstanding the issuance of any patent, including rights-of-way running through the reservation;

(2) All dependent Indian communities within the borders of the United States whether within the original or subsequently acquired territory thereof, and whether within or without the limits of a State;

(3) All Indian allotments, the Indian titles to which have not been extinguished, including rights-of-way running through the same; and

(4) Any lands title to which is either held in trust by the United States for the benefit of any Indian Tribe or individual or held by any Indian Tribe or individual subject to restriction by the United States against alienation and over which an Indian Tribe exercises jurisdiction.

Total THC. Total THC is the value determined after the process of decarboxylation, or the application of a conversion factor if the testing methodology does not include decarboxylation, that expresses the potential total delta-9 tetrahydrocannabinol content derived from the sum of the THC and THCA content and reported on a dry weight basis. This post-decarboxylation value of THC can be calculated by using a chromatograph technique using heat, such as gas chromatography, through which THCA is converted from its acid form to its neutral form, THC. Thus, this test calculates the total potential THC in a given sample. The total THC can also be calculated by using a liquid chromatograph technique, which keeps the THCA intact. This technique requires the use of the following conversion: [Total THC = (0.877 x THCA) + THC] which calculates the potential total THC in a given sample.

Tribal government. The governing body of an Indian Tribe.

USDA licensee. A person, partnership, or corporation licensed under the USDA planto grow hemp under the terms established in this part and who produces hemp.

Subpart B—State and Tribal Hemp Production Plans

§ 990.2 State and Tribal plans; General authority.

States or Indian Tribes desiring to have primary regulatory authority over the production of hemp in the State or territory of the Indian Tribe shall submit to the Secretary for approval, through the State department of agriculture (in consultation with the Governor and chief law enforcement officer of the State) or the Tribal government, as applicable, a plan under which the State or Indian Tribe monitors and regulates that production.

§ 990.3 State and Tribal plans; Plan requirements.

(a) *General requirements.* A State or Tribal plan submitted to the Secretary for approval must include the practice and procedures described in this paragraph (a).

(1) A State or Tribal plan must include a practice to collect, maintain, and report to the Secretary relevant, real-time information for each producer licensed or authorized to produce hemp under the State or Tribal plan regarding:

(i) Contact information as described in § 990.70(a)(1);

(ii) A legal description of the land on which the producer will produce hemp in the State or territory of the Indian Tribe including, to the extent practicable, its geospatial location; and

(iii) The status and number of the producer's license or authorization in a format prescribed by USDA.

(2) A State or Tribal plan must include a procedure for accurate and effective sampling of hemp that includes the requirements in this paragraph (a)(2).

(i) Samples from cannabis plants must be collected within 30 days prior to the anticipated harvest, for total delta-9 tetrahydrocannabinol concentration level testing. Samples must be collected by a sampling agent. Producers may not collect samples from their own growing facilities.

(ii) Samples shall be obtained from the flowering tops of plants when flowering tops are present, and shall be approximately five to eight inches in length from the ''main stem'' (that includes the leaves and flowers), ''terminal bud'' (that occurs at the end of a stem), or ''central cola'' (cut stem that could develop into a bud) of the flowering top of the plant.

(iii) The method used for sampling must be sufficient at a confidence level of 95 percent that no more than one percent of the plants in each lot would exceed the acceptable hemp THC level and ensure that a representative sample is collected that represents a homogeneous composition of the lot. Alternatively, States and Tribes may adopt a performance-based method that meets the requirements in paragraphs (a)(2)(iii)(A) and (B) of this section.

(A) The alternative method must be part of the State or Tribe's hemp plan and is subject to USDA approval.

(B) The alternative method must have the potential to ensure, at a confidence level of 95 percent, that the cannabis plant species *Cannabis sativa* L. that will be subject to the alternative method will not test above the acceptable hemp THC level. The alternative method may consider one or more of the following factors:

(*1*) Seed certification process or process that identifies varieties that have consistently demonstrated to result in compliant hemp plants in that State or territory of the Indian Tribe;

(*2*) Whether the producer is conducting research on hemp;

(*3*) Whether a producer has consistently produced compliant hemp plants over an extended period of time; and

(*4*) Factors similar to those in this paragraph (a)(2)(iii)(B).

(iv) During a scheduled sample collection, the producer or an authorized representative of the producer shall be present at the growing site if possible.

(v) Sampling agents shall be provided with complete and unrestricted access during business hours to all hemp and other cannabis plants (whether growing or harvested), to areas where hemp is grown and stored, and to all land, buildings, and other structures used for the cultivation, handling, and storage of all hemp and other cannabis plants, and all locations listed in the producer license.

(vi) A producer shall not harvest the cannabis crop prior to samples being taken.

(vii) Sampling agents must be trained using USDA, State, or Tribal training procedures. States and Indian Tribes must maintain information, available to producers, about trained sampling agents.

(3) A State or Tribal plan must include a procedure for testing that is able to accurately identify whether the sample contains a total delta-9 tetrahydrocannabinol content concentration level that exceeds the acceptable hemp THC level. The procedure must include a validated testing methodology that uses post-

decarboxylation or other similarly reliable methods. The testing methodology must consider the potential conversion of THCA in hemp into THC and the test result must report the total available THC derived from the sum of the THC and THCA content. Testing methodologies meeting the requirements of this paragraph (a)(3) include, but are not limited to, gas or liquid chromatography with detection. The total THC concentration level shall be determined and reported on a dry weight basis.

(i) Any test of a representative sample resulting in higher than the acceptable hemp THC level shall be conclusive evidence that the lot represented by the sample is not in compliance with this part and shall be disposed of or remediated in accordance with § 990.27.

(ii) Samples of hemp plant material from one lot shall not be commingled with hemp plant material from other lots.

(iii) Laboratories conducting analytical testing for purposes of detecting the concentration levels of Total THC shall meet the following requirements:

(A) Laboratory quality assurance must ensure the validity and reliability of test results;

(B) Analytical method selection, validation, and verification must ensure that the testing method used is appropriate (fit for purpose), and that the laboratory can successfully perform the testing;

(C) The demonstration of testing validity must ensure consistent, accurate analytical performance;

(D) Method performance specifications must ensure analytical tests are sufficiently sensitive for the purposes of the detectability requirements of this part; and

(E) Effective disposal procedures for non-compliant samples that do not meet the requirements of this part.

(F) Measurement of uncertainty (MU) must be estimated and reported with test results. Laboratories shall use appropriate, validated methods and procedures for all testing activities and evaluate measurement of uncertainty.

(G) Sample preparation of pre- or post-harvest samples shall require grinding of sample to ensure homogeneity of plant material prior to testing. Sample preparation may follow a procedure described by USDA.

(H) After December 31, 2022, States and Indian Tribes shall require that only laboratories registered with the DEA may conduct testing under this section.

(4) A State or Indian Tribe shall require testing laboratories to comply with USDA reporting requirements in subpart F of this part. Laboratories shall only submit test results used to determine compliance with this part. Test results from informal testing conducted throughout the growing season shall not be reported to USDA.

(5) A State or Tribal plan must include a procedure to comply with the enforcement procedures in § 990.6.

(6) A State or Tribal plan must include a procedure for the disposal or remediation of cannabis plants if the sample representing that plant tests above the acceptable hemp THC level.

(i) The disposal must be conducted either by using a DEA-registered reverse distributor or law enforcement; or on site at the farm or hemp production facility.

(ii) The State or Tribal plan must include procedures to verify the disposal or remediation of the cannabis plant. This may come in the form of in-person verification by State or Tribal representatives, or alternative requirements that direct growers to provide pictures, videos, or other proof that disposal or remediation occurred successfully. Disposal and remediation means are described at AMS's website.

(iii) If a producer elects to perform remediation activities, an additional sampling and testing of the post-remediated crop must occur to determine THC concentration levels.

(7) A State or Tribal plan must include a procedure for conducting annual inspections of, at a minimum, a random group of producers to verify that hemp is not produced in violation of this part.

(8) A State or Tribal plan must include a procedure for submitting the report described in § 990.70 to the Secretary by the first of each month. If the first of the month falls on a weekend or holiday, the report is due by the first business day following the due date. All such information must be submitted to the USDA in a format that is compatible with USDA's information sharing system.

(9) The State or Tribal government must certify that the State or Indian Tribe has the resources and personnel to carry out the practices and procedures described in paragraphs (a)(1) through (9) of this section.

(10) The State or Tribal plan must include a procedure to collect and share information with USDA to support the information sharing requirements in 7 U.S.C. 1639q(d). The State or Tribal government is responsible for reporting the information identified in paragraphs (a)(10)(i) through (iii) of this section with AMS. The State or Tribal hemp production plan must include the following:

(i) A requirement that producers report their hemp crop acreage to the FSA, consistent with the requirement in § 990.7.

(ii) Assignment of a license or authorization identifier for each producer in a format prescribed by USDA.

(iii) A requirement that producers report the total acreage of hemp planted, harvested, and, if applicable, disposed or remediated. The State or Tribal government shall collect this information and report it to AMS.

(b) *Relation to State and Tribal law.* A State or Tribal plan may include any other practice or procedure established by a State or Indian Tribe, as applicable; *Provided,* That the practice or procedure is consistent with this part and Subtitle G of the Act.

(1) *No preemption.* Nothing in this part preempts or limits any law of a State or Indian Tribe that:

(i) Regulates the production of hemp; and

(ii) Is more stringent than this part or Subtitle G of the Act.

(2) *References in plans.* A State or Tribal plan may include a reference to a law of the State or Indian Tribe regulating the production of hemp, to the extent that the law is consistent with this part.

§ 990.4 USDA approval of State and Tribal plans.

(a) *General authority.* No later than 60 calendar days after the receipt of a State or Tribal plan for a State or Tribal territory in which production of hemp is legal, the Secretary shall:

(1) Approve the State or Tribal plan only if the State or Tribal plan complies with this part; or

(2) Disapprove the State or Tribal plan if the plan does not comply with this part. USDA shall provide the State or Tribe with written notification of the disapproval and the cause for the disapproval.

(b) *Amended plans.* A State or Tribal government, as applicable, must submit to the Secretary an amended plan if:

(1) The Secretary disapproves a State or Tribal plan and the State or Indian Tribe wishes to have primary regulatory authority over hemp production within its State or territory of the Indian Tribe; or

(2) The State or Indian Tribe makes substantive revisions to its plan or its laws which alter the way the plan meets the requirements of this part. If this occurs, the State or Tribal government must re-submit the revised plan for USDA approval. Such re-submissions should be provided to USDA within 60 days from the date that the State or

Tribal laws and regulations are effective. Producers shall continue to comply with the requirements of the existing plan while such modifications are under consideration by USDA. If State or Tribal government laws or regulations in effect under the USDA-approved plan change but the State or Tribal government does not submit a revised plan within 60 days from the effective date of the new law or regulation, the existing plan is revoked.

(3) USDA approval of State or Tribal government plan shall remain in effect unless an amended plan must be submitted to USDA because of a substantive revision to a State's or Tribe's plan, a relevant change in State or Tribal laws or regulations, or approval of the plan is revoked by USDA.

(4) Upon USDA approval of a Tribal plan, an Indian Tribe may exercise jurisdiction and therefore primary regulatory authority over all production of hemp in its Territory regardless of the extent of its inherent regulatory authority.

(c) *Technical assistance.* The Secretary may provide technical assistance to help a State or Indian Tribe develop or amend a plan. This may include the review of draft plans or other informal consultation as necessary.

(d) *Approved State or Tribal plans.* If the Secretary approves a State or Tribal plan, the Secretary shall notify the State or Indian Tribe by letter or email.

(1) In addition to the approval letter, the State or Indian Tribe shall receive their plan approval certificate either as an attachment or via website link.

(2) The USDA shall post information regarding approved plans on its website.

(3) USDA approval of State or Tribal government plans shall remain in effect unless:

(i) The State or Tribal government's laws and regulations in effect under the USDA-approved plan change, thus requiring such plan to be revised and re-submitted for USDA approval.

(ii) A State or Tribal plan must be amended in order to comply with future amendments to Subtitle G the Act and this part.

(e) *Producer rights upon revocation of State or Tribal plan.* If USDA revokes approval of a State or Tribal plan due to noncompliance as defined in paragraph (b)(2) of this section and § 990.5, producers licensed or authorized to produce hemp under the revoked State or Tribal plan may continue to produce for the remainder of the calendar year in which the revocation became effective. Producers operating in a State or Tribal territory with a revoked plan would have to apply to USDA for a license to continue producing.

§ 990.5 Audit of State or Tribal plan compliance.

The Secretary may conduct an audit to determine a State or Indian Tribe's compliance with their approved plan.

(a) *Frequency of audits.* Compliance audits may be scheduled, no more frequently than every three years, based on available resources. Audits may include an onsite-visit, a desk-audit, or both. The USDA may adjust the frequency of audits if deemed appropriate based on program performance, compliance issues, or other relevant factors identified and provided to the State or Tribal governments by USDA.

(b) *Scope of audit review.* The audit may include, but is not limited to, a review of the following:

(1) The resources and personnel employed to administer and oversee its approved plan;

(2) The process for licensing and systematic compliance review of hemp producers;

(3) Sampling methods and laboratory testing requirements and components;

(4) Disposal and/or remediation of non-compliant hemp plants or hemp plant material practices, to ensure that correct reporting to the USDA has occurred;

(5) Results of and methodology used for the annual inspections of producers; and

(6) Information collection procedures and information accuracy (*i.e.,* geospatial location, contact information reported to the USDA, legal description of land).

(c) *Audit reports.* (1) Audit reports will be issued to the State or Tribal government no later than 60 days after the audit concludes. If the audit reveals that the State or Tribal government is not in compliance with its USDA approved plan, USDA will advise the State or Indian Tribe of non-compliances and the corrective measures that must be completed to come into compliance with the Act and regulations in this part. The USDA will require the State or Indian Tribe to develop a corrective action plan, which must be reviewed and approved by the USDA. The corrective action plan must include a reasonable date by which the State or Indian Tribe will correct make corrections. USDA will approve or deny the corrective action plan within 60 days of its receipt. USDA will conduct a second audit to determine if the State or Indian Tribe is in compliance with the corrective action plan and has corrected the non-compliances.

(2) If the USDA determines that the State or Indian Tribe is not in compliance after the second audit, the USDA may revoke its approval of the State or Tribal plan for one year or until the State or Indian Tribe becomes compliant whichever occurs later. USDA will not approve a State or Indian Tribe's plan until the State or Indian Tribe demonstrates upon inspection that it is in compliance with all regulations in this part.

§ 990.6 Violations of State and Tribal plans.

(a) *Producer violations.* Producer violations of USDA-approved State and Tribal hemp production plans shall be subject to enforcement in accordance with the terms of this section.

(b) *Negligent violations.* Each USDA-approved State or Tribal plan shall contain provisions relating to negligent producer violations as defined under this part. Producers shall not receive more than one negligent violation per growing season. Negligent violations shall include:

(1) Failure to provide a legal description of land on which the producer produces hemp;

(2) Failure to obtain a license or other required authorization from the State department of agriculture or Tribal government, as applicable; or

(3) Production of cannabis with a total delta-9 tetrahydrocannabinol concentration exceeding the acceptable hemp THC level. Hemp producers do not commit a negligent violation under this paragraph (b)(3) if they make reasonable efforts to grow hemp and the cannabis (marijuana) does not have a total delta-9 tetrahydrocannabinol concentration of more than 1.0 percent on a dry weight basis.

(c) *Corrective action for negligent violations.* Each USDA-approved State or Tribal plan shall provide for the correction of negligent violations. Each corrective action plan shall include, at a minimum, the following terms:

(1) A reasonable date by which the producer shall correct the negligent violation.

(2) A requirement that the producer periodically report to the State department of agriculture or Tribal government, as applicable, on its compliance with the State or Tribal plan and corrective action plan for a period of not less than the next 2 years from the date of the negligent violation.

(3) A producer that negligently violates a State or Tribal plan approved under this part shall not as a result of that violation be subject to any criminal

enforcement action by the Federal, State, Tribal, or local government.

(4) A producer that negligently violates a State or Tribal plan three times during a 5-year period shall be ineligible to produce hemp for a period of 5 years beginning on the date of the third violation.

(5) The State or Indian Tribe shall conduct an inspection to determine if the corrective action plan has been implemented as submitted.

(d) *Culpable violations.* Each USDA-approved State or Tribal plan shall contain provisions relating to producer violations made with a culpable mental state greater than negligence, including that:

(1) If the State or Tribal government determines that a producer has violated the plan with a culpable mental state greater than negligence, the State or Tribal government, as applicable, shall immediately report the producer to:

(i) The U.S. Attorney General; and

(ii) The chief law enforcement officer of the State or Indian Tribe, as applicable.

(2) Paragraphs (b) and (c) of this section shall not apply to culpable violations.

(e) *Felonies.* Each USDA-approved State or Tribal plan shall contain provisions relating to felonies. Such provisions shall state that:

(1) A person with a State or Federal felony conviction relating to a controlled substance may not participate in the plan and may not produce hemp under the State or Tribal plan for 10 years from the date of the conviction. An exception applies to a person who was lawfully growing hemp under section 7606 of the Agricultural Act of 2014 (7 U.S.C. 5940) before December 20, 2018, and whose conviction also occurred before that date.

(2) The State or Tribal plan shall define who is participating in the plan or program and is subject to the felony conviction restriction for purposes of paragraph (e)(1) of this section. To determine whether a person is subject to the felony conviction restriction, the State or Tribe much obtain a criminal history report for that person. The State or Indian Tribe may require additional reports or checks as it deems necessary.

(3) For each license or authorization that the State or Indian Tribe issues, its plan must identify at least one individual as participating in the plan and for whom it will obtain a criminal history report to determine eligibility under paragraph (e)(1) of this section.

(f) *False statement.* Each USDA-approved State or Tribal plan shall state that any person who materially falsifies any information contained in an application to participate in such program shall be ineligible to participate in that program.

(g) *Appeals.* For States and Indian Tribes who wish to appeal an adverse action, subpart D of this part will apply.

§ 990.7 Establishing records with USDA Farm Service Agency.

All producers licensed to produce hemp under an USDA-approved State or Tribal plan shall report hemp crop acreage to FSA and shall provide, at minimum, the following information:

(a) Street address and, to the extent practicable, geospatial location for each lot or greenhouse where hemp will be produced. If an applicant operates in more than one location, or is producing under multiple licenses, production information shall be provided for each location.

(b) Acreage dedicated to the production of hemp, or greenhouse or indoor square footage dedicated to the production of hemp.

(c) License or authorization identifier in a format prescribed by USDA.

§ 990.8 Production under Federal law.

Nothing in this subpart prohibits the production of hemp in a State or the territory of an Indian Tribe for which a State or Tribal plan is not approved under this subpart if produced in accordance with subpart C of this part, and if the production of hemp is not otherwise prohibited by the State or Indian Tribe.

Subpart C—USDA Hemp Production Plan

§ 990.20 USDA requirements for the production of hemp.

(a) *General hemp production requirements.* The production of hemp in a State or territory of an Indian Tribe where there is no USDA approved State or Tribal plan must be conducted in accordance with this subpart, provided that the production of hemp is not prohibited by the State or territory of an Indian Tribe where production will occur.

(b) *Convicted felon ban.* A person with a State or Federal felony conviction relating to a controlled substance is subject to a 10-year ineligibility restriction on participating in and producing hemp under the USDA plan from the date of the conviction. An exception applies to a person who was lawfully growing hemp under section 7606 of the Agricultural Act of 2014 (7 U.S.C. 5940) before December 20, 2018, and whose conviction also occurred before that date.

(c) *Falsifying material information on application.* Any person who materially falsifies any information contained in an application for a license under the USDA plan shall be ineligible to participate in the USDA plan.

§ 990.21 USDA hemp producer license.

(a) *General application requirements*—(1) *Requirements and license application.* Any person producing or intending to produce hemp must have a valid license prior to producing hemp. A valid license means the license is unexpired, unsuspended, and unrevoked.

(2) *Application dates.* Applicants may submit an application for a license at any time.

(3) *Required information on application.* The applicant shall provide the information requested on the application form, including:

(i) *Contact information.* Full name, residential address, telephone number, and email address. If the applicant is a business entity, the full name of the business, the principal business location address, full name and title of the key participants, title, email address (if available), and employer identification number (EIN) of the business; and

(ii) *Criminal history report.* A current criminal history report for an individual, or if the applicant is a business entity, all key participants, dated within 60 days of the application submission date. A license application will not be considered complete without all required criminal history reports.

(4) *Submission of completed application forms.* Completed application forms shall be submitted to USDA.

(5) *Incomplete application procedures.* Applications missing required information shall be returned to the applicant as incomplete. The applicant may resubmit a completed application.

(6) *License expiration.* USDA-issued hemp producer licenses shall be valid until December 31 of the year three years after the year in which license was issued.

(b) *License renewals.* USDA hemp producer licenses must be renewed prior to license expiration. Licenses are not automatically renewed. Applications for renewal shall be subject to the same terms, information collection requirements, and approval criteria as provided in this subpart for initial applications unless there has been an amendment to the regulations in this part or the law since approval of the initial or last application.

(c) *License modification.* A license modification is required if there is any

change to the information submitted in the application including, but not limited to, sale of a business, the production of hemp in a new location, or a change in the key participants under a license.

(d) *Licensing for research.* (1) Producers that produce hemp for research must obtain a USDA license. However, the hemp that is produced for research and does not enter the stream of commerce is not subject to the sampling requirements in §§ 990.24 and 990.26; provided that the producer adopts and carries out a USDA approved alternative sampling method that has the potential to ensure, at a confidence level of 95 percent, that the cannabis plant species *Cannabis sativa* L. that will be subject to this alternative method will not test above the acceptable hemp THC level.

(2) USDA licensees shall ensure the disposal of all non-compliant plants in accordance with § 990.27. Only research institutions registered with DEA to handle marijuana can keep hemp that tests over the 0.3 acceptable hemp THC level until the end of the study.

(3) USDA licensees shall comply with the reporting requirements in § 990.71 including reporting disposal of non-compliant plants.

§ 990.22 USDA hemp producer license approval.

(a) A license shall not be issued unless:

(1) The application submitted for USDA review and approval is complete and accurate.

(2) The criminal history report(s) submitted with the license application confirms that all key participants to be covered by the license have not been convicted of a felony, under State or Federal law, relating to a controlled substance within the past ten (10) years unless the exception in § 990.20(b) applies.

(3) The applicant, if the applicant was previously or is currently licensed, submitted all reports required as a participant in the hemp production program by this part.

(4) The application contains no materially false statements or misrepresentations and the applicant has not previously submitted an application with any materially false statements or misrepresentations.

(5) The applicant's license is not currently suspended, if the applicant is currently licensed.

(6) The applicant is not applying for a license as a stand-in for someone whose license has been suspended, revoked, or is otherwise ineligible to participate.

(7) The State or territory of the Indian Tribe where the person produces or intends to produce hemp does not have a USDA-approved plan or has not submitted a plan to USDA for approval and is awaiting USDA's decision.

(8) The State or territory of the Indian Tribe where the person produces or intends to produce hemp does not prohibit the production of hemp.

(b) USDA shall provide written notification to applicants whether the application has been approved or denied. USDA shall provide written notification to applicants in a State or territory of an Indian Tribe that has submitted a plan to USDA and is awaiting USDA approval that their application is being returned.

(1) If an application is approved, a license will be issued.

(2) Licenses will be valid until December 31 of the year three after the year in which the license was issued.

(3) Licenses may not be sold, assigned, transferred, pledged, or otherwise disposed of, alienated or encumbered.

(4) If a license application is denied, the notification from USDA will explain the reason for denial. Applicants may appeal the denial in accordance with subpart D of this part.

(c) If the applicant is producing in more than one State or territory of an Indian Tribe, the applicant may have more than one license to grow hemp. If the applicant has operations in a location covered under a State or Tribal plan, that operation must be licensed under the State or Tribal plan, not the USDA plan.

§ 990.23 Reporting hemp crop acreage with USDA Farm Service Agency.

All USDA licensees shall report hemp crop acreage to FSA within 30 days of hemp been planted and shall provide, at a minimum, the following information:

(a) Street address and, to the extent practicable, geospatial location of the lot, greenhouse, building, or site where hemp will be produced. All locations where hemp is produced must be reported to FSA.

(b) Acreage dedicated to the production of hemp, or greenhouse or indoor square footage dedicated to the production of hemp.

(c) The hemp license number.

§ 990.24 Responsibility of a USDA licensee prior to harvest.

USDA licensees must:

(a) No more than 30 days prior to the anticipated harvest of cannabis plants, have a sampling agent collect samples from the cannabis plant for total delta-9 tetrahydrocannabinol concentration level testing.

(b) Have samples collected from the flowering tops of the plant by cutting the top five to eight inches from the ''main stem'' (that includes the leaves and flowers), ''terminal bud'' (that occurs at the end of a stem), ''or ''central cola'' (cut stem that could develop into a bud) of the flowering top of the plant. Sampling guidelines and training requirements for sampling agents are available from USDA. The method used for sampling must be sufficient at a confidence level of 95 percent that no more than one percent (1%) of the plants in the lot would exceed the acceptable hemp THC level. The method used for sampling must ensure that a representative sample is collected that represents a homogeneous composition of the lot.

(c) Have an authorized representative of the USDA licensee present at the growing site during a scheduled sample collection, if possible.

(d) Ensure that sampling agents are provided with complete and unrestricted access during business hours to all hemp and other cannabis plants, (whether growing or harvested), all hemp production and storage areas, all land, buildings, and other structures used for the cultivation, handling, and storage of all hemp and other cannabis plants, and all locations listed in the producer license.

(e) Not harvest the cannabis crop prior to samples being taken.

(f) Use post-harvest samples only for remediated biomass.

§ 990.25 Standards of performance for detecting total delta-9 tetrahydrocannabinol (THC) concentration levels.

Analytical testing for purposes of determining total THC in cannabis plants shall meet the standards in this section.

(a) Laboratory quality assurance must ensure the validity and reliability of test results.

(b) Analytical method selection, validation, and verification must ensure that the testing method used is appropriate (fit for purpose), and that the laboratory can successfully perform the testing.

(c) The demonstration of testing validity must ensure consistent, accurate analytical performance.

(d) Method performance specifications must ensure analytical tests are sufficiently sensitive for the purposes of the detectability requirements of this part.

(e) Laboratory must have an effective disposal procedure for non-compliant samples that do not meet the requirements of this part.

(f) Measurement of uncertainty (MU) must be estimated and reported with

test results. Laboratories shall use appropriate, validated methods and procedures for all testing activities and evaluate measurement of uncertainty.

(g) At a minimum, analytical testing of samples for total THC must use post-decarboxylation or other similarly reliable methods approved by the Secretary. The testing methodology must consider the potential conversion of THCA in hemp into THC and the test result must reflect the total available THC derived from the sum of the THC and THCA content. Testing methodologies meeting the requirements of this paragraph (g) include, but are not limited to, gas or liquid chromatography with detection.

(1) The total THC shall be determined and reported on a dry weight basis. Additionally, measurement of uncertainty (MU) must be estimated and reported with test results. Laboratories shall use appropriate, validated methods and procedures for all testing activities and evaluate measurement of uncertainty.

(2) Any sample test result exceeding the acceptable hemp THC level shall be conclusive evidence that the lot represented by the sample is not in compliance with this part.

(3) After December 31, 2022, USDA licensees may only use laboratories registered with the DEA to conduct testing under this section.

§ 990.26 Responsibility of a USDA producer after laboratory testing is performed.

(a) The producer shall harvest the crop no later than thirty (30) days after the date of sample collection.

(b) If the producer fails to complete harvest within thirty (30) days of sample collection, a second pre-harvest sample of the lot shall be required to be submitted for testing.

(c) Harvested lots of hemp plants shall not be commingled with other harvested lots or other material.

(d) Lots that meet the acceptable hemp THC level may enter the stream of commerce.

(e) Lots that do not meet the acceptable hemp THC level are subject to § 990.27.

(f) Any producer may request additional pre-harvest testing if it is believed that the original total delta-9 tetrahydrocannabinol concentration level test results were in error. Additional testing may be conducted by the laboratory that conducted the initial test, or another laboratory.

§ 990.27 Non-compliant cannabis plants.

(a) Cannabis plants exceeding the acceptable hemp THC level constitute marijuana, a schedule I controlled substance under the Controlled Substances Act (CSA), 21 U.S.C. 801 *et seq.,* and producers must either use a DEA-registered reverse distributor or law enforcement to dispose of non-compliant plants or ensure the disposal of such cannabis plant on site at the farm or hemp production facility.

(b) Producers must notify USDA of their intent to dispose of or remediate non-conforming plants and verify disposal or remediation by submitting required documentation.

(c) If a producer elects to perform remediation activities, an additional sampling and testing of the post-remediated crop must occur to determine THC concentration levels.

§ 990.28 Compliance.

(a) *Audits.* USDA licensees may be audited by the USDA. The audit may include a review of records and documentation, and may include site visits to farms, fields, greenhouses, storage facilities, or other locations affiliated with the producer's hemp operation. The audit may include the current crop year, as well as any previous crop year(s). The audit may be performed remotely or in person.

(b) *Frequency of audit verifications.* Audit verifications may be performed once every three (3) years unless otherwise determined by USDA. If the results of the audit find negligent violations, a corrective action plan may be established.

(c) *Assessment of producer's hemp operations for conformance.* The producer's operational procedures, documentation, recordkeeping, and other practices may be verified during the audit verification. The auditor may also visit the production, cultivation, or storage areas for hemp listed on the producer's license.

(1) *Records and documentation.* The auditor shall assess whether required reports, records, and documentation are properly maintained for accuracy and completeness.

(2) [Reserved]

(d) *Audit reports.* Audit reports will be issued to the producer no later than 60 days after the audit is concluded. If USDA determines through an audit that the producer is not compliant with the Act or this part, USDA shall require a corrective action plan. The corrective action plan must include a reasonable date by which the producer will correct the negligent violation. USDA will approve or deny the corrective action plan within 60 days of its receipt. Producers operating under a corrective action plan must also periodically report to USDA on their compliance with the plan for a period of not less than two calendar years following the violation. The producer's implementation of a corrective action plan may be reviewed by USDA during a future site visit or audit. If additional instances of noncompliance occur, USDA may revoke the producer's USDA license for one year or until the producer becomes compliant whichever occurs later.

§ 990.29 Violations.

Violations of this part shall be subject to enforcement in accordance with the terms of this section.

(a) *Negligent violations.* Hemp producers are not subject to more than one negligent violation per calendar year. A hemp producer shall be subject to enforcement for negligently:

(1) Failing to provide an accurate legal description of land where hemp is produced;

(2) Producing hemp without a license; and

(3) Producing cannabis exceeding the acceptable hemp THC level. Hemp producers do not commit a negligent violation under this paragraph (a) if they make reasonable efforts to grow hemp and the cannabis does not have a total THC concentration of more than 1.0 percent on a dry weight basis.

(b) *Corrective action for negligent violations.* For each negligent violation, USDA will issue a Notice of Violation and require a corrective action plan from the producer. The producer shall comply with the corrective action plan to cure the negligent violation. Corrective action plans will be in place for a minimum of two (2) years from the date of their approval. Corrective action plans will, at a minimum, include:

(1) The date by which the producer shall correct each negligent violation;

(2) Steps that will be taken to correct each negligent violation; and

(3) A description of the procedures that will demonstrate compliance must be submitted to USDA.

(c) *Negligent violations and criminal enforcement.* A producer who negligently violates this part shall not, as a result of that violation, be subject to any criminal enforcement action by any Federal, State, Tribal, or local government.

(d) *Subsequent negligent violations.* If a subsequent negligent violation occurs while a corrective action plan is in place, a new corrective action plan must be submitted with a heightened level of quality control, staff training, and quantifiable action measures.

(e) *Negligent violations and license revocation.* A producer that negligently violates the license 3 times in a 5-year

period shall have their license revoked and be ineligible to produce hemp for a period of 5 years beginning on the date of the third violation.

(f) *Culpable mental state greater than negligence.* If USDA determines that a licensee has violated the terms of the license or of this part with a culpable mental state greater than negligence:

(1) USDA shall immediately report the licensee to:

(i) The U.S. Attorney General; and

(ii) The chief law enforcement officer of the State or Indian territory, as applicable, where the production is located; and

(2) Paragraphs (a) and (b) of this section shall not apply to culpable violations.

§ 990.30 USDA producers; License suspension.

(a) USDA may issue a notice of suspension to a producer if USDA or its representative receives some credible evidence establishing that a producer has:

(1) Engaged in conduct violating a provision of this part; or

(2) Failed to comply with a written order from the USDA–AMS Administrator related to negligence as defined in this part.

(b) Any producer whose license has been suspended shall not handle or remove hemp or cannabis from the location where hemp or cannabis was located at the time when USDA issued its notice of suspension, without prior written authorization from USDA.

(c) Any person whose license has been suspended shall not produce hemp during the period of suspension.

(d) A producer whose license has been suspended may appeal that decision in accordance with subpart D of this part.

(e) A producer whose license has been suspended and not restored on appeal may have their license restored after a waiting period of one year from the date of the suspension. If the license was issued more than three years prior to the date of restoration, the producer shall submit a new application and criminal history report to USDA.

(f) A producer whose license has been suspended may be required to provide, and operate under, a corrective action plan to fully restore their license.

§ 990.31 USDA licensees; Revocation.

USDA shall immediately revoke the license of a USDA licensee if such licensee:

(a) Pleads guilty to, or is convicted of, any felony related to a controlled substance; or

(b) Made any materially false statement with regard to this part to USDA or its representatives with a culpable mental state greater than negligence; or

(c) Is found to be growing cannabis exceeding the acceptable hemp THC level with a culpable mental state greater than negligence or negligently violated this part three times in five years.

§ 990.32 Recordkeeping requirements.

(a) USDA licensees shall maintain records of all hemp plants acquired, produced, handled, disposed of, or remediated as will substantiate the required reports.

(b) All records and reports shall be maintained for at least three years.

(c) All records shall be made available for inspection by USDA inspectors, auditors, or their representatives during reasonable business hours. The following records must be made available:

(1) Records regarding acquisition of hemp plants;

(2) Records regarding production and handling of hemp plants;

(3) Records regarding storage of hemp plants; and

(4) Records regarding disposal and remediation of all cannabis plants that do not meet the definition of hemp.

(d) USDA inspectors, auditors, or their representatives shall have access to any premises where hemp plants may be held during reasonable business hours.

(e) All reports and records required to be submitted to USDA as part of participation in the program in this part which include confidential data or business information, including but not limited to information constituting a trade secret or disclosing a trade position, financial condition, or business operations of the particular licensee or their customers, shall be received by, and at all times kept in the custody and control of, one or more employees of USDA or their representatives. Confidential data or business information may be shared with applicable Federal, State, Tribal, or local law enforcement or their designee in compliance with the Act.

Subpart D—Appeals

§ 990.40 General adverse action appeal process.

(a) Persons who believe they are adversely affected by the denial of a license application under the USDA hemp production program may appeal such decision to the AMS Administrator.

(b) Persons who believe they are adversely affected by the denial of a license renewal under the USDA hemp production program may appeal such decision to the AMS Administrator.

(c) Persons who believe they are adversely affected by the revocation or suspension of a USDA hemp production license may appeal such decision to the AMS Administrator.

(d) States and Indian Tribes that believe they are adversely affected by the denial of a proposed State or Tribal hemp plan may appeal such decision to the AMS Administrator.

§ 990.41 Appeals under the USDA hemp production plan.

(a) *Appealing a denied USDA-plan license application.* A license applicant may appeal the denial of a license application.

(1) If the AMS Administrator grants an applicant's appeal of a licensing denial, the applicant will be issued a USDA hemp production license.

(2) If the AMS Administrator denies an appeal, the applicant's license application will be denied. The applicant may request a formal adjudicatory proceeding within 30 days to review the decision. Such proceeding shall be conducted pursuant to the U.S. Department of Agriculture's Rules of Practice Governing Adjudicatory Proceedings, 7 CFR part 1, subpart H.

(b) *Appealing a denied USDA-plan license renewal.* A producer may appeal the denial of a license renewal.

(1) If the AMS Administrator grants a producer's appeal of a licensing renewal denial, the applicant's USDA hemp production license will be renewed.

(2) If the AMS Administrator denies the appeal, the applicant's license will not be renewed. The denied producer may request a formal adjudicatory proceeding within 30 days to review the decision. Such proceeding shall be conducted pursuant to the U.S. Department of Agriculture's Rules of Practice Governing Formal Adjudicatory Proceedings, 7 CFR part 1, subpart H.

(c) *Appealing a USDA-plan license termination or suspension.* A USDA hemp plan producer may appeal the revocation or suspension of a license.

(1) If the AMS Administrator grants the appeal of a license termination or suspension, the producer will retain their license.

(2) If the AMS Administrator denies the appeal, the producer's license will be terminated or suspended. The producer may request a formal adjudicatory proceeding within 30 days to review the decision. Such proceeding shall be conducted pursuant to the U.S. Department of Agriculture's Rules of Practice Governing Formal Adjudicatory Proceedings, 7 CFR part 1, subpart H.

(d) *Filing period.* The appeal of a denied license application, denied license renewal, suspension, or revocation must be filed within the time-period provided in the letter of notification or within 30 business days from receipt of the notification, whichever occurs later. The appeal will be considered ''filed'' on the date received by the AMS Administrator. The decision to deny an appeal of a license application or renewal, or suspend or terminate a license, is final unless a formal adjudicatory proceeding is requested within 30 days to review the decision. Such proceeding shall be conducted pursuant to the U.S. Department of Agriculture's Rules of Practice Governing Adjudicatory Proceedings, 7 CFR part 1, subpart H.

(e) *Where to file.* Appeals to the Administrator must be filed in the manner as determined by AMS.

(f) *What to include.* All appeals must include a copy of the adverse decision and a statement of the appellant's reasons supporting why the decision was not proper or made in accordance with applicable program regulations in this part, policies, or procedures.

§ 990.42 Appeals under a State or Tribal hemp production plan.

(a) *Appealing a State or Tribal hemp production plan application.* A State or Indian Tribe may appeal the denial of a proposed State or Tribal hemp production plan by the USDA to the AMS Administrator.

(1) If the AMS Administrator grants a State or Indian Tribe's appeal of a denied hemp plan application, the proposed State or Tribal hemp production plan shall be established as proposed.

(2) If the AMS Administrator denies an appeal, the proposed State or Tribal hemp production plan shall not be approved. Prospective producers located in the State or territory of the Indian Tribe may apply for hemp licenses under the terms of the USDA plan. The State or Indian Tribe may request a formal adjudicatory proceeding be initiated within 30 days to review the decision. Such proceeding shall be conducted pursuant to the U.S. Department of Agriculture's Rules of Practice Governing Adjudicatory Proceedings, 7 CFR part 1, subpart H.

(b) *Appealing the suspension or termination of a State or Tribal hemp production plan.* A State or Tribe may appeal the revocation by USDA of an approved State or Tribal hemp production plan.

(1) If the AMS Administrator grants a State or Indian Tribe's appeal of a State or Tribal hemp production plan suspension or revocation, the associated hemp production plan will remain in place and effective.

(2) If the AMS Administrator denies an appeal, the State or Tribal hemp production plan will be suspended or revoked as applicable. Producers located in that State or territory of the Indian Tribe may continue to produce hemp under their State or Tribal license until the end the calendar year in which the State or Tribal plan's disapproval was effective or when the State or Tribal license expires, whichever is earlier. Producers may apply for a USDA license under subpart C of this part unless hemp production is otherwise prohibited by the State or Indian Tribe. The State or Indian Tribe may request a formal adjudicatory proceeding be initiated to review the decision. Such proceeding shall be conducted pursuant to the U.S. Department of Agriculture's Rules of Practice Governing Formal Adjudicatory Proceedings, 7 CFR part 1, subpart H.

(c) *Filing period.* The appeal of a State or Tribal hemp production plan suspension or revocation must be filed within the time-period provided in the letter of notification or within 30 business days from receipt of the notification, whichever occurs later. The appeal will be considered ''filed'' on the date received by the AMS Administrator. The decision to deny a State or Tribal plan application or suspend or revoke approval of a plan, is final unless the decision is appealed in a timely manner.

(d) *Where to file.* Appeals to the Administrator must be filed in the manner as determined by AMS.

(e) *What to include in appeal.* All appeals must include a copy of the adverse decision and a statement of the appellant's reasons supporting why the decision was not proper or made in accordance with applicable program regulations in this part, policies, or procedures.

Subpart E—Administrative Provisions

§ 990.60 Agents.

As provided under 7 CFR part 2, the Secretary may name any officer or employee of the United States or name any agency or division in the United States Department of Agriculture, to act as their agent or representative in connection with any of the provisions of this part.

§ 990.61 Severability.

If any provision of this part is declared invalid or the applicability thereof to any person or circumstances is held invalid, the validity of the remainder of this part or the applicability thereof to other persons or circumstances shall not be affected thereby.

§ 990.62 [Reserved]

§ 990.63 Interstate transportation of hemp.

No State or Indian Tribe may prohibit the transportation or shipment of hemp lawfully produced under a State or Tribal plan approved under subpart B of this part, under a license issued under subpart C of this part, or under 7 U.S.C. 5940 through the State or territory of the Indian Tribe, as applicable.

Subpart F—Reporting Requirements

§ 990.70 State and Tribal hemp reporting requirements.

(a) *State and Tribal hemp producer report.* Each State and Indian Tribe with a plan approved under this part shall submit to USDA, by the first of each month, a report providing the contact information and the status of the license or other authorization issued for each producer covered under the applicable State and Tribal plans. If the first of the month falls on a weekend or holiday, the report is due by the first business day following the due date. The report shall be submitted using a digital format compatible with USDA's information sharing systems, whenever possible. The report shall contain the information described in this paragraph (a).

(1)(i) For each new producer who is an individual and is licensed or authorized under the State or Tribal plan, the report shall include the full name of the individual, license or authorization identifier, Employee Identification Number (''EIN'') of the business entity, business address, telephone number, and email address (if available).

(ii) For each new producer that is an entity and is licensed or authorized under the State or Tribal plan, the report shall include full name of the entity, the principal business location address, license or authorization identifier, and the full name, title, and email address (if available) of each employee for whom the entity is required to submit a criminal history report.

(iii) For each producer that was included in a previous report and whose reported information has changed, the report shall include the previously reported information and the new information.

(2) The status of each producer's license or authorization.

(3) The period covered by the report.

(4) Indication that there were no changes during the current reporting cycle, if applicable.

(b) *State and Tribal hemp disposal or remediation report.* If a producer has produced cannabis exceeding the acceptable hemp THC level, the cannabis must be disposed of or remediated. States and Tribes with plans approved under this part shall submit to USDA, by the first of each month, a report notifying USDA of any occurrence of non-conforming plants or plant material and providing a disposal or remediation record of those plants and materials. This report would include information regarding name and contact information for each producer subject to a disposal or remediation during the reporting period, and date disposal or remediation was completed. If the first of the month fall on a weekend or holiday, reports are due by the first business day following the due date. The report shall contain the information described in this paragraph (b).

(1) Name and address of the producer.

(2) Producer license or authorization identifier.

(3) Location information, such as lot number, location type, and geospatial location or other location descriptor for the production area subject to disposal or remediation.

(4) Disposal or remediation completion date.

(5) Total acreage.

(c) *Annual report.* Each State or Indian Tribe with a plan approved under this part shall submit an annual report to USDA. The report form shall be submitted by December 15 of each year and contain the information described in this paragraph (c).

(1) Total planted acreage.

(2) Total harvested acreage.

(3) Total acreage disposed and remediated.

(d) *Test results report.* Each producer must ensure that the laboratory that conducts the test of the sample(s) from its lots reports the test results to USDA. Informal testing conducted throughout the growing season for purposes of monitoring THC concentration do not need to be reported to USDA. The test results report shall contain:

(1) Producer's license or authorization identifier.

(2) Name of producer.

(3) Business address of producer.

(4) Lot identification number for the sample.

(5) Name of laboratory and, no later than December 31, 2022, the DEA registration number of laboratory for testing.

(6) Date of test and report.

(7) Identification of a pre-harvest or post-harvest retest.

(8) Test result.

§ 990.71 USDA plan reporting requirements.

(a) *USDA licensing application.* USDA will accept applications on a rolling basis. Licenses will be valid until December 31 of the year three years after the license is issued. The license application will be used for both new and renewal applicants. The application shall include:

(1) *Contact information.* (i) For an applicant who is an individual, the application shall include full name of the individual, Employee Identification Number (''EIN'') of the business entity, business address, telephone number, and email address (if available).

(ii) For an applicant that is an entity, the application shall include full name of the entity, the principal business location address, and the full name, title, and email address (if available) of each key participant of the entity.

(2) *Criminal history report.* As part of a complete application, each applicant shall provide a current Federal Bureau of Investigation's Identity History Summary. If the applicant is a business entity, a criminal history report shall be provided for each key participant.

(i) The applicant shall ensure the criminal history report accompanies the application.

(ii) The criminal history report must be dated within 60 days of submission of the application submittal.

(3) *Consent to comply with program requirements.* All applicants submitting a completed license application, in doing so, consent to comply with the requirements of this part.

(b) *USDA licensee disposal and remediation form.* USDA licensee conducts a disposal or remediation activity, that licensee must report the activity on the appropriate form to USDA no later than 30 days after the date of completion of disposal or remediation activity. The report shall contain the information described in this paragraph (b).

(1) Name and address of the producer.

(2) The USDA licensee's USDA license number.

(3) Geospatial location, or other valid land descriptor, for the production area subject to disposal or remediation.

(4) Date of completion of disposal or remediation.

(5) Signature of the USDA licensee or authorized representative.

(c) *USDA licensee annual report.* Each USDA licensee shall submit an annual report to USDA. The report form shall be submitted by December 15 of each year and contain the information described in this paragraph (c).

(1) USDA licensee 's license number.

(2) USDA licensee 's name.

(3) USDA licensee's address.

(4) Lot, location type, geospatial location, total planted acreage, total acreage disposed and remediated, and total harvested acreage.

(d) *Test results report.* Each USDA licensee must ensure that the laboratory that conducts the test of the sample(s) from its lots reports the test results for all samples tested to USDA. Informal testing conducted throughout the growing season for purposes of monitoring THC concentration do not need to be reported to USDA. The test results report shall contain the information described in this paragraph (d) for each sample tested.

(1) USDA licensee 's license number.

(2) Name of the USDA licensee.

(3) Business address of the USDA licensee.

(4) Lot identification number for the sample.

(5) Name of testing laboratory.

(6) Date of test and report.

(7) Identification of a pre-harvest or post-harvest retest.

(8) Test result.

RIN 0991–AC24

Securing Updated and Necessary Statutory Evaluations Timely

AGENCY: Department of Health and Human Services (HHS).

ACTION: Final rule.

SUMMARY: The Regulatory Flexibility Act (RFA) requires agencies to publish plans to conduct periodic reviews of certain of their regulations. Multiple Executive Orders also require agencies to submit plans for periodic reviews of certain regulations. To further comply with the RFA and Executive Orders, and to ensure the Department's regulations have appropriate impacts, the U.S. Department of Health and Human Services (HHS or the Department) issues this final rule amending its regulations to set expiration dates for the Department's regulations (subject to certain exceptions), unless the Department periodically assesses the regulations to determine if they are subject to the RFA, and if they are, performs a review that satisfies the criteria in the RFA.

DATES: This final rule is effective on March 22, 2021.

FOR FURTHER INFORMATION CONTACT: James Lawrence, 200 Independence Avenue SW, Washington, DC 20201; or by email at *reviewnprm@hhs.gov;* or by telephone at 1–877–696–6775.

SUPPLEMENTARY INFORMATION: This final rule is organized as follows:

Table of Contents

I. Summary

On November 4, 2020, HHS published in the **Federal Register** a notice of proposed rulemaking titled ''Department of Health and Human Services Securing Updated and Necessary Statutory Evaluations Timely'' (hereinafter, ''proposed rule'').[1] On November 23, 2020, the Department held a public hearing on the proposed rule.[2] For the reasons described herein, after considering public comments on the proposed rule, HHS now finalizes the proposed rule as amended. This final rule will enhance the Department's implementation of section 3(a) of the Regulatory Flexibility Act (RFA), 5 U.S.C. 610, and various executive orders, and improve accountability and the performance of its regulations.[3] The RFA requires federal agencies to publish in the **Federal Register** ''a plan for the periodic review of the rules issued by the agency which have or will have a significant economic impact upon a substantial number of small entities'' in order ''to determine whether such rules should be continued without change, or should be amended or rescinded, consistent with the stated objectives of applicable statutes, to minimize any significant impact of the rules upon a substantial number of small entities.'' 5 U.S.C. 610(a). In conducting this retrospective review, agencies must consider a variety of factors, including the continued need for the rule, legal issues, public input, overlap and duplication with other federal or State and local governmental rules, and technological, economic, or other changes. 5 U.S.C. 610(b). Agency compliance with 5 U.S.C. 610 may be subject to judicial review. *See* 5 U.S.C. 611(a).

Several Executive Orders have also directed agencies to submit plans for the periodic review of certain of their regulations.[4]

The Department has tried to carry out the evidence-based approach to regulation prescribed by Congress and the executive orders, but HHS' efforts have met varying levels of success. Several States, as well as jurisdictions outside the United States, have experimented with different ways of ensuring agencies engage in retrospective regulatory reviews so that legal requirements are updated in view of emerging evidence and changed circumstances. Among the lessons that have emerged is that while statutory mandates are helpful, one of the most important factors for ensuring agencies conduct retrospective reviews of their regulations is to provide for the sunset or automatic expiration of certain regulatory requirements after a period of time unless a retrospective review determines that the regulations should be maintained.

Therefore, in order to ensure evidence-based regulation that does not become outdated as conditions change, HHS finalizes this rule to provide that, subject to certain exceptions, all regulations issued by the Secretary or his delegates or sub-delegates in Titles 21, 42, and 45 of the CFR shall expire at the end of (1) five calendar years after the year that this final rule first becomes effective, (2) ten calendar years after the year of the Section's promulgation, or (3) ten calendar years after the last year in which the Department Assessed and, if required, Reviewed[5] the Section, whichever is latest. The RFA and executive orders have only resulted in limited retrospective review by the Department. The Department believes this final rule will effectuate the desire for periodic retrospective reviews expressed in the RFA and Executive Orders, as well as ensure the Department's regulations are having appropriate impacts and have not become outdated. The literature and the Department's experience suggest that many regulations are having estimated impacts that, over time, differ from what was estimated at the time the regulations were promulgated. This final rule will enhance both (1) the fulfillment of the existing policies that led to the Department's regulations and (2) the Department's longstanding desire

to comply with the RFA and periodically review its regulations.

II. Background

A. The Regulatory Flexibility Act

In 1980, Congress enacted the Regulatory Flexibility Act (RFA), Public Law 96–354, 94 Stat. 1164 (1980) (codified as amended at 5 U.S.C. 601–612). Congress stated that ''the purpose of this Act [is] to establish as a principle of regulatory issuance that agencies shall endeavor, consistent with the objectives of the rule and of applicable statutes, to fit regulatory and informational requirements to the scale of the businesses, organizations, and governmental jurisdictions subject to regulation.'' 94 Stat. at 1165. Consistent with this purpose, section 3(a) of the RFA requires agencies to publish in the **Federal Register** a ''plan for the periodic review of rules which have or will have a significant economic impact upon a substantial number of small entities.'' 5 U.S.C. 610(a). The ''purpose of the review shall be to determine whether such rules should be continued without change, or should be amended or rescinded . . . to minimize any significant economic impact of the rules upon a substantial number of small entities.'' *Id.* In conducting this review, Congress provided that agencies ''shall consider the following factors'':

(a) The continued need for the rule;

(b) The nature of complaints or comments received concerning the rule from the public;

(c) The complexity of the rule;

(d) The extent to which the rule overlaps, duplicates or conflicts with other Federal rules, and, to the extent feasible, with State and local governmental rules; and

(e) The length of time since the rule has been evaluated or the degree to which technology, economic conditions, or other factors have changed in the area affected by the rule.

5 U.S.C. 610(b)(1)–(5). Congress required agencies to conduct an initial review within ten years of the effective date of the RFA, as well as subsequent reviews ''within ten years of the publication of'' future final rules. 5 U.S.C. 610(a).

The retrospective review provided for in 5 U.S.C. 610 is a congressional mandate. Under the plain terms of the Act, having a plan for such reviews is not optional. Congress fashioned a private right of action for small entities to ensure agencies satisfy 5 U.S.C. 610. *See* 5 U.S.C. 611(a)(1) (''For any rule subject to this chapter, a small entity that is adversely affected or aggrieved by final agency action is entitled to judicial review of agency compliance with the requirements of sections 601, 604, 605(b), 608(b), and 610 in accordance with chapter 7.''). Originally, as one commentator explained, the RFA ''contain[ed] an extremely qualified and ambiguous provision for judicial review.'' [6] In 1996, Congress amended the RFA to more clearly provide for judicial review of violations of 5 U.S.C. 610.[7] As one House Committee report explained, the lack of judicial review made ''agencies completely unaccountable for their failure to comply with its requirements,'' a problem the amendment attempted to solve.[8]

B. Executive Orders Directing Agencies To Review Existing Regulations

Other efforts to conduct retrospective regulatory review both predate and have continued after passage of the RFA. In 1978, President Carter issued an executive order on improving federal regulations.[9] The order directed agencies to ''periodically review their existing regulations.'' [10] In determining which existing regulations to review, the order required agencies to consider, among other things, whether ''technology, economic conditions or other factors have changed in the area affected by the regulation.'' [11] The Executive Order considered suggestions from the public that all regulations be reviewed, usually 3–5 years after issuance. But the Carter Administration instead instructed that, due to agency resource limitations, agencies should concentrate their reviews on those regulations which no longer serve their intended purpose, that have caused administrative difficulties, or that have been affected by new developments.[12] The executive order also considered, but rejected, the idea of including a sunset provision in regulations on the ground that agencies cannot entirely eliminate regulations unless the law that authorized the regulations allows it.[13] However, the Department believes that executive order did not consider that the authorizing statutes for many regulations permit those regulations to be rescinded. Moreover, as discussed below, experience since 1978 has shown it is difficult to adequately conduct retrospective regulatory review if regulations do not contain sunset provisions.

Like the Carter Administration, every subsequent administration has directed agencies to engage in retrospective review of existing regulations. In 1981, President Reagan ordered agencies to ''review[ ] existing regulations'' in view of cost-benefit principles and potential alternatives.[14] In 1992, President George H.W. Bush issued a memorandum instructing agencies to conduct a 90-day review ''to evaluate existing regulations and programs and to identify and accelerate action on initiatives that will eliminate any unnecessary regulatory burden or otherwise promote economic growth.'' [15] President Clinton similarly called for review of existing regulations to determine whether they have become ''unjustified or unnecessary as a result of changed circumstances,'' and ''to confirm that regulations are both compatible with each other and [are] not duplicative or inappropriately burdensome in the aggregate.'' [16] Specifically, that Executive Order required agencies to submit to the Office of Information and Regulatory Affairs (OIRA) a program under which the agency ''will periodically review its existing significant regulations to determine whether any such regulations should be modified or eliminated so as to make the agency's regulatory program more effective in achieving the regulatory objectives, less burdensome, or in greater alignment with the President's priorities and the principles set forth in this Executive Order.'' [17] The George W. Bush Administration's Acting OIRA Administrator noted that the Bush Administration was ''in the

[10] 43 FR at 12663.

[11] *Id.*

[12] *Id.* at 12669. As discussed below, the Department is reviewing a different subset of its regulations than was directed by Exec. Order No. 12044, in part because the RFA's directive to review regulations that have a significant economic impact upon a substantial number of small entities had not yet been enacted at the time of Exec. Order No. 12044. Moreover, Exec. Order No. 12044 was responding to suggestions that the review be performed every three to five years. The Department's reviews will be performed every ten years (except for regulations that have already been in effect for ten years), which should lessen the burden on the Department's resources.

process of reviewing a variety of existing regulations and regulatory programs in an effort to identify areas where sensible changes will yield greater benefits for the public at lower costs.'' [18]

President Obama also instructed agencies to engage in retrospective regulatory review. In 2011, President Obama issued an executive order ordering agencies ''[t]o facilitate the periodic review of existing significant regulations . . . to promote retrospective analysis of rules that may be outmoded, ineffective, insufficient, or excessively burdensome, and to modify, streamline, expand, or repeal them in accordance with what has been learned.'' [19] Similarly, in 2012, President Obama noted that retrospective review has particular relevance ''[d]uring challenging economic times,'' and that agencies should consider whether regulations ''should be modified or streamlined in light of changed circumstances, including the rise of new technologies.'' [20]

President Trump has attempted to identify existing undue regulatory burdens and facilitate retrospective review of regulations. For example, in January 2017, President Trump issued an executive order requiring agencies to identify at least two regulations to be repealed for every one regulation proposed or otherwise promulgated.[21] Similarly, a 2017 OIRA report to Congress explained, ''Rules should be written and designed to facilitate retrospective analysis of their effects, including consideration of the data that will be needed for future evaluation of the rules' ex post costs and benefits.'' [22] In May 2020, in response to the COVID–19 pandemic, President Trump ordered agencies to ''identify regulatory standards that may inhibit economic recovery'' and to ''consider taking appropriate action, consistent with applicable law,'' including modifying, waiving, or rescinding those regulatory requirements.[23]

In addition to the executive orders, other executive branch actions have sought to spur agencies to conduct the reviews called for by 5 U.S.C. 610. One example was the Regulatory Review and Reform (r3) initiative, which the Small Business Administration launched in part to improve compliance with 5 U.S.C. 610 and further the goals of periodic reviews. The r3 initiative was a long-term project to help agencies pinpoint existing federal rules that warrant review—and to revise those rules if they are found to be ineffective, duplicative, out of date, or otherwise deficient.[24]

Consistent with these actions, HHS has conducted retrospective reviews of some of its regulations. For example, pursuant to Executive Order 13563, HHS published a list of regulations the Department identified as candidates for retrospective review.[25] The Department also took action. For example, HHS, citing Executive Order 13563, eliminated certain restrictions on the use of telemedicine in rural areas.[26]

Nonetheless, the Department has only conducted retrospective review of regulations to a very limited extent. One academic analysis determined that, in response to Executive Order 13563, the Department planned 83 retrospective analyses in 2012 and completed 33 analyses with final action by August 31, 2013.[27] By contrast, the Department issued 247 rules between the date Executive Order 13563 was issued and August 31, 2013.[28] As of July 2016, the Department had 40 planned retrospective analyses and by April 2017 had completed analyses with final action on 19 of them.[29] These findings are consistent with government assessments that the Department's efforts to comply with 5 U.S.C. 610 have at times been lacking.[30]

Commenters on the proposed rule listed the following as examples of regulations that they and/or Congress have requested the Department to review, but that the commenters claimed were not reviewed:

- Regulations mandated for review by the 21st Century Cures Act, Public Law 114–255, sec. 2034, 130 Stat. 1033 (2016). Section 2034 of that Act, according to the commenters, requires the Secretary to lead a review by research funding agencies of all regulations and policies related to the disclosure and reporting of financial conflicts of interest to reduce administrative burden on federally funded researchers. It also calls for the Secretary to harmonize the differences between the Basic HHS Policy for the Protection of Human Research Subjects (45 CFR part 46, subpart A) and the FDA regulations for the protection of human subjects (21 CFR parts 50 and 56). Commenters stated that these regulations are well overdue for assessment and review.
- Regulations covering access to skilled therapy services, which commenters say must be updated to reflect the national settlement in the *Jimmo* v. *Sebelius* litigation to codify the fact that skilled services are covered for Medicare beneficiaries not just to improve function, but to maintain or prevent deterioration in function.
- The dockets established by FDA's Center for Food Safety and Applied Nutrition and Center for Veterinary Medicine on Sept. 8, 2017,[31] in which the Centers requested comments and

information to assist in identifying existing regulations and related paperwork requirements that could be modified, repealed or replaced, consistent with the law, to achieve meaningful burden reduction while allowing FDA to achieve its public health mission and fulfill statutory obligations. The commenters stated these were examples of incomplete regulatory review initiatives.[32] Commenters stated that despite submitting extensive comments that detailed numerous regulations that they believe could be modified, repealed or replaced, the agency did not take any further action.

A review conducted for the Department in 2019 (discussed in more detail in Section C) concluded that related good governance stewardship actions were deprioritized and relegated to ''rainy day'' activities that Department operating divisions would get around to when they could.[33] However, the rainy day in many cases has never arrived.

Scholars have also posited reasons why agencies may be reluctant to perform retrospective reviews. One administrative law expert now at Northwestern University has written:

> [E]ven with sufficient resources, agencies may not be properly incentivized. They are less likely to be found at fault for not conducting rigorous periodic reviews. Many rules, even those with significant effects, are often not on the public's radar once adopted. Challenging agency regulation under the RFA is more difficult than under the Administrative Procedure Act (APA) because there is no comment process and standing is granted to more limited parties. The harm to the public resulting from a cursory analysis is also much less clear. If sufficient interests exist to modify the rule, strong interest groups will directly lobby the agency to modify the rule. But in this case, a brand new rulemaking effort emerges.
>
> There are also political reasons and moral hazard concerns associated with performing retrospective analyses. In most cases, retrospective analyses of existing regulations are routine business matters left to be handled by staff members, rather than political appointees. Political appointees, such as agency heads, tend to come with specific regulatory agendas of their own. By contrast, staff members at regulatory agencies are best viewed as career members who have a vested interest in seeing their agencies continue to exist and thrive. All else equal, they are not inclined to acknowledge that the work of their agency is inefficient or unnecessary, and even less inclined to conduct analyses that may lead to a curtailing of the agency's authority. Whatever the reasons may be, serious ex post reviews are few and far between. A majority of rules, once adopted, will likely persist without significant ex post modification. As to how many agency rules currently implemented may be costing more resources than yielding benefits is anyone's guess.[34]

Thus, the Department concludes that it needs to impose a strong incentive on itself to perform retrospective review, given these countervailing incentives to not perform such reviews and the limited number of retrospective reviews that the Department has performed over the last 40 years. As discussed in more detail in the regulatory impact analysis *infra,* the Department has the resources to periodically review the impacts of its regulations.

C. Limitations in Government Projections Counsel in Favor of Widespread Retrospective Regulatory Review

The Congressional and Presidential directives to periodically review existing regulations are sound policy. When the Department first issues a regulation, it makes an educated guess about the regulation's impact. Several years after the regulation is promulgated, the Department has a somewhat greater basis for assessing its real-world impacts and can refine the regulation or agency enforcement practices, as appropriate. This would further democratic values such as accountability, administrative simplification, transparency, and performance measurement and evaluation.

Indeed, the literature indicates that government projections of regulatory impacts would benefit from refinement based on experience after the regulations are implemented. The literature suggests the need for refinement is widespread, so widespread review would yield greater benefits than review of a handful of regulations. In 2005, the Office of Management and Budget (OMB) provided an overview of a sample of retrospective analyses based on an examination of forty-seven case studies.[35] OMB considered a pre-regulation estimate to be accurate if the post-regulation estimate was within +/− 25 percent of the pre-regulation estimate.[36] This measure of accuracy reveals the difficulty and uncertainty inherent in prospective cost-benefit analysis. OMB found that agencies often inaccurately estimated the benefits of regulations in its sample of regulations, and agencies were more likely to overestimate benefits than to underestimate them, where benefits were estimated.[37] Agencies overestimated benefits in 19 of 39 sampled regulations, whereas they underestimated benefits in only two of the 39 regulations.[38] In two cases, agencies overestimated benefits by a factor of 10.[39] Second, agencies sometimes overestimated the benefit-cost ratio, and in that sense were a bit too optimistic about the consequences of their rules. Agency estimates were accurate in only 11 rules, while the ratio was overestimated in 22 rules and underestimated in 14 rules.[40] Third, agencies also overestimated and, less frequently, underestimated costs in the sampled regulations. Agency cost estimates were accurate for only 12 rules, overestimated for 16 rules, underestimated for 12 rules, and not estimated for seven rules.[41]

Academic studies have also identified inaccuracies in agency estimates, relative to an ex post re-estimation. For example, one study of sixty-one rules for which benefit-cost ratios could be compared before and after the fact (including some not included in the OMB review) found that the estimated ratios were essentially accurate in only sixteen of the sixty-one cases, though the study found no bias in estimates of benefit-cost ratios.[42] In this analysis, Dr. Harrington criticized certain aspects of the OMB analysis. But it is notable that, even though OMB and Dr. Harrington used somewhat differing methods and reviewed samples of regulations that did not completely overlap, they both found ex ante estimates to be in many cases lacking. Dr. Harrington concluded his analysis by noting that ''the results

[42] Winston Harrington, *Grading Estimates of the Benefits and Costs of Federal Regulation,* Res. for the Future, Discussion Paper 06–39, 2006, at 33, *http://papers.ssrn.com/sol3/papers.cfm?abstract_id=937357.* Dr. Harrington used the same measure of accuracy as OMB. While both OMB and Dr. Harrington noted that using +/− 25% as the measure of accuracy could be arbitrary, it is nonetheless informative that in many cases the ex ante estimates in the sampled regulations differed from ex post estimates by more than +/−25%.

demonstrate the value of *ex post* analysis. It is frustrating that there is so little of it, especially when so many close observers, from all points of view, claim to be in favor of it.'' [43]

A more recent study of a sample of federal regulations found that of the eight regulations for which the author was able to make ex ante and ex post cost comparisons, six regulations involved overestimates of costs, two involved underestimates of costs, and none were deemed accurate.[44] A regulation was deemed accurate if the regulation's regulatory impact analysis fell roughly within +2/−5% of the ex post observation.[45] Of the 18 regulatory requirements for which the author was able to compare benefits (also referred to as ''effectiveness'' in the study) estimates on an ex ante and ex post basis, he found that 10 involved overestimates, six were underestimates, and two were relatively accurate.[46]

These studies all found that in most cases the sampled ex ante estimates were not within +/−25% of the ex post observations. The studies suggest many federal regulations are estimated after the fact to have real-world impacts that differ from the estimated impacts at the time the regulations were promulgated. Although these samples were not necessarily representative, it would not be unreasonable to think that the Department could make major improvements by conducting widespread review of its regulations, rather than merely reviewing the small number of regulations that interested parties ask the Department to consider revising.[47]

Benefit Cost Anal. no. 2, 2014, at 259–84, *https://www.cambridge.org/core/services/aop-cambridge-core/content/view/A7B29CE98E650B424E92FF292A8FFC89/S2194588800000774a.pdf/national_primary_drinking_water_regulation_for_arsenic_a_retrospective_assessment_of_costs.pdf* (finding that the EPA methodology overestimated predicted capital costs from its arsenic rule in most studied cases, especially as the size of the system increases (as measured by the design flow rate)).

[47] This is not to suggest that prospective regulatory impact analyses are not helpful. To the contrary, they add tremendous value and greatly improve agency rule makings. But as explained elsewhere herein, even when an agency's cost-benefit analysis uses sound science and the best available information to estimate the costs, benefits or other impacts associated with a rule, technological innovation or subsequent changes in the law, among other things, can result in an ex post assessment of impacts differing from the agency's estimates at the time it promulgated the rule.

Reasons Regulatory Projections Differ From Regulations' Real-World Impacts

There are several reasons why regulations' ex ante cost-benefit estimates tend to be inaccurate. First, changes in the legal landscape can cause government projections to become obsolete. For example, in February 2010, officials in the Centers for Medicare and Medicaid Services' Office of the Actuary (OACT) issued health spending and coverage projections through 2019.[48] A month later, Congress enacted the Patient Protection and Affordable Care Act, Public Law 111–148, 124 Stat. 119 (''ACA''), and the Health Care and Education Reconciliation Act of 2010, Public Law 111–152, 124 Stat. 1029. Largely as a result of the ACA's passage, in October 2010 OACT issued revised projections forecasting that by 2019 the insured share of the population would be 92.7 percent—roughly ten percentage points higher than OACT projected nine months earlier.[49]

Second, changes in technology can also render projections inaccurate. One study has noted that even when an agency's benefit-cost analysis uses sound science and the best available information to estimate the costs associated with a rule, technological innovation can result in an ex post assessment of costs differing from the agency's cost estimates at the time it promulgated the rule.[50] As an example of technology's impact on regulations, in 2019 the Food and Drug Administration (FDA) issued a rule amending requirements for medical device premarket submissions to remove requirements for paper and multiple copies, and replace these requirements with requirements for a single submission in electronic format.[51] Changes in technology had rendered the requirement for multiple copies, whether in electronic format or paper form, no longer necessary.[52] Had the Department reviewed more of its regulations, it might have learned of additional instances where technological changes counsel in favor of amendment. In addition, some scholars have suggested that in some cases changes in technology can reduce the costs of complying with regulatory mandates.[53] If retrospective reviews conclude that technology has reduced compliance costs, that can inform the Department's decision about if or how to amend a regulation.

Yet another reason for potential divergence between prospective and retrospective regulatory impact estimates is non-compliance with the regulation being assessed. One study found differing accuracy for prospective per-unit cost estimates and prospective aggregate cost estimates; where there is substantial non-compliance with the regulation being analyzed, cost estimates per unit can sometimes be reasonably accurate while aggregates are simultaneously overestimated.[54] (Non-compliance would, of course, also affect the accuracy of benefits estimates.[55]) As such, ex post analysis has the potential to inform not just decisions about codified regulatory requirements but also about agency enforcement practices.

Institutionalizing Retrospective Review To Refine Projections That Were Lacking

While the prospective cost-benefit analyses performed in connection with the promulgation of rules are quite useful, former OIRA Administrator Cass Sunstein has explained that ''[w]hen agencies issue rules, they have to speculate about benefits and costs.'' [56] Therefore,[a]fter rules are in place, [agencies] should test those speculations, and they should use what they learn when revisiting a regulation

[56] Cass R. Sunstein, *The Regulatory Lookback,* 94 B.U. L. Rev. 579, 591 (2014).

or issuing a new one.'' [57] Professor Sunstein described this as ''one of the most important steps imaginable'' for regulatory reform, ''not least because it can reduce cumulative burdens and promote the goal of simplification.'' [58] He has noted that agencies' failure ''until very recently . . . to gather, let alone act on'' retrospective reviews is ''an astonishing fact.'' [59]

Michael Greenstone, who served as Chief Economist on the Council of Economic Advisors between 2009 and 2010, similarly concluded that the ''single greatest problem with the current system is that most regulations are subject to a cost-benefit analysis only in advance of their implementation. This is the point when the least is known and any analysis must rest on many unverifiable and potentially controversial assumptions.'' [60] According to Professor Greenstone, the lack of a regulatory lookback created a system ''largely based on faith, rather than evidence,'' where the agency ''all too frequently takes shots in the dark and we all too infrequently fail to find out if we have hit anything—or even worse, we only find out when things have gone horribly wrong.'' [61] As he explained, ''it is nearly impossible to imagine'' only prospective, and not retrospective, evaluations ''being used in other contexts where people's lives are on the line. For example, I am confident that there would be a deafening uproar of protest if the FDA announced that it would approve drugs without testing them in advance. Yet, this is largely what we do with regulations that affect our health and well-being.'' [62]

If retrospective analysis ''could be firmly institutionalized,'' Professor Sunstein observed, then it ''would count as the most important structural change in regulatory policy since the original requirement of prospective analysis during the Reagan Administration.'' [63]

Other administrative law experts have also urged agencies to more robustly institutionalize retrospective review of regulations. The Administrative Conference of the United States (ACUS) has ''urge[d] agencies to remain mindful of their existing body of regulations and the ever-present possibility that those regulations may need to be modified, strengthened, or eliminated in order to achieve statutory goals while minimizing regulatory burdens.'' [64] More recently, the American Bar Association Section of Administrative Law and Regulatory Practice, has ''*urge*[*d*] [*the Administration*] *to build on the efforts of previous administration[s] and take steps to institutionalize careful, in-depth retrospective review of existing rules.*'' [65]

The Need for a Greater Incentive To Institutionalize Retrospective Review

Despite these many calls for retrospective review, as noted in section II.B., the Department has had limited success in implementing retrospective review in practice.[66] In 2019, the Department piloted an approach to augment expert policy insights with artificial intelligence-driven data analysis of its regulations, which showed the need to more firmly institutionalize retrospective review. The artificial intelligence review found that 85% of Department regulations created before 1990 have not been edited; the Department has nearly 300 broken citation references in the CFR (*i.e.* CFR sections that reference other CFR sections that no longer exist); more than 50 instances of regulatory requirements to submit paper documents in triplicate or quadruplicate; and 114 parts in the CFR with no regulatory entity listed, 17 of which may be misplaced.[67] The Department concluded that some good governance stewardship recommendations ''were deprioritized and relegated to rainy day activities that [Department operating divisions] would get around to when they could.'' [68] Unfortunately, in many cases the Department has for years not gotten around to addressing these issues.

As one observer recently explained:

> Retrospective review of existing regulations . . . is a perennial favorite target for advice on how to improve OIRA's processes. Every administration since President Carter has developed some program to modify, streamline, or expand existing regulations, and there is no shortage of advice on how to make the process run more efficiently. Yet, despite a few notable one-off successes from past retrospective review efforts, no past retrospective review campaign has ever truly succeeded in creating a long-term culture of retrospective review or of prospectively embedding into new regulations a process for data collection and pre-set targets for future lookbacks. Any future efforts around retrospective review, therefore, should be clear-eyed about past failures.[69]

For the reasons discussed in this final rule, the Department believes a stronger

[60] Michael Greenstone, *Toward a Culture of Persistent Regulatory Experimentation and Evaluation,* in New Perspectives on Regulation 111, 113 (David Moss & John Cisternino eds., 2009). It should not be inferred, however, that retrospective analysis is free of assumptions (including potentially controversial assumptions) or is generally without challenges, especially with respect to establishing relevant counterfactuals. For discussion and recent examples related to just two of the many areas of Department regulatory activity, *see* Trinided Beleche *et al., Are Graphic Warning Labels Stopping Millions of Smokers? A Comment on Huang, Chaloupka, and Fong,* 15 Econ Journal Watch 129 (2018) and Aaron Kearsley *et al., A Retrospective and Commentary on FDA's Bar Code Rule,* 9 J. Benefit-Cost Analysis 496 (2018). Moreover, to the extent that retrospective analysis is used to inform policy choices going forward, it becomes, or is at least being used as, prospective analysis and thus relies on assumptions about the future, including as regards technology and the legal and regulatory landscape. But since retrospective analysis is conducted after some real-world experience living under the regulation, it can in many cases be an improvement over earlier prospective analysis.

[68] *Id.* at 18

[69] Jason Schwartz, *Enhancing the Social Benefits of Regulatory Review,* Institute for Policy Integrity, at 30 (Oct. 2020), *https://policyintegrity.org/files/publications/Enhancing_the_Social_Benefits_of_Regulatory_Review.pdf.* Several weeks after publishing this article, the author submitted a comment opposing the proposed rule. For the reasons discussed in the responses to public comments, the Department did not find those arguments compelling, but believes the quoted passage is a fair description of the problem this final rule aims to solve. The Department is trying to be clear-eyed about past failures, and has concluded that a strong incentive, such as that included in this final rule, is commensurate with the problem to be solved and to more firmly institutionalize retrospective review.

incentive is needed to achieve the benefits of retrospective review.[70] This final rule creates a mechanism to more firmly institutionalize the retrospective reviews that Professors Sunstein and Greenstone, as well as ACUS and others, have called for.

D. The Experiences of States and Other Jurisdictions With Automatic Expiration or ''Sunset'' Provisions

This mechanism is based in part on the experiences of States and other jurisdictions. Several States incorporate retrospective regulatory review into their laws. New York, for example, requires retrospective review of regulations ''no later than in the fifth calendar year after the year in which the rule is adopted,'' and requires that rules be ''re-reviewed at five-year intervals'' thereafter. N.Y. A.P.A. Law sec. 207. Similarly, Texas requires State agencies to review rules four years after they go into effect and then subsequently at four-year intervals. Tex. Gov't Code sec. 2001.039. In addition to New York and Texas, State law requires some form of retrospective regulatory review in at least Alabama, Arizona, Illinois, Iowa, Michigan, Missouri, New Jersey, New Mexico, North Carolina, North Dakota, Ohio, Oklahoma, Pennsylvania, Rhode Island, Tennessee, and Washington.[71]

Some States with retrospective review requirements allow regulations to automatically expire or sunset after a period of time, unless reviewed or readopted. In New Jersey, regulations automatically expire ''seven years following the effective date of the rule'' unless extended by the agency. N.J. Stat. Ann. sec. 52:14B–5.1(b).[72] Indiana allows regulations to expire on January 1 following the seven-year anniversary of their effective dates. Ind. Code sec. 4–22–2.5–2. The Governor of Florida recently instructed Florida government agencies to ''include a sunset provision in all proposed or amended rules,'' which ''may not exceed five years unless otherwise required by existing statute.'' [73]

Experience in the States suggests that sunset provisions can be an important tool to ensure reviews take place. An analysis of regulation in all 50 States found that for a reduction in both regulatory creation and enforcement, ''[t]he single most important policy in a state is the presence of a sunset provision.'' [74] On the other hand, one report stated that, despite their initial popularity in the States,[75] sunset provisions fell out of favor, not because they did not produce more cost-effective, cost-justified regulation, but because sunset requirements did not provide sufficient legislative control over executive agencies.[76] But that observation is inapplicable to the Department, because this final rule concerns the Department's review of its own regulations. Noting the benefits of sunset provisions, the report added that sunset ''provisions have been responsible for the analysis of thousands of state regulations and, on average, the repeal of twenty to thirty percent of existing regulations and the modification of another forty percent.'' [77]

Experience outside the United States also suggests the utility of sunset provisions. The Office for Economic Co-Operation and Development (OECD) analyzed regulatory practices in the European Union. In a 2010 report, the OECD recommended, for ''[t]he management and rationalization of existing regulations,'' that Germany ''[k]eep up the 'spring cleaning' of legislation at regular intervals'' and ''consider the inclusion of a review mechanism in individual draft regulations, or even [include] a sunset clause (beyond which the law automatically expires) where appropriate.'' [78] With respect to the United Kingdom's regulatory program, the OECD noted ''sunset clauses are also helpful'' in order ''to remove unnecessary burdens in legislation.'' [79] Throughout the 2010 report, the OECD repeatedly noted the value of retrospective regulatory review.[80]

In 2019, the OECD published an additional survey regarding regulatory review practices in the European Union. The OECD again noted the utility of sunset provisions, describing them as a ''useful 'failsafe' mechanism to ensure the entire stock of subordinate regulation remains fit for purpose over time.'' [81] The report noted as of its 2019 date that sunset provisions are in place for at least some regulations in nine different countries, including the United Kingdom, France, and Germany.[82]

In 2009, the Republic of Korea (ROK) enacted a law under which about 20% of the existing regulations are to be reviewed on a regular basis (about every 3 to 5 years) and become invalid if they

[70] Regulatory Streamlining & Analysis (Mar. 2019) (it ''appears the current set of governance structures, incentives and processes to promulgate regulatory reform need strengthening to be more effective'').

[71] Ala. Code 41–22–5.2; Ariz. Rev. Stat. 41–1056; 5 Ill. Comp. Stat. Ann. 100/5–130; Iowa Code Ann. 17A.33; Mich. Comp. Laws 10.151; Missouri Rev. Stat., Title XXXVI § 536.175.5; N.J. Stat. Ann. 52:14B–5.1; N.M. Stat. 14–4A–6; N.C. Gen. Stat. 150B–21.3A; N.D. Cent. Code 28–32–18.1; Ohio Rev. Code Ann. 106.03; Okla. Stat. Ann. tit. 75, 307.1; 71 Pa. Stat. Ann. 745.2; R.I. Gen. Laws Ann. tit. 42, ch. 64.13; Tenn. Code Ann. 4–56–102; Wash Rev. Code Ann. 43.70.041, 43.22.052.

[72] Although the New Jersey law permits the Governor, within five days of the expiration of a rule, to restore it, the Department does not include a similar provision in this proposed rule. That is because the RFA contains no such similar provision and the Department is giving itself ten years, as opposed to seven years, to perform Assessments and (when required) Reviews of Regulations.

[73] Letter from Gov. Ron DeSantis to Florida Agency Heads (Nov. 11, 2019), *https://www.floridahasarighttoknow.myflorida.com/content/download/147113/980326/FINAL_Directive_to_Agencies_11.19.pdf.*

[76] *See id.* (noting that ''North Carolina was first to repeal its sunset law, and many other states quickly followed suit'' after concluding that ''sunset provisions quickly proved to be an expensive, cumbersome, and disappointing method for enhancing legislative control'').

[77] *Id.* at 23–24. The report added, without citing a great deal of empirical evidence, that ''sunset requirements produce perfunctory reviews and waste resources.'' This appears to be based on a law review article that noted, not that retrospective reviews were per se perfunctory, but that ''unless adequate resources are provided, the reviews *may be* relatively perfunctory and meaningless, wasting whatever resources are expended.'' *See* Neil R. Eisner & Judith S. Kaleta, *Federal Agency Reviews of Existing Regulations,* 48 Admin. L. Rev. 139, 160 (1996) (emphasis added). But this law review article noted that adding ''sunset'' dates to regulations unless they are reviewed was ''likely to ensure that a review is done.'' *Id.* As explained herein, the Department intends to commit adequate resources to its reviews if this proposed rule were to be finalized. The law review article said that sunset provisions should be used only in narrowly focused situations where it is determined that it is necessary to apply some ''pressure'' and only where assessments are made of the available resources and the benefits to be derived from the review. *Id.* But the article was written in 1996. As discussed herein, subsequent experience with efforts short of a forcing mechanism suggest that forcing mechanisms are needed to ensure review of a wide array of Department regulations, and that the benefits from these retrospective reviews would be substantial.

[82] *Id.* at ch. 4, Table 4.1.

are found to lack feasibility.[83] Under the ROK's ''review and sunset,'' there is a duty to carry out a review of a regulation on a specified schedule. This sunset clause was established upon the idea that even a rational regulation needs to be examined periodically to determine its grounds for remaining in force, as its validity may be compromised under any change in circumstances or its characteristics.[84] An OECD report stated that ''[g]iven such rationale, the sunset clause is considered as a critical component of efforts in regulatory quality improvement.'' [85]

These authorities indicate an emerging awareness that sunset provisions are useful in ensuring retrospective regulatory review. This is consistent with the Department's experience over the last 40 years, which suggests that, absent a sunset provision or automatic expiration date, Congressional and Presidential directives to perform periodic retrospective reviews of regulations have limited success.

Indeed, previous Administrations have recognized the benefits of sunset provisions. In a June 2015 report, the Department of Treasury's Office of Economic Policy, the Obama Administration's Council of Economic Advisors, and the Department of Labor discussed sunset provisions as applied to occupational licensing.[86] That report found evidence that sunset reviews that automatically terminate regulatory boards and agencies absent legislative action assist with ''removing unnecessary licensing.'' [87] The report explained that sunset review can be ''useful because, even if licensing was justified when first introduced, technological and economic changes may have rendered it unnecessary or overly restrictive.'' [88] The report found ''[p]eriodic examination of existing rules is thus helpful in maintaining the quality of occupational regulation.'' [89]

Professor Greenstone has similarly recommended the automatic repeal of regulations if their benefits and costs are not periodically assessed:

> [Another] step in reforming our regulatory system is to require that all regulations contain rules specifying the date by which the regulatory review board has to assess their costs and benefits. If the regulatory review board fails to meet one of these deadlines, then the regulation should be repealed by default. The purpose of this sunset provision is to ensure that all regulations are evaluated carefully and do not stay on the books just because they have been on the books in the past.[90]

Professor Greenstone suggested that this review could cause the regulation to be expanded if supported by evidence.[91] According to Professor Greenstone, this would ''ensure that ineffective regulations are removed and that society fully benefits from the effective ones.'' [92]

This final rule seeks to advance democratic values and apply the lessons learned from States, foreign jurisdictions, and the academic community. This final rule would apply the benefits of automatic-expiration-absent-periodic-review to a broader array of regulations than is currently being reviewed by the Department.

E. The Need for Widespread Retrospective Review

The evidence suggests the Department should conduct retrospective review on a broad scale to improve impact estimates and enhance the Department's ability to fulfil the goals motivating its regulations. As explained in Section C, studies of federal regulations consistently find that, in most sampled regulations, the ex ante estimate of costs and benefits is not within +/−25% of the ex post observation. Although these samples were not necessarily representative, taken together they suggest that many federal regulations are estimated after the fact to have real-world impacts that differ from the estimated impacts at the time the regulations were promulgated. Therefore, HHS believes that review should be done on a broad scale, rather than reviewing a handful of regulations that happen to be brought to the Department's attention.

The artificial intelligence review described in this final rule also suggests that large numbers of Department regulations would benefit from retrospective review. The artificial intelligence review identified that 85% of Department regulations created before 1990 have not been edited; the Department has nearly 300 broken citation references [93] in the CFR; and there are more than 50 instances of HHS regulatory requirements to submit paper documents in triplicate or quadruplicate.[94] This suggests that humans performing a comprehensive review of Department regulations would find large numbers of requirements that

[87] *Id.* at 48.

[88] *Id.* at 49.

[89] *Id.* The report also suggests that to strengthen sunset provisions in the States, sunset commissions responsible for conducting the cost-benefit analysis should be provided adequate resources; the cost-benefit review process should be insulated against political interference; a minimum number of votes should be required to overrule the sunrise agency's recommendation; and specialized committees within legislatures be appointed to work with the agency in charge of conducting the review. *See id.* at 42. As discussed herein, the Department believes it has adequate resources to conduct the required reviews. As discussed in footnote 92, it is not clear that a federal agency can legally completely insulate its reviews from supervision by the agency's leadership, but the Department believes that its retrospective reviews will generally be performed by career civil servants. Lastly, the Department cannot require Congress to appoint committees to work with the Department officials performing the retrospective reviews, but the Department would welcome the opportunity to discuss reviews with Congressional staff if Congress so chose. The report also suggested ''sunrise'' reviews can be more effective than sunset reviews. But for already-existing regulations, the Department cannot perform sunrise reviews, so the Department is has decided to take advantage of the benefits of sunset reviews. Moreover, the Department already engages in ''sunrise review'' to some extent when it develops regulatory flexibility analyses, *see* 5 U.S.C. 603, 604, and regulatory impact analyses (notably, such reviews did not occur for regulations that preceded the RFA, many of which still remain in effect).

[90] Greenstone, *Toward a Culture of Persistent Regulatory Experimentation and Evaluation,* in New Perspectives on Regulation 111, 121 (David Moss & John Cisternino eds., 2009).

[91] *Id.*

[92] *Id.* at 123. Professor Greenstone made a separate suggestion that a regulatory review board be created with the authority to assess the effectiveness of regulations and repeal regulations deemed ineffective. The Department considered this in the proposed rule. First, the Department is concerned that such a board raises legal concerns, since many Department regulations can only be repealed by the Secretary, not by an independent board. Second, Professor Greenstone proposed the independent review board on the grounds that (1) it would remove the board's functions as much as possible from political control, and (2) those most deeply involved in implementing a regulation are likely to see the benefits more clearly than the costs. *Id.* at 119–121. While these concerns are understandable, the Department believes it is capable of performing the Review. As an initial matter, those who conduct the Review would not necessarily be those in the Department who implement the Section being Reviewed. Moreover, as described herein, Reviews must be performed in such a manner that they can withstand judicial review under the arbitrary and capricious standard. This would require the Reviews to meet a minimum standard of rigor and require them to consider relevant factors. Moreover, many regulations legally cannot be amended or repealed without authorization by a political appointee.

[93] As discussed below, HHS has roughly 18,000 regulations total.

[94] 85 FR 70102.

would benefit from review, and possibly amendment or rescission.

The HHS response to the COVID–19 pandemic also indicates that the Department should perform widespread retrospective reviews. During the COVID–19 pandemic, the Department's response has largely consisted of waiving regulatory requirements or exercising enforcement discretion to not enforce certain regulatory requirements to enhance the Nation's response to the pandemic. Examples include waivers to increase hospital capacity, ease restrictions on services rendered by medical residents, and allowing patients to seek more services via telehealth.[95] On November 25, 2020, the Department published in the **Federal Register** a non-exhaustive list of 382 enforcement discretion announcements, waivers or changes to regulations, agency guidance materials, or compliance obligations made to respond to the COVID–19 pandemic and its impact on the healthcare industry. *See* Regulatory Relief to Support Economic Recovery; Request for Information (RFI), 85 FR 75720 (Nov. 25, 2020) at Attachment A. The Department should learn from the pandemic and conduct widespread reviews to determine whether these or other regulatory requirements could hinder the Nation's response to a future emergency, or otherwise should be amended or rescinded. Determining whether the Department's existing 18,000 regulations are having appropriate impacts is a worthwhile enterprise, even if it somewhat reduces the time spent issuing new regulations. Some commenters at the November 23, 2020 public hearing on the proposed rule suggested that the proposed rule was akin to using a missile to kill a mouse. But the literature and the Department's experience indicate the problem is not a mere mouse.

Thus, there is a need for widespread retrospective review, but it is nearly impossible to see how a satisfyingly comprehensive review could occur without a sunset mechanism. The Department recognizes that in many cases the Department had strong reasons for issuing its regulations. Examples of such motivations might include enhancing food safety,[96] increasing access to health insurance,[97] or increasing the incentive for Temporary Assistance for Needy Families recipients to work.[98] These are all important policy goals that the Department wishes to achieve. This final rule is intended to further these goals, as well as the other goals motivating the Department's regulations. The literature and the Department's experience suggest that large numbers of regulations are having impacts that, over time, differ from what was estimated at the time the regulations were promulgated. Therefore, the Department needs to conduct periodic reviews of its regulations to determine whether the policy goals behind the regulations are in fact being effected (and if amending those regulations could more effectively further those goals).

This final rule is not a reversal of a prior Department policy, but in fact an effort to enhance both (1) the fulfillment of the existing policies that led to the Department's regulations and (2) the Department's longstanding desire to comply with the RFA and periodically review its regulations. In any event, this final rule provides the reasoned explanation that would be required if it were a change in policy.[99]

F. Operationalization of This Final Rule

In this section, the Department summarizes aspects of how it will operationalize this final rule.

The proposed rule proposed creating a website where the Department would announce when it has commenced Assessments or Reviews. The proposed rule further proposed that the public could comment on regulations and submit comments requesting that the Department Assess or Review a regulation.[100]

In light of public comments, the Department is making these procedures more robust. Under this final rule, when the Department commences the process of performing an Assessment or Review, it shall state on a Department-managed website the sections of the Code of Federal Regulations whose Assessment or Review it is commencing. The Department shall also announce once a month in the **Federal Register** those new Assessments or Reviews that it has commenced in the last month. Some comments on the proposed rule said that announcements should be made in the **Federal Register**, which the public already monitors, rather than a separate website. Therefore, in response to these comments, in this final rule the Department commits to announcing once a month in the **Federal Register** which new Assessments and Reviews it has commenced. The Department will also create a docket on *Regulations.gov* for each Assessment or Review that the Department is conducting. These docket numbers will be referenced in the **Federal Register** announcements. The public will be able to submit comments to the dockets of each rulemaking being Assessed or Reviewed. Each docket shall specify the date by which comments must be received. There shall also be a general docket on *Regulations.gov* where the public can submit comments requesting that the Department Assess or Review a regulation. This addresses the commenters' concern about commenting on a Department website, rather than via the regular **Federal Register** method. The Department anticipates that the process will be similar to that currently used by the EPA.[101] The Department also intends to publish the results of the Assessments and Reviews in the dockets for the applicable regulations.

To further aid the public and the Department, the Department is placing at *https://www.hhs.gov/regulations/federal-registry/index.html* a list of Department rule makings; the year they were initially promulgated; the last year the rule making was amended; and the **Federal Register** citation from the time the rule making was amended. This list was generated with artificial intelligence and the Department believes it is accurate, but it is conceivable that some Department regulations are not included. This list includes all Department regulations, including those that may be exempt from this final rule. The Department believes it would be informative to the public to provide a list of all Department regulations, as well as their **Federal Register** citations and promulgation dates. The Department intends to update this list annually with newly-issued regulations.

In addition, the Department intends to create on its website a dashboard that shows its progress on its Assessments and Reviews, including when it commenced those Assessments and Reviews; its progress; and when it expects them to be completed. If they so

[95] *See, e.g.,* Coronavirus waivers and flexibilities, *CMS.gov, https://www.cms.gov/about-cms/emergency-preparedness-response-operations/current-emergencies/coronavirus-waivers.*

[96] *E.g.,* 21 CFR part 112.

[97] *E.g.,* 45 CFR part 147.

[98] 45 CFR part 261.

[99] *See FCC* v. *Fox TV Stations, Inc.,* 556 U.S. 502, 515–16 (2009) (''[A] reasoned explanation is needed for disregarding facts and circumstances that underlay or were engendered by the prior policy,'' but the agency ''need not demonstrate to a court's satisfaction that the reasons for the new policy are *better* than the reasons for the old one; it suffices that the new policy is permissible under the statute, that there are good reasons for it, and that the agency *believes* it to be better, which the conscious change of course adequately indicates'') (emphasis in original).

[100] *See, e.g.,* 85 FR 70120.

[101] *See, e.g.,* Regulatory Flexibility Act Section 610 Review of the Testing and Labeling Regulations Pertaining to Product Certification of Children's Products, Including Reliance on Component Part Testing, 85 FR 52078 (Aug. 24, 2020).

choose, the public can view this dashboard to see the Department's progress on its Assessments and Reviews of particular regulations. The dashboard will also help to keep the Department on track to timely complete Assessments and Reviews.[102]

Finally, the Department will, within nine months of publication of this final rule, publish in the **Federal Register** its schedule for conducting Assessments and Reviews. The Department's goal is to provide the public with more information on which regulations it intends to Assess or Review in the next 24 months, so that the public can plan ahead for any desired engagement on those regulations. The Department will subsequently publish in the **Federal Register** its schedule for conducting Assessments and Reviews of regulations that the Department does not intend to review in the first 24 months. However, the Department expects that this schedule will be aspirational in nature to ensure Departmental flexibility to depart from the plan if needed to respond to changing circumstances. The Department will update the plan at appropriate intervals based on its progress.

III. Statutory Authority and Legal Basis for This Final Rule

The statutory authorities supporting this final rule are the statutory authorities for the Department's existing regulations.[103] 85 FR 70103. The Department finalizes herein its proposal to amend its regulations to add expiration dates unless the Department periodically conducts the required Assessment or Review of the regulations, or an exception applies. Some of the Department's primary rulemaking authorities include:

- Section 701(a) of the Federal Food Drug and Cosmetic Act (FD&C Act), 21 U.S.C. 371(a), which authorizes the Secretary to ''promulgate regulations for the efficient enforcement of [the FD&C Act], except as otherwise provided in this section'';
- Section 1102 of the Social Security Act, 42 U.S.C. 1302, which provides that the Secretary ''shall make and publish such rules and regulations, not inconsistent with this Act, as may be necessary to the efficient administration of the functions with which [he] is charged under this Act'';
- Section 1871 of the Social Security Act, 42 U.S.C. 1395hh, which provides that ''the Secretary shall prescribe such regulations as may be necessary to carry out the administration of the insurance programs under this title''; and
- 5 U.S.C. 301, which provides that ''[t]he head of an Executive department or military department may prescribe regulations for the government of his department, the conduct of its employees, the distribution and performance of its business, and the custody, use, and preservation of its records, papers, and property. This section does not authorize withholding information from the public or limiting the availability of records to the public.''

It complies with the Administrative Procedure Act (APA) to amend regulations to add dates by which the regulations expire unless a review of the regulation is timely performed. An agency can, through notice-and-comment rulemaking, amend its regulations to provide that they expire at a future date.[104] An agency can also provide that its regulations expire when an event occurs or ceases to occur.[105] That is what this final rule does.

Moreover, Agencies can—and often do—issue one rule that applies to many other agency rules, rather than amending or rescinding each affected regulation individually. To take one example, in 2008 the Department revised the definition of ''entity'' at 42 CFR 411.351. *See* 73 FR 48434, 48751 (Aug. 19, 2008). The revised definition had the effect of changing the meaning of ''entity'' each time it was used in 42 CFR part 411, subpart J. It would be burdensome to specify the meaning of ''entity'' each time it appears in Subpart J, so the Department issued one definition that broadly applied to all sections of Subpart J.

There are many other examples where an Agency issues a regulation that applies to, amends, rescinds, or supersedes many other regulations.[106] This avoids an unnecessarily cumbersome process. A court ruling that agencies must amend each individual regulation would call into question large numbers of agency regulations and impose substantial burdens on agencies (and the Office of the Federal Register, which would be required to print the same text over and over) when promulgating future regulations.

Moreover, in this rule making the Department considered each individual Department regulation, and, as discussed further, decided to exempt certain regulations. The Department concluded that this final rule should apply to and amend its remaining regulations, because this final rule will enhance both (1) the fulfillment of the existing policies that led to those

[102] The Department's information technology personnel are currently undertaking a large data migration that had been planned for a long time. Therefore, the dashboard will not be active as of the date this final rule is published. But the Department intends for this dashboard to be active well in advance of 2026, when the first Assessments and Reviews must be completed.

[103] Including certain ones inadvertently not listed in the proposed rule.

[104] *See, e.g.,* Amendment to the Interim Final Regulation for Mental Health Parity, 70 FR 42276, 42277 (July 22, 2005) (amending interim final rule to provide that ''the requirements of the MHPA interim final regulation apply to group health plans and health insurance issuers offering health insurance coverage in connection with a group health plan during the period commencing August 22, 2005 through December 31, 2005. Under the extended sunset date, MHPA requirements do not apply to benefits for services furnished after December 31, 2005.''); *see generally Clean Air Council* v. *Pruitt,* 862 F.3d 1, 9 (D.C. Cir. 2017) (an agency can amend or revoke a legislative rule through notice-and-comment rulemaking).

[106] *See, e.g.,* 21 CFR 1.1(b) (''the definitions and interpretations of terms contained in sections 201 and 900 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 321 and 387) shall be applicable also to such terms when used in regulations promulgated under that act''); 7 CFR 786.113 (''*Notwithstanding any other regulation,* interest will be due from the date of the disbursement to the producer or other recipient of the funds''); 40 CFR 455.21

(''*Notwithstanding any other regulation,* process wastewater flow for the purposes of this subpart does not include wastewaters from the production of intermediate chemicals''); 45 CFR 611.12 (''All regulations . . . heretofore issued by any officer of the Foundation which impose requirements designed to prohibit any discrimination against individuals on the ground of race, color, or national origin under any program to which this part applies, and which authorize the suspension or termination of or refusal to grant or to continue Federal financial assistance to any applicant for or recipient of such assistance for failure to comply with such requirements, *are hereby superseded* to the extent that such discrimination is prohibited by this part,'' with certain exceptions); 7 CFR 3430.1 (''In cases where regulations of this part conflict with existing regulations of NIFA in Title 7 (*i.e.,* 7 CFR parts 3400 through 3499) of the Code of Federal Regulations, *regulations of this part shall supersede*''); 24 CFR 943.118 (''The participating PHAs must adopt the same fiscal year so that the applicable periods for submission and review of the joint PHA Plan are the same. *Notwithstanding any other regulation,* PHAs proposing to form consortia may request and HUD may approve changes in PHA fiscal years to make this possible'') (emphasis added).

regulations and (2) the Department's longstanding desire to comply with the RFA and periodically review its regulations. There is a need for widespread retrospective review, but it is nearly impossible to see how a satisfyingly comprehensive review could occur without a sunset mechanism. The Department recognizes that in many cases the Department had strong reasons for issuing its regulations. Examples of such motivations might include enhancing food safety,[107] increasing access to health insurance,[108] or increasing the incentive for Temporary Assistance for Needy Families recipients to work.[109] These are all important policy goals that the Department wishes to achieve. This final rule is intended to further these goals, as well as the other goals motivating the Department's regulations. The literature and the Department's experience suggest that large numbers of regulations are having impacts that, over time, differ from what was estimated at the time the regulations were promulgated. Therefore, the Department needs to conduct periodic reviews of its regulations to determine whether the policy goals behind the regulations are in fact being effected (and if amending those regulations could more effectively further those goals). The Department concluded that the benefits of retrospective review, and need to more strongly incentivize it, justified this course of action. Forty years of experience since the RFA's enactment; the decades since relevant Executive Orders were enacted; and other Federal government efforts to spur the Department to conduct more retrospective reviews indicate that, absent this final rule's pushing mechanism, the Department will not conduct as many retrospective reviews as desired. In addition, the Department will consider each individual Section when conducting Assessments and (if needed) Reviews.

The Department also notes the text of 5 U.S.C. 610 indicates Congress believed agencies had the authority to periodically review at least those regulations that have a significant economic impact upon a substantial number of small entities (and that the agency had the authority to assess which of its regulations have such an impact).

The Department received comments on the statutory authority for the proposed rule. Below the Department summarizes these comments and responds to them.

IV. Provisions of Proposed Rule and Response to Public Comments [110]

On November 4, 2020, HHS published in the **Federal Register** the proposed rule.[111] Part of the proposed rule had a 30-day public comment period, and part of it had a 60-day comment period to comply with 42 U.S.C. 1395hh(b). In response to the publication of that proposed rule, HHS received 486 comments from industry trade organizations, healthcare providers, businesses, legal/policy think tanks, non-profit public interest groups, and members of the U.S. Congress during the initial 30-day public comment period, and 532 comments total throughout the 60-day comment period. Commenters generally opposed the proposed rule, although some commenters supported it. Roughly a quarter of commenters requested that the Department withdraw the proposed rule. Some commenters requested that the Department extend the public comment period.

The Department also held a public hearing on the proposed rule on November 23, 2020. Twenty-one members of the public, all representing either unions, public-interest groups, or industry trade organizations, spoke. The speakers at the public hearing all either expressed concerns about the proposed rule, opposed it, or requested that the Department withdraw it. Both a transcript and recording of the public hearing are available at *https://beta.regulations.gov/docket/HHS-OS-2020-0012/document.*

In the following sections, HHS includes a summary of the provisions of the proposed rule, the public comments received, HHS's responses to the comments, and any changes made to the regulatory text as a result.

General Purpose of the Proposal and General Comments

5 U.S.C. 610 and Executive Orders 12866 and 13563 direct agencies to devise plans to periodically review certain of their regulations using certain criteria. By requiring the Department to periodically perform such reviews, this final rule implements Congress's and the President's desires for retrospective review of regulations. This final rule will lead to the amendment or rescission, where appropriate, of Department regulations that have a significant economic impact upon a substantial number of small entities. This final rule also furthers democratic values such as accountability, administrative simplification, transparency, and performance measurement and evaluation.

General Comments and Responses

Comment: A few commenters stated that the retrospective review of regulations proposed by the rule is an important and necessary tool for improving agency regulation and minimizing unnecessary regulatory burdens. Commenters listed the many benefits of this approach, including the refining of regulations using real-world data and experience, improving government accountability, avoiding the natural tendency of agency officials charged with achieving public benefits to focus on pursuing those benefits and not on reducing the burdens of their regulation to the public, and preventing the continued enforcement of obsolete, outdated, and even unintentionally harmful regulations. Some commenters stated that it is axiomatic that periodic retrospective review is essential to the proper functioning of the executive branch.

Response: The Department agrees, and believes this final rule will achieve these benefits.

Comment: A few commenters stated that beyond simply cutting regulatory burdens, the scheduled assessments and, when necessary, reviews of existing HHS regulations afford HHS the opportunity to keep regulations up to date with modern trends. Commenters noted that not only will this rule establish an opportunity for the Department to terminate obsolete regulations that are no longer fit for purpose or that are judged to be ineffective, but it will also give HHS and the public a reliable framework and a set of tools to continually keep regulations up to date with evolving circumstances.

Response: The Department agrees and emphasizes that the benefits of retrospective review—some of which are cited by these commenters—are substantial. As the proposed rule noted, Professor Cass Sunstein, who served as OIRA Administrator from 2009 to 2012, has observed that ''the requirement of retrospective analysis,'' if ''firmly institutionalized,'' ''would count as the most important structural change in regulatory policy since the original

[107] *E.g.,* 21 CFR part 112.

[108] *E.g.,* 45 CFR part 147.

[109] 45 CFR part 261.

[110] The Department proposed to add substantively identical provisions to Titles 21, 42, and 45. For concision, in this section the Department describes these provisions once, rather than repeating the same substantive provisions several times. The Department uses the phrase ''[XX]'' to refer to the fact that substantively identical provisions will be added to chapters in Titles 21, 42, and 45.

[111] *See* 85 FR 70096.

requirement of prospective analysis during the Reagan Administration.'' [112]

Comment: A large number of commenters stated that the proposed rule will cause an additional burden to the Department and a diversion of the Department's personnel resources. Some of these commenters suggested that the regulatory review process could adversely affect the Department's ability to focus on the administration of current programs, to issue new regulations, and to appropriately review current regulations needing modification. Commenters also raised specific concern about the initial review of regulations that are over ten years old within two years after the calendar year in which this rule is finalized. Those commenters expressed concern that HHS would be unable to Assess or Review all 12,400 regulations that the Department estimates will fall under this category because of the high volume of regulations. A number of commenters stated that two years is an arbitrary and inadequate timeline for all 12,400 regulations to be Assessed or Reviewed, and some regulations could expire simply because the Department did not have enough time to conduct an Assessment or Review. Several commenters also stated that they believe the Department's estimate that 12,400 of its regulations are over ten years old is lower than the actual number, although no commenter provided an independent count of HHS regulations to support this assertion. A few commenters pointed out that after an Assessment or Review occurs, there may be additional need for rulemaking or revision of regulations, which is an additional cost the Department does not contemplate in its estimate. A few commenters stated that it was unclear where HHS plans to obtain the funding and personnel resources needed to implement this regulatory review process.

Response: The Department has considered the public comments, and decided that, for regulations that are more than ten years old on the effective date of this final rule, the Department shall have five years, rather two as proposed in the proposed rule, to complete the Assessments and (if needed) Reviews. This will spread out the initial burden and provide the opportunity for more robust Assessments and Reviews. The regulatory impact analysis in this final rule explains how HHS has the resources and personnel to perform the Assessments and Reviews called for by this final rule. Moreover, the Regulatory Flexibility Act already calls for the Department to assess which of its regulations have a significant economic impact upon a substantial number of small entities, and to review those regulations every ten years. Therefore, assuming full compliance with the RFA, this rule does not impose any additional burden on the Department beyond what was already called for in the RFA.

To the extent there are additional burdens resulting from this regulation, HHS believes widespread retrospective review is a worthwhile enterprise. The literature and the Department's experience suggest that large numbers of regulations are having impacts that, over time, differ from what was estimated at the time of promulgation. The Department should conduct periodic reviews to determine whether the policy goals behind the regulations are in fact being effected (and if amending those regulations could more effectively further those goals). Thus, it is sensible to periodically review existing regulations, even if it takes some time away from issuing new regulations (many of which, the literature suggests, would have impacts that differ from their estimated impacts at the time of promulgation).

HHS also notes that courts ''have no basis for reordering agency priorities. The agency is in a unique—and authoritative—position to view its projects as a whole, estimate the prospects for each, and allocate its resources in the optimal way.'' *In re Barr Labs., Inc.,* 930 F.2d 72, 76 (D.C. Cir. 1991). For the reasons discussed herein, the Department has done this, and determined that Reviews and Assessments should be a priority.

Lastly, we note that the COVID–19 pandemic imposed a tremendous, unforeseen burden on the Department, yet there has been no material drop in the Department's ability to promulgate new regulations or enforce existing regulations. This suggests that after the pandemic, the Department will be resourceful enough to perform Assessments and Reviews, as well as promulgate new regulations that need to be promulgated and appropriately enforce existing regulations.

Comment: A few commenters stated that the benefits of this final rule are difficult to fully anticipate, and there are a number of reasons to believe that the benefits of this rulemaking will vastly outweigh the costs. For example, if HHS were to find cost savings worth 0.0025 percent of departmental spending or 0.0007 percent of national spending, the regulation would pay for itself and pass a cost-benefit test at the higher end of cost estimates.

Response: The regulatory impact analysis for this final rule describes what the Department expects to be the primary impacts resulting from this final rule.

Comment: A large number of commenters stated that, as proposed, this rule would divert resources from the Department's COVID–19 pandemic response efforts. Many of these commenters stated that it is irresponsible for the Department to create a retrospective regulatory review process at a time when it should be devoting all of its resources to combatting COVID–19.

Response: HHS respectfully disagrees with this comment. Due to the changes made from the proposed rule, under this final rule the first Assessments and Reviews need not be completed until the end of 2026. The Department believes the pandemic will be over by then.

In fact, the COVID–19 pandemic has reinforced the need for this final rule. The Department's response to the pandemic has largely consisted of waiving regulatory requirements or exercising enforcement discretion to not enforce certain regulatory requirements during the pandemic. *See, e.g., Coronavirus waivers and flexibilities, CMS.gov*, *https://www.cms.gov/about-cms/emergency-preparedness-response-operations/current-emergencies/coronavirus-waivers;* Regulatory Relief to Support Economic Recovery; Request for Information (RFI), 85 FR 75720 (Nov. 25, 2020) at Attachment A (non-exhaustive list of enforcement discretion announcements or changes to regulations, agency guidance materials, or compliance obligations made to respond to the COVID–19 pandemic and its impact on the healthcare industry). The Department should learn from the pandemic and consider whether to retain regulatory requirements that were waived or where flexibility was provided during the Nation's response to COVID–19, as well as consider the impact its regulations could have on the response to a future pandemic or other emergency.

Comment: A large number of commenters viewed the 30-day comment period (which began on November 4, 2020, the day that the **Federal Register** published the proposed rule and the day after the rule went on public display) as too short. A large number of these commenters stated that the proposed rule should be withdrawn for various reasons, or in the alternative, requested a longer comment period if the proposed rule was not withdrawn. Commenters' reasons for asking for an extension included lack of

[112] Cass R. Sunstein, *The Regulatory Lookback,* 94 B.U. L. Rev. 579, 584 (2014).

advanced notice of the proposed rule, the perceived magnitude of the rule, fewer resources available to commenters due to the COVID–19 pandemic and the Thanksgiving holiday, and the number of topics on which the Department requested comment.

A large number of commenters stated that the 30-day comment period violates the Administrative Procedure Act (''APA'') because it denies meaningful ''opportunity to participate in the rule making'' required by 5 U.S.C. 553(c).[113] A few commenters specifically mentioned that while there is no established minimum comment period prescribed by the APA, Executive Order 12866 states that the public's opportunity to comment, ''in most cases should include a comment period of not less than 60 days,'' although shorter comment periods have been upheld in the face of exigent circumstances.[114] Other commenters said the Department should not finalize the rule until the next Administration enters office.

Response: While HHS understands the commenters' desire for more time, the comment period was adequate. Neither the APA, nor any other statute requires a longer comment period for the proposed rule. Instead, the APA merely requires that ''[a]fter notice required by this section, the agency shall give interested persons an opportunity to participate in the rule making through submission of written data, views, or arguments with or without opportunity for oral presentation.'' 5 U.S.C. 553(c). This occurred here. The comment period provided ample time for the submission of 486 comments by a variety of interested parties, including extensive comments by a number of entities just by the end of the 30-day period. Those comments offer a broad array of perspectives on the proposed rule. The number and comprehensiveness of the comments received disprove commenters' claim that the 30-day comment period was insufficient time for commenters to provide meaningful comment. Accordingly, after reviewing the public comments and the requests for additional time, the Department does not believe that extending the comment period is or was necessary for the public to receive sufficient notice of, and opportunity to meaningfully comment on, the proposed rule. Nor is there anything that would have required additional outreach outside of the public notice and comment process and the comment period.

Moreover, under this final rule, the public will have a robust opportunity to comment on each regulation during the Assessment or Review process.

HHS respectfully disagrees that Executive Order 12866 requires a 60-day comment period for this rule. Executive Order 12866 repeats the baseline requirement that ''each agency should afford the public a meaningful opportunity to comment on any proposed regulation,'' which ''in most cases should include a comment period of not less than 60 days.'' [115] Neither Executive Order mandates a 60-day comment period. That is why many HHS, and other agency, regulations are issued with shorter comment periods. No commenter pointed to a court decision vacating a rule based on a failure to comply with an Executive Order's supposed 60-day comment period requirement. As explained above, the volume of comments received demonstrates that the public has been afforded a meaningful opportunity to comment.[116]

Moreover, a portion of the proposed rule had a 60-day public comment period because 42 U.S.C. 1395hh(b) requires a 60-day comment period before issuing or amending certain Medicare regulations. The Department did not finalize this rule until after the 60-day comment period closed, and the Department has considered all comments, including those received throughout the 60-day comment period, before finalizing this rule. In all, the Department received 532 comments by the end of the 60-day comment period.

Lastly, past practice has often been to finalize rules that are ready for finalization without waiting for the incoming Administration to take office.[117]

Comment: A few commenters viewed the 30-day comment period as insufficient because some of the regulations that will be amended by this final rule had a comment period that lasted more than 30 days when they were originally promulgated.

Response: HHS respectfully disagrees with these commenters. Not only did the Department not finalize this rule until after the 60-day comment period closed, but the APA does not specify a required length for comment periods when issuing or amending regulations. The APA has already ''established the maximum procedural requirements which Congress was willing to have the courts impose upon agencies in conducting rulemaking procedures.'' *Vt. Yankee Nuclear Power Corp.* v. *Natural Res. Def. Council, Inc.,* 435 U.S. 519, 524 (1978). Neither courts nor regulated entities may ''impose upon [an] agency its own notion of which procedures are 'best' or most likely to further some vague, undefined public good.'' *Id.* at 549. The number and comprehensiveness of the comments received disprove commenters' claim that the comment period was insufficient. A portion of the proposed rule had a 60-day public comment period because 42 U.S.C. 1395hh(b) requires a 60-day comment period before issuing or amending certain Medicare regulations. But for many other Department regulations, Congress has enacted no requirement specifying a particular comment period.

Comment: Several commenters stated that they found it unfair that the proposed rule had a 30-day comment period, but parties regulated by CMS have 60 days to comment on the portion of the proposed rule pertaining to certain CMS regulations. Commenters mentioned that they believed this could present a fundamental due process issue.

Response: As stated in the proposed rule, Congress required a 60-day public comment period before issuing or amending certain Medicare regulations. *See* 42 U.S.C. 1395hh(b); 85 FR at 70104 n.87. No similar statutory requirement applies to most other Department regulations.

Comment: Several commenters stated that seven days' notice prior to the public hearing on the proposed rule was insufficient time to prepare remarks for the public hearing. The same commenters also stated that holding the public hearing 10 days before the close of the comment period on the rule was insufficient time for commenters to

[113] *See N.C. Growers' Ass'n, Inc.* v. *United Farm Workers,* 702 F.3d 755, 770 (4th Cir. 2012) (APA requires ''meaningful'' opportunity to comment); *Petry* v. *Block,* 737 F.2d 1193, 1201 (D.C. Cir. 1984) (relying on Administrative Conference of the United States' view that 30-day comment period is inadequate and 60-day comment period is the reasonable minimum time for comment).

[114] Exec. Order No. 12866 of Sept. 30, 1993, 58 FR 190 (Oct. 4, 1993).

[115] *See also* Exec. Order No. 13563 of Jan. 18, 2011, 76 FR 3821 (Jan. 21, 2011) (''To the extent feasible and permitted by law, each agency shall afford the public a meaningful opportunity to comment through the internet on any proposed regulation, with a comment period that should generally be at least 60 days.'').

[116] A commenter pointed to 21 CFR 10.40(b)(2) as counseling in favor of a 60-day comment period. But that provision by its terms applies only to the FDA Commissioner. The proposed rule was issued by the Secretary.

[117] For example, fifty-six (56) new rules were finalized in the final two (2) full days of the previous Administration. *See* **Federal Register**, *https://www.federalregister.gov/documents/search?conditions%5Bpublication_date%5D%5Bgte%5D=1%2F18%2F2017&conditions%5Bpublication_date%5D%5Blte%5D=1%2F20%2F2017&conditions%5Btype%5D%5B%5D=RULE.*

meaningfully incorporate the testimony and learnings from the public hearing into their written comments.

Response: HHS respectfully disagrees. While the specific date of the hearing (November 23, 2020) was published in the **Federal Register** on November 16, 2020, notice that a hearing would be held was provided in the proposed rule itself.[118] Thus, commenters were on notice 19 days (November 4, 2020, to November 23, 2020) prior to the hearing and had 19 days to prepare remarks for the hearing. And as these comments themselves show, choosing the date for the public hearing requires a balance between, first, giving the public sufficient time to review the proposed rule, and second, giving the public adequate time to review comments made at the hearing before submitting written comments. Scheduling the hearing on November 23, 2020 reflected an appropriate balance of these considerations.

Comment: Several commenters were supportive of the rule and expressed that the provisions of the Regulatory Flexibility Act should be followed to increase transparency, public participation, and administrative accountability. These commenters appreciated the Department's efforts to ensure recurring attention to the impact of its rules on small and independent businesses, and minimize the regulatory burden it imposes on these entities. These commenters also stated that regulatory review is a laudable goal that administrative agencies should be aiming for.

Several commenters emphasized the importance of periodically reviewing old regulations to determine whether they should be updated to adapt to changing circumstances. For instance, a few commenters stated that the COVID–19 pandemic drew attention to the fact that many of the Health Insurance Portability and Accountability Act (HIPAA) regulations are out-of-date. Some commenters also stated that the process for developing regulatory impact analyses could be improved if, after each regulation is fully implemented, public comments were solicited on the accuracy of the assumptions underlying the original impact analysis. These commenters appreciated the Department's efforts to consider and update its regulatory review process.

Response: HHS agrees with these commenters that the final rule will implement the important goals of the Regulatory Flexibility Act, including transparency, public participation, administrative accountability, and a more streamlined regulatory structure. The process set out in the proposed rule that is now being finalized will create a structured plan to operationalize the Department's longstanding goals of reviewing and updating its regulations and—where needed—eliminating regulations that no longer serve their intended purpose(s) and unduly burden both small entities or the public at large. Requiring the solicitation of comments on the assumptions in regulatory impact analyses is beyond the scope of this final rule, but the public is welcome to submit such comments to the dockets of regulations being Assessed or Reviewed.

Comment: A few commenters stated that the proposed rule does not provide sufficient examples of how this approach has worked in the past. A few commenters point out that the proposed rule cites an article that indicates that states have adopted and then abandoned similar approaches to adding automatic expirations dates. They also state that HHS dismisses this fact in the proposed rule without providing a compelling reason. Commenters stated that the examples where this approach has been used that the Department cites to in the proposed rule (U.S. states, the European Union, and the Republic of Korea) have no bearing or authority over federal rulemaking in the United States, where Congress through the APA has established procedures and standards for promulgating, updating, and rescinding regulations. They also stated that the executive actions reviewing regulations that are cited to in the proposed rule underscore that the Department does not need this rule to compel periodic regulatory review.

Response: HHS respectfully disagrees. As explained in the proposed rule, 85 FR at 70102 & nn.66–69, to the extent that states abandoned automatic expiration dates, they did so for reasons that are inapplicable to this situation, namely, the provisions' failure to enhance legislative control. As explained in the regulatory impact analysis, at least one state that undid its sunset provision (North Carolina) subsequently reenacted a sunset process for regulations. The article that one commenter referenced [119] did not cite any empirical support for the proposition that automatic expirations produce ineffective or inadequate retrospective reviews where sufficient resources and staff are provided (as is the Department's intent here).[120]

Second, the proposed rule referred to other jurisdictions' sunsets to illustrate that (1) adding sunset provisions does not wreak havoc or cause undue uncertainty and (2) experience shows sunset provisions can be effective in achieving the benefits from robust retrospective review of regulations. The legal framework of federal rulemaking under the APA may differ from other jurisdictions, but that does not detract from the point that other jurisdictions' experience shows that sunset provisions can be effective and do not lead to havoc or tremendous uncertainty. For the reasons explained in the proposed rule and this final rule, this final rule complies with the APA.

The Department also disagrees with the commenters' suggestion that the existence of limited and sporadic instances of retrospective review demonstrate this rule is not necessary. As explained in the proposed rule, the Department has failed to engage in comprehensive retrospective review of its rules notwithstanding the RFA and long-standing Executive Orders calling for such reviews. This history of limited compliance shows that the proposed rule being finalized is appropriate.

Comment: Several commenters stated that the proposed rule was a political effort to cause difficulties for the incoming Biden Administration, which will be tasked with implementing this final rule.

Response: HHS respectfully disagrees with these commenters because the purpose of this final rule is to require the Department to periodically review its regulations. The rule is not politically motivated, but is instead an effort to ensure the Department periodically reviews its regulations that have a significant economic impact upon a substantial number of small entities. In any event, based in part on comments received on the proposed rule, in this final rule the Department has extended the deadline to five calendar years to complete the Assessments and (if necessary) Reviews of regulations that are more than ten years old. Thus, the initial deadline will not occur in the next Presidential term.

Comment: A few commenters stated that this rule is advancing the Trump Administration's conservative agenda at the expense of good regulations that regulate health and safety for patients and consumers. Many of these commenters also indicated that the rule would put the interests of Wall Street ahead of the individual Americans who

[118] 85 FR at 70097.

[119] Jason A. Schwartz, *52 Experiments with Regulatory Review: The Political and Economic Inputs into State Rulemakings, Inst. for Policy Integrity,* Rep. No. 6, at 33 (Nov. 2010), *https://policyintegrity.org/files/publications/52_Experiments_with_Regulatory_Review.pdf.*

[120] *See* 85 FR at 70102 n.69.

are affected by HHS regulations and benefit from the regulatory structures they create.

Response: HHS respectfully disagrees. As emphasized in the proposed rule, (and this final rule) the Department intends to timely Assess and Review all covered regulations. Moreover, this final rule does not favor regulations of any particular ideological bent; it applies to all Department regulations, subject to the exceptions listed herein. Regulations that meet the RFA's criteria will not be modified or rescinded. The focus and anticipated result of the proposed rule is to eliminate or streamline unnecessary regulatory burdens on small entities. Retrospective review enjoys bipartisan support and benefits all Americans. Some regulations may bestow privileges upon narrow constituencies by creating barriers to entry in their industry. Such regulations may also disproportionately burden small businesses, because small businesses may be the new entrants such regulations are intended to keep out. If these regulations do not meet the RFA's criteria and are amended, small businesses and consumers may benefit from increased competition.

Comment: A few commenters stated that regulations issued after this rule is finalized should include the date of promulgation to make it easy for the public to determine how old the regulation is and when it will be reviewed.

Response: Rules already include their date of promulgation. To the extent the commenter requests that amendments to existing rules include the original date of promulgation, the Department may include this date in prospective rulemakings. Moreover, in conjunction with this final rule, the Department is placing at *https://www.hhs.gov/regulations/federal-registry/index.html* a list of Department rulemakings, the year they were initially promulgated, the last year the rules were amended, and the **Federal Register** citation from the time the rule was last amended. This list was generated with artificial intelligence and the Department believes it is accurate, but it is conceivable that some Department regulations are not included. This list includes all Department regulations, including those that may be exempt from this final rule. The Department believes it would be informative to the public to provide a list of all Department regulations, as well as their **Federal Register** citations and promulgation dates. The Department intends to update this list annually with newly-issued regulations.

Comment: One commenter stated that instead of the Department's proposed schedule of regulatory review, each agency within HHS should include retrospective review compliance into its annual objectives and, perhaps, even into periodic Congressional reports.

Response: The Department thanks the commenter for this suggestion, but experience suggests it would not be adequate to solve the problem. As noted in the proposed rule, the failure to adequately review existing significant regulations has already been well documented to Congress.[121] It is also public knowledge.[122] Nonetheless, such ''public shaming,'' if that is what the commenter intends, has not resulted in the Department adequately conducting retrospective review.

Comment: A large number of commenters stated that the proposed rule would be unnecessary and duplicative of the Department's existing efforts to review its regulations. These commenters stated that the Department already updates some of its rules annually, and has updated other non-annual rules in the past. Other commenters believe that HHS is already doing a fulsome review as required by the RFA. Several commenters stated that in 2011, the Department posted its final plan for retrospective review of existing regulations, and from 2012–2016 it provided semi-annual updates on its website listing the rules undergoing or scheduled for review. Some commenters suggested that previous executive orders that called for periodic review of existing regulations are a sufficient means of ensuring the Department is conducting these periodic reviews. Commenters suggested that the Department continue to conduct retrospective reviews using its already established process and provide regular updates to the public on its progress. Other commenters stated that the Department does not address why it failed to perform the required regulatory reviews in the past, nor how the process proposed in the proposed rule will make a difference.

A few commenters noted that even though previous executive orders have prioritized regulatory reviews, most observers to date note that these kinds of reviews have failed to be institutionalized by agencies, including HHS. These commenters cited evidence suggesting that despite efforts to review regulations over the years and to reduce regulatory burdens, the total number of regulatory restrictions that have been issued by HHS continues to grow year after year, except for two brief periods around 1980 and during the mid-1990s (perhaps as part of deregulatory efforts).

Response: The Department respectfully disagrees that this final rule is unnecessary and duplicative. While commenters are correct that HHS annually updates the annual Medicare payment rules, those rules and certain other rules that are updated annually are exempt from this final rule. This final rule also exempts the rules at 42 CFR part 73, since those are periodically reviewed. Regarding the 2011–2016 retrospective review plan and reviews, that effort was helpful but sporadic, not sustained. As explained in the proposed rule, these efforts only resulted in review of a small fraction of rules. *See* 85 FR at 70099. The failure to institutionalize retrospective review further underscores the need for this final rule and the review process it is implementing. A few instances of the Department taking the initiative to review its regulations cannot reasonably be considered a sufficient regulatory review when thousands of regulations that have been promulgated over the decades have not been touched.[123]

Comment: Many commenters questioned the Department's plan for personnel resources to conduct the Reviews prescribed by this final rule. These commenters believe that the Department underestimated the number of people who would be needed to conduct the Reviews, and stated that the personnel resources would be better utilized on other projects. For example, some commenters stated that the Department is already too slow in promulgating certain regulations, and should task its employees with carrying out the Department's existing duties.

Response: The regulatory impact analysis for this final rule describes the personnel resources that the Department envisions being used to conduct Assessments and Reviews. The

[121] *See, e.g.,* Curtis W. Copeland, Cong. Rsch. Serv., RL32801, Reexamining Rules: Section 610 of the Regulatory Flexibility Act 7–8 (2008); U.S. Gov't Accountability Off., GAO/GGD–94–105, Regulatory Flexibility Act: Status of Agencies' Compliance 12 (1994) (quoting a 1983 Small Business Administration report that stated that the Department's section 610 review plan was '' 'very general,' and, as a result, 'it is difficult to measure progress and to make recommendations with respect to future review' ''); *see also* Testimony of The Hon. Thomas M. Sullivan, Chief Counsel for Advocacy, U.S. SBA, U.S. House of Representatives Comm. on Small Bus. Subcomm. on Reg.'s, Health Care and Trade (July 30, 2008),

[122] *See, e.g.,* Connor Raso, *Assessing regulatory retrospective review under the Obama administration,* Brookings Inst., (Jun. 15, 2017), *https://www.brookings.edu/research/assessing-regulatory-retrospective-review-under-the-obama-administration/.*

[123] *See, e.g.,* 85 FR at 70111 (explaining that as of 2019, 85% of Department regulations created before 1990 had not been edited, and the Department had nearly 300 broken citation references in the CFR).

sensitivity analysis therein addresses the possibility that costs could be lower than estimated in the proposed rule. Periodically reviewing regulations with a significant economic impact upon a substantial number of small entities is an existing Department duty. Moreover, as discussed elsewhere herein, retrospective review can yield tremendous benefits. The literature and the Department's experience suggest that large numbers of regulations are having impacts that, over time, differ from what was estimated at the time the regulations were promulgated. Therefore, the Department should prioritize conducting periodic reviews of its regulations to determine whether the policy goals behind the regulations are in fact being effected (and if amending those regulations could more effectively further those goals).

Comment: A few commenters questioned whether the Department should have employees Assess or Review regulations if those employees are not responsible for implementing them. These commenters stated that if reviewers have not worked on matters connected with the regulations they are Reviewing, those reviewers may not have an adequate understanding of the regulations, which could lead to the expiration of regulations that are essential to the successful operation of the Department's programs.

One commenter also disagreed with the premise of the Department's use of career civil servants to conduct regulatory reviews. This commenter stated that the proposed rule was logically inconsistent because it ''maligned'' career public servants at the Department for not reviewing the Department's regulations, but also proposes to task these same individuals with carrying out the proposed review process.

Response: Which Department officials Assess or Review particular regulations will be decided on a case-by-case basis, but those conducting Assessments and Reviews will generally be employees who are familiar with those regulations, as well as technical experts, including economists. The Department strongly disagrees with the comment that the proposed rule ''maligned'' career civil servants. The proposed rule quoted a law professor who was suggesting several reasons why retrospective reviews do not occur as often as desired. The Department believes career civil servants can capably Assess and Review regulations, just as they capably conduct regulatory impact analyses and regulatory flexibility analyses.

Comment: Several commenters stated that the two-year timeline for review of all regulations over ten years old was insufficient. A number of commenters suggested that the timeline be extended to five years.

Response: The Department has considered these comments and has decided to revise the rule in light of them. Under this final rule, regulations issued more than ten years prior to the final rule's effective date will not expire if Assessed and (if necessary) Reviewed within five calendar years of the effective date of this final rule. Moreover, under this final rule, if the Secretary makes a written determination that the public interest requires continuation of the Section (as defined in the text of the final rule) in force beyond the date on which the Section otherwise would expire, the Secretary may continue the Section in force one time for a period stated in the determination, which period shall not to exceed one year.

Comment: Several commenters stated that the proposed rule would cause significant regulatory uncertainty in the healthcare industry, which would not know which regulations may or may not expire. Some commenters stated that the proposed rule would cause uncertainty for states, which implement Federal programs and rely on Federal regulations and funding. Potential regulatory changes could create additional compliance and regulatory costs for healthcare providers which may be forced to adapt to a changing regulatory framework. Changes may also trigger regulated entities to forgo future investments because they lack regulatory clarity. For example, some commenters stated that the uncertainty created around the expiration of regulations, including those that guide eligibility for Medicaid, Medicare provider reimbursements, or certification of hospitals and clinics, could disrupt the efficient operation of critical safety-net programs, create regulatory gaps and inconsistent application of the law, and make accessing safety-net services for our most vulnerable populations even more complicated and difficult than it is today. Some commenters said the poor, people of color, and/or the LGBTQ community, would be particularly affected. Additionally, some commenters stated that the proposed rule would make it difficult for them to advise clients on how to comply with the Department's regulations. These commenters stated that if HHS determined that a regulation required modification, it should clearly publicize its intention to exercise enforcement discretion in not enforcing the then-current iteration of the regulation while the particular regulation is being modified.

Other commenters stated that the regulatory review process set forth in this rule would ensure that HHS reviews regulations as required by the RFA, which means that if HHS were currently complying with the RFA in a satisfactory manner, there would be little additional uncertainty stemming from the proposed rule.

Response: The Department notes that there is always a possibility that regulations could be amended or rescinded, even absent this rule. The Department does not believe uncertainty among the regulated community will add significantly to the costs of this rulemaking for the following reasons. The Department's sporadic use of periodic retrospective review—notwithstanding the RFA and Executive Orders—itself leads to ''uncertainty'' about how robustly the Department implements directives that make for good policy.[124] To the extent that the Department can maintain compliance with its obligations, this should build trust in the Department and reduce uncertainty (offsetting some or all of the uncertainty discussed by the commenters, if such uncertainty exists). Further, as noted above, the Department plans to release information about the 18,000 regulations under its authority and when they were adopted, such that any uncertainty surrounding the expiration dates of the Department's various rulemakings will be reduced substantially, if not entirely. Additional measures to mitigate private costs are discussed in the ''Operationalization of This Final Rule'' section of this final rule. Second, the Department notes that many states and foreign jurisdictions have sunset provisions that are a routine part of their regulatory processes. If the sunset reviews in these other jurisdictions do not create tremendous uncertainty, it stands to reason that neither will this final rule. The regulatory impact analysis for this final rule describes in more detail the sunset provisions from these other jurisdictions.

Under this final rule, the regulated community has five years to adjust to the changes made by this final rule, so any reliance interests are significantly reduced as compared to the proposed rule. Where appropriate, the Department would announce the regulations for

[124] To the extent this uncertainty has been lessened because the public has seen how the Department has implemented these directives over the course of many years, the same can be said for this final rule once it has been implemented for several years.

which it is exercising enforcement discretion.

Comment: A few commenters stated that the Department should allow reasonable reliance on a regulation while that regulation is under review, and for a reasonable time after a decision to amend, rescind or allow a regulation to expire. These commenters also stated that the final rule should allow the Department to extend a regulation for any period of time reasonably necessary for regulated entities relying the regulation to adjust their business practices.

Response: HHS appreciates the commenters' concern regarding the reliance interests of regulated entities; however, HHS respectfully disagrees with the premises of these comments. First, HHS does not intend to allow a regulation to simply expire. And as explained in the proposed rule, the public will have the opportunity to provide comments identifying regulations that the public believes need to be Assessed and Reviewed, which mitigates the risk of inadvertent expiration.

Second, with respect to Sections that, after Review, the Department determines should be amended or rescinded, such Sections will be amended or rescinded through a separate notice-and-comment rulemaking process. Considerations about the effective dates of such amendments or rescissions, including the need to allow adequate time for transition, will be taken into account in that separate rulemaking process. Finally, Review under this final rule expressly considers ''the continued need for the Section,'' so regulated entities' reliance interests will be taken into account during Reviews.

Comment: Several commenters stated that the use of artificial intelligence and machine learning technology in regulatory review is a novel and innovative approach, and members of the public should have been afforded notice of the Deloitte research project and the opportunity to comment on the use of this technology. In particular, these commenters wanted to understand if and how the technology would be used by HHS to identify the regulations that will be reviewed. Some commenters asked HHS to provide additional information regarding the methodology used, and the underlying algorithm. A few commenters stated that all code should be posted on a publicly-accessible website, consistent with best practices among academic researchers in data science.

Response: The Department agrees that the use of artificial intelligence machine learning technology in regulatory review is a novel and innovative approach. The technology discussed in the proposed rule was initially used to perform an internal assessment of Department regulations, which is why the Department did not previously notify the public about this research project. Artificial intelligence will not be used to perform Assessments and Reviews pursuant to this final rule. While artificial intelligence can determine if a regulation has been amended in the last thirty years, it cannot at this time easily determine if a regulation satisfies the criteria listed in 5 U.S.C. 610. The artificial intelligence review was useful, because it suggested that large numbers of Department regulations would benefit from retrospective review. The technology identified that 85% of Department regulations created before 1990 have not been edited; the Department has nearly 300 broken citation references in the CFR; and there are more than 50 instances of HHS regulatory requirements to submit paper documents in triplicate or quadruplicate. This suggests humans performing a comprehensive review of Department regulations would find large numbers of requirements that would benefit from review, and possibly amendment or rescission.

Regarding the technology used to perform the 2019 analysis, the analysis was performed using a tool called RegExplorer. RegExplorer is an ''augmented intelligence'' tool, meaning it is designed to use artificial intelligence in conjunction with subject matter experts. While RegExplorer is proprietary technology, some of the models deployed within RegExplorer include keyword technology (a structured and iterative approach to process, analyze, and return keyword search results); a clustering algorithm (a cluster is a machine-generated group of regulatory documents that have been algorithmically gathered together based on a set of similar characteristics, such as the relevant sub-agency, placement of text within the regulatory dataset, similarity of text content, and text format and structure); citation extraction and mapping; and similar section analysis.

Comment: A few commenters asked why HHS chose to redact some of the ''Regulatory Streamlining & Analysis'' published by Deloitte in March 2019 that the Department cites in support of the proposed rule. These commenters pointed out that two of three bullet points in the ''executive summary'' slide, and all but 25 of the document's 170 pages are redacted. These commenters asked why this information was not made available to the public, and why HHS did not have a public meeting to discuss the Deloitte findings and solicit feedback on its regulatory reform ideas back in 2019.

Response: The Department was transparent by including the Deloitte analysis in the docket for this rulemaking. The redacted information is information protected by applicable privileges, is confidential information, trade secret information, or not relevant to this rulemaking. As can be seen from the Table of Contents for the analysis, the redacted information does not relate to the machine learning analysis that was conducted to enhance regulatory reform that was discussed in the proposed rule. In November 2020, the Department held a public hearing on the proposed rule, which referred to the Deloitte presentation. The public was able to opine on the analysis at that public hearing. The Department did not have a public meeting to discuss the Deloitte findings and solicit feedback in 2019, because the Department was at the time still undergoing its internal deliberative process.

Comment: A few commenters stated that ideally the systematic evaluation of regulations should be a regular part of the rulemaking process, with the evaluation criteria and timeline embedded within each new rule so that the regulated community has an opportunity to opine on how and when each regulation will be reviewed. Commenters suggested that HHS identify up front what data it will use to track the progress of the regulation, and commit to continually collecting the same kinds of data over time. Such a process would make future evaluation of regulations and programs easier. It would also improve public accountability because the public would have a clearer sense of what the regulation is designed to achieve, and can monitor HHS's progress.

Response: HHS agrees with the commenters' focus on the need to systematically evaluate the effectiveness of agency regulations—indeed, the Department has proposed the instant rule in order to make such evaluations more frequent and comprehensive. The timeline for Review of a given Section is set forth in section [XX](c)(1), and the criteria for Review are set forth in [XX](d). As is current practice, the Department intends to explain in the preambles to future rules what goals the rules are intended to achieve. This will enable the public to know what goals each regulation is designed to achieve. However, the data necessary to evaluate a particular rule will differ from rule to rule, and the Department cannot

generally commit to such collection in advance and in the abstract, although it may be useful to do so in particular cases.

Comment: One commenter suggested that HHS consider performing a cost-savings analysis for regulations receiving a Review under the proposed rule, or for that subset of Assessed regulations that are deemed significant or economically significant. Such analysis could include estimates of the costs, cost savings, and the net cost savings of the regulation.

Response: For purposes of this final rule, the Department has decided to limit the Review criteria to the criteria listed in 5 U.S.C. 610, plus whether the regulation complies with applicable law. These are the criteria that Congress directed the Department to use in its periodic reviews, plus a review for compliance with the law. Determining the regulation's costs, as well as cost savings from amendment or rescission, will often be subsumed in the five criteria listed in 5 U.S.C. 610.

Comment: A large number of commenters stated that the proposed rule would negatively impact programs if review efforts are underfunded, or that the proposed rule was costly and unfunded.

Response: The Department disagrees that regulatory review efforts would be underfunded. As explained in the regulatory impact analysis, this final rule will impose relatively low costs on the Department.

Comment: Several commenters, including Tribal governments and representatives, affiliated groups of Indian Tribes, and the IHS Tribal Self-Governance Advisory Committee, stated that the Department should have consulted with Tribal governments on the rule and failed to notify Tribal leaders and representatives of the proposed rule in violation of HHS's duty as a federal agency to consult with Tribal nations under Exec. Order No. 13175 of Nov. 6, 2000, 65 FR 67249 (Nov. 9, 2000) (E.O. 13175) and the Department's own Tribal consultation policy.

Response: The Department and Indian Tribes share the goal to establish clear policies to further the government-to-government relationship between the Federal Government and Indian Tribes. True and effective consultation shall result in information exchange, mutual understanding, and informed decision-making on behalf of the Tribal governments involved and the Federal Government. The importance of consultation with Indian Tribes was affirmed through Presidential Memoranda in 1994, 2004 and 2009,[125] and E.O. 13175. HHS believes that neither the proposed nor the final rule violate the Department's Tribal consultation policy or E.O. 13175. Subject to certain exceptions, the policy and E.O. 13175 require consultation before any action that will significantly affect Indian Tribes, or before promulgating any regulation that has Tribal implications. HHS believes that this final rule does not significantly affect Indian Tribes or have Tribal implications, as those terms are used in the policy and E.O. 13175. This final rule amends existing regulations to provide that the regulations will expire if not Assessed and (if necessary) Reviewed by certain dates. HHS intends that all rules will be Assessed and (if necessary) Reviewed timely. Therefore, this final rule would have no direct impact on Indian Tribes, beyond their costs of participation in the monitoring, Assessment, and Review processes. As explained in this final rule's regulatory impact analysis, the estimated total monitoring costs to the public over ten years is estimated to range from $52.2 million to $156.7 million using a 7% discount rate, or $58.8 million to $176.3 million over ten years using a 3% discount rate (all figures using $2020). The U.S. Census estimates that in 2019, 1.7% of the U.S. population was all or partially American Indian or Alaska Native.[126] 1.7% of the estimated monitoring costs would be roughly $887,400 to $2.66 million over ten years using a 7% discount rate, or $999,600 to roughly $3 million over ten years using a 3% discount rate (and the cost to Tribes could be less since not every American Indian or Alaska Native is affiliated with a Tribe). Tribes will be able to comment on regulations during the Assessment and Review processes.

Comment: A commenter stated that the rule would allow for the sunset of regulations that merely implement statutory requirements, such as Indian preference. The commenter cited as examples 42 CFR 136.41–43, 42 CFR 121, 42 CFR 136a.41–43, all of which, the commenter stated, are mandated by 25 U.S.C. 5117.

Response: The Department respectfully disagrees. This final rule exempts from the Assessment and Review requirement ''Sections whose expiration pursuant to this section would violate any other Federal law.'' *See* Section [XX](g). In any event, the Department is not convinced the statutory provision cited by the commenter mandates the cited regulations. There is no obligation imposed on HHS in 25 U.S.C. 5117 to prescribe any particular regulations on Indian preference. Rather, section 5117 provides that ''any employee entitled to Indian preference who is within a retention category established under regulations prescribed under such subsection to provide due effect to military preference shall be entitled to be retained in preference to other employees not entitled to Indian preference who are within such retention category.'' Neither 25 U.S.C. 5117 nor 25 U.S.C. 5116 (which is referenced in 25 U.S.C. 5117) are cited as statutory authorities for the regulations cited by the commenter.

Comment: A few commenters stated that agencies (including HHS) have long ignored the retrospective review mandate of the RFA and have failed to perform such reviews. One reason for this, according to the commenters, is that the RFA does not create incentives for federal agencies to review their regulations. These commenters stated that this final rule would solve that problem by providing a clear incentive for agencies within HHS to review their regulations to prevent their automatic expiration. Commenters stated that without such a consequence, agencies will continue to fail to conduct retrospective reviews of their regulations.

Response: The Department cannot speak for other federal agencies and would not state that the Department has completely ignored retrospective review. But the Department would agree that it has not performed reviews as often as Congress intended. The Department agrees that this final rule will address this problem by providing an incentive to perform retrospective reviews.

Comment: A few commenters stated that the Department failed to analyze the potential costs of rescinding regulations, and only focuses on the costs of conducting voluntary Assessments and Reviews. A few commenters stated that HHS did not assess the potential forgone benefits of expired regulations.

Response: This is addressed in the regulatory impact analysis for this final rule.

[125] Presidential Memoranda on Government-to-Government Relations With Native American Tribal Governments, 85 FR 22951 (May 4, 1994), Presidential Memorandum, Government-to-Government Relationship with Tribal Governments, September 23, 2004, *https://www.govinfo.gov/content/pkg/WCPD-2004-09-27/pdf/WCPD-2004-09-27-Pg2106.pdf,* Presidential Memorandum on Tribal Consultation, 74 FR 57879 (Nov. 9, 2009).

[126] *ACS Demographic and Housing Estimates,* U.S. Census Bureau, *https://data.census.gov/cedsci/table?q=United%20States&g=0100000US&tid=ACSDP1Y2019.DP05&hidePreview=true.*

Comment: A few commenters stated that the Department should consider doing a regulatory impact analysis when reviewing rulemakings that predate the Regulatory Flexibility Act and have a significant economic impact upon a substantial number of small entities (''SEISNOSE''). These commenters also noted that conducting additional regulatory impact analyses would impose an additional cost to the Department, which it should account for if it chooses to do additional analysis on Pre-RFA rulemakings.

Response: As explained in the proposed rule, more resources will be required to review regulations that predate the RFA.[127] The regulatory impact analysis for this final rule accounts for the additional resources required to conduct Reviews of rule makings that predate the RFA. But the criteria listed in 5 U.S.C. 610 are the criteria that Congress directed the Department to use when reviewing regulations that predate the RFA. Therefore, for rule makings that predate the RFA and have a SEISNOSE, this final rule requires that the Review consider the factors listed in 5 U.S.C. 610, as well as whether the component Sections within those rulemakings comply with applicable law.

Comment: A few commenters asked for clarification on whether a regulation that is identified for amendment through the regulatory review process set forth in this final rule would be prioritized over new regulations the Department is promulgating.

Response: In the scenario described by commenters, the Department would aim to amend the referenced regulation and also promulgate new regulations that the Department believes should be promulgated. Experience shows the Department is able to amend existing regulations and promulgate new ones at the same time.

Comment: A few commenters asked if regulations that are sunset because they were not Assessed or Reviewed by the deadline would have to go through notice-and-comment rule making to be reissued if they were otherwise unchanged. These commenters also asked how these regulations would be prioritized by the Department.

Response: As explained throughout the proposed rule (and this final rule), the Department is committed to dedicating adequate resources to timely Assess and Review its regulations. If a regulation did automatically expire, though, the Department would be required to undertake notice-and-comment rule making to reissue the regulation, unless one of the exceptions to notice-and-comment rule making in 5 U.S.C. 553 applies.

Furthermore, allowing for automatic reissuance of an expired regulation threatens to undermine the efficacy of this final rule. If there were no costs or obstacles to simply resurrecting an expired regulation in its original, pre-expiration form, then there would be no compelling incentive to timely Assess and Review Department regulations.

It is impossible to say at this point how the Department might ''prioritize'' re-issuance of expired regulations, without knowing which regulation is at issue and what other competing priorities the Department might have at the time. That said, the Department anticipates it will prioritize re-issuance of expired regulations in line with the public need for such regulation, balancing the same considerations it always does in allocating its policy-making resources. As noted above, the risk that important, ''priority'' regulations—those that meaningfully impact regulated entities—will expire is mitigated by the fact that interested members of the public can alert the Department to a needed Assessment or Review. Commenters have also flagged regulations to review during the public comment process on this rule.

Comment: A few commenters stated that the Department should clarify how it will reconcile or update applicable guidance documents associated with rescinded regulations. If guidance documents remain in existence or are not updated to account for the regulatory changes resulting from the process established in this final rule, it could lead to confusion for regulated entities. A few commenters asked for clarification on whether the Department is considered to have Reviewed a regulation if the Department issues a guidance document on that particular regulation.

Response: The Department may not issue any guidance document that establishes a legal obligation that is not reflected in a duly enacted statute or in a regulation lawfully promulgated under a statute. The Department may not use any guidance document for purposes of requiring a person or entity outside the Department to take any action, or refrain from taking any action, beyond what is required by the terms of an applicable statute or regulation.[128] Therefore, any guidance document based on an expired regulation has no effect. If a guidance document addresses expired regulations as well as regulations still in effect, the Department would seek to expeditiously revise the guidance document.

The Department is not considered to have Reviewed a Section simply because the Department issues a guidance document concerning that particular Section. The Department is only considered to have Reviewed a Section if, with respect to the Section, the Department has followed the procedures specified in section [XX](f) of this final rule. The Department must publish the results of the Review, including the full underlying analyses and data used to support the results (subject to any applicable privilege, protections for confidential business information, or explicit legal prohibition on disclosure), in the **Federal Register**.

Comment: A few commenters asked how other enforcement agencies, such as the Office of the Inspector General or the Department of Justice, and federal healthcare program contractors, would be affected by the proposed rule. Commenters stated that a lack of coordination between agencies and other entities with equities in an expired regulation could lead to different and possibly contrary conclusions about how to proceed. These commenters also stated that this could lead to conflicting requirements, resulting in different rules in different jurisdictions. Commenters asked the Department to clarify how corporate compliance programs should advise their organizations if a regulation expires.

Response: This final rule applies to the HHS Office of Inspector General (OIG), which is a component of HHS, although certain regulations for which OIG has enforcement responsibility are exempt, such as 42 CFR 1001.952. For regulations that were issued in coordination with another Agency, that function in concert with another Agency's regulations, or that have a specific, direct impact on regulations issued by another Federal agency, the Department shall consult with that other Agency when undertaking the Assessment or Review, and consider the other Agency's views when considering the factors described in section [XX](d). In addition, when Assessing or Reviewing regulations that require review and approval by the Attorney General under Exec. Order No. 12250 of

[127] *See* 85 FR 70115 (''Of the 273 rulemakings subject to Reviews in the first two years, the Department estimates roughly 16%, or 44, of those rulemakings were promulgated prior to the requirement for prospective regulatory flexibility analyses. As described further below, those 44 Reviews will require more Department resources than the estimated 229 Reviews of rulemakings promulgated after the prospective analysis requirement went into effect'').

[128] Department of Health and Human Services Good Guidance Practices, 85 FR 78785 (Dec. 7, 2020).

Nov. 2, 1980, 45 FR 72995 (Nov. 4, 1980), the Department will consult with the Department of Justice (DOJ) and provide a draft of the findings to DOJ well in advance of the Assessment or Review deadline so DOJ can review and approve prior to the publication of the findings. If an HHS regulation is amended, rescinded, or expires, no other governmental body may take a different view of the regulation's legal effect.

Regarding how corporate compliance programs should advise their organizations if a regulation expires, an HHS regulation that expires no longer has legal effect and cannot be enforced by any governmental body against a regulated entity.

Comment: One commenter stated that HHS observes that the proposed rule's review requirements ''do not impose new burdens . . . if incomplete compliance [with the Regulatory Flexibility Act] is not accounted for in the regulatory baseline.'' [129] But HHS's entire rationale for the proposed pule, according to the commenter, is that incomplete compliance with existing review requirements is and will continue to be a problem under the regulatory baseline (*i.e.,* absent the proposed rule).

Response: HHS maintains that the proposed rule, as well as this final rule, does not impose new burdens if incomplete compliance with the RFA is not accounted for in the regulatory baseline. HHS recognizes that, after implementation of this final rule, the Department's Assessments and Reviews will likely result in an additional resource expenditure beyond what would occur absent promulgation of this final rule. This was analyzed in the Regulatory Impact Analysis of the proposed rule and in more detail (largely due to comments received) in the Regulatory Impact Analysis of this final rule. It is worth noting, though, that the burdens resulting from this final rule are burdens that Congress already intended for the Department to bear.

Comment: A few commenters stated that the Department does not cite any reason why a regulatory review should be triggered by the age of a regulation or why ten years should be the trigger. Some commenters stated that a regulatory review could also be based on the subject matter of the regulation, its economic impact, or the number of people it affects. Other commenters pointed out that the Department also could have used a different time period other than ten years to conduct its reviews. Commenters point to the Department's citation to a number of foreign and sub-national entities that mandate the reviews of regulations after five or seven years. These commenters stated that since there are other options for the frequency of regulatory review, the proposal to have such rules automatically expire after ten years is arbitrary and capricious.

Response: HHS respectfully disagrees. The proposed rule explained why the Department chose ten years:

> The Department proposes to perform the Assessment and (if required) the Review on each Regulation every ten years. Some states provide that, unless readopted or re-reviewed, their regulations expire in seven years,[130] while at least one state uses a ten-year time period.[131] The Department proposes to perform the Assessment and (if required) the Review every ten years, because ten years is the period listed in 5 U.S.C. 610. The Department has many Regulations, some of which are complex, so having to perform the Assessment and Review more than once every ten years could unduly burden the Department and increase the likelihood that a Regulation inadvertently expires because it is not Assessed or Reviewed.[132]

This rationale still holds. In this final rule, the Department decides to Review rules that have a SEISNOSE, because those are the rules that the RFA directed HHS to review.

Comment: A few commenters stated that the proposed rule interferes with the RFA's procedure for regulatory review. 5 U.S.C. 610–611. These commenters note that those sections require agencies to publish plans for regulatory review, provide a schedule for revision that varies by agency, give agency heads the right to delay review for one-year periods, up to a maximum of five years, identify multiple factors that must be considered in reviewing each rule, prescribe the terms of public notice via the **Federal Register**, and specify judicial appeal procedures and criteria, including standing rights and remedies. These commenters also stated that the Department's proposed rule would scrap that process and replace it with a default of across-the-board regulatory repeal in case of inaction, without recourse, using a completely different system of judicial review premised on the underlying APA, rather than the RFA. Commenters stated that this would be a usurpation of Congress's role, and would raise constitutional questions involving balance of power between the branches. According to commenters, the Department must address this issue or else promulgating this final rule would be arbitrary and capricious.

Response: HHS respectfully disagrees. This final rule is consistent with the RFA's requirement to publish a plan for periodic review—it *is* such a plan, and the RFA does not prohibit the Department from including expiration dates in its regulations. The Review process considers the five factors enumerated in the RFA. *See* 5 U.S.C. 610(b). This final rule requires publication in the **Federal Register** of the results of Assessments and Reviews under section [XX](f). This final rule does not supplant or purport to foreclose any available judicial review under 5 U.S.C. 611. And with respect to section 610 compliance, the RFA's judicial-review provisions expressly cross-reference the broader APA judicial-review provisions. *See* 5 U.S.C. 611(a)(1) (''For any rule subject to this chapter, a small entity that is adversely affected or aggrieved by final agency action is entitled to judicial review of agency compliance with the requirements of sections 601, 604, 605(b), 608(b), and 610 *in accordance with chapter 7.*'') (emphasis added). Because this rule is consistent with the RFA, it does not usurp Congress's role or raise constitutional separation-of-power concerns. To the contrary, it implements Congressional intent for periodic review of regulations. Section II.F of this final rule further addresses the commenters' concerns in discussing how the Department will operationalize this final rule.

Comment: Several commenters stated that the proposed rule violates the RFA's intent as expressed by Congress. In passing the RFA, Congress expressly made the following finding: ''the practice of treating all regulated businesses, organizations, and governmental jurisdictions as equivalent may lead to inefficient use of regulatory agency resources, enforcement problems and, in some cases, to actions inconsistent with the legislative intent of health, safety, environmental and economic welfare legislation.'' [133] These commenters stated that the proposed rule departs from the Congressional intent in passing the RFA because the proposed rule would subject every regulation to mandatory review as well as repeal by default. In this way, the proposed rule ''treats all regulated businesses, organizations, and governmental jurisdictions as equivalent'' by terminating all

[129] 85 FR 70112.

[130] *See, e.g.,* N.J. Admin. Code § 1:30–6.4 (2020) (regulations expire every seven years unless readopted, subject to certain exceptions); Ind. Code 4–22–2.5–2 (imposing seven-year expiration date on regulations unless readopted).

[131] N.C. Gen. Stat. 150B–21.3A.

[132] 85 FR at 70106.

[133] Public Law 96–354, 94 Stat. 1164, 1164 (1980) (as amended 1996).

regulations, without considering the unique set of stakeholders affected by each regulation.

Response: HHS respectfully disagrees with these comments because these commenters fundamentally misunderstand the operation of this final rule, as well as the Congressional finding they quote. This final rule does not repeal regulations by default. As explained in this final rule, the Department intends to timely complete the necessary Assessments and Reviews and has built in safeguards to mitigate the risk of inadvertent expiration. Under this final rule, the Department must Assess which of its rule makings have a significant economic impact upon a substantial number of small entities, and then perform the more robust Reviews on those rule makings. Therefore, the Department is paying special attention to those regulations which have a significant economic impact upon a substantial number of small entities. As explained in the proposed rule, the Department cannot know which regulations currently have a SEISNOSE without Assessing its regulations.[134] This process is consistent with the RFA, which instructs agencies to review ''the rules issued by the agency which have or will have a significant economic impact upon a substantial number of small entities.''

Reviews consider the five factors expressly included within the RFA, as well as an additional factor that is indisputably beneficial and appropriate: ''Whether the rulemaking complies with applicable law.'' *See* Section [XX](d). Subjecting regulations with a SEISNOSE to Review does *not* ''treat all regulated businesses, organizations, and governmental jurisdictions as equivalent'' because the findings of the Review will be tailored to the regulation.[135]

The commenters also quote the language from the Congressional findings and declaration of purpose out of context. Congress was clearly focused on agencies ignoring the distinction between ''large scale entities'' and small entities.[136] Given that this rule closely tracks the RFA's goal of minimizing undue burden on small entities, it aligns with the Congressional intent behind the RFA.

Comment: A commenter stated that automatic expiration of Department regulations could frustrate the RFA's purpose by inappropriately sunsetting rules that increase economic benefits for small entities. This commenter stated that the proposed rule does not sufficiently address this concern. This commenter also stated that the proposed rule undermines congressional intent because the proposed rule does not consider that the Department may be impeding its ability to conduct reviews under the RFA by instituting added procedural requirements and broadly applicable regulatory sunsets. This commenter further stated that expiration dates are particularly contrary to effectuating RFA compliance because the Department will need to prioritize assessing rules without any impact on small entities simply due to their imminent expiration, rather than using Department resources efficiently to focus on rules requiring the Department's review under the RFA.

Response: The Department respectfully disagrees. The RFA calls on the Department to periodically review regulations that have a significant economic impact upon a substantial number of small entities. This final rule intends to increase the number of such reviews that occur, and directs the Department to review using the criteria specified in 5 U.S.C. 610(b) (plus whether the rule making complies with applicable law). As for Assessing regulations not previously determined to have a SEISNOSE, implicit in 5 U.S.C. 610 is the requirement to determine which regulations have a SEISNOSE.[137] Without performing the Assessment, the Department may not know which regulations have or will have a significant economic impact upon a substantial number of small entities. Due to changed circumstances, a regulation that did not have such an impact at the time it was promulgated may now have such an impact.[138] The Department does not intend for any regulations to inadvertently sunset, and it is unlikely that any regulations with significant benefits would slip through the cracks. The regulatory impact analysis addresses this in more detail.

Comment: A few commenters stated that beyond simply cutting regulatory burdens, the scheduled regulatory review of existing HHS regulations will afford HHS the opportunity to keep regulations up to date with modern trends. These commenters noted that not only will this rule establish an opportunity for the Department to terminate obsolete regulations that are no longer fit for purpose or that are judged to be ineffective, but it will also give HHS and the public a reliable framework and a set of tools to continually keep regulations up to date with evolving circumstances.

Response: The Department agrees with these comments and emphasizes that the benefits of retrospective review—some of which are cited by these commenters—are substantial. As the proposed rule noted, Professor Cass Sunstein, who served as OIRA Administrator from 2009 to 2012, has observed that ''the requirement of retrospective analysis,'' if ''firmly institutionalized,'' ''would count as the most important structural change in regulatory policy since the original requirement of prospective analysis during the Reagan Administration.'' [139]

Comment: A few commenters stated that regulatory review does not create as much benefit to regulated entities as the proposed rule suggests, because many of the costs of regulatory compliance have already been factored into the cost of doing business, and are essentially evanescent over time.

Response: While some costs of regulatory compliance may have been factored into the cost of doing business, this comment overlooks many of the benefits of retrospective review. For example, economic, technological, or legal changes can make a regulation obsolete over time. Retrospective review is widely acknowledged to be beneficial by scholars across the ideological spectrum, many of whom are cited in the proposed and this final rule.

Comment: A commenter asked for greater detail on the Assessment and Review process, especially planning of what is to be included and excluded in the retrospective review process. The commenter also asked for greater explanation of how the Department will provide notification of what rules have been Assessed. The commenter also asked what would happen if a part of a rule was reviewed but not other parts of it.

---

[134] *See* 85 FR 70107.

[135] Under the commenters' argument, the fact that the RFA sets forth five factors to be considered (*see* 5 U.S.C. 610(b)) would also supposedly be inconsistent with Congressional intent.

[136] *See* Public Law 96–354, 94 Stat. 1164, 1164 (1980) (as amended 1996), Sec. 2(a)(2) (''laws and regulations designed for application to large scale entities have been applied uniformly to small businesses, small organizations, and small governmental jurisdictions even though the problems that gave rise to government action may not have been caused by those smaller entities''); Sec. 2(b) (''It is the purpose of this Act to establish as a principle of regulatory issuance that agencies shall endeavor, consistent with the objectives of the rule and of applicable statutes, to fit regulatory and informational requirements to the scale of the businesses, organizations, and governmental jurisdictions subject to regulation.'').

[137] 85 FR 70112.

[138] 85 FR 70107.

[139] Cass R. Sunstein, *The Regulatory Lookback,* 94 B.U. L. Rev. 579, 584 (2014).

Response: Section II.F of this final rule's preamble provides greater detail on the Assessment and Review process and the Department's planning for Assessments and Reviews. Examples of Section 610 reviews conducted by the EPA are instructive on how the Department anticipates the five factors set forth in 5 U.S.C. 610(b) will be analyzed.[140] The results of all Assessments and Reviews conducted in a calendar year will be published in a single document in the **Federal Register** during that calendar year. The Department also intends to place the results of an Assessment or Review in the docket for the rule on *Regulations.gov*. Lastly, this final rule defines ''Assess'' as a determination as to whether the ''Sections issued as part of the same rulemaking (and any amendments or additions that may have been added thereafter)'' currently have a significant economic impact upon a substantial number of small entities. This final rule defines ''Review'' as a process the purpose of which is to determine whether ''Sections that were issued as part of the same rulemaking (and any amendments or additions that may have been issued thereafter)'' should be continued without change, amended, or rescinded. Thus, while Sections are what expire if they are not timely Assessed or Reviewed, the Department should be Assessing or Reviewing all Sections that were part of the same rulemaking (and any amendments or additions that may have been issued thereafter), not just some of them.

Comment: One commenter stated that it previously advocated for the review and modernization of some of the Department's regulations covering Medicare health and safety standards. For example, according to the commenter, the Medicare Conditions of Participation regulations for psychiatric hospitals do not align their requirements with modern psychiatric care. However, the commenter stated that no substantive revisions to the provisions have occurred since the requirements for psychiatric hospitals were first implemented, meaning that a comprehensive review of these regulations has not occurred for at least 40 years, when psychiatric care was delivered much differently. This commenter stated that this is a clear example of why regular regulatory reviews are necessary.

Response: The Department thanks the commenter for identifying these regulations. The Department intends to timely Assess and (if necessary) Review these regulations. If the Assessments and Reviews suggest these regulations should be amended or rescinded, the Department will commence rulemaking to amend or rescind them.

Comment: A few commenters applauded the Department for continuing the bipartisan work on regulatory review to ensure federal agencies are continually held accountable to taxpayers and that regulations remain relevant and updated to innovation and changes in market conditions. The commenters also asked when the planning and drafting of the proposed rule began, any recent regulatory actions that would demonstrate the effects that regulatory reviews, suspensions, or updates can have on the health care industry, or the economy more broadly, and a list of Department regulations suspended during the pandemic.

Response: The Department thanks the commenters for the first part of this comment. Second, for a non-exhaustive list of 382 enforcement discretion announcements, waivers or changes to regulations, agency guidance materials, or compliance obligations made to respond to the COVID–19 pandemic and its impact on the healthcare industry, *see* Regulatory Relief to Support Economic Recovery; Request for Information (RFI), 85 FR 75720 (Nov. 25, 2020) at Attachment A. The planning and drafting of the proposed rule is subject to the deliberative process privilege, but evolved out of the 2019 regulatory streamlining analysis discussed in the proposed rule.

Technical Legal Comments

Comment: A large number of commenters stated that the proposed rule would violate the Administrative Procedure Act (APA), because it would allow the Department to revise or rescind thousands of regulations at one time instead of conducting notice and comment rulemaking on each existing individual rule it chooses to repeal. Some of these commenters also mentioned that the APA requires agencies to use substantially the same process to repeal a rule as they used to promulgate a rule, so a process that allows for automatic expiration of a rule would not meet this statutory requirement. A commenter stated that ''Revocation constitutes a reversal of the agency's former views as to the proper course'' and ''[w]hile the agency is entitled to change its view on [a matter], it is obligated to explain its reasons for doing so. . . . [A]n agency changing its course by rescinding a rule is obligated to supply a reasoned analysis for the change'' and ''[g]enerally, one aspect of that explanation would be a justification for rescinding the regulation . . .'' (quoting *Motor Vehicles Mfrs. Ass'n of U.S., Inc.* v. *State Farm Mut. Auto. Ins. Co.,* 463 U.S. 29, 41, 42, 52, 56 (1983)). Commenters stated that this rule would be arbitrary and capricious on these grounds. One commenter stated that if the Department does not perform an affirmative action to prevent expiration of a regulation, the Department would fail to articulate a satisfactory explanation for its expiration, making the agency action arbitrary and capricious.

Response: This final rule complies with the APA. The APA generally requires, with certain exceptions, notice and comment prior to finalizing a ''rule making,'' 5 U.S.C. 553, which is defined as ''formulating, amending, or repealing a rule.'' 551(5). *See Motor Vehicles Mfrs. Ass'n of U.S.* v. *State Farm Mut. Auto. Ins. Co.,* 463 U.S. 29, 41 (1983) (''We believe that the recession or modification of an [agency rule] is subject to the same test.''). The APA has already ''established the maximum procedural requirements which Congress was willing to have the courts impose upon agencies in conducting rulemaking procedures.'' *Vt. Yankee Nuclear Power Corp.* v. *Nat. Res. Def. Council, Inc.,* 435 U.S. 519, 524 (1978). Neither courts nor regulated entities may ''impose upon [an] agency its own notion of which procedures are 'best' or most likely to further some vague, undefined public good.'' *Id.* at 549.

The Department agrees with commenters who stated the APA generally requires agencies to use substantially the same process to amend or repeal a rule as they used to promulgate a rule. The Department is complying with this requirement. *See Clean Air Council* v. *Pruitt,* 862 F.3d 1, 9 (2017) (an agency can amend or revoke a legislative rule through notice-and-comment rulemaking). In this rule making, the Department has gone through notice-and-comment rule making to amend its regulations by establishing conditions under which the regulations will either be Assessed and/

[140] *See Results of EPA's Section 610 Review of the Final Rule for Control of Emissions of Air Pollution from Nonroad Diesel Engines and Fuel,* EPA Off. of Transp. & Quality (Sept. 2014), *https://www.regulations.gov/document?D=EPA-HQ-OAR-2013-0642-0003; Regulatory Flexibility Act Section 610 Review of the National Pollutant Discharge Elimination System (NPDES) Permit Regulation and Effluent Limitation Guidelines and Standards for Concentrated Animal Feeding Operations (CAFOs),* EPA Off. of Water (June 3, 2014), *https://www.regulations.gov/document?D=EPA-HQ-OW-2012-0813-0216; Results of EPA's Section 610 Review of the Final Rule for Lead; Renovation, Repair, and Painting Program,* EPA Off. of Pollution Prevention and Toxics (Apr. (April 2018), *https://www.regulations.gov/document?D=EPA-HQ-OPPT-2016-0126-0019.*

or Reviewed or expire. This is permissible. The Department is going through notice-and-comment rule making to amend its regulations to apply expiration dates unless certain conditions are satisfied. Agencies already promulgate regulations that expire upon the satisfaction of a future event or non-event.[141] Nothing in the APA forecloses agencies from including conditional expirations dates in regulations. It would call into question many rules—and be extremely disruptive—if courts held that conditional expiration dates violate the APA.

The Department also rejects the argument that it cannot revise many regulations in one rule making, but instead must conduct notice-and-comment rule making on each individual regulation it seeks to amend or rescind. The APA does not include such a requirement. When 5 U.S.C. 551(5) defines ''rule making'' as an ''agency process for formulating, amending, or repealing *a rule*'' (emphasis added), that includes formulating, amending, or repealing ''rules.'' *See* 1 U.S.C. 1 (''In determining the meaning of any Act of Congress, unless the context indicates otherwise—words importing the singular include and apply to several persons, parties, or things''). Agencies can—and often do—issue one rule that applies to many other agency rules, rather than amending or rescinding each affected regulation individually. To take one example, in 2008 the Department revised the definition of ''entity'' at 42 CFR 411.351. *See* 73 FR 48434, 48751 (Aug. 19, 2008). The revised definition had the effect of changing the meaning of ''entity'' each time it was used in 42 CFR part 411, subpart J. It would be burdensome to specify the meaning of ''entity'' each time it appears in subpart J, so the Department issued one definition that broadly applied to all sections of subpart J. There are many other examples where an Agency issues a regulation that applies to, amends, rescinds, or supersedes many other regulations.[142] This avoids an unnecessarily cumbersome process. A court ruling that Agencies must amend each individual regulation would call into question large numbers of Agency regulations and impose substantial burdens on agencies (and the Office of the Federal Register, which would be required to print the same text over and over) when promulgating future regulations. In addition, the Department will consider each individual regulation when conducting Assessments and (if needed) Reviews.

Moreover, in this rule making the Department considered each individual Department regulation, and, as discussed further, decided to exempt certain regulations from this final rule. The Department concluded that the benefits of retrospective review, and need to more strongly incentivize it, justified applying this final rule to the Department's remaining regulations. In this rule making, the Department is considering the important factors. It issues this final rule because, for the reasons described herein, the Department believes the benefits of retrospective review, and the need to strongly incentivize it, are so great that the risk of a regulation inadvertently expiring is justified by the benefit of institutionalizing retrospective review in this manner. Forty years of experience since the RFA's enactment; the decades since relevant Executive Orders were enacted; and other Federal government efforts to spur the Department to conduct more retrospective reviews indicate that, absent such a pushing mechanism, the Department will not conduct as many retrospective reviews as desired. Indeed, this final rule, rather than being a revocation of prior regulations, will enhance the fulfillment of the existing policies that led to the Department's regulations subject to this final rule.

Comment: Many commenters stated that the proposed rule could create legal uncertainty regarding the validity and enforceability of regulations that the Department, after conducting a Review, determines should be amended or rescinded. Commenters stated this could have negative effects on the HHS programs, the healthcare industry, and states which administer Medicaid and CHIP. Some of these commenters stated that HHS admits that enforcing a Regulation deemed to require amendment or rescission in some cases could raise concerns about whether such enforcement is arbitrary and capricious. Continuing to enforce the regulation (or portions thereof) could arguably run counter to the evidence before the agency. However, these commenters stated that, HHS provides no insight or explanation on how it would address this conundrum.

Response: The Department respectfully disagrees. The commenters' concerns only apply where the Department has announced, after Review, that a regulation should be amended or rescinded. Where that is the case, the announced results will suggest what portions of the regulation may need revision and the Department anticipates that commenters will generally be able to participate in subsequent rule making regarding amending or rescinding the regulation. The basis for amendment or rescission will suggest the extent to which continued enforcement in the interim is appropriate. That is why the proposed rule states the Department would exercise enforcement discretion ''on a case-by-case basis as appropriate.''[143] Consistent with Department practice, the Department would announce if it is exercising enforcement discretion to not enforce a regulation.

Comment: Several commenters stated that if Congress's intent was to effectuate results similar to those in the proposed rule, it could have included sunset provisions in its statutes. By not including sunsets in its statutes, Congress must not have perceived a need for Congressionally-directed

[141] *See, e.g.,* Control of Communicable Diseases; Foreign Quarantine 85 FR 7874, 7874 (Feb. 12, 2020) (providing that, unless extended, interim final rule ''will cease to be in effect on the earlier of (1) the date that is two incubation periods after the last known case of 2019–nCoV, or (2) when the Secretary determines there is no longer a need for this interim final rule''); Medicare and Medicaid Programs, Clinical Laboratory Improvement Amendments (CLIA), and Patient Protection and Affordable Care Act; Additional Policy and Regulatory Revisions in Response to the COVID–19 Public Health Emergency, 85 FR 54820, 54820 (Sept. 2, 2020) (providing that an interim final rule applies ''for the duration of the [public health emergency] for COVID–19''); U.S. Dep't of Transp., Final Regulatory Impact Analysis: Amendment to Federal Motor Vehicle Safety Standard 208 Passenger Car Front Seat Occupant Protection, at XII–35 (July 11, 1984), *http://www-nrd.nhtsa.dot.gov/Pubs/806572.pdf* (explaining that ''[i]f mandatory use laws are passed that will cover 67 percent of the population effective September 1, 1989, the rule will be rescinded'').

[142] *See, e.g.,* 21 CFR 1.1(b) (''the definitions and interpretations of terms contained in sections 201 and 900 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 321 and 387) shall be applicable also to such terms when used in regulations promulgated under that act''). [143] 85 FR 70108.

rulemaking to expire in the foreseeable future, or at least not automatically.

Response: HHS disagrees that Congress's choice to not include automatic sunset provisions in its statutes undercuts or forecloses the proposed rule. The RFA requires the Department to develop ''a plan for the periodic review of the rules issued by the agency which have or will have a'' SEISNOSE, but leaves the details of said plan to the Department. 5 U.S.C. 610(a). The RFA demonstrates Congress's intent that agencies conduct retrospective review, and the Department has determined, for the reasons explained in the proposed rule, that sunset provisions are a practical and effective way to ensure that Congressional intent is honored. The commenters' position suggests it is improper to take steps to effectuate Congressional intent if Congress itself has not expressly legislated such steps—but, of course, agencies frequently fill in the details of a statutory regime implemented by Congress.

Comment: One commenter stated that the proposed rule is misleading, which thwarts public comment and violates the APA. This commenter stated that it was misleading and irrational for HHS to suggest that it is hypothetical whether any regulation would sunset under the rule, because every regulation would sunset unless a timely Assessment or Review occurs. This commenter suggested that the rule's description is inadequate to meet the notice standard required by the APA. This commenter reasoned that the Department's explanation of the proposed rule and its reasoning did not provide the public with a meaningful opportunity to participate in rulemaking through the submission of comments, which violates the notice and comment requirement of the APA. 5 U.S.C. 553.

Response: HHS respectfully disagrees. ''The APA requires that the notice of proposed rulemaking contain 'reference to the legal authority under which the rule is proposed' and 'either the terms or substance of the proposed rule or a description of the subjects and issues involved.' '' *Little Sisters of the Poor Saints Peter and Paul Home* v. *Pa.,* 140 S. Ct. 2367, 2384 (2020) (quoting 5 U.S.C. 553(b)(2)–(3)). The notice of proposed rulemaking, which spanned 29 pages of the **Federal Register**, did just that. The adequacy of the notice is demonstrated by the fact that the agency received 532 comments—both critical and in support of the proposed rule—that raised general issues as well as commented on specific provisions of the proposed rule. The volume of comments also demonstrates that the public had ample, meaningful opportunity to participate in this rulemaking. There is nothing misleading in the Department's statement that it intends to timely Assess and (where required) Review its Sections. The proposed rule and this final rule adequately explain the basis for this final rule.

Comment: One commenter stated that the proposed rule is arbitrary and capricious because the stated rationale of incentivizing retrospective regulatory review is implausible. This commenter stated that it is wrong to think that the Department is incentivized to Assess or Review its regulations, because the Department may want its regulations to expire. The commenter said that the penalty for failure to review regulations actually falls on the regulated industry, not the Department. The commenter stated that HHS unlawfully ignored the predictable effects of the proposed rule on third parties.

Response: HHS respectfully disagrees. The proposed rule amply explained the benefits of retrospective review. It also explained why sunset deadlines were necessary to incentivize retrospective review (including, for example, the Department's experience with under-utilization of retrospective review). This rationale is not implausible because of the speculative possibility that the Department will intentionally forego Assessments and Reviews. If the Department wanted its regulations to expire, it would have conducted rulemakings to rescind its regulations. The proposed rule and this final rule demonstrate the Department's commitment to timely Assess and (where necessary) Review its regulations. For example, the proposed rule and final rule include (among other things) a clear-eyed analysis of the resources and staff time required to conduct Assessments and Reviews, and provide a mechanism for the public to request the Department to conduct Assessments and Reviews on certain regulations.

Comment: A few commenters stated that the proposed regulatory review process is arbitrary and capricious, because it elevates the need to undertake RFA reviews above any other purpose served by the Department's regulations, which commenters state is disproportionate to the problem at hand. These commenters state that since HHS estimates that only 11% of its regulations have a SEISNOSE and would be subject to the RFA, it is arbitrary and capricious to subject the other 89% of regulations to possible rescission.

Response: HHS respectfully disagrees. As explained in the proposed rule and this final rule's preamble, there is a need for widespread retrospective regulatory review. It is nearly impossible to see how a satisfyingly comprehensive review could occur without a sunset mechanism. The Department recognizes that in many cases the Department had strong reasons for issuing its regulations. Those regulations were motivated by important policy goals that the Department wishes to achieve. This final rule will further these goals. The literature and the Department's experience suggest that large numbers of regulations are having impacts that, over time, differ from what was estimated at the time the regulations were promulgated. Therefore, the Department needs to conduct periodic reviews of its regulations to determine whether the policy goals behind the regulations are in fact being effected (and if amending those regulations could more effectively further those goals). Therefore, this final rule is in fact an effort to enhance both (1) the fulfillment of the existing policies that led to the Department's regulations and (2) the Department's longstanding desire to comply with the RFA and periodically review its regulations.

As for conducting Assessments on many regulations, and not just Reviewing those regulations previously determined to have a SEISNOSE, the proposed rule explained that ''[w]ithout performing the Assessment, the Department may not know which regulations have or will have a significant economic impact upon a substantial number of small entities. Due to changed circumstances, a regulation that did not have such an impact at the time it was promulgated may now have such an impact.'' [144]

Comment: One commenter stated that the Department may not finalize the proposed rule without conducting a review under the National Environmental Policy Act (NEPA) or considering how the proposed rule is consistent with Executive Orders 13045 or 12898.

This commenter stated that HHS violated its obligations under NEPA because commenters believe the rule is a major federal action. According to the commenter, the proposed rule stated that it ''will not have a significant impact on the environment'' without providing additional explanation.[145] The commenter stated that the FDA's own NEPA regulations require it to conduct *at least* an environmental assessment before promulgating certain

[144] 85 FR 70107.

[145] 85 FR 70118.

regulations, and FDA cannot rescind those regulations without conducting NEPA review. *See* 21 CFR 25.20.

This commenter also stated that the proposed rule does not adequately consider Executive Orders 13045 or 12898. Executive Order 13045 imposes requirements on agencies to protect children from environmental health risks and safety risks.[146] The commenter stated that because the Department did not mention Executive Order 13045 in its proposed rule, it must have failed to consider it. Executive Order 12898 directs federal agencies to make environmental justice part of their mission, and to identify and address the disproportionate environmental and health effects of their activities.[147] This commenter expressed that HHS did not consider whether the proposed sunset rule will cause ''disproportionately high and adverse human health or environmental effects . . . on minority populations and low-income populations'' [148] even though the commenter believes there is every reason to think that the sunset rule will cause such adverse effects.

Response: HHS respectfully disagrees that further analysis under NEPA, E.O. 12898 (''Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations''), and/or E.O. 13045 (''Protection of Children From Environmental Health Risks and Safety Risks''), is required. The commenter's position is based on a fundamental misunderstanding of how the final rule functions. As explained in the notice of proposed rulemaking, this rule does not in and of itself rescind any regulations; it provides that certain regulations will expire if not Assessed and (if required) Reviewed by certain dates.

Thus, there is no basis to say that this final rule itself ''significantly affect[s] the quality of the human environment,'' 42 U.S.C. 4332(C); may cause ''disproportionately high and adverse human health or environmental effects . . . on minority populations and low-income populations,'' E.O. 12898, Sec. 1–101; or ''concern[s] an environmental health risk or safety risk that an agency has reason to believe may disproportionately affect children,'' E.O. 13045 Sec. 2–202(b).[149]

The commenter says an environmental assessment may be necessary, including consideration of alternatives as required by section 102(2)(E) of NEPA, 40 CFR 1501.5(c)(2), if it is unclear whether the rule will significantly affect the environment. But it is clear that this rule alone does not have a significant environmental impact. Any rescissions or amendments pursuant to Assessments and Reviews will be effected through notice-and-comment rulemaking independent of this rule and include any required environmental (and other) analyses. In any event, the Department adequately explained the alternatives it considered in its proposed rule,[150] as well as in the regulatory impact analysis for this final rule.

Comment: A few commenters stated that HHS mistakenly exempts the proposed rule from the regulatory review process it creates. The proposed rule states that it ''cannot, absent other actions, directly impose on the public costs that exceed benefits . . . [o]nly the failure to perform an Assessment or Review in the future could theoretically impose on the public costs that exceed benefits.'' [151] These commenters stated that it was a mistake for HHS to assume that the proposed rule will not ''directly impose on the public costs that exceed benefits'' because costs would be imposed on the public unless Assessment or Review of Regulations take place. These commenters took the position that the Department's regulations would expire by default, and that expiration would impose a cost that would exceed benefits.

Response: HHS respectfully disagrees. This final rule would not become obsolete due to economic, technological, or legal changes the way that many other rules can. For the reasons discussed herein, the Department believes the process set forth in this final rule will enable the Department to Assess and (where required) Review its regulations. It is a mistake, and bereft of evidence, to assume that the Department's regulations would expire by default.

Comment: Several commenters stated that the Department did not adequately explain its reasoning for the proposed rule. Some of these commenters stated that HHS did not acknowledge the facts and circumstances that motivated the initial promulgation of its regulations, nor did HHS discuss in the proposed rule the serious reliance interests that have been created by some of these regulations. Commenters asserted that the Department claims that it ''is considering the important factors''—without articulating what those factors are—and asserts that it ''believes the benefits of retrospective review, and the need to strongly incentivize it, are so great that the risk of a Regulation inadvertently expiring is outweighed by the benefit of institutionalizing retrospective review in this manner.'' [152] A few commenters asked HHS to identify the regulations that are vulnerable to rescission under the rule, and to describe the nature and magnitude of the harm that might result from their expiration.

Response: The Department believes the proposed rule adequately explained the facts and circumstances that motivated issuing the proposed rule, and adequately showed that the Department considered the relevant factors. The same is true for the preamble to this final rule, which provides additional explanation for why the Department is issuing this final rule and the factors it considered. The Department recognizes that in many cases the Department had strong reasons for issuing its regulations. Examples of such motivations might include enhancing food safety,[153] increasing access to health insurance,[154] or increasing the incentive for Temporary Assistance for Needy Families recipients to work.[155] These are all important policy goals that the Department wishes to achieve. This final rule is intended to further these goals, as well as the other goals motivating the Department's regulations. The literature and the Department's experience suggest that large numbers of regulations are having impacts that, over time, differ from what was estimated at the time the regulations were promulgated. Therefore, the Department needs to conduct periodic reviews of its regulations to determine whether the policy goals behind the regulations are in fact being effected (and if amending those regulations could more effectively further those goals). Outside of the exempted regulations, no particular regulations are more ''vulnerable to rescission'' than others under this final rule. This final rule is agnostic as to all Department regulations. They must all be Assessed and, if they have a SEISNOSE, Reviewed using the criteria specified in section [XX](d).

Comments on the Statutory Authority for This Final Rule

Comment: Several commenters stated that the Department does not have the authority to propose automatic expiration of its regulations. Some commenters stated that HHS fails to explain how Congress's grants of authority to the Department to ''promulgate,'' 21 U.S.C. 371(a), to ''make and publish,'' 42 U.S.C. 1302(a), or to ''prescribe,'' 42 U.S.C. 1395hh(a), regulations also give it the authority to rescind those regulations, with that rescission subject to future reversal at the Department's discretion. Other commenters stated that the proposed rule not only falls outside these grants of rulemaking authority, but squarely contradicts Congress's instructions that HHS ''shall'' promulgate certain regulations. *E.g.,* 21 U.S.C. 371, 42 U.S.C. 1395hh(a). Some commenters cited to section 1102 of the Social Security Act, which directs the Secretary of HHS to issue regulations ''not inconsistent with this Act'' to implement the Medicaid and CHIP programs but does not provide specific statutory authority for the Secretary to write automatic expiration dates into regulations.

Response: The Department respectfully disagrees. As explained in the proposed rule, the statutory authorities supporting this rule making are the statutory authorities for the Department's existing regulations.[156] Moreover, the Department believes that the relevant portions of the proposed rule, as finalized herein, are fully consistent with 42 U.S.C. 1302(a). Indeed, it specifically cited this provision as one source of statutory authority for promulgating the proposed rule (85 FR at 70103), and does so in this final rule. The commenters' position is incorrect for multiple reasons. First, the commenters' assertion seems to suggest that *any* action by the Department to repeal or amend Medicaid or CHIP regulations, by the mere act of amendment or rescission, is ''inconsistent'' with those programs. That position is untenable.[157] In fact, this final rule is the promulgation of a regulation that will contribute to ''the efficient administration of'' the Department's functions under the Social Security Act, because the Reviews called for by this final rule will take into account both the continued need for particular regulations, as well as whether the burden of those regulations on small entities can be minimized (among several other factors that will enhance efficiency, such as the complexity of the Regulation or whether it is duplicative). For the same reasons, this final rule is the promulgation of a regulation for ''the efficient enforcement'' of the Federal Food Drug, and Cosmetic Act and necessary to carry out the administration of the Medicare program. *See* 21 U.S.C. 371(a); 42 U.S.C. 1395hh(a)(1). This final rule will enhance the fulfillment of the policies that motivated the regulations issued pursuant to 42 U.S.C. 1302, 42 U.S.C. 1395hh, and 21 U.S.C. 371.

Comment: Several commenters stated that the proposed rule exceeds the statutory authority of the RFA, because the RFA only affects regulations that ''have a significant economic impact upon a substantial number of small entities.'' 5 U.S.C. 602, 604, 605. However, according to the commenters, the proposed rule does not limit its reach to those regulations covered by the RFA because it adds expiration dates to *all* HHS regulations, not just those that ''have a significant economic impact upon a substantial number of small entities.'' [158] These commenters added that the RFA also does not mandate the automatic expiration of regulations that have not undergone agency review.

Response: The primary statutory authorities for this final rule are the statutory authorities for the Department's existing regulations. The Department also notes, though, that the text of 5 U.S.C. 610 indicates Congress believed agencies have the authority to periodically review at least those regulations that have a significant economic impact upon a substantial number of small entities (and that agencies have the authority to assess which of their regulations have such an impact). *See* 5 U.S.C. 610(a)–(b). The commenters are correct that the RFA does not mandate the automatic expiration of rules; however, the RFA also does not foreclose this final rule's approach. As explained throughout the proposed rule and in this final rule, decades of experience, empirical evidence, and scholarly commentary all support the Department's view that this final rule will enhance compliance with the RFA's directive to periodically review regulations with a SEISNOSE.

Comment: A few commenters stated that the proposed rule does not cite the RFA (5 U.S.C. 610) as a source of its statutory authority. These commenters stated that they believe the Department omitted the RFA it its list of statutory authority because the rule is contrary to the statute.

Response: The proposed rule cited 5 U.S.C. 610 as one of the statutory bases for the proposed rule.[159] The statutory bases for this rulemaking also include the existing statutory authorities for the Department's regulations. This final rule is consistent with the RFA, because it sets forth a plan for the periodic review of the regulations issued by the Department which have or will have a significant economic impact upon a substantial number of small entities. *See* 5 U.S.C. 610(a). Moreover, this final rule requires such review to consider the factors set forth in 5 U.S.C. 610(b). The text of 5 U.S.C. 610 indicates Congress believed agencies have the authority to periodically review at least those regulations that have a significant economic impact upon a substantial number of small entities (and that agencies have the authority to assess which of their regulations have such an impact). *See* 5 U.S.C. 610(a)–(b).

Specific Provisions of the Proposed Rule and Final Rule

Section [XX](a)

In the proposed rule, HHS proposed to add Section [XX](a), which provided that the proposed rule would apply to and amend all Regulations issued by the Secretary or his delegates or sub-delegates in this title. HHS received no comments specific to Section [XX](a). However, in this final rule HHS replaces ''this title'' with ''this chapter,'' and amends the relevant chapters of Titles 21, 42, and 45, rather than amending all regulations that were issued by the Secretary (or his delegates or sub-delegates) in the titles. HHS makes this change to increase clarity and precision. For example, certain chapters in Title 21 contain Drug Enforcement Administration, not HHS or FDA regulations. Although the proposed rule's use of the language ''Regulations issued by the Secretary or his delegates or sub-delegates in this title'' addressed this by limiting the scope of the

[156] 85 FR 70103.

[157] *See, e.g.,* Medicare and Medicaid Programs; Regulatory Provisions To Promote Program Efficiency, Transparency, and Burden Reduction; Part II, 79 FR 27106, 27153 (May 12, 2014) (citing 42 U.S.C. 1302 as statutory authority for the removal of certain regulatory text); Medicare Program; Amendment to Payment Policies Under the Physician Fee Schedule and Other Revisions to Part B for CY 2011 76 FR 1366, 1367 (Jan. 10, 2011) (relying on 42 U.S.C. 1302 and 42 U.S.C. 1395hh, among other statutory provisions, to amend or remove regulatory text); Color Additives; D&C Green No. 6; Uniform Specifications, 51 FR 37908, 37909 (Oct. 27, 1986) (citing 21 U.S.C. 371 as statutory authority for amending and removing regulatory text).

[158] *See* 85 FR 70123; *id.* at 70104–05 (defining ''Regulations'' as ''a section of the Code of Federal Regulations'').

[159] *See* 85 FR 70119, 70120, 70121, 70123.

proposed rule to regulations issued by the *HHS* Secretary or his delegates or sub-delegates, HHS in this final rule amends the chapters belonging to HHS, rather than the entirety of the titles. This is not a substantive change and does not cause the application of the final rule or the rights and obligations it creates to differ from the proposed rule.[160]

Similarly, HHS clarifies that it is amending its other regulations through the provisions in this final rule by generally applying an expiration date to those regulations, if certain conditions are not met, rather than asking the Office of the Federal Register to literally amend each other regulation, which would be unnecessarily burdensome and resource intensive. Accordingly, this final rule states that it applies to and ''shall be deemed to amend'' all regulations issued by the Secretary or his delegates or sub-delegates in the applicable chapters. This is not a substantive change and does not affect the application of the final rule or the rights and obligations it creates.

HHS received no comments specific to section [XX](a) of the proposed rule.

Accordingly, HHS finalizes section [XX](a) to read, ''[t]his section applies to and shall be deemed to amend all regulations issued by the Secretary or his delegates or sub-delegates in this chapter.''

Section [XX](b)

HHS proposed to add section [XX](b), which defined several terms used in the proposed rule.

i. Section [XX](b)(1)

HHS proposed to define ''Assess'' as ''a determination by the Department, in consultation with other Federal agencies as appropriate, as to whether the Regulations issued as part of the same rulemaking (and any amendments or additions that may have been added thereafter) currently have a significant economic impact upon a substantial number of small entities.''

5 U.S.C. 610 directs agencies to have plans to periodically review those regulations that have or will have a significant economic impact upon a substantial number of small entities. Accordingly, in order to determine which regulations to periodically review using 5 U.S.C. 610's criteria, the Department must first determine which rules have a significant economic impact upon a substantial number of small entities. When promulgating regulations, the Department is required to determine whether a rule will have a significant economic impact on a substantial number of small entities. *See* 5 U.S.C. 605(b).[161] The Assessment refers to an essentially identical determination. In making the Assessment, the Department can look to the determination of the regulation's impact on small entities made at the time of promulgation, as well as experience since promulgation.

Comments on Section [XX](b)(1)

HHS received the following comment on the proposed definition of ''Assess.''

Comment: A few commenters stated that HHS should clarify that periodic Assessments *must* look to the determination of the regulation's impact on small entities made at the time of promulgations, *as well as* experience since promulgation.[162] These commenters stated that HHS should clarify that any Assessment that only contemplates the former and ignores the latter will be deficient.

Response: Assessments must analyze the regulation's impact on small entities at the time the regulation is being Assessed. The Department believes this is clear from the text of the proposed rule, which defined ''Assess'' as ''a determination by the Department, in consultation with other Federal agencies as appropriate, as to whether the Regulations issued as part of the same rulemaking (and any amendments or additions that may have been added thereafter) *currently* have a significant economic impact upon a substantial number of small entities'' (emphasis added). Accordingly, the Department adopts in this final rule the definition of ''Assess'' from the proposed rule, except that the term ''Regulations'' in the proposed rule is changed to ''Sections'' in this final rule. The determination made at the time of promulgation about whether a rulemaking had a SEISNOSE may be a useful data point in assessing the regulation's current impact on small entities.

Accordingly, HHS is finalizing the definition of ''Assess'' as proposed, with the technical amendment just mentioned.

ii. Section [XX](b)(2)

HHS proposed to define ''Review'' as a process conducted by the Department, in consultation with other Federal agencies as appropriate, the purpose of which shall be to determine whether the Regulations that were issued as part of the same rulemaking (and any amendments or additions that may have been issued thereafter) should be continued without change, or should be amended or rescinded, consistent with the stated objectives of applicable statutes, to minimize any significant economic impact of the Regulations upon a substantial number of small entities.

HHS received no comments specific to the proposed definition of ''Review.''

Accordingly, HHS is finalizing the definition of ''Review'' as proposed, except that it replaces the term ''Regulations'' with ''Sections,'' to conform this provision to the rest of this final rule.

iii. Section [XX](b)(3)

HHS proposed to define ''Regulation'' as ''a section of the Code of Federal Regulations. For example, 42 CFR 2.13 is a Regulation, and 42 CFR 2.14 is another Regulation.'' This definition was proposed to make clear that a section of the CFR, as opposed to a part, subpart, or paragraph within a section, is the unit that must be Assessed and (if required) Reviewed, or will otherwise expire. Defining ''Regulation'' in this objective way makes it easier for the Department and the public to know what exactly has to be Assessed or Reviewed by the dates listed in the proposed rule. Had the Department used the Administrative Procedure Act's (APA's) definition of ''rule,'' [163] it could be unclear in certain circumstances what precisely needed to be reviewed.

In the final rule, HHS changes the term ''Regulation'' to ''Section'' for the reasons previously discussed.

[160] In addition, whereas the proposed rule added certain regulatory text to Title 45, Part 6, this final rule adds the text to Title 45, Part 8. This is not a substantive change. Since the Department anticipates that, for good governance and streamlining reasons, Part 6 soon may soon be subsumed into Part 5, the Department in this final rule adds the relevant text to Part 8.

[161] 5 U.S.C. 605(b) refers to rules that have a ''significant economic impact *on* a substantial number of small entities,'' whereas 5 U.S.C. 610 refers to rules that have ''significant economic impact *upon* a substantial number of small entities.'' This does not appear to be a material difference.

[162] *See A Guide for Government Agencies: How To Comply With The Regulatory Flexibility Act,* U.S. SBA Off. of Advoc., at 80–81 (2017), *https://cdn.advocacy.sba.gov/wp-content/uploads/2019/06/21110349/How-to-Comply-with-the-RFA.pdf,* (''If Congress meant to limit periodic reviews, it would have simply required agencies to review rules that originally had a significant impact, rather than rules that now have a significant impact.'').

[163] 5 U.S.C. 551(4) (providing that '' 'rule' means the whole or a part of an agency statement of general or particular applicability and future effect designed to implement, interpret, or prescribe law or policy or describing the organization, procedure, or practice requirements of an agency and includes the approval or prescription for the future of rates, wages, corporate or financial structures or reorganizations thereof, prices, facilities, appliances, services or allowances therefor or of valuations, costs, or accounting, or practices bearing on any of the foregoing'').

Comments on Section [XX](b)(3)

HHS received the following comments on the proposed definition of ''Regulation.''

Comment: A few commenters stated that HHS arbitrarily chose to reject the APA's definition of ''Regulation'' and adopted its own definition of ''Regulation'' for the purposes of this rule, defining regulation as ''a section of the Code of Federal Regulations.'' Some commenters stated that using a different definition in this rule from the definition in the APA (and incorporated in Executive Order 12866 and Executive Order 13771) is confusing. Commenters stated that the Department's explanation that it used a special definition of ''Regulation'' to avoid confusion that could be created by using the APA's definition was insufficient and lacked statutory basis.

Response: To avoid any confusion, HHS uses ''Section,'' rather than ''Regulation,'' in this final rule to refer to a section of the Code of Federal Regulations. It is crucial to the proper function of this final rule that the Department and public clearly understand the scope and timing of the Assessment and Review process. Such understanding is made easier with a bright-line definition of the agency issuances that are subject to Assessment and Review. The Department's use of ''Section'' endeavors to provide such clarity by using a readily available and well-established system of organization, the Code of Federal Regulations. It is clear when a section of the Code of Federal Regulations was first promulgated.

The use of ''Section,'' rather than ''Regulation,'' in this final rule is not a substantive change from the proposed rule. Rather, it is an attempt to bring additional clarity by using ''Section'' to refer to a section of the Code of Federal Regulations, rather than using the term ''Regulation.''

Comment: One commenter expressed concern over the proposed rule's definition of ''Regulation,'' stating that the definition is too narrow. This commenter stated that under the proposed rule, each Regulation would be Assessed or Reviewed without the context of the preamble language that was included in the rulemaking.

Response: HHS respectfully disagrees. ''Assessment'' and ''Review'' are defined in this final rule as determinations with respect to ''Sections that were issued as part of the same rulemaking (and any amendments or additions that may have been issued thereafter).'' In the proposed rule, ''Regulation'' was defined as a section of the Code of Federal Regulations so the Department and public can know what units would expire absent Assessment or (if needed) Review. But the text of the final rule makes clear that a single Assessment or Review should be performed on all Sections that were issued as part of the same rulemaking (and any amendments or additions that may have been issued thereafter). The Department disagrees with the commenters who stated that, under the proposed rule, each Regulation would be Assessed or Reviewed without the context of the preamble language that was included in the rulemaking. Under this final rule, the Department may consider this information when conducting Assessments and Reviews.

Accordingly, HHS is finalizing the definition proposed, except that it defines the term ''Section'' rather than ''Regulation.''

iv. Section [XX](b)(4)

HHS proposed to define ''Year of the Regulation's Promulgation'' to mean the calendar year the Regulation first became effective, irrespective of whether it was subsequently amended. The purpose of this proposed definition was to provide clarity to the Department and the public. If a regulation were amended, questions could arise whether the clock for re-reviewing the rule making in which the regulation was first promulgated begins on the date the rule making was first promulgated; the date it was last amended; or whether the clock for reviewing the amended portion begins on a different date than the portion that was initially enacted. The proposed definition is more clear for the Department and the public, because this definition, in conjunction with section [XX](c) of the proposed rule, makes clear that the clock starts for the retrospective review of a regulation on the date that the rule making from which the regulation originates was first promulgated, even if it is subsequently amended.

If, for example, the Department issues a regulation as a part of a rule making and amends it nine years later, the Department may wish to conduct the regulatory review of the entire rule making at the time of amendment of a specific regulation initially promulgated in that rule making, particularly since the Department is presumably already performing a regulatory impact analysis with regard to the amendment. Since the Department is already conducting a regulatory impact analysis, performing the regulatory review at that time may save Department resources and spare the Department from having to perform the Review on the regulation the next year. In fact, any time the Department amends a regulation, it could perform the regulatory review at that time, thereby conserving Department resources.

HHS received no comments specific to the proposed definition of ''Year of the Regulation's Promulgation.''

Accordingly, HHS is finalizing the definition of ''Year of the Regulation's Promulgation'' as proposed, except that it changes the term ''Regulation'' to ''Section.''

v. Section [XX](b)(5)

HHS proposed to define ''[s]ignificant economic impact upon a substantial number of small entities'' as having the meaning ascribed to that term in the Regulatory Flexibility Act, Public Law 96–354, 94 Stat. 1164 (Sept. 19, 1980) (as amended 1996).

HHS received the following comments on the proposed definition of ''Significant economic impact upon a substantial number of small entities.''

Comment: A few commenters stated that neither the proposed rule, nor the RFA gives a clear definition of ''significant impact'' or of ''small entity,'' and asked that HHS clarify the definition of these terms in the final rule.

Response: HHS declines to add definitions of these terms within this final rule. ''Significant economic impact'' and ''small entity'' are terms within the RFA, which has been in existence for over forty years. These terms have been applied by the Department and other agencies since the RFA's enactment. Definitions pertinent to ''small entity'' appear at 5 U.S.C. 601. As explained in the proposed rule, the Department has considered a rule to have a significant impact on a substantial number of small entities if it has at least a three percent impact on revenue on at least five percent of small entities.[164]

Comment: One commenter stated that the citation in the definition of ''Significant economic impact upon a substantial number of small entities'' found at 21 CFR 6.1(b)(5), 42 CFR 1.1(b)(5), 42 CFR 404.1(b)(5), and 45 CFR 6.1(b)(5) was incorrect. The proposed rule cited the Regulatory Flexibility Act, Public Law 96–354, 94 Stat. 1164 (Sept. 19, 1980) (as amended 1996). This commenter stated that because the definition in the RFA appears in section 610 of title 5 of the U.S. Code, the correct citation is to the code. This commenter also stated that the definition of ''Significant economic impact upon a substantial number of

[164] *See* 85 FR at 70117.

small entities'' shall be defined to have the meaning ''of'' that term in 5 U.S.C. 610, rather than the meaning ''ascribed to'' that term in 5 U.S.C. 610.

Response: HHS appreciates the comments and agrees that citation to the Code is proper. This final rule incorporates this suggestion, and replaces the citation in the proposed rule with ''5 U.S.C. 610.'' It also incorporates the comment to use ''of'' instead of ''ascribed to.'' This revised definition may provide increased clarity.

Accordingly, in this final rule HHS is finalizing the definition of ''[s]ignificant economic impact upon a substantial number of small entities'' to provide that this term shall have the meaning of that term in section 610 of title 5 of the United States Code.

Section [XX](c)

i. Section [XX](c)(1)–(2)

In the proposed rule, HHS proposed that unless a Regulation contains an earlier expiration date or is rescinded earlier, all Regulations issued by the Secretary or his delegates or sub-delegates in this title shall expire at the end of either (1) two calendar years after the year that this rule first becomes effective, (2) ten calendar years after the Year of the Regulation's Promulgation, or (3) ten calendar years after the last year in which the Department Assessed and (if Review of the Regulation is required pursuant to paragraph (d)) Reviewed the Regulation, whichever is latest. The last year in which the Department Assessed and (if Review of the Regulation is required) Reviewed the Regulation shall be the year during which the findings of the Assessment and, if required, the Review of the Regulation are published in the **Federal Register** pursuant to paragraph (f) of this section.

In other words, under the proposed rule the Department must Review all its regulations (subject to the exceptions listed below) that have a significant economic impact upon a substantial number of small entities every ten years, or such regulations shall expire. To determine which regulations have a significant economic impact upon a substantial number of small entities, the proposed rule stated that the Department must Assess all its regulations (subject to the exceptions listed below) every ten years, or such regulations shall expire if not Assessed. The Department believes all of its regulations (subject to the exceptions) should be Assessed and, if they have a significant economic impact upon a substantial number of small entities, Reviewed. The proposed rule stated that Assessments and Reviews should not be performed only on those regulations issued after the proposed rule goes into effect. After all, it is likely that some regulations promulgated decades ago may have become outdated.[165]

Section [XX](c) of the proposed rule made clear that Department regulations (subject to the exceptions listed below) shall expire if their Assessment and (if required) Review are not timely performed. Both 5 U.S.C. 610 and executive orders by multiple presidents over several decades direct the Department to devise plans to periodically review many of its regulations.[166] Although the Department retrospectively reviewed a very limited number of its regulations, observers have over the decades noted that the Department has not always performed retrospective review to a satisfactory extent, and many of its regulations have not been reviewed. Therefore, the Department concluded in the proposed rule that it was appropriate to impose on itself a stronger incentive to ensure it complies with the purposes animating the RFA and the executive orders, as well as to ensure its regulations are not unduly burdening the public. As a CRS report put it, ''[w]ithout some type of enforcement of the review requirement, agencies are unlikely to conduct many more reviews than have occurred pursuant to Section 610.'' [167] This is one reason why analyses have found that sunset provisions are an effective way to improve governance and reduce undue regulatory burdens.[168] States have imposed similar expiration dates for many of their regulations unless they are reviewed or readopted.

It complies with the APA to amend regulations to specify dates by which regulations expire unless the Assessment and/or Review is timely performed. An agency can, through notice-and-comment rulemaking, amend its regulations to provide that they expire at a future date.[169] An agency can also provide that its regulations expire upon the occurrence of a condition.[170] That is what the Department proposed

[166] The RFA and the Executive Orders direct agencies to review overlapping, but not identical, sets of regulations. The RFA directs agencies to have plans to review regulations that have a ''significant economic impact upon a substantial number of small entities.'' 5 U.S.C. 610. By contrast, Executive Order 12866 directed agencies to submit to OIRA programs to periodically review ''significant regulations.'' Exec. Order 12866, Sec. 5(a). ''Significant regulations'' are not necessarily those that have a ''significant economic impact upon a substantial number of small entities.'' *Id.* at Sec. 3(f) (defining ''significant regulatory action'' as any regulatory action that is likely to result in a rule that may: (1) Have an annual effect on the economy of $100 million or more or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or tribal governments or communities; (2) Create a serious inconsistency or otherwise interfere with an action taken or planned by another agency; (3) Materially alter the budgetary impact of entitlements, grants, user fees, or loan programs or the rights and obligations of recipients thereof; or (4) Raise novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in this Executive order.''). Executive Order 13563 also directed agencies to review ''significant regulations.'' Exec. Order 13563, Sec. 6. The Department has proposed to Review those regulations that satisfy the RFA criteria, since those are the regulations that Congress directed agencies to have plans to review. The Department requested comment on whether additional regulations, such as significant regulations, should also be Reviewed.

in the proposed rule. To be sure, an agency generally must ''articulate a satisfactory explanation'' for its action, ''including a rational connection between the facts found and the choice made,'' and cannot ''entirely fail[] to consider an important aspect of the problem.'' [171] The Department anticipates that if a regulation expires because the Department does not timely complete its regulatory review, a litigant might object to the expiration on the grounds that the Department by definition did not ''articulate a satisfactory explanation'' or ''failed to consider an important factor,'' because in not performing an Assessment or Review, the Department failed to consider any factors. The Department rejects such arguments. In this rulemaking, the Department is considering the important factors. For the reasons described in the proposed rule and in this final rule, the Department believes the benefits of retrospective review, and the need to strongly incentivize it, are so great that the risk of a regulation inadvertently expiring is justified by the benefit of institutionalizing retrospective review in this manner. Forty years of experience since the RFA's enactment; the decades since relevant Executive Orders were enacted; and other Federal government efforts to spur the Department to conduct more retrospective reviews indicate that, absent such a forcing mechanism, the Department will not conduct as many retrospective reviews as desired.

The Department will mitigate this risk by setting up two web pages on the Department's website by the date this final rule is published; one that lists the dates of promulgation of all of its rulemakings, and a second that lists the rulemakings that contain regulations (called ''Sections'' in this final rule) that the Department has decided to Assess or Review. The Department will regularly update the web page listing the rulemakings containing Sections that it has decided to Assess or Review with all additional rulemakings containing Sections that it begins to Assess or Review. The Department will also create a docket on *Regulations.gov*, to which the public may direct any comments requesting that the Department begin the Assessment or Review of regulations. This requirement is described in more detail in the discussion of section [XX](h).

Therefore, in this rulemaking process, which amends Department regulations through the notice-and-comment process, the Department is considering the important factors. In addition, the Department intends to create on its website a dashboard that shows its progress on its Assessments and Reviews, including when it commenced those Assessments and Reviews, its progress, and when it expects them to be completed. The Department also intends to create a dashboard showing its progress on conducting Assessments and Reviews. *See* Section II.F. for more detail on the dashboard.

The Department proposed to perform the Assessment and (if required) the Review on each regulation every ten years. Some states provide that, unless readopted or re-reviewed, their regulations expire in seven years,[172] while at least one state uses a ten-year time period.[173] The Department proposed to perform the Assessment and (if required) the Review every ten years, because ten years is the period listed in 5 U.S.C. 610.

The proposed rule provided that regulations promulgated more than ten years ago will expire at the end of two calendar years from the date the proposed rule, if finalized, became effective, unless an Assessment and (if required) the Review is performed on them. In the proposed rule, the Department requested public comment on whether two years is an appropriate time period to Assess and (if required) Review Regulations promulgated more than ten years ago.

The Department has decided that all of its regulations (subject to the exceptions listed below) should be periodically Assessed to determine whether they have a significant economic impact upon a substantial number of small entities. Without performing the Assessment, the Department may not know which regulations have or will have a significant economic impact upon a substantial number of small entities. Due to changed circumstances, a regulation that did not have such an impact at the time it was promulgated may now have such an impact. The Department is also aware of literature suggesting that agencies have not been consistent in deciding which rules have a significant economic impact on a substantial number of small entities, or have avoided such a finding in order to avoid complying with the RFA's requirements.[174] By Assessing all of its regulations (subject to the exceptions described herein) and publishing the results of the Assessments, the Department can avoid concern that the Department is failing to Assess or Review regulations that have a significant economic impact upon a substantial number of small entities.

The Department should in many cases perform a single Assessment (and, where required, a single Review) that considers all regulations issued as part of the same rulemaking. That would generally make sense from an economic perspective, for the same reasons that the Department in many cases does a single regulatory impact analysis on all regulations that are issued as part of the same rulemaking. That is why the proposed rule and this final rule define ''Assess'' and ''Review'' as determinations regarding ''Regulations issued as part of the same rulemaking (and any amendments or additions that may have been added thereafter)'' (except that the term ''Regulations'' is replaced with ''Sections'' in this final rule). Indeed, 5 U.S.C. 605(c) provides that ''[i]n order to avoid duplicative action, an agency may consider a series of closely related rules as one rule for the purposes of sections 602, 603, 604 and 610 of this title.'' Thus, if a series of regulations were issued as part of the same rulemaking and one of those regulations was subsequently amended, the Department would in many cases take the view that the series of regulations could be Assessed or Reviewed together for purposes of this final rule.

The same is true for the converse. Consider, for example, the 2015 rulemaking Preventive Controls for Human Food that established 21 CFR part 117 and also amended or revised individual regulations in Parts 1, 106, 110, 114, 120, 123, 129, 179, and 211 that were originally issued before 2015.[175] If the Department so chose, when the deadline approaches for Assessing and (if required) Reviewing the amended regulations in 21 CFR part

106, the Department could, as part of the same Assessment or Review, also assess or review the other regulations that were amended in this rulemaking.

For regulations that were issued in coordination with another Agency, that function in concert with another Agency's regulations, or that have a specific, direct impact on regulations issued by another Federal agency, the proposed rule proposed that the Department would consult with that other Agency when undertaking the Assessment or Review, and consider the other Agency's views when considering the factors described in section [XX](d). An example of regulations that have a specific, direct impact on regulations issued by another Federal agency are the Department's ACA regulations concerning the operation of Exchanges that affect eligibility for the advance premium tax credit. Such regulations have a specific, direct impact on Department of the Treasury regulations.[176]

The Department's understanding is that the decisions based upon Reviews, including the amendment, repeal, or continuance of regulations without change, will constitute final agency action. First, the decisions will mark the consummation of the agency's decisionmaking process with respect to whether a regulation satisfies the criteria described in section [XX](d). Second, the decisions constitute action by which rights or obligations have been determined, or from which legal consequences will flow. This is because if the Review is not performed, the regulation would expire.[177] Therefore, because the decisions based upon Reviews constitute final agency action, they must be performed in such a manner that they would withstand judicial review under the arbitrary and capricious standard.[178]

Similarly, if an Assessment concludes that a regulation does not have a significant economic impact upon a substantial number of small entities, that would mark the consummation of the Department's decisionmaking process with respect to whether a Review must be performed on the regulation. Such an Assessment's findings would also constitute action by which rights or obligations have been determined, or from which legal consequences will flow, because if the Assessment is not performed, the regulation would expire. Therefore, Assessments must also be performed in such a manner that they would withstand judicial review under the arbitrary and capricious standard.

The Department proposed to perform the Assessment and (if required) the Review on each Regulation every ten years. Some states provide that, unless readopted or re-reviewed, their regulations expire in seven years,[179] while at least one state uses a ten-year time period.[180] The Department proposed to perform the Assessment and (if required) the Review every ten years, because ten years is the period listed in 5 U.S.C. 610. The Department has many regulations, some of which are complex, so having to perform the Assessment and Review more than once every ten years could unduly burden the Department and increase the likelihood that a Regulation inadvertently expires because it is not Assessed or Reviewed.

Comments and Responses Regarding Section [XX](c)

HHS received the following comments on Section [XX](c) of the proposed rule.

Comment: Several commenters asked the Department to extend, from two years to five years, the timeframe for Assessment or Review of regulations that are over ten years old.

Response: The Department considered this comment, and has decided to make this change. Under this final rule, regulations that are more than ten years old when this final rule becomes effective shall expire if not Assessed and (if needed) Reviewed within five calendar years of the year that this final rule becomes effective. This will spread out the initial burden on the Department and provide the opportunity for more robust Assessments and Reviews. It also reduces any harm to reliance interests, since the public will now be on notice further in advance of the initial Assessment and Review deadlines.

Comment: Several commenters stated that the final rule should provide the Secretary with the authority to make one-time, case-by-case exceptions to the automatic expiration of a rule.

Response: HHS appreciates this comment and has decided to include within this final rule a provision that allows the Secretary—on a non-delegable basis—to extend on a one-time, case-by-case basis the automatic expiration date of a Section by one year. The Department shall promptly publish in the **Federal Register** any such determination by the Secretary to extend the expiration date.

Comment: A large number of commenters stated that the process established in the proposed rule could result in important regulations slipping through the cracks and expiring, which could have implications for other rules. These commenters stated that the Assessment and Review process established in the proposed rule would be complicated and time-consuming to put into practice, which could result in the automatic expiration of some regulations. A large number of commenters specifically mentioned regulations at 42 CFR 435.603, on which multiple insurance affordability programs, including Medicaid and CHIP, rely to determine financial eligibility using Modified Adjusted Gross Income (MAGI) methodologies. According to the commenters, the expiration of that regulation would allow programs to redefine MAGI household and income counting rules, with no standards, consistency, or accountability, which commenters fear could wreak havoc in HHS programs. Another commenter stated that if some critical regulations, such as the Medicare health and safety standards which provide a baseline for patient safety sunset, this could threaten patient safety. A large number of commenters suggested that safeguards be put in place to ensure that regulations that are critical to the operation of safety net providers do not simply expire because an Assessment or Review was not completed in time.

Response: HHS appreciates the theoretical possibility raised by these commenters that important regulations (such as MAGI methodologies or Medicare health and safety standards) could expire inadvertently. But as explained throughout the proposed rule and in this final rule, the Department intends to timely complete the required Assessments and Reviews. As noted in the proposed rule, as an additional safeguard, in the unlikely event it appears HHS has overlooked an impending deadline, interested members of the public can raise the need to Assess or Review specific regulation through public comment. As

[176] *See, e.g.,* 45 CFR 155.340 (regarding administration of advance payments of the premium tax credit and cost-sharing reductions and requiring the Exchange to comply with Treasury regulations).

[177] *See U.S. Army Corps of Engineers* v. *Hawkes Co., Inc.,* 136 S. Ct. 1807, 1813 (2016) (to have final agency action, ''First, the action must mark the consummation of the agency's decisionmaking process—it must not be of a merely tentative or interlocutory nature. And second, the action must be one by which rights or obligations have been determined, or from which legal consequences will flow'' (quoting *Bennett* v. *Spear,* 520 U.S. 154, 177–78 (1997)).

[178] *See* 5 U.S.C. 704 (final agency action is reviewable); 5 U.S.C. 706 (a reviewing court shall hold unlawful and set aside agency action, findings, and conclusions found to be arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law).

[179] 85 FR 70,105.

[180] *Id.*

an additional safeguard, the Department adds in this final rule that if, prior to the expiration of a Section, the Secretary makes a written determination that the public interest requires continuation of the Section in force beyond the date on which the Section would otherwise expire under this final rule, the Secretary may continue the Section in force one time for a period stated in the determination, which period shall not exceed one year.

Comment: Several commenters expressed concern about the precedent created by an automatic expiration date, which they believe could allow future administrations to reject regulations by simply letting them lapse. These commenters stated that this scenario would allow the Department to bypass the regulatory process and deprive the American people of the opportunity for comment and input.

Response: HHS respectfully disagrees that this is a significant enough risk to outweigh the tremendous benefits from retrospective review. The commenters' concerns assume a lack of good faith by future administrations. There would also likely be a tremendous public outcry if many beneficial regulations were permitted to expire.

This final rule does not bypass the regulatory process or deprive the American people of the opportunity for comment and input. In this rulemaking, the Department is going through the APA's ordinary notice-and-comment process. This final rule reflects that the Department accepted and considered over 500 public comments on the proposed rule. The Department also held a public hearing on the proposed rule and considered the comments made there in promulgating this final rule. In addition, this final rule institutionalizes an ongoing opportunity for public comment during this regulatory review process.

Comment: Several commenters stated that public harm could result from removing regulations that protect the public health and consumers. A few commenters suggested that the Assessments and Reviews conducted by the Department should specifically consider consumer protection.

Response: For the reasons explained in the preamble and regulatory impact analysis for this final rule, this final rule implements a process by which the Department will Assess and Review its regulations. HHS intends to undertake a careful Assessment, and (if necessary) Review of each regulation subject to this final rule to determine if the regulation should be continued without change, amended, or rescinded. HHS has no intention to rescind regulations that appropriately protect the public health or consumers. Reviews will consider the factors described in 5 U.S.C. 610(b) (as well as whether the regulation complies with applicable law). These are the factors that Congress directed the Department to consider when periodically reviewing regulations that have a SEISNOSE. Considerations with respect to consumer protection will often be subsumed in this analysis.

Comment: A few commenters suggested that instead of the proposed timeframe for review, the Department should instead Review regulations on a rolling basis but not less than 10 years from the date of first promulgation or substantial amendment.

Response: HHS respectfully disagrees. Clear and specific deadlines are needed to ensure the efficacy of this rule and to secure robust retrospective review of agency regulations. Moreover, the commenters' suggestion that review occur no *less* than 10 years from the date of promulgation or substantial amendment is, in the Department's view, an undue time lapse. It threatens to leave long outdated and burdensome regulations in place for too long.

Comment: One commenter stated that the proposed timeline for reviewing regulations is inconsistent with the proposed rule's goal of reviewing regulations based on the likelihood of their obsolescence. This commenter stated that the proposed rule assumes that the passage of time increases the likelihood of regulatory obsolescence, but the proposed rule defines a Regulation's age based on the date on which it was originally promulgated, regardless of subsequent amendments. Therefore, some regulations that have been subsequently amended could reach their time for review earlier than regulations that were promulgated and never amended. For example, a Medicaid regulation first adopted in 1968 but revised repeatedly and as recently as 2020 would need to be Assessed, possibly Reviewed, and possibly revised again even though it was just amended.

This commenter said this timing is also incongruent with specific provisions in the RFA. The RFA defines a ''rule'' to include ''any rule for which the agency publishes a general notice of proposed rulemaking pursuant to section 553(b),'' which explicitly includes regulatory amendments. *See* 5 U.S.C. 553(b) and 551(5). The commenter stated that this statutory provision requires the proposed rule's ''clock'' for 10-year review to be reset based on the most recent regulatory amendment that went through APA notice and comment procedures.

Response: HHS respectfully disagrees. As an initial matter, 5 U.S.C. 610 refers to review ''within'' ten years; it does not foreclose reviewing regulations sooner. Second, this rule seeks to balance the desire to review older regulations first, while also specifying clear, easily-ascertainable deadlines for Assessments and Reviews. It would be harder for the Department and the public to determine the Assessment and Review deadlines if the deadlines changed each time a regulation were amended. Providing that the ''clock'' begins to run from the year a Section was first promulgated is a reasonable way to balance these considerations. Tying deadlines to the amendments of Sections threatens to make the rule completely unwieldy—leaving an open question of when certain parts of a rule are up for Assessment and Review.

Also, as explained in the proposed rule, if the Department is amending a regulation close in time to its ten-year Assessment or Review date, then the Department can conduct Assessment and Review alongside the amendment, thereby restarting the ten-year clock if it publishes the findings in the **Federal Register** in the manner specified in this final rule.[181]

Amendments to Section [XX](c)

After considering the public comments on the two year time period to Assess and (if required) Review regulations that are more than ten years old, the Department has decided to extend this time period to five calendar years after the year that this section first becomes effective. Furthermore, in this final rule the Department amends section [XX](c) to read ''this chapter,'' rather than ''this title,'' as was used in the proposed rule. The Department makes this change to conform to the fact that this final rule amends certain chapters, rather than entire titles. The Department finalizes sections [XX](c)(1)–(2) as amended.

ii. Section [XX](c)(3)

After considering the public comments received on the proposed rule, the Department decided to add a new Section [XX](c)(3) to this final rule.

Section [XX](c)(3) states that if, prior to the expiration of a Section under paragraph (c)(1) of this section, the Secretary makes a written determination that the public interest requires continuation of the Section in force beyond the date on which the Section would otherwise expire under paragraph (c)(1), the Secretary may continue the Section in force one time

[181] 85 FR 70105.

for a period stated in the determination, which shall not exceed one calendar year. This final rule requires the Department to promptly publish any such written determination in the **Federal Register**. The authority of the Secretary to make this written determination is not delegable and may be exercised only by the Secretary or, when the office of the Secretary is vacant or the Secretary has become unable to perform the functions and duties of the office of the Secretary, by the individual acting as Secretary in accordance with the law. This provision, like other provisions of this final rule, is severable.

The Department adds this provision so that, if a pandemic, emergency, or other development arises that prevents the Department from timely Assessing or Reviewing certain Sections and the public interest requires their continuation, the Department can have additional time to Assess and (if needed) Review those Sections.

A. Section [XX](d)

HHS proposed in Section [XX](d) of the proposed rule that the Department would be required to Review those Regulations that the Department Assesses have a significant economic impact upon a substantial number of small entities. In reviewing Regulations to minimize any significant economic impact of the Regulation on a substantial number of small entities in a manner consistent with the stated objectives of applicable statutes, the proposed rule stated that the Department's Review shall consider (1) the continued need for the Regulation, consideration of which shall include but not be limited to the extent to which the Regulation defines terms or sets standards used in or otherwise applicable to other Federal rules; (2) the nature of complaints or comments received concerning the Regulation from the public; (3) the complexity of the Regulation; (4) the extent to which the Regulation overlaps, duplicates or conflicts with other Federal rules, and, to the extent feasible, with State and local governmental rules; (5) the degree to which technology, economic conditions, or other factors have changed in the area affected by the regulation since the Regulation was promulgated or the last time the Regulation was Reviewed by the Department; (6) whether the Regulation complies with applicable law; and (7) other considerations as required by relevant executive orders and laws.

This largely mirrors the review described in 5 U.S.C. 610. It is also consistent with ACUS' recommendation that agencies ''consider whether the [existing] regulations are accomplishing their intended purpose or whether they might, to the extent permitted by law, be modified, strengthened or eliminated in order to achieve statutory goals more faithfully, minimize compliance burdens on regulated entities, or more effectively confer regulatory benefits.'' [182] Prior to finalization, OIRA may review Reviews, including to coordinate inter-agency participation in the Review process where there are significant inter-agency equities or as otherwise appropriate.[183] For example, when Assessing or Reviewing regulations that require Executive Order 12250 review and approval by the Attorney General, the Department will consult with the Department of Justice (DOJ) and provide a draft of the findings to DOJ well in advance of the Assessment or Review deadline, so that DOJ can review and approve prior to the publication of the findings. It may be appropriate for OIRA to coordinate this process.

Proposed section [XX](d) of the proposed rule provided that the Department shall consider the continued need for the Regulation, ''consideration of which shall include but not be limited to the extent to which the Regulation defines terms or sets standards used in or otherwise applicable to other Federal rules.'' The quoted phrase is not found in 5 U.S.C. 610, but the Department included it in the proposed rule to clarify that determining the continued need for a regulation includes determining the extent to which it defines terms or sets standards used in or otherwise applicable to other Federal rules. However, this was not meant to be the only factor the Department should consider when determining the continued need for a regulation. Under the proposed rule, the Department shall consider any factors that, for a particular regulation, are relevant to determining whether there is a continued need for the regulation.

In addition to this phrase, two factors listed in section [XX](d) of the proposed rule were not found in 5 U.S.C. 610. The first is that section [XX](d) of the proposed rule stated that the Review should take into account ''whether the Regulation complies with applicable law.'' Since applicable law may have changed since a regulation was promulgated, the Department wants to ensure that its regulations are regularly reviewed to ensure that they comply with applicable law.

Second, section [XX](d) of the proposed rule stated that the Review should take into account ''other considerations as required by relevant executive orders and laws.'' The proposed rule stated that to the extent Executive Orders or laws enacted since the RFA require the Department to consider additional factors when performing retrospective review of particular regulations, the Department wishes to comply with those Executive Orders and laws. A recent Department of Transportation rule similarly required that agency, when periodically reviewing its regulations, to consider ''[o]ther considerations as required by relevant executive orders and laws.'' *See* 49 CFR 5.13(d)(2)(vi). Upon further consideration, the Department has decided not to finalize this seventh factor. First, this factor is not included in the RFA.[184] Second, this factor is potentially unclear and could be open to multiple interpretations. Third, this final rule already requires the Department to consider whether the rulemaking complies with applicable law. Thus, the seventh factor is not only susceptible to multiple interpretations, but seems largely (if not entirely) subsumed by other factors in this final rule.

The Department anticipates that the Reviews would be similar to the section 610 analyses currently performed by agencies. The Reviews would benefit from real-world data and information gathered since the regulations were promulgated to potentially discern the impact of the regulation on small entities and on society more generally.

Section [XX](d) of the proposed rule requires that only regulations that have a significant economic impact upon a substantial number of small entities be Reviewed, because those are the regulations that 5 U.S.C. 610 requires agencies have a plan to periodically review.

Comments on Section [XX](d)

HHS received the following comments on Section [XX](d) of the proposed rule.

Comment: Several commenters suggested that HHS consult with trade

[182] Administrative Conference of the United States, Recommendation 2014–5, 79 Fed. App'x—Recommendations of the Administrative Conference of the United States, 79 FR 75114, 75117 (Dec. 17, 2014).

[183] OIRA may also coordinate inter-agency participation in the Assessment process where there are significant inter-agency equities or as otherwise appropriate.

[184] The RFA also does not include ''whether the Regulation complies with applicable law'' as a factor. But it seems uncontroversial to require the Department to consider whether its regulations comply with applicable law, and this phrase has a clear meaning.

groups and other specialty societies to consider the policy recommendations of providers and others in the healthcare industry to understand the implications of modifying or rescinding existing regulations. Some of these commenters brought up certain regulations for which they care deeply and would like to see rescinded or maintained.

Response: HHS appreciates these comments and wishes for the public to have the opportunity to provide meaningful feedback on regulatory changes that the Department may consider as it conducts its Assessments and Reviews. To achieve that goal, the proposed rule, as finalized, includes a process of soliciting robust public comments and feedback, which HHS will consider and incorporate into its Assessment and Review decisions. As stated in [XX](d)(2), ''[t]he nature of complaints or comments received concerning the Regulation from the public'' is one of the factors that the Department is required to consider under this rule when it conducts its Assessments and Reviews. HHS is committed to ensuring that the public has ample opportunity to opine on its regulations, and looks forward to thoughtfully considering public comments during the regulatory review process resulting from this final rule.

Comment: A few commenters stated that the Department's process for reviewing regulations that have a SEISNOSE was unclear from the proposed rule. These commenters asked that the Department provide at least one example of how factors would be considered and how HHS would conduct its decision-making process.

Response: Based in part on these comments, in this final rule the Department removes the final factor specified in the proposed rule (''other considerations as required by relevant executive orders and laws''). The Department does so because this factor's meaning could be unclear, it is not in the RFA, and it adds little beyond what is already more clearly stated in other factors, such as whether the rulemaking complies with applicable law. Beyond removing this factor, HHS respectfully declines to provide additional clarity within this final rule as to the exact contours of the Review process. As explained in the proposed rule, the Review takes into account factors that already exist under 5 U.S.C. 610(b), along with a consideration of whether the rulemaking complies with applicable law, a factor whose meaning is clear and uncontroversial. It is anticipated that the Review process will track the Department's and other agencies' past practice with respect to Section 610 analyses. In particular, examples of Section 610 reviews conducted by the EPA are instructive on how the Department anticipates the five factors set forth in 5 U.S.C. 610(b) will be analyzed.[185] The Review decision-making process will be implemented in a manner appropriate for the regulation in question, including but not limited to input from subject-matter experts within the Department and the public.

Comment: A few commenters asked for clarification regarding the Department's decision-making process as to whether a regulation would be identified as requiring a rescission or amendment based on the factors provided. For example, if HHS were to identify overlap or duplication between a regulation under Review and other Federal regulations, how would HHS assess the factors to make a decision to rescind or amend? These commenters also asked for clarification on how the Department would determine that a regulation is duplicative.

Response: The factors specified in the final rule will be balanced, and a determination as to whether to amend or rescind a Section will be made on a case-by-case basis. No one factor by itself is dispositive (unless the Section does not comply with applicable law). The balancing of a series of considerations, sometimes complex and wide-ranging, is inherent in the Department's policy-making functions, even beyond the context of the Review process set out in this final rule. In the prior comment, the Department provided examples of how the Reviews will consider the relevant factors. The concept of regulatory duplication, which has been in the RFA, 5 U.S.C. 610(b)(4) for over forty years, is largely self-explanatory. A regulation may be considered duplicative, if, for instance, it serves the same function or overlaps with another regulation.[186] Amending or rescinding duplicative regulations can reduce complexity and regulatory burden.

Comment: Some commenters asked HHS to clarify how it would consider public comments about a regulation, and whether there would be numerical or content benchmarks that HHS would use to guide its decision-making regarding the public feedback it receives.

Response: The Department will create dockets on *Regulations.gov* for its Assessments and Reviews, and the public may submit comments to those dockets in the same manner as it can submit comments on notices of proposed rulemaking. The Department's Reviews will be holistic and consider the five factors specified in 5 U.S.C. 610(b), as well as compliance with applicable law. No one factor by itself is dispositive (unless the Section does not comply with applicable law). The weight that the Department gives to comments will be a case-by-case determination. For example, fifty complaints about a major rule that also had 500 supportive comments might not counsel in favor of amending or rescinding the rule. But fifty complaints about a rule that had no comments supporting it might weigh in favor of amendment or rescission, particularly if the other section 610 factors do not counsel strongly in favor of continuing the regulation without change. The public-comment process, and how much weight to give to various comments, is familiar to the Department and the public from the many instances of public comment on Department policymaking actions. A similar standard will be applied here.

Accordingly, the Department finalizes section [XX](d) of the proposed rule as proposed, except that it removes (d)(7), which proposed that Reviews consider ''[o]ther considerations as required by relevant executive orders and laws.'' Moreover, in the finalized section [XX](d), the Department replaces the term ''Regulation'' with ''rulemaking.'' This is in response to comments previously discussed expressing concerning about potential ambiguity caused by the use of the term ''Regulation.'' This change is also made to conform section [XX](d) to the fact that ''Reviews'' are defined as determinations as to ''whether Sections [187] that were issued as part of the same rulemaking (and any amendments or additions that may have been issued thereafter)'' should be continued without change, amended, or rescinded. Reviews are therefore not of individuals sections but of the sections

[187] ''Regulations'' in the proposed rule.

issued as part of the same rulemaking. Thus, this revision to section [XX](d) is made for clarity but is not a substantive change from the proposed rule.

Section [XX](e)

In the proposed rule, HHS proposed that if the Review concludes that a Regulation should be amended or rescinded, the Department shall have two years from the date that the findings of the Review are published in the **Federal Register** pursuant to paragraph (f) to amend or rescind the Regulation. The proposed rule further stated that if the Secretary determines that completion of the amendment or rescission is not feasible by the established date, he shall so certify in a statement published in the **Federal Register** and may extend the completion date by one year at a time for a total of not more than five years.

The Department included this provision in the proposed rule because, if the Review concludes that a Regulation should be amended or rescinded, the Regulation should in fact be amended or rescinded. The Department believes that two years will generally be an adequate amount of time to amend or rescind a Regulation, since the Department will have already conducted a Review of the Regulation. In circumstances where amendment is not feasible within that time period, the proposed rule stated that the Secretary could so certify in a statement published in the **Federal Register** and extend the completion date by one year at a time for a total of not more than five years.

As stated in the proposed rule, when the Review determines that a regulation should be amended or rescinded, the Department would, on a case-by-case basis as appropriate, use enforcement discretion to not enforce the regulation or a portion of the regulation until it is amended or rescinded. This is because in many cases the Department would not want to enforce regulations (or portions of regulations) that it determines should be amended or rescinded. The Department noted that enforcing a regulation deemed to require amendment or rescission in some cases raises concerns about whether such enforcement is arbitrary and capricious. Continuing to enforce the regulation (or portions thereof) would arguably ''run[ ] counter to the evidence before the agency.'' [188]

[188] *Motor Vehicle Mfrs. Ass'n of U.S., Inc.* v. *State Farm Mut. Auto. Ins. Co.,* 463 U.S. 29, 43 (1983).

Comments on Section [XX](e)

HHS received the following comments on Section [XX](e) of the proposed rule.

Comment: Some commenters stated that the Department should limit the length of time for amending or rescinding a Regulation from two years with three one-year extensions for a total of not more than five years to two years with the possibility to extend for one year (for a total of not more than three years). One commenter also stated that the current text is ambiguous as to whether it is a maximum of five years (two years plus three one-year extensions) or a maximum of seven years (two years plus five one-year extensions).

Response: HHS appreciates these comments and, in this final rule, modifies the rule's text to clarify that, if a Review concludes that a Section should be amended or rescinded, the maximum time for amending or rescinding the Section (including all possible extensions) is five years. That is, there is a two-year period to amend or rescind, which can be extended no more than three times for one year each time.

The Department believes the two-year default period is appropriate and declines to further limit the number of possible extensions. If the Department concludes that a regulation should be amended or rescinded, it does not want to unduly delay doing so. The Department believes that two years will generally be an adequate amount of time to amend or rescind such regulations, since the Department has already Reviewed them. However, given the complexity of some Department regulations and competing priorities, in some circumstances it may not be feasible to amend or rescind a regulation within two years. In circumstances where amendment or rescission is not feasible within that time period, the Secretary can so certify in a statement published in the **Federal Register** and extend the completion date by one year at a time no more than three times, for a total of not more than five years (inclusive of the initial two-year period).

Accordingly, after considering the public comments, the Department chose to clarify the language in section [XX](e) of the proposed rule with respect to the time period for extension of the completion of an amendment or rescission. Where the proposed rule stated that the Secretary ''may extend the completion date by one year at a time for a total of not more than five years,'' the final rule clarifies that the Secretary ''may extend the completion date by one year at a time, *no more than three times,* for a total of not more than five years *(inclusive of the initial two-year period)*'' (emphasis added). This change does not alter the time period for extending the completion date of an amendment or rescission, but HHS believes that this language clarifies the length of time that the completion may be extended. The Department finalizes Section [XX](e) of the proposed rule, with this clarifying language.

Section [XX](f)

Section [XX](f) of the proposed rule provided that the results of all Assessments and Reviews conducted in a calendar year, including the full underlying analyses and data used to support the results (subject to any applicable privilege, protections for confidential business information, or explicit legal prohibition on disclosure), shall be published in a single document in the **Federal Register** during that calendar year. The proposed rule stated that the document shall be organized in a manner that enables both the Department and the public to readily determine which Assessments and Reviews were conducted during that calendar year. It further proposed that the document shall also specify the year by which the next Assessment (and, if required, the next Review) of the Regulation shall be completed.

The Department included this requirement in the proposed rule so that both the Department and the public could readily know which Regulations were Assessed and Reviewed each year. If Assessments and Reviews were published in disparate places throughout the year, it could become extraordinarily difficult for both the Department and the public to know which Regulations were Assessed and Reviewed each year. Section [XX](f) was proposed to enable both the Department and the public to look in one place to know which Assessments and Reviews were conducted each calendar year, and know the findings of those Assessments and Reviews.

The proposed rule stated that when publishing the findings of an Assessment or Review, the Department should include the full underlying analyses and data used to support the results, subject to any applicable privilege, protections for confidential business information, or explicit prohibition on disclosure. This will increase transparency and permit the public to see how the Department reached its conclusion. By requiring publication of the Reviews and the underlying analyses and data, the Department also incorporated ACUS'

suggestion that ''[a]gencies should disclose relevant data concerning their retrospective analyses'' so as to ''allow private parties to recreate the agency's work and to run additional analyses concerning existing rules' effectiveness.'' [189] The Department does not believe that the deliberative process privilege would generally bar disclosing the final underlying analyses and data referred to in section [XX](f).[190]

Section [XX](f) of the proposed rule also provides that the document published in the **Federal Register** shall specify the year by which the next Assessment (and, if required, the next Review) of the Regulation shall be completed. This can be particularly helpful if the Department conducts an Assessment or Review of a Regulation prior to the deadline year.

Comments on Section [XX](f)

HHS received the following comments on Section [XX](f) of the proposed rule.

Comment: A few commenters suggested that the results of each Assessment and Review should be published separately in the **Federal Register** as they are completed, with a title clearly identifying the affected regulation and the Department's responses to the public comments received.

Response: HHS respectfully disagrees that the results should be published on a rolling basis. Announcing the results of all Assessments and Reviews within a single document makes it easier for the public (and the Department) to determine (1) which Sections were Assessed and Reviewed, (2) the dates by which they were Assessed and Reviewed, and (3) when they next need to be Assessed and (if needed) Reviewed. Interested parties need only refer to a single source of information for a given year. Publishing all Assessments and Reviews for a given year in a single document also reduces the risk that a Section will inadvertently expire.

The commenters' concerns about the Reviews including the Department's responses to public comments was already addressed in the proposed rule. Section [XX](d) of the proposed rule directed the agency to consider, as part of Reviews, ''the nature of complaints or comments received concerning the Regulation from the public.'' And the document published in the **Federal Register** shall include the ''full underlying analyses and data used to support the results (subject to any applicable privilege, protections for confidential business information, or explicit legal prohibition on disclosure.'' Section [XX](d)'s requirement to consider the nature of complaints or comments only applies to Reviews, not Assessments. Assessments are preliminary determinations that only focus on whether a rule making has a SEISNOSE, and do not require as extensive an analysis as Reviews. If the Department receives comments during the Assessment process, it would endeavor to take them into account in determining whether a rule making has a SEISNOSE. Moreover, as the proposed rule proposed,[191] the document published in the **Federal Register** will be organized in a manner that enables both the Department and the public to readily determine which Assessments and Reviews were conducted during each calendar year.

Comment: Some commenters stated that the Department should commit to publishing results of Reviews as they are completed, or on no less than a monthly basis, so that the interested public can truly contemplate each regulation now in question.

Response: The Department intends to publish the results of the Assessments and Reviews in the dockets for the applicable regulations. However, as compared to publishing Assessments and Reviews in the **Federal Register** on a rolling basis, announcing the results of all Assessments and Reviews within a single document makes it easier for the public (and the Department) to determine (1) which Sections were Assessed and Reviewed, (2) the dates by which they were Assessed and Reviewed, and (3) when they next need to be Assessed and (if needed) Reviewed. Interested parties need only refer to a single source of information for a given year. Publishing all Assessments and Reviews for a given year in a single document also reduces the risk that a Section will inadvertently expire. The Department will announce on a periodic basis when it has commenced the process of performing an Assessment or Review.

Comment: A few commenters asked what role the Office of Information and Regulatory Affairs (OIRA) within the Office of Management and Budget (OMB) would have in reviewing the reports, and any proposed revisions to standing regulations.

Response: As noted in the proposed rule, ''Prior to finalization, OIRA may review Reviews, including to coordinate inter-agency participation in the Review process where there are significant inter-agency equities or as otherwise appropriate.'' [192]

Accordingly, after considering the public comments, HHS finalizes section [XX](f) as proposed.

Section [XX](g)

HHS proposed in Section [XX](g) of the proposed rule that paragraph (c) of the proposed rule would not apply to Regulations that are prescribed by Federal law, such that the Department exercises no discretion as to whether to promulgate the Regulation and as to what is prescribed by the Regulation. For such Regulations that are adopted after the effective date of this section, the proposed rule stated that the Federal law described shall be cited in the notice of adoption. Section [XX](g) of the proposed rule also provided that paragraph (c) of the proposed rule would not apply to (1) Regulations whose expiration pursuant to this section would violate any other Federal law; (2) this section; (3) Regulations that involve a military or foreign affairs function of the United States; (4) Regulations addressed solely to internal agency management or personnel matters; (5) Regulations related solely to Federal Government procurement; and (6) Regulations that were issued jointly with other Federal agencies, or that were issued in consultation with other agencies because of a legal requirement to consult with that other agency.

Section[XX](g)(1) of the proposed rule excepted Regulations that are prescribed by Federal law, such that the Department exercises no discretion as to whether to promulgate the Regulation and as to what is prescribed by the Regulation. This is only the case in rare circumstances. Because the Department lacks discretion over what is contained in these Regulations and cannot rescind them, they are exempted from section [XX](c). For such Regulations that are promulgated after the effective date of this final rule, the Department shall describe in the Regulation's notice of adoption the Federal law that results in

[189] 79 FR 75114, 75117 (Dec. 17, 2014); *see also* Exec. Order 13563, Sec. 6(a) (Jan. 18, 2011) (''retrospective analyses, including supporting data, should be released online whenever possible''). Although this final rule incorporates several ACUS' recommendations, it does not incorporate all of them. This final rule does not set forth a prioritization scheme, although the Department intends to subsequently set forth a schedule for conducting Assessments and Reviews.

[190] *See, e.g., Coastal States Gas Corp.* v. *Dep't of Energy,* 617 F.2d 854, 866 (D.C. Cir. 1980) (''[E]ven if the document is predecisional at the time it is prepared, it can lose that status if it is adopted, formally or informally, as the agency position on an issue or is used by the agency in its dealings with the public.'').

[191] *See, e.g.,* 85 FR 70121.

[192] 85 FR 70108.

the Department having no discretion as to whether to promulgate the Regulation and what is prescribed by the Regulation. The proposed rule included this requirement so the public has notice that such Regulations are exempt from section [XX](c).

Section [XX](g) of the proposed rule likewise also exempted from section [XX](c) any Regulation whose expiration pursuant to this section would violate any other Federal law. The exceptions listed in sections [XX](g)(1) and [XX](g)(2) of the proposed rule are not satisfied simply because the statutory authority for the regulation provides that the Secretary ''shall'' prescribe regulations. For example, section 804(b) of the Federal Food Drug & Cosmetic Act, 21 U.S.C. 384(b), provides that the ''Secretary, after consultation with the United States Trade Representative and the Commissioner of U.S. Customs and Border Protection, *shall* promulgate regulations permitting pharmacists and wholesalers to import prescription drugs from Canada into the United States'' (emphasis added). However, although the statute was enacted in 2003, as of January 1, 2020 the Department had not issued any regulations implementing it, indicating the Department's view that section 804(b) did not require the Department to issue regulations. Similarly, Section 1102 of the Social Security Act, 42 U.S.C. 1302, provides that the Secretary ''*shall* make and publish such rules and regulations, not inconsistent with this Act, as may be necessary to the efficient administration of the functions with which [he] is charged under this Act'' (emphasis added). But the Department does not believe every regulation promulgated pursuant to section 1102 is required to have been issued, or that it would violate Federal law to rescind such regulations.

Section [XX](g) of the proposed rule also exempted the proposed rule from section [XX](c). Assuming that no rules expire due to lack of Assessment or Review, the proposed rule stated that this rule cannot, absent other actions, directly impose on the public costs that exceed benefits, since the proposed rule merely would require the Department to periodically Assess and, in some cases, Review its Regulations. Only the failure to perform an Assessment or Review in the future could theoretically impose on the public costs that exceed benefits (assuming expired Regulations were on balance benefiting the public). The proposed rule stated that it would improve the Department's regulations by requiring the Department to evaluate the impact of its regulations and amend or rescind those regulations with a significant economic impact upon a substantial number of small entities that the Department determines should be amended or rescinded. Therefore, the rationale for periodic review would not apply to the proposed rule to the extent it applies to other Department regulations. The Department realizes that certain members of the regulated community might rely on particular regulations, but the Department proposed that it would take that into account when performing Assessments and Reviews. The Department proposed that it would only determine that a regulation should be amended or rescinded if the regulation's burdens outweigh these reliance interests and the other benefits of the regulation or if other factors, such as a change in law, might compel amendment or rescission. The Department stated in the proposed rule that it does not intend to avoid Assessing or, if required, Reviewing any regulation and does not anticipate that an important regulation would expire due to failure to Assess or Review it. Accordingly, the Department proposed to exempt the proposed rule from Section [XX](c).

The Department also proposed in Section [XX](g) of the proposed rule to exempt Regulations that involve a military or foreign affairs function of the United States. For purposes of the proposed rule (as well as in this final rule), ''a military or foreign affairs function of the United States'' has the same meaning as that phrase has under 5 U.S.C. 553(a). Regulations that involve a military or foreign affairs function of the United States were exempted from the proposed rule for the same reasons that Congress exempted them from the requirements of 5 U.S.C. 553.

Section [XX](g) of the proposed rule also exempted Regulations addressed solely to internal agency management or personnel matters and Regulations related solely to Federal Government procurement. Because such Regulations do not directly impact the public, the rationale for retrospective review is weaker with respect to these Regulations.

The portion of the proposed rule applying to Title 42 also exempted 42 CFR 1001.952 from expiration. 42 CFR 1001.952 provides a safe harbor for various payment and business practices that, although they potentially implicate the Federal anti-kickback statute, are not treated as offenses under the statute. The Department proposed to exempt this regulation because it was concerned that certain otherwise permissible behavior could become criminal simply because the Department did not Review this Regulation. The portion of the proposed rule applying to Title 42 also exempted 42 CFR part 73. 42 U.S.C. 262a provides that, with respect to Part 73, the ''Secretary shall review and republish [a list of certain biological agents and toxins] biennially, or more often as needed, and shall by regulation revise the list as necessary in accordance with such paragraph.'' Since those regulations are already being reviewed biennially, there was no need for the proposed rule to apply to 42 CFR part 73. Similarly, the portion of the proposed rule applying to Title 42 also exempted the annual Medicare Part A and Part B payment methodology update rules. Since these rules are amended annually, it does not make sense to Review them every ten years. Lastly, the portion of the proposed applying to Title 42 also exempted 42 CFR 100.3, since the statutory basis for this regulation provides that it cannot be amended unless (1) a proposed regulation is provided to the Advisory Committee on Childhood Vaccines (ACCV) and the ACCV is provided at least 90 days to make recommendations and comments, and (2) there is subsequently a 180-day public comment period. *See* 42 U.S.C. 300aa–14(c). For these reasons, these regulations are also exempted from this final rule.

Section [XX](g) of the proposed rule also exempted any Regulations that were issued jointly with other Federal agencies, or that were issued in consultation with other agencies because of a legal requirement to consult with that other agency. This is because the Department cannot on its own rescind or amend a Regulation issued jointly with another Federal agency. An example of regulations issued with other agencies because of a legal requirement to consult with those other agencies are the regulations issued jointly by the Department and the Departments of Labor and the Treasury in accordance with section 104 of the Health Insurance Portability and Accountability Act (HIPAA). This provision directs the Secretaries of HHS, Labor and the Treasury to ensure that regulations issued pursuant to provisions where the Secretaries share interpretive jurisdiction (which includes many of the provisions in Title XXVII of the Public Health Service (PHS) Act) are administered to have the same effect at all times.[193] An example of jointly-issued regulations are regulations governing State innovation waivers under section 1332 of the

[193] *See* Health Insurance Portability and Accountability Act of 1996, Public Law 104–191, 110 Stat. 1936 (1996).

Patient Protection and the Affordable Care Act.[194]

The Department retains these exemptions for the reasons discussed in the proposed rule. For the reasons discussed below, this final rule also exempts certain other regulations from this final rule.

Comments on Section [XX](g)

HHS received the following comments on Section [XX](g) of the proposed rule.

Comment: Several commenters asked for further clarity on the proposed exemptions from the proposed rule. These commenters stated that it is unclear how the public would know which regulations are eligible for an exemption under the proposed rule. They suggested that the Department may be interpreting ''Regulations that are prescribed by Federal law, such that the Department exercises no discretion as to whether to promulgate the Regulation and as to what is prescribed in the Regulation'' very narrowly, because the proposed rule stated that it is ''rare'' that the Department has ''no discretion as to whether to promulgate [a] regulation and what is prescribed by the regulation.'' [195] These commenters stated that the examples given in the proposed rule were insufficient and open to interpretation, and members of the public should not be expected to be able to conduct their own statutory analysis. Some commenters specifically asked for at least one example of a regulation that would be exempted under this rule. Commenters also asked for examples of regulations that ''were issued in consultation with other agencies because of a legal requirement to consult with that other agency.''

Response: The Department thanks these commenters for their comments. Regulations that ''involve a military or foreign affairs function of the United States'' are regulations that would satisfy that standard under 5 U.S.C. 553(a)(1). ''Regulations addressed solely to internal agency management or personnel matters'' refers to regulations that would satisfy the ''matter relating to agency management or personnel'' standard under 5 U.S.C. 553(a)(2).[196]

An example of regulations issued with other agencies because of a legal requirement to consult with those other agencies are the regulations issued jointly by the Department and the Departments of Labor and the Treasury in accordance with section 104 of HIPAA. This provision directs the Secretaries of HHS, Labor and the Treasury to ensure that regulations issued pursuant to provisions where the Secretaries share interpretive jurisdiction (which includes many of the provisions in Title XXVII of the PHS Act) are administered to have the same effect at all times.[197] Such regulations constitute a small percentage of the Department's overall number of regulations (although they may have an outsize impact), and the Department is not aware of many regulations outside those promulgated pursuant to the relevant HIPAA provisions that would satisfy this exception. Regulations that are prescribed by Federal law, such that the Department exercises no discretion as to whether to promulgate the regulation and as to what is prescribed in the regulation is also a very small category.

Comment: A few commenters stated that it was disingenuous for HHS to specifically decide to exempt this rule from the assessment and review process. These commenters stated that this decision is at best disingenuous or at worst an attempt to permanently impose a rigid review structure.

Response: HHS respectfully disagrees. This final rule does not permanently impose a rigid review structure, because this rule can be amended or rescinded under the APA. As explained in the notice of proposed rulemaking, the nature of this rule means that ''the rationale for periodic review does not apply to this proposed rule to the extent it applies to other Department regulations.'' [198] This final rule would not become obsolete due to economic, technological, or legal changes the way that many other rules can.

Comment: Several commenters stated that they do not want the annual Notice of Benefits and Payment Parameters (NBPP) rule to be subject to this rule.

Response: The Department agrees and has decided to exempt the annual Notice of Benefit and Payment Parameters update rules. Just as the proposed rule exempted the annual Medicare payment rules, this final rule need not apply to NBPP rules that are already reviewed and updated annually. The 2021 NBPP annual rules can be found at 85 FR 29164 (May 14, 2020). These and the equivalents for other years are exempt from this final rule.

Final Section [XX](g)

Based in part on comments, the Department has decided in the portion of the final rule applying to Title 21, Chapter I to also exempt the following provisions from this final rule:

- 21 CFR parts 131, 133, 135–137, 139, 145, 146, 150, 152, 155, 156, 158, 160, 161, 163–166, 168, 169.
- 21 CFR parts 331–333, 335–336, 338, 340–341, 343–344, 346–350, 352, 355, 357, 358.
- 21 CFR parts 862, 864, 866, 868, 870, 872, 874, 876, 878, 880, 882, 884, 886, 888, 890, 892, 895, 898.

Based in part on comments, the Department decided in the portion of the file rule applying to Title 45, Subchapter A, to also exempt the annual Notice of Benefit and Payment Parameters update rules.

The first three bullets encompass FDA's food standard, device-specific, and over-the-counter drug regulations that specify characteristics of certain foods, devices, and over-the-counter drugs. These are regulations that specify the characteristics of particular foods, devices, and over-the-counter drugs. Many of the device regulations are already required to be reviewed in some way every five years.[199] Similarly, FDA is already undergoing a process to establish a set of general principles for food standards for FDA to use when considering whether to establish, revise, or eliminate a food standard.[200] Thus, there is less need to review these regulations every ten years, since these are being reviewed, or new processes for reviewing these regulations are being established. In addition, the exempt food standard, device, and OTC drug regulations simply create product identities.

As explained *supra,* the annual Notice of Benefit and Payment Parameters update rules are also now being exempt because those are already updated

[194] *See, e.g.,* 77 FR 11700 (Feb. 27, 2012).

[195] 85 FR 70109.

[196] *See, e.g.,* regulations amended in Update of Organizational References, 50 FR 8993 (Mar. 6, 1985) (''Because these amendments related to internal agency management and personnel and because the amendments are not substantive, the rule is exempt from the notice and comment and delayed effective date requirements of section 553(b) and (d)(3) of the Administrative Procedure Act'').

[197] *See* Health Insurance Portability and Accountability Act of 1996, Public Law 104–191, 110 Stat. 1936 (1996). *See also* 85 FR 70110.

[198] 85 FR at 70109.

[199] *See, e.g.,* 21 U.S.C. 360(l) (providing that ''at least once every 5 years thereafter, as the Secretary determines appropriate, the Secretary shall identify, through publication in the **Federal Register**, any type of class I device that the Secretary determines no longer requires a report under subsection (k) to provide reasonable assurance of safety and effectiveness''; 21 U.S.C.(m) (providing that the Secretary, ''at least once every 5 years thereafter, as the Secretary determines appropriate [ ] publish in the **Federal Register** a notice that contains a list of each type of class II device that the Secretary determines no longer requires a report under subsection (k) to provide reasonable assurance of safety and effectiveness'').

[200] *See https://www.federalregister.gov/documents/2020/04/20/2020-08182/food-standards-general-principles-and-food-standards-modernization-extension-of-comment-period.*

annually. Thus, there is no need to Assess or Review them every ten years.

In addition, whereas the proposed rule exempted in Title 42 the ''annual Medicare Part A and Part B payment methodology update rules,'' this final rule exempts the ''annual Medicare payment update rules.'' All annual Medicare payment update rules are revised annually, so there is no need to require Assessment or Review of them every ten years.

Other than adding or revising these exemptions and changing the term ''Regulation'' to ''Section,'' the Department finalizes Section [XX](g) as proposed.

Section [XX](h)

HHS proposed in Section [XX](h) of the proposed rule that when the Department commences the process of performing an Assessment or Review, it shall state on a Department-managed website the Regulation(s) whose Assessment or Review it is commencing. As proposed, the public would be able to submit comments regarding these Regulation(s) in the manner specified on this website. HHS proposed that members of the public could also submit comments in the manner specified on the website requesting that the Department begin the Assessment or Review of a Regulation, particularly if they are concerned that the deadline is nearing and the Department has not stated that it has commenced the Assessment or Review.

The Department included this provision in the proposed rule so that, when the Department is Assessing or Reviewing a regulation, the public can submit comments for the Department's consideration. The Department stated in the proposed rule that it believes this will maximize transparency, public participation, and the Department's knowledge of the real-world impacts of its regulations.

The Department also proposed in this provision to allow the public to submit comments on the Department website requesting that the Department begin the Assessment or Review of a regulation. The Department stated that it considered the risk that a regulation could expire because the Department inadvertently did not Assess or Review it. The Department proposed to mitigate this risk by allowing members of the public to submit comments requesting that the Department commence the Assessment or Review of a regulation. If a person is concerned that the Department has not announced the Assessment or Review of a Regulation and the deadline is nearing, the person can request that the Department to conduct the Assessment or Review.

The Department stated in the proposed rule that it intends to timely Assess and, where required, Review all its regulations. The Department noted, however, that if it has not announced that it is Assessing or Reviewing a Regulation, and the deadline is nearing, those who rely on the regulation are on notice that it might expire, just as the public is on notice that a regulation might be rescinded when an agency issues a notice of proposed rulemaking to rescind the Regulation.

Comments on Section [XX](h)

HHS received the following comments on section [XX](h) of the proposed rule.

Comment: Several commenters questioned the adequacy of the proposed process for soliciting comments on the regulations that are reaching their time for Assessment or Review. Some of these commenters stated that the public should be given ample notice of upcoming Assessments and Reviews, and a clear and adequate timeframe for providing comments. Other commenters expressed concern about the process of posting information regarding Assessments and Reviews to a Department-managed website. Some commenters stated that instead of providing notice of Assessments and Reviews and instructions on how to submit public comments exclusively on a Department-managed website, the Department should also put this information on the **Federal Register**.

Several commenters stated that members of the public should not be responsible for monitoring an HHS website to see if Assessment or Review of a particular regulation is commencing. Some commenters cited the added expense on the regulated industry that would be created if an additional review process is created by this rule, which would disproportionately fall on small businesses. One commenter even suggested this was a purposeful decision by the Department to create a system that favors well-funded special interests that can afford lawyers and lobbyists to advocate for their favored policies. Commenters stated that although HHS proposes to create a website to enable the public to comment and request a review when the deadline for assessing a rule is approaching, this website would not be governed by APA rules and the Department would not be required to meaningfully respond to those comments. Commenters stated that, as a result, rules that govern the administration of Medicaid and CHIP and affect access to care for millions of beneficiaries could automatically expire without public comment.

A potential solution suggested by one commenter is that the Department could include in the final rule a requirement that it include a notice of all regulations scheduled for review during the next 12 months in its semi-annual regulatory agendas published in the **Federal Register**. This commenter also suggested that HHS publish semi-annually in the **Federal Register** a list of regulations that are scheduled to expire in the next 12 months if they are not Assessed and Reviewed.

Other commenters requested clarification on how HHS will treat the comments it receives. For example, some commenters asked whether the comments would be included as a part of the public record. Other commenters mentioned that the proposed rule does not clarify whether HHS will be required to respond to all comments made by the public. These commenters asked the Department to ensure that it publicly display the comments it receives.

Response: The Department appreciates these comments and seeks to minimize costs for the public. Accordingly, this final rule makes some revisions in response to these comments. Under this final rule, when the Department commences the process of performing an Assessment or Review, it shall state on a Department-managed website the Section(s) whose assessment or Review it is commencing. It shall also announce once a month in the **Federal Register** those new Assessments or Reviews that it has commenced in the last month. The Department will create a docket on *Regulations.gov* for each Assessment or Review that the Department is conducting. These docket numbers will be referenced in the **Federal Register** announcements. The public will be able to submit comments to the dockets of each rule making being Assessed or Reviewed. Each docket shall specify the date by which comments must be received. There shall also be a general docket on *Regulations.gov* where the public can submit comments requesting that the Department Assess or Review a regulation. These changes address the concern about putting the information on a Department website, rather than in the **Federal Register**. The Department anticipates that the process will be similar to that currently used by the EPA.[201] The Department also intends to

[201] *See, e.g.,* Regulatory Flexibility Act Section 610 Review of the Testing and Labeling Regulations Pertaining to Product Certification of Children's

publish the results of the Assessments and Reviews in the dockets for the applicable regulations.

Separately, in conjunction with this final rule, the Department is placing at *https://www.hhs.gov/regulations/federal-registry/index.html* a list of Department rule makings, the year they were initially promulgated, the last year the rule making was amended, and the **Federal Register** citation from the time the rule making was last amended. This list was generated with artificial intelligence and the Department believes it is accurate, but it is conceivable that some Department regulations are not included. This list includes all Department regulations, including those that may be exempt from this final rule. The Department believes it would be informative to the public to provide a list of all Department regulations, as well as their **Federal Register** citations and promulgation dates. The Department intends to update this list annually with newly-issued regulations. The schedule for Assessment and Review is discussed in Section II.F.

HHS disagrees that this final rule is for the benefit of well-financed special interests. As the Department observed in the proposed rule, empirical evidence confirms that, due to the inherent advantage from economies of scale, large, well-capitalized entities are better positioned to absorb compliance costs than small entities.[202] By announcing Assessments and Reviews on *Regulations.gov*, and putting the dockets for Assessments and Reviews on *Regulations.gov*, this final rule reduces the costs associated with having to monitor two separate websites. The regulatory impact analysis for this final rule addresses the estimated impacts for this final rule, including monitoring and comment costs.

Comment: A few commenters suggested that instead of the process set forth in the proposed rule, HHS should provide a means of soliciting public comment at least every ten years on the Department's existing rules, which the Department would then be required to consider.

Response: The Department is incorporating aspects of this suggestion. This final rule makes the nature of complaints or comments on a regulation one of the factors to be considered when performing Reviews. But the commenters' suggestion by itself would not be adequate to address the problem. The Department's rules have always been open for public comment under 5 U.S.C. 553(e), yet only limited retrospective review has taken place, contrary to Congressional intent. The suggestion that the Department take a passive role in retrospective review is inconsistent with the RFA, which intends for HHS to engage in this analysis on its own initiative.

Comment: Several commenters stated that, according to the process set forth in the proposed rule, it would be difficult, if not impossible, for the public to accurately determine whether a regulation is subject to an Assessment, and if so, the deadline for informing the agency and commenting. These commenters surmise that there could be scenarios where a regulation was not Assessed, but it is unclear whether it has expired or was exempt from the regulatory review process and is still in place. This could leave regulated entities subject to the regulation without guidance on what is expected of them, or could result in regulations being inadvertently removed with negative impacts on beneficiaries, consumers, and the public in general.

Response: The Department respectfully disagrees. Again, as stated above, the Department intends to timely Assess and (if needed) Review its regulations. This final rule provides that un-Reviewed and un-Assessed Sections expire based on the time elapsed since the Year of the Section's promulgation. To aid the public, in conjunction with this final rule the Department is placing at *https://www.hhs.gov/regulations/federal-registry/index.html* a list of Department rule makings, the year they were initially promulgated, the last year the rule making was amended, and the **Federal Register** citation from the time the rule making was last amended. This list was generated with artificial intelligence and the Department believes it is accurate, but it is conceivable that some Department regulations are not included. This list is meant to be an aid to the public and the Department, but the **Federal Register** and Code of Federal Regulations are what have legal force and determine the dates of promulgation. Moreover, a regulated entity can use the **Federal Register** and Code of Federal Regulations to determine the year in which a Section was promulgated. From there, the regulated entity can determine the year by which a Section must be Assessed and (if needed) Reviewed. The regulated entity can consult the **Federal Register** document containing the findings of the Department's Assessments and Reviews from that year to determine if the Section was timely Assessed and (if needed) Reviewed. This is less burdensome than many legal research activities that regulated entities need to do to determine whether they are in compliance with the law. Regulated entities frequently must determine whether a particular statute or regulation is still in effect, has been amended, or whether there is a proposed change to the statute or regulation before Congress or in front of an agency.

Comment: Several commenters had comments related to APA petitions. A commenter stated that the APA also includes a process for the public to petition for retrospective review of existing rules. *See* 5 U.S.C. 553(e). Other commenters noted the APA does not specify the process for receiving petitions. As a result, according to the commenters, how petitions are received and treated varies across—and even within—agencies. These commenters stated that to date, HHS has not adopted any particular regulations concerning the form that petitions under section 553(e) must take. Nor has HHS adopted recommendations by the Administrative Conference of the United States for receiving, processing, and responding to petitions. A few commenters noted that they had submitted petitions but no action had been taken to date on their request. For example, one commenter stated that it filed citizen petitions in August 2016 and February 2017 asking the agency to remove outdated recordkeeping requirements. Another commenter stated that in February 2018 it commented to the Food and Drug Administration Center for Veterinary Medicine (CVM) on regulations that the commenter claimed are outdated or needing improvement.

Response: The Department respectfully disagrees with the commenters' suggestion that the petition mechanism in 5 U.S.C. 553(e) somehow undercuts or forecloses this final rule. Indeed, the substantive point of these comments—that the agency should retrospectively review its rules to determine whether amendment or rescission is necessary, especially where pressed to do so by the public—is fully consistent with this final rule. The commenters who stated they petitioned the Department to amend or rescind regulations, yet the Department took no action, further supports why this final rule is needed (although the Department takes no position in this final rule on whether any particular commenters' petition had merit).[203] The comments

Products, Including Reliance on Component Part Testing, 85 FR 52078 (Aug. 24, 2020).

[202] 85 FR 70118 & n.145.

[203] *See also* Maeve P. Carey, Cong. Rsch. Serv., R46190, Petitions for Rulemaking: An Overview 1 (2020) (describing § 553(e) as ''arguably

Continued

suggest the Department is not examining its existing regulations as often as is desired. Moreover, 5 U.S.C. 553(e)'s petition process does not make this final rule unnecessary, because there is reason to believe that even some rules that have not been the subject of any petitions would benefit from amendment or rescission.[204] The literature and the Department's experience suggest that large numbers of regulations are having impacts that, over time, differ from what was estimated at the time of promulgation.

Some HHS components have regulations governing petitions.[205] But whether the Department should have additional or different petition procedures is outside the scope of this final rule, which, like 5 U.S.C. 610, operates independently of 5 U.S.C. 553(e)'s petition process.

Comment: Some commenters stated that it was arbitrary for HHS to not meaningfully consider other ''strong incentives'' to revisit its own rules besides the process it proposes. For example, commenters suggested that HHS could have explored creating a petition process whereby parties could request review of certain rules, or could have convened a Federal Advisory Committee to advise the Department on which rules merit review. In both these scenarios, HHS could incentivize itself to act by giving parties a right of judicial review if the Department failed to respond to a petition or a Committee recommendation.

Response: HHS respectfully disagrees. The APA itself already affords a process for petitioning for review of rules. 5 U.S.C. 553(e) (''Each agency shall give an interested person the right to petition for the issuance, amendment, or repeal of a rule.''). And denials of such petitions may be subject to the APA's judicial review procedures.[206] Notwithstanding the existence of section 553(e), comprehensive retrospective review of agency rules has not taken hold. The literature suggests large numbers of Department regulations are having impacts that differ from their estimated impacts. It is unlikely that a Federal Advisory Committee could undertake the scale of review needed to comprehensively advise on which regulations merit review.

Comment: Some commenters stated that the Department should provide clear notice to the public of when a Regulation may be about to expire, and provide actual notice of rescissions.

Response: The Department reiterates its previous response to a similar comment. The Department intends to timely Assess and, where required, Review all its regulations. However, if the Department has not announced that it is Assessing or Reviewing a regulation, and the deadline is nearing, the public is on notice that it might expire, just as the public is on notice that a regulation might be rescinded when an agency issues a notice of proposed rulemaking to rescind the regulation.[207] Moreover, section [XX](f) requires that the Department, in announcing the results of Assessments and Reviews, ''shall also specify the year by which the next assessment (and, if required, the next review) of the Section shall be completed.''

The Department plans to periodically announce in the **Federal Register** regulations that have expired, and have the Code of Federal Regulations revised accordingly.

Final Section [XX](h)

Accordingly, based on public comments, HHS finalizes section [XX](h) to provide that when the Department commences the process of performing an Assessment or Review, it shall state on a Department-managed website the Section(s) whose Assessment or Review it is commencing. It shall also announce once a month in the **Federal Register** those new Assessments or Reviews that it has commenced in the last month. The Department will create a docket on *Regulations.gov* for each Assessment or Review that the Department is conducting. The public will be able to submit comments to the dockets of each rule making being Assessed or Reviewed. Each docket shall specify the date by which comments must be received. There shall also be a general docket on *Regulations.gov* where the public can submit comments requesting that the Department assess or review a Section.

Section [XX](i)

Lastly, the proposed rule included a severability clause. The Department stated in the proposed rule that it believes the proposed rule fully complies with applicable law, but does not wish to see the entire proposed rule vacated in the event that a portion of it is vacated. For example, the Department does not wish to see the entire final rule vacated because one of the exceptions listed in section [XX](g) is invalidated. However, the Department requested comment in the proposed rule on whether the amendments to add expiration dates should be severable from other portions of the proposed rule, including the requirements to perform Assessments and Reviews. The Department stated that it was requesting comments on this because it is not clear that the proposed rule could properly function without the expiration dates.

HHS received no comments specific to Section [XX](i) of the proposed rule.

Accordingly, for the reasons stated in the proposed rule, HHS finalizes the provisions of Section [XX](i) as proposed.

Additional Comments on Particular Regulations

Comment: Commenters identified certain regulations that they would not want to expire under the proposed rule. These regulations include, but are not limited to:

- Regulations implementing Medicare, Medicaid, CHIP, and other large programs that HHS administers.
- Regulations implementing the Affordable Care Act (ACA).
- Regulations that operate Temporary Assistance for Needy Families (TANF) program, the Child Care and Development Fund (CCDF) program, Head Start and Early Head Start Programs, and the Family Violence Prevention and Services (FVPSA) Program.
- FDA Regulations at 21 CFR Chapter 1.
- Provisions at 42 CFR 435.603 which determine financial eligibility using the Modified Adjusted Gross Income (MAGI) methodologies.
- Regulations implementing Income and Eligibility Verification requirements at 42 CFR 435.940–435.965.
- 42 CFR 435.907, related to Medicaid application requirements.
- Medicaid cost-sharing regulations.
- Regulations governing Medicaid waivers, including Section 1115 and Section 1332 waivers and Home & Community-Based Services (HCBS) waivers.
- Fair Hearings for Applicants and Beneficiaries requirements in 42 CFR 431 Subpart E.
- Confidentiality regulations in 42 CFR part 431 Subpart F.
- Regulations relating to comparability or services for groups of

beneficiaries and sufficiency of amount, duration, and scope of Medicaid services, found at 42 CFR 440.230–440.250.

- The Medicaid balanced billing regulation at 42 CFR 447.15.
- Regulations that shape children's access to care in a wide range of areas, including but not limited to: 42 CFR 438.1–438.930—Medicaid Managed Care; 42 CFR 447.56—Limitations on premiums and cost sharing; 42 CFR 447.203—Documentation of access to care and service payment rates; 42 CFR 447.204—Medicaid provider participation and public process to inform access to care; 42 CFR 447.400—Payments for Primary Care Services Furnished by Physicians; 42 CFR 410.78—Telehealth services; 45 CFR 156.10–156.1256—Health Insurance Issuer Standards Under the Affordable Care Act, Including Standards Related to Exchanges.
- Regulations concerning infant formula, including: 21 CFR 101: Food Labeling; 21 CFR 105.65: Infant Foods; 21 CFR 106: Infant Formula Requirements Pertaining to Current Good Manufacturing Practice, Quality Control; Procedures, Quality Factors, Records and Reports, and Notifications; 21 CFR 107: Infant Formula; and 21 CFR 312: Investigational New Drug Application.
- Regulations implementing the Vaccines for Children Program at 42 CFR 441.600–441.615 and Grants for Childhood Immunization Programs at 42 CFR 51b.201–51b.206.
- Regulations implementing title IV–E programs that HHS administers, which provide funds for States and Tribes to provide foster care, transitional independent living programs for children, guardianship assistance, and adoption assistance for children with special needs at 45 CFR part 1356.
- Regulations that pertain to maternal and child health project grants administered by the Health Resources and Services Administration's Maternal and Child Health Bureau at 42 CFR 51a.1–42 CFR 51a.8.
- Medicaid regulations that outline the mandatory and optional benefits that States commonly use to finance home visiting services, such as: Extended pregnancy services (42 CFR 440.210, 42 CFR 440.220); Targeted case management (42 CFR 440.169(b)); Medical or other remedial care by licensed practitioners (42 CFR 440.60); Early and Periodic Screening, Diagnostic and Treatment (42 CFR 440.40(b)); Medicaid Administrative Claiming (42 CFR 433.15); and Managed care (42 CFR part 438).
- Regulations in 45 CFR Subchapter B that require insurance coverage of essential health benefits (EHBs) such as preventive health services, prohibit preexisting condition exclusions, and establish fair practices in setting health insurance premiums and mental health parity, among other protections.
- Regulations in 42 CFR part 441, which sets forth State Medicaid plan requirements and Federal Financial Participation for specific services. Commenters specifically mentioned Early and Periodic Screening, Diagnosis, and Treatment (EPSDT) regulations found throughout Part 441, which provide essential comprehensive and preventive services to children who are covered by Medicaid.
- Regulations that protect nursing home patients by requiring reasonable promptness for medical assistance fair hearing obligations (42 CFR 435.930(a), 42 CFR 431.10(c)(3); 435.1200(b).
- Regulations found in 42 CFR part 483 protecting long term care facility residents, and specifically Subpart G, which protects children in psychiatric residential treatment facilities (PRTFs) from restraint and seclusion used as a means of ''coercion, discipline, convenience or retaliation.''
- Regulations found in 42 CFR part 460, implementing Programs of All-Inclusive Care for the Elderly (PACE).
- Regulations implementing the Medicare Low Income Subsidy program under 42 CFR part 423.
- Regulations at 42 CFR part 438 which implement Medicaid Managed Care.
- Regulations related to food ingredients, including color additives (21 CFR parts 70–82), Generally Recognized as Safe (GRAS) regulations, and procedural regulations governing the agency's premarket review functions, among others.
- Regulations implementing the Food Safety Modernization Act (FSMA), Good Manufacturing Practices (GMPs), low acid canned foods/acidified foods (LACF/AF), Hazard Analysis and Critical Control Point (HACCP) regulations for juice and seafood, Dietary Supplement GMPs, import/export requirements, and infant formula, among others).
- Nutrition labeling regulations.
- Regulations implementing Food Standards of Identity and Quality (*e.g.,* dairy standards, bottled water (21 CFR 165.110), cacao products, and other food categories).
- Regulations implementing the Family Smoking Prevention and Tobacco Control Act (the ''TCA'').
- Regulations governing the Indian health system, the Indian Health Service's (IHS) Tribal Self-Governance program, and Indian specific provisions in the Medicaid, Medicare CHIP and Marketplace regulations.
- Regulations implementing the Indian Child Welfare Act, which impacts all Indian Health Service regulations (42 CFR parts 136 and 136a) and the Department's Tribal Self-Governance regulations (42 CFR part 137).
- Regulations implementing the Mental Health Parity and Addiction Equity Act (MHPAEA), which requires that mental health and substance use disorder coverage be comparable to general medical coverage.
- Regulations that implement programs authorized by the Developmental Disabilities Assistance and Bill of Rights Act that help ensure people with intellectual or developmental disabilities and their families have access to needed community services and individualized supports, and other programs that are important to people with disabilities, such as the Independent Living programs and critical safety net programs such as Medicaid.
- 42 CFR 457.520, relating to cost sharing for well-baby and well-child care services.
- Regulations in 42 CFR part 407 relating to Hospital Insurance Entitlement and Supplementary Medical Insurance Enrollment and Entitlement, Part B enrollment including so-called state buy-in plans would harm seniors, and retroactive liability for Part B premiums when a beneficiary loses eligibility for a buy-in plan.
- Provisions found at 45 CFR 146.136 that apply the federal law requiring parity between private health insurance coverage for physical ailments and for mental illness and substance use disorders would be at risk.
- Regulations that implement the Title X Family Planning Program.
- Regulations guiding the practice of social work.
- Regulations implementing the Health Insurance Portability and Accountability Act of 1996 (HIPAA), found in 45 CFR parts 160, 162, and 164, particularly 45 CFR 164.502, which clarifies and strengthens privacy protections people with HIV.
- Preadmission Screening and Resident Review (PASRR) regulations found at 483.100 through 483.138.
- Regulations protecting the confidentiality of Substance Use Disorder (SUD) patient records, found at 42 CFR part 2.
- Regulations that prohibit insurance plans and issuers from imposing

financial requirements or treatment limitations on mental health and SUD benefits that are more restrictive than those that apply to medical/surgical benefits.

- Office of Human Research Protections (OHRP) regulations in 45 CFR part 46, and FDA regulations at 21 CFR part 50, which protect human research subjects.
- Regulations in 45 CFR part 96, which govern block grants.
- 42 CFR 489.24, related to the special responsibilities of Medicare hospitals in emergency cases.
- Regulations concerning Section 1557 of the Affordable Care Act, which prevents discrimination on the basis of race, sex, sexual orientation, and gender identity in healthcare settings.
- Regulations implementing the Ryan White Program
- Regulations governing Medicare's Six Protected Classes.
- Regulations related to the Congregate and Home-Delivered Nutrition Programs.
- Regulations related to over-the-counter medicine products.
- Regulations at 42 CFR 425.612 identify the circumstances under which specific payment regulations are waived under the accountable care organization (ACO) program.
- Regulations related to non-emergency medical transportation (NEMT).
- Regulations affecting the domestic and global seafood industry.
- Regulations affecting the pet food industry.
- Regulations implementing the Medicare Modernization Act, such as 42 CFR 422.2268, which establishes standards for marketing by MA plans.
- Regulations requiring CMS programs to include an extraordinary circumstances exception (ECE) policy for natural disasters and other circumstances (*see* 42 CFR 412.140(c)(2) for the inpatient quality reporting (IQR) program and 42 CFR 412.160(c)(1)–(4) for the value-based purchasing program).
- Regulations at 42 CFR 441.62, which require, according to the commenters, that states assure transportation for periodic screening and treatment for Medicaid eligible children, and regulations at 42 CFR 440.170(a), which provide the definition for what constitutes transportation, *e.g.,* ambulance, taxicab, common carrier or other appropriate means, as well as meals and lodging for both the child and necessary attendant.
- 42 CFR 440.230(b)–(d), which requires that services be ''sufficient in amount, duration, and scope to reasonably achieve their purpose,'' directs states not to ''arbitrarily deny or reduce the amount, duration, or scope of such services to an otherwise eligible individual solely because of the diagnosis, type of illness, or condition,'' and permits states to place appropriate limits on a service based on such criteria as ''medical necessity'' or on utilization review criteria.
- 42 CFR 435.831, which establishes the standards for determining eligibility for the ''medically needy''—an optional category that may enable aged, blind and disabled persons in certain states who have ''excess income'' above the Medicaid limits to qualify for Medicaid, if they incur certain medical expenses.
- 42 CFR 415.174 Exception: Evaluation and management services furnished in certain centers.
- 42 CFR 457.496—Parity in mental health and substance use disorder benefits.
- 42 CFR 457.410—Health benefits coverage options.
- What commenters characterized as many highly important and sensitive Medicare provisions in Title 42, CFR parts 400–499 that directly impact beneficiaries and health care providers. Some of these provisions include beneficiary and provider appeal rights (Part 405); Part A eligibility and entitlement provisions (Part 406); Part B enrollment and entitlement provisions (Part 407); provisions that outline the scope of Part A Benefits, including hospital and skilled nursing facility coverage (Part 409); Medicare Advantage coverage rules and enrollee protections (Part 422); and, Part D prescription drug parameters (Part 423).

Response: The Department thanks the commenters for identifying these regulations. The Department intends to timely Assess and (if necessary) Review these regulations.

Comment: Commenters identified certain regulations for which they would like the Department to prioritize amendment through its proposed retrospective regulatory review process. These regulations include, but are not limited to:

- Regulations mandated for review by the 21st Century Cures Act, Public Law 114–255, sec. 2034, 130 Stat. 1033 (2016). Section 2034 of that Act requires the Secretary to lead a review by research funding agencies of all regulations and policies related to the disclosure and reporting of financial conflicts of interest to reduce administrative burden on federally funded researchers. It also calls for the Secretary to harmonize the differences between the Basic HHS Policy for the Protection of Human Research Subjects (45 CFR part 46, subpart A) and the FDA regulations for the protection of human subjects (21 CFR parts 50 and 56). Commenters stated that these regulations are well overdue for assessment and review.
- Regulations covering access to skilled therapy services, which commenters say must be updated to reflect the national settlement in the *Jimmo* v. *Sebelius* litigation to codify the fact that skilled services are covered for Medicare beneficiaries not just to improve function, but to maintain or prevent deterioration in function.
- The dockets established by FDA's Center for Food Safety and Applied Nutrition and Center for Veterinary Medicine on Sept. 8, 2017,[208] in which the Centers requested comments and information to assist in identifying existing regulations and related paperwork requirements that could be modified, repealed or replaced, consistent with the law, to achieve meaningful burden reduction while allowing FDA to achieve its public health mission and fulfill statutory obligations are examples of incomplete regulatory review initiatives.[209] Commenters stated that despite submitting extensive comments that detailed numerous regulations that they believe could be modified, repealed or replaced, the agency did not take any further action.

Response: The Department thanks the commenters for identifying these regulations. The Department intends to timely Assess and (if necessary) Review these regulations. If the Assessments and Reviews suggest these regulations should be amended or rescinded, the Department will commence rulemaking to amend or rescind them.

Comment: Commenters identified certain regulations that they would want amended or rescinded. These regulations include, but are not limited to:

- What the commenters characterized as unnecessary burdens in post-acute care (PAC) regulations.
- What the commenters characterized as the outdated and inappropriate ''in the home'' requirement for coverage of durable medical equipment (DME), which commenters believe significantly limits the mobility devices available to beneficiaries with mobility disabilities.

[208] *E.g.,* Nonrulemaking Docket FDA-2017-N-5093: Review of Existing General Regulatory and Information Collection Requirements of the Food and Drug Administration, *https://beta.regulations.gov/docket/FDA-2017-N-5093.*

[209] *See* Review of Existing General Regulatory and Information Collection Requirements of the Food and Drug Administration, 82 FR 42506 (Sept. 8, 2017); FDA-2017-N-5093, *https://beta.regulations.gov/docket/FDA-2017-N-5093.*

Response: The Department thanks the commenters for identifying these regulations. The Department intends to timely Assess and (if necessary) Review these regulations. If the Assessments and Reviews suggest these regulations should be amended or rescinded, the Department will commence rulemaking to amend or rescind them.

Comment: Some commenters provided feedback on what baseline the Department could use when conducting an analysis of an existing regulation. Commenters suggested that HHS could simply conduct an ex ante analysis of how the regulation is likely to perform going forward compared with the baseline scenario of what would happen if the regulation were allowed to expire. The benefits of this approach, according to the commenters, are that HHS already produces ex ante analyses (so this approach would not be departing from present practices), the analysis could still include a backward-looking component to the extent that data on past performance could be used to forecast the regulation's future performance, and the regulation's future performance is what should ultimately determine whether the regulation should continue as-is or be amended or rescinded. Another option, according to commenters, is that the Department could perform a retrospective cost-benefit analysis that looks at how the regulation performed relative to the baseline of what would have happened in the absence of the regulation, or relative to the regulation as it stood before it was last significantly amended.

Response: The Department appreciates this comment. The comments suggest different approaches may make sense for different regulations. Accordingly, the Department declines to adopt in this final rule a single method for conducting retrospective reviews. Reviews must be conducted in a manner that is not arbitrary and capricious under the APA, so that will provide a minimum level of rigor that all Reviews will have to meet, though different methodologies may be appropriate in different cases. The Department intends to take into account these comments when conducting Reviews pursuant to this final rule.

V. Regulatory Impact Analysis (Executive Orders 12866, 13563, 13771)

A. Executive Order 12866 Determination

Executive Order 12866 directs agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary and not prohibited by statute, to select regulatory approaches that maximize net benefits. Section 3(f) of Executive Order 12866 defines a ''significant regulatory action'' as an action that is likely to result in a regulation (1) having an annual effect on the economy of $100 million or more in any one year, or adversely and materially affecting a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or tribal governments or communities (also referred to as ''economically significant''). OMB has designated this rule as economically significant for the purposes of Executive Order 12866. This regulatory impact analysis fulfills analytical obligations under section 3(f) of Executive Order 12866 for economically significant rulemakings.[210]

B. Need for Regulation

The first principle of regulation, according to Executive Order 12866, is that ''Each agency shall identify the problem that it intends to address (including, where applicable, the failures of private markets or public institutions that warrant new agency action) as well as assess the significance of that problem.'' The regulation being finalized by the Department addresses lax compliance with periodic review requirements under the Regulatory Flexibility Act (RFA) of 1980 and the need to periodically review existing regulations to determine if they are having their intended impacts. Section 610 of the RFA calls upon the Department to have a plan to conduct periodic reviews of its regulations that have or will have a significant economic impact upon a substantial number of small entities (SEISNOSE). The RFA directs agencies to consider the following factors as part of those reviews: (1) The continued need for the rule; (2) the nature of complaints or comments received concerning the rule from the public; (3) the complexity of the rule; (4) the extent to which the rule overlaps, duplicates or conflicts with other rules; and (5) the length of time since the rule has been evaluated or the degree to which technology, economic conditions, or other factors have changed in the area affected by the rule.

A review of department semi-annual agenda reports over the last ten years, as well as a review of specific rules identified in those agendas as completed rulemakings resulting from section 610 reviews, indicated three completed final rulemakings that emanated from section 610 reviews since 2011.[211] (These rules are presented in table 1 below). To put this in context, the Department estimates it has roughly 18,000 regulations under its purview and that five regulations on average are part of the same rulemaking. Further, (as discussed in more detail below) the Department estimates approximately 11% of its regulations have a SEISNOSE, which suggests that approximately 396 Department rulemakings have a SEISNOSE. The three rules in table 1 amend approximately 130 sections of the CFR. (If an average rulemaking contains five sections, 130 sections correspond to the number of sections on average in approximately 26 rulemakings.) Given that Section 610 of the RFA sets a 10-year schedule for review of rulemakings, one might expect that roughly ten percent of regulations with a SEISNOSE would be reviewed each year, which would be approximately 40 rulemakings every year.[212] Moreover, many of these regulations should likely be updated to reflect evolving circumstances. However, this does not appear to be occurring.[213]

[210] This analysis was informed by public comments and also by work of Dr. James Broughel.

[211] Note that some rules labeled as 610 reviews in Department semi-annual agendas were not, in actuality, a result of section 610 reviews.

[212] There are roughly 3,600 rulemakings (18,000 divided by 5). 11% of this figure is 396. Ten percent of 396 is roughly 40.

[213] A review of Department semiannual regulatory agendas issued between June of 2016 and August of 2020 confirms the three rules listed in table 1 are the only three final rulemakings to be completed in the last five years that are also associated with section 610 reviews. One rule, 0938–AT23, was merged with another rule, 0938–AS21. *See* Dept. Health & Human Servs., Semiannual Regulatory Agenda, 81 FR 37,294 (Jun. 9, 2016); 81 FR 94742 (Dec. 23, 2016); 82 FR 40278 (Aug. 24, 2017); 83 FR 27126 (Jun. 11, 2018); 83 FR 58020 (Nov. 16, 2018); 84 FR 29624 (Jun. 24, 2019); 84 FR 71130 (Dec. 26, 2019); and 85 FR 52704 (Aug. 26, 2020).

TABLE 1—FINAL ACTIONS AS A RESULT OF SECTION 610 REVIEWS SINCE 2011

Name of rulemaking	CFR citation and RIN	Year	Regulatory changes made as a result of Section 610 reviews
Medicare and Medicaid Programs; Regulatory Provisions To Promote Program Efficiency, Transparency, and Burden Reduction; Fire Safety Requirements for Certain Dialysis Facilities; Hospital and Critical Access Hospital (CAH) Changes To Promote Innovation, Flexibility, and Improvement in Patient Care.	42 CFR Parts 403, 416, 418, 441, 460, 482, 483, 484, 485, 486, 488, 491, and 494. RIN 0938–AT23	2019 (Final Rule)	Reformed Medicare regulations that were identified as unnecessary, obsolete, or excessively burdensome on health care providers and suppliers, and increased the ability of health care professionals to devote resources to improving patient care by eliminating or reducing requirements that impede quality patient care or that divert resources away from furnishing high quality patient care. Updated fire safety standards for Medicare and Medicaid participating End-Stage Renal Disease (ESRD) facilities by adopting the 2012 edition of the Life Safety Code and the 2012 edition of the Health Care Facilities Code, and updated the requirements that hospitals and Critical Access Hospitals must meet to participate in the Medicare and Medicaid programs. Requirements were intended to conform to current standards of practice and support improvements in quality of care, reduce barriers to care, and reduce some issues that may exacerbate workforce shortage concerns.
Medicare and Medicaid Programs; Conditions of Participation for Home Health Agencies.	42 CFR Parts 409, 410, 418, 440, 484, 485 and 488. RIN 0938–AG81	2017 (Final Rule)	Revised the conditions of participation that home health agencies (HHAs) must meet in order to participate in the Medicare and Medicaid programs. The new requirements focus on the care delivered to patients by HHAs, reflect an interdisciplinary view of patient care, allow HHAs greater flexibility in meeting quality care standards, and eliminate unnecessary procedural requirements.
Medicare and Medicaid Programs; Reform of Requirements for Long-Term Care Facilities.	42 CFR Parts 405, 431, 447, 482, 483, 485, 488, and 489. RIN 0938–AR61	2016 (Final Rule)	Revised the requirements that Long-Term Care facilities must meet to participate in the Medicare and Medicaid programs. These changes are necessary to reflect the substantial advances that have been made over the past several years in the theory and practice of service delivery and safety.

The Department's limited success in performing retrospective regulatory review is further supported by a regulatory reform project the Department piloted, which utilized AI-driven data analysis. Machine-learning algorithms identified over 1,200 CFR section citations that merited consideration for reform and 159 CFR sections that could benefit from regulatory streamlining based on their similarities to other sections.[214] That project uncovered that 85% of Department regulations created before 1990 have not been edited, and that the Department has nearly 300 broken citation references in the CFR (*i.e.,* CFR sections that reference other CFR sections that no longer exist).[215] These findings are consistent with a 2018 study by the same consulting firm that estimated that 68 percent of federal regulations have never been updated.[216] These findings suggest regulations are not being updated to reflect evolving economic conditions and technology, even though this is a goal of the RFA.

Machine-learning tools also demonstrate the complexity of Department rules—and reducing complexity is another goal of the RFA. *See, e.g.,* 5 U.S.C. 610(b)(3). Data from the Mercatus Center show that the Department's regulations in 2019 received a Shannon entropy score of 8.2. Shannon Entropy is a measure of complexity based on the amount of information contained in text. It can be thought of as measuring the number of new ideas that are introduced in a document, or, alternatively, how much computational effort would be required to understand a document. To put the Shannon entropy score into context, a typical Shakespeare play receives a Shannon entropy score of 8.0. The complexity of Department regulations is not entirely surprising given that regulations often involve science, engineering, or other highly technical material. However, having regulations that are more complex than a typical Shakespeare play would seem to be at odds with various directives that fall on the Department for regulations to be simple, easy to understand, and written in plain language.[217]

TABLE 2—2019 SHANNON ENTROPY SCORE FOR HHS REGULATIONS

Department	Shannon entropy score

reviewed and revised to align with technological, economic, and other developments. Section 5 of Executive Order 12866 requires agencies to submit to the Office of Information and Regulatory Affairs (OIRA) a plan to periodically review their existing significant regulations to determine whether any such regulations should be modified or eliminated so as to make the agency's regulatory program more effective in achieving regulatory objectives, less burdensome, or in greater alignment with the President's priorities and principles. Section 6 of Executive Order 13563 similarly requires agencies to submit to OIRA a plan to periodically review their existing significant regulations to determine whether any such regulations should be modified, streamlined, expanded, or repealed so as to make the agency's regulatory program more effective or less burdensome in achieving regulatory objectives.

However, existing executive orders have not institutionalized a process for retrospective review and periodic updating of regulations, as evidenced by the fact that relatively few Department regulations are updated. Furthermore, every president since Jimmy Carter, including all those elected after enactment of 5 U.S.C. 610, has ordered some form of retrospective review of regulations,[218] with mixed effects. This suggests that stronger incentives and forcing mechanisms are needed to ensure retrospective review occurs to an appropriate extent.

Some commenters suggested that a review of existing regulations does not make sense during a pandemic, but this misses the broader point that the Department has waived, suspended, or exercised enforcement discretion not to enforce many regulations in order to respond to the pandemic.[219] Had the Department not done so, this may have hampered the Department's ability to respond nimbly, flexibly and quickly to the emergency.[220] For example, the Department has issued waivers or exemptions, or exercised enforcement discretion with respect to, certain Medicare, Medicaid, CHIP, and HIPAA restrictions, including waivers to increase hospital capacity, ease restrictions on services rendered by medical residents, and allow patients to seek more services via telehealth. Meanwhile, other regulations that may have facilitated pandemic response have remained in place.

The Department's position is that retrospective review would require some change from the status quo, and unless there is a strong incentive to change, continuing business as usual is the path of least resistance.[221] Thus, the status quo is maintained. Moreover, rescinding a regulation that has already been promulgated is likely to meet greater resistance than resistance to foregoing promulgating a regulation not yet enacted. This reflects a phenomenon known as loss aversion.[222]

The Department's determination is that this final rule will address these issues by changing the choice architecture facing the Department by enacting a new default rule when the Department fails to conduct retrospective reviews. Sunset provisions change the default from rules staying on the books indefinitely to rules being eliminated after some predetermined amount of time unless evidence is presented for why rules should continue. When a default rule is changed, the choice architecture confronting decision makers is altered and can spur changes in behavior. A consistent finding in the literature on behavioral anomalies is that choice architecture and default rules have an important influence on decision making.[223] Changes in the Department's choice architecture can ultimately result in changes in public wellbeing.

To conclude, this final rule is intended to address a failure to periodically review regulations as often as desired in line with the RFA and other directives for retrospective review. The Department believes that this final rule, by changing the default for regulations from continued existence to expiration unless periodic review is conducted, will result in more widespread retrospective review of regulations. Requiring the expiration of rules that have not been assessed or reviewed in accordance with section 610 of the RFA should result in more regulations being updated to reflect evolving circumstances.

C. Alternatives Considered

The Department considered several alternatives to the proposed regulation. First, it considered not issuing this final rule. However, the RFA and certain Executive Orders direct the Department to periodically review certain Department regulations. Moreover, the literature and the Department's experience suggest that large numbers of regulations are having estimated impacts that, over time, differ from what was estimated at the time the regulations were promulgated, so many regulations should be periodically reviewed.[224] The Department's experience over the last forty years is that, absent a strong incentive such as the potential expiration of a regulation, the Department will not review an adequate number of its regulations.

Next, the Department considered seeking to perform the reviews called for by the RFA without implementing a new forcing mechanism. Given past experience, however, it seems unrealistic to assume this would bring about meaningful change. First, the fact that these reviews are not already occurring is evidence they are unlikely to occur in the future. Second, as discussed above, there is a strong bias towards the status quo in governmental action, and this may stand in the way of behavior changes. Third, the literature suggests that enforcement mechanisms are needed to spur more periodic reviews, and specifically that sunset provisions are a useful enforcement mechanism.[225] Moreover,

Continued

even if the Department conducted the reviews called for by the RFA absent a new forcing mechanism, there might be benefits to this final rule, albeit ones that are hard to quantify. For example, this final rule could guard against a decrease in the frequency of Department retrospective reviews in future years.

Another alternative the Department considered is conducting in-depth Reviews of all of its Regulations (absent those that are exempt from this rulemaking), not just those designated as having a SEISNOSE. The Department sees value in conducting such widespread Reviews. However, the Department has opted not to require a complete Review of all Department regulations at the present time, although it leaves open the option to require such Reviews in the future.

The Department also considered conducting Reviews of significant regulations, as that term is defined in Executive Order 12866. The Department is choosing to Review those regulations that have a SEISNOSE, in order to maintain a close connection between this final rule and the RFA. The Department sought comment on whether to Review additional regulations, such as those that are significant under Executive Order 12866. Given limited responses to this request, the Department will not Review other regulations at this time beyond those designated as having a SEISNOSE. However, the Department leaves open the possibility to conduct Reviews of other regulations in the future.

The Department considered only Reviewing those regulations that, at the time of promulgation, the Department determined had a SEISNOSE. However, such determinations were not made for regulations that were promulgated prior to the passage of the RFA,[226] and some post-RFA regulations that did not have such a SEISNOSE at the time of promulgation might have such a SEISNOSE today. One commenter suggested that an alternative to the proposed rule would be to attach sunset dates only prospectively for regulations finalized after the effective date of this rule. The same commenter suggested requiring retrospective reviews only for those regulations specifically identified by stakeholders as problematic. But as a general matter, the Department believes that older regulations are more likely to be obsolete. As a result, the Department believes that this final rule should apply to them. Moreover, only reviewing regulations identified by stakeholders is unlikely to suffice. Regulations are known to create entry barriers into industries and these barriers often affect small businesses disproportionally.[227] Therefore, the Department believes stakeholder input cannot be the only source of information to spur reviews. Concentrated interest groups will lobby to protect regulations that have been specifically constructed for their benefit. Meanwhile, consumers, small businesses, and the public more generally often experience dispersed costs that are not taken into account by these stakeholders. The work of political scientist Mancur Olson explains why these groups that comprise broader society, because they are larger, face collective action problems and often find it costly to organize and lobby on behalf of their own interests.[228] Meanwhile, more narrow, concentrated interests find it relatively easier to organize and lobby for their own interests. Thus, stakeholders may not identify to the Department many regulations that are unduly burdensome to the public at large.[229]

The Department is also aware of literature suggesting that agencies have not been consistent in deciding which rules have a SEISNOSE or have avoided such a finding in order to avoid the RFA's requirements.[230] Moreover, 5 U.S.C. 610 presupposes the agency will make a determination about which regulations have or will have a SEISNOSE. This suggests there is good reason to Assess most of the Department's regulations. For these reasons, the Department has chosen to Assess all of its Regulations (subject to the exceptions listed herein) to determine which have a SEISNOSE and to Review those Regulations that have a SEISNOSE using the criteria listed in 5 U.S.C. 610 (as well as whether they comply with applicable law).

Finally, some commenters suggested that the Department include a provision granting the Secretary the authority to extend the expiration date in certain circumstances. Other commenters suggested that the proposed rule's two-year Assessment and Review period affecting some of the Department's older regulations was too short. In response, the Department has made several modifications to the final rule from its proposed form. First, regulations older than ten years will expire after five years, as opposed to expiring after two years, if these Regulations are not Assessed and (when necessary) Reviewed. Second, this final rule grants the Secretary a one-time option to push back this expiration date by one year for a given Regulation. Both of these modifications have the effect of lowering some costs of this final rule as compared to the proposed rule, because these changes lengthen the expected Assessment and Review period, pushing some costs into the future. This reduces the present value of these costs.

D. Cost Analysis

5 U.S.C. 610 already directs the Department to undertake periodic reviews of its regulations. Nevertheless, because the Department believes this final rule will stimulate a behavior change at the Department and among the public, the regulation has some costs associated with it. Therefore, the Department performed the following analysis to estimate the costs and burdens to the Department and the public from (1) Assessing which Department regulations have a SEISNOSE, and (2) Reviewing those regulations.

The Department has roughly 18,000 regulations, the vast majority of which it believes would need to be Assessed.[231] Roughly 12,400 of these

2020), *https://www.ag.gov.au/sites/default/files/2020-07/Guide%20to%20Managing%20Sunsetting%20of%20Legislative%20Instruments.pdf.*

[226] The Department estimates that 16% of its regulations that are more than ten years old were promulgated prior to 1980, when Congress passed the RFA.

[227] *See, e.g., Regulatory Reform: Hearings on S. 104, S. 262, S. 755, S. 1291 Before the Subcomm. on Admin. Practice & Procedure of the Comm. on the Judiciary,* 96th Cong. 3–4 (1979) (statement of Peter J. Petkas, Director, The Regulatory Council) (describing the disproportionate impact on small businesses and uncertainty about benefits resulting from burdensome regulations); 142 Cong. Rec. S1637 (daily ed. Mar. 7, 1996) (statement of Sen. Bond) (''The SBA chief counsel for advocacy released a report that said that small businesses bear a disproportionate share of the regulatory burden.''); Nicole V. Crain & W. Mark Crain, *The Impact of Regulatory Costs on Small Firms,* (U.S. Small Bus. Admin., Office of Advocacy, Washington, DC), at 55, 57 (2010) (finding that ''regulations cost small firms an estimated $10,585 per employee. Regulations cost medium-sized firms $7,454 per employee, and large firms $7,755 per employee,'' and that in the health care sector, the cost per employee is 45 percent higher in small firms than in medium-sized firms, and 28 percent higher in small firms than in large firms).

[228] Mancur Olson, The Logic of Collective Action (Harv. U. Press 1971).

[229] The Department welcomes comments from all members of the public on (1) regulations being Assessed or Reviewed pursuant to this final and (2) future notices of proposed rulemaking. The Department will consider comments received from all members of the public. We merely make this observation to explain why relying solely on stakeholders may not enable the Department to identify certain regulations that should be amended or rescinded.

[230] *See, e.g.,* Connor Raso, *Agency Avoidance of Rulemaking Procedures,* 67 Admin. L. Rev. 65, 93–95, 99–101 (2015); Michael R. See, *Willful Blindness: Federal Agencies' Failure to Comply with the Regulatory Flexibility Act's Periodic Review Requirement—And Current Proposals to Reinvigorate the Act,* 33 Fordham Urb. L. J. 1199, 1222–25 (2006).

[231] *See* Enhancing Regulatory Reform Through Advanced Machine Learning Findings (internal

regulations are over ten years old, and roughly 17,200 are more than five years old.[232] The vast majority of these would need to be Assessed within five years of this final rule's effective date (or six years if the optional extension is exercised by the Secretary). The Department estimates that roughly five regulations on average are part of the same rulemaking due to the number of unique **Federal Register** citations associated with its regulations. This would suggest the Department would have to perform roughly 3,440 Assessments in the first five years (or six for certain of these regulations if the extension is exercised by the Secretary, and 3,600 Assessments in total.

However, some of these rulemakings are exempt from this final rule. The Department estimates that approximately 66 parts of the CFR that the Department actively updates contain the vast majority of the regulations that are exempt from this final rule. According to analysis from the Mercatus Center, however, the Department has approximately 8,574 active parts of the CFR.[233] 66 parts are therefore less than 1% of the Department's active parts. As a result, the Department does not believe the exemptions will significantly alter the costs of this final rule.[234]

To help estimate the impact of this final rule, the Department conducted a limited randomized sampling[235] of its regulations and assessed whether the sampled regulations would be exempt from this final rule and whether, at the time of issuance, the regulations were: Economically significant; found to have a SEISNOSE; or subject to the Unfunded Mandates Reform Act (UMRA) of 1995. This information is included in table 3. Also included in table 3 is the estimated impact of the regulations when they were first promulgated.

TABLE 3—SAMPLED DEPARTMENT REGULATIONS

HHS slide) (the sum of the numbers listed in the table under the column denoted "#" is 17,890 Department regulations).

[232] *See id.* (adding the figures listed in the "#" columns for the 1950s, 1960s, 1970s, 1980s, 1990s, and 2000s yields 12,383 regulations. 17,200 regulations are estimated to have been issued by the end of 2016).

[233] These data are available at *Quantgov.org.*

[234] The exempt parts may on average have more Sections than other parts. But even still, it seems unlikely the exemptions would significantly alter the costs of this final rule. If the Department were incorrect about this assumption, costs from this final rule would likely be lower than estimated herein. Similarly, the Department does not have enough information at present to determine whether the CFR sections that could potentially benefit from regulatory streamlining based on their similarities to, overlap with, or duplicativeness of other Sections will lead to a reduction in Department costs of Assessments and Reviews, due to duplication of work. The initial Assessment of all non-exempt regulations would determine whether this is the case.

[235] With the aid of a random number generator, the Department selected Department regulations in each of its three main titles (21, 42, and 45) of the Code of Federal Regulations. The random number generator was used to identify the relevant part of each title of the CFR to assess.

TABLE 3—SAMPLED DEPARTMENT REGULATIONS—Continued

42	Organ Procurement and Transplantation Network.	63 FR 16296	No	Yes	No	No	Although incremental effects attributable to the rule were not estimated, impact categories would have included life-years saved by non-renal organ transplants, quality of life improvements for kidney recipients, and the admittedly expensive costs of transplantation.[241]
42	Medicare Program; Hospital Insurance Entitlement and Supplementary Medical Insurance Enrollment and Entitlement.	53 FR 47199	No	No	No	N/A (rule issued prior to UMRA being enacted).	N/A: "We have determined that a regulatory impact analysis is not required for these rules because they would not have an annual impact of $100 million or more."[242]
45	Cooperation in Identifying and Providing Information To Assist States in Pursuing Third Party Health Coverage.	56 FR 8926	No	No	No	N/A (rule issued prior to UMRA being enacted).	"[T]he cost of implementation is expected to be insignificant."[243]
45	Responsibility of Applicants for Promoting Objectivity in Research for which Public Health Service Funding is Sought and Responsible Prospective Contractors.	76 FR 53256	No	No	No	No	Estimated annual cost of $23,236,238.[244]
45	Rate Increase Disclosure and Review	76 FR 29964	No	No	No	No	"CMS estimates that issuers will incur approximately $10 million to $15 million in one-time administrative costs, and $0.6 million to $5.5 million in annual ongoing administrative costs related to complying with the requirements of this final rule from 2011 through 2013. In addition, States will incur very small additional costs for reporting the results of their reviews to the Federal government, and the Federal government will incur approximately $0.7 million to $5.9 million in annual costs to conduct reviews of justifications filed by issuers in States that do not perform effective reviews."[245]

None of the sampled regulations would be exempt from this final rule, meaning all sampled rules would need to be Assessed. This is consistent with the assumption that few enough regulations would be exempt from this final rule to significantly affect the cost estimates presented here. At the time the ten sampled regulations were promulgated, the Department believed that one of the ten had a SEISNOSE. If the Assessments' findings mirror the findings from the time of issuance, one of the ten sampled regulations would need to be Reviewed. Similarly, an academic study found 11.1% of Department final rules issued in 1993 had a SEISNOSE.[246] A more recent study found that 92% of agency rules were found to not be subject to the RFA, suggesting agencies believe roughly 8% of their regulations have a SEISNOSE.[247]

Assuming the Department has roughly 3,600 total rulemakings that are subject to this final rule; 3,440 of these are more than five years old (*i.e.* would be ten years old by the end of 2026); and that roughly 11% [248] have a SEISNOSE, then the Department might have to perform roughly 396 Reviews in total, of which 378 would have to be completed in the five years after this rule is finalized. However, some of these rulemakings might be reviewed as part of section 610 reviews even in absence of this final rule (*i.e.,* in the baseline scenario). As noted above, the Department estimates that the three completed rulemakings emanating from section 610 reviews over the last decade amend approximately 130 sections of the CFR.

[247] Connor Raso, *Agency Avoidance of Rulemaking Procedures,* 67 Admin. L. Rev. 65, 69 (2015).

[248] The Department chooses 11%, rather than 8% or 10%, because the study that found 11.1% of Department regulations had a significant economic impact upon a substantial number of small entities was focused solely on the Department's regulations.

If the decade following implementation of this final rule is similar to the previous decade, then the Department can expect to review and amend 130 sections of the CFR, which is equivalent to 26 average rulemakings if 5 regulations correspond with one rulemaking on average. These 26 rulemakings are assumed to be what would be Reviewed in the baseline scenario. Therefore, the Department expects to conduct 370 Reviews in total, of which 353 would have to be completed in the five years after this rule is finalized.[249]

Of the 353 rulemakings subject to Reviews in the first five years (or six years if the Secretary exercises the one-year extension authority), the Department estimates roughly 44 rulemakings were promulgated prior to the requirement for prospective regulatory flexibility analyses. Those 44 Reviews will require more Department resources than the estimated 309 Reviews of rulemakings promulgated after the prospective analysis requirement went into effect.

Therefore, as a result of this final rule, the Department expects to have to conduct 370 Reviews in total. These include approximately 44 rulemakings that were promulgated prior to the requirement for prospective regulatory flexibility analyses, and 326 Reviews of rulemakings promulgated after the prospective analysis requirement went into effect. Of these 326, the Department assumes most Reviews will occur earlier in the coming ten years such that 309 Reviews are conducted in the first five calendar years following implementation of this final rule and 17 of the Reviews occur in the second five calendar years. This is consistent with the fact that the vast majority, roughly 95 percent, of Department regulations are older than five years (and therefore will be more than ten years old by the end of 2026).

1. Costs Related to Section 610 Reviews of Regulations More Than Five Years Old

The majority of the Reviews conducted in response to this regulation will have to be conducted in the first five calendar years following implementation of this regulation, because the vast majority of the Department's regulations were finalized before the end of 2016. A full initial Regulatory Flexibility Act (RFA) analysis requires 250 to 500 hours to complete because federal agencies must analyze the impact of their regulatory actions on small entities (small businesses, small non-profit organizations and small jurisdictions of government) and, where the regulatory impact is likely to be ''significant'' and affecting a ''substantial number'' of these small entities, seek less burdensome alternatives for them. This involves defining the market and determining costs for each small entity. The section 610 review is a more streamlined analysis because the regulatory flexibility analysis is the starting point. The section 610 review focuses on five areas of analysis: (1) Whether there is a continued need for the rule, (2) the number and nature of complaints, (3) the complexity of the regulation, (4) whether there is duplication, and (5) the degree to which technology, economic conditions, or other factors have changed in the area affected by the rule, as well as whether the Regulation complies with applicable law. As such, the Department estimates that a Review will require significantly less time than a full RFA analysis.

The Department recognizes that some regulations were promulgated prior to when the requirement for prospective regulatory analysis went into effect, and that a section 610 review of such rulemakings may be more time intensive. The Department estimates 309 rulemakings from 2016 or earlier will be subject to section 610 review where some prospective analysis has been performed, in which case such reviews will take 40 to 100 hours. The Department estimates it will undertake section 610 reviews of 44 rules for which no prospective regulatory analysis was performed. The Department assumes that between 250 to 500 hours may be required for these reviews, even though the section 610 review is more circumscribed than a full regulatory flexibility analysis and will therefore generally take less time to perform. The Department also notes that there could be costs associated with publishing the notices of Assessments and Reviews to the Department's website and the **Federal Register** for public comment, but that such costs will be minimal and would not require the hiring of additional personnel.

Therefore, the Department estimates that a total of between 23,360 and 52,900 hours will be spent on Reviews outside the Assessment process during the first five years (the number of hours may ultimately be slightly less if the Secretary exercises the optional one-year extension with respect to some regulations), which will clear the backlog of section 610 reviews for regulations at least five years old. The Department assumes 40 to 100 hours per Review for the estimated 309 Reviews for which an initial prospective analysis was performed. The Department assumes 250 to 500 hours per Review for the estimated 44 Reviews where no such initial prospective analysis was performed.

The Department estimates that the fully-loaded cost per hour to the Department to employ a person to conduct a Review or Assessment is $244.98 per hour (referred to as ''*LaborCost*'').[250] Assuming the 23,360 to 52,900 estimated hours are spread evenly across the first five years following implementation of this final rule, and assuming a 7 percent discount rate, the present value of these costs ranges from $4.7 to $10.6 million in total. Without discounting, this is equal to 20.1 to 45.6 full-time equivalents (FTEs) working at *LaborCost* to initiate and conduct Reviews of regulations in the first 5 years.

2. Costs Related to Rulemakings That ''Age In'' To Section 610 Review

The Department estimates 17 rulemakings would ''age in'' [251] to the section 610 review requirement during years six through ten after this rule is finalized. The Department estimates it will require between 680 to 1,700 hours to Review these rules, because the Department assumes those 17 Reviews would take between 40 to 100 hours per Review, as each of those rulemakings were promulgated after prospective regulatory analysis was required. Assuming hours reviewing these rulemakings are spread equally across years six through ten, the Department estimates the present value of the cost of Reviewing 17 rulemakings in years six through ten to be between $0.1 million and $0.3 million at a seven percent discount rate. Without discounting, this represents 0.6 to 1.5 FTEs working at *LaborCost* to conduct 17 Reviews of rules that age into the Review requirement during the decade following implementation of this regulation.

[249] Since approximately 95 percent of Department rules were finalized before 2016, this analysis assumes 25 Reviews in the baseline scenario would occur in the first five years following implementation of this final rule, and one Review would occur in the subsequent five years.

[250] Here, the Department uses the reported ''FY 2021 average fully supported cost to [FDA of] $284,174 per FTE,'' divided by 1,160 ''Net Supported Direct FDA Work Hours Available for Assignments'' per year to arrive at $244.98 per hour. Food Safety Modernization Act Domestic and Foreign Facility Reinspection, Recall, and Importer Reinspection Fee Rates for Fiscal Year 2021, 85 FR 46669, 46670 (Aug. 3, 2020).

[251] ''Age in,'' meaning that the rules become ten years old during years six through ten.

3. Costs Related to Assessments

In addition to conducting Reviews of rulemakings that have a SEISNOSE, the Department will allocate resources towards conducting Assessments of its rulemakings to determine whether a Review is required. At the time of promulgation, regulations are evaluated as to whether they had a SEISNOSE under the RFA. However, some regulations were promulgated prior to the RFA, while others were certified exempt from having to produce a regulatory flexibility analysis because they were certified as not having a SEISNOSE. This final rule will require the Department to make a determination as to whether covered rulemakings currently have a SEISNOSE and, if so, to Review those regulations. Because circumstances could change over time, the designation that a regulation has a SEISNOSE is likely to change for some rules. As a result, this final rule requires the Department to timely Assess all of its regulations (subject to the exceptions in this final rule) to determine whether they have a SEISNOSE, otherwise the regulations would expire. As discussed above, some rulemakings may overlap with or be duplicative of one another, reducing the number of Reviews that will be eventually required. However, the Department believes an initial Assessment of all rulemakings (subject to this final rule's exceptions) will likely be required first to determine the extent of such overlap or duplication.

The Department believes each Assessment will require between three and 10 hours to perform. The Department estimates that it will have to conduct roughly 3,062 Assessments in the first five years after this rule is finalized, and an additional 142 Assessments in the subsequent five years, for a total of 3,204 Assessments across ten years.[252]

As such, the Department believes 9,186 to 30,620 hours will be spent on Assessments in the first five years. The Department believes 426 to 1,420 hours will be spent on Assessments in the following five years. Assuming these hours are spread evenly across their respective ranges of years, the present value of costs associated with these Assessments ranges from $1.9 to $6.4 million at a 7 percent discount rate. Without discounting, this represents 8.3 to 27.6 FTEs working on a total of 3,204 Assessments over ten years. If, as seems plausible, Assessments of regulations more than ten years old will disproportionately occur in the latter half of the 2021–2026 time period, the present value of the cost of Assessments will be slightly less than estimated herein.

4. Costs Related to Review of Additional Rulemakings Found To Have a SEISNOSE

Depending on the outcome of the Assessments, the Department may have to Review additional rulemakings. The Department estimates roughly 5% of Assessments of Regulations not initially found to have a SEISNOSE will conclude that a Review is required. The Department believes this is a reasonable estimate because the 5% rate is roughly half of the percentage of all Department regulations that the Department currently believes have a SEISNOSE. Accordingly, the Department estimates 153 Reviews will be required in the first five years,[253] and seven Reviews will be required in the subsequent five years,[254] for a total of 160 additional Reviews. The Department estimates the 153 Reviews will require 6,120 to 15,300 hours,[255] and that the seven Reviews will require 280 to 700 hours in the subsequent five years.

Assuming these hours are spread evenly across the corresponding time frames, multiplying these hour estimates by *LaborCost* and discounting at a seven percent discount rate yields an estimated $1.3 to $3.2 million over ten years, which corresponds with 5.5 to 13.8 FTEs for additional post-Assessment Reviews over ten years (without discounting). If, as seems plausible, Reviews of regulations in this category will not be spread evenly across the corresponding time frames but will disproportionately occur in the latter half of the time frames, the present value of the cost of these Reviews will be slightly less than estimated herein.

5. Monitoring Costs

Some commenters argued that the proposed rule's regulatory impact analysis underestimated the costs of this rulemaking, because it did not consider the costs to the regulated community of: Monitoring which regulations may expire; commenting either during the Assessment and Review process or to request that the Department conduct an Assessment or Review; and, when necessary, writing and submitting comments on regulations amended as a result of retrospective reviews conducted pursuant to this final rule.

The Department believes the cost of monitoring Assessments will be relatively trivial. This final rule requires the Department to announce on its website, as well as on *Regulations.gov*, when it has commenced Reviews and Assessments. Making the announcement on *Regulations.gov* (as opposed to only on the Department's website, as proposed) will reduce the monitoring costs raised by the commenters, because the regulated community already monitors *Regulations.gov*.

Moreover, in conjunction with this final rule, the Department is placing at *https://www.hhs.gov/regulations/federal-registry/index.html* a list of Department regulations, the year they were initially promulgated, the last year the rule was amended, and the **Federal Register** citation from the time the rule was initially promulgated. This list was generated with artificial intelligence and the Department believes it is accurate, but it is conceivable that some Department regulations are not included. This list can be used to easily create a schedule of expiration dates, so that the monitoring public does not need to identify these dates itself. Announcements of this kind conform to Organisation for Economic Co-operation and Development guidelines that recommended creating a predetermined schedule for when regulations are due for assessment and review.[256] This type of ''programmed review'' would give both the Department and the public ample time to prepare for the Review and to submit comments as needed. It would also reduce the time and effort required of the public to track those regulations that are set to expire or be revised. As such, the monitoring public should not bear any significant expense keeping track of when regulations are set to expire or reminding the Department of when regulations are set to expire. Additionally, monitoring costs associated with Assessments are likely to not be significant because Assessments are unlikely to result in amendments of regulations, absent a subsequent Review also occurring. This final rule only mandates amendment or rescission of certain regulations that have been Reviewed.

In addition, the Department intends to create on its website a dashboard that shows its progress on its Assessments and Reviews, including when it commenced those Assessments and Reviews, its progress, and when it

[252] 3,062 is 3,440 total Department rulemakings older than 2016, minus 25 rulemakings Reviewed in the baseline scenario, minus the 353 rulemakings Reviewed in the first five years. 142 is 160 rulemakings affected by this final rule in the second five years, minus one rulemaking Reviewed in the baseline scenario, minus the 17 rulemakings expected to be Reviewed in the second five years.

[253] 5% of 3,062 is 153.

[254] 5% of 142 is 7.

[255] Each review will take 40–100 hours.

[256] Organisation for Economic Co-operation and Development, ''Reviewing the Stock of Regulation'' (2020).

expects them to be completed. If they so choose, the public can view this dashboard to see the Department's progress on its Assessments and Reviews of particular regulations. The dashboard will also help to keep the Department on track to timely complete Assessments and Reviews.

Based on the experience of North Carolina,[257] the Department estimates that approximately 10 percent of Reviewed rulemakings will be rescinded and 30 percent of Reviewed rulemakings will be amended in some way. Since 530 rulemakings are expected to be Reviewed in total,[258] this suggests 53 regulations will be rescinded and 159 will be updated.

To estimate how much interest these expiring and amended regulations are likely to generate, the Department notes that it received 486 comments on the proposed rule as of the close of the 30-day public comment period. A typical commenter is likely to be someone with a legal background. According to the Bureau of Labor Statistics,[259] the mean hourly wage of a lawyer is $71.60 (2020$). Assuming base salary constitutes one half of fully-loaded wages,[260] this suggests the fully loaded cost per hour of writing comments is $143.20.

If a typical comment takes 5 to 15 hours to write, and if the 486 comments the Department received on the proposed rule is a good proxy for the interest the Department will receive on the 159 rulemakings expected to be amended as a result of this final rule over the next decade, then the total (undiscounted) monitoring cost related to writing comments on those 159 regulations is $55.3 to $166.0 million.[261] However, rulemakings are not likely to all be amended at the same time. Further, if the Secretary determines that completion of an amendment or a rescission is not feasible by the required date, he or she can certify this in a statement published in the **Federal Register** and may extend the completion date by one year at a time, no more than three times.

Assuming the Secretary does not extend the completion date (this assumption is relaxed in the sensitivity analysis below), the Department expects 152 of the amended rulemakings will be Reviewed in the first five years and seven regulations Reviewed in the second five years. Assuming monitoring costs are spread equally across these timeframes (with the understanding that this may overestimate costs somewhat since rulemakings are likely to be amended after they are Reviewed, which would push amendment to the later end of the timeframe) the present value of these monitoring costs ranges from $44.8 to $134.3 million at a seven percent discount rate.

The Department expects it will receive less interest in regulations that are rescinded after being Reviewed, given that many regulations that are sunset in states often face little resistance from the public, perhaps because their rescission is uncontroversial. For example, the state of Idaho underwent a sunset review process for its entire regulatory code in 2019. As a result of the review, 19 percent of rule chapters, 10 percent of pages, and more than 19,000 regulatory restrictions were rescinded when the code was rewritten in the summer of 2019.[262] This occurred with little controversy, suggesting many regulations that were rescinded were obviously outdated or counterproductive, such that their removal was uncontroversial.[263]

The North Carolina experience, which has been ongoing for several years, may be a better representation of what the Department can expect from its reviews, since the circumstances in Idaho were somewhat unique. Nonetheless, the 10 percent of reviewed rules being rescinded in North Carolina is comparable to the 10 percent of pages of rules repealed during Idaho's mid-2019 review. The Department assumes rescinded regulations will receive half as many comments as amended regulations. In that case, 53 rescinded regulations, of which 51 are expected in the first five years, should generate costs of $7.5 to $22.4 million (discounted at a 7 percent discount rate, assuming rescinded regulations are spread across corresponding timeframes in a manner consistent with the amended regulations described above). Thus, the total cost of monitoring is likely to range from $52.2 to $156.7 million (at a seven percent discount rate).

6. Total Estimated Costs From Implementing This Rulemaking

The Department estimates a total cost of between $60.2 to $199.3 million over ten years in order to do the following: (a) Conduct section 610 Reviews for Department rulemakings from 2016 or earlier in years 1 to 5, (b) conduct section 610 Reviews of rulemakings that ''age in'' to section 610 review in years 6 to 10, (c) conduct Assessments of rulemakings in years 1 to 10, and (d) conduct section 610 Reviews of rulemakings deemed to be subject to Review following an Assessment in years 1 to 10. The total number of Department employees required to conduct these activities is estimated to be 34.5 to 88.5 FTEs over ten years. The Department has also estimated the cost of increased monitoring falling on regulated entities. Results are presented in table 4 below, which also includes cost estimates discounted at a 3 percent discount rate for sensitivity purposes.[264]

TABLE 4—PRESENT VALUE OF ESTIMATED COST OF ASSESSING AND REVIEWING DEPARTMENT REGULATIONS OVER TEN YEARS (MILLIONS OF 2020$), AT 3 AND 7 PERCENT DISCOUNT RATES

Type of cost	Cost (7%)	Cost (3%)	FTEs
Department Costs:			

[257] Jon Sanders, *Rule removal under periodic review has slowed down, but a new law tightens the process,* The John Locke Found.: The Locker Room (July 22, 2019), *https://lockerroom.johnlocke.org/2019/07/22/rule-removal-under-periodic-review-has-slowed-down-but-a-new-law-tightens-the-process/.*

[258] This is 370 Reviews from rules that were initially identified as having a SEISNOSE plus the 160 Reviews from Assessments determining that additional rulemakings have a SEISNOSE.

[259] *See* Bureau of Labor Statistics, Occupational Employment Statistics, 23–1011 Lawyers. *https://www.bls.gov/oes/current/oes231011.htm.*

[260] This assumption is in line with Department guidelines on regulatory analysis. *See* U.S. Dep't of Health & Hum. Servs., Guidelines for Regulatory Impact Analysis, at 28 (2016).

[261] This is 159 rulemakings × 486 commenters × $143.20 per hour × 5 to 15 hours per comment.

[262] Office of Gov. Brad Little, Idaho's Historic Regulatory Cuts (July 2019).

[263] The fact that there seemed to be little controversy surrounding rescinded rules may imply some of those rescissions were fairly trivial in some cases. While data on the extent to which rescissions were trivial or nontrivial are unavailable, news stories provide some basis for this belief. Note that rescinded rules being relatively trivial is not evidence that amended rules were trivial. *See, e.g.,* Editorial, Idaho Quits Worrying About Snails, Wall St. J., June 28, 2019, *https://www.wsj.com/articles/idaho-quits-worrying-about-snails-11561763217.*

[264] The Office of Management and Budget recommends a 7 percent base-case default discount rate be used in regulatory impact analysis. OMB also recommends a 3 percent consumption rate of interest be used as an alternative. See Office of Mgmt. & Budget, Circular A–4, Regulatory Analysis (Sept. 17, 2003).

TABLE 4—PRESENT VALUE OF ESTIMATED COST OF ASSESSING AND REVIEWING DEPARTMENT REGULATIONS OVER TEN YEARS (MILLIONS OF 2020$), AT 3 AND 7 PERCENT DISCOUNT RATES—Continued

Type of cost	Cost (7%)	Cost (3%)	FTEs
A. Costs Related to Section 610 Reviews of Regulations More Than Five Years Old.	$4.7 to $10.6 million.	$5.2 to $11.9	20.1 to 45.6.
B. Costs Related to Rulemakings That ''Age In'' to Section 610 Review	$0.1 to $0.3	$0.2 to $0.4	0.6 to 1.5.
C. Costs Related to Assessments	$1.9 to $6.4	$2.1 to $7.1	8.3 to 27.6.
D. Costs Related to Review of Additional Rulemakings Found to Have a SEISNOSE.	$1.3 to $3.2	$1.4 to $3.6	5.5 to 13.8.
Private Costs:			
E. Cost to Monitoring Public	$52.2 to $156.7	$58.8 to $176.3	N/A.
Total	$60.2 to $177.2	$67.7 to $199.3	34.5 to 88.5.

These figures can also be presented on an annualized basis, calculations of which are presented in table 5 below. Annualized costs are estimated to range from $7.9 million to $25.2 million per year over the decade following implementation of this final rule.

TABLE 5—ACCOUNTING STATEMENT: ANNUALIZED COSTS OF FINAL RULES

Present value (millions of 2020$)	Discount rate (percent)	Time horizon	Annualized, millions of 2020$ per year
$60.2 to $177.2	7	2021–2030	$8.6 to $25.2.
$67.7 to $199.3	3	2021–2030	$7.9 to $23.4.

7. Sensitivity Analysis

One commenter noted that conducting a retrospective analysis can be as time-consuming and expensive as a prospective regulatory analysis, suggesting the Department's estimates of the time and expense of Reviews may be understated. The Department believes that on average Reviews of rulemakings implemented after the RFA are likely to be less time consuming than those implemented before. Moreover, 250 to 500 hours is the amount of time estimated to produce a full initial RFA analysis, which requires more time than a section 610 review, even one where no RFA analysis was conducted when the rulemaking was promulgated. Nevertheless, for the sake of testing the sensitivity of the cost estimates for Reviews, the Department calculates the costs of Reviews assuming all Reviews take 250 to 500 hours, rather than the assumption of 40 to 100 hours for post-RFA regulations made above. In this case, the present value of the total cost of Reviews (A, B and D in table 4) would rise to $26.5 to $53.0 million from $6.1 to $14.1 million (at a seven percent discount rate), and would rise to $29.7 to $59.4 million from $6.8 to $15.8 million (at a three percent discount rate).

However, there are also reasons to believe the costs estimated in table 4 are overestimated. First, this final rule permits the Secretary to extend by up to one year the expiration date for particular regulations. Having this option might have the effect of pushing back the time horizon for certain Reviews and Assessments by one year. This would suggest the costs presented in table 4 above are overestimated to the extent that the present value of these costs will fall as some costs are pushed into the future. Assuming all costs are pushed back by one year, discounting the total costs by one additional year at a seven percent discount rate yields a present value of total costs in the range of $56.3 million to $165.6 million, and at a three percent rate yields a present value of total costs in the range of $65.7 to $193.5 million. These potential reduced costs are one reason the Department has decided to modify the final rule from its proposed form.

Similarly, the costs of monitoring might be pushed into the future if the Secretary exercises his or her right to extend the completion date by one year at a time, up to three times, with respect to amendment or rescission of regulations after Review. Assuming amended or rescinded regulations are pushed back three years in the future, the present value of monitoring costs would fall to $42.6 to $127.9 million at a seven percent discount rate and to $53.8 to $161.3 million at a three percent discount rate. If, as some commenters stated, this final rule resulted in the Department issuing fewer new notices of proposed rulemaking, the reduction in commenting costs from the reduction in new notices of proposed rulemaking would cause the monitoring costs from this final rule to drop.

8. Other Possible Costs

Some commenters noted that there might be other sources of cost associated with this rulemaking other than those cited in the regulatory impact analysis accompanying the proposed rule. Some of these costs have been accounted for above, such as the cost of monitoring or the potential for Reviews to take longer than estimated in the proposed rule. Other commenters cited increased uncertainty to businesses and members of the regulated community as a possible cost due to the increased chance that rules may expire in the future. The Department does not believe uncertainty among the regulated community will add significantly to the costs of this rulemaking for the following reasons. The Department's sporadic use of periodic retrospective review—notwithstanding the RFA and Executive Orders—itself leads to ''uncertainty'' about how robustly the Department implements directives that make for good policy.[265] To the extent that the Department can maintain compliance with its obligations, this should build trust in the Department

[265] To the extent this uncertainty has been lessened because the public has seen how the Department has implemented these directives over the course of many years, the same can be said for this final rule once it has been implemented for several years.

and reduce uncertainty (offsetting some or all of the uncertainty discussed by the commenters, if such uncertainty exists). Further, as noted above, the Department plans to release information about the 18,000 regulations under its authority and when they were adopted, such that any uncertainty surrounding the expiration dates of the Department's various rulemakings will be reduced substantially, if not entirely. Additional measures to mitigate private costs are discussed in the ''Operationalization of This Final Rule'' section of this final rule.

Second, the Department notes that many states have sunset provisions that are a routine part of their regulatory processes. New Jersey, Indiana, and North Carolina have sunset provisions for their regulations. Missouri has a sunset provision for regulations, which is tied to a periodic review requirement.[266] Colorado, California, and Texas have sunset review processes for entire boards, commissions, and agencies. Some states have an annual sunset review process for their entire administrative code.[267] Although the sunset clause is rarely exercised, there nevertheless is always the possibility the entire regulatory code will expire in these states in any particular year. In fact, two states (Idaho and Rhode Island) replaced their regulatory codes in recent years as part of sunset processes, and these experiences seemed to work relatively seamlessly.[268]

Similarly, many major federal laws have sunset clauses attached to them. Notable among these are the Patriot Act, enacted in the aftermath of the 9/11 terrorist attack, and tax laws passed as part of the budget reconciliation process under the Byrd Rule in the U.S. Senate. Federal agencies like the Food and Drug Administration within the Department periodically go through a reauthorization process, not unlike a sunset review.[269] Sunset provisions are also routinely used in other countries, notably in Australia, Canada and the United Kingdom. A recent OECD report noted that just under half of OECD member countries have some form of sunsetting arrangements in place.[270] In Australia, since the passage of the Legislation Act of 2003,[271] all regulations (known as legislative instruments), with some exceptions, automatically expire 10 years after enactment unless parliament acts to extend the period or a replacement instrument is adopted.[272] The Australian Federal Register of Legislation (the equivalent of the **Federal Register** in the United States) maintains the sunset dates for qualifying legislation and provides notice about legislative instruments set to expire soon.[273] The Department also plans to provide advance notice of expiration dates, and will provide updates on its progress conducting its regulatory reviews.

The Australian government also notes that sunset provisions are a useful way to spur periodic review of regulations, stating in a report that ''Sunsetting provides an opportunity for agencies to review and streamline legislative instruments. It is an important mechanism for reducing red tape, delivering clearer laws and aligning existing legislation with current government policy.'' [274]

The Republic of Korea (ROK) enacted regulatory sunset legislation in the late 1990s and formed a Regulatory Reform Committee (RRC) to review newly-introduced regulations and to improve the quality of existing regulations.[275] According to a report from the OECD, ''The overall aim of the sunset clause is to periodically review regulations in order to determine whether it will be retained or abolished.'' [276] In 2009, ROK broadened the scope of its regulatory sunset process by tying in requirements for retrospective analysis.[277] About 20 percent of existing regulations are reviewed every three to five years and rescinded if found to ''not serve the originally intended purpose.'' [278] Moreover, according to the OECD, ''[i]n 2014, the RRC set goals to reduce the economic regulations by 10% . . . As a result, 995 out of 9,876 economic regulations were improved, which amounts to 10.1% of the total.'' [279]

These jurisdictions' sunset provisions do not all work identically to this final rule. However, in some ways this final rule is more lax than these other jurisdictions' sunset provisions, because the requirements to extend expiration dates are more modest compared to some other jurisdictions. For example, conducting an Assessment, and when necessary, a Review, is a relatively easy way to extend an expiration date compared to having to initiate an entirely new rulemaking. If the sunset reviews in these other jurisdictions do not create tremendous uncertainty, it stands to reason that neither will this final rule.

Some commenters expressed concern that regulations might accidentally expire due to the Department not timely conducting an Assessment or Review. The Department intends to review all regulations subject to this final rule, and that any regulations that are eliminated will be formally rescinded following the Review process. This is consistent with the experiences of other jurisdictions with sunset provisions, where rules (or boards or commissions) are first subjected to a review process before they are reauthorized or rescinded. As an example, Idaho recently conducted a sunset review of its entire regulatory code. While a significant number of rule chapters were eliminated as part of that effort, those chapters were rescinded as part of a deliberate review process.

New Jersey is a state that attaches a 7-year sunset provision to regulations. According to the Office of Administrative Law in the state, it is a relatively rare phenomenon that rules expire due to administrative error.[280] Similarly, accidental expiration of rules appears to be uncommon in Missouri, a state that connects a sunset provision to a periodic review requirement, much like this final rule.[281]

Data from North Carolina's sunset review process can be informative about the extent to which rules are likely to be rescinded, modified, or kept without change as part of a sunset review. A North Carolina public policy organization found that 19,361 rules were reviewed as part of that state's sunset review process in recent years.[282]

Continued

Of these, 5,542 were sent back through the rule adoption process (28.6%), presumably to be updated, and 11,811 rules were automatically re-upped with no change (61.0%). About 10 percent of regulations reviewed under the recent sunset review process were rescinded,[283] and this occurred under the supervision of the state Rules Review Commission that was overseeing the process.

These numbers reinforce that there is little empirical basis to support fears that thousands of regulations might accidentally expire as a result of the Department's final regulation. The experiences in Idaho, New Jersey, Missouri and North Carolina demonstrate that sunset reviews tend to be orderly processes. Even in states like Idaho and Rhode Island, where significant portions of their regulatory codes were eliminated in recent years, these processes took place in an orderly fashion under the supervision of the state budget offices in those states.

Moreover, the Department has built in safeguards to prevent inadvertent expiration of regulations, such as seeking comment on the proposed rule regarding regulations that are important to Assess and Review, and enabling the public to submit comments requesting that the Department commence an Assessment or Review. Most importantly, the Department plans to release a list of when all of the regulations under its authority were created and last modified. This can be used to easily determine the expiration date of all regulations under its authority, which will significantly lower the chance any regulation might expire accidentally. The fact that a schedule of the Department's rules, along with their corresponding creation and modification dates, will be made public by the Department means the public will also be aware of which rules are scheduled to expire and when, thereby providing an additional safeguard against accidental expirations. Additionally, the timeline for initial reviews of older regulations has also been extended to five years in this final rule, with the option of a one-year extension, which should give the Department ample time to conduct Assessments and Reviews and should result in few, if any, accidental expirations.

One might worry that periodic reviews may distract from other potentially beneficial rulemakings, which could impose a cost that the Department has not fully considered in the proposed rule. However, there is some indication that when regulators are undergoing retrospective review efforts, if a rulemaking is an urgent priority to them, they often find ways to justify it as part of their reviews, even if the rulemaking would have occurred absent the review.[284] In other words, regulators maintain some flexibility to enact necessary new regulations by folding them into retrospective reviews, including the amendment and rescission process, alleviating some of the concern raised by the commenters. To the extent that any new rulemaking is displaced as a result of reviews required by the current regulation, it is likely to be the case that relatively lower priority rulemakings are displaced first (as presumably the Department will first implement high priority regulations before moving on to lower priority regulations).

Unfortunately, it is unknown with certainty whether Department rules impose benefits in excess of costs on average. The vast majority of Department rules do not have cost-benefit reports associated with them. Even for those that do, there are large uncertainties, and the literature suggests that many regulations are having estimated impacts that, over time, differ from what was estimated at the time the regulations were promulgated.[285] This suggests that if a regulation did expire accidentally, this could be a cost or a benefit of this final rule, depending on the circumstances, since it is unknown whether the net benefits of the preponderance of Department rules are positive or negative. Regulations that are rescinded through sunset procedures are sometimes obviously problematic, such that their removal is uncontroversial. And if a regulation accidentally expired, it could very well be because neither the Department nor interested members of the public saw a discernible benefit from the regulation. Regulations with discernible benefits are unlikely to go under the radar.

A related concern in comments is that Assessments and Reviews will take Department time and resources away from responding to the COVID–19 pandemic. Under this final rule, no Assessments or Reviews need to be completed until the end of 2026, well after the COVID–19 pandemic is likely to have subsided. Hence it is unlikely that this final rule will hamper the response to the pandemic.

The Department recognizes that this final rule requires the Department to undertake certain tasks. But given the importance of retrospective review, the Department believes that review should be a priority and it is willing to commit the necessary resources towards performing Assessments and Reviews.[286]

The expertise of Department analysts may also be best leveraged through Assessments and Reviews that could facilitate the Department's response to future pandemics or emergencies. As noted earlier, the Department waived or exercised enforcement discretion with respect to many regulations as part of its response to the pandemic. A review of those regulations is entirely appropriate to determine whether those regulations are undermining Department goals. Additionally, the COVID–19 pandemic has raised serious questions about whether certain Department regulations are protecting public health or otherwise achieving their objectives. In fact, it is possible that in the coming years even absent this final rule the Department would find it necessary to conduct in-depth reviews of Department regulations given the need to suspend, waive, or exercise enforcement discretion with respect to certain regulations during the COVID–19 pandemic. If such reviews would have taken place even absent this final rule, the cost of this final rule could be significantly lower than estimated (since those costs would be built into the baseline scenario).

Some commenters cited a report that stated ''sunset requirements produce perfunctory reviews and waste

process, The John Locke Found.: The Locker Room (July 22, 2019), *https://lockerroom.johnlocke.org/2019/07/22/rule-removal-under-periodic-review-has-slowed-down-but-a-new-law-tightens-the-process/.*

resources.'' [287] Indeed, the same report was cited in the preamble of the proposed version of this rule. However, as noted in the proposed rule's preamble, this statement from the report does not appear to be supported by the evidence. For example, the report noted that some states have repealed their sunset provisions, highlighting that ''North Carolina was first to repeal its sunset law, and many other states quickly followed suit,'' and concluded that ''sunset provisions quickly proved to be an expensive, cumbersome, and disappointing method for enhancing legislative control.'' [288] However, North Carolina reenacted a sunset process for regulations in 2013 [289] (after the report in question was published). Moreover, not every jurisdiction uses sunset provisions as a mechanism for enhancing legislative control. As already noted, the purpose of sunset provisions is often to spur retrospective review and analysis of regulation or legislation, not necessarily to empower the legislative branch of government. Nor is it the Department's intention with this final rule to enhance legislative control, but instead to encourage more retrospective review and improve outcomes resulting from the Department's regulations.

Sunset provisions are set up in institutionally diverse ways across diverse jurisdictions. Different jurisdictions set different expiration time horizons on rules and grant authority to different governing bodies to decide whether regulations should be extended or not. New Jersey and Indiana grant the authority to renew regulations to the regulating agency, not the legislature (similar to this final rule). Meanwhile, Idaho and Tennessee task the legislature with renewing regulations.

While legal scholars have sometimes argued that sunset provisions have a useful role to play in strengthening legislative control,[290] sunset provisions' benefits in terms of improving the impacts of regulations are equally if not more important than these legislative oversight or separation of powers issues. It may be the case that sometimes legislators do not want or do not have time to devote to in-depth reviews of large numbers of regulations, which is perhaps why sunset reviews that engage the legislature have sometimes turned into pro forma exercises.[291] In other words, it seems likely that the criticisms of sunset provisions that have appeared sporadically in the academic literature may relate to whether sunsets spur legislative engagement in rulemaking, rather than whether they are useful in terms of spurring retrospective review (where there seems to be less controversy).

To conclude, the Department acknowledges that some categories of costs have not been quantified here. While other categories of costs do exist than those calculated in table 4, they may be subject to greater uncertainty, be more challenging to estimate, or be relatively minor such that their estimation would not substantially alter the conclusions of this cost analysis.

As is common practice, this regulatory impact analysis has not sought to quantify the benefits of this final rule, but the Department believes they will be substantial.

E. Summary of Regulatory Impact Analysis

A forcing mechanism will help ensure robust compliance with the Department's statutory obligations, which will strengthen the rule of law in the United States. Given how much of federal spending is driven by Department spending, regulatory reviews may also constitute a way to cut the federal budget deficit. If the Department is not able to review its own regulations in a timely manner, it is not clear how any member of the public can be expected to comply with all of the regulations the Department has written for them (plus all of the regulations issued by other federal, state, and local agencies). Fortunately, the Department intends to timely Assess and (where needed) Review those regulations not exempt from this final rule. Even if for some reason the Department cannot, it has provided itself an opportunity to delay the expiration date where the public interest requires so doing.

Regulatory Flexibility Act

The Department has examined the economic implications of this final rule as required by the RFA (5 U.S.C. 601–612). The RFA generally requires that when an agency issues a proposed rule, or a final rule pursuant to section 553(b) of the APA or another law, the agency must prepare a regulatory flexibility analysis that meets the requirements of the RFA and publish such analysis in the **Federal Register**. 5 U.S.C. 603, 604. Specifically, the RFA normally requires agencies to describe the impact of a rulemaking on small entities by providing a regulatory impact analysis. Such analysis must address the consideration of regulatory options that would lessen the economic effect of the rule on small entities. The RFA defines a ''small entity'' as (1) a proprietary firm meeting the size standards of the Small Business Administration (SBA); (2) a nonprofit organization that is not dominant in its field; or (3) a small government jurisdiction with a population of less than 50,000. 5 U.S.C. 601(3)–(6). Except for such small government jurisdictions, neither State nor local governments are ''small entities.'' Similarly, for purposes of the RFA, individual persons are not small entities. The requirement to conduct a regulatory impact analysis does not apply if the head of the agency ''certifies that the rule will not, if promulgated, have a significant economic impact on a substantial number of small entities.'' 5 U.S.C. 605(b). The agency must, however, publish the certification in the **Federal Register** at the time of publication of the rule, ''along with a statement providing the factual basis for such certification.'' *Id.* If the agency head has not waived the requirements for a regulatory flexibility analysis in accordance with the RFA's waiver provision, and no other RFA exception applies, the agency must prepare the regulatory flexibility analysis and publish it in the **Federal Register** at the time of promulgation or, if the rule is promulgated in response to an emergency that makes timely compliance impracticable, within 180 days of publication of the final rule. 5 U.S.C. 604(a), 608(b).

The Department considers a rule to have a significant impact on a substantial number of small entities if it has at least a three percent impact on revenue on at least five percent of small entities. Department regulations impact at least NAICS industry sectors 11, 31–33, 42, 44–45, 48–49, 52, 54, 62, 81, and 92.

The Regulatory Impact Analysis in the prior section also satisfies the Department's obligation to conduct a regulatory flexibility analysis under section 604. For the reasons described in this final rule, this final rule will benefit small entities.

Congressional Review Act

The Congressional Review Act (CRA) defines a ''major rule'' as ''any rule that the Administrator of the Office of Information and Regulatory Affairs

(OIRA) of the Office of Management and Budget finds has resulted in or is likely to result in—(A) an annual effect on the economy of $100,000,000 or more; (B) a major increase in costs or prices for consumers, individual industries, Federal, State, or local government agencies, or geographic regions; or (C) significant adverse effects on competition, employment, investment, productivity, innovation, or on the ability of United States-based enterprises to compete with foreign-based enterprises in domestic and export markets.'' 5 U.S.C. 804(2). Based on the analysis of this final rule under Executive Order 12866, this rule is expected to be a major rule for purposes of the CRA. The Department will comply with the CRA's requirements to inform Congress.

Unfunded Mandates Reform Act

Section 202 of the Unfunded Mandates Reform Act of 1995 (Unfunded Mandates Act) (2 U.S.C. 1532) requires that covered agencies prepare a budgetary impact statement before promulgating a rule that includes any Federal mandate that may result in the expenditure by State, local, and tribal governments, in the aggregate, or by the private sector, of $100 million in 1995 dollars, updated annually for inflation. Currently, that threshold is approximately $156 million. If a budgetary impact statement is required, section 205 of the Unfunded Mandates Act also requires covered agencies to identify and consider a reasonable number of regulatory alternatives before promulgating a rule.

National Environmental Policy Act (NEPA)

HHS has determined that the proposed rule will not have a significant impact on the environment.

Executive Order 12988: Civil Justice Reform

HHS has reviewed this rule under Executive Order 12988 on Civil Justice Reform and has determined that this final rule complies with this Executive Order.

Executive Order 13132: Federalism

Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a rule that imposes substantial direct costs on State and local governments or has federalism implications. The Department has determined that this final rule does not impose substantial direct costs on State and local governments or have federalism implications as defined in Executive Order 13132. The final rule requires the Department to periodically review certain of its regulations, and provides that if the regulations are not reviewed by a certain date, they will expire. Any rescission of a regulation would only occur because of acts independent of this final rule—either the findings of a Review determining a regulation should be amended, or a failure to perform an Assessment or Review. Thus, this final rule would impose no substantial direct costs on State and local governments.

The Department notes, though, that this final rule might indirectly have beneficial federalism implications. Among other things, the Reviews called for by this final rule require the Department to determine if certain Department regulations overlap, duplicate or conflict with State and local government rules and, if so, to consider that when determining whether to amend or rescind the regulations. If a Review conducted pursuant to this final rule were to find that a Department regulation should be amended or rescinded, the Department would comply with Executive Order 13132 in amending or rescinding the regulation.

Plain Writing Act of 2010

Under the Plain Writing Act of 2010 (Pub. L. 111–274, October 13, 2010), executive departments and agencies are required to use plain language in documents that explain to the public how to comply with a requirement the federal government administers or enforces. The Department has attempted to use plain language in promulgating this proposed rule, consistent with the Federal Plain Writing Act guidelines.

Assessment of Federal Regulation and Policies on Families

Section 654 of the Treasury and General Government Appropriations Act of 1999, Public Law 105–277, sec. 654, 112 Stat. 2681 (1998) requires Federal departments and agencies to determine whether a policy or regulation could affect family well-being. Section 601 (note) required agencies to assess whether a regulatory action (1) impacted the stability or safety of the family, particularly in terms of marital commitment; (2) impacted the authority of parents in the education, nurturing, and supervision of their children; (3) helped the family perform its functions; (4) affected disposable income or poverty of families and children; (5) was justified if it financially impacted families; (6) was carried out by State or local government or by the family; and (7) established a policy concerning the relationship between the behavior and personal responsibility of youth and the norms of society.

This final rule would apply to and amend certain Department regulations to add dates by which they would expire unless the Department periodically reviews the regulations using certain criteria. Standing alone, absent the failure to perform an Assessment or Review, this final rule would have no direct impact, other than resulting in the Department amending or rescinding Regulations that it determines do not satisfy the Review criteria.

If the family well-being determination requirement were still in force, for the reasons described in this final rule's Regulatory Impact Analysis, the Department concludes that the benefits to the public, including families, that flow from periodic Assessments and Reviews of Regulations far outweigh any potential adverse impact on family well-being that might result from a regulation expiring because the Department did not Assess or Review it. The Department believes that impacted families benefit greatly when a regulatory body considers the real-world impacts of its regulations, and whether changes in technology, the economy, or the legal landscape counsel in favor of amending or rescinding regulations. It is conceivable that a regulation affecting the disposable income or poverty of families or children could expire. It is also possible that the expiration of a regulation that the Department does not Review could have beneficial impacts on family well-being. If, pursuant to this final rule, the Department amends or rescinds a regulation, it would conduct any required assessment of the policy on families at the time of such rulemaking.

Paperwork Reduction Act of 1995

In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3506; 5 CFR 1320 Appendix A.1), HHS has reviewed this final rule and has determined that there are no new collections of information contained therein.

§ 6.1 Retrospective Review of Existing Regulations.

(a) This section applies to and shall be deemed to amend all regulations issued by the Secretary or his delegates or sub-delegates in this chapter.

(b) For purposes of this section,

(1) *Assess* shall refer to a determination by the Department, in consultation with other Federal agencies as appropriate, as to whether the Sections issued as part of the same rulemaking (and any amendments or additions that may have been added thereafter) currently have a significant economic impact upon a substantial number of small entities.

(2) *Review* shall refer to a process conducted by the Department, in consultation with other Federal agencies as appropriate, the purpose of which shall be to determine whether Sections that were issued as part of the same rulemaking (and any amendments or additions that may have been issued thereafter) should be continued without change, or should be amended or rescinded, consistent with the stated objectives of applicable statutes, to minimize any significant economic impact of the Sections upon a substantial number of small entities.

(3) *Section* (when capitalized) shall mean a section of the Code of Federal Regulations. For example, 42 CFR 2.13 is a Section, and 42 CFR 2.14 is another Section (see 1 CFR 21.11).

(4) *Year of the Section's promulgation* shall mean the year the Section first became effective, irrespective of whether it was subsequently amended.

(5) *Significant economic impact upon a substantial number of small entities* shall have the meaning of that term in section 610 of title 5 of the United States Code.

(c)(1) Unless a Section expires earlier or is rescinded, all Sections issued by the Secretary or his delegates or sub-delegates in this chapter shall expire at the end of:

(i) Five calendar years after the year that this section first becomes effective;

(ii) Ten calendar years after the year of the Section's promulgation; or

(iii) Ten calendar years after the last year in which the Department assessed and (if review of the Section is required pursuant to paragraph (d) of this section) reviewed the Section, whichever is latest.

(2) The last year in which the Department assessed and (if review of the Section is required) reviewed the Section shall be the year during which the findings of the assessment and (if required) the review of a Section are published in the **Federal Register** pursuant to paragraph (f) of this section.

(3)(i) If, prior to the expiration of a Section under paragraph (c)(1) of this section, the Secretary makes a written determination that the public interest requires continuation of the Section in force beyond the date on which the Section would otherwise expire under paragraph (c)(1), the Secretary may continue the Section in force one time for a period stated in the determination, which shall not exceed one calendar year.

(ii) The Department shall promptly publish in the **Federal Register** any written determination under paragraph (c)(3)(i) of this section.

(iii) The authority of the Secretary under paragraph (c)(3)(i) of this section is not delegable and may be exercised only by the Secretary or, when the office of the Secretary is vacant or the Secretary has become unable to perform the functions and duties of the office of the Secretary, by the individual acting as Secretary in accordance with the law.

(d) The Department is required to review those rulemakings (and any amendments or additions that may have been added thereafter) that the Department assesses have a significant economic impact upon a substantial number of small entities. In reviewing rulemakings to minimize any significant economic impact on a substantial number of small entities in a manner consistent with the stated objectives of applicable statutes, the Department's review shall consider the following factors:

(1) The continued need for the rulemaking, consideration of which shall include but not be limited to the extent to which the rulemaking defines terms or sets standards used in or otherwise applicable to other Federal rules;

(2) The nature of complaints or comments received concerning the rulemaking from the public;

(3) The complexity of the rulemaking;

(4) The extent to which the rulemaking overlaps, duplicates or conflicts with other Federal rules, and, to the extent feasible, with State and local governmental rules;

(5) The degree to which technology, economic conditions, or other factors have changed in the area affected by the rulemaking since the rulemaking was promulgated or the last time the rulemaking was reviewed by the Department; and

(6) Whether the rulemaking complies with applicable law.

(e) If the review concludes the Section should be amended or rescinded, the Department shall have two years from the date that the findings of the review are published in the **Federal Register** pursuant to paragraph (f) of this section to amend or rescind the Section. If the Secretary determines that completion of the amendment or rescission is not

feasible by the established date, he shall so certify in a statement published in the **Federal Register** and may extend the completion date by one year at a time, no more than three times, for a total of not more than five years (inclusive of the initial two-year period).

(f) The results of all assessments and reviews conducted in a calendar year, including the full underlying analyses and data used to support the results (subject to any applicable privilege, protections for confidential business information, or explicit legal prohibition on disclosure), shall be published in a single document in the **Federal Register** during that calendar year. The document shall be organized in a manner that enables both the Department and the public to readily determine which assessments and reviews were conducted during that calendar year. The document shall also specify the year by which the next assessment (and, if required, the next review) of the Section shall be completed.

(g) Paragraph (c) of this section shall not apply to:

(1) Sections that are prescribed by Federal law, such that the Department exercises no discretion as to whether to promulgate the Section and as to what is prescribed by the Section. For Sections described in this paragraph (g)(1) that are adopted after the effective date of this section, the Federal law described in this paragraph (g)(1) shall be cited in the notice of adoption.

(2) Sections whose expiration pursuant to this section would violate any other Federal law.

(3) This section.

(4) Sections that involve a military or foreign affairs function of the United States.

(5) Sections addressed solely to internal agency management or personnel matters.

(6) Sections related solely to Federal Government procurement.

(7) Sections that were issued jointly with other Federal agencies, or that were issued in consultation with other agencies because of a legal requirement to consult with that other agency.

(8) 21 CFR parts 131, 133, 135–137, 139, 145, 146, 150, 152, 155, 156, 158, 160, 161, 163–166, 168, and 169.

(9) 21 CFR parts 331–333, 335–336, 338, 340–341, 343–344, 346–350, 352, 355, 357, and 358.

(10) 21 CFR parts 862, 864, 866, 868, 870, 872, 874, 876, 878, 880, 882, 884, 886, 888, 890, 892, 895, and 898.

(h) When the Department commences the process of performing an assessment or review, it shall state on a Department-managed website the Section(s) whose assessment or review it is commencing. It shall also announce once a month in the **Federal Register** those new assessments or reviews that it has commenced in the last month. The Department will create a docket on *Regulations.gov* for each assessment or review that the Department is conducting. The public will be able to submit comments to the dockets of each rulemaking being assessed or reviewed. Each docket shall specify the date by which comments must be received. There shall also be a general docket on *Regulations.gov* where the public can submit comments requesting that the Department assess or review a Section.

(i) Any provision of this section held to be invalid or unenforceable by its terms, or as applied to any person or circumstance, shall be construed so as to continue to give the maximum effect to the provision permitted by law, unless such holding shall be one of utter invalidity or unenforceability, in which event the provision shall be severable from this section and shall not affect the remainder thereof or the application of the provision to persons not similarly situated or to dissimilar circumstances.

§§ 6.2 through 6.5 [Reserved].

§ 1.1 Retrospective Review of Existing Regulations.

(a) This section applies to and shall be deemed to amend all regulations issued by the Secretary or his delegates or sub-delegates in this chapter.

(b) For purposes of this section,

(1) *Assess* shall refer to a determination by the Department, in consultation with other Federal agencies as appropriate, as to whether the Sections issued as part of the same rulemaking (and any amendments or additions that may have been added thereafter) currently have a significant economic impact upon a substantial number of small entities.

(2) *Review* shall refer to a process conducted by the Department, in consultation with other Federal agencies as appropriate, the purpose of which shall be to determine whether Sections that were issued as part of the same rulemaking (and any amendments or additions that may have been issued thereafter) should be continued without change, or should be amended or rescinded, consistent with the stated objectives of applicable statutes, to minimize any significant economic impact of the Sections upon a substantial number of small entities.

(3) *Section* (when capitalized) shall mean a section of the Code of Federal Regulations. For example, 42 CFR 2.13 is a Section, and 42 CFR 2.14 is another Section (see 1 CFR 21.11).

(4) *Year of the Section's promulgation* shall mean the year the Section first became effective, irrespective of whether it was subsequently amended.

(5) *Significant economic impact upon a substantial number of small entities* shall have the meaning of that term in section 610 of title 5 of the United States Code.

(c)(1) Unless a Section expires earlier or is rescinded, all Sections issued by the Secretary or his delegates or sub-delegates in this chapter shall expire at the end of:

(i) Five calendar years after the year that this section first becomes effective;

(ii) Ten calendar years after the year of the Section's promulgation; or

(iii) Ten calendar years after the last year in which the Department assessed and (if review of the Section is required pursuant to paragraph (d) of this section) reviewed the Section, whichever is latest.

(2) The last year in which the Department assessed and (if review of the Section is required) reviewed the Section shall be the year during which the findings of the assessment and (if

required) the review of a Section are published in the **Federal Register** pursuant to paragraph (f) of this section.

(3)(i) If, prior to the expiration of a Section under paragraph (c)(1) of this section, the Secretary makes a written determination that the public interest requires continuation of the Section in force beyond the date on which the Section would otherwise expire under paragraph (c)(1), the Secretary may continue the Section in force one time for a period stated in the determination, which shall not exceed one calendar year.

(ii) The Department shall promptly publish in the **Federal Register** any written determination under paragraph (c)(3)(i) of this section.

(iii) The authority of the Secretary under paragraph (c)(3)(i) of this section is not delegable and may be exercised only by the Secretary or, when the office of the Secretary is vacant or the Secretary has become unable to perform the functions and duties of the office of the Secretary, by the individual acting as Secretary in accordance with the law.

(d) The Department is required to review those rulemakings (and any amendments or additions that may have been added thereafter) that the Department assesses have a significant economic impact upon a substantial number of small entities. In reviewing rulemakings to minimize any significant economic impact on a substantial number of small entities in a manner consistent with the stated objectives of applicable statutes, the Department's review shall consider the following factors:

(1) The continued need for the rulemaking, consideration of which shall include but not be limited to the extent to which the rulemaking defines terms or sets standards used in or otherwise applicable to other Federal rules;

(2) The nature of complaints or comments received concerning the rulemaking from the public;

(3) The complexity of the rulemaking;

(4) The extent to which the rulemaking overlaps, duplicates or conflicts with other Federal rules, and, to the extent feasible, with State and local governmental rules;

(5) The degree to which technology, economic conditions, or other factors have changed in the area affected by the rulemaking since the rulemaking was promulgated or the last time the rulemaking was reviewed by the Department; and

(6) Whether the rulemaking complies with applicable law.

(e) If the review concludes the Section should be amended or rescinded, the Department shall have two years from the date that the findings of the review are published in the **Federal Register** pursuant to paragraph (f) of this section to amend or rescind the Section. If the Secretary determines that completion of the amendment or rescission is not feasible by the established date, he shall so certify in a statement published in the **Federal Register** and may extend the completion date by one year at a time, no more than three times, for a total of not more than five years (inclusive of the initial two-year period).

(f) The results of all assessments and reviews conducted in a calendar year, including the full underlying analyses and data used to support the results (subject to any applicable privilege, protections for confidential business information, or explicit legal prohibition on disclosure), shall be published in a single document in the **Federal Register** during that calendar year. The document shall be organized in a manner that enables both the Department and the public to readily determine which assessments and reviews were conducted during that calendar year. The document shall also specify the year by which the next assessment (and, if required, the next review) of the Section shall be completed.

(g) Paragraph (c) of this section shall not apply to:

(1) Sections that are prescribed by Federal law, such that the Department exercises no discretion as to whether to promulgate the Section and as to what is prescribed by the Section. For Sections described in this paragraph (g)(1) that are adopted after the effective date of this section, the Federal law described in this paragraph (g)(1) shall be cited in the notice of adoption.

(2) Sections whose expiration pursuant to this section would violate any other Federal law.

(3) This section.

(4) Sections that involve a military or foreign affairs function of the United States.

(5) Sections addressed solely to internal agency management or personnel matters.

(6) Sections related solely to Federal Government procurement.

(7) Sections that were issued jointly with other Federal agencies, or that were issued in consultation with other agencies because of a legal requirement to consult with that other agency.

(8) 42 CFR part 73.

(9) 42 CFR 100.3.

(h) When the Department commences the process of performing an assessment or review, it shall state on a Department-managed website the Section(s) whose assessment or review it is commencing. It shall also announce once a month in the **Federal Register** those new assessments or reviews that it has commenced in the last month. The Department will create a docket on *Regulations.gov* for each assessment or review that the Department is conducting. The public will be able to submit comments to the dockets of each rulemaking being assessed or reviewed. Each docket shall specify the date by which comments must be received. There shall also be a general docket on *Regulations.gov* where the public can submit comments requesting that the Department assess or review a Section.

(i) Any provision of this section held to be invalid or unenforceable by its terms, or as applied to any person or circumstance, shall be construed so as to continue to give the maximum effect to the provision permitted by law, unless such holding shall be one of utter invalidity or unenforceability, in which event the provision shall be severable from this section and shall not affect the remainder thereof or the application of the provision to persons not similarly situated or to dissimilar circumstances.

§ 404.1 Retrospective Review of Existing Regulations.

(a) This section applies to and shall be deemed to amend all regulations issued by the Secretary or his delegates or sub-delegates in this chapter.

(b) For purposes of this section,

(1) *Assess* shall refer to a determination by the Department, in consultation with other Federal agencies as appropriate, as to whether the Sections issued as part of the same rulemaking (and any amendments or additions that may have been added thereafter) currently have a significant economic impact upon a substantial number of small entities.

(2) *Review* shall refer to a process conducted by the Department, in consultation with other Federal agencies as appropriate, the purpose of which shall be to determine whether Sections that were issued as part of the same rulemaking (and any amendments or additions that may have been issued thereafter) should be continued without change, or should be amended or rescinded, consistent with the stated objectives of applicable statutes, to minimize any significant economic impact of the Sections upon a substantial number of small entities.

(3) *Section* (when capitalized) shall mean a section of the Code of Federal Regulations. For example, 42 CFR 2.13 is a Section, and 42 CFR 2.14 is another Section (see 1 CFR 21.11).

(4) *Year of the Section's promulgation* shall mean the year the Section first became effective, irrespective of whether it was subsequently amended.

(5) *Significant economic impact upon a substantial number of small entities* shall have the meaning of that term in section 610 of title 5 of the United States Code.

(c)(1) Unless a Section expires earlier or is rescinded, all Sections issued by the Secretary or his delegates or sub-delegates in this chapter shall expire at the end of:

(i) Five calendar years after the year that this section first becomes effective;

(ii) Ten calendar years after the year of the Section's promulgation; or

(iii) Ten calendar years after the last year in which the Department assessed and (if review of the Section is required pursuant to paragraph (d) of this section) reviewed the Section, whichever is latest.

(2) The last year in which the Department assessed and (if review of the Section is required) reviewed the Section shall be the year during which the findings of the assessment and (if required) the review of a Section are published in the **Federal Register** pursuant to paragraph (f) of this section.

(3)(i) If, prior to the expiration of a Section under paragraph (c)(1) of this section, the Secretary makes a written determination that the public interest requires continuation of the Section in force beyond the date on which the Section would otherwise expire under paragraph (c)(1), the Secretary may continue the Section in force one time for a period stated in the determination, which shall not exceed one calendar year.

(ii) The Department shall promptly publish in the **Federal Register** any written determination under paragraph (c)(3)(i) of this section.

(iii) The authority of the Secretary under paragraph (c)(3)(i) of this section is not delegable and may be exercised only by the Secretary or, when the office of the Secretary is vacant or the Secretary has become unable to perform the functions and duties of the office of the Secretary, by the individual acting as Secretary in accordance with the law.

(d) The Department is required to review those rulemakings (and any amendments or additions that may have been added thereafter) that the Department assesses have a significant economic impact upon a substantial number of small entities. In reviewing rulemakings to minimize any significant economic impact on a substantial number of small entities in a manner consistent with the stated objectives of applicable statutes, the Department's review shall consider the following factors:

(1) The continued need for the rulemaking, consideration of which shall include but not be limited to the extent to which the rulemaking defines terms or sets standards used in or otherwise applicable to other Federal rules;

(2) The nature of complaints or comments received concerning the rulemaking from the public;

(3) The complexity of the rulemaking;

(4) The extent to which the rulemaking overlaps, duplicates or conflicts with other Federal rules, and, to the extent feasible, with State and local governmental rules;

(5) The degree to which technology, economic conditions, or other factors have changed in the area affected by the rulemaking since the rulemaking was promulgated or the last time the rulemaking was reviewed by the Department; and

(6) Whether the rulemaking complies with applicable law.

(e) If the review concludes the Section should be amended or rescinded, the Department shall have two years from the date that the findings of the review are published in the **Federal Register** pursuant to paragraph (f) of this section to amend or rescind the Section. If the Secretary determines that completion of the amendment or rescission is not feasible by the established date, he shall so certify in a statement published in the **Federal Register** and may extend the completion date by one year at a time, no more than three times, for a total of not more than five years (inclusive of the initial two-year period).

(f) The results of all assessments and reviews conducted in a calendar year, including the full underlying analyses and data used to support the results (subject to any applicable privilege, protections for confidential business information, or explicit legal prohibition on disclosure), shall be published in a single document in the **Federal Register** during that calendar year. The document shall be organized in a manner that enables both the Department and the public to readily determine which assessments and reviews were conducted during that calendar year. The document shall also specify the year by which the next assessment (and, if required, the next review) of the Section shall be completed.

(g) Paragraph (c) of this section shall not apply to:

(1) Sections that are prescribed by Federal law, such that the Department exercises no discretion as to whether to promulgate the Section and as to what is prescribed by the Section. For Sections described in this paragraph (g)(1) that are adopted after the effective date of this section, the Federal law described in this paragraph (g)(1) shall be cited in the notice of adoption.

(2) Sections whose expiration pursuant to this section would violate any other Federal law.

(3) This section.

(4) Sections that involve a military or foreign affairs function of the United States.

(5) Sections addressed solely to internal agency management or personnel matters.

(6) Sections related solely to Federal Government procurement.

(7) Sections that were issued jointly with other Federal agencies, or that were issued in consultation with other agencies because of a legal requirement to consult with that other agency.

(8) The annual Medicare payment update rules.

(h) When the Department commences the process of performing an assessment or review, it shall state on a Department-managed website the Section(s) whose assessment or review it is commencing. It shall also announce once a month in the **Federal Register** those new assessments or reviews that it has commenced in the last month. The Department will create a docket on *Regulations.gov* for each assessment or review that the Department is conducting. The public will be able to submit comments to the dockets of each rulemaking being assessed or reviewed. Each docket shall specify the date by which comments must be received. There shall also be a general docket on *Regulations.gov* where the public can submit comments requesting that the Department assess or review a Section.

(i) Any provision of this section held to be invalid or unenforceable by its terms, or as applied to any person or circumstance, shall be construed so as to continue to give the maximum effect to the provision permitted by law, unless such holding shall be one of utter invalidity or unenforceability, in which event the provision shall be severable from this section and shall not affect the remainder thereof or the application of the provision to persons not similarly situated or to dissimilar circumstances.

§§ 404.2 through 404.5 [Reserved]

CHAPTER V—OFFICE OF INSPECTOR GENERAL—HEALTH CARE, DEPARTMENT OF HEALTH AND HUMAN SERVICES

■ 4. Add subpart A to part 1000 to read as follows:

§ 1000.1 Retrospective Review of Existing Regulations.

(a) This section applies to and shall be deemed to amend all regulations issued by the Secretary or his delegates or sub-delegates in this chapter.

(b) For purposes of this section,

(1) *Assess* shall refer to a determination by the Department, in consultation with other Federal agencies as appropriate, as to whether the Sections issued as part of the same rulemaking (and any amendments or additions that may have been added thereafter) currently have a significant economic impact upon a substantial number of small entities.

(2) *Review* shall refer to a process conducted by the Department, in consultation with other Federal agencies as appropriate, the purpose of which shall be to determine whether Sections that were issued as part of the same rulemaking (and any amendments or additions that may have been issued thereafter) should be continued without change, or should be amended or rescinded, consistent with the stated objectives of applicable statutes, to minimize any significant economic impact of the Sections upon a substantial number of small entities.

(3) *Section* (when capitalized) shall mean a section of the Code of Federal Regulations. For example, 42 CFR 2.13 is a Section, and 42 CFR 2.14 is another Section (see 1 CFR 21.11).

(4) *Year of the Section's promulgation* shall mean the year the Section first became effective, irrespective of whether it was subsequently amended.

(5) *Significant economic impact upon a substantial number of small entities* shall have the meaning of that term in section 610 of title 5 of the United States Code.

(c)(1) Unless a Section expires earlier or is rescinded, all Sections issued by the Secretary or his delegates or sub-delegates in this chapter shall expire at the end of:

(i) Five calendar years after the year that this section first becomes effective;

(ii) Ten calendar years after the year of the Section's promulgation; or

(iii) Ten calendar years after the last year in which the Department assessed and (if review of the Section is required pursuant to paragraph (d) of this section) reviewed the Section, whichever is latest.

(2) The last year in which the Department assessed and (if review of the Section is required) reviewed the Section shall be the year during which the findings of the assessment and (if required) the review of a Section are published in the **Federal Register** pursuant to paragraph (f) of this section.

(3)(i) If, prior to the expiration of a Section under paragraph (c)(1) of this section, the Secretary makes a written determination that the public interest requires continuation of the Section in force beyond the date on which the Section would otherwise expire under paragraph (c)(1), the Secretary may continue the Section in force one time for a period stated in the determination, which shall not exceed one calendar year.

(ii) The Department shall promptly publish in the **Federal Register** any written determination under paragraph (c)(3)(i) of this section.

(iii) The authority of the Secretary under paragraph (c)(3)(i) of this section is not delegable and may be exercised only by the Secretary or, when the office of the Secretary is vacant or the Secretary has become unable to perform the functions and duties of the office of the Secretary, by the individual acting as Secretary in accordance with the law.

(d) The Department is required to review those rulemakings (and any amendments or additions that may have been added thereafter) that the Department assesses have a significant economic impact upon a substantial number of small entities. In reviewing rulemakings to minimize any significant economic impact on a substantial number of small entities in a manner consistent with the stated objectives of applicable statutes, the Department's review shall consider the following factors:

(1) The continued need for the rulemaking, consideration of which shall include but not be limited to the extent to which the rulemaking defines terms or sets standards used in or otherwise applicable to other Federal rules;

(2) The nature of complaints or comments received concerning the rulemaking from the public;

(3) The complexity of the rulemaking;

(4) The extent to which the rulemaking overlaps, duplicates or conflicts with other Federal rules, and, to the extent feasible, with State and local governmental rules;

(5) The degree to which technology, economic conditions, or other factors have changed in the area affected by the rulemaking since the rulemaking was promulgated or the last time the rulemaking was reviewed by the Department; and

(6) Whether the rulemaking complies with applicable law.

(e) If the review concludes the Section should be amended or rescinded, the

Department shall have two years from the date that the findings of the review are published in the **Federal Register** pursuant to paragraph (f) of this section to amend or rescind the Section. If the Secretary determines that completion of the amendment or rescission is not feasible by the established date, he shall so certify in a statement published in the **Federal Register** and may extend the completion date by one year at a time, no more than three times, for a total of not more than five years (inclusive of the initial two-year period).

(f) The results of all assessments and reviews conducted in a calendar year, including the full underlying analyses and data used to support the results (subject to any applicable privilege, protections for confidential business information, or explicit legal prohibition on disclosure), shall be published in a single document in the **Federal Register** during that calendar year. The document shall be organized in a manner that enables both the Department and the public to readily determine which assessments and reviews were conducted during that calendar year. The document shall also specify the year by which the next assessment (and, if required, the next review) of the Section shall be completed.

(g) Paragraph (c) of this section shall not apply to:

(1) Sections that are prescribed by Federal law, such that the Department exercises no discretion as to whether to promulgate the Section and as to what is prescribed by the Section. For Sections described in this paragraph (g)(1) that are adopted after the effective date of this section, the Federal law described in this paragraph (g)(1) shall be cited in the notice of adoption.

(2) Sections whose expiration pursuant to this section would violate any other Federal law.

(3) This section.

(4) Sections that involve a military or foreign affairs function of the United States.

(5) Sections addressed solely to internal agency management or personnel matters.

(6) Sections related solely to Federal Government procurement.

(7) Sections that were issued jointly with other Federal agencies, or that were issued in consultation with other agencies because of a legal requirement to consult with that other agency.

(8) 42 CFR 1001.952.

(h) When the Department commences the process of performing an assessment or review, it shall state on a Department-managed website the Section(s) whose assessment or review it is commencing. It shall also announce once a month in the **Federal Register** those new assessments or reviews that it has commenced in the last month. The Department will create a docket on *Regulations.gov* for each assessment or review that the Department is conducting. The public will be able to submit comments to the dockets of each rulemaking being assessed or reviewed. Each docket shall specify the date by which comments must be received. There shall also be a general docket on *Regulations.gov* where the public can submit comments requesting that the Department assess or review a Section.

(i) Any provision of this section held to be invalid or unenforceable by its terms, or as applied to any person or circumstance, shall be construed so as to continue to give the maximum effect to the provision permitted by law, unless such holding shall be one of utter invalidity or unenforceability, in which event the provision shall be severable from this section and shall not affect the remainder thereof or the application of the provision to persons not similarly situated or to dissimilar circumstances.

L. 100–690, the Anti–Drug Abuse Act of 1988, 102 Stat. 4310, 21 U.S.C. 853a; secs. 13400–13424, Pub. L. 111–5, 123 Stat. 258–279; Sec. 1101 of the Patient Protection and Affordable Care Act (Pub. L. 111–148); Section 1103 of the Patient Protection and Affordable Care Act (Pub. L. 111–148); secs. 1104 and 10109 of Pub. L. 111–148, 124 Stat. 146–154 and 915–917; Title I of the Affordable Care Act, Sections 1311, 1312, 1411, 1412, Pub. L. 111–148, 124 Stat. 119; Medicare Advantage (*e.g.,* Pub. L. 115–245, Div. B, sec. 209); the Weldon Amendment (*e.g.,* Pub. L. 115–245, Div. B, sec. 507(d)); 5 U.S.C. 610.

§ 8.1 Retrospective Review of Existing Regulations.

(a) This section applies to and shall be deemed to amend all regulations issued by the Secretary or his delegates or sub-delegates in this subtitle.

(b) For purposes of this section,

(1) *Assess* shall refer to a determination by the Department, in

consultation with other Federal agencies as appropriate, as to whether the Sections issued as part of the same rulemaking (and any amendments or additions that may have been added thereafter) currently have a significant economic impact upon a substantial number of small entities.

(2) *Review* shall refer to a process conducted by the Department, in consultation with other Federal agencies as appropriate, the purpose of which shall be to determine whether Sections that were issued as part of the same rulemaking (and any amendments or additions that may have been issued thereafter) should be continued without change, or should be amended or rescinded, consistent with the stated objectives of applicable statutes, to minimize any significant economic impact of the Sections upon a substantial number of small entities.

(3) *Section* (when capitalized) shall mean a section of the Code of Federal Regulations. For example, 42 CFR 2.13 is a Section, and 42 CFR 2.14 is another Section (see 1 CFR 21.11).

(4) *Year of the Section's promulgation* shall mean the year the Section first became effective, irrespective of whether it was subsequently amended.

(5) *Significant economic impact upon a substantial number of small entities* shall have the meaning of that term in section 610 of title 5 of the United States Code.

(c)(1) Unless a Section expires earlier or is rescinded, all Sections issued by the Secretary or his delegates or sub-delegates in this chapter shall expire at the end of:

(i) Five calendar years after the year that this section first becomes effective;

(ii) Ten calendar years after the year of the Section's promulgation; or

(iii) Ten calendar years after the last year in which the Department assessed and (if review of the Section is required pursuant to paragraph (d) of this section) reviewed the Section, whichever is latest.

(2) The last year in which the Department assessed and (if review of the Section is required) reviewed the Section shall be the year during which the findings of the assessment and (if required) the review of a Section are published in the **Federal Register** pursuant to paragraph (f) of this section.

(3)(i) If, prior to the expiration of a Section under paragraph (c)(1) of this section, the Secretary makes a written determination that the public interest requires continuation of the Section in force beyond the date on which the Section would otherwise expire under paragraph (c)(1), the Secretary may continue the Section in force one time for a period stated in the determination, which shall not exceed one calendar year.

(ii) The Department shall promptly publish in the **Federal Register** any written determination under paragraph (c)(3)(i) of this section.

(iii) The authority of the Secretary under paragraph (c)(3)(i) of this section is not delegable and may be exercised only by the Secretary or, when the office of the Secretary is vacant or the Secretary has become unable to perform the functions and duties of the office of the Secretary, by the individual acting as Secretary in accordance with the law.

(d) The Department is required to review those rulemakings (and any amendments or additions that may have been added thereafter) that the Department assesses have a significant economic impact upon a substantial number of small entities. In reviewing rulemakings to minimize any significant economic impact on a substantial number of small entities in a manner consistent with the stated objectives of applicable statutes, the Department's review shall consider the following factors:

(1) The continued need for the rulemaking, consideration of which shall include but not be limited to the extent to which the rulemaking defines terms or sets standards used in or otherwise applicable to other Federal rules;

(2) The nature of complaints or comments received concerning the rulemaking from the public;

(3) The complexity of the rulemaking;

(4) The extent to which the rulemaking overlaps, duplicates or conflicts with other Federal rules, and, to the extent feasible, with State and local governmental rules;

(5) The degree to which technology, economic conditions, or other factors have changed in the area affected by the rulemaking since the rulemaking was promulgated or the last time the rulemaking was reviewed by the Department; and

(6) Whether the rulemaking complies with applicable law.

(e) If the review concludes the Section should be amended or rescinded, the Department shall have two years from the date that the findings of the review are published in the **Federal Register** pursuant to paragraph (f) of this section to amend or rescind the Section. If the Secretary determines that completion of the amendment or rescission is not feasible by the established date, he shall so certify in a statement published in the **Federal Register** and may extend the completion date by one year at a time, no more than three times, for a total of not more than five years (inclusive of the initial two-year period).

(f) The results of all assessments and reviews conducted in a calendar year, including the full underlying analyses and data used to support the results (subject to any applicable privilege, protections for confidential business information, or explicit legal prohibition on disclosure), shall be published in a single document in the **Federal Register** during that calendar year. The document shall be organized in a manner that enables both the Department and the public to readily determine which assessments and reviews were conducted during that calendar year. The document shall also specify the year by which the next assessment (and, if required, the next review) of the Section shall be completed.

(g) Paragraph (c) of this section shall not apply to:

(1) Sections that are prescribed by Federal law, such that the Department exercises no discretion as to whether to promulgate the Section and as to what is prescribed by the Section. For Sections described in this paragraph (g)(1) that are adopted after the effective date of this section, the Federal law described in this paragraph (g)(1) shall be cited in the notice of adoption.

(2) Sections whose expiration pursuant to this section would violate any other Federal law.

(3) This section.

(4) Sections that involve a military or foreign affairs function of the United States.

(5) Sections addressed solely to internal agency management or personnel matters.

(6) Sections related solely to Federal Government procurement.

(7) Sections that were issued jointly with other Federal agencies, or that were issued in consultation with other agencies because of a legal requirement to consult with that other agency.

(8) The annual Notice of Benefit and Payment Parameters update rules.

(h) When the Department commences the process of performing an assessment or review, it shall state on a Department-managed website the Section(s) whose assessment or review it is commencing. It shall also announce once a month in the **Federal Register** those new assessments or reviews that it has commenced in the last month. The Department will create a docket on *Regulations.gov* for each assessment or review that the Department is conducting. The public will be able to submit comments to the dockets of each rulemaking being assessed or reviewed. Each docket shall specify the date by

which comments must be received. There shall also be a general docket on *Regulations.gov* where the public can submit comments requesting that the Department assess or review a Section.

(i) Any provision of this section held to be invalid or unenforceable by its terms, or as applied to any person or circumstance, shall be construed so as to continue to give the maximum effect to the provision permitted by law, unless such holding shall be one of utter invalidity or unenforceability, in which event the provision shall be severable from this section and shall not affect the remainder thereof or the application of the provision to persons not similarly situated or to dissimilar circumstances.

§ 8.2 through 8.5 [Reserved]

Subtitle B—Regulations Relating to Public Welfare

CHAPTER II—OFFICE OF FAMILY ASSISTANCE (ASSISTANCE PROGRAMS), ADMINISTRATION FOR CHILDREN AND FAMILIES, DEPARTMENT OF HEALTH AND HUMAN SERVICES

■ 6. Add part 200 to read as follows:

PART 200—REVIEW OF REGULATIONS

Sec.

Authority: 5 U.S.C. 301; 5 U.S.C. 610; 24 U.S.C. 321–329; 31 U.S.C. 7501 *et seq.;* 42 U.S.C. 301; 42 U.S.C. 303; 42 U.S.C. 601; 42 U.S.C. 601 note; 42 U.S.C. 602; 42 U.S.C. 602 (note); 42 U.S.C. 602(a)(44); 42 U.S.C. 603; 42 U.S.C. 603(a)(4); 42 U.S.C. 604; 42 U.S.C. 605; 42 U.S.C. 606; 42 U.S.C. 607; 42 U.S.C. 608; 42 U.S.C. 609; 42 U.S.C. 610; 42 U.S.C. 611; 42 U.S.C. 612; 42 U.S.C. 613; 42 U.S.C. 613(i); 42 U.S.C. 616; 42 U.S.C. 619; 42 U.S.C. 654; 42 U.S.C. 862a; 42 U.S.C. 1202; 42 U.S.C. 1203; 42 U.S.C. 1301; 42 U.S.C. 1302; 42 U.S.C. 1306(a); 42 U.S.C. 1308; 42 U.S.C. 1313; 42 U.S.C. 1316; 1320b–7: 42 U.S.C. 1973gg–5; 42 U.S.C. 1337; 42 U.S.C. 1352; 42 U.S.C. 1353; 42 U.S.C. 1382 (note); 42 U.S.C. 1383 (note); sections 1, 5, 6, and 7 of Reorganization Plan No. 1 of 1953, 67 Stat. 631; Secs. 1–11, 74 Stat. 308–310; Sec. 302, 75 Stat. 142, sec. 1102, 49 Stat. 647; sec. 6 of Pub. § 200.1 Retrospective Review of Existing Regulations.

(a) This section applies to and shall be deemed to amend all regulations issued by the Secretary or his delegates or sub-delegates in this chapter.

(b) For purposes of this section,

(1) *Assess* shall refer to a determination by the Department, in consultation with other Federal agencies as appropriate, as to whether the Sections issued as part of the same rulemaking (and any amendments or additions that may have been added thereafter) currently have a significant economic impact upon a substantial number of small entities.

(2) *Review* shall refer to a process conducted by the Department, in consultation with other Federal agencies as appropriate, the purpose of which shall be to determine whether Sections that were issued as part of the same rulemaking (and any amendments or additions that may have been issued thereafter) should be continued without change, or should be amended or rescinded, consistent with the stated objectives of applicable statutes, to minimize any significant economic impact of the Sections upon a substantial number of small entities.

(3) *Section* (when capitalized) shall mean a section of the Code of Federal Regulations. For example, 42 CFR 2.13 is a Section, and 42 CFR 2.14 is another Section (see 1 CFR 21.11).

(4) *Year of the Section's promulgation* shall mean the year the Section first became effective, irrespective of whether it was subsequently amended.

(5) *Significant economic impact upon a substantial number of small entities* shall have the meaning of that term in section 610 of title 5 of the United States Code.

(c)(1) Unless a Section expires earlier or is rescinded, all Sections issued by the Secretary or his delegates or sub-delegates in this chapter shall expire at the end of:

(i) Five calendar years after the year that this section first becomes effective;

(ii) Ten calendar years after the year of the Section's promulgation; or

(iii) Ten calendar years after the last year in which the Department assessed and (if review of the Section is required pursuant to paragraph (d) of this section) reviewed the Section, whichever is latest.

(2) The last year in which the Department assessed and (if review of the Section is required) reviewed the Section shall be the year during which the findings of the assessment and (if required) the review of a Section are published in the **Federal Register** pursuant to paragraph (f) of this section.

(3)(i) If, prior to the expiration of a Section under paragraph (c)(1) of this section, the Secretary makes a written determination that the public interest requires continuation of the Section in force beyond the date on which the Section would otherwise expire under paragraph (c)(1), the Secretary may continue the Section in force one time for a period stated in the determination, which shall not exceed one calendar year.

(ii) The Department shall promptly publish in the **Federal Register** any written determination under paragraph (c)(3)(i) of this section.

(iii) The authority of the Secretary under paragraph (c)(3)(i) of this section is not delegable and may be exercised only by the Secretary or, when the office of the Secretary is vacant or the Secretary has become unable to perform the functions and duties of the office of the Secretary, by the individual acting as Secretary in accordance with the law.

(d) The Department is required to review those rulemakings (and any amendments or additions that may have been added thereafter) that the Department assesses have a significant economic impact upon a substantial number of small entities. In reviewing rulemakings to minimize any significant economic impact on a substantial number of small entities in a manner consistent with the stated objectives of applicable statutes, the Department's review shall consider the following factors:

(1) The continued need for the rulemaking, consideration of which shall include but not be limited to the extent to which the rulemaking defines terms or sets standards used in or otherwise applicable to other Federal rules;

(2) The nature of complaints or comments received concerning the rulemaking from the public;

(3) The complexity of the rulemaking;

(4) The extent to which the rulemaking overlaps, duplicates or conflicts with other Federal rules, and, to the extent feasible, with State and local governmental rules;

(5) The degree to which technology, economic conditions, or other factors have changed in the area affected by the rulemaking since the rulemaking was promulgated or the last time the rulemaking was reviewed by the Department; and

(6) Whether the rulemaking complies with applicable law.

(e) If the review concludes the Section should be amended or rescinded, the Department shall have two years from the date that the findings of the review are published in the **Federal Register** pursuant to paragraph (f) of this section to amend or rescind the Section. If the Secretary determines that completion of the amendment or rescission is not feasible by the established date, he shall so certify in a statement published in the **Federal Register** and may extend the completion date by one year at a time, no more than three times, for a total of not more than five years (inclusive of the initial two-year period).

(f) The results of all assessments and reviews conducted in a calendar year, including the full underlying analyses and data used to support the results (subject to any applicable privilege, protections for confidential business information, or explicit legal prohibition on disclosure), shall be published in a single document in the **Federal Register** during that calendar year. The document shall be organized in a manner that enables both the Department and the public to readily determine which assessments and reviews were conducted during that calendar year. The document shall also specify the year by which the next assessment (and, if required, the next review) of the Section shall be completed.

(g) Paragraph (c) of this section shall not apply to:

(1) Sections that are prescribed by Federal law, such that the Department exercises no discretion as to whether to promulgate the Section and as to what is prescribed by the Section. For Sections described in this paragraph (g)(1) that are adopted after the effective date of this section, the Federal law described in this paragraph (g)(1) shall be cited in the notice of adoption.

(2) Sections whose expiration pursuant to this section would violate any other Federal law.

(3) This section.

(4) Sections that involve a military or foreign affairs function of the United States.

(5) Sections addressed solely to internal agency management or personnel matters.

(6) Sections related solely to Federal Government procurement.

(7) Sections that were issued jointly with other Federal agencies, or that were issued in consultation with other agencies because of a legal requirement to consult with that other agency.

(h) When the Department commences the process of performing an assessment or review, it shall state on a Department-managed website the Section(s) whose assessment or review it is commencing. It shall also announce once a month in the **Federal Register** those new assessments or reviews that it has commenced in the last month. The Department will create a docket on *Regulations.gov* for each assessment or review that the Department is conducting.The public will be able to submit comments to the dockets of each rulemaking being assessed or reviewed. Each docket shall specify the date by which comments must be received. There shall also be a general docket on *Regulations.gov* where the public can submit comments requesting that the Department assess or review a Section.

(i) Any provision of this section held to be invalid or unenforceable by its terms, or as applied to any person or circumstance, shall be construed so as to continue to give the maximum effect to the provision permitted by law, unless such holding shall be one of utter invalidity or unenforceability, in which event the provision shall be severable from this section and shall not affect the remainder thereof or the application of the provision to persons not similarly situated or to dissimilar circumstances.

§ 200.2 through 200.5 [Reserved]

CHAPTER III—OFFICE OF CHILD SUPPORT ENFORCEMENT (CHILD SUPPORT ENFORCEMENT PROGRAM), ADMINISTRATION FOR CHILDREN AND FAMILIES, DEPARTMENT OF HEALTH AND HUMAN SERVICES

■ 7. Add part 300 to read as follows:

PART 300—REVIEW OF REGULATIONS

Sec.

Authority: 5 U.S.C. 301; 5 U.S.C. 610; 25 U.S.C. 1603(12); 25 U.S.C. 1621e; 42 U.S.C. 609(a)(8); 42 U.S.C. 651 through 658; 42 U.S.C. 652(a)(4) and (g); 42 U.S.C. 654(15)(A); 42 U.S.C. 655(f); 42 U.S.C. 658a; 42 U.S.C. 659a; 42 U.S.C. 660; 42 U.S.C. 663; 42 U.S.C. 664; 42 U.S.C. 666 through 669A; 42 U.S.C. 1301; 42 U.S.C. 1302; 42 U.S.C. 1396a(a)(25); 42 U.S.C. 1396b(d)(2); 42 U.S.C. 1396b(o); 42 U.S.C. 1396b(p); 42 U.S.C. 1396(k).

§ 300.1 Retrospective Review of Existing Regulations.

(a) This section applies to and shall be deemed to amend all regulations issued by the Secretary or his delegates or sub-delegates in this chapter.

(b) For purposes of this section,

(1) *Assess* shall refer to a determination by the Department, in consultation with other Federal agencies as appropriate, as to whether the Sections issued as part of the same rulemaking (and any amendments or additions that may have been added thereafter) currently have a significant economic impact upon a substantial number of small entities.

(2) *Review* shall refer to a process conducted by the Department, in consultation with other Federal agencies as appropriate, the purpose of which shall be to determine whether Sections that were issued as part of the same rulemaking (and any amendments or additions that may have been issued thereafter) should be continued without change, or should be amended or rescinded, consistent with the stated objectives of applicable statutes, to minimize any significant economic impact of the Sections upon a substantial number of small entities.

(3) *Section* (when capitalized) shall mean a section of the Code of Federal Regulations. For example, 42 CFR 2.13 is a Section, and 42 CFR 2.14 is another Section (see 1 CFR 21.11).

(4) *Year of the Section's promulgation* shall mean the year the Section first became effective, irrespective of whether it was subsequently amended.

(5) *Significant economic impact upon a substantial number of small entities* shall have the meaning of that term in section 610 of title 5 of the United States Code.

(c)(1) Unless a Section expires earlier or is rescinded, all Sections issued by the Secretary or his delegates or sub-delegates in this chapter shall expire at the end of:

(i) Five calendar years after the year that this section first becomes effective;

(ii) Ten calendar years after the year of the Section's promulgation; or

(iii) Ten calendar years after the last year in which the Department assessed and (if review of the Section is required pursuant to paragraph (d) of this section) reviewed the Section, whichever is latest.

(2) The last year in which the Department assessed and (if review of the Section is required) reviewed the Section shall be the year during which the findings of the assessment and (if required) the review of a Section are published in the **Federal Register** pursuant to paragraph (f) of this section.

(3)(i) If, prior to the expiration of a Section under paragraph (c)(1) of this section, the Secretary makes a written determination that the public interest requires continuation of the Section in force beyond the date on which the Section would otherwise expire under paragraph (c)(1), the Secretary may continue the Section in force one time for a period stated in the determination,

which shall not exceed one calendar year.

(ii) The Department shall promptly publish in the **Federal Register** any written determination under paragraph (c)(3)(i) of this section.

(iii) The authority of the Secretary under paragraph (c)(3)(i) of this section is not delegable and may be exercised only by the Secretary or, when the office of the Secretary is vacant or the Secretary has become unable to perform the functions and duties of the office of the Secretary, by the individual acting as Secretary in accordance with the law.

(d) The Department is required to review those rulemakings (and any amendments or additions that may have been added thereafter) that the Department assesses have a significant economic impact upon a substantial number of small entities. In reviewing rulemakings to minimize any significant economic impact on a substantial number of small entities in a manner consistent with the stated objectives of applicable statutes, the Department's review shall consider the following factors:

(1) The continued need for the rulemaking, consideration of which shall include but not be limited to the extent to which the rulemaking defines terms or sets standards used in or otherwise applicable to other Federal rules;

(2) The nature of complaints or comments received concerning the rulemaking from the public;

(3) The complexity of the rulemaking;

(4) The extent to which the rulemaking overlaps, duplicates or conflicts with other Federal rules, and, to the extent feasible, with State and local governmental rules;

(5) The degree to which technology, economic conditions, or other factors have changed in the area affected by the rulemaking since the rulemaking was promulgated or the last time the rulemaking was reviewed by the Department; and

(6) Whether the rulemaking complies with applicable law.

(e) If the review concludes the Section should be amended or rescinded, the Department shall have two years from the date that the findings of the review are published in the **Federal Register** pursuant to paragraph (f) of this section to amend or rescind the Section. If the Secretary determines that completion of the amendment or rescission is not feasible by the established date, he shall so certify in a statement published in the **Federal Register** and may extend the completion date by one year at a time, no more than three times, for a total of not more than five years (inclusive of the initial two-year period).

(f) The results of all assessments and reviews conducted in a calendar year, including the full underlying analyses and data used to support the results (subject to any applicable privilege, protections for confidential business information, or explicit legal prohibition on disclosure), shall be published in a single document in the **Federal Register** during that calendar year. The document shall be organized in a manner that enables both the Department and the public to readily determine which assessments and reviews were conducted during that calendar year. The document shall also specify the year by which the next assessment (and, if required, the next review) of the Section shall be completed.

(g) Paragraph (c) of this section shall not apply to:

(1) Sections that are prescribed by Federal law, such that the Department exercises no discretion as to whether to promulgate the Section and as to what is prescribed by the Section. For Sections described in this paragraph (g)(1) that are adopted after the effective date of this section, the Federal law described in this paragraph (g)(1) shall be cited in the notice of adoption.

(2) Sections whose expiration pursuant to this section would violate any other Federal law.

(3) This section.

(4) Sections that involve a military or foreign affairs function of the United States.

(5) Sections addressed solely to internal agency management or personnel matters.

(6) Sections related solely to Federal Government procurement.

(7) Sections that were issued jointly with other Federal agencies, or that were issued in consultation with other agencies because of a legal requirement to consult with that other agency.

(h) When the Department commences the process of performing an assessment or review, it shall state on a Department-managed website the Section(s) whose assessment or review it is commencing. It shall also announce once a month in the **Federal Register** those new assessments or reviews that it has commenced in the last month. The Department will create a docket on *Regulations.gov* for each assessment or review that the Department is conducting. The public will be able to submit comments to the dockets of each rulemaking being assessed or reviewed. Each docket shall specify the date by which comments must be received. There shall also be a general docket on *Regulations.gov* where the public can submit comments requesting that the Department assess or review a Section.

(i) Any provision of this section held to be invalid or unenforceable by its terms, or as applied to any person or circumstance, shall be construed so as to continue to give the maximum effect to the provision permitted by law, unless such holding shall be one of utter invalidity or unenforceability, in which event the provision shall be severable from this section and shall not affect the remainder thereof or the application of the provision to persons not similarly situated or to dissimilar circumstances.

§ 300.2 through 300.5 [Reserved]

CHAPTER IV—OFFICE OF REFUGEE RESETTLEMENT, ADMINISTRATION FOR CHILDREN AND FAMILIES DEPARTMENT OF HEALTH AND HUMAN SERVICES

■ 8. Add part 403 to read as follows:

PART 403—REVIEW OF REGULATIONS

Sec.

Authority: 5 U.S.C. 301; 5 U.S.C. 610; 6 U.S.C. 279; 8 U.S.C. 1103(a)(3); 8 U.S.C. 1232; 8 U.S.C. 1255a note; 8 U.S.C. 1522 note; 8 U.S.C. 1522(a)(9); 42 U.S.C. 15607(d).

§ 403.1 Retrospective Review of Existing Regulations.

(a) This section applies to and shall be deemed to amend all regulations issued by the Secretary or his delegates or sub-delegates in this chapter.

(b) For purposes of this section,

(1) *Assess* shall refer to a determination by the Department, in consultation with other Federal agencies as appropriate, as to whether the Sections issued as part of the same rulemaking (and any amendments or additions that may have been added thereafter) currently have a significant economic impact upon a substantial number of small entities.

(2) *Review* shall refer to a process conducted by the Department, in consultation with other Federal agencies as appropriate, the purpose of which shall be to determine whether Sections that were issued as part of the same rulemaking (and any amendments or additions that may have been issued thereafter) should be continued without change, or should be amended or rescinded, consistent with the stated objectives of applicable statutes, to minimize any significant economic impact of the Sections upon a substantial number of small entities.

(3) *Section* (when capitalized) shall mean a section of the Code of Federal Regulations. For example, 42 CFR 2.13 is a Section, and 42 CFR 2.14 is another Section (see 1 CFR 21.11).

(4) *Year of the Section's promulgation* shall mean the year the Section first became effective, irrespective of whether it was subsequently amended.

(5) *Significant economic impact upon a substantial number of small entities* shall have the meaning of that term in section 610 of title 5 of the United States Code.

(c)(1) Unless a Section expires earlier or is rescinded, all Sections issued by the Secretary or his delegates or sub-delegates in this chapter shall expire at the end of:

(i) Five calendar years after the year that this section first becomes effective;

(ii) Ten calendar years after the year of the Section's promulgation; or

(iii) Ten calendar years after the last year in which the Department assessed and (if review of the Section is required pursuant to paragraph (d) of this section) reviewed the Section, whichever is latest.

(2) The last year in which the Department assessed and (if review of the Section is required) reviewed the Section shall be the year during which the findings of the assessment and (if required) the review of a Section are published in the **Federal Register** pursuant to paragraph (f) of this section.

(3)(i) If, prior to the expiration of a Section under paragraph (c)(1) of this section, the Secretary makes a written determination that the public interest requires continuation of the Section in force beyond the date on which the Section would otherwise expire under paragraph (c)(1), the Secretary may continue the Section in force one time for a period stated in the determination, which shall not exceed one calendar year.

(ii) The Department shall promptly publish in the **Federal Register** any written determination under paragraph (c)(3)(i) of this section.

(iii) The authority of the Secretary under paragraph (c)(3)(i) of this section is not delegable and may be exercised only by the Secretary or, when the office of the Secretary is vacant or the Secretary has become unable to perform the functions and duties of the office of the Secretary, by the individual acting as Secretary in accordance with the law.

(d) The Department is required to review those rulemakings (and any amendments or additions that may have been added thereafter) that the Department assesses have a significant economic impact upon a substantial number of small entities. In reviewing rulemakings to minimize any significant economic impact on a substantial number of small entities in a manner consistent with the stated objectives of applicable statutes, the Department's review shall consider the following factors:

(1) The continued need for the rulemaking, consideration of which shall include but not be limited to the extent to which the rulemaking defines terms or sets standards used in or otherwise applicable to other Federal rules;

(2) The nature of complaints or comments received concerning the rulemaking from the public;

(3) The complexity of the rulemaking;

(4) The extent to which the rulemaking overlaps, duplicates or conflicts with other Federal rules, and, to the extent feasible, with State and local governmental rules;

(5) The degree to which technology, economic conditions, or other factors have changed in the area affected by the rulemaking since the rulemaking was promulgated or the last time the rulemaking was reviewed by the Department; and

(6) Whether the rulemaking complies with applicable law.

(e) If the review concludes the Section should be amended or rescinded, the Department shall have two years from the date that the findings of the review are published in the **Federal Register** pursuant to paragraph (f) of this section to amend or rescind the Section. If the Secretary determines that completion of the amendment or rescission is not feasible by the established date, he shall so certify in a statement published in the **Federal Register** and may extend the completion date by one year at a time, no more than three times, for a total of not more than five years (inclusive of the initial two-year period).

(f) The results of all assessments and reviews conducted in a calendar year, including the full underlying analyses and data used to support the results (subject to any applicable privilege, protections for confidential business information, or explicit legal prohibition on disclosure), shall be published in a single document in the **Federal Register** during that calendar year. The document shall be organized in a manner that enables both the Department and the public to readily determine which assessments and reviews were conducted during that calendar year. The document shall also specify the year by which the next assessment (and, if required, the next review) of the Section shall be completed.

(g) Paragraph (c) of this section shall not apply to:

(1) Sections that are prescribed by Federal law, such that the Department exercises no discretion as to whether to promulgate the Section and as to what is prescribed by the Section. For Sections described in this paragraph (g)(1) that are adopted after the effective date of this section, the Federal law described in this paragraph (g)(1) shall be cited in the notice of adoption.

(2) Sections whose expiration pursuant to this section would violate any other Federal law.

(3) This section.

(4) Sections that involve a military or foreign affairs function of the United States.

(5) Sections addressed solely to internal agency management or personnel matters.

(6) Sections related solely to Federal Government procurement.

(7) Sections that were issued jointly with other Federal agencies, or that were issued in consultation with other agencies because of a legal requirement to consult with that other agency.

(h) When the Department commences the process of performing an assessment or review, it shall state on a Department-managed website the Section(s) whose assessment or review it is commencing. It shall also announce once a month in the **Federal Register** those new assessments or reviews that it has commenced in the last month. The Department will create a docket on *Regulations.gov* for each assessment or review that the Department is conducting. The public will be able to submit comments to the dockets of each rulemaking being assessed or reviewed. Each docket shall specify the date by which comments must be received. There shall also be a general docket on *Regulations.gov* where the public can submit comments requesting that the Department assess or review a Section.

(i) Any provision of this section held to be invalid or unenforceable by its terms, or as applied to any person or circumstance, shall be construed so as to continue to give the maximum effect to the provision permitted by law, unless such holding shall be one of utter invalidity or unenforceability, in which event the provision shall be severable from this section and shall not affect the remainder thereof or the application of the provision to persons not similarly situated or to dissimilar circumstances.

§ 403.2 through 403.5 [Reserved]

CHAPTER X—OFFICE OF COMMUNITY SERVICES, ADMINISTRATION FOR CHILDREN AND FAMILIES, DEPARTMENT OF HEALTH AND HUMAN SERVICES

■ 9. Add part 1010 to read as follows:

PART 1010—REVIEW OF REGULATIONS

Sec.

Authority: 5 U.S.C. 301; 5 U.S.C. 610; 42 U.S.C. 604 nt.; 42 U.S.C. 9901 *et seq.;* 42 U.S.C. 11302 (101 Stat. 485); 42 U.S.C. 11461–11464; 42 U.S.C. 11472 (101 Stat. 532–533).

§ 1010.1 Retrospective Review of Existing Regulations

(a) This section applies to and shall be deemed to amend all regulations issued by the Secretary or his delegates or sub-delegates in this chapter.

(b) For purposes of this section,

(1) *Assess* shall refer to a determination by the Department, in consultation with other Federal agencies as appropriate, as to whether the Sections issued as part of the same rulemaking (and any amendments or additions that may have been added thereafter) currently have a significant economic impact upon a substantial number of small entities.

(2) *Review* shall refer to a process conducted by the Department, in consultation with other Federal agencies as appropriate, the purpose of which shall be to determine whether Sections that were issued as part of the same rulemaking (and any amendments or additions that may have been issued thereafter) should be continued without change, or should be amended or rescinded, consistent with the stated objectives of applicable statutes, to minimize any significant economic impact of the Sections upon a substantial number of small entities.

(3) *Section* (when capitalized) shall mean a section of the Code of Federal Regulations. For example, 42 CFR 2.13 is a Section, and 42 CFR 2.14 is another Section (see 1 CFR 21.11).

(4) *Year of the Section's promulgation* shall mean the year the Section first became effective, irrespective of whether it was subsequently amended.

(5) *Significant economic impact upon a substantial number of small entities* shall have the meaning of that term in section 610 of title 5 of the United States Code.

(c)(1) Unless a Section expires earlier or is rescinded, all Sections issued by the Secretary or his delegates or sub-delegates in this chapter shall expire at the end of:

(i) Five calendar years after the year that this section first becomes effective;

(ii) Ten calendar years after the year of the Section's promulgation; or

(iii) Ten calendar years after the last year in which the Department assessed and (if review of the Section is required pursuant to paragraph (d) of this section) reviewed the Section, whichever is latest.

(2) The last year in which the Department assessed and (if review of the Section is required) reviewed the Section shall be the year during which the findings of the assessment and (if required) the review of a Section are published in the **Federal Register** pursuant to paragraph (f) of this section.

(3)(i) If, prior to the expiration of a Section under paragraph (c)(1) of this section, the Secretary makes a written determination that the public interest requires continuation of the Section in force beyond the date on which the Section would otherwise expire under paragraph (c)(1), the Secretary may continue the Section in force one time for a period stated in the determination, which shall not exceed one calendar year.

(ii) The Department shall promptly publish in the **Federal Register** any written determination under paragraph (c)(3)(i) of this section.

(iii) The authority of the Secretary under paragraph (c)(3)(i) of this section is not delegable and may be exercised only by the Secretary or, when the office of the Secretary is vacant or the Secretary has become unable to perform the functions and duties of the office of the Secretary, by the individual acting as Secretary in accordance with the law.

(d) The Department is required to review those rulemakings (and any amendments or additions that may have been added thereafter) that the Department assesses have a significant economic impact upon a substantial number of small entities. In reviewing rulemakings to minimize any significant economic impact on a substantial number of small entities in a manner consistent with the stated objectives of applicable statutes, the Department's review shall consider the following factors:

(1) The continued need for the rulemaking, consideration of which shall include but not be limited to the extent to which the rulemaking defines terms or sets standards used in or otherwise applicable to other Federal rules;

(2) The nature of complaints or comments received concerning the rulemaking from the public;

(3) The complexity of the rulemaking;

(4) The extent to which the rulemaking overlaps, duplicates or conflicts with other Federal rules, and, to the extent feasible, with State and local governmental rules;

(5) The degree to which technology, economic conditions, or other factors have changed in the area affected by the rulemaking since the rulemaking was promulgated or the last time the rulemaking was reviewed by the Department; and

(6) Whether the rulemaking complies with applicable law.

(e) If the review concludes the Section should be amended or rescinded, the Department shall have two years from the date that the findings of the review are published in the **Federal Register** pursuant to paragraph (f) of this section to amend or rescind the Section. If the Secretary determines that completion of the amendment or rescission is not feasible by the established date, he shall so certify in a statement published in the **Federal Register** and may extend the completion date by one year at a time, no more than three times, for a total of not more than five years (inclusive of the initial two-year period).

(f) The results of all assessments and reviews conducted in a calendar year, including the full underlying analyses and data used to support the results (subject to any applicable privilege, protections for confidential business information, or explicit legal prohibition on disclosure), shall be published in a single document in the **Federal Register** during that calendar year. The document shall be organized in a manner that enables both the Department and the public to readily determine which assessments and reviews were conducted during that calendar year. The document shall also specify the year by which the next assessment (and, if required, the next review) of the Section shall be completed.

(g) Paragraph (c) of this section shall not apply to:

(1) Sections that are prescribed by Federal law, such that the Department exercises no discretion as to whether to promulgate the Section and as to what is prescribed by the Section. For Sections described in this paragraph (g)(1) that are adopted after the effective date of this section, the Federal law described in this paragraph (g)(1) shall be cited in the notice of adoption.

(2) Sections whose expiration pursuant to this section would violate any other Federal law.

(3) This section.

(4) Sections that involve a military or foreign affairs function of the United States.

(5) Sections addressed solely to internal agency management or personnel matters.

(6) Sections related solely to Federal Government procurement.

(7) Sections that were issued jointly with other Federal agencies, or that were issued in consultation with other agencies because of a legal requirement to consult with that other agency.

(h) When the Department commences the process of performing an assessment or review, it shall state on a Department-managed website the Section(s) whose assessment or review it is commencing. It shall also announce once a month in the **Federal Register** those new assessments or reviews that it has commenced in the last month. The Department will create a docket on *Regulations.gov* for each assessment or review that the Department is conducting. The public will be able to submit comments to the dockets of each rulemaking being assessed or reviewed. Each docket shall specify the date by which comments must be received. There shall also be a general docket on *Regulations.gov* where the public can submit comments requesting that the Department assess or review a Section.

(i) Any provision of this section held to be invalid or unenforceable by its terms, or as applied to any person or circumstance, shall be construed so as to continue to give the maximum effect to the provision permitted by law, unless such holding shall be one of utter invalidity or unenforceability, in which event the provision shall be severable from this section and shall not affect the remainder thereof or the application of the provision to persons not similarly situated or to dissimilar circumstances.

§ 1010.2 through 1010.5 [Reserved]

CHAPTER XIII—ADMINISTRATION FOR CHILDREN AND FAMILIES, DEPARTMENT OF HEALTH AND HUMAN SERVICES

■ 10. Add subchapter A to read as follows:

SUBCHAPTER A—[include your preferred subchapter heading]

PART 1300—REVIEW OF REGULATIONS

Sec.

Authority: 5 U.S.C. 301; 5 U.S.C. 610; 29 U.S.C. 709; 29 U.S.C. 3343; 42 U.S.C. 620 *et seq.,* 42 U.S.C. 670 *et seq.;* 42 U.S.C. 1302; 42 U.S.C. 1395b–4; 42 U.S.C. 2991, *et seq.;* 42 U.S.C. 3001 *et seq.;* Title III of the Older Americans Act; 42 U.S.C. 3001; Title VI, Part A of the Older Americans Act; 42 U.S.C. 3001; Title VI Part B of the Older Americans Act; 42 U.S.C. 3515e; 42 U.S.C. 5701; 42 U.S.C. 9801 *et seq.;* 42 U.S.C. 10401 *et seq.;* 42 U.S.C. 15001 *et seq.*

§ 1300.1 Retrospective Review of Existing Regulations.

(a) This section applies to and shall be deemed to amend all regulations issued by the Secretary or his delegates or sub-delegates in this chapter.

(b) For purposes of this section,

(1) *Assess* shall refer to a determination by the Department, in consultation with other Federal agencies as appropriate, as to whether the Sections issued as part of the same rulemaking (and any amendments or additions that may have been added thereafter) currently have a significant economic impact upon a substantial number of small entities.

(2) *Review* shall refer to a process conducted by the Department, in consultation with other Federal agencies as appropriate, the purpose of which shall be to determine whether Sections that were issued as part of the same rulemaking (and any amendments or additions that may have been issued thereafter) should be continued without change, or should be amended or rescinded, consistent with the stated objectives of applicable statutes, to minimize any significant economic impact of the Sections upon a substantial number of small entities.

(3) *Section* (when capitalized) shall mean a section of the Code of Federal Regulations. For example, 42 CFR 2.13 is a Section, and 42 CFR 2.14 is another Section (see 1 CFR 21.11).

(4) *Year of the Section's promulgation* shall mean the year the Section first became effective, irrespective of whether it was subsequently amended.

(5) *Significant economic impact upon a substantial number of small entities* shall have the meaning of that term in section 610 of title 5 of the United States Code.

(c)(1) Unless a Section expires earlier or is rescinded, all Sections issued by the Secretary or his delegates or sub-delegates in this chapter shall expire at the end of:

(i) Five calendar years after the year that this section first becomes effective;

(ii) Ten calendar years after the year of the Section's promulgation; or

(iii) Ten calendar years after the last year in which the Department assessed and (if review of the Section is required pursuant to paragraph (d) of this section) reviewed the Section, whichever is latest.

(2) The last year in which the Department assessed and (if review of the Section is required) reviewed the Section shall be the year during which the findings of the assessment and (if required) the review of a Section are published in the **Federal Register** pursuant to paragraph (f) of this section.

(3)(i) If, prior to the expiration of a Section under paragraph (c)(1) of this section, the Secretary makes a written determination that the public interest requires continuation of the Section in force beyond the date on which the Section would otherwise expire under paragraph (c)(1), the Secretary may continue the Section in force one time for a period stated in the determination, which shall not exceed one calendar year.

(ii) The Department shall promptly publish in the **Federal Register** any written determination under paragraph (c)(3)(i) of this section.

(iii) The authority of the Secretary under paragraph (c)(3)(i) of this section is not delegable and may be exercised only by the Secretary or, when the office of the Secretary is vacant or the Secretary has become unable to perform the functions and duties of the office of the Secretary, by the individual acting as Secretary in accordance with the law.

(d) The Department is required to review those rulemakings (and any amendments or additions that may have been added thereafter) that the Department assesses have a significant economic impact upon a substantial number of small entities. In reviewing rulemakings to minimize any significant economic impact on a substantial number of small entities in a manner consistent with the stated objectives of applicable statutes, the Department's review shall consider the following factors:

(1) The continued need for the rulemaking, consideration of which shall include but not be limited to the extent to which the rulemaking defines terms or sets standards used in or otherwise applicable to other Federal rules;

(2) The nature of complaints or comments received concerning the rulemaking from the public;

(3) The complexity of the rulemaking;

(4) The extent to which the rulemaking overlaps, duplicates or conflicts with other Federal rules, and, to the extent feasible, with State and local governmental rules;

(5) The degree to which technology, economic conditions, or other factors have changed in the area affected by the rulemaking since the rulemaking was

promulgated or the last time the rulemaking was reviewed by the Department; and

(6) Whether the rulemaking complies with applicable law.

(e) If the review concludes the Section should be amended or rescinded, the Department shall have two years from the date that the findings of the review are published in the **Federal Register** pursuant to paragraph (f) of this section to amend or rescind the Section. If the Secretary determines that completion of the amendment or rescission is not feasible by the established date, he shall so certify in a statement published in the **Federal Register** and may extend the completion date by one year at a time, no more than three times, for a total of not more than five years (inclusive of the initial two-year period).

(f) The results of all assessments and reviews conducted in a calendar year, including the full underlying analyses and data used to support the results (subject to any applicable privilege, protections for confidential business information, or explicit legal prohibition on disclosure), shall be published in a single document in the **Federal Register** during that calendar year. The document shall be organized in a manner that enables both the Department and the public to readily determine which assessments and reviews were conducted during that calendar year. The document shall also specify the year by which the next assessment (and, if required, the next review) of the Section shall be completed.

(g) Paragraph (c) of this section shall not apply to:

(1) Sections that are prescribed by Federal law, such that the Department exercises no discretion as to whether to promulgate the Section and as to what is prescribed by the Section. For Sections described in this paragraph (g)(1) that are adopted after the effective date of this section, the Federal law described in this paragraph (g)(1) shall be cited in the notice of adoption.

(2) Sections whose expiration pursuant to this section would violate any other Federal law.

(3) This section.

(4) Sections that involve a military or foreign affairs function of the United States.

(5) Sections addressed solely to internal agency management or personnel matters.

(6) Sections related solely to Federal Government procurement.

(7) Sections that were issued jointly with other Federal agencies, or that were issued in consultation with other agencies because of a legal requirement to consult with that other agency.

(h) When the Department commences the process of performing an assessment or review, it shall state on a Department-managed website the Section(s) whose assessment or review it is commencing. It shall also announce once a month in the **Federal Register** those new assessments or reviews that it has commenced in the last month. The Department will create a docket on *Regulations.gov* for each assessment or review that the Department is conducting. The public will be able to submit comments to the dockets of each rulemaking being assessed or reviewed. Each docket shall specify the date by which comments must be received. There shall also be a general docket on *Regulations.gov* where the public can submit comments requesting that the Department assess or review a Section.

(i) Any provision of this section held to be invalid or unenforceable by its terms, or as applied to any person or circumstance, shall be construed so as to continue to give the maximum effect to the provision permitted by law, unless such holding shall be one of utter invalidity or unenforceability, in which event the provision shall be severable from this section and shall not affect the remainder thereof or the application of the provision to persons not similarly situated or to dissimilar circumstances.

§ 1300.2 through 1300.5 [Reserved]

Dated: January 8, 2021.

Alex M. Azar II,

Secretary, Department of Health and Human Services.

[FR Doc. 2021–00597 Filed 1–15–21; 8:45 am]

FEDERAL REGISTER

Vol. 86 Tuesday,
No. 11 January 19, 2021

Part VIII

Bureau of Consumer Financial Protection

12 CFR Part 1006
Debt Collection Practices (Regulation F); Final Rule

BUREAU OF CONSUMER FINANCIAL PROTECTION

12 CFR Part 1006

[Docket No. CFPB–2019–0022]

RIN 3170–AA41

Debt Collection Practices (Regulation F)

AGENCY: Bureau of Consumer Financial Protection.

ACTION: Final rule; official interpretation.

SUMMARY: The Bureau of Consumer Financial Protection (Bureau) is issuing this final rule to revise Regulation F, which implements the Fair Debt Collection Practices Act (FDCPA). The final rule governs certain activities by debt collectors, as that term is defined in the FDCPA. Among other things, the final rule clarifies the information that a debt collector must provide to a consumer at the outset of debt collection communications, prohibits debt collectors from bringing or threatening to bring a legal action against a consumer to collect a time-barred debt, and requires debt collectors to take certain actions before furnishing information about a consumer's debt to a consumer reporting agency.

DATES: This rule is effective on November 30, 2021.

FOR FURTHER INFORMATION CONTACT: Joel Singerman, Counsel, or Dania Ayoubi, Joseph Baressi, Seth Caffrey, Brandy Hood, David Jacobs, Courtney Jean, Adam Mayle, Kristin McPartland, Michael Silver, Senior Counsels, Office of Regulations, at 202–435–7700. If you require this document in an alternative electronic format, please contact *CFPB_Accessibility@cfpb.gov.*

SUPPLEMENTARY INFORMATION:

I. Summary of the Final Rule

The Bureau is finalizing amendments to Regulation F, 12 CFR part 1006, which implements the FDCPA.[1] The amendments prescribe Federal rules governing the activities of debt collectors, as that term is defined in the FDCPA (debt collectors or FDCPA debt collectors). The final rule clarifies the information that a debt collector must provide to a consumer at the outset of debt collection communications and provides a model validation notice containing such information. The final rule also addresses consumer protection concerns related to passive collections (*i.e.,* the practice of furnishing information about a debt to a consumer reporting agency before communicating with the consumer about the debt) and the collection of debt that is beyond the statute of limitations (*i.e.,* time-barred debt). On November 30, 2020, the Bureau published a final rule in the **Federal Register** that focused on debt collection communications and related practices by debt collectors (November 2020 Final Rule). The November 2020 Final Rule reserved certain sections of Regulation F in anticipation of this final rule.

As discussed in the November 2020 Final Rule, in 1977, Congress passed the FDCPA to eliminate abusive debt collection practices by debt collectors, to ensure that those debt collectors who refrain from using abusive debt collection practices are not competitively disadvantaged, and to promote consistent State action to protect consumers against debt collection abuses.[2] The statute was a response to ''abundant evidence of the use of abusive, deceptive, and unfair debt collection practices by many debt collectors.'' [3] According to Congress, these practices ''contribute to the number of personal bankruptcies, to marital instability, to the loss of jobs, and to invasions of individual privacy.'' [4]

The FDCPA established specific consumer protections, enabling consumers to establish controls on when and how debt collectors contact them, establishing privacy protections surrounding the collection of debts, and protecting consumers from certain collection practices. The FDCPA also established broad consumer protections, prohibiting harassment or abuse, false or misleading representations, and unfair practices. In the Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act), Congress provided the Bureau with authority under the FDCPA to prescribe substantive rules with respect to the collection of debts by debt collectors. The Bureau issues this final rule, like the November 2020 Final Rule, to implement and interpret the FDCPA.

A. Coverage and Organization of the Final Rule

The final rule is based primarily on the Bureau's authority to issue rules to implement the FDCPA and, consequently, covers debt collectors, as that term is defined in the FDCPA.

As revised in the November 2020 Final Rule, Regulation F contains four subparts. Subpart A contains generally applicable provisions, such as definitions that apply throughout the regulation. Subpart B contains rules for FDCPA debt collectors. Subpart C is reserved for any future debt collection rulemakings. Subpart D contains certain miscellaneous provisions. This final rule adds additional provisions in subparts A, B, and D.

B. Scope of the Final Rule

FDCPA section 809(a) requires that a debt collector send a written notice containing certain information about the debt and actions the consumer may take in response (the validation notice) to a consumer within five days of the initial communication, unless such validation information was provided in the initial communication or the consumer has paid the debt.[5] The final rule clarifies the information about the debt and the consumer's rights with respect to the debt that a debt collector must provide to a consumer at the outset of debt collection communications, including (if applicable) on a validation notice. The final rule also requires a debt collector to provide prompts that a consumer can use to dispute the debt, request information about the original creditor, or take certain other actions. The final rule provides a safe harbor for compliance with these disclosure requirements for debt collectors who use the model validation notice or certain variations of the notice.

The final rule also prohibits a debt collector from suing or threatening to sue a consumer to collect time-barred debt. In addition, the final rule prohibits a debt collector from furnishing information about a debt to a consumer reporting agency before engaging in specific outreach to the consumer about the debt. The final rule also addresses certain other disclosure-focused provisions, such as clarifying how a debt collector may respond to a consumer's request for original-creditor information if the original creditor is the same as the current creditor. Additionally, the final rule interprets the definition of consumer under the FDCPA to include deceased natural persons and, relatedly, provides that, if a debt collector knows or should know that the a consumer is deceased, and the debt collector has not previously provided the validation information to the deceased consumer, the debt collector must provide that information to a person who is authorized to act on behalf of the deceased consumer's estate.

II. Background

A. Debt Collection Market Background

A consumer debt is commonly understood to be a consumer's obligation to pay money to another person or entity. Sometimes a debt arises out of a closed-end loan. Other times, a debt arises from a consumer's use of an open-end line of credit, commonly a credit card. And in other cases, a debt arises from a consumer's purchase of goods or services with payment due thereafter. Often there is an agreed-upon payment schedule or date by which the consumer must repay the debt.

For a variety of reasons, consumers sometimes are unable or unwilling to make payments when they are due. Collection efforts may directly recover some or all of the overdue amounts owed to debt owners and thereby may indirectly help to keep consumer credit available and more affordable to consumers.[6] Collection activities also can lead to repayment plans or debt restructuring that may provide consumers with additional time to make payments or resolve their debts on more manageable terms.[7]

The November 2020 Final Rule provides an extensive overview of the debt collection market (including the roles of creditors, third-party debt collectors, debt buyers, and a variety of service providers in the market), methods of debt collection, and consumer protection concerns in debt collection.[8] Below the Bureau summarizes information regarding debt collection methods and consumer protection concerns specifically related to the topics addressed in this final rule.

B. Debt Collection Methods

If a consumer's payment obligations remain unmet, a creditor may send the account to a third-party debt collector to recover on the debt in the third-party debt collector's name. A creditor typically stops communicating with a consumer once responsibility for an account has moved to a third-party debt collector. Active debt collection efforts typically begin with the debt collector attempting to locate the consumer, usually by identifying a valid telephone number or mailing address, so that the debt collector can establish contact with the consumer. Once a debt collector has obtained contact information for a consumer, the debt collector typically will seek to communicate with the consumer to obtain payment on some or all of the debt.

As already noted, FDCPA section 809(a) generally requires a debt collector to provide certain information to a consumer either at the time that, or shortly after, the debt collector first communicates with the consumer in connection with the collection of a debt. The required information includes: (1) Certain details about the debt, such as the amount of the debt and the name of the creditor to whom the debt is owed; and (2) a description of consumer protections, such as the consumer's rights to dispute the debt and to request information about the original creditor. A debt collector may send a validation notice containing the required information as the initial communication to the consumer or send the required information in a validation notice within five days after the initial communication. Currently, validation notices include little or no information about the debt beyond the information specifically listed in FDCPA section 809(a). This information may not be sufficient for the consumer to recognize the debt, particularly if, for example, the amount owed has changed over time due to interest, fees, payment, or credits, or if the debt collector has changed since an original collection attempt.

A debt collector may tailor the collection strategy depending on a variety of factors, including the size and age of the debt and the debt collector's assessment of the likelihood of obtaining money from the consumer. For example, rather than engage in active debt collection efforts by affirmatively locating and contacting consumers, some debt collectors collecting relatively small debts—such as many medical, utility, and telecommunications debts—report the debts to consumer reporting agencies and then wait for consumers to contact them after discovering the debts on their consumer reports.[9]

As discussed in the November 2020 Final Rule, a debt owner may also try to recover on a debt through litigation.[10] And debt collectors sometimes attempt to collect debt for which the applicable statute of limitations has expired. The length of the limitations period for debt collection claims usually varies by State and debt type; most limitations periods are between three and six years, although some are as long as 15 years. Currently, in most States, expiration of the statute of limitations, if raised by the consumer as an affirmative defense, precludes the debt collector from recovering on the debt through litigation, but it does not extinguish the debt itself. If the debt is not extinguished, a debt collector may use non-litigation means, such as letters and telephone calls, to collect a time-barred debt, as long as those means do not violate the FDCPA or other laws.[11]

C. Consumer Protection Concerns

As discussed in the November 2020 Final Rule, each year consumers submit tens of thousands of complaints about debt collection to Federal regulators.[12] A significant proportion of those complaints involve debts that consumers believe they do not owe, which may be because the debt is being collected in error or because the consumer does not recognize the debt. Consumers also file thousands of private actions each year against debt collectors who allegedly have violated the FDCPA, including many cases alleging violations related to the validation notice. Since the Bureau began operations in 2011, it has brought numerous debt collection

cases against third-party debt collectors, alleging both FDCPA violations and unfair, deceptive, or abusive debt collection acts or practices in violation of the Dodd-Frank Act.[13] In many of these cases, the Bureau has obtained civil penalties, monetary compensation for consumers, and other relief. In its supervisory work, the Bureau similarly has identified many FDCPA violations during examinations of debt collectors. Over the past decade, the Federal Trade Commission (FTC) and State regulators also have brought numerous additional actions against debt collectors for violating Federal and State debt collection and consumer protection laws.

D. FDCPA and Dodd-Frank Act Protections for Consumers

Federal and State governments historically have sought to protect consumers from harmful debt collection practices. From 1938 to 1977, the Federal government primarily protected consumers through FTC enforcement actions against debt collectors who engaged in unfair or deceptive acts or practices in violation of section 5 of the FTC Act.[14] When Congress enacted the FDCPA in 1977, it found that ''[e]xisting laws and procedures for redressing . . . injuries [were] inadequate to protect consumers.'' [15] Congress found that ''[t]here [was] abundant evidence of the use of abusive, deceptive, and unfair debt collection practices by many debt collectors'' and that these practices ''contribute to the number of personal bankruptcies, to marital instability, to the loss of jobs, and to invasions of individual privacy.'' [16]

The FDCPA was enacted, in part, ''to eliminate abusive debt collection practices by debt collectors, [and] to insure that those debt collectors who refrain from using abusive debt collection practices are not competitively disadvantaged.'' [17] Among other things, the FDCPA: (1) Prohibits debt collectors from engaging in harassment or abuse, making false or misleading representations, and engaging in unfair practices in debt collection; (2) restricts debt collectors' communications with consumers and others; and (3) requires debt collectors to provide consumers with disclosures concerning the debts they owe or allegedly owe.

The FDCPA, in general, applies to debt collectors as that term is defined under the statute. As discussed further in the section-by-section analysis of § 1006.2(i) of the November 2020 Final Rule, the FDCPA generally provides that a debt collector is any person: (1) Who uses any instrumentality of interstate commerce or the mails in any business the principal purpose of which is the collection of any debts (*i.e.,* the ''principal purpose'' prong), or (2) who regularly collects, or attempts to collect, directly or indirectly, debts owed or due or asserted to be owed or due to another (*i.e.,* the ''regularly collects'' prong). FDCPA section 803(6) also sets forth several exclusions from the general definition.

Until the creation of the Bureau, no Federal agency was authorized to issue regulations to implement the substantive provisions of the FDCPA. Courts have issued opinions providing differing interpretations of various FDCPA provisions, and there is considerable uncertainty with respect to how the FDCPA applies to communication technologies that have developed since 1977. The Dodd-Frank Act amended the FDCPA to provide the Bureau with authority to ''prescribe rules with respect to the collection of debts by debt collectors.'' [18]

III. Summary of the Rulemaking Process

A. The November 2020 Final Rule

The Bureau issued the November 2020 Final Rule to finalize certain provisions of the proposed rule that the Bureau published in the **Federal Register** on May 21, 2019, to amend Regulation F.[19] Specifically, the November 2020 Final Rule primarily addressed debt collection communications and related practices by debt collectors. The November 2020 Final Rule reserved certain sections of Regulation F in anticipation of this final rule.

B. The 2019 Proposal and 2020 Supplemental Proposal

As noted, on May 21, 2019, the Bureau published a proposed rule (the May 2019 proposal or proposal) in the **Federal Register** to amend Regulation F.[20] The proposal provided a 90-day comment period that would have closed on August 19, 2019. To allow interested persons more time to consider and submit their comments, the Bureau issued an extension of the comment period until September 18, 2019.[21] In response to the May 2019 proposal, the Bureau received more than 14,000 comments from consumers, consumer groups, members of Congress, other government agencies, creditors, debt collectors, industry trade associations, and others. As discussed below, the Bureau has considered those comments in deciding to issue this final rule.

As relevant to this final rule, in the May 2019 proposal, the Bureau proposed to implement and interpret FDCPA section 809(a) and (b) regarding the information that debt collectors must provide to consumers at the outset of debt collection communications and debt collectors' obligations to respond to consumers' disputes and requests for original-creditor information, including if the consumer obligated or allegedly obligated to pay the debt has died. The Bureau also proposed to prohibit debt collectors from bringing or threatening to bring a legal action against a consumer to collect a debt that the debt collector knows or should know is a time-barred debt. And the Bureau proposed to prohibit debt collectors from furnishing information regarding a debt to a consumer reporting agency before communicating with the consumer about the debt.

On February 21, 2020, the Bureau released a supplemental notice of proposed rulemaking to amend Regulation F to require debt collectors to make certain disclosures when collecting time-barred debts (the February 2020 proposal).[22] The February 2020 proposal provided a 60-day comment period that would have closed on May 4, 2020. To allow interested persons more time to consider and submit their comments, the Bureau issued two extensions of the comment period, the first until June 5, 2020, and the second until August 4,

2020.[23] In response to the February 2020 proposal, the Bureau received approximately 90 comments from consumers, consumer groups, members of Congress, other government agencies, creditors, debt collectors, industry trade associations, and others. As discussed below, the Bureau has considered those comments in adopting this final rule.

C. Consumer Testing

The Bureau has undertaken two rounds of qualitative disclosure testing and one round of quantitative disclosure testing, all of which have informed this final rule.

First, as discussed in more detail in the May 2019 proposal, the Bureau in 2014 contracted with a third-party vendor, Fors Marsh Group (FMG), to assist with developing, and to conduct qualitative consumer testing of the model validation notice.[24] This initial qualitative testing included focus group testing, cognitive testing, and usability testing conducted by FMG.[25] Through the testing, the Bureau sought insight into consumers' understanding of debt collection protections and how consumers would interact with the forms if the forms were incorporated into a final rule. Specific findings from the consumer testing are discussed in more detail in part V where relevant. In conjunction with the release of the May 2019 proposal, the Bureau made available a report prepared by FMG regarding the focus group testing,[26] the cognitive testing,[27] the usability testing,[28] and a report prepared by FMG summarizing the focus group testing, cognitive testing, and usability testing.[29]

Second, to obtain additional information about consumer comprehension and decision-making in response to sample debt collection disclosures relating to time-barred debt, in 2017 the Bureau contracted with ICF International, Inc. (ICF) to conduct a web survey of approximately 8,000 individuals possessing a broad range of demographic characteristics.[30] This quantitative testing concluded in late September 2019, and, in conjunction with the release of the February 2020 proposal, the Bureau [31] and ICF [32] published detailed reports summarizing the testing methodology and results. The February 2020 proposal provides an extensive overview of the quantitative testing.[33]

Third, to further evaluate the effectiveness of the model validation notice, the Bureau contracted with FMG again in 2019 to conduct an additional round of qualitative testing. Because of the COVID–19 pandemic, FMG conducted this consumer testing by telephone, completing 51 one-on-one usability interviews between October 5 and October 15, 2020. The qualitative testing showed, among other things, that 80 percent of participants shared positive initial reactions to the model validation notice and indicated that the information in the notice was clear and available actions were obvious. In addition, 88 percent of participants rated the overall model validation notice as ''very easy'' or ''easy'' to understand, and no participants rated the notice as ''difficult'' or ''very difficult'' to understand. Finally, 77 percent of participants answered correctly over 90 percent of the time when, after reviewing the notice, they were asked to answer certain questions about information included on the notice. In conjunction with release of this final rule, the Bureau is making available a report prepared by FMG regarding the qualitative testing.[34]

D. Other Outreach [35]

In November 2013, the Bureau began the rulemaking process with the publication of an Advance Notice of Proposed Rulemaking (ANPRM) regarding debt collection.[36] As discussed in the May 2019 proposal, the ANPRM sought information about a wide variety of both first- and third-party debt collection practices. The Bureau received more than 23,000 comments in response to the ANPRM, which the Bureau considered when developing the proposals.

To better understand the operational costs of debt collection firms, including law firms, the Bureau also surveyed debt collection firms and vendors and published a report based on that study in July 2016 (CFPB Debt Collection Operations Study or Operations Study).[37] The Operations Study focused on understanding how debt collection firms obtain information about delinquent consumer accounts and attempt to collect on those accounts.

In August 2016, the Bureau convened a Small Business Review Panel (Small Business Review Panel or Panel) with the Chief Counsel for Advocacy of the Small Business Administration (SBA) and the Administrator of the Office of Information and Regulatory Affairs with

---

[23] *See* 85 FR 17299 (Mar. 27, 2020) (first extension); 85 FR 30890 (May 21, 2020) (second extension).

[24] The Bureau also tested a statement of consumer rights disclosure, but the Bureau decided not to propose to require debt collectors to provide such a disclosure to consumers. Instead, the Bureau proposed in the May 2019 proposal to require certain debt collectors to provide with the validation information a statement referring consumers to a Bureau-provided website that would describe certain consumer protections in debt collection. *See* the section-by-section analysis of § 1006.34(c)(3)(iv). Because the Bureau did not propose to require debt collectors to provide consumers with a statement of consumer rights disclosure, the Bureau did not summarize testing related to that disclosure in the May 2019 proposal.

the Office of Management and Budget (OMB).[38] As part of this process, the Bureau prepared an outline of proposals under consideration and the alternatives considered (Small Business Review Panel Outline or Outline),[39] which the Bureau posted on its website for review by the small entity representatives participating in the Panel process and by the general public. The Panel gathered information from the small entity representatives and made findings and recommendations regarding the potential compliance costs and other impacts on those entities of the proposals under consideration. Those findings and recommendations are set forth in the Small Business Review Panel Report, which is part of the administrative record in this rulemaking and is available to the public.[40] The Bureau considered these findings and recommendations in preparing the proposals and this final rule.
