In § 447.203(b)(5), we propose a mechanism to ensure compliance with paragraphs (b)(1) through (b)(4). Specifically, we propose that, if a State fails to comply with the payment rate transparency and comparative payment rate analysis and payment rate disclosure requirements in paragraphs (b)(1) through (b)(4) of proposed § 447.203, including requirements for the time and manner of publication, that, under section 1904 of the Act and procedures set forth in regulations at 42 CFR part 430 subparts C and D, future grant awards may be reduced by the amount of FFP we estimate is attributable to the State's administrative expenditures relative to the total expenditures for the categories of services specified in paragraph (b)(2) of proposed § 447.203 for which the State has failed to comply with applicable requirements, until such time as the State complies with the requirements. We also propose that unless otherwise prohibited by law, FFP for deferred expenditures would be released after the State has fully complied with all applicable requirements. This proposed enforcement mechanism is similar in structure to the mechanism that applies with respect to the Medicaid Disproportionate Share Hospital (DSH) reporting requirements in § 447.299(e), which specifies that State failure to comply with reporting requirements will lead to future grant award reductions in the amount of FFP CMS estimates is attributable to expenditures made for payments to the DSH hospitals as to which the State has not reported properly. We are proposing this long-standing and effective enforcement mechanism in this proposed rule because we believe it is proportionate and clear, and to remain consistent with other compliance actions we take for State non-compliance with statutory and regulatory requirements. We are seeking public comment on the proposed method for ensuring compliance with the payment rate transparency and comparative payment rate analysis and payment rate disclosure requirements, as specified in proposed § 447.203(b)(5).

A fundamental element of ensuring access to covered services is the sufficiency of a provider network. As discussed elsewhere in this rule, the HCBS direct care workforce is currently experiencing notable worker shortages.[191] A robust workforce providing HCBS allows more beneficiaries to obtain necessary services in home and community-based settings. We are proposing to use data-driven benchmarks in requiring comparative payment rate analyses relative to Medicare non-facility payment rates for the categories of service specified in proposed § 447.203(b)(2)(i) through (iii), but Medicare non-facility payment rates are generally not relevant in the context of HCBS, as discussed earlier in this section. Furthermore, data alone cannot replace the lived experience of direct care workers and recipients of the services they provide.

Understanding how Medicaid payment rates compare in different geographic areas of a State and across State programs is also an important access to care data point for covered benefits where Medicaid is a predominant payer of services, as in the case of HCBS. In the absence of HCBS coverage and a lack of available payment rate and claims utilization data from other health payers, such as Medicare or private insurers, and with the significant burden and potential infeasibility associated with gathering payment data for individuals who pay out of pocket (that is, self-pay), we believe it would be a reasonable standard for States to compare their rates to geographically similar State Medicaid program payment rates as a basis for understanding compliance with section 1902(a)(30)(A) of the Act for those services. In addition, even for services where other payers establish

[191] *https://www.macpac.gov/wp-content/uploads/2022/03/MACPAC-brief-on-HCBS-workforce.pdf.*

payment rates, comparisons to rates paid by other geographically similar States could be important to understanding compliance with section 1902(a)(30)(A) of the Act since Medicaid beneficiaries may have unique health care needs that are not typical of the general population in particular geographic areas.

Section 2402(a) of the Affordable Care Act directs the Secretary to promulgate regulations ensuring that all States develop service systems that, among other things, improve coordination and regulation of providers of HCBS to oversee and monitor functions, including a complaint system, and ensure that there are an adequate number of qualified direct care workers to provide self-directed services. This statutory mandate, coupled with the workforce shortages exacerbated by the COVID–19 pandemic, necessitates action specific to direct care workers. As such, we are proposing to require States to establish an interested parties' advisory group to advise and consult on FFS rates paid to direct care workers providing self-directed and agency-directed HCBS, at a minimum for personal care, home health aide, and homemaker services as described in § 440.180(b)(2) through (4), and States may choose to include other HCBS. The definition of direct care workers is proposed elsewhere in this rule under § 441.302(k)(1)(ii). We propose to utilize that definition, to consider a direct care worker a registered nurse, licensed practical nurse, nurse practitioner, or clinical nurse specialist who provides nursing services to Medicaid-eligible individuals receiving HCBS; a licensed nursing assistant who provides such services under the supervision of a registered nurse, licensed practical nurse, nurse practitioner, or clinical nurse specialist; a direct support professional; a personal care attendant; a home health aide; or other individuals who are paid to provide services to address activities of daily living or instrumental activities of daily living directly to Medicaid-eligible individuals receiving HCBS available under part 441, subpart G. A direct care worker may be employed by a Medicaid provider, State agency, or third party; contracted with a Medicaid provider, State agency, or third party; or delivering services under a self-directed service model.

We propose that the group would consult on rates for service categories under the Medicaid State plan, section 1915(c) waiver and demonstration programs, as applicable, where payments are made to individual providers or providers employed by an agency for, at a minimum, the previously described types of services, including for personal care, home health aide, and homemaker services provided under sections 1905(a), 1915(i), 1915(j), and 1915(k) State plan authorities, and section 1915(c) waivers. These proposed requirements also would extend to rates for HCBS provided under section 1115 demonstrations, as is typical for rules pertaining to HCBS authorized using demonstration authority. The interested parties advisory group may consult on other HCBS, at the State's discretion.

Specifically, in § 447.203(b)(6), we propose that the State agency would be required to establish an advisory group for interested parties to advise and consult on provider rates with respect to service categories under the Medicaid State plan, section 1915(c) waiver and demonstration programs, as applicable, where payments are made to the direct care workers specified in § 441.302(k)(1)(ii) for the self-directed or agency-directed services found at § 440.180(b)(2) through (4). The interested parties' advisory group would be required to include, at a minimum, direct care workers, beneficiaries and their authorized representatives, and other interested parties. ''Authorized representatives'' refers to individuals authorized to act on the behalf of the beneficiary, and other interested parties may include beneficiary family members and advocacy organizations. To the extent a State's MAC established under proposed § 431.12, if finalized, meets the requirements of this regulation, the State could utilize that committee for this purpose. However, we note the roles of the MAC under proposed § 431.12 and the interested party advisory group under proposed § 447.203(b)(6) would be distinct, and the existence or absence of one committee or group (for example, if one of these proposals is not finalized) would not affect the requirements with respect to the other as established in a final rule.

We further propose in § 447.203(b)(6)(iii) that the interested parties' advisory group would advise and consult with the Medicaid agency on current and proposed payment rates, HCBS payment adequacy data as required at § 441.311(e), and access to care metrics described in § 441.311(d)(2), associated with services found at § 440.180(b)(2) through (4), to ensure the relevant Medicaid payment rates are sufficient to ensure access to homemaker services, home health aide services, and personal care services for Medicaid beneficiaries at least as great as available to the general population in the geographic area and to ensure an adequate number of qualified direct care workers to provide self-directed personal assistance services.

In proposed § 447.203(b)(6)(iv), we propose that the interested parties advisory group would meet at least every 2 years and make recommendations to the Medicaid agency on the sufficiency of State plan, 1915(c) waiver, and demonstration direct care worker payment rates, as applicable. The State agency would be required to ensure the group has access to current and proposed payment rates, HCBS provider payment adequacy minimum performance and reporting standards as described in § 441.311(e), and applicable access to care metrics for HCBS as described in § 441.311(d)(2) to produce these recommendations. These materials would be required to be made be available with sufficient time for the advisory group to consider them, formulate recommendations, and transmit those recommendations to the State. If the State has asked the group to consider a proposed rate change, they would need to provide the group with sufficient time to review and produce a recommendation within the State's intended rate adjustment schedule. This would be necessary because the group's recommendation would be considered part of the interested parties input described in proposed §§ 447.203(c)(4) and 447.204(b)(3), which States would be required to consider and analyze. The interested parties' advisory group would make recommendations to the Medicaid agency on the sufficiency of the established and proposed State plan, section 1915(c) waiver and demonstration payment rates, as applicable. In other words, the group would provide information to the State regarding whether, based on the group's knowledge and experience, current payment rates are sufficient to enlist a sufficiently large work force to ensure beneficiary access to services, and whether a proposed rate change would be consistent with a sufficiently large work force or would disincentivize participation in the work force in a manner that might compromise beneficiary access.

We propose to require States to convene this interested parties' advisory group every 2 years, at a minimum, to advise and consult on current and suggested payment rates and the sufficiency of these rates to ensure access to HCBS for beneficiaries consistent with section 1902(a)(30)(A) of the Act. This timing aligns with the comparative payment rate analysis and payment rate disclosure publication requirements proposed in § 447.203(b)(4), although we note that

this would be a minimum requirement and a State may find that more frequent meetings would be necessary or helpful for the advisory group to provide meaningful and actionable feedback. We further propose that the process by which the State selects its advisory group members and convenes meetings would be required to be made publicly available, but other matters, such as the tenure of members, would be left to the State's discretion.

Finally, in § 447.203(b)(6)(v), we propose that the Medicaid agency would be required to publish the recommendations of the interested parties' advisory group consistent with the publication requirements described in paragraph (b)(1) of this section for payment rate transparency data, within 1 month of when the group provides the recommendation to the agency. We intend that States would consider, but not be required to adopt, the recommendations of the advisory group. Under this proposal, the work of the advisory group would be regarded as an element of the State's overall rate-setting process. Additionally, the feedback of this advisory group would not be required for rate changes. That is to say, should a State need or want to adjust rates and it is not feasible to obtain a recommendation from the advisory group in a particular instance, the State would still be permitted to submit its rate change SPA to CMS. However, to the extent the group comments on proposed rate changes, its feedback would be considered part of the interested parties input described in proposed §§ 447.203(c)(4) and 447.204(b)(3), which States would be required to consider and analyze, and submit such analysis to us, in connection with any SPA submission that proposes to reduce or restructure Medicaid service payment rates. In addition, by way of clarification, we intend that the advisory group would be permitted to suggest alternate rates besides those proposed by the State for consideration.

We are seeking public comment on the proposed interested parties advisory group and about whether other categories of services should be included in the requirement for States to consult with the interested parties advisory group.

3. State Analysis Procedures for Rate Reduction or Restructuring (§ 447.203(c))

As stated previously, the Supreme Court's Armstrong decision underscored the importance of CMS' administrative review of Medicaid payment rates to ensure compliance with section 1902(a)(30)(A) of the Act. CMS' oversight role is particularly important when States propose to reduce provider payment rates or restructure provider payments, since provider payment rates can affect provider participation in Medicaid, and therefore, beneficiary access to care. In § 447.203(c), we propose a process for State access analyses that would be required whenever a State submits a SPA proposing to reduce provider payment rates or restructure provider payments.

As noted previously, the 2015 final rule with comment period required that, for any SPA proposing to reduce provider payment rates or restructure provider payments in circumstances when the changes could result in diminished access, States must submit a detailed analysis of access to care under §§ 447.203(b)(1) and (b)(6) and 447.204(b)(1). This analysis includes, under current § 447.203(b)(1), the extent to which beneficiary needs are fully met; the availability of care through enrolled providers to beneficiaries in each geographic area, by provider type and site of service; changes in beneficiary utilization of covered services in each geographic area; the characteristics of the beneficiary population (including considerations for care, service and payment variations for pediatric and adult populations and for individuals with disabilities); and actual or estimated levels of provider payment available from other payers, including other public and private payers, by provider type and site of service. Currently, this information is required for any SPA that proposes to reduce provider payment rates or restructure provider payments in circumstances when the changes could result in diminished access, regardless of the provider payment rates or levels of access to care before the proposed reduction or restructuring.

Following the implementation of the 2015 final rule with comment period, as we worked with States to implement the AMRP requirements, many States expressed concerns that the requirements that accompany proposed rate reductions or restructurings are overly burdensome. Specifically, States pointed to instances where proposed reductions or restructurings are nominal, or where rate changes are made via the application of a previously approved rate methodology, such as when the State's approved rate methodology ties Medicaid payment rates to a Medicare fee schedule and the Medicare payment rate is reduced. We acknowledged these concerns through previous proposed rulemaking. In the 2018 proposed rule, we agreed that our experience implementing the AMRP process from the 2015 final rule with comment period raised questions about the benefit of the access analysis when proposed rate changes include nominal rate reductions or restructurings that are unlikely to result in diminished access to care.[192]

We did not finalize the 2018 proposed rule; instead, in response to feedback, we proposed a rescission of the AMRP process in the 2019 proposed rule.[193] In that proposed rule, we indicated that future guidance would be forthcoming to provide information on the required data and analysis that States might submit with rate reduction or restructuring SPAs in place of the AMRPs to support compliance with section 1902(a)(30)(A) of the Act.[194] We did not finalize the rescission proposed in the 2019 proposed rule. Although we are concerned that the current AMRP process is overly burdensome for States and CMS in relation to the benefit obtained in helping ensure compliance with the access requirement in section 1902(a)(30)(A) of the Act, our 2018 and 2019 proposed rules did not adequately consider our need for information and analysis from States seeking to reduce provider payment rates or restructure provider payments to enable us to determine that the statutory access requirement is met when making SPA approval decisions.

To improve the efficiency of our administrative procedures and better inform our SPA approval decisions, this proposed rule would establish standard information that States would be required to submit with any proposed rate reductions or proposed payment restructurings in circumstances when the changes could result in diminished access, including a streamlined set of data when the reductions or restructurings are nominal, the State rates are above a certain percentage of Medicare payment rates, and there are no evident access concerns raised through public processes; and an additional set of data elements that would be required when States propose FFS provider payment rate reductions or restructurings in circumstances when the changes could result in diminished access and these criteria are not met. For both sets of required or potentially required elements, we are proposing to standardize the data and information States would be required to submit with rate reduction or restructuring SPAs. Although the AMRP processes have helped to improve our administrative

[192] 83 FR 12696 at 12697.

[193] 84 FR 3372.2.

[194] Id at 33723.

reviews and helped us make informed SPA approval determinations, the procedures within this proposed rule would provide us with similar information in a manner that reduces State burden. Additionally, the proposed procedures would provide States increased flexibility to make program changes with submission of streamlined supporting data to us when current Medicaid rates and proposed changes fall within specified criteria that create a reasonable presumption that proposed reductions or restructuring would not reduce beneficiary access to care in a manner inconsistent with section 1902(a)(30)(A) of the Act.

This proposed rule seeks to achieve a more appropriate balance between reducing unnecessary burden for States and CMS, and ensuring that we have the information necessary to make appropriate determinations for whether a rate reduction or restructuring SPA might result in beneficiary access to covered services failing to meet the standard in section 1902(a)(30)(A) of the Act. In § 447.203(c), we propose to establish analyses that States would be required to perform, document, and submit concurrently with the submission of rate reduction and rate restructuring SPAs, with additional analyses required in certain circumstances due to potentially increased access to care concerns.

We are proposing a two-tiered approach for determining the level of access analysis States would be required to conduct when proposing provider payment rate reductions or payment restructurings. The first tier of this approach, proposed at § 447.203(c)(1), sets out three criteria for States to meet when proposing payment rate reductions or payment restructurings in circumstances when the changes could result in diminished access that, if met, would not require a more detailed analysis to establish that the proposal meets the access requirement in section 1902(a)(30)(A) of the Act. The State agency would be required to provide written assurance and relevant supporting documentation that the three criteria specified in those paragraphs are met, as well as a description of the State's procedures for monitoring continued compliance with section 1902(a)(30)(A) of the Act. As explained in more detail later in this section, these criteria proposed in § 447.203(c)(1) represent thresholds we believe would likely assure that Medicaid payment rates would continue to be sufficient following the change to enlist enough providers so that care and services are available under the plan at least to the extent that such care and services are available to the general population in the geographic area.

We note that, in the course of our review of a payment SPA that meets these criteria, as with any SPA review, we may need to request additional information to ensure that all Federal SPA requirements are met. We also note that meeting the three criteria described in proposed § 447.203(c)(1) does not guarantee that the SPA would be approved, if other applicable Federal requirements are not met. Furthermore, if any criterion in the first tier is not met, we propose a second tier in § 447.203(c)(2), which would require the State to conduct a more extensive access analysis in addition to providing the results of the analysis in the first tier. A detailed discussion of the second tier follows the details of the first tier in this section.

Under proposed § 447.203(c)(1)(i), the State would be required to provide a supported assurance that Medicaid payment rates in the aggregate (including base and supplemental payments) following the proposed reduction or restructuring for each benefit category affected by the proposed reduction or restructuring would be at or above 80 percent of the most recently published Medicare payment rates for the same or a comparable set of Medicare-covered services.

In proposed § 447.203(c)(1)(i), we mean for ''benefit category'' to refer to all individual services under a category of services described in section 1905(a) of the Act for which the State is proposing a payment rate reduction or restructuring. Comparing the payment rates in the aggregate would involve first performing a comparison of the Medicaid to the Medicare payment rate on a code-by-code basis, meaning CPT, CDT, or HCPCS as applicable, to derive a ratio for individual constituent services, and then the ratios for all codes within the benefit category would be averaged by summing the individual ratios then dividing the sum by the number of ratios. For example, if the State is seeking to reduce payment rates for a subset of physician services, the State would review all current payment rates for all physician services and determine if the proposed reduction to the relevant subset of codes would result in an average Medicaid payment rate for all physician services that is at or above 80 percent of the average corresponding Medicare payment rates. For supplemental payments, we are relying upon the definition of supplemental payments in section 1903(bb)(2) of the Act, which defines supplemental payments as ''a payment to a provider that is in addition to any base payment made to the provider under the State plan under this title or under demonstration authority . . . [b]ut such term does not include a disproportionate share hospital payment made under section 1923 [of the Act].'' With the inclusion of supplemental payments, States would need to aggregate the supplemental payments paid to qualifying providers during the State fiscal year and divide by all providers' total service volume (including service volume of providers that do not qualify for the supplemental payment) to establish an aggregate, per-service supplemental payment amount, then add that amount to the State's fee schedule rate to compare the aggregate Medicaid payment rate to the corresponding Medicare payment rate. As this supportive assurance in proposed § 447.203(c)(1)(i) is expected to be provided with an accompanying SPA, CMS may ask the State to explain how the analysis was conducted if additional information is needed as part of the analysis of the SPA. We are requesting comment on the proposed § 447.203(c)(1)(i) supported assurance that Medicaid payment rates in the aggregate (including base and supplemental payments) following the proposed reduction or restructuring for each benefit category affected by the proposed reduction or restructuring would be at or above 80 percent of the most recently published Medicare payment rates for the same or a comparable set of Medicare-covered services should include a weighted average of the payment rate analysis by service volume, number of beneficiaries receiving the service, and total amount paid by Medicaid for the code in a year using State's Medicaid utilization data from the MMIS claims system rather than using a straight code-by-code analysis.

We understand that this approach may have a smoothing effect on the demonstrated overall levels of Medicaid payment within a benefit category under the State plan. In many circumstances, only a subset of providers are recipients of Medicaid supplemental payments with the rest of the providers within the benefit category simply receiving the State plan fee schedule amount. This could result in a demonstration showing the Medicaid payments being high relative to Medicare, but the actual payments to a large portion of the providers would be less than the overall demonstration would suggest. As an alternative, we considered whether to adopt separate comparisons for

providers who do and who do not receive supplemental payments, where a State makes supplemental payments for a service to some but not all providers of that service. We are requesting comments on the proposed approach and this alternative.

We selected FFS Medicare, as opposed to Medicare Advantage, as the proposed payer for comparison for a number of reasons. A threshold issue is payment rate data availability: private payer data may be proprietary or otherwise limited in its availability for use by States. In addition, Medicare sets its prices rather than negotiating them through contracts with providers, and is held to many similar statutory standards as Medicaid with respect to those prices, such as efficiency, access, and quality.[195] For example, section 1848(g)(7) of the Act directs the Secretary of HHS to monitor utilization and access for Medicare beneficiaries provided through the Medicare fee schedule rates, and directs that the Medicare Payment Advisory Commission (MedPAC) shall comment on the Secretary's recommendations. In developing its comments, MedPAC convenes and consults a panel of physician experts to evaluate the implications of medical utilization patterns for the quality of and access to patient care. In a March 2001 report, MedPAC summarized its evaluation of Medicare rates, stating ''Medicare buys health care products and services from providers who compete for resources in private markets. To ensure beneficiaries' access to high-quality care, Medicare's payment systems therefore must set payment rates for health care products and services that are: high enough to stimulate adequate numbers of providers to offer services to beneficiaries, sufficient to enable efficient providers to supply high-quality services, given the trade-offs between cost and quality that exist with current technology and local supply conditions for labor and capital, and low enough to avoid imposing unnecessary burdens on taxpayers and beneficiaries through the taxes and premiums they pay to finance program spending.'' [196] Medicare's programmatic focus on beneficiary access aligns with the requirements of section 1902(a)(30)(A) of the Act.

In addition, Medicare fee schedule rates are stratified by geographic areas within the States, which we seek to consider, as well to ensure that payment rates are consistent with section 1902(a)(30)(A) of the Act. The Medicare PFS pricing amounts are adjusted to reflect the variation in practice costs from area to area. Medicare established GPCI for every Medicare payment locality for each of the three components of a procedure's relative value unit (that is, the RVUs for work, practice expense, and malpractice). The current Medicare PFS locality structure was implemented in 2017 in accordance with the Protecting Access to Medicare Act of 2014 (PAMA 2014). Under the current locality structure, there are 112 total PFS localities.[197]

When considering geography in their rate analyses, CMS expects States to conduct a code-by-code analysis of the ratios of Medicaid-to-Medicare provider payment rates for all applicable codes within the benefit category, either for each of the GPCIs within the State, or by calculating an average Medicare rate across the GPCIs within the State (such as in cases where a State does not vary its rates by region). In cases where a State does vary its Medicaid rates based on geography, but that variation does not align with the Medicare GPCI, the State should utilize the Medicare payment rates as published by Medicare for the same geographical location as the Medicaid base payment rates to achieve an equivalent comparison and align the Medicare GPCI to the locality of the Medicaid payment rates, using the county and locality information provided by Medicare for the GPCIs, for purposes of creating a reasonable comparison of the payment rates.[198] To conduct such an analysis that meets the requirements of proposed § 447.203(c)(1)(i), States may compare the Medicaid payment rates applicable to the same Medicare GPCI to each Medicare rate by GPCI individually, and then aggregate that comparison into an average rate comparison for the benefit category. To the extent that Medicaid payment rates do not vary by geographic locality within the State, the State may also calculate a Statewide average Medicare rate based upon all of the rates applicable to the GPCIs within that State, and compare that average Medicare rate to the average Medicaid rate for the benefit category.

Once we decided to propose using Medicare payment rates as a point of comparison, we needed to decide what threshold ratio of proposed Medicaid to Medicare payment rates should trigger additional consideration and review for potential access issues. First, we considered how current levels of Medicaid payment compares to the Medicare payment for the same services. In a 2021 *Health Affairs* article, Zuckerman, et al, found that ''Medicaid physician fees were 72 percent of Medicare physician fees for twenty-seven common procedures in 2019.'' [199] This ratio varied by service type. For example, ''the 2019 Medicaid-to-Medicare fee index was lower for primary care (0.67) than for obstetric care (0.80) or for other services (0.78).'' The authors also found that ''between 2008 and 2019 Medicare and Medicaid fees both increased (23.6 percent for Medicare fees and 19.9 percent for Medicaid fees), leaving the fee ratios similar.'' [200]

Next, considering that Medicaid rates are generally lower than Medicare, we wanted to examine the relationship between these rates and a beneficiary's ability to access covered services. This led us to first look into a comparison of physician new patient acceptance rates based on a prospective new patient's payer. In a June 2021 fact sheet, the Medicaid and CHIP Payment and Access Commission (MACPAC) found ''in 2017 (the most recent year available), physicians were significantly less likely to accept new patients insured by Medicaid (74.3 percent) than those with Medicare (87.8 percent) or

[197] Section 220(b) of PAMA 204 added section 1848(e)(6) of the Act, which requires that, for services furnished on or after January 1, 2017, the locality definitions for California, which has the most unique locality structure, be based on the Metropolitan Statistical Area (MSA) delineations as defined by the Office of Management and Budget (OMB). The resulting modifications to California's locality structure increased its number of localities from 9 under the previous structure to 27 under the MSA-based locality structure (operational note: for the purposes of payment the actual number of localities under the MSA-based locality structure is 32). Of the 112 total PFS localities, 34 localities are Statewide areas (that is, only one locality for the entire State). There are 75 localities in the other 16 States, with 10 States having 2 localities, 2 States having 3 localities, 1 State having 4 localities, and 3 States having 5 or more localities. The District of Columbia, Maryland, and Virginia suburbs, Puerto Rico, and the Virgin Islands are additional localities that make up the remainder of the total of 112 localities. Medicare PFS Locality Configuration. *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/Locality.* Accessed December 21, 2022.

[200] Id.

private insurance (96.1 percent).'' [201] MACPAC found this to be true ''regardless of physician demographic characteristics (age, sex, region of the country); and type and size of practice.'' [202]

We then wanted to confirm whether this was related to the rates themselves. In a 2019 *Health Affairs* article, the authors found that, ''higher payment continues to be associated with higher rates of accepting new Medicaid patients . . . physicians most commonly point to low payment as the main reason they choose not to accept patients insured by Medicaid.'' [203] The study found that physicians in States that pay above the median Medicaid-to-Medicare fee ratio accepted new Medicaid patients at higher rates than those in States that pay below the median, with acceptance rates increasing by nearly 1 percentage point (0.78) for every percentage point increase in the fee ratio.[204]

Similarly, in a 2020 study published by the *National Bureau of Economic Research,* researchers found that there was a positive association between increasing Medicaid physician fees and increased likelihood of having a usual source of care, improved access to specialty doctor care, and large improvements in caregivers' satisfaction with the adequacy of health coverage, among children with special health care needs with a public source of health coverage.[205] Further, Berman, et al, focused on pediatricians looked at Medicaid-Medicare fee ratio quartiles and found that the percent of pediatricians accepting all Medicaid patients and relative pediatrician participation in Medicaid increased at each quartile, but improvement was most significant up to the third quartile.[206] According to the Kaiser Family Foundation, in 2016, following the expiration of section 1202 of the Affordable Care Act (Pub. L. 111–148), which amended section 1902(a)(13) of the Act to implement a temporary payment floor for certain Medicaid primary care physician services, the third quartile of States had Medicaid-Medicare fee ratios of between 79 and 86 percent for all services provided under all State Medicaid fee-for-service programs.[207] Importantly, considering the proposed requirements at paragraph (c) pertain to proposed payment rate reductions or payment restructurings in circumstances when the changes could result in diminished access, multiple recent studies have also shown that the association between Medicaid physician fees and measures of beneficiary access are consistent whether physician payments are increased or decreased to reach a particular level at which access is assessed.[208]

The Kaiser Family Foundation found that 23 States have Medicaid-to-Medicare fee ratios of at least 80 percent for all services, 17 States have fee ratios of 80 percent for primary care services, 32 States have fee ratios of 80 percent for obstetric care, and 27 States have fee ratios of 80 percent for other services.[209] Additional studies support the Holgash and Heberlein findings that physicians most commonly point to low payment as the main reason they choose not to accept patients insured by Medicaid, showing that States with a Medicaid to Medicare fee ratio at or above 80 percent show improved access for children to a regular source of care,[210] and decreased use of hospital-based facilities, versus States with a lower Medicaid to Medicare fee ratio.

In general, we are concerned that higher rates of acceptance by some providers of new patients with payers other than Medicaid (specifically, Medicare and private coverage), and indications by some providers that low Medicaid payments are a primary reason for not accepting new Medicaid patients, may suggest that some beneficiaries could have a more difficult time accessing covered services than other individuals in the same geographic area. We are encouraged by findings that suggest that some increases in Medicaid payment rates may drive increases in provider acceptance of new Medicaid patients, with one study finding that new Medicaid patient acceptance rates increased by 0.78 percent for every percentage point increase in the Medicaid-to-Medicare fee ratio, for certain providers for certain States above the median Medicaid-to-Medicare fee ratio.[211] [212] In line with the Berman study, which found that increases in the percentage of pediatricians participating in Medicaid and of pediatricians accepting new Medicaid patients occurred with Medicaid payment rate increases at each quartile of the Medicaid-to-Medicare fee ratio but were most significant up to the third quartile, we believe that beneficiaries in States that provide this level of Medicaid payment generally may be less likely to encounter access to care issues at rates higher than the general population.[213] In line with the Kaiser Family Foundation reporting of the Medicaid-to-Medicare fee ratio third quartile as ranging from 79 to 86 percent in 2016, depending on the service, we believe that a minimum 80 percent Medicaid-to-Medicare fee ratio is a reasonable threshold to propose in § 447.203(c)(1)(i) as one of three criteria State proposals to reduce or restructure provider payments would be required to meet to qualify for the proposed streamlined documentation process.[214] As documented by the Kaiser Family Foundation, many States currently satisfy this ratio for many Medicaid-covered services, and according to findings by Zuckerman, et al. in *Health Affairs,* in 2019, the average nationwide fee ratio for obstetric care met this

proposed threshold.[215] [216] We propose that this percentage would hold across benefit categories, because we did not find any indication that a lower threshold would be adequate, or that a higher threshold would be strictly necessary, to support a level of access to covered services for Medicaid beneficiaries at least as great as for the general population in the geographic area. It is worth noting that the disparities in provider participation for some provider types may be larger than this overview suggests, as such we are proposing a uniform standard in the interest of administrative simplicity, but note that States must meet all three of the criterion in proposed paragraph (c)(1) to qualify for the streamlined analysis process; otherwise, the additional analysis specified in proposed paragraph (c)(2) would be required.

Given the results of this literature review, and by proposing this provision as only one part of a three-part assessment of the likely effect of a proposed payment rate reduction or payment restructuring on access to care, as further discussed in this section, we propose 80 percent of the most recently published Medicare payment rates, as identified on the applicable Medicare fee schedule for the same or a comparable set of Medicare-covered services, as a benchmark for the level of Medicaid payment for benefit categories that are subject to proposed provider payment reductions or restructurings that is likely to enlist enough providers so that care and services are available to Medicaid beneficiaries at least to the extent as to the general population in the geographic area, where the additional tests in proposed § 447.203(c)(1) also are met. The published Medicare payment rates means the amount per applicable procedure code identified on the Medicare fee schedule. The established Medicare fee schedule rate includes the amount that Medicare pays for the claim and any applicable co-insurance and deductible amounts owed by the patient. Medicaid fee-schedule rates should be representative of the total computable payment amount a provider would expect to receive as payment-in-full for the provision of Medicaid services to individual beneficiaries. Section 447.15 defines payment-in-full as ''the amounts paid by the agency plus any deductible, coinsurance or copayment required by the plan to be paid by the individual.'' Therefore, State fee schedule should be inclusive of total base payment from the Medicaid agency plus any applicable coinsurance and deductibles to the extent that a beneficiary is expected to be liable for those payments. If a State Medicaid fee schedule does not include these additional beneficiary cost-sharing payment amounts, then the Medicaid fee schedule amounts would need to be modified to include expected beneficiary cost sharing to align with Medicare's fee schedule.

We note that Medicaid benefits that do not have a reasonably comparable Medicare-covered analogue, and for which a State proposes a payment rate reduction or payment restructuring in circumstances when the changes could result in diminished access, would be subject to the expanded review criteria proposed in § 447.203(c)(2), because the State would be unable to demonstrate its Medicaid payment rates are at or above 80 percent of Medicare payment rates for the same or a comparable set of Medicare-covered services after the payment rate reduction or payment restructuring in circumstances when the changes could result in diminished access. For identifying a comparable set of Medicare-covered services, we would expect to see services that bear a reasonable relationship to each other. For example, the clinic benefit in Medicaid does not have a directly analogous clinic benefit in Medicare. In Medicaid, clinic services generally are defined in § 440.90, as ''preventive, diagnostic, therapeutic, rehabilitative, or palliative services that are furnished by a facility that is not part of a hospital but is organized and operated to provide medical care to outpatients.'' This can include a number of primary care services otherwise available through physician practices and other primary care providers, such as nurse practitioners. Therefore, in seeking to construct a comparable set of Medicare-covered services to which the State could compare its proposed Medicaid payment rates, the State reasonably could include Medicare payment rates for practitioner services, such as physician and nurse practitioner services, or payments for facility-based services that bear a reasonable similarity to clinic services, potentially including those provided in Ambulatory Surgical Centers. We would expect the State to develop a reasonably comparable set of Medicare-covered services to which its proposed Medicaid payment rates could be compared and to include with its submission an explanation of its reasoning and methodology for constructing the Medicare rate to compare Medicaid payment rates to.

In § 447.203(c)(1)(ii), we propose that the State would be required to provide a supported assurance that the proposed reduction or restructuring, including the cumulative effect of all reductions or restructurings taken throughout the State fiscal year, would result in no more than a 4 percent reduction in aggregate FFS Medicaid expenditures for each benefit category affected by proposed reduction or restructuring within a single State fiscal year. The documentation would need to show the change stated as a percentage reduction in aggregate FFS Medicaid expenditures for each affected benefit category. We recognize that the effects of payment rate reductions and payment restructurings on beneficiary access generally cannot be determined through any single measure, and applying a 4 percent threshold without sufficient additional safeguards would not be prudent. Therefore, we are proposing to limit the 4 percent threshold as the cumulative percentage of rate reductions or restructurings applied to the overall FFS Medicaid expenditures for a particular benefit category affected by the proposed reduction(s) or restructuring(s) within each State fiscal year. We are proposing the cumulative application of the threshold to State plan actions taken within a State fiscal year as opposed to a SPA-specific application to avoid circumstances where a State may propose rate reductions or restructurings that cumulatively exceed the 4 percent threshold across multiple SPAs without providing additional analysis.

For example, if a State proposed to reduce payment rates for a broad set of obstetric services by 3 percent in State fiscal year 2023 and had not proposed any other payment changes affecting the benefit category of obstetric care during the same State fiscal year, that payment change would meet the criterion proposed in § 447.203(c)(1)(ii) because it would be expected to result in no more than a 3 percent reduction in aggregate Medicaid expenditures for obstetric care within a State fiscal year. However, if the State had received approval earlier in the State fiscal year to revise its obstetric care payment methodology to include value-based arrangements expected to reduce overall Medicaid expenditures for obstetric care by 2 percent per State fiscal year, then it is likely that the cumulative effect of the proposal to reduce payment rates for a broad set of obstetric services by 3 percent and the Medicaid obstetric care

[215] Id.

[216] Zuckerman, S. et al. ''Medicaid Physician Fees Remained Substantially Below Fees Paid By Medicare in 2019,'' Health Affairs, Volume 40, Number 2, February 2021. Available at *https://doi.org/10.1377/hlthaff.2020.00611* (accessed December 23, 2022).

expenditure reductions under the earlier-approved payment restructuring would result in an aggregate reduction to FFS Medicaid expenditures for obstetric services of more than 4 percent in a State fiscal year. If so, the State's proposal would not meet the criterion proposed in § 447.203(c)(1)(ii), and the proposal would be subject to the additional review criteria proposed in § 447.203(c)(2). The State would need to document for our review whether the three percent payment rate reduction proposal for the particular subset of obstetric services would be likely to result in a greater than 2 percent further reduction in aggregate FFS Medicaid expenditures for obstetric care as compared to the expected expenditures for such services for the State fiscal year before any payment rate reduction or payment restructuring; if this expected aggregate reduction is demonstrated to be 2 percent or less, then the proposal still could meet the criterion proposed in § 447.203(c)(1)(ii).

We propose to codify a 4 percent reduction threshold for aggregate FFS Medicaid expenditures in each benefit category affected by a proposed payment rate reduction or payment restructuring within a State fiscal year. This threshold is consistent with one we proposed in the 2018 proposed rule, which proposed to require the States to submit an AMRP with any SPA that proposed to reduce provider payments by greater than 4 percent in overall service category spending in a State fiscal year or greater than 6 percent across 2 consecutive State fiscal years, or restructure provider payments in circumstances when the changes could result in diminished access.[217] The proposed rule received positive feedback from States regarding its potential for mitigating administrative burden, and providing States with flexibility to administer their programs and make provider payment rate changes. Some States and national organizations requested that we increase the rate reduction threshold to 5 percent and increase the consecutive year threshold to 8 percent.[218] [219] Non-State commenters cautioned CMS against providing too much administrative flexibility and to not abandon the Medicaid access analysis the current regulations require. Commenters also raised that 4 and 6 percent may seem nominal for larger medical practices and health care settings, but for certain physician practices or direct care workers a 6 percent reduction in payment could be considerable.[220] This feedback has been essential in considering how we proceed with this proposed rule, in which we emphasize that the size of the rate reduction threshold proposed in § 447.203(c)(1)(ii) would operate in conjunction with the two other proposed elements in § 447.203(c)(1)(i) and (iii) to qualify the State for a streamlined analysis process and would not exempt the proposal from scrutiny for compliance with section 1902(a)(30)(A) of the Act.

We are proposing a 4 percent threshold on cumulative provider payment rate reductions throughout a single State fiscal year as one of the criteria of the streamlined process in proposed paragraph (c)(1), and therefore, emphasizing that while we believe this payment threshold to be nominal and unlikely to diminish access to care, we propose to include paragraph (c)(1)(i) to require States to review current levels of provider payment in relation to Medicare and propose to include paragraph (c)(1)(iii) to require that States rely on the public process to inform the determination on the sufficiency of the proposed payment rates after reduction or restructuring, with consideration for providers and practice types that may be disproportionately impacted by the State's proposed rate reductions or restructurings.

As previously noted, we would not consider any payment rate reduction or payment rate restructuring proposal to qualify for the streamlined analysis process in the proposed paragraph (c)(1) unless all three of the proposed paragraph (c)(1) criteria are met. Using information from the Kaiser Family Foundation's Medicaid-to-Medicare fee index [221] as an example, only 15 States could have reduced primary care service provider payment rates by up to 4 percent in 2019 and continued to meet the 80 percent of Medicare threshold in proposed paragraph (c)(1). Even those 15 States with rates above the 80 percent of Medicare threshold would be subject to proposed paragraph (c)(2) requirements if the State received significant public feedback that the proposed payment reduction or restructuring would result in an access to care concern, if the State were unable to reasonably respond to or mitigate such concerns. All States with primary care service payment rates below the 80 percent of Medicare threshold, no matter the size of the payment rate reduction or restructuring and no matter whether interested parties expressed access concerns through available public processes, would have to conduct an additional access analysis required under proposed paragraph (c)(2).

We issued SMDL #17–004 to provide States with guidance on complying with regulatory requirements to help States avoid unnecessary burden when seeking approval of and implementing payment changes, because States often seek to make payment rate and/or payment structure changes for a variety of programmatic and budgetary reasons with limited or potentially no effect on beneficiary access to care, and we recognized that State legislatures needed some flexibility to manage State budgets accordingly. We discussed a 4 percent spending reduction threshold with respect to a particular service category in SMDL #17–004 as an example of a targeted reduction where the overall change in net payments within the service category would be nominal and any effect on access difficult to determine (although we reminded States that they should document that the State followed the public process under § 447.204, which could identify access concerns even with a seemingly nominal payment rate reduction). To our knowledge, since the release of SMDL #17–004, the 4 percent threshold for regarding a payment rate reduction as nominal has not resulted in access to care concerns in State Medicaid programs, and it received significant State support for this reason in comments submitted in response to the 2018 proposed rule.[222]

In instances where States submitted payment rate reduction SPAs after the publication of SMDL #17–004, we routinely have asked the State for an explanation of the purpose of the proposed change, whether the FFS Medicaid expenditure impact for the

service category would be within a 4 percent reduction threshold, and for an analysis of public comments received on the proposed change, and approved those SPAs to the extent that the State was able to resolve any potential access to care issues and determined that access would remain consistent for the Medicaid population. For example, of the 849 SPAs approved in 2019, there were 557 State payment rate changes. Of those, 39 were classified as payment rate reductions or methodology changes that resulted in a reduction in overall provider payment. Within those 39, there were 18 SPAs that sought to reduce payments by less than 4 percent of overall spending within the benefit category, most of which were decreases related to changes in Medicare payment formulas. Sixteen of the remaining 21 SPAs fell into an area discussed in SMDL #17–004 as being unlikely to result in diminished access to covered services, where with the State's analytical support, we were able to determine that the payment rates would continue to comply with section 1902(a)(30)(A) of the Act without submitting an AMRP with the SPA. Six of these SPAs represented rate freezes meant to continue forward a prior year's rates or eliminated an inflation adjustment. Six SPAs reduced a payment rate to comply with Federal requirements, such as the Medicaid UPLs in §§ 447.272 and 447.321, the Medicaid DME FFP limit in section 1903(i)(27) of the Act, or the Medicaid hospice rate, per section 1902(a)(13)(B) of the Act. Four SPAs contained reductions that resulted from programmatic changes such as the elimination of a Medicaid benefit or shifting the delivery system for a benefit to coverage by a pre-paid ambulatory health plan. Finally, we found five SPAs for which States were required to submit AMRPs, three of which were submitted to us in 2017 and updated for 2019. Overall, our review of SPAs revealed that smaller reductions may often be a result of elements of the State's approved payment methodology or other requirements that may be outside of the State's control, such as Federal payment limits or changes in the Medicare payment rate formulas that might be incorporated into a State's approved payment methodology, or coding changes that might affect the amount of payment related to the unit of service. We determined, using this information, that it is necessary to provide States with some degree of flexibility in making changes, even if that change is a reduction in provider payment. For example, if a State submits a SPA to reduce or restructure inpatient hospital base or supplemental payments, where inaction on the State's part would result in the State exceeding the applicable UPL, the State would need to reduce inpatient hospital payments or risk a compliance action against the State for violating Medicaid UPL requirements authorized under section 1902(a)(30)(A) of the Act and implementing regulations in 42 CFR 447 subparts C and F. We recognize that this flexibility does not eliminate the need to monitor or consider access to care when making payment rate decisions, but also recognize the need to provide some relief in circumstances where the State must take a rate action to address an issue of compliance with another statutory or regulatory requirement.

Accordingly, we propose that, where a State has provided the information required under proposed paragraphs (c)(1)(i) through (iii), we would consider that the proposed reduction would result in a nominal payment adjustment unlikely to diminish access below the level consistent with section 1902(a)(30)(A) of the Act and would approve the SPA, provided all other criteria for approval also are met, without requiring the additional analysis that otherwise would be required under proposed § 447.203(c)(2).

Finally, in § 447.203(c)(1)(iii), we propose that the State would be required to provide a supported assurance that the public processes described in § 447.203(c)(4) yielded no significant access to care concerns or yielded concerns that the State can reasonably respond to or mitigate, as appropriate, as documented in the analysis provided by the State under § 447.204(b)(3). The State's response to any access concern identified through the public processes, and any mitigation approach, as appropriate, would be expected to be fully described in the State's submission to us.

We note that the proposed requirement in § 447.203(c)(4) would not duplicate the requirements in current § 447.204(a)(2), as the current § 447.204(a)(2) requires States to consider provider and beneficiary input as part of the information that States are required to consider prior to the submission of any SPA that proposes to reduce or restructure Medicaid service payment rates. The proposed § 447.203(c)(4) describes material that States would be required to include with any SPA submission that proposes to reduce or restructure provider payment rates. As discussed in the CMCS informational bulletin dated June 24, 2016,[223] before submitting SPAs to us, States are required under § 447.204(a)(2) to make information available so that beneficiaries, providers, and other interested parties may provide input on beneficiary access to the affected services and the impact that the proposed payment change would have, if any, on continued service access. States are expected to obtain input from beneficiaries, providers, and other interested parties, and analyze the input to identify and address access to care concerns. States must obtain this information prior to submitting a SPA to us and maintain a record of the public input and how the agency responded to the input. When a State submits the SPA to us, § 447.204(b)(3) requires the State to also submit a specific analysis of the information and concerns expressed in input from affected interested parties. We would rely on this and other documentation submitted by the State, including under proposed § 447.203(c)(1)(iii), (c)(2)(vi), and (c)(4), to inform our SPA approval decisions.

In addition, States are required use the applicable public process required under section 1902(a)(13) of the Act, as applicable, and follow the public notice requirement in § 447.205, as well as any other public processes required by State law (for example, State-specified budgetary process requirements), in setting payment rates and methodologies in view of potential access to care concerns. States have an important role in identifying access to care concerns, including through ongoing and collaborative efforts with beneficiaries, providers, and other interested parties. We understand that not every concern would be easily resolvable, but we anticipate that States would be meaningfully engaged with their beneficiary, provider, and other interested party communities to identify and mitigate issues as they arise. As discussed herein, we would consider information about access concerns raised by beneficiaries, providers, and other interested parties when States propose SPAs to reduce Medicaid payment rates or restructure Medicaid payments and would not approve proposals that do not comport with all applicable requirements, including the access standard in section 1902(a)(30)(A) of the Act.

In feedback received regarding implementation of the AMRP

[223] CMCS Informational Bulletin, ''Federal public notice and public process requirements for changes to Medicaid payment rates.'' Published June 24, 2016. *https://www.medicaid.gov/federal-policy-guidance/downloads/cib062416.pdf.* Accessed November 3, 2022.

requirements in the 2015 final rule with comment period, States expressed concern about burdensome requirements to draft, seek public input on, and update their AMRP after receiving beneficiary or provider complaints that were later resolved by the State's engagement with beneficiaries and the provider community. Our proposal to require access review procedures specific to State proposals to reduce payment rates or restructure payments would provide an opportunity for the State meaningfully to address and respond to interested parties' input, and seeks to balance State burden concerns with the clear need to understand the perspectives of interested parties most likely to be affected by a Medicaid payment rate reduction or payment restructuring. Currently, § 447.203(b)(7) requires States to have ongoing mechanisms for beneficiary and provider input on access to care through various mechanisms, and to maintain a record of data on public input and how the State responded to such input, which must be made available to us upon request. We propose to retain this important mechanism and to relocate it to § 447.203(c)(4). Through the cross reference to proposed § 447.203(c)(4) in proposed § 447.203(c)(1)(iii), we would require States to use the ongoing beneficiary and provider feedback mechanisms to aid in identifying and assessing any access to care issues in cooperation with their interested parties' communities, as a component of the streamlined access analysis criteria in proposed § 447.203(c)(1).

Together, we believe the proposed criteria of § 447.203(c)(1)(i) through (iii), where all are met, would establish that a State's proposed Medicaid payment rates and/or payment structure are consistent with the access requirement in section 1902(a)(30)(A) of the Act at the time the State proposes a payment rate reduction or payment restructuring in circumstances when the changes could result in diminished access. Importantly, as noted above, proposed § 447.203(c)(4) (proposed to be relocated from current § 447.203(b)(7)) would ensure that States have ongoing procedures for compliance monitoring independent of any approved Medicaid payment changes.

We previously outlined in SMDL #17–004 several circumstances where Medicaid payment rate reductions generally would not be expected to diminish access: reductions necessary to implement CMS Federal Medicaid payment requirements; reductions that will be implemented as a decrease to all codes within a service category or targeted to certain codes, but for services where the payment rates continue to be at or above Medicare and/or average commercial rates; and reductions that result from changes implemented through the Medicare program, where a State's service payment methodology adheres to the Medicare methodology. This proposed rule would not codify this list of policies that may produce payment rate reductions unlikely to diminish access to Medicaid-covered services. However, as a possible addition to the proposed streamlined access analysis criteria in proposed § 447.203(c)(1), we are requesting comment on whether this list of circumstances discussed in SMDL #17–004 should be included in a new paragraph under proposed § 447.203(c)(1) and, if one or more of these circumstances were applicable, the State's proposal would be considered to qualify for the streamlined analysis process under proposed § 447.203(c)(1) notwithstanding the other proposed criteria in proposed paragraph(c)(1).

Proposed paragraph (c)(1) discusses the full set of written assurances and relevant supporting documentation that States would be required to submit with a proposed payment rate reduction or payment restructuring SPA in circumstances when the changes could result in diminished access, where the requirements in proposed paragraphs (c)(1)(i) through (c)(1)(iii) are met. The inclusion of documentation that confirms all criteria proposed in paragraph (c)(1) are met would exempt the State from the requirements in proposed § 447.203(c)(2), discussed later in this section; however, it would not guarantee SPA approval. Proposed payment rate reduction SPAs and payment rate restructuring SPAs meeting the requirements in proposed § 447.203(c)(1) would still be subject to CMS' standard review requirements for all proposed SPAs to ensure compliance with section 1902(a) of the Act, including implementing regulations in part 430. Specifically, and without limitation, this includes compliance with sections 1902(a)(2) of the Act, requiring financial participation by the State in payments authorized under section 1903 of the Act. CMS reviews SPAs involving payments to ensure that the State has identified an adequate source of non-Federal share financing for payments under the SPA so that section 1902(a)(2) of the Act is satisfied; in particular, section 1903(w) of the Act and its implementing regulations establish requirements for certain non-Federal share financing sources that CMS must ensure are met. We further note that a proposed SPA's failure to meet the criteria in proposed paragraph (c)(1) would not result in automatic SPA disapproval; rather, such proposals would be subject to additional documentation and review requirements, as described in proposed § 447.203(c)(2).

In paragraph (c)(2), we propose the additional, more rigorous State access analysis that States would be required to submit where the State proposes to reduce provider payment rates or restructure provider payments in circumstances when the changes could result in diminished access where the requirements in paragraphs (c)(1)(i) through (iii) are not met. We believe this more rigorous access analysis should be required because we believe that, where the State is unable to demonstrate that the proposed paragraph (c)(1) criteria are met, more scrutiny is needed to ensure that the proposed payment rates and structure would be sufficient to enlist enough providers so that covered services would be available to beneficiaries at least to the same extent as to the general population in the geographic area. Accordingly, we are proposing in § 447.203(c)(2) to have States document current and recent historical levels of access to care, including a demonstration of counts and trends of actively participating providers, counts and trends of FFS Medicaid beneficiaries who receive the services subject to the proposed payment rate reduction or payment restructuring; and service utilization trends, all for the 3-year period immediately preceding the submission date of the proposed rate reduction or payment restructuring SPA, as a condition for approval. As with the current AMRP process, the information provided by the State would serve as a baseline of understanding current access to care within the State's program, from which the State's payment rate reduction or payment restructuring proposal would be scrutinized.

The 2015 final rule with comment period included requirements that the AMRP process include data on the following topics, in current § 447.203(b)(1)(i) through (v): the extent to which beneficiary needs are fully met; the availability of care through enrolled providers to beneficiaries in each geographic area, by provider type and site of service; changes in beneficiary utilization of covered services in each geographic area; the characteristics of the beneficiary population (including considerations for care, service and payment variations for pediatric and adult populations and for

individuals with disabilities); and actual or estimated levels of provider payment available from other payers, including other public and private payers, by provider type and site of service. The usefulness of the ongoing AMRP data was directly related to the quality of particular data measures that States selected to use in their AMRPs, and one of the biggest concerns we heard about the process was that States were not always certain that they were providing us with the relevant data that we needed to make informed decisions about Medicaid access to care because the 2015 final rule provided States with a considerable amount of flexibility in determining the type of data that may be provided in support of the State's access analysis included in their AMRP. In addition, States were required to consult with the State's medical advisory committees and publish the draft AMRP for no less than 30 days for public review and comment, per § 447.203(b). Therefore, the final AMRP, so long as the base data elements were met and supported the State's conclusion that access to care in the Medicaid program met the requirements of section 1902(a)(30)(A) of the Act, then the AMRP was accepted by us. As a result, the AMRPs were often very long and complex documents that sometimes included data that was not necessarily useful for understanding the extent of beneficiary access to services in the State or for making administrative decisions about SPAs. In an effort to promote standardization of data measures and limit State submissions to materials likely to assist in ensuring consistency of payment rates with the requirements of section 1902(a)(30)(A) of the Act, we are proposing to maintain a number of the currently required data elements from the AMRP but to be more precise about the type of information that would be required.

In § 447.203(c)(2), we propose that, for any SPA that proposes to reduce provider payment rates or restructure provider payments in circumstances when the changes could result in diminished access, where the requirements in paragraphs (c)(1)(i) through (iii) are not met, the State would be required to also provide specified information to us as part of the SPA submission as a condition of approval, in addition to the information required under paragraph (c)(1), in a format prescribed by us. Specifically, in § 447.203(c)(2)(i), we propose to require States to provide a summary of the proposed payment change, including the State's reason for the proposal and a description of any policy purpose for the proposed change, including the cumulative effect of all reductions or restructurings taken throughout the current State fiscal year in aggregate FFS Medicaid expenditures for each benefit category affected by proposed reduction or restructuring within a State fiscal year. We are proposing to collect this information for SPAs that require a § 447.203(c)(2) analysis, but for those that meet the criteria proposed under § 447.203(c)(1), we are not proposing to require a summary of the proposed payment change, including the State's reason for the proposal and a description of any policy purpose for the proposed change beyond that which is already provided as part of a normal State plan submission or as may be requested by CMS through the normal State plan review process; we are requesting comment whether these elements should apply to both proposed § 447.203(c)(1) and (c)(2) equally.

In § 447.203(c)(2)(ii), we propose to require the State to provide Medicaid payment rates in the aggregate (including base and supplemental payments) before and after the proposed reduction or restructuring for each benefit category affected by proposed reduction or restructuring, and a comparison of each (aggregate Medicaid payment before and after the reduction or restructuring) to the most recently published Medicare payment rates for the same or a comparable set of Medicare-covered services and, as reasonably feasible, to the most recently available payment rates of other health care payers in the State or the geographic area for the same or a comparable set of covered services. This proposed element is similar to the current § 447.203(b)(1)(v) rate comparison requirement, which requires the AMRP to include ''[a]ctual or estimated levels of provider payment available from other payers, including other public and private payers, by provider type and site of service.'' However, the proposed analysis specifically would require an aggregate comparison including Medicaid base and supplemental payments, as applicable, before and after the proposed reduction or restructuring are implemented, compared to the most recently published Medicare payment rates for the same or comparable set of Medicare-covered services and, as reasonably feasible, to the most recently available payment rates of other health care payers in the State or the geographic area for the same or a comparable set of covered services. We found that, first, States struggled with obtaining and providing private payer data as contemplated by the 2015 final rule with comment period, and, second, States were confused about how to compare Medicaid rates to Medicare rates where there were no comparable services between Medicare and Medicaid. We wanted to acknowledge the feedback we received from States during the AMRP process and modify the requirements in the proposed rule by focusing on the more readily available Medicare payment data as the most relevant payment comparison for Medicaid in this proposed rule, as discussed in detail above. We believe that the E/M CPT/HCPCS code comparison methodology included in the proposed § 447.203(b)(3)(i) and the payment rate disclosure in proposed § 447.203(b)(3)(ii) can serve, at a minimum, as frameworks for States that struggled to compare Medicaid rates to Medicare where there may be no other comparable services between the two programs. Otherwise where comparable services exist, States would be required to compare all applicable Medicaid payment rates within the benefit category to the Medicare rates for the same or comparable services under proposed § 447.203(c)(2)(ii). For reasons mentioned previously in this section, Medicare through MEDPAC engages in substantial analysis of access to care as it reviews payment rates for services, so we believe this is a sufficient benchmark for the Medicaid payment rate analysis.

In § 447.203(c)(2)(iii), we are proposing to require States to provide information about the number of actively participating providers of services in each benefit category affected by the proposed reduction or restructuring. For this purpose, an actively participating provider is a provider that is participating in the Medicaid program and actively seeing and providing services to Medicaid beneficiaries or accepting Medicaid beneficiaries as new patients. The State would be required to provide the number of actively participating providers of services in each affected benefit category for each of the 3 years immediately preceding the SPA submission date, by State-specified geographic area (for example, by county or parish), provider type, and site of service. The State would be required to document observed trends in the number of actively participating providers in each geographic area over this period. The State could provide estimates of the anticipated effect on the number of actively participating providers of services in each benefit category affected by the proposed

reduction or restructuring, by geographic area. This data element is similar to current § 447.203(b)(1)(ii), under which States must analyze the availability of care through enrolled providers to beneficiaries in each geographic area, by provider type and site of service, in the AMRP; however, the proposal would require specific quantitative information describing the number of providers, by geographic area, provider type, and site of service available to furnish services to Medicaid beneficiaries and leaves less discretion to the States on specific data measures. With all of the data elements included in proposed paragraph (c)(2), we are proposing that the data come from the 3 years immediately preceding the State plan amendment submission date, as this would provide us with the most recent data and would allow for considerations for data anomalies that might otherwise distort a demonstration of access to care if only 1 year of data was used.

In § 447.203(c)(2)(iv), we are proposing to require States to provide information about the number of Medicaid beneficiaries receiving services through the FFS delivery system in each benefit category affected by the proposed reduction or restructuring. The State would be required to provide the number of beneficiaries receiving services in each affected benefit category for each of the 3 years immediately preceding the SPA submission date, by State-specified geographic area (for example, by county or parish). The State would be required to document observed trends in the number of Medicaid beneficiaries receiving services in each affected benefit category in each geographic area over this period. The State would be required to provide quantitative and qualitative information about the beneficiary populations receiving services in the affected benefit categories over this period, including the number and proportion of beneficiaries who are adults and children and who are living with disabilities, and a description of the State's consideration of the how the proposed payment changes may affect access to care and service delivery for beneficiaries in various populations. The State would be required to provide estimates of the anticipated effect on the number of Medicaid beneficiaries receiving services through the FFS delivery system in each benefit category affected by the proposed reduction or restructuring, by geographic area. This proposed provision is a combination of current § 447.203(b)(1)(i) and (iv), which require States to provide an analysis of the extent to which beneficiary needs are met, and the characteristics of the beneficiary population (including considerations for care, service and payment variations for pediatric and adult populations and for individuals with disabilities). Even though we are not proposing to require this analysis to be updated broadly with respect to many benefit categories on an ongoing basis, we would require current information on the number of beneficiaries currently receiving services through the FFS delivery system in each benefit category affected by the proposed reduction or restructuring to inform our SPA review process to ensure that the statutory access standard is met. The inclusion of this beneficiary data is relevant because it provides information about the recipients of Medicaid services and where, geographically, these populations reside to ensure that the statutory access standard is met.

In § 447.203(c)(2)(v), we are proposing to require information about the number of Medicaid services furnished through the FFS delivery system in each benefit category affected by the proposed reduction or restructuring. The State would be required to provide the number of Medicaid services furnished in each affected benefit category for each of the 3 years immediately preceding the SPA submission date, by State-specified geographic area (for example, by county or parish), provider type, and site of service. The State would be required to document observed trends in the number of Medicaid services furnished in each affected benefit category in each geographic area over this period. The State would be required to provide quantitative and qualitative information about the Medicaid services furnished in the affected benefit categories over this period, including the number and proportion of Medicaid services furnished to adults and children and who are living with disabilities, and a description of the State's consideration of the how the proposed payment changes may affect access to care and service delivery. The State would be required to provide estimates of the anticipated effect on the number of Medicaid services furnished through the FFS delivery system in each benefit category affected by the proposed reduction or restructuring, by geographic area. This proposed data element is similar to that currently required in § 447.203(b)(1)(iii), which requires an analysis of changes in beneficiary utilization of covered services in each geographic area. However, as stated earlier, the difference here is that this proposed analysis would be limited to the beneficiary populations impacted by the rate reduction or restructuring, for a more narrow set of data points, rather than requiring the State to conduct a full review of the Medicaid beneficiary population every 3 years on an ongoing basis. Even though we are not proposing to require this analysis to be updated broadly with respect to many benefit categories on an ongoing basis, we would require current information on the number and types of Medicaid services being delivered to Medicaid beneficiaries through the FFS delivery system in each benefit category affected by the proposed reduction or restructuring to inform our SPA review process to ensure that the statutory access standard is met. The inclusion of this data is relevant because it provides information about the actual distribution of care received by Medicaid beneficiaries and where, geographically, these services are provided to ensure that the statutory access standard is met.

Finally, in § 447.203(c)(2)(vi), we are proposing to require a summary of, and the State's response to, any access to care concerns or complaints received from beneficiaries, providers, and other interested parties regarding the service(s) for which the payment rate reduction or restructuring is proposed as required under § 447.204(a)(2). This proposed requirement mirrors the requirement in § 447.204(b)(3), which requires that for any SPA submission that proposes to reduce or restructure Medicaid service payment rates, a specific analysis of the information and concerns expressed in input from affected interested parties must be provided at the time of the SPA submission. The new proposed § 447.203(c)(2)(vi) requires the same analysis while providing more detail as to what we expect the State to provide. Specifically, proposed § 447.203(c)(2)(vi) would require information about concerns and complaints from beneficiaries and providers specifically, as well as from other interested parties, and would underscore that the required analysis would be required to include the State's responses.

Where any of the previously discussed proposed data elements requires an analysis of data over a 3-year period, we are proposing this time span to smooth statistical anomalies, and so that data variations can be understood. For example, any 3-year period look-back that includes portions of time

during a public health emergency, such as that for the COVID–19 pandemic, might include much more variation in the access to care measures than periods before or after the public health emergency. By using a 3-year period, it is more likely that the State, CMS, and other interested parties would be able to identify and appropriately account for short term disruptions in access-related measures, for example, when the number of services performed dropped precipitously in 2020 as elective visits and procedures were postponed or canceled due to the public health emergency.[224] If the proposed rule only included a 12-month period, for example, it might not be clear that the data represent an accurate reflection of access to care at the time of the proposed reduction or restructuring. For example, a State may see variation in service utilization if there have been programmatic changes that are introduced over time, such as a move to increase care provided through a managed care delivery system in the State through which the fee-for-service utilization declines steadily until managed care enrollment targets are achieved, but a one-time review of that fee-for-service utilization capturing just a 12-month period might not capture data most reflective of the current fee-for-service utilization demonstrating access to care consistent with section 1902(a)(30)(A) of the Act. We are seeking public comment on the proposed use of a 3-year period where the proposed rule would require data about trends over time in the data elements proposed to be required under § 447.203(c)(2). We are also seeking public comment on the data elements required in § 447.203(c)(2) as additional State rate analysis.

Proposed paragraph (c)(2) would require that States conduct and provide to us a rigorous analysis of a proposed payment rate reduction's or payment restructuring's potential to affect beneficiary access to care. However, by limiting these analyses to only those proposed payment rate reductions and payment restructurings in circumstances when the changes could result in diminished access that do not meet the criteria in proposed paragraph (c)(1), we believe that the requirements proposed in paragraph (c)(2) would help to enable us to determine whether the proposed State Medicaid payment rates and payment methodologies are consistent with section 1902(a)(30)(A) of the Act while minimizing State and Federal administrative burden, to the extent possible. We would use this State-provided information and analysis to help us understand the current levels of access to care in the State's program, and determine, considering the provider, beneficiary, and other interested party input collected through proposed § 447.203(c)(4), whether the proposed payment rate reduction or payment restructuring likely would reduce access to care for the particular service(s) consistent with the statutory standard in section 1902(a)(30)(A) of the Act. If we approve the State's proposal, the data provided would serve as a baseline for prospective monitoring of access to care within the State.

The proposed analysis and documentation requirements in paragraph (c)(2) draw, in part, from the current requirements of the AMRP process in the current § 447.203(b)(1), and reflect the diverse methods and measures that are and can be used to monitor access to care. We also drew on some of the comments received on the 2011 proposed rule, as discussed in the 2015 final rule with comment period, where several commenters recommended that CMS consider identifying a set of uniform measures that States must collect data on or that CMS weighs more heavily in its analysis.[225] We are proposing to provide more specificity on the types of uniform data elements in this proposed rule in § 447.203(c) than is provided under current § 447.203(b)(1). States have shown that they have access to the data listed in the proposed § 447.203(c)(2) when we have requested it during SPA reviews and through the AMRP process, and through this proposed rule, we are proposing to specify the type of data that we would expect States to provide with rate reduction or restructuring SPAs that do not meet the proposed criteria for streamlined analysis under § 447.203(c)(1). As noted elsewhere in the preamble, the ongoing AMRP requirements have presented an administratively burdensome process for States to follow every 3 years, particularly where we did not provide States with the specific direction on the types of data elements we preferred for States to include. However, the data elements involved in the current AMRP process in § 447.203(b)(1) can provide useful information about beneficiary access to care in current § 447.203(b)(1)(i), (iii), and (iv); Medicaid provider availability in current § 447.203(b)(1)(ii); and about payment rates available from other payers, which may affect Medicaid beneficiaries' relative ability to access care, in current § 447.203(b)(1)(v). We found that the AMRPs were most relevant when updated to accompany a submission of rate reduction or restructuring SPAs as specified in the current § 447.203(b)(6); accordingly, to better balance ongoing State and Federal administrative burden with our need to obtain access-related information to inform our approval decisions for payment rate reduction or restructuring SPAs, we are proposing to end the ongoing AMRP requirement but maintain a requirement that States include similar data elements when submitting such SPAs to us that do not qualify for the proposed streamlined analysis process under § 447.203(c)(1).

The proposed analyses in paragraph (c)(2) would enable us to focus our review of Medicaid access to care on proposals that may result in diminished access to care, enabling us to more substantively review a proposed rate reduction's or restructuring's potential impact on access (for example, counts of participating providers), realized access (for example, service utilization trends), and the beneficiary experience of care (for example, characteristics of the beneficiary population, beneficiary utilization data, and information related to feedback from beneficiaries and other interested parties collected during the public process and through ongoing beneficiary feedback mechanisms, along with the State's responses to that feedback), while also being able to more quickly work through a review of nominal rate reduction SPAs for which States have demonstrated certain levels of payment and for which the public process did not generate access to care concerns. By including information on provider type and site of service, we believe States would be able to demonstrate access to the services provided under a specific benefit category within a number different settings across the Medicaid program, such as the availability of physicians services delivered in a physician practice, clinic setting, FQHC or RHC, or even in a hospital-based office setting. We believe that by defining specific data elements which must be provided to support a payment rate reduction SPA would create a more predictable process for States and for CMS in conducting the SPA review than under the current AMRP process in § 447.203(b)(6).

Furthermore, data elements proposed to be required under proposed § 447.203(c)(2) would be based on State-specified geographic stratifications, to help ensure we can perform access

[224] Stuart, B. ''How The COVID–19 Pandemic Has Affected Provision Of Elective Services: The Challenges Ahead.'' *Health Affairs,* October 8, 2020. Available at *https://www.healthaffairs.org/do/10.1377/forefront.20201006.263687* (accessed February 27, 2023).

[225] 80 FR 67576 at 67590.

review consistent with the requirements of section 1902(a)(30)(A) of the Act. We expect that States would have readily available access to geographically differential beneficiary and provider data. Some of this information is available through CMS-maintained resources, such as the Transformed Medicaid Statistical Information System (T–MSIS), and other data is available through the National Plan and Provider Enumeration System (NPPES), but we believe that States should have their own data systems that would allow them to generate the most up-to-date beneficiary utilization and provider enrollment data, stratified by geographic areas within the State. States should use the most recent complete data available for each of the proposed data elements, and each would be required to be demonstrated to CMS by State-specified geographic area. We believe that the geographic stratification would enable CMS to establish a baseline for Medicaid access to care within the geographic areas so that we can determine if current levels of access to care are consistent with section 1902(a)(30)(A) of the Act, and can make future determinations if access is diminished in the future within the geographic area. For all of the data elements in proposed § 447.203(c)(2), the more geographic differentiation that can be provided (that is, the smaller and more numerous the distinct geographic areas of the State that are selected for separate analysis), the more we believe that the State can meaningfully demonstrate that the proposed rate changes are consistent with the access standard in section 1902(a)(30)(A) of the Act, which requires that States assure that payments are sufficient to enlist enough providers so that care and services are available under the plan at least to the extent that such care and services are available to the general population in the geographic area.

If finalized, we anticipate releasing subregulatory guidance, including a template to support completion of the analysis that would be required under paragraph (c)(2), prior to the beginning date of the *Comparative Payment Rate Analysis Timeframe* proposed in § 447.203(b)(4). In the intervening period, we anticipate working directly with States through the SPA review process to ensure compliance with section 1902(a)(30)(A) of the Act.

In § 447.203(c)(3), we propose mechanisms for ensuring compliance with requirements for State analysis for rate reduction or restructuring, as specified in proposed paragraphs (c)(1) and (c)(2), as applicable. We propose that a State that submits a SPA that proposes to reduce provider payments or restructure provider payments that fails to provide the required information and analysis to support approval as specified in proposed paragraphs (c)(1) and (2), as applicable, may be subject to SPA disapproval under § 430.15(c). Additionally, States that submit relevant information, but where there are unresolved access to care concerns related to the proposed SPA, including any raised by CMS in our review of the proposal and any raised through the public process as specified in proposed paragraph (c)(4) of this section, or under § 447.204(a)(2), may be subject to SPA disapproval under § 430.15(c). Disapproving a SPA means that the State would not have authority to implement the proposed rate reduction or restructuring and would be required to continue to pay providers according to the rate methodology described in the approved State plan. Proposed paragraph (c)(3) would further provide that if, after approval of a proposed rate reduction or restructuring, State monitoring of beneficiary access shows a decrease in Medicaid access to care, such as a decrease in the provider-to-beneficiary ratio for any affected service, or the State or CMS experiences an increase in the number of beneficiary or provider complaints or concerns about access to care that suggests possible noncompliance with the access requirements in section 1902(a)(30)(A) of the Act, we may take a compliance action. As described in § 447.204(d), compliance actions would be carried out using the procedures described in § 430.35.

As discussed in the prior section, we are proposing to move current § 447.203(b)(7) to proposed § 447.203(c)(4). We are not proposing any changes to the public process described in current paragraph (b)(7). If the other provisions of this proposed rule are finalized, we would redesignate paragraph (b)(7) as paragraph (c)(4). The ability for providers and beneficiaries to provide ongoing feedback to the State regarding access to care and a beneficiary's ability to access Medicaid services is essential to the Medicaid program in that it provides the primary interested parties the opportunity to communicate with the State and for the State to track and take account of those interactions in a meaningful way. The ongoing mechanisms for provider and beneficiary feedback must be retained in this proposed rule as this process serves an important role in determining whether or not the public has raised concerns regarding access to Medicaid-covered services, which would inform the State's approach to ongoing Medicaid provider payment rates and methodologies, and whether related proposals would be approvable.

We are proposing to move current § 447.203(b)(8) to proposed § 447.203(c)(5) to better organize § 447.203 to reflect the policies in this proposed rule. We are not proposing any changes to the methods for addressing access questions and remediation of inadequate access to care, as described in current paragraph (b)(8). If the other provisions of this proposed rule are finalized, we would redesignate paragraph (b)(8) as paragraph (c)(5). It is important to retain this provision because we acknowledge that there may be access issues that come about apart from a specific State payment rate action, and there must be mechanisms through which those issues can be identified and corrective action taken.

Finally, we are proposing to move current § 447.204(d) to proposed § 447.203(c)(6). We believe the subject matter, of compliance actions for an access deficiency, is better aligned to the proposed changes in § 447.203. We are not proposing any changes to defining the remedy for the identification of an unresolved access deficiency, as described in current § 447.204(d). If the other provisions of this proposed rule are finalized, we would redesignate § 447.204(d) as paragraph (c)(6).

We are seeking public comment on our proposed procedures and requirements for State analysis for payment rate reduction or payment restructuring SPAs, including the qualification criteria for streamlined analysis proposed in § 447.203(c)(1), the proposed additional analysis elements in § 447.203(c)(2) for those proposed payment rate reductions or payment restructurings that do not meet the criteria in paragraph (c)(1), the proposed methods for ensuring compliance in § 447.203(c)(3), the proposed mechanisms for ongoing beneficiary and provider input in § 447.203(c)(4), the proposed methods to address access questions and remediation of inadequate access to care in § 447.203(c)(5), and the proposed compliance actions for access deficiencies in § 447.203(c)(6).

4. Medicaid Provider Participation and Public Process To Inform Access to Care (§ 447.204)

In § 447.204, we propose conforming changes to reflect proposed changes in § 447.203, if finalized. These conforming edits are limited to § 447.204(a)(1) and (b) and are necessary

for consistency with the newly proposed changes in § 447.203(b). The remaining paragraphs of § 447.204 would be unchanged.

Specifically, we propose to update the language of § 447.204(a)(1), which currently references § 447.203, to reference § 447.203(c). Because we are proposing wholesale revisions to § 447.203(b) and the addition of § 447.203(c), the proposed data and analysis referenced in the current citation to § 447.203 would be located more precisely in § 447.203(c). Current § 447.204(b)(1) refers to the State's most recent AMRP performed under current § 447.203(b)(6) for the services at issue in the State's payment rate reduction or payment restricting SPA; we propose to remove this requirement to align with our proposal to rescind the AMRP requirements in current § 447.203(b). Current § 447.204(b)(2) and (3) require the State to submit with such a payment SPA an analysis of the effect of the change in the payment rates on access and a specific analysis of the information and concerns expressed in input from affected interested parties; we believe these current requirements are addressed in proposed § 447.203(c)(1) and (2), as applicable. We believe that the continued inclusion of these paragraphs (b)(2) and (3) would be unnecessary or redundant in light of the proposals in § 447.203(c)(1) and (2), if finalized. The objective processes proposed under § 447.203(c)(1) and (2), which would require States to submit quantitative and qualitative information with a proposed payment rate reduction or payment restructuring SPA, would be sufficient for us to obtain the information necessary to assess the State's proposal with the same or similar information as currently is required under § 447.204(b)(2) and (3).

With the removal of § 447.204(b)(1) through (b)(3), we propose to revise § 447.204(b) to read, ''[t]he State must submit to us with any such proposed State plan amendment affecting payment rates documentation of the information and analysis required under § 447.203(c) of this chapter.''

Finally, as noted in the previous section, we propose to remove and relocate § 447.204(d), as we felt the nature of that provision is better suited to codification in § 447.203(c)(6).

We are seeking public comment on the proposed amendments to § 447.204.

III. Collection of Information Requirements

Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501 *et seq.*), we are required to provide 60-day notice in the **Federal Register** and solicit public comment before a collection of information requirement is submitted to the Office of Management and Budget (OMB) for review and approval. To fairly evaluate whether an information collection should be approved by OMB, section 3506(c)(2)(A) of the PRA requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our Agency.
- The accuracy of our estimate of the information collection Burden.
- The quality, utility, and clarity of the information to be collected.
- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

We are soliciting public comment on each of these issues for the following sections of this document that contain information collection requirements (see section III.E. of this preamble for further information). Comments, if received, will be responded to within the subsequent final rule.

A. Wage Estimates

To derive average costs, we used data from the U.S. Bureau of Labor Statistics' (BLS's) May 2021 National Occupational Employment and Wage Estimates for all salary estimates (*http://www.bls.gov/oes/current/oes_nat.htm*). In this regard, Table 1 presents BLS' mean hourly wage, our estimated cost of fringe benefits and other indirect costs [226] (calculated at 100 percent of salary), and our adjusted hourly wage.

TABLE 1—NATIONAL OCCUPATIONAL EMPLOYMENT AND WAGE ESTIMATES

Occupation title	Occupational code	Mean hourly wage ($/hr)	Fringe benefits and other indirect costs ($/hr)	Adjusted hourly wage ($/hr)
Administrative Services Manager	11–3012	54.34	54.34	108.68
Business Operations Specialist	13–1000	38.64	38.64	77.28
Business Operations Specialist, All Other	13–1199	38.10	38.10	76.20
Chief Executive	11–1011	102.41	102.41	204.82
Compensation, Benefits, and Job Analyst	13–1141	35.49	35.49	70.98
Computer and Information Analyst	15–1210	50.40	50.40	100.80
Computer Programmer	15–1251	46.46	46.46	92.92
Data Entry Keyers	43–9021	17.28	17.28	34.56
General and Operations Manager	11–1021	55.41	55.41	110.82
Human Resources Manager	11–3121	65.67	65.67	131.34
Management Analyst	13–1111	48.33	48.33	96.66
Social and Community Service Managers	11–9151	36.92	36.92	73.84
Social Science Research Assistants	19–4061	27.13	27.13	54.26
Statistician	15–2041	47.81	47.81	95.62
Survey Researcher	19–3022	31.10	31.10	62.20
Training and Development Specialist	13–1151	32.51	32.51	65.02

For States and the private sector the employee hourly wage estimates have been adjusted by a factor of 100 percent. This is necessarily a rough adjustment, both because fringe benefits and other indirect costs vary significantly across employers, and because methods of estimating these costs vary widely across studies. Nonetheless, we believe

[226] *https://aspe.hhs.gov/reports/valuing-time-us-department-health-human-services-regulatory-impact-analyses-conceptual-framework.*

that there is no practical alternative and that doubling the hourly wage to estimate total cost is a reasonably accurate estimation method.

We believe that the costs for beneficiaries undertaking administrative and other tasks on their own time is a post-tax hourly wage rate of $20.71/hr.

We adopt an hourly value of time based on after-tax wages to quantify the opportunity cost of changes in time use for unpaid activities. This approach matches the default assumptions for valuing changes in time use for individuals undertaking administrative and other tasks on their own time, which are outlined in an ASPE report on ''Valuing Time in U.S. Department of Health and Human Services Regulatory Impact Analyses: Conceptual Framework and Best Practices.'' [*] We start with a measurement of the usual weekly earnings of wage and salary workers of $998. [**] We divide this weekly rate by 40 hours to calculate an hourly pre-tax wage rate of $24.95. We adjust this hourly rate downwards by an estimate of the effective tax rate for median income households of about 17 percent, resulting in a post-tax hourly wage rate of $20.71. We adopt this as our estimate of the hourly value of time for changes in time use for unpaid activities.[227] [228] Unlike our State and private sector wage adjustments, we are not adjusting beneficiary wages for fringe benefits and other indirect costs since the individuals' activities, if any, would occur outside the scope of their employment.

B. Adjustment to State Cost Estimates

To estimate the financial burden on States, it was important to consider the Federal government's contribution to the cost of administering the Medicaid program. The Federal government provides funding based on an FMAP that is established for each State, based on the per capita income in the State as compared to the national average. FMAPs range from a minimum of 50 percent in States with higher per capita incomes to a maximum of 83 percent in States with lower per capital incomes. For Medicaid, all States receive a 50 percent FMAP for administration. States also receive higher Federal matching rates for certain systems improvements, redesign, or operations. As such, and taking into account the Federal contribution to the costs of administering the Medicaid programs for purposes of estimate State burden with respect to collection of information, we elected to use the higher end estimate that the States would contribute 50 percent of the costs, even though the burden would likely be much smaller.

C. Proposed Information Collection Requirements (ICRs)

1. ICRs Regarding Medicaid Advisory Committee and Beneficiary Advisory Group (§ 431.12)

The following proposed changes will be submitted to OMB for review under control number 0938–TBD (CMS–10845). At this time, the control number is to be determined (TBD). OMB will assign the control number upon their clearance of this new collection of information request. The control number will be set out in the subsequent final rule (CMS–2442–F).

Currently, most States have an established Medicaid Advisory Committee (MAC, previously known as a Medical Care Advisory Committee, or MCAC) whereby each State has the discretion on how to operate its MAC. A small number of States also use consumer advisory subcommittees as part of their MACs, similar to the Beneficiary Advisory Groups (BAGs) in proposed § 431.12. We reviewed data from 10 States to determine the current status of MACs and to determine the burden needed to comply with the proposed § 431.12 requirements across 50 States and the District of Columbia.

Under the proposed provision, States would be required to:

- Appoint members to the MAC and BAG on a rotating and continuous basis.
- Develop and publish a process for MAC and BAG member recruitment and appointment and selection of MAC and BAG leadership.
- Develop and publish:

++ Bylaws for governance of the MAC.

++ A current list of MAC and BAG membership.

++ Past meeting minutes, including a summary from the most recent BAG Meeting.

- Develop, publish, and implement a regular meeting schedule for the MAC and BAG.

Additionally, the State must provide and post to its website an annual report written by the MAC to the State describing its activities, topics discussed, recommendations. The report must also include actions taken by the State based on the MAC recommendations.

The proposed requirements would require varying levels of effort by States. For example, a handful of States already have a BAG. However, we believe that most States will be required to create new structures and processes. The majority of States reviewed are already meeting some of the new proposed requirements for MACs, such as publication of meeting schedules, publication of membership lists, and publication of bylaws. However, all MAC bylaws would need to be updated to meet the new proposed requirements. Our review showed that most States are not currently publishing their recruitment and appointment processes for MAC members, and those that did would need to update these processes to meet the new proposed requirements. About half of the States reviewed published meeting minutes with responses and State actions, as required under the new proposed requirements. But only one State reviewed published an annual report, so this will likely be a new requirement for almost all State MACs. States will not need to modify or build a reporting systems to create and post these annual reports. Due to the wide range in the use and maturity of current MCACs across the States, we are providing a range of estimates to address these variations. We recognize that some States, which do not currently operate a MCAC, will have a higher burden to implement the requirements of § 431.12 to shift to the MAC and BAG structure. However, our research showed that the majority of States do have processes and procedures for their current MCACs, which will require updating, but at a much lower burden. Therefore, we believe it is appropriate to offer average low and high burden estimates.

For a low estimate, we estimate it would take a team of business operations specialists 120 hours at $76.20/hr to develop and publish the processes and report. In aggregate, we estimate an annual burden of 6,120 hours (120 hr/response × 51 responses) at a cost of $466,344 (6,120 hr × $76.20/hr). We also estimate that it would take 40 hours at $131.34/hr for a human resources manager to review and approve bylaws and help with recruitment and appointment and selection of MAC and BAG leadership which would occur every 2 years. In aggregate, we estimate a biennial burden of 2,040 hours (40 hr/response × 51

[227] Department of Health and Human Services, Office of the Assistant Secretary for Planning and Evaluation. 2017. ''Valuing Time in U.S. Department of Health and Human Services Regulatory Impact Analyses: Conceptual Framework and Best Practices.'' *https://aspe.hhs.gov/reports/valuing-time-us-department-health-human-services-regulatory-impact-analyses-conceptual-framework.*

[228] U.S. Bureau of Labor Statistics. Employed full time: Median usual weekly nominal earnings (second quartile): Wage and salary workers: 16 years and over [LEU0252881500A], retrieved from FRED, Federal Reserve Bank of St. Louis; *https://fred.stlouisfed.org/series/LEU0252881500A.* Annual Estimate, 2021.

responses) at a cost of $267,934 (2,040 hr × $131.34/hr). Additionally, we estimate it would take 10 hours at $110.82/hr for an operations manager to review the updates and prepare the required reports for annual publication. In aggregate, we estimate an annual burden of 510 hours (10 hr/response × 51 responses) at a cost of $56,518 (510 hr × $110.82/hr).

We derived the high estimate by doubling the hours from the low estimate. We used this approach because all States already have a MCAC requirement which means the type of work being discussed is already underway in most States and that there is reference point for the type of work described. For example, we estimate it would take a team of business operations specialists 240 hours at $76.20/hr to develop and publish the processes and annual report. In aggregate, we estimate an annual burden of 12,240 hours (240 hr/response × 51 responses) at a cost of $932,688 (12,240 hr × $76.20/hr). We also estimate that it would take 80 hours at $131.34/hr for a human resources manager to review and approve bylaws and help with recruitment and appointment and selection of MAC and BAG leadership which would occur every 2 years. In aggregate, we estimate a biennial burden of 4,080 hours (80 hr/response × 51 responses) at a cost of $535,867 (4,080 hr × $131.34). Additionally, we estimate it would take 20 hours at $110.82/hr for an operations manager to review the updates and prepare the required annual report for publication. In aggregate, we estimate an annual burden of 1,020 hours (20 hr/response × 51 responses) at a cost of $113,036 (1,020 hr × $110.82/hr).

We have summarized the total burden in Table 2. To be conservative and not underestimate our burden analysis, we are using the high end of our estimates to score the PRA-related impact of the proposed requirements.

TABLE 2—SUMMARY OF BURDEN ESTIMATES FOR MEDICAL CARE ADVISORY COMMITTEE REQUIREMENTS

Requirement	Number of respondents	Total responses	Frequency	Time per response (hr)	Total time (hr)	Wage ($/hr)	Total cost ($)	State share ($)
§ 431.12 (develop/publish report)	51	51	Annual	240	12,240	76.20	932,688	466,344
§ 431.12 (review/approve bylaws)	51	51	Biennial	80	4,080	131.34	535,867	267,934
§ 431.12 (review updates/prepare reports)	51	51	Annual	20	1,020	110.82	113,036	56,518
Total	51	153	Varies	Varies	17,340	Varies	1,581,591	790,795

2. ICRs Regarding Person-Centered Service Plans (§ 441.301(c)(3); Cross-Referenced to §§ 441.450(c), 441.540(c), and 441.725(c), and Part 438)

The following proposed changes will be submitted to OMB for their approval after this proposed rule is finalized and our survey instrument has been developed. The survey instrument and burden will be made available to the public for their review under the standard non-rule PRA process which includes the publication of 60- and 30-day **Federal Register** notices. In the meantime, we are setting out our preliminary burden figures (see below) as a means of scoring the impact of this rule's proposed changes. The availability of the survey instrument and more definitive burden estimates will be announced in both **Federal Register** notices. The CMS ID number for that collection of information request is CMS–10854 (OMB control number 0938–TBD). Since this would be a new collection of information request, the OMB control number has yet to be determined (TBD) but will be issued by OMB upon their approval of the new collection of information request.

Section 1915(c)(1) of the Act requires that services provided through section 1915(c) waiver programs be provided under a written plan of care (hereinafter referred to as ''person-centered service plans'' or ''service plans''). Existing Federal regulations at § 441.301(c) address the person-centered planning process and include a requirement at § 441.301(c)(3) that the person-centered service plan be reviewed and revised upon reassessment of functional need, at least every 12 months, when the individual's circumstances or needs change significantly or at the request of the individual.

In 2014, we released guidance for section 1915(c) waiver programs [229] (hereinafter the ''2014 guidance'') that included expectations for State reporting of State-developed performance measures to demonstrate compliance with section 1915(c) of the Act and the implementing regulations in part 441, subpart G through six assurances, including assurances related to person-centered service plans. The 2014 guidance also indicated that States should conduct systemic remediation and implement a Quality Improvement Project when they score below an 86 percent threshold on any of their performance measures. Based on feedback CMS obtained during various public engagement activities conducted with States and other interested parties over the past several years about the reporting discussed in the 2014 guidance, as well as feedback received through the RFI [230] discussed earlier about the need to standardize reporting and set minimum standards for HCBS, we are proposing a different approach for States to demonstrate that they meet the statutory requirements in section 1915(c) of the Act and the regulatory requirements in part 441, subpart G, including the requirements regarding assurances around service plans.

Within this rule we propose to replace expectations for State reporting of State-developed performance measures and the 86 percent performance threshold included in the 2014 guidance and codify requirements for reporting on standardized measures and a minimum performance level for States to demonstrate that they meet the existing person-centered service plan requirements at § 441.301(c)(3). Specifically, at new § 441.301(c)(3)(ii)(A), we propose to require that States demonstrate that a reassessment of functional need was conducted at least annually for at least 90 percent of individuals continuously enrolled in the waiver for at least 365 days. We also propose, at new § 441.301(c)(3)(ii)(B), to require that States demonstrate that they reviewed the person-centered service plan and revised the plan as appropriate based on the results of the required reassessment of functional need at least every 12 months for at least 90 percent of individuals continuously enrolled in the waiver for at least 365 days. At

[229] Modifications to Quality Measures and Reporting in § 1915(c) Home and Community-Based Waivers. March 2014. Accessed at *https://www.hhs.gov/guidance/sites/default/files/hhs-guidance-documents/3-cmcs-quality-memo-narrative_0_2.pdf.*

[230] CMS Request for Information: Access to Coverage and Care in Medicaid & CHIP. February 2022. For a full list of question from the RFI, see *https://www.medicaid.gov/medicaid/access-care/downloads/access-rfi-2022-questions.pdf.*

§ 441.311(b)(3), we propose to modernize the service plan reporting requirement by standardizing State reporting through new Federal reporting requirements. These performance and reporting requirements, in combination with other proposed requirements [231] identified throughout this proposed rule, are intended to supersede and fully replace existing reporting requirements and required performance levels for section 1915(c) waiver programs, which were established through the 2014 guidance discussed earlier.[232] We propose to apply these requirements to services delivered under FFS or managed care delivery systems. Further, we propose to apply the proposed requirements at § 441.301(c)(3) to sections 1915(j), (k), and (i) State plan services by cross-referencing at §§ 441.450(c), 441.540(c), and 441.725(c), respectively. In addition, we propose to reposition, specify, and remove extraneous language from § 441.301(c)(1).

a. One Time Person-Centered Service Plan Requirements: State (§ 441.301(c)(3))

As discussed above, at new § 441.301(c)(3)(ii)(A), we propose to require that States demonstrate that a reassessment of functional need was conducted at least annually for at least 90 percent of individuals continuously enrolled in the waiver for at least 365 days. We also propose, at new § 441.301(c)(3)(ii)(B), to require that States demonstrate that they reviewed the person-centered service plan and revised the plan as appropriate based on the results of the required reassessment of functional need at least every 12 months for at least 90 percent of individuals continuously enrolled in the waiver for at least 365 days. The burden associated with the person-centered service plan reporting requirements proposed at § 441.301(c)(3)(ii)(A) and (B) will affect the 48 States (including the District of Columbia) that deliver HCBS under sections 1915(c), (i), (j), or (k) authorities.[233] We anticipate that States will need to update State policy and oversight and monitoring processes related to the codification of the new 90 percent minimum performance level associated with requirements.

However, because we are codifying a minimum performance level associated with existing regulations but not otherwise changing the regulatory requirements under § 441.301(c)(3)(ii)(A) and (B), we do not estimate any additional burden related to those requirements. We also hold that there is no additional burden associated with repositioning, specifying, and removing extraneous language from the regulatory text at § 441.301(c)(1). In this regard we are only estimating burden for updating State policy and oversight and monitoring processes related to the codification of the new 90 percent minimum performance level associated with requirements.

We estimate it would take 8 hours at $108.68/hr for an administrative services manager to update State policy and oversight and monitoring processes, 2 hours at $110.82/hr for a general and operations manager to review and approve the updates to State policy and oversight and monitoring processes, and 1 hour at $204.82/hr for a chief executive to review and approve the updates to State policy and oversight and monitoring processes. In aggregate, we estimate a one-time burden of 528 hours (48 States × [8 hr + 2 hr + 1 hr]) at a cost of $62,203 (48 States × [(8 hr × $108.68/hr) + (2 hr × $110.82/hr) + (1 hr × $204.82/hr)]). Taking into account the Federal contribution to Medicaid administration, the estimated State share of this cost would be $31,102 ($62,203 × 0.50).

TABLE 3—SUMMARY OF ONE-TIME BURDEN ESTIMATES FOR STATES FOR THE PERSON-CENTERED SERVICE PLAN REQUIREMENTS AT § 441.301(c)(3)

Requirement	Number of respondents	Total responses	Frequency	Time per response (hr)	Total time (hr)	Wage ($/hr)	Total cost ($)	State share ($)
Update State policy and oversight and monitoring processes.	48	48	Once	8	384	108.68	41,733	20,867
Review and approval of State policy update at the management level.	48	48	Once	2	96	110.82	10,639	5,319
Review and approval of State policy update at the chief executive level.	48	48	Once	1	48	204.82	9,831	4,916
Total	48	144	Once	11	528	Varies	62,203	31,102

b. One Time Person-Centered Service Plan Requirements: Managed Care Entities (§ 441.301(c)(3))

As discussed earlier in sections II.B.1 of this preamble, we are proposing to also apply, to managed care delivery systems, the requirements at § 441.301(c)(3) to demonstrate that a reassessment of functional need was conducted at least annually for at least 90 percent of individuals continuously enrolled in the waiver for at least 365 days and to demonstrate that they reviewed the person centered service plan and revised the plan as appropriate based on the results of the required reassessment of functional need at least every 12 months for at least 90 percent of individuals continuously enrolled in the waiver for at least 365 days. As with the burden estimate for States, we do not estimate an ongoing burden related to the codification of a minimum performance level associated with the requirements at § 441.301(c)(3).

For managed care entities we estimate it would take 5 hours at $108.68/hr for an administrative services manager to update organizational policy and oversight and monitoring processes related to the codification of a new minimum performance level and 1 hour at $204.82/hr for a chief executive to review and approve the updates to organizational policy and oversight and monitoring processes. In aggregate, we estimate a one-time burden of 966 hours (161 managed care entities × [5 hr + 1 hr]) at a cost of $120,463 (161 managed care entities × [(5 hr × $108.68/hr) + (1 hr × $204.82/hr)]).

[231] The other requirements relate to incident management, critical incident, person centered planning, and service provision compliance reporting; reporting on the HCBS Quality Measure Set; access reporting; and payment adequacy reporting.

[232] Modifications to Quality Measures and Reporting in § 1915(c) Home and Community-Based Waivers. March 2014 Accessed at *https://www.hhs.gov/guidance/sites/default/files/hhs-guidance-documents/3-cmcs-quality-memo-narrative_0_71.pdf.*

[233] Arizona, Rhode Island, and Vermont do not have HCBS programs under any of these authorities.

TABLE 4—SUMMARY OF ONE-TIME BURDEN ESTIMATES FOR MANAGED CARE ENTITIES (MCES) FOR THE PERSON-CENTERED SERVICE PLAN REQUIREMENTS AT § 441.301(c)(3)

Requirement	Number of respondents	Total responses	Frequency	Time per response (hr)	Total time (hr)	Wage ($/hr)	Total cost ($)	State share ($)
Update organizational policy and oversight and monitoring processes.	161	161	Once	5	805	108.68	87,487	n/a
Review and approval of policy and oversight and monitoring processes.	161	161	Once	1	161	204.82	32,976	n/a
Total	161	322	Once	6	966	Varies	120,463	n/a

3. ICRs Regarding Grievance System (§ 441.301(c)(7); Cross-Referenced to §§ 441.464(d)(2)(v), 441.555(b)(2)(iv), and 441.745(a)(1)(iii), and Part 438)

At § 441.301(c)(7), we propose to require that States establish grievance procedures for Medicaid beneficiaries receiving section 1915(c) waiver program services through a FFS delivery system to file a complaint or expression or dissatisfaction related to the State's or a provider's compliance with the person-centered planning and service plan requirements at § 441.301(c)(1) through (3) and the HCBS settings requirements at § 441.301(c)(4) through (6).

Proposed § 441.301(c)(7)(vii) lists proposed recordkeeping requirements related to grievances. Specifically, at § 441.301(c)(7)(vii)(A), we propose to require that States maintain records of grievances and review the information as part of their ongoing monitoring procedures. At § 441.301(c)(7)(vii)(B)(*1*) through (*7*), we propose to require that the record of each grievance must contain the following information at a minimum: a general description of the reason for the grievance, the date received, the date of each review or review meeting (if applicable), resolution and date of the resolution of the grievance (if applicable), and the name of the beneficiary for whom the grievance was filed. Further, at § 441.301(c)(7)(vii)(C), we propose to require that grievance records be accurately maintained and in a manner that would be available upon our request.

We also propose to apply these proposed requirements in § 441.301(c)(7) to sections 1915(j), (k), and (i) State plan services by cross-referencing at §§ 441.464(d)(2)(v), 441.555(b)(2)(iv), and 441.745(a)(1)(iii), respectively. However, to avoid duplication with the grievance requirements at part 438, subpart F, we do not propose to apply these requirements to managed care delivery systems.

The following proposed changes will be submitted to OMB for their approval after this proposed rule is finalized and our reporting tools and survey instrument has been developed. The survey instrument and burden will be made available to the public for their review under the standard non-rule PRA process which includes the publication of 60- and 30-day **Federal Register** notices. In the meantime, we are setting out our preliminary burden figures (see below) as a means of scoring the impact of this rule's proposed changes. The availability of the survey instrument and more definitive burden estimates will be announced in both **Federal Register** notices. The CMS ID number for that collection of information request is CMS–10854 (OMB control number 0938–TBD). Since this would be a new collection of information request, the OMB control number has yet to be determined (TBD) but will be issued by OMB upon their approval of the new collection of information request.

a. States

The burden associated with the grievance system requirements proposed at § 441.301(c)(7) will affect the 48 States (including the District of Columbia) that deliver at least some HCBS under sections 1915(c), (i), (j), or (k) authorities through FFS delivery systems.[234] [235] While some States may have existing grievance systems in place for their FFS delivery systems, we are unable to determine the number of States with existing grievance systems or whether those grievance systems would meet the proposed requirements at § 441.301(c)(7). As a result, we do not take this information into account in our burden estimate. We estimate a one-time and on-going burden to implement these requirements at the State level.

Specifically, States will have to: (1) develop and implement policies and procedures; (2) establish processes and data collection tools for accepting, tracking, and resolving, within required timeframes, beneficiary grievances, including processes and tools for: providing beneficiaries with reasonable assistance with filing a grievance, for accepting grievances orally and in writing, for reviewing grievance resolutions with which beneficiaries are dissatisfied, and for providing beneficiaries with a reasonable opportunity to present evidence and testimony and make legal and factual arguments related to their grievance; (3) inform beneficiaries, providers, and subcontractors about the grievance system; and (4) develop beneficiary notices; and collect and maintain information on each grievance, including the reason for the grievance, the date received, the date of each review or review meeting (if applicable), resolution and date of the resolution of the grievance (if applicable), and the name of the beneficiary for whom the grievance was filed.

i. One-Time Grievance System Requirements: States (§ 441.301(c)(7))

With regard to the one-time requirements, we estimate it would take: 240 hours at $108.68/hr for an administrative services manager to draft policy and procedure content, prepare notices and informational materials, draft rules for publication, and conduct public hearings; 100 hours at $92.92/hr for a computer programmer to build, design, and operationalize internal systems for data collection and tracking; 120 hours at $65.02/hr for a training and development specialist to develop and conduct training for staff; 40 hours at $110.82/hr for a general and operations manager to review and approve policies, procedures, rules for publication, notices, and training materials; and 20

[234] Arizona, Rhode Island, and Vermont do not have HCBS programs under any of these authorities.

[235] While some States deliver the vast majority of HCBS through managed care delivery systems, States would be subject to these requirements if they deliver any HCBS under section 1915(c), (i), (j), or (k) authorities through a fee-for service delivery system. Based on data showing that the percent of LTSS expenditures delivered through managed LTSS delivery systems varied between 3 percent and 93 percent in 2019 across all States with managed LTSS, we assume that all States deliver at least some HCBS through fee-for-service delivery systems (*https://www.medicaid.gov/medicaid/long-term-services-supports/downloads/ltssexpenditures2019.pdf*). We anticipate that the burden associated with implementing these requirements will be lower for States that deliver the vast majority of HCBS through managed care delivery systems.

hours at $204.82/hr for a chief executive to review and approve all operations associated with this collection of information requirement. In aggregate, we estimate a one-time burden of 24,960 hours (520 hr × 48 States) at a cost of $2,481,926 (48 States × [(240 hr × $108.68/hr) + (100 hr × $92.92/hr) + (120 hr × $65.02/hr) + (40 hr × $110.82/hr) + (20 hr × $204.82/hr)]). Taking into account the Federal contribution to Medicaid administration, the estimated State share of this cost would be $1,240,963 ($2,481,926 × 0.50).

TABLE 5—SUMMARY OF ONE-TIME BURDEN ESTIMATES FOR STATES FOR THE GRIEVANCE SYSTEM REQUIREMENTS AT § 441.301(c)(7)

Requirement	Number of respondents	Total responses	Frequency	Time per response (hr)	Total time (hr)	Wage ($/hr)	Total cost ($)	State share ($)
Draft policy and procedures, rules for publication; prepare beneficiary notices, informational materials; conduct public hearings.	48	48	Once	240	11,520	108.68	1,251,994	625,997
Build, design, operationalize internal systems for data collection and tracking.	48	48	Once	100	4,800	92.92	446,016	223,008
Develop and conduct training for staff	48	48	Once	120	5,760	65.02	374,515	187,258
Review and approve policies, procedures, rules for publication, notices, and training materials at the management level.	48	48	Once	40	1,920	110.82	212,774	106,387
Review and approve all operations in collection of information requirement at the chief executive level.	48	48	Once	20	960	204.82	196,627	98,314
Total	48	240	Once	520	24,960	Varies	2,481,926	1,240,964

ii. Ongoing Grievance System Requirements: States (§ 441.301(c)(7))

With regard to the on-going requirements, we estimate that approximately 2 percent of 1,460,363 Medicaid beneficiaries who receive HCBS under section 1915(c), (i), (j), or (k) authorities through FFS delivery systems annually [236] will file a grievance or appeal (29,207 grievances = 1,460,363 × 0.02).[237] We estimate it would take: 0.333 hours or 20 minutes at $76.20/hr for a business operations specialist to collect the required information for each grievance from the beneficiary, 0.166 hours or 10 minutes at $34.56/hr for a data entry worker to record the required information on each grievance, 20 hours at $92.92/hr for a computer programmer to maintain the system for storing information on grievances, 12 hours at $110.82/hr for a general and operations manager to monitor and oversee the collection and maintenance of the required information, and 2 hours at $204.82/hr for a chief executive to review and approve all operations associated with this collection of information requirement. In aggregate, we estimate an on-going burden of 16,206 hours at a cost of $1,081,374 ([(29,207 grievances × 0.333 hr × $76.20/hr) + (29,207 grievances × 0.166 hr × $34.56/hr) + (48 States × 20 hr × $92.92/hr) + (48 States × 12 hr × $110.82/hr) + (48 States × 2 hr × $204.82/hr)]). Taking into account the Federal contribution to Medicaid administration, the estimated State share of this cost would be $540,687 ($1,081,374 × 0.50) per year.

TABLE 6—SUMMARY OF ONGOING BURDEN FOR STATES FOR THE GRIEVANCE SYSTEM REQUIREMENTS AT § 441.301(c)(7)

Requirement	Number of respondents	Total responses	Frequency	Time per response (hr)	Total time (hr)	Wage ($/hr)	Total cost ($)	State share ($)
Collect required grievance data and information	48	29,207	On occasion	0.333	9,726	76.20	741,116	370,558
Enter required grievance data and information into data collection and tracking system.	48	29,207	On occasion	0.166	4,848	34.56	167,559	83,780
Perform maintenance on system for storing data and information on grievances.	48	48	Annually	20	960	92.92	89,203	44,602
Monitor and oversee the collection and maintenance of the required information at the management level.	48	48	Annually	12	576	110.82	63,832	31,916
Review and approve all operations associated with collection of information requirement at the executive level.	48	48	Annually	2	96	204.82	19,663	9,831
Total	48	58,558	Varies	Varies	16,206	Varies	1,081,374	540,687

4. ICRs Regarding Incident Management System (§ 441.302(a)(6); Cross-Referenced to §§ 441.464(e), 441.570(e), 441.745(a)(1)(v), and Part 438)

At § 441.302(a)(6), we propose to require that States provide an assurance that they operate and maintain an incident management system that identifies, reports, triages, investigates, resolves, tracks, and trends critical incidents. At § 441.302(a)(6)(i)(A), we propose to establish a minimum standard definition of a critical incident. At § 441.302(a)(6)(i)(B), we propose to require that States have electronic incident management systems that, at a minimum, enable electronic collection, tracking (including of the status and

[236] *https://www.medicaid.gov/medicaid/long-term-services-supports/downloads/ltss-user-brief-2019.pdf.*

[237] We based this percent on an estimate of the percent of Medicaid beneficiaries that file appeals and grievances in Medicaid managed care in Supporting Statement A for the information collection requirements for the Medicaid managed care file rule (CMS–2408–F, RIN 0938–AT40). See *https://omb.report/icr/202205-0938-015/doc/121334100* for more information.

resolution of investigations), and trending of data on critical incidents. At § 441.302(a)(6)(i)(C), we propose to require States to require providers to report to States any critical incidents that occur during the delivery of section 1915(c) waiver program services as specified in a waiver participant's person-centered service plan, or are a result of the failure to deliver authorized services. At § 441.302(a)(6)(i)(D), we propose to require that States use claims data, Medicaid Fraud Control Unit data, and data from other State agencies such as Adult Protective Services or Child Protective Services to the extent permissible under applicable State law to identify critical incidents that are unreported by providers and occur during the delivery of section 1915(c) waiver program services, or as a result of the failure to deliver authorized services. At § 441.302(a)(6)(i)(E), we propose to require that States share information on the status and resolution of investigations if the State refers critical incidents to other entities for investigation. We also propose, at § 441.302(a)(6)(i)(F), to require States to separately investigate critical incidents if the investigative agency fails to report the resolution of an investigation within State-specified timeframes. At § 441.302(a)(6)(i)(G), we propose to require that States meet the reporting requirements at § 441.311(b)(1) related to the performance of their incident management systems. We also propose to codify minimum performance levels to demonstrate that States meet the requirements at § 441.302(a)(6). These performance and reporting requirements, in combination with other proposed requirements identified throughout this proposed rule, are intended to supersede and fully replace existing reporting requirements and required performance levels for section 1915(c) waiver programs, which were established in 2014.[238]

At § 441.302(a)(6)(iii), we propose to apply these requirements to services delivered under FFS or managed care delivery systems. We also propose to apply the proposed requirements § 441.302(a)(6) to sections 1915(j), (k), and (i) State plan services by cross-referencing at §§ 441.570(e), 441.464(e), and 441.745(a)(1)(v), respectively.

The following proposed changes will be submitted to OMB for their approval after this proposed rule is finalized and our survey instrument has been developed. The survey instrument and burden will be made available to the public for their review under the standard non-rule PRA process which includes the publication of 60- and 30-day **Federal Register** notices. In the meantime, we are setting out our preliminary burden figures (see below) as a means of scoring the impact of this rule's proposed changes. The availability of the survey instrument and more definitive burden estimates will be announced in both **Federal Register** notices. The CMS ID number for that collection of information request is CMS–10854 (OMB control number 0938–TBD). Since this would be a new collection of information request, the OMB control number has yet to be determined (TBD) but will be issued by OMB upon their approval of the new collection of information request.

a. States

The burden associated with the incident management system requirements proposed at § 441.302(a)(6) will affect the 48 States (including Washington, DC) that deliver HCBS under section 1915(c), (i), (j), or (k) authorities.[239] We estimate a one-time and on-going burden to implement these requirements at the State level. The burden for the proposed reporting requirements at § 441.311(b)(1) is included in the ICR #8, which is the ICRs Regarding Compliance Reporting (§ 441.311(b)).

All of the States impacted by § 441.302(a)(6)(i)(B), requiring that States use an information system, as defined in 45 CFR 164.304 and compliant with 45 CFR part 164, have existing incident management systems in place. However, we assume that all States will need to make at least some changes to their existing systems to fully comply with the proposed requirements. Specifically, States will have to update State policies and procedures; implement new or update existing electronic incident management systems; publish revised provider requirements through State notice and publication processes; update provider manuals and other policy guidance; amend managed care contracts; collect required information from providers; use other required data sources to identify unreported incidents; and share information with other entities in the State responsible for investigating critical incidents.

i. One Time Incident Management System Requirements: States (§ 441.302(a)(6))

With regard to the one-time requirements related to proposed § 441.302(a)(6), we estimate it would take: 120 hours at $108.68/hr for an administrative services manager to draft policy content, prepare notices and draft rules for publication, conduct public hearings, and draft contract modifications for managed care plans; 20 hours at $96.66/hr for a management analyst to update provider manuals; 80 hours at $65.02/hr for a training and development specialist to develop and conduct training for providers; 80 hours at $76.20/hr for a business operations specialist to establish processes for information sharing with other entities; 80 hours at $100.80/hr for a computer and information analyst to build, design, and implement reports for using claims and other data to identify unreported incidents; 24 hours at $110.82/hr for a general and operations manager to review and approve managed care contract modifications, policy and rules for publication, and training materials; and 10 hours at $204.82/hr for a chief executive to review and approve all operations associated with this requirement.

In aggregate, we estimate a one-time burden of 19,872 hours (414 hr × 48 States) at a cost of $1,874,125 (48 States × [(120 hr × $108.68/hr) + (20 hr × $96.66/hr) + (80 hr × $65.02/hr) + (80 hr × $76.20/hr) + (80 hr × $100.80/hr) + (24 hr × $110.82/hr) + (10 hr × $204.82/hr)]). Taking into account the Federal contribution to Medicaid administration, the estimated State share of this cost would be $937,063 ($1,874,125 × 0.50).

In addition, we estimate that States, based on the results of the incident management system assessment discussed earlier in section II.B.3. of this preamble, that 82 percent of States, or 39 States (48 States × 0.82), would need to update existing electronic incident management systems, while the remaining 9 States would need to implement new electronic incident management systems, to meet the proposed requirement at § 441.302(a)(6)(i)(B). We estimate based on information reported by some States in spending plans for section 9817 of the American Rescue Plan Act of 2021 that the cost per State to update existing electronic systems is $2 million while the cost per State to implement new electronic systems is $5 million.[240] In

[238] Modifications to Quality Measures and Reporting in § 1915(c) Home and Community-Based Waivers. March 2014 Accessed at *https://www.hhs.gov/guidance/sites/default/files/hhs-guidance-documents/3-cmcs-quality-memo-narrative_0_71.pdf.*

[239] Arizona, Rhode Island, and Vermont do not have HCBS programs under any of these authorities.

Continued

aggregate, we estimate a one-time technology burden of $123,000,000 [($2,000,000 × 39 States) + ($5,000,000 × 9 States)]. Taking into account the Federal contribution to Medicaid administration, the estimated State share of this cost would be $ 61,500,000 ($123,000,000 × 0.50).

TABLE 7—SUMMARY OF ONE-TIME BURDEN FOR STATES FOR THE INCIDENT MANAGEMENT SYSTEM REQUIREMENTS (§ 441.302(a)(6))

Requirement	Number of respondents	Total responses	Frequency	Time per response (hr)	Total time (hr)	Wage ($/hr)	Total cost ($)	State share ($)

ii. Ongoing Incident Management System Requirements: States (§ 441.302(a)(6))

With regard to the ongoing requirements § 441.302(a)(6), we estimate that there are 0.5 critical incidents annually [241] for each of the 1,889,640 Medicaid beneficiaries who receive HCBS under sections 1915(c), (i), (j), or (k) authorities annually, or 944,820 (1,889,640 × 0.5) critical incidents annually.[242] We further estimate that, based on data on unreported incidents, these requirements will result in the identification of 30 percent more critical incidents annually, or 283,446 (944,820 × 0.3) critical incidents; [243] that 76 percent, or 215,419 (283,446 × 0.76) will be reported for individuals enrolled in FFS delivery systems; [244] and that 10 percent of those for individuals enrolled in FFS delivery systems (21,542 = 215,419 × 0.1) will be made through provider reports and 90 percent (193,877 = 215,419 × 0.9) through claims identification and other sources.[245] We estimate 0.166 hr or 10 minutes at $34.56/hr for a data entry worker to record the information on each reported critical incident reported by providers for individuals enrolled in FFS delivery systems. In aggregate, we estimate an ongoing burden each year of 3,576 hours (21,542 incidents × 0.166 hr) at a cost of $123,587 (3,576 hr × $34.56/hr) to record the information on each reported critical incident reported by providers for individuals enrolled in FFS delivery systems. While States can establish different processes for the reporting of critical incidents for individuals enrolled in managed care, we assume for the purpose of this analysis that the States would delegate provider reporting critical incidents and identification of critical incidents through claims and other data sources to managed care entities and that the managed care entities would be responsible for reporting the identified critical incidents to the State.[246] We further assume that the information reported by managed care entities to the State and identified by the State through claims and other data sources would be in an electronic form. For the 68,027 more critical incidents for individuals enrolled in managed care (283,446 more critical incidents identified × 24 percent

Assistance Percentage (FMAP) rate for the design, development, or installation of improvements of mechanized claims processing and information retrieval systems, in accordance with applicable Federal requirements. Enhanced FFP at a 75 percent FMAP rate is also available for operations of such systems, in accordance with applicable Federal requirements. However, the receipt of these enhanced funds is conditioned upon States meeting a series of standards and conditions to ensure investments are efficient and effective. As a result, we do not assume for the purpose of this burden estimate that States will qualify for the enhanced Federal match. This estimate overestimates State burden to the extent that States qualify for the enhanced Federal match.

[241] Data on the number of critical incidents is limited. We base our estimate on available public information, such as *https://oig.hhs.gov/oas/reports/region7/71806081.pdf* and *https://dhs.sd.gov/servicetotheblind/docs/2015%20CIR%20Annual%20Trend%20Analysis.pdf.*

[242] *https://www.medicaid.gov/medicaid/long-term-services-supports/downloads/ltss-user-brief-2019.pdf.*

[243] Data on the number of unreported critical incidents is limited. We base our estimate on available public information, such as *https://pennlive.com/news/2020/01/possible-abuse-of-group-home-residents-wasnt-adequately-tracked-in-pa-federal-audit.html* and *https://www.kare11.com/article/news/local/federal-audit-finds-maine-dhhs-failed-to-investigate-multiple-deaths-critical-incidents/97-463258015.*

[244] *https://www.medicaid.gov/medicaid/long-term-services-supports/downloads/ltss-user-brief-2019.pdf.*

[245] Data is limited on the identification of critical incidents through various data sources. We conservatively assume that 25 percent of more critical incidents identified as a result of these requirements will be reported by providers even though claims data will likely identify a substantially higher of percentage of claims than will be reported by providers.

[246] Addressing Critical Incidents in the MLTSS Environment: Research Brief, ASPE, *https://aspe.hhs.gov/reports/addressing-critical-incidents-mltss-environment-research-brief-0.*

for individuals enrolled in managed care), and the 193,877 more critical incidents identified through claims and other data sources for individuals enrolled in FFS (283,446 more critical incidents identified × 76 percent for individuals enrolled in FFS × 90 percent identified through claims and other sources), we estimate 2 minutes (0.0333 hr) at $34.56/hr for a data entry worker to record the information on each of these 261,904 critical incidents (68,027 + 193,877). In aggregate, for § 441.302(a)(6), we estimate an ongoing annual burden of 8,721 hours (261,904 incidents × 0.0333 hr) at a cost of $301,398 (8,721 hr × $34.56/hr) on these critical incidents.

In total, for § 441.302(a)(6), we estimate an ongoing burden each year of 12,297 hours (3,576 hours + 8,721 hours) at a cost of $424,985 ($123,587 + $301,398) to record the information on all critical incidents for individuals enrolled in FFS and managed care delivery systems across all States. We further estimate it would take 12 hours at $76.20/hr for a business operations specialist to maintain processes for information sharing with other entities; 20 hours at $100.80/hr for a computer and information analyst to update and maintain reports for using claims and other data to identify unreported incidents; 24 hours at $110.82/hr for a general and operations manager to monitor the operations associated with this requirement; and 4 hours at $204.82/hr for a chief executive to review and approve all operations associated with this collection of information requirement in each State. In aggregate, we estimate an ongoing burden of 15,177 hours ([60 hr × 48 States] + 12,297 hr) at a cost of $732,617 ($424,985 + [48 States × ((12 hr × $76.20/hr) + (20 hr × $100.80/hr) + (24 hr × $110.82/hr) + 4 hr × $204.82/hr)]). In addition, we estimate an on-going annual technology-related cost of $500,000 per State for States to maintain their electronic incident management systems. In aggregate, we estimate an ongoing burden of $24,000,000 ($500,000 × 48 States) for States to maintain their electronic incident management systems. In total, we estimate an ongoing annual burden of 15,177 hours at a cost $24,732,617 ($732, 617 + $24,000,000). Taking into account the Federal contribution to Medicaid administration, the estimated State share of this cost would be $12,366,309 ($24,732,617 × 0.50). Taking into account the Federal contribution to Medicaid administration, the estimated State share of this cost would be $12,366,309 ($24,732,617 × 0.50).

TABLE 8—SUMMARY OF ONGOING BURDEN FOR STATES FOR THE INCIDENT MANAGEMENT SYSTEM REQUIREMENTS AT PROPOSED § 441.302(a)(6)

Requirement	Number of respondents	Total responses	Frequency	Time per response (hr)	Total time (hr)	Wage ($/hr)	Total cost ($)	State share ($)
Record the information on each reported critical incident reported by providers for individuals enrolled in FFS delivery systems.	48	21,542	Annually	0.166	3,576	34.56/hr	123,587	61,793

b. Service Providers and Managed Care Contractors

The burden associated with this proposed rule would affect service providers that provide HCBS under sections 1915(c), (i), (j), and (k) authorities, as well as managed care entities that contract with the States to provide managed long-term services and supports.

The following discussion estimates an ongoing burden for service providers to implement these requirements and both a one-time and ongoing burden for managed care contractors.

i. On-Going Incident Management System Requirements: Service Provider

To estimate the number of service providers that would be impacted by this proposed rule, we used unpublished data from the Provider Relief Fund to estimate that there are 19,677 providers nationally across all payers delivering the types of HCBS that are delivered under sections 1915(c), (i), (j), and (k) authorities. We then prorate the number to estimate the number of providers in the 48 States that are subject to this requirement (19,677 providers nationally × 48 States subject to the proposed requirement/51 States = 18,520 providers). We used data from the Centers for Disease Control and Prevention [247] to estimate the percentage of these HCBS providers that participate in Medicaid and, due to uncertainty in the data and differences in provider definitions, estimate both a lower and upper range of providers affected. At a low end of 78 percent Medicaid participation, we estimate that there are 14,446 providers impacted (18,520 providers × 0.78), while at a high end of 85 percent participation, we estimate that there are 15,742 providers impacted (18,520 providers × 0.85). To be conservative and not underestimate our projected burden analysis, we are using the high end of our estimates to score the PRA-related impact of the proposed requirements.

As discussed earlier, we estimate that providers will report 10 percent, or 28,345, of the more critical incidents (283,446 more critical incidents × 0.10) identified annually as a result of these requirements. Based on these figures, we estimate that, on average, each provider will report 1.8 (28,345 incidents/15,742 providers) more critical incidents annually. We further estimate that, on average, it would take a provider 1 hour at $110.82/hr for a general and operations manager to collect the required information and report the information to the State or to the managed care entity as appropriate for each incident.[248] In aggregate, for § 441.302(a)(6), we estimate an ongoing burden of 28,345 hours (28,345 incidents × 1 hr) at a cost of $3,141,193 (28,345 hr × $110.82/hr).

TABLE 9—SUMMARY OF ONGOING BURDEN FOR SERVICE PROVIDERS FOR THE INCIDENT MANAGEMENT SYSTEM REQUIREMENTS

Requirement	Number of respondents	Total responses	Frequency	Time per response (hr)	Total time (hr)	Wage ($/hr)	Total cost ($)	State share ($)
Collect the required information and report the information to the State or to the managed care entity (§ 441.302(a)(6)(i)(C)).	15,742 providers.	28,345 incidents.	Annually	1	28,345	110.82	3,141,193	n/a
Total	15,742 providers.	28,345 incidents.	Annually	1	28,345	110.82	3,141,193	n/a

ii. One Time Incident Management System Requirements: Managed Care Entities (§ 441.302(a)(6))

As required under proposed § 441.302(a)(6), while States can establish different processes for the reporting of critical incidents for individuals enrolled in managed care, we assume for the purpose of this analysis that the States would delegate provider reporting of critical incidents and identification of critical incidents through claims and other data sources to managed care entities and that the managed care entities would be responsible for reporting the identified critical incidents to the State.[249] We further assume that the information reported by managed care entities to the State would be in an electronic form.

We estimated that there are 161 managed long-term services and supports plans providing services across 25 States.[250] With regard to the one-time requirements at § 441.302(a)(6), we estimate it would take: 20 hours at $108.68/hr for an administrative services manager to draft policy for contracted providers; 20 hours at $96.66/hr for a management analyst to update provider manuals; 40 hours at $65.02/hr for a training and development specialist to develop and conduct training for providers; 80 hours at $100.80/hr for a computer and information analyst to build, design, and implement reports for using claims and other data to identify unreported incidents; and 6 hours at $204.82/hr for a chief executive to review and approve all operations associated with this requirement. In aggregate, we estimate a one-time burden of 26,726 hours (161 managed care entities × 166 hr) at a cost of $2,576,084 (161 managed care entities × [(20 hr × $108.68/hr) + (20 hr × $96.66/hr) + (40 hr × $65.02/hr) + (80 hr × $100.80/hr) + (6 hr × $204.82/hr)]).

TABLE 10—SUMMARY OF ONE-TIME BURDEN FOR MANAGED CARE ENTITIES (MCES) FOR THE INCIDENT MANAGEMENT SYSTEM REQUIREMENTS AT § 441.302(a)(6)

Requirement	Number of respondents	Total responses	Frequency	Time per response (hr)	Total time (hr)	Wage ($/hr)	Total cost ($)	State share ($)
Draft policy for contracted providers	161	161	Once	20	3,220	108.68	349,950	n/a
Update provider manuals	161	161	Once	20	3,220	96.66	311,245	n/a
Develop and conduct training for providers	161	161	Once	40	6,440	65.02	418,729	n/a
Build, design, and implement reports for using claims and other data to identify unreported incidents.	161	161	Once	80	12,880	100.80	1,298,304	n/a

[247] *https://www.cdc.gov/nchs/data/series/sr_03/sr03_43-508.pdf.*

[248] The actual amount of time for each incident will vary depending on the nature of the critical incident and the specific reporting requirements of each State and managed care entity. This estimate assumes that some critical incidents will take substantially less time to report, while others could take substantially less time.

iii. Ongoing Incident Management System Requirements: Managed Care Entities (§ 441.302(a)(6))

The on-going burden to managed care entities consists of the collection and maintenance of information on critical incidents. As noted earlier, we estimate that these requirements will result in the identification of 283,446 more critical incidents annually than are currently identified by States. We further estimate that 24 percent, or 68,027 (283,446 × 0.24), will be reported for individuals enrolled in managed care delivery systems [251] and that 10 percent, or 6,803 (68,027 × 0.10), will be made through provider reports and 90 percent, or 61,224 (68,027 × 0.90), through claims identification and other sources.[252] We estimate that it would take 0.166 hr at $34.56/hr for a data entry worker to record the information on each reported critical incident reported by providers (§ 441.302(a)(6)(i)(B)(*2*)). In aggregate, we estimate an ongoing burden of 1,129 hours (6,803 critical incidents made through provider reports × 0.166 hr) at a cost of $39,018 (1,129 hr × $34.56/hr). We also estimate that it would take: 20 hours at $100.80/hr for a computer and information analyst to update and maintain reports for using claims and other data to identify unreported incidents (§ 441.302(a)(6)(i)(B)(*3*)); 6 hours at $110.82/hr for a general and operations manager to monitor the operations associated with this requirement and report the information to the State (§ 441.302(a)(6)(i)(E)); and 1 hour at $204.82/hr for a chief executive to review and approve all operations associated with this collection of information requirement (§ 441.302(a)(6)(i)(G)). In aggregate, we estimate an ongoing burden of 5,476 hours (1,129 hr + [161 managed care entities × 27 hr]) at a cost of $503,622 ($39,018 + (161 managed care entities × [(20 hr × $100.80/hr) + (6 hr × $110.82/hr) + (1 hr × $204.82/hr)]).

TABLE 11—SUMMARY OF ONGOING BURDEN FOR MANAGED CARE ENTITIES (MCES) FOR THE INCIDENT MANAGEMENT SYSTEM REQUIREMENTS

Requirement	Number of respondents	Total responses	Frequency	Time per response (hr)	Total time (hr)	Wage ($/hr)	Total cost ($)	State share ($)
Record the information on each reported critical incident reported by providers (§ 441.302(a)(6)(i)(B)(2)).	161	6,803	Annually	0.166	1,129	34.56	39,029	n/a
Update and maintain reports for using claims and other data to identify unreported incidents (§ 441.302(a)(6)(i)(B)(3)).	161	161	Annually	20	3,220	100.80	324,576	n/a
Monitor the operations associated with this requirement and report the information to the State (§ 441.302(a)(6)(i)(E)).	161	161	Annually	6	966	110.82	107,052	n/a
Review and approve all operations associated with this requirement (§ 441.302(a)(6)(i)(G)).	161	161	Annually	1	161	204.82	32,976	n/a
Total	161	7,286	Annually	Varies	5,476	Varies	503,633	n/a

5. ICRs Regarding HCBS Payment Adequacy (§§ 441.302(k) and 441.311(e); Cross-Referenced to §§ 441.464(f), 441.570(f) and 441.745(a)(1)(iv), and Part 438)

This proposed rule would update § 441.302, by adding new paragraph (k)(2), which would require that at least 80 percent of Medicaid payments for the following services be spent on compensation, as defined at § 441.302(k)(1)(i), to direct care workers for the following services: homemaker services, home health aide services, and personal care services.

Proposed § 441.302(k)(1)(i) defines compensation to include salary, wages, and other remuneration as defined by the Fair Labor Standards Act and implementing regulations (29 U.S.C. 201 *et seq.,* 29 CFR parts 531 and 778); benefits (such as health and dental benefits, sick leave, and tuition reimbursement); and the employer share of payroll taxes for direct care workers delivering services authorized under section 1915(c) of the Act. Proposed § 441.302(k)(1)(ii) defines direct care workers to include workers who provide nursing services, assist with activities of daily living (such as mobility, personal hygiene, eating), or provide support with instrumental activities of daily living (such as cooking, grocery shopping, managing finances). Specifically, direct care workers include nurses (registered nurses, licensed practical nurses, nurse practitioners, or clinical nurse specialists) who provide nursing services to Medicaid-eligible individuals receiving HCBS, licensed or certified nursing assistants, direct support professionals, personal care attendants, home health aides, and other individuals who are paid to directly provide services to Medicaid beneficiaries receiving HCBS to address activities of daily living or instrumental activities of daily living. Direct care

[251] *https://www.medicaid.gov/medicaid/long-term-services-supports/downloads/ltss-user-brief-2019.pdf.*

[252] Data is limited on the identification of critical incidents through various data sources. We conservatively assume that 25 percent of additional critical incidents identified as a result of these requirements will be reported by providers even though claims data will likely identify a substantially higher of percentage of claims than will be reported by providers.

workers include individuals employed by a Medicaid provider, State agency, or third party; contracted with a Medicaid provider, State agency, or third party; or delivering services under a self-directed service model.

To demonstrate compliance with the requirements proposed at § 441.302(k), new reporting requirements are proposed at § 441.311(e). Specifically, States would be required to report separately on the percent of payments that are spent on the direct care workforce for HCBS services. The services are found at § 440.180(b)(2) through (4), and include: homemaker services, home health aide services, and personal care services. Separate reporting would be required on payment for services that are self-directed.

The following proposed changes will be submitted to OMB for their approval after this proposed rule is finalized and our survey instrument has been developed. The survey instrument will be made available to the public for their review under the standard non-rule PRA process which includes the publication of 60- and 30-day **Federal Register** notices. In the meantime, we are setting out our preliminary burden figures (see below) as a means of scoring the impact of this rule's proposed changes. The availability of the survey instrument and more definitive burden estimates will be announced in both **Federal Register** notices. The CMS ID number for that collection of information request is CMS–10854 (OMB control number 0938–TBD). Since this would be a new collection of information request, the OMB control number has yet to be determined (TBD) but will be issued by OMB upon their approval of the new collection of information request.

a. States

The burden associated with the proposed requirements would affect the 48 States (including Washington, DC) that deliver HCBS under sections 1915(c), (i), (j), or (k) authorities.[253] [254] We estimate both a one-time and ongoing burden to implement these requirements at the State level. Specifically, under proposed §§ 441.302(k) and 441.311(e), States would have to: (1) draft new policy (one-time); (2) publish the provider requirements through State notice and publication processes (one-time); (3) update provider manuals and other policy guidance for each of the services subject to the requirement (one-time); (4) inform providers of services through State notification processes, both initially and annually (one-time and ongoing); (5) collect the information from providers for each service required (ongoing); (6) aggregate the data broken down by each service as well as self-directed services (ongoing); (7) derive an overall percentage for each service including self-directed services (ongoing); and (8) report to us on an annual basis (ongoing).

i. One Time HCBS Payment Adequacy Requirements: State Burden

With regard to the one-time requirements, we estimate it would take: 80 hours at $108.68/hr for an administrative services manager to: draft policy content, prepare notices and draft rules for publication, conduct public hearings, and draft contract modifications for managed care plans; 30 hours at $96.66/hr for a management analyst to update provider manuals for each of the affected services, and draft provider agreement amendments; 25 hours at $92.92/hr for a computer programmer to build, design, and operationalize internal systems for collection, aggregation, stratification by service, reporting, and creating remittance advice; 60 hours at $65.02/hr for a training and development specialist to develop and conduct training for providers; 6 hours at $110.82/hr for a general and operations manager to: review, approve managed care contract modifications, policy and rules for publication, and training materials; and 3 hours at $204.82/hr for a chief executive to review and approve all operations associated with this requirement. In aggregate, we estimate a one-time burden of 9,792 hours (204 hr × 48 States) at a cost of $916,693 (48 States × [(80 hr × $108.68/hr) + (30 hr × $96.66/hr) + (25 hr × $92.92/hr) + (60 hr × $65.02/hr) + (6 hr × $110.82/hr) + (3 hr × $204.82/hr)]). Taking into account the Federal contribution to Medicaid administration, the estimated State share of this cost would be $458,347 ($916,693 × 0.50).

TABLE 12—SUMMARY OF ONE-TIME BURDEN FOR STATES FOR THE HCBS PAYMENT ADEQUACY REQUIREMENTS AT §§ 441.302(k) AND 441.311(e)

Requirement	Number of respondents	Total responses	Frequency	Time per response (hr)	Total time (hr)	Wage ($/hr)	Total cost ($)	State share ($)
Draft policy content, prepare notices and draft rules for publication, conduct public hearings; and draft contract modifications for managed care plans.	48	48	Once	80	3,840	108.68	417,331	208,666
Update provider manuals for each of the affected services, draft provider agreement amendment.	48	48	Once	30	1,440	96.66	139,190	69,595
Build, design, and operationalize internal systems for collection, aggregation, stratification by service, reporting, and creating remittance advice.	48	48	Once	25	1,200	92.92	111,504	55,752
Develop and conduct training for providers	48	48	Once	60	2,880	65.02	187,258	93,629
Review, approve managed care contract modifications, policy and rules for publication, and training materials.	48	48	Once	6	288	110.82	31,916	15,958.08
Review and approve all operations associated with this requirement.	48	48	Once	3	144	204.82	29,494	14,747
Total	48	288	Once	Varies	9,792	Varies	916,693	458,347

[253] Arizona, Rhode Island, and Vermont do not have HCBS programs under any of these authorities.

[254] For purposes of this burden analysis, we are not taking into consideration temporary wage increases or bonus payments that have been or are being made.

ii. Ongoing HCBS Payment Adequacy Requirements: State Burden

With regard to the on-going requirements, we estimate it would take 6 hours at $92.92/hr for a computer programmer to: (1) collect the information from all providers for each service required; (2) aggregate and stratify by each service as well as self-directed services; (3) derive an overall percentage for each service including self-directed services; and (4) develop report to CMS on an annual basis. We also estimate it would take 2 hours at $110.82/hr by a general and operations manager to review, verify, and approve reporting to CMS and 1 hour at $204.82/hr for a chief executive to review and approve all operations associated with this requirement. In aggregate, we estimate an ongoing burden of 432 hours (9 hr × 48 States) at a cost of $47,231 (48 States × [(6 hr × $92.92/hr) + (2 hr × $110.82/hr) + (1 hr × $204.82/hr)]). Taking into account the Federal contribution to Medicaid administration, the estimated State share of this cost would be $23,616 ($47,231 × 0.50) per year.

TABLE 13—SUMMARY OF ONGOING BURDEN FOR STATES FOR THE HCBS PAYMENT ADEQUACY REQUIREMENTS AT §§ 441.302(k) AND 441.311(e)

Requirement	Number of respondents	Total responses	Frequency	Time per response (hr)	Total time (hr)	Wage ($/hr)	Total cost ($)	State share ($)
Collect information from providers; aggregate and stratify data as required; derive an overall percentage for each service; and develop report annually.	48	48	Annually	6	288	92.92	26,761	13,380
Review, verify and approve reporting to CMS	48	48	Annually	2	96	110.82	10,639	5,319
Review and approve all operations associated with this requirement.	48	48	Annually	1	48	204.82	9,831	4,916
Total	48	144	Annually	Varies	432	Varies	47,231	23,616

b. Service Providers and Managed Care Contractors

The burden associated with this proposed rule will affect both service providers that provide the services listed at § 440.180(b)(2) through (4) across HCBS programs as well as managed care entities that contract with the States to provide managed long-term services and supports. We estimate both a one-time and ongoing burden to implement the reporting requirements § 441.311(e) for both service providers and managed care contractors.

To estimate the number of service providers that will be impacted by this proposed rule, we used unpublished data from the Provider Relief Fund to estimate that there are 14,444 providers nationally across all payers delivering homemaker, home health aide, and/or personal care services. We then prorate the number to estimate the number of providers in the 48 States that are subject to this requirement (14,444 providers nationally × 48 States subject to the proposed requirement/51 States = 13,594 providers). We used data from the Centers for Disease Control and Prevention [255] to estimate the percentage of these HCBS providers that participate in Medicaid and, due to uncertainty in the data and differences in provider definitions, estimate both a lower and upper range of providers affected. At a low end of 78 percent Medicaid participation, we estimate that there are 10,603 providers impacted (13,594 × 0.78), while at a high end of 85 percent participation, we estimate that there are 11,555 providers impacted (13,594 × 0.85). To be conservative and not underestimate our projected burden analysis, we are using the high end of our estimates to score the PRA-related impact of the proposed requirements.

i. One Time HCBS Payment Adequacy Requirements: Service Providers (§ 441.311(e))

With regard to the one-time requirements, we estimate it would take: 35 hours at $70.98/hr for a compensation, benefits and job analysis specialist to calculate compensation, as defined by § 441.302(k)(1)(i) for each direct care worker defined at § 441.302(k)(1)(ii); 40 hours at $92.92/hr for a computer programmer to build, design and operationalize an internal system to calculate each direct care worker's compensation as a percentage of total revenues received, aggregate the sum of direct care worker compensation as an overall percentage, and separate self-directed services to report to the State; and 8 hours at $110.82/hr for a general and operations manager to review and approve reporting to the State. In aggregate, we estimate a one-time burden of 959,065 hours (11,555 providers × 83 hr) at a cost of $81,897,911 (11,555 providers × [(35 hr × $70.98/hr) + (40 hr × $92.92/hr) + (8 hr × $110.82/hr)]).

TABLE 14—SUMMARY OF ONE-TIME BURDEN FOR SERVICE PROVIDERS FOR THE HCBS PAYMENT ADEQUACY REQUIREMENTS AT § 441.311(e)

Requirement	Number of respondents	Total responses	Frequency	Time per response (hr)	Total time (hr)	Wage ($/hr)	Total cost ($)	State share ($)
Calculate compensation for each direct care worker	11,555	11,555	Once	35	404,425	70.98	28,706,087	n/a
Build, design and operationalize an internal system for reporting to the State.	11,555	11,555	Once	40	462,200	92.92	42,947,624	n/a
Review and approve reporting to the State	11,555	11,555	Once	8	92,440	110.82	10,244,200	n/a
Total	11,555	34,665	Once	Varies	959,065	Varies	81,897,911	n/a

[255] *https://www.cdc.gov/nchs/data/series/sr_03/sr03-047.pdf.*

ii. Ongoing HCBS Payment Adequacy Requirements: Service Providers (§ 441.311(e))

With regard to the on-going requirements, we estimate it would take 8 hours at $70.98/hr for a compensation, benefits, and job analysis specialist to account for new hires and/or contracted employees; 8 hours at $92.92/hr for a computer programmer to calculate compensation, aggregate data, and report to the State as required; and 5 hours at $110.82/hr for a general and operations manager to review and approve reporting to the State. In aggregate, we estimate an on-going burden of 242,655 hours (11,555 providers × 21 hr) at a cost of $21,553,542 (11,555 providers × [(8 hr × $70.98/hr) + (8 hr × $92.92/hr) + (5 hr × $110.82/hr)]).

TABLE 15—SUMMARY OF ONGOING BURDEN FOR SERVICE PROVIDERS FOR THE HCBS PAYMENT ADEQUACY REQUIREMENTS AT § 441.311(e)

Requirement	Number of respondents	Total responses	Frequency	Time per response (hr)	Total time (hr)	Wage ($/hr)	Total cost ($)	State share ($)
Account for new hires and/or contracted employees.	11,555	11,555	Once	8	92,440	70.98	6,561,391	n/a
Calculate compensation, aggregate data, and report to the State.	11,555	11,555	Once	8	92,440	92.92	8,589,525	n/a
Review and approve reporting to the State	11,555	11,555	Once	5	57,775	110.82	6,402,626	n/a
Total	11,555	34,665	Once	Varies	242,655	Varies	21,553,542	n/a

iii. One Time HCBS Payment Adequacy Requirements: Managed Care Entities (§ 441.311(e))

As noted earlier, the burden associated with this proposed rule will affect managed care entities (see section d, below) that contract with the States to provide managed long-term services and supports. We estimate that there are 161 managed long-term services and supports plans providing services across 25 States.[256] We estimate both a one-time and ongoing burden for managed care entities to implement these requirements. Specifically, managed care entities would have to: (1) draft new policy (one-time); (2) update provider manuals for each of the services subject to the requirement (one-time); (3) inform providers of requirements (one-time and ongoing); (4) collect the information from providers for each service required (ongoing); (5) aggregate the data as required by the States (ongoing); and (6) report to the State on an annual basis (ongoing).

With regard to the one-time requirements, we estimate it would take 40 hours at $108.68/hr for an administrative services manager to draft policy for contracted providers; 25 hours at $92.92/hr for a computer programmer to build, design, and operationalize internal systems for data collection, aggregation, stratification by service, and reporting; 30 hours at $65.02/hr for a training and development specialist to develop and conduct training for providers; and 3 hours at $204.82/hr for a chief executive to review and approve reporting to the State. In aggregate, we estimate a one-time burden of 15,778 hours (161 MCEs × 98 hr) at a cost of $1,486,877 (161 MCEs × [(40 hr × $108.68/hr) + (25 hr × $92.92/hr) + (30 hr × $65.02/hr) + (3 hr × $204.82/hr)]).

TABLE 16—SUMMARY OF ONE-TIME BURDEN FOR MANAGED CARE ENTITIES (MCES) FOR THE HCBS PAYMENT ADEQUACY REQUIREMENTS AT § 441.311(e)

Requirement	Number of respondents	Total responses	Frequency	Time per response (hr)	Total time (hr)	Wage ($/hr)	Total cost ($)	State share ($)
Draft policy for contracted providers	161	161	Once	40	6,440	108.68	699,899	n/a
Build, design, and operationalize internal systems for data collection, aggregation, stratification by service, and reporting.	161	161	Once	25	4,025	92.92	374,003	n/a
Develop and conduct training for providers	161	161	Once	30	4,830	65.02	314,047	n/a
Review and approve reporting to the State	161	161	Once	3	483	204.82	98,928	n/a
Total	161	644	Once	Varies	15,778	Varies	1,486,877	n/a

iv. Ongoing HCBS Payment Adequacy Requirements: Managed Care Entities (§ 441.311(e))

With regard to the ongoing requirements, we estimate it would take: 6 hours at $92.92/hr for a computer programmer to: (1) collect the information from all providers for each service required, (2) aggregate and stratify data as required, and (3) develop report to the State on an annual basis; and 2 hours at $204.82/hr for a chief executive to review and approve the reporting to the State. In aggregate, we estimate an ongoing burden of 1,288 hours (161 MCEs × 8 hr) at a cost of $155,713 (161 MCEs × [(6 hr × $92.92/hr) + (2 hr × $204.82/hr)]).

6. ICRs Regarding Supporting Documentation for HCBS Access (§§ 441.303(f)(6) and 441.311(d)(1))

Section 1915(c) of the Act authorizes States to set enrollment limits or caps on the number of individuals served in a waiver, and many States maintain waiting lists of individuals interested in receiving waiver services once a spot becomes available. States vary in the way they maintain waiting lists for section 1915(c) waivers, and if a waiting list is maintained, how individuals may join the waiting list. Some States permit individuals to join a waiting list as an expression of interest in receiving waiver services, while other States require individuals to first be determined eligible for waiver services to join the waiting list. States have not been required to submit any information on the existence or composition of waiting lists, which has led to gaps in information on the accessibility of HCBS within and across States. Further, feedback obtained during various interested parties' engagement activities conducted with States and other interested parties over the past several years about reporting requirements for HCBS, as well as feedback received through the RFI[257] discussed earlier, indicate that there is a need to improve public transparency and processes related to States' HCBS waiting lists.

We propose to amend § 441.303(f)(6) by adding language to the end of the regulatory text: ''If the State has a limit on the size of the waiver program and maintains a list of individuals who are waiting to enroll in the waiver program, the State must meet the reporting requirements at § 441.311(d)(1).''

For States that limit or cap enrollment in a section 1915(c) waiver and maintain a waiting list, States would be required to provide a description annually on how they maintain the list of individuals who are waiting to enroll in a section 1915(c) waiver program. The description must include, but not be limited to, information on whether the State screens individuals on the waiting list for eligibility for the waiver program, whether the State periodically re-screen individuals on the waiver list for eligibility, and the frequency of re-screening, if applicable. In addition, States would be required to report of the number of people on the waiting list if applicable, as well as the average amount of time that individuals newly enrolled in the waiver program in the past 12 months were on the waiting list, if applicable.

The following proposed changes will be submitted to OMB for their approval after this proposed rule is finalized and our survey instrument has been developed. The survey instrument and burden will be made available to the public for their review under the standard non-rule PRA process which includes the publication of 60- and 30-day **Federal Register** notices. In the meantime, we are setting out our preliminary burden figures (see below) as a means of scoring the impact of this rule's proposed changes. The availability of the survey instrument and more definitive burden estimates will be announced in both **Federal Register** notices. The CMS ID number for that collection of information request is CMS–10854 (OMB control number 0938–TBD). Since this would be a new collection of information request, the OMB control number has yet to be determined (TBD) but will be issued by OMB upon their approval of the new collection of information request.

a. One Time Waiting List Reporting Requirements: States (§ 441.311(d)(1))

The one-time State burden associated with the waiting list reporting requirements proposed in § 441.311(d)(1) will affect the 39 State Medicaid programs with waiting lists for section 1915(c) waivers.[258] We estimate both a one-time and ongoing burden to implement these requirements at the State level. Specifically, States will have to query their databases or instruct their contractors to do so to collect information on the number of people on existing waiting lists and how long they wait; and write or update their existing waiting list policies and the information collected. In some States, HCBS waivers are administered by more than one operating agency, in these cases each will have to report this data up to the Medicaid agency for submission to us.

With regard to the one-time requirements, we estimate it would take: 16 hours at $108.68/hr for an administrative services manager to write or update State policy, direct information collection, compile information, and produce a report; 20 hours at $92.92/hr for a computer programmer or contractor to query internal systems for reporting requirements; 3 hours at $110.82/hr for a general and operations manager to review and approve report; and 2 hours at $204.82/hr for a chief executive to review and approve all reports associated with this requirement. In aggregate, we estimate a burden of 1,599 hours (39 States × 41 hr) at a cost of $169,236 (39 States × [(16 hr × $108.68/hr) + (20 hr × $92.92/hr) + (3 hr × $110.82/hr) + (2 hr × $204.82/hr)]). Taking into account the Federal contribution to Medicaid administration, the estimated State share of this cost would be $84,618 ($169,236 × 0.50).

Assuming no changes to the State waiting list policies, each year States would only need to update the report to reflect the number of people on the list of individuals who are waiting to enroll in the waiver program and average amount of time that individuals newly enrolled in the waiver program in the past 12 months were on the list.

TABLE 18—SUMMARY OF ONE-TIME BURDEN FOR STATES FOR THE WAITING LIST REPORTING REQUIREMENTS AT § 441.311(d)(1)

Requirement	Number of respondents	Total responses	Frequency	Time per response (hr)	Total time (hr)	Wage ($/hr)	Total cost ($)	State share ($)
Write or update State policy, direct information collection, compile information, and produce a report.	39	39	Once	16	624	108.68	67,816	33,908
Query internal systems for reporting requirements	39	39	Once	20	780	92.92	72,478	36,239
Review and approve report at management level	39	39	Once	3	117	110.82	12,966	6,483
Review and approve all reports associated with this requirement at the executive level.	39	39	Once	2	78	204.82	15,976	7,988
Total	39	156	Once	Varies	1,599	Varies	169,236	84,618

b. Ongoing Waiting List Reporting Requirements: States (§ 441.311(d)(1))

With regard to the on-going burden for the section 1915(c) waiver waiting list reporting requirements at § 441.311(d)(1), we estimate it would take: 4 hours at $108.68/hr for an administrative services managers across relevant operating agencies to direct information collection, compile information, and produce a report; 6 hours at $92.92/hr for a computer programmer or contractor to query internal systems for reporting requirements; 3 hours at $110.82/hr for a general and operations manager to review and approve report; and 2 hours at $204.82/hr for a chief executive to review and approve all reports associated with this requirement. In aggregate, we estimate a burden of 585 hours (39 States × 15 hr) at a cost of $67,639 (39 States × [(4 hr × $108.68/hr) + (6 hr × $92.92/hr) + (3 hr × $110.82/hr) + (2 hr × $204.82/hr)]. Taking into account the Federal contribution to Medicaid administration, the estimated State share of this cost would be $33,820 ($67,639 × 0.50) per year.

TABLE 19—SUMMARY OF ONGOING BURDEN FOR STATES FOR THE WAITING LIST REPORTING REQUIREMENTS AT § 441.311(d)(1)

Requirement	Number of respondents	Total responses	Frequency	Time per response (hr)	Total time (hr)	Wage ($/hr)	Total cost ($)	State share ($)
Direct information collection, compile information, and produce a report.	39	39	Annually	4	156	108.68	16,954	8,477
Query internal systems for reporting requirements	39	39	Annually	6	234	92.92	21,743	10,872
Review and approve report at the management level	39	39	Annually	3	117	110.82	12,966	6,483
Review and approve all reports associated with this requirement at the executive level.	39	39	Annually	2	78	204.82	15,976	7,988
Total	39	156	Annually	Varies	585	Varies	67,639	33,820

7. ICRs Regarding Additional HCBS Access Reporting (§ 441.311(d)(2)(i))

Additional HCBS access reporting is proposed at § 441.311(d)(2)(i). States would be required to report annually on the average amount of time from when homemaker services, home health aide services, or personal care services, listed in § 440.180(b)(2) through (4), are initially approved to when services began for individuals newly approved to begin receiving services within the past 12 months. For this specific metric, States will be allowed to report on a statistically valid random sample of individuals newly approved to begin receiving these services within the past 12 months.

Proposed § 441.311(d)(2)(ii) would require States to report annually on the percent of authorized hours for homemaker services, home health aide services, or personal care, as listed in § 440.180(b)(2) through (4), that are provided within the past 12 months. States will have the option to report on a statistically valid random sample of individuals authorized to receive these services within the past 12 months, rather than all individuals authorized to receive these services within the past 12 months.

The following proposed changes will be submitted to OMB for their approval after this proposed rule is finalized and our survey instrument has been developed. The survey instrument and burden will be made available to the public for their review under the standard non-rule PRA process which includes the publication of 60- and 30-day **Federal Register** notices. In the meantime, we are setting out our preliminary burden figures (see below) as a means of scoring the impact of this rule's proposed changes. The availability of the survey instrument and more definitive burden estimates will be announced in both **Federal Register** notices. The CMS ID number for that collection of information request is CMS–10854 (OMB control number 0938–TBD). Since this would be a new collection of information request, the OMB control number has yet to be determined (TBD) but will be issued by OMB upon their approval of the new collection of information request.

The burden associated with the proposed additional HCBS access reporting requirements at § 441.311(d)(2) would affect the 48 States (including Washington DC) that deliver HCBS under sections 1915(c), (i), (j), or (k) authorities.[259] Specifically, States will have to query their databases or instruct their contractors to do so to collect information on the average amount of time from which homemaker services, home health aide services, or personal care services, as listed in § 440.180(b)(2) through (4), are initially approved to when services began, for individuals newly approved to begin receiving services within the past 12 months, and the percent of authorized hours for these services that are provided within the past 12 months. We expect many States will need to analyze report this metric for a statistically valid random sample of beneficiaries. They will then need to produce a report for

[259] Arizona, Rhode Island, and Vermont do not have HCBS programs under any of these authorities.

us within such information. For States with managed long-term services and supports, they would need to direct managed care entities to report this information up to them.

We estimate one-time and ongoing burden to implement the requirements at § 441.311(d)(2) at the State level.

a. One-Time HCBS Access Reporting Requirements: States (§ 441.311(d)(2))

With regard to the one-time burden related to the HCBS access reporting requirements, we estimate it would take: 20 hours at $108.68/hr for an administrative services manager across relevant operating agencies to direct information collection, compile information, and produce a report; 60 hours at $92.92/hr for a computer programmer or contractor to analyze service authorization and claims data; 40 hours at $95.62/hr for a statistician to conduct data sampling; 3 hours at $110.82/hr for a general and operations manager to review and approve report; and 2 hours at $204.82/hr for a chief executive to review and approve all reports associated with this requirement. In aggregate, we estimate a one-time burden of 6,000 hours (48 States × 125 hr) at a cost of $591,154 (48 States × [(20 hr × $108.68/hr) + (60 hr × $92.92/hr) + (40 hr × $95.62/hr) + (3 hr × $110.82/hr) + (2 hr × $204.82/hr)]). Taking into account the Federal contribution to Medicaid administration, the estimated State share of this cost would be $295,577 ($591,154 × 0.50) per year.

TABLE 20—SUMMARY OF ONE-TIME BURDEN FOR STATES FOR THE HCBS ACCESS REPORTING REQUIREMENTS AT § 441.311(d)(2)

Requirement	Number of respondents	Total responses	Frequency	Time per response (hr)	Total time (hr)	Wage ($/hr)	Total cost ($)	State share ($)
Direct information collection, compile information, and produce a report.	48	48	Once	20	960	108.68	104,333	52,166
Analyze service authorization and claims data	48	48	Once	60	2,880	92.92	267,610	133,805
Conduct data sampling	48	48	Once	40	1,920	95.62	183,590	91,795
Review and approve report at the management level	48	48	Once	3	144	110.82	15,958	7,979
Review and approve all reports associated with this requirement at the executive level.	48	48	Once	2	98	204.82	19,663	9,831
Total	48	240	Once	Varies	6,000	Varies	591,154	295,577

b. Ongoing HCBS Access Reporting Requirements: States (§ 441.311(d)(2))

With regard to the on-going burden related to the HCBS access reporting requirements for States, we estimate it would take: 10 hours at $108.68/hr for an administrative services manager to direct information collection, compile information, and produce a report; 20 hours at $92.92/hr for a computer programmer or contractor to analyze service authorization and claims data; 10 hours at $95.62/hr for a statistician to conduct data sampling; 3 hours at $110.82/hr for a general and operations manager to review and approve report; and 2 hours at $204.82/hr for a chief executive to review and approve all reports associated with this requirement. In aggregate, we estimate a burden of 2,160 hours (48 States × 45 hr) at a cost of $222,888 (48 States × [(10 hr × $108.68/hr) + (20 hr × $92.92/hr) + (10 hr × $95.62/hr) + (3 hr × $110.82/hr) + (2 hr × $204.82/hr)]). Taking into account the Federal contribution to Medicaid administration, the estimated State share of this cost would be $111,444 ($222,888 × 0.50) per year.

TABLE 21—SUMMARY OF ONGOING BURDEN FOR STATES FOR THE HCBS ACCESS REPORTING REQUIREMENTS AT § 441.311(d)(2)

Requirement	Number of respondents	Total responses	Frequency	Time per response (hr)	Total time (hr)	Wage ($/hr)	Total cost ($)	State share ($)
Direct information collection, compile information, and produce a report.	48	48	Annually	10	480	108.68	52,166	26,083
Analyze service authorization and claims data	48	48	Annually	20	960	92.92	89,203	44,601
Conduct data sampling	48	48	Annually	10	480	95.62	45,898	22,949
Review and approve report at the management level	48	48	Annually	3	144	110.82	15,958	7,979
Review and approve all reports associated with this requirement at the executive level.	48	48	Annually	2	96	204.82	19,663	9,831
Total	48	240	Annually	Varies	2,160	Varies	222,888	111,444

c. One-Time HCBS Access Reporting Requirements: Managed Care Entities (§ 441.311(d)(2))

With regard to the one-time proposed HCBS access reporting requirements at § 441.311(d)(2) for managed care entities, we estimate it would take: 10 hours at $108.68/hr for an administrative services manager to direct information collection, compile information, and produce a report to the State; 35 hours at $92.92/hr for a computer programmer to analyze service authorization and claims data; 10 hours at $95.62/hr for a statistician to conduct data sampling; and 2 hours at $204.82/hr for a chief executive review and approval. In aggregate, we estimate a one-time burden of 9,177 hours (161 MCEs × 57 hr) at a cost of $918,479 (161 MCEs × [(10 hr × $108.68/hr) + (35 hr × $92.92/hr) + (10 hr × $95.62/hr) + (2 hr × $204.82/hr)]).

TABLE 22—SUMMARY OF ONE-TIME BURDEN FOR MANAGED CARE ENTITIES FOR THE HCBS ACCESS REPORTING REQUIREMENTS AT § 441.311(d)(2)

Requirement	Number of respondents	Total responses	Frequency	Time per response (hr)	Total time (hr)	Wage ($/hr)	Total cost ($)	State share ($)
Direct information collection, compile information, and produce a report to the State.	161	161	Once	10	1,610	108.68	174,975	n/a
Analyze service authorization and claims data	161	161	Once	35	5,635	92.92	523,604	n/a
Conduct data sampling	161	161	Once	10	1,610	95.62	153,948	n/a
Review and approve report	161	161	Once	2	322	204.82	65,952	n/a
Total	161	644	Once	Varies	9,177	Varies	918,479	n/a

d. Ongoing HCBS Access Reporting Requirements: Managed Care Entities (§ 441.311(d)(2))

With regard to the ongoing requirements associated with the annual collection, aggregation, and reporting the HCBS access measures at § 441.311(d)(2), we estimate it would require: 4 hours at $108.68/hr for an administrative services manager to direct information collection, compile information, and produce a report to the State; 20 hours at $92.92/hr for a computer programmer to analyze service authorization and claims data; 8 hours at $95.62/hr for a statistician to conduct data sampling; and 2 hours at $204.82/hr for a chief executive to review and approve. In aggregate, we estimate a burden of 5,474 hours (161 MCEs × 34 hr) at a cost of $558,303 (161 MCEs × [(4 hr × $108.68/hr) + (20 hr × $92.92/hr) + (8 hr × $95.62/hr) + (2 hr × $204.82/hr)]).

TABLE 23—SUMMARY OF ONGOING BURDEN FOR MANAGED CARE ENTITIES (MCES) FOR ADDITIONAL HCBS ACCESS REPORTING REQUIREMENTS AT § 441.311(d)(2)

Requirement	Number of respondents	Total responses	Frequency	Time per response (hr)	Total Trtime (hr)	Wage ($/hr)	Total cost ($)	State share ($)

8. ICRs Regarding Compliance Reporting (§ 441.311(b))

a. Ongoing Incident Management System Assessment Requirements: States (§ 441.311(b)(1))

Through proposed updates to § 441.311(b)(1), as described in proposed § 441.302(a)(6), this proposed rulemaking aims to standardize CMS expectations and State reporting requirements to ensure that States operate and maintain an incident management system that identifies, reports, triages, investigates, resolves, tracks, and trends critical incidents. The proposed updates were informed by the responses to the HCBS Incident Management Survey (CMS–10692; OMB 0938–1362) recently released to States.

The following proposed changes will be submitted to OMB for their approval after this proposed rule is finalized and our survey instrument has been developed. The survey instrument and burden will be made available to the public for their review under the standard non-rule PRA process which includes the publication of 60- and 30-day **Federal Register** notices. In the meantime, we are setting out our preliminary burden figures (see below) as a means of scoring the impact of this rule's proposed changes. The availability of the survey instrument and more definitive burden estimates will be announced in both **Federal Register** notices. The CMS ID number for that collection of information request is CMS–10692 (OMB control number 0938–1362). We estimate that the proposed reporting requirement at § 441.311(b)(1) would apply to the 48 States (including Washington, DC) that deliver HCBS under sections 1915(c), (i), (j), or (k) authorities. Some States employ the same incident management system across their waivers, while others employ an incident management system specific to each waiver and will require multiple assessments to meet the proposed requirements at § 441.311(b)(1). Based on the responses to the previously referenced survey, we are estimating that on average States will conduct assessments on two incident management systems, totaling approximately 96 unique required assessments (48 State Medicaid programs × 2 incident management system assessments per State). Because the requirements proposed by § 441.311(b)(1) would be required every 24 months, we estimate 48 assessments on an annual basis (96 unique assessments every 2 years). With regard to the ongoing requirements, we estimate that it would take 1.5 hours at $73.84/hr for a social/community service manager to gather information and complete the required assessment; and 0.5 hours at $110.82/hr for a general and operations manager to review and approve the assessment. In aggregate, we estimate an ongoing annual burden of 96 hours (48 States × 2 hr) at a cost of $7,976 (48 States × [(1.5 hr × $73.84/hr) + (0.5 hr × $110.82/hr)]). Taking into account the Federal contribution to Medicaid administration, the estimated State share of this cost would be $3,988 ($7,976 × 0.50) per year.

TABLE 24—SUMMARY OF THE ONGOING BURDEN FOR STATES FOR THE PROPOSED INCIDENT MANAGEMENT SYSTEM ASSESSMENT REQUIREMENTS AT § 441.311(b)(1)

Requirement	Number of respondents	Total responses	Frequency	Time per response (hr)	Total time (hr)	Wage ($/hr)	Total cost ($)	State share ($)
Gather information and complete the required assessment.	48	48	Annually	1.5	72	73.84	5,316	2,658
Review and appprove the assessment	48	48	Annually	0.5	24	110.82	2,660	1,330
Total	48	96	Annually	Varies	96	Varies	7,976	3,988

b. Reporting on Critical Incidents (§ 441.311(b)(2)), Person-Centered Planning (§ 441.311(b)(3)), and Type, Amount, and Cost of Services (§ 441.311(b)(4))

This proposed rulemaking codifies existing compliance reporting requirements on Critical Incidents, Person-Centered Planning, and Type, Amount, and Cost of Services. This includes codifying minimum performance standards at § 441.311(b)(2) and (3) and making updates to critical incident and person-centered planning requirements previously described in 2014 guidance,[260] and moving the existing requirement at § 441.302(h)(1) to report on type, amount, and cost of services to § 441.311(b)(4) as part of the new consolidated compliance reporting section at § 441.311.

This proposed rule would remove our currently approved burden and replace it with the burden associated with the proposed amendments to § 441.311(b)(2) through (4). In aggregate, the change would remove 11,132 hours (253 waivers × 44 hr) and $860,281 (11,132 hr × $77.28/hr for a business operations specialist). Taking into account the Federal contribution to Medicaid administration, the estimated State share of this cost reduction would be minus $430,140 (−$860,281 × 0.50).

TABLE 25—SUMMARY OF THE REMOVAL OF APPROVED ONGOING BURDEN FOR FORM 372(S) AS A RESULT OF THE PROPOSED REQUIREMENTS AT § 441.311(b)(2) THROUGH (b)(4)

Requirement	Number of respondents	Total responses	Frequency	Time per response (hr)	Total time (hr)	Wage ($/hr)	Total cost ($)	State share ($)
Remove currently approved burden under control number 0938–0272 (CMS–372(S)).	48	253	Annually	(44)	(11,132)	77.28	(860,281)	(430,140)
Total	48	253	Annually	(44)	(11,132)	77.28	(860,281)	(430,140)

We expect to revise the Form CMS–372(S) and the form's instructions based on the proposed reporting requirements. The following proposed changes will be submitted to OMB for their approval after this proposed rule is finalized and our survey instrument has been developed. The survey instrument and burden will be made available to the public for their review under the standard non-rule PRA process which includes the publication of 60- and 30-day **Federal Register** notices. In the meantime, we are setting out our preliminary burden figures (see below) as a means of scoring the impact of this rule's proposed changes. The availability of the survey instrument and more definitive burden estimates will be announced in both **Federal Register** notices. The CMS ID number for that collection of information request is CMS 0938–0272 (CMS–372(S)). The proposed consolidated reporting requirements at § 441.311(b)(2) through (4) also assume that 48 States (including Washington, DC) are required to submit the Form CMS–372(S) Report on an annual basis. However, a separate form would no longer be required for each of the 253 approved waivers currently in operation. We estimate a burden of 50 hours for a business operations specialist to draft each Form CMS–372(S) Report submission. The per response increase reflects the proposed increase to the minimum State quality performance level for person-centered planning (at proposed § 441.301(c)(3)(ii)) and critical incident reporting (at proposed § 441.302(a)(6)(ii)) from the 86 percent threshold established by the 2014 guidance to 90 percent in this proposed rule. This slight increase to the minimum performance level will help ensure that States are sufficiently meeting all section 1915(c) waiver requirements but may also increase the evidence that some States may need to submit to document that appropriate remediation is being undertaken to resolve any compliance deficiencies. As a result, we now estimate a total of 50 hours for each Form CMS–372(S) Report submission, comprised of 30 hours of recordkeeping, collection and maintenance of data, and 20 hours of record assembly, programming, and completing the Form CMS–372(S) Report in the required format. We also estimate 3 hours at $110.82/hr for a general and operations manager to review and approve the report to CMS; and 2 hours at $204.82/hr for a chief executive to review and approve all reports associated with this requirement.

[260] *https://www.hhs.gov/guidance/sites/default/files/hhs-guidance-documents/3-cmcs-quality-memo-narrative_0_71.pdf.*

TABLE 26—SUMMARY OF THE NEW BURDEN FOR FORM 372(S) ANNUAL REPORT ON HCBS WAIVERS, INCLUSIVE OF UPDATES TO PROPOSED § 441.311(b)(2) THROUGH (4)

Requirement	Number of respondents	Total responses	Frequency	Time per response (hr)	Total time (hr)	Wage ($/hr)	Total cost ($)	State share ($)
Draft Form CMS 372(S) Report submission	48	48	Annually	50	2,400	77.28	185,472	92,736
Review and approve the report at the management level.	48	48	Annually	3	144	110.82	15,958	7,979
Review and approve all reports associated with this requirement at the executive level.	48	48	Annually	2	96	204.82	19,663	9,831
Total	48	144	Annually	Varies	2,640	Varies	221,093	110,546

The net change resulting from reporting requirements on critical incidents, person-centered service planning, and type, amount, and cost of services, proposed by § 441.311(b)(2) through (4) is a burden decrease of 8,492 hours and $319,594 (State share).

9. ICRs Regarding Reporting on the Home and Community-Based Services (HCBS) Quality Measure Set (§ 441.311(c))

a. States

At § 441.311(c), we propose to require that States report every other year on the HCBS Quality Measure Set, which is described in section II.B.8. of the preamble. The proposed reporting requirement would affect the 48 States (including Washington, DC) that deliver HCBS under section 1915(c), 1915(i), 1915(j), and 1915(k) authorities. We estimate both a one-time and ongoing burden to implement these requirements at the State level.

As proposed at § 441.311(c), the data collection would include reporting every other year on all measures in the HCBS Quality Measure Set that are identified by the Secretary.[261] For certain measures which are based on data already collected by us, the State can elect to have the Secretary report on their behalf.

Under proposed § 441.312(c)(1)(iii), States would also be required to establish performance targets, subject to our review and approval, for each of the measures in the HCBS Quality Measure Set that are identified as mandatory for States to report or are identified as measures for which we will report on behalf of States, as well as to describe the quality improvement strategies that they will pursue to achieve the performance targets for those measures.

The following proposed changes will be submitted to OMB for their approval after this proposed rule is finalized and our survey instrument has been developed. The survey instrument and burden will be made available to the public for their review under the standard non-rule PRA process which includes the publication of 60- and 30-day **Federal Register** notices. In the meantime, we are setting out our preliminary burden figures (see below) as a means of scoring the impact of this rule's proposed changes. The availability of the survey instrument and more definitive burden estimates will be announced in both **Federal Register** notices. The CMS ID number for that collection of information request is CMS–10854 (OMB control number 0938–TBD). Since this would be a new collection of information request, the OMB control number has yet to be determined (TBD) but will be issued by OMB upon their approval of the new collection of information request.

i. One Time HCBS Quality Measure Set Requirements: States (§ 441.311(c))

This one-time burden analysis assumes that States must newly adopt one of the ''experience of care'' surveys cited in the HCBS Quality Measure Set: The Consumer Assessment of Healthcare Providers and Systems Home and Community-Based (HCBS CAHPS®) Survey, National Core Indicators®-Intellectual and Developmental Disabilities (NCI®–IDD), National Core Indicators-Aging and Disability (NCI–AD)™, or Personal Outcome Measures (POM)® to fully meet the HCBS Quality Measures Set mandatory requirements. Currently most States use at least one of these surveys; however, States may need to use multiple ''experience of care'' surveys, depending on the populations served by the States' HCBS program and the particular survey instruments that States select to use, to ensure that all major population groups are assessed using the measures in the HCBS Quality Measure Set.

The estimate of one-time burden related to the effort associated with the proposed requirements is for the first year of reporting. It assumes that the Secretary will initially require 25 of the 97 measures currently included in the HCBS Quality Measure Set. The estimate disregards costs associated with the voluntary reporting of measures in the HCBS Quality Measure Set that are not yet mandatory, and voluntary stratification of measures ahead of the phase-in schedule, discussed later in this section.

Additionally, the Secretary will require stratification by demographic characteristics of 25 percent of the measures in the HCBS Quality Measure Set for which the Secretary has specified that reporting should be stratified 3 years after the effective date of these regulations, 50 percent of such measures by 5 years after the effective date of these regulations, and 100 percent of measures by 7 years after the effective date of these regulations. The burden associated with stratifying data is considered in the ongoing cost estimate only. We anticipate that certain costs will decline after the first year of reporting, but that some of the reduction will be supplanted with costs associated with stratifying data.

With regard to the one-time requirements at § 441.311(c) for reporting on the initial mandatory elements of the HCBS Quality Measure Set, we estimate that would take: 540 hours at $108.68/hr for administrative services managers to conduct project planning, administer and oversee survey administration, compile measures, establish and describe performance targets, describe quality improvement strategies, and produce a report; 40 hours at $95.62/hr for a statistician to determine survey sampling methodology; 500 hours at $62.20/hr for survey researcher(s) to be trained in survey administration and to administer an in-person survey; 200 hours at $34.56/hr for a data entry worker to input the data; 60 hours at $92.92/hr for a computer programmer to synthesize the data; and 5 hours at $204.82/hr for a chief executive to verify, certify, and approve the report. In aggregate, we estimate a one-time burden of 64,560 hours (48 States × 1,345 hr) at a cost of $5,141,918 (48 States × [(540 hr × $108.68/hr) + (40 hr × $95.62/hr) + (500 hr × $62.20/hr) + (200 hr × $34.56/hr) + (60 hr × $92.92/hr) + (5 hr × $204.82/

[261] Available at *https://www.medicaid.gov/federal-policy-guidance/downloads/smd22003.pdf.*

hr)]) Taking into account the Federal contribution to Medicaid administration, the estimated State share of this cost would be $2,570,959 ($5,141,918 × 0.50).

TABLE 27—SUMMARY OF THE ONE-TIME BURDEN FOR STATES FOR THE HCBS QUALITY MEASURE SET REQUIREMENTS AT § 441.311(c)

Requirement	Number of respondents	Total responses	Frequency	Time per response (hr)	Total time (hr)	Wage ($/hr)	Total cost ($)	State share ($)
Conduct project planning, administer and oversee survey administration, compile measures, establish and describe performance targets, describe quality improvement strategies, and produce a report.	48	48	Once	5200	25,920	108.68	2,816,986	1,408,493
Determine survey sampling methodology	48	48	Once	40	1,920	95.62	183,590	91,795
Receive training in survey administration and administer an in-person survey.	48	48	Once	500	24,000	62.20	1,492,800	746,400
Input data	48	48	Once	200	9,600	34.56	346,944	173,472
Synthesize data	48	48	Once	60	2,880	92.92	267,610	133,805
Verify, certify, and approve the report	48	48	Once	5	240	204.82	49,157	24,578
Total	48	288	Once	Varies	64,560	Varies	5,141,918	2,570,959

ii. Ongoing HCBS Quality Measure Set Requirements: States (§ 441.311(c))

With regard to the ongoing burden of fulfilling proposed requirements at § 441.311(c), every other year, for reporting on mandatory elements of the HCBS Quality Measure Set, including data stratification by demographic characteristics, we estimate it would take: 520 hours at $108.68/hr for administrative services managers to conduct project planning, administer and oversee survey administration, compile measures, update performance targets and quality improvement strategy description, and produce a report; 80 hours at $95.62/hr for a statistician to determine survey sampling methodology; 1,250 hours at $62.20/hr for survey researcher(s) to be trained in survey administration and to administer an in-person survey; 500 hours at $34.56/hr for a data entry worker to input the data; 100 hours at $92.92/hr for a computer programmer to synthesize the data; and 5 hours at $204.82/hr for a chief executive to verify, certify, and approve a State data submission to us. In aggregate, we estimate an ongoing burden of 117,840 hours (48 States × 2,455 hr) at a cost of $8,136,446 (48 States × [(520 hr × $108.68/hr) + (80 hr × $95.62/hr) + (1,250 hr × $62.20/hr) + (500 hr × $34.56/hr) + (100 hr × $92.92/hr) + (5 hr × $204.82/hr)]). Given that reporting is every other year, the annual burden would be 58,920 hours (117,840 hr/2 years) and $4,068,223 ($8,136,446/2 years). Taking into account the Federal contribution to Medicaid administration, the estimated State share of this cost would be $2,034,112 ($4,068,223 × 0.50).

TABLE 28—SUMMARY OF THE ONGOING BURDEN FOR STATES FOR THE HCBS QUALITY MEASURE SET REQUIREMENTS AT § 441.311(c)

Requirement	Number of respondents	Total responses	Frequency	Time per response (hr)	Total time (hr)	Wage ($/hr)	Total cost ($)	State share ($)
Conduct project planning, administer and oversee survey administration, compile measures, update performance targets and quality improvement strategy description, and produce a report.	48	48	Every other year.	520	24,960	108.68	2,712,653	1,356,326
Determine survey sampling methodology	48	48	Every other year.	80	3,840	95.62	367,181	183,590
Receive training in survey administration and administer an in-person survey.	48	48	Every other year.	1,250	60,000	62.20	3,732,000	1,866,000
Input data	48	48	Every other year.	500	24,000	34.56	867,360	433,680
Synthesize data	48	48	Every other year.	100	4,800	92.92	446,016	223,008
Verify, certify, and approve the report	48	48	Every other year.	5	240	204.82	49,157	24,578
Total	48	576	Every other year.	Varies	235,680	Varies	8,174,366	4,087,183

b. HCBS Quality Measure Set Requirements: Beneficiary Experience Survey (§ 441.311(c))

State adoption of existing beneficiary experience surveys, contained in the HCBS Quality Measure Set, to fulfill the proposed mandatory reporting requirements would include a burden on beneficiaries. As proposed in the previous section, a State must newly adopt one of the ''experience of care'' surveys cited in the HCBS Quality Measure Set: The Consumer Assessment of Healthcare Providers and Systems Home and Community Based (HCBS CAHPS®) Survey, National Core Indicators® Intellectual and Developmental Disabilities (NCI® IDD), National Core Indicators Aging and Disability (NCI AD)™, or Personal Outcome Measures (POM)®.

With regard to beneficiary burden, we estimate it would take 45 minutes (0.75 hr) at $20.71/hr for a Medicaid beneficiary to complete a survey every other year that will be used to derive one or more of the measures in the

HCBS Quality Measure Set. At 1,000 beneficiaries/State and 48 States, we estimate an aggregate burden of 36,000 hours (1,000 beneficiary responses/State × 48 States × 0.75 hr/survey) at a cost of $ 745,560 (36,000 hr × $20.71/hr). Given that survey is every other year, the annual burden would be 18,000 hours (36,000 hr/2 years) and $372,780 ($745,560/2 years).

TABLE 29—SUMMARY OF BENEFICIARY EXPERIENCE SURVEY BURDEN FOR THE HCBS QUALITY MEASURE SET REQUIREMENTS AT § 441.311(c)

Requirement	Number of respondents	Total responses	Frequency	Time per response (hr)	Total time (hr)	Wage ($/hr)	Total cost ($)	State share ($)
Complete beneficiary experience survey	48,000	24,000	Annually	0.75	18,000	20.71	372,780	n/a
Total	48,000	48,000	Every other Year.	0.75	18,000	20.71	745,560	n/a

10. ICRs Regarding Website Transparency (§ 441.313; Cross-Referenced to §§ 441.486, 441.595, and 441.750, as Well as Part 438)

The proposed rule adds a new section, at § 441.313, titled, ''website Transparency, to promote public transparency related to the administration of Medicaid-covered HCBS under section 1915(c) of the Act.'' Specifically, at § 441.313(a), we propose to require States to operate a website that meets the availability and accessibility requirements at § 435.905(b) and that provides the data and information that States are required to report under the newly proposed reporting section at § 441.311. At § 441.313(a)(1), we propose to require that the data and information that States are required to report under § 441.311 be provided on one website, either directly or by linking to the web pages of the managed care organization, prepaid ambulatory health plan, prepaid inpatient health plan, or primary care case management entity that is authorized to provide services. At § 441.313(a)(2), we propose to require that the web page include clear and easy to understand labels on documents and links.

At § 441.313(a)(3), we propose to require that States verify the accurate function of the website and the timeliness of the information and links at least quarterly. At § 441.313(c), we propose to apply these requirements to services delivered under FFS or managed care delivery systems. At § 441.313(a)(4), we propose to require that States explain that assistance in accessing the required information on the website is available at no cost and include information on the availability of oral interpretation in all languages and written translation available in each prevalent non-English language, how to request auxiliary aids and services, and a toll-free and TTY/TDY telephone number. Further, we propose to apply the proposed requirements at § 441.313 to sections 1915(j), (k), and (i) State plan services by cross-referencing at §§ 441.486, 441.595, and 441.750, respectively.

The following proposed changes will be submitted to OMB for their approval after this proposed rule is finalized and our survey instrument has been developed. The survey instrument and burden will be made available to the public for their review under the standard non-rule PRA process which includes the publication of 60- and 30-day **Federal Register** notices. In the meantime, we are setting out our preliminary burden figures (see below) as a means of scoring the impact of this rule's proposed changes. The availability of the survey instrument and more definitive burden estimates will be announced in both **Federal Register** notices. The CMS ID number for that collection of information request is CMS–10854 (OMB control number 0938–TBD). Since this would be a new collection of information request, the OMB control number has yet to be determined (TBD) but will be issued by OMB upon their approval of the new collection of information request.

The burden associated with the website transparency requirements proposed at § 441.313 will affect the 48 States (including Washington, DC) that deliver HCBS under sections 1915(c), (i), (j), or (k) authorities. We are requiring at § 441.313(c) to apply the website transparency requirements to services delivered under FFS or managed care delivery systems, and we propose to provide States with the option to meet the requirements at § 441.313 by linking to the web pages of the managed care organization, prepaid ambulatory health plan, prepaid inpatient health plan, or primary care case management entity that are authorized to provide services. However, we are not requiring managed care entities to report the data and information required under § 441.311 on their website. As such, we estimate that there is no additional burden for managed care entities associated with the requirements to link to the web pages of the managed care organization, prepaid ambulatory health plan, prepaid inpatient health plan, or primary care case management entity that are authorized to provide services for § 441.313. Further, the burden associated with the requirements for managed care entities to report the data and information required under § 441.311 is estimated in the ICRs Regarding Compliance Reporting (§ 441.311(b)).

If a State opts to comply with the requirements at § 441.313 by linking to the web pages of the managed care organization, prepaid ambulatory health plan, prepaid inpatient health plan, or primary care case management entity that are authorized to provide services, the State would incur a burden. However, such burden would be less than the burden associated with posting the information required under § 441.311 on their own website. We are unable to estimate the number of States that may opt to comply with the requirements at § 441.313 by linking to the web pages of the managed care organization, prepaid ambulatory health plan, prepaid inpatient health plan, or primary care case management entity that are authorized to provide services. As a result, we do not take into account the option in our burden estimate and conservatively assume that all States subject to the requirements at § 441.313 by posting the information required under § 441.311 on their own website.

We estimate both a one-time and ongoing burden to implement these requirements at the State level.

a. One Time Website Transparency Requirements: States (§ 441.313)

The burden associated with the website transparency requirements proposed at § 441.313 will affect the 48 States (including Washington, DC) that deliver HCBS under sections 1915(c), (i), (j), or (k) authorities. We estimate

both a one-time and ongoing burden to implement these requirements at the State level. In developing our burden estimate, we assumed that States would provide the data and information that States are required to report under newly proposed § 441.311 through an existing website, rather than develop a new website to meet this requirement.

With regard to the one-time burden, based on the website transparency requirements, we estimate it would take: 24 hours at $108.68/hr for an administrative services manager to determine the content of the website; 80 hours at $92.92/hr for a computer programmer or contractor to develop the website; 3 hours at $110.82/hr for a general and operations manager to review and approve the website; and 2 hours at $204.82/hr for a chief executive to review and approve the website. In aggregate, we estimate a one-time burden of 5,232 hours (48 States × 109 hr) at a cost of $517,633 (48 States × [(24 hr × $108.68/hr) + (80 hr × $92.92/hr) + (3 hr × $110.82/hr) + (2 hr × $204.82/hr)]). Taking into account the Federal contribution to Medicaid administration, the estimated State share of this cost would be $258,817 ($517,633 × 0.50) per year.

TABLE 30—SUMMARY OF THE ONE-TIME BURDEN FOR STATES FOR THE WEBSITE TRANSPARENCY REQUIREMENTS AT § 441.313

Requirement	Number of respondents	Total responses	Frequency	Time per response (hr)	Total time (hr)	Wage ($/hr)	Total cost ($)	State share ($)/year
Determine content of website	48	48	Once	24	1,152	108.68	125,199	62,600
Develop website	48	48	Once	80	3,840	92.92	356,813	178,406
Review and approve the website at the management level.	48	48	Once	3	144	110.82	15,958	7,979
Review and approve the website at the executive level.	48	48	Once	2	96	204.82	19,663	9,831
Total	48	192	Once	Varies	5,232	Varies	517,633	258,816

b. Ongoing Website Transparency Requirements: States (§ 441.313)

With regard to the State on-going burden related to the website transparency requirement, per quarter we estimate it would take: 8 hours at $108.68/hr for an administrative services manager to provide updated data and information for posting and to verify the accuracy of the website; 20 hours at $92.92/hr for a computer programmer or contractor to update the website; 3 hours at $110.82/hr for a general and operations manager to review and approve the website; and 2 hours at $204.82/hr for a chief executive to review and approve the website. In aggregate, we estimate an ongoing annual burden of 6,336 hours (33 hr × 48 States × 4 quarters) at a cost of $666,228 (48 States × 4 quarters × [(8 hr × $108.68/hr) + (20 hr × $92.92/hr) + (3 hr × $110.82/hr) + (2 hr × $204.82/hr)]). Taking into account the Federal contribution to Medicaid administration, the estimated State share of this cost would be $333,114 ($666,228 × 0.50) per year.

TABLE 31—SUMMARY OF THE ONGOING BURDEN FOR STATES FOR THE WEBSITE TRANSPARENCY REQUIREMENTS AT § 441.313

Requirement	Number of respondents	Total responses	Frequency	Time per response (hr)	Total time (hr)	Wage ($/hr)	Total cost ($)	State share ($)
Provide updated data and information for posting and verify the accuracy of the website.	48	192	Quarterly	8	1,536	108.68	166,932	83,466
Update website	48	192	Quarterly	20	3,840	92.92	356,813	178,406
Review and approve website at the management level.	48	192	Quarterly	3	576	110.82	63,832	31,916
Review and approve website at the executive level	48	192	Quarterly	2	384	204.82	78,651	39,325
Total	48	768	Quarterly	Varies	6,336	Varies	666,228	333,114

11. ICRs Regarding Payment Rate Transparency (§ 447.203)

The following proposed changes will be submitted to OMB for review under control number 0938–1134 (CMS–10391).

This proposed rule would update documentation requirements in § 447.203. To develop the burden estimates associated with these changes, we account for the removal of existing information collection requirements in current § 447.203(b), and the introduction of new requirements at proposed 447.203(b) and (c). As described later in this section, we estimate the impact of the proposed revisions to § 447.203 would result in a net burden reduction. We do not anticipate any additional information collection burden from the conforming edits proposed in § 447.204, as the conforming edits merely alter the items submitted as part of an existing submission requirement, and the burden of producing those items is reflected in the estimates related to § 447.203, including instances where we propose to move language from § 447.204 to § 447.203.

a. Removal of Access Monitoring Review Plan: States (§ 447.203(b)(1) Through (8))

The burden reduction associated with the removal of § 447.203(b)(1) through (8) consists of the removal of time and effort necessary to develop and publish AMRPs, perform ongoing monitoring, and corrective action plans.

Current § 447.203(b)(1) and (2) describes the minimum factors that States must consider when developing an AMRP. Specifically, the AMRP must include: input from both Medicaid beneficiaries and Medicaid providers, an analysis of Medicaid payment data,

and a description of the specific measures the State will use to analyze access to care. Current § 447.203(b)(3) requires that States include aggregate percentage comparisons of Medicaid payment rates to other public (including, as practical, Medicaid managed care rates or Medicare rates) and private health coverage rates within geographic areas of the State. Current § 447.203(b)(4) describes the minimum content that must be included in the monitoring plan. States are required to describe: measures the State uses to analyze access to care issues, how the measures relate to the overarching framework, access issues that are discovered as a result of the review, and the State Medicaid agency's recommendations on the sufficiency of access to care based on the review. Current § 447.203(b)(5) describes the timeframe for States to develop the AMRP and complete the data review for the following categories of services: primary care, physician specialist services, behavioral health, pre- and post-natal obstetric services including labor and delivery, home health, any services for which the State has submitted a SPA to reduce or restructure provider payments which changes could result in diminished access, and additional services as determined necessary by the State or CMS based on complaints or as selected by the State. While the initial AMRPs have been completed, the plan must be updated at least every 3 years, but no later than October 1 of the update year. Current § 447.203(b)(6)(i) requires that any time a State submits a SPA to reduce provider payment rates or restructure provider payments in a way that could diminish access, the State must submit an AMRP associated with the services affected by the payment rate reduction or payment restructuring that has been completed within the prior 12 months.

Section 447.203(b)(6)(ii) requires that States have procedures within the AMRP to monitor continued access after implementation of a SPA that reduces or restructures payment rates. The monitoring procedures must be in place for a period of at least 3 years following the effective date of the SPA. However, States were already required to submit information on compliance with section 1902(a)(30)(A) of the Act prior to the 2015 final rule with comment period. Therefore, removal of § 447.203(b)(6)(ii) will result in a burden reduction.

Finally, we note that this section references the proposed rescission of the current AMRP process contained in § 447.203(b)(1) to § 447.203(b)(8). However, the requirements of paragraph (b)(7) are reflected in proposed paragraph (b)(4), and the requirements of paragraph (b)(8) are reflected in proposed paragraph (c)(5). As such, there is not a change in impact related to the rescission of these specific aspects of the AMRP process, should our proposals be finalized, and are not reflected in this section.

In our currently approved information collection request, we estimated that the requirements to develop and make the AMRPs publicly available for the specific categories of Medicaid services will affect each of the 50 State Medicaid programs and the District of Columbia (51 total respondents). We will use that estimate here as well, although we note that the figure does not represent solely those States, but may include territories not exempt under waivers, and exclude States not subject due to reliance entirely on managed care (with no beneficiaries receiving any benefits through FFS delivery), and these figures fluctuate. As such, for consistency, we will maintain the estimate of 51 respondents subject to this proposed rule. We further note that the one-time cost estimates have already been met for AMRPs, and the ongoing monitoring requirements are every 3 years. As such, the estimates in this section for burden reduction are for 17 respondents, one-third of the 51 affected respondents, to provide an annual estimate of the reduced burden.

We estimated that every 3 years, it would take: 80 hours at $54.26/hr for a research analyst to gather data, 80 hours at $100.80/hr for an information analyst to analyze the data, 100 hours at $96.66/hr for a management analyst to develop the content of the AMRP, 40 hours at $77.28/hr for a business operations specialist to publish the AMRP, and 10 hours at $110.82/hr for managerial staff to review and approve the AMRP. In aggregate, and as shown in Table 35, we estimate the reduced annual burden of the rescission of the ongoing AMRP requirements would be minus 5,270 hours (17 States × 310 hr) and minus $446,593 (17 States × [(80 hr × $54.26/hr) + (80 hr × $100.80/hr) + (100 hr × $96.66/hr) + (40 hr × $77.28/hr) + (10 hr × $110.82/hr)]). Taking into account the 50 percent Federal contribution for administrative expenditures, the rescission represents a saving to States of minus $223,297 ($446,593 × 0.50).

The currently approved ongoing burden associated with the requirements under § 447.203(b)(6)(ii) is the time and effort it takes each of the State Medicaid programs to monitor continued access following the implementation of a SPA that reduces or restructures payment rates. In our currently approved information collection request, we estimate that in each SPA submission cycle, 22 States would submit SPAs to implement rate changes or restructure provider payments based on the number of submissions received in FY 2010. Using our currently approved burden estimates we estimate a reduction of: 40 hours at $96.66/hr for a management analyst to develop the monitoring procedures, 24 hours at $96.66/hr for a management analyst to periodically review the monitoring results, and 3 hours at $110.82/hr for a general and operations manager to review and approve the monitoring procedures. In aggregate, we estimate burden reduction of minus 1,474 hours (22 Respondents × 67 hr) and minus $143,411 (22 States × [(40 hr × $96.66/hr) + (24 hr × $96.66/hr) + (3 hr × $110.82/hr)]). Accounting for the 50 percent Federal administrative match, the total State cost reduction is adjusted to $71,706 ($143,411 × 0.50).

TABLE 32—SUMMARY OF ANNUAL BURDEN REDUCTION ASSOCIATED WITH REMOVAL OF ACCESS MONITORING REVIEW PLAN REQUIREMENTS

[§ 447.203(b)(1) through (8)]

Requirement	Number of respondents	Total responses	Frequency	Time per response (hr)	Total time (hr)	Wage ($/hr)	Total cost ($)	State share ($)
Rescission of § 447.203(b)(1) through (b)(6)(i).	17	17	Triennial (figures are annualized).	(310)	(5,270)	Varies	(446,593)	(223,297)
Rescission of § 447.203(b)(6)(ii)	22	22	Varies (figures are annualized).	(67)	(1,474)	Varies	(143,411)	(71,706)

b. Payment Rate Transparency (§ 447.203(b)(1) Through (5))

We are proposing to replace the AMRP requirements with a new payment rate transparency requirement at § 447.203(b)(1) through (5). The burden associated with the proposed payment rate transparency requirement consists of the time and effort to develop and publish a Medicaid FFS provider payment rate information and analysis.

Proposed § 447.203(b)(1) specifies that all FFS Medicaid payments must be published on a publicly accessible website that is maintained by the State. Proposed § 447.203(b)(2) specifies the service types that are subject to the proposed payment analysis, which include: primary care services; obstetrical and gynecological services; outpatient behavioral health services; and certain HCBS. Proposed § 447.203(b)(3) describes the required components of the payment analysis to include, for services in proposed § 447.203(b)(2)(i) through (iii), a percentage comparison of Medicaid payment rates to the most recently published Medicare payment rates effective for the time period for each of the service categories specified in paragraph (b)(2). We also specify that the payment analysis must include percentage comparisons made on the basis of Medicaid base payments. For HCBS described in proposed § 447.203(b)(2)(iv), we propose to require a State-based comparison of average hourly payment rates. Proposed § 447.203(b)(4) details the payment analysis timeframe, with the first payment analysis required to be published by the State agency by January 1, 2026, and updated every 2 years by January 1. Proposed § 447.203(b)(5) describes our mechanism for ensuring compliance and that we may take compliance action against a State that fails to meet the requirements of the payment rate transparency, comparative payment rate analysis, and payment rate disclosure provisions in preceding proposed paragraphs in § 447.203(b) including a deferral or disallowance of certain of the State's administrative expenditures following the procedures described at part 430, subpart C.

We estimate that the proposed requirements to complete and make publicly available all FFS Medicaid payments and the comparative payment rate analysis and payment rate disclosures under § 447.203(b)(1) through (5) for the specific categories of Medicaid services would affect 51 total respondents, based on the estimate in the prior section regarding the variation in States and territories subject to these requirements. We propose to require applicable States and territories to publish all FFS Medicaid payments initially by January 1, 2026, while future updates to the payment rate transparency information would depend on when a State submits a SPA updating provider payments and we have approved that SPA. As such, we assume 51 one-time respondents for the initial rates publication. Because the comparative payment rate analysis and payment rate disclosure requirement is biennial, we assume 26 annual respondents in any given year, and we will assume this figure would account for the updates made following a rate reduction SPA or rate restructuring SPA approval. The proposed comparative payment rate analysis would be similar to the current requirement at § 447.203(b)(3) that requires AMRPs to include a comparative payment rate analysis against public or private payers. The inclusion of levels of provider payment available from other payers is also one of five required components of the AMRP as specified by current § 447.203(b)(1). To estimate the burden associated with our proposed comparative payment rate analysis and payment rate disclosure provisions, we assume this work would require approximately 25 percent of the ongoing labor hour burden that we previously estimated to be required by the entire AMRP, to account for the service categories subject to the comparative payment rate analysis and payment rate disclosure in proposed § 447.203(b)(2) as decreased from the full body of AMRP service requirements. We invite comment on these estimated proportions.

With regard to the developing and publishing the payment rate transparency data at proposed § 447.203(b)(1), we estimate a low one-time and ongoing burden due to the data being available, and the main work required to meet the proposed requirement would be formatting and web publication. As such, we estimate it would initially take: 5 hours at $54.26/hr for a research assistant to gather the data, 5 hours at $77.28/hr for a business operations specialist to publish, and 1 hour at $110.82/hr for a general and operations manager to review and approve the rate transparency data. In aggregate, we estimate a one-time burden of 561 hours (51 Respondents × 11 hr) at a cost of $39,195 (51 Respondents × [(5 hr × $54.26/hr) + (5 hr × $77.28/hr) + (1 hr × $110.82/hr)]). Taking into account the Federal administrative match of 50 percent, the requirement will cost States $19,597 ($39,195 × 0.50).

For the ongoing cost to update assumed to take place every 2 years (although we are proposing that updates would only be required as necessary to keep the data current, with any update made no later than 1 month following the date of CMS approval of the SPA or similar amendment providing for the change), we estimate an annualized impact on 26 respondents (51 respondents every 2 years) of: 2 hours at $54.26/hr for a research assistant to update the data, 1 hour at $77.28/hr for a business operations specialist to publish the updates, and 1 hour at $110.82/hr for a general and operations manager to review and approve the rate transparency update. In aggregate, we estimate an annualized burden of 104 hours (26 Respondents × 4 hr) at a cost of $7,712 (26 Respondents × [(2 hr × $54.26/hr) + (1 hr × $77.28/hr) + (1 hr × $110.82/hr)]). Taking into account the Federal administrative match of 50 percent, the requirement will cost States $3,856 ($7,712 × 0.50).

With regard to developing and publishing the comparative payment rate analysis and payment rate disclosure at proposed § 447.203(b)(2), we estimate it would take: 20 hours at $54.26/hr for a research assistant to gather the data, 20 hours at $100.80/hr for an information analyst to analyze the data, 25 hours at $96.66/hr for a management analyst to design the comparative payment rate analysis, 11 hours at $77.28/hr for a business operations specialist to publish the comparative payment rate analysis and payment rate disclosure, and 3 hours at $110.82/hr for a general and operations manager to review and approve the comparative payment rate analysis and payment rate disclosure. In aggregate, we estimate an annualized burden, based on 51 respondents every 2 years, of 2,054 (26 Respondents × 79 hr) at a cost of $174,206 (26 States × [(20 hr × $54.26/hr) + (20 hr × $100.80/hr) + (25 hr × $96.66/hr) + (11 hr × $77.28/hr) + (3 hr × $110.82/hr)]). We then adjust the total cost to $87,103 ($174,206 × 0.50) to account for the 50 percent Federal administrative match. We have summarized the total burdens in Table 33.

TABLE 33—SUMMARY OF BURDEN ASSOCIATED WITH PROPOSED PAYMENT RATE TRANSPARENCY REQUIREMENTS
[Proposed § 447.203(b)(1) through (5)]

Requirement	Number of respondents	Total responses	Frequency	Time per response (hr)	Total time (hr)	Wage ($/hr)	Total cost ($)	State share ($)
§ 447.203(b)(1) Rate Transparency	51	51	One-time	11	561	Varies	39,195	19,597
§ 447.203(b)(1) Rate Transparency	26	26	Biannual (figures are annualized).	4	104	Varies	7,712	3,856
§ 447.203(b)(2) and (3) Rate Analysis	26	26	Biannual (figures are annualized).	79	2,054	Varies	174,206	87,103
Total	51	103	Varies	Varies	2,719	Varies	221,113	110,557

c. Medicaid Payment Rate Interested Parties' Advisory Group (§ 447.203(b)(6))

The burden associated with the recordkeeping requirements proposed § 447.203(b)(6), specifically the online publication associated with the reporting and recommendations of the interested parties advisory group, would consist of the time and effort for all 50 States and the District of Columbia to:

- Appoint members to the interested parties' advisory group.
- Provide the group members with materials necessary to:

++ Review current and proposed rates.

++ Hold meetings.

++ Provide a written recommendation to the State.

- Publish the group's recommendations to a website maintained by the single State agency.

The proposed requirements would require varying levels of efforts for States depending on the existence of groups that may fulfil the requirements of this group. However, because it is unknown how many States would be able to leverage existing practices, and to what extent, this estimate does not account for those differences.

We estimate that it would take 40 hours at $131.34/hr for a human resources manager to recruit interested parties and provide the necessary materials for the group to meet. In aggregate, we estimate a one-time burden of 2,040 hours (51 Respondents × 40 hr) at a cost of $267,934 (2,040 hr × $131.34/hr). Taking into account the 50 percent administrative match, the total one-time State cost is estimated to be $133,967 ($267,934 × 0.50).

We believe the ongoing work to maintain the needs of this group would take a human resources manager 5 hours at $131.34/hr annually. Additionally, we estimate it would take 4 hours for the biennial requirement, or 2 hours annually at $110.82/hr for an operations manager to review and prepare the recommendation for publication. In aggregate, we estimate an ongoing annualized burden of 182 hours (26 Respondents × 7 hr) at a cost of $22,837 (26 Respondents × [(5 hr × $131.34/hr) + (2 hr × $110.82/hr)]). Accounting for the 50 percent Federal administrative match, the total State cost is adjusted to $11,418 ($22,837 × 0.50). We have summarized the total burdens in Table 34.

TABLE 34—SUMMARY OF BURDEN FOR MEDICAID PAYMENT RATE INTERESTED PARTIES' ADVISORY GROUP

Requirement	Number of respondents	Total responses	Frequency	Time per response (hr)	Total time (hr)	Wage ($/hr)	Total cost ($)	State share ($)

§ 447.203(b)(6) (Support and publish recommendation).	51	26	Biennial (figures are annualized).	7	182	Varies	22,837	11,418
Total	51	77	Varies	Varies	2,222	Varies	290,771	145,386

d. State Analysis Procedures for Payment Rate Reductions or Payment Restructuring (§ 447.203(c))

The proposed State analysis procedures for payment rate reductions and payment restructurings at § 447.203(c)(1) through (3) within this proposed rule effectively would replace payment rate reduction or payment restructuring procedures in current § 447.203(b)(6). As noted, the burden reduction associated with the removal of § 447.203(b)(6)(i) has already been accounted for in the recurring burden reduction estimate shown in Table 36 for the removal of the AMRP requirements, and the burden reduction associated with the removal of monitoring requirements at current § 447.203(b)(6)(ii) has been accounted for in Table 37. Our proposed replacement procedures at § 447.203(c)(1) through (3) would introduce new requirements as follows.

i. Initial State Analysis for Rate Reduction or Restructuring (§ 447.203(c)(1))

Proposed § 447.203(c)(1) would require that for States proposing to reduce or restructure provider payment rates, the State must document that their program and proposal meet all of the following requirements: (i) Medicaid rates in the aggregate for the service category following the proposed reduction(s) or restructurings are at or above 80 percent of most recent Medicare prices or rates for the same or a comparable set of services; (ii) Proposed reductions or restructurings result in no more than a 4 percent reduction of overall spending for each service category affected by a proposed reduction or restructuring in a single State fiscal year; and (iii) Public process yields no significant access concerns or the State can reasonably respond to concerns.

Proposed § 447.203(c)(1) would apply to all States that submit a SPA that proposes to reduce or restructure provider payment rates. We limited our estimates for new information collection burden to the requirements at § 447.203(c)(1)(i) through (ii). Our estimates assume States will build off the comparative analysis required by proposed § 447.203(b)(2) through (4) to complete the requirements proposed by § 447.203(c)(1)(i), which will limit the additional information collection burden. We also assume no additional

information collection burden posed by the public review process required by proposed § 447.203(c)(1)(iii), as this burden is encapsulated by current public process requirements at § 447.204.

The requirements of proposed § 447.203(c) apply to all 50 States and the District of Columbia, as well as US territories. We will again use the estimate of 50 utilized in preceding sections, which we note may include territories not exempt under waivers, and exclude States not subject due to reliance entirely on managed care (with no beneficiaries receiving any benefits through FFS delivery), and these figures fluctuate. As such, for consistency, we will maintain the estimate of 51 respondents subject to this proposed rule. While we cannot predict how many States will submit a rate reduction SPA or rate restructuring SPA in a given year, the figures from 2019 provide the best recent estimate, as the years during the COVID pandemic do not reflect typical behavior. In 2019, we approved rate reduction and rate restructuring SPAs from 17 unique State respondents. Therefore, to estimate the annualized number of respondents subject to this information collection burden, we will utilize a count of 17 respondents.

With regard to the burden associated with completing the required State analysis for proposed rate reductions or restructurings at § 447.203(c)(1), we estimate that it would take: 20 hours at $96.66/hr for a management analyst to structure the rate reduction or restructuring analysis, 25 hours at $100.80/hr for an information analyst to complete the rate reduction or restructuring analysis, and 3 hours at $110.82/hr for a general and operations manager to review and approve the rate reduction or restructuring analysis. In aggregate, we estimate a burden of 816 hours (17 States × 48 hr) at a cost of $81,356 (17 States × [(20 hr × $96.66/hr) + (25 hr × $100.80/hr) + (3 hr × $110.82/hr)]). Accounting for the 50 percent Federal administrative reimbursement, this adjusts to a total State cost of $40,678 ($81,356 × 0.50). We are soliciting public comment on these estimates as well as relevant State data to further refine the burden and time estimates.

TABLE 35—BURDEN ASSOCIATED WITH TIER 1 STATE ANALYSIS PROCEDURES FOR RATE REDUCTIONS OR RESTRUCTURINGS

[Proposed § 447.203(c)(1)]

Requirement	Number of respondents	Total responses	Frequency	Time per response (hr)	Total time (hr)	Wage ($/hr)	Total cost ($)	State share ($)
§ 447.203(c)(1)	17	17	Annual	48	816	Varies	81,356	40,678
Total	17	17	Annual	48	816	Varies	81,356	40,678

ii. Additional State Rate Analysis (§ 447.203(c)(2))

Proposed § 447.203(c)(2) describes requirements for payment proposals that do not meet the requirements in paragraph (c)(1), requiring the State to provide the nature of the change and policy purpose, the rates compared to Medicare and/or other payers pre- and post-reduction or restructuring, counts/trends of actively participating providers by geographic areas, counts of FFS Medicaid beneficiaries residing in geographic areas/characteristics of the beneficiary population, service utilization trends, access to care complaints from beneficiaries, providers, and other interested parties, and the State's response to access to care complaints.

The information collection requirements proposed at § 447.203(c)(2) applies to those States that submit rate reduction or restructuring SPAs that do not meet one or more of the criteria proposed by § 447.203(c)(1). Using 2019 rate reduction and restructuring SPA figures, we estimate that 17 States will submit rate reduction or restructuring SPAs per year. Then, a 2019 Urban Institute analysis [262] indicates that 22 States (or 43 percent) have rates that meet the 80 percent fee ratio threshold proposed in § 447.203(c)(1)(i) across all services. Although our proposal does not include all services, using this all services amount is our best method to estimate how many States may fall below on any given service without knowing which. Because we cannot predict the amount a State may propose to reduce, once or cumulatively for the SFY, and because failure of any one criterion in § 447.203(c)(1) would require additional analysis under § 447.203(c)(2), we will use that percentage to assess how many States would need to perform additional analysis. Using this percentage, we estimate that 7 (43 percent × 17) of the estimated 17 unique State respondents may submit rate reduction or restructuring SPAs meet that criteria for the streamlined analysis process under proposed § 447.203(c)(1). Therefore, we assume that 10 out of 17 unique annual State respondents who submit rate reduction or restructuring SPAs would also need to perform the additional analysis § 447.203(c)(2).

The required components of the review and analysis in proposed § 447.203(c)(2) are similar to the AMRP requirements found at current § 447.203(b)(1). However, due to the anticipated development and release of a template for States to facilitate completion of the required analysis, as well as the lack of a requirement to publish the analysis, we anticipate a moderately reduced burden associated with proposed § 447.203(c)(2) when compared to the burden estimated for the AMRPs.

With regard to our proposed requirements, we estimate that it would take: 64 hours at $54.26/hr for a social science research assistant to gather data, 64 hours at $100.80/hr for a computer and information analyst to analyze data, 80 hours at $96.66/hr for a management analyst to structure the analyses and organize output, and 8 hours at $110.82/hr for a general and operations manager to review and approve the rate reduction or restructuring analysis. In aggregate, we estimate a burden of 2,160 hours (10 States × 216 hr) at a cost of $185,432 (10 States × [(64 hr × $54.26/hr) + (64 hr × $100.80/hr) + (80 hr × $96.66/hr) + (8 hr × $110.82/hr)]). The total cost is adjusted down to $92,716 ($185,432 × 0.50) for States after accounting for the 50 percent Federal administrative match. We are soliciting public comment on these estimates as well as relevant State data to further refine the burden and time estimates.

We do not assume any additional information collection imposed by the

[262] Zuckerman, S. et al. ''Medicaid Physician Fees Remained Substantially Below Fees Paid By Medicare in 2019.'', *Health Affairs,* Volume 40, Number 2, February 2021, p. 343–348, *https://www.healthaffairs.org/doi/10.1377/hlthaff.2020.00611,* accessed August 31, 2022.

compliance procedures proposed by § 447.203(c)(3).

Table 41 shows our estimated combined annualized burden for § 447.203(c), which includes 17 States for § 447.203(c)(1) and 10 States for § 447.203(c)(2). In total, we estimate an annualized burden of 4,992 (1,104 hours + 2,160 hours) hours at a cost of $443,848 ($110,070 + $74,172). This cost to States is then adjusted to $221,924 after the 50 percent Federal administrative reimbursement is applied.

TABLE 37—SUMMARY OF PROPOSED ANNUAL BURDEN ESTIMATES—Continued

Regulation section(s) in Title 42 of the CFR	OMB Control Number (CMS ID Number)	Number of respondents	Number of responses	Time per response (hr)	Total time (hr)	Hourly labor Rate ($/hr)	Total labor cost ($)	State share ($)	Total beneficiary cost ($)
§ 447.203(c)(2) (Table 36) (additional State analysis).	OMB 0938–1134 (CMS–10391).	51 States and Territories.	12	216	2,160	Varies ...	185,432	92,716	n/a
Total	.....	Varies ...	478,858	Varies ...	1,600,122	Varies ...	279,404,181	82,205,315	504,180

[a] The reporting requirement is every other year. Therefore, the on-going burden reflected in this table is half of the on-going burden per State reflected in Table 24.
[b] The reporting requirement is every other year. Therefore, the on-going burden reflected in this table is half of the on-going burden per State reflected in Table 32.
[c] The reporting requirement is every other year. Therefore, the on-going burden reflected in this table is half of the on-going burden per discussed above.
[d] The reporting requirement is quarterly. Therefore, the on-going burden reflected in this table is four times the on-going burden discussed above.

E. Submission of PRA-Related Comments

We have submitted a copy of this proposed rule to OMB for its review of the rule's information collection requirements. The requirements are not effective until they have been approved by OMB.

To obtain copies of the supporting statement and any related forms for the proposed collections discussed above, please visit the CMS website at *www.cms.hhs.gov/PaperworkReductionActof1995,* or call the Reports Clearance Office at 410–786–1326.

We invite public comments on these potential information collection requirements. If you wish to comment, please submit your comments electronically as specified in the **DATES** and **ADDRESSES** section of this proposed rule and identify the rule (CMS–2442–P), the ICR's CFR citation, and OMB control number.

IV. Response to Comments

Because of the large number of public comments we normally receive on **Federal Register** documents, we are not able to acknowledge or respond to them individually. We will consider all comments we receive by the date and time specified in the **DATES** section of this preamble, and, when we proceed with a subsequent document, we will respond to the comments in the preamble to that document.

V. Regulatory Impact Analysis

A. Statement of Need

1. Medicaid Advisory Committee

The changes to § 431.12 are intended to provide beneficiaries a greater voice in State Medicaid programs. In making policy and program decisions, it is vital for States to incorporate the perspective and experience of those served by the Medicaid program. States are currently required to operate a MCAC, made up of health professionals, consumers, and State representatives to ''advise the Medicaid agency about health and medical care services.'' This rule establishes new requirements for a MAC in place of the MCAC, with additional membership requirements to include a broader group of interested parties, to advise the State Medicaid agency on matters related to the effective administration of the Medicaid program. We seek to expand the viewpoints represented on the MAC, to provider States with richer feedback on Medicaid program and policy issues. States are already required to set up and use MCACs. The proposed changes will result in the State also setting up a smaller group, the BAG which will likely have a cost implication. The additional cost will depend on whether or not States already have a beneficiary committee—we know that many States already do. This smaller group which feeds into the larger MCAC will benefit the Medicaid program by creating a forum for beneficiaries to weigh in on key topics and share their unique views as Medicaid program participants. The new provisions of § 431.12 also enhance transparency and accountability through public reporting requirements related to the operation and activities of the MAC and BAG, and guidelines for operation of both bodies.

2. Home and Community-Based Services (HCBS)

The proposed changes at part 441, subpart G, seek to amend and add new Federal requirements, which are intended to improve access to care, quality of care, and health outcomes, and strengthen necessary safeguards that are in place to ensure health and welfare, and promote health equity for people receiving Medicaid-covered HCBS. The provisions in this proposed rule are intended to achieve a more consistent and coordinated approach to the administration of policies and procedures across Medicaid HCBS programs in accordance with section 2402(a) of the Affordable Care Act, and is made applicable to part 441, subparts J, K, and M, as well as part 438 to achieve these goals.

Specifically, the proposed rule seeks to: strengthen person-centered services planning and incident management systems in HCBS; require minimum percentages of Medicaid payments for certain HCBS to be spent on compensation for the direct care workforce; require States to establish grievance systems in FFS HCBS programs; report on waiver waiting lists in section 1915(c) waiver programs, service delivery timeframes for certain HCBS, and a standardized set of HCBS quality measures; and promote public transparency related to the administration of Medicaid-covered HCBS through public reporting on measures related to incident management systems, critical incidents, person-centered planning, quality, access, and payment adequacy.

In 2014, we released guidance [263] for section 1915(c) waiver programs, which described a process in which States were to report on State-developed performance measures to demonstrate that they meet the six assurances that are required for section 1915(c) waiver programs. Those six assurances include the following:

1. *Level of Care:* The State demonstrates that it implements the processes and instrument(s) specified in its approved waiver for evaluating/reevaluating an applicant's/waiver participant's level of care consistent with care provided in a hospital, nursing facility, or Intermediate Care Facilities for Individuals with Intellectual Disabilities.

2. *Service Plan:* The State demonstrates it has designed and

[263] *https://www.hhs.gov/guidance/sites/default/files/hhs-guidance-documents/3-cmcs-quality-memo-narrative_0_71.pdf.*

implemented an effective system for reviewing the adequacy of service plans for waiver participants.

3. *Qualified Providers:* The State demonstrates that it has designed and implemented an adequate system for assuring that all waiver services are provided by qualified providers.

4. *Health and Welfare:* The State demonstrates it has designed and implemented an effective system for assuring waiver participant health and welfare.

5. *Financial Accountability:* The State demonstrates that it has designed and implemented an adequate system for insuring financial accountability of the waiver program.

6. *Administrative Authority:* The Medicaid Agency retains ultimate administrative authority and responsibility for the operation of the waiver program by exercising oversight of the performance of waiver functions by other State and local/regional non-State agencies (if appropriate) and contracted entities.

Despite these assurances, there is evidence that State HCBS systems still need to be strengthened and that there are gaps in existing reporting requirements. We believe that this proposed rule is necessary to address these concerns and strengthen HCBS systems. The requirements in this proposed rule are intended to supersede and fully replace the reporting and performance expectations described in the 2014 guidance for section 1915(c) waiver programs. They are also intended to promote consistency and alignment across HCBS programs, as well as delivery systems, by applying the requirements (where applicable) to sections 1915(i), (j), and (k) authorities State plan benefits and to both FFS and managed care delivery systems.

3. Fee-for-Service (FFS)

Provisions under § 447.203 from this proposed rule would impact States' required documentation of compliance with section 1902(a)(30)(A) of the Act to ''assure that payments are . . . sufficient to enlist enough providers so that care and services are available under the plan at least to the extent that such care and services are available to the general population in the geographic area.'' We have received comments from State agencies that the existing AMRP requirement first established by the 2015 final rule with comment period imposes excessive administrative burden for its corresponding value in demonstrating compliance with section 1902(a)(30)(A) of the Act.

This proposed rule would replace the existing AMRP requirement with a more limited payment rate transparency requirement under proposed § 447.203(b), while requiring a more detailed access impact analysis (as described at proposed § 447.203(c)(2)) when a State proposes provider rate reductions or restructurings that exceed certain thresholds for a streamlined analysis process under proposed § 447.203(c)(1). By limiting the data collection and publication requirements imposed on all States, while targeting certain provider rate reductions or restructuring proposals for a more detailed analysis, this proposed rule would provide administrative burden relief to States while maintaining a transparent and data-driven process to assure State compliance with section 1902(a)(30)(A) of the Act.

B. Overall Impact

We have examined the impacts of this rule as required by E.O. 12866 on Regulatory Planning and Review (September 30, 1993), E.O. 13563 on Improving Regulation and Regulatory Review (January 18, 2011), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96–354), section 1102(b) of the Act, section 202 of the Unfunded Mandates Reform Act of 1995 (March 22, 1995; Pub. L. 104–4), E.O. 13132 on Federalism (August 4, 1999), and the Congressional Review Act (5 U.S.C. 804(2))

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Section 3(f) of Executive Order 12866 as amended by Executive Order 14094 defines a ''significant regulatory action'' as an action that is likely to result in a rule: (1) having an annual effect on the economy of $200 million or more in any 1 year, or adversely and materially affecting a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local or tribal governments or communities; (2) creating a serious inconsistency or otherwise interfering with an action taken or planned by another agency; (3) materially altering the budgetary impacts of entitlement grants, user fees, or loan programs or the rights and obligations of recipients thereof; or (4) raising legal or policy issues for which centralized review would meaningfully further the President's priorities, or the principles set forth in the Executive Order.

A regulatory impact analysis (RIA) must be prepared for major rules. Accordingly, this proposed rule is not a ''significant'' rule under section 3(f)(1) of the Executive Order, as the aggregate amount of benefits and costs will not meet the $200 million threshold in any 1 year.

Based on our estimates using a ''no action'' baseline in accordance with OMB Circular A–4, (available at *https://www.whitehouse.gov/wpcontent/uploads/legacy_drupal_files/omb/circulars/A4/a-4.pdf*), OMB's Office of Information and Regulatory Affairs has determined that this rulemaking is ''significant'' according to section 3(f)(4), raising legal or policy issues for which centralized review would meaningfully further the President's priorities, or the principles set forth in Executive Order 12866. Therefore, OMB has reviewed these proposed regulations, and the Departments have provided the following assessment of their impact.

C. Detailed Economic Analysis

As mentioned in the prior section, and in accordance with OMB Circular A–4, the following estimates were determined using a ''no action'' baseline. That is, our analytical baseline for impact is a direct comparison between the proposed provisions and not proposing them at all.

1. Benefits

a. Medicaid Advisory Committees (MAC)

We believe the changes to § 431.12 would benefit State Medicaid programs and those they serve by ensuring that beneficiaries have a significant role in advising States on the experience of receiving health care and services through Medicaid. These benefits cannot be quantified. However, the BAG and a more diverse and transparent MAC will provide opportunities for richer interested parties feedback and expertise to positively impact State decision making on Medicaid program and policy chances. For example, beneficiary feedback on accessing health care services and the quality of those services can inform decisions on provider networks and networks adequacy requirements. Issues that States need to address, like cultural competency of providers, language accessibility, health equity, and disparities and biases in the Medicaid program, can be revealed through beneficiary experiences. The MAC falls into the Public Administration 921 Executive, Legislative, and Other General Government Support.

b. Person-Centered Service Plans, Grievance Systems, Incident Management Systems

The proposed changes benefit Medicaid beneficiaries and States by requiring States to demonstrate through reporting requirements that they provide safeguards to assure eligibility for Medicaid-covered care and services is determined and provided in a manner that is in the Medicaid beneficiaries' best interest, although these potential benefits cannot be monetarily quantified at this time. The proposed changes would provide further safeguards that ensure health and welfare by strengthening the person-centered service plan requirements, establishing grievance systems, amending requirements for incident management systems, and establishing new reporting requirements for States, and contracted managed care entities identified by the North American Industry Classification System (NAICS) industry code (Direct Health and Medical Insurance Carriers (524114).

These changes would benefit individuals on HCBS waiver wait lists, and individuals who receive homemaker, home health aide, and personal care services, under the amended and proposed regulations found at §§ 441.301(c), 441.302(a)(6), 441.302(h), 441.303(f), 441.311, and cross-referenced in §§ 441.464, 441.555(b)(2)(iv), 441.570, and 441.745(a)(1)(iii). These potential benefits cannot be monetarily quantified at this time.

c. Home and Community-Based Services (HCBS) Payment Adequacy

The proposed rule adds new requirements at §§ 441.302(k) and 441.311 (cross-referenced at §§ 441.464(f) and 441.745(a)(1)(vi)) that require States to demonstrate through reporting that payments to providers are sufficient to provide access to care that is at least comparable to that of the general population in the same geographic location, in accordance with section 1902(a)(30(A) of the Act. This proposed rule seeks to address access to care that is being affected by direct care workforce shortages.

Through this proposed rule, which establishes certain minimum thresholds for compensation for direct care workers, we can better ensure payment adequacy to a provider population experiencing worker shortages that impact beneficiary access. States will be required to report annually to us on the percent of payments for certain HCBS that are spent on compensation for direct care workers and will be required to separately report on payments for services that are self-directed. States may benefit from reporting in the aggregate for each service subject to the requirement across HCBS programs and delivery systems, which minimizes administrative burden while providing us better oversight of compensation of the direct care workforce, although these potential benefits cannot be monetarily quantified at this time due to the variety of State data collection approaches.

d. Home and Community-Based Services (HCBS) Quality Measure Set Reporting

As described in section II.B.8. of this proposed rule, on July 21, 2022, we issued State Medicaid Director Letter (SMDL) # 22–003 [264] to release the first official version of the HCBS Quality Measure Set. This proposed rule provides definitions and sets forth requirements proposed at § 441.312 that expand on the HCBS Quality Measure Set described in the SMDL. By expanding and codifying aspects of the SMDL, we can better drive improvement in quality of care and health outcomes for beneficiaries receiving HCBS. States will also benefit from the clarity afforded by this proposed rule, and from the assurance that other States they may be looking to for comparison are adhering to the same requirements. The clarity and assurance, at this time, cannot be measured.

e. Fee-for-Service (FFS) Payment Transparency

The proposed changes to § 447.203 would update requirements placed on States to document access to care and service payment rates. The proposed updates create a systematic framework through which we can ensure compliance with section 1902(a)(30)(A) of the Act, while reducing existing burden on States and maximizing the value of their efforts, as described in section III.C.11.a of this rule.

The proposed payment rate transparency provisions at § 447.203(b) create a process that would facilitate transparent oversight by us and other interested parties. By requiring States to calculate Medicaid payment rates as a percent of corresponding Medicare payment rates, this provision offers a uniform benchmark through which us and interested parties can assess payment rate sufficiency. When compared to the existing AMRP requirement, the rate analysis proposed by § 447.203(b) should improve the utility of the reporting, while reducing the associated administrative burden, as reflected in the Burden Estimate Summary Table 37. Proposed updates at § 447.203(c) specify required documentation and analysis when States propose to reduce or restructure provider payment rates. By establishing thresholds at § 447.203(c)(1), this proposed rule would generally limit the more extensive access review prescribed by § 447.203(c)(2) to those SPAs that we believe more likely to cause access concerns. In doing so, these proposed updates reduce the State administrative burden imposed by existing documentation requirements for proposed rate reductions or restructurings, without impeding our ability to ensure proposed rate reduction and restructuring SPAs comply with section 1902(a)(30)(A) of the Act. These burden reductions are reflected in the Collection of Information section of this rule.

When considering the benefits of these regulatory updates, we considered the possibility that the improved transparency required by § 447.203(b) could create upward pressure on provider payment rates, and that the tiered nature of documentation requirements set by § 447.203(c) could create an incentive for States to moderate proposed payment reductions or restructurings that were near the proposed thresholds that would trigger additional analysis and documentation requirements. If either of these rate impacts were to occur, existing literature implies there could be follow-on benefits to Medicaid beneficiaries, including but not limited to increased physician acceptance rates,[265] increased appointment availability,[266] and even improved self-reported health.[267] However, nothing in this proposed rulemaking would require States to directly adjust payment rates, and we recognize that multiple factors influence State rate-setting proposals, including State budgetary pressures, legislative priorities, and other forces. These competing influences create substantial uncertainty about the specific impact of the proposed provisions at § 447.203 on provider payment rate-setting and beneficiary access. Rather, the specific intent and anticipated outcome of these

[267] Alexander, D., and Molly Schnell. ''The Impacts of Physician Payments on Patient Access, Use, and Health'', National Bureau of Economic Research, Working Paper 26095, July 2019 (revised August 2020), p. 1–74. *https://www.nber.org/papers/w26095.* Accessed June 16, 2022.

provisions is the creation of a more uniform, transparent, and less burdensome process through which States can conduct required payment rate and access analyses and we can perform our oversight role related to provider payment rate sufficiency.

2. Costs

a. Medicaid Advisory Committee (MAC)

States will incur additional costs (estimated below) in appointing and recruiting members to the MAC and BAG and also developing and publishing bylaws, membership lists, and meeting minutes for the MAC and BAG. All of these costs can be categorized under the NAICS Code 921 (Executive, Legislative, and Other General Government Support) since States are the only entity accounted for in the MAC and BAG. How often these costs occur will vary in how often the State chooses to make changes such as add or replace members of the MAC and BAC or change its bylaws. Additionally, there will be new costs, estimated below, for States related to meeting logistics and administration for the BAG. All of these new costs can also be categorized under the NAICS Code 921 (Executive, Legislative, and Other General Government Support). Since most States are already holding MAC meetings under current regulatory requirements, any new costs related to MAC requirements would likely be minimal. In terms of the BAG meeting costs, we estimate a total annual cost of $532,627 for States. We estimate it will take a business operations specialist 10 hours to plan and execute each BAG meeting, at a total cost of $155,448 ($76.20/hour × 10 hours × 4 meetings/year) × 51 States and the District of Columbia). To satisfy the requirements of § 431.12(i)(4)(i), a public relations specialist will spend an estimated 80 hours/year supporting Medicaid beneficiary MAC and BAG members at a total cost of $287,395 ($70.44/hour × 80 hours) × 51 States and the District of Columbia). A chief executive in State government, as required by § 431.12(i)(4)(iii), will spend a total of 8 hours a year attending BAG meetings, which we estimate will be 2 hours in duration, 4 times a year at a total cost of $48,984 ($120.06/hour × 2 hours/meeting × 4 meetings) × 51 States and the District of Columbia). Each meeting of the BAG will cost States an estimated $200 in meeting costs and telecommunication, at an annual total cost of $40,800 ($200 × 4 meetings) × 51 States and the District of Columbia).

There will also be a per meeting cost to States for financial support for beneficiary members participating in MAC and BAG meetings, as described in § 431.12(i)(4)(ii). We estimate a cost of $75/beneficiary/meeting in the form of transportation vouchers, childcare reimbursement, meals, and/or other financial compensation. Assuming 4 meetings per year (with BAG and MAC meetings co-located and occurring on the same day) and an average of 8 beneficiary members on the BAG and MAC, the cost of financial support for beneficiary members across States is estimated to cost approximately $122,400 annually (($75/beneficiary × 8 beneficiaries × 4 meetings/year) × 51 States and the District of Columbia). This cost will vary depending on the decisions States make around financial support, the number of beneficiary members of the BAG and MAC, and the number of meetings per year. We seek comment on the costs associated with planning, execution, and participation in the MAC and BAG meetings.

TABLE 38—PROJECTED 5-YEAR COSTS FOR PROPOSED UPDATES

Provision	Calendar year (CY)					Total CY 2024–2028 ($ in millions)
	2024 ($ in millions)	2025 ($ in millions)	2026 ($ in millions)	2027 ($ in millions)	2028 ($ in millions)	
§ 431.12 MAC & BAG logistic and admin support	0.533	0.532	0.532	0.532	0.532	2.663
§ 431.12 Financial support to MAC/BAG beneficiary members (cost will range per State)	0.122	0.122	0.122	0.122	0.122	0.612
Total	0.655	0.655	0.655	0.655	0.655	3.275

Costs will vary depending by State depending on how many in person meetings are held and how many Medicaid beneficiaries are selected for the MAC and BAG.

b. Home and Community-Based Services (HCBS)

Costs displayed in Table 38 are inclusive of both one-time and ongoing costs. One-time costs are split evenly over the years leading up to the proposed effective date. For example, if a proposed provision takes effect 3 years after the final rule's publication, the one-time costs would be split evenly across each of the years leading to that effective date. Because costs are projected over 5 years, the total estimated costs exceed the amounts shown in the COI section. The estimates below do not account for higher costs associated with medical care, as the costs are related exclusively to reporting costs. Costs to States, the Federal government, and managed care entities do not account for enrollment fluctuations, as they assume a stable number of States operating HCBS programs and managed care entities delivering services through these programs. Similarly, costs to providers and beneficiaries do not account for enrollment fluctuations. In the COI section, costs are based on a projected range of HCBS providers and beneficiaries. Given this uncertainty, here, we based cost estimates on the mid-point of the respective ranges and kept those assumptions consistent over the course of the 5-year projection. Per OMB guidelines, the projected estimates for future years do not consider ordinary inflation.

Table 39 summarizes the estimated ongoing costs for States, managed care entities (Direct Health and Medical Insurance Carriers (NAICS 524114)), and providers (Services for the Elderly and Persons with Disabilities (NAICS 624120) and Home Health Care Services (NAICS 621610)) from the COI section of the HCBS provisions of the proposed rule projected over 5 years. This comprises the entirety of anticipated quantifiable costs associated with proposed changes to part 441, subpart G. It is also possible that increasing the threshold from 86 percent to 90 percent for compliance reporting at § 441.311(b)(2) through (3) may lead to additional costs to remediate issues pertaining to critical incidents or person-centered planning. However, the various avenues through which States could address these concerns creates substantial uncertainty as to what those costs may be. While we acknowledge the potential for increased costs in a limited number of States that may fall within the gap between the existing and

the proposed compliance thresholds, we do not quantify them here.

TABLE 39—PROJECTED 5-YEAR COSTS FOR PROPOSED UPDATES TO 441 SUBPARTS G, J, K, AND M

Provision	Calendar year (CY)					Total CY 2024–2028 ($ in millions)

Proposed § 441.311(d)(2)(i) (Additional HCBS Access Reporting)	0.50	0.50	0.50	0.78	0.78	3.07
Proposed § 441.311(b)(1) (Incident Management System Assessment)				0.00	0.00	0.01
Removal of Current Form 372(S) Ongoing Reporting Information Collection				(0.84)	(0.84)	(1.68)
Proposed Form 372(S) Reporting Requirement to include Proposed § 441.311(b)(2)–(4)				0.22	0.22	0.44
Proposed § 441.311(c) (HCBS Quality Measure Set)	1.72	1.72	1.72	4.59	4.59	14.34
Proposed § 441.313 (Website Transparency)				1.18	1.18	2.37
Total	65.80	65.80	65.44	34.74	35.39	267.18

The costs displayed in Table 40 are inclusive of costs anticipated to be incurred by State Medicaid agencies, the Federal government, providers, managed care entities, and beneficiaries. Table 40 distributes those costs across these respective entities.

TABLE 40—PROJECTED DISTRIBUTION OF COSTS FOR PROPOSED UPDATES TO 42 CFR 441 SUBPART G, J, K, AND M

Costs associated with updates to § 42 CFR 441 Subparts G, J, K, and M	Calendar year (CY)					Total CY 2024–2028 ($ in millions)
	2024 ($ in millions)	2025 ($ in millions)	2026 ($ in millions)	2027 ($ in millions)	2028 ($ in millions)	
Total Costs associated with updates to 42 CFR 441 subparts G, J, K, and M	65.80	65.80	65.44	34.74	35.39	267.18
State Costs	21.88	21.88	21.69	4.59	4.50	74.54
Federal Costs	21.88	21.88	21.69	4.59	4.50	74.54
HCBS Provider Costs (Services for the Elderly and Persons with Disabilities (NAICS 624120) and Home Health Care Services (NAICS 621610))	20.47	20.47	20.47	23.62	24.69	109.73
Managed Care Entity Costs (Direct Health and Medical Insurance Carriers (NAICS 524114))	1.58	1.58	1.58	1.43	1.19	7.35

c. Fee-for-Service (FFS) Payment Rate Transparency

The costs associated with the payment rate transparency proposals are wholly associated with information collection requirements, and as such those impacts are reflected in the COI section of this rule. For ease of reference, and for projection purposes, we are including those costs here in Table 41.

TABLE 41—PROJECTED 5-YEAR COSTS FOR PROPOSED UPDATES TO 42 CFR 447.203

Provision	Calendar year (CY)					Total CY 2024–2028 ($ in millions)
	2024 ($ in millions)	2025 ($ in millions)	2026 ($ in millions)	2027 ($ in millions)	2028 ($ in millions)

§ 447.203(c)(2) (Table 36) (additional State analysis)	92,716					185,432

3. Transfers

Transfers are payments between persons or groups that do not affect the total resources available to society. They are a benefit to recipients and a cost to payers, with zero net effects. Because this rule proposes changes to requirements to State agencies without changes to payments from Federal to State governments, the transfer impact is null, and cost impacts are reflected in the other sections of this rule.

4. Regulatory Review Cost Estimation

If regulations impose administrative costs on private entities, such as the time needed to read and interpret this proposed or final rule, we should estimate the cost associated with regulatory review. There is uncertainty involved with accurately quantifying the number of entities that will review the rule. However, for the purposes of this proposed rule we assume that on average, each of the 51 affected State Medicaid agencies will have one contractor per State review this proposed rule. This average assumes that some State Medicaid agencies may use the same contractor, others may use multiple contractors to address the various provisions within this proposed rule, and some State Medicaid agencies may perform the review in-house. We also assume that each affected managed care entity (estimated in the COI section to be 161 managed care entities) will review the proposed rule. Lastly, we assume that an average of two advocacy or interest group representatives from each State will review this proposed rule. In total, we are estimating that 314 entities (51 State Contractors + 161 Managed Care Entities + 102 Advocacy and Interest Groups) will review this proposed rule. We acknowledge that this assumption may understate or overstate the costs of reviewing this rule. We welcome any comments on the approach in estimating the number of entities which will review this proposed rule.

We also recognize that different types of entities are in many cases affected by mutually exclusive sections of this proposed rule, and therefore for the purposes of our estimate we assume that each reviewer reads approximately 50 percent of the rule. We seek comments on this assumption.

Using the wage information from the Bureau of Labor Statistics, *https://www.bls.gov/oes/current/oes_nat.htm,* we consider medical and health service managers (Code 11–9111), as including the 51 State Contractors, 161 Managed Care Entities and 102 Advocacy and Interest Groups identified in the proposed rule, and we estimate that the cost of reviewing this rule is $115.22 per hour, including fringe benefits and other indirect costs. Assuming an average reading speed of 250 words per minute, we estimate that it would take approximately 3.33 hours for each individual to review half of this proposed rule ([100,000 words × 0.5]/ 250 words per minute/60 minutes per hour). For each entity that reviews the rule, the estimated cost is $384.06 (3.33 hours × $115.22). Therefore, we estimate

that the total one-time cost of reviewing this regulation is $120,594.84 ($384.06 per individual review × 314 reviewers).

D. Alternatives Considered

1. Medicaid Advisory Committee (MAC)

In determining the best way to promote beneficiary and interested parties' voices in State Medicaid program decision making and administration, we considered several ways of revising the MCAC structure and administration. We considered setting minimum benchmarks for each category of all types of MAC members, but we viewed it as too restrictive. We ultimately concluded that only setting minimum benchmarks (at least 25 percent) for beneficiary representation on the MAC and requiring representation from the other MAC categories would give States maximum flexibility in determining the exact composition of their MAC. However, we understand that some States may want us to set specific thresholds for each MAC category rather than determine those categories on their own.

We also considered having not having a separate BAG, but we ultimately determined that requiring States to establish a separate BAG assures that there is a dedicated forum for States to receive beneficiary input outside of the MAC. In the MAC setting, a beneficiary might not feel as comfortable speaking up among other Medicaid program interested parties. The BAG also provides an opportunity for beneficiaries to focus on the issues that are most important to them, and bring those issues to the MAC.

Finally, we also considered setting specific topics for the MAC to provide feedback. However, due to the range of issues specific to each State's Medicaid program, we determined it was most conducive to allow States work with their MAC to identify which topics and priority issues would benefit from interested parties' input.

2. Home and Community-Based Services (HCBS)

a. Person-Centered Service Plans, Grievance Systems, Incident Management Systems

We considered whether to codify the existing 86 percent performance level that was outlined in the 2014 guidance for both person-centered service plans and incident management systems. We did not choose this alternative due to feedback from States and other interested parties of the importance of these requirements, as well as concerns that an 86 percent performance level may not be sufficient to demonstrate that a State has met the requirements.

We considered whether to apply these requirements to section 1905(a) ''medical assistance'' State Plan personal care, home health, and case management services. We decided against this alternative based on State feedback that they do not have the same data collection and reporting capabilities for these services as they do for HCBS delivered under sections 1915(c), (i), (j), and (k) of the Act and because of differences between the requirements of those authorities and section 1905(a) State Plan benefits.

Finally, we considered allowing a good cause exception to the minimum performance level reporting requirements to both the person-centered service plan and the incident management system. We decided against this alternative because the 90 percent performance level is intended to account for various scenarios that might impact a State's ability to achieve these performance levels. Furthermore, there are existing disaster authorities that States could utilize to request a waiver of these requirements in the event of a public health emergency or a disaster.

b. HCBS Payment Adequacy

We considered several alternatives to the proposed rule. We considered whether the requirements relating to the percent of payments going to the direct care workforce should apply to other services, such as adult day health, habilitation, day treatment or other partial hospitalization services, psychosocial rehabilitation services, and clinic services for individuals with mental illness. We decided against this alternative because the proposed services (homemaker, home health aide, and personal care) are those for which the vast majority of payment should be comprised of compensation for direct care workers and for which there would be low facility or other indirect costs. We also did not include other services for which the percentage might be variable due to the diversity of services included or for which worker compensation would be reasonably expected to comprise only a small percentage of the payment.

We considered whether to apply these payment adequacy requirements to section 1905(a) ''medical assistance'' State Plan personal care and home health services, but decided not to, based on State feedback that they do not have the same data collection and reporting capabilities for these services as they do for sections 1915(c), (i), (j), and (k) HCBS.

We considered whether other reporting requirements such as a State assurance or attestation or an alternative frequency of reporting could be used to determine State compliance but determined that the proposed requirement is necessary to demonstrate compliance.

We considered whether to require reporting at the delivery system, HCBS waiver program, or population level but decided against additional levels of reporting because it would increase reporting burden for States without providing additional information necessary for determining whether States meet the requirements at § 441.302(k).

c. Supporting Documentation Requirements

No alternatives were considered.

d. HCBS Quality Measure Set Reporting

We considered giving States the flexibility to choose which measures they would stratify and by what factors but decided against this alternative as discussed in the Mandatory Medicaid and CHIP Core Set Reporting proposed rule (see 87 FR 51313). We believe that consistent measurement of differences in health outcomes between different groups of beneficiaries is essential to identifying areas for intervention and evaluation of those interventions.[268] Consistency could not be achieved if each State made its own decisions about which data, it would stratify and by what factors.

3. Payment Rate Transparency

In developing this proposed rule, we considered multiple alternatives. We considered not proposing this rule and maintaining the status quo under current regulations at § 447.203 and 204. However, as noted throughout the Background and Provisions sections of this rule, since the 2011 proposed rule, we have received concerns from interested parties, including State agencies, about the administrative burden of completing AMRPs and questioning whether they are the most efficient way to determine access to care. These comments expressed particular concern about the AMRPs' value when they are required to accompany a proposed nominal rate reduction or restructuring, or where proposed rate changes are made via application of a previously approved rate methodology. At the same time, and as we have discussed, the Supreme

[268] Schlotthauer AE, Badler A, Cook SC, Perez DJ, Chin MH. Evaluating Interventions to Reduce Health Care Disparities: An RWJF Program. Health Aff (Millwood). 2008;27(2):568–573.

Court's 2015 decision in Armstrong v. Exceptional Child Care, Inc., 135 S. Ct. 1378 (2015) ruled that Medicaid providers and beneficiaries do not have private right of action to challenge State-determined Medicaid payment rates in Federal courts. This decision emphasized a greater importance on our administrative review of SPAs proposing to reduce or restructure payment rates. For both of these reasons, this proposed rule includes proposals that would create an alternative process that both reduces the administrative burden on States and standardizes and strengthens our review of proposed payment rate reductions or payment restructurings to ensure compliance with section 1902(a)(30)(A) of the Act.

We considered, but did not propose, adopting a complaint-driven process or developing a Federal review process for assessing access to care concerns. Although such processes could further our goals of ensuring compliance with the access requirement in section 1902(a)(30)(A) of the Act, we concluded similar effects could be achieved through methods that did not require the significant amount of Federal effort that would be necessary to develop either or both of these processes. Additionally, a complaint-driven process would not necessarily ensure a balanced review of State-proposed payment rate or payment structure changes, and it is possible that a large volume of complaints could be submitted with the intended or unintended effect of hampering State Medicaid program operations. Therefore, the impact of adopting a complaint-driven process or developing a Federal review process for assessing access to care concerns may be negligible given existing processes. Instead, we believe that relying on existing processes that States are already engaged in, such as the ongoing provider and beneficiary feedback channels under paragraph (b)(7) in § 447.203 and the public process requirement for States submitting a SPA that proposed to reduce or restructure Medicaid service payments in § 447.204, would be more effective than creating a new process. While we are relying on existing public feedback channels and processes that States are already engaged in, we are seeking public comment regarding our alternative consideration to propose adopting a complaint driven process or developing a Federal review process for assessing access to care concerns.

We considered finalizing the 2018 proposed rule that would have provided exemptions to the AMRP process for States with high managed care penetration or finalizing the 2019 proposed rule that would have rescinded the AMRP requirements without substantive replacement. As described in the 2018 proposed rule, while we agreed that our experience implementing the AMRP process from the 2015 final rule with comment period raised questions about the benefit of the access analysis when States proposed nominal payment rate reductions or payment restructurings that were unlikely to result in diminished access to care, we did not believe maintaining the AMRP process was the best course of action.[269] Additionally, after proposing to rescind the AMRP requirements through the 2019 proposed rule and issuing a CMCS Informational Bulletin about an agency wide effort to establish a new, comprehensive access strategy, we decided not to rescind the AMRP requirements without another regulation in place to codify the requirements for State compliance with section 1902(a)(30)(A) of the Act given our oversight responsibility. While we have already received and reviewed public comments received on the 2018 proposed rule or the 2019 proposed rule, we are seeking any additional public comments that were not already captured during the comment periods of the 2018 proposed rule or 2019 proposed rule with regard to finalizing these rules as an alternative considered within this proposed rulemaking.

We considered numerous variations of the individual provisions of this proposed rule. We considered, but did not propose, maintaining the benefits outlined in the current § 447.203(b)(5)(ii)(A) through (H) or requiring all mandatory Medicaid benefit categories be included in the comparative payment rate analysis proposed under § 447.203(b)(2). We also considered, but did not propose, including inpatient hospital behavioral health services and covered outpatient drugs including professional dispensing fees as additional categories of services subject to the comparative payment rate analysis proposed under § 447.203(b)(2). We considered, but did not propose, requiring States whose Medicaid payment rates vary by provider type, calculate an average Medicaid payment rate of all providers for each E/M CPT code subject to the comparative payment rate analysis. We also considered, but did not propose, different points of comparison other than Medicare under the comparative payment rate analysis proposed under § 447.203(b)(2) or using a peer payment rate benchmarking approach for benefit categories where Medicaid is the only or primary payer, or there is no comparable Medicare rate under the comparative payment rate analysis proposed under § 447.203(b)(2) and (3). We considered, but did not propose, varying timeframes for the comparative payment rate analysis proposed under § 447.203(b)(2). We also considered not proposing the payment rate transparency aspect of this rule proposed under § 447.203(b)(1), leaving the comparative payment rate analysis to replace the AMRP process as proposed under § 447.203(b)(2). With regard to the proposal in § 447.203(c), we considered, but did not propose, establishing alternative circumstances from those described in the 2017 SMDL for identifying nominal payment rate adjustments, establishing a minimum set of required data for States above 80 percent of the most recent Medicare payment rates after the proposed reduction or restructuring, using measures that are different from the proposed measures that would be reflected in the forthcoming template, allowing States to use their own unstructured data for States that fail to meet all three criteria in § 447.203(c)(1), and CMS producing and publishing the comparative payment rate analysis proposed in § 447.203(b).

We considered, but did not propose, maintaining the benefits outlined in the current § 447.203(b)(5)(ii)(A) through (H) or requiring all mandatory Medicaid benefit categories be included in the comparative payment rate analysis proposed under § 447.203(b)(2). Maintaining the benefits in current § 447.203(b)(5)(ii)(A) through (H) would have simplified the transition from the AMRP process to the payment rate transparency and comparative payment rate analysis requirements, if this proposed rule is finalized. However, our experience implementing the 2015 final rule with comment period, as well as interested parties' and States' feedback about the AMRP process, encouraged us to review and reconsider the current list of benefits subject to the AMRP process under current regulations § 447.203(b)(5)(ii)(A) through (H) to determine where we could decrease the level of effort required from States while still allowing ourselves an opportunity to review for access concerns. During our review of the current list of benefits under § 447.203(b)(5)(ii)(A) through (H), we considered, but did not propose, requiring all mandatory Medicaid benefit categories be included in the comparative payment rate analysis.

[269] 83 FR 12696 at 12697.

However, when considering the existing burden of the AMRP process under current § 447.203)(b), we believed that expanding the list of benefits to include under proposed § 447.203(b) and (c) would not support our goal to develop a new access strategy that aims to balance Federal and State administrative burden with our shared obligation to ensure compliance with section 1902(a)(30)(A) of the Act. As previously noted section II. of this rule, we are seeking public comment on primary care services, obstetrical and gynecological services, outpatient behavioral health services, and personal care, home health aide, and homemaker services provided by individual providers and providers employed by an agency as the proposed categories of services subject to the comparative payment rate analysis requirements in proposed § 447.203(b)(2)(i). Additionally, we are seeking public comment regarding our alternative consideration to propose maintaining the benefits outlined in the current § 447.203(b)(5)(ii)(A) through (H) or propose requiring all mandatory Medicaid benefit categories.

We also considered, but did not propose, including inpatient hospital behavioral health services and covered outpatient drugs including professional dispensing fees as additional categories of services subject to the comparative payment rate analysis proposed under § 447.203(b)(2). As previously described in section II. Of this proposed rule, we did not propose including inpatient behavioral health services as an additional category of service in the comparative payment rate analysis due to existing UPL and CAA payment data requirements for institutional services. The impact of including inpatient behavioral health services in the comparative payment rate analysis would have required duplicative effort by States to report the same information in a different format to us. Additionally, we considered, but did not propose, including covered outpatient drugs (including professional dispensing fees) as an additional category of service in the comparative payment rate analysis due to the complexity of drug pricing policies and use of rebate programs that does not fit into our proposed comparative payment rate analysis methodology that relies on E/M CPT/HCPCS codes to identify the services subject to the analysis.[270] The impact of including covered outpatient drugs (including professional dispensing fees) in the comparative payment rate analysis would have resulted in us proposing an entirely different process, in addition to the comparative payment rate analysis, for States to follow which would create additional burden on States to comply with. However, we are still seeking public comment regarding our decision not to include inpatient behavioral health services and covered outpatient drugs including professional dispensing fees as additional proposed categories of services subject to the comparative payment rate analysis requirements in proposed § 447.203(b)(2).

We considered, but did not propose, requiring States whose Medicaid payment rates vary by provider type to calculate an average Medicaid payment rate of all provider types for each E/M CPT code subject to the comparative payment rate analysis. Rather than proposing States distinguish their Medicaid payment rates by each provider type in the comparative payment rate analysis, we considered proposing States calculate an average Medicaid payment rate of all providers for each E/M CPT code. This consideration would have simplified the comparative payment rate analysis because States would include a single, average Medicaid payment rate amount and only need to separately analyze their Medicaid payment rates for services delivered to pediatric and adult populations, if they varied. However, calculating an average for the Medicaid payment rate has limitations, including sensitivity to extreme values and inconsistent characterizations of the payment rate between Medicaid and Medicare. In this rule, we propose to characterize the Medicare payment rate as the non-facility payment rate listed on the Medicare PFS for the E/M CPT/HCPCS codes subject to the comparative payment rate analysis. If we were to propose the Medicaid payment rate be calculated as an average Medicaid payment rate of all provider types for the same E/M CPT/HCPCS code, then States' calculated average Medicaid payment rate could include a wide variety of provider types, from a single payment rate for physicians to an average of three payment rates for physicians, physician assistants, and nurse practitioners. This wide variation in how the Medicaid payment rate is calculated among States would provide a less meaningful comparative payment rate analysis to Medicare. The extremes and outliers that would be diluted by using an average are not necessarily the same for both Medicaid and Medicare, so even if both sides of the comparison used an average, we would not be able to look more closely at specific large differences between the respective rates. As previously noted in section II. of this proposed rule, we are seeking public comment on the proposed characterization of the Medicaid payment rate, which accounts for variation in payment rates for pediatric and adult populations and distinguishes payment rates by provider type, in the comparative payment rate analysis. Additionally, we are seeking public comment regarding our alternative consideration to propose requiring States whose Medicaid payment rates vary by provider type to calculate an average Medicaid payment rate of all provider types for each E/M CPT code subject to the comparative payment rate analysis.

We considered, but did not propose, requiring States to use a different point of comparison, other than Medicare, for certain services where Medicare is not a consistent or primary payer, such as pediatric dental services or HCBS. The impact of requiring a different point of comparison, other than Medicare, would have carried forward the current regulation requiring States to ''include an analysis of the percentage comparison of Medicaid payment rates to other public (including, as practical, Medicaid managed care rates) and private health insurer payment rates within geographic areas of the State'' in their AMRPs. As previously discussed in this rule, FFS States expressed concerns following the 2015 final rule with comment period that private payer payment rates were proprietary information and not available to them, therefore, the challenges to comply with current regulations would be carried forward into the proposed rule. Therefore, we also considered, but did not propose, using various payment rate benchmarking approaches for benefit categories where Medicaid is the only or primary payer, or there is no comparable Medicare rate. As previously noted in section II. of this proposed rule, we considered benchmarks based on national Medicaid payment averages for certain services included within the LTSS benefit category, benchmarks that use average daily rates for certain HCBS that can be compared to other State Medicaid programs, and benchmarks that use payment data specific to the State's Medicaid program for similarly situated services so that the service payments may be benchmarked to national average. Notwithstanding the previously described limitations of the alternative considered for situations where

[270] *https://www.kff.org/medicaid/issue-brief/pricing-and-payment-for-medicaid-prescription-drugs/.*

differences between Medicaid and Medicare coverage and payment exists, we are seeking public comment regarding our alternative consideration to propose States use a different point of comparison, other than Medicare, for certain services where Medicare is not a consistent or primary payer or States use a payment rate benchmarking approach for benefit categories where Medicaid is the only or primary payer, or there is no comparable Medicare rate. Specifically, we are seeking public comment on the feasibility and burden on States to implement these alternatives considered for the proposed comparative payment rate analysis. For any comparison to other State Medicaid programs or to a national benchmark, we also are seeking public comment on the appropriate role for such a comparison in the context of the statutory requirement to consider beneficiary access relative to the general population in the geographic area.

We considered, but did not propose, various timeframes for the comparative payment rate analysis, including annual (every year), triennial (every 3 years), or quinquennial (every 5 years) updates after the initial effective date of January 1, 2026. As noted in section II. of this proposed rule, we did not propose an annual timeframe as we felt that an annual update requirement was too frequent due to many State's biennial legislative sessions that provide the Medicaid agency with authority it make Medicaid payment rate changes as well as create more or maintain a similar level of administrative burden of the AMRPs. While some States do have annual legislative sessions and may have annual Medicaid payment rate changes, we felt that proposing annual updates solely for the purpose of capturing payment rate changes in States that with annual legislative sessions would be overly burdensome and duplicative for States with biennial legislative sessions who do not have new, updated Medicaid payment rates to update in their comparative payment rate analysis. Therefore, for numerous States with biennial legislative sessions, the resulting analysis would likely not vary significantly from year to year. Additionally, the comparative payment rate analysis proposes to use the most recently published Medicare payment rates and we are cognizant that Medicare payment rate updates often occur on a quarterly basis. While Medicare often increases rates by the market basket inflation amount, as well as through rulemaking, it does not always result in payment increases for providers.[271] [272] We also considered, but did not propose, maintaining the triennial (every 3 years) timeframe currently in regulation, because we thought it necessary to make significant changes to the non-SPA-related reported in § 447.203(b) that would represent a significant departure from the initial AMRP process in the 2015 final rule with comment in the current § 447.203(b)(1) and this new proposed approach did not lend itself to the triennial timeframe of the current AMRP process. Lastly, we considered, but did not propose, the comparative payment rate analysis be published on a quinquennial basis (every 5 years), because this timeframe was too infrequent for the comparative payment rate analysis to provide meaningful, actionable information. As previously noted in section II. of this rule, we are seeking public comment on the proposed timeframe for the initial publication and biennial update requirements of the comparative payment rate analysis as proposed in § 447.203(b)(4). Additionally, we are seeking public comment regarding our alternative consideration to propose an annual, triennial, or quinquennial timeframe for the updating the comparative payment rate analysis after the initial effective date.

We considered, but did not propose, requiring the comparative payment rate analysis be submitted directly to us, as this would not achieve the public transparency goal of the proposed rule. As proposed in § 447.203(b)(3), we are requiring States develop and publish their Medicaid comparative payment rate analysis on the State's website in an accessible and easily understandable format. This proposal is methodologically similar to the current regulation, which requires AMRPs be submitted to us and publicly published by the State and CMS. We found this aspect of the rule to be an effective method of publicly sharing access to care information, as well as ensuring State compliance. As previously noted in section II. of this proposed rule, we are seeking public comment on the proposed requirement for States to publish their Medicaid FFS payment rates for all services and comparative payment rate analysis and payment rate disclosure information on the State's website under the proposed § 447.203(b)(1) and (3), respectively. Additionally, we are seeking public comment regarding our alternative consideration to propose requiring the comparative payment rate analysis be submitted directly to us and not publicly published.

We considered, but did not propose, that we produce and publish the comparative payment rate analysis proposed in § 447.203(b)(2) through (3) whereby we would develop reports for all States demonstrating Medicaid payment rates for all services or a subset for Medicaid services as a percentage of Medicare payment rates. Shifting responsibility for this analysis would remove some burden from States and allow us to do a full cross-comparison of State Medicaid payment rates to Medicare payment rates, while ensuring a consistent rate analysis across States. However, this approach would rely on T–MSIS data, which would increase the lag in available data due to the need for CMS to prepare it, and introduce uncertainty into the results due to ongoing variation in State T–MSIS data quality and completeness. Although our proposed approach still relies on State-supplied data, they are able to perform the comparisons on their own regardless of the readiness and compliance of any other State. Furthermore, we would need to validate its results with States and work through any discrepancies. Ultimately, we determined the increased lag time and uncertainty in results would diminish the utility of the rate analyses proposed in § 447.203(b), if performed by us instead of the States, to support our oversight of State compliance with section 1902(a)(30)(A) of the Act. As previously noted in section II. of this rule, we are seeking public comment on our proposal to require States to develop and publish a comparative payment rate analysis and payment rate disclosure as proposed in § 447.203(b)(2) and (3). Additionally, we are seeking public comment regarding our alternative consideration to propose that we produce and publish the comparative payment rate analysis and payment rate disclosure proposed in § 447.203(b)(2) and (3) for all States.

[271] Although ''market basket'' technically describes the mix of goods and services used in providing health care, this term is also commonly used to denote the input price index (that is, cost category weights and price proxies combined) derived from that market basket. Accordingly, the term ''market basket'' as used in this document refers to the various CMS input price indexes. A CMS market basket is described as a fixed-weight, Laspeyres-type index because it measures the change in price, over time, of the same mix of goods and services purchased in the base period. FAQ—Medicare Market Basket Definitions and General Information, updated May 2022. *https://www.cms.gov/Research-Statistics-Data-and-Systems/Statistics-Trends-and-Reports/MedicareProgramRatesStats/Downloads/info.pdf* Accessed January 4, 2023.

[272] Medicare Unit Cost Increases Reported as of April 2022. *https://www.cms.gov/files/document/ffs-trends-2021-2023-april-2022.pdf.* Accessed January 4, 2023.

We considered, but did not propose, establishing alternative circumstances from the 2017 SMDL for identifying nominal payment rate adjustments when States propose a rate reduction or restructuring. We previously outlined in SMDL #17–004 several circumstances where Medicaid payment rate reductions generally would not be expected to diminish access: reductions necessary to implement CMS Federal Medicaid payment requirements; reductions that will be implemented as a decrease to all codes within a service category or targeted to certain codes, but for services where the payment rates continue to be at or above Medicare and/or average commercial rates; and reductions that result from changes implemented through the Medicare program, where a State's service payment methodology adheres to the Medicare methodology. This proposed rule would not codify this list of policies that may produce payment rate reductions unlikely to diminish access to Medicaid-covered services. We considered, but did not propose, setting a different percentage for the criteria that State Medicaid rates for each benefit category affected by the reductions or restructurings must, in the aggregate, be at or above 80 percent of the most recent comparable Medicare payment rates after the proposed reduction or restructuring as a threshold. We considered setting the threshold at 100 percent of Medicare to remain consistent with the 2017 SMDL. However, after conducting a literature review, we determined that 80 percent of the most recently published Medicare payment rates is currently the most reliable benchmark of whether a rate reduction or restructuring is likely to diminish access to care. We also considered, but did not propose, setting a different percentage for the criteria that proposed reductions or restructurings result in no more than 4 percent reduction of overall FFS Medicaid expenditures for a benefit category. We considered a variety of percentages, but determined that codifying the 4 percent threshold from the 2017 SMDL and proposed in the 2018 proposed rule [273] was the best option based on our experience implementing this established policy after the publication of the 2017 SMDL. Additionally, we received a significant number of comments in the 2018 proposed rule from State Medicaid agencies that signaled strong support for this percentage threshold as a meaningful threshold for future rate changes.[274] [275] [276] Lastly, we considered, but did not propose, defining what is meant by ''significant'' access concerns received through the public process described in § 447.204 when a State proposes a rate reduction or restructuring. As proposed, we expect State Medicaid agencies to make reasonable determinations about which access concerns are significant when raised through the public process, and as part of our SPA review, may request additional information from the State to better understand any access concerns that have been raised through public processes and whether they are significant. Based on our experience implementing the policies outlined in the 2017 SMDL and a literature review of relevant research about payment rate sufficiency, we proposed criteria for States proposing rate reductions or restructurings that would reduce the SPA submission requirements when those criteria are met. Additionally, each of these thresholds is one of a three-part test where States must meet all three, or else it will trigger a requirement for additional State analysis of the rate reduction or restructuring. As previously noted in section II. of this rule, we are seeking public comment on the streamlined criteria proposed in § 447.203(c)(1). Additionally, we are seeking public comment regarding our alternative consideration to propose establishing alternative circumstances from the 2017 SMDL for identifying nominal payment rate adjustments when States propose a rate reduction or restructuring.

We considered, but did not propose, establishing a minimum set of required data for States above 80 percent of the most recent Medicare payment rates after the proposed reduction or restructuring regardless of the remaining criteria. This requirement would minimize administrative burden on States by not requiring States submit all items in § 447.203(c)(2) and establish a baseline for comparison if future rate reductions or restructurings are proposed that may lower the State's payment rates below 80 percent of the most recent Medicare payment rates. However, we determined that, while we believe 80 percent to be an effective threshold point, we did not want that to serve as the only trigger for additional analysis. As proposed, only States that do not meet all of the proposed requirements in § 447.203(c)(1) will have to submit the required data outlined in § 447.203(c)(2). As previously noted in section II. of this rule, we are seeking public comment on our proposal to require all three criteria described in § 447.203(c)(1)(i) through (iii) for assessing the effect of a proposed payment rate reduction or payment restructuring on access to care. Additionally, we are seeking public comment regarding our alternative consideration to propose establishing alternative circumstances from the 2017 SMDL for identifying nominal payment rate adjustments when States propose a rate reduction or restructuring.

We considered, but did not propose, allowing States to use their own unstructured data, similar to the AMRP process, for States that fail to meet all three criteria in § 447.203(c)(1), thereby eliminating the need for us to develop a template for States proposing rate reductions or restructurings. While this would reduce administrative burden on us and provide States with flexibility in determining relevant data for complying with statutory and regulatory requirements, we received feedback after the 2015 final rule with comment period that States found developing an AMRP from scratch with minimal Federal guidelines a challenging task and other interested parties noted that States had too much discretion in documenting sufficient access to care. Therefore, we proposed developing a template to support State analyses of rate reduction or restructuring SPAs that fail to meet the criteria in § 447.203(c)(1). As noted elsewhere in the preamble, if finalized, we anticipate releasing subregulatory guidance, including a template to support completion of the analysis that would be required under paragraph (c)(2), prior to the beginning date of the *Comparative Payment Rate Analysis and Payment Rate Disclosure Timeframe* proposed in § 447.203(b)(4), which is proposed to begin 2 years after the effective date of the final rule. In the intervening period, we anticipate working directly with States through the SPA review process to ensure compliance with section 1902(a)(30)(A) of the Act. Additionally, we are seeking public comment regarding our alternative consideration to propose allowing States to use their own unstructured data, similar to the AMRP

process, for States that fail to meet all three criteria in § 447.203(c)(1).

After careful consideration, we ultimately determined that the requirements in proposed § 447.203(b) and (c) would strike a more optimal balance between alleviating State and Federal administrative burden, while ensuring a transparent, data-driven, and consistent approach to States' implementation and our oversight of State compliance with the access requirement in section 1902(a)(30)(A) of the Act.

E. Accounting Statement and Table

As required by OMB Circular A–4 (available at *https://www.whitehouse.gov/wp-content/uploads/legacy_drupal_files/omb/circulars/A4/a-4.pdf*), we have prepared an accounting statement in Table 43 showing the classification of the impact associated with the provisions of this proposed rule. Note, Table 43 shown previously in this proposed rule provides a summary of the one-time and annual costs estimates.

TABLE 44—ACCOUNTING TABLE

Category	Estimates	Units		
		Year dollar	Discount rate (%)	Period covered
Regulatory Review Costs:				
Annualized Monetized ($million/year)	.112	2023	7	2024–2028
	.117	2023	3	2024–2028
Costs to States:				
Annualized Monetized ($million/year)	72.12	2023	7	2024–2028
	75.22	2023	3	2024–2028
Costs to Beneficiaries:				
Annualized Monetized ($million/year)	0.47	2023	7	2024–2028
	0.49	2023	3	2024–2028
Costs to Providers:				
Annualized Monetized ($million/year)	102.05	2023	7	2024–2028
	106.44	2023	3	2024–2028
Costs to Managed Care Entities:				
Annualized Monetized ($million/year)	6.84	2023	7	2024–2028
	7.13	2023	3	2024–2028

F. Regulatory Flexibility Act (RFA)

The RFA requires agencies to analyze options for regulatory relief of small entities, if a rule has a significant impact on a substantial number of small entities. For purposes of the RFA, we estimate that *almost all* of Home Health Care Services, Services for the Elderly and Persons with Disabilities, and Direct Health and Medical Insurance Carriers are small entities as that term is used in the RFA (include small businesses, nonprofit organizations, and small governmental jurisdictions). The great majority of hospitals and most other health care providers and suppliers are small entities, either by being nonprofit organizations or by meeting the SBA definition of a small business (having revenues of less than $8.0 million to $41.5 million in any 1 year).

For purposes of the RFA, approximately 95 percent of the health care industries impacted are considered small businesses according to the Small Business Administration's size standards with total revenues of $41 million or less in any 1 year.

According to the SBA's website at *http://www.sba.gov/content/small-business-size-standards* HCBS Provider Costs and Managed care Entity fall in the North American Industrial Classification System 621610 Home Health Care Services, 624120 Services for the Elderly and Persons with Disabilities, and 524114 Direct Health and Medical Insurance Carriers.

TABLE 45—HCBS PROVIDERS COSTS AND MANAGED CARE ENTITY SIZE STANDARDS

NAICS (6-digit)	Industry subsector description	SBA size standard/small entity threshold (million)	Total small businesses
621610	Home Health Care Services	$15	20,597
624120	Services for the Elderly and Persons with Disabilities	19	20,740
524114	Direct Health and Medical Insurance Carriers	47	501

Source: 2012 Economic Census. Note, no recent data exist for Enterprise Receipt Size.

Individuals and States are not included in the definition of a small entity. This rule will not have a significant impact measured change in revenue of 3 to 5 percent on a substantial number of small businesses or other small entities. All the industries combined, according to the 2012 Economic Census, earned approximately $46,771,961,000.00. Hence, all the costs combined, amounts to about 1 percent.

Therefore, as its measure of significant economic impact on a substantial number of small entities, HHS uses a change in revenue of more than 3 to 5 percent. We do not believe that this threshold will be reached by the requirements in this proposed rule. Therefore, the Secretary has certified that this proposed will not have a significant economic impact on a substantial number of small entities.

In addition, section 1102(b) of the Act requires us to prepare a regulatory impact analysis if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 603 of the Act. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a metropolitan statistical area and has fewer than 100 beds. This proposed rule will not have a significant impact on the operations of small rural hospitals since small hospitals are not affected by the proposed rule. Therefore, the Secretary has certified that this proposed rule will not have a significant impact on the operations of a substantial number of small rural hospitals.

G. Unfunded Mandates Reform Act (UMRA)

Section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA) also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of $100 million in 1995 dollars, updated annually for inflation. In 2023, that threshold is approximately $177 million. This proposed rule would not impose a mandate that will result in the expenditure by State, local, and Tribal Governments, in the aggregate, or by the private sector, of more than $177 million in any 1 year.

Several of the provisions in the proposed rule address gaps in existing regulations. In these cases, the costs for States to implement those proposals would be minimal. For the remaining areas of the proposed rule, we have sought to minimize burden whenever possible while still achieving the goals of this rulemaking. We further note that, if finalized, States would be able to claim administrative match for the work required to implement the proposals.

H. Federalism

E.O. 13132 establishes certain requirements that an agency must meet when it issues a proposed rule that imposes substantial direct requirement costs on State and local governments, preempts State law, or otherwise has Federalism implications. This rule does not impose substantial direct costs on State or local governments, preempt State law, or otherwise have Federalism implications. As mentioned in the previous section of this rule, the costs to States by our estimate do not rise to the level of specified thresholds for significant burden to States. In addition, many proposals amend existing requirements or further requirements that already exist in statute, and as such would not create any new conflict with State law.

I. Conclusion

If the policies in this proposed rule are finalized, it will enable us to implement enhanced access to health care services for Medicaid beneficiaries across FFS, managed care, and HCBS delivery systems.

The analysis in section V. of this proposed rule, together with the rest of this preamble, provides a regulatory impact analysis. In accordance with the provisions of E.O. 12866, this proposed rule was reviewed by the Office of Management and Budget.

Chiquita Brooks-LaSure, Administrator of the Centers for Medicare & Medicaid Services, approved this document on XX XX, 20XX

List of Subjects

42 CFR Part 431

Administrative practice and procedure, Consumer protection, Grant programs—health, Medicaid, Organization and functions (Government agencies), Public assistance programs, Reporting and recordkeeping requirement.

42 CFR Part 438

Administrative practice and procedure, Grant programs—health, Health professions, Medicaid, Older adults, People with Disabilities, Reporting and recordkeeping requirements.

42 CFR Part 441

Administrative practice and procedure, Consumer protection, Grant programs—health, Health professions, Medicaid, Older adults, People with Disabilities, Reporting and recordkeeping requirements

42 CFR Part 447

Accounting, Administrative practice and procedure, Drugs, Grant programs—health, Health facilities, Health professions, Medicaid, Reporting and recordkeeping requirements, and Rural areas.

For the reasons set forth in the preamble, the Centers for Medicare & Medicaid Services proposes to amend 42 CFR Chapter IV as set forth below:

PART 431—STATE ORGANIZATION AND GENERAL ADMINISTRATION

■ 1. The authority citation for part 431 continues to read as follows:

Authority: 42 U.S.C. 1302.

■ 2. Revise § 431.12 to read as follows:

§ 431.12 Medicaid Advisory Committee and Beneficiary Advisory Group.

(a) *Basis and purpose.* This section, based on section 1902(a)(4) of the Act, prescribes State Plan requirements for establishment and ongoing operation of a public Medicaid Advisory Committee (MAC) with a dedicated Beneficiary Advisory Group (BAG) comprised of current and former Medicaid beneficiaries, their family members and caregivers, to advise the State Medicaid agency on matters of concern related to policy development, and matters related to the effective administration of the Medicaid program.

(b) *State plan requirement.* The State Plan must provide for a MAC and a BAG that will advise the Medicaid Agency Director on matters of concern related to policy development and matters related to the effective administration of the Medicaid program.

(c) *Appointment of members.* The agency director, or a higher State authority, must appoint members to the MAC and BAG on a rotating and continuous basis. The State must create a process for recruitment and appointment of members and publish this information on the States website as specified in paragraph (f).

(d) *MAC membership and composition.* The membership of the MAC must be composed of the following percentage and representative categories of interested parties in the State:

(1) Minimum of 25 percent of committee members must be from the BAG.

(2) The remaining committee members must include representation of at least one from each of the following categories:

(A) State or local consumer advocacy groups or other community-based organizations that represent the interests of, or provide direct service, to Medicaid beneficiaries.

(B) Clinical providers or administrators who are familiar with the health and social needs of Medicaid beneficiaries and with the resources available and required for their care. This includes providers or administrators of primary care, specialty care, and long-term care.

(C) Participating Medicaid managed care plans, or the State health plan association representing such plans, as applicable; and

(D) Other State agencies that serve Medicaid beneficiaries (for example, foster care agency, mental health agency, health department, State agencies delegated to conduct eligibility determinations for Medicaid, State Unit on Aging), as ex-officio members.

(e) *Beneficiary Advisory Group.* The State must form and support a BAG, which can be an existing beneficiary group, that is comprised of: Individuals who are currently or have been Medicaid beneficiaries and individuals with direct experience supporting Medicaid beneficiaries (family members or caregivers of those enrolled in Medicaid), to advise and provide input to the State regarding their experience with the Medicaid program, on matters of concern related to policy development and matters related to the effective administration of the Medicaid program.

(1) The MAC members described in paragraph (d)(1) of this section must also be members of the BAG.

(2) The BAG must meet separately from the MAC, on a regular basis, and in advance of each MAC meeting to ensure BAG member preparation for each MAC meeting.

(f) *MAC and BAG administration.* The State agency must create standardized processes and practices for the administration of the MAC and the BAG that are available for public review on the State website. The State agency must—

(1) Develop and publish by posting publicly on its website, bylaws for governance of the MAC and BAG, a current list of MAC and BAG membership, and past meeting minutes of the MAC and BAG meetings, including a list of meeting attendees;

(2) Develop and publish by posting publicly on its website a process for MAC and BAG member recruitment and appointment and selection of MAC and BAG leadership;

(3) Develop, publish by posting publicly on its website, and implement a regular meeting schedule for the MAC and BAG; the MAC and BAG must each meet at least once per quarter and hold off-cycle meetings as needed.

(4) Make at least two MAC meetings per year open to the public and those meetings must include a dedicated time during the meeting for the public to make comments. The public must be adequately notified of the date, location, and time of each public MAC meeting at least 30 calendar days in advance. BAG meetings are not required to be open to the public, unless the State's BAG members decide otherwise. The same requirements would apply to States whose BAG meetings were determined, by its membership, to be open to the public;

(5) Offer a variety of in-person and virtual attendance options including, at a minimum telephone dial-in options at the MAC and BAG meetings for its members. If the MAC or BAG meeting is deemed open to the public, the State must offer at a minimum a telephone dial-in option for members of the public;

(6) Ensure meeting times and locations for MAC and BAG meetings are selected to maximize member attendance and may vary by meeting; and

(7) Facilitate participation of beneficiaries by ensuring that that meetings are accessible to people with disabilities, that reasonable modifications are provided when necessary to ensure access and enable meaningful participation, and communications with individuals with disabilities are as effective as with others, that reasonable steps are taken to provide meaningful access to individuals with Limited English Proficiency, and that meetings comply with the requirements at § 435.905(b) of this chapter and applicable regulations implementing the ADA, section 504 of the Rehabilitation Act, and section 1557 of the Affordable Care Act at 28 CFR part 35 and 45 CFR parts 84 and 92.

(g) *MAC and BAG participation and scope.* The MAC and BAG participants must have the opportunity to participate in and provide recommendations to the State agency on matters related to policy development and matters related to the effective administration of the Medicaid program. At a minimum, the MAC and BAG must determine, in collaboration with the State, which topics to provide advice on related to—

(1) Additions and changes to services;

(2) Coordination of care;

(3) Quality of services;

(4) Eligibility, enrollment, and renewal processes;

(5) Beneficiary and provider communications by State Medicaid agency and Medicaid managed care plans;

(6) Cultural competency, language access, health equity, and disparities and biases in the Medicaid program; or

(7) Other issues that impact the provision or outcomes of health and medical care services in the Medicaid program as by the MAC, BAG, or State.

(h) *State agency staff assistance, participation, and financial help.* The State agency must provide staff to support planning and execution of the MAC and the BAG to include—

(1) Recruitment of MAC and BAG members;

(2) Planning and execution of all MAC and BAG meetings and the production of meeting minutes that include actions taken or anticipated actions by the State in response to interested parties' feedback provided during the meeting. The minutes are to be posted on the State's website within 30 calendar days following each meeting. Additionally, the State must also produce and post on its website an annual report as specified in paragraph (i) of this section; and

(3) The provision of appropriate support and preparation (providing research or other information needed) to the Medicaid beneficiary MAC and BAG members to ensure meaningful participation. These tasks include—

(i) Providing staff whose responsibilities include facilitating MAC and BAG member engagement;

(ii) Providing financial support, if necessary, to facilitate Medicaid beneficiary engagement in the MAC and the BAG.

(iii) Attendance by at least one staff member from the State agency's executive staff at all MAC and BAG meetings.

(i) *Annual report.* The MAC, with support from the State, submit an annual report describing its activities, topics discussed, and recommendations. The State must review the report and include responses to the recommended actions. The State agency must then—

(1) Provide MAC members with final review of the report;

(2) Ensure that the annual report of the MAC includes a section describing the activities, topics discussed, and recommendations of the BAG, as well as the State's responses to the recommendations; and

(3) Post the report to the State's website.

(j) *Federal financial participation.* FFP is available at 50 percent of expenditures for the MAC and BAG activities.

■ 3. Amend § 431.408 by revising paragraph (a)(3)(i) to read as follows:

§ 431.408 State public notice process.

(a) * * *

(3) * * *

(i) The Medicaid Advisory Committee and Beneficiary Advisory Group that operate in accordance with § 431.12 of this subpart; or

* * * * *

PART 438—MANAGED CARE

■ 4. The authority citation for part 438 continues to read as follows:

Authority: 42 U.S.C. 1302.

■ 5. Section 438.72 is added to subpart B to read as follows:

§ 438.72 Additional requirements for long-term services and supports.

(a) [Reserved]

(b) *Services authorized under section 1915(c) waivers and section 1915(i), (j), and (k) State plan authorities.* The State

must comply with the review of the person-centered service plan requirements at § 441.301(c)(1) through (3), the incident management system requirements at § 441.302(a)(6), the payment adequacy requirements at § 441.302(k), the reporting requirements at § 441.311, and the website transparency requirements at § 441.313 for services authorized under section 1915(c) waivers and section 1915(i), (j), and (k) State plan authorities.

PART 441—SERVICES: REQUIREMENTS AND LIMITS APPLICABLE TO SPECIFIC SERVICES

■ 6. The authority citation for part 441 continues to read as follows:

Authority: 42 U.S.C. 1302.

■ 7. Amend § 441.301 by revising paragraphs (c)(1) and (3), and adding paragraph (c)(7) to read as follows:

§ 441.301 Contents of request for a waiver.

* * * * *

(c) * * *

(1) *Person-centered planning process.* The individual, or if applicable, the individual and the individual's authorized representative, will lead the person-centered planning process. When the term ''individual'' is used throughout this section, it includes the individual's authorized representative if applicable. In addition, the person-centered planning process:

* * * * *

(3) *Review of the person-centered service plan*—(i) *Requirement.* The State must ensure that the person-centered service plan is reviewed, and revised, as appropriate, based upon the reassessment of functional need as required by § 441.365(e), at least every 12 months, when the individual's circumstances or needs change significantly, or at the request of the individual.

(ii) *Minimum performance at the State level.* The State must demonstrate, through the reporting requirements at § 441.311(b)(3), that it meets the following minimum performance levels:

(A) Complete a reassessment of functional need at least every 12 months for no less than 90 percent of the individuals continuously enrolled in the waiver for at least 365 days; and

(B) Review and revise, as appropriate, the person-centered service plan, based upon the reassessment of functional need, at least every 12 months for no less than 90 percent of the individuals continuously enrolled in the waiver for at least 365 days.

(iii) *Effective date.* The performance levels described in paragraph (c)(3)(ii) of this section are effective 3 years after the date of enactment of this paragraph; and in the case of the State that implements a managed care delivery system under the authority of sections 1915(a), 1915(b), 1932(a), or 1115(a) of the Act and includes HCBS in the MCO's, PIHP's, or PAHP's contract, the first managed care plan contract rating period that begins on or after 3 years after the date of enactment of this paragraph.

* * * * *

(7) *Grievance system*—(i) *Purpose.* The State must establish a procedure under which a beneficiary may file a grievance related to the State or a provider's compliance with paragraphs (c)(1) through (6) of this section. This requirement does not apply to a managed care delivery system under the authority of sections 1915(a), 1915(b), 1932(a), or 1115(a) of the Act.

(ii) *Definitions.* As used in this section:

Grievance means an expression of dissatisfaction or complaint related to the State's or a provider's compliance with paragraphs (c)(1) through (6), regardless of whether remedial action is requested.

Grievance system means the processes the State implements to handle grievances, as well as the processes to collect and track information about them.

(iii) *General requirements.* (A) The beneficiary or a beneficiary's authorized representative, if applicable, may file a grievance. All references to beneficiary include the role of the beneficiary's representative, if applicable.

(*1*) Another individual or entity may file a grievance on behalf of the beneficiary with the written consent of the beneficiary or authorized representative.

(*2*) A provider cannot file a grievance that would violate the State's conflict of interest guidelines, as required in § 441.540(a)(5).

(B) The State must:

(*1*) Base its grievance processes on written policies and procedures that, at a minimum, meet the conditions set forth in this subsection;

(*2*) Provide beneficiaries reasonable assistance in completing forms and taking other procedural steps related to a grievance. This includes, but is not limited to, ensuring the grievance system is accessible to individuals with disabilities and persons who are limited English proficient, consistent with § 435.905(b) of this chapter, and includes auxiliary aids and services upon request, such as providing interpreter services and toll-free numbers that have adequate TTY/TTD and interpreter capability;

(*3*) Ensure that punitive action is neither threatened nor taken against an individual filing a grievance;

(*4*) Accept grievances and requests for expedited resolution or extension of timeframes from the beneficiary;

(*5*) Provide to the beneficiary the notices and information required under this subsection, including information on their rights under the grievance system and on how to file grievance, and ensure that such information is accessible for individuals with disabilities and individuals who are limited English proficient in accordance with § 435.905(b);

(*6*) Review any grievance resolution with which the beneficiary is dissatisfied; and

(*7*) Provide information about the grievance system to all providers and subcontractors approved to deliver services.

(C) The process for handling grievances must:

(*1*) Allow the beneficiary to file a grievance with the State either orally or in writing.

(*2*) Acknowledge receipt of each grievance.

(*3*) Ensure that the individuals who make decisions on grievances are individuals:

(i) Who were neither involved in any previous level of review or decision-making related to the grievance nor a subordinate of any such individual;

(ii) Who are individuals who have the appropriate clinical and non-clinical expertise, as determined by the State; and

(iii) Who consider all comments, documents, records, and other information submitted by the beneficiary without regard to whether such information was submitted to or considered previously by the State.

(*4*) Provide the beneficiary a reasonable opportunity, face-to-face (including through the use of audio or video technology) and in writing, to present evidence and testimony and make legal and factual arguments related to their grievance. The State must inform the beneficiary of the limited time available for this sufficiently in advance of the resolution timeframe for grievances as specified in paragraphs (c)(7)(v)(B)(*1*) and (*2*) of this section.

(*5*) Provide the beneficiary their case file, including medical records in compliance with 45 CFR 164.510(b), other documents and records, and any new or additional evidence considered, relied upon, or generated by the State related to the grievance. This information must be provided free of charge and sufficiently in advance of the

resolution timeframe for grievance as specified in paragraphs (c)(7)(v)(B)(*1*) and (*2*) of this section.

(*6*) Provide beneficiaries, free of charge, with language services, including written translation and interpreter services in accordance with § 435.905(b), to support their participation in grievance processes and their use of the grievance system.

(iv) *Filing timeframes.* (A) A beneficiary may file a grievance at any time.

(B) The beneficiary may request expedited resolution of a grievance whenever there is a substantial risk that resolution within standard timeframes will adversely affect the beneficiary's health, safety, or welfare, as described in paragraph (c)(7)(v) of this section.

(v) *Resolution and notification*—(A) *Basic rule.* The State must resolve each grievance, and provide notice, as expeditiously as the beneficiary's health, safety, and welfare requires, within State-established timeframes that may not exceed the timeframes specified in this section.

(B) *Specific timeframes*—(*1*) *Standard resolution of grievances.* For standard resolution of a grievance and notice to the affected parties, the timeframe may not exceed 90 calendar days from the day the State receives the grievance. This timeframe may be extended under paragraph (c)(7)(v)(C) of this section.

(*2*) *Expedited resolution of grievances.* For expedited resolution of a grievance and notice to affected parties, the State must establish a timeframe that is no longer than 14 calendar days after the State receives the grievance. This timeframe may be extended under paragraph (c)(7)(v)(C) of this section.

(C) *Extension of timeframes.* (*1*) The States may extend the timeframes from those in paragraph (c)(7)(v)(B) of this section by up to 14 calendar days if—

(*i*) The beneficiary requests the extension; or

(*ii*) The State documents that there is need for additional information and how the delay is in the beneficiary's interest.

(D) *Requirements following extension.* If the State extends the timeframes not at the request of the beneficiary, it must complete all of the following:

(*1*) Make reasonable efforts to give the beneficiary prompt oral notice of the delay.

(*2*) Within 2 calendar days of determining a need for a delay, but no later than the timeframes in paragraph (c)(7)(v)(B) of this section, give the beneficiary written notice of the reason for the decision to extend the timeframe.

(*3*) Resolve the grievance as expeditiously as the beneficiary's health condition requires and no later than the date the extension expires.

(vi) *Format of notice*—(A) *Written notice.* The State must establish a method to notify a beneficiary of the resolution of a grievance and ensure that such methods meet, at a minimum, the standards described at § 435.905(b) of this chapter.

(B) *Oral notice.* For notice of an expedited resolution, the State must also make reasonable efforts to provide oral notice.

(vii) *Recordkeeping.* (A) The State must maintain records of grievances and must review the information as part of its ongoing monitoring procedures.

(B) The record of each grievance must contain, at a minimum, all of the following information:

(*1*) A general description of the reason for the grievance.

(*2*) The date received.

(*3*) The date of each review or, if applicable, review meeting.

(*4*) Resolution of the grievance, as applicable.

(*5*) Date of resolution, if applicable.

(*6*) Name of the beneficiary for whom the grievance was filed.

(C) The record must be accurately maintained in a manner available upon request to CMS.

(viii) *Effective date.* This requirement is effective 2 years after the date of enactment of this paragraph.

■ 8. Amend § 441.302 by—

■ a. Adding paragraph (a)(6);

■ b. Revising paragraph (h);

■ c. Adding new paragraph (k).

The additions and revision read as follows:

§ 441.302 State assurances.

* * * * *

(a) * * *

(6) Assurance that the State operates and maintains an incident management system that identifies, reports, triages, investigates, resolves, tracks, and trends critical incidents.

(i) *Requirements.* The State must:

(A) Define critical incident to include, at a minimum—

(*1*) Verbal, physical, sexual, psychological, or emotional abuse;

(*2*) Neglect;

*(3) E*xploitation including financial exploitation;

(*4*) Misuse or unauthorized use of restrictive interventions or seclusion;

(*5*) A medication error resulting in a telephone call to or a consultation with a poison control center, an emergency department visit, an urgent care visit, a hospitalization, or death; or

(*6*) An unexplained or unanticipated death, including but not limited to a death caused by abuse or neglect.

(B) Use an information system, as defined in 45 CFR 164.304 and compliant with 45 CFR part 164, that, at a minimum—

(*1*) Enables electronic critical incident data collection;

(*2*) Tracking (including of the status and resolution of investigations), and;

(*3*) Trending.

(C) Require providers to report to the State, within State-established timeframes and procedures, any critical incident that occurs during the delivery of services authorized under section 1915(c) of the Act and as specified in the waiver participant's person-centered service plan, or occurs as a result of the failure to deliver services authorized under section 1915(c) of the Act and as specified in the waiver participant's person-centered service plan.

(D) Use claims data, Medicaid fraud control unit data, and data from other State agencies such as Adult Protective Services or Child Protective Services to the extent permissible under applicable State law to identify critical incidents that are unreported by providers and occur during the delivery of services authorized under section 1915(c) of the Act and as specified in the waiver participant's person-centered service plan, or occur as a result of the failure to deliver services authorized under section 1915(c) of the Act and as specified in the waiver participant's person-centered service plan.

(E) Ensure that there is information sharing on the status and resolution of investigations, such as through the use of information sharing agreements, between the State and the entity or entities responsible in the State for investigating critical incidents as defined in § 441.302(a)(6)(i)(A) if the State refers critical incidents to other entities for investigation;

(F) Separately investigate critical incidents if the investigative agency fails to report the resolution of an investigation within State-specified timeframes; and

(G) Demonstrate that it meets the requirements in paragraph (a)(6) of this section through the reporting requirement at § 441.311(b)(1).

(ii) *Minimum performance at the State level.* The State must demonstrate, through the reporting requirements at § 441.311(b)(2), that it meets the following minimum performance levels:

(A) Initiate an investigation, within State-specified timeframes, for no less than 90 percent of critical incidents;

(B) Complete an investigation and determine the resolution of the investigation, within State-specified timeframes, for no less than 90 percent of critical incidents; and

(C) Ensure that corrective action has been completed within State-specified timeframes, for no less than 90 percent of critical incidents that require corrective action.

(iii) *Effective date.* This requirement is effective 3 years after the date of enactment of this paragraph; and in the case of the State that implements a managed care delivery system under the authority of sections 1915(a), 1915(b), 1932(a), or 1115(a) of the Act and includes HCBS in the MCO's, PIHP's, or PAHP's contract, the first managed care plan contract rating period that begins on or after 3 years after the date of enactment of this paragraph.

* * * * *

(h) *Reporting.* Assurance that the agency will provide CMS with information on the waiver's impact, including the data and information as required in § 441.311.

* * * * *

(k) *HCBS payment adequacy.* Assurance that payment rates are adequate to ensure a sufficient direct care workforce to meet the needs of beneficiaries and provide access to services in the amount, duration, and scope specified in the person-centered service plan.

(1) *Definitions.* As used in this section.

(i) *Compensation* means:

(A) Salary, wages, and other remuneration as defined by the Fair Labor Standards Act and implementing regulations (29 U.S.C. 201 *et seq.,* 29 CFR parts 531 and 778);

(B) Benefits (such as health and dental benefits, sick leave, and tuition reimbursement); and

(C) The employer share of payroll taxes for direct care workers delivering services authorized under section 1915(c) of the Act.

(ii) *Direct care worker* means any of the following individuals:

(A) A registered nurse, licensed practical nurse, nurse practitioner, or clinical nurse specialist who provides nursing services to Medicaid-eligible individuals receiving home and community-based services available under this subpart;

(B) A licensed or certified nursing assistant who provides such services under the supervision of a registered nurse, licensed practical nurse, nurse practitioner, or clinical nurse specialist;

(C) A direct support professional;

(D) A personal care attendant;

(E) A home health aide; or

(F) Other individuals who are paid to provide services to address activities of daily living or instrumental activities of daily living, behavioral supports, employment supports, or other services to promote community integration directly to Medicaid-eligible individuals receiving home and community-based services available under this subpart.

(G) A direct care worker may be employed by a Medicaid provider, State agency, or third party; contracted with a Medicaid provider, State agency, or third party; or delivering services under a self-directed service model.

(2) *Requirement.* The State must demonstrate, through the reporting requirements at § 441.311(e), that it meets the minimum performance levels in paragraph (k)(3) of this section for the services at § 440.180(b)(2) through (4) that are delivered by direct care workers and authorized under section 1915(c) of the Act.

(3) *Minimum performance at the State level.* The State must meet the following minimum performance level, calculated as the percentage of total payment for a service represented by total compensation to direct care workers:

(i) At least 80 percent of all payments with respect to services at § 440.180(b)(2) through (4) must be spent on compensation for direct care workers.

(ii) [Reserved]

(4) *Effective date.* This requirement is effective 4 years after the date of enactment of this paragraph; and in the case of the State that implements a managed care delivery system under the authority of sections 1915(a), 1915(b), 1932(a), or 1115(a) of the Act and includes HCBS in the MCO's, PIHP's, or PAHP's contract, the first managed care plan contract rating period that begins on or after 4 years after the date of enactment of this paragraph.

■ 9. Amend § 441.303 by revising paragraph (f)(6) to read as follows:

§ 441.303 Supporting documentation required.

* * * * *

(f) * * *

(6) The State must indicate the number of unduplicated beneficiaries to which it intends to provide waiver services in each year of its program. This number will constitute a limit on the size of the waiver program unless the State requests and the Secretary approves a greater number of waiver participants in a waiver amendment. If the State has a limit on the size of the waiver program and maintains a list of individuals who are waiting to enroll in the waiver program, the State must meet the reporting requirements at § 441.311(d)(1).

* * * * *

■ 10. Section 441.311 is added to subpart G to read as follows:

§ 441.311 Reporting requirements.

(a) *Basis and scope.* Section 1902(a)(6) of the Act requires State Medicaid agencies to make such reports, in such form and containing such information, as the Secretary may from time to time require, and to comply with such provisions as the Secretary may from time to time find necessary to assure the correctness and verification of such reports. Section 1902(a)(19) of the Act requires States to provide safeguards to assure that eligibility for Medicaid-covered care and services will be determined and provided in a manner that is consistent with simplification, simplicity of administration, and in the best interest of Medicaid beneficiaries. This section describes the reporting requirements for States for section 1915(c) waiver programs, under the authority at section 1902(a)(6) and (a)(19) of the Act.

(b) *Compliance reporting*—(1) *Incident management system.* As described in § 441.302(a)(6)—

(i) The State must report, every 24 months, according to the format and specifications provided by CMS, on the results of an incident management system assessment to demonstrate that it meets the requirements in § 441.302(a)(6).

(ii) CMS may reduce the frequency of reporting to up to once every 60 months for States with incident management systems that are determined by CMS to meet the requirements in § 441.302(a)(6).

(2) *Critical incidents,* as defined in § 441.302(a)(6)(i)(A). The State must report to CMS annually on the following, according to the format and specifications provided by CMS:

(i) Number and percent of critical incidents for which an investigation was initiated within State-specified timeframes;

(ii) Number and percent of critical incidents that are investigated and for which the State determines the resolution within State-specified timeframes;

(iii) Number and percent of critical incidents requiring corrective action, as determined by the State, for which the required corrective action has been completed within State-specified timeframes.

(3) *Person-centered planning,* as described in § 441.301(c)(1) through (3).

(i) Percent of beneficiaries continuously enrolled for at least 365 days for whom a reassessment of functional need was completed within the past 12 months. The State may report this metric for a statistically valid random sample of beneficiaries.

(ii) Percent of beneficiaries continuously enrolled for at least 365 days who had a service plan updated as a result of a re-assessment of functional need within the past 12 months. The State may report this metric for a statistically valid random sample of beneficiaries.

(4) The type, amount, and cost of services provided under the State plan.

(c) *Reporting on the Home and Community-Based Services Quality Measure Set,* as described in § 441.312.

(1) *General rules.* The State—

(i) Must report every other year, according to the format and schedule prescribed by the Secretary through the process for developing and updating the measure set described in § 441.312(d), on all measures in the Home and Community-Based Services Quality Measure Set that are identified by the Secretary pursuant to § 441.312(d)(1)(ii) of this subpart.

(ii) May report on all other measures in the Home and Community-Based Services Quality Measure Set that are not described in § 441.312(d)(1)(ii) and (iii) of this subpart.

(iii) Must establish, subject to CMS review and approval, State performance targets for each of the measures in the Home and Community-Based Services Quality Measure Set that are identified by the Secretary pursuant to § 441.312(d)(1)(ii) and (iii) of this subpart and describe the quality improvement strategies that the State will pursue to achieve the performance targets.

(iv) May establish State performance targets for each of the measures in the Home and Community-Based Services Quality Measure Set that are not identified by the Secretary pursuant to § 441.312(d)(1)(ii) and (iii) of this subpart and describe the quality improvement strategies that the State will pursue to achieve the performance targets.

(2) Measures identified per § 441.312(d)(1)(iii) of this subpart will be reported by the Secretary on behalf of the State.

(3) In reporting on Home and Community-Based Services Quality Measure Set measures, the State may, but is not required to:

(i) Report on the measures identified by the Secretary pursuant to § 441.312(c) of this subpart for which reporting will be, but is not yet required (that is, reporting has not yet been phased-in).

(ii) Report on the populations identified by the Secretary pursuant to § 441.312(c) of this subpart for whom reporting will be, but is not yet required.

(d) *Access reporting.* The State must report to CMS annually on the following, according to the format and specifications provided by CMS:

(1) *Waiver waiting lists.* (i) A description of how the State maintains the list of individuals who are waiting to enroll in the waiver program, if the State has a limit on the size of the waiver program, as described in § 441.303(f)(6), and maintains a list of individuals who are waiting to enroll in the waiver program. This description must include, but is not limited to:

(A) Information on whether the State screens individuals on the list for eligibility for the waiver program;

(B) Whether the State periodically re-screens individuals on the list for eligibility; and

(C) The frequency of re-screening, if applicable.

(ii) Number of people on the list of individuals who are waiting to enroll in the waiver program, if applicable.

(iii) Average amount of time that individuals newly enrolled in the waiver program in the past 12 months were on the list of individuals waiting to enroll in the waiver program, if applicable.

(2) *Access to homemaker services, home health aide, and personal care.* (i) Average amount of time from when homemaker services, home health aide services, or personal care services, as listed in § 440.180(b)(2) through (4), are initially approved to when services began, for individuals newly approved to begin receiving services within the past 12 months. The State may report this metric for a statistically valid random sample of beneficiaries.

(ii) Percent of authorized hours for homemaker services, home health aide services, or personal care services, as listed in § 440.180(b)(2) through (4), that are provided within the past 12 months. The State may report this metric for a statistically valid random sample of beneficiaries.

(e) *Payment adequacy.* The State must report to CMS annually on the percent of payments for certain services, as specified in § 441.302(k)(3)(i), that are spent on compensation for direct care workers, at the time and in the form and manner specified by CMS. The State must report separately for each service and, within each service, must separately report services that are self-directed.

(1) *Services.* The State must report on payment adequacy for the services at § 440.180(b)(2) through (4) that are authorized under section 1915(c) of the Act.

(2) [Reserved]

(f) *Effective date.* (1) The reporting requirements at paragraphs (b) through (d) of this section are effective 3 years after the date of enactment of this paragraph; and in the case of a State that implements a managed care delivery system under the authority of sections 1915(a), 1915(b), 1932(a), or 1115(a) of the Act and includes HCBS in the MCO's, PIHP's, or PAHP's contract, the first managed care plan contract rating period that begins on or after 3 years after the date of enactment of this paragraph.

(2) The reporting requirements at paragraph (e) of this section are effective 4 years after the date of enactment of this paragraph; and in the case of a State that implements a managed care delivery system under the authority of sections 1915(a), 1915(b), 1932(a), or 1115(a) of the Act and includes HCBS in the MCO's, PIHP's, or PAHP's contract, the first managed care plan contract rating period that begins on or after 4 years after the date of enactment of this paragraph.

■ 11. Section 441.312 is added to subpart G to read as follows:

§ 441.312 Home and Community-Based Services Quality Measure Set.

(a) *Basis and scope.* Section 1102(a) of the Act provides the Secretary of HHS with authority to make and publish rules and regulations that are necessary for the efficient administration of the Medicaid program. Section 1902(a)(6) of the Act requires State Medicaid agencies to make such reports, in such form and containing such information, as the Secretary may from time to time require, and to comply with such provisions as the Secretary may from time to time find necessary to assure the correctness and verification of such reports. This section describes the Home and Community-Based Services Quality Measure Set, which States are required to use in section 1915(c) waiver programs to promote public transparency related to the administration of Medicaid covered HCBS, under the authority at sections 1102(a) and 1902(a)(6) of the Act.

(b) *Definitions.* As used in this subpart—

Attribution rules means the process States use to assign beneficiaries to a specific health care program or delivery system for the purpose of calculating the measures on the Home and Community-Based Services Quality Measure Set.

Home and Community-Based Services Quality Measure Set means the Home and Community-Based Services Quality Measures for Medicaid established and updated at least every other year by the Secretary through a process that allows for public input and comment,

including through the **Federal Register**, as described in paragraph (d) of this section.

(c) *Responsibilities of the Secretary.* The Secretary shall—

(1) Identify, and update at least every other year, beginning no later than December 31, 2025 and biennially thereafter, the quality measures to be included in the Home and Community-Based Services Quality Measure Set as defined in paragraph (b) of this section.

(2) Consult at least every other year with States and other interested parties identified in paragraph (g) of this section to—

(i) Establish priorities for the development and advancement of the Home and Community-Based Services Quality Measure Set;

(ii) Identify newly developed or other measures which should be added including to address any gaps in the measures included in the Home and Community-Based Services Quality Measure Set;

(iii) Identify measures which should be removed as they no longer strengthen the Home and Community-Based Services Quality Measure Set; and

(iv) Ensure that all measures included in the Home and Community-Based Services Quality Measure Set reflect an evidence-based process including testing, validation, and consensus among interested parties; are meaningful for States; are feasible for State-level, program-level, or provider-level reporting as appropriate.

(3) In consultation with States, develop and update, at least every other year, the HCBS Quality Measure Set using a process that allows for public input and comment as described in paragraph (d) of this section.

(d) *Process for developing and updating the HCBS Quality Measure Set.* The process for developing and updating the HCBS Quality Measure Set will address all of the following:

(1) Identification of all measures in the Home and Community-Based Services Quality Measure Set, including:

(i) Measures newly added and measures removed from the prior version of the Home and Community-Based Services Quality Measure Set;

(ii) The specific measures for which reporting is mandatory;

(iii) The measures for which the Secretary will complete reporting on behalf of States and the measures for which States may elect to have the Secretary report on their behalf; and

(iv) The measures, if any, for which the Secretary will provide States with additional time to report, as well as how much additional time the Secretary will provide, in accordance with paragraph (c) of this section.

(2) Technical information to States on how to collect and calculate the data on the Home and Community-Based Services Quality Measure Set.

(3) Standardized format and reporting schedule for reporting measure data required under this section.

(4) Procedures that State agencies must follow in reporting measure data required under this section.

(5) Identification of the populations for which States must report the measures identified by the Secretary under paragraph (e) of this section, which may include, but is not limited to beneficiaries—

(i) Receiving services through specified delivery systems, such as those enrolled in a managed care plan or receiving services on a fee-for-service basis;

(ii) Who are dually eligible for Medicare and Medicaid, including beneficiaries whose medical assistance is limited to payment of Medicare premiums or cost sharing;

(iii) Who are older adults;

(iv) Who have physical disabilities;

(v) Who have intellectual and development disabilities;

(vi) Who have serious mental illness; and

(vii) Who have other health conditions.

(6) Technical information on attribution rules for determining how States must report on measures for beneficiaries who are included in more than one population, as described in paragraph (d)(5) of this section, during the reporting period.

(7) The subset of measures among the measures in the Home and Community-Based Services Quality Measure Set that must be stratified by race, ethnicity, sex, age, rural/urban status, disability, language, Tribal status, or such other factors as may be specified by the Secretary and informed by consultation every other year with States and interested parties in accordance with paragraph (b)(2) and subsection (g) of this section.

(8) Describe how to establish State performance targets for each of the measures in the Home and Community-Based Services Quality Measure Set.

(e) *Phasing in of certain reporting.* As part of the process that allows for developing and updating the Home and Community-Based Services Quality Measure Set described in paragraph (d) of this section, the Secretary may provide that mandatory State reporting for certain measures and reporting for certain populations of beneficiaries will be phased in over a specified period of time, taking into account the level of complexity required for such State reporting.

(f) *Selection of measures for stratification.* In specifying which measures, and by which factors, States must report stratified measures consistent with paragraph (d)(7) of this section, the Secretary will take into account whether stratification can be accomplished based on valid statistical methods and without risking a violation of beneficiary privacy and, for measures obtained from surveys, whether the original survey instrument collects the variables necessary to stratify the measures, and such other factors as the Secretary determines appropriate; the Secretary will require stratification of 25 percent of the measures in the Home and Community-Based Services Quality Measure Set for which the Secretary has specified that reporting should be stratified by 3 years after the effective date of these regulations, 50 percent of such measures by 5 years after the effective date of these regulations, and 100 percent of measures by 7 years after the effective date of these regulations.

(g) *Consultation with interested parties.* For purposes of paragraph (c)(2) of this section, the Secretary must consult with interested parties as described in this paragraph to include the following:

(1) State Medicaid Agencies and agencies that administer Medicaid-covered home and community-based services.

(2) Health care and home and community-based services professionals, including members of the allied health professions who specialize in the care and treatment of older adults, children and adults with disabilities, and individuals with complex medical needs.

(3) Health care and home and community-based services professionals (including members of the allied health professions), providers, and direct care workers who provide services to older adults, children and adults with disabilities, and individuals with complex medical and behavioral health care needs who live in urban and rural medically underserved communities or who are members of distinct population sub-groups at heightened risk for poor outcomes.

(4) Providers of home and community-based services.

(5) Direct care workers and national organizations representing direct care workers.

(6) Consumers and national organizations representing older adults, children and adults with disabilities,

and individuals with complex medical needs.

(7) National organizations and individuals with expertise in home and community-based services quality measurement.

(8) Voluntary consensus standards setting organizations and other organizations involved in the advancement of evidence-based measures of health care.

(9) Measure development experts.

(10) Such other interested parties as the Secretary may determine appropriate.

■ 12. Section 441.313 is added to subpart G to read as follows:

§ 441.313 website transparency.

(a) The State must operate a website consistent with § 435.905(b) of this chapter that provides the results of the reporting requirements specified at § 441.311. The State must:

(1) Include all content on one web page, either directly or by linking to individual managed care organization, prepaid ambulatory health plan, prepaid inpatient health plan, and primary care case management, as defined in part 438, entity websites;

(2) Include clear and easy to understand labels on documents and links;

(3) Verify no less than quarterly, the accurate function of the website and the timeliness of the information and links; and

(4) Include prominent language on the website explaining that assistance in accessing the required information on the website is available at no cost and include information on the availability of oral interpretation in all languages and written translation available in each non-English language, how to request auxiliary aids and services, and a toll-free and TTY/TDY telephone number.

(b) CMS must report on its website the results of the reporting requirements specified at § 441.311 that the State reports to CMS.

(c) These requirements are effective 3 years after the date of enactment of this paragraph; and in the case of the State that implements a managed care delivery system under the authority of sections 1915(a), 1915(b), 1932(a), and 1115(a) of the Act and includes HCBS in the MCO's, PIHP's, or PAHP's contract, the first managed care plan contract rating period that begins on or after 3 years after the date of enactment of this paragraph.

■ 13. Amend § 441.450 in paragraph (c) by adding, in alphabetical order, the definition of ''Service plan'' to read as follows:

§ 441.450 Basis, scope, and definitions.

* * * * *

(c) * * *

Service plan means the written document that specifies the services and supports (regardless of funding source) that are to be furnished to meet the needs of a participant in the self-directed PAS option and to assist the participant to direct the PAS and to live in the community. The service plan is developed based on the assessment of need using a person-centered and directed process. The service plan supports the participant's engagement in community life and respects the participant's preferences, choices, and abilities. The participant's representative, if any, families, friends, and professionals, as desired or required by the participant, will be involved in the service-planning process. Service plans must meet the requirements of § 441.301(c)(3).

* * * * *

■ 14. Amend § 441.464 by–

■ a. Revising paragraph (d)(2)(v);

■ b. Redesignating current paragraphs (e) and (f) as paragraphs (g) and (h); and

■ c. Adding a new paragraphs (e) and (f).

The revisions and additions read as follows:

§ 441.464 State assurances.

* * * * *

(d) * * *

(2) * * *

(v) Grievance process, as defined in § 441.301(c)(7) when self-directed PAS include services under a section 1915(c) waiver program.

* * * * *

(e) *Incident management system.* The State operates and maintains an incident management system that identifies, reports, triages, investigates, resolves, tracks, and trends critical incidents and adheres to requirements of § 441.302(a)(6).

(f) *Payment rates* are adequate to ensure a sufficient direct care workforce to meet the needs of beneficiaries and provide access to services in the amount, duration, and scope specified in the person-centered service plan, in accordance with § 441.302(k).

* * * * *

■ 15. Amend § 441.474 by adding paragraph (c) to read as follows:

§ 441.474 Quality assurance and improvement plan.

* * * * *

(c) The quality assurance and improvement plan must comply with all components of §§ 441.311 and 441.312 and related reporting requirements relevant to the State's self-directed PAS program.

* * * * *

■ 16. Section 441.486 is added to subpart J to read as follows:

§ 441.486 website transparency.

For States subject to the requirements of subpart J, the State must operate a website consistent with § 441.313.

■ 17. Amend § 441.540 by revising paragraph (c) to read as follows:

§ 441.540 Person-centered service plan.

* * * * *

(c) *Reviewing the person-centered service plan.* The State must ensure that the person-centered service plan is reviewed, and revised, as appropriate, based upon the reassessment of functional need, at least every 12 months, when the individual's circumstances or needs change significantly, and at the request of the individual. States must adhere to the requirements of § 441.301(c)(3).

* * * * *

■ 18. Amend § 441.555 by revising paragraph (b)(2)(iv) to read as follows:

§ 441.555 Support system.

* * * * *

(b) * * *

(2) * * *

(iv) Grievance process, as defined in § 441.301(c)(7).

* * * * *

■ 19. Amend § 441.570 by adding paragraphs (e) and (f) to read as follows:

§ 441.570 State assurances.

* * * * *

(e) An incident management system in accordance with § 441.302(a)(6) is implemented.

(f) Payment rates are adequate to ensure a sufficient direct care workforce to meet the needs of beneficiaries and provide access to services in the amount, duration, and scope specified in the person-centered service plan, in accordance with § 441.302(k).

■ 20. Amend § 441.580 by redesignating paragraph (i) as (j), and adding a new paragraph (i) to read as follows:

§ 441.580 Data collection.

* * * * *

(i) Data and information as required in § 441.311.

* * * * *

■ 21. Amend § 441.585 by adding paragraph (d) to read as follows:

§ 441.585 Quality assurance system.

* * * * *

(d) The State must implement the Home and Community-Based Services Quality Measure Set in accordance with § 441.312.

■ 22. Section 441.595 is added to subpart K to read as follows—

§ 441.595 website transparency.

For States subject to the requirements of subpart K, the State must operate a website consistent with § 441.313.

■ 23. Amend § 441.725 by revising paragraph (c) to read as follows:

§ 441.725 Person-centered service plan.

* * * * *

(c) Reviewing the person-centered service plan. The State must ensure that the person-centered service plan is reviewed, and revised, as appropriate, based upon the reassessment of functional need as required in § 441.720, at least every 12 months, when the individual's circumstances or needs change significantly, and at the request of the individual. States must adhere to the requirements of § 441.301(c)(3).

* * * * *

■ 24. Amend § 441.745 by—

■ a. Redesignating paragraph (a)(1)(iii) as paragraph (a)(1)(iv);

■ b. Adding new paragraphs (a)(iii) and (a)(v) through (vii);

■ c. Revising paragraph (b)(1)(i); and

■ d. Adding paragraph (b)(1)(v).

The revision and additions read as follows:

§ 441.745 State plan HCBS administration: State responsibilities and quality improvement.

* * * * *

(a) * * *

(1) * * *

(iii) *Grievances.* A State must provide individuals with the opportunity to file a grievance as defined in section § 441.301(c)(7).

* * * * *

(v) A State must implement an incident management system in accordance with § 441.302(a)(6).

(vi) A State must assure payment rates are adequate to ensure a sufficient direct care workforce to meet the needs of beneficiaries and provide access to services in the amount, duration, and scope specified in the person-centered service plan, in accordance with § 441.302(k).

(vii) A State must assure the submission of data and information as required in § 441.311.

* * * * *

(b) * * *

(1) * * *

(i) Incorporate a continuous quality improvement process that includes monitoring, remediation, and quality improvement, including recognizing and reporting critical incidents, as defined in § 441.302(a)(6)(i)(A).

* * * * *

(v) Implementation of the Home and Community-Based Services Quality Measure Set in accordance with § 441.312.

* * * * *

■ 25. Section § 441.750 is added to subpart M to read as follows—

§ 441.750 Website transparency.

For States subject to the requirements of subpart M, the State must operate a website consistent with § 441.313.

* * * * *

PART 447—PAYMENT FOR SERVICES

■ 26. The authority citation for part 447 is revised to read as follows:

Authority: 42 U.S.C. 1302, and 1396r–8, and Pub. L. 111–148.

■ 27. Amend § 447.203 by revising paragraph (b) and adding paragraph (c) to read as follows:

§ 447.203 Documentation of access to care and service payment rates.

* * * * *

(b)(1) *Payment rate transparency.* The State agency is required to publish all Medicaid fee-for-service payment rates on a website developed and maintained by the single State agency that is accessible to the general public. Published Medicaid fee-for-service payment rates include fee schedule payment rates made to providers delivering Medicaid services to Medicaid beneficiaries through a fee-for-service delivery system. The website where the State agency publishes its Medicaid fee-for-service payment rates must be easily reached from a hyperlink on the State Medicaid agency's website. Medicaid fee-for-service payment rates must be organized in such a way that a member of the public can readily determine the amount that Medicaid would pay for the service and, in the case of a bundled or similar payment methodology, identify each constituent service included within the rate and how much of the bundled payment is allocated to each constituent service under the State's methodology. If the rates vary, the State must separately identify the Medicaid fee-for-service payment rates by population (pediatric and adult), provider type, and geographical location, as applicable. The initial publication of the Medicaid fee-for-service payment rates shall occur no later than January 1, 2026 and include approved Medicaid fee-for-service payment rates in effect as of January 1, 2026. The agency is required to include the date the payment rates were last updated on the State Medicaid agency's website and to ensure these data are kept current where any necessary update must be made no later than 1 month following the date of CMS approval of the State plan amendment, section 1915(c) HCBS waiver amendment, or similar amendment revising the provider payment rate or methodology. In the event of a payment rate change that occurs in accordance with a previously approved rate methodology, the State will update its payment rate transparency publication no later than 1 month after the effective date of the most recent update to the payment rate.

(2) *Comparative payment rate analysis and payment rate disclosure.* The State agency is required to develop and publish a comparative payment rate analysis of Medicaid payment rates for each of the following categories of services in paragraphs (b)(2)(i) through (iii) of this section and a payment rate disclosure of Medicaid payment rates for each of the following categories of services in paragraph (b)(2)(iv) of this section, as specified in paragraph (b)(3) of this section. If the rates vary, the State must separately identify the payment rates by population (pediatric and adult), provider type, and geographical location, as applicable.

(i) Primary care services.

(ii) Obstetrical and gynecological services.

(iii) Outpatient behavioral health services.

(iv) Personal care, home health aide, and homemaker services, as specified in § 440.180(b)(2) through (4), provided by individual providers and providers employed by an agency.

(3) *Comparative payment rate analysis and payment rate disclosure requirements.* The State agency must develop and publish, consistent with the publication requirements described in paragraph (b)(1) of this section for payment rate transparency data, a comparative payment rate analysis and a payment rate disclosure.

(i) For the categories of services described in paragraph (b)(2)(i) through (iii) of this section, the comparative payment rate analysis must compare the State agency's Medicaid fee-for-service payment rates to the most recently published Medicare payment rates effective for the same time period for the evaluation and management (E/M) codes applicable to the category of service. The State must conduct the comparative payment rate analysis at the Current Procedural Terminology (CPT) or Healthcare Common Procedure Coding System (HCPCS) code level, as applicable, using the most current set of codes published by CMS, and the analysis must meet the following requirements:

(A) The State must organize the analysis by category of service as described in paragraphs (b)(2)(i) through (iii) of this section.

(B) The analysis must clearly identify the Medicaid base payment rates for each E/M CPT/HCPCS code identified by CMS under the applicable category of service, including, if the rates vary, separate identification of the payment rates by population (pediatric and adult), provider type, and geographical location, as applicable.

(C) The analysis must clearly identify the Medicare non-facility payment rates effective for the same time period for the same set of E/M CPT/HCPCS codes, and for the same geographical location as the Medicaid base payment rates, that correspond to the Medicaid base payment rates identified under paragraph (b)(3)(i)(B) of this section, including, separate identification of the payment rates by provider type.

(D) The analysis must specify the Medicaid base payment rate identified under paragraph (b)(3)(i)(B) of this section as a percentage of the Medicare non-facility payment rate identified under paragraph (b)(3)(i)(C) of this section for each of the services for which the Medicaid base payment rate is published pursuant to paragraph (b)(3)(i)(B) of this section.

(E) The analysis must specify the number of Medicaid-paid claims and the number of Medicaid enrolled beneficiaries who received a service within a calendar year for each of the services for which the Medicaid base payment rate is published pursuant to paragraph (b)(3)(i)(B) of this section.

(ii) For each category of services specified in paragraph (b)(2)(iv) of this section, the State agency is required to publish a payment rate disclosure that expresses the State's payment rates as the average hourly payment rates, separately identified for payments made to individual providers and to providers employed by an agency, if the rates vary. The payment rate disclosure must meet the following requirements:

(A) The State must organize the payment rate disclosure by category of service as specified in paragraph (b)(2)(iv) of this section.

(B) The disclosure must identify the average hourly payment rates by applicable category of service, including, if the rates vary, separate identification of the average hourly payment rates for payments made to individual providers and to providers employed by an agency, by population (pediatric and adult), provider type, and geographical location, as applicable.

(C) The disclosure must identify the number of Medicaid-paid claims and the number of Medicaid enrolled beneficiaries who received a service within a calendar year for each of the services for which the average hourly payment rates are published pursuant to paragraph (b)(3)(ii)(B) of this section.

(4) *Comparative payment rate analysis and payment rate disclosure timeframe.* The State agency must publish the initial comparative payment rate analysis and payment rate disclosure of its Medicaid payment rates in effect as of January 1, 2025 as required under paragraphs (b)(2) and (b)(3) of this section, by no later than January 1, 2026. Thereafter, the State agency must update the comparative payment rate analysis and payment rate disclosure no less than every 2 years, by no later than January 1 of the second year following the most recent update. The comparative payment rate analysis and payment rate disclosure must be published consistent with the publication requirements described in paragraph (b)(1) of this section for payment rate transparency data.

(5) *Compliance with payment rate transparency, comparative payment rate analysis, and payment rate disclosure requirements.* If a State fails to comply with the payment rate transparency, comparative payment rate analysis, and payment rate disclosure requirements in paragraphs (b)(1) through (b)(4) of this section, including requirements for the time and manner of publication, future grant awards may be reduced under the procedures set forth at 42 CFR part 430, subparts C and D by the amount of FFP CMS estimates is attributable to the State's administrative expenditures relative to the total expenditures for the categories of services specified in paragraph (b)(2) of this section for which the State has failed to comply with applicable requirements, until such time as the State complies with the requirements. Unless otherwise prohibited by law, deferred FFP for those expenditures will be released after the State has fully complied with all applicable requirements.

(6) *Interested parties advisory group for rates paid for certain services.* (i) The State agency must establish an advisory group for interested parties to advise and consult on provider rates with respect to service categories under the Medicaid State plan, 1915(c) waiver, and demonstration programs, as applicable, where payments are made to the direct care workers specified in § 441.302(k)(1)(ii) for the self-directed or agency-directed services found at § 440.180(b)(2) through (4).

(ii) The interested parties advisory group must include, at a minimum, direct care workers, beneficiaries, beneficiaries' authorized representatives, and other interested parties impacted by the services rates in question, as determined by the State.

(iii) The interested parties advisory group will advise and consult with the Medicaid agency on current and proposed payment rates, HCBS payment adequacy data as required at § 441.311(e), and access to care metrics described in § 441.311(d)(2), associated with services found at § 440.180(b)(2) through (4), to ensure the relevant Medicaid payment rates are sufficient to ensure access to personal care, home health aide, and homemaker services for Medicaid beneficiaries at least as great as available to the general population in the geographic area and to ensure an adequate number of qualified direct care workers to provide self-directed personal assistance services.

(iv) The interested parties advisory group shall meet at least every 2 years and make recommendations to the Medicaid agency on the sufficiency of State plan, 1915(c) waiver, and demonstration direct care worker payment rates, as applicable. The State agency will ensure the group has access to current and proposed payment rates, HCBS provider payment adequacy minimum performance and reporting standards as described in § 441.311(e), and applicable access to care metrics as described in § 441.311(d)(2) for HCBS in order to produce these recommendations. The process by which the State selects interested party advisory group members and convenes its meetings must be made publicly available.

(v) The Medicaid agency must publish the recommendations produced under paragraph (b)(6)(iv) of the interested parties advisory group consistent with the publication requirements described in paragraph (b)(1) of this section for payment rate transparency data, within 1 month of when the group provides the recommendation to the agency.

(c)(1) *Initial State analysis for rate reduction or restructuring.* For any State plan amendment that proposes to reduce provider payment rates or restructure provider payments in circumstances when the changes could result in diminished access where the criteria in paragraphs (c)(1)(i) through (iii) of this section are met, the State agency must provide written assurance and relevant supporting documentation that the following conditions are met as well as a description of the State's procedures for monitoring continued compliance with section 1902(a)(30)(A) of the Act, as part of the State plan amendment submission in a format

prescribed by CMS as a condition of approval:

(i) Medicaid payment rates in the aggregate (including base and supplemental payments) following the proposed reduction or restructuring for each benefit category affected by the proposed reduction or restructuring would be at or above 80 percent of the most recently published Medicare payment rates for the same or a comparable set of Medicare-covered services.

(ii) The proposed reduction or restructuring, including the cumulative effect of all reductions or restructurings taken throughout the current State fiscal year, would be likely to result in no more than a 4 percent reduction in aggregate fee-for-service Medicaid expenditures for each benefit category affected by proposed reduction or restructuring within a State fiscal year.

(iii) The public processes described in paragraph (c)(4) of this section and § 447.204 of this part yielded no significant access to care concerns from beneficiaries, providers, or other interested parties regarding the service(s) for which the payment rate reduction or payment restructuring is proposed, or if such processes did yield concerns, the State can reasonably respond to or mitigate the concerns, as appropriate, as documented in the analysis provided by the State pursuant to § 447.204(b)(3).

(2) *Additional State rate analysis.* For any State plan amendment that proposes to reduce provider payment rates or restructure provider payments in circumstances when the changes could result in diminished access where the requirements in paragraphs (c)(1)(i) through (iii) of this section are not met, the State must also provide the following to CMS as part of the State plan amendment submission as a condition of approval, in addition to the information required under paragraph (c)(1) of this section, in a format prescribed by CMS:

(i) A summary of the proposed payment change, including the State's reason for the proposal and a description of any policy purpose for the proposed change, including the cumulative effect of all reductions or restructurings taken throughout the current State fiscal year in aggregate fee-for-service Medicaid expenditures for each benefit category affected by proposed reduction or restructuring within a State fiscal year.

(ii) Medicaid payment rates in the aggregate (including base and supplemental payments) before and after the proposed reduction or restructuring for each benefit category affected by proposed reduction or restructuring, and a comparison of each (aggregate Medicaid payment before and after the reduction or restructuring) to the most recently published Medicare payment rates for the same or a comparable set of Medicare-covered services and, as reasonably feasible, to the most recently available payment rates of other health care payers in the State or the geographic area for the same or a comparable set of covered services.

(iii) Information about the number of actively participating providers of services in each benefit category affected by the proposed reduction or restructuring. For this purpose, an actively participating provider is a provider that is participating in the Medicaid program and actively seeing and providing services to Medicaid beneficiaries or accepting Medicaid beneficiaries as new patients. The State must provide the number of actively participating providers of services in each affected benefit category for each of the 3 years immediately preceding the State plan amendment submission date, by State-specified geographic area (for example, by county or parish), provider type, and site of service. The State must document observed trends in the number of actively participating providers in each geographic area over this period. The State may provide estimates of the anticipated effect on the number of actively participating providers of services in each benefit category affected by the proposed reduction or restructuring, by geographic area.

(iv) Information about the number of Medicaid beneficiaries receiving services through the FFS delivery system in each benefit category affected by the proposed reduction or restructuring. The State must provide the number of beneficiaries receiving services in each affected benefit category for each of the 3 years immediately preceding the State plan amendment submission date, by State-specified geographic area (for example, by county or parish). The State must document observed trends in the number of Medicaid beneficiaries receiving services in each affected benefit category in each geographic area over this period. The State must provide quantitative and qualitative information about the beneficiary populations receiving services in the affected benefit categories over this period, including the number and proportion of beneficiaries who are adults and children and who are living with disabilities, and a description of the State's consideration of the how the proposed payment changes may affect access to care and service delivery for beneficiaries in various populations. The State must provide estimates of the anticipated effect on the number of Medicaid beneficiaries receiving services through the FFS delivery system in each benefit category affected by the proposed reduction or restructuring, by geographic area.

(v) Information about the number of Medicaid services furnished through the FFS delivery system in each benefit category affected by the proposed reduction or restructuring. The State must provide the number Medicaid services furnished in each affected benefit category for each of the 3 years immediately preceding the State plan amendment submission date, by State-specified geographic area (for example, by county or parish), provider type, and site of service. The State must document observed trends in the number of Medicaid services furnished in each affected benefit category in each geographic area over this period. The State must provide quantitative and qualitative information about the Medicaid services furnished in the affected benefit categories over this period, including the number and proportion of Medicaid services furnished to adults and children and who are living with disabilities, and a description of the State's consideration of the how the proposed payment changes may affect access to care and service delivery. The State must provide estimates of the anticipated effect on the number of Medicaid services furnished through the FFS delivery system in each benefit category affected by the proposed reduction or restructuring, by geographic area.

(vi) A summary of, and the State's response to, any access to care concerns or complaints received from beneficiaries, providers, and other interested parties regarding the service(s) for which the payment rate reduction or restructuring is proposed as required under § 447.204(a)(2).

(3) *Compliance with requirements for State analysis for rate reduction or restructuring.* A State that submits a State plan amendment that proposes to reduce provider payment rates or restructure provider payments in circumstances when the changes could result in diminished access that fails to provide the information and analysis to support approval as specified in paragraphs (c)(1) and (2) of this section, as applicable, may be subject to State plan amendment disapproval under § 430.15(c) of this chapter. Additionally, States that submit relevant information, but where there are unresolved access to care concerns related to the proposed

State plan amendment, including any raised by CMS in its review of the proposal and any raised through the public process as specified in paragraph (c)(4) of this section or under § 447.204(a)(2), may be subject to State plan amendment disapproval. If State monitoring of beneficiary access after the payment rate reduction or restructuring takes effect shows a decrease in Medicaid access to care, such as a decrease in the provider-to-beneficiary ratio for any affected service, or the State or CMS experiences an increase in beneficiary or provider complaints or concerns about access to care that suggests possible noncompliance with the access requirements in section 1902(a)(30)(A) of the Act, CMS may take a compliance action using the procedures described in § 430.35 of this chapter.

(4) *Mechanisms for ongoing beneficiary and provider input.* (i) States must have ongoing mechanisms for beneficiary and provider input on access to care (through hotlines, surveys, ombudsman, review of grievance and appeals data, or another equivalent mechanisms), consistent with the access requirements and public process described in § 447.204.

(ii) States should promptly respond to public input through these mechanisms citing specific access problems, with an appropriate investigation, analysis, and response.

(iii) States must maintain a record of data on public input and how the State responded to this input. This record will be made available to CMS upon request.

(5) *Addressing access questions and remediation of inadequate access to care.* When access deficiencies are identified, the State must, within 90 days after discovery, submit a corrective action plan with specific steps and timelines to address those issues. While the corrective action plan may include longer-term objectives, remediation of the access deficiency should take place within 12 months.

(i) The State's corrective actions may address the access deficiencies through a variety of approaches, including, but not limited to: Increasing payment rates, improving outreach to providers, reducing barriers to provider enrollment, providing additional transportation to services, providing for telemedicine delivery and telehealth, or improving care coordination.

(ii) The resulting improvements in access must be measured and sustainable.

(6) *Compliance actions for access deficiencies.* To remedy an access deficiency, CMS may take a compliance action using the procedures described at § 430.35 of this chapter.

■ 28. Amend § 447.204 by—

■ a. Revising paragraphs (a)(1) and (b); and

■ b. Removing paragraph (d).

The revisions read as follows:

§ 447.204 Medicaid provider participation and public process to inform access to care.

(a) * * *

(1) The data collected, and the State analysis performed, under § 447.203(c).

* * * * *

(b) The State must submit to CMS with any such proposed State plan amendment affecting payment rates documentation of the information and analysis required under § 447.203(c) of this chapter.

* * * * *

Dated: April 24, 2023.

Medicaid Program; Medicaid and Children's Health Insurance Program (CHIP) Managed Care Access, Finance, and Quality

AGENCY: Centers for Medicare & Medicaid Services (CMS), Department of Health and Human Services (HHS).

ACTION: Proposed rule.

SUMMARY: This proposed rule would advance CMS' efforts to improve access to care, quality and health outcomes, and better address health equity issues for Medicaid and Children's Health Insurance Program (CHIP) managed care enrollees. The proposed rule would specifically address standards for timely access to care and States' monitoring and enforcement efforts, reduce burden for some State directed payments and certain quality reporting requirements, add new standards that would apply when States use in lieu of services and settings (ILOSs) to promote effective utilization and specify the scope and nature of ILOS, specify medical loss ratio (MLR) requirements, and establish a quality rating system for Medicaid and CHIP managed care plans.

DATES: To be assured consideration, comments must be received at one of the addresses provided below, by July 3, 2023.

ADDRESSES: In commenting, please refer to file code CMS–2439–P.

Comments, including mass comment submissions, must be submitted in one of the following three ways (please choose only one of the ways listed):

1. *Electronically.* You may submit electronic comments on this regulation to *http://www.regulations.gov.* Follow the ''Submit a comment'' instructions.

2. *By regular mail.* You may mail written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–2439–P, P.O. Box 8016, Baltimore, MD 21244–8016.

Please allow sufficient time for mailed comments to be received before the close of the comment period.

3. *By express or overnight mail.* You may send written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–2439–P, Mail Stop C4–26–05, 7500 Security Boulevard, Baltimore, MD 21244–1850.

For information on viewing public comments, see the beginning of the **SUPPLEMENTARY INFORMATION** section.

SUPPLEMENTARY INFORMATION: *Inspection of Public Comments:* All comments received before the close of the comment period are available for viewing by the public, including any personally identifiable or confidential business information that is included in a comment. We post all comments received before the close of the comment period on the following website as soon as possible after they have been received: *http://www.regulations.gov.* Follow the search instructions on that website to view public comments. CMS will not post on *Regulations.gov* public comments that make threats to individuals or institutions or suggest that the individual will take actions to harm the individual. CMS continues to encourage individuals not to submit duplicative comments. We will post acceptable comments from multiple unique commenters even if the content is identical or nearly identical to other comments.

Table of Contents

Applicability and Complicace Timeframes

CMS proposes that the proposed new requirements would be applicable, and therefore, States required to comply by the effective date of the final rule or as otherwise specified in regulatory text.

I. Medicaid and CHIP Managed Care

A. Background

As of September 2022, the Medicaid program provided essential health care coverage to more than 83 million [1] individuals, and, in 2020, had annual outlays of more than $671 billion. In 2021, the Medicaid program accounted for 17 percent of national health expenditures.[2] The program covers a broad array of health benefits and services critical to underserved populations, including low-income adults, children, parents, pregnant individuals, the elderly, and people with disabilities. For example, Medicaid pays for approximately 42 percent of all births in the U.S.[3] and is the largest payer of long-term services and supports (LTSS),[4] services to treat substance use disorder, and services to prevent and treat the Human Immunodeficiency Virus.[5]

Ensuring beneficiaries can access covered services is a crucial element of the Medicaid program. Depending on the State and its Medicaid program structure, beneficiaries access their health care services using a variety of care delivery systems; for example, fee-for-service (FFS) and managed care, including through demonstrations and waiver programs. In 2020, 72 percent [6]

[6] MACPAC 2022 Analysis of T–MSIS data February 2022. Exhibit 30. Percentage of Medicaid Enrollees in Managed Care by State and Eligibility

of Medicaid beneficiaries were enrolled in comprehensive managed care plans; the remaining individuals received all of their care or some services that have been carved out of managed care through FFS.

With a program as large and complex as Medicaid, to promote consistent access to health care for all beneficiaries across all types of care delivery systems in accordance with statutory requirements, access regulations need to be multi-factorial. Strategies to enhance access to health care services should reflect how people move through and interact with the health care system. We view the continuum of health care access across three dimensions of a person-centered framework: (1) enrollment in coverage; (2) maintenance of coverage; and (3) access to services and supports. Within each of these dimensions, accompanying regulatory, monitoring, and/or compliance actions may be needed to ensure access to health care is achieved and maintained.

In early 2022, we released a request for information (RFI)[7] to collect feedback on a broad range of questions that examined topics such as: challenges with eligibility and enrollment; ways we can use data available to measure, monitor, and support improvement efforts related to access to services; strategies we can implement to support equitable and timely access to providers and services; and opportunities to use existing and new access standards to help ensure that Medicaid and Children's Health Insurance Program (CHIP) payments are sufficient to enlist enough providers. Some of the most common feedback we received through the RFI related to promoting cultural competency in access to and the quality of services for beneficiaries across all dimensions of health care and using payment rates as a driver to increase provider participation in Medicaid and CHIP programs. Commenters were also interested in opportunities to align approaches for payment regulation and compliance across Medicaid and CHIP delivery systems and services.

As noted above, the first dimension of access focuses on ensuring that eligible people are able to enroll in the Medicaid program. Access to Medicaid enrollment requires that a potential beneficiary know if they are or may be eligible for Medicaid, be aware of Medicaid coverage options, and be able to easily apply for and enroll in coverage. The second dimension of access in this continuum relates to maintaining coverage once the beneficiary is enrolled in the Medicaid program initially. Maintaining coverage requires that eligible beneficiaries are able to stay enrolled in the program without interruption, or that they know how to and can smoothly transition to other health coverage, such as CHIP, Exchange coverage, or Medicare, when they are no longer eligible for Medicaid coverage. In September 2022, we published a proposed rule, *Streamlining the Medicaid, Children's Health Insurance Program, and Basic Health Program Application, Eligibility, Determination,* Enrollment, *and Renewal Processes* (87 FR 54760; hereinafter the ''Streamlining Eligibility & Enrollment proposed rule'') to simplify the processes for eligible individuals to enroll and retain eligibility in Medicaid, CHIP, and the Basic Health Program (BHP).

The third dimension, which is the focus of this proposed rule, is access to services and supports. This rule is focused on addressing additional critical elements of access: (1) potential access (for example, provider availability and network adequacy); (2) beneficiary utilization (the use of health care and health services); and (3) beneficiaries' perceptions and experiences with the care they did or did not receive. These terms and definitions build upon our previous efforts to examine how best to monitor access.[8]

In addition to the three proposed rules (the Streamlining Eligibility & Enrollment proposed rule, this proposed rule on managed care, and Medicaid Program; Ensuring Access to Medicaid Services proposed rule), we are also engaged in non-regulatory activities (for example, best practices toolkits and technical assistance to States) to improve access to health care services across Medicaid delivery systems. As noted earlier, the Streamlining Eligibility & Enrollment proposed rule addresses the first two dimensions of access to health care: (1) enrollment in coverage and (2) maintenance of coverage. Through that proposed rule, we sought to streamline Medicaid, CHIP and BHP eligibility and enrollment processes, reduce administrative burden on States and applicants toward a more seamless eligibility and enrollment process, and increase the enrollment and retention of eligible individuals. Through the Ensuring Access to Medicaid Services proposed rule, and this proposed rule involving managed care, we outline additional proposed steps to address the third dimension of the health care access continuum: access to services, while also in this rule addressing quality and financing of services in the managed care context. We seek to address a range of access-related challenges that impact how beneficiaries are served by Medicaid across all of its delivery systems.

The use of managed care in Medicaid has grown from 81 percent in 2016 to 84 percent in 2020,[9] with 72 percent of Medicaid beneficiaries enrolled in comprehensive managed care organizations in 2020. We note that States may implement a Medicaid managed care delivery system using four Federal authorities—sections 1915(a), 1915(b), 1932(a), and 1115(a) of the Social Security Act (the Act); each is described briefly below.

Under section 1915(a) of the Act, States can implement a voluntary managed care program by executing a contract with organizations that the State has procured using a competitive procurement process. To require beneficiaries to enroll in a managed care program to receive services, a State must obtain approval from CMS under two primary authorities:

- Through a State plan amendment (SPA) that meets standards set forth in section 1932(a) of the Act, States can implement a mandatory managed care delivery system. This authority does not allow States to require beneficiaries who are dually eligible for Medicare and Medicaid (dually eligible beneficiaries), American Indians/Alaska Natives (except as permitted in section 1932(a)(2)(C) of the Act), or children with special health care needs to enroll in a managed care program. State plans, once approved, remain in effect until modified by the State.
- We may grant a waiver under section 1915(b) of the Act, permitting a State to require all Medicaid beneficiaries to enroll in a managed care delivery system, including dually eligible beneficiaries, American Indians/Alaska Natives, or children with special health care needs. After approval, a State may operate a section 1915(b) waiver for a 2-year period (certain waivers can be operated for up to 5

years if they include dually eligible beneficiaries) before requesting a renewal for an additional 2- (or 5-) year period.

We may also authorize managed care programs as part of demonstration projects under section 1115(a) of the Act that include waivers permitting a State to require all Medicaid beneficiaries to enroll in a managed care delivery system, including dually eligible beneficiaries, American Indians/Alaska Natives, and children with special health care needs. Under this authority, States may seek additional flexibility to demonstrate and evaluate innovative policy approaches for delivering Medicaid benefits, as well as the option to provide services not typically covered by Medicaid. Such demonstrations are approvable only if it is determined that the demonstration would promote the objectives of the Medicaid statute and the demonstration is subject to evaluation.

The above authorities all permit States to operate their Medicaid managed care programs without complying with the following standards of Medicaid law outlined in section of 1902 of the Act:

- *Statewideness* (section 1902(a)(1) of the Act): States may implement a managed care delivery system in specific areas of the State (generally counties/parishes) rather than the whole State;
- *Comparability of Services* (section 1902(a)(10)(B) of the Act): States may provide different benefits to people enrolled in a managed care delivery system; and
- *Freedom of Choice* (section 1902(a)(23)(A) of the Act): States may generally require people to receive their Medicaid services only from a managed care plan's network of providers or primary care provider.

States that elect to operate a separate CHIP within a managed care delivery system do not need specific statutory authority to offer benefits through a managed care program. However, sections 2103(f)(3) and 2107(e)(1)(N) and (R) of the Act apply certain provisions of sections 1903 and 1932 of the Act related to Medicaid managed care to separate CHIPs. States that elect a Medicaid expansion CHIPs that operate within a managed care delivery system are subject to all requirements under section 1932 of the Act.

In the May 6, 2016 **Federal Register** (81 FR 27498), we published the ''Medicaid and Children's Health Insurance Program (CHIP) Programs; Medicaid Managed Care, CHIP Delivered in Managed Care, and Revisions Related to Third Party Liability'' final rule (hereinafter referred to as ''the 2016 final rule'') that modernized the Medicaid and CHIP managed care regulations to reflect changes in the use of managed care delivery systems. The 2016 final rule aligned many of the rules governing Medicaid and CHIP managed care with those of other major sources of coverage; implemented applicable statutory provisions; strengthened actuarial soundness payment provisions to promote the accountability of managed care program rates; strengthened efforts to reform delivery systems that serve Medicaid and CHIP beneficiaries; and enhanced policies related to program integrity. The 2016 final rule applied many of the Medicaid managed care rules to separate CHIP, particularly in the areas of access, finance, and quality through cross-references to 42 CFR part 438.

In the January 18, 2017 **Federal Register** (82 FR 5415), we published the ''Medicaid Program; The Use of New or Increased Pass-Through Payments in Medicaid Managed Care Delivery Systems'' final rule (hereinafter referred to as ''the 2017 final rule''). In the 2016 final rule, we defined pass-through payments at § 438.6(a) as any amount required by the State (and considered in calculating the actuarially sound capitation rate) to be added to the contracted payment rates paid by the MCO, PIHP, or PAHP to hospitals, physicians, or nursing facilities that is not for the following purposes: a specific service or benefit provided to a specific enrollee covered under the contract; a provider payment methodology permitted under § 438.6(c)(1)(i) through (iii) for services and enrollees covered under the contract; a subcapitated payment arrangement for a specific set of services and enrollees covered under the contract; graduate medical education (GME) payments; or Federally-qualified health center (FQHC) or rural health clinic (RHC) wrap around payments. On June 29th, 2016, we also published the CMCS Informational Bulletin (CIB) concerning ''The Use of New or Increased Pass-Through Payments in Medicaid Managed Care Delivery Systems.'' The 2017 final rule codified the information in the CIB as well as gave States the option to eliminate physician and nursing facility payments immediately or phase down these payments over the 5-year transition period if they prefer and specified the maximum amount of pass-through payments permitted annually during the transition periods under Medicaid managed care contract(s) and rate certification(s). That final rule prevented increases in pass-through payments and the addition of new pass-through payments beyond those in place when the pass-through payment transition periods were established in the 2016 final rule.

In the November 13, 2020 **Federal Register** (85 FR 72754), we published the ''Medicaid Program; Medicaid and Children's Health Insurance Program (CHIP) Managed Care'' final rule (hereinafter referred to as the ''2020 final rule'') which streamlined the Medicaid and CHIP managed care regulatory framework to relieve regulatory burdens; support State flexibility and local leadership; and promote transparency, flexibility, and innovation in the delivery of care. The rule was intended to ensure that the regulatory framework was efficient and feasible for States to implement in a cost-effective manner and ensure that States can implement and operate Medicaid and CHIP managed care programs without undue administrative burdens.

Since publication of the 2020 final rule, the COVID–19 public health emergency (PHE) challenged States' ability to ensure beneficiaries' access to high-quality care, ensure adequate provider payment during extreme workforce challenges, and provide adequate program monitoring and oversight. On January 28, 2021, Executive Order (E.O.) 14009, *Strengthening Medicaid and the Affordable Care Act,* was signed and established the policy objective to protect and strengthen Medicaid and the Affordable Care Act (ACA) and to make high-quality health care accessible and affordable for every American, and directed executive departments and agencies to review existing regulations, orders, guidance documents, and policies to determine whether such agency actions are inconsistent with this policy. On April 25, 2022, Executive Order 14070 directed agencies with responsibilities related to Americans' access to health coverage to review agency actions to identify ways to continue to expand the availability of affordable health coverage, to improve the quality of coverage, to strengthen benefits, and to help more Americans enroll in quality health coverage. This proposed rule aims to fulfill Executive Orders 14009 and 14070 by helping States to use lessons learned from the PHE and build stronger managed care programs to better meet the needs of the Medicaid and CHIP populations by improving access to and quality of care provided.

In addition, this rule proposes new standards to help States improve their monitoring of access to care by requiring establishment of new standards for appointment wait times, use of secret shopper surveys, use of enrollee experience surveys, and requiring States to submit a managed care plan analysis of payments made by plans to providers, for specific services, to more closely monitor plans' network adequacy. It also proposes provisions that would reduce burden for States that choose to direct MCOs, PIHPs, or PAHPs in certain ways to use their capitation payments to pay specified providers specified amounts, address impermissible redistribution arrangements related to State directed payments, and add clarity to the requirements related to medical loss ratio calculations. To improve transparency and provide valuable information to enrollees, providers, and CMS, this rule proposes to enhance existing State website requirements for content and ease of use. Lastly, this proposed rule would make quality reporting more transparent and meaningful for driving quality improvement, reduce burden on certain quality reporting requirements, and establish State requirements for implementing a Medicaid and CHIP quality rating system aimed at ensuring monitoring of performance by Medicaid and CHIP managed care plans and empowering beneficiary choice in managed care.

Finally, we believe it is important to acknowledge the role of health equity within this proposed rule. Medicaid and CHIP are the primary source of health care coverage for over one in three people of color in this country. Consistent with Executive Order 13985 [10] which calls for advancing equity for underserved populations, we are working to advance health equity across CMS programs consistent with the goals and objectives we have outlined in the CMS Framework for Health Equity 2022–2032 [11] and the HHS Equity Action Plan.[12] That effort includes increasing our understanding of the needs of those we serve to ensure that all individuals have access to equitable care and coverage.

A key part of our approach will be to work with States to improve measurement of health disparities through the stratification of State reporting on certain measures to identify potential differences in access, quality, and outcomes based on demographic factors like race, ethnicity, age, rural/urban status, disability, language, sex, sexual orientation, and gender identity, as well as social determinants of health.

The ''Medicaid Program and CHIP; Mandatory Medicaid and Children's Health Insurance Program (CHIP) Core Set Reporting'' proposed rule appeared in the August 22, 2022 **Federal Register** (87 FR 51303) (hereinafter referred to as the''Mandatory Medicaid and CHIP Core Set Reporting proposed rule''). In that proposed rule, we proposed that the Secretary would specify, through annual subregulatory guidance, which measures in the Medicaid and CHIP Child Core Set, the behavioral health measures of the Medicaid Adult Core Set, and the Health Home Core Sets, States would be required to stratify, and by which factors, such as race, ethnicity, sex, age, rural/urban status, disability, language or other factors specified by the Secretary. CMS also proposed a phased-in timeline for stratification of measures in these Core Sets. In the Medicaid Program; Ensuring Access to Medicaid Services proposed rule, published elsewhere in the **Federal Register**, we also proposed a similar phased-in timeline and process for mandatory reporting and stratification of the Home and Community-Based Services (HCBS) Quality Measure Set.

Measuring health disparities, reporting these results, and driving improvements in quality are cornerstones of the CMS approach to advancing health equity and also align with the CMS Strategic Priorities.[13] In this proposed rule, we establish our intent to align with the stratification factors required for Core Set measure reporting, which we believe would minimize State and health plan burden to report stratified measures. To further reduce burden on States, we would permit States to report, if finalized, the same measurement and stratification methodologies and classifications as those proposed in the Mandatory Medicaid and CHIP Core Set Reporting proposed rule and the Ensuring Access to Medicaid Services proposed rule. We believe these measures and methodologies would be appropriate to include in States' Managed Care Program Annual Report (MCPAR) because § 438.66(e)(2)(vii) requires information on and an assessment of the operation of each managed care program and an evaluation of managed care plan performance on quality measures. Reporting these measures in MCPAR would minimize State and provider burden while allowing more robust CMS monitoring and oversight of the quality of the health care provided at a managed care plan and program level. We would also anticipate publishing additional subregulatory guidance and adding specific fields in MCPAR that would accommodate this measure and data stratification reporting to simplify the process for States.

B. Provisions of the Proposed Regulations

Throughout this document, the term ''PAHP'' is used to mean a prepaid ambulatory health plan that does not exclusively provide non-emergency medical transportation services. Whenever this document is referencing a PAHP that exclusively provides non-emergency medical transportation services, it is specifically addressed as a ''Non-Emergency Medical Transportation (NEMT) PAHP.'' Throughout this document, the use of the term ''managed care plan'' includes managed care organizations (MCOs), prepaid inpatient health plans (PIHPs), and prepaid ambulatory health plans (PAHPs) and is used only when the provision under discussion applies to all three arrangements. An explicit reference is used in the preamble if the provision applies to primary care case management (PCCMs) or PCCM entities.

For CHIP, the preamble uses ''CHIP'' when referring collectively to separate child health programs and Medicaid expansion programs. We use ''separate CHIP'' specifically in reference to separate child health programs and also in reference to any proposed changes in subpart L of part 457, which are only applicable to separate child health programs operating in a managed care delivery system. Also note in this proposed rule, all proposed changes to Medicaid managed care regulations are equally applicable to Medicaid expansion managed care programs as described at § 457.1200(c).1. Access (42 CFR 438.2, 438.10, 438.66, 438.68, 438.206, 438.207, 438.214, 438.602, 457.1207, 457.1218, 457.1230, 457.1250, 457.1285)

a. Enrollee Experience Surveys (§§ 438.66(b) and (c), 457.1230(b))

In the 2016 final rule, we renamed and expanded § 438.66 *State Monitoring Requirements* to ensure that States had robust systems to monitor their

[10] Executive Order 13985, *https://www.whitehouse.gov/briefing-room/presidential actions/2021/01/20/executive-order-advancingracial-equity-and-support-or-underservedcommunities-through-the-federal-government/.*

[11] CMS Framework for Health Equity 2022–2032: *https://www.cms.gov/files/document/cmsframework-health-equity.pdf.*

[12] HHS Equity Action Plan, *https://www.hhs.gov/sites/default/files/hhs-equity-action-plan.pdf.*

[13] CMS Strategic Plan 2022, *https://www.cms.gov/cms-strategic-plan.*

managed care programs, utilize the monitoring results to make program improvements, and report to CMS annually the results of their monitoring activities. Existing regulations at § 438.66(c)(5) require States to use the data collected from their monitoring activities to improve the performance of their managed care programs, including results from any enrollee or provider satisfaction surveys conducted by the State or managed care plan. Some States currently use surveys to gather direct input from their managed care enrollees, which we believe is a valuable source of information on enrollees' actual and perceived access to services. As a general matter, disparities in access to care related to demographic factors such as race, ethnicity, language, or disability status are, in part, a function of the availability of the accessible providers who are willing to provide care and are competent in meeting the needs of populations in medically underserved communities. Surveys can focus on matters that are important to enrollees and for which they are the best and, sometimes, only source of information. Patient experience surveys can also focus on how patients experienced or perceived key aspects of their care, not just on how satisfied they were with their care. For example, experience surveys can focus on asking patients whether or how often they accessed health care, barriers they encountered in accessing health care, and their experience including communication with their doctors, understanding their medication instructions, and the coordination of their health care needs. Some States already use enrollee experience surveys and report that the data is an asset in their efforts to assess whether the managed care program is meeting its enrollees' needs.

One of the most commonly used enrollee experience survey in the health care industry, including for Medicare Advantage organizations, is the Consumer Assessment of Healthcare Providers and Systems (CAHPS®).[14] CAHPS experience surveys are available for health plans, dental plans, and home and community-based services (HCBS) programs, as well as for patient experience with providers such as home health, condition specific care such as behavioral health, or facility-based care such as in a nursing home. A survey specially designed to measure the impact of long-term services and supports (LTSS) on the quality of life and outcomes of enrollees is the National Core Indicators-Aging and Disabilities (NCI–AD®) Adult Consumer Survey™.[15] Whichever survey is chosen by a State, it should complement data gathered from other network adequacy and access monitoring activities to provide the State with a more complete assessment of their managed care programs' success at meeting their enrollees' needs. To ensure that States' managed care program monitoring systems, required at § 438.66(a), appropriately capture the enrollee experience, we propose to revise § 438.66(b)(4) to explicitly include ''enrollee experience.'' Section 438.66(c)(5) currently requires States to use the results from any enrollee or provider satisfaction surveys they choose to conduct to improve the performance of its managed care program. To ensure that States have the data from an enrollee experience survey to include in their monitoring activities and improve the performance of their managed care programs, we propose to revise § 438.66(c)(5) to require that States conduct an annual enrollee experience survey. To reflect this, we propose to revise § 438.66(c)(5) to add ''an annual'' before ''enrollee'' and add ''experience survey conducted by the State'' after ''enrollee.'' We also propose to replace ''or'' with ''and'' to be explicit that use of provider survey results alone would not be sufficient to comply with § 438.66(c)(5). While we encourage States and managed care plans to utilize provider surveys, we are not proposing to mandate them at this time. We believe other proposals in this rule, such as enrollee surveys and secret shopper surveys, may yield information that would inform our decision on the use of provider surveys in the future. We invite comment on whether we should mandate the use of a specific enrollee experience survey, define characteristics of acceptable survey instruments, and the operational considerations of enrollee experience surveys States use currently.

To reflect these proposals in the annual assessment of the operation of the managed care program report called the Managed Care Program Annual Report (MCPAR) required at § 438.66(e), we propose conforming edits in § 438.66(e)(2)(vii). We propose to include the results of an enrollee experience survey to the list of items that States must evaluate in their report and add ''provider'' before ''surveys'' to distinguish them from enrollee experience surveys. Additionally, consistent with the transparency proposals described in section I.B.1.f. of this section, we propose to revise § 438.66(e)(3)(i) to require that States post the report required in § 438.66(e)(1) on their website within 30 calendar days of submitting it to CMS. Currently § 438.66(e)(3)(i) only requires that the report be posted on the State's website but does not specify a timeframe; we believe that adding further specificity about the timing of when the report should be posted would be helpful to interested parties and bring consistency to this existing requirement. This proposal is authorized by section 1902(a)(6) of the Act which requires that States provide reports, in such form and containing such information, as the Secretary may from time to time require.

For an enrollee experience survey to yield robust, usable results, it should be easy to understand, simple to complete, and readily accessible for all enrollees that receive it; therefore, we believe they should meet the interpretation, translation, and tagline criteria in § 438.10(d)(2). Therefore, we propose to add enrollee experience surveys as a document subject to the requirements in § 438.10(d)(2). This would ensure that enrollees that receive a State's enrollee experience survey would be fully notified that oral interpretation in any language and written translation in the State's prevalent languages would be readily available, and how to request auxiliary aids and services, if needed.

These proposals are authorized by section 1932(b)(5) of the Act which requires managed care organizations to demonstrate adequate capacity and services by providing assurances to the State and CMS that it has the capacity to serve the expected enrollment in its service area, including assurances that it offers an appropriate range of services and access to preventive and primary care services for the population expected to be enrolled in such service area, and maintains a sufficient number, mix, and geographic distribution of providers of services. The authority for our proposals is extended to prepaid inpatient health plans (PIHPs) and prepaid ambulatory health plans (PAHPs) through regulations based on our authority under section 1902(a)(4) of the Act. Because enrollee experience survey results would provide direct and candid input from enrollees, States and managed care plans could use the results to determine if their networks offer an appropriate range of services and access as well as if it provides a sufficient number, mix, and geographic distribution of providers to meet their enrollees' needs. Enrollee experience survey data would enable managed care plans to assess whether their networks

[14] The acronym ''CAHPS'' is a registered trademark of the Agency for Healthcare Research and Quality.

[15] NCI–AD Adult Consumer Survey™ is a copyrighted tool.

are providing sufficient capacity as experienced by their enrollees and that assessment would inform the assurances that the plan is required to provide to the State and CMS. These proposals are also authorized by section 1932(c)(1)(A)(i) and (iii) of the Act which require States that contract with MCOs to develop and implement a quality assessment and improvement strategy that includes: standards for access to care so that covered services are available within reasonable timeframes and in a manner that ensures continuity of care and adequate primary care and specialized services capacity and procedures for monitoring and evaluating the quality and appropriateness of care and services to enrollees and requirements for provision of quality assurance data to the State. Data from enrollee experience surveys would enable States to use the results to evaluate whether their plans' networks are providing access to covered services within reasonable timeframes and in a manner that ensures continuity of care. These data would also inform the development and maintenance of States' quality assessment and improvement strategies and would be critical to States' monitoring and evaluation of the quality and appropriateness of care and services provided to enrollees.

We remind States that in addition to the mandatory external quality review (EQR) activities under § 438.358(b), there is an existing optional EQR activity under § 438.358(c)(2) for the administration or validation of consumer or provider surveys of quality of care. States that contract with MCOs and use external quality review organizations (EQROs) to administer or validate the proposed enrollee experience surveys may be eligible to receive up to a 75 percent enhanced Federal match, pursuant to § 438.370, to reduce the financial burden of conducting or validating the proposed enrollee survey(s).

We request comment on the cost and feasibility of implementing enrollee experience surveys for each managed care program as well as the extent to which States already use enrollee experience surveys for their managed care programs.

We propose that States would have to comply with § 438.66(b) and (c) no later than the first managed care plan rating period that begins on or after 3 years after the effective date of the final rule as we believe this is a reasonable timeframe for compliance. We have proposed this applicability date in § 438.66(f).

We did not adopt the managed care State monitoring requirements described at § 438.66 in the 2016 final rule for separate CHIPs because we wished to limit administrative burden on separate CHIP managed care plans, which typically serve smaller populations. Since we did not adopt MCPAR, we do not plan to adopt the new Medicaid enrollee experience survey requirements proposed at § 438.66(b) and (c) for separate CHIPs. However, States currently collect enrollee experience data for CHIP through annual CAHPS surveys as required at section 2108(e)(4) of the Act. Currently, there are no requirements for States to use these data to evaluate their separate CHIP managed care plans network adequacy or to make these survey results available to beneficiaries to assist in selecting a managed care plan. We believe that enrollee experience data can provide an invaluable window into the performance of managed care plans and assist States in their annual review and certification of network adequacy for separate CHIP MCOs, PIHPs, and PAHPs. For this reason, we propose to amend § 457.1230(b) to require States to evaluate annual CAHPS survey results as part of the State's annual analysis of network adequacy as described in § 438.207(d). Since States already collect CAHPS survey data for CHIP and would likely not need the same timeframe to implement as needed for implementing the proposed Medicaid enrollee experience surveys requirement, we propose for the provision at § 457.1230(b) to be applicable 60 days after the effective date of the final rule. However, we are open to a later applicability date such as 1, 2, or 3 years after the effective date of the final rule. We invite comment on the appropriate applicability date for this provision.

We also believe that access to enrollee experience data is critical in affording separate CHIP beneficiaries the opportunity to make informed decisions when selecting their managed care plan(s). To this end, we propose at § 457.1207 to require States to post comparative summary results of CAHPS surveys by managed care plan annually on State websites as described at § 438.10(c)(3). The posted summary results must be updated annually and allow for easy comparison between the managed care plans available to separate CHIP beneficiaries. We seek public comment on other approaches to including CHIP CAHPS survey data for the dual purposes of improving access to managed care services and enabling beneficiaries to have useful information when selecting a managed care plan.

b. Appointment Wait Time Standards (§§ 438.68(e), 457.1218)

In the 2020 final rule, we revised § 438.68(b)(1) and (2) by replacing the requirement for States to set time and distance standards with a more flexible requirement that States set a quantitative network adequacy standard for specified provider types. We explained that quantitative network adequacy standards that States may elect to use included minimum provider-to-enrollee ratios; maximum travel time or distance to providers; a minimum percentage of contracted providers that are accepting new patients; maximum wait times for an appointment; hours of operation requirements (for example, extended evening or weekend hours); and combinations of these quantitative measures. We encouraged States to use the quantitative standards in combination- not separately- to ensure that there are not gaps in access to, and availability of, services for enrollees. (85 FR 72802)

Key to the effectiveness of the Medicaid and CHIP program is ensuring that it provides timely access to high-quality services in a manner that is equitable and consistent. During the COVID–19 public health emergency (PHE), managed care plans have faced many challenges ensuring access to covered services and those challenges shed light on opportunities for improvement in monitoring timely access. These challenges include workforce shortages, changes in providers' workflows and operating practices, providers relocating leaving shortages in certain areas, and shifts in enrollee utilization such as delaying or forgoing preventive care. Some of these challenges may become permanent and thus, States and managed care plans need to adjust their monitoring, evaluation, and planning strategies to ensure equitable access to all covered services.

On February 17, 2022, we issued a request for information [16] (RFI) soliciting public input on improving access in Medicaid and CHIP, including ways to promote equitable and timely access to providers and services. Barriers to accessing care represented a significant portion of comments received, with common themes related to providers not accepting Medicaid and

[16] CMS Request for Information: Access to Coverage and Care in Medicaid & CHIP. February 2022. For a full list of question from the RFI, see *https://www.medicaid.gov/medicaid/access-care/downloads/access-rfi-2022-questions.pdf.*

recommendations calling for us to set specific quantitative access standards. Many commenters urged us to consider developing a Federal standard for timely access to providers and services, but giving State Medicaid and CHIP agencies the flexibility to impose more stringent requirements. A recently published study [17] examined the extent to which Medicaid managed care plan networks may overstate the availability of physicians in Medicaid, and evaluated the implications of discrepancies in the ''listed'' and ''true'' networks for beneficiary access. The authors concluded that findings suggest that current network adequacy standards might not reflect actual access and that new methods are needed that account for physicians' willingness to serve Medicaid patients. Another review of 34 audit studies demonstrated that Medicaid is associated with a 1.6-fold lower likelihood in successfully scheduling a primary care appointment and a 3.3-fold lower likelihood in successfully scheduling a specialty appointment when compared with private insurance.[18]

Based on the RFI comments received, research, engagement with interested parties, and our experience in monitoring State managed care programs, we are persuaded about the need for increased oversight of network adequacy and overall access to care, and propose a new quantitative network adequacy standard. Specifically, we propose to redesignate existing § 438.68(e) regarding publication of network adequacy standards to § 438.68(g) and create a new § 438.68(e) titled ''Appointment wait time standards.''

In § 438.68(e)(1)(i) through (iv), we propose that States develop and enforce wait time standards for routine appointments for four types of services: outpatient mental health and substance use disorder (SUD)-adult and pediatric, primary care- adult and pediatric, obstetrics and gynecology (OB/GYN), and an additional type of service determined by the State (in addition to the three listed) in an evidence-based manner for Medicaid. We include ''If covered in the MCO's, PIHP's, or PAHP's contract'' before the first three service types (paragraphs (e)(1)(i) through (iii)) to be clear that standards only need to be developed and enforced if the service is covered by the managed care plan's contract, but the forth service (paragraph (e)(1)(iv)) must be one that is covered by the plan's contract. For example, we understand that primary care and OB/GYN is likely not covered by a behavioral health PIHP; therefore, a State would not be required to set appointment wait time standards for primary care and OB/GYN for the behavioral health PIHP and would only have to set appointment wait time standards for mental health and SUD as well as one State-selected provider type. To ensure that our proposal to have States set appointment wait time standards for mental health and SUD as well as one State-selected provider type for behavioral PIHPs and PAHPs is feasible, we request comment on whether behavioral health PIHPs and PAHPs include provider types other than mental health and SUD in their networks. Although we believe behavioral health PIHPs and PAHPs may include other provider types, we want to validate our understanding. We propose to adopt the proposed wait time standards for separate CHIP through an existing cross-reference at § 457.1218. We are proposing primary care, OB/GYN, and mental health and SUD because they are indicators of core population health; therefore, we believe proposing to require States to set appointment wait time standards for them would have the most impact on access to care for Medicaid and CHIP managed care enrollees.

At § 438.68(e)(1)(iv), we propose that States select a provider type in an evidence-based manner to give States the opportunity to use an appointment wait time standard to address an access challenge in their local market. We are not proposing to specify the type of evidence to be used in this rule; rather, we defer to States to consider multiple sources, such as encounter data, appeals and grievances, and provider complaints, as well as to consult with their managed care plans to select a provider type. We believe proposing that States select one of the provider types subject to an appointment wait time standard would encourage States and managed care plans to analyze network gaps effectively and then innovate new ways to address the challenges that impede timely access. States would identify the provider type(s) they choose in existing reporting in MCPAR, per § 438.66(e), and the Network Adequacy and Access Assurances Report, per § 438.207(d).

To be clear that the appointment wait time standards proposed in § 438.68(e) cannot be the quantitative network adequacy standard required in § 438.68(b)(1), we propose to add ''. . . , other than for appointment wait times . . .'' in § 438.68(b)(1). We are not proposing to define routine appointments in this rule; rather, we defer to States to define it as they deem appropriate. We encourage States to work with their managed care plans and their network providers to develop a definition of ''routine'' that would reflect usual patterns of care and current clinical standards. We acknowledge that defining ''urgent'' and ''emergent'' for appointment wait time standards could be much more complex given the standards of practice by specialty and the patient-specific considerations necessary to determine those situations. We invite comments on defining these terms should we undertake additional rulemaking in the future. We clarify that setting appointment wait time standards for routine appointments as proposed at § 438.68(e)(1) would be a minimum; States are encouraged to set additional appointment wait time standards for other types of appointments. For example, States may consider setting appointment wait time standards for emergent or urgent appointments as well.

To provide States with flexibility to develop appointment wait time standards that reflect the needs of their Medicaid and CHIP managed care populations and local provider availability while still setting a level of consistency, we propose maximum appointment wait times at § 438.68(e)(1): State developed appointment wait times must be no longer than 10 business days for routine outpatient mental health and substance use disorder appointments in § 438.68(e)(1)(i) and no longer than 15 business days for routine primary care in § 438.68(e)(1)(ii) and OB/GYN appointments in § 438.68(e)(1)(iii). We are not proposing a maximum appointment wait time standard for the State-selected provider type. These proposed maximum timeframes were informed by standards for the individual insurance Marketplace established under the Affordable Care Act that will begin in 2024 of 10 business days for behavioral health and 15 business days for primary care services; we note that we elected not to adopt the Marketplace's appointment wait time standard of 30 business days for non-urgent specialist appointments as we believe focusing on primary care, OB/GYN, and mental health and SUD is the most appropriate starting place for Medicaid managed care standards. These proposed timeframes were also

[17] *https://www.healthaffairs.org/doi/full/10.1377/hlthaff.2021.01747.*

[18] W. Hsiang, A. Lukasiewicz, and M. Gentry, ''Medicaid Patients Have Greater Difficulty Scheduling Health Care Appointments Compared With Private Insurance Patients: A Meta-Analysis,'' SAGE Journals, April 5, 2019, available at *https://journals.sagepub.com/doi/full/10.1177/0046958019838118.*

informed by engagement with interested parties, including comments in response to the RFI. We are proposing to require appointment wait times for routine appointments only in this rule as we believe that providers utilize more complex condition and patient-specific protocols and clinical standards of care to determine scheduling for urgent and emergent care. We may address standards for other types of appointments in future rulemaking and hope that information from the use of appointment wait time standards for routine appointments may inform future proposals.

In developing this proposal, we considered appointment wait time standards between 30-calendar days and 45-calendar days. Some interested parties stated that these standards would be more appropriate for routine appointments and would more accurately reflect current appointment availability for most specialties. However, we believe 30-calendar days and 45-calendar days as the maximum wait time may be too long as a standard; we understand it may be a realistic timeframe currently for some specialist appointments but we were not convinced that they should be the standard for outpatient mental health and substance use disorder, primary care, and OB/GYN appointments. We invite comment on aligning with the Marketplace standards at 10- and 15-business days, or whether wait time standards should differ, and if so, what standards would be the most appropriate.

To make the appointment wait time standards as effective as possible, we defer to States on whether and how to vary appointment wait time standards for the same provider type; for example, by adult versus pediatric, telehealth versus in-person, geography, service type, or other ways. However, wait time standards must, at a minimum, reflect the timing proposed in § 438.68(e)(1). We encourage States to consider the unique access needs of certain enrollees when setting their appointment wait time standards to facilitate obtaining meaningful results when assessing managed care plan compliance with the standards.

As a general principle, we seek to align across Medicaid managed care, CHIP managed care, the Marketplace, and Medicare Advantage (MA) when reasonable to build consistency for individuals that may change coverage over time and to enable more effective and standardized comparison and monitoring across programs. Proposing 90 percent compliance with 10- and 15-business day maximum appointment wait time standards would be consistent with standards set for Marketplace plans for plan year 2024.[19] However, we note that for MA, CMS expects MA plans to set reasonable standards for primary care services for urgently needed services or emergencies immediately; services that are not emergency or urgently needed, but in need of medical attention within one week; and routine and preventive care within 30 days.[20]

To ensure that managed care plans' contracts reflect their obligation to comply with the appointment wait time standards, we propose to revise § 438.206(c)(1)(i) to include appointment wait time standards as a required provision in MCO, PIHP, and PAHP contracts for Medicaid, which is included in separate CHIP regulations through an existing cross-reference at § 457.1230(a). We believe this is necessary since our proposal at § 438.68(e)(1) to develop and enforce appointment wait time standards is a State responsibility; proposing this revision to § 438.206(c)(1)(i) would specify the corresponding managed care plan responsibility.

We propose to revise the existing applicability date in § 438.206(d) for Medicaid, which is applicable for separate CHIPs through an existing cross-reference at § 457.1230(a) and a proposed cross-reference at § 457.1200(d), to reflect that States would have to comply with § 438.206(c)(1)(i) no later than the first managed care plan rating period that begins on or after 4 years after the effective date of the final rule. We believe this is a reasonable timeframe for compliance.

Current requirements at § 438.68(c)(1) and (2) for Medicaid, and through a cross-reference at § 457.1218 for separate CHIP, direct States to consider twelve elements when developing their network adequacy standards. We remind States that § 438.68(c)(1)(ix) includes the availability and use of telemedicine, e-visits, and/or other evolving and innovative technological solutions as an element that States must consider when developing their network adequacy standards. Services delivered via telehealth seek to improve a patient's health through two-way, real time interactive communication between the patient, and the provider. Services delivered in this manner can, for example, be used for assessment, diagnosis, intervention, consultation, and supervision across distances. Services can be delivered via telehealth across all populations served in Medicaid including, but not limited to children, individuals with disabilities, and older adults. States have broad flexibility to cover telehealth through Medicaid and CHIP, including the methods of communication (such as telephonic or video technology commonly available on smart phones and other devices) to use.[21] States need to balance the use of telehealth with the availability of providers that can provide in-person care and enrollees' preferences for receiving care to ensure that they establish network adequacy standards under § 438.68 that accurately reflect the practical use of both types of care in their State. Therefore, States should review encounter data to gauge telehealth use by enrollees over time and the availability of telehealth appointments by providers and account for that information when developing their appointment wait time standards. We also remind States that they have broad flexibility with respect to covering services provided via telehealth and may wish to include quantitative network adequacy standards or specific appointment wait time standards for telehealth *in addition* to in-person appointment standards, as appropriate based on current practices and the extent to which network providers offer telehealth services. Although States have broad flexibility in this area, we remind States of their responsibility under section 504 of the Rehabilitation Act and section 1557 of the Affordable Care Act to ensure effective communications for patients with disabilities for any telehealth services that are offered and to provide auxiliary aids and services at no cost to the individual to ensure that individuals with disabilities are able to access and utilize services provided via telehealth; we also remind States of their responsibilities under Title VI of the Civil Rights Act of 1964, including the obligation to take reasonable steps to ensure meaningful language access for persons with limited English proficiency when providing telehealth services.[22]

Current Medicaid regulations at § 438.68(e), and through a cross-reference at § 457.1218 for separate

[22] US Department of Justice, Civil Rights Division and Department of Health and Human Services, Office for Civil Rights, ''Guidance on Nondiscrimination in Telehealth: Federal Protections to Ensure Accessibility to People with Disabilities and Limited English Proficient Persons,'' July 29, 2022, available online at *https://www.hhs.gov/civil-rights/for-individuals/disability/guidance-on-nondiscrimination-in-telehealth/index.html.*

CHIP, require States to publish the network adequacy standards required by § 438.68(b)(1) and (2) on their websites and to make the standards available upon request at no cost to enrollees with disabilities in alternate formats or through the provision of auxiliary aids and services. To ensure transparency and inclusion of the new proposed appointment wait time standards in this provision, we propose several revisions: to redesignate § 438.68(e) to § 438.68(g); to replace ''and'' with a comma after ''(b)(1);'' add ''(b)'' before ''(2)'' for clarity; and add a reference to (e) after ''(b)(2).'' We believe these changes make the sentence clearer and easier to read. Lastly, § 438.68(e) currently includes ''. . . the website required by § 438.10.'' For additional clarity in redesignated § 438.68(g), we propose to replace ''438.10'' with ''§ 438.10(c)(3)'' to help readers more easily locate the requirements for State websites. These proposed changes apply equally to separate CHIP managed care through existing cross-references at §§ 457.1218 and 457.1207.

At § 438.68(e)(2), which is included in separate CHIP regulations through an existing cross-reference at § 457.1218, we propose that managed care plans would be deemed compliant with the standards established in paragraph (e)(1) when secret shopper results, described in section I.B.1.c. of this rule, reflect a rate of appointment availability that meets State established standards at least 90 percent of the time. By proposing a minimum compliance rate for appointment wait time standards, we would provide States with leverage to hold their managed care plans accountable for ensuring that their network providers offer timely appointments. Further, ensuring timely appointment access 90 percent of the time would be an important step toward helping States ensure that the needs of their Medicaid and CHIP populations are being met timely. As with any provision of part 438 and subpart L of part 457, we may require States to take corrective action to address noncompliance.

To ensure that appointment wait time standards would be an effective measure of network adequacy, we believe we need some flexibility to add provider types to address new access or capacity issues at the national level. Therefore, at § 438.68(e)(3), which is included in separate CHIP regulations through an existing cross-reference at § 457.1218, we propose that CMS may select additional types of appointments to be added to § 438.68(e)(1) after consulting with States and other interested parties and providing public notice and opportunity to comment. From our experience with the COVID–19 PHE as well as multiple natural disasters in recent years, we believe it prudent to explicitly state that we may utilize this flexibility as we deem appropriate in the future.

We recognize that situations may arise when an MCO, PIHP, or PAHP may need an exception to the State established provider network standards, including appointment wait times. Section 438.68(d) currently provides that, to the extent a State permits an exception to any of the provider-specific network standards, the standard by which an exception would be evaluated and approved must be specified in the MCO, PIHP, or PAHP contract and must be based, at a minimum, on the number of providers in that specialty practicing in the MCO's, PIHP's, or PAHP's service area. We propose to make minor grammatical revisions to § 438.68(d)(1) by deleting ''be'' before the colon and inserting ''be'' as the first word of § 438.68(d)(1)(i) and (ii), which is included in separate CHIP regulations through an existing cross-reference at § 457.1218. We also propose to add a new standard at § 438.68(d)(1)(iii) for Medicaid, and through an existing cross-reference at § 457.1218 for separate CHIP, for reviews of exception requests, which would require States to consider the payment rates offered by the MCO, PIHP, or PAHP to providers included in the provider group subject to the exception. Managed care plans sometimes have difficulty building networks that meet network adequacy standards due to low payment rates. We believe that States should consider whether this component is a contributing factor to a plan's inability to meet the standards required by § 438.68(b)(1) and (2) and (e), when determining whether a managed care plan should be granted an exception. We remind States of their obligation at § 438.68(d)(2) to monitor enrollee access on an ongoing basis to the provider types in managed care networks that operate under an exception and report their findings as part of the annual Medicaid MCPAR required at § 438.66(e).

Our proposal for States to develop and enforce appointment wait time standards proposed at § 438.68(e) and the accompanying secret shopper surveys of plan's compliance with them (described in section I.B.1.c. of this proposed rule) proposed at § 438.68(f) are authorized by section 1932(b)(5) of the Act, and is extended to PIHPs and PAHPs through regulations based on our authority under section 1902(a)(4) of the Act, and authorized for CHIP through section 2103(f)(3) of the Act. We believe that secret shopper surveys could provide unbiased, credible, and representative data on how often network providers are offering routine appointments within the State's appointment wait time standards and these data would aid managed care plans as they assess their networks, pursuant to § 438.207(b), and provide an assurance to States that their networks have the capacity to serve the expected enrollment in their service area and that it offers appropriate access to preventive and primary care services for their enrollees. States should find the results of the secret shopper surveys a rich source of information to assess compliance with the components of their quality strategy that address access to care and determine whether covered services are available within reasonable timeframes, as required in section 1932(c)(1)(A)(i) of the Act and required for CHIP through section 2103(f)(3) of the Act.

Section 1932(d)(5) of the Act requires that, no later than July 1, 2018, contracts with MCOs and PCCMs, as applicable, must include a provision that providers of services or persons terminated (as described in section 1902(kk)(8) of the Act) from participation under this title, title XVIII, or title XXI must be terminated from participating as a provider in any network. Although States have had to comply with this provision for several years, we believe we should reference this important provision in 42 CFR part 438, as well as use our authority under section 1902(a)(4) of the Act to apply it to PIHPs and PAHPs. To do this, we propose a new § 438.214(d)(2) to reflect that States must ensure through their MCO, PIHP, and PAHP contracts that providers of services or persons terminated (as described in section 1902(kk)(8) of the Act) from participation under this title, title XVIII, or title XXI must be terminated from participating as a provider in any Medicaid managed care plan network.

We propose that States would have to comply with § 438.68(b)(1), (e), and (g) no later than the first MCO, PIHP, or PAHP rating period that begins on or after 3 years after the effective date of the final rule as we believe this is a reasonable timeframe for compliance. We propose that States would have to comply with § 438.68(f) no later than the first MCO, PIHP, or PAHP rating period that begins on or after 4 years after the effective date of the final rule. We propose that States would have to comply with § 438 (d)(1)(iii) no later than the first MCO, PIHP, or PAHP rating period that begins on or after 2

years after the effective date of the final rule. We have proposed these applicability dates in § 438.68(h) for Medicaid, and for separate CHIPs through an existing cross-reference at § 457.1218 and a proposed cross-reference at § 457.1200(d).

c. Secret Shopper Surveys (§§ 438.68(f), 457.1207, 457.1218)

We recognize that in some States and for some services, Medicaid beneficiaries face significant gaps in access to care. Evidence suggests that in some localities and for some services, it takes Medicaid beneficiaries longer to access medical appointments compared to individuals with other types of health coverage.[23] This may be exacerbated by difficulties in accessing accurate information about managed care plans' provider networks; although Medicaid and CHIP managed care plans are required to make regular updates to their online provider directories in accordance with §§ 438.10(h)(3) and 457.1207 respectively, analyses of these directories suggest that a significant share of provider listings include inaccurate information on, for example, how to contact the provider, the provider's network participation, and whether the provider is accepting new patients.[24] Relatedly, analyses have shown that the vast majority of services delivered to Medicaid beneficiaries are provided by a small subset of health providers listed in managed care plan provider directories, with a substantial share of listed providers delivering little or no care for Medicaid beneficiaries.[25] Some measures of network adequacy may not be as meaningful as intended if providers are ''network providers'' because they have a contract with a managed care plan, but in practice are not actually accepting new Medicaid enrollees or impose a cap on the number of Medicaid enrollees they will see.

To add a greater level of validity and accuracy to States' efforts to measure network adequacy and access, we propose to require States to use secret shopper surveys as part of their monitoring activities. Secret shopper surveys are a form of research that can provide high-quality data and actionable feedback to States and managed care plans and can be performed either as ''secret'' meaning the caller does not identify who they are performing the survey for or ''revealed'' meaning the caller identifies the entity for which they are performing the survey. While both types of surveys can produce useful results, we believe the best results are obtained when the survey is done as a secret shopper and the caller pretends to be an enrollee (or their representative) trying to schedule an appointment. Results from these surveys should be unbiased, credible, and reflect what it is truly like to be an enrollee trying to schedule an appointment, which is a perspective not usually provided by, for example, time and distance measures or provider-to-enrollee ratios. Many States and managed care plans currently use some type of survey to monitor access; however, we believe there should be some consistency to their use for Medicaid managed care programs to enable comparability.

To ensure consistency, we propose a new § 438.68(f), and propose to require that States use independent entities to conduct annual secret shopper surveys of managed care plan compliance with appointment wait time standards proposed at § 438.68(e) and the accuracy of certain data in all managed care plans' electronic provider directories required at § 438.10(h)(1). These proposed changes apply equally to separate CHIPs through existing cross-references at §§ 457.1218 and 457.1207. We believe that the entity that conducts these surveys must be independent of the State Medicaid or CHIP agency and its managed care plans subject to the survey to ensure unbiased results. Therefore, at § 438.68(f)(3)(i), we propose to consider an entity to be independent of the State if it is not part of the State Medicaid agency and, at § 438.68(f)(3)(ii), to consider an entity independent of a managed care plan subject to a secret shopper survey if the entity is not an MCO, PIHP, or PAHP; is not owned or controlled by any of the MCOs, PIHPs, or PAHPs subject to the surveys; and does not own or control any of the MCOs, PIHPs, or PAHPs subject to the surveys. Given the valuable data the proposed secret shopper surveys could provide States, we believe requiring the use of an independent entity to conduct the surveys would be critical to ensure unbiased results.

We also propose to require States to use secret shopper surveys to determine the accuracy of certain provider directory information in MCOs', PIHPs', and PAHPs' most current electronic provider directories at § 438.68(f)(1)(i). Since we believe that paper directory usage is dwindling due to the ever-increasing use of electronic devices and because electronic directory files are usually used to produce paper directories, we are not requiring secret shopper validation of paper directories. Rather, we propose in § 438.68(f)(1)(i)(A) through (C) to require surveys of electronic provider directory data for primary care providers, OB/GYN providers, and outpatient mental health and substance use disorder providers, if they are included in the managed care plan's provider directories. We are proposing these provider types because they are the provider types with the highest utilization in many Medicaid managed care programs.

To ensure that a secret shopper survey can be used to validate directory data for every managed care plan, we propose in § 438.68(f)(1)(i)(D) to require secret shopper surveys for provider directory data for the provider type selected by the State for its appointment wait time standards in § 438.68(e)(1)(iv). We recognize that the State-chosen provider type may vary across managed care plan types and thus, States may have to select multiple provider types to accommodate all of their managed care programs. For example, a State may select a provider type from their MCOs' directories that is not a provider type included in their mental health PIHP's directories; just as the State may select a provider type from their behavioral health PIHPs' directories that is not a provider type included in their dental PAHPs' directories. We note that the State-chosen provider type cannot vary among plans of the same type within the same managed care program. Although this degree of variation between States would limit comparability, we believe that the value of validating provider directory data outweighs this limitation and that having results for provider types that would be important to State specific access issues would be a rich source of data for States to evaluate managed care plan performance and require the impacted plan to implement timely remediation, if needed.

At § 438.68(f)(1)(ii)(A) through (D), we propose to require that States use

[23] W. Hsiang, A. Lukasiewicz, and M. Gentry, ''Medicaid Patients Have Greater Difficulty Scheduling Health Care Appointments Compared With Private Insurance Patients: A Meta-Analysis,'' SAGE Journals, April 5, 2019, available at *https://journals.sagepub.com/doi/full/10.1177/0046958019838118.*

Haeder, ''Directory Accuracy and Timely Access in Maryland's Medicaid Managed Care Program,'' Journal of Health Care for the Poor and Underserved, available at *https://pubmed.ncbi.nlm.nih.gov/35574863/;* A. Bauman and S. Haeder, ''Potemkin Protections: Assessing Provider Directory Accuracy and Timely Access for Four Specialties in California,'' Journal of Health Politics, Policy and Law, 2022, available at *https://pubmed.ncbi.nlm.nih.gov/34847230/.*

[25] A. Ludomirsky, et. al., ''In Medicaid Managed Care Networks, Care is Highly Concentrated Among a Small Percentage of Physicians,'' Health Affairs, May 2022, available at *https://www.healthaffairs.org/doi/full/10.1377/hlthaff.2021.01747.*

independent entities to conduct annual secret shopper surveys to verify the accuracy of four pieces of data in each MCO, PIHP, or PAHP electronic provider directory required at § 438.10(h)(1): the active network status with the MCO, PIHP, or PAHP; the street address as required at § 438.10(h)(1)(ii); the telephone number as required at § 438.10(h)(1)(iii); and whether the provider is accepting new enrollees as required at § 438.10(h)(1)(vi). We believe these are the most critical pieces of information that enrollees rely on when seeking network provider information. Inaccuracies in this information can have a tremendously detrimental effect on enrollees' ability to access care since finding providers that are not in the managed care plan's network, have inaccurate addresses and phone numbers, or finding providers that are not accepting new patients listed in a plan's directory can delay their ability to contact a network provider and ultimately, receive care.

To maximize the value of using secret shopper surveys to validate provider directory data, identified errors must be corrected as quickly as possible. Therefore, at § 438.68(f)(1)(iii) and (iv) respectively, we propose that States must receive information on all provider directory data errors identified in secret shopper surveys no later than 3 business days from identification by the entity conducting the secret shopper survey and that States must then send that data to the applicable managed care plan within 3 business days of receipt. We also propose in § 438.68(f)(1)(iii) that the information sent to the State must be ''sufficient to facilitate correction'' to ensure that enough detail is provided to enable the managed care plans to quickly investigate the accuracy of the data and make necessary corrections. We note that States could delegate the function of forwarding the information to the managed care plans to the entity conducting the secret shopper surveys so that the State and managed care plans receive the information at the same time. This would hasten plans' receipt of the information as well as alleviate State burden. To ensure that managed care plans use the data to update their electronic directories, we propose at § 438.10(h)(3)(iii) to require MCOs, PIHPs, and PAHPs to use the information from secret shopper surveys required at § 438.68(f)(1) to obtain corrected information and update provider directories no later than the timeframes specified in § 438.10(h)(3)(i) and (ii), and included in separate CHIP regulations through an existing cross-reference at § 457.1207. While updating provider directory data after it has been counted as an error in secret shopper survey results would not change a managed care plan's compliance rate, it would improve provider directory accuracy more quickly and thus, improve access to care for enrollees.

To implement section 5123 of the Consolidated Appropriations Act of 2023,[26] we propose to revise § 438.10(h)(1) by adding ''searchable'' before ''electronic form'' to require that managed care plan electronic provider directories be searchable. We also propose to add paragraph (ix) to § 438.10(h)(1) to require that managed care plan provider directories include information on whether each provider offers covered services via telehealth. These proposals would align the text in § 438.10(h) with section 1932(a)(5) of the Act, as amended by section 5123 of the Consolidated Appropriations Act of 2023. Section 5123 of the Consolidated Appropriations Act of 2023 specifies that the amendments to section 1932(a)(5) of the Act will take effect on July 1, 2025; therefore, we propose that States would have to comply with the revisions to § 438.10(h)(1) and new (h)(1)(ix) by July 1, 2025.

Our proposals for a secret shopper survey of provider directory data proposed at § 438.68(f)(1) are authorized by section 1932(a)(5)(B)(i) of the Act for Medicaid and through section 2103(f)(3) of the Act for CHIP, which require each Medicaid MCO to make available the identity, locations, qualifications, and availability of health care providers that participate in their network. The authority for our proposals is extended to PIHPs and PAHPs through regulations based on our authority under section 1902(a)(4) of the Act. We propose that secret shopper surveys include verification of certain providers' active network status, street address, telephone number, and whether the provider is accepting new enrollees; these directory elements reflect the identity, location, and availability, as required for Medicaid in section 1932(a)(5)(B)(i) of the Act and required for CHIP through section 2103(f)(3) of the Act. Although the statute does not explicitly include ''accurate'' to describe ''the identity, locations, qualifications, and availability of health care providers,'' we believe it is the intent of the text and therefore, utilizing secret shopper surveys to identify errors in provider directories would help managed care plans ensure the accuracy of the information in their directories. Further, our proposal at § 438.10(h)(3)(iii) for managed care plans to use the data from secret shopper surveys to make timely corrections to their directories would also be consistent with statutory intent to reflect accurate identity, locations, qualifications, and availability information. Secret shopper survey results would provide vital information to help managed care plans fulfill their obligations to make the identity, locations, qualifications, and availability of health care providers that participate in the network available to enrollees and potential enrollees.

We believe using secret shopper surveys could also be a valuable tool to help States meet their enforcement obligations of appointment wait time standards, required in § 438.68(e). Secret shopper surveys are perhaps the most commonly used tool to assess health care appointment availability and can produce unbiased, actionable results. At § 438.68(f)(2), we propose to require States to determine each MCO's, PIHP's, and PAHP's rate of network compliance with the appointment wait time standards proposed in § 438.68(e)(1). We also propose in § 438.68(f)(2)(i) that, after consulting with States and other interested parties and providing public notice and opportunity to comment, we may select additional provider types to be added to secret shopper surveys of appointment wait time standards. We believe that after reviewing States' assurances of compliance and accompanying analyses of secret shopper survey results as proposed at § 438.207(d), and through an existing cross-reference at § 457.1230(b) for separate CHIP, we may propose additional provider types be subject to secret shopper surveys in future rulemaking.

In section I.B.1.b. of this proposed rule, we explained that States need to balance the use of telehealth with the availability of providers that can provide in-person care and enrollees' preferences for receiving care to ensure that they establish network adequacy standards under § 438.68(e) that accurately reflect the practical use of telehealth and in-person appointments in their State. To ensure that States reflect this, in § 438.68(f)(2)(ii), we propose that appointments offered via telehealth only be counted towards compliance with appointment wait time standards if the provider also offers in-person appointments and that telehealth visits offered during the secret shopper survey be separately identified in the survey results. We believe it would be appropriate to prohibit managed care plans from meeting appointment wait time standards with telehealth

[26] *BILLS-117hr2617enr.pdf* (*congress.gov*).

appointments alone and by separately identifying telehealth visits in the results because this would help States determine if the type of appointments being offered by providers is consistent with expectations and enrollees' needs. We note that this proposal is consistent with the requirement for QHPs beginning in 2024.[27] Managed care encounter data in Transformed Medicaid Statistical Information system (T–MSIS) reflects that most care is still provided in-person and that use of telehealth has quickly returned to near pre-pandemic levels. We believe by explicitly proposing to limit the counting of telehealth visits to meet appointment wait time standards, as well as the segregation of telehealth and in-person appointment data, secret shopper survey results would produce a more accurate reflection of what enrollees actually experience when attempting to access care. We considered aligning appointment wait times and telehealth visits with the process used by MA for demonstrating overall network adequacy, which permits MA organizations to receive a 10-percentage point credit towards the percentage of beneficiaries residing within published time and distance standards for the applicable provider specialty type and county when the plan includes one or more telehealth providers that provide additional telehealth benefits. However, we believe our proposal would provide States and CMS with more definitive data to assess the use of telehealth and enrollee preferences and would be the more appropriate method to use at this time. We request comment on this proposal.

Our proposal for secret shopper surveys of plans' compliance with appointment wait time standards proposed at § 438.68(f)(2) is authorized by section 1932(b)(5) of the Act for Medicaid and through section 2103(f)(3) of the Act for CHIP, because secret shopper surveys could provide unbiased, credible, and representative data on how often network providers are offering routine appointments within the State's appointment wait time standards. This data should aid managed care plans as they assess their networks, pursuant to § 438.207(b), and provide an assurance to States that their networks have the capacity to serve the expected enrollment in their service area. States should find the results of the secret shopper surveys a rich source of information to assess compliance with the components of their quality strategy that address access to care and determine whether covered services are available within reasonable timeframes, as required in section 1932(c)(1)(A)(i) of the Act for Medicaid and section 2103(f)(3) of the Act for CHIP.

It is critical that secret shopper survey results be obtained in an unbiased manner using professional techniques that ensure objectivity. To reflect this, we propose at § 438.68(f)(3) that any entity that conducts secret shopper surveys must be independent of the State Medicaid agency and its managed care plans subject to a secret shopper survey. In § 438.68(f)(3)(i) and (ii), we propose the criteria for an entity to be considered independent: Section 438.68(f)(3)(i) proposes that an entity cannot be a part of any State governmental agency to be independent of a State Medicaid agency and § 438.68(f)(3)(ii) proposes that to be independent of the managed care plans subject to the survey, an entity would not be an MCO, PIHP, or PAHP, would not be owned or controlled by any of the MCOs, PIHPs, or PAHPs subject to the surveys, and would not own or control any of the MCOs, PIHPs, or PAHPs subject to the surveys. We propose to define ''independent'' by using criteria that is similar, but not as restrictive, as the criteria used for independence of enrollment brokers and specified at § 438.810(b)(1). We believe this consistency in criteria would make it easier for States to evaluate the suitability of potential survey entities. We remind States that the optional EQR activity at § 438.358(c)(5) could be used to conduct the secret shopper surveys proposed at § 438.68(f) and for secret shopper surveys conducted for MCOs, States may be able to receive enhanced Federal financial participation (FFP), pursuant to § 438.370.

Secret shopper surveys can be conducted in many ways, using varying levels of complexity and gathering a wide range of information. We want to give States flexibility to design their secret shopper surveys to produce results that not only validate managed care plans' compliance with provider directory data accuracy as proposed at § 438.68(f)(1) and appointment wait time standards at § 438.68(f)(2), but also provide States the opportunity to collect other information that would assist them in their program monitoring activities and help them achieve programmatic goals. To provide this flexibility, we are proposing a limited number of methodological standards for the required secret shopper surveys. In § 438.68(f)(4), we propose that secret shopper surveys would have to be completed for a statistically valid sample of providers and: (1) use a random sample; and (2) include all areas of the State covered by the MCO's, PIHP's, or PAHP's contract. We believe these would be the most basic standards that all secret shopper surveys would have to meet to produce useful results that enable comparability between plans and among States. We propose in § 438.68(f)(4)(iii) that secret shopper surveys to determine plan compliance with appointment wait time standards would have to be completed for a statistically valid sample of providers to be clear that a secret shopper surveys must be administered to the number providers identified as statistically valid for each plan. To ensure consistency, equity, and context to the final compliance rate for each plan, we believe it would be important that inaccurate provider directory data not reduce the number of surveys administered. Therefore, as a practical matter, if the initial data provided by a State to the entity performing the survey does not permit surveys to be completed for a statistically valid sample, the State would need to provide additional data to enable completion of the survey for an entire statistically valid sample. We do not believe this provision would need to apply to secret shopper surveys of provider directory data proposed in paragraph (f)(1) since the identification of incorrect directory data is the intent of those surveys and should be reflected in a plan's compliance rate.

Because we believe secret shopper survey results can produce valuable data for States, managed care plans, enrollees and other interested parties, we propose at § 438.68(f)(5), that the results of these surveys would be reported to CMS and posted on the State's website. Specifically, at § 438.68(f)(5)(i), we propose that the results of the secret shopper surveys of provider directory data validation at § 438.68(f)(1) and appointment wait time standards at § 438.68(f)(2) would be reported to CMS annually using the content, form, and submission times proposed in § 438.207(d). At § 438.68(f)(5)(ii), we propose that States post the results on the State's website required at § 438.10(c)(3) within 30 calendar days of the State submitting them to CMS. We believe using the existing report required at § 438.207(d) would lessen burden on States, particularly since we published the Network Adequacy and Access Assurances Report template [28] in July 2022 and are also developing an electronic reporting portal to facilitate States' submissions. We anticipate

[27] *https://www.cms.gov/sites/default/files/2022-04/Final-2023-Letter-to-Issuers_0.pdf.*

[28] *https://www.medicaid.gov/medicaid/managed-care/downloads/network-assurances-template.xlsx.*

revising the data fields in the Network Adequacy and Access Assurances Report [29] to include specific fields for secret shopper results, including the provider type chosen by the State as required in § 438.68(e)(1)(iv) and (f)(1)(i)(D). This proposal is authorized by section 1902(a)(6) of the Act which requires that States provide reports, in such form and containing such information, as the Secretary may from time to time require.

We recognize that implementing secret shopper surveys would be a significant undertaking, especially for States not already using them; but we believe that the data produced by successful implementation of them would be a valuable addition to States' and CMS' oversight efforts. As always, technical assistance would be available to help States effectively implement and utilize secret shopper surveys. We invite comment on the type of technical assistance that would be most useful for States as well as States' best practices and lessons learned from using secret shopper surveys.

We also propose that States would have to comply with § 438.68(f) no later than the first MCO, PIHP, or PAHP rating period that begins on or after 4 years after the effective date of the final rule.

d. Assurances of Adequate Capacity and Services—Provider Payment Analysis (§§ 438.207(b), 457.1230(b))

We believe there needs to be greater transparency in Medicaid and CHIP provider payment rates in order for States and CMS to monitor and mitigate payment-related access barriers. There is considerable evidence that Medicaid payment rates, on average, are lower than Medicare and commercial rates for the same services and that provider payment influences access, with low rates of payment limiting the network of providers willing to accept Medicaid patients, capacity of those providers who do participate in Medicaid, and investments in emerging technology among providers that serve large numbers of Medicaid beneficiaries. However, there is no standardized, comprehensive, cross-State comparative data source available to assess Medicaid and CHIP payment rates across clinical specialties, health plans, and States. Given that a critical component of building a managed care plan network is payment, low payment rates can harm access to care for Medicaid and CHIP enrollees in a number of ways. Evidence suggests that low Medicaid physician fees limit physicians' participation in the program, particularly for behavioral health and primary care providers.[30] [31] Relatedly, researchers have found that increases in the Medicaid payment rates are directly associated with increases in provider acceptance of new Medicaid patients. In short, two key drivers of access—provider network size and capacity—are inextricably linked with Medicaid provider payment levels and acceptance of new Medicaid patients.[32] [33] While many factors affect provider participation, given the important role rates play in assuring access, greater transparency is needed to understand when and to what extent provider payment may influence access in State Medicaid and CHIP programs to specific provider types or for Medicaid and CHIP beneficiaries enrolled in specific plans.

We also believe that greater transparency and oversight is warranted as managed care payments have grown significantly as a share of total Medicaid payments; in FY 2021, the Federal government spent nearly $250 billion on payments to managed care plans.[34] With this growth, we seek to develop, use, and facilitate State use of data to generate insights into important, provider rate related indicators of access. Unlike fee-for-service (FFS) Medicaid and CHIP programs, managed care plans generally have the ability to negotiate unique reimbursment rates for individual providers. Generally, unless imposed by States through a State directed payment or mandated by statute (such as Federally qualified health centers payment requirements established under section 1902(bb) of the Act), there are no Federal regulatory or statutory minimum or maximum limits on the payment rates a managed care plan can negotiate with a network provider. As such, there can be tremendous variation among plans' payment rates, and we often do not have sufficient visibility into those rates to perform analyses that would promote a better understanding of how these rates are impacting access. Section 438.242(c)(3) for Medicaid, and through cross-reference at § 457.1233(d) for separate CHIP, requires managed care plans to submit to the State all enrollee encounter data, including allowed amounts and paid amounts, that the State is required to report to CMS. States are then required to submit those data to T–MSIS as required in § 438.818 for Medicaid, and through cross-reference at § 457.1233(d) for separate CHIP. However, variation in the quantity and quality of T–MSIS data, particularly for data on paid amounts, remains. We believe that provider payment rates in managed care are inextricably linked with provider network sufficiency and capacity and seek to propose a process through which managed care plans must report, and States must review and analyze, managed care payment rates to providers as a component of States' responsibility to ensure network adequacy and enrollee access consistent with State and Federal standards. Linking payment levels to quality of care is consistent with a strategy that we endorsed in our August 22, 2022 CIB [35] urging States to link Medicaid payments to quality measures to improve the safety and quality of care.

To ensure comparability in managed care plans' payment analyses, we propose to require a payment analysis that managed care plans would submit to States per § 438.207(b)(3) and States would review and include in the assurance and analysis to CMS per § 438.207(d). Specifically, we propose to replace the periods at the end of § 438.207(b)(1) and (2) with semi-colons and add ''and'' after § 438.207(b)(2) to make clear that (b)(1) through (3) would all be required for Medicaid managed care, and for separate CHIP through an existing cross-reference at § 457.1230(b).

At § 438.207(b)(3) for Medicaid, and for separate CHIP through an existing cross-reference at § 457.1230(b), we propose to require that MCOs, PIHPs, and PAHPs submit annual documentation to the State that demonstrates a payment analysis showing their level of payment for certain services, if covered by the managed care plan's contract. We

propose that the analysis would use paid claims data from the immediate prior rating period to ensure that all payments are captured, including those that are negotiated differently than a plan's usual fee schedule. We also believe it is important to use claims data to ensure that utilization would be considered to prevent extremely high or low payments from inappropriately skewing the results. We acknowledge that paid claims data would likely not be complete within 180 days of the end of a rating period, which is when this analyis is proposed to be reported by the State in § 438.207(d)(3)(ii). However, we believe that the data would be sufficiently robust to produce a reasonable percentage that reflects an appropriate weighting to each payment based on actual utilization and could be provided to the State far enough in advance of the State submitting its reporting to CMS to be incorporated. We believe this analysis of payments would provide States and CMS with vital information to assess the adequacy of payments to providers in managed care programs, particularly when network deficiencies or quality of care issues are identified or grievances are filed by enrollees regarding access or quality.

In § 438.207(b)(3)(i) for Medicaid, and for separate CHIP through an existing cross-reference at § 457.1230(b), we propose to require that each MCO, PIHP, and PAHP would use paid claims data from the immediate prior rating period to determine the total amount paid for evaluation and management current procedural terminology (CPT) codes for primary care, OB/GYN, mental health, and SUD services. Due to the unique payment requirements in section 1902(bb) of the Act for Federally qualified health centers and rural health clinics, we propose in § 438.207(b)(3)(iv) to exclude these provider types from the analysis. We further propose that this analysis provide the percentage that results from dividing the total amount the managed care plan paid by the published Medicare payment rate for the same codes on the same claims. Meaning, the payment analysis would reflect the comparison of how much the managed care plan paid for the evaluation and managment CPT codes to the published Medicare payment rates including claim-specific factors such as provider type, geographic location where the service was rendered, and the site of service. In § 438.207(b)(3)(i)(A) for Medicaid, and for separate CHIP through an existing cross-reference at § 457.1230(b), we also propose that the plans would include in the analysis separate total amounts paid and separate comparison percentages to Medicare for primary care, OB/GYN, mental health, and substance use disorder services for ease of analysis and clarity. Lastly in § 438.207(b)(3)(i)(B) for Medicaid, and for separate CHIP through an existing cross-reference at § 457.1230(b), we propose that the percentages would have to be reported separately if they differ between adult and pediatric services. We believe the proposals in § 438.207(b)(3)(i)(A) and (B) would ensure sufficient detail in the data to enable more granular analysis across plans and States as well as to prevent some data from obscuring issues with other data. For example, if payments for adult primary care are significantly lower than pediatric primary care, providing separate totals and comparison percentages would prevent the pediatric data from artificially inflating the adult totals and percentages. We believe this level of detail would be necessary to prevent misinterpretation of the data.

We propose in § 438.207(b)(3)(ii) for Medicaid, and for separate CHIP through an existing cross-reference at § 457.1230(b), to require that the payment analysis provide the total amount paid for homemaker services, home health aide services, and personal care services and the percentage that results from dividing the total amount paid by the amount the State's Medicaid or CHIP FFS program would have paid for the same claims. We propose two differences between this analysis and the analysis in § 438.207(b)(3)(i): first, this analysis would use all codes for the services as there are no evaluation and management CPT codes for these LTSS; and second, we propose the comparison be to Medicaid or CHIP FFS payment rates, as applicable, due to the lack of comparable Medicare rates for these services. We propose these three services as we believe these have high impact to help keep enrollees safely in the community and avoid institutionalization. Again, we believe this analysis of payment rates would be important to provide States and CMS with information to assess the adequacy of payments to providers in managed care programs, particularly when enrollees have grievances with services approved in their care plans not being delivered or not delivered in the authorized quantity. We request comment on whether in-home habilitation provided to enrollees with IDD should be added to this analysis.

We believe that managed care plans could perform the analyses in § 438.207(b)(3)(i) and (ii) by: (1) Identifying paid claims in the prior rating period for each required service type; (2) identifying the appropriate codes and aggregating the payment amounts for the required service types; and (3) calculating the total amount that would be paid for the same codes on the claims at 100 percent of the appropriate published Medicare rate, or Medicaid/CHIP FFS rate for the analysis in § 438.207(b)(3)(ii), applicable on the date of service. For the aggregate percentage, divide the total amount paid (from 2. above) by the amount for the same claims at 100 percent of the appropriate published Medicare rate or Medicaid/CHIP FFS, as appropriate (from 3. above). We believe this analysis would require a manageable number of calculations using data readily available to managed care plans.

To ensure that the payment analysis proposed in paragraph (b)(3) is appropriate and meaningful, we propose at § 438.207(b)(3)(iii) for Medicaid, and for separate CHIP through an existing cross-reference at § 457.1230(b), to exclude payments for claims for the services in (b)(3)(i) for which the managed care plan is not the primary payer. A comparison to payment for cost sharing only or payment for a claim for which another payer paid a portion would provide little, if any, useful information.

The payment analysis proposed at § 438.207(b)(3) is authorized by sections 1932(c)(1)(A)(ii) and 2103(f)(3) of the Act, which requires States' quality strategies to include an examination of other aspects of care and service directly related to the improvement of quality of care. The authority for our proposals is extended to PIHPs and PAHPs through regulations based on our authority under section 1902(a)(4) of the Act. Because the proposed payment analysis would generate data on each managed care plan's payment levels for certain provider types as a percent of Medicare or Medicaid FFS rates, States could use the analysis in their examination of other aspects of care and service directly related to the improvement of quality of care, particularly access. Further, sections 1932(c)(1)(A)(iii) and 2103(f)(3) of the Act authorizes the proposals in this section as enabling States to compare payment data among managed care plans in their program could provide useful data to fulfill their obligations for monitoring and evaluating quality and appropriateness of care.

We also propose to revise § 438.207(f) to reflect that States would have to comply with § 438.207(b)(3) no later than the first rating period that begins on or after 2 years after the effective date

of the final rule as we believe this is a reasonable timeframe for compliance.

e. Assurances of Adequate Capacity and Services Reporting (§§ 438.207(d), 457.1230(b))

Currently at § 438.207(d), States are required to review the documentation submitted by their managed care plans, as required at § 438.207(b), and then submit to CMS an assurance of their managed care plans' compliance with §§ 438.68 and 438.206. To make States' assurances and analyses more comprehensive, we propose to revise § 438.207(d) to explicitly require States to include the results from the secret shopper surveys proposed in § 438.68(f) (see section I.B.1.c. of this proposed rule) and included in separate CHIP regulations through an existing cross-reference at § 457.1230(b). We also propose to require States to include the payment analysis proposed in § 438.207(b)(3) (see section I.B.1.d. of this proposed rule) to their assurance and analyses reporting. Additionally, on July 6, 2022, we published a CIB [36] that provided a reporting template Network Adequacy and Access Assurances Report [37] for the reporting required at § 438.207(d). To be clear that States would have to use the published template, we propose to explicitly require that States submit their assurance of compliance and analyses required in § 438.207(d) in the ''format prescribed by CMS.'' The published template would fulfill this requirement as would future versions including any potential electronic formats. We believe the revision proposed in § 438.207(d) would be necessary to ensure consistent reporting to CMS and enable effective analysis and oversight. Lastly, because we propose new requirements related to the inclusion of the payment analysis and the timing of the submission of this reporting to CMS, we propose to redesignate the last sentence in § 438.207(d) as § 438.207(d)(1) and create a new § 438.207(d)(2) and (3).

In § 438.207(d)(2) for Medicaid and included in separate CHIP regulations through an existing cross-reference at § 457.1230(b), we propose that the States' analysis required in § 438.207(d)(1) must include the payment analysis required of plans in § 438.207(b)(3) and provide the elements specified in paragraphs (d)(2)(i) and (ii). Specifically, § 438.207(d)(2)(i) proposes to require States to include the data submitted by each plan and § 438.207(d)(2)(ii) proposes to require States to use the data from its plans' reported payment analysis percentages and weight them using the member months associated with the applicable rating period to produce a Statewide payment percentage for each service type. We believe these data elements would provide valuable new data to support States' assurances of network adequacy and access and we would revise the Network Adequacy and Access Assurances Report template published in July 2022 to add fields for States to easily report these data. We remind States that § 438.66(a) and (b) require States to have a monitoring system for all of their managed care programs and include all aspects, including the performance of their managed care plans in the areas of availability and accessibility of services, medical management, provider network management, and appeals and grievances. Accordingly, States should have ample data from their existing monitoring activities and which would be supplemented by the proposal requirements in this rule, to improve the performance of their managed care programs for all covered services, as required in § 438.66(c). Because concerns around access to primary care, mental health, and SUD services have been raised nationally, we expect States to review and analyze their plans' data holistically to provide a robust, comprehensive analysis of the adequacy of each plan's network and level of realistic access and take timely action to address deficiencies.

Section 438.207(d) was codified in 2002 (67 FR 41010) as part of the implementing regulations for section 1932(b)(5) of the Act ''Demonstration of Adequate Capacity and Services.'' In the 2016 final rule, we made minor revisions to the language but did not address the timing of States' submission of their assurance and analysis. Given the July 2022 release of the Network Adequacy and Access Assurances Report template for the assurance and analysis, we believe it would be appropriate to clarify this important aspect of the reporting requirement. To simplify the submission process and enable States and CMS to allot resources most efficiently, we propose to establish submission times in § 438.207(d)(3)(i) through (iii) that correspond to the times for managed care plans to submit documentation to the State in § 438.207(c)(1) through (3). Specifically for Medicaid, we propose that States submit their assurance and analysis at § 438.207(d)(3): (1) at the time it submits a completed readiness review, as specified at § 438.66(d)(1)(iii); (2) on an annual basis and no later than 180 calendar days after the end of each contract year; and (3) any time there has been a significant change as specified in § 438.207(c)(3) and with the submission of the associated contract. We also propose in § 438.207(d)(3) that States must post the report required in § 438.207(d) on their website within 30 calendar days of submission to CMS. We believe the information in this report would be important information for interested parties to have access to on a timely basis and 30 calendar days seems adequate for States to post the report after submitting.

Since we did not adopt the MCPAR requirements for separate CHIP managed care in the 2016 final rule, we are also not adopting the proposed submission timeframe at § 438.207(d)(3)(i). However, we propose for separate CHIPs to align with Medicaid for the proposed network adequacy analysis submission timeframes at § 438.207(d)(3)(ii) and (iii) through the existing cross-reference at § 457.1230(b).

In § 438.207(e), we propose a conforming revision to add a reference to the secret shopper evaluations proposed at § 438.68(f) as part of the documentation that States must make available to CMS, upon request, and included in separate CHIP regulations through an existing cross-reference at § 457.1230(b). We believe this would be necessary as the current text of § 438.207(e) only addresses the documentation provided by the managed care plans.

Sections 1932(b)(5) and 2103(f)(3) of the Act require Medicaid and CHIP MCOs to demonstrate adequate capacity and services by providing assurances to the State and CMS, as specified by the Secretary, that it has the capacity to serve the expected enrollment in its service area, including assurances that it offers an appropriate range of services and access to preventive and primary care services for the population expected to be enrolled in such service area, and maintains a sufficient number, mix, and geographic distribution of providers of services. The authority for our proposals is extended to PIHPs and PAHPs through regulations based on our authority under section 1902(a)(4) of the Act. Our proposals to require States to include the secret shopper surveys proposed in § 438.68(f) as well as the reimbursment analysis proposed in § 438.207(b)(3) to their assurance and analyses reporting proposed at § 438.207(d) are authorized by section 1932(b)(5) of the Act for Medicaid and

[36] *https://www.medicaid.gov/federal-policy-guidance/downloads/cib07062022.pdf.*

[37] *https://www.medicaid.gov/medicaid/managed-care/downloads/network-assurances-template.xlsx.*

authorized for CHIP through section 2103(f)(3) of the Act because the States' reports reflect the documentation and assurances provided by their managed care plans of adequate capacity, an appropriate range of services, and access to a sufficient number, mix, and geographic distribution of network providers. Sections 1932(b)(5) and 2103(f)(3) of the Act also require that the required assurances be submitted to CMS in a time and manner determined by the Secretary; that information is proposed in § 438.207(d)(3)(i) through (iii) and corresponds to the requirements for submission of documenation from managed care plans in § 438.207(c)(3).

We also propose to revise § 438.207(g) to reflect that States would have to comply with paragraph (d)(2) no later than the first managed care plan rating period that begins on or after 2 years after the effective date of the final rule and paragraph (d)(3) no later than the first managed care plan rating period that begins on or after 1 year after the effective date of the final rule. We propose that States would not be held out of compliance with the requirements of paragraphs (e) of this section prior to the first MCO, PIHP, or PAHP rating period that begins on or after 4 years after the effective date of the final rule, so long as they comply with the corresponding standard(s) codified in paragraph (e) contained in the 42 CFR, parts 430 to 481, most recently published before the final rule. We propose that States would have to comply with paragraph (f) no later than the first managed care plan rating period that begins on or after 4 years after the effective date of the final rule. We believe these are reasonable timeframes for compliance given the level of new burden imposed by each.

f. Remedy Plans To Improve Access (§ 438.207(f))

For FFS programs, we rely on § 447.203(b)(8) to require States to submit corrective action plans when access to care issues are identified. Because of the numerous proposals in this rule that would strengthen States' monitoring and enforcement of access requirements and the importance of timely remediation of access issues, we believe we should have a similar process set forth in part 438 for managed care programs. In § 438.68(e), we propose a process that would require States to carefully develop and enforce their managed care plans' use of appointment wait time standards to ensure access to care for Medicaid managed care enrollees. As proposed in a new § 438.207(f), when the State, MCO, PIHP, PAHP, or CMS identifies any access issues, including any access issues with the standards specified in §§ 438.68 and 438.206, the State would be required to submit a plan to remedy the access issues consistent with this proposal. If we determine that an access issue revealed under monitoring and enforcement rises to the level of a violation of access requirements under section 1932(c)(1)(A)(i) of the Act, as incorporated in section 1903(m)(2)(A)(xii) of the Act, we have the authority to disallow Federal financial participation (FFP) for the payments made under the State's managed care contract for failure to ensure adequate access to care. We intend to closely monitor any State remedy plans that would be needed under this proposal to ensure that both us and States would adequately and appropriately address emerging access issues in Medicaid managed care programs. Using § 447.203(b)(8) as a foundation, we propose to redesignate existing § 438.207(f) as § 438.207(g) and propose a new requirement for States to submit remedy plans in new § 438.207(f), titled Remedy plans *to* improve access. In § 438.207(f)(1), we propose that when the State, MCO, PIHP, PAHP, or CMS identifies an issue with a managed care plan's performance with regard to any State standard for access to care under this part, including the standards at §§ 438.68 and 438.206, States would follow the steps set forth in paragraphs (i) through (iv). First, in paragraph (1)(i), States would have to submit to CMS for approval a remedy plan no later than 90 calendar days following the date that the State becomes aware of an MCO's, PIHP's, or PAHP's access issue. We believe 90 calendar days would be sufficient time for States to effectively assess the degree and impact of the issue and develop an effective set of steps including timelines for implementation and completion, as well as responsible parties. In § 438.207(f)(1)(ii), we propose that the State would have to develop a remedy plan to address the identified issue that if addressed could improve access within 12 months and that identifies specific steps, timelines for implementation and completion, and responsible parties. We believe 12 months would be a reasonable amount of time for States and their managed care plans to implement actions to address the access issue and improve access to services by enrollees of the MCO, PIHP, or PAHP. We do not propose to specify that the remedy plan would be implemented by the managed care plans or the State; rather, we propose that the remedy plan would identify the responsible party required to make the access improvements at issue, which would often include actions by both States and their managed care plans. Additionally, we believe this proposal acknowledges that certain steps that may be needed to address provider shortages can only be implemented by States. For example, changing scope of practice laws to enable more providers to fill gaps in access or joining interstate compacts to enable providers to practice geographically due to the opportunity to hold one multistate license valid for practice in all compact States, streamlined licensure requirements, reduced expenses associated with obtaining multiple single-State licenses, and the creation of systems that enable electronic license application processes. Lastly, in § 438.207(f)(1)(ii), we propose some approaches that States could consider to address the access issue, such as increasing payment rates to providers, improving outreach and problem resolution to providers, reducing barriers to provider credentialing and contracting, providing for improved or expanded use of telehealth, and improving the timeliness and accuracy of processes such as claim payment and prior authorization.

We propose in § 438.207(f)(1)(iii) to require States to ensure that improvements in access are measurable and sustainable. We believe it would be critical that the remedy plan produce measurable results in order to monitor progress and, ultimately, bring about the desired improvements in access under the managed care plan. We also propose that the improvements in access achieved by the actions be sustainable so that enrollees would be able to continue receiving the improved access to care and managed care plans would continue to ensure its provision. In paragraph (f)(1)(iv) of this section, we propose that States submit quarterly progress updates to CMS on implementation of the remedy plan so that we would be able to determine if the State was making reasonable progress toward completion and that the actions in the plan are effective. Not properly monitoring progress of the remedy plan could significantly lessen the effectiveness of it and allow missed opportunities to make timely revisions and corrections.

Lastly, in paragraph (f)(2) of this section we propose that if the remedy plan required in paragraph (f)(1) of this section does not address the managed care plan's access issue within 12 months, we may require the State to continue to take steps to address the

issue for another 12 months and may require revision to the remedy plan. We believe proposing that we be able to extend the duration of actions to improve access and/or require the State to make revision to the remedy plan would be critical to ensuring that the State's and managed care plans' efforts are effective at addressing the identified access issue.

These proposals are authorized by section 1902(a)(4)(A) of the Act, which provides for methods of administration found necessary by the Secretary for the proper and efficient operation of the plan as we believe States taking timely action to address identified access issues is fundamental and necessary to the operation of an effective and efficient Medicaid program. The proposal for States to submit quarterly progress reports is authorized by section 1902(a)(6) of the Act which requires that States provide reports, in such form and containing such information, as the Secretary may from time to time require. Lastly, we believe these proposals are also authorized by section 1932(c)(1)(A)(i) and (iii) of the Act which require States that contract with MCOs to develop and implement a quality assessment and improvement strategy that includes (and extended to PIHPs and PAHPs through regulations based on our authority under section 1902(a)(4) of the Act): standards for access to care so that covered services are available within reasonable timeframes and in a manner that ensures continuity of care and adequate primary care and specialized services capacity and procedures for monitoring and evaluating the quality and appropriateness of care and services to enrollees and requirements for provision of quality assurance data to the State. Implementing timely actions to address managed care plan access issues would be an integral operational component of a State's quality assessment and improvement strategy.

g. Transparency (§§ 438.10(c), 438.602(g), 457.1207, 457.1285)

In the 2016 final rule, we finalized § 438.10(c)(3) for Medicaid, which is included in separate CHIP regulations through cross-reference at § 457.1207, which required States to operate a website that provides specific information, either directly or by linking to individual MCO, PIHP, PAHP, or PCCM entity websites. A State's website may be the single most important resource for information about its Medicaid program and there are multiple requirements for information to be posted on a State's website throughout 42 CFR part 438. Current regulations at § 438.10(c)(6)(ii) require certain information to be ''prominent and readily accessible'' and § 438.10(a) defines ''readily accessible'' as ''electronic information and services which comply with modern accessibility standards such as section 508 guidelines, section 504 of the Rehabilitation Act, and W3C's Web Content Accessibility Guidelines (WCAG) 2.0 AA and successor versions.'' Despite these requirements, we have received input from numerous and varied interested parties since the 2016 final rule about how challenging it can be to locate regulatorily required information on some States' websites.

There is variation in how ''user-friendly'' States' websites are, with some States making navigation on their website fairly easy and providing information and links that are readily available and presenting required information on one page. However, we have not found this to be the case for most States. Some States have the required information scattered on multiple pages that requires users to click on many links to locate the information they seek. While such websites may meet the current minimum standards in part 438, they do not meet our intent of providing one place for interested parties to look for all required information. Therefore, we believe revisions are necessary to ensure that all States' websites required by § 438.10(c)(3) provide a consistent and easy user experience. We acknowledge that building websites is a complex and costly endeavor that requires consideration of many factors, but we believe that States and managed care plans share an obligation to build websites that quickly and easily meet the needs of interested parties without undue obstacles. We note that State and managed care plan websites must be compliant with civil rights laws, including the Americans with Disabilities Act (ADA), section 504 of the Rehabilibation Act, Title VI of the Civil Rights Act of 1964, and section 1557 of the Affordable Care Act. In this proposed rule, we believe that there are several minimal qualities that all websites should include, such as being able to:

- Function quickly and as expected by the user;
- Produce accurate results;
- Use minimal, logical navigation steps;
- Use words and labels that users are familiar with for searches;
- Allow access, when possible, without conditions such as establishment of a user account or password;
- Provide reasonably comparable performance on computers and mobile devices;
- Provide easy access to assistance via chat; and
- Provide multilingual content for individuals with LEP.

We also believe that States and managed care plans should utilize web analytics to track website utilization and inform design changes. States should create a dashboard to regularly quantify website traffic, reach, engagement, sticking points, and audience characteristics. Given the critical role that websites fill in providing necessary and desired program information, we believe proposing additional requirements on States' websites are appropriate.

We acknowledge that States and managed care plans may have information accessible through their websites that is not public facing; for example, enrollee specific protected health information. Proper security mechanisms should continue to be utilized to prevent unauthorized access to non-public facing information, such as the establishment of a user account and password or entry of other credentials. Data security must always be a priority for States and managed care plans and the proposals in § 438.10(c)(3) in no way diminish that obligation for States.

To increase the effectiveness of States' websites and add some consistency to website users' experence, we propose in § 438.10(c)(3) to revise ''websites'' to ''web pages'' in the reference to managed care plans. We propose this change to clarify that if States provide required content on their website by linking to individual MCO, PIHP, PAHP, or PCCM entity websites, the link on the State's site would have to be to the specific page that includes the requested information. We believe this would prevent States from showing links to a landing page for the managed care plan that then leaves the user to start searching for the specific information needed. Next, we propose to add ''States must:'' to paragraph (c)(3) before the items specified in new (c)(3)(i) through (iv). In § 438.10(c)(3)(i), we propose to require that all information, or links to the information, required in this part to be posted on the State's website, be available from one page. We believe that when website users have to do repeated searches or click through multiple pages to find information, they are more likely to give up trying to locate it. As such, we have carefully chosen the information that is required in 42 CFR part 438 to be posted on States' websites to ensure effective

communication of information and believe it represents an important step toward eliminating common obstacles for States' website users.

At § 438.10(c)(3)(ii), we propose to require that States' websites use clear and easy to understand labels on documents and links so that users can easily identify the information contained in them. We believe that using terminology and the reading grade level consistent with that used in other enrollee materials, such as handbooks and notices, would make the website more familiar and easy to read for enrollees and potential enrollees. Similar to having all information on one page, using clear labeling would reduce the likelihood of users having to make unncessary clicks as they search for specific information.

In § 438.10(c)(3)(iii), we propose to require that States check their websites at least quarterly to verify that they are functioning as expected and that the information is the most currently available. Malfunctioning websites or broken links can often render a website completely ineffective, so monitoring a website's performance and content is paramount. While we are proposing that a State's website be checked for functionality and information timeliness no less than quarterly, we believe this is a minimum standard and that States should implement continual monitoring processes to ensure the accuracy of their website's performance and content.

Lastly, in § 438.10(c)(3)(iv), to enable maximum effectiveness of States' websites, we propose to require that States' websites explain that assistance in accessing the information is available at no cost to them, including information on the availability of oral interpretation in all languages and written translation in each prevalent non-English language, alternate formats, auxiliary aids and services, and a toll-free TTY/TDY telephone number. This proposal is consistent with existing information requirements in § 438.10(d) and section 1557 of the Affordable Care Act. Clear provision of this information would help to ensure that all users have access to States' websites and can obtain assistance when needed.

The Medicaid managed care website transparency revisions proposed at § 438.10(c)(3)(i) through (iv) would apply to separate CHIP through the existing cross-reference at § 457.1207.

To help States monitor their website for required content, we propose to revise § 438.602(g) to contain a more complete list of information. While we believe the list proposed in § 438.602(g) would help States verify their website's compliance, we clarify that a requirement to post materials on a State's website in 42 CFR part 438 or any other Federal regulation but omitted from § 438.602(g), is still in full force and effect. Further, requirements on States to post specific information on their websites intentionally remain throughout 42 CFR part 438 and are not replaced, modified, or superceded by the items proposed in § 438.602(g)(5) through (12). Currently § 438.602(g) specifies four types of information that States must post on their websites; we propose to add nine more as (g)(5) through (g)(13): (5) enrollee handbooks, provider directories, and formularies required at § 438.10(g), (h), and (i); (6) information on rate ranges required at § 438.4(c)(2)(iv); (7) reports required at §§ 438.66(e) and 438.207(d); (8) network adequacy standards required at § 438.68(b)(1) and (2), and (e); (9) secret shopper survey results required at § 438.68(f); (10) State directed payment evaluation reports required in § 438.6(c)(2)(v)(C); (11) links to all required Application Programming Interfaces including as specified in § 431.60(d) and (f); (12) quality related information required in §§ 438.332(c)(1), 438.340(d), 438.362(c) and 438.364(c)(2)(i); and (13) documentation of compliance with requirements in subpart K—Parity in Mental Health and Substance Use Disorder Benefits. Although we are proposing to itemize these nine types of information in § 438.602(g)(5) through (13), we note that all but the following three are currently required to be posted on States' websites: the report at § 438.207(d), secret shopper survey results at § 438.68(f), and State directed payment evaluation reports at § 438.6(c)(2)(v)(C). Lastly, in § 438.10(c)(3), we propose to make the list of website content more complete by removing the current references to paragraphs (g) through (i) only and including a reference to § 438.602(g) and ''elsewhere in this part.''

We propose to revise § 438.10(j) to reflect that States would have to comply with § 438.10(c)(3) no later than the first managed care plan rating period that begins on or after 2 years after the effective date of the final rule and that States would have to comply with § 438.10(d)(2) no later than the first managed care plan rating period that begins on or after 3 years after the effective date of the final rule. Lastly, we propose that States must comply with § 438.10(h)(3)(iii) no later than the first managed care plan rating period that begins on or after 4 years after the effective date of the final rule. We believe these proposed compliance dates would provide reasonable time for compliance given the varying levels of State and managed care plan burden.

We propose to add § 438.602(j) to require States to comply with § 438.602(g)(5) through (13) no later than the first managed care plan rating period that begins on or after 2 years after the effective date of the final rule. We believe this is a reasonable timeframe for compliance.

For separate CHIP managed care, we currently require States to comply with the transparency requirements at § 438.602(g) through an existing cross-reference at § 457.1285. We propose to align with Medicaid in adopting most of the consolidated requirements for posting on a State's website proposed at § 438.602(g)(5) through (13) for separate CHIP.

We propose to adopt the provision at § 438.602(g)(5) (which specifies that States must post enrollee handbooks, provider directories, and formularies on the State's website) because requirements at § 438.10(g) through (i) are currently required for separate CHIP through an existing cross-reference at § 457.1207.

We do not plan to adopt the provision at § 438.602(g)(6) (which requires that States must post information on rate ranges on their websites) because we do not regularly review rates for separate CHIP.

We propose to adopt the provision at § 438.602(g)(7) (which specifies that States must post their assurances of network adequacy on the State's website) since the proposed network adequacy reporting at § 438.207(d) would apply to separate CHIP through an existing cross-reference at § 457.1230(b) (see section I.B.1.e. of this proposed rule). Since we did not adopt the managed care program annual reporting requirements at § 438.66(e) for separate CHIP, we propose to exclude this reporting requirement at § 457.1230(b).

We propose to adopt the provision at § 438.602(g)(8) (which requires State network adequacy standards to be posted on the State's website) for separate CHIP because we propose to adopt the new appointment wait time reporting requirements through an existing cross-reference at § 457.1230(b) (see section I.B.1.e. of this proposed rule), though we propose to exclude references to LTSS as not applicable to separate CHIP.

We propose to adopt the provision at § 438.602(g)(9) (which specifies that States must post secret shopper survey results on the State's website) for separate CHIP network access reporting to align with our proposed adoption of

secret shopper reporting at § 438.68(f) through an existing cross-reference at § 457.1218 (see section I.B.1.c. of this proposed rule).

We do not propose to adopt the provision at § 438.602(g)(10) (which directs States to post SDP evaluation reports on the State's website) because State directed payments are not applicable to separate CHIP.

We propose to adopt the provision at § 438.602(g)(11) (which specifies that States must post required information for Application Programming Interfaces on the State's website) given the existing requirements at § 457.1233(d).

We propose to adopt the provision at § 438.602(g)(12) (which requires States to post quality-related information on the State's website) for separate CHIP as required through cross-references at § 457.1240(c) and (e), as well as the applicable EQR report through a cross-reference at § 457.1250(a). However, we propose to exclude the reference to § 438.362(c) since MCO EQR exclusion is not applicable to separate CHIP.

We propose to adopt the provision at § 438.602(g)(13) (which requires States to post documentation of compliance with parity in mental health and substance use disorder benefits on the State's website) for separate CHIP through the existing cross-reference at § 457.1285. However, we propose to replace the reference to subpart K of part 438 with CHIP parity requirements at § 457.496 in alignment with contract requirements at § 457.1201(l).

We propose to amend § 457.1285 to state, the State must comply with the program integrity safeguards in accordance with the terms of subpart H of part 438 of this chapter, except that the terms of §§ 438.66(e), 438.362(c), 438.602(g)(6) and (10), 438.604(a)(2) and 438.608(d)(4) and references to LTSS of this chapter do not apply and that references to subpart K under part 438 should be read to refer to parity requirements at § 457.496.

Our proposals for requirements for States' websites at § 438.10(c)(3) and the list proposed in § 438.602(g) are authorized by sections 1932(a)(5)(A) and 2103(f)(3) of the Act for Medicaid and which require each State, enrollment broker, or managed care entity to provide all enrollment notices and informational and instructional materials in a manner and form which may be easily understood by enrollees and potential enrollees. The authority for our proposals is extended to PIHPs and PAHPs through regulations based on our authority under section 1902(a)(4) of the Act. We believe that our proposals would make States' websites easier to use by incorporating easily understood labels, having all information accessible from one page, verifying the accurate functioning of the site, and clearly explaining the availability of assistance—all of which would directly help States fulfill their obligation to provide informational materials in a manner and form which may be easily understood.

h. Terminology (§§ 438.2, 438.3(e), 438.10(h), 438.68(b), 438.214(b))

Throughout 42 CFR part 438, we use ''behavioral health'' to mean mental health and SUD. However, it is an imprecise term that does not capture the full array of conditions that are intended to be included, and some in the SUD treatment community have raised concerns with its use. It is important to use clear, unambiguous terms in regulatory text. Therefore, we propose to change ''behavioral health'' throughout 42 CFR part 438 as described here. In the definition of PCCM entity at § 438.2 and for the provider types that must be included in provider directories at § 438.10(h)(2)(iv), we propose to replace ''behavioral health'' with ''mental health and substance use disorder;'' for the provider types for which network adequacy standards must be developed in § 438.68(b)(1)(iii), we propose to remove ''behavioral health'' and the parentheses; and for the provider types addressed in credentialing policies at § 438.214(b), we propose to replace ''behavioral'' with ''mental health.'' We also propose in the definition of PCCM entity at § 438.2 to replace the slash between ''health systems'' and ''providers'' with ''and'' for grammatical accuracy.

Similarly, we also propose to change ''psychiatric'' to ''mental health'' in § 438.3(e)(2)(v) and § 438.6(e). We believe that ''psychiatric'' does not capture the full array of services that can be provided by IMDs.

These proposals are authorized by section 1902(a)(4)(A) of the Act, which provides for methods of administration found necessary by the Secretary for the proper and efficient operation of the plan, because use of clear, unambiguous terms in regulatory text is imperative for proper and efficient operation of the plan.

2. State Directed Payments (42 CFR 438.6, 438.7, 430.3)

a. Background

Section 1903(m)(2)(A) of the Act requires contracts between States and MCOs to provide payment under a risk-based contract for services and associated administrative costs that are actuarially sound. CMS has historically used our authority under section 1902(a)(4) of the Act to apply the same requirements to contracts between States and PIHPs or PAHPs. Under risk-based managed care arrangements with the State, Medicaid managed care plans have the responsibility to negotiate payment rates with providers. Subject to certain exceptions, States are generally not permitted to direct the expenditures of a Medicaid managed care plan under the contract between the State and the plan or to make payments to providers for services covered under the contract between the State and the plan (§§ 438.6 and 438.60, respectively). However, there are circumstances in which a State may believe that requiring managed care plans to make specified payments to health care providers is an important tool in furthering the State's overall Medicaid program goals and objectives; for example, funding to ensure certain minimum payments are made to safety net providers to ensure access to care, funding to enhance behavioral health care providers as mandated by State legislative directives, or funding for quality payments to ensure providers are appropriately rewarded for meeting certain program goals. Because this type of State direction reduces the plan's ability to effectively manage costs, CMS, in the 2016 final rule, established specific exceptions to the general rule prohibiting States from directing the expenditures of MCOs, PIHPs and PAHPs at § 438.6(c)(1)(i) through (iii). These exceptions came to be known as State directed payments (SDPs).

The current regulations at § 438.6(c) specify the parameters for how and when States may direct the expenditures of their Medicaid managed care plans and the associated requirements and prohibitions on such arrangements. Permissible SDPs include directives that certain providers of the managed care plan participate in value-based purchasing (VBP) models, that certain providers participate in multi-payer or Medicaid-specific delivery system reform or performance improvement initiatives, or that the managed care organization adhere to certain fee schedule requirements (for example, minimum fee schedules, maximum fee schedules, and uniform dollar or percentage increases). Among other requirements, § 438.6(c) requires SDPs to be based on the utilization and delivery of services under the managed care contract and expected to advance at least one of the objectives in the State's managed care quality strategy.

All SDPs must be included in all applicable managed care contract(s) and described in all applicable rate certification(s) as noted in § 438.7(b)(6).

Further, § 438.6(c)(2)(ii) requires that most SDPs be approved in writing prior to implementation.[38] To obtain written prior approval, States must submit a ''preprint'' form to CMS to document how the SDP complies with the Federal requirements outlined in § 438.6(c).[39] States must obtain written approval of certain SDPs in order for CMS to approve the corresponding Medicaid managed care contract(s) and rate certifications(s). States were required to comply with this prior approval requirement for SDPs no later than the rating period for Medicaid managed care contracts starting on or after July 1, 2017.

Each SDP preprint submitted to CMS is reviewed by a Federal review team to ensure that the payments comply with the regulatory requirements in § 438.6(c) and other applicable law. The Federal review team consists of subject matter experts from various components and groups within CMS, which regularly include those representing managed care policy and operations, quality, and actuarial science. Over time, these reviews have expanded to include subject matter experts on financing of the non-Federal share and demonstration authorities when needed. The CMS Federal review team works diligently to ensure a timely review and that standard operating procedures are followed for a consistent and thorough review of each preprint. Most preprints are reviewed on an annual basis; SDPs that are for VBP arrangements, delivery system reform, or performance improvement initiatives and that meet additional criteria in the Federal regulations are eligible for multi-year approval.

CMS has issued guidance to States regarding SDPs on multiple occasions. In November 2017, CMS published the initial preprint form [40] along with guidance for States on the use of SDPs.[41] In May 2020, CMS published guidance on managed care flexibilities to respond to the COVID–19 public health emergency (PHE), including how States could use SDPs in support of their COVID–19 response efforts.[42] In January 2021, CMS published additional guidance for States to clarify existing policy, and also issued a revised preprint form that States must use for rating periods beginning on or after July 1, 2021.[43] The revised preprint form is more comprehensive compared to the initial preprint, and it is designed to systematically collect the information that CMS identified as necessary as part of our review of SDPs to ensure compliance with the Federal regulatory requirements.[44] This includes identification of the estimated total dollar amount for the SDP, an analysis of provider reimbursement rates for the class(es) of providers that the SDP is targeting, and information about the sources of the non-Federal share used to finance the SDP.

Since § 438.6(c) was issued in the 2016 final rule, States have requested approval for an increasing number of SDPs. The scope, size, and complexity of the SDP arrangements submitted by States for approval has also grown steadily and quickly. In calendar year 2017, CMS received 36 preprints for our review and approval from 15 States. In contrast, in calendar year 2021, CMS received 223 preprints from 39 States. For calendar year 2022, CMS received 298 preprints from States. In total, as of December 2022, CMS has reviewed more than 1,100 SDP proposals and approved 993 proposals since the 2016 final rule was issued.[45]

SDPs also represent a notable amount of spending. The Medicaid and CHIP Payment and Access Commission (MACPAC) reported that CMS approved SDP arrangements in 37 States, with spending exceeding more than $25 billion in 2020.[46] The U.S. Government Accountability Office (GAO) also reported that at least $20 billion has been approved by CMS for preprints with payments to be made on or after July 1, 2021, across 79 approved preprints.[47] Our internal analysis of all SDPs approved from when § 438.6(c) was issued in the 2016 final rule through March 2022 estimates that the total spending for each SDP approved for the most recent rating period for States is nearly $48 billion [48] (Federal and State) with at least half being dollars that States are requiring be paid in addition to the rates negotiated between the plans and providers. The aforementioned nearly $48 billion is an annual figure.[49]

As the volume of SDP preprint submissions and total dollars flowing through SDPs continues to increase, CMS recognizes the importance of ensuring that SDPs are contributing to Medicaid quality goals and objectives as part of our review process, as well as ensuring that SDPs are developed and implemented with appropriate fiscal and program integrity guardrails. The proposed changes in this notice of proposed rulemaking are intended to ensure the following policy goals:

(1) Medicaid managed care enrollees receive access to high-quality care under SDP payment arrangements;

(2) SDPs are appropriately linked to Medicaid quality goals and objectives for the providers participating in the SDP payment arrangements; and

(3) CMS and States have the appropriate fiscal and program integrity guardrails in place to strengthen the accountability and transparency of SDP payment arrangements.

We are issuing this proposal based on our authority to interpret and implement section 1903(m)(2)(A)(iii) of the Act, which requires contracts between States and MCOs to provide

[38] State directed payments that are minimum fee schedules for network providers that provide a particular service under the contract using State plan approved rates as defined in § 438.6(a) are not subject to the written prior approval requirement at § 438.6(c)(2)(ii); however, they must comply with the requirements currently at § 438.6(c)(2)(ii)(A) through (F) (other than the requirement for prior written approval) and be appropriately documented in the managed care contract(s) and rate certification(s).

[47] U.S. Government Accountability Office, ''Medicaid: State Directed Payments in Managed Care,'' June 28, 2022, available at *https://www.gao.gov/assets/gao-22-105731.pdf.*

[48] This data point is an estimate and reflective of the most recent approval for all unique payment arrangements that have been approved through March 31, 2022 under CMS' standard review process. Rating periods differ by State; some States operating their managed care programs on a calendar year basis while others operate on a State fiscal year basis, which most commonly is July to June. The most recent rating period for which the SDP was approved as of March 2022 also varies based on the review process reflective of States submitting proposals later than recommended (close to or at the end of the rating period), delays in State responses to questions, and/or reviews taking longer due to complicated policy concerns (for example, financing).

[49] As part of the revised preprint form, States are asked to identify if the payment arrangement requires plans to pay an amount in addition to negotiated rates vs. limiting or replacing negotiated rates. Approximately half of the total dollars identified for the SDP actions included were identified by States for payment arrangements that required plans to pay an amount in addition to the rates negotiated between the plan and provider(s) rates.

payment under a risk-based contract for services and associated administrative costs that are actuarially sound and our authority under section 1902(a)(4) of the Act to establish methods of administration for Medicaid that are necessary for the proper and efficient operation of the State plan. As explained in the 2016 final rule, regulation of SDPs is necessary to ensure that Medicaid managed care plans have sufficient discretion to manage the risk of covering the benefits outlined in their contracts, which is integral to ensuring that capitation rates are actuarially sound as defined in § 438.4 (81 FR 27582). We have historically relied on section 1902(a)(4) of the Act to extend the same requirements adopted under section 1903(m)(2)(A)(iii) of the Act for MCOs related to actuarially sound capitation rates to PIHPs and PAHPs. Where a proposal is also based on interpreting and implementing other authority, we note that in the applicable explanation of the proposed policy.

We did not adopt the Medicaid managed care SDP requirements described at § 438.6 in the 2016 final rule for separate CHIPs because there was no statutory requirement to do so and we wished to limit the scope of new regulations and administrative burden on separate CHIP managed care plans. For similar reasons, we are not proposing to adopt the new Medicaid managed care SDP requirements proposed at §§ 438.6 and 438.7 for separate CHIPs.

We are proposing to define State directed payments as a contract arrangement that directs an MCO's, PIHP's, or PAHP's expenditures under paragraphs (c)(1)(i) through (iii) of this section. We are proposing this definition as it is currently used by States and CMS in standard interactions as well as in published guidance to describe these contract requirements. Defining this term also improves the readability of the related regulations. We have also proposed to rename the header for this section to ''*State Directed Payments under MCO, PIHP, or PAHP contracts*'' reflect this term.

In addition, we are proposing several revisions to § 438.6 to further specify and add to the existing requirements and standards for SDPs. First, we are proposing revisions, including: expanding the scope of § 438.6(c) consistent with recent guidance; exempting SDPs that establish payment rate minimums at 100 percent of the Medicare rate from written prior approval; incorporating SDPs for non-network providers in certain circumstances; setting new procedures and timeframes for the submission of SDPs and related documentation; codifying and further specifying standards and documentation requirements on total payment rates; further specifying and strengthening existing requirements related to financing as well as the connection to the utilization and delivery of services; updating and providing flexibilities for States to pursue VBP through managed care; strengthening evaluation requirements and other areas; and addressing how SDPs are incorporated into capitation rates or reflected in separate payment terms. The proposed regulatory provisions include both new substantive standards and new documentation and contract term requirements. In addition, we are proposing a new appeal process for States that are dissatisfied with CMS's determination related to a specific SDP preprint and new oversight and monitoring standards. In recognition of the scope of changes we are proposing, some of which will require significant time for States to implement, we are proposing a series of applicability dates over a roughly 5-year period for compliance. These applicability dates are discussed later in section I.B.2.p. of this proposed rule.

We solicit feedback on our proposals.

A more detailed outline of the remaining parts of this section is provided below:

b. Contract Requirements Considered to be SDPs (Grey Area Payments)
c. Medicare Exemption, SDP Standards and Prior Approval (§ 438.6(c)(1)(iii)(B), (c)(2), and (c)(5)(iii)(A)(*5*))
d. Non-Network Providers (§ 438.6(c)(1)(iii))
e. SDP Submission Timeframes (§ 438.6(c)(2)(viii) and (ix))
f. Standard for Total Payment Rates for each SDP, Establishment of Payment Rate Limitations for certain SDPs and Expenditure Limit for All SDPs (§ 438.6(c)(2)(ii)(I) and (c)(2)(iii))
g. Financing (§ 438.6(c)(2)(ii)(G) and (H))
h. Tie to Utilization and Delivery of Services for Fee Schedule Arrangements (§ 438.6(c)(2)(vii))
i. Value-Based Payments and Delivery System Reform Initiatives (§ 438.6(c)(2)(vi))
j. Quality and Evaluation (§ 438.6(c)(2)(ii)(D) and (F), (c)(2)(iv) and (v), and (c)(7))
k. Contract Term Requirements (§ 438.6(c)(5))
l. Including SDPs in Rate Certifications and Separate Payment Terms (§§ 438.6(c)(2)(ii)(J), (c)(6), and 438.7(f))
m. SDPs included through Adjustments to Base Capitation Rates (§ 438.7(c)(4) through (6))
n. Appeals (§ 430.3(d))
o. Reporting Requirements to Support Oversight (§ 438.6(c)(4))
p. Applicability Dates (§ 438.6(c)(4), 438.6(c)(8), and 438.7(g)(2) and (3))

b. Contract Requirements Considered To Be SDPs (Grey Area Payments)

Under § 438.6(c), States are not permitted to direct the expenditures of a Medicaid managed care plan under the contract between the State and the plan unless it is an SDP that complies with § 438.6(c), is permissible in a specific provision under Title XIX, is permissible through an implementing regulation of a Title XIX provision related to payments to providers, or is a permissible pass-through payment that meets requirements in § 438.6(d). States are also not permitted to make payments directly to providers for services covered under the contract between the State and a managed care plan as specified in § 438.60.

In our November 2017 CMCS Informational Bulletin (CIB) entitled ''Delivery System and Provider Payment Initiatives under Medicaid Managed Care Contracts,'' we noted instances where States may include general contract requirements for provider payments that would not be subject to approval under § 438.6(c) as long as the State was not mandating a specific payment methodology or amounts under the contract.[50] We also noted that these types of contract requirements would not be pass-through payments subject to the requirements under § 438.6(d), as we believed they maintained a link between payment and the delivery of services. One scenario in the CIB described contract language generally requiring managed care plans to make 20 percent of their provider payments as VBP or alternative payment arrangements when the State does not mandate a specific payment methodology and the managed care plan retains the discretion to negotiate with network providers the specific terms for the amount, timing, and mechanism of such VBP or alternative payment arrangements. We continue to believe that this scenario does not meet the criteria for an SDP nor a pass-through payment but as our thinking has evolved, we believe that the aforementioned VBP scenario represents the State imposing a quality metric on the managed care plans rather than the providers. We believe that this specific

[50] *https://www.medicaid.gov/federal-policy-guidance/downloads/cib11022017.pdf.*

type of contractual condition and measure of plan accountability is permissible, so long as it meets the requirements for an incentive arrangement under § 438.6(b)(2) or, a withhold arrangement under § 438.6(b)(3).

The other scenario described the State contractually implementing a general requirement for Medicaid managed care plans to increase provider payment for covered services provided to Medicaid enrollees covered under the contract, where the State did not mandate a specific payment methodology or amount(s) and managed care plans retain the discretion for the amount, timing, and mechanism for making such provider payments. At the time, we believed that these areas of flexibility for the plan would be sufficient to exclude the State's contract requirement from the scope of § 438.6(c). However, as we have continued to review managed care contracts and rate certifications since November 2017, we have grown increasingly concerned that excluding the latter type of vague contractual requirement for increased provider payment from the requirements of § 438.6(c) created an unintended loophole in regulatory oversight, presenting a significant program integrity risk. For example, some States include general contract requirements for significant increases to provider payments that require the State to add money to the capitation rates paid to the managed care plans as part of rate development for a specific service (for example, hospital services) but without any further accountability to ensure that the additional funding included in the capitation payments is paid to providers for a specific service or benefit provided to a specific enrollee covered under the contract. While this is similar to the definition of pass-through payment in § 438.6(a), these contractual requirements do not meet all of the other requirements in § 438.6(d) to be permissible pass-through payments. We commonly refer to these types of contractual arrangements as ''grey area payments'' as they do not completely comply with § 438.6(c) nor § 438.6(d).

Upon reflection and based on our experience since the 2017 CIB, we concluded that general contractual requirements to increase provider payment rates circumvent the intent of the 2016 final rule and the subsequent 2017 Pass-Through Payment Final Rule to improve the fiscal integrity of the program and ensure the actuarial soundness of all capitation rates.[51] As we stated in the preamble of the 2016 final rule ''[w]e believe that the statutory requirement that capitation payments to managed care plans be actuarially sound requires that payments under the managed care contract align with the provision of services to beneficiaries covered under the contract. . . . In our review of managed care capitation rates, we have found pass-through payments being directed to specific providers that are generally not directly linked to delivered services or the outcomes of those services. These pass-through payments are not consistent with actuarially sound rates and do not tie provider payments with the provision of services.'' Further, ''[a]s a whole, [42 CFR] § 438.6(c) maintains the MCO's, PIHP's, or PAHP's ability to fully utilize the payment under that contract for the delivery and quality of services by limiting States' ability to require payments that are not directly associated with services delivered to enrollees covered under the contract.''

In January 2021, we published SMDL #21–001,[52] through which we sought to close the unintentional loophole created in the November 2017 CIB and realign our implementation of the regulation with the original intent of the 2016 final rule and the 2017 final rule. The 2021 SMDL provides that if a State includes a general contract requirement for provider payment that provides for or adds an amount to the provider payment rates, even without directing the specific amount, timing or methodology for the payments, and the provider payments are not clearly and directly linked specifically to the utilization and delivery of a specific service or benefit provided to a specific enrollee, then CMS will require the contractual requirement to be modified to comply with § 438.6(c) or (d) beginning with rating periods that started on or after July 1, 2021. We maintain this interpretation. At this time, we also believe it is important to further specify our stance that any State direction of a managed care plan's payments to providers, regardless of specificity or even if tied specifically to utilization and delivery of services, is prohibited unless § 438.6(c) or (d) permits the arrangement. State wishing to impose quality requirements or thresholds on managed care plans, such as the requirement that a certain percentage of provider payments be provided through a VBP arrangement, must do so within the parameters of § 438.6(b). We do not believe any changes are needed to the regulation text in § 438.6(c) or (d) to reflect this reinterpretation and clarification because this preamble provides an opportunity to again bring this important information to States' attention; CMS will continue this narrower interpretation of § 438.6(c) and (d). We solicit comments on whether additional clarification about these grey area payments is necessary or, if revision to the regulation text would be helpful.

c. Medicare Exemption, SDP Standards and Prior Approval (§ 438.6(c)(1)(iii)(B), § 438.6(c)(2), and § 438.6(c)(5)(iii)(A)(*5*))

In § 438.6(c), States are permitted to direct managed care plans' expenditures under the contract as specified in § 438.6(c)(1)(i) through (iii), subject to written prior approval based on complying with the requirements in § 438.6(c)(2). In the preamble to the 2020 final rule, we noted our observation that a significant number of proposals submitted by States for review under § 438.6(c)(2) required managed care plans to adopt minimum fee schedules specified under an approved methodology in the Medicaid State plan. In response, we adopted several revisions to § 438.6(c) in the 2020 final rule.[53] We defined ''State plan approved rates'' in § 438.6(a) as ''amounts calculated for specific services identifiable as having been provided to an individual beneficiary described under CMS approved rate methodologies in the Medicaid State plan,'' and excluded supplemental payments that are paid in addition to State plan approved rates. We also revised § 438.6(c)(1)(iii)(A) to explicitly address SDPs that are a minimum fee schedule for network providers that provide a particular service under the contract using State plan approved rates and revised § 438.6(c)(2)(ii) to exempt these specific SDP arrangements from the written prior approval requirement. However, SDPs described in paragraph § 438.6(c)(1)(iii)(A) must comply with the requirements currently at § 438.6(c)(2)(ii)(A) through (F) (other than the requirement for written prior approval) and be appropriately documented in the managed care contract(s) and rate certification(s).

This piece of the 2020 final rule was, in part, intended to eliminate unnecessary and duplicative review processes in an effort to promote efficient and effective administration of the Medicaid program. This rule improved States' efforts to timely implement certain SDP arrangements that meet their local goals and objectives without drawing upon State staff time unnecessarily. We continue to believe exempting payment arrangements based on an approved State plan rate methodology from written prior approval does not increase program integrity risk or create a lack of Federal oversight. We continue to review the corresponding managed care contracts and rate certifications which include these SDPs. The State plan review and approval process ensures that Medicaid State plan approved rates are consistent with efficiency, economy, and quality of care and are sufficient to enlist enough providers so that care and services are available under the plan, at least to the extent that such care and services are available to the general population in the geographic area, as required under section 1902(a)(30) of the Act.

As we have continued to review and approve SDPs since the 2020 final rule, we believe this same rationale applies to SDPs that adopt a minimum fee schedule using Medicare approved rates for providers that provide a particular service under the contract. Medicare rates are developed under Title XVIII of the Act and there are annual rulemakings associated with Medicare payment for benefits available under Parts A and B in the Medicare Fee-for-Service (FFS) program. Additionally, section 1852(a)(2) of the Act provides that Medicare Advantage plans pay out-of-network providers at least the amount payable under FFS Medicare for benefits available under Parts A and B, taking into account cost sharing and permitted balance billing.[54] These considerations mean that prior written approval by CMS is not necessary to ensure that the standards for SDPs in current § 438.6(c)(2) are met.

Consistent with how we have considered State plan rates to be reasonable, appropriate, and attainable under §§ 438.4 and 438.5, Medicare approved rates too meet this same threshold. Therefore, we are proposing to exempt SDPs that adopt a minimum fee schedule based on total published Medicare payment rates from written prior approval as it would be unnecessary and duplicative. We propose to amend § 438.6(c) to provide specifically for SDPs that require use of a minimum fee schedule using FFS Medicare payment rates.

First, we propose to add a new definition to § 438.6(a) for ''total published Medicare payment rate'' as amounts calculated as payment for specific services that have been developed under Title XVIII Part A and Part B. We propose to re-designate the existing § 438.6(c)(1)(iii)(B) through (D) as § 438.6(c)(1)(iii)(C) through (E), respectively, and add a new § 438.6(c)(1)(iii)(B) explicitly recognizing SDP arrangements that are a minimum fee schedule using a total published Medicare payment rate in effect no more than 3 years prior to the start of the rating period as a permissible type of SDP. We are also proposing to revise proposed re-designated paragraph (c)(1)(iii)(C) to take into account the proposed new category of SDPs that use one or more total published Medicare payment rates. As part of the proposals for paragraphs (c)(1)(iii)(A) through (E), we also propose to streamline the existing regulation text to eliminate the phase ''as defined in paragraph (a)'' as unnecessary; we expect that interested parties and others who read these regulations will read them completely and recognize when defined terms are used.

We also propose to restructure § 438.6(c)(2) and amend its paragraph heading to *Standards for State directed payments* as discussed fully in later sections. As part of this restructuring, we propose to re-designate part of the provision in § 438.6(c)(2)(ii) to § 438.6(c)(2)(i) to describe which SDPs require written prior approval. This revision includes proposing a conforming revision in § 438.6(c)(2)(i) to reflect the re-designation of § 438.6(c)(1)(iii)(B) through (D) as (c)(1)(iii)(C) through (E). This revision will ensure that that SDPs described in paragraph (c)(1)(iii)(B) along with the SDPs described in paragraph (c)(1)(iii)(A), are not included in the written prior approval requirement. States that adopt a minimum fee schedule using 100 percent of total published Medicare payment rates will still need to document these SDPs in the corresponding managed care contracts and rate certifications and those types of SDPs must still comply with requirements for all SDPs other than prior written approval by CMS, just as minimum fee schedules tied to State plan approved rates described in paragraph (c)(1)(iii)(A) must comply. SDPs described under paragraphs (c)(1)(iii)(A) and (B) would still need to comply with the standards listed in the proposed restructured § 438.6(c)(2)(ii). (See sections II.2.f. through l. for proposed new requirements and revisions to existing requirements for all SDPs to be codified in paragraph (c)(2)(ii).)

Our proposal to exempt certain SDPs from written prior approval from CMS is specific to SDPs that require the Medicaid managed care plan to use a minimum fee schedule that is equal 100 percent of the total published Medicare payment rate. SDP arrangements that use a different percentage (whether higher or lower than 100 percent) of a total published Medicare payment rate as the minimum payment amount or are simply based off of an incomplete total published Medicare payment rate would be included in the SDPs described in paragraph (c)(1)(iii)(C). Our review of SDPs includes ensuring that they will result in provider payments that are reasonable, appropriate, and attainable, and will not negatively impact access to care. Accordingly, we believe that SDPs that propose provider payment rates that are incomplete or either above or below 100 percent of total published Medicare payment rates may not always meet these criteria and thus, should remain subject to written prior approval by CMS.

We are also not proposing to remove the written prior approval requirement for SDPs for provider rates tied to a Medicare fee schedule in effect more than 3 years prior to the start of the rating period. This is reflected in our proposed revision to redesignated paragraph (c)(1)(iii)(C) to describe fee schedules for providers that provide a particular service under the contract using rates other than the State plan approved rates or one or more total published Medicare payment rates described in proposed new paragraph (c)(1)(iii)(B). We propose the limit of 3 years to be consistent with how § 438.5(c)(2) requires use of data that is at least that recent for rate development. Our review of SDPs includes ensuring that they will result in provider payments that are reasonable, appropriate, and attainable, and will not negatively impact access to care. Accordingly, we believe that SDPs that propose provider payment rates tied to a total published Medicare payment rate in effect more than 3 years prior to the start of the rating period may not always meet these criteria and thus, should remain subject to written prior approval by CMS.

We solicit public comments on our proposal to specifically address SDPs

[54] See also 42 CFR 422.100(b) and 422.214 and guidance in the ''MA Payment Guide for Out of Network Payments'', April 15, 2015, available at *https://www.cms.gov/Medicare/Health-Plans/MedicareAdvtgSpecRateStats/downloads/oonpayments.pdf.*

that are for minimum fee schedules using 100 percent of the amounts in a total published Medicare payment rate for providers that provide a particular service provided that the total published Medicare payment rate was in effect no more than 3 years prior to the start of the rating period and on our proposal to exempt these specific types of SDP arrangements from the prior written approval requirement in § 438.6(c)(2)(ii).

We are also proposing to add new § 438.6(c)(5) (with the paragraph heading *Requirements for Medicaid Managed Care Contract Terms for State directed payments),* for oversight and audit purposes. Proposed new paragraph (c)(5)(iii)(A)(5) would require the managed care plan contract to include certain information about the Medicare fee schedule used in the SDP, regardless of whether the SDP was granted an exemption from written prior approval under § 438.6(c)(1)(iii)(B). That is, for SDPs which use total published Medicare payment rates, the contract would need to specify which Medicare fee schedule(s) the State directs the managed care plan to use and any relevant and material adjustments due to geography, such as rural designations, and provider type, such as Critical Access Hospital or Sole Community Hospital designation.

The managed care contract would also need to identify the time period for which the Medicare fee schedule is in effect as well as the rating period for which it is used for the SDP. Consistent with § 438.6(c)(1)(iii)(B), the Medicare fee schedule must be in effect no more than 3 years prior to the start of the rating period for the services provided in the arrangement. This 3-year requirement is similar to § 438.5 rate setting, under which data that the actuary relies upon must be from the 3 most recent years that have been completed, prior to the rating period for which rates are being developed. For example, should a State seek to implement a § 438.6(c)(1)(iii)(B) fee schedule in calendar year 2025, the Medicare fee schedule must have been in effect for purposes of Medicare payment at least at the beginning of calendar year 2021.

Requiring sufficient language in the contract regarding the Medicare fee schedule would provide clarity to CMS, managed care plans, and providers regarding the explicit Medicare payment methodology being used under the contract. For broader discussion of § 438.6(c)(5), see section I.B.2.k. of this proposed rule.

We request comment on other material or significant information about a Medicare fee schedule that would need to be included to ensure the managed care contract sufficiently describes this type of SDP.

For discussion on the proposed applicability dates for the proposals outlined in this section, see section I.B.2.p. of this proposed rule.

We solicit public comments on our proposals.

d. Non-Network Providers (§ 438.6(c)(1)(iii))

We are proposing to remove the term ''network'' from the descriptions of SDP arrangements in current (and revised as proposed) § 438.6(c)(1)(iii). Existing regulations specify that for a State to require an MCO, PIHP or PAHP to implement a fee schedule under § 438.6(c)(1)(iii), the fee schedule must be limited to ''network providers.'' This limitation is not included in § 438.6(c)(1)(i) or (ii) for SDP arrangements that are VBP and multi-payer or Medicaid-specific delivery system reform or performance improvement initiatives. In our experience working with States, limiting the descriptions of SDP arrangements subject to § 438.6(c)(iii) to those that involve only network providers has proven to be too narrow and has created an unintended barrier to States' and CMS' policy goals to ensure access to quality care for beneficiaries.

In the 2016 final rule, we finalized current § 438.6(c)(1)(iii) to include ''network'' before ''providers'' in this provision.[55] As previously noted, the regulation at § 438.6(c)(1) generally prohibits States from directing the MCO's, PIHP's or PAHP's expenditures under the contract unless it meets one of the exceptions (as provided in a specific provision in Title XIX, in another regulation implementing a Title XIX provision related to payment to providers, a SDP that complies with § 438.6(c), or a pass-through payment that complies with § 438.6(d)). Therefore, the inclusion of the word ''network'' in the SDP arrangement descriptions in the 2016 final rule has prevented States from including contract requirements to direct their Medicaid managed care plans on how to pay non-network providers.

In our work with States over the years, some States have noted concerns with the requirement that permissible SDPs only apply (or include) payments by Medicaid managed care plans to network providers. States have noted that limiting SDPs to network providers is impractical in large and diverse States. Several States had, prior to rulemaking, pre-existing contractual requirements with managed care plans that required a specific level of payment (such as the State's Medicaid FFS rates) for non-network providers. This aligns with our experience working with States as well, and we note section 1932(b)(2)(D) of the Act requires that non-network providers furnishing emergency services must accept as payment in full an amount equal to the Medicaid State plan rate for those services. Some States have historically required plans to pay non-network providers at least the Medicaid State plan approved rate or another rate established in the managed care contract. Many States with enrollees on their borders rely on providers in neighboring States to deliver specialty services, such as access to children's hospitals.

While we support States' and plans' efforts to develop strong provider networks and to focus their efforts on providers who have agreed to participate in plan networks, executing network agreements with every provider may not always be feasible for plans. For example, in large hospital systems, it may be impractical for every plan to obtain individual network agreements with each rounding physician delivering care to Medicaid managed care enrollees. In such instances, States may have an interest in ensuring that their Medicaid managed care plans pay non-network providers at a minimum level to avoid access to care concerns. We have also encountered situations in which States opt to transition certain benefits, which were previously carved out from managed care, from fee-for-service into managed care. In these instances, States would like to require their managed care plans to pay out-of-network providers a minimum fee schedule in order to maintain access to care while allowing plans and providers adequate time to negotiate provider agreements and provider payment rates for the newly incorporated services. Consequently, we are proposing these changes to provide States a tool to direct payment to non-network providers as well as network providers.

Therefore, we are proposing to remove the term ''network'' from the descriptions of permissible SDP arrangements in § 438.6(c)(1)(iii). Under this proposal, the permissible SDPs are described as payment arrangements or amounts ''for providers that provide a particular service under the contract'' and this will permit States to direct payments under their managed care contracts for both network and non-network providers, subject to the requirements in paragraph (c). We note

[55] *https://www.federalregister.gov/d/2016-09581/p-1269.*

that, as proposed, all of the standards and requirements under § 438.6(c) would still be applicable to SDPs that direct payment arrangements for non-network providers.

Finally, as pass-through payments (PTPs) are separate and distinct from SDPs, we are maintaining the phrase ''network provider'' in § 438.6(d)(1) and (6). Existing PTPs are subject to a time-limited transition period and in accordance with § 438.6(d)(3) and (5), respectively, hospital PTPs must be fully eliminated by no later than the rating period beginning July 1, 2027 and NF and physician services PTPs were required to have been eliminated by no later than the rating period July 1, 2022 with the exceptions of pass-through payments for States transitioning services and populations in accordance with § 438.6(d)(6). Therefore, we do not believe that it is appropriate or necessary to eliminate the word ''network'' from § 438.6(d).

We solicit public comments on our proposal. In particular, we seek comment on whether this change would result in negative unintended consequences.

For discussion on the proposed applicability dates for the proposals outlined in this section, see section I.B.2.p. of this proposed rule.

e. SDP Submission Timeframes (§ 438.6(c)(2)(viii) and (ix))

Since we established the ability for States to direct the expenditures of their managed care plans in the 2016 final rule, we have encouraged States to submit their requests for written prior approval 90 days in advance of the start of the rating period whenever possible. We also recommend that States seek technical assistance from CMS in advance of formally submitting the preprint for review to CMS for more complicated proposals to facilitate the review process.

Submitting 90 days in advance of the rating period provides CMS and the State time to work through the written prior approval process before the State includes the SDP in their managed care plan contracts and the associated rate certifications. If States include SDPs in managed care contracts and capitation rates before we issue written prior approval, any changes to the SDP made as a result of the review process would likely then necessitate contract and rate amendments,[56] creating additional work for States, actuaries, CMS, and managed care plans. Submitting SDP preprints at least 90 days in advance of the rating period can help reduce the need for subsequent contract and rate amendments to address any inconsistencies between the contracts and rate certifications and approved SDPs. State directed payments that are not submitted 90 days in advance of the affected rating period also cause delays in the approval of managed care contracts and rates because those approvals are dependent on the written prior approval of the SDP. Since we cannot approve only a portion of a State's Medicaid managed care contract, late SDP approvals delay approval of the entire contract and the associated capitation rates.

Some States have not been successful in submitting their SDP preprints in advance of the rating period for a variety of reasons. Sometimes it is due to changes in program design, such as a new benefit linked to the SDP being added to the Medicaid managed care contract during the rating period. Other unforeseen changes, such as public health emergencies (PHE) or natural disasters, can also create circumstances in which States need to respond to urgent concerns around access to care by implementing an SDP during the rating period. While we recognize that from time to time there may be a circumstance that necessitates a late preprint submission, we have found that some States routinely submit SDP preprints at the very end of the rating period with implementation dates retroactive to the start of the rating period. We have provided repeated technical assistance to these States, and we published additional guidance in 2021 [57] to reiterate our expectation that States submit SDP preprints before the start of a rating period. This guidance also made clear that CMS would not accept SDP preprints for rating periods that are closed; however, we have not been able to correct the situation with some States.

To make our processes more responsive to States' needs while ensuring that reviews linked to SDP approvals are not unnecessarily delayed, we propose a new § 438.6(c)(2)(viii)(A) through (C) to set the deadline for submission of SDP preprints that require written prior approval from CMS under paragraph (c)(2)(i) (redesignated from § 438.6(c)(2)(ii)). In § 438.6(c)(2)(viii)(A), we propose to require that all SDPs that require written prior approval from CMS must be submitted to CMS no later than 90 days in advance of the end of the rating period to which the SDP applies. This requirement applies if the payment arrangement for which the State is seeking written prior approval begins at least 90 days in advance of the end of the rating period. We strongly encourage all States to submit SDPs in advance of the start of the rating period to ensure CMS has adequate time to process the State's submissions and is able to support the State in incorporating these payments into their Medicaid managed care contracts and rate development. We are proposing to use a deadline of no later than 90 days prior to the end of the applicable rating period because we believe this minimum timeframe balances the need for State flexibility to address unforeseen changes that occur after the managed care plan contracts and rates have been developed with the need to ensure timely processing of managed care contracts and capitation rates. When a State fails to submit all required documentation for any SDP arrangement that requires written prior approval 90 days prior to the end of the rating period to which the SDP applies, the SDP would not be eligible for written prior approval; therefore, the State would not be able to include the SDP in its Medicaid managed care contracts and rate certifications for that rating period.

In § 438.6(c)(2)(viii)(B), we propose to address the use of shorter-term SDPs in response to infrequent events, such as PHEs and natural disasters, by permitting States to submit all required documentation before the end of the rating period for SDP proposals that would start less than 90 days before the end of the rating period. We believe this flexibility would be appropriate to allow States to effectively use SDPs during the final quarter of the rating period to address urgent situations that affect access to and quality of care for Medicaid managed care enrollees.

There are SDPs, such as VBP and delivery system reform, that can be approved under § 438.6(c)(3) for up to three rating periods. For these, we propose in § 438.6(c)(2)(viii)(C) that the same timeframes described in § 438.6(c)(2)(viii)(A) and (B) apply to the first rating period of the SDP.

To illustrate these timeframes, we are using an SDP eligible for annual approval that a State is seeking to include in their CY 2025 rating period. For example, under the current regulations, CMS would strongly recommend that a State seeking approval of an SDP for the calendar year (CY) 2025 rating period would ideally submit the preprint by October 3, 2024. However, under this proposal to revised § 438.6(c)(2)(viii), if the start of the SDP

[56] The term ''rate amendment'' is used to reference an amendment to the initial rate certification.

[57] *https://www.medicaid.gov/Federal-Policy-Guidance/Downloads/smd21001.pdf.*

was on or before October 2, 2025, the State must submit the preprint no later than October 2, 2025 in order for CMS to accept it for review; if the State submitted the preprint for review after that date, CMS could not grant written prior approval of the preprint for the CY 2025 rating period. The State could instead seek written prior approval for the CY 2026 rating period instead if the preprint could not be submitted for the CY 2025 rating period by the October 2, 2025 deadline.

We considered an alternative requiring all SDPs to be submitted prior to the start of the rating period for which the State was requesting written prior approval. This would be a notable shift from current practice, which requires all preprints be submitted prior to the end of the rating period. Requiring that States submit all preprints prior to the start of the rating period would reduce administrative burden and better align with the prospective nature of risk-based managed care. However, instituting such a deadline could potentially be too rigid for States that needed to address an unanticipated or acute concern during the rating period.

Lastly, we considered an alternative of requiring that States submit all SDPs in advance of the start of the payment arrangement itself. For example, a State may seek to start a payment arrangement halfway through the rating period (for example, an SDP for payments starting July 1, 2025 for States operating on a CY rating period). Under this alternative approach, the State would have to submit the preprint for prior approval before July 1, 2025 in order for it to be considered for written prior approval. This would provide additional flexibility for States establishing new SDPs, but would limit the additional flexibility for that SDP to that initial rating period. If the State wanted to renew the SDP the subsequent rating period (for example, CY 2026), it would have to resubmit the preprint before the start of that rating period.

As discussed in section I.B.2.p. of this proposed rule on Applicability and Compliance dates, we are proposing that States must comply with these new submission timeframes beginning with the first rating period beginning on or after 2 years after the effective date of the final rule. In the interim, we would continue our current policy of not accepting submissions for SDPs after the rating period has ended. We solicit public comment on our proposals and these alternatives, as well as additional options that would also meet our goals for adopting time limits on when an SDP can be submitted to CMS for written prior approval.

For amendments to approved SDPs, we propose at § 438.6(c)(2)(ix) to require all amendments to SDPs approved under § 438.6(c)(2)(i) (redesignated from § 438.6(c)(2)(ii)) to be submitted for written prior approval as well. We also propose at § 438.6(c)(2)(ix)(A) to require that all required documentation for written prior approval of such amendments be submitted prior to the end of the rating period to which the SDP applies in order for CMS to consider the amendment. To illustrate this, we again provide the following example for an SDP approved for one rating period (CY 2025). If that SDP was approved by CMS prior to the start of the rating period (December 31, 2024 or earlier) and it began January 1, 2025, then the State would have to submit any amendment to the preprint for that rating period before December 31, 2025. After December 31, 2025, CMS would not accept any amendments to that SDP for that CY 2025 rating period. The same would be true for an SDP that was approved for one rating period after the start of the rating period (for example, approval on October 1, 2025 for a CY 2025 rating period). the State would have until December 31, 2025 to submit any amendment to the preprint for CMS review; after December 31, 2025, CMS would not accept any amendments to that SDP for that rating period.

We further propose § 438.6(c)(2)(ix)(B) to set timelines for the submission of amendments to SDPs approved for multiple rating periods as provided in paragraph (c)(3). Under this proposal, § 438.6(c)(2)(ix)(A) and (B) would allow an amendment window for the proposal within the first 120 days of each of the subsequent rating periods for which the SDP is approved after the initial rating period. The amendment process for the first year of the multiple rating periods would work the same way as it would for any SDP approved for one rating period and be addressed by proposed paragraph (xi)(A). However, in recognition that the SDP is approved for multiple rating periods, we are proposing in § 438.6(c)(2)(ix)(B) that the State would be able to amend the approved preprint for the second (CY 2026 in our example) and third (CY 2027 in our example) rating periods within the first 120 days of the CY 2026 rating period (for example, by May 1, 2026). The requested amendment could not make any retroactive changes to the SDP for the CY 2025 rating period because the CY 2025 rating period would be closed in this example. The State would not be permitted to amend the payment arrangement after May 1, 2026 for the CY 2026 rating period. The State would be able to do the same for the CY 2027 rating period as well—amend the SDP within the first 120 days of the CY 2027 rating period, but only for the CY 2027 rating period and not for the concluded CY 2025 or CY 2026 rating periods.

As proposed, these deadlines are mandatory for written prior approval of an SDP or any amendment of an SDP. When a State fails to submit all required documentation for any amendments within these specified timeframes, the SDP would not be eligible for written prior approval. Therefore, the State would not be able to include the amended SDP in its Medicaid managed care contracts and rate certifications for that rating period. The State could continue to include the originally approved SDP as documented in the preprint in its contracts for the rating period for which the SDP was originally approved. We note that written prior approval of an SDP does not obligate a State to implement the SDP. If a State chose not to implement an SDP for which CMS has granted prior approval, elimination of an SDP would not require any prior approval, under our current regulations or this proposal. We solicit comment on this aspect of our proposal.

We are proposing regulatory changes in §§ 438.6(c)(5)(vi) and 438.7(c)(6) to require the submission of related contract requirements and rate certification documentation no later than 120 days after the start of the SDP or the date we granted written prior approval of the SDP, whichever is later. States should submit their rate certifications prior to the start of the rating period, and § 438.7(c)(2) requires that any rate amendments [58] comply with Federal timely filing requirements. However, we believe given the nature of SDPs, there should be additional timing restrictions on when revised rate certifications that include SDPs can be provided for program integrity purposes. We also remind States that these proposals do not supersede other requirements regarding submission of contract and rate certification documentation when applicable, including but not limited to those that require prior approval or approval prior to the start of the rating period such as requirements outlined in §§ 438.3(a), 438.4(c)(2), and 438.6(b)(1). These proposals are discussed in later sections: section I.B.2.k on Contract Requirements for SDPs; section I.B.2.l on Separate Payment Terms; and section

[58] The term ''rate amendment'' is used to reference an amendment to the initial rate certification.

I.B.2.m on SDPs included as adjustments to base rates.

We are making these proposed regulatory changes to institute submission timeframes to ensure efficient and proper administration of the Medicaid program. We had also considered an alternative of requiring that States submit all amendments to SDPs for written prior approval within either 120 days of the start of the payment arrangement or 120 days of CMS issuing written prior approval, whichever was later. To illustrate this, we again provide the following example for an SDP approved for one rating period (CY 2025). If that SDP was approved by CMS prior to the start of the rating period (December 31, 2024 or earlier) and it began January 1, 2025, then the State would have 120 days after the start of the payment arrangement (May 1, 2025) to submit any amendment to the preprint for that rating period. After May 1, 2025, CMS would not accept any amendments to that SDP for that CY 2025 rating period. If, however, that SDP were approved after the start of the rating period (for example, October 1, 2025 for a CY 2025 rating period); the State would have 120 days from that written prior approval (January 29, 2026) to submit any amendment to the preprint for CMS review; after January 29, 2026, CMS would not accept any amendments to that SDP for that rating period. Requiring that States submit any amendments to the SDP preprint within 120 days of either the start of the payment arrangement or the initial approval could reduce some administrative burden by limiting the time period for amendments to preprints. However, the time frame would be specific to each preprint, which could present some challenges in ensuring compliance. Additionally, it would not preclude States from submitting amendments after the end of the rating period; in fact, it may encourage States to submit SDP preprints toward the end of the rating period to preserve the ability to amend the preprint after the end of the rating period. CMS does not believe such practices are in alignment with the prospective nature of risk-based managed care. We solicit public comment on our proposals and these alternatives, as well as additional options that would also meet our goals for adopting time limits on when amendments to SDPs can be submitted to CMS for written prior approval.

For discussion on the proposed applicability dates for the proposals outlined in this section, see section I.B.2.p. of this proposed rule.

We solicit public comments on these proposals.

f. Standard for Total Payment Rates for Each SDP, Establishment of Payment Rate Limitations for Certain SDPs, and Expenditure Limit for All SDPs (§ 438.6(c)(2)(ii)(I), 438.6(c)(2)(iii))

Standard for Total Payment Rates for Each SDP. Section 1903(m)(2)(A)(iii) of the Act requires contracts between States and managed care plans that provide for payments under a risk-based contract for services and associated administrative costs to be actuarially sound. Under section 1902(a)(4) of the Act, CMS also has authority to establish methods of administration for Medicaid that are necessary for the proper and efficient operation of the State plan. Further, actuarially sound capitation rates are projected to provide for all reasonable, appropriate, and attainable costs that are required under the terms of the contract and for the operation of the managed care plan for the time period and the population covered under the terms of the contract. In risk-based managed care, managed care plans have the responsibility to manage the financial risk of the contract, and one of the primary tools plans use is negotiating payment rates with providers. Absent Federal statutory requirements or specific State contractual restrictions, the specific payment rates and conditions for payment between risk-bearing managed care plans and their network providers are subject to negotiations between the plans and providers, as well as overall private market conditions. As long as plans are meeting the requirements for ensuring access to care and network adequacy, States typically provide managed care plans latitude to develop a network of providers to ensure appropriate access to covered services under the contract for their enrollees and fulfill all of their contractual obligations while managing the financial risk.

As noted earlier, both the volume of SDP preprints being submitted by States for approval and the total dollars flowing through SDPs have grown steadily and quickly since § 438.6(c) was promulgated in the 2016 final rule. MACPAC reported that CMS approved SDP arrangements in 37 States, with spending exceeding more than $25 billion.[59] Our internal analysis of all SDPs approved from when § 438.6(c) was issued in the 2016 final rule through March 2022, provides that the total spending approved for each SDP for the most recent rating period for States is nearly $48 billion[60] with at least half of that spending being dollars that States are requiring be paid in addition to negotiated rates.[61] This $48 billion figure is an estimate of annual spending. As SDP spending continues to increase, we believe it is appropriate to apply additional regulatory requirements with respect to the totality of provider payment rates under SDPs to ensure proper fiscal and programmatic oversight in Medicaid managed care programs, and we are proposing several related regulatory changes as well as exploring other potential payment rate and expenditure limits.

As noted in the 2016 final rule, section 1903(m)(2)(A)(iii) of the Act requires that contracts between States and Medicaid managed care organizations for coverage of benefits use prepaid payments to the entity that are actuarially sound. By regulation based on section 1902(a)(4) of the Act, CMS extended the requirement for actuarially sound capitation rates to PIHPs and PAHPs. The regulations addressing actuarially sound capitation rates are at §§ 438.4 through 438.7.

Currently § 438.6(c)(2) specifies that SDPs must be developed in accordance with § 438.4, the standards specified in § 438.5 and generally accepted actuarial principles and practices. Under the definition in § 438.4, actuarially sound capitation rates are ''projected to provide for all reasonable, appropriate, and attainable costs that are required under the terms of the contract and for the operation of the MCO, PIHP, or PAHP for the time period and the population covered under the terms of the contract . . .'' Consistent with this

[59] Medicaid and CHIP Payment and Access Commission, ''Report to Congress on Medicaid and CHIP,'' June 2022, available at *https://www.macpac.gov/wp-content/uploads/2022/06/MACPAC_June2022-WEB-Full-Booklet_FINAL-508-1.pdf.*

[60] This data point is an estimate and reflective of the most recent approval for all unique payment arrangements that have been approved through March 31, 2022 under CMS' standard review process. Rating periods differ by State; some States operating their managed care programs on a calendar year basis while others operate on a State fiscal year basis, which most commonly is July to June. The most recent rating period for which the SDP was approved as of March 2022 also varies based on the review process reflective of States submitting proposals later than recommended (close to or at the end of the rating period), delays in State responses to questions, and/or reviews taking longer due to complicated policy concerns (for example, financing).

[61] As part of the revised preprint form, States are asked to identify if the payment arrangement requires plans to pay an amount in addition to negotiated rates vs. limiting or replacing negotiated rates. Approximately half of the total dollars identified for the SDP actions included were identified by States for payment arrangements that required plans to pay an amount in addition to the rates negotiated between the plan and provider(s) rates.

definition in § 438.4, we noted in the State Medicaid Director Letter #21–001 published on January 8, 2021 that CMS requires States to demonstrate that SDPs result in provider payment rates that are reasonable, appropriate, and attainable as part of the preprint review process. We are proposing here to codify this standard regarding the provider payment rates for each SDP more clearly in the regulation. As part of the proposed revisions in § 438.6(c)(2)(ii) to specify the standards that each SDP must meet, we are proposing a new standard at § 438.6(c)(2)(ii)(I) to codify our current policy that each SDP ensure that the total payment rate for each service, and each provider class included in the SDP must be reasonable, appropriate and attainable and, upon request from CMS, the State must provide documentation demonstrating the total payment rate for each service and provider class. We propose in § 438.6(a) to define ''total payment rate'' as the aggregate for each managed care program of: (1) the average payment rate paid by all MCOs, PIHPs, or PAHPs to all providers included in the specified provider class for each service identified in the SDP; (2) the effect of the SDP on the average rate paid to providers included in the specified provider class for the same service for which the State is seeking written prior approval; (3) the effect of any and all other SDPs on the average rate paid to providers included in the specified provider class for the same service for which the State is seeking written prior approval; and (4) the effect of any and all allowable pass-through payments, as defined in § 438.6(a), paid to any and all providers in the provider class specified in the SDP for which the State is seeking written prior approval on the average rate paid to providers in the specified provider class. We note that while the total payment rate described above is collected for each SDP, the information provided for each SDP must account for the effects of all payments from the managed care plan (for example, other SDPs or pass-through payments) to any providers included in the provider class specified by the State for the same rating period. We assess if the total payment level across all SDPs in a managed care program is reasonable, appropriate and attainable.

We note that, currently, § 438.6(c)(1)(iii)(A) describes an SDP that sets a minimum fee schedule using Medicaid State plan approved rates for a particular service. As proposed in section I.B.2.c, § 438.6(c)(1)(iii)(B) would describe an SDP that sets a minimum fee schedule using 100 percent of the total published Medicare payment rate that was in effect no more than 3 years prior to the start of the applicable rating period for a particular service. An SDP that sets a minimum fee schedule using Medicaid State plan approved rates for a particular service does not currently require prior written approval by CMS per § 438.6(c)(2)(ii), and we are proposing in § 438.6(c)(2)(i) to not require prior approval for an SDP that sets a minimum fee schedule using 100 percent of the total published Medicare payment rate. We also believe that both of these specific payment rates would be (and therefore meet the requirement that) reasonable, appropriate and attainable because CMS has reviewed and determined these payment rates to be appropriate under the applicable statute and implementing regulations for Medicaid and Medicare respectively. However, for other SDP arrangements, additional analysis and consideration is necessary to ensure that the payment rates directed by the State meet the standard of reasonable, appropriate and attainable.

The proposed standard at § 438.6(c)(2)(ii)(I) also includes a requirement that upon request from CMS, the State must provide documentation demonstrating the total payment rate for each service and provider class. While we are not proposing to require States to provide documentation in a specified format to demonstrate that the total payment rate is reasonable, appropriate and attainable for all services (see next section for documentation requirements for some SDPs), we intend to continue requesting information from all States for all SDPs documenting the different components of the total payment rate as described earlier in section I.B.2.f. of this proposed rule using a standardized measure (for example, Medicaid State plan approved rates or Medicare) for each service and each class included in the SDP. We formalized this process in the revised preprint form [62] published in January 2021, and described it in the accompanying SMDL. We will continue to review and monitor all payment rate information submitted by States for *all* SDPs as part of our oversight activities and to ensure managed care payments are reasonable, appropriate and attainable. Based on our ongoing monitoring of payment rates, we may issue guidance further detailing documentation requirements and a specified format to demonstrate that the total payment rate is reasonable, appropriate and attainable for all services.

We solicit comments on our proposed changes.

Establishment of Payment Rate Limitations for Certain SDPs. As noted, a number of other entities, including MACPAC [63] and GAO,[64] have released reports focused on SDPs. Both noted concerns about the growth of SDPs and lack of a regulatory payment ceiling. Our proposed standard at § 438.6(c)(2)(ii)(I) would codify our current practice of determining whether the total payment rate is reasonable, appropriate, and attainable for each SDP. However, neither in our guidance nor in our proposed regulatory requirement at § 438.6(c)(2)(ii)(I) have we defined the terms ''reasonable, appropriate and attainable'' as they are used for SDPs. To address this, we are proposing several regulatory standards to establish when the total payment rates for certain SDPs are reasonable, appropriate and attainable. We are proposing to adopt at § 438.6(c)(2)(iii) both specific standards and the documentation requirements necessary for ensuring compliance with the specific standards for the types of SDPs described in paragraphs (c)(1)(i),(ii), and (iii)(C) through (E) where the SDP is for one or more of the following types of services: inpatient hospital services, outpatient hospital services, nursing facility services, and qualified practitioner services at an academic medical center.

To explain and provide context for proposed new paragraph (c)(2)(iii), we discuss the historical use of the average commercial rate (ACR) benchmark for SDPs, the proposed payment limit for inpatient hospital services, outpatient hospital services, qualified practitioner services at academic medical centers and nursing facility services (including proposed definitions for these types of services) and some alternatives we are also considering, the proposed requirement for States to demonstrate the ACR, and the proposed requirements for States to demonstrate compliance with the ACR and total payment rate comparison requirement. We have included further sub-headers to help guide the reader through this section.

1. Historical Use of the Average Commercial Rate Benchmark for SDPs

In late 2017, we received an SDP preprint to raise inpatient hospital payment rates broadly that would result in a total payment rate that exceeded 100 percent of Medicare rates in that State, but the payments would remain below the ACR for that service and provider class in that State. We had concerns about whether the payment rates were still reasonable, appropriate, and attainable for purposes of CMS approval of the SDP as being consistent with the existing regulatory requirement that all SDPs must be developed in accordance with § 438.4, the standards specified in § 438.5, and generally accepted actuarial principles and practices. We realized that approving an SDP that exceeded 100 percent of Medicare rates would be precedent-setting for CMS. We explored using an internal total payment rate benchmark that could be applied uniformly across all SDPs to evaluate preprints for approval and to ensure that payment rates projected to be paid to providers under the SDP(s) remained reasonable, appropriate, and attainable.

Medicare is a significant payer in the health insurance market, and Medicare reimbursement is a standardized benchmark used in the industry. Medicare reimbursement is also a benchmark used in Medicaid FFS, including the Upper Payment Limits (UPLs) that apply to classes of institutional providers, such as hospitals, nursing facilities, and intermediate care facilities for individuals with intellectual disabilities (ICFs/IID), that are based on Medicare payment rates. The UPLs apply an overall payment ceiling based on how much Medicare would have paid in total as a mechanism for determining economy and efficiency of payment for State plan services while allowing for facility-specific payments.[65] Generally for inpatient and outpatient services, these UPL requirements apply to three classes of facilities based on ownership status: State-owned, non-State government-owned, and private. Hospitals within a class can be paid different amounts and facility-specific total payment rates can vary, sometimes widely, so long as in the aggregate, the total amount that Medicaid paid across the class is no more than what Medicare would have paid.

When considering the Medicaid FFS UPL methodologies, we had some concerns that applying the same standards for the total payment rate under SDPs to three classes based on ownership status, would not be appropriate for implementing the SDP requirements. In some States, SDPs have become a method to meet their quality and access goals in Medicaid managed care.

Currently, § 438.6(c)(2)(ii)(B) provides States with broader flexibility than what is required for FFS UPLs in defining the provider class for which States can implement SDPs. This flexibility has proven important for States to target their efforts to achieve their stated policy goals tied to their managed care quality strategy. For example, CMS has approved SDPs where States proposed and implemented SDPs that applied to provider classes defined by criteria such as participation in State health information systems. In other SDPs, the eligible provider class was established by participation in learning collaboratives which were focused on health equity or social determinants of health. In both cases, the provider class under the SDP was developed irrespective of the facility's ownership status. These provider classes can be significantly wider or narrower than the provider class definitions used for Medicaid UPL demonstrations in Medicaid FFS. Therefore, the provider classes in some approved SDPs did not align with the classes used in Medicaid FFS UPL demonstrations, which are only based on ownership or operation status (that is, State government-owned or operated, Non-State government-owned or operated, and privately-owned and operated facilities) and include all payments made to all facilities that fit in those ownership-defined classes. Not all providers providing a particular service in Medicaid managed care programs must be included in an SDP. Under § 438.6(c)(2)(ii)(B), States are required to direct expenditures equally, using the same terms of performance, for a *class* of providers furnishing services under the contract; however, they are not required to direct expenditures equally using the same terms of performance for *all providers* providing services under the contract.

Without alignment across provider classes, CMS could have faced challenges in applying a similar standard of the Medicaid FFS UPL to each provider class that the State specified in the SDP irrespective of how each provider class that the State specified in the SDP compared to the ownership-defined classes used in the Medicaid FFS UPL. Given the diversity in provider classes States have proposed and implemented under SDPs approved by CMS at the time (and subsequently), combined with the fact that not all providers of a service under the contract are necessarily subject to the SDP, CMS had concerns that applying the Medicaid FFS UPL to each provider class under the SDP could have resulted in situations in managed care where provider payments under SDPs would not align with Medicaid FFS policy. In some instances, payments to particular facilities could potentially be significantly higher than allowed in Medicaid FFS, and in others, facility-specific payments could potentially be significantly lower than allowed in Medicaid FFS.

We note that States have been approved to make Medicaid FFS supplemental payments up to the ACR for qualified practitioners affiliated with and furnishing services (for example, physicians under the physician services benefit) in academic medical centers, physician practices, and safety net hospitals.[66] CMS had previously approved SDPs that resulted in total payment rates up to the ACR for the same providers that States had approved State plan authority to make supplemental payments up to the ACR in Medicaid FFS. Additionally, while CMS does not review the provider payment rate assumptions for all services underlying Medicaid managed care rate development, we had recently approved Medicaid managed care contracts in one State where plans are paid capitation rates developed assuming the use of commercial rates

[65] The Upper Payment Limit regulations for FFS Medicaid are §§ 447.272 (inpatient hospital services), 447.321 (outpatient hospital services) and 447.325 (other inpatient and outpatient facility services).

[66] CMS has approved Medicaid State plan amendments authorizing such targeted Medicaid supplemental payment methodologies for qualified practitioner services up to the average commercial rate under 1902(a)(30)(A) of the Act. Additional information on this and other payment demonstrations is published on *Medicaid.gov* at *https://www.medicaid.gov/medicaid/financial-management/payment-limit-demonstrations/index.html*. Instructions specific to qualified practitioner services ACR are further described in the following instructions: *https://www.medicaid.gov/medicaid/downloads/upl-instructions-qualified-practitioner-services-replacement-new.pdf#:~:text=CMS%20has%20approved%20SPAs%20that%20use%20the%20following,payments%20or%20an%20alternate%20fee%20schedule%20is%20used.* As practitioner payments are not subject to Medicaid UPL requirements under 42 CFR part 447 subparts C and F, the ACR is a mechanism by which CMS can review Medicaid practitioner supplemental payments compared to average commercial market rates where private insurance companies have an interest in setting reasonable, competitive rates in a manner that may give assurance that such rates are economic and efficient, consistent with section 1902(a)(30)(A) of the Act.

paid to providers for all services covered in the contract.

For these reasons, in 2018, CMS ultimately interpreted the current § 438.6(c)(2)(i) (which we propose to re-designate as § 438.6(c)(2)(ii)(I) and (J) along with revisions to better reflect our interpretation) to allow total payment rates in an SDP up to the ACR. The statutory and regulatory requirements for the UPL in Medicaid FFS do not apply to risk-based managed care plans; therefore, permitting States to direct MCOs, PIHPs, PAHPs to make payments higher than the UPL does not violate any Medicaid managed care statutory or regulatory requirements. We adopted ACR as the standard benchmark for all SDPs. this standard benchmark for all SDPs applied ACR more broadly (that is, across more services and provider types) than allowed under Medicaid FFS, due to the Medicare payment-based UPLs applicable in FFS. Our rationale in 2018 for doing so was that using the ACR allowed States more discretion than the Medicaid FFS UPL because it allows States to ensure that Medicaid managed care enrollees have access to care that is comparable to access for the broader general public. Also, we believed using the ACR presented the least disruption for States as they were transitioning existing, and often long-standing, pass-through payments [67] into SDPs, while at the same time providing a ceiling for SDPs to protect against the potential of SDPs threatening States' ability to comply with our interpretation of current § 438.6(c)(2)(i) that total provider payment rates resulting from SDPs be reasonable, appropriate and attainable. Finally, using the ACR provided some parity with Medicaid FFS payment policy for payments for qualified practitioners affiliated with and furnishing services at academic medical centers, physician practices, and safety net hospitals where CMS has approved rates up to the ACR.[68]

Therefore, since 2018, we have used the ACR as a benchmark for total payment rates for all SDP reviews. Under this policy, States have had to document the total payment rate specific to each service type included in the SDP and specific to each provider class identified. For example, if an SDP provides a uniform increase for inpatient and outpatient hospital services with two provider classes (rural hospitals and non-rural hospitals), the State would be required to provide an analysis of the total payment rate (average base rate paid by plans, the effect of the SDP, the effect of any other approved SDP(s), and the effect of any permissible pass-through payments) using a standardized measure (for example, Medicaid State plan approved rates or Medicare) for each service and each class included in the SDP. In the example above, the State would be required to demonstrate the total payment rates for inpatient services for rural hospitals, inpatient services for non-rural hospitals, outpatient services for rural hospitals and outpatient services for non-rural hospitals separately. We formalized this process in the revised preprint form [69] published in January 2021, and described it in the accompanying SMDL. While CMS has collected this information for each SDP submitted for written prior approval, we historically requested the impact not only of the SDP under review, but any other payments made by the managed care plan (for example, other SDPs or pass-through payments) to any providers included in the provider class specified by the State for the same rating period.

When a State has not demonstrated that the total payment rate for each service(s) and provider class(es) included in each SDP arrangement is at or below either the Medicare or Medicaid FFS rate (when Medicare does not cover the service), CMS has requested documentation from the State to demonstrate that the total payment rates that exceed the Medicare or the Medicaid FFS rate do not exceed the ACR for the service and provider class. CMS has worked with States to collect documentation on the total payment rate, which has evolved over time. CMS has not knowingly approved an SDP where the total payment rate, inclusive of all payments made by the plan to any providers included in the provider class for the same rating period, was projected to exceed the ACR.

2. Proposed Payment Rate Limit for Inpatient Hospital Services, Outpatient Hospital Services, Qualified Practitioner Services at Academic Medical Centers, and Nursing Facility Services

While CMS has not knowingly approved an SDP that includes payment rates that are projected to exceed the ACR, States are increasingly submitting preprints that would push total payment rates up to the ACR. Therefore, we propose to move away from the use of an internal benchmark to a regulatory limit on the projected total payment rate, using the ACR for inpatient hospital services, outpatient hospital services, qualified practitioner services at an academic medical center, and nursing facility services. We are also considering other potential options for this limit on total payment rate for these four services.

CMS believes that using the ACR as a limit is likely appropriate as it is generally consistent with the need for managed care plans to compete with commercial plans for providers to participate in their networks to furnish comparable access to care for inpatient hospital services, outpatient hospital services, qualified practitioner services at an academic medical center and nursing facility services.

While Medicaid is a substantial payer for these services, it is not the most common payer for inpatient hospital, outpatient hospital and qualified practitioner services at an academic medical center. Looking at the National Health Expenditures data for 2020, private health insurance pays for 32 percent of hospital expenditures, followed by Medicare (25 percent) and Medicaid (17 percent). There is a similar breakdown for physician and clinical expenditures—private health insurance pays for 37 percent of physician and clinical expenditures, followed by Medicare (24 percent) and Medicaid (11 percent).[70] For these three services, commercial payers typically pay the

[67] Pass-through payments are defined in § 438.6(a) as, ''any amount required by the State to be added to the contracted payment rates, and considered in calculating the actuarially sound capitation rate between the MCO, PIHP, or PAHP and hospitals, physicians, or nursing facilities that is not for a specific service or benefit provided to a specific enrollee covered under the contract, a provider payment methodology permitted under § 438.6(c), a sub-capitated payment arrangement for a specific set of services and enrollees covered under the contract; GME payments; or FQHC or RHC wrap around payments.''

[68] CMS has approved Medicaid State plan amendments authorizing such targeted Medicaid supplemental payment methodologies for qualified practitioner services up to the average commercial rate under 1902(a)(30)(A) of the Act. Additional information on this and other payment demonstrations is published on *Medicaid.gov* at . Instructions specific to qualified practitioner services ACR are further described in the following instructions: *https://www.medicaid.gov/medicaid/downloads/upl-instructions-qualified-practitioner-services-replacement-new.pdf#:~:text=CMS%20has%20approved%20SPAs%20that%20use%20the%20following,payments%20or%20an%20alternate%20fee%20schedule%20is%20used. As practitioner payments are not subject to Medicaid UPL requirements under 42 CFR part 447 subparts C and F, the ACR is a mechanism by which CMS can review Medicaid practitioner supplemental payments compared to average commercial market rates where private insurance companies have an interest in setting reasonable, competitive rates in a manner that may give assurance that such rates are economic and efficient, consistent with section 1902(a)(30)(A) of the Act.*

highest rates, followed by Medicare, followed by Medicaid.[71] [72] [73] [74]

Based on both CMS' experience with SDPs for inpatient hospital services, outpatient hospital services and qualified practitioner services at an academic medical center as well as data from the National Health Expenditure survey and other external studies examining payment rates across the Medicaid, Medicare and commercial markets, we believe that for these three services, the ACR payment rate limit would likely be reasonable, appropriate and attainable while allowing States the flexibility to further State policy objectives through implementation of SDPs.

We also believe that this proposed ACR payment rate limit aligns with the SDP actions submitted to CMS. Based on our internal data collected from our review of SDPs, the most common services for which States seek to raise total payment rates up to the ACR are qualified practitioner services at academic medical centers, inpatient hospital services, and outpatient hospital services. Looking at approvals since 2017 through March 2022, we have approved 145 preprint actions that were expected to yield SDPs equal to the ACR: 33 percent of these payments are for professional services at academic medical centers; 18 percent of these payments are for inpatient hospital services; 17 percent of these payments are for outpatient hospital services; 2 percent are for nursing facilities. Altogether, this means that at least two thirds of the SDP submissions intended to raise total payment rates up to the ACR were for these four provider classes. While States are pursuing SDPs for other types of services, very few States are pursuing SDPs that increase total payment rates up to the ACR for those other categories or types of covered services.

While there have not been as many SDP submissions to bring nursing facilities up to a total payment rate near the ACR, there have been a few that have resulted in notable payment increases to nursing facilities. In the same internal analysis referenced above, 2 percent of the preprints approved that were expected to yield SDPs equal to the ACR were for nursing facilities. There have also been concerns raised as part of published audit findings about a particular nursing facility SDP.[75] Therefore, we propose to include these four services—inpatient hospital services, outpatient hospital services, qualified practitioner services at an academic medical center, and nursing facility services—in § 438.6(c)(2)(iii) and limit the projected total payment rate for each of these four services to ACR for any SDP arrangements described in paragraphs (c)(1)(i) through (iii), excluding (c)(1)(iii)(A) and (B), that are for any of these four services. States directing MCO, PIHP or PAHP expenditures in such a manner that results in a total payment rate above the ACR for any of these four types of services would not be approvable under our proposal. Such arrangements would violate the standard proposed in § 438.6(c)(2)(ii)(I) that total payment rates be reasonable, appropriate and attainable and the standard proposed in § 438.6(c)(2)(iii) setting specific payment level limits for certain types of SDPs. We note that while the total payment rate is collected for each SDP, the information provided for each SDP must account for the effects of all payments from the managed care plan (for example, other SDPs or pass-through payments) to any providers included in the provider class specified by the State for the same rating period. The proposed total payment limit would apply across all SDPs in a managed care program; States would not be able to for example, create multiple SDPs that applied, in part or in whole, to the same provider classes and be projected to exceed the ACR. These proposals are based on our authority to interpret and implement section 1903(m)(2)(A)(iii) of the Act, which requires contracts between States and MCOs to provide payment under a risk-based contract for services and associated administrative costs that are actuarially sound and in order to apply these requirements to PIHPs and PAHPs as well as MCOs, on our authority under section 1902(a)(4) of the Act to establish methods of administration for Medicaid that are necessary for the proper and efficient operation of the State plan.

For some services where Medicaid is the most common or only payer (such as HCBS,[76] mental health services,[77] substance use disorder services,[78] and obstetrics and gynecology services,[79] [80]) interested parties have raised concerns about access to care more specifically. For example, one State recently shared data from its internal analysis of the landscape of behavioral health reimbursement in the State that showed Medicaid managed care reimbursement for behavioral health services is higher than commercial reimbursement. Further, a study [81] authorized through Oregon's Legislature outlined several disparities in behavioral health payment, including a concern that within the commercial market, behavioral health providers often receive higher payment rates when furnishing services to out-of-network patients, potentially reducing incentives for these providers to join Medicaid managed care or commercial health plan networks. Instituting a limit on SDP payment amounts that is tied to the ACR, particularly when access concerns have also been raised in the commercial markets too, may have a deleterious effect on access to care for Medicaid managed care enrollees.

We acknowledge that some States have had difficulty with providing payment rate analyses demonstrating that the total payment rate is below ACR, including for services other than

inpatient hospital services, outpatient hospital services, nursing facility services, or qualified practitioner services at academic medical centers. For example, based on our experience, some States have found it difficult to obtain data on commercial rates paid for HCBS. States have noted that this is due to the fact that commercial markets do not generally offer HCBS, making the availability of commercial rates for such services scarce or nonexistent. This same concern has been raised for other services, such as behavioral health and substance use disorder services, among others, where Medicaid is the most common payer and commercial markets do not typically provide similar levels of coverage.

Therefore, we are not proposing at this time to establish in § 438.6(c)(2)(iii) payment rate ceilings for each SDP for services other than inpatient hospital services, outpatient hospital services, nursing facility services, or qualified practitioner services at academic medical centers that States include in SDPs. While SDPs for all other services will still need to meet the proposed standard at § 438.6(c)(2)(ii)(I) that the total payment rate for each SDP (meaning the payment rate to providers) is reasonable, appropriate and attainable, at this time we believe further research is needed before codifying a specific payment rate limit for these services to ensure that such limits do not result in inappropriately reducing payment rates and negatively affecting access to care. We will continue to review and monitor all payment rate information submitted by States for all SDPs as part of our oversight activities and to ensure managed care payments are reasonable, appropriate and attainable. Depending on our future experience, we may revisit this issue as necessary.

For clarity and consistency in applying these proposed new payment limits, we propose to define several terms in § 438.6(a), including a definition for ''inpatient hospital services'' that would be the same as specified at 42 CFR 440.10, ''outpatient hospital services'' that would be the same as specified in § 440.20(a) and ''nursing facility services'' that would be the same as specified at § 440.40(a). Relying on existing regulatory definitions will prevent confusion and provide consistency across Medicaid delivery systems.

We also propose definitions in § 438.6(a) for both ''academic medical center'' and ''qualified practitioner services at an academic medical center'' to clearly articulate which SDP arrangements would be limited based on the proposed payment rate. We propose to define ''academic medical center'' as a facility that includes a health professional school with an affiliated teaching hospital. We propose to define ''qualified practitioner services at an academic medical center'' as professional services provided by physicians and non-physician practitioners affiliated with or employed by an academic medical center.

At this time, we are not proposing to establish a payment rate ceiling for qualified practitioners that are not affiliated with or employed by an academic medical center. We have not seen a comparable volume or size of SDP preprints for provider types not affiliated with hospitals or academic medical centers, and we believe establishing a payment ceiling would likely be burdensome on States and could inhibit States from pursuing SDPs for providers such as primary care physicians and mental health providers and we seek comment on this issue. Depending on our future experience, we may revisit this policy choice in the future but until then, qualified practitioner services furnished at other locations or settings will be subject to the general standard we currently use that is proposed to be codified at § 438.6(c)(2)(ii)(I) that total payment rates for each service and provider class included in the SDP must be reasonable, appropriate and attainable.

We believe that establishing a total payment rate limit of the ACR for these four services appropriately balances the need for additional fiscal guardrails while providing States flexibility in pursuing provider payment initiatives and delivery system reform efforts that further advance access to care and enhance quality of care in Medicaid managed care. In our view, utilizing the ACR in a managed care delivery system is appropriate and acknowledges the market dynamics at play to ensure that managed care plans can build provider networks that are comparable to the provider networks in commercial health insurance and ensure access to care for managed care enrollees. However, we recognize that formally codifying a payment rate limit of ACR for these four service types may raise some questions. First, codifying a payment rate limit of ACR for these four service types may incent States and interested parties to implement additional payment arrangements that raise total payment rates up to the ACR for other reasons beyond advancing access to care and enhancing quality of care in Medicaid managed care. The majority of SDPs that increase total payment rates up to the average commercial rate are primarily funded by either provider taxes, IGTs, or a combination of these two sources of the non-Federal share. These SDPs represent some of the largest SDPs in terms of total dollars that are required to be paid in addition to base managed care rates. We are concerned about incentivizing States to raise total payment rates up to the ACR based on the source of the non-Federal share, rather than based on furthering goals and objectives outlined in the State's managed care quality strategy. To mitigate this concern, which is shared not only by CMS but oversight bodies and interested parties such as MACPAC,[82] we are proposing additional regulatory changes related to financing the non-Federal share; see section I.B.2.g. of this proposed rule.

In light of these concerns, we are considering alternatives to the ACR as a total payment rate limit for inpatient hospital services, outpatient hospital services, nursing facility services, and qualified practitioner services at an academic medical center for each SDP. we are considering including in the final rule establishing the total payment rate limit at the Medicare rate; this is a standardized benchmark used in the industry, and is often a standard utilized in Medicaid FFS under upper payment limit (UPL) demonstrations in 42 CFR part 447. The Medicare rate is also not based on proprietary commercial payment data, and the payment data could be verified and audited more easily than the ACR. If we did include in the final rule a total payment rate limit at the Medicare rate, this may limit the growth in payment rates more than limiting the total payment rate to the ACR. We are also considering, and soliciting feedback on, establishing a total payment rate limit for all services, not limited to just these four services, for all SDP arrangements described in § 438.6(c)(1)(i), (ii), and (iii)(C) through (E) at the Medicare rate in the final rule. We invite public comments on these alternatives.

[82] MACPAC's report noted, ''The largest directed payment arrangements are typically targeted to hospitals and financed by them. Of the 35 directed payment arrangements projected to increase payments to providers by more than $100 million a year, 30 were targeted to hospital systems and at least 27 were financed by provider taxes or IGTs. During our interviews, interested parties noted that the amount of available IGTs or provider taxes often determined the total amount of spending for these types of arrangements. Once this available pool of funding was determined, States then worked backward to calculate the percentage increase in provider rates. Medicaid and CHIP Payment and Access Commission, ''Oversight of Managed Care Directed Payments,'' June 2022, available at *https://www.macpac.gov/wp-content/uploads/2022/06/Chapter-2-Oversight-of-Managed-Care-Directed-Payments-1.pdf*.

We do have some concerns about whether Medicare is an appropriate payment rate limit for managed care payments given the concerns and limitations we noted earlier in the ''Historical Use of the Average Commercial Rate Benchmark for SDPs'' section of this proposed rule, such as provider class limitations. Additionally, Medicare payment rates are developed for a population that differs from the Medicaid population. For example, Medicaid covers substantially more pregnant women and children than Medicare. Although Medicaid FFS UPLs are calculated as a reasonable estimate of what Medicare would pay for Medicaid services and account for population differences across the programs, it can be a challenging exercise to do so accurately. Therefore, we seek public comment to further evaluate if Medicare would be a reasonable limit for the total provider rate for the four types of services delivered through managed care that we propose, all services, and/or additional types of services. We note that beneficiaries enrolled in a managed care plan are often more aligned with individuals in commercial health insurance (such as, adults and kids), whereas the FFS population is generally more aligned with the Medicare population (older adults and individuals with complex health care needs). To acknowledge the challenges in calculating the differences between the Medicaid and Medicare programs, we are also considering, and soliciting feedback on, whether the total payment rate limit for each SDP for these four services should be set at some level between Medicare and the ACR, or a Medicare equivalent of the ACR in the final rule. We invite public comments on these alternatives.

In considering these potential alternatives, we are also considering whether robust quality goals and objectives should be a factor in setting a total payment rate limit for each SDP for these four types of services. Specifically, we are also considering including in the final rule a provision permitting a total payment rate limit for any SDP arrangements described in paragraphs (c)(1)(i) and (ii) that are for any of these four services, at the ACR, while limiting the total payment rate for any SDP arrangements described in § 438.6(c)(1)(iii)(C) through (E), at the Medicare rate. As we noted earlier, CMS believes that establishing a total payment rate limit of the ACR for these four services provides States flexibility in pursuing provider payment initiatives and delivery system reform efforts that further advance access to care and enhance quality of care in Medicaid managed care. Under this alternative policy we are considering including in the final rule, there would be an additional fiscal guardrail compared to our proposal by limiting the total payment rate for these four services to ACR for value-based initiatives only and further limiting the total payment rate for these four services to the Medicare rate for fee schedule arrangements (for example, uniform increases, minimum or maximum fee schedules). This alternative acknowledges the importance of robust quality outcomes and innovative payment models and could incentivize States to consider quality-based payment models that can better improve health outcomes for Medicaid managed care enrollees. We invite public comments on whether this potential alternative should be included in the final rule.

For each of these alternatives, we acknowledge that some States currently have SDPs that have total payment rates up to the ACR. Therefore, these alternative proposals could be more restrictive, and States could need to reduce funding from current levels, which could have a negative impact on access to care and other health equity initiatives. we also seek public comment on whether or not CMS should consider a transition period in order to mitigate any disruption to provider payment levels if we adopt one of the alternatives for a total payment rate limit on SDP expenditures in the final rule.

We seek public comment on our proposal to establish a payment rate limit for SDP arrangements at the ACR for inpatient hospital services, outpatient hospital services, qualified practitioner services at an academic medical center and nursing facility services. Additionally, we solicit public comment on the alternatives we are considering to establish a payment rate limit at the Medicare rate, a level between Medicare and the ACR, or a Medicare equivalent of the ACR for these four service types. We also solicit public comment on whether the final rule should include a provision establishing a total payment rate limit for any SDP arrangements described in paragraphs (c)(1)(i) and (ii) that are for any of these four services, at the ACR, while limiting the total payment rate for any SDP arrangements described in paragraph § 438.6(c)(1)(iii)(C) through (E), at the Medicare rate.

3. Average Commercial Rate Demonstration Requirements

In order to ensure compliance with the provision currently proposed that the total payment rate for SDPs that require written prior approval from CMS for inpatient hospital services, outpatient hospital services, qualified practitioner services at an academic medical centers and nursing facility services do not exceed the ACR for the applicable services subject to the SDP, CMS will need certain information and documentation from the State. Therefore, we propose in § 438.6(c)(2)(iii) that States provide two pieces of documentation: (1) an ACR demonstration; and (2) a total payment rate comparison to the ACR. We propose the timing for these submissions in § 438.6(c)(2)(iii)(C). The ACR demonstration would be submitted with the initial preprint submission (new, renewal, or amendment) following the applicability date of this section and then updated at least every 3 years, so long as the State continues to include the SDP in one or more managed care contracts. The total payment rate comparison to the ACR would be submitted with the preprint as part of the request for approval of each SDP and updated with each subsequent preprint submission (each amendment and renewal).

At § 438.6(c)(2)(iii)(A), we propose to specify the requirements for demonstration of the ACR if a State seeks written prior approval for an SDP that includes inpatient hospital services, outpatient hospital services, qualified practitioner services at an academic medical center or nursing facility services. This demonstration must use payment data that: (1) is specific to the State; (2) is no older than the 3 most recent and complete years prior to the start of the rating period of the initial request following the applicability date of this section; (3) is specific to the service(s) addressed by the SDP; (4) includes the total reimbursement by the third party payer and any patient liability, such as cost sharing and deductibles; (5) excludes payments to FQHCs, RHCs and any non-commercial payers such as Medicare; and (6) excludes any payment data for services or codes that the applicable Medicaid managed care plans do not cover under the contracts with the State that will include the SDP. We consider Qualified Health Plans (QHPs) operating in the ACA Marketplace to be commercial payers for purposes of this proposed provision, and therefore, payment data from QHPs should be included when available.

At proposed § 438.6(c)(2)(iii)(A)(*1*), we would require States to use payment data specific to the State for the analysis, as opposed to regional or national analyses, to provide more accurate information for assessment. Given the wide variation in payment for the same service from State to State, regional or national analyses could be misleading, particularly when determining the impact on capitation rates that are State specific. Additionally, each State's Medicaid program offers different benefits and has different availability of providers. We currently request payment rate analyses for SDPs to be done at a State level for this reason and believe it would be important and appropriate to continue to do so.

At proposed § 438.6(c)(2)(iii)(A)(*2*), we would require States to use data that is no older than the 3 most recent and complete years prior to the start of the rating period of the initial request following the applicability date of this section. This would ensure that the data is reflective of the current managed care payments and market trends. It also aligns with rate development standards outlined in § 438.5. For example, for the ACR demonstration for an SDP seeking written prior approval for inpatient hospital services, outpatient hospital services, qualified practitioner services at an academic medical center or nursing facility services for a CY 2025 rating period, the data used must be from calendar year 2021 and later. We used a calendar year for illustrative purpose only; States must use their rating period timeframe for their analysis.

We propose at § 438.6(c)(2)(iii)(A)(*3*) to require States to use data that is specific to the service type(s) included in the SDP; this would be a change from current operational practice. In provider payment rate analyses for SDPs currently, States are required to compare the total payment rate for each service and provider class to the corresponding service and provider class specific ACR. For example, States requiring their managed care plans to implement SDPs for inpatient hospital services for three classes of providers—rural hospitals, urban hospitals, and other hospitals—would have to produce payment rate analyses specific to inpatient hospital services in rural hospitals, inpatient hospital services in urban hospitals, and inpatient hospital services in other hospitals separately. Under our current operational practice, if the total payment rate for any of these three provider classes exceeds Medicare, CMS requests the State provide documentation demonstrating that the total payment rate does not exceed the ACR specific to both that service and that provider class. As noted later in this same section, we are proposing in § 438.6(c)(2)(iii)(B), to continue to require States to produce the total payment rate comparison to the ACR at a service and provider class level. However, our proposal to codify a requirement for an ACR demonstration includes changes to our approach to determining the ACR and would require States to submit the ACR demonstration, irrespective of if the total payment rate were at or below the Medicare rate or State plan rate for all preprints seeking written prior approval for the four services.

During our reviews of SDP preprints since the 2016 final rule, it has become clear that requiring an ACR analysis that is specific both to the service and provider class can have deleterious effects when States want to target Medicaid resources to those providers serving higher volumes of Medicaid beneficiaries. For example, we have often heard from States that rural hospitals commonly earn a larger share of their revenue from the Medicaid program than they do from commercial payers. There is also evidence that rural hospitals tend to be less profitable than urban hospitals and at a greater risk of closure.[83] These hospitals often serve a critical role in providing access to services for Medicaid beneficiaries living in rural areas where alternatives to care are very limited or non-existent. If States want to target funding to increase reimbursement for hospital services to rural hospitals, limiting the ceiling for such payments to the ACR for rural hospitals only would result in a lower ceiling than if the State were to broaden the category to include hospitals with a higher commercial payer mix (for example, payment data for hospital services provided at a specialty cardiac hospital, which typically can negotiate a higher rate with commercial plans). However, in doing so, the existing regulatory requirement for SDPs at § 438.6(c)(2)(ii)(B) requires that the providers in a provider class be treated the same—meaning they get the same uniform increase. This has resulted in some cases States not being able to use Medicaid funds to target hospitals that provide critical services to the Medicaid population, but instead must use some of those Medicaid funds to provide increases to hospitals that serve a lower share of Medicaid beneficiaries.

In another example to demonstrate the potential effects of requiring an ACR analysis that is specific to both the service and provider class level, a State could seek to implement an SDP that would provide different increases for different classes of hospitals (for example, rural and urban public hospitals would receive a higher percentage increase than teaching hospitals and short-term acute care hospitals). The SDP preprint could provide for separate additional increases for hospitals serving a higher percentage of the Medicaid population and certain specialty services and capabilities. However, if the average base rate that the State's Medicaid managed care plans paid was already above the ACR paid for services to one of the classes (for example, rural hospitals), the State could not apply the same increases to this class as it would the other classes, even if the average base rate paid for the one class was below the ACR when calculated across all hospitals. In this example, the State would be left with the option of either eliminating the one class (for example, rural hospitals) from the payment arrangement or withdrawing the entire SDP proposed preprint even if the State still had significant concerns about access to care as it related to the one class (for example, rural hospitals). The focus on the ACR for the service at the provider class level has the potential to disadvantage providers with less market power, such as rural hospitals or safety net hospitals, which typically receive larger portions of their payments from Medicaid than from commercial payers. These providers typically are not able to negotiate rates with commercial payers on par with providers with more market power.

To provide States the flexibility they need to design SDPs to direct resources as they deem necessary to meet their programmatic goals, we propose to require an ACR demonstration using payment data specific to the service type (that is, by the specific type of service). This would allow States to provide an ACR analysis at just the service level instead of at the service and provider class level. For example, States could establish a tiered fee schedule or series of uniform increases, directing a higher payment rate to facilities that provide a higher share of services to Medicaid enrollees than to the payment rate to facilities that serve a lower share of services to Medicaid enrollees. States would still have a limit of the ACR, but allowing this to be measured at the service level and not at

[83] MACPAC Issue Brief, ''Medicaid and Rural Health.'' Published April 2021 *https://www.macpac.gov/wp-content/uploads/2021/04/Medicaid-and-Rural-Health.pdf.*

the service and provider class level would provide States flexibility to target funds to those providers that serve more Medicaid beneficiaries. Based on our experience, facilities that serve a higher share of Medicaid enrollees, such as rural hospitals and safety net hospitals, tend to have less market power to negotiate higher rates with commercial plans. Allowing States to direct plans to pay providers using a tiered payment rate structure based on different criteria, such as the hospital's payer mix, without limiting the total payment rate to the ACR specific to each tier (which would be considered a separate provider class), but rather at the broader service level would provide States with tools to further the goal of parity with commercial payments, which may have a positive impact on access to care and the quality of care delivered. We would still permit States to elect to provide a demonstration of the ACR at both the service and provider class level or just at the service level if the State chooses to provide the more detailed and extensive analysis, but this level of analysis would no longer be required. We remind States that the statutory requirements in sections 1902(a)(2), 1903(a), 1903(w), and 1905(b) of the Act concerning the non-Federal share contribution and financing requirements, including those implemented in 42 CFR part 433, subpart B concerning health care-related taxes, bona fide provider related donations, and IGTs, apply to all Medicaid expenditures regardless of delivery system (fee-for-service or managed care).

At § 438.6(c)(2)(iii)(B), we propose to specify the requirements for the comparison of the total payment rate for the services included in the SDP to the ACR for those services if a State seeks written prior approval for an SDP that includes inpatient hospital services, outpatient hospital services, qualified practitioner services at an academic medical center or nursing facility services. Under this proposal, the comparison must: (1) be specific to each managed care program that the SDP applies to; (2) be specific to each provider class to which the SDP applies; (3) be projected for the rating period for which written prior approval is sought; (4) use payment data that is specific to each service included in the SDP; and (5) include a description of each of the components of the total payment rate as defined in § 438.6(a) as a percentage of the average commercial rate, demonstrated pursuant to § 438.6(c)(2)(iii)(A), for each of the four categories of services (that is, inpatient hospital services, outpatient hospital services, nursing facility services or qualified practitioner services at an academic medical center) included in the SDP submitted to CMS for review and approval.

The proposed comparison of the total payment rate to the ACR would align with current practice with one exception. We are proposing to codify that the total payment rate comparison would be specific to each Medicaid managed care program to which the SDP under review would apply. Evaluating payment at the managed care program level would be consistent with the payment analysis described in section I.B.1.d. of this proposed rule. The total payment rate comparison proposed at § 438.6(c)(iii)(B) would be a more detailed analysis than is currently requested from States for SDP reviews. Under our proposal, these more detailed total payment rate comparisons would also have to be updated and submitted with each initial preprint, amendment and renewal per proposed § 438.6(c)(2)(iii)(C). In addition, we are proposing that the total payment rate comparison to ACR must be specific to both the service and the provider class; this is current practice today but differs from our proposal for the ACR demonstration, which is proposed to be service specific only.

We have proposed a set of standards and practices States must follow in conducting their ACR analysis. However, we are not proposing to require that States use a specific source of data for the ACR analysis. Further, at this time, we are not proposing to require States to use a specific template or format for the ACR analysis. In our experience working with States on conducting the analysis of the ACR, the availability of data differs by State and service. States are familiar with the process used for conducting a code-level analysis of the ACR for the qualified practitioner services at academic medical centers for Medicaid FFS.[84] Some States have continued to use this same process for documenting the ACR for SDPs as well, particularly when there is a limited number of providers from which to collect such data (for example, academic medical centers). However, code-level data analysis to determine the ACR has proven more challenging for other services, particularly when that service is provided by large numbers of providers. For example, the number of hospitals furnishing inpatient services in a given State can be hundreds of providers.

Data for inpatient and outpatient hospital service payment rates tend to be more readily available in both the Medicare and commercial markets. States with SDPs for hospital services have provided analyses using hospital cost reports and all-payer claims databases. Others have relied on actuaries and outside consultants, which may have access to private commercial databases, to produce an ACR analysis. At times, States have purchased access to private commercial databases to conduct these analyses. We believe each of these approaches, provided the data used for the analyses meet the proposed requirements in § 438.6(c)(2)(iii), would be acceptable to meet our proposed requirements.

4. Average Commercial Rate Demonstration and Total Payment Rate Comparison Compliance

We propose at § 438.6(c)(2)(iii)(C) to require States to submit the ACR demonstration and the total payment rate comparison for review as part of the documentation necessary for written prior approval for payment arrangements, initial submissions or renewals, starting with the first rating period beginning on or after the effective date of this rule. The total payment rate comparison will need to be updated with each subsequent preprint amendment and renewal.

In recognition of the additional State resources required to conduct an ACR analysis, we propose to require that States update the ACR demonstration once every 3 years as long as the State continues to seek to include the SDP in the MCO, PIHP, or PAHP contract. This time period aligns with existing policy for ACR demonstrations for qualified practitioners in Medicaid FFS programs; specifically, those that demonstrate payment at the Medicare equivalent of the ACR.

For discussion on the proposed applicability dates for the proposals outlined in this section, see section I.B.2.p. of this proposed rule.

We solicit public comments on our proposals.

Expenditure Limit for SDPs. The increasing use by States of SDPs has been cited as a key area of oversight risk for CMS. Several oversight bodies, including MACPAC, OIG, and GAO, have authored reports focused on CMS oversight of SDPs.[85] [86] [87] Both GAO and

[84] *https://www.medicaid.gov/medicaid/financial-management/payment-limit-demonstrations/index.html.*

[85] Medicaid and CHIP Payment and Access Commission, ''Oversight of Managed Care Directed Payments,'' June 2022, available at *https://www.macpac.gov/wp-content/uploads/2022/06/*

MACPAC have noted concerns about the growth of SDPs in terms of spending as well as fiscal oversight. Additionally, as States' use of SDPs in managed care programs continues to grow, some interested parties have raised concerns that the risk-based nature of capitation rates for managed care plans has diminished. Medicaid managed care plans generally have the responsibility under risk-based contracts to negotiate with its providers to set payment rates, except when a State believes the use of an SDP is a necessary tool to support the State's Medicaid program goals and objectives. In a risk contract, as defined in § 438.2, a managed care plan assumes risk for the cost of the services covered under the contract and incurs loss if the cost of furnishing the services exceeds the payments under the contract. States' use of SDPs and the portion of total costs for each managed care program varies widely and, in some cases, are a substantial portion of total program costs on an aggregate, rate cell, or category of service basis in a given managed care program or by managed care plan. For example, in one State, one SDP accounts for nine percent of the total projected capitation rates in a given managed care program, and as much as 43 percent of the capitation rates by rate cell for SFY 2023. In another State, SDPs accounted for over 50 percent of the projected Medicaid managed care hospital benefit component of the capitation rates in CY 2022. In a third State, the amount of SDP payments as a percentage of the capitation rates are between 12.5 percent and 40.3 percent by managed care plan and rate cell for SFY 2022. Some interested parties have raised concerns that such percentages are not reasonable in rate setting, and that States are potentially using SDP arrangements to circumvent Medicaid FFS UPLs by explicitly shifting costs from Medicaid FFS to managed care contracts.

CMS agrees with some of these concerns; and therefore, we are considering, and invite comment on, potentially imposing a limit on the amount of SDP expenditures in the final rule based on comments received. Imposing such a limit could help to address and improve program and fiscal protections to address the oversight risks identified by oversight bodies, ensure that risk-based contracts are used as intended, and that managed care plans that are ''at risk'' truly have the ability to manage how their revenue is used to cover all reasonable, appropriate, and attainable costs under the terms of the contract. Such an approach could have potential negative impacts on access to care that would need to be balanced with the need for improved program and fiscal integrity. We seek public comment on whether we should adopt a limit on SDP expenditures in the final rule.

To minimize burden on States, a limit on SDP expenditures could be structured similarly to the proposed 5 percent limit for ILOS expenditures, based on the ILOS cost percentage, proposed in § 438.16(c)(1) (see section I.B.4.b. of this proposed rule). However, we question whether the five percent limit proposed for ILOSs would be a reasonable limit for SDPs given the expansive nature of and associated services impacted by SDPs. Rather, we believe 10 to 25 percent of total costs could be more realistic for limiting SDP expenditures. Like with the ILOS cost percentage, CMS would not approve the related managed care contracts if the limit on SDP expenditures were exceeded. We seek public comment on both the overall approach of using a percent of total costs as well as on the appropriateness of 10 to 25 percent or what a reasonable percentage limit for SDP expenditures could be. We believe a limit on SDP expenditures could be structured in the following ways and invite comment on them as well as if the SDP expenditures limit should be imposed on a rate cell basis instead to inform our deliberative process.

One way to impose a limit on total SDP expenditures could be as a portion of the total costs for each Medicaid managed care program. Under such an approach, States would be required to produce the same type of calculation for the final State directed payment cost percentage (see section I.B.2.j. of this proposed rule) except that for the numerator, States would be required to account for all SDPs applicable to that managed care program instead of just one SDP. Otherwise, the numerator and denominator would be calculated in the same manner as described for the final State directed payment cost percentage.

A second way to impose a limit on total SDP expenditures could be as a portion of the total costs for each Medicaid managed care program, but only focus on the costs related to inpatient hospital services, outpatient hospital services, nursing facility services, and qualified practitioner services at academic medical centers. Under this second approach, States would be required to produce the same type of calculation for the final State directed payment cost percentage (see section I.B.2.j. of this proposed rule) except the numerator would include all SDPs for inpatient hospital services, outpatient hospital services, nursing facility services and qualified practitioner services at an academic medical center applicable to that managed care program instead of just one SDP. Similarly, the denominator would only include the portion of total Medicaid managed care payments made from the State to the plan related to these four service types.

If we finalize a limit on SDP expenditures, States would need to submit documentation to CMS to demonstrate compliance. We believe that requiring this documentation be submitted with one of these existing submission requirements rather than submitting separately would increase program efficiencies and reduce administrative burden. We are considering, and invite comment on, whether documentation to comply with a limit on the amount of SDP expenditures should be submitted with the associated managed care plan contract that includes the SDP contractual arrangement, the associated rate certification, or the SDP preprint.

We seek comment on these alternatives, including perspectives on how well the alternatives address the concerns we have identified and potential consequences of using overall expenditure limits for SDPs.

g. Financing (§ 438.6(c)(2)(ii)(G) and (H))

From our experience in working with States, it has become clear that SDPs provide an important tool for States in furthering the goals and objectives of their Medicaid programs within a managed care environment. In finalizing the standards and limits for SDPs and pass-through payments in the 2016 and 2017 final rules, we intended to ensure that the funding that was included in Medicaid managed care rate development was done so appropriately and in alignment with Federal statutory requirements applicable to the Medicaid program. This includes Federal requirements for the source(s) of the non-Federal share of SDPs.

Background on Medicaid Non-Federal Share Financing. Medicaid expenditures are jointly funded by the Federal and State governments. Section 1903(a)(1) of the Act provides for

Federal payments to States of the Federal share of authorized Medicaid expenditures. The foundation of Federal-State shared responsibility for the Medicaid program is that the State must participate in the financial burdens and risks of the program, which provides the State with an interest in operating and monitoring its Medicaid program in the best interest of beneficiaries (see section 1902(a)(19) of the Act) and in a manner that results in receiving the best value for taxpayers for the funds expended. Sections 1902(a)(2), 1903(a), and 1905(b) of the Act require States to share in the cost of medical assistance and in the cost of administering the Medicaid program. FFP is not available for expenditures for services and activities that are not medical assistance authorized under a Medicaid authority or allowable State administrative activities. Additionally, FFP is not available to States for expenditures that do not conform to approved State plans, waiver, demonstration projects, or contracts, as applicable.

Section 1902(a)(2) of the Act and its implementing regulation in 42 CFR part 433, subpart B require States to share in the cost of medical assistance expenditures and permit other units of State or local government to contribute to the financing of the non-Federal share of medical assistance expenditures. These provisions are intended to safeguard the Federal-State partnership, irrespective of the Medicaid delivery system or authority (for example, FFS or managed care delivery system, and State plan, waiver, or demonstration authority), by ensuring that States are meaningfully engaged in identifying, assessing, mitigating, and sharing in the risks and responsibilities inherent in operating a program as complex and economically significant as Medicaid, and that States are accordingly motivated to administer their programs economically and efficiently (see, for example, section 1902(a)(4) of the Act).

There are several types of permissible means for financing the non-Federal share of Medicaid expenditures, including, but not limited to: (1) State general funds, typically derived from tax revenue appropriated directly to the Medicaid agency; (2) revenue derived from health care-related taxes when consistent with Federal statutory requirements at section 1903(w) of the Act and implementing regulations at 42 CFR part 433, subpart B; (3) provider-related donations to the State which must be ''bona fide'' in accordance with section 1903(w) of the Act and implementing regulations at 42 CFR part 433, subpart B; [88] and (4) intergovernmental transfers (IGTs) from units of State or local government that contribute funding for the non-Federal share of Medicaid expenditures by transferring their own funds to and for the unrestricted use of the Medicaid agency.[89] Regardless of the source or sources of financing used, the State must meet the requirements at section 1902(a)(2) of the Act and § 433.53 that obligate the State to fund at least 40 percent of the non-Federal share of total Medicaid expenditures (both medical assistance and administrative expenditures) with State funds.

Health care-related taxes and IGTs are a critical source of funding for many States' Medicaid programs, including for supporting the non-Federal share of many payments to safety net providers. Health care-related taxes made up approximately 17 percent ($37 billion) of all States' non-Federal share in 2018, the latest year for which data are available.[90] IGTs accounted for approximately 10 percent of all States' non-Federal share for that year. The Medicaid statute clearly permits certain health care-related taxes and IGTs to be used to support the non-Federal share of Medicaid expenditures, and CMS supports States' adoption of these non-Federal financing strategies where consistent with applicable Federal requirements. CMS approves hundreds of State payment proposals annually that are funded by health care-related taxes that appear to meet statutory requirements. The statute and regulations afford States flexibility to tailor health care-related taxes within certain parameters to suit their provider community, broader State tax policies, and the needs of State programs. However, all health care-related taxes must be imposed in a manner consistent with applicable Federal statutes and regulations, which prohibit direct or indirect ''hold harmless'' arrangements (see section 1903(w)(4) of the Act; 42 CFR 433.68(f)).

States first began to use health care-related taxes and provider-related donations in the mid-1980s as a way to finance the non-Federal share of Medicaid payments (Congressional Research Service, ''Medicaid Provider Taxes,'' August 5, 2016, page 2). Providers would agree to make a donation or would support (or not oppose) a tax on their activities or revenues, and these mechanisms (donations or taxes) would generate funds that could then be used to raise Medicaid payment rates to the providers. Frequently, these programs were designed to hold Medicaid providers ''harmless'' for the cost of their donation or tax payment. As a result, Federal expenditures rapidly increased without any corresponding increase in State expenditures, since the funds used to increase provider payments came from the providers themselves and were matched with Federal funds. In 1991, Congress passed the Medicaid Voluntary Contribution and Provider-Specific Tax Amendments (Pub. L. 102–234, enacted December 12, 1991) to establish limits for the use of provider-related donations and health care-related taxes to finance the non-Federal share of Medicaid expenditures. Statutory provisions relating to health care-related taxes and donations are in section 1903(w) of the Act.

Section 1903(w)(1)(A)(i)(II) requires that health care-related taxes be broad-based as defined in section 1903(w)(3)(B), which specifies that the tax must be imposed with respect to a permissible class of health care items or services (as described in section 1903(w)(7)(A)) or with respect to providers of such items or services and generally imposed at least with respect to all items or services in the class furnished by all non-Federal, nonpublic providers or with respect to all non-Federal, nonpublic providers; additionally, the tax must be imposed uniformly in accordance with section 1903(w)(3)(C) of the Act. However,

[88] ''Bona fide'' provider-related donations are truly voluntary and not part of a hold harmless arrangement that effectively repays the donation to the provider (or to providers furnishing the same class of items and services). As specified in § 433.54, a bona fide provider-related donation is made to the State or a unit of local government and has no direct or indirect relationship to Medicaid payments made to the provider, any related entity providing health care items or services, or other providers furnishing the same class of items or services as the provider or entity. This is satisfied where the donations are not returned to the individual provider, provider class, or a related entity under a hold harmless provision or practice. Circumstances in which a hold harmless practice exists are specified in § 433.54(c).

[89] Certified public expenditures (CPEs) also can be a permissible means of financing the non-Federal share of Medicaid expenditures. CPEs are financing that comes from units of State or local government where the units of State or local governmental entity contributes funding of the non-Federal share for Medicaid by certifying to the State Medicaid agency the amount of allowed expenditures incurred for allowable Medicaid activities, including the provision of allowable Medicaid services provided by enrolled Medicaid providers. States infrequently use CPEs as a financing source in a Medicaid managed care setting, as managed care plans need to be paid prospective capitation payments and CPEs by nature are a retrospective funding source, dependent on the amount of expenditures the unit of State or local government certifies that it already has made.

[90] U.S. Government Accountability Office, ''Medicaid: CMS Needs More Information on States' Financing and Payment Arrangements to Improve Oversight,'' GAO–21–98, December 7, 2020, available at *https://www.gao.gov/products/gao-21-98.*

section 1903(w)(1)(A)(iii) of the Act disallows the use of revenues from a broad-based health care related tax if there is in effect a hold harmless arrangement described in section 1903(w)(4) of the Act with respect to the tax. Section 1903(w)(4) of the Act specifies that, for purposes of section 1903(w)(1)(A)(iii) of the Act, there is in effect a hold harmless provision with respect to a broad-based health care related tax if the Secretary determines that any of the following applies: (A) the State or other unit of government imposing the tax provides (directly or indirectly) for a non-Medicaid payment to taxpayers and the amount of such payment is positively correlated either to the amount of the tax or to the difference between the amount of the tax and the amount of the Medicaid payment; (B) all or any portion of the Medicaid payment to the taxpayer varies based only upon the amount of the total tax paid; or (C) the State or other unit of government imposing the tax provides (directly or indirectly) for any payment, offset, or waiver that guarantees to hold taxpayers harmless for any portion of the costs of the tax. Section 1903(w)(1)(A) of the Act specifies that, for purposes of determining the Federal matching funds to be paid to a State, the total amount of the State's Medicaid expenditures must be reduced by the amount of revenue received the State (or by a unit of local government in the State) from impermissible health care-related taxes, including, as specified in section 1903(w)(1)(A)(iii) of the Act, from a broad-based health care related tax for which there is in effect a hold harmless provision described in section 1903(w)(4) of the Act.

In response to the Medicaid Voluntary Contribution and Provider-Specific Tax Amendments of 1991, we published the ''Medicaid Program; Limitations on Provider-Related Donations and Health Care-Related Taxes; Limitations on Payments to Disproportionate Share Hospitals'' interim final rule with comment period in the November 24, 1992 **Federal Register** (57 FR 55118) (November 1992 interim final rule) and the subsequent final rule published in the August 13, 1993 **Federal Register** (58 FR 43156) (August 1993 final rule) establishing when States may receive funds from provider-related donations and health care-related taxes without a reduction in medical assistance expenditures for the purposes of calculating FFP.

After the publication of the August 1993 final rule, we revisited the issue of health care-related taxes and provider-related donations in the ''Medicaid Program; Health-Care Related Taxes'' final rule (73 FR 9685) which published in the February 22, 2008 **Federal Register** (February 2008 final rule). The February 2008 final rule, in part, made explicit that certain practices would constitute a hold harmless arrangement, in response to certain State tax programs that we believed contained hold harmless provisions. For example, five States had imposed a tax on nursing homes and simultaneously created programs that awarded grants or tax credits to private pay residents of nursing facilities that enabled these residents to pay increased charges imposed by the facilities, which thereby recouped their own tax costs. We believed that these payments held the taxpayers (the nursing facilities) harmless for the cost of the tax, as the tax program repaid the facilities indirectly, through the intermediary of the nursing facility residents. However, in 2005, the Department of Health and Human (HHS) Departmental Appeals Board (the Board) (Decision No. 1981) ruled that such an arrangement did not constitute a hold harmless arrangement under the regulations then in place (73 FR 9686–9687). Accordingly, in discussing revisions to the hold harmless guarantee test in § 433.68(f)(3), the February 2008 final rule preamble explained that a State can provide a direct or indirect guarantee through a direct or indirect payment. We stated that a direct guarantee will be found when, ''a payment is made available to a taxpayer or party related to the taxpayer with the reasonable expectation that the payment would result in the taxpayer being held harmless for any part of the tax'' as a result of the payment (73 FR 9694). We noted parenthetically that such a direct guarantee can be made by the State through direct or indirect payments. *Id.* As an example of a party related to the taxpayer, the preamble cited the example of, ''as a nursing home resident is related to a nursing home'' (73 FR 9694). As discussed in this preamble to the February 2008 final rule, whenever there exists a ''reasonable expectation'' that the taxpayer will be held harmless for the cost of the tax by direct or indirect payments from the State, a hold harmless situation exists and the tax is impermissible for use to support the non-Federal share of Medicaid expenditures.

Non-Federal Share Financing and State Directed Payments. The statutory requirements in sections 1902(a)(2), 1903(a), 1903(w), and 1905(b) of the Act concerning the non-Federal share contribution and financing requirements, including those implemented in 42 CFR part 433, subpart B concerning health care-related taxes, bona fide provider related donations, and IGTs, apply to all Medicaid expenditures regardless of delivery system (fee-for-service or managed care). We employ various mechanisms for reviewing State methods for financing the non-Federal share of Medicaid expenditures. This includes, but is not limited to, reviews of fee-for-service SPAs, reviews of managed care SDPs, quarterly financial reviews of State expenditures reported on the Form CMS–64, focused financial management reviews, and reviews of State health care-related tax and provider-related donation proposals and waiver requests.

We reiterated this principle in the 2020 Medicaid managed care rule, noting ''certain financing requirements in statute and regulation are applicable across the Medicaid program irrespective of the delivery system (for example, fee-for-service, managed care, and demonstration authorities), and are similarly applicable whether a State elects to direct payments under § 438.6(c)'' (85 CFR 72765). Further, section 1903(m)(2)(A) of the Act limits FFP in prepaid capitation payments to MCOs for coverage of a defined minimum set of benefits to cases in which the prepaid payments are developed on an actuarially sound basis for assuming the cost of providing the benefits at issue to Medicaid managed care enrollees. CMS has extended this requirement, through rulemaking under section 1902(a)(4) of the Act, to the capitation rates paid to PIHPs and PAHPs under a risk contract as well.

As part of our review of SDP proposals, we are increasingly encountering issues with State financing of the non-Federal share of SDPs, including use of health care-related taxes and IGT arrangements that may not be in compliance with the underlying Medicaid requirements for non-Federal share financing. In January 2021, CMS released a revised preprint form that systematically collects documentation regarding the source(s) of the non-Federal share for each SDP and requires States to provide additional assurances and details specific to each financing mechanism, which has contributed to our increased awareness of non-Federal share financing issues associated with SDPs.[91] Concerns around the funding of the non-Federal share for SDPs have been

[91] *https://www.medicaid.gov/medicaid/managed-care/downloads/sdp-4386c-preprint-template.pdf.*

raised by oversight bodies,[92] [93] and the Department of Health and Human Services Office of Inspector General (OIG) is currently conducting an audit of States' use of what are often referred to as Local Provider Participation Funds to support the non-Federal share of Medicaid payments, for which CMS has evidence that appears to suggest the use of hold harmless arrangements in connection with health care-related taxes.[94]

In recent years, we have identified instances in which States appear to be funding the non-Federal share of Medicaid SDP payments through health care-related tax programs that appear to involve an impermissible hold harmless arrangement. In these arrangements, with varying degrees of State awareness and involvement, providers appear to have pre-arranged agreements to redistribute Medicaid payments (or other provider funds that are replenished by Medicaid payments). These redistribution arrangements are not described on the States' SDP applications; if an SDP preprint stated that Medicaid payments ultimately would be directed to a recipient without being based on the delivery of Medicaid-covered services, we could not approve the SDP, because section 1903(a) of the Act limits Federal financial participation to expenditures for medical assistance and qualifying administrative activities (otherwise stated, FFP is not available in expenditures for payments to third parties unrelated to the provision of covered services or conduct of allowable administrative activities). Similarly, under 1903(w), FFP is not permissible in payments that would otherwise be matchable as medical assistance if the State share being matched does not comply with the conditions in section 1903(w), such as in the case of the type of hold harmless arrangement described above. The fact that these apparent hold harmless arrangements are not made explicit on SDP preprints should not affect our ability to disapprove SDPs when we cannot verify they do not employ redistribution arrangements.

These arrangements appear designed to redirect Medicaid payments away from the providers that furnish the greatest volume of Medicaid-covered services toward providers that provide fewer, or even no, Medicaid-covered services, with the effect of ensuring that taxpaying providers are held harmless for all or a portion of their cost of the health care-related tax. In the arrangements, a State or other unit of government imposes a health-care related tax, then uses the tax revenue to fund the non-Federal share of SDPs that require Medicaid managed care plans to pay the provider taxpayers. The taxpayers appear to enter a pre-arranged agreement to redistribute the Medicaid payments to ensure that all taxpayers, when accounting for both their original Medicaid payment (from the State through a managed care plan) and any redistribution payment received from another taxpayer(s) or other entity, receive back (and are thereby held harmless for) all or at least a portion of their tax amount.

Providers that serve a relatively low percentage of Medicaid patients or no Medicaid patients often do not receive enough Medicaid payments funded by a health care-related tax to cover the provider's cost in paying the tax. Providers in this position are unlikely to support a State or locality establishing or continuing a health care-related tax because the tax would have a negative financial impact on them. Redistribution arrangements like those just described seek to eliminate this negative financial impact or turn it into a positive financial impact for taxpaying providers, likely leading to broader support among the provider class of taxpayers for legislation establishing or continuing the tax. Based on limited information we have been able to obtain from providers participating in such arrangements, we believe providers with relatively higher Medicaid volume agree to redistribute some of their Medicaid payments to ensure broad support for the tax program, which ultimately works to these providers' advantage since the tax supports increased Medicaid payments to them (even net of Medicaid payments that they redistribute to other providers) compared to payment amounts for delivering Medicaid-covered services they would receive in the absence of the tax program. These redistribution arrangements therefore help ensure that State or local governments are successful in enacting or continuing provider tax programs.

The Medicaid statute in 1903(w) does not permit us to provide FFP in expenditures under any State payment proposal that would distribute Medicaid payments to providers based on the cost of a health care-related tax instead of based on Medicaid services, so payment redistribution arrangements often occur without notice to CMS (and possibly States) and are not described as part of a State payment proposal submitted for CMS review and approval (see, section 1903(w)(4) of the Act). Given that we cannot knowingly approve awarding FFP under this scenario, we believe that it would be inconsistent with the proper and efficient operation of the Medicaid State plan to approve an SDP when we know the payments would be funded under such an arrangement. For example, we would not approve an SDP that would require payment from a Medicaid managed care plan to a hospital that did not participate in Medicaid, in any amount. Nor would we approve an SDP that would require payment from a Medicaid managed care plan (that is, a Medicaid payment) to a hospital with a low percentage of Medicaid revenue based on the difference between the hospital's total cost of a health care-related tax and other Medicaid payments received by the hospital. As a result, the redistribution arrangements seek to achieve what cannot be accomplished explicitly through a CMS-approved payment methodology (that is, redirecting Medicaid funds to hold taxpayer providers harmless for their tax cost, with a net effect of directing Medicaid payments to providers based on criteria other than their provision of Medicaid-covered services).

Redistribution arrangements undermine the fiscal integrity of the Medicaid program and are inconsistent with existing statutory and regulatory requirements prohibiting hold harmless arrangements. Currently, § 433.68(f)(3), implementing section 1903(w)(4)(C) of the Act, provides that a hold harmless arrangement exists where a State or other unit of government imposing a health care-related tax provides for any direct or indirect payment, offset, or waiver such that the provision of the payment, offset, or waiver directly or indirectly guarantees to hold taxpayers harmless for all or any portion of the tax amount. The February 2008 final rule on health care-related taxes specified that hold harmless arrangements prohibited by § 433.68(f)(3) exist ''[w]hen a State payment is made available to a taxpayer or a party related to the taxpayer (for example, as a nursing home resident is related to a nursing home), in the

[94] U.S. Department of Health and Human Services Office of the Inspector General, ''States' Use of Local Provider Participation Funds as the State Share of Medicaid Payments'', W–00–22–31557, report expected 2023, work plan available at *https://www.oig.hhs.gov/reports-and-publications/workplan/summary/wp-summary-0000626.asp*.

reasonable expectation that the payment would result in the taxpayer being held harmless for any part of the tax'' (73 FR 9694, quoting preamble discussion from the proposed rule). Regardless of whether the taxpayers participate voluntarily, whether the taxpayers receive the Medicaid payments from a Medicaid managed care plan, or whether taxpayers themselves or another entity make redistribution payments using the very dollars received as Medicaid payments or with other provider funds that are replenished by the Medicaid payments, the taxpayers participating in these redistribution arrangements have a reasonable expectation that they will be held harmless for all or a portion of their tax amount.

We stated that the addition of the words ''or indirectly'' in the regulation indicates that the State itself need not be involved in the actual redistribution of Medicaid funds for the purpose of returning tax amounts to taxpayers in order for the arrangement to qualify as a hold harmless (73 FR 9694). We further explained in the same preamble that we used the term ''reasonable expectation'' because ''State laws were rarely overt in requiring that State payments be used to hold taxpayers harmless'' (73 FR 9694). Hold harmless arrangements need not be overtly established through State law or contracts, but can be based upon a reasonable expectation that certain actions will take place among participating entities to return to taxpaying providers all or any portion of their tax amounts. The redistribution arrangements detailed earlier constitute a hold harmless arrangement described in section 1903(w)(4) of the Act and implementing regulations in part 433. Such arrangements require a reduction of the State's medical assistance expenditures as specified by section 1903(w)(1)(A)(iii) of the Act and § 433.70(b).

Approving an SDP under which the State share is funded through an impermissible redistribution agreement would also be inconsistent with ''proper and efficient administration'' of the Medicaid program within the meaning of section 1902(a)(4) of the Act, as it would result in expenditures for which FFP would ultimately have to be disallowed, when it would be more efficient to not allow such expenditures to be made in the first place. We therefore also rely on our authority under section 1902(a)(4) of the Act to specify methods of administration that are necessary for proper and efficient administration in support of the authority we proposed to make explicit in § 438.6 to disapprove an SDP when we are aware the State share in the SDP would be based on an arrangement that violates section 1903(w) of the Act. We note that in addition to the foregoing, SDPs that are required by Medicaid managed care contracts must be limited to payments for services that are covered under the Medicaid managed care contract and meet the definition of medical assistance under section 1903(a) of the Act. Thus, to the extent the funds are not used for medical assistance, but diverted for another purpose, matching as medical assistance would not be permissible.

In the past, we have identified instances of impermissible redirection or redistribution of Medicaid payments and have taken action to enforce compliance with the statute. For example, the Board upheld our decision to disallow a payment redirection arrangement in a State under a FFS State plan amendment, citing section 1903(a)(1) of the Act, among other requirements (HHS, Board Decision No. 2103, July 31, 2007). Specifically, the Board found that written agreements among certain hospitals redirected Medicaid payments. The payments were not retained by the hospitals to offset their Medicaid costs, as required under the State plan. Instead, pre-arranged agreements redirected Medicaid payments to other entities to fund non-Medicaid costs. In its decision, the Board stated, ''Hence, they were not authorized by the State plan or Medicaid statute[.]'' When providers redistribute their Medicaid payments for purposes of holding taxpayers harmless or otherwise, in effect, the State's claim for FFP in these provider payments is not limited to the portion of the payment that the provider actually retains as payment for furnishing Medicaid-covered services, but also includes the portion that the provider diverts for a non-Medicaid activity ineligible for FFP (for example, holding other taxpayers harmless for their tax costs). This payment of FFP for non-qualifying activities also has the effect of impermissibly inflating the Federal matching rate that the State receives for qualifying Medicaid expenditures above the applicable, statutorily-specified matching rate (see, for example, sections 1903(a), 1905(b), 1905(y), and 1905(z) of the Act).

Ensuring permissible non-Federal share sources and ensuring that FFP is only paid to States for allowable Medicaid expenditures is critical to protecting Medicaid's sustainability through responsible stewardship of public funds. State use of impermissible non-Federal share sources often artificially inflates Federal Medicaid expenditures. Further, these arrangements reward providers based on their ability to fund the State share, and disconnect the Medicaid payment from Medicaid services, quality of care, health outcomes, or other Medicaid program goals. Of critical concern, it appears that the redistribution arrangements are specifically designed to redirect Medicaid payments away from Medicaid providers that serve a high percentage of Medicaid beneficiaries to providers that do not participate in Medicaid or that have relatively lower Medicaid utilization.

States have cited challenges with identifying and providing details on redistribution arrangements when we have requested such information during the review of SDPs. The current lack of transparency prevents both CMS and States from having information necessary for reviewing both the proposed non-Federal share financing source and the proposed payment methodology to ensure they meet Federal requirements. Some States have also expressed concerns with ongoing oversight activities in which CMS is attempting to obtain information that may involve arrangements to which only private entities are a party. We are only interested in any business arrangements among private entities that could result in a violation of Federal statutory and regulatory requirements.

As noted above, we recognize that health care-related taxes can be critical tools for financing payments that support the Medicaid safety net, but they must be implemented in accordance with applicable statutory and regulatory requirements. This proposed rule would ensure that CMS and States have necessary information about any arrangements in place that would redistribute Medicaid payments and make clear that we have the authority to disapprove proposed SDPs if States identify the existence of such an arrangement or do not provide required information or ensure the attestations are made and available as required under proposed paragraph (c)(2)(ii)(H). The proposed new attestation requirement would help ensure appropriate transparency regarding the use of Medicaid payments and any relationship to the non-Federal share source(s), and aims to do so without interfering with providers' normal business arrangements.

All Federal legal requirements for the financing of the non-Federal share, including but not limited to, 42 CFR part 433, subpart B, apply regardless of delivery system, although currently,

§ 438.6(c) does not explicitly state that compliance with statutory requirements and regulations outside of part 438 related to the financing of the non-Federal share is required for SDPs to be approvable or that CMS may deny written prior approval for an SDP based on a State's failure to demonstrate that the financing of the non-Federal share is fully compliant with applicable Federal law. The requirements applicable to health care-related taxes, bona fide provider related donations, and IGTs also apply to the non-Federal share of expenditures for payments under part 438. Currently, § 438.6(c)(1)(ii)(E) provides that a State must demonstrate to CMS, in writing, that an SDP does not condition provider participation in the SDP on the provider entering into or adhering to intergovernmental transfer agreement. We believe additional measures are necessary to ensure compliance with applicable Federal requirements for the source(s) of non-Federal share. We are concerned that the failure of the current regulations to explicitly condition written prior approval of an SDP on the State demonstrating compliance with applicable Federal requirements for the source(s) of non-Federal share potentially compromises our ability to disapprove an SDP where it appears the SDP arrangement is supported by impermissible non-Federal share financing arrangements. Given the growing number of SDPs that raise potential financing concerns, and the growing number of SDPs generally, we believe it is important to be explicit in the regulations governing SDPs that the same financing requirements governing the sources of the non-Federal share apply regardless of delivery system, and that CMS will scrutinize the source of the non-Federal share of SDPs during the preprint review process. We propose to revise § 438.6(c)(2)(ii) to add a new paragraph (c)(2)(ii)(G) that would explicitly require that an SDP comply with all Federal legal requirements for the financing of the non-Federal share, including but not limited to, 42 CFR part 433, subpart B, as part of the CMS review process.

We also propose to revise § 438.6(c)(2)(ii) to ensure transparency regarding the use of SDPs and to ensure that the non-Federal share of SDPs is funded with a permissible source. Under our proposal, States would be required to ensure that each participating provider in an SDP arrangement attests that it does not participate in any hold harmless arrangement with respect to any health care-related tax as specified in § 433.68(f)(3) in which the State or other unit of government imposing the tax provides for any direct or indirect payment, offset, or waiver such that the provision of the payment, offset, or waiver directly or indirectly guarantees to hold the provider harmless for all or any portion of the tax amount. Such hold harmless arrangements include those that produce a reasonable expectation that taxpaying providers would be held harmless for all or a portion of their cost of a health care-related tax. States would be required to note in the preprint their compliance with this requirement prior to our written prior approval of any contractual payment arrangement directing how Medicaid managed care plans pay providers. States would comply with this proposed requirement by obtaining each provider's attestation or requiring the Medicaid managed care plan to obtain each provider's attestation. We also propose, at § 438.6(c)(2)(ii)(H) to require that the State ensure that such attestations are available upon CMS request.

Under this proposal, CMS may deny written prior approval of an SDP if it does not comply with any of the standards in § 438.6(c)(2), including the financing of the non-Federal share is not fully compliant with all Federal legal requirements for the financing of the non-Federal share and/or the State does not require an attestation from each provider receiving a payment based on the SDP that it does not participate in any hold harmless arrangement. As part of our proposed restructuring of § 438.6(c)(2), these provisions would apply to all SDPs, regardless of whether written prior approval is required. We rely on our authority in section 1902(a)(4) of the Act to require methods of administration as are found by the Secretary to be necessary for the proper and efficient operation of the Medicaid State Plan to propose these requirements for ensuring that the source of the non-Federal share of the financing for SDPs is consistent with section 1903(w) of the Act. It is consistent with the economic and efficient operation of the Medicaid State Plan to ensure that State expenditures are consistent with the requirements to obtain FFP, and thereby avoid the process of recouping FFP when provided inappropriately, which is needlessly burdensome for States and CMS. Given that all Federal legal requirements for the financing of the non-Federal share, including but not limited to, 42 CFR part 433, subpart B, apply regardless of delivery system, we also solicit public comment on whether the proposed changes in § 438.6(c)(2)(ii)(G) and (H) should be incorporated more broadly into 42 CFR part 438.

For discussion on the proposed applicability dates for the proposals outlined in this section, see section I.B.2.p. of this proposed rule.

We solicit public comments on these proposals.

h. Tie to Utilization and Delivery of Services for Fee Schedule Arrangements (§ 438.6(c)(2)(vii))

A fundamental requirement of SDPs is that they are payments related to the delivery of services under the contract. In the 2016 final rule, we stated how we believe that actuarially sound payments, which are required under section 1903(m)(2)(A)(iii) for capitation payments to MCOs and under part 438 regulations for capitation payments to risk-based PIHPs and PAHPs, must be based on the provision of covered benefits and associated administrative obligations under the managed care contract (81 FR 27588). This requirement that SDPs be tied to the utilization and delivery of covered benefits differentiates SDPs from pass-through payments. We described the differences between pass-through payments and SDPs in the 2016 final rule and in the 2017 Pass-Through Payment Rule, where we noted, that pass-through payments are not consistent with our regulatory standards for actuarially sound rates because they do not tie provider payments with the provision of services (81 FR 27587 through 27592, 82 FR 5415).

The current regulations at § 438.6(c)(2)(ii)(A) require that States demonstrate in writing that SDPs that require prior written approval be based on the utilization and delivery of services to Medicaid enrollees covered under the managed care plan contract. We have interpreted this requirement to mean that SDPs must be conditioned upon the utilization or delivery of services during the rating period identified in the preprint for which the State is seeking written prior approval. Requiring SDPs to be based on the utilization and delivery of services is a fundamental and necessary requirement for ensuring the fiscal and program integrity of SDPs, but we believe further clarification is necessary due to the variety of payment mechanisms that States use in their SDP arrangements. In particular, ensuring that payments are based on the delivery of services in SDPs that are fee schedule requirements described in § 438.6(c)(1)(iii) is relatively straightforward since fee schedules explicitly link a rate to each

code (for example, CPT or HCPCS), compared to SDPs that are VBP initiatives described in § 438.6(c)(1)(i) and (ii). As discussed in further detail in the section I.B.2.i of this proposed rule, ensuring that payments in VBP initiatives are based on the delivery of services in ways that do not hinder States' ability to pursue VBP efforts is more difficult because, by their nature, VBP initiatives seek to move away from paying for volume in favor of paying for value and performance. We propose revising § 438.6(c) to address how different types of SDPs must be based on utilization and delivery of covered services; this section discusses these requirements for fee schedule arrangements and section I.B.2.i. of this proposed rule discusses the requirements for VBP initiatives.

For SDPs that are fee schedule requirements described in § 438.6(c)(1)(iii), the tie to utilization and delivery of services means that States require managed care plans to make payments when a particular service was delivered during the rating period for which the SDP was approved. Thus, the State could not, under our interpretation of the requirement, require managed care plans to make payments for services that were delivered outside of the approved rating period. However, in working with States, we found that this was not always understood. We therefore clarified this in SMDL #21–001,[95] and explained that SDPs need to be conditioned on the delivery and utilization of services covered under the managed care plan contract for the applicable rating period and that payment cannot be based solely on historical utilization.

We propose to codify this clarification in a new § 438.6(c)(2)(vii)(A) for SDPs described in § 438.6(c)(1)(iii)—that is, minimum fee schedules, maximum fee schedules, and uniform increases. As proposed, § 438.6(c)(2)(vii)(A) would require that any and all payments made under the SDP are conditioned on the utilization and delivery of services under the managed care plan contract for the applicable rating period only. This would preclude States from making any SDP payment based on historical or any other basis that is not tied to the delivery of services to the rating period itself.

Our proposal also addresses SDPs that require reconciliation. In SMDL #21–001,[96] we noted that in capitation rate development, States can use historical data to inform the capitation rates that will be paid to managed care plans for services under the rating period, and this is consistent with § 438.5(b)(1) and (c). However, in accordance with current requirements in § 438.6(c)(2)(ii)(A), payment to providers for an SDP must be made based on the delivery and utilization of covered services rendered to Medicaid beneficiaries during the rating period documented for the approved SDP. We have reviewed and approved SDPs, typically SDPs that establish uniform increases of a specific dollar amount, in which States require managed care plans to make interim payments based on historical utilization and then after the close of the rating period, reconcile the payments to actual utilization that occurred during the rating period approved in the SDP. For these SDPs, States will include the SDP in the rate certification and then once actual utilization for the current rating year is known, CMS has also seen in some instances, States have their actuaries submit an amendment to adjust the amount paid to plans (whether through a separate payment term or an adjustment to base rates) to account for this reconciliation. These amendments typically come near to or after the close of the rating period and are most common when the reconciliation would result in increased costs to the plan absent the adjustment. As a result, risk is essentially removed from the managed care plans participating in the SDP. We are concerned with this practice as we believe tying payments in an SDP, even interim payments, to utilization from a historical time period outside of the rating period approved for the SDP, is inconsistent with prospective risk-based capitation rates that are developed for the delivery of services in the rating period. Further, rate amendments that are submitted after the rating period concludes that adjust the capitation rates retroactively to reflect actual utilization under the SDP goes against the risk-based nature of managed care. To address this, we propose a new § 438.6(c)(2)(vii)(B) which would prohibit States from requiring managed care plans to make interim payments based on historical utilization and then to reconcile those interim payments to utilization and delivery of services covered under the contract after the end of the rating period for which the SDP was originally approved.

To illustrate our concern and need for the proposed regulatory requirement, we share the following example for a State that has an SDP approved to require a uniform increase to be paid for inpatient hospital services for CY 2020. During CY 2020, the State's contracted managed care plans pay the inpatient hospital claims at their negotiated rates for actual utilization and report that utilization to the State via encounter data. Concurrently, the State directs its managed care plans, via the SDP, to make a separate uniform increase in payment to the same inpatient hospital service providers, based on historical CY 2019 utilization. Under this example, the increase in January CY 2020 payment for the providers is made based on January CY 2019 data, the increase in February CY 2020 payment is based on February CY 2019 data, and so forth. This pattern of monthly payments continues throughout CY 2020. After the rating period ends in December 2020, and after a claims runout period that can be as long as 16 months, the State then in mid-CY 2021 or potentially early 2022, reconciles the amount of CY 2019-based uniform increase payments to the amount the payments should be based on CY 2020 claims. The State then requires its managed care plans to make additional payments to, or recoup payments from, the hospitals for under- or over-payment of the CY 2019-based uniform increase.

In the inpatient hospital uniform increase example above, the State may initially account for the SDP in the CY 2020 rate certification and, after the rating period is over, the State submits an amendment to their rate certification to revise the total dollar amount dedicated to the SDP and the capitation rates to reflect the SDP provider payments that were made based on actual utilization in the CY 2020 rating period—thereby, making the managed care plans ''whole'' and removing risk from the managed care plans participating in the SDP. We do not find these practices consistent with the nature of risk-based managed care.

Capitation rates must be actuarially sound as required by section 1903(m)(2)(A)(iii) of the Act[97] and in § 438.4. Specifically, § 438.4(a) requires that actuarially sound capitation rates are projected to provide for all reasonable, appropriate, and attainable costs that are required under the terms of the contract and for the operation of the MCO, PIHP, or PAHP for the time period and the population covered under the terms of the contract, and such capitation rates are developed in

[95] *https://www.medicaid.gov/Federal-Policy-Guidance/Downloads/smd21001.pdf.*

[96] *https://www.medicaid.gov/Federal-Policy-Guidance/Downloads/smd21001.pdf.*

[97] The actuarial soundness requirements apply statutorily to MCOs under section 1903(m)(2)(A)(ii) of the Act and were extended to PIHPs and PAHPs under our authority in section 1902(a)(4) of the Act in the 2002 final rule.

accordance with the requirements outlined in § 438.4(b). ''Rating Period'' is defined at § 438.2 as a period of 12 months selected by the State for which the actuarially sound capitation rates are developed and documented in the rate certification submitted to CMS as required by § 438.7(a). We believe SDPs that make payments based on retrospective utilization and include reconciliations to reflect actual utilization, while eventually tying final payment to utilization and delivery of services during the rating period approved in the SDP, are contrary to the nature of risk-based managed care. SDPs must tie to the utilization and delivery of services to Medicaid enrollees covered under the contract for the rating period approved in the SDP.

We have previously issued regulations and guidance in response to payments we found to be inconsistent with the statute concerning actuarial soundness. In the 2016 rule we noted our belief that the statutory requirement that capitation payments to managed care plans be actuarially sound requires that payments under the managed care contract align with the provision of services under the contract. We further noted that based on our review of capitation rates, we found pass-through payments being directed to specific providers that generally were not directly linked to the delivered services or the outcomes of those services; thereby noting that pass-through payments are not consistent with actuarially sound rates and do not tie provider payments with the provision of services [98] These concerns led CMS to phase out the ability of States to utilize pass-through payments as outlined in § 438.6(d). We reach a similar conclusion in our review of SDP proposals which use reconciliation of historical to actual utilization; if States are seeking to remove risk from managed care plans in connection with these types of SDPs, it is inconsistent with the nature of risk-based Medicaid managed care. As further noted in the 2016 rule, ''[t]he underlying concept of managed care and actuarial soundness is that the [S]tate is transferring the risk of providing services to the MCO and is paying the MCO an amount that is reasonable, appropriate, and attainable compared to the costs associated with providing the services in a free market. Inherent in the transfer of risk to the MCO is the concept that the MCO has both the ability and the responsibility to utilize the funding under that contract to manage the contractual requirements for the delivery of services.'' [99]

States use retrospective reconciliations even though there are less administratively burdensome ways to ensure payment rates for specific services are at or above a certain level. States could accomplish this through the establishment of a minimum fee schedule, which we propose to define in § 438.6(a) as any contract requirement where the State requires a MCO, PIHP, or PAHP to pay no less than a certain amount for a covered service(s). If a State's intent is to require that managed care plans pay an additional amount per service delivered, States could accomplish this through the establishment of a uniform increase, which we propose to define in § 438.6(a) as any contract requirement where the State requires a MCO, PIHP, or PAHP to pay the same amount (the same dollar or the same percentage increase) per covered service(s) in addition to the rates the managed care plan negotiated with providers. In addition to being less administratively burdensome, both options would provide more clarity to providers on payment rates and likely result in more timely payments than a retrospective reconciliation process. Both options would also allow States' actuaries to include the SDPs into the standard capitation rate development process using the same utilization projections used to develop the underlying capitation rates. States can require both minimum fee schedules and uniform increases under current regulations.

We believe requiring managed care plans to make interim payments based on historical utilization and then reconciling to actual utilization instead suggests an intent by State to ensure payment of a specific aggregate amount to certain providers or, in some cases, removal of all risk related to these SDPs from managed care plans. We believe prohibiting this practice and removing post-payment reconciliation processes as we propose in § 438.6(c)(2)(vii)(B) would alleviate actuarial and oversight concerns as well as restore program and fiscal integrity to these kinds of payment arrangements.

CMS is proposing to prohibit the use of post-payment reconciliation processes for SDPs; specifically, that States establishing fee schedules under § 438.6(c)(1)(iii) cannot require that plans pay providers using a post-payment reconciliation process. It is not uncommon for States to pair SDPs requiring plans to pay providers using a post-payment reconciliation process with a separate payment term described later in section I.B.2.l. However, post-payment reconciliation process and separate payment terms are not the same. Separate payment terms are payments made to the plan in addition to the capitation rates to account for any portion of the cost of complying with the SDP not already accounted for in the capitation rates. In contrast, the post-payment reconciliation process that we are proposing to prohibit here directs how the plans pay providers. In both cases, CMS has raised concerns about the removal of risk from the plan and their use by some States in ways that are contrary to the risk-based nature of Medicaid managed care. However, as discussed later, while CMS has a strong preference that SDPs be included as adjustments to the capitation rates since that method is most consistent with the nature of risk-based managed care, we believe separate payment terms can be a useful tool for States to be able to make targeted investments in response to acute concerns around access to care. In contrast, we do not see the same kind of benefit to the Medicaid program in allowing States to require that plans pay providers using a post-payment reconciliation process. We believe that there are methods for providing sufficient guardrails around the use of separate payment terms that lessen the risks associated with the use of separate payment terms as we have proposed and described in section I.B.2.1. of this proposed rule.

For discussion on the proposed applicability dates for the proposals outlined in this section, see section I.B.2.p. of this proposed rule.

We solicit public comments on our proposals.

i. Value-Based Payments and Delivery System Reform Initiatives (§ 438.6(c)(2)(vi))

We are also proposing several changes to § 438.6(c) to address how VBP initiatives, which include value-based purchasing, delivery system reform, and performance improvement initiatives as described in § 438.6(c)(1)(i) and (ii), can be tied to delivery of services under the Medicaid managed care contract as well as to remove barriers that prevent States from using SDPs to implement these initiatives. Currently § 438.6(c)(2)(ii)(A) requires SDPs to be based on the utilization and delivery of services, so SDPs that require use of VBP initiatives must base payment to providers on utilization and delivery of services. Further, § 438.6(c)(2)(iii)(A) requires States to demonstrate in writing that the SDP will make participation in the VBP initiative available, using the same

[98] 81 FR 27587 and 27588.

[99] 81 FR 27588.

terms of performance, to a class of providers providing services under the contract related to the initiative. Existing regulations at § 438.6(c)(1)(i) and (ii) allow States to direct Medicaid managed care plans to implement value-based purchasing models with providers or to participate in delivery system reform or performance improvement initiatives; these types of SDPs require written prior approval from CMS. These provisions were adopted as exceptions to the overall prohibition on States directing the payment arrangements used by Medicaid managed care plans to pay for covered services. Since the 2016 rule, States have used SDPs to strengthen their ability to use their managed care programs to promote innovative and cost-effective methods of delivering care to Medicaid enrollees, to incent managed care plans to engage in State activities that promote certain performance targets, and to identify strategies for VBP initiatives to link quality outcomes to provider reimbursement. As the number of SDPs for VBP initiatives continues to grow, we have found that the existing requirements at § 438.6(c)(2)(iii) can pose unnecessary barriers to implementation of these initiatives in some cases. Revisions to § 438.6(c) would address such barriers. First, we propose to redesignate current paragraph (c)(2)(iii) as paragraph (c)(2)(vi) with a revision to remove the phrase ''demonstrate in writing,'' and we propose to redesignate current paragraph (c)(2)(iii)(A) as paragraph (c)(2)(iv)(A).

In an effort to remove provisions that are barriers to implementation of VBP initiatives, add specificity to the types of arrangements that can be approved under § 438.6(c), and to strengthen the link between SDPs that are VBP initiatives and quality of care, we are proposing the following changes to the requirements that are specific to SDPs that involve VBP initiatives:

(1) Remove the existing requirements at § 438.6(c)(2)(iii)(C) that currently prohibit States from setting the amount or frequency of the plan's expenditures.

(2) Remove the existing requirements at § 438.6(c)(2)(iii)(D) that currently prohibit States from recouping unspent funds allocated for these SDPs.

(3) Redesignate § 438.6(c)(2)(iii)(B) with revisions and clarifications to § 438.6(c)(2)(vi)(B). The provision addresses how performance in these types of arrangements is measured for participating providers.

(4) Adopt a new § 438.6(c)(2)(vi)(C) to establish requirements for use of population-based and condition-based payments in these types of SDP arrangements. As discussed in section I.B.2.f of this proposed rule, we are proposing to adopt requirements for provider payment rates used in SDP arrangements through revisions to § 438.6(c)(2)(iii).

Currently, § 438.6(c)(2)(iii)(C) prohibits States from setting the amount or frequency of expenditures in SDPs that are VBP initiatives. In the 2015 proposed rule,[100] we reasoned that while capitation rates to the managed care plans would reflect an amount for incentive payments to providers for meeting performance targets, the plans should retain control over the amount and frequency of payments. We believed that this approach balanced the need to have a health plan participate in a multi-payer or community-wide initiative, while giving the health plan a measure of control to participate as an equal collaborator with other payers and participants. However, VBP initiatives often include, by design, specific payment amounts at specific times. As States began to design and implement VBP initiatives, sometimes across delivery systems or focused on broad population health goals, many found that allowing plans to retain such discretion undermined the State's ability to implement meaningful initiatives with clear, consistent operational parameters necessary to drive provider performance improvement and achieve the goals of the State's program. Also, because some VBP initiatives provide funding to providers on a bases other than ''per claim,'' these payment arrangements need to be designed and administered in a way that encourages providers to commit to meeting performance goals while trusting that they will receive the promised funding if they meet the performance targets. This is especially true for multi-delivery system arrangements or arrangements that do not make payments for long periods of time, such as annually. Inconsistencies in administration or payment can undermine providers' confidence in the arrangement. For example, States often direct their Medicaid managed care plans to distribute earned performance improvement payments to providers on a quarterly basis. Because these types of payment arrangements affect provider revenue differently than the usual per claim payment methodology, establishing strong parameters and operational details that define when and how providers will receive payment is critical for robust provider participation. While allowing States the flexibility to include the amount and frequency of payments when designing VBP and delivery system reform initiatives removes discretion from managed care plans, we believe this flexibility is necessary to ensure that States can achieve their quality goals and get value for the dollars and effort that they invest in these arrangements. Creating obstacles for States trying to implement VBP initiatives was not our intent in the 2016 final rule. Our goal then and now is to incent States to implement innovative initiatives that reward quality of care and improved health outcomes over volume of services. To accomplish this, we need to refine our regulations; we propose to remove the existing text at § 438.6(c)(2)(iii)(C) that prohibits States from setting the amount and frequency of payment. We believe this would enable States to design more effective VBP initiatives using more robust quality measures to help ensure provider uptake, boost providers' confidence in the efficiency and effectiveness of the arrangement, and enable States to use VBP initiatives to achieve critical program goals.

Currently, § 438.6(c)(2)(iii)(D) prohibits States from recouping any unspent funds allocated for SDP arrangements from managed care plans when the SDP arrangement is for VBP, delivery system reform, or performance improvement initiatives. In the 2015 proposed rule, we explained that because funds associated with delivery system reform or performance initiatives are part of the capitation payment, any unspent funds would remain with the MCO, PIHP, or PAHP. We believed this was important to ensure that the SDPs made to providers were associated with a value relative to innovation and Statewide reform goals and not simply an avenue for States to provide funding increases to specific providers. However, allowing managed care plans to retain unspent funds when providers fail to achieve performance targets can create perverse incentives for States and managed care plans. States have described to us that they are often not incentivized to establish VBP arrangements with ambitious performance or quality targets if those arrangements result in managed care plans profiting from weak provider performance. Although States attempt to balance setting performance targets high enough to improve care quality and health outcomes but not so high that providers are discouraged from participating or so low that they do not result in improved quality or outcomes,

[100] *https://www.federalregister.gov/documents/2015/06/01/2015-12965/medicaid-and-childrens-health-insurance-program-chip-programs-medicaid-managed-care-chip-delivered.*

many States struggle due to of lack experience and robust data. And unfortunately, failed attempts to implement VBP arrangements discourage States, plans, and providers from trying to use the arrangements again. It was never our intent to discourage States from adopting innovative VBP initiatives, so we seek to address the unintended consequence created in the 2016 final rule by proposing to remove the regulation text at § 438.6(c)(2)(iii)(D) that prohibits States from recouping unspent funds from the plans. We believe that removing this prohibition could enable States to reinvest these unspent funds to further promote VBP and delivery system innovation.

To expand the types of VBP initiatives that would be allowed under § 438.6(c)(1)(i) and (ii) and ensure a focus on value over volume, we are also proposing additional revisions in § 438.6(c)(2)(vi) to distinguish between performance-based payments and the use of proposed population-based or condition-based payments to providers.

The existing regulations at § 438.6(c)(1)(i) and (ii) were intended both to incent State activities that promote certain performance targets as well as to facilitate and support delivery system reform initiatives within the managed care environment to improve health care outcomes. We recognize that certain types of multi-payer or Medicaid-specific initiatives, such as patient-centered medical homes (PCMH), broad-based provider health information exchange projects, and delivery system reform projects to improve access to services, among others, may not lend themselves to being conditioned upon provider performance during the rating period.[101] Instead, these arrangements are conditioned upon other factors, such as the volume and characteristics of a provider's attributed population of patients or upon meeting a total cost of care (TCOC) benchmark, for example, through the provision of intense case management resulting in a reduction of chronic disease. Due to the diversity of VBP initiatives, we believe that the existing language at § 438.6(c)(2)(iii)(B), which requires that all SDPs that direct plan expenditures under § 438.6(c)(1)(i) and (ii) must use a common set of performance measures across all of the payers and providers, cannot be broadly applied to arrangements or initiatives under § 438.6(c)(1)(i) and (ii) that do not measure specific provider performance measures.

We believe the best way to address the limitations in current regulation text is to specify different requirements for VBP initiatives that condition payment upon performance from ones that are population or condition-based. Therefore, we propose to use new § 438.6(c)(2)(vi)(B) for requirements for SDPs that condition payment on performance. We are also proposing to adopt additional requirements in addition to redesignating the provision currently at § 438.6(c)(2)(iii)(B) to newly proposed § 438.6(c)(2)(vi)(B)(*2*). Additionally, we are proposing new requirements at new (c)(2)(vi)(B)(1) and (3) through (5) that are clarifications or extensions of the current requirement that SDPs use a common set of performance metrics.

We further propose to add new § 438.6(c)(2)(vi)(C) to describe the requirements for SDPs that are population-based payments and condition-based payments.

Performance-Based Payments. Under current § 438.6(c)(2)(ii)(A), SDPs that direct the MCO's, PIHP's, or PAHP's expenditures under paragraphs (c)(1)(i) and (ii) must be based on the utilization and delivery of services. Therefore, we have required that SDPs that are VBP initiatives be based on performance tied to the delivery of covered services to Medicaid beneficiaries covered under the Medicaid managed care contract for the rating period. This means that we have not allowed these types of SDPs to be based on ''pay-for-reporting'' because the act of reporting, alone, is an administrative activity and not a covered service. Instead, when States seek to design SDPs that pay providers for administrative activities rather than provider performance, we have encouraged States to use provider reporting or participation in learning collaboratives as a condition of provider eligibility for the SDPs and then tie payment under the SDP to utilization under § 438.6(c)(1)(iii). At § 438.6(c)(2)(vi)(B)(*1*), we propose to codify our interpretation of this policy by requiring that payments to providers under SDPs that are based on performance not be conditioned upon administrative activities, such as the reporting of data, nor upon the participation in learning collaboratives or similar administrative activities. The proposed regulation explicitly states our policy so that States have a clear understanding of how to design their SDPs appropriately. We recognize and understand the importance of establishing provider reporting requirements, learning collaboratives, and similar activities to help further States' goals for performance and quality improvement and want to support these activities; however, while these activities can be used as eligibility criteria for the provider class receiving payments, they cannot be the basis for receiving payment from the Medicaid managed care plan under an SDP described in § 438.6(c)(1)(i) or (ii) that is based on performance.

Currently, our policy is that the performance measurement period for SDPs that condition payment based upon performance must overlap with the rating period in which the payment for the SDP is made. However, we have found that States frequently experience delays in obtaining performance-based data due to claims run out time and the time needed for data analyses and validation of the data and the results. All of this can make it difficult, if not impossible, to comply with this requirement. Therefore, we propose to permit States to use a performance measurement period that precedes the start of the rating period in which payment is delivered by up to 12 months. Under this aspect of our proposal, States would be able to condition payment on performance measure data from time periods up to 12 months prior to the start of the rating period in which the SDP is paid to providers. We believe that this flexibility would allow States adequate time to collect and analyze performance data for use in the payment arrangement and may incentivize States to adopt more VBP initiatives. We solicit comment on whether 12 months is an appropriate time period to allow for claims runout and data analysis, or if the time period that the performance period may precede the rating period should be limited to 6 months or extended to 18 or 24 months, or if the performance period should remain consistent with the rating period. We also propose that the performance measurement period must not exceed the length of the rating period. We believe this would make it clear to States that although we propose to extend the length of time between provider performance and payment for administrative simplicity, we are not extending the performance measurement time. Finally, we are also proposing that all payments would need to be documented in the rate certification for the rating period in which the payment is delivered. We also believe identifying which rating period the payments should be reflected in is important since up to 2 rating periods may be involved between

[101] *http://hcp-lan.org/workproducts/apm-framework-onepager.pdf.*

performance and payment, and we want States to document these payments consistently. Specifically, we propose, at § 438.6(c)(2)(vi)(B)(*3*), that a payment arrangement that is based on performance must define and use a performance period that must not exceed the length of the rating period and must not precede the start of the rating period in which the payment is delivered by more than 12 months, and all payments must be documented in the rate certification for the rating period in which the payment is delivered.

In a December 2020 report,[102] the OIG found that a quality improvement incentive SDP implemented in one State resulted in incentive payments paid to providers whose performance declined during the measurement period. Other interested parties, such as MACPAC, have noted concerns with performance improvement SDPs that continue even when there has been a decline in quality or access. In alignment with our proposed evaluation policies at § 438.6(c)(2)(iv) (see section I.B.2.j. of this proposed rule) that seek to better monitor the impact of SDPs on quality and access to care, and in an effort to establish guardrails against payment for declining performance in VBP SDPs, we propose to add § 438.6(c)(2)(vi)(B)(*4*) and (*5*). Measurable performance targets that demonstrate performance relative to a baseline allow States (and CMS) to assess whether or not a provider's performance has improved. Therefore, at § 438.6(c)(2)(vi)(B)(*4*), we propose to require that all SDPs that condition payment on performance include a baseline statistic for all metrics that are used to measure the performance that is the basis for payment from the plan to the provider; these are the metrics (including, per proposed paragraph (c)(2)(iv)(A)(*2*), at least one performance measure, as that term is proposed to be defined in § 438.6(a)) that are specified by the States in order to comply with proposed § 438.6(c)(2)(vi)(B)(*2*). At § 438.6(c)(2)(vi)(B)(*5*), we propose to require that all SDPs that condition payment on performance use measurable performance targets, which are attributable to the performance by the providers in delivering services to enrollees in each of the State's managed care program(s) to which the payment arrangement applies, that demonstrate improvement over baseline data on all metrics selected in § 438.6(c)(2)(vi)(B)(*2*). We believe that these proposals would be consistent with how quality improvement is usually measured as well as be responsive to oversight bodies and help promote economy and efficiency in Medicaid managed care.

Population-Based Payments and Condition-Based Payments. As discussed previously in this preamble section, States often adopt VBP initiatives that are intended to further goals of improved population health and better care at lower cost. We support these efforts and encourage the use of methodologies or approaches to provider reimbursement that prioritize achieving improved health outcomes over volume of services. Therefore, we propose to add new § 438.6(c)(2)(vi)(C) to establish regulatory pathways for approval of VBP initiatives that may not be conditioned upon specific measures of performance.

We propose to define a ''population-based payment'' at § 438.6(a) as a prospective payment for a defined Medicaid service(s) for a population of Medicaid managed care enrollees covered under the contract attributed to a specific provider or provider group. We propose to define a ''condition-based payment'' as a prospective payment for a defined set of Medicaid service(s), that are tied to a specific condition and delivered to Medicaid managed care enrollees. One example of a population-based payment would be an SDP that is a primary care medical home (PCMH) and directs managed care plans to pay prospective per member per month (PMPM) payments for care management to primary care providers, where care management is the service being delivered under the contract and covered by the PMPM. An attributed population could also be condition-based. For example, States could direct managed care plans to pay a provider or provider group a PMPM for Medicaid enrollees with a specific condition when the enrollee is attributed to the provider or provider group for treatment for that condition.

At § 438.6(c)(2)(vi)(C)(*1*), we propose to require that population-based and condition-based payments be conditioned upon either the delivery by the provider of one or more specified Medicaid covered service(s) during the rating period or the attribution to the provider of a covered enrollee for the rating period for treatment. This proposed requirement aligns with the requirement, currently at § 438.6(c)(2)(ii)(A), that SDP arrangements base payments to providers on utilization and delivery of services under the Medicaid managed care contract. States, consistent with 1903(m)(2)(A)(xi), § 438.242(d), and 438.818, must collect, maintain, and submit to T–MSIS encounter data showing that covered service(s) have been delivered to the enrollees attributed to a provider that receives the population-based payment. Further, if the payment is conditioned upon the attribution of a covered enrollee to a provider, we propose § 438.6(c)(2)(vi)(C)(2) to require that the attribution methodology uses data that are no older than the 3 most recent and complete years of data; seeks to preserve existing provider-enrollee relationships; accounts for enrollee preference in choice of provider; and describes when patient panels are attributed, how frequently they are updated, and how those updates are communicated to providers.

We have seen States submit proposals for VBP initiatives that include prospective PMPM population-based payments with no direct tie to value or quality of care and paid in addition to the contractually negotiated rate. Because population-based payments should promote higher quality and coordination of care to result in improved health outcomes, we believe it is imperative that these type of PMPM payments are used to ensure that enrollees are receiving higher quality and coordinated services to increase the likelihood of enrollees experiencing better outcomes. Therefore, we propose to add § 438.6(c)(2)(vi)(C)(*3*) to require that population-based payments and condition-based payments replace the negotiated rate between a plan and providers for the Medicaid covered service(s) being delivered as a part of the SDP to prevent any duplicate payment(s) for the same service. Also, at § 438.6(c)(2)(vi)(C)(*2*), we propose to add a requirement that prevents payments from being made in addition to any other payments made by plans to the same provider on behalf of the same enrollee for the same services included in the population- or condition-based payment. We believe that the requirements in paragraph (c)(2)(vi)(C)(*2*) would prevent States from implementing SDPs under § 438.6(c)(2)(vi)(C) that are PMPM add-on payments made in addition to negotiated rates with no further tie to quality or value.

We recognize the importance of providing a regulatory pathway for States to implement SDPs that are VBP initiatives designed to promote higher quality care in more effective and efficient ways at a lower cost. Because quality of care and provider

[102] U.S. Department of Health and Human Services Office of the Inspector General, ''Aspects of Texas' Quality Incentive Payment Program Raise Questions About Its Ability To Promote Economy and Efficiency in the Medicaid Program,'' A–06–18–07001, December 21, 2020, available at *https://oig.hhs.gov/oas/reports/region6/61807001.asp.*

performance are integral and inherent to all types of VBP initiatives, we believe that SDPs under proposed § 438.6(c)(2)(vi)(C) that are designed to include population-based or condition-based payments must also include in their design and evaluation at least one performance measure and set the target for such a measure to demonstrate improvement over baseline at the provider class level for the provider class receiving the payment. As such, we propose new § 438.6(c)(2)(vi)(C)(*4*) to require that States include at least one performance measure that measures performance at the provider class level as a part of the evaluation plan outlined in proposed § 438.6(c)(2)(iv). We are also proposing that States would be required to set the target for such a performance measure to demonstrate improvement over baseline. We believe that this balances the need to provide States the flexibility to design VBP initiatives to meet their population health and other value-based care goals, while providing accountability by monitoring the effect of the initiatives on the performance of the provider class and the subsequent health outcomes of the enrollees.

Approval Period. In the 2020 Medicaid managed care rule, we finalized a revision to § 438.6(c)(2)(i) allowing that SDPs are VBP initiatives as defined in § 438.6(c)(1)(i) and (ii) meet additional criteria described in § 438.6(c)(3)(i)(A) through (C) would be eligible for multi-year approval if requested. Because of the tie to the managed care quality strategy, which in § 438.340 is required to be updated at least once every 3 years, CMS has never granted written prior approval of an SDP for more than 3 years. We are proposing to modify § 438.6(c)(3)(i) to add that a multi-year written prior approval may be for of up to three rating periods to codify our existing policy. Requiring States to renew multi-year SDPs every 3 years will allow us to monitor changes and ensure that SDPs remains aligned with States' most current managed care quality strategy. We are also proposing minor revisions in paragraphs (c)(3)(i)(A) through (C) to use the term ''State directed payment'' as appropriate and to revise paragraph (c)(3)(ii) to specify it is about written prior approvals. Finally, we are proposing to redesignate paragraph (c)(2)(F) to new paragraph (c)(3)(iii) to explicitly provide that State directed payments are not automatically renewed.

For discussion on the proposed applicability dates for the proposals outlined in this section, see section I.B.2.p. of this proposed rule.

We solicit public comments on these proposals.

j. Quality and Evaluation (§ 438.6(c)(2)(ii)(D) and (F), (c)(2)(iv) and (v), and (c)(7))

We are proposing several changes to the SDP regulations in § 438.6(c) to support more robust quality improvement and evaluation. Existing regulations at § 438.6(c)(2)(ii)(C) and (D) specify that to receive written prior approval, States must demonstrate in writing, amongst other requirements, that the State expects the SDP to advance at least one of the goals and objectives in the State's managed care quality strategy and has an evaluation plan that measures the degree to which the SDP advances the identified goals and objectives. We issued guidance in November 2017 [103] that provided further guidance on what evaluation plans should generally include: the identification of performance criteria which can be used to assess progress on the specified goal(s) and objective(s); baseline data for performance measure(s); and improvement targets for performance measure(s).

In order to monitor the extent to which an SDP advances the identified goals and objectives in a State's managed care quality strategy, we request that States submit their SDP evaluation results from prior rating periods to aid our review of preprint submissions that are renewals of an existing SDP. If an SDP proposal meets regulatory requirements but the State is unable to provide the requested evaluation results, we will usually approve a renewal of the SDP with a ''condition of concurrence'' that the State submit evaluation results with the following year's preprint submission for renewal of the SDP for the following rating period. For example, one common condition of concurrence for year two preprints is the provision of SDP evaluation results data for year one of the SDP with the year three preprint submission.

In 2021, CMS conducted an internal analysis to assess the effectiveness of SDP evaluation plans in measuring progress toward States' managed care quality strategy goals and objectives and whether SDP evaluation findings provided us with sufficient information to analyze whether an SDP facilitated quality improvement. We analyzed data from 228 renewal preprints submitted by 33 States between April 2018 and February 2021. Over half (63 percent) of the evaluation plans submitted were incomplete, and only 43 percent of the renewal preprints included any evaluation results. Our analysis also found only a 35 percent compliance rate with conditions of concurrence requesting States submit SDP evaluation results with the preprint for the following rating period. Our policy goals in this area are frustrated by the lack of a regulation requiring submission of these evaluation results. By adopting requirements for submission of evaluation plans and reports, we intend to increase compliance and improve our oversight in this area.

As the volume of SDP preprint submissions and total dollars flowing through SDPs continues to increase, we recognize the importance of ensuring that SDPs are contributing to Medicaid quality goals and objectives, and recognize that meaningful evaluation results are critical for ensuring that these payments further improvements in quality of care. Moreover, consistent submission of evaluation results is important for transparency and for responsiveness to oversight bodies. Consistent with our internal findings, other entities, including MACPAC [104] and GAO,[105] have noted concerns about the level of detail and quality of SDP evaluations. In MACPAC's June 2022 Report to Congress, the Commission noted concern about the lack of availability of information on evaluation results for SDPs, even when the arrangements had been renewed multiple times. The report also noted that examples of when evaluation results showed a decline in quality or access but the SDPs were renewed without changes. MACPAC recommended in its report that CMS require more rigorous evaluation requirements for SDPs, particularly for arrangements that substantially increase provider payments above Medicaid FFS reimbursement. The report also suggests that CMS provide written guidance on the types of measures that States should use to evaluate progress towards meeting quality and access goals and noted that we should clarify the extent to which evaluation results are used to inform approval and renewal decisions.

We are proposing a number of regulatory changes to enhance CMS's

ability to collect evaluations of SDPs and enhance the level of detail described in the evaluation. CMS' intent is to shine a spotlight on SDP evaluations and use evaluation results in determining future approvals of State directed payments. CMS also plans to issue additional technical assistance on this subject as well to assist States in the development of evaluation plans in alignment with the proposed regulatory requirements and preparing the subsequent evaluation reports.

In an effort to strengthen reporting and to better monitor the impact of SDPs on quality and access to care, we propose at § 438.6(c)(2)(iv) that the State must submit an evaluation plan for each SDP that requires written prior approval that includes four specific elements. We specify that our proposal is to establish minimum content requirements for SDP evaluation plans but is not intended to limit States in evaluating their SDP arrangements. Currently, § 438.6(c)(2)(ii)(D) requires that States develop an evaluation plan that measures the degree to which the arrangement advances at least one of the goals and objectives in the State's managed care quality strategy (which is required by § 438.340).

We propose at § 438.6(c)(2)(iv)(A) that the evaluation plan must identify at least two metrics that would be used to measure the effectiveness of the payment arrangement in advancing the identified goal(s) and objective(s) from the State's managed care quality strategy on an annual basis. In addition, proposed paragraph (c)(2)(vi)(C)(*4*) further specifies that at least one of those metrics must measure performance at the provider class level for SDPs that are population- or condition-based payments. Under § 438.6(c)(2)(iv)(A)(*1*), we propose that the metrics must be specific to the SDP and attributable to the performance by the providers for enrollees in all of the State's managed care program(s) to which the SDP applies, when practicable and relevant. We propose the standard ''when practicable and relevant'' to allow flexibility to account for situations in which contract or program level specificity may be either impossible to obtain or may be ineffective in measuring the identified quality goal(s) and objective(s). For example, States may implement a quality improvement initiative in both the Medicaid FFS program and Medicaid managed care program(s), but measuring the impact of that initiative on each program separately would not produce valid results due to the small sample sizes. Proposing this flexibility would allow States to produce an evaluation inclusive of both Medicaid managed care and FFS data and comprised of measures relevant to the approved SDP to demonstrate the effect the SDP arrangement is having on advancing the State's overall quality goals.

We propose at § 438.6(c)(2)(iv)(A)(*2*) to require that at least one of the selected metrics must be a performance measure, for which we propose a definition in § 438.6(a) as described in section I.B.2.i. of this proposed rule. We currently allow, and would continue to allow, States to select a metric with a goal of maintaining access to care when that is the goal of the SDP. While access metrics provide valuable information, they do not measure service delivery, quality of care, or outcomes, and they do not provide insight into the impact that these payment arrangements have on the quality of care delivered to Medicaid enrollees. Therefore, if a State elects to choose a metric that measures maintenance of access, our proposal would require States to choose at least one additional performance metric. Because we recognize that performance is a broad term and that the approach to evaluating quality in healthcare is evolving, and because we understand the importance of preserving States' flexibility to identify performance measure(s) that are most appropriate for evaluating the specific SDP, we are not proposing additional requirements for the other minimum metric so as not to preclude innovation. However, we would strongly recommend that States use existing measure sets which are in wide use across Medicaid and CHIP, including the Medicaid and CHIP Child and Adult Core Sets [106] and the Home and Community-Based Services Quality Measure Set,[107] to facilitate alignment and reduce administrative burden. In some cases, these existing measures may not be the most appropriate choice for States' Medicaid managed care goals; therefore, we will issue subregulatory guidance to provide best practices and recommendations for choosing appropriate performance measures when not using existing measure sets.

Concerns around access to primary care, maternal health, and behavioral health have been raised nationally. The current administration considers increasing access to care for these services to be a national priority. We encourage States to implement SDPs for these services and providers to improve access. We also encourage States to include measures that focus on primary care and behavioral health in their evaluation plans when relevant. This could include using existing measures from the Medicaid and CHIP Child and Adult Core Sets [108] or other standardized measure sets. CMS also expects that States consider examining parity in rates for primary care and behavioral health compared to other services, such as inpatient and outpatient hospital services, as part of their evaluation of SDPs.

It is crucial to monitor and evaluate the impact of SDP implementation, and as such we propose at § 438.6(c)(2)(iv)(B) to require States to include baseline performance statistics for all metrics that would be used in the evaluation since this data must be established in order to monitor changes in performance during the SDP performance period. We believe this proposal is particularly necessary since we found in our internal study that, among the SDP evaluation plan elements, a baseline statistic(s) was the most commonly missing element. We propose the requirements at § 438.6(c)(2)(iv)(B) in an effort to ensure that States' evaluation plans produce reliable results throughout the entirety of the SDP's implementation.

Measurable SDP evaluation performance targets that demonstrate performance relative to the baseline measurement allow States to determine whether the payment arrangement is having the intended effect and helping a State make progress toward its quality goals. Our internal analysis showed that nearly 20 percent of performance measures selected by States were not specific or measurable. Therefore, at § 438.6(c)(2)(iv)(C), we also propose to require that States include measurable performance targets relative to the baseline statistic for each of the selected measures in their evaluation plan.

Overall, we believe that the proposed regulations at § 438.6(c)(2)(iv) would ensure that States collect and use stronger data for developing and evaluating payment arrangements to meet the goals of their Medicaid programs and would also be responsive to recommendations for more clarity for SDP evaluation plans. However, we

[106] Medicaid and CHIP Child Core Set (*https://www.medicaid.gov/medicaid/quality-of-care/performance-measurement/child-core-set/index.html*), the Medicaid Adult Core Set (*https://www.medicaid.gov/medicaid/quality-of-care/performance-measurement/adult-core-set/index.html*).

recognize and share the concerns raised by oversight bodies regarding the limited availability of SDP evaluation results for use in internal and external monitoring of the effect of SDPs on quality of care. While we ask States for evaluation results as part of the review process for SDP renewals, current regulations do not explicitly require submission of completed evaluation reports and results or use by CMS of prior evaluation reports and results in reviewing current SDPs for renewal or new SDPs. As a result, because most States do not comply with our request for evaluation data, we are proposing to revise § 438.6(c)(2) to ensure that SDPs further the goals and objectives identified in the State's managed care quality strategy. We propose at § 438.6(c)(2)(iv)(D) that States must provide commitment to submit an evaluation report in accordance with proposed § 438.6(c)(2)(v), which is discussed in the next paragraph of this section, if the final State directed payment cost percentage exceeds 1.5 percent.

Finally, we are proposing to amend § 438.6(c)(2)(ii)(D) to further require the evaluation plan include all the elements outlined in paragraph (c)(2)(iv). These proposed changes in § 438.6(c)(2)(ii)(D) and the new proposed requirements in § 438.6(c)(2)(iv) would further identify the necessary components of a State's evaluation plans for SDPs and make clear that we have the authority to disapprove proposed SDPs if States fail to provide in writing evaluation plans for their SDPs that comply with these regulatory requirements.

Section 1902(a)(6) of the Act requires that States provide reports, in such form and containing such information, as the Secretary may from time to time require. Our proposal to add new § 438.6(c)(2)(v) to require that States submit to CMS, for specified types of SDPs that have a final State directed payment cost percentage that exceeds 1.5 percent, an evaluation report using the evaluation plan the State outlined under proposed § 438.6(c)(2)(iv). As proposed in § 438.6(c)(2)(v), the proposed evaluation reporting requirement is limited to States with SDPs that require prior approval. We recognize that submitting an evaluation report would impose some additional burden on States, so we propose this risk-based approach to identify when an evaluation report must be submitted to CMS based on the actual total amount that is paid as a separate payment term described in § 438.6(c)(6) or portion of the actual total portion of capitation payments attributable to the SDP, as a percentage of the State's total Medicaid managed care program costs for each managed care program. This approach would allow States and CMS to focus resources on payment arrangements with the highest financial risk. We have selected the 1.5 percent as it aligns with existing Medicaid managed care policy for when rate amendments are necessary (often referred to as a *de minimis* threshold or *de minimis* changes) and with proposed policies for in lieu of services (see section I.B.3. of this proposed rule).

We propose to define ''final State directed payment cost percentage'' in § 438.6(a) as the annual amount calculated, in accordance with paragraph (c)(7)(iii) of this section, for each State directed payment and each managed care program. In § 438.6(c)(7)(iii)(A), we propose for SDPs requiring prior approval that the final SDP cost percentage numerator be calculated as the portion of the total capitation payments that is attributable to the State directed payment and, actual total amount that is paid as a separate payment term described in § 438.6(c)(6), for each managed care program. In § 438.6(c)(7)(iii)(B), we propose the final SDP cost percentage denominator be calculated as the actual total capitation payments, defined at § 438.2, for each managed care program, including all State directed payments in effect under § 438.6(c) and pass-through payments in effect under § 438.6(d), and the actual total amount of State directed payments that are paid as a separate payment term as described in paragraph (c)(6). To calculate the numerator for a minimum or maximum fee schedule type of SDP that is incorporated into capitation rates as an adjustment to base capitation rates, an actuary should calculate the absolute change that the SDP has on base capitation rates. Over time, as the SDP is reflected in the base data and incorporated into base capitation rates, it is possible that the absolute effect may decrease or no longer be apparent, and the numerator may decrease to zero. We solicit comment on whether the numerator for a minimum or maximum fee schedule SDP that is incorporated into capitation rates as an adjustment to base capitation rates should be calculated in a different manner (for example, estimating a portion of the capitation rates resulting from the SDP). We do not believe that it is necessary to propose regulation text to codify this approach as we intend to issue additional guidance in the Medicaid Managed Care Rate Development Guide in accordance with § 438.7(e). We also solicit comment on whether we should codify this in regulation text. We believe this proposed numerator and denominator would provide an accurate measurement of the final expenditures associated with a SDP and total program costs in each managed care program in a risk-based contract.

We believe the final SDP cost percentage should be measured distinctly for each managed care program and SDP, as reflected in the definition proposed for this term. This is appropriate because capitation rates are typically developed by program, SDPs may vary by program, and each managed care program may include differing populations, benefits, geographic areas, delivery models, or managed care plan types. For example, one State may have a behavioral health program that covers care to most Medicaid beneficiaries through PIHPs, a physical health program that covers physical health care to children and pregnant women through MCOs, and a program that covers physical health and MLTSS to adults with a disability through MCOs. Another State may have several different managed care programs that serve similar populations and provide similar benefits through MCOs, but the delivery model and geographic areas served by the managed care programs vary. We addressed managed care program variability within the 2016 final rule when we noted that ''This clarification in the regulatory text to reference ''managed care program'' in the regulatory text is to recognize that States may have more than one Medicaid managed care program—for example physical health and behavioral health . . .'' (81 FR 27571). Therefore, we believe it would be contrary to our intent if States were to develop a final SDP cost percentage by aggregating data from more than one managed care program since that would be inconsistent with rate development, the unique elements of separate managed care programs, and the SDPs that vary by managed care program. We note here that we intend to use this application of managed care program in other parts of this section of this proposed rule, including, but not limited to, the discussion of calculating the total payment rate in section I.B.2.f. of this proposed rule, measurement of performance for certain VBP arrangements discussed in section I.B.2.i. of this proposed rule and separate payment terms in section I.B.2.i. of this proposed rule.

With § 438.6(c)(7)(i), we propose that the final State directed payment cost percentage be calculated on an annual basis and recalculated annually to ensure consistent application across all States and managed care programs. To

ensure that final State directed payment cost percentage would be developed in a consistent manner with how the State directed payment costs would be included in rate development, we propose at § 438.6(c)(7)(ii) to require that the final SDP cost percentage would have to be certified by an actuary and developed in a reasonable and appropriate manner consistent with generally accepted actuarial principles and practices. An ''actuary'' is defined in § 438.2 as an individual who meets the qualification standards established by the American Academy of Actuaries for an actuary and follows the practice standards established by the Actuarial Standards Board, and who is acting on behalf of the State to develop and certify capitation rates.

Although all States would be required to develop and document evaluation plans in compliance with the provisions proposed in § 438.6(c)(2)(iv), the proposed regulation at § 438.6(c)(2)(v) requires submission of the evaluation report for an SDP based on whether the SDP results in a final SDP cost percentage greater than 1.5 percent. In recognition that the final SDP cost percentage report represents additional State burden and that many States may choose to evaluate their SDPs regardless of the final SDP cost percentage, we propose § 438.6(c)(7) which requires States to submit the final SDP cost percentage report, only if a State wishes to demonstrate that it is below 1.5 percent. With this proposed reporting requirement, States would be required to provide the final SDP cost percentage report to demonstrate that an SDP is exempt from the proposed evaluation report requirement. For SDP arrangements that do not exceed the threshold, States would not be required to submit evaluation results under proposed new paragraph § 438.6(c)(2)(v), but we would encourage States to monitor the evaluation results of all of their SDPs. We recognize that in order to monitor the 1.5 percent threshold, we would need a reporting mechanism by which States would be required to calculate and provide the final SDP cost percentage to CMS. Therefore, we propose a requirement (at new § 438.6(c)(7)(iv)) that the State submit the final State directed payment cost percentage annually to CMS for review, when the final State directed payment cost percentage does not exceed 1.5 percent and the State has not voluntarily submitted the evaluation report, as a separate report concurrent with the rate certification submission required in § 438.7(a) no later than 2 years after the completion of each 12-month rating period that included a State directed payment. We believe that it is appropriate for States' actuaries to develop a separate report to document that the final State directed payment cost percentage does not exceed 1.5 percent, rather than including it in a rate certification, because the final State directed payment cost percentage may require alternate data compared to the base data that were used for prospective rate development, given the timing of base data requirements as outlined in § 438.5(c)(2). We note that this proposal is similar to the concurrent submission for the proposed MLR reporting at § 438.74 and proposed ILOS projected and final cost percentage reporting at § 438.16(c). We considered proposing that States submit the final SDP report to CMS upon completion of the report, separately and apart from the rate certification. However, we believe there should be consistency across States for when this report is submitted to CMS for review, and we believe receiving this report and the rate certification at the same time would enable CMS to review them concurrently.

As the proposed denominator for the final SDP cost percentage would be based on the actual total capitation payments and the actual total State directed payments paid as a separate payment term (see section I.B.2.l. of this proposed rule for details on this proposal for separate payment terms) paid by States to managed care plans, we recognize that calculating the final SDP cost percentage would take States and actuaries some time. For example, changes to the eligibility file and revised rate certifications for rate amendments may impact the final capitation payments that are a component of the calculation. Given these factors, we believe that 2 years is an adequate amount of time to accurately perform the calculation. Under this proposal, for example, the final SDP cost percentage report for a managed care program that uses a calendar year 2024 rating period would be submitted to CMS with the calendar year 2027 rate certification.

For the evaluation reports, we propose to adopt three requirements in § 438.6 (c)(2)(v)(A). First, in § 438.6(c)(2)(v)(A)(*1*), we propose that evaluation reports must include all of the elements approved in the evaluation plan required in § 438.6(c)(2)(iv). In § 438.6(c)(2)(v)(A)(*2*), we propose to require that States include the 3 most recent and complete years of annual results for each metric as required in § 438.6(c)(2)(iv)(A). Lastly, at § 438.6(c)(2)(v)(A)(*3*), in acknowledgement of MACPAC's recommendation to enhance transparency of the use and effectiveness of SDP arrangements, we propose to require that States publish their evaluation reports on their public facing website as required under § 438.10(c)(3).

States consistently have difficulty providing evaluation results in the first few years after implementation of an SDP due to the time required for complete data collection. Our internal analysis found that States' ability to provide evaluation results improved over time. Although only 21 percent of proposals included evaluation results in year two, 55 percent of proposals included results data in year three, and 66 percent of year 4 proposals included the results of the evaluation. For this reason, we considered but ultimately did not propose that States submit an annual evaluation. Therefore, we propose at § 438.6(c)(2)(v)(B) to require States to submit the first evaluation report no later than 2 years after the conclusion of the 3-year evaluation period and that subsequent evaluation reports would have to be submitted to CMS every 3 years after.

In § 438.6(c)(2)(v)(A)(*2*), we propose to require that evaluation reports include the 3 most recent and complete years of annual results for each metric as approved under the evaluation plan approved as part of the preprint review. Therefore, the first evaluation report would be due no later than with the submission of the preprint for the sixth rating period after the applicability date for the evaluation plan; this evaluation plan would contain results from the first 3 years after the applicability date for the evaluation plan. We believe that this approach to implementation would allow adequate time for States to obtain final and validated encounter data and performance measurement data to compile and publish the first evaluation report. We also considered a 5 and 10-year period evaluation period, but we concluded that seemed to be an unreasonably long time to obtain actionable evaluation results. We concluded that a 3-year period would provide sufficient time to collect complete data and demonstrate evaluation trends over a period of time.

After submission of the initial evaluation report, States would be required to submit subsequent evaluation reports every 3 years. This means that States would submit the second evaluation report with the SDP preprint submission for the first rating period beginning 9 years after the applicability date for the evaluation plan; this evaluation report would contain results from years four through six after the applicability date for the

evaluation plan . States would be required to continue submitting evaluation reports with this frequency as long as the SDP is implemented. We acknowledge that some SDPs will have been operational for multiple years when these proposed regulations take effect. We are not proposing a different implementation timeline for SDP arrangements that predate the compliance deadline for this proposal. For these mature payment arrangements, States would be required to submit an evaluation report in the fifth year after the compliance date that includes the 3 most recent and complete years of annual results for the SDP. However, because these types of long-standing payment arrangements have been collecting evaluation data since implementation, we would expect States to include the evaluation history in the report in order to provide the most accurate picture.

We recognize and share the concerns that oversight bodies have expressed regarding the extent to which CMS uses evaluation results to inform SDP written prior approval decisions. In response to these concerns and as a part of the proposed revisions to § 438.6(c)(2)(ii), which include the standards that all SDPs must meet, we are proposing a new standard at § 438.6(c)(2)(ii)(F) requiring that all SDPs must result in achievement of the stated goals and objectives in alignment with the State's evaluation plan. We believe that the proposed changes would help us to better monitor the impact of SDPs on quality and access to care and would help standardize our review of SDP proposal submissions under § 438.6(c) while allowing us to disapprove SDPs that do not meet their stated quality goals and objectives.

We are also making a concurrent proposal at § 438.358(c)(7) to include a new optional EQR activity to support evaluation requirements, which would give States the option to leverage a CMS-developed protocol or their EQRO to assist with evaluating SDPs. We believe this proposed optional activity would reduce burden associated with these new requirements and is discussed in more detail in section I.B.5.c.3 of this proposed rule. we are considering, and invite public comment on, requiring that States procure an independent evaluator for SDP evaluations in the final rule based on comments received. In consideration of the myriad of new proposed requirements within this proposed rule, we weighed the value of independent evaluation with increased State burden. We are concerned that it would be overly burdensome for States to procure independent evaluators for SDPs due, in part, to the timing of the final SDP cost percentage submission. In section I.B.2. of this proposed rule, we are proposing that the final SDP cost percentage be submitted 2 years following completion of the applicable rating period, and we propose here that if the final SDP cost percentage exceeds the 1.5 percent, States would be required to submit an evaluation. While we encourage all States to evaluate their SDPs, it could be difficult and time consuming to procure an independent evaluator in a timely manner solely for the purpose of the SDP evaluation since States would not know definitely whether an evaluation is required until 2 years following the rating period. We solicit comment on whether we should consider a requirement that States use an independent evaluator for SDP evaluations.

For discussion on the proposed applicability dates for the proposals outlined in this section, see section I.B.2.p. of this proposed rule.

We solicit public comments on our proposals and the alternatives under consideration.

k. Contract Term Requirements (§ 438.6(c)(5))

SDPs are contractual obligations in which States direct Medicaid managed care plans on how or how much to pay specified provider classes for certain Medicaid-covered services. The current heading for § 438.6(c) describes paragraph (c) as being about delivery system and provider payment initiatives under MCO, PIHP, or PAHP contracts. Further, the regulation refers to SDPs throughout as provisions in the contract between the MCO, PIHP or PAHP and the State that direct expenditures by the managed care plan (that is, payments made by the managed care plan to providers). SDPs are to be included in a State's managed care rate certification per § 438.7(b)(6) and final capitation rates for each MCO, PIHP, and PAHP must be identified in the applicable contract submitted for CMS review and approval per § 438.3(c)(1)(i). Thus, every SDP must be documented in the managed care contract and actuarial rate certification.

Previous guidance issued to States, including in the January 2022 State Guide to CMS Criteria for Medicaid Managed Care Contract Review and Approval (State Guide), indicates that contractual requirements for SDPs should be sufficiently detailed for managed care plans to operationalize each payment arrangement in alignment with the approved preprint(s).[109] The State Guide includes examples of information that States could consider including in their managed care contracts for SDPs.[110] However, despite this guidance, there is a wide variety of ways States include these requirements into their contracts, many of which lack critical details to ensure that plans implement the contractual requirement consistent with the approved SDP. For example, some States have sought to include a broad contractual requirement that their plans must comply with all SDPs approved under § 438.6(c) with no further details in the contract to describe the specific payment arrangements that the State is directing the managed care plan to implement and follow. Other States have relied on broad contract requirements stating that plans must comply with all applicable State laws as a method of requiring compliance with State legislation requiring plans to pay no less than a particular fee schedule for some services. These types of vague contractual provisions represent significant oversight risk for both States and CMS.

To reduce this risk and improve the clarity of SDPs for managed care plans, we propose to codify at § 438.6(c)(5) minimum requirements for the content of a Medicaid managed care contract that includes one or more SDP contractual requirement(s). We believe these minimum requirements for SDP contract terms would assist States when developing their contracts, ensure that managed care plans receive necessary information on the State's intent and direction for the SDP, facilitate CMS' review of managed care contracts, and ensure compliance with the approved SDP preprint. At § 438.6(c)(5)(i) through (v), we propose to specify the information that must be documented in the managed care contract for each SDP. Proposed § 438.6(c)(5)(i) would require the State to identify the start date and, if applicable, the end date within the applicable rating period. While most SDPs, particularly long-standing contractual requirements, are in effect throughout the entire rating period, some SDPs begin in the middle of the rating period or are for a limited period of time within a rating period. This requirement would ensure that the time period for which the SDP applies is clear to the managed care plans.

Proposed § 438.6(c)(5)(ii) would require the managed care contract to

[109] *https://www.medicaid.gov/medicaid/downloads/mce-checklist-state-user-guide.pdf.*

[110] *https://www.medicaid.gov/medicaid/downloads/mce-checklist-state-user-guide.pdf.*

describe the provider class eligible for the payment arrangement and all eligibility requirements. This would ensure compliance with the scope of the written prior approval issued by CMS because we have implemented paragraph (c)(2)(ii)(B) by requiring States to provide a description of the class of providers eligible to participate and the eligibility criteria. In addition, a clear contract term will provide clear direction to plans regarding the provider class that is eligible for the SDPs.

Proposed § 438.6(c)(5)(iii) would require the State to include a description of each payment arrangement in the managed care contract. This will ensure compliance with the written prior approval issued by CMS and provide clear direction to plans while also assisting CMS in its review and approval of Medicaid managed care contracts. For each type of payment arrangement, we are proposing to require that specific elements be included in the contract at a minimum. For SDPs that are minimum fee schedule arrangements, we propose that the contract must include: in § 438.6(c)(5)(iii)(A)(1), the fee schedule the plan must ensure payments are at or above; in paragraph (c)(5)(iii)(A)(2), the procedure and diagnosis codes to which the fee schedule applies; and in paragraph (c)(5)(iii)(A)(3), the applicable dates of service within the rating period for which the fee schedule applies. We are proposing the requirement at paragraph (c)(5)(iii)(A)(3) so that it is clear that payment can only be triggered based on service delivery within the applicable rating period.

For minimum fee schedules set at the State plan approved rate as described in § 438.6(c)(1)(iii)(A), we propose to require at § 438.6(c)(5)(iii)(A)(4) that the contract reference the applicable State plan page, the date it was approved, and a link to where the currently approved State plan page is posted online when possible. For minimum fee schedules set at the Medicare rate as described in § 438.6(c)(1)(iii)(B), we propose to require at § 438.6(c)(5)(iii)(A)(5), that the contract include the Medicare fee schedule and any specific information necessary for implementing the payment arrangement. For example, Medicare updates their fee schedules annually using a calendar year but Medicaid managed care contracts may not be based on a calendar year, such as those that use a State fiscal year. Therefore, States would have to identify the publication year of the Medicare fee schedule being required by the SDP. As another example, the Medicare physician fee schedule includes factors for different geographic areas of the State to reflect higher cost areas; the Medicaid managed care contract would have to specify if the plans are required to apply those factors or use an average of those factors and pay the same rate irrespective of the provider's geographic region.

For uniform increases as described in paragraph (c)(1)(iii)(D), we propose at § 438.6(c)(5)(iii)(B)(1) through (5) to require the contract to include: (1) whether the uniform increase will be a specific dollar amount or a specific percentage increase over negotiated rates; (2) the procedure and diagnosis codes to which the uniform increase will be applied; (3) the specific dollar amount of the increase or percent of increase, or the methodology to establish the specific dollar amount or percentage increase; (4) the applicable dates of service within the rating period for which the uniform increase applies; and (5) the roles and responsibilities of the State and the plan, as well as the timing of payment(s), and any other significant relevant information.

For maximum fee schedules as described in paragraph (c)(1)(iii)(E), we propose at § 438.6(c)(5)(iii)(C)(1) through (4) to require the contract to include: (1) the maximum fee schedule the plan must ensure payments are below; (2) the procedure and diagnosis codes to which the fee schedule applies; (3) the applicable dates of service within the rating period for which the fee schedule applies; and (4) details of the State's exemption process for plans and providers to follow if they are under contract obligations that result in the need to pay more than the maximum fee schedule. We believe an exemption process is necessary for payment arrangements that limit how much a managed care plan can pay a provider to ensure that the MCO, PIHP, or PAHP retains the ability to reasonably manage risk and has discretion in accomplishing the goals of the contract.

For contractual obligations described in paragraph (c)(1)(i) and (ii) that condition payment based upon performance, we propose at § 438.6(c)(5)(iii)(D)(*1*) through (6) to require that managed care plan contracts must include a description of the following elements approved in the SDP arrangement: (1) the performance measures that payment will be conditioned upon; (2) the measurement period for those metrics; (3) the baseline statistics against which performance will be based; (4) the performance targets that must be achieved on each metric for the provider to obtain the performance-based payment; (5) the methodology to determine if the provider qualifies for the performance-based payment as well as the amount of the payment; and (6) the roles and responsibilities of the State and the plan, the timing of payment(s), what to do with any unearned payments if applicable, and other significant relevant information. Some States perform the calculations to determine if a provider has achieved the performance targets necessary to earn performance-based payments, while others delegate that function to their managed care plans. Adding this specificity to the contract would ensure clarity for both the States and the managed care plans.

For contractual obligations described in paragraphs (c)(1)(i) and (ii) that are population or condition-based payments as defined in § 438.6(a), we propose at § 438.6(c)(5)(iii)(E) to require the contract to describe: (1) the Medicaid covered service(s) that the population or condition-based payment is made for; (2) the time period that the population-based or condition-based payment covers; (3) when the population-based or condition-based payment is to be made and how frequently; (4) a description of the attribution methodology, if one is used, which must include at a minimum the data used, when the panels will be established, how frequently those panels will be updated, and how that attribution model will be communicated to providers; and (5) the roles and responsibilities of the State and the plan in operationalizing the attribution methodology if an attribution methodology is used.

Proposed § 438.6(c)(5)(iv) would require that the State include in the managed care contract any encounter reporting and separate reporting requirements that the State needs in order to audit the SDP and report provider-level payment amounts to CMS as required in § 438.6(c)(4).

Proposed § 438.6(c)(5)(v) would require that the State indicate in the contract whether the State would be using a separate payment term as defined in § 438.6(a) to implement the SDP. This information would provide additional clarity for oversight purposes for both States and CMS.

Finally, we propose to require in § 438.6(c)(5)(vi) that all SDPs must be specifically described and documented in MCO, PIHP, and PAHP contracts no later than 120 days after the start of the SDP or approval of the SDP under § 438.6(c)(2)(i), whichever is later. This timeframe is consistent with the timeframe being proposed for documenting separate payment terms in the managed care contract under § 438.6(c)(6)(v). We believe that

proposing to require States to document the SDP within these timeframes is reasonable given that the contract would only have to document the SDP and the contract action could be submitted to CMS in draft form so long as it included all of the required elements in § 438.6(c)(5)(i) through (v), as applicable. CMS would not require a final signed copy of the contract amendment within this proposed 120-day timeframe; however, States would still be required to submit a final signed contract action prior to CMS' approval of the managed care contract.

For discussion on the proposed applicability dates for the proposals outlined in this section, see section I.B.2.p. of this proposed rule.

We solicit public comments on our proposals.

l. Including SDPs in Rate Certifications and Separate Payment Terms (§§ 438.6(c)(2)(ii)(J), (c)(6) and 438.7(f))

Including SDPs in rate certifications. Under current regulations, all SDPs must be included in all applicable managed care contract(s) and described in all applicable rate certification(s) as noted in § 438.7(b)(6). As part of our proposed amendment and redesignation of current § 438.6(c)(2)(i), we are proposing to re-designate the existing regulatory requirement at § 438.6(c)(2)(i) as § 438.6(c)(2)(ii)(J) to require that each SDP must be developed in accordance with § 438.4 and the standards specified in §§ 438.5, 438.7, and 438.8. We are also proposing to remove the current provision that SDPs must be developed in accordance with generally accepted actuarial principles and practices. We are proposing this edit because inclusion of the language ''generally accepted actuarial principles and practices'' is duplicative of the language included in § 438.4. establishment of SDPs is a State decision. We are concerned that inclusion of the duplicative language that SDPs must be developed in accordance with generally accepted actuarial principles and practices could be interpreted as a requirement for an actuary to be involved in the development of the SDP arrangement and adherence to actuarial standards of practice (ASOPs), potentially creating unnecessary State administrative burden associated with the preprint development process. However, we note the proposed rule maintains the existing requirement that SDPs must be developed in accordance with § 438.4 and the standards specified in §§ 438.5, 438.7, and 438.8. While we believe that an actuary, as defined in § 438.2, must develop the capitation rates to ensure they are actuarially sound and account for all SDPs when doing so, but we believe States should have the flexibility to determine if they wish to involve actuaries in the development of each specific SDP arrangement. Because actuaries must account for all SDPs approved by CMS and included in the State's approved managed care contract in the applicable rate certifications, providing all documentation required by CMS, we do recommend that States consult with and keep actuaries apprised of SDPs to facilitate their development of actuarially sound capitation rates. We also believe that for certain SDPs, specifically bundled payments, episode-based payments, population-based payments and accountable care organizations, it would be beneficial for actuaries to assist States in the development of these arrangements.

In accordance with § 438.4(a), actuarially sound capitation rates are projected to provide for all reasonable, appropriate and attainable costs that are required under the terms of the contract and for the operation of the managed care plan for the time period and the population covered under the terms of the contract, and capitation rates are developed in accordance with the requirements in § 438.4(b) to be approved by CMS. This includes the requirement in § 438.4(b)(1) that the capitation rates must be developed with generally accepted actuarial principles and practices and in § 438.4(b)(7) they must meet any applicable special contract provisions as specified in § 438.6, to ensure that all SDPs, which are contractual arrangements, are considered as the actuary develops actuarially sound capitation rates. (Similarly, withhold and incentive arrangements and pass-through payments must be taken into account when capitation rates are developed.) We are not proposing changes to the requirements for actuarially sound capitation rates; therefore, we will retain and reaffirm here applicability of the requirements of that SDPs must be developed in such a way as to ensure compliance with § 438.4 and the standards specified in § 438.5 and specify further that SDPs must also be developed in such a way to ensure compliance with § 438.7 and § 438.8.

We solicit public comments on our proposal.

Separate Payment Terms. Under current regulations, all SDPs must be included in all applicable managed care contract(s) and described in all applicable rate certification(s) as noted in § 438.7(b)(6). As part of the Medicaid Managed Care Rate Development Guide, CMS has historically provided guidance on two ways that States could make payment to cover SDP obligations in Medicaid managed care contracts: through adjustments to the base capitation rates [111] in alignment with the standards described in § 438.5(f) or through a ''separate payment term'' [112] which was described in guidance applicable to rating periods beginning between July 1, 2019 and June 30, 2021. Separate payment terms are unique to Medicaid managed care SDPs. CMS has not previously formally defined separate payment terms in regulation.

The most common structure for separate payment terms is a State first establishes a finite and predetermined pool of funding that is paid by the State to the plan(s) separately and in addition to the capitation payments for a specific SDP. The pool of funds is then disbursed regularly throughout the rating period (for example, quarterly) based on the services provided in that portion of the rating period (for example, quarter) to increase total provider payments or reach a specific payment rate target. Typically, States divide the dedicated funding pool into equal allotments (for example, four if making quarterly payments to their plans). They then review the encounter data for the service(s) and provider class identified in the approved preprint for the quarter that has just ended and divide the allotment by the total service utilization across all providers in the defined class (for example, inpatient discharges for all rural hospitals) to determine a uniform dollar amount to be paid in addition to the initial payment by the managed care plan for rendered services. The State will then pay the quarterly allotment to the managed care plans, separate from the capitation rate payment, and direct them to use that allotment for additional retroactive payments to providers for the utilization that occurred in the quarter that just ended. The State will repeat this process each quarter, with the uniform increase changing for each quarter depending on utilization but being paid uniformly to providers in the defined class for the services within that quarter (for example, inpatient discharges for rural hospitals). Other

[111] As defined in § 438.2, capitation payments are a payment the State makes periodically to a contractor on behalf of each beneficiary enrolled under a contract and based on the actuarially sound capitation rate for the provision of services under the State plan.

[112] This guidance has appeared in the Medicaid Managed Care Rate Development Guide for rating periods starting between July 1, 2019 and June 30, 2021. Medicaid Managed Care Rate Development Guides for every rating period are located at *https://www.medicaid.gov/medicaid/managed-care/guidance/rate-review-and-rate-guides/index.html.*

States have chosen to make payments semi-annually, annually, or monthly. States have also utilized separate payment terms for SDPs that are performance-based payments rather than uniform increases (for example, pay for performance under which payment is conditioned upon provider performance).

As noted earlier, separate payment terms are paid separate and apart from capitation rate payments; they are not included in capitation rates. The development of the separate payment term is frequently done by the State rather than the State's actuaries; CMS has never required actuaries to certify the reasonableness of the amount of the separate payment term, but only that the separate payment term is consistent with what was approved in the SDP preprint. However, CMS has always required that separate payment terms be documented in the State's rate certification and that SDPs, including those that utilize separate payment terms, must be developed in accordance with § 438.4 and the standards in §§ 438.5, 438.7 and 438.8. CMS has asked actuaries to document the separate payment terms in the State's rate certification because they are required payments for services under the risk-based contract.

Depending on the size and scope of the SDP and the provider payment rates assumed in the capitation rate development, separate payment terms can have a significant impact on the assessment of the actuarial soundness of the rates. In some cases, capitation rates may not be sufficient without taking separate payment terms into account. When examined in conjunction with the capitation rates, CMS has found that amounts included in separate payment terms can, when combined with capitation payment amounts, represent a significant portion of the total payment made under the Medicaid managed care contract. For example, in one State, the separate payment term for an SDP for inpatient hospital services represented 40 percent of the total amount paid in certain rate cells.

In some cases, the provider payment rates assumed in the development of the capitation rates, absent the SDP paid through a separate payment term to the plan(s), are so low that the capitation rates would likely not be actuarially sound. In the example above, considering how low the payment rates were absent the SDP paid to the plans through a separate payment term in this State, it would be difficult for an actuary to determine that the capitation rates are actuarially sound. However, the additional payments made as part of the SDP for these providers raise the effective provider payment rates, and after considering all payments made to the plan (the base capitation rates and the separate payment term payments for the SDP) the actuary may be able to determine that the capitation rates are actuarially sound. This is not the case for all States and for all SDPs; however, this example highlights the need to account for the impact of separate payment terms on the assessment of the actuarial soundness of the capitation rates. Additionally, since the contract requires that the managed care plans pay the SDP to providers, the separate payment term must be included within the actuarial certification for the rates to be considered actuarially sound as defined in § 438.4(a). For this reason, we consider separate payment terms part of the contract with the managed care plans that is subject to the requirements of section 1903(m)(2)(A) of the Act, and a necessary part of certifying the actuarial soundness of capitation rates under this provision. As such, we propose to regulate them under this authority.

Over time, the number of SDPs approved by CMS using separate payment terms has increased substantially. According to our internal analysis, 41.5 percent of all SDPs that CMS has reviewed and approved from May 2016 through March 2022 were included in the State's rate certification submission as a separate payment term. While there has been some fluctuation over time in this trend, the share of SDPs that use separate payment terms has increased from 42 percent of all SDPs that began in calendar year 2020 to 55 percent of all SDPs that began in calendar year 2021.[113]

In our January 2021 SMDL, we published additional guidance on SDPs, and expressed our growing concern with the increased use of separate payment terms.[114] We noted, ''[a]s CMS has reviewed State directed payments and the related rate certifications, CMS has identified a number of concerns around the use of separate payment terms. Frequently, while there is risk for the providers, there is often little or no risk for the plans related to the directed payment, which is contrary to the nature of risk-based managed care. This can also result in perverse incentives for plans that can result in shifting utilization to providers in ways that are not consistent with Medicaid program goals.''

To better understand why States choose to pay plans for their SDPs through a separate payment term, we started collecting information from States as part of the revised preprint form published in January 2021. States were required to start using this revised preprint for SDP requests for rating periods beginning on or after July 1, 2021. In the revised preprint form, States must identify if any portion of the SDP would be included in the rate certification as a separate payment term and if so, to provide additional justification as to why this is necessary and what precludes the State from covering the costs of SDPs as an adjustment to the capitation rates paid to managed care plans.

From the data we have collected as well as discussions with States, we have noted that there are a number of reasons why States use separate payment terms. For example, States have noted particular challenges with including VBP arrangements in capitation rates. They have asserted that it is difficult to project individual provider level performance in a way that lends itself to inclusion in standard rate development practices. Additionally, performance measurement often does not align with States' rating periods, further complicating the standard rate development process.

Several States also noted that even for fee schedule-based SDPs, such as uniform payment increases, incorporation into standard rate development practices presents challenges. States assert that using a separate payment term offers administrative simplicity to the State agency in administering the SDPs because distributing a pre-determined amount of funding among the plans is much easier than relying on actuarial projections. Further, the use of a separate payment term also promotes the ease of tracking and verification of accurate payment to providers from the managed care plans required under the SDP. This is particularly important when States are implementing legislative directives that require an appropriation of funding be dedicated to a specific purpose. State legislatures, in some instances, have identified a specific dollar amount that they want to invest in increasing reimbursement for a particular service, potentially to respond to an acute concern around

[113] Our internal analysis examines trends based upon when a payment arrangement began. Since States have different rating periods, this can refer to different time frames for different States. For example, payment arrangements that began in calendar year 2020 would include payment arrangements that were in effect for CY 2020 rating periods, which operated between January 1, 2020 through December 31, 2020, as well as SFY 2021 rating periods, which for most States were operated between July 1, 2020 through June 30, 2021.

[114] *https://www.medicaid.gov/Federal-Policy-Guidance/Downloads/smd21001.pdf.*

access. Incorporating this funding into the State's capitation rates through standard rate development would not ensure that plans did not use this funding, or portions of this funding, for other purposes. Additionally, even with the proper tracking, States would have to specify a particular minimum fee schedule or uniform increase at the start of the rating period to include in rate development and ensure it went to the appropriate providers for the appropriate services. While such a methodology is permissible and used effectively by a number of States today, some States have noted challenges in utilizing such an approach, particularly if the SDP is targeting a narrow set of providers.

States have also noted that utilization often cannot be predicted adequately; thus, including dedicated funding into base rates may not always result in the funding being distributed as intended by the legislature. Absent the ability to use separate payment terms, States are likely to resort to requiring plans to make interim payments based on historical utilization and then reconciling to current utilization, often after the end of the rating period, to ensure that all of the funding was used as directed by the legislature. As noted in section I.B.2.h. of this proposed rule, we have significant concerns with this practice in States that already require plans to make interim payments based on historical utilization and then reconcile to current utilization. As part of this proposed rulemaking, we have proposed to prohibit such payment methodologies in § 438.6(c)(2)(vii).

States also stated that separate payment terms reduce the burden on managed care plans by limiting the need to update claims systems. In fact, one State noted that they shifted from incorporating a particular SDP as an adjustment to capitation rates to implementing the SDP through a separate payment term because their managed care plans did not have the ability to update or modify their claims payment systems in a manner that would ensure accurate payment of the increases required under the State's SDP if the funding was built into the capitation payment. The State noted that the managed care plans had dedicated significant technical resources and still could not implement the changes needed accurately.

As noted earlier, CMS has a strong preference that SDPs be included as adjustments to the capitation rates since that method is most consistent with the nature of risk-based managed care. However, we recognize that States believe there is utility in the use of separate payment terms for specific programmatic or policy goals. We believe separate payment terms are one tool for States to be able to make targeted investments in response to acute concerns around access to care. However, we continue to believe that, while separate payment terms often retain risk for the providers as opposed to guaranteeing them payment irrespective of the Medicaid services they deliver to Medicaid managed care enrollees, there is often little or no risk for the plans related to separate payment terms under an SDP, which is contrary to the nature of risk-based managed care.

Therefore, we believe that it is necessary to establish regulatory requirements regarding the use of separate payment terms to fulfill our obligations for fiscal and programmatic oversight. Because the use of separate payment terms is limited to SDPs that must be tied to utilization and delivery of services to Medicaid enrollees under the managed care contract and the potential impact of separate payment terms on the assessment of actuarial soundness and certification of capitation rates, we consider separate payment terms part of the contract with the a managed care plan that is subject to 1903(m)(2)(A) requirements, and we propose to regulate them under this authority. States are generally not permitted to direct the expenditures of a Medicaid managed care plan under the contract between the State and the plan or to make payments to providers for services covered under the contract between the State and the plan (§§ 438.6 and 438.60) unless SDP requirements are satisfied.

Proposed Regulatory Changes—Contract Requirements

First, we propose to amend § 438.6(a) to define ''separate payment term'' as a pre-determined and finite funding pool that the State establishes and documents in the Medicaid managed care contract for a specific SDP for which the State has received written prior approval. Payments made from this funding pool are made by the State to the MCOs, PIHPs or PAHPs exclusively for SDPs for which the State has received written prior approval and are made separately and in addition to the capitation rates identified in the contract as required under § 438.3(c)(1)(i).

CMS recognizes that some separate payment terms in the past may not have fit this definition. For example, one State makes one payment monthly that is inclusive of both the capitation payment and the separate payment term. The State then contractually requires the managed care plans to hold a portion of the monthly payment in a reserve that the State later directs the plans how to pay to providers under an approved SDP. In this example, the State initially indicated to CMS that the SDP was accounted for through adjustments to base data in capitation rates. However, the State later agreed with CMS that the contractual requirement to hold a portion of the monthly payment in a reserve that the State later directed was more in alignment with separate payment terms. To be clear, such a practice would not be considered an adjustment to base rates or part of capitation rate development under this proposed rule; instead it would, under our proposed rule, fall under the proposed definition of a separate payment term and would have to comply with all proposed requirements for SDPs and separate payment terms in the proposed revisions to § 438.6(c).

We propose a new § 438.6(c)(6) that would specify requirements for the use of separate payment terms. First, we propose a new § 438.6(c)(6)(i) to require that all separate payment terms are reviewed and approved as part of the review of the SDP in § 438.6(c)(2). This is effectively current practice today; when a State indicates that an SDP is included in the applicable rate certification(s) through a separate payment term, the approved preprint is checked to ensure that it also indicates that the SDP utilizes a separate payment term. This requirement would codify this operational practice. We believe reviewing and approving the separate payment term as part of the SDP review and approval process would be mutually beneficial for CMS and States because they are inextricably linked given the proposed definition of a separate payment term. We believe this would also enable us to track of the use of separate payment terms more quickly and accurately.

Because we are proposing to require that separate payment terms are approved as part of the review and approval of the SDPs in § 438.6(c)(2)(i) (redesignated from 438.6(c)(2)(ii)), we believe we should explicitly address those SDPs that do not require written prior approval to ensure clarity for States. Therefore, we propose a new requirement at § 438.6(c)(6)(ii) that would expressly prohibit States from using separate payment terms to fund SDPs that are exempted from the written prior approval process—specifically, minimum fee schedules using State plan approved rates in § 438.6(c)(1)(iii)(A) and minimum fee schedules using approved Medicare fee schedules, as

proposed in § 438.6(c)(1)(iii)(B). Such payment arrangements must be included as an adjustment to the capitation rates identified in the contract, as required under § 438.3(c)(1)(i).

At § 438.6(c)(6)(iii), we propose to require that each separate payment term be specific to both an individual SDP approved under § 438.6(c)(2)(i) (redesignated from 438.6(c)(2)(ii)) and to each Medicaid managed care program to provide clarity in the contract for the plan and facilitate State and Federal oversight of such terms. SDPs approved under § 438.6(c)(2) can apply to more than one Medicaid managed care program. Requiring that each separate payment term be specific to both the SDP approved under § 438.6(c)(2)(i) (redesignated from 438.6(c)(2)(ii)) and each Medicaid managed care program would facilitate monitoring and oversight help ensure clarity and consistency between the approval of the separate payment term and the SDP, the managed care plan contract, and the rate certification.

Additionally, we are proposing a new requirement at § 438.6(c)(6)(iv) that the separate payment term would not exceed the total amount documented in the written prior approval for each SDP for which we have granted written prior approval. Under current practice, the total dollar amount for the separate payment term has acted as a threshold to ensure alignment between the rate certification and the SDP; States that documented more for the separate payment term in the rate certification(s) than the total dollars documented in the preprint under current practice have to either revise the rate amendment so that the total dollars for the separate payment term does not exceed what was captured in the preprint or submit an amendment to the preprint. If States choose to amend the preprint under current practice, the State is required to explain the cause of the increase (for example, a change in payment methodology, or expansion of the provider class); and then verify that the payment analysis has not changed or if it has, then update the payment analysis to ensure that the total payment rate is still reasonable, appropriate and attainable.[115] This proposed requirement would strengthen this practice by requiring that the amount included in both the rate certification(s) and contract(s) for each separate payment term cannot exceed the amount documented as part of the SDP review and approval. The total dollar amount documented in the written prior approval for the State directed payment would instead act as a maximum that could not be exceeded in the Medicaid managed care contract(s) and rate certification(s) that include the SDP without first obtaining written CMS approval of an amendment to the SDP as noted below. We emphasize that we currently review rate certifications to verify that the total dollars across all applicable Medicaid managed care programs do not exceed the total dollars identified in the State directed payment documentation approved by CMS. If the total dollars included in rate certifications exceed the total dollars identified in the State directed payment documentation, the State then has to either reduce the total dollars included in the rate certification for the separate payment term or, most commonly, submit an amendment to the preprint for review and approval by CMS. This process causes significant delays and administrative burden for both the State and the Federal government, and therefore, we believe a regulation prohibiting States from exceeding the total dollars for the separate payment term identified in the State directed payment documentation is appropriate and important.

We have also considered requiring that the separate payment term must equal exactly the total amount documented for each SDP for which we have granted written prior approval. Instead of acting as a maximum, the total dollar amount for the separate payment term would act as both a minimum and a maximum; the State's contract and rate certifications would have to include exactly the total dollar amount identified in the SDP approved by CMS. We did not propose this alternative as we are concerned that requiring the total amount for the separate payment term to act as both a minimum and maximum could be too administratively burdensome; however, we solicit comments on both our proposal to require that the total dollars documented in the SDP approved by CMS under (c)(2) would act as a maximum as well as this alternative option of the total dollars documented in the SDP approved by CMS under (c)(2)(i) as both a minimum and a maximum.

Historically, separate payment terms have only been documented in the State's preprint review and in the State's rate certifications; the details of when and how these payments would be made by the State to the plans was often not clear to CMS or the plans. This lack of clarity presents significant oversight concerns for these separate payment terms because it makes tracking the payments made from the State to the plan difficult to identify, particularly on the CMS–64 form on which States claim FFP. It also presents challenges for ensuring timely payment to plans and, ultimately, providers. CMS believes that just as the final capitation rates must be specifically identified in the applicable contract submitted for CMS review and approval, so too should separate payment terms associated with SDPs.

As previously noted in this section, CMS maintains that while there is risk for the providers as opposed to guaranteeing them payment irrespective of the Medicaid services they deliver to Medicaid managed care enrollees, there is often little or no risk for the plans related to the SDP to the extent it is included in contracts as a separate payment term, which is contrary to the nature of risk-based managed care. This becomes even more concerning when States retroactively amend the separate payment term, sometimes even after the end of the rating period.

To illustrate this, we provide the following examples. Example 1: States that include SDPs into their contracts and rate certifications through separate payment terms must have the total dollars for the separate payment term certified in the rate certification(s). The State would then look at the utilization over a defined period, for example, one quarter, and divide one-fourth of the total dollars certified in the separate payment term by the utilization during that quarter to determine a uniform dollar amount increase. Example 1 illustrates a common practice for SDPs that use separate payment terms: it allows the uniform dollar amount applied to utilization to vary from one quarter to another, but it ensures that the total dollars dedicated to the State directed payment are fully expended.

Example 2: Some States have used this same methodology in example 1, but instead of having their actuaries certify the total dollar amount prospectively, they would have their actuaries certify an estimate of the total dollars and then have their actuaries recertify a higher amount later, often after all the payments under the separate payment term have been made.

Example 2 not only removes all risk from the plans for the SDP, but also removes all risk from the providers when the actuary recertifies a total dollar amount later, often after all the payments under the separate payment

[115] As noted in section I.B.2.f. of this proposed rule, CMS requires States to demonstrate that SDPs result in provider payment rates that are reasonable, appropriate, and attainable as part of the preprint review process in alignment with the guidance published in State Medicaid Director Letter #21–001 published on January 8, 2021. We are proposing to codify this requirement in § 438.6(c)(2(ii)(I).

term have been made. Such practices are contradictory to the prospective nature of risk-based managed care. In our experience, such payment arrangements are not driven by furthering particular goals and objectives identified in the State's managed care quality strategy, but rather by the underlying financing of the non-Federal share associated with the SDPs. We note financing requirements in statute and regulation are applicable across the Medicaid program irrespective of the delivery system (for example, fee-for-service, managed care, and demonstration authorities), and are similarly applicable whether a State elects to direct payments under § 438.6(c) or not.

To curtail these concerning practices, we propose to require as part of § 438.6(c)(6)(v) that States must document the separate payment term in the State's managed care contracts no later than 120 days after the start of the payment arrangement or written prior approval of the SDP, whichever is later. We believe that proposing to require States to document the separate payment term within these timeframes is reasonable given that the contract amendment would only have to document the separate payment term and the related SDP; the contract action could be submitted to CMS in draft form so long as it included all of the required elements. CMS would not require a final signed copy of the amendment within this proposed 120-day timeframe; however, States would still be required to submit a final signed contract action prior to CMS' approval of the managed care contract.

To further the fiscal and programmatic integrity of separate payment terms, we propose in § 438.6(c)(6)(v)(A) to prohibit States from amending the separate payment term after CMS approval except to account for an amendment to the payment methodology that is first approved by CMS as an amendment to the approved State directed payment. We recognize that a change in payment methodology would potentially result in the need to amend the separate payment term as it could impact the total dollar amount. However, to avoid the current practice where States include a total dollar amount in the rate certification(s) other than what is in the approved SDP preprint, CMS is proposing to require that CMS first approve the amendment to the preprint before the separate payment term can be amended. We believe this proposal would also ensure that some level of risk is maintained and that States do not retroactively add additional funding with the goal of removing all risk from the SDP arrangement. Such actions do not align with the fundamental principles of Medicaid managed care.

Alternatively, we are also considering including a proposal to permit amendments to the separate payment term to account for a change in the total aggregate dollars to be paid by the State to the plan where there is no change in the non-Federal portion of the total aggregate dollars. We are considering this alternative in recognition that the Federal portion of the total aggregate dollars may fluctuate due to Federal statute changes that are outside the State's control. We acknowledge that due to this, the total dollars, which includes the Federal share, cannot be perfectly predicted by States at the start of a State's rating period. We did not include this alternative proposal out of concern that it may have negative unintended consequences. We solicit comment on both the exception we are proposing and this alternative additional exception that we are considering.

To improve transparency of States' use of separate payment terms and to ensure that managed care plans have clear information on the contractual requirements associated to State directed payments linked to a separate payment term, in § 438.6(c)(6)(v)(B)(*1*) through (*4*), we propose four pieces of information that would be documented in the State's Medicaid managed care plan contracts: (1) the total dollars that the State would pay to the plans for the individual SDP that CMS gave written prior approval; (2) the timing and frequency of payments that would be made under the separate payment term from the State to the plans; (3) a description or reference to the contract requirement for the specific SDP for which the separate payment term would be used; and (4) any reporting that the State requires to ensure appropriate reporting of the separate payment term for purposes of MLR reporting under § 438.8.

Proposed Regulatory Changes—Rate Certification for Separate Payment Terms

To reflect our proposals discussed above that would require States to document separate payment terms in their managed care rate certifications, we propose changes to § 438.7. Specifically, we propose to add a new § 438.7(f) that would require the State, through its actuary, to certify the total dollar amount for each separate payment term as detailed in the State's Medicaid managed care contract, consistent with the requirements of § 438.6(c)(6). Requiring that all separate payment terms be included in the rate certification to plans is also current practice today and provides a complete picture of all payments made by States to plans under risk contracts.

We also propose to codify many existing practices that we currently employ when reviewing State directed payments that use separate payment terms. In § 438.7(f)(1), we propose that the State may pay each MCO, PIHP, or PAHP a different amount under the separate payment term compared to other MCOs, PIHPs, or PAHPs so long as the aggregate total dollars paid to all MCOs, PIHPs, and PAHPs does not exceed the total dollars of the separate payment term for each respective Medicaid managed care program included in the Medicaid managed care contract. In § 438.7(f)(2), we propose that the State, through its actuary, would have to provide an estimate of the impact of the separate payment term on a rate cell basis, as paid out per the SDP approved by CMS under § 438.6(c)(2)(i). Both of these proposed regulatory requirements are part of current operational practice today as documented in the Medicaid Managed Care Rate Development Guide.[116] Having the estimated impact of the separate payment term on a rate cell basis helps to evaluate the actuarial soundness of the capitation rates. In § 438.7(f)(3), we propose that no later than 12 months following the end of the rating period, the State would have to submit documentation to CMS that includes the total amount of the separate payment term in the rate certification consistent with the distribution methodology described in the State directed payment for which the State obtained written prior approval to facilitate oversight and monitoring of the separate payment term.

Finally, we are proposing at § 438.7(f)(4) to require States to submit a rate certification or rate certification amendment incorporating the separate payment term within 120 days of either the start of the payment arrangement or written prior approval of the SDP, whichever is later. This proposal is aligned with the proposed contract requirement in § 438.6(c)(6)(v).

As previously noted we strongly prefer that SDPs be included as adjustments to capitation rates since that method is most consistent with the nature of risk-based managed care. Our

[116] Medicaid Managed Care Rate Development Guides for every rating period are located at *https://www.medicaid.gov/medicaid/managed-care/guidance/rate-review-and-rate-guides/index.html.*

proposals to amend § 438.6(a) to add a new definition for separate payment term, the addition of §§ 438.6(c)(6) and 438.7(f) are intended to maintain the State's ability to use separate payment terms while implementing necessary guardrails for fiscal and programmatic oversight. However, given our longstanding concern with separate payment terms, CMS is considering, and invites comment on, requiring all SDPs to be included only through risk-based adjustments to capitation rates and eliminate the State's ability to use separate payment terms altogether in the final rule based on comments received. Prohibiting the use of separate payment terms would align with CMS' stated preference and would be most consistent with the nature of risk-based managed care. However, many States currently use separate payment terms for existing SDPs; prohibiting their use could cause some disruptions for States.

Another alternative CMS is considering, and invites comment on, is further prohibiting the use of separate payment terms not only to SDPs described in paragraphs (c)(1)(iii)(A) and (B), but to all SDPs described in paragraph (c)(1)(iii). Under this alternative, States would only be able to use separate payment terms for value-based initiatives described in paragraphs (c)(1)(i) and (ii). This alternative would still allow States to use separate payment terms for some payment arrangements and could incentivize States to consider quality-based payment models that can better improve health outcomes for Medicaid managed care enrollees. this proposal recognizes the difficulties that States and their actuaries may face in incorporating some value-based payment initiatives into capitation rate development as compared to fee schedules as described in paragraph (c)(1)(iii).

For each of these two alternatives, we acknowledge that some States currently use separate payment terms. Therefore, these alternative proposals could cause some disruptions as States evaluate changes to SDPs. If CMS adopts one of the alternatives for a total payment rate limit on SDP expenditures in the final rule, we also seek public comment on whether or not CMS should consider a transition period in order to mitigate any disruptions.

We seek public comment on whether either of these alternative approaches we are considering should be adopted in the final rule, as well as comments on our proposals.

For discussion on the proposed applicability dates for the proposals outlined in this section, see section I.B.2.p. of this proposed rule.

We solicit public comment on our proposals.

m. SDPs Included Through Adjustments to Base Capitation Rates (§ 438.7(c)(4) Through (6))

We also propose three additional changes to § 438.7(c) to address adjustments to managed care capitation rates that are used for SDPs. Specifically, we propose to add a new regulatory requirement at § 438.7(c)(5) specifying that retroactive adjustments to capitation rates resulting from an SDP must be the result of an approved SDP being added to the contract, an amendment to an already approved SDP, a State directed payment described in § 438.6(c)(1)(iii)(A) or (B), or a material error in the data, assumptions, or methodologies used to develop the initial rate adjustment such that modifications are necessary to correct the error. This requirement would align with the proposed requirement at § 438.6(c)(6)(v)(A). We believe this proposed regulatory requirement is necessary to ensure the fiscal integrity of SDPs and their impact on rate development. While not as frequent, we have also observed States, through their actuaries, submitting amendments to rates for SDPs included through adjustments to base rates that do not reflect changes in payment methodology, changes in benefit design, or general actuarial practices, but instead appear to be related to financing of the non-Federal share. We do not view such actions as consistent with the prospective and risk-based nature of Medicaid managed care. It also creates significant administrative burden for both States and the Federal government, by delaying review of associated rate certifications.

Additionally, we propose a new regulatory requirement at § 438.7(c)(4) that States must submit a revised rate certification for any changes in the capitation rate per rate cell, as required under § 438.7(a) for any special contract provisions related to payment in § 438.6 not already described in the rate certification, regardless of the size of the change in the capitation rate per rate cell. States are permitted the flexibility under § 438.7(c)(3) to increase or decrease the capitation rate per rate cell up to 1.5 percent during the rating period without submitting a revised rate certification for rate changes unrelated to special contract provisions, including SDPs, and ILOSs as proposed in section I.B.4.e. of this proposed rule. We believe that providing this same flexibility for changes to rates for special contract provisions, including SDPs, is incongruent with the existing requirement at § 438.7(b)(6) that the rate certification include a description of any of the special contract provisions related to payment in § 438.6 that are applied in the contract. In addition, we believe it is also inconsistent with ensuring appropriate program integrity, such as the 105 percent threshold in 438.6(b)(2) and existing and proposed SDP standards. Therefore, our proposal here addresses and clarifies this requirement.

Finally, we propose a new regulatory requirement at § 438.7(c)(6) to require that States must submit the required rate certification documentation for SDPs incorporated through adjustments to base rates (either the initial rate certification or a revised rate certification) no later than 120 days after either the start date of the SDP approved under § 438.6(c)(2)(i) (redesignated from § 438.6(c)(2)(ii)) or 120 days after the date CMS issued written prior approval of the SDP, whichever is later.

For discussion on the proposed applicability dates for the proposals outlined in this section, see section I.B.2.p. of this proposed rule.

We solicit public comment on our proposals.

n. Appeals (§ 430.3(d))

As outlined under § 438.6(c), SDPs are arrangements that allow States to require managed care plans to make specified payments to healthcare providers when the payments support overall Medicaid program goals and objectives (for example, funding to ensure certain minimum payments are made to safety net providers to ensure access or quality payments to ensure providers are appropriately rewarded for meeting certain program goals). Section 438.6(c) was issued by CMS because this type of State direction of managed care payment goes against the general premise of managed care in which a contracted organization assumes risk from the State for the delivery of care to its beneficiaries. As a result, we established a process whereby States must submit a ''preprint'' form to CMS to document how the SDP complies with the Federal requirements outlined in § 438.6(c). If the proposal does comply, we issue written prior approval. Subsequent to written prior approval, the SDP is permitted to be included in the relevant managed care organization contract and rate certification documents. This process is required by CMS for most SDPs.

As discussed throughout this proposed rule, the volume of State

requests for written approval to implement State directed payment arrangements has grown significantly in both number and total dollars included in managed care plan capitation rates since § 438.6(c) was promulgated in the 2016 final rule.

Based on our review of SDP prior approval requests, we have observed that States use SDPs not only as routine payment mechanisms, such as to set minimum fee schedules or provide uniform increases, but also for more complex payment arrangements, such as to implement Total Cost of Care (TCOC) programs, and multi-metric and multi-year VBPs. CMS provides technical assistance to States at all stages of SDP development to help States develop SDP arrangements that meet their programmatic goals and comply with § 438.6(c). This technical assistance can involve both verbal and written assistance, as well as the exchange of CMS-generated question sets and State responses. The State responses are shared internally with Federal review partners who provide subject matter expertise, which may include those representing managed care policy and operations, quality, and actuarial science, which is then shared with the State to inform SDP revisions and ensure compliance with the regulations.

Providing this technical assistance has become increasingly challenging as the number and complexity of States' SDP requests has increased. To date, when CMS and States have found themselves unable to reach agreement on an SDP proposal and we are unable to issue prior written approval, States have agreed to withdraw the submission. However, as SDPs have matured as a State tool, they have outgrown this informal process of State rescission. The proposals in this rule would further specify and strengthen the SDP regulations and we believe it is appropriate to begin formally disapproving proposals that cannot comply with the regulations.

A disapproval for an SDP could be issued for many reasons, including impermissible financing of the non-Federal share, failure to show improvement in the proposed quality evaluation report in the timeframe required, or non-compliance with the controlling regulations in part 438. To be consistent with other CMS processes which issue formal disapprovals, such as those for SPA submissions and disallowances of State Medicaid claims, there should be a formal process for States to appeal should CMS issue disapproval of written prior approval for a State's SDP proposal. The alternative is that a State may seek redress in the courts, which can be costly and slow for both CMS and the States. We believe that States will benefit from and appreciate an established, consistent administrative process with which they are familiar.

Under our authority under section 1902(a)(4) of the Act to establish methods for proper and effective operations in Medicaid, we propose to add a new § 430.3(d) that would explicitly permit disputes that pertain to written disapprovals of SDPs under § 438.6(c) to be heard by the Health and Human Services (HHS) Department Appeals Board (the Board) in accordance with procedures set forth in 45 CFR part 16. As described in that section, the Board is comprised of members appointed by the HHS Secretary it conducts *de novo* review of certain agency decisions under the procedures at 45 CFR part 16 and its corresponding appendix A. The Board has a robust administrative adjudication process as well experience resolving disputes between CMS and States involving the Medicaid program, as it already reviews Medicaid disallowances under Title XIX of the Act using the procedures set forth at 45 CFR part 16.

Applying those procedures to CMS's decision to deny a State's SDP request, the State would have 30 days to appeal to the Board after an appellant receives a final written decision from CMS communicating a disapproval of a State directed payment. The case would then be assigned a presiding Board member who would preside over procedural matters and conduct record development in the case. Within 10 days of receiving the notice of appeal, the Board would assess the filing for completeness and jurisdiction. If it is found to be appropriately filed, the Board would acknowledge the notice and outline the next steps in the case. Under existing 45 CFR 16.16, the Board may even allow additional parties to participate if there is a ''clearly identifiable and substantial interest in the outcome of the dispute'' in the discretion of the Board. The State would then have 30 days to file its appeal brief, which would contain its argument for why the final decision of CMS was in error, and its appeal file, which would include the documents on which its arguments are based. Then, CMS would have 30 days to submit its brief in response to the State's brief as well as any additional supporting documentation not already contained in the record. The State would be given fifteen days to submit its optional reply.

Under the Board's process, parties would be encouraged to work cooperatively to develop a joint appeal file and stipulate to facts alleviating the need to submit documentation. At any time, the Board may request additional documentation or information, request additional briefings, hold conferences, set schedules, issue orders to show cause, and take other steps as appropriate to ''develop a prompt, sound decision'' per existing 45 CFR 16.9. Although there is no general right to a hearing in cases heard under 45 CFR part 16, States appealing a CMS disapproval of a proposed State directed payment under this proposed process could request a hearing or oral argument, or the Board may call for one *sua sponte* should it determine its decision-making would be enhanced by such proceedings. Generally, the Board's proceedings are held in Washington, DC, but may be held in an HHS Regional Office or ''other convenient facility near the appellant.'' Decisions are issued by the Board in three-member panels. Under 45 CFR 16.23, the Board has established general goals for its consideration of cases within 6 to 9 months; however, the paramount concern of the Board is to take the time needed to review a record fairly and adequately in order to produce a sound decision. Mediation may be used under 45 CFR 16.18 as an alternative or preliminary process to resolve the issues between the parties.

As an alternative to our proposal described above to use the Board for such decisions, we also considered permitting appeals of SDP written disapprovals to be heard by the CMS Offices of Hearings and Inquiries (OHI) and the CMS Administrator for final agency action, as governed by part 430, subpart D. The current jurisdiction of OHI stems from section 1902 of the Act, under which it hears appeals arising from decisions to disapprove Medicaid State Plan material under § 430.18 or to withhold Federal funds under § 430.35 for noncompliance of a State Plan. The OHI process is overseen by a presiding officer who makes a recommendation to the Administrator, who issues the final decision. The process is initiated upon issuance of a written disapproval.

If we were to use this process for disapproval of SDPs, the hearing officer would mail the State a notice of hearing or opportunity for hearing related to an SDP disapproval that is also published in the **Federal Register**. The hearing would be scheduled either in the CMS Regional Office or another place designated by the hearing officer for convenience and necessity of the parties between 30 and 60 days after notice. Before the hearing, issues may be added, removed, or modified, to also be published in the **Federal Register** and

with twenty days' notice to the State before the hearing, unless all issues have been resolved, in which case the hearing is terminated.

Under this process, the State and CMS would be given 15 days to provide comment and information regarding the removal of an issue. Before the hearing, other individuals or groups would be able to petition to join the matter as a party within 15 days after notice is posted in the **Federal Register**. The State and CMS would be able to file comments on these petitions within five days from receipt. The presiding officer would determine whether to recognize additional parties. Alternatively, any person or organization would be able to file an *amicus curiae* (friend of the court) as a non-party, should their petition to do so be granted. The parties would have the right to conduct discovery before the hearing under § 430.86 and to participate in prehearing conferences under § 430.83.

At the hearing, parties would make opening statements, submit evidence, present and cross-examine witnesses, and present oral arguments.[117] The transcript of the hearing along with stipulations, briefs, and memoranda would be filed with CMS and may be inspected and copied in the office of the CMS Docket Clerk. After the expiration of the period for post hearing brief, the presiding officer would certify the record and recommendation to the Administrator. The Administrator would serve a copy to the parties who have 20 days to file exceptions or support to the recommendation. The Administrator would then issue its final decision within 60 days. The decision of the Administrator under this section is the final decision of the Secretary and constitutes ''final agency action'' within the meaning of 5 U.S.C. 704 and a ''final determination'' within the meaning of section 1116(a)(3) of the Act and § 430.38. Should the Administrator preside directly, they will issue a decision within 60 days after expiration of the period for submission of post hearing briefs. Hearings using this CMS/OHI and Administrator review process most often take over 1 year to reach final resolution.

We believe the Board would be the most appropriate entity to hear appeals of disapprovals of SDPs proposals for the following reasons. Foremost, while both the Board's and OHI's processes can resolve disputes, we believe the Board's shorter goal resolution time of 6 to 9 months would better facilitate timely approval of managed care plan contracts and the payment of capitation payments. Medicaid managed care uses a prospective payment system of capitation payments and anything that delays approval of the managed care plans' contracts can have a significant adverse impact on a State's managed care program. Additionally, the Board's processes have the added flexibilities of allowing for mediation under 45 CFR 16.18, as well as not requiring, but allowing, a hearing, as described in 45 CFR 16.11. These differences in the Board regulations give additional options and possible efficiencies to the parties. Therefore, while we believe both processes would be adequate for appeals of any disapproval of a State directed payment, for the reasons described above, we believe the processes under the Board would be the most appropriate proposal for inclusion in § 430.3(d).

We seek public comment on whether the Board or OHI appeals processes would best serve the purposes of resolving disputes fairly and efficiently.

o. Reporting Requirements To Support Oversight (§ 438.6(c)(4))

Many States with managed care programs are using the authority in § 438.6(c) to direct managed care plans' payments to certain providers. States' increasing use of these arrangements has been cited as a key area of oversight risk for CMS. Several oversight bodies, including MACPAC, OIG, and GAO, have authored reports focused on CMS oversight of SDPs.[118] [119] [120] Both GAO and MACPAC have recommended that we collect and make available provider-specific information about Medicaid payments to providers, including SDPs.

As discussed in section I.B.3. of this proposed rule, CMS' current review and approval process for SDPs is prospective; that is, we do not consistently nor systematically review the actual amounts that States provide to managed care plans for these SDPs [121] nor the actual amounts that managed care plans pay to providers. CMS published a revised preprint form in January 2021 that requires States to provide an estimated total dollar amount that will be included in the capitation rates for the SDP arrangement; [122] however, States are not required to report to CMS on the actual expenditures associated with these arrangements in any separate or identifiable way. On a limited basis, we perform in-depth State-level medical loss ratio (MLR) reviews and Financial Management Reviews (FMRs) that include the actual amounts paid through SDPs. But without the systematic collection of actual payment amounts, we cannot determine exactly how much is being paid under these arrangements, to what extent actual expenditures differ from the estimated dollar amounts approved by CMS under a State's proposal, and whether Federal funds are at risk for impermissible or inappropriate payments.

We concur with the oversight bodies that it is important that we gain more information and insight into actual SDP spending to help us fulfill our oversight and monitoring obligations. We propose two approaches, one near term and one longer term, for collecting both aggregate and provider-level information. The first proposal would use existing MLR reporting as a vehicle to collect actual expenditure data associated with SDPs. Specifically, in § 438.8(k), we propose to require that managed care plans include SDPs and associated revenue as separate lines in their MLR reports to States; specifically, the amount of payments to providers made under SDPs that direct the managed care plan's expenditures as specified in § 438.6(c) and the payments from the State to the managed care plans for expenditures related to these SDPs. In turn, we propose to require that managed care plan-level SDP expenditure reporting be explicitly reflected in States' annual summary MLR reporting to CMS, as required under § 438.74. See section I.B.3. of this proposed rule for more information about these proposals.

We also propose to establish a new requirement at § 438.6(c)(4) for States to annually submit data, no later than 180

[117] 42 CFR 430.83.

[120] U.S. Government Accountability Office, ''Medicaid: State Directed Payments in Managed Care,'' June 28, 2022, available at *https://www.gao.gov/assets/gao-22-105731.pdf.*

[121] Consistent with the requirements for separate payment terms outlined in the Medicaid managed care rate guide, CMS requires States to (1) submit documentation to CMS includes the total amount of the payment into the rate certification's rate cells consistent with the distribution methodology included in the approved State directed payment preprint, as if the payment information had been known when the rates were initially developed; and (2) submit a rate amendment to CMS if the total amount of the payment or distribution methodology is changed from the initial rate certification.

[122] *https://www.medicaid.gov/medicaid/managed-care/downloads/sdp-4386c-preprint-template.pdf.*

days after each rating period, to CMS' Transformed Medicaid Statistical Information System (T–MSIS), and in any successor format or system designated by CMS, specifying the total dollars expended by each MCO, PIHP, and PAHP for SDPs that were in effect for the rating period, including amounts paid to individual providers. The purpose of this reporting would be to gain more information and insight into actual SDP spending at the individual provider-level. As MACPAC noted in their June 2022 Report to Congress, ''[State directed payments] are a large and rapidly growing form of Medicaid payments to providers, but we do not have provider-level data on how billions of dollars in directed payments are being spent''.[123] The Commission noted that SDPs are larger than Disproportionate Share Hospital (DSH) and Upper Payment Limit (UPL) supplemental payments, but there is much less data on who is receiving them.[124] Currently, States must provide CMS with specific information for FFS supplemental payments that are made to individual providers; however, there is no such requirement for States or managed care plans to provide this type of quantitative, provider-specific data separately for SDPs. We believe implementing a provider-level SDP reporting requirement would facilitate our understanding of provider-level Medicaid reimbursement across delivery systems.

We propose to develop and provide the form through which the reporting would occur so that there would be one uniform template for all States to use. We propose in § 438.6(c)(4) the minimum data fields that would need to be collected to provide the data needed to perform proper oversight of SDPs. Proposed § 438.6(c)(4)(i) through (v) outlines the minimum data fields: provider identifiers, enrollee identifiers, managed care plan identifiers, procedure and diagnosis codes, and allowed, billed, and paid amounts. Paid amounts would include the amount that represents the managed care plan's negotiated payment amount, the amount of the State directed payments, the amount for any pass-through payments under § 438.6(d), and any other amounts included in the total paid to the provider. When contemplating the FFS supplemental payment reporting, we considered how States should have the information being requested readily available, ''[i]ncluding the provider-specific payment amounts when approved supplemental payments are actually made and claimed for FFP, as the aggregate expenditures reported on the CMS–64 comprise the individual, provider-specific payment amounts''.[125] Similarly, we believe States and their managed care plans already collect provider-level SDP data, including the negotiated rate between the plan and provider and any additional SDPs (or pass-through payments specified at § 438.6(d)) that are made to the provider. We seek comment on whether these are the appropriate minimum data fields to require and what provider-level SDP data States currently collect as part of their monitoring and oversight of SDPs.

We recognize that there are existing data collection processes and systems established between CMS and States that could likely support this SDP reporting, and would like to rely on these systems to the extent they could help minimize additional or duplicative reporting by States. For instance, we considered the existing system and reporting structure that States are using for FFS supplemental payment reporting. The Consolidated Appropriations Act (CAA) of 2021 established new reporting requirements for Medicaid FFS supplemental payments under both State plan or demonstration authorities consistent with section 1902(a)(30)(A) of the Act.[126] [127] We issued guidance in December 2021 outlining the information that States must report to CMS as a condition of approval for a State plan or SPA that would provide for a supplemental payment, beginning with supplemental payments data about payments made on or after October 1, 2021.

Under these FFS requirements, each quarter, each State must submit reports on supplemental payment data through the Medicaid Budget and Expenditure System (MBES), as a requirement for a State plan or State plan amendment that would provide for a supplemental payment. The data collection involves both narrative information, as well as quantitative, provider-specific data on supplemental payments. The narrative information includes descriptions of the supplemental payment methodology, determination of eligible providers, description of the timing of the payments, and justification for compliance with section 1902(a)(30)(A) of the Act. The quantitative, provider-specific data collection includes detailed provider-specific accounting of supplemental payments made within the quarter, including: provider name, provider ID number, and other provider identifiers; Medicaid authority (FFS or demonstration authority); Medicaid service category for the supplemental payments; aggregate base payments made to the provider; and aggregate supplemental payments made to the provider, which will reflect the State's claim for Federal financial participation.

This supplemental payment reporting is included in the MBES to capture the entire set of data reporting elements required in section 1903(bb)(1)(B) of the Act in one central location. MBES is familiar to States, in part because of State's quarterly expenditure reporting on the CMS–64 form. We can view additional reporting of provider-specific base and supplemental FFS payment amount information in MBES in the context of actual State expenditures for Medicaid. We could consider taking a similar approach for SDPs by adding reporting in MBES to capture provider-specific SDP data.

As another option, we considered encounter data reported through T–MSIS as the method for collecting SDP provider-specific payment amounts. Specifically, T–MSIS could work well for SDPs that are specifically tied to an encounter or claim, such as minimum fee schedules or uniform dollar or percentage increases. Current regulations at § 438.242(c)(3) require States to submit all enrollee encounter data, including the allowed amount and paid amounts, and these paid amounts should be inclusive of State directed payments that are tied to an encounter or claim. We could build additional data fields in T–MSIS to capture more details about the paid amount, including the amount that was the managed care plan's negotiated payment amount, the amount of the State directed payments, the amount for any pass-through payments under § 438.6(d), and any other amounts included in the total payment amount paid to the provider. This level of detail would provide the information we need for analysis and

[123] Medicaid and CHIP Payment and Access Commission, ''Oversight of Managed Care Directed Payments,'' June 2022, available at *https://www.macpac.gov/wp-content/uploads/2022/06/Chapter-2-Oversight-of-Managed-Care-Directed-Payments-1.pdf.*

[124] Medicaid and CHIP Payment and Access Commission, ''Oversight of Managed Care Directed Payments,'' June 2022, available at *https://www.macpac.gov/wp-content/uploads/2022/06/Chapter-2-Oversight-of-Managed-Care-Directed-Payments-1.pdf.*

[125] *https://www.medicaid.gov/federal-policy-guidance/downloads/smd21006.pdf.*

[126] The CAA included Division CC, Title II, Section 202 (section 202), which added section 1903(bb) of the Act to specify new supplemental payment reporting requirements.

[127] Demonstration authority includes uncompensated care (UC) pool payments, delivery system reform incentive payments (DSRIP), and possibly designated State health program (DSHP) payments to the extent that such payments meet the definition of supplemental payment as specified in section 1903(bb)(2) of the Act.

oversight of SDP spending, and it would be consistent with the managed care plan payment analysis proposed in § 438.207(b)(3) (see section I.B.1.d. of this proposed rule). There are various fields currently captured in T–MSIS via monthly encounter submissions (for example, national provider identifier, enrollee identifiers, managed care plan identifiers, procedure and diagnosis codes, billed, allowed, and paid amounts) that could help us determine provider-specific SDP reimbursement. We believe utilizing T–MSIS in this manner would substantially reduce unnecessary or duplicative reporting from States, would be an effective method to collect the data with minimal additional burden on managed care plans and States, and it would enable comprehensive analyses since the data would be included with all other T–MSIS data.

Lastly, we considered whether to utilize a separate reporting mechanism for this new reporting of SDP provider-level data. For example, we could explore building a new reporting portal, similar to the one developed for the submission of the Managed Care Program Annual Report. However, this would take considerable time and resources to develop and would be separate and distinct from all other SDP data, making it more difficult to perform comprehensive analyses. We also considered whether to permit States to submit the proposed reporting using a Word or Excel template sent to a CMS mailbox. While this would be the fastest way to collect the data, it too presents challenges for integrating the data with other data collected by CMS for analyses.

Because we believe T–MSIS to be the most efficient option, we propose in § 438.6(c)(4) to require States to submit data to T–MSIS as the method for collecting provider-specific payment amounts under SDPs. As specified in proposed § 438.6(c)(4)(i)(E), provider-specific paid amounts would include a plan's negotiated payment amount, the amount of the State directed payments, the amount for any pass-through payments under § 438.6(d), and any other amounts included in the total paid to the provider. States would submit this data to CMS no later than 180 days after each rating period. We believe 180 days permits adequate time for claims run out, submission of the necessary data to the State, and for the State to format the data for submission to CMS. We also propose in § 438.6(c)(4) that States would have to comply with this new reporting requirement after the rating period that begins after we release reporting instructions for submitting the information required by this proposal. We seek public comment on our proposal to use T–MSIS for this new reporting, or whether another reporting vehicle such as MBES, or other alternatives described in this proposed rulemaking would be better suited for SDP reporting. We also seek comment on how T–MSIS or another reporting vehicle could support capturing value-based payment arrangements in which payment is not triggered by an encounter or claim.

We also propose a conforming requirement at § 438.6(c)(5)(iv) to align with the proposal in § 438.6(c)(4); proposed paragraph (c)(5)(iv) would require States to document any reporting requirements necessary to comply with § 438.6(c)(4) in their managed care contracts.

We consider these data reporting proposals to be a two-prong approach, with the MLR proposed requirements explained in section I.B.3. of this proposed rule serving as a short-term step and the provider-specific data reporting proposed here being a longer-term initiative. We believe this would ensure the appropriate content and reporting while also giving States sufficient time to prepare for each proposal based on the level of new burden. While some managed care plans and States may assert that these proposals increase administrative burden unnecessarily, we believe that the increased transparency associated with these enhanced standards would benefit both State and Federal government oversight of SDPs. Implementing these proposals for State and managed care plan reporting of actual SDP expenditures would provide CMS more complete information when evaluating, developing, and implementing possible changes to Medicaid payment policy and fiscal integrity policy.

For discussion on the proposed applicability dates for the proposals outlined in this section, see section I.B.2.p. of this proposed rule.

We solicit public comment on these proposals.

p. Applicability and Compliance Dates (§§ 438.6(c)(4) and (c)(8), and 438.7(g)(2))

We propose that States and managed care plans would have to comply with § 438.6(a), (c)(1)(iii), (c)(2)(i), (c)(2)(ii)(A) through (C), (c)(2)(ii)(E), (c)(2)(ii)(G), (c)(2)(ii)(I) through (J), (c)(2)(vi)(A), (c)(3), (c)(6)(i) through (iv), and 438.7(c)(4), (c)(5), and (f)(1) through (3) upon the effective date of the final rule, as these proposals are either technical corrections or clarifications of existing policies and standards. We propose that States and managed care plans would have to comply with § 438.6(c)(2)(iii), (vi)(B), (vi)(C)(*1*) and (*2*) no later than the first rating period for contracts with MCOs, PIHPs and PAHPs beginning on or after the effective date of the final rule as these newly proposed requirements will provide States with increased flexibility and not require States to make changes to existing arrangements. We propose that States and managed care plans would have to comply with § 438.6(c)(2)(ii)(H), (c)(2)(vi)(C)(*3*) and (*4*), (c)(2)(vii), (c)(2)(viii) and (ix), and (c)(5)(i) through (v) no later than the first rating period for contracts with MCOs, PIHPs and PAHPs beginning on or after 2 years after the effective date of the final rule. We believe this is a reasonable timeframe for compliance because it allows States sufficient time to operationalize the timelines and requirements for preprint submissions that are newly established in these proposals while balancing the need to strengthen CMS oversight.

We further propose that States and managed care plans would have to comply with § 438.6(c)(2)(ii)(D), (F), (c)(2)(iv), (c)(2)(v), and (c)(7) no later than the first rating period for contracts with MCOs, PIHPs and PAHPs beginning on or after 3 years after the effective date of the final rule as we believe States will need a sufficient period of time to address the policy elements within these proposals and operationalize them via various reporting, documentation and submission processes. For § 438.6(c)(2)(ii)(D) and (F), (c)(2)(iv) and (v), and (c)(7), we are considering requiring compliance for the first rating period beginning on or after 1 year, or 2 years after the effective date of the final rule, but we are proposing the first rating period beginning on or after 3 years after the effective date of the final rule because we believe it strikes a balance between the work States would need to do to comply with these proposals and the urgency with which we believe these proposals should be implemented in order to strengthen and ensure appropriate and efficient operation of the Medicaid program. We solicit comment on the proposal and alternatives.

We propose that States and managed care plans would have to comply with §§ 438.6 (c)(5)(vi), and (c)(6)(v), and 438.7(c)(6) and (f)(4) no later than the first rating period for contracts with MCOs, PIHPs and PAHPs beginning on or after 4 years after the effective date of the final rule. Because these proposals establish new submission

timelines and new requirements for contract and rate certification documentation, and because States could view the new requirements as substantial changes to the SDP process, we are proposing a longer timeline for compliance. We are considering requiring compliance no later than the first rating period beginning on or after 3 years after effective date of the final rule to align with the compliance dates in the proposals described in the paragraph above; however, to provide States adequate time to implement strong policies and procedures to address the newly proposed requirements before submitting the relevant contract and rate certification documentation, we are proposing the longer period for States to adjust and come into compliance. We solicit comment on the proposal and alternative.

Finally, as outlined in proposed § 438.6(c)(4), States would be required to submit the initial TMSIS report subsequent to the first rating period following the release of CMS guidance on the content and form of the report.

We have proposed these applicability dates in §§ 438.6(c)(4) and (c)(8), and 438.7(g).

We solicit public comment on these proposals.

3. Medical Loss Ratio (MLR) Standards (§§ 438.8, 438.3, and 457.1203)

In the 2016 final rule, we finalized Medicaid and CHIP managed care regulations in §§ 438.8(k) and 457.1203(f) respectively, that require managed care plans to annually submit reports of their MLR to States, and, at §§ 438.74 and 457.1203(e) respectively, we require States to submit annually a summary of those reports to CMS. These sections were issued based on our authority under sections 1903(m)(2)(A)(iii), 1902(a)(4), and 2101(a) of the Act based on the rationale that actuarially sound capitation rates must be utilized for MCOs, PIHPs, and PAHPs. Additionally, actuarial soundness requires that capitation payments cover reasonable, appropriate, and attainable costs in providing covered services to enrollees in Medicaid managed care programs. We propose to amend our requirements under the same authority and rationale that we describe below.

Medical loss ratios are one tool that CMS and States can use to assess whether capitation rates are appropriately set by generally illustrating how capitation funds are spent on claims and quality improvement activities as compared to administrative expenses. More specifically, MLR calculation and reporting can be used to demonstrate that adequate amounts of the capitation payments are spent on services for enrollees. With MLR reporting, States have more information to understand how the capitation payments made for enrollees in managed care programs are expended, resulting in responsible fiscal stewardship of total Medicaid and CHIP expenditures.

Medicaid and CHIP managed care MLR reporting requirements align, generally, with Marketplace standards for Qualified Health Plans (QHPs) and Medicare Advantage standards for Medicare Advantage organizations (MAOs). As we noted in the preamble to the 2015 managed care proposed rule,[128] alignment with Marketplace or Medicare Advantage standards supports administrative simplicity for States and health plans to manage health care delivery across different product lines and eases the administrative burden on issuers and regulators that work in all of those contexts and markets (80 FR 31101). We also noted that a consistent methodology across multiple markets (private, Medicare, Medicaid, and CHIP) would allow for administrative efficiency for the States in their roles regulating insurance and Medicaid/CHIP, and for issuers and managed care plans to collect and measure data necessary to calculate an MLR and provide reports. In addition, a consistent standard would allow comparison of MLR outcomes consistently from State to State and among commercial, Medicare, and Medicaid/CHIP managed care plans (80 FR 31107).

In general, Medicaid and CHIP managed care MLR reporting requirements have remained aligned over time with the Marketplace MLR requirements; however, CMS finalized some regulatory changes for QHP MLR reporting in 45 CFR 158.140, 158.150, and 158.170 effective July 1, 2022.[129] To keep the Medicaid and CHIP managed care regulations aligned with these new Marketplace provisions, we propose several revisions to our requirements in the following areas:

- Requirements for clinical or quality improvement standards for provider incentive arrangements;
- Prohibited administrative costs in quality improvement activity (QIA) reporting; and
- Additional requirements for expense allocation methodology reporting.

In addition, we propose changes to specify timing of updates to credibility adjustment factors; when Medicaid and CHIP managed care plans are required to resubmit MLR reports to the State; the level of data aggregation required for State MLR summary reports to CMS; contract requirements related to reporting of overpayments; and new reporting requirements for SDPs.

a. Standards for Provider Incentives (§§ 438.3(i), 438.8(e)(2), 457.1201, and 457.1203)

We are revising standards for provider incentives to remain consistent with our goals of alignment with the Marketplace when appropriate, and to ensure that capitation rates are actuarially sound and based on reasonable expenditures for covered services under the contract. Under section 1903(m)(2)(A)(iii) of the Act and implementing regulations, FFP is not available for State expenditures incurred for payment (as determined under a prepaid capitation basis or under any other risk basis) for services provided by a managed care plan unless the prepaid payments are made on an actuarially sound basis. This requirement is made applicable to PIHPs and PAHPs under authority in section 1902(a)(4) of the Act. As specified in current regulations at § 438.4(a), actuarially sound Medicaid capitation rates are projected to provide for all reasonable, appropriate, and attainable costs as well as the operation of the MCO, PIHP, or PAHP required under the terms of the contract.

While Medicaid managed care plans are required to calculate and report an MLR to the State, States are not required to establish a minimum MLR requirement; although under current regulations at § 438.4(b)(9), capitation rates must be developed in a way that the managed care plan would reasonably achieve an MLR of at least 85 percent. Under current regulations at § 438.8(c), if a State elects to require that their managed care plans meet a minimum MLR requirement, the minimum must be set to at least 85 percent. Further, under § 438.8(j), States may establish a remittance arrangement based on an MLR requirement of 85 percent or higher. As a general matter, remittance arrangements based on minimum MLRs may provide value to States by requiring managed care plans to remit a portion of their capitation payments to States when spending on covered services and QIAs is less than the minimum MLR requirements.

[128] *https://www.govinfo.gov/content/pkg/FR-2015-06-01/pdf/2015-12965.pdf.*

[129] *https://www.federalregister.gov/documents/2022/05/06/2022-09438/patient-protection-and-affordable-care-act-hhs-notice-of-benefit-and-payment-parameters-for-2023.*

At existing §§ 438.3(i)(1) and 457.1201(h), respectively, Medicaid and CHIP managed care plan contracts must require compliance with the provider plan incentive requirements in §§ 422.208 and 422.210.[130] In this section, we refer to the term ''incentive'' to mean both incentive and bonus payments to providers. Under § 422.208(c), managed care plans may enter into a physician incentive plan with a health care provider, but plans must meet requirements applicable to those arrangements in § 422.208(c) through (g), and under § 422.208(c)(1) plans cannot make a payment, directly or indirectly, as an inducement to reduce or limit medically necessary services. A Medicaid and CHIP managed care plan may make incentive payments to a provider if the provider agrees to participate in the plan's provider network. These payment arrangements may be based solely on an amount negotiated between the plan and the provider. Medicaid and CHIP managed care plans can implement provider incentive arrangements that are not based on quality improvement standards or metrics; however, provider incentive payments must be included as incurred claims when managed care plans calculate their MLR, per §§ 438.8(e)(2)(iii)(A) and 457.1203(c) respectively. Further, provider incentive payments may influence the development of future capitation rates, and Medicaid managed care plans may have a financial incentive to inappropriately pay provider incentives when the plans are unlikely to meet minimum MLR requirements. Additionally, these payments may inappropriately inflate the numerator of the MLR calculation and reduce or eliminate remittances, if applicable. Additionally, including such data in the base data used for rate development may inappropriately inflate future capitation rates.

Vulnerabilities With Managed Care Plans' Provider Incentive Contracting Practices

As part of our Medicaid managed care program integrity oversight efforts, CMS recently conducted several in-depth reviews of States' oversight of managed care plan MLR reporting. These reviews included examinations of the contract language for provider incentive arrangements between managed care plans and network providers. As part of these reviews, CMS identified several examples of managed care plan practices that could make an incentive payment inappropriate to include in the numerator. For example, there were inconsistent documentation and contracting practices for incentive payments in contracts between some Medicaid managed care plans and their network providers, including State acceptance of attestations of these arrangements from senior managed care plan leadership when contract documentation was lacking. These reviews also noted that many managed care plans' contracts with network providers did not base the incentive payments on a requirement for the providers to meet quantitative clinical or quality improvement standards or metrics. In fact, examination of these contracts between managed care plans and their network providers revealed that some managed care plans did not require a provider to improve their performance in any way to receive an incentive payment. Additionally, many of the incentive arrangements were not developed prospectively with clear expectations for provider performance. Finally, we identified provider incentive performance periods that did not align with the MLR reporting period and provider incentive contracts that were signed after the performance period ended.

Contract Requirements for Provider Incentive Payment Arrangements

Based on these reviews, we are concerned that if a provider incentive arrangement is not based on basic core contracting practices (including sufficient supporting documentation and clear, prospective quantitative quality or performance metrics), it may create an opportunity for a managed care plan to more easily pay network providers solely to expend excess funds to increase their MLR numerator under the guise of paying incentives. This potential loophole could also be used to help managed care plans avoid paying remittances. Also, this practice could artificially inflate future capitation rates. To address these concerns, we are proposing additional requirements on provider incentive arrangements in § 438.3(i).

In a new § 438.3(i)(3) and (4) for Medicaid, and included in separate CHIP regulations through an existing cross-reference at § 457.1201(h), we propose to require that the State, through its contract(s) with a managed care plan, must include specific provisions related to provider incentive contracts. Specifically, the proposed changes would require in § 438.3(i)(3)(i) and (ii) that incentive payment contracts between managed care plans and network providers have a defined performance period that can be tied to the applicable MLR reporting period(s), and such contracts must be signed and dated by all appropriate parties before the commencement of the applicable performance period. We also propose, in § 438.3(i)(3)(iii), that all incentive payment contracts must include well-defined quality improvement or performance metrics that the provider must meet to receive the incentive payment. In addition, in § 438.3(i)(3)(iv), we propose that incentive payment contracts must specify a dollar amount that can be clearly linked to successful completion of these metrics as well as a date of payment. We note that managed care plans would continue to have flexibility to determine the appropriate quality improvement or quantitative performance metrics to include in the incentive payment contracts. In addition, the proposed changes would also require in § 438.3(i)(4)(i) that the State's contracts must define the documentation that the managed care plan must maintain to support these arrangements. In § 438.3(i)(4)(ii), we propose that the State must prohibit managed care plans from using attestations as documentation to support the provider incentive payments. In § 438.3(i)(4)(iii), we propose that the State's contracts require that managed care plans must make the incentive payment contracts and supporting documentation available to the State both upon request and at any routine frequency that the State establishes. Finally, we propose that States and managed care plans would have to comply with § 438.3(i)(3) and (4) no later than the rating period for contracts with MCOs, PIHPs, and PAHPs beginning on or after 60 days following the effective date of the final rule as we believe this is a reasonable timeframe for compliance. Therefore, we have proposed this applicability date in § 438.3(v) for Medicaid, and through a proposed cross-reference at § 457.1200(d) for separate CHIPs, and we seek public comment on this proposal. Other changes proposed to § 438.3(v) are outlined in section I.B.4.i. of this proposed rule.

We also propose to amend § 438.608 to cross-reference these requirements in the program integrity contract requirements section. Specifically, we propose to add a new § 438.608(e) that notes the requirements for provider incentives in § 438.3(i)(3) and (4). This proposed requirement is equally

[130] As specified in § 438.3(i)(2), in applying the provisions of §§ 422.208 and 422.210 of this chapter, references to ''MA organization,'' ''CMS,'' and ''Medicare beneficiaries'' must be read as references to ''MCO, PIHP, or PAHP,'' ''State,'' and ''Medicaid beneficiaries,'' respectively.

applicable for separate CHIPs through an existing cross-reference at § 457.1285.

Alignment With Marketplace Regulations for Provider Incentive Arrangements [131]

Effective July 1, 2022, the Marketplace regulations at 45 CFR 158.140(b)(2)(iii) were revised to require issuers to tie provider bonuses and incentives payments to clearly-defined, objectively measurable, and well-documented clinical or quality improvement standards for these costs to qualify as expenditures in the MLR numerator. In contrast, current Medicaid and CHIP managed care regulations for provider incentive arrangements do not require these payments to be based on quality or performance metrics. This inconsistency hinders the comparison of MLR data between the Marketplace issuers and Medicaid and CHIP managed care plans, which is important given the high number of health plans that are both sold in the Marketplace and Medicaid managed care plans as well as the frequent churn of individuals between Marketplace, Medicaid, and CHIP coverage. To address the potential for inappropriate inflation of the MLR numerator as well as facilitate data comparability, we propose in § 438.8(e)(2)(iii)(A) for Medicaid, which is included in separate CHIP regulations through an existing cross-reference at § 457.1203(c), to require that for a provider bonus or incentive payment to be included in the MLR numerator, the provider bonus or incentive arrangement would have to require providers to meet clearly-defined, objectively measurable, and well-documented clinical or quality improvement standards to receive the bonus or incentive payment. This change would prohibit Medicaid and CHIP managed care plans from including provider bonus or incentive payments that are not based on clinical or quality improvement standards in their MLR numerator, which would improve the accuracy of their MLR, as well as other components of managed care programs that rely on reported MLRs, such as capitation rate development and remittances. Further, a consistent methodology across multiple markets would allow for administrative efficiency for the States as they monitor their Medicaid and CHIP programs, and for issuers and managed care plans to collect and measure data necessary to calculate an MLR and provide reports.

We believe that by requiring States' contracts with managed care plans to specify how provider bonus or incentive payment arrangements would be structured in managed care plans' provider contracts, transparency around these arrangements would improve. In addition, by requiring the contracts to include more specific documentation requirements, CMS and States would be better able to ensure that provider bonus or incentive payments are not being used either to inappropriately increase the MLR to avoid paying potential remittances, inflate future capitation rates, or to simply move funds from a Medicaid managed care plan to an affiliated company. The proposals would increase transparency into provider bonuses and incentives, improve the quality of care provided by ensuring that bonuses and incentives are paid to providers that demonstrated furnishing high-quality care, and protect Medicaid and CHIP programs against fraud and other improper payments. We are seeking comment on these proposed requirements, including whether any additional documentation requirements should be specified in regulation. We propose that States and managed care plans would be required to comply with these requirements 60 days after the effective date of this final rule as we believe these proposals are critical for fiscal integrity in Medicaid and CHIP. We considered an alternative compliance date of no later than the rating period for contracts with MCOs, PIHPs and PAHPs beginning on or after 60 days following the effective date of the final rule; however, we are concerned this is not soon enough. We seek comment on this proposal.

b. Prohibited Costs in Quality Improvement Activities (§§ 438.8(e)(3) and 457.1203(c))

The preamble to the Marketplace regulations that took effect on July 1, 2022 indicated that examinations of MLR reporting of issuers found ''wide discrepancies in the types of expenses that issuers include in QIA expenses'' and that inconsistency ''creates an unequal playing field among issuers'' (87 FR 692). Therefore, to provide further clarity on the types of costs that may be included in MLR calculations in the future, CMS modified Marketplace regulations for QIA expenditures in 45 CFR 158.150(a), effective July 1, 2022, to prohibit the inclusion of indirect or overhead expenses that do not directly improve health care quality when reporting QIAs.

In Medicaid and separate CHIP regulations at §§ 438.8(e)(3) and 457.1203(c) respectively, we included QIA activities that meet the Marketplace MLR requirements, but we did not explicitly include a prohibition on managed care plans including indirect or overhead expenses when reporting QIA costs in the MLR because the commercial regulations did not have this exclusion at the time. As a result, the current Medicaid MLR regulations do not require managed care plans to exclude indirect or overhead QIA expenditures. For example, expenditures for facility maintenance, utilities, or marketing may be included in the MLR even though these expenses do not directly improve health care quality. As a result, Medicaid or CHIP managed care plans may include these types of costs as QIA costs in the MLR numerator, which could result in inappropriately inflated MLRs, and a different standard existing in the Marketplace and Medicaid and CHIP markets. This difference in standards could pose a potential administrative burden for managed care plans that participate in both Medicaid and CHIP and the Marketplace because managed care plans may include different types of expenses in reporting QIA.

To align Medicaid and CHIP MLR QIA reporting requirements with the Marketplace requirements and to improve clarity on the types of QIA expenditures that should be included in the MLR numerator, we propose to amend § 438.8(e)(3)(i) for Medicaid, which is included in separate CHIP regulations through an existing cross-reference at § 457.1203(c), to add a reference to the Marketplace regulation that prohibits the inclusion of overhead or indirect expenses that are not directly related to health care quality improvement. This change would provide States with more detailed QIA information to improve MLR reporting consistency, allow for better MLR data comparisons between the Marketplace and Medicaid and CHIP markets, and reduce administrative burden for managed care plans that participate in both Medicaid and CHIP and the Marketplace. We propose that these requirements would be effective 60 days after the effective date of this final rule as we believe these proposals are critical for fiscal integrity in Medicaid and CHIP. We considered an alternative effective date of no later than the rating period for contracts with MCOs, PIHPs and PAHPs beginning on or after 60 days following the effective date of the final rule; however, we are concerned this is not soon enough. We seek

comment on the applicability date for these proposals.

c. Additional Requirements for Expense Allocation Methodology (§§ 438.8(k)(1)(vii) and 457.1203(f))

As specified in current regulations at §§ 438.8(k)(1)(vii) and 457.1203(f) respectively, Medicaid and CHIP managed care plans must provide a report of the methodology or methodologies that they used to allocate certain types of expenditures for calculating their MLR. Examples of these types of expenditures include overhead expenses such as facility costs or direct expenses such as employee salaries. If a plan operates multiple lines of business, for example in both Medicaid and the Marketplace, it must indicate in the Medicaid MLR report how the share of certain types of costs were attributed to the Medicaid line of business. However, the Medicaid MLR regulations in § 438.8(g) and (k)(1)(vii) do not require managed care plans to submit information about the types of expenditures allocated to the Medicaid line of business and do not require managed care plans to specify how each type of expenditure was allocated to the Medicaid MLR.

Recent CMS State-level Medicaid MLR reviews noted a lack of expense allocation information in managed care plans' MLR reports to States. Specifically, CMS determined that several plans operated in multiple markets, for example, Medicaid and Medicare Advantage, and failed to adequately describe how certain costs that may apply across multiple lines of business were allocated to the Medicaid MLR report. Examples of these expenses include: quality improvement expenses, taxes, licensing or regulatory fees, and non-claims costs. The impact of this lack of transparency is that it may be impossible for a State to determine if the managed care plan's allocation of the applicable expenses to the Medicaid line of business was reasonable. For example, if a managed care plan operating in multiple markets does not provide information on how quality improvement activity expenses were allocated to the Medicaid MLR, the State will be unable to determine if the MLR numerator is inappropriately inflated.

The Marketplace regulations in 45 CFR 158.170(b) require significantly more detail for expense allocation in QHPs' MLR reporting. Specifically, § 158.170(b) requires a description of the types of expenditures that were allocated, how the expenses met the criteria for inclusion in the MLR, and the method(s) used to aggregate these expenses. We propose to require in § 438.8(k)(1)(vii) for Medicaid, which is included in CHIP regulations through an existing cross-reference at § 457.1203(f), that managed care plans must include information that reflects the same information required under Marketplace requirements in the MLR report that they submit to the State. Specifically, in § 438.8(k)(1)(vii), we propose to add to the existing text that plans' descriptions of their methodology must include a detailed description of the methods used to allocate expenses, including incurred claims, quality improvement expenses, Federal and State taxes and licensing or regulatory fees, and other non-claims costs, as described § 158.170(b). These revisions would improve State MLR oversight by providing States with more detailed information to ensure the appropriateness of managed care plans' expense allocation. These proposed requirements would align with Marketplace regulations and reduce administrative burden for managed care plans. We propose that States and managed care plans would be required to comply with these requirements 60 days after the effective date of this final rule as we believe these proposals are critical for fiscal integrity in Medicaid and CHIP. We considered an alternative compliance date of no later than the rating period for contracts with MCOs, PIHPs and PAHPs beginning on or after 60 days following the effective date of the final rule; however, we are concerned that is not soon enough. We seek comment on this proposal.

d. Credibility Factor Adjustment to Publication Frequency (§§ 438.8(h)(4) and 457.1203(c))

Section 2718(c) of the Public Health Service Act charged the National Association of Insurance Commissioners (NAIC) with developing uniform methodologies for calculating measures of the expenditures that make up the MLR calculation, and to address the special circumstances of smaller plans. The NAIC model regulation allows smaller plans to adjust their MLR calculations by applying a ''credibility adjustment.'' Under §§ 438.8(h) and 457.1203(c) respectively, Medicaid and CHIP managed care calculated MLRs may be adjusted using credibility factors to account for potential variability in claims due to random statistical variation. These factors are applied to plans with fewer enrollees to adjust for the higher impact of claims variability on smaller plans. As stated in § 438.8(h)(4), CMS is responsible for developing and publishing these factors annually for States and managed care plans to use when reporting MLRs for plans with fewer enrollees. In the 2015 Medicaid and CHIP managed care proposed rule (80 FR 31111), we proposed adopting a credibility adjustment methodology along with assurances to monitor and reevaluate credibility factors ''in light of developing experience with the Affordable Care Act reforms.'' In the 2015 proposed rule (80 FR 31111), we also proposed to update the credibility adjustment method within the parameters of the methodology proposed in that proposed rule. We finalized this proposal without revision in the 2016 final rule (81 FR 27864). The Medicaid managed care credibility adjustment factors were published on July 31, 2017 at *https://www.medicaid.gov/federal-policy-guidance/downloads/cib073117.pdf.*

Since this publication of the credibility adjustment factors in 2017, the factors have not changed. The factors were originally developed using a statistical model applying the Central Limit Theorem (80 FR 31111). This model produced credibility factors that were not expected to change annually. Therefore, we believe that annual updates to these factors are not required, and we propose to modify § 438.8(h)(4) for Medicaid, which is included in separate CHIP regulations through an existing cross-reference at § 457.1203(c), to remove ''On an annual basis.'' If we determine that the factors need to be updated, we would use the methodology specified at § 438.8(h)(4)(i) through (vi). We are not proposing any revisions to § 438.8(h)(4)(i) through (vi) in this rule. We propose that these changes would be effective 60 days after the effective date of this final rule as we believe this timeframe is reasonable. We seek comment on this proposal.

e. MCO, PIHP, or PAHP MLR Reporting Resubmission Requirements (§§ 438.8(m) and 457.1203(f))

Medicaid and CHIP managed care plans are required to resubmit MLR reports to States under certain circumstances. In the 2015 managed care proposed rule preamble, we noted that States may make retroactive changes to capitation rates that could affect the MLR calculation for a given MLR reporting year and that when that occurred, the MCO, PIHP, or PAHP would need to recalculate the MLR and provide a new report with the updated figures (80 FR 31113). We also indicated that ''In any instance where a State makes a retroactive change to the capitation payments for an MLR reporting year where the report has already been submitted to the State, the

MCO, PIHP, or PAHP must re-calculate the MLR for all MLR reporting years affected by the change and submit a new report meeting the requirements in paragraph (k) of this section.'' This regulation was finalized in 2016 without changes (81 FR 27864). However, the reference in the regulation to changes to capitation ''payments'' rather than ''rates'' has caused confusion about when managed care plans should resubmit MLR reports to the State, and has contributed to additional administrative burden by requiring plans to resubmit MLR reports to the State and by requiring States to review multiple MLR report submissions from managed care plans.

As part of our Medicaid MLR report compliance reviews, we have heard from several States that MLR reports from MCOs, PIHPs, or PAHPs are often resubmitted to the State. These resubmissions usually resulted from payments the State made to the managed care plan as part of the retroactive eligibility review process. As part of this process in these States, the State reviews beneficiary eligibility records to determine if an individual qualifies for retroactive eligibility. If an enrollee qualifies for retroactive eligibility, the State modifies the number of capitation payments that were made to a plan; however, the State does not retroactively modify the capitation rate for a group of members. When a State modifies the number of payments, but not the rate of payment to a managed care plan, we believe that it is unnecessary for a plan to resubmit the MLR to the State. For separate payment terms, only used for SDPs, the proposed regulation changes would require the State to document in the managed care plan contracts the total dollars that the State would pay to the plans for the individual State directed payment; the timing and frequency of payments that would be made under the separate payment term from the State to the plans; a description or reference to the contract requirement for the specific State directed payment for which the separate payment term would be used; and any reporting that the State requires to ensure appropriate reporting of the separate payment term for purposes of MLR reporting under § 438.8. If the State modifies a separate payment term, the MLR would need to be resubmitted to the State. See further details in section I.B.2.l. of this proposed rule.

We propose to amend § 438.8(m) for Medicaid, which is included in separate CHIP regulations through an existing cross-reference at § 457.1203(f), to specify that an MCO, PIHP, or PAHP would only be required to resubmit an MLR report to the State when the State makes a retroactive change to capitation rates. Specifically, we propose to replace ''payments'' with ''rates'' and to insert ''retroactive rate'' before the word ''change.'' These changes would decrease administrative burden for both managed care plans and States by reducing the number of MLR report submissions while retaining our original intent. We propose that these changes would be effective 60 days after the effective date of this final rule as we believe this timeframe is reasonable to alleviate State and plan administrative burden. We considered an alternative effective date no later than the rating period for contracts with MCOs, PIHPs and PAHPs beginning on or after 60 days following the effective date of the final rule; however, we do not believe additional time is necessary. We seek comment on this proposal.

f. Level of MLR Data Aggregation (§§ 438.74 and 457.1203(e))

As specified in existing requirements at §§ 438.8(k) and 457.1203(f) respectively, Medicaid and CHIP managed care plans are required to submit detailed MLR reports to States, and States, as required in § 438.74 for Medicaid and § 457.1203(e) for separate CHIP, must submit a summary description of those reports to CMS. In the preamble to the 2015 managed care proposed rule (80 FR 31113), we described the term ''summary'' as meaning an abbreviated version of the more detailed reports required from managed care plans in § 438.8(k), but did not refer to a Statewide aggregation of data across managed care plans. The proposed regulatory text for § 438.74 did not include the words ''for each'' and was finalized as proposed. In our compliance reviews of State summary MLR reports, several States provided MLR data aggregated over the entire State and neglected to provide the abbreviated MLR report for each plan. These submissions of MLR summary reports that omitted information by plan indicate States' confusion with what is required for these reports.

To correct this issue, we propose to amend § 438.74(a) for Medicaid, which is included in separate CHIP regulations through an existing cross-reference at § 457.1203(e), to note explicitly that State MLR summary reports must include the required elements for each MCO, PIHP, or PAHP that is contracted with the State. To specify that the MLR information would have to be reported for each managed care plan, we propose in § 438.74(a)(1) to replace ''the'' with ''each'' before ''report(s).'' In addition, in § 438.74(a)(2), we propose to add language to specify that the information listed as required in the summary description must be provided for each MCO, PIHP, or PAHP under contract with the State. These changes would specify that States must provide MLR information for each managed care plan in their annual summary reports to CMS. We propose that States and managed care plans would be required to comply with these changes 60 days after the effective date of this final rule as we believe these proposals are critical for fiscal integrity in Medicaid and CHIP. We considered an alternative compliance date of no later than the rating period for MCO, PIHP and PAHP contracts beginning on or after 60 days following the effective date of the final rule; however, we are concerned this is not soon enough. We seek comment on this proposal.

g. Contract Requirements for Overpayments (§§ 438.608(a)(2) and(d)(3), and 457.1285)

In the 2016 final rule, we aimed to strengthen State and Medicaid and CHIP managed care plan responsibilities to protect against fraud and other overpayments in State Medicaid and CHIP programs, in part, by enhancing reporting requirements to support actuarial soundness payment provisions and program integrity efforts (81 FR 27606). Overpayments are defined in § 438.2 as any payment made to a network provider by a MCO, PIHP, or PAHP to which the network provider is not entitled under Title XIX of the Act or any payment to a MCO, PIHP, or PAHP by a State to which the MCO, PIHP, or PAHP is not entitled under Title XIX of the Act. These overpayments may be the result of fraud, waste, abuse, or other billing errors. Regardless of cause, overpayments should be excluded from the capitation rate because they do not represent reasonable, appropriate, or attainable costs.

The 2016 final rule also enhanced the integrity of capitation payments, in part, by requiring at § 438.608(d)(3) for Medicaid, and included in separate CHIP regulations through an existing cross-reference at § 457.1285, that State contracts with managed care plans include provisions specifying that managed care plans must report the recoveries of overpayments annually. This reporting to the State is critical to the actuarial soundness of capitation rates because managed care plans must exclude overpayments from their incurred claims, which is also a key element in the numerator of the MLR calculation. As required in § 438.5(b)(5), States must consider Medicaid managed

care plans' past reported MLR and the projected MLR in the development of capitation rates. If a managed care plan's MLR numerator does not exclude overpayments, the MLR may be inappropriately inflated. Section 438.608(d)(4) requires that the State use the results of the information and documentation collected under § 438.608(d)(3) for setting actuarially sound Medicaid capitation rates consistent with the requirements in § 438.4.

This proposed rule seeks to modify § 438.608(a)(2), which requires managed care plan contracts to include a provision for the prompt reporting of all overpayments identified or recovered (specifying those due to potential fraud) to the State; and § 438.608(d)(3), which requires managed care plan contracts to include annual reports on plan recoveries of overpayments. Both proposed changes are included in separate CHIP regulations through an existing cross-reference at § 457.1285. The proposed changes aim to ensure that Medicaid and CHIP managed care plans report comprehensive overpayment data to States in a timely manner, which would better position States to execute program integrity efforts and develop actuarially sound capitation rates.

Defining ''Prompt'' Reporting (§§ 438.608(a)(2) and 457.1285))

Current regulations at § 438.608(a)(2) require that States include a provision in their contracts with managed care plans for the prompt reporting to the State of all overpayments identified or recovered, specifying the overpayments due to potential fraud. However, the term ''prompt'' is not defined. Although a time period is not defined, prompt reporting of identified or recovered overpayments is important because it can enable a State to expeditiously take action against a provider to prevent further inappropriate activity, including potential fraud. With prompt reporting of managed care plan overpayments, the State is better equipped to identify similar overpayments and prevent future overpayments across its networks and managed care programs.

CMS' oversight efforts and other program integrity reviews have revealed that States interpret the promptness requirement under § 438.608(a)(2) inconsistently. For example, some States do not define ''prompt'' in managed care plan contracts, instead deferring to managed care plans' interpretation of the timeframe to report overpayments; this lack of definition can result in inconsistent overpayment reporting among managed care plans and States. Our reviews also revealed that some States do not use a consistent timeframe across managed care plan contracts when requiring the reporting of overpayments. As a result, managed care plans may not report identified or recovered overpayments within a timeframe that enables States to effectively and swiftly investigate and take appropriate administrative action against providers that may be committing fraudulent activities across networks and managed care programs.

We believe that establishing a uniform definition of the term ''prompt'' would provide clarity to States and managed care plans, thereby enhancing ongoing communication between managed care plans and States, particularly as it relates to program integrity practices. Therefore, we propose to amend § 438.608(a)(2) for Medicaid, and included in separate CHIP regulations through an existing cross-reference at § 457.1285, to define ''prompt'' as within 10 business days of identifying or recovering an overpayment. We believe 10 business days would provide a managed care plan sufficient time to investigate overpayments and determine whether they are due to potential fraud or other causes, such as billing errors, and also quickly provide the State with awareness to mitigate other potential overpayments across its networks and managed care programs. With a clear and consistent overpayment reporting requirement, States would be better equipped to: direct managed care plans to look for specific network provider issues, identify and recover managed care plan and fee-for-service claims that are known to be unallowable, take corrective actions to correct erroneous billing practices, or consider a potential law enforcement referral. We are seeking public comment on the proposed 10 business day timeframe and whether reporting should be from date of identification or recovery, or instead on a routine basis, such as monthly. We propose that States and managed care plans would be required to comply with these requirements 60 days after the effective date of this final rule as we believe these proposals are critical for fiscal integrity in Medicaid and CHIP. We considered an alternative effective date of no later than the rating period for contracts with MCOs, PIHPs and PAHPs beginning on or after 60 days following the effective date of the final rule; however, we do not believe additional time is necessary. We seek comment on this proposal.

Identifying Overpayment Reporting Requirements (§§ 438.608(d)(3) and 457.1285)

The overpayment reporting provisions in 42 CFR part 438, subpart H require managed care plans to recover the overpayments they identify, and in turn, report those identified overpayments to the State for purpose of setting actuarially sound capitation rates. In the 2015 proposed rule, we stated that ''MCOs, PIHPs, and PAHPs must report improper payments and recover overpayments they identify from network providers. States must take such recoveries into account when developing capitation rates. Therefore, capitation rates that include the amount of improper payments recovered by an MCO, PIHP, or PAHP as projected costs would not be considered actuarially sound.'' (80 FR 31119). It was our expectation that ''such recoveries'' include recoveries of all identified overpayments. This intent is also reflected in § 438.608(a)(2), which states that managed care plans must report both ''identified or recovered'' overpayments to the State. However, the words ''identified or'' were omitted from the related regulatory text at § 438.608(d)(3). Program integrity reviews and investigations conducted since the 2016 final rule have found that language in § 438.608(d)(3) providing that managed care plans only report ''recovered overpayments'' has created an unintentional effect of managed care plans' reporting partial overpayment data for capitation rate calculations. This omission may have also disincentivized managed care plans from investing in the resources necessary to recover identified overpayments in the interest of maintaining a higher MLR. For example, we have identified instances in which managed care plans identified an overpayment, but did not recover the entire overpayment from the provider due to negotiating or settling the overpayment to a lesser amount. In other cases, managed care plans identified an overpayment that was resolved by applying an offset to future payments to the provider instead of recovering the full overpayment in the impacted rating period. These situations resulted in the managed care plans only reporting a relatively small or no overpayment recovery amount to the State in the impacted rating period, instead of the full amount of the identified overpayment. This inconsistent reporting does not reflect our original intent in imposing the current requirements in § 438.608(d)(3), and prevents the State from accounting

for the full amount of the identified overpayment in the impacted rating period when developing capitation rates as required under § 438.608(d)(4).

To address these issues, we propose to revise § 438.608(d)(3) for Medicaid and separate CHIP regulations through an existing cross-reference at § 457.1285, to specify our original intent that any overpayment (whether identified or recovered) must be reported by Medicaid or CHIP managed care plans to the State. Through this proposed change, we believe that managed care plans and States would have more consistency in the overpayment reporting requirements at § 438.608(a)(2) and (d)(3) by requiring reporting to the State all overpayments, whether identified or recovered. By ensuring that both identified and recovered overpayments are reported, States and CMS would be more assured that capitation rates account for only reasonable, appropriate, and attainable costs covered under the contract. We propose that States and managed care plans would be required to comply with these requirements 60 days after the effective date of this final rule as we believe these proposals are critical for fiscal integrity in Medicaid and CHIP. We considered an alternative effective date no later than the rating period for contracts with MCOs, PIHPs and PAHPs beginning on or after 60 days following the effective date of the final rule; however, we are concerned that is not soon enough. We seek comment on this proposal.

h. Reporting of SDPs in the Medical Loss Ratio (MLR) (§§ 438.8(e)(2)(iii) and (f)(2), 438.74, 457.1203(e) and (f))

Many States are using the authority in § 438.6(c) to direct Medicaid managed care plans' payments to certain providers. See section I.B.2.e. of this proposed rule for more information. States' increasing use of SDP arrangements has been cited as a key area of oversight risk for CMS. Several advisory and oversight bodies, including MACPAC, the HHS OIG, and GAO, have authored reports focused on CMS oversight of SDPs.[132] [133] [134] The scope, size, and complexity of the SDP arrangements being submitted by States for approval has also grown steadily and quickly. For calendar year 2022, CMS received 298 preprints from States. In total, as of December 2022, CMS has reviewed more than 1,100 SDP proposals and approved 993 proposals since the 2016 final rule was issued.

SDPs also represent a notable amount of spending. MACPAC reported that CMS approved SDP arrangements in 37 States, with spending exceeding more than $25 billion for SDPs through 2020.[135] GAO also reported that at least $20 billion has been approved by CMS for preprints with payments to be made on or after July 1, 2021, across 79 proposals.[136]

Under our current review and approval process for SDPs we ask States to estimate projected SDP expenditures, but we do not review the actual amounts that States provide to Medicaid managed care plans for these payment arrangements, and we do not review the actual amounts that Medicaid managed care plans pay to providers. We retrospectively review SDP actual amounts as part of State-level MLR reviews and in-depth reviews of State expenditures where Federal dollars are at risk, known as Financial Management Reviews; however, these reviews are limited to only a few States each year. We do not conduct other formal retrospective reviews of actual SDP expenditures. Thus, we rarely confirm with States that SDP actual spending amounts were reasonably consistent with the CMS-approved estimated amounts. Instead, we require States to provide the estimated total payment amounts for these arrangements as part of the current approval process. We are also aware that some States are permitting managed care plans to retain a portion of SDPs for administrative costs when plans make these payments to providers. Because States are not required to provide the actual expenditures associated with these arrangements in any separate or identifiable way, we cannot determine exactly how much is being paid under these arrangements and whether Federal funds are at risk for impermissible or inappropriate payment.

We propose new reporting requirements for Medicaid SDPs in §§ 438.8 and 438.74 to align with the reporting that is currently required for Medicaid FFS supplemental payments. CMS FFS supplemental payment guidance notes that ''[i]nformation about all supplemental payments under the State plan and under demonstration is necessary to provide a full picture of Medicaid payments.'' [137] While States must provide CMS with the amounts for FFS supplemental payments, there is no requirement for States or managed care plans to provide actual payment data separately for SDPs. Implementing a new requirement for both State and managed care plan reporting of actual SDP expenditures would support CMS oversight activities to better understand provider-based payments across delivery systems.

To address the need for additional information on the actual amounts paid as SDPs, we propose to require Medicaid managed care plans to include SDPs and associated revenue as separate lines in the MLR reports required at § 438.8(k). The managed care MLR reporting requirements at § 438.8(k) were codified in the 2016 final rule, and States have substantial experience in obtaining and reviewing MLR reports from their managed care plans. To date, our MLR guidance has not addressed the inclusion of SDPs in the MLR; this proposal would specify these requirements by amending § 438.8(k) to ensure that Medicaid SDPs would be separately identified in annual MLR reporting.

Specifically, at § 438.8(e)(2)(iii)(C), we propose to require that managed care plan expenditures to providers that are directed by the State under § 438.6(c), including those that do and do not require prior CMS approval, must be included in the MLR numerator. In § 438.8(f)(2)(vii), we propose to require that State payments made to Medicaid MCOs, PIHPs, or PAHPs for approved arrangements under § 438.6(c) be included in the MLR denominator as premium revenue. We propose that States and managed care plans are required to comply with these changes in § 438.8(e)(2)(iii)(C) and (f)(2)(vii) 60 days after the effective date of the final rule as we believe these proposals are critical for fiscal integrity in Medicaid. We considered an alternative compliance date of no later than the rating period for contracts with MCOs, PIHPs and PAHPs beginning on or after 60 days following the effective date of the final rule; however, we are concerned this is not soon enough, given the fiscal integrity risks that are involved. We seek comment on this proposal.

We also propose to require that the managed care plans' MLR reports to States as required in § 438.8(k) include two additional line items. The first item at § 438.8(k)(1)(xiv) requires reporting of Medicaid managed care plan

[132] *https://www.macpac.gov/publication/june-2022-report-to-congress-on-medicaid-and-chip/ June 2022 Report to Congress on Medicaid and CHIP, Chapter 2.*

[137] *https://www.medicaid.gov/federal-policy-guidance/downloads/smd21006.pdf.*

expenditures to providers that are directed by the State under § 438.6(c). The second item at § 438.8(k)(1)(xv) requires reporting of Medicaid managed care plan revenue from the State to make these payments. We propose, in § 438.8(k)(xvi), that States and managed care plans would be required to comply with § 438.8(k)(1)(xiv) and (xv) no later than the first rating period for contracts with MCOs, PIHPs, and PAHPs beginning on or after the effective date of the final rule. We considered an alternative effective date where States and plan would comply with these requirements 60 days after the effective date of this final rule. However, we were concerned this may not be a reasonable timeframe for compliance as the new reporting requirements may require State and managed care plans to make changes to financial reporting systems and processes. We seek public comment on this proposal.

For separate CHIPs, we do not propose to adopt the new reporting requirements at § 438.8(k)(1)(xiv) and (xv) because SDPs are not applicable to separate CHIP managed care plans. For this reason, we propose to amend § 457.1203(f) to exclude any references to SDPs for managed care plan MLR reporting. For clarity, we also propose to make a technical change at § 457.1203(f) to include the word ''in'' before the cross-reference to § 438.8.

To assist in CMS oversight of these arrangements, the plan-level SDP expenditure reporting should be reflected in States' annual summary MLR reports to CMS. As part of States' annual summary MLR reporting that is required under § 438.74, we propose to require two additional line items. The first item at § 438.74(a)(3)(i) requires State reporting of the amount of payments made to providers that direct Medicaid MCO, PIHP, or PAHP expenditures under § 438.6(c). The second item at § 438.74(a)(3)(ii) requires State reporting of the amount of payments, including amounts included in capitation payments, that the State makes to Medicaid MCOs, PIHPs, or PAHPs for approved SDPs under § 438.6(c). We propose, in § 438.74(a)(4), that States would be required to comply with § 438.74(a)(3) no later than the rating period for contracts with MCOs, PIHPs, and PAHPs beginning on or after 60 days following the effective date of the final rule as we believe this is a reasonable timeframe for compliance. We considered an alternative effective date where States would comply with the new requirement 60 days after the effective date of this final rule. However, we were concerned this may not be a reasonable timeline for compliance as these changes may require States to make changes to financial reporting systems and processes. We seek public comment on this proposal.

We do not propose to adopt the new SDP reporting requirements for separate CHIPs at § 438.74 since expenditures under § 438.6(c) are not applicable to separate CHIP managed care plans. However, since existing separate CHIP regulations at § 457.1203(e) currently cross-reference to the reporting requirements at § 438.74, we propose to amend § 457.1203(e) to exclude any references to SDPs in State MLR reporting.

While some managed care plans and States may oppose these proposals as increasing administrative burden, we believe that the increased transparency associated with these enhanced standards would benefit both State and Federal government oversight of SDPs. Implementing these new requirements for both State and managed care plan reporting of actual SDP expenditures would support CMS' understanding of provider-based payment across delivery systems.

4. In Lieu of Services and Settings (ILOSs) (§§ 438.2, 438.3, 438.7, 438.16, 438.66, 457.1201, 457.1207)

a. Overview of ILOS Requirements (§§ 438.2, 438.3(e), 438.16, 457.1201(e))

In the 2016 final rule, we finalized § 438.3(e) for Medicaid, which was included in separate CHIP regulations through cross-reference at § 457.1201(e), and specified in § 438.3(e)(2) that managed care plans have flexibility under risk contracts to provide a substitute service or setting for a service or setting covered under the State plan, when medically appropriate and cost effective, to enrollees at the managed care plan and enrollee option (81 FR 27538 and 27539). A substitute service or setting provided in lieu of a covered State plan service or setting under these parameters is known as an ''in lieu of service or setting'' (ILOS). In the 2015 notice of proposed rulemaking, we stated that, under risk contracts, managed care plans have historically had the flexibility to offer an ILOS that meets an enrollee's needs (80 FR 31116). Within the 2016 final rule, we clarified that this ILOS authority continues to exist for States and managed care plans, subject to § 438.3(e)(2). We believe ILOS authority is inherent in a risk contract in accordance with section 1903(m)(2)(A) of the Act which addresses risk-based capitation payments, which are defined in § 438.2. Additionally, we rely on the authority in section 1902(a)(4) of the Act to establish methods for proper and effective operations in Medicaid with respect to PIHPs and PAHPs. ILOSs are incorporated into the applicable States' contracts with its managed care plans and associated capitation rates, and are subject to CMS review and approval in accordance with § 438.3(a) and § 438.7(a) respectively.

ILOSs are utilized by States and their managed care plans to strengthen access to, and availability of, covered services and settings, or reduce or prevent the need for covered services and settings. As outlined in the guidance issued on January 7, 2021 [138] and January 4, 2023 [139] respectively, ILOSs can be an innovative option States may consider employing in Medicaid and CHIP managed care programs to address social determinants of health (SDOHs) and health-related social needs (HRSNs). The use of ILOSs can also improve population health, reduce health inequities, and lower overall health care costs in Medicaid. We further believe that ILOSs can be used, at the option of the managed care plan and the enrollee, as immediate or longer term substitutes for State plan-covered services and settings, or when the ILOSs can be expected to reduce or prevent the future need to utilize the State plan-covered services and settings. The investments and interventions implemented through ILOSs may also offset potential future acute and institutional care, and improve quality, health outcomes, and enrollee experience. For example, offering medically tailored meals as an ILOS may improve health outcomes and facilitate greater access to care to HCBS, thereby preventing or delaying enrollees' need for nursing facility care. We encourage managed care plans to leverage existing State and community level resources, including through contracting with community-based organizations and other providers that are already providing such services and settings and that have expertise working with Medicaid and CHIP enrollees. We believe there is a great deal of State and managed care plan interest in utilizing ILOSs to help address many of the unmet physical, behavioral, developmental, long-term care, and other needs of Medicaid and CHIP enrollees. We expect that States' and managed care plans' use of ILOSs, as well as associated Federal expenditures for these services and settings, will

[138] *https://www.medicaid.gov/federal-policy-guidance/downloads/sho21001.pdf.*

[139] *https://www.medicaid.gov/federal-policy-guidance/downloads/smd23001.pdf.*

continue to increase. We acknowledge that ILOSs can offer many benefits for enrollees, but we also believe it is necessary to ensure adequate assessment of these substitute services and settings prior to approval, and ongoing monitoring for appropriate utilization of ILOSs and beneficiary protections. Additionally, we believe there must be appropriate fiscal protections and accountability of expenditures on these ILOSs which are alternative services and settings not covered in the State plan. Therefore, we propose to revise the regulatory requirements for ILOSs to specify the nature of the ILOSs that can be offered and ensure appropriate and efficient use of Medicaid and CHIP resources, and that these investments advance the objectives of the Medicaid and CHIP programs.

To ensure clarity on the use of the term ''in lieu of service or setting'' and the associated acronym ''ILOS,'' we propose to add a definition in § 438.2 for Medicaid to define an ''in lieu of service or setting (ILOS)'' as a service or setting that is provided to an enrollee as a substitute for a covered service or setting under the State plan in accordance with § 438.3(e)(2) and acknowledge that an ILOS can be used as an immediate or longer term substitute for a covered service or setting under the State plan, or when the ILOS can be expected to reduce or prevent the future need to utilize State plan-covered service or setting. For separate CHIP, we propose to align by adding ''In lieu of service or setting (ILOS) is defined as provided in § 438.2 of this chapter'' to the definitions at § 457.10. Given this proposed definition and associated acronym, we also propose several conforming changes in § 438.3(e)(2). We propose to revise § 438.3(e)(2) to remove ''services or settings that are in lieu of services or settings covered under the State plan'' and replace it with ''an ILOS''. We propose to revise § 438.3(e)(2)(i) and (ii) to remove ''alternative service or setting'' and replace it with ''ILOS.'' In § 438.3(e)(2)(iii), we propose to remove ''in lieu of services'' and replace it with ''ILOS is'', and remove the ''and'' at the end of this requirement given new requirements that will be proposed. We propose to revise § 438.3(e)(2)(iv) to remove ''in lieu of services are'' and replace it with ''the ILOS is, and add the term ''and settings'' after ''covered State plan covered services'' to accurately reflect that ILOSs are substitute services and settings for State plan services and settings. Additionally, we added an ''and'' at the end of this requirement given a new proposed addition of § 438.3(e)(2)(v) that is described later in this section. The proposed changes at § 438.3(e) are equally applicable to separate CHIP managed care plan contract requirements through the existing cross-reference at § 457.1201(e).

Because we are making numerous proposals related to ILOSs, we believe adding a cross reference in § 438.3(e)(2)(v) to a new section would make it easier for readers to locate all of the provisions in one place and the designation flexibility of a new section would enable us to better organize the provisions for readability. To do this, we propose to create a new § 438.16 titled *ILOS requirements* for Medicaid, and we propose to amend § 457.1201(c) and (e) to include cross-references to § 438.16 to adopt for separate CHIP. Our proposals in § 438.16 would be based on several key principles, described in further detail in sections I.B.4.b. through I.B.4.h. of this proposed rule. These principles include that ILOSs would have to: (1) meet general parameters; (2) be provided in a manner that preserves enrollee rights and protections; (3) be medically appropriate and cost effective substitutes for State plan services and settings, (4) be subject to monitoring and oversight; and (5) undergo a retrospective evaluation, when applicable. We also propose parameters and limitations for ILOSs, including our proposed requirements for ILOSs to be appropriately documented in managed care plan contracts and considered in the development of capitation rates, and our proposed risk-based approach for State documentation and evaluation requirements of any managed care plan contracts that include ILOSs. CMS intends to continue our review of ILOSs as part of our review of the States' managed care plan contracts in accordance with § 438.3(a), and associated capitation rates in accordance with § 438.7(a). CMS has the authority to deny approval of any ILOS that does not meet standards in regulatory requirements, and thereby does not advance the objectives of the Medicaid program, as part of our review of the associated Medicaid managed care plan contracts and capitation rates.

We acknowledge that one of the most commonly utilized ILOSs is inpatient mental health or substance use disorder treatment provided during a short term stay (no more than 15 days during the period of the monthly capitation payment) in an institution for mental diseases (IMD). Due to the statutory limitation on coverage of services provided in an IMD in accordance with language in section 1905(a) of the Act following section 1905(a)(30) of the Act, our ability to permit States to make a monthly Medicaid capitation payment for an enrollee who receives services in an IMD is limited as outlined in § 438.6(e), and uniquely based on the nature of risk-based payment (see 80 FR 31116 for further details on this policy). Other than as an ILOS, in accordance with §§ 438.3(e)(2) and 438.6(e), FFP is not available for any medical assistance under Title XIX for services provided to an individual, ages 21 to 64, who is a patient in an IMD facility. We are not proposing changes regarding the coverage of short term stays in an IMD as an ILOS, or payments to MCOs and PIHPs for enrollees who are a patient in an IMD in § 438.6(e) (see 81 FR 27555 through 27563 for further details on the existing policy). In acknowledgement of the unique parameters necessary for coverage of services provided in IMDs as an ILOS, given the statutory limitations, we do not believe § 438.16 should apply to a short term IMD stay as an ILOS. For example, a short term stay in an IMD as an ILOS is excluded from the calculation for an ILOS cost percentage, described in further detail in section I.B.4.b. of this proposed rule, as the costs of a short term IMD stay must not be used in rate development given the statutory limitation, and instead States must use the unit costs of providers delivering the same services included in the State plan as required in § 438.6(e). Additionally, as described in § 438.6(e), States may only make a monthly capitation payment to an MCO or PIHP for an enrollee aged 21 to 64 receiving inpatient treatment in an IMD when the length of stay in an IMD is for a short term stay of no more than 15 days during the period of the monthly capitation payment. Therefore, we propose to add § 438.3(e)(2)(v) to explicitly provide an exception from the applicability of § 438.16 for short term stays, as specified in § 438.6(e), for inpatient mental health or substance use disorder treatment in an IMD. This proposal does not replace or alter existing Federal requirements and limitations regarding the use of short term IMD stays as an ILOS, or the availability of FFP for capitation payments to MCOs and PIHPs for enrollees who utilize an IMD.

We do not propose to adopt the IMD exclusion for separate CHIP since there are no similar payment restrictions for stays in an IMD in separate CHIP. As long as a child is not applying for or renewing their separate CHIP coverage while a resident of an IMD, the child remains eligible for separate CHIP and any covered State plan services or ILOSs while in an IMD consistent with the

requirements of § 457.310(c)(2)(ii). For this reason, we propose to amend § 457.1201(e) to exclude references to IMDs in the cross-reference to § 438.3(e).

States and managed care plans will continue to be obligated to comply with other applicable Federal requirements for all ILOS, including short term IMD stays. This includes, but is not limited to, those requirements outlined in §§ 438.3(e)(2), 438.6(e), and 438.66. As required in § 438.66(a) through (c), States must establish a system to monitor performance of their managed care programs. When ILOSs are included in a managed care plan's contract, they too must be part of the State's monitoring activities. As part of such monitoring, States must ensure that all ILOSs, including short term stays in an IMD, are medically appropriate, cost effective, and at the option of the enrollee and managed care plan.

b. ILOS General Parameters (§§ 438.16(a) Through (d), 457.1201(c) and (e))

We believe ILOSs can give States and managed care plans opportunities to strengthen access to care, address unmet needs of Medicaid and CHIP enrollees, and improve the health of Medicaid and CHIP beneficiaries. However, we believe it is necessary to implement appropriate Federal protections to ensure the effective and efficient use of Medicaid and CHIP resources, particularly since these services and settings are not State plan-covered services and settings furnished under managed care plan contracts, and we rely on the authority in sections 1902(a)(4) and 2101(a) of the Act to establish methods for proper and effective operations in Medicaid and CHIP respectively. Therefore, to ensure States and managed care plans utilize ILOSs effectively and in a manner that best meets the needs of the enrollees as well as that related Federal expenditures are reasonable and appropriate, we propose several key requirements in § 438.16.

We believe that a limitation on the types of substitute services or settings that can be offered as an ILOS would be a key protection to ensure an ILOS is an appropriate and efficient use of Medicaid and CHIP resources, and we believe this is a reasonable method to ensure proper and effective operations in Medicaid and CHIP in accordance with authority in sections 1902(a)(4) and 2101(a) of the Act, respectively. We believe that the services and settings that could be provided as an ILOS should be consistent with the services and settings that could be authorized under the Medicaid or CHIP State plan or a program authorized through a waiver under section 1915(c) of the Act. As further described in section I.B.4.a. of this proposed rule, we believe the only Medicaid exception should be a short term stay in an IMD for the provision of inpatient mental health or substance use disorder treatment, which already has appropriate safeguards per requirements outlined in § 438.6(e). Therefore, we propose to require in § 438.16(b) that an ILOS must be approvable as a service or setting through a State plan amendment, including sections 1905(a), 1915(i), or 1915(k) of the Act, or a waiver under section 1915(c) of the Act. For example, personal care homemaker services are approvable as a covered service in a waiver under section 1915(c) of the Act, and would be an approvable ILOS if it is a medically appropriate and cost effective substitute for a service or setting covered under the State plan.

For separate CHIP, we similarly propose that ILOSs must be consistent with services and settings approvable under sections 2103(a) through (c), 2105(a)(1)(D)(ii), and 2110(a) of the Act as well as the services and settings identified in § 438.16(b). For this reason, we propose to adopt the requirements proposed at § 438.16(b) by amending § 457.1201(e) to include a new cross-reference to § 438.16(b). We also remind States that the use of an ILOS does not absolve States and managed care plans of their responsibility to comply with other Federal requirements. States must ensure that contracts with managed care plans comply with all applicable Federal and State laws and regulations in accordance with §§ 438.3(f) and 457.1201(f). For example, with the exception of short term IMD stays as described in section I.B.4.a. of this proposed rule, ILOSs must adhere to general prohibitions on payment for room and board under Title XIX of the Act. Additionally, States and managed care plans must ensure access to emergency services in accordance with the Emergency Medical Treatment and Labor Act and compliance with the Americans with Disabilities Act and Section 504 of the Rehabilitation Act. Moreover, consistent with § 438.208(c)(3), States must comply with person-center planning requirements as applicable.

Because ILOSs are provided as substitutes for State plan-covered services and settings, we believe that we have an obligation to ensure appropriate fiscal protections for Medicaid and CHIP investments in ILOSs, and that there should be a limit on the amount of expenditures for ILOSs to increase accountability, reduce inequities in the services and settings available to beneficiaries across managed care and fee-for-service delivery systems, and ensure enrollees receive State plan-covered services and settings. We rely on the authority in section 1902(a)(4) of the Act to establish methods for proper and efficient operations in Medicaid and section 2101(a) of the Act for establishing efficient and effective health assistance in CHIP. To determine a reasonable limit on expenditures for ILOSs, we propose to limit allowable ILOS costs to a portion of the total costs for each managed care program that includes ILOS(s), hereinafter referred to as an ILOS cost percentage. States claim FFP for the capitation payments they make to managed care plans. Capitation payments are based on the actuarially sound capitation rates as defined in § 438.2, for Medicaid, and rates are developed with ''actuarially sound principles'' as required for separate CHIP at § 457.1203(a). The utilization and cost associated with ILOSs are accounted for in the development of Medicaid and separate CHIP capitation rates in accordance with §§ 438.3(e)(2)(iv) and 457.1201(e) respectively. Therefore, we propose in § 438.16(c), that the ILOS cost percentage must be calculated based on capitation rates and capitation payments as outlined in further detail in this section. In section I.B.2.l. of this proposed rule, CMS proposes requirements for State directed payments as a separate payment term, and we also believe these costs should be accounted for in the denominator of the ILOS cost percentage as these are payments made by the State to the managed care plans. The reporting requirements in this proposal are authorized by sections 1902(a)(6) and 2107(b)(1) of the Act which require that States provide reports, in such form and containing such information, as the Secretary may from time to time require.

Given that actuarially sound capitation rates are developed prospectively based on historical utilization and cost experience, as further defined in § 438.5, we believe that an ILOS cost percentage and associated expenditure limit should be measured both on a projected basis when capitation rates are developed and on a final basis after capitation payments are made by States to the managed care plans. Therefore, we propose to define both a ''projected ILOS cost percentage'' and ''final ILOS cost percentage'' in § 438.16(a) as the amounts for each managed care program that includes ILOS(s) using the calculations proposed in § 438.16(c)(2)

and (3), respectively. Additional details on these percentages are provided later in this section. We also believe the projected ILOS cost percentage and final ILOS cost percentage should be measured distinctly for each managed care program as capitation rates are typically developed by program, ILOSs available may vary by program, and each managed care program may include differing populations, benefits, geographic areas, delivery models, or managed care plan types. For example, one State may have a behavioral health program that covers care to most Medicaid beneficiaries through PIHPs, a physical health program that covers physical health care to children and pregnant women through MCOs, and a program that covers physical health and MLTSS to adults with a disability through MCOs. Another State may have several different managed care programs that serve similar populations and provide similar benefits through MCOs, but the delivery model and geographic areas served by the managed care programs vary. We addressed managed care program variability within the 2016 final rule when we noted that ''This clarification in the regulatory text to reference ''managed care program'' in the regulatory text is to recognize that States may have more than one Medicaid managed care program—for example physical health and behavioral health . . .'' (81 FR 27571). Therefore, we do not believe it would be consistent with our intent to develop an ILOS cost percentage by aggregating data from more than one managed care program since that would be inconsistent with rate development, the unique elements of separate managed care programs, and the ILOSs elements (target populations, allowable provider types, etc.) that vary by managed care program. Developing the ILOS cost percentage by managed care program would further ensure appropriate fiscal safeguards for each managed care program that includes ILOS(s). We believe 5 percent is a reasonable limit on ILOS expenditures because it is high enough to ensure that ILOSs would be used effectively to achieve their intended purpose, but still low enough to ensure appropriate fiscal safeguards. This proposed 5 percent limit would be similar to incentive arrangements at § 438.6(b), which limits total payment under contracts with incentive arrangements to 105 percent of the approved capitation payments attributable to the enrollees or services covered by the incentive arrangement. In § 438.6(b)(2), we note that total payments in excess of 105 percent will not be actuarially sound. We believe this existing limitation for incentive arrangements allows States to design and motivate quality and outcome-based initiatives while also maintaining fiscal integrity. We believe a similar threshold would be necessary and appropriate for ILOSs. Therefore, we propose, at § 438.16(c)(1)(i), to require that the projected ILOS cost percentage could not exceed 5 percent and the final ILOS cost percentage could not exceed 5 percent.

For separate CHIP, we require States at § 457.1203(a) to develop capitation rates consistent with actuarially sound principles, but at § 457.1203(b) we allow for States to establish higher capitation rates if necessary to ensure sufficient provider participation or provider access or to enroll providers who demonstrate exceptional efficiency or quality in the provision of services. While we do not impose a similar limit for incentive arrangements in separate CHIP capitation rates as we do for Medicaid capitation rates, we wish to align with Medicaid in limiting projected and final ILOS cost percentages to 5 percent of capitation payments for separate CHIPs. For this reason, we propose to amend § 457.1203(b) to adopt 5 percent ILOS cost percentage limits by amending § 457.1201(c) to include a new cross-reference to § 438.16(c)(1).

We also propose, in § 438.16(c)(1)(ii), that the State's actuary would have to calculate the projected ILOS cost percentage and final ILOS cost percentage on an annual basis and recalculate these projections annually to ensure consistent application across all States and managed care programs. Furthermore, to ensure that the projected ILOS cost percentage and final ILOS cost percentage would be developed in a consistent manner with how the associated ILOS costs would be included in rate development, we propose at § 438.16(c)(1)(iii) to require that the projected ILOS cost percentage and the final ILOS cost percentage would have to be certified by an actuary and developed in a reasonable and appropriate manner consistent with generally accepted actuarial principles and practices. An ''actuary'' is defined in § 438.2 as an individual who meets the qualification standards established by the American Academy of Actuaries for an actuary and follows the practice standards established by the Actuarial Standards Board, and who is acting on behalf of the State to develop and certify capitation rates. Therefore, we believe that the actuary that would certify the projected and final ILOS cost percentages should be the same actuary that developed and certified the capitation rates that included ILOS(s). For separate CHIP, we do not require actuarial certification of capitation rates and are not adopting the requirement at § 438(c)(1)(iii). We propose to amend § 457.1201(c) to exclude requirements for certification by an actuary. However, we remind States that separate CHIP rates must be developed using ''actuarially sound principles'' in accordance with § 457.1203(a).

We propose at § 438.16(c)(2), that the projected ILOS cost percentage would have to be calculated by dividing the portion of the total capitation payments that would be attributable to all ILOSs, excluding short term stays in an IMD as specified in § 438.6(e), for each managed care program (numerator) by the projected total capitation payments for each managed care program, including all State directed payments in effect under § 438.6(c) and pass-through payments in effect under § 438.6(d), and the projected total State directed payments that are paid as a separate payment term as described in § 438.6(c)(6) (denominator). We also propose, at § 438.16(c)(3), that the final ILOS cost percentage would have to be calculated by dividing the portion of the total capitation payments that is attributable to all ILOSs, excluding a short term stay in an IMD as specified in § 438.6(e), for each managed care program (numerator) by the actual total capitation payments for each managed care program, including all State directed payments in effect under § 438.6(c) and pass-through payments in effect under § 438.6(d), and the actual total State directed payments that are paid as a separate payment term as described in § 438.6(c)(6) (denominator). We believe these proposed numerators and denominators for the projected and final ILOS cost percentages would be an accurate measurement of the projected and final expenditures associated with ILOSs and total program costs in each managed care program in a risk-based contract. For separate CHIP, we propose to align with the projected and final ILOS cost percentage calculations by amending § 457.1201(c) to include cross-references to § 438.16(c)(2) through (3). However, since pass-through payments and State directed payments are not applicable to separate CHIP, we propose to exclude all references to pass-through payments and State directed payments at § 457.1201(c).

We considered proposing that the actual expenditures of the managed care plans for ILOSs and total managed care program costs, tied to actual paid amounts in encounter data, be the numerator and denominator for the final

ILOS cost percentage. However, we determined this would be inconsistent with how States claim FFP for capitation payments in a risk contract (based on the actuarially sound capitation rates as defined in § 438.2 for each managed care program, rather than on the actual plan costs for delivering ILOSs based on claims and encounter data submitted). Consistent with all services and settings covered under the terms of the managed care plans' contracts, we acknowledge the actual plan experience will inform prospective rate development in the future, but it is an inconsistent measure for limiting ILOS expenditures associated with FFP retroactively. We believe expenditures for short term stays in an IMD would have to be excluded from the numerator of these calculations as they are excluded from the proposed requirements outlined in § 438.16. We also believe the denominator of these calculations should include all State directed payments and pass-through payments that are included into capitation rates as outlined in § 438.6(c) and (a) respectively. It is necessary to include these State directed payments and pass-through payments to ensure that the projected and final expenditures would accurately reflect total capitation payments.

We believe the projected ILOS cost percentage should be included in the rate certification for each managed care program that includes ILOS(s) and any subsequent revised rate certification (for example, rate amendment) as applicable, such as those that change the ILOSs offered, capitation rates, pass-through payments and/or State directed payments. As previously described in this section, we propose at § 438.16(c)(1)(iii) that the actuary who certifies the projected ILOS cost percentage would have to be the same actuary who develops and certifies the associated Medicaid capitation rates and the State directed payments paid as a separate payment term (see section I.B.2.l. of this proposed rule for details on this proposal for separate payment terms). We also believe that including this percentage within the rate certification would reduce administrative burden for States and actuaries while also ensuring consistency between how this percentage would be calculated and how ILOS costs would be accounted for in rate development. Therefore, we propose to require, at § 438.16(c)(5)(i), that States annually submit to CMS for review the projected ILOS cost percentage for each managed care program as part of the Medicaid rate certification required in § 438.7(a). For separate CHIP, we do not require actuarial certification of capitation rates or review by CMS, and for this reason we do not adopt the new requirement proposed at § 438.16(c)(5)(i) for separate CHIP.

As the proposed denominator for the final ILOS cost percentage, in § 438.16(c)(3)(i), would be based on the actual total capitation payments and the State directed payments paid as a separate payment term (see section I.B.2.l. of this proposed rule for details on this proposal for separate payment terms) paid by States to managed care plans, we recognize that calculating the final ILOS cost percentage would take States and actuaries some time. For example, changes to the eligibility file and revised rate certifications for rate amendments may impact the final capitation payments that are a component of the calculation. We also believe documentation of the final ILOS cost percentage is a vital component of our monitoring and oversight as it would ensure that the expenditures for ILOSs comply with the proposed 5 percent limit; and therefore, must be submitted timely. Given these factors, we believe that 2 years is an adequate amount of time to accurately perform the calculation. Therefore, we propose, at § 438.16(c)(5)(ii), to require that States must submit the final ILOS cost percentage report to CMS with the rate certification for the rating period beginning 2 years after the completion of each 12-month rating period that included an ILOS(s). Under this proposal, for example, the final ILOS cost percentage report for a managed care program that uses a calendar year 2024 rating period would be submitted to CMS with the calendar year 2027 rate certification. For separate CHIP, we do not require review of capitation rates by CMS and do not propose to adopt the requirements at § 438.16(c)(5)(ii) for separate CHIP.

We considered requiring the final ILOS cost percentage be submitted to CMS within 1 year after the completion of the rating period that included ILOS(s) to receive this data in a more timely fashion. However, we were concerned this may not be adequate time for States and actuaries given the multitude of factors described previously in this section. We request comment on whether our assumption that 1 year is inadequate is correct.

We also believe that it is appropriate for States' actuaries to develop a separate report to document the final ILOS cost percentage, rather than including it in a rate certification, because the final ILOS cost percentage may require alternate data compared to the base data that were used for prospective rate development, given the timing of base data requirements as outlined in § 438.5(c)(2). However, this final ILOS cost percentage could provide details that should inform prospective rate development, such as through an adjustment outlined in § 438.5(b)(4), so we believe it should be submitted along with the rate certification. We note that this proposal is similar to the concurrent submission necessary for the MLR reporting at § 438.74. We considered proposing that States submit this report separately to CMS upon completion. However, we believe there should be consistency across States for when this report is submitted to CMS for review, and we believe receiving this report and the rate certification at the same time would enable CMS to review them concurrently. For these reasons, we propose, at § 438.16(c)(5)(ii), to require that States submit the final ILOS cost percentage annually to CMS for review as a separate report concurrent with the rate certification submission required in § 438.7(a). We intend to issue additional guidance on the standards and documentation requirements for this report. For separate CHIP, we do not require review of capitation rates by CMS and do not propose to adopt the requirements at § 438.16(c)(5)(ii) for separate CHIP.

We believe there must be appropriate transparency on the managed care plan costs associated with delivering ILOSs to aid State oversight and monitoring of ILOSs, and to ensure proper and effective operations in Medicaid in accordance with authority in section 1902(a)(4) of the Act. Therefore, we propose, in § 438.16(c)(4), that States provide to CMS a summary report of the actual managed care plan costs for delivering ILOSs based on claims and encounter data provided by the managed care plans to States. We also believe this summary report should be developed concurrently and consistently with the final ILOS cost percentage to ensure appropriate fiscal safeguards for each managed care program that includes ILOS(s). We believe this summary report should be developed for each managed care program consistent with the rationale described in section I.B.4.b. of this proposed rule for developing the ILOS cost percentage for each managed care program. Therefore, in § 438.16(a), we propose to define a ''summary report for actual MCO, PIHP and PAHP ILOS costs'' and propose that this summary report be calculated for each managed

care program that includes ILOSs. We also propose, in § 438.16(c)(1)(ii), that this summary report be calculated on an annual basis and recalculated annually. We propose, in § 438.16(c)(1)(iii), that this summary report be certified by an actuary and developed in a reasonable and appropriate manner consistent with generally accepted actuarial principles and practices. Finally, we propose, in § 438.16(c)(5)(ii), that this summary report be submitted to CMS for review within the actuarial report that includes the final ILOS cost percentage. For separate CHIP, we do not require similar actuarial reports and do not propose to adopt the annual ILOS cost report requirements by excluding references to them at § 457.1201(c).

To balance States' administrative burden with ensuring fiscal safeguards and enrollee protections related to ILOSs, we believe it would be appropriate to use a risk-based approach for States' documentation and evaluation requirements. This proposed reporting requirement is authorized by sections 1902(a)(6) and 2107(b)(1) of the Act which requires that States provide reports, in such form and containing such information, as the Secretary may from time to time require. Therefore, we propose that the ILOS documentation States would have to submit to CMS, as well as an evaluation States would have to complete, would vary based on a State's projected ILOS cost percentage for each managed care program. We believe the projected ILOS cost percentage would be a reasonable proxy for identifying States that offer a higher amount of ILOSs, in comparison to overall managed care program costs, and likely could have a corresponding higher impact to Federal expenditures. As we considered the types of State activities and documentation that could vary under this proposed risk-based approach, we considered which ones would be critical for all States to undertake for implementation and continual oversight of the use of ILOSs, but would not require our review unless issues arose that warranted additional scrutiny. We propose that documentation requirements for States with a projected ILOS cost percentage that is less than or equal to 1.5 percent would undergo a streamlined review, while States with a higher projected ILOS cost percentage would have more robust documentation requirements. Additionally, we propose States with a higher final ILOS cost percentage would be required to submit an evaluation of ILOSs to CMS. These parameters are explained further in sections I.B.4.d. and g. of this proposed rule.

As we considered a reasonable percentage for this risk-based approach, we evaluated flexibilities currently offered in part 438 to assess if similar thresholds would be reasonable for this purpose. These flexibilities included the opportunity available to States to adjust rates without the requirement for a revised rate certification. Specifically, we are referring to the 1 percent flexibility for States that certify rate ranges in accordance with § 438.4(c)(2)(iii) and the 1.5 percent flexibility for States that certify capitation rates in accordance with § 438.7(c)(3). An additional flexibility currently available to States relates to incentive arrangements. In accordance with § 438.6(b)(2), total payment under States' managed care plan contracts with incentive arrangements are allowed to be no greater than 105 percent of the approved capitation payments attributable to the enrollees or services covered by the incentive arrangement. As we evaluated a reasonable and appropriate threshold to utilize for this risk-based approach, we explored utilizing similar flexibilities of 1 percent, 1.5 percent and 5 percent, and also considered 2.5 percent as a mid-point in this 5 percent range.

We do not believe 5 percent is a reasonable percentage for this risk-based approach as this is the proposed limit for the projected and final ILOS cost percentages described in this section. We believe a greater degree of State documentation, and CMS oversight, is necessary for States that offer ILOSs that represent a higher share of overall managed care program costs, and likely have a corresponding higher impact on Federal expenditures. In the 2020 final rule, we finalized § 438.4(c)(2)(iii) to permit States that certify rate ranges to make rate adjustments up to 1 percent without submitting a revised rate certification. Our rationale was that States using rate ranges were already afforded additional flexibility given the certification of rate ranges so it was not appropriate to utilize the same 1.5 percent flexibility that is offered to States that certify capitation rates (85 FR 72763). We do not believe a similar rationale is appropriate or relevant for this proposal, and thus, we do not believe 1 percent would be the most appropriate threshold. We are also concerned that utilizing 2.5 percent for a risk-based approach would result in inadequate Federal oversight to ensure program integrity, such as fiscal safeguards and enrollee protections related to ILOSs. We believe 1.5 percent, a de minimis amount, is appropriate to propose for utilization of a risk-based approach for States' documentation and evaluation requirements, and associated CMS review, as ILOS expenditures less than or equal to 1.5 percent would likely be a relatively minor portion of overall managed care program expenditures. Therefore, we propose 1.5 percent for this risk-based approach in § 438.16(d)(2); States with a projected ILOS cost percentage that exceeds 1.5 percent would be required to adhere to additional requirements described in sections I.B.4.d. and g. of this proposed rule. For separate CHIP, we propose to adopt the new documentation requirements for States with a cost percentage that exceeds 1.5 percent at § 438.16(d)(2) by amending § 457.1201(e) to include a cross-reference to § 438.16(d)(2).

c. Enrollee Rights and Protections (§§ 438.3(e), 457.1201(e), 457.1207)

Consistent with the ILOS definition proposed in § 438.2, ILOSs are immediate or longer term substitutes for State plan-covered services and settings, or when the ILOSs can be expected to reduce or prevent the future need to utilize the covered services and settings under the State plan. They can be utilized to improve enrollees' health care outcomes, experience, and overall care; however, ILOSs are an option and not a requirement for managed care plans. While ILOSs are offered to Medicaid and CHIP enrollees at the option of the managed care plan, the provision of an ILOS is also dependent on the enrollees' willingness to use the ILOS instead of the State plan-covered service or setting. Medicaid managed care enrollees are entitled to receive covered services and settings under the State plan consistent with section 1902(a)(10) of the Act. As ILOSs can be offered as substitutes for covered State plan services and settings that Medicaid enrollees are otherwise entitled to, we believe that it is of the utmost importance that we identify the enrollee rights and managed care protections for individuals who are offered or opt to use an ILOS instead of receiving State plan-covered service or setting. To ensure clarity for States, managed care plans, and enrollees on the rights and protections afforded to enrollees who are eligible for, offered, or receive an ILOS, we propose to add new § 438.3(e)(2)(ii)(A) and (B) under § 438.3(e)(2)(ii) to specify our meaning of enrollee rights and protections that are not explicitly stated elsewhere in part 438. We believe it would be appropriate to add this clarity to § 438.3(e)(2)(ii) as these are not new rights or protections, but rather, existing rights and protections that we believe

should be more explicitly stated for all ILOSs, including short-term IMD stays.

We propose to specify, in § 438.3(e)(2)(ii)(A), that an enrollee who is offered or utilizes an ILOS would retain all rights and protections afforded under part 438, and if an enrollee chooses not to receive an ILOS, they would retain their right to receive the service or setting covered under the State plan on the same terms as would apply if an ILOS was not an option. We believe this proposed addition would ensure clarity that the rights and protections guaranteed to Medicaid managed care enrollees under Federal regulations remain in full effect when an enrollee is eligible to be offered or elects to receive an ILOS. For example, enrollees retain the right to make informed decisions about their health care and to receive information on available treatment options and alternatives as required in § 438.100(b)(2)(iii). To ensure that enrollee rights and protections would be clearly and consistently provided to enrollees, we propose to revise § 438.10(g)(2)(ix) to explicitly require that the rights and protections in § 438.3(e)(2)(ii) be included in enrollee handbooks if ILOSs are added to a managed care plan's contract. For separate CHIP, enrollee rights and protections are unique from those offered to Medicaid enrollees, and are instead located under subparts K and L of part 457. To acknowledge these differences, we propose to amend § 457.1207, (which includes an existing cross-reference to § 438.10) to reference instead to the separate CHIP enrollee rights and protections under subparts K and L of part 457. Protections to ensure that managed care enrollees have the ability to participate in decisions regarding their health care, and have avenues to raise concerns including their right to appeals related to adverse benefit determinations and grievances are critical to ensure that ILOSs are utilized in a reasonable, appropriate, and effective manner.

We believe safeguards and protections for enrollees that elect to use an ILOS should be specified, particularly since ILOS costs can vary compared to costs for the State plan service or setting for which it is a substitute. Specifically, we want to make clear that the provision or offer of an ILOS may not be used coercively or with the intent to interfere with the provision or availability of State plan-covered service and setting that an enrollee would otherwise be eligible to receive. Therefore, we propose to add § 438.3(e)(2)(ii)(B) to ensure that an ILOS would not be used to reduce, discourage, or jeopardize an enrollee's access to services and settings covered under the State plan, and a managed care plan may not deny an enrollee access to a service or setting covered under the State plan on the basis that an enrollee has been offered an ILOS as a substitute for a service or setting covered under the State plan, is currently receiving an ILOS as a substitute for a service or setting covered under the State plan, or has utilized an ILOS in the past. While ILOSs can be effective substitutes for services and settings covered under the State plan, we want to ensure consistent and clear understanding for enrollees, States, and managed care plans on how ILOSs can be appropriately utilized to meet an enrollee's needs.

For separate CHIP, we propose to adopt the enrollee rights and protections at § 438.3(e)(2)(ii)(A) and (B) through an existing cross-reference at § 457.1201(e). However, separate CHIP enrollee rights and protections are unique from those offered to Medicaid enrollees and are instead located under subparts K and L of part 457. To acknowledge these differences, we propose to amend § 457.1201(e), which already includes a cross-reference to § 438.3(e) to State, ''An MCO, PIHP, or PAHP may cover, for enrollees, services that are not covered under the State plan in accordance with § 438.3(e) of this chapter . . . except . . . that references to enrollee rights and protections under part 438 should be read to refer to the rights and protections under subparts K and L of this part.''

We believe that a strong foundation built on these enrollee rights and protections would also ensure that ILOSs may have a positive impact on enrollees' access to care, health outcomes, experience, and overall care. As such, we believe these enrollee rights and protections must be clearly documented in States' managed care plan contracts. Therefore, we propose this documentation requirement in § 438.16(d)(1)(v). For separate CHIP, we propose to adopt the requirement for enrollee rights and protections for ILOSs to be documented in managed care plan contracts by amending § 457.1201(e) to include a cross-reference to § 438.16(d)(1)(v).

d. Medically Appropriate and Cost Effective (§§ 438.16(d), 457.1201(e))

In § 438.3(e)(2)(i), managed care plans may cover an ILOS if the State determines the ILOS is medically appropriate and cost effective substitute for a covered State plan service or setting. This policy is consistent with authority in section 1902(a)(4) of the Act to establish methods for proper and efficient operations in Medicaid as well as the nature of capitation payments based on risk-based capitation rates recognized in section 1903(m)(2)(A) of the Act. We interpret medically appropriate and cost effective substitute to mean that an ILOS may serve as an immediate or longer term substitute for a covered service or setting under the State plan, or when the ILOS can be expected to reduce or prevent the future need to utilize a covered service or setting under the State plan. We believe this is a reasonable interpretation in acknowledgement that health outcomes from any health care services and settings may also not be immediate. We offer the following examples to illustrate the difference between an ILOS that is an immediate versus longer term substitute for a State plan service or setting, or when the ILOS can be expected to reduce or prevent the future need to utilize a covered service or setting under the State plan.

For example, transportation to and services provided at a sobering center could be offered as a medically appropriate and cost effective immediate substitute for target populations for specific State plan services or settings, such as an emergency room visit or hospital inpatient stay. Alternatively, we can envision target populations for which an ILOS, such as housing transition navigation services, might serve as a longer term substitute for a covered State plan service or setting, or when the ILOS can be expected to reduce or prevent the need to utilize the covered service or setting under the State plan, such as populations with chronic health conditions and who are determined to be at risk of experiencing homelessness. The managed care plan might choose to offer medically tailored meals to individuals with a diabetes diagnosis and poorly managed A1C levels. While not an immediate substitute for a State plan-covered service such as emergency room visits or inpatient hospital stays, medically tailored meals consistently provided to the individual over a period of time could contribute to improved management of the diabetes. In the long term, improved management might lead to fewer complications related to diabetes and consequentially, fewer emergency room visits and inpatient stays thereby demonstrating the ILOS was both medically appropriate and cost effective for the individual.

We believe it is important to ensure appropriate documentation to support a State's determination that an ILOS is a medically appropriate and cost effective substitute, either long or short term, for a State plan-covered service or setting.

ILOS documentation requirements for States would permit CMS and the State to better monitor the use of ILOSs, safeguard enrollee rights, facilitate fiscal accountability, and promote transparency to ensure the efficient and appropriate use of Medicaid and CHIP resources. Therefore, we propose to expand the documentation requirements for ILOSs through the addition of requirements in § 438.16. Specifically, we propose at § 438.16(d)(1), elements that must be included in any managed care plan contract that includes ILOS(s) in order to obtain CMS approval consistent with § 438.3(a). In accordance with § 438.3(e)(2)(iii), States are already required to authorize and identify ILOSs in each managed care plan contract and such ILOSs are offered at the option of the managed care plan. Therefore, we believe it is consistent with a risk contract to require States to provide sufficient detail regarding any ILOSs covered under the contract and accounted for in the capitation rates per § 438.3(e)(2)(iv).

In our experience reviewing managed care plan contracts, States have not always provided sufficient detail in their managed care plan contracts for Federal review. For example, some contracts have included only general language that ILOSs are provided at the option of the managed care plan and have not clearly identified each ILOS that the State has authorized in sufficient detail. We believe clarity is needed to ensure accountability and transparency in managed care plan contracts. Therefore, we propose § 438.16(d)(1)(i) and (ii) to require that States would include within each managed care plan contract that includes ILOS(s), the name and definition for each ILOS and clearly identify the State plan-covered service or setting for which each ILOS has been determined to be a medically appropriate and cost effective substitute by the State. For separate CHIP, we propose to adopt the new documentation requirements at § 438.16(d)(1)(i) and (ii) by amending § 457.1201(e) to include the cross-reference. By requiring that this information be clearly identified in the contract, we believe that managed care plans would have sufficient detail on the ILOSs to be able to utilize ILOSs appropriately while enabling States and CMS to more effectively monitor each ILOS over time. We also believe including this level of detail in the contract would be an appropriate fiscal protection to ensure that capitation rates are developed in an actuarially sound manner in accordance with § 438.4 for Medicaid, and developed with actuarially sound principles in accordance with § 457.1203(a) for separate CHIP. Actuarially sound capitation rates, as defined in § 438.4(a) for Medicaid, and actuarially sound principles as defined at § 457.10 for CHIP, are projected to provide for all reasonable, appropriate, and attainable costs that are required under the terms of the contract and for the operation of the managed care plan for the time period and the population covered under the terms of the contract. Additionally, for Medicaid, such capitation rates must be developed in accordance with the requirements in § 438.4(b), including the requirements that the actuarially sound capitation rates must be appropriate for the populations to be covered and the services to be furnished under the contract as required in § 438.4(b)(2).

The existing regulation § 438.3(e)(2)(i) indicates that a managed care plan may offer an ILOS if the State determines that the ILOS is a medically appropriate and cost-effective substitute for a covered service or setting under the State plan. As noted in section I.B.4.a of this proposed rule, we are proposing a definition of ILOS in § 438.2 to specify that ILOSs may be determined to be cost effective and medically appropriate as immediate or longer-term substitutes for State plan-covered services and settings, or when the ILOSs can be expected to reduce or prevent the future need to utilize State plan-covered services and settings. Current regulations do not require States or managed care plans to document any details related to the determination of medical appropriateness and cost effectiveness, either broadly or for a specific enrollee who is offered an ILOS. For managed care plans to appropriately offer ILOSs to enrollees consistent with the State's determination of medical appropriateness and cost effectiveness, States would have to identify the target populations for each ILOS using clear clinical criteria. Prospective identification of the target population for an ILOS would also be necessary to ensure capitation rates are developed in an actuarially sound manner in accordance with § 438.4, including the requirements that the actuarially sound capitation rates must be appropriate for the populations to be covered and the services to be furnished under the contract as required in § 438.4(b)(2) and meet the applicable requirements of part 438, including ILOS requirements as required in § 438.4(b)(6). For these reasons, we propose a new requirement at § 438.16(d)(1)(iii) to require States to document within each managed care plan contract the clinically defined target population(s) for which each ILOS has been determined to be a medically appropriate and cost effective substitute. For separate CHIP, we propose to adopt the new documentation requirements at § 438.16(d)(1)(iii) by amending § 457.1201(e) to include the cross-reference. We propose the phrase ''clinically defined target populations'' as we believe that States would have to identify a target population for each ILOS that would have to be based on clinical criteria. This would not preclude States from using additional criteria to further target certain clinically defined populations for ILOSs.

While States may establish target population(s) for which an ILOS is medically appropriate, we believe that the actual determination of medical appropriateness should be completed by a provider, for each enrollee, using their professional judgement, and assessing the enrollee's presenting medical condition, preferred course of treatment, and current or past medical treatment to determine if an ILOS is medically appropriate for that specific enrollee. Therefore, we propose, at § 438.16(d)(1)(iv), to require that the managed care plan contract document a process by which a licensed network or managed care plan staff provider would have to determine that an ILOS is medically appropriate for a specific enrollee. Under this proposal, this determination and documentation could be done by either a licensed network provider or a managed care plan staff provider to ensure States and managed care plans have capacity to implement this requirement, consistent with State standards. For separate CHIP, we propose to adopt the new documentation requirements at § 438.16(d)(1)(iv) by amending § 457.1201(e) to include the cross-reference. The provider would have to document the determination of medical appropriateness within the enrollee's records, which could include the enrollee's plan of care, medical record (paper or electronic), or another record that details the enrollee's care needs. This documentation would have to include how each ILOS would be expected to address those needs.

As discussed in section I.B.4.b. of this proposed rule, we propose a risk-based approach based on a State's projected ILOS cost percentage, for State documentation and evaluation requirements of ILOSs that would require standard streamlined documentation to CMS for States with a

projected ILOS cost percentage less than or equal to 1.5 percent while States with a projected ILOS cost percentage that exceeds 1.5 percent would be required to submit additional documentation. To specify the proposed additional documentation requirements for a State with a projected ILOS cost percentage that exceeds 1.5 percent, we propose, at § 438.16(d)(2), the documentation requirements in paragraphs § 438.16(d)(2)(i) and (ii), and that this documentation would be submitted to CMS concurrent with the managed care plan contract that includes the ILOS(s), for review and approval by CMS under § 438.3(a). We believe concurrent submission is the most efficient, since each ILOS must be authorized and identified in States' contracts with a managed care plan as required in § 438.3(e)(2)(ii). In § 438.16(d)(2)(i), we propose that the State submit a description of the process and supporting evidence the State used to determine that each ILOS would be a medically appropriate service or setting for the clinically defined target population(s), consistent with proposed § 438.16(d)(1)(iii). As ILOSs are often substitutes for State plan-covered services and settings that have already been determined medically appropriate, we expect that States would have to use evidence-based guidelines, peer reviewed research, randomized control trials, preliminary evaluation results from pilots or demonstrations, or other forms of sound evidence to support the State's determination of an ILOS' medical appropriateness. Lastly, in § 438.16(d)(2)(ii), we propose that the State provide a description of the process and supporting data that the State used to determine that each ILOS is a cost effective substitute for a State plan-covered service or setting for the defined target population(s), consistent with the proposed § 438.16(d)(1)(iii). CMS has the authority to deny approval of any ILOS that does not meet standards in regulatory requirements, and thereby does not advance the objectives of the Medicaid program, as part of our review of the associated Medicaid managed care plan contracts and capitation rates. For separate CHIP, we propose to adopt the new documentation requirements at § 438.16(d)(2) by amending § 457.1201(e) to include the cross-reference.

While we believe that a risk-based approach for States' ILOS documentation and evaluation requirements is a reasonable and appropriate balance of administrative burden and fiscal safeguards, we always reserve the right to ask for additional documentation from a State as part of our review and approval of the managed care plan contracts and rate certifications as required respectively in §§ 438.3(a) and 438.7(a), and we are not precluded from doing so by our proposal to add § 438.16(d)(2)(i) through (ii). Therefore, we propose to require at § 438.16(d)(3) that any State must provide additional documentation, whether part of the managed care plan contract, rate certification, or supplemental materials, if we determine that the requested information would be pertinent to the review and approval of a contract that includes ILOS(s). For separate CHIP, we propose to adopt the new documentation requirements at § 438.16(d)(3) by amending § 457.1201(e) to include the cross-reference, except that references to rate certifications do not apply.

e. Payment and Rate Development (§§ 438.3(c), 438.7(b), 457.1201(c))

In accordance with existing regulations at § 438.3(e)(2)(iv), States are required to ensure the utilization and actual cost of ILOSs are taken into account in developing the benefit component of the capitation rates that represents covered State plan services, unless a statute or regulation explicitly requires otherwise. Additionally, through existing regulations at § 438.4(b)(6), States' actuaries are required to certify that Medicaid capitation rates have been developed in accordance with the ILOS requirements outlined in § 438.3(e). We relied on authority in section 1903(m)(2)(A)(iii) of the Act and regulations based on our authority under section 1902(a)(4) of the Act, to establish actuarially sound capitation rates. While ILOS utilization and actual costs, when allowed, are included in rate development, the existing regulations at § 438.3(c)(1)(ii) do not clearly acknowledge the inclusion of ILOSs in the final capitation rates and related capitation payments. Existing regulations at § 438.3(c)(1)(ii) require that the final capitation rates must be based only upon services covered under the State plan and additional services deemed by the State to be necessary to comply with the requirements of part 438 subpart K (Parity in Mental Health and Substance Use Disorder Benefits), and represent a payment amount that is adequate to allow the managed care plan to efficiently deliver covered services to Medicaid-eligible individuals in a manner compliant with contractual requirements. As an ILOS is not a managed care plan requirement, but rather offered at the option of the managed care plan, it would not be included within the requirement in § 438.3(c)(2)(ii) related to contractual requirements. We propose to revise § 438.3(c)(1)(ii) to include ''ILOS'' to ensure clarity on this matter. This technical change would be included in separate CHIP regulations through an existing cross-reference at § 457.1201(c). We consider this a technical correction to § 438.3(c)(1)(ii) as §§ 438.3(e)(2)(iv) and 438.4(b)(6) clearly denote the inclusion of ILOSs in rate development and we believe this was inadvertently excluded from the final regulatory text in the 2016 final rule.

Additionally, we propose to revise § 438.7(b)(6) and the proposed § 438.7(c)(4) (see section I.B.2.l. of this proposed rule) to add ''ILOS in § 438.3(e)(2)'' to ensure any contract provision related to ILOSs must be documented in all rate certifications submitted to CMS for review and approval. We believe this is necessary to ensure compliance with proposed new regulatory requirements in § 438.16(c)(1)(i) and (c)(4)(i), described in section I.B.4.b. of this proposed rule, to ensure that the projected ILOS cost percentage documented in the rate certification would not exceed the proposed 5 percent limit. This is a similar approach to the current requirements in § 438.7(b)(6) which require a revised rate certification for any change to a contract provisions related to payment in § 438.6, including incentive arrangements that have a similar 5 percent limit in accordance with § 438.6(b)(2). We intend to issue additional guidance in the Medicaid Managed Care Rate Development Guide, in accordance with § 438.7(e), on the Federal standards and documentation requirements for adequately addressing ILOSs in all rate certifications. For separate CHIP, we do not plan to adopt the proposed change at § 438.7(b)(6) since rate certifications are not applicable to separate CHIP.

As risk-based capitation rates are developed prospectively, States' actuaries will make initial assumptions regarding managed care plan and enrollee utilization of ILOSs and associated costs. Since ILOS are offered at the option of the managed care plan and Medicaid enrollee, States and their actuaries should closely monitor whether managed care plans elect to offer these ILOs and enrollees utilize these ILOSs. States' actuaries should assess if adjustments to the actuarially sound capitation rates are necessary in accordance with §§ 438.4, 438.7(a) and 438.7(c)(2). For example, a rate adjustment may be necessary if managed care plan actual uptake of

ILOSs varies from what is intially assumed for rate development and results in an impact to actuarial soundness.

f. State Monitoring (§§ 438.16(d) and (e), 438.66(e), 457.1201(c))

In the 2016 final rule, we clarified the term ''monitoring'' to include oversight responsibilities, and we required standard data elements that a State's monitoring system must collect to inform performance improvement efforts for its managed care program(s). We wish to continue to strengthen State and CMS oversight of each Medicaid managed care program with the addition of proposed text to explicitly address States' monitoring of ILOSs. We rely on the authority in section 1902(a)(4) of the Act to establish methods for proper and effective operations in Medicaid.

Currently, § 438.66 requires that States establish a system to monitor performance of managed care programs broadly, § 438.66(b) outlines the data elements that a State's system must collect, § 438.66(c) establishes expectations for State use of such data for performance improvement, and § 438.66(e) requires States to provide a report on and assessment of each managed care program. When ILOSs are included in a managed care plan's contract, they too must be included in the State's monitoring activities required in § 438.66(b) and (c). We believe States must ensure appropriate monitoring, evaluation, and oversight of ILOSs. We believe additional protections are necessary to ensure the delivery of ILOSs. In the 2015 notice of proposed rulemaking, we proposed expanded State monitoring requirements in § 438.66 and noted that our experience since the 2002 final rule has shown that strong State management and oversight of managed care is important throughout a program's evolution, but is particularly critical when States transition large numbers of beneficiaries from FFS to managed care or when new managed care plans are contracted (see 80 FR 31158). We subsequently finalized these requirements in the 2016 final rule. We believe that this logic is also applicable when a State expands the use of ILOSs as we have seen in recent years. Therefore, our proposals in this section further strengthen these existing Federal requirements related to States' monitoring activities for each managed care program.

As with all covered services and settings, States and their managed care plans must comply with all enrollee encounter data requirements in §§ 438.242 and 438.818. We rely on authority in section 1903(m)(2) of the Act to require sufficient encounter data and a level of detail specified by the Secretary. Complete, accurate, and validated encounter data would also support the evaluation and oversight of ILOS proposals described in sections I.B.4.g. and h. of this proposed rule, and ensure appropriate rate development, as described in section I.B.4.e. of this proposed rule. In § 438.242(c)(2), we require that contracts between a State and its managed care plans provide for the submission of enrollee encounter data to the State at a frequency and level of detail to be specified by CMS and the State, based on program administration, oversight, and program integrity needs. Further, at § 438.242(d), States must review and validate that encounter data collected, maintained, and submitted to the State by the managed care plan is a complete and accurate representation of the services and settings provided to enrollees. Because ILOSs may not be easily identifiable in CPT® and Healthcare Common Procedure Coding System (HCPCS), we believe it is imperative that States identify specific codes and modifiers, if needed, for each ILOS and provide that information to its managed care plans to ensure consistent use. For example, the use of a modifier is useful when a State needs to separately identify an ILOS from a State plan-covered service or setting that may utilize the same HCPCS code. We propose in § 438.16(d)(1)(vi), to require that States include a contractual requirement that managed care plans utilize the specific codes established by the State to identify each ILOS in enrollee encounter data. States could require the use of specific HCPCS or CPT codes and modifiers, if needed, that identify each ILOS. To the extent possible, we encourage States to work towards the development of standard CPT® and HCPCS codes for ILOSs, and States may wish to collaborate with appropriate interested groups. For separate CHIP, while the provisions at § 438.66 are not applicable, we propose to adopt the new coding requirements at § 438.16(d)(1)(vi) by amending § 457.1201(c) to include the cross-reference.

We considered allowing States to include this level of data outside of the managed care plan contract, such as in a provider manual or similar documents; however, those documents are frequently not readily available to interested parties and some are not made publicly available. We believe requiring specific codes to be in the managed care plan contracts would ensure that we can easily identify ILOSs in T–MSIS data, support program integrity activities, and ensure that the information is publicly available as required at § 438.602(g)(1). For these reasons, we believe requiring the codes in the managed care plan contract would be the most appropriate and efficient option. We also believe this proposal would ensure that ILOSs are easily identifiable in the base data utilized for development of capitation rates in accordance with rate development standards described in § 438.5(c), and the associated development of the projected and final ILOS cost percentage which are built off of capitation rates and capitation payments as proposed in section I.B.4.b. of this proposed rule.

States are required to submit an annual performance report to CMS for each Medicaid managed care program administered by the State in accordance with § 438.66(e)(1), known as the MCPAR. In § 438.66(e)(2), we specify the content of the MCPAR, including § 438.66(b)(11) that specifies accessibility and availability of covered services in the managed care plan contract. As ILOSs are substitutes for State plan-covered services and settings, we believe States should already be reporting on ILOSs in MCPAR, but to improve clarity for States, we propose to add an explicit reference. Therefore, we propose a minor revision to § 438.66(e)(2)(vi) to add the phrase ''including any ILOS.'' To facilitate States' reporting of their monitoring activities and findings for ILOSs in MCPAR, we intend to update the MCPAR report template to enable States to easily and clearly include ILOS data throughout the report. We believe that it is important for States to monitor trends related to the availability and accessibility of ILOSs given the unique and innovative nature of some ILOSs, and we believe using MCPAR would be an efficient way for States to report their activities.

g. Retrospective Evaluation (§§ 438.16(e) and 457.1201(e))

As part of Federal monitoring and oversight of Medicaid and CHIP programs, we regularly require States to submit evaluations to CMS that analyze cost or cost savings, enrollee health outcomes or enrollee experiences for a specific Medicaid or CHIP benefit, demonstration, or managed care program. For example, as set forth in an SMDL [140] published on December 22, 1998, States with a program authorized by a waiver of section 1915(b) of the Act

[140] *https://www.medicaid.gov/federal-policy-guidance/downloads/smd122298.pdf.*

must conduct two independent assessments of the quality of care, cost effectiveness and impact on the State's Medicaid program, and access to care to ensure compliance with § 431.55(b)(2)(i) through (iii). There are also quality requirements at §§ 438.340 and 457.1240(e) for States contracting with a managed care plan to develop and implement a written quality strategy for assessing and improving the quality of health care and services furnished by the plan. We also believe that States should evaluate and demonstrate that ILOSs are cost effective, medically appropriate, and an appropriate and efficient use of Medicaid and CHIP resources and that such a requirement would be consistent with those existing requirements and the proposals outlined in sections I.B.4. of this proposed rule. We rely on the authority in sections 1902(a)(4) and 2101(a) of the Act to establish methods for proper and effective operations in Medicaid and CHIP respectively, and sections 1902(a)(6) and 2107(b)(1) of the Act which requires that States provide reports, in such form and containing such information, as the Secretary may from time to time require. To reduce State and Federal administrative burden, where possible, we again propose a risk-based approach to the State documentation requirement that would be proportional to a State's ILOS cost percentage. We propose, in § 438.16(e)(1) for Medicaid, and through a proposed cross-reference at § 457.1201(e) for separate CHIP, to require States to submit a retrospective evaluation to CMS of ILOSs, if the final ILOS cost percentage exceeds 1.5 percent, though we do strongly encourage all States that include ILOSs in their managed care plan contracts to conduct a retrospective evaluation of all ILOSs. As a State could authorize multiple ILOSs in one managed care program, we believe that this evaluation should evaluate each ILOS in order to clearly assess the impact and effectiveness of each ILOS.

With § 438.16(e)(1)(i) for Medicaid, and through a proposed cross-reference at § 457.1201(e) for separate CHIP, we propose that an evaluation be completed separately for each managed care program that includes an ILOS. We considered allowing States to evaluate ILOSs across multiple managed care programs to reduce State administrative burden and alleviate potential concerns regarding sample size for the evaluation. We further considered permitting States to self-select the appropriate level at which to evaluate ILOSs including for each managed care program, across managed care programs, or by managed care plan contract. However, in our experience, a State with multiple managed care programs (for example, behavioral health, physical health, etc.) could have differing enrollee eligibility criteria, populations, covered benefits, managed care plan types, delivery models, geographic regions, or rating periods among the separate managed care programs. Including more than one managed care program in an evaluation would likely impact evaluation rigor and could dilute or even alter evaluation results due to the variability among managed care programs. As States would be required to provide the ILOS cost percentage for each managed care program, we believe that it is necessary for the evaluation to also be conducted at the individual program level as it is one measure to aid in evaluating the overall impact of the ILOSs. For these reasons, we believe it would be critical for States to provide separate evaluations for each managed care program that includes ILOSs. We seek public comment on whether the evaluation should be completed for each managed care program, across multiple managed care programs, each managed care plan contract, or at a level selected by the State.

Since these proposed retrospective evaluations would utilize complete encounter data, we considered several options for the length of the evaluation period. Often, evaluation reports are required on an annual basis, such as MCPAR in § 438.66(e) or the Network Adequacy and Access Assurances report in § 438.207(d). We considered requiring an annual submission for the report required in § 438.16(e)(1), but believed that encounter data would be insufficient to result in meaningful analysis. We also considered a 3-year evaluation period, which may be sufficient for ILOSs that are immediate substitutes, but enrollees may need to receive longer term substitutes for a period of several years in order for a State to have robust data. We also considered a 10-year period, but we concluded that seemed to be an unreasonably long time to obtain information on the efficient and effective use of these unique services and settings. We concluded that a 5-year period would provide sufficient time to collect complete data. Therefore, we propose in § 438.16(e)(1)(ii) for Medicaid, and through a proposed cross-reference at § 457.1201(e) for separate CHIP, that a State's retrospective evaluation would have to use the 5 most recent years of accurate and validated data for the ILOSs. We believe the 5-year period would allow managed care plans and enrollees to become comfortable with the available ILOSs and opt to provide or receive them, thus generating the necessary data for the evaluation. Even for ILOSs that are longer term substitutes, we believe a 5-year period would be sufficient to permit robust data collection for cost effectiveness and medical appropriateness. We request comment on the appropriate length of the evaluation period.

By proposing that retrospective evaluations be completed using the five most recent years of accurate and validated data for the ILOS(s), we recognize that we need to also propose the scope of the evaluation. We considered permitting States to identify an appropriate 5-year evaluation period, but ultimately decided against this as it could create a perverse incentive to identify a favorable evaluation period for each ILOS in order to circumvent the termination process proposed in § 438.16(e)(2)(iii) and described in section I.B.4.h. of this proposed rule. We also considered if the evaluation period should begin with the first year that a State exceeds the 1.5 percent final ILOS cost percentage threshold, but decided against this option as we believe it is necessary for evaluation rigor to establish an early or, ideally pre-intervention, baseline from which to evaluate the impact of a new ILOS over time. We concluded that States' evaluations should be retroactive to the first complete rating period following the effective date of this provision in which the ILOS was included in the managed care plan contracts and capitation rates; we propose this in § 438.16(e)(1)(iv) for Medicaid, and through a proposed cross-reference at § 457.1201(e) for separate CHIP. We believe that our proposed approach is aligned with identified best practices for evaluation. We would encourage States to consider developing a preliminary evaluation plan for each ILOS as part of the implementation process for a new ILOS and any time States significantly modify an existing ILOS. We request comment on the appropriate timing of an ILOS evaluation period.

To ensure some consistency and completeness in the retrospective evaluations, we believe there should be a minimum set of required topics to be included. First, in § 438.16(e)(1)(ii) for Medicaid, and through a proposed cross-reference at § 457.1201(e) for separate CHIP, we propose to require that States must utilize data to at least evaluate cost, utilization, access, grievances and appeals, and quality of care for each ILOS. Similar elements are

required in evaluations for programs authorized by waivers approved under sections 1915(b) and 1915(c) of the Act and demonstrations under section 1115(a) of the Act. We believe these five proposed elements would permit CMS and States to accurately measure the impact and programmatic integrity of the use of ILOSs. We expand upon these elements in § 438.16(e)(1)(iii) wherein we propose the minimum elements that a State, if required to conduct an evaluation, would have to evaluate and include in an ILOS retrospective evaluation. We propose, in § 438.16(e)(1)(iii)(A) for Medicaid, and through a proposed cross-reference at § 457.1201(e) for separate CHIP, to require States to evaluate the impact each ILOS had on utilization of State plan-covered services and settings, including any associated savings. As an intended substitute for a State plan-covered service or setting, that is cost effective and medically appropriate as required in § 438.3(e)(2)(i), we believe that it is important to understand the impact of each ILOS on these State plan-covered services and settings and any cost savings that result from reduced utilization of such specific services and settings. We believe that this evaluation element would also require the State to evaluate potentially adverse trends in State plan services and settings utilization, such as underutilization of adult preventive health care. Per § 438.3(e)(2)(i), the State must determine that an ILOS is a cost effective substitute; therefore, we believe that it would be appropriate for a State to evaluate any cost savings related to utilization of ILOSs in place of State plan-covered services and settings.

Similarly, we propose in § 438.16(e)(1)(iii)(B) for Medicaid, and through a proposed cross-reference at § 457.1201(e) for separate CHIP, to require that States evaluate trends in managed care plan and enrollee use of each ILOS. We believe that it is necessary to understand actual utilization of each ILOS in order to evaluate enrollee access to ILOSs and related trends that occur over time. Trends in enrollee utilization of ILOSs could also be compared to data related to State plan services and settings utilization to determine if there is a correlation between utilization of certain ILOSs and decreased or increased utilization of certain State plan services and settings. Trends in utilization of ILOSs may also help identify when enrollees choose not to utilize an ILOS to help States and managed care plans assess future changes in authorized ILOSs. We believe this is a key evaluation element necessary to determine if the ILOS was cost effective.

Critical to the authority for the allowable provision of ILOSs, is a State determination that an ILOS is a cost effective and medically appropriate substitute for a covered service or setting under the State plan as required in § 438.3(e)(2)(i). Therefore, we believe States should evaluate whether, after 5 years, its determinations are still accurate given actual enrollee utilization and experience. To achieve this, we propose § 438.16(e)(1)(iii)(C) for Medicaid, and through a proposed cross-reference at § 457.1201(e) for separate CHIP, which would require that States use encounter data to evaluate if each ILOS is a cost effective and medically appropriate substitute for the identified covered service or setting under the State plan or a cost effective measure to reduce or prevent the future need to utilize the identified covered service or setting under the State plan. We have included the following example to identify how a State could use encounter data to evaluate the medical appropriateness of an ILOS. A State may initially determine that the provision of air filters as an ILOS is a medically appropriate substitute service for individuals with an asthma diagnosis for emergency department visits, inpatient and outpatient services, and HCBS for activities of daily living (ADLs). After analyzing the actual encounter data, the State may discover that the provision of air filters to the target population did not result in decreased utilization of a State plan service such as emergency department, inpatient and outpatient services, nor HCBS for ADLs. In this instance, the evaluation results would demonstrate that the ILOS as currently defined was not cost effective for the target population of individuals as currently defined.

As ILOSs are services and settings provided to Medicaid and CHIP managed care enrollees in lieu of State plan-covered services and settings, we believe that it is important for States to evaluate the quality of care provided to enrollees who utilized ILOSs to ensure that the ILOS(s) are held to the same quality standards as the State plan services and settings enrollees would otherwise receive. Quality of care is also a standard domain within evaluations of Medicaid and CHIP services, Medicaid and CHIP managed care plans, and Medicaid and CHIP programs as demonstrated by the ubiquitous use of the National Committee for Quality Assurance (NCQA) Consumer Assessment of Healthcare Providers and Systems (CAHPS) survey and Healthcare Effectiveness Data and Information Set (HEDIS) measure set which includes standardized and validated quality of care measures for use by States and managed care plans operating within Medicaid and CHIP managed care environments. Accordingly, in § 438.16(e)(1)(iii)(D) for Medicaid, and through a proposed cross-reference at § 457.1201(e) for separate CHIP, we propose that States evaluate the impact of each ILOS on quality of care. We believe that States should use validated measure sets, when possible, to evaluate the quality of care of ILOSs, though we do not want to stifle State innovation in this area so we are not proposing to require it. We considered proposing to require that States procure an independent evaluator for ILOS evaluations. In consideration of the myriad of new proposed requirements within this proposed rule, we weighed the value of independent evaluation with increased State burden. We are concerned that it would be overly burdensome for States to procure independent evaluators for ILOS(s) due, in part, to the timing of the final ILOS cost percentage submission. In section I.B.4.b. of this proposed rule, we are proposing that the final ILOS cost percentage be submitted 2 years following completion of the applicable rating period, and we propose here that if the final ILOS cost percentage exceeds the 1.5 percent, States would be required to submit an evaluation. While States should conduct some evaluation planning efforts, it could be difficult and time consuming to procure an independent evaluator in a timely manner solely for the purpose of the ILOS evaluation since States would not know definitely whether an evaluation is required until 2 years following the rating period. We solicit comment on whether we should consider a requirement that States use an independent evaluator for ILOS evaluations.

We believe that States should, to the extent possible, leverage existing quality improvement and evaluation processes for the retrospective ILOS evaluation. Through §§ 438.364(a) and 457.1250(a), we require States to partner with an EQRO to produce an annual technical report that summarizes findings related to each MCO's, PIHP's, PAHP's, or PCCM entity's performance relative to quality, timeliness, and access to health care services furnished to Medicaid and CHIP enrollees. Through these existing EQR activities at § 438.364(b), and, if finalized, the newly proposed optional activity at § 438.64(c)(7), discussed in

more detail in section I.B.5.c.3. of this proposed rule, we believe States could leverage the CMS-developed protocol or their EQRO to assist with evaluating the impact of ILOSs on quality of care. We believe this new optional activity could reduce burden associated with these new evaluation requirements for ILOSs.

The elements we have proposed in the evaluation should communicate a complete narrative about the State, managed care plans, and enrollees' experience with ILOSs. As key thresholds and limits on ILOSs, the projected and final ILOS cost percentages would be another element that CMS would consider as part of the overall mosaic to understand the impact that an ILOS might have on each managed care program. Although the final ILOS cost percentage is proposed to be submitted with the rate certification submission required in § 438.7(a) for the rating period beginning 2 years after each rating period that includes ILOS(s), we believe it is important to the completeness of the retrospective evaluation, that all final ILOS cost percentages available be included. Therefore, we propose in § 438.16(e)(1)(iii)(E) for Medicaid, and through a proposed cross-reference at § 457.1201(e) for separate CHIP, that States provide the final ILOS cost percentage for each year in their retrospective evaluation, consistent with the report proposed in § 438.16(c)(5)(ii), (described in section I.B.4.b. of this proposed rule) with a declaration of compliance with the allowable 5 percent threshold proposed in § 438.16(c)(1)(i). We believe this necessary documentation of State compliance would be appropriate to be documented in the evaluation alongside the other data we have proposed to ensure a fulsome evaluation that accurately demonstrates whether the ILOS(s) are an appropriate and efficient use of Medicaid and CHIP resources.

In section I.B.4.c. of this rule, we proposed to identify enrollee rights and protections for individuals who are offered or who receive an ILOS, and in section I.B.4.f. of this proposed rule we outlined requirements for States' monitoring of enrollee rights and protections. To determine if States have appropriately safeguarded and adequately monitored enrollee rights and protections, we propose in § 438.16(e)(1)(iii)(F) for Medicaid, and through a proposed cross-reference at § 457.1201(e) for separate CHIP, to require States to evaluate appeals, grievances, and State fair hearings data, reported separately for each ILOS, including volume, reason, resolution status, and trends. As ILOSs are substitutes for covered State plan services and settings, and are offered at the option of the managed care plan, we believe it would be important to evaluate appeals, grievances, and State fair hearing trends to ensure that enrollees' experience with ILOSs is not inconsistent or inequitable compared to the provision of State plan services and settings. We acknowledge that we already require for Medicaid, through § 438.66(e)(2)(v), that States include an assessment of the grievances, appeals, and State fair hearings annually in MCPAR. But the information we propose that States submit with the ILOS retrospective evaluation is different as it would be specific to each ILOS compared to the summary level information required by MCPAR. We believe collecting these data by ILOS will help evaluate the quality of care and enrollee experience related to the provision of each ILOS.

Finally, we believe an evaluation of the impact ILOSs have on health equity efforts is a critical component to measure enrollee experience, health outcomes, and whether ILOSs are an appropriate and efficient use of Medicaid and CHIP resources. As ILOSs can be an innovative option States may consider employing in Medicaid and CHIP managed care programs to address SDOHs and HRSNs, we also believe it is critical to measure their impact on improving population health and reducing health disparities. We propose in § 438.16(e)(1)(iii)(G) for Medicaid, and through a proposed cross-reference at § 457.1201(e) for separate CHIP, to require States to evaluate the impact of each ILOS on health equity efforts undertaken by the State to mitigate health disparities. To do this, managed care plans should submit enrollee encounter data, to the extent possible, that includes comprehensive data on sex (including sexual orientation and gender identity), race, ethnicity, disability status, rurality and language spoken. We remind managed care plans of their obligations in §§ 438.242(c)(3) and 457.1233(d) to submit all enrollee encounter data that States are required to report to CMS under § 438.818; currently, T–MSIS provides fields for sex, race, ethnicity, disability status, and language spoken.

To allow adequate time for claims run-out and the evaluation to be conducted, we propose in § 438.16(e)(1)(iv) for Medicaid, and through a proposed cross-reference at § 457.1201(e) for separate CHIP, to require that States submit a retrospective evaluation to CMS no later than 2 years after the completion of the first 5 rating periods that included the ILOS following the effective date of this provision, if finalized. This 2-year timeframe is similar to the timeframe utilized for independent assessments to evaluate programs authorized by waivers approved under section 1915(b) of the Act.

While we believe many ILOSs can be sufficiently validated as medically appropriate and cost effective substitutes within 5 years, we know that some may not. To fulfill our program monitoring obligations, we believe we must be able to require additional evaluations if the initial evaluation demonstrates deficiencies. We propose in § 438.16(e)(1)(v) for Medicaid, and through a proposed cross-reference at § 457.1201(e) for separate CHIP, to explicitly assert our right to require States to provide additional 5-year retrospective evaluations. We believe that this could be a necessary flexibility when additional evaluation time might be needed, such as to demonstrate that an ILOS acting as a longer term substitute for a covered State plan service or setting is cost effective and medically appropriate. We also believe we may need to utilize this flexibility when a State substantially revises the ILOSs that are options within a managed care program.

For CHIP, our typical mechanism for retrospective managed care cost evaluation is through the CHIP Annual Report Template System (CARTS). We recognize that CARTS is completed annually by States and that our proposed timeframe for the retrospective evaluation is for a period of 5 years, but we considered whether it would be less burdensome to States to incorporate the CHIP ILOS retrospective evaluation into CARTS rather than as a stand-alone report. We seek public comment on whether or not the proposed retrospective evaluation should be incorporated into CARTS for CHIP ILOSs.

h. State and CMS Oversight (§§ 438.16(e) and 457.1201(e))

If a State determines that an ILOS is no longer a medically appropriate or cost effective substitute or the State identifies another area of noncompliance in the provision of ILOSs, we believe CMS must be promptly notified. We rely on the authority in sections 1902(a)(4) and 2101(a) of the Act to establish methods for proper and effective operations in Medicaid and CHIP, and sections 1902(a)(6) and 2107(b)(1) of the Act which require that States provide reports, in such form and containing such information, as the Secretary may from time to time require. We propose,

in § 438.16(e)(3) for Medicaid, and through a proposed cross-reference at § 457.1201(e) for separate CHIP, to establish processes and timelines for State and CMS oversight of ILOSs. In § 438.16(e)(2)(i)(A) and (B) for Medicaid, and through a proposed cross-reference at § 457.1201(e) for separate CHIP, we propose to require that States notify CMS within 30 calendar days if the State determines that an ILOS is no longer a medically appropriate or cost effective substitute for a State plan-covered service or setting, or the State identifies another area of noncompliance in this proposed section. Issues of noncompliance that would require State notification to CMS include, but are not limited to, contravening statutory requirements (for example, the provision of room and board), failure to safeguard the enrollee rights and protections enumerated under part 438, or the absence of the proposed provider documentation necessary to establish that an ILOS is medically appropriate for a specific enrollee. We believe that 30 days is a reasonable period of time for a State to identify and confirm an area of noncompliance. We considered a 60-day notification period, but believe that States should notify CMS in a more expeditious manner so that CMS may assess and swiftly remediate issues of noncompliance that might cause harm to enrollees. We seek comment on the time period for State notification to CMS to ensure it is reasonable and appropriate.

We believe a termination process for ILOSs is critical to properly safeguard the health and safety of Medicaid and CHIP enrollees. Therefore, we propose a Federal oversight process at § 438.16(e)(2)(ii) for Medicaid, and through a proposed cross-reference at § 457.1201(e) for separate CHIP, which would permit CMS to terminate the use of an ILOS, if we determine noncompliance or receive State notification of noncompliance as proposed in § 438.16(e)(2)(i). In § 438.16(e)(2)(iii) for Medicaid, and through a proposed cross-reference at § 457.1201(e) for separate CHIP, we propose a process for termination of an ILOS that would apply when a State terminates an ILOS, a managed care plan elects to no longer offer an ILOS to its enrollees, or CMS notifies the State that it must terminate an ILOS. In any of these events, we propose that the State would be required to submit an ILOS transition plan to CMS for review and approval within 15 calendar days of the decision by the State to terminate an ILOS, a managed care plan notifying the State it will no longer offer an ILOS, or receipt of notice from CMS to terminate. In addition to 15 calendar days, we also considered 30, 60, and 90 calendar days, but ultimately decided on the former option. We recognize that 15 calendar days is a rapid submission timeline, but we firmly believe that such a transition plan would need to be implemented immediately following an ILOS termination to safeguard enrollee health and safety, and to maintain the integrity and efficient operation of the Medicaid program in accordance with sections 1902(a)(4) and 2101(a) of the Act. Given the submission timeline and that ILOSs are provided at the option of the managed care plan, we believe States should prepare an ILOS transition plan as part of the implementation process for any new ILOSs. The process for termination proposed at § 438.16(e)(2)(iii) is the same, regardless of whether the State, managed care plan or CMS terminates the ILOS as the potential risks to enrollees are the same irrespective of which entity directs termination of the ILOS.

In § 438.16(e)(2)(iii)(A) through (D) for Medicaid, and through a proposed cross-reference at § 457.1201(e) for separate CHIP, we propose the elements States should include in the transition plan for the ILOS. We believe that a transition plan is necessary to protect the health and well-being of Medicaid and CHIP enrollees for whom the sudden termination of an ILOS, without an adequate transition plan, could have a significant negative impact. We rely on the authority in sections 1902(a)(4) and 2101(a) of the Act to establish methods for proper and effective operations in Medicaid and CHIP, and sections 1902(a)(6) and 2107(b)(1) of the Act which require that States provide reports, in such form and containing such information, as the Secretary may from time to time require. In § 438.16(e)(2)(iii)(A) for Medicaid, and through a proposed cross-reference at § 457.1201(e) for separate CHIP, we propose to require that States establish a process to notify enrollees that the ILOS they are currently receiving will be terminated as expeditously as the enrollee's health condition requires. We also propose, in § 438.16(e)(2)(iii)(B) for Medicaid, and through a proposed cross-reference at § 457.1201(e) for separate CHIP, to require that States create and make publicly available a transition of care policy, not to exceed 12 months, to arrange for State plan services and settings to be provided timely and with minimal disruption to the care for any enrollees receiving an ILOS at the time of termination. From the period of notification onward, we would expect that a State and its managed care plans cease provision of the ILOS to any new enrollees. Together, we believe that these two actions would ensure adequate beneficiary protections, including adequate beneficiary notice and access to medically appropriate State plan-covered services and settings in a timely fashion.

In addition to enrollee focused activities, we propose that the transition plan also include administrative actions that States would take to remove a terminated ILOS from the applicable managed care plan contract(s) and capitation rates. ILOSs must be authorized and identified in the managed care plan contract consistent with § 438.3(e)(2)(iii) and § 457.1201(e), and we believe it is equally important to ensure any terminated ILOS is removed from the managed care plan contract (and rate certification if necessary) to ensure clarity on contractual obligations and appropriate program integrity. We propose, in § 438.16(e)(2)(iii)(C) for Medicaid, and through a proposed cross-reference at § 457.1201(e) for separate CHIP, to direct States to remove the ILOS from the applicable managed care plan contracts and submit a modified contract to CMS for review and approval as required for Medicaid in § 438.3(a). Similarly, we permit States, through §§ 438.3(e)(2)(iv) and § 457.1201(e), to account for the utilization and actual cost of ILOSs in developing the component of the capitation rates that represents the covered State plan services, unless a statute or regulation explicitly requires otherwise. As part of the transition plan, States would be required to provide an assurance that it would submit the necessary contract amendment, and outline a reasonable timeline for submitting the contract amendment to CMS for review and approval. In the event that an ILOS is terminated from the managed care plan contract, the State and its actuary, should evaluate if an adjustment(s) to the capitation rates is necessary to ensure Medicaid capitation rates continue to be actuarially sound, such as if the programmatic change would have a material impact to the rate development. As outlined in § 438.4 for Medicaid, actuarially sound capitation rates must be appropriate for the populations to be covered and the services to be furnished under the managed care plan contract, and the State's actuary must ensure that the capitation rates continue to be actuarially sound given any change to

the contract. Therefore, we propose in § 438.16(e)(2)(iii)(D) to direct States to adjust the actuarially sound capitation rate(s), as needed, to remove utilization and cost of the ILOS from Medicaid capitation rates as required in §§ 438.4, 438.7(a) and 438.7(c)(2). As part of the transition plan, States would be required to provide an assurance that it would submit an adjustment to the capitation rates, as needed, and outline a reasonable timeline for submitting the revised rate certification to CMS for review and approval.

For separate CHIPs, States must develop capitation rates consistent with actuarially sound principles as required at § 457.1203(a). We also believe that in the event a CHIP ILOS is terminated, a State should evaluate if an adjustment to the capitation rate is needed to account for the removal of ILOS utilization and cost from the managed care plan contract. For this reason, we propose to adopt § 438.16(e)(2)(iii)(D) for separate CHIP through a new cross-reference at § 457.1201(e). However, we note that the requirements at § 438.7 are not applicable for 42 CFR part 457.

i. Applicability Dates (§§ 438.3(e), 438.7(g), 438.16(f), 457.1200(d))

We propose that States and managed care plans would be required to comply with the provisions outlined in §§ 438.2, 438.3(c)(1)(ii) and (e)(2)(i) through (iv), 438.10(g)(2)(ix), 438.66(e)(2)(vi) and applicable cross-references for separate CHIP at §§ 457.10, 457.1201(c) and (e), and 457.1207 no later than the effective date of the final rule. We believe this is appropriate as these proposals are technical corrections or clarifications of existing requirements. Additionally, we propose that States and managed care plans would have to comply with §§ 438.3(e)(2)(v), 438.16, 438.7(b)(6) no later than the rating period for contracts with MCOs, PIHPs, and PAHPs beginning on or after 60 days following the effective date of the final rule as we believe this is a reasonable timeframe for compliance. We propose to revise § 438.3(v) to add this proposed date, remove ''July 1, 2017,'' and update ''2015'' and referenced citations; and add 438.7(g)(1) and 438.16(f). We propose to adopt the applicability date at § 438.16(f) for separate CHIP by adding § 457.1200(d).

5. Quality Assessment and Performance Improvement Program, State Quality Strategies and External Quality Review (§§ 438.330, 438.340, 438.350, 438.354, 438.358, 438.360, 438.364, 457.1201, 457.1240, 457.1250)

a. Quality Assessment and Performance Improvement Program (§ 438.330)

Regulations at § 438.330 establish the Quality Assessment and Performance Improvement (QAPI) programs that States must require of Medicaid managed care plans (that is, MCOs, PIHPs, and PAHPs). Section 438.330(d) describes the performance improvement projects (PIPs) that States must require of Medicaid managed care plans as part of the QAPI program. Medicare Advantage (MA) plans are subject to similar (but not identical) requirements at § 422.152. Section 422.152 outlines the quality improvement program requirements for MA organizations, including the development and implementation of a Chronic Care Improvement Program (CCIP). Previously, CMS required MA organizations to develop and implement Quality Improvement Project (QIPs), which were an organization's initiatives focusing on specified clinical and nonclinical areas and were expected to have a favorable effect on health outcomes and enrollee satisfaction. However, CMS found the implementation of the QIP and CCIP requirements had become burdensome and complex, and removed the requirements for the QIP. With the removal of the QIP requirement with the 2019 Final Rule (83 FR 16440), we are proposing to update our regulations at § 438.330(d)(4) which still reference a QIP as a substitute for a PIP in managed care plans exclusively serving dually eligible individuals.

Through previous rulemaking, in the 2016 final rule (81 FR 27682), we implemented a policy, at § 438.330(d)(4), to allow States to permit Medicaid managed care plans exclusively serving dually eligible individuals to substitute an MA plan's quality improvement project (QIP) conducted under § 422.152(d) in the place of a Medicaid PIP, to prevent unnecessary duplication and increase flexibility for plans and States. Subsequently, in the final rule ''Medicare Programs; Contract Year 2019 Policy and Technical Changes to the Medicare Advantage, Medicare Cost Plan, Medicare Fee-for-Service, the Medicare Prescription Drug Benefit Programs and the PACE Program,'' we removed the QIP from the requirements for MA organizations at § 422.152, because we determined that they did not add significant value and many were duplicative of existing activities, such as the Chronic Care Improvement Program (CCIP) (83 FR 16669). Due to an oversight at that time, we neglected to remove a reference to the QIP from § 438.330(d)(4) to conform with the changes at § 422.152. We are now proposing to replace the outdated reference at § 438.330(d)(4) to § 422.152(d) (which previously described the now-removed QIP), with a reference to the CCIP requirements for MA organizations in § 422.152(c). This change would allow States to permit a Medicaid managed care plan exclusively serving dually eligible individuals to substitute an MA organization CCIP, conducted in accordance with the requirements at § 422.152(c), for one or more of the PIPs required under § 438.330(d). We believe the CCIP meets the same intent of the current regulation as an appropriate substitute for a PIP based on the quality improvement standards in a CCIP, including the identification of intervention goals and objectives, the collection and analysis of valid and reliable data, the assessment of performance and outcomes using quality indicators and measures, systematic and ongoing follow-up for increasing or sustaining improvement, and the reporting of results to CMS. We believe that permitting such a substitution would also maintain the intent of the current regulation to prevent unnecessary duplication and increase flexibility for plans and States, while allowing Medicaid managed care plans to maintain robust health improvement initiatives for dually enrolled individuals. Since the change to remove QIPs has been in place since 2019, we expect some States to already have CCIPs in place in lieu of QIPs, and therefore, are proposing that States must comply with this update in § 438.330(d)(4) no later than the rating period for contracts beginning after the effective date of the final rule in the applicability date provision at § 438.310(d)(1). We note this proposed change does not apply to separate CHIP because we did not apply § 438.330(d)(4) to separate CHIP in the 2016 final rule, and because § 457.310(b)(2) does not allow for concurrent health coverage in separate CHIP.

b. Managed Care State Quality Strategies (§§ 438.340, 457.1240)

Current regulations at § 438.340, which are included in separate CHIP regulations through an existing cross-reference at § 457.1240(e), set forth requirements for States to draft and

implement a written quality strategy for assessing and improving the quality of health care and services furnished by the MCO, PIHP, or PAHP. The requirement also applies to a PCCM entity whose contract with the State provides financial incentives for improved quality outcomes, as described in § 438.310(c)(2). The quality strategy is intended to serve as a foundational tool for States to set goals and objectives related to quality of care and access for their managed care programs. Current regulations at § 438.340(c) require States to make their quality strategy available for public comment when drafting or revising it, and require States to submit their initial quality strategy to CMS for feedback prior to adopting in final. These regulations also stipulate that States must review and update their quality strategy as needed, but no less than once every three years and submit the strategy to CMS whenever significant changes are made to the document or whenever significant changes occur within the State's Medicaid program. Building upon these requirements, we are proposing several changes to increase transparency and opportunity for meaningful ongoing public engagement around States' managed care quality strategies. We are proposing that States must comply with these updates in § 438.340 no later than 1 year from the effective date of the final rule, and are proposing to codify this applicability date at § 438.310(d)(2) for Medicaid, and through a proposed amendment at § 457.1200(d) to include a cross-reference to § 438.310(d) for separate CHIP.

First, we are proposing to increase the opportunity that interested parties have to provide input into States' managed care quality strategy. Current regulations at § 438.340(c)(1) require that States make their quality strategy available for public comment when it is first adopted and when revisions are made. However, the current regulations do not require that the quality strategy be posted for public comment at the three-year renewal mark if significant changes have not been made. We are proposing to revise § 438.340(c)(1) to require that States make their quality strategy available for public comment at the 3-year renewal, regardless of whether or not the State intends to make significant changes, as well as whenever significant changes are made. The proposed change would promote transparency and give interested parties an opportunity to provide input on changes they think should be made to the quality strategy, even if the State itself is not proposing significant changes. Consistent with current policy, States will retain discretion under the proposed rule to define the public comment process. This proposed change would apply equally to separate CHIP through the existing cross-reference at § 457.1240(e).

Second, we are proposing to revise § 438.340(c)(2)(ii) to clarify that the State Medicaid agency must post on its website the results of its 3-year review. The current regulations make clear at § 438.340(c)(2) that the review must include an evaluation, conducted within the previous 3 years, of the effectiveness of the quality strategy and that the results of the review must be made available on the State's website, but do not specifically state that the full evaluation must be posted on the website. Proposed revisions at § 438.340(c)(2)(ii) make clear that the evaluation, as part of the review, must be posted. We note that current § 438.340(c) allows for States to post the evaluation on the website as a standalone document or to include the evaluation in the State's updated and finalized quality strategy, which is required to be posted under § 438.340(d). The proposed change at § 438.340(c)(2)(ii) would apply equally to separate CHIP through the existing cross-reference at § 457.1240(e). For additional information on the components and purpose of the managed care quality strategy, see the Quality Strategy Toolkit, available at *https://www.medicaid.gov/medicaid/downloads/managed-care-quality-strategy-toolkit.pdf.*

Third, we are proposing to clarify when States must submit a copy of their quality strategy to CMS. Current regulations at § 438.340(c)(3) require that States submit to CMS a copy of their initial quality strategy for feedback and a copy of the revised quality strategy whenever significant changes are made. The current regulations do not require States to submit to CMS subsequent versions of their quality strategy unless the State has made significant changes to the document or to their Medicaid program. We are proposing to modify § 438.340(c)(3)(ii) to require that States, prior to finalizing a revised or renewed quality strategy as final, submit a copy of the revised strategy to CMS at minimum every 3 years, following the review and evaluation of the strategy described at § 438.340(c)(2), in addition to when significant changes are made. These proposed changes would allow CMS the opportunity to provide feedback periodically to help States strengthen their managed care quality strategies before they are finalized, whether or not significant changes are made to a State's strategy or to their Medicaid program. We propose to include this requirement into the provision at § 438.340(c)(3)(ii) for Medicaid by adding § 438.340(c)(3)(ii)(A) through (C), which would apply to separate CHIP through an existing cross-reference at § 457.1240(e). We are proposing at § 438.310(d)(2) for Medicaid, and through a proposed amendment at § 457.1200(d) to include a cross-reference to § 438.310(d) for separate CHIP, that States must comply with updates to § 438.340 no later than 1 year from the effective date of the final rule, which we believe would give States time to update internal processes accordingly.

Finally, we are proposing a technical correction to § 438.340(c)(3)(ii) to correct an internal citation related to State-defined significant changes. Currently, § 438.340(c)(3)(ii) references significant changes ''as defined in the State's quality strategy per paragraph (b)(11) of this section[.]'' However, § 438.340(b)(10) contains the information on a State's definition of a significant change. Therefore, we are proposing to replace ''paragraph (b)(11)'' with ''paragraph (b)(10)'' in § 438.340(c)(3)(ii). This proposed change would apply equally to separate CHIP through the existing cross-reference at § 457.1240(e).

c. External Quality Review (§§ 438.350, 438.354, 438.358, 438.360, 438.364, 457.1201, 457.1240, 457.1250)

Current regulations at §§ 438.350, 438.354, 438.358, 438.360, 438.364, and 457.1250 provide requirements for the annual External Quality Review (EQR) on quality, timeliness, and access to the health care services furnished to Medicaid and CHIP beneficiaries enrolled in managed care. The regulations set forth the EQR-related activities that States or a qualified EQR organization (EQRO) must perform, and the information that must be produced from an EQR and included in an annual detailed EQR technical report. States must submit to CMS an annual EQR technical report, which must include, among other things, a description of data, including validated performance measurement data for certain mandatory EQR-related activities. The regulations also delineate the circumstances in which States may use the results from a Medicare or private accreditation review in lieu of conducting an EQR for a given managed care entity. The EQR requirements in 438 Subpart E apply to each MCO, PIHP, and PAHP that has a contract with a State Medicaid or CHIP agency as well as certain PCCM entities

whose contract with the State provides financial incentives for improved quality outcomes, as described in § 438.310(c)(2). We are proposing several changes to the EQR regulations that seek to accomplish two overarching goals: (1) eliminate unnecessary burdensome requirements; and (2) make EQR more meaningful for driving quality improvement.

(1) Removal of PCCM Entities From Scope of Mandatory External Quality Review

In the final 2016 final rule, we added a definition of ''primary care case management entity'' in §§ 438.2 and 457.10 to recognize a new type of primary care case management system in Medicaid and CHIP. Previously, the regulations recognized, and continue to recognize, a primary care case manager (PCCM) as a physician or a physician group practice or, at State option, a physician assistant, nurse practitioner, or certified nurse-midwife that contracts with the State to furnish case management services to Medicaid beneficiaries. The 2016 final rule added the term ''PCCM entity,'' which is defined in §§ 438.2 and 457.10 as an organization that provides one or more additional specified functions in addition to primary care case management services, for example, intensive case management, development of care plans, execution of contracts with and/or oversight responsibilities for other FFS providers, and review of provider claims, utilization and practice patterns, among others. We further recognized in the 2016 final rule that some PCCM entities have contracts with the State that provide financial incentives for improved quality outcomes. Per current § 438.310(c)(2), such PCCM entities are subject to a number of the requirements in 42 CFR part 438, subpart E (relating to Quality Measurement and Improvement and External Quality Review) to which PCCMs are not similarly subject.

Of particular relevance to this proposed rule, the regulations have long provided that States are not required to perform an annual EQR of the State's PCCMs. However, in the 2016 final rule, we provided at §§ 438.350 and 457.1250(a) that States are required to conduct an annual EQR of PCCM entities operating under a risk-bearing contract described in § 438.310(c)(2). We reasoned at the time that, while PCCMs traditionally are paid a per capita fee to provide case management services for Medicaid beneficiaries and otherwise are reimbursed for services rendered on a fee-for-service (FFS) basis, such PCCM entities function more like a managed care entity because their contracts include shared financial risk, and thus should be subject to the EQR requirements.

The 2016 final rule also provided for CMS review of States' contracts with their PCCM entities under § 438.3(r). Our reviews of these contracts have led us to reevaluate the policy to require an annual EQR of PCCM entities described in § 438.310(c)(2), as these contracts exhibit wide variability in the size, structure, and scope of case management and other services provided by risk-bearing PCCM entities. This variation calls into question the appropriateness of EQR as an oversight tool for many of the PCCM entities. For example, the scope of services for some of these PCCM entities may yield little to no data for EQR. In addition, some PCCM entities are a single provider or a small provider group, and we believe the cost and burden imposed by the EQR process may disincentivize them from entering into risk-bearing contracts with States aimed at improving quality and outcomes in the fee-for-service delivery system. We do not believe the EQR requirement should be a barrier for these types of PCCM entities to establish arrangements aimed at quality improvement when States have additional quality monitoring and oversight tools that may be sufficient (for example, QAPI program reviews described at § 438.330(e)).

Therefore, we propose to remove PCCM entities described in § 438.310(c)(2) from the managed care entities subject to EQR under § 438.350. Other requirements in 42 CFR part 438, subpart E that currently apply to risk-bearing PCCM entities described at § 438.310(c)(2) are not impacted by this proposed rule.[141] We note that States may perform additional oversight and monitoring activities that are similar to external quality reviews for PCCM providers (and other providers not subject to EQR such as non-emergency medical transportation providers) at their discretion, and may choose to use an entity that is also an EQRO for these activities, however these activities would not be subject to 438 Subpart E regulations for EQR. Further, we believe that the removal of all PCCM entities from the mandatory scope of EQR will alleviate burden on States and PCCM entities while retaining appropriate tools for quality monitoring and oversight.

We propose conforming amendments to remove reference to PCCM entities described in § 438.310(c)(2) in §§ 438.310(b)(5), 438.358(a)(1), 438.364(a)(3) through (6), and 438.364(c)(2)(ii), and to remove the reference to § 438.350 from § 438.310(c)(2). We also propose removing the current provision at § 438.358(b)(2) that applies risk-bearing PCCM entities to the mandatory EQR activities, to conform with the proposed changes at § 438.350, and reserve this provision for future use. We maintain that EQROs must be independent from any PCCM entities they review at the State's discretion, as currently required under § 438.354(c), and propose a modification at § 438.354(c)(2)(iii) to clarify this. We note that these changes, if finalized, would be effective as of the effective date of the final rule. For separate CHIP, we likewise propose to exclude all PCCM entities from EQR requirements by removing the cross-reference to § 438.350 at § 457.1201(n)(2), by removing the reference to PCCM entities entirely from § 457.1250(a), and removing the cross-reference to § 457.1250(a) for quality requirements applicable to PCCM entities at § 457.1240(f).

(2) EQR Review Period

The current regulations provide that most EQR activities are performed using information derived from the preceding 12 months, but do not clearly indicate to which 12-month period the activity should pertain. Specifically, the current regulations at § 438.358(b)(1) (which apply to separate CHIP through § 457.1250(a)) require validation of information collected or calculated during ''the preceding 12 months'' for three of the mandatory EQR activities (validation of performance improvement projects, validation of performance measurement data, and validation of network adequacy activities). The optional EQR activities described in § 438.358(c) also must be performed using information derived ''during the preceding 12 months''. In addition, we do not currently specify in the regulations when the EQR activity must take place relative to the finalization and posting of the annual report. The result is a lack of uniformity in the review periods included in States' annual EQR technical reports each year. In some cases, for example, States have

[141] States are currently required to include their PCCM entities in CMS contract review under § 438.3(r), and for PCCM entities described at § 438.310(c)(2), States must include them in aspects of their quality assessment and performance improvement programs (QAPI) including an annual utilization and program reviews (§ 438.330(b)(2), (b)(3), (c), and (e)), and their quality strategy (§ 438.340), which includes a quality strategy effectiveness evaluation. States have the discretion under § 438.358(d) to use their EQRO to provide technical assistance to PCCM entities described at § 438.310(c)(2).

reported on the results of EQR activities conducted three or more years ago, while other States have reported on the results of EQR activities conducted relatively close to the completion of the report. To support States' and CMS' ability to use the reports for quality improvement and oversight, we are proposing modifications to ensure consistency and align the data in the annual reports with the most recently available information used to conduct the EQR activities.

We propose to add a new paragraph (a)(3) in § 438.358 to define the 12-month review period for all but one the EQR-related activities described in § 438.358(b)(1) and the optional activities described in § 438.358(c). The one exception is the activity described in § 438.350(b)(1)(iii), which requires a review within the previous 3 years. Under proposed § 438.358(a)(3), the 12-month review period for the applicable EQR activities begins on the first day of the most recently concluded contract year or calendar year, whichever is nearest to the date of the EQR-related activity.

We understand that most performance measures run on a calendar year, while performance improvement projects and network adequacy assessments typically align with the contract year. Under the proposed rule, the 12-month review period for EQR activities does not have to be the same. For example, if an EQRO begins the performance measurement validation activity in July of 2022, and the State calculates performance measures on the calendar year, the review period for the performance measurement validation activity would be January 1 through December 31, 2021. Similarly, if the EQRO validates PIPs in November 2021 and the most recent contract year ended in March 2021, the review period for the EQRO would be March 2020–March 2021.

We are also proposing to require at § 438.358(b)(1) and (c) that the EQR-related activities must be performed in the 12 months preceding the finalization and publication of the annual report. We believe these two proposed changes would result in more recent data being publicly posted in the annual EQR technical reports, and also would create more consistency among States regarding the time period represented by the data. Consistency in what data is reported could help make the EQR technical reports a more meaningful tool for monitoring quality between plans within and between States.

As noted, the proposed clarification of the 12-month review period for the applicable EQR-related activities described in § 438.350(b)(1) and (c) would be effectuated at proposed § 438.358(a)(3). We propose conforming changes to § 438.358(b)(1)(i), (ii) and (iv), and (c) to reference the EQR review period proposed at § 438.358(a)(3). We propose to modify the language at § 438.350(b)(1) and (c) to indicate that the EQR-related activities must be performed in the 12 months preceding the finalization of the annual reports. These proposed changes would apply equally to separate CHIP EQR requirements for MCOs, PIHPs, and PAHPS through an existing cross-reference to Medicaid's EQR-related activities in § 438.358 at § 457.1250(a). We are proposing that States must comply with these updates to § 438.358 no later than December 31, 2025, and are proposing to codify this applicability date at § 438.310(d)(3) for Medicaid, and through a proposed amendment at § 457.1200(d) to include a cross-reference to § 438.310(d) for separate CHIP. This applicability date aligns with the new annual due date for EQR technical reports as proposed at § 438.364(c)(2)(i), which we believe provides States sufficient time to make any contractual or operational updates following the final rule.

(3) Using an Optional EQR Activity To Support Current and Proposed Managed Care Evaluation Requirements

We are proposing to add a new optional EQR activity to support States in their evaluations to learn more about quality outcomes and timeliness of and access to care in managed care plans and programs. Specifically, we believe the existing or proposed evaluation requirements included in this proposed rule for quality strategies at § 438.340(c)(2)(i), State Directed Payments (SDPs) at § 438.6(c)(2)(iv) and (v), and In Lieu of Services or Settings (ILOSs) at § 438.16(e)(1) may be implemented using this new EQR activity. We currently require at § 438.340(c)(2)(i) that States review their quality strategy at a minimum every 3 years, and that this review include an evaluation of the effectiveness of the quality strategy conducted within the previous 3 years. In this proposed rule, we are proposing new requirements related to the evaluation of SDPs at § 438.6(c)(2)(iv) and (v) and ILOSs at § 438.16(e)(1), described in more detail in sections I.B.2.j. and I.B.4.g. We discuss at length the challenges States have demonstrated regarding the SDP evaluation plans and results in section I.B.2.j. of this proposed rule, which indicates to us that States would likely benefit from additional technical assistance and support in conducting evaluations under the newly proposed SDP and ILOS requirements. Additionally, CMS' reviews of State quality strategy evaluations have revealed many challenges for States and a similar need for greater technical assistance. For this reason, we propose to add a new optional EQR activity at § 438.358(c)(7) to assist in evaluations of quality strategies, SDPs, and ILOSs, that pertain to outcomes, quality, or access to health care services. We are focusing the scope of the EQR optional activity to activities permissible under the statutory authority at Section 1932(c)(2) of the Act, which requires external review of the quality outcomes and timeliness of, and access to, the items and services for which the organization is responsible under the contract. We believe by adding this optional activity, States, their agent, or an EQRO could use the accompanying protocol that CMS would develop (in coordination with the National Governors Association in accordance with § 438.352) to assist with evaluation activities related to quality strategies, SDPs, and ILOS, that are within the scope of EQR. We also believe EQROs may be well positioned to help with evaluations since their qualifications, as required under § 438.354(b), include research design and methodology, including statistical analysis, and quality assessment and improvement methods. We believe this optional activity would provide States critical technical assistance via a CMS-developed protocol that would enable more robust evaluations, which could lead to greater transparency and quality improvement in States' implementation of their quality strategy, SDPs and ILOSs. It could also reduce burden by allowing States to receive an enhanced match for activities carried out by an EQRO under this optional activity in accordance with section 1903(a)(3)(C)(ii) of the Act.

For separate CHIP, we did not adopt the proposed evaluation of SDPs at § 438.6(c)(2)(iv) and (v) (see sections I.B.2.a. and I.B.2.j. of this proposed rule). For this reason, we propose to amend separate CHIP EQR requirements at § 457.1250(a) to exclude references to § 438.6. However, we proposed to adopt the new ILOS retrospective evaluation requirements at § 438.16(e)(1) through our proposed cross-reference at § 457.1201(e) (see section I.B.4.g. of this proposed rule). Since section 2103(f)(3) of the Act requires external review of CHIP managed care plans, we also believe that CHIP EQROs are well positioned to assist with the proposed ILOSs evaluations and agree it would be beneficial to States to have this optional

EQR activity. We propose to adopt the new EQR optional activity for separate CHIP through an existing cross-reference to § 438.358 at § 457.1250(a). If finalized, this optional activity would be available to States as of the effective date of the final rule.

(4) Non-Duplication of Mandatory EQR Activities With Medicare or Accreditation Review

Current § 438.360 provides an option for States to exempt MCOs, PIHPs, or PAHPs from EQR-related activities that would duplicate activities conducted as a part of either a Medicare review of a Medicare Advantage (MA) plan or a private accreditation review. Section 438.360(a)(1) requires that, in order for a State to exercise this option with respect to private accreditation, the plan accreditation must be from a private accrediting organization recognized by CMS ''as applying standards at least as stringent as Medicare under the procedures in § 422.158 of this chapter[.]'' Section 422.158 describes the procedures for private, national accreditation organizations (PAOs) to apply for approval of accreditation as a basis for deeming compliance with Medicare requirements, also referred to as ''deeming authority.'' Sections 422.156 and 422.157 discuss conditions and applications of the deeming authority, under which a PAO may accredit MA plans for the purposes of deeming compliance with one or more specific areas of the MA program. The implementation of this current requirement at § 438.360(a)(1) has meant that PAOs must obtain deeming authority from CMS as a prerequisite for the States to use the PAO's plan accreditation review for the purposes of nonduplication of mandatory EQR activities. This means the PAO must obtain and periodically renew their MA deeming authority from CMS even if it is solely for the purpose of providing States the opportunity to use their reviews of a Medicaid managed care plans in lieu of conducting a similar EQR-related activity.

We believe the current regulation creates an unnecessary administrative burden on both CMS and PAOs and may restrict the availability of the EQR nonduplication option for States. We also do not believe that the current requirement is compelled under the statute. The statutory basis for the nonduplication provision, found at section 1932(c)(2)(B) of the Act, states, a State may provide that, in the case of a Medicaid managed care organization that is accredited by a private independent entity (*such as those described in section 1852(e)(4)*) or that has an external review conducted under section 1852(e)(3) of the Act, the external review activities conducted under subparagraph (A) with respect to the organization shall not be duplicative of review activities conducted as part of the accreditation process or the external review conducted under such section (*emphasis added*). Section 1852(e)(4) of the Act is the statutory basis for PAOs to obtain MA deeming authority from CMS. We do not read this provision as requiring every private independent entity to be described under section 1852(e)(4) of the Act in order for a State to exercise the nonduplication provision. Rather, we read section 1932(c)(2)(B) of the Act as describing in general terms the types of organizations that would be eligible to participate in nonduplication, and providing organizations described in section 1852(e)(4) of the Act as an example.

Therefore, we propose at § 438.360(a)(1) to remove the requirement that PAOs must apply for MA deeming authority from CMS in order for States to rely on PAO accreditation reviews in lieu of EQR activities. We are proposing conforming changes to the title of § 438.362(b)(2) to remove language specific to Medicare Advantage deeming. Additionally, we are proposing to remove the requirements for PAOs related to MA deeming authority at § 438.362(b)(2)(i). This proposal would remove paragraph (b)(2)(i)(B) and modify paragraph (b)(2)(i) to include current § 438.362(b)(2)(i)(A). We believe this proposed change will reduce administrative burden among the private accreditation industry, as well as create more flexibility for States to leverage PAO reviews for nonduplication. We note that under § 438.360(a)(2) States will still be required to ensure the review standards used by any PAO are comparable to standards established through the EQR protocols under § 438.352, and pursuant to § 438.360(c), will need to explain the rationale for the State's determination that the activity is comparable in their quality strategy at § 438.340. If finalized, these changes would be effective as of the effective date of the final rule.

(5) External Quality Review Results (§ 438.364)

(a) Data Included in EQR Technical Reports

The current regulations at § 438.364, included in separate CHIP programs through an existing cross-reference at § 457.1250(a), describe what information must be included in the annual EQR technical reports as well as the public availability of the reports. While the information currently provided in the EQR technical reports is useful to CMS in our work with States to improve beneficiary access to and quality of care provided through a managed care delivery system, we believe these reports could and should provide additional information useful to both CMS and the public.

Current regulations at § 438.364(a)(2) describe the information the State must include in the annual EQR technical report for each EQR-related activity. Under § 438.364(a)(2)(iii), the EQR technical reports must include a description of data obtained, including validated performance measurement data for each PIP validation and performance measurement validation activity at § 438.358(b)(1)(i) and (ii), respectively. The current regulations, however, limit the data included in the reports to performance measurement data; the regulations do not require that other types of data that may be used to measure the outcomes associated with a PIP, such as percentages of enrollees that participated in the PIP or data on patient satisfaction based on services received from the plan, be included in the annual reports. The result is that reports often focus on whether the methods used to implement or evaluate the PIP were validated, but do not include the measurable data reflecting the outcomes of the PIP. Additionally, the regulations do not currently require the reports to include any data obtained from the mandatory network adequacy validation activity.

We believe validation alone is insufficient to provide CMS and interested parties with insight into plan performance on PIPs or States' effectiveness in driving quality improvement through PIPs. We also believe data on network adequacy validation is critical to understanding plan performance regarding timeliness and access to care. Therefore, we are proposing to revise § 438.364(a)(2)(iii) in two ways: (1) to require that the EQR technical reports include ''any outcomes data and results from quantitative assessments'' for the applicable EQR activities in addition to whether or not the data has been validated, and (2) to require this type of data from the mandatory network adequacy validation activity to also be included the EQR technical report. We believe this change will result in more meaningful EQR technical reports because they will include, in addition to validation information, the data demonstrating the outcome of PIPs and the results of quantitative assessments that determined plan compliance with

network adequacy standards. This, in turn, will make the EQR technical reports a more effective tool to drive quality improvement and oversight in managed care. The proposed revisions to § 438.364(a)(2)(iii) for Medicaid would apply to separate CHIP through an existing cross-reference at § 457.1250(a). We propose at § 438.310(d)(4) for Medicaid, and through a proposed amendment at § 457.1200(d) to include a cross-reference to § 438.310(d) for separate CHIP, that States must comply with these updates to the type of data in the EQR technical report no later 1 year from the issuance of the associated protocol, which we believe will provide the guidance and time for States and EQROs need to update their processes.

In addition to the proposed regulations in this section, we are considering adding guidance in the EQR protocols, described under § 483.352, for States to stratify performance measures collected and reported in the EQR technical reports under the performance measure validation activity. We believe stratification of performance measure data in EQR technical reports would support States' efforts to monitor disparities and address equity gaps. Stratifying performance measure data also aligns with proposed requirements for the mandatory reporting of Medicaid and CHIP Core Sets and proposed requirements in the MAC QRS proposed under new 42 CFR part 438 subpart G. We seek comment on how CMS could best support States in these efforts using future guidance we develop in the EQR protocols.

(b) Revising the Date Annual EQR Technical Reports Must Be Finalized and Posted

We currently require at § 438.364(c) that EQR technical reports be completed and available on the State's website required under § 438.10(c)(3) no later than April 30th of each year. However, we understand that most States with managed care programs use Healthcare Effectiveness Data and Information Set (HEDIS) measures. HEDIS measures represent the majority of measures included in the performance measure validation EQR activity. Data on these measures from the previous calendar year are audited and finalized in June annually. We therefore are proposing to revise § 438.364(c)(1) and (c)(2)(i) to change the April 30th date to December 31st. We believe this proposed change would align better with the HEDIS timeframes because the EQR performance measurement activity could then follow the HEDIS audit. We considered aligning the EQR technical report posting date with the end of the Federal fiscal year on September 30th. However, we believe States and EQROs need more time to complete the EQR activities after receiving audited HEDIS data. We also believe December 31st is most appropriate because performance measurement data is most often calculated on a calendar year, so the December 31st date would result in data being at most 1 year old at the time the reports are posted on the State's website. We believe this change, coupled with those discussed in section I.B.5.c.2. of this proposed rule regarding changes to the EQR review period, would improve the utility of the technical reports for States, CMS and interested parties by making the data reported in them more current. The proposed changes at § 438.364(c)(1) and (c)(2)(i) for Medicaid would apply to separate CHIP through an existing cross-reference at § 457.1250(a).

We seek comment on changing the posting date to December 31st annually. We also seek comment on whether additional time beyond December 31st is needed by States, and if so, how much time and why, or whether the posting date should remain at April 30th of each year, or a date between April 30th and December 31st and why. We are proposing at § 438.310(d)(3) for Medicaid, and through a proposed amendment at § 457.1200(d) to include a cross-reference to § 438.310(d) for separate CHIP, that States come into compliance with this new due date by December 31, 2025, which we believe would provide enough time for contractual and operational updates.

(c) Notifying CMS When Annual EQR Technical Reports Are Posted

Current regulations do not require States to notify CMS that their EQR technical report has been completed and posted on the State's website. We propose to revise § 438.364(c)(2)(i) to require that States notify CMS within 14 calendar days of posting their EQR technical reports on their website, for example, by providing CMS with a link to the report. Section 401 of the Children's Health Insurance Reauthorization Act (CHIPRA) of 2009 (Pub. L. 111–3, enacted February 4, 2009) and section 2701 of the ACA require that CMS review and aggregate data from these reports in an annual report to the Secretary by September 30th. This proposed change would facilitate our review and aggregation of the required data and ensure that all States' data are included in the annual report. We are proposing that the notice to CMS be provided ''in a form and manner determined by CMS.'' However, we seek comment on whether we should require that this notice be provided via email or some other mode of communication. The proposed revisions at § 438.364(c)(2)(i) would apply to separate CHIP through an existing cross-reference at § 457.1250(a). We note that this requirement be effective as of the effective date of the final rule, which we do not believe will impose a great burden on States since most States already notify CMS when their EQR technical reports are posted by email.

(d) Revising Website Requirements for Historical EQR Technical Reports

Currently, States are encouraged, but not required, to retain EQR technical reports from previous years on their websites. We are proposing to require States maintain at least the previous 5 years of EQR technical reports on their website. Retaining at least 5 years of past EQR technical reports would provide administrative efficiencies and additional transparency by allowing CMS to use historical data and information within the annual EQR technical reports for the purposes of reviewing States' managed care program and plan performance during contract renewals and waiver renewals. In addition, having archived reports would provide other interested parties insight into historical plan performance. In addition, section 1915(b) waivers can be approved for up to 5 years, and section 1115 demonstrations are often approved for 5 years, providing additional support for 5 years being an appropriate timeframe for this requirement.

We understand that almost half of States already retain at least 2 years' worth of EQR technical reports based on a review of State websites in 2022, and we seek comment on whether archiving 5 years of reports would pose a significant burden on States. We propose to add this provision to the requirements at § 438.364(c)(2) for Medicaid, which would apply to separate CHIP through an existing cross-reference at § 457.1250(a).

We are proposing that States must comply with this update to § 438.364(c)(2)(iii) no later than December 31, 2025, and are proposing to codify this applicability date at § 438.310(d)(3) for Medicaid, and through a proposed amendment at § 457.1200(d) to include a cross-reference to § 438.310(d) for separate CHIP. This applicability date aligns with the new proposed due date for the EQR technical reports, which we believe would provide the time needed to update websites accordingly.

(6) Technical Changes

We are proposing a technical change at § 438.352 to eliminate the apostrophe from National Governors Association to align with the correct name of the organization.

6. Medicaid Managed Care Quality Rating System (§§ 438.334 and 457.1240)

a. Background

In the 2016 final rule we established the authority to require States to operate a Medicaid managed care quality rating system (QRS) at § 438.334 and adopted the requirement for this provision, excluding provisions regarding consultation with the Medical Care Advisory Committee, to apply to separate CHIP at § 457.1240(d). We use the term ''Medicaid and CHIP Managed Care Quality Rating System'' (''MAC QRS'') for this proposed rule in line with the terminology used in the 2020 final managed care rule (85 FR 72754). The MAC QRS requirements currently include public posting of quality ratings on the State's website, which is intended to provide beneficiaries and their caregivers with a web-based interface to compare Medicaid and CHIP managed care plans based on assigned performance indicators and ratings. As described in previous rulemaking, the policy objectives of the MAC QRS are threefold: (1) to hold States and plans accountable for the care provided to Medicaid and CHIP beneficiaries; (2) to empower beneficiaries with useful information about the plans available to them; and (3) to provide a tool for States to drive improvements in plan performance and the quality of care provided by their programs. Managed care is the dominant delivery system in the Medicaid program; of the 80.8 million individuals covered by Medicaid as of July 1, 2020, 67.8 million (84 percent) were enrolled in a type of managed care.[142] Numerous States have implemented rating systems for Medicaid and CHIP managed care plans, but the MAC QRS represents the first time that States would be held to a minimum Federal standard for their rating systems and that Medicaid and CHIP beneficiaries in every State contracting with a managed care plan could access quality and other performance data at the plan level, supporting the ability of Medicaid and CHIP beneficiaries to select plans that meet their needs. The policies we are now proposing would establish the MAC QRS as a one-stop-shop where beneficiaries could access information about Medicaid and CHIP eligibility and managed care; compare plans based on quality and other factors key to beneficiary decision making, such as the plan's drug formulary and provider network; and ultimately select a plan that meets their needs. Many of the policies proposed for States' MAC QRS websites build upon existing data and information that States are already required to report publicly and to us. Thus, we believe that under the proposals in this rulemaking, States would be able to leverage many existing reporting systems and their current quality infrastructure to build their MAC QRS websites and provide a user-friendly experience for beneficiaries that informs their understanding of managed care plan performance and choice of plan.

Current requirements at § 438.334(b)(1) for Medicaid, which is adopted by cross-reference at § 457.1240(d) for separate CHIP, provide that CMS, in consultation with States and other interested parties, including beneficiaries, managed care plans, external quality review organizations (EQROs), tribal organizations, and beneficiary advocates (hereafter referred to as ''interested parties''), will develop a MAC QRS framework that includes quality measures and a methodology for calculating quality ratings. The current regulations also provide States the option to either use the CMS-developed framework or establish an alternative QRS that produces substantially comparable information about plan performance, subject to our approval. Furthermore, the current regulations require that we develop a minimum set of mandatory quality measures that must be used, regardless of whether a State chooses to implement the CMS-developed QRS or an alternative QRS; this supports the goal of State-to-State comparisons of plan performance while reducing plan burden through standardization. The current regulations also require the MAC QRS framework to align, where appropriate, with other CMS managed care rating approaches (such as the Medicaid Scorecard initiative, the Medicare Advantage (MA) and Part D 5-star and the Qualified Health Plan (QHP) quality rating systems) as a way to reduce State and plan burden across quality reporting systems.

Since these regulations were issued, we have used a variety of forums to engage in robust consultation with interested parties to develop the framework of the MAC QRS to fulfill our obligation under § 438.334(b)(1) for Medicaid and under § 457.1240(d) for separate CHIP. These forums included beneficiary interviews, workgroup meetings, listening sessions, user testing of a MAC QRS prototype, and in-depth interviews with participants from State Medicaid programs, managed care plans, and EQROs. Through these extensive consultations, which took place between 2018 and 2022 and are summarized below, we learned about current State quality measure collection and reporting efforts and beneficiary needs and preferences related to the selection of a health plan. What we learned informed the MAC QRS framework proposed in this rulemaking. We summarize our consultation activities here:

- *2018 to 2022 Beneficiary and Caregiver Interviews:* Between 2018 and 2022, we conducted two rounds of individual interviews with a diverse selection of potential users of the MAC QRS. We conducted 96 interviews with people of differing age, race, ethnicity, geographic location, and Medicaid experience. The first round of 48 individual interviews focused on discovering beneficiary values and understanding the measures of health plan quality that matter to beneficiaries. Using a Human Centered Design approach, a MAC QRS website prototype was developed following an initial round of engagement with States and other interested parties as well as beneficiary and caregiver interviews, and then tested by the second group of 48 potential users. This second group of individuals provided feedback on: website navigation and usability; the features that aided users' ability to identify health plans that align with their needs and preferences, such as being able to search for plans that cover specific providers and/or prescriptions; the ability to filter quality measures to show ratings stratified based on user-identified specifications such as age, race, and ethnicity; and information on health plan quality, including quality measures identified as desirable by participants. The two rounds of engagement culminated in a revised MAC QRS website prototype, linked to in section I.B.6.g. of this proposed rule, that incorporate content and features found most desirable by potential MAC QRS users.
- *2019 Measure Workgroup:* A workgroup consisting of 27 members from key groups, including State Medicaid and CHIP agencies, Medicaid and CHIP managed care plans, EQROs, and national organizations representing health care providers and beneficiaries, met between July and December 2019 to identify potential measures for the

[142] *https://www.medicaid.gov/medicaid/managed-care/downloads/2020-medicaid-managed-care-enrollment-report.pdf.*

mandatory measure set and the feasibility of reporting certain measures.

- *2019 Interested Parties Listening Sessions:* Between August and November 2019, we held 15 listening sessions with 380 interested parties including Medicaid and CHIP Directors, Medicaid medical directors, managed care plan officials, and managed long-term services and supports (MLTSS) officials. Participants were requested to consider the presented measures and the feasibility of data collection and reporting. Website prototypes were presented to elicit feedback on feasibility, the comparison of measures by program and plan type, population stratification, and concerns related to measure presentation.
- *2019 and 2020 State, Health Plan and EQRO Interviews:* In 2019 and 2020, we conducted 20 interviews with 39 representatives from State Medicaid programs, managed care plans, and EQROs to obtain feedback regarding appropriate measures for inclusion in the MAC QRS, implementation of an alternative QRS, concerns about implementation of a MAC QRS, and technical assistance needs. In addition, we obtained information on current approaches and methodologies used by States and plans to calculate quality measures.
- *2021 and 2022 Listening Sessions:* In 2021 and 2022, we held 11 listening sessions with over 280 participants, during which we shared a sample mandatory measure set containing over 25 measures. We requested feedback on feasibility of data collection and reporting; reliability of the measures; actionability for use in quality improvement by the managed care plan; gaps in representation of specific populations or conditions; and a feasible timeline for collecting, calculating, and displaying the sample mandatory measures.

Based on this consultation, we are now proposing a MAC QRS framework that includes mandatory measures, a rating methodology (either the CMS-developed methodology or an alternate methodology approved by CMS), and a mandatory website display format; the website display would be an additional third component of the MAC QRS framework. We are proposing that States must include the mandatory measures under the MAC QRS framework but that States may also include additional measures without implementing an alternative QRS. This would change the current regulations that include both mandatory and non-mandatory measures in the CMS-developed framework. We are also proposing the initial mandatory measure set that States must use regardless of whether they use the MAC QRS framework or a CMS-approved alternative QRS, as well as a subregulatory process under which CMS would engage regularly with interested parties in order to update the mandatory measure set over time.

Additionally, after consulting with prospective MAC QRS users, we now believe displaying quality ratings alone would not be useful in selecting a health plan without additional context about Medicaid and CHIP as well as other information about health plans. We are therefore proposing website display requirements as a new component of the overall framework, and propose that the MAC QRS website include information that draws from existing State data and information to ensure a State's MAC QRS is a meaningful and usable tool for beneficiaries. Finally, in light of the diverse starting points from which States will begin to implement their MAC QRS, we are proposing to delay the deadline by which States must come into compliance with several of the requirements of the proposed MAC QRS framework to provide States with more time to implement the more complex requirements, including certain interactive display features. Importantly, States can use the optional EQR activity at § 438.358(c)(6) to assist with the quality rating of MCOs, PIHPs, and PAHPs. This could reduce burden by allowing States to receive an enhanced match for certain, limited activities carried out by an EQRO under this optional activity in accordance with section 1903(a)(3)(C)(ii) of the Act.

This proposal is made under our authority to implement and interpret in sections 1932(c)(1), 1932(a)(5)(C) and 2103(f)(3) of the Act, which provide that States that contract with MCOs for Medicaid managed care and CHIP, respectively, must develop and implement a quality assessment and improvement strategy that examines standards for access to care as well as other aspects of care and services directly related to the improvement of quality of care (including grievance procedures and information standards) and must provide comparative information on available plans related to health plan benefits and cost-sharing, service area, and available quality and performance indicators. As with most other requirements for managed care plans, we rely on section 1902(a)(4) of the Act to extend the same requirements to PIHPs and PAHPs that apply to MCOs in a Medicaid managed care program and on section 2103(f)(3) of the Act to extend the same requirements that apply to MCOs in CHIP to PIHPs and PAHPs. Throughout this section of the proposed rule, we note how the proposed Medicaid managed care regulations in part 438, subpart G (related to the MAC QRS) would apply equally to separate CHIP by a proposed cross-referenced added to § 457.1240(d).

The proposed set of minimum quality measures are intended to evaluate performance on quality of care, access to services, and outcomes. By measuring performance annually on specific quality measures (that is, mandatory measures adopted by us and any additional measures elected by the State), States will have information and data to monitor and evaluate performance of their managed care plans.

In exercising our authority under sections 1932(c)(1) and 2103(f)(3) of the Act, CMS may not implement standards for the implementation of a quality assessment or improvement strategies unless the Secretary implements such standards in consultation with the States. To fulfill this requirement, we have engaged in robust consultation with States, as described in section I.B.6.a. of this proposed rule, on the design of the MAC QRS, including the mandatory measure set, methodology, and display requirements. Going forward, we are proposing to continue to engage in consultation prior to making updates to the three components of the MAC QRS framework. In section I.B.6.e.3. of this proposed rule, we discuss our proposal for a subregulatory process through which we will continue to consult with States and interested parties to update the mandatory measure set; in section I.B.6.f. of this proposed rule, we discuss our proposal to continue to consult with States and interested parties to update the MAC QRS methodology, and in section I.B.6.g. of this proposed rule, we discuss our proposal to consult with States and interested parties to update our proposed website display requirements.

b. Provisions of the Proposed Rule (§§ 438.334, 438 Subpart G, and 457.1240(d))

We are proposing to create a new subpart G in 42 CFR part 438 to implement the MAC QRS framework required under § 438.334 of the current regulations and establish the standards which States must meet for CMS to approve adoption of an alternative QRS and related requirements. Existing regulations at § 438.334 are redesignated to newly-created proposed sections in Subpart G with proposed revisions, discussed in detail below in this proposed rule. For separate CHIP, we propose to adopt the new provisions of

subpart G in part 438 by cross-reference through an amendment at § 457.1240(d).

c. Definitions (§§ 438.334, 438.500, and 457.1240(d))

There are some technical and other terms relevant to our proposed regulations. Therefore, we propose the following definitions at § 438.500(a) for Medicaid, and for separate CHIP by cross-reference through a proposed amendment at § 457.1240(d). Some proposed definitions are discussed in more detail later in this proposed rule in connection with other proposed regulation text related to the definition.

- *Measurement period* means the period for which data are collected for a measure or the performance period that a measure covers.
- *Measurement year* means the first calendar year and each calendar year thereafter for which a full calendar year of claims and encounter data necessary to calculate a measure are available.
- *Medicaid managed care quality rating system framework* (*QRS framework*) means the mandatory measure set identified by CMS in the Medicaid and CHIP managed care quality rating system technical resource manual described in § 438.530, the methodology for calculating quality ratings described in § 438.515, and the website display described in § 438.520 of this subpart.
- *Medicare Advantage and Part D 5-Star Rating System (MA and Part D quality rating system)* means the rating system described in subpart D of parts 422 and 423 of this chapter.
- *Qualified health plan rating system (QHP quality rating system)* means the health plan quality rating system developed in accordance with 45 CFR 156.1120.
- *Quality rating* means the numeric or other value of a quality measure or an assigned indicator that data for the measure is not available.
- *Technical resource manual* means the guidance described in § 438.530.
- *Validation* means the review of information, data, and procedures to determine the extent to which they are accurate, reliable, free from bias, and in accord with standards for data collection and analysis.

d. General Rule and Applicability (§§ 438.334(a), 438.505(a) and 457.1240(d))

Currently, § 438.334(a) lays out the general rule for the MAC QRS, including general requirements for States contracting with MCOs, PIHPs and/or PAHPs to furnish services to Medicaid beneficiaries. These requirements also apply to separate CHIP through a cross-reference to § 438.334 at § 457.1240(d). Specifically, § 438.334(a) requires States to adopt a quality rating system using the CMS framework or an alternative quality rating system and to implement such quality rating system within 3 years of the date of the final rule published in the **Federal Register**. We are proposing at § 438.505(a)(2) for Medicaid, and for separate CHIP by cross-reference to Part 438, Subpart G at § 457.1240(d), to require States to implement their MAC QRS (or alternative QRS) by the end of the fourth calendar year following the effective date of the final rule (meaning the fourth calendar year following issuance of the final rule). This proposed change from the current 3-year implementation date under § 438.344(a) would provide States more time to make the operational and contractual changes needed to meet the requirements in this proposed rule and also give States flexibility to determine what time of year to publish their quality ratings. To illustrate the proposed timeline change, we provide the following example: if the final rule is effective on April 1, 2024, States would be required to implement their MAC QRS no later than December 31, 2028, and the data displayed in 2028 would be from the measurement year between January 1, 2026 and December 31, 2026. The timeline for future measurement and display years is discussed in detail in section I.B.6.e.7. of this proposed rule. The proposal at § 438.520(a)(6) for Medicaid, and for separate CHIP by cross-reference through a proposed amendment at § 457.1240(d), would require implementation of some website display requirements, discussed in section I.B.6.g. of this proposed rule, after the proposed implementation date. We also discuss in section I.B.6.g. of this proposed rule, how several of the proposed display requirements build upon existing information and data States either already have or are currently required to report publicly or to CMS. We seek comment on whether these proposed policies, all together, would give States sufficient time to implement their MAC QRS or alternative QRS on a timeline that meets their operational needs.

We are also proposing for Medicaid, as a general rule, that States provide a support system for beneficiaries or users of a State's MAC QRS, leveraging existing State resources. In our user testing, described in greater detail in I.B.6.g. of this proposed rule, users responded positively to the availability of live consumer assistance through telephone or online chat, which 83 percent of participants found useful as it helped them navigate the MAC QRS website and get the information they were looking for right away. Per § 438.71, States are currently required to develop and implement a beneficiary support system. The elements of the beneficiary support system are identified at § 438.71(b)(1) as including choice counseling for all beneficiaries in § 438.71(b)(1)(i), assistance for enrollees in understanding managed care in § 438.71(b)(1)(ii), and assistance related to the receipt of long-term services and supports at § 438.71(b)(1)(iii). Currently, § 438.2 provides that choice counseling means the provision of information and services designed to assist beneficiaries in making enrollment decisions and includes answering questions and identifying factors to consider when choosing among managed care plans and primary care providers. Choice counseling does not include making recommendations for or against enrollment into a specific MCO, PIHP, or PAHP. We believe that this existing support is an appropriate system for States to build upon to assist beneficiaries in using and understanding the information in the MAC QRS to select a managed care plan. In a new § 438.505(a)(3), we are therefore proposing for Medicaid that States would be required to use the beneficiary support system implemented under current § 438.71 to provide choice counseling to all beneficiaries, and assistance for enrollees on understanding how to use the managed care quality rating system to select a managed care plan, including the receipt of long-term services and supports. With the support system already in place, we believe States could leverage existing resources by developing new scripts and training existing staff. We discuss the importance of providing this assistance in section I.B.6.g. of this proposed rule where we provide an overview of the input we received from beneficiaries. However, since a beneficiary support system is not required for separate CHIP, we do not propose to adopt this provision for subpart L of part 457.

The current regulations at § 438.334(b)(1) for Medicaid, and applied by cross-reference at § 457.1240(d) for separate CHIP, require the MAC QRS framework to align, where appropriate, with the QHP quality rating system, the MA and Part D quality rating system and other related CMS quality rating approaches as a way to reduce State burden across Federal quality reporting systems. We believe this requirement should

continue to apply broadly to the MAC QRS framework and are therefore proposing to require this alignment, to the extent appropriate, as part of CMS' maintenance the MAC QRS framework. We propose to redesignate this requirement for alignment in § 438.334(b)(1) to its own provision at § 438.505(c) for Medicaid, and for separate CHIP by cross-reference through a proposed amendment at § 457.1240(d). The importance of alignment of the MAC QRS with the MA and Part D and QHP quality rating systems was shared by States, managed care plans and other interested parties, affirming the requirement in our current regulations that, to the extent possible, the MAC QRS be aligned with the MA and Part D and QHP quality ratings systems, the Medicaid and CHIP Child Core Set, the Medicaid Adult Core Set, and other similar CMS initiatives such as the Medicaid and CHIP Scorecard and the CMS Universal Foundation.[143] We are also proposing, at § 438.505(c), that in maintaining the MAC QRS mandatory measure set and rating methodology, CMS will align with these other similar CMS programs and approaches when appropriate.

Finally, current regulations at § 438.334(a) for Medicaid managed care programs (applied to separate CHIP through a cross-reference in § 457.1240(d)) apply the requirements for the MAC QRS to each State contracting with an MCO, PIHP or PAHP to furnish services to Medicaid or CHIP beneficiaries. We are proposing to revise this to refer to ''an applicable managed care plan as described in paragraph (b) of this section'' in proposed § 438.505(a), and add an applicability provision at new § 438.505(b) stating that the provisions of newly-proposed subpart G apply to States contracting with MCOs, PIHPs, and PAHPs for the delivery of services covered under Medicaid. The proposed provisions at § 438.505(a) and (b) are also proposed to apply to separate CHIP through a cross-reference at § 457.1240(d), but excluding all references to beneficiary support systems. We note that the current and proposed regulations in Subpart G do not apply to PCCM entities, consistent with current regulations at §§ 438.10(c)(2) and 457.1207; non-emergency medical transport PAHPs are also not included in the MAC QRS, in accordance with §§ 438.9 and 457.1206(b). In addition, our proposal for the MAC QRS framework excludes contracts between States and MA Dual Eligible Special Needs Plans (D–SNP) where the contract is only for the D–SNP to provide Medicaid coverage of Medicare cost sharing for the D–SNP enrollees; this is reflected in proposed § 438.505(b).

e. Establishing and Modifying a Mandatory Measure Set for MAC QRS (§§ 438.334(b), 438.510 and 457.1240(d))

The current regulations at § 438.334(b)(1) direct CMS, after consulting with States and other interested parties, to identify a mandatory set of QRS quality measures that align, where appropriate, with the MA and Part D and QHP quality rating systems and other related CMS quality rating approaches, and to provide an opportunity for public notice and comment on such mandatory measures. In this section we discuss the standards that guided CMS in identifying the initial mandatory measures and propose an initial mandatory measure set. We seek comment on our proposed initial mandatory measure set, which we will finalize in the preamble of the final rule. Under this proposal, we would not duplicate the list of the mandatory measures and specifications in regulation text in light of the regular updates and revisions contemplated by the rules we are proposing for ongoing maintenance of the MAC QRS. We also propose a subregulatory process to modify the mandatory measure set over time, including proposing to codify the standards that guided development of the proposed initial mandatory measure set.

(1) Standards for Including Measures in Mandatory Measure Set (§§ 438.510(c), 457.1240(d))

Three distinct considerations guided the process of selecting individual measures to establish a concise proposed initial mandatory measure set. We are proposing at § 438.510(c)(1)–(3) to codify these three considerations as standards that we would apply in the future to determine when to add measures to the mandatory measure set, when to make substantive updates to an existing mandatory measure, and in some circumstances, when to remove a measure from the mandatory measure set. Specifically, a measure is only included in our proposed initial mandatory measure set and would only be added in the future if (1) it meets five of the six measure inclusion criteria proposed in this section; (2) it would contribute to balanced representation of beneficiary subpopulations, age groups, health conditions, services, and performance areas (for example, preventive health, long term services and supports, etc.) within a concise set of mandatory measures; and (3) the burdens associated with including the measure do not outweigh the benefits to the overall quality rating system framework of including the new measure based on the measure inclusion criteria we are proposing. Under our proposal, and as discussed in section I.B.6.e.4. of this proposed rule, a measure would be added to the mandatory set if it meets each of these three standards. To determine whether a measure meets these standards, CMS would rely on the input received throughout the subregulatory process proposed in § 438.510(b) and discussed in section I.B.6.e.3. of this proposed rule and other relevant research and information. Similarly, a measure would be removed from the mandatory measure set if it no longer met these standards. This approach would ensure that each of the three proposed standards are met.

Using the MAC QRS goals described in section I.B.6.a. of this proposed rule as a guidepost during our discussion with States and other interested parties, we identified and refined six measure inclusion criteria: (1) is the measure meaningful and useful for beneficiaries and their caregivers when choosing a managed care plan; (2) does the measure align with other CMS rating programs described in § 438.505(c) of this chapter; (3) does the measure assess health plan performance in at least one of the following areas: customer experience, access to services, health outcomes, quality of care, health plan administration, and health equity; (4) does the measure provide an opportunity for managed care plans to influence their performance on the measure; (5) is the measure based on data that are readily available, or available without undue burden on States and plans, such that it is feasible to report by most States and managed care plans; and (6) does the measure demonstrate scientific acceptability, meaning that the measure, as specified, produces consistent and credible results.

We used these six criteria to assess hundreds of measures suggested throughout our engagement with interested parties. We explain each proposed criterion here and describe how we assessed measures suggested during our engagement with interested parties against the criteria to select the proposed initial mandatory measure set of 18 measures, displayed in Table 1. In doing so, we also show how we would make future updates to the mandatory measure list using these criteria.

[143] *https://www.nejm.org/doi/full/10.1056/NEJMp2215539.*

• *Usefulness to beneficiaries:* Whether the measure is meaningful and useful for beneficiaries or their caregivers when choosing a managed care plan. For the proposed mandatory set, we assessed whether a measure meets this criterion by seeking beneficiaries' feedback on which measures of health plan performance are most relevant to them. We then gave preference to measures that assess the quality of care or services most commonly identified by beneficiaries as relevant to selection of a health plan or their assessment of a health plan's quality. When adding, updating or removing measures, we intend to rely on the continued engagement with beneficiaries proposed in § 438.520(c) (discussed in section I.B.6.g.4. of this proposed rule) to apply a similar preference for changes that are either most meaningful and useful or most commonly described as meaningful and useful. Input from beneficiaries or beneficiary advocates with experience assisting beneficiaries will be particularly important in evaluating this criterion, but input from other interested parties will also be considered.

• *Alignment:* Whether the measure or measure concept is consistent with the principles of, or is represented in, one or more existing Federal, State, and/or Medicaid and CHIP quality reporting programs. For the measures listed in Table 1, we assessed whether a measure meets this criterion by identifying the extent to which States and other Federal programs (such as the Medicaid and CHIP Scorecard, the MA and Part D quality rating system, and the QHP quality rating system) currently collect or report the measure. We considered feedback on measures commonly used to assess health plan performance as well as the challenges and concerns with these measures. We gave preference to measures commonly collected or reported with few reporting challenges. However, we also considered emerging measures that are not yet commonly collected or reported but align with a performance area or health outcomes measured by commonly used measures. As an example, an emerging measure such as the Person-Centered Contraception Counseling measure, which is not currently adopted at the plan level, could meet the alignment criterion if our workgroup identified that it overlaps with an existing, widely used measure in the area of contraception. We believe this approach more accurately reflects the continuing evolution of quality measurement and would allow the consideration of new, better measures, as they are developed. We note, however, that emerging measures would still be assessed based on the other criteria and standards described here and proposed at § 438.510(c)(1), (2), and (3), and it may take time for emerging measures to meet the final regulatory standards. Within the proposed measure set, 15 of the 18 measures are commonly reported by States,[144] 16 of the 18 measures overlap with the 2023 and 2024 Core Set measures, 11 with the QHP quality ratings system, 13 with the 2021 Medicaid and CHIP Scorecard, and 5 with the MA and Part D quality rating system.

• *Relevance:* Whether the measure evaluates or measures the managed care plan's performance in at least one of the following areas: customer experience, access to services, health outcomes, quality of care, health plan administration, and health equity. For the proposed measure set, we determined which of the areas each measure evaluates or measures. Preference was given to measures that evaluate or measure more than one area.

• *Actionability:* Whether there are opportunities for managed care plans to influence their performance on the measure. For the proposed measure set, we assessed whether a measure met this criterion by considering input on what actions managed care plans may take to improve or maintain measure performance and the extent to which the plans control, or are capable of influencing, what is being measured. We also considered whether the measure is currently specified at the plan level, meaning that measure specifications are available to calculate the measure at the plan (as opposed to provider or State) level. We gave preference to measures that are currently specified at the plan level and are more easily controlled or influenced by health plans.

• *Feasibility:* Whether the data needed to calculate the measure are readily available or could be captured without undue burden and could be implemented by most States and health plans. For the proposed measure set, we assessed whether a measure meets this criterion by considering the accessibility of the data required to calculate the measures and the proportion of plans or States that currently collect data for the measure. We gave preference to measures that require data that are easily accessible to plans (such as claims data) or are commonly collected.

• *Scientific Acceptability:* Whether the measure produces consistent (reliable) and credible (valid) results. We assessed whether a measure meets this criterion by reviewing evidence that use of the measure can draw reasonable conclusions about care in a given domain.[145]

Using feedback throughout our consultations related to the mandatory measure list, we assessed our list of suggested measures to identify the extent to which each measure met these inclusion criteria. During the same consultations, we received feedback (and our own evaluation showed) that while each of the six criteria were important to consider, it would be difficult for a measure to meet all six criteria. For instance, we found that requiring all six criteria could prevent the inclusion of either measures that are meaningful to beneficiaries but not commonly used by States, or measures aligned with State priorities for managed care quality and plan performance, but less useful to beneficiaries. We are therefore proposing in § 438.510(c)(1) that a measure must meet at least five of the six measure inclusion criteria to be considered against our other standards and included in the mandatory measure set in the future. We seek comment on the six criteria we are proposing to evaluate prospective measures for the mandatory measure set, and whether there are additional objective measure inclusion criteria that we should use to evaluate quality measures for inclusion as mandatory measures. Additionally, we seek comment on our proposal to require measures to meet five out of the six proposed criteria, and whether that threshold produces a sufficient number of measures to consider for the MAC QRS. Finally, we seek comment on the extent to which the measures in our proposed measure set meet the proposed measure inclusion criteria, including the reasons and/or supporting data for why the measure meets or does not meet the criteria. In our review of measures and development of the list of mandatory measures, we believe that each meets at least 5 if not all 6 of the criteria proposed at § 438.510(c)(1).

Through our work to develop the proposed mandatory measure set, we found that many measures meet at least five of the six measure inclusion criteria, and without additional guardrails in place we believe the set would quickly expand and become burdensome to States and plans. States

[144] As reported by States for the 2020–2021 EQR reporting cycle.

[145] CMS Measures Blueprint: *https://mmshub.cms.gov/measure-lifecycle/measure-testing/evaluation-criteria/overview.*

and managed care plans generally recommended limiting the mandatory set to between 10 and 30 measures to ensure plans' ability to improve on selected measures and States' capacity to succeed in reporting, and to limit the impact of implementing a QRS on State and plan resources. Furthermore, our MAC QRS website prototype user testing showed that beneficiaries were evenly split between those with high informational needs who preferred detailed information from a lot of measures and those who valued clear, concise information on the big picture using fewer measures.

To maintain a concise measure set, we are proposing to codify two additional measure inclusion standards in § 438.510(c)(2) and (3). These two additional standards reflect the feedback we received on maintaining a ''concise'' mandatory measure list and provide a process by which to identify further distinctions among measures that meet our inclusion criteria and to consider the measure set as a whole as part of the selection process. First, in § 438.510(c)(2), we propose that a measure must contribute to balanced representation of beneficiary subpopulations, age groups, health conditions, services, and performance areas that are assessed within a concise mandatory measure set. We have included as part of our standard proposed in § 438.510(c)(2) that the overall measure set should be ''concise,'' given the feedback we received on limiting the number of measures in the mandatory measure set. we established and intend to maintain a goal of no more than 20 measures for the initial mandatory measure set. However, the proposed rule would retain flexibility for the number of measures to increase as the mandatory set is updated over time. we would consider each suggested measure in relation to other suggested measures and the overall mandatory measure set to identify those that are very similar or duplicative, keeping in mind the need for a mandatory measure set that is both representative and concise.

Second, we propose in § 438.510(c)(3) that a measure would be added to the mandatory measure set when the burdens of adding the measure do not outweigh the benefits based on the 6 criteria proposed at § 438.510(c)(1)(i) through (vi). we would compare similar measures, that is, those suggested for inclusion that measure performance within similar subpopulations of beneficiaries, health conditions, services, and performance areas as well as the extent to which a contemplated new measure meets the criteria listed in proposed paragraph (c)(1), to assess the benefits and burdens of including each measure in the mandatory measure set. Under our proposal, we would include a measure when all three of the standards proposed in § 438.510(c) are met. CMS would use the subregulatory process proposed in § 438.510(b) and discussed in section 1.B.6.e.3. of this proposed rule to determine which measures meet the proposed standards.

We seek comment on the standards proposed at § 438.510(c)(2) and (3) and how measures should be assessed using these standards. In particular, we seek comment on the appropriate balance of representation (of populations and performance areas) in the mandatory measure set and any additional considerations that may be missing from our proposed paragraph (c)(2). Further, we seek comment on whether there are additional considerations for the weighing of burdens and benefits of a measure under proposed § 438.510(c)(3).

(2) Mandatory Measure Set (§§ 438.510(a), (b), and 457.1240(d))

We propose in § 438.510(a) for Medicaid, and for separate CHIP by cross-reference through a proposed amendment at § 457.1240(d), that the quality rating system for managed care plans implemented by the State for Medicaid (and CHIP) managed care programs must include the measures in a mandatory measure set, which will be identified by CMS in the technical resource manual as proposed in § 438.530(a)(1). We note that in proposed § 438.520(b), discussed in section I.B.6.g.5. of this proposed rule, States can include other, additional measures outside the mandatory measure set. We received input through our consultations with interested parties, detailed in section I.B.6.a. of this proposed rule, on how to construct a mandatory measure set for the MAC QRS, including the number of measures, measure inclusion criteria, and performance areas and populations represented by the measures. After considering the priorities and other information gleaned through the several years of consultations described in section I.B.6.a. of this proposed rule, and applying the standards discussed in section I.B.6.e.1. of this proposed rule, we are proposing for public comment an initial set of 18 mandatory measures that represents the collective input we received during those consultations. This proposed initial set of mandatory measures can be found in Table 1. These proposed mandatory measures reflect a wide range of preventive and chronic care measures representative of Medicaid and CHIP beneficiaries.

TABLE 1: Proposed MAC QRS Mandatory Measure Set

NQF #*	Measure Steward	Measure Name	Measure Description	Data Collection Method
2801	NCQA	Use of First-Line Psychosocial Care for Children and Adolescents on Antipsychotics (APP-CH)	The percentage of members who had a new prescription for an antipsychotic medication and had documentation of psychosocial care as first-line treatment. Ages: 1 to 17	Administrative**
0004	NCQA	Initiation and Engagement of Substance Use Disorder (SUD) Treatment	The percentage of new SUD episodes for members that result in the following: • Initiation of SUD Treatment. Percentage of new SUD episodes for members that result in treatment initiation through an inpatient SUD admission, outpatient visit, intensive outpatient encounter or partial hospitalization, telehealth, or medication treatment within 14 days of the diagnosis • Engagement of SUD Treatment. The percentage of new SUD episodes for members that have evidence of treatment engagement within 34 days of the initiation visit. Ages: 13 – 17 | 18 to 64 | 65 and older	Administrative or EHR
0418* **	CMS	Preventive Care and Screening: Screening for Depression and Follow-Up Plan (CDF)	The percentage of members screened for depression on the date of the encounter or 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool, and if positive, a follow-up plan is documented on the date of the eligible encounter. Ages: 12 to 17 | 18 to 64 | 65 and older	Administrative or EHR
3489	NCQA	Follow-Up After Hospitalization for Mental Illness (FUH)	The percentage of emergency department (ED) visits for members with a principal diagnosis of mental illness or intentional self-harm and who had a follow-up visit for mental illness. The following rates are reported: • The percentage of ED visits for mental illness for which the member received follow-up within 30 days of the ED visit (31 total days) • The percentage of ED visits for mental illness for which the beneficiary received follow-up within 7 days of the ED visit (8 total days). Ages: 6 to 17 | 18 to 64	Administrative
1392	NCQA	Well-Child Visits in the First 30 Months of Life (W30)	The percentage of members who had the following number of well-child visits with a primary care practitioner (PCP) during the last 15 months. The following rates are reported:	Administrative

NQF #*	Measure Steward	Measure Name	Measure Description	Data Collection Method
			• Well-Child Visits in the First 15 Months. Children who turned age 15 months during the measurement year: Six or more well-child visits. • Well-Child Visits for Age 15 Months to 30 Months. Children who turned age 30 months during the measurement year: Two or more well-child visits. Ages: 0 to 15 months | 15 to 30 months	
1516	NCQA	Child and Adolescent Well-Care Visits (WCV)	The percentage of members who had at least one comprehensive well-care visit with a primary care practitioner (PCP) or an obstetrician/gynecologist (OB/GYN) during the measurement year. Ages: 3 to 21	Administrative
2372	NCQA	Breast Cancer Screening (BCS)	The percentage of women who had a mammogram to screen for breast cancer. Ages: 50 to 74	Administrative, EHR, or Electronic Clinical Data System (ECDS)♦
0032	NCQA	Cervical Cancer Screening (CCS)	The percentage of women who were screened for cervical cancer using either of the following criteria: • Women ages 21 to 64 who had cervical cytology performed within the last 3 years • Women ages 30 to 64 who had cervical high-risk human papillomavirus (hrHPV) testing performed within the last 5 years • Women ages 30 to 64 who had cervical cytology/high-risk human papillomavirus (hrHPV) co-testing within the last 5 years Ages: 21 to 64	Administrative, hybrid, or EHR
0034	NCQA	Colorectal Cancer Screening (COL)	The percentage of members who had appropriate screening for colorectal cancer. Ages: 50 to 75	Administrative, hybrid, or ECDS
2517	DQA	Oral Evaluation, Dental Services (OEV)	The percentage of members who received a comprehensive or periodic oral evaluation within the reporting year. Ages: 0 to 20	Administrative
2902	OPA	Contraceptive Care - Postpartum Women (CCP)	Among women who had a live birth, the percentage that: 1. Were provided a most effective or moderately effective method of contraception within 3 and 60 days of delivery. 2. Were provided a long-acting reversible method of contraception (LARC) within 3 and 60 days of delivery. Ages: 15 to 20 | 21 to 44	Administrative
1517**	NCQA	Prenatal and Postpartum Care (PPC)	Percentage of deliveries of live births on or between October 8 of the year prior to the measurement year and October 7 of the measurement year that: 1. Received a prenatal care visit in the first trimester, on or before the enrollment start date or within 42 days of enrollment in Medicaid/CHIP (Timeliness of Prenatal Care Rate).	Administrative or hybrid

NQF #*	Measure Steward	Measure Name	Measure Description	Data Collection Method
			2. That had a postpartum visit on or between 7 and 84 days after delivery (Postpartum Care Rate). Ages: All Ages	
0575/0059	NCQA	Hemoglobin A1c Control for Patients with Diabetes (HBD)	The percentage of members with diabetes (types 1 and 2) whose hemoglobin A1c (HbA1c) was at the following levels during the measurement year: • HbA1c control (<8.0%). • HbA1c poor control (>9.0%). Ages: 18 to 75	Administrative or hybrid
1800	NCQA	Asthma Medication Ratio (AMR)	The percentage of members who were identified as having persistent asthma and had a ratio of controller medications to total asthma medications of 0.50 or greater during the measurement year. Ages: 5 to 18 | 19 to 64	Administrative
0018	NCQA	Controlling High Blood Pressure (CBP)	The percentage of members who had a diagnosis of hypertension and whose blood pressure (BP) was adequately controlled (< 140/90 mm Hg) during the measurement year. Ages: 18 to 85	Administrative, hybrid, or EHR
0006	AHRQ❖	CAHPS – How people rated their health plan	The percentage of members who rated their health plan a 9 or 10, where 0 is the worst health plan possible and 10 is the best health plan possible. Ages: 0 to 17 | 18 and older	Consumer Survey
0006	AHRQ❖	CAHPS – Getting care quickly	Composite of the following items: • The percentage of members who indicated that they always got care for illness, injury, or condition as soon as they needed, in the last six months. • The percentage of members who indicated they always got check-up or routine care as soon as they needed, in the last six months. Ages: 0 to 17 | 18 and older	Consumer Survey
0006	AHRQ❖	CAHPS – Getting needed care	Composite of the following items: • The percentage of members who indicated that it was always easy to get necessary care, tests, or treatment, in the last six months. • The percentage of members who indicated that they always got an appointment with a specialist as soon as needed, in the last six months. Ages: 0 to 17 | 18 and older	Consumer Survey
0006	AHRQ❖	CAHPS – How well doctors communicate	Composite of the following items: • The percentage of members who indicated that their doctor always explained things in a way that was easy to understand. • The percentage of members who indicated that their doctor always listened carefully to enrollee.	Consumer Survey

NQF #*	Measure Steward	Measure Name	Measure Description	Data Collection Method
			• The percentage of members who indicated that their doctor always showed respect for what enrollee had to say. • The percentage of members who indicated that their doctor always spent enough time with enrollee. Ages: 0 to 17 | 18 and older	
0006	AHRQ❖	CAHPS – Health plan customer service	Composite of the following items: • The percentage of members who indicated that customer service always gave necessary information or help, in the last six months. • The percentage of members who indicated that customer service always was courteous and respectful, in the last six months. Ages: 1 to 17 | 18 and older	Consumer Survey
Not endorsed	CMS	MLTSS-1 LTSS Comprehensive Assessment and Update	The percentage of Medicaid MLTSS plan participants who have documentation of a comprehensive assessment in a specified timeframe that includes documentation of core elements. Two performance rates and two exclusions rates are reported for this measure: • Assessment of Core Elements. Medicaid MLTSS plan participants who had a long-term services and supports comprehensive assessment with nine core elements documented within 90 days of enrollment (for new participants) or during the measurement year (for established participants) • Assessment of Supplemental Elements. Medicaid MLTSS plan participants who had a long-term services and supports comprehensive assessment with nine core elements and at least 12 supplemental elements documented within 90 days of enrollment (for new participants) or during the measurement year (for established participants) Ages: 18 and older	Case Management Record Review
3547	CMS	MLTSS-7: LTSS Minimizing Institutional Length of Stay	The proportion of admissions to an institutional facility (for example, nursing facility, intermediate care facility for individuals with intellectual disabilities (ICF/IID)) for managed long-term services and support (MLTSS) plan enrollees that result in successful discharge to the community (community residence for 60 or more days) within 100 days of admission. This measure is reported as an observed rate and a risk-adjusted rate. Ages: 18 and older	Claims, Enrollment Data

* Refers to National Qualify Forum number. Measure endorsed by NQF can be found at NQF: Quality Positioning System ™ (qualityforum.org)

** Examples of administrative data collection methods are claims, encounters, vital records, and registries.

*** This measure is no longer endorsed by NQF.

♦ The HEDIS® Electronic Clinical Data System (ECDS) reporting standard defines data sources and types of structured data acceptable for use for a measure. The measures are provided as digital quality measures.

BILLING CODE 4120–01–P

We considered including several other measures that are not included in the proposed initial mandatory set. These other measures were not included because they did not meet one or more of the standards described in section I.B.6.e.1. of this proposed rule. These other measures and the reason we did not include them in Table 1, are described here:

- *Contraceptive measure:* States and other interested parties stated a desire for the MAC QRS to include a quality measure involving contraceptive services that would be relevant for all women, but many noted that there is not yet a measure they would recommend that meets this description. Beneficiaries did not specifically speak to the importance of a contraceptive measure, but consistently noted the desire to be involved in their care decisions and for providers to respect their health goals and needs when providing counseling on health care options. We considered various contraceptive measures in addition to CCP, the measure currently included in the proposed mandatory set. They include Contraceptive Care—All Women Ages 15 to 44 (CCW) and a new survey-based measure, Person-Centered Contraceptive Counseling (PCCC), that uses patient provided responses to assess the person-centeredness of contraceptive counseling. While we believe the PCCC measure aligns well with beneficiary preferences stated during beneficiary consultations, it failed to meet two of the six measure inclusion criteria. First, PCCC does not currently meet our requirement of feasibility as we did not find evidence that plans are currently collecting the data necessary to produce this measure and some interested parties stated concern about the perceived burden of reporting PCCC. Second, we believe the measure does not meet the scientific acceptability criterion as it is currently specified only at the provider level so it is unknown whether it produces consistent and credible results at the plan level. With respect to CCW and CCP, both measures meet at least five of the six inclusion criteria. Furthermore, both measures measure access to contraception that reduces unintended pregnancy in their respective populations and therefore each would contribute to balanced representation of beneficiaries by providing insight into the accessibility of contraceptive care among beneficiaries who may become pregnant. However, while both CCP and CCW would contribute to balanced representation within a concise mandatory measure set, we believe the benefits of including CCP are greater than those of CCW because CCP focuses on measuring access to effective contraceptive care during the postpartum period, which can improve birth spacing and timing and improve the health outcomes of women and children.
- *Follow-up after Emergency Department Visit for Mental Illness (FUM) versus Follow-up After Hospitalization for Mental Illness (FUH):* There was support from States and other interested parties to include both of these measures, and including both would give a fuller picture of the percentage of emergency department and inpatient hospital discharges for which beneficiaries received follow-up services. These measures met all of our measure inclusion criteria and had similar benefits and burdens, but the two measures assessed important, but very similar services. We concluded that including both would not contribute to balanced representation within an overall mandatory set. Upon balancing benefits and burdens associated with each measure, we selected FUH because it was more commonly collected or reported at both the State and Federal level and more frequently used by States to assess plan performance. We provide a detailed analysis of our review of the FUH and FUM measures in section I.B.6.e.4. of this proposed rule.
- *Childhood Immunization Status (CIS):* We considered including the childhood immunization status measure, however, we included the well-child visit measure instead. Both measures met at least five of the six inclusion criteria and each could contribute to balanced representation within the overall mandatory set. However, when reviewing the burdens and benefits to the overall MAC QRS, we concluded the CIS measure would have little added benefit because our beneficiary testing showed that parents cared a lot about whether their children can get appointments (reflected in the well-child visit measure), but no beneficiary commented specifically on childhood immunizations.
- *Postpartum Depression Screening:* We considered this measure based on recommendations from the 2019 Measure Workgroup. However, we did not include this measure because it did not meet two of our six inclusion criteria. First, the measure is not aligned with any other CMS programs. Second, the measure did not meet our feasibility criterion because the measure relies solely on a proprietary electronic clinical data systems (ECDS) reporting method. While this measure has been recommended for addition to the Core Set, CMS has deferred decisions related to the measure to assess how the proprietary nature of this information impacts the feasibility of reporting.

(3) Subregulatory Process To Update Mandatory Measure Set (§§ 438.510(b) and 457.1240(d))

The current regulations at § 438.334(b)(2) establish that we may, after consulting with States and other interested parties and providing public notice and opportunity to comment, periodically update the Medicaid managed care QRS framework developed under current § 438.334(b)(1). We remain dedicated to the policy currently reflected in § 438.334(b)(1) and (b)(2) that requires engagement with interested parties for continuous improvement of the MAC QRS. In addition, continued engagement with States is consistent with our obligations under sections 1932(c)(1)(D) and 2103(f)(3) of the Act to consult with States in setting standards for measuring and monitoring managed care plan performance. However, we believe that requiring rulemaking to add new measures that may better meet beneficiaries' and States' needs or to remove measures whose utility has been surpassed by other measures would be overly restrictive and would undermine our ability to adapt the mandatory set to keep pace with changes in the quality field and user preferences. We also believe that a robust subregulatory process in which we interpret and apply substantive regulatory standards governing the measures to be included in the mandatory measure set can ensure that any changes reflect the extensive input from interested parties that is needed. We are therefore

proposing to revise § 438.334(b)(2), redesignated at new proposed § 438.510(b) for Medicaid, and for separate CHIP by cross-reference through a proposed amendment at § 457.1240(d), that we undergo a subregulatory process to engage with States and other interested parties, to obtain expert and public input and recommendations prior to modifying the mandatory measure set. Once the mandatory measure set is finalized through this rulemaking, we believe periodic, subregulatory updates and maintenance to add, remove, or update measures would ensure that the mandatory measure set continues over time to adhere to our three proposed standards at § 438.510(c). To achieve these goals, we are proposing these modifications occur at least every other year (biennially).

With exceptions for removing measures for specific reasons proposed at § 438.510(d) and non-substantive updates to existing measures as proposed at § 438.510I(1), we are proposing in new § 438.510(b) that we will engage in a two-step subregulatory process to obtain input and recommendations from States and other interested parties prior to finalizing certain types of changes to the mandatory measure set in the future. This proposed engagement with States is similar to the public notice and comment process currently required by § 438.334(b) and consistent with our obligations under sections 1932(c)(1)(D) and 2103(f)(3) of the Act to consult with States in setting standards for measuring and monitoring managed care plan performance. Proposed § 438.510(b) would apply to separate CHIP by cross-reference through a proposed revision to § 457.1240(d).

As the first step in the process, we propose at § 438.510(b)(1) that CMS would engage with States and interested parties (such as State officials, measure experts, health plans, beneficiaries and beneficiary advocates or organizations, tribal organizations, health plan associations, health care providers, external quality review organizations and other organizations that assist States with MAC QRS ratings) to evaluate the current mandatory measure set and make recommendations to add, remove, or update existing measures. The purpose of this evaluation would be to ensure the mandatory measures continue to meet the standards proposed in § 438.510(c). We envision that this engagement could take several forms. For example, a workgroup could be convened to hold public meetings where the workgroup attendees would make recommendations to CMS to add and remove measures. Alternatively, a smaller series of meetings with interested parties could be held, or a request for information could be published to solicit recommendations from experts. In either case, we intend that recommendations would be based on the standards proposed in § 438.510(c) and discussed in section I.B.6.e.1. of this proposed rule.

At § 438.510(b)(2) we propose that the second step in the process would be for CMS to provide public notice and opportunity to comment through a call letter (or similar subregulatory process using written guidance) that includes the mandatory measures identified for addition, removal or updating through the public engagement step. Following the public notice and opportunity for public comments, we propose at § 438.510(f) that we will publish the modifications to the mandatory measure set in the technical resource manual proposed at § 438.530 (this proposal is discussed in more detail in section I.B.6.e.7. of this proposed rule).

This subregulatory process shares similarities with the QHP quality rating system, which uses a call letter process to gather feedback on measure updates. It also aligns with how the Core Sets are updated annually. As part of the Core Set annual review and selection process, a workgroup made up of Medicaid and CHIP interested parties and measurement experts convenes annually, in a public meeting, and develops a set of recommendations for changes to the Core Sets. These recommendations are posted in a draft report for public comment, and the final report that is submitted to CMS includes both the workgroup recommendations and public comments. The annual updates to the Core Sets are based on the workgroup recommendations and comments, and using input from States and Federal partners, CMS decides whether to accept them prior to the updated Core Sets being finalized. Details on this process are available at *https://www.medicaid.gov/medicaid/quality-of-care/downloads/annual-core-set-review.pdf.* While we generally are aligning the MAC QRS workgroup processes, as noted above, with the QHP quality rating and Core Set processes as appropriate, the MAC QRS is independent and will have its own processes.

If the proposed rule is finalized in 2024, the implementation deadline for each State's MAC QRS per proposed § 438.505(b) (which provides for such implementation to be no later than the fourth calendar year following publication of the final rule) would be December 31, 2028, and the first measurement year would be 2026. Since we are proposing to finalize our initial measure set in this rulemaking, any updates to the initial mandatory measure list made pursuant to the subregulatory process proposed at § 438.510(b) would be effective no earlier than the year after the implementation of each State's MAC QRS. We believe it would be appropriate to initiate the proposed subregulatory process for the second display year (for example, 2029 if the rule is finalized in 2024) because the mandatory measure list would be 5 years old by then, and at least biennially thereafter (in line with proposed § 438.510(b)(2)). However, we seek comment on whether we should instead initiate the subregulatory process to update the mandatory measure list for the third display year (for example, 2030 if the rule is finalized in 2024). We also seek comment on the types of engagement that would be important under this proposed subregulatory process (for example, workgroups, smaller meetings, requests for information), the types of experts that CMS should include in the engagement, and the use of a call letter or similar guidance to obtain public input.

(4) Adding Mandatory Measures (§§ 438.510(b)(2), (d) and (e) and 457.1240(d))

Our proposal at § 438.510(c) states that CMS would add a measure to the mandatory measure set when all three standards proposed at § 438.510(c)(1)–(3) are met, based on available information, including input from the subregulatory process. Under our proposal, at least biennially, we would use the subregulatory process proposed in § 438.510(b) to gather input that would be used to determine if a measure meets the proposed standards to be added to the mandatory measure set. For example, CMS could request the workgroup's assessment of the list of measures suggested for addition (from the workgroup, CMS, or both), using our three proposed standards: the proposed criteria (per proposed § 438.510(c)(1)), input on how best to curate a balanced representation of measures from the suggested measures (per proposed § 438.510(c)(2)), and the benefits and burdens of adopting the measures (per proposed § 438.510(c)(3)). Using this input, CMS could identify a subset of measures from that list that best represents these standards. This subset of measures would then be considered eligible to add to the mandatory measure set and described in a call letter or similar written guidance, which would explain how standards in

§ 438.510(c) were applied using input from prior engagement activities and CMS's research and preliminary evaluation. Through the call letter process, CMS would gather public comment including any additional evidence, explanations, and perspectives to determine whether the subset of measures meet the standards in proposed § 438.510(c). The measures that meet the proposed standards based on the totality of input and information compiled by CMS would be added to future iterations of the mandatory measure set. To further illustrate how we intend for the standards proposed in § 438.510(c) to be applied using the subregulatory process, we provide more specific detail in this section of our assessment of two measures considered for inclusion in the proposed mandatory measure set. We intend for the subregulatory process for adding measures to follow this same approach.

In previous discussions, States and other interested parties recommended both the Follow-Up After ED Visit for Mental Illness (FUM) and the Follow-Up After Hospitalization for Mental Illness (FUH) as potential measures to include in our preliminary measure set. As a first step, we used our own research and input from our consultations to assess the measures against the measure inclusion criteria, that we are now proposing as our first standard, and found that both measures meet each of our six proposed criteria (see Table 2).

TABLE 2—EXAMPLE INCLUSION CRITERIA ASSESSMENT

Criteria	FUM	FUH
Alignment	• Identified by 16 States as a measure collected from managed care plans in the '20–'21 EQR reporting cycle. • Reported publicly as a measure of plan performance in 2 States. • Core Set measure	• Identified by 19 States as a measure collected from managed care plans in the '20–'21 EQR reporting cycle. • Reported publicly as a measure of plan performance in 4 States. • Core Set and QHP QRS measure.
Usefulness to Beneficiaries	• The importance of timely access to mental health services were consistently identified in our conversations with Medicaid beneficiaries.	
Relevance	• Both measures address access to services.	
Actionability	• States and plans identified various ways in which plans can address follow-up. The 30-day measure was generally thought to be more actionable than 7-day due to supply of mental health providers and the need for plan coordination in States that carve out behavioral health.	• States and plans identified various ways in which plans can address follow-up. The 30-day measure was generally thought to be more actionable than 7-day due to supply of mental health providers and the need for plan coordination in States that carve out behavioral health. • Used by 3 States to assess plan performance as part of the State's quality strategy.
Feasibility	• Relies on administrative data from claims that are owned or available to plans, but would require coordination between plans in States that offer behavioral through a separate managed care program.	
Scientific Acceptability	• Generally regarded as reliable and valid measure in our listening sessions. • Endorsed by the National Quality Forum.	

Second, we considered the two measures in light of our goals for balanced representation within a concise measure set. Given our goal to limit the initial mandatory measure set to fewer than 20 measures and the fact that both measures focus on assessing follow-up care for mental illness, we determined that including one of the two measures would best maintain balanced representation within the overall measure set and within the behavioral health performance area. We then weighed the benefits and burdens of including each measure using our assessment of the extent to which each measure met our inclusion criteria. As represented in Table 2, we found that both measures had similar benefits and burdens, but the FUH measure had more benefits as it was more commonly collected or reported at both the State and Federal level and more frequently used by States to assess plan performance. We therefore chose to include the FUH measure in the proposed mandatory set.

(5) Removing Existing Mandatory Measures (§§ 438.510(b)(2), (d) and (e) and 457.1240(d))

We are proposing at § 438.510(d)(1) that we may remove existing mandatory measures from the mandatory measure set if, after following the subregulatory process proposed at § 438.510(b), we determine that the measure no longer meets the standards for the mandatory measure set proposed at 438.510(c). We would use the same approach we described in section I.B.6.e.2. of this proposed rule and illustrated with our FUH/FUM example in section I.B.6.e.4. of this proposed rule to assess whether a measure continues to meet our measure inclusion criteria to remain in the mandatory measure set. We are also proposing at § 438.510(d)(2) through (4) to provide CMS the authority to remove mandatory measures outside of the subregulatory process proposed in § 438.510(b) in three circumstances: when the measure steward (other than CMS) retires or stops maintaining a measure (proposed at § 438.510(d)(2)), if CMS determines that the clinical guidelines associated with the specifications of the measure change such that the specifications no longer align with positive health outcomes (proposed at § 438.510(d)(3)), or if CMS determines that a measure shows low statistical reliability under the standard identified in § 422.164(e) of this chapter (proposed at § 438.510(d)(4)).

These proposed criteria for removing measures outside the subregulatory process align with the current regulations governing the MA and Part D quality rating system.[146] When a

[146] "Medicare Program; Contract Year 2024 Policy and Technical Changes to the Medicare Advantage Program, Medicare Prescription Drug Benefit Program, Medicare Cost Plan Program, and

Continued

measure steward such as NCQA or PQA retires a measure, they go through a process that includes extensive review by experts and solicit public comments from a variety of interested parties, including health plans, purchasers, consumers and other interested parties. The proposal to allow CMS to remove a measure if an external measure steward retires or stops maintaining a mandatory measure would allow us flexibility to ensure that measures included in the QRS mandatory measure set are maintained by the measure steward and consistent with the measure steward's underlying standards of clinical meaningfulness, reliability, and appropriateness for measures. Additionally, when there is a change in clinical guidelines such that measure specifications no longer align with or promote positive health outcomes, we believe it would be appropriate to remove the measure. Finally, we are proposing that CMS would have the authority to remove measures that show low statistical reliability (that is, how much variation between measure values that is due to real differences in quality versus random variation). We are using the same standard for statistical reliability as applied for the MA and Part D quality rating system under §§ 422.164(e) and 423.184(e). Any measures removed under these three circumstances proposed at § 438.510(d)(2) through (4) would be announced in the annual technical resource manual, proposed at § 438.530. We believe these criteria will allow us to swiftly remove measures that are no longer appropriate quality indicators of health plan performance. We seek comments on whether there are additional circumstances in which we should be able to remove a mandatory measure without engaging in the subregulatory process proposed at § 438.510(b).

(6) Updating Mandatory Measure Technical Specifications (§§ 438.510 and 457.1240(d))

In addition to adding and removing measures, we are also proposing rules at § 438.510(e) for Medicaid, and for separate CHIP by cross-reference through a proposed amendment at § 457.1240(d), governing how we would handle updates to mandatory measures in the MAC QRS that are a result of changes made by a measure steward other than CMS to an existing mandatory measure's technical specifications. These are updates that measure stewards routinely make to quality measures, and can be non-substantive (such as changes that clarify instructions to identify services or procedures) or substantive in nature (for example, major changes to how the measures are calculated). We are proposing different subregulatory processes by which these non-substantive and substantive updates to existing mandatory measures would be made. First, in proposed paragraph § 438.510(e)(1) for Medicaid, and for separate CHIP by cross-reference through a proposed amendment at § 457.1240(d), we propose that we would update the technical resource manual to revise descriptions of the existing mandatory measures that undergo non-substantive measure technical specification changes. In alignment with current practices in the MA and Part D quality rating system and the Core Sets, we are not proposing to use the subregulatory process proposed in § 438.510(b) for non-substantive changes because we believe they reflect routine measure maintenance by measures stewards that do not significantly affect the measure and would not need additional review by the workgroup and CMS. We are proposing in new paragraph § 438.510(e)(1)(i)–(iv) for Medicaid, and for separate CHIP by cross-reference through a proposed amendment at § 457.1240(d), to codify examples of the types of updates that are non-substantive under this proposal. This proposal is consistent with current practice and regulations for the MA and Part D quality rating system at §§ 422.164(d)(1) and 423.184(d)(1). We identify and describe the proposed non-substantive updates in detail below and seek comment on whether this list is exhaustive, whether it is an adequate list of examples of non-substantive changes, or whether we should consider adding other examples of non-substantive changes to the list. Examples of the types of changes we believe would be non-substantive for purposes of proposed § 438.510(e)(1) include, but are not limited to the following:

- If the change narrows the denominator or population covered by the measure with no other changes, the change would be non-substantive. For example, if an additional exclusion—such as excluding nursing home residents from the denominator—is added, the change would be considered non-substantive and would be incorporated through announcement in the annual technical resource manual.
- If the change does not meaningfully impact the numerator or denominator of the measure, the change would be non-substantive. For example, if additional codes are added that increase the numerator for a measure during or before the measurement period, such a change would not be considered substantive. This type of change has no impact on the current clinical practices of the plan or its providers.
- If revisions are made to the clinical codes without change in the target population or the intent of the measure and the target population, the change would be non-substantive. The clinical codes for quality measures (such as HEDIS measures) are routinely revised as the code sets are updated. Examples of clinical codes, include, but are not limited to:

+ ICD–10–CM code sets, which are updated annually,

+ Current Procedural Terminology (CPT) codes, which are published and maintained by the American Medical Association (AMA) to describe tests, surgeries, evaluations, and any other medical procedure performed by a healthcare provider on a patient, and

+ National Drug Code (NDC) which is updated bi-annually.

- If the measure specification change provides additional clarifications for reporting, without changing the intent of the measure, the change would be non-substantive. Examples include:

+ Adding additional tests that would meet the numerator requirements.

+ Clarifying documentation requirements (for example, medical record documentation).

+ Adding additional instructions to identify services or procedures that meet (or do not meet) the specifications of the measure.

+ Adding alternative data sources or expanding of modes of data collection to calculate a measure.

Second, we propose at § 438.510(e)(2) for Medicaid, and for separate CHIP by cross-reference through a proposed amendment at § 457.1240(d), that we may update an existing mandatory measure that has undergone a substantive measure specification update (that is, an update not within the scope of non-substantive updates, which are illustrated in § 438.510(e)(1)(i) through (iv), only after completing the subregulatory process proposed in § 438.510(b). We believe that most substantive measure specification updates to existing measures could result in new or different measures, thereby necessitating consideration and

Programs of All-Inclusive Care for the Elderly'' (CMS–4201–F). Published in the **Federal Register** on April 12, 2023 (88 FR 22120). Available online at *https://www.federalregister.gov/documents/2022/12/27/2022-26956/medicare-program-contract-year-2024-policy-and-technical-changes-to-the-medicare-advantage-program.*

evaluation against the criteria and standards in proposed paragraph (c) using the process in proposed § 438.510(b). We seek comment on our proposal to incorporate substantive measure specification updates to existing mandatory measures only after consultation with States, other interested parties, and the public, or whether we should consider a separate process for these types of updates.

(7) Finalization and Display of Mandatory Measures and Updates (§§ 438.510(f) and 457.1240(d))

In new paragraph § 438.510(f) for Medicaid, and for separate CHIP by cross-reference through a proposed amendment at § 457.1240(d), we propose that CMS would communicate modifications to the mandatory measure set and the timeline States would be given to implement modifications to the mandatory measure set in the annual technical resource manual. We propose to use the technical resource manual described in proposed § 438.530 to communicate the final updates. We are proposing that States would be given at least 2 calendar years from the start of the measurement year immediately following the technical resource manual in which the mandatory measure addition or substantive update was finalized to display the measurement results and ratings using the new or updated measure(s). We believe giving States at least 2 years would allow for contract and systems updates when new measures are added or substantive updates are made to the mandatory measure set. For example, if the technical resource manual finalized updates in August 2026, and the next measurement year after August started in January 2027, States would have, at a minimum, until January 2029 before they would be required to display the ratings for the mandatory measure updates in their MAC QRS. A State may elect to display the ratings for a new mandatory measure sooner. As two years from the start of the measurement year would always be in January, we seek comment on whether there is a need for States to have the flexibility to update their quality ratings by the end of the second calendar year, which, based on the example above, would give States the flexibility to update the rating between January and December of 2029.

We are proposing the same implementation timeline for substantive updates to existing mandatory measures, since we believe these should be treated in the same manner as new measures. We are proposing this timeline based on discussions with States and other interested parties about operational considerations for implementation of new and substantively updated measures and the posting of the associated ratings. We are not proposing a specific deadline for States to stop display of a measure that has been removed from the mandatory measure set because States have the option to continue to display measures removed from the mandatory set as additional measures as described in section I.B.6.g.5. of this proposed rule. We seek comment on this flexibility considering the criteria under which measures can be removed at proposed § 438.510(d). We seek comment on whether our timeframes are appropriate for updates to the mandatory measure set or whether we should consider allowing for more or less time, and why.

In conclusion, we seek comment on the proposed subregulatory process to add and remove measures, as described in sections I.B.6.e.3. of this proposed rule, specifically the types of engagement (workgroup, smaller meetings, requests for information) and the types of experts that would be included in the engagement, and the use of a call letter or similar guidance to obtain public input on the MAC QRS mandatory measure set before it is substantively updated. We note that we are proposing the subregulatory process to update the mandatory measure set take place *at least* biennially. However, CMS could engage in this process more frequently in certain circumstances, such as in the case of rapidly evolving public health concerns. We seek comment on whether we should consider implementing the process on an annual basis, or another frequency, and why. We note that we are proposing to release the technical resource manual annually regardless of whether we are making any modifications to the mandatory measure set, to address any non-substantive changes to measure specifications or any removals that occur outside of the subregulatory process, as described in section I.B.6.i. of this proposed rule.

f. MAC QRS Methodology (§§ 438.334(d), 438.515, 457.1240(d))

Fundamental to any QRS is the methodology used to calculate the quality ratings for States' managed care plans. Under current regulations at § 438.334(b)(1) CMS must, after consulting with interested parties and providing public notice and opportunity to comment, develop a methodology that States must use in the MAC QRS adopted by the State to calculate its plans' quality ratings, unless we approve an alternative methodology as part of an alternative MAC QRS in accordance with proposed § 438.525. During the extensive engagement with States and other interested parties described in section I.B.6.a. of this proposed rule, we identified two main themes to consider in the development of a MAC QRS methodology: (1) States are concerned about the burden associated with data collection and quality rating calculation, and (2) beneficiaries desire transparent, representative quality ratings. In developing the MAC QRS methodology that we are proposing here, we sought to balance these two, often competing preferences, while ensuring that quality ratings remained comparable within and among States. We also considered the Interoperability and Patient Access for Medicare Advantage Organization and Medicaid Managed Care Plans, State Medicaid Agencies, CHIP Agencies and CHIP Managed Care Entities, Issuers of Qualified Health Plans on the Federally-Facilitated Exchanges, and Health Care Providers,[147] (referred to as ''CMS Interoperability and Patient Access final rule'') published in May 2020. That rule placed several requirements on State Medicaid FFS programs as well as on Medicaid managed care plans for the implementation of application programming interfaces to facilitate sharing information between payers, enrollees, and providers. Based on these considerations, at § 438.515 we propose requirements for collecting and using data to calculate managed care quality ratings for mandatory measures (that is, the MAC QRS methodology which we propose that States must use), unless we have approved an alternative QRS. The same requirements are proposed for separate CHIP managed care plans through a proposed cross-reference at § 457.1240(d).

Under current regulations at § 438.334(d), each year States would be required to collect data from each managed care plan with which they contract and issue an annual quality rating for each managed care plan based on the data collected. We are proposing to replace that policy with more specific requirements in proposed new § 438.515(a) for States to collect and validate data used by the State to calculate and issue quality ratings for

[147] *https://www.govinfo.gov/content/pkg/FR-2020-05-01/pdf/2020-05050.pdf* Medicare and Medicaid Programs; Patient Protection and Affordable Care Act; Interoperability and Patient Access for Medicare Advantage Organization and Medicaid Managed Care Plans, State Medicaid Agencies, CHIP Agencies and CHIP Managed Care Entities, Issuers of Qualified Health Plans on the Federally-Facilitated Exchanges, and Health Care Providers. CMS–9115–F. Published in the **Federal Register** on May 1, 2020 (85 FR 25510 through 25640).

each mandatory measure on an annual basis. First, we propose, at proposed § 438.515(a)(1) for Medicaid, and for separate CHIP by cross-reference through a proposed amendment at § 457.1240(d)), that States must collect the data necessary to calculate quality ratings for mandatory measures from their contracted managed care plans and, as applicable and available without undue burden, the State's Medicaid fee-for-service program and Medicare. Specifically, we propose that data be collected from managed care plans that meet a minimum enrollment threshold of 500 or more enrollees on July 1 of the measurement year. This enrollment threshold is the same as the enrollment threshold for the QHP quality rating system requirement at section 1311(c)(4) of the Patient Protection and Affordable Care Act.

We believe that requiring States to calculate quality ratings for plans with fewer than 500 enrollees would be overly burdensome, as these plans may have limited resources for collecting and reporting data, and are more likely than plans with higher enrollment to have small denominator sizes that would make it inappropriate to issue and display quality ratings for some measures due to privacy or validity concerns. Further, through an analysis of 2019 Transformed Medicaid Statistical Information System (T–MSIS) Analytic Files (which are research-optimized files of T–MSIS data), we determined that neither the number of managed care plans nor the percentage of beneficiaries reported in the MAC QRS would be significantly reduced by excluding plans with enrollment below 500. Thus, we believe the proposed enrollment threshold maximizes inclusion of plans and enrollees, while also minimizing the burden of data collection and reporting on smaller plans. States would have the flexibility to include plans with fewer than 500 enrollees at their discretion, and we would encourage States to do so when appropriate and feasible.

At § 438.515(a)(1)(ii) for Medicaid, and for separate CHIP by cross-reference through a proposed amendment at § 457.1240(d), we propose that States would also be required to collect available data from the State's Medicaid fee-for-service (FFS) program, Medicare (including Medicare Advantage plans), or both if all necessary data cannot be provided by the managed care plans for the measures and collection of these data does not impose an undue burden on the State. For example, if a State delivers behavioral health services through a managed care program and all other services through its FFS program, the State would need to collect both managed care and FFS data to calculate quality ratings for the managed care plans participating in its behavioral health managed care program for many of our proposed behavioral health mandatory measures. Similarly, if a managed care plan provides services to enrollees who are dually eligible for Medicare and Medicaid services, it would be necessary for the State to collect data about services provided by Medicare to such enrollees to calculate quality ratings for some measures included on the proposed mandatory set. While we are proposing that States must collect data from these other sources as needed to calculate mandatory measures if the data are available for collection without undue burden, we are not proposing that States would calculate or assign quality ratings to Medicaid FFS or Medicare plans.

We considered requiring States to collect data only from their contracted managed care plans and then only when a plan is able to provide all data necessary to calculate and issue a quality rating for a given performance measure, which is a common practice among measure stewards. However, we are concerned that there would be instances where there is no single plan from which a State could collect all data necessary to calculate one or more of the measures on our mandatory measure list. For example, of the 18 measures on our proposed mandatory measure set, four require data from more than one setting, including three of our proposed behavioral health mandatory measures. These four measures include Use of First-Line Psychosocial Care for Children and Adolescents on Antipsychotics (APP), Initiation and Engagement of Alcohol and Other Drug Abuse or Dependence Treatment (IET), Follow-Up After Hospitalization for Mental Illness) (FUH), and Asthma Medication Ratio (AMR). To calculate the three behavioral health measures, it is necessary to collect behavioral health or substance use service data as well as either pharmacy or physical health data. When these services are covered by separate plans or delivery systems, such as where a State has chosen to split Medicaid coverage of these services between separate managed care programs or use a combination of managed care and FFS delivery systems, these mandatory measures would be at risk of going unreported. Similar issues are raised for dually eligible individuals who receive coverage through Medicare and Medicaid. We note that Medicaid is the single largest payer of mental health services in the U.S., and behavioral health and substance use measures would be at particular risk of going unreported, as services provided in these settings are commonly provided through a separate managed care plan. We believe that our proposal for States to collect and use data from multiple sources will mitigate the risk of underreporting of mandatory measures, particularly those measures assessing behavioral health and substance use services.

We believe our proposal is aligned with ongoing efforts to expand access to health plan data at both the State and Federal level. For example, State data collection required for measures in the Child Core Set and behavioral health measures in the Adult Core Set, which will become mandatory effective for calendar year 2024, requires States to report measures using data from both managed care and FFS programs as well as Medicare data for dually eligible beneficiaries. Many of these measures overlap with the mandatory measures proposed for the MAC QRS, which means States will already be obligated to collect Medicaid managed care and FFS data and to obtain Medicare data needed to calculate certain performance measures. Thus, we believe that the benefits of proposed § 438.515(a)(1)(ii) outweigh the costs of any increased burden on States.

Furthermore, there is an ongoing effort at the Federal and State levels to increase data availability and interoperability, including State access to managed care plan data. At the time of this proposed rule, data available for collection include encounter data received from a State's own Medicaid managed care plans under § 438.242 and data from FFS providers through claims and other reporting. Given existing data availability, we believe that the collection of such data would rarely result in an undue State burden. States can also obtain Medicare Part A, B and D data free of charge through the CMS State Data Resource Center (SDRC). Although Part C data are not available publicly through the SDRC, States may use their contracts with MA Dual Eligible Special Needs Plans (D–SNPs), which are required under § 422.107, to obtain Medicare data about the dually eligible individuals enrolled in those plans. As a significant number of States already obtain Part C data in this way, we believe such data would be available without undue burden in many cases, particularly where a State has already opted to obtain some Medicare Part C data in this way.

We understand that making contractual or systems changes to allow a State to collect such data without

causing an undue burden, such as a substantial financial or resource investment, may mean that a State implements these changes over time, and that this timeline may extend past the implementation date proposed in § 438.505(a)(2). We intend the proposed standard ''without undue burden'' to facilitate a gradual implementation of contract or system changes to collect the necessary data. We also would be available to provide technical assistance to help States acquire and use available data to calculate MAC QRS quality ratings. We seek comment on the proposed requirement that States collect available data from multiple sources on the mandatory measures. In addition, we request comment on the type of technical assistance that would be most helpful in assisting States in obtaining and using data from the sources specified in the proposed regulation.

Once the necessary data are collected to calculate quality ratings for each mandatory measure, our proposal at § 438.515(a)(2) would require States to ensure that all collected data are validated. This aligns with similar requirements in 45 CFR 156.1120(a)(2), which requires QHP issuers to validate data for the QHP QRS, and 42 CFR 422.162(c)(2), which requires MA organizations to provide unbiased, accurate and complete quality data to CMS for the MA and Part D quality rating system. Currently, § 438.320 defines validation for purposes of subpart E of part 438 as the review of information, data, and procedures to determine the extent to which they are accurate, reliable, free from bias, and in accord with standards for data collection and analysis. We are proposing the same definition for purposes of new subpart G at § 438.500. States may use the current optional EQR activity at § 438.358(c)(6) and 457.1250(a)—for which enhanced match may be available for Medicaid EQR-related activities performed for MCOs per § 438.370(a)—to assist with the calculation and validation of data used to generate quality ratings for the MAC QRS. Use of this optional activity may help reduce burden on States.

We are proposing in § 438.515(a)(3) that States use the validated data to calculate performance rates for managed care plans. Under this proposal, States would calculate, for each mandatory measure, a measure performance rate for each managed care plan whose contract includes a service or action being assessed by the measure, as determined by the State. Under this proposal, the mandatory measures would be assigned to the plan(s) based on whether the plan's contract covers the service or action being assessed by the measure, as identified by the State. We believe this would be straightforward for measures assessing single services or actions, but, as we noted previously in this section of the proposed rule, some States choose to deliver Medicaid services through different managed care programs. In these States, data necessary to calculate a measure performance rate for a given measure may be collected from two managed care plans. However, a State may determine that only one of these services or actions for which data must be collected is being assessed by the measure. In such a case, the State must identify, among those plans from which the State collected data, the plans whose contract includes the service of action identified by the States as being assessed by the measure, and calculate and assign quality ratings accordingly.

For example, the Follow-Up After Hospitalization (FUH) measure listed in Table 2 requires data on two services: hospitalization and mental health services. In a State that offers behavioral and physical health services through separate managed care programs, the State would need hospitalization data from plans participating in the physical health program and mental health service data from the plans participating in the behavioral health program to calculate FUH performance rates. Because data are collected from more than one plan, our proposal would require States to determine which service or action is being assessed by the measure. If a State determines that the service or action being assessed by the FUH measures is the provision of timely follow-up of mental health services to an enrollee following a hospitalization for mental illness, the State would then be required to identify all plans that are contracted to provide the follow-up mental health services assessed by the FUH measure and assign each of those plans a quality rating for the FUH measure.

Lastly, our current regulation at § 438.334(d) requires States to issue *an* annual quality rating (that is, a single rating) to each managed care plan using the Medicaid managed care quality rating system (emphasis added). However, based on feedback we received from beneficiaries, we are proposing to revise that current policy and to require States to issue to each managed care plan a quality rating for each mandatory measure for which the managed care plan is accountable. As proposed at § 438.515(a)(4) for Medicaid, and for separate CHIP by cross-reference through a proposed amendment at § 457.1240(d), States would be required to issue quality ratings as measure performance rates (that is, the individual percentage rates calculated under § 438.515(a)(3)). For example, a managed care plan that furnishes behavioral health services would likely be issued a measure performance rate for each of the proposed behavioral health mandatory measures, depending on the availability of data. We also considered requiring States to calculate and display a performance rating that reflects a national baseline for each mandatory measure, which would align with the practice of States that currently publish managed care quality measures using an individual, percentage rating. However, we chose not to propose this requirement in this rulemaking. We seek comment on our proposal to issue individual performance rates and seek additional input on our decision not to require additional percentage ratings to reflect a national baseline for each mandatory measure.

The proposal to require that States issue quality ratings for individual quality measures is supported by the user testing we conducted during our engagement with interested parties. Beneficiaries stated varying preferences for the level of information that they would like to have, with roughly half preferring more detailed information, 40 percent preferring big picture information, and 10 percent falling in the middle. Many beneficiaries stated interest in quality ratings for specific measures that related to their individual health care needs, especially those that aligned with their understanding of important health indicators identified by trusted health care professionals, such as blood A1c levels for people with diabetes, demonstrating the value of including individual measure quality ratings.

Our user testing suggests that displaying managed care plan quality ratings both at the individual measure and the domain level would be most desirable to beneficiaries. This approach would allow beneficiaries who prefer big picture information to concisely compare plans at the domain-level, while beneficiaries who desire more detailed information could drill down into the domains to understand a plan's performance on the individual quality measures from which the domain score is derived. These findings are discussed in additional detail in section I.B.6.g. of this proposed rule. However, we did not significantly test domain level quality ratings and believe that additional engagement with interested parties and beneficiary testing would be necessary before requiring States to calculate and issue domain-level ratings. Therefore,

we propose at § 438.515(c) for Medicaid, and for separate CHIP by cross-reference through a proposed amendment at § 457.1240(d), that CMS will engage with States, beneficiaries, and other interested parties before proposing to implement domain-level quality ratings for managed care plans. Examples of potential care domains include behavioral health, chronic conditions, infant and children, and preventive care.

We believe that including domain-level quality ratings in the MAC QRS, in addition to measure-level quality ratings, would align best with the informational preferences expressed by beneficiaries who participated in testing of a MAC QRS prototype. We intend to propose the care domains, methodology, and website display requirements in future rulemaking. In calculating domain-level quality ratings, we are considering requiring States to calculate and assign quality ratings for a managed care plan only in those domains that are relevant to the managed care plan. For instance, while most care domains are likely to be relevant to an MCO, a care domain that focuses on infants and children is unlikely to be relevant to a plan that provides long term services and supports to dually eligible individuals. We seek feedback on our proposal to include individual percent scores, intended approach to domain-level ratings, and potential MAC QRS care domains.

To ensure that services provided to all Medicaid beneficiaries are reflected in each managed care plan's quality ratings, we propose at § 438.515(b)(1) that States must ensure that the quality ratings issued under proposed § 438.515(a)(4) include data for all beneficiaries who receive coverage from the managed care plan for a service or action for which data are required to calculate the quality rating. This includes beneficiaries who are dually eligible for Medicare and Medicaid and receive services through the Medicaid managed care plan, subject to the availability of data about the services received by dually eligible individuals. While we recognize that including dually eligible beneficiaries in quality ratings may require additional effort to obtain and analyze Medicare utilization data, especially where dually eligible beneficiaries are not in programs that integrate Medicare and Medicaid, we believe it is important to ensure that these beneficiaries can assess the quality of care furnished by available Medicaid plans for beneficiaries who also are enrolled in Medicare. Furthermore, including dually eligible individuals in MAC QRS quality ratings would align with the Adult and Child Core Sets, as some measures require both Medicaid and Medicare data (see Core Set NPRM, 87 FR at 51317). Under proposed § 438.515(b)(1), only dually eligible individuals who receive full Medicaid benefits would be included in the MAC QRS, because individuals whose Medicaid eligibility is limited to assistance with Medicare premiums and/or cost sharing receive covered services exclusively through Medicare. We intend to provide additional guidance on which beneficiaries must be included in the quality ratings for each MAC QRS mandatory measure in the technical resource manual alongside technical specifications from the mandatory measure's measure steward. For separate CHIP, § 457.310(b)(2) does not allow for concurrent coverage with other health insurance, so our proposed amendment to § 457.1240(d) excludes dually eligible individuals from the scope of the required CHIP managed care quality rating.

In § 438.515(b)(2) for Medicaid, and for separate CHIP by cross-reference through a proposed amendment at § 457.1240(d), we propose that States would be required to calculate quality ratings at the plan level by program. While some States have one managed care program through which they offer all Medicaid services, most States cover Medicaid services through multiple programs that are defined by the population served by the program and the set of benefits covered by the program. For example, a State may have one program that covers behavioral health services while a second program covers physical health services. Other States may choose to provide similar services through different managed care programs that serve different populations. In these States, different programs cover different services to meet the needs of different subpopulations of Medicaid beneficiaries, such as pregnant individuals, children in foster care, or those with disabilities, chronic conditions, or HIV/AIDS. In States with multiple managed care programs, managed care plans may choose which programs they will participate in by contracting with the State. Generally, beneficiaries would then select from the managed care plans participating in each program for which the beneficiary is determined eligible, subject to requirements on access to multiple managed care plans in § 438.52.

Under our proposals, States that offer multiple managed care programs would calculate plan level ratings for each managed care plan participating in a single managed care program using only the service data described in § 438.515(b)(1) of beneficiaries enrolled in that managed care plan under that managed care program. A managed care plan that participates in multiple managed care programs would receive a distinct rating for each of these programs. These ratings would be produced using data only from those beneficiaries enrolled in the managed care plan under the specific managed care program. That is, ratings would be calculated at the plan level but with the plan dividing up its enrolled population based on the specific managed care program(s) that the State has contracted with the plan for coverage. As eligible beneficiaries select from available managed care plans within a program, we believe that plan level quality ratings for each program in which the plan participates will best align with what beneficiaries may expect to receive from each managed care plan participating in that program. This approach is distinguishable from single plan level ratings for all of the programs in which the plan participates, which would be calculated using all data from the plan regardless of the managed care program. We believe such ratings would not provide useful information to potential enrollees because such plan level ratings would reflect the quality of services provided to all beneficiaries covered by the plan, regardless of the program through which the beneficiary receives services from the plan, and may not reflect the performance that a beneficiary could expect based on the beneficiary's enrollment options. The proposed plan level ratings for each managed care program would produce quality ratings that are most representative of the care beneficiaries can expect to experience because each rating would be calculated only from data for beneficiaries enrolled in the same managed care plan under the same program. If a measure cannot be reported for a plan due to low denominator sizes, the plan would be issued an appropriate ''missing data'' message for that measure as the quality rating. We seek comment on how this proposed policy would interact with our proposed minimum enrollment threshold, such as an analysis that assesses the extent to which a State's smaller plans may report missing data messages.

We considered the level at which ratings are assigned in the MA and Part D and QHP quality ratings systems as part of developing our proposal for the MAC QRS. In the MA and Part D quality rating system, quality ratings for most measures are assigned at the contract

level, which consolidates data from all plan benefit packages offered under the contract to calculate a quality rating. Under a contract-level reporting unit, quality ratings would be calculated based on data from all enrollees served under a given contract between a State and a managed care plan. However, we do not believe that contract-level ratings would be as useful to Medicaid beneficiaries and would make it difficult for States to assess the quality of care provided to beneficiaries in separate programs that are often designed to improve the quality of care for a particular subpopulation of beneficiaries with unique care considerations. In the QHP quality rating system, quality ratings are assigned at the product level (for example, Exclusive Provider Organization Plan (EPO), Health Maintenance Organization (HMO), Point of Service (POS), and Preferred Provider Organization (PPO)). These products typically provide coverage of a similar set of comprehensive health care services, but vary in terms of how enrollees are able to access these services and at what cost. If an issuer of health care offered multiple products, each separate product would receive its own ratings. In Medicaid, product level ratings could correlate with ratings assigned at the PIHP, PAHP, or MCO level.

Under our proposal at § 438.515(b)(2), managed care plans that participate in multiple managed care programs would receive separate quality ratings under each program. These separate quality ratings would be calculated from data for only those beneficiaries enrolled in the managed care plan under a given program. We believe that this approach best balances the need for representative ratings with the level of effort States must employ to calculate quality ratings for the MAC QRS, while also accommodating the current way that States structure their overall Medicaid and CHIP program and the need for comparable quality ratings both within and among States. While our proposed reporting unit would require the calculation of more quality ratings than those used by the MA and Part D or QHP quality rating systems, we believe that this additional work will also help States monitor the quality of the managed care programs that they have developed to ensure provision of high-quality, cost-efficient care to their beneficiaries. We seek comment on our proposal to use a program-level reporting unit for the MAC QRS as well as other recommendations for reporting units that would result in quality ratings that are both representative and less burdensome on States.

Finally, it is important to note that States could receive an enhanced match for assistance with quality ratings of MCOs performed by an EQRO, including the calculation and validation of MCO data, under the external quality review optional activity at § 438.358(c)(6), in accordance with § 438.370 and section 1903(a)(3)(C)(ii) of the Act.

g. MAC QRS Website Display (§§ 438.334(e), 438.520, 457.1240(d))

Current regulations at § 438.334(e), which would be redesignated at § 438.520(a) of this proposed rule, require States to prominently display the quality rating issued for each MCO, PIHP, or PAHP on the website required under § 438.10(c)(3) in a manner that complies with the standards in § 438.10(d). Our policies proposed at § 438.520 would establish new requirements for the website display, which were informed by extensive consultation with Medicaid beneficiaries and their caregivers and iterative testing of a MAC QRS website prototype. The consultation and testing revealed that the presentation of quality ratings greatly influences the usability and utility of the MAC QRS as a tool to assist beneficiaries in selecting a plan. Providing information to beneficiaries in a useable way is necessary for compliance with section 1932(a)(5) of the Act regarding provision of information, including comparative information on plan quality, to beneficiaries when a State mandates enrollment in an MCO. The same standards apply under section 2103(f)(3) of the Act to CHIP. To promote the efficient and economical operation of the Medicaid State Plan and CHIP, we apply the same requirements for all managed care programs through our regulations. Our proposed requirements for Medicaid managed care programs in § 438.520 would also be applicable to separate CHIP under this proposal, through a cross-reference in the CHIP regulation at § 457.1240(d).

In our initial round of testing, participants struggled to understand how to use the MAC QRS prototype, and often dismissed or skipped over the quality ratings, noting that they did not understand the ratings or how they translated to member care. Subsequent revisions of our MAC QRS prototype focused on identifying how best to present quality ratings to prospective users in a way that supported beneficiaries' ability to understand and incorporate quality ratings and use them to inform their selection of a health plan. Based on our testing, it was clear that to truly empower beneficiaries as informed health care consumers, quality ratings are best presented as one part of a comprehensive website that efficiently guides the user through the considerations for identifying a quality health plan. We also learned that to be more useful, the website should address factors commonly considered by individuals in selecting a health plan, which include information not traditionally factored into health plan quality ratings, such as what providers are in the network and drug coverage. Using this feedback, we designed, tested, and refined the MAC QRS display components proposed in this rulemaking to align with the stated preferences of our user-testing participants.

The display components identified as most critical are included in proposed § 438.520; these components fall into three categories: (1) information to help navigate and understand the content of the MAC QRS website; (2) information to allow users to identify available managed care plans and features to tailor display information; and (3) features that allow beneficiaries to compare managed care plans on standardized information, including plan performance, cost and coverage of services and pharmaceuticals, and provider network. Based on the feedback we received during prototype testing, we believe that these components are critically important to ensure quality rating information can be readily understood by beneficiaries and used in decision-making. We are therefore proposing at § 438.520 that States display a MAC QRS website that includes: (1) clear information that is understandable and usable for navigating a MAC QRS website; (2) interactive features that allows users to tailor specific information, such as formulary, provider directory, and quality ratings based on their entered data; (3) standardized information so that users can compare managed care programs and plans, based on our identified information; (4) information that promotes beneficiary understanding of and trust in the displayed quality ratings, such as data collection timeframes and validation confirmation; and (5) access to Medicaid and CHIP enrollment and eligibility information, either directly on the website or through external resources.

Importantly, we understand from our engagement with States and interested parties that some display requirements we believe align with the goals discussed in section I.B.6.a. of this proposed rule may require more

technology-intensive implementation, such as the interactive features that allow users to tailor displayed information. We are therefore proposing to implement the proposed website display requirements in two phases. The first phase would be implemented by the end of the fourth year following the release of the final rule, as proposed at § 438.505(a)(2). In this phase, States would develop the MAC QRS website, display quality ratings, and would ensure that users can access information on plan providers, drug coverage, and view quality ratings by sex, race, ethnicity and dual eligibility status from the MAC QRS website. For instance, in lieu of an interactive search tool, the State may simply hyperlink to each managed care plan's existing provider directory and formulary to meet our proposed requirements. This first phase would accomplish the goal of having a one-stop-shop for beneficiaries to access the information we believe is key to their decision-making, but would not require States to develop the interactive tools identified in our research as more beneficial and usable by prospective users. In the second phase, States would be required to modify the website to provide a more interactive user experience with more information readily available to users on the MAC QRS website. This would entail including or moving some of the information required in other parts of 42 CFR part 438 to the MAC QRS website. For example, users could tailor the display of information to their needs and search for plans that cover their providers and medications without leaving the MAC QRS website. We discuss our proposal for phasing-in more interactive features of the website display in more detail later in this section. We seek comment on which requirements should be phased in as well as how much time would be needed.

Given the visual nature of the website display, we are providing two sample MAC QRS prototypes; a simple website (Prototype A) that represents the information we are considering to require by the proposed implementation date in § 438.505(a)(2) and another MAC QRS prototype (Prototype B) that represents an interactive website that includes both the display features from the first implementation phase and the more technology-intensive features we are considering phasing in. These prototypes can be found at *https://www.medicaid.gov/medicaid/quality-of-care/medicaid-managed-care-quality/quality-rating-system/index.html* and are meant to show our overall vision for the progression of the website display. In addition to the two prototypes, we intend to release a MAC QRS design guide following the final rule, which will provide a comprehensive overview of the results of our user testing that States may reference in the design of their MAC QRS website display. These materials would also provide CMS's interpretation of the requirements of the final rule as well as guidance on potential best practices in complying with the rule. We intend the design guide to include several components, including but not limited to: desirable features and content that States can implement at their discretion, plain language descriptions of mandatory measures, and display templates that States would have the option to use in the design of their MAC QRS. In the following paragraphs we discuss the proposed website display requirements and the feedback that led to their inclusion in the proposed website display.

(1) Navigational and Orienting Information (§§ 438.334(e), 438.520(a)(1) and (5), 457.1240(d))

Throughout our engagement, beneficiaries consistently stated the expectation that State Medicaid website and online plan selection processes would be difficult to navigate, and many users shared that they had previously felt confused and overwhelmed during the process of selecting a managed care plan. When reviewing the initial MAC QRS prototype, some beneficiaries reported struggling to understand the purpose of the prototype and how and when the information could be useful. In light of this feedback, we tested a number of features to support users in understanding and navigating potential websites and found that beneficiaries responded positively to live assistance services (such as chat and telephone), and pop-ups and other mechanisms of displaying information to explain content as participants navigated the prototype.

We found that providing upfront clear information about what the MAC QRS is (a State-run, unbiased source of information on managed care plans and their performance) and is not (a sales funnel for a particular managed care plan) and what it can do (help compare available managed care plans and their quality and performance) and what it cannot do (determine eligibility for Medicaid and CHIP or enroll beneficiaries in a health plan) allowed participants to quickly determine the purpose of the MAC QRS and whether the information available would be a useful tool for them when selecting a managed care plan. We also found that some beneficiaries initially needed additional background on relevant programs such as Medicaid, CHIP, and Medicare to understand if they were eligible for, or enrolled in, a plan or program with ratings or information available through the MAC QRS. Once the purpose of the MAC QRS was established, beneficiaries positively responded to features that clearly conveyed how to use the information available in the MAC QRS to select a managed care plan in a simple, easy to understand manner, such as providing the steps to identifying, comparing, and selecting a managed care plan. In our testing prototype, users were wary about entering personal information to help identify and tailor the display of available managed care plans, such as zip code, age, sex, and health conditions—information that can be helpful in navigating a website designed to help individuals select a plan. However, when a clear explanation of how their information would be used, users became more comfortable providing personal information.

Based on these findings from user testing, we are proposing certain navigational requirements for the MAC QRS website display requirements in proposed § 438.520(a)(1). Specifically, we propose in § 438.520(a)(1)(i) that States must provide users with information necessary to understand and navigate the MAC QRS display, including a requirement to provide users with information on the MAC QRS purpose, relevant information on dual eligibility and enrollment through Medicare, Medicaid, and CHIP, and an overview of how the MAC QRS website can be used to select a managed care plan. We propose in § 438.520(a)(1)(ii) that States must provide information on how to access the beneficiary support system required under existing § 438.71 to answer questions related to the MAC QRS (proposed at § 438.505(a)(3) and described in section I.B.6.d. of this proposed rule). Since beneficiary support systems are not required for separate CHIP, our proposed amendment to § 457.1240(d) excludes references to this requirement. We seek comment on whether beneficiary supports similar to those proposed for Medicaid should be required for States for separate CHIP in connection with the MAC QRS information or on a broader basis through future rulemaking. Under proposed § 438.520(a)(1)(iii) for Medicaid, and for separate CHIP by cross-reference through a proposed amendment at § 457.1240(d), States would be required

to inform users of how any information they provide would be used. Finally, under proposed § 438.520(a)(5), States would be required to provide users with information or hyperlinks that direct users to resources on how and where to apply for Medicaid and enroll in a Medicaid or CHIP plan. This requirement ensures that users can easily navigate to the next steps in the plan selection process after reviewing the MAC QRS website.

We believe that States can implement these features by relying on existing public information or expanding current requirements. For instance, States are required to have the beneficiary support system at § 438.71 in place and can train existing staff on the MAC QRS. Through an environmental scan of State Medicaid websites, we found that all States currently have information describing their Medicaid and CHIP programs as well as programs available to those dually eligible for Medicare and Medicaid. In both phases of the website display implementation, States may use these existing resources to comply with the requirements of proposed § 438.520(a)(1)(i) and (ii) either by hyperlinking to these resources from the MAC QRS website or incorporating existing information into the MAC QRS website display. Finally, as part of the MAC QRS design guide, we intend to provide plain language descriptions to illustrate what we would interpret the final rule to require; States may use such examples on their websites to provide an overview of how to use the MAC QRS to select a quality managed care plan.

(2) Tailoring of MAC QRS Display Content (§§ 438.334(e), 438.520(a)(2) and (a)(6), and 457.1240(d))

We also found that testing participants responded positively to features that allowed them to reduce the number of plans displayed to only those that met specific criteria, such as geographic location and eligibility requirements (for example, beneficiary age), so long as their privacy concerns were addressed by providing information on how and why such data would be used. Beneficiaries felt most comfortable providing their age and geographic location to identify health plans and we believe that these data points are likely sufficient to reduce the number of plans available to beneficiaries for comparison while also minimizing burden on States. Furthermore, dually eligible participants responded positively to the ability to easily identify those plans for which they were eligible. Therefore, we are proposing at § 438.520(a)(2)(i) for Medicaid, and for separate CHIP by cross-reference through a proposed amendment at § 457.1240(d), that each State's website must allow users to view available plans for which the user may be eligible based on users' age, geographic location, and dual eligibility status, as well as other demographic data identified by us in display guidance. Under the proposed rule, States would retain the flexibility to allow users to use additional information or eligibility criteria to further narrow down available managed care plans, such as searching by health condition like pregnancy or diabetes. In both phases of the website display implementation, States may meet this requirement by linking to a PDF that clearly indicates plans available to a beneficiary based on the identified factors (see Prototype A at *https://www.medicaid.gov/medicaid/quality-of-care/medicaid-managed-care-quality/quality-rating-system/index.html*). However, States may instead choose to implement an interactive display that allows the beneficiaries to input information upfront, and then tailors which managed care plans' information is displayed based on this information (see Prototype B at *https://www.medicaid.gov/medicaid/quality-of-care/medicaid-managed-care-quality/quality-rating-system/index.html*). In our environmental scan of State Medicaid websites, we identified many States that provide such a feature to help beneficiaries identify plans available to them. We believe this requirement supports the MAC QRS website being a one-stop-shop where beneficiaries can select a plan based on their eligibility information. We have made the judgment that requiring the development and use of the MAC QRS website in this manner is necessary for the proper and efficient operation of State Medicaid plans, and accordingly are proposing this requirement under our authority in section 1902(a)(4) of the Act, because this would support the beneficiary enrollment (and disenrollment) protections established in section 1932(a)(4)(A) of the Act . Based on our testing, the additional context is necessary and appropriate for beneficiaries to effectively use the information on plan quality ratings when choosing a managed care plan. Further, providing this flexibility for beneficiaries to choose how certain comparative information is presented is consistent with the requirement in section 1932(a)(5)(C) of the Act (which we have extended to information about PIHPs and PAHPs as well as MCOs using our authority in section 1902(a)(4) of the Act) for States to provide comparative information to beneficiaries about Medicaid managed care plans.

Participants in our user testing also prioritized confirming whether their current provider or prescriptions would be covered under a plan prior to navigating to other details about the plan. We therefore are proposing at § 438.520(a)(2)(ii) and (iii) for Medicaid, and for separate CHIP by cross-reference through a proposed amendment at § 457.1240(d), to require States to display provider directory and drug coverage information for each managed care plan in phase one of the website display requirements. This information is already required to be available from managed care plans under existing § 438.10(h)(1) and (2) and § 438.10(i), which set forth the general requirements for provider directory and formulary information that plans must make available to beneficiaries. In the first phase, States could satisfy the proposed requirements by providing hyperlinks to existing plan formularies and provider directories required under § 438.10(h) and (i) (See Prototype A); this capability would be required by the general implementation date proposed under § 438.505(a)(2).

As previously mentioned, user-testing participants preferred an integrated search feature that allowed them to identify available plans that offered coverage of specific prescription drugs and providers, rather than being directed via hyperlink to each managed care plan's website, which would require them to conduct multiple searches to identify the plans that cover their prescriptions and providers. When consulted, States generally were supportive of the display requirements we are proposing in § 438.520(a)(2), but noted that a searchable formulary or directory would be difficult to design and implement by the implementation date proposed in § 438.505(a)(2). Under § 431.60(a) of the May 2020 CMS Interoperability and Patient Access final rule,[148] States must implement an application programming interface (API) that permits third-party retrieval of certain data specified by CMS, including information about covered outpatient drugs and preferred drug list information (§ 431.60(b)(4)) and

[148] Medicare and Medicaid Programs; Patient Protection and Affordable Care Act; Interoperability and Patient Access for Medicare Advantage Organization and Medicaid Managed Care Plans, State Medicaid Agencies, CHIP Agencies and CHIP Managed Care Entities, Issuers of Qualified Health Plans on the Federally-Facilitated Exchanges, and Health Care Providers. CMS–9115–F. (85 FR 25510). Published in the **Federal Register** on May 1, 2020. (available online at *https://www.govinfo.gov/content/pkg/FR-2020-05-01/pdf/2020-05050.pdf).*

provider directory information (§ 431.70(b)). These requirements are applied in Medicaid managed care to MCOs, PIHP, and PAHPs under § 438.242(b)(5) and (6). We therefore believe that burden on managed care plans and States to provide the interactive search tools proposed in § 438.520(a)(2) would be minimized given that the data necessary to offer such tools is the same data that plans must make available through an API as specified in § 438.242(b)(5) and (6) and States could compile and leverage this existing data to offer the search functionality we are proposing. However, we agree that States will need additional time to implement dynamic, interactive website display features. Therefore, we are proposing, at § 438.520(a)(6)(i) and (ii) for Medicaid, and for separate CHIP by cross-reference through a proposed amendment at § 457.1240(d), that States would be given at least two additional years after a State's initial implementation of their MAC QRS (that is, two additional years after the date proposed at § 438.505(a)(2) for initial implementation) to display provider directory and drug coverage information for each managed care plan through an integrated, interactive search feature that allows users to identify plans that cover certain providers and prescriptions (see Prototype B). We seek comment on this phased-in approach and a reasonable timeline for the second phase. In addition, we seek comment on the display requirements and technical assistance needs.

In § 438.520(a)(6)(iii) and (iv), we propose a second phase of implementation for the stratification of quality ratings, in which States would implement an interactive display that allows beneficiaries to view and filter quality ratings for specific mandatory measures identified by CMS by the factors which would already be required in phase one under proposed § 438.520(a)(2)(v) plus additional factors identified by CMS including, but not limited to, age, rural/urban status, disability, and language spoken by the enrollees who have received services (see Prototype B). This proposal would address feedback we received in testing the MAC QRS prototype websites with beneficiaries. We tested dynamic filters that allowed participants to view quality ratings representing services provided only to plan beneficiaries that aligned with participant-selected factors such as race, sex, and age. This feature increased participant positivity and trust in the quality ratings displayed, especially among those who raised concerns about the uniformity of experience among beneficiaries. Similar to our proposal to phase-in interactive plan provider directory and formulary tools, we are proposing to phase in the interactive display of quality ratings stratified by various demographic factors. In § 438.520(a)(2)(v) for Medicaid, and for separate CHIP by cross-reference through a proposed amendment at § 457.1240(d), we therefore are proposing a first phase of implementation for this information that would require States to display quality ratings for mandatory measures stratified by factors including dual eligibility status, race and ethnicity, and sex. To reduce burden on States, we would permit States to report, if finalized, the same measurement and stratification methodologies and classifications as those proposed in the Mandatory Medicaid and CHIP Core Set Reporting proposed rule and the Access proposed rule. Measuring and making available performance reports on a stratified basis will assist in identifying health disparities. Driving improvements in quality is a cornerstone of the CMS approach to advancing health equity and also align with the CMS Strategic Priorities. In the first phase of implementation, a State's website would need to provide access to quality ratings that reflect the quality of care furnished to all of a plan's enrollees, as well as quality ratings that reflect the quality of care furnished to these subpopulations of a plan's enrollees (see Prototype A). This requirement is consistent with current efforts among measure stewards and other Federal reporting programs, such as the Child and Adult Core Sets, to stratify data to ensure that disparities in health outcomes are identified and addressed, not hidden (See Core Set proposed rule, 87 FR 51313). We are selecting these as our initial stratification factors as we believe this information is most likely to be collected as compared to our other proposed stratification factors. Furthermore, many testing participants shared their concern that health outcomes and customer experience may vary when stratified by race, ethnicity, or sex. We also believe that those who are dually eligible to receive Medicare and full Medicaid benefits would find it particularly useful to see quality ratings that focus specifically on the experience of such dually eligible beneficiaries. We believe that such ratings would allow beneficiaries who are dually eligible for Medicare and Medicaid to best identify a high-quality health plan, given the unique access considerations among this population. States would be required to display this information by the general MAC QRS implementation date proposed under § 438.505(a)(2). We seek comment on the feasibility of the proposed factors for stratifying quality ratings by the initial implementation date, and also whether certain mandatory measures may be more feasible to stratify by these factors than others. We are proposing that this interactive tool would be available no earlier than two years after the general MAC QRS implementation date. We request comment on this proposal including the timeline for implementation, technical assistance that may be necessary for States to implement the proposed feature, and the proposed factors by which such quality ratings would be stratified.

(3) Plan Comparison Information (§§ 438.334(e), 438.520(a)(3), and 457.1240(d))

Our prototype testing showed us participants were often frustrated and confused by the need to navigate multiple websites to obtain health plan information, such as out of pocket expenses, plan coverage of benefits, providers, and pharmaceuticals; and health plan metrics such as average time spent waiting for care, weekend and evening hours, and appointment wait times. When compiled into a standardized display along with quality ratings in our website prototype, participants responded positively and found the ability to compare plans on out-of-pocket expenses and covered benefits to be particularly useful. After identifying available plans that aligned with their needs and preferences on these two variables, some participants reflected that they would use quality ratings as an additional way to narrow down and filter their options. When presented alongside quality ratings, this information allowed beneficiaries to better compare plans. Based on this testing, we are proposing in § 438.520(a)(3) for Medicaid, and for separate CHIP by cross-reference through a proposed amendment at § 457.1240(d), to require States to display, for each managed care plan, standardized information identified by CMS that allows users to compare available managed care plans and programs, including the name, website, and customer service telephone hot line of each managed care plan; premium and cost sharing information; a summary of covered benefits; certain metrics of managed care plan access and performance; and whether the managed care plan offers an integrated Medicare-Medicaid plan. Under proposed § 438.520(a)(3)(iii) and (iv), States

would be required to identify comparative information about plans, specifically differences in premiums, cost-sharing, and benefits among managed care plans, to help users quickly identify where managed care plans do and do not differ. We believe that this information should be readily available to States and providing comparative information of this type is consistent with the information disclosure requirements in section 1932(a)(5) of the Act. These requirements are illustrated in Prototype A and B.

Under proposed § 438.520(a)(3)(v), States would also be required to provide on the QRS website certain metrics of managed care plan performance that States must make available to the public under Part 438, subparts B and D regulations, including certain data most recently reported to CMS on each managed care program under § 438.66(e) (Medicaid only) and the results of secret shopper survey proposed at § 438.68(f) in this proposed rule. Proposed paragraph (a)(3)(v) authorizes CMS to specify the metrics that are required to be displayed this way. States already report information related to grievances, appeals, availability and accessibility of covered services under § 438.66(e) and we believe that displaying some of this information would be responsive to input we received from our testing participants and improve transparency for beneficiaries without imposing significant burden on States since the information is already reported to us. States could choose to integrate these metrics into the display of MAC QRS measures on the MAC QRS website or, as illustrated in Prototypes A and B, may choose to hyperlink to an existing page with the identified information from the MAC QRS web page. These proposed requirements also support our goal for the MAC QRS to be a one-stop-shop where beneficiaries can access a wide variety of information on plan quality and performance in a user-friendly format to help inform their decision making. We seek comment on the inclusion of these metrics, and whether we should consider phasing in certain metrics first before others.

Lastly, at § 438.530(a)(3)(vi), we are proposing to require States to indicate when a managed care plan offers an integrated Medicare-Medicaid plan or a highly or fully integrated Medicare Advantage D–SNP and to provide a link to the integrated plan's rating under the MA and Part D quality rating system. The definitions of fully integrated dual eligible special needs plan and highly integrated dual eligible special needs plan are at § 422.2. We believe this is the simplest and most efficient way to help dually eligible users understand how to use the two quality ratings together. Both Prototype A and B illustrate this requirement through a hyperlink to the integrated plan's MA and Part D quality rating. We seek comment on these requirements, including on our proposal to require States to provide standardized information that users may rely on to compare managed care plans and request feedback on the feasibility of providing this information by the date initial implementation date.

(4) Information on Quality Ratings (§§ 438.334(e), 438.520(a)(4) and (c), and 457.1240(d))

Our user testing found that participants were initially skeptical of data provided in the MAC QRS, stating confusion regarding the source of the data used and mistrust in the ratings generated because they were uncertain how they were derived. Additionally, some participants stated that they did not trust information from the health plans. In an effort to improve user trust through data transparency, we tested providing clear and comprehensive information on displayed quality ratings and identified three types of information that together resulted in increased participant trust of the quality ratings. These include descriptions of the quality ratings in plain language, how recent the data displayed are, and how the data were confirmed to be accurate. Based on this user feedback, in § 438.520(a)(4)(i) for Medicaid, and for separate CHIP by cross-reference through a proposed amendment at § 457.1240(d), we propose that States would provide plain language descriptions of the importance and impact of each quality measure. We found that a simple explanation of what a quality measure is assessing, as well as how the measure relates to a beneficiary's health and well-being, were most helpful to users in understanding displayed quality ratings. A simple explanation would satisfy the proposed requirement. Both Prototype A and B include example explanations for our proposed mandatory measures, and we intend to include a sample explanation of the quality ratings for each final mandatory measure in the design guide discussed in section I.B.6.g. of this proposed rule, which States may choose to use.

Users responded positively to information that showed when data were collected and whether data were validated. They appreciated knowing that an external, neutral organization calculated the measures, noting that they would not trust the measures if they were calculated solely by the managed care plan. In § 438.520(a)(4)(ii) for Medicaid, and for separate CHIP by cross-reference through a proposed amendment at § 457.1240(d), we propose that States be required to indicate the measurement period during which data were produced to calculate the displayed quality ratings. In § 438.520(a)(4)(iii) for Medicaid, and for separate CHIP by cross-reference through a proposed amendment at § 457.1240(d), we propose that States must provide on the MAC QRS website when, how, and by whom quality ratings have been validated. This information would be provided in plain language and convey the role of parties (other than the rated plans) in validating data used to calculate the quality ratings, which will promote transparency and trustworthiness in the data. We note that States may use the External Quality Review optional activity described at § 438.358(c)(6) for EQRO assistance with quality ratings and link to the validated data included in the EQR technical reports. We seek comment on the display requirement proposed in § 438.520(a)(4) and request feedback on the feasibility of implementing these requirements by the initial implementation date proposed at§ 438.505(a)(2).

Finally, we believe that user preferences for how information should be displayed may change over time as the available data and the technology that enables website display of available data evolves. To ensure that the MAC QRS website continues to be a useful tool, we intend to periodically engage in additional consultations with MAC QRS users as part of a continuous improvement approach. We are proposing in § 438.520(c) for Medicaid, and for separate CHIP by cross-reference through a proposed amendment at § 457.1240(d), that CMS periodically consult with interested parties, including MAC QRS users such as Medicaid and CHIP beneficiaries and their caregivers, to maintain and update the website display requirements for the information required in proposed § 438.520(a). These consultations may result in proposed changes through rulemaking that add to or refine existing requirements or remove existing requirements that beneficiaries no longer find useful.

(5) Display of additional Measures Not on the Mandatory Measure Set (§§ 438.334(e), 438.520(b), and 457.1240(d))

Under our proposal at § 438.510(a), States would have the option to display

additional measures that are not included in the mandatory measure set if the two requirements set forth in proposed § 438.520(b)(1) and (2) are met. The same standards would apply to separate CHIP as proposed in § 457.1240(d) by cross-referencing part 438, subpart G.

First, we are proposing, in § 438.520(b)(1) to require States to obtain input from prospective MAC QRS users, including beneficiaries, their caregivers, and, if the State enrolls American Indians/Alaska Natives in managed care, consult with Tribes and Tribal Organizations in accordance with the State's Tribal consultation policy. In this proposed rule, we have extensively noted the importance of the prospective user testing we engaged in and the extent to which this feedback directed our design of the MAC QRS framework and selection of the preliminary mandatory measure set. Just as beneficiary participation was, and will continue to be, critical in our design of the MAC QRS, we believe beneficiary participation is critical in the identification of any additional measures included in a State's MAC QRS. States could meet this requirement by ensuring that beneficiary members of the MCAC are present when obtaining input from the State's MCAC, or may engage in direct beneficiary interviews, focus groups, or prototype testing.

Second, we are also proposing at § 438.520(b)(2) that States must document the input received from prospective MAC QRS users on such additional measures, the modifications made to the proposed additional measures in response to the input, and rationale for not accepting input. We are also proposing this documentation to be reported as part of the MAC QRS annual report proposed under § 438.535(a)(3). For States that currently publish a QRS-like website, measures that are not in the mandatory measure set would be considered additional measures and would be subject to this process prior to display. If a State obtained user input for the additional measure prior to displaying the measure on its current website, the State may use this input to meet this requirement.

h. Alternative Quality Rating System (§§ 438.334(c), 438.525, and 457.1240(d))

Current regulations at § 438.334(c) allow States, with CMS approval, to implement an alternative managed care quality system (alternative QRS) that uses different quality measures or applies a different methodology if the conditions set forth in § 438.334(c)(1)(i) through (iii) are met, including that the measure or methodology must be substantially comparable to the measures and methodology established by CMS under the MAC QRS framework. Based on feedback we received during our engagement with States and other interested parties, we are proposing to redesignate § 438.334(c) at § 438.525 for Medicaid, and for separate CHIP by cross-reference through a proposed amendment at § 457.1240(d), and to modify the current policy by narrowing the changes (compared to the MAC QRS framework described in proposed § 438.515) that would require our approval. We are also proposing to apply the same requirements for both Medicaid managed care programs and separate CHIP by revising § 457.1240(d) to require States to comply with § 438.525.

First, we are proposing to remove the language in current § 438.334(c)(1) that includes the use of ''different performance measures'' being subject to our review and approval as part of an alternative QRS. Current regulations at § 438.334(c)(1) require States to submit for our review and approval an alternative QRS request to include measures different than those included in the mandatory measure set identified by CMS. We believe requiring States to obtain our approval to include measures not required by us creates unnecessary administrative burden for both States and CMS. Under the proposed regulation, instead of requiring approval of different measures, we are proposing that States would have the flexibility to add measures that are not mandatory measures without prior approval from CMS.

We highlight here that the measure specifications established by measure stewards for mandatory measures are not considered part of the methodology described in proposed § 438.515 and are therefore not subject to § 438.525. Modifications to these specifications that are approved by the measure steward do not require a State to undergo any part of the alternative QRS process described in this section for the State to use those measure steward approved modifications to produce a rating for a mandatory measure. However, we would consider quality ratings for mandatory measures identified by CMS under § 438.510(a) that are calculated using specifications not approved by a measure steward to be a different measure. We believe that this policy provides flexibility to States while ensuring that the results on the mandatory measures remain comparable among States.

Second, we are proposing to further define the criteria and process for determining if an alternative QRS system is substantially comparable to the MAC QRS methodology described in proposed § 438.515. The current regulations at § 438.334(c)(4) provide that we will issue guidance on the criteria and process for determining if an alternative QRS meets the substantial comparability standard in current § 438.334(c)(1)(ii), redesignated at § 438.525(a)(2). We are proposing to eliminate § 438.334(c)(4) and redesignate as proposed § 438.525(c)(2)(i) through (iii) and specify in proposed § 438.525(c)(2)(iv) that States are responsible for submitting documents and evidence that demonstrates compliance with the substantial comparability standards. We believe that eliminating § 438.334(c)(4) is appropriate as this rulemaking provides an opportunity for States and other interested parties to submit comments on how CMS should evaluate alternative quality rating systems for substantial comparability.

In the future, we intend to issue instructions on the procedures and the dates by which States must submit an alternative QRS request to meet the implementation date specified in proposed § 438.505(a)(2). For requests or modifications made after implementation of the MAC QRS, we are considering accepting rolling requests instead of specifying certain dates or times of year when we will accept alternative QRS requests or modifications. We believe this may be necessary given that States may have different contract cycles with managed care plans. We solicit comment on these different approaches.

Current § 438.334(c)(2) describes the information that States would submit to CMS as part of their request to implement an alternative QRS. We are proposing to redesignate § 438.334(c)(2), with revisions, at § 438.525(c)(2)(iv) to allow States to provide additional supporting documents and evidence that they believe demonstrates that a proposed alternative QRS would yield information regarding managed care plan performance that is substantially comparable to that yielded by the MAC QRS methodology described in § 438.515. Examples of such additional supporting documents could include a summary of the results of a quantitative or qualitative analysis of why the proposed alternative methodology is substantially comparable or calculations of mandatory measures with the alternative methodology and with the methodology required under § 438.515.

We seek comment on these proposals, in particular, the described process and documentation for assessing whether a

proposed alternative QRS framework is substantially comparable, by when States would need alternative QRS guidance, and by when States would need to receive approval of an alternative QRS request to implement the alternative by the implementation date specified in proposed § 438.505(a)(2).

i. Annual Technical Resource Manual (§§ 438.334, 438.530, and 457.1240(d))

We propose at § 438.530(a) for Medicaid, and for separate CHIP by cross-reference through a proposed amendment at § 457.1240(d), that CMS will develop and update annually a Medicaid managed care quality rating system technical resource manual no later than August 1, 2025, and update it annually thereafter. Providing clear and detailed information for reporting on MAC QRS measures not only supports States in implementing their MAC QRS but is also essential for consistent reporting and comparable quality ratings across States and managed care plans. This manual would include information needed by States and managed care plans to calculate and issue quality ratings for all mandatory measures that States would be required to report under this proposed rule. This includes the mandatory measure set, the measure steward technical specifications for those measures, and information on applying our proposed methodology requirements to the calculation of quality ratings for mandatory measures. Under our proposal, we would publish an initial technical resource manual following the final rule, and would update the manual annually thereafter to maintain its relevance. We considered releasing the technical resource manual less frequently than annually, but we do not believe this manual could be properly maintained unless it is updated annually due to the inclusion of updates to the technical specifications for the mandatory measures.

Proposed § 438.530(a) identifies the components of the technical resource manual to be issued by CMS. As described in § 438.530(a)(1), we propose to use the technical resource manual to identify the mandatory measures as well as any measures newly added or removed from the previous year's mandatory measure set. We intend for the first technical resource manual to include details on the initial MAC QRS mandatory measure set that will be finalized after consideration of the public comments received in response to this proposed rule.

These content requirements for the technical resource manual proposed at new § 438.530(a)(1) through (3) include the following:

- The mandatory measure set so States know what they are required to report.
- The specific MAC QRS measures newly added to or removed from the prior year's mandatory set as well as a summary of the engagement and public comments received during the engagement process in § 438.510(b) used for the most recent modifications to the mandatory measure set. To provide a complete picture of any changes being made to the MAC QRS measures, we propose this summary to include a discussion of the feedback and recommendations received, the final modifications and timeline for implementation, and the rationale for recommendations or feedback not accepted.
- The subset of mandatory measures that must be stratified by race, ethnicity, sex, age, rural/urban status, disability, language, or such other factors as may be specified by CMS in the annual technical resource manual as required under § 438.520(a)(2)(v) and (a)(6)(iii). We discuss the rationale for inclusion of stratifiers in section I.B.6.g.2. of this proposed rule.
- How to use the methodology described in § 438.515 to calculate quality ratings for managed care plans. We seek comment on which topics States and health plans would like technical assistance or additional guidance to ensure successful implementation of the rating system.
- Technical specifications for mandatory measures produced by measures stewards as part of the proposed annual technical resource manual. We believe this information would assist States and health plans in the calculation of quality ratings for mandatory measures and aligns with the practices of the Adult and Child Core Set and the MA and Part D and QHP quality rating systems.

Lastly, at § 438.530(b) for Medicaid, and for separate CHIP by cross-reference through a proposed amendment at § 457.1240(d), we are proposing the general rule that CMS take into account stratification guidance issued by the measure steward and other CMS reporting programs when identifying which measures, and by which factors, States must stratify mandatory measures. Under this proposal, we plan to implement a phased-in approach for specifying the mandatory measures for which data must be stratified and the factors by which such data must be stratified. We intend to align with the stratification schedule which is proposed in § 437.10(d) of the Mandatory Medicaid and CHIP Core Set Reporting Proposed Rule (see 87 FR 51327). We believe this alignment with the Core Set stratification would minimize State and health plan burden to report stratified measures. For any MAC QRS measures that are not Core Set measures, we would consider, and align where appropriate, with the stratification policies for the associated measure steward or other CMS reporting programs. Additional information regarding MAC QRS stratification requirements are proposed in section I.B.6.g.2. of this proposed rule.

Based on feedback we received through listening sessions with interested parties, we are considering releasing an updated technical resource manual at least five months prior to the measurement period for which the technical resource manual will apply. This is in alignment with the proposed date for the first technical resource manual of August 1, 2025 for a 2026 measurement year, and would ensure that States have enough time to implement any necessary changes before the measurement period and, if necessary, submit and receive approval for an alternative QRS request. In our listening sessions, interested parties noted that this timeline would align with those used by other measure stewards (for example, NCQA for HEDIS measures) and would ensure that States and managed care plans are able to identify and make necessary contractual, systems, and data collection changes to facilitate additional data collection required for the upcoming measurement period. We seek comment on whether this timing is appropriate for States to implement any changes included in the reporting and technical guidance for the initial measurement year as well as subsequent measurement years.

j. Reporting (§§ 438.334, 438.535, and 457.1240(d))

We are proposing requirements at § 438.535 for States to submit to CMS, upon request, information on their MAC QRS to support our oversight of Medicaid and CHIP and compliance with MAC QRS requirements, to ensure beneficiaries can meaningfully compare ratings between plans, and to help us monitor trends in additional measures and use of permissible modifications to measure specifications used among States, which could inform future additions to the mandatory measures and modifications of our methodology. We are proposing any request for reporting by States would be no more frequently than annually. We are proposing the report would include the following components:

• A list of all measures included in the State's MAC QRS, including a list of the mandatory measures reported and any additional measures a State has chosen to display in their MAC QRS to inform updates to the measures list;
• An attestation that displayed quality ratings for all mandatory measures were calculated and issued in compliance with § 438.515, and a description of the methodology used to calculate any additional measures when it deviates from the methodology proposed in § 438.515;
• If a State chooses to display additional quality measures, a description of and the required documentation for the process required under § 438.520(b);
• The date on which the State publishes or updates their quality ratings for the State's managed care plans;
• The link to the State's MAC QRS website to enable CMS to ensure the MAC QRS ratings are current; and
• The use of any technical specification adjustments to MAC QRS mandatory measures, which are outside the measure steward's allowable adjustment for the mandatory measure, but that the measure steward has approved for use by the State. As discussed in section I.B.6.f. of this proposed rule, we do not consider measure steward technical specifications to be part of the MAC QRS rating methodology, but they are part of the measures. Therefore, we do not require States to submit such adjustments to us for approval as an alternative QRS and believe State reporting is more appropriate to better understand if such adjustments impact plan-to-plan comparability or comparability within and among States.
• A summary of each alternative QRS approved by CMS, including the effective dates (the time period during which the alternative QRS was, has been, or will be applied by the State) for each approved alternative QRS.

We propose these reporting requirements at new § 438.535(a)(1) through (7) for Medicaid, and for separate CHIP by cross-reference through a proposed amendment at § 457.1240(d). We propose in § 438.535(a) the report will be ''in a form and manner determined by CMS'' because we intend to establish an online portal that States could access to easily submit this information to us. At § 438.535(b) for Medicaid, and for separate CHIP by cross-reference through a proposed amendment at § 457.1240(d) we propose that States would be given a minimum of 90 days' notice to provide such a report. We seek comment on whether States prefer one annual reporting date or a date that is relative to their MAC QRS updates.

k. Technical Changes (§§ 438.334, 438 Subpart G, 438.358, and 457.1240(d))

We are proposing several technical changes to conform our regulations with other parts of our proposed rule, which include:
• Redesignating the regulations under current § 438.334(a) to 42 CFR part 438, subpart G, § 438.505;
• In current § 438.358(c)(6), changing the reference for this EQR optional activity from § 438.334 to part 438, subpart G to align with the proposed redesignating of § 438.334;
• In current § 438.334(a)(1), redesignated to § 438.505(a)(1)(i), changing the ''Medicaid managed care quality rating system developed by CMS in accordance with paragraph (b) of this section'' to ''QRS framework'' to align with the proposed definition of QRS framework in new § 438.500;
• In current § 438.334(a)(2), redesignated to § 438.505(a)(2)(ii), changing ''in accordance with paragraph (c) of this section'' to ''in accordance with § 438.525 of this subpart'' to align with the proposed alternative QRS requirements in new § 438.525;
• Modifying current § 438.334(a)(3), redesignated to § 438.505(a)(2), to use the term ''the final rule'' instead of ''a final notice'' to refer to the proposed rules herein, if finalized;
• Modifying current § 438.334(c)(1), redesignated to § 438.525(a), by replacing ''different methodology'' with ''alternative methodology'' to better align with the proposed terminology used in the new proposed § 438.525);
• In current § 438.334(b)(1), redesignated to § 438.505(c), replacing ''related CMS quality rating approaches'' with ''similar CMS quality measurement and rating initiatives'' to better describe how we are aligning the QRS framework;
• Redesignating current § 438.334(c)(3)(i) to § 438.525(c)(2)(i) and modifying by removing ''alternative quality rating system framework, including the quality measures'' to align with our proposal under new § 438.525;

Unless otherwise noted, these technical changes are equally proposed for separate CHIP by cross-reference through a proposed amendment at § 457.1240(d).

II. Collection of Information Requirements

Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501 *et seq.*), we are required to provide 60-day notice in the **Federal Register** and solicit public comment before a collection of information requirement is submitted to the Office of Management and Budget (OMB) for review and approval. For the purpose of the PRA and this section of the preamble, ''collection of information'' is defined under 5 CFR 1320.3 of the PRA's implementing regulations. To fairly evaluate whether a collection of information should be approved by OMB, section 3506(c)(2)(A) of the PRA requires that we solicit comment on the following issues:

• The need for the information collection and its usefulness in carrying out the proper functions of our agency.
• The accuracy of our estimate of the information collection burden.
• The quality, utility, and clarity of the information to be collected.
• Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

We are soliciting public comment on each of these issues for the following sections of this document that contain information collection requirements. Comments, if received, will be responded to within the subsequent final rule.

A. Wage Estimates

To derive average costs, we used data from the U.S. Bureau of Labor Statistics' May 2021 National Occupational Employment and Wage Estimates for all salary estimates (*https://www.bls.gov/oes/current/oes_nat.htm*). Table 3 presents BLS' mean hourly wage, our estimated cost of fringe benefits and overhead (calculated at 100 percent of salary), and our adjusted hourly wage.

TABLE 3—NATIONAL OCCUPATIONAL EMPLOYMENT AND WAGE ESTIMATES

Occupation title	Occupation code	Mean hourly wage ($/hr)	Fringe benefits and overhead ($/hr)	Adjusted hourly wage ($/hr)
All Occupations	00–0000	28.01	n/a	n/a

TABLE 3—NATIONAL OCCUPATIONAL EMPLOYMENT AND WAGE ESTIMATES—Continued

Occupation title	Occupation code	Mean hourly wage ($/hr)	Fringe benefits and overhead ($/hr)	Adjusted hourly wage ($/hr)
Accountant	13–2011	40.37	40.37	80.74
Actuary	15–2011	60.24	60.24	120.48
Business Operations Specialist, All Other	13–1199	38.64	38.64	77.28
Computer Programmer	15–1251	54.68	54.68	109.36
Customer Service Rep	43–4051	18.79	18.79	37.58
Database Administrator	15–1242	49.25	49.25	98.50
General and Operations Manager	11–1021	55.41	55.41	110.82
Medical Records Specialist	29–2072	23.23	23.23	46.46
Office Clerk, General	43–9061	18.98	18.98	37.96
Statistician	15–2041	47.81	47.81	96.62
Registered Nurse	29–1141	39.78	39.78	79.56
Web Developer	15–1245	39.09	39.09	78.18

States and the Private Sector: As indicated, we are adjusting our employee hourly wage estimates by a factor of 100 percent. This is necessarily a rough adjustment, both because fringe benefits and overhead costs vary significantly from employer to employer, and because methods of estimating these costs vary widely from study to study. Nonetheless, we believe that doubling the hourly wage to estimate total cost is a reasonably accurate estimation method.

Beneficiaries: To derive average costs for beneficiaries we believe that the burden will be addressed under All Occupations (BLS occupation code 00–0000) at $28.01/hr. Unlike our State and private sector wage adjustments, we are not adjusting beneficiary wages for fringe benefits and overhead since the individuals' activities would occur outside the scope of their employment.

B. Proposed Information Collection Requirements (ICRs)

To estimate the burden for the requirements in part 438, we utilized State submitted data by States for enrollment in managed care plans for CY 2020. The enrollment data reflected 58,521,930 enrollees in MCOs, 37,692,501 enrollees in PIHPs or PAHPs, and 6,089,423 enrollees in PCCMs, for a total of 67,836,622 Medicaid managed care enrollees. This includes duplicative counts when enrollees are enrolled in multiple managed care plans concurrently. These data also showed 43 States that contract with 467 MCOs, 11 States that contract with 162 PIHPs or PAHPs, 19 States that contract with 21 non-emergency transportation PAHPs, and 13 States with 26 PCCM or PCCM entities. The estimates below reflect deduplicated State counts as data permitted.

To estimate the burden for these requirements in part 457, we utilized State submitted data for enrollment in managed care plans for CY 2017. The enrollment data reflected 4,580,786 Medicaid expansion CHIP and 2,593,827 separate CHIP managed care enrollees. These data also showed that 32 States use managed care entities for CHIP enrollment contracting with 199 MCOs, PIHPs, and PAHPs, as well as 17 PCCMs.

1. ICRs Regarding Standard Contract Requirements (§ 438.3 and 457.1203)

The following proposed changes to § 438.3 will be submitted to OMB for review under control number 0938–TBD (CMS–10856). At this time the OMB control number has not been determined, but it will be assigned by OMB upon their clearance of our proposed collection of information request. The control number's expiration date will be issued by OMB upon their approval of our final rule's collection of information request. The following proposed changes to § 457.1203 will be submitted to OMB for review under control number 0938–1282 (CMS–10554).

The proposed amendments to §§ 438.3(i) and 457.1203(f) would require that MCOs, PIHPs, and PAHPs report provider incentive payments based on standard metrics for provider performance. The proposed amendments to § 438.8(e)(2) would define the provider incentive payments that could be included in the MLR calculation; however, the administrative burden for these changes is attributable to the managed care contracting process, so we are attributing these costs to the contracting requirements in § 438.3(i). Approximately half (or 315 Medicaid contracts and 100 CHIP contracts) of all MCO, PIHP, and PAHP contracts would require modification to reflect these changes. For the contract modifications, we estimate it would take 2 hours at $77.28/hr for a business operations specialist and 1 hour at $110.82/hr for a general operations manager. In aggregate for Medicaid for § 438.3(i), we estimate a one-time State burden of 945 hours (315 contracts × 3 hr) at a cost of $83,595 [315 contracts × ((2 hr × $77.28/hr) + (1 hr × $110.82/hr))]. As this would be a one-time requirement, we annualize our time and cost estimates to 315 hours and $9,288. The annualization divides our estimates by three (3) years to reflect OMB's likely approval period. We are annualizing the one-time burden estimates since we do not anticipate any additional burden after the 3-year approval period expires.

In aggregate for CHIP for § 457.1203(f) we estimate a one-time State burden of 300 hours (100 contracts × 3 hr) at a cost of $26,538 [100 contracts × ((2 hr × $77.28/hr) + (1 hr × $110.82/hr))]. As this would be a one-time requirement, we annualize our time and cost estimates to 66 hours and $8,819. The annualization divides our estimates by three (3) years to reflect OMB's likely approval period. We are annualizing the one-time burden estimates since we do not anticipate any additional burden after the 3-year approval period expires.

To report provider incentive payment based on standard metrics, MCOs, PIHP, and PAHPs would need to select standard metrics, develop appropriate payment arrangements, and then modify the affected providers' contracts. We estimate it would take 120 hours consisting of: 80 hours × $77.28/hr for a business operations specialist and 40 hours × $110.82/hr for a general and operations manager. In aggregate for Medicaid for § 438.3(i), we estimate a one-time private sector burden of 37,800 hours (315 contracts × 120 hr) at a cost of $3,343,788 [315 contracts × ((80 hr × $77.28/hr) + (40 hr × $110.82/hr))]. As this would be a one-time requirement, we annualize our time and cost

estimates to 12,600 hours and $1,114,596. The annualization divides our estimates by three (3) years to reflect OMB's likely approval period. We are annualizing the one-time burden estimates since we do not anticipate any additional burden after the 3-year approval period expires.

In aggregate for CHIP for § 457.1203(f) we estimate a one-time private sector burden of 12,000 hours (100 contracts × 120 hr) at a cost of $1,061,520 [100 contracts × ((80 hr × $77.28/hr) + (40 hr × $110.82/hr))].

To do the annual reconciliations needed to make the incentive payments and include the expenditures in their annual report required by 438.8(k), we estimate MCOs, PIHPs, and PAHPs would take 1 hour at $77.28/hr for a business operations specialist. In aggregate for Medicaid we estimate an annual private sector burden of 315 hours (315 contracts × 1 hr) at a cost of $24,343 (315 contracts × 1 hr × $77.28/hr).

In aggregate for CHIP, we estimate an annual private sector burden of 100 hours (100 contracts × 1 hr) and $7,728 (100 contracts × 1 hr × $77.28/hr).

2. ICRs Regarding Special Contract Provisions Related to Payment (§ 438.6)

The following proposed changes will be submitted to OMB for review under control number 0938–TBD (CMS–10856). At this time the OMB control number has not been determined, but it will be assigned by OMB upon their clearance of our proposed collection of information request. The control number's expiration date will be issued by OMB upon their approval of our final rule's collection of information request.

The proposed amendments to § 438.6(c)(2) would require all SDP expenditures under paragraphs (c)(1)(i) and (ii) and (c)(1)(iii)(C) through (E) (that is, the SDPs that require prior written approval under this proposed rule) must be submitted and have written approval by CMS prior to implementation.

Initially, we estimate that 38 States would submit 50 new proposals for minimum/maximum fee schedules, value-based payment, or uniform fee increases. We estimate that it would take 2 hours at $120.48/hr for an actuary, 6 hours at $77.28/hr for a business operations specialist, and 2 hours at $110.82/hr for a general and operations manager for development and submission. We estimate an annual State burden of 500 hours (50 proposals × 10 hr) at a cost of $46,314 [50 proposals × ((2 hr × $120.48/hr) + (6 hr × $77.28/hr) + (2 hr × $110.82/hr))].

Thereafter, we estimate that 38 States would submit 150 renewal or amendment proposals per year. We estimate also it would take 1 hour at $77.28/hr for a business operations specialist, 1 hour at $120.48/hr for an actuary, and 1 hour at $110.82/hr for a general and operations manager for any proposal updates or renewals. In aggregate, we estimate an annual State burden of 450 hours (150 proposals × 3 hr) and $46,287 [150 renewal/amendment proposals × ((1 hr × $77.28/hr) + (1 hr × $110.82/hr) + (1 hr × 120.48/hr))].

The proposed amendments to § 438.6(c)(2)(iii) would require that all SDPs subject to prior approval under paragraphs (c)(1)(i) through (iii) for inpatient hospital services, outpatient hospital services, nursing facility services, and qualified practitioner services at an academic medical center, include a written analysis, showing that the total payment for such services does not exceed the average commercial rate. We estimate that 38 States will develop and submit 60 of these SDPs that include a written analysis to CMS. We also estimate it would take 6 hours at $120.48/hr for an actuary, 3 hours at $110.82/hr for a general and operations manager, and 6 hours at $109.36/hr for a computer programmer for each analysis. In aggregate we estimate an annual State burden of 900 hours (60 SDPs × 15 hr) and at a cost of $102,690 [60 certifications × ((6 hr × $120.48/hr) + (3 hr × $110.82/hr) + (6 hr × $109.36/hr))].

Section 438.6(c)(2)(iv) would require that SDPs under paragraphs (c)(1)(i) and (ii) and (c)(1)(iii)(C) through (E) must prepare and submit a written evaluation plan to CMS. The evaluation plan must include specific components under this proposal and is intended to measure the effectiveness of those State directed payments in advancing at least one of the goals and objectives in the quality strategy on an annual basis and whether specific performance targets are met. We estimate that 38 States would submit 50 written evaluation plans for new proposals. We also estimate it would take 5 hours at $109.36/hour for a computer programmer, 2.5 hours at $110.82/hr for a general and operations manager, and 2.5 hours at $77.28/hr for a business operations specialist for each new evaluation plan. In aggregate, we estimate an annual State burden of 500 hours (50 evaluation plans × 10 hr) and at a cost of $50,853 [50 evaluation plans × ((5 hr × 109.36/hr) + (2.5 hr × $110.82) + (2.5 hr × $77.28/hr))].

Thereafter, we estimate that 38 States would prepare and submit 150 written evaluation plans for amendment and renewal proposals. We also estimate it would take 2 hours at $109.36/hr for a computer programmer, 2 hours at $110.82/hr for a general and operations manager and 2 hours at $77.28/hr for a business operations specialist for each evaluation plan amendment and renewal. In aggregate we estimate an annual State burden of 900 hours (150 evaluation plans × 6 hr) at a cost of $89,238 [150 evaluation plans × ((2 hr × 109.36/hr) + (2 hr × $110.82) + (2 hr × $77.28/hr))].

Section 438.6(c)(2)(v) would require for all SDPs under paragraphs (c)(1)(i) and (ii) and (c)(1)(iii)(C) through (E) that have an actual Medicaid managed care spending percentage greater than 1.5 must complete and submit an evaluation report using the approved evaluation plan to demonstrate whether the SDP results in achievement of the State goals and objectives in alignment with the State's evaluation plan.

We estimate 38 States will submit 47 evaluation reports. We also estimate it would take 3 hours at $109.36/hr for a computer programmer, 1 hour at $110.82/hour for a general and operations manager, and 2 hours at $77.28/hr for a business operations specialist for each report. In aggregate we estimate an annual State burden of 282 hours (47 reports × 6 hr) at a cost of $27,893 [47 reports × ((3 hr × $109.36/hr) + (1hr × $110.82/hr) + (2 hr × $77.28/hr)].

The proposal at § 438.6(c)(7) would require States to submit a final SDP cost percentage as a separate actuarial report concurrently with the rate certification only if a State wishes to demonstrate that the final SDP cost percentage is below 1.5 percent. We anticipate that 10 States would need: 5 hours at $120.48/hr for an actuary, 5 hours at $109.36/hr for a computer programmer, and 7 hours at $77.28/hr for a business operations specialist. In aggregate, we estimate an annual State burden of 170 hours (17 hr × 10 States) at a cost of $16,902 (10 States × [(5 hr × $120.48/hr) + (5 hr × $109.36/hr) + (7 hr × $77.28/hr)]).

3. ICRs Regarding Rate Certification Submission (§ 438.7)

The following proposed changes will be submitted to OMB for review under control number 0938–TBD (CMS–10856). At this time the OMB control number has not been determined, but it will be assigned by OMB upon their clearance of our proposed collection of information request. The control number's expiration date will be issued by OMB upon their approval of our final rule's collection of information request.

The proposed amendments to § 438.7 set out revisions to the submission and

documentation requirements for all managed care actuarial rate certifications. The certification would be reviewed and approved by CMS concurrently with the corresponding contract(s). Currently, § 438.7(b) details certain requirements for documentation in the rate certifications. We believe these requirements are consistent with actuarial standards of practice and previous Medicaid managed care rules.

We estimate that 44 States would develop 225 certifications at 250 hours for each certification. Of the 250 hours, we estimate that it would take 110 hours at $120.48/hr for an actuary, 15 hours at $110.82/hr for a general and operations manager, 53 hours at $109.36/hr for a computer programmer, 52 hours at $77.28/hr for a business operations specialist, and 20 hours at $37.96/hr for an office and administrative support worker. In aggregate we estimate an annual State burden of 56,250 hours (250 hr × 225 certifications) at a cost of $5,735,012 [225 certifications × ((110 hr × $120.48/hr) + (15 hr × $110.82/hr) + (53 hr × $109.36/hr) + (52 hr × $77.28/hr) + (20 hr × $37.96/hr))].

4. ICRs Regarding Medical Loss Ratio Standards (§§ 438.3, 438.8, 438.74, and 457.1203)

The following proposed changes will be submitted to OMB for review under control number 0938–TBD (CMS–10856). At this time the OMB control number has not been determined, but it will be assigned by OMB upon their clearance of our proposed collection of information request. The control number's expiration date will be issued by OMB upon their approval of our final rule's collection of information request. The following proposed changes to § 457.1203 will be submitted to OMB for review under control number 0938–1282 (CMS–10554).

This rule's proposed amendments to §§ 438.8 and 457.1203 would require that MCOs, PIHPs, and PAHPs report to the State annually their total expenditures on all claims and non-claims related activities, premium revenue, the calculated MLR, and, if applicable, any remittance owed.

We estimate the total number of MLR reports that MCOs, PIHPs, and PAHPs were required to submit to States amount to 629 Medicaid contracts and 199 CHIP contracts. All MCOs, PIHPs, and PAHPs need to report the information specified under §§ 438.8 and 457.1203 regardless of their credibility status.

The proposed amendments to § 438.8(k) would require that MCOs, PIHPs, and PAHPs include expenditures for State directed payments on a separate line in their annual report to the State. We anticipate that the one-time system change would take 4 hr at $77.28/hr for a business operations specialist and 2 hr at $109.36/hr for a computer programmer. In aggregate for Medicaid for § 438.8(k), we estimate a one-time private sector burden of 3,774 hours (629 contracts × 6 hr) at a cost of $332,011 [629 contracts × ((4 hr × $77.28/hr) + (2 hr × $109.36/hr))]. As this would be a one-time requirement, we annualize our time and cost estimates to 1,258 hours and $110,670. The annualization divides our estimate by three (3) years to reflect OMB's likely approval period. We are annualizing the one-time burden estimates since we do not anticipate any additional burden after the 3-year approval period expires.

The proposed amendments to §§ 438.8(k)(1)(vii) and 457.1203(f) would require that MCOs, PIHPs, and PAHPs develop their annual MLR reports compliant with the proposed expense allocation methodology.[149] To meet this requirement we anticipate it would take: 1 hr at $80.74/hr for an accountant, 1 hr at $77.28/hr for a business operations specialist, and 1 hr at $110.82/hr for a general operations manager. In aggregate for Medicaid for § 438.8(k)(1)(vii), we estimate an annual private sector burden of 1,887 hours (629 contracts × 3 hr) at a cost of $169,100 [629 contracts × ((1 hr × $80.74/hr) + (1 hr × $77.28/hr) + (1 hr × $110.82/hr))]. In aggregate for CHIP for § 457.1203(f), we estimate an annual private sector burden of 597 hours (199 contracts × 3 hr) at a cost of $53,499 [199 contracts × ((1 hr × $80.74/hr) + (1 hr × $77.28/hr) + (1 hr × $110.82/hr))].

The proposed amendments to §§ 438.74 and 457.1203(e) would require States to comply with data aggregation requirements for their annual reports to CMS. We estimate that only 5 States would need to resubmit MLR reports to comply with the proposed data aggregation changes. We anticipate that it would take 5 hours × $77.28/hr for a business operations specialist. In aggregate, for Medicaid for § 438.74, we estimate a one-time State burden of 25 hours (5 States × 5 hr) at a cost of $1,932 (5 States × 5 hr × $77.28/hr). As this would be a one-time requirement, we annualize our time and cost estimates to 8 hours and $644. In aggregate for CHIP for § 457.1203(e) we estimate a one-time State burden of 25 hours (5 States × 5 hr) at a cost of $1,932 (5 States × 5 hr × $77.28/hr). As this would be a one-time requirement, we annualize our time and cost estimates for CHIP to 8 hours and $644. The annualization divides our estimates by three (3) years to reflect OMB's likely approval period. We are annualizing the one-time burden estimates since we do not anticipate any additional burden after the 3-year approval period expires.

The proposed amendments to § 438.74 would require States to submit a summary report of the State directed payment data submitted by their managed care plans under § 438.8(k). The proposed changes to § 438.74 would apply to 43 States. To accommodate the new data from plans resulting from proposed changes to § 438.74, we anticipate it would take 4 hours at $77.28/hr for a business operations specialist to implement the proposed SDP reporting changes in their MLR summary reports. In aggregate, we estimate an annual State burden of 172 hours (43 States × 4 hr) at a cost of $13,292 (43 States × 4 hr × $77.28/hr).

5. ICRs Regarding Information Requirements (§§ 438.10 and 457.1207)

The following proposed changes to § 438.10 will be submitted to OMB for review under control number 0938–TBD (CMS–10856). At this time the OMB control number has not been determined, but it will be assigned by OMB upon their clearance of our proposed collection of information request. The control number's expiration date will be issued by OMB upon their approval of our final rule's collection of information request. The following proposed changes to § 457.1207 will be submitted to OMB for review under control number 0938–1282 (CMS–10554).

The proposed amendments to §§ 438.10(c)(3) and 457.1207 would require States to operate a website that provides the information required in § 438.10(f). We propose to require that States include required information on one page, use clear labeling, and verify correct functioning and accurate content at least quarterly. We anticipate it would take 20 hours at $109.36/hr once for a computer programmer to place all required information on one page and ensure the use of clear and easy to understand labels on documents and links.

In aggregate for Medicaid for § 438.10(c)(3), we estimate a one-time State burden of 900 hours (45 States × 20 hr) at a cost of $98,424 (900 hr × $109.36/hr). As this would be a one-time requirement, we annualize our time and cost estimates to 300 hours and $32,808. In aggregate for CHIP for § 457.1207, we estimate a one-time State burden of 640 hours (32 States × 20 hr) at a cost of $69,990 (640 hr × $109.36/

[149] Methodology(ies) for allocation of expenditures as described at 45 CFR 158.170(b).

hr). As this would be a one-time requirement, we annualize our time and cost estimates to 213 hours and $23,294. The annualization divides our estimates by three (3) years to reflect OMB's likely approval period. We are annualizing the one-time burden estimates since we do not anticipate any additional burden after the 3-year approval period expires.

We also anticipate that it would take 40 hr at $109.36/hr for a computer programmer to periodically add and verify the function and content on the site at least quarterly (10 hours/quarter). In aggregate for Medicaid for we estimate an annual State burden of 1,800 hours (45 States × 40 hr) at a cost of $196,848 (1,800 hr × $109.36/hr). Due to the additional proposal to post summary enrollee experience survey results by separate CHIP managed care plan on the State's website, we estimate an additional 1 hour at $109.36/hr for a computer programmer to post these comparative data annually for a total of 41 hours. For CHIP, we estimate an annual State burden of 1,312 hours (32 States × 41 hr) at a cost of $143,480 (1,312 hr × $109.36/hr).

6. ICRs Regarding ILOS Contract and Supporting Documentation Requirements (§§ 438.16 and 457.1201)

The following proposed changes at § 438.16 will be submitted to OMB for review under control number 0938–TBD (CMS–10856). At this time the OMB control number has not been determined, but it will be assigned by OMB upon their clearance of our proposed collection of information request. The control number's expiration date will be issued by OMB upon their approval of our final rule's collection of information request. The following proposed changes to § 457.1201 will be submitted to OMB for review under control number 0938–1282 (CMS–10554).

The proposals at §§ 438.16 and 457.1201 would require States that provide ILOSs, with the exception of short term IMD stays, to comply with additional information collection requirements. 44 States utilize MCOs, PIHPs and PAHPs in Medicaid managed care programs. We do not have current data readily available on the number of States that utilize ILOSs and the types of ILOSs in Medicaid managed care. We believe it is a reasonable estimate to consider that half of the States with MCOs, PIHPs and PAHPs (22 States) may choose to provide non-IMD ILOSs. Similarly, for CHIP, we estimate that half of the States with MCOs, PIHPs, and PAHPS (16 States) provide ILOSs and would be subject to the additional information collection requirements.

The proposal at § 438.16(c)(4)(i) would require States to submit a projected ILOS cost percentage to CMS as part of the rate certification. The burden for this proposal is accounted for in ICR #2 (above) for § 438.7 Rate Certifications.

The proposal at § 438.16(c)(5)(ii) would require States to submit a final ILOS cost percentage and summary of actual MCO, PIHP and PAHP ILOS costs as a separate actuarial report concurrently with the rate certification. We anticipate that 22 States would need: 5 hours at $120.48/hr for an actuary, 5 hours at $109.36/hr for a computer programmer, and 7 hours at $77.28/hr for a business operations specialist. In aggregate, we estimate an annual State burden of 374 hours (17 hr × 22 States) at a cost of $37,184 (22 States × [(5 hr × $120.48/hr) + (5 hr × $109.36/hr) + (7 hr × $77.28/hr)]).

Proposals at §§ 438.16(d)(1) and 457.1201(e) would require States that elect to use ILOS to include additional documentation requirements in their managed care plan contracts. We anticipate that 22 States for Medicaid and 16 States for CHIP would need 1 hour at $77.28/hr for a business operations specialist to amend 327 Medicaid MCO, PIHP, and PAHP contracts and 100 CHIP contracts annually. In aggregate for Medicaid for § 438.16(d)(1), we estimate an annual State burden of 327 hours (327 contracts × 1 hr) at a cost of $25,271 (327 hr × $77.28/hr). In aggregate for CHIP for § 457.1201(e) we estimate an annual State burden of 100 hours (100 contracts × 1 hr) at a cost of $7,728 (100 hr × $77.28/hr).

Proposals at §§ 438.16(d)(2) and 457.1201(e) would require some States to provide to CMS additional documentation to describe the process and supporting data the State used to determine each ILOS to be a medically appropriate and cost-effective substitute. This additional documentation would be required for States with a projected ILOS cost percentage greater than 1.5 percent. We anticipate that approximately 5 States may be required to submit this additional documentation. We estimate it would take 2 hours at $77.28/hr for a business operations specialist to provide this documentation. In aggregate for Medicaid for § 438.16(d)(2), we estimate an annual State burden of 10 hours (5 States × 2 hr) at a cost of $773 (10 hr × $77.28/hr). In aggregate for CHIP for § 457.1201(e) we estimate the same annual State burden of 10 hours (5 States × 2 hr) at a cost of $773 (10 hr × $77.28/hr).

Proposals at §§ 438.16(e)(1) and 457.1201(e) would require States with a final ILOS cost percentage greater than 1.5 percent to submit an evaluation for ILOSs to CMS. We anticipate that approximately 5 States may be required to develop and submit an evaluation. We estimate it would take 25 hours at $77.28/hr for a business operations specialist. In aggregate for Medicaid for § 438.16(e)(1), we estimate an annual State burden of 125 hours (5 States × 25 hr) at a cost of $9,660 (125 hr × $77.28/hr). In aggregate for CHIP for § 457.1201(e), we estimate the same annual State burden of 125 hours (5 States × 25 hr) at a cost of $9,660 (125 hr × $77.28/hr).

An ILOS may be terminated by either a State, a managed care plan, or by CMS. Proposals as §§ 438.16(e)(2)(iii) and 457.1201(e) would require States to develop an ILOS transition of care policy. We believe all States with non-IMD ILOSs should proactively prepare a transition of care policy in case an ILOS is terminated. We estimate both a one-time burden and an annual burden for these proposals. We believe there is a higher one-time burden as all States that currently provide non-IMD ILOSs would need to comply with this proposed requirement by the applicability date, and an annual burden is estimated for States on an on-going basis. We estimate for a one-time burden, it would take: 2 hours at $109.36/hr for a computer programmer and 2 hours at $77.28/hr for a business and operations specialist for initial development of a transition of care policy. In aggregate for Medicaid for § 438.16(e)(2)(iii), we estimate a one-time State burden 88 hours (22 States × 4 hr) at a cost of $8,212 (22 States × [(2 hr × $109.36/hr) + (2 hr × $77.28/hr)]). As this would be a one-time requirement, we annualize our time and cost estimates to 30 hours and $2,799. In aggregate for CHIP for § 457.1201(e), we estimate a one-time State burden 64 hours (16 States × 4 hr) at a cost of $5,973 (16 States × [(2 hr × $109.36/hr) + (2 hr × $77.28/hr)]). As this would be a one-time requirement, we annualize our time and cost estimates to 21 hours and $1,991. The annualization divides our estimates by three (3) years to reflect OMB's likely approval period. We are annualizing the one-time burden estimates since we do not anticipate any additional burden after the 3-year approval period expires.

For updates to reflect specific ILOSs, we also estimate that this proposed ILOS transition of care policy would have an annual burden of 1 hour at $77.28/hr for a business operations specialist per State. In aggregate for

Medicaid for § 438.16(e)(2)(iii), we estimate an annual State burden of 22 hours (22 States × 1 hr) at a cost of $1,700 (22 hr × $77.28/hr). In aggregate for CHIP for § 457.1201(e), we estimate an annual State burden of 16 hours (16 States × 1 hr) at a cost of $1,237 (16 hr × $77.28/hr).

For MCOs, PIHPs, or PAHPs that would need to implement a transition policy when an ILOS is terminated, we estimate that on an annual basis, 20 percent of managed care plans (65 plans for Medicaid and 40 plans for CHIP) may need to implement this policy. We estimate an annual managed care plan burden of 2 hours at $77.28/hr for a business operations specialist to implement the policy. In aggregate for Medicaid for § 438.16(e)(2)(iii)(B) we estimate an annual burden of 130 hours (65 plans × 2 hr) at a cost of $10,046 (130 hr × $77.28/hr). In aggregate for CHIP for § 457.1201(e), we estimate an annual burden of 80 hours (40 plans × 2 hr) at a cost of $6,182 (80 hr × $77.28/hr).

7. ICRs Regarding State Monitoring Requirements (§ 438.66)

The following proposed changes will be submitted to OMB for review under control number 0938–TBD (CMS–10856). At this time the OMB control number has not been determined, but it will be assigned by OMB upon their clearance of our proposed collection of information request. The control number's expiration date will be issued by OMB upon their approval of our final rule's collection of information request.

The proposed amendments to § 438.66(c) would require States to conduct, or contract for, an enrollee experience survey annually. We believe most, if not all, States will use a contractor for this task and base our burden estimates on that assumption. In the first year, for procurement, contract implementation and management, and analysis of results, we estimate 85 hours at $77.28/hr for a business operations specialist and 25 hours at $110.82/hr for general operations manager. In aggregate for § 438.66(c), we estimate a one-time State burden of 5,390 hours (49 States × 110 hr) at a cost of $457,626 (49 States × [(85 hr × $77.28/hr) + (25 hr × $110.20)]). As this would be a one-time requirement, we annualize our time and cost estimates to 1,796 hours and $152,542. The annualization divides our estimates by three (3) years to reflect OMB's likely approval period. We are annualizing the one-time burden estimates since we do not anticipate any additional burden after the 3-year approval period expires.

In subsequent years, for contract management and analysis of experience survey results, we estimate 50 hours at $77.28/hr for a business operations specialist and 15 hours at $110.82/hr for general operations manager. In aggregate, we estimate an annual State burden of 3,185 hr (49 States × 65 hr) at a cost of $270,789 (49 States × [(50 hr × $77.28/hr) + (15 hr × $110.20/hr)]).

Amendments to § 438.66(e)(1) and (2) would require that States submit an annual program assessment report to CMS covering the topics listed in § 438.66(e)(2). The data collected for § 438.66(b) and the utilization of the data in § 438.66(c), including reporting as proposed in § 438.16, would be used to complete the report. We anticipate it would take 80 hours at $77.28/hr for a business operations specialist to compile and submit this report to CMS. In aggregate, we estimate an annual State burden of 3,920 hours (49 States × 80 hr) at a cost of $302,938 (3,920 hr × $77.28/hr).

8. ICRs Regarding Network Adequacy Standards (§§ 438.68 and 457.1218)

The following proposed changes to § 438.66 will be submitted to OMB for review under control number 0938–TBD (CMS–10856). At this time the OMB control number has not been determined, but it will be assigned by OMB upon their clearance of our proposed collection of information request. The control number's expiration date will be issued by OMB upon their approval of our final rule's collection of information request. The following proposed changes to § 457.1218 will be submitted to OMB for review under control number 0938–1282 (CMS–10554).

Sections 438.68(e) and 457.1218 would require States with MCO, PIHP, and PAHPs to develop appointment wait time standards for four provider types. We anticipate it would take: 20 hours at $77.28/hr for a business operations specialist for development and 10 hours at $77.28/hr a business operations specialist for ongoing enforcement of all network adequacy standards. In aggregate for Medicaid for § 438.68(e), we estimate a one-time State burden of 880 hours (44 States × 20 hr) at a cost of $68,006 (880 hr × $77.28/hr) and an annual State burden of 440 hours (44 States × 10 hr) at a cost of $34,003 (440 hr × $77.28/hr).

In aggregate for CHIP for § 457.1218, we estimate a one-time State burden of 640 hours (32 States × 20 hr) at a cost of $49,459 (640 hr × $77.28/hr) and an annual State burden of 320 hours (32 States × 10 hr) at a cost of $24,730 (320 hr × $77.28/hr). As this would be a one-time requirement, we annualize our time and cost estimates to 320 hours and $24,729. The annualization divides our estimates by three (3) years to reflect OMB's likely approval period. We are annualizing the one-time burden estimates since we do not anticipate any additional burden after the 3-year approval period expires.

Amendments to §§ 438.68(f) and 457.1218 would require States with MCO, PIHPs, or PAHPs to contract with an independent vendor to perform secret shopper surveys of plan compliance with appointment wait times and accuracy of provider directories and send directory inaccuracies to the State within three days of discovery. In the first year, for procurement, contract implementation, and management, we anticipate it would take: 85 hours at $77.28/hr for a business operations specialist and 25 hours at $110.82/hr for general operations manager. In aggregate for Medicaid for § 438.68(f), we estimate a one-time State burden of 4,840 hours (44 States × 110 hr) at a cost of $410,929 (44 States × [(85 hr × $77.28/hr) + (25 hr × $110.82/hr)]). As this would be a one-time requirement, we annualize our time and cost estimates to 1,614 hours and $136,976. In aggregate for CHIP for § 457.1218, we estimate a one-time State burden of 3,520 hours (32 States × 110 hr) at a cost of $298,858 (32 States × [(85 hr × $77.28/hr) + (25 hr × $110.82/hr)]). As this would be a one-time requirement, we annualize our time and cost estimates to 1441 hours and $129,228. The annualization divides our estimates by three (3) years to reflect OMB's likely approval period. We are annualizing the one-time burden estimates since we do not anticipate any additional burden after the 3-year approval period expires.

In subsequent years, for contract management and analysis of results, we anticipate it would take 50 hours at $77.28/hr for a business operations specialist and 15 hours at $110.82/hr for general operations manager. In aggregate for Medicaid for § 438.68(c), we estimate an annual State burden of 2,860 hours (44 States × 65 hr) at a cost of $243,157 (44 States × [(50 hr × $77.28/hr) + (15 hr × $110.82)]).

In aggregate for CHIP for § 457.1218 we estimate an annual State burden of 2,080 hours (32 States × 65 hr) at a cost of $176,842 (32 States × [(50 hr × $77.28/hr) + (15 hr × $110.82/hr)]).

9. ICRs Regarding Assurance of Adequate Capacity and Services (§§ 438.207 and 457.1230)

The following proposed changes to § 438.207 will be submitted to OMB for

review under control number 0938–TBD (CMS–10856). At this time the OMB control number has not been determined, but it will be assigned by OMB upon their clearance of our proposed collection of information request. The control number's expiration date will be issued by OMB upon their approval of our final rule's collection of information request. The following proposed changes to § 457.1230 will be submitted to OMB for review under control number 0938–1282 (CMS–10554).

The proposed amendments to §§ 438.207(b) and 457.1230(b) would require MCOs, PIHPs, and PAHPs to submit documentation to the State of their compliance with § 438.207(a). As we propose in this rule to add a reimbursement analysis at § 438.207(b)(3) (and at § 457.1230(b) for separate CHIP), we estimate a one-time plan burden of: 50 hours at $77.28/hr for a business operations specialist, 20 hours at $110.82/hr for a general operations manager, and 80 hours at $109.36/hr for a computer programmer. In aggregate for Medicaid for § 438.207(b), we estimate a one-time private sector burden of 94,350 hours (629 MCO, PIHPs, and PAHPs × 150 hr) at a cost of $9,327,567 (629 MCOs, PIHPs, and PAHPs × [(50 hr × $77.28/hr) + (20 hr × $110.20/hr) + (80 hr × $109.36/hr)]). As this would be a one-time requirement, we annualize our time and cost estimates to 31,450 hours and $3,460,800. The annualization divides our estimates by three (3) years to reflect OMB's likely approval period. We are annualizing the one-time burden estimates since we do not anticipate any additional burden after the 3-year approval period expires.

In aggregate for CHIP for § 457.1230(b), we estimate a one-time private sector burden of 29,850 hours (199 MCO, PIHPs, and PAHPs × 150 hr) at a cost of $2,948,543 (199 MCOs, PIHPs, and PAHPs × [(50 hr × $77.28/hr) + (20 hr × $110.20/hr) + (80 hr × $109.36/hr)]). As this would be a one-time requirement, we annualize our time and cost estimates to 9,950 hours and $982,848. The annualization divides our estimates by three (3) years to reflect OMB's likely approval period. We are annualizing the one-time burden estimates since we do not anticipate any additional burden after the 3-year approval period expires.

For ongoing analyses and submission of information that would be required by amendments to § 438.207(b), we estimate it would take: 20 hours at $77.28/hr for a business operations specialist, 5 hours at $110.82/hr for a general operations manager, and 20 hours at $109.36/hr for a computer programmer. In aggregate for Medicaid, we estimate a one-time private sector burden of 28,305 hours (629 MCO, PIHPs, and PAHPs × 45 hr) at a cost of $2,696,460 (629 MCO, PIHPs, and PAHPs × [(20 hr × $77.28/hr) + (5 hr × $110.20/hr) + (20 hr × $109.36/hr)]).

In aggregate for CHIP, we estimate a one-time private sector burden of 8,955 hours (199 MCO, PIHPs, and PAHPs × 45 hr) at a cost of $852,476 (199 MCO, PIHPs, and PAHPs × [(20 hr × $77.28/hr) + (5 hr × $110.20/hr) + (20 hr × $109.36/hr)]).

Amendments to §§ 438.207(d) and 457.1230(b) would require States to submit an assurance of compliance to CMS that their MCOs, PIHPs, and PAHPs meet the State's requirements for availability of services. The submission to CMS must include documentation of an analysis by the State that supports the assurance of the adequacy of the network for each contracted MCO, PIHP or PAHP and the accessibility of covered services. Including the proposals in this rule at § 438.68(f) and § 438.208(b)(3), we anticipate it would take 40 hours at $77.28/hr for a business operations specialist. Although States may need to submit a revision to this report at other times during a year (specified at § 438.207(c)), we believe these submissions will be infrequent and require minimal updating to the template; therefore, the burden estimated here in inclusive of occasional revisions. In aggregate for Medicaid, we estimate an annual State burden of 1,760 hours (44 States × 40 hr) at a cost of $136,013 (1,760 hr × $77.28/hr).

Due to the additional proposal to include enrollee experience survey results in the State's separate CHIP analysis of network adequacy, we anticipate an additional 4 hours at $77.28/hr for a business operations specialist to analyze these data for a total of 44 hours annually. In aggregate for CHIP, we estimate an annual State burden of 1,408 hours (32 States x 44 hr) at a cost of $108,810 (1,408 hr × $77.28/hr).

10. ICRs Regarding External Quality Review Results (§§ 438.364 and 457.1250)

The following proposed changes to § 438.364 will be submitted to OMB under control number 0938–0786 (CMS–R–305), and the proposed changes to § 457.1250 will be submitted to OMB for review under control number 0938–1282 (CMS–10554).

Amendments to § 438.360(a)(1) would remove the requirement that plan accreditation must be from a private accrediting organization recognized by CMS as applying standards at least as stringent as Medicare under the procedures in § 422.158. Eliminating this requirement would simplify the plan accreditation process. We assume that States would apply the non-duplication provision to 10 percent of MCOs, PIHPs, and PAHPs, we anticipate that this provision would offset the burden associated with § 438.358(b)(1)(i) through (iii) for 65 MCOs, PIHPs, and PAHPs (since these activities will no longer be necessary for these 65 plans). Consistent with the estimates used in § 438.358(b)(1)(i) through (iii), we estimate an aggregated offset of annual State burden of minus 26,606 hours [(−65 MCOs, PIHPs × 409.33 hr)] and minus $2,056,146 (−26,606.45 hr × $77.28/hr).

The proposed amendments to § 438.364(a)(2)(iii) for Medicaid, and through an existing cross-reference at § 457.1250(a) for separate CHIP, would (1) require that the EQR technical reports include ''any outcomes data and results from quantitative assessments'' for the applicable EQR activities in addition to whether or not the data has been validated, and (2) add the mandatory network adequacy validation activity to the types of EQR activities to which the requirement to include data in the EQR technical report applies. For Medicaid § 438.364, we assume 44 States and 654 MCOs, PIHPs and PAHPs will be subject to the EQR provisions. For CHIP, we assume 32 States and 199 MCOs, PIHPs and PAHPs will be subject to the proposed EQR provisions.

We estimate it would take 1 hour at $77.28/hr for a business operations specialist to describe the data and results from quantitative assessments and 30 minutes at $37.96/hr for an office clerk to collect and organize data. In aggregate for Medicaid we estimate an annual State burden of 981 hours (654 MCOs, PIHPs, and PAHPs yearly reports × 1.5 hr) at a cost of $62,954 (654 reports × [(1 hr × $77.28/hr) + (0.5 hr × $37.96/hr)]). In aggregate for CHIP for § 457.1250(a), we estimate an annual State burden of 299 hours (199 MCOs, PIHPs, and PAHPs yearly reports × 1.5 hr) at a cost of $19,156 (199 reports × [(1 hr × $77.28/hr) + (0.5 hr × $37.96/hr)]).

Amendments to § 438.364(c)(1) for Medicaid, and through an existing cross-reference at § 457.1250(a) for separate CHIP, shifts the date in which States must finalize their annual EQR technical report. Previously, EQR annual reports had to be posted by April 30th, but under this new provision, EQR technical reports must be posted on the website required under §§ 438.10(c)(3)

and 457.1207 by December 31st of each year. We estimate it would take 1 hour at $77.28/hr for a business operations specialist and 30 minutes at $110.82/hr a general operations manager to amend vendor contracts to reflect the new reporting date. In aggregate for Medicaid, we estimate an annual State burden of 981 hours (654 MCOs, PIHPs, and PAHPs yearly reports × 1.5 hr) at a cost of $86,779 (654 contracts [(1 hr × $77.28/hr) + (0.5 hr × $110.82/hr)]). In aggregate for CHIP, we estimate an annual State burden of 299 hours (199 MCOs, PIHPs, and PAHPs yearly reports × 1.5 hr) and $26,405 (199 contracts [(1 hr × $77.28/hr) + (0.5 hr × $110.82/hr)]). Amendments to § 438.364(c)(2)(i) for Medicaid, and through an existing cross-reference at § 457.1250(a) for separate CHIP, would require States to notify CMS within 14 calendar days of posting their EQR technical reports on their quality website and provide CMS with a link to the report. Previously States were not required to notify CMS when reports were posted. We estimate it would take 30 minutes at $77.28/hr for a business operations specialist to notify CMS of the posted reports. In aggregate for Medicaid we estimate an annual State burden of 22 hours (44 States × 0.5 hr) at a cost of $1,700 (22 hr × $77.28/hr). In aggregate for CHIP, we estimate an annual State burden of 16 hours (32 States × 0.5 hr) at a cost of $1,236 (16 hr × $77.28/hr).

Amendments to § 438.364(c)(2)(iii) for Medicaid, and through an existing cross-reference at § 457.1250(a) for separate CHIP, would require States to maintain an archive of at least the previous 5 years of EQR technical reports on their websites. Currently, almost half of States maintain an archive of at least 2 years' worth of EQR reports. Initially, we assume 75 percent of reports completed within the previous 5 years need to be archived on State websites. We estimate it would take 5 minutes (0.0833 hr) at $77.28/hr for a business operations specialist to collect and post a single EQR technical report to a State website. In aggregate for Medicaid for § 438.364(c)(2)(iii), we estimate a one-time burden of 204 hours (654 MCOs, PIHPs, and PAHPs yearly reports × 0.75 × 5 years × 0.0833 hr) at a cost of $15,765 (204 hr × $77.28/hr). As this will be a one-time requirement, we annualize our time and cost estimates to 68 hours and $5,255. In aggregate for CHIP for § 457.1250(a), we estimate a one-time burden of 62 hours [(199 MCOs, PIHPs, and PAHPs yearly reports × 0.75 × 5 years × 0.0833 hr) at a cost of $4,791 (62 hr × $77.28/hr). As this would be a one-time requirement, we annualize our time and cost estimates to 21 hours and $1,597. The annualization divides our estimates by three (3) years to reflect OMB's likely approval period. We are annualizing the one-time burden estimates since we do not anticipate any additional burden after the 3-year approval period expires.

11. ICRs Regarding Requirements for PCCMs (§§ 438.310(c)(2), 438.350, and 457.1250)

The following proposed changes will be submitted to OMB for review under control number 0938–0786 (CMS–R–305). The following proposed changes to § 457.1250 will be submitted to OMB for review under control number 0938–1282 (CMS–10554).

The proposed amendments to §§ 438.310(c)(2), 438.350, and 457.1250(a) would remove PCCMs from the managed care entities subject to EQR. We estimate the burden on States of completing EQR mandatory and optional activities which include:

Mandatory EQR activities include the validation of performance measures and a compliance review. We assume States validate 3 performance measures each year and conduct a compliance review once every 3 years. We expect it would take 53 hours at $77.28/hr for a business operations specialist to complete each performance measure validation and 361 hours at $77.28/hr for a business operations specialist to conduct a compliance review. Alleviating this burden would result in an annual State Medicaid savings of minus 2,793 hours (10 PCCM entities × [(53 hr/validation × 3 performance measure validations) + (361 hr/3 years compliance review)]) and minus $215,843 (− 2,793 hr × $77.28/hr). For CHIP for § 457.1250(a), we estimate an annual State savings of minus 4,749 hours (17 PCCM entities × [(53 hr/validation × 3 performance measure validations) + (361 hr/3 years compliance review)]) and minus $367,003 (−4,749 hr × $77.28/hr).

Optional EQR activities include: (1) validation of client level data (such as claims and encounters); (2) administration or validation of consumer or provider surveys; (3) calculation of performance measures; (4) conduct of PIPs; (5) conduct of focused studies; and (6) assist with the quality rating of MCOs, PIHPs, and PAHPs consistent with §§ 438.334 and 457.1240(d). Based on our review of recent EQR technical report submissions we estimate and assume that each year 10 percent of PCCM entities would be subject to each of the optional EQR-related activities. Regarding the administration or validation of consumer or provider surveys, we assume that half would administer surveys while half (29) would validate surveys. We also estimate that a mix of professionals would work on each optional EQR-related activity: 20 percent by a general and operations manager at $110.82/hr; 25 percent by a computer programmer at $92.92/hr; and 55 percent by a business operations specialist at $77.28/hr. Alleviating this burden would result in an annual State Medicaid savings of minus 999 hours (−350+−75 hr + −25 hr + −159 hr + −195 hr + −195 hr) and minus $87,810 [(−999 hr × 0.20 × $110.82/hr) + (−999 hr × 0.25 × $92.92/hr) + (−999 hr × 0.55 × $77.28/hr)]. For CHIP, we estimate annual State savings of minus 649 hours (−75 hr + −25 hr + −159 hr + −195 hr + −195 hr) and minus $57,045.80 [(−649 hr × 0.20 × $110.82/hr) + (−649 hr × 0.25 × $92.92/hr) + (−649 hr × 0.55 × $77.28/hr)].

Per § 438.364(c)(2)(ii), each State agency would provide copies of technical reports, upon request, to interested parties such as participating health care providers, enrollees and potential enrollees of the MCO, PIHP, or PAHP, beneficiary advocacy groups, and members of the general public. This change would eliminate the burden on States to provide PCCM EQR reports. We estimate an annual State burden of 5 minutes (on average) or 0.0833 hours at $37.96/hr for an office clerk to disclose the reports (per request), and that a State would receive five requests per PCCM entity. Alleviating this burden would result in an annual Medicaid State savings of minus 4 hours (10 PCCM entities × 5 requests × 0.0833 hr) and minus $152 (−4 hr × $37.96/hr). For CHIP for § 457.1250(a), we estimate an annual State savings of minus 0.833 hours (50 minutes) (2 PCCM entities × 5 requests × 0.833 hr) and minus $32 (−0.833 hr × $37.96/hr).

For the mandatory and optional EQR activities, in aggregate, we estimate an annual State savings of minus 3,796 hours (−2,793 hr + −999 hr + −4 hr) and minus $303,805 ($215,843 + $87,810 + $152).

Additionally, the burden associated with § 438.358(b)(2) also includes the time for a PCCM entity (described in § 438.310(c)(2)) to prepare the information necessary for the State to conduct the mandatory EQR-related activities. Given the estimate of 200 hr for an MCO, PIHP, or PAHP, and that there are only 2 mandatory EQR-related activities for PCCM entities (described in § 438.310(c)(2)), we estimate it would take 100 hr to prepare the documentation for these 2 activities, half (50 hr) at $77.28/hr by a business operations specialist and half (50 hr) at

$37.96/hr by an office clerk. In aggregate for Medicaid, we estimate an annual private sector savings of minus 1,000 hours (10 PCCM entities × 100 hr) and minus $57,620 [(− 500 hr × $77.28/hr) + (− 500 hr × $37.96/hr)]. In aggregate for CHIP for § 457.1250(a), we estimate an annual private sector savings of minus 200 hours (2 PCCM entities × 100 hr) and minus $11,524 [(− 100 hr × $77.28/hr) + (− 100 hr × $37.96/hr)].

Amendments to §§ 438.364(c)(7) and 457.1250(a) add a new optional EQR activity to assist in evaluations for In Lieu of Services, quality strategies and State Directed Payments that pertain to outcomes, quality, or access to health care services. Based on our review of recent EQR technical report submissions we estimate and assume that each year 10 percent of MCOs, PIHPs and PAHPs will be subject to each of the optional EQR-related activities, though we note that the exact States and number vary from year to year. We also estimate that a mix of professionals will work on each optional EQR-related activity: 20 percent by a general and operations manager at $110.82/hr; 25 percent by a computer programmer at $109.36/hr; and 55 percent by a business operations specialist at $77.28/hr. To assist in evaluations, we estimate an annual State burden of 80 hours per MCO, PIHP and PAHP. In aggregate for Medicaid, the annual State burden to assist in evaluations is 4,640 hours (58 MCOs, PIHPs and PAHPs × 80 hr) at a cost of $426,917 [(4,640 hr × 0.20 × $110.82/hr) + (4,640 hr × 0.25 × $103.36/hr) + (4,640 hr × 0.55 × $77.28/hr)]. In aggregate for CHIP for § 457.1250(a), the annual State burden to assist in evaluations is 1,600 hours (20 MCOs, PIHPs and PAHPs × 80 hr) at a cost of $147,213 [(1,600 hr × 0.20 × $110.82/hr) + (1,600 hr × 0.25 × $109.36/hr) + (1,600 hr × 0.55 × $77.28/hr)].

12. ICRs Regarding Quality Rating System Measure Collection (§§ 438.515 and 457.1240)

The following proposed changes will be submitted to OMB for review under control number 0938–1281 (CMS–10553). The following proposed changes to § 457.1240 will be submitted to OMB for review under control number 0938–1282 (CMS–10554).

The proposed amendments to §§ 438.515(a)(1) and 457.1240(d) would revise the existing QRS requirements by mandating that the State collect specified data from each managed care plan with which it contracts that has 500 or more enrollees on July 1 of the measurement year. Based on the data collected, the State would calculate and issue an annual quality rating to each managed care plan. The State would also collect data from Medicare and the State's fee-for-service providers, if all data necessary to issue an annual quality rating cannot be provided by the managed care plans. Annual quality ratings will serve as a tool for States, plans and beneficiaries. The annual quality ratings will hold States and plans accountable for the care provided to Medicaid and CHIP beneficiaries, provide a tool for States to drive improvements in plan performance and the quality of care provided by their programs, and empower beneficiaries with useful information about the plans available to them. States would be required to collect data using the framework of a mandatory QRS Measure Set. We used the proposed mandatory measure set, found in Table 1, as the basis for the measure collection burden estimate. The proposed mandatory measure set consists of 18 measures, including CAHPS survey measures, and reflects a wide range of preventive and chronic care measures representative of Medicaid and CHIP beneficiaries. For Medicaid managed care, we assume 629 MCOs, PIHPs and PAHPs and 44 States to be subject to the proposed mandatory QRS measure set collection and reporting provision. For CHIP managed care, we assume 199 MCOs, PIHPs and PAHPs and 32 States to be subject to the proposed mandatory QRS measure set collection and reporting provision. We assume that plans with CHIP populations will report the subset of QRS measures which apply to beneficiaries under 19 years of age and to pregnant and postpartum adults, where applicable.

For Medicaid, we expect reporting the QRS non-survey measures would take: 680 hours at $109.36/hr for a computer programmer to program and synthesize the data; 212 hours at $77.28/hr for a business operations specialist to manage the data collection process; 232 hours at $37.96/hr for an office clerk to input the data; 300 hours at $79.56/hr for a registered nurse to review medical records for data collection; and 300 hours at $46.46/hr for medical records and health information analyst to compile and process medical records. For Medicaid, for one managed care entity we estimate an annual private sector burden of 1,724 hours (680 hr + 212 hr + 232 hr + 300 hr + 300 hr) at cost of $137,361 ([680 hr × $109.36/hr] + [252 hr × $77.28/hr] + [328 hr x $37.96/hr] + [300 hr × $79.56/hr] + [300 hr × $46.46/hr]).

For Medicaid, we also estimate that conducting the QRS survey measures comprised of the CAHPS survey would take: 20 hours at $77.28/hr for a business operations specialist to manage the data collection process; 40 hours at $37.96/hr for an office clerk to input the data; and 32 hours at $95.62/hr for a statistician to conduct data sampling. For one Medicaid managed care entity we estimate an annual private sector burden of 92 hours (20 hr + 40 hr + 32 hr) at cost of $6,124 ([20 hr × $77.28/hr] + [40 hr × $37.96/hr] + [32 hr × $95.62]).

For one Medicaid managed care entity, for mandatory QRS non-survey and survey measures we estimate an annual private sector burden of 1,816 hours (1,724 hr +92 hr) at a cost of $143,485 ($137,361 + $6,124). In aggregate, for Medicaid, we estimate an annual private sector burden of 1,142,264 hours (629 Medicaid MCOs, PIHPs and PAHPs × 1,816 hours) and $90,252,065 (629 Medicaid MCOs, PIHPs and PAHPs × $143,485).

For CHIP for § 457.1240(d), we expect reporting non-survey QRS measures would take: 400 hours at $109.36/hr for a computer programmer to program and synthesize the data; 148 hours at $77.28/hr for a business operations specialist to manage the data collection process; 152 hours at $37.96/hr for an office clerk to input the data; 60 hours at $79.56/hr for a registered nurse to review medical records for data collection; and 60 hours at $46.46/hr for medical records specialist to compile and process medical records. For one CHIP managed care entity we estimate an annual private sector burden of 820 hours (400 hr + 148 hr + 152 hr + 60 hr +60 hr) at cost of $68,513 ([400 hr × $109.36/hr] + [148 hr × $77.28/hr] + [152 hr × $37.96/hr] + [60 hr × $79.56/hr] + [60 hr × $46.46/hr])

For CHIP for § 457.1240(d), we also estimate that conducting the survey measures (comprised of the CAHPS survey and secret shopper) would take: 20 hours at $77.28/hr for a business operations specialist to manage the data collection process; 56 hours at $37.96/hr for an office clerk to input the data; and 32 hours at $95.62/hr for a statistician to conduct data sampling. For one CHIP managed care entity we estimate an annual private sector burden of 108 hours (20 hr + 56 hr + 32 hr) at cost of $6,731 ([20 hr × $77.28/hr] + [56 hr × $37.96/hr] + [32 hr × $95.62]).

For one CHIP managed care entity, for mandatory QRS non-survey and survey measures, we estimate an annual private sector burden of 928 hours (820 hr +108 hr) at a cost of $75,244 ($68,513 + $6,731). In aggregate, for CHIP for § 457.1240(d), we estimate an annual private sector burden of 184,672 hours (199 CHIP MCOs, PIHPs and PAHPs × 928 hours) and $14,973,556 (199 CHIP MCOs, PIHPs and PAHPs × $75,244).

The CAHPS survey measures also include a new burden on Medicaid beneficiaries. Beneficiaries complete the survey via telephone or mail. Response rates vary slightly by survey population. The adult CAHPS survey aims for 411 respondents out of a 1,350-person sampling and the Child CAHPS survey aims for 411 respondents out of a 1,650-person sampling. For Medicaid, the survey would be conducted twice, once for children and once for adults. For CHIP, the survey would be conducted once for children and once for pregnant or postpartum adults, as applicable. We estimate it would take 20 minutes (0.33 hr) at $28.01/hr for a Medicaid or CHIP beneficiary to complete the CAHPS Health Plan Survey. For Medicaid, in aggregate, we estimate a new beneficiary burden of 172,346 hours (629 MCOs, PIHPs and PAHPs × 0.33 hr per survey response × 822 beneficiary responses) at a cost of $4,827,411 (172,346 hr × $28.01/hr). For CHIP for § 457.1240(d), in aggregate, we estimate a new beneficiary burden of 27,263 hours (199 MCOs, PIHPs, and PAHPs × 0.33 hr per survey response × 411 beneficiary responses) at a cost of $763,637 (27,263 hr × $28.01/hr).

Additionally, amendments to § 438.515(a)(1)(i), reporting QRS measures would require States to update existing managed care contracts. We estimate it would take 1 hour at $77.28/hr for a business operations specialist and 30 minutes at $110.82/hr a general operations manager to amend vendor contracts to reflect the new reporting requirements. In aggregate for Medicaid, we estimate a one-time State burden of 944 hours (629 MCOs, PIHPs, and PAHPs × 1.5 hours) at a cost of $83,462 (629 contracts × [(1 hr × $77.28/hr) + (0.5 hr × $110.82/hr)]). As this would be a one-time requirement, we annualize our time and cost estimates to 315 hours and $27,821. The annualization divides our estimates by three (3) years to reflect OMB's likely approval period. We are annualizing the one-time burden estimates since we do not anticipate any additional burden after the 3-year approval period expires. In aggregate for CHIP for § 457.1240(d), we estimate a one-time State burden of 299 hours (199 MCOs, PIHPs, and PAHPs × 1.5 hours) at a cost of $26,405 (199 contracts × [(1 hr × $77.28/hr) + (0.5 hr × $110.82/hr)]). As this would be a one-time requirement, we annualize our time and cost estimates to 99 hours and $8,820. The annualization divides our estimates by three (3) years to reflect OMB's likely approval period. We are annualizing the one-time burden estimates since we do not anticipate any additional burden after the 3-year approval period expires.

Amendments to § 438.515(a)(1)(ii) require States to collect data from Medicare and the State's fee-for-service providers, if all data necessary to issue an annual quality rating cannot be provided by the managed care plans and the data are available for collection by the State without undue burden. We expect a that subset of States would need to collect Medicare data or State Medicaid fee-for-service data to report the mandatory quality measures. We assume that plans have access to Medicare data for their members and have included this burden in the cost of data collection described above. However, we assume Medicaid fee-for-service data would need to be provided and that this requirement would impact 5 States. For a State to collect the fee-for-service data needed for QRS reporting, we expect it would take: 120 hours at $109.36/hr for a computer programmer to program and synthesize the data and 20 hours at $77.28/hr for a business operations specialist to manage the data collection process. In aggregate for Medicaid, we estimate an annual State burden of 700 hours (5 States × [120 hr + 20 hr]) at a cost of $73,344 ([120 hr × $109.36/hr] + [20 hr × $77.28/hr]).

Amendments to §§ 438.515(a)(2) and 457.1240(d) require the QRS measure data to be validated. We estimate it would take 16 hours at $77.28/hr for a business operations specialist to review, analyze and validate measure data. In aggregate for Medicaid, we estimate an annual private sector burden of 10,064 hours (629 MCOs, PIHPs, PAHPs and PCCMs × 16 hr) at a cost of $777,746 (10,064 hr × $77.28/hr). In aggregate for CHIP for § 457.1240(d), we estimate an annual private sector burden of 3,184 hours (199 MCOs, PIHPs and PAHPs × 16 hr) at a cost of $246,060 (3,184 hr × $77.28/hr).

13. ICRs Regarding Requirements for QRS Website Display (§§ 438.520(a) and 457.1240)

The following proposed changes will be submitted to OMB for review under control number 0938–1281 (CMS–10553). The following proposed changes to § 457.1240 will be submitted to OMB for review under control number 0938–1282 (CMS–10554).

The proposed amendments to §§ 438.520(a) and 457.1240(d) would require the State to prominently post an up-to-date display on its website that provides information on available MCOs, PIHPs and PAHPs. The display must: allow users to view tailored information, compare managed care plans, provide information on quality ratings and directs users to resources on how to enroll in a Medicaid or CHIP plan. Additionally, the display must offer consumer live assistance services. After the display is established, the State would need to maintain the display by populating the display with data collected from the mandatory QRS measure set established as proposed in this proposed rule. The proposed rule outlines a phase-in approach to the QRS website display requirements; however, the burden estimate reflects the full implementation of the website. We recognize this may results is an overestimate during the initial phase of the website display but believe the estimate is representative of the longer-term burden associated with the QRS website display requirements.

To develop the initial display, we estimate it would take: 600 hours at $109.36/hr for a computer programmer to create and test code; 600 hours at $78.18/hr for a web developer to create the user interface; 80 hours at $77.28/hr for a business operations specialist to manage the display technical development process; and 450 hours at $98.50/hr for a database administer to establish the data structure and organization. We estimate that 44 States for Medicaid and 32 States for CHIP will develop QRS website displays. For one State, we estimate a burden of 1,730 hours (600 hr + 600 hr + 80 hr + 450 hr) at a cost of $163,031 ([600 hr × $109.36/hr] + [600 hr × $78.18/hr] + [80 hr × $77.28/hr] + [450 hr × $98.50/hr]). In aggregate for Medicaid, we estimate a one-time State burden of 76,120 hours (44 States × 1,730 hr) at a cost of $7,173,364 (44 States × $163,031). In aggregate for CHIP for § 457.1240(d), we estimate a one-time State burden of 55,360 hours (32 States × 1,730 hr) and $5,216,992 (32 States × $163,031). As this would be a one-time requirement, we annualize our time and cost estimates for CHIP to 18,453 hours and $48,330,202. The annualization divides our estimates by three (3) years to reflect OMB's likely approval period. We are annualizing the one-time burden estimates since we do not anticipate any additional burden after the 3-year approval period expires.

To maintain the QRS display annually, we estimate it would take: 384 hours at $109.36/hr for a computer programmer to modify and test code; 256 hours at $78.18/hr to update and maintain the user interface; 120 hours at $77.28/hr for a business operations specialist to manage the daily operations of the display; and 384 hours at $98.50/hr for a database administer to organize data. We estimate that 44

States for Medicaid and 32 States for CHIP will maintain QRS displays annually. For one State, we estimate a burden of 1,144 hours (384 hr + 256 hr + 120 hr + 384 hr) at a cost of $109,106 ([384 hr × $92.92/hr] + [256 hr × $78.18/hr] + [120 hr × $77.28/hr] + [384 hr × $98.50/hr]). In aggregate for Medicaid, we estimate an annual State burden of 50,336 hours (1,144 hours × 44 States) at a cost of $4,800,664 ($109,106 × 44 States). In aggregate for CHIP for § 457.1240(d), we estimate an annual State burden of 103,168 hours (1,144 hr × 32 States) at a cost of $3,491,392 ($109,106 × 32 States).

The amendments to §§ 438.520(a)(2)(iv) and 457.1240(d) would require the display to include quality ratings for mandatory measures which may be stratified by factors determined by CMS. We estimate it would take 24 hours at $109.36/hr for a computer programmer to develop code to stratify plan data. In aggregate for Medicaid (§ 438.520(a)(2)(iv)), we estimate an annual private sector burden of 15,096 hours (629 MCOs, PIHPs and PAHPs × 24 hr) at a cost of $1,650,899 (15,096 hr × $109.36/hr). In aggregate for CHIP for § 457.1240(d), we estimate an annual private sector burden of 4,776 hours (199 MCOs, PIHPs and PAHPs × 24 hr) at a cost of $522,303 (4,776 hr × $109.36/hr).

The amendments to § 438.520(a)(3)(v) would require the QRS website display to include certain managed care plan performance metrics, as specified by CMS including the results of the secret shopper survey specified in § 438.68(f). The secret shopper survey is currently accounted for by OMB under control number 0938–TBD (CMS–10856). Plans would complete the secret shopper independent of the QRS requirements. To meet QRS requirements, States would enter data collected from the secret shopper survey and display the results of the survey on the QRS. Since the burden for the secret shopper survey is accounted for under a separate control number, for the purposes of MAC QRS, we account for the incremental burden associated with meeting the QRS requirements. We estimate it would take 16 hours at $37.96/hr for an office clerk to enter the results from the secret shopper survey into the QRS. In aggregate for Medicaid § 438.520(a)(3)(v), we estimate an annual private sector burden of 10,064 hours (629 MCOs, PIHPs and PAHPs × 16 hr) at a cost of $382,029 (10,064 hr × $37.96/hr). In aggregate for CHIP for § 457.1240(d), we estimate an annual private sector burden of 3,184 hours (199 MCOs, PIHPs and PAHPs × 16 hr) at a cost of $120,865 (3,184 hr × $37.96/hr).

14. ICRs Regarding QRS Annual Reporting Requirements (Part 438 Subpart G and §§ 438.520(a) and 457.1240)

The following proposed changes will be submitted to OMB for review under control number 0938–1281 (CMS–10553). The following proposed changes to § 457.1240 will be submitted to OMB for review under control number 0938–1282 (CMS–10554).

The proposed amendments to §§ 438.535(a) and 457.1240(b) would mandate that on an annual basis, the State submit a Medicaid managed care quality rating system report in a form and manner determined by CMS. We estimate that 44 States for Medicaid and 32 States for CHIP will submit annual MAC QRS reports. We estimate it would take 24 hours at $77.28/hr for a business operations specialist to compile the required documentation to complete this report and attestation that the State is in compliance with QRS standards. In aggregate for Medicaid for § 438.535(a), we estimate an annual State burden of 1,056 hours (44 States × 24 hr) at a cost of $81,608 (1,056 hr × $77.28/hr). In aggregate for CHIP for § 457.1240(b), we estimate an annual State burden of 768 hours (32 States × 24 hr) at a cost of $59,351 (768 hr × $77.28/hr).

The addition of 438 subpart G for Medicaid, and through a proposed amendment at § 457.1240(d) for separate CHIP, would revise the quality rating system requirements and associated burden previously promulgated under § 438.334. Given the QRS requirements have substantively changed, our currently approved burden estimates for making changes to an approved alternative Medicaid managed care QRS are no longer applicable.

Therefore, alleviating this burden would result in an annual Medicaid State reduction of minus 116.7 hours [(10 States × 35 hr)/3 years] and minus $8,361 (10 States × [(5 hr × $37.96/hr) + (30 × $77.28/hr)]/3 years). Similarly, we estimate an annual CHIP State savings of minus 116.7 hours [(10 States × 35 hr)/3 years] and minus $8,361 [(10 States × ((5 hr × $37.96/hr) + (30 × $77.28/hr))/3 years)].

To implement an alternative Medicaid managed care QRS, we estimate it would take: 5 hours at $37.96/hr for an office and administrative support worker, 25 hours at $77.28/hr for a business operations specialist to complete the public comment process, and 5 additional hours at $77.28/hr for a business operations specialist to seek and receive approval from CMS for the change. We assume that a subset of States will opt for an alternative QRS and that the subset will revise their QRS once every three years.

15. ICRs Regarding Program Integrity Requirements Under the Contract (§§ 438.608 and 457.1285)

The following proposed changes to § 438.608 will be submitted to OMB for review under control number 0938–TBD (CMS–10856). At this time the OMB control number has not been determined, but it will be assigned by OMB upon their clearance of our proposed collection of information request. The control number's expiration date will be issued by OMB upon their approval of our final rule's collection of information request. The following proposed changes to § 457.1285 will be submitted to OMB for review under control number 0938–1282 (CMS–10554).

The proposed amendments to §§ 438.608 and 457.1285 would require States to update all MCO, PIHP, and PAHP contracts to require managed care plans to report overpayments to the State within 10 business days of identifying or recovering an overpayment. We estimate that the proposed changes to the timing of overpayment reporting (from timeframes that varied by State to 10 business days for all States) would apply to all MCO, PIHP, and PAHP contracts, including contracts for NEMT, that is, a total of 654 contracts for Medicaid, and 199 contracts for CHIP. We estimate it would take: 2 hours at $77.28/hr for a business operations specialist and 1 hour at $110.82/hr for a general and operations manager to modify State contracts with plans. In aggregate for Medicaid for *§* 438.608, we estimate a one-time State burden of 1,962 hours (654 contracts × 3 hr) at a cost of $173,559 [654 contracts × ((2 hr × $77.28/hr) + (1 hr × $110.82/hr))]. As this would be a one-time requirement, we annualize our time and cost estimates to 654 hours and $57,853.

In aggregate for CHIP for § 457.1285, we estimate a one-time State burden of 597 hours (199 contracts × 3 hr) at a cost of $52,811 [199 contracts × ((2 hr × $77.28/hr) + (1 hr × $110.82/hr))]. As this would be a one-time requirement, we annualize our time and cost estimates to 199 hours and $17,604. The annualization divides our estimates by three (3) years to reflect OMB's likely approval period. We are annualizing the one-time burden estimate since we do not anticipate any additional burden after the 3-year approval period expires.

We also estimate that it would take MCOs, PIHPs, and PAHPs 1 hour at

$109.36/hr for a computer programmer to update systems and processes already used to meet the previous requirement for ''prompt'' reporting. In aggregate for Medicaid for §438.608, we estimate a one-time private sector burden of 654 hours (654 contracts × 1 hr) at a cost of $71,521 (654 hr × $109.36/hr). As this would be a one-time requirement, we annualize our time and cost estimates to 218 hours and $23,840. In aggregate for CHIP for § 457.1285, we estimate a one-time private sector burden of 199 hours (199 contracts × 1 hr) at a cost of $21,763 (199 contracts × $109.36/hr). As this would be a one-time requirement, we annualize our time and cost estimates to 218 hours and $7,947. The annualization divides our estimates by three (3) years to reflect OMB's likely approval period. We are annualizing the one-time burden estimate since we do not anticipate any additional burden after the 3-year approval period expires.

C. Summary of Collection of Information Requirements and Associated Burden Estimates

TABLE 4: Summary of Proposed Medicaid Requirements and Burden

Regulatory Section in Title 42 of the CFR	OMB Control Number (CMS ID No.)	# of Respondents	Total # of Responses	Time per Response (hours)	Total Time (hours)	Labor Rate ($/hr)	Total cost ($)	Frequency	Annualized Time (hours)	Annualized Costs ($)

D. Submission of PRA-Related Comments

We have submitted a copy of this proposed rule to OMB for its review of the rule's information collection requirements. The requirements are not effective until they have been approved by OMB.

To obtain copies of the supporting statement and any related forms for the proposed collections discussed above, please visit the CMS website at *www.cms.hhs.gov/PaperworkReductionActof1995*, or call the Reports Clearance Office at 410–786–1326.

We invite public comments on these potential information collection requirements. If you wish to comment, please submit your comments electronically as specified in the **DATES** and **ADDRESSES** section of this proposed rule and identify the rule (CMS–2439–P), the ICR's CFR citation, and OMB control number.

III. Response to Comments

Because of the large number of public comments we normally receive on **Federal Register** documents, we are not able to acknowledge or respond to them individually. We will consider all comments we receive by the date and time specified in the **DATES** section of this preamble, and, when we proceed with a subsequent document, we will respond to the comments in the preamble to that document.

IV. Regulatory Impact Analysis

A. Statement of Need

This proposed rule would advance CMS' efforts to improve access to care, quality and health outcomes, and better address health equity issues for Medicaid and CHIP managed care enrollees. The proposed rule would specifically address standards for timely access to care and States' monitoring and enforcement efforts, reduce burden for State directed payments and certain quality reporting requirements, add new standards that would apply when States use in lieu of services and settings (ILOSs) to promote effective utilization and identify the scope and nature of ILOS, specify medical loss ratio (MLR) requirements, and establish a quality rating system (QRS) for Medicaid and CHIP managed care plans.

B. Overall Impact

We have examined the impacts of this rule as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review (January 18, 2011), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96–354), section 1102(b) of the Act, section 202 of the Unfunded Mandates Reform Act of 1995 (March 22, 1995; Pub. L. 104–4), Executive Order 13132 on Federalism (August 4, 1999), and the Congressional Review Act (5 U.S.C. 804(2)).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Section 3(f) of Executive Order 12866, as amended by Executive Order 14094, defines a ''significant regulatory action'' as an action that is likely to result in a rule: (1) having an annual effect on the economy of $200 million or more in any 1 year, or adversely and materially affecting a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local or tribal governments or communities; (2) creating a serious inconsistency or otherwise interfering with an action taken or planned by another agency; (3) materially altering the budgetary impacts of entitlement grants, user fees, or loan programs or the rights and obligations of recipients thereof; or (4) raising legal or policy issues for which centralized review would meaningfully further the President's priorities or the principles set forth in the Executive Order.

A regulatory impact analysis (RIA) must be prepared for major rules. Based on our estimates, OMB's Office of Information and Regulatory Affairs has determined this rulemaking is ''significant'' under Section 3(f)(1) as measured by the $200 million threshold, and hence also a major rule under Subtitle E of the Small Business Regulatory Enforcement Fairness Act of 1996 (also known as the Congressional Review Act). Accordingly, we have prepared a Regulatory Impact Analysis that to the best of our ability presents the costs and benefits of the rulemaking. Therefore, OMB has reviewed these proposed regulations, and the Departments have provided the following assessment of their impact.

C. Detailed Economic Analysis

We have examined the proposed provisions in this rule and determined that most of the proposed revisions to part 438 and part 457 outlined in this proposed rule are expected to minimally or moderately increase administrative burden and associated costs as we note in the COI (see section II. of this proposed rule). Aside from our analysis on burden in the COI, we believe that certain provisions in this proposed rule should specifically be analyzed in this regulatory impact analysis as potentially having a significant economic impact. Those proposed provisions include State directed payments, MLR reporting standards, and ILOS due to the impact these proposed provisions could have on the associated and corresponding managed care payments.

1. State Directed Payments (SDPs) (§§ 438.6, 438.7)

Neither the May 6, 2016 final rule (81 FR 27830) nor the November 13, 2020 final rule (85 FR 72754) included a regulatory impact analysis that discussed the financial and economic effects of SDPs. At the time the 2016 final rule was published and adopted regulations explicitly governing State directed payments, we believed that States would use the SDPs in three broad ways to: (1) transition previous pass-through payments into formal arrangements as SDPs; (2) add or expand provider payment requirements to promote access to care; and (3) implement quality or value payment models that include Medicaid managed care plans. However, since § 438.6(c) was issued in the 2016 final rule, States have requested approval for an increasing number of SDPs. The scope, size, and complexity of the SDPs being submitted by States for approval has also grown steadily. In calendar year 2017, CMS received 36 preprints for our review and approval from 15 States; in calendar year 2021, CMS received 223 preprints from 39 States. For calendar year 2022, CMS received 309 preprints from States. As of March 2023, CMS has reviewed more than 1,100 SDP proposals and approved more than 1,000 proposals since the 2016 final rule was issued. To accommodate these requests from States, CMS applied discretion in interpreting and applying § 438.6(c) in reviewing and approving SDPs. The 2016 final rule required criteria to determine if provider payment rates are ''reasonable, appropriate, and attainable'' and that SDPs must relate to utilization, quality, or other goals described in § 438.6(c). CMS has interpreted these sections of the regulation broadly, and therefore, the amount of SDP payments has grown significantly over time.

SDPs also represent a substantial amount of State and Federal spending. The Medicaid and CHIP Payment and Access Commission (MACPAC) reported that CMS approved SDPs in 37

States, with spending exceeding more than $25 billion.[150] The U.S. Government Accountability Office (GAO) also reported that at least $20 billion has been approved by CMS for preprints with payments to be made on or after July 1, 2021, across 79 proposals.[151]

We have tracked SDP spending trends as well. Using the total spending captured for each SDP through the end of fiscal year 2022, we calculate that SDP payments in 2022 were at least $52.2 billion. there may be some SDPs for which CMS does not have projected or actual spending data. In addition, our data reporting and collection is not standardized, and in some cases may be incomplete, so spending data for some SDP approvals may be less accurate. CMS began collecting total dollar estimates for SDPs incorporated through adjustments to base rates as well as those incorporated through separate payment terms with the revised preprint form published in January 2021; States were required to use the revised preprint form for rating periods beginning on or after July 1, 2021. We estimate that SDP spending comprises approximately 11.3 percent of total managed care payments in 2022 ($461.6 billion) and 6.6 percent of total Medicaid benefit expenditures ($794.5 billion). SDP spending varies widely across States. Thirty-nine (39) States reported the use of one or more SDPs in 2022. In these States, the percentage of Medicaid managed care spending paid through SDPs ranged from 1 percent to 58 percent, with a median of 8 percent; as a share of total Medicaid spending, SDPs ranged from 0 percent to 33 percent, with a median of 3 percent.

From 2016 through 2022, SDPs were a significant factor in Medicaid expenditure growth. Total benefit spending increased at an average annual rate of 6.3 percent per year from 2016 through 2022; excluding SDPs, benefit spending grew at an average rate of 5.1 percent. Managed care payments grew 9.2 percent on average over 2016 to 2022, but excluding SDPs, the average growth rate was 7.0 percent. While some SDP spending may have been included in managed care payments prior to 2016 (either as a pass-through payment or some other form of payment), by 2022 we expect that much of this is new spending.

In 2022, we estimate that about 75 percent of SDP spending went to hospitals for inpatient and outpatient services, and another 5 percent went to academic medical centers. The remaining 20 percent of SDP spending went to nursing facilities, primary care physicians, specialty physicians, HCBS and personal care service providers, behavioral health service providers, and dentists.

The data available do not allow us to determine how much of this baseline SDP spending was incorporated into managed care expenditures prior to the 2016 final rule, or reflected historical transfers from prior payment arrangements. For example, States transitioned pass-through payments to SDPs or transferred spending from fee-for-service payments (for example, supplemental payments) to SDPs. Some States indicate that the SDP has had no net impact on rate development while other States have reported all estimated spending for the services and provider class affected by the SDP. Based on our experience working with States, we believe much of the earlier SDP spending was largely existing Medicaid spending that was transitioned to managed care SDPs. However, in more recent years, we believe that most SDP spending reflects new expenditures. For context, States reported $6.7 billion in pass-through payments after the 2016 final rule.[152] States also have reported only a small decrease in fee-for-service supplemental payments since 2016 (from $28.7 billion in 2016 to $27.5 billion in 2022).[153] SDP spending in 2022 significantly exceeds the originally reported pass-through payments and the changes in fee-for-service supplemental payments.

The proposals in this rule are intended to ensure the following policy goals: (1) Medicaid managed care enrollees receive access to high-quality care under SDPs; (2) SDPs are appropriately linked to Medicaid quality goals and objectives for the providers participating in the SDPs; and (3) CMS has the appropriate fiscal and program integrity guardrails in place to strengthen the accountability and feasibility of SDPs.

The proposal expected to have the most significant economic impact is setting a payment ceiling at 100 percent of the ACR for SDPs for inpatient hospital services, outpatient hospital services, nursing facility services, and qualified practitioner services at academic medical centers. As discussed in section I.B.2.f. of this proposed rule, we have used the ACR as a benchmark for total payment levels for all SDP reviews since 2018 and have not knowingly approved an SDP that includes payment rates that are projected to exceed the ACR. Based on the available data, we estimate that $11.6 billion of SDPs in 2022 reflect payments at or near the ACR. It is difficult to determine the amounts of these payments due to data quality and inconsistent reporting of these details. For example, if payment data are aggregated across multiple providers or provider types, it can be difficult to determine if providers are being paid at different levels. Additionally, many SDPs report payment rates relative to Medicare instead of ACR; for some SDPs, the payment rates relative to Medicare suggest effective payment rates would be near the ACR. These would include SDPs with effective payment rates of 150 percent or more of the Medicare rate (with several over 200 percent and as high as 450 percent).

Under current policy, we project that SDP spending would increase from $52 billion in 2022 (or 11.3 percent of managed care spending) to about $91 billion by 2028 (or 15 percent of managed care spending).

TABLE 6—PROJECTED MEDICAID MANAGED CARE AND STATE DIRECTED SPENDING UNDER CURRENT POLICY, FY 2022–2028—Continued

[In billions of dollars]

	2022	2023	2024	2025	2026	2027	2028
SDP spending	$52.2	$66.1	$67.5	$73.1	$79.2	$85.7	$91.2
SDP as share of managed care	11.3%	13.2%	14.1%	14.5%	14.8%	15.0%	15.0%

Estimating the impact of the proposed SDP provisions is challenging for several reasons. First, as noted previously, the projected and actual spending data that we collect from States is not standardized, and in some cases aggregated across providers. It is also often difficult to determine how payment rates compare, especially when States use different benchmarks for payment (for example, comparing SDPs using Medicare payment rates to those using ACR payment rates). In addition, there is frequently limited information on ACR payment rates. It is difficult to determine how the ACR may be calculated and how the calculation may vary across different States and providers. Furthermore, it may be difficult to determine how many more providers are not paid under SDPs and how much they could be paid if SDPs were expanded to them.

Second, it is difficult to determine how much providers are paid in managed care programs without SDPs. These data appear to be less frequently reported, and we have virtually no information about provider payments when the State does not use an SDP. This information is important when estimating the impact of changes in SDPs, because the initial payment rate matters as much as the final rate. In some cases, the initial payment rates for existing SDPs are significantly low (for example, there are several SDPs where the reported initial payment rates are 10 to 20 percent of ACR or commercial rates, 25 to 30 percent of Medicare rates, or 10 to 35 percent of Medicaid State plan rates). In other cases, the initial payment rates are relatively higher. Thus, it may be difficult to determine how large new SDPs would be.

Third, there is significant variation in the use of SDPs across States. States have significant discretion in developing SDPs (including which providers receive SDPs and the amounts of the payments), and it is challenging to predict how States would respond to changes in policy. Some States may add more SDPs or expand spending in existing SDPs. Moreover, as many SDPs are funded through sources other than State general revenues (such as intergovernmental transfers or provider taxes), decisions about SDPs may be dependent on the availability of these funding sources.

For these reasons, we believe it is prudent to provide a range of estimated impacts for this section of the proposed rule. The following estimates reflect a reasonable expectation of the impacts of this proposed rule on Medicaid expenditures, but do not include all possible outcomes.

We estimate that the low end of the range for the proposed changes would have zero impact on Medicaid expenditures. That is, we assume that the new policies in the rule would have no bearing on States' future decisions on SDPs. Future growth in Medicaid spending on SDPs would be the same as currently projected. This estimate also assumes that there would be no reduction in expenditures from limiting effective payment rates to ACR rates.

We believe this is a reasonable estimate of the low end of this range. SDPs are already growing rapidly and several States already have SDPs with effective payment rates at or near the ACR. In addition, SDP spending is projected to continue to grow as a share of Medicaid managed care spending over the next several years, which suggests that other States may add SDPs or increase the payment rates within the SDPs. Thus, one possible outcome is that States would use SDPs the same way under current policy and under the proposed rule.

The estimate of the upper end of the range is based on the expectation that the provisions of the proposed rule would prompt States to increase SDP spending. We believe that by setting the payment limit at the ACR rates for certain services, States may increase the size and scope of future SDPs to approach this limit. In particular, there are many SDPs that currently have effective reimbursement rates at or around 100 percent of Medicare reimbursement rates, and others with rates below 100 percent of ACR, and that States may potentially increase payments associated with these SDPs.

For the high scenario, we assume that Medicaid SDP spending would increase at a faster rate than projected under current law. Under current law, Medicaid SDP spending is projected to reach 15 percent of managed care spending by 2027; we assume in the high scenario that SDP spending would reach about 17.5 percent of managed care spending in 2027. Under this scenario, SDP spending would increase by approximately 20 percent by 2027 (or about $16 billion). From 2024 through 2026, SDP spending would increase somewhat faster than assumed under current law to reach those levels. This increase would include additional spending from current SDPs increasing payment rates to the ACR, and may also include new or expanded SDPs. We would also expect that this would occur mostly among SDPs for hospitals and academic medical centers, as those are currently the providers that receive the majority of SDPs. We have not estimated a breakdown of impacts by provider type or by State in this analysis. The estimated impacts are provided in Table 7.

TABLE 7—PROJECTED MEDICAID STATE DIRECTED PAYMENT SPENDING UNDER PROPOSED RULE, HIGH SCENARIO, FY 2024–2028

[In billions of dollars]

	2024	2025	2026	2027	2028
Current law	$67.5	$73.1	$79.2	$85.7	$91.2
Proposed rule	72.2	81.7	91.8	101.9	108.5
Impact	4.7	8.6	12.6	16.2	17.3

In Table 8, we provide estimates of the impacts on the Federal government and on States.

TABLE 8—PROJECTED MEDICAID STATE DIRECTED PAYMENT SPENDING UNDER PROPOSED RULE BY PAYER, HIGH SCENARIO, FY 2024–2028

[in billions of dollars]

	2024	2025	2026	2027	2028
Total impact	$4.7	$8.6	$12.6	$16.2	$17.3
Federal government	3.1	5.6	8.2	10.5	11.1
States	1.6	3.0	4.4	5.7	6.2

We project that the Federal government would pay an additional $11.1 billion in 2028, with the States paying an additional $6.2 billion in the high scenario. We would note that for the States, they would have discretion of whether or not to increase SDP spending (through existing or new SDPs), and that the source of the non-Federal share may vary. Many States already use sources other than State general revenues (such as IGTs and provider taxes, as noted previously), and therefore the direct impact to State expenditures may be less than projected.

As noted previously, there is a wide range of possible outcomes of this proposed rule on SDP expenditures. The actual changes in spending may be difficult to determine, as there is uncertainty in the future amount of spending through SDPs in the baseline. The specific impacts could also vary over time, by State, and by provider type. We believe actual impacts can reasonably be expected to fall within the range shown here.

There are additional proposals in this rule that may also slightly increase SDP spending. This includes allowing States to:

(1) Direct expenditures for non-network providers;

(2) Set the amount and frequency for VBP SDPs;

(3) Recoup unspent funds for VBP SDPs; and

(4) Exempting minimum fee schedules at the Medicare rate from prior approval.

We do not have quantitative data to analyze the impact of these provisions. However, based on a qualitative analysis of our work with States, we believe these regulatory changes would have much more moderate effects on the economic impact in comparison to the ceiling on payment levels described above. Allowing States to direct expenditures for non-network providers will likely increase the number of State contract provisions; however, we anticipate that most States will want to require minimum fee schedules tied to State plan rates, which will likely result in very small changes from existing rate development practices. Regarding the proposal to remove the existing regulatory requirements for setting the amount and frequency for VBP SDPs and recouping unspent funds for VBP SDPs, we anticipate this will change the types of SDPs States seek, encouraging them to pursue VBP models, that would replace existing VBPs, though a few States may pursue new models. The proposed regulatory requirement to exempt minimum fee schedules tied to Medicare rates will likely cause some increase in spending as more States may take up this option, but again, we do not anticipate this to have as significant impact on rate development.

There are a few proposals in this rule that are likely to exert some minor downward pressure on the rate of growth in SDP spending, such as the enhanced evaluation requirements, requirements related to financing of the non-Federal share, and eliminating States' ability to use reconciliation processes. We expect that these provisions would not have any significant effect on Medicaid expenditures.

Aside from spending, we believe many of the proposals in section I.B.2. of this proposed rule would have significant qualitative impacts on access, quality, and transparency. One example is our proposal to permit the use of SDPs for non-network providers (section I.B.2.d. of this proposed rule). One of the most frequently used non-network provider types is family planning. Permitting States to use SDPs for family planning providers could greatly improve access and ease access for enrollees consistent with the statutory intent of section 1902(a)(23)(B) of the Act. Our proposal to permit States to set the frequency and amount of SDP payments (section I.B.2.h. of this proposed rule) should remove unnecessary barriers for States implementing VBP SDPs. This should have direct impacts on quality of care as States will be more inclined to use VBP SDPs. It will allow the payments to be more closely linked to the services provided in a timely fashion, and it will allow States to establish strong parameters and operational details that define when and how providers will receive payment to support robust provider participation. Lastly, our proposal (section I.B.2.b. of this proposed rule) to require specific information in managed care plan contracts would improve accountability to ensure that the additional funding included in the rate certification is linked to a specific service or benefit provided to a specific enrollee covered under the contract.

Taken together, we believe our SDP related proposals in this rule would enable us to ensure that SDPs would be used to meet State and Federal policy goals to improve access and quality, used for the provision of services to enrollees under the contract, and improve fiscal safeguards and transparency. The proposals in this rule would provide a more robust set of regulations for SDPs and are informed by six years of experience reviewing and approving SDP preprints. We believe the resulting regulations would enable more efficient and effective use of Medicaid managed care funds.

2. Medical Loss Ratio (MLR) Standards (§§ 438.8, 438.74, 457.1201, 457.1203, 457.1285)

We propose to amend §§ 438.3(i), 438.8(e)(2), 457.1201, and 457.1203 to specify that only those provider incentives and bonuses that are tied to clearly defined, objectively measurable, and well-documented clinical or quality improvement standards that apply to providers may be included in incurred claims for MLR reporting. In States that require managed care plans to pay remittances back to the State for not meeting a minimum MLR, and where remittance calculations are based on the MLR standards in § 438.8, the remittance amounts may be affected. If managed care plans currently include

(in reported incurred claims) payments to providers that significantly reduce or eliminate remittances while providing no value to consumers, the proposed clarification would result in transfers from such managed care plans to States in the form of higher remittances or lower capitation rates. Although we do not know how many managed care plans currently engage in such reporting practices or the amounts improperly included in MLR calculations, using information from a prior CCIIO RIA analysis,[154] we estimate the impact of the proposed clarification by assuming that provider incentive and bonus payments of 1.06 percent or more paid claims (the top 5 percent of such observations) may represent incentives based on MLR or similar metrics. Based on this assumption and the Medicaid MLR data for 2018, *the proposed clarification would increase remittances paid by managed care plans to States by approximately $12 million per year* (total computable).

We propose to amend §§ 438.8(e)(3) and 457.1203(c) to specify that only expenditures directly related to activities that improve health care quality may be included in QIA expenses for MLR reporting. In States that require managed care plans to pay remittances back to the State for not meeting a minimum MLR, and where the remittance calculations are based on the MLR standards in § 438.8, the remittance amounts may be affected. This proposed change would result in transfers from managed care plans that currently include indirect expenses in QIA to States in the form of higher remittances or lower capitation rates. Although we do not know how many managed care plans include indirect expenses in QIA, using information from a previous CCIIO RIA analysis,[155] we estimate the impact of the proposed change by assuming that indirect expenses inflate QIA by 41.5 percent (the midpoint of the 33 percent to 50 percent range observed during CCIIO MLR examinations) for half of the issuers that report QIA expenses (based on the frequency of QIA-related findings in CCIIO MLR examinations). Based on these assumptions and the Medicaid MLR data for 2018, *the proposed clarification would increase remittances paid by managed care plans to States by approximately $49.8 million per year.*

We propose to amend §§ 438.608(a)(2) and (d)(3), and 457.1285 to require States' contracts with managed care plans to include a provision requiring managed care plans to report any overpayment (whether identified or recovered) to the State. In States that require managed care plans to pay remittances back to the State for not meeting a minimum MLR, and where the remittance calculations are based on the MLR standards in § 438.8, the remittance amounts may be affected. Given that States do not provide this level of payment reporting to CMS, we are unable to quantify the benefits and costs of this proposed change; however, this proposed change may result in transfers from managed care plans to States in the form of higher remittances or lower capitation rates.

We propose to amend 438.8(k) to require managed care plans to report SDPs to States as a line item in their MLR reports. In States that require managed care plans to pay remittances back to the State for not meeting a minimum MLR, and the remittance calculation arrangements are based on § 438.8, the remittance amounts may be affected. Given that CMS does not have data on actual revenue and expenditure amounts for SDPs that would allow for modeling the effect of the line item reporting on remittances, we are unable to quantify the benefits and costs of this proposed change. We expect that this proposed change may result in transfers from States to managed care plans in the form of lower remittances or higher capitation rates.

3. In Lieu of Services and Settings (ILOSs) (§§ 438.2, 438.3, 438.16, 457.1201, 457.120)

In the May 6, 2016 final rule (81 FR 27830), the regulatory impact analysis addressed the financial and economic effects of allowing FFP for capitation payments made for enrollees that received inpatient psychiatric services during short-term stays in an institution for mental disease (IMD) as an ILOS; however, it did not address other potential ILOS (see 81 FR 27840 and 27841 for further details). When we analyzed the May 6, 2016 final rule for the regulatory impact analysis, we concluded that the financial and economic effects of all other ILOSs would be offset by a decrease in expenditures for the State plan-covered services and settings for which ILOSs are a medically appropriate and cost effective substitute. The use of ILOSs is a longstanding policy in managed care given the flexibility that managed care plans have historically had in furnishing care in alternate settings and services in a risk-based delivery system, if cost effective, on an optional basis and to the extent that the managed care plan and the enrollee agree that such setting or service would provide medically appropriate care. States and managed care plans historically have utilized ILOSs that are immediate substitutes for covered services and settings under the State plan, such as a Sobering Center as a substitute for an emergency department visit. More recently, a few States and managed care plans have begun utilizing ILOSs as longer term substitutes for covered services and settings under the State plan. On January 7, 2021, CMS published a State Health Official (SHO) letter (SHO# 21–001) [156] that described opportunities under Medicaid and CHIP to better address social determinants of health (SDOH). Additionally, on January 4, 2023, CMS published a State Medicaid Director (SMD) letter (SMD# 23–001) [157] that outlined additional guidance for ILOSs in Medicaid managed care. Since CMS published this guidance, States have been working to implement changes in their Medicaid managed care programs to meet the HRSNs of Medicaid beneficiaries more effectively, including partnering with community-based organizations that routinely address HRSNs.

We believe that expanding the definition of what is allowable as ILOSs in Medicaid managed care would likely lead to an increase in Medicaid expenditures. Many of these services intended to address HRSNs may not have been previously eligible for coverage under Medicaid as an ILOS. While guidance requires these to be cost effective, the proposed rule does not require cost effectiveness to be ''budget neutral.'' Moreover, for ILOSs that are intended to be in lieu of some future service, the cost effectiveness may need to be measured over years.

Data on ILOS is extremely limited, and CMS does not currently collect any data (outside of ILOS spending for IMDs as part of the managed care rate contract). Moreover, there is limited information on the additional ILOSs that States may use. Therefore, we are providing a range of potential impacts for this section as well.

At the low end of the range, we project that there would be no impact on Medicaid expenditures. In these cases, we would assume (1) the use of new ILOSs are relatively lower; and (2) additional ILOS spending is offset by savings from other Medicaid services.

[154] 87 FR 703.

[155] 87 FR 703.

[156] Opportunities in Medicaid and CHIP to Address Social Determinants of Health, *https://www.medicaid.gov/federal-policy-guidance/downloads/sho21001.pdf.*

[157] Additional Guide on Use of In Lieu of Services and Settings in Medicaid Managed Care, *https://www.medicaid.gov/federal-policy-guidance/downloads/smd23001.pdf.*

At the high end of the range, we project that there would be some increase in Medicaid spending. We make the following assumptions for the high scenario: (1) half of States would use new ILOSs; (2) States would increase use of ILOSs to 2 percent of total Medicaid managed care spending; and (3) additional ILOSs would offset 50 percent of new spending. Table 9 shows the impacts in the high scenario.

TABLE 9—PROJECTED MEDICAID ILOS SPENDING UNDER PROPOSED RULE BY PAYER, HIGH SCENARIO, FY 2024–2028

[In billions of dollars]

	2024	2025	2026	2027	2028
Total impact	$2.4	$2.5	$2.7	$2.9	$3.0
Federal government	1.6	1.6	1.7	1.9	2.0
States	0.8	0.9	1.0	1.0	1.0

We also believe it is important for CMS to begin to capture data on ILOS expenditures as a portion of total capitation payments that are eligible for FFP to ensure appropriate fiscal oversight, as well as detail on the managed care plans' ILOS costs. Therefore, we proposed reporting related to the final ILOS cost percentage and actual MCO, PIHP and PAHP ILOS costs in §§ 438.16(c) and 457.1201(c). This will also aid us in future regulatory impact analyses.

4. Regulatory Review Cost Estimation

If regulations impose administrative costs on private entities, such as the time needed to read and interpret this proposed rule, we should estimate the cost associated with regulatory review. Due to the uncertainty involved with accurately quantifying the number of entities that will review the rule, we assume that the total number of unique commenters on the 2016 final rule will be the number of reviewers of this proposed rule. We received 879 unique comments on the 2016 final rule. We acknowledge that this assumption may understate or overstate the costs of reviewing this rule. It is possible that not all commenters reviewed the 2016 rule in detail, and it is also possible that some reviewers chose not to comment on the proposed rule. For these reasons, we thought that the number of past commenters would be a fair estimate of the number of reviewers of this rule. We welcome any comments on the approach in estimating the number of entities which will review this proposed rule.

We also recognize that different types of entities are in many cases affected by mutually exclusive sections of this proposed rule, and therefore, for the purposes of our estimate, we assume that each reviewer reads approximately 50 percent of the rule. We seek comments on this assumption.

Using the wage information from the BLS for medical and health service managers (Code 11–9111), we estimate that the cost of reviewing this rule is $115.22 per hour, including overhead and fringe benefits *https://www.bls.gov/oes/current/oes_nat.htm.* Assuming an average reading speed, we estimate that it would take approximately 20 hours for the staff to review half of this proposed rule. For each entity that reviews the rule, the estimated cost is $2,304. Therefore, we estimate that the total cost of reviewing this regulation is $2 million.

D. Alternatives Considered

1. State Directed Payments (SDPs)

As discussed in section I.B.2.f. of this proposed rule on provider payment limits, we are considering alternatives to the ACR as a total payment rate limit for inpatient hospital services, outpatient hospital services, nursing facility services, and qualified practitioner services at an academic medical center for each SDP. The alternatives we are considering include the Medicare rate, some level between Medicare and the ACR, or a Medicare equivalent of the ACR. We are also considering an alternative that would establish a total payment rate limit for any SDPs described in paragraphs (c)(1)(i) and (ii) that are for any of these four services, at the ACR, while limiting the total payment rate for any SDPs described in paragraph § 438.6(c)(1)(iii)(C) through (E), at the Medicare rate. We are also considering and seek public comment on establishing a total payment rate limit for all services for all SDP arrangements described in § 438.6(c)(1)(i) and (ii), and 438.6(c)(1)(iii)(C) through (E) at the Medicare rate. For each of these alternatives, we acknowledge that some States currently have SDPs that have total payment rates up to the ACR. Therefore, these alternative proposals could be more restrictive, and States could need to reduce funding from current levels, which could have a negative impact on access to care and health equity initiatives.

2. Medical Loss Ratio (MLR) Standards

For all MLR-related proposed changes, except those relating to SDP reporting, the only alternative considered was no change. We considered alternatives to requiring actual SDP amounts as part of MLR reports, including creating a new separate reporting process for SDPs or modifying existing reporting processes to include SDPs. We determined that creating a new separate reporting process specific to SDPs would impose significant burden on States as it would require State staff to learn a new process and complete an additional set of documents for SDP reporting. We considered modifying other State managed care reporting processes, for example, MCPAR, to include SDPs but, unlike MLR reporting, those processes were not specific to reporting financial data. We propose integrating SDP reporting in the MLR as the current MLR process requires reporting of financial data from managed care plans, and in turn, States provide a summary of these reports to CMS in the form of the annual MLR summary report. The integration of managed care plan and State SDP reporting using current MLR processes will encourage States to add the monitoring and oversight of SDPs as a part of a State's established MLR reporting process.

3. In Lieu of Services and Settings (ILOSs) (§§ 438.2, 438.3, 438.16, 457.1201, 457.120)

One alternative we considered was leaving the 2016 final rule as it is today; however, since the rule was finalized in 2016, we continue to hear of increased State and plan utilization and innovation in the use of ILOSs, and we do not believe the current regulation ensures appropriate enrollee and fiscal protections. As a result, we propose many additional safeguards in this rule. The ILOS proposals seek to ensure appropriate safeguards while also specifying that States and managed care plans can consider both short term and

longer term substitutes for State plan-covered services and settings. Additionally, we considered including enrollee protections and ILOS transparency without the 5 percent limit on the ILOS cost percentage and the ILOS evaluation, when applicable. However, we have concerns regarding the potential unrestrained growth of ILOS expenditures.

E. Accounting Statement and Table

As required by OMB Circular A–4 (available at *https://www.whitehouse.gov/wp-content/uploads/legacy_drupal_files/omb/circulars/A4/a-4.pdf*), we have prepared an accounting statement in Table 10 showing the classification of the impact associated with the provisions of this proposed rule. In the case *of* SDPs, we categorize these *as transfers* from the Federal government *and* States to health care providers. For ILOSs, we categorize these as transfers from the Federal government and States to beneficiaries in the form of additional services. Finally, for MLR requirements, we categorize these as transfers from managed care organizations to the Federal government and States.

This provides our best estimates of the transfer payments outlined in the ''Section C. Detailed Economic Analysis'' above. We detail our estimates of the low and high end of the ranges in this section, and the primary estimate is the average of the low and high scenario impacts. This reflects a wide range of possible outcomes, but given the uncertainty *in* the ways and degrees to which States may use the SDPs and ILOSs, we believe that *this* is a reasonable estimate of the potential impacts under this proposed rule. For the MLR provisions, we have not provided a range given the relatively small size of the estimated impact.

These impacts are discounted at seven percent and three percent, respectively, as reflected in Table 10.

TABLE 10—ACCOUNTING STATEMENT

[In millions of 2024 dollars]

Benefits						
Non-Quantified	This proposed rule would support many benefits to the Medicaid program, including to align State and Federal efforts to improve timely access to care for Medicaid managed care enrollees, enhance and improve quality-based provider payments to better support care delivery, and support better quality improvement throughout the Medicaid managed care program.					
Transfers						
Annual monetized transfers	Primary estimate	Low estimate	High estimate	Units		
				Year dollars	Discount rate (percent)	Period covered
From Federal Government to Providers	3,384	0	6,767	2024	7	2024–2028
	3,449	0	6,899	2024	3	2024–2028
From States to Providers	1,846	0	3,692	2024	7	2024–2028
	1,882	0	3,764	2024	3	2024–2028
From Federal Government to Beneficiaries	809	0	1,617	2024	7	2024–2028
	809	0	1,619	2024	3	2024–2028
From States to Beneficiaries	428	0	856	2024	7	2024–2028

	62	62	62	2024	3	2024–2028
From Managed Care Plans to States	34	34	34	2024	7	2024–2028
	34	34	34	2024	3	2024–2028

F. Regulatory Flexibility Act (RFA)

Effects on MCOs, PIHPs or PAHPs (referred to as ''managed care plans'') will not have a significant economic impact. As outlined in section II.B. of this proposed rule, we utilized data submitted by States for enrollment in Medicaid managed care plans for CY 2020. The enrollment data reflected 58,521,930 enrollees in MCOs, 37,692,501 enrollees in PIHPs or PAHPs, and 6,089,423 enrollees in PCCMs, for a total of 67,836,622 Medicaid managed care enrollees.[158] This includes duplicative counts when enrollees are enrolled in multiple managed care plans concurrently. This data also showed 43 States that contract with 467 MCOs, 11 States that contract with 162 PIHPs or PAHPs, 19 States that contract with 21 non-emergency transportation PAHPs, and 13 States with 26 PCCM or PCCM entities. For CHIP, we utilized State submitted data for enrollment in managed care plans for CY 2017. The enrollment data reflected 4,580,786 Medicaid expansion and 2,593,827 separate CHIP managed care enrollees.[159] These data also showed that 32 States use managed care entities for CHIP enrollment contracting with 199 managed care entities.[160]

[158] Medicaid Managed Care Enrollment and Program Characteristics (2020).

[159] Centers for Medicare and Medicaid Services, Statistical Enrollment Data System (2017), Quarterly Enrollment Data Form 21E: Number of Children Served in Separate CHIP Program/ Quarterly Enrollment Data Form 64.21E: Number of Children Served in CHIP Medicaid Expansion Program/Quarterly Enrollment Data Form 21PW: Number of Pregnant Women Served, accessed December 5, 2022.

[160] Results of managed care survey of States completed by Centers for Medicare and Medicaid Services, Center for Medicaid and CHIP Services, Children and Adults Health Programs Group, Division of State Coverage Programs, 2017.

The RFA requires agencies to analyze options for regulatory relief of small entities, if a rule has a significant impact on a substantial number of small entities. For purposes of the RFA, we estimate that some managed care plans may be small entities as that term is used in the RFA. We believe that only a few managed care plans may qualify as small entities. Specifically, we believe that approximately 14–25 managed care plans may be small entities. We believe that the remaining managed care plans have average annual receipts from Medicaid and CHIP contracts and other business interests in excess of $41.5 million; therefore, we do not believe that this proposed rule will have a significant economic impact on a substantial number of small businesses.

For purposes of the RFA, approximately 0.04 percent of Medicaid managed care plans may be considered small businesses according to the Small Business Administration's size standards with total revenues of $8 million to $41.5 million in any 1 year. Individuals and States are not included in the definition of a small entity. The cost impact on Medicaid managed care plans on a per entity basis is approximately $54,500. This proposed rule will not have a significant impact measured change in revenue of 3 to 5 percent on a substantial number of small businesses or other small entities.

The proposed rule would specifically address standards for (1) timely access to care and States' monitoring and enforcement efforts; (2) reduce burden for State directed payments (SDPs) and certain quality reporting requirements; (3) add new standards that would apply when States use in lieu of services and settings (ILOSs) to promote effective utilization and identify the scope and nature of ILOS; (4) specify medical loss ratio (MLR) requirements; and (5) establish a quality rating system (QRS) for Medicaid and CHIP managed care plans. As outlined, these efforts do not impact small entities.

As its measure of significant economic impact on a substantial number of small entities, HHS uses a change in revenue of more than 3 to 5 percent. We do not believe that this threshold will be reached by the requirements in this proposed rule. Therefore, the Secretary has certified that this proposed rule will not have a significant economic impact on a substantial number of small entities.

In addition, section 1102(b) of the Act requires us to prepare a regulatory impact analysis if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 603 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a metropolitan statistical area and has fewer than 100 beds. We do not anticipate that the provisions in this proposed rule will have a substantial economic impact on most hospitals, including small rural hospitals. Provisions include some proposed new standards for State governments and managed care plans but no direct requirements on providers, including hospitals. The impact on individual hospitals will vary according to each hospital's current and future contractual relationships with Medicaid managed care plans, but any additional burden on small rural hospitals should be negligible. We invite comment on our proposed analysis of the impact on small rural hospitals regarding the provisions of this proposed rule. We have determined that we are not preparing analysis for either the RFA or section 1102(b) of the Act because we have determined, and the Secretary certifies, that this proposed rule will not have a significant economic impact on a substantial number of small entities or a significant impact on the operations of a substantial number of small rural hospitals in comparison to total revenues of these entities.

Section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA) also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of $100 million in 1995 dollars, updated annually for inflation. In 2023, that is approximately $177 million. This proposed rule does not contain any Federal mandate costs resulting from (A) imposing enforceable duties on State, local, or tribal governments, or on the private sector, or (B) increasing the stringency of conditions in, or decreasing the funding of, State, local, or tribal governments under entitlement programs. We have determined that this proposed rule does not impose any mandates on State, local, or tribal governments, or the private sector that will result in an annual expenditure of $177 million or more.

Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a proposed rule that imposes substantial direct requirement costs on State and local governments, preempts State law, or otherwise has Federalism implications. We believe this proposed regulation gives States appropriate flexibility regarding managed care standards (for example, setting network adequacy standards, setting credentialing standards, EQR activities), while also aligning Medicaid and CHIP managed care standards with those for plans in the Marketplace and MA to better streamline the beneficiary experience and to reduce administrative and operational burdens on States and health plans across publicly-funded programs and the commercial market. We have determined that this proposed rule would not significantly affect States' rights, roles, and responsibilities.

G. Unfunded Mandates Reform Act (UMRA)

Section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA) also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of $100 million in 1995 dollars, updated annually for inflation. In 2023, that threshold is approximately $177 million. This proposed rule would not impose a mandate that will result in the expenditure by State, local, and Tribal Governments, in the aggregate, or by the private sector, of more than $177 million in any one year.

H. Federalism

Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a proposed rule that imposes substantial direct requirement costs on State and local governments, preempts State law, or otherwise has Federalism implications. This proposed rule will not have a substantial direct effect on State or local governments, preempt States, or otherwise have a Federalism implication.

Chiquita Brooks-LaSure, Administrator of the Centers for Medicare & Medicaid Services, approved this document on April 24, 2023.

List of Subjects

42 CFR Part 430

Administrative practice and procedure, Grant programs-health, Medicaid, Reporting and recordkeeping requirements.

42 CFR Part 438

Citizenship and naturalization, Civil rights, Grant programs-health, Individuals with disabilities, Medicaid, Reporting and recordkeeping requirements, Sex discrimination.

42 CFR Part 457

Administrative practice and procedure, Grant programs-health,

Health insurance, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, the Centers for Medicare & Medicaid Services proposes to amend 42 CFR chapter IV as set forth below:

PART 430—GRANTS TO STATES FOR MEDICAL ASSISTANCE PROGRAMS

■ 1. The authority citation for part 430 is revised to read as follows:

Authority: 42 U.S.C. 1302.

■ 2. Amend § 430.3 by revising the introductory text and adding paragraph (d) to read as follows:

§ 430.3 Appeals under Medicaid.

Four distinct types of disputes may arise under Medicaid.

* * * * *

(d) Disputes that pertain to disapproval of written prior approval by CMS of State directed payments under 42 CFR 438.6(c)(2)(i) are also heard by the Board in accordance with procedures set forth in 45 CFR part 16. 45 CFR part 16, appendix A, lists all the types of disputes that the Board hears.

PART 438—MANAGED CARE

■ 3. The authority citation for part 438 continues to read as follows:

Authority: 42 U.S.C. 1302.

■ 4. Amend § 438.2 by—

■ a. Adding the definition of ''In lieu of service or setting (ILOS)'' in alphabetical order; and

■ b. Revising paragraph (9) in the definition of ''Primary care case management entity (PCCM entity)''.

The addition and revision read as follows:

§ 438.2 Definitions.

* * * * *

In lieu of service or setting (ILOS) is a service or setting that is provided to an enrollee as a substitute for a covered service or setting under the State plan in accordance with § 438.3(e)(2). An ILOS can be used as an immediate or longer-term substitute for a covered service or setting under the State plan, or when the ILOS can be expected to reduce or prevent the future need to utilize the covered service or setting under the State plan.

* * * * *

Primary care case management entity (PCCM entity) * * *

(9) Coordination with mental and substance use disorder health systems and providers.

* * * * *

■ 5. Amend § 438.3 by:

■ a. Revising paragraphs (c)(1)(ii) and (e)(2);

■ b. Adding paragraphs (i)(3) and (4); and

■ c. Revising paragraph (v).

The additions and revisions read as follows:

§ 438.3 Standard contract requirements.

* * * * *

(c) * * *

(1) * * *

(ii) The final capitation rates must be based only upon services covered under the State plan, ILOS, and additional services deemed by the State to be necessary to comply with the requirements of subpart K of this part (applying parity standards from the Mental Health Parity and Addiction Equity Act), and represent a payment amount that is adequate to allow the MCO, PIHP or PAHP to efficiently deliver covered services to Medicaid-eligible individuals in a manner compliant with contractual requirements.

* * * * *

(e) * * *

(2) An MCO, PIHP or PAHP may cover, for enrollees, an ILOS as follows:

(i) The State determines that the ILOS is a medically appropriate and cost effective substitute for the covered service or setting under the State plan;

(ii) The enrollee is not required by the MCO, PIHP, or PAHP to use the ILOS, and the MCO, PIHP or PAHP must comply with the following requirements:

(A) An enrollee who is offered or utilizes an ILOS offered as a substitute for a covered service or setting under the State plan retains all rights and protections afforded under part 438, and if an enrollee chooses not to receive an ILOS, they retain their right to receive the service or setting covered under the State plan on the same terms as would apply if an ILOS was not an option; and

(B) An ILOS may not be used to reduce, discourage, or jeopardize an enrollee's access to services and settings covered under the State plan, and an MCO, PIHP or PAHP may not deny access to a service or setting covered under the State plan, on the basis that the enrollee has been offered an ILOS as an optional substitute for a service or setting covered under the State plan, is currently receiving an ILOS as a substitute for a service or setting covered under the State plan, or has utilized an ILOS in the past;

(iii) The approved ILOS is authorized and identified in the MCO, PIHP or PAHP contract, and will be offered to enrollees at the option of the MCO, PIHP or PAHP;

(iv) The utilization and actual cost of the ILOS is taken into account in developing the component of the capitation rates that represents the covered State plan services and settings, unless a statute or regulation explicitly requires otherwise; and

(v) With the exception of a short term stay as specified in § 438.6(e) in an Institution for Mental Diseases (IMD), as defined in § 435.1010 of this chapter, for inpatient mental health or substance use disorder treatment, an ILOS must also comply with the requirements in § 438.16.

* * * * *

(i) * * *

(3) The State, through its contracts with an MCO, PIHP, and PAHP must require that incentive payment contracts between the MCO, PIHP, and PAHP and network providers:

(i) Have a defined performance period that can be tied to the applicable MLR reporting periods.

(ii) Be signed and dated by all appropriate parties before the commencement of the applicable performance period.

(iii) Include well-defined quality improvement or performance metrics that the provider must meet to receive the incentive payment.

(iv) Specify a dollar amount that can be clearly linked to successful completion of the metrics defined in the incentive payment contract, including a date of payment.

(4) The State through its contracts with an MCO, PIHP, and PAHP must:

(i) Define the documentation that must be maintained by the MCO, PIHP, and PAHP to support the provider incentive payments.

(ii) Prohibit the use of attestations as supporting documentation for data that factor into the MLR calculation.

(iii) Require the MCO, PIHP, and PAHP to make incentive payment contracts, and any documentation in paragraph (e)(4)(i), available to the State upon request and at any routine frequency established in the State's contract with the MCO, PIHP, and PAHP.

* * * * *

(v) *Applicability date.* Paragraphs (e)(2)(v), (i)(3), and (i)(4) of this section apply to the first rating period for contracts with MCOs, PIHPs and PAHPs beginning on or after 60 days following [EFFECTIVE DATE OF THE FINAL RULE].

* * * * *

§ 438.6 Special contract provisions related to payment.

■ 6. Amend § 438.6—

■ a. In paragraph (a) by:

■ i. Revising the introductory text;

■ ii. Adding definitions for ''Academic medical center'', ''Average commercial rate'', ''Condition-based payment'', ''Final State directed payment cost percentage'', ''Inpatient hospital services'', ''Maximum fee schedule'', ''Minimum fee schedule'', ''Outpatient hospital services'', ''Nursing facility services'', ''Performance measure'', ''Population-based payment'', ''Qualified practitioner services at an academic medical center'', ''Separate payment term'', ''Total payment rate'', ''Total published Medicare payment rate'', and ''Uniform increase'' in alphabetical order;

■ b. By revising paragraph (c) paragraph heading and paragraphs (c)(1)(iii),(c)(2) and (c)(3).

■ c. By adding paragraphs (c)(4) through (8); and

■ d. By revising paragraph (e).

The revisions and additions read as follows:

§ 438.6 Special contract provisions related to payment.

(a) *Definitions.* As used in this section, the following terms have the indicated meanings:

Academic medical center means a facility that includes a health professional school with an affiliated teaching hospital.

Average commercial rate means the average rate paid for services by the highest claiming third-party payers for specific services as measured by claims volume.

* * * * *

Condition-based payment means a prospective payment for a defined set of Medicaid covered service(s) that are tied to a specific condition and delivered to Medicaid managed care enrollees.

Final State directed payment cost percentage means the annual amount calculated, in accordance with paragraph (c)(7)(iii) of this section, for each State directed payment for which written prior approval is required under paragraph (c)(2)(i) of this section and for each managed care program.

* * * * *

Inpatient hospital services means the same as specified at § 440.10.

Maximum fee schedule means any State directed payment where the State requires an MCO, PIHP, or PAHP to pay no more than a certain amount for a covered service(s).

Minimum fee schedule means any State directed payment where the State requires an MCO, PIHP, or PAHP to pay no less than a certain amount for a covered service(s).

Outpatient hospital services means the same as specified in § 440.20(a).

Nursing facility services means the same as specified in § 440.40(a).

* * * * *

Performance measure means, for State directed payments, a quantitative measure with a numerator and denominator that is used to monitor performance at a point in time or track performance over time, of provider service delivery, quality of care, or outcomes as defined in § 438.320 for enrollees.

Population-based payment means a prospective payment for a defined set of Medicaid service(s) for a population of Medicaid managed care enrollees covered under the contract attributed to a specific provider or provider group.

Qualified practitioner services at an academic medical center means professional services provided by both physicians and non-physician practitioners affiliated with or employed by an academic medical center.

* * * * *

Separate payment term means a pre-determined and finite funding pool that the State establishes and documents in the Medicaid managed care contract for a State directed payment for which the State has received written prior approval under § 438.6(c)(2)(i). Payments made from this funding pool are made by the State to the MCOs, PIHPs or PAHPs exclusively for State directed payments for which the State has received written prior approval under § 438.6(c)(2)(i) and are made separately and in addition to the capitation rates identified in the contract as required under § 438.3(c)(1)(i).

State directed payment (SDP) means a contract arrangement that directs an MCO's, PIHP's, or PAHP's expenditures under paragraphs (c)(1)(i) through (iii) of this section.

* * * * *

Total payment rate means the aggregate for each managed care program of:

(i) The average payment rate paid by all MCOs, PIHPs, or PAHPs to all providers included in the specified provider class for each service identified in the State directed payment;

(ii) The effect of the State directed payment on the average rate paid to providers included in the specified provider class for the same service for which the State is seeking prior approval under paragraph (c)(2)(i) of this section;

(iii) The effect of any and all other State directed payments on the average rate paid to providers included in the specified provider class for the same service for which the State is seeking prior approval under paragraph (c)(2)(i) of this section; and

(iv) The effect of any and all allowable pass-through payments, as defined in paragraph (a) of this section, paid to any and all providers included in the provider class specified in the State directed payment for which the State is seeking prior approval under paragraph (c)(2)(i) of this section on the average payment rate to providers in the specified provider class.

Total published Medicare payment rate means amounts calculated as payment for specific services that have been developed under Title XVIII Part A and Part B.

Uniform increase means any State directed payment that directs the MCO, PIHP, or PAHP to pay the same amount (the same dollar amount or the same percentage increase) per Medicaid covered service(s) in addition to the rates the MCO, PIHP or PAHP negotiated with the providers included in the specified provider class for the service(s) identified in the State directed payment.

* * * * *

(c) *State directed payments under MCO, PIHP, or PAHP contracts—*

(1) * * *

(iii) The State may require the MCO, PIHP, or PAHP to:

(A) Adopt a minimum fee schedule for providers that provide a particular service under the contract using State plan approved rates.

(B) Adopt a minimum fee schedule for providers that provide a particular service under the contract using a total published Medicare payment rate that was in effect no more than 3 years prior to the start of the rating period and the minimum fee schedule to be used by the MCO, PIHP, or PAHP is equivalent to 100 percent of the specified total published Medicare payment rate.

(C) Adopt a minimum fee schedule for providers that provide a particular service under the contract using rates other than the State plan approved rates or one or more total published Medicare payment rates described in paragraph (c)(1)(iii)(B) of this section.

(D) Provide a uniform dollar or percentage increase for providers that provide a particular service under the contract.

(E) Adopt a maximum fee schedule for providers that provide a particular service under the contract, so long as the MCO, PIHP, or PAHP retains the ability to reasonably manage risk and has discretion in accomplishing the goals of the contract.

(2) *Standards for State directed payments.* (i) State directed payments

specified in paragraphs (c)(1)(i) and (ii) and (c)(1)(iii)(C) through (E) of this section must have written prior approval that the standards and requirements in this section are met.

(ii) Each State directed payment must meet the following standards. Specifically, each State directed payment must:

(A) Be based on the utilization and delivery of services;

(B) Direct expenditures equally, and using the same terms of performance, for a class of providers providing the service under the contract;

(C) Expect to advance at least one of the goals and objectives in the quality strategy in § 438.340;

(D) Have an evaluation plan that measures the degree to which the State directed payment advances at least one of the goals and objectives in the quality strategy in § 438.340 and includes all of the elements outlined in paragraph (c)(2)(iv) of this section;

(E) Not condition provider participation in State directed payments on the provider entering into or adhering to intergovernmental transfer agreements;

(F) Result in achievement of the stated goals and objectives in alignment with the State's evaluation plan;

(G) Comply with all Federal legal requirements for the financing of the non-Federal share, including but not limited to, 42 CFR 433, subpart B;

(H) Ensure that each provider receiving payment under a State directed payment attests that it does not participate in any hold harmless arrangement with respect to any health care-related tax as specified in § 433.68(f)(3) of this subchapter in which the State or other unit of government imposing the tax provides for any direct or indirect payment, offset, or waiver such that the provision of the payment, offset, or waiver directly or indirectly guarantees to hold the provider harmless for all or any portion of the tax amount, and ensure that such attestations are available upon CMS request;

(I) Ensure that the total payment rate for each service and provider class included in the State directed payment must be reasonable, appropriate and attainable and, upon request from CMS, the State must provide documentation demonstrating the total payment rate for each service and provider class; and

(J) Be developed in accordance with § 438.4, and the standards specified in §§ 438.5, 438.7, and 438.8.

(iii) The total payment rate projected for each State directed payment for which written prior approval is required under paragraph (c)(2)(i) of this section for inpatient hospital services, outpatient hospital services, nursing facility services, or qualified practitioner services at an academic medical center must not exceed the average commercial rate. To demonstrate compliance with this paragraph, States must submit:

(A) The average commercial rate demonstration, for which States must use payment data that:

(*1*) Is specific to the State;

(*2*) Is no older than from the three most recent and complete years prior to the rating period of the initial request following the applicability date of this section;

(*3*) Is specific to the service(s) addressed by the State directed payment;

(*4*) Includes the total reimbursement by the third-party payer and any patient liability, such as cost sharing and deductibles;

(5) Excludes payments to FQHCs, RHCs, and from any non-commercial payers, such as Medicare; and

(*6*) Excludes any payment data for services or codes that the applicable Medicaid MCOs, PIHPs, or PAHPs do not cover.

(B) A total payment rate comparison, for which States must provide a comparison of the total payment rate for these services included in the State directed payment to the average commercial rate that:

(*1*) Is specific to each managed care program that the State directed payment applies to;

(*2*) Is specific to each provider class to which the State directed payment applies;

(*3*) Is projected for the rating period for which the State is seeking prior approval under paragraph (c)(2)(i) of this section;

(*4*) Uses payment data that are specific to each service included in the State directed payment; and

(*5*) Describes each of the components of the total payment rate as a percentage of the average commercial rate (demonstrated by the State as provided in paragraph (c)(2)(iii)(A) of this section) for each of these services included in the State directed payment.

(C) The ACR demonstration described in paragraph (c)(2)(iii)(A) of this section must be included with the initial documentation submitted for written prior approval of the State directed payment under paragraph (c)(2)(i) of this section, and then subsequently updated at least once every 3 years thereafter as long as the State continues to include the State directed payment that requires prior approval under paragraph (c)(2)(i) of this section in any MCO, PIHP, or PAHP contract. The total payment rate comparison described in paragraph (c)(2)(iii)(B) of this section must be included with the documentation submitted for written prior approval under paragraph (c)(2)(i) of this section and updated with each amendment and subsequent renewal.

(iv) For State directed payments for which written prior approval under paragraph (c)(2)(i) of this section is required, the State must include a written evaluation plan with its submission for written prior approval under paragraph (c)(2)(i) of this section and an updated written evaluation plan with each amendment and subsequent renewal. The evaluation plan must include the following elements:

(A) Identification of at least two metrics that will be used to measure the effectiveness of the State directed payment in advancing at least one of the goals and objectives in the quality strategy on an annual basis, which must:

(*1*) Be specific to the State directed payment, and when practicable and relevant, attributable to the performance by the providers for enrollees in all of the State's managed care program(s) to which the State directed payment applies; and

(*2*) Include at least one performance measure as defined in § 438.6(a) as part of the metrics used to measure the effectiveness of the State directed payment;

(B) Include baseline statistics on all metrics that will be used in the evaluation of the State directed payment for which the State is seeking written prior approval under paragraph (c)(2)(i) of this section;

(C) Include performance targets for all metrics to be used in the evaluation of the State directed payment for which the State is seeking written prior approval under paragraph (c)(2)(i) of this section that demonstrate either maintenance or improvement over the baseline statistics and not a decline relative to baseline. The target for at least one performance measure, as defined in § 438.6(a), must demonstrate improvement over baseline; and

(D) Include a commitment by the State to submit an evaluation report in accordance with § 438.6(c)(2)(v) if the final State directed payment cost percentage exceeds 1.5 percent.

(v) For any State directed payment for which written prior approval is required under paragraph (c)(2)(i) of this section that has a final State directed payment cost percentage greater than 1.5 percent, the State must complete and submit an evaluation report using the evaluation plan outlined during the prior approval

process under paragraph (c)(2)(iv) of this section.

(A) This evaluation report must:

(*1*) Include all of the elements in paragraph (c)(2)(iv) of this section as specified in the approved evaluation plan;

(*2*) Include three most recent and complete years of annual results for each metric as required in paragraph (c)(2)(iv)(A) of this section; and

(*3*) Be published on the public facing website as required under § 438.10(c)(3).

(B) States must submit the initial evaluation report as described in paragraph (c)(2)(v)(A) of this section to CMS no later than 2 years after the conclusion of the 3-year evaluation period. Subsequent evaluation reports must be submitted to CMS every 3 years.

(vi) Any State directed payments described in paragraph (c)(1)(i) or (ii) of this section must:

(A) Make participation in the value-based purchasing, delivery system reform, or performance improvement initiative available using the same terms of performance to a class of providers providing services under the contract related to the reform or improvement initiative;

(B) If the State directed payment for which written prior approval is required under paragraph (c)(2)(i) of this section conditions payment upon performance, the payment to providers under the State directed payment:

(*1*) Cannot be conditioned upon administrative activities, such as the reporting of data nor upon the participation in learning collaboratives or similar administrative activities.

(*2*) Must use a common set of performance measures across all of the payers and providers specified in the State directed payment;

(*3*) Must define and use a performance measurement period that must not exceed the length of the rating period and must not precede the start of the rating period in which the payment is delivered by more than 12 months, and all payments must be documented in the rate certification for the rating period in which the payment is delivered;

(*4*) Must identify baseline statistics on all metrics that will be used to measure the performance that is the basis for payment to the provider from the MCO, PIHP, or PAHP; and

(*5*) Must use measurable performance targets, which are attributable to the performance by the providers in delivering services to enrollees in each of the State's managed care program(s) to which the State directed payment applies, that demonstrate improvement over baseline data on all metrics that will be used to measure the performance that is the basis for payment to the provider from the MCO, PIHP, or PAHP.

(C) If the State directed payment is a population-based or condition-based payment, the State directed payment must:

(*1*) Be conditioned upon the delivery by the provider of one or more specified Medicaid covered service(s) during the rating period or the attribution of a covered enrollee to a provider for the rating period for treatment;

(*2*) If conditioning payment on the attribution to a provider, have an attribution methodology using data that are no older than the three most recent and complete years of data; seeks to preserve existing provider-enrollee relationships; accounts for enrollee preference in choice of provider; and describes when patient panels are attributed, how frequently they are updated, and how those updates are communicated to providers;

(*3*) Replace the negotiated rate between an MCO, PIHP, or PAHP and providers for the Medicaid covered service(s) included in the population or condition-based payment; no other payment may be made by an MCO, PIHP, or PAHP to the same provider on behalf of the same enrollee for the same services included in the population or condition-based payment; and

(*4*) Include at least one metric in the evaluation plan required under paragraph (c)(2)(iv) of this section that measures performance at the provider class level; the target for this performance measure, as defined in § 438.6(a), must be set to demonstrate improvement over baseline.

(vii) Any State directed payment described in paragraph (c)(1)(iii) of this section must:

(A) Condition payment from the MCO, PIHP, or PAHP to the provider on the utilization and delivery of services under the contract for the rating period for which the State is seeking written prior approval only; and

(B) Not condition payment from the MCO, PIHP, or PAHP to the provider on utilization and delivery of services outside of the rating period for which the State is seeking written prior approval and then require that payments be reconciled to utilization during the rating period.

(viii) A State must submit all required documentation for all State directed payments for which written prior approval is required under (c)(2)(i) of this section no later than:

(A) Ninety days before the end of the rating period for any State directed payments that begins at least 90 days before the end of the rating period.

(B) Before the end of the rating period for any State directed payment that begins less than 90 days before the end of the rating period.

(C) For any State directed payments that are approved for multiple rating periods as provided in paragraph (c)(3) of this section, the same time frames described in paragraphs (c)(2)(viii)(A) and (B) of this section apply to the first rating period for which the State is seeking written prior approval under paragraph (c)(2)(i) of this section.

(ix) States seeking to amend State directed payments after CMS has issued written prior approval under paragraph (c)(2)(i) of this section must obtain written prior approval of the amendment(s). States must submit all required documentation for written prior approval of such amendment(s):

(A) Prior to the end of the rating period to which the State directed payment applies to amend the State directed payment; and

(B) For any State directed payments that are approved for multiple rating periods as provided in paragraph (c)(3) of this section, within 120 days of the start of the rating period for amendments to the State directed payment for either the second or third rating period. States cannot amend State directed payments that are approved on a multi-year basis as defined in paragraph (c)(3) of this section for rating periods that have concluded.

(3) *Approval and renewal timeframes.* (i) Approval of a State directed payment described in paragraphs (c)(1)(i) and (ii) of this section is for one rating period unless a multi-year approval of up to three rating periods is requested and meets all of the following criteria:

(A) The State has explicitly identified and described the State directed payment in the contract as a multi-year State directed payment, including a description of the State directed payment by year and if the State directed payment varies by year.

(B) The State has developed and described its plan for implementing a multi-year State directed payment, including the State's plan for multi-year evaluation, and the impact of a multi-year State directed payment on the State's goals and objectives in the State's quality strategy in § 438.340.

(C) The State has affirmed that it will not make any changes to the State directed payment methodology, or magnitude of the payment, described in the contract for all years of the multi-year State directed payment without CMS written prior approval. If the State determines that changes to the State

directed payment methodology, or magnitude of the payment, are necessary, the State must obtain written prior approval of such changes under paragraph (c)(2) of this section.

(ii) Written prior approval of a State directed payment described in paragraph (c)(1)(iii)(C) through (E) of this section is for one rating period.

(iii) State directed payments are not automatically renewed.

(4) *Reporting requirements.* The State must submit to CMS no later than 180 days after each rating period, data to the Transformed Medicaid Statistical Information System, and in any successor format or system designated by CMS, specifying the total dollars expended by each MCO, PIHP, and PAHP for State directed payments, including amounts paid to individual providers. The initial report will be due after the rating period following the release of reporting instructions by CMS. Minimum data fields to be collected include the following:

(i) Provider identifiers.

(ii) Enrollee identifiers.

(iii) MCO, PIHP or PAHP identifiers.

(iv) Procedure and diagnosis codes.

(v) Allowed, billed, and paid amounts. Paid amounts include the amount that represents the MCO's, PIHP's or PAHP's negotiated payment amount, the amount of the State directed payment, the amount for any pass-through payments under paragraph (d) of this section, and any other amounts included in the total amount paid to the provider.

(5) *Requirements for Medicaid Managed Care contract terms for State directed payments.* State directed payments must be specifically described and documented in the MCO's, PIHP's, or PAHP's contracts. The MCO's, PIHP's or PAHP's contract must include, at a minimum, the following information for each State directed payment:

(i) The State directed payment start date and, if applicable, the end date within the applicable rating period;

(ii) A description of the provider class eligible for the State directed payment and all eligibility requirements;

(iii) A description of the State directed payment, which must include at a minimum:

(A) For State directed payments described in paragraphs (c)(1)(iii)(A), (B), and (C) of this section:

(*1*) The required fee schedule;

(*2*) The procedure and diagnosis codes to which the fee schedule applies;

(*3*) The applicable dates of service within the rating period for which the fee schedule applies;

(*4*) For State directed payments that specify State plan approved rates, the contract must also reference the State plan page, when it was approved, and a link to the currently approved State plan page when possible; and

(*5*) For State directed payments that specify a Medicare-referenced fee schedule, the contract must also include information about the Medicare fee schedule(s) that is necessary to implement the State directed payment, including identifying the specific Medicare fee schedule, the time period for which the Medicare fee schedule is in effect, and any material adjustments due to geography or provider type that need to be applied.

(B) For State directed payments described in paragraphs (c)(1)(iii)(D) of this section, the contract must include the following:

(*1*) Whether the uniform increase will be a specific dollar amount or a percentage increase of negotiated rates;

(*2*) The procedure and diagnosis codes to which the uniform dollar or percentage increase applies;

(*3*) The specific dollar amount or percentage increase that the MCO, PIHP or PAHP must apply or the methodology to establish the specific dollar amount or percentage increase;

(*4*) The applicable dates of service within the rating period for which the uniform increase applies; and

(*5*) The roles and responsibilities of the State and the MCO, PIHP, or PAHP, the timing of payments, and other significant relevant information.

(C) For State directed payments described in paragraph (c)(1)(iii)(E) of this section, the contract must include the following:

(*1*) The fee schedule the MCO, PIHP, or PAHP must ensure that payments are below;

(*2*) The procedure and diagnosis codes to which the fee schedule applies;

(*3*) The applicable dates of service within the rating period for which the fee schedule applies; and

(*4*) Details of the State's exemption process for MCOs, PIHPs, or PAHPs and providers to follow if they are under contractual obligations that result in the need to pay more than the maximum fee schedule.

(D) For State directed payments described in paragraphs (c)(1)(i) and (ii) of this section that condition payment based upon performance:

(*1*) The approved performance measures upon which payment will be conditioned;

(*2*) The approved measurement period for those measures;

(*3*) The approved baseline statistics for all measures against which performance will be measured;

(*4*) The performance targets that must be achieved on each measure for the provider to obtain the performance-based payment;

(*5*) The methodology to determine if the provider qualifies for the performance-based payment as well as the amount of the payment; and

(*6*) The roles and responsibilities of the State and the MCO, PIHP, or PAHP, the timing of payments, what to do with any unearned payments, and other significant relevant information.

(E) For State directed payments described in paragraphs (c)(1)(i) and (ii) of this section using a population-based or condition-based payment as defined in paragraph (a) of this section:

(*1*) The Medicaid covered service(s) that the population or condition-based payment is for;

(*2*) The time period that the population or condition-based payment covers;

(*3*) When the population or condition-based payment is to be made and how frequently;

(*4*) A description of the attribution methodology, if one is used, which must include at a minimum the data used, when the panels will be established, how frequently those panels will be updated, and how the attribution methodology will be communicated to providers; and

(*5*) The roles and responsibilities of the State and the MCO, PIHP, or PAHP in operationalizing the attribution methodology if an attribution methodology is used.

(iv) Any encounter reporting and separate reporting requirements necessary for auditing the State directed payment in addition to the reporting requirements in paragraph (c)(4) of this section; and

(v) If the State will be using a separate payment term as defined in paragraph (a) of this section to implement the State directed payment for which written prior approval is required under paragraph (c)(2)(i) of this section.

(vi) All State directed payments must be specifically described and documented in the MCO's, PIHP's, and PAHP's contracts no later than 120 days after the start date of the State directed payment for which the State has obtained written prior approval or 120 days after the date CMS issued written prior approval of the State directed payment under (c)(2) of this section, whichever is later.

(6) *Separate payment term requirements.* All separate payment terms must:

(i) Be reviewed and approved as part of the review of the State directed payment for which written prior approval is required under paragraph (c)(2)(i) of this section;

(ii) Not be used to implement a State directed payment described in paragraphs (c)(1)(iii)(A) and (B) of this section;

(iii) Be specific to each Medicaid managed care program and specific to the individual State directed payment for which the State has obtained written prior approval under paragraph (c)(2) of this section;

(iv) Not exceed the total amount documented in the written prior approval for each State directed payment for which the State has obtained written prior approval under paragraph (c)(2)(i) of this section and for each Medicaid managed care program; and

(v) Be documented in the State's contracts with the MCOs, PIHPs, or PAHPs no later than 120 days after the start date of the State directed payment for which the State has obtained written prior approval under paragraph (c)(2)(i) of this section or 120 days after the date CMS issued written prior approval of the State directed payment under (c)(2)(i) of this section, whichever is later.

(A) The separate payment term cannot be amended except to account for a payment methodology that is first approved by CMS as an amendment to the State directed payment for which the State has obtained written prior approval under paragraph (c)(2)(i) of this section.

(B) The documentation in the MCO's, PIHP's, or PAHP's contract must include:

(*1*) The total dollars that the State will pay to the MCOs, PIHPs, or PAHPs for the individual State directed payment for which the State has obtained written prior approval under paragraph (c)(2)(i) of this section.

(*2*) The timing and frequency of payments that will be made under the separate payment term from the State to the MCO, PIHP, or PAHP;

(*3*) A description or reference to the specific State directed payment for which the State has obtained written prior approval under paragraph (c)(2)(i) of this section for which the separate payment term is to be used; and

(*4*) Any separate reporting requirements that the State requires to ensure appropriate reporting of the separate payment term for the purposes of MLR reporting under § 438.8.

(7) *Final State directed payment cost percentage.* For each State directed payment for which written prior approval is required under paragraph (c)(2)(i) of this section, unless the State voluntarily submits the evaluation report per paragraph (c)(2)(v) of this section, the State must calculate the final State directed payment cost percentage and if the final State directed payment cost percentage is below 1.5 percent the State must provide a final State directed payment cost percentage report to CMS as follows:

(i) *State directed payment cost percentage calculation.* The final State directed payment cost percentage must be calculated on an annual basis and recalculated annually.

(ii) *State directed payment cost percentage certification.* The final State directed payment cost percentage must be certified by an actuary and developed in a reasonable and appropriate manner consistent with generally accepted actuarial principles and practices.

(iii) *Calculation of the final State directed payment cost percentage.* The final State directed payment cost percentage is the result of dividing the amount determined in paragraph (c)(7)(iii)(A) of this section by the amount determined in paragraph (c)(7)(iii)(B) of this section.

(A) The actual total amount that is paid as a separate payment term described in paragraph (c)(6) of this section and portion of the actual total capitation payments that is attributable to the State directed payment for which the State has obtained written prior approval under paragraph (c)(2)(i) of this section, for each managed care program.

(B) The actual total capitation payments, defined at § 438.2, for each managed care program, including all State directed payments in effect under § 438.6(c) and pass-through payments in effect under § 438.6(d), and the actual total amount of all State directed payments that are paid as separate payment terms as described in paragraph(c)(6).

(iv) *Annual CMS review of the final State directed payment cost percentage.* The State must submit the final State directed payment cost percentage annually to CMS for review as a separate report concurrent with the rate certification submission required in § 438.7(a) for the rating period beginning 2 years after the completion of each 12-month rating period that includes a State directed payment for which the State has obtained written prior approval under paragraph (c)(2)(i) of this section.

(8) *Applicability dates.* States must comply with:

(i) Paragraphs (a), (c)(1)(iii), (c)(2)(i), (c)(2)(ii)(A) through (C), (c)(2)(ii)(E), (c)(2)(ii)(G), (c)(2)(ii)(I) and (J), (c)(2)(vi)(A), (c)(3), (c)(6)(i) through (iv) of this section beginning on [EFFECTIVE DATE OF THE FINAL RULE].

(ii) Paragraphs (c)(2)(iii), (c)(2)(vi)(B), and (c)(2)(vi)(C)(*1*) and (*2*) of this section no later than the first rating period for contracts with MCOs, PIHPs and PAHPs beginning on or after [insert the effective date of the final rule].

(iii) Paragraphs (c)(2)(ii)(H), (c)(2)(vi)(C)(*3*) and (*4*), (c)(2)(vii), (c)(2)(viii), (c)(2)(ix) and (c)(5)(i) through (v) of this section no later than the first rating period for contracts with MCOs, PIHPs and PAHPs beginning on or after 2 years after [insert the effective date of the final rule].

(iv) Paragraphs (c)(2)(ii)(D) and (F), (c)(2)(iv), (c)(2)(v) and (c)(7) of this section no later than the first rating period for contracts with MCOs, PIHPs and PAHPs beginning on or after 3 years after [insert the effective date of the final rule].

(v) Paragraphs (c)(5)(vi) and (c)(6)(v) of this section no later than the first rating period for contracts with MCOs, PIHPs and PAHPs beginning on or after 4 years after [insert the effective date of the final rule].

(vi) Paragraph (c)(4) of this section no later than the first rating period following the release of reporting instructions by CMS.

* * * * *

(e) *Payments to MCOs and PIHPs for enrollees that are a patient in an institution for mental disease.* The State may make a monthly capitation payment to an MCO or PIHP for an enrollee aged 21–64 receiving inpatient treatment in an Institution for Mental Diseases, as defined in § 435.1010 of this chapter, so long as the facility is a hospital providing mental health or substance use disorder inpatient care or a sub-acute facility providing mental health or substance use disorder crisis residential services, and length of stay in the IMD is for a short term stay of no more than 15 days during the period of the monthly capitation payment. The provision of inpatient mental health or substance use disorder treatment in an IMD must meet the requirements for in lieu of services at § 438.3(e)(2)(i) through (iii). For purposes of rate setting, the State may use the utilization of services provided to an enrollee under this section when developing the inpatient mental health or substance use disorder component of the capitation rate, but must price utilization at the cost of the same services through providers included under the State plan.

■ 7. Amend § 438.7 by—

■ a. Revising paragraph (b)(6); and

■ b. Adding paragraphs (c)(4) through (6) and (f) and (g).

The revisions and additions read as follows:

§ 438.7 Rate certification submission.

* * * * *

(b) * * *

(6) *Special contract provisions.* A description of any of the special contract provisions related to payment in § 438.6 and ILOS in § 438.3(e)(2) that are applied in the contract.

(c) * * *

(4) The State must submit a revised rate certification for any changes in the capitation rate per rate cell, as required under paragraph (a) of this section for any special contract provisions related to payment described in § 438.6 and ILOS in § 438.3(e)(2) not already described in the rate certification, regardless of the size of the change in the capitation rate per rate cell.

(5) Retroactive adjustments to the capitation rates, as outlined in paragraph (c)(2), resulting from a State directed payment described in § 438.6(c) must be a result of adding or amending any State directed payment consistent with the requirements in § 438.6(c), or a material error in the data, assumptions or methodologies used to develop the initial capitation rate adjustment such that modifications are necessary to correct the error.

(6) The rate certification or retroactive adjustment to capitation rates resulting from any State directed payments for which the State has obtained written prior approval under § 438.6(c)(2)(i) must be submitted no later than 120 days after the start date of the State directed payment for which the State has obtained written prior approval under § 438.6(c)(2)(i) of this section or 120 days after the date CMS issued written prior approval of the State directed payment under § 438.6(c)(2)(i) of this section, whichever is later.

* * * * *

(f) *State certification.* The State, through its actuary, must certify the total dollar amount for each separate payment term included in the State's MCO, PIHP or PAHP contracts in alignment with the requirements of § 438.6(c)(6).

(1) The State may pay each MCO, PIHP or PAHP a different amount under the separate payment term that is different than the amount paid to another MCO, PIHP or PAHP, so long as the aggregate total dollars paid to all MCOs, PIHPs and PAHPs does not exceed the total dollars of the separate payment term for each respective Medicaid managed care program included in the Medicaid managed care contract.

(2) As part of the State's rate certification documentation for a separate payment term, the State, through its actuary, must provide an estimate of the impact of the separate payment term on a rate cell basis, as paid per the State directed payment approved by CMS under § 438.6(c)(2)(i).

(3) No later than 12 months following the end of the rating period, the State must submit documentation to CMS that demonstrates the impact of the separate payment term by rate cell for which the State has obtained written prior approval under § 438.6(c)(2)(i) consistent with the distribution methodology described in the State directed payment for which the State obtained written prior approval under § 438.6(c)(2)(i) in the manner and form required by CMS.

(4) Once CMS has issued written prior approval under § 438.6(c)(2)(i), the State must submit a rate certification or a rate certification amendment incorporating the separate payment term no later than 120 days after the start date of the State directed payment for which the State has obtained written prior approval under § 438.6(c)(2)(i) or 120 days after the date CMS issued written prior approval of the State directed payment under § 438.6(c)(2)(i), whichever is later.

(g) *Applicability dates.* (1) Paragraph (b)(6) of this section applies to the rating period for contracts with MCOs, PIHPs and PAHPs beginning on or after 60 days following [insert the effective date of the final rule]. Until that applicability date, States are required to continue to comply with paragraph (b)(6) of this section contained in 42 CFR, parts 430 to 481, edition most recently published prior to the final rule.

(2) Paragraphs (c)(4), (c)(5), (f)(1), (f)(2) and (f)(3) of this section applies beginning on [insert the effective date of the final rule].

(3) Paragraphs (c)(6) and (f)(4) of this section apply no later than the first rating period for contracts with MCOs, PIHPs and PAHPs beginning on or after 4 years after [insert the effective date of the final rule].

■ 8. Amend § 438.8 by—

■ a. Revising paragraph (e)(2)(iii)(A);

■ b. Adding paragraph (e)(2)(iii)(C);

■ c. Revising paragraph (e)(3)(i);

■ d. Adding paragraph (f)(2)(vii);

■ e. Revising paragraphs (h)(4) introductory text and (k)(1)(vii);

■ f. Adding paragraphs (k)(1)(xiv) through (xvi); and

■ g. Revising paragraph (m).

The revisions and additions read as follows:

§ 438.8 Medical loss ratio (MLR) standards.

* * * * *

(e) * * *

(2) * * *

(iii) * * *

(A) The amount of incentive and bonus payments made, or expected to be made, to network providers that are tied to clearly-defined, objectively measurable, and well-documented clinical or quality improvement standards that apply to providers.

* * * * *

(C) The amount of payments made under all contract arrangements that direct the MCO's, PIHP's, or PAHP's expenditures as specified in § 438.6(c)(1)(i) through (iii).

* * * * *

(3) * * *

(i) An MCO, PIHP, or PAHP activity that meets the requirements of 45 CFR 158.150(a) and (b) and is not excluded under 45 CFR 158.150(c).

* * * * *

(f) * * *

(2) * * *

(vii) Payments to the MCO, PIHP, or PAHP for expenditures approved under § 438.6(c)(1)(i) through (iii).

* * * * *

(h) * * *

(4) CMS will publish base credibility factors for MCOs, PIHPs, and PAHPs that are developed according to the following methodology:

* * * * *

(k) * * *

(1) * * *

(vii) Methodology(ies) for allocation of expenditures, which must include a detailed description of the methods used to allocate expenses, including incurred claims, quality improvement expenses, Federal and State taxes and licensing or regulatory fees, and other non-claims costs, as described in 45 CFR 158.170(b).

* * * * *

(xiv) The amount of payments made to providers under all contract arrangements that direct the MCO's, PIHP's, or PAHP's expenditures as described in § 438.6(c)(1)(i) through (iii).

(xv) Payments to the MCO, PIHP, or PAHP from the State for expenditures approved under § 438.6(c)(1)(i) through (iii).

(xvi) Paragraphs (k)(1)(xiv) and (xv) of this section apply to the rating period for contracts with MCOs. PIHPs, and PAHPs beginning on or after 60 days following [EFFECTIVE DATE OF THE FINAL RULE].

* * * * *

(m) *Recalculation of MLR.* In any instance where a State makes a retroactive change to the capitation rates for an MLR reporting year where the report has already been submitted to the State, the MCO, PIHP, or PAHP must re-

calculate the MLR for all MLR reporting years affected by the retroactive rate change and submit a new report meeting the requirements in paragraph (k) of this section.

* * * * *

■ 9. Amend § 438.10 by—

■ a. Revising paragraphs (c)(3), (d)(2), (g)(2)(ix), (h)(1) introductory text;

■ b. Adding paragraph (h)(1)(ix);

■ c. Revising paragraph (h)(2)(iv);

■ d. Adding paragraph (h)(3)(iii); and

■ e. Revising paragraph (j).

The revisions and additions read as follows:

§ 438.10 Information requirements.

* * * * *

(c) * * *

(3) The State must operate a website that provides the content, either directly or by linking to individual MCO, PIHP, PAHP, or PCCM entity web pages, specified at § 438.602(g) and elsewhere in this part. States must:

(i) Include all content, either directly or by linking to individual MCO, PIHP, PAHP, or PCCM entity websites, on one web page;

(ii) Include clear and easy to understand labels on documents and links;

(iii) Verify no less than quarterly, the accurate function of the website and the timeliness of the information presented; and

(iv) Explain that assistance in accessing the required information on the website is available at no cost and include information on the availability of oral interpretation in all languages and written translation available in each prevalent non-English language, how to request auxiliary aids and services, and a toll-free and TTY/TDY telephone number.

* * * * *

(d) * * *

(2) Make oral interpretation available in all languages and written translation available in each prevalent non-English language. Written materials that are critical to obtaining services for potential enrollees and experience surveys for enrollees must include taglines in the prevalent non-English languages in the State, explaining the availability of written translations or oral interpretation to understand the information provided, information on how to request auxiliary aids and services, and the toll-free telephone number of the entity providing choice counseling services as required by § 438.71(a). Taglines for written materials critical to obtaining services must be printed in a conspicuously-visible font size.

* * * * *

(g) * * *

(2) * * *

(ix) Enrollee rights and responsibilities, including the elements specified in § 438.100 and, if applicable, § 438.3(e)(2)(ii).

* * * * *

(h) * * *

(1) Each MCO, PIHP, PAHP, and when appropriate, the PCCM entity, must make available in paper form upon request and searchable electronic form, the following information about its network providers:

* * * * *

(ix) Whether the provider offers covered services via telehealth.

(2) * * *

(iv) Mental health and substance use disorder providers; and

* * * * *

(3) * * *

(iii) MCOs, PIHPs, or PAHPs must use the information received from the State pursuant to § 438.68(f)(1)(iii) to update provider directories no later than the timeframes specified in (h)(3)(i) and (ii).

* * * * *

(j) *Applicability.* States will not be held out of compliance with the requirements of paragraph (c)(3) of this section prior to the first rating period for contracts with MCOs, PIHPs, or PAHPs beginning on or after 2 years after [insert the effective date of the final rule], so long as they comply with the corresponding standard(s) codified in paragraph (c)(3) of this section contained in the 42 CFR, parts 430 to 481, most recently published before the final rule. States will not be held out of compliance with the requirements of paragraph (d)(2) of this section prior to the first rating period for contracts with MCOs, PIHPs, or PAHPs beginning on or after 3 years after the [insert the effective date of the final rule], so long as they comply with the corresponding standard(s) codified in paragraphs (d)(2) of this section contained in the 42 CFR, parts 430 to 481, most recently published before the final rule. States will not be held out of compliance with the requirements of paragraph (h)(1) of this section prior to July 1, 2025, so long as they comply with the corresponding standard(s) codified in paragraph (h)(1) of this section contained in the 42 CFR, parts 430 to 481, most recently published before the final rule. States will not be held out of compliance with the requirements of paragraph (h)(1)(ix) of this section prior to July 1, 2025. Paragraph (h)(3)(iii) of this section applies to the first rating period for contracts with MCOs, PIHPs and PAHPs beginning on or after 4 years after [insert the effective date of the final rule].

* * * * *

■ 10. Add § 438.16 to read as follows:

§ 438.16 In lieu of services and settings (ILOS) requirements.

(a) *Definitions.* As used in this part, the following terms have the indicated meanings:

Final ILOS cost percentage is the annual amount calculated, in accordance with paragraph (c)(3) of this section, specific to each managed care program that includes ILOS.

Projected ILOS cost percentage is the annual amount calculated, in accordance with paragraph (c)(2) of this section, specific to each managed care program that includes ILOS.

Summary report of actual MCO, PIHP, and PAHP ILOS costs is the report calculated, in accordance with paragraph (c)(4) of this section, specific to each managed care program that includes ILOS.

(b) *General rule.* An ILOS must be approvable as a service or setting through a waiver under section 1915(c) of the Act or a State plan amendment, including section 1905(a), 1915(i), or 1915(k) of the Act.

(c) *ILOS Cost Percentage and summary report of actual MCO, PIHP, and PAHP ILOS costs.*

(1) General rule. (i) The projected ILOS cost percentage calculated as required in paragraph (c)(2) of this section may not exceed 5 percent and the final ILOS cost percentage calculated as required in paragraph (c)(3) of this section may not exceed 5 percent.

(ii) The projected ILOS cost percentage, the final ILOS cost percentage, and the summary report of actual MCO, PIHP, and PAHP ILOS costs must be calculated on an annual basis and recalculated annually.

(iii) The projected ILOS cost percentage, the final ILOS cost percentage, and the summary report of actual MCO, PIHP, and PAHP ILOS costs must be certified by an actuary and developed in a reasonable and appropriate manner consistent with generally accepted actuarial principles and practices.

(2) *Calculation of the projected ILOS cost percentage.* The projected ILOS cost percentage is the result of dividing the amount determined in paragraph (c)(2)(i) of this section by the amount determined in paragraph (c)(2)(ii) of this section.

(i) The portion of the total capitation payments that is attributable to all ILOSs, excluding a short term stay in an

IMD as specified in § 438.6(e), for each managed care program.

(ii) The projected total capitation payments for each managed care program, including all State directed payments in effect under § 438.6(c) and pass-through payments in effect under § 438.6(d), and the projected total State directed payments in effect under § 438.6(c) that are paid as a separate payment term as described in § 438.6(c)(6).

(3) *Calculation of the final ILOS cost percentage.* The final ILOS cost percentage is the result of dividing the amount determined in paragraph (c)(3)(i) of this section by the amount determined in paragraph (c)(3)(ii) of this section.

(i) The portion of the total capitation payments that is attributable to all ILOSs, excluding a short term stay in an IMD as specified in § 438.6(e), for each managed care program.

(ii) The actual total capitation payments, defined at § 438.2, for each managed care program, including all State directed payments in effect under § 438.6(c) and pass-through payments in effect under § 438.6(d), and the actual total State directed payments in effect under § 438.6(c) that are paid as a separate payment term as described in § 438.6(c)(6).

(4) *Summary report of actual MCO, PIHP, and PAHP ILOS costs.* The State must submit to CMS a summary report of the actual MCO, PIHP and PAHP costs for delivering ILOSs based on the claims and encounter data provided by the MCO(s), PIHP(s) and PAHP(s).

(5) *CMS review of the projected ILOS cost percentage, the final ILOS cost percentage and the summary report of actual MCO, PIHP and PAHP ILOS costs.*

(i) The State must annually submit the projected ILOS cost percentage to CMS for review as part of the rate certification required in § 438.7(a).

(ii) The State must submit the final ILOS cost percentage and the summary report of actual MCO, PIHP, and PAHP ILOS costs annually to CMS for review as a separate report concurrent with the rate certification submission required in § 438.7(a) for the rating period beginning 2 years after the completion of each 12-month rating period that includes an ILOS.

(d) *Documentation requirements*—(1) *State requirements.* All States that include an ILOS in an MCO, PIHP, or PAHP contract are required to include, at minimum, the following:

(i) The name and definition of each ILOS;

(ii) The covered service or setting under the State plan for which each ILOS is a medically appropriate and cost-effective substitute;

(iii) The clinically defined target populations for which each ILOS is determined to be medically appropriate and cost effective;

(iv) The process by which a licensed network or MCO, PIHP, or PAHP staff provider, determines and documents in the enrollee's records that each identified ILOS is medically appropriate for the specific enrollee;

(v) The enrollee rights and protections, as defined in § 438.3(e)(2)(ii); and

(vi) A requirement that the MCO, PIHP, or PAHP will utilize specific codes established by the State that identify each ILOS in encounter data, as required under § 438.242.

(2) *Additional documentation requirements.* A State with a projected ILOS cost percentage that exceeds 1.5 percent is also required to provide the following documentation concurrent with the contract submission for review and approval by CMS under § 438.3(a).

(i) A description of the process and supporting evidence the State used to determine that each ILOS is a medically appropriate service or setting for the clinically defined target population(s), consistent with paragraph (d)(1)(iii) of this section.

(ii) A description of the process and supporting data the State used to determine that each ILOS is a cost-effective substitute for the clinically defined target population(s), consistent with paragraph (d)(1)(iii) of this section.

(3) *Provision of additional information.* At the request of CMS, the State must provide additional information, whether part of the MCO, PIHP or PAHP contract, rate certification or supplemental materials, if CMS determines that the requested information is pertinent to the review and approval of a contract that includes ILOS.

(e) *Monitoring, evaluation and oversight.* (1) *Retrospective evaluation.* A State with a final ILOS cost percentage that exceeds 1.5 percent, is required to submit at least one retrospective evaluation of ILOS to CMS. The retrospective evaluation must:

(i) Be completed separately for each managed care program that includes an ILOS.

(ii) Be completed using the 5 most recent years of accurate and validated data for the ILOS. The State must utilize these data to at least evaluate cost, utilization, access, grievances and appeals, and quality of care for each ILOS.

(iii) Evaluate at least:

(A) The impact each ILOS had on utilization of State plan approved services or settings, including any associated cost savings;

(B) Trends in MCO, PIHP, or PAHP and enrollee use of each ILOS;

(C) Whether encounter data supports the State's determination that each ILOS is a medically appropriate and cost-effective substitute for the identified covered service and setting under the State plan or a cost-effective measure to reduce or prevent the future need to utilize the covered service and setting under the State plan;

(D) The impact of each ILOS on quality of care;

(E) The final ILOS cost percentage for each year consistent with the report in paragraph (c)(5)(ii) of this section with a declaration of compliance with the allowable threshold in paragraph (c)(1)(i) of this section;

(F) Appeals, grievances, and State fair hearings data, reported separately, related to each ILOS, including volume, reason, resolution status, and trends; and

(G) The impact each ILOS had on health equity efforts undertaken by the State to mitigate health disparities.

(iv) The State must submit the retrospective evaluation to CMS no later than 2 years after the completion of the first 5 rating periods that included ILOS.

(v) CMS reserves the right to require the State to submit additional retrospective evaluations to CMS.

(2) *Oversight.* Oversight for each ILOS must include the following:

(i) *State notification requirement.* The State must notify CMS within 30 calendar days if:

(A) The State determines that an ILOS is no longer a medically appropriate or cost effective substitute for the covered service or setting under the State plan identified in the contract as required in paragraph (d)(1)(ii) of this section; or

(B) The State identifies noncompliance with requirements in this section.

(ii) *CMS oversight process.* If CMS determines that a State is out of compliance with any requirement in this part or receives a State notification in paragraph (e)(2)(i) of this section, CMS may require the State to terminate the use of an ILOS.

(iii) *Process for termination of ILOS.* When a State decides to terminate an ILOS, an MCO, PIHP or PAHP decides to cease offering an ILOS to its enrollees, or CMS makes the decision to require the State to terminate an ILOS, the State must submit an ILOS transition plan to CMS for review and approval within 15 calendar days of the

decision. The transition plan must include at least the following:

(A) A process to notify enrollees of the termination of an ILOS that they are currently receiving as expeditiously as the enrollee's health condition requires.

(B) A transition of care policy, not to exceed 12 months, to arrange for State plan services and settings to be provided timely and with minimal disruption to care to any enrollee who is currently receiving the ILOS that will be terminated. The State must make the transition of care policy publicly available.

(C) An assurance the State will submit the modification of the MCO, PIHP, or PAHP contract to remove the ILOS and submission of the modified contracts to CMS as required in § 438.3(a), and a reasonable timeline for submitting the contract amendment.

(D) An assurance the State and its actuary will submit an adjustment to the actuarially sound capitation rate, as needed, to remove utilization and cost of the ILOS from capitation rates as required in §§ 438.4, 438.7(a) and 438.7(c)(2), and a reasonable timeline for submitting the revised rate certification.

(f) *Applicability date.* Section 438.16 applies to the rating period for contracts with MCOs, PIHPs and PAHPs beginning on or after 60 days following [insert the effective date of the final rule].

■ 11. Amend § 438.66 by revising paragraphs (b)(4), (c)(5), (e)(2)(vi) and (vii), and (e)(3)(i), and (f) to read as follows:

§ 438.66 State monitoring requirements.

* * * * *

(b) * * *

(4) Enrollee materials, enrollee experience, and customer services, including the activities of the beneficiary support system.

* * * * *

(c) * * *

(5) Results from an annual enrollee experience survey conducted by the State and any provider satisfaction survey conducted by the State or MCO, PIHP, or PAHP.

* * * * *

(e) * * *

(2) * * *

(vi) Availability and accessibility of covered services, including any ILOS, within the MCO, PIHP, or PAHP contracts, including network adequacy standards.

(vii) Evaluation of MCO, PIHP, or PAHP performance on quality measures and results of an enrollee experience survey, including as applicable, consumer report card, provider surveys, or other reasonable measures of performance.

* * * * *

(3) * * *

(i) Posted on the website required under § 438.10(c)(3) within 30 calendar days of submitting it to CMS.

* * * * *

(f) With respect to applicability, States will not be held out of compliance with the requirements of paragraphs (b) through (c) of this section prior to the first rating period for contracts with MCOs, PIHPs, or PAHPs beginning on or after 3 years after [insert the effective date of the final rule], so long as they comply with the corresponding standard(s) codified in § 438.66 contained in the 42 CFR, parts 430 to 481, edition most recently published prior to the final rule.

■ 12. Amend § 438.68 by—

■ a. Revising paragraphs (b)(1) introductory text, (b)(1)(iii), (d)(1), (d)(2) and (e); and

■ b. Adding paragraphs (f) through (h).

The revisions and additions read as follows:

§ 438.68 Network adequacy standards.

* * * * *

(b) * * *

(1) *Provider types.* At a minimum, a State must develop a quantitative network adequacy standard, other than appointment wait times, for the following provider types, if covered under the contract:

* * * * *

(iii) Mental health and substance use disorder, adult and pediatric.

* * * * *

(d) * * *

(1) To the extent the State permits an exception to any of the provider-specific network standards developed under this section, the standard by which the exception will be evaluated and approved must:

(i) Be specified in the MCO, PIHP or PAHP contract.

(ii) Be based, at a minimum, on the number of providers in that specialty practicing in the MCO, PIHP, or PAHP service area.

(iii) Include consideration of the payment rates offered by the MCO, PIHP, or PAHP to the provider type for which an exception is being requested.

(2) States that grant an exception in accordance with paragraph (d)(1) of this section to an MCO, PIHP or PAHP must monitor enrollee access to that provider type on an ongoing basis and include the findings to CMS in the managed care program assessment report required under § 438.66(e).

(e) *Appointment wait time standards.* States must establish and enforce appointment wait time standards.

(1) *Routine appointments.* Standards must be established for routine appointments with the following provider types and within the specified limits:

(i) If covered in the MCO's, PIHP's, or PAHP's contract, outpatient mental health and substance use disorder, adult and pediatric, within State-established time frames but no longer than 10 business days from the date of request.

(ii) If covered in the MCO's, PIHP's, or PAHP's contract, primary care, adult and pediatric, within State-established time frames but no longer than 15 business days from the date of request.

(iii) If covered in the MCO's, PIHP's, or PAHP's contract, obstetrics and gynecological within State-established time frames but no longer than 15 business days from the date of request.

(iv) State-selected, other than those listed in paragraphs (e)(1)(i) through (iii) of this section, chosen in an evidence-based manner within State-established time frames.

(2) *Minimum compliance.* MCOs, PIHPs, and PAHPs will be deemed compliant with the standards established in paragraph (e)(1) of this section when secret shopper results, consistent with paragraph (f)(2) of this section, reflect a rate of appointment availability that meets the standards established at paragraph (e)(1)(i) through (iv) of at least 90 percent.

(3) *Selection of additional types of providers.* After consulting with States and other interested parties and providing public notice and opportunity to comment, CMS may select additional types of providers to be added to paragraph (e)(1) of this section.

(f) *Secret shopper surveys.* States must contract with an entity, independent of the State Medicaid agency and any of its contracted MCOs, PIHPs and PAHPs subject to the survey, to conduct annual secret shopper surveys of each MCO's, PIHP's, and PAHP's compliance with the provider directory requirements in § 438.10(h) as specified in paragraph (f)(1) of this section and appointment wait time requirements as specified in paragraph (f)(1) of this section.

(1) *Provider directories.* (i) A secret shopper survey must be conducted to determine the accuracy of the information specified in paragraph (f)(1)(ii) of this section in each MCO's, PIHP's, and PAHP's most current electronic provider directories, as required at § 438.10(h), for the following provider types:

(A) Primary care providers, if they are included in the MCO's, PIHP's, or PAHP's provider directory;

(B) Obstetric and gynecological providers, if they are included in the MCO's, PIHP's, or PAHP's provider directory;

(C) Outpatient mental health and substance use disorder providers, if they are included in the MCO's, PIHP's, or PAHP's provider directory; and

(D) The provider type chosen by the State in (e)(1)(iv).

(ii) A secret shopper survey must assess the accuracy of the information in each MCO's, PIHP's, and PAHP's most current electronic provider directories for at least:

(A) The active network status with the MCO, PIHP, or PAHP;

(B) The street address(es) as required at § 438.10(h)(1)(ii);

(C) The telephone number(s) as required at § 438.10(h)(1)(iii); and

(D) Whether the provider is accepting new enrollees as required at § 438.10(h)(1)(vi).

(iii) States must receive information, sufficient to facilitate correction by the MCO, PIHP, or PAHP, on errors in directory data identified in secret shopper surveys from the entity conducting the secret shopper survey no later than 3 business days from the day the error is identified by the entity conducting the secret shopper survey.

(iv) States must send information required in paragraph (f)(1)(iii) of this section to the applicable MCO, PIHP, or PAHP no later than 3 business days from receipt.

(2) *Timely appointment access.* A secret shopper survey must be used to determine each MCO's, PIHP's, and PAHP's rate of network compliance with the appointment wait time standards in paragraph (e)(1) of this section.

(i) After consulting with States and other interested parties and providing public notice and opportunity to comment, CMS may select additional types of appointments to be added to a secret shopper survey.

(ii) Appointments offered via telehealth can only be counted toward compliance with the appointment wait time standards in paragraph (e)(1) of this section if the provider being surveyed also offers in-person appointments to the MCO's, PIHP's, or PAHP's enrollees and must be identified separately from in-person appointments in survey results.

(3) *Independence.* An entity will be considered independent of the State as specified in paragraph (f)(3)(i) of this section and independent of the MCOs, PIHPs, or PAHPs subject to the surveys as specified in paragraph (f)(3)(ii) of this section.

(i) An entity will be considered independent of the State if it is not part of the State Medicaid agency.

(ii) An entity will be considered independent of an MCO, PIHP, or PAHP subject to the secret shopper surveys if the entity is not an MCO, PIHP, or PAHP, is not owned or controlled by any of the MCOs, PIHPs, or PAHPs subject to the surveys, and does not own or control any of the MCOs, PIHPs, or PAHPs subject to the surveys.

(4) *Methodological standards.* Secret shopper surveys required in this paragraph must:

(i) Use a random sample;

(ii) Include all areas of the State covered by the MCO's, PIHP's, or PAHP's contract; and

(iii) For secret shopper surveys required in paragraph (f)(2) of this section for appointment wait time standards, be completed for a statistically valid sample of providers.

(5) *Results reporting.* Results of the secret shopper surveys conducted pursuant to paragraphs (f)(1) and (2) of this section must be analyzed, summarized, and:

(i) Reported to CMS using the content, form, and submission times as specified at § 438.207(d); and

(ii) Posted on the State's website required at § 438.10(c)(3) within 30 calendar days of submission to CMS.

(g) *Publication of network adequacy standards.* States must publish the standards developed in accordance with paragraphs (b)(1) and (2), and (e) of this section on the website required by § 438.10(c)(3). Upon request, network adequacy standards must also be made available at no cost to enrollees with disabilities in alternate formats or through the provision of auxiliary aids and services.

(h) *Applicability.* States will not be held out of compliance with the requirements of paragraph (b)(1) and of this section prior to the first rating period beginning on or after 3 years after [insert the effective date of the final rule], so long as they comply with the corresponding standard(s) codified in paragraphs (b) of this section contained in the 42 CFR, parts 430 to 481, most recently published before the final rule. Paragraph (d)(1)(iii) of this section applies to the first rating period for contracts with MCOs, PIHPs and PAHPs beginning on or after 2 years after [insert the effective date of the final rule]. Paragraph (e) of this section applies to the first rating period for contracts with MCOs, PIHPs and PAHPs beginning on or after 3 years after [insert the effective date of the final rule]. Paragraph (f) of this section applies to the first rating period for contracts with MCOs, PIHPs and PAHPs beginning on or after 4 years after [insert the effective date of the final rule]. States will not be held out of compliance with the requirements of paragraph (g) of this section prior to the first rating period that begins on or after 3 years after [insert the effective date of the final rule], so long as they comply with the corresponding standard(s) codified in paragraph (g) of this section contained in the 42 CFR, parts 430 to 481, most recently published before the final rule.

■ 13. Amend § 438.74 by revising paragraph (a) to read as follows:

§ 438.74 State oversight of the minimum MLR requirement.

(a) *State reporting requirement.* (1) The State must annually submit to CMS a summary description of each report(s) received from the MCO(s), PIHP(s), and PAHP(s) under contract with the State, according to § 438.8(k), with the rate certification required in § 438.7.

(2) The summary description must be provided for each MCO, PIHP, or PAHP under contract with the State and must include, at a minimum, the amount of the numerator, the amount of the denominator, the MLR percentage achieved, the number of member months, and any remittances owed by each MCO, PIHP, or PAHP for that MLR reporting year.

(3) The summary description must also include line items for:

(i) The amount of payments made under all contract arrangements that direct the MCO's, PIHP's, or PAHP's expenditures as specified in § 438.6(c)(1)(i) through (iii); and

(ii) Payments to the MCO, PIHP, or PAHP for expenditures approved under § 438.6(c)(1)(i) through (iii).

(4) Paragraph (a)(3) of this section applies to the rating period for contracts with MCOs, PIHPs, and PAHPs beginning on or after 60 days following [insert the effective date of the final rule].

* * * * *

■ 14. Amend § 438.206 by revising paragraphs (c)(1)(i) and (d) to read as follows:

§ 438.206 Availability of services.

* * * * *

(c) * * *

(1) * * *

(i) Meet and require its network providers to meet State standards for timely access to care and services taking into account the urgency of the need for services as well as appointment wait times specified in § 438.68(e).

* * * * *

(d) *Applicability date.* States will not be held out of compliance with the requirements of paragraphs (c)(1)(i) of this section prior to the first rating period that begins on or after 4 years after [insert the effective date of the final rule], so long as they comply with the corresponding standard(s) codified in paragraph (c)(1)(i) of this section contained in the 42 CFR, parts 430 to 481, most recently published before the final rule.

* * * * *

■ 15. Amend § 438.207—

■ a. In paragraph (b)(1), by removing the ''.'' at the end of the paragraph and adding in its place '';''.

■ b. In paragraph (b)(2), by removing the ''.'' at the end of the paragraph and adding in its place ''; and'';

■ c. By adding paragraph (b)(3);

■ d. By revising paragraphs (d) and (e);

■ e. By revising paragraph (f) and adding paragraph (g).

The revisions and additions read as follows:

§ 438.207 Assurances of adequate capacity and services.

* * * * *

(b) * * *

(3) Except as specified in paragraphs (b)(3)(iii) and (iv) of this section and if covered by the MCO's, PIHP's, or PAHP's contract, provides a payment analysis using paid claims data from the immediately prior rating period that demonstrates each MCO's, PIHP's, or PAHP's level of payment as specified in paragraphs (b)(3)(i) and (ii) of this section.

(i) The payment analysis must provide the total amount paid for evaluation and management current procedural terminology codes in the paid claims data from the prior rating period for primary care, OB/GYN, mental health, and substance use disorder services, as well as the percentage that results from dividing the total published Medicare payment rate for the same services.

(A) A separate total and percentage must be reported for primary care, obstetrics and gynecology, mental health, and substance use disorder services; and

(B) If the percentage differs between adult and pediatric services, the percentages must be reported separately.

(ii) For homemaker services, home health aide services, and personal care services, the payment analysis must provide the total amount paid and the percentage that results from dividing the total amount paid by the amount the State's Medicaid FFS program would have paid for the same services.

(A) A separate total and percentage must be reported for homemaker services, home health aide services, and personal care services; and

(B) If the percentage differs between adult and pediatric services, the percentages must be reported separately.

(iii) Payments by MCOs, PIHPS, and PAHPs for the services specified in § 438.207(b)(3)(i) but for which the MCO, PIHP, or PAHP is not the primary payer are excluded from the analysis required in this paragraph.

(iv) Services furnished by a Federally-qualified health center as defined in section 1905(l)(2) and services furnished by a rural health clinic as defined in section 1905(l)(1) are excluded from the analysis required in this paragraph.

* * * * *

(d) *State review and certification to CMS.* After the State reviews the documentation submitted by the MCO, PIHP, or PAHP as specified in paragraph (b) of this section and the secret shopper evaluation results as required at § 438.68(f), the State must submit an assurance of compliance to CMS, in the format prescribed by CMS, that the MCO, PIHP, or PAHP meets the State's requirements for availability of services, as set forth in §§ 438.68 and 438.206.

(1) The submission to CMS must include documentation of an analysis that supports the assurance of the adequacy of the network for each contracted MCO, PIHP or PAHP related to its provider network.

(2) The analysis in paragraph (d)(1) of this section must include the payment analysis submitted by each MCO, PIHP, or PAHP, as required in paragraph (b)(3) of this section, and contain:

(i) The data provided by each MCO, PIHP, and PAHP in paragraph (b)(3) of this section; and

(ii) A State level payment percentage for each service type specified in paragraphs (b)(3)(i) and (ii) of this section produced by using the number of member months for the applicable rating period to weight each MCO's, PIHP's, or PAHP's reported percentages, as required in paragraph (b)(3) of this section.

(3) States must submit the assurance of compliance required in paragraph (d) of this section as specified in paragraphs (i) through (iii) of this section and post the report on the State's website required in § 438.10(c)(3) within 30 calendar days of submission to CMS.

(i) At the time it submits a completed readiness review, as specified at § 438.66(d)(1)(iii).

(ii) On an annual basis and no later than 180 calendar days after each rating period.

(iii) At any time there has been a significant change as specified in paragraph (c)(3) of this section and with the submission of the associated contract, as required at § 438.3(a).

(e) *CMS' right to inspect documentation.* The State must make available to CMS, upon request, all documentation collected by the State from the MCO, PIHP, or PAHP as well as documentation from all secret shopper surveys required at § 438.68(f).

(f) *Remedy plans to improve access.* (1) When the State, MCO, PIHP, PAHP, or CMS identifies an area in which an MCO's, PIHP's, or PAHP's access to care under the access standards in this part could be improved, including the standards at §§ 438.68 and 438.206, the State must:

(i) Submit to CMS for approval a remedy plan as specified in paragraph (f)(ii) of this section no later than 90 calendar days following the date that the State becomes aware of an MCO's, PIHP's, or PAHP's access issue;

(ii) Develop a remedy plan that addresses the identified access issue within 12 months and that identifies specific steps with timelines for implementation and completion, and responsible parties. State's and managed care plans' actions may include a variety of approaches, including, but not limited to: increasing payment rates to providers, improving outreach and problem resolution to providers, reducing barriers to provider credentialing and contracting, providing for improved or expanded use of telehealth, and improving the timeliness and accuracy of processes such as claim payment and prior authorization;

(iii) Ensure that improvements in access are measurable and sustainable; and

(iv) Submit quarterly progress updates to CMS on implementation of the remedy plan.

(2) If the remedy plan required in paragraph(f)(1) of this section does not result in addressing the MCO's, PIHP's, or PAHP's access issue by improving access within 12 months, CMS may require the State to continue the remedy plan for another 12 months and may require revision to the remedy plan required in paragraph (f)(1) of this section.

(g) *Applicability date.* Paragraphs (b)(3) and (d)(2) of this section apply to the first rating period for contracts with MCOs, PIHPs, or PAHPs beginning on or after 2 years after [insert the effective date of the final rule]. Paragraph (d)(3) of this section applies to the first rating period beginning on or after 1 year after [insert the effective date of the final rule]. States will not be held out of

compliance with the requirements of paragraph (e) of this section prior to the rating period beginning on or after 4 year after [insert the effective date of the final rule], so long as they comply with the corresponding standard(s) codified in paragraph (e) of this section contained in the 42 CFR, parts 430 to 481, most recently published before the final rule. Paragraph (f) of this section applies to the first rating period for contracts with MCOs, PIHPs, or PAHPs beginning on or after 4 years after [EFFECTIVE DATE OF THE FINAL RULE].

■ 16. Amend § 438.214 is amended by—
■ a. Revising paragraph (b)(1); and
■ b. Adding paragraph (d)(2).

The revision and addition read as follows:

§ 438.214 Provider Selection.

* * * * *

(b) * * *

(1) Each State must establish a uniform credentialing and recredentialing policy that addresses acute, primary, mental health, substance use disorders, and LTSS providers, as appropriate, and requires each MCO, PIHP and PAHP to follow those policies.

* * * * *

(d) * * *

(2) States must ensure through its contracts that MCOs, PIHPs, and PAHPs terminate any providers of services or persons terminated (as described in section 1902(kk)(8) of the Social Security Act) from participation under this title, title XVIII, or title XXI from participating as a provider in any network.

* * * * *

■ 17. Amend § 438.310 by revising paragraphs (b)(5) introductory text, (c)(2), and (d) to read as follows:

§ 438.310 Basis, scope, and applicability.

* * * * *

(b) * * *

(5) Requirements for annual external quality reviews of each contracting MCO, PIHP, PAHP including—

* * * * *

(c) * * *

(2) The provisions of § 438.330(b)(2) and (3), (c), and (e), and § 438.340 apply to States contracting with PCCM entities whose contracts with the State provide for shared savings, incentive payments or other financial reward for the PCCM entity for improved quality outcomes.

* * * * *

(d) *Applicability dates.* States will not be held out of compliance with the following requirements of this subpart prior to the dates noted below so long as they comply with the corresponding standard(s) in 42 CFR part 438 contained in the 42 CFR parts 430 to 481, edition revised as of [insert effective date of final rule]:

(1) States must comply with § 438.330(d)(4) no later than the rating period for contracts beginning after [insert the effective date of the final rule].

(2) States must comply with updates to § 438.340 no later than 1 year from [insert the effective date of the final rule].

(3) States must comply with updates to §§ 438.358 and 438.364(c)(2)(iii) no later than December 31, 2025.

(4) States must comply with § 438.364(a)(2)(iii) no later 1 year from the issuance of the associated protocol.

■ 18. Amend § 438.330 by revising paragraph (d)(4) to read as follows:

§ 438.330 Quality assessment and performance improvement program.

* * * * *

(d) * * *

(4) The State may permit an MCO, PIHP, or PAHP exclusively serving dual eligibles to substitute an MA organization chronic care improvement program conducted under § 422.152(c) of this chapter for one or more of the performance improvement projects otherwise required under this section.

* * * * *

§ 438.334 [Removed and reserved]

■ 19. Section 438.334 is removed and reserved.

■ 20. Amend § 438.340 by revising paragraphs (b)(4), (c)(1) introductory text, (c)(2)(ii), and (c)(3) to read as follows:

§ 438.340 Managed care State quality strategy.

* * * * *

(b) * * *

(4) Arrangements for annual, external independent reviews, in accordance with § 438.350, of the quality outcomes and timeliness of, and access to, the services covered under each MCO, PIHP, and PAHP contract.

* * * * *

(c) * * *

(1) Make the strategy available for public comment before submitting the strategy to CMS for review in accordance with paragraph (c)(3) of this section, including:

* * * * *

(2) * * *

(ii) The State must make the results of the review, including the evaluation conducted pursuant to paragraph (c)(2)(i) of this section, available on the website required under § 438.10(c)(3).

* * * * *

(3) Prior to adopting as final, submit to CMS the following:

(i) A copy of the initial strategy for CMS comment and feedback.

(ii) A copy of the strategy—

(A) Every 3 years following the review in paragraph (c)(2) of this section;

(B) Whenever significant changes, as defined in the State's quality strategy per paragraph (b)(10) of this section, are made to the document;

(C) Whenever significant changes occur within the State's Medicaid program.

* * * * *

§ 438.344 [Removed and reserved]

■ 21. Remove and reserve 438.344.

■ 22. Amend § 438.350 by revising the introductory text and paragraph (a) to read as follows:

§ 438.350 External quality review.

Each State that contracts with MCOs, PIHPs, or PAHPs must ensure that—

(a) Except as provided in § 438.362, a qualified EQRO performs an annual EQR for each such contracting MCO, PIHP, or PAHP.

* * * * *

■ 23. Amend § 438.354 by revising paragraph (c)(2)(iii) to read as follows:

§ 438.354 Qualifications of external quality review organizations.

* * * * *

(c) * * *

(2) * * *

(iii) Conduct, on the State's behalf, ongoing Medicaid managed care program operations related to oversight of the quality of MCO, PIHP, PAHP, or PCCM entity (described in § 438.310(c)(2)) services that it will review as an EQRO, except for the related activities specified in § 438.358;

* * * * *

■ 24. Amend § 438.358 by—
■ a. Revising paragraph (a)(1);
■ b. Adding paragraph (a)(3);
■ c. Revising paragraphs (b)(1) introductory text, (b)(1)(i), (ii), and (iv);
■ d. Removing and reserving paragraph (b)(2);
■ e. Revising paragraph (c) introductory text and (c)(6); and
■ f. Adding paragraph (c)(7).

The revisions read as follows:

§ 438.358 Activities related to external quality review.

(a) * * *

(1) The State, its agent that is not an MCO, PIHP, or PAHP or an EQRO may perform the mandatory and optional EQR-related activities in this section.

* * * * *

(3) For the EQR-related activities described in § 438.350(b)(1) and (c) of

this subpart (except § 438.350(b)(1)(iii)), the review period begins on the first day of the most recently concluded contract year or calendar year, whichever is nearest to the date of the EQR-related activity, and is 12 months in duration.

(b) * * *

(1) For each MCO, PIHP, or PAHP the following EQR-related activities must be performed in the 12 months preceding the finalization of the annual report:

(i) Validation of performance improvement projects required in accordance with § 438.330(b)(1) that were underway during the EQR review period per paragraph (a)(3) of this section.

(ii) Validation of MCO, PIHP, or PAHP performance measures required in accordance with § 438.330(b)(2) or MCO, PIHP, or PAHP performance measures calculated by the State during the EQR review period described in paragraph (a)(3) of this section.

* * * * *

(iv) Validation of MCO, PIHP, or PAHP network adequacy during the EQR review period per paragraph (a)(3) of this section to comply with requirements set forth in § 438.68 and, if the State enrolls Indians in the MCO, PIHP, or PAHP, § 438.14(b)(1).

(2) [Reserved]

(c) *Optional activities.* For each MCO, PIHP, PAHP, and PCCM entity (described in § 438.310(c)(2)), the following activities may be performed in the 12 months preceding the annual report by using information derived during the EQR review period described in paragraph (a)(3) of this section:

* * * * *

(6) Assist with the quality rating of MCOs, PIHPs, and PAHPs consistent with 42 CFR part 438, subpart G.

(7) Assist with evaluations required under §§ 438.16(e)(1), 438.340(c)(2)(i), and 438.6(c)(2)(iv) and (v) pertaining to outcomes, quality, or access to health care services

* * * * *

■ 25. Amend § 438.360 by revising paragraph (a)(1) to read as follows:

§ 438.360 Nonduplication of mandatory activities with Medicare or accreditation review.

(a) * * *

(1) The MCO, PIHP, or PAHP is in compliance with the applicable Medicare Advantage standards established by CMS, as determined by CMS or its contractor for Medicare, or has obtained accreditation from a private accrediting organization recognized by CMS;

* * * * *

■ 26. Amend § 438.362 by revising paragraph (b)(2) paragraph heading and (b)(2)(i) to read as follows:

§ 438.362 Exemption from external quality review.

* * * * *

(b) * * *

(2) *Medicare information from a private accrediting organization.* (i) If an exempted MCO has been reviewed by a private accrediting organization, the State must require the MCO to provide the State with a copy of all findings pertaining to its most recent accreditation review if that review has been used to fulfill certain requirements for Medicare external review under subpart D of part 422 of this chapter.

* * * * *

■ 27. Amend § 438.364 by revising paragraphs (a)(1), (a)(2)(iii), (a)(3) through (6), (c)(1) and (c)(2) to read as follows:

§ 438.364 External quality review results.

(a) * * *

(1) A description of the manner in which the data from all activities conducted in accordance with § 438.358 were aggregated and analyzed, and conclusions were drawn as to the quality, timeliness, and access to the care furnished by the MCO, PIHP, or PAHP.

(2) * * *

(iii) The data and a description of data obtained, including validated performance measurement, any outcomes data and results from quantitative assessments, for each activity conducted in accordance with § 438.358(b)(1)(i), (ii) and (iv) of this subpart; and

* * * * *

(3) An assessment of each MCO's, PIHP's, or PAHP's-strengths and weaknesses for the quality, timeliness, and access to health care services furnished to Medicaid beneficiaries.

(4) Recommendations for improving the quality of health care services furnished by each MCO, PIHP, or PAHP, including how the State can target goals and objectives in the quality strategy, under § 438.340, to better support improvement in the quality, timeliness, and access to health care services furnished to Medicaid beneficiaries.

(5) Methodologically appropriate, comparative information about all MCOs, PIHPs, or PAHPs, consistent with guidance included in the EQR protocols issued in accordance with § 438.352(e).

(6) An assessment of the degree to which each MCO, PIHP, or PAHP has addressed effectively the recommendations for quality improvement made by the EQRO during the previous year's EQR.

* * * * *

(c) * * *

(1) The State must contract with a qualified EQRO to produce and submit to the State an annual EQR technical report in accordance with paragraph (a) of this section. The State must finalize the annual technical report by December 31st of each year.

(2) The State must—

(i) Post the most recent copy of the annual EQR technical report on the website required-under § 438.10(c)(3) by December 31st of each year and notify CMS, in a form and manner determined by CMS, within 14 calendar days of the Web posting.

(ii) Provide printed or electronic copies of the information specified in paragraph (a) of this section, upon request, to interested parties such as participating health care providers, enrollees and potential enrollees of the MCO, PIHP, or PAHP beneficiary advocacy groups, and members of the general public.

(iii) Maintain at least the previous 5 years of EQR technical reports on the on the website required under § 438.10(c)(3).

* * * * *

■ 28. Subpart G is added to part 438 to read as follows:

Subpart G—Medicaid Managed Care Quality Rating System

Sec.

§ 438.500 Definitions.

(a) Definitions. As used in this subpart, the following terms have the indicated meanings:

Measurement period means the period for which data are collected for a measure or the performance period that a measure covers.

Measurement year means the first calendar year and each calendar year thereafter for which a full calendar year of claims and encounter data necessary to calculate a measure are available.

Medicaid managed care quality rating system framework (QRS framework) means the mandatory measure set identified by CMS in the Medicaid and CHIP managed care quality rating

system technical resource manual described in § 438.530, the methodology for calculating quality ratings described in § 438.515, and the website display described in § 438.520 of this subpart.

Medicare Advantage and Part D 5-Star Rating System (MA and Part D quality rating system) means the rating system described in subpart D of parts 422 of 423 of this chapter.

Qualified health plan rating system (QHP quality rating system) means the health plan quality rating system developed in accordance with 45 CFR 156.1120.

Quality rating means the numeric or other value of a quality measure or an assigned indicator that data for the measure is not available.

Technical resource manual means the guidance described in § 438.530.

Validation means the review of information, data, and procedures to determine the extent to which they are accurate, reliable, free from bias, and in accord with standards for data collection and analysis.

§ 438.505 General rule and applicability.

(a) *General rule.* As part of its quality assessment and improvement strategy for its managed care program, each State contracting with an applicable managed care plan, as described in paragraph (b) of this section, to furnish services to Medicaid beneficiaries must—

(1)(i) Adopt the QRS framework developed by CMS; or

(ii) Adopt an alternative managed care quality rating system in accordance with § 438.525 of this subpart.

(2) Implement such managed care quality rating system by the end of the fourth calendar year following [the effective date of the final rule published in the **Federal Register**], unless otherwise specified in this subpart.

(3) Use the State's beneficiary support system implemented under § 438.71 to provide the services identified at § 438.71(b)(1)(i) and (ii) to beneficiaries, enrollees, or both seeking assistance using the managed care quality rating system implemented by the State under this subpart.

(b) *Applicability.* The provisions of this subpart apply to States contracting with MCOs, PIHPs, and PAHPs for the delivery of services covered under Medicaid. The provisions of this subpart do not apply to States contracting with Medicare Advantage Dual Eligible Special Needs Plans for only Medicaid coverage of Medicare cost sharing.

(c) *Continued alignment.* To maintain the QRS framework, CMS aligns the mandatory measure set and methodology described in § 438.510 and § 438.515 of this subpart, to the extent appropriate, with the qualified health plan quality rating system developed in accordance with 45 CFR 156.1120, the MA and Part D quality rating system, and other similar CMS quality measurement and rating initiatives.

§ 438.510 Mandatory QRS measure set for Medicaid managed care quality rating system.

(a) *Measures required.* The quality rating system implemented by the State must include the measures in the mandatory QRS measure set identified by CMS in the Medicaid and CHIP managed care quality rating system technical resource manual, and may include other measures identified by the State as described in § 438.520(b).

(b) *Subregulatory process to update mandatory measure set.* Subject to paragraph (d) of this section, CMS will update the mandatory measure set at least every other year, including the addition, removal or updating of mandatory measures after:

(1) Engaging with States and other interested parties (such as State officials, measure experts, health plans, beneficiary advocates, tribal organizations, health plan associations, and external quality review organizations) to evaluate the current mandatory measure set and make recommendations to add, remove or update existing measures based on the criteria and standards in paragraph (c) of this section; and

(2) Providing public notice and opportunity to comment through a call letter (or similar subregulatory process using written guidance) on any planned modifications to the mandatory measure set following the engagement described in paragraph (b)(1) of this section.

(c) *Standards for adding mandatory measures.* Based on available relevant information, including the input received during the process described in paragraph (b) of this section, CMS will add a measure in the mandatory measure set when each of the following standards are met:

(1) The measure meets at least 5 of the following criteria:

(i) Is meaningful and useful for beneficiaries or their caregivers when choosing a managed care plan;

(ii) Aligns with other CMS programs described in § 438.505(c);

(iii) Measures health plan performance in at least one of the following areas: customer experience, access to services, health outcomes, quality of care, health plan administration, and health equity;

(iv) Presents an opportunity for managed care plans to influence their performance on the measure;

(v) Is based on data that are available without undue burden on States and plans such that it is feasible to report by many States and managed care plans;

(vi) Demonstrates scientific acceptability, meaning that the measure, as specified, produces consistent and credible results;

(2) The proposed measure contributes to balanced representation of beneficiary subpopulations, age groups, health conditions, services, and performance areas within a concise mandatory measure set, and

(3) The burdens associated with including the measure does not outweigh the benefits to the overall quality rating system framework of including the new measure based on the criteria listed in paragraph (c)(1).

(d) *Removing mandatory measures.* CMS may remove existing mandatory measures from the mandatory measure set if—

(1) After following the process described in paragraph (b) of this section, CMS determines that the measure no longer meets the standards described in paragraph (c) of this section;

(2) The measure steward (other than CMS) retires or stops maintaining a measure;

(3) CMS determines that the clinical guidelines associated with the specifications of the measure change such that the specifications no longer align with positive health outcomes; or

(4) CMS determines that the measure shows low statistical reliability under the standard identified in §§ 422.164(e) and 423.184(e) of this chapter.

(e) *Updating existing mandatory measures.* CMS will modify the existing mandatory measures that undergo measure technical specifications updates as follows—

(1) *Non-substantive updates.* CMS will update changes to the technical specifications for a measure made by the measure steward; such changes will be in the technical resource manual issued under paragraph (f) of this section and § 438.530. Examples of non-substantive updates include, but are not limited to, those that:

(i) Narrow the denominator or population covered by the measure.

(ii) Do not meaningfully impact the numerator or denominator of the measure.

(iii) Update the clinical codes with no change in the target population or the intent of the measure.

(iv) Provide additional clarifications such as:

(A) Adding additional tests that would meet the numerator requirements;

(B) Clarifying documentation requirements;

(C) Adding additional instructions to identify services or procedures; or

(D) Adding alternative data sources or expanding of modes of data collection to calculate a measure.

(2) *Substantive updates.* CMS may adopt substantive updates to a mandatory measure not subject to paragraph (e)(1)(i) through (iv) of this section only after following the process specified in paragraph (b) of this section.

(f) *Finalization and display of mandatory measures and updates.* CMS will finalize modifications to the mandatory measure set and the timeline for State implementation of such modifications in the technical resource manual. For new or substantively updated measures, CMS will provide each State with at least 2 calendar years from the start of the measurement year immediately following the release of the annual technical resource manual in which the modification to the mandatory measure set is finalized to display measurement results and ratings using the new or updated measure(s).

§ 438.515 Medicaid managed care quality rating system methodology.

(a) For each measurement year, the State—

(1) Must collect the data necessary to calculate quality ratings for each quality measure described in § 438.510(a) of this subpart from:

(i) The State's contracted managed care plans that have 500 or more enrollees from the State's Medicaid program on July 1 of the measurement year; and

(ii) Sources of Medicare data (including Medicare Advantage plans, Medicare providers, and CMS), the State's Medicaid fee-for-service providers, or both if all data necessary to calculate a measure cannot be provided by the managed care plans described in paragraph (a)(1) of this section and such data are available for collection by the State without undue burden.

(2) Must ensure that all data collected under paragraph (a)(1) of this section are validated.

(3) Must use the validated data described in paragraph (a)(2) of this section and the methodology described in paragraph (b) of this section to calculate for each quality measure described in § 438.510(a) of this subpart, a measure performance rate for each managed care plan whose contract includes a service or action assessed by the measure, as determined by the State.

(4) Must issue quality ratings to each managed care plan for each measure calculated for the plan under paragraph (a)(3) of this section.

(b) Subject to § 438.525, the State must ensure that the quality ratings issued under paragraph (a)(4) of this section:

(1) Include data for all enrollees who receive coverage through the managed care plan for a service or action for which data are necessary to calculate the quality rating for the managed care plan, including data for enrollees who are dually eligible for both Medicare and Medicaid, subject to the availability of data under paragraph (a)(1)(ii) of this section.

(2) Are issued to each managed care plan at the plan level, by managed care program, so that a plan participating in multiple managed care programs is issued distinct ratings for each program in which it participates resulting in quality ratings that are representative of services provided only to those beneficiaries enrolled in the plan through the rated program.

(c) After engaging with States, beneficiaries, and other interested parties, CMS will propose to implement domain-level quality ratings, including care domains for which States would be required to calculate and assign domain-level quality ratings for managed care plans, a methodology to calculate such ratings, and website display requirements for displaying such ratings on the MAC QRS website display described in § 438.520.

§ 438.520 Website display.

(a) In a manner that complies with the accessibility standards outlined in § 438.10(d) of this part and in a form and manner specified by CMS, the State must prominently display on the website required under § 438.10(c)(3):

(1) Information necessary for users to understand and navigate the contents of the QRS website display, including:

(i) A statement of the purpose of the Medicaid managed care quality rating system, relevant information on Medicaid, CHIP and Medicare and an overview of how to use the information available in the display to select a quality managed care plan;

(ii) Information on how to access the beneficiary support system described in § 438.71 to answer questions about using the State's managed care quality rating system to select a managed care plan; and

(iii) If users must input user-specific information to access or use the QRS, an explanation of why the information is requested, how it will be used, and whether it is optional or required.

(2) Information that allows beneficiaries to identify managed care plans available to them that align with their coverage needs and preferences including:

(i) All available managed care programs and plans for which a user may be eligible based on the user's age, geographic location, and dually eligible status, if applicable, as well as other demographic data identified by CMS;

(ii) A description of the drug coverage for each managed care plan, including the formulary information specified in § 438.10(i) and other similar information as specified by CMS;

(iii) Provider directory information for each managed care plan including all information required by § 438.10(h)(1) and (2) and such other provider information as specified by CMS;

(iv) Quality ratings described at § 438.515(a)(4) that are calculated by the State for each managed care plan in accordance with § 438.515 for mandatory measures identified by CMS in the technical resource manual, and

(v) The quality ratings described in § 438.520(a)(2)(iv) calculated by the State for each managed care plan in accordance with § 438.515 for mandatory measures identified by CMS, stratified by dual eligibility status, race and ethnicity, and sex.

(3) Standardized information identified by CMS that allows users to compare available managed care plans and programs, including:

(i) The name of each managed care plan;

(ii) An internet hyperlink to each managed care plan's website and each available managed care plan's toll-free customer service telephone number;

(iii) Premium and cost-sharing information including differences in premium and cost-sharing among available managed care plans within a single program;

(iv) A summary of benefits including differences in benefits among available managed care plans within a single program;

(v) Certain metrics, as specified by CMS, of managed care plan performance that States must make available to the public under subparts B and D of this part, including data most recently reported to CMS on each managed care program pursuant to § 438.66(e) of this part and the results of the secret shopper survey specified in § 438.68(f) of this part;

(vi) If a managed care plan offers an integrated Medicare-Medicaid plan or a highly or fully integrated Medicare Advantage D–SNP (as those terms are defined in § 422.2 of this chapter), an indication that an integrated plan is

available and a link to the integrated plan's most recent rating under the Medicare Advantage and Part D 5-Star Rating System.

(4) Information on quality ratings displayed in accordance with paragraph (a)(2)(iv) of this section in a manner that promotes beneficiary understanding of and trust in the ratings, including:

(i) A plain language description of the importance and impact of each quality measure assigned a quality rating;

(ii) The measurement period during which the data used to calculate the quality rating was produced; and

(iii) Information on quality ratings data validation, including a plain language description of when, how and by whom the data were validated.

(5) Information or hyperlinks directing users to resources on how and where to apply for Medicaid and enroll in a Medicaid or CHIP plan.

(6) By a date specified by CMS, which shall be no earlier than 2 years after the implementation date for the quality rating system specified in § 438.505:

(i) A search tool that enables users to identify available managed care plans that provide coverage for a drug identified by the user;

(ii) A search tool that enables users to identify available managed care plans that include a provider identified by the user in the plan's network of providers; and

(iii) The quality ratings described in § 438.520(a)(iv) calculated by the State for each managed care plan in accordance with § 438.515 for mandatory measures identified by CMS, including the display of such measures stratified by dual eligibility status, race and ethnicity, sex, age, rural/urban status, disability, language of the enrollee, or other factors specified by CMS in the annual technical resource manual.

(iv) An interactive tool that enables users to view the quality ratings described at § 438.520(a)(iv), stratified by the factors described in paragraph (a)(6)(iii) of this section.

(b) If the State chooses to display quality ratings for additional measures not included in the mandatory measures set described in § 438.510(a), the State must:

(1) Obtain input on the additional measures, prior to their use, from prospective users, including beneficiaries, caregivers, and, if the State enrolls American Indians/Alaska Natives in managed care, consult with Tribes and Tribal Organizations in accordance with the State's Tribal consultation policy; and

(2) Document the input received from prospective users required under paragraph (b)(1) of this section, including modifications made to the additional measure(s) in response to the input and rationale for input not accepted.

(c) CMS will periodically consult with States and interested parties including Medicaid managed care quality rating system users to evaluate the website display requirements described in this section for continued alignment with beneficiary preferences and values.

§ 438.525 Alternative quality rating system.

(a) A State may implement an alternative Medicaid managed care quality rating system that applies an alternative methodology from that described in § 438.510(a)(3) provided that—

(1) The alternative quality rating system includes the mandatory measures identified by CMS under § 438.510(a)(1);

(2) The ratings generated by the alternative quality rating system yield information regarding managed care plan performance which, to the extent feasible, is substantially comparable to that yielded by the methodology described in § 438.515, taking into account such factors as differences in covered populations, benefits, and stage of delivery system transformation, to enable meaningful comparison of performance across States.

(3) The State receives CMS approval prior to implementing an alternative quality rating system or modifications to an approved alternative Medicaid managed care quality rating system.

(b) Prior to submitting a request for, or modification of, an alternative Medicaid managed care quality rating system to CMS, the State must—

(1) Obtain input from the State's Medical Care Advisory Committee established under § 431.12 of this chapter; and

(2) Provide an opportunity for public comment of at least 30 days on the proposed alternative Medicaid managed care quality rating system or modification.

(c) To receive CMS approval for an alternative quality rating system, a State must:

(1) Submit a request for, or modification of, an alternative Medicaid managed care quality rating system to CMS in a form and manner and by a date determined by CMS; and

(2) Include the following in the State's request for or modification of an alternative quality rating system:

(i) The alternative methodology to be used in generating plan ratings;

(ii) Documentation of the public comment process specified in paragraph (b)(1) and (2) this section, including discussion of the issues raised by the Medical Care Advisory Committee and any policy revisions or modifications made in response to the comments and rationale for comments not accepted;

(iii) Other information or documentation specified by CMS to demonstrate compliance with paragraph (a) of this section; and

(iv) Other supporting documents and evidence that the State believes demonstrates compliance with the requirements of (a)(2) of this section.

§ 438.530 Annual technical resource manual.

(a) No later than August 1, 2025, CMS will publish a Medicaid managed care quality rating system technical resource manual, and update it annually thereafter. The technical resource manual must include all of the following:

(1) Identification of all Medicaid managed care quality rating system measures, including:

(i) A list of the mandatory measures; and

(ii) Any measures newly added or removed from the prior year's mandatory measure set.

(iii) The subset of mandatory measures that must be displayed and stratified by factors such as race and ethnicity, sex, age, rural/urban status, disability, language, or such other factors as may be specified by the CMS in accordance with §§ 438.520(a)(2)(iv) and 438.520(a)(6)(iii).

(2) Guidance on the application of the methodology used to calculate and issue quality ratings as described in § 438.515.

(3) Measure steward technical specifications for mandatory measures.

(4) A summary of interested party engagement and public comments received during the public notice and comment process described in § 438.510(b) using the process identified in § 438.510(c) for the most recent modifications to the mandatory measure set including:

(i) Discussion of the feedback and recommendations received on potential modifications to mandatory measures;

(ii) The final modifications and the timeline by which such modifications must be implemented; and

(iii) The rationale for not accepting or implementing specific recommendations or feedback submitted during the consultation process.

(b) In developing and issuing the manual content described in paragraphs (a)(1) and (2) of this section, CMS will take into account whether stratification is currently required by the measure steward or other CMS programs and by

which factors when issuing guidance that identifies which measures, and by which factors, States must stratify mandatory measures.

§ 438.535 Reporting.

(a) Upon CMS' request, but no more frequently than annually, the State must submit a Medicaid managed care quality rating system report in a form and manner determined by CMS. Such report must include:

(1) A list of all mandatory measures displayed as required under § 438.520(a)(1)(i) and any additional measures the State chooses to include in the Medicaid managed care quality rating system as permitted under § 438.510(a).

(2) An attestation that all displayed quality ratings for mandatory measures were calculated and issued in compliance with § 438.515, and a description of the methodology used to calculate ratings for any additional measures, if such methodology deviates from the methodology in § 438.515.

(3) The documentation required under § 438.520(b)(2), if including additional measures in the State's Medicaid managed care quality rating system in accordance with § 438.520(c)(3).

(4) The date on which the State publishes or updates the quality ratings for the State's managed care plans.

(5) A link to the State's website for their Medicaid managed care quality rating system.

(6) The application of any technical specification adjustments used to calculate and issue quality ratings described in § 438.515(a)(3) and (4), at the plan- or State-level, that are outside a measure steward's allowable adjustments for a mandatory measure but that the measure steward has approved for use by the State.

(7) A summary of each alternative QRS approved by CMS, including the effective dates for each approved alternative QRS.

(b) States will be given no less than 90 days to submit such a report to CMS on their Medicaid managed care quality rating system.

■ 29. Amend § 438.602 by adding paragraphs (g)(5) through (13) and (j) to read as follows:

§ 438.602 State responsibilities.

* * * * *

(g) * * *

(5) Enrollee handbooks, provider directories, and formularies required at § 438.10(g), (h), and (i).

(6) The information on rate ranges required at § 438.4(c)(2)(iv), if applicable.

(7) The reports required at § 438.66(e) and § 438.207(d).

(8) The network adequacy standards required at § 438.68(b)(1) through (2) and (e).

(9) The results of secret shopper surveys required at § 438.68(f).

(10) State directed payment evaluation reports required in § 438.6(c)(2)(v)(C).

(11) Information on all required Application Programming Interfaces including as specified in § 431.60(d) and (f).

(12) Quality related information as required in §§ 438.332(c)(1), 438.340(d), 438.362(c) and 438.364(c)(2)(i).

(13) Documentation of compliance with requirements in Subpart K—Parity in Mental Health and Substance Use Disorder Benefits.

* * * * *

(j) *Applicability.* Paragraphs (g)(5) through (13) apply to the first rating period for contracts with MCOs, PIHPs and PAHPs beginning on or after 2 years after [EFFECTIVE DATE OF THE FINAL RULE].

■ 30. Amend § 438.608 by revising paragraphs (a)(2) and (d)(3) and adding paragraph (e) to read as follows:

§ 438.608 Program integrity requirements under the contract.

(a) * * *

(2) Provision for reporting within 10 business days all overpayments identified or recovered, specifying the overpayments due to potential fraud, to the State.

* * * * *

(d) * * *

(3) Each MCO, PIHP, or PAHP must report annually to the State on all overpayments identified or recovered.

* * * * *

(e) *Standards for provider incentive or bonus arrangements.* The State, through its contract with the MCO, PIHP or PAHP, must require that incentive payment contracts between managed care plans and network providers meet the requirements as specified in §§ 438.3(i)(3) and (4).

PART 457—ALLOTMENTS AND GRANTS TO STATES

■ 31. The authority citation for part 457 continues to read as follows:

Authority: 42 U.S.C. 1302.

■ 32. Amend § 457.10 by adding the definition of ''In lieu of service or setting (ILOS)'' in alphabetical order to read as follows:

§ 457.10 Definitions and use of terms.

* * * * *

In lieu of service or setting (ILOS) is defined as provided in § 438.2 of this chapter.

* * * * *

■ 33. Amend § 457.1200 by adding paragraph (d) to read as follows:

§ 457.1200 Basis, scope, and applicability.

* * * * *

(d) *Applicability dates.* States must comply with the requirements of this subpart by the dates established at §§ 438.3(v), 438.16(f), 438.68(h), 438.206(d) and 438.310(d) of this chapter.

■ 34. Amend § 457.1201 by revising paragraphs (c), (e), and (n)(2) to read as follows:

§ 457.1201 Standard contract requirements.

* * * * *

(c) *Payment.* The final capitation rates for all MCO, PIHP or PAHP contracts must be identified and developed, and payment must be made in accordance with §§ 438.3(c) and 438.16(c)(1) through (3) of this chapter, except that the requirement for preapproval of contracts, certifications by an actuary, annual cost reports, contract arrangements described in § 438.6(c), and references to pass through payments do not apply, and contract rates must be submitted to CMS upon request of the Secretary.

* * * * *

(e*) Services that may be covered by an MCO, PIHP, or PAHP.* An MCO, PIHP, or PAHP may cover, for enrollees, services that are not covered under the State plan in accordance with §§ 438.3(e) and 438.16(b), (d), and (e) of this chapter, except that references to § 438.7, IMDs, and rate certifications do not apply and that references to enrollee rights and protections under part 438 should be read to refer to the rights and protections under subparts K and L of this part.

* * * * *

(n) * * *

(2) Contracts with PCCMs must comply with the requirements of paragraph (o) of this section; § 457.1207; § 457.1240(b) (cross-referencing § 438.330(b)(2), (b)(3), (c), and (e) of this chapter); § 457.1240(e) (cross-referencing § 438.340 of this chapter).

* * * * *

■ 35. Amend § 457.1203 by revising paragraphs (e) and (f) to read as follows:

§ 457.1203 Rate development standards and medical loss ratio.

* * * * *

(e) The State must comply with the requirements related to medical loss ratios in accordance with the terms of

§ 438.74 of this chapter, except contract arrangements described in § 438.6(c) do not apply and the description of the reports received from the MCOs, PIHPs and PAHPs under § 438.8(k) of this chapter will be submitted independently, and not with the rate certification described in § 438.7 of this chapter.

(f) The State must ensure, through its contracts, that each MCO, PIHP, and PAHP complies with the requirements in § 438.8 of this chapter, except that contract arrangements described in § 438.6(c) do not apply.

■ 36. Revise § 457.1207 to read as follows:

§ 457.1207 Information requirements.

The State must provide, or ensure its contracted MCO, PAHP, PIHP, PCCM, and PCCM entities provide, all enrollment notices, informational materials, and instructional materials related to enrollees and potential enrollees in accordance with the terms of § 438.10 of this chapter, except that the terms of § 438.10(c)(2), (g)(2)(xi)(E), and (g)(2)(xii) of this chapter do not apply and that references to enrollee rights and protections under part 438 should be read to refer to the rights and protections under subparts K and L of this part. The State must annually post comparative summary results of enrollee experience surveys by managed care plan on the State's website as described at § 438.10(c)(3) of this chapter.

■ 37. Amend § 457.1230 by revising paragraph (b) to read as follows:

§ 457.1230 Access standards.

* * * * *

(b) *Assurances of adequate capacity and services.* The State must ensure, through its contracts, that each MCO, PIHP and PAHP has adequate capacity to serve the expected enrollment in accordance with the terms of § 438.207 of this chapter, except that the reporting requirements in § 438.207(d)(3)(i) of this chapter do not apply. The State must evaluate the most recent annual enrollee experience survey results as required at section 2108(e)(4) of the Act as part of the State's analysis of network adequacy as described at § 438.207(d) of this chapter.

* * * * *

■ 38. Amend § 457.1240 by revising paragraphs (d) and (f) to read as follows:

§ 457.1240 Quality measurement and improvement.

* * * * *

(d) *Managed care quality rating system.* The State must determine a quality rating or ratings for each MCO, PIHP, and PAHP in accordance with the requirements set forth subpart G of part 438 of this chapter, except that references to dually eligible beneficiaries, a beneficiary support system, and the terms of § 438.525(b)(1) and (c)(2)(ii) of this chapter related to consultation with the Medical Care Advisory Committee do not apply.

* * * * *

(f) *Applicability to PCCM entities.* For purposes of paragraphs (b) and (e) of this section, a PCCM entity described in this paragraph is a PCCM entity whose contract with the State provides for shared savings, incentive payments or other financial reward for improved quality outcomes.

■ 39. Amend § 457.1250 by revising paragraph (a) to read as follows:

§ 457.1250 External quality review.

(a) Each State that contracts with MCOs, PIHPs, or PAHPs must follow all applicable external quality review requirements as set forth in §§ 438.350 (except for references to § 438.362), 438.352, 438.354, 438.356, 438.358 (except for references to § 438.6), 438.360 (only with respect to nonduplication of EQR activities with private accreditation) and 438.364 of this chapter.

* * * * *

■ 40. Revise § 457.1285 to read as follows:

§ 457.1285 Program integrity safeguards.

The State must comply with the program integrity safeguards in accordance with the terms of subpart H of part 438 of this chapter, except that the terms of §§ 438.66(e), 438.362(c), 438.602(g)(6) and (10), 438.604(a)(2), 438.608(d)(4) and references to LTSS of this chapter do not apply and that references to subpart K under part 438 should be read to refer to parity requirements at § 457.496.

Dated: April 24, 2023.

Xavier Becerra,

Secretary, Department of Health and Human Services.

BILLING CODE 4120–01–P

FEDERAL REGISTER

Vol. 88 Wednesday,
No. 85 May 3, 2023

Part IV

United States Sentencing Commission

Sentencing Guidelines for United States Courts; Notice

UNITED STATES SENTENCING COMMISSION

Sentencing Guidelines for United States Courts

AGENCY: United States Sentencing Commission.

ACTION: Notice of submission to Congress of amendments to the sentencing guidelines effective November 1, 2023, and request for comment.

SUMMARY: The United States Sentencing Commission hereby gives notice that the Commission has promulgated amendments to the sentencing guidelines, policy statements, commentary, and statutory index; and the Commission requests comment regarding whether Parts A and B of Amendment 8, relating to ''status points'' and certain offenders with zero criminal history points, should be included in the *Guidelines Manual* as an amendment that may be applied retroactively to previously sentenced defendants. This notice sets forth the text of the amendments and the reason for each amendment, and the request for comment regarding Parts A and B of Amendment 8.

DATES: *Effective Date of Amendments.* The Commission has specified an effective date of November 1, 2023, for the amendments set forth in this notice.

Written Public Comment. Written public comment regarding retroactive application of Parts A and B of Amendment 8, should be received by the Commission not later than June 23, 2023. Any public comment received after the close of the comment period may not be considered.

ADDRESSES: There are two methods for submitting public comment.

Electronic Submission of Comments. Comments may be submitted electronically via the Commission's Public Comment Submission Portal at *https://comment.ussc.gov.* Follow the online instructions for submitting comments.

Submission of Comments by Mail. Comments may be submitted by mail to the following address: United States Sentencing Commission, One Columbus Circle, NE, Suite 2–500, Washington, DC 20002–8002, Attention: Public Affairs—Issue for Comment on Retroactivity.

FOR FURTHER INFORMATION CONTACT: Jennifer Dukes, Senior Public Affairs Specialist, (202) 502–4597.

SUPPLEMENTARY INFORMATION: The United States Sentencing Commission is an independent agency in the judicial branch of the United States Government. The Commission promulgates sentencing guidelines and policy statements for federal courts pursuant to 28 U.S.C. 994(a). The Commission also periodically reviews and revises previously promulgated guidelines pursuant to 28 U.S.C. 994(o) and submits guideline amendments to the Congress not later than the first day of May each year pursuant to 28 U.S.C. 994(p). Absent action of the Congress to the contrary, submitted amendments become effective by operation of law on the date specified by the Commission (generally November 1 of the year in which the amendments are submitted to Congress).

(1) Amendments to the Sentencing Guidelines, Policy Statements, Official Commentary, and Statutory Index

Pursuant to its authority under 28 U.S.C. 994(p), the Commission has promulgated amendments to the sentencing guidelines, policy statements, commentary, and statutory index. Notice of the proposed amendment was published in the **Federal Register** on February 2, 2023 (*see* 88 FR 7180). The Commission held public hearings on the proposed amendments in Washington, DC, on February 23–24 and March 7–8, 2023. On April 27, 2023, the Commission submitted the promulgated amendments to the Congress and specified an effective date of November 1, 2023.

The text of the amendments to the sentencing guidelines, policy statements, commentary, and statutory index, and the reason for each amendment, is set forth below. Additional information pertaining to the amendments described in this notice may be accessed through the Commission's website at *www.ussc.gov.*

(2) Request for Comment on Parts A and B of Amendment 8, Relating to ''Status Points'' and Certain ''Zero-Point'' Offenders

This notice sets forth a request for comment regarding whether Parts A and B of Amendment 8, relating to the impact of ''status points'' at § 4A1.1 ((Criminal History Category) and offenders with zero criminal history points at new § 4C1.1 (Adjustment for Certain Zero-Point Offenders), should be included in subsection (d) of § 1B1.10 (Reduction in Term of Imprisonment as a Result of Amended Guideline Range (Policy Statement)) as an amendment that may be applied retroactively to previously sentenced defendants.

The Background Commentary to § 1B1.10 lists the purpose of the amendment, the magnitude of the change in the guideline range made by the amendment, and the difficulty of applying the amendment retroactively to determine an amended guideline range under § 1B1.10(b) as among the factors the Commission considers in selecting the amendments included in § 1B1.10(d). To the extent practicable, public comment should address each of these factors.

Authority: 28 U.S.C. 994(a), (o), (p), and (u); USSC Rules of Practice and Procedure 2.2, 4.1, and 4.1A.

Carlton W. Reeves,

Chair.

(1) Amendments to the Sentencing Guidelines, Policy Statements, Official Commentary, and Statutory Index

1. Amendment: Section 1B1.13 is amended—

by inserting at the beginning the following new heading: ''(a) *In General.*—'';

by striking ''Bureau of Prisons under'' and inserting ''Bureau of Prisons or the defendant pursuant to'';

and by inserting at the end the following:

''(b) *Extraordinary and Compelling Reasons.*—Extraordinary and compelling reasons exist under any of the following circumstances or a combination thereof:

(1) *Medical Circumstances of the Defendant.*—

(A) The defendant is suffering from a terminal illness (*i.e.,* a serious and advanced illness with an end-of-life trajectory). A specific prognosis of life expectancy (*i.e.,* a probability of death within a specific time period) is not required. Examples include metastatic solid-tumor cancer, amyotrophic lateral sclerosis (ALS), end-stage organ disease, and advanced dementia.

(B) The defendant is—

(i) suffering from a serious physical or medical condition,

(ii) suffering from a serious functional or cognitive impairment, or

(iii) experiencing deteriorating physical or mental health because of the aging process,

that substantially diminishes the ability of the defendant to provide self-care within the environment of a correctional facility and from which he or she is not expected to recover.

(C) The defendant is suffering from a medical condition that requires long-term or specialized medical care that is not being provided and without which the defendant is at risk of serious deterioration in health or death.

(D) The defendant presents the following circumstances—

(i) the defendant is housed at a correctional facility affected or at

imminent risk of being affected by (I) an ongoing outbreak of infectious disease, or (II) an ongoing public health emergency declared by the appropriate federal, state, or local authority;

(ii) due to personal health risk factors and custodial status, the defendant is at increased risk of suffering severe medical complications or death as a result of exposure to the ongoing outbreak of infectious disease or the ongoing public health emergency described in clause (i); and

(iii) such risk cannot be adequately mitigated in a timely manner.

(2) *Age of the Defendant.*—The defendant (A) is at least 65 years old; (B) is experiencing a serious deterioration in physical or mental health because of the aging process; and (C) has served at least 10 years or 75 percent of his or her term of imprisonment, whichever is less.

(3) *Family Circumstances of the Defendant.*—

(A) The death or incapacitation of the caregiver of the defendant's minor child or the defendant's child who is 18 years of age or older and incapable of self-care because of a mental or physical disability or a medical condition.

(B) The incapacitation of the defendant's spouse or registered partner when the defendant would be the only available caregiver for the spouse or registered partner.

(C) The incapacitation of the defendant's parent when the defendant would be the only available caregiver for the parent.

(D) The defendant establishes that circumstances similar to those listed in paragraphs (3)(A) through (3)(C) exist involving any other immediate family member or an individual whose relationship with the defendant is similar in kind to that of an immediate family member, when the defendant would be the only available caregiver for such family member or individual. For purposes of this provision, 'immediate family member' refers to any of the individuals listed in paragraphs (3)(A) through (3)(C) as well as a grandchild, grandparent, or sibling of the defendant.

(4) *Victim of Abuse.*—The defendant, while in custody serving the term of imprisonment sought to be reduced, was a victim of:

(A) sexual abuse involving a 'sexual act,' as defined in 18 U.S.C. 2246(2) (including the conduct described in 18 U.S.C. 2246(2)(D) regardless of the age of the victim); or

(B) physical abuse resulting in 'serious bodily injury,' as defined in the Commentary to § 1B1.1 (Application Instructions);

that was committed by, or at the direction of, a correctional officer, an employee or contractor of the Bureau of Prisons, or any other individual who had custody or control over the defendant.

For purposes of this provision, the misconduct must be established by a conviction in a criminal case, a finding or admission of liability in a civil case, or a finding in an administrative proceeding, unless such proceedings are unduly delayed or the defendant is in imminent danger.

(5) *Other Reasons.*—The defendant presents any other circumstance or combination of circumstances that, when considered by themselves or together with any of the reasons described in paragraphs (1) through (4), are similar in gravity to those described in paragraphs (1) through (4).

(6) *Unusually Long Sentence.*—If a defendant received an unusually long sentence and has served at least 10 years of the term of imprisonment, a change in the law (other than an amendment to the Guidelines Manual that has not been made retroactive) may be considered in determining whether the defendant presents an extraordinary and compelling reason, but only where such change would produce a gross disparity between the sentence being served and the sentence likely to be imposed at the time the motion is filed, and after full consideration of the defendant's individualized circumstances.

(c) *Limitation on Changes in Law.*—Except as provided in subsection (b)(6), a change in the law (including an amendment to the Guidelines Manual that has not been made retroactive) shall not be considered for purposes of determining whether an extraordinary and compelling reason exists under this policy statement. However, if a defendant otherwise establishes that extraordinary and compelling reasons warrant a sentence reduction under this policy statement, a change in the law (including an amendment to the Guidelines Manual that has not been made retroactive) may be considered for purposes of determining the extent of any such reduction.

(d) *Rehabilitation of the Defendant.*—Pursuant to 28 U.S.C. 994(t), rehabilitation of the defendant is not, by itself, an extraordinary and compelling reason for purposes of this policy statement. However, rehabilitation of the defendant while serving the sentence may be considered in combination with other circumstances in determining whether and to what extent a reduction in the defendant's term of imprisonment is warranted.

(e) *Foreseeability of Extraordinary and Compelling Reasons.*—For purposes of this policy statement, an extraordinary and compelling reason need not have been unforeseen at the time of sentencing in order to warrant a reduction in the term of imprisonment. Therefore, the fact that an extraordinary and compelling reason reasonably could have been known or anticipated by the sentencing court does not preclude consideration for a reduction under this policy statement.''.

The Commentary to § 1B1.13 captioned ''Application Notes'' is amended—

by striking Notes 1 through 5 as follows:

''1. *Extraordinary and Compelling Reasons.*—Provided the defendant meets the requirements of subdivision (2), extraordinary and compelling reasons exist under any of the circumstances set forth below:

(A) *Medical Condition of the Defendant.*—

(i) The defendant is suffering from a terminal illness (*i.e.,* a serious and advanced illness with an end of life trajectory). A specific prognosis of life expectancy (*i.e.,* a probability of death within a specific time period) is not required. Examples include metastatic solid-tumor cancer, amyotrophic lateral sclerosis (ALS), end-stage organ disease, and advanced dementia.

(ii) The defendant is—

(I) suffering from a serious physical or medical condition,

(II) suffering from a serious functional or cognitive impairment, or

(III) experiencing deteriorating physical or mental health because of the aging process,

that substantially diminishes the ability of the defendant to provide self-care within the environment of a correctional facility and from which he or she is not expected to recover.

(B) *Age of the Defendant.*—The defendant (i) is at least 65 years old; (ii) is experiencing a serious deterioration in physical or mental health because of the aging process; and (iii) has served at least 10 years or 75 percent of his or her term of imprisonment, whichever is less.

(C) *Family Circumstances.*—

(i) The death or incapacitation of the caregiver of the defendant's minor child or minor children.

(ii) The incapacitation of the defendant's spouse or registered partner when the defendant would be the only available caregiver for the spouse or registered partner.

(D) *Other Reasons.*—As determined by the Director of the Bureau of Prisons, there exists in the defendant's case an

extraordinary and compelling reason other than, or in combination with, the reasons described in subdivisions (A) through (C).

2. *Foreseeability of Extraordinary and Compelling Reasons.*—For purposes of this policy statement, an extraordinary and compelling reason need not have been unforeseen at the time of sentencing in order to warrant a reduction in the term of imprisonment. Therefore, the fact that an extraordinary and compelling reason reasonably could have been known or anticipated by the sentencing court does not preclude consideration for a reduction under this policy statement.

3. *Rehabilitation of the Defendant.*—Pursuant to 28 U.S.C. 994(t), rehabilitation of the defendant is not, by itself, an extraordinary and compelling reason for purposes of this policy statement.

4. *Motion by the Director of the Bureau of Prisons.*—A reduction under this policy statement may be granted only upon motion by the Director of the Bureau of Prisons pursuant to 18 U.S.C. 3582(c)(1)(A). The Commission encourages the Director of the Bureau of Prisons to file such a motion if the defendant meets any of the circumstances set forth in Application Note 1. The court is in a unique position to determine whether the circumstances warrant a reduction (and, if so, the amount of reduction), after considering the factors set forth in 18 U.S.C. 3553(a) and the criteria set forth in this policy statement, such as the defendant's medical condition, the defendant's family circumstances, and whether the defendant is a danger to the safety of any other person or to the community.

This policy statement shall not be construed to confer upon the defendant any right not otherwise recognized in law.

5. *Application of Subdivision (3).*—Any reduction made pursuant to a motion by the Director of the Bureau of Prisons for the reasons set forth in subdivisions (1) and (2) is consistent with this policy statement.'';

and by inserting the following new Notes 1 and 2:

''1. *Interaction with Temporary Release from Custody Under 18 U.S.C. 3622 ('Furlough').*—A reduction of a defendant's term of imprisonment under this policy statement is not appropriate when releasing the defendant under 18 U.S.C. 3622 for a limited time adequately addresses the defendant's circumstances.

2. *Notification of Victims.*—Before granting a motion pursuant to 18 U.S.C. 3582(c)(1)(A), the Commission encourages the court to make its best effort to ensure that any victim of the offense is reasonably, accurately, and timely notified, and provided, to the extent practicable, with an opportunity to be reasonably heard, unless any such victim previously requested not to be notified.''.

The Commentary to § 1B1.13 captioned ''Background'' is amended by striking ''the Commission is authorized'' and inserting ''the Commission is required''.

Reason for Amendment: This amendment responds to, among other things, the First Step Act of 2018 (''First Step Act''), Public Law 115–391, 603(b), 132 Stat. 5194, 5239, which amended 18 U.S.C. 3582(c)(1)(A) to authorize courts to grant a motion for a sentence reduction upon a defendant's own motion. Previously, a court was authorized to do so only upon the motion of the Director of the Bureau of Prisons (''BOP''). Congress amended the law for the express purpose, set forth on the face of the enactment, of ''increasing the use'' of sentence reduction motions under section 3582(c)(1)(A). First Step Act § 603(b).

Section 3582(c)(1)(A) authorizes a court to reduce a defendant's term of imprisonment if ''extraordinary and compelling reasons'' warrant a reduction and ''such a reduction is consistent with applicable policy statements issued by the Sentencing Commission.'' Congress directed the Commission to ''describe what should be considered extraordinary and compelling reasons for sentence reduction, including the criteria to be applied and a list of specific examples.'' Sentencing Reform Act of 1984 (''SRA''), Public Law 98–473, 98 Stat. 1987, 2023 (codified at 28 U.S.C. 994(t)). Congress also directed the Commission to promulgate general policy statements regarding the appropriate use of section 3582(c). 28 U.S.C. 994(a)(2)(C).

For more than 30 years, reductions pursuant to section 3582(c)(1)(A) could be granted only upon the motion of the BOP. BOP filed such motions extremely rarely—the number of defendants receiving relief averaged two dozen per year—and for the most part limited its motions to cases involving inmates who were expected to die within a year or were profoundly and irremediably incapacitated. U.S. Dep't of Just., Off. of the Inspector Gen., The Federal Bureau of Prisons' Compassionate Release Program, I–2013–006 1 & n.9 (2013).

Sentence reductions under section 3582(c)(1)(A) thus came to be known as ''compassionate release,'' though that phrase appears nowhere in the SRA and sentence reductions that do not result in immediate release are authorized by the law. BOP's sparing use of its authority persisted despite guidance from the Commission in 2007 that ''extraordinary and compelling reasons'' can be based on (a) the medical condition of the defendant, (b) the age of the defendant, (c) the defendant's family circumstances, and (d) reasons other than, or in combination with, those three specified ones. USSG App. C, amend. 698 (effective Nov. 1, 2007).

In 2018, the First Step Act put an end to BOP's gatekeeping function and allowed individuals to file motions for sentence reductions under the statute. Because the Commission lost its quorum in early 2019 and did not regain it until 2022, it was unable to amend § 1B1.13 during the more than four-year period since defendants were first permitted to file such motions. During those years, courts have found extraordinary and compelling reasons warranting sentence reductions based on all of the factors the Commission identified in 2007, *i.e.,* the three specified bases of medical condition, age, and family circumstances, and the ''other reasons'' catchall. Commission data indicate courts have hewed to the ''extraordinary and compelling'' requirement, *see* U.S. Sent'g Comm'n, Compassionate Release Data Report (Dec. 2022), at tbls. 10, 12, & 14, and while they have found such circumstances to be present in more cases than BOP had before the First Step Act, they have been judicious in granting relief.

Among other things, the amendment extends the applicability of the policy statement to defendant-filed motions; expands the list of specified extraordinary and compelling reasons that can warrant sentence reductions; retains the existing ''other reasons'' catchall; provides specific guidance with regard to the permissible consideration of changes in the law; and responds to case law that developed after the enactment of the First Step Act.

The amendment is informed by Commission data, including its analysis of the factors identified by courts in granting sentence reduction motions in the years since the First Step Act was signed into law. It is also informed by extensive public comment, including from the Department of Justice, the Federal Public and Community Defenders, the Commission's advisory groups, law professors, currently and formerly incarcerated individuals, and other stakeholders in the federal criminal justice system.

Applicability to Defendant-Filed Motions and Structural Revisions

The amendment revises § 1B1.13(a) to reflect that a defendant is now

authorized to file a motion under 18 U.S.C. 3582(c)(1)(A), making the policy statement applicable to both defendant-filed and BOP-filed motions.

The amendment also makes two structural changes to § 1B1.13. First, it moves the description of the permissible bases for a reduction from the Commentary to the policy statement itself.

Second, the amendment moves Application Notes 2 and 3 into the body of the policy statement as new subsections (e) and (d). Application Note 3 previously provided that, pursuant to 28 U.S.C. 994(t), rehabilitation of a defendant is not, by itself, an extraordinary and compelling reason for purposes of § 1B1.13. New subsection (d) adopts this same language but adds, consistent with the plain language of section 994(t) and courts' interpretations of it, that rehabilitation of the defendant while incarcerated may be considered *in combination* with other circumstances in determining whether extraordinary and compelling reasons warrant a sentence reduction. *See* U.S. Sent'g Comm'n, Compassionate Release Data Report (Dec. 2022), tbls. 10, 12 & 14 (showing that courts have frequently considered rehabilitation in connection with other factors when granting sentence reduction motions). Application Note 2 provided that ''an extraordinary and compelling reason need not have been unforeseen at the time of sentencing in order to warrant a reduction in the term of imprisonment.'' New subsection (e) retains this instruction without change.

Revisions to ''Extraordinary and Compelling Reasons''

The amendment expands the list of specified extraordinary and compelling reasons and retains the ''other reasons'' basis for a sentence reduction to better account for and reflect the plain language of section 3582(c)(1)(A), its legislative history, and decisions by courts made in the absence of a binding policy statement.

The list of specified ''extraordinary and compelling reasons'' is expanded by: (a) adding two new subcategories to the ''Medical Circumstances of the Defendant'' ground for relief; (b) making three modifications to the ''Family Circumstances'' ground; (c) adding a new ground called ''Victim of Abuse''; and (d) adding a new ground called ''Unusually Long Sentence,'' which permits a judge to consider a non-retroactive change in sentencing law as an extraordinary and compelling reason in specified circumstances.

The first of the two new subcategories under ''Medical Circumstances of the Defendant'' applies when a defendant is ''suffering from a medical condition that requires long-term or specialized medical care that is not being provided'' and who, without that care, ''is at risk of serious deterioration in health or death.'' The second applies when a defendant, due to personal health risk factors and custodial status, is at increased risk of suffering severe medical complications or death as a result of exposure to an ongoing outbreak of infectious disease or public health emergency. The amendment incorporates several factors courts considered during the COVID–19 pandemic related to the defendant's individual health circumstances, the level of risk at the defendant's facility, and the ability to adequately mitigate the defendant's individualized risk. The public health emergency prong requires that the emergency be declared by the appropriate governmental authority. These new subcategories reflect the medical circumstances not expressly identified in § 1B1.13 that were most often cited by courts in granting sentence reduction motions during the pandemic. *See* U.S. Sent'g Comm'n, Compassionate Release Data Report (Dec. 2022) tbls. 10, 12 & 14.

The second modification to the list of specified extraordinary and compelling reasons revises the ''Family Circumstances'' ground in three ways. First, it expands the existing provision relating to the death or incapacitation of the caregiver of a defendant's minor child to include a child who is 18 years of age or older and incapable of self-care because of a mental or physical disability or a medical condition. This expansion reflects the Commission's determination that providing care for a non-minor child with severe caretaking needs presents a circumstance similar to providing care for a minor child, as some courts have recognized. *See, e.g., United States* v. *Barnes,* No. 3:17-cr-00011, 2021 WL 1269783, at *4 (S.D. Ind. Jan. 29, 2021) (granting a sentence reduction to a defendant whose 21-year-old son had numerous physical and mental disabilities that required 24-hour care, finding these circumstances ''to be analogous to a minor child''). Second, the amendment adds a new provision for cases in which a defendant's parent is incapacitated and the defendant would be the only available caregiver. Other than the relationships specified in the current policy statement, a parent has been the family member most often identified as needing care by courts granting sentence reductions under § 3582(c)(1)(A). *See* U.S. Sent'g Comm'n, Compassionate Release: The Impact of the First Step Act and COVID–19 Pandemic (2022), at 32; *see also United States* v. *Bucci,* 409 F. Supp. 3d 1, 2 (D. Mass. 2019) (concluding that there is ''no reason to discount'' a defendant's caregiving role ''simply because the incapacitated family member is a parent and not a spouse,'' registered partner, or minor child). The third modification to the family circumstances ground for relief adds a provision that applies when the defendant establishes that similar circumstances exist with respect to a person whose relationship with the defendant is similar in kind to that of an immediate family member, and the defendant would be the only available caregiver. This provision recognizes the diversity of family structures in America, and that caretaking needs within all of those family structures may give rise to equally extraordinary and compelling circumstances. The amendment accords with decisions by courts after the First Step Act. *See, e.g., United States* v. *Griffin,* No. 1:95–cr–00751, 2020 WL 7295765, at *2–3 (S.D. Fla. Dec. 8, 2020) (granting release because the defendant was ''the only viable, adequate caregiver for his sister'' who had significant cognitive impairment due to vascular dementia and stroke); *United States* v. *Reyes,* No. 04–cr–970, 2020 WL 1663129, at *3 (N.D. Ill. Apr. 3, 2020) (granting defendant relief to assist in caring for his aunt with stage four cancer, recognizing ''non-traditional family arrangements and the need for others in the family to contribute when a relative is sick''). Relief is available under this subsection only if the defendant establishes both the qualifying relationship and that the defendant is the only available caregiver.

The third modification to the list of specified extraordinary and compelling reasons adds a ground for relief at new subsection (b)(4) (''Victim of Abuse''), which applies if a defendant has suffered sexual or physical abuse that was committed by or at the direction of a correctional officer, an employee or contractor of the BOP, or any other individual having custody or control over the defendant. This provision responds to the Department of Justice's (''DOJ'') suggestion that a sentence reduction may be appropriate where an individual in BOP custody has been determined to have been the victim of sexual assault perpetrated by BOP personnel. Principal Assoc. Deputy Att'y Gen. Working Grp. of DOJ Components, Dep't of Just., Report and

Recommendations Concerning the Department of Justice's Response to Sexual Misconduct by Employees of the Bureau of Prisons 22 (2022); *see also* Staff of Permanent S. Subcomm. on Investigations, 117th Cong., Rep. on Sexual Abuse of Female Inmates in Federal Prisons (Comm. Print 2022) (summarizing results of investigation into sexual abuse of federal prisoners in BOP custody). New subsection (b)(4) is limited to instances in which the defendant was a victim of either (a) sexual abuse involving a ''sexual act,'' as defined in 18 U.S.C. 2246(2) (including the conduct described in 18 U.S.C. 2246(2)(D) regardless of the age of the victim); or (b) physical abuse resulting in ''serious bodily injury,'' as defined at § 1B1.1, while in custody serving the term of imprisonment sought to be reduced. New subsection (b)(4) provides that the misconduct must be established by a conviction in a criminal case, a finding or admission of liability in a civil case, or a finding in an administrative proceeding, unless the defendant establishes that such proceedings are unduly delayed or the defendant is in imminent danger.

Apart from the specified extraordinary and compelling reasons, the amendment retains the ''Other Reasons'' catchall ground currently found in Application Note 1(D). It also makes clear that extraordinary and compelling reasons exist if the defendant presents any other circumstance or combination of circumstances that, considered by themselves or together with any of the reasons specified in paragraphs (1) through (4), are similar in gravity to those described in paragraphs (1) through (4). The Commission considered but specifically rejected a requirement that ''other reasons'' be similar in nature and consequence to the specified reasons. Rather, they need be similar only in gravity, a requirement that inheres in the statutory requirement that they present extraordinary and compelling reasons for a sentence reduction. *See* 18 U.S.C. 3582(c)(1)(A).

The Commission recognized that during the period between the enactment of the First Step Act in 2018 and this amendment, district courts around the country based sentence reductions on dozens of reasons and combinations of reasons. Based on a careful review of those cases, the Commission continues to believe what is stated in Application Note 4 to the current policy statement, *i.e.,* that judges are ''in a unique position to determine whether the circumstances warrant a reduction.'' Guidance beyond that provided in the amended policy statement regarding what circumstances or combination of circumstances are sufficiently extraordinary and compelling to warrant a reduction in sentence is best provided by reviewing courts, rather than through an effort by the Commission to predict and specify in advance all of the grounds on which relief may be appropriate.

The fifth modification to the list of specified extraordinary and compelling reasons appears in new subsection (b)(6) (''Unusually Long Sentence'') and permits non-retroactive changes in law (other than non-retroactive amendments to the Guidelines Manual) to be considered extraordinary and compelling reasons warranting a sentence reduction, but only in narrowly circumscribed circumstances. Specifically, where (a) the defendant is serving an unusually long sentence; (b) the defendant has served at least ten years of the sentence; and (c) an intervening change in the law has produced a gross disparity between the sentence being served and the sentence likely to be imposed at the time the motion is filed, the change in law can qualify as an extraordinary and compelling reason after the court has fully considered the defendant's individualized circumstances.

One of the expressed purposes of section 3582(c)(1)(A) when it was enacted in 1984 was to provide a narrow avenue for judicial relief from unusually long sentences. S. Rep. No. 98–225 (1983). Having abolished parole in the interest of certainty in sentencing, Congress recognized the need for such judicial authority. In effect, it replaced opaque Parole Commission review of every federal sentence with a transparent, judicial authority to consider reducing only a narrow subset of sentences—those presenting ''extraordinary and compelling'' reasons for a reduction.

Subsections (b)(6) and (c) operate together to respond to a circuit split concerning when, if ever, non-retroactive changes in law may be considered as extraordinary and compelling reasons within the meaning of section 3582(c)(1)(A). *Compare United States* v. *Ruvalcaba,* 26 F.4th 14, 16, 26–28 (1st Cir. 2022) (holding that non-retroactive changes in sentencing law may be considered in light of a defendant's particular circumstances), *United States* v. *McCoy,* 981 F.3d 271, 286–88 (4th Cir. 2020) (same), *United States* v. *Chen,* 48 F.4th 1092, 1098 (9th Cir. 2022) (same), *and United States* v. *McGee,* 992 F.3d 1035, 1047–48 (10th Cir. 2021) (same), *with United States* v. *Andrews,* 12 F.4th 255, 260–62 (3d Cir. 2021), *cert. denied,* 142 S. Ct. 1446 (2022) (holding that non-retroactive changes in law are not permissible considerations), *United States* v. *McMaryion,* 64 F.4th 257, 259–60 (5th Cir. 2023) (same), *United States* v. *McCall,* 56 F.4th 1048, 1061 (6th Cir. 2022) (en banc) (same), *United States* v. *King,* 40 F.4th 594, 595 (7th Cir. 2022) (same), *United States* v. *Crandall,* 25 F.4th 582, 585–86 (8th Cir. 2022) (same), *and United States* v. *Jenkins,* 50 F.4th 1185, 1198, 1198 (DC Cir. 2022) (same).

The Commission considered whether the foregoing split among the circuit courts of appeals was properly addressed by the Commission, which typically resolves such disagreements when they relate to its guidelines or policy statements, *see Braxton* v. *United States,* 500 U.S. 344 (1991), or by the Supreme Court. In making that determination, the Commission was influenced by the fact that on several occasions the Department of Justice successfully opposed Supreme Court review of the issue on the ground that it should be addressed first by the Commission. *See, e.g.,* Brief For the United States in Opposition to Grant of Certiorari, *Jarvis* v. *United States,* No. 21–568, 2021 WL 5864543 (U.S. Dec. 8, 2021); Memorandum For the United States in Opposition to Grant of Certiorari, *Watford* v. *United States,* No. 21–551, 2021 WL 5983234 (U.S. Dec. 15, 2021); Memorandum For the United States in Opposition to Grant of Certiorari, *Williams* v. *United States,* No. 21–767, 2022 WL 217947 (U.S. Jan. 24, 2022); Memorandum For the United States in Opposition to Grant of Certiorari, *Thacker* v. *United States,* No. 21–877, 2022 WL 467984 (U.S. Feb. 14, 2022).

The amendment agrees with the circuits that authorize a district court to consider non-retroactive changes in the law as extraordinary and compelling circumstances warranting a sentence reduction but adopts a tailored approach that narrowly limits that principle in multiple ways. First, it permits the consideration of such changes only in cases involving ''unusually long sentences,'' which the legislative history to the SRA expressly identified as a context in which sentence reduction authority is needed. *See* S. Rep. No. 98–225, at 55 (1983), *reprinted in* 1984 U.S.C.C.A.N. 3182, 3238–39. (''The Committee believes that there may be unusual cases in which the eventual reduction in the length of a term of imprisonment is justified by changed circumstances. These would include cases of severe illness, cases in which other extraordinary and compelling circumstances justify a reduction of an unusually long

sentence, and some cases in which the sentencing guidelines for the offense of which the defender [sic] was convicted have been later amended to prove a shorter term of imprisonment.''). Second, the change in law itself may be considered an extraordinary and compelling reason only where it would produce a gross disparity between the length of the sentence being served and the sentence likely to be imposed at the time the motion is filed. Finally, to address administrative concerns raised by some commenters, the amendment limits the application of this provision to individuals who have served at least 10 years of the sentence the motion seeks to reduce. Commission data show that between fiscal year 2013 and fiscal year 2022, fewer than 12 percent (11.5%) of all offenders were sentenced to a term of imprisonment of ten years or longer.

Subsection (b)(6) excludes from consideration as extraordinary and compelling reasons warranting a reduction in sentence changes to the Guidelines Manual that the Commission has not made retroactive. Public comment requested that the Commission clarify the interaction between § 1B1.13 and § 1B1.10, and the Commission determined that excluding non-retroactive changes to the guidelines from consideration as extraordinary and compelling reasons was consistent with § 1B1.10 and the Supreme Court's decision in *Dillon* v. *United States,* 560 U.S. 817 (2010).

To more fully address the proper role of changes in law in this context, the amendment also adds a new subsection (c) to the policy statement. Whereas subsection (b)(6) narrowly limits the circumstances in which a non-retroactive change in the law can constitute an extraordinary and compelling reason that itself can warrant a reduction in sentence, subsection (c) of the amended policy statement governs the use of changes in the law in cases where a defendant ''otherwise establishes that extraordinary and compelling reasons warrant a sentence reduction.'' In those circumstances, *all* changes in law, including non-retroactive amendments to the Guidelines Manual, may properly be considered in determining the extent of a sentencing reduction. For example, a defendant's motion may present the following circumstances: (a) commendable rehabilitation while incarcerated; (b) the offense conduct occurred when the defendant was in his late teens or early twenties; and (c) pursuant to intervening legislation or intervening Guidelines amendments, the sentence likely to be imposed at the time of the motion would be lower than the sentence being served, but not grossly so. In those circumstances, the change in law could not properly be considered an extraordinary and compelling reason warranting a reduction in sentence. However, if the court determines that the combination of the other two factors constitutes an extraordinary and compelling reason, the change in law is among the broad array of factors that may properly be considered in determining the extent of any such reduction. This aspect of the amendment is fully consistent with *Concepcion* v. *United States,* 142 S. Ct. 2389 (2022).

Finally, the requirements in subsection (b)(6) that the defendant be serving an unusually long sentence and have served at least ten years of such sentence are not applicable to cases not covered by that subsection. Those requirements apply only when a defendant seeks to have a non-retroactive change in law itself be considered an extraordinary and compelling reason warranting a reduction in sentence.

New Application Notes Regarding Interaction With 18 U.S.C. 3622 and Notification of Victims

The amendment also adds two new application notes to the Commentary to § 1B1.13. New Application Note 1 provides that a reduction under this policy statement is not appropriate when temporary release under 18 U.S.C. 3622 (a furlough granted by the Bureau of Prisons) ''adequately addresses'' the defendant's circumstances. This new application note responds to public comment, including comment from the Criminal Law Committee for the Judicial Conference of the United States, urging the Commission to clarify that this policy statement is not intended to address temporary medical or family circumstances that a BOP-granted furlough adequately addresses.

New Application Note 2 ''encourages the court to make its best effort to ensure that any victim of the offense is reasonably, accurately, and timely notified, and provided, to the extent practicable, with an opportunity to be reasonably heard, unless any such victim previously requested not to be notified.'' Although § 3582(c)(1)(A) does not require a court to conduct a public court proceeding before resolving a motion, and in many cases the passage of time can make victim identification and notification difficult, the Commission encourages the court to make its best effort to notify any victims and, to the extent public court proceedings are held, afford them an opportunity to be heard, unless the victim previously requested not to be notified.

Conforming Changes

Finally, as conforming changes, the amendment deletes Application Notes 4 and 5 and makes a minor technical change to the Background Commentary. Application Note 4 reflected that only the Bureau of Prisons could file a motion under 18 U.S.C. 3582(c)(1)(A) before the First Step Act and, as such, ''encourage[d] the Director of the Bureau of Prisons to file such a motion.'' Application Note 5 provided that ''[a]ny reduction made pursuant to a motion by the Director of the Bureau of Prisons for the reasons set forth in subdivisions (1) and (2) is consistent with this policy statement.'' These two application notes were deleted because a motion by the Director of the Bureau of Prisons is no longer required after the enactment of the First Step Act. The Background Commentary is also amended to reflect that the Commission is ''required,'' as opposed to ''authorized,'' to ''describe what should be considered extraordinary and compelling reasons for sentence reduction.''

2. Amendment: The Commentary to § 2A2.4 captioned ''Statutory Provisions'' is amended by striking ''18 U.S.C. §§ 111'' and inserting ''18 U.S.C. §§ 40A, 111''.

Section 2A5.2 is amended in the heading by striking ''Vehicle'' and inserting ''Vehicle; Unsafe Operation of Unmanned Aircraft''.

The Commentary to § 2A5.2 captioned ''Statutory Provisions'' is amended by striking ''18 U.S.C. § 1992(a)(1)'' and inserting ''18 U.S.C. § 39B, 1992(a)(1)''.

The Commentary to § 2B1.1 captioned ''Statutory Provisions'' is amended by striking ''7 U.S.C. § 6, 6b, 6c, 6h, 6o, 13, 23; 15 U.S.C. § 50, 77e, 77q, 77x, 78j, 78ff, 80b–6, 1644, 6821; 18 U.S.C. § 38, 225, 285–289, 471–473, 500, 510, 553(a)(1), 641, 656, 657, 659, 662, 664, 1001–1008, 1010–1014, 1016–1022, 1025, 1026, 1028, 1029, 1030(a)(4)–(5), 1031, 1037, 1040, 1341–1344, 1348, 1350, 1361, 1363, 1369, 1702, 1703 (if vandalism or malicious mischief, including destruction of mail, is involved), 1708, 1831, 1832, 1992(a)(1), (a)(5), 2113(b), 2282A, 2282B, 2291, 2312–2317, 2332b(a)(1), 2701; 19 U.S.C. § 2401f; 29 U.S.C. § 501(c); 42 U.S.C. § 1011; 49 U.S.C. 14915, 30170, 46317(a), 60123(b)'', and inserting ''5 U.S.C. §§ 8345a, 8466a; 7 U.S.C. § 6, 6b, 6c, 6h, 6o, 13, 23; 15 U.S.C. §§ 50, 77e, 77q, 77x, 78j, 78ff, 80b–6, 1644, 6821; 18 U.S.C. § 38, 220, 225, 285–289, 471–473, 500, 510, 553(a)(1), 641, 656, 657, 659, 662, 664, 1001–1008, 1010–1014,

1016–1022, 1025, 1026, 1028, 1029, 1030(a)(4)–(5), 1031, 1037, 1040, 1341–1344, 1348, 1350, 1361, 1363, 1369, 1702, 1703 (if vandalism or malicious mischief, including destruction of mail, is involved), 1708, 1831, 1832, 1992(a)(1), (a)(5), 2113(b), 2282A, 2282B, 2291, 2312–2317, 2332b(a)(1), 2701; 19 U.S.C. § 2401f; 20 U.S.C. 1097(a), (b), (d), (e); 29 U.S.C. 501(c); 42 U.S.C. §1011; 49 U.S.C. § 14915, 30170, 46317(a), 60123(b)''.

The Commentary to § 2B4.1 captioned ''Statutory Provisions'' is amended by striking ''18 U.S.C. § 215'' and inserting ''18 U.S.C. § 215, 220''.

Section 2G1.1(b)(1)(B) is amended by striking ''the offense involved fraud or coercion'' and inserting ''(i) the offense involved fraud or coercion; or (ii) the offense of conviction is 18 U.S.C. §§ 2421A(b)(2)''.

The Commentary to § 2G1.1 captioned ''Statutory Provisions'' is amended by striking ''2422(a) (only if the offense involved a victim other than a minor)'' and inserting ''2421A (only if the offense involved a victim other than a minor), 2422(a) (only if the offense involved a victim other than a minor). For additional statutory provision(s), *see* Appendix A (Statutory Index)''.

Section 2G1.3(b) is amended—

in paragraph (3) by striking ''increase by 2 levels'' and inserting ''increase by 2 levels. *Provided,* however, that subsection (b)(3)(B) shall not apply if the offense of conviction is 18 U.S.C. § 2421A'';

and in paragraph (4) by striking ''If (A) the offense involved the commission of a sex act or sexual contact; or (B) subsection (a)(3) or (a)(4) applies and the offense involved a commercial sex act, increase by 2 levels.'', and inserting the following:

''(Apply the greater):

(A) If (i) the offense involved the commission of a sex act or sexual contact; or (ii) subsection (a)(3) or (a)(4) applies and the offense involved a commercial sex act, increase by 2 levels.

(B) If (i) subsection (a)(4) applies; and (ii) the offense of conviction is 18 U.S.C. §§ 2421A(b)(2), increase by 4 levels.''.

The Commentary to § 2G1.3 captioned ''Statutory Provisions'' is amended by striking ''2422 (only if the offense involved a minor), 2423, 2425'' and inserting ''2421A (only if the offense involved a minor), 2422 (only if the offense involved a minor), 2423, 2425. For additional statutory provision(s), *see* Appendix A (Statutory Index)''.

The Commentary to § 2H3.1 captioned ''Statutory Provisions'' is amended by striking ''47 U.S.C. § 605'' and inserting ''44 U.S.C. § 3572; 47 U.S.C. § 605''.

The Commentary to § 2N1.1 captioned ''Statutory Provisions'' is amended by striking ''18 U.S.C. § 1365(a), (e)'' and inserting ''18 U.S.C. § 1365(a), (e); 21 U.S.C. 333(b)(7). For additional statutory provision(s), *see* Appendix A (Statutory Index)''.

The Commentary to § 2N2.1 captioned ''Statutory Provisions'' is amended by striking ''333(a)(1), (a)(2), (b)'' and inserting ''333(a)(1), (a)(2), (b)(1)–(6), (b)(8)''.

The Commentary to § 2S1.3 captioned ''Statutory Provisions'' is amended by striking ''5332'' and inserting ''5332, 5335, 5336''.

The Commentary to § 2X5.2 captioned ''Statutory Provisions'' is amended by striking ''18 U.S.C. § 1365(f), 1801; 34 U.S.C. § 12593; 49 U.S.C. § 31310.'' and inserting ''10 U.S.C. § 2733a(g)(2); 18 U.S.C. § 39B, 1365(f), 1801, 2259(d)(4); 34 U.S.C. § 12593; 49 U.S.C. § 31310. For additional statutory provision(s), *see* Appendix A (Statutory Index).''.

Appendix A (Statutory Index) is amended—

by inserting before the line referenced to 7 U.S.C. 6 the following new line references:

''5 U.S.C. § 8345a 2B1.1
5 U.S.C. § 8466a 2B1.1'';

by inserting before the line referenced to 12 U.S.C. § 631 the following new line reference:

''10 U.S.C. § 2733a(g)(2) 2X5.2'';

by inserting before the line referenced to 18 U.S.C. § 43 the following new line references:

''18 U.S.C. § 39B 2A5.2, 2X5.2
18 U.S.C. § 40A 2A2.4'';

by inserting before the line referenced to 18 U.S.C. § 224 the following new line reference:

''18 U.S.C. § 220 2B1.1, 2B4.1'';

by inserting before the line referenced to 18 U.S.C. § 2260(a) the following new line reference:

''18 U.S.C. § 2259(d)(4) 2X5.2'';

by inserting before the line referenced to 18 U.S.C. § 2320 the following new line reference:

''18 U.S.C. § 2319C 2B5.3'';

by inserting before the line referenced to 18 U.S.C. § 2422 the following new line reference:

''18 U.S.C. § 2421A 2G1.1, 2G1.3'';

by inserting before the line referenced to 21 U.S.C. § 101 the following new line reference:

''20 U.S.C. § 1097(e) 2B1.1'';

by inserting before the line referenced to 21 U.S.C. § 458 the following new line reference:

''21 U.S.C. § 333(b)(8) 2N2.1'';

by inserting before the line referenced to 31 U.S.C. § 5363 the following new line references:

''31 U.S.C. § 5335 2S1.3
31 U.S.C. § 5336 2S1.3'';

and by inserting before the line referenced to 45 U.S.C. § 359(a) the following new line reference:

''44 U.S.C. § 3572 2H3.1''.

Reason for Amendment: This multi-part amendment responds to recently enacted legislation.

FDA Reauthorization Act of 2017

First, the amendment amends Appendix A (Statutory Index) to reference a new offense for counterfeit drugs at 21 U.S.C. 333(b)(8) (Penalties [for violations of the Federal Food, Drug, and Cosmetic Act (FDCA)]) to § 2N2.1 (Violations of Statutes and Regulations Dealing With Any Food, Drug, Biological Product, Device, Cosmetic, Agricultural Product, or Consumer Product) in response to the FDA Reauthorization Act of 2017, Public Law 115–52 (Aug. 18, 2017). The Act added subsection 333(b)(8), which provides that the statutory maximum term of imprisonment is ten years for a violation of 21 U.S.C. 331(i)(3) (Prohibited acts [under the FDCA]). Subsection 331(i)(3) prohibits causing a drug to be counterfeited, or making, selling, dispensing, or holding for sale or dispensing, a counterfeit drug. The Commission determined that § 2N2.1 is the most appropriate guideline to which to reference this offense because § 2N2.1 covers similar penalty provisions at section 333.

Allow States and Victims To Fight Online Sex Trafficking Act

Second, the amendment amends §§ 2G1.1 (Promoting a Commercial Sex Act or Prohibiting Sexual Conduct with an Individual Other than a Minor) and 2G1.3 (Promoting a Commercial Sex Act or Prohibited Sexual Conduct with a Minor; Transportation of Minors to Engage in a Commercial Sex Act or Prohibited Sexual Conduct; Travel to Engage in Commercial Sex Act or Prohibited Sexual Conduct with a Minor; Sex Trafficking of Children; Use of Interstate Facilities to Transport Information about a Minor) in response to the Allow States and Victims to Fight Online Sex Trafficking Act of 2017, Public Law 115–164 (Apr. 11, 2017). The Act added a new offense at 18 U.S.C. 2421A(a) (Promotion or facilitation of prostitution and reckless disregard of sex trafficking) which prohibits owning, managing, or operating an interactive computer service with the intent to promote or

facilitate prostitution. Section 2421A has a statutory maximum term of imprisonment of ten years. The Act included an aggravated offense at subsection 2421A(b)(2) if the offender commits an offense under subsection 2421A(a) while acting in reckless disregard of the fact that such conduct contributed to sex trafficking in violation of 18 U.S.C. 1591(a) (Sex trafficking of children or by force, fraud, or coercion). Offenses under section 1591(a) that involve force, fraud, coercion, or minors have statutory mandatory minimum terms of imprisonment of at least ten years and statutory maximum terms of imprisonment of life. Offenses under subsection 2421A(b)(2) have a 25-year statutory maximum term of imprisonment to reflect the serious nature of the sex trafficking conduct in violation of section 1591(a). To reflect the statutory maximum term of imprisonment at subsection 2421A(b)(2), the amendment amends the 4-level enhancement at § 2G1.1(b)(1)(B) and adds a new 4-level enhancement at § 2G1.3(b)(4)(B) that apply if the offense of conviction is 18 U.S.C. 2421A(b)(2). The amendment also amends § 2G1.3(b)(3) to provide that § 2G1.3(b)(3)(B) shall not apply if the offense of conviction is 18 U.S.C. 2421A because the use of a computer is already accounted for in the base offense level.

FAA Reauthorization Act of 2018

Third, the amendment amends Appendix A to reference new offenses in the FAA Reauthorization Act of 2018, Public Law 115–254 (Oct. 5, 2018). The new offense at 18 U.S.C. 39B (Unsafe operation of unmanned aircraft) is referenced to § 2A5.2 (Interference with Flight Crew Member or Flight Attendant; Interference with Dispatch, Navigation, Operation, or Maintenance of Mass Transportation Vehicle) and § 2X5.2 (Class A Misdemeanors (Not Covered by Another Specific Offense Guideline)). Section 39B prohibits the knowing or reckless unsafe operation of drones that interfere with the safe operation of an aircraft carrying one or more persons or operated in close proximity to an airport runway. Section 39B has a statutory maximum term of imprisonment of one year. The statutory maximum term of imprisonment for reckless violations that cause serious bodily injury or death is ten years, and for knowing violations that cause serious bodily injury or death is any term of years or life. The Commission determined that § 2A5.2 is the most appropriate guideline to which to reference felony violations of section 39B because it covers conduct interfering with the operation of aircraft. Additionally, providing a reference to § 2X5.2 is consistent with Commission practice relating to new misdemeanor offenses.

The FAA Reauthorization Act also added a new offense at 18 U.S.C. 40A (Operation of unauthorized unmanned aircraft over wildfires) which is referenced in Appendix A to § 2A2.4 (Obstructing or Impeding Officers). Section 40A prohibits operating a drone in a manner that interferes with wildfire suppression or with law enforcement or emergency response efforts related to wildfire suppression. Section 40A has a statutory maximum term of imprisonment of two years. The Commission determined that § 2A2.4 is the most appropriate guideline to which to reference this offense because it covers conduct involving interfering with and obstructing or impeding officers.

SUPPORT for Patients and Communities Act

Fourth, the amendment amends Appendix A to reference a new offense at 18 U.S.C. 220 (Illegal remunerations for referrals to recovery homes, clinical treatment facilities, and laboratories) to §§ 2B1.1 (Theft, Property Destruction, and Fraud) and 2B4.1 (Bribery in Procurement of Bank Loan and Other Commercial Bribery) in response to the Substance Use-Disorder Prevention that Promotes Opioid Recovery and Treatment for Patients and Communities Act (''the SUPPORT for Patients and Communities Act''), Public Law 115–271 (Oct. 24, 2018). Section 220 prohibits soliciting, receiving, paying, or offering any remuneration, including kickbacks, bribes, or rebates, for referring patients to a facility covered by a health care benefit program. Section 220 has a statutory maximum term of imprisonment of ten years. The Commission determined that §§ 2B1.1 and 2B4.1 are the most appropriate guidelines to which to reference this offense because both guidelines cover conduct involving kickbacks and bribery.

Amy, Vicky, and Andy Child Pornography Victim Assistance Act

Fifth, the amendment amends Appendix A to reference a new offense at 18 U.S.C. 2259(d) (Mandatory restitution [for child pornography victims]) to § 2X5.2 in response to the Amy, Vicky, and Andy Child Pornography Victim Assistance Act, Public Law 115–299 (Dec. 7, 2018). Subsection 2259(d) prohibits attorneys from charging fees in excess of 15 percent when representing a child pornography victim who receives ''defined monetary assistance'' from the Child Pornography Victims Reserve and provides for a statutory maximum term of imprisonment of one year. Providing a reference to § 2X5.2 is consistent with Commission practice relating to new misdemeanor offenses.

Foundations for Evidence-Based Policymaking Act

Sixth, the amendment amends Appendix A to reference a new offense at 44 U.S.C. 3572 (Confidential information protection) to § 2H3.1 (Interception of Communications; Eavesdropping; Disclosure of Certain Private or Protected Information) in response to the Confidential Information Protection and Statistical Efficiency Act, part of the Foundations for Evidence-Based Policymaking Act of 2018, Public Law 115–435 (Jan. 14, 2019).

Section 3572 prohibits the unauthorized disclosure of information collected by an agency under a pledge of confidentiality for exclusively statistical purposes or using the information for other than statistical purposes. Section 3572 has a statutory maximum term of imprisonment of five years. The Commission determined that § 2H3.1 is the most appropriate guideline to which to reference this offense because it covers conduct involving the unauthorized disclosure of information.

National Defense Authorization Act for Fiscal Year 2020

Seventh, the amendment amends Appendix A to reference a new offense at 10 U.S.C. 2733a (Armed Forces; Medical malpractice claims by members of the uniformed services) to § 2X5.2 in response to the National Defense Authorization Act for Fiscal Year 2020, Public Law 116–92 (Dec. 20, 2019). Section 2733a prohibits attorneys from charging fees in excess of 20 percent when representing a member of the uniformed services who receives a payment under section 2733a for medical malpractice caused by a health care provider of the Department of Defense. Section 2733a has a statutory maximum term of imprisonment of one year. Providing a reference to § 2X5.2 is consistent with Commission practice relating to new misdemeanor offenses.

Representative Payee Fraud Prevention Act

Eighth, the amendment amends Appendix A to reference two new offenses at 5 U.S.C. 8345a (Government Organization and Employees; Embezzlement or conversion of

payments) and 8466a (Embezzlement or conversion of payments) to § 2B1.1 in response to the Representative Payee Fraud Prevention Act of 2019, Public Law 116–126 (Mar. 18, 2020). Sections 8345a and 8466a prohibit representative payees of minors or other individuals under a legal disability from embezzling or converting retirement payments under the Civil Service Retirement System or the Federal Employees' Retirement System. The statutory maximum term of imprisonment for both sections is five years. The Commission determined that § 2B1.1 is the most appropriate guideline to which to reference these offenses because it covers conduct involving similar financial fraud.

Stop Student Debt Relief Scams Act

Ninth, the amendment amends Appendix A to reference a new offense at 20 U.S.C. 1097(e) (Education; Student Assistance Programs; Criminal penalties) to § 2B1.1 in response to the Stop Student Debt Relief Scams Act of 2019, Public Law 116–251 (Dec. 22, 2020). Subsection 1097(e) prohibits the unauthorized use of an access device relating to student assistance programs issued to another or obtained by fraud to access the information technology systems of the Department of Education for commercial advantage or private financial gain. Subsection 1097(e) has a statutory maximum term of imprisonment of five years. The Commission determined that § 2B1.1 is the most appropriate guideline to which to reference this offense because § 2B1.1 covers other section 1097 offenses prohibiting embezzlement, fraud and false statements involved in student assistance programs.

Protecting Lawful Streaming Act

Tenth, the amendment amends Appendix A to reference a new offense at 18 U.S.C. 2319C (Illicit digital transmission services) to § 2B5.3 (Criminal Infringement of Copyright or Trademark) in response to the Protecting Lawful Streaming Act, part of the 2021 Consolidated Appropriations Act, Public Law 116–260 (Dec. 27, 2020). Section 2319C prohibits publicly offering or providing digital transmission services designed to provide the unauthorized transmission of copyrighted works, including pre-release works being prepared for commercial public performance, and provides for a statutory maximum term of imprisonment of three years. The statutory maximum term of imprisonment is five years if the offense involved one or more pre-release works, and for a second or subsequent violation of section 2319C, the statutory maximum term of imprisonment is ten years. The Commission determined that § 2B5.3 is the most appropriate guideline to which to reference this offense because it covers conduct involving criminal copyright infringement including pre-release works.

William M. (Mac) Thornberry National Defense Authorization Act for Fiscal Year 2021

Eleventh, the amendment amends Appendix A to reference multiple new offenses at 31 U.S.C. 5335 (Money and Finance; Concealment of source of assets in monetary transactions) and 5336 (Beneficial ownership information reporting requirements) to § 2S1.3 (Structuring Transactions to Evade Reporting Requirement; Failure to Report Cash or Monetary Transactions; Failure to File Currency and Monetary Instruments Report) in response to the William M. (Mac) Thornberry National Defense Authorization Act for Fiscal Year 2021, Public Law 116–283 (Jan. 1, 2021).

Subsection 5335(b) prohibits concealing, falsifying, or misrepresenting a material fact from a financial institution about the ownership or control of certain assets over $1,000,000 if the person or entity controlling the assets is a certain foreign figure or associate. Subsection 5335(c) prohibits concealing, falsifying, or misrepresenting a material fact, to or from a financial institution, about the source of funds in monetary transactions involving ''primary money laundering concerns'' and that violate the prohibitions prescribed in section 5318A(b)(5). Both subsections 5335(b) and 5335(c) have a statutory maximum term of imprisonment of ten years.

Subsection 5336(h)(1) prohibits willfully providing false or fraudulent beneficial ownership information to the Department of the Treasury's Financial Crimes Enforcement Network (''FinCEN'') in accordance with the reporting requirements in subsection 5336(b). Subsection 5336(h)(1) has a statutory maximum term of imprisonment of two years. Subsection 5336(c)(4) prohibits employees and officers of any requesting agency from violating the protocols established by the Secretary of the Treasury or the unauthorized disclosure or use of the beneficial ownership information submitted to FinCEN. Subsection 5336(h)(2) prohibits any person from knowingly disclosing or using beneficial ownership information obtained through a report submitted to, or through a disclosure made by, FinCEN, without authorization. Both subsections 5336(c)(4) and 5336(h)(2) have a statutory maximum term of imprisonment of five years. The statutory maximum term of imprisonment for a violation of subsection 5336(c)(4) or 5336(h)(2) is ten years if the offense was committed while violating another law of the United States or as part of a pattern of certain unlawful activities.

The Commission determined that § 2S1.3 is the most appropriate guideline to which to reference these new offenses because it covers similar conduct involving structuring financial transactions and requiring the filing of a Currency Transaction Report regarding payment, receipt, or transfer of United States coins or currency.

3. Amendment: Section 2A3.3 is amended—

in the heading by striking ''Acts'' and inserting ''Acts; Criminal Sexual Abuse of an Individual in Federal Custody''.

in subsection (a) by striking ''14'' and inserting ''18'';

and by inserting at the end the following new subsection (c):

''(c) Cross Reference

(1) If the offense involved criminal sexual abuse or attempt to commit criminal sexual abuse (as defined in 18 U.S.C. § 2241 or § 2242), apply § 2A3.1 (Criminal Sexual Abuse; Attempt to Commit Criminal Sexual Abuse). If the victim had not attained the age of 12 years, § 2A3.1 shall apply, regardless of the 'consent' of the victim.''.

The Commentary to § 2A3.3 captioned ''Statutory Provision'' is amended by striking ''§ 2243(b)'' and inserting ''§§ 2243(b), 2243(c)''.

The Commentary to § 2H1.1 captioned ''Statutory Provisions'' is amended by striking ''246, 247, 248, 249'' and inserting ''246–250''.

Appendix A (Statutory Index) is amended—

by inserting before the line referenced to 18 U.S.C. 281 the following new line reference:

''18 U.S.C. § 250 2H1.1'';

and by inserting before the line referenced to 18 U.S.C. 2244 the following new line reference:

''18 U.S.C. § 2243(c) 2A3.3''.

Reason for Amendment: This multi-part amendment responds to statutory changes provided in division W, title XII, of the Violence Against Women Act Reauthorization Act, Public Law 117–103 (Nov. 9, 2022) and separately addresses concerns regarding cases involving sexual abuse committed by law enforcement or correctional personnel against victims in their custody, care, or supervision.

First, the amendment amends Appendix A (Statutory Appendix) to reference the new offense created at 18 U.S.C. 250 (Penalties for civil rights offenses involving sexual misconduct) to § 2H1.1 (Offenses Involving Individual Rights). New section 250 criminalizes engaging in or causing another to engage in sexual misconduct while committing any civil rights offense under chapter 13 (Civil Rights) of title 18, U.S. Code, or 42 U.S.C. 3631 (Fair Housing [violations]). Section 250 delineates different degrees of prohibited sexual misconduct, including aggravated sexual abuse as defined in 18 U.S.C. 2241 (Aggravated sexual abuse), sexual abuse as defined in 18 U.S.C. 2242 (Sexual abuse), a sexual act not amounting to aggravated sexual abuse or sexual abuse, and sexual contact, as defined in 18 U.S.C. 2244 (Abusive sexual contact). The statutory maximum term of imprisonment for a violation of section 250 ranges from two years to any term of years or life, depending on the sexual conduct involved in the offense.

The Commission determined that § 2H1.1 is the most appropriate guideline to which to reference this new offense. Other similar offenses are referenced to this guideline. In addition, the Commission concluded that the alternative base offense levels provided in § 2H1.1 effectively address both the broad array of conduct criminalized under this new statute and the varying statutory maximum terms of imprisonment applicable to such conduct.

Second, the amendment amends Appendix A to reference new subsection (c) at 18 U.S.C. 2243 (Sexual abuse of a minor, a ward, or an individual in Federal custody) to § 2A3.3 and makes a conforming change to § 2A3.3's title. The new subsection at 18 U.S.C. 2243 prohibits law enforcement officers from knowingly engaging in a sexual act with an individual under arrest or supervision, in detention, or in federal custody. The Commission determined § 2A3.3 is the most appropriate guideline to which to reference the new offense because it covers a similar offense at 18 U.S.C. 2243(b) prohibiting anyone in a federal prison, institution, or facility from knowingly engaging in a sexual act with a ward, defined as an inmate or other person in official detention and under the custodial, supervisory, or disciplinary authority of the person engaging in the act. Subsection 2243(b) also has the same 15-year statutory maximum term of imprisonment, and a reference to this guideline will result in similar penalties for both subsections of section 2243.

Finally, the amendment increases the base offense level at § 2A3.3 for offenses involving the sexual abuse of a ward or an individual in federal custody from 14 to 18. The Commission determined that the increased base offense level will more appropriately reflect the 15-year statutory maximum penalty for offenses referenced to this guideline and punish the serious sexual conduct involved in these offenses. In promulgating the amendment, the Commission was informed by both the rate and extent of above-range sentences in these cases. While the average guideline minimum in fiscal years 2018 through 2022 was 17 months (median 12 months), the average sentence imposed was more than double, at 35 months (median 15 months).

The Commission also concluded that an increased guideline range for § 2A3.3 offenses would be more proportional to the guideline range at § 2A3.2 (Criminal Sexual Abuse of a Minor Under the Age of Sixteen Years (Statutory Rape) or Attempt to Commit Such Acts) for the sexual abuse of minors over the age of 12 and under the age of 16 years, conduct prohibited by 18 U.S.C. 2243(a) with the same 15-year statutory maximum term of imprisonment as subsections 2243(b) and 2243(c). Section 2A3.2 has a base offense level 18 and a 4-level enhancement if the victim is in the care, custody, or supervisory control of the defendant.

Consistent with this approach, the amendment also amends § 2A3.3 to include the same cross reference currently provided for in § 2A3.2 in order to ensure proportional guideline ranges for all section 2243 offenses when the offense involved aggravating sexual conduct. The new cross reference sends cases to § 2A3.1 (Criminal Sexual Abuse; Attempt to Commit Criminal Sexual Abuse) if the offense involved criminal sexual abuse or attempt to commit criminal sexual abuse (as defined in 18 U.S.C. 2241 or § 2242), and further directs that § 2A3.1 shall apply if the victim had not attained the age of 12 years, regardless of the ''consent'' of the victim.

4. Amendment: Section 2D1.1(a) is amended—

in paragraph (1) by striking the following:

''43, if the defendant is convicted under 21 U.S.C. 841(b)(1)(A), (b)(1)(B), or (b)(1)(C), or 21 U.S.C. 960(b)(1), (b)(2), or (b)(3), and the offense of conviction establishes that death or serious bodily injury resulted from the use of the substance and that the defendant committed the offense after one or more prior convictions for a similar offense; or'',

and inserting the following:

''43, if—

(A) the defendant is convicted under 21 U.S.C. 841(b)(1)(A) or (b)(1)(B), or 21 U.S.C. 960(b)(1) or (b)(2), and the offense of conviction establishes that death or serious bodily injury resulted from the use of the substance and that the defendant committed the offense after one or more prior convictions for a serious drug felony or serious violent felony; or

(B) the defendant is convicted under 21 U.S.C. 841(b)(1)(C) or 21 U.S.C. 960(b)(3) and the offense of conviction establishes that death or serious bodily injury resulted from the use of the substance and that the defendant committed the offense after one or more prior convictions for a felony drug offense; or'';

and in paragraph (3) by striking ''similar offense'' and inserting ''felony drug offense''.

Section 2D1.1(b)(18) is amended by striking ''subdivisions'' and inserting ''paragraphs''.

The Commentary to § 2D1.1 captioned ''Application Notes'' is amended—

by striking Note 2 as follows:

''2. *'Plant'.*—For purposes of the guidelines, a 'plant' is an organism having leaves and a readily observable root formation (*e.g.,* a marihuana cutting having roots, a rootball, or root hairs is a marihuana plant).'';

by redesignating Note 1 as Note 2;

by inserting before Note 2 (as so redesignated) the following new Note 1:

''1. *Definitions.*—

For purposes of the guidelines, a 'plant' is an organism having leaves and a readily observable root formation (*e.g.,* a marihuana cutting having roots, a rootball, or root hairs is a marihuana plant).

For purposes of subsection (a), 'serious drug felony,' 'serious violent felony,' and 'felony drug offense' have the meaning given those terms in 21 U.S.C. 802.'';

and in Note 21 by striking ''a minimum offense level of level 17'' and inserting ''that the applicable guideline range shall not be less than 24 to 30 months of imprisonment''.

Section 2D1.11(b)(6) is amended by striking ''subdivisions'' and inserting ''paragraphs''.

The Commentary to § 2D1.11 captioned ''Application Notes'' is amended in Note 7 by striking ''a minimum offense level of level 17'' and inserting ''an applicable guideline range of not less than 24 to 30 months of imprisonment''.

Section 4A1.3(b)(3)(B) is amended—

in the heading by striking ''*to Category I*'';

by striking ''whose criminal history category is Category I after receipt of'' and inserting ''who receives'';

by striking ''criterion'' and inserting ''criminal history requirement'';

and by striking ''if, before receipt of the downward departure, the defendant had more than one criminal history point under § 4A1.1 (Criminal History Category)'' and inserting ''if the defendant did not otherwise meet such requirement before receipt of the downward departure''.

Section 5C1.2(a) is amended—

by inserting after ''§ 963,'' the following: ''or 46 U.S.C. 70503 or § 70506,'';

by striking ''set forth below'' and inserting ''as follows'';

and by striking paragraph (1) as follows:

''(1) the defendant does not have more than 1 criminal history point, as determined under the sentencing guidelines before application of subsection (b) of § 4A1.3 (Departures Based on Inadequacy of Criminal History Category);'',

and inserting the following new paragraph (1):

''(1) the defendant does not have—

(A) more than 4 criminal history points, excluding any criminal history points resulting from a 1-point offense, as determined under the sentencing guidelines;

(B) a prior 3-point offense, as determined under the sentencing guidelines; and

(C) a prior 2-point violent offense, as determined under the sentencing guidelines;''.

Section 5C1.2(b) is amended by striking ''the offense level applicable from Chapters Two (Offense Conduct) and Three (Adjustments) shall not be less than 17'' and inserting ''the applicable guideline range shall not be less than 24 to 30 months of imprisonment''.

The Commentary to § 5C1.2 captioned ''Application Notes'' is amended—

by striking Notes 1, 2, and 3 as follows:

''1. 'More than 1 criminal history point, as determined under the sentencing guidelines,' as used in subsection (a)(1), means more than one criminal history point as determined under § 4A1.1 (Criminal History Category) before application of subsection (b) of § 4A1.3 (Departures Based on Inadequacy of Criminal History Category).

2. 'Dangerous weapon' and 'firearm,' as used in subsection (a)(2), and 'serious bodily injury,' as used in subsection (a)(3), are defined in the Commentary to § 1B1.1 (Application Instructions).

3. 'Offense,' as used in subsection (a)(2)–(4), and 'offense or offenses that were part of the same course of conduct or of a common scheme or plan,' as used in subsection (a)(5), mean the offense of conviction and all relevant conduct.'';

by inserting the following new Note 1:

''1. *Definitions.*—

(A) The term 'violent offense' means a 'crime of violence,' as defined in 18 U.S.C. 16, that is punishable by imprisonment.

(B) 'Dangerous weapon' and 'firearm,' as used in subsection (a)(2), and 'serious bodily injury,' as used in subsection (a)(3), are defined in the Commentary to § 1B1.1 (Application Instructions).

(C) 'Offense,' as used in subsection (a)(2)–(4), and 'offense or offenses that were part of the same course of conduct or of a common scheme or plan,' as used in subsection (a)(5), mean the offense of conviction and all relevant conduct.'';

by redesignating Note 4 as Note 2;

in Note 2 (as so redesignated) by inserting at the beginning the following new heading: ''*Application of subsection (a)(2).*—'';

by striking Notes 5, 6, and 7 as follows:

''5. 'Organizer, leader, manager, or supervisor of others in the offense, as determined under the sentencing guidelines,' as used in subsection (a)(4), means a defendant who receives an adjustment for an aggravating role under § 3B1.1 (Aggravating Role).

6. 'Engaged in a continuing criminal enterprise,' as used in subsection (a)(4), is defined in 21 U.S.C. 848(c). As a practical matter, it should not be necessary to apply this prong of subsection (a)(4) because (i) this section does not apply to a conviction under 21 U.S.C. 848, and (ii) any defendant who 'engaged in a continuing criminal enterprise' but is convicted of an offense to which this section applies will be an 'organizer, leader, manager, or supervisor of others in the offense.'

7. Information disclosed by the defendant with respect to subsection (a)(5) may be considered in determining the applicable guideline range, except where the use of such information is restricted under the provisions of § 1B1.8 (Use of Certain Information). That is, subsection (a)(5) does not provide an independent basis for restricting the use of information disclosed by the defendant.'';

by inserting the following new Notes 3 and 4:

''3. *Application of Subsection (a)(4).*—

(A) *'Organizer, leader, manager, or supervisor of others in the offense'.*—The first prong of subsection (a)(4) requires that the defendant was not subject to an adjustment for an aggravating role under § 3B1.1 (Aggravating Role).

(B) *'Engaged in a continuing criminal enterprise'.*—'Engaged in a continuing criminal enterprise,' as used in subsection (a)(4), is defined in 21 U.S.C. 848(c). As a practical matter, it should not be necessary to apply this prong of subsection (a)(4) because (i) this section does not apply to a conviction under 21 U.S.C. 848, and (ii) any defendant who 'engaged in a continuing criminal enterprise' but is convicted of an offense to which this section applies will be an 'organizer, leader, manager, or supervisor of others in the offense.'

4. *Use of Information Disclosed under Subsection (a).*—Information disclosed by a defendant under subsection (a) may not be used to enhance the sentence of the defendant unless the information relates to a violent offense, as defined in Application Note 1(A).'';

by redesignating Notes 8 and 9 as Notes 5 and 6, respectively;

in Note 5 (as so redesignated) by inserting at the beginning the following new heading: ''*Government's Opportunity to Make Recommendation.*—'';

and in Note 6 (as so redesignated) by inserting at the beginning the following new heading: ''*Exemption from Otherwise Applicable Statutory Minimum Sentences.*—''.

The Commentary to § 5C1.2 captioned ''Background'' is amended by inserting after ''Violent Crime Control and Law Enforcement Act of 1994'' the following: ''and subsequently amended''.

Reason for Amendment: This two-part amendment revises § 5C1.2 (Limitation on Applicability of Statutory Minimum Sentences in Certain Cases) and subsections (a)(1) and (a)(3) of § 2D1.1 (Unlawful Manufacturing, Importing, Exporting, or Trafficking (Including Possession with Intent to Commit These Offenses); Attempt or Conspiracy) in response to the First Step Act of 2018, Public Law 115–391 (Dec. 21, 2018) (''First Step Act''). The First Step Act amended the eligibility criteria of the ''safety valve'' provision at 18 U.S.C. 3553(f) and the enhanced penalty provisions for certain drug trafficking defendants at 21 U.S.C. 841(b) and 960(b). The amendment primarily revises § 5C1.2 to conform it to the statutory safety valve, as amended by the First Step Act. In addition, the amendment revises subsections (a)(1) and (a)(3) of § 2D1.1 to make the guideline's reference to the type of prior offenses that trigger enhanced mandatory minimum penalties

consistent with the amended statutory provisions.

First, the amendment makes three changes to § 5C1.2 and its corresponding commentary to reflect the statutory changes to section 3553(f) made by the First Step Act. The First Step Act expanded the safety valve provision at section 3553(f) by extending its applicability to defendants convicted of maritime offenses (46 U.S.C. 70503 and 70506) and broadening the criminal history eligibility criteria to include defendants who do not have: (1) ''more than 4 criminal history points, excluding any criminal history points resulting from a 1-point offense, as determined under the sentencing guidelines''; (2) a ''prior 3-point offense, as determined under the sentencing guidelines''; and (3) a ''prior 2-point violent offense, as determined under the sentencing guidelines.'' The amendment revises § 5C1.2(a) to include maritime offenses and the expanded statutory criminal history criteria. Next, it revises Application Note 1 to incorporate the statutory definition for the term ''violent offense.'' Finally, it revises Application Note 7 to reflect the new statutory limitation that information disclosed by a defendant pursuant to 18 U.S.C. 3553(f) ''may not be used to enhance the defendant's sentence unless the information relates to a violent offense.''

Second, the amendment revises § 5C1.2(b) to account for the expanded class of defendants who qualify for safety valve relief. Section 5C1.2(b) implemented Congress's directive requiring that the guideline minimum be at least 24 months for defendants whose statutorily required minimum sentence was at least five years by providing a minimum offense level of 17 for such offenders. *See* Violent Crime Control and Law Enforcement Act of 1994, Public Law 103–222, 80001(b), 108 Stat. 1796, 1985 (1994) (''In the case of a defendant for whom the statutorily required minimum sentence is 5 years, such guidelines and amendments to guidelines . . . shall call for a guideline range in which the lowest term of imprisonment is at least 24 months.''); *see also* USSG App. C, amend. 624 (effective Nov. 1, 2001) (adding § 5C1.2(b) ''in order to comply more strictly with the directive''). Before the First Step Act, only defendants in Criminal History Category (CHC) I (with no more than one criminal history point) could qualify for safety valve relief, and a base offense level of 17 therefore correlated with a guideline range of 24 to 30 months for all safety-valve-eligible defendants. After the First Step Act, a safety-valve-eligible defendant can be in any CHC, and an offense level of 17 correlates with the following guideline ranges at each category: I (24–30 months); II (27–33); III (30–37); IV (37–46); V (46–57); and VI (51–63). Because Congress's directive is tied to the existence of a 5-year mandatory minimum penalty and not to the defendant's CHC, the amendment replaces the offense-level floor with a guideline-range floor. The Commission determined that the proportionality concerns raised in public comment and testimony are addressed by the operation of the Sentencing Table, irrespective of the offense-level floor.

Third, the amendment makes conforming changes to § 4A1.3 (Departures Based on Inadequacy of Criminal History Category (Policy Statement)), which references the number of criminal history points permitted under § 5C1.2(a)(1).

Fourth, the amendment makes only non-substantive changes to § 2D1.1(b)(18) and § 2D1.11(b)(6), the 2-level reductions that are tethered to the eligibility criteria of paragraphs (1)–(5) of § 5C1.2(a). The 2-level reductions in § 2D1.1 and § 2D1.11 apply to any defendant who meets the revised criteria of § 5C1.2.

Finally, the amendment revises subsections (a)(1) and (a)(3) of § 2D1.1 to replace the term ''similar offense'' with the appropriate terms set forth in the relevant statutory provisions, as amended by the First Step Act.

The penalty provisions at 21 U.S.C. 841(b) and 960(b) provide enhanced mandatory minimum penalties for defendants (1) whose instant offense resulted in death or serious bodily injury or (2) who have prior convictions for certain specified offenses. Penalties are further increased if death or serious bodily injury occurred as a result of the instant offense *and* the defendant has a qualifying prior conviction. Prior to the First Step Act, all of the recidivist penalty provisions within sections 841(b) and 960(b) provided for an enhanced mandatory minimum penalty if a defendant had one or more convictions for a prior ''felony drug offense,'' as defined in 21 U.S.C. 802(44). The First Step Act both narrowed and expanded the type of prior offenses that trigger enhanced mandatory minimum penalties under 21 U.S.C. 841(b)(1)(A), 841(b)(1)(B), 960(b)(1), and 960(b)(2) by replacing the term ''felony drug offense'' with ''serious drug felony,'' as defined in 21 U.S.C. 802(57), and adding ''serious violent felony'' offenses, as defined in 21 U.S.C. 802(58). The First Step Act did not amend 21 U.S.C. 841(b)(1)(C), 841(b)(1)(E), 960(b)(3), or 960(b)(5), which still provide for enhanced mandatory minimum penalties if a defendant was convicted of a prior ''felony drug offense.''

The enhanced statutory penalty structure is accounted for through heightened alternative base offense levels (BOL) at § 2D1.1(a)(1)–(a)(4). Prior to the amendment, § 2D1.1(a)(1) provided for a BOL of 43 ''if the defendant is convicted under [any of six enumerated subsections], and the offense of conviction establishes that death or serious bodily injury resulted from the use of the substance and that the defendant committed the offense after one or more prior convictions *for a similar offense*.'' Subsection 2D1.1(a)(3) is identical to § 2D1.1(a)(1), except that it provides a BOL of 30 and applies if the defendant is convicted of an offense involving a Schedule III controlled substance under 21 U.S.C. 841(b)(1)(E) or 21 U.S.C. 960(b)(5).

The First Step Act amended four of the six penalty provisions referenced in § 2D1.1(a)(1) and, for those amended provisions, the term ''similar offense'' is over-inclusive, because it includes drug offenses that do not meet the definition of ''serious drug felony,'' and under-inclusive, because it fails to account for a prior ''serious violent felony.'' The amendment divides § 2D1.1(a)(1) into two subparagraphs, (A) and (B). Subparagraph (A), which references the four statutory provisions amended by the First Step Act, replaces the term ''similar offense'' with ''serious drug felony or serious violent felony.'' Subparagraph (B), which references the two provisions that were not amended, replaces the term ''similar offense'' with ''felony drug offense.'' The amendment also amends § 2D1.1(a)(3), by replacing the term ''similar offense'' with ''felony drug offense,'' for consistency with the terminology used in § 2D1.1(a)(1).

5. Amendment: Section 2D1.1(b)(13) is amended—

by inserting after ''defendant'' the following: ''(A)'';

and by inserting after ''4 levels'' the following: ''; or (B) represented or marketed as a legitimately manufactured drug another mixture or substance containing fentanyl (N-phenyl-N-[1-(2-phenylethyl)-4-piperidinyl] propanamide) or a fentanyl analogue, and acted with willful blindness or conscious avoidance of knowledge that such mixture or substance was not the legitimately manufactured drug, increase by 2 levels. The term 'drug,' as used in subsection (b)(13)(B), has the meaning given that term in 21 U.S.C. 321(g)(1)''.

Reason for Amendment: This amendment revises subsection (b)(13) of

§ 2D1.1 (Unlawful Manufacturing, Importing, Exporting, or Trafficking (Including Possession with Intent to Commit These Offenses); Attempt or Conspiracy) to add a new subparagraph (B) with an alternative 2-level enhancement for offenses where the defendant represented or marketed as a legitimately manufactured drug another mixture or substance containing fentanyl or a fentanyl analogue, and acted with willful blindness or conscious avoidance of knowledge that such mixture or substance was not the legitimately manufactured drug. The new subparagraph (B) refers to 21 U.S.C. 321(g)(1) to define the term ''drug.''

Since § 2D1.1(b)(13)'s initial promulgation in 2018, the distribution of fentanyl and fentanyl analogues has dramatically increased. The Drug Enforcement Administration reported a substantial increase in the seizure of fake prescription pills, seizing over 50.6 million in calendar year 2022, with 70 percent containing fentanyl. Of those seized pills containing fentanyl, six out of ten contained a potentially lethal dose of the substance, according to lab testing. Additionally, the Centers for Disease Control and Prevention (CDC) estimates there were 107,622 drug overdose deaths in the United States in 2021, an increase of nearly 15 percent from the 93,655 deaths estimated in 2020. The CDC attributes 80,816 of the drug overdose deaths in 2021 to synthetic opioids, primarily fentanyl.

Commission data also indicates an increase in fentanyl and fentanyl analogue offenses, with fentanyl supplanting other drug types, such as crack cocaine and heroin, to become the third most prevalent primary drug (12.6%) among federal drug offenses in fiscal year 2022. In fiscal year 2017, 166 offenders were held accountable for fentanyl or fentanyl analogues. By fiscal year 2022, the number of offenders increased to 2,511 offenders.

The new alternative 2-level enhancement reflects the increased culpability of an individual who acted with willful blindness or conscious avoidance of knowledge that the substance the individual represented or marketed as a legitimately manufactured drug contained fentanyl or a fentanyl analogue. The Commission determined that the ''willful blindness'' and ''conscious avoidance'' doctrines are ''well established in criminal law,'' as recognized by the Supreme Court. *See Glob.-Tech Appliances, Inc.* v. *SEB S.A.,* 563 U.S. 754, 766 (2011). While appellate courts articulate the ''willful blindness'' or ''conscious avoidance'' doctrines slightly differently, the requirement makes clear that the government bears the burden to prove by a preponderance of the evidence that the enhancement applies based on the subjective belief and deliberate action of the defendant committing the offense.

6. Amendment: Section 2K2.1(a)(4)(B) is amended by inserting after ''18 U.S.C. 922(d)'' the following: '', § 932, or § 933''.

Section 2K2.1(a)(6)(B) is amended by inserting after ''18 U.S.C. 922(d)'' the following: '', § 932, or § 933''.

Section 2K2.1(b) is amended—

in paragraph (4) by striking ''If any firearm (A) was stolen, increase by 2 levels; or (B) had an altered or obliterated serial number, increase by 4 levels'' and inserting ''If (A) any firearm was stolen, increase by 2 levels; or (B)(i) any firearm had an altered or obliterated serial number; or (ii) the defendant knew that any firearm involved in the offense was not otherwise marked with a serial number (other than a firearm manufactured prior to the effective date of the Gun Control Act of 1968) or was willfully blind to or consciously avoided knowledge of such fact, increase by 4 levels'';

in paragraph (5) by striking ''If the defendant engaged in the trafficking of firearms, increase by 4 levels.'' and inserting the following:

''(Apply the Greatest) If the defendant—

(A) was convicted under 18 U.S.C. 933(a)(2) or (a)(3), increase by 2 levels;

(B) (i) transported, transferred, sold, or otherwise disposed of, or purchased or received with intent to transport, transfer, sell, or otherwise dispose of, a firearm or any ammunition knowing or having reason to believe that such conduct would result in the receipt of the firearm or ammunition by an individual who (I) was a prohibited person; or (II) intended to use or dispose of the firearm or ammunition unlawfully; (ii) attempted or conspired to commit the conduct described in clause (i); or (iii) received a firearm or any ammunition as a result of inducing the conduct described in clause (i), increase by 2 levels; or

(C) (i) transported, transferred, sold, or otherwise disposed of, or purchased or received with intent to transport, transfer, sell, or otherwise dispose of, two or more firearms knowing or having reason to believe that such conduct would result in the receipt of the firearms by an individual who (I) had a prior conviction for a crime of violence, controlled substance offense, or misdemeanor crime of domestic violence; (II) was under a criminal justice sentence at the time of the offense; or (III) intended to use or dispose of the firearms unlawfully; (ii) attempted or conspired to commit the conduct described in clause (i); or (iii) received two or more firearms as a result of inducing the conduct described in clause (i), increase by 5 levels.

Provided, however, that subsection (b)(5)(C)(i)(I) shall not apply based upon the receipt or intended receipt of the firearms by an individual with a prior conviction for a misdemeanor crime of domestic violence against a person in a dating relationship if, at the time of the instant offense, such individual met the criteria set forth in the proviso of 18 U.S.C. 921(a)(33)(C).'';

and by inserting at the end the following new paragraphs (8) and (9):

''(8) If the defendant—

(A) receives an enhancement under subsection (b)(5); and

(B) committed the offense in connection with the defendant's participation in a group, club, organization, or association of five or more persons, knowing or acting with willful blindness or conscious avoidance of knowledge that the group, club, organization, or association had as one of its primary purposes the commission of criminal offenses;

increase by 2 levels.

(9) If the defendant—

(A) receives an enhancement under subsection (b)(5);

(B) does not have more than 1 criminal history point, as determined under § 4A1.1 (Criminal History Category) and § 4A1.2 (Definitions and Instructions for Computing Criminal History), read together, before application of subsection (b) of § 4A1.3 (Departures Based on Inadequacy of Criminal History Category); and

(C) (i) was motivated by an intimate or familial relationship or by threats or fear to commit the offense and was otherwise unlikely to commit such an offense; or (ii) was unusually vulnerable to being persuaded or induced to commit the offense due to a physical or mental condition;

decrease by 2 levels.''.

The Commentary to § 2K2.1 captioned ''Statutory Provisions'' is amended by inserting after ''(k)–(o),'' the following: ''932, 933,''.

The Commentary to § 2K2.1 captioned ''Application Notes'' is amended—

in Note 3 by striking ''subsections (a)(4)(B) and (a)(6)'' and inserting ''subsections (a)(4)(B), (a)(6), and (b)(5)'';

in Note 8(A)—

in the first paragraph by striking ''However, if the offense involved a firearm with an altered or obliterated serial number, apply subsection (b)(4)(B)'' and inserting ''However, if the offense involved a firearm with an altered or obliterated serial number, or

if the defendant knew that any firearm involved in the offense was not otherwise marked with a serial number (other than a firearm manufactured prior to the effective date of the Gun Control Act of 1968) or was willfully blind to or consciously avoided knowledge of such fact, apply subsection (b)(4)(B)(i) or (ii)'';

and by striking the second paragraph as follows:

''Similarly, if the offense to which § 2K2.1 applies is 18 U.S.C. §§ 922(k) or 26 U.S.C. §§ 5861(g) or (h) (offenses involving an altered or obliterated serial number) and the base offense level is determined under subsection (a)(7), do not apply the enhancement in subsection (b)(4)(B). This is because the base offense level takes into account that the firearm had an altered or obliterated serial number. However, if the offense involved a stolen firearm or stolen ammunition, apply subsection (b)(4)(A).'',

and inserting the following paragraph:

''Similarly, if the offense to which § 2K2.1 applies is 18 U.S.C. §§ 922(k) or 26 U.S.C. §§ 5861(g) or (h) (offenses involving an altered or obliterated serial number) and the base offense level is determined under subsection (a)(7), do not apply the enhancement in subsection (b)(4)(B)(i). This is because the base offense level takes into account that the firearm had an altered or obliterated serial number. However, if the offense involved a stolen firearm or stolen ammunition, or if the defendant knew that any firearm involved in the offense was not otherwise marked with a serial number (other than a firearm manufactured prior to the effective date of the Gun Control Act of 1968) or was willfully blind to or consciously avoided knowledge of such fact, apply subsection (b)(4)(A) or (B)(ii).'';

in Note 8(B) by striking the following:

''*Knowledge or Reason to Believe.*—Subsection (b)(4) applies regardless of whether the defendant knew or had reason to believe that the firearm was stolen or had an altered or obliterated serial number.'',

and inserting the following:

''*Defendant's State of Mind.*—Subsection (b)(4)(A) or (B)(i) applies regardless of whether the defendant knew or had reason to believe that the firearm was stolen or had an altered or obliterated serial number. However, subsection (b)(4)(B)(ii) only applies if the defendant knew that any firearm involved in the offense was not otherwise marked with a serial number (other than a firearm manufactured prior to the effective date of the Gun Control Act of 1968) or was willfully blind to or consciously avoided knowledge of such fact.'';

in Note 10 by striking ''subsection (a)(1) and (a)(2)'' and inserting ''subsections (a)(1) and (a)(2)'';

in Note 13—

by striking paragraph (A) as follows:

''(A) *In General.*—Subsection (b)(5) applies, regardless of whether anything of value was exchanged, if the defendant—

(i) transported, transferred, or otherwise disposed of two or more firearms to another individual, or received two or more firearms with the intent to transport, transfer, or otherwise dispose of firearms to another individual; and

(ii) knew or had reason to believe that such conduct would result in the transport, transfer, or disposal of a firearm to an individual—

(I) whose possession or receipt of the firearm would be unlawful; or

(II) who intended to use or dispose of the firearm unlawfully.'';

by redesignating paragraphs (B), (C), and (D) as paragraphs (A), (B), and (C), respectively;

in paragraph (A) (as so redesignated) by striking the following paragraphs:

'' 'Individual whose possession or receipt of the firearm would be unlawful' means an individual who (i) has a prior conviction for a crime of violence, a controlled substance offense, or a misdemeanor crime of domestic violence; or (ii) at the time of the offense was under a criminal justice sentence, including probation, parole, supervised release, imprisonment, work release, or escape status. 'Crime of violence' and 'controlled substance offense' have the meaning given those terms in § 4B1.2 (Definitions of Terms Used in Section 4B1.1). 'Misdemeanor crime of domestic violence' has the meaning given that term in 18 U.S.C. §§ 921(a)(33)(A).

The term 'defendant', consistent with § 1B1.3 (Relevant Conduct), limits the accountability of the defendant to the defendant's own conduct and conduct that the defendant aided or abetted, counseled, commanded, induced, procured, or willfully caused.'',

and inserting the following paragraphs:

'' 'Crime of violence' and 'controlled substance offense' have the meaning given those terms in § 4B1.2 (Definitions of Terms Used in Section 4B1.1).

'Misdemeanor crime of domestic violence' has the meaning given that term in 18 U.S.C. §§ 921(a)(33)(A).

The term 'criminal justice sentence' includes probation, parole, supervised release, imprisonment, work release, or escape status.

The term 'defendant,' consistent with § 1B1.3 (Relevant Conduct), limits the accountability of the defendant to the defendant's own conduct and conduct that the defendant aided or abetted, counseled, commanded, induced, procured, or willfully caused.'';

and in paragraph (B) (as so redesignated) by striking ''If the defendant trafficked substantially more than 25 firearms'' and inserting ''If the defendant transported, transferred, sold, or otherwise disposed of, or purchased or received with intent to transport, transfer, sell, or otherwise dispose of, substantially more than 25 firearms'';

and by striking Note 15 as follows:

''15. *Certain Convictions Under 18 U.S.C. §§ 922(a)(6), 922(d), and 924(a)(1)(A).*—In a case in which the defendant is convicted under 18 U.S.C. §§ 922(a)(6), 922(d), or 924(a)(1)(A), a downward departure may be warranted if (A) none of the enhancements in subsection (b) apply, (B) the defendant was motivated by an intimate or familial relationship or by threats or fear to commit the offense and was otherwise unlikely to commit such an offense, and (C) the defendant received no monetary compensation from the offense.''.

Appendix A (Statutory Index) is amended by inserting before the line referenced to 18 U.S.C. 956 the following new line references:

''18 U.S.C. §§ 932 2K2.1
18 U.S.C. §§ 933 2K2.1''.

Reason for Amendment: This multi-part amendment responds to the directive in section 12004(a)(5) of the Bipartisan Safer Communities Act, Public Law 117–159 (the ''Act''), addresses new offenses and other changes in law made by the Act, and revises the primary firearms guideline, § 2K2.1 (Unlawful Receipt, Possession, or Transportation of Firearms or Ammunition; Prohibited Transactions Involving Firearms or Ammunition), to account for firearms that are not marked with a serial number. In the Act, Congress directed that the Commission:

shall review and amend its guidelines and policy statements to ensure that persons convicted of an offense under section 932 or 933 of title 18, United States Code, and other offenses applicable to the straw purchases and trafficking of firearms are subject to increased penalties in comparison to those currently provided by the guidelines and policy statements for such straw purchasing and trafficking of firearms offenses. In its review, the Commission shall consider, in particular, an appropriate amendment to reflect the intent of Congress that straw purchasers without significant criminal histories receive sentences that are sufficient to deter participation in such

activities and reflect the defendant's role and culpability, and any coercion, domestic violence survivor history, or other mitigating factors. The Commission shall also review and amend its guidelines and policy statements to reflect the intent of Congress that a person convicted of an offense under section 932 or 933 of title 18, United States Code, who is affiliated with a gang, cartel, organized crime ring, or other such enterprise should be subject to higher penalties than an otherwise unaffiliated individual.

Public Law 117–159, 12004(a)(5), 136 Stat. 1313, 1328 (2022).

New Straw Purchase and Firearms Trafficking Offenses

The amendment makes two changes to account for the new offenses at 18 U.S.C. 932 and 933 established by the Act. First, the amendment amends Appendix A (Statutory Index) to reference the new offenses to § 2K2.1. Section 12004(a)(1) of the Act makes it unlawful to engage in straw purchasing of firearms (18 U.S.C. 932) or trafficking in firearms (18 U.S.C. 933). Sections 932 and 933 both carry statutory maximum sentences of 15 years of imprisonment. 18 U.S.C. 932(c)(1), 933(b). The statutory maximum in section 932 increases to 25 years where the defendant has reasonable cause to believe the firearm would be used to commit a felony or certain other offenses. 18 U.S.C. 932(c)(2). As both offenses address conduct that is analogous to other firearms offenses, the Commission determined that the most appropriate guideline is § 2K2.1.

Second, the amendment revises § 2K2.1 to set the base offense level for defendants convicted of these crimes at level 14, or level 20 if the offense involved either a semiautomatic firearm that is capable of accepting a large capacity magazine or a firearm described in 26 U.S.C. 5845(a). The Commission set these base offense levels to the same levels applicable to defendants convicted under a third statute used to prosecute straw purchasers and traffickers with the same 15-year statutory maximum, 18 U.S.C. 922(d), to ensure proportionality.

Increase Penalties for Straw Purchasing and Trafficking Offenses

The amendment next revises § 2K2.1 to respond to section 12004(a)(5) of the Act, which directs the Commission to provide increased penalties for defendants convicted under 18 U.S.C. 932, 18 U.S.C. 933, or ''other offenses applicable to the straw purchases and trafficking of firearms.'' Specifically, the amendment revises the existing ''trafficking'' specific offense characteristic at § 2K2.1(b)(5).

Prior to the amendment, subsection (b)(5) provided an enhancement of four levels ''[i]f the defendant engaged in the trafficking of firearms.'' Application Note 13(A) provided that this enhancement applied if the defendant transported, transferred, or otherwise disposed of two or more firearms to another individual, or received two or more firearms with the intent to transport, transfer, or otherwise dispose of firearms to another individual, whose possession or receipt would be unlawful or who intended to use or dispose of the firearm unlawfully. Application Note 13(B) defined a person whose possession or receipt would be unlawful as an individual who (i) had a prior conviction for a crime of violence, a controlled substance offense, or a misdemeanor crime of domestic violence; or (ii) at the time of the offense was under a criminal justice sentence, including probation, parole, supervised release, imprisonment, work release, or escape status.

The amendment revises subsection (b)(5) in three ways to comply with Congress's directive to include an increase for all defendants convicted under 18 U.S.C. 932, 18 U.S.C. 933, or other offenses involving straw purchasing or trafficking of firearms.

First, the amendment creates a new subsection, § 2K2.1(b)(5)(A), which provides a 2-level enhancement for defendants convicted of illegally receiving a firearm under 18 U.S.C. 933(a)(2) (the trafficking receipt provision) or § 933(a)(3) (attempting/conspiring to violate section 933). This ensures that receipt-only defendants convicted under section 933 receive the requisite increase.

Second, the amendment creates a new subsection, § 2K2.1(b)(5)(B), which provides a 2-level enhancement for any defendant engaged in straw purchasing or trafficking. This provision incorporates the elements of the straw purchasing and firearms trafficking statutes, including 18 U.S.C. 922(d), § 932, and § 933(a)(1), to provide an increase for defendants who attempted, conspired, or engaged in conduct involving the illicit transfer of a firearm or ammunition but who would not have received the trafficking enhancement prior to the amendment because of the limiting criteria in the existing Application Note 13. Those criteria included trafficking two or more firearms and that the recipient have criminal convictions for specified crimes.

Third, the amendment revises the criteria previously set forth in Application Notes 13(A) and (B) and incorporates the criteria into subsection (b)(5)(C). New subsection (b)(5)(C) provides an increase for defendants who attempted, conspired, or engaged in conduct involving the illicit transfer of two or more firearms to a person who (i) had a prior conviction of a crime of violence, controlled substance offense, or misdemeanor crime of domestic violence; (ii) was under a criminal justice sentence at the time of the offense; or (iii) intended to use or dispose of the firearms unlawfully. The new subsection (b)(5)(C) increases the enhancement from four levels to five levels to ensure straw purchasers and firearms traffickers meeting these criteria receive increased penalties as required by the directive.

The Commission determined that the expanded specific offense characteristic at subsection (b)(5) fully implements the directive by ensuring that defendants who illegally transfer a firearm receive an increased penalty under the guidelines. Specifically, the enhancement is tailored to apply to the most culpable defendants who engage in (a) straw purchasing, including those defendants who induce straw purchasing, and (b) firearms trafficking, including those defendants whose conduct was ''upstream'' in the gun trafficking pipeline. Consistent with the legislative history of the Act, public comment, and witness testimony, the Commission determined that such an increase is appropriate to reflect Congress's view that such conduct contributes to the illegal flow of firearms and that such defendants are currently under-punished as compared to felons in possession of the trafficked weapons. At the same time, by incorporating the elements of the core straw purchasing and firearms trafficking statutes, including the new offenses (sections 932 and 933), the new enhancement narrowly targets such defendants without also impacting other firearms defendants who were not intended to receive an increase.

The amendment also makes two conforming changes. First, to conform with statutory changes in 18 U.S.C. 921(a)(33), the amended subsection (b)(5)(C) includes a proviso that the enhancement does not apply by reason of the transferee's prior misdemeanor crime of domestic violence where the transferee's rights were restored. Second, the amendment amends the upward departure provision in Application Note 13(B) to conform the language with the revised subsection (b)(5).

Increase Penalties for Organized Crime

The amendment next amends § 2K2.1 to respond to section 12004(a)(5) of the Act, which directs the Commission to increase penalties for defendants convicted under 18 U.S.C. 932 or § 933 who are affiliated with organized crime. The amendment implements this portion of the directive by creating a new specific offense characteristic providing for a 2-level enhancement under § 2K2.1(b)(8). Section 2K2.1(b)(8) applies to those defendants who receive an increase at subsection (b)(5) and who committed the offense in connection with the defendant's participation in an organization of five or more persons, knowing, or acting with willful blindness or conscious avoidance of knowledge, that the organization has as one of its primary purposes the commission of criminal offenses.

To ensure that a defendant would not receive the enhancement based solely on evidence unrelated to the criminal act or mere inclusion in gang databases, the enhancement requires that the defendant committed the offense ''in connection with'' the defendant's ''participation'' in a criminal organization, and that the defendant knew or consciously avoided knowledge of the criminal nature of the organization's activities. As with other amendments this year, the Commission determined that the doctrines of ''willful blindness'' and ''conscious avoidance'' are ''well established in criminal law.'' *See Glob.-Tech Appliances, Inc.* v. *SEB S.A.,* 563 U.S. 754, 766, 769 (2011) (noting that, while the Courts of Appeals articulate the ''willful blindness'' or ''conscious avoidance'' doctrines slightly differently, ''[the Courts of Appeals] all appear to agree on two basic requirements: (1) The defendant must subjectively believe that there is a high probability that a fact exists and (2) the defendant must take deliberate actions to avoid learning of that fact.'').

Finally, the Commission determined that a 2-level increase for defendants receiving this enhancement is appropriate because specific offense characteristics accounting for other aggravating factors, such as the number of firearms and the use or possession of any firearm or ammunition in connection with another felony offense, may also apply to gang-affiliated defendants in addition to the new enhancement at subsection (b)(8). Accordingly, the Commission determined that an incremental 2-level enhancement appropriately and adequately differentiates straw purchasing and firearms trafficking defendants affiliated with organized crime from those who are unaffiliated.

Reduction for Mitigating Circumstances

The amendment amends § 2K2.1 to respond to section 12004(a)(5) of the Act, which directs the Commission to consider an amendment accounting for straw purchasers with mitigating circumstances. The amendment implements this portion of the directive by creating a new specific offense characteristic at § 2K2.1(b)(9) providing a 2-level reduction available to defendants who receive an increase at subsection (b)(5) and satisfy other eligibility criteria. The amendment also deletes Application Note 15, which provided for a downward departure for certain straw purchasers, because subsection (b)(9) provides a reduction with broader criteria.

Consistent with congressional intent that the reduction apply to straw purchasers without significant criminal histories, a defendant must have no more than 1 criminal history point to qualify for the specific offense characteristic. Also consistent with congressional intent that the Commission account for mitigating circumstances, the adjustment applies to a defendant motivated by an intimate or familial relationship or by threats or fear who was otherwise unlikely to commit such an offense, or to a defendant who was unusually vulnerable due to physical or mental conditions. The Commission determined that such qualifiers appropriately ensure that the reduction is not so broad as to include highly culpable defendants, while also ensuring it is not so narrow as to exclude the less culpable defendants.

Similarly, the Commission determined that a 2-level reduction is appropriate to ensure that the magnitude of the reduction matches the magnitude of the increase provided in subsections (b)(5)(A) and (B) so that qualifying defendants do not receive increased penalties as a result of the amendment taken as a whole.

Firearms Not Marked With a Serial Number

Finally, the amendment amends § 2K2.1 to account for privately made firearms not marked with a serial number, commonly referred to as ''ghost guns.'' The amendment provides a 4-level enhancement if the defendant knew that the offense involved a firearm not marked with a serial number, or the defendant was willfully blind or consciously avoided knowing this fact.

In adding the enhancement, the Commission concluded that there is no meaningful distinction between a firearm with an obliterated serial number, which has long-triggered a 4-level enhancement under § 2K2.1(b)(4), and a firearm that is not marked with a serial number. The Commission also concluded that firearms not marked with a serial number share the traits that led the Commission to implement a 4-level enhancement for firearms with altered or obliterated serial numbers: ''difficulty in tracing firearms with altered or obliterated serial numbers, and the increased market for these types of weapons.'' USSG App. C, amend. 691 (effective Nov. 1, 2006). Specifically, the Commission shared concerns raised by the Department of Justice regarding the proliferation of ghost guns, the increased frequency with which ghost guns are used in connection with criminal activity, and the difficulty in tracing these firearms. Therefore, the Commission concluded that the same 4-level enhancement applied in offenses involving an altered or obliterated serial number is also appropriate for firearms not marked with a serial number.

The Commission determined that the enhancement should apply only to those defendants who knew or consciously avoided knowing that the firearm was not marked with a serial number. The amendment also specifically excepts firearms manufactured before the effective date of the Gun Control Act of 1968, which imposed the requirement that federal firearms licensees serialize newly manufactured or imported firearms.

The amendment also makes conforming changes to Application Note 8.

7. Amendment: Section 3E1.1(b) is amended by inserting after ''1 additional level.'' the following: ''The term 'preparing for trial' means substantive preparations taken to present the government's case against the defendant to a jury (or judge, in the case of a bench trial) at trial. 'Preparing for trial' is ordinarily indicated by actions taken close to trial, such as preparing witnesses for trial, in limine motions, proposed voir dire questions and jury instructions, and witness and exhibit lists. Preparations for pretrial proceedings (such as litigation related to a charging document, discovery motions, and suppression motions) ordinarily are not considered 'preparing for trial' under this subsection. Post-conviction matters (such as sentencing objections, appeal waivers, and related issues) are not considered 'preparing for trial.' ''.

The Commentary to § 3E1.1 captioned ''Application Notes'' is amended in Note 6 by striking ''The government

should not withhold such a motion based on interests not identified in § 3E1.1, such as whether the defendant agrees to waive his or her right to appeal.''.

Reason for Amendment: This amendment responds to circuit conflicts over whether a reduction under subsection (b) of § 3E1.1 (Acceptance of Responsibility), which requires a motion from the government, may be withheld or denied if a defendant moves to suppress evidence or raises sentencing challenges. The amendment addresses the circuit conflicts by providing a definition of the term ''preparing for trial,'' which appears in § 3E1.1(b) and Application Note 6 to § 3E1.1. The amendment also deletes hortatory language that the Commission previously added to Application Note 6 providing that the ''government should not withhold such a motion based on interests not identified in § 3E1.1, such as whether the defendant agrees to waive his or her right to appeal.'' *See* USSG App. C, amend. 775 (effective Nov. 1, 2013).

The amendment defines ''preparing for trial'' as ''substantive preparations taken to present the government's case against the defendant to a jury (or judge, in the case of a bench trial) at trial.'' The amendment further provides examples of actions that ordinarily indicate preparing for trial (such as preparing witnesses for trial, in limine motions, proposed voir dire questions and jury instructions, and witnesses and exhibit lists). The amendment further provides that preparations for pretrial proceedings (such as litigation related to a charging document, discovery motions, and suppression motions) ordinarily are not considered preparing for trial, and that post-conviction matters (such as sentencing objections, appeal waivers, and related issues) are not considered preparing for trial.

As Justices Sotomayor and Gorsuch observed in 2021, the conflict as to whether a suppression hearing is a valid basis for denying a § 3E1.1(b) reduction is both longstanding and has a potentially significant impact on defendants. *See Longoria* v. *United States,* 141 S. Ct. 978, 979 (2021) (statement of Sotomayor, J., with whom Gorsuch, J. joins, respecting the denial of certiorari, ''emphasiz[ing] the need for clarification from the Commission'' on this ''important and longstanding split among the Courts of Appeals over the proper interpretation of § 3E1.1(b)''). Three circuits (the Third, Fifth, and Sixth Circuits) have permitted the government to withhold a § 3E1.1(b) motion based on a suppression motion, while five circuits (the First, Second, Ninth, Tenth, and D.C. Circuits) have held that a reduction may not be denied based on a suppression motion. *Compare United States* v. *Longoria,* 958 F.3d 372 (5th Cir. 2020), *cert. denied,* 141 S. Ct. 978 (2021), *United States* v. *Collins,* 683 F.3d 697 (6th Cir. 2012), and *United States* v. *Drennon,* 516 F.3d 160 (3d Cir. 2008), *with United States* v. *Vargas,* 961 F.3d 566 (2d Cir. 2020), *United States* v. *Price,* 409 F.3d 436 (D.C. Cir. 2005), *United States* v. *Marquez,* 337 F.3d 1203 (10th Cir. 2003), *United States* v. *Marroquin,* 136 F.3d 220 (1st Cir. 1998), and *United States* v. *Kimple,* 27 F.3d 1409 (9th Cir. 1994).

Similarly, the First, Third, Seventh, and Eighth Circuits have held that the government may withhold a § 3E1.1(b) motion based on sentencing challenges, while the Second and Fifth Circuits have held that it may not. *Compare United States* v. *Adair,* 38 F.4th 341 (3d Cir. 2022), *United States* v. *Jordan,* 877 F.3d 391 (8th Cir. 2017), *United States* v. *Sainz-Preciado,* 566 F.3d 708 (7th Cir. 2009), and *United States* v. *Beatty,* 538 F.3d 8 (1st Cir. 2008), *with United States* v. *Castillo,* 779 F.3d 318 (5th Cir. 2015), and *United States* v. *Lee,* 653 F.3d 170 (2d Cir. 2011).

These conflicts have resulted in variation in § 3E1.1(b) motion practice across—and even within—judicial districts. In some jurisdictions, defendants receive the additional reduction as a matter of course, even if they assert pre-trial or post-conviction challenges. In others, the § 3E1.1(b) motion has been withheld based on motions to suppress, sentencing challenges, or other grounds. Because the sentencing impact of losing one additional level under § 3E1.1(b) can be significant, the practice in the latter districts has had a chilling effect, deterring defendants from pursuing certain evidentiary and sentencing challenges.

The Commission promulgated this amendment to decrease variation between jurisdictions in applying § 3E1.1(b). The amendment also aims to minimize any deterrent effect on defendants' ability to exercise their constitutional rights. *See also* § 3E1.1, comment. (n.2) (allowing consideration for the adjustment where a defendant exercises constitutional rights to trial to raise a constitutional challenge to a statute or challenge the applicability of a statute to the defendant's conduct).

In promulgating this amendment, the Commission recognizes that these circuit conflicts involve guideline and commentary provisions that Congress directly amended, and that Congress also directed the Commission not to ''alter or repeal'' the congressional amendments. *See* Prosecutorial Remedies and Other Tools to end the Exploitation of Children Today Act of 2003, Public Law 108–21, 401(g), (j)(4), 117 Stat. 650. In recognition of this limitation, the amendment defines a term that the congressional amendments did not define—''preparing for trial''—without altering or repealing the amendments that Congress made.

8. Amendment:

Part A (Status Points Under § 4A1.1)

The Commentary to § 2P1.1 captioned ''Application Notes'' is amended in Note 5 by striking ''§ 4A1.1(d)'' and inserting ''§ 4A1.1(e)''.

Section 4A1.1 is amended—

by striking subsection (d) as follows:

''(d) Add 2 points if the defendant committed the instant offense while under any criminal justice sentence, including probation, parole, supervised release, imprisonment, work release, or escape status.'';

by redesignating subsection (e) as subsection (d);

and by inserting at the end the following new subsection (e):

''(e) Add 1 point if the defendant (1) receives 7 or more points under subsections (a) through (d), and (2) committed the instant offense while under any criminal justice sentence, including probation, parole, supervised release, imprisonment, work release, or escape status.''.

The Commentary to § 4A1.1 captioned ''Application Notes'' is amended—

by striking Note 4 as follows:

''4. *§ 4A1.1(d).* Two points are added if the defendant committed any part of the instant offense (*i.e.,* any relevant conduct) while under any criminal justice sentence, including probation, parole, supervised release, imprisonment, work release, or escape status. Failure to report for service of a sentence of imprisonment is to be treated as an escape from such sentence. *See* § 4A1.2(n). For the purposes of this subsection, a 'criminal justice sentence' means a sentence countable under § 4A1.2 (Definitions and Instructions for Computing Criminal History) having a custodial or supervisory component, although active supervision is not required for this subsection to apply. For example, a term of unsupervised probation would be included; but a sentence to pay a fine, by itself, would not be included. A defendant who commits the instant offense while a violation warrant from a prior sentence is outstanding (*e.g.,* a probation, parole, or supervised release violation warrant) shall be deemed to be under a criminal justice sentence for the purposes of this

provision if that sentence is otherwise countable, even if that sentence would have expired absent such warrant. *See* § 4A1.2(m).'';

by redesignating Note 5 as Note 4;

in Note 4 (as so redesignated) by striking ''§ 4A1.1(e)'' each place such term appears and inserting ''§ 4A1.1(d)'';

and by inserting at the end the following new note 5:

''5. *§ 4A1.1(e).* One point is added if the defendant (1) receives 7 or more points under § 4A1.1(a) through (d), and (2) committed any part of the instant offense (*i.e.,* any relevant conduct) while under any criminal justice sentence, including probation, parole, supervised release, imprisonment, work release, or escape status. Failure to report for service of a sentence of imprisonment is to be treated as an escape from such sentence. *See* § 4A1.2(n). For the purposes of this subsection, a 'criminal justice sentence' means a sentence countable under § 4A1.2 (Definitions and Instructions for Computing Criminal History) having a custodial or supervisory component, although active supervision is not required for this subsection to apply. For example, a term of unsupervised probation would be included; but a sentence to pay a fine, by itself, would not be included. A defendant who commits the instant offense while a violation warrant from a prior sentence is outstanding (*e.g.,* a probation, parole, or supervised release violation warrant) shall be deemed to be under a criminal justice sentence for the purposes of this provision if that sentence is otherwise countable, even if that sentence would have expired absent such warrant. *See* § 4A1.2(m).''.

The Commentary to § 4A1.1 captioned ''Background'' is amended in the last paragraph by striking ''Section 4A1.1(d) adds two points if the defendant was under a criminal justice sentence during any part of the instant offense'' and inserting ''Section 4A1.1(e) adds one point if the defendant receives 7 or more points under § 4A1.1(a) through (d) and was under a criminal justice sentence during any part of the instant offense''.

Section 4A1.2 is amended—

in subsection (a)(2) by striking ''§ 4A1.1(e)'' and inserting ''§ 4A1.1(d)'';

in subsection (m) by striking ''§ 4A1.1(d)'' and inserting ''§ 4A1.1(e)'';

in subsection (n) by striking ''§ 4A1.1(d)'' and inserting ''§ 4A1.1(e)'';

and in subsection (p) by striking ''§ 4A1.1(e)'' and inserting ''§ 4A1.1(d)''.

Part B (Zero-Point Offenders)

Subpart 1 (Adjustment for Certain Zero-Point Offenders)

Chapter Four is amended by inserting at the end the following new Part C:

''PART C—ADJUSTMENT FOR CERTAIN ZERO-POINT OFFENDERS

§ 4C1.1. *Adjustment for Certain Zero-Point Offenders*

(a) *Adjustment.*—If the defendant meets all of the following criteria:

(1) the defendant did not receive any criminal history points from Chapter Four, Part A;

(2) the defendant did not receive an adjustment under § 3A1.4 (Terrorism);

(3) the defendant did not use violence or credible threats of violence in connection with the offense;

(4) the offense did not result in death or serious bodily injury;

(5) the instant offense of conviction is not a sex offense;

(6) the defendant did not personally cause substantial financial hardship;

(7) the defendant did not possess, receive, purchase, transport, transfer, sell, or otherwise dispose of a firearm or other dangerous weapon (or induce another participant to do so) in connection with the offense;

(8) the instant offense of conviction is not covered by § 2H1.1 (Offenses Involving Individual Rights);

(9) the defendant did not receive an adjustment under § 3A1.1 (Hate Crime Motivation or Vulnerable Victim) or § 3A1.5 (Serious Human Rights Offense); and

(10) the defendant did not receive an adjustment under § 3B1.1 (Aggravating Role) and was not engaged in a continuing criminal enterprise, as defined in 21 U.S.C. 848;

decrease the offense level determined under Chapters Two and Three by 2 levels.

(b) *Definitions and Additional Considerations.*—

(1) 'Dangerous weapon,' 'firearm,' 'offense,' and 'serious bodily injury' have the meaning given those terms in the Commentary to § 1B1.1 (Application Instructions).

(2) 'Sex offense' means (A) an offense, perpetrated against a minor, under (i) chapter 109A of title 18, United States Code; (ii) chapter 110 of title 18, not including a recordkeeping offense; (iii) chapter 117 of title 18, not including transmitting information about a minor or filing a factual statement about an alien individual; or (iv) 18 U.S.C. 1591; or (B) an attempt or a conspiracy to commit any offense described in subparagraphs (A)(i) through (iv) of this definition.

(3) In determining whether the defendant's acts or omissions resulted in 'substantial financial hardship' to a victim, the court shall consider, among other things, the non-exhaustive list of factors provided in Application Note 4(F) of the Commentary to § 2B1.1 (Theft, Property Destruction, and Fraud).

Commentary

Application Notes:

1. *Application of Subsection (a)(6).*—The application of subsection (a)(6) is to be determined independently of the application of subsection (b)(2) of § 2B1.1 (Theft, Property Destruction, and Fraud).

2. *Upward Departure.*—An upward departure may be warranted if an adjustment under this guideline substantially underrepresents the seriousness of the defendant's criminal history. For example, an upward departure may be warranted if the defendant has a prior conviction or other comparable judicial disposition for an offense that involved violence or credible threats of violence.''.

Subpart 2 (Implementation of 28 U.S.C. 994(j))

The Commentary to § 5C1.1 captioned ''Application Notes'' is amended—

by inserting at the beginning of Note 1 the following new heading: ''*Application of Subsection (a).*—'';

by inserting at the beginning of Note 2 the following new heading: ''*Application of Subsection (b).*—'';

by inserting at the beginning of Note 3 the following new heading: ''*Application of Subsection (c).*—'';

by striking Note 4 as follows:

''If the defendant is a nonviolent first offender and the applicable guideline range is in Zone A or B of the Sentencing Table, the court should consider imposing a sentence other than a sentence of imprisonment, in accordance with subsection (b) or (c)(3). *See* 28 U.S.C. 994(j). For purposes of this application note, a 'nonviolent first offender' is a defendant who has no prior convictions or other comparable judicial dispositions of any kind and who did not use violence or credible threats of violence or possess a firearm or other dangerous weapon in connection with the offense of conviction. The phrase 'comparable judicial dispositions of any kind' includes diversionary or deferred dispositions resulting from a finding or admission of guilt or a plea of *nolo contendere* and juvenile adjudications.'';

by redesignating Notes 5 through 10 as Notes 4 through 9, respectively;

by inserting at the beginning of Note 4 (as so redesignated) the following new

heading: ''*Application of Subsection (d).*—'';

by inserting at the beginning of Note 5 (as so redesignated) the following new heading: ''*Application of Subsection (e).*—'';

by inserting at the beginning of Note 6 (as so redesignated) the following new heading: ''*Departures Based on Specific Treatment Purpose.*—'';

by inserting at the beginning of Note 7 (as so redesignated) the following new heading: ''*Use of Substitutes for Imprisonment.*—'';

by inserting at the beginning of Note 8 (as so redesignated) the following new heading: ''*Residential Treatment Program.*—'';

by inserting at the beginning of Note 9 (as so redesignated) the following new heading: ''*Application of Subsection (f).*—'';

and by inserting at the end the following new Note 10:

''10. *Zero-Point Offenders.*—

(A) *Zero-Point Offenders in Zones A and B of the Sentencing Table.*—If the defendant received an adjustment under § 4C1.1 (Adjustment for Certain Zero-Point Offenders) and the defendant's applicable guideline range is in Zone A or B of the Sentencing Table, a sentence other than a sentence of imprisonment, in accordance with subsection (b) or (c)(3), is generally appropriate. *See* 28 U.S.C. 994(j).

(B) *Departure for Cases Where the Applicable Guideline Range Overstates the Gravity of the Offense.*—A departure, including a departure to a sentence other than a sentence of imprisonment, may be appropriate if the defendant received an adjustment under § 4C1.1 (Adjustment for Certain Zero-Point Offenders) and the defendant's applicable guideline range overstates the gravity of the offense because the offense of conviction is not a crime of violence or an otherwise serious offense. *See* 28 U.S.C. 994(j).''.

Subpart 3 (Additional Changes)

Chapter One, Part A is amended in Subpart 1(4)(d) (Probation and Split Sentences)—

by adding an asterisk after ''community confinement or home detention.'';

by adding a second asterisk after ''through departures.*'';

and by striking the following Note:

''*Note: Although the Commission had not addressed 'single acts of aberrant behavior' at the time the Introduction to the Guidelines Manual originally was written, it subsequently addressed the issue in Amendment 603, effective November 1, 2000. (*See* USSG App. C, amendment 603.)'',

and inserting the following Notes:

''*Note: The Commission expanded Zones B and C of the Sentencing Table in 2010 to provide a greater range of sentencing options to courts with respect to certain offenders. (*See* USSG App. C, amendment 738.) In 2018, the Commission added a new application note to the Commentary to § 5C1.1 (Imposition of a Term of Imprisonment), stating that if a defendant is a 'nonviolent first offender and the applicable guideline range is in Zone A or B of the Sentencing Table, the court should consider imposing a sentence other than a sentence of imprisonment.' (*See* USSG App. C, amendment 801.) In 2023, the Commission added a new Chapter Four guideline, at § 4C1.1 (Adjustment for Certain Zero-Point Offenders), providing a decrease of 2 levels from the offense level determined under Chapters Two and Three for 'zero-point' offenders who meet certain criteria. In addition, the Commission further amended the Commentary to § 5C1.1 to address the alternatives to incarceration available to 'zero-point' offenders by revising the application note in § 5C1.1 that addressed 'nonviolent first offenders' to focus on 'zero-point' offenders. (*See* USSG App. C, amendment 821.)

**Note: Although the Commission had not addressed 'single acts of aberrant behavior' at the time the Introduction to the Guidelines Manual originally was written, it subsequently addressed the issue in Amendment 603, effective November 1, 2000. (*See* USSG App. C, amendment 603.)''.

Section 4A1.3(b)(2)(A) is amended by striking ''A departure'' and inserting ''Unless otherwise specified, a departure''.

The Commentary to § 4A1.3 captioned ''Application Notes'' is amended in Note 3 by striking ''due to the fact that the lower limit of the guideline range for Criminal History Category I is set for a first offender with the lowest risk of recidivism'' and inserting ''unless otherwise specified''.

Part C (Impact of Simple Possession of Marihuana Offenses)

The Commentary to § 4A1.3 captioned ''Application Notes'', as amended by Part B, Subpart 3 of this amendment, is further amended in Note 3 by striking the following:

''*Downward Departures.*—A downward departure from the defendant's criminal history category may be warranted if, for example, the defendant had two minor misdemeanor convictions close to ten years prior to the instant offense and no other evidence of prior criminal behavior in the intervening period. A departure below the lower limit of the applicable guideline range for Criminal History Category I is prohibited under subsection (b)(2)(A), unless otherwise specified.'',

and inserting the following:

''*Downward Departures.*—

(A) *Examples.*—A downward departure from the defendant's criminal history category may be warranted based on any of the following circumstances:

(i) The defendant had two minor misdemeanor convictions close to ten years prior to the instant offense and no other evidence of prior criminal behavior in the intervening period.

(ii) The defendant received criminal history points from a sentence for possession of marihuana for personal use, without an intent to sell or distribute it to another person.

(B) *Downward Departures from Criminal History Category I.*—A departure below the lower limit of the applicable guideline range for Criminal History Category I is prohibited under subsection (b)(2)(A), unless otherwise specified.''.

Reason for Amendment: This amendment is the result of several Commission studies regarding the nature of the criminal history of federal offenders, including analyses of the number and types of prior convictions included as criminal history and the ability of the criminal history rules to predict an offender's likelihood of rearrest. While these studies continue to recognize the close association between an offender's criminal history calculation under the guidelines and the likelihood of future recidivism, the amendment makes targeted changes to reduce the impact of providing additional criminal history points for offenders under a criminal justice sentence (commonly known as ''status points''), to reduce recommended guideline ranges for offenders with zero criminal history points under the guidelines (''zero-point offenders''), and to recognize the changing legal landscape as it pertains to simple possession of marihuana offenses. These targeted amendments balance the Commission's mission of implementing data-driven sentencing policies with its duty to craft penalties that reflect the statutory purposes of sentencing.

Part A—Status Points

Part A of the amendment addresses ''status points'' for offenders, namely the additional criminal history points given to offenders for the fact of having committed the instant offense while under a criminal justice sentence,

including probation, parole, supervised release, imprisonment, work release, or escape status. The amendment redesignates current subsection (d) of § 4A1.1, which addresses ''status points,'' as subsection (e) and redesignates current subsection (e), which addresses multiple crimes of violence treated as a single sentence, as subsection (d). This redesignation is made for ease of application.

Under the previous ''status points'' provision, two criminal history points were added under § 4A1.1(d) if the defendant committed the instant offense ''while under any criminal justice sentence, including probation, parole, supervised release, imprisonment, work release, or escape status.'' The amendment limits the overall criminal history impact of ''status points'' in two ways. First, as revised, the ''status points'' provision under redesignated subsection (e) applies only to offenders with more serious criminal histories under the guidelines by requiring that an offender have seven or more criminal history points under subsections (a) through (d) in addition to having been under a criminal justice sentence at the time of the instant offense. Offenders with six or fewer criminal history points under subsections (a) through (d) will no longer receive ''status points.'' Second, the amendment also reduces from two points to one point the ''status points'' assessed for offenders to whom the revised provision applies. Part A of the amendment also makes conforming changes to the Commentary to § 4A1.1, § 2P1.1 (Escape, Instigating or Assisting Escape), and § 4A1.2 (Definitions and Instructions for Computing Criminal History).

As part of its study of criminal history, the Commission found that ''status points'' are relatively common in cases with at least one criminal history point, having been applied in 37.5 percent of cases with criminal history points over the last five fiscal years. Of the offenders who received ''status points,'' 61.5 percent had a higher Criminal History Category as a result of the addition of the ''status points.'' The Commission also recently published a series of research reports regarding the recidivism rates of federal offenders. *See, e.g.,* U.S. Sent'g Comm'n, Recidivism of Federal Offenders Released in 2010 (2021), available at *https://www.ussc.gov/research/research-reports/recidivism-federal-offenders-released-2010.* These reports again concluded that an offender's criminal history calculation under the guidelines is strongly associated with the likelihood of future recidivism by the defendant. In a related publication, the Commission also found, however, that status points add little to the overall predictive value associated with the criminal history score. *See* U.S. Sent'g Comm'n, Revisiting Status Points (2022), available at *https://www.ussc.gov/research/research-reports/revisiting-status-points.*

The Commission's action to limit the impact of ''status points'' builds upon its tradition of data-driven evolution of the guidelines. As described in the Introduction to Chapter Four, the original Commission envisioned status points as ''consistent with the extant empirical research assessing correlates of recidivism and patterns of career criminal behavior'' and therefore envisioned ''status points'' as being reflective of, among other sentencing goals, the increased likelihood of future recidivism. *See* USSG Ch.4, Pt.A, intro. comment. The original Commission also explained, however, that it would ''review additional data insofar as they become available in the future.'' The Commission's recent research suggests that ''status points'' improve the predictive value of the criminal history score less than the original Commission may have expected, suggesting that the treatment of ''status points'' under Chapter Four should be refined.

Accordingly, the Commission determined that it was appropriate to address several concerns regarding the scope and impact of status points. In taking these steps, the Commission observed that the operation of the *Guidelines Manual* separately accounts for consecutive punishment imposed upon revocations of supervised release, a likely occurrence if an offender was under a criminal justice sentence during the commission of another offense. The Commission further recognized that it is also possible that an offender's criminal history score would be independently increased as the result of additional time imposed as the result of a revocation of probation or supervised release for the offense that also results in the addition of status points.

At the same time, by retaining ''status points'' for those offenders in higher criminal history categories, the Commission continues to recognize that ''status points,'' like the other criminal history provisions in Chapter Four, reflect and serve multiple purposes of sentencing, including the offender's perceived lack of respect for the law, as reflected both in the offender's overall criminal history and the fact that the offender has reoffended while under a criminal justice sentence ordered by a court. *See* 18 U.S.C. 3553(a)(2)(A)–(C).

The Commission concluded that accounting for status on a more limited basis continues to serve the broader purposes of sentencing while also addressing other concerns raised regarding the impact of status points.

Part B—Zero-Point Offenders

Part B of the amendment includes three subparts making changes pertaining to offenders who did not receive any criminal history points from Chapter Four, Part A. Subpart 1 provides for an adjustment for certain offenders with zero criminal history points. Subpart 2 revises § 5C1.1 (Imposition of a Term of Imprisonment) to implement the congressional directive at 28 U.S.C. 994(j). Finally, Subpart 3 makes other conforming changes.

Subpart 1—Adjustment for Certain Zero-Point Offenders

Subpart 1 of Part B of the amendment creates a new Chapter Four guideline at § 4C1.1 (Adjustment for Certain Zero-Point Offenders). New § 4C1.1 provides a decrease of two levels from the offense level determined under Chapters Two and Three for offenders who did not receive any criminal history points under Chapter Four, Part A and whose instant offense did not involve specified aggravating factors. In establishing new § 4C1.1, the Commission was informed by its studies of recidivism among federal offenders, as well as other extensive data analyses of offenders with no criminal history points, and public comment. The Sentencing Table in Chapter Five, Part A is divided into six criminal history categories, from I (lowest) to VI (highest). Criminal History Category I includes offenders with zero criminal history points and those with one criminal history point. Recidivism data analyzed by the Commission shows, however, that offenders with zero criminal history points have considerably lower recidivism rates than other offenders, including offenders with one criminal history point. *See* U.S. Sent'g Comm'n, Recidivism of Federal Offenders Released in 2010 (2021), available at *https://www.ussc.gov/research/research-reports/recidivism-federal-offenders-released-2010.* Among other findings, the report concluded that ''zero-point offenders'' were less likely to be rearrested than ''one point'' offenders (26.8% compared to 42.3%), the largest variation of any comparison of offenders within the same Criminal History Category.

In promulgating this change, the Commission also considered the rates of departures and variances in cases involving offenders with no criminal history points. The Commission has

long viewed the rates and extents of departures and variances from the applicable guideline ranges as a feedback mechanism from the courts that a particular area of the guidelines may warrant further review and possible amendment. In fiscal year 2021, 39.2 percent of offenders with zero criminal history points received a sentence within the guidelines range; by comparison, 47.4 percent of offenders with one criminal history point were sentenced within the guideline range. The Commission determined that the departure and variance rates for zero-point offenders, coupled with its recidivism data, warranted action.

The amendment applies to offenders with no criminal history points, including (1) offenders with no prior convictions; (2) offenders who have prior convictions that are not counted because those convictions were not within the time limits set forth in subsection (d) and (e) of § 4A1.2 (Definitions and Instructions for Computing Criminal History); and (3) offenders who have prior convictions that are not used in computing the criminal history category for reasons other than their ''staleness'' (*e.g.,* sentences resulting from foreign or tribal court convictions, minor misdemeanor convictions, or infractions). In adopting this definition of ''zero-point offenders,'' the Commission opted to hew to the long-standing and carefully crafted criminal history rules set forth in Chapter Four, regarding which prior convictions count for criminal history purposes and which do not. The Commission also observed that attempts to exclude offenders with certain prior convictions could lead to increased complexity and litigation and require the additional practical step of investigating prior unscorable offenses for which records may not be readily available.

While determining that a reduction is appropriate for some offenders with zero criminal history points, the Commission also identified circumstances in which zero-point offenders are appropriately excluded from eligibility in light of the seriousness of the instant offense of conviction or the existence of aggravating factors in the instant offense (*e.g.,* where the offender used violence or credible threats of violence in connection with the offense or where the instant offense of conviction was a ''sex offense''). The exclusionary criteria identified by the Commission were again informed by extensive data analyses and public comment. The Commission was also informed by existing legislation, including the congressionally established criteria for the statutory safety valve at 18 U.S.C. 3553(f) and the recent firearms legislation set forth in the Bipartisan Safer Communities Act.

Subpart 2—Implementation of 28 U.S.C. 994(j)

Subpart 2 of Part B of the amendment revises the Commentary to § 5C1.1 (Imposition of a Term of Imprisonment) that addresses ''nonviolent first offenders.'' New Application Note 10(A) provides that if the defendant received an adjustment under new § 4C1.1 and the defendant's applicable guideline range is in Zone A or B of the Sentencing Table, a sentence other than a sentence of imprisonment, in accordance with subsection (b) or (c)(3), is generally appropriate. New Application Note 10(B) adds a corresponding departure provision providing that a departure, including a departure to a sentence other than a sentence of imprisonment, may be appropriate if the offender received an adjustment under new § 4C1.1 and the applicable guideline range overstates the gravity of the offense because the offense of conviction is not a crime of violence or an otherwise serious offense.

The changes to the Commentary to § 5C1.1 respond to Congress's directive to the Commission at 28 U.S.C. 994(j), directing the Commission to ensure that the guidelines reflect the general appropriateness of imposing a sentence other than imprisonment in cases in which the defendant is a first offender who has not been convicted of a crime of violence or an otherwise serious offense. The Commission determined that the revised commentary serves Congress's intent in promulgating section 994(j) while providing appropriate limitations and guidance through reliance on the criteria set forth in new § 4C1.1 and the specific statutory language set forth in section 994(j).

Subpart 3—Additional Changes

Subpart 3 of Part B of the amendment makes a corresponding change to subsection (b)(2)(A) of § 4A1.3 (Departures Based on Inadequacy of Criminal History Category (Policy Statement)) to provide that a departure below the lower limit of the applicable guideline range for Criminal History Category I is prohibited, ''unless otherwise specified.'' The amendment also revises an explanatory note in Chapter One, Part A, Subpart 1(4)(d) (Probation and Split Sentences) to detail amendments to the *Guidelines Manual* related to the implementation of 28 U.S.C. 994(j), first offenders, and ''zero-point offenders.''

Part C—Impact of Simple Possession of Marihuana Offenses

Part C of the amendment revises the Commentary to § 4A1.3 (Departures Based on Inadequacy of Criminal History Category (Policy Statement)) to include sentences resulting from possession of marihuana offenses as an example of when a downward departure from the defendant's criminal history may be warranted. Specifically, Part C provides that a downward departure may be warranted if the defendant received criminal history points from a sentence for possession of marihuana for personal use, without an intent to sell or distribute it to another person. Most commenters, including the Department of Justice, supported this change. *See* Letter from Jonathan J. Wroblewski, Dir., Crim. Div., U.S. Dep't of Just., to Hon. Carlton W. Reeves, Chair, U.S. Sent'g Comm'n (Feb. 27, 2023), *in* U.S. Sent'g Comm'n, 2022–2023 Amendment Cycle Proposed Amendments/Public Comment (2023); see also U.S. Sent'g Comm'n, 2022–2023 Amendment Cycle Proposed Amendments/Public Comment (2023) (providing numerous public comment supporting the amendment).

The Commission also relied upon its recently published report on the impact of simple possession of marihuana offenses on sentencing. *See* U.S. Sent'g Comm'n, Weighing the Impact of Simple Possession of Marijuana: Trends and Sentencing in the Federal System (2023), available at *https://www.ussc.gov/research/research-reports/weighing-impact-simple-possession-marijuana.* In that study, the Commission found that 4,405 federal offenders (8.0%) received criminal history points under the federal sentencing guidelines for prior marihuana possession sentences in fiscal year 2021. Most such prior sentences were for state court convictions resulting in less than 60 days in prison or non-custodial sentences. The Commission also found informative that ten percent (10.2%) of these 4,405 offenders had no other criminal history points, and that for 40 percent (40.1%) of the 4,405 offenders (1,765), the criminal history points for prior marihuana possession sentences resulted in a higher Criminal History Category.

9. Amendment: The Commentary to § 2L1.2 captioned ''Application Notes'' is amended in Note 2, in the paragraph that begins '' 'Crime of violence' means'', by inserting after ''territorial jurisdiction of the United States.'' the following: '' 'Robbery' is the unlawful taking or obtaining of personal property

from the person or in the presence of another, against his will, by means of actual or threatened force, or violence, or fear of injury, immediate or future, to his person or property, or property in his custody or possession, or the person or property of a relative or member of his family or of anyone in his company at the time of the taking or obtaining. The phrase 'actual or threatened force' refers to force that is sufficient to overcome a victim's resistance.''.

Section 4B1.2(a) is amended—

by inserting at the beginning the following new heading ''*Crime of Violence.*—'';

and in paragraph (1) by striking ''another,'' and inserting ''another;''.

Section 4B1.2(b) is amended by striking the following:

''The term 'controlled substance offense' means an offense under federal or state law, punishable by imprisonment for a term exceeding one year, that prohibits the manufacture, import, export, distribution, or dispensing of a controlled substance (or a counterfeit substance) or the possession of a controlled substance (or a counterfeit substance) with intent to manufacture, import, export, distribute, or dispense.'',

and inserting the following:

''*Controlled Substance Offense.*—The term 'controlled substance offense' means an offense under federal or state law, punishable by imprisonment for a term exceeding one year, that—

(1) prohibits the manufacture, import, export, distribution, or dispensing of a controlled substance (or a counterfeit substance) or the possession of a controlled substance (or a counterfeit substance) with intent to manufacture, import, export, distribute, or dispense; or

(2) is an offense described in 46 U.S.C. 70503(a) or § 70506(b).''.

Section 4B1.2(c) is amended by inserting at the beginning the following new heading ''*Two Prior Felony Convictions.*—''.

Section 4B1.2 is amended by inserting at the end the following two new subsections (d) and (e):

''(d) *Inchoate Offenses Included.*—The terms 'crime of violence' and 'controlled substance offense' include the offenses of aiding and abetting, attempting to commit, or conspiring to commit any such offense.

(e) *Additional Definitions.*—

(1) *Forcible Sex Offense.*—'Forcible sex offense' includes where consent to the conduct is not given or is not legally valid, such as where consent to the conduct is involuntary, incompetent, or coerced. The offenses of sexual abuse of a minor and statutory rape are included only if the sexual abuse of a minor or statutory rape was (A) an offense described in 18 U.S.C. 2241(c) or (B) an offense under state law that would have been an offense under section 2241(c) if the offense had occurred within the special maritime and territorial jurisdiction of the United States.

(2) *Extortion.*—'Extortion' is obtaining something of value from another by the wrongful use of (A) force, (B) fear of physical injury, or (C) threat of physical injury.

(3) *Robbery.*—'Robbery' is the unlawful taking or obtaining of personal property from the person or in the presence of another, against his will, by means of actual or threatened force, or violence, or fear of injury, immediate or future, to his person or property, or property in his custody or possession, or the person or property of a relative or member of his family or of anyone in his company at the time of the taking or obtaining. The phrase 'actual or threatened force' refers to force that is sufficient to overcome a victim's resistance.

(4) *Prior Felony Conviction.*—'Prior felony conviction' means a prior adult federal or state conviction for an offense punishable by death or imprisonment for a term exceeding one year, regardless of whether such offense is specifically designated as a felony and regardless of the actual sentence imposed. A conviction for an offense committed at age eighteen or older is an adult conviction. A conviction for an offense committed prior to age eighteen is an adult conviction if it is classified as an adult conviction under the laws of the jurisdiction in which the defendant was convicted (*e.g.,* a federal conviction for an offense committed prior to the defendant's eighteenth birthday is an adult conviction if the defendant was expressly proceeded against as an adult).''.

The Commentary to § 4B1.2 captioned ''Application Notes'' is amended in Note 1—

in the heading by striking ''*Definitions.*—'' and inserting ''*Further Considerations Regarding 'Crime of Violence' and 'Controlled Substance Offense'.*—'';

by striking the first three paragraphs as follows:

'' 'Crime of violence' and 'controlled substance offense' include the offenses of aiding and abetting, conspiring, and attempting to commit such offenses.

'Forcible sex offense' includes where consent to the conduct is not given or is not legally valid, such as where consent to the conduct is involuntary, incompetent, or coerced. The offenses of sexual abuse of a minor and statutory rape are included only if the sexual abuse of a minor or statutory rape was (A) an offense described in 18 U.S.C. 2241(c) or (B) an offense under state law that would have been an offense under section 2241(c) if the offense had occurred within the special maritime and territorial jurisdiction of the United States.

'Extortion' is obtaining something of value from another by the wrongful use of (A) force, (B) fear of physical injury, or (C) threat of physical injury.'';

and by striking the last paragraph as follows:

'' 'Prior felony conviction' means a prior adult federal or state conviction for an offense punishable by death or imprisonment for a term exceeding one year, regardless of whether such offense is specifically designated as a felony and regardless of the actual sentence imposed. A conviction for an offense committed at age eighteen or older is an adult conviction. A conviction for an offense committed prior to age eighteen is an adult conviction if it is classified as an adult conviction under the laws of the jurisdiction in which the defendant was convicted (*e.g.,* a federal conviction for an offense committed prior to the defendant's eighteenth birthday is an adult conviction if the defendant was expressly proceeded against as an adult).''.

Reason for Amendment: This amendment is a result of the Commission's work on § 4B1.2 (Definitions of Terms Used in Section 4B1.1) regarding several application issues that have arisen in the context of the career offender guideline. As part of this study, the Commission considered varying case law interpreting certain guideline definitions and commentary to the guideline. Informed by the case law, public comment and relevant sentencing data, this amendment specifically addresses application issues regarding the meaning of ''robbery'' and ''extortion'' and the treatment of inchoate offenses. The amendment also makes necessary changes to further implement the congressional directive at 28 U.S.C. 994(h).

The amendment makes several changes to address a circuit conflict regarding the authoritative weight afforded to certain commentary to § 4B1.2. The commentary to § 4B1.2 prior to the amendment provided that the definitions of ''crime of violence'' and ''controlled substance offense'' include the offenses of aiding and abetting, conspiring, and attempting to commit such offenses. Although most circuits had previously held that this commentary was authoritative under *Stinson* v. *United States,* 508 U.S. 36

(1993), several courts have now concluded that the guideline definition of ''controlled substance offense'' does not include inchoate offenses because such offenses are not expressly included in the guideline text. *See United States* v. *Dupree,* 57 F.4th 1269 (11th Cir. 2023) (*en banc*); *United States* v. *Campbell,* 22 F.4th 438 (4th Cir. 2022); *United States* v. *Nasir,* 17 F.4th 459 (3d Cir. 2021) (*en banc*); *United States* v. *Havis,* 927 F.3d 382 (6th Cir. 2019) (*en banc*); *United States* v. *Winstead,* 890 F.3d 1082 (D.C. Cir. 2018). Several courts held that the Commission exceeded its authority under *Stinson* when it attempted to incorporate inchoate offenses into § 4B1.2(b)'s definition through the commentary, finding that the commentary can only interpret or explain the guideline, it cannot expand its scope by adding qualifying offenses. *See, e.g., Havis,* 927 F.3d at 385–87. More recently, courts have relied on *Kisor* v. *Wilkie,* 139 S. Ct. 2400 (2022), to hold that guideline commentary should not be afforded deference unless the guideline text is genuinely ambiguous. *See, e.g., Dupree,* 57 F.4th at 1275. Applying the *Kisor* holding to the guidelines, courts have concluded that the plain language definition of ''controlled substance offense'' in § 4B1.2 unambiguously excludes inchoate offenses. Similarly, courts have held that ''crime of violence'' excludes conspiracies because the § 4B1.2 commentary does not warrant *Kisor* deference. *See, e.g., United States* v. *Abreu,* 32 F.4th 271, 277–78 (3d Cir. 2022).

The amendment addresses this circuit conflict by moving, without change, the commentary including certain inchoate and accessory offenses in the definitions of ''crime of violence'' and ''controlled substance offense'' to the text of the guideline. While not the subject of the circuit conflict, the amendment also moves the definitions of enumerated offenses (*i.e.,* ''forcible sex offense'' and ''extortion'') and ''prior felony conviction'' from the commentary to a new subsection (e) in the guideline to avoid similar challenges to their applicability.

The amendment next addresses a concern that Hobbs Act robbery offenses no longer qualify as ''crimes of violence'' under § 4B1.2. In 2016, the Commission amended § 4B1.2 to, among other things, delete the ''residual clause'' and revise the ''enumerated clause'' by moving enumerated offenses that were previously listed in the commentary to the guideline itself. Although the guideline generally relies on existing case law for purposes of defining most enumerated offenses, the amendment added to the Commentary to § 4B1.2 definitions for two of the enumerated offenses: ''forcible sex offense'' and ''extortion.'' Consistent with the Commission's goal of focusing the career offender and related enhancements on the most dangerous offenders, the amendment narrowed the generic definition of extortion by limiting it to offenses having an element of force or an element of fear or threat ''of physical injury,'' as opposed to non-violent threats such as injury to reputation. As such, extortion is defined as ''obtaining something of value from another by the wrongful use of (A) force, (B) fear of physical injury, or (C) threat of physical injury.''

After the 2016 amendment, every Court of Appeals addressing the issue under the guidelines has held that Hobbs Act robbery is not a ''crime of violence'' under § 4B1.2, reasoning that neither generic robbery nor the guidelines definition of extortion encompass threats against property while the Hobbs Act defines ''robbery'' as, among other things, ''the unlawful taking or obtaining of personal property . . . by means of actual or threatened force, or violence, or fear of injury, immediate or future, to his person or *property* . . . .'' *See* 18 U.S.C. 1951(b)(1) (emphasis added); *United States* v. *Chappelle,* 41 F.4th 102 (2d Cir. 2022); *United States* v. *Scott,* 14 F.4th 190 (3d Cir. 2021); *United States* v. *Prigan,* 8 F.4th 1115 (9th Cir. 2021); *United States* v. *Green,* 996 F.3d 176 (4th Cir. 2021); *Bridges* v. *United States,* 991 F.3d 793 (7th Cir. 2021); *United States* v. *Eason,* 953 F.3d 1184 (11th Cir. 2020); *United States* v. *Camp,* 903 F.3d 594 (6th Cir. 2018); *United States* v. *O'Connor,* 874 F.3d 1147 (10th Cir. 2017).

The amendment amends § 4B1.2 to add to the new subsection (e) a definition of ''robbery'' that mirrors the ''robbery'' definition at 18 U.S.C. 1951(b)(1) and makes a conforming change to § 2L1.2 (Illegal Reentry), which also includes robbery as an enumerated offense. The Commission views the recent decisions holding that Hobbs Act robbery is not a crime of violence under the guidelines as an unintended consequence of the 2016 amendment to the career offender guideline meant to remove threats to reputation. In addition, the Commission conducted an analysis of recent cases and found that the Hobbs Act robberies overwhelmingly involved violence.

The amendment clarifies that ''actual or threatened force'' for purposes of the new ''robbery'' definition is ''force sufficient to overcome a victim's resistance.'' The Commission concludes that such definition, relying on the Supreme Court's decision in *Stokeling* v. *United States,* 139 S. Ct. 544 (2019), would eliminate potential litigation over the meaning of actual or threatened force in this context and is consistent with the level of force necessary for a robbery under the force clause.

Finally, the amendment revises the definition of ''controlled substance offense'' in § 4B1.2(b) to include ''an offense described in 46 U.S.C. 70503(a) or § 70506(b).'' The directive at 28 U.S.C. 994(h) instructs the Commission to assure that ''the guidelines specify a term of imprisonment at or near the maximum term authorized'' for offenders who are 18 years or older and have been convicted of a felony that is, and have previously been convicted of two or more felonies that are, among other things, ''an offense described in . . . chapter 705 of title 46.'' *See* 28 U.S.C. 994(h). In 2016, Congress enacted the Coast Guard Authorization Act of 2015, Public Law 114–120 (2016), which amended Chapter 705 of Title 46 by adding two new offenses to section 70503(a), in subparagraphs (2) and (3). Following this statutory change, these two new offenses are not covered by the pre-amendment definition of ''controlled substance offense'' in § 4B1.2 as required by the directive.

10. Amendment: Section 3D1.2(d) is amended by striking ''§§ 2G1.1, 2G2.1;'' and inserting ''§§ 2G1.1, 2G1.3, 2G2.1;''.

The Commentary to § 5F1.7 captioned ''Background'' is amended—

by striking ''six months'' and inserting ''6 months'';

by striking ''as the Bureau deems appropriate. 18 U.S.C. 4046.' '' and inserting ''as the Bureau deems appropriate.' 18 U.S.C. 4046.'';

and by striking the final paragraph as follows:

''The Bureau of Prisons has issued an operations memorandum (174–90 (5390), November 20, 1990) that outlines eligibility criteria and procedures for the implementation of this program (which the Bureau of Prisons has titled 'intensive confinement program'). Under these procedures, the Bureau will not place a defendant in an intensive confinement program unless the sentencing court has approved, either at the time of sentencing or upon consultation after the Bureau has determined that the defendant is otherwise eligible. In return for the successful completion of the 'intensive confinement' portion of the program, the defendant is eligible to serve the remainder of his term of imprisonment in a graduated release program comprised of community

corrections center and home confinement phases.'',

and inserting the following:

''In 1990, the Bureau of Prisons issued an operations memorandum (174–90 (5390), November 20, 1990) that outlined eligibility criteria and procedures for the implementation of a shock incarceration program (which the Bureau of Prisons titled the 'intensive confinement program'). In 2008, however, the Bureau of Prisons terminated the program and removed the rules governing its operation. *See* 73 FR 39863 (July 11, 2008).''.

Reason for Amendment: This two-part amendment responds to miscellaneous guideline application issues.

First, the amendment revises subsection (d) of § 3D1.2 (Grouping of Closely Related Counts) to provide that multiple counts involving more than one victim sentenced under § 2G1.3 (Promoting a Commercial Sex Act or Prohibited Sexual Conduct with a Minor; Transportation of Minors to Engage in a Commercial Sex Act or Prohibited Sexual Conduct; Travel to Engage in Commercial Sex Act or Prohibited Sexual Conduct with a Minor; Sex Trafficking of Children; Use of Interstate Facilities to Transport Information about a Minor) are explicitly excluded from grouping under § 3D1.2(d). Subsection 3D1.2(d) provides that certain guidelines are excluded from the operation of the grouping rules in Chapter Three, Part D (Multiple Counts). Among the guidelines specifically excluded under § 3D1.2(d) is § 2G1.1 (Promoting a Commercial Sex Act or Prohibited Sexual Conduct with an Individual Other than a Minor). When § 2G1.3 was promulgated in 2004, some offenses that were originally referenced to § 2G1.1 were moved to the new § 2G1.3, but § 2G1.3 was not added to the list of excluded guidelines at § 3D1.2(d). *See* USSG App. C, amend. 664 (effective date: Nov. 1, 2004). The amendment corrects that oversight and treats § 2G1.3 similarly to § 2G1.1.

Second, the amendment updates the Commentary to § 5F1.7 (Shock Incarceration Program (Policy Statement)) to reflect that the Bureau of Prisons (BOP) no longer operates a shock incarceration program. The Commentary to § 5F1.7 describes the authority of the BOP to operate a shock incarceration program and the procedures that the BOP established in 1990 regarding operation of such a program. However, the BOP terminated its shock incarceration program and removed the rules governing its operation in 2008. The amendment updates the Commentary to § 5F1.7 to reflect that shock incarceration is no longer a potential sentencing option, foreclosing any potential confusion on its current availability.

11. Amendment: The Commentary to § 1B1.1 captioned ''Application Notes'' is amended in Note 1(E) by striking ''(*e.g.* a defendant'' and inserting ''(*e.g.,* a defendant''.

The Commentary to § 1B1.3 captioned ''Background'' is amended by striking ''the guidelines in those Chapters'' and inserting ''the guidelines in those chapters''.

The Commentary to § 1B1.4 captioned ''Background'' is amended by striking ''in imposing sentence within that range'' and inserting ''in imposing a sentence within that range''.

The Commentary to § 1B1.10 captioned ''Background'' is amended by striking ''Title 18'' and inserting ''title 18''.

The Commentary to § 1B1.11 captioned ''Background'' is amended by striking ''133 S. Ct. 2072, 2078'' and inserting ''569 U.S. 530, 533''.

The Commentary to § 2A4.2 captioned ''Statutory Provisions'' is amended by striking ''§§ 876,'' and inserting ''§§ 876(a),''.

The Commentary to § 2A6.1 captioned ''Statutory Provisions'' is amended by striking ''876,'' and inserting ''876(c),''.

The Commentary to § 2B3.2 captioned ''Statutory Provisions'' is amended by striking ''§§ 875(b), 876,'' and inserting ''§§ 875(b), (d), 876(b), (d),''.

The Commentary to § 2D1.1 captioned ''Application Notes'' is amended—

in Note 8(A) by striking ''the statute (21 U.S.C. 841(b)(1)), as the primary basis'' and inserting ''the statute (21 U.S.C. 841(b)(1)) as the primary basis'', and by striking ''fentanyl, LSD and marihuana'' and inserting ''fentanyl, LSD, and marihuana'';

in Note 8(D)—

under the heading relating to Schedule I or II Opiates, by striking the following:

''1 gm of Heroin = 1 kg
1 gm of Dextromoramide = 670 gm
1 gm of Dipipanone = 250 gm
1 gm of 1-Methyl-4-phenyl-4-propionoxypiperidine/MPPP = 700 gm
1 gm of 1-(2-Phenylethyl)-4-phenyl-4-acetyloxypiperidine/PEPAP = 700 gm
1 gm of Alphaprodine = 100 gm
1 gm of Fentanyl (N-phenyl-N-[1-(2-phenylethyl)-4-piperidinyl] Propanamide) = 2.5 kg
1 gm of a Fentanyl Analogue = 10 kg
1 gm of Hydromorphone/Dihydromorphinone = 2.5 kg
1 gm of Levorphanol = 2.5 kg
1 gm of Meperidine/Pethidine = 50 gm
1 gm of Methadone = 500 gm
1 gm of 6-Monoacetylmorphine = 1 kg
1 gm of Morphine = 500 gm
1 gm of Oxycodone (actual) = 6700 gm
1 gm of Oxymorphone = 5 kg
1 gm of Racemorphan = 800 gm
1 gm of Codeine = 80 gm
1 gm of Dextropropoxyphene/Propoxyphene-Bulk = 50 gm
1 gm of Ethylmorphine = 165 gm
1 gm of Hydrocodone (actual) = 6700 gm
1 gm of Mixed Alkaloids of Opium/Papaveretum = 250 gm
1 gm of Opium = 50 gm
1 gm of Levo-alpha-acetylmethadol (LAAM) = 3 kg'',

and inserting the following:

''1 gm of 1-(2-Phenylethyl)-4-phenyl-4-acetyloxypiperidine (PEPAP) = 700 gm
1 gm of 1-Methyl-4-phenyl-4-propionoxypiperidine (MPPP) = 700 gm
1 gm of 6-Monoacetylmorphine = 1 kg
1 gm of Alphaprodine = 100 gm
1 gm of Codeine = 80 gm
1 gm of Dextromoramide = 670 gm
1 gm of Dextropropoxyphene/Propoxyphene-Bulk = 50 gm
1 gm of Dipipanone = 250 gm
1 gm of Ethylmorphine = 165 gm
1 gm of Fentanyl (N-phenyl-N-[1-(2-phenylethyl)-4-piperidinyl] Propanamide) = 2.5 kg
1 gm of a Fentanyl Analogue = 10 kg
1 gm of Heroin = 1 kg
1 gm of Hydrocodone (actual) = 6,700 gm
1 gm of Hydromorphone/Dihydromorphinone = 2.5 kg
1 gm of Levo-alpha-acetylmethadol (LAAM) = 3 kg
1 gm of Levorphanol = 2.5 kg
1 gm of Meperidine/Pethidine = 50 gm
1 gm of Methadone = 500 gm
1 gm of Mixed Alkaloids of Opium/Papaveretum = 250 gm
1 gm of Morphine = 500 gm
1 gm of Opium = 50 gm
1 gm of Oxycodone (actual) = 6,700 gm
1 gm of Oxymorphone = 5 kg
1 gm of Racemorphan = 800 gm'';

under the heading relating to Cocaine and Other Schedule I and II Stimulants (and their immediate precursors), by striking the following:

''1 gm of Cocaine = 200 gm
1 gm of N-Ethylamphetamine = 80 gm
1 gm of Fenethylline = 40 gm
1 gm of Amphetamine = 2 kg
1 gm of Amphetamine (Actual) = 20 kg
1 gm of Methamphetamine = 2 kg
1 gm of Methamphetamine (Actual) = 20 kg
1 gm of ''Ice'' = 20 kg
1 gm of Khat = .01 gm
1 gm of 4-Methylaminorex ('Euphoria') = 100 gm

1 gm of Methylphenidate (Ritalin) = 100 gm
1 gm of Phenmetrazine = 80 gm
1 gm Phenylacetone/P_2P (when possessed for the purpose of manufacturing methamphetamine) = 416 gm
1 gm Phenylacetone/P_2P (in any other case) = 75 gm
1 gm Cocaine Base ('Crack') = 3,571 gm
1 gm of Aminorex = 100 gm
1 gm of N-N-Dimethylamphetamine = 40 gm
1 gm of N-Benzylpiperazine = 100 gm'',

and inserting the following:

''1 gm of 4-Methylaminorex ('Euphoria') = 100 gm
1 gm of Aminorex = 100 gm
1 gm of Amphetamine = 2 kg
1 gm of Amphetamine (actual) = 20 kg
1 gm of Cocaine = 200 gm
1 gm of Cocaine Base ('Crack') = 3,571 gm
1 gm of Fenethylline = 40 gm
1 gm of 'Ice' = 20 kg
1 gm of Khat = .01 gm
1 gm of Methamphetamine = 2 kg
1 gm of Methamphetamine (actual) = 20 kg
1 gm of Methylphenidate (Ritalin) = 100 gm
1 gm of N-Benzylpiperazine = 100 gm
1 gm of N-Ethylamphetamine = 80 gm
1 gm of N-N-Dimethylamphetamine = 40 gm
1 gm of Phenmetrazine = 80 gm
1 gm of Phenylacetone (P_2P) (when possessed for the purpose of manufacturing methamphetamine) = 416 gm
1 gm of Phenylacetone (P_2P) (in any other case) = 75 gm'';

under the heading relating to Synthetic Cathinones (except Schedule III, IV, and V Substances), by striking ''a synthetic cathinone'' and inserting ''a Synthetic Cathinone'';

under the heading relating to LSD, PCP, and Other Schedule I and II Hallucinogens (and their immediate precursors), by striking the following:

''1 gm of Bufotenine = 70 gm
1 gm of D-Lysergic Acid Diethylamide/ Lysergide/LSD = 100 kg
1 gm of Diethyltryptamine/DET = 80 gm
1 gm of Dimethyltryptamine/DM = 100 gm
1 gm of Mescaline = 10 gm
1 gm of Mushrooms containing Psilocin and/or
Psilocybin (Dry) = 1 gm
1 gm of Mushrooms containing Psilocin and/or
Psilocybin (Wet) = 0.1 gm
1 gm of Peyote (Dry) = 0.5 gm
1 gm of Peyote (Wet) = 0.05 gm
1 gm of Phencyclidine/PCP = 1 kg
1 gm of Phencyclidine (actual)/PCP (actual) = 10 kg
1 gm of Psilocin = 500 gm
1 gm of Psilocybin = 500 gm
1 gm of Pyrrolidine Analog of Phencyclidine/PHP = 1 kg
1 gm of Thiophene Analog of Phencyclidine/TCP = 1 kg
1 gm of 4-Bromo-2,5-Dimethoxyamphetamine/DOB = 2.5 kg
1 gm of 2,5-Dimethoxy-4-methylamphetamine/DOM = 1.67 kg
1 gm of 3,4-Methylenedioxyamphetamine/MDA = 500 gm
1 gm of 3,4-Methylenedioxymethamphetamine/ MDMA = 500 gm
1 gm of 3,4-Methylenedioxy-N-ethylamphetamine/MDEA = 500 gm
1 gm of Paramethoxymethamphetamine/ PMA = 500 gm
1 gm of 1-Piperidinocyclohexanecarbonitrile/ PCC = 680 gm
1 gm of N-ethyl-1-phenylcyclohexylamine (PCE) = 1 kg'',

and inserting the following:

''1 gm of 1-Piperidinocyclohexanecarbonitrile (PCC) = 680 gm
1 gm of 4-Bromo-2,5-Dimethoxyamphetamine (DOB) = 2.5 kg
1 gm of 2,5-Dimethoxy-4-methylamphetamine (DOM) = 1.67 kg
1 gm of 3,4-Methylenedioxyamphetamine (MDA) = 500 gm
1 gm of 3,4-Methylenedioxymethamphetamine (MDMA) = 500 gm
1 gm of 3,4-Methylenedioxy-N-ethylamphetamine (MDEA) = 500 gm
1 gm of Bufotenine = 70 gm
1 gm of D-Lysergic Acid Diethylamide/ Lysergide (LSD) = 100 kg
1 gm of Diethyltryptamine (DET) = 80 gm
1 gm of Dimethyltryptamine (DM) = 100 gm
1 gm of Mescaline = 10 gm
1 gm of Mushrooms containing Psilocin and/or
Psilocybin (dry) = 1 gm
1 gm of Mushrooms containing Psilocin and/or
Psilocybin (wet) = 0.1 gm
1 gm of N-ethyl-1-phenylcyclohexylamine (PCE) = 1 kg
1 gm of Paramethoxymethamphetamine (PMA) = 500 gm
1 gm of Peyote (dry) = 0.5 gm
1 gm of Peyote (wet) = 0.05 gm
1 gm of Phencyclidine (PCP) = 1 kg
1 gm of Phencyclidine (PCP) (actual) = 10 kg
1 gm of Psilocin = 500 gm
1 gm of Psilocybin = 500 gm
1 gm of Pyrrolidine Analog of Phencyclidine (PHP) = 1 kg
1 gm of Thiophene Analog of Phencyclidine (TCP) = 1 kg'';

under the heading relating to Schedule I Marihuana, by striking the following:

''1 gm of Marihuana/Cannabis, granulated, powdered, etc. = 1 gm
1 gm of Hashish Oil = 50 gm
1 gm of Cannabis Resin or Hashish = 5 gm
1 gm of Tetrahydrocannabinol, Organic = 167 gm
1 gm of Tetrahydrocannabinol, Synthetic = 167 gm'',

and inserting the following:

''1 gm of Cannabis Resin or Hashish = 5 gm
1 gm of Hashish Oil = 50 gm
1 gm of Marihuana/Cannabis (granulated, powdered, etc.) = 1 gm
1 gm of Tetrahydrocannabinol (organic) = 167 gm
1 gm of Tetrahydrocannabinol (synthetic) = 167 gm'';

under the heading relating to Synthetic Cannabinoids (except Schedule III, IV, and V Substances), by striking ''a synthetic cannabinoid'' and inserting ''a Synthetic Cannabinoid'', and by striking '' 'Synthetic cannabinoid,' for purposes of this guideline'' and inserting '' 'Synthetic Cannabinoid,' for purposes of this guideline'';

under the heading relating to Schedule I or II Depressants (except gamma-hydroxybutyric acid), by striking ''except gamma-hydroxybutyric acid'' both places such term appears and inserting ''except Gamma-hydroxybutyric Acid'';

under the heading relating to Gamma-hydroxybutyric Acid, by striking ''of gamma-hydroxybutyric acid'' and inserting ''of Gamma-hydroxybutyric Acid'';

under the heading relating to Schedule III Substances (except ketamine), by striking ''except ketamine'' in the heading and inserting ''except Ketamine'';

under the heading relating to Ketamine, by striking ''of ketamine'' and inserting ''of Ketamine'';

under the heading relating to Schedule IV (except flunitrazepam), by striking ''except flunitrazepam'' in the heading and inserting ''except Flunitrazepam'';

under the heading relating to List I Chemicals (relating to the manufacture of amphetamine or methamphetamine), by striking ''of amphetamine or methamphetamine'' in the heading and inserting ''of Amphetamine or Methamphetamine'';

under the heading relating to Date Rape Drugs (except flunitrazepam, GHB, or ketamine), by striking ''except flunitrazepam, GHB, or ketamine'' in the heading and inserting ''except Flunitrazepam, GHB, or Ketamine'', by striking ''of 1,4-butanediol'' and inserting ''of 1,4-Butanediol'', and by striking ''of gamma butyrolactone'' and inserting ''of Gamma Butyrolactone'';

in Note 9 in the Typical Weight Per Unit (Dose, Pill, or Capsule) Table, under the heading relating to Hallucinogens, by striking the following:

''MDA 250 mg
MDMA 250 mg
Mescaline 500 mg
PCP* 5 mg
Peyote (dry) 12 gm
Peyote (wet) 20 gm
Psilocin* 10 mg
Psilocybe mushrooms (dry) 5 gm
Psilocybe mushrooms (wet) 50 gm
Psilocybin* 10 mg
2,5-Dimethoxy-4-methylamphetamine (STP, DOM)* 3 mg'',

and inserting the following:

''2,5-Dimethoxy-4-methylamphetamine (STP, DOM)* 3 mg
MDA 250 mg
MDMA 250 mg
Mescaline 500 mg
PCP* 5 mg
Peyote (dry) 12 gm
Peyote (wet) 120 gm
Psilocin* 10 mg
Psilocybe mushrooms (dry) 5 gm
Psilocybe mushrooms (wet) 50 gm
Psilocybin* 10 mg'';

and in Note 21, by striking ''Section § 5C1.2(b)'' and inserting ''Section 5C1.2(b)''.

The Commentary to § 2D1.1 captioned ''Background'' is amended by striking ''Public Law 103–237'' and inserting ''Public Law 104–237'', and by inserting after ''to change the title of the Drug Equivalency Tables to the 'Drug Conversion Tables.' '' the following: ''*See* USSG App. C, Amendment 808 (effective November 1, 2018).''.

The Commentary to § 2D2.3 captioned ''Background'' is amended by striking ''Section 6482'' and inserting ''section 6482''.

Section 2G2.1(b)(6)(A) is amended by striking ''engage sexually explicit conduct'' and inserting ''engage in sexually explicit conduct''.

The Commentary to § 2H3.1 captioned ''Application Notes'' is amended in Note 5(B) by striking ''(*e.g.* physical harm'' and inserting ''(*e.g.,* physical harm''.

The Commentary to § 2K2.4 captioned ''Statutory Provisions'' is amended by striking ''§§ 844(h)'' and inserting ''§§ 844(h), (o)''.

The Commentary to § 2M1.1 captioned ''Background'' is amended by striking ''this Part'' and inserting ''this part''.

The Commentary to § 2M4.1 captioned ''Statutory Provisions'' is amended by striking ''50 U.S.C. App. § 462'' and inserting ''50 U.S.C. § 3811''.

The Commentary to § 2M5.1 captioned ''Statutory Provisions'' is amended by striking ''50 U.S.C. App. §§ 2401–2420'' and inserting ''50 U.S.C. § 4601–4623. For additional statutory provision(s), *see* Appendix A (Statutory Index)''.

The Commentary to § 2M5.1 captioned ''Application Notes'' is amended—

in Note 3 by striking ''50 U.S.C. App. § 2410'' and inserting ''50 U.S.C. § 4610'';

and in Note 4 by striking ''50 U.S.C. App. 2405'' and inserting ''50 U.S.C. § 4605''.

The Commentary to § 2M5.3 captioned ''Application Notes'' is amended in Note 1, in the paragraph that begins '' 'Specially designated global terrorist' has'', by striking ''§ 594.513'' and inserting ''§ 594.310''.

The Commentary to § 2M6.1 captioned ''Application Notes'' is amended in Note 1—

by striking the following paragraph:

'' 'Restricted person' has the meaning given that term in 18 U.S.C. § 175b(d)(2).'',

and by striking the following paragraph:

'' 'Vector' has the meaning given that term in 18 U.S.C. § 178(4).''.

The Commentary to § 2T1.1 captioned ''Application Notes'' is amended—

in Note 6, in the paragraph that begins '' 'Gross income' has'', by striking ''§ 1.61'' and inserting ''§ 1.61–1'';

and in Note 7 by striking ''Subchapter C corporation'' and inserting ''subchapter C corporation''.

The Commentary to § 2T1.1 captioned ''Background'' is amended by striking ''the treasury'' and inserting ''the Treasury''.

Chapter Two, Part T, Subpart 2 is amended in the introductory commentary by striking ''Parts I–IV of Subchapter J of Chapter 51 of Subtitle E of Title 26'' and inserting ''parts I–IV of subchapter J of chapter 51 of subtitle E of title 26, United States Code''.

Chapter Two, Part T, Subpart 3 is amended in the introductory commentary by striking ''Subpart'' both places such term appears and inserting ''subpart''.

Chapter Three, Part A is amended in the introductory commentary by striking ''Part'' and inserting ''part''.

The Commentary to § 3A1.1 captioned ''Background'' is amended by striking ''Section 280003'' and inserting ''section 280003''.

The Commentary to § 3A1.2 captioned ''Application Notes'' is amended in Note 3 by striking ''the victim was a government officer or employee, or a member of the immediate family thereof'' and inserting ''the victim was a government officer or employee, a former government officer or employee, or a member of the immediate family thereof''.

Chapter Three, Part B is amended in the introductory commentary by striking ''Part'' and inserting ''part''.

The Commentary to § 3C1.1 captioned ''Application Notes'' is amended in Note 4(I) by striking ''Title 18'' and inserting ''title 18''.

Chapter Three, Part D is amended in the introductory commentary by striking ''Part'' each place such term appears and inserting ''part''.

The Commentary to § 3D1.1 captioned ''Application Notes'' is amended in Note 2 by striking ''Part'' both places such term appears and inserting ''part''.

The Commentary to § 3D1.1 captioned ''Background'' is amended by striking ''Chapter 3'' and inserting ''Chapter Three'', and by striking ''Chapter 4'' and inserting ''Chapter Four''.

The Commentary to § 3D1.2 captioned ''Background'' is amended by striking ''Part'' both places such term appears and inserting ''part''.

The Commentary to § 3D1.3 captioned ''Background'' is amended by striking ''Part'' and inserting ''part''.

The Commentary to § 3D1.4 captioned ''Background'' is amended by striking ''Part'' and inserting ''part''.

The Commentary to § 4A1.3 captioned ''Application Notes'' is amended in Note 2(C)(v) by striking ''this Chapter'' and inserting ''this chapter''.

The Commentary to § 4B1.1 captioned ''Background'' is amended by striking ''Title 28'' and inserting ''title 28''.

The Commentary to § 5C1.1 captioned ''Application Notes'' is amended in Note 1 by striking ''this Chapter'' and inserting ''this chapter''.

The Commentary to § 5E1.1 captioned ''Application Notes'' is amended in Note 1 by striking ''Chapter'' both places such term appears and inserting ''chapter''; by striking ''Title 18'' both places such term appears and inserting ''title 18''; and by striking ''Subchapter C'' and inserting ''subchapter C''.

The Commentary to § 5E1.1 captioned ''Background'' is amended by striking ''Title 18'' and inserting ''title 18''.

The Commentary to § 5E1.3 captioned ''Background'' is amended by striking ''Title 18'' and inserting ''title 18'', and by striking ''The Victims'' and inserting ''the Victims''.

The Commentary to § 5E1.4 captioned ''Background'' is amended by striking ''Titles'' and inserting ''titles''.

The Commentary to § 5G1.3 captioned ''Background'' is amended by striking ''132 S. Ct. 1463, 1468'' and inserting ''566 U.S. 231, 236'', and by striking ''132 S. Ct. at 1468'' and inserting ''566 U.S. at 236''.

Chapter Five, Part H is amended in the introductory commentary by striking ''Part'' each place such term appears and inserting ''part''.

Chapter Six, Part A is amended in the introductory commentary by striking ''Part'' and inserting ''part''.

Chapter Seven, Part A, Subpart 3(b) (Choice between Theories) is amended by striking ''Title 21'' and inserting ''title 21''.

The Commentary to § 8A1.2 captioned ''Application Notes'' is amended in Note 3(G) by striking '' 'Prior criminal adjudication' means'' and inserting '' 'Criminal Adjudication' means''.

The Commentary to § 8B1.1 captioned ''Background'' is amended by striking ''Title 18'' and inserting ''title 18''.

The Commentary to § 8B2.1 captioned ''Application Notes'' is amended in Note 1, in the paragraph that begins '' 'Governing authority' means'', by striking ''means the (A) the Board'' and inserting ''means (A) the Board''.

The Commentary to § 8C2.5 captioned ''Application Notes'' is amended in Note 1 by striking '' 'prior criminal adjudication' '' and inserting '' 'criminal adjudication' ''.

The Commentary to § 8C3.2 captioned ''Application Note'' is amended in Note 1 by striking ''the period provided for payment shall in no event exceed five years'' and inserting ''the period provided for payment shall be the shortest time in which full payment can reasonably be made''.

Section 8C3.3(a) is amended by striking ''its ability'' and inserting ''the ability of the organization''.

The Commentary to § 8E1.1 captioned ''Background'' is amended by striking ''Title 18'' and inserting ''title 18''.

Appendix A (Statutory Index) is amended—

by striking the following line reference:

''18 U.S.C. § 876 2A4.2, 2A6.1, 2B3.2, 2B3.3'';

by inserting before the line referenced to 18 U.S.C. 877 the following new line references:

''18 U.S.C. § 876(a) 2A4.2, 2B3.2
18 U.S.C. § 876(b) B3.2
18 U.S.C. § 876(c) 2A6.1
18 U.S.C. § 876(d) 2B3.2, 2B3.3'';

in the line referenced to 25 U.S.C. 450d by striking ''§ 450d'' and inserting ''§ 5306'';

by striking the following line references:

''33 U.S.C. § 1227(b) 2J1.1, 2J1.5
33 U.S.C. § 1232(b)(2) 2A2.4'';

by inserting before the line referenced to 46 U.S.C. App. § 1707a(f)(2) the following new line references:

''46 U.S.C. § 70035(b) 2J1.1, 2J1.5
46 U.S.C. § 70036(b) 2A2.4'';

by striking the following line references:

''50 U.S.C. App. § 462 2M4.1
50 U.S.C. App. § 527(e) 2X5.2
50 U.S.C. App. § 2410 2M5.1'';

and by inserting before the line referenced to 52 U.S.C. 10307(c) the following new line references:

''50 U.S.C. § 3811 2M4.1
50 U.S.C. § 3937(e) 2X5.2
50 U.S.C. § 4610 2M5.1''.

Reason for Amendment: This amendment makes technical, stylistic, and other non-substantive changes to the *Guidelines Manual.*

First, the amendment makes clerical changes to correct typographical errors in the following guidelines and commentary: § 1B1.1 (Application Instructions); § 1B1.3 (Relevant Conduct (Factors that Determine the Guideline Range)); § 1B1.4 (Information to be Used in Imposing Sentence (Selecting a Point Within the Guideline Range or Departing from the Guidelines)); § 1B1.10 (Reduction in Term of Imprisonment as a Result of Amended Guideline Range (Policy Statement)); § 2D2.3 (Operating or Directing the Operation of a Common Carrier Under the Influence of Alcohol or Drugs); § 2G2.1 (Sexually Exploiting a Minor by Production of Sexually Explicit Visual or Printed Material; Custodian Permitting Minor to Engage in Sexually Explicit Conduct; Advertisement for Minors to Engage in Production); § 2H3.1 (Interception of Communications; Eavesdropping; Disclosure of Certain Private or Protected Information); § 2M1.1 (Treason); § 2T1.1 (Tax Evasion; Willful Failure to File Return, Supply Information, or Pay Tax; Fraudulent or False Returns, Statements, or Other Documents); the Introductory Commentary to Chapter Two, Part T, Subpart 2 (Alcohol and Tobacco Taxes); the Introductory Commentary to Chapter Two, Part T, Subpart 3 (Customs Taxes); the Introductory Commentary to Chapter Three, Part A (Victim-Related Adjustments); § 3A1.1 (Hate Crime Motivation or Vulnerable Victim); the Introductory Commentary to Chapter Three, Part B (Role in the Offense); § 3C1.1 (Obstructing or Impeding the Administration of Justice); the Introductory Commentary to Chapter Three, Part D (Multiple Counts); § 3D1.1 (Procedure for Determining Offense Level on Multiple Counts); § 3D1.2 (Groups of Closely Related Counts); § 3D1.3 (Offense Level Applicable to Each Group of Closely Related Counts); § 3D1.4 (Determining the Combined Offense Level); § 4A1.3 (Departures Based on Inadequacy of Criminal History Category (Policy Statement)); § 4B1.1 (Career Offender); § 5C1.1 (Imposition of a Term of Imprisonment); § 5E1.1 (Restitution); § 5E1.3 (Special Assessments); § 5E1.4 (Forfeiture); the Introductory Commentary to Chapter Five, Part H (Specific Offender Characteristics); the Introductory Commentary to Chapter Six, Part A (Sentencing Procedures); Chapter Seven, Part A (Introduction to Chapter Seven); § 8B1.1 (Restitution—Organizations); § 8B2.1 (Effective Compliance and Ethics Program); § 8C3.3 (Reduction of Fine Based on Inability to Pay); and § 8E1.1 (Special Assessments—Organizations).

Second, the amendment makes clerical changes to the Commentary to §§ 1B1.11 (Use of Guidelines Manual in Effect on Date of Sentencing (Policy Statement)) and 5G1.3 (Imposition of a Sentence on a Defendant Subject to an Undischarged Term of Imprisonment or Anticipated State Term of Imprisonment), to update citations of Supreme Court cases. In addition, the amendment makes technical changes to (1) the Commentary to § 2K2.4 (Use of Firearm, Armor-Piercing Ammunition, or Explosive During or in Relation to Certain Crimes), to add a missing reference to 18 U.S.C. 844(o); (2) the Commentary to § 2M6.1 (Unlawful Activity Involving Nuclear Material, Weapons, or Facilities, Biological Agents, Toxins, or Delivery Systems, Chemical Weapons, or Other Weapons Of Mass Destruction; Attempt or Conspiracy), to delete the definitions of two terms that are not currently used in the guideline; (3) the Commentary to §§ 2M5.3 (Providing Material Support or Resources to Designated Foreign Terrorist Organizations or Specially Designated Global Terrorists, or For a Terrorist Purpose) and 2T1.1 (Tax Evasion; Willful Failure to File Return, Supply Information, or Pay Tax; Fraudulent or False Returns, Statements, or Other Documents), to correct references to the Code of Federal Regulations; and (4) the Commentary to § 3A1.2 (Official Victim), to add missing content in Application Note 3.

Third, the amendment makes technical changes to the Commentary to §§ 2A4.2 (Demanding or Receiving Ransom Money), 2A6.1 (Threatening or

Harassing Communications; Hoaxes; False Liens), and 2B3.2 (Extortion by Force or Threat of Injury or Serious Damage), and to Appendix A (Statutory Index), to provide references to the specific applicable provisions of 18 U.S.C. 876 (Mailing threatening communications).

Fourth, the amendment makes certain stylistic and technical changes to the Commentary to § 2D1.1 (Unlawful Manufacturing, Importing, Exporting, or Trafficking). It revises the Drug Conversion Tables at Application Note 8(D) and the Typical Weight Per Unit Table at Application Note 9 to reorganize the controlled substances contained therein in alphabetical order to make the tables more user-friendly. The amendment also makes minor changes to the controlled substance references to promote consistency in the use of capitalization, commas, parentheticals, and slash symbols throughout the Drug Conversion Tables. In addition, the amendment makes clerical changes throughout the Commentary to correct certain typographical errors. It also amends the Background Commentary to add a specific reference to Amendment 808, which replaced the term ''marihuana equivalency'' with the new term ''converted drug weight'' and changed the title of the ''Drug Equivalency Tables'' to ''Drug Conversion Tables.''

Fifth, the amendment makes clerical changes to reflect the editorial reclassification of certain sections of the United States Code. Effective December 1, 2015, the Office of Law Revision Counsel eliminated the Appendix to title 50 of the United States Code and transferred the non-obsolete provisions to new chapters 49 to 57 of title 50 and to other titles of the United States Code. To reflect the new section numbers of the reclassified provisions, the amendment makes changes to § 2M4.1 (Failure to Register and Evasion of Military Service), § 2M5.1 (Evasion of Export Controls; Financial Transactions with Countries Supporting International Terrorism), and Appendix A. Similarly, effective September 1, 2016, the Office of Law Revision Counsel also transferred certain provisions from chapter 14 of title 25 of the United States Code to four new chapters in title 25 to improve the organization of the title. To reflect these changes, the amendment makes further changes to Appendix A.

Sixth, the amendment makes technical changes to the commentary of several guidelines in Chapter Eight (Sentencing of Organizations). It replaces the term ''prior criminal adjudication,'' as found and defined in Application Note 3(G) of § 8A1.2 (Application Instructions—Organizations), with ''criminal adjudication'' to better reflect how that term is used throughout Chapter Eight. The amendment also makes conforming changes to the Commentary to § 8C2.5 (Culpability Score) to account for the new term. In addition, the amendment revises Application Note 1 of § 8C3.2 (Payment of the Fine—Organizations) to reflect the current language of subsection (d) of 18 U.S.C. 3572 (Imposition of a sentence of fine and related matters), providing that if the court permits other than immediate payment of a fine or other monetary payment, the period provided for payment shall be the shortest time in which full payment can reasonably be made.

Finally, the amendment makes clerical changes to provide updated references to certain sections of the United States Code that were redesignated by legislation. The Frank LoBiondo Coast Guard Authorization Act of 2018, Pub. L. 115–282 (2018) (hereinafter ''the Act''), among other things, established a new chapter 700 (Ports and Waterway Safety) in subtitle VII (Security and Drug Enforcement) of title 46 (Shipping) of the United States Code. Section 401 of the Act repealed the Ports and Waterways Safety Act of 1972, previously codified in 33 U.S.C. 1221–1232b, and restated its provisions with some revisions in the new chapter 700 of title 46, specifically at 46 U.S.C. 70001–70036. Appendix A includes references to Chapter Two guidelines for both former 33 U.S.C. 1227(b) and 1232(b). The amendment revises Appendix A to delete the references to 33 U.S.C. 1227(b) and 1232(b) and replace them with updated references to 46 U.S.C. 70035(b) and 70036(b). The Act did not make substantive revisions to either of these provisions.

(2) Request for Comment on Parts A and B Of Amendment 8, Relating to ''STATUS POINTS'' and Certain ''Zero–Point''Offenders

On April 27, 2023, the Commission submitted to the Congress amendments to the sentencing guidelines, policy statements, official commentary, and Statutory Index, which become effective on November 1, 2023, unless Congress acts to the contrary. Such amendments and the reason for each amendment are included in this notice.

Section 3582(c)(2) of title 18, United States Code, provides that ''in the case of a defendant who has been sentenced to a term of imprisonment based on a sentencing range that has subsequently been lowered by the Sentencing Commission pursuant to 28 U.S.C. 994(o), upon motion of the defendant or the Director of the Bureau of Prisons, or on its own motion, the court may reduce the term of imprisonment, after considering the factors set forth in section 3553(a) to the extent that they are applicable, if such a reduction is consistent with applicable policy statements issued by the Sentencing Commission.'' Pursuant to 28 U.S.C. 994(u), ''[i]f the Commission reduces the term of imprisonment recommended in the guidelines applicable to a particular offense or category of offenses, it shall specify in what circumstances and by what amount the sentences of prisoners serving terms of imprisonment for the offense may be reduced.'' The Commission lists in subsection (d) of § 1B1.10 (Reduction in Term of Imprisonment as a Result of Amended Guideline Range (Policy Statement)) the specific guideline amendments that the court may apply retroactively under 18 U.S.C. 3582(c)(2).

Amendment 8, pertaining to criminal history, has the effect of lowering guideline ranges. The Commission intends to consider whether, pursuant to 18 U.S.C. 3582(c)(2) and 28 U.S.C. 994(u), Parts A and B of this amendment, relating to the impact of ''status points'' at § 4A1.1 (Criminal History Category) and offenders with zero criminal history points at new § 4C1.1 (Adjustment for Certain Zero-Point Offenders), should be included in § 1B1.10(d) as an amendment that may be applied retroactively to previously sentenced defendants. In considering whether to do so, the Commission will consider, among other things, a retroactivity impact analysis and public comment. Accordingly, the Commission seeks public comment on whether it should make Parts A and B of Amendment 8 available for retroactive application. To help inform public comment, the retroactivity impact analysis will be made available to the public as soon as practicable.

The Background Commentary to § 1B1.10 lists the purpose of the amendment, the magnitude of the change in the guideline range made by the amendment, and the difficulty of applying the amendment retroactively to determine an amended guideline range under § 1B1.10(b) as among the factors the Commission considers in selecting the amendments included in § 1B1.10(d). To the extent practicable, public comment should address each of these factors.

The Commission seeks comment on whether it should list Parts A and B of Amendment 8, addressing the impact of ''status points'' at § 4A1.1 and offenders

with zero criminal history points at new § 4C1.1, in § 1B1.10(d) as changes that may be applied retroactively to previously sentenced defendants. For each of these parts, the Commission requests comment on whether that part should be listed in § 1B1.10(d) as an amendment that may be applied retroactively.

If the Commission does list one or both such parts of the amendment in § 1B1.10(d) as an amendment that may be applied retroactively to previously sentenced defendants, should the Commission provide further guidance or limitations regarding the circumstances in which, and the amount by which, sentences may be reduced?

[EPA–HQ–OPPT–2020–0465; FRL–8155–02–OCSPP]

RIN 2070–AK70

Methylene Chloride; Regulation Under the Toxic Substances Control Act (TSCA)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is proposing to address the unreasonable risk of injury to human health presented by methylene chloride under its conditions of use as documented in EPA's June 2020 Risk Evaluation for Methylene Chloride and November 2022 revised risk determination for methylene chloride prepared under the Toxic Substances Control Act (TSCA). TSCA requires that EPA address by rule any unreasonable risk of injury to health or the environment identified in a TSCA risk evaluation and apply requirements to the extent necessary so that the chemical no longer presents unreasonable risk. Methylene chloride, also known as dichloromethane, is acutely lethal, a neurotoxicant, a likely human carcinogen, and presents cancer and non-cancer risks following chronic exposures as well as acute risks. Central nervous system depressant effects can result in loss of consciousness and respiratory depression, resulting in irreversible coma, hypoxia, and eventual death, including 85 documented fatalities from 1980 to 2018, a majority of which were occupational fatalities (see Unit II.A.). Nevertheless, methylene chloride is still a widely used solvent in a variety of consumer and commercial applications including adhesives and sealants, automotive products, and paint and coating removers. To address the identified unreasonable risk, EPA is proposing to: prohibit the manufacture, processing, and distribution in commerce of methylene chloride for consumer use; prohibit most industrial and commercial uses of methylene chloride; require a workplace chemical protection program (WCPP), which would include a requirement to meet inhalation exposure concentration limits and exposure monitoring for certain continued conditions of use of methylene chloride; require recordkeeping and downstream notification requirements for several conditions of use of methylene chloride; and provide certain time-limited exemptions from requirements for uses of methylene chloride that would otherwise significantly disrupt national security and critical infrastructure.

DATES: Comments must be received on or before July 3, 2023. Under the Paperwork Reduction Act, comments on the information collection provisions are best assured of consideration if the Office of Management and Budget (OMB) receives a copy of your comments on or before June 2, 2023.

ADDRESSES: Submit your comments, identified by docket identification (ID) number EPA–HQ–OPPT–2020–0465, through the Federal eRulemaking Portal at *https://www.regulations.gov.* Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Additional instructions on commenting or visiting the docket, along with more information about dockets generally, is available at *https://www.epa.gov/dockets.*

SUPPLEMENTARY INFORMATION:

I. Executive Summary

A. Does this action apply to me?

You may be potentially affected by the proposed action if you manufacture (defined under TSCA to include import), process, distribute in commerce, use, or dispose of methylene chloride or products containing methylene chloride. The following list of North American Industrial Classification System (NAICS) codes is not intended to be exhaustive, but rather provides a guide to help readers determine whether this document applies to them. Potentially affected entities include:

- Other Chemical and Allied Products Merchant Wholesalers (NAICS code 424690);
- Crude Petroleum Extraction (NAICS code 211120);
- All Other Basic Organic Chemical Manufacturing (NAICS code 325199);
- Other Chemical and Allied Products Merchant Wholesalers (NAICS code 424690);
- Petroleum Bulk Stations and Terminals (NAICS code 424710);
- Other Basic Inorganic Chemical Manufacturing (NAICS code 325180);
- Testing Laboratories (NAICS code 541380);
- Hazardous Waste Treatment and Disposal (NAICS code 562211);
- Solid Waste Combustors and Incinerators (NAICS code 562213);
- Materials Recovery Facilities (NAICS code 562920);
- Paint and Coating Manufacturing (NAICS code 325510);
- Air and Gas Compressor Manufacturing (NAICS code 333912);
- Gasket, Packing, and Sealing Device Manufacturing (NAICS code 339991);
- Residential Remodelers (NAICS code 236118);
- Commercial and Institutional Building Construction (NAICS code 236220);
- Plumbing, Heating, and Air-Conditioning Contractors (NAICS code 238220);
- Painting and Wall Covering Contractors (NAICS code 238320);
- All Other Miscellaneous Manufacturing (NAICS code 339999);
- Automotive Parts and Accessories Stores (NAICS code 441310);
- All Other Miscellaneous Store Retailers (except Tobacco Stores) (NAICS code 453998);
- Other Support Activities for Air Transportation (NAICS code 488190);
- All Other Automotive Repair and Maintenance (NAICS code 811198);
- Commercial and Industrial Machinery and Equipment (except Automotive and Electronic) Repair and Maintenance (NAICS code 811310);
- Footwear and Leather Goods Repair (NAICS code 811430);
- Adhesive Manufacturing (NAICS code 325520);
- All Other Miscellaneous Chemical Product and Preparation Manufacturing (NAICS code 325998);
- Audio and Video Equipment Manufacturing (NAICS code 334310);
- Reupholstery and Furniture Repair (NAICS code 811420);
- All Other Rubber Product Manufacturing (NAICS code 326299);
- All Other Miscellaneous Textile Product Mills (NAICS code 314999);
- All Other Miscellaneous Fabricated Metal Product Manufacturing (NAICS code 332999);
- Oil and Gas Field Machinery and Equipment Manufacturing (NAICS code 333132);

- Bare Printed Circuit Board Manufacturing (NAICS code 334412);
- Other Electronic Component Manufacturing (NAICS code 334419);
- All Other Miscellaneous Electrical Equipment and Component Manufacturing (NAICS code 335999);
- Printing Machinery and Equipment Manufacturing (NAICS code 333244);
- Petroleum Refineries (NAICS code 324110);
- Petroleum Lubricating Oil and Grease Manufacturing (NAICS code 324191);
- Painting and Wall Covering Contractors (NAICS code 238320);
- Welding and Soldering Equipment Manufacturing (NAICS code 333992);
- New Car Dealers (NAICS code 441110);
- Used Car Dealers (NAICS code 441120);
- Drycleaning and Laundry Services (except Coin-Operated) (NAICS code 812320); and
- Doll, Toy, and Game Manufacturing (NAICS code 339930).

This action may also affect certain entities through pre-existing import certification and export notification rules under TSCA. Persons who import any chemical substance governed by a final TSCA section 6(a) rule are subject to the TSCA section 13 (15 U.S.C. 2612) import certification requirements and the corresponding regulations at 19 Code of Federal Regulations (CFR) 12.118 through 12.127; see also 19 CFR 127.28. Those persons must certify that the shipment of the chemical substance complies with all applicable rules and orders under TSCA. The EPA policy in support of import certification appears at 40 CFR part 707, subpart B. In addition, any persons who export or intend to export a chemical substance that is the subject of this proposed rule are subject to the export notification provisions of TSCA section 12(b) (15 U.S.C. 2611(b)), and must comply with the export notification requirements in 40 CFR part 707, subpart D.

If you have any questions regarding the applicability of this proposed action to a particular entity, consult the technical information contact listed under **FOR FURTHER INFORMATION CONTACT**.

B. What is the Agency's authority for taking this action?

Under TSCA section 6(a) (15 U.S.C. 2605(a)), if the U.S. Environmental Protection Agency, hereinafter EPA or ''the Agency,'' determines through a TSCA section 6(b) risk evaluation that a chemical substance presents an unreasonable risk of injury to health or the environment, EPA must by rule apply one or more requirements listed in section 6(a) to the extent necessary so that the chemical substance or mixture no longer presents such risk.

C. What action is the Agency taking?

Pursuant to TSCA section 6(b), EPA determined that methylene chloride presents an unreasonable risk of injury to health, without consideration of costs or other non-risk factors, including an unreasonable risk to potentially exposed or susceptible subpopulations identified as relevant to the 2020 Risk Evaluation for Methylene Chloride by EPA, under the conditions of use (Refs. 1, 2). A detailed description of the conditions of use that drive EPA's determination that methylene chloride presents an unreasonable risk is included in Unit III.B.2. Accordingly, to address the unreasonable risk, EPA is proposing, under TSCA section 6(a) to:

(i) Prohibit the manufacture, processing, and distribution of methylene chloride for all consumer use, as outlined in Unit IV.A.3.;

(ii) Prohibit most industrial and commercial use of methylene chloride, as outlined in Unit IV.A.2.;

(iii) Require a WCPP, including inhalation exposure concentration limits and related workplace exposure monitoring and exposure controls, for ten conditions of use of methylene chloride (including manufacture; processing as a reactant; laboratory use; industrial or commercial use in aerospace and military paint and coating removal from safety-critical, corrosion-sensitive components by Federal agencies and their contractors; industrial or commercial use as a bonding agent for acrylic and polycarbonate in mission-critical military and space vehicle applications, including in the production of specialty batteries for such by Federal agencies and their contractors; and disposal), as outlined in Unit IV.A.1.;

(iv) Require recordkeeping and downstream notification requirements for manufacturing, processing, and distribution in commerce of methylene chloride, as outlined in Unit IV.A.4.;

(v) Provide a 10-year time-limited exemption under TSCA section 6(g) for civilian aviation from the prohibition addressing the use of methylene chloride for paint and coating removal to avoid significant disruptions to critical infrastructure, as outlined in Unit IV.A.5., with conditions for this exemption to include compliance with the WCPP described in Unit IV.A.1.; and

(vi) Provide a 10-year time-limited exemption under TSCA section 6(g) for emergency use of methylene chloride in furtherance of National Aeronautics and Space Administration's mission for specific conditions which are critical or essential and for which no technically and economically feasible safer alternative is available, as outlined in Unit IV.A.5., with conditions for this exemption to include compliance with the WCPP described in Unit IV.A.1.

EPA notes that all TSCA conditions of use of methylene chloride (other than the use of methylene chloride in consumer paint and coating removers, which was subject to separate action under TSCA section 6 (84 FR 11420, March 27, 2019)) are subject to this proposal. Condition of use is defined in TSCA to mean the circumstances under which a chemical substance is intended, known, or reasonably foreseen to be manufactured, processed, distributed in commerce, used, or disposed of. EPA is requesting public comment on all aspects of this proposal.

D. Why is the Agency taking this action?

Under TSCA section 6(a), ''[i]f the Administrator determines in accordance with subsection (b)(4)(A) that the manufacture, processing, distribution in commerce, use or disposal of a chemical substance or mixture, or that any combination of such activities, presents an unreasonable risk of injury to health or the environment, the Administrator shall by rule. . . apply one or more of the [section 6(a)] requirements to such substance or mixture to the extent necessary so that the chemical substance no longer presents such risk.'' Methylene chloride was the subject of a risk evaluation under TSCA section 6(b)(4)(A) that was issued in June 2020 (2020 Risk Evaluation for Methylene Chloride) (Ref. 1). In addition, EPA issued a revised unreasonable risk determination for methylene chloride in November 2022 (Ref. 2) determining that methylene chloride, as a whole chemical substance, presents an unreasonable risk of injury to health under the conditions of use. As a result, EPA is proposing to take action to the extent necessary so that methylene chloride no longer presents such risk. The unreasonable risk is described in Unit III.B.1. and the conditions of use that drive the unreasonable risk for methylene chloride are described in Unit III.B.2.

EPA emphasizes that some of the adverse effects from methylene chloride exposure can be immediately experienced and only for a short duration; others, however, can result in sudden death. Other effects may result in long-term impacts and should likewise be considered significant. Methylene chloride's hazards are well established. Fatalities from acute methylene chloride exposures have

been documented and pose a serious public health threat; these fatalities led the agency to prohibit the manufacture, processing, and distribution of methylene chloride for use in consumer paint and coating removers in 2019 (84 FR 11420, March 27, 2019) (FRL–9989–29). This proposed rule would eliminate the unreasonable risk to human health from the remaining conditions of use of methylene chloride, as identified in the 2020 Risk Evaluation for Methylene Chloride and the revised unreasonable risk determination for methylene chloride in November 2022.

EPA is not proposing a complete ban on methylene chloride. The agency recognizes that continued use of methylene chloride in one of the TSCA conditions of use may complement the agency's efforts to address climate-damaging hydrofluorocarbons (HFCs) under the American Innovation and Manufacturing Act of 2020 (AIM Act), thereby supporting human health and environmental protection under these programs, and that, for these HFC-related, reactant processing uses, workplace controls to address unreasonable risk can be implemented. Therefore, while addressing the unreasonable risk, this rule proposes to allow methylene chloride's continued use in tandem with additional worker protections for the production of HFC–32, one of the regulated substances that are subject to a phasedown under the AIM Act. While HFC–32 is one of the regulated substances subject to the phasedown in production and consumption by 85% over the next 15 years, HFC–32 is likely to be used to facilitate the transition from certain other HFCs and HFC blends with higher global warming potentials in certain applications. EPA expects that, by allowing for the continued use of methylene chloride in the production of HFC–32, this approach would complement EPA's work under the AIM Act. For many of the conditions of use for which EPA is proposing workplace controls under a WCPP, data was submitted during the risk evaluation and Small Business Advocacy Review (SBAR process that indicates some facilities may already be in compliance with the proposed methylene chloride Existing Chemical Exposure Limit (ECEL). Additionally, the requirements in this proposal would prohibit uses that account for approximately one third of the total annual production volume of methylene chloride generated (TSCA and non-TSCA uses), leaving a sufficient supply in circulation to provide a source for these critical or essential uses for which EPA is proposing to allow continued use (Unit IV.A.), either under a WCPP or through a TSCA section 6(g) exemption (Ref. 3).

E. What are the estimated incremental impacts of this Action?

EPA has prepared an Economic Analysis of the potential incremental impacts associated with this rulemaking that can be found in the rulemaking docket (Ref. 3). As described in more detail in the Economic Analysis (Ref. 3) and in Units VI.D. and X.D., EPA's analysis of the incremental, non-closure-related costs of this proposed rule is estimated to be $13.2 million annualized over 20 years at a 3% discount rate and $14.5 million annualized over 20 years at a 7% discount rate. These costs take compliance with implementation of a WCPP for certain conditions of use into consideration, which would include an ECEL of 2 ppm (8 mg/m^3) for inhalation exposures as an 8-hour time-weighted average (TWA), applicable personal protective equipment (PPE) requirements, and reformulation costs of numerous products. In addition to the monetized costs discussed previously there are unknown economic impacts of potential firm closures in the furniture refinishing industry as discussed in the Economic Analysis. Potential average lost profits range from $14,000 (one firm closing) to $67 million under the extreme and unlikely assumption of a complete sector shutdown (Ref. 3). EPA had also received comments following SBAR meetings where submitted exposure measurements indicated an ability to achieve ECEL levels, suggesting that a WCPP for certain uses is achievable; this is further discussed in Unit V.A.1. Unquantified costs exist, including determining the best substitute for the firm's specific needs and how a different product may impact a firm's existing workflow (*e.g.,* does a different adhesive take longer to dry) and how a firm may work through the hierarchy of controls to comply with a WCPP. Although some costs cannot be quantified, they are not necessarily less important than the quantified costs. The most notable unquantified cost is change in labor and wait times within applications for which methylene chloride use is more efficient than substitute methods or alternative chemicals for achieving desired results. Additionally, in the unique case of furniture refinishing (within the commercial paint and coating removal condition of use), alternatives to products containing methylene chloride may not be economically viable and may cause damage to the substrate, and thus the prohibition of this use could impact the sector significantly. After publication of the proposed rule for methylene chloride in paint and coating removal (82 FR 7464, January 19, 2017) (FRL–9958–57), EPA, in collaboration with the Small Business Administration's Office of Advocacy, conducted a workshop on furniture refinishing in Boston, Massachusetts, on September 12, 2017 (82 FR 41256, August 30, 2017) (FRL–9966–83) to address information gaps for the furniture refinishing sector identified in that proposed rule. The workshop was well attended by over 100 furniture refinishing experts, industry professionals, nongovernmental organizations, academic experts, and State and Federal Government partners (Ref. 4). The informative discussion among the participants and invited speakers touched on the commercial and consumer use of methylene chloride in furniture refinishing, the potential effects that regulation may have on businesses, alternatives to methylene chloride, health risks associated with methylene chloride, and labeling of consumer and commercial products (speaker presentations, transcript notes, and public comments are available in the docket EPA–HQ–OPPT–2017–0139).

EPA estimates that as many as 5,000 furniture refinishers still use methylene chloride, a majority of which are small businesses. While the amount of methylene chloride paint removers used per firm for furniture refinishing can vary greatly, industry stakeholder information indicates one 55-gallon drum every two months (Ref. 4). This would result in an estimated 2.3 million gallons of formulated paint remover used annually. The amount of methylene chloride included in this estimate would depend on the percent in formulation used by the furniture refinishing firms. The impact of a prohibition of methylene chloride for furniture refinishing could result in the closure of an unknown number of the 5,000 potentially affected furniture refinishing firms using methylene chloride in the baseline.

Based on the estimated revenues per firm presented in Table 3–1 of the Economic Analysis and the 5,000 estimated number of furniture refinishing firms using methylene chloride (see Table 6–12 in the Economic Analysis), the total revenue for furniture refinishing firms using methylene chloride is approximately $1.8 billion. According to IRS (2013) data, profit in this sector is about 3.8% of sales. Therefore, closure of affected furniture refinishing firms using methylene chloride following this

rulemaking has an upper bound for economic impacts of $1.8 billion in total revenue, and $67 million in terms of the total profit, under the assumption that all affected firms fully close. A detailed discussion of potential economic impacts as a result of varying percentages of furniture refinishing firms closing is provided in the Economic Analysis in section 7.11 (Ref. 3).

EPA identified many alternative products for paint and coating removers, though many may require longer periods of time, replacement of equipment, or rework of processes in order to work for furniture refinishing uses. These may not be appropriate alternatives as they could damage the wood substrate. Mechanical or thermal methods (*i.e.,* sanding, media blasting, and heat guns) are also potential alternatives for this sector, though they likewise they require different processes, and often require more time (Refs. 3, 4, 5, 6). For furniture refinishing, as with other commercial uses, the health benefits that would result from prohibiting this use of methylene chloride, including deaths avoided, are further discussed in the Economic Analysis (Ref. 3).

The actions proposed in this rule are expected to achieve health benefits for the American public, some of which can be monetized and others that, while tangible and significant, cannot be monetized. Although some benefits cannot be quantified, they are not necessarily less important than the quantified benefits. The monetized benefits of this rule are approximately $17.7 million to $18.5 million annualized over 20 years at a 3% discount rate and $13.4 million to $13.9 million annualized over 20 years at a 7% discount rate. The monetized benefits only include potential reductions in risk of liver cancer, lung cancer, and potential deaths avoided from acute methylene chloride exposure. Non-monetized benefits include potential reductions in central nervous system depressant effects; these effects include loss of consciousness and respiratory depression that may result in irreversible coma and hypoxia. Risks from acute exposures to methylene chloride can lead to workplace accidents and are precursors to the more severe central nervous system effects (up to and including death). Other non-monetized benefits include reductions in liver disease (including vacuolization, necrosis, hemosiderosis and hepatocellular degeneration), immune system compromise, and irritation and burns (Ref. 3).

II. Background

A. Overview of Methylene Chloride

Methylene chloride is acutely lethal, a neurotoxicant, and a likely human carcinogen. This proposed rule is specifically intended to address the unreasonable risk of injury to health that EPA has identified in the 2020 Risk Evaluation for Methylene Chloride and unreasonable risk determination, as described in Unit III.B.2. Methylene chloride is a colorless liquid and a volatile chemical with a sweet odor resembling chloroform. It is produced in and imported into the United States. Methylene chloride is manufactured, processed, distributed in commerce, used, and disposed of as part of many industrial, commercial, and consumer conditions of use. As outlined in Unit III.B.1., methylene chloride is a widely used solvent in a variety of consumer and commercial applications including adhesives and sealants, automotive products, and paint and coating removers. Some evidence suggests that in recent years, use of methylene chloride has been declining in certain sectors (Ref. 3), particularly for consumer products, as the hazards of methylene chloride are well known, and certain uses are highly regulated. As further described in Unit II.B. and in the regulatory appendix (Ref. 7), these regulations include EPA's 2019 rule addressing unreasonable risk to consumers from methylene chloride use in consumer paint and coating removal by prohibiting manufacturing, processing, and distribution in commerce of methylene chloride for consumer use in paint and coating removal (84 FR 11420, March 27, 2019) (FRL–9989–29).

The total aggregate production volume of methylene chloride ranged from 100 million to 500 million pounds between 2016 and 2019 according to Chemical Data Reporting (CDR) (Ref. 8). One notable high-volume use accounting for approximately one-fifth of all methylene chloride annual production volume is processing as a reactant, which includes the manufacture of hydrofluorocarbons (HFCs) (Ref. 1). This condition of use is described in Unit III.B.2., with a description of proposed requirements to address unreasonable risk in Unit III.B.3, and V.1. An estimated 35% of the annual production volume of methylene chloride is for pharmaceutical uses, which are not subject to TSCA and would not be regulated by this rule (15 U.S.C. 2602(2)(B)(vi); 21 U.S.C. 321(g)(1)).

B. Regulatory Actions Pertaining to Methylene Chloride

Because of its adverse health effects, methylene chloride is subject to numerous State, Federal, and international regulations restricting and regulating its use. A summary of EPA regulations pertaining to methylene chloride, as well other Federal, State, and international regulations, is in the docket (Refs. 1, 7).

C. Consideration of Occupational Safety and Health Administration (OSHA) Occupational Health Standards in TSCA Risk Evaluations and TSCA Risk Management Actions

TSCA requires EPA to evaluate whether a chemical substance presents an unreasonable risk of injury to health or the environment, without consideration of costs or other non-risk factors, including an unreasonable risk to a potentially exposed or susceptible subpopulation identified as relevant by the Administrator, under the conditions of use. Conditions of use are the circumstances, as determined by the Administrator, under which a chemical is intended, known, or reasonably foreseen to be manufactured, processed, distributed in commerce, used, or disposed of. If EPA determines through risk evaluation that a chemical substance presents an unreasonable risk, TSCA section 6 requires EPA to issue regulations applying one or more control requirements to the extent necessary so that the chemical substance no longer presents such risk. Although EPA must consider, and in some cases factor-in, to the extent practicable, non-risk factors as part of TSCA section 6(a) rulemaking (see TSCA section 6(c)(2)), EPA must nonetheless still ensure that the selected regulatory requirements apply ''to the extent necessary so that the chemical substance or mixture no longer presents [unreasonable] risk.'' 15 U.S.C. 2605(a). This risk-based requirement is distinguishable from approaches mandated by other laws, including the Occupational Safety and Health Act (OSH Act), which includes both significant risk and feasibility (technical and economic) assessments in its rulemaking.

Congress intended for EPA to consider occupational risks from chemicals it evaluates under TSCA, among other potential exposures, as relevant and appropriate. As noted previously, section 6(b) of TSCA requires EPA to evaluate risks to potentially exposed or susceptible subpopulations identified as relevant by the Administrator. TSCA section 3(12)

defines the term ''potentially exposed or susceptible subpopulation'' as ''a group of individuals within the general population identified by the Administrator who, due to either greater susceptibility or greater exposure, may be at greater risk than the general population of adverse health effects from exposure to a chemical substance or mixture, such as infants, children, pregnant women, workers, or the elderly.''

The OSH Act similarly requires OSHA to evaluate risk specific to workers prior to promulgating new or revised standards and requires OSHA standards to substantially reduce significant risk to the extent feasible, even if workers are exposed over a full working lifetime. *See* 29 U.S.C. 655(b)(5); *Indus. Union Dep't, AFL–CIO* v. *Am. Petroleum Inst.,* 448 U.S. 607, 642 (1980) (plurality opinion).

Thus, the standards for chemical hazards that OSHA promulgates under the OSH Act share a broadly similar purpose with the standards that EPA promulgates under TSCA section 6(a). The control measures OSHA and EPA require to satisfy the objectives of their respective statutes may also, in many circumstances, overlap or coincide. However, as this section outlines, there are important differences between EPA's and OSHA's regulatory approaches and jurisdiction, and EPA considers these differences when deciding whether and how to account for OSHA requirements (such as those described in Unit II.B.2.) when evaluating and addressing potential unreasonable risk to workers so that compliance requirements are clearly explained to the regulated community.

1. OSHA Requirements

OSHA's mission is to ensure that employees work in safe and healthful conditions. The OSH Act establishes requirements that each employer comply with the General Duty Clause of the Act (29 U.S.C. 654(a)), as well as with occupational safety and health standards issued under the Act.

a. General Duty Clause of the OSH Act

The General Duty Clause of the OSH Act requires employers to keep their workplaces free from recognized hazards that are causing or are likely to cause death or serious physical harm to employees. The General Duty Clause is cast in general terms, and does not establish specific requirements like exposure limits, personal protective equipment (PPE)), or other specific protective measures that EPA could potentially consider when developing its risk evaluations or risk management requirements. OSHA, under limited circumstances, has cited the General Duty Clause for regulating exposure to chemicals. To prove a violation of the General Duty Clause, OSHA must prove employer or industry recognition of the hazard, that the hazard was causing or likely to cause death or serious physical harm, and a feasible method to eliminate or materially reduce the hazard was available. In rare situations, OSHA has cited employers for violation of the General Duty Clause where exposures were below a chemical-specific permissible exposure limit (PEL). In such situations, OSHA must demonstrate that the employer had actual knowledge that the PEL was inadequate to protect its employees from death or serious physical harm. Because of the heavy evidentiary burden on OSHA to establish violations of the General Duty Clause, it is not frequently used to cite employers for employee exposure to chemical hazards.

b. OSHA Standards

OSHA standards are issued pursuant to the OSH Act and are found in title 29 of the CFR. There are separate standards for general industry, construction, maritime and agriculture sectors, general standards applicable to a number of sectors (*e.g.,* OSHA's Respiratory Protection standard), and a methylene chloride standard. OSHA has numerous standards that apply to employers who operate chemical manufacturing and processing facilities, as well as to downstream employers whose employees may be occupationally exposed to hazardous chemicals.

OSHA sets legally enforceable limits on the airborne concentrations of hazardous chemicals, referred to as PELs, established for employers to protect their workers against the health effects of exposure to hazardous substances (29 CFR parts 1910, Subpart Z; 1915, Subpart Z; 1926, Subparts D and Z). Under section 6(a) of the OSH Act, OSHA was permitted an initial 2-year window after the passage of the Act to adopt ''any national consensus standard and any established Federal standard.'' 29 U.S.C. 655(a). OSHA used this authority in 1971 to establish PELs that were adopted from Federal health standards originally set by the Department of Labor through the Walsh-Healy Act, in which approximately 400 occupational exposure limits were selected based on the American Conference of Governmental Industrial Hygienists (ACGIH) 1968 list of Threshold Limit Values (TLVs). In addition, about 25 exposure limits recommended by the American Standards Association (now called the American National Standards Institute) (ANSI) were adopted as PELs.

Following the 2-year window provided under section 6(a) of the OSH Act for adoption of national consensus and existing Federal standards, OSHA has issued health standards following the requirements in section 6(b) of the Act. OSHA has established approximately 30 PELs under section 6(b)(5) as part of comprehensive substance-specific standards that include additional requirements for protective measures such as use of PPE, establishment of regulated areas, exposure assessment, hygiene facilities, medical surveillance, and training. These ancillary provisions in substance-specific OSHA standards further mitigate residual risk that could be present due to exposure at the PEL.

Though many OSHA PELs have not been updated since they were established in 1971, the methylene chloride PEL was last updated as part of the OSHA methylene chloride standard in 1997. In many instances, scientific evidence has accumulated suggesting that the current limits of many PELs are not sufficiently protective. On October 10, 2014, OSHA published a **Federal Register** document in which it recognized that many of its PELs are outdated and inadequate for ensuring protection of worker health (79 FR 61384). In addition, health standards issued under section 6(b)(5) of the OSH Act must reduce significant risk only to the extent that it is technologically and economically feasible to do so. OSHA's legal requirement to demonstrate that its section 6(b)(5) standards are technologically and economically feasible at the time they are promulgated often precludes OSHA from imposing exposure control requirements sufficient to ensure that the chemical substance no longer presents a significant risk to workers.

In sum, the great majority of OSHA's chemical standards are outdated or do not sufficiently reduce significant risk to workers. They would, in either case, be unlikely to address unreasonable risk to workers within the meaning of TSCA, since TSCA section 6(b) unreasonable risk determinations may account for unreasonable risk to more sensitive endpoints and working populations than OSHA's risk evaluations typically contemplate, and EPA is obligated to apply TSCA section 6(a) risk management requirements to the extent necessary so that the unreasonable risk is no longer presented.

Because the requirements and application of TSCA and OSHA regulatory analyses differ, and because

OSHA's chemical-specific standards are decades old and may include outdated assumptions regarding the most sensitive end-point and/or the technological and economic feasibility of the standards, it is necessary for EPA to conduct risk evaluations and, where it finds unreasonable risk to workers, develop risk management requirements for chemical substances that OSHA also regulates, and it is expected that EPA's findings and requirements may sometimes diverge from OSHA's. However, it is also appropriate that EPA consider the chemical standards that OSHA has already developed to limit the compliance burden to employers by aligning management approaches required by the agencies, where alignment will adequately address unreasonable risk to workers. The following section discusses EPA's consideration of OSHA standards in its risk evaluation and management strategies under TSCA.

2. Consideration of OSHA Standards in TSCA Risk Evaluations

When characterizing the risk during risk evaluation under TSCA, EPA believes it is appropriate to evaluate the levels of risk present in scenarios where no mitigation measures are assumed to be in place for the purpose of determining unreasonable risk (see Unit II.C.2.a.). (It should be noted that there are some cases where scenarios may reflect certain mitigation measures, such as in instances where exposure estimates are based on monitoring data at facilities that have existing engineering controls in place.) In addition, EPA believes it is appropriate to also evaluate the levels of risk present in scenarios considering applicable OSHA requirements (*e.g.,* chemical-specific PELs and/or chemical-specific standards with PELs and additional ancillary provisions), as well as scenarios considering industry or sector best practices for industrial hygiene that are clearly articulated to the Agency. By characterizing risks using scenarios that reflect different levels of mitigation, EPA risk evaluations can help inform potential risk management actions by providing information that could be used during risk management to tailor risk mitigation appropriately to address any unreasonable risk identified (see Unit II.C.2.b. and Unit II.C.3.).

a. Risk Characterization for Unreasonable Risk Determination

When making unreasonable risk determinations as part of TSCA risk evaluations, EPA cannot assume as a general matter that all workers are always equipped with and appropriately using sufficient PPE, although it does not question the public comments received on the 2020 Risk Evaluation for Methylene Chloride regarding the occupational safety practices often followed by industry respondents. When characterizing the risk to human health from occupational exposures during risk evaluation under TSCA, EPA believes it is appropriate to evaluate the levels of risk present in baseline scenarios where PPE is not assumed to be used by workers. This approach of not assuming PPE use by workers considers the risk to potentially exposed or susceptible subpopulations (workers and occupational non-users) who may not be covered by OSHA standards, such as self-employed individuals and public sector workers who are not covered by a State Plan. Mitigation scenarios included in the EPA risk evaluation (*e.g.,* scenarios considering use of PPE) likely represent current practice in many facilities where companies effectively address worker and bystander safety requirements. However, the Agency cannot assume that all facilities will have adopted these practices for the purposes of making the TSCA risk determination.

Therefore, EPA makes its determinations of unreasonable risk based on scenarios that do not assume compliance with OSHA standards, including any applicable exposure limits or requirements for use of respiratory protection or other PPE. Making unreasonable risk determinations based on such scenarios should not be viewed as an indication that EPA believes there are no occupational safety protections in place at any location, or that there is widespread noncompliance with applicable OSHA standards. Rather, it reflects EPA's recognition that unreasonable risk may exist for subpopulations of workers that may be highly exposed because they are not covered by OSHA standards, such as self-employed individuals and public sector workers who are not covered by an OSHA State Plan, or because their employer is out of compliance with OSHA standards, or because EPA finds unreasonable risk for purposes of TSCA notwithstanding existing OSHA requirements.

b. Risk Evaluation To Inform Risk Management Requirements

In addition to the scenarios described previously, EPA risk evaluations may characterize the levels of risk present in scenarios considering applicable OSHA requirements (*e.g.,* chemical-specific PELs and/or chemical-specific health standards with PELs and additional ancillary provisions) as well as scenarios considering industry or sector best practices for industrial hygiene that are clearly articulated to the Agency. EPA's evaluation of risk under scenarios that, for example, incorporate use of engineering or administrative controls, or PPE, serves to inform its risk management efforts. Characterizing risks using scenarios that reflect different levels of mitigation can help inform potential risk management actions by providing information that could be used during risk management to tailor risk mitigation to address worker exposures where the Agency has found unreasonable risk. In particular, as discussed later in this unit, EPA can use the information developed during its risk evaluation to determine whether alignment of EPA's risk management requirements with existing OSHA requirements or industry best practices will adequately address unreasonable risk as required by TSCA.

3. Consideration of OSHA Standards in TSCA Risk Management Actions

When undertaking risk management actions, EPA: (1) Develops occupational risk mitigation measures to address any unreasonable risk identified by EPA, striving for consistency with applicable OSHA requirements and industry best practices, including appropriate application of the National Institute for Occupational Safety and Health (NIOSH) hierarchy of controls (Ref. 9) (hereafter referred to as ''hierarchy of controls''), when those measures would address an unreasonable risk; and (2) Ensures that EPA requirements apply to all potentially exposed workers in accordance with TSCA requirements. Consistent with TSCA section 9(d), EPA consults and coordinates TSCA activities with OSHA and other relevant Federal agencies for the purpose of achieving the maximum applicability of TSCA while avoiding the imposition of duplicative requirements.

Informed by the mitigation scenarios and information gathered during the risk evaluation and risk management process, the Agency might propose rules that require risk management practices that may be already common practice in many or most facilities. Adopting clear, comprehensive regulatory standards will foster compliance across all facilities (ensuring a level playing field) and assure protections for all affected workers, especially in cases where current OSHA standards may not apply to them or not be sufficient to address the unreasonable risk.

4. Methylene Chloride and OSHA Requirements

EPA incorporated the considerations described earlier in this Unit into the 2020 Risk Evaluation for Methylene Chloride, the November 2022 revised unreasonable risk determination for methylene chloride, and this rulemaking. Specifically, in the TSCA 2020 Risk Evaluation for Methylene Chloride, EPA presented risk estimates based on workers' exposures with and without respiratory protection. EPA determined that even when respirators are used by workers, most of the conditions of use evaluated presented an unreasonable risk. Additional considerations of OSHA standards in the revised unreasonable risk determination are discussed further in the **Federal Register** notice announcing that document (Ref. 19) (87 FR 67901, November 10, 2022). In Units III.B.3. and V., EPA outlines the importance of considering the hierarchy of controls when developing risk management actions in general, and specifically when determining if and how regulated entities may meet a risk-based exposure limit for methylene chloride. The hierarchy of controls is a prioritization of exposure control strategies from most protective and preferred to least protective and preferred techniques. In order of precedence, they are: elimination of the hazard, substitution with a less hazardous substance, engineering controls, administrative controls such as training or exclusion zones with warning signs, and, finally, use of PPE (Ref. 9). Under the hierarchy of controls, the use of respirators (and all PPE) should only be considered after all other measures have been taken to reduce exposures, and then under the context of the OSHA Respiratory Protection Standard at 29 CFR 1910.134. As discussed in Units III.A.1. and V.A.1., EPA's risk management approach would not rely solely or primarily on the use of respirators to reduce exposures to workers so that methylene chloride does not present unreasonable risk; instead, EPA is proposing prohibitions for or affecting most conditions of use and a WCPP for certain industrial and commercial uses. The WCPP would require consideration of the hierarchy of controls before use of respirators and other PPE. The WCPP is discussed in full in Units IV.A.1. and V.A. As discussed further in Unit V.A.1., for many of the conditions of use for which EPA is proposing a WCPP, data was submitted during the risk evaluation and SBAR process that indicates some facilities may already be in compliance with the proposed methylene chloride ECEL.

In accordance with the approach described earlier in Unit II.C.3., EPA intends for this regulation to be as consistent as possible with the current OSHA standard for methylene chloride, with additional requirements as necessary to address the unreasonable risk. Notable differences between the WCPP and the OSHA standard are the exposure limits and the action levels. The WCPP would include an Existing Chemical Exposure Limit (ECEL) of 2 ppm as an 8-hour TWA to address unreasonable risk for chronic cancer and non-cancer inhalation endpoints, and acute non-cancer endpoints, as well as an EPA Short Term Exposure Limit (EPA STEL) of 16 ppm as a 15-minute TWA to address any peak exposures which may result in additional unreasonable risk from acute inhalation. A regulated entity must comply with both the 8-hour TWA ECEL and the 15-minute TWA EPA STEL to completely address the unreasonable risk. EPA recognizes that for methylene chloride, the ECEL and EPA STEL would be significantly lower than the OSHA PEL (25 ppm as an 8-hour TWA) and STEL (125 ppm). In addition to the distinctions in statutory requirements described in this Unit, EPA has identified factors contributing to the differences in these levels, outlined here (Ref. 14).

EPA considers the methylene chloride ECEL to represent the best available science under TSCA section 26(h), since it was derived from information in the 2020 Risk Evaluation for Methylene Chloride, which is the result of a rigorous systematic review process that investigated the entirety of the reasonably available current literature in order to identify all relevant adverse health effects. Additionally, by using the information from the 2020 Risk Evaluation for Methylene Chloride, the ECEL incorporates advanced modeling and peer-reviewed methodologies, including accounting for exposures to potentially exposed or susceptible subpopulations, as required by TSCA.

The ECEL is an 8-hour occupational inhalation exposure limit based on the point of departure of the endpoint that drives the unreasonable risk determination (chronic non-cancer liver effects, in the case of methylene chloride), and takes into consideration the uncertainties identified in the 2020 Risk Evaluation for Methylene Chloride (Ref. 11). The ECEL represents the concentration at or below which an adult human, including a member of a potentially exposed or susceptible subpopulation, would be unlikely to suffer adverse effects if exposed for a working lifetime. EPA has determined as a matter of risk management policy that ensuring exposures remain at or below the ECEL will eliminate- any unreasonable risk of injury to health. In addition to the ECEL, as part of this rulemaking, EPA is setting an ECEL-action level, a value half of the ECEL, that would trigger additional monitoring action to ensure that workers are not exposed to concentrations above the ECEL.

The OSHA PEL is an 8-hour time-weighted average (TWA) based on an employee's average airborne exposure in any 8-hour work shift of a 40-hour work week that shall not be exceeded (Ref. 12). OSHA is required to promulgate a standard that reduces significant risk to the extent that it is technologically and economically feasible to do so (81 FR 16285).

For methylene chloride, the ECEL is based on the most sensitive point of departure (POD) across acute, chronic non-cancer, and cancer endpoints. As demonstrated in the ECEL memo, chronic liver toxicity is the basis of the methylene chloride ECEL (Ref. 11). Both inhalation and oral studies identified liver effects as sensitive non-cancer effects linked with exposure to methylene chloride in animals. Overall, based on limited human evidence and strong evidence in multiple animal species from highly rated studies based on systematic review, the weight of the scientific evidence supported EPA's finding that non-cancer liver effects follow methylene chloride exposure.

EPA used liver lesions in rats as indicated by cellular vacuolization in Nitschke *et al.,* 1988 as the basis of the chronic non-cancer POD. Study data was run through a physiological-based pharmacokinetic (PBPK) model to more accurately account for both inter-species differences and human variability. Internal PBPK-modeled doses were also benchmark-dose modeled in order to better refine the POD estimate, resulting in a human equivalent concentration (HEC) of 4.8 ppm based on continuous exposure with a benchmark margin of exposure (MOE) (equal to the product of all uncertainty factors) of 10. The resulting ECEL is 2 ppm.

The EPA STEL is based on decreased visual performance identified in an acute inhalation study on human subjects. Putz *et al.* (1979) is a well-conducted study of 12 volunteers that identified decreased visual peripheral performance after 1.5 hour of exposure to 195 ppm (200 ppm nominal) (Ref. 13). Because this study used a single concentration, it is not amenable to dose-response modeling, so EPA used

the lowest observed adverse effects concentration (LOAEC) of 195 ppm. Adjusting to a more appropriate exposure duration of 8-hour for occupational scenarios resulted in a HEC of 80 ppm with benchmark MOE of 30. The resulting acute exposure limit is 16 ppm, eight times higher than the overall ECEL.

The OSHA PEL for methylene chloride was adopted in 1971 and updated in 1997 (62 FR 1494, January 10, 1997). The OSHA PEL is set at 25 ppm, based on cancer from the same National Toxicology Program (1986) study cited for cancer effects in the 2020 Methylene Chloride Risk Evaluation (Ref. 14) (though EPA found this was not the most sensitive POD, and thus set an ECEL of 2 ppm, based on non-cancer liver effects from Nitschke *et al.,* 1988 (Refs. 15, 16)).

The OSHA PEL utilized a PBPK model to derive lifetime excess risk estimates for cancer. The PEL was set at 25 ppm based on estimated lifetime risk of 2.4 to 3.6 cases per 1000 or 2.4–$3.66x10^{-3}$ (E^{-3}) at that exposure level. EPA used a benchmark of 1 in 10,000 (10^{-4}) for individuals in industrial and commercial work environments for purposes of the unreasonable risk determination for methylene chloride (Ref. 2), and at that cancer risk level EPA calculates the exposure limit based on cancer to be approximately 42 ppm—almost double the OSHA PEL. OSHA acknowledges that the 10^{-3} threshold is ''100 to 1000 times higher than the risk levels generally regarded by other Federal Agencies as on the boundary between significant and insignificant risk'' and notes that ''even at the final PELs, the risks to workers clearly remain significant.'' (62 FR 1494, January 10, 1997).The 1997 decision to not derive a PEL lower than 25 ppm was based on economic and technical analysis, with OSHA stating, ''because of the lack of documented feasibility data for potential PELs of less than 25 ppm, OSHA has concluded that there is not enough information available to support lowering the 8-hour TWA PEL or STEL further at this time'' (62 FR 1494, January 10, 1997).

As for non-cancer liver effects that are the basis of the ECEL, OSHA determined that ''chronic exposure to [methylene chloride] caused toxic effects in rat and mouse liver and cancer in mouse liver. These studies appear to have been well conducted and the differences in toxicity observed across studies were likely due to differences in dose or route of exposure . . . [L]imited evidence supports the hypothesis that [methylene chloride] causes human hepatotoxicity, based on the data in the Ott study. The remaining studies and case reports do not provide clear evidence of a causative role of [methylene chloride] in hepatotoxicity. The Agency [OSHA] has set the exposure limits based on cancer and [central nervous system] effects and has not reached final conclusions on this issue'' (62 FR 1514–1515, January 10, 1997). As discussed in Units II.D., III.B.A., and VII.D., the ECEL represents the best available science at time of publication of the 2020 Risk Evaluation for Methylene Chloride.

D. Summary of EPA's Risk Evaluation Activities on Methylene Chloride

In July 2017, EPA published the scope of the methylene chloride risk evaluation (82 FR 31592, July 7, 2017) (FRL–9963–57), and, after receiving public comments, published the problem formulation in June 2018 (83 FR 26998, June 11, 2018) (FRL–9978–40). In October 2019, EPA published a draft risk evaluation (84 FR 57866, October 29, 2019) (FRL–9999–69), and, after public comment and peer review by the Science Advisory Committee on Chemicals (SACC), EPA issued the 2020 Risk Evaluation for Methylene Chloride in June 2020 in accordance with TSCA section 6(b) (85 FR 37942, June 24, 2020) (FRL–10011–16). EPA subsequently issued a draft revised TSCA risk determination for methylene chloride (87 FR 39824, July 5, 2022) (9946–01–OCSPP), and, after public notice and receipt of comments, published a Revised Risk Determination for Methylene Chloride in November 2022 (Ref. 2). The 2020 Risk Evaluation for Methylene Chloride and supplemental materials are in docket EPA–HQ–OPPT–2019–0437, and the November 2022 revised unreasonable risk determination and additional materials supporting the risk evaluation process are in docket EPA–HQ–OPPT–2016–0742, on *https://www.regulations.gov.*

1. 2020 Risk Evaluation

In the 2020 Risk Evaluation for Methylene Chloride, EPA evaluated risks associated with 53 conditions of use within the following categories: manufacture (including import), processing, distribution in commerce, industrial and commercial use, consumer use, and disposal (Ref. 1). Descriptions of these conditions of use are in Unit III.B.2. The 2020 Risk Evaluation for Methylene Chloride identified significant adverse health effects associated with short- and long-term exposure to methylene chloride, including central nervous system effects up to and including death from acute inhalation exposures, non-cancer liver effects from chronic inhalation, and cancer from chronic inhalation exposures to methylene chloride, as well as acute central nervous system effects and chronic non-cancer liver effects from dermal exposure. A further discussion of the hazards of methylene chloride is in Unit III.B.1.

2. 2022 Revised Unreasonable Risk Determination

EPA has been revisiting specific aspects of its first ten TSCA existing chemical risk evaluations, including the methylene chloride risk evaluation, to ensure that the risk evaluations upon which risk management decisions are made better align with TSCA's objective of protecting health and the environment. For methylene chloride, EPA revised the original unreasonable risk determination based on the 2020 Risk Evaluation for Methylene Chloride and issued a final revised unreasonable risk determination in November 2022 (Ref. 2). EPA revised the risk determination for the 2020 Risk Evaluation for Methylene Chloride pursuant to TSCA section 6(b) and consistent with Executive Order 13990, (''Protecting Public Health and the Environment and Restoring Science to Tackle the Climate Crisis'') and other Administration priorities (Refs. 17, 18, 19). The revisions consisted of making the risk determination based on the whole-chemical substance instead of by individual conditions of use (which resulted in the revised risk determination superseding the prior ''no unreasonable risk'' determinations (Ref. 2) the withdrawal of the associated TSCA section 6(i)(1) ''no unreasonable risk'' order; and clarifying that the risk determination does not reflect an assumption that all workers are always provided and appropriately wear PPE (Ref. 2).

In determining whether methylene chloride presents unreasonable risk under the conditions of use, EPA considered relevant risk-related factors, including, but not limited to: the effects of the chemical substance on health (including cancer and non-cancer risks) and human exposure to the substance under the conditions of use (including duration, magnitude and frequency of exposure); the effects of the chemical substance on the environment and environmental exposure under the conditions of use; the population exposed (including any potentially exposed or susceptible subpopulations); the severity of hazard (including the nature of the hazard, the irreversibility of the hazard); and uncertainties.

EPA determined that methylene chloride presents an unreasonable risk of injury to health. The unreasonable risk determination is driven by risks to workers and occupational non-users (workers who do not directly handle methylene chloride but perform work in an area where methylene chloride is present) from occupational exposures (*i.e.,* during manufacture, processing, industrial and commercial uses, or disposal), and to consumers and bystanders from consumer use of methylene chloride. EPA did not identify risks of injury to the environment that drive the unreasonable risk determination for methylene chloride. The methylene chloride conditions of use that drive EPA's determination that the chemical substance poses unreasonable risk to health are listed in the unreasonable risk determination (Ref. 2) and also in Unit III.B.2., with descriptions to aid chemical manufacturers, processors, and users in determining how their particular use or activity would be addressed under the proposed regulatory provisions.

While the 2020 Risk Evaluation for Methylene Chloride estimated different risks for occupational non-users and workers, the benchmark (and thus the ECEL and EPA STEL value) is the same for both populations. That is, while workers and occupational non-users may have different exposure patterns, the level of exposure such that risks are no longer unreasonable is the same for both workers and occupational non-users. Thus, for the purposes of risk management, the distinction between worker and occupational non-user is no longer relevant, and both are encompassed by the definition of a potentially exposed person, as outlined in Unit IV.A.1.a. EPA additionally emphasizes that the inclusion of occupational non-users itself does not exceed the scope of those individuals that are already covered by the OSHA PEL, as the methylene chloride OSHA standard applies to all employees within a regulated area, regardless of whether they directly handle methylene chloride.

3. Fenceline Screening Analysis

The 2020 TSCA Risk Evaluation for Methylene Chloride excluded the assessment of certain exposure pathways that were or could be regulated under another EPA-administered statute (see section 1.4.2 of the 2020 Risk Evaluation for Methylene Chloride (Refs. 1, 2)). This resulted in the surface water, drinking water, and ambient air pathways for methylene chloride exposure not being assessed for human health risk to the general population. In June 2021, EPA made a policy announcement on the path forward for TSCA chemical risk evaluations, indicating that EPA would, among other things, examine whether the exclusion of certain exposure pathways from the risk evaluations would lead to a failure to identify and protect fenceline communities (Refs. 10, 20).

In order to assess the potential for risk to the general population in proximity to a facility releasing methylene chloride, EPA developed the TSCA Screening Level Approach for Assessing Ambient Air and Water Exposures to Fenceline Communities Version 1.0, which was presented to the SACC in March 2022, with a report issued by the SACC on May 18, 2022 (Ref. 21). This analysis is discussed in Unit VI.A.

III. Regulatory Approach

A. Background

Under TSCA section 6(a), if the Administrator determines, in accordance with TSCA section 6(b)(4)(A), that the manufacture (including import), processing, distribution in commerce, use, or disposal of a chemical substance or mixture, or any combination of such activities, presents an unreasonable risk of injury to health or the environment, EPA must by rule apply one or more of the following requirements to the extent necessary so that the chemical substance or mixture no longer presents such risk.

- Prohibit or otherwise restrict the manufacturing (including import), processing, or distribution in commerce of the substance or mixture, or limit the amount of such substance or mixture which may be manufactured, processed, or distributed in commerce (section 6(a)(1)).
- Prohibit or otherwise restrict the manufacturing, processing, or distribution in commerce of the substance or mixture for a particular use or above a specific concentration for a particular use (section 6(a)(2)).
- Limit the amount of the substance or mixture which may be manufactured, processed, or distributed in commerce for a particular use or above a specific concentration for a particular use specified (section 6(a)(2)).
- Require clear and adequate minimum warning and instructions with respect to the substance or mixture's use, distribution in commerce, or disposal, or any combination of those activities, to be marked on or accompanying the substance or mixture (section 6(a)(3)).
- Require manufacturers and processors of the substance or mixture to make and retain certain records or conduct certain monitoring or testing (section 6(a)(4)).
- Prohibit or otherwise regulate any manner or method of commercial use of the substance or mixture (section 6(a)(5)).
- Prohibit or otherwise regulate any manner or method of disposal of the substance or mixture, or any article containing such substance or mixture, by its manufacturer or processor or by any person who uses or disposes of it for commercial purposes (section 6(a)(6)).
- Direct manufacturers or processors of the substance or mixture to give notice of the unreasonable risk determination to distributors, certain other persons, and the public, and to replace or repurchase the substance or mixture (section 6(a)(7)).

As described in Unit III.B., EPA assessed how the TSCA section 6(a) requirements could be applied to address the unreasonable risk found to be present in the 2020 Risk Evaluation for Methylene Chloride and the final revised unreasonable risk determination, so that methylene chloride no longer presents such unreasonable risk. EPA's proposed regulatory action and a primary alternative regulatory action are fully discussed in Unit IV. EPA is requesting public comment on the proposed regulatory action and primary alternative regulatory action.

Under the authority of TSCA section 6(g), EPA may consider granting a time-limited exemption for a specific condition of use for which EPA finds that: (1) The specific condition of use is a critical or essential use for which no technically and economically feasible safer alternative is available, taking into consideration hazard and exposure; (2) Compliance with the requirement would significantly disrupt the national economy, national security, or critical infrastructure; or (3) The specific condition of use, as compared to reasonably available alternatives, provides a substantial benefit to health, the environment, or public safety. Further, the Administrator may by rule, extend, modify, or eliminate an exemption if the Administrator determines, on the basis of reasonably available information and after adequate public justification, the exemption warrants extension or modification or is no longer necessary. Based on reasonably available information, EPA has considered the issue and is proposing that a TSCA section 6(g) exemption is warranted for certain

conditions of use, as detailed in Unit IV.A.5. EPA is requesting comment on the proposed rule's section 6(g) exemption provisions and rationale.

TSCA section 6(c)(2)(A) requires EPA, in proposing and promulgating section 6(a) rules, to consider and include a statement of effects addressing certain factors, including the costs and benefits and the cost effectiveness of the proposed regulatory action and of the one or more primary alternative regulatory actions considered by the Administrator. Also, under TSCA section 6(c)(2), EPA must consider the effects of the chemical substance or mixture on health or the environment and the magnitude of the exposure, which can include impacts to health or the environment in fenceline communities. TSCA section 6(c)(2) considerations are discussed in Unit VI.

TSCA section 6(c)(2)(C) requires that, in deciding whether to prohibit or restrict in a manner that substantially prevents a specific condition of use and in setting an appropriate transition period for such action, EPA consider, to the extent practicable, whether technically and economically feasible alternatives that benefit health or the environment will be reasonably available as a substitute when the proposed prohibition or restriction takes effect. Unit III.B.4. includes more information regarding EPA's consideration of alternatives, and Unit V. provides more information on EPA's considerations more broadly under TSCA section 6(c)(2).

As described in this Unit, EPA carried out required consultations as described later in this unit and also considered impacts on children's environmental health as part of its approach to developing this TSCA section 6 regulatory action.

1. Consultations

EPA conducted consultations and outreach as part of development of this proposed regulatory action. The Agency held a federalism consultation from October 22, 2020, until January 23, 2021, as part of this rulemaking process and pursuant to Executive Order 13132. This included a background presentation on September 9, 2020, and a consultation meeting on October 22, 2020. During the consultation, EPA met with State and local officials early in the process of developing the proposed action in order to receive meaningful and timely input into its development (Ref. 22). During the consultation, participants and EPA discussed preemption, EPA's authority under TSCA section 6 to regulate identified unreasonable risk, what activities would be potentially regulated in the proposed rule, and the relationship between TSCA and existing statutes—particularly the Clean Water Act (CWA) and Safe Drinking Water Act (SDWA) (Ref. 22).

Methylene chloride is not manufactured (including imported), processed, distributed in commerce, or regulated by Tribal governments. However, EPA consulted with Tribal officials during the development of this proposed action (Ref. 23). The Agency held a Tribal consultation from October 7, 2020, to January 8, 2021, with meetings on November 12 and 13, 2020. Tribal officials were given the opportunity to meaningfully interact with EPA risk managers concerning the current status of risk management. During the consultation, EPA discussed risk management under TSCA section 6(a), findings from the 2020 Risk Evaluation for Methylene Chloride, types of information that would be helpful to inform risk management, principles for transparency during the risk management process, and types of information EPA is seeking from Tribes (Ref. 23). EPA received no written comments as part of this consultation.

In addition to the formal consultations, EPA also conducted outreach to advocates for communities that might be subject to disproportionate exposure to methylene chloride, including underrepresented communities such as minority populations, low-income populations, and Indigenous peoples. EPA's Environmental Justice (EJ) consultation occurred from November 4, 2020, through January 18, 2021. On November 16 and 19, 2020, EPA held public meetings as part of this consultation. These meetings were held pursuant to and in compliance with Executive Orders 12898 and 14008. EPA received three written comments following the EJ meetings, in addition to oral comments provided during the consultations (Refs. 24, 25, 26). In general, commenters supported strong regulation of methylene chloride to protect lower-income communities and workers. Commenters supported strong outreach to affected communities, encouraged EPA to follow the hierarchy of controls in regulating methylene chloride, favored prohibitions, and noted the uncertainties associated with use of PPE (*e.g.,* in some cases, use of PPE did not provide adequate protection given the exposure scenario).

As required by section 609(b) of the Regulatory Flexibility Act (RFA), EPA convened a SBAR Panel to obtain advice and recommendations from Small Entity Representatives (SERs) that potentially would be subject to the rule's requirements. EPA met with SERs before and during Panel proceedings, on November 4, 2020, and January 28, 2021. Panel recommendations are in Unit X.C. and in the Initial Regulatory Flexibility Analysis (Ref. 27); the Panel report is in the docket (Ref. 6).

Units X.C., X.E., X.F., and X.J. provide more information regarding the consultations.

2. Other Stakeholder Consultations

In addition to the formal consultations described in Unit X., EPA attended a Small Business Administration (SBA) Office of Advocacy Environmental Roundtable on September 11, 2020 and held a public webinar on September 16, 2020. At both events EPA staff provided an overview of the TSCA risk management process and the findings in the 2020 Risk Evaluation for Methylene Chloride (Ref. 28). Attendees of these meetings were given an opportunity to voice their concerns regarding the risk evaluation and risk management.

Furthermore, EPA has engaged in discussions with representatives from different industries, non-governmental organizations, technical experts, and users of methylene chloride. A list of external meetings held during the development of this proposed rule is in the docket (Ref. 29); meeting materials and summaries are also in the docket. The purpose of these discussions was to hear from users, academics, manufacturers, and members of the public health community about practices related to commercial and consumer uses of methylene chloride; public health impacts of methylene chloride; the importance of methylene chloride in the various uses subject to this proposed rule; frequently used substitute chemicals or alternative methods; engineering control measures and PPE currently in use or feasibly adoptable; and other risk-reduction approaches that may have already been adopted or considered for industrial, commercial or consumer uses.

3. Children's Environmental Health

The Agency's 2021 Policy on Children's Health (Ref. 30) requires EPA to protect children from environmental exposures by consistently and explicitly considering early life exposures (from conception, infancy, and early childhood and through adolescence until 21 years of age) and lifelong health in all human health decisions through identifying and integrating children's health data and information when conducting risk assessments. TSCA section 6(b)(4)(A) also requires EPA to

conduct risk evaluations ''to determine whether a chemical substance presents an unreasonable risk of injury to health or the environment . . . including an unreasonable risk to a potentially exposed or susceptible subpopulation identified as relevant to the risk evaluation by the Administrator, under the conditions of use.'' In addition, TSCA section 6(a) requires EPA to apply one or more risk management requirements so that methylene chloride no longer presents an unreasonable risk (which includes unreasonable risk to any relevant potentially exposed or susceptible subpopulations).

The 2020 Risk Evaluation for Methylene Chloride evaluated exposures of infants, toddlers, older children (11 to 15 years and 16 to 20 years), and males and females of reproductive age; while EPA identified exposures to these populations (as bystanders, consumers, or workers) as driving the unreasonable risk for methylene chloride, EPA did not find that the adverse health impacts for these groups was disproportionate in comparison to other populations. While there is some evidence of an association between methylene chloride and developmental neurological effects, the literature contains methodological limitations in human studies and concentration limitations in animal studies, and thus reproductive/development effects were not carried forward to dose-response (Ref. 1).

More specifically, the 2020 Risk Evaluation for Methylene Chloride released in June 2020 considered impacts on both children and adults from occupational and consumer use from inhalation and dermal exposures, as applicable. For occupational use, the risk evaluation considered males (>16 years of age) and females of reproductive age (>16 years of age to less than 50 years of age) for both dermal and inhalation exposures. For consumer use, EPA evaluated dermal exposures for children ages 11 to 15 and 16 to 20 years of age, and the evaluation of bystander exposure from inhalation exposures included infants, toddlers and older children. While risks to children are not disproportionate, effects observed in studies include central nervous system impairment from acute inhalation exposure and liver toxicity from chronic inhalation exposure. The risks described in this section would be addressed by the proposed regulatory action described in Unit IV.

B. Regulatory Assessment of Methylene Chloride

1. Description of Conditions of Use

This Unit describes the TSCA conditions of use that drive the unreasonable risk for methylene chloride. Condition of use descriptions were obtained from EPA sources such as CDR use codes, the 2020 Risk Evaluation for Methylene Chloride and related documents, as well as the Organisation for Economic Co-operation and Development harmonized use codes, and stakeholder engagements. EPA acknowledges that some of the terms here may be defined under other statutes; however, the descriptions in this unit are intended to provide clarity to the regulated entities who will implement the provisions of this rulemaking under TSCA section 6(a).

a. Manufacturing (Includes Import)

i. Domestic Manufacturing

This condition of use refers to manufacturing, or producing, a chemical substance within the United States (including manufacturing for export). Manufacture includes the extraction of a component chemical substance from a previously existing chemical substance or complex combination of chemical substances.

ii. Import

This condition of use refers to the act of causing a chemical substance or mixture to arrive within the customs territory of the United States.

b. Processing

i. Processing as a Reactant

This condition of use refers to processing methylene chloride in chemical reactions for the manufacturing of another chemical substance or product, *e.g.,* difluoromethane, also known as HFC–32, which is used in fluorocarbon blends for refrigerants, and bis-2,2-dinitropropyl-acetal/formal.

ii. Processing: Incorporation Into a Formulation, Mixture, or Reaction Product

This condition of use refers to when methylene chloride is added to a product (or product mixture) prior to further distribution of the product.

iii. Processing: Repackaging

This condition of use refers to the preparation of methylene chloride for distribution in commerce in a different form, state, or quantity. This includes transferring the chemical from a bulk container into smaller containers.

iv. Processing: Recycling

This condition of use refers to the process of treating generated waste streams(*i.e.,* which would otherwise be disposed of as waste) that are collected, either on-site or transported to a third-party site, for commercial purpose. Waste solvents can be restored to a condition that permits reuse via solvent reclamation/recycling. The recovery process may involve an initial vapor recovery or mechanical separation step followed by distillation, purification, and final packaging.

c. Industrial and Commercial Uses

i. Industrial and Commercial Use as Solvent for Batch Vapor Degreasing

This condition of use refers to the process of heating methylene chloride to its volatilization point and using its vapor to remove dirt, oils, greases, and other surface contaminants (such as drawing compounds, cutting fluids, coolants, solder flux, and lubricants) from metal parts, electronics, or other articles in batch open-top vapor degreasers or closed-loop vapor degreasing in industrial or commercial settings.

ii. Industrial and Commercial Use as Solvent for In-line Vapor Degreasing

This condition of use refers to the process of heating methylene chloride to its volatilization point and using its vapors to remove dirt, oils, greases, and other surface contaminants from textiles, glassware, metal surfaces, and other articles using conveyorized or continuous-web vapor degreasing machines in industrial or commercial settings.

iii. Industrial and Commercial Use as Solvent for Cold Cleaning

This condition of use refers to the industrial or commercial use of methylene chloride as a non-boiling solvent in cold-cleaning to dissolve oils, greases, and other surface contaminants from textiles, glassware, metal surfaces, and other articles.

iv. Industrial and Commercial Use as Solvent for Aerosol Spray Degreaser/Cleaner

This condition of use refers to industrial or commercial use of methylene chloride in aerosol degreasing as an aerosolized solvent spray, typically applied from a pressurized can, to remove residual contaminants from fabricated parts or machinery (including circuit boards and electronics).

v. Industrial and Commercial Use in Adhesives, Sealants, and Caulks

This condition of use refers to industrial or commercial use of methylene chloride in adhesives, sealants, and caulks to promote bonding between other substances, promote adhesion of surfaces, or prevent seepage of moisture or air.

vi. Industrial and Commercial Use in Paints and Coatings

This condition of use refers to industrial or commercial use of methylene chloride in paints or coatings applied to surfaces, usually to enhance properties such as water repellency, gloss, fade resistance, ease of application, or foam prevention, etc.

vii. Industrial and Commercial Use in Paint and Coating Removers

This condition of use refers to industrial or commercial use of methylene chloride or methylene chloride-containing products applied to surfaces to remove paint, coatings, and other finishes and to clean the underlying surface, including but not limited to furniture refinishing.

viii. Industrial and Commercial Use in Adhesive and Caulk Removers

This condition of use refers to industrial or commercial use of methylene chloride in products in industrial or commercial settings applied to surfaces to unbind substances or remove sealants and to clean the underlying surface by softening adhesives, caulks, and other glues so they can be removed.

ix. Industrial and Commercial Use in Metal Aerosol Degreasers

This condition of use refers to the industrial or commercial use of methylene chloride in aerosol degreasing as an aerosolized solvent spray, typically applied from a pressurized can, to remove residual contaminants from fabricated parts, machinery, or other metal substrate.

x. Industrial and Commercial Use in Metal Non-Aerosol Degreasers

This condition of use refers to the industrial or commercial use of methylene chloride in liquid degreasing to remove residual contaminants from fabricated parts, machinery, or other metal substrate.

xi. Industrial and Commercial Use in Finishing Products for Fabric, Textiles, and Leather

This condition of use refers to industrial or commercial use of methylene chloride in the finishing of fabrics at fabric or textile mills, including in products that impart color or other desirable properties to fabrics or textiles. The methylene chloride may be added during the manufacturing of the textile or during the finishing, such as pressing of the fabric.

xii. Industrial and Commercial Use in Automotive Care Products (Functional Fluids for Air Conditioners)

This condition of use refers to the industrial or commercial use of methylene chloride for one or more operational properties in a closed system in products intended for automotive care and includes automotive air conditioner refrigerant and as a refrigerant with stop leak sealant.

xiii. Industrial and Commercial Use in Automotive Care Products (Interior Car Care)

This condition of use refers to the industrial or commercial use of methylene chloride in cleaning agents used to remove stains from interior carpets and textiles in automotive vehicles.

xiv. Industrial and Commercial Use in Automotive Care Products (Degreasers)

This condition of use refers to the industrial or commercial use of methylene chloride in liquid or aerosol degreasing to remove residual contaminants from automotive substrates and articles.

xv. Industrial and Commercial Use in Apparel and Footwear Care Products

This condition of use refers to the industrial or commercial use of methylene chloride in apparel and footwear care products as post-market waxes, polishes, or other media and applied to footwear, textiles, or fabrics to impart color or other desirable properties.

xvi. Industrial and Commercial Use in Spot Removers for Apparel and Textiles

This condition of use refers to the industrial or commercial use of methylene chloride or methylene chloride-containing products applied from squeeze bottles, hand-held spray bottles, or spray guns, either before or after a cleaning cycle on apparel and textiles. After application, the methylene chloride or product is removed by manually scraping or flushing away the stain by using a brush, spatula, pressurized air, or steam.

xvii. Industrial and Commercial Use in Liquid Lubricants and Greases

This condition of use refers to the industrial or commercial use of methylene chloride in liquids that reduce friction, heat generation, and wear between surfaces.

xviii. Industrial and Commercial Use in Spray Lubricants and Greases

This condition of use refers to the industrial or commercial use of methylene chloride in sprays that reduce friction, heat generation, and wear between surfaces.

xix. Industrial and Commercial Use in Aerosol Degreasers and Cleaners

This condition of use refers to the industrial or commercial use of methylene chloride in aerosol degreasing as an aerosolized solvent spray, typically applied from a pressurized can, to remove residual contaminants from a fabricated part or other substrate.

xx. Industrial and Commercial Use in Non-Aerosol Degreasers and Cleaners

This condition of use refers to the industrial or commercial use of methylene chloride in liquid degreasing to remove residual contaminants (such as oils, greases, and similar materials) from a fabricated part or other substrate (such as textiles, glassware, products, and other articles).

xxi. Industrial and Commercial Use in Cold Pipe Insulations

This condition of use refers to the industrial or commercial use of methylene chloride when typically applied in aerosolized form in products used in building and construction materials to provide insulation.

xxii. Industrial and Commercial Use as a Solvent That Becomes Part of a Formulation or Mixture

This condition of use refers to industrial or commercial use of methylene chloride added to a product (or product mixture) in an industrial or commercial setting.

xxiii. Industrial and Commercial Use as a Processing Aid

This condition of use refers to the industrial or commercial use of methylene chloride to improve the processing characteristics or the operation of process equipment or to alter or buffer the pH of the substance or mixture, when added to a process or to a substance or mixture to be processed. Processing agents do not become a part of the reaction product and are not intended to affect the

function of a substance or article created.

xxiv. Industrial and Commercial Use as Propellant and Blowing Agent

This condition of use refers to the industrial or commercial use of methylene chloride in the production of polyurethane foam including as a blowing agent and as a solvent for cleaning equipment.

xxv. Industrial and Commercial Use as a Laboratory Chemical

This condition of use refers to the industrial or commercial use of methylene chloride in a laboratory process or in specialized laboratory equipment for instrument calibration/maintenance chemical analysis, chemical synthesis, extracting and purifying other chemicals, dissolving other substances, executing research, development, test and evaluation methods, and similar activities. In response to a request for clarification, EPA agrees that use of methylene chloride in a closed-loop chiller system used to perform FAA-required aviation fuel testing is considered industrial and commercial use as a laboratory chemical (Ref. 31). The analogous use of methylene chloride in a chiller system in the Department of Defense McKinley Climactic Laboratory would likewise be considered industrial and commercial use as a laboratory chemical.

xxvi. Industrial and Commercial Use for Electrical Equipment, Appliance, and Component Manufacturing

This condition of use refers to the industrial or commercial use of methylene chloride in electrical and electronic products; their maintenance; their manufacture, such as in the production of printed circuit boards; and at wholesalers and retail stores.

xxviii. Industrial and Commercial Use for Plastic and Rubber Products Manufacturing

This condition of use refers to the industrial or commercial use of methylene chloride in the manufacture and processing of plastic and rubber products, including in interfacial polymerization for polycarbonate plastic manufacturing.

xxix. Industrial and Commercial Use in Cellulose Triacetate Film Production

This condition of use refers to the industrial or commercial use of methylene chloride as a chemical processor for polycarbonate resins and cellulose triacetate (photographic film).

xxx. Industrial and Commercial Use as Anti-Spatter Welding Aerosol

This condition of use refers to the industrial or commercial use of methylene chloride in formulations to prevent spatter from adhering to metal surfaces during welding.

xxxi. Industrial and Commercial Use for Oil and Gas Drilling, Extraction, and Support Activities

This condition of use refers to the industrial or commercial use of methylene chloride in the extraction, development, and preparation of oil, liquid crude petroleum, and gas. Activities may include exploration for crude petroleum and natural gas, core sampling, drilling wells, operating separator, emulsion breakers, and distilling equipment.

xxxii. Industrial and Commercial Use for Toys, Playgrounds, and Sporting Equipment

This condition of use refers to the industrial or commercial use of methylene chloride in the manufacture of toys intended for children's use (and child-dedicated articles), including fabrics, textiles, and apparel (which may include stuffed toys, blankets, or comfort objects) as well as plastic articles (hard) (which may include dolls, toy cars, toy animals, or teething rings).

xxxiii. Industrial and Commercial Use in Lithographic Printing Plate Cleaner

This condition of use refers to the industrial or commercial use of methylene chloride in lithographic printing for the cleaning of plates and rollers.

xxxiv. Industrial and Commercial Use in Carbon Remover, Wood Floor Cleaner, and Brush Cleaner

This condition of use refers to the industrial or commercial use of methylene chloride in formulated products to remove carbon and other dirt and residues from a variety of surfaces including floors and brushes.

d. Consumer Uses

i. Consumer Use as a Solvent in Aerosol Degreasers/Cleaners

This condition of use refers to consumer use of products containing methylene chloride as a solvent for cleaning or degreasing in the form of an aerosol spray degreaser or cleaner. The products are used to dissolve oils, greases, and similar materials from textiles, glassware, metal surfaces, and other articles.

ii. Consumer Use in Adhesives and Sealants

This condition of use refers to consumer use of methylene chloride in single or two-component products used to fasten other materials together or prevent the passage of liquid or gas.

iii. Consumer Use in Brush Cleaners for Paints and Coatings

This condition of use refers to consumer use of products containing methylene chloride to clean brushes after using them to apply paints or coatings.

iv. Consumer Use in Adhesive and Caulk Removers

This condition of use refers to consumer use of products containing methylene chloride to remove, loosen, or deteriorate any adhesive or caulk from a substrate, such as floor adhesive removal.

v. Consumer Use in Metal Degreasers

This condition of use refers to consumer use of products containing methylene chloride for the degreasing of metals, such as coil cleaners and electronics cleaners.

vi. Consumer Use in Automotive Care Products (Functional Fluids for Air Conditioners)

This condition of use refers to consumer use of products containing methylene chloride for automotive care and includes automotive air conditioner refrigerant and leak sealant.

vii. Consumer Use in Automotive Care Products (Degreasers)

This condition of use refers to consumer use of products containing methylene chloride for automotive care and includes products for degreasing automotive parts, such as brakes, carburetors, engines, and gaskets.

viii. Consumer Use in Lubricants and Greases

This condition of use refers to consumer use of products containing methylene chloride to reduce friction, heat generation, and wear between solid surfaces, such as engines and brakes.

ix. Consumer Use in Cold Pipe Insulation

This condition of use refers to consumer use of products containing methylene chloride used in building and construction materials to provide insulation.

x. Consumer Use in Arts, Crafts, and Hobby Materials Glue

This condition of use refers to consumer use of arts, crafts, and hobby materials, such as glues, containing methylene chloride.

xi. Consumer Use in an Anti-Spatter Welding Aerosol

This condition of use refers to consumer use of products containing methylene chloride to prevent the spatter of the welding from sticking to welding material or a nearby surface (for example, workbenches).

xii. Consumer Use in Carbon Removers and Other Brush Cleaners

This condition of use refers to consumer use of products containing methylene chloride for cleaning applications to remove carbon, inks and paints, grease, or other foreign matter. The cleaning operations include carbon removers (for example, to clean appliances, pots, and pans) and other applications that usually involve the use of a brush (for example, in lithographic printing cleaners, in taxidermy, and in wood and floor cleaners).

e. Disposal

This condition of use refers to the process of disposing generated waste streams of methylene chloride that are collected either on-site or transported to a third-party site for disposal.

f. Terminology in This Proposed Rule

For the purposes of this proposed rulemaking, ''occupational conditions of use'' refers to the TSCA conditions of use described in Units III.B.1.a, b, c, and e. Although EPA identified both industrial and commercial uses in the 2020 Risk Evaluation for Methylene Chloride for purposes of distinguishing scenarios, the Agency clarified then and clarifies now that EPA interprets the authority Congress gave to the Agency to ''regulat[e] any manner or method of commercial use'' under TSCA section 6(a)(5) to reach both industrial and commercial uses.

Additionally, in the 2020 Risk Evaluation for Methylene Chloride, EPA identified and assessed all known, intended, and reasonably foreseen industrial, commercial, and consumer uses of methylene chloride (other than the use of methylene chloride in consumer paint and coating removers, which was subject to separate action under TSCA section 6 (84 FR 11420, March 27, 2019)). EPA determined that all industrial, commercial, and consumer use of methylene chloride evaluated in the 2020 Risk Evaluation for Methylene Chloride drives the unreasonable risk of injury to health. As such, for purposes of this risk management rulemaking, ''consumer use'' refers to all known, intended, or reasonably foreseen methylene chloride consumer uses. Likewise, for the purpose of this risk management rulemaking, ''industrial and commercial use'' refers to all known, intended, or reasonably foreseen methylene chloride industrial and commercial use.

EPA further notes that this proposed rule does not apply to any substance excluded from the definition of ''chemical substance'' under TSCA section 3(2)(B)(ii) through (vi). Those exclusions include, but are not limited to, any pesticide (as defined by the Federal Insecticide, Fungicide, and Rodenticide Act) when manufactured, processed, or distributed in commerce for use as a pesticide; and any food, food additive, drug, cosmetic, or device, as defined in section 201 of the Federal Food, Drug, and Cosmetic Act, when manufactured, processed, or distributed in commerce for use as a food, food additive, drug, cosmetic or device.

EPA is not proposing to incorporate the descriptions in Units III.B.1.a through III.B.1.e. into the regulatory text as definitions. EPA requests comment on whether a definition should be promulgated for each condition of use of methylene chloride and, if so, whether the descriptions in this Unit are consistent with the conditions of use evaluated in the 2020 Risk Evaluation for Methylene Chloride and whether they provide a sufficient level of detail such that they would improve the clarity and readability of the regulation if promulgated.

2. Description of Unreasonable Risk Under the Conditions of Use

EPA has determined that methylene chloride presents an unreasonable risk of injury to human health under the conditions of use based on acute and chronic non-cancer risks and chronic cancer risks. As described in the TSCA section 6(b) 2020 Risk Evaluation for Methylene Chloride, EPA identified non-cancer adverse effects from both acute and chronic inhalation and dermal exposures to methylene chloride, and cancer from chronic inhalation and dermal exposures to methylene chloride (Ref. 1). EPA identified neurotoxicity effects (central nervous system) as the most sensitive endpoint of the non-cancer adverse effects from acute inhalation and dermal exposures, and liver effects as the most sensitive endpoint of the non-cancer adverse effects from chronic inhalation and dermal exposures for all conditions of use. However, EPA also identified additional risks associated with other adverse effects (*e.g.,* other nervous system effects, immune system effects, reproductive and developmental effects, and irritation/burns) resulting from acute and chronic exposures. By targeting the sensitive chronic liver endpoint for risk management, EPA's action will also eliminate the unreasonable risks from acute, chronic non-cancer and cancer endpoints from methylene chloride. EPA also recognizes the severity of the risks from acute inhalation exposures to methylene chloride, because relatively small increases in acute exposure can lead to extreme adverse effects associated with central nervous system suppression, including coma and death. Occupational fatalities linked to methylene chloride have been recorded as recently as June 2020 (Ref. 32). Eighty-five occupational fatalities between 1980 and 2018 have been documented from methylene chloride in paint and coating removal or adhesive and sealant use, and when methylene chloride is being used as a cleaning or degreasing solvent; there has been no linear trend indicating a decrease in fatalities during that time period (Ref. 32). In some instances, while workers were wearing respirators, the respirators were inadequate to protect against methylene chloride inhalation exposure (Ref. 32). Unit VI.A. summarizes the health effects and the magnitude of the exposures in more detail.

To make the unreasonable risk determination for methylene chloride, EPA evaluated exposures to workers, occupational non-users, consumer users, and bystanders using reasonably available monitoring and modeling data for inhalation and dermal exposures. In addition, EPA conducted a screening level analysis to assess risks from the air and water pathways to fenceline communities. A discussion of EPA's analysis and the expected effects of this rulemaking on fenceline communities is in Unit VI.A.

For the 2020 Risk Evaluation for Methylene Chloride, EPA considered potentially exposed or susceptible subpopulations identified as relevant to the risk evaluation by the Agency. There are several groups of individuals with greater exposure to methylene chloride relative to the general population, including: (1) Workers and occupational non-users, and (2) Consumer users and bystanders to consumer use of products containing methylene chloride (Ref. 1). EPA also identified several human subpopulations which may have greater susceptibility than the general population to the hazards of methylene chloride, including individuals with

certain genetic polymorphisms (variant forms of a specific DNA sequence) that may make them more susceptible to getting cancer from methylene chloride, and individuals with cardiac disease and other comorbidities, who may be at increased risk for angina from acute exposures (Ref. 1). All potentially exposed or susceptible subpopulations are included in the quantitative and qualitative analyses described in the 2020 Risk Evaluation for Methylene Chloride and were considered in the determination of unreasonable risk for methylene chloride. As discussed in Units II.D. and VI.A., the 2020 Risk Evaluation for Methylene Chloride excluded the air and water exposure pathways from the published risk evaluations and may have caused some risks to be unaccounted for in the risk evaluation. EPA considers receptors exposed to methylene chloride through those pathways to constitute a subset of the general population and categorizes them as fenceline communities; they may also be considered potentially exposed or susceptible subpopulations. See Unit VI.A. for further discussion on assessing and protecting risk to fenceline communities.

3. Description of TSCA Section 6 Requirements for Risk Management

EPA examined the TSCA section 6(a) requirements (listed in Unit III.A.) to identify which ones have the potential to eliminate the unreasonable risk from methylene chloride. This Unit summarizes the TSCA section 6 considerations for issuing regulations under TSCA section 6(a). Unit V. outlines how EPA applied these considerations specifically to managing the unreasonable risk from methylene chloride.

As required, EPA developed a proposed regulatory action and one primary alternative regulatory action, which are described in Units IV.A. and IV.B., respectively. To identify and select a regulatory action, EPA considered the two routes of exposure driving the unreasonable risk, inhalation and dermal, and the exposed populations. For occupational conditions of use (see Unit III.B.1.f.), EPA considered how it could directly regulate manufacturing (including import), processing, distribution in commerce, industrial and commercial use, or disposal to address the unreasonable risk. EPA does not have direct authority to regulate consumer use. Therefore, EPA considered how it could exercise its authority under TSCA to regulate the manufacturing (including import), processing, and/or distribution in commerce of methylene chloride at different levels in the supply chain to eliminate exposures or restrict the availability of methylene chloride and methylene chloride-containing products for consumer use in order to address the unreasonable risk.

As required by TSCA section 6(c)(2), EPA considered several factors, in addition to identified unreasonable risk, when selecting among possible TSCA section 6(a) requirements. To the extent practicable, EPA factored into its decisions: (i) the effects of methylene chloride on health and the environment, (ii) the magnitude of exposure to methylene chloride of human beings and the environment, (iii) the benefits of methylene chloride for various uses, and (iv) the reasonably ascertainable economic consequences of the rule. In evaluating the reasonably ascertainable economic consequences of the rule, EPA considered (1) The likely effect of the rule on the national economy, small business, technological innovation, the environment, and public health; (2) The costs and benefits of the proposed regulatory action and one or more primary alternative regulatory actions considered; and (3) The cost effectiveness of the proposed regulatory action and of the one or more primary alternative regulatory actions considered. TSCA section 6(c)(2)(A) considerations for methylene chloride are discussed in full in Unit VI., including the statement of effects of the proposed rule with respect to these considerations.

EPA also considered regulatory authorities under statutes administered by other agencies such as the OSH Act, the Consumer Product Safety Act (CPSA), and the Federal Hazardous Substances Act (FHSA), as well as other EPA-administered statutes, to examine (1) Whether there are opportunities for all or part of this risk management action to be addressed under other statutes, such that a referral may be warranted under TSCA section 9(a) or 9(b); or (2) Whether TSCA section 6(a) regulation could include alignment of requirements and definitions in and under existing statutes and regulations to minimize confusion to the regulated entities and the general public.

In addition, EPA followed other TSCA requirements such as considering the availability of alternatives when contemplating prohibition or a substantial restriction (TSCA section 6(c)(2)(C), as outlined in Unit III.B.4.), and setting proposed compliance dates in accordance with the requirements in TSCA section 6(d)(1)(B) (described in the proposed and alternative regulatory action in Unit IV.).

To the extent information was reasonably available, EPA considered pollution prevention strategies and the hierarchy of controls adopted by OSHA and NIOSH, as discussed in Unit II.C.4., when selecting regulatory actions, with the goal of identifying risk management control methods that are permanent, feasible, and effective. EPA also considered how to address the unreasonable risk while providing flexibility to the regulated community where appropriate, and took into account the information presented in the 2020 Risk Evaluation for Methylene Chloride, as well as input from stakeholders (as described in Unit III.A.) and anticipated compliance strategies from regulated entities.

Taken together, these considerations led EPA to the proposed regulatory action and primary alternative regulatory action described in Unit IV. Additional details related to how the requirements in this Unit were incorporated into development of those actions are in Unit V.

As demonstrated by the number of distinct programs addressed in this rulemaking and the structure of this proposed rule in addressing them independently, EPA generally intends the rule's provisions to be severable from each other. EPA expects to provide additional detail on severability in the final rule once the Agency has considered public comments and finalized the regulatory language.

IV. Proposed Regulatory and Alternative Regulatory Actions

This Unit describes the proposed regulatory action by EPA so that methylene chloride will no longer present an unreasonable risk of injury to health. In addition, as indicated by TSCA section 6(c)(2)(A), EPA must consider the costs and benefits and the cost-effectiveness of the proposed regulatory action and one or more primary alternative regulatory actions. In the case of methylene chloride, the proposed regulatory action is described in Unit IV.A. and the alternative regulatory action considered is described in Unit IV.B. An overview of the proposed regulatory action and primary alternative regulatory action for each condition of use is in Unit IV.C.

A. Proposed Regulatory Action

EPA is proposing under TSCA section 6(a) to: Require a WCPP, including inhalation exposure concentration limits and related monitoring, for ten conditions of use, outlined in Unit IV.A.1.; Prohibit most industrial and commercial use of methylene chloride, outlined in Unit IV.A.2.; Prohibit the

manufacture, processing, and distribution in commerce of methylene chloride for all consumer use (other than the use of methylene chloride in consumer paint and coating removers, which was subject to separate action under TSCA section 6 (84 FR 11420, March 27, 2019), outlined in Unit IV.A.3.; Establish recordkeeping and downstream notification requirements, outlined in Unit IV.A.4.; and Provide a 10-year, time-limited exemption under TSCA section 6(g) for paint and coating removal by civilian aviation from a prohibition that would significantly disrupt critical infrastructure, as outlined in Unit IV.A.5., with conditions for this exemption to include compliance with the WCPP described in Unit IV.A.1.

1. Workplace Chemical Protection Program (WCPP)

a. Overview

As described in Unit I., under TSCA section 6(a), 15 U.S.C. 2605(a), EPA is required to issue a regulation applying one or more of the TSCA section 6(a) requirements to the extent necessary so that the unreasonable risk of injury to human health or the environment from a chemical substance is no longer presented. The TSCA section 6(a) requirements provide EPA the authority to limit or prohibit a number of activities, including, but not limited to, restricting or regulating the manufacture, processing, distribution in commerce, commercial use, or disposal of the chemical substance. Given this statutory authority, EPA may find it appropriate in certain circumstances to propose a WCPP for certain occupational (*i.e.,* industrial and commercial) conditions of use. A WCPP encompasses inhalation exposure thresholds, includes monitoring and recordkeeping requirements to verify that those thresholds are not exceeded, and may include other components, such as dermal protection, to ensure that the chemical substance no longer presents unreasonable risk. Under a WCPP, owners or operators have some flexibility, within the parameters outlined in this Unit, regarding how they prevent exceedances of the identified EPA exposure limit thresholds. In the case of methylene chloride, meeting the EPA exposure limit thresholds for certain occupational conditions of use would address the unreasonable risk to potentially exposed persons from inhalation exposure.

EPA uses the term ''potentially exposed person'' in this Unit and in the regulatory text to include workers, occupational non-users, employees, independent contractors, employers, and all other persons in the work area where methylene chloride is present and who may be exposed to methylene chloride under the conditions of use for which a WCPP would apply. EPA's intention is to require a comprehensive WCPP that would address the unreasonable risk from methylene chloride to workers directly handling the chemical or in the area where the chemical is being used. Similarly, the 2020 Risk Evaluation for Methylene Chloride did not distinguish between employers, contractors, or other legal entities or businesses that manufacture, process, distribute in commerce, use, or dispose of methylene chloride. For this reason, EPA uses the term ''owner or operator'' to describe the entity responsible for implementing the WCPP in any workplace where an applicable condition of use described in Units III.B.1.a. through III.B.1.e. and subject to the WCPP is occurring. The term includes any person who owns, leases, operates, controls, or supervises such a workplace.

EPA is proposing a WCPP for the following conditions of use: domestic manufacturing; import; processing as a reactant; processing for incorporation into a formulation, mixture, or reaction product; processing in repackaging; processing in recycling; industrial and commercial use as a laboratory chemical; industrial or commercial use for paint and coating removal from safety-critical, corrosion-sensitive components of aircraft and spacecraft by Federal agencies and their contractors; industrial or commercial use as a bonding agent for acrylic and polycarbonate in mission-critical military and space vehicle applications, including in the production of specialty batteries for such applications by Federal agencies and their contractors; and disposal (EPA's rationale is provided in Unit V.). EPA is additionally proposing to require that uses receiving an exemption under TSCA section 6(g), as outlined in Unit IV.A.5., comply with the WCPP. EPA is proposing that these requirements take effect 180 days after publication of the final rule, at which point entities would be required to conduct initial monitoring (as described in Unit IV.A.1.c.). Additionally, EPA would require the implementation of any needed exposure controls based on initial monitoring and development of an exposure control plan within 1 year of publication of the final rule (Unit IV.A.1.d.). EPA believes these timeframes are achievable because they are consistent with the timeframes in OSHA's 1997 standard for methylene chloride (62 FR 1494, January 10, 1997). EPA is requesting comment on these proposed implementation timeframes for the WCPP requirements.

When considering and developing a WCPP that includes an ECEL, EPA coordinates and consults with other Federal agencies to achieve the maximum enforcement of TSCA while avoiding imposing duplicative requirements, consistent with TSCA section 9(d). For methylene chloride, EPA's streamlined approach for implementing the ECEL would seek to align with, to the extent possible, certain elements of the existing OSHA standard for regulating methylene chloride under 29 CFR 1910.1052. The OSHA PEL, action level, STEL, and ancillary requirements have established a strong precedent for exposure limit threshold requirements within the regulated community. However, the existing PEL and STEL do not eliminate the unreasonable risk identified by EPA under TSCA, and EPA is therefore proposing to apply new, lower, exposure thresholds, derived from the TSCA 2020 Risk Evaluation for Methylene Chloride, while aligning with existing requirements wherever possible (Refs. 1, 11). For methylene chloride, this approach would eliminate the unreasonable risk driven by the conditions of use subject to the WCPP, enable continued industry use where appropriate, and provide the familiarity of a pre-existing framework for the regulated community.

EPA's proposed requirements include specific exposure limits and ancillary requirements necessary for the ECEL's successful implementation as part of a WCPP. Taken together, these WCPP requirements would apply to the extent necessary so that the unreasonable risk driven by the conditions of use listed earlier in this Unit would no longer be presented. EPA's proposal would align with existing requirements from the OSHA methylene chloride standard at 29 CFR 1910.1052 to the extent possible (also summarized in Unit V.A.). As discussed in Unit II.B.3., because the unreasonable risk driven by these occupational conditions of use cannot be addressed entirely through the continued application of the OSHA standard and associated requirements, EPA is proposing additional requirements for lower exposure limits, user notification, recordkeeping, periodic monitoring, and respirator selection criteria as part of the WCPP. EPA acknowledges that the values of the ECEL, the ECEL action level, and the EPA STEL, outlined in Unit IV.A.1.b., may mean that some entities that are

currently in compliance with the OSHA standard will have to increase the frequency and scope of their compliance activities in order to achieve compliance with the requirements being proposed in this action, such as through the implementation of engineering controls to reduce exposures to the extent feasible, periodic exposure monitoring frequency (Unit IV.A.1.c.iii.), establishment of regulated areas (Unit IV.A.1.d.), use of respiratory protection (Unit IV.A.1.e.ii.), and notification of monitoring results (Unit IV.A.1.f.ii.).

This Unit includes a summary of the WCPP, including a description of proposed exposure limits including an ECEL, ECEL action level, and EPA STEL; proposed implementation requirements including monitoring requirements; a description of potential exposure controls, including engineering controls, administrative controls, and PPE as it relates to dermal protections and respirator selection; and additional requirements proposed for recordkeeping, workplace participation, and notification in accordance with the hierarchy of controls. This Unit also describes compliance timeframes for these proposed requirements.

b. Existing Chemical Exposure Limit (ECEL), EPA Action Level (AL), and Short-Term Exposure Limit (STEL)

To reduce exposures in the workplace and address the inhalation exposures to methylene chloride for occupational conditions of use that drive to the unreasonable risk of injury to human health, EPA is proposing an ECEL under TSCA section 6(a) of 2 ppm (8 mg/m^3) as an 8-hour TWA based on the chronic non-cancer human equivalent concentration for liver toxicity. EPA has determined, as a matter of risk management policy, that ensuring exposures remain at or below the ECEL will eliminate the unreasonable risk of injury to health resulting from acute and chronic inhalation exposures for certain occupational conditions of use. EPA's description for how the requirements related to an ECEL would address the unreasonable risk driven by those occupational conditions of use and the rationale for the regulatory approach of a WCPP are in Unit V.A.

If ambient exposures are kept at or below the 8-hour TWA ECEL of 2 ppm and at or below the 15-minute TWA EPA STEL of 16 ppm, a potentially exposed person would be protected against the effects described in Unit III.B.3., including effects resulting from acute exposure (central nervous system depression), chronic non-cancer effects (liver toxicity), and cancer. As an example, the incremental individual cancer risk at the 8-hour ECEL is 5.1×10^{-6}, which is lower than the occupational benchmark for cancer risk of 1×10^{-4} cited in the 2020 Risk Evaluation for Methylene Chloride and the NIOSH Chemical Carcinogen Policy (Ref. 33).

EPA is also proposing to establish an ECEL action level at half of the 8-hour ECEL, or 1 ppm (4 mg/m^3) as an 8-hour time-weighted average. The ECEL action level would be a definitive cut-off point below which certain compliance activities, such as periodic monitoring, would not be required as described further in this Unit. As explained by OSHA, an action level provides employers and employees with confidence that exposure reduction actions could be taken before inhalation exposure to methylene chloride exceeds the inhalation exposure limit (Ref. 34). EPA agrees with this reasoning and, like OSHA, expects the inclusion of an ECEL action level will stimulate innovation within industry to reduce exposures to methylene chloride to levels below the action level (Ref. 34). Therefore, EPA has identified a need for an action level for methylene chloride and is proposing a level that would be half the 8-hour ECEL, which is in alignment with the precedented approach established by OSHA (Ref. 34).

In addition to the 8-hour TWA ECEL, EPA is proposing a STEL of 16 ppm (57 mg/m^3) as a 15-minute TWA. This short-term exposure limit is based on the non-cancer endpoint of central nervous system depression resulting from acute exposures. EPA has also determined, as a matter of risk management policy, that ensuring exposures remain at or below the EPA STEL will eliminate the unreasonable risk of injury to health driven by acute inhalation exposures in an occupational setting. EPA is proposing the EPA STEL for the protection of potentially exposed persons to methylene chloride for shorter durations and at higher concentrations that fall outside the parameters of the ECEL 8-hour time-weighted average. EPA is also proposing the EPA STEL in consideration of the severe and potentially irreversible hazards of such short-term exposures, which, as described in Unit II.B.2., can range from blurred vision to death.

In summary, EPA is proposing that owners or operators must ensure the airborne concentration of methylene chloride within the personal breathing zone of potentially exposed persons remains at or below 2 ppm as an 8-hour TWA ECEL, with an action level identified as 1 ppm as an 8-hour TWA. EPA is also proposing that owners or operators must ensure the airborne concentration of methylene chloride within the personal breathing zone of potentially exposed persons remains at or below a 15-minute TWA, or EPA STEL, of 16 ppm. EPA is proposing the ECEL and EPA STEL for certain occupational conditions of use to ensure that no person is exposed to inhalation of methylene chloride in excess of these concentrations resulting from those conditions of use, thus eliminating the unreasonable risk of injury to human health driven by those conditions of use. For the identified conditions of use for which the concentration thresholds are being proposed, EPA expects that the regulated community has the ability to detect the values for the ECEL, ECEL action level, and EPA STEL because these limits are above the detection limits of methylene chloride monitoring devices that are widely available in commerce, currently in use, and approved by OSHA and NIOSH, which generally range from 0.2 to 0.4 ppm (Ref. 11). EPA's methodology and inputs for the ECEL and EPA STEL values is directly derived from the peer reviewed analysis in the 2020 Risk Evaluation for Methylene Chloride, which was also subject to public comment (Ref 13). As with all aspects of this rulemaking, the public is welcome to comment on the methodology for the ECEL and EPA STEL values.

As discussed further in Unit V.A.1., for many of the conditions of use for which EPA is proposing a WCPP, data was submitted during the risk evaluation and SBAR process that indicates some facilities may already be in compliance with the proposed methylene chloride ECEL. As noted previously in this Unit, EPA expects that, if inhalation exposures for affected occupational conditions of use are kept at or below the ECEL and EPA STEL, potentially exposed persons reasonably likely to be exposed in the workplace would be protected from the unreasonable risk associated with covered occupational conditions of use. EPA is also proposing to require owners or operators to comply with additional requirements that would be needed to ensure successful implementation of the ECEL and EPA STEL.

c. Monitoring Requirements

i. In General

Monitoring requirements are a key component of implementing EPA's proposed requirements for a WCPP. Initial monitoring for methylene chloride is critical for establishing a baseline of exposure for potentially exposed persons; similarly, periodic exposure monitoring assures continued

compliance over time so that potentially exposed persons are not exposed to levels that would result in an unreasonable risk of injury to health. Exposure monitoring could be suspended if certain conditions described in this Unit are met. Also, in some cases, a change in workplace conditions with the potential to impact exposure levels would warrant additional monitoring, which is also described.

EPA proposes to require that owners or operators determine each potentially exposed person's exposure by taking a personal breathing zone air sample of each potentially exposed person's exposure, or by taking personal breathing zone air samples that are representative of each potentially exposed person's exposure. Owners or operators would be permitted to consider personal breathing zone air samples to be representative of each potentially exposed person's exposure when one or more samples are taken for at least one potentially exposed person in each job classification in a work area during every work shift, and the person sampled is expected to have the highest methylene chloride exposure; or when one or more samples are taken which indicate the highest likely 15-minute exposures during such operations for at least one potentially exposed person in each job classification in the work area during every work shift, and the person sampled is expected to have the highest methylene chloride exposure. Personal breathing zone air samples taken during one work shift may be used to represent potentially exposed person exposures on other work shifts where the owner or operator can document that the tasks performed and conditions in the workplace are similar across shifts. These requirements align with the approach taken for characterization of employee exposure in the 1997 OSHA standard for methylene chloride (see 29 CFR 1910.1052(d)(1)(i) and (ii)). EPA also proposes to require that the owner or operator ensure, for initial and periodic monitoring, that their methods and metering results used in performance of the exposure monitoring are accurate to a confidence level of 95% and are within (plus or minus) 25% of airborne concentrations of methylene chloride above the 8-hour TWA ECEL or the 15-minute TWA EPA STEL, or within (plus or minus) 35% for airborne concentrations of methylene chloride at or above the ECEL action level but at or below the 8-hour TWA ECEL. These requirements, including the 35%, would align with the approach taken in the 1997 OSHA standard for methylene chloride (see 29 CFR 1910.1052(d)(1)(iii)). EPA acknowledges that new monitoring methods or technologies may have been developed since 1997 that would allow for greater accuracy, and thus a smaller range for monitoring results, and EPA requests comment on the exposure monitoring accuracy requirements outlined in this Unit. Therefore, while the EPA requirements utilize the values of the ECEL, ECEL action level, and EPA STEL, the approach should be familiar to the regulated community. To ensure compliance for monitoring activities, EPA proposes recordkeeping requirements outlined in this Unit. EPA acknowledges that the 25% buffer for the 8-hour and 15-minute TWA potentially could allow some exposures above the exposure limits proposed here. EPA requests comment on these buffers' effects and any alternatives to account for measurement variance or uncertainty.

ii. Initial Exposure Monitoring

Under the proposed regulation, each owner or operator of a facility engaged in one or more of the conditions of use listed earlier in Unit IV.A.1.a. would be required to perform initial exposure monitoring 180 days after publication of the final rule to determine the extent of exposure of potentially exposed persons to methylene chloride. Initial monitoring would notify owners and operators of the magnitude of possible exposures to potentially exposed persons with respect to their work conditions and environments. Based on the magnitude of possible exposures in the initial exposure monitoring, the owner or operator may need to increase or decrease the frequency of future periodic monitoring, adopt new exposure controls (such as engineering controls, administrative controls, and/or a respiratory protection program), or to continue or discontinue certain compliance activities such as periodic monitoring. In addition, the monitoring sample would be required to be taken when and where the operating conditions are best representative of each potentially exposed person's full-shift exposures. If the owner or operator chooses to use a sample that is representative of potentially exposed persons' full shift exposures (rather than monitor every individual), such sampling should include persons closest to the source of methylene chloride, so that the monitoring results would be representative of the most highly exposed persons in the workplace. Additionally, analogous to the OSHA standard, EPA expects that owners and operators would conduct initial exposure monitoring representative of all tasks a potentially exposed person would be expected to do. EPA understands that certain tasks may occur less frequently or may reflect upset conditions (for example, due to malfunction). EPA is soliciting comments regarding how owners and operators could conduct initial exposure monitoring to ensure that it is representative of all tasks likely to be conducted by potentially exposed persons.

EPA also recognizes that the values for the ECEL action level and EPA STEL may mean that some owners or operators currently in compliance with the OSHA standard would have to re-establish a monitoring baseline. Aligning with the existing OSHA standard (29 CFR 1910.1052(d)(2)) to the extent possible, EPA is proposing that an owner or operator may temporarily forgo initial exposure monitoring if:

(i) An owner or operator could provide EPA with objective data generated during the last 5 years demonstrating that methylene chloride cannot be released in the workplace in airborne concentrations at or above the ECEL action level (1-ppm 8-hour TWA) and above the EPA STEL (16 ppm 15-minute TWA) and that the data represent the highest methylene chloride exposures likely to occur under reasonably foreseeable conditions of manufacturing, processing, use, or disposal, as applicable, including handling of methylene chloride during those activities. The oldest objective data used to demonstrate that exposures are below the ECEL action level and EPA STEL will indicate the beginning of the 5-year cycles of recurring initial exposure monitoring as described in this Unit;

(ii) Where potentially exposed persons are exposed to methylene chloride for fewer than 30 days per year and the owner or operator has measurements by direct-metering devices that give immediate results and provide sufficient information regarding potentially exposed persons' exposures to determine and implement the control measures that are necessary to reduce exposures to below the ECEL action level and EPA STEL.

As described in more detail later in this Unit, unlike the OSHA standards in 29 CFR 1910.1052(d)(2) to (d)(3), the owner or operator must conduct an initial monitoring at least once every 5 years since its last monitoring. This new initial monitoring would have to be representative of all the potentially exposed persons in the workplace and the tasks that they are expected to do. Additionally, if a facility were to

commence one or more conditions of use listed in Unit IV.A.1.a. after the effective date of the rule, the owner or operator would be required to perform initial exposure monitoring within 180 days and would be required to, at a minimum, conduct initial exposure monitoring every 5 years thereafter if methylene chloride is present in the facility. EPA is soliciting comments regarding the proposed requirement for recurring 5-year initial exposure monitoring.

iii. Periodic Exposure Monitoring

EPA's proposal is aligned with elements of the existing OSHA standard (29 CFR 1910.1052(d)(3)) to the extent possible. Based on the results from the initial exposure monitoring, EPA is proposing the following periodic monitoring for owners or operators. These proposed requirements are also outlined in Table 1.

- If all samples taken during the initial exposure monitoring reveal: a concentration below the ECEL action level (1 ppm 8-hour TWA) and at or below the EPA STEL (16 ppm 15-minute TWA), the ECEL and EPA STEL periodic monitoring would not be required, except when additional exposure monitoring (Unit IV.A.1.c.v.) measurements require it.
- If the initial exposure monitoring concentration is: below the ECEL action level (1 ppm 8-hour TWA) and above the EPA STEL (16 ppm 15-minute TWA), the ECEL periodic monitoring would not be required except when additional monitoring (Unit IV.A.1.c.v.) measurements require it, but EPA STEL periodic monitoring would be required every 3 months.
- If the initial exposure monitoring concentration is: at or above the ECEL action level (1 ppm 8-hour TWA) and at or below the ECEL (2 ppm 8-hour TWA), and at or below the EPA STEL (16 ppm 15-minute TWA), the ECEL would be required to be monitored every 6 months.
- If the initial exposure monitoring concentration is: at or above the ECEL action level (1 ppm 8-hour TWA) and at or below the ECEL (2 ppm 8-hour TWA), and above the EPA STEL, the ECEL would be required to be monitored every 6 months and EPA STEL would be required to be monitored every 3 months.
- If the initial exposure monitoring concentration is: above the ECEL (2 ppm 8-hour TWA) and below, at, or above the EPA STEL (16 ppm 15-minute TWA), the ECEL and EPA STEL would be required to be monitored every 3 months.
- The owner or operator would be permitted to alter the periodic exposure monitoring frequency from every 3 months to every 6 months if two consecutive monitoring events taken at least 7 days apart indicate that the potential exposure has decreased to or below the ECEL, but at or above the ECEL action level.
- The owner or operator would be permitted to transition from the periodic exposure monitoring frequency of every 6 months to an initial exposure monitoring frequency of once every 5 years if two consecutive monitoring events taken at least 7 days apart indicate that the potential exposure has decreased below the ECEL action level and at or below the EPA STEL. The second consecutive monitoring event would delineate the new date from which the next 5-year initial exposure monitoring must occur.

In addition to the periodic monitoring standards described earlier, EPA is proposing two additional provisions:

- Based on its monitoring results, if the owner or operator would be required to monitor either the ECEL or EPA STEL in a 3-month interval but does not engage in any of the conditions of use listed in Unit IV.A.1.a. for which the WCPP is proposed over the entirety of those 3 months, the owner or operator would be permitted to forgo the upcoming periodic monitoring event. However, documentation of cessation of use of methylene chloride would be required, and initial monitoring would be required when the owner or operator resumes or starts any of the conditions of use listed in Unit IV.A.1.a. for which the WCPP is proposed.
- Based on its monitoring results, if the owner or operator would be required to monitor the ECEL in a 6-month interval but does not engage in any of the conditions of use listed in Unit IV.A.1.a. for which the WCPP is proposed over the entirety of those 6 months, the owner or operator would be permitted to forgo the upcoming periodic monitoring event. However, documentation of cessation of use of methylene chloride would be required, and initial monitoring would be required when the owner or operator resumes or starts any of the conditions of use listed in Unit IV.A.1.a. for which the WCPP is proposed.
- Initial monitoring would be required to occur at least once every 5 years if methylene chloride is present. EPA requests comment on the timeframes for periodic monitoring outlined in this Unit, particularly whether more frequent monitoring may be possible or recommended.

TABLE 1—PERIODIC MONITORING REQUIREMENTS BASED ON INITIAL EXPOSURE MONITORING RESULTS

Air concentration condition	Periodic monitoring requirement
If the initial exposure monitoring concentration is below the ECEL action level and at or below the EPA STEL.	ECEL and EPA STEL periodic monitoring not required.
If the initial exposure monitoring concentration is below the ECEL action level and above the EPA STEL.	ECEL monitoring not required and EPA STEL monitoring required every 3 months.
If the initial exposure monitoring concentration is at or above the ECEL action level and at or below the ECEL; and at or below the EPA STEL.	ECEL monitoring every 6 months.
If the initial exposure monitoring concentration is at or above the ECEL action level and at or below the ECEL; and above the EPA STEL.	ECEL monitoring every 6 months and EPA STEL monitoring every 3 months.
If the initial exposure monitoring concentration is above the ECEL and below, at, or above the EPA STEL.	ECEL monitoring every 3 months and EPA STEL monitoring every 3 months.
Two consecutive monitoring events have taken place 7 days apart that indicate that potential exposure has decreased from above the ECEL to at or below the ECEL, but at or above the ECEL action level.	Reduce periodic monitoring frequency from every 3 months to every 6 months.
Two consecutive monitoring events have taken place 7 days apart that indicate that potential exposure has decreased to below the ECEL action level and at or below the EPA STEL.	Transition from periodic monitoring frequency of every 6 months to initial monitoring once every 5 years. The second consecutive monitoring event will delineate the new date from which the next 5-year initial exposure monitoring must occur.

TABLE 1—PERIODIC MONITORING REQUIREMENTS BASED ON INITIAL EXPOSURE MONITORING RESULTS—Continued

Air concentration condition	Periodic monitoring requirement
If the owner or operator engages in any of the conditions of use for which WCPP is proposed and is required to monitor either the ECEL or EPA STEL in a 3-month interval, but does not engage in any of those conditions of use for the entirety of the 3-month interval.	The owner or operator may forgo the upcoming periodic monitoring event. However, documentation of cessation of manufacture, processing, use, or disposal of methylene chloride must be maintained, and initial monitoring would be required when the owner or operator resumes or starts any of the conditions of use for which the WCPP is proposed.
Owner or operator engages in any of the conditions of use for which WCPP is proposed and is required to monitor the ECEL in a 6-month interval, but does not engage in any of those conditions of use for the entirety of the 6-month interval.	The owner or operator may forgo the upcoming periodic monitoring event. However, documentation of cessation of manufacture, processing, use, or disposal of methylene chloride must be maintained, and initial monitoring would be required when the owner or operator resumes or starts any of the conditions of use for which the WCPP is proposed.

Note: Additional scenarios in which monitoring may be required are discussed in Unit IV.A.1.c.v.

iv. Minimum Frequency of Exposure Monitoring

EPA is proposing to require that an initial monitoring event be conducted at a minimum frequency of every 5 years by owners or operators using methylene chloride for any condition of use subject to the WCPP. This in contrast to OSHA's standards in 1910.1052(d)(2) to (d)(3) whereby employers would otherwise be permitted to discontinue monitoring indefinitely based on monitoring results. Moreover, EPA is proposing that monitoring requirements could only be made less frequent based on the results of the initial exposure monitoring or the periodic exposure monitoring outlined under Unit IV.A.1.c.iii.

OSHA's standards in 1910.1052(d)(2)(i) through (iii) allow for a discontinuation of initial monitoring which subsequently precludes the need for periodic monitoring unless additional monitoring is required under certain conditions. Given the steep dose response for methylene chloride that may lead up to and include fatalities as a result of inhalation exposure, EPA is instead proposing to require that a minimum initial monitoring frequency be established at 5-year intervals. EPA is requesting public comments on the proposed conditions for periodic monitoring for methylene chloride as part of implementation of the WCPP that differ from OSHA's existing monitoring requirements under 29 CFR 1910.1052.

v. Additional Exposure Monitoring

In addition to initial and periodic monitoring, there are some additional circumstances that would require a new initial exposure monitoring. EPA is proposing that the owner or operator complying with the WCPP would carry out this additional exposure monitoring (analogous to those requirements outlined in 29 CFR 1910.1052(d)(4)) after any change that may reasonably be expected to introduce additional sources of exposure, or result in a change in exposure levels, to methylene chloride. Examples include changes in the production, production volume, use rate, process, control equipment, or work practices that may reasonably be anticipated to cause additional sources of exposure or result in increased exposure levels to methylene chloride; and start-up, shutdown, or malfunction of the facility or facility equipment that may reasonably be anticipated to cause additional sources of exposure or result in increased exposure levels to methylene chloride. This additional exposure monitoring event may result in increased frequency of periodic monitoring. The required additional exposure monitoring should not delay implementation of any necessary cleanup or other remedial action to reduce the exposures to potentially exposed persons.

d. Exposure Control Plan (ECP)

EPA recommends and encourages the use of pollution prevention as a means of controlling exposures whenever practicable. Pollution prevention, also known as source reduction, is any practice that reduces, eliminates, or prevents pollution at its source (*e.g.,* elimination and substitution, as described in the hierarchy of controls). While the WCPP is intended to be non-prescriptive to allow more flexibility to regulated entities than requiring specific prescriptive controls, EPA is proposing to require the use of elimination and substitution, followed by the use of engineering controls, administrative controls, and work practices prior to requiring the use of respirators as a means of controlling inhalation exposures below EPA's ECEL or STEL, in accordance with the hierarchy of controls. If an owner or operator chooses to replace methylene chloride with a substitute, EPA recommends that they carefully review the available hazard and exposure information on the potential substitutes to avoid a substitute chemical that might later be found to present unreasonable risks or be subject to regulation (sometimes referred to as a ''regrettable substitution''). EPA expects that, for conditions of use for which EPA is proposing a WCPP, compliance at most workplaces would be part of an established industrial hygiene program that aligns with the hierarchy of controls. Workplaces that cannot, in accordance with that hierarchy, eliminate the source of methylene chloride emissions or replace methylene chloride with a substitute would be required to use feasible engineering controls, and subsequently feasible administrative controls, to implement process changes to reduce exposures following the hierarchy of controls (Ref. 9). EPA also expects those owners or operators already implementing the OSHA PEL of 25 ppm as an 8-hour TWA would revise their monitoring program to follow EPA's ECEL requirements with EPA's lower ECEL of 2 ppm as an 8-hour TWA and EPA's STEL of 16 ppm as a 15-minute TWA.

Analogous to the OSHA Standard (29 CFR 1910.1052(e)), EPA is proposing to require that the owner or operator demarcate any area where airborne concentrations of methylene chloride are reasonably expected to exceed the ECEL or the EPA STEL. This regulated area would be demarcated using administrative controls, *e.g.,* highly visible signifiers, in multiple languages as appropriate, placed in conspicuous areas, and documented through training and recordkeeping. The owner or operator would be required to restrict access to the regulated area from any potentially exposed person that lacks proper training or is otherwise unauthorized to enter.

EPA proposes to require regulated entities use the hierarchy of controls to the extent feasible and supplement

further protections using PPE, including respirators for potentially exposed persons at risk of inhalation exposure above the ECEL or EPA STEL. If efforts of elimination, substitution, engineering controls, and administrative controls are not sufficient to reduce exposures to or below the ECEL or EPA STEL for all potentially exposed persons in the workplace, EPA proposes to require the owner or operator to use feasible controls (including elimination, substitution, engineering controls, or administrative controls and work practices) to reduce methylene chloride concentrations in the workplace to the lowest levels achievable and, analogous to the requirements under 29 CFR 1910.1052(e)(3), supplement these controls with respiratory protection and PPE as needed to achieve the ECEL before potentially exposed persons enter a regulated area. In such cases, EPA would require that the owner or operator provide potentially exposed persons reasonably likely to be exposed to methylene chloride by inhalation to concentrations above the ECEL or EPA STEL with respirators affording sufficient protection against inhalation risk and appropriate training on the proper use of such respirators, to ensure that their exposures do not exceed the ECEL or EPA STEL, as described in this Unit.

EPA also proposes to require that the owner or operator document their efforts to use elimination, substitution, engineering controls, and administrative controls to reduce exposure to or below the ECEL or EPA STEL in an exposure control plan. In addition, analogous to the requirements under 29 CFR 1910.1052(f)(2), an owner or operator would be prohibited from rotating work schedules to comply with the ECEL 8-hour TWA.

EPA proposes to require that the owner or operator include and document in the exposure control plan or through any existing documentation of the facility's safety and health program developed as part of meeting OSHA requirements or other safety and health standards the following:

(i) Identification of available exposure controls and rationale for using or not using available exposure controls in the following sequence (*i.e.,* elimination and substitution, then engineering controls and administrative controls) to reduce exposures in the workplace to either at or below the ECEL or to the lowest level achievable, and the exposure controls selected based on feasibility, effectiveness, and other relevant considerations;

(ii) If exposure controls were not selected, document the efforts identifying why these are not feasible, not effective, or otherwise not implemented;

(iii) Actions taken to implement exposure controls selected, including proper installation, maintenance, training, or other steps taken;

(iv) Regular inspections, evaluations, and updating of the exposure controls to ensure effectiveness and confirmation that all persons are using them accordingly;

(v) Occurrence and duration of any start-up, shutdown, or malfunction of exposure controls or of facility equipment that causes air concentrations above the ECEL or EPA STEL and subsequent corrective actions taken during start-up, shutdown, or malfunctions to mitigate exposures to methylene chloride; and

(vi) Objective data generated during the previous 5 years, when used to forgo the initial exposure monitoring, must include: the use of methylene chloride being evaluated, the source of objective data, measurement methods, measurement results, and measurement analysis of the use of methylene chloride, and any other relevant data to the operations, processes, or person's exposure.

e. Personal Protective Equipment (PPE)

Where elimination, substitution, engineering, and administrative controls are not feasible or sufficiently protective to reduce the air concentration to or below the ECEL, or if inhalation exposure above the ECEL is still reasonably likely, EPA proposes to set minimum respiratory PPE requirements based on an owner or operator's measured air concentration for one or more potentially exposed persons and the level of PPE needed to reduce exposure to or below the ECEL. In those circumstances, EPA is proposing to require that the owner or operator also comply with OSHA's General Requirements for PPE standard at 29 CFR 1910.132 for application of a PPE program. EPA is also proposing that the owner or operator comply with 29 CFR 1910.134 for proper use, maintenance, fit-testing, and training of respirators. EPA recognizes that there may be limitations in using certain types of PPE or respirator protection for various work scenarios such as cost, time burdens, ergonomic and dexterity considerations, climate, size, and capability.

i. Required Dermal Protection

EPA is proposing to require provision and use of chemically resistant gloves in combination with specific activity training (*e.g.,* glove selection (type, material), expected duration of glove effectiveness, actions to take when glove integrity is compromised, storage requirements, procedure for glove removal and disposal, chemical hazards) for tasks where dermal exposure can be expected to occur. Additionally, EPA is proposing to require owners and operators to continue to comply with relevant sections of the methylene chloride OSHA standard to minimize and protect potentially exposed persons from dermal exposure, including 29 CFR 1910.1052(h) and (i). Additional information related to choosing appropriate gloves can be found in the NIOSH Hazard Alert (Ref. 35) and in appendix F of the 2020 Risk Evaluation for Methylene Chloride (Ref. 1). EPA requests comment on the degree to which additional guidance related to use of gloves might be necessary. Additionally, EPA requests comment on whether EPA should specifically incorporate dermal protection into the exposure control plan and require consideration of the hierarchy of controls for dermal exposures.

ii. Required Respiratory Protection

EPA is proposing the following requirements for respiratory protection, based on the exposure monitoring concentrations measured as an 8-hour TWA that exceeds the ECEL (2 ppm) or 15-minute TWA that exceeds the EPA STEL (16ppm); see also the following table (Table 2). These requirements would apply after all other feasible controls are exhausted or proven ineffective to control inhalation exposure (including elimination, substitution, engineering controls, and administrative controls in accordance with the hierarchy of controls). EPA is proposing to establish minimum respiratory protection requirements, such that any respirator affording the same or a higher degree of protection than the following proposed requirements may be used. While this Unit includes respirator selection requirements for respirators of Assigned Protection Factor (APF) of 1,000 or greater, EPA does not anticipate that respirators beyond APF 25 will be widely or regularly used to address unreasonable risk, particularly when other controls are put in place. EPA anticipates that owners or operators would attempt to minimize respirator costs by reducing inhalation exposures levels so that, if a respirator is needed, a supplied-air respirator could be used in lieu of a self-contained breathing apparatus. Under this proposed regulatory option, as with existing OSHA regulations, air-purifying respirators (in contrast to air-supplied

respirators) would not be permitted as a means of mitigating methylene chloride exposure, as they do not provide adequate respiratory protection against this chemical (Ref. 36). Additionally, EPA acknowledges in Unit V.A.1. that there may be respirator limitations dependent upon the nature of the activity in which methylene chloride is used (*e.g.,* a decreased range of motion or access to a small space could hinder PPE use).

- If the measured exposure concentration is at or below the ECEL (2 ppm 8-hour TWA) and EPA STEL (16 ppm 15-minute TWA): no respiratory protection would be required.
- If the measured exposure concentration is above 2 ppm and less than or equal to 50 ppm (25 times the ECEL): the respirator protection required would be any NIOSH-certified supplied-air respirator (SAR) or airline respirator in a continuous-flow mode equipped with a loose-fitting facepiece or helmet/hood (APF 25).
- If the measured exposure concentration is above 50 ppm and less than or equal to 100 ppm (50 times the ECEL): the respirator protection required would be: (i) Any NIOSH-certified Supplied-Air Respirator (SAR) or airline respirator in a demand mode equipped with a full facepiece (APF 50); or (ii) Any NIOSH-certified Self-Contained Breathing Apparatus (SCBA) in demand-mode equipped with a full facepiece or helmet/hood (APF 50).
- If the measured exposure concentration is unknown or at any value above 100 ppm and up to 2,000 ppm (1,000 times the ECEL): the respirator protection required would be: (i) Any NIOSH-certified Supplied-Air Respirator (SAR) or Airline Respirator in a continuous-flow mode equipped with a full facepiece or certified helmet/hood (APF 1,000); or (ii) Any NIOSH-certified Supplied-Air Respirator (SAR) or Airline Respirator in pressure-demand or other positive-pressure mode equipped with a full facepiece (APF 1,000); or (iii) Any NIOSH-certified Self-Contained Breathing Apparatus (SCBA) in a pressure-demand or other positive-pressure mode equipped with a full facepiece or certified helmet/hood (APF 1,000+).

TABLE 2—RESPIRATORY PROTECTION CONDITIONS AND REQUIREMENTS

Concentration condition	Minimum required respirator protection
At or below the ECEL and EPA STEL	No respirator required.
Above ECEL (2 ppm) and less than or equal to 50 ppm (25 times the ECEL).	Any NIOSH-certified supplied-air respirator (SAR) or airline respirator in a continuous-flow mode equipped with a loose-fitting facepiece or helmet/hood (APF 25).
Above 50 ppm and less than or equal to 100 ppm (50 times the ECEL).	Either (i) any NIOSH-certified Supplied-Air Respirator (SAR) or airline respirator in a demand mode equipped with a full facepiece (APF 50); or (ii) any NIOSH-certified Self-Contained Breathing Apparatus (SCBA) in demand-mode equipped with a full facepiece or helmet/hood (APF 50).
Unknown concentration or at any value above 100 ppm and up to 2,000 ppm (1,000 times the ECEL).	One of (i) any NIOSH-certified Supplied-Air Respirator (SAR) or Airline Respirator in a continuous-flow mode equipped with a full facepiece or certified helmet/hood (APF 1,000); or (ii) any NIOSH-certified Supplied-Air Respirator (SAR) or Airline Respirator in pressure-demand or other positive-pressure mode equipped with a full facepiece (APF 1,000); or (iii) any NIOSH-certified Self-Contained Breathing Apparatus (SCBA) in a pressure-demand or other positive-pressure mode equipped with a full facepiece or certified helmet/hood (APF 10,000).

f. Additional Proposed Requirements

i. Workplace Participation

EPA encourages owners and operators to consult with potentially exposed persons on the development and implementation of exposure control plans and PPE/respirator programs. EPA is proposing to require owners and operators to provide potentially exposed persons regular access to the exposure control plans, exposure monitoring records, PPE program implementation, and respirator program implementation (such as fit-testing and other requirements) described in 29 CFR 1910.134(l). To ensure compliance in workplace participation, EPA is proposing that the owner or operator document the notice to and ability of any potentially exposed person that may reasonably be affected by methylene chloride inhalation exposure to readily access the exposure control plans, facility exposure monitoring records, PPE program implementation, or any other information relevant to methylene chloride inhalation exposure in the workplace.

ii. Notification of Monitoring Results

EPA proposes that when a potentially exposed person's exposure to methylene chloride exceeds the ECEL action level within a regulated area, the owner or operator would be required to inform each potentially exposed person of the quantity, location, manner of use, release, and storage of methylene chloride and the specific operations in the workplace that could result in exposure to methylene chloride, particularly noting where exposures may be above the ECEL or EPA STEL, analogous to those requirements outlined in 29 CFR 1910.1052(l). EPA proposes that the owner or operator must, within 15 working days after receipt of the results of any exposure monitoring, notify each potentially exposed person whose exposure is represented by that monitoring in writing, either individually to each potentially exposed person or by posting the information in an appropriate and accessible location, such as public spaces or common areas, for potentially exposed persons outside of the regulated area (as described in Unit IV.A.1.d.). The notice would be required to identify the ECEL, ECEL action level, and EPA STEL and what they mean in plain language, the exposure monitoring results, and any corresponding respiratory protection required. The notice would also be required to include a description of the actions taken by the owner or operator to reduce inhalation exposures to or below the ECEL, or refer to a document available to the potentially exposed persons which states the actions to be taken to reduce exposures, and to be posted in multiple languages if necessary (*e.g.,* notice must be in a language that the potentially exposed person understands, including a non-English language version representing the language of the largest group of workers who cannot readily comprehend or read English). While 15 working days is consistent with requirements under the OSHA methylene chloride standard, EPA notes that it may be preferable to require more expedient notification of monitoring results, and that precedent exists in some circumstances for faster

notification timeframes (*e.g.,* OSHA requirements for the construction sector require a 5-day timeframe). EPA therefore requests comment on the 15-day timeframe for notification of potentially exposed persons of monitoring results and the possibility for a shorter timeframe, such as 5 days.

iii. Recordkeeping

For each monitoring event of methylene chloride, OSHA requires under 29 CFR 1910.1052(m) that the employer record information including, but not limited to, dates; operations involving exposure; sampling and analytical methods; the number of samples; durations, and results of each sample taken; the type of respirator and PPE worn (if any); the exposed employees' names, work shifts, and job classifications; and exposure of all the employees represented by monitoring, indicating which potentially exposed persons were actually monitored. EPA is requiring that this information is kept by the owner or operator of record for potentially exposed persons. In addition to the requirements outlined in 29 CFR 1910.1052(m)(2), EPA is proposing to require documentation of the following whenever monitoring for the WCPP is required under TSCA section 6(a):

(i) All measurements that may be necessary to determine the conditions (*e.g.,* work site temperatures, humidity, ventilation rates, monitoring equipment type and calibration dates) that may affect the monitoring results;

(ii) All other potentially exposed persons whose exposure monitoring was not measured but whose exposure is intended to be represented by the area or representative sampling monitoring;

(iii) Use of established analytical methods such as those outlined in appendix A of the ECEL memo (Ref. 11) with a limit of detection below the ECEL action level and accuracy of monitoring within 25% for the ECEL and 35% for the EPA STEL, as discussed in Unit IV.A.1.c.ii., so that the owner or operator may identify when the implementation of additional exposure controls is necessary, determine the monitoring frequency according to the requirements described in this Unit, and properly identify and provide persons exposed to methylene chloride with the required respiratory equipment and PPE proposed in this Unit;

(iv) Compliance with the Good Laboratory Practice Standards at 40 CFR part 792;

(v) Information regarding air monitoring equipment, including: type, maintenance, calibrations, performance tests, limits of detection, and any malfunctions.

For owners and operators to demonstrate compliance with the WCPP provisions, EPA is proposing that owners and operators must retain compliance records for 5 years, unless a longer retention time is required under 29 CFR 1910.1020, or other applicable regulations. EPA is requiring the owner or operator to retain records of:

- Exposure control plan;
- Regulated areas and authorized personnel;
- Facility exposure monitoring records;
- Notifications of exposure monitoring results;
- PPE and respiratory protection used and program implementation; and
- Information and training required under 29 CFR 1910.1052 section (l) and appendix A, provided by the owner or operator to each potentially exposed person prior to or at the time of initial assignment to a job involving potential exposure to methylene chloride.

All records required to be maintained by this Unit could be kept in the most administratively convenient form (electronic or paper). The owner or operator would be required to document training or re-training (analogous to 29 CFR 1910.1052(l)(5)) of any potentially exposed person as necessary to ensure that, in the event of monitoring results that indicate exposure or possible exposures above the ECEL action level or the EPA STEL, the potentially exposed person has demonstrated understanding of how to safely use and handle methylene chloride and how to appropriately use required PPE. EPA expects that the content of such training will not exceed what is already required by 29 CFR 1910.1052 section (l) and appendix A. In addition, the owner or operator would be required to update the training and requisite documentation when there is reasonable expectation that exposure may exceed the ECEL action level due to change in tasks or procedures.

g. Compliance Timeframes

With regard to the compliance timeframe for those occupational conditions of use which are subject to the WCPP, EPA is proposing to require that owners and operators establish initial exposure monitoring according to the process outlined in this Unit by [DATE 180 DAYS AFTER DATE OF PUBLICATION OF FINAL RULE IN THE **FEDERAL REGISTER**]. EPA is proposing to require each owner or operator ensure that the airborne concentration of methylene chloride does not exceed the ECEL or EPA STEL for all potentially exposed persons by [DATE 270 DAYS AFTER DATE OF PUBLICATION OF FINAL RULE IN THE **FEDERAL REGISTER**], and if applicable, each owner or operator must provide respiratory protection sufficient to reduce inhalation exposures to below the ECEL or EPA STEL to all potentially exposed persons in the regulated area within 3 months after receipt of the results of any exposure monitoring or within 9 months after the date of publication of the final rule in the **Federal Register** (for any new facilities, or a facility commencing one or more conditions of use listed in Unit IV.A.1.a. after the effective date of the final rule, the timeframe for the requirement for initial exposure monitoring is described earlier in Unit IV.A.1.c.ii.; following that, the requirements and timeframes in this Unit would apply). EPA is also proposing to require owners and operators demarcate a regulated area within 3 months after receipt of any exposure monitoring that indicates exposures exceeding the ECEL or EPA STEL. Owners and operators should proceed accordingly to implement an exposure control plan by [DATE 360 DAYS AFTER DATE OF PUBLICATION OF FINAL RULE IN THE **FEDERAL REGISTER**]. EPA requests comment relative to the ability of owners or operators to conduct initial monitoring by [DATE 180 DAYS AFTER DATE OF PUBLICATION OF FINAL RULE IN THE **FEDERAL REGISTER**], and anticipated timelines for any procedural adjustments needed to comply with the requirements outlined in this Unit. EPA may finalize shorter or longer compliance timeframes based on public comment.

2. Prohibition of Certain Industrial and Commercial Uses

Except for those uses which will continue under the WCPP, EPA is proposing to prohibit industrial and commercial use of methylene chloride, including use of methylene chloride in: solvent for batch vapor degreasing; solvent for in-line vapor degreasing; solvent for cold cleaning; solvent for aerosol spray degreaser/cleaner; adhesives, sealants, and caulks; paints and coatings; paint and coating removers (including furniture refinishers); adhesive and caulk removers; metal aerosol degreasers; metal non-aerosol degreasers; finishing products for fabric, textiles and leather; automotive care products (functional fluids for air conditioners); automotive care products (interior car care); automotive care products (degreasers); apparel and footwear care products; spot removers for apparel and textiles; liquid lubricants and greases; spray lubricants and greases; aerosol

degreasers and cleaners; non-aerosol degreasers and cleaners; cold pipe insulations; solvent that becomes part of a formulation or mixture; processing aid; propellant and blowing agent; electrical equipment, appliance, and component manufacturing; plastic and rubber products manufacturing; cellulose triacetate film production; anti-spatter welding aerosol; oil and gas drilling, extraction, and support activities; toys, playground and sporting equipment; carbon remover, wood floor cleaner, and brush cleaner; and lithographic printing plate cleaner. This does not include manufacturing and processing of methylene chloride for commercial use or industrial and commercial use of methylene chloride as a laboratory chemical, for which EPA is proposing to require compliance with a WCPP for the reasons described in Unit III.B.3. This rationale is discussed further in Unit V.A.1.

As Discussed in Unit III.B.1.f., the restrictions in this proposed rule do not apply to any substance that is excluded from the definition of ''chemical substance'' under TSCA section 3(2)(B)(ii) through (vi). However, EPA requests comment on the impacts, if any, the proposed prohibition described in this Unit, or other aspects of this proposal, may have on the production and availability of any food, food additive, drug, cosmetic, device, or other substance excluded from the definition of ''chemical substance'' under TSCA section 3(2)(B)(ii) through (vi).

As discussed in Unit III.B.3., based on consideration of alternatives, the broad range of work environments and activities, and the severity of the hazards of methylene chloride, EPA determined that prohibition is the best way to address the unreasonable risk from methylene chloride driven by the conditions of use identified in this Unit. EPA requests comment regarding the number of entities that could potentially close as well as associated costs with a prohibition of methylene chloride for certain industrial and commercial conditions of use identified in this Unit. EPA would also like comment on whether it should consider a *de minimis* level of methylene chloride in formulations for certain continuing industrial and commercial uses to account for impurities (*e.g.,* 0.1% or 0.5%) when finalizing the prohibitions described in this Unit, and, if so, what level should be considered *de minimis.*

EPA is proposing that the prohibition for uses described in this section would become effective following prohibitions relevant to these uses in stages of the supply chain before the industrial and commercial use (*e.g.,* manufacturing and processing). This proposal includes restrictions in a staggered schedule for each stage of the supply chain and would come into effect in 90 days for manufacturers, 180 days for processors, 270 days for distributors to retailers, 360 days for all other distributors and retailers, and 450 days for industrial and commercial uses after the publication date of the final rule. When proposing these compliance dates, EPA considered sustained awareness of risks, including acute fatalities, resulting from methylene chloride exposure as well as precedent established by the OSHA standards (62 FR 1494, January 10, 1997). EPA has no information indicating that the proposed compliance dates are not practicable for the activities that would be prohibited, or that additional time is needed for products affected by the proposed restrictions to clear the channels of trade. However, EPA requests comment on whether additional time is needed, for example, for products affected by proposed restrictions to clear the channels of trade. EPA may finalize shorter or longer compliance timeframes based on public comment.

Additionally, EPA recognizes that there may be instances where an ongoing use of methylene chloride that has implications for national security or critical infrastructure as it relates to other Federal agencies (*e.g.,* DOD, NASA) is identified after the methylene chloride rule is finalized, but the final rule prohibits that use. For instances like that, EPA requests comments on an appropriate, predictable process that could expedite reconsideration for uses that Federal agencies or their contractors become aware of after the final rule is issued using the tools available under TSCA, aligning with the requirements of TSCA section 6(g). One example of an approach could be the establishment by rulemaking of a Federal agency category of use that would require implementation of the WCPP and periodic reporting to EPA on details of the use as well as progress in discontinuing the use or finding a suitable alternative. To utilize the category of use a Federal agency would petition EPA, supported by documentation describing the specific use (including documentation of the specific need, service life of any relevant equipment, and specific identification of any applicable regulatory requirements or certifications, as well as the location and quantity of the chemical being used); the implications of cessation of this use for national security or critical infrastructure (including how the specific use would prevent injuries/fatalities or otherwise provide life-supporting functions); exposure control plan; and, for Federal agency uses where similar adoption by the commercial sector may be likely, concrete steps taken to identify, test, and qualify substitutes for the uses (including details on the substitutes tested and the specific certifications that would require updating; and estimates of the time required to identify, test, and qualify substitutes with supporting documentation). EPA requests comment on whether these are the appropriate types of information for use in evaluating this type of category of use, and whether there are other considerations that should apply. EPA would make a decision on the petition within 30 days and publish the decision in the **Federal Register** shortly after. Additionally, during the year following the petition, EPA would take public comment on the approved petition and no later than 180 days after submitting the petition to EPA, the requesting agency would submit monitoring data indicating compliance with the WCPP at each relevant location as well as documentation of efforts to identify or qualify substitutes. In the absence of that confirmatory data, the utilization of the generic Federal agency category of use would expire within one year of the date of receipt by EPA of the petition. EPA could undertake a TSCA section 6(g) rulemaking for those instances where the Federal agency could not demonstrate compliance with the WCPP. This is just one example of a potential process. EPA requests comments on a process that could expedite reconsideration for uses that Federal agencies or their contractors become aware of after the final rule is issued.

3. Prohibition of Manufacturing, Processing, and Distribution of Methylene Chloride for Consumer Use

In the 2020 Risk Evaluation for Methylene Chloride, EPA evaluated consumer use of methylene chloride: as a solvent in aerosol spray degreasers/cleaners; in adhesives and sealants in single component glues and adhesives and sealants in caulks; in paints and coatings in brush cleaners and in adhesive/caulk removers; in metal products in aerosol and non-aerosol degreasers and cleaners; in automotive care products in functional fluids for air conditioners and in degreasers; in lubricants and greases in liquid and spray lubricants and greasers and in aerosol and non-aerosol degreasers and cleaners; in building and construction

materials in cold pipe insulation; in arts, crafts, and hobby materials in crafting glue and cement/concrete; and in other uses such as anti-spatter welding aerosol and in carbon remover and brush cleaner. All consumer uses evaluated in the 2020 Risk Evaluation for Methylene Chloride drive unreasonable risk of injury to health. As such, for purposes of this risk management rulemaking, ''consumer use'' refers to all known, intended, or reasonably foreseen methylene chloride consumer uses. EPA is proposing to prohibit the manufacturing, processing, and distribution in commerce of methylene chloride for all consumer use. (The proposed prohibitions would not extend to the use of methylene chloride in consumer paint and coating removers since that use was not evaluated in the 2020 Risk Evaluation for Methylene Chloride and manufacturing, processing, and distribution for that use are already prohibited. (84 FR 11420 (March 27, 2019)).

As discussed in Unit III.B.3., based on consideration of the severity of the hazards of methylene chloride in conjunction with the limited options available to adequately address the identified unreasonable risk to consumers and bystanders under TSCA section 6(a), EPA is proposing to address the unreasonable risk from consumer use by prohibiting the manufacturing (including import), processing, and distribution in commerce of methylene chloride for consumer use in order to remove methylene chloride and products containing methylene chloride from the market, thereby effectively eliminating instances of consumer use.

Additionally, EPA is proposing to prohibit retailers from distributing in commerce methylene chloride and all methylene chloride-containing products, in order to prevent products intended for industrial and commercial use under the WCPP outlined in Unit IV.A.1. from being purchased by consumers. A retailer is any person or business entity that distributes or makes available products to consumers, including through e-commerce internet sales or distribution. If a person or business entity distributes or makes available any product to at least one consumer, then it is considered a retailer (40 CFR 751.103). For a distributor not to be considered a retailer, the distributor must distribute or make available products solely to commercial or industrial end-users or businesses. Prohibiting manufacturers (including importers), processors, and distributors from distributing methylene chloride, or any products containing methylene chloride, to retailers would prevent retailers from making these products available to consumers, which would help address that part of the unreasonable risk driven by consumer use of methylene chloride (Ref. 37). EPA promulgated a similar prohibition for retailers in the 2019 final rule addressing unreasonable risk from consumer use of methylene chloride in Paint and Coating Removal (84 FR 11420, March 27, 2019), and has not received negative feedback from retailers regarding sales losses. EPA has continued to receive feedback from stakeholders, including small businesses, on particular strategies they suggest could be used to ensure that distribution only occurs to commercial entities, such as requiring a business number (Ref. 6). To that end, EPA would like comment on whether distributors that are not retailers should be required to use tax IDs or other verification methods prior to selling methylene chloride or products containing methylene chloride to ensure consumers are not purchasing methylene chloride or industrial or commercial products containing methylene chloride.

Additionally, during litigation on the 2019 final rule petitioners argued that EPA's definition of ''retailer'' was so broad as to cover all commercial entities, creating supply chain issues for commercial users seeking to attain and use the chemical for commercial activities (*Lab. Council for Latin Am. Advancement* v. *United States Env't Prot. Agency,* 12 F.4th 234 (2d Cir. 2021)). EPA has not found this to be the case; small businesses that are non-retail distributors exist and even participated as small entity representatives consulted as part of the SBAR process for this rulemaking. Nonetheless, EPA is soliciting comment on whether similar supply chain issues for uses that are permitted under the WCPP are anticipated.

EPA is proposing that the prohibitions of manufacturing, processing, and distribution in commerce of methylene chloride for consumer use described in this section would occur in 90 days for manufacturers, 180 days for processers, 270 days for distributing to retailers, and 360 days for all other distributors and retailers after the publication date of the final rule in the **Federal Register**. EPA considered irreversible health effects and risks, such as acute fatalities, associated with methylene chloride when proposing compliance dates. EPA has no information indicating these compliance dates are not practicable for the activities that would be prohibited, or that additional time is needed for products affected by proposed restrictions to clear the channels of trade. However, EPA requests comment on whether additional time is needed, for example, for products affected by proposed restrictions to clear the channels of trade. EPA may finalize shorter or longer compliance timeframes based on public comment. EPA would also like comment on whether it should consider a *de minimis* level of methylene chloride in formulations for certain continuing industrial and commercial uses to account for impurities (*e.g.,* 0.1% or 0.5%) when finalizing these prohibitions, and, if so, what level should be considered *de minimis.*

4. Other Requirements

a. Recordkeeping

For conditions of use that are not otherwise prohibited under this proposed regulation, EPA is also proposing that manufacturers, processors, and distributors maintain ordinary business records, such as invoices and bills-of-lading, that demonstrate compliance with restrictions and other provisions of this proposed regulation; and that they maintain such records for a period of 5 years from the date the record is generated. EPA notes that this 5-year record retention period is an increase from the 3-year requirements for records related to consumer paint and coating removal finalized in the 2019 final rule. However, the 3-year requirement still applies to records generated under that rule. EPA is proposing that this requirement begin at the effective date of the rule (60 days following publication of the final rule in the **Federal Register**). Recordkeeping requirements would ensure that owners or operators can demonstrate compliance with the proposed regulations if necessary. Note that this requirement would expand those recordkeeping requirements promulgated in 2019 at 40 CFR 751.109 affecting manufacturers, processors, and distributors of methylene chloride.

b. Downstream Notification

For conditions of use that are not otherwise prohibited under this proposed regulation, EPA is proposing that manufacturers (including importers), processors, and distributors, excluding retailers, of methylene chloride and methylene chloride-containing products provide downstream notification of certain prohibitions through Safety Data Sheets

(SDSs) by adding to sections 1(c) and 15 of the SDS the following language:

After [DATE 270 DAYS AFTER DATE OF PUBLICATION OF FINAL RULE IN THE **FEDERAL REGISTER**], this chemical/product cannot be distributed in commerce to retailers. After [DATE 360 DAYS AFTER DATE OF PUBLICATION OF FINAL RULE IN THE **FEDERAL REGISTER**], this chemical/product is and can only be distributed in commerce or processed for the following purposes: (1) Processing as a reactant; (2) Processing for incorporation into a formulation, mixture, or reaction product; (3) Processing for repackaging; (4) Processing for recycling; (5) Industrial or commercial use as a laboratory chemical; (6) Industrial or commercial use as a bonding agent for acrylic and polycarbonate in mission-critical military and space applications, including in the production of specialty batteries for such applications that is performed by the Department of Defense, the Department of Homeland Security, or the National Aeronautics and Space Administration or their contractors at locations controlled by the agency or the agency's contractor; (7) Industrial or commercial use for paint and coating removal from safety-critical, corrosion-sensitive components of aircraft and spacecraft that are owned or operated by the U.S. Department of Defense, the National Aeronautics and Space Administration, the U.S. Department of Homeland Security, and the Federal Aviation Administration that is performed by the agency or agency contractors at locations controlled by the agency or the agency's contractor; (8) Industrial or commercial use for paint and coating removal from safety-critical, corrosion-sensitive components of other aircraft and spacecraft until [10 years after date of publication of the final rule in the **Federal Register**], and (9) Disposal.

The intention of downstream notification is to spread awareness throughout the supply chain of the restrictions on methylene chloride under TSCA as well as provide information to commercial end users about allowable uses of methylene chloride. Note that this requirement would amend and add to the downstream notification requirements promulgated in 2019 at 40 CFR 751.107 for paint and coating removers for consumer use, and additionally redesignate that section as 751.111(a). As they become effective, the new amended requirements would supersede those notification requirements promulgated in 2019.

To provide adequate time to update the SDS and ensure that all products in the supply chain include the revised SDS, EPA is proposing a 150-day period for manufacturers and a 210-day period for processors and distributors to implement the proposed SDS changes (following publication of the final rule).

EPA requests comments on the appropriateness of identified compliance timeframes for recordkeeping and downstream notification requirements described in this Unit.

5. TSCA Section 6(g) Exemptions

Under TSCA section 6(g)(1), EPA may grant an exemption from a requirement of a TSCA section 6(a) rule for a specific condition of use of a chemical substance or mixture. TSCA section 6(g)(1)(B) permits such an exemption if EPA finds that compliance with the requirement, as applied with respect to the specific condition of use, would significantly disrupt the national economy, national security, or critical infrastructure.

TSCA section 6(g)(2) requires EPA to analyze the need for the exemption, and to make public the analysis and a statement describing how the analysis was taken into account when proposing an exemption under TSCA section 6(g). To that end, based on discussions and information provided by industry stakeholders, EPA has analyzed the need for different exemptions and is proposing to grant two of them, with conditions as required under TSCA section 6(g)(4) and described in Units IV.A.5.a.ii. and IV.A.5.b.ii. This Unit presents the results of that analysis.

a. Uses of Methylene Chloride for Paint and Coating Removal Essential for Critical Infrastructure

i. Analysis of the Need for TSCA Section 6(g)(1)(B) Exemption for Commercial Aviation and Aerospace

EPA has preliminarily determined that a prohibition on the commercial use of methylene chloride for paint and coating removal from safety-critical, corrosion-sensitive components of aircraft and aerospace vehicles for commercial aviation and aerospace would significantly disrupt the national economy and critical infrastructure. Aviation has been designated by co-sector agencies DHS and DOT as a key subsector in the Transportation Systems Sector, one of 16 designated critical infrastructure sectors. There are no technically feasible alternatives currently available for methylene chloride used in paint and coating removal for safety-critical, corrosion-sensitive components of aircraft and aerospace vehicles. Thus, commercial aviation and aerospace compliance with the proposed ban on methylene chloride use in commercial paint and coating removal would significantly disrupt critical infrastructure.

As explained by a commenter on the 2017 Notice of Proposed Rulemaking (NPRM), all aircraft have similar safety-critical, corrosion-sensitive components of the type described by DOD (Ref. 38). For example, commercial aircraft often contain components, such as landing gear, that are made from high-strength alloy steels. According to this commenter, the aerospace industry, like DOD, has made significant investments in the evaluation of alternative methods and materials for removing coatings. The commenter states that the industry has had some success, depending upon the substrate, surface treatment, and coating system, but investigation continues into both chemical and non-chemical means. Non-chemical methods, such as plastic beads, were not suitable in all instances due to concerns about damaging the substrate. Many alternative chemical strippers were not effective on all coatings, which caused corrosion concerns in some cases. According to this commenter, benzyl alcohol is a qualified alternative paint remover for some paint formulations but cannot be considered a ''drop-in'' replacement for all applications due to performance concerns.

The concerns expressed by this commenter about corrosion-sensitive components on aircraft and aerospace equipment echo the concerns over methylene chloride alternatives expressed by DOD and discussed at length in the preamble to EPA's 2017 proposal. For example, both the commenter and DOD stated that currently available substitute chemicals cannot completely remove certain coatings (Ref. 38). This results in improperly applied, incompletely adhering replacement coatings, which may result in corrosion of underlying critical parts. For another example, according to the commenter and DOD, substitute chemicals are also incompatible with some underlying metallic, nonmetallic, and composite materials, resulting in material damage to critical components, and the potential for an increased risk of catastrophic failure of safety critical parts. The commenter on the 2017 NPRM also stated that the process for evaluating and then adopting alternatives in aviation applications is a multi-year process. According to the commenter, the materials required to remove coatings on aircraft parts must be developed by a material formulator to meet technical performance requirements and must be ''qualified by the Original Equipment Manufacturer (OEM), and then shown to not cause harm to the aircraft or negatively affect performance to the FAA prior to implementation'' (Ref. 38). The commenter stated that this can take years, with no guarantee of success, so

a longer timeframe for aviation and aerospace to make the transition is appropriate. The commenter suggested that 10 years would be a realistic estimate of the time needed.

More recently, Boeing provided information to EPA indicating that the company has invested considerable resources over many years to qualify and implement alternatives to methylene chloride, including a combination of acid, alkaline, and hydrogen peroxide-activated benzyl alcohol removers and plastic media blast (Ref. 31). Boeing continues to evaluate potential alternatives, such as laser ablation, which the company believes will, if implemented, eliminate hazardous waste, address ergonomic challenges and save significant time over traditional paint and coating removal operations. According to Boeing, the company has identified several paint and coating removal applications with no feasible alternatives to methylene chloride (Ref. 31). These include:

- Large parts or parts with complex geometries that cannot undergo media blasting or strip tank immersion either due to size constraints or entrapment concerns, and where hand abrasion is impractical;
- Situations in which selective coating removal is needed, *e.g.,* the preservation of a conversion coating;
- Effective removal of oven-cured paints and coatings;
- Localized removal of coatings on overhaul or rework parts to reveal part markings and serial numbers;
- Stripping of parts preceding non-destructive testing, where other coating removal methods such as media blasting could hide defects; and
- Removal of polyvinyl formal or polyurethane insulating enamel from copper magnet wire.

While there are alternatives available for many applications, the public comments on the 2017 NPRM, and the information provided by Boeing in 2022 demonstrate there are several aviation and aerospace applications for which there are limited alternatives to methylene chloride for paint and coating removal, due to concerns about damage to the substrate, and these limited alternatives take longer to work. EPA has preliminarily determined that lengthening the time that commercial aircraft and spacecraft are out of service due to necessary safety inspections and repairs will have a considerable adverse impact on air travel and other infrastructure elements such as satellite placement. Therefore, EPA has preliminarily determined that requiring commercial aviation and aerospace sectors to comply at this time with the ban on methylene chloride use in paint and coating removal would cause significant disruption to critical infrastructure. In addition, EPA has preliminarily determined that compliance at this time with the proposed ban on the manufacture, processing, and distribution in commerce of methylene chloride for commercial paint and coating removal for these specific commercial aviation and aerospace uses would also result in a significant disruption to critical infrastructure. EPA's proposed conditions for this exemption are described in this Unit, including proposed requirements to comply with the WCPP.

EPA acknowledges that in many cases commercial aviation facilities may be more sophisticated and industrialized than other commercial paint and coating removal operations. However, at the time of proposal, data available to EPA demonstrate that the risks from paint and coating removal in the aviation sector do not differ significantly from other commercial paint and coating removal (Ref. 1). As shown in the 2020 Risk Evaluation for Methylene Chloride, high-end and central tendency estimates for aircraft paint stripping are three orders of magnitude below the benchmark for acute inhalation risks and four orders of magnitude below the benchmark for chronic non-cancer inhalation risks (Ref. 1). Even if use of APF 50 air supplied respirators were assumed, the risks that remain for both high-end and central tendency would be an order of magnitude below the benchmark for both endpoints (Ref. 1). Therefore, while EPA expects that some of these facilities could successfully follow the requirements of the WCPP, based on qualitative information provided by stakeholders, this expectation is not sufficiently supported by monitoring data in the 2020 Risk Evaluation for Methylene Chloride. As a result, there is significant uncertainty whether the requirements of the WCPP could be implemented successfully in this sector for this particular use on a consistent and reliable basis, in part due to the diversity of facilities in this sector. EPA understands that generally large commercial aviation facilities could have industrial hygiene expertise, sophisticated engineering and administrative controls, and experience with rigorous safety requirements and methods for ensuring continuous strong safety records (Ref. 31). However, EPA is concerned about the ability of smaller aircraft repair shops to implement the WCPP over the long term, particularly for this condition of use. While EPA recognizes that the proposed TSCA section 6(g) exemption for commercial aircraft paint and coating removal could also cover these smaller aircraft repair shops, the exemption is time-limited and ultimately would result in these small shops using alternatives to methylene chloride. While Federal agencies and contractors should be regulated under the WCPP, the Agency is proposing that commercial use of methylene chloride for a similar type of paint and coating removal be regulated with a time-limited, conditional exemption under TSCA section 6(g), due to notable differences in the two sectors. Specifically, exposure information assessed by EPA resulted in key differences in risk estimates for paint and coating removal by civilian aviation and DOD (see discussion in this Unit and Unit V.A.1.). Additionally, as described in Unit V.A.1., Federal and Federal contractor facilities are subject to multiple levels of oversight as a result of the governmental and public nature of their activities, while many civilian aviation facilities are not likely to experience the same level of scrutiny. EPA emphasizes that in the absence of information, it must still ensure that unreasonable risks are addressed. Because EPA has found inadequate information to otherwise determine whether the unreasonable risk would be addressed when using methylene chloride under a WCPP for commercial use of methylene chloride for paint and coating removal from safety-critical, corrosion-sensitive components of aircraft and aerospace vehicles for commercial aviation and aerospace, EPA has determined that the proposed exemption under TSCA section 6(g) allowing for time-limited, conditional use of methylene chloride for this critical use is the appropriate approach.

EPA recognizes that in some situations, certain facilities may do both Federal contractor and commercial aviation work and may use methylene chloride for paint and coating removal from safety-critical, corrosion-sensitive components on military, Federal, or commercial aviation. EPA requests comment on whether such co-located activities in a facility should be subject to the WCPP, rather than the exemption under TSCA section 6(g). Additionally, EPA seeks additional information and requests comment on whether it is possible to distinguish between commercial aviation facilities that would be able to meet the WCPP and those that would not, including what criteria should be used for such distinctions (*e.g.,* size of facility, volume

or type of work performed, record of exposure reduction practices). EPA also requests comment on the extent to which specific commercial aviation and aerospace uses or types of facilities could fully comply with the WCPP to address identified unreasonable risk.

ii. Proposed Exemptions for Uses of Methylene Chloride for Paint and Coating Removal That Are Essential for Critical Infrastructure

For the reasons discussed in this Unit, EPA is proposing to provide a 10-year exemption for commercial aviation and commercial aerospace applications from the proposed prohibition on the use of methylene chloride in commercial paint and coating removal. In defining the scope of the exemption to limit the exemption to commercial aviation and aerospace, EPA looked to the definitions and provisions of the Federal Aviation Regulations in title 14 of the CFR. Air carriers and commercial operators are certificated under 14 CFR part 119. Repair stations are certificated under 14 CFR part 145. To effectively prevent significant disruptions to critical infrastructure including commercial aviation and aerospace, EPA would make this exemption available to three different groups of commercial entities. In each case, the exemption would be available only for the use of methylene chloride to remove paint and coatings from safety-critical, corrosion-sensitive components of aircraft or aerospace vehicles. The first group would consist of those facilities that primarily maintain and repair aircraft used by air carriers and commercial operators. More specifically, maintenance and repair facilities operated by air carriers and commercial operators certificated under 14 CFR part 119 would be eligible for the exemption, as would be repair stations certificated under 14 CFR part 145, if their primary business is performing maintenance, preventive maintenance, rebuilding, or alteration of aircraft operated by air carriers and commercial operators certificated under 14 CFR part 119. The second group would consist of manufacturers of aircraft intended for, or capable of being used by, air carriers and commercial operators certificated under 14 CFR part 119. The third group would consist of any person manufacturing or repairing spacecraft, space vehicles, or payloads or similar hardware that is intended for, or used in, commercial space transportation operations subject to 14 CFR chapter III.

The conditions for the proposed exemption would be: (1) The use of methylene chloride for commercial paint or coating removal by certificated air carriers, commercial operators, or repair stations, or by manufacturers of aircraft or aerospace vehicles or hardware, would be limited to the safety-critical, corrosion-sensitive components on aircraft and aerospace vehicles; (2) The use of methylene chloride for paint or coating removal would be required to be performed on the premises of the certificated air carrier or commercial operator or repair station, or of the manufacturer of aircraft or aerospace vehicles or hardware; and (3) The certificated air carrier, commercial operator, repair station, or manufacturer of aircraft or aerospace vehicles and hardware manufacturer would have to comply with the WCPP discussed in Unit IV.A.1.

EPA wishes to make clear that the exemption for the commercial aerospace and aviation industry would only be available for the purpose of paint and coating removal from components of aircraft and spacecraft that are corrosion-sensitive and safety critical components, such as landing gear, gear boxes, turbine engine parts, and other aircraft and spacecraft and components composed of metallic materials (specifically high-strength steel, aluminum, titanium, and magnesium) and composite materials. In addition, these components would have to be of the type that not only require their paint or coatings to be removed for inspection and maintenance but also would be so negatively affected by the use of paint and coating removal chemicals or methods other than methylene chloride that the safety of the system could be compromised. General paint and coating removal on aircraft and spacecraft would not be authorized under this exemption. One commenter on the 2017 proposal suggested that EPA clarify that only the manufacturer of the component may make this determination. In EPA's view, persons availing themselves of the exemption would need to have a reasonable basis to conclude that the components on which methylene chloride is used are corrosion-sensitive and safety critical components within the meaning of the definition. EPA believes such persons could rely, in part, on information supplied by the manufacturer of the component. A determination of whether a particular component of an aircraft or spacecraft is a safety-critical corrosion-sensitive component would be a fact-specific determination that takes into account the substrate and character of the component, the effects of methylene chloride paint or coating remover on the component, and other relevant factors.

The entities subject to the proposed exemption would nonetheless still be subject to the proposed general recordkeeping requirements discussed in Unit IV.A., the WCPP recordkeeping requirements discussed in Unit IV.A.1.f.iii., and requirements to maintain records that demonstrate compliance with the exemption conditions, including the condition that methylene chloride only be used for paint and coating removal from corrosion-sensitive and safety critical components of an aircraft or spacecraft. Pursuant to TSCA section 6(g)(3), if this proposed exemption is finalized, EPA may by rule later extend, modify, or eliminate the exemption, on the basis of reasonably available information and after adequate public justification, if EPA determines the exemption warrants a change. EPA would initiate this rulemaking process (*e.g.,* proposed rule, final rule) at the request of any regulated entity benefiting from such an exemption, as appropriate. The Agency is open to engagement throughout the duration of any TSCA section 6(g) exemption, and emphasizes that to ensure continuity in the event of an extension or modification request, such a request should come at least 2 years prior to the expiration of an exemption.

EPA requests comments on all aspects of the proposed TSCA section 6(g) exemption from the proposed prohibition on use of methylene chloride in commercial paint and coating removal for paint and coating removal essential for critical infrastructure by certificated commercial air carriers, commercial operators, or repair stations, or by manufacturers of aircraft or aerospace vehicles and hardware, noting that the proposed exemptions would be limited to the safety-critical, corrosion-sensitive components on aircraft and aerospace vehicles, including safety-critical components.

b. Certain Emergency Uses of Methylene Chloride for Which No Technically and Economically Feasible Safer Alternative Is Available

i. Analysis of the Need for TSCA Section 6(g)(2)(A) Exemption for NASA Certain Uses in an Emergency

EPA also considered a TSCA section 6(g) exemption for emergency use of methylene chloride in the furtherance of NASA's mission. Under TSCA section 6(g)(1)(A), EPA may ''grant an exemption from a requirement of a . . . rule for a specific condition of use of a chemical substance or mixture, if the Administrator finds that the specific condition of use is a critical or essential use for which no technically and economically feasible safer alternative is

available, taking into consideration hazard and exposure.'' For certain specific conditions of use, EPA proposes that use of methylene chloride by NASA and its contractors in an emergency be exempt from the requirements of this rule because it is a critical or essential use provided that (1) there is an emergency; and (2) NASA selected methylene chloride because there are no technically or economically feasible safer alternatives available during the emergency.

NASA operates on the leading edge of science seeking innovative solutions to future problems where even small volumes of an otherwise prohibited chemical substance could be vital to crew safety and mission success. During interagency review, NASA expressed concerns that there will likely be circumstances where a specific, EPA-prohibited condition of use may be identified by NASA during an emergency as being needed in order to avoid or reduce situations of harm or immediate danger to human health, or the environment, or avoid imperiling NASA space missions. In such cases, it is possible that no technically and economically feasible safer alternative would be available that meets the stringent technical performance requirements necessary to remedy harm or avert danger to human health, the environment, or avoid imperiling NASA space missions.

An emergency is a serious and sudden situation requiring immediate action to remedy harm or avert danger to human health, the environment, or to avoid imperiling NASA space missions. In NASA's case, there may be instances where the emergency use of methylene chloride for specific conditions of use is critical or essential to remedying harm or averting danger to human health, the environment, or avoiding imperiling NASA space missions. Because of the immediate and unpredictable nature of emergencies described in this Unit and of the less forgiving environments NASA operates in that offer little to no margin for error, it is likely that, at the time of finalization of this proposal, alternatives to emergency methylene chloride use may not be available in a timely manner to avoid or reduce harm or immediate danger (Ref. 39). In this way, these emergencies for particular conditions of use meet the criteria for an exemption under TSCA section 6(g)(1)(A), because the emergency use of methylene chloride for listed conditions of use is critical or essential and no technically and economically feasible safer alternative will be available in a timely manner, taking into consideration hazard and exposure.

In support of the TSCA section 6(g)(1)(A) emergency use exemption, NASA submitted detailed criteria which they must use to screen, qualify, and implement materials to be used in spacecraft equipment, as well as historical case studies that outline the loss of life and loss of assets in the discharge of previous missions. In one of several examples detailed, the Apollo I command module fire that claimed the lives of three American astronauts demonstrated the need for careful testing and continuity of materials (Ref. 39). Moreover, due to NASA's rigorous safety testing requirements under various environmental conditions, technically and economically feasible safer alternatives may not be readily available during emergencies and may require certain conditions of use of methylene chloride to alleviate the emergency.

In another example, NASA identified a scenario concerning a mission to the International Space Station (ISS) whereby, during a launch evolution, the countdown was paused immediately prior to launch (T–2 minutes). NASA engineers identified a clogged filter and supply line as the primary issue, which required immediate attention (*i.e.,* line flushing and filter cleaning). In this type of emergency scenario, an already approved chemical substance rated for space system applications is necessary to immediately remedy the situation. Although methylene chloride was not used in this particular incident, if it were needed, in the future to address such an emergency, then the proposed exemption would allow for its lawful use—the countdown would resume and the launch would occur. Conversely, without an exemption under the specific condition of use (*e.g.,* industrial and commercial use in non-aerosol degreasers and cleaners), NASA's use of methylene chloride would be otherwise prohibited, which would put NASA in an untenable position of having to choose to either violate the law or place the mission (and potentially the health and safety of its employees involved in the mission) at risk.

As described in Unit IV.A.5.a., the identification and qualification of compatible materials in the context of aviation is iterative and involves expansive collaboration between original equipment manufacturers, Federal agencies, and qualifying institutions. This is equally, if not more so, the case in the context of human space flight operations undertaken by NASA (Ref. 39). NASA's mission architecture requirements often are developed many years in advance of an actual launch occurring. As part of mission planning, space systems are designed, full scale mock-ups are built, and mission critical hardware is constructed using materials qualified for spaceflight. Once NASA's mission architecture requirements are developed, NASA may need to retain emergency access to methylene chloride because its alternatives may not have yet gone through NASA's rigorous certification process before their use. Allowing NASA to retain emergency use of methylene chloride would reduce the chances that this rule will hinder future space missions for which mission architecture infrastructure is being developed or is already built. While NASA considers alternatives to the chemical substances it currently uses in its space system designs, NASA has not yet identified technically and economically feasible alternatives to proven chemistries in many current applications. While EPA acknowledges that the use of methylene chloride in emergency situations may be necessary in the near term, it is also EPA's understanding that NASA will continue its work to identify and qualify alternatives to methylene chloride. Thus, as with the exemption described in Unit IV.A.5.a., EPA is proposing an exemption duration of 10 years.

ii. Proposed Exemption for Use of Methylene Chloride for Emergency Uses in the Context of Human Space Flight for Certain Uses

For the reasons discussed in this Unit, EPA is proposing a 10-year exemption for emergency use of methylene chloride in furtherance of NASA's mission for the following specific conditions of use: Industrial and commercial use as solvent for cold cleaning; Industrial and commercial use as a solvent for aerosol spray degreaser/cleaner; Industrial and commercial use in adhesives, sealants and caulks; Industrial and commercial use in adhesive and caulk removers; Industrial and commercial use in metal non-aerosol degreasers; Industrial and commercial use in non-aerosol degreasers and cleaners; and Industrial and commercial use as solvent that becomes part of a formulation or mixture. EPA is also proposing to include additional requirements as part of the exemption, pursuant to TSCA section 6(g)(4), including required notification and controls for exposure, to the extent feasible: (1) NASA and its contractors must provide notice to the EPA Administrator of each instance of emergency use within 15 days and; (2) NASA and its contractors would have to comply with the WCPP described in Unit IV.A.1. to the extent feasible.

EPA is proposing to require that NASA notify EPA within 15 days of the emergency use. The notification would include a description of the specific use of methylene chloride in the context of one of the conditions of use for which this exemption is being proposed, an explanation of why the use described qualifies as an emergency, and an explanation with regard to the lack of availability of technically and economically feasible alternatives.

As with the exemption described in Unit IV.A.5.a., EPA expects NASA and its contractors have the ability to implement a WCPP as described in Unit IV.A.1. for the identified uses in the context of an emergency, to some extent even if not to the full extent of WCPP implementation. Therefore, EPA is proposing to require that during emergency use, NASA must comply with the WCPP to the extent technically feasible in light of the particular emergency.

Under the proposed exemption, NASA and its contractors would still be subject to the proposed general recordkeeping requirements discussed in Unit IV.A.

EPA requests comment on this TSCA section 6(g) exemption for continued emergency use of methylene chloride in the furtherance of NASA's mission as described in this Unit, and whether any additional conditions of use should be included, in particular for any uses qualified for space flight for which no technically or economically feasible safer alternative is available. Additionally, EPA requests comment on what would constitute sufficient justification of an emergency.

c. Analysis of the Need for a TSCA Section 6(g) Exemption for Commercial Furniture Refinishing

While EPA in the past has proposed to exclude commercial furniture refinishing from regulation of the use of methylene chloride in commercial paint and coating removal, this proposed rule does not exclude commercial furniture refinishing from the proposed prohibition on the use of methylene chloride for commercial paint and coating removal, because EPA has determined that this use drives the unreasonable risk for methylene chloride, reasonably available information demonstrates that alternative methods or substitute chemicals are available to some extent, and, based on reasonably available information, EPA has not found that a TSCA section 6(g) exemption is warranted for the use of methylene chloride in commercial furniture refinishing.

The 2020 Risk Evaluation for Methylene Chloride identified risks for commercial use of methylene chloride in paint and coating removal, including furniture refinishing, as a result of acute and chronic non-cancer exposures that would not be mitigated by an APF 50 respirator. The 2020 Risk Evaluation for Methylene Chloride identified risks for commercial use of methylene chloride in paint and coating removal, including furniture refinishing, as a result of acute and chronic non-cancer exposures that would not be mitigated by an APF 50 respirator. EPA identified many alternative products for paint and coating removers. However, some may require longer periods of time or rework of equipment and processes in order to work for furniture refinishing uses, or, though they may be used as paint and coating removers in other contexts, may not be appropriate alternatives for use on wood substrates. EPA's consideration of alternatives, including for safety and flammability, is discussed further in Unit V.B., the Economic Analysis, and Alternatives Assessment (Ref. 3, Ref. 40). Mechanical or thermal methods (*i.e.,* sanding, media blasting, or heat guns) are also potential alternatives for this sector, though likewise they may damage the substrate, require different processes, and often requires more time (Refs. 33, 55, 66). While the economic impacts of prohibiting the commercial use of methylene chloride for furniture refinishing may be significant for this sector, it is unclear whether this will result in firm closures, and, if so, how many. Given the magnitude of the risks resulting from this use, including the documented fatalities (Ref. 32), the likely inability of this sector to comply with a WCPP (as described in Unit V.A.), and the availability of some alternatives, EPA determined that a prohibition would be necessary the identified risks that drive the unreasonable risk to health, as discussed in Unit V.A.1. EPA requests comment on all aspects of this preliminary determination that a TSCA section 6(g) exemption is not warranted for the use of methylene chloride in furniture refinishing, including information on the availability of alternatives and the time needed to implement alternatives. EPA emphasizes that the Agency is seeking input regarding whether an exemption is needed and welcomes information related to this condition of use during the public comment period.

B. Primary Alternative Regulatory Action

As indicated by TSCA section 6(c)(2)(A)(iv)(II) through (III), EPA must consider the costs and benefits and the cost effectiveness of the proposed regulatory action and one or more primary alternative regulatory actions considered by the Agency. An overview of the proposed regulatory action and alternative regulatory action for each condition of use is in Unit IV.C.

The primary alternative regulatory action described in this notice combines prohibitions and requirements for a WCPP to address the unreasonable risk from methylene chloride driven by the various conditions of use, as well as time-limited exemptions under TSCA section 6(g) for two uses. While in some ways it is similar to the proposed regulatory action, the primary alternative regulatory action described in this notice would allow a WCPP, including requirements to meet an ECEL and EPA STEL, for several additional conditions of use than would be allowed under the proposed regulatory action. The alternative regulatory action additionally would include longer compliance timeframes for prohibitions and a WCPP, as described in this Unit.

As in the proposed regulatory action described in Unit IV.A.1., EPA's primary alternative regulatory action described in this notice would include WCPP, including requirements to meet an ECEL and EPA STEL for: manufacturing: domestic manufacture; manufacturing: import; processing: as a reactant; processing: incorporation into a formulation, mixture, or reaction product; processing: repackaging; processing: recycling; industrial and commercial use as a laboratory chemical; and disposal.

In addition, the primary alternative regulatory action described in this notice would require a WCPP for additional industrial and commercial conditions of use: industrial and commercial use in finishing products for fabric, textiles, and leather; industrial and commercial use as solvent that becomes part of a formulation or mixture; industrial and commercial use as a processing aid; industrial and commercial use for electrical equipment, appliance, and component manufacturing; industrial and commercial use for plastic and rubber products manufacturing; industrial and commercial use in cellulose triacetate film production; industrial and commercial use for oil and gas drilling, extraction, and support activities; and industrial and commercial use in paint or coating removal from safety-critical, corrosion-sensitive components of aircraft owned or operated by air carriers or commercial operators certificated under 14 CFR part 119.

EPA believes a WCPP may be a viable alternative to the proposed prohibition for these additional industrial and commercial conditions of use because, as discussed in Unit V.A., these conditions of use are generally industrial in nature; owners or operators are likely currently complying with the OSHA methylene chloride standard, so they should be familiar with what is being required to meet the ECEL; and, as far as the Agency is aware, these conditions of use have not resulted in any documented fatalities. Because of the industrial nature of the sectors relevant to these conditions of use, the owner or operator may have the capability to successfully implement a WCPP to ensure that the unreasonable risk, as a result of exposure to methylene chloride, are prevented. However, at the time of proposal, EPA has not yet received any monitoring data or detailed description of methylene chloride involving activities for these conditions of use to confirm that compliance with an ECEL of 2 ppm is possible. Therefore, concerns about the feasibility of implementing an ECEL for these additional industrial and commercial conditions of use, as discussed in Unit V.3., led EPA to propose that they be prohibited (see Unit IV.A.2.). EPA does not have sufficient information to confidently conclude that facilities engaged in these conditions of use could meet the ECEL for methylene chloride.

Therefore, EPA requests comment on the ways in which methylene chloride may be used in the conditions of use that would be prohibited (under the proposed regulatory action) due to concerns about feasibility of implementing an ECEL, and the degree to which users of methylene chloride in these sectors could successfully implement the WCPP, including requirements to meet an ECEL and EPA STEL, described in Unit IV.A.1. EPA is also requesting comment on whether to consider a regulatory alternative that would subject more conditions of use to a WCPP, instead of prohibition, than those currently contemplated in the primary alternative regulatory action. EPA also requests monitoring data and detailed descriptions of methylene chloride involving activities for these conditions of use to determine whether these additional conditions of use could comply with the WCPP such that risks are no longer unreasonable.

Specifically with regards to the condition of use ''Industrial and commercial use as a processing aid,'' EPA notes that the description of this condition of use (in Unit III.B.1.c.xxiii.) covers a broad range of chemical use activities. During the SBAR Panel, one SER provided process descriptions, diagrams, and monitoring data which indicated that particular entity may already be able to meet an ECEL of 2 ppm. This particular entity uses methylene chloride as a heat transfer fluid in a closed system. Information provided to EPA indicated that inhalation exposures were frequently below the ECEL and in some cases below the level of detection, and while dermal exposure were possible, they could be mitigated through use of PPE (Ref. 6). EPA's 2020 Risk Evaluation for Methylene Chloride incorporated exposure estimates from a different type of processing aid application that did not resemble the SER's use, which is highly specialized and may be considered a sub-use of the condition of use as a whole. EPA requests comment on the degree to which other entities using methylene chloride as a processing aid may otherwise comply with the proposed WCPP requirements for methylene chloride. In the case that several entities are able to demonstrate the continued use of methylene chloride without subjecting workers to unreasonable risk is possible, through a combination of monitoring data and process description, EPA acknowledges its willingness to finalize a regulation under which this particular sub-use of the condition of use, or the condition of use as a whole could continue under the WCPP.

Additionally, EPA notes that the alternatives analysis did not specifically identify any alternatives for this condition of use (Ref. 40). This is a limitation of the type of analysis done, which was specifically based on the use of alternative formulations currently on the market, and therefore not applicable to most processing uses. EPA emphasizes that this is not a positive finding that alternatives do not exist for this condition of use. To that end, EPA requests comment on the degree to which alternatives may or may not be available for use of methylene chloride as a heat transfer fluid and in other processing aid applications.

In the event that EPA is not able to identify any alternatives for this condition of use, and additional information is not provided that would allow EPA to determine that the WCPP could address unreasonable risk driven by this condition of use, EPA will consider finalizing a prohibition that allows for an appropriate phaseout in accordance with TSCA section 6(d). Alternatively, in the event that EPA is unable to identify alternatives for this condition of use, and EPA determines through new information provided that prohibition of the use would significantly impact national security or critical infrastructure, EPA will consider an exemption under TSCA section 6(g).

Under the primary alternative regulatory action, EPA would prohibit the manufacture, processing, and distribution in commerce of methylene chloride for all consumer use. Additionally, under the primary alternative regulatory action described in this notice and considered by EPA, other than those conditions of use listed earlier for inclusion under the WCPP, EPA would prohibit the remaining industrial and commercial uses, including two uses for which EPA is proposing the WCPP as the regulatory action: industrial or commercial use for paint and coating removal from safety-critical, corrosion-sensitive components of aircraft and spacecraft by Federal agencies and their contractors; and industrial or commercial use as a bonding agent in the production of specialty batteries for military or space applications by Federal agencies and their contractors. Recordkeeping and downstream notification would be required as described in Unit IV.A.4.

For industrial or commercial use for paint and coating removal from safety-critical, corrosion-sensitive components of aircraft and spacecraft by Federal agencies and their contractors, and industrial or commercial use as a bonding agent in the production of specialty batteries for military or space applications by Federal agencies and their contractors, the alternative regulatory action would include an exemption from the prohibition for 10 years under TSCA section 6(g). For the duration of this exemption, regulated entities would be required to comply with the WCPP to the extent practicable.

For these two uses, EPA has conducted an analysis of the application of this rulemaking and found that a TSCA section 6(g) exemption may be warranted if the primary alternative regulatory action considered by EPA is adopted, in its entirety or in relevant part, in the final rule. Based on discussions with and information provided by industry stakeholders, EPA understands that these two uses of methylene chloride by DoD, NASA, and other Federal agencies are essential for national security and critical infrastructure.

As discussed in greater detail in Unit V.B., EPA is aware that there are specific military uses for which methylene chloride is essential for paint and coating removal and for which there are no suitable alternatives currently available. The military readiness of DOD's warfighting capability is

paramount to ensuring national security, which includes ensuring the maintenance and preservation of DOD's warfighting assets. DOD has identified safety-critical uses of methylene chloride for ensuring military aviation readiness. These consist of the use of methylene chloride for the removal of coatings from safety-critical, corrosion-sensitive military aviation components, such as landing gear, gear boxes, and turbine engine parts, that not only require their coatings be removed for inspection and maintenance but also would be so negatively affected by the use of technically incompatible, substitute paint removal chemicals or methods that the safe performance of the aircraft could be compromised.

EPA has evaluated the effect that a prohibition on methylene chloride for industrial or commercial paint and coating removal could have on military readiness and preliminarily determines that an exemption would be warranted under TSCA section 6(g)(1)(B) to avoid the significant deleterious impacts on national security that compliance with the proposed prohibition could entail, should the primary alternative regulatory action be adopted in the final rule in whole or in part. More specifically, because the available alternatives either cannot be used on certain substrates, such as high-strength steel or magnesium, or take an unacceptably long time to work in certain situations, compliance with the proposed prohibition would result in important military assets being off-line for significantly longer inspection and repair periods, which would significantly disrupt national security.

In addition, as noted by commenters on EPA's 2017 NPRM, there are other Federal agencies that use safety-critical, corrosion-sensitive components on aviation and space applications and stated that the proposed exemption should also apply to those Federal agencies and their contractors. These commenters asserted that, without an exemption for NASA, the Department of Homeland Security (DHS), and the Federal Aviation Administration (FAA), the proposed prohibition on the use of methylene chloride for industrial or commercial paint and coating removal could negatively affect national security and critical infrastructure.

EPA's analysis of the potential impacts on DOD's military readiness and national security is equally applicable to NASA, DHS, and FAA. As stated by commenters on EPA's 2017 NPRM (Ref. 46), aircraft and other assets operated by DHS, NASA, and the FAA also contain safety-critical, corrosion-sensitive components of the type described by DOD, and suitable alternatives to methylene chloride are similarly not available for all applications. Those agencies are also responsible for assets that are essential to national security or constitute critical infrastructure and contain safety-critical, corrosion-sensitive components on which methylene chloride is used for paint and coating removal. The Coast Guard, one of the five Armed Services of the United States, is a military branch within DHS. Like the four Armed Services within DOD, the Coast Guard is also responsible for warfighting assets that may require the use of methylene chloride for the removal of coatings from safety-critical, corrosion-sensitive components. The Coast Guard's military readiness is as important as the military readiness of the four Armed Services within DOD. Similarly, the readiness of U.S. Customs and Border Protection aviation for monitoring and protecting the borders of the United States is an integral part of national security. As for NASA, the United States Space Priorities Framework notes that space systems (*e.g.,* flight components of satellites and space craft) are part of the nation's critical infrastructure and that the United States has significant national security interests in space (Ref. 41). The integrity and performance of our national airspace system, overseen by the FAA, is a matter of both national security and critical infrastructure. FAA-operated aircraft ensure the integrity of instrument approaches to airports and airway procedures that constitute our National Airspace System infrastructure (Ref. 42). The FAA's Flight Program Operations accomplishes this through the airborne inspection of space- and ground-based instrument flight procedures and the validation of electronic signals in space transmitted from ground navigation systems, evaluating accuracy, aeronautical data, human factors fly-ability, and obstacle clearance.

As discussed in Unit V.B., substitute chemicals for paint and coating removal for safety-critical, corrosion-sensitive components are not technically feasible as they have one or more technical limitations; are incompatible with underlying materials; and/or do not support the coating removal requirements of safety inspections, non-destructive inspection, material assessment, or field repair processes. Therefore, EPA has preliminarily determined that DHS, NASA, and FAA compliance with a prohibition on the use of methylene chloride for industrial or commercial paint and coating removal, which would preclude use of methylene chloride for removal of paint and coatings from safety-critical, corrosion-sensitive components of these agencies' aircraft and other assets, would significantly disrupt national security and critical infrastructure in the same way that DOD's compliance with a prohibition would. In addition, due to concerns about impacts to the availability of methylene chloride for use in removing paint and coatings from safety-critical, corrosion-sensitive components, EPA has preliminarily determined that a ban on the manufacture, processing, and distribution in commerce of methylene chloride for industrial or commercial paint and coating removal for these safety-critical, corrosion-sensitive components would also significantly disrupt national security and critical infrastructure. For this reason, if the primary alternative regulatory action considered by EPA is adopted, in its entirety or in relevant part, in the final rule, an exemption under TSCA section 6(g) would be warranted to prevent significant disruption of national security and critical infrastructure.

EPA has also analyzed the need for a TSCA section 6(g) exemption for use of methylene chloride as a bonding agent in the production of specialty batteries for use in critical energy storage applications in military and space exploration settings, including defense applications such as precision guided weapons, military airframes, satellites, space launch vehicles, and spacecraft. According to a maker of these batteries, all major military and space applications, such as aircraft (F–35, B2), radios, and Mars mission equipment, require these batteries to function in very harsh conditions, including operation to −40 °C and storage at −54 °C (Ref. 47). As discussed further in Unit V.B., EPA understands that methylene chloride is a superior bonding agent for this process because of its unique evaporative qualities, and that availability of technologically and economically feasible alternatives to methylene chloride is lacking.

As discussed in this Unit, EPA recognizes that military readiness is paramount to ensuring national security, and that space systems are part of our critical infrastructure and have impacts on national security. Therefore, EPA has preliminarily determined that DOD and NASA compliance with a prohibition on the use of methylene chloride as a bonding agent in the production of specialty batteries for use in critical energy storage applications in military and space exploration settings would significantly disrupt national security and critical infrastructure,

should the primary alternative regulatory action be adopted in the final rule in whole or in part. In addition, due to concerns about impacts to the availability of methylene chloride for use as a bonding agent in the production of these specialty batteries, EPA has preliminarily determined that a prohibition on the manufacture, processing, and distribution in commerce of methylene chloride for use as a bonding agent in the production of specialty batteries for use in critical energy storage applications in military and space exploration settings would also significantly disrupt national security and critical infrastructure. For this reason, if the primary alternative regulatory action considered by EPA is adopted, in its entirety or in relevant part, in the final rule, an exemption under TSCA section 6(g) would be warranted to prevent significant disruption of national security and critical infrastructure.

Given the potential severity of impacts from acute exposures, EPA's proposed regulatory action would include relatively rapid compliance timeframes. However, it is possible that longer timeframes would be needed for entities to come into compliance; therefore, the primary alternative regulatory action described in this notice would include longer timeframes for implementation than the proposed regulatory action. The prohibitions under the primary alternative regulatory action would take effect in 360 days for manufacturers, 450 days for processers, 540 days for distributing to retailers, 630 days for all other distributors and retailers, and 720 days for industrial and commercial users after publication of the final rule in the **Federal Register** (in contrast to 90 days for manufacturers, 180 days for processers, 270 days for distributing to retailers, 360 days for all other distributors and retailers, and 450 days for industrial and commercial users after publication of the final rule in the **Federal Register** in the proposed action described in Unit IV.A.). Similarly, the compliance timeframes for the WCPP under the primary alternative regulatory action would be extended by 6 months in comparison to the proposed action described in Unit IV.A: EPA would require that regulated entities establish initial exposure monitoring according to the process outlined in Unit IV.A. within 12 months, ensure that the airborne concentration of methylene chloride does not exceed the ECEL or EPA STEL within 15 months (and provide respiratory protection if necessary), and implement an exposure control plan within 18 months. EPA requests comment on the ability of regulated entities engaged in the additional conditions of use that would be subject to a WCPP under the primary alternative regulatory action to conduct initial monitoring within 12 months, anticipated timelines for any procedural adjustments needed to comply with the requirements, and the extent to which this option could result in additional exposure, compared the proposed regulatory option as described in Unit IV.A. Overall, EPA requests comment on any advantages or drawbacks for the timelines outlined in this Unit, compared to the timelines identified for the proposed regulatory action in Unit IV.A.

As noted earlier in this Unit, for some conditions of use, both the proposed regulatory action and primary alternative regulatory action would result in a prohibition. EPA emphasizes that for those conditions of use, the primary alternative regulatory action includes a different timeline for implementation of the prohibition, in comparison to the proposed regulatory action. As discussed in more detail in Unit V.A., for those conditions of use, EPA also considered other regulatory approaches available under TSCA section 6(a). However, EPA found that none of these other regulatory approaches would address the unreasonable risk.

Where EPA has determined that a chemical substance presents unreasonable risk under TSCA section 6(b)(4), EPA must undertake rulemaking to ''apply one or more of the [TSCA § 6(a)(1) through (7)] requirements to such substance . . . to the extent necessary so that the chemical substance . . . no longer presents such risk.'' TSCA § 6(a). ''In proposing and promulgating [such] a rule,'' EPA must ''consider and publish a statement based on reasonably available information with respect to . . . the reasonably ascertainable economic consequences of the rule, including consideration of . . . (II) the costs and benefits of the proposed . . . regulatory action and of the [one] or more primary alternative regulatory actions considered by [EPA]; and (III) the cost effectiveness of the proposed regulatory action and of the [one] or more primary alternative regulatory actions considered by [EPA].'' EPA interprets this to mean that Congress intended this ''primary alternative regulatory action'' to be another regulatory option under TSCA § 6(a)(1) through (7) that would meet the requirements of TSCA § 6(a), namely address the unreasonable risk identified under TSCA section 6(b)(4) ''to the extent necessary so that the chemical substance . . . no longer presents such risk.'' Here, the proposed regulatory action is comprised of a mix of proposed options under TSCA section 6(a), each directed at specific conditions of use and with specified timeframes for compliance. The primary alternative regulatory options considered by the Agency would adjust the overall mix of TSCA section 6(a) requirements, including compliance timeframes, resulting in a proposed regulatory action that is more restrictive in some ways and less restrictive in others. For conditions of use where the only options that would address the unreasonable risk are prohibition options under TSCA § 6(a)(2), the proposed option and the primary alternative regulatory option are distinct because implementing prohibitions on differing timetables under TSCA section 6(d) would result in a different mix of regulatory options with different costs, benefits, and cost effectiveness than the proposed regulatory action.

C. Overview of Conditions of Use and Proposed Regulatory Action and Primary Alternative Regulatory Action

The following Table 3 is a side-by-side depiction of the proposed regulatory action with the primary alternative regulatory action for each condition of use. Additionally, timeframes between the proposed and primary alternative regulatory action differ as outlined in Units IV.A. and B; those Units also contain additional details such as exemptions proposed under TSCA section 6(g) and delayed compliance dates under TSCA section 6(d) for specific applications.

TABLE 3—EPA PROPOSED OR ALTERNATIVE ACTION BY CONDITION OF USE

Condition of use	Action	
	Proposed regulatory action	Primary alternative action
Industrial and commercial use as solvent for batch vapor degreasing	Prohibit	Prohibit.
Industrial and commercial use as solvent for in-line vapor degreasing	Prohibit	Prohibit.
Industrial and commercial use as solvent for cold cleaning	Prohibit	Prohibit.
Industrial and commercial use as a solvent for aerosol spray degreaser/cleaner	Prohibit	Prohibit.
Industrial and commercial use in adhesives, sealants and caulks	Prohibit	Prohibit.
Industrial and commercial use in paints and coatings	Prohibit	Prohibit.
Industrial and commercial use in paint and coating removers	Prohibit	Prohibit.
Industrial and commercial use in paint and coating removers from safety critical, corrosion-sensitive components of aircraft and spacecraft owned or operated by DOD, NASA, DHS, FAA.	WCPP	Prohibit, with a 10-year time-limited exemption and interim WCPP.
Industrial and commercial use in paint and coating removers from safety-critical, corrosion-sensitive components of aircraft owned or operated by air carriers or commercial operators.	Prohibit, with a 10-year time-limited exemption and interim WCPP.	WCPP.
Industrial or commercial use as a bonding agent for acrylic and polycarbonate in mission-critical military and space vehicle applications, including in the production of specialty batteries for such applications.	WCPP	Prohibit, with a 10-year time-limited exemption and interim WCPP.
Industrial and commercial use in adhesive and caulk removers	Prohibit	Prohibit.
Industrial and commercial use in metal aerosol degreasers	Prohibit	Prohibit.
Industrial and commercial use in metal non-aerosol degreasers	Prohibit	Prohibit.
Industrial and commercial use in finishing products for fabric, textiles and leather	Prohibit	WCPP.
Industrial and commercial use in automotive care products (functional fluids for air conditioners).	Prohibit	Prohibit.
Industrial and commercial use in automotive care products (interior car care)	Prohibit	Prohibit.
Industrial and commercial use in automotive care products (degreasers)	Prohibit	Prohibit.
Industrial and commercial use in apparel and footwear care products	Prohibit	Prohibit.
Industrial and commercial use in spot removers for apparel and textiles	Prohibit	Prohibit.
Industrial and commercial use in liquid lubricants and greases	Prohibit	Prohibit.
Industrial and commercial use in spray lubricants and greases	Prohibit	Prohibit.
Industrial and commercial use in aerosol degreasers and cleaners	Prohibit	Prohibit.
Industrial and commercial use in non-aerosol degreasers and cleaners	Prohibit	Prohibit.
Industrial and commercial use in cold pipe insulations	Prohibit	Prohibit.
Industrial and commercial use as solvent that becomes part of a formulation or mixture.	Prohibit	WCPP.
Industrial and commercial use as a processing aid	Prohibit	WCPP.
Industrial and commercial use as a propellant and blowing agent	Prohibit	Prohibit.
Industrial and commercial use for electrical equipment, appliance, and component manufacturing.	Prohibit	WCPP.
Industrial and commercial use for plastic and rubber products manufacturing	Prohibit	WCPP.
Industrial and commercial use in cellulose triacetate film production	Prohibit	WCPP.
Industrial and commercial use as anti-spatter welding aerosol	Prohibit	Prohibit.
Industrial and commercial use for oil and gas drilling, extraction, and support activities.	Prohibit	WCPP.
Industrial and commercial use in toys, playground and sporting equipment	Prohibit	Prohibit.
Industrial and commercial use in carbon remover, wood floor cleaner, and brush cleaner.	Prohibit	Prohibit.
Industrial and commercial use in lithographic printing plate cleaner	Prohibit	Prohibit.
Consumer use as solvent in aerosol degreasers/cleaners	Prohibit[1]	Prohibit.[1]
Consumer use in adhesives and sealants	Prohibit[1]	Prohibit.[1]
Consumer use in brush cleaners for paints and coatings	Prohibit[1]	Prohibit.[1]
Consumer use in adhesive and caulk removers[1]	Prohibit[1]	Prohibit.[1]
Consumer use in metal degreasers	Prohibit[1]	Prohibit.[1]
Consumer use in automotive care products (functional fluids for air conditioners)	Prohibit[1]	Prohibit.[1]
Consumer use in automotive care products (degreasers)	Prohibit[1]	Prohibit.[1]
Consumer use in lubricants and greases	Prohibit[1]	Prohibit.[1]
Consumer use in cold pipe insulation	Prohibit[1]	Prohibit.[1]
Consumer use in arts, crafts, and hobby materials glue	Prohibit[1]	Prohibit.[1]
Consumer use in an anti-spatter welding aerosol	Prohibit[1]	Prohibit.[1]
Consumer use in carbon removers and other brush cleaners	Prohibit[1]	Prohibit.[1]
Manufacturing (Domestic manufacturing)	WCPP	WCPP.
Manufacturing (Import)	WCPP	WCPP.
Processing: processing as a reactant	WCPP	WCPP.
Processing: incorporation into a formulation, mixture, or reaction product	WCPP	WCPP.
Processing: repackaging	WCPP	WCPP.
Processing: recycling	WCPP	WCPP.
Industrial and commercial use as a laboratory chemical	WCPP	WCPP.
Disposal	WCPP	WCPP.

[1] Prohibit manufacture, processing, and distribution in commerce for the consumer use.

V. Rationale for the Proposed Regulatory and Primary Alternative Regulatory Actions

This Unit describes how the considerations described in Unit III.B.3. were applied when selecting among the TSCA section 6(a) requirements to arrive at the proposed and primary alternative regulatory actions described in Unit IV.A. and B.

A. Consideration of Risk Management Requirements Available Under TSCA Section 6(a)

1. Workplace Chemical Protection Program (WCPP)

One option EPA considered for occupational conditions of use was establishing a WCPP, which would include an ECEL and related required implementation measures, such as monitoring. As described in Unit IV.A.1., the WCPP for methylene chloride would be non-prescriptive, in the sense that owners and operators would not be required to use specific equipment or engineering controls prescribed by EPA to achieve the exposure concentration limit. Rather, a performance-based exposure limit would enable owners and operators to determine how to most effectively meet the exposure limits based on conditions at their workplace, aligned with the hierarchy of controls. However, due to the low exposure levels and stringent requirements in the WCPP necessary to address the unreasonable risk from methylene chloride, EPA identified only a relatively small number of conditions of use where the Agency expects the WCPP can be successfully implemented.

The central components of the WCPP are the ECEL and EPA STEL. EPA has determined as a matter of risk management policy that ensuring exposures remain at or below the ECEL and EPA STEL would eliminate any unreasonable risk of injury to health driven by inhalation exposures for occupational conditions of use subject to the WCPP.

In the case of methylene chloride, EPA has calculated the ECEL for methylene chloride to be 2 ppm (8 mg/m^3) for inhalation exposures as an 8-hour TWA in workplace settings, based on the chronic non-cancer human equivalent concentration for liver toxicity from inhalation exposures. This is the concentration at which an adult human, including a member of a susceptible subpopulation, would be unlikely to suffer adverse effects if exposed for a working lifetime (Ref. 11). EPA chose the chronic non-cancer liver toxicity endpoint as the basis for this exposure limit as it is the most sensitive of the endpoints identified, and therefore will be protective of both acute and chronic cancer inhalation endpoints over the course of a working day and lifetime.

However, the well-established and severe acute hazard identified for methylene chloride, from blurred vision to death, can be experienced in much shorter timeframes. Therefore, EPA determined a short-term exposure limit, or EPA STEL, of 16 ppm (57 mg/m^3) as a 15-minute TWA, based on the non-cancer endpoint of central nervous system depression resulting from acute exposures, was necessary in order to ensure the unreasonable risk was fully addressed in occupational settings (Ref. 11).

Once EPA identified the appropriate risk-based inhalation limits to address identified unreasonable risk, EPA carefully considered the appropriateness of such a program for each occupational condition of use of methylene chloride, in the context of the unreasonable risk.

Particular factors related to work activities that may make it difficult for certain conditions of use to comply with an ECEL are worth further discussion. One example includes work activities that may take place in the field, such as on-site paint removal or the use of adhesives in construction or renovation, making it challenging to establish a regulated area and conduct monitoring. In other contexts, the donning of air-supplied respirators would create challenges for movement and feasibility of work activities that may take place in small, enclosed spaces. Similarly, work activities that require a high range of motion or for some other reason could create challenges for the implementation of respiratory PPE are not good candidates for a WCPP, such as use as an anti-spatter welding aerosol, where use of a welding mask would impede the donning of an air-supplied respirator.

EPA also considered the feasibility of exposure reduction sufficient to address the unreasonable risk, even in facilities currently complying with the OSHA methylene chloride standard. While EPA acknowledges the regulated community's expected familiarity with OSHA PELs generally, as well as facilities' past and ongoing actions to implement the methylene chloride PEL and corresponding methods of compliance in OSHA's methylene chloride standard, EPA's exposure limits would be a full order of magnitude lower than the OSHA PEL. (The differences between the ECEL and EPA STEL and the OSHA PEL are discussed in more detail in Unit II.C.4.) This creates a significant amount of uncertainty as to the ability of facilities engaging in most industrial and commercial conditions of use to meet the ECEL and EPA STEL (and associated action levels) without relying on the use of PPE (or as discussed previously, if the nature of the activity precludes use of PPE required to meet such a level), and, therefore, whether exposures could be reduced in a manner aligned with the hierarchy of controls, because under that hierarchy PPE is considered a measure of last resort.

EPA understands that this uncertainty extends to the applicability of respirators as well. Although respirators, specifically SCBAs, could reduce exposures to levels that are protective of non-cancer and cancer risks, not all workers may be able to wear respirators. Individuals with impaired lung function due to asthma, emphysema, or chronic obstructive pulmonary disease, for example, may be physically unable to wear a respirator. OSHA requires that a determination regarding the ability to use a respirator be made by a physician or other licensed health-care professional, and annual fit testing is required for tight-fitting, full-face piece respirators to provide the required protection. Individuals with facial hair, such as beards or sideburns that interfere with a proper face-to-respirator seal, cannot wear tight fitting respirators. In addition, respirators may also present communication problems, vision problems, worker fatigue, and reduced work efficiency (63 FR 1152, January 8, 1998). According to OSHA, ''improperly selected respirators may afford no protection at all (for example, use of a dust mask against airborne vapors), may be so uncomfortable as to be intolerable to the wearer, or may hinder vision, communication, hearing, or movement and thus pose a risk to the wearer's safety or health'' (63 FR 1189 through 1190).

In contrast to considerations that would weigh against the likelihood of a facility within a condition of use to successfully implement WCPP, there are certain considerations that indicate a condition of use is a good fit for effective risk management via WCPP. Based on reasonably available information, including monitoring data, and information related to considerations described previously in this Unit, EPA's confidence that requirements to meet an ECEL and EPA STEL can be implemented is highest for highly standardized and industrialized settings, such as where methylene chloride is used in a closed system.

For example, one of the conditions of use for which EPA is proposing to require compliance with the WCPP is processing of methylene chloride as a reactant. A large volume of methylene chloride is processed for this condition of use, which almost entirely goes towards the manufacture of the hydrofluorocarbon HFC–32 (Refs. 3, 44). Monitoring data and exposure information submitted by industry, including by small entity representatives as part of the SBAR process, suggests that methylene chloride exposures in some facilities may already be below levels that would be consistent with the proposed ECEL (Refs. 6, 45, 46). Additionally, HFC–32 is one of the regulated substances identified in the AIM Act. Among other things, the AIM Act authorizes EPA to address listed HFCs in three main ways: phasing down HFC production and consumption through an allowance allocation program; facilitating sector-based transitions to next-generation technologies; and issuing certain regulations for purposes of maximizing reclamation and minimizing releases of HFCs and their substitutes from equipment and ensuring the safety of technicians and consumers. EPA anticipates that many entities currently using HFCs with higher global warming potential will transition to alternatives with lower global warming potential as requirements under the AIM Act take effect. HFC–32, while being one regulated substance subject to the overall phasedown in production and consumption of regulated substances under the AIM Act, is likely to be used to facilitate the transition from other HFCs and HFC blends with higher global warming potential in certain applications. By allowing for the continued, controlled use of methylene chloride in the manufacture of HFC–32, efforts to shift to chemicals with lower global warming potential would not be impeded by this rulemaking. Allowing this use to continue, subject to compliance with the WCPP, would complement industry's ongoing effort to abate the use of hydrofluorocarbons with higher global warming potential.

An additional strong candidate for WCPP is industrial and commercial use of methylene chloride as a laboratory chemical. Laboratory settings are expected to be more conducive to the implementation of engineering controls such as fume hoods to ventilate vapors and adequately reduce overall exposure to methylene chloride consistent with the hierarchy of controls.

For both these conditions of use (processing of methylene chloride as a reactant and industrial and commercial use as a laboratory chemical), the 2020 Risk Evaluation for Methylene Chloride indicates that only small reductions in exposure are needed for WCPP compliance. Based on analysis in the 2020 Risk Evaluation for Methylene Chloride describing expected exposures with and without use of PPE, EPA identified an air-supplied respirator of APF 25 as the minimum respiratory PPE that is sufficient to mitigate the unreasonable risk driven by both of these conditions of use (note for OSHA APF 25 is the minimum allowable respiratory PPE for methylene chloride, as filter and cartridge respirators are not protective against methylene chloride vapors). This suggested that, for these conditions of use, the reductions in exposure required to achieve a level that would not present unreasonable risk may be less than in other instances, which, together with other considerations previously described, including monitoring data indicating exposures near or below the ECEL, adds to EPA's confidence that facilities engaging in these two conditions of use could meet the WCPP requirements. Additionally, industrial and commercial use of methylene chloride as a laboratory chemical is necessary to provide for the analysis of monitoring samples required to demonstrate compliance with the WCPP under this proposed regulation.

An additional candidate for the WCPP is paint and coating removal from safety-critical, corrosion-sensitive components on military and Federal aviation. Regarding military aviation, as part of interagency collaboration with the DOD on the NPRM issued in January 2017 (Ref. 47), EPA was made aware that there are specific military uses for which methylene chloride is essential for paint and coating removal for which there are no suitable alternatives currently available (see further discussion in Unit V.B.). These consist of the use of methylene chloride for the removal of coatings from corrosion-sensitive components on military aviation, including safety-critical components made of specialty metallic, nonmetallic, and composite materials. More specifically, this includes components such as landing gear, gear boxes, turbine engine parts, and other military aircraft components composed of metallic materials (specifically high-strength steel, aluminum, titanium, and magnesium) and composite materials that require their coatings be removed for inspection and maintenance. Similarly, as stated by commenters on EPA's 2017 NPRM (Ref. 38), aircraft and other assets operated by DHS, NASA, and the FAA also contain safety-critical, corrosion-sensitive components of the type described by DOD, and suitable alternatives to methylene chloride are similarly not available for all applications.

As described further in Unit V.B., EPA concluded that under TSCA section 6(c)(2)(C) that technologically and economically feasible alternatives that benefit health or the environment would not be readily available as a substitute for these specific safety-critical uses on corrosion-sensitive components. However, under TSCA section 6(a), EPA must still address identified risks such that they are no longer unreasonable. EPA considered the appropriateness of the WCPP for this subset of activities under industrial or commercial use of methylene chloride for commercial paint and coating removal, and emphasizes that this consideration was made very narrowly for the use of methylene chloride for paint and coating removal for safety-critical, corrosion-sensitive components, and not for more general use of methylene chloride in paint and coating removal by Federal agencies or their contractors, or for aircraft or spacecraft paint and coating removal more broadly. Rather, EPA's consideration of the appropriateness of the WCPP takes into account the specifics of the components from which the coatings are being removed (and thus the lack of suitable alternatives for this particular subset of uses), and the relevant paint and coating removal processes. EPA notes that these activities are expected to take place in highly industrialized facilities in which regulated areas may already be established, for compliance with current regulations for methylene chloride or other chemicals, and that the paint and coating removal work in these facilities would not take place in small or enclosed spaces (rather, parts would frequently be removed for coating removal) (Ref. 48). Additionally, EPA considered whether exposures could feasibly be reduced sufficiently so that the risks were no longer unreasonable. To that end, during the risk evaluation for methylene chloride, DOD submitted additional monitoring data for their particular activities involving use of methylene chloride for paint and coating removal. EPA's risk evaluation shows that, in comparison with other uses of methylene chloride for paint and coating removal, the magnitude of exposure, and thus the risks, are much lower for DOD's specified use. More specifically, EPA's risk evaluation found that central tendency risks for DOD uses of methylene chloride for commercial

paint and coating removal do not exceed the acute or chronic non-cancer inhalation benchmarks, and high-end risks for those same endpoints could be addressed using the minimum allowable PPE for methylene chloride (Ref. 1). In addition to exposure reductions, EPA also considered whether other components of the WCPP could be effectively implemented, including development of exposure reduction plans, exposure monitoring, administrative controls, and workplace participation. During the development of this proposed rulemaking, discussions with DOD confirmed what was suggested by EPA's risk evaluation—that is, the remaining uses by DOD and other Federal agencies (*e.g.,* DHS, NASA, and FAA) of methylene chloride for paint and coating removal for safety-critical, corrosion-sensitive components are highly industrialized and take place in controlled settings with numerous protections for workers already in place. In this way, use of methylene chloride for the removal of coatings from corrosion-sensitive components on military aviation, including safety-critical components made of specialty metallic, nonmetallic, and composite materials resembles other uses of methylene chloride for which the WCPP is being proposed, such as laboratory use. EPA further expects that Federal and Federal contractor facilities are subject to multiple levels of oversight as a result of the governmental and public nature of their activities, while civilian aviation facilities are not likely to experience the same level of scrutiny. Federal Government procurement is also subject to the Federal Acquisition Regulations System in Title 49 of the CFR, which prescribes, among other things, health and environmental management and oversight requirements for Federal contracts. For this reason, EPA is proposing a WCPP for this particular subset of the methylene chloride commercial paint and coating remover condition of use. EPA requests comment and further information regarding the Agency's expectations that Federal and Federal contractor facilities would be subject to a higher level of oversight than non-Federal or contractor facilities, and that existing or expected controls would be successful in achieving the requirements of the WCPP.

Similarly, EPA has examined the use of methylene chloride as a bonding agent for acrylic and polycarbonate in mission-critical military and space vehicle applications by Federal agencies and their contractors (Ref. 43) and is proposing WCPP for this subset of the commercial use of methylene chloride in adhesives condition of use. Mission-critical applications potentially include fabrication of fixtures and enclosures for scientific research; production of optically clear articles such as space vehicle windows, space suit helmet components, or elements of extraterrestrial habitats; or sealing the plastic cases of specialty batteries.

A stakeholder that produces lithium and silver oxide zinc batteries described how they are used in critical energy storage applications in military and space exploration settings, including defense applications such as precision guided weapons, military airframes, satellites, space launch vehicles, and spacecraft. (The stakeholder also described use of these batteries in medical devices; EPA notes that the TSCA definition of ''chemical substance'' excludes, under TSCA section 3(2)(B)(vi), ''any food, food additive, drug, cosmetic, or device . . . when manufactured, processed, or distributed in commerce for use as a food, food additive, drug, cosmetic, or device.'' 15 U.S.C. 2602(2)(B)(vi). To the extent that bonding agents in the production of specialty batteries for medical applications qualify as a ''device'' as defined in section 201(h) of the Federal Food, Drug, and Cosmetic Act, those particular uses that qualify as a ''device'' would be excluded from the ''chemical substance'' definition if ''manufactured, processed, or distributed in commerce for use as a . . . device,'' and would therefore not be subject to the rule if finalized). This stakeholder requested an exemption under TSCA section 6(g) for this use of methylene chloride. According to the requester, all major military and space applications, such as aircraft (F–35, B2), radios, and Mars mission equipment, require these batteries to function in very harsh conditions, including operation to −40 °C and storage at −54 °C.

Methylene chloride is used as a bonding agent for assembly of the plastic casings for these specialty batteries. The requester views the casing as a critical component of the battery because it houses and protects the cell anodes and cathodes. The requester explains that, during the solvent bonding process, methylene chloride dissolves the plastic slightly, allowing the polymers to form a physical bond comprised of the parent material. This results in a fully bonded battery casing which acts as a single Unit, rather than individual pieces integrated with layers of a different material. According to the requester, methylene chloride is a superior bonding agent for this process because of its unique evaporative qualities. In the requester's view, methylene chloride's low evaporation rate results in a higher degree of polymer bonding and a stronger casing, with less residue to inhibit the bonding process. The requester is not aware of any substance other than methylene chloride that would enable the production of battery casings of sufficient strength and durability for these specialty batteries. The requester further contends that the governmental and other entities for whom the requester produces these batteries prevent the substitution for methylene chloride in their contract specifications.

EPA's consideration of the lack of availability of technologically and economically feasible alternatives, pursuant to TSCA section 6(c)(2)(C), was one factor in the proposed determination not to prohibit manufacture, processing, distribution in commerce, and use of methylene chloride as a bonding agent for acrylic and polycarbonate in mission critical military and space vehicle applications, such as in the production of specialty batteries for use in such applications (Ref. 48) (discussed further in Unit V.B.). However, under TSCA section 6(a), EPA must still address identified risks such that they are no longer unreasonable. Based on information provided by NASA and the vendor, EPA determined that the production of these specialty batteries necessarily occurs in a highly industrialized and well-controlled environment, which EPA does not expect to be replicated for most uses of methylene chloride in general use adhesives. Such a highly industrialized and well-controlled environment would allow for establishment of a regulated area and effective monitoring. Additionally, EPA expects that, for this specific use, facilities would be able to successfully implement the WCPP, including exposure reduction to levels below which the unreasonable risk would not be present due primarily to the small quantities of methylene chloride used, as well as to the engineering and other controls in place. For example, in the vendor's process, ''methylene chloride is a component of the bonding cement that is moved through an entirely closed tubing system into a vented reservoir and vented enclosure for bonding and curing'' (Ref. 48). In this way, use of methylene chloride as a bonding agent in specialty batteries resembles other uses of methylene chloride for which the WCPP is being proposed such as laboratory use and paint and coating

removal by Federal agencies on safety-critical, corrosion-sensitive aircraft components. For this reason, EPA is proposing a WCPP for this particular subset of the methylene chloride commercial use in adhesives condition of use. EPA requests comment and further information regarding the Agency's expectations that the facilities in which this use is carried out are industrialized and highly controlled, and that existing or expected exposure reduction and workplace controls would be successful in achieving the requirements of the WCPP. EPA also notes that while the Agency is not aware of any similar use of methylene chloride as a bonding element for batteries for commercial spaceflight or other use, it requests comment and information on any such use.

For methylene chloride to be available for processing as a reactant and industrial and commercial use as a laboratory chemical, it must be manufactured (including imported), processed, and distributed in commerce. Likewise, as long as methylene chloride remains in use, it must also be disposed of. The manufacturing, processing, and disposal conditions of use for methylene chloride include, to some extent, the factors described earlier in this Unit favor the successful implementation of the WCPP (*e.g.,* they do not take place in the field (*i.e.,* they do not take place outside of a highly controlled environment) and are highly industrialized). Regulating upstream manufacturing and processing of methylene chloride is a key component of the supply-chain approach for risk management of commercial and consumer use of methylene chloride. Therefore, as discussed in Unit IV.A.1., EPA is proposing the WCPP for manufacture (including importing) and processing for certain uses, and disposal to ensure that workers are not subject to the unreasonable risk from methylene chloride as it moves throughout the supply chain.

Additionally, for methylene chloride, the strong precedent for dermal protection set by 29 CFR 1910.1052, in combination with the risk characterization in the 2020 Risk Evaluation for Methylene Chloride which indicated chemically resistant gloves, together with activity specific training are sufficient to address the unreasonable risk, led EPA to propose a dermal PPE requirement as part of the WCPP (Ref. 1).

As discussed in the Economic Analysis, there is some uncertainty relative to the burden of recycling and disposal facilities that would be required to implement a WCPP under this proposed regulation, particularly in implementing an air monitoring program. For example, disposal facilities may be receiving methylene chloride intermittently; however, facilities that currently receive methylene chloride-containing products or formulations for disposal may not receive methylene chloride in the future, as restrictions are finalized. As many of these facilities are small entities, EPA is requesting comment on what regulatory flexibilities (*e.g.,* extended compliance) may be afforded to entities that would continue to recycle and dispose of methylene chloride under the proposed regulation.

2. Prohibition

Because both EPA's 8-hour ECEL and 15-minute EPA STEL are significantly lower than the OSHA PEL and STEL, there is a high degree of uncertainty as to whether most industrial and commercial users will be able to comply with such a level and thus whether the unreasonable risk would be addressed. As discussed earlier in this Unit, this uncertainty, combined with the severity of the risks of methylene chloride and the prevalence of cost-effective alternative processes and products (Ref. 3), has led EPA to propose prohibitions, rather than compliance with the WCPP, for most industrial and commercial uses of methylene chloride, as outlined in Unit IV.A.2.

EPA also considered the potential for methylene chloride use to increase in particular sectors, such as vapor degreasing applications, where it has largely been phased out because of the well-established hazard (Refs. 3, 49). In order to prevent the potential for use of methylene chloride to increase in a sector that has already moved away from it, use of methylene chloride in vapor degreasing would be prohibited under the proposed regulatory and primary alternative regulatory action. The decline in use of methylene chloride was one of several considerations that led EPA to propose to prohibit use of methylene chloride in vapor degreasing.

Regarding industrial, commercial, and consumer uses of methylene chloride, TSCA section 6(a)(2) provides EPA with the authority to prohibit or otherwise restrict the manufacture (including import), processing, or distribution in commerce of a substance or mixture ''for a particular use'' to ensure that a chemical substance no longer presents unreasonable risk. For this rule, EPA proposes that ''for a particular use'' includes consumer use more broadly, as well as industrial and commercial use, which encompasses the individual industrial, commercial, and consumer uses evaluated in the 2020 Risk Evaluation for Methylene Chloride. Given the severity and ubiquitous nature of the risks identified in the 2020 Risk Evaluation for Methylene Chloride for all industrial, commercial, and consumer use, and noting that those conditions of use encompass all known, intended, and reasonably foreseen use of methylene chloride (other than use of methylene chloride in consumer paint and coating removers, which was subject to separate action under TSCA section 6 (84 FR 11420, March 27, 2019)), EPA proposes that prohibiting manufacture (including importing), processing, and distribution in commerce of methylene chloride for most industrial and commercial use and all consumer use is reasonable and necessary to eliminate the unreasonable risk of methylene chloride from industrial, commercial, and consumer use, including by precluding retailers from selling methylene chloride and methylene chloride-containing products to consumers for unspecified end-uses. (The proposed prohibitions would not extend to the use of methylene chloride in consumer paint and coating removers since manufacturing, processing, and distribution for that use are already prohibited.) EPA believes that any retailer selling methylene chloride-containing products to consumers for unspecified end-uses would be selling products for use by consumers for one of the consumer uses EPA evaluated in the 2020 Risk Evaluation for Methylene Chloride and found to drive the unreasonable risk for methylene chloride in the 2022 revised risk determination. EPA's proposed requirements to address unreasonable risk to consumers and bystanders to consumer use are described in Unit IV.A.

A key consideration regarding consumer uses is the role of retailers and other distributors. A retailer is defined in 40 CFR 751.103 as any entity that makes available a chemical substance or mixture to consumer end users, including through e-commerce internet sales or distribution, and is not specific to retailers of methylene chloride. Previously, in the 2019 methylene chloride TSCA section 6(a) risk management rulemaking addressing consumer use of methylene chloride in paint and coating removal (Ref. 37), EPA prohibited (*see* 40 CFR 751.105(c)) retailers from distributing in commerce paint and coating removers containing methylene chloride, as well as distribution to retailers under 40 CFR 751.105(b) (Ref. 37). To meet the same

goal of protecting consumers from accessing methylene chloride-containing products that could pose unreasonable risk, for a broader range of consumer use, EPA considered using a similar provision to ensure that retailers will not be able to purchase methylene chloride for sale or distribution to consumers, or to make available to consumers products containing methylene chloride. This provision aims to help prevent the use of methylene chloride in non-industrial settings or for off-label uses by consumers. For these reasons, as described in Unit IV.A.3., EPA's proposal to address unreasonable risk from methylene chloride includes prohibition on the distribution in commerce of methylene chloride to and by retailers.

3. Primary Alternative Regulatory Option

EPA acknowledges that for some of the occupational uses that it is proposing to prohibit, there may be some activities or facilities that could implement workplace protection requirements necessary to ensure that exposure remain below the ECEL and EPA STEL. In some cases, they may be able to undertake more extensive risk reduction measures than EPA currently anticipates. Therefore, for EPA's primary alternative regulatory action described in Unit IV.B., EPA is considering and requesting comment on a WCPP, including requirements to ensure exposures remain below an ECEL and EPA STEL, for some conditions of use of methylene chloride in addition to those conditions of use which are proposed to be subject to a WCPP under the proposed regulatory action (*i.e.,* those additional uses listed in Unit IV.B.). This includes conditions of use that have not resulted in documented acute fatalities, where reasonably available information suggests minimal ongoing use, where reasonably available information suggests use of methylene chloride may increase if other solvents are significantly restricted for that use such as for other solvents undergoing risk evaluation under TSCA section 6(b), and where the regulated entities may have fewer challenges implementing requirements to meet an ECEL and EPA STEL because work activities may occur in sophisticated facilities or take place in a closed system. The additional conditions of use which would be subject to WCPP under the primary alternative regulatory action described in this notice meet all of these criteria. However, EPA was not able to identify reasonably available information such as monitoring data or detailed activity descriptions to indicate with certainty that relevant regulated entities for these conditions of use could sufficiently mitigate identified unreasonable risk through a WCPP. Due to this uncertainty, EPA is requesting comment on the ways in which methylene chloride may be used in the additional conditions of use that would be subject to a WCPP under the primary alternative regulatory action, and the degree to which users of methylene chloride in these sectors could successfully implement the WCPP, including requirements to meet an ECEL and EPA STEL, as described in Unit IV.A.1., for the conditions of use listed for the primary alternative regulatory action in Unit IV.B.

Additionally, As discussed in Unit V.A.1. and 2., EPA acknowledges that for the occupational uses for which it is proposing the WCPP, there are varying degrees of uncertainty as to whether industrial and commercial owners and operators are able implement workplace protection requirements necessary to ensure that exposures remain below the ECEL and EPA STEL. For this reason, EPA's alternative regulatory action would prohibit two uses for which EPA is proposing the WCPP (industrial or commercial use for paint and coating removal from safety-critical, corrosion-sensitive components of aircraft and spacecraft by Federal agencies and their contractors; and industrial or commercial use as a bonding agent in the production of specialty batteries for military or space applications by Federal agencies and their contractors). Because of the importance of these uses for national security and critical infrastructure, EPA's alternative regulatory action would include a time-limited exemption under TSCA section 6(g) from the prohibition for these two uses, for a period of 10 years, during which time the regulated entity would comply with a WCPP to the extent practicable. The analyses for these exemptions are in Unit IV.B.

4. Risk Management Requirements Considered but Not Proposed

Since it is unlikely that all facilities with occupational exposures to methylene chloride would be able to implement a WCPP, including requirements to meet an ECEL and EPA STEL, EPA also examined the extent to which a certification and limited access program restricting methylene chloride use to trained and licensed users could ensure that only certain workers employed by a facility would be able to purchase and subsequently use methylene chloride. Under a limited access program, entities would submit a self-certification to the distributor at the point of purchasing the products. The self-certification could consist of a statement indicating that the facility is implementing a WCPP to control exposures to methylene chloride, as well as a connection between the purchaser and the facility (*e.g.,* a current employee). As discussed earlier in this Unit, because of the severity of acute risks from methylene chloride which could potentially lead to fatalities, and the high potential for diversion of commercial products of methylene chloride for non-commercial use, EPA has significant concerns regarding the appropriateness of a certification and limited access program for methylene chloride. These concerns are supported by previous comments received as part of public comments on the Advance Notice of Proposed Rulemaking for Methylene Chloride Commercial Paint and Coating Removal: Training, Certification and Limited Access Program expressing unease in implementing a training, certification and limited access program for methylene chloride (Ref. 50).

Several commenters on the Advance Notice of Proposed Rulemaking for Methylene Chloride Commercial Paint and Coating Removal: Training, Certification and Limited Access Program identified what they believe would be insufficiencies in training, certification, and limited access to methylene chloride (Ref. 50). Commenters expressed concerns that this type of program would not provide enough safeguards and would not eliminate unreasonable risk to workers. Commenters were skeptical of a training program's efficacy noting that deaths related to methylene chloride exposure still occurred with workers who were trained and wearing PPE (Ref. 50).

Several commenters believed that a training, certification, and limited access program would not be feasible. A commenter suggested that an effective training model to examine is the Alaska Hazardous Paint Certification program, which includes hands-on training and practice in local exhaust ventilation techniques and equipment and PPE gloves, clothing, and respirators. In the Alaskan program, a minimum of 16 hours for initial training, with at least 6 hours of hands-on training as well as 8-hour refresher class every 3 years, are necessary requirements. Moreover, commenters expressed that a robust training, certification, and limited access program would include multiple layers of training and certification and supporting documentation. A commenter also highlighted that ''small businesses do not have the same resources for implementing safety

programs as larger ones, yet they account for a very large percentage of [methylene chloride] users.'' In light of these comments, EPA decided to account for uncertainty related to ECEL implementation and compliance for certain uses by proposing prohibitions on those uses, rather than proposing a self-certification and limited access program. Nonetheless, EPA is requesting comment on the inclusion of a certification, training, and limited access program for any uses that would be subject to a WCPP, in addition to the requirements outlined in Unit IV.A.1.

Another option that EPA considered for occupational conditions of use was requiring specific, prescribed engineering controls, administrative controls, or PPE to reduce exposures to methylene chloride in occupational settings. These prescriptive requirements would be supported by information in the 2020 Risk Evaluation for Methylene Chloride. As described in Units III.A.1. and 2., EPA received input during required consultations and additional engagement that options that align with the hierarchy of controls (*i.e.,* elimination and substitution of hazards in the workplace), which could be accomplished through the implementation of a WCPP with a risk-based exposure limit, should be preferred over prescriptive controls (*Refs. 9, 51*). Inadequacy of engineering, administrative, and PPE control measures to lower exposure below the exposure limit would mean that elimination or substitution would be the only viable methods of addressing unreasonable risk, creating in effect a de-facto prohibition. Additionally, prescriptive controls present significant uncertainties related to their feasibility and consistency of proper use.

EPA determined that such prescriptive controls (*i.e.,* engineering or administrative controls, or PPE) may not be able to eliminate unreasonable risk for some conditions of use when used in isolation. In the 2020 Risk Evaluation for Methylene Chloride, many conditions of use still drive the unreasonable risk even with the application of air-supplied APF 50 respirators (Ref. 1). Additionally, where data were reasonably available, EPA modeled the change in air rates that would be needed to eliminate unreasonable risk and found that in some cases it was not possible to eliminate unreasonable risk with changes in airflow alone, while in other cases the change in airflow needed would not be feasible to achieve (Ref. 1). Because of the uncertainty regarding the feasibility of exposure reductions through prescriptive controls alone, EPA determined that a WCPP, including requirements to meet an ECEL and EPA STEL (which would be accompanied by monitoring requirements) in tandem with the implementation of engineering controls, administrative controls, and/or PPE as elements of the program, as appropriate, would more successfully reduce exposure so that the unreasonable risk is addressed. For occupational conditions of use where compliance with the WCPP is unlikely to eliminate the unreasonable risk driven by those conditions of use, prohibitions (rather than prescribed controls) would be more appropriate to ensure that methylene chloride does not present unreasonable risk under the conditions of use.

EPA also considered limiting the weight fraction of methylene chloride in consumer products and conducted an analysis using the Consumer Exposure Models for the 2020 Risk Evaluation for Methylene Chloride to estimate whether this would reduce risks from consumer conditions of use that drive the unreasonable risk for methylene chloride, such that they no longer drive the unreasonable risk (Ref. 52). For all consumer conditions of use, the weight fraction or concentration identified through this modeling that would address the unreasonable risk through inhalation or dermal pathways was so low that it was highly unlikely that methylene chloride would still serve its functional purpose in the formulation. EPA thus concluded that a weight fraction limit would essentially function as a prohibition yet with a greater amount of uncertainty regarding compliance and no increased benefit to consumer users; it was therefore not a preferred option for consumer uses. (Refs. 1, 52).

5. Additional Considerations

After considering the different regulatory options under TSCA section 6(a), alternatives (described in Unit III.B.4.), compliance dates, and other requirements under TSCA section 6(c), EPA developed the proposed regulatory action described in Unit IV.A. to address the unreasonable risk from methylene chloride. To ensure successful implementation of this proposed regulatory action, EPA considered other requirements to support compliance with the proposed regulations, such as requiring monitoring and recordkeeping to demonstrate compliance with the WCPP, or downstream notification regarding the prohibition on manufacturing, processing, and distribution in commerce of methylene chloride, and products containing methylene chloride, for consumer use. These proposed requirements are described in Unit IV.A.

Under TSCA section 6(g)(1)(B), EPA may grant an exemption from a requirement of a TSCA section 6(a) rule for a specific condition of use of a chemical substance or mixture if compliance with the requirement would significantly disrupt the national economy, national security, or critical infrastructure. Based on reasonably available information, EPA has found that a TSCA section 6(g) exemption is warranted for certain uses. Therefore, EPA is proposing to grant exemptions from the rule requirements under TSCA section 6(g), as detailed in Unit IV.A.5. Unit IV.A.5. also provides a description of the request for exemption from the rule requirements that EPA is not proposing to grant. TSCA section 6(g) assumes a particular use cannot continue such that the risks are no longer unreasonable. However, EPA notes that information may be provided during the public comment period indicating this may not be case. For example, new information may demonstrate compliance with a WCPP is possible.

As required under TSCA section 6(d), any rule under TSCA section 6(a) must specify mandatory compliance dates, which shall be as soon as practicable with a reasonable transition period, but no later than 5 years after the date of promulgation of the final rule (except in the case of a use exempted under TSCA section 6(g)). For ban or phase-out requirements, EPA must specify mandatory compliance dates for the start of ban or phase-out requirements, which must be as soon as practicable but no later than 5 years after the date of promulgation of the final rule (except in the case of a use exempted under TSCA section 6(g)), and for full implementation of ban or phase-out requirements, which must be as soon as practicable. These compliance dates are detailed in Unit IV.A. and IV.B.

B. Consideration of Alternatives in Deciding Whether To Prohibit or Substantially Restrict Methylene Chloride

Under TSCA section 6(c)(2)(C), in deciding whether to prohibit or restrict in a manner that substantially prevents a specific condition of use of a chemical substance or mixture, and in setting an appropriate transition period for such action, EPA must consider, to the extent practicable, whether technically and economically feasible alternatives that benefit human health or the environment, compared to the use so proposed to be prohibited or restricted,

will be reasonably available as a substitute when the proposed prohibition or other restriction takes effect. To that end, in addition to an Economic Analysis (Ref. 3), EPA conducted an Alternatives Assessment, using reasonably available information (Ref. 40).

For this assessment, EPA identified and analyzed alternatives to methylene chloride in products relevant to industrial, commercial, and consumer conditions of use proposed to be prohibited or restricted, even if such restrictions are not anticipated to substantially prevent the condition of use. EPA is aware of the lack of viable alternatives to methylene chloride for several conditions of use and considered that information to the extent practicable in the development of the regulatory options as described in Unit III.B.3.

As an example, EPA's consideration of the lack of viable alternatives to processing methylene chloride in the manufacture of HFC–32 taken in context with the risk estimates, monitoring data, and expected work practices informed EPA's proposed approach of WCPP for this condition of use. Similarly, when proposing WCPP for industrial or commercial use of methylene chloride for paint and coating removal from mission- and safety-critical, corrosion sensitive components of aircraft and spacecraft by Federal agencies or their contractors, EPA considered how the safety-critical, corrosion-sensitive components would be so negatively affected by the use of technically incompatible, substitute paint removal chemicals or methods that the safe performance of the aircraft could be compromised. There are no known substitutes for methylene chloride for this particular use. As discussed in the preamble to the 2017 NPRM, DOD has actively sought to reduce its use of methylene chloride in paint and coating removal since 1990. DOD has replaced most of its usage of methylene chloride for paint and coating removal with mechanical methods, benzyl alcohol products, other solvents, and laser ablation. In an effort to reduce the use of all hazardous air pollutants (HAPs) such as methylene chloride, the Army has conducted tests to identify and test the effectiveness of HAP-free paint and coating removers on military high-performance coatings (Ref. 53). In another example, the Air Force in December 2015 significantly reduced the use of methylene chloride for removing coatings on flight control parts and is now using substitute chemical products, primarily those with benzyl alcohol formulations (Ref. 48). Similarly, the Navy has transitioned substitutes to paint methylene chloride use when alternatives with equal performance are identified. For DOD, this evaluation of and transition to safer alternatives is ongoing and substitutions are approved where technically feasible and commensurate with performance and mission-readiness requirements.

DOD continues to pursue potential substitutes for methylene chloride. However, for safety-critical, corrosion-sensitive components on military aviation, including safety-critical components, DOD has found that currently available substitute chemicals for paint and coating removal have one or more technical limitations. These include the inability to effectively remove specific military high performance or chemical resistant coatings and incompatibility with underlying metallic, nonmetallic, and composite materials, resulting in material damage to critical components. In addition, substitute chemicals or methods currently available do not support DOD's need for coating removers that enable critical safety inspection, non-destructive inspection, material assessment, or field repair processes. For example, benzyl alcohol has replaced methylene chloride in many DOD paint and coating removal applications. However, acid benzyl alcohol formulations, which work more quickly than alkaline formulations, cannot be used on high-strength steel or magnesium metals because there is the potential for resulting hydrogen embrittlement (Ref. 54). In DOD's experience, the alkaline benzyl alcohol formulations require 25 to 50% more time than methylene chloride and are more labor-intensive, particularly on very thick coatings or polyurethane coatings with water-based primers (Ref. 54). In addition, the reaction rate for alkaline benzyl alcohol formulations is very slow when the temperature is below 65 degrees, so paint and coating removal in cold locations with this alternative must be performed in a heated area (Ref. 54). As described earlier in Unit V.A.1., aircraft and other assets operated by DHS, NASA, and the FAA also contain safety-critical, corrosion-sensitive components of the type described by DOD, and suitable alternatives to methylene chloride are similarly not available for all applications. Substitute chemicals for paint and coating removal for safety-critical, corrosion-sensitive components are not technically feasible as they have one or more technical limitations; are incompatible with underlying materials; and/or do not support the coating removal requirements of safety inspections, non-destructive inspection, material assessment, or field repair processes. Therefore, EPA has evaluated the effect that a significant restriction on the use of methylene chloride would have for industrial and commercial paint and coating removal by DOD, DHS, NASA, and FAA and concluded that under TSCA section 6(c)(2)(C) that technologically and economically feasible alternatives that benefit health or the environment would not be readily available as a substitute. Due to the essential nature of this subset of activities under industrial or commercial use of methylene chloride as a paint and coating remover, EPA's consideration of the availability of technologically and economically feasible alternative was one factor in the proposed determination not to prohibit manufacture, processing, distribution in commerce, and use of methylene chloride for paint and coating removal for safety-critical, corrosion sensitive components.

As an additional example, EPA considered the information provided regarding a lack of viable alternatives for the use of methylene chloride in chemical bonding of acrylic and polycarbonate, specifically for specialty batteries for use in military and space applications. As described earlier in Unit V.A., EPA received information from a stakeholder, as part of a request for an exemption under TSCA section 6(g), describing how methylene chloride is uniquely suited as a bonding agent for these specialty batteries. Upon receipt of the TSCA section 6(g) exemption request summarized in this unit, EPA consulted with NASA, and NASA provided information on its effort to screen alternative adhesives for the chemical bonding of acrylic and polycarbonate. Specifically, NASA identified ten materials and completed screening-level testing for six of those ten materials as of the publication of this proposed rule. Results submitted to EPA indicate that none of the materials tested met the technical requirements for chemical bonding applications (Ref. 47). While vendors submitting the TSCA section 6(g) exemption request predicted a timeline of at least one year to find a replacement for the bonding agent for specialty batteries, NASA noted that the projected substitution timeline applies only to the vendor's own battery production process. The total timeline, including qualification testing for human spaceflight, is a complex, multi-year process that could only begin after the vendor's substitution was completed.

NASA additionally emphasized that losing access to qualified high-performance substances such as specialty batteries would have immediate effects for currently ongoing space-flight programs, including the Artemis Program, with the potential to introduce an unacceptable level of risk to crew, vehicle, and viability of the program. Qualification of materials for human spaceflight can take years and significant resources to accomplish, while potentially impacting program production schedule and launch manifest.

NASA has emphasized that specific Artemis components have been designed to work with the identified specialty batteries with polycarbonate casing bonded using methylene chloride. The safety and reliability of these batteries has been established in uncrewed Artemis I test missions, and the next flights will take humans back to the Moon. A change of battery material would require recertification of multiple hardware pieces, retesting of crew and vehicle safety, and disrupt parts production and launch schedules that are already underway. NASA notes that stockpiling of batteries would not be an option, as batteries have a 2-year shelf life.

For this use, EPA has concluded under TSCA section 6(c)(2)(C) that technologically and economically feasible alternatives that benefit health or the environment would not be readily available as a substitute. Due to the essential nature of this subset of activities under industrial or commercial use of methylene chloride as an adhesive, a paint and coating remover, EPA's consideration of the availability of technologically and economically feasible alternative was one factor in the proposed determination not to prohibit manufacture, processing, distribution in commerce, and use of methylene chloride as a bonding agent in the production of specialty batteries for use in military and space applications.

EPA also notes that, for some conditions of use, EPA was unable to identify products currently available for sale that contain methylene chloride. EPA is soliciting comments on whether there are actually products in use or available for sale relevant to these conditions of use that contain methylene chloride at this time, so that EPA can ascertain whether there are alternatives that benefit human health or the environment. These conditions of use are detailed in the Alternatives Assessment (Ref. 40).

For conditions of use for which products currently containing methylene chloride were identified, EPA identified several hundred commercially available alternative products that do not contain methylene chloride, and listed in the Alternatives Assessment, to the extent practicable, their unique chemical components, or ingredients. For each of these chemical components or ingredients, EPA identified whether it functionally replaced methylene chloride for the product use and screened product ingredients for human health and environmental hazard, as well as identified flammability and global warming potential where information was reasonably available (Ref. 40). EPA then assigned a rating to the human health and environmental hazards, using a methodology described in the Alternatives Assessment document. EPA identified 65 total alternative products in the paint and coating remover category, of which furniture refinishing is a subcategory (Ref. 48). As described in the Economic Analysis, while not all of these alternative products may meet the specific use for some furniture refinishing uses, mechanical or thermal methods may be non-chemical alternatives to using products containing methylene chloride for paint and coating removal. EPA did not find barriers to pricing, customer satisfaction, coating removal performance, or content (specifically volatile organic compounds, or VOC) that may be caused by restricting the use of methylene chloride in this product category in general. For fire safety, the restriction of methylene chloride in this product category is met by products with very high flash points, or products with evaporation barriers that restrict vapor generation (Ref. 3). Therefore, EPA finds that there are technological and economically feasible alternatives in the marketplace.

In general, EPA identified products containing ingredients with a lower hazard screening rating than methylene chloride for certain endpoints, while some ingredients presented higher hazard screening ratings than methylene chloride (Ref. 40). These alternative hazard screening ratings are described in detail in the Alternatives Assessment grouped under common product use categories (Ref. 40). EPA has therefore, pursuant to TSCA section 6(c)(2)(C), considered, to the extent practicable, whether technically and economically feasible alternatives that benefit human health or the environment, compared to the use proposed to be prohibited or restricted, will be reasonably available as a substitute when the proposed prohibition or other restriction becomes effective. EPA is additionally requesting comment on the alternatives analysis as a whole.

VI. TSCA Section 6(c)(2) Considerations

A. Health Effects of Methylene Chloride and the Magnitude of Human Exposure to Methylene Chloride

EPA's analysis of the health effects of methylene chloride is in the 2020 Risk Evaluation for Methylene Chloride (Ref. 1). A summary is presented here.

The 2020 Risk Evaluation for Methylene Chloride identified six non-cancer adverse health effects: effects from acute/short-term exposure, liver effects, immune system effects, nervous system effects, reproductive/developmental effects, and irritation/burns (Ref. 1). The 2020 Risk Evaluation for Methylene Chloride also identified cancer hazards from carcinogenicity as well as genotoxicity, particularly for liver and lung tumors (Ref. 1).

Among the non-cancer adverse health effects, the 2020 Risk Evaluation for Methylene Chloride identified neurotoxicity indicative of central nervous system depression as a primary effect of methylene chloride in humans following acute inhalation exposures (Ref. 1). Identified central nervous system depressive symptoms include drowsiness, confusion, headache, dizziness, and neurobehavioral deficits when performing various tasks. Central nervous system depressant effects can result in loss of consciousness and respiratory depression, possibly resulting in irreversible coma, hypoxia, and eventual death (Ref. 1).

Additionally, the 2020 Risk Evaluation for Methylene Chloride identified the liver as a sensitive target organ for inhalation exposure (Ref. 1). For human health risks to workers and consumers, EPA identified cancer and non-cancer human health risks. Risks from acute exposures include central nervous system risks such as central nervous system depression and a decrease in peripheral vision, each of which can lead to workplace accidents and are precursors to more severe central nervous system effects such as incapacitation, loss of consciousness, coma, and death. For chronic exposures, EPA identified risks of non-cancer liver effects as well as liver and lung tumors (Ref. 1).

The 2020 Risk Evaluation for Methylene Chloride also identified several irritation hazards from methylene chloride exposure. Following exposures to methylene chloride vapors, irritation has been observed in the respiratory tract and eyes. Direct contact with liquid methylene chloride on the

skin has caused chemical burns in workers and gastrointestinal irritation in individuals who accidentally ingested methylene chloride (Ref. 1).

Regarding the magnitude of human exposure, one factor EPA considers for the conditions of use that drive unreasonable risk is the size of the exposed population, which, for methylene chloride, EPA estimates is 785,000 workers, 135,000 occupational non-users, and 15 million consumers (Ref. 1).

In addition to these estimates of numbers of workers, occupational non-users, consumers, and bystanders to consumer use directly exposed to methylene chloride, EPA recognizes there is exposure to the general population from air and water pathways for methylene chloride. (While bystanders are individuals in proximity to a consumer use of methylene chloride, fenceline communities are a subset of the general population who may be living in proximity to a facility where methylene chloride is being used in an occupational setting). As mentioned in Unit II.D., EPA has separately conducted a screening approach to assess whether there may be risks to the general population from these exposure pathways. While the use of this screening approach indicates some level of risk to fenceline communities, EPA cannot determine, without further data and quantitative analysis, whether the risk to these communities would be an unreasonable risk. This Unit summarizes the results of that fenceline analysis. Although EPA is not making a determination of unreasonable risk based on the fenceline screening analysis, the proposed regulatory action described in Unit IV. is expected to reduce the risks identified in the screening approach.

As described in Unit II.D., EPA's analysis was presented to the SACC peer review panel in March 2022, and EPA plans to consider SACC feedback (including the SACC recommendation to EPA to consider multiple years of release data to estimate exposures and associated risks) and make decisions regarding how to assess general population exposures in upcoming risk evaluations, such as for 1,4-dioxane and for the forthcoming 20 High Priority Substances. For methylene chloride, EPA recognizes that a key input into the fenceline assessment was data on releases from the most recent Toxics Release Inventory (TRI) reporting year and that the use of more than one year of data could result in different conclusions. Accordingly, in this Unit EPA presents the results of its analysis of the extent to which including more than one year of TRI data impacts EPA's conclusions regarding fenceline risks (Ref. 55).

EPA's fenceline analysis for the water pathway for methylene chloride, based on methods presented to the SACC, did not find risks from incidental oral and dermal exposure to surface water, and while EPA found one facility which indicated acute risk from drinking water, additional assessment of this location identified that there are no source drinking water intakes for public drinking water systems in proximity to the facility estimated to have risk, thereby making risks to the general population through the drinking water pathway unlikely.

Additionally, EPA's analysis, as presented to the SACC, identified 14 facilities, representing nine conditions of use, with some indication of expected exposure and associated cancer risk to receptors within select distances evaluated from 5 to 100 meters from the inhalation pathway. Those nine conditions of use are: industrial and commercial use in non-aerosol degreasers and cleaners; industrial and commercial use as a solvent for in-line vapor degreasing; industrial and commercial use as a solvent for cold cleaning; industrial and commercial use in aerosol spray degreasers and cleaners; industrial and commercial use in cellulose triacetate film production; industrial and commercial use in plastic and rubber product manufacturing; processing: incorporation into a formulation, mixture, or reaction product; industrial and commercial use as a propellant and blowing agent; and industrial and commercial use in paint and coating removers. Under the proposed regulatory action described in Unit IV.A., all of the conditions of use with an indication of risk from 5 to 100 meters would be prohibited, with the exception of processing: incorporation into a formulation, mixture, or reaction product.

Of those 14 facilities with indicated risk, only three had an indication of risk out to 100 meters from a releasing facility. Those three facilities represent three total conditions of use: industrial and commercial use in non-aerosol degreasers and cleaners; industrial and commercial use for plastic product manufacturing; and industrial and commercial use as a propellant and blowing agent. Under the proposed regulatory action described in Unit IV.A., these three conditions of use, as well as all of the conditions of use with an indication of risk at 5 to 100 meters would be prohibited, with the exception of processing: incorporation into a formulation, mixture, or reaction product.

Following SACC feedback, EPA applied a slightly modified pre-screening methodology to evaluate 6 years of methylene chloride release data (2015 through 2020 Toxic Release Inventory data as well as the 6-year average of that data) for those 14 facilities where there was an indication of exposure and associated risk via the ambient air pathway. The multi-year analysis further supported EPA's findings (indications of exposure and associated risks) from the original analysis for five of the 14 facilities, representing four conditions of use, which indicated exposure and associated risk at 100 meters from a releasing facility. Those four conditions of use are: processing: incorporation into a formulation, mixture, or reaction product; industrial and commercial use in non-aerosol degreasers and cleaners; industrial and commercial use for plastic product manufacturing; and industrial and commercial use as a propellant and blowing agent. For the additional nine facilities, the multi-year analysis did not indicate risks at 100 meters. The multi-year analysis incorporated 6 years of TRI data and found that while the annual releases may vary by as much as a factor of 10, the overall estimated exposure concentrations and associated risk calculations varied by no more than three times. Additionally, typical cancer benchmarks used by EPA and other regulatory agencies are an increased cancer risk above benchmarks ranging from 1 in 1,000,000 to 1 in 10,000 (*i.e.,* 1×10^{-6} to 1×10^{-4}), in some cases depending on the subpopulation exposed. (see, *e.g.,* EPA's interpretation set forth in 54 FR 38044, September 14, 1989) which discusses the use of benchmarks for purposes of section 112 of the Clean Air Act (CAA); see also EPA's interpretation of the upper bound of acceptable risk and the preferred benchmark described in the Letter of Concern regarding EPA Complaint Nos. 01R–22–R6, 02R–22–R6, and 04R–22–R6 see page 3 footnotes 5 and 6 and page 6 (Ref. 56)). In this fenceline analysis for the ambient air pathway for methylene chloride, estimates of risk to fenceline communities were calculated using 1×10^{-6} as the benchmark for cancer risk in fenceline communities. While EPA is unable to determine, based on the screening level fenceline analysis, whether risks to the general population drive the unreasonable risk, as a matter of risk management policy EPA considers the range of 1×10^{-6} to 1×10^{-4} as the appropriate benchmark

for increased cancer risk for the general population, including fenceline communities. It is preferable to have the air concentration of methylene chloride result in an increased cancer risk closer to the 1×10^{-6} benchmark, with the 1×10^{-4} benchmark generally representing the upper bound of acceptability for estimated excess cancer risk. The benchmark value is not a bright line, and the Agency considers a number of factors when determining unreasonable risk, such as the endpoint under consideration, the reversibility of effect, exposure-related considerations (*e.g.,* duration, magnitude, or frequency of exposure, or population exposed). Under the proposed regulatory action described in Unit IV.A., all of the conditions of use with an indication of risk at 100 meters would be prohibited, with the exception of processing: incorporation into a formulation, mixture, or reaction product.

Although the initial analysis presented to SACC and the multi-year analysis conducted in response to SACC feedback for methylene chloride indicated exposure and associated risks to select receptors within the general population at particular facilities, EPA is unable to formally determine with this analysis whether those risks drive the unreasonable risk. However, EPA believes that the prohibitions being proposed for manufacturing (including importing), processing, and distribution in commerce for 45 of 53 uses, including all consumer use and most commercial use, would address the majority of exposures to the general population. Of the 14 facilities which indicated some risk for methylene chloride, under the proposed regulatory option, only 3 could continue to use methylene chloride (all for processing: incorporation into formulation, mixture, or reaction product), and thus exposures to the fenceline at the remainder of those facilities would be addressed.

Under the proposed rule, only ten conditions of use would continue, namely domestic manufacturing (for downstream uses that would continue under the WCPP); import; processing as a reactant; processing: incorporation into a formulation, mixture, or reaction product; processing as repackaging; processing as recycling; industrial and commercial use as a laboratory chemical; industrial or commercial use in aerospace and military paint and coating removal from safety-critical, corrosion-sensitive components by Federal agencies and their contractors, industrial or commercial use as a bonding agent for acrylic and polycarbonate in mission-critical military and space vehicle applications, including in the production of specialty batteries for such by Federal agencies and their contractors, and disposal. Of those conditions of use, only processing: incorporation into formulation, mixture, or reaction product has risk indicated at the fenceline, and based on land use analysis, there do not appear to be communities currently located at the fencelines (Ref. 57). Additionally, over time this condition of use can reasonably be expected to decline because, while processing into a formulation, mixture, or reaction product would continue under a WCPP, all downstream distribution and use of formulations, mixtures, or reaction products (except for laboratory use and any time limited exemptions that could be established under TSCA section 6(g)) would be prohibited.

For all ten conditions of use that would remain ongoing, the proposed rule would require exposure controls via implementation of a WCPP as described in Unit IV.A.1. In the instances where efforts to reduce exposures in the workplace to levels below the ECEL and EPA STEL could lead to adoption of engineering controls that ventilate more methylene chloride outside, EPA believes this potential exposure would be limited as a result of the existing National Emission Standards for Hazardous Air Pollutants (NESHAPs) for methylene chloride for these conditions of use under the CAA (applicable NESHAPs: 40 CFR part 63 subpart F, Synthetic Organic Chemical Manufacturing Industry; 40 CFR part 63 subpart DD, Off-Site Waste and Recovery Operations; 40 CFR part 63 subpart VVV, Publicly Owned Treatment Works; and 40 CFR part 63 subpart VVVVVV, the NESHAP for Chemical Manufacturing Area Sources) and that any exceedances are an enforcement issue. Thus, EPA's proposal to prohibit manufacture, processing, and distribution in commerce of methylene chloride for all consumer use and most industrial and commercial use, and to prohibit most industrial and commercial use of methylene chloride, is expected to largely address the risks identified in the screening analysis to any general population or fenceline communities close to facilities engaging in methylene chloride use. EPA therefore does not intend to revisit the air pathway for methylene chloride as part of a supplemental risk evaluation.

B. Environmental Effects of Methylene Chloride and the Magnitude of Environmental Exposure to Methylene Chloride

EPA's analysis of the environmental effects of and the magnitude of exposure of the environment to methylene chloride is in the 2020 Risk Evaluation for Methylene Chloride (Ref. 1). The unreasonable risk determination for methylene chloride is based solely on risks to human health; based on the 2020 Risk Evaluation for Methylene Chloride, EPA determined that exposures to the environment did not drive the unreasonable risk.

For all conditions of use, the unreasonable risk determination is not driven by exposures via water for acute and chronic exposures to methylene chloride for amphibians, fish, and aquatic invertebrates. To characterize aquatic organisms' exposure to methylene chloride, modeled data were used to represent surface water concentrations near facilities actively releasing methylene chloride to surface water, and monitored concentrations were used to represent ambient water concentrations of methylene chloride. EPA considered the biological relevance of the species to determine the concentrations of concern for the location of surface water concentration data to produce risk quotients, as well as frequency and duration of the exposure. While some site-specific risk quotients, calculated from modeled release data from facilities conducting recycling, disposal, and wastewater treatment plant activities, indicated risk, uncertainties in the analysis were considered. These uncertainties include limitations in data, since monitoring data were not available near facilities where methylene chloride is released, and data incorporated from the Toxics Release Inventory, which does not include release data for facilities with fewer than ten employees. As an additional uncertainty, the model does not consider chemical fate or hydrologic transport properties and may not consider dilution in static water bodies. Additional analysis indicated that model outputs, rather than monitoring estimates, may best represent concentrations found at the point of discharge from the facilities (Ref. 1).

The toxicity of methylene chloride to sediment-dwelling invertebrates is similar to its toxicity to aquatic invertebrates. Methylene chloride is most likely present in the pore waters and not absorbed to the sediment organic matter because methylene chloride has low partitioning to organic matter. The concentrations in sediment

pore water are similar to or less than the concentrations in the overlying water, and concentrations in the deeper part of sediment are lower than the concentrations in the overlying water. Therefore, the risk estimates, based on the highest ambient surface water concentration, do not support an unreasonable risk determination to sediment-dwelling organisms from acute or chronic exposures. There is uncertainty due to the lack of ecotoxicity studies specifically for sediment-dwelling organisms and limited sediment monitoring data (Ref. 1).

Based on its physical-chemical properties, methylene chloride does not partition to or accumulate in soil. Therefore, the physical chemical properties of methylene chloride do not support an unreasonable risk determination to terrestrial organisms.

C. Benefits of Methylene Chloride for Various Uses

Methylene chloride is a solvent used in a variety of industrial, commercial, and consumer use applications, including adhesives, pharmaceuticals, metal cleaning, chemical processing, and feedstock in the production of refrigerant hydrofluorocarbon-32 (HFC–32) (82 FR 7467). Specifically, methylene chloride use in commercial paint and coating removal provides benefits for some users because it is readily available and works quickly and effectively on nearly all coatings without damaging most substrates. For a variety of additional uses (*e.g.,* adhesives, adhesive removers, cold pipe insulation, welding anti-spatter spray) methylene chloride is relatively inexpensive, highly effective, evaporates quickly, and is not flammable, making it a popular and effective solvent for many years. As of 2016, the leading applications for methylene chloride are as a solvent in the production of pharmaceuticals and polymers and paint removers, although recent regulations and voluntary industry actions are expected to decrease the chemical's use in the paint remover sector (40 CFR part 751, subpart B). The total aggregate production volume ranged from 100 to 500 million pounds between 2016 and 2019 according to CDR (Ref. 8).

D. Reasonably Ascertainable Economic Consequences of the Proposed Rule

1. Likely Effect of the Rule on the National Economy, Small Business, Technological Innovation, the Environment, and Public Health.

The reasonably ascertainable economic consequences of this proposed rule include several components, all of which are described in the Economic Analysis for this proposed rule (Ref. 3). With respect to the anticipated effects of this proposed rule on the national economy, EPA considered the number of businesses and workers that would be affected and the costs and benefits to those businesses and workers and did not find that there would be an impact on the national economy (Ref. 3). The economic impact of a regulation on the national economy becomes measurable only if the economic impact of the regulation reaches 0.25% to 0.5% of Gross Domestic Product (GDP) (Ref. 58). Given the current GDP, this is equivalent to a cost of $40 billion to $80 billion. Therefore, because EPA has estimated that the non-closure-related cost of the proposed rule would range from $13.2 million annualized over 20 years at a 3% discount rate and $14.5 million annualized over 20 years at a 7% discount rate, EPA has concluded that this rule is highly unlikely to have any measurable effect on the national economy (Ref. 3). In addition, EPA considered the employment impacts of this proposed rule, and found that the direction of change in employment is uncertain, but EPA expects the short-term and longer-term employment effects to be small. To that end, EPA is requesting public comment on short term and longer-term employment effects from this proposal.

Of the small businesses potentially impacted by this proposed rule, 98% (225,248 firms) are expected to have impacts of less than 1% to their firm revenues (rounded metric), 0.1% (118 firms) are expected to have impacts between 1 and 3% to their firm revenues (rounded metric), and 0.03212.1% (4,905 firms) are expected to have impacts greater than 3% to their firm revenues (rounded metric). Excluding end-users, total estimated impacts on small businesses are $9.3 million (annualized using a 7 percent discount rate). End users with economic and technologically feasible alternatives available do not have economic impacts that are estimated beyond rule familiarization costs ($1.8 million in total costs, annualized using a 7 percent discount rate). Thus, the estimated total impact of the rule on small businesses ranges from $11.1 to $73.6 million (see section 7.11 of the Economic Analysis). Commercial paint and coating removers are one product type where for which methylene chloride is likely the most effective product for many applications. In particular, alternatives to methylene chloride paint and coating removers in commercial furniture refinishing may not be as cost-effective for this use because they may take more time to achieve the desired outcome or require alternate processes affecting operations that present challenges for certain businesses. The impact of a prohibition of methylene chloride for furniture refinishing could result in the closure of an unknown number of affected entities or business lines. As discussed in Unit I.E., closure of affected furniture refinishing firms using methylene chloride following this rulemaking has an upper bound for economic impacts of $1.8 billion in total revenue, and $67 million in terms of the total profit, under the assumption that all affected firms fully close due to the restrictions on methylene chloride. A detailed discussion of potential economic impacts as a result of varying percentages of furniture refinishing firms closing is provided in the Economic Analysis in section 7.11 (Ref. 3).

With respect to this proposed rule's effect on technological innovation, EPA expects this rule to spur more innovation than it will hinder. A prohibition or significant restriction on the manufacture, processing, and distribution in commerce of methylene chloride for uses covered in this proposed rule may increase demand for existing, as well as development of additional, safer chemical substitutes. This proposed rule is not likely to have significant effects on the environment because, as discussed in Unit VI.B., methylene chloride does not present an unreasonable risk to the environment, though this proposed rule does present the potential for small reductions in air emissions and soil contamination associated with improper disposal of products containing methylene chloride. The effects of this proposed rule on public health are estimated to be positive, due to the potential prevention of deaths from acute exposure and reduced risk of cancer from chronic exposure to methylene chloride.

2. Costs and Benefits of the Proposed Regulatory Action and of the One or More Primary Alternative Regulatory Actions Considered by the Administrator

The costs and benefits that can be monetized for this proposed rule are

described at length in in the Economic Analysis (Ref. 3). The non-closure-related costs for this proposed rule are estimated to be $13.2 million annualized over 20 years at a 3% discount rate and $14.5 million annualized over 20 years at a 7% discount rate. The monetized benefits are estimated to be $17.7 to $18.5 million annualized over 20 years at a 3% discount rate and $13.4 to $13.9 million annualized over 20 years at a 7% discount rate.

EPA considered the estimated costs to regulated entities as well as the cost to administer and enforce alternative regulatory actions. The primary alternative regulatory action is described in detail in Unit IV.B. The estimated annualized, non-closure-related costs of the primary alternative regulatory action are $12.4 million at a 3% discount rate and $13.3 million at a 7% discount rate over 20 years (Ref. 3). The estimated annualized benefits of this primary alternative regulatory action are $17.7 to $18.5 million at a 3% discount rate and $13.4 to $13.9 million at a 7% discount rate over 20 years (Ref. 3).

This proposal is expected to achieve health benefits for the American public, some of which can be monetized and others that, while tangible and significant, cannot be monetized. EPA believes that the balance of costs and benefits of this proposal cannot be fairly described without considering the additional, non-monetized benefits of mitigating the non-cancer adverse effects. The multitude of adverse effects from methylene chloride exposure can profoundly impact an individual's quality of life, as discussed in Units II.A. (overview), III.B.2. (description of the unreasonable risk), V.A. (discussion of the health effects), and the Risk Evaluation. Some of the adverse effects can be immediately experienced and can result in sudden death; others can have impacts that are experienced for a shorter portion of life but are nevertheless significant in nature. The incremental improvements in health outcomes achieved by given reductions in exposure cannot be quantified for non-cancer health effects associated with methylene chloride exposure, and therefore cannot be converted into monetized benefits. The qualitative discussion throughout this rulemaking and in the Economic Analysis highlights the importance of these non-cancer effects, which are not able to be monetized in the way that EPA is able to for cancer and death. These effects include not only cost of illness but also personal costs such as emotional and mental stress that are hard to measure appropriately. Considering only monetized benefits significantly underestimates the impacts of methylene chloride adverse outcomes and underestimates the benefits of this proposed rule. As the proposed option is more restrictive and therefore more protective than the primary alternative option, the value of unquantified benefits may be higher for the proposed option. This implies that the difference between the proposed and primary alternative options is larger than it appears, in favor of the proposed option, based on monetized benefits alone.

The 2020 Risk Evaluation for Methylene Chloride identified two non-cancer health effects in reviewed scientific literature relevant to children, namely reproductive and developmental hazards. The 2020 Risk Evaluation for Methylene Chloride summarizes human health hazards identified in the review of scientific literature, including studies investigating methylene chloride exposure and reproductive and developmental effects as well as developmental neurotoxicity. Some epidemiological studies identified effects that include reduced fertility, spontaneous abortions, oral cleft defects, heart defects, and autism spectrum disorder (ASD). For ASD, due to methodological reasons including confounding by other chemicals and lack of temporal specificity, the 2020 Risk Evaluation for Methylene Chloride did not advance this hazard to a dose response calculation. Additionally, EPA did not carry reproductive/developmental effects forward for dose-response, because epidemiological studies lacked controls for co-exposures, animal studies observed effects mostly at higher methylene chloride concentrations, and EPA identified no relevant mechanistic information (Ref. 1). Nonetheless, additional health benefits may be achieved by reducing the incidence of reproductive effects for workers in commercial facilities or companies that use methylene chloride for the commercial uses proposed to be regulated (Ref. 3).

EPA was unable to estimate either the precise reduction in individual risk of these reproductive and developmental effects from reducing exposure to methylene chloride or the total number of cases avoided can be estimated due to a lack of necessary data. Nevertheless, reproductive hazards such as reduced fertility are important considerations. These health effects are serious and can have impacts throughout a lifetime; for example, infertility and fertility treatment can have deleterious social and psychological consequences such as mental distress (Ref. 59).

The potential impacts of these effects include monetary impacts from associated healthcare costs such as fertility treatments, as well as complications from fertility treatments (*e.g.,* higher multiple birth rates), mental stress and emotional suffering, which cannot be quantified or monetized but should not be ignored.

3. Cost Effectiveness of the Proposed Regulatory Action and of One or More Primary Alternative Regulatory Actions Considered by the Administrator

Cost effectiveness is a method of comparing certain actions in terms of the expense per item of interest or goal. A goal of this proposed regulatory action is to prevent user deaths resulting from exposure to methylene chloride. The proposed regulatory action would cost, excluding closure-related costs, $9.9 million per potential prevented death while the primary alternative regulatory action would cost, excluding closure-related costs, $9.3 million per potential prevented death (using the 3% discount rate). While the primary alternative regulatory action would be lower in cost compared to the proposed action, the difference is small and both options are considered to have similar levels of cost effectiveness in decreasing the potential for death from exposure to methylene chloride (Ref. 3). See Chapter 9 of the Economic Analysis for greater detail on the cost effectiveness of the proposed and primary regulatory actions.

4. Requests for Comment on Economic Analysis

As described in the Economic Analysis, two conditions of use, Processing: Recycling and Disposal, are responsible for the majority (~60%) of the estimated total $13 million non-closure-related costs of the rule. Given the prevalence of small entities in this sector, EPA requests comment on what regulatory flexibilities, within the scope of TSCA and mitigating unreasonable risk, may be afforded to these conditions of use to reduce burden of complying with the WCPP.

As described in the Economic Analysis and the Alternatives Assessment, alternatives for methylene chloride as a processing aid were not identified. EPA requests information on potential alternative processing aids to methylene chloride as it relates to the proposed regulatory option for this COU. The Economic Analysis includes a qualitative discussion of uncertainty in cost estimates, including uncertainties related to the cost of reformulating products that currently contain methylene chloride, which

could be underestimated, or overestimated. EPA requests comment on additional aspects of reformulation, including any costs that may be associated with mitigating countervailing risks of alternative formulations. Additionally, EPA requests comment on the degree to which qualities or properties of methylene chloride, beyond those discussed in the Economic Analysis and summarized in Unit VI.C. may make methylene chloride a preferable choice when compared to alternatives with similar costs and effectiveness. EPA also requests comment regarding information to estimate transition costs to suitable alternatives, including how often these costs might be incurred or what the specific costs would be per-user or per-firm when they are incurred. Similarly, EPA requests comment on how costs and economic impacts from firm closures may be reduced with longer compliance timeframes. Finally, EPA requests comment on how better to monetize the benefits of each alternative in the Economic Analysis and whether EPA should consider any other categories of benefits.

VII. TSCA Section 9 Analysis and Section 14 and 26 Considerations

A. TSCA Section 9(a) Analysis

TSCA section 9(a) provides that, if the Administrator determines, in the Administrator's discretion, that an unreasonable risk may be prevented or reduced to a sufficient extent by an action taken under a Federal law not administered by EPA, the Administrator must submit a report to the agency administering that other law that describes the risk and the activities that present such risk. TSCA section 9(a) describes additional procedures and requirements to be followed by EPA and the other Federal agency after submission of the report. As discussed in this Unit, for this proposed rule, the Administrator does not determine that unreasonable risk from methylene chloride under the conditions of use may be prevented or reduced to a sufficient extent by an action taken under a Federal law not administered by EPA.

TSCA section 9(d) instructs the Administrator to consult and coordinate TSCA activities with other Federal agencies for the purpose of achieving the maximum enforcement of TSCA while imposing the least burden of duplicative requirements. For this proposed rule, EPA has coordinated with appropriate Federal executive departments and agencies including OSHA and the Consumer Product Safety Commission (CPSC) to identify their respective authorities, jurisdictions, and existing laws with regard to risk evaluation and risk management of methylene chloride, which are summarized in this Unit.

As discussed in more detail in Unit II.C., OSHA requires that employers provide safe and healthful working conditions by setting and enforcing standards and by providing training, outreach, education, and assistance. OSHA has established health standards for methylene chloride covering employers in General Industry, Shipyards, and Construction (29 CFR 1910.1052(a)). Gaps exist between OSHA's authority to set workplace standards under the OSH Act and EPA's obligations under TSCA section 6 to eliminate unreasonable risk presented by chemical substances under the conditions of use. As noted previously, to set PELs for chemical exposure, OSHA must first establish that the new standards are economically and technologically feasible (79 FR 61384, 61387, Oct. 10, 2014). When setting the 8-hour TWA PEL for methylene chloride in 1997, OSHA concluded that ''at the 25 ppm PEL the residual risk still greatly exceeds any significant risk threshold,'' but set the PEL at that level because it was the lowest level for which OSHA could document technological and economic feasibility across the affected industries at that time (62 FR 1494, 1575 January 10, 1997; 63 FR 50172, 50713, September 22, 1998). Thus, if OSHA were to initiate a new action to lower its PEL, the difference in requirements between the OSH Act and TSCA could result in the OSHA PEL still being set at a higher level than the risk-based exposure limit for methylene chloride determined by EPA to be necessary to address the unreasonable risk identified under TSCA. However, EPA believes that the feasibility of technology has advanced over the last 25 years such that for certain conditions of use, based on monitoring data received during the risk evaluation and feedback during SBAR, EPA's risk-based level of 2 ppm is achievable, and indeed, is already being achieved. For most industrial and commercial conditions of use, EPA has determined it is not feasible to meet the ECEL and is thus proposing to prohibit those uses. In addition, OSHA may set exposure limits for workers, but its authority is limited to the workplace and does not extend to consumer uses of hazardous chemicals, and thus OSHA cannot address the unreasonable risk from methylene chloride under all of its conditions of use, which include consumer uses. OSHA also does not have direct authority over State and local employees, and it has no authority over the working conditions of State and local employees in States that have no OSHA-approved State Plan under 29 U.S.C. 667.

CPSC, under authority provided to it by Congress in the CPSA, protects the public from unreasonable risk of injury or death associated with consumer products. Under the CPSA, CPSC has the authority to regulate methylene chloride in consumer products, but not in other sectors such as automobiles, some industrial and commercial products, or aircraft for example. CPSC issued its methylene chloride guidance under the FHSA, which does not include the same jurisdictional exceptions as the CPSA. Recently, CPSC revised its labeling guidance for methylene chloride under the FHSA to provide more immediate guidance and clarity to consumers and industry regarding the acute hazards associated with using methylene chloride-based paint removers while they remain on the market (83 FR 12254, March 21, 2018). However, while EPA believes that the updated CPSC labeling guidance, if properly implemented by industry, would prevent some users from using methylene chloride paint and coating removal products in an unsafe manner, for the reasons described in the proposal, it is unlikely to address the unreasonable risks to consumers under a 9(a) determination by the Administrator. Furthermore, in a letter to EPA regarding paint and coating removers, CPSC stated ''because TSCA gives EPA the ability to reach both occupational and consumer uses, we recognize that EPA may address risks associated with these chemicals in a more cohesive and coordinated manner given that CPSC lacks authority to address occupational hazards.'' (EPA–HQ–OPPT–2016–0231–0154).

Therefore, EPA maintains that TSCA is the appropriate vehicle to deliver broad protections to consumers who may use formulations that contain methylene chloride and whose use drives the unreasonable risk of injury to health from methylene chloride. An action under TSCA also would be able to address occupational unreasonable risk and would reach entities that are not subject to OSHA. The timeframe and any exposure reduction as a result of updating OSHA or CPSC regulations for methylene chloride cannot be estimated, while TSCA imposes a much more accelerated 2-year statutory timeframe for proposing and finalizing requirements to address unreasonable risk. Regulating methylene chloride's

unreasonable risk utilizing TSCA authority will also avoid the situation where a patchwork of regulations amongst several Agencies using multiple laws and differing legal standards would occur and is therefore a more efficient and effective means of addressing the unreasonable risk of methylene chloride.

Moreover, the 2016 amendments to TSCA altered both the manner of identifying unreasonable risk and EPA's authority to address unreasonable risk, such that risk management is increasingly distinct from provisions of the CPSA, FHSA, or, OSH Act., In a TSCA section 6 risk management rule, following an unreasonable risk determination, EPA must apply risk management requirements to the extent necessary so that the chemical no longer presents unreasonable risk and only consider costs and benefits of the regulatory action to the extent practicable, 15 U.S.C. 2605(a) and (c)(2). By contrast, a consumer product safety rule under the CPSA must include a finding that ''the benefits expected from the rule bear a reasonable relationship to its costs.'' 15 U.S.C. 2058(f)(3)(E). Additionally, the 2016 amendments to TSCA reflect Congressional intent to ''delete the paralyzing 'least burdensome' requirement,'' 162 Cong. Rec. S3517 (June 7, 2016), a reference to TSCA section 6(a) as originally enacted in 1976, which required EPA to use ''the least burdensome requirements'' that protect ''adequately'' against unreasonable risk, 15 U.S.C. 2605(a) (1976). However, a consumer product safety rule under the CPSA must impose ''the least burdensome requirement which prevents or adequately reduces the risk of injury for which the rule is being promulgated.'' 15 U.S.C. 2058(f)(3)(F) Analogous requirements, also at variance with recent revisions to TSCA, affect the availability of action CPSC may take under the FHSA relative to action EPA may take under TSCA. 15 U.S.C. 1262. But EPA's substantive burden under TSCA section 6(a) is to apply requirements to the extent necessary so that the chemical substance no longer presents the unreasonable risk that was determined in accordance with TSCA section 6(b)(4)(A) without consideration of cost or other non-risk factors.

EPA therefore concludes that TSCA is the most appropriate regulatory authority able to prevent or reduce unreasonable risk of methylene chloride to a sufficient extent across the range of conditions of use, exposures, and populations of concern. This unreasonable risk can be addressed in a more coordinated, efficient, and effective manner under TSCA than under different laws implemented by different agencies. Further, there are key differences between the finding requirements of TSCA and those of the OSH Act, CPSA, and FHSA. For these reasons, in the Administrator's discretion, the Administrator has analyzed this issue and does not determine that unreasonable risk from methylene chloride may be prevented or reduced to a sufficient extent by an action taken under a Federal law not administered by EPA.

B. TSCA Section 9(b) Analysis

If EPA determines that actions under other Federal laws administered in whole or in part by EPA could eliminate or sufficiently reduce a risk to health or the environment, TSCA section 9(b) instructs EPA to use these other authorities to protect against that risk unless the Administrator determines in the Administrator's ''discretion that it is in the public interest to protect against such risk'' under TSCA. In making such a public interest finding, TSCA section 9(b)(2) states: ''the Administrator shall consider, based on information reasonably available to the Administrator, all relevant aspects of the risk . . . and a comparison of the estimated costs and efficiencies of the action to be taken under this title and an action to be taken under such other law to protect against such risk.''

Although several EPA statutes have been used to limit methylene chloride exposure (Refs. 3, 7), regulations under those EPA statutes largely regulate releases to the environment, rather than occupational or consumer exposures. While these limits on releases to the environment are protective in the context of their respective statutory authorities, regulation under TSCA is also appropriate for occupational and consumer exposures and in some cases can provide upstream protections that would prevent the need for release restrictions required by other EPA statutes (*e.g.,* RCRA, CAA, CWA).

The primary exposures and unreasonable risk to consumers, bystanders, workers, and occupational non-users would be addressed by EPA's proposed prohibitions and restrictions under TSCA section 6(a). In contrast, the timeframe and any exposure reduction as a result of updating regulations for methylene chloride under RCRA, CAA, or CWA cannot be estimated, nor would they address the direct human exposure to consumers, bystanders, workers, and occupational non-users from the conditions of use evaluated in the 2020 Risk Evaluation for Methylene Chloride. More specifically, none of EPA's other statutes (*e.g.,* RCRA, CAA, and CWA) can address exposures to workers and occupational non-users related to the specific activities that result in occupational exposures associated with disposal activities. EPA therefore concludes that TSCA is the most appropriate regulatory authority able to prevent or reduce risks of methylene chloride to a sufficient extent across the range of conditions of use, exposures, and populations of concern.

For these reasons, the Administrator does not determine that unreasonable risk from methylene chloride under its conditions of use, as evaluated in the 2020 Risk Evaluation for Methylene Chloride, could be eliminated or reduced to a sufficient extent by actions taken under other Federal laws administered in whole or in part by EPA.

C. TSCA Section 14 Requirements

EPA is also providing notice to manufacturers, processors, and other interested parties about potential impacts to confidential business information that may occur if this rule is finalized as proposed. Under TSCA sections 14(a) and 14(b)(4), if EPA promulgates a rule pursuant to TSCA section 6(a) that establishes a ban or phase-out of a chemical substance, the protection from disclosure of any confidential business information regarding that chemical substance and submitted pursuant to TSCA will be ''presumed to no longer apply,'' subject to the limitations identified in TSCA section 14(b)(4)(B)(i) through (iii). If this rule is finalized as proposed, then pursuant to TSCA section 14(b)(4)(B)(iii), the presumption against protection from disclosure would apply only to information about the specific conditions of use that this rule would prohibit or phase out. Similarly, if this rule is finalized as proposed, the presumption against protection from disclosure would not apply to certain uses that this rule proposes to exempt from the ban or phase-out pursuant to TSCA section 6(g). Per TSCA section 14(b)(4)(B)(i), the presumption against protection would not apply to information about these conditions of use. However, the presumption against protection would apply to information about conditions of use that are not exempt from the ban or phase-out, pursuant to TSCA section 6(g). Manufacturers or processors seeking to protect such information would be able to submit a request for nondisclosure as provided by TSCA sections 14(b)(4)(C) and 14(g)(1)(E). Any request for nondisclosure would need to be

submitted within 30 days after receipt of notice from EPA under TSCA section 14(g)(2)(A). EPA anticipates providing such notice via the Central Data Exchange (CDX).

D. TSCA Section 26 Considerations

In accordance with TSCA section 26(h), EPA has used scientific information, technical procedures, measures, methods, protocols, methodologies, and models consistent with the best available science. As in the case of the unreasonable risk determination, risk management decisions for this proposed rule, as discussed in Unit III.B.3. and Unit V., were based on a risk evaluation that was subject to public comment and independent, expert peer review, and developed in a manner consistent with the best available science and based on the weight of the scientific evidence as required by TSCA sections 26(h) and (i) and 40 CFR 702.43 and 702.45. In particular, the ECEL and EPA STEL values incorporated into the WCPP are derived from the analysis in the 2020 Risk Evaluation for Methylene Chloride; they likewise represent decisions based on the best available science and the weight of the scientific evidence (Ref. 11). The ECEL value of 2 ppm as an 8-hour TWA is based on the chronic non-cancer human equivalent concentration (HEC) for liver toxicity identified in the 2020 Risk Evaluation for Methylene Chloride, which is the concentration at which an adult human would be unlikely to suffer adverse effects if exposed for a working lifetime, including susceptible subpopulations. The EPA STEL of 16 ppm as a 15-minute TWA is derived from the non-cancer endpoint of central nervous system depression resulting from acute exposures that was identified in the 2020 Risk Evaluation for Methylene Chloride.

The extent to which the various information, procedures, measures, methods, protocols, methodologies, or models, as applicable, used in EPA's decisions have been subject to independent verification or peer review is adequate to justify their use, collectively, in the record for this rule. Additional information on the peer review and public comment process, such as the peer review plan, the peer review report, and the Agency's response to public comments, can be found at EPA's risk evaluation docket at EPA–HQ–OPPT–2020–0465.

VIII. Requests for Comment

EPA is requesting public comment on all aspects of this proposal, including the proposed and primary alternative regulatory actions and all supporting analysis. Additionally, within this proposal, the Agency is soliciting feedback from the public on specific issues throughout this proposed rule. For ease of review, this section summarizes those specific requests for comment.

1. EPA is requesting public comment on the proposed regulatory action and primary alternative regulatory action. (Unit III.A.).

2. EPA is requesting comment on the proposed rule's TSCA section 6(g) exemptions' provisions and rationales. (Unit III.A.).

3. Following Panel recommendations in the Panel report (Ref. 6) and in response to SERs recommendations, EPA is requesting comment on the following topics as outlined in the SBAR Panel Report:

a. EPA requests comment on the extent to which a regulation under TSCA section 6(a) could minimize requirements, such as testing and monitoring protocols, recordkeeping, and reporting requirements, which may exceed those already required under OSHA's regulations for methylene chloride.

b. EPA requests comment on the feasibility of complying with and monitoring for an Existing Chemical Exposure Limit (ECEL) of 2 ppm. In particular, EPA requests comment on changes that may be needed to meet such a standard, for example changes related to elimination of methylene chloride or substitution, engineering controls, process changes, and monitoring frequency.

c. EPA requests comment on workplace monitoring for implementation of an ECEL. EPA is soliciting information related to the frequency of monitoring, initial monitoring, and periodic monitoring for workplace exposure levels and how a lower exposure level from the OSHA PEL may impact the frequency of periodic monitoring. Specifically, EPA requests comment about when this may impact the frequency of periodic monitoring where initial monitoring shows that employee exposures are above the level that would initiate requirements for compliance with the ECEL or an OSHA STEL.

d. EPA requests comment on reasonable compliance timeframes for small businesses, including timeframes for reformulation of products or processes containing methylene chloride; implementation of new engineering or administrative controls; changes to labels, SDSs, and packaging; implementation of new PPE, including training and monitoring practices; and supply chain management challenges. EPA also requests comment on establishing differing compliance or reporting requirements or timetables that take into account the limited resources available to small entities.

e. EPA requests comment on the feasibility and availability of various prescriptive engineering controls to reduce exposure levels, and information on any technologies or prescriptive control options used in combination for addressing the unreasonable risk.

f. EPA requests comment on providing an option of either complying with the ECEL or implementing various administrative and engineering controls, such as those employed in a closed-loop system, including information on how a small business can demonstrate that such controls eliminate the unreasonable risk for that use.

g. EPA requests comment on establishing a certification program for the use of methylene chloride by the furniture refinishing industry as well as measures to address the unreasonable risk for commercial use of methylene chloride in paint and coating removal for furniture refinishing.

h. EPA requests comment on means by which small businesses can maintain access to methylene chloride for industrial and commercial uses including establishing training, certification, and limited access programs.

i. EPA requests comment on TSCA section 6(g)(1) exemptions for any MIL–SPEC programs where methylene chloride is specified or required for a specific end-use application.

j. EPA requests comment on temporary work practices to allow for limited circumstances, including but not limited to equipment failure or maintenance activity, where monitoring may not be feasible to comply with an ECEL.

k. EPA requests comment on the extent to which methylene chloride may be used in the same facility for TSCA and non-TSCA uses.

4. EPA requests comment on whether a definition should be promulgated for each condition of use of methylene chloride and, if so, whether the descriptions in Unit III.B.1.f. are consistent with the conditions of use evaluated in the 2020 Risk Evaluation for Methylene Chloride and whether they provide a sufficient level of detail such that they would improve the clarity and readability of the regulation if promulgated. (Unit III.B.1.f.).

5. EPA is requesting comment on the proposed implementation timeframe for the WCPP requirements; EPA proposes that they would take effect 180 days

after publication of the final rule, at which point entities would be required to conduct initial monitoring (as described in Unit IV.A.1.c.) and develop an exposure control plan within 1 year of publication of the final rule (Unit IV.A.1.a. and d.). (Unit IV.A.1.a.).

6. EPA acknowledges that new monitoring methods or technologies may have been developed since 1997 that would allow for greater accuracy, and thus a smaller range for monitoring results, and EPA requests comment on the exposure monitoring accuracy requirements. (Unit IV.A.1.c.i.).

7. EPA acknowledges that the 25% buffer for the 8-hour and 15-minute TWA potentially could allow some exposures above the exposure limits proposed here. EPA requests comment on these buffers' effects and any alternatives to account for measurement variance or uncertainty. (Unit IV.A.1.c.i.).

8. EPA is soliciting comments regarding how owners and operators could conduct initial exposure monitoring to ensure that it is representative of all tasks likely to be conducted by potentially exposed persons. (Unit IV.A.1.c.ii.).

9. EPA is soliciting comments regarding the proposed requirement for recurring 5-year initial exposure monitoring. (Unit IV.A.1.c.ii.).

10. EPA requests comment on the timeframes for periodic monitoring outlined in Unit IV.A.1.c.iii, particularly whether more frequent monitoring may be possible or recommended. (Unit IV.A.1.c.iii.).

11. EPA is requesting public comments on the proposed conditions for periodic monitoring for methylene chloride as part of implementation of the WCPP that differ from OSHA's existing monitoring requirements under 29 CFR 1910.1052. (Unit IV.A.1.c.iv.).

12. EPA requests comment on the degree to which additional guidance related to use of gloves might be necessary. Additionally, EPA requests comment on whether EPA should specifically incorporate dermal protection into the exposure control plan and require consideration of the hierarchy of controls for dermal exposures. (Unit IV.A.1.e.i.).

13. EPA requests comment on the 15-day timeframe for notification of potentially exposed persons of monitoring results and the possibility for a shorter timeframe, such as 5 days. (Unit IV.A.1.f.ii.).

14. EPA requests comment relative to the ability of owners or operators to conduct initial monitoring by 180 days after publication of the final rule, and anticipated timelines for any procedural adjustments needed to comply with the requirements outlined in Unit IV.A.1. (Unit IV.A.1.g.).

15. EPA requests comment on the impacts, if any, the proposed prohibition described in Unit IV.A.2., or other aspects of this proposal, may have on the production and availability of any food, food additive, drug, cosmetic, device, or other substance excluded from the definition of ''chemical substance'' under TSCA section 3(2)(B)(ii) through (vi). (Unit IV.A.2.).

16. EPA requests comment regarding the number of entities that could potentially close as well as associated costs with a prohibition of methylene chloride for certain industrial and commercial conditions of use identified in Unit IV.A.2. (Unit IV.A.2.).

17. EPA would like comment on whether it should consider a *de minimis* level of methylene chloride in formulations for certain continuing industrial and commercial uses to account for impurities (*e.g.,* 0.1% or 0.5%) when finalizing the prohibitions described in Unit IV.A., and, if so, what level should be considered *de minimis* (Units IV.A.2., and IV.A.3.).

18. EPA is proposing that the prohibition of certain industrial and commercial conditions of use described in Unit IV.A.2 would occur 90 days after the publication date of the final rule for manufacturers, 180 days for processors, 270 days for distributing to retailers, 360 days for all other distributors and retailers, and 450 days for industrial and commercial uses. EPA requests comment on whether additional time is needed, for example, for products affected by proposed restrictions to clear the channels of trade. (Unit IV.A.2.).

19. EPA requests comments on an appropriate, predictable process that could expedite reconsideration for uses that Federal agencies or their contractors become aware of after the final rule is issued using the tools available under TSCA, aligning with the requirements of TSCA section 6(g). EPA requests comment on the appropriate types of information for use in evaluating this type of category of use, and other considerations that should apply. (Unit IV.A.2).

20. EPA would like comment on whether distributors that are not retailers should be required to use tax IDs or other verification methods prior to selling methylene chloride or products containing methylene chloride to ensure consumers are not purchasing methylene chloride or commercial or industrial products containing methylene chloride. (Unit IV.A.3.).

21. During litigation (see *Lab. Council for Latin Am. Advancement* v. *United States Env't Prot. Agency,* 12 F.4th 234 (2d Cir. 2021)) on a previous rulemaking (84 FR 11420, March 27, 2019) petitioners argued that EPA's definition of ''retailer'' was so broad as to cover all commercial entities, creating supply chain issues for commercial users seeking to attain and use the chemical for commercial activities. EPA has not found this to be the case; small businesses that are non-retail distributors exist and even participated as small entity representatives consulted as part of the SBAR process for this rulemaking. Nonetheless, EPA is soliciting comment on whether similar supply chain issues for uses that are permitted under the WCPP are anticipated. (Unit IV.A.3.).

22. EPA is proposing that the prohibition of manufacturing, processing, and distribution for consumer use described in Unit IV.A.3. would occur 90 days after the publication date of the final rule for manufacturers, 180 days for processers, 270 days for distributing to retailers, and 360 days for all other distributors and retailers after the publication date of the final rule. EPA requests comment on whether additional time is needed, for example, for products affected by proposed restrictions to clear the channels of trade. (Unit IV.A.3.).

23. EPA requests comments on the appropriateness of identified compliance timeframes for recordkeeping and downstream notification requirements described in Unit IV.A.4. (Unit IV.A.4.b.).

24. EPA recognizes that in some situations, certain facilities may do both Federal contractor and commercial aviation work and may use methylene chloride for paint and coating removal from safety-critical, corrosion-sensitive components on military, Federal, or commercial aviation. EPA requests comment on whether such co-located activities in a facility should be subject to the WCPP, rather than the exemption under TSCA section 6(g). Additionally, EPA seeks additional information and requests comment on whether it is possible to distinguish between commercial aviation facilities that would be able to meet the WCPP and those that would not, including what criteria should be used for such distinctions (*e.g.,* size of facility, volume or type of work performed, record of exposure reduction practices). EPA also requests comment on the extent to which specific commercial aviation and aerospace uses or types of facilities could fully comply with the WCPP to address identified unreasonable risk. (Unit IV.A.5.a.i.).

25. EPA requests comments on all aspects of the proposed TSCA section 6(g) exemption from the proposed prohibition on use of methylene chloride in commercial paint and coating removal for paint and coating removal essential for critical infrastructure by certificated commercial air carriers, commercial operators, or repair stations, or by manufacturers of aircraft or aerospace vehicles and hardware, noting that the proposed exemptions would be limited to the safety-critical, corrosion-sensitive components on aircraft and aerospace vehicles, including safety-critical components. (Unit IV.A.5.a.ii.).

26. EPA requests comment on this TSCA section 6(g) exemption for continued emergency use of methylene chloride in the furtherance of NASA's mission as described in this unit, and whether any additional conditions of use should be included, in particular for any uses qualified for space flight for which no technically or economically feasible safer alternative is available. Additionally, EPA requests comment on what would constitute sufficient justification of an emergency. (Unit IV.A.5.b.ii.).

27. EPA requests comments on all aspects of the preliminary determination that a TSCA section 6(g) exemption is not warranted for the use of methylene chloride in furniture refinishing, including information on the availability of alternatives and the time needed to implement alternatives. EPA emphasizes that the Agency is seeking input regarding whether an exemption is needed and welcomes information related to this condition of use during the public comment period. (Unit IV.A.5.c.).

28. Primary alternative regulatory action: EPA requests comment on the ways in which methylene chloride may be used in the additional conditions of use that would be subject to a WCPP under the primary alternative regulatory action, and the degree to which users of methylene chloride in these sectors could successfully implement the WCPP, including requirements to meet an ECEL and EPA STEL, as described in Unit IV.A.1., for the conditions of use listed for the primary alternative regulatory action in Unit IV.B. EPA is also requesting comment on whether to consider a regulatory alternative that would subject more conditions of use to a WCPP, instead of prohibition, than those currently contemplated in the primary alternative regulatory action. EPA also requests monitoring data and detailed descriptions of methylene chloride involving activities for these conditions of use to determine whether these additional conditions of use could comply with the WCPP such that risks are no longer unreasonable. (Unit IV.B.).

29. Primary alternative regulatory action: EPA requests comment on the degree to which entities using methylene chloride as a processing aid may comply with the proposed WCPP requirements for methylene chloride. EPA requests comment on the degree to which alternatives may or may not be available for use of methylene chloride as a heat transfer fluid and in other processing aid applications. (Unit IV.B.).

30. Primary alternative regulatory action: EPA requests comment on the ability of regulated entities engaged in the additional conditions of use that would be subject to a WCPP under the primary alternative regulatory action to conduct initial monitoring within 12 months, anticipated timelines for any procedural adjustments needed to comply with the requirements, and the extent to which this option could result in additional exposure, compared the proposed regulatory option as described in Unit IV.A. Overall, EPA requests comment on any advantages or drawbacks for the timelines outlined in Unit IV.B., compared to the timelines identified for the proposed regulatory action in Unit IV.A. (Unit IV.B.)

31. EPA requests comment and further information regarding the Agency's expectations that Federal and Federal contractor facilities would be subject to a higher level of oversight than non-Federal or contractor facilities, and that existing or expected controls would be successful in achieving the requirements of the WCPP. (Unit V.A.1.).

32. EPA requests comment and further information regarding the Agency's expectations that the facilities in which use of methylene chloride as a bonding agent in specialty batteries is carried out are industrialized and highly controlled, and that existing or expected exposure reduction and workplace controls would be successful in achieving the requirements of the WCPP. EPA also notes that while the Agency is not aware of any similar use of methylene chloride as a bonding element for batteries for commercial spaceflight or other use, it requests comment and information on any such use. (Unit V.A.1.).

33. EPA is requesting comment on what regulatory flexibilities may be afforded to entities that will continue to recycle and dispose of methylene chloride under the proposed regulation. (Unit V.A.1.).

34. EPA is requesting comment on the inclusion of a certification, training, and limited access program for any uses that would be subject to a WCPP, in addition to the requirements outlined in Unit IV.A.1. (Unit V.A.4.).

35. For some conditions of use, EPA was unable to identify products currently available for sale that contain methylene chloride. EPA is soliciting comments on whether there are actually products in use or available for sale relevant to these conditions of use that contain methylene chloride at this time, so that EPA can ascertain whether there are alternatives that benefit human health or the environment. (Unit V.B.).

36. EPA is requesting comment on the alternatives analysis as a whole. (Unit V.B.).

37. EPA considered the employment impacts of this proposed rule, and found that the direction of change in employment is uncertain, but EPA expects the short-term and longer-term employment effects to be small. To that end, EPA is requesting public comment on short term and longer-term employment effects from this proposal. (Unit VI.D.1.).

38. As described in the Economic Analysis, two conditions of use, Processing: Recycling and Disposal, are responsible for the majority (~60%) of the estimated total $12 million in non-closure-related costs of the rule. Given the prevalence of small entities in this sector, EPA requests comment on what regulatory flexibilities, within the scope of TSCA and mitigating unreasonable risk, may be afforded to these conditions of use to reduce burden of complying with the WCPP. (Unit VI.D.4.).

39. As described in the Economic Analysis and the Alternatives Analysis, alternatives for methylene chloride as a processing aid were not identified. EPA requests information on potential alternative processing aids to methylene chloride as it relates to the proposed regulatory option for this COU. (Unit VI.D.4.).

40. The Economic Analysis includes a qualitative discussion of uncertainty in cost estimates, including uncertainties related to the cost of reformulating products that currently contain methylene chloride, which could be underestimated, or overestimated. EPA requests comment on additional aspects of reformulation, including any costs that may be associated with mitigating countervailing risks of alternative formulations. (Unit VI.D.4.)

41. EPA requests comment on the degree to which qualities or properties of methylene chloride, beyond those discussed in the Economic Analysis and summarized in Unit VI.C., may make methylene chloride a preferable choice when compared to alternatives with

similar costs and effectiveness. (Unit VI.D.4.)

42. EPA requests comment regarding information to estimate transition costs to suitable alternatives, including how often these costs might be incurred or what the specific costs would be per-user or per-firm when they are incurred. (Unit VI.D.4.)

43. EPA requests comment on how costs and economic impacts from firm closures may be reduced with longer compliance timeframe. (Unit VI.D.4.)

44. EPA requests comment on how better to monetize the benefits of each alternative in the Economic Analysis and whether EPA should consider any other categories of benefits. (Unit VI.D.4.)

X. Statutory and Executive Order Reviews

Additional information about these statutes and Executive Orders can be found at *https://www.epa.gov/laws-regulations/laws-and-executive-orders.*

A. Executive Orders 12866: Regulatory Planning and Review and 13563: Improving Regulation and Regulatory Review

This action is an economically significant regulatory action that was submitted to the Office of Management and Budget (OMB) for review under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 13563 (76 FR 3821, January 21, 2011). Any changes made in response to OMB recommendations during that review have been documented in the docket. EPA prepared an Economic Analysis of the potential costs and benefits associated with this action, which is available in the docket and is summarized in Units I.E. and VI.D. (Ref. 3).

B. Paperwork Reduction Act (PRA)

The information collection activities in this proposed rule have been submitted to OMB for review and comment under the PRA, 44 U.S.C. 3501 *et seq.* The Information Collection Request (ICR) document that EPA prepared has been assigned EPA ICR No. 2735.01 (Ref. 60). You can find a copy of the ICR in the docket for this rule, and it is briefly summarized here.

There are two primary provisions of the proposed rule that may increase burden under the PRA.

The first is downstream notification, which would be carried out by updates to the relevant SDS and which would be required for manufacturers, processors, and distributors in commerce of methylene chloride, who would provide notice to companies downstream upon shipment of methylene chloride about the prohibitions. The information submitted to downstream companies through the SDS would provide knowledge and awareness of the restrictions to these companies.

The second primary provision of the proposed rule that may increase burden under the PRA is WCPP-related information generation, recordkeeping, and notification requirements (including development of exposure control plans; exposure level monitoring and related recordkeeping; development of documentation for a PPE program and related recordkeeping; development of documentation for a respiratory protection program and related recordkeeping; development and notification to potentially exposed persons (employees and others in the workplace) about how they can access the exposure control plans, exposure monitoring records, PPE program implementation documentation, and respirator program documentation; and development of documentation demonstrating eligibility for an exemption from the proposed prohibitions, and related recordkeeping).

Respondents/affected entities: Persons that manufacture, process, use, distribute in commerce, or dispose of methylene chloride or products containing methylene chloride. See also Unit I.A.

Respondent's obligation to respond: Mandatory (TSCA section 6(a) and 40 CFR part 751).

Frequency of response: On occasion.

Estimated number of respondents: 237,929.

Total estimated burden: 129,772 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: $10,385,871 (per year), includes $2,809,809 annualized capital or operation and maintenance costs.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. After display in the **Federal Register** when approved, the OMB control numbers for EPA regulations in 40 CFR are listed in 40 CFR part 9 and displayed on the form and instructions or collection portal, as applicable.

Submit your comments on the Agency's need for this information, the accuracy of the provided burden estimates, and any suggested methods for minimizing respondent burden to the EPA using the docket identified at the beginning of this proposed rule. You may also send your ICR-related comments to OMB's Office of Information and Regulatory Affairs using the interface at *https://www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under Review—Open for Public Comments'' or by using the search function. OMB must receive comments no later than July 3, 2023. EPA will respond to any ICR-related comments in the final rule.

C. Regulatory Flexibility Act (RFA)

Pursuant to section 603 of the RFA, 5 U.S.C. 601 *et seq.,* EPA prepared an initial regulatory flexibility analysis (IRFA) that examines the impact of the proposed rule on small entities along with regulatory alternatives that could minimize that impact (Ref. 27). The complete IRFA is available for review in the docket and is summarized here.

1. Need for the Rule

Under TSCA section 6(a) (15 U.S.C. 2605(a)), if EPA determines after a TSCA section 6(b) risk evaluation that a chemical substance presents an unreasonable risk of injury to health or the environment, without consideration of costs or other non-risk factors, including an unreasonable risk to a potentially exposed or susceptible subpopulation identified as relevant to

the risk evaluation, under the conditions of use, EPA must by rule apply one or more requirements listed in TSCA section 6(a) to the extent necessary so that the chemical substance or mixture no longer presents such risk. Methylene chloride was the subject of a risk evaluation under TSCA section 6(b)(4)(A) that was issued in June 2020. In addition, in 2022, EPA issued a revised unreasonable risk determination that methylene chloride as a whole chemical substance presents an unreasonable risk of injury to health under the conditions of use. As a result, EPA is proposing to take action to the extent necessary so that methylene chloride no longer presents such risk.

2. Objectives and Legal Basis for the Rule

Under TSCA section 6(a) (15 U.S.C. 2605(a)), if EPA determines through a TSCA section 6(b) risk evaluation that a chemical substance presents an unreasonable risk of injury to health or the environment, EPA must by rule apply one or more requirements listed in TSCA section 6(a) to the extent necessary so that the chemical substance or mixture no longer presents such risk. EPA has determined through a TSCA section 6(b) risk evaluation that methylene chloride presents an unreasonable risk under the conditions of use.

3. Description and Number of Small Entities to Which the Rule Will Apply

The proposed rule potentially affects small manufacturers (including importers), processors, distributors, retailers, users of methylene chloride or of products containing methylene chloride, and entities engaging in disposal. EPA estimates that the proposed rule would affect approximately 237,930 firms using methylene chloride, of which 230,266 are estimated to be small entities. End users with economic and technologically feasible alternatives available do not have estimated cost impacts beyond rule familiarization costs. Alternative products that are drop-in substitutes (*i.e.,* requiring no changes by the user in how the product is used) are available for most uses including adhesives, various degreasers, or lubricants and greases. However, in some cases some effort might be required by firms using methylene chloride products to identify suitable alternatives, test them for their desired applications, learn how to use them safely and effectively, and implement new processes for using the alternative products. The information to estimate how often these costs might be incurred or what the specific costs would be per-user or per-firm when they are incurred is not available. Therefore, EPA is unable to consider these costs quantitatively in the IRFA or Economic Analysis.

4. Projected Compliance Requirements

To address the unreasonable risk EPA has identified, EPA is proposing to: (i) Prohibit the manufacture (including import), processing, and distribution in commerce of methylene chloride for all consumer use (other than the use of methylene chloride in consumer paint and coating removers, which was subject to separate action under TSCA section 6 (84 FR 11420, March 27, 2019); (ii) prohibit most industrial and commercial uses of methylene chloride; (iii) require a WCPP for certain industrial and commercial conditions of use, including inhalation exposure concentration limits; (iv) require recordkeeping and downstream notification requirements for several conditions of use; and (v) provide time-limited exemptions under TSCA section 6(g) for military and civilian aviation from the prohibition addressing the use of methylene chloride for paint and coating removal to avoid significant disruptions to national security and critical infrastructure.

EPA is proposing to prohibit most conditions of use. For other conditions of use that drive the unreasonable risk determination for methylene chloride, EPA proposes a WCPP to address the unreasonable risk. A WCPP would encompass inhalation exposure thresholds, includes monitoring and recordkeeping requirements to verify that those thresholds are not exceeded, and other components, such as dermal protection, to ensure that the chemical substance no longer presents unreasonable risk. Under a WCPP, owners or operators would have some flexibility, within the parameters outlined in Unit IV.A.1., regarding the manner in which they prevent exceedances of the identified exposure thresholds. Therefore, EPA generally refers to the WCPP approach as a non-prescriptive approach. In the case of methylene chloride, meeting the exposure thresholds proposed by EPA for certain occupational conditions of use would address unreasonable risk driven by inhalation exposure from those conditions of use for potentially exposed persons.

EPA's proposed requirements include the specific exposure limits that would be required to meet the TSCA section 6(a) standard to apply one or more requirements to the substance so that it no longer presents unreasonable risk, and also include ancillary requirements necessary for the ECEL's successful implementation as part of a WCPP.

EPA is not proposing reporting requirements beyond downstream notification (third-party notifications). Regarding recordkeeping requirements, three primary provisions of the proposed rule relate to recordkeeping. The first is recordkeeping for PPE: under the proposed regulatory action, facilities complying with the rule through WCPP would be required to develop and maintain records associated with a dermal and inhalation protection and in accordance with an exposure control plan. Additionally, under the proposed regulatory action, facilities complying with the rule through a WCPP would be required to monitor exposure levels and maintain records of this monitoring. Last, under the proposed regulatory action, facilities complying with the rule through a WCPP would be required to notify potentially exposed persons of monitoring results.

a. Classes of Small Entities Subject to the Compliance Requirements

The small entities that would be potentially directly regulated by this rule are small businesses that manufacture (including import), process, distribute in commerce, use, or dispose of methylene chloride, including retailers of methylene chloride for end-consumer uses.

b. Professional Skills Needed To Comply

Entities that would be subject to this proposal that manufacture (including import), process, or distribute methylene chloride in commerce for consumer use would be required to cease under the proposed rule. The entity would be required to modify their Safety Data Sheet or develop another way to inform their customers of the prohibition on manufacture, processing, and distribution of methylene chloride for consumer use. They would also be required to keep records of how much methylene chloride they sold, and to whom, and maintain a copy of the method they use for notifying their customers. None of these activities require any special skills.

Entities that use methylene chloride in any of the industrial and commercial conditions of use that are prohibited would be required to cease under the proposed rule. Restriction or prohibition of these uses will likely require the implementation of an alternative chemical or the cessation of use of methylene chloride in a process or equipment that may require persons

with specialized skills, such as engineers or other technical experts. Instead of developing an alternative method themselves, commercial users of methylene chloride may choose to contract with another entity to do so.

Entities that would be permitted to continue to manufacture, process, distribute, use, or dispose of methylene chloride would be required to implement a WCPP and would have to meet the provisions of the program for continued use of methylene chloride. Adaption to a WCPP may require persons with specialized skills such as an engineer or health and safety professional. Instead of implementing the WCPP themselves, entities that use methylene chloride may choose to contract with another entity to do so. Records would have to be maintained for compliance with a WCPP. While this recording activity itself may not require a special skill, the information to be measured and recorded may require persons with specialized skills such as an industrial hygienist.

5. Relevant Federal Rules

Because of its health effects, methylene chloride is subject to numerous State, Federal, and international regulations restricting and regulating its use. The following is a summary of the regulatory actions pertaining to methylene chloride; for a full description see appendix A of the 2020 Risk Evaluation for Methylene Chloride.

EPA has issued numerous rules and notices pertaining to methylene chloride under its various authorities. Methylene chloride is a hazardous air pollutant (HAP) under the CAA (42 U.S.C. 7412(b)(1)). EPA promulgated National Emission Standards for Hazardous Air Pollutants (NESHAPs) for methylene chloride for several industrial source categories.

With this proposed rule under TSCA section 6, certain uses identified under these NESHAPs would be prohibited while other uses would be subject to a WCPP. Moreover, the proposed rule would allow methylene chloride's continued use in processing as a reactant for the manufacture of HFC–32 and subject to compliance as part of a WCPP.

Programs within EPA implementing other environmental statutes, including, but not limited to, the RCRA, the Comprehensive Environmental Response, the Compensation, and Liability Act (CERCLA), the SDWA, and the CWA, classify methylene chloride as a hazardous waste, a hazardous substance, a volatile organic contaminant, and a toxic pollutant, respectively. Releases into the environment of methylene chloride in excess of 1,000 pounds must be reported under CERCLA (40 CFR 302.4). While TSCA shares equity in the regulation of methylene chloride, EPA does not anticipate this rule to duplicate nor conflict with the aforementioned programs' classifications and associated rules.

In addition to regulations administered by the EPA, methylene chloride is also subject to regulations by other Federal agencies.

In 2005, the Secretary of Transportation listed methylene chloride as a hazardous material with regard to transportation that is subject to regulations prescribing requirements applicable to the shipment and transportation of listed hazardous materials under the Hazardous Materials Transportation Act (70 FR 34381, June 14, 2005).

OSHA has a standard for regulating methylene chloride under 29 CFR 1910.1052. The OSHA PEL, action level, STEL, and ancillary requirements have established a strong precedent for exposure threshold requirements within the regulated community. However, EPA recognizes that the existing PEL and STEL do not eliminate the unreasonable risk identified by EPA under TSCA, and EPA is therefore proposing to apply new, lower exposure thresholds, derived from the 2020 Risk Evaluation for Methylene Chloride, while aligning with existing requirements wherever possible. For methylene chloride, this approach would eliminate the unreasonable risk driven by certain conditions of use, reduce burden for complying with the regulations, and provide the familiarity of a pre-existing framework for the regulated community.

Under the FHSA enforced by CPSC, household products are required to have hazardous substance labels for products that contain methylene chloride. In 1987, CPSC issued a decision to require labeling of household products that contain methylene chloride under the FHSA (52 FR 34698, September 14, 1987). Labels indicated that inhalation of methylene chloride vapor has caused cancer in certain laboratory animals, and the labels specified precautions to be taken during use by consumers. In 2018, in response to a petition, CPSC updated the labeling policy for paint strippers containing methylene chloride to include a warning of the acute hazards from inhalation of methylene chloride vapors in addition to the chronic hazards (83 FR 12254, March 21, 2018, and 83 FR 18219, April 26, 2018). With the proposed prohibition on the manufacture, processing, and distribution in commerce of methylene chloride for paint and coating removal under TSCA, EPA anticipates that CPSC may require labeling for any products that fall outside of the scope of TSCA and would not present conflict.

In pesticides, methylene chloride was registered as an antimicrobial pesticide in 1974 pursuant to the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) (7 U.S.C. 136 *et seq.*). Methylene chloride was also a pesticide product inert ingredient used as a solvent and co-solvent, and as a dispersing and wetting agent. In June 1998, EPA published a **Federal Register** document that designated methylene chloride as a List 1 inert ingredient due to its toxicological and other concerning effects (63 FR 34384, June 24, 1998) (FRL–5792–3). In 2002, EPA revoked pesticide tolerance exemptions for methylene chloride as an extraction solvent and as a post-harvest fumigant for crops established under the Federal Food, Drug, and Cosmetic Act (FFDCA) (67 FR 16027, April 4, 2002) (FRL–6833–3).

In 1989, the Food and Drug Administration (FDA) banned methylene chloride as an ingredient in all cosmetic products because of its animal carcinogenicity and likely hazard to human health under the FFDCA (54 FR 27328, June 29, 1989). Before 1989, methylene chloride had been used in aerosol cosmetic products, such as hairspray (Ref. 61).

6. Significant Alternatives to the Proposed Rule

As discussed further in Unit V.A.4. and the IRFA, EPA considered—in addition to the prohibition and WCPP that are proposed—a wide variety of control measures to address the unreasonable risk from methylene chloride such as weight fractions, prescriptive controls, and a certification and limited access program. The Agency determined that some methods either did not effectively address the unreasonable risk presented by methylene chloride or there was uncertainty in conditions of use that would be less able to comply with a comprehensive WCPP to adequately protect potentially exposed persons. The primary alternative regulatory action was considered and found to provide greater uncertainty in addressing the unreasonable risk from methylene chloride under the conditions of use.

As required by the RFA section 609(b), EPA also convened a SBAR Panel to obtain advice and recommendations from small entity

representatives that potentially would be subject to the rule's requirements. The SBAR Panel evaluated the assembled materials and small-entity comments on issues related to elements of an IRFA. The panel recommended EPA include certain requests for comment, which can be found in Unit VIII. (number 3.a through 3.k) and summarized in the Initial Regulatory Flexibility Assessment (Ref. 27). The full SBAR Panel Report is in the rulemaking docket (Ref. 6).

D. Unfunded Mandates Reform Act (UMRA)

This action contains a Federal mandate under UMRA, 2 U.S.C. 1531–1538, that may result in expenditures of $100 million or more for State, local and Tribal governments, in the aggregate, or the private sector in any one year. Accordingly, the EPA has prepared a written statement required under UMRA section 202. The statement is included in the docket for this action and briefly summarized here.

EPA estimates the compliance costs of the proposed rule to the private sector to be approximately to be $13.2 million annualized over 20 years at a 3% discount rate and $14.5 million annualized over 20 years at a 7% discount rate. However, the costs of the rule to the private sector are difficult to completely quantify. EPA's upper-bound estimate for the potential economic impact of the proposed rule on firms subject to the proposed prohibition on the use of methylene chloride in commercial furniture refinishing involves a worst-case assumption that all of as many as 5,000 furniture refinishing firms will fully close due to the proposed prohibition.

As described in more detail in Units I.E. VI.D.2. and Tables 3–1 and 6–12 of the Economic Analysis (Ref. 3), EPA estimates the upper-bound economic impact of potential closures of affected furniture refinishing firms using methylene chloride following this rulemaking to be $1.8 billion in total lost revenue, and $67 million in terms of the total lost profit, under the assumption that all affected firms fully close due to the proposed restrictions on methylene chloride. Thus, the Agency concludes that cost of the rule to the private sector may exceed the inflation-adjusted UMRA threshold of $100 million in any one year.

Nevertheless, the economic impact of a regulation on the national economy is generally considered to be measurable only if the economic impact of the regulation reaches 0.25 percent to 0.5 percent of GDP (Ref. 58). Given the current GDP of $23.17 trillion, this is equivalent to a cost of $58 billion to $116 billion. Therefore, EPA has concluded that this rule is highly unlikely to have any measurable effect on the national economy. Additional information on EPA's estimates of the benefits and costs of this action are provided in Units I.E. and VI.D.2., and in the Economic Analysis for this action (Ref. 3). Information on the authorizing legislation is provided in Unit I.B. Information on prior consultations with affected State, local, and Tribal governments is provided in Unit III.A.1.

This action is not subject to the requirements of UMRA section 203 because it contains no regulatory requirements that might significantly or uniquely affect small governments.

E. Executive Order 13132: Federalism

EPA has concluded that this action has federalism implications, as specified in Executive Order 13132 (64 FR 43255, August 10, 1999), because regulation under TSCA section 6(a) may preempt State law. As set forth in TSCA section 18(a)(1)(B), the issuance of rules under TSCA section 6(a) to address the unreasonable risks presented by a chemical substance has the potential to trigger preemption of laws, criminal penalties, or administrative actions by a State or political subdivision of a State that are: (1) Applicable to the same chemical substance as the rule under TSCA section 6(a); and (2) Designed to prohibit or otherwise restrict the manufacture, processing, or distribution in commerce or use of that same chemical. TSCA section 18(c)(3) applies that preemption only to the ''hazards, exposures, risks, and uses or conditions of use'' of such chemical included in the final TSCA section 6(a) rule.

EPA provides the following preliminary federalism summary impact statement. The Agency consulted with State and local officials early in the process of developing the proposed action to permit them to have meaningful and timely input into its development. This included a consultation meeting on October 22, 2020, and a background presentation on September 9, 2020. EPA invited the following national organizations representing State and local elected officials to these meetings: Association of State Drinking Water Administrators, National Association of Clean Water Agencies, Western States Water Council, National Water Resources Association, American Water Works Association, Association of Metropolitan Water Agencies, Association of Clean Water Administrators, Environmental Council of the States, National Association of Counties, National League of Cities, County Executives of America, U.S. Conference of Mayors, and National Association of Attorneys General. A summary of the meeting with these organizations, including the views that they expressed, is available in the docket (Ref. 22). As discussed in Unit III.A.1., during Federal consultation meetings EPA provided information on TSCA section 6 regulations and participants discussed preemption as well as the relationship between TSCA and existing statutes such as the CWA and SDWA. (Ref. 22). EPA provided an opportunity for these organizations to provide follow-up comments in writing but did not receive any such comments.

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action does not have Tribal implications as specified in Executive Order 13175 (65 FR 67249, November 9, 2000) because it will not have substantial direct effects on Tribal governments, on the relationship between the Federal Government and the Indian Tribes, or on the distribution of power and responsibilities between the Federal Government and Indian Tribes. Methylene chloride is not manufactured, processed, or distributed in commerce by Tribes and, therefore, this rulemaking would not impose substantial direct compliance costs on Tribal governments. Thus, Executive Order 13175 does not apply to this action.

Consistent with the EPA Policy on Consultation and Coordination with Indian Tribes, EPA consulted with Tribal officials during the development of this action. The Agency held a Tribal consultation from October 7, 2020, to January 8, 2021, with meetings on November 12 and 13, 2020. Tribal officials were given the opportunity to meaningfully interact with EPA concerning the current status of risk management. During the consultation, EPA discussed risk management under TSCA section 6(a), findings from the 2020 Risk Evaluation for Methylene Chloride, types of information to inform risk management, principles for transparency during risk management, and types of information EPA sought from Tribal officials (Ref. 23). EPA briefed Tribal officials on the Agency's risk management considerations and Tribal officials raised no related issues or concerns to EPA during or in follow-up to those meetings (Ref. 23). EPA received no written comments as part of this consultation.

G. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

This action is not subject to Executive Order 13045 (62 FR 19885, April 23, 1997) because EPA does not believe the environmental health or safety risks addressed by this action present a disproportionate risk to children as reflected by the conclusions of the methylene chloride risk evaluation. Accordingly, this action's health and risk assessments are contained in Units III.A.3., III.B.2., and V.A., as well as in the 2020 Risk Evaluation for Methylene Chloride, and the Economic Analysis for this proposed rulemaking (Refs. 1, 3).

H. Executive Order 13211: Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution or Use

This action is not a ''significant energy action'' under Executive Order 13211 (66 FR 28355, May 22, 2001) because it is not likely to have a significant adverse effect on the supply, distribution or use of energy.

I. National Technology Transfer and Advancement Act (NTTAA)

Pursuant to the NTTAA section 12(d), 15 U.S.C. 272, the Agency has determined that this rulemaking involves environmental monitoring or measurement, specifically for occupational inhalation exposures to methylene chloride. Consistent with the Agency's Performance Based Measurement System (PBMS), EPA proposes not to require the use of specific, prescribed analytic methods. Rather, the Agency plans to allow the use of any method that meets the prescribed performance criteria. The PBMS approach is intended to be more flexible and cost-effective for the regulated community; it is also intended to encourage innovation in analytical technology and improved data quality. EPA is not precluding the use of any method, whether it constitutes a voluntary consensus standard or not, as long as it meets the performance criteria specified.

For this rulemaking, the key consideration for the PBMS approach is the ability to accurately detect and measure airborne concentrations of methylene chloride at the ECEL, the ECEL action level, and the EPA STEL. Some examples of methods which meet the criteria are included in appendix A of the ECEL memo (Ref. 11). EPA recognizes that there may be voluntary consensus standards that meet the proposed criteria (Ref. 62). EPA requests comments on whether it should incorporate such voluntary consensus standards in the rule and seeks information in support of such comments regarding the availability and applicability of voluntary consensus standards that may achieve the sampling and analytical requirements of the rule in lieu of the PBMS approach.

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations

Executive Order 12898 (59 FR 7629, February 16, 1994) directs Federal agencies, to the greatest extent practicable and permitted by law, to make environmental justice part of their mission by identifying and addressing, as appropriate, disproportionately high and adverse human health or environmental effects of their programs, policies, and activities on minority populations (people of color and/or Indigenous peoples) and low-income populations.

EPA believes that the human health and environmental conditions that exist prior to this action do not result in disproportionate and adverse effects on people of color, low-income populations, and/or Indigenous peoples. The documentation for this decision is contained in the Economic Analysis (Ref. 3), which is in the public docket for this action. As part of the Economic Analysis for this rulemaking, EPA conducted an environmental justice analysis using information about the facilities, workforce, and communities potentially affected by the regulatory options under current conditions, before the proposed regulation would goes into effect. The analysis drew on publicly available data provided by EPA, U.S. Census Bureau, and Centers for Disease Control and Prevention (CDC), including data from TRI, EPA Enforcement and Compliance History Online (ECHO), National Air Toxics Assessment (NATA), the American Community Survey, and the Behavioral Risk Factor Surveillance System. The intent of the analysis was to characterize the baseline conditions faced by communities and workers to identify the potential for disproportionate impacts on minority and low-income populations.

EPA believes that this action is not likely to result in new disproportionate and adverse effects on people of color, low-income populations and/or Indigenous peoples. However, while this regulatory action would apply requirements to the extent necessary so that methylene chloride no longer presents an unreasonable risk, EPA is not able to quantify the distribution of the change in risk across affected workers, communities, or demographic groups due to data limitations that prevented EPA from conducting a more comprehensive analysis of such a change.

EPA additionally identified and addressed environmental justice concerns by conducting outreach to advocates of communities that might be subject to disproportionate exposure to methylene chloride, such as minority populations, low-income populations, and Indigenous peoples.

On November 16 and 19, 2020, EPA held public meetings as part of this consultation. (Ref. 51). See also Unit III.A.1. These meetings were held pursuant to and in compliance with Executive Order 12898 and Executive Order 14008, Tackling the Climate Crisis at Home and Abroad (86 FR 7619, February 1, 2021). EPA received three written comments following the EJ meetings, in addition to oral comments provided during the consultations (Refs. 24, 25, 26). In general, commenters supported strong regulation of methylene chloride to protect lower-income communities and workers. Commenters supported strong outreach to affected communities, encouraged EPA to follow the hierarchy of controls, favored prohibitions, and noted the uncertainty of use—and in some cases inadequacy—of PPE.

The information supporting this Executive Order review is contained in Units II.D., III.A.1., and VI.A., and well as in the Economic Analysis (Ref. 3, 51). EPA's presentations, a summary of EPA's presentation and public comments made, and fact sheets for the environmental justice consultations related to this rulemaking are available at *https://www.epa.gov/assessing-and-managing-chemicals-under-tsca/environmental-justice-consultations-methylene-chloride.* These materials are also available in the public docket for this rulemaking.

List of Subjects in 40 CFR Part 751

Environmental protection, Chemicals, Export notification, Hazardous substances, Import certification, Reporting and recordkeeping.

Michael S. Regan,

Administrator.

Therefore, for the reasons stated in the preamble, EPA proposes to amend 40 CFR chapter I as follows:

PART 751—REGULATION OF CERTAIN CHEMICAL SUBSTANCES AND MIXTURES UNDER SECTION 6 OF THE TOXIC SUBSTANCES CONTROL ACT

■ 1. The authority citation for part 751 continues to read as follows:

Authority: 15 U.S.C. 2605.

■ 2. Amend § 751.5 by adding in alphabetical order definitions for ''authorized person'', ''ECEL'', ''EPA STEL'', ''owner or operator'', ''potentially exposed person'', ''regulated area'', and ''retailer'' to read as follows:

§ 751.5 Definitions

* * * * *

Authorized person means any person specifically authorized by the owner or operator to enter, and whose duties require the person to enter, a regulated area.

* * * * *

ECEL is an Existing Chemical Exposure Limit, which is an EPA regulatory limit on workplace exposure to an airborne concentration of a chemical substance, generally based on an eight (8)-hour time-weighted average (TWA).

* * * * *

EPA STEL is a Short-Term Exposure Limit, which is an EPA regulatory limit on workplace exposure to an airborne concentration of a chemical substance, based on an exposure of less than eight hours.

Owner or operator means any person who owns, leases, operates, controls, or supervises a workplace covered by this part.

* * * * *

Potentially exposed person means any person who may be occupationally exposed to a chemical substance or mixture in a workplace as a result of a condition of use of that chemical substance or mixture.

Regulated area means an area established by the regulated entity to demarcate areas where airborne concentrations of a specific chemical substance exceed, or there is a reasonable possibility they may exceed, the ECEL or the EPA STEL.

Retailer means a person who distributes in commerce or makes available a chemical substance or mixture to consumer end users, including e-commerce internet sales or distribution. Any distributor with at least one consumer end user customer is considered a retailer. A person who distributes in commerce or makes available a chemical substance or mixture solely to commercial or industrial end users or solely to commercial or industrial businesses is not considered a retailer.

■ 3. Revise § 751.101 to read as follows:

§ 751.101 General.

This subpart sets certain restrictions on the manufacture (including import), processing, distribution in commerce, use, and disposal of methylene chloride (CASRN 75–09–2) to prevent unreasonable risks of injury to health.

■ 4. Amend § 751.103 by adding in alphabetical order a definition for ''ECEL'' to read as follows:

§ 751.103 Definitions.

* * * * *

ECEL action level means a concentration of airborne methylene chloride of 1 part per million (1 ppm) calculated as an 8-hour time weighted average (TWA).

* * * * *

■ 5. Amend § 751.105 by revising the section heading to read as follows:

§ 751.105 Prohibition of manufacturing (including import), processing, and distribution in commerce related to consumer paint and coating removal.

* * * * *

§ 751.107 [Redesignated as § 751.111]

■ 6. Redesignate § 751.107 as § 751.111 in subpart B and add new § 751.107 in subpart B to read as follows:

§ 751.107 Other prohibitions of manufacturing (including import), processing, distribution in commerce, and use.

(a) *Applicability.* (1) The provisions of this section apply to all manufacturing (including import)),), processing, and distribution in commerce of methylene chloride for consumer use other than for the paint and coating removal use addressed under § 751.105.

(2) The provisions of this section apply to all manufacturing (including import), processing, and distribution in commerce of methylene chloride for industrial or commercial use, and to all commercial or industrial use of methylene chloride, other than the conditions of use addressed under § 751.109(a).

(b) *Prohibitions.* (1) After [DATE 90 DAYS AFTER DATE OF PUBLICATION OF FINAL RULE IN THE **FEDERAL REGISTER**], all persons are prohibited from manufacturing (including import) methylene chloride, for the uses listed in paragraphs (a)(1) and (2) of this section except for those uses specified in paragraph (b)(7) of this section.

(2) After [DATE 180 DAYS AFTER DATE OF PUBLICATION OF FINAL RULE IN THE **FEDERAL REGISTER**], all persons are prohibited from processing methylene chloride, including any methylene chloride-containing products for the uses listed in paragraphs (a)(1) and (2) of this section except for those uses specified in paragraph (b)(7) of this section.

(3) After [DATE 270 DAYS AFTER DATE OF PUBLICATION OF FINAL RULE IN THE **FEDERAL REGISTER**], all persons are prohibited from distributing in commerce methylene chloride, including any methylene chloride-containing products, to retailers for any use.

(4) After [DATE 360 DAYS AFTER DATE OF PUBLICATION OF FINAL RULE IN THE **FEDERAL REGISTER**], all retailers are prohibited from distributing in commerce (including making available) methylene chloride, including any methylene chloride-containing products, for any use.

(5) After [DATE 360 DAYS AFTER DATE OF PUBLICATION OF FINAL RULE IN THE **FEDERAL REGISTER**], all persons are prohibited from distributing in commerce (including making available) methylene chloride, including any methylene chloride-containing products for any use described in paragraphs (a)(1) and (2) of this section except for those uses specified in paragraph (b)(7) of this section.

(6) After [DATE 450 DAYS AFTER DATE OF PUBLICATION OF FINAL RULE IN THE **FEDERAL REGISTER**], all persons are prohibited from industrial or commercial use of methylene chloride, including any methylene chloride containing products for the uses listed in paragraph (a)(2) of this section except for those uses specified in paragraph (b)(7) of this section.

(7) After [DATE 10 YEARS AFTER DATE OF PUBLICATION OF FINAL RULE IN THE **FEDERAL REGISTER**], all persons are prohibited from manufacturing (including import), processing, distribution in commerce, or use of methylene chloride, including any methylene chloride containing products, for industrial or commercial use for paint or coating removal from safety critical, corrosion-sensitive components of aircraft or spacecraft as described in § 751.115(b)(1) through (3).

§ 751.109 [Redesignated as § 751.113]

■ 7. Redesignate § 751.109 as new § 751.113 in subpart B and add new § 751.109 in subpart B to read as follows:

§ 751.109 Workplace Chemical Protection Program.

(a) *Applicability.* The provisions of this section apply to the following

conditions of use of methylene chloride, except to the extent the conditions of use are prohibited by §§ 751.105 and 751.107:

(1) Manufacturing (domestic manufacture);

(2) Manufacturing (import);

(3) Processing: as a reactant;

(4) Processing: incorporation into a formulation, mixture, or reaction product;

(5) Processing: repackaging;

(6) Processing: recycling;

(7) Industrial and commercial use as a laboratory chemical;

(8) Industrial or commercial use for paint and coating removal from safety-critical, corrosion-sensitive components of aircraft and spacecraft that are owned or operated by the U.S. Department of Defense, the National Aeronautics and Space Administration, the U.S. Department of Homeland Security, and the Federal Aviation Administration that is performed by the agency or the agency's contractor at locations controlled by the agency or the agency's contractor.

(9) Industrial or commercial use as a bonding agent for acrylic and polycarbonate in mission-critical military and space vehicle applications, including in the production of specialty batteries for applications that are performed by the U.S. Department of Defense, the National Aeronautics and Space Administration, or the U.S. Department of Homeland Security or their contractors at locations controlled by the agency or the agency's contractor; and

(10) Disposal;

(b) *Relationship to 29 CFR part 1910.* For purposes of this section:

(1) Any provisions applying to ''employee'' in 29 CFR 1910.1020, 29 CFR 1910.132, 29 CFR 1910.134, and 29 CFR 1910.1052 also apply equally to potentially exposed persons; and

(2) Any provisions applying to ''employer'' in 29 CFR 1910.1020, 29 CFR 1910.132, 29 CFR 1910.134, and 29 CFR 1910.1052 also apply equally to any owner or operator for the regulated area.

(c) *Exposure limits.* The owner or operator must ensure the following:

(1) *Existing Chemical Exposure Limit (ECEL).* No person is exposed to an airborne concentration of methylene chloride in excess of 2 parts of methylene chloride per million parts of air (2 ppm) as an 8-hour TWA.

(2) *EPA short-term exposure limit (EPA STEL).* No person is exposed to an airborne concentration of methylene chloride in excess of 16 parts of methylene chloride per million parts of air (16 ppm) as determined over a sampling period of 15 minutes.

(3) *Regulated areas.* Owners or operators must establish and maintain regulated areas in accordance with 29 CFR 1910.1052(e)(2), (4), (5), (6), and (7), within 3 months after receipt of the results of any monitoring data as outlined in paragraph (d) of this section. Owners or operators must establish a regulated area wherever a potentially exposed person's exposure to airborne concentrations of methylene chloride exceeds or can reasonably be expected to exceed either the ECEL or EPA STEL.

(d) *Exposure monitoring*—(1) *In general*—(i) *Characterization of exposures.* Owners or operators must determine each potentially exposed person's exposure by either:

(A) Taking a personal breathing zone air sample of each potentially exposed person's exposure; or

(B) Taking personal breathing zone air samples that are representative of each potentially exposed person's exposure.

(ii) *Representative samples.* Owners or operators are permitted to consider personal breathing zone air samples to be representative of each potentially exposed person's exposure when they are taken as follows:

(A) *ECEL.* The owner or operator has taken one or more personal breathing zone air samples for at least one potentially exposed person in each job classification in a work area during every work shift, and the person sampled is expected to have the highest methylene chloride exposure.

(B) *EPA STEL.* The owner or operator has taken one or more personal breathing zone air samples which indicate the highest likely 15-minute exposures during such operations for at least one potentially exposed person in each job classification in the work area during every work shift, and the person sampled is expected to have the highest methylene chloride exposure.

(C) *Exception.* Personal breathing zone air samples taken during one work shift may be used to represent potentially exposed person exposures on other work shifts where the owner or operator can document that the tasks performed and conditions in the workplace are similar across shifts.

(iii) *Accuracy of monitoring.* Owners or operators must ensure that the methods used to perform exposure monitoring produce results that are accurate to a confidence level of 95%, and are:

(A) Within plus or minus 25% for airborne concentrations of methylene chloride above the ECEL or the EPA STEL; or

(B) Within plus or minus 35% for airborne concentrations of methylene chloride at or above the ECEL action level but at or below the ECEL.

(iv) *Currency of monitoring data.* Owners or operators are not permitted to rely on monitoring data that is more than 5 years old to demonstrate compliance with initial or periodic monitoring requirements for either the ECEL or the EPA STEL.

(2) *Initial monitoring.* (i) After [DATE 180 DAYS AFTER DATE OF PUBLICATION OF FINAL RULE IN THE **FEDERAL REGISTER**] each owner or operator of a workplace where methylene chloride is present must perform an initial exposure monitoring to determine each potentially exposed person's exposure, except under the following temporary conditions:

(A) An owner or operator can provide EPA with objective data generated during the last 5 years that demonstrates to EPA that methylene chloride cannot be released in the workplace in airborne concentrations at or above the ECEL action level (1-ppm 8-hour TWA) or above the EPA STEL (16 ppm 15-minute TWA) and that the data represents the highest methylene chloride exposures likely to occur under conditions of use described in paragraph (a) of this section; or

(B) Where potentially exposed persons are exposed to methylene chloride for fewer than 30 days per year, and the owner or operator has measurements by direct-metering devices which give immediate results and which provide sufficient information regarding exposures to determine and implement the control measures that are necessary to reduce exposures to below the ECEL action level and EPA STEL.

(ii) An owner or operator must re-conduct an initial exposure monitoring at least once every 5 years if methylene chloride is present in the workplace.

(3) *Periodic monitoring.* Where the initial exposure monitoring shows exposure at or above the ECEL action level at or above the EPA STEL, the owner or operator must establish an exposure monitoring program for periodic monitoring of exposure to methylene chloride in accordance with table 1 to this paragraph (d)(3).

TABLE 1 TO § 751.109(d)(3)—PERIODIC MONITORING REQUIREMENTS BASED ON INITIAL EXPOSURE MONITORING RESULTS

Air concentration condition observed during initial exposure monitoring	Periodic monitoring requirement
If the initial exposure monitoring concentration is below the ECEL action level and at or below the EPA STEL.	ECEL and EPA STEL monitoring not required.
If the initial exposure monitoring concentration is below the ECEL action level and above the EPA STEL.	ECEL monitoring not required, and EPA STEL monitoring required every 3 months.
If the initial exposure monitoring concentration is at or above the ECEL action level and at or below the ECEL; and at or below the EPA STEL.	ECEL monitoring every 6 months.
If the initial exposure monitoring concentration is at or above the ECEL action level and at or below the ECEL; and above the EPA STEL.	ECEL monitoring every 6 months and EPA STEL monitoring every 3 months.
If the initial exposure monitoring concentration is above the ECEL and below, at, or above the EPA STEL.	ECEL monitoring every 3 months and EPA STEL monitoring every 3 months.
Two consecutive monitoring events have taken place 7 days apart that indicate that potential exposure has decreased from above the ECEL to at or below the ECEL, but at or above the ECEL action level.	Reduce ECEL periodic monitoring frequency from every 3 months to every 6 months.
Two consecutive monitoring events have taken place 7 days apart that indicate that potential exposure has decreased to below the ECEL action level and at or below the EPA STEL.	Transition from ECEL periodic monitoring frequency from of every 6 months to initial monitoring once every 5 years. The second consecutive monitoring event will delineate the new date from which the next 5-year initial exposure monitoring must occur.
If the owner or operator engages in any conditions of use described in paragraph (a) of this section and is required to monitor either the ECEL or EPA STEL in a 3-month interval, but does not engage in any of those uses for the entirety of the 3-month interval.	The owner or operator may forgo the upcoming periodic monitoring event. However, documentation of cessation of use of methylene chloride must be maintained, and initial monitoring is required when the owner or operator resumes or starts any of the conditions of use described in paragraph (a) of this section.
Owner or operator engages in any conditions of use described in paragraph (a) of this section and is required to monitor the ECEL in a 6-month interval, but does not engage in any of those uses for the entirety of the 6-month interval..	The owner or operator may forgo the upcoming periodic monitoring event. However, documentation of cessation of the condition(s) of use must be maintained until periodic monitoring resumes, and initial monitoring is required when the owner or operator resumes or starts any of the conditions of use described in paragraph (a) of this section.

Note: Additional scenarios in which monitoring may be required are discussed paragraph (d)(4).

(4) *Additional monitoring.* The owner or operator must conduct an additional initial exposure monitoring immediately after any change that may reasonably be expected to introduce additional sources of exposure to methylene chloride, or otherwise result in increased exposure to methylene chloride compared to the most recent monitoring event.

(5) *Notification of monitoring results.* (i) The owner or operator must inform potentially exposed persons of monitoring results within 15 working days.

(ii) This notification must include the following:

(A) Exposure monitoring results;

(B) Identification and explanation of the ECEL, ECEL Action Level, and EPA STEL in plain language;

(C) Explanation of any corresponding required respiratory protection as described in paragraph (f);

(D) Descriptions of actions taken by the owner or operator to reduce exposure;

(E) Quantity of methylene chloride in use;

(F) Location of methylene chloride use;

(G) Manner of methylene chloride use;

(H) Identified releases of methylene chloride; and

(I) Whether the airborne concentration of methylene chloride exceeds the ECEL or the EPA STEL.

(iii) Notice must be provided in plain language writing, in a language that the person understands, to each potentially exposed person or posted in an appropriate and accessible location outside the regulated area with an English-language version and a non-English language version representing the language of the largest group of workers who do not read English.

(e) *ECEL control procedures and plan*—(1) *Method of compliance.* After [DATE 360 DAYS AFTER DATE OF PUBLICATION OF FINAL RULE IN THE **FEDERAL REGISTER**], the owner or operator must institute and maintain the effectiveness of engineering controls and work practices to reduce exposure to or below the ECEL and EPA STEL except to the extent that the owner or operator can demonstrate that such controls are not feasible. Wherever the feasible engineering controls and work practices which can be instituted are not sufficient to reduce exposures for potentially exposed person to or below the ECEL or EPA STEL, the owner or operator must use them to reduce exposure to the lowest levels achievable by these controls and must supplement them by the use of respiratory protection that complies with the requirements of paragraph (f) of this section to reduce exposures to or below the ECEL or EPA STEL. Wherever engineering controls and work practices are not feasible, the owner or operator must use respiratory protection that complies with the requirements of paragraph (f) of this section to reduce exposures for potentially exposed persons to or below the ECEL or EPA STEL. Where an owner or operator cannot demonstrate the use of engineering controls or work practices that result in exposure below the ECEL or EPA STEL, and has not demonstrated that it has supplemented the risk of exposure with respiratory protection, this will constitute a failure to comply with the ECEL. Additionally, the owner or operator must not implement a schedule of personnel rotation as a means of compliance with the ECEL.

(2) *Exposure control plan requirements.* After [DATE 360 DAYS AFTER DATE OF PUBLICATION OF FINAL RULE IN THE **FEDERAL REGISTER**], the owner or operator must include and document in an exposure control plan the following:

(i) Identification of exposure controls and rationale for using or not using exposure controls in the following sequence—elimination, substitution,

engineering controls, and administrative controls—to reduce exposures in the workplace to either at or below the ECEL or EPA STEL or to the lowest level achievable, and the exposure controls selected based on feasibility, effectiveness, and other relevant considerations;

(ii) If exposure controls were not selected, document the efforts identifying why these are not feasible, not effective, or otherwise not implemented;

(iii) Actions taken to implement exposure controls selected, including proper installation, maintenance, training or other steps taken;

(iv) Regular inspections, evaluations, and updating of the exposure controls to ensure effectiveness and confirmation that all persons are using them accordingly;

(v) Occurrence and duration of any start-up, shutdown, or malfunction of exposure controls or of facility equipment that causes air concentrations to be above the ECEL or EPA STEL and subsequent corrective actions taken during start-up, shutdown, or malfunctions to mitigate exposures to methylene chloride; and

(vi) Objective data generated during the previous 5 years, when used to forgo the initial exposure monitoring, must include: the use of methylene chloride being evaluated, the source of objective data, measurement methods, measurement results, and measurement analysis of the use of methylene chloride, and any other relevant data to the operations, processes, or person's exposure.

(3) *Respirator requirements.* The owner or operator must supply a respirator, selected in accordance with paragraph (f) of this section, to each potentially exposed person who enters a regulated area and must ensure each potentially exposed person uses that respirator whenever methylene chloride exposures may exceed the ECEL or EPA STEL.

(f) *Respiratory protection*—(1) *Respirator conditions.* After [DATE 270 DAYS AFTER DATE OF PUBLICATION OF FINAL RULE IN THE **FEDERAL REGISTER**] or within 3 months after receipt of the results of any exposure monitoring as described in paragraph (d) of this section, owners or operators must provide respiratory protection to all potentially exposed persons in the regulated area as outlined in paragraph (c)(3) of this section, and according to the provisions outlined in 29 CFR 1910.134(a) through (l) (except paragraph (d)(1)(iii)) and as specified in this paragraph for potentially exposed persons exposed to methylene chloride in concentrations above the ECEL or the EPA STEL. For the purpose of this paragraph (f), the maximum use concentration (MUC) as used in 29 CFR 1910.134 must be calculated by multiplying the assigned protection factor (APF) specified for a respirator by the ECEL or EPA STEL.

(2) *Respirator selection criteria.* The type of respiratory protection that regulated entities must select and provide to potentially exposed persons in accordance with 29 CFR 1910.1052(g)(3)(i), is directly related to the monitoring results, as follows:

(i) If the measured exposure concentration is at or below the ECEL or EPA STEL: no respiratory protection is required.

(ii) If the measured exposure concentration is above 2 ppm and less than or equal to 50 ppm: the respirator protection required is any NIOSH-certified supplied-air respirator (SAR) or airline respirator in a continuous-flow mode equipped with a loose-fitting facepiece or helmet/hood (APF 25).

(iii) If the measured exposure concentration is above 50 ppm and less than or equal to 100 ppm the respirator protection required is:

(A) Any NIOSH-certified Supplied-Air Respirator (SAR) or airline respirator in a demand mode equipped with a full facepiece (APF 50); or

(B) Any NIOSH-certified Self-Contained Breathing Apparatus (SCBA) in demand-mode equipped with a full facepiece or helmet/hood (APF 50).

(iv) If the measured exposure concentration is unknown or at any value above 100 ppm and up to 2,000 ppm the respirator protection required is:

(A) Any NIOSH-certified Supplied-Air Respirator (SAR) or airline respirator in a continuous-flow mode equipped with a full facepiece or certified helmet/hood (APF 1,000); or

(B) Any NIOSH-certified Supplied-Air Respirator (SAR) or airline respirator in pressure-demand or other positive-pressure mode equipped with a full facepiece (APF 1,000); or

(C) Any NIOSH-certified Self-Contained Breathing Apparatus (SCBA) in a pressure-demand or other positive-pressure mode equipped with a full facepiece or certified helmet/hood (APF 10,000).

(3) *Minimal respiratory protection.* Requirements outlined in paragraph (e)(2) of this section represent the minimum respiratory protection requirements, such that any respirator affording a higher degree of protection than the required respirator may be used.

(4) *Workplace participation.* Owners or operators must document the notice to and ability of any potentially exposed person to access the exposure control plan and other associated records.

(g) *Dermal protection.* (1) Owners or operators must require the donning of gloves that are chemically resistant to methylene chloride with activity-specific training where dermal contact with methylene chloride is possible, after application of the requirements in paragraph (e), in accordance with the NIOSH hierarchy of controls.

(2) Owners or operators must minimize and protect potentially exposed persons from dermal exposure in accordance with 29 CFR 1910.1052(h) and (i).

(h) *Training.* Owners or operators must provide training in accordance with 29 CFR 1910.1052(l)(1) through (6) to potentially exposed persons prior to or at the time of initial assignment to a job involving potential exposure to methylene chloride. In addition, if respiratory protection or PPE must be worn within a regulated area, owners or operators must provide training in accordance with 29 CFR 1910.132(f) to potentially exposed persons within that regulated area.

■ 8. Revise newly redesignated § 751.111 to read as follows:

§ 751.111 Downstream notification.

(a) After August 26, 2019, and before [DATE 150 DAYS AFTER DATE OF PUBLICATION OF FINAL RULE IN THE **FEDERAL REGISTER**] for each person who manufactures (including imports), and before [DATE 210 DAYS AFTER DATE OF PUBLICATION OF FINAL RULE IN THE **FEDERAL REGISTER**] for each person who processes or distributes in commerce, methylene chloride for any use must, prior to or concurrent with the shipment, notify companies to whom methylene chloride is shipped, in writing, of the restrictions described in § 751.105. Notification must occur by inserting the following text in section 1(c) and section 15 of the SDS provided with the methylene chloride or with any methylene chloride containing product:

> This chemical/product is not and cannot be distributed in commerce (as defined in TSCA section 3(5)) or processed (as defined in TSCA section 3(13)) for consumer paint or coating removal.

(b) Beginning on [DATE 150 DAYS AFTER DATE OF PUBLICATION OF FINAL RULE IN THE **FEDERAL REGISTER**], each person who manufactures (including import) methylene chloride for any use must, prior to or concurrent with the shipment, notify companies to whom

methylene chloride is shipped, in writing, of the restrictions described in this subpart in accordance with paragraph (d) of this section.

(c) Beginning on [DATE 210 DAYS AFTER DATE OF PUBLICATION OF FINAL RULE IN THE **FEDERAL REGISTER**], each person who processes or distributes in commerce methylene chloride or methylene chloride-containing products for any use must, prior to or concurrent with the shipment, notify companies to whom methylene chloride is shipped, in writing, of the restrictions described in this subpart in accordance with paragraph (d) of this section.

(d) The notification required under paragraphs (b) and (c) of this section must occur by inserting the following text in section 1(c) and section 15 of the SDS provided with the methylene chloride or with any methylene chloride containing product:

After August 26, 2019, this chemical/product is not and cannot be distributed in commerce or processed for consumer paint or coating removal. After [DATE 270 DAYS AFTER DATE OF PUBLICATION OF FINAL RULE IN THE **FEDERAL REGISTER**] this chemical/product cannot be distributed in commerce to retailers for any use. After [DATE 360 DAYS AFTER DATE OF PUBLICATION OF FINAL RULE IN THE **FEDERAL REGISTER**], this chemical/product is and can only be processed or distributed in commerce for the following purposes: (1) Processing as a reactant; (2) Processing for incorporation into a formulation, mixture, or reaction product; (3) Processing for repackaging; (4) Processing for recycling; (5) Industrial or commercial use as a laboratory chemical; (6) Industrial or commercial use as a bonding agent for acrylic and polycarbonate in mission-critical military and space vehicle applications, including in the production of specialty batteries for such applications that are performed by the U.S. Department of Defense, the National Aeronautics and Space Administration, or the Department of Homeland Security or their contractors at locations controlled by the agency or the agency's contractor; (7) Industrial or commercial use for paint and coating removal from safety-critical, corrosion-sensitive components of aircraft and spacecraft that are owned or operated by the U.S. Department of Defense, the National Aeronautics and Space Administration, the U.S. Department of Homeland Security, and the Federal Aviation Administration that is performed by the agency or the agency's contractor at locations controlled by the agency or the agency's contractor; (8) Industrial or commercial use for paint and coating removal from safety critical, corrosion-sensitive components of other aircraft or spacecraft until [DATE 10 YEARS AFTER DATE OF PUBLICATION OF FINAL RULE IN THE **FEDERAL REGISTER**]; and (9) Disposal.

■ 9. Revise newly redesignated § 751.113 to read as follows:

§ 751.113 Recordkeeping Requirements.

(a) *General records.* Each person who manufactures (including imports), processes, or distributes in commerce any methylene chloride after August 26, 2019, must retain in one location at the headquarters of the company, or at the facility for which the records were generated, documentation showing:

(1) The name, address, contact, and telephone number of companies to whom methylene chloride was shipped;

(2) A copy of the notification provided under § 751.111; and

(3) The amount of methylene chloride shipped.

(b) *Exposure monitoring records.* Owners or operators are required to retain monitoring records in accordance with 29 CFR 1910.1052(m)(2) Additionally, for each monitoring event of methylene chloride required under this subpart, owners or operators must document the following:

(1) All measurements that may be necessary to determine the conditions that may affect the monitoring results;

(2) The identity of all other potentially exposed persons whose exposure was not measured but whose exposure is intended to be represented by the area or representative sampling monitoring;

(3) Use of established analytical methods;

(4) Compliance with the Good Laboratory Practice Standards in accordance with 40 CFR part 792; and

(5) Information regarding air monitoring equipment including: type, maintenance, calibrations, performance tests, limits of detection, and any malfunctions.

(c) *Exposure control records.* Owners or operators must retain records of:

(i) Exposure control plan as described in § 751.109(e)(2);

(ii) Regulated areas and authorized personnel;

(iii) Facility exposure monitoring records;

(iv) Notifications of exposure monitoring results;

(v) Personal protective equipment (PPE) and respiratory protection used by potentially exposed persons and program implementation, including fit-testing; and

(vi) Information and training provided pursuant to subsection (i) of this section.

(d) *Records related to § 751.115 exemptions.* To maintain eligibility for an exemption described in § 751.115, the records maintained by the owners or operators must demonstrate compliance with the specific conditions of the exemption.

(e) *Minimum record retention period.* The records required under paragraphs (a) through (c) of this section must be retained for at least 5 years from the date that such records were generated.

■ 10. Add § 751.115 to subpart B to read as follows:

§ 751.115 Exemptions.

(a) *In general.* (1) Time-limited exemptions as described in paragraphs (b)(1) through (3) of this section provided for through § 751.107(b)(7) are established in this section in accordance with 15 U.S.C. 2605(g)(1)(B).

(2) Time-limited exemptions as described in paragraph (b)(4) of this section are established in this section in accordance with 15 U.S.C. 2605(g)(1)(A).

(3) In order to be eligible for the exemptions established in this section, regulated parties must comply with all conditions established for such exemptions in accordance with 15 U.S.C. 2605(g)(4).

(b) *Time-limited exemptions.* (1) Paint or coating removal from safety-critical, corrosion-sensitive components of aircraft owned or operated by air carriers or commercial operators certificated under 14 CFR part 119 until [DATE 10 YEARS AFTER DATE OF PUBLICATION OF FINAL RULE IN THE **FEDERAL REGISTER**]. The following are specific conditions of this exemption:

(i) The paint or coating removal must be performed on the premises of maintenance or repair facilities operated by air carriers or commercial operators certificated under 14 CFR part 119 or at repair stations certificated under 14 CFR part 145, if their primary business is performing maintenance, preventive maintenance, rebuilding, or alteration of aircraft operated by air carriers and commercial operators certificated under 14 CFR part 119.

(ii) The owner or operator of the location where the paint or coating removal is being performed must comply with the Workplace Chemical Protection Program provisions in § 751.109.

(iii) The owner or operator of the location where the paint or coating removal is being performed must comply with the recordkeeping requirements in § 751.113.

(2) Paint and coating removal from safety-critical, corrosion-sensitive components of aircraft intended for, or suitable for operation by, air carriers and commercial operators certificated under 14 CFR part 119 until [DATE 10 YEARS AFTER DATE OF

PUBLICATION OF FINAL RULE IN THE **FEDERAL REGISTER**]. The following are specific conditions of this exemption:

(i) The paint or coating removal must be performed at locations owned or operated by the manufacturer of the aircraft.

(ii) The owner or operator of the location where the paint or coating removal is being performed must comply with the Workplace Chemical Protection Program provisions in § 751.109.

(iii) The owner or operator of the location where the paint or coating removal is being performed must comply with the recordkeeping requirements in § 751.113.

(3) Paint and coating removal from safety-critical, corrosion-sensitive components of spacecraft used in, or intended for use in, commercial space transportation operations subject to 14 CFR chapter III, including payloads such as satellites and similar hardware, until [DATE 10 YEARS AFTER DATE OF PUBLICATION OF FINAL RULE IN THE **FEDERAL REGISTER**]. The following are specific conditions of this exemption:

(i) The paint or coating removal must be performed at locations owned or operated by the manufacturer of the spacecraft or payload or similar hardware.

(ii) The owner or operator of the location where the paint or coating removal is being performed must comply with the Workplace Chemical Protection Program provisions in § 751.109.

(iii) The owner or operator of the location where the paint or coating removal is being performed must comply with the recordkeeping requirements in § 751.113.

(4) Use of methylene chloride or methylene chloride-containing products identified in paragraph (b)(4)(i) of this section in an emergency by the National Aeronautics and Space Administration and its contractors operating within the scope of their contracted work until [DATE 10 YEARS AFTER DATE OF PUBLICATION OF FINAL RULE IN THE **FEDERAL REGISTER**].

(i) *Applicability.* The emergency use exemption described in this paragraph (b)(4) shall apply to the following specific conditions of use as described in paragraphs (b)(4)(i)(A)(*1*) through (*7*) of this section.

(A) Conditions of use subject to this exemption:

(*1*) Industrial and commercial use as solvent for cold cleaning

(*2*) Industrial and commercial use as a solvent for aerosol spray degreaser/cleaner

(*3*) Industrial and commercial use in adhesives, sealants and caulks

(*4*) Industrial and commercial use in adhesive and caulk removers

(*5*) Industrial and commercial use in metal non-aerosol degreasers

(*6*) Industrial and commercial use in non-aerosol degreasers and cleaners

(*7*) Industrial and commercial use as solvent that becomes part of a formulation or mixture

(B) Emergency use:

(*1*) *In general.* An emergency is a serious and sudden situation requiring immediate action, within 15 days or less, necessary to protect:

(*i*) Safety of National Aeronautics and Space Administration's or their contractors' personnel;

(*ii*) National Aeronautics and Space Administration's missions;

(*iii*) Human health, safety, or property, including that of adjacent communities; or

(*iv*) The environment.

(*2*) *Duration.* Each emergency is a separate situation; if use of methylene chloride exceeds 15 days, then justification must be documented.

(*3*) *Eligibility.* To be eligible for the exemption, the National Aeronautics and Space Administration and its contractors must:

(*i*) Select methylene chloride because there are no technically and economically feasible safer alternatives available during the emergency.

(*ii*) Perform the emergency use of methylene chloride at locations controlled by National Aeronautics and Space Administration or its contractors.

(ii) *Requirements.* To be eligible for the emergency use exemption described in this paragraph (b)(4), National Aeronautics and Space Administration and its contractors must comply with the following conditions:

(A) *Notification.* Within 15 days of the emergency use by National Aeronautics and Space Administration and its contractors, National Aeronautics and Space Administration must provide notice to EPA that includes the following:

(*1*) Identification of the conditions of use detailed in paragraph (b)(4)(i)(A) of this section that the emergency use fell under;

(*2*) An explanation for why the emergency use met the definition of emergency in paragraph (b)(4)(i)(B) of this section; and

(*3*) An explanation of why methylene chloride was selected, including why there were no technically and economically feasible safer alternatives available in the particular emergency.

(B) *Exposure.* The owner or operator must comply with the Workplace Chemical Protection Program provisions in § 751.109, to the extent technically feasible in light of the particular emergency.

(C) *Recordkeeping.* The owner or operator of the location where the use takes place must comply with the recordkeeping requirements in § 751.113.

BILLING CODE 6560–50–P

FEDERAL REGISTER

Vol. 88 Wednesday,
No. 85 May 3, 2023

Part VI

Department of Energy

Federal Energy Regulatory Commission
18 CFR Part 35
Incentives for Advanced Cybersecurity Investment; Final Rule

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

18 CFR Part 35

[Docket No. RM22–19–000; Order No. 893]

Incentives for Advanced Cybersecurity Investment

AGENCY: Federal Energy Regulatory Commission.

ACTION: Final rule.

SUMMARY: The Federal Energy Regulatory Commission is revising its regulations to provide incentive-based rate treatment for the transmission of electric energy in interstate commerce and the sale of electric energy at wholesale in interstate commerce by utilities for the purpose of benefitting consumers by encouraging investments by utilities in Advanced Cybersecurity Technology and participation by utilities in cybersecurity threat information sharing programs, as directed by the Infrastructure Investment and Jobs Act of 2021.

DATES: This rule is effective July 3, 2023.

SUPPLEMENTARY INFORMATION:

TABLE OF CONTENTS

I. Introduction

1. In this final rule, the Federal Energy Regulatory Commission revises its regulations pursuant to section 219A of the Federal Power Act (FPA) [1] to add subpart K, consisting of § 35.48, to our regulations to establish rules for incentive-based rate treatment for certain voluntary cybersecurity investments [2] by utilities [3] as described in this final rule. These rules make incentive-based rate treatment available to utilities that make voluntary cybersecurity investments in Advanced Cybersecurity Technology [4] that

[1] Infrastructure Investment and Jobs Act of 2021, Public Law 117–58, section 40123, 135 Stat. 429, 951 (to be codified at 16 U.S.C. 824s–1) (IIJA).

[2] In this final rule, the term investments includes expenditures that can be either capitalized costs or expenses.

[3] Notwithstanding that FPA section 219A requires the Commission to offer incentives to public utilities, as discussed in section III.A.1. of this final rule, we make rate incentives also available to non-public utilities that have or will have a rate on file with the Commission, similar to Commission precedent under FPA section 219, 16 U.S.C. 824s. We intend that all references in this final rule to utilities include both public utilities and non-public utilities that have or will have a rate on file with the Commission.

[4] FPA section 219A(a)(1) defines the term Advanced Cybersecurity Technology to mean any technology, operational capability, or service, including computer hardware, software, or a related

enhance their security posture by improving their ability to protect against, detect, respond to, or recover from a cybersecurity threat and to utilities that participate in cybersecurity threat information sharing programs. The Commission is issuing this final rule to comply with FPA section 219A(c).[5] This voluntary cybersecurity incentive-based rate treatment is for the purpose of benefitting consumers by encouraging cybersecurity investments in Advanced Cybersecurity Technology and in participation in cybersecurity threat information sharing programs.[6]

2. We establish a regulatory framework for utilities to request incentive-based rate treatment for certain voluntary cybersecurity investments.[7] Under this framework, we: (1) identify the utilities permitted to request incentive-based rate treatment for cybersecurity investments; (2) establish the criteria that the Commission will use to determine whether a cybersecurity investment is eligible to receive an incentive-based rate treatment; (3) discuss the approaches that a utility may use to demonstrate that a cybersecurity investment satisfies the eligibility criteria; (4) explain the types of incentive-based rate treatments available for qualifying cybersecurity investments; (5) set limits on the duration of the incentive-based rate treatment; (6) describe what utilities must include in their applications for incentive-based rate treatment for cybersecurity investments; and (7) establish the annual reporting requirements for utilities that receive incentive-based rate treatment for their cybersecurity investments.

II. Background

A. Infrastructure Investment and Jobs Act of 2021

3. On November 15, 2021, the IIJA was signed into law.[8] Section 40123 of the IIJA added section 219A to the FPA, which directs the Commission to revise its regulations to establish, by rule, incentive-based, including performance-based, rate treatments for the transmission of electric energy in interstate commerce and the sale of electric energy at wholesale in interstate commerce by public utilities for the purpose of benefitting consumers by encouraging investments by public utilities in Advanced Cybersecurity Technology and participation by public utilities in cybersecurity threat information sharing programs.

1. Advanced Cybersecurity Technology

4. Under FPA section 219A(a), an Advanced Cybersecurity Technology can be a product and/or a service.[9] Cybersecurity products are generally hardware, software, and cybersecurity services that can be used for information technology (IT) systems and/or operational technology (OT) systems.[10] Cybersecurity products can include, but are not limited to, security information and event management systems, intrusion detection systems, anomaly detection systems, encryption tools, data loss prevention systems, forensic toolkits, incident response tools, imaging tools, network behavior analysis tools, access management systems, configuration management systems, anti-malware tools, user behavior analytic software, event logging systems, and any system for access control, identification, authentication, and/or authorization control.

5. Cybersecurity services may be either automated or manual and can include, but are not limited to, system installation and maintenance, network administration, asset management, threat and vulnerability management, training, incident response, forensic investigation, network monitoring, data sharing, data recovery, disaster recovery, network restoration, log analytics, cloud network storage, and any general cybersecurity consulting service.

6. Under FPA section 219A(a), Advanced Cybersecurity Technology Information may include, but is not limited to, plans, policies, procedures, specifications, implementation, configuration, manuals, instructions, accounting, financials, logs, records, and physical or electronic access lists related to or regarding the Advanced Cybersecurity Technology. FPA section 219A(g) states that Advanced Cybersecurity Technology Information that is provided to, generated by, or collected by the Federal Government under FPA section 219A subsections (b), (c), or (f) shall be considered to be critical electric infrastructure information under FPA section 215A.[11] Utilities submitting to the Commission Advanced Cybersecurity Technology Information or other information they believe to be Critical Energy/Electric Infrastructure Information (CEII) must clearly indicate which portions of their filing contains CEII and provide public and non-public versions of the information pursuant to the Commission's regulations.[12]

2. Cybersecurity Threat Information Sharing Programs

7. FPA section 219A(c) directs the Commission to identify incentive-based rate treatments that could support participation by public utilities in cybersecurity threat information sharing programs. Utilities face barriers to participating in cybersecurity information sharing programs, such as the high costs associated with implementing monitoring technology and maintenance of sensor technology, the amount of time and effort required to share information, incurring fees to participate in cybersecurity threat information sharing programs, and concerns regarding the confidentiality of the information once shared.

B. Study and Report to Congress

8. As an initial step in the process of revising the Commission's regulations, FPA section 219A(b) requires the Commission to conduct a study, in consultation with certain entities,[13] to identify incentive-based rate treatments, including performance-based rates, for the jurisdictional transmission and sale of electric energy that could support investments in Advanced Cybersecurity Technology and participation by public utilities in cybersecurity threat

asset, that enhances the security posture of public utilities through improvements in the ability to protect against, detect, respond to, or recover from a cybersecurity threat. IIJA, Public Law 117–58, section 40123, 135 Stat. at 951 (to be codified at 16 U.S.C. 824s–1(a)(1)). FPA section 219A(a)(2) defines the term Advanced Cybersecurity Technology Information to mean information relating to advanced cybersecurity technology or proposed advanced cybersecurity technology that is generated by or provided to the Commission or another Federal agency. *Id.* at 952 (to be codified at 16 U.S.C. 824s–1(a)(2)).

[5] IIJA, Public Law 117–58, section 40123, 135 Stat. at 952 (to be codified at 16 U.S.C. 824s–1(c)).

[11] IIJA, Public Law 117–58, section 40123, 135 Stat. at 952 (to be codified at 16 U.S.C. 824s–1(g)) (citing 16 U.S.C. 824o–1).

[12] *See* 18 CFR 388.113(d)(1)(i)–(ii).

[13] FPA section 219A(b) identifies the following entities: the Secretary of Energy; North American Electric Reliability Corporation (NERC); Electricity Subsector Coordinating Council (ESCC); and National Association of Regulatory Utility Commissioners (NARUC).

information sharing programs.[14] As directed, Commission staff consulted with the specified entities to help identify incentive-based rate treatments that could enhance the security posture of the Bulk-Power System.[15]

9. In addition to conducting the study, FPA section 219A(b) requires the Commission to submit a report to Congress (Report) detailing the results of the study. On May 13, 2022, the Report was submitted to Congress.[16] The Report, among other things, outlined prior Commission efforts to address incentives for cybersecurity initiatives. The Report provided information regarding potential incentive-based rate treatments and the Commission's general ratemaking authority, including the prior adoption of rate incentives and performance-based ratemaking in other contexts. In addition, the Report discussed challenges associated with adopting an incentive-based rate structure to enhance the security posture of the Bulk-Power System.

C. NOPR

10. On September 22, 2022, the Commission issued the NOPR in this proceeding, proposing under FPA section 219A to establish rules for incentive-based rate treatments for certain voluntary cybersecurity investments by utilities.[17] The Commission proposed that these rules would make incentives available to utilities that make certain cybersecurity investments that enhance their security posture by improving their ability to protect against, detect, respond to, or recover from a cybersecurity threat, or that participate in cybersecurity threat information sharing programs to the benefit of ratepayers and national security.

11. First, the Commission proposed a regulatory framework for how a utility could qualify for incentives for eligible cybersecurity investments.[18] Under this framework, the Commission proposed that eligible cybersecurity investments must: (1) materially improve cybersecurity through either an investment in Advanced Cybersecurity Technology or participation in a cybersecurity threat information sharing program; [19] and (2) not already be mandated by Critical Infrastructure Protection (CIP) Reliability Standards, or local, State, or Federal law.[20] The Commission proposed that a utility would seek incentive-based rate treatment for a cybersecurity investment in a filing pursuant to FPA section 205,[21] and that the incentive would be effective no earlier than the date of the Commission order approving the incentive request.[22]

12. Second, the Commission proposed to evaluate cybersecurity investments using a list of pre-qualified expenditures that are determined by the Commission to be eligible for incentives, which would be posted on the Commission's public website (PQ List).[23] The Commission proposed that any cybersecurity investment that is on the PQ List would be entitled to a rebuttable presumption of eligibility for an incentive.[24] With the Commission having evaluated cybersecurity investments to include on the PQ List in advance of the application for incentive-based rate treatment, along with the rebuttable presumption, the Commission postulated that the PQ List approach would provide an efficient and transparent mechanism for determining appropriate cybersecurity investments that are eligible for incentives.[25] The Commission also discussed and sought comment on a potential alternative approach, whereby a utility's cybersecurity investment would be evaluated on a case-by-case basis to determine if it is eligible for an incentive.[26]

13. Third, the Commission proposed two potential cybersecurity incentives: (1) a return on equity (ROE) adder of 200 basis points (Cybersecurity ROE Incentive); [27] and (2) deferred cost recovery for certain cybersecurity investments that enables the utility to defer expenses and include the unamortized portion in its rate base (Cybersecurity Regulatory Asset Incentive).[28]

14. Fourth, the Commission proposed that any approved incentive(s) would remain in effect for five years from the date on which the cybersecurity investment(s) enters service or the expenses are incurred, or expire earlier if certain other conditions discussed in the NOPR are met before the end of that five year period, *e.g.,* the cybersecurity investment becomes mandatory.[29] For continued voluntary participation in a cybersecurity threat information sharing program, however, the Commission proposed that utilities be able to continue deferring these expenses and including them in their rate base for each annual tranche of expenses, for as long as: (1) the utility continues incurring costs for its participation in the program; and (2) the program remains eligible for incentives.[30] The Commission sought comment on the proposed duration and expiration conditions for incentives granted under this proposal.

15. Finally, the Commission proposed that a utility receiving a cybersecurity incentive pursuant to the proposed rule must make an annual informational filing by June 1 of each year following the receipt of incentive for as long as the utility receives the incentive.[31] The Commission proposed that the annual filing should detail the specific cybersecurity investments that were made pursuant to the Commission's approval and the corresponding FERC account used.[32]

16. The initial comment period for the NOPR ended on November 7, 2022, and the Commission received 27 initial comments. The reply comment period for the NOPR ended on November 21, 2022, and the Commission received six reply comments.

III. Discussion

17. To implement the statutory directive in FPA section 219A, we add subpart K to our regulations, consisting of § 35.48, to establish the rules for incentive-based rate treatment for utilities that voluntarily make cybersecurity investments as described in this final rule. For this final rule, a

[14] IIJA, Public Law 117–58, section 40123, 135 Stat. at 952 (to be codified at 16 U.S.C. 824s–1(b)).

[15] The term Bulk-Power System is defined in FPA section 215 and refers to: (1) facilities and control systems necessary for operating an interconnected electric energy transmission network (or any portion thereof); and (2) electric energy from generation facilities needed to maintain transmission system reliability. 16 U.S.C. 824o(a)(1). In the context of developing and determining the applicability of mandatory Reliability Standards, NERC uses the term bulk electric system, which NERC defines to generally include the transmission facilities that are operated at 100 kV or higher and real power or reactive power resources connected at 100 kV or higher. *See* NERC, Glossary of Terms Used in NERC Reliability Standards (Mar. 8, 2023), *https://www.nerc.com/pa/Stand/Glossary%20of%20Terms/Glossary_of_Terms.pdf* (NERC Glossary).

[21] 16 U.S.C. 824d. The Commission noted that a utility would be permitted to first file a petition for declaratory order to seek a Commission determination on its eligibility for an incentive, but the utility would still need to make a filing with the Commission pursuant to FPA section 205 before adding the incentive-based rate treatment to its rate on file with the Commission.

cybersecurity investment includes both expenses and capitalized costs associated with Advanced Cybersecurity Technology and participation in a cybersecurity threat information sharing program. In this final rule we: (1) identify the utilities permitted to request incentive-based rate treatment for cybersecurity investments; (2) establish the criteria that the Commission will use to determine whether a cybersecurity investment is eligible to receive an incentive-based rate treatment; (3) discuss the approaches that a utility may use to demonstrate that a cybersecurity investment satisfies the eligibility criteria; (4) explain the type of incentive-based rate treatment available for qualifying cybersecurity investments; (5) set limits on the duration of the incentive-based rate treatment; (6) describe what utilities must include in their applications for incentive-based rate treatment for cybersecurity investments; and (7) establish the annual reporting requirements for utilities that receive incentive-based rate treatment for their cybersecurity investments.

A. Cybersecurity Investments

18. We establish a structure that allows certain entities to request rate incentives for cybersecurity investments that satisfy the eligibility criteria. First, we determine which utilities may request the cybersecurity incentives. Next, we add definitions that identify the types of investments for which those utilities could seek incentive-based rate treatment. Finally, we establish the eligibility criteria that the Commission will use to determine whether a cybersecurity investment is eligible for an incentive.

1. Utilities Eligible To Request Rate Incentives for Cybersecurity Investments

19. FPA section 219A(c) directs the Commission to establish, by rule, incentive-based rate treatment for the transmission of electric energy in interstate commerce and the sale of electric energy at wholesale in interstate commerce by public utilities for the purpose of benefiting consumers by encouraging cybersecurity investments.[33]

a. NOPR Proposal

20. In the NOPR, the Commission proposed to make rate incentives available to both public utilities as well as non-public utilities that have or will have a rate on file with the Commission, similar to Commission precedent regarding transmission incentives under FPA section 219.[34] The Commission explained that it intended that all references to utilities in the NOPR would include both public utilities and non-public utilities that have or will have a rate on file with the Commission.

b. Comments

21. Some commenters discuss the utilities that should or should not be eligible for cybersecurity incentives. American Public Power Association (APPA) agrees with the NOPR proposal that non-public utilities with rates on file with the Commission should be eligible to receive incentives for qualifying investments.[35] Electric Power Supply Association (EPSA) also supports the proposal and argues that the statutory language in FPA section 219A requires the Commission to extend the proposed incentives to all utilities whose rates are regulated by the Commission, including those utilities who recover their costs through competitive markets.[36]

22. EPSA contends that Congress did not intend to limit cybersecurity incentives to utilities with cost-of-service rates on file with the Commission, but rather intended to make incentive-based rates available to all utilities, including those with market-based rates.[37] EPSA specifically suggests that the Commission establish formula rates for costs associated with identified incented cybersecurity investments. Alternatively, EPSA suggests allowing market-based rate entities to make FPA section 205 filings to recover the costs of eligible cybersecurity investments.[38] In contrast, California Public Utilities Commission and the California Department of Water Resources State Water Project (California Parties) suggest that market-based rate sellers or generators should not be eligible for incentives, so as to avoid interference with competitive markets.[39] Transmission Access Policy Study Group (TAPS) states that the Commission should explicitly exclude generators with market-based rates from incentive eligibility.[40] APPA urges the Commission to clarify in the final rule that its proposed incentives are limited to cost-based rates and not available for wholesale sales made under market-based rate authority.[41]

c. Commission Determination

23. We adopt the NOPR proposal to permit public utilities and non-public utilities that have or will have a rate on file with the Commission to seek incentive-based rate treatment for their eligible cybersecurity investments.[42]

24. We add § 35.48(a) to our regulations, which declares that the purpose of this section is to establish rules for incentive-based rate treatment for utilities with rates on file with the Commission that voluntarily make cybersecurity investments. In doing so, we adopt the NOPR proposal to allow utilities described in FPA section 201(f)[43] that have or will have a rate on file with the Commission to be eligible to receive incentives for cybersecurity investments in the same manner as public utilities. Accordingly, we add § 35.48(c) to our regulations, which states that the Commission will authorize incentive-based rate treatment to public and non-public utilities that have or will have a rate on file with the Commission for their voluntary cybersecurity investments, provided that the resulting rate is just and reasonable and not unduly discriminatory or preferential.

25. In FPA section 219A(c), Congress directs the Commission to offer incentive-based rate treatment for both the transmission of electric energy in interstate commerce and the sale of electric energy at wholesale in interstate commerce. This rulemaking satisfies the statutory requirement of providing the opportunity for public and non-public utilities to file to seek authorization to recover the cost of and receive incentive-based rate treatment on eligible cybersecurity investments.

26. We disagree with EPSA's contentions that utilities that make sales of energy, capacity, or ancillary services at market-based rates should be able to continue to make those sales and also separately recover the costs of, and receive incentive-based rate treatment on, eligible cybersecurity investments. The Incentive permitted in this final rule may only be recovered through a cost-of-service rate. As noted above, the ability to seek incentive-based rate treatment under this final rule meets the requirements of FPA section 219A.[44] All

[44] The dissent's criticism correctly notes that FPA section 219A is designed to provide incentives for certain cybersecurity investments. However, FPA section 219A also requires the Commission to

Continued

sellers of energy, capacity, and ancillary services are free to file cost-of-service rates under FPA section 205. Thus, we note that utilities currently making sales of energy, capacity, and ancillary services under market-based rate authority may make a filing to recover their entire cost of service, including costs of and an incentive on, eligible cybersecurity investments and proceed to make sales exclusively under that cost-based rate.[45]

2. Cybersecurity Investment Definitions

27. The cybersecurity investments eligible for incentives could include investments in Advanced Cybersecurity Technology, voluntary participation in a cybersecurity threat information sharing program, or both. Accordingly, we add § 35.48(b) to our regulations to define these and other terms used in that section. We incorporate the definitions of Advanced Cybersecurity Technology and Advanced Cybersecurity Technology Information in FPA section 219A(a).[46] Therefore, we define Advanced Cybersecurity Technology as any technology, operational capability, or service, including computer hardware, software, or a related asset, that enhances the security posture of public utilities through improvements in the ability to protect against, detect, respond to, or recover from a cybersecurity threat (as defined in section 102 of the Cybersecurity Act of 2015 (6 U.S.C. 1501)).[47] We define Advanced Cybersecurity Technology Information as information relating to Advanced Cybersecurity Technology or proposed Advanced Cybersecurity Technology that is generated by or provided to the Commission or another Federal agency.[48] In accordance with FPA section 219A(g), Advanced Cybersecurity Technology Information is considered to be Critical Electric Infrastructure Information as that term is defined in FPA section 215A(a)(3) and § 388.113(c)(1) of the Commission's regulations.[49] We also define CEII in new subpart K as having the same meaning as that term is defined in § 388.113 of the Commission's regulations. In addition, we define Electric Reliability Organization and Reliability Standard as having the same meanings as those terms are defined in § 39.1 of the Commission's regulations.[50]

3. Cybersecurity Investment Eligibility Criteria

a. NOPR Proposal

28. In the NOPR, the Commission proposed that a cybersecurity investment must satisfy two eligibility criteria to be considered for a cybersecurity incentive.[51] First, the cybersecurity investment would need to materially improve cybersecurity through either an investment in Advanced Cybersecurity Technology or participation in a cybersecurity threat information sharing program. Second, the cybersecurity investment could not already be mandated by CIP Reliability Standards, or otherwise mandated by local, State, or Federal law. Additionally, the Commission sought comment on whether, and if so how, the Commission should evaluate and ensure that the benefits of the cybersecurity investment exceed the combined costs of the cybersecurity investment and incentive, to ensure that the proposed rates are just and reasonable. The Commission also sought comment on whether these would be the appropriate criteria and whether there are additional criteria or limitations that the Commission should consider (*e.g.,* whether the Commission should consider an obligation imposed by a State commission as a condition for a merger to be ineligible for an incentive).

29. The Commission proposed that, in determining which cybersecurity investments will materially improve a utility's security posture, the Commission will consider the following sources: (1) security controls enumerated in the NIST Special Publication (SP) 800–53 ''Security and Privacy Controls for Information Systems and Organizations'' catalog; [52] (2) security controls satisfying an objective found in the NIST Cybersecurity Framework; [53] (3) a specific recommendation from the Department of Homeland Security's (DHS) Cybersecurity and Infrastructure Security Agency (CISA) or from the Department of Energy (DOE); [54] (4) a specific recommendation from the CISA Shields Up Campaign; [55] (5) participation in the Cybersecurity Risk Information Sharing Program (CRISP) or similar cybersecurity threat information sharing program; and/or (6) the Cybersecurity Capability Maturity Model (C2M2) Domains [56] at the highest Maturity Indicator Level.[57] The Commission proposed that using these sources from other agencies responsible for addressing sophisticated and rapidly evolving cyber threats as qualifiers for the consideration of incentives would allow the Commission to benefit from the expertise of other Federal agencies and help ensure that the cybersecurity investments will be targeted and effective.

b. Comments

30. Microsoft Corporation (Microsoft) and the Michigan Public Service Commission (Michigan Commission) support the proposed eligibility criteria.[58] The Office of the Ohio Consumers' Counsel (Ohio Consumers' Counsel) also supports the proposed eligibility criteria and recommends that the Commission require utilities to demonstrate that their eligible expenditures provide quantifiable, incremental benefits to rate payers that will exceed expenditure cost.[59]

31. Alliant Energy Corporate Services, Inc. (Alliant), the Interstate Natural Gas Association of America (INGAA), the National Rural Electric Cooperative (NRECA), and APPA support the proposed eligibility criterion that a utility must show that a cybersecurity investment materially improves its cybersecurity posture for its investment to be eligible for an incentive.[60] While NRECA supports the proposed eligibility criterion, it is concerned that ''materially improves cybersecurity''

determine that any rate approved under this rule be just and reasonable, not unduly discriminatory or preferential. IIJA, Public Law 117–58, section 40123, 135 Stat. at 952 (to be codified at 16 U.S.C. 824s–1(e)). We agree with TAPS that the recovery of costs and an incentive as set forth in this final rule is not compatible with making sales at market-based rates. Therefore, our decision on this issue seeks to give meaning to all of the provisions of FPA section 219A.

may be too subjective to ensure that cybersecurity investments provide adequate benefits to customers.[61] NRECA recommends that the Commission specify additional criteria or establish a minimum level of benefit or value a cybersecurity investment would provide to be eligible.[62]

32. The Public Utilities Commission of Ohio's Office of the Federal Energy Advocate (Ohio FEA) and Edison Electric Institute (EEI) do not support the proposed eligibility criterion that a cybersecurity investment must materially improve cybersecurity.[63] Ohio FEA asserts that the term ''materially improves'' may be ambiguous and suggests that the Commission should provide additional detail regarding this criterion in order to achieve its objective and streamline review of cybersecurity incentives.[64] EEI argues that applying a ''materially improve'' test will lead to subjective and inconsistent results because it is unclear what additional insights the Commission would reference beyond the six sources from other agencies to satisfy the criterion.[65] EEI argues that the materiality test is not part of the statutory language and will not necessarily improve the cybersecurity posture of the filing utility.[66] EEI recommends that, instead, the Commission give utilities the flexibility to propose other sources than the six listed in the NOPR and provide context for why a cybersecurity investment supports a targeted level of cyber maturity within a broader cybersecurity risk management and control framework.[67]

33. Ohio FEA supports the Commission referencing other Federal agencies and activities to determine whether a cybersecurity investment materially improves cybersecurity but asserts that the final determination should be based on the specific circumstances of the filing utility.[68] INGAA recommends that the Federal Bureau of Investigation (FBI) and the National Security Agency (NSA) be added to the sources used to inform the Commission's determination of whether a particular cybersecurity investment satisfies the first eligibility criterion.[69] DOE states that, while the six sources listed in the NOPR are beneficial and valuable, they are not a comprehensive list of ways that cybersecurity can be measured.[70] SecurityScorecard recommends that international standards such as ISO/IEC 27000 and Information Systems Audit and Control Association's Control Objectives for Information and Related Technologies also be considered when assessing the materiality criteria.[71]

34. DOE and EEI recommend that the Commission adjust the eligibility criteria referencing the C2M2 Domains from the highest Maturity Indicator Level to lower, incremental levels.[72] DOE and EEI argue that investments made to reach lower, incremental maturity levels would be more valuable than overinvestment in unnecessary controls to reach the highest Maturity Indicator Level.[73]

35. Most commenters support the idea that expenditures already mandated by local, State, or Federal law or an enforceable CIP Reliability Standard should not be eligible for an incentive. EEI, NRECA, and INGAA support this eligibility criterion as proposed in the NOPR. Other commenters argue that the proposed criterion should be expanded to include other types of legally binding agreements or Reliability Standards.[74] TAPS, APPA, Ohio FEA, California Parties, and the Maryland Public Service Commission and Pennsylvania Public Utility Commission (Maryland and Pennsylvania Commissions) argue that investments made to satisfy any type of legal obligation should be ineligible for an incentive, including, for example, remedial measures as a settlement of NERC compliance violations, a condition of a State or Federal license, a condition of a merger proceeding, and an obligation under a cybersecurity insurance policy.[75] APPA further recommends that the Commission clarify whether investments are ineligible if mandated by only CIP Reliability Standards or also by any other mandatory Reliability Standard.[76] In addition to an expanded definition of ''mandated,'' TAPS recommends that the Commission require a filing utility to attest that a cybersecurity investment for which it seeks incentives is not being made to satisfy any legal obligation.[77]

36. The North American Electric Reliability Corporation and the six Regional Entities[78] (NERC) states that any voluntary incentives should build upon and complement existing cybersecurity CIP Reliability Standards.[79] NERC recommends that the Commission consider the relationship between voluntary cybersecurity investments and mandatory CIP Reliability Standards and cautions that it may be a challenge for the Commission to determine whether a particular investment is mandated by the CIP Reliability Standards.[80] NERC explains that, because the CIP Reliability Standards are outcome oriented and do not prescribe specific technologies, a utility may file for an incentive that, while not mandated, is being used to comply with mandatory CIP Reliability Standards.[81] TAPS similarly states that the Commission should take a nuanced approach to assess whether a technology exceeds the CIP Reliability Standards when a technology has been used to comply with, but is not specifically mandated by, a CIP Reliability Standard.[82] NRECA urges the Commission to consider whether it will grant incentives for cybersecurity expenditures that enhance the cybersecurity of low impact BES Cyber Systems or only medium or high impact BES Cyber Systems.[83]

37. California Parties support the addition of an eligibility criterion for information-sharing programs that the incentives be conditioned on utilities participating in all applicable regional and State cybersecurity initiatives.[84] DOE recommends that the Commission establish attributes that the Commission will consider when determining the eligibility of information-sharing programs for incentives.[85]

c. Commission Determination

38. We adopt and modify the NOPR proposal by adding § 35.48(d) to the Commission's regulations to permit a utility to receive incentive-based rate

treatment for a cybersecurity investment. We establish two eligibility criteria that require that each cybersecurity investment: (1) materially improves cybersecurity through either Advanced Cybersecurity Technology or participation in a cybersecurity threat information sharing program; and (2) is not already mandated by the Reliability Standards, or otherwise mandated by local, State, or Federal law, decision, or directive; otherwise legally mandated; or an action taken in response to a Federal or State agency merger condition, consent decree from Federal or State agency, or settlement agreement that resolves a dispute between a utility and a public or private party.[86]

39. In the NOPR, the Commission identified several sources that the Commission would consider as part of its evaluation of whether a cybersecurity investment would materially improve a utility's security posture, thereby providing quantifiable cybersecurity benefits.[87] Based on the comments received, we modify the NOPR proposal.

40. As recommended by INGAA, we find that the Commission should also consider specific recommendations from the FBI and NSA. Therefore, we find that, in determining which cybersecurity investments will materially improve a utility's security posture, the Commission will consider the following sources: (1) security controls enumerated in the NIST SP 800–53 ''Security and Privacy Controls for Information Systems and Organizations'' catalog; [88] (2) security controls satisfying an objective found in the NIST Cybersecurity Framework [89] technical subcategory; (3) a specific cybersecurity recommendation from a relevant Federal authority, such as DHS's CISA, the FBI, NSA, or DOE; [90] (4) participation in a relevant cybersecurity threat information sharing program; and/or (5) achieving and sustaining one or more of the C2M2 Domains at the highest Maturity Indicator Level.[91] Considering these sources as part of a Commission determination of whether a particular cybersecurity investment would materially improve cybersecurity will allow the Commission to approve objective, targeted, and effective cybersecurity investments for incentive treatment.[92]

41. In addition, we agree with DOE's and Ohio FEA's recommendation that the Commission expand the list of potential eligible cybersecurity threat information sharing programs beyond CRISP. We clarify that a utility may seek an incentive for participation in other cybersecurity threat information sharing programs and the Commission will consider whether such cybersecurity threat information sharing programs would qualify for incentive treatment. We will not, as EEI suggests, consider recommendations other than the five sources described above. Considering other sources would increase subjectivity and unpredictability of incentive-based rate treatment of cybersecurity investments.

42. We agree with DOE's and California Parties' recommendation that the Commission should establish eligibility criteria or attributes in evaluating cybersecurity threat information-sharing programs. The Commission will evaluate any proposed relevant cybersecurity threat information-sharing program to determine whether the program: (1) is sponsored by the Federal or State government; (2) provides two-way communications from and to electric industry and government entities; and (3) delivers relevant and actionable cybersecurity information to program participants from the United States electricity industry.

43. We decline to adopt SecurityScorecard's recommendation that the Commission consider international standards, such as ISO/IEC 27000, when assessing the materiality criteria. Like NIST SP 800–53, ISO/IEC 27000 provides a catalog of information and cyber-related security controls. While there are some differences in focus between the two standards, for the context of determining how to successfully categorize a cybersecurity investment used to improve the security posture of a utility, both standards perform similar functions. Therefore, we believe that considering such international standards in assessing materiality would be duplicative and unnecessary and we will not adopt this recommendation. Instead, we will use NIST SP 800–53 as the foundation of security controls to evaluate whether a cybersecurity investment materially improves the cybersecurity of a utility because NIST SP 800–53 was developed by a Federal agency and is publicly accessible without additional cost.

44. We also decline to adopt DOE and EEI's recommendation that the Commission provide incentives for any incremental steps taken by utilities in connection with C2M2 and not just for achieving the highest Maturity Indicator Level. The C2M2 model contains descriptive cybersecurity measures at a high level rather than prescriptive requirements. Therefore, it would be difficult for the Commission to determine that compliance with incremental steps necessarily materially improves cybersecurity. For these reasons, we are requiring a utility to demonstrate that its proposed cybersecurity investments will cause the utility to achieve Maturity Indicator Level 3 of the C2M2 Domains rather than the incremental steps of the lower Maturity Indicator Levels in order to receive an incentive for its cybersecurity investments.

45. TAPS, APPA, Ohio FEA, California Parties, and the Maryland and Pennsylvania Commissions request that the Commission ensure that investments made to satisfy any type of legal obligation be ineligible for an incentive. The Maryland and Pennsylvania

[86] As the dissent points out, FPA section 219A(c) directs the Commission to establish rate incentives for participation by public utilities in cybersecurity threat information sharing programs and investments by public utilities in Advanced Cybersecurity Technology, which it defines as any technology, operational capability, or service, including computer hardware, software, or a related asset, that enhances the security posture of public utilities through improvements in the ability to protect against, detect, respond to, or recover from a cyber security threat. Public Law 117–58, section 40123(a), 135 Stat. 429, 951 (codified 16 U.S.C. 824s–1(c)). FPA section 219A also specifies that such rate treatments exist for the purpose of benefitting consumers and requires that the Commission ensure that resulting rates be just and reasonable. *See* Public Law 117–58, section 40123(a), 135 Stat. 429, 951 (codified 16 U.S.C. 824s–1(a) & (c)). The materially improves incentive eligibility criterion seeks to balance these statutory requirements. Solely focusing on the term enhance may result in the Commission granting incentives that do not meet these other statutory requirements mentioned above. It is thus reasonable for the Commission to exercise its judgement via the materially improves eligibility criterion to evaluate incentives requests.

[87] In section III.B., we discuss different methods that utilities could use to show how their cybersecurity investments satisfy the eligibility criteria.

[88] NIST, Special Publication 800–53, Revision 5, *Security and Privacy Controls for Information Systems and Organizations,* (Dec. 12, 2020), *https://www.nist.gov/privacy-framework/nist-privacy-framework-and-cybersecurity-framework-nist-special-publication-800-53.*

[89] *See* NIST, *Cybersecurity Framework, https://www.nist.gov/cyberframework.*

[90] *See, e.g.,* CISA, *National Cyber Awareness System Alerts, https://www.cisa.gov/uscert/ncas/alerts.*

[91] *See* DOE, *Cybersecurity Capability Maturity Model, https://www.energy.gov/ceser/cybersecurity-capability-maturity-model-c2m2.*

[92] As we discuss in section III.B.1., when considering whether to add a cybersecurity investment to the PQ List, the Commission will determine whether the cybersecurity investment would materially improve cybersecurity for all utilities. As we discuss in section III.B.2., when evaluating a utility case-by-case application for incentive-based rate treatment for a particular cybersecurity investment, the Commission will determine whether the cybersecurity investment would materially improve cybersecurity for the utility requesting the incentive-based rate treatment.

Commissions comment that utilities should not receive incentives for implementing cybersecurity measures that are already made mandatory by existing and future obligations.[93] APPA comments that the Commission should broaden the second eligibility criterion to clarify that incentives would not be available for cybersecurity investments for mandatory Reliability Standards and that the Commission should replace the reference to the CIP Reliability Standards with Reliability Standards.[94] We agree with both suggestions. Accordingly, we are expanding the second eligibility criterion to emphasize the requirement that the utility must undertake the specific cybersecurity investment voluntarily in order to receive a cybersecurity incentive pursuant to our regulations. Our revised § 35.48(d)(2) provides that a cybersecurity investment is only eligible for an incentive if it is not already mandated by the Reliability Standards as maintained by the Electric Reliability Organization, or otherwise mandated by local, State, or Federal law, decision, or directive; otherwise legally mandated; or an action taken in response to a Federal or State agency merger condition, consent decree from Federal or State agency, or settlement agreement that resolves a dispute between a utility and a public or private party.[95]

46. Additionally, we recognize the concerns raised by NERC and TAPS about the difficulty in determining whether a particular cybersecurity investment is mandatory. Accordingly, as discussed in greater detail in section III.D.3., we are adopting TAPS's suggestion that, in order to demonstrate that the specific cybersecurity investment for which the utility is seeking an incentive is voluntary, the applicant must include an attestation in its filing so stating.[96]

47. TAPS raises issues about technologies that both meet and exceed the Reliability Standards. We recognize that there could be a single Advanced Cybersecurity Technology that provides multiple security controls that allow the utility to meet and potentially exceed compliance with a Reliability Standard. In that instance, where the utility makes a single cybersecurity investment for security controls to comply with a Reliability Standard, that investment will not be incentive-eligible. However, there may be instances where a utility invests in a single Advanced Cybersecurity Technology that while complying with a Reliability Standard also provides enhanced cybersecurity controls that go beyond compliance with a Requirement in the Reliability Standard. In those instances, only the incremental investment to exceed the Requirement of the Reliability Standard would be eligible for an incentive.

48. In response to NRECA's concerns regarding the reliability and security of low impact BES Cyber Systems, we are not requiring any eligibility criteria other than the two discussed above. Therefore, low impact BES Cyber Systems are not excluded from eligibility for incentive-based rate treatment for cybersecurity investments.

49. We disagree with EEI's conclusion that we should omit ''materially improve'' as the standard for the first eligibility criterion due to its absence from the statutory language and possible subjectivity. FPA section 219A requires the Commission to offer incentives for Advanced Cybersecurity Technology investments and participation in information-sharing programs. It does not require that the Commission provide incentives for *all* Advanced Cybersecurity Investments or participation in *any* information-sharing program. FPA section 219A also requires that the Commission ensure that rates are just and reasonable and not unduly discriminatory or preferential.[97] Without a materiality standard in the first criterion (or something similar), any Advanced Cybersecurity Investment that is not mandatory would be incentive-eligible, regardless of whether such investments enhance a utility's security posture or result in just and reasonable rates. Furthermore, use of such a standard is consistent with Commission precedent. In Order No. 679, the Commission required applicants for transmission incentives to show that requested incentives are tailored to the risks and challenges of individual projects, even though such a requirement is not included in the statutory language of FPA section 219.[98]

50. We recognize that the materially improves criterion requires use of Commission subject matter expertise and judgement. In exercising its subject matter expertise and judgement, the Commission will take into account the findings of other Federal agencies to inform its decisions, as described in section III.B.2.c. Although the Commission seeks to maximize predictability and transparency in its provision of incentives, some degree of judgement is necessary given the many types of cybersecurity threats and investments and their rapid evolution. It is for this reason that we also decline NRECA's request that the Commission provide additional criteria or a baseline level of benefit. As discussed in section III.C.3., quantification of benefits may be difficult for cybersecurity investments, such that a bright line benefit requirement is inappropriate. In this final rule, we are establishing eligibility criteria that balance the need to ensure that incentives are targeted at the most beneficial investments with recognizing that there are many potential cybersecurity investments which could provide a wide variety of benefits. We find that overly prescriptive eligibility criteria may unduly preclude incentive-based rate treatment of beneficial cybersecurity investments.

51. Although the Commission sought comment on whether, and if so how, the Commission should evaluate and ensure that the benefits of the cybersecurity investment exceed the combined costs of the cybersecurity investment and the incentive, to ensure that the proposed rates are just and reasonable, we will not at this time predicate incentive eligibility on such a cost-benefit showing. As the Commission proposed in the NOPR and we affirm here, the rates, including the costs of any incentive, must remain within the zone of reasonableness. This is necessary to ensure that the rates that include incentives for cybersecurity investments are just and reasonable and not unduly discriminatory or preferential.

52. Ohio Consumers' Counsel argues that there must be quantifiable, incremental benefits that can be measured in cost-benefit savings to consumers. Nevertheless, we find that quantification of the costs and benefits for each cybersecurity investment is

[93] Maryland and Pennsylvania Commissions Initial Comments at 8.

[94] APPA Initial Comments at 5.

[95] A mandate must either be for a utility to achieve a specific outcome or to require a utility to take a prescribed action. General mandates to improve a utility's cybersecurity may still make specific cybersecurity investments voluntary for purposes of the Commission's evaluation of the eligibility criteria.

[96] The attestation must be made by a senior person within the utility that the utility has authorized to act on behalf of the utility. One example of a senior person could be the CIP Senior Manager as NERC defines that term. NERC Glossary at 10 (defining CIP Senior Manager to mean ''A single senior management official with overall authority and responsibility for leading and managing implementation of and continuing adherence to the requirements within the NERC CIP Standards, CIP–002 through CIP–011.'').

[97] FPA section 219A(e)(1). FPA section 219A(e)(2) also prohibits unjust and unreasonable double recovery for Advanced Cybersecurity Technology. IIJA, Public Law 117–58, section 40123, 135 Stat. at 952 (to be codified at 16 U.S.C. 824s–1(e)(2)).

[98] *See Promoting Transmission Investment Through Pricing Reform,* Order No. 679, 71 FR 43294 (July 31, 2006), 116 FERC ¶ 61,057, at P 26, *order on reh'g,* Order No. 679–A, 72 FR 1152 (Jan. 10, 2007), 117 FERC ¶ 61,345 (2006), *order on reh'g,* 119 FERC ¶ 61,062 (2007).

neither required nor practical. Such a cost-benefit analysis is particularly inapt for cybersecurity where benefits are even harder to identify and quantify than are economic and reliability benefits for transmission investments. The courts have long recognized that a primary purpose of the FPA, and its counterpart the Natural Gas Act (NGA), is to encourage the orderly development of plentiful supplies of electricity and natural gas at reasonable prices.[99] To carry out this purpose, the Commission may consider non-cost factors as well as cost factors.[100] Moreover, Congress' enactment of section 219A reflects its determination that incentives generally can spur cybersecurity investments and their associated consumer benefits.

53. As the Commission proposed in the NOPR, we find that all cybersecurity investments must satisfy both of the eligibility criteria in order to be eligible for incentive treatment. In addition, we now clarify that a utility may not request an incentive for a cybersecurity investment that the utility has already been incurring for more than three months prior to the filing of the incentive application, as discussed in section III.C.2 of this final rule, unless that cybersecurity investment is for participation in an incentive-eligible cybersecurity threat information sharing program.

B. Cybersecurity Investment Incentive Requests

54. In order to maximize predictability and transparency in our provision of incentives, we provide below a framework for evaluating whether certain cybersecurity investments, including expenses and capitalized costs, are eligible for a cybersecurity incentive. First, as the Commission proposed in the NOPR, we include a list of pre-qualified investments, the PQ List, to identify certain cybersecurity investments that the Commission finds merit the rebuttable presumption of eligibility for all utilities and are therefore eligible for incentive-based rate treatment. We also discuss the procedures that we will use to update the PQ List. Second, we adopt the cybersecurity investments proposed in the NOPR for inclusion on the initial PQ List. Third, we describe how the Commission will evaluate whether a utility's cybersecurity investments that are not included on the PQ List may be eligible for incentive-based rate treatment. Finally, we discuss how a utility can seek incentive-based rate treatment for new cybersecurity investments made to comply with a Reliability Standard during the period after the Commission approves a new or modified cybersecurity Reliability Standard but before that new or modified cybersecurity Reliability Standard becomes mandatory and enforceable.

1. PQ List Approach

a. Structure of the PQ List

i. NOPR Proposal

55. In the NOPR, the Commission proposed to create a PQ List that would identify cybersecurity investments that the Commission determined would satisfy the eligibility criteria.[101] The Commission proposed that any cybersecurity investment that the Commission includes on the PQ List would be entitled to a rebuttable presumption of eligibility for an incentive.[102] However, an applicant would still need to demonstrate, and the Commission would need to find, that the proposed rate, inclusive of the cybersecurity incentive, is just and reasonable. The Commission proposed to provide an opportunity for protestors to rebut this presumption by demonstrating that the cybersecurity investment did not meet one or more of the eligibility criteria (*e.g.,* that, given the unique circumstances of the utility, the expenditure for which the utility seeks an incentive would not materially improve cybersecurity or is otherwise mandatory for that utility) or the Commission could make this finding based on other evidence.

56. The Commission explained that the PQ List approach would provide efficiency and transparency benefits.[103] The utility-specific incentive filings under the PQ List approach could be substantially streamlined compared to a case-by-case approach because the Commission would have pre-reviewed the cybersecurity investments included on the PQ List for eligibility for incentives.

57. In the NOPR, the Commission noted the rapidly evolving nature of cybersecurity threats and solutions and that it expected to regularly evaluate the PQ List and update it as necessary.[104] When updating the PQ List, the Commission could add, modify, or remove cybersecurity investments to/from the PQ List. The Commission proposed that it would update the PQ List via a rulemaking, whether *sua sponte* or in response to a petition.

ii. Comments

58. INGAA, Microsoft, TAPS, the Michigan Commission, Ohio Consumers' Counsel, ITC Companies, APPA, Anterix, Inc. (Anterix), OT Coalition, Avangrid, Inc. (Avangrid), MISO Transmission Owners, EPSA, and EEI support the PQ List approach.[105] OT Coalition, Avangrid, MISO Transmission Owners, EPSA, and EEI further urge the Commission to consider using both the PQ List and case-by-case approaches.[106] ITC Companies agree with the Commission that the PQ List approach will decrease the filing and review burden on utilities and the Commission [107] while INGAA and Microsoft agree that the PQ List approach will provide transparency for utilities as to what expenditures will be eligible for incentives.[108] Microsoft and Anterix caveat their support of the PQ List approach by suggesting other items for inclusion on the PQ List, such as security incident and event monitoring, user and entity behavior analysis,[109] and private LTE wireless broadband communication systems.[110] TAPS, Michigan Commission, and Ohio Consumers' Counsel recommend that the PQ List be updated regularly,[111] and APPA underscores the need for stakeholders to have the opportunity to rebut the presumption of eligibility.[112]

59. In contrast, Alliant, the Maryland and Pennsylvania Commissions, and DOE assert that that the PQ List approach with its rebuttable presumption of eligibility will lessen innovation by encouraging utilities to pursue the same types of cybersecurity investments (*i.e.,* those on the PQ List), regardless of the utility's individual

[112] APPA Initial Comments at 5.

needs and risks.[113] California Parties, while not necessarily opposed to the concept of a PQ List approach, strongly oppose giving filing utilities a rebuttable presumption of eligibility for expenditures on the PQ List.[114] They argue that the burden on a party seeking to rebut the presumption of eligibility is too great.[115]

60. Many commenters raise concerns that finding a balance between transparency and security will prove challenging for the Commission. NRECA cautions that a publicly accessible PQ List will alert adversaries to the cybersecurity activities of utilities and create a security risk.[116] Alliant recommends that, if the Commission decides to proceed with the PQ List approach, it defer to NERC for identification of technologies and designate the PQ List as CEII to protect it from public access.[117] On the other hand, California Parties and the Maryland and Pennsylvania Commissions underscore the need for public transparency and access to allow stakeholders to rebut the presumption of eligibility and utilities to know what types of expenditures are eligible.[118]

61. Some commenters describe the challenges that maintaining an updated PQ List will present for the Commission. Ohio FEA and the Maryland and Pennsylvania Commissions express concern that the Commission may be unable to maintain a current PQ List, due to the lengthy regulatory process required,[119] potentially leading to overinvestment in outdated measures and underinvestment in cutting edge technologies.[120] Most commenters support frequent and regular review and updates to the PQ List.[121] EEI recommends that the Commission commit to reviewing and updating the PQ List on a regular cadence no less than annually, while Anterix, Avangrid, TAPS, and Ohio Consumers' Counsel suggest regular and expeditious updates.[122] TAPS and Ohio Consumers' Counsel recommend that, when the Commission initiates a rulemaking to modify the PQ List, it should assess whether existing expenditures still meet the eligibility criteria in addition to assessing new additions.[123]

62. California Parties and NRECA emphasize that modifications to the PQ List should only be made via a full rulemaking process where stakeholders and customers have the opportunity to comment.[124] California Parties further argue that the Commission should not expand the initial PQ List in its final rule without a full notice-and-comment period for the suggested additions.[125] TAPS highlights that the rulemaking process will improve regulatory certainty for utilities and customers and facilitate participation and input on whether proposed expenditures meet the eligibility criteria.[126]

63. Indicated PJM Transmission Owners [127] and Anterix recommend that the Commission hold a technical conference to inform its decision making on reviewing and updating the eligible expenditures on the PQ List.[128]

iii. Commission Determination

64. We adopt and modify the NOPR's proposal to create a PQ List by adding § 35.48(e)(1) to the Commission's regulations, which establishes the framework for a PQ List of cybersecurity investments that the Commission finds materially improves cybersecurity. We find that the cybersecurity investments on the PQ List would be entitled to a presumption of satisfying the eligibility criteria. As proposed in the NOPR, protestors may seek to rebut this presumption by demonstrating that, given the unique circumstances of the utility, the cybersecurity investment on the PQ List would not materially improve cybersecurity of the utility. We note that the utility would still need to demonstrate that it would make the cybersecurity investment voluntarily. In addition, the Commission will not presume anything about the resulting rates. Utilities seeking an incentive under the PQ List must still show that the proposed rate, including the cybersecurity incentive, is just and reasonable and not unduly discriminatory or preferential.

65. The PQ List approach is also in line with FPA section 219A(d)(2), which allows the Commission to reduce the cybersecurity risks to the facilities of small or medium-sized public utilities with limited cybersecurity resources.[129] While all utilities would benefit from the reduced filing obligations when requesting incentive treatment for cybersecurity investments on the PQ List, we expect that this approach would be particularly beneficial for small and medium-sized utilities with limited cybersecurity resources.

66. We disagree with concerns that including cybersecurity investments on the PQ List would lessen cybersecurity innovation or alert adversaries of utility cybersecurity investment. Regarding lessening innovation, as an initial matter, we note that utilities may still seek to recover in their rates all prudently incurred cybersecurity investments. Furthermore, as described in section III.B.2, we are adding a case-by-case approach that may better incent cybersecurity investments responding to rapidly evolving threats than does the PQ List. Regarding concerns about alerting adversaries, we find that such assertions are speculative and that describing and providing incentives to broadly beneficial cybersecurity investments will not unto itself

[128] Indicated PJM Transmission Owners Initial Comments at 5; Anterix Initial Comments at 12–13.

[129] FPA section 219A(d)(2) provides that the Commission may provide additional incentives beyond incentive-based rate treatment in any case which the Commission determines that an investment in Advanced Cybersecurity Technology or in information sharing program costs will reduce cybersecurity risks to facilities of small or medium-sized public utilities with limited cybersecurity resources, as determined by the Commission. IIJA, Public Law 117–58, section 40123, 135 Stat. at 952 (to be codified at 16 U.S.C. 824s–1(d)(2)).

highlight either industry-wide or utility-specific vulnerabilities.

67. We disagree with comments recommending that we designate the PQ List as CEII. The PQ List does not meet the definition of CEII, because the list is general in nature and does not reveal specific vulnerabilities.[130] As discussed in section III.D.3.c., requests for incentive-based rate treatment for cybersecurity investments may include requests for CEII treatment consistent with our regulations.[131] As we approve additional PQ List items, we expect that any future PQ List item will not be more specific than what can be found in the already publicly available materials, such as the NIST publications and CIP Reliability Standards. We decline to adopt Alliant's recommendation that the Commission defer to NERC to identify eligible technologies for the PQ List. The Commission will evaluate potential cybersecurity technologies from time to time, and determine, based on the record evidence, whether it would be appropriate to add the proposed cybersecurity investments in these technologies to the PQ List.

68. We disagree with comments that the PQ List approach places an undue burden on parties seeking to rebut the presumption of eligibility. We believe that the PQ List approach appropriately balances the interests of the utilities and any potential protestors seeking to rebut the presumption of eligibility. By starting with the initial PQ List, we have identified specific cybersecurity investments that we find will materially improve the cybersecurity of utilities broadly, while enabling protestors to demonstrate that the eligibility criteria are not met in a utility's particular circumstance.

69. We acknowledge the concerns raised by commenters regarding the time necessary for the Commission to modify the PQ List. Some commenters request that the Commission commit to a regular update cycle for the PQ List. In this final rule, the Commission modifies the proposed regulation to allow the Commission to post the PQ List on its website and to update it subject to a notice and comment period or in a rulemaking. In addition, the case-by-case approach allows the Commission to evaluate whether a utility's cybersecurity investment would satisfy the eligibility criteria as to that utility. This means that utilities would not have to wait for the Commission to update the PQ List before seeking incentives for cybersecurity investments not yet included on the PQ List. In response to Indicated PJM Transmission Owners and Anterix's suggestion to have a technical conference when considering updates to the PQ List, we note that the Commission will consider such action when undertaking its periodic PQ List reviews.

b. Initial PQ Lis

i. NOPR Proposal

70. The Commission proposed to include two eligible cybersecurity investments on the initial PQ List: (1) expenditures associated with participation in CRISP;[132] and (2) expenditures associated with internal network security monitoring within the utility's cyber systems, which could include IT cyber systems and/or OT cyber systems, and which could be associated with cyber systems that may or may not be subject to the Reliability Standards.[133] The Commission believed that these cybersecurity investments would materially improve cybersecurity[134] and were not already mandated by the Reliability Standards[135] or otherwise mandated by Federal law. The Commission proposed to include CRISP, as its purpose is to facilitate the timely bi-directional sharing of unclassified and classified threat information and development of situational awareness tools that enhance the energy sector's ability to identify, prioritize, and coordinate the protection of critical infrastructure and key resources.[136]

71. The Commission also proposed to include internal network security monitoring on the PQ List because internal network security monitoring may better position a utility to detect malicious activity that has circumvented perimeter controls.[137] The Commission observed that, while the currently effective Reliability Standards do not require internal network security monitoring, NERC has recognized the proliferation and usefulness of such technology.[138] The Commission also sought comments on whether to include any additional cybersecurity investments on the initial PQ List.

ii. Comments

72. NERC, DOE, and Microsoft support the inclusion of CRISP on the PQ List.[139] EEI and American Electric Power Service Corporation (AEP) support incentives for both new and existing participants of CRISP.[140] EEI argues that, because participation in cybersecurity threat information sharing programs is an ongoing action and CRISP participants have to occasionally upgrade technology, existing participants should be eligible to receive an incentive.[141]

73. APPA and California Parties oppose the Commission providing incentives for existing CRISP participants.[142] APPA and California Parties argue that an incentive must be an inducement for future action and cannot provide an incentive for actions already taken, such as recovery of an incentive for ongoing participation in CRISP if a utility is already a participant.[143] APPA further adds that CRISP participants report high satisfaction with the program and thus do not need an incentive to continue participation.[144] The Maryland and Pennsylvania Commissions and California Parties note that most major

[144] APPA Initial Comments at 13–14.

investor-owned utilities are already part of CRISP, whether individually or as members of a respective regional transmission organization or independent system operator.[145]

74. EEI, UMass Lowell Applied Research Corporation (UMLARC), Ohio FEA, and Microsoft recommend that the Commission consider for inclusion on the PQ List additional eligible cybersecurity threat information sharing programs.[146] EEI recommends that the PQ List be expanded to include other federally funded or supported cybersecurity threat information sharing programs,[147] while Ohio FEA suggests that the National Cyber Security Division cyber-response programs under DHS should be included in the PQ List.[148] Microsoft recommends modifying the proposed language to be solution-neutral and outcome-focused to accommodate other timely bi-directional threat information-sharing programs.[149]

75. Microsoft and EEI support the inclusion of internal network security monitoring on the initial PQ List.[150] EEI further recommends that the Commission broaden the eligibility for incentives to cybersecurity capabilities across protective and detective controls, not only those limited to internal network security monitoring.[151] Similarly, SecurityScorecard suggests that the Commission broaden its focus from internal network security monitoring to continuous monitoring so as to secure both the perimeter and internal network.[152] Microsoft supports eligible expenditures associated with internal network security monitoring as cybersecurity best practices consistent with a Zero Trust security model, including technologies associated with asset discovery, inventory and management, network monitoring, traffic classification, and behavior analytics within the internal environment.[153]

76. While acknowledging the cybersecurity benefits of internal network security monitoring, APPA and California Parties do not support its inclusion on the PQ List.[154] California Parties state that utilities have sufficient financial incentives to allocate funding towards internal network security monitoring through the Commission's existing cost recovery mechanisms, and that mandatory CIP Reliability Standards are better suited than incentives for facilitating widespread adoption of internal network security monitoring.[155] APPA argues that internal network security monitoring is not a category of expenditures that can be presumed to materially improve cybersecurity prior to agreement on best practices.[156] In their reply comments, California Parties echo APPA's concerns and note the lack of consensus between commenters as to what qualifies as internal network security monitoring.[157]

77. NERC notes that the CIP Reliability Standards are technology-neutral and do not prescribe specific technological methods, tools, or approaches to reach compliance.[158] NERC states that utilities and other NERC-registered entities may already be using internal network security monitoring in combination with other tools or processes to comply with Reliability Standards and therefore cautions that it may be difficult to determine whether a particular cybersecurity investment is mandatory for purposes of analyzing the second eligibility criterion.

78. UMLARC argues that defense communities face particular cybersecurity risks. UMLARC explains that certain defense communities are implementing community cyber force pilot programs. UMLARC recommends that the Commission place community cyber forces for information-sharing programs on the PQ List, while noting that these programs are still in pilot phases.[159]

79. NERC recommends that the Commission consider the deployment of sensors as part of an operational technology visibility program, administered by the Electricity Information Sharing and Analysis Center (E–ISAC), for inclusion on the PQ List.[160] Microsoft, MISO Transmission Owners,[161] and EEI support the inclusion of internal network security monitoring on the PQ List but recommend that internal network security monitoring expenditures be consistent with a Zero Trust security model.[162] EEI suggests that technology and processes to implement, manage, and monitor user and endpoint behavioral analysis be added to the PQ List.[163]

80. DOE states that the PQ List should be expanded to include other information sharing programs, as well as permit case-by-case basis evaluation of other investments.[164] When considering whether to expand eligible information-sharing programs on the PQ List, DOE recommends that the Commission consider whether investments for participating in other Department-led cybersecurity programs, such as C2M2, materially improve the security posture of the utility.[165] DOE suggests the specific inclusion of the Cybersecurity for the Operational Technology Environment program on the PQ List.[166] EEI broadly suggests that the Commission expand the PQ List to include other federally funded or supported cybersecurity threat information sharing programs.[167]

81. Anterix recommends that the Commission include expenditures for private LTE wireless broadband communication systems as an item eligible for incentives on the PQ List.[168] MISO Transmission Owners and International Transmission Companies

(ITC Companies) [169] recommend that the Commission add expenditures for utility-owned private fiber networks to the PQ List, as well as expenditures made to upgrade or replace legacy operating systems.[170] They further suggest that the Commission should expand the PQ List to include advanced cybersecurity expenditures to address physical security, such as biometric identification, access cards or access control systems.[171]

82. Microsoft and EEI both recommend inclusion of user and endpoint behavioral analysis.[172] Avangrid and the Operational Technology Cybersecurity Coalition (OT Coalition) advocate for the addition of hardware and software risk management tools aimed to help identify cybersecurity threats to suppliers and vendors.[173] MISO Transmission Owners additionally propose that the Commission expand the PQ List to include cybersecurity expenditures such as for DHS's CyberSentry hardware and software.[174]

83. Microsoft recommends expanding the PQ List to include cloud-enabled security solutions, threat intelligence, vulnerability assessment, access control and privileged access management, endpoint detection and response, firewall and network management, and multifactor authentication and biometrics.[175] EEI suggests that the Commission consider adding technology and processes to develop threat hunting capability within IT and OT environments (*e.g.,* incident response retainer fees, penetration tests, or vulnerability assessments; secure coding practices and consulting services to navigate Software Bill of Materials requirements; and data loss prevention capabilities).[176]

iii. Commission Determination

84. We adopt and modify the NOPR's proposal and add § 35.48(e)(1) to the Commission's regulations to include two cybersecurity investments on the initial PQ List: (1) cybersecurity investments associated with participation in CRISP and (2) cybersecurity investments associated with internal network security monitoring within the utility's cyber systems. We find that both of these cybersecurity investments satisfy the eligibility criteria and both merit the rebuttable presumption.

85. First, we include cybersecurity investments associated with a utility's participation in CRISP. We find that a utility's participation in CRISP materially improves cybersecurity because it involves utility participation in a cybersecurity threat information sharing program. We note that such participation falls under the recommendations in the NIST SP 800–53 Security and Privacy Controls for Information Systems and Organizations catalog. In addition, CRISP: (1) is facilitated by the Federal Government; (2) provides two-way communications from and to electric industry and government entities; and (3) delivers relevant and actionable cybersecurity information to participants within the United States electricity industry. Having found that participation in CRISP satisfies the first eligibility criterion, we include it on the initial PQ List.

86. We are aware that many, but not all, utilities already participate in CRISP. Our inclusion of CRISP on the initial PQ List reflects the mandate in FPA section 291A(c) to establish incentive-based rate treatments by encouraging *participation* in cybersecurity threat information sharing programs. The mandate to incentivize *participation* indicates that all CRISP participants, not just new entrants, should be eligible to seek an incentive for any new cybersecurity investment associated with their participation, so long as that participation is voluntary.

87. Second, we include cybersecurity investments associated with a utility's investment in internal network security monitoring within the utility's cyber systems. As the Commission explained in the NOPR, a utility's cybersecurity investments associated with internal network security monitoring could include IT cyber systems and/or OT cyber systems and could be associated with cyber systems that may or may not be subject to the Reliability Standards.

88. We find that cybersecurity investments associated with internal network security monitoring within the utility's cyber systems materially improves cybersecurity because they are investments in Advanced Cybersecurity Technology. Internal network security monitoring falls under the recommendations in the NIST SP 800–53 Security and Privacy Controls for Information Systems and Organizations catalog. Having found that cybersecurity investments associated with internal network security monitoring within the utility's cyber systems satisfies the first eligibility criterion, we will include it on the initial PQ List.

89. NERC observes that some utilities may already use internal network security monitoring as part of their compliance with Reliability Standards and therefore cautions that it may be difficult to determine whether a particular cybersecurity investment is mandatory for purposes of determining whether such expenditures would qualify for incentive-based rate treatment. We have addressed this concern primarily in section III.A.3.c., and we reiterate that a utility's cybersecurity investments, including internal network security monitoring, made to comply with a Reliability Standard, will not be incentive-eligible because the utility did not make those investments voluntarily. However, there may be instances where a utility invests in internal network security monitoring that while complying with a Reliability Standard also provides enhanced cybersecurity protections that go beyond compliance with a Requirement in the Reliability Standard.[177] Those incremental cybersecurity investments in internal network security monitoring that go beyond compliance with a Requirement in a Reliability Standard would be eligible for incentive-based rate treatment provided that the utility demonstrates that the incremental cybersecurity investments satisfy the eligibility criteria.[178] With regard to NERC's concern regarding the potential difficulty of discerning which cybersecurity investments for internal network security monitoring qualify for incentive-based rate treatment, it is incumbent upon the utility to demonstrate in its filing seeking an incentive that the associated expenses are for new internal network security monitoring that is in addition to its preexisting cybersecurity programs and go beyond compliance with a Requirement in the Reliability Standard.

90. We decline at this time to add any additional cybersecurity investments to

[176] EEI Initial Comments at 5–6.

[177] *See infra* section III.C.2.c. (discussing the availability of incentive-based rate treatment for *new* cybersecurity investments).

[178] We discuss in section III.D.3.c. the types of information that a utility would need to include in is filing of a request for incentive-based rate treatment for its cybersecurity investment. A utility seeking an incentive-based rate treatment for the incremental voluntary portion of its cybersecurity investment would need to identify its additional, voluntary cybersecurity investments that exceed the legal requirement. The utility would also need to distinguish the portion of the cybersecurity investment it made to comply with a legal requirement from the voluntary portion.

the initial PQ List. Because of the rebuttable presumption afforded to items on the PQ List, it is important that the Commission have a high degree of confidence that such items will likely materially improve cybersecurity for all utilities. While many of the additional cybersecurity investments commenters suggest to include on the initial PQ List may indeed be beneficial investments that would improve cybersecurity, we find that suggestions offered by commenters either lack sufficient evidence to show they will materially improve cybersecurity across all utilities or lack sufficient specificity to be included on the PQ List at this time.

91. As discussed in section III.B.1.a., the Commission will, from time to time, evaluate whether it would be appropriate to modify the PQ List. As the Commission updates the PQ List over time, entities may propose to add the items that the Commission does not accept in this final rule as well as other items, assuming that the entities can provide adequate support as to why it is appropriate to include these items. We also note that we are adding a case-by-case approach in addition to the PQ List approach, and utilities can seek an incentive for these investments on an individual basis, albeit without the presumption of eligibility.

92. In response to SecurityScorecard's suggestion that the Commission broaden its focus from internal network security monitoring to continuous monitoring, we do not agree that the PQ List should be so expanded at this time, as we note that the CIP Reliability Standards already mandate perimeter monitoring in some form. In response to Microsoft and EEI's suggestions, we recognize the benefits of both the Zero Trust security model and deploying Security Information and Event Management processes. However, both are considered to be frameworks that guide cybersecurity investments rather than specific cybersecurity investments themselves. We note that the Commission could consider providing incentives to specific applications of either the Zero Trust security model or Security Information and Event Management on a case-by-case basis, and, in the future, the Commission could consider adding specific applications of these concepts to the PQ List.

93. We disagree with UMLARC that community cyber force informational-sharing programs should be on the PQ List. Community cyber forces are currently pilot programs. By their nature as pilot programs, community cyber forces do not have standardized specific attributes, nor do they have a proven track record for placement on a pre-qualified list. Given that we do not have a clear understanding of these pilot programs or any associated investments, at this time, we decline to add community cyber forces to the PQ List.

94. We disagree with Anterix, MISO Transmission Owners, and ITC Companies' proposals to include investments in private communication systems such as LTE wireless and fiber networks on the PQ List. The use of private communication systems does not necessarily provide a cybersecurity benefit because the confidentiality of data transiting those networks may not be encrypted.

95. The MISO Transmission Owners recommend that the Commission consider adding expenditures associated with the Department of Homeland Security's CyberSentry hardware and software to the PQ List.[179] CyberSentry is a pilot program, and the record in this proceeding does not include enough evidence for us to determine whether CyberSenrty would materially improve the cybersecurity of all utilities. Nevertheless, CyberSentry uses sensors to monitor the IT and OT Networks for cyber security threats, and incentive-based rate treatment for these cybersecurity investments may already be eligible cybersecurity investments as internal network security monitoring.

96. DOE recommends that the Commission consider including the Cybersecurity for the Operational Technology Environment (CyOTE™) program on the PQ List. According to DOE, this program enhances OT threat information-gathering for the energy sector.[180] CyOTE is currently under development, and the record in this proceeding does not include enough evidence for us to determine whether cybersecurity investments associated with CyOTE would materially improve cybersecurity for all utilities. We find that MISO Transmission Owners' and ITC Companies' proposals to include investments made for physical access control systems, access cards, and biometrics are beyond the scope for this proceeding because they are not investments in Advanced Cybersecurity Technology or related to participation in a cybersecurity threat information sharing program. MISO Transmission Owners and ITC Companies also propose including investments for upgrading or replacing legacy systems. We find there is insufficient evidence in the record to determine whether the specific applications could be considered cybersecurity investments. Accordingly, we decline to include these investments on the PQ List.

97. Cybersecurity investments in Advanced Cybersecurity Technology included on the PQ List must include at least one specific security control that materially improves the cybersecurity of all utilities, thus meriting a rebuttable presumption. We find that the proposals from Microsoft and EEI to expand the PQ List to cover a broader set of advanced cybersecurity solutions such as threat intelligence, vulnerability management, access control, and others are vague and lack the specificity needed to establish a record for inclusion on the PQ List. Proposals from Avangrid and the OT Coalition to include investments for hardware and software risk management tools similarly lack specificity. We therefore decline to include these investments on the PQ List at this time.

98. While proposals from EEI to consider investments related to threat hunting, penetration tests, and consulting services for Software Bill of Materials requirements describe efforts to detect cybersecurity vulnerabilities, they also lack specificity with regard to mitigation and remediation of identified deficiencies. Microsoft and EEI both propose including investments for user and endpoint behavioral analysis, and NERC proposes including investments for the deployment of OT sensors. However, commenters do not demonstrate that these items are different in scope than what is already covered by internal network security monitoring on the PQ List. Therefore, we decline to include these investments on the PQ List at this time.

99. As discussed in section III.B.1.a., the Commission will, from time to time, evaluate whether it would be appropriate to modify the PQ List. We also note that, because we are adding a case-by-case approach in addition to the PQ List approach, utilities can seek an incentive for investments not identified

[179] Department of Homeland Security, *ICS Security Offerings Fact Sheet, https://www.cisa.gov/sites/default/files/publications/ics_security_offerings_fact_sheet_S508C.pdf* (explaining that ''CyberSentry is a voluntary pilot program that leverages best in breed, commercial off-the-shelf technologies, such as network intrusion detection tools, to identify malicious activity in Critical infrastructure (CI) ICS and corporate networks. CyberSentry participation increases real-time visibility into U.S. CI and provides the capability to detect nation-state adversaries on CI networks and derive cross-sector analytic insights.'').

[180] DOE, *Cybersecurity for the Operational Technology Environment (CyOTE), https://www.energy.gov/ceser/cybersecurity-operational-technology-environment-cyote* (stating that CyOTE is a ''research initiative, led by CESER in partnership with Idaho National Laboratory and energy sector partners, aims to develop tools and capabilities that can provide energy asset owners and operators with timely alerts and actionable information.'').

on the PQ List, albeit without the presumption of eligibility.

2. Case-by-Case Approach

a. NOPR Proposal

100. In the NOPR, the Commission recognized the limitations of only adopting the PQ List approach and sought comment on whether and, if so, how it should implement a case-by-case approach to grant incentives.[181] The Commission explained that it could permit a utility to file for incentive-based rate treatment for any cybersecurity investment that the utility believes satisfies the eligibility criteria, and that the Commission would review such filings on a case-by-case basis, to determine whether the proposed cybersecurity expenditure satisfies the eligibility criteria.

101. The Commission further explained that its evaluation of a utility's application under the case-by-case approach would differ from its evaluation of a filing seeking incentives for items on the PQ List, although the eligibility criteria would be the same under either approach. Specifically, the case-by-case application would not receive a presumption of eligibility for any cybersecurity investment and the utility would bear the full burden to demonstrate in its filing that its cybersecurity investment meets the eligibility criteria. Just as it would in a filing for incentive treatment of a cybersecurity investment on the PQ List, the filing utility would also need to demonstrate that its proposed rate, inclusive of the incentive, is just and reasonable.

b. Comments

102. OT Coalition, Avangrid, MISO Transmission Owners, EPSA, INGAA, EEI, Microsoft, Ohio Consumers' Counsel, Anterix, and DOE support the adoption of a case-by-case approach in addition to the PQ List approach.[182] Alliant and the Maryland and Pennsylvania Commissions support the adoption of a case-by-case approach instead of the PQ List approach.[183] TAPS, the Michigan Commission, APPA, and California Parties oppose the Commission adoption of a case-by-case approach.[184]

103. EEI, MISO Transmission Owners, INGAA, and Anterix describe the role of a case-by-case approach as a supplement to the PQ List approach, providing flexibility for the filing utilities.[185] Microsoft, OT Coalition, and Ohio Consumers' Counsel highlight the use of the case-by-case approach as a mechanism both for utilities to file for incentives not on the PQ List and to inform additions to the PQ List.[186] INGAA asserts that the case-by-case approach will encourage utilities to make qualifying investments not included on the PQ List, which will result in strengthening the security posture of the Bulk-Power System.[187] Avangrid states that the Commission should allocate sufficient human and financial resources to ensure timely review of case-by-case incentive requests.[188]

104. Alliant and the Maryland and Pennsylvania Commissions support the adoption of a case-by-case approach over the PQ List. Alliant argues that, due to the dynamic and rapid pace at which cybersecurity solutions become obsolete, the case-by-case approach will allow the Commission to review incentive requests in light of the most current technologies available and the overall needs of the utility.[189] The Maryland and Pennsylvania Commissions assert that the case-by-case approach would encourage utilities to be more innovative in their cybersecurity improvements and allows an applicant to demonstrate how a particular incentive addresses the utility's actual needs or meets the statutory criteria specific to the individual utility.[190] Ohio FEA argues that the PQ List approach alone is an inadequate approach because it will be unable to stay abreast of the ever-changing cybersecurity landscape.[191]

105. TAPS, the Michigan Commission, APPA, and California Parties oppose the adoption of the case-by-case approach. The Michigan Commission supports the transparency and efficiency that the PQ List provides over the case-by-case approach.[192] The Michigan Commission argues that, if a cybersecurity investment materially improves security, the investment should be considered for inclusion in the CIP Reliability Standards.[193] TAPS also enumerates concerns with the efficiency and transparency of the case-by-case approach, as well as the potential for increased litigation expenses and slower adoption of Advanced Cybersecurity Technologies.[194] APPA states that the case-by-case approach would be administratively burdensome and lead to incentives for routine, best practice cybersecurity expenditures.[195] California Parties argue that a case-by-case approach would be administratively infeasible and reduce regulatory certainty for filing utilities.[196]

106. The Iowa Utilities Board states that incentives under the case-by-case approach should be higher than those granted under the PQ List because the case-by-case approach drives innovation.[197]

c. Commission Determination

107. We adopt a case-by-case approach to granting incentives by adding § 35.48(e)(2) to the Commission's regulations, which permits a utility to demonstrate that a cybersecurity investment satisfies each of the eligibility criteria. Unlike the PQ List approach, the Commission will not presume that the requested cybersecurity investment satisfies the eligibility criteria. The utility requesting incentive-based rate treatment would need to demonstrate in its filing that the cybersecurity investment(s) would materially improve cybersecurity for the utility requesting the incentive-based rate treatment.

108. We find that allowing utilities to make case-by-case cybersecurity incentive requests in addition to PQ List requests provides several benefits. The case-by-case approach offers greater flexibility than the PQ List approach alone for utilities to respond to cybersecurity threats. In addition, reviewing cybersecurity investments on a case-by-case basis can help to inform the Commission about potential new additions that it could make to the PQ List in future proceedings. We believe

that, by allowing utilities to use more than one approach to show that a cybersecurity investment satisfies the eligibility criteria, we strike the right balance between customer protection, transparency, efficiency, and responsiveness to cybersecurity threats.

109. In order to determine on a consistent and transparent basis whether a cybersecurity investment satisfies the first eligibility criterion, the Commission will consider evidence showing that the utility would invest in cybersecurity improvements that: (1) are based on a documented and recommended technical cybersecurity mitigation action published in an alert or advisory by a relevant Federal agency (*e.g.,* CISA, DOE, FBI, DOD, NSA); [198] and (2) respond to an alert or advisory that meets the objective of a subcategory of the NIST Cybersecurity Framework, or its successor, and references the related NIST 800–53 Security Control, or its successor.[199] The Commission would base its assessment of the evidence on whether an incentive is appropriate on the mitigation actions detailed in the specified agencies' alerts and advisories along with the NIST Cybersecurity Framework and NIST 800–53 Security Controls to determine whether the utility's proposed cybersecurity investment would materially improve its cybersecurity.

110. As discussed in section III.A.3. and consistent with the Commission's evaluations of PQ List cybersecurity investments in section III.B.1.a., under the case-by-case approach a utility would still need to demonstrate that it would make the cybersecurity investment voluntarily, and that the proposed rate, including the cybersecurity incentive, is just and reasonable and not unduly discriminatory or preferential.

111. We decline to add any additional eligibility criteria to our regulations that would apply only to cybersecurity investments that are not included on the PQ List. We find that the eligibility criteria in our regulations are sufficient for incentive requests that use either the PQ List or case-by-case approach. Similarly, we decline to offer different forms of incentives for cybersecurity investments based on whether or not the investment appears on the PQ List. We are not convinced that the benefits of cybersecurity investments made that are on the PQ List or for which a utility requests incentives on a case-by-case basis differ and would therefore merit disparate incentive levels because all incentive-eligible investments under both mechanisms must satisfy the requirement to materially improve cybersecurity in the first eligibility criterion.

3. Early Compliance With Approved Reliability Standards

a. NOPR Proposal

112. In the NOPR, the Commission proposed the second eligibility criterion limiting incentive-based rate treatment to cybersecurity investments that a utility made voluntarily.[200] The NOPR also sought comment on whether the second eligibility criterion was appropriate and whether there were additional criteria or limitations that the Commission should consider, including any potential refinements, and any other criteria for incentive eligibility that the Commission should adopt in the final rule. Finally, the NOPR proposed to allow a utility granted a cybersecurity incentive to receive that incentive until the investment or activity that serves as the basis of that incentive become mandatory pursuant to a Reliability Standard approved by the Commission.[201] This would include cybersecurity investments made by a utility to comply with Reliability Standards that the Commission has already approved pursuant to § 39.5(d) of the Commission's regulations, but that have not yet taken effect pursuant to the implementation plan approved by the Commission.

b. Comments

113. Many commenters discuss how the NOPR's proposed incentives would interact with and affect the CIP Reliability Standards and development processes. Indicated PJM Transmission Owners, the Michigan Commission, and EPSA note that incentives could supplement the time-intensive NERC standards development process.[202] APPA and Alliant express concern that providing incentives for cybersecurity investments would disincentivize the timely development of CIP Reliability Standards.[203] NERC advises the Commission to develop rate incentives for voluntary cybersecurity investments that build upon and complement existing CIP Reliability Standards.[204] NERC and TAPS advise the Commission to consider how the proposed incentives will affect compliance with the CIP Reliability Standards.[205]

114. Indicated PJM Transmission Owners support the availability of incentives to early adopters of cybersecurity technology.[206] The Michigan Commission discusses an approach in which the proposed Cybersecurity Regulatory Asset Incentive would be used to facilitate cybersecurity investments during the period in which said investments are evaluated for inclusion in the CIP Reliability Standards.[207] EPSA notes that the nature of the long, detailed process to develop and implement NERC CIP Reliability Standards may not be able to keep up with the rapidly evolving nature of cybersecurity threats.[208] EPSA states that it is prudent to provide incentives for protections to address rapidly evolving technologies to ensure a reliable, resilient, and operational electric grid.[209]

115. The Maryland and Pennsylvania Commissions argue that making incentives available in the period before the completion of mandatory standards does not expedite the standards process or the voluntary adoption of improvements.[210] On the contrary, they assert that the proposed incentives actually would encourage delays in the standards development process so utilities could recover incentives for voluntary implementation.[211] The Maryland and Pennsylvania Commissions further note that the proposed incentives do not provide a tapering off period, such as over the time frame in which a CIP Reliability Standard is being developed. They assert that such a tapering period would

[198] Technical cybersecurity mitigation action means a recommended action requiring the purchase of software, hardware, or third-party services.

[199] Some alerts may reference specific NIST 800–53 Security Controls, while others may reference security controls generally. One example of a case-by-case request for incentive-based rate treatment of cybersecurity investments is a utility requesting an incentive for an implementation of data backup procedures on both the IT and OT networks. This type of action is specifically recommended in the CISA ''Shields Up'' Alert. *See* CISA, *Essential Element: Your Data* (Oct. 15, 2020), *https://www.cisa.gov/sites/default/files/publications/Cyber%20Essentials%20Toolkit%205%2020201015_508.pdf.* Further, this action is covered by the NIST Cybersecurity Framework Category Information Protection Processes and Procedures, subcategory 4 and thus would be evidence that this proposed implementation would materially improve the utility's cybersecurity.

[211] *Id.* at 10.

motivate utilities to implement material improvements as early as possible.[212]

116. APPA recommends that the Commission modify the proposed eligibility criteria in a manner that would disallow incentives for early adoption of CIP Reliability Standards.[213] Instead of a cybersecurity expenditure losing eligibility when it becomes mandatory pursuant to a CIP Reliability Standard, APPA recommends that the cut off for incentives should be the earlier of: (1) the date of any Commission directive that would require the investment; or (2) the date that a Standards Authorization Request is submitted to NERC to require that incentive.[214] APPA argues that it would not be just or reasonable to provide an incentive to a utility for an investment where a new or revised mandatory Reliability Standard is pending.[215]

c. Commission Determination

117. We adopt an application of the case-by-case method for utilities to satisfy the eligibility criteria by adding § 35.48(e)(3) to the Commission's regulations, which permits utilities to receive incentives for cybersecurity investments made to comply with a cybersecurity-related CIP Reliability Standard (*i.e.,* excluding CIP Reliability Standards that may be related to physical security and not cybersecurity) approved by the Commission before that CIP Reliability Standard becomes mandatory and enforceable for that utility. In general, cybersecurity investments made by a utility to comply and maintain its compliance with a Commission-approved Reliability Standard will materially improve the utility's cybersecurity. Filing utilities would need to demonstrate that the cybersecurity investment(s) it will make are necessary to comply with the Reliability Standard, and that it will make those cybersecurity investments prior to the date that the Reliability Standard is mandatory and enforceable for that utility.[216] Those cybersecurity investments made by the utility before the newly-approved Reliability Standard becomes effective (*i.e.,* mandatory and enforceable) are voluntary. Those cybersecurity investments made by the utility after the newly-approved Reliability Standard becomes effective and mandatory are no longer voluntary. As required by the second eligibility criteria, all of the utility's cybersecurity investments incurred to comply with a Reliability Standard after the Reliability Standard becomes mandatory and enforceable for that utility are ineligible for incentive-based rate treatment.

118. We find that allowing utilities to receive an incentive to comply with a Commission-approved cybersecurity-related CIP Reliability Standard before it becomes mandatory and enforceable could materially improve their cybersecurity posture during that period. In addition, we find that permitting an incentive for early compliance with approved cybersecurity-related CIP Reliability Standards will help to bridge gaps between voluntary cybersecurity measures and the cybersecurity measures mandated in the CIP Reliability Standards. It is possible that allowing utilities to receive incentives for early compliance could unintentionally incentivize standards drafting teams' artificial lengthening of the implementation period to increase the amount of time a utility could receive incentives. Nevertheless, the Commission would continue to consider whether the implementation time is reasonable when determining whether to approve the proposed CIP Reliability Standard.[217]

119. We clarify that the cybersecurity investments made by a utility to achieve early compliance with an approved cybersecurity-related CIP Reliability Standard may be eligible for incentive-based rate treatment. We reiterate that, after receiving Commission authorization for incentive-based rate treatment, the utility may only collect the incentive during the period that begins with the utility achieving compliance with the approved cybersecurity-related CIP Reliability Standard and that ends according to the duration provisions of § 35.48(g), as further discussed in section III.D.[218] Therefore, the earlier that a utility complies with a new CIP Reliability Standard, the longer the utility's incentive recovery period may be.

C. Cybersecurity Investment Rate Incentives

120. The Commission proposed two potential rate incentive options for utilities that make eligible cybersecurity investments: (1) the Cybersecurity ROE Incentive, an ROE adder of 200 basis points that would be applied to the incentive-eligible investments; [219] and (2) the Cybersecurity Regulatory Asset Incentive, deferral of certain eligible expenses for rate recovery, enabling them to be part of rate base such that a return can be earned on the unamortized portion.[220] The Commission stated that both offer meaningful incentives to encourage cybersecurity investments that improve a utility's cybersecurity posture.[221] The Commission also sought comment on whether, and if so how, the principles of performance-based regulation could apply to utilities with respect to cybersecurity investments.[222]

121. The Commission also noted that most utility IT investments (general and intangible plant) and expenses (administrative and general costs) support functions of the entire utility, not just the transmission function.[223] Consequently, the Commission found that only a portion of those costs are allocated to transmission customers, typically based on wages and salaries allocators.[224]

1. Cybersecurity ROE Incentive

a. NOPR Proposal

122. The Commission proposed to allow a utility that makes cybersecurity investments that are eligible for incentives to request the Cybersecurity ROE Incentive that would be applied to the incentive-eligible investments.[225] The Commission explained that any

[212] *Id.* at 10.

[213] APPA Initial Comments at 13–14.

[214] *Id.* at 13–14.

[215] *Id.* at 13–14.

[216] In addition, as explained below, filings seeking the incentives would have to comply with the filed rate doctrine. *See Exxon Mobil Corp.* v. *FERC,* 571 F.3d 1208, 1211 (D.C. Cir. 2009) (citing *Towns of Concord, Norwood, & Wellesley* v. *FERC,* 955 F.2d 67, 71 & n.2 (D.C. Cir. 1992); *Ark. La. Gas Co.* v. *Hall,* 453 U.S. 571, 577–578 (1981)) (''The Commission may not retroactively alter a filed rate to compensate for prior over- or underpayments. A corollary to this rule against retroactive ratemaking, the filed rate doctrine, forbids a regulated entity to charge rates for its services other than those properly filed with the appropriate regulatory authority. Together, these rules generally limit the relief the Commission may order to prospective [rates].'') (cleaned up).

[217] *See Rules Concerning Certification of the Elec. Reliability Org.; & Procs. for the Establishment, Approval, & Enf't of Elec. Reliability Standards,* Order No. 672, 71 FR 8662 (Feb. 17, 2006), 114 FERC ¶ 61,104, at P 333, *order on reh'g,* Order No. 672–A, 71 FR 19814 (Apr. 18, 2006), 114 FERC ¶ 61,328 (2006) (''In considering whether a proposed Reliability Standard is just and reasonable, the Commission will consider also the timetable for implementation of the new requirements, including how the proposal balances any urgency in the need to implement it against the reasonableness of the time allowed for those who must comply'').

[218] In addition to having its rate that includes incentive-based treatment on file with the Commission, a utility must submit an informational filing to the Commission notifying the Commission of the date that it has achieved compliance with the approved cybersecurity-related CIP Reliability Standard.

incentive granted under this proposal would be subject to the total base and incentive return being capped at the top of the utility's zone of reasonableness.[226] The Commission stated that the 200-basis point ROE adder would provide a meaningful incentive to encourage utilities to improve their systems' cybersecurity. The Commission recognized that this amount exceeds the ROE incentives for transmission facilities that the Commission typically provides pursuant to FPA section 219. The Commission explained that, because cybersecurity investments are relatively small compared to conventional transmission projects, a higher ROE may be necessary to affect the expenditure decisions of utilities, without unduly burdening ratepayers.

123. The Commission also proposed that enterprise-wide investments, which are not specific to transmission or the sale for resale of electric energy in interstate commerce, but a portion of which are recovered through rates on file with the Commission, may also be eligible for the 200-basis point ROE adder incentive if the Commission determines that the investments merit incentives, based on the eligibility criteria described above.[227] However, consistent with both longstanding cost-causation ratemaking principles [228] and the statutory requirement that rates inclusive of incentives be just and reasonable and not unduly discriminatory or preferential, the Commission proposed that only the conventionally allocated portion of such investments that flows through to cost-of-service rates on file with the Commission would be eligible for this rate treatment.

b. Comments

124. EEI, MISO Transmission Owners, and Indicated PJM Transmission Owners support the proposed ROE incentive.[229] EEI notes that some cybersecurity investments involve relatively low dollar amounts, compared with other capital investments.[230] Therefore, in addition to the fact that these investments are recovered over a short period, EEI believes that the proposed 200-basis point adder is reasonable and has the potential to create an incentive that will shift utility cybersecurity expenditures in the manner intended by the Commission and Congress.[231]

125. EEI and MISO Transmission Owners support the Commission's proposal to include enterprise-wide costs as eligible for incentive treatment.[232] EEI states that the Commission's enterprise-wide approach avoids the potential for investments to be funneled to only certain assets, leaving other areas (*e.g.,* network assets, generation) potentially ineligible, and aligns with Commission policies on enabling access for, and deployment of, distributed energy resources and advanced technologies.[233] MISO Transmission Owners state that the inclusion of enterprise-wide costs encourages enterprise-wide strategic security investments, which provide benefits to a utility's security program efficiency more broadly, as well as to ratepayers.[234]

126. APPA and Alliant agree with the proposal in the NOPR to cap total base and incentive ROE at the top of the zone of reasonableness.[235] APPA asks the Commission to clarify that, in applying the cap at the top end of the zone of reasonableness, a public utility would be required to take into account ROE adders other than the cybersecurity investment adder.[236]

127. Alliant, APPA, Iowa Utilities Board, Joint Consumer Advocates, the Michigan Commission, Ohio FEA, Ohio Consumers' Counsel, and TAPS do not support the proposed ROE adder of 200 basis points.[237] Alliant, APPA, California Parties, Ohio Consumers' Counsel, and Ohio FEA argue that the proposed 200-basis points adder is not just and reasonable.[238] APPA, California Parties, and TAPS also argue that the Commission has not sufficiently supported or explained why a 200-basis point return is necessary.[239]

128. APPA, California Parties, and TAPS argue that eligible cybersecurity investments are not ''relatively small'' as the NOPR suggests.[240] California Parties state that, in recent years, the California Public Utilities Commission has authorized significant amounts for State jurisdictional cybersecurity capital expenditures and annual IT physical and cybersecurity activities for utilities.[241] TAPS comments that the Commission has found that Duke Energy has made over $137 million in capital investments as part of its cybersecurity program that is designed based on the NIST Framework.[242] TAPS further states that, in 2019, Dominion Energy Virginia received State approval to spend $910.3 million on cyber and physical security and telecommunications over 10 years, with $154.4 being spent in the first three years related to improved monitoring and alarm capabilities and enhanced utility security.[243] TAPS argues that these sums illustrate that cybersecurity investments are not relatively small compared to conventional transmission projects.[244]

129. The Michigan Commission states that the potential financial risks that cyberattacks can pose on electric utilities already serve as a strong incentive for investment, much stronger than an additional 200 basis points would provide when applied to what the NOPR recognizes are relatively low-cost investments.[245]

130. Alliant states that using a 200-basis point ROE incentive would impose unnecessary administrative burdens on the Commission and all parties affected, as processing requests for incentives would consume valuable and limited resources of the Commission.[246] Iowa Utilities Board argues that an incentive rate adder could have a cascading impact on

economic activity, might adversely impact inflation, and could provide a perverse incentive to invest in unneeded technologies.[247] Ohio Consumers' Counsel comments that a 200-basis point adder is not necessary and is unreasonably costly for consumers, and also defies the logic of Order No. 679, which contemplated ROE adders of 100 and 150 basis points only, with the higher ROEs for more complicated and expensive transmission projects.[248]

131. Several commenters argue for a modification to the Commission's proposal of 200 basis points. NRECA requests that the Commission revise its proposal to allow for a request of up to 200-basis points, and questions whether it is appropriate to grant the same ROE adder for all cybersecurity expenditures or whether the Commission instead should tie the amount of the ROE incentive to the projected impact of the cybersecurity expenditure.[249] APPA asks whether the Commission has considered whether applying a smaller ROE adder would be sufficient to encourage investment.[250] Ohio Consumers' Counsel states that, instead of proposing a flat 200-basis point ROE adder, the Commission should provide for a pool of potential adders, ranging from 25 basis points up to a cap of 50 basis points, depending on the magnitude of the investment and the complexity or proven track record for the technology or activity.[251]

132. The Maryland and Pennsylvania Commissions suggest tapering incentives over time to encourage utilities to implement material improvements as early as possible. They argue that such tapering adds a ''performance-based'' aspect to the NOPR proposals.

133. AEP and ITC Companies request that the Commission apply incentives to the entire rate base.[252] ITC Companies state that it might be better to offer a general rather than asset-specific ROE adder for utilities that adopt a sufficient level of additional Advanced Cybersecurity Technologies and cybersecurity threat information sharing program participation.[253] ITC Companies argue that this would reflect the fact that an entity's individual cybersecurity assets and practices are part of a cohesive defensive framework that applies to its entire operation.[254] ITC Companies explain that the type of cybersecurity investment to which the ROE incentive might apply is not a financially significant portion of total rate base for most responsible entities and, in many instances, it is likely that the marginal benefit of this incentive will not justify the administrative cost of obtaining this incentive (even with a PQ List in place), especially where the zone of reasonableness applicable to a responsible entity's overall rate of return further diminishes the impact of the incentive.[255] AEP argues that an incentive adder applied system-wide to the transmission rate base would not need to rise to the level contemplated in the NOPR, *e.g.,* 50 basis points, and would be sufficient to incentivize industry participants to adopt cybersecurity programs that go above and beyond existing cybersecurity requirements.[256]

c. Commission Determination

134. We decline to adopt an ROE incentive adder, as proposed in the NOPR. We conclude that the Cybersecurity Regulatory Asset Incentive satisfies the statutory obligation to benefit consumers by encouraging investments by utilities in Advanced Cybersecurity Technology and participation by utilities in cybersecurity threat information sharing programs. We believe that expenses, which include cybersecurity assessments, architectural reviews, maturity model evaluations, software subscriptions, monitoring, training, procuring outside services, and cloud computing services, constitute a large portion of overall expenditures for many cybersecurity investments, including cybersecurity threat information sharing programs. We find that the provision of the Cybersecurity Regulatory Asset Incentive alone provides the encouragement that Congress intended without unduly increasing costs on consumers.

2. Cybersecurity Regulatory Asset Incentive

a. NOPR Proposal

135. The Commission proposed a Cybersecurity Regulatory Asset Incentive to allow a utility that makes cybersecurity investments that are eligible for incentives to seek deferred cost recovery.[257] The Commission explained that, in limited circumstances, it may be appropriate to allow a utility to defer recovery of certain cybersecurity costs that are generally expensed as they are incurred, and treat them as regulatory assets, while also allowing such regulatory assets to be included in transmission rate base. Many costs associated with cybersecurity are in the form of expenses, often to third-party vendors, rather than capital investments. Moreover, certain cost categories that companies historically have purchased and capitalized, such as software, are now often procured as services with periodic payments to vendors that are recorded as expenses. Therefore, to encourage investment in cybersecurity, the Commission proposed to allow utilities to defer and amortize eligible costs that are typically recorded as expenses, including those that are associated with third-party provision of hardware, software, and computing and networking services. The Commission also sought comment on whether it would be preferable to permit only 50% of incentive-eligible expenses to be treated as regulatory assets.

136. The Commission observed that a range of implementation costs associated with cybersecurity investments could be eligible for deferred rate treatment.[258] Such costs may include, for example, training to implement new cybersecurity practices and systems. However, the Commission proposed that, to be eligible for the incentive of deferred cost recovery, such training costs must be distinct from costs associated with pre-existing training on cybersecurity practices. The Commission stated that another potentially eligible implementation cost may be internal system evaluations and assessments or analyses by third parties, to the extent that they are associated with a capitalizable item and are part of eligible capitalizable costs. The Commission proposed that any implementation costs that are not conventionally booked as plant and thus capitalized can be considered for deferral as a regulatory asset. Recurring costs may be eligible for deferral as a regulatory asset and may include, for example, subscriptions, service agreements, and post-implementation training costs. Specifically, the Commission proposed to allow utilities, under this incentive, to include ongoing dues and other expenses directly associated with participation by utilities in cybersecurity threat information sharing programs that satisfy the eligibility criteria.

[256] AEP Initial Comments at 6.

[257] NOPR, 180 FERC ¶ 61,189 at P 39.

[258] *Id.* P 40.

137. The Commission observed that, because FPA section 219A(c)(2) directs the Commission to offer incentives to encourage *participation* by public utilities in cybersecurity threat information sharing programs, it proposed to allow utilities that are currently participating in such programs to seek incentives for any new cybersecurity investment associated with their participation, so long as that participation is voluntary.[259] The Commission sought comment on whether to allow utilities who are already participating in an eligible cybersecurity threat information sharing program to be eligible for this incentive.[260]

138. The Commission also noted that the Commission's rules and regulations in the Uniform System of Accounts [261] already require public utilities to maintain records supporting any entries to the regulatory asset account so that the public utility can furnish full information as to the nature and amount of, and justification for, each regulatory asset recorded in the account.[262] The Commission explained that, pursuant to its existing regulations, utilities must maintain sufficient records to support the distinction of any investments that are afforded incentive-based rate treatment.[263]

139. Additionally, the Commission proposed that only directly-assigned utility costs or the conventionally allocated portion of enterprise-wide expenses (*e.g.,* using the wages and salaries allocator) would be eligible for the Cybersecurity Regulatory Asset Incentive in rates on file with the Commission.[264]

b. Comments

140. EEI, Iowa Utilities Board, the Michigan Commission, and MISO Transmission Owners support the Commission's proposal.[265] The Michigan Commission states that the Commission's acknowledgement that many cybersecurity costs have shifted to expenses rather than capital costs is valid.[266] The Michigan Commission adds that the proposed Cybersecurity Regulatory Asset Incentive could help facilitate these types of investments during the time in which such investments are evaluated for inclusion in the CIP Reliability Standards, and that the proposed Cybersecurity Regulatory Asset Incentive would allow for reasonable facilitation of cybersecurity investments in advance of CIP Reliability Standard updates and would avoid unjust and unreasonable rates.[267] Iowa Utilities Board comments that allowing a utility to capitalize the operational expenses for cybersecurity expenditures is by itself an adequate incentive because it reduces cash flow demands and provides an opportunity for the utility to earn a return on those expenditures.[268]

141. MISO Transmission Owners support the proposal to allow utilities to defer and amortize eligible costs that are typically recorded as expenses that are associated with third-party hardware, software, and computing and networking services.[269] MISO Transmission Owners state that allowing transmission owners to capitalize costs and investments associated with cybersecurity investment, including up-front training and implementation expenses, will enable utilities to fully realize the relative security benefits that rapid adoption of cybersecurity investment can generate, as well as the often-lower cost that such solutions impose on ratepayers relative to physical infrastructure.[270]

142. MISO Transmission Owners ask the Commission to clarify that cybersecurity-related operation and maintenance expenses, labor costs, and post-implementation training costs may be included as part of the Cybersecurity Regulatory Asset Incentive.[271] EEI suggests that the Commission include training, implementation, software costs, and allow cloud computing expenses to also be allowed to be deferred as a regulatory asset.[272] EEI expresses concern with the proposal to limit the eligible costs to those associated with implementing cybersecurity upgrades and to not include ongoing costs including system maintenance, surveillance, and other labor costs, either in the form of employee salaries or third-party service contracts.[273] EEI argues that including these costs would support the Commission's cybersecurity goals, incent best practices, and benefit customers by reducing the possibility of interruptions from cyber-attacks.[274]

143. Ohio Consumers' Counsel opposes the proposal to allow deferred accounting and recovery of a return on the unamortized portion of the costs for cybersecurity expenses.[275] Ohio Consumers' Counsel states that deferred accounting and cost collection of cybersecurity expenses as regulatory assets will cost consumers more over time than would recovery of the expense all in one year.[276]

144. APPA and California Parties contend that the Cybersecurity Regulatory Asset Incentive should be limited to 50% of eligible investment in cybersecurity initiatives.[277] California Parties comment that the Commission should allow no more than 50% of eligible expenses to be treated as a regulatory asset included in transmission rate base to reduce the burden on consumers.[278] California Parties argue that the Commission failed to offer any explanation as to why its proposal that 100% of eligible expenses should be able to receive incentive treatment is properly calibrated to induce the desired investment.[279]

c. Commission Determination

145. We adopt the NOPR's proposal to add § 35.48(f) to the Commission's regulations to include a Cybersecurity Regulatory Asset Incentive that allows a utility to seek deferred cost recovery for cybersecurity investments that are eligible for incentives. We find that, in limited circumstances that are specific to cybersecurity investments, it is appropriate to allow a utility to defer recovery of certain cybersecurity costs that are generally expensed as they are incurred, and treat them as regulatory assets, while also allowing such regulatory assets to be included in the utility's rate base.

146. In response to Ohio Consumers' Counsel's concerns about consumer costs, as an initial matter, we note that increased consumer costs in isolation do not impugn the reasonableness of an incentive, provided the rates are still just and reasonable. The Commission has long offered transmission incentives, which increase rates, because they encourage investments and activities that the Commission has found provide consumer benefits. The Cybersecurity Regulatory Asset

Incentive nominally increases rates, though consumers benefit from the time value of money associated with later recovery through rate base than immediate recovery as an expense. Based on the expense-heavy nature of many cybersecurity investments, we find this appropriate to effectuate Congress' requirement that the Commission offer cybersecurity incentives. We also will not, as suggested by California Parties and APPA, limit this incentive to 50% of eligible expenses. Given the comparatively small amount of many cybersecurity expenses, we find that such a limitation may inadequately provide incentives to meaningfully encourage utilities to improve their cybersecurity posture.

147. In response to MISO Transmission Owners' and EEI's comments, we clarify that utilities may seek this incentive for a range of expenses including operation and maintenance expenses, labor costs, implementation costs, network monitoring, and training costs. Additionally, ongoing expenses, either incurred by utility employees or utility payments to third parties may be eligible. Software purchases typically would not qualify for the Cybersecurity Regulatory Asset Incentive because they generally constitute capital investments; however, software-as-a-service expenses could qualify for the Cybersecurity Regulatory Asset Incentive.

148. We find it appropriate to limit eligibility for incentive-based rate treatment to new cybersecurity investments. As also discussed in section III.D.3.c., we add § 35.48(h)(5) to our regulations to provide that the Cybersecurity Regulatory Asset Incentive may be applied to new cybersecurity investments that: (1) occur after the effective date of the Commission's approval of incentive-based rate treatment; and (2) are materially different from cybersecurity investments already incurred by the utilities more than three months prior to the incentive request. Utilities may seek incentives for one-time cybersecurity expenses and/or recurring ones.

149. We generally define new cybersecurity investments to include investments for those activities that have occurred no more than three months prior to the date that the utility files its incentive request with the Commission. We provide one exception and one clarification to this general three-month rule. First, a utility may seek incentive-based rate treatment for its future cybersecurity investments made to participate in cybersecurity threat information sharing programs even if the utility began its participation and therefore made cybersecurity investments related to its participation more than three months before filing its request for incentive-based rate treatment with the Commission. We clarify that utilities seeking incentive-based rate treatment for cybersecurity investments made to comply with a Commission-approved cybersecurity-related CIP Reliability Standard before it becomes mandatory and enforceable for that utility will be permitted to seek incentive-based rate treatment for its cybersecurity expenses that began no earlier than three months before the date that the Commission's approval of the Reliability Standard becomes effective. A utility's cybersecurity expenses that began more than three months before the date that the Commission order or final rule approving a new or modified Reliability Standard becomes effective will not be considered new and will be considered materially similar and duplicative. Therefore, the cybersecurity investments made more than three months before the Commission approves a new or modified Reliability Standard would be ineligible to receive incentive-based rate treatment as early compliance with an approved Reliability Standard.

150. To be clear, this prior three-month provision only determines whether a utility's cybersecurity investment is new and therefore eligible for incentive-based rate treatment. The filed rate doctrine and the rule against retroactive ratemaking preclude the Commission from granting a utility incentive-based rate treatment for cybersecurity investments made before the Commission acts on a request for declaratory order or the effective date of an FPA section 205 filing requesting the incentive-based rate treatment for cybersecurity incentives.[280]

151. Moreover, we find it appropriate that only new cybersecurity investments, and not duplicative or materially similar ones to existing expenses, be eligible. As discussed in section III.D.3., we will require utilities to attest that the cybersecurity investments that are the basis for the incentive-based rate treatments are new cybersecurity investment and not duplicative or materially similar to preexisting expenses. For instance, investment in training associated with a new cybersecurity system may be eligible while annual basic cybersecurity training may not, even if the contents slightly change year-to-year. This will ensure that incentives encourage cybersecurity investments that improve a utility's cybersecurity posture rather than just reward ongoing or recurring activities. The three-month period to determine eligibility of incentives for pre-existing expenses allows for utilities making new cybersecurity investments to respond to immediate cybersecurity vulnerabilities while giving them time to request incentives. We reiterate that utilities may not recover incentives on specific investments that predate the effective date of filing requesting incentive-based rate treatment. We find that this grace period could incentivize utilities not to wait until the effective date of requested incentives to undertake urgent cybersecurity action.

152. FPA section 219A(c)(2) requires the Commission to offer incentives to encourage *participation* by public utilities in cybersecurity threat information sharing programs. Furthermore, participation in information-sharing programs provides cybersecurity benefits to the participating utility that applies for an incentive-based rate treatment, the other program participants, and their customers. Consequently, unlike other expenses, we find that utilities may request the Cybersecurity Regulatory Asset Incentive for expenses associated with participation in cybersecurity threat information sharing programs regardless of how long the utilities have participated in the programs—although only expenses prospective from the effective date of the Commission's approval of the cybersecurity incentives in the utility's rate(s) on file with the Commission shall be eligible.

153. The Commission's rules and regulations in the Uniform System of Accounts[281] require public utilities to maintain records supporting any entries to the regulatory asset account so that the public utility can furnish full information as to the nature and amount of, and justification for, each regulatory asset recorded in the account. Pursuant to our existing regulations, any utility receiving an incentive must maintain sufficient records to support the distinction of any investments that are afforded incentive-based rate treatment.[282] Given the novelty of allowing incentive recipients to include certain expenses in rate base, it is essential that the utilities keep records in a manner that allows the Commission and other parties to ensure that no double-recovery occurs.

[280] *See* n.216, *supra.*

[281] *See* 18 CFR pt. 101, Account Definition Account 182.3, Other Regulatory Assets, paragraph D.

[282] *Id.*

154. We also find that, consistent with the Commission's longstanding cost-causation ratemaking principles, only costs directly assigned to a function or the conventionally allocated portion of enterprise-wide expenses (*e.g.,* using the wages and salaries allocator) would be eligible for the Cybersecurity Regulatory Asset Incentive in rates specific to that function. For example, only incentives for transmission-specific or transmission-allocated costs may be recovered in transmission rates.

3. Performance-Based Rates

a. NOPR Proposal

155. In the NOPR, the Commission noted that FPA section 219A(c) directs the Commission to establish incentive-based, including performance-based, rate treatments.[283] The Commission observed that, because it is difficult to directly observe the level of effort a utility expends on ensuring cybersecurity, performance-based regulation could theoretically provide a valuable tool to motivate utilities to maintain and operate their systems reliably and efficiently. The Commission explained that performance-based ratemaking can take multiple forms, but ultimately requires the ability to measure and tie rate treatments to actual performance.[284]

156. The Commission sought comment on performance-based rates and whether and how the principles of performance-based regulation could apply to utilities with respect to cybersecurity investments.[285] The Commission also sought comment on specific cybersecurity performance metrics that could be subject to a performance standard.[286] In particular, the Commission sought comment on whether any widely accepted metrics for cybersecurity performance could lend themselves as benchmarks for performance-based rates, or whether new appropriate metrics could be developed. The Commission further sought comment on what rate mechanisms could accompany such metrics. The Commission asked that any proposed mechanisms: (1) rely on cybersecurity performance benchmarks and not expenditures or practices; and (2) consider ratepayer impacts, given the relatively small costs of cybersecurity expenditures compared to utilities' overall cost-of-service.

b. Comments

157. No commenter explicitly supports performance-based rates with respect to cybersecurity investments. EEI, Iowa Utilities Board, and Ohio Consumers' Counsel all filed comments opposing this approach.[287] EEI argues that, without clear, industry-wide metrics, a performance-based program would be difficult to implement.[288] Ohio Consumers' Counsel states that setting a performance threshold for advanced cybersecurity investment and activities is likely to be challenging, given the rapid pace of development in both the types of cybersecurity threats experienced and the technological advances used to counter those threats.[289] Iowa Utilities Board comments that performance measurement for cybersecurity investments is difficult because, more often than not, it would be difficult to pinpoint the root cause of failure on a particular entity or process when there is a performance failure.[290]

158. Ohio FEA states that, if the Commission adopts performance-based rates for cybersecurity incentives, it should neither choose which expenses to approve nor check whether incurred expenses comply with the utility's plans but should simply verify whether predetermined outcomes have been achieved.[291] Ohio FEA recommends that the Commission consider developing resources, such as C2M2, to achieve a performance monitoring tool that will aid in performance-based rates.[292]

c. Commission Determination

159. We interpret the directive to establish incentive-based, including performance-based, rate treatments in FPA section 219A to require the Commission to consider performance-based rates as an option among incentive ratemaking treatments. This interpretation is consistent with the Commission's finding in Order. No. 679 regarding the directive to establish incentive-based (including performance-based) rate treatments for investments in transmission infrastructure in FPA section 219.[293] Because of the Congressional directive to encourage performance-based rates, the Commission signaled its intention to reevaluate previous Commission policies on performance-based rate treatments and attempt to offer such incentives in the cybersecurity context. We recognize that performance-based regulation could theoretically provide a valuable tool to motivate utilities to maintain and operate their systems reliably and efficiently. Performance-based ratemaking can take multiple forms, but ultimately requires the ability to measure and tie rate treatments to actual performance (*i.e.,* the number and severity of cybersecurity incidents) rather than intermediate steps such as specific cybersecurity protocols or cybersecurity investments that intend to achieve that performance.

160. However, after evaluating the comments, we continue to find that it is difficult to directly observe the success of a cybersecurity investment. We share the view of commenters that it would be premature to adopt generic performance-based rate measures at this time. However, the development of performance-based rate measures may represent a long-term goal for utilities and the Commission to pursue.

D. Cybersecurity Investment Incentive Implementation

1. Cybersecurity ROE Incentive Duration

a. NOPR Proposal

161. The Commission proposed to allow a utility granted a Cybersecurity ROE Incentive to receive that incentive until the earliest of: (1) the conclusion of the depreciation life of the underlying asset; (2) five years from when the cybersecurity investment(s) enter service; [294] (3) the time that the investment(s) or activities that serve as the basis of that incentive become mandatory pursuant to a Reliability Standard approved by the Commission, or local, State, or Federal law; or (4) the recipient no longer meets the requirements for receiving the incentive.[295] The Commission recognized that incentive-eligible cybersecurity investments primarily include equipment or system modifications that typically have short depreciation lives, as opposed to long-lived assets like physical structures. The Commission believed that most cybersecurity incentives granted under this rulemaking would remain in effect

[283] NOPR, 180 FERC ¶ 61,189 at P 44.

[284] *Id.* P 44.

[285] The Commission also explained that, consistent with Order No. 679, which implemented FPA section 219, it interpreted the directive to establish incentive-based, including performance-based, rate treatments in FPA section 219A to require the Commission to consider performance-based rates as an option among incentive ratemaking treatments. *Id.* P 46 n.41.

[293] Order No 679, 116 FERC ¶ 61,057 at P 270.

[294] For participation in a cybersecurity threat information sharing program, the ''investment'' would recur annually.

[295] NOPR, 180 FERC ¶ 61,189 at P 46.

until the conclusion of the depreciation life of the underlying asset. However, for investments with useful lives exceeding five years, the Commission proposed that the incentive end at the conclusion of five years from the time that the asset receiving the cybersecurity incentive entered service, noting that most IT investments feature useful lives no longer than five years. The Commission preliminarily found that five years is a reasonable expected life to encourage utilities to make an investment and to ensure just and reasonable rates. The Commission also sought comment on whether the proposed duration should be three years instead of five years.

b. Comments

162. EEI comments that the five-year depreciation period may be reasonable, but, if the utility has a cybersecurity asset with a longer depreciation life, the utility should have the option to make an argument for a longer incentives period, depending on the investment on a case-by-case basis.[296] EEI further comments that, if an incentive becomes mandatory, it is not clear why it must end automatically. EEI argues that, for example, if the investment is in year three and then in year four it becomes a mandatory standard, the utility would lose the incentive moving forward and that this approach will dampen potential incentives to do the work to be an early adopter of promising, qualifying cybersecurity measures.[297] AEP comments that the proposed five-year duration is unlikely to drive utilities to meaningfully reconsider their current and future investment in cybersecurity.[298]

163. APPA, California Parties, the Electricity Consumers Resource Council (ELCON), Ohio Consumers' Counsel, and TAPS state that the Commission should limit the duration proposal to a maximum of three years.[299] California Parties, TAPS, and Ohio Consumers' Counsel argue that setting the limit at three years better aligns with the fast-evolving nature of cybersecurity technology, and that consumers should not have to pay for technology that has become obsolete.[300] APPA comments that, where an asset has a useful life of no more than five years, a three-year Cybersecurity ROE Incentive would apply to a large portion, and potentially all, of the asset's useful life.[301] APPA states that the value of the Cybersecurity ROE Incentive to a utility would decline over time as the underlying asset depreciates and reduces the rate base to which the ROE adder is applied.[302]

c. Commission Determination

164. As discussed in section III.C.1.c., we do not adopt the NOPR's proposed Cybersecurity ROE Incentive. Consequently, we need not address the duration of this incentive.

2. Cybersecurity Regulatory Asset Incentive Duration and Amortization Period

a. NOPR Proposal

165. The Commission proposed to specify that a utility granted the Cybersecurity Regulatory Asset Incentive must amortize the regulatory asset over five years.[303] The Commission stated that this may reflect the generally short-lived nature of cybersecurity activities and corresponds to the depreciation rates for investments described above.[304] The Commission observed that this period generally relates to the expected useful life and associated cost-of-service amortization period of cybersecurity investments.

166. The Commission also proposed to specify that a utility granted the Cybersecurity Regulatory Asset Incentive may defer eligible expenses for up to five years from the date of Commission approval of the incentive.[305] Under this provision, the Commission proposed that eligible expenses incurred for five years could be added to the regulatory asset that is allowed in rate base and amortized over five subsequent years.[306] The Commission preliminarily found that this limit would be appropriate, given the potentially indefinite nature of certain expenses. The Commission stated that such a limit would also reflect that cybersecurity risks and solutions evolve over time and matches the proposed five-year maximum duration of the Cybersecurity ROE Incentive. The Commission preliminarily found that a five-year limit appropriately balances the goal of providing an incentive of a sufficient size to encourage utilities to make eligible improvements in their cybersecurity posture with the requirement to protect ratepayers.

167. However, the Commission proposed to make an exception to this sunsetting provision for eligible cybersecurity threat information sharing programs.[307] The Commission noted that FPA section 219A(c)(2) directs the Commission to provide incentives for *participation* in cybersecurity threat information sharing programs. The Commission preliminarily found that participation in such cybersecurity threat information sharing programs, which provide participants with ongoing updates about active cybersecurity threats and are therefore distinct from other cybersecurity investments that may become obsolete with the passage of time, warrants a different incentive treatment than other investments. Consequently, the Commission proposed that utilities be able to continue deferring these ongoing expenses and including them in their rate base for each annual tranche of expenses, for as long as: (1) the utility continues incurring costs for its participation in the program; and (2) the program remains eligible for incentives.

b. Comments

168. EEI supports the NOPR proposal to make an exception to the sunsetting provision for eligible cybersecurity threat information sharing programs on the basis that they are distinct from discrete cybersecurity investments that may become obsolete with the passage of time.[308] EEI comments that sharing information about the nature of threats can help electric utilities react to and mitigate the threat.[309]

169. EEI requests clarification that the amortization period would be up to five years, but that five years is not the only duration permissible for amortization.[310]

170. TAPS agrees with the Commission's preliminary finding that the five-year limit balances the goals of ratepayer protection with inducing the desired investment.[311] However, TAPS argues that the NOPR unjustifiably proposed to depart from that balance

[303] As noted above, the cybersecurity investment for participation in a cybersecurity threat information sharing program would recur annually.

[304] NOPR, 180 FERC ¶ 61,189 at P 47.

[305] *Id.* P 48.

[306] The Commission proposed that, in their FPA section 205 filings, incentive recipients must include notes to their formula rates specifying the Commission order(s) which approved the incentive and stating that the associated Cybersecurity Regulatory Asset Incentive must terminate in the earlier of: (1) five years from the date of the later of the Commission approving the incentive or the expense being incurred; or (2) the cybersecurity investment becoming mandatory.

[308] EEI Initial Comments at 14.

[309] *Id.* at 14.

[310] *Id.* at 14.

[311] TAPS Initial Comments at 20–21.

with regard to expenses incurred for eligible cybersecurity threat information sharing programs by allowing a perpetual incentive on those investments.[312] TAPS argues that the Commission should not adopt such an exception for cybersecurity threat information sharing programs, because it gives no consideration of the requirement to protect ratepayers.[313] TAPS states that the NOPR's distinction from other discrete cybersecurity investments that may become obsolete with the passage of time does not support granting a perpetual incentive for cybersecurity threat information sharing programs.[314] TAPS further argues that the fact that participants are provided with ongoing updates after joining such programs is a recurring benefit that likely increases retention, even absent any incentive.[315]

171. California Parties also oppose the NOPR's exception to the sunsetting provision for eligible cybersecurity threat information sharing programs.[316] California Parties state that, once a utility has elected to participate in CRISP and has paid the requisite start-up costs, there is no longer a purpose served by incentive treatment, given that the utility is able to readily recover all ongoing costs of participation (along with the start-up costs) in transmission rates.[317] California Parties argue that, to provide incentives in this circumstance—where they are simply not needed to induce prudent spending on an annual subscription to CRISP and associated staff time—would result in unjust and unreasonable rates.[318]

c. Commission Determination

172. We adopt the NOPR's proposal to add § 35.48(g)(1) to the Commission's regulations, with one modification. As suggested by EEI, we will modify the NOPR proposal to allow, at the request of the utility, the Cybersecurity Regulatory Asset Incentive duration to be *up to* five years. This revision provides flexibility to requesting utilities while maintaining ratepayer protections. A utility granted the Cybersecurity Regulatory Asset Incentive must amortize the regulatory asset for up to five years. Additionally, a utility granted the Cybersecurity Regulatory Asset Incentive may defer eligible expenses for up to five years from the date of Commission approval of the incentive. Consistent with the NOPR proposal, we find that a five-year amortization period balances the Commission's goals of ratepayer protection and providing an appropriate incentive to encourage utilities to improve their cybersecurity posture. To clarify, incentive-eligible, cybersecurity expenses for each of the five years may be included in rate base and amortized for up to five years, essentially creating five tranches of cybersecurity expenses. We also clarify that if and when cybersecurity measures become mandatory, utilities will cease receiving the Cybersecurity Regulatory Asset Incentive for taking such measures.[319] No additional expenses will be converted to regulatory assets and the unamortized portions of regulatory assets must be incurred as expenses in the year when they were converted back to expenses and immediately removed from rate base.

173. We add § 35.48(g)(2) to the Commission's regulations to provide an exception to the five-year duration limit to the incentive-based rate treatment of cybersecurity investments made to participate in a cybersecurity threat information sharing program. We find that the duration exception for participation in eligible cybersecurity threat information sharing programs as proposed in the NOPR is appropriate. As discussed in the body of this rule, the Congressional mandate to incentivize participation indicates that all participants should be eligible to seek cybersecurity incentives for their participation in eligible programs. Therefore, we decline to remove the exception to the sunsetting provision for participation in an eligible cybersecurity threat sharing program.

3. Filing Process

a. NOPR Proposal

174. The Commission proposed to require a utility's request for one or more incentive-based rate treatments to be made in a filing pursuant to FPA section 205. As proposed in the NOPR, such a request must include a detailed explanation of how the utility plans to implement one or both of the proposed incentive approaches and the requested rate treatment.[320] The Commission proposed to require utilities to provide detail on the expenditures for which they seek incentives and show how the cybersecurity-related expenditures meet the eligibility requirements, as described in more detail below.

175. In addition, the Commission proposed that a utility seeking one or more incentive-based rate treatments must receive Commission approval prior to implementing any incentive in its rate on file with the Commission. The Commission stated that, in order to effectuate an incentive in rates, utilities would need to propose in their FPA section 205 filing conforming revisions to their formula rates to reflect incentive rate treatment granted pursuant to these proposed regulations. The Commission explained that utilities with stated rates may file under FPA section 205 to seek incentives as part of a larger rate case or make a request for single issue ratemaking, which the Commission will evaluate on a case-by-case basis to ensure that the rate, inclusive of the incentive, is just and reasonable and not unduly discriminatory or preferential.[321]

176. The Commission proposed that filings under the PQ List approach must provide evidence that the utility has made one or more pre-qualified cybersecurity expenditures and otherwise complies with all appropriate requirements.[322]

177. The Commission also proposed that a utility requesting the Cybersecurity ROE Incentive must provide the anticipated cost of the capital investment and the identity of the rate schedule(s) on file with the Commission under which it will recover the increased ROE.[323] The Commission alternatively proposed that a utility requesting the Cybersecurity Regulatory Asset Incentive must provide a description of the covered expense(s), including whether the expense(s) are associated with the third-party provision of hardware, software, and computing network services or incurred for training to implement network analysis and monitoring programs, as well as an estimate of the cost of such expense(s) and when the cost is expected to be incurred.

178. The Commission preliminarily found that the same cybersecurity investment should not be eligible for both the Cybersecurity ROE Incentive and the Cybersecurity Regulatory Asset Incentive. Given that regulatory asset treatment may be approved for costs that are normally treated as expenses (*i.e.,* as regulatory assets), the Commission preliminarily found that costs that are allowed to be deferred as a regulatory asset should be included in rate base for determination of the base return but not for the additional return

associated with the 200-basis point ROE adder.[324]

b. Comments

179. Ohio Consumers' Counsel requests that the Commission require any incentive application (whether an application for incentives for advanced technologies and actions on the pre-qualification list or for incentives that are not included on that list) to be made in a FPA section 205 filing.[325] Ohio Consumers' Counsel further requests that the Commission require that both types of applications explicitly identify in which accounts the utility will book the costs associated with the investment, expense or action.[326] Ohio Consumers' Counsel comments that such a requirement is needed to ensure transparency and proper rate treatment for these investments.[327]

180. California Parties ask the Commission to clarify the incentive application procedures to ensure that stakeholders have adequate time and information to meaningfully review and comment on incentive requests.[328] California Parties argue that the usual filing procedures under FPA section 205 are not sufficient because they neither provide ample time for review, given the more complex nature of cybersecurity incentive applications, nor do the procedures ensure the development of an adequate factual record, especially given the CEII considerations.[329] In support, California Parties state that the filing procedures under FPA section 205 provide only 21 days for an interested party to intervene and comment and do not ensure the opportunity for discovery or evidentiary hearings.[330] California Parties request that the Commission make clear that all cybersecurity incentive applications will be presumed to raise issues of material fact and will thus be subject to an evidentiary hearing with an opportunity for discovery.[331] California Parties aver that evidentiary hearings and discovery would provide a critical measure of transparency regarding the use of ratepayer funds, provided appropriate safeguards are in place.[332]

181. NRECA seeks additional detail on the NOPR's proposed filing process.[333] Specifically, NRECA requests that the Commission propose language addressing applications under the case-by-case approach.[334] NRECA also asks the Commission to describe the anticipated composition of teams responsible for reviewing and evaluating requests under the proposed new provisions.[335] NRECA states that, given the wide-ranging implications of granting cybersecurity incentives, the reviewing team should include staff with diverse backgrounds, including electrical engineers who understand the structure of the transmission and generations assets that may be affected by the proposed cybersecurity investment, system or computer science engineers who understand the nature of the proposed investments, and analysts with ratemaking experience who can balance the increased benefits of the proposed investment against the cost to the ratepayers.[336]

182. MISO Transmission Owners caution that, while the inclusion of cybersecurity threat information sharing programs on the PQ List will provide certainty, efficiency, and transparency for utilities seeking an incentive, public disclosure through the filing process could put utilities at risk.[337] MISO Transmission Owners recommend that the Commission adopt filing procedures that would protect the confidentiality of utilities requesting incentives, including the use of a public cover sheet disclosing what incentives are being applied for with the remainder of the application being confidential.[338] In contrast, NRECA acknowledges the need for utilities to submit certain information under CEII filing regulations but warns that the more information filing utilities are able to hide from the public, the greater the burden on interested parties.[339] NRECA cautions that the consolidation of incentive applications containing sensitive information may increase the overall risk to the bulk electric system.[340]

c. Commission Determination

183. We adopt the NOPR's proposal and add § 35.48(h) to the Commission's regulations, which specifies the details required in applications to the Commission to receive incentive-based rate treatment for cybersecurity investments. We clarify that utilities may request Commission approval of incentives for cybersecurity investments pursuant to FPA section 219A by filing an FPA section 205 filing or by seeking a ruling on eligibility by filing a petition for declaratory order followed-up by an FPA section 205 filing. Utilities must propose to revise their rates to reflect such incentives pursuant to FPA section 205. Pursuant to FPA section 219A(f), § 35.48(h) permits utilities to seek cybersecurity incentives either as part of a larger rate case or make a request for single issue ratemaking.[341]

184. With regard to Ohio Consumers' Counsel's suggestion that the Commission require any incentive application (whether an application for incentives for Advanced Cybersecurity Technologies and actions on the PQ List or for incentives that are not included on that list) to be made in a FPA section 205 filing, we agree that an FPA section 205 filing is necessary for any incentives to be effectuated in utility rates. However, consistent with the Commission's precedent with respect to transmission incentives, we will allow utilities to seek declaratory orders finding expenditures to be eligible for incentives prior to making FPA section 205 filings to implement incentives in rates. A request for a declaratory order must include all necessary information for the Commission to determine whether the investment merits an incentive. The FPA section 205 filing necessary to add incentive-based rate treatment to a utility's rate on file with the Commission, whether filed in conjunction with a petition for declaratory order or on its own, must provide information required for the Commission to determine that the rate inclusive of the incentives is just and reasonable and not unduly discriminatory or preferential.[342]

185. The filing process is similar for incentives requested for cybersecurity investments that are on the PQ List and case-by-case requests. The distinction is that requests for incentives for cybersecurity investments that are on the PQ List have the rebuttable presumption that the items on the PQ List satisfy the eligibility criteria, *i.e.,* materially improving cybersecurity posture and not already being mandatory. By contrast, applicants under a case-by-case approach must provide a detailed description of how the cybersecurity investments will satisfy the eligibility criteria and thereby materially improve the cybersecurity posture for their utility. To make this demonstration, in addition to describing

[342] 18 CFR pt. 35.

the cybersecurity investments, applicants should: (1) describe their prevailing cybersecurity posture including existing equipment, processes, and ongoing expenses; and (2) describe how the cybersecurity investment for which an incentive is sought would elevate the utility's cybersecurity posture. The application should include evidence sufficient to demonstrate that the cybersecurity investment(s) would be for activities that are consistent with the discussion in section III.B. regarding the PQ List and case-by-case approaches. We also clarify that, for incentive requests either for PQ List items or on a case-by-case basis, utilities must include in their transmittal letter an attestation that, to their knowledge, the cybersecurity investments are not mandatory, as described in section III.A.3. above. Additionally, for the Cybersecurity Regulatory Asset Incentive, the transmittal letter must include an attestation that the utility has not already been undertaking materially the same cybersecurity expenses for more than three months (with the exception of participation in cybersecurity threat information sharing programs).[343] As described in III.C.2. only new types of cybersecurity investments, and not materially similar ones to existing expenses, will be eligible for incentive-based rate treatment.

186. As described in § 35.48(h), requests for the Cybersecurity Regulatory Asset Incentive must provide: (1) a description of the relevant cybersecurity expenses; (2) estimates of the costs of cybersecurity expenses; (3) a description of when the cybersecurity expenses are expected to be incurred; and (4) an attestation that the utility's cybersecurity expenses are new, *i.e.,* the utility has not already been undertaking materially the same cybersecurity expenses for more than three months prior to the date of filing its request with the Commission. Descriptions of expenses should include details such as whether they are conducted by utility employees or third parties and whether they are for training or the direct carrying out of cybersecurity tasks. This last requirement seeks to ensure that cybersecurity incentives encourage utilities to improve their cybersecurity posture rather than provide a return on expenses that the utility is already undertaking. Incentive-eligible expenses should be meaningfully distinct from past ones and not only contain small variations or incremental modifications from existing expenses.

187. Consistent with the Commission's implementation of transmission incentives under FPA section 219, interested parties will have a 21-day comment period, unless otherwise provided by the Commission.[344] We find that California Parties have not justified departing from the Commission's comment period convention. Doing so could impede the timeliness of the Commission's evaluation of cybersecurity incentives. Furthermore, we will not presume that every request for cybersecurity incentives will have issues of material fact requiring hearing and settlement judge procedures. Such a presumption would also constitute an unjustified departure from Commission incentive precedent under FPA section 219 and may unnecessarily delay the incentive-based rate treatment of cybersecurity investments as well as the utility's underlying cybersecurity investments.

188. In response to Ohio Consumers' Council suggested requirement that utilities identify the accounts that cybersecurity investment will be booked in, as described in section III.C.2, pursuant to our existing regulations, any utility that receives an incentive must maintain sufficient records to support the distinction of any investments that are afforded incentive-based rate treatment.

189. We will not, as NRECA suggests, describe the anticipated composition of Commission staff responsible for reviewing and evaluating requests under the proposed new provisions. Such description is neither necessary nor consistent with Commission procedures.

190. Consequently, for a given cybersecurity investment, utilities will be able to receive a single incentive-based rate treatment, as discussed in section III.B., for each voluntary cybersecurity investment that the utility makes. Utilities must specify which incentive they seek in their filings with the Commission.

191. We note that § 35.48(j) to the Commission's regulations declares that utilities may request CEII treatment pursuant to § 35.48(k) to the Commission's regulations for the portions of their cybersecurity incentive-based rate filings that contains CEII. This is consistent with § 388.113 of the Commission's regulations.[345] In addition, FPA section 219A(g) declares that Advanced Cybersecurity Technology Information provided to the Commission under FPA 219A(b), (c), or (f) ''shall be considered to be Critical Electric Infrastructure Information under [FPA] section 215A.'' [346]

4. Reporting Requirements

a. NOPR Proposal

192. In order to ensure that a utility receiving incentive rate treatment has implemented the requirements of the incentive and to ensure that it continues to adhere to the requirements, the Commission proposed to require utilities to submit informational reports to the Commission for the duration of the incentive.[347]

193. The Commission also proposed that a utility that has received cybersecurity incentives under this section must make an annual informational filing by June 1, provided that the utility has received Commission-approval for the incentive at least 60 days prior to June 1 of that year.[348] Utilities that receive Commission-approval for an incentive later than 60 days prior to June 1 would be required to submit an annual informational filing beginning on June 1 of the following year. The Commission proposed that the annual filing should detail the specific investments, if any, as of that date, that were made pursuant to the Commission's approval and the corresponding FERC account for which expenditures are booked. For recipients of the Cybersecurity ROE Incentive, the Commission proposed that each annual informational filing should describe the parts of its network that it upgraded in addition to the nature and cost of the various investments. For recipients of the Cybersecurity Regulatory Asset Incentive, the Commission proposed that each annual informational filing should describe such expenses in sufficient detail to demonstrate that such expenses are specifically related to the eligible cybersecurity investment underlying the incentives and not for ongoing services including system maintenance, surveillance, and other labor costs.

194. The Commission noted that it could also conduct periodic verification to assess cybersecurity investments and expenses for which it has approved

[343] For ongoing cybersecurity investments made to comply with approved Reliability Standards, the three-month period begins on the date that the Commission's approval of the Reliability Standard becomes effective. For approvals that the Commission issues by order, the effective date is the date of the order. For approvals that the Commission issues by rulemaking, the effective date occurs on a specified date that occurs after the later of Congress receiving notice from the Commission or the final rule is published in the **Federal Register**.

[344] 18 CFR 35.8.

[345] 18 CFR 388.113.

[346] IIJA, Public Law 117–58, section 40123, 135 Stat. at 951 (to be codified at 16 U.S.C. 824s–1(g)).

[347] NOPR, 180 FERC ¶ 61,189 at P 54.

[348] *Id.* P 55.

incentives.[349] The Commission could perform such verifications through multiple means (*i.e.,* directing further informational filings, audits, etc.). The Commission stated that the annual informational filings would inform the Commission on how and when any additional verification is warranted.

b. Comments

195. Ohio Consumers' Counsel supports the NOPR's proposal and recommends that the Commission and consumers must both be able to verify that the investments are being made and that the intended benefits are being received.[350]

196. Several commenters ask for the Commission to require additional information beyond the proposed reporting requirements. NRECA requests that the Commission require that the annual informational filings include any changes to the categorization of any incentivized enhancements and affirmatively state that the previously incentivized enhancement remains valid.[351] NRECA states that this modification will address the burden placed on ratepayers to review and analyze the information provided to ensure the accuracy of formulas applying different ROEs, especially where certain of those ROEs are capped.[352] NRECA also asks that the Commission consider issuing responses confirming the continued applicability of incentive rate treatment in response to the annual informational filings.[353] Ohio FEA recommends that verification methods should be established that go beyond the annual information filings proposed by the NOPR to ensure that cybersecurity benefits are realized and that double recovery of incentives is avoided.[354] NRECA also recommends that the Commission establish a process to confirm whether a utility's cybersecurity investment had the security effects described.[355]

197. California Parties urge the Commission to require utilities awarded cybersecurity incentives to submit aggregated data and, consistent with the Commission's CEII regulations, provide vetted State officials access to it.[356] California Parties argue that the provision of such data will, in turn, enable the relevant State officials to improve the cybersecurity protection of utility assets in their respective states.[357]

198. While not opposed to the NOPR proposal, EEI states that the Commission should allow the annual reports to be filed under the CEII regulations because the information the Commission seeks, while innocuous on its own, could be coupled with other information and used by those seeking to attack the reliability of U.S. energy infrastructure.[358] EEI states that, given the sensitivity of information filed as part of an annual report, electric companies would need assurances regarding how the various intervenor/third-party recipients of CEII would comply with sensitive data and information protection requirements, the obligation to destroy CEII when requested to do so, the prohibition on sharing CEII, and immediate reporting of unauthorized access of CEII.[359]

c. Commission Determination

199. Consistent with the NOPR, in order to ensure that a utility receiving incentive-based rate treatment has implemented and continues to adhere to the requirements of the incentive, we require utilities to submit informational reports to the Commission for the duration of the cybersecurity incentive, pursuant to § 35.48(i), which we are adding to the Commission's regulations. We continue to find that cybersecurity investments, unlike many others, may not otherwise be observable and verifiable by other parties. Consistent with the comments of Ohio Consumers' Counsel and California Parties, this requirement should provide State commissions and other stakeholders enhanced visibility into the cybersecurity investments that utilities are making for which they receive incentives.

200. Consistent with the NOPR, a utility that has received cybersecurity incentives under this section must make an annual informational filing by June 1 of that calendar year, provided that the utility has received Commission-approval for the incentive at least 60 days prior to June 1 of that year. Utilities that receive Commission-approval for an incentive within 60 days before June 1 must submit an annual informational filing beginning on June 1 of the following year.[360] The annual filing must detail the specific investments, if any, as of that date, that were made pursuant to the Commission's approval and the corresponding FERC account for which the cybersecurity investments are booked. For recipients of the Cybersecurity Regulatory Asset Incentive, annual informational filings should describe expenses in sufficient detail to demonstrate that such expenses specifically relate to the eligible cybersecurity investment and not to ongoing services including system maintenance, surveillance, and other labor costs that are materially the same as those that existed prior to the incentive request. Additionally, consistent with NRECA's comments, annual informational filings must specify any material changes in the nature of such expenses from prior filings. Unlike capital investments, ongoing expenses could potentially change in nature over time, and this provision ensures that the incentives in utility rates correspond to the precise expenses for which the Commission approved incentives.

201. We will not, as requested by NRECA, include a requirement for the Commission to issue responses confirming the continued applicability of incentive rate treatment in response to the annual informational filings. We do not find that such affirmative confirmation is necessary to ensure that incentives continue to be just and reasonable.

202. We also decline to establish a process to confirm whether a utility's cybersecurity investment had the security effects described as recommended by NRECA.[361] The annual informational filings will enable the Commission and interested parties to confirm that utilities have made the cybersecurity investments for which they receive incentives. Establishing a process to review the efficacy of each cybersecurity investment would create a substantial regulatory burden on utilities and other parties, including the Commission. Furthermore, measuring the ultimate effect of specific cybersecurity investments may be difficult given that security defenses can act as a deterrence to cyberattack and therefore it is impossible to know what cyberattacks have been prevented.

203. We note that § 35.48(j) to the Commission's regulations declares that utilities may request CEII treatment pursuant to § 35.48(i) to the Commission's regulations for the portions of their cybersecurity incentive-based rate informational reports that contain CEII. This is consistent with § 388.113 of the

Commission's regulations.[362] In addition, FPA section 219A(g) declares that Advanced Cybersecurity Technology Information provided to the Commission under FPA 219A(b), (c), or (f) ''shall be considered to be Critical Electric Infrastructure Information under [FPA] section 215A.'' [363]

E. Other Issues

1. Comments

204. INGAA and the International Pipeline Resilience Organization (IPRO) support the Commission's efforts to provide cybersecurity incentives to electric utilities but argue that rate-based incentives should also be available to owners and operators of interstate natural gas pipelines under the Commission's authority.[364] Both commenters assert that, due to the highly interconnected nature of the electric and gas industries and the similarities in threats faced by both industries, the Commission is overlooking a security threat by solely focusing on incentives for electric utilities.[365] IPRO argues that the Commission has the requisite authority under the NGA and the Interstate Commerce Act (ICA) to offer incentives to the oil and gas industry.[366] In contrast, California Parties assert that, because the NOPR does not cite the NGA or ICA, the Commission cannot include incentives for pipeline owners and operators in the final rule.[367]

205. EPSA urges the Commission to prevent cross-subsidization among vertically integrated entities. EPSA avers that, while these companies may have separate legal entities for their transmission and generation operations, cybersecurity programs are often administered as a shared service. EPSA argues that the Commission must ensure that any entities to which it extends incentives on the transmission side are not cross-subsidizing cybersecurity operations for their generation arms.[368]

2. Commission Determination

206. We will not, as IPRO advocates, extend incentives to natural gas pipelines and oil pipelines in this proceeding. This rulemaking effectuates Congress' requirement that the Commission develop cybersecurity incentives for utilities pursuant to FPA section 219A. As noted by California Parties, incentives under the NGA and the ICA are beyond the scope of this proceeding. We also note that the application of longstanding cost-of-service cost-allocation practices to enterprise-wide costs, described in sections III.C.1 and III.C.2 above, will address EPSA's cross-subsidization concerns.

IV. Information Collection Statement

207. The information collection requirements contained in this final rule are subject to review by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 at 44 U.S.C. 3507(d). OMB's regulations require approval of certain information collection requirements imposed by agency rules.[369] Upon approval of a collection of information, OMB will assign an OMB control number and expiration date. Respondents subject to the filing requirements of this proposed rule will not be penalized for failing to respond to this collection of information unless the collection of information displays a valid OMB Control Number. This final rule establishes the Commission's regulations with respect to the implementation of FPA section 219A.[370]

208. Interested persons may obtain information on the reporting requirements by contacting Ellen Brown, Office of the Executive Director, Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426 via email (*DataClearance@ferc.gov*) or telephone (202) 502–8663).

209. The Commission solicited comments on the NOPR and the collection of information in that NOPR.

Title: FERC–725B, Incentives for Advanced Cybersecurity Investment.

Action: Proposed revision of FERC–725B.

OMB Control No.: 1902–0248.

Respondents for this Rulemaking: Public utilities and non-public utilities that have or will have a rate on file with the Commission.

Frequency of Information Collection:

On occasion: Voluntary filings seeking incentive-based rate treatment for cybersecurity expenditures; and

Annually: An informational filing on June 1 of each year, required of entities that have been granted and are receiving incentive-based rate treatment for cybersecurity expenditures.

Abstract: The final rule provides that a utility may seek incentive-based rate treatment for cybersecurity investments by making a rate filing in accordance with section 205 of the FPA. The final rule states that one approach the Commission may use in evaluating such a filing is to consider whether prospective cybersecurity investments would match one of the types of investments listed at proposed 18 CFR 35.48(d). The final rule refers to this list of pre-qualified expenditures that are eligible for incentives as the PQ List. Any cybersecurity expenditure that is on the PQ List is entitled to a rebuttable presumption of eligibility for an incentive.

210. The final rule also discusses a different approach, in which a utility's cybersecurity expenditure would be evaluated on a case-by-case basis to determine if it is eligible for an incentive. Under that approach, the utility would need to demonstrate that the prospective investment is voluntary and would materially improve cybersecurity through either an investment in Advanced Cybersecurity Technology or participation in cybersecurity threat information sharing program. Under either approach, the utility would need to demonstrate that its rate, inclusive of the incentive, is just and reasonable and not unduly discriminatory or preferential.

211. The final rule also provides that a utility that is granted incentive-based rate treatment must submit an annual informational filing to the Commission by June 1 of each year, provided that the utility has received Commission approval of the incentive at least 60 days prior to June 1 of that year. Utilities that receive Commission approval of an incentive later than 60 days prior to June 1 would be required to submit an annual informational filing beginning on June 1 of the following year. The informational filing must describe the specific investments, if any, as of that date, that were made pursuant to the Commission's approval and the corresponding FERC account for which expenditures are booked. For incentives where the Commission allows deferral of expenses, annual informational filings should describe such expenses in sufficient detail to demonstrate that such expenses are specifically related to the cybersecurity investment for which the incentive was granted, and not for ongoing services including system maintenance, surveillance, and other labor costs.

Necessity of Information: Required to obtain or retain benefits.

Internal Review: The Commission has reviewed the changes and has determined that such changes are necessary. These requirements conform to the Commission's need for efficient

[362] 18 CFR 388.113.

[364] INGAA Initial Comments at 2; IPRO Initial Comments at 2–3.

[365] INGAA Initial Comments at 2; IPRO Initial Comments at 2–3.

[366] IPRO Initial Comments at 9–10.

[367] California Parties Reply Comments at 14.

[368] EPSA Initial Comments at 9.

[369] 5 CFR 1320.11.

[370] Public Law 117–55, 135 Stat. 951 (2021) (to be codified at 16 U.S.C. 824s–1).

information collection, communication, and management within the energy industry. The Commission has specific, objective support for the burden estimates associated with the information collection requirements.

212. The NERC Compliance Registry, as of August 5, 2022, identifies approximately 1,669 utilities, both public and non-public, in the U.S. that would be eligible for this proposed incentive and rate treatment. The Commission estimates that the NOPR may affect the burden [371] and cost [372] as follows:

FERC–725B—CHANGES IN FINAL RULE IN DOCKET NO. RM22–19–000

A. Area of modification	B. Number of respondents	C. Annual estimated number of responses per respondent	D. Annual estimated number of responses (Column B × Column C)	E. Average burden hours & cost ($) per response	F. Total estimated burden hours & total estimated cost ($)(Column D × Column E)
Voluntary filing seeking incentive rate treatment for cybersecurity investment. 18 CFR 35.48(b).	50	1	50	80 hours; $7,280 ...	4,000 hours; $364,000
Annual informational filing required where Commission has granted incentive rate treatment. 18 CFR 35.48(h).	50	1	50	40 hours; $3,640 ...	2,000 hours; $182,000
Totals	.....	.....	.....	.....	6,000 hours; $546,000

V. Environmental Analysis

213. The Commission is required to prepare an Environmental Assessment or an Environmental Impact Statement for any action that may have a significant adverse effect on the human environment.[373] We conclude that that neither an Environmental Assessment nor an Environmental Impact Statement is required for this final rule under § 380.4(a)(15) of the Commission's regulations, which provides a categorical exemption for approval of actions under sections 205 and 206 of the FPA relating to the filing of schedules containing all rates and charges for the transmission or sale of electric energy subject to the Commission's jurisdiction, plus the classification, practices, contracts, and regulations that affect rates, charges, classifications, and services.[374]

VI. Regulatory Flexibility Act

214. The Regulatory Flexibility Act of 1980 (RFA) [375] generally requires a description and analysis of final rules that will have significant economic impact on a substantial number of small entities. The Small Business Administration's (SBA) Office of Size Standards develops the numerical definition of a small business.[376] The SBA size standard for electric utilities is based on the number of employees, ranging from 250 to 1,000 employees based on the electric utility type.[377] While this final rule is applicable to all small utilities, participation with this final rule is voluntary for all respondents, including small utilities. We estimate that the average cost of voluntary participation for each utility to be $7,280 (initial filing) plus an annual estimated cost of $3,640 for up to five years. These initial and annual estimated costs would not constitute a significant economic impact on affected entities of any size, including small entities. Accordingly, the Commission certifies that this final rule will not have a significant economic impact on a substantial number of small entities.

VII. Document Availability

215. In addition to publishing the full text of this document in the **Federal Register**, the Commission provides all interested persons an opportunity to view and/or print the contents of this document via the internet through the Commission's Home Page (*http://www.ferc.gov*). At this time, the Commission has suspended access to the Commission's Public Reference Room due to the President's March 13, 2020 proclamation declaring a National Emergency concerning the Novel Coronavirus Disease (COVID–19).

216. From FERC's Home Page on the internet, this information is available on eLibrary. The full text of this document is available on eLibrary in PDF and Microsoft Word format for viewing, printing, and/or downloading. To access this document in eLibrary, type the docket number excluding the last three digits of this document in the docket number field.

217. User assistance is available for eLibrary and the FERC's website during normal business hours from FERC Online Support at 202–502–6652 (toll free at 1–866–208–3676) or email at *ferconlinesupport@ferc.gov,* or the Public Reference Room at (202) 502–8371, TTY (202)502–8659. Email the Public Reference Room at *public.referenceroom@ferc.gov.*

VIII. Effective Date and Congressional Notification

218. These regulations are effective [insert date 60 days from publication in **Federal Register**]. The Commission has determined, with the concurrence of the Administrator of the Office of Information and Regulatory Affairs of OMB, that this rule is not a ''major rule'' as defined in section 351 of the Small Business Regulatory Enforcement Fairness Act of 1996.

List of Subjects in 18 CFR Part 35

Electric power rates, Electric utilities, Reporting and recordkeeping requirements.

[371] ''Burden'' is the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a Federal agency. For further explanation of what is included in the information collection burden, refer to 5 CFR 1320.3.

[372] Commission staff estimates that respondents' hourly wages (including benefits) are comparable to those of FERC employees in Fiscal Year 2022. Therefore, the hourly cost used in this analysis is $91 and $188,992 annually.

By the Commission. Commissioner Danly is dissenting with a separate statement attached.

Issued: April 21, 2023.

Debbie-Anne A. Reese,

Deputy Secretary.

In consideration of the foregoing, the Commission hereby amends part 35, chapter I, title 18, Code of Federal Regulations, as follows:

PART 35—FILING OF RATE SCHEDULES AND TARIFFS

■ 1. The authority citation for part 35 continues to read as follows:

Authority: 16 U.S.C. 791a–825r, 2601–2645; 31 U.S.C. 9701; 42 U.S.C. 7101–7352.

■ 2. Add subpart K, consisting of § 35.48, to read as follows:

Subpart K—Cybersecurity Investment Provisions

§ 35.48 Cybersecurity investment.

(a) *Purpose.* This section establishes rules for incentive-based rate treatments for utilities with rates on file with the Commission that voluntarily make cybersecurity investments as described in this section.

(b) *Definitions.* As used in this section:

Advanced Cybersecurity Technology means any technology, operational capability, or service, including computer hardware, software, or a related asset, that enhances the security posture of public utilities through improvements in the ability to protect against, detect, respond to, or recover from a cybersecurity threat (as defined in section 102 of the Cybersecurity Act of 2015 (6 U.S.C. 1501)).

Advanced Cybersecurity Technology Information means information relating to Advanced Cybersecurity Technology or proposed Advanced Cybersecurity Technology that is generated by or provided to the Commission or another Federal agency. Pursuant to FPA section 219A(g), Advanced Cybersecurity Technology Information is considered to be Critical Electric Infrastructure Information.

Critical Energy/Electric Infrastructure Information (CEII) has the same meaning as defined in 18 CFR 388.113.

Electric Reliability Organization has the same meaning as defined in § 39.1 of this subchapter.

Reliability Standard has the same meaning as defined in § 39.1 of this subchapter.

(c) *Incentive-based rate treatment for cybersecurity investment.* The Commission will authorize incentive-based rate treatment for a utility that voluntarily makes an investment in Advanced Cybersecurity Technology and for a utility that voluntarily participates in a cybersecurity threat information sharing program under this section, provided that the utility meets the requirements of this section and the utility demonstrates that the resulting rate is just and reasonable and not unduly discriminatory or preferential, as required by sections 205 and 206 of the Federal Power Act. Incentive-based rate treatment is available to both public and non-public utilities that have or will have a rate on file with the Commission. A utility may request a single incentive-based rate treatment as specified in paragraph (f) of this section for an eligible cybersecurity investment that meets the eligibility criteria set forth in paragraph (d) of this section.

(d) *Eligibility criteria.* Pursuant to paragraphs (e) through (k) of this section, a utility may receive incentive-based rate treatment for a cybersecurity investment that:

(1) Materially improves cybersecurity through either Advanced Cybersecurity Technology or participation in a cybersecurity threat information sharing program; and

(2) Is not already mandated by the Reliability Standards as maintained by the Electric Reliability Organization, or otherwise mandated by local, State, or Federal law, decision, or directive; otherwise legally mandated; or an action taken in response to a Federal or State agency merger condition, consent decree from Federal or State agency, or settlement agreement that resolves a dispute between a utility and a public or private party.

(e) *Demonstrating satisfaction of the eligibility criteria.* A utility shall demonstrate to the Commission that a proposed cybersecurity investment satisfies the eligibility criteria in paragraph (d) of this section. Such demonstration shall show that the cybersecurity investment fulfills at least one of the provisions in the following paragraphs (e)(1) through (3):

(1) A utility shall demonstrate that a cybersecurity investment qualifies as one or more of the pre-qualified cybersecurity investments. The Commission shall rebuttably presume that pre-qualified cybersecurity investments satisfy the eligibility criteria. The Commission shall maintain a list on its website of pre-qualified cybersecurity investments and shall update such list from time to time either subject to notice and comment procedures or in a rulemaking.

(2) A utility shall demonstrate that a cybersecurity investment satisfies each of the eligibility criteria in paragraph (d) of this section. The Commission shall not presume that such demonstration satisfies the eligibility criteria.

(3) A utility shall demonstrate that it will make cybersecurity investments to comply with a Reliability Standard that is approved by the Commission but has not yet taken effect as approved by the Commission. The Commission shall not presume that such demonstration satisfies the eligibility criteria. Any incentives authorized by the Commission pursuant to this section shall terminate when the Reliability Standard takes effect.

(f) *Types of incentive-based rate treatment for cybersecurity investment.* For purposes of this section, incentive-based rate treatment shall mean deferral of expenses as a regulatory asset.

(g) *Incentive duration.* (1) A deferred Advanced Cybersecurity Technology regulatory asset whose costs are typically expensed shall be:

(i) Amortized over a period of up to five years;

(ii) Limited to expenses incurred in the first five years following Commission approval of the incentive;

(iii) Limited to ongoing expenses that the applicable utility was not already undertaking more than three months prior to filing an incentive request; and

(iv) Terminated when the cybersecurity investment or activity that serves as the basis of that incentive becomes mandatory.

(2) An incentive granted for participation in a qualified cybersecurity threat information sharing program will not be subject to the five-year duration limitation provisions of paragraph (g)(1)(ii) of this section for as long as the utility participates in the qualified cybersecurity threat information sharing program and such participation is not mandatory as to the utility. A utility participating in a qualified cybersecurity threat information sharing program is eligible to continue deferring expenses associated with such participation, which for each year would be amortized over the next five years.

(h) *Incentive applications.* For the purpose of this section, a utility's request for incentive based-rate treatments for one or more cybersecurity investments must be made in a filing pursuant to section 205 of the Federal Power Act, or in a petition for a declaratory order that precedes a filing pursuant to section 205 of the Federal Power Act. Utilities may file such a request either as a part of a general rate request or on a single-issue basis. Such a request shall include a detailed explanation to include the following information:

(1) A demonstration that the cybersecurity investment satisfies the eligibility criteria, which includes an attestation that cybersecurity investment is not mandatory, as required by paragraph (d)(2) of this section, and that the resulting rate is just and reasonable and not unduly discriminatory or preferential; and

(2) A detailed description of relevant cybersecurity expenses, including whether such cybersecurity expenses are:

(i) Associated with third-party provision of hardware, software, computing networking services, and/or cybersecurity monitoring services;

(ii) For training to implement network analysis and monitoring programs, and/or other cybersecurity protocols; and/or

(iii) Other cybersecurity expenses;

(3) Estimates of the cost of such cybersecurity expenses;

(4) When the cybersecurity expenses are expected to be incurred; and

(5) An attestation that the utility either has not already been undertaking duplicative or materially the same expenses for more than three months or that the utility is participating in a cybersecurity threat information-sharing program for the expense at issue. In the case of cybersecurity investments made to comply with a Reliability Standard that is approved by the Commission but has not yet taken effect as approved by the Commission pursuant to paragraph (e)(3) of this section, the utility must attest that it has not already been undertaking duplicative or materially the same expenses for more than three months prior to the date that the Commission's approval of the Reliability Standard becomes effective.

(i) *Reporting requirements.* A utility that has received Commission approval for incentive-based rate treatment under this section shall make an annual informational filing on June 1, provided that the utility has received such Commission approval at least 60 days prior to June 1 of that year. A utility that receives Commission approval of an incentive-based rate treatment under this section later than 60 days prior to June 1 shall submit an annual informational filing beginning on June 1 of the following year. The annual filing shall detail the specific cybersecurity investments that were made pursuant to the Commission's approval and the corresponding FERC account used. The annual informational filing shall describe the deferred expenses in sufficient detail to demonstrate that such expenses are specifically related to the cybersecurity investment granted incentives and not for ongoing services including system maintenance, surveillance, and other labor costs. Utilities shall provide a detailed description of any material changes in the nature of such expenses from prior year informational filings.

(j) *Transmittal of CEII in incentive applications and annual reports.* As appropriate, any CEII submitted to the Commission in a utility's incentive application made pursuant to paragraph (k) of this section or contained in its reporting requirements made pursuant to paragraph (i) of this section shall be filed consistent with 18 CFR part 388.

Note: The following will not appear in the Code of Federal Regulations.

UNITED STATES OF AMERICA

Incentives for Advanced Cybersecurity Investment, Docket No. RM22–19–000

DANLY, Commissioner, *dissenting:*

1. I dissent from today's Final Rule [378] because it is not in line with the Infrastructure Investment and Jobs Act (IIJA) directive to establish incentive-based rate treatments that ''encourag[e]'' ''investments by public utilities in advanced cybersecurity technology'' and ''participation by public utilities in cybersecurity threat information sharing programs.'' [379] Some have stated that Congress intended for the IIJA to ''shore up cybersecurity'' across the energy sector and other critical infrastructure.[380] The Final Rule provides cybersecurity incentives to select energy sector participants and only a few cybersecurity investments. This rule does not ''shore up cybersecurity'' of the bulk power system. At best, it is a tepid response to a clear Congressional mandate.

2. *First,* the Final Rule limits incentives and cost recovery to those public and non-public utilities ''that have or will have a [cost-based] rate [tariff] on file with the Commission.'' [381] Put differently, the Final Rule excludes public and non-public utilities that sell electricity at market-based rates. This exclusion is not narrow. In 2019, the Commission estimated that there were over 2,500 market-based rate sellers.[382]

3. Given the size of the population excluded, one would expect the IIJA to have directed such limitation. It does not. The statute directs the Commission to establish incentive-based rate treatments that ''encourage'' ''public utilities'' to make cybersecurity investments and participate in cybersecurity information sharing programs. It allows for single-issue rate filings and does not distinguish between those utilities with cost-of-service rates from those with market-based rates.

4. Nor does the broader context of the IIJA support such exclusion.[383] A reading of the IIJA's cybersecurity provisions in their entirety make evident that Congress intended for agencies to immediately undertake a broad campaign to support cybersecurity investment in the energy sector. The IIJA directed the Commission to establish cybersecurity incentives within 1.5 years of its enactment.[384] Further, as noted by the Electric Power Supply Association (EPSA), ''Congress specifically cites small or medium-sized public utilities with limited cybersecurity resources as being potentially eligible for *additional* incentives beyond those identified in the legislation, demonstrating the Congressional intent to fortify the entirety of the [Bulk Power System] to the greatest extent that is reasonably possible.'' [385] The IIJA also directed the Secretary of Energy to ''*enhance*[ ] grid security,'' [386] ''*deploy* advanced cybersecurity technologies for electric utility systems,'' [387] and ''*increase* the

I am immensely proud of this work.'').

[381] Final Rule, 183 FERC ¶ 61,033 at P 23 (citation omitted).

[382] *Data Collection for Analytics & Surveillance & Market-Based Rate Purposes,* Order No. 860, 168 FERC ¶ 61,039, at P 324 (2019).

[383] *See McCarthy* v. *Bronson,* 500 U.S. 136, 139 (1991) (''[S]tatutory language must always be read in its proper context.''); *Crandon* v. *U.S.,* 494 U.S. 152, 158 (1990) (''In determining the meaning of the statute, we look not only to the particular statutory language, but to the design of the statute as a whole and to its object and policy.'') (citations omitted).

[384] Public Law 117–58, section 40123(b)–(c), 135 Stat. 429, 952 (codified 16 U.S.C. 824s–1(b)–(c)) (requiring the Commission to conduct a study to identify incentive-based rate treatments within 180 days after the enactment of the section and establish a rule for incentive-based rate treatment within one year thereafter).

[385] EPSA, November 7, 2022 Comments, at 6 (Accession No. 20221107–5130) (emphasis in original) (EPSA Comments). The IIJA also authorized the Commission to provide ''additional incentives'' if that ''investment in advanced cybersecurity technology or information sharing program costs will reduce cybersecurity risks to . . . defense critical electric infrastructure.'' Public Law 117–58, section 40123(d), 135 Stat. 429, 952 (codified at 16 U.S.C. 824s–1(d)).

[386] *Id.,* section 40121, 135 Stat. 429, 949 (emphasis added).

[387] *Id.,* section 40124(c), 135 Stat. 429, 954 (emphasis added).

participation of eligible entities in cybersecurity threat information sharing programs.'' [388] Simply put, excluding 2,500 market-based rate sellers from cybersecurity incentives and cost recovery is not in line with Congressional intent. It should also not go unnoticed that the majority fails to include the provisions from the IIJA in its revised regulations regarding additional incentives for certain utilities, including defense critical electric infrastructure and small and medium utilities,[389] without any explanation although there really can be none.

5. What Congress intended is of no consequence to the majority. On top of failing to respond meaningfully to EPSA's argument regarding Congressional intent (an Administrative Procedure Act violation),[390] my colleagues declare (without citing to any provision in the IIJA) that ''utilities that make sales of energy, capacity, or ancillary services at market-based rates should [not] be able to continue to make those sales and also separately recover the costs of, and receive incentive-based rate treatment on, eligible cybersecurity investments.'' [391] Then the majority goes on to claim that the ''final rule meets the requirements of [the IIJA]'' because ''[a]ll sellers of energy, capacity, and ancillary services are free to file cost-of-service rates under FPA section 205 . . . to recover their entire cost of service'' and ''proceed to make sales exclusively under that cost-based rate.'' [392] In other words, the Commission has fulfilled the Congressional mandate because 2,500 market-based rate sellers can always abandon their market-based rate authority and make filings to transact only at cost-based rates.

6. That reasoning is untenable. The IIJA intended agencies to adopt policies and rules that would induce swift and efficient investments in cybersecurity by the entire energy sector—it was not designed to undermine competitive markets. Moreover, the majority's interpretation effectively voids the IIJA's directive that ''[t]he Commission *shall permit* public utilities to apply for incentive-based rate treatment under a rule issued under this section on a single-issue basis by submitting to the Commission a tariff schedule under [FPA] section [205 [393]] . . . that permits recovery of costs and incentives over the depreciable life of the applicable assets, without regard to changes in receipts or other costs of the public utility.'' [394]

7. Public utilities submit revisions both to market-based rate tariffs and cost-based rate tariffs under FPA section 205. While the proposed rule stated that utilities must file to recover costs and incentives in accordance with FPA section 205 and identified certain filing requirements as to utilities with formula rates and stated rates,[395] at no time did the Commission suggest that entities currently making sales of energy, capacity and ancillary services under market-based rate tariffs must make a filing to recover their *entire* cost of service, including costs of and an incentive return on, cybersecurity investments and proceed to make sales *exclusively* under that cost-based rate, as set forth in the final rule. The final rule is not a ''logical outgrowth'' [396] of the proposed rule, and its sharp departure from the proposed rule violates that the Administrative Procedure Act (APA) requirement that agencies engaged in a rulemaking must provide interested parties adequate notice and opportunity to comment on a proposed rule.[397] It also is nonsensical. Even under the construct today, a generation utility may have both a market-based rate tariff under which it sells energy, capacity and ancillary services and a cost-based rate tariff under which it recovers a reactive power revenue requirement. There is no requirement that such generation utility abandon its market-based rate tariff to recover its cost-based rates. Because the proposed rule failed to provide adequate notice to the public of any change as to market-based rate sellers, this violation of the APA is an obvious legal error.

8. *Second,* the Final Rule unilaterally imposes the heightened requirement that each ''cybersecurity investment[s] [must] . . . *materially improve* cybersecurity through either an investment in Advanced Cybersecurity Technology or participation in a cybersecurity threat information sharing program.'' [398] The IIJA includes no such materiality requirement. Congress directed the Commission to ''encourage[ ]—(1) investments by public utilities in advanced cybersecurity technology; and (2) participation by public utilities in cybersecurity threat information sharing programs.'' [399]

9. The IIJA already limits what qualifies as ''advanced cybersecurity technology'' to ''any technology, operational capability, or service, including computer hardware, software, or a related asset, that *enhances* the security posture of public utilities through improvements in the ability to protect against, detect, respond to, or recover from a cybersecurity threat.'' [400] The ordinary meaning of ''enhance'' is ''to improve the quality, amount, or strength of something.'' [401] It is not to ''materially improve the quality, amount or strength of something.''

10. While the IIJA does not explicitly define ''cybersecurity threat information sharing program,'' [402] it can be inferred that the statute requires (1) that there is a ''program,'' (2) that ''information [is] shar[ed],'' and (3) that information relates to ''cybersecurity.'' The statute cannot be read as inferring a requirement that the utility's participation must ''materially improve'' the security posture of that utility. The additional requirements in the Final Rule that the information be ''relevant and actionable'' and program be ''sponsored by the federal or state government'' are arbitrary and subjective and also is not in line with

[398] Final Rule, 183 FERC ¶ 61,033 at P 28.

[399] Public Law 117–58, section 40123(c)(2), 135 Stat. 429, 952 (codified 16 U.S.C. 824s–1(c)(2)).

[400] *Id.,* section 40123(a), 135 Stat. 429, 951–52 (codified 16 U.S.C. 824s–1(a)).

[401] Cambridge Dictionary, *https://dictionary.cambridge.org/us/dictionary/english/enhance* (defining ''enhance'').

[402] Public Law 117–58, section 40123(c), 135 Stat. 429, 952 (codified 16 U.S.C. 824s–1(c)).

the IIJA.[403] Congress knows how to say ''materially improve,'' and in fact, did so elsewhere in the IIJA,[404] but did not do so to limit the cybersecurity investments eligible for an incentive.

11. To make matters worse, the majority provides no meaningful objective criteria for satisfying its materiality requirement. While the Final Rule lists specific sources that the Commission will ''consider'' in its determination,[405] even when parties demonstrate that an investment meets the requisite number of sources the Commission finds that it does not ''have a *high degree of confidence* that such item[ ] will likely materially improve cybersecurity.'' [406] What could be more arbitrary than a ''standard'' based upon how confident an agency feels?

12. *Third,* the majority eliminates the 200-basis point ROE Adder incentive because ''[cybersecurity] expenses . . . constitute a large portion of overall expenditures for many cybersecurity investments'' and ''the Cybersecurity Regulatory Asset Incentive alone provides the encouragement that Congress intended without unduly increasing costs on consumers.'' [407] I disagree. Like Chairman Phillips, then Commissioner, stated in his concurrence to the NOPR:

> I believe the 5-year proposed duration and the 200-basis point adder are adequate to properly incent utilities. Unlike expenses in the traditional transmission incentives context, the dollar amounts in cybersecurity investments are typically small. Yet, the benefits of additional, advanced cybersecurity investments cannot be ignored. Offering anything less than what is proposed would likely be insufficient to incent any action by utilities, as required by Congress.[408]

13. Moreover, Congress required the Commission to establish a rule to provide incentives to investments in ''*any* technology, operational capability, or service'' [409] not just ''many cybersecurity investments.'' [410]

14. *Finally,* Congress did not require the Commission to simply ''consider performance-based rates as an option among incentive ratemaking treatments'' [411] as the majority contends. The statutory text states that ''the Commission *shall establish, by rule, incentive-based, including performance-based, rate treatments.*'' [412] There is no ambiguity here that could allow for, or support, the majority's ''interpretation.''

15. The word ''consider[ ],'' while used elsewhere in FPA section 219A,[413] is absent from that provision. And the majority should not place too much weight on Order No. 679, which interpreted a provision in FPA section 219 similarly.[414] The Commission's interpretation in Order No. 679 was arguably not in accordance with law and was never upheld by a court on appeal. My colleagues cannot rewrite a Congressional mandate because they believe that the statute is ''difficult'' to implement.[415]

16. Nor is compliance with this provision as ''difficult'' as the majority claims. The Commission could comply simply by establishing a rule that entities can propose on a case-by-case basis a performance-based rate treatment that would measure and tie the rate treatment to the number and severity of cybersecurity incidents. No more is required on the Commission's part.

17. Congress has made it clear that the Commission must provide incentives to shore up the security of the bulk power system. President Biden has ''urge[d] our private sector partners to harden [their] cyber defenses immediately.'' [416] Former President Trump issued an Executive Order declaring that ''[i]t is the policy of the executive branch to use its authorities and capabilities to support the cybersecurity risk management efforts of the owners and operators of the Nation's critical infrastructure.'' [417] Former President Obama warned that cybersecurity threats are ''the most serious economic and national security challenge[ ] we face as a nation'' and ''America's economic prosperity . . . will depend on cybersecurity.'' [418] Similarly, last fall in his concurrence to the Cybersecurity Incentives NOPR, Chairman Phillips, then Commissioner, stated, ''the nation's security and economic well-being depends on reliable and cyber-resilient energy infrastructure.'' [419] Instead of following Congress' instructions, and taking this reliability threat seriously, the majority passes up the opportunity to harden the cybersecurity defenses of the nation's critical energy infrastructure.

For these reasons, I respectfully dissent.

James P. Danly,
Commissioner.
